SUPPLY DIVISION

Penicillin Production

A total of 662.2 billion units of penicillin passed assay during August, representing the greatest quantity reported for any single month since production was initiated in Japan. Actual production by product follows:

(Unit - 10,000)

Product	August Production
Amorphous	3,109,635
Crystalline	4,607,382
Penicillin "G"	3,890,750
Procaine in Oil	8,369,340
Procaine "G" in Oil	39,105,120
Procaine Aqueous Inj	2,162,490
Procaine "G" Aqueous Inj	1,921,020
Penicillin Ointment	337,935
Tablets, Crystalline	2,613,030
Crystalline "G"	100,000
Total	66,216,705.5

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

Streptomycin Production

The Ministry of Welfare reports a total of 13,355 grams of streptomycin passed assay during August - September. An Additional 5,020 grams failed to pass histamine tests. This quantity will be reprocessed and is not necessarily considered a total loss.

Medical Supplies

Production of medical supplies reported during August totalled 3,063,528,137 Yen. The report did not include precious metals, X-Ray and physiotherapy equipment, surgical instruments or miscellaneous items. Following is the breakdown of reported production by category.

(Unit - Yen)

Item	August Production
Controlled Medicines	46,676,513
Non-controlled Medicines	2,137,399,365
Patent Medicines	438,597,202
Biologics	58,100,360
Textile Sanitary Materials	339,811,320
Dental Instruments	17,384,780
Dental Materials	16,103,197
Rubber Sanitary Goods	9,454,950
Total	¥3,063,528,137

Freeze of TOG Stocks

The Japanese Ministry of International Trade and Industry has been instructed by SCAP, to make no further shipments or deliveries of TOG items to Japanese manufacturers until inventories are completed and U.S. Army requirements are satisfied from existing stocks. All stocks utilized by the U.S. Army will be replaced. Two commodities, castor oil and beef tallow, imported for pharmaceutical manufacturers were effected by the freeze order. Both items will be released to drug manufacturers by the end of October.

Guinea Pigs for Assay Purposes

The four prefectural laboratory animal producers associations, delivered a total of 12,132 guinea pigs to the National Institute of Health during the period from 7 August to 28 September. The laboratory animal producers are now in a position to furnish guinea pigs to biologic producers, medical institutions, research laboratories etc., as required.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

NARCOTIC CONTROL

Narcotic Control Activities Report - August

The August report on narcotic control activities from the Ministry of Welfare contained the following information:

Arrests -	Registered persons	43
	Unregistered persons (Including 21 Koreans and 23 foreign nationals)	207
Convictions -	Registered persons	17
	Unregistered persons (Including seven Koreans and nine foreign nationals)	70
Theft of narcotics (Including one hospital)		10
Losses by fire (Pharmacy)		1

Penalties for registrants varied from ¥3,000 fine to twelve months penal servitude. Ten out of eleven sentences of penal servitude were suspended. Seven sentences were appealed by defendants.

Penalties for non-registrants tried in Japanese Court varied from ¥1,000 fine to three penal servitude. Fifteen out of fifty-three sentences of penal servitude were suspended. Ten sentences were appealed by procurators and twenty-two were appealed by defendants.

Four Japanese tried in Military Courts received sentences varying from three years penal servitude to five years penal servitude. Two were found not guilty.

One Korean tried in Military Court was sentenced to three years penal servitude.

Penalties for nine foreign nationals varied from three months penal servitude to three years penal servitude.

Ten registrants received adminstrative disposition and one-hundred were admonished. Ten non-registrants were released because of insufficient evidence.

Twenty-eight violations of the Marihuana Law were reported. Two were arrested and the others were not arrested since they were farmers unfamiliar with the Marihuana Law.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

The report also summarized the activities of the narcotic agents as follows:

Inspections of registrants	1485
Investigations originated	227
Investigations concluded	228
Investigations not concluded	275

WELFARE

Public Assistance Statistics - July.

*The Ministry of Welfare has submitted the following figures for the month of July, 1950. Figures for June, 1950 and July 1949 are included for purpose of comparison.

Persons - Institutional	141,769	139,608	133,663
Persons - Non-Institutional	1,885,052	1,839,086	1,534,509
Total	2,026,321	1,978,794	1,669,172
Assistance - Cash	1,169,018,490	1,140,755,391	348,341,105
Assistance - Kind	14,198,403	16,555,834	12,996,497
Total	1,183,216,893	1,157,311,725	361,337,602

*Prefectural public assistance figures are attached as Incl. No. 3 .

UNICEF Feeding Program, August 1950.

Attached as Incl. 4 is a report on the number of children receiving milk in the UNICEF supplemental feeding program during August 1950.

Social Works Fundamental Law.

Conferences have been initiated with representatives of the Social Affairs Bureau, Ministry of Welfare, for study of the proposed Social Works Fundamental Law with the view of its submission to the Japanese Diet at its next regular session. The law as proposed is an extremely important piece of legislation providing, among other things, for the revision of the archaic Social Work Law of 1938 and the establishment of welfare Districts. As soon as a firm draft of the proposed law is completed it will be forwarded to the Regions for information.

Japanese Red Cross Campaign for Goods and Funds for Comfort of Sick and Wounded United Nations Military and Relief of Civilian War Sufferers in Korea.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

Attached as Incl. No. 5 is a translation of the plan of organization by which the Japanese Red Cross will conduct a National campaign for goods and funds for comfort of United Nations sick and wounded military and for relief of civilian war sufferers in Korea. The plan has been approved by SCAP. The campaign is to be carried on throughout Japan during the month of November. All fund and goods collected for comfort of sick and wounded UN military will be turned over by the Japanese Red Cross to the American Red Cross as the agency designated to receive indigenous contributions for aid and comfort of sick and wounded United Nations military. Funds and supplies collected by the Japanese Red Cross for relief of civilian war sufferers in Korea will be turned over through established channels for distribution under the United Nations relief program in Korea. Independent organizations wishing to participate in the collections of relief and comfort items are encouraged to affiliate their efforts with the Japanese Red Cross Campaign.

Community Chest.

The Central Community Chest Committee has presented the first returns on prefectrual Community Chest 1950 collections as follows:

SOCIAL SECURITY

Social Security

The Advisory Council on Social Security has been very active during the past few months with public hearings and committee meetings, attempting to arrive at final conclusions with reference to their report to the Prime Minister and the Diet.

The preliminary report of the Council was issued in June, to be used as the basis for discussion and public hearings. This report was the subject of comments from SCAP. These comments were quite exhaustive, including commendation for the recognition of the need for a large scale approach to tuberculosis control, and also pointing out that the recommended program was too ambitious in relation to Japan's resources. Further, specific objection was taken to the proposal for making National Health Insurance a compulsory program.

The final recommendations are scheduled for adoption by the general assembly at their convention to be held 16 - 19 October.

Hohatsu #63

Date : September 9, 1950

From : Chief, Insurance Bureau, Welfare Ministry

To : Prefectural Governors
Chief Director, Health Insurance Society.

Subject : Item concerning Hospital Fees

This is to notify that the handling of the above stated subject shall be done according to the following.

I. Meaning of a complete nursing service and complete hospital meals.

1. A complete nursing service means that in hospitals or in clinics the nurses of the respective institutions give nursing care themselves or with the cooperation of the nursing aids of the same institution to such an extent that it is considered unnecessary for individual patients to employ attendants or to let their families stay with them to look after them.

2. Complete hospital meals mean that the diet is so prepared by the hospital that it will suit the condition of the patient as well as his likes while its calorie value is 2,400 per day for an ordinary adult patient with 30 grams or more of protein and 20 grams or more of fats and that it is considered unnecessary to supplement food to individual patients by cooking in the wards.

II. The application of a complete nursing service and complete hospital meals.

As a rule, the application of a complete nursing service or complete hospital meals is to be recognized when it is practised in the entire institution. However, when such a practice is carried out in a part of the institution it is considered helpful in the development of the Insurance medical treatment and therefore the application of this for a certain ward will be permissible.

III. Procedures

The application procedures are as follows.

1. The director of the institution which is to practise a complete nursing service or complete hospital meals (including institutions in which only certain wards are practising this) shall apply to the prefectural governor following the attached form.

incl. 1

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

2. The prefecture makes investigation according to the above mentioned application and then decides for or against approval. When the institution is approved, the following approval number will be decided by the prefecture and both the applicant and the Fund office will be notified of the approval with the approval number.

a. In case a complete nursing service or complete hospital meals are given in the entire institution.

Nursing No._____ Meals No._____

b. In case a complete nursing service or complete hosptial meals are given in a special ward.

Special Nursing No._____ Special meals No._____

In making a decision for approval the opinions of the related doctor's Association(s) shall be listened to.

3. Approval applications shall be filed and kept on "gun", city or ward basis so that they can easily be referred to.

4. All the hospital bills for the patients who have received a complete nursing service or complete hospital meals shall bear one of the above mentioned approval numbers in order to show clearly to which category the institution which issued the bills belongs. Bills which do not bear the approval number shall not be given any additional payment.

5. Hospital admission reports which are submitted by those institutions that are carrying out a complete nursing service or complete hospital meals shall also bear the above mentioned approval number.

6. The patients in an institution (or in a ward) where a complete nursing service is being given cannot ask for fees for nursing service.

7. Pointers in carrying out.

It is requested that you inspect properly the actual situation of the institutions where a complete nursing service or complete hospital meals are provided to see that adequate administration is done.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

Application for Approval of

To : Prefectural Governor

Remarks :-

1. When only either a complete nursing service or complete hospitals meals is carried out, or when it is carried out in the entire institution or only partially, unnecessary words shall be crossed out.

2. In A, B and C of 3 specialized services shall be itemized.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

Byō #184

Date : September 13, 1950

From : Chief, National Hospital Section, Medical Affairs Bureau, Ministry of Welfare
Chief, National Sanatorium Section, Medical Affairs Bureau, Ministry of Welfare

To : Chiefs, Medical Affairs Branch Offices
Directors, National Hospitals
Directors, National Sanatoria

Subject : Handling of hospital fees

Regarding the partial amendment of the Social Insurance Medical Fee Point Value Table, the Chief, Medical Affairs Bureau, issued a notification, Ihatsu 593, on September 13, stating that when a complete nursing service and complete hospital meals were provided, two points could be added to the hospital fees respectively. As to the meaning and procedures of the complete nursing service and complete hospital meals, the Chief, Insurance Bureau, has notified the Governor of each prefecture as the attached paper. It is requested that those national hospitals and sanatoria of which conditions are such that the addition of points can be considered, submit applications to their respective governors for approval.

It is further requested that those institutions that have received approval report to that effect to this Section immediately.

COMFORT AND RELIEF MONEY AND GOOD'S COLLECTION FOR THE SICK AND WOUNDED SOLDIERS OF UNITED NATIONS FORCES AND WAR SUFFERERS IN SOUTH KOREA

1. PURPOSE

We wish that the war in Korea be settled in peace as early as possible. However, as the war continues, number of sick and wounded UN soldiers increases and the Koreans are turned adrift by the war damage.

Extending sympathy to these victims and from humanitarian view point, we should like to collect relief money and goods from Japanese people to console sick and wounded UN soldiers and mitigate the agony of the sufferers in Korea.

2. HOW TO CARRY OUT THE COLLECTION

A committee shall be established by the representatives of non-governmental organizations and information agencies and the collection of relief money and goods shall be carried out by the decision of this Committee.

A. Committee

(1) Name

The committee shall be named "Comfort and Relief Money and Goods Collection Committee for the sick and wounded Soldiers of United Nations and War Sufferers in South Korea" and there shall be Central and Local Committees. The former shall be established in the National Headquarters of the Japanese Red Cross Society and the letters in each Prefectural Chapter of the Society.

(2) Organization

Chairman	1
Vice-Chairman	2
Committee members	several

Both Chairman and Vice-Chairman shall be elected from among Committee members.

(3) Administration

The Committee shall be called by Chairman when necessary and the Chairman shall preside over the meeting.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

The Vice-Chairman shall assist Chairman and take his place in case of his absence.

B. Term of Collection

Period of collection campaign shall be one month and it may be prolonged if necessary. As to when it is carried out, consideration shall be given not to affect the Community Chest Campaign October 1-31.

C. Publicity

The purpose of this collection shall be publicised through newspapers, radio and other means.

D. Collection and management of Relief Money and Goods

Donation shall be voluntary.

Relief money shall be received at every cooperative agencies and gathered at the National Headquarters of the Japanese Red Cross Society.

As for comfort and relief goods, the following articles shall be received at the National Hq. and Chapters of the Japanese Red Cross Society.

(1) Comfort Goods

Local arts; photograph; picture post card; English letter of sympathy; schoolchildren's drawing; doll, etc.

(2) Relief Goods

Clothing; food (not corruptible, such as canned goods); medical supplies; schooling articles; ordinary utensils, etc.

The Committee shall decide how to manage money and goods. Relief goods for war sufferers shall be sent to Korea through appropriate international organization.

3. REPORT OF RESULT

The Committee shall make public to the Japanese people by proper means the result of collection and how they have been managed.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

REGULATIONS GOVERNING THE COMFORT AND RELIEF MONEY AND GOODS COLLECTION CENTRAL COMMITTEE FOR THE SICK AND WOUNDED SOLDIERS OF UNITED NATIONS AND WAR SUFFERERS IN SOUTH KOREA

Article 1. The Committee shall be called "Comfort and relief money and goods collection Central Committee for the sick and wounded soldiers of United Nations and War sufferers in South Korea," and shall have its office in the National Headquarters of the Japanese Red Cross Society, No. 5-1 Shiba Park, Minato-ku, Tokyo.

Art. 2. The object of the Committee shall be to console sick and wounded UN soldiers and to administer relief to the war sufferers in South Korea.

Art. 3. To attain the object mentioned in the preceding Article, the Committee shall collect and manage comfort and relief money and goods.

Art. 4. The Committee shall be composed of one chairman, two vice-chairmen and several Committee members.

Art. 5. Chairman and Vice-Chairmen shall be elected from among Committee members.

Art. 6. The Chairman shall control the business of the Committee.

The Vice-Chairmen shall assist the Chairman. In case of the Chairman's absence, he shall be represented by one of the Vice-Chairmen he has designated.

Art. 7. The Chairman shall call the meeting of the Committee and shall preside over the meeting.

Art. 8. The decision in the meeting shall be made by majority and in case of a tie, the Chairman shall take a decision.

Art. 9. There shall be several secretaries for the liaison and coordination of the business of the Committee. Secretaries shall be appointed by the Chairman.

List of Members of the Comfort and Relief Money and Goods Collection Central Committee for the sick and wounded Soldiers of United Nations and War Sufferers in South Korea

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

DIGEST OF WEEKLY REPORT OF COMMUNICABLE DISEASES IN JAPAN FOR THE WEEK ENDED 16 SEPTEMBER 1950

During the thirty-seventh week, ended 16 September 1950, there were 22,917 cases of the 31 communicable disease (exclusive of the four venereal diseases) compared with 21,579 cases reported for the same diseases last week. Some corrections were received this week for preceding weeks in the current year. Totals for eight diseases (epidemic meningitis, measles, whooping cough, influenza, tetanus, rabies, leprosy, and trachoma) were lower this week than in both last week and the thirty-seventh week of last year, while totals for two others (dysentery and tuberculosis) were higher currently. No cases of smallpox, cholera, plague, yellow fever, anthrax, glanders, or dengue fever were reported either this week, last week, or in the thirty-seventh week of 1949. Tsutsugamushi cases numbered the same as last week, while schistosomiasis and filariasis were both lower than previously. Data for these last three diseases are not available prior to the current year. Present totals for the remaining eleven diseases fell between those reported last week and in the thirty-seventh week of last year.

About the same number of diphtheria cases was reported this week (192) as last week (193). Deaths increased from 7 to 10. The present case figure was 37 percent greater than that (140) recorded for the same week of last year but 9 percent below the total (210) for the corresponding 1948 period. Cases increased over last week in 20 prefectures, decreased in 17, and stayed the same in 7, while no cases were reported either week in the remaining 2. There were 21 cases in Niigata Prefecture this week and from 1 to 12 cases in 40 additional prefectures. The current and cumulative case rates were 12.4 and 13.9 respectively. Corresponding death rates were 0.6 and 1.2.

Dysentery cases which decreased during the last four weeks, increased this week for the first time since the high point for the year was reached for the week ended 12 August. They numbered 2,583 currently, 9 percent greater than last week's figure (2,366). The number of deaths, however, decreased slightly, from 511 to 506. This week's cases were 56 percent higher than in the same period of last year (1,655) and about three and a half times the corresponding 1948 total (730). Changes from last week were almost equally divided between prefectures with increases (23) and those with decreases (22), while cases stayed the same in the one remaining prefecture. Shizuoka Prefecture reported the most outstanding change, an increase from 81 to 263 cases, the present figure including an outbreak of 150 cases in Hamana-Gun. There were other large increases in Kagawa Prefecture (from 8 to 80 cases) and Osaka Prefecture (96 to 161). Two prefectures in the Kanto region with 23 percent of all cases this week were Tokyo-to (331 cases) and Shizuoka (263), while that region as a whole accounted for half of the total. Excluding Tokyo-to and Shizuoka, cases ranged from 3 to 187. Of the total dysentery reported this week, 2,564 cases and all deaths were listed as bacillary and the other 19 cases as amebic. Current and cumulative case rates for all dysentery were 166.5 and 68.5 respectively. Corresponding death rates were 32.6 and 14.1.

The number of typhoid fever cases (120) did not change from last week. Deaths increased from 15 to 18. This week's case figure was 40 percent less than that (201) recorded for the same period of last year and nearly 60 percent below the corresponding 1948 total (284). Decreases from last week occurred in almost half (21) of the prefectures, increases in about a third (16), and no change in three. Six additional prefectures have reported no cases for two weeks or longer. There were 12 cases in Tokyo-to this week and, at the other extreme, none in 12 prefectures. The current and cumulative case rates were 7.7 and 6.8 respectively. Corresponding death rates were 1.2 and 0.8.

Paratyphoid fever cases (41) remained approximately the same as last week (39), and deaths (1) did not change. The present number of cases was a third below the figure (62) for the thirty-seventh week of last year and about a half of that (84) for the same period of 1948. Twenty prefectures have reported no cases for at least two weeks. Twelve reported increases over last week, nine decreases, and the remaining five stayed the same. Tokyo-to currently reported ten cases and 19 additional prefectures from one to four each. The current and cumulative case rates were 2.6 and 2.4 respectively, the corresponding death rates both 0.1.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

There have been no smallpox cases reported since mid-July and no deaths thus far this year. No cases were recorded for the thirty-seventh week of last year, but there was one during the same period of 1948. The cumulative case rate as of 16 September 1950 was less than 0.1.

No typhus fever cases were reported this week whereas there was one case last week, and no deaths were reported during either period. There were also no cases last year at this time, but two in the same period of 1948. The cumulative case and death rates this week were 1.6 and 0.1 respectively.

There were 16 cases of malaria and one death this week compared with 14 cases and 3 deaths last week. There were about seven times as many cases during the thirty-seventh week of last year (111) and nearly ten times as many in the corresponding 1948 period (155). The majority (28) of the prefectures have reported no cases for two or more weeks. Nine prefectures reported increases over last week, seven decreases, and the remaining two no change. Eleven prefectures reported one to five cases each this week. The current and cumulative case rates were 1.0 and 1.4 respectively, while the corresponding death rates were both 0.1.

Japanese "B" encephalitis cases decreased for the second consecutive week. They numbered 439 currently, 40 percent less than last week (727). Deaths also decreased, from 246 to 178. This week's cases were nearly three times higher than in the same period of last year (157) but 22 percent lower than in the corresponding 1948 week (561). There were decreases from last week in about half (24) of the prefectures and increases in 14. Of the remaining 8 prefectures, which did not change, Hokkaido has reported no cases yet this year, Nagasaki Prefecture none for three weeks, and Fukui and Shiga none for two weeks. The most notable change from last week occurred in Tokyo-to, a decrease from 161 to 42 cases, while there was also a large decrease in Niigata, from 78 to 19. Nagano Prefecture (64 cases) and Tokyo-to (42) together accounted for nearly a fourth of this week's total cases, and 37 other prefectures had cases ranging from 1 to 27. The current and cumulative case rates were 28.3 and 7.2 respectively. Corresponding death rates were 11.5 and 2.3.

The number of scarlet fever cases reported this week (52) was somewhat higher than in the preceding week (46), while no deaths were reported during either period. Present cases were slightly fewer than in the same weeks of last year (55) and 1948 (54). Nineteen prefectures have reported no cases for at least two weeks. Increases over last week occurred in 12 prefectures, decreases in nearly that many (11), and no change in the remaining four. There were 11 cases in Tokyo-to this week, 7 in Osaka Prefecture, and from 1 to 3 in 20 additional prefectures. The current and cumulative case rates were 3.4 and 6.7 respectively. The cumulative death rate was less than 0.1.

Epidemic meningitis cases (24) decreased 44 percent from last week (43). Deaths decreased from 13 to 4. The present case figure was about half of that (49) recorded for the same week of last year and 38 percent below the corresponding 1948 total (39). Cases decreased from last week in about half (22) of the prefectures, increased in 8, and stayed the same in 3,while no cases have been reported for two weeks or longer in the remaining 13. Approximately a third (16) of the prefectures reported cases this week, from 1 to 5 each. The current and cumulative case rates were 1.5 and 1.6 respectively, the corresponding death rates 0.3 and 0.5.

There were 212 cases of measles this week, 8 percent fewer than last week (231). The present number was approximately a fourth of the figure (803) recorded for the same week of last year and 15 percent below the total (248) for the corresponding period of 1948. Almost half (21) of the prefectures reported decreases from last week, a third (15) increases, and one stayed the same. Nine additional prefectures have reported no cases for two weeks or longer. Thirty-two prefectures had cases ranging from 1 to 37 this week. The current and cumulative case rates were 13.7 and 84.2 respectively.

The number of whooping cough cases decreased 10 percent, from 2,365 last week to 2,117 currently. Cases this week were more than 50 percent fewer than in the same week of last year (4,315) but 55 percent higher than in the corresponding 1948 period (1,362). There were decreases from last week in 25 prefectures and increases in 21. Large decreases were recorded in Fukuoka Prefecture, from 161 to 71

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

cases, and Toyama, from 107 to 41, while there was a comparable increase in Kagoshima, from 50 to 127. Four prefectures with current cases amounting to 23 percent of the total were Hokkaido (132), Kagoshima (127), Tokyo-to (117), and Nagano (113). Forty-one other prefectures had cases ranging from 6 to 88, while Nara reported no cases. The current and cumulative case rates were 136.5 and 182.6 respectively.

Tuberculosis cases continued to increase, the present figure (13,983) being 15 percent higher than last week's (12,181). Current cases were 21 percent greater than those (11,509) in the same week of last year and 53 percent above the total (9,129) for the corresponding period of 1948. There were increases over last week in about two-thirds (31) of the prefectures and decreases in the remaining third (15). Tokyo-to reported the largest increase, from 1,762 to 2,255 cases. Four prefectures (Chiba, Hyogo, Gifu, and Saitama) had increases of 200 or more cases and five others increases of more than 100. The largest decrease occurred in Fukuoka Prefecture, from 623 to 391 cases, and there were decreases of more than 100 cases in three additional prefectures. Tokyo-to reported the largest number of cases this week while Nara, with 33 cases, had the smallest number. Ninety percent of all tuberculosis cases were designated as respiratory tuberculosis (12,639). The current and cumulative case rates for all forms of tuberculosis were 901.6 and 599.9 respectively.

There was a small increase (3 percent) in pneumonia cases this week, from 1,061 to 1,093. They were slightly fewer than those (1,106) recorded for the thirty-seventh week of last year but 88 percent greater than the corresponding 1948 total (582). Increases over last week occurred in about half (24) of the prefectures, decreases in 20, and no change in the remaining 2. Saitama Prefecture reported 85 cases this week and the other 45 prefectures from 4 to 48 each. The current and cumulative case rates were 70.5 and 199.1 respectively.

Five cases of influenza were reported this week compared with six last week and six and fifteen respectively during the thirty-seventh weeks of last year and 1948. They occurred in Mie and Nagasaki (two each) and in Tottori. The current and cumulative case rates were 0.3 and 36.2 respectively.

Poliomyelitis cases (89) decreased 17 percent from last week (107). They were slightly higher than in the thirty-seventh week of last year (84) and almost two and a half times the total (37) recorded for the corresponding 1948 period. Cases decreased from last week in 19 prefectures, increased in 13, and stayed the same in 6, while no cases have been reported for two weeks or longer in the remaining eight. Twenty-eight prefectures reported cases this week, from one to ten each. The current and cumulative case rates were 5.7 and 4.1 respectively.

The number of tetanus cases decreased from 42 last week to 35 currently. During the thirty-seventh weeks of last year and 1948 there were 58 and 40 cases respectively. Approximately a third (16) of the prefectures have reported no cases for two or more weeks. Another third (15) reported decreases from last week, ten increases, and five no change. This week's cases were distributed among 19 prefectures having from one to four cases each. The current and cumulative case rates were 2.3 and 2.4 respectively.

Eleven cases of puerperal infection were reported this week, the same number as last week. There were 18 and 11 cases respectively in the thirty-seventh weeks of 1949 and 1948. No cases have been reported for two weeks or more in almost two-thirds (29) of the prefectures. Prefectural changes from last week were almost equally divided between decreases (9) and increases (8). Light prefectures having one or two cases each accounted for the present total. The current and cumulative case rates were 0.7 and 1.0 respectively.

No rabies cases were reported this week. Last week there were three cases and in the corresponding 1949 and 1948 weeks one each. The cumulative case rate this week was 0.1..

There has been no anthrax reported since mid-July. No cases were recorded during this same period either last year or in 1948. The cumulative case rate this week was less than 0.1.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

Leprosy cases (6) remained nearly the same as in the preceding week (7). There were 10 cases last year at this time and 13 cases during the like period of 1948. Changes from last week included four prefectures with decreases and three with increases. Two prefectures stayed the same, and the remaining 37 have reported no cases for two weeks or longer. There were one or two cases in each of five prefectures this week. Current and cumulative case rates were 0.4 and 0.7 respectively.

The number of trachoma cases decreased 5 percent, from 1,950 last week to 1,849 currently. This week's figure was about 25 percent less than that (2,434) recorded for the same week of last year and 20 percent below the corresponding 1948 total (2,304). The majority (28) of the prefectures reported decreases from last week, 17 increases, while the remaining one stayed the same. Prefectural case figures this week ranged from 2 to 199. The current and cumulative case rates were 119.2 and 206.1 respectively.

There was no change from last week in the number of infectious diarrhea cases reported (2). One case each was recorded for the thirty-seventh weeks of 1949 and 1948. Hokkaido and Osaka Prefecture reported this week's cases. The current and cumulative cases rates were both 0.1.

The number of tsutsugamushi cases reported (2) did not change from the preceding week. Both cases again occurred Niigata Prefecture. The current and cumulative case rates were 0.1 and 0.2 respectively.

Schistosomiasis cases numbered 45 this week compared with 57 last week, a decrease of over 20 percent. Yamanashi Prefecture reported 32 cases, Saga 11, and Fukuoka 2. The current and cumulative case rates were 2.9 and 1.2 respectively.

One case of filariasis was reported this week compared with five last week. The one case occurred in Kagoshima Prefecture. Current and cumulative case rates were both 0.1.

The four venereal diseases accounted for 6,567 cases this week compared with 6,397 cases last week. Current and cumulative numbers of syphilis cases this week were 2,269 and 90,731 respectively; gonorrhea, 3,957 and 125,110; chancroid, 334 and 11,236; and lymphogranuloma venereum, 7 and 361. Totals for syphilis and lymphogranuloma venereum were both lower this week than last week, 2,336 and 10 respectively. Gonorrhea cases, however, were higher than in the previous week (3,736) as were also chancroid cases (315 last week). All totals this week were lower than those recorded for the same week of last year. At that time there were 3,835 cases of syphilis, 3,994 cases of gonorrhea, 458 cases of chancroid, and 11 cases of lymphogranuloma venereum. The current and cumulative case rates for each of these diseases as of 16 September 1950 were: syphilis, 146.3 and 158.1 respectively; gonorrhea, 255.1 and 218.0; chancroid, 21.5 and 19.6; and lymphogranuloma venereum, 0.5 and 0.6.

FOOTNOTES:

1. There were no cases or deaths reported for cholera or plague, and there were also no cases of yellow fever, glanders, or dengue fever.

2. Rates are the numbers of cases or deaths per 100,000 population estimated as of 1 July 1949, and are computed on an annual basis.

3. A dash (-) indicates that no cases or deaths were reported and that the cases or death rate was zero.

4. A rate of 0.0 indicates that there were some cases or deaths but that the rate was less than 0.1.

5. "NA" indicates that data are not available.

6. * Cumulative figures adjusted for delayed and corrected reports.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

DIGEST OF WEEKLY REPORT OF COMMUNICABLE DISEASES IN JAPAN FOR THE WEEK ENDED 23 SEPTEMBER 1950

During the thirty-eighth week, ended 23 September 1950, there were 22,848 cases of the 31 communicable diseases (exclusive of the four venereal diseases) compared with 22,916 cases reported for the same diseases last week. Some corrections were received this week for preceding weeks in the current year. Totals for eight diseases (diphtheria, typhoid fever, paratyphoid fever, Japanese "B" encephalitis, epidemic meningitis, whooping cough, influenza, and infectious diarrhea) were lower this week than in both last week and the thirty-eighth week of last year, while totals for five others (scarlet fever, tuberculosis, pneumonia, poliomyelitis, and leprosy) were higher currently. No cases of smallpox, typhus fever, cholera, plague, yellow fever, anthrax, glanders, or dengue fever were reported either this week, last week, or in the thirty-eighth week of 1949. Tsutsugamushi and filariasis cases were higher and schistosomiasis cases lower currently than in the preceding week. Data for these last three diseases are not available prior to the current year. Present totals for the seven remaining diseases fell between those reported last week and in the thirty-eighth week of last year.

Diphtheria cases decreased 12 percent, from 192 last week to 169 in the present week. There was an increase in deaths, however, from 10 to 13. This weeks cases were 7 percent fewer than those (182) recorded during the same week of last year and 12 percent below the corresponding 1948 total (193). Almost half (22) of the prefectures reported decreases from last week, 19 had increases, while four did not change, and the remaining one has reported no cases for the past three weeks. There were 15 cases in Niigata Prefecture this week, from one to ten cases in 38 additional prefectures, and none in the remaining seven. The current and cumulative case rates were 10.9 and 13.8 respectively. Corresponding death rates were 0.8 and 1.1.

The number of dysentery cases reported this week (2,086) was nearly 20 percent lower than in the preceding week (2,583). Deaths decreased from 506 to 468. The present case figure was 70 percent greater than that (1,228) recorded for the thirty-eighth week of last year and almost four times the total (531) for the same period of 1948. (See attached chart). There were decreases from last week in 27 prefectures, increases in 17, and no change in the remaining 2. Shizuoka Prefecture reported the most outstanding change, a decrease from 263 to 61 cases, while there were also substantial decreases in Osaka Prefecture (from 161 to 77 cases) and Kagawa Prefecture (80 to 9). Tokyo-to reported the largest number of cases this week (333), nearly a sixth of the nation's total. Cases in the 45 other prefectures ranged from 1 in Nara to 155 in Saitama. Of the total dysentery reported this week, 2,067 cases and all deaths were listed as bacillary and the remaining 19 cases as amebic. The current and cumulative case rates for all dysentery were 134.5 and 70.2 respectively. Corresponding death rates were 30.2 and 14.5.

There was a slight decrease in the number of typhoid fever cases, from 120 last week to 117 currently. The number of deaths decreased from 18 to 12. Cases this week were more than a third fewer than in the same week of last year (179) and over 50 percent below the corresponding 1948 total (238). Almost half (21) of the prefectures reported decreases from last week, 16 increases, and five no change, while the four remaining prefectures have reported no cases for two weeks or longer. There were 14 cases in Gifu Prefecture this week and, at the other extreme, none in 14 prefectures. The current and cumulative case rates were 7.5 and 6.8 respectively, the corresponding death rates both 0.8.

Parathyphoid fever cases decreased from 41 last week to 38 in the present week, while deaths increased from one to two. This week's case figure was a third less than that (57) recorded for the same period of last year and 44 percent below the number (68) in the corresponding 1948 week. Seventeen prefectures have reported no cases for two or more weeks. Changes from last week included 12 prefectures with decreases and 11 with increases, while the numbers stayed the same in the remaining six. Present cases occurred in 20 prefectures with from one to seven cases each. The current and cumulative case rates were 2.5 and 2.4 respectively and the corresponding death rates both 0.1.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

No smallpox cases have been reported since mid-July and no deaths thus far this year. There were also no cases recorded for the thirty-eighth weeks of 1949 and 1948. The cumulative case rate this week was less than 0.1.

There have been no typhus fever cases reported for two weeks and no deaths since July. There were also no cases during this same week last year but one was recorded for the corresponding 1948 period. The cumulative case and death rates as of 23 September 1950 were 1.6 and 0.1 respectively.

The number of malaria cases (26) increased over the preceding week (16), while the number of deaths (1) stayed the same. Current cases were about a fourth of those (97) recorded for the thirty-eighth week of last year and approximately a fifth of the total (120) for the corresponding 1948 period. There have been no cases reported for two or more weeks in nearly half (21) of the prefectures. About a third (15) showed increases over the preceding week, nine decreases, and the remaining one no change. Aichi and Shiga Prefectures each reported six cases this week and fourteen additional prefectures one each. The current and cumulative case rates were 1.7 and 1.5 respectively. The corresponding death rates were both 0.1.

Japanese "B" encephalitis cases (213) decreased by more than half from last week (439). Deaths also decreased, from 177 to 104. The present case figure was 18 percent less than that (259) for the same week of last year and 34 percent below the corresponding 1948 number (325). Two-thirds (31) of the prefectures reported fewer cases this week than last week and nine prefectures had more cases. Of the remaining six prefectures, which have reported no cases for two weeks or longer, one (Hokkaido) has reported none this year. About a third of all cases this week occurred in the three prefectures of Ibaraki, Tokyo, and Nagano, each with 24 cases. At the other extreme, 17 prefectures reported having no cases. The current and cumulative case rates were 13.7 and 7.4 respectively, while the corresponding death rates were 6.7 and 2.4.

There were 58 cases of scarlet fever this week compared with 51 cases in the previous period. No deaths have been reported for three weeks. Current cases were 32 percent greater than those (44) in the thirty-eighth week of last year and 81 percent higher than in the same period of 1948 (32). Almost half (21) of the prefectures have reported no cases for two or more weeks. Changes from last week were equally divided between prefectures with increases and those with decreases (11), while the numbers stayed the same in the remaining three prefectures. Nineteen prefectures reported cases this week, from one to ten each. The current and cumulative case rates were 3.7 and 6.7 respectively, and the cumulative death rate was less than 0.1.

The number of epidemic meningitis cases decreased from 24 last week to 18 currently, and the number of deaths (4) did not change. This week's cases were about one-third those (60) in the same period of last year and nearly two-thirds the corresponding 1948 total (30). No cases have been reported for two weeks or longer in approximately half (22) of the prefectures. Decreases from last week occurred in twelve prefectures, increases in nine, and no change in the remaining three. Present cases occurred in 14 prefectures, from one to three in each. The current and cumulative case rates were 1.2 and 1.6 respectively, the corresponding death rates 0.3 and 0.5.

Measles cases (235) increased approximately 10 percent over last week (212). They were under half the total (492) recorded for the thirty-eighth week of last year but nearly a fourth higher than in the same period of 1948 (191). Cases increased over last week in about half (22) of the prefectures, decreased in 17, and stayed the same in one. Six additional prefectures have reported no cases for two weeks or longer. Fukui Prefecture reported the greatest number of cases this week (41), while there were eleven prefectures with none. The current and cumulative case rates were 15.2 and 82.3 respectively.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

There were 16 percent fewer whooping cough cases this week (1,777) than in the preceding week (2,117). The present figure was about half that (3,503) recorded for the same week of last year but 54 percent higher than in the corresponding 1948 period (1,155). The majority (28) of the prefectures reported decreases from last week, 17 increases, and the remaining one did not change. Cases this week ranged from 5 in Tokushima to 111 in Saitama. The current and cumulative case rates were 114.6 and 180.8 respectively.

There was a further increase this week in the number of tuberculosis cases reported. The present figure (14,759) was six percent higher than in the preceding week (13,983). It was almost 50 percent greater than the number (9,924) recorded for the thirty-eighth week of last year and 80 percent above the total (8,195) for the comparable period of 1948 (See attached chart). Cases increased over last week in 26 prefectures, decreased in 18, and stayed the same in the remaining two. The largest change this week was an increase from 391 to 697 cases in Fukuoka Prefecture and three were increases of more than 100 cases in five other southern prefectures. All large decreases occurred in four prefectures located in the central portion of Honshu, the two largest being in Aichi (from 616 to 391 cases) and Tokyo-to (2,255 to 2,037). Tokyo-to continued to report the most cases and Nara (32) the fewest. Ninety percent of all cases this week were designated as respiratory tuberculosis (13,334). The current and cumulative case rates for all forms of tuberculosis were 951.6 and 609.1 respectively.

Pneumonia cases (1,193) increased 9 percent over the preceding week (1,093). They were 17 percent higher than in the thirty-eighth week of last year (1,022) and 88 percent above the corresponding 1948 total (634). Half (23) of the prefectures reported fewer cases this week than last week, 22 had more, and the remaining one did not change. Saitama Prefecture reported 103 cases during the present week and the other 45 prefectures from 2 to 89 each. Current and cumulative case rates were 76.9 and 195.9 respectively.

One influenza case was reported this week compared with five last week. There were 15 and 14 cases respectively during the thirty-eighth weeks of 1949 and 1948. The one case this week occurred in Ehime Prefecture. Current and cumulative case rates were 0.1 and 35.3 respectively.

There were 99 cases of poliomyelitis reported this week. Last week there were 89 cases and in the thirty-eighth weeks of 1949 and the previous year 95 and 43 respectively. Cases increased over last week in 19 prefectures, decreased in 13, and stayed the same in 5, while no cases have been reported for two weeks or longer in the remaining 9. Nearly two-thirds (29) of the prefectures reported cases this week, from one to twelve each. The current and cumulative case rates were 6.4 and 4.1 respectively.

The number of tetanus cases (37) this week increased slightly over the preceding week (35). Last year at this time there were 52 cases and in the same period of the previous year 34. There have been no cases reported for at least two weeks in a third (15) of the prefectures. Changes from last week included 13 prefectures with increases and 12 with decreases, while the remaining 6 stayed the same. Twenty-six prefectures currently reported from one to four cases each. The current and cumulative case rates were both 2.4.

Puerperal infection cases increased from 11 last week to 17 in the present week. There were 19 cases recorded for the thirty-eighth weeks of both last year and 1948. The majority (27) of the prefectures have reported no cases for two or more weeks, eleven had increases, seven decreases, and one did not change. Thirteen prefectures with from one to three cases each accounted for the present total. Current and cumulative case rates were 1.1 and 1.0 respectively.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

No cases of rabies were reported either this week or last week. Two cases were recorded for the thirty-eighth weeks of both 1949 and 1948. The cumulative case rate this week was 0.1.

There have been no cases of anthrax reported since the middle of July. No cases were recorded for the thirty-eighth weeks of last year and 1948. The cumulative case rate as of 23 September 1950 was less than 0.1.

Leprosy cases numbered 18 this week, three times as many as in the preceding week (6). There were 11 cases last year at this time and 8 in the like period of 1948. Three-fourths (34) of the prefectures have reported no cases for at least two weeks. Increases over last week occurred in seven prefectures, decreases in four, and no change in the remaining one. Iwate and Oita Prefectures each reported six cases currently and six additional prefectures one each. The current and cumulative case rates were 1.2 and 0.8 respectively.

The number of trachoma cases increased 5 percent, from 1,849 last week to 1,946 currently. This week's figure was about 20 percent less than that (2,450) recorded for the same week of last year and 13 percent below the corresponding 1948 total (2,242). Cases increased over last week in 24 prefectures, decreased in 21 and stayed the same in the remaining one. There were 315 cases in Saitama Prefecture this week and, at the other extreme, none in Oita. The current and cumulative case rates were 125.5 and 204.0 respectively.

No cases of infectious diarrhea were reported this week. Last week there were two cases, during the thirty-eighth week of last year there were also two cases, and during the comparable 1948 period there was none. The cumulative case rate this week was 0.1.

There were four cases of tsutsuga mushi disease this week compared with two cases last week. Three occurred in Niigata Prefecture which has reported about four-fifths of all cases so far this year. The other current case was in Yamagata, the second to be reported from that prefecture. The current and cumulative case rates were 0.3 and 0.2 respectively.

Schistosomiasis cases decreased from 45 last week to 35 currently. The prefectures reporting cases this week were Yamanashi (21), Hiroshima (9), and Saga (5). Current and cumulative case rates were 2.3 and 1.2 respectively.

Two filariasis cases were reported this week, one in Shizuoka Prefecture and the other in Miyazaki. Last week there was one case reported. The current and cumulative case rates this week were both 0.1.

The four venereal diseases accounted for 6,046 cases this week compared with 6,567 cases last week. Current and cumulative numbers of syphilis cases this week were 2,207 and 92,938 respectively; gonorrhea, 3,531 and 128,641; chancroid, 299 and 11,535; and lymphogranuloma venereum, 9 and 370. Totals were lower this week than in the preceding week for all diseases except lymphogranuloma venereum. Last week syphilis cases numbered 2,269, gonorrhea 3,957, chancroid 334, and lymphogranuloma venereum 7. Comparing totals for this week with those for the same week of last year, all four diseases showed decreases. At that time there were 3,420 cases of syphilis, 3,684 cases of gonorrhea, 371 cases of chancroid, and 13 cases of lymphogranuloma venereum. The current and cumulative case rates for each of these diseases as of 23 September 1950 were: syphilis, 142.3 and 157.7 respectively; gonorrhea, 227.7 and 218.3, chancroid, 19.3 and 19.6; and lymphogranuloma venereum, 0.6 and 0.6.

FOOTNOTES:

1. There were no cases or deaths reported for cholera or plague, and there were also no cases of yellow fever, glanders, or dengue fever.

2. Rates are the numbers of cases or deaths per 100,000 population, estimated as of 1 July 1949, and are computed on an annual basis.

3. A dash (-) indicates that no cases or deaths were reported and that the case or death rate was zero.

4. A rate of 0.0 indicates that there were some cases or deaths but that the rate was less than 0.1.

5. "NA" indicates that data are not available.

6. * Cumulative figures adjusted for delayed and corrected reports.

6.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

DIGEST OF WEEKLY REPORT OF COMMUNICABLE DISEASES IN JAPAN FOR THE WEEK ENDED 30 SEPTEMBER 1950

During the thirty-ninth week, ended 30 September 1950, there were 23,531 cases of the 31 communicable diseases (exclusive of the four venereal diseases) now being reported compared with 22,851 cases reported for the same diseases last week. Some corrections were received this week for preceding weeks in the current year. Totals for nine diseases (typhoid fever, paratyphoid fever, malaria, Japanese "B" encephalitis, whooping cough, poliomyelitis, tetanus, puerperal infection, and trachoma) were lower this week than in both last week and the thirty-ninth week of last year, while totals for three others (diphtheria, tuberculosis, and infecticus diarrhea) were higher currently. No cases of smallpox, cholera, plague, yellow fever, anthrax, glanders, or dengue fever were reported either this week, last week, or in the thirty-ninth week of 1949. Tsutsugamushi cases were higher and schistosomiasis and filariasis cases lower currently than in the preceding week. Data for these last three diseases are not available prior to the current year. Present totals for the remaining nine diseases fall between those reported last week and in the thirty-ninth week of last year.

The number of diphtheria cases reported this week (215) was 27 percent higher than in the preceding week (169). Deaths, on the other hand, decreased from 13 to 5. The present case figure was 62 percent greater than that (133) recorded for the same week of last year and 3 percent above the corresponding 1948 total (209). Cases increased over last week in 26 prefectures, decreased in 13, and stayed the same in 5. No cases have been reported for two or more weeks in the remaining two. Two other prefectures also reported no cases this week while, at the other extreme, Niigata Prefecture with 16 cases continued to report the largest number. The current and cumulative case rates were 13.9 and 13.8 respectively. Corresponding death rates were 0.3 and 1.1.

Dysentery continued to decrease, with 18 percent fewer cases this week (1,714) than last week (2,086), and 363 deaths compared with 468 previously. This week's cases were 81 percent higher than in the same period of last year (947) and over three and a half times the total (470) recorded for the comparable 1948 period. About two-thirds (30) of the prefectures reported fewer cases this week than last week, 13 more cases, while the remaining three did not change. The largest changes were an increase from 3 to 68 cases in Ishikawa Prefecture and a decrease from 155 to 91 cases in Saitama. Tokyo-to, with 283 cases this week, continued to account for a sixth of the total cases. The second highest number was in Niigata Prefecture (150), and cases ranged from 1 to 115 in the remaining 44 prefectures. Bacillary dysentery accounted for 1,699 cases and 362 deaths and amebic dysentery the remaining 15 cases and one death. Current and cumulative case rates for all dysentery were 110.5 and 71.2 respectively. The corresponding death rates were 23.4 and 14.8.

There were 101 cases of typhoid fever reported this week 14 percent fewer than in the preceding week (117). Deaths also decreased, from 12 to 9. The present number of cases was about 40 percent less than in the same week of 1949 (170) and 50 percent below the corresponding 1948 figure (204). There were decreases from last week in a third (15) of the prefectures and increases in about the same number (14). Of the 17 prefectures which did not change, ten have reported no cases for two or more weeks. Approximately two-thirds (31) of the prefectures reported cases this week, from 1 to 12 each. The current and cumulative case rates were 6.5 and 6.8 respectively, the corresponding death rates 0.6 and 0.8.

Paratyphoid fever cases decreased from 38 last week to 31 currently, while deaths (2) remained the same. The present case figure was 35 percent less than that (48) recorded for the same week of last year and 58 percent below the corresponding 1948 number (74). Twenty prefectures have reported no cases for at least two weeks. Changes from last week included eleven prefectures with decreases and eight with increases, while the remaining seven stayed the same. This week's cases were distributed among 19 prefectures having from one to five each. The current and cumulative case rates were 2.0 and 2.4 respectively and the corresponding death rates both 0.1.

No smallpox cases have been reported since mid-July and no deaths thus far this year. There were also no cases recorded for the thirty-ninth weeks of 1949 and 1948. The cumulative case rate as of 30 September 1950 was less than 0.1.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

There have been no typhus fever cases reported for three weeks and no deaths since July. One case was recorded for the thirty-ninth week of last year but none during the corresponding period of 1948. The cumulative case and death rates this week were 1.5 and 0.1 respectively.

The number of malaria cases decreased from 26 last week to 18 in the present week, and there was one death during each week. Current cases were approximately a fourth of those recorded for the corresponding weeks of last year (64) and 1948 (80). There have been no cases reported for two or more weeks in almost half (21) of the prefectures. Cases decreased from last week in 13 prefectures, increased in 10, and stayed the same in the remaining two. Thirteen prefectures having from one to three cases each accounted for this week's total cases. The current and cumulative case rates were 1.2 and 1.5 respectively, the corresponding death rates both 0.1.

There was a further decrease in Japanese "B" encephalitis this week. Cases decreased 12 percent, from 216 to 190, and deaths from 104 to 58. The present number of cases was 17 percent less than that (229) recorded for the thirty-ninth week of last year and 5 percent below the figure (199) for the comparable period of 1948. Decreases from last week occurred in almost half (21) of the prefectures, increases in 13, and no change in 3, while no cases have been reported for two weeks or longer in the remaining 9. The largest change was an increase from 5 to 65 cases in Kanagawa Prefecture. Of these 65 cases, 61 occurred in Kawasaki city. Kanagawa also accounted for over a third of this week's total. Thirty-one additional prefectures had cases this week ranging from one to eleven. The current and cumulative case rates were 12.3 and 7.5 respectively. Corresponding death rates were 3.7 and 2.5.

Scarlet fever cases numbered 45 this week compared with 58 in the previous week, a decrease of 22 percent. There were three deaths reported currently compared with none during the three preceding weeks. The present case figure was slightly higher than that (42) recorded for the same week of last year and a fourth above the corresponding 1948 total (36). Twenty prefectures have reported no cases for at least two weeks. A third (15) showed decreases from last week, nine increases, while the remaining two stayed the same. This week's cases were distributed among almost half (21) of the prefectures and ranged from one to seven. The current and cumulative case rates were 2.9 and 6.6 respectively, the corresponding death rates 0.2 and less than 0.1.

The number of epidemic meningitis cases (32) rose by more than three-fourths over last week (18), while deaths (4) remained the same. During the thirty-ninth weeks of last year and 1948 cases numbered 37 and 31 respectively. There were increases over last week in a third (15) of the prefectures, decreases in seven, and no change in five, while no cases have been reported for two weeks or longer in the remaining 19. Twenty prefectures reported from one to four cases each this week. Current and cumulative case rates were 2.1 and 1.6 respectively, the corresponding death rates 0.3 and 0.5.

There was no change from last week in the number of measles cases (235). The present figure was 40 percent less than that (391) recorded for the same week of last year but 18 percent greater than in the corresponding 1948 period (199). Cases decreased from last week in nearly half (21) of the prefectures, increased in 17, and stayed the same in 3. The five remaining prefectures have reported no cases for two weeks or longer. Fukui Prefecture showed the largest change, an increase from 41 to 88 cases, the present number being 37 percent of the national total. Thirty-four additional prefectures had cases ranging from 1 to 26. The current and cumulative case rates were 15.2 and 30.6 respectively.

Whooping cough cases decreased by almost a fourth, from 1,777 last week to 1,359 currently. This week's cases were over 50 percent fewer than those (2,770) in the same period of last year but more than 50 percent higher than in the like period of 1948 (894). Approximately three-fourths (34) of the prefectures reported fewer cases this week than last week, while twelve had more cases. Tokyo-to reported the largest number of cases this week (106) and Niigata the second-largest (75), while Nara Prefecture, at the other extreme, reported none. The current and cumulative case rates were 87.6 and 178.4 respectively.

The number of tuberculosis cases continued to increase, with 14 percent more cases this week (16,890) than in the preceding week (14,759). The current figure was 83 percent higher than the number (9,219) recorded for the thirty-ninth week of last year and well over twice the total (7,642) for the same period of 1948.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

This increase may be due to an increase in reporting of tuberculosis. Cases increased over last week in 29 prefectures and decreased in 17. Five prefectures reporting particularly large changes, all increases, were Kyoto (from 422 to 852 cases), Osaka (861 to 1,274), Shizuoka (438 to 806), Toyama (211 to 482), and Hiroshima (323 to 590). The most nearly comparable decrease occurred in Hokkaido, from 833 to 614 cases. One-fifth of all cases this week were reported by Tokyo-to (2,129) and Osaka Prefecture (1,274). Numbers ranged from 28 to 873 in the remaining 44 prefectures. Ninety percent of all this week's cases were designated as respiratory tuberculosis (15,214). The current and cumulative case rates for all forms of tuberculosis were 1,089.0 and 621.4 respectively.

There were 15 percent fewer pneumonia cases this week (1,014) than in the preceding week (1,193). They were slightly higher than in the thirty-ninth week of last year (980) and about 80 percent greater than the corresponding 1948 total (560). Cases decreased from last week in 28 prefectures, increased in 15, and stayed the same in the remaining 3. Saitama Prefecture reported the largest change, a decrease from 103 to 49 cases. The current and cumulative case rates were 65.4 and 192.5 respectively.

Six cases of influenza were reported this week compared with one last week. During the thirty-ninth weeks of last year and 1948 there were 13 and 16 cases respectively. Four of this week's cases occurred in Oita and the other two in Saga. Current and cumulative case rates were 0.4 and 34.4 respectively.

There were 71 cases of poliomyelitis reported this week, 28 percent fewer than in the preceding week (99). They were somewhat lower than those (79) recorded for the thirty-ninth week of last year but over twice the corresponding 1948 total (34). Seventeen prefectures reported decreases from last week, eleven increases, and seven stayed the same, while the remaining eleven prefectures have reported no cases for two weeks or longer. Cases this week occurred in about two-thirds (30) of the prefectures, from one to six in each. The current and cumulative case rates were 4.6 and 4.1 respectively.

Tetanus cases (36) remained nearly the same as in the previous week (37). They were a fourth below those (48) in the same week of 1949 but slightly higher than the corresponding 1948 total (34). Cases decreased from last week in 16 prefectures, increased in 12, and stayed the same in 6. The remaining 12 prefectures have reported no cases for at least two weeks. Half (23) of the prefectures reported cases this week, from one to five each. The current and cumulative case rates were 2.3 and 2.4 respectively.

The number of puerperal infection cases decreased from 17 last week to 13 in the present week. Last year at this time there were 17 cases and in the same period of the previous year 22. More than half (25) of the prefectures have reported no cases for two or more weeks. Changes from last week included 13 prefectures with decreases and 8 with increases. Present cases were distributed among 10 prefectures having one or two each. The current and cumulative case rates were 0.8 and 1.0 respectively.

No rabies cases have been reported for three weeks. One case each was recorded for thirty-ninth weeks of 1949 and 1948. The cumulative case rate this week was 0.1.

There has been no anthrax reported since mid-July. During the thirty-ninth weeks of 1949 and 1948 there were also no cases. The cumulative case rate as of 30 September 1950 was less than 0.1.

There were 12 cases of leprosy reported this week compared with 18 last week and 5 and 11 respectively during the thirty-ninth weeks of last year and 1948. No cases have been reported for two or more weeks in over two-thirds (32) of the prefectures, of which three (Chiba, Niigata, and Toyama) have reported none this year. Increases over last week occurred in seven prefectures, decreases in five, and no change in the remaining two. Nine Prefectures with one or two cases each accounted for the present total. The current and cumulative case rates were both 0.8.

Trachoma cases decreased 22 percent, from 1,946 last week to 1,521 currently. The present figure was 42 percent less than that (2,624) recorded for the same week of last year and 21 percent below the corresponding 1948 number (1,932). Cases decreased from last week in 26 prefectures, increased in 18, and stayed the same in the remaining 2. Prefectural case figures this week ranged from 1 in Nara to 145 in Fukuoka. The current and cumulative case rates were 98.1 and 201.3 respectively.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

Two cases of infectious diarrhoea were reported this week compared with none in the preceding week. No cases were recorded for the thirty-ninth weeks of either 1949 to 1948. Chiba Prefecture reported one of this week's cases and Hyogo Prefecture the other. The current and cumulative case rates were both 0.1.

There were eight cases of tsutsugamushi disease reported this week, all by Niigata Prefecture. Last week there were four cases. The current and cumulative case rates this week were 0.5 and 0.2 respectively.

Schistosomiasis cases decreased from 35 last week to about half that figure (17) this week. Sixteen of the current cases occurred in Yamanashi Prefecture, which has reported 70 percent of all cases this year. The remaining current case was in Saitama. Current and cumulative case rates were 1.1 and 1.2 respectively.

One filariasis case was reported this week (from Kagoshima Prefecture) compared with two cases in the preceding week. The current and cumulative case rates were both 0.1.

The four veneral diseases accounted for 6,060 cases this week compared with 6,046 cases last week. Current and cumulative numbers of syphilis cases this week were 2,221 and 95,159 respectively; gonorrhea, 3,524 and 132,165; chancroid, 310 and 11,845; and lymphogranuloma venereum, 5 and 375. Totals for syphilis and chancroid were slightly higher this week than last week (2,207 and 299 respectively), while those for gonorrhea and lymphogranuloma venereum were slightly lower (3,531 and 9 respectively last week). All totals were lower this week than in the same week of last year. At that time there were 3,109 cases of syphilis, 3,569 cases of gonorrhea, 374 cases of chancroid, and 7 cases of lymphogranuloma venereum. The current and cumulative case rates for each of these diseases as of 30 September 1950 were: syphilis, 143.2 and 157.3 respectively; gonorrhea, 227.2 and 218.5; chancroid, 20.0 and 19.6; and lymphogranuloma venereum, 0.3 and 0.6.

DECLASSIFIED E. O. 12065 SECTION 3-402 / NNDG NO. 775013

SUMMARY REPORT OF CASES AND DEATHS FROM COMMUNICABLE DISEASES IN JAPAN WEEK ENDED 30 SEPTEMBER 1950
