To : Hiroshima Military Government Team

Through: Chugoku Liaison and Coordination Office

Subject: Report on Carbide Explosion in Reparations Plant - Hiro Shop, Government Railway

We herewith report to you on the above subject as follows:

1. Date of Explosion:

08.25 hrs. on 9 September 1948.

2. Place of Explosion:

Southern part of Foundry of Hiro Shop, Hiroshima Railway Division.

3. Casualty by Explosion:

Mr. S. Honda, dead at 09.00 hrs. on the same day.
Mr. M. Kamigaki, dead at about 14.30 hrs on the same day.
Mr. M. Oshita, in critical condition.
Mr. G. Nomura, wounded, but will be recovered.
Mr. M. Inada, wounded, but will be recovered.

4. Causes of Casualty:

One carbide tank adjacent to the foundry indicated on the attached map exploded. The Hiro Shop is authorized to produce seventy (70) tons carbide yearly in accordance with the approval given by Hiroshima Military Government Team in letter Serial No. HMGT 095 dated 26 January 1948 only for internal consumption of Government Railway. The carbide which exploded this time was being produced from 6 to 9 September 1948. The explosion occurred in the morning on 9 September when the product was being put into the tank.

Namely the tank was located outside the foundry and on 8 September two (2) tons carbide was put in already. Over two days had elapsed when it was put in. In the morning three carriers perhaps opened the door of the lower part of the sidings to put additional quantity of carbide in the tank.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

HIROSHIMA FINANCE BUREAU

We are getting further detailed statement from the wounded. Two workers who were working on the spot for installing a jib crane to be used for throwing the carbide into the tank were also wounded (of whom one dead later).

5. Details of carbide tank:

Dimension: Length 4 m x Width 2 m x Height 2.2 m.
Structure: Square type, angle steel of 65 x 65 x 6 mm and Steel plate of 4 mm in thickness which was electrically welded.
Input mouth: 56 x 560 mm located at two points of the upper part.
Output mouth: Located at two points of the lower part of the sidings. These are proposed for dual use as input mouth.
Exhaust mouth: Provided at two points by pipes of one inch in diameter.
Capacity: 20 tons.
Manufacture: Kawaminami Seisakusho, Hiro Shop.
Date of Manufacture: 22 August 1948.
Date of Inspection: 23 August 1948. Gas density tested by pressure of 2 kg/cm^2.

6. Damages to reparations facilities:

Window panes of the foundry and the machine shop adjacent to the spot are partly damaged, which will be reconditioned soon. No further damage was done.

7. Our opinions:

a) The Finance Bureau instructed the Government Railway to immediately recondition the damaged parts of the reparations buildings.

b) As the exploded tank was located in certain distance from the reparations equipments, the damages to these are slight. But it is assumed that it will be necessary to place the carbide storage tanks at safer point.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

HIROSHIMA FINANCE BUREAU

c) The causes of the explosion will be thoroughly investigated and necessary actions to remove the defects will be taken immediately.

K. Yamashita
Chief of Kure Branch,
Hiroshima Finance Bureau
