# A <br> SUPPLEMENT 

TO THE

PHARMACOPGEAS,
$\& c$.

Scribere jussit Amor. Orid.

## NOTICE.

The Author's Lessons on the Materia Medica, of which he tias a cabinet of numerous and choice specineens, and his botanical excursions into the neighbourhood of London, will be continued as heretofore. The latter conmence every year in May, and last the whole summer.

[^0]
## SUPPLEMENT

## TO THE

## PHARMACOPCEIAS;

## PROFESSIONAL OR PRIVATE PRACTITIONERS OF MEDICINE;

BUT ALSO THOSE WHICH ARE SOLD BY CHEMISTS, DRUGGISTS, AND HERBALISTS, FOR OTHER PURPOSES;

TOGETHER WITH
A COLLECTION OF THE MOST USUAL MEDICAL FORMULE;
AX EXPLANATION OF THE CONTRACTIONS USED BY PHYSICIANS AND DRUGGISTS ;

THE MEDICAL ARRANGEMENT OF THE AR'LICLES OF THE LONDON YHARMACOPEIA, WITH THEIR DOSES, AT ONE VIEW;

A SIMILAR LIST OF THE INDIGENOUS PLANTS OF THE BRITISH ISLANDS, WHICH ARE CAPABLE OF BEING USED IN MEDICINE:

AND ALSO

A VERY COPIOUS INDEX, ENGLISH AND LATIN, OF THE VARIOUS NAMBS BY WHICH UHE ARTICLES HAVE BEEN KNOWN AT DIFFERENT HERIODS.

LONDON:
PRINTED FOR THOMAS AND GEORGE UNDERWOOD, (2) , FLEN: STREET.
1818.

## WILLIAM simONS, Esq.

A TREASURER OF THE SOCIETY OF APOTHECARIES OF 小H

City of Londom,

## THIS WORK

IS DEDICATED

IN TOKEN OF RESPECT AND GRATITUDE,

By

## THE AUTHOR.

## PREFACE.

TIIE intention of the present Work is to give a concise account of the actual state of our knowledge of drugs in gencral, using that term in its most extensive signification, as including, not only those natural substances and compounds which are employed by physicians or private practitioners in the practice of medicine, but those other substances and compounds which, from their analogy to these, are usually sold by the same retailers as sell medicines for the purpose of being used as dyes, paints, perfumes, cosmetics, liqueurs, \&c.; and upon this account the work appears under the title of a Supplement to the Pharmacopœia, as that book contains only the medicines in use at present with the physicians of London and its environs.

Still, however, the medicines form the greater bulk of the work, fiom the vast variety of them that are employed in different places, and these are properly divisible into three classes :

1. Euporista, or easily procurable medicines, comprehending those which may be collected in the neighbouring fields, \&c. or procured fiom the shops not peculiarly appropriated to the selling of medicines.
2. Officinals, comprehending those which are collected and prepared for use in the shops that are expressly kept for the sale of medicines, and of which the preparation is generally known.
3. Nostrums, or patent medicines, in Latin Chemica, compreliending those whose preparation is not generally known, and which are made only by peculiar persons, who keep their preparation a secret, or at least deny that it is known: as most of these are largely advertised, and their virtues vaunted in posting-bills, a connexion is hence formed between the preparers and the printers of their advertisements, so that in many places the printers and stationers are the usual venders of this class of medicines. This is the
original signification of the term chemical, as applied to thedicines; and the declamations of the old pliysicians against the employment of chemical medicines must be understood to apply to these nostrums, whose composition being unknown to most, and spurious imitations of them ohtruded in many cases into trade, renders them peculiarly unsafe: at present, however, the term is frequently but improperly applied to those preparations which require a peculiar apparatus, and which are therefore prepared by persons who supply the shops with them, as these were the nostrums of former ages, but are now become officinals.

The substances treated of in this work comprehend all those of the first and second class, and some of the third or patent medicines, which being in great request, the wholesale druggists are in the habit of supplying their customers with imitations of them, respecting which the author has procured the receipts of many of the most respectable houses in London; and from the agreement between these receipts in essential articles, it may be presumed that they are as accurate copies of the originals as the secrecy in which the latter are enveloped will allow.

In mentioning the uses of the first class, which principally consists of plants and a few animal substances, it must be kept in mind that the author considers himself merely as an historian, and does not vouch for the reality of the virtues ascribed to them, and even in some places has affixed a note of admiration to mark his incredulity; yet at the same time it is probable that these plants would not have enjoyed the reputation they possess, if they had not been found useful; and the neglect into which they have fallen in England, is partly to be ascribed to their not being given in sufficient duses, still more to the prevalence of apothecary practice; for, as the apothecary, to cover the illegality of his practice, is obliged to sell medicines to his patients, it is his interest to make as small a stock as possible serve his purpose; and in some degree to the credit given by the venders of foreign drugs, and their activity in promoting the sale of them.

As to the officinal preparations, all those kept in the shops of druggists in town or country, whether for the supply of apothecaries, ferriers, or private practitioners, are inserted; the alterations which have been made in the last century in the Pharmacopocias of the Metropolitan College,
with the variations of the two provincial Pharmacoposias, are succinctly shown. It may seem to some that this was an unnecessary task, but it must be considered, that although pure apothecaries, or young beginners fresh from the schools of London, Edinburgh, or Dublin, may pay implicit obedience to the last edition of these works, yet the older practitioners, and the youth trained under them, naturally prefer the preparations to which they have been accustomed; and as private practitioners prefer the study of the celebrated old anthors, who have enjoyed the praises of centuries, and in which the plants, \&c. are designated by their real names, in preference to the modern authors, who have not yet passed through the ordeal of public opinion, and who, in their fondness for novel terms, necessitate their readers to learn an everchonging language; so the druggists, who profess to keep whatever articles are in request, are obliged to retain in their shops the drugs and compositions which, although they are rejected by the colleges, still enjoy their ancient reputation; and retail customers who have been accustomed to the taste of any popular medicine, will prefer the shop where they can procure the article with its old flavour, of which an instance occurs in paregoric elixir, in which the college has discarded the oil of anise seed, which the retailer must either put in, or see many of his customers carry their money to some other shop, where they pay less obedience to the mandates of the physicians. The author would also have willingly given all the compositions that have ever been inserted in the Pharmacopœia, although not used at present, for the sake of those who read the old anthors, as the Pharmacopoeias themselves are difficult to be procured; but this would of necessity have added to the extent of the work, which has exceeded the limit that was set to it.

There is now first published, under most of the officinals, the method which the wholesale druggists of London actually use in making them. In giving these receipts the author has quoted the original weights, \&x. as this affords a hint as to the quantity which is consumed.

Another class of receipts which has never yet been published so distinctly as in the present work, is the substitution or reduction in price of sundry articles: this by many is styled adulteration, and all the topics of vituperative rhetoric are lavished upon the practice, and very justly, when the suidstitutes or reduced articles are sold at the same price as
those which the druggists technically distinguish by the app pellation verum: this, however, is a practice, of which no house of any respectability would be guilty. 'These substitutes and reduced artickes are manufactured for two deserip.tions of customers, first for those very clever per: ons in their own conceit, who are fond of hagerling, and insist on buring better bargains than other people, shutting their eyes to the defects of an article, so that they can enjoy the delight of getting it cheat?; and, secomdly, for those persons who being but bad paymasters, yet, as the ciruggist for his own credit cannot charge more than the usual price of the article, he must therefore deterionate it in value to make up for the risk he rums, and the long credit he must give.

Having thus explained what may be found in this work, it remains to say a few words upon some circumstances connected with the general nature of it; and first, of the College Pharmacopoias, the intention of these werks being much misunderstooct, by the junior members of the profese sion.

Physicians not preparing themselves the medicines they exhibit to thicir patienis, it is very convenient for them to intimate to the neighboming retailers whom the sick employ for this purposes, the medicines they are likely to order, and the mode in which they wish certain compounds, which require time for their preparation, should be kept ready in the shops: this, and this alone, is the true office of a Pharmaсорæеі.

Before the publication of local Pharmacopœias, the apothecaries kept in their shops the six following books: Aricenna on Simples; Scrapion on the same subject; Simon Januensis De Synonymis, and his Quid pro quo; the Liber Servitoris of Bulchasim Ben Aberazerin, treating of the preparation of minerals, plants, and animals; the Antidotarium of Johannes Damascenus or Mesue, arrauged in classes like the present lharmacopcias ; and the Antidotarium of Nicolaus de Salerno, arranged alphabetically, of which there were two editions in use: in the common edition, or Nicolaus parvus, as it was called, several of the compositions of the Nicolaus magnus were omitted, and those that were retained were directed to be made upon a smaller scale than in the other.

The London College of Physicians first published a Pharmacopœia of their own in May 1618 , selected from the
two latter of these works, with a few additions from the modern authors then in repute; but this work was found so full of errors, that it was obliged to be called in immediatelys the whole impression cancelled, and a new edition published in December following: to this some additions were made in 1627 and 1635 , and in 1650 an improved edition came forth, to which some additions were made in $167 \%$. No alterations of much consequence, however, were made until 1720 , when a new edition was published muder the auspices of Sir Hans Sloane: he being a botanist, the botanical names of the plants were added to the officinal names, which was a great improvement, but in some measure counterbalanced by the roots, woods, barks, gums, rosins, and other parts or products of plants being huddled together under the general title of vegetables, with only a note in the margin of the parts or products in use. In the older editions, fiructus cardam. minoris, and semina card. min. were enumerated separately among the drugs, and the latter ordered in the compositions; but in this and the succeeding editions, semina only are reckoned among the drugs, and semina decorticata ordered in the compositions, a mode of expression which is evidently erroneous. The simple distilled waters were now first directed of an uniform strength, viz. 81 b of green herb to the gallon; the sweetened spirits, or cordials and ratafias, were omitted; brandy ordered where proof spirit would now be used; and several syrups, ointments, plaisters, and similar compositions which had gone out of use among the profession in London, were omitted, although it is probable that many practitioness still employed them, as we know that some are even now retained by private practitioners; yet it is evident that the object of the college in all these Pharmacopeias, was not to direct the practice of the kingdom, but simply to inform the retailers what compositions they would do well to keep ready in their shops.

In a new edition, published in 1745 , the system of curtailment was pursued to a considerable extent, no compound being admitted but what had a majority of voices in favour of its insertion; it was also at first proposed to omit the drugs entirely, then to give only a list of those used in making up the compounds in the work; and at last a list was made out of those which the majority of the committee supposed to be the most efficacious. It is from this period that we may date the decline of pharmacological knowledge
among the profession. A great fear of poisons seems to have been predominant in the minds of the compilers; anong other instances, the black-cherry water, one of the few distilled waters that have any marked action, and usually made 1215 of the fruit with the stones to the gallon, was discarded, because when made with tith of stones only to the pint it was poisonous. Great pains were bestowed in restoring the compositions of the ancients to their original names and composition, and in throwing out the superfluous ingredients which a succession of ages had introduced into the shop medicines, so that it may be truly said, that in regard to the syrops, oils, ointments, pills, electaries, and other formulæ of what is called Galenical pharmacy, this edition is still the best hitherto published. In the department usually called the chemical, it was less happy : the most remarkable feature is the changes of name now for the first time introduced: the consequence of this arrangement cannot but be called unhappy, for before this time there existed an intercommunion between the several European nations that used the Latin language, by which the pharmacy of one nation was in some degree common to all; but this communication now began to be dammed up by a local dialect being introduced.

As the edition of 1745 excelled in Galenic pharmacy, the next, of 1788 , may be regarded as the best compendium of chemical pharmacy- the college has produced: although some new names were introduced, they were formed (by Bergmann) on the true Latin module, and such as the improved state of that science called for: lience they were immediately adopted without a murmur by the druggists, and still preferred by them. In the Galenical compositions simplicity was pursued to the utmost, and probably to an injurious extent, since it is well known that a misture of drugs will frequently have more effect than the same quantity of either of them separately, and a mixture of spices is more agreeable than any of them alone. The very compound medicines which had formed the principal instruments of physicians for 2000 years, and some probably twice that period, were discarded; on the other hand, a few powerful drugs, which the college in 1745 had considered as poisons, were restored to the materia medica. Two secretly amended impressions of this edition were afterwards put forth, a circumstance that was productive of error.

The edition of 1809 is chiefly remarkable for the entire
adoption of the French chemical nomenclatnre, in which it must be allowed that the college has avoided the solecism of their Scotch and Irish brethren, by giving the new words the gender they would have had, had they been Latin words, or could be legitimately formed by analogical derivation. It does not appear that any necessity existed for this condeseension, since, although our experimental chemists had adopted this innovation, as being more conversant with the French authors, than with the 1788 edition of the Pharmacopoia, in which a regular nomenclature of salts had been reduced to actual use, yet the Germans, who, both by prescriptive right, and real merit, were entitled to take the lead in chemistry, did then, and do still, refuse to debase their own language, or their Latin works, with such limping barbarisms as sulphas, tartras, \&c.; and even the French schood of mineralogy follow the nomenclature of lergman: nor is this the only change of names introduced in this cdition; many others occur, even in the drugs, as resina abiectis, which had in the old editions and in forcign authors been used for Strasburgh turpentine, was made to signify frankincense; so pix arida, which was constantly used for comm mon black pitch, was applied to white or Burgundy pitch, except that in the unguentum picis aridæ it must be taticia in its old sense, as otherwise the compound would not answer to its English name of black basilicon. It is also evident that in the directions for/tinctura rhæi, the quantities of water and spirit of wine were counterchanged; and in those for oxydum antimonii, an ounce of nitric acid was directed instead of a drachm, by which the process was rendered uncertain, if not impracticable, and a most violent emetic sometimes produced, sometimes a mild diaphoretic. A preference was evidently given, in ordering the chemical preparations, to the moist way, with the idea of enabling the apothecaries to prepare this class of medicines themselves; but in fact the college might more properly have put the whole of them into the drug's, merely noticing the strength of some of them, as they have done with oil of vitriol and spirit of wine; and following the old models of Mesue and Nicolatis, confine their directions to the falenic department, since the chemicals are usually prepared in the country, where houseroom, labour, and fuel are cheap, by manufacturers, who totally disregard the directions of the college, and then exchanged with the London druggists for foreign articles. It
is moreover well known, that few apothecaries prepare even the tinctures and Galenicals themselves, those of large practice not having time, and those who have time to spare, not consuming a sufficient quantity to make it worth their while, especially as the waste increases in proportion as the quantity prepared at once is less: this, then, being the case, the chemicals are still less likely ever to be prepared by the apmthecaries themselves: besides, much of the merit of chemicial processes depends upon their concatenation with others carried on in the same laboratory, to make the waste of one process serve as the ingredients for another, a circumstance that cannot be considered by the college, as depending upon an infinite variety of circumstances, but which has a most material influence upon the price at which the auticles can be brought into the market.

The Pharmacopocia printed in 1815 is only a corrected impression of the edition of 1809 ; the publicity given to the emendation is highly commendable. In this pix arida is still used for Burgundy pitch, and the black basilicon ordered, by the new name of unguentum resinæ nigre, to be made with resina nigra; whether this is meant to signify black pitch as formerly directed, and still used by the druggists in making that ointment, or common brown rosin, hitherto denoted by resina nigra, but which will not communicate much colour, is not explained.

As to the provincial Pharmacopceias, the old Edinburgh was published in 1798, and to that college properly belongs the demerit of curtailing the medical stores of nature, in which they were so unfortunately followed by the London college, in their edition of 174.5 . The new Edinburgh, published 1805, was the first to adopt the French chemical nomenclature, and followed even the idiom of that language in making the names in as masculine. This edition is also remarkable for its sesquipedalian names, and affords a striking example of the fondness of the Scotch authors for the pedantry of technical language. The Dublin of 1807 is in general a copy of the London edition of 1788; but in the chemical part, the French nomenclature was adopted, the names in as being used, according to the English idiom, in the neuter gender. An attempt was made in this part to furnish the experimenter with pure chemical agents, as well as the physician with chenical medicines.

A fiequent source of error arises from the weights with
which the apothecaries ought to compound their medicines being different from that ly which they buy and sell, so that they should have both piles, whereas, the gold and silver smiths, who also use the Troy, buy and sell, as well as compound by it, and therefore require only that pile. Some schemers have proposed to remedy this by introducing a new pile decimally divided, but this would only increase the confusion, unless we could suppose that, by a legislative act, all the old authors could be magically altered to the new standard: and both the ponderal scales would be very awkward to reduce to the decimal standard, which has the inconrenience of having only two divisors without remainders, viz. $\underset{\sim}{2}$ and 5 ; as well the avoirdupois, which seems to have been formed by the common traders, from the continual bisection of a horse-load, taking a new integer whenever the fractional expression became inconyenient; as the Troy, which seems to be a scientific weight, invented in the hierarchal colleges of Iran or Egypt, by the inultiplication of the weight of some standard seed little liable to variation, by twelve, its multiples or aliquot parts, those numbers being chosen, that the integers thence arising might admit of various divisors without remainders being left. If it were thought absolutely necessary to have the ponderal and arithmetical scales the same, it would be far easier to introduce a duodenary and even a hexadenary scale of notation, which would improve arithmetic, and merely oblige persons of education to learn a couple of new multiplication tables, than to alter the weight to which the common people have been accustomed.

In fact, it is only when the common pound of sixteen ounces is inadvertently taken for the Troy pound of twelve ounces that the error in respect to the composition of medicines is of any great consequence; upon this account it were to be wished that the college in their future editions would avoid that source of error, by directing ounces only, without any mention of pounds by weight; for, in using the common ounces, with the drachms, scruples, and grains of the 'Troy, or with the liquid measures, the ratio of error is only as $10+$ to 11 , which is very trifling; and if those that use the common weights were to add an ounce overweight to every ten, whenever the smaller weights, or liquid measures are used in the same composition, the error would be rendered very inconsiderable.

## VEGETABLES.

$V_{\text {egetables }}$ form in every country the greatest number of remedies employed by practitioners in medicine, not being so remote, in respect to their chemical composition, from the solids and fluids of the human body, as to refuse to assimilate with them, and yet sufficiently so as to have, in general, a decidedly marked action upon them.

The number of vegetables which are possessed of medical virtues, and which are sold in the shops of druggists and herbalists, or used by private practitioners, being so great, it is absolutely necessary to adopt some mode of arrangement. Of the two methods now in common use, that of Jussieu is here followed, as being more natural than the sexual system of Linnæus, which is indeed confessed by himself to be a mere artificial arrangement, for the purpose of nomenclature : it must however be allowed, as well in respect to the arrangement of Jussieu, as to the natural orders of Linnæus himself, that the want of a proper clue by which a plant may be botanically investigated, and its place in the system discovered, is a singular blemish; the student being obliged to rest satisfied with the mere ipse dixit of his master. This defect renders both those arrangements inferior to the method of our sagacious countryman, the Rev. Mr. Ray, which is nearly equally natural. The preference thus given to a natural system is also justifiable
on the ground that most of the orders have some common medical qualities, which are the mone distinctly marked, as the order itself is more distinct from others in its botanical characters.

The plants are designated by their common English names, the officmal Latin names by which they are known throughout Europe, and finally, by those given them by Linneus and his followers, when they differ from those last mentioned, in order that references may be made to the works of the old botanists, who were particularly studious of the uses of plants; while the new botanists, on the contrary, study little more than the names of plants, frequently change these names, and are very indifferent as to their uses.

The plants included in this synopsis are not only those mentioned in the several successive Pharmacopocias of the College of Physicians, and in the two provincial Pharmacopœias of Dublin and Edinburgh, but also most of the plants which have ever been described as possessing any medical virtues. It has been judged proper to take in a greater number of plants than is usual, because in country places, remote from the shops, and where persons cannot attain more elaborate and elegant remedies, many excellent ones may be supplied in this way; and the regular practitioner, who may occasionally find himself to be deficient in any officinal drugs, or who may have other motises of convenience to determine his choice, will by this means be enabled to substitute the wild plants that grow around hin for the others.

Herbs for medical purposes ought to be cullected when they begin to flower, and gathered on a dry day, as soon as the dew is off; they should be spread thin, dried as quick as possible by a gentle heat, and kept in a dry, dark place.

Flowers should in general be gathered in full bloom.
Fruits, unless their efficacy depends upon the acerbity of their juice, ought to be gathered when they are ripe.

Roots are best taken up in the begiming of spring, unless otherwise ordered. They, as well as woods and barks, are the better for being fresh, although many will keep a long time without any perceptible decay. Many kinds of roots may be kept fresh in dry sand in a cellar.

The doses of such regetables as exert a very powerful action on the human frame are mentioned under each article; or, if not properly known, a caution is given lest any unlucky accident should occur. The generality, however, of plants, having no very marked action, are taken in powder, in doses of a drachm night and morning; or a sufficient quantity, to give a strong taste or colour to water, is infused or boiled in it, usually an ounce to a pint; and the doses are so regulated, that the soluble parts of about a drachm of the vegetable are contained in each ; and these doses are exhibited three or four times in a day.

The plants that are marked with an asterisk grow wild in the British islands.

## Order 1. FUNGI.

Commonly poisonous; the best remedy in this case, after. immediate vomiting and the exhibition of clysters, is ather zj, in a glass of water. The Russians, however, eat almost every species that are of any size, only stewing them thoroughly, and drinking a glass of brandy after them.

Agaric of the larch. Agaricus, Boletus pini laricis. It grows in the East on the larch : the interior part is friable, light, and used as a drastic purge, dose 3 j to 3 ij , in powder, with some ginger; or an infusion of double that weight.
*Touchwoon, Spunk, Amadou. B. igniarius and $B$. fomentarius. These, when softened by beating, are used for stopping blood; soaked in a ley of salt-petre and dried, they are used as tinder: the Laplanders burn them about their habitations to keep off a species of gad-fly, which is fatal to the young rein-deer.
*B. sulphureus. On drying, evolves needle-like crystals of oxalic acid, nearly pure.
*Agaricus muscarius. Infused in milk, kills flies; juice rubbed on bedsteads expels bugs; dried and powdered, gr. x to xxx, with vinegar, cathartic, sudorific; externally sapplied to ulcers and gangrenes.
*Puff-balis. Crepitus lupi, Lycoperdon Bovista. Narrootic; its smoke stupifies bees, but does not kill them; its yery subtile seminal dust is used as a styptic.
*Trumfles. Tubera terro, L. Tuber. Some are white with a garlic sceut, but the black are more used as an aphrodisiac and heating food, which, however, is hard to digest,
like all other eatable mushrooms : grows under ground, and is seratched or turned up by dogsi or hogs trained for that purpose.
? Scarmet mushmoon. Cynomorium coccincum. Styptic, Эj in wine.

* Jew's bar. Auricula Judu, Fungus sambuci, Peaiza Auricula. Grows on the elder; used, soaked in milk or vimegar, as a gargle in the quinsey, \&c.
*OAK leather. Xylostroma giganteum. Found in the cracks of oaks; used in Ireland as a dressing for ulcers, and in Virginia to spread plaisters upon.
s. iLG.E.

Approach to an animal nature, by coniaining much nitrogen.

Mousse de Conse. Fucus Helminthocorton. This sea moss contains several kinds of geniculated thread-like algæ, as different ceramia, conferva fasciculata, c. albida, e. intertexta, corallina officinalis, fucus purpurcus, f. plumosus (these two last algre are less vermifuge than the others): ulva clarata and u. prolifera are also fonnd in this sea moss, which is rermifuge, taken in the form of a jelly or thick mucilage.
*Dulse, Laver. F. esculentus, $F$. palmatus, $F$. sacetuarinus, and $F$. ectulis.
*Sea girdle and hangers. $F$. digitatus. Contain a nutritive jelly, more or less saccharine, eaten both by man and beast; also burned for kelp.
*Bladder wrack. Quercus marina, F. vesiculosus. Burnt to a charcoal is the regetable Rethiops of the shops; its ashes yield a considerable quantity of alkali; other species of fuci furnish this salt, but generally in a less quantity, therefore this is most usually burned for that purpose.

* Pepper durse. F. pinnatifidus. Diting, aromatic taste, eaten as a salad.

Indian crass, Sea grass. F. Tendo. Used by anglers as the curd of the line next the hook; becomes brittle unless greased: it has lately been said to be of an amimal nature.
*Star shoot: Nostoch, Tremella Nostoc. A greenish jelly, eatable; infused in brandy, it causes a disgust to that liquor in these who drink of it.
*Crow silk, Hairy river weed. Conferva rivularis. This green fibrous plant, found in'stagnant water, smells marshy, is used as a rermifuge by some country people; it is as difficult to burn as fontinalis antipyretica; adheres firmly to glass or paper, and was used by the ancients to bind up broken limbs, keeping it constantly moist.
*Oak lungs, Tree lungwort, Hazei, crottles. Pulwonaria arborea, Lichen arborum, L. pulmonarius. Slightly bitter, opening, detersive, useful in diseases of the lungs; dyes wool of a durable orange colour; yields a gum similar to gum Arabic.
*Iceland moss. Lichen, L. islandicus, Cladonia islandica. Slightly bitter, used as food in Iceland, either made into bread or boiled in water, the first water being rejected; and in the form of tea against colds; mucilaginous, antihectic, aad sometimes purgative. Got into fashion a few years ago, instead of the preceding, as being supposed to be a foreign drug, and therefore of value.
*Lichen velleus. Has the same qualities.
*L. aphthosus. A drastic rermifuge.
*L. plicatis. Astringent.

* L. rangiferinus. This, as well as the last, has an agreeabie smell; used for making Cyprus powder, or French scent bags.
*Cup moss. Muscus pyixidatus, L. pyxidatus. Useful in hooping congh, and other complaints of the lungs; dose, a tea-cup of the infusion, which is generally slightly emetic.
*L. cocciferus. Used for the same purposes, and in intermittent fevers.
*L. prunastri. Astringent, pulmonary; very retentive of odours; used as a basis for perfumed powders.
* Ash-coloured ground hiverworit. L. cinereus terrestris, L. caninus. Much praised as a remedy for hydrophobia, the basis of a powder against that disease.
*L. pustulatus. May be substituted for allspice, dyes a fine red.
* Canary archel, Herb archel. Roccella tinctorrm, Lichen Roccella. Allays the tickling cough attendant upos. phthisis; and from it is manufactured litmus, so much used in dyeing and experimental chemistry.
*L. calcareus. Dried, powdered, and steeped in urine, dyes a fine scarlet.
*Stone crotixes, Arceri,f, L. caperatus. Dyes wool
of an orange colour; but if the wool is previously boiled in urine, of a russet brown.
*L. furinaceus. Yields, like many other species of lichen, a mucilage with water, which on being dried becomes transparent and similar to gum Arabic.
*Cork, Corkier, Arcell, Kenherig. L. omphalodes. Styptic; dyes wool reddish brown, for which purpose it is steeped in stale urine and a little salt, and then made into balls with lime.
*Auvergne archel, Ground archel. L. Parellus. Used, like the Canary archel, in large quantities to mako litmus.
*L. tartareus. Dyes purple, collected in large quantitics for the dyers.
*L. vulpinus. Used to poison wolves, mixed with ground. glass, and strewed upon carcases; dyes wool yellow.

## 3. HEPATIC.E.

*Marchantia poligmorplia. Aperitive, acrid, astringent.

## 4. MUSCI.

*Club moss. Lycopodium clavatum. Herb astringent, restores ropy wine in a few days: polien very inflammable, used in theatres to imitate lightning, by its being thrown across the flame of a candle; repels water so strongly, that if it be strewed upon a basin of that fluid, the hand may be plunged to the bottom without being wetted, hence females employed in delicate works use it to keep their hands free from sweat: in use also to roll up boluses and pills; and in the plica Polonica.
*Uprigitr fir moss. L. Selago. Violently emetic and purgative, fit only for robust constitutions which can bear rough medicines, used by the country ginls in the north to procure abortion; the decoction is used as a wash to destroy lice in swine and cattle.
*Goldilocks. Adiantum aureum, Polytrichum, P. vul. gare. Very sudorific, pulmonary.!

## 5. FILICES.

These pants are sweetish, astringent, and pectoral.
*True maidenharr. Adiantum vulgare, Capillus Ve-
reris, A. Capillus Veneris. A fine pectoral, slightly astringent.
*Black maidenhair, Oak fern. Ad. nigyrum, Asplenium Adiantum nigrum.
*Common maidenhair. Trichomanes, Aspl. Trichomanes.
*Wall rue, Tent wort. Ad. album, Ruta muraria, Salvia vitce, Aspl. Ruta muraria. These have all nearly the same qualities as the true maidenhair.
*Spleenwort, Miltwaste. Ceterach, Asplenium, Scolopendria, Aspl. Ceterach.
*Hart's tongue. Phyllitis, Lingua cervina, Aspl. Scolopendrium. Are astringent, vulnerary, pectoral, and used in spitting of blood, fluxes, and swelling of the spleen.
*Male fern. Filix mas, Polypodium Filix mas. Root slightly bitter, astringent, a good vermifuge in doses of 3 j to ziij; expelling the tænia, either by the assistance of a strong purge, or by repeating the powdered root for some time ; it is also boiled in ale to flavour it.

Calaguala, P...... Root sudorific; grows in Peru.
Scythian lamb. P. Barometz. Root fleecy, has been exhibited as an animal-plant, eating up the grass around it!
*Polypody of the oak. P. quercinum, $P$. vulgare Root saccharine, and slightly purgative: an infusion of 3 j in half a pint of hot water may be taken at twice; by long boiling, becomes bitter.
*Siall oak fern. Dryopteris, P. Dryopteris. Acrid, septic.
*Female fern. Filix fomina, Pteris aquilina. Root an excellent vermifuge.

* Flowering fern. Filix florida, Osmunda regatis. The young shoots, made into a conserve, are a specific for the rickets; root boiled in water makes a kind of starch used to stiffen linen.
*Moon wort. Lunaria, O. Lunaria. Leaves astringent.
*Adder's tongue. Ophioglossum, Oph. vulgatum. A celebrated vulnerary.

OBS. Many other kinds of ferns have qualities similar to those here recited; a ley of the ashes of most of the species has been used as a wash to promote the growth of the hair, from the alkali contained in them stimulating the skin, whence they have been called capillary herbs; and the
roots of some, especially of the male and female fern, have been used for food in a scarcity of corn.

## 6. NAIADES:

*Horse tair. Equisetum, Cauda cquina, E. palustre. Astringent and vulncrary: the other species of equisetum have similar qualities.
*Ducks meat. Lens palustris, Lemma major, and L. minor. Are used externally as coolers.

## \%. AROIDE E.

Plants of this order are pepper-like, or acrid.
*Wake robin, Cuckow pint. Arum, A. maculatuin. Root acrid, incisive, detersive ; gr. $x$ to $Э j$ of the fresh root made into an emulsion with gum Arabic and spermaceti, taken three or four times a day, useful in obstinate rheumatisms; has been used in washing instead of soap; yields a very fine starch, but unless the juice is well separated, it frets and chops the hands of the laundresses.

Colocasia. A. Colocasia. Root used as food in Egypt.
Dragons. A. Dracunculus: Root, and those of several other kinds of arum, used as food.

Dumb cane. A. scquinum. Root used in fomentation for the gout, or bruised with lard to rub on dropsical limbs; expressed juice of the stem and root with one fourth of rum is diuretic, but it can scarcely be swallowed.
*Calamus aromaticus, Acorus verus, A: Calamus. Root a sweet-scented agreeable stomachic, might be used for the foreign spices, dose from $\vdots j$ to $3 j$; it yields a resinous extract with spirit of wine.

Calla palustris. Root used as food.

## 8. TYPHE.

*Burr reed. Sparganium, S. ramosum. and S. simplex. Roots given with wine for the bites of venomous serpents.
*Cat's tail, Reed nace. Typha, T. palustrie. Flowers mixed with hog's lard used to cure burns.

## 9. CYPEROIDEAE.

## Cypenes rotundus.

*C. longus. Is perhaps only a variety of the former.

Roots sweet-scented, heating, dose 5 fs to 3 j , equal to the foreign aromatics; when first powdered the scent is weak, but by keeping it becomes stronger.

Adrue, C. articulatus. Root aromatic, stimulant, used for Virginia snake-root; infusion good in vomiting and fluxes.

C, esculentus. Root eatable, and when roasted makes good coffee.
C. Papyrus. Paper was first made from this reed.

## 10. GRAMINE AR.

Seeds mutritive, the basis of bread.
Maize. Zea, Z. Mays. Flour nourishing, but heavy, forms a resolvent poultice; juice of the stalk contains much sugar.

Rye. Secale, S. cereale. Flour resolvent, emollient, forms a moist doughy bread which is slightly acid, but very refieshing, and may be kept for a long time; seed mostly consumed in the manufacture of the malt spirit drank in the north of Europe; the discoloured flour of spurred rye, mixed with bread, occasions gangrene of the extremities, but in a small dose, is now used as an emmenagogue.

Wheat. Triticum, T. hybermum, and T. astivum. Used for bread in all polished nations; at present it is fermented previously to being baked, but formerly and even yet in religious ceremonies of ancient institution, used unleavened, Superior to other flour, as it contains not only starch, but also gluten and much saccharine matter. From it are manufactured starch, semolina, vermicelli, \&c.

Couch grass. Gramen officinas um, T. repens. Root very vivacious, opening, used in pectoral decoctions; as it is very saccharine, and may be had at the cheapest rate, if not for nothing, it is recommended to be brewed for a table beer.

Barley. Hordeum, H. distichon, and some other species of this genus. Grain cooling, chiefly consumed in brewing, as it makes a coarse doughy bread, formerly used to feed horses. The bran contains an acrid resin, to get rid of which it is made into pearl barley, hordeum perlatum; Scotch barley; or French barley, Fordeum Gallicum; and the taste of what. resin still remains is separated by throwing away the first water in which it is boiled: used in pectoral
decoctions.

Oats. Avena, A. sativa. Seeds the chief food of horses at present; a great part, however, passes through them unchanged, moless the oats are bruised or wetted with salt water, in which case they are completely digested; the decorticated grain, grotes, makes a cooling gruel; the flour, a heavy coarse bread.

Rice, Oryza, O. sativa. Seeds, decorticated, nourishing, astringent, yielding half their weight of mucilage, with scarcely any gluten, do not make bread; a spirit is distilled from it called arrac.

Millet. Milium, Panicum miliaceum. Makes a heavy, drying, binding gruel, much eaten by the negroes.

* Flote grass, Manna grass. Gramen mannce, Festuca fluitans. Seeds decorticated, Russia seeds, nutritive, sweetish.

Indian millet, Barbadoes mileet. Sorghum, Holcus Sorghum. Grain much eaten in the north of China and in Italy: made into polenta, and with millet into macaroni, it reddens the excrements: probably the first grain cultivated by man, as the standard of the Chinese weights and measures is taken from the number of these seeds.

Couscous. H. spicatus. A common food in Africa, where beer is also made from it.

Durpa. H. Durra. Eaten in Egypt by the lower classos.
$H$. cafer. Stalk very saccharine, cultivated in the south of Europe for the manufacture of sugar.

Zizania aquatica. Bears the cold better than any other species of grain, and will probably become the bread-corn of the north, beyond the latitudes in which oats grow freely, from its productiveness; the great objection to it is the seeds not ripening all at one time.

Sugar cane. Arundo saccharina, Saccharum officinate. Cultivated for the manufacture of sugar and cane spirit from its juice.
*Reed. A. vallatoria, A. Phragmites. Root diuretic, depurative; panicles dye woo! green.

Cameis hay., Schonanthus, Juncus odoratus, Andropogon Schernanthus. Stalk and leaves aromatic, sharp tasted, heating, attenuant,' discussive, tonic ; contains a resin analogous to myrrh.
-Indian spikenard. Narduís Indica, A. Nardus. Bitter, smells like cyperus, and has the qualities of camels hay.
*Spring grass. Anthoxanthum odoratum. Nearly resembles the two former: the very agreeable odour of new hay is owing to this grass.

Job's tears. Lachryma Jobi, Coix Lacryma. Seeds diuretic, and used to make anodyne necklaces for teething children.

* Darnel. Lolium, L. temulentum. Seeds mixed with bread-corn, or malt for brewing, render the bread or beer intoxicating.

## 11. PALMA.

Date tree. Phoenix dactylifera. Fruit, dactylus, is saccharine, fleshy, emollient, slightly astringent, and pec. toral.

Sago palar. Sagus genuina.
Cycas circinatis, and C. revoluta. All yield the fecula called sago, from the pith of the trink.

Guinea palm. Elais guinensis. Yields the oil called in the West Indies, mackaw fat.

Cocoa tree. Cocos micifera. Fruit used as food, as is also the fruit bud or cabbage as it is called, the gathering of which destroys the tree; palm oil is likewise extracted from this plant.

Maldivian cocoa nut tree. Borassus sechellensis. Fruit resembling two smooth thighs, highly esteemed assalexipharmic.

Cabbage palm. Areca oleracca. Flowering bud, or cabbage, is highly esteemed; as is also the oil.

Areca, Faurel. A. Catechu. Husk of its fruit, pinang, chewed with betel and a little lime as a sialogogue and stomachic, reddens the spittle : a kind of catechu is extracted from it.

Calamus Draco. Fruit yields the commonest sort of dragons blood, sold in balls wrapped up in palm leaves.

Sugar palm. Arenga saccharifera. Yields sago; and by tapping a considerable quantity of saccharine juice, which speedily ferments, and produces palm wine, or is made into sugar by being immediately evaporated.

Chanmerops. It is a species of this genus which appears to yield the fetid resin called gum caranna.

## 12. ASPARAGI.

The plants of this order are dincetic.
Dracena Draco. Yields, hy incision, the purest dragons bloed; some other sorts of it are furnished by trees of the 85 th oider.
*Herd Paris, Thue hove, Ose berry. Herba Paris, Paris quadrifolia. Alexipharmic, recommended by Boerhaave in maniacal cases, dose $3 j$ a day; leaves and berries narcotic ; root emetic, but dose twice as great as that of ipecacuanha.
*Asparagus. A. officinalis. One of the five opening roots; shoots eaten as a dainty, but produce in some bloody urine, and accelerate the fits of the gout.
*Solomon's SEAL. Polygonatum, Sigillum Salomonis, Convallaria Polygonatum. Root vulnerary, astringent, diuretic, but may be added to flour in time of scarcity, used m a recent state as a cataplasm to take away the marks of bruises; berries, flowers, and leaves acrid and poisonous.

* Lily of the valley. Lilium convallium, C. majatis. Flowers cephalic, in doses of 3 j ; or dried and used as a sternutatory.
* Butchers broom, Knee holly. Ruscus, Bruscus, R. aculeatus. Root one of the five opening ones; berries also cpening.

Horse tongue. Hippoglossum, Bislingua, R. Hyposlossum.

Alexandrian bay. Laurus Alexandrina, R. Hypophyllum.

Rough bindwefd. Smilax aspera.
Widd yam, Bastard ipecacuanha. S: Pscudochina. China. S. China.
Sarsaparmla. S. Sarsaparilla, Roots active cleansing sudorifics, of great use in syphilis, and the rheumatism, in powder, Эj to .5 j .

* Black mhony. Brionia nigra, Tamus communis. Root diuretic, incisive, and opening; externally resolvent; young shoots cateri as asparagus.

Ysm. Dioscorea sativa. Root, which is very large, eaten as a potatoe, but it has a strong taste; a kind of sago is also made from it.

## 13. JUNCI.

The plants of this order are mostly acrid.
*Flowering rush. Butomus umbellatus. Herb aperitive.
*Great water piantain. Plantago aquatica, Alisma Plantago aquatica. Used by the Russians in hydrophobia.
*Arrow head. Sagitta aquatica, Sagittaria sagittifolia. Herb acrid, opening, and incisive; root, bulbous, very nutritive, cultivated for this part by the Chinese.

White heliebore. Elleborus albus, Veratrum, V. album. Root a drastic emetic, in doses of gr. fis, to gr. iij, also used as a sternutatory, and in itch ointments; juice used to poison weapons for war or hunting.

Sevadilla. V. Sabbadilla. Capsules and grains caustic, powder used to kill fleas.

## 14. LILIA.

These plants are generally nauseous and incisive.
*Mendow saffron. Colchicum, C. autumnale. Bulb, in the beginning of summer, a very powerful incisive, diuretic, and expectorant; but is inert in the autumn, or when dried; dose of the recent bulb, gr. fs to gr. iij, made into a pill. Some suppose the seeds lying hid all winter in the bulb to be the active part.

White lily. Lilium album, L. candidum. Bulb roasted is emollient and ripening.

## 15. BROMELIAE.

Curatof. Agave rivipara. Juice of the leaf, mixed with lime-juice and treacle, a good dressing for ulcers; the inspissated juice used as a plaister in gout.

## 16. ASPHODELI.

Juices, cither purgative, nauseous, or incisive.
SQuili. Scilla, S. maritima. Bulb acrid, bitter, naüseous, and emetic, powerfully incisive and diuretic ; dose of the fresh root gr. v to gr. xv; of the dried, gr. j to gr. iij, bis in die.

Aloes. Aloe perfoliata, and several other species. Juice of the leaves inspissated, forms the purer kinds of aloes found in the shops; a water extract of the leayes is
known by the name of horse aloes; the matives of Cochin Chinat exuact a nutritive fecula from some species of this genus.

Graric. Allium, A. sativum, and the bulbous heads called Rocambole.

> Onions. C'epe, A. Cepu.

Shallots. A. ascalonicum.
*Crves. A. Schocnoprasum.
Welch Onion. A. fistulosum.
*Crow Garlic. A. vineale.
*Wild Garlic. A. oleraceum.
Leeks. Porrum, A. Porrum. Are all expectorant, stimulant, and contain a little sulphur; juices, especially that of leeks, powerful diuretics, dissolving the calculi formed of the earthy phosphates: the juice of onions, when fermented, forms vinegar, holding manna in solution.
*Ramsons. A. ursinum. Infused in brandy, used in gravelly complaints; communicates an ill flavour to milk and butter in the spring, as the cows then eat it.

OBS. The bulbs of the asphodels and spiderworts possess qualities similar to those of squills, but in a less degree; as do also those of hyacinth.

## 17. NARCISSI.

Lily-asphodet. Hemerocallis flaza. Expectorant.
*Narcissus, N. poeticus.
${ }^{*}$ Daffodil. $^{\text {N. Pseudo-narcissus. }}$
Tuberose. Polyanthes Tuberosa. Roots emetic; used also as a dressing to burns.

## 18. IRIDES.

Florentrne órrice. Iris florentina. The fresh root is a drastic hydragogue; when dried it is a sialogogue, dose Эj to 3 j , and an errhine; it contains fecula, and is used in perfumery to give a violet scent to oils, $\mathcal{S c c}^{2}$; the juice of the root, 3 j for a dose, has been used in dropsy.

* Yellow water fleur de luce. Acorus adulterinus, P.seudacorus, Gladiolus luteus, I. Pseud-acorus. Root a nauseous drastic purgative, but used by country people, and in dropsy when other medicines fail, dose gtt. haxx of its juice every hour or two in syrup of buckthom; the seeds roasted make excellent coffee, superior to any other sulbstitute.

Hermodactyle. Hermodactylus, I. Tuberosa. Roots incisive and purgative, in doses of Gl's to 3 fs.
*Stinking gladwyn. I. fietidissima. Juice of the root sternutatory, useful also in dropsy and scrophula.

Corn flag. Gladiolus communis. Root has the same qualities as that of iris pseud-acorus, but is weaker.
*Crocus. C. sativus. Root has been proposed to be made into bread in times of scarcity; summits of the pistils aried, saffron, have a strong but agrecable odour, and an aromatic taste, used in doses of gr. v to 3 fs , as cordial, emmenagogue, anodyne, and exhilarant; dyes a fine yellow, much used in foreign cookery to colour rice, \&c. : the best is called hay saffron, crocus in fono; the cake saffron, or crocus in placenta, formerly, and still in some countries, esteemed the best, being now adulterated with marygold flowers, and those of bastard saffron, or safflower, which is perhaps the true explanation of the very different effects ascribed to saffron by medical practitioners.

## 19. MUSA.

None of these are used, by Europeans, in medicine, or sold in the shops of druggists.

## 20. CANNAE.

Plants of this order are warm and aromatic.
Ginger. Zinziber, Amomum Zinziber. Roots in powder, gr. x to $3 j$, heating, aromatic, stomachic, cordial; in infusion, diaphoretic; used also as seasoning to food. There are two sorts, the black, which are the roots scalded and lastily dried in the sun; and the white, each root of which is carefully washed, scraped, and dried.

Bengalee, Cassanunapr. Zevumbet, A. Zerumbet. Root stomachic, hysteric.

Zedoary. Zedoaria, Kompferia rotunda, A. Zedoária. Root stops vomitirg, stimulant, drying, emmenagogue.

Great cardamonis, Amomum in the bunch. Cardámomuт majus, A. verum, A. racemosum.

Lesser cardanoms. Cardamomum minus, A. Cardămomum, Elettaria Cardamomum. Seeds stimulant, drying, assisting digestion, emmenagogue.

Grains of Paradise. Grana Paradisi, Cardamomum maximum, A. Grana paradisi. Seeds aromatic, stimulant,
takte very hot and liting like pepper; used by some in large doses 10 cure agnes: also to give a false strength to wine, beer, vinegar, and other liquors.

Inmin arrow root. Maranta arundinacea. Root yichls a very fine stareh.

Gamangai. Galanga, M. Gulangra. Root stops vomiting, is heating, drying, emmenagogue.

Indln cane, Limin shot. Canna indica. Seeds cordial, vuhncrary.

Cos'cis. Cost. urabicus. Root aromatic, rather acrid, with the smell of orrice, stomachic, tonic, discussive. Distinguished in the shops into sweet and bitter costus, which is merely owing to keeping, the root becoming bitter and stronger by age.

Turmeric. Curcuma, C. longa. Root aromatic, tonic, discussive, and heating; used especiaily in the jaundice and the itch, dose 3 j to yij : dyes a tine yellow, and is used as a seasoning in Indian cookery.

## 21. ORCHIDES.

## These plants are estecmed as highlly aphrodisiac.

Banilloes. Vanilla, Epidendron Vanilla. Pods brown, as thick as a quill, greasy on the outside, and sometimes covered with an efflorescence of flowers of benzoin, scent strong but very agreeable; cephalic, stomachic, used to scent chocolate and liqueurs.

Green withe. E. claviculatum. Expressed juice, in doses of a table spoonful, cathartic, vermifuge, and diuretic.
*Fools stones. Orchis Morio.

* Male fools stones. O. mascula: Roots washed, baked, and ground into powder, called Salep, are extremely nutritive, restorative, and aphrodisiac ; gr. viij render an ounce of water so thick that it will hardly pass through a cloth ; extremely useful to travellers and seamen, as a reserve stock to be used in case of need. The other species of orchis, as also those of satyrium, may be prepared and used for this purpose.

Bastard hellebore. Hellcborine, Serapias latifolia. Root strengthening.

## 22. HYDROCHARIDES.

## These are refrigerant and antaphrodisiac.

*Yellow water inly. Nymphoca hutea.
*White water inly. N. alba. Roots astringent, refrigerant; a weak infusion useful in leprosy, dose a pint night and morning.

Egyptian bean, Jamaica water lily. Faba Agyphaca, Nymphica Nelumbo. Root astringent, as also the liquor that runs out of the footstalk when cut, used in loosenesses and vonitings, also diuretic and cooling; seeds nutritive.

Water caltrops. Nuces aquatica, Tribulus aquatieus, Trapa natans. Herb cooling; nuts farinaceous and nourishing.

## 23. ARISTOLOCHI $\underset{\text {. }}{ }$

The plants of this order are emmenagoguc.
Long-rooted birthwort. Aristolochia longa.
Round birthwort. A. rotunda. Roots, taken to $3 j$ fs, hot, odorous, powerfully incisive.

* Upright birthwort. A. Clematitis.
A. Pistolochia. Roots are efficacious emmenagogues.

Jamaica contrayerva. A. odorata. Root, in infusion, diuretic, purgative, stomachic, and emmenagogue.

Virginia snake root. Serpentaria Virginiana, $A$. Serpentaria. Root antiseptic, heating, alexipharmic, diaphoretic; an active medicine, given in doses of gr. x to 3 fs of the powder, or an infusion of 5 j , every four hours, against the bites of snakes and canine madness. Roots of collinsonia precox, ord. 39 , are frequently mixed with that in the market.

Hypocistus. Asarum Hypocistus. The dried expressed juice of this parasitical plant is very astringent.
*Asarabacca. A. vulgare, A. europooum. Root a drasic purge, working in doses of $Э \mathrm{j}$ to 5 j , if finely powdered, pwards; but if coarsely powdered, downwards; it is also ised as a sternutatory, from gr. j to gr. iij: leaves milder, und were the usual emetic before the introduction of ipecauanha, no. 6 to 9 in whey.

Black svake weed. Serpentaria nigra, A. virginiana. loots are mixed with those of Virginia snake root, and ave the same qualities.

## 24. ELFAGNI.

These plants are usually purgrative, or acrid.
Cirebulic myrobalans. Myrobalani C'hebuli, Terminalia chebula.

Belleric myobalans. M. Bellerici, T. bellcrica. Fruits, taken from 3 vj to $\overline{3} j \mathrm{f}$ s, are astringent.

Yellow myrobalans. M. citrini.
Indian black myrobalans. M. Indici. Appear to be species of the same gellus of plants, are rather purgative. For other kinds of myrobalans, see order 27, 94, and 96.

Varnisil tree of China. T. Vernix. Produces the resin used in varnishing the Indian cabinets.
*Sallow thonn, Sea buckthonn. Hippopfac Rhamnoidcs. Herb purgative; berries, made into a rob with. sugar, an excellent sauce for fiesh fish.

Narrow-heaved wild olive. Elcaghus angustifolia. Vermifuge.

## 25. THYMEL ※无

## Plants of this order are caustic.

EEvergreen spurge laurel. Laureola, Chamaedaphue. Daphne Laureola. Usually sold for mezereon.
*Mezereon, Spurge onive. Chamaláa, Laureola fomina, Mezereum, D. Mezercum.

Spurge flax. Thymelaa, D. Gnidium. Have all similar qualities, but the latter seems the most efficacious. Bark serves as a vesicatory, and ulcerates the parts to which it is applied; but it has been chewed in palsy of the tongue with success; its activity is diminished by rinegar: taken internally, in doses of only a few grains, it is a dangerous drastic, working both upwards and downwards, as well as the berries, grana Cnidia, which are also sometimes steeped in vinegar to give it apparent strength.

## 26. PROTEN.

None of these are used or sold.

## 27. LAURI.

Very aromatic, fruits or berries oily and odorifcrous.
Bay tref. Laurus, L. wobilis. Berries $5^{\text {fs }}$ to.$j \mathrm{jfs}$, very heating, and emmenagogue; a green oil or rather but-
ter is extracted from them by cecoction in water: by the press they yield an insipid fluid oil.

Avocado tear tree: L. Persea. Fruit eatable, stomachic ; leaves odorous, pectoral.

Camphire thee. L. Camphora. Wood distilled with water yields the camphire found in the market.

Cinnanon tree. L. Cinnamomum. Root yields camphire by distillation;

Bark of the first quality, breaking shivery, with a warm Havour, cinnamom, cinnamomum, cinnamomi cortex, lauri cinnamomi cortex;

Bark of an inferior quality, breaking short, with a slimy mucilaginous taste, casia, cassia lignea of the moderns, cassice lignexe costex, lauri cassio cortex;

Twig's, with the bark left on, xylocasia, casia lignea of the ancients;

Dried leaves, folium Indicum, folium Indum, Matabathrum;

Dried receptacle of the seeds, cassia buds, baccoe cassio, cassix lignex flores nondum expliciti, lauri cassix flos nondum explicitus; are stomachic, tonic, and cordial, in doses of gr. v to $Э j$, and are much used in cookery as spices: the bark that is not fit for sale, even under the name of cassia, is distilled with sea water, or a mixture of that and cinnamon water, for its yield of oil..

Wild cinnamon tree. L. Cassia, L. Myrrha. Neither the bark nor any other part is used in medicine, or for other purposes; both bark and leaves are bitter, with a slight flavour and smell of myrrh.

Sassafkas. L. Sassafras. Bark and root active sudorifics of an agreeable odour, heating and drying; yield an essential oil like that of cloves.

Culilawan. L. Culilaban. Bark, cortea caryophylloides, brownish red, flat, a quarter of an inch thick, odour strong, between clove bark and sassafras; leaves resemble those of raventsara : both are heating, stimulant, and stomachic.

Raventsara. Agathophyllum aromaticum. Leaves an excellent tonic cordial spice, form an agreeable cordial, and yield an oil resembling that of cloves.

Nutmeg tree. Myristica officinalis, M. moschata. The kernel of the fruit, mutmeg, max moschata, myristicor nuclci, myristice moschatce fructûs nucleus.
© 2

Membsane clothing the seed, mace, macis. Are stomachic, cephalic, uterine, and cordial; in an over dose, say 3 ij, the nutmeg is soporific and produces delirium.
? Brasilian bean. Faba pichurim, Lauraster Amboinensis. Seed stomachic, astringent, modyne; of great use in diarrhoea and dysentery; yields a concrete oil.

Amemican myrobalans, Jack in a box. Hernandia sonora, and $H$. ovigera. . Seeds oily, but not purgative.

## 28. POLYGONE E.

Yherds acid or astringert, containing' oxalic acid.
Rhubars. Rhabarbarum verum, Rheum, Rheum urdulatum, R. compactum, and $R$. palmatum. Roots purgative, astringent, stomachic, vermifuge, tinging the urine yellow, dose gr. x to $Э_{\mathrm{ij}}$; also good dentifrices: Turkey rhubarb is reputed the best, but the inferior kind of Russian, East Indian, and even English rhubarb, is dressed up by the retailers, and sold by that name. Used also in dyeing.

Rhapontic. Rhaponticum, Rheum Rhaponticum, the radical-leaf stalks of which are used, being peeled, in cookery, instead of gooseberries.
*Blood wort, Bloody dock. Lapathnm sanguineum, Rumex sanguineus.

Garden patience. Patientia, Lap. sativum, Rum. Patientia.
*Dock, Great water dock. Hydrolapathum, Rum. aquaticus, Rum. Hydrolapathum.
*Sharp-pointed dock. Lap. acutum, Oxylapathum, Rum. acutus, the root of which dyes a good yellow.
*Monks rhubarb, broad-leaved nock. Rhabarbarmm monachorum, Rum. obtusifolius.

Bastard monks rhubarb. Hippolapathum, Rum. alpimus. Roots have the same qualities as foreign rhubarb, but rather weaker; hence the dose must be nearly doubled: used in powders, tinctures, and infusions, instead of rhubarb.
*Curled dock. Lap. crispmm, Rum. crispus. Sceds anti-dysenteric; roots bruised and made into an ointment cure the itch.
*Sorrel. Acetosa, Rum Acctosa.
French soriei., Acct. Romana, Rum. scrutata.
*Sheeps somrel. Acet. arvensis, Rum. Acctosella. Roots cooling purges; leaves contain much oxalate of potash, very
cooling, antiscorbutic, eaten in salads; make excellent whey by boiling a few in milk.

Sea side grape. Coccoloba uifera. Fruit very astringent, and on that account dangerous to eat ; the inspissated juice is the common kino of the shops.

* Common knot grass. Centinodia, Polygonum, P. aviculare. Herb vulnerary, astringent.
*Buckwheat. Fagopyrum, P. Fagopyrum. Seeds nutritive, fattening, made into bread, used in poultices, and yield an oil.
*Black bindweed. Volubilis nigra, P. Convolvulus. Seeds equally nutritive as buckwheat, and much easier to cultivate.
*Bistort, Snake weed. Bistorta, P. Bistorta. Root very astringent, dose $Э j$ to $3 j$; tans leather very well; young shoots eaten as greens.
*Dead arse smart. Persicaria, P. Persicaria.
*Arse smart. Pers.urens, Pol. Hydropiper. Are vulnerary, detersive, and diuretic ; dye wool yellow.

OBS. All the polygonums contain a red colouring matter, and may be used to great advantage in tanning; their leares may be made to yield woad.

## 29. ATRIPLICES.

## Most of these are emollient.

Spinage. Spinachia oleracea. Leaves emollient, opening, boiled as greens.

White beet. Beta viulgaris alba. Leaves eaten as a substitute for spinage.

Red beet. B. vulgaris rubra. Root red, nutritive; yields a small quantity of sugar.

Strawberry spinage, Blitum capitatum. Laxative.
Orache. Atriplex hortensis. Emollient,
Sea purslane. A. Halimus.
*Sea orache. A. littoralis. Leaves and young shoots pickled, and eaten in the manner of samphire.
*Narrow-leaved wild orache. A: angustifolia, $A$. patula. Sceds emetic, sudorific, antidysenteric; a good substitute for ipecacuanha.
*English Mercury, Atil good. Mercurialis, Tota bona, Chenopodium Bonus henricus. Herb opening, eaten as spinage, or the young shoots as asparagus.
*Stneting orache. Alriplex olitla, C. Vilvaria.
Oak of Jerusalen. Botrys, Ambrosiu, C. Botrys. Stinking plants, used beat up with sugar, as arr:ihysterics and vermifuges ; their decoction is used externally in eruptions.

Worm cooseroor. C. arithelminticum. Vermifuge.
Mexican tea. C. ambrosioides. A stomachic, antiasthmatic plant of an agreeable smell, used as tea.

Herbe aux charpentiers. Rivina humilis. Pectoral.
Stinking ground pine. Camphorata, Camphorosma monspeliacum. Smells of camphire, is nervine, cephalic, antarthritic.
*Glasswort, Saltwort: Kali, Salsola Kali. Violently emmenagogue, diuretic, and hydragogue: this and the other species of this genus are burned for the alkali yielded by their ashes.
*Saltwort. Salicomia fruticosa. Yields a smaller quantity of alkali than is afforded by the salsola.
*Marsi samphire: $\quad S$. herbacea. Pickled, and eaten as samphire; is also burned for the alkali it yields.

American poke weed, Jucato calleloe. Phytolacca decandra. Root emetic, infusing 1 oz . in a pint of wine, and taking two spoonfuls; juice red, a very common domestic purge in America; leaves bruised,-very detersive, of great use in cancerous cases as a poultice; berries yield a red dye, but which will not stand: used to colour wine.

## 30. AMARANTHI.

*Upright blite, All seed. Blitum minus, Amaranthus Blitum. Refrigerant, slightly astringent.
*Verticlllate knot grass. Corrigiola, Illecebrum verticillatum. . Is refrigerant and astringent.
*Rupture wort. Herniaria glabra: Rather saltish and astringent, diuretic, antinephritic ; juice removes specks in the cye.

## 31. PLANTAGINEE.

These plants. are; in general, vulnerary.

* Plantant, Wayblead. Plantago major.
*Lambs leftuce, Hóiry plantain. P. média.
*Ribwort, Riberass. P. lanccolata. Roots giij to yj, quovis die, useful in vernal àgues; leaves astringeit, vulnc-
rary, used whole as a dressing for wounds; juice of the leaves used as a collyrium, and internally, J j to ij in fevers; if they are intermittent, the dose must be double: a strong decoction may be used for the juice.
* Bucks horn plantain. Cornu cervinum, $P$. Coromopus. Root and leaves beaten up with bay salt, are applied as a poultice to the wrist in agues; a decoction of the leaves is given in disorders of the eyes.

Flea wort. Psyllium Pulicaria. Seeds mucilaginous, purgative.

## 32. NYCTAGINES.

Marvel of Peru. Mirabilis Jalapa. Plant cultivated in England, and the root sold for that of jalap, convolvulus jalapa, see order 43 , but is not purgative.
M. longiflora. Root is not purgative.
M. dichotoma. Root is purgative, and very like the foreign jalap.

## 33. PLUMBAGINES.

The plants of this order are acrid or astringent.
Tootir wort. Dentaria, Dentillaria, Plumbago eniropoea. Canstic, corrosive, used by beggars to produce ulcers in order to excite pity; and in tooth-ach as a masticatory.
*Red behen, Sea layender. Behen rubrum, Limoniuin maritimum, Statice Limonium. Root astringent, used in loosenesses, \&c. ; seeds also astringent. The druggists sell under this name, round transverve slices of a root resembling jalap, of a reddish brown colour.

## 34. LYSIMACHIE.

The plants of this order are esteemed depurative,

* Pimpernel. Anagallis terrestris mas, A. arvensis. Has been used in mániacal cases, and against hydrophobia; flower is an excellent indicator of the weather, and useful in epilepsy, gr. xx , quater in die.
* Blue-Flowered pimpernel. A. fumina, A. corulca. Is of similar qualities.
*Prminose. Primula veris vulgaris, $P$. veris acaulis. Roots dried, $\mathrm{zj}_{\mathrm{f}}$ is a strong emetic; herb cephalic, anodyne, expectorant.

解Ox hip, Great cows hips, $P$. veris elatior. Resembles
the former, of which it is probably a varicty, or a mule plant between that and the common cows lips.

* Cows lips, Pagils. I’. veris officinalis, Puralysis vulgaris. Flowers used to flavour wine, and render it narcotic.

Bear's ear sanicle. Cortusa matthioli. Cephalic, anodyne, expectorant, and vulnerary.
*Yellow loosesthife, Willow herb. Lysimachia vulgaris.
*Money wort, Herb two-pence. Nummularia, L. Nimmularia. Are astringent and vulnerary.

Annual navel wort. Androsace maxima. Diuretic.

* Butiter wort, Yorkshire sanicie. Pinguicula vulgaris. Leaves heal wounds and chaps of the skin; the Welch make them into a purging syrup; they thicken rein deers' milk, turn it sour, and make it keep for any length of time.
*Water pimpernel. Samolus valerandi. Has similar qualities.
*Marsh trefoil, Bog bean. Trifolium paludosum, Menyanthes, M. trifoliata. Very bitter, astringent; root may be mixed with meal, in a scarcity of bread; leaves dried and powdered 3 j , purges and vomits, used as a vermifuge; an infusion of them is extremely bitter, and useful in rheumatism and dropsy; they make a good substitute for hops in brewing, 2 oz . being equal to a 1 t . of hops.
*Fringed bog bean, Dwarf watel lily. Nymphrea lutea minor, M. Nymphoides. Very bitter, antiscorbutic, febrifuge and cooling; may also be substituted for hops.

Montrelier turbith. Globularia Alypum. Root, a drastic purgative; the other species of this genus are also purgative.

* Sow bread. Artanita, Cyclamen, C. europaum. Root, a drastic purge and cmmenagogue, as also an errline; leaves bruised and made into a pessary are emmenagogue, and cause abortion; an ointment is made from it, which, when rubbed on the navel, purges and kills worms.

Soldanella alpina. Has very similar qualities.

## 35. PEDICULARES.

* Milk wort. Polygala vulgaris. Root may be substituted for rattlesnake root, dose in powder is 3 fs to 3 , useful in pleurisy; herb bitter, diaphoretic, in infusion ${ }_{5}$ iiij
taken daily, promotes expectoration, and is excellent in catarrhous coughs.

Polygala amara, has the same qualities.
Rattlesnake root. Senega, P. Senega. Root diaphoretic, diuretic, used in America against the bite of the rattlesnake, either in powder Эj to ij, or ${ }^{3} \mathrm{j}$ boiled in $\mathrm{Hbj} \mathrm{f}_{\mathrm{s}}$ of water to $\nVdash j$, and given by ij at a time.

Polygala theezans. Mixed with tea sometimes, in. Japan.
:Eyebright. Fuphragia, Euphrasia officinalis, Cephalic, ophthalmic.
*Speedwell, Fluellin. Veronica mas, Betonica Pauli, V. officinalis. Leaves slightly astringent, bitter; may be substituted for tea, but is more astringent and less grateful.
*Smallest flufllin. V. spicata.

* Mountain madwort. V. montana.
*Speedwell chickweed. V. arvensis. Vulnerary, incisive, diaphoretic, antiphthisic.
*Wild germander. Chamcedrys syluestris, V. Chameedrys. Leaves, a better substitute for tea than those of speedwell.
* Brooklime. Anagallis aquatica, Beccabunga, V. Bea caumenga. Leaves, when fresh, diuretic, antiscorbutic, eaten as salad ; juice, in a full dose, an easy purge.
*Red rattle, Louse wort. Pedicularis palustris. Nauseous, acrid; its juice, or a decoction used externally in old ulcers; kills lice, although the plant itself is said by Tragus to breed lice in cattle that feed on it.
:Yellow rattle, Cocks comr. Crista gralli, Rhinanthus: Crista gralli. Is used to kill lice, as the former.

## 36. ACANTHI.

These plants are vulnerary and pectoral.
Bears rreech. Branca ursina, Acanthus, A. mollis. Leares diuretic, externally maturative; dye a fine yellow.

Marabar nut rree. Justicia Adhatoda. Leaves purgative.

Balsanr. J. pectoralis. Vulncrary, resolvent, a syrup of it is much praised in disorders of the chest; and it is also used in making the elixir Americain of the French.

Saricocolla shrubs. Penoca Sarcocolla and P. mucronata. Yield gum sarcocol.

Ruellia tuberosa. Used instead of ipecacuanha.

## 3\%. JASMINE.E.

## The sherubs of this order are mostly odorous.

Jasmine. Jasmimum, J. officinale. Flowers recommended in shortness of breath, and in scirrhus of the womb.
*Privet. Ligustrum, L. vulgare. Leaves bitter and slightly astringent ; flowers astringent and temperant, used in washes and gargles for ulcers; berries have a dry spongy pulp, from which a rose-coloured paint may be obtained.

Manya ash. Fraxinus Ortus. 'This, and some other species of this genus, exude from their bark and leaves in hot weather, the saccharine substancce called manna.
*Ash tree. F. excelsior. Bark febrifuge and diuretic; seeds acrid, bitter; leaves 3 vj to $\mathrm{K}_{\mathrm{j}} \mathrm{f}$ s in infusion a good purge, and a decoction of the same has been used to cure agues.

Onive tree. Olea, O. curopca. Ripe fruit yields a fine oil; the lees of which, oleum omphacinum, are astringent, as also the fruit itself and the leaves.

## 38. VITICES.

Agnús castus. Vitex Agnus castus. Flowering tops cooling, drying; and looked upon as anaphrodisiac, whence they were used to strew the beds of the Vestal virgins and Christian nuns.

Tectonia grandis. Leaves used against the thrush and dropsy; and also to purify water.

* Vervain. Verbena, V. officinalis. Febrifuge, vulnerary; used externally as a rubefacient in rheumatism and other pains of the joints.

Turee-reaved vervain. V. triphylta. Leaves drawn through the hand smell like citrons.

Jamaica vervain. V. Janaicense. Juice, cochl. maj. j to ij , cathartic, deobstruent, emmenagogue.

Volxameria inermis, of India.
Avicennia resinifera, of New Zealand. Yield red astringent resins, but little known at present among druggists,

## 39. LABIATE.

## The plants of this order are aromatic and heating.

Sage of virtue, Sifall garden sage. Saluia ceirtutis, S. hortensis minor, S. officinulis. Heating, sudorific, used
in palsy and trembling of the neives; it is also cordial, stomachic, stops night sweats, and the flow of milk after weaning.

Great garden sage. S. hortensis major, S. officinalis. Clary. Sclarra, Sulv. Sclareca.
Purple tor clary. Horminum, Salv. Horminum.. . Sage of Crete. S. creticu.
Ethioplan sage. S. cethiopicr. Excite the nervous system, produce a slight intoxication, used in disorders of the eyes, and are aphrodisiac.

Rosemary. Rosmarinus, R. officinalis. Flowers, anthos, cephalic, nervine, cordial, heating, emmenagogue, and strengthening; honce it is drank as tea in chlorosis.

Canidlan snake root. Collinsonic pracox. Root used for Virginia snake root, and mixed with it by the merchants.

Lavenner, Lavandula anģustifolia, L. spica.
Stike lavender. L. latifolia, Spica vulgaris, $L$. Spica. Flowering tops very odoriferous and yield much essential oil, containing a portion of camphire; they are nervine, antispasmodic, and cephalic.

French lavender. Stocchas Arabica, L. Stochas, Has the same qualities, and is also diuretic.

Curled-leaved mint. Mentha crispa.
*Bergamot mint. M. odorata.
*Pepper mint. M. piperis sapore, M. piperitc.
*Horse mint. Menthastrum, Mentha sylvestris.
*Water inint. Sisymibrium sylvestre, M. aquatica.
*Penny royal. Pulegium vulgare, M. Pulegiumi.
*Water calamint. Calamintha aquatica, M. arvensis
*Spear mint. M. viridis, M. sativa.
*Bushy red mint. M. balsamina, M. gentitis.
Halts penny royal. Pulegium cervinum, M. cervina. Are all"stomachic, promoting digestion, diuretic, and approved emmenagogues, either in powder or infusion; theyall yield oil, containing camphire in considerable quantity, on distillation. The botanical nomenclature of the mint genus is in a state of inextricable confusion, which is continually increasing by the attempts to unravd it.

Baria. Melissa, M. officinalis.

* Common calamint. Calamintha vulgaris, Cimontanas?
Camintha.
M. Culamintha.
*Lesser calamint. C'. odore pulegii, M. Nepeta. Cephalic, useful in nervous and hysteric diseases.
*Bastard badm. Melissa Fuchsii, Melittis melissophylhom. Diurctic, opening.

Sifeet basil. Ocymum Basilicum. Strong-scented, used as an emmenagogue; it was this plant that gave the peculiar flavour to the Fetter Lane sausages of London.

Summer savoury. Saturcja hortensis. More acrid, and hotter than the last, as also more active; it dyes a jellow colour.
*Winter savoury. S. durior, S. frutescens, S. montana.

Mountain hyssop. Thymbra spicata. Vermifuge, as are also the two last.

Hyssof. Hyssopus, $H$. officinalis. Leaves emmenagogue, and pectoral in tea; externally soaked in water or wine, and applied as a cataplasm, used as a discutient for black eyes and other contusions.

Thyme. Thymus, T. vulgaris.

* Mother of thyme, Wild thyme, Lemon thyme. Serpyillum, T. Serpyllum.
*Winter mariooram. Origanum, 0 . vulgare, the tops of which dye purple.

Sweet Marjoham. Marjorana, Amaracus, Sampsucus, O. Marjorana.

Dittany of Crete. Dictamnus Creticus, O. Dictamnus.
*Ground ivy. Hedera terrestris, Chamacissus, Glechoma hederacea.
*CAT mint. Nepeta, Mentha cataria, N. cataria, which is highly alluring to cats.
*Wood betony. Betonica sylvestris, B. vulgaris, B, afficinalis.
*Dead nettle, White archangel: Urtica mortua. Lamium album.

Purple archangel. L. Orvala.
*Red archangel. L. purpurcum.

* Great wild basil. Ocymum sylvestre, Clinopodium. vulgare. All of these have analogous qualities, being heating and strengthening; made into tea with honey, they are diaphoretic, discussive, expectorant, and make excelient wound drinks; some are slightly astringent: ground ivy is
the most commonly used; dittany of Crete was a celebrated vulnerary and astringent among the old physicians.

Jamaica wild hops. C. rugosum. In infusion with honey and alum used as a gargle.

Moldarian mint. Dracocephalum Moldavica. Similar in quality to mint.
*Horehound. Prassium, Marrubium album, M. vulgare. Pectoral, used in coughs and colds, 3 j of the leaves powdered, or ${ }^{3} \mathrm{ij}$ of the expressed juice, or M. fs infused for tea.

Bastard dittany. M. pseudodictammus.

* Black horehound. M. nigrum, Ballote nigrum.

Jamaica spikenard. B. suaveolens; the infusion of which has a great reputation as a powerful diuretic in dropsy and gravel.
*Clowns allheal. Panax coloni, Stachys palustris.
*Stinking dead nettle. S. Sylvatica.
*Narrow-leaf allheal. Galeopsis Ladanum.
*Yellow archangel. Lamium luteum, G. Galcobdolon.
*Water horehound. Marrubium aquaticum, Lycopus e:rropacus.
*Mother wort. Cardiaca, Leonurus Cardiaca.
Bastard horehound. L. Marmbiastrum.
Sage leaf mullein. Phlomis Lychnitis. All of these are strong-scented plants, more or less disagreeable, emmenagogue, antihysteric, anti-epileptic, expectorant, and for the most part vermifuge; externally they are vulnerary.
*Germander. Scordium, Teucrium Scordium.
*Wood sage. Scorodonia, Salvia agrestis, T. Scorodonia, which has been used in brewing instead of hops, but gave too much colour to the liquor.

Jagged germander. T. Botrys.
Syrian herb mastich, Cat thyme. Marum Syriacum, T. Marum. Have similar qualities; this last plant is emmenagogue, $Э_{j}$ to 3 fs; cats are also very fond of it.
*Creeping germander. Chamoedrys, Trissago," T. Chamiedrys.
*Ground pine. Chamarpitys, Iva arthritica, T. Chamapitys. Bitter, tonic, febrifuge.

Poley mountain. Polium montanum, T. capitatum. Lavender-leaf poley. T. montanum.
Cretan poley mountain. Polium Creticum, T. Cre-
ticum. 'These have the same quatities as the former, and are alsu alexiterical.
*Common bugle. Bugula, Ajuga reptans.
*Mountan bugle. A. pyramidalis.
*Self heal, Prunclle, P. vulgaris.
"Hooved wint.ow herb. Lysimachia galericulata, Scutellaria galcriculata.

Monntain monwort. Sideritis montana. Bitter, asitringent, nearly inodorous; the English ones are excellent home febrifuges.

## 40. SCROPHULARI压.

These plants are incisive, attenuant, and nuuscous.

* Knotted figwont. Scrophularia nodosa.
*Watler figwort, Water betony. Betonica aquatica, S. aquatica. Incisive, attenuating, much praised in scrophulous and cancerous complaints.

Hedge hyssor. Gratiola, G. officinalis. A very acrid, drastic vernifuge, useful also in dropsy and jaundice; dose gr . v to Эjfs, beginning with a small one: the inspissated juice gr. xx to xxx is purgative and diuretic.

Capraria bifolia. A West Indian shrub, whose flowers are used instead of tea.

* LoxGlove. Digitalis, D. purpurea.
*Yellow foxglove. D. lutea. Used externally as vulnerary and antiscrophulous ;and internally in doses of gr. fs to gr. ij, as a sedative, and particularly as a diuretic, but great caution is required in using it: the old writers recommend the decoction without any caution, hence it is probably rendered weaker by this process.
*Snar dragon. Antirrhinum majus. Antihysteric, and used externally in ophthalmia.
*Toad flax. Linaria, A. Linaria. Deobstruent, diuretic.

Small toad flax. A. mimus.
*Ivi-leaved toad flax:- Cymbalaria, A. Cymbalaria.
*Fluellin, Temale speedwella: Elatinc, Veroüica. fumina, A. Elatinc. Are all anticancerous, especially the last, the juice of which is very :successfully used as well inwardly as outwardly in foul ihcers and cutaneous eruptions.

## 41. SOLANE R:

The plants of this order ilave, for the most part, a pozerful action on the human body, and are more or less poi= sonous.
*Wimte mullein, High taper, Cows lungwort. Verbascum, Tapsus barbatus, V. Thapsus. Anodyne and pectoral, much employed by private practitioners, farriers, and cow doctors; the down has been used as moxa for the actual cautery; a decoction of ${ }^{3} \mathrm{ij}$ of the leaves in a quart of water, griven in doses of 祭iij every three hours, is of great service in diarrhœas.
*Yellow moth mullein. Blattaria, V. Blattaria. Has the same qualities; is said to attract moths; seeds inebriate fish.
*Henbane. Hyosciamus, H. niger. Leaves a very powerful narcotic, in doses of gr. iij to gr.. $\mathbf{x}$; externally is anodyne or resolvent; seeds narcotic, gr. iij to $x$, the smoke of them applied by a funnel to the diseased tooth is recommended in severe tooth-ache.

Great white henbane. $H$. allus. Is also very active, but milder than the black; sceds used in spitting of blood.

Tobacco. Nicotiana, Petum, Tabacum, N. Tabacum. Leaves when green detersive, acrid, narcotic, and apophlegmatizant; used externally in diseases of the skin, and as a dressing to verminous sores; and internally as an emetic $\mathcal{J}^{\text {fs }}$ to 3 j in water $\mathrm{on}^{\mathrm{j} i \mathrm{i} j}$, and in dropsy and palsy; the smôke of them is used as a stimulating glyster in apoplexy, inveterate costiveness, and apparent death by drowning or hanging, in which last case, however, it is sometimes improper; as, if it does not immediately succeed, it exhausts the patient so much, as to render other means ineffectual. It being necessary that the dried leaves should undergo some kind of fermentation to render them agreeable to smokers and snuffi-takers, the best kinds are moistened with treacle and water during the process of drying: the peculiar flavour of the Macouba snuff of Martinique, which is so much praised, is partly owing to the tobacco itself being the produce of a hot country, and partly to its being moistened with the best cane juice. The cultivators of this country, notwithstanding the separation of the United States, âre
still prohithited froms growing this plant in favour of the neercantile interest.
*Thongy aplies Stramonium, Datura Stranoonium. The whole hert, dried and chopped up, is a strong nareotic, even when mixed with tobacco and smoked, much used lately in asthma; exterually the leaves are anodyne, and used in head-ache and the gout ; seeds may be given in powder to gr. x ; expresserl juice made into an ointment with hogs lard good for irritable ulcers, burns, and scalds.

Metei. D. Metel. Seeds narcotic, more powerful than the last, produce temporary idiotcy, used for frauds.

Mandrake. Mandragora, Atropa Mandagora. Formerly supposed to be aphrodisiac, root gr. iij a powerfil narcotic, or it may be steeped in wine: leaves externally used as an excellent anodyne and resolvent, as also the powder of the root, to indurated glands.
*Deadly nightsihade, Dwale. Solanum lethale, Bella donna, A. Belladonna. Leaves applied to the eye paralyse the iris, they are useful in cancer and scrophula, either applied as poultices, or sprinkled over the sores; used also internally in doses of gr. j to ij in obstinate diseases, acting as a narcotic, diaphoretic, diuretic, and sialogogue. Berries eaten in an over dose, that is, more than three or four, are poisonous; vinegar is the best antidote, as emetics, even tartar emetic Gfs, have in this case scarcely any action; juice of the berries made into syrup, in doses of coch. parv. j , has been given as an anodyne in dysentery.

- Winter cherry. Allelicngi, Halicacabum, Plysalis Alkeliengi. Berries antinephritic, lithontriptic, and diuretic; if in gathering they are rubbed against the calyx, they acquire a nauscous taste, and become purgative.

Jamaica winter cherry. P. angulosa. Juice of the plant, with Cayemne pepper, diuretic and eases the colic.
*Comaron nightshade. Solamum vulgarc, S. nigrum. Leaves used externally as anodyne in erysipelas.
*Bitrer sweet, Woody nightshade. S. lighosum, Dulcamara, S. Duleamara. Diuretic, depurative, in decoction, its taste being covered with milk.

Love apple', Tomatoes. Lycopersicon, S. Lycopersicon. Berries beconing a common sauce in England, much used in the southern countries; exterially anodyne.

Egg piant, Mad apples. Mala insana, Mclongena, S. IEelongena. Cultivated in England for curiosity only;
leaves narcotic; berries boiled and eaten in the warmercountries.

Potatoe. Batata, S: tuberosum. A Peruvian plant ${ }^{\text {b }}$ whose cultivation is spreading rapidly over the whole world, the root yielding a vast quantity of food upon a small extent of ground, and with little labour: when it first began to bè uised, it was supposed to be narcotic, diuretic, and aphrodisiac.

Guineà pepper," Pepper pons. Capsicum, C. ànuum.
Indian pepper, Bird pepper, Tschliles. Piper Indicum, $C$ : fintescens. Berries, which are fleshless, are of a burning heat, irritating, attenuant; 'the powder is given in doses of gr. vj to viiij; also as sauce, or to give a false strength to vinegar, spirits, \&cc.; infused in vinegar, used as a gargle; externally they are rubefacient; with hog's lard; form a liniment for paralytic limbs.

Calebash tree. "Crescentia Cuijete and C. lagenaria. The fruits, whose rinds are used as vessels for various purposes, contain a yellow, sharp, rather disagreeable pulp; used in the West Indies in diarrhoea, dropsy, head-ache ; also externally in burns and in coups de soleil; expressed juice of the pulp, in a dose of 5 iiij, is purgative : a pectoral syrup is also made from it, which is sent over to Europe.

## 42. BORAGINES:

## The plants of this order are moistening and refreshing.

Smbesten. Mÿxa, Cordia Mýyxa, and C. Sebesten. The fruit is softening, moistening, and slightly laxative; exellent bird-lime is made from it.

West Indian lienuar Rhodiun. C. Gerascantrus. sometimes used for the true.
*Borace. Borago officinatis. Flower cordial ; the tops ere formerly used in conl tankards; leaves refreshing, mistening, they contain nitre.
*Garden bugloss, Ox tovge.: Buglonsum horteine, 'nchusa officinalis. The same qualities as the former. Thie iice of the corolla produces a heautiful green with acids.
Al.kaver. Anchusa finctorir. Bark of the root tinges Iy bodies red, hence used in lip-salves, is aperitive, and ghtly astringent.
*Spottel lungwort, Spotten comprey, SAGE of Je-
nusalem, Cums irrs of Jerusalem. Pulmonaria mackIosa, $P$. officinalis.
*Smale wild borage, Great goose grass, German Madwort. Asperuga procumbens.

Small yellow alkanet. Onosma echioides.
*Mouse ear, Scorpion grass. Myosotis scorpioides a, M. arvensis.
*Water scorpion grass. M. scorpioides $\beta$, M. palustris.
"Small wild bugloss. Lycopsis arvensis.
Creeping bugloss. L. vesicularia. Are all pectoral plants.
*Gromwell, Bastard alkanet. Milium Solis, Lithospermum, L. officinale. Seeds are diuretic; juice of the root used to paint the face red; bark of the root tinges wax jike the foreign alkanet.

Turnsole. Heliotropium europceum. Softens warts, and makes them fall off; taken internally it opens the belly.

* I amaica turnsole. H. jamaicensis. Plant in decoction diuretic.
$\because$ Vipers bugloss. Echium, E. vulgare. Root opening and slightly astringent.
* Comfrey, Great consound. Symphytum, Consolida major, S. officinale. Root astringent, glutinous, and celebrated as a vulnerary; leaves used to flavour cakes; young shoots esculent.
*Hounds tongue. Cynoglossum, C. officinale. Roots astringent and sedative, like the other species of this genus; used externally, and internally in decoction, in scrophula: the herb bruised drives away mice.

## 43. CONVOLVULI.

## These are usually purgative.

Jalap. Jalapium, Jalapa, Mcchoacanna nigra, Convolvulus Jalappa. Root a very active purgative, in doses of 3 fs to 3 j , in powder. In hypochondriacal disorders and hot bilious temperaments it gripes violently, and seldom acts properly as a purge.

Turbiti. Turbeth, Turpethum, C. Turpethum. Root has qualities similar to jalap, but is rougher in its operation. Entirely driven out of English practice by jalap, which is only half the price of this root.

Mechoacan. Mechoacanna alba, C. Mechoacanna. Root less active thian the preceding, and not so fatiguing in its operation.
*Sea colewort, Scotch scurvy grass. Soldanella, Brassica marina, C. Soldanella. Root a strong hydragogue, used in Germany.

Aleppo scammony plant. C. Scammonium. The roots of this plant yield, by incision, the grey gum resin, called Aleppo Scammony, to be distinguished from the b'ack, called Smyina, yielded by the periploca scammonium, in order 47.
*Bindweed. C. sepium and C. arvensis. The juices of these plants are purgative.

Sea side potatoe siff. C. brasiliensis. Root, in decoction, purgative ; yields scammony.

Sweet potatoes, Spanish potatoes, C. Batatas. Root nutritive, supposed formerly to be aphrodisiac, as appears by the allusions of our old playwrights.

African ligium Rhodium. C. scopurius. The wood has a scent of roses.
*Dodder of thyme. Epithymum, Cuscuta Epithymum.
*Great dodder, Hell weed. C. europcea. Parasitic plants, composed of interlaced filaments, without leaves; the epithymum is the most eqteemed, as being more aromatic, bcth to the taste and smell; juice purgative and deobstruent; externally used against the itch.

## 44: POLEMONII.

*Greer valerian, Jacob's ladder. Polemoinium caruleum. Root is astringent, antidysenteric, and vulnerary.

## 45. BIGNONIA.

Gingelin, Vangloe. Sesamum orieritale. Seeds yield an oil which is sufficiently mild to be used for food, and in emulsions as a pectoral; the seeds of gold of pleasure, myagrum sativum, order 63, are sold in Europe for those of sesamum.

Bigionia radicans, B. sempervirens, and B. echinata. Roots vulnerary, sudorific, employed in America against the bites of venomous animals.

White cedair. B. leucoxylon. Alexipharmic, used against the poison of the manchineel apple.

## 46. GENTIANE.

The plants of this order are febrifuge.
Great yellow gentian. Gentiana, G. hutea. Root very bitter, febrifuge, vermifuge, antiseptic, dose in powder gr. x to Эij:
*Lesser centaury. Centaurium mitus, G. Centaurium, Chironia Centaurium. Flowering tops powerfully bitter, febrifuge, and vermifuge ; it is used against obstructions, jaundice, weaknesses, and is reckoned a specific in hydrophobia; sometimes proves cathartic : externally in decoction it destroys lice, and cures the itch.

Gentiana cruciata. Antiseptic, bitter, stomachic.
*Heliwort. G. Amarella. Used in disorders of the liver, and amenorrloea.
*Marsh gentiax, Calathlai violet. G. Pneumonanthe. Less active, but bitter, hepatic, as well as its congeners.

Wora grass, Carolina pink. Spigelia marylandicu, and $S$. anthelmia. Bitter herbs, used to expel lumbrici from children; dose of the powdered root or herb, gr. x to jj, night and morning; expressed juice, cochl. maj. j to children of four or five years old: infusion of the herb eoch: maj. ij, for the same age.

Ophiorrhiza Mungos, and O: Tanceolata. Roots bitter, alexipharmic, used in the East Indies against the bite of venomous serpents, analogous to serpentaria.

## 47. APOCYNI.

Rose bay, Souti Sea rose. Nerium Oleander. Internally it is poisonous, as also its distilled water ; externally astringent, antipsoric, and sternutatory; wood used to clear muddy water ; leaves acrid, poisonóus, infused in oil used in itclr.

Bela-Aye. N. antidysentericum. A brown astringent bark brought from Ceyloin and Malabar.

Echires syphilitica. Used in Cayenne, in syphilis, but has less action in cold countries.

Swanlow wort. Asclepias Vincetoxicum. Root irritating, forcing out a sweat, and therefore thought to be alexipharmic and antilydropic.

Syrian dogs bane. A. syriaca. Milk of the plant a drastic poison; leaves, used externally, are resolvent.

Bastard ipecacuanha, Red head. A. curassutica. Root whitish, mixed with ipecacuaiha, but less active than. that root, dose $\exists_{j}$ to Эiij ; $^{\text {; }}$ expressed juice of the plant also emetic, coch. maj. j to ij ; or as a clyster in bleeding piles: bruised leaves applied to fresh wounds.
A. asthmatica. Used in the East Indies in small doses for the asthma.

Scamiony ipecacuanha. Cynanchim Ipecacuanta. This brown East Indian root is also used as an emetic.

European scammony. C. monspeliacum. The juice of this plant is weaker than scammony, but is mixed with it in the warehouses.

Smyrna scammony plant. Periploca Scammonium. The milky juice of this plant is stronger than the other kinds of scammony; see order 43 .

Vomiting scammony. Periploca emetica. The root is a kind of ipecacuanha.

Scammony Senna. Periploca greca. Leaves are collected in Syria, \&c. to mix with senna, whose purgative virtue they increase, sometimes to a violent degree; they are more pointed and longer than those of senna.

Venetian dogs bane. Apocynuin venetum. A dangerous poison, smells strong and disagreeable; leaves mixed up with grease kills dogs, wolves, foxes, \&c.

Nux vomica. Strychnos Nux vomica. Seeds buttonshaped, velvety, of a horny substance, very bitter, emetic, and poisonous to most animals; they act upon the nervous system, and are narcotic : much used by the London porter
brewers.

Saint Ienatius's bean. Ignatia amara, S. Ignatia. Seed has the form of a nut, excessively bitter, occasions giddiness, convulsions, and yomiting; but has been used in small doses to cure agues.

Syakewood. Lignum colubrinum, S. colubrinum. Root ceasions tremblings, is erretic, vermifuge, very bitter and erviceable in stubborn intermittents.

Strychnos potatorum. Wood and seeds very bitter, used ) render muddy water clear:
*Periwinkie. Vinca Pervinca, Vinca minor.
${ }^{*}$ Gieater pertwinkie. V. major. Leaves astringent, atidysenteric, contracting and strengthening the sexual orins, also expectorant: in hot climates, the plants of this nus acquire poisonous qualities.
nux ahouat. Cerbera Ahmuai and C. Thevetia, Dreadful poisons. The seeds, which are in the form of little bells, are to be found in some collections of drugs.

Bohon upas. C. oppositifolia. The famous Molucea poison tree.

## 48. SAPOT AE.

Neese berry. Achras Sapota. Diuretic; bark may be given for the Peruvian bark.

Sapodilla tree. A. mammosa. Kernel bitter, makes a strengthening emulsion.

Star aprle. Chrysophyllum Cainito. Juice of the unripe fruit, with orange juice, very astringent.

## 49. GUAIACANE.

The plants of this order are resinpus and odorous.
Cane storax tree. Styrax officinale. Yields, by incision, the resin called cane, or dry storax.

Benzorn raurel. S. Benzoin. Yields, by incision, the resin called benzoin.

## 50. RHODODENDRA.

Dwarf rosebay. Rhododendron ferrugineum. Much used in the north of Europe against rheumatisms and eruptions.

Yellow rhopodendron. R. Chrysanthum. Leaves austere, astringent, bitter, stimulant; diaphoretic and narcotic; used in Siberia against the rheumatism, 3 ij of the dried leaves, infused in half a pint of water, kept hot all night, and drank in the morning.

Marsh cistus, Wild rosejary. Ledum palustre: Gives an agreealle odour to beer, and renders it heady ; also drives away insects.

Labrador tea. L. latifolium. Leaves used as a substitute for tea.

Azafea pontica. Bees which feed upon it produçe poisonous hoiney.

> 51. ERIC历.

The plants are generally antiherpetic.

* Bearberiy. Uva ursi, Arbutus Uéa ursi. Leàes bitter, astringent, much praised in disorders of the urinary passages, and even thought to be lithontriptic; dose, in
powder, gr. $\mathbf{x}$ to $Э \mathrm{ij}$, ter quaterve in die; leaves boiled in acid dye brown, and are used also to tan leather.
*Strawberry tree. Arbutus Unedo. Fruit astringent. The medical student should be mindful of the pronunciation of arbutus, as the gardeners lengthen the middle syllable, contrary to all classical authority.
*Black whortleberries, Bilberries. Vaccinia, Myrtillus, V. Myrtillus. Berries acidulous, refreshing, useful in fevers, also antiscorbutic ; would make wine.
*Great bilberry. V.uliginosum.
*Red whorts. V. Vitis idcea.
* Cranberries. V. Oxycoccus. Used in tarts and preserves, and would make good wine.
*Heaths. Erica vulgaris, E. herbacea, E. purpurascens, \&c. Used in fomentations and baths, against rheumatism and paralytic affections, causing a sweat: dye a fine yellow, and tan leather.
*Rosemary-leavied andromeda. Andromeda polyfolia. Has the same qualities as the preceding.
*Wintergreen. Pyrola, P. rotundifolia. Vulnerary, formerly in great esteem.

## 52. CAMPANULACE

The plants of this order are generally depurative.
*Rampions. Rapunculuis esculentus, Campanula Rapanculus. Root is eaten, raw or boiled, in salads, being far more delicate than úrnips or radishes; seeds ophthalmic ; juice odontalgic.
*Great throatwort, Canterbury bells. Trachelium, C. Trachelium. Root eaten in salads; herb astringent, recommended in quinsey, tumours, and inflammation of the mouth.
*Hairy sheers scablous. Scabiosa ovilla, Jasione montana.
*Horned rampions. Rapunculus corniculatus, Phyteuma orbiculare.

Spiked rampions. P. spicata. The same qualities as great throatwort.

Blue cardinal flower. Lobelia syphilitica Root depurative, antivenereal, used in decoction.

## 53. CICHORACE E.

These are in general lactescent and depurative.
Endeye. Cichorium, Seris, C. Endivia.
*Wild succory. C. agreste, C. Intylus. An excellent aperitive, hepatic and attenuant, very useful in fevers; root; dried and ground to powder, used to improve coffee; the seeds are one of the smaller cold ones.
*Nipplewort. Lampsana, Lapsana communis. Used for healing sore nipples; in other respects agrees with the former.

Blue gum succory. Catananche carnlea. Similar to the preceding.

Golpen thistle. Scolymus maculatus. Its root may be used instead of eryngo.

* Italian letruce. Scariola, Lactuca Scariola.
- Letruce. ' Lactuca, L. sativa. Refreshing, slightly anodyne, laxative, and antaphrodisiac; seeds of the latter, one of the smaller cold ones.
*STRONG-SCENTED WILD Lettucr. L. sylvestris major odore opii, L. virosa. Very narcotic and anodyne, occasions giddiness; inspissated juice smells like opium.

Rushy gum succory, Chondrilla juncea. Laxative, diuretic; used in dropsy, gr. xviij to $\mathfrak{z i i j}$, in twenty-four hours.

Long-rooted hawkweed, Hieracium, Sonchus ar vensis.
*Smooth sowthistle, Hares lettuce. Sonchus loevis, S. oleraceus loevis.
*Prickly sowthistle. S. asper, S. oleraceus asper. These and the other species of this genus, as well as those of picris, crepis, prenanthes, hyoseris, \&c. possess similar qualities with lettuce.
*Hawkweeds. Hieracium. Various species. Bitterer than the preceding, and more useful as opening medicines; slightly astringent.
*Dandelion, Piss-a-bed. Dens Teonis, Taraxacum, Leontodon Taraxacum. Blanched leaves used in salads, very opening, refreshing, diuretic; juice, or strong decoction of the roots, ${ }^{5} \mathrm{j}-\mathrm{iv}$, bis terve in die, detergent, aperitive; root roasted, used as coffee.

Leontodon bulboshs. Roots anodyne.
Scorzonera, Vipers grass. Scorzoncra hispamica, Root opening, slightly diaphoretic, and diuretic.

* Yellow goats-beard, Go to bed at noon Tragopogon pratense.
*Salsafy. T. purpureum, T. porrifolium. Roots nourishing, opening, and supposed to be useful in affections of the chest.

## 54. CINAROCEPHALAE.

The herbs of this order are depurative.
*Great Burdock. Lappas. Bardana major, Arctium Lappa. The young shoots stripped have been eaten as asparagus; root used in disorders of the skin, diaphoretic, diuretic, also useful in dropsy, ${ }^{5} \mathrm{j} \mathrm{ij}$ of the fresh root boiled in three pints of water to two, and the whole drank in a day and night.
*Our lady's thistle, Milk thistle. Carduus Ma-? rice, C. marianus. Pectoral, antipleuritic, aperitive.

Artichoкe. Cinara, Scolymus, C. Scolymus.
Chardoon. C. Cardunculus. Aperitive, diuretic, and aphrodisiac.

Carline thistle. Carlina, Chamoeleon albus, Carlina acaulis. Root restorative, useful after great fatigue, when proper refreshments cannot be procured: formerly in common use with soldiers and foot travellers.
*Prickly carline thistle. C. vulgaris. Diuretic and diaphoretic.
*Coman cotton thistle. Acanthium, Onopordum Acanthium: Qualities the same as the preceding: also astringent and used to coagulate milk.

Cnicus Eriophorus. Used in scirrious tumours.
Atracerylis humilis and A: gummifera. Analogous to carduus benedictus ; coagulate milk.

Bastard saffron, Safflower. Carthamus, Cnicus, Cn: tinctorius. Flowers used in dyeing and to adulterate saffion; seeds purgative and emetic.

Distaff tiristle. Atractylis, Čn. lanatus. Root depurative.
"Sawwort. Scrratula, is tinctoria. Vulnerary; dyes yellow with alum, but is inferior to weld, and therefore used only for coarser cloths.
*WAY thistle. Carduus àvensis, S. arvensis. Useful in scirrhous tumours; yields a sort of galls, considered as astringent.
*Blue bottie. Cyanus segetum, Centaurea Cyanus.

Great blue bottre. Cyanus major, Cent. montana. Flowers cooling, astringent.
*Knapweed, Matrelion. Jacea nigra, Cent. Jacea. Astringent.

Centaurea Stocbe. Qualities the same as the blue bottle.

Great centaury. Centaurium majus, Centaurea Centaurium. Root vulnerary, astringent, anti-dysenteric.

Centaurea amara. Odorant, but analogous to the former.
*Star thistle, Calcitrapa, Carduus stellatus, Cent. Calcitrapa.

Carduus benedictus. Cent. benedicta. Root very diuretic, deobstruent, lithontriptic; leaves alexipharmic in infusion,

## 55. CORYMBIFERAE.

Cacalia alpina.
C. saracenica. Useful in coughs; the juice allays the tickling in the throat.
C. anteuphorbium, Serves as an antidote to euphorbium.
*Hemp aghmony, Eupatorium Avicennce, E. cannabinum. Rather bitter, hepatic, aperitive, useful in catarrh, cough, and cachexy, also diuretic and vulnerary; root. à drastic purge.
*Mountain cudweed, Caṭs foot. Gnaphalium mone tanum, G. dioicum.

Gnaph. tomentosum. Flowers recommended in the violent running of the nose in children, slightly astringent and diaphoretic.
*Jersey cudweed. G. luteo-album.
Eternal flower. Stochas citrina, G. Stachas. Tops used in obstructions and colds.
*Cudweed, Herb impious. Gnaphalium, Filago germanica.
*Least cudweed. Gnaphalium minimum, F. montana. Friago arvensis.
Filago Leontopodium. Qualities as the preceding; alsa astringent and discussive, externally applied.

* Ploughman's spikenard. Conyza, Baccharis, C. squarrosa. Root and leaves used in ointments against the itch and farcy, and in wine against the jaundice.

German goldilocks. Chrysocoma Linosyris. Anthelmintic, deobstruent.
*Fleabane. Erigeron acre.
*Canadian fleabane. E. canadense. Are diuretic, lithontriptic, and vulnerary.

Starwoat. Aster Amellus. Leaves discussive, vulnerary, resolvent; and useful in angina.
*Gouben rob. Virga aurea, Solidago Virga aurea. A celebrated vulnerary, diuretic, useful in spitting of blood. American golden rod. S. canadiensis. With alum, dyes wool, silk, and cotton a beautitul yellow,
*Eficampane. Helenium, Enula campana, Inula Heleniun Root aromatic, slightly bitter, an excellent tonic, diaphoretic, and stomachic; useful in asthma, hooping cough, and in uterine and exanthematous diseases, usually given in infusion, 3 j for a dose; externally antipsoric : a decoction of the root cures the scab in sheep.

Sweet-rooted starwort. Inula odora. Is more aromatic.

Middee size fleabane. Conysa media, Inula dysenterica. A very powerful tonic in diarrhœa.

* Tleabane. Pulicaria, Comyza, Inula pulicaria. Drives away insects by its smell.
*Colts foot. Tussilago, Farfara, T. Farfara. Leaves form the basis of most of the British herb tobaccos; used also externally to diminish inflammation; an infusion of the dried leaves is nuch used as an expectorant in coughs and shortness of breath as tea, or the steam is inhaled for the same purpose: a strong decoction of them is of considerable service in scrophulous cases; the downy substance, on the under side of the leaf, dipped in a solution of salt-petre, and dried, is an excellent tinder; juice drank liberally serviceable in calculous complaints.

Alpine colts foot. T. alpina. Has the same qualities.
*Butrbrbur. Petasitcs, T. Petasites. Leaves used to dress ulcers; flowers strongly diaphoretic, diuretic, useful in asthma ; root used as a remedy against the tapeworm.
*Grocndse!.. Erigeron, S. Senccio vulgaris.
*Ragwort, Seggrum. Jacobra, S. Jacobrea. Used in poultices against inflammation, and in colic pains ; and also as a gargle in sore throat.

Alpine groundsel. S. Doronicum. Infusion and steau of the infusion used in astlma.

Fbench mabycold. Tagetes patula. The dried juice
used in disorders of the eyes; but the strong smell of the plant seems to show that it also possesses active properties, analogous to those of marygold : flowers dye yellow.

German leopards bane. Arnica montana. Root discussive; leaves attenuant, diaphoretic, and diuretic, in doses of gr. v to gr. $x$, in larger doses they induce vomiting until the stomach is used to them; they are mich used in bruises from falls ; flowers may be substituted for Peruvian bark, in intermittents and gangrenes, $3 j$ to be taken in two days, beat up with honey into an electuary.
*Leopards bane. Doronicum Romanum, D. Pardalianches. Root aromatic, discussive, used by the sportsmen of the Alps against giddiness.

Marygold. Calendula officinalis, Flowers cordial, hepatic, diaphoretic, and emmenagogue.

* Daisy, Small Daisy. Bellis minor, Consolida minima, Symphytum minimum, B. perennis. Root antiscrophulous: leaves in salads open the body, used in vulnerary fomentations.
*Great daisy, Ox eye varsy. B, major, Chyysunthemum Leucanthemum.
*Corn marygold. Chrysanthemum segetum. Both these are discussive and attenuant, when used externally; and given against the jaundice, asthma, and shortness of, breath.:
*Eeverfew. Matricaria, Parthenium, M. Parthenium.
* Common camomile. Chamamelum vulgare, M. Chamomilla. Emmenagogue, stomachic, carminative, anticolic; and used externally as a fomentation in nephritic pains.

Tanacetum Balsamita. Leaves stomachic, cordial, cephalic, uterine, supposed to diminish the narcotic power of opium ; seed vermifuge,
*Tansey. T. vulgare. Vermifuge, uterine, diuretic; used in colic pains and in gout; dose in substance 5 j , or more, usually drank as tea; seeds vermifuge, substituted for wormseed or santolina.
*Mugwort. Artemisia, A. vulgaris. Tops very active uterines in decoction as a bath; mixed with rice and sugar, are, by the Chinese women, used as a pessary.

Moxa. A. sinensis and A. lamurinosa: The down of the leaves, formed into snall cones, is burned on the place affected in gout, rheumatism, sce.

Southernwood. Abrotanum mas; Art. Abrotanum. Tops very discussive, antiseptic, vermifuge, and tonic.

Wormseed, Semen contra, Semen cine. Santonicum, Art. Santonica? A. contra? and A.judaica? The seeds are used as a vermifuge, in doses of gr. x to 3 fs , three or four times a-day, when lumbrici are suspected to exist in the intestines: tansey seeds are substituted for them; they are also emmenagogue, stomachic.
'*Wormwgod. Absinthium vulgare, Art. Absinthium. Stomachic, splenic, hepatic, excites the appetite, promotes digestion, antiseptic, and vermifuge.

True Roman wormwood. Absinthium Romanum, Art. pontica.

Alpine wormwood. Art.'rupestris.
*SEA wormwood, Common Roman wornwood. Absinthium maritimum, Art. maritima. Very similar to the former ; made iuto conserves, are used to prevent dropsy ; the last is the mildest, but the weakest.

Tariagon. Dracunculus horiensis, Art. Dracunculus. Excites the appetite and the menses, heating, carminative.

Layender. cotron. Abrotanum fomina, Chamocyparissus, Santolina Chamacyparissus. A good vermifuge, and said to drive away insects from wardrobes.
*Ox eye camomile. Anthemis tinctoria. Flowers yield a good yellow dye.
*Wild camomile. Anthemis arvensis.
*Cahomile. Chamamelum, A. nobilis. Flowers úsed in flatulent colic and spasmodic affections, diuretic, laxativé, and diaphoretic; they are equal to bark in curing intermitrent fevers, giving $3^{\text {fs }}$ to 3 j, in powder, several times during the intermission, and avoiding their laxative effect, by joiniing an opiate or an astringent; used also externally in resolvent fomentations and poultices.
*Stinking camomile, May weed. Cotula fuetida, A. Cotula. Used in hysteric fits; the juice also useful in the king's evil.

Prilitory of Spain. Pyrethrum, A. Pyrethrum. Root acrid, formerly pickled while young for a satuce, sialogogue, and used as a masticatory in the tooth-ach, and in powder, in the cure of intermittents, or as a sternutatory.

Ox eye. Buphthalmum, A. Valentina. Vulnerary, aperitive; dyes a good yellow.

Yellow star wort. Aster atticus, Inguinalis, Buph-
thalmam spinosum. Vulnerary, and of great use in buboes, and other swellings of the groin.
*Yarow, Minsoir. Millefolium, Acliullea Millefilium, and A. nobilis. Astringent, tonic, and vulnerary, used in hemorrhages ; and externally in head-ach, tumours, \&e.; added to beer to rend it more intoxicating, and fately recommended to smokers, in lieu of tobacco; root warm might supply the place of contrayerva.
*Sneezewort, Bastard philitory. Ptarmica, A. Ptarmica. Leaves sternutatory; root acrid, used as a masticatory in tooth-ach, and sometimes sold for that of pellitory of Spain.

Sweet maddin. Ageratum, Eupatorium Mesues, Ach. Ageratum. Stomachic, cordial, cephalic.

Achillea odorata. An excellent vulnerary and astringent, supposed to have been introduced into chirurgical practice by Achilles.
*Water hemp agrimony, Eupatorium cannabinum fceminum, Bidens tripartita. Strong smelling, hepatic, vulnerary.

Spilanthus Acmella. A very powerful diuretic, alsodiaphoretic, attenuant, and anodyne; leaves and seeds used as tea.

Suxflower. Heliantlhus anmuus. Seeds oily, used in emulsions; the young shoots boiled are aphrodisiac.

Jerusalem artichoke. H. tuberosus. Roots nourishing, diuretic, and give the smell of turpentine to the urine; flowers yield turpentine.

Ambrosta maritima. Cardiac, cephalic, astringent.
*Small burdock. Xanthium, Lappa minor, Bardama minor, X. Strumarium. Root bitter, antiscrophulous, and anticancerous.

## 56. DIPSACEA.

* Scabrous. Scabiosa, S. arvensis. Leaves depurative, employed in diseases of the skin, and also in those of the lungs, and in quinsy.
*Devils bit. Succisa, Morsus Diaboli, Scabiosa

## Succisa.

*Teasee, Fulders thistle. Dipsacles sativuls, Carduus fullonum, D. fullonum.
*Wild teasel. D. sylvestris, Labrum Vcucris, D. fullonum. Their roots are antiscrophlulous, and in wine diuretic.
*Wild valemin. Valeriana sylvestris, V. officinalis. Root very sudorific, diuretic, antiseptic, strengthening the sight, vermifuge, anti-epileptic; appears to contain camphor: given in nowder, in doses of $Э_{j}$ to 3 j , mace covers its unpleasant flavour: plant allures cats and rats to the place.

Great valerlan. Phu, V. major, V. Phal. Root an active tonic exhibited in spasmodic diseases.

Celtic nard. Nardus Celtica, V. Celtica. Root stomachic, diuretic; in Africa they make a tonic cosmetic ointment of it.

Mountain valerian. V. montana. Qualities the same.
*Corn salad. V. Locusta. A refreshing, cooling salad herb.

## 5\%. RUBIACE F.

These plants are astringent and diuretic.
*Woodroor. Asperula, Asperula odorata. Hepatic and deobstruent internally; antipsoric externally.
*Squinancy wort. Rubia cynanchica, A. cynanchica. Used externally in quinsy.
A. tinctoria. Aperitive, diuretic ; dyes red.

* Ladies bedstraw, Cheese renning. Gallium, Galium.verum.
*Cleavers, Goose-grass. Aparine, G. Aparine.
*Wird madder. Rubia sylvestris levis, G. Mollugo.
*Smill mountain bastard madder. Mollugo montana, G. uliginosum. Vulnerary, aperitive; curdle milk.
*MADDER. Rubia tinctorum. Root slightly astringent, diuretic, emmenagogue, and aperitive, used in the rickets,
 dyes red.
*Crosswort. Cruciata, Valantia Cruciata.
*Little field madder. Sherardia arvensis. Qualities the same as those of ladies bedstraw.

Brown ipecacuanha. Psychotria emetica.
Cephaelis ipecacuanha, Calicocca Ipecacuanha. These roots are emetic, and almost always mixt with the grey and white ipecacuanha: see order 47 and 80 .

Peruvian bark trees. Many species of bark are sold under this name in trade, as the following: see also order 83, ad finem:

Loxa, Cascara, or Cascarllta fina de Loxa. Cinchonia Condaminia. Bark thin, fine, very much rolled up,
the outside is brownish, and eracked transversely; the inside is of a rusty fawn colour, smells aromatic, breaks clean between the teeth, is very tonic and resinous, but of a mich dling bitterness: it is now rare, being only gathered for the king of Spain; and the barks of other species of cinchona substituted for it.

Grey bark, Female doxa, Lima bark. C. grundiffora, C. macrocarpa, C. ovalifolia of Mutis, C. officinalis of Linnacus. Bark much rolled, grey more or less whitish on the outside, and of a pale fawn colour on the inside; the outward skin is cracked transversely, breaks rather clean, is less resinous, and less astringent than the former, but rather more bitter; mixed with other barks, especially with that of the myrospermum pedicellatum, whose bark is resinous, aromatic, and speckled on the outside.

Cascarilla peluda. C. ovalifoliu of Bompland. Bark similar to the preceding, cracked lengthways, clear yellow on the inside, bitter, astringent, and resinous; mixed by the merchants with Havannah bark.

Pale bark. C. officinalis of Vahl, C. lancifolia, C. nitida, C. coriacea. Bark rather large, fawn colour on the inside, covered with a brown rugged epidermis, split transversely, rather spicy odour, very bitter and tonic, but less resinous than the former; the colour becomes darker in water and spirit, has a great analogy with the true Calisaya kinkina: sometimes the epidermis is taken off.

Havannah bark, Huanuco. C. glandulifera? Bark in larger pieces than the former, fawn brown on the outside, which is warty and knobby; the inside is fawn colour, breats fibrous, slightly resinous, not so aromatic or astringent as the grey bark, but more bitter. The eracks in the epidermis are perpendicular.! 'Is frequently mixed with the grev.

Blackisu Huanuco. C. glandulifera: Bark blackish ${ }_{2}$ but in other respects similar to the Huanuco.

Calisaya: bark, Royal yeliow bark. C. pubesetis, C. cordifolia, C. ovata. Bark in large pieces, rery little rolled, fine grained, but slightly fibrous, sometimes peeled, or with a thick epidermis, which may be separated in fiakes: the inside is deep yellow, taste very bitter and astringent, the decoction is red like that of peach blossoms.

New Carthagena bark. C. mirvantha? Dark yellow, flat like pasteboard, thready, friable, with a silvery white epidermis, not cracked; the decoction is pale, and af-
fords little or no precipitate with infusion of gallnuts, slightly bitter and astringent: its febrifuge power is but feeble.

Bastard koyal yellow bark, Lampigna. C. lanceolata. Bark very thick, woody, in large pieces not rolled, very little taste, and no resin.

Kinkina Loxa delgada, Delgadilla. C. hirsuta. An excellent medicine, but very rare.

Mulberry-leaf bark. C. purpurea. A yellowish brown bark in good esteem in America.

Soccнı. C. laccifera. A thick red bark, spongy, slightly rolled; the recent bark, scraped on the inside, yields a red lake.

Aharquillado. . C. dichotoma? Or it is perhaps the bark of a portlandia.
C. micrantha. Bark thin.

Asmonich. C. rosea. Bark chocolate colour on the inside, very styptic, perhaps analogous to kinkina nova.

Thick red bark. C. magnifolia, C. oblomgifolia. Bark thick, fibrous, of a brown red or fawn colour, bit ter, very astringent; the outer coat is rugged, cracked in different directions, it breaks more like fibres than threads : this is supposed to be the bark originally brought to England; it has since given place to the grey bark, but is still considered as an active medicine, especially in gangrenous cases.

Pale red bark. C. angustifolia? Much like the former, but its outward coat is whiter and less rugged, and it is neither so bitter nor so astringent.

Kinkina piton, Saint Domingo barik? C.floribunda, C. montana. Bark thick, brown, rugged, of a rusty fawn colour on the inside; in no great esteem, being apt to excite vomiting and purging, but useful in external application.

Caribbee bark, Saint Lucla bark. C. caribbca. Bark differs but little from the kinhina piton, and is much cheaper than the other sorts.

Guiana bark. C. Iongiflora. In thick long woody pieces. These three species are bitter, astringent, and scentless.

Jamaica barks. C. brachycarpa and C. triffora. May be used for the others; but these, as well as the St. Lucia bark, must be given in small doses, as being considerably emetic.

Kinima nova. C. rosea? Bark in thick, woody, long, straight, flattened pieces, with a smooth whitish coat, under
which are vessels filled with an acrid reddish resin: the inside of the bark is pale red, or Hesh colour, tastes at first mawkish, and afterwards acrid and nauscous: it yields, both to water and spirit, a high coloured astringent tincture, without any bitterness: may be used externally, but seems to haye little effect as a febrifuge.

Most of these barks, as soon as they come out of the merchants' hands, are sold by the druggists, under three or four names only; viz.

1. Peruvian barl,, Grey bark, Pale bark. Cortex PCmuianus, Cinchona lancifolia, Cin. offic. cortex communis.
2. Yellow bark. Cinchona cordifolia, Cinchonce officinalis cortex flavus.
3. Red bark. Cin. oblongifolia, Cin. officinalis cortex ruber.
4. Saint Lucia bark. Cin. Caribboca,

Each of which is distinguished into quilled bark (or that taken off the smaller branches, or from the younger trees, rolled up like cinnamon, with the outer coat not taken off), and the large flat pieces, with or without the outer coat.

The chemical habits of these several barks are very different, but they cannot well be examined in Europe. The infusion of some kinds precipitates the infusion of nut.galls, as well as solution of isinglass; others, only one or the other of these tests; but the chemists vary in their accounts, owing to the mixture of the barks of several species, and their sale under one common name. Medically considered, they are all tonic and febrifuge, and may be given in powder, from $Э j$ to $s^{i j}$ every two or four hours, so as to get down an ounce betwcen each fit of intermittent fevers; of great use in stopping the progress of gàngrene: they are also given in infusion and decoction.

Coffee shiub. Coffe, Coffea arabica. The fresh seeds are febrifuge, diuretic, and tonic ; when roasted, they acquire a sweet-scented empyreumatic oil, which is heating to the body, and a small portion of tanning matter : they are then well known to form a stomachic, antihypnotic infusion, which stimulates the nervous system.

Ironwood. Siderodendrum triflorum. Bark diuretic, stomachic.

Nonatelia officinalis. An excellent pectoral, in infusion.
Gardenia gummifera. Yields a resin, not the true elemi, but perhaps the cancame, which is so much like the other.

## 58. CAPRIFOLIA.

The plants of this order are detersive and attenuant.
*Linnea borealis. Useful in rheumatism and gout; infused in milk or water, is astringent and diuretic.
*Woodbine. Periclymenum, Caprifolium, Matrisylua, Lonicera Periclymenum.
*Honeysuckle. L. Caprifolium. Leaves vulnerary, used in detersive gargles ; flowers antasthmatic.
*Wayfaring tree, Pliant mealy tree, Vibumum Lantana. Berries drying, astringent; bark of the root is made into bird-lime.
*Geldres rose. V. Opulus. Leaves and berries reffeshing, and used in astringent gargles.
*Elder. Sambucus, S. nigra. Second bark, gr. v to $\exists_{j}$, a very active antihydropic; leaves a nauseous purgative; flowers a good diaphoretic, useful in disorders of the chest, discussive and attenuant, poisonous to peacocks ; berries used to flavour sugar wine, poisonous to poultry; the dry berries, grana actes, useful in dropsy.
*Dware keder. Ebulus, S. Ebulus. Qualities the same, but more violent; root jjfs a strong purge ; leaves used in poultices for the gout and piles; berries used to dye blue, and also to make wine.

Mountain elder. S. racemosa. Narcotic.
*Mrseltoe. Viscus quercinus, Viscum album. Berries very purgative; leaves anti-epileptic, in doses of 9 j to 5 j , twice a-day. The miseltoe that grows on the oak tree is most esteemed.
*Ivy. Hedera crborca, H. Helix. Leaves used internally in atrophy, and externally to dress issues, also boiled in wine as a wash to kill vermin; berries purge; the trunk yields a gum resin.

Cornelian cherry. Comus, C. mascula. .. Fruit very astringent, useful in loosenesses.
*Dogwood, Gatter tree, Femafe cornel tree, $C$. fixmina, ${ }^{C}$. sanguinea. Seeds yield good oil, like those of the former species.

> 59. ARALIE.

## Grey sarsaparilea. Aralia mudicaulis.

Aralia racemosa. Roots of both these species are mixed vith those of sarsaparilla.

Ginseng. Panax quinquefolium. Roots highly esteemed in China as a cordial, alexipharmic, and aphrodisiac; dose $3 \mathrm{j}-\mathrm{ij}$, chewed, or sliced and made into tea; it is different from the ninsing of the next order, with which it was confounded,

## 60. UMBELLIFER压.

The plants of this order are aromatic, and if they growo in zuater, poisonous.
Anise. Anisum, Pimpinella Anisum. Seeds one of the four great hot ones, cephalic, stomachic, carminative, diuretic, and emmenagogue. Our summers not being sufficiently warm to ripen the seeds, they are usually imported; those from Spain are the smallest.

* Burnet saxifrage. P. Saxifraga. Root chewed, relieves the tooth-ach ; both it and the seeds are opening, detersive, and lithontriptic; $Э_{j}$ in powder, or $3_{\mathrm{ij}}$ in infusion.
* Herb Gerard, Goutwort, Ashweed. Agopodium podagraria, Root and leaves said to be useful in the gout: the young leaves used in salads.

Carur. Carum, Carurn Carui. Seeds cordial, cephalic, stomachic, carminative, diuretic, sudorific, emmenagogue, and galactopoietic; root sweet, nourishing, and better eating than parsneps.
*Smallage, Celery. Apium, Eleoselinum, A. graveolens. Root very opening, diuretic, emmenagogue, useful in jaundice and the gravel; seeds still more active; blanched stalks eaten in salads.

Parsley. Petroselinum vulgare, A. Petroselinum. Root is one of the five opening ones, very diuretic; leaves, besides their use as a sauce, resolve coagulated milk in the breasts, are attenuant and detersive ; but supposed to produce epilepsy and inflammation of the eyes; seeds carminative.
*Fennec. Foniculum vulgare, Ancthu?n Fœniculum. Seeds aromatic, hot, very carminative; roots opening; leaves diuretic. A variety, with sweet, well-tasted seeds, $F$. dulcc, is cultivated for medical purposes.

Dill. Anethum, A. graveolens, Seeds digestive, discussive, galactopoietic, stopping vomiting and the hiccough, antaphrodisiac, and hypnotic; leaves ripen 'tumours.
*Alexanders. Smyrnium, Hipposelinum, S. Olusa-
trum. Root and herb opening, emmenagogue, useful in colic and asthma.
*Parsnep. Pastinaca hortensis, P. sativa. Root used as food, but its strong smell renders it disagreeable to many; seeds have the same qualities as the preceding.

Gum parsner. P. Opoponax. Root yields, on being wounded, a milky juice, which hardens into the gum resin, called opoponax.

Thapsia villosa.
T. Asclepium.
T. garganica. Roots acrid, very drastic, emmenagogue; herbs useful in phagedenic ulcers.

Seseli Turbith. Root acrid, emmenagogue, and purges upwards and downwards very violently.

Seseli saxifragum.

## S. montanum.

S. glaucum. Roots not so acrid as S. Turbith, antihysteric, cephalic, antispasmodic.

## Seseli tortuosum.

S. Hippomarathrum. Seeds infused in wine stomachic, aperitive, facilitate labour, dissipate flatulency, and drive away labour pains; roots antasthmatic.
*Masterwort. Imperatoria, Astrantia, Imperatoria Obstruthium. Root very odorous, sharp-tasted, aromatic, sudorific, alexiterial, and cordial, very restorative after fatigue; useful in apoplexy, palsy, flatulent colic, and disorders of the stomach: 3 fs in substance, or 3 j in infusion, is the usual dose.
*Wild Cicely, Cow-weed. Cicutaria vulgaris, Chacrophyllum sylvestre. Strong smelling, acrid, diuretic, dyes woollen yellow and green.

Hemlock chervil. C. Cicutaria. Roots poisonous, as well as the leaves.

## Musk chervil. C. aromaticum.

*Chervil. Charefoliam, Scandix cerefolium.
*Sweet cicely. Myrirhis, S. odorata. Very resolving, diuretic, emmenagogue, lithontriptic, thinning the blood, and procuring gentle slumbers.
*Venus' comb, Shepherds needie. Pecten Veneris, S. Pecten. The young shoots eaten raw or boiled strengthen the stomach, and are diuretic.
*Coriander. Coriandrum sativum. Herb eaten as a alad too frequently, occasions fatuity; seeds very stomachic;
agree in other respects with the preceding, and are excellently adapted to cover the taste and prevent the griping of semna.
*Spignel, Meu. Mcrm, Athamanta Mcum, Detlozsa Meum. Root gummy, resinous, smelling like lovage, very carminative, emmenagogue, and antasthmatic.
aimlesser hemlock, Fools parsley. Cicutaria futnay Ath. C'ynapium. P'oisonous.
*Long-ikaved water parsmer. Sium evuca folio, Ci cuta virosa.
*Marsh hemlock, Water hembock. Phellandrium, $P$. aquaticum.

Pielelandrium Mutellina.
*Water Dropwor't. Enanthe aquatica, O. fistulosa.
*Hemlock dhopwoht. O. cicute facic, O. crocata. All very acrid and poisonous, especially the roots, emetic, and act upon the nervous system : used externally, being boiled, are powerfully resolvent, anodyne, and very useful in scrophulous and scirrhous tumours; they are also used in inflammation of the penis.
*Hemrock. Cicuta, Conium maculatum. Very poisonous in warm countries, but less active in cold ones, powerfully narcotic, of great use in many obstinate disorders, as scirrhus, cancer, chronic rheumatism, ill-conditioned ulcers, and glandular tumours; dose of the dried leaves in powder, gr. j to $Э \mathrm{j}$, every four hours, to be exhibited with great caution, especially when a fresh parcel of powder is used, or of the inspissated juice, gr. j to gr. ịj : aphrodisiac.

Cumin. Cyminum, Cuminum Cyminum. Seeds hot, aromatic, carminative, resolvent, and attenuant.

Macedonian parisley. Petroselimum Macedonicum, Bubon macedonicum. Sceds emmenagogue, carminative, cephatic.

Bubon Galbanum. The gum resin galbanum is yielded by this plant.

Bubon grummiferum. An inferior sort of galbanum is also yielded by this plant.

Ammi verilm, S'ison Ammi. Seeds aromatic, and have all the qualities of anise.
*Common amonung, Bastard stone parsley. Amomum zintğare, Sison Amomum. Seeds very diuretic, lithontriptic, warm, aromatic.
*Corn honewort. S. segetum. Useful in indolent tumours.

Skirret. Sisairum, Sium Sisaìum. Root used as food excites the appetite, stomachic; is considered as a specific against the bad effects of quicksilver.

Ninstug. Ninzen, Nisi, S. Ninsi. Considered in China as an excellent alexipharmic and aphrodisiac, and thought to lengthen life: frequently confounded with ginseng, as in the Pharm. Lond. 1720.
*Great water pansnep. Pastinaca aquatica, Sium la\& tifotium: Routs poisonous; leaves aperitive, diuretic, antiscorbutic.

Sium Berula. Has the same qualities.
*Creeping water parsnep. S. nodifolium. Juice used in cutaneous diseases; dose for children coch. maj. iij, bis in die, and for adults $\overline{j i j i j}$, omni mane.
*Angelica. A. Archangelica. Root and stalk excellently stomachic, carminative, aperitive, diaphoretic and emmenagogue, useful in typhus fever.
*Wild angelica. A. sylvestris. The same, but weaker:
Lovage. Levisticum, Ligusticum Leristicum. Root aromatic ; leaves and seeds have the qualities of angelica and masterwort: it abounds with a yellowish gummy juice, much resembling opoponax.

Hartwort. Seseli, Siler montanum, Laserpitium Siler.
Laserpitium latifolium.
L. angustifólium.
L. Chironium. Roots recommended in the king's evil, spitting of blood, and marisca; they are anaphrodisiac.
*Cow parsnef. Sphondylium, Heracleum Sphondylium. Root and leaves emollient; seeds a specific in hysteric spasms, 5 ij being infused and drank in white wine ; juice of the head renders the hair curly; young shoots are a good substitute for asparagus.

Heracletm Panax, and other species, are added to fermented liquors ànd distilled by the northern nations, in order to augment the strength of the spirit.

Heracleum gummiferum. Is said to yield gum ammoniac.

Ferula assafoctida. From the cut root runs the gum esin called assafoetida.

Ferula. .........'. The seeds have been found in the x 4
gum resin called sagapenum, and are considered as those of the plant from whence it is extracted.

Ferula persica? Also said to yield gum anmoniac.
*Hogs rennel, Sulphurwolet, Horestrange. Peucedunum, P. officinale. Root very diuretic, attenuant, expectorant, aperitive; wounded, it exudes a gum resin.
*Meadow saxifrage. Saxifraga vulgaris, Pcucedanum Silaus. Root aperitive, used in calculous cases.

Cachirys Libanotys. Root very heating and detersive; used externally in piles.

Cachirys odontalgica. Used in tooth-ach, in the same manuer as pellitory of Spain.
*Samphire. Crithmum, Foeniculum maritimum, Herba Suncti Petri, Crithmum maritimum. Excites the appetite, used pickled for sauce.

Athamanta Oreoselinum.
*A. Libanotis. Diaphoretic, diuretic, discussive, useful in calculus.

Daucuss Creticus. A. cretensis. Seeds odorous, carminative, diuretic, antihysteric, and nervine.

Selinum Caruifolia.
S. sylvestre. Roots alexipharmic.
: Earth nut, Kipyer nut, Pig nut, Hawt nut. Bulbocastanum, Bunium Bulbocastanum. Root alimentary, very nourishing, stimulant; useful in bloody urine and spitting of blood.
*Carrot. Daucus nostras, D. vulgaris, D. Carota. Root saccharine, alimentary; used externally as a poultice to carcinomatous and foul ulcers.

Wild carrot. Daucus sylvestris, D. Visnaga. . Seeds antihysteric, diuretic, antipleuritic, very useful in calculus and in nephritic complaints : considered by Lamarck as an ammi.

Daucus gummifer. Yields one sort of opoponax.
Caucalis leptophylla.
Gueat bastard parstey. C. latifolia.
*Fine-teaved bastard parshey. C. daucoides.
C. grandiflora. Are all diuretic.
*Hedge parslex, Hens foot. Caucalis minor, Tordylium Anthriscus.
*Harts wozt. Tordylium officinale. Roots and seeds diuretic.
*Thorough wax. Perfoliata, Bupleurum perfoliatum. Vulnerary, used externally in tumours.
*Hares ear. Auricula leporis, B. rotundifolium. And the other species of the same genus are aperitive, discussive, and diuretic.

Black masterwort. Astrantia major.
A. minor. Roots used in scirthus of the spleen, and mania.
*Sanicle. Sanicula europcea. Leaves vulnerary, cleansing.
*Common eryngo. Eryngium campestre. Root one of the principal aperitive ones, diuretic, emmenagogue, hepatic, nephritic, and aphrodisiac.
*Eryngo, Sea holly. Eryngium maritimum. Is still more esteemed ; the young shoots boiled may be eaten as asparagus.

Three-leaved eryngo. E. tricuspidatum. Root aphrodisiac, diuretic.

Stinking weed. E. foetidum. Leaves, in infusion, antihysteric, either internally or in clysters.
*Marsh pennywort, White rot. Hydrocotyle vuz garis. Qualities the same as those of eryngo.

## 61. RANUNCULACE E.

These plants are acrid, and many of them are poisonous.
*Wild travellers joy. Clematis Vitalba. Bark and herb caustic, raising blisters, ophthalmic.

Clematis Flammula.
Clematis erecta. As caustic and burning as the former; used for issues and venereal ulcers; seeds drastic ; leaves used outwardly in leprosy, internally, $\mathrm{J}^{\mathrm{ij}}$ or iij in $\mathrm{H} \mathrm{j} j$ boiling water, the infusion to be drunk in a day and night, in inveterata syphilis.

Atragene alpina. Qualities the same.
*Meadow rue, Bastard rhubarb. Thalictrum majus, T. flavum.
*Lesser meadow rue. T. minus.
T. aquilegifolium.
T. angustifolium. Roots and herbs bitter, purgative, diuretic, useful in old ulcers and the jaundice.

Yellow anemone. Anemone vernalis.
A. pratensis.

Woon Axemone, Woon chompoot. 1. ucmorosa.
White woun anemoxe: A. syltictris: Plants acrid, caustic, exulcerating; being chewed, hiey act as sialogrgues; flowers poisonous.
*Pasque rlower. Pillsatille, A. P'ulsatilla. Root acrid, sternutatory ; leaves detersive; extract of the root useful in palsy and amaurosis, also externally for uicers and herpetic eruptions.

Garden anemone. A. conronaria. Less caustic.
Hepatica. H. nobilis, Trifolium uureun, A. ITepatica. Aperitive, vulnerary, useful in diabetes and dysentery; leaves detergent in diseases of the skin, or in gargles.
*lesser celandine, Pilewort. Chelidonium minus, Ranunculus Ficaria. Juice of the root acrid, styptic, useful in piles, being weakened with wine or beer; leaves caustic, but mild and eatable in Sweden, according to Linnæus.
*Lesser spearwort. R. flammeus minor, R. Fíammula.
*Great spearwort. R. flam. major, R. Lingua.
Atpine crowfoot. Thora, R. Thora. Very acrid, cauterises the skin; poisonous to man and horse.
*Upheht meadow chowfoot, Butter cups. R. acris. Equally caustic; root used, when dry, as a febrifuge in intermittents.
*Rouxd root crowfoot. R. bullosus. Very acrid, kills rats, but not sheep; root used as a vesicatory, yields a nutritive frcula.
*Malisi crowfoot. R. palustris, R. sceleratus. Very acrid and poisonous, but eaten by animals in some countries.
*Water crowroot. R. aquatilis. Acrid, eaten by cattle.
*Cors crowsoot. R. arvensis. The same.
*Wood crowfoot. R. auricomus. Less acrid: by drying most of the ranunculi lose their acridness.
*Mansh marycold. Caltha palustris. Herb acrid, caustic, useful externally in diseases of the reins or loins.
*Proxy. Pconia officinalis. Root and seeds anti-epileptic, emmenagogue.
*Mousetaif. Myosurus minizus.
Birds eye. Adonis vernalis.

* Pilemants eye, Rep norocco. A. audumnalis. Are vulncrary and astringent.
*Herb Chilstopher, Bane berries. Cheristophoriana, Acteca spicata. Vulnerary, astringent; juice of the berries affords a deep black dye.

Bi,ack heldebore, Christmas rose. Elleborus niger, Mclampodium, Hellcborus niger. Root nauseous, violently purgative to both man and horse, diuretic and emmenagogue, also used as an exutory in cattle to lieep open issues; dose, in powder, gr. x to $Э \mathrm{j}$.

Three-leaved hellebore. H. trifolius. Dyes skins, wool, \&cc. yellow.
*Wird black hellebore, Bears foot. H. viridis.
Helleborus lyyemalis. Qualities the same as black hellebore.
*Great bastard bears foot, Setter wort. Helleboraster maximus, Helleborus foetidus. Leaves vermifuge, in powder, gr. x to $5^{f s}$, or a decoction of 3 j ; the juice (a little vinegar being added to moisten the bruised leaves) made into a syrup, is also used with advantage, a tea spoonful at night, and one or two in the morning.
*Globe crowfoot, Locker gowlons. Ranunculus globosus, Trollius europceus.
T. asiaticus. Equally acrid, and must be used with caution.

Fennel flower, Devil in a bush. Nigella, Gith, N. sativa. Seeds acrid, oily; attenuant, opening.

Nigella arvensis. Seeds have the same qualities.
*Columbine. Aquilegia sylvestris, A. vulgaris. Herb, flower, and seeds opening, acrid, diuretic, and used in detersive gargles.
*Larks spur. Delphinium, Consolida regális, D. Consolida. Root vulnerary, consolidating wounds, ophthalmic.

Upright larks spur. D. Ajacis.
Siberlan bee larks spur. D. elatum. Have the same qualities as the common larks spur.

Stavésacre. Siaphisagria, D. Stapluisagria. Seeds acrid, nauseous, kill lice and rats, purging violently in doses of gr. iij to gr. x ; used as a masticatory in tooth-ach, and also in apophlegmatizant gargles.

Wolfs bane. Aconitum lycoctonum. Root poisonous, occasioning vertigo, stupor, and spasm; used to kill dogs and wolves.

Perple mones hood. Aconitum, A. ncomontanum.
Early blue wolfs baive. A. Nupellus.
Greater monks hood. A. Cammarum.
A. tuaricum. The first is that sold in the shops: leaves

## 60

 VEGETABLES - - 81. Ranunculacex.powerfully diaphoretic, diuretic, and stimulant, in doses of gr. i, gradually increased; of great use in obstinate diseases.

Wholesome wolfs mank, Yeliow helmet flower. Anthora, Antithora, Aconitum Anthora. Roois cordial, alexiterial.

## 62. PAPAVERACEE.

The proper juice of these herbs is soporiferous or acrid.
*White roppy. Papaver album, P. somniferum. Seeds used in emulsions, better tasted than almonds, and more oily; capsules (without the seeds) used in emollient and anodyne fomentations ; yield, by incision, the best opium, and, by expression, a coarser sort: cultivated by the Lincolnshire cottagers, for the purpose of distilling a nareotic water from it.

Black poppy. P. nigrum. A variety of the last.
*Red poppy, Corn rose. P. rubrum, Rhceas, P. erraticum, P. Rhoeas. Petals pectoral, slightly anodyne; used also as a red colouring ingredient in medicines.
*Long-headed bastard poppy. Argemone capitulo longiori, P. Argemone. Leaves used outwardly in inflammations; the yellow expressed juice takes off spots on the cornea.
*Yellow horned poppy. Chelidonium Glaucium. Seeds and juice analogous to the preceding.
*Great celandine. Chelidonium majus. Root very detersive, attenuant, acrid, purgative, and diuretic ; herb ophthalmic.
*Fumitory. Fumaria officinalis. Very opening, refreshing ; of use in cutaneous disorders, boiled in milk; or its expressed juice, taken daily to $\overline{3} \mathrm{ij}$, twice a day: the infusion removes freckles and clears the skin; dyes yellow.
*Bulbous-rooted fumitory. F. bullosa, मे. solida.
*Yellow fumitory. F. lutea. Have the same qualities.

## 63. CRUCIFERE.

All these herts are antiscorbutic and diuretic ; seeds oily.
*Wild mustard, Charlock. Raphanus Raphanistrum.
Radish. R. hortensis, R. sativus. Aperitive, diuretic, and excite the appetite ; seed attenuant.
*Mustard. Sinapi, Sinapis nigra. Seeds unbruised, coch. maj. j, stimulant, and generally laxative; cure rernal
ague ; farina of the seeds used as a rubefacient, and as seasoning, first manufactured on a large scale by my grandfather, at the Black Boy in Pall Mall; when first mixed with water or vinegar has a bitter flavour, which afterwards goes off: hull of the seed sold for ground pepper, under the name of P. D. i. e. pepper dust.
*White mustard. Sinapi album, Sinapis alba. Seeds less stimulant than mustard:

* Yellow charlock. Sinapis arvensis. Seed detersive and digestive; if given to birds instead of rape, heats and kills them.
*Colewort, Cabrage, Cauliflower, Brocoli, \&cc. \&c. Brassica, Caulis, B. oleracea. Afford a copious source of aliment to man and beast: was, for six hundred years, the only internal remedy used by the Romans, according to Cato and Pliny ; juice a good pectoral, discussive, diuretic, and opens the belly: leaves vulnerary, opening.
*Turnip. Rapum, B. Rapa.
*Navew, French turnip. Napus dulcis, B. Napus. Roots nourishing, containing a sweet juice, which is very pectoral, and of great use in coughs, asthma, colds, and consumptions.
*Rape, Cole. N. sylvestris, B. Napus. Seeds incisive, diuretic, galactopoietic; but mostly used for the extraction of the oil.

Rocket. Eruca, B. Eruca.
Wild rocket. Eruca sylvestris, B. Erucastrum̂. Bechic, antiscorbutic, diuretic, flatulent, and aphrodisiac ; seeds acrid, stimulant, and exciting the appetite.
*Tower mustard. Turritis hirsuta.

* Bastard tower mustard. Arabis Turrita. Their juice kills worms, and cures the thrush.

Dames violet, Rocket. Hesperis matronais. Incisive; used in dysury, strangury, and dyspnoea.
"Wallflower. Cheiri, Leucoium luteum, Cheivanthus Cheiri. Flowers cordial, emmenagogue, used in palsy.
*Hedge mustard. Erysimum, E. officinale. Pectoral. expectorant.
*Jack by the hedge, Sauce alone. Alliaria, E. Alliaria.
*Winter cressfs, Winter nocket. E. Barbarea, Antiscorbutic, very incisive, attenuant; used in coughs; ex. ternally detersive; seed acrid, lithontriptic.
*Fixx wered. Sophia chirrergorum, Sisymbrium Soplia. Vulnerary, astringent, detersive.
*Water chessks. Nasturtium aquaticum, S. Nasturtium. An excellent depurative and antiscorbutic; used in obstructions and calculous cases.
*Lades smock, Cuckow flower. Cardamine pratensis. Qualities of the preceding; flowers antispasmodic, in doses of 3 j to 3 ij , twice or thrice a day; the flowering tops are still more successfuliy used in epileptic fits.

Dentaria heptaphylla. Root astringent, attenuant.
Sattin flower, Honesty, Moonwort. Lunuria rediviva.
L. annua. Roots detersive, vulnerary; leaves diuretic; seeds extremely acrid, used in epilepsy.

* Alysson. Alyssum campestre. Seeds, with honey, take away freckles, and are also useful in mania.
*Common whitlow grass. Paronychia vulgaris, Draba verna. Opening, detersive; seed hot, like pepper, and might be used in its stead.
*Draba muralis. Has the same qualities.
*Horse radish. Raphanus sylvestris, R. rusticamus, Armoracia, Cochlearia Armoracia. Root powerfully antiscorbutic, antirheumatic, acrid, taken, cut into small pieces, without chewing, coch. $j$, omni mane, incisive; used as a sauce.
*Swines cresses. Coronopus Ruellii, Coch. Coronopus. Qualities aialogous to the former.
*Scurvy grass. Cochlearia Batava; C. hortensis, C. officinalis.
*Sea scurvy grass. C. Britannica marina, C. angrlica. These herbs abound in volatile principles, which are dissipated by heat; they are the most valuable of antiscorbutics eaten raw, or only their juice, ${ }_{5}^{5} j$ to ${ }_{5} \mathrm{jiij}$ : an excellent whey may be made from them.
*Lesser shepherds purse. Bursa pastoris minor, Ilec ris nudicaulis.
* Iberis amara. Antiscorbutic, may be eaten in salads.
*Shepherds, purse. Bursa pastoris, Thlaspi Bursa pastoris.
*'Treacle mustard, Penny cress. T. areense.
*Mithimate mustard, Bastaird chegs. 'T'. compestec. Seeds acrid, detersive, astringent.

Garden cresses. Nasturtium hortense, Lepidium sativum.

Aubrosia. L. procumbens. Seeds very opening, incisive, antiscorbitic, and emmenagogue.
*Dittander, Pepperwort. Lepidium, Piperitis, L. latifolium. Acrid, irritative, useful in sciatica; infused in beer, facilitates delivery; as a masticatory is sialogogue.

Sciatica cress. Iberis, L. Iberis. Made into a poultice with lard, used in sciatica.

Rose of Jericio. Anastatica hieruntica. The dried plant is highly lyggrometical, and opens with moisture.
*Wild gold of preasure. Myagrum sativum. Vermifuge; seeds useful in palsy, yield much oil, sold for those of sesamum.

Bunlas Erucago. Acrịd, diuretic.

* Sea rocket. Eruca marina, B. Cakile. Antiscorbutic, useful in the colic.
*Sea colewort, Sea cabbage. Brassica marina Anglica, Crambe maritima, Vulnerary, cooling; an excellent pot-herb.
*Woad. Isatis, Glastum, Isatis tinctoria. Desiccative, astringent, vulnerary; used also as a blue dye; and it is probable that indigo might be manufactured from it, if the mercantile interest did not prevent all improvements of this nature.

Isatis lusitanica. A smaller plant, used in dyeing.

## 64. CAPPARIDES.

## The seeds of these plants are acrid.

Caper tree. Capparis spinosa. Bark acerb, discussive, splenic, useful in the gout; flowers pickled used as a sauce to sharpen the appetite.
*Yellow welis, 1 yrers weed. Luteola, Rèsela Luteolà.

* Wud nocher. R. vulgaris, R. hutea. Discussive; used externally to dissipate inflammations and tumours; dyes white cloth yellow, and blue cloth green, by boiling with alum,
*Sun dew, Rosa solis. Ros Solis, Rorella, Drosera rotucndifolia. Acrid, anti-arthritic, detersive, externally riibefacient: the leaves of the living plant are a curious flytrap.
*Grass or Pannassus. Gramen Parnássi, Parnaşia palustris. Juice oplithalmic; seeds diuretic, aperitive.

## 65. SAPINDI.

Soap berry tree. Saponaria, Sapindus Saponaria. Fruit used externally, bruised and mixed with rum, as an embrocation in rheumatism; tops, leaves, and especially the seed vessels, form a lather with water, and cleanse linen, \&rc.; and the whole plant intoxicates and kills fish.

Cardiospermum Halicacabum. Juice used as an emollient in gonorrhœa; herb used as food, and to throw out the. eruption of the small pox.

Genip tree. Melicocca bijuga. Seeds aily, emollient.

## 66. ACERA.

Barks of these trees are astringent; juice saccharinc.
*Common maple. Acer minus, A. campestrc. Root useful in liver complaints.

Virginia maple. A. rubrum.
Sugar maple. A. saccharinum.
*Greater maple, Sycamore. A. majus; A. Pseudoplatanus.

Norway maple. A. platanoides. The sap of these trees, as well as that of the common maple, is used for making sugar and wine: each tree of the sugar maple is computed to yield annually about six pounds of sugar, which might be made in large quantities in England from the common or the sycamore maple, by merely tapping the plant in the winter or spring, and boiling down the juice that runs from it, with a small quantity of chalk or lime, to get rid of the concomitant acid.

Horse chestnut. Hippocastanum, Asculus Hippocastanum. Bark and skin of the fruit febrifuge, astringent, used for Peruvian bark in doses of 5 fs to 5 j , interposing a laxative occasionally, also errhine; seeds farinaceous, but must be soaked in an alkaline ley, to take off their bitterness, then nutritive.

Scarlet-flowered horse ehestnut. Asc. Pauia. Bark febrifuge.

## 67. MALPIGHIE.

Switch sorrel. Triopteris jamaicensis. Acerb, bitterish, probably astringent.

Cowhage cherby. Malpighia urens. Young leave
covered with bristles, which break off and cause a violent itching.

Barbadoes cherry. Cerasus jamaicensis, M. glabra. Fruit subacid, carminative, stomachic.

## 68. HYPERICA.

The plants of this order are vulnerary and nervine.
*St. John's wort. Hypericum, H. perforatum. Resolvent, vuinerary, attenuant, nervine ; contains a reddish resin; the tincture of the flowers is useful in maniacal and melancholic cases. The colouring matter in the leaves gives a good red dye to wool.
*St. Peter's wort, Ascyron. H. Ascyrum. Seeds purgative, useful in sciatica.

Bastard St. John's wort. Coris, H. Coris. Seeds diuretic, antispasmodic, emmenagogue.
*Tutsan, Park-leaves. Androscmum, Clymenum Italorum, H. Androscemum. Qualities of St. John's wort.

## 69. GUTTIFER压.

The juice of these trees is resinous, acrid, and drastic.
Cambooge tree. Carcapulli, Cambogia gutta. Yields he gum-resin called gamboge.

Ponya afaram. Calophyllum inophyllum. Yields a ellow resin, which is somewhat similar to tacamahaca.

Tsi Xu. Augia Sinensis. Yields a fine black resin sed in China for varnish, and which is also purgative.

Cerion copal tree. Elcoocarpus copallifera. Yields a ind of copal.

OBS. The fruit of some species of Grias, Garcinia, and fammea, which all belong to this order, are acidulous and ccharine.

## 70. AURANTIA.

Citron. Citria malus, Citrus, C. medica. Juice of the uit excites the appetite, stops vomiting, is acidulous, antiptic, antiscorbutic, and used along with cordials as an antite to manchineel poison ; rind of the fruit aromatic, nic, yields by expression the scented oil called essence de trat; seeds bitter, vermifuge.
Limon. Limonia malus, Limon, C. medica, C. Limon. nice of the fruit more acid than that of the citron: when
mixed with one fifth of brandy or rum, it may be kept fresh for nearly three years; rind of the fruit aromatic, not so hot as orange peel; yields the vil called essence of lemons.

Seville orange. Aurantia malues, A. Hispalense, C. Aurantium. Leaves and flowers antispasmodic, cordial, cephatic, 3 fs or 3 j , bis terve in die, or in a decoction; rind of the fruit bitter, stomachic, and useful in colic ; unripe fruit, orange peas, Curasso oranges, baccer aurantice, aurantia Curaslavensia, aurantia Cturassoventia, used for issues instead of peas.

Sweet orange, China orange. Aurantium Chinense, C. sinensis. Juice of the fruit contains a saccharine, as well *s an acid matter; mixed with salt is a common purge in the West Indies.

Limon Bergamotta. Rinds of the fruit yield, by expression, essence of Bergamotte; one hundred peels are required to produce an ounce.

Green tea. Thea viridis.
Blacis tea. Thea bohea. Leaves, in weak infusion, stomachic, favour digestion, raise the spirits, an excellent diluent; when the infusion is too strong, it weakens the nervous system, and is even emetic. Began to be used in Europe in 1666, and now very common, especially in England and Morocco. Many attempts have been made to supply its place with native herbs, but hitherto without success; there is, however, very little doubt but that the plants themselves might be cultivated in England, if the mercantile interest in the House of Commons did not oblige the government to prohibit it in the same manner as the cultivation of tobacco, or the manufacture of sugar from maple or birch trees.

Des Guignes gives the following characters of the different kinds of tea, as he observed them in China, using the common English orthography, with their usual price at Canton:

Bohea tea is of a black cast, and yields a deep yellowish infusion; sells in China for 12 to 15 taels (dollars) per pic, or about 120 tt .

Congou tea: the infusion is lighter than that of bohea, rather green, and seldom of an agreeable smell; sells for 25 to 27 taels.

Soutchong tea: the infusion is a fine green, smells agreeably; the leaves ought to have no spots on them; sells for 40 to 50 taels.

Pekco tea: the infusion is light and rather green, has a violet scent, and a very fine perfume in the mouth; sells for 34 to 60 taels.

Imperial tea, mao tcha of the Chinese, has a green cast, the infusion is also green; the leaves large and of a fine green, has a slight smell of soap.

Songlo tea has a leaden cast, the infusion is green, the leaves are longer and more pointed than the black teas; sells for 24 to 26 taels: the inferior sorts have yellow leaves and a smell of sprats.

Hyson tea is of a leaden cast, the infusion is a fine green, the leaves are handsome, without spots, and open quite flat; it has a strong taste, and a slight smell of roasted chestnuts: sells for 50 to 60 taels.

Tchue tcha, of which he gives no characters, but it appears to be the finest of the teas, as it sells for 65 to 70 taels.

Japanese camelita. Camellia japonica. Leaves frequently mixed with those of tea by the Chinese.

## 71. MELI压.

## The plants of this order are usually odoriferous.

Winter's cinnamon, Winter's bark. Cortex Wintcranus, Wintera aromatica. Bark thick, channelled on the ontside, grey, unequal, much cracked; on the inside solid, iron-grey; sharp-tasted, aromatic, very fragrant: used in scurvy, vomiting, and palsy: rare at present, being not in such esteem as canella alba, which is usually substituted for it: dose, in powder, gr. x to Эj.

Azedarach, Bead tree, Melia Azedarach. Seeds oily; leaves vulnerary, vermifuge, diuretic, kill insects; the fruit is dangerous.

Mahogany. Szoietenia Mahagoni.
Swietenia febrifuga. Barks astringent, tonic, used as ubstitutes for Peruvian bark; dose, in powder, 3 fs.

Barbadoes cedar. Cedrela odorata. Wood nervine, cephalic, antirheumatic; yields a limpid resin.

Cedrela Rosmarinus. Has the same qualities.:

## 72. VITES.

These plants usually contain an acerb principle.
Grape vine. Vitis vinifera. Numerous varieties of his plant are cultivated, from whence are produced

Raisinss of the Sim, wore passer majores.

> Grocer's currants, uva minores Corinthiaca.

Blue currants, black Smyrna raisins, used in pectoral drinks, are refieshing, and open the body, especially the latter.

Juice of unripe grapes, French verjuice, agresta, labrusca, contains citric acid, used as an acidulous seasoning to food.

Juice of ripe grapes, mustum, an excellent antiscorbutic.

## 73. GERANIA.

Herbs slightly acrid, or acid, vulnerary, and astringent.
*Cranes bill. Geranium cicutarium.
*Musk clanes bill. G. moschatum.
\%Herb Robert. Gratia Dei, G. robertianum.
*Doves foot. G. columbinum, Pes columbinus, G. rotundifolium.

* Bloody cranes bill. G. sanguineum.

Blue doves foot. G. batrachyoides. Astringent and detersive ; used in poultices.

Bulbous-rooted cranes bill. G. tuberosum. Ront in wine used as a wash in inflammation of the vulva.

Nasturtium, Indian cress. Tropocolum majus.
Smaller nasturtium. T. minus. Eaten in salads as antiscorbutic, exciting the appetite, and assisting digestion ; externally used in stubborn itch.
*Yellow balsam, Touch me not. Impatiens Noli tangere. Herb very diuretic, capable of producing a diabetes; but extremely uncertain in its operation.
*Wood sorrel. Alleluia, Lujula, Acetosella, Trifolium acidum, Oxalis Acetosella.
*Oxalis corniculata. Herbs in salads very refreshing, acidulous, anti-putrescent; make a very pleasant whey; used in the Alps and Switzerland for the extraction of salt of sorrel.

Jaitaica wood sorrel. O. stricta. In salads diuretic, cooling.

> 74. MALVACE E.

The plants of this order are cmollient.
*Comon mallow. Malva communis, M. syliestris.
*Dwarf mallow. M. rotundifolia. Cürl-leaved mallow. M. crispa.

Vervain mallow. Alcba, M. Alcea?

* Musk mallow. M. moschata. All these herbs are eminently emollient and moistening, proper to cool and open. the belly; flowers pectoral.
*Marsh nallows. Althoca, Bismalva, Ibiscus, Althoca officinalis. Leaves and roots very emollient, particularly useful in diseases of the bladder; flowers pectoral.

Aithea hirsuta. Has the same virtues.
*Tree mallow. Malva arborea, Lavatera arborca.
Lavatera triloba.
L. thuringiaca. Have the same qualities, but are seldom used.

Indian mallow. Sida Abutilon. Leaves emollient, cleansing to ulcers; seeds opening, diuretic.

Musk mallow, Musk ochra. Bamia moschata, Hibiscus Abelmoschus. Seeds smell like musk, are cordial, cephalic, stomachic, and emetic ; used also in perfumes, and by the Africans, in coffee.

Okra. H. esculentus. Used as a potherb, contains a kind of gelatine; decoction of the leaves and pods demulcent, pectoral.

Guinea sorrel, Red sorrel. H. Sabdariffa. Herb acid, refreshing, dinretic.

Cotron. Bombax, Gossypium herbaceum. Seeds pectoral, anti-asthmatic ; down of the seeds used as a caustic, instead of moxa; young buds very mucilaginous, pectoral.

Cacao, Chocolate nut. Cacao, Theobroma Cacao. Kernels rather bitter, butyraceous, nourishing, emulsive, contained in a capsule filled with an acidulous pulp: used for the extraction of the butyraceous oil, and for making chocolate ; being buried for thirty or forty days they lose their bitterness.

## 75. MAGNOLI e.

Barkis of these trees are bitter, astringent, or aromatic.
Wild cinnamon. Canella alba. Berry aromatic, used as a spice; bark rolled, peeled, whitish, thicker than cinnamon, pungent, and sweet-smelling; warm, stimulant, antiscorbutic; dose gr. x to $3^{\mathrm{fs}}$; used also as a stcrnutatory: the very odoriferous gum resin, alouchi, is said to be the produce of this tree.

Star anise. Anisum stcllatum, Illicium anisatum: Seeds contained in radiated brown capsules, fine scented, stomachic, make excellent liqueurs.

Angustura. Cusparia fibrifugg? Magnolia glanca? Bark aromatic, intensely bitter, tonic, stimulant, very useful in dyspepsia, diarrhoea, and dysentery; dose gr. v to xx.

Magnoria Plumeri. Has the same qualities.
Virginia tulip tree. Liriodendron tulipifera. Root and bark smell like essence of Bergamotte, and are used to flavour liqueurs, \&c.

Stave wood, Mountain damson. Simarouba, Quassia Simarouba. Bark inodorous, bitter, astringent, useful in dysentery, intermittent fever, dyspepsia, the whites; dose Эj to 3 fs; wood inert.

Quassia, Coissi. Quassia amara. Wood of the root very bitter, febrifuge, introduced by a negro physician of that name, stomachic, useful also in gout ; dose gr. x to 3 j , three or four times a day, or it may be taken in an infusion: it is also much used by brewers instead of hops; and pastrycooks, \&c. put a few chips into a plate of water, as a poison for flies: bark of the root esteemed in Surinam the most powerful, but not officinal in Europe.

Quassia excelsa. The same qualities, but weaker.
Bitter wood. Q. polygama. Wood makes a good bitter infusion, 3 ij -iv to lib cold water; or the powder, gr. xv , may be taken.

## 76. ANNONA.

## Fruits nourishing or spicy.

Ethiopian pepper. Uvaria aromatica. Capsules, Piper Athiopicum, very aromatic, heating, used to flavour liqueurs : differs from the amomum grana Paradisi of order 18.

Sour sor. Annona muricata. Root, in decoction, used against fish poison; fruit eatable.

## 7\%. MENISPERMA.

These plants are caustic, or depurative and diuretic.
Cocculus Indicus. Menispcrmum Cocculus. Capsules acrid, used to intoxicate fish; and in powder to destroy vermin; also by brewers, to give a false strength to beer..

Columbo, Calumba. M. hirsutum. Root bitter, aromatic, stomachic, anti-emetic, astringent; dose 5 fs frequently in a day.

Pareira brava, Velvet leaf. Cissampetos Paicira,

Trunk or root, in powder, $Э_{j}$ to $Э_{\mathrm{ij}}$; or in infusion, $\overline{\mathrm{iij}}$ to Hjj water, pro tribus dosibus: diuretic, very useful in obstructions, dropsy, or gravelly complaints; decoction of the plant made into syrup, pectoral.

Liane a glacer l'eau, Cissampelos Caapeba. A very powerful diuretic, in use among the negroes in Martinique against bites of serpents; its mucilage thickens water.

Brown pareira brava. Abuta rufescens. The same qualities as the white pareira brava.

## 78. BERBERIDES.

The plants of this order are acidulous and astringent.
*Parberry, Pipperidges. Berberis, Oxycantha, B. vulgaris. Berries very acid, incisive, astringent, hepatic ; bark useful in jaundice as an aperitive; root very bitter: root, wood, and bark give wool a yellow colour destructible by air and soap.
*Aleine barren wort. Epimedium alpinum. Roots and leaves astringent, said to hinder conception.

## 79. TILIACEAE.

The flowers of these plants are nervine.
*Lime, Linden, Bast. Tilia europea. Flowers antispasmodic, cephalic; bark and leaves drying, astringent, diuretic, emmenagogue ; berries astringent; slime of the bark very useful in burns and wounds; wood used for cutting and carving, as having a fine even grain.

Jews mallow, Bhungef paut. Corchorus olitorius.
Gifee naltha paut. C. capsularis. Leaves emollient, eaten as spinage in hot countries; stalk made into a kind of hemp, called paut, of which the coarse cloth in which the goods brought from the East Indies, or gunny bags, are made.

Arnotio plant. Bixa Oreblana. Yields the fecule called arnotto.

## 80. CISTI.

The plants of this order are astringent or pectoral.

* Dware cistus, Littie sunflower. Helianthemum Anglicum luteum, Cistus Helianthemum.

Cistus Fumana.
*C. guttatus and the other species are astringent, vulne--ary plants.

The parasitic plant hypocistus, eytinus hypocistis, sec order $\varrho_{\sim} 3$, grows chicfly on the C . incanus.
C. creticus, Yields the resin called labdanum.
C. ladaniferus. Yields, by boiling in water, an inferior sort of labdanum.

* Purple violet, Viola odiorata.
* Hearts ease, Pensele V. tricolor. Flowers moistening, pectoral, antipleuritic; seeds diuretic, lithontriptic; roots expectorant, sometimes slightly emetic, and in doses of 3 j , cathartic; the flowers of the purple violet make a fine blue syrup.

Ipecacuanifa. V. Ipecacuanha. Root emetic, milder than the false kinds, order 477 and 57 , but mostly adulterated with them; dose gr. v to Эij : in small doses gr. fs to gr. ij, given frequently, it is diaphoretic, expectorant, and stomachic. In both methods it is antidysenteric ; gr. v, or enough to excite nausea, given an hour before the fit, has been successful in intermittents.

## 81. RUTACE E.

Plants of this order are usually of a strong offensive scent, resinous, detersive, heating.
Caltrops. Tribulus terrestris. Herb detersive, as tringent; seeds cordial.

Bean caper, Zygophyllum Fabago. Vermifuge.
Lignum vite. Guaiacum, G. officinale. Wood resinous, hot, aromatic, diaphoretic, diuretic, much used in dropsy, gout, and especially in the venereal disease in warm climates; its use having been communicated by the Caribs, along with the disease: yields also the resin called guaiacum; leaves detersive, used in scouring floors, and washing printed linens.

Lignum sanctụa, $G$. sanctum. Has the same qualities.

Rue. Ruta hortensis, R. graveolens. Powerfully resolvent, emmenagogue, carminative, diuretic; also alexipharmic, nervine, cephalic, antispasmodic, and anaphrodisiac; dose gr. xv to $Э_{\mathrm{ij}}$; externally rubefacient.

Wiid rue. Harmel, Ruta sylvestris, Peganum Harmala. Seeds very inebriating, soporific, letificant, and cause a happy forgetfulness and pleasant delirium.

Bastard dittany. Fraxinclla, Dictammus albus. Ront rather bitter, cordial, cephalic, alexiterial, uterine, anti-epileptic, vermifuge, in powder $Э_{j}$, bis in die.

## 82. CARYOPHILLERE.

The flowers of these plaints are corclial; the herbs refreshing.
*Field prnk. Caryophyllus arvensis, Holostcum umbellation.

* Chickweed. Alsine, A. media.

Alsine mucronata. Refreshing, moistening, may be caten as spinage; externally ophthalmic.
*Spurry. Spergula arvensis. The same qualities; cultivated as food for cattle.
*Mouse-ear chickweed. Alsine hirsuta myosotis, $C$ erastium vulgatum.
*Broad-leaved mouse-ear chickweed. Als. hirsuta altera viscosa, C. viscosum.
*Great marsh chickweed. Als. aquatica major, C. aquaticum.
*Corn mouse-Ear. Cerastium arvense.
C. repens. All cooling, moistening herbs, nourishing cattle, and may be useful in scarcities of food.
*SAND wout. Arenaria media. Externally used in whitlows and other inflammations.
*Sea spurry. A. marina. Very succulent; great quantities are pickled and sold for samphire.
*Great stitchwort, Stellaria Holostel.
S. Alsine. Have the qualities attributed to chickweed. Gypsophila Saxifraga.
G. muralis. Lithontriptic.
*Sopewont. Saponaria, S. officinalis. Attenuating, opening, antivenereal.

* Clove pink, Clove gillyflower. Caryophyllus. ruber, Tunica, Vetonica, Dianthus Caryophyllus. Flowers cephalic, cordial, antispasmodic, nervine, in doses of $Э j$ to $j \mathrm{j}$; useful in heartburn and contagious fevers.

Eiflet des Chartreux. D. cartlusianus.
*Deptrond pink. Caryophyllus pratensis, D. Armeria. Sweet Williang. D. barbatus.
Fringed pink. D. superbus.
*Stone pink, Maiden pink. D. arenarius, and the other species of dianthus, have similar qualities, but weaker.
*Lobel's catcifiy. Behen album, Silene Armeria.
Red catchely. S. muscipula.
S. İelien.
*Gpafing poppr, White bottle, White Bfihen: Bchen ulbum, Cuculuhes Behen. Roots cordial.
*Campion, Batchelors button. Lychinis dioica.

* Catchily. L. viscaria.
© Cuckow flower, Meadow pink. L. Flos euculi. Qualities nearly the same.
*Cockle. Agrostemma Githago. Rose campion. A. coronaria. Agrostemma Flos Jovis.
Aghostemma Coli rosa. Roots vulnerary, astringent; seeds purgative.
*Flax. Linum, L. usitatissimum. Seeds, linseed, extremely emollient, and also diuretic; yield a very drying oil.
*Dwarf wild flax, Mile mountain. L. cathurticum. Purgative in doses of 3 fs to $3 j$.

## 83. SEMPERVIV.

The juice of these plants is either detersive or marchish.

* Navelwort. Umbilicus Veneris, Cotyledon, C. Umbilicus. Refreshing, detersive, cooling, very diuretic, useful in inflammations of the skin.
C. calycinum. Leaves acid in the morning, tasteless at noon, bitter in the evening.
*Rosewort, Roseroot. Rhodia radix, Rhodiola rosea. Root very cephalic, astringent.
*Orpine, Livelong. Telephium, Crassula, Fabaria, Sedum Telephium. Vulnerary, astringent, easing pain in fresh wounds or in old ulcers.

Evergreen lesser houseleek. S. Anacampseros.
Annual white houselfek. S. Cepoca. Equally cooling, astringent, and diuretic.
: Lesser housleleek, Prick madam. S. mimus, S. album. Qualities the same; used in salads.
*Wall pepper, Stone crop. IS. minimum, Iileccbra, S. acre. Emetic, and a powerful detersive in cancers and scrophula, antiscorbutic; externally rubefacient.
*Common griat houseleek. Sedum majus, Sempervivuim, Semp. "tectorum. Very cooling, astringent; used externally to corns.

## 84. SAXIFRAGE.

## The plants of this order are cooling:

*White s.ixifrage. Saxifraga alba, S. granulata.
*Rek-leaved whitlow grass. Paronychia, S. tridactylites.

Narrow-leaved saxifrage. S. C'otyledon.
*Lenion pride. S. Geum, and the other species of this genus, are aperitive, diuretic ; useful in jaundice, obstructions, and scrophula.
*Golden saxifrage. S. aurea, Chrysoplenium oppositifolium, and C. alternifolium. Aperitive, diuretic, antiasthmatic, and pectoral.
*Tluberous moschatel. Adoxa Moschatellina. Has nearly the same qualities.

## 85. CACTI.

The plants of this order are catable, acidulous, and cooling.
*Red curiants, Garnet berries. Ribes, Ribesia, Ribes rubrum. Fruit acid, cooling; as also the white variety: both make good wine ; juice of the fruit, with sugar, drank as lemonade or orgeat.
*Black currants, Quinsy berries. Ribes nigrim. Odour similar to that of bugs; leaves, in infusion, aperitive, diuretic, used in gargles, and as a substitute for tea the young ones only being used; fruit aperitive; the juice makes excellent wine.
*Gooseberries, Berries. Grossularia, Uva crispa, Ribes Grossularia, R. Uvia crispa. Juice of the berries used as sauce for maycril and other fish; astringent, but when very ripe, laxative ; makes an excellent vinegar; seeds, washed and roasted, substituted for coffee.

Indian fig, Prickly pear. Cactus Opuntia, and the ther species of this genus: fruits sweetish, diuretic; plants very cooling; juice contains a red colouring principle, which olours the urine of those that eat the fruit, and forms the lyeing principle of the cochineal, which feed on the C. coo inellifer, C. Tuna, and C. sylvestris.

## 86. PORTULACEA.

The plants of this order are cooling and saline.
Purslane. Portulaca, P. oleracea. Very cooling, use-
ful in scurry, heat of wine, and bilious disorders; seeds one of the cold ones, vermifuge.

Jamaica iurstane. P. pilosa. In salads, diuretic: as also its expressed juice.
*' 'amarisk. T'amariscus, T. grallica. Bark opening, deobstruent: ashes of the bark contain a large proportion of Glauber's salt.

German tamarisk. T. germanica. Has similar qualities.
*Strapwort. Corrigiola littoralis. The same qualities as purslane.
*Annual knawell, German knotgrass. Sclerantlues annuus. Diuretic, astringent: the vapour arising from a decoction of it is used in the tooth-ach.
*Perennial knawell. S. perennis. The scarlet grain, or coccus Polonicus, is found upon its roots in the summer months.

## 87. FICOIDE E.

## Saline coolers.

Glinus lotoides. Cooling, aperitive, nitrous.
Ice plant. Mesembryanthemum crystallinum. Contains acetate of potash; like the other species of this genus, it is very mucilaginous, and useful in inflammatory and bilious fevers.

Tetragonia expansa. Antiscorbutic, cooling, eaten as food.
88. ONAGR $\times$.
*Tree primrose. Enonthcra biennis. Root cleanses foul ulcers.

* Rose bay willow herb, Persian willow, French willow. Epilobium angustifolium. Suckers eatable; an infusion of the plant intoxicates; down of the seeds, mixed with cotton or fur, has been woven or felted.
*Broad smooth-leaved willow herb. E. montanum.
*Square-stalked widlow herb. E. tetragomum. And the foreign species are used to cleanse foul ulcers.
* Einchanters nightshade. Circaa lutctiana. Resolvent, vulnerary; formerly supposed to possess wonderful properties in regard to magic and sorcery.

Fuchsia triphylla and F. multiflora. Vulnerary.
White sanders. Santalum album.
Yellow sanders. Santalum citrinum. The outside
of the wood is the white, the heart of the tree is the yellow, aromatic, slightly bitter and sweetish, cordial, cephalic.

## 89. MYRTI.

These trces and shrubs are usually aromatic.
Cajeput. Melaleuca Leucodendron. Leaves yield an essential oil, brought from the Molucca isles.

Myrtie. Myrtus communis. Leaves odoriferous, cephalic, astringent; bark and leaves used in tanning ; berries used in dyeing, and to form an astringent extract; flowers and leaves yield an essential oil by distillation; and the berries a fixed oil, myrteum, which is astringent.

Musk myrtle. Myrtus Uegni.
M. Luma. Berries used in Chili to form, by fermentation, an agreeable stomachic wine; leaves form a very cordial tea.
M. Cheken. Juice expressed from the green wood, used in Chili in glaucoma and inflammations of the eyes.

Allspice, Jamaica pepper, Clove pepper. Piper Jamaicense, Pimenta, Piper odoratum, P. caryophyllatum, Myrtus Pimenta. Fruit dried before it is thoroughly ripe, is heating, aromatic; used as a sauce, and in liqueurs; yields an essential oil, like that of cloves.

Clove berry tree. M. caryophyllata. Bark, cloved bark, cassia caryophyllata, thin, reddish iron grey, rolled up in short tubes, external coat taken off, sharp tasted, and smelling like cloves, aromatic, cephalic ; fruit round, blackish, bigger than pepper, eyed at the top, enclosing undei a thin skin and spongy substance two black seeds, smejling and tasting like cloves, sold for carpobalsamum and amo mum; agree in qualities with cloves.

Myrtus acris.
M. fragrans. Have the same qualities as all spice.

Cloves. Caryophyyllus aromaticus, Engenia caryophyl'ata. Flower buds of the tree before they open, dried and imoked, are hot, stimulating, and aromatic, dose gr. v tò rr. . : the ripe fruit, antophyllus, mother cloves, or fusses, tre large, less aromatic, used, when preserved, as a stomä:hic, and antispasmodic.

Pomegranate. Mala Punica, Granata, Punicum Iranatum. Fruit very cooling, antibilious, astringent, corlial ; rind of the fruit, pomegranate peel, cortex granati,
malacorium, very astringent, detersive; dose, in powder, 3 Is to 3 j , in infusion, to f is ; used in tamingr; flowers of the wild trees, baloustice, tonnic, astringent.

Syringa, Moek orange. P'liladelphus coromarius. Flowers very strong scented; leaves detersive, may be used as tea.

Guava, Bay reumb. Psidium pyrifermen. Young leaves, buds, and fruit, in decoction, astringent. Marmalade of the fruit the same.

Jambos. Eugqria Jumbos. Fruits eatable.
Lecythis ollaria.
L. Zabucajo. Kernels catable.

Red gum thee. Eucalyptus resinifera. Yields the red gum or kino.

Yellow gum tree. Acarois resinifera. Yields the yellow gum.

## 90. MELASTOMA.

Melastoma lierta. Leaves powdered used to sprinkle on ulcers; berries yield a juice like that of myrtle berries; also used for ulcers.

The berries of various species of melastoma dye black, very lasting.

## 91. SALICARIAE.

## The plants of this order are astringent.

*Purple-spieed willow herb. Lysimachia purpurea spicata, Lythrum Salicaria. Ophthalmic, useful in inflammation and redness of the eyes, astringent, and used in the winter diaryheas of northern countries; may also be taken as tea, or even fermented as a beer.
L. virgata. The same qualities.

Henna. Lawsonia inermis. Used throughout Asia and north Africa to colour the nails of females of a reddish colour, as an addition to their charms.

## 92. ROSACEAE.

These plants contain an astringent or acid principle.
*Apple. Malus, Pyrus Malus. Fruit of the wild, crab, is rough to the taste, contains an astringent principle, and much malic acid; juice of the wild fruit, verjuice, the same qualities, used in sprains: fruit of the cultivated, sweet, eatable; its juice forms, by fermentation, cyder.
*Pear. Pyruls, $P$. communis. Fruit nearly the same as that of the apple, but becomes much sweeter by cultivation; its fermented juice is called perry.

Quince. Cotonea, Cydonia, $P$. Cydonia. Fruit rough, astringent, binding, very stomachic; seeds very mucilaginous.
*White beam, Wild pear. Cratcegus Aria.
*Wild service, Sorb. C. torminalis. Fruit ripened upon straw until soft eatable, astringent, useful in fluxes.

Azarole. C. Azarolus. Fruit red; pulp yellowish, pasty, of a sharpish taste, saccharine, refreshing.

Hawthons, White thorn, May. Spina alba, C. Onyacantha. Flowers odoriferous; fruit, senella, hazes, yields by fermentation a refreshing acidulous liquor.
*Dutch medlar. Mespilus germanica. Fruit extremely astringent, even when ripe, difficult to digest; leaves and seeds used in detergent gargles, very active.

Bastard quince. M. Cotoneaster.
Evetigreen thorn. M. Pyracantha. Fruits astringent.
*Senvice. Sorbus domestica. Fruit rough, very astringent, even when softened; yield, by fermentation, a kind of cyder; wood hard, used by rule-makers.
*Mountain ash, Quicien, Roan. Fraximus syluestris, S. aucuparia. Fruit astringent; when dried and powdered, make a kind of bread; its infusion forms an acidulous drink; 121 t fermented yield 4 tb of fine flavoured spirit: seeds yield oil ; bark tans better than oak bark.

Hundred-leaved rose, Pale rose. Rosa centifolia. Petals astringent, purgative, yield a very odoriferous distilled water.

Evergreen rose. R. sempervirens. Petals musky, very purgative; used in the Levant and at Tunis for distillimg attar of roses.

Wiere rose. Rr. alba. Petals smell less agreeable than those of the hundred-leaf rose, but are more purgative.

Damask rose. R. damascena. Petals pale red, good scent, more purgative than the other.

Provence rose, Rose de Provins. R. provincialis. Petals deep red, of a powerful scent, which they preserve after, drying ; astringent, detersive, tonic, cephalic ; may be kept for a year or eighteen months, by being closely pressed together ; some prefer iron vessels for this purpose, to keep way worms from the mass as well as the air.

Red rose. R. rubra, R. gallica. Petals less ondoriferous; in small doses have the same qualities as the preeceding; but the powder in doses of 5 j occasions three or four stools.
*Dog rose, Wild briar. Cymoshutos, R. canina. Root has been recommended in hydrophohia; fruit, hips, lithontriptic, opening, makes a fine conserve; excrescences made by an insect, bedeguar, formerly used in calculous diseases.
*Sweet briar. R. eglanteria, R. vubiginosa. Leaves odoriferous; make a good substitute for tea.
*Small burnet. Pimpinella, Sanguisorba, Poterium Sanguisorba. Used in salads; astringent, cordial, vulnerary, and pectoral.
*Agrinony. Eupatorium Grcecorum, Agrimonia, 1. Eupatorium. Very detersive, astringent; used in gargles; also hepatic, splenic, and tonic used internally; the infusion of the root is used in fevers and jaundice.
*Parsley piert. Aphanes arvensis. Diuretic, lithontriptic.
*Ladies mantle, Bears foot. Alchemilla vulgaris.

* Alpine ladies mantle. A. alpina. Vulnerary, very astringent, detersive, used to render women's breasts firm.
*Tomentil, Seprforl. Tormentilla, Heptaphyllum, T. crecta. Root very astringent, febrifuge, and is not stimulant ; dose Эj to Эij.
*Cinqfoil, Five-leaved grass. Pentaphyillum, Quin. quefolium, Potentilla reptans. Bark of the root red, astringent, and antiseptic; used as gargle for loose teeth.
*Wild tansie, Silver weed. Argentina, P. anserina.
*Hoary cinqfoll. P. argentea.
*Purple marsh cingfoll. Pentaphyllum rubrum palustre, Comarum palustre. The same qualities as tormentil. Root of this last dyes a dirty red.
*Strawberry. Fragaria, F. Vesca. Roots aperitive; fruit cooling, opening, diuretic, dissolves the tartar off the teeth, diaphoretic, very useful in calculous gout and consumption.
*Barren strawberry. F. sterilis. Root astringent; dyes red.
* Avens, Heub Bennet. Caryophyllata, Geum urbanum.
*Water avens. G. rivale.
Geum montanum. Roots scented like cloves, sudorific, tonic, antipodagric, stomachic, febrifuge ; may be substitut-
ed for bark : when young, they give a pleasant flavour to ale, and prevent it from growing sour.
*Rasp berry, Hind beriry. Rubus iddous. Fruit cooling, cordial, conmunicates a fine flavour to liqueurs; leaves form astringent and detersive gargles.
*Dew berry, Shall blamble. R. coesius. The same, but sourish.
*Knot berry, Cloud berry. Chamocimorus, R. Cha* mocmorus. Fruit acerb, astringent, 'dyes a bluish purple; eaves and tops astringent.
*Black berry, Branible. R. vulggaris, R. fruticosus. Truit rather acerb; used as fruit, and also for wine, which, rhen mixed with sloe juice, is very palatable; green twigs וsed in dyeing black.
*Meadow sweet, Quefn of the meadows. Ulmaria, Reģina prati, Spircea Ulmaria. Herbs sudorific, astringent, ntispasmodic; flowers flavour water by infusion or distillaon.
*Dropwort. Filipendula, S. Filipendula. Herb astrinent, diuretic ; roots dried and powdered, may be made into kind of bread.
*Cherry, Gee. Cerasus, Prunus Cerasus. Many vaeties: fruit cooling, nutritive, laxative; makes a good ine and spirit by itself, and gives a flavour to other liquors. *Brd cherry, Wild cluster cherry. Cerasus avium,
Padus. Fruit astringent, nauseous, but gives an agrecle flavour to wine or brandy; bark antisyphilitic.
- Perfumed cherry thee. P. Máhaleb. Wood odori--ous, sudorific ; kernels used to scent washballs.
Laurel: Laurocerasus, P. Laurocerasus. Leaves ve been used in cookery for those of the bay tree, but are $s$ aromatic, and communicate the flavour of bitter almonds: they contain Prussic acid, they act on the nervous system, 1 are dangerous.
"Plumb. Prumus domestica. Many varieties: fruit 2et, acidulous, cooling, laxative, apt to purge.
Prunelloes. P. Brignoliensis. Fruit cooling, not
to purge, and therefore preferred as au agreeable refriant in fevers.
Sloe, Black thorn. P. syluestris, P. spinosa. Leaves, n dried, one of the best substitutes for tea; bark powad, in doses of 3 ij , used in intermittent fevers; flowers, infused in water or whey, are a pleasant purge; fruit
gives a pleasant flavour and red colonf to wine; juice of the Fimit stains linen of a a madible colour; used for markiner clothes, and for colouring wines; the inspissated juice of the mripe firmit is the astringent extract called German ucucia.

Aprocock. Amerniacu mala, Precocia, Isumus armicniaca. Fruil nourishing, lavative, febrile; seeds bitter, sapronaceous.

Piache, Nectanines. Persica multe, Amygedulus persica. Leares and flowers purgative; fruit in hot countries the same.

Dwarf almond. A. pmila. Flowers purgative.
Araond. Amygdulus' communis. 'Two varicties; vi\%. hitter andi sweet: seeds covered with an acrid, resinous skin: the swect are pectoral and cooling, but mawkish; the bitter are used to relieve the favour of the sweet, and to clear muddy water; they are poisonons to fowls, parots, and many animals : both yieid a fine oil by expression.

Ícaco. Chrysobalanis Icaco. Fruit laxative, may be substituied for myrobalans.

Eagle wood. Lignumi aspalathi, Aquilaria oíata. Wood resinous, yellowish, with black reins, cordial, alexipharmic, used for fumigations, of very great value, but lese esteemed them lignum aloes, order 96 .

## 23. LEGUNINOS思。

The scedsh of these plants are mutritioe, but rimaly.
Fuptins thoms. Acaciu, Nrimosu nilolica. Tield gum Arabic: expressed juice of its pords is the acacia zera. Mrios a senceatl. Iie!ds gun Senegal.
M. furnesiana. Yields also a kind ol' gum.
MI. Catechu. Yields the extract called terra japonica, or cutch.

Coccoon. M. scaudens. Pods four to seven feet long; seeds eatalile.

Nepmatic wood, Cats claw. M. Ungries cati. In decoction, diuretic.

Cbeepling and machly sexsitive plajts. Ho...... Roots cleancd and barked, about gr. xy, in red wime, againsi poisons; the leaves are themselves poisomous.

M: Ingrta. Seds saccharine.
M. firgifolia. Scerls catable.

In. fitoox. Seeds purgative, attemant.

Tripie thorned acacra. Gleditsia triacanthos. Seeds used to feed amimals; sap yiclds sugar.

Carob tree, St. Jonn's bread. Siliqua dulcis, Carobr, Ceratia, Ceratonia Siliqua. Pod used as food for man and beast; ophthalmic, cuoling, pectoral.

Tamarind. Tamarindus, T. indica. Pulp of the pods acidulous, cooling, laxative, antiseptic; one or two ounces are required to prove cathartic.

Cassia stick tree. Cassia fistularis, C. fistula. Pulp of the pods cooling, laxative, dose 5 ij to Jj .

Horse cassia. C. javanica. Pods very large, with three nerves-two close together along the back suture, the third separate, opposite to the others; pulp purgative, but not so agreeable as that of the cassia stick tree.

Stheing weed, Jamaica piss-a-bed C. occidentalis. Expressed juice used externally in erupions; a decoction of the root is diuretic.

Cassia emarginata. Pulp of the pods laxative.
Sriva. Senna Alexandrina, C. acutifolia. Leaves ind seecis, $Э_{j}$ to $\frac{. j}{}$, or in infusion, purgative, nauseous, and ipt to gripe, best corrected with ginger or coriander seeds; oods less purgative than the leaves, but also less bitter, and eldom gripe.

Cassra Absus. Leaves mixed with those of the precedng plant.
C. Senna. Leares more nauseous and less active than he preceding. The French import some senna leaves from heir islands; the species to which they belong is not yet demined.

Cane-piece sensitive plant. C. Chamoceristo. a ecoction of it, drank liberally, 4 fb a day, is useful against te poison of nightshade.

Cassia alata. Flowers made into an ointment, used to re tetters.
Ringworm bush. C. herpetica. Bruised leaves and pressed juice used against itch, tetters, and ringworms.
Guirandina. Moringa. Root achid, like horse-radish; ood, Lignum nephriticum, diuretic; its infusion is blue by: fraction, and opal yellow by reflection; nuts, Batame yrepsica, Crlans umguentaria, Ben nuts, yield, by expresin, a scentless oil; leaves antispasmodic.
lities: nut, 3 fs in powder, astringent; used in gonorthoca, and to throw out the yaws, and in convulsive diseases.

Logwood. Lignum Campecherse, Homatoxylon campechianum. Wood astringent; dose $\mathrm{Oj}^{2}$ to 3 j , or in decoction; used also to dye purple or violet.

Brasil, wood. Lignum Brasiliense, Lignum Fernambucense, Ccesalpinia crista. Wood sweetish, slightly astringent; used to dye red, and for ink; sometimes substituted for red sanders.

Brasiletto. C.brasilicnsis. Wood elastic, tough, durable, polishes well, colour is a beautiful orange, full of resin, yields a fine full tincture by infusion.

Bastard nicarago wood. C. vesicaria. Wood brown, used in dyeing.

Sappan. C. Sappan. Wood used for dyeing red.
Barbadoes flower fence, Barbadoes pride, Spanishif carnations. Poinciana pulcherrima. Tea of the leaven and flowers, and syrup of the flowers, purgative, and emmenagogue ; also the seeds in powder, dose $\mathfrak{j}$ j, in common use with the negro slaves to procure abortion.

Adenanthera pavonia. Sometimes substituted for red sanders.

Lotus Courbaril. Hymenia Courbaril. Yields gum anime, which may be used for guaiacum, or burnt as incense ; pods contain an acidulous nutritive farina.

Judas tree. Cercis Siliquastrum. Flowers piquant. antiscorbutic, in salads.

Stinking bean trefoil. Anagyris foutida. Leave emmenagogue, cephalic; seeds emetic.
*Turze, Whins, Gorse. Genista spinosa, Ulex eurcpocus. Plant attenuant, diuretic, determining to the shin, occasioning nausea.

Canary rosewood. Genista canariensis. Wood, lignum rhodium verum? yellowish, with red veins, has the scent of roses; used for fumigation, is cordial and cephalic.
*Dyers bropm, Green weed, Wood waxen. G. tinctoria. Flowers and leaves aperitive, diuretic; with alum and tartar, dye an inferio: yellow.

Spartium purgans. Leaves and soeds purgative.
*Broom. Genista, S. scoparium. Plant diuretic, even for animals who browse on it; flowers used as a pickle for the-tahle; sceds emetic; yet used as a substitute for coffee: fresh tops and leaves cathartic in decoction.

Spanish broom. S. junceum. Qualities the same as common broom, but stronger; affords good hemp.

Laburnuar. Cytisus Laburnum. Leaves diuretic, resolvent ; a good food for cattle.

Pigeon pea, Angola pea. C. Cajan. Seeds used as food, strong tasted; young shoots pectoral; roots aromatic.

White lupine. Lupinus, L. albus. Seeds rather bitter, emmenagogue, vermifuge; used as food, and externally in resolvent poultices.
*Resthifarrow, Cammock, Petty whin. Ononis, Anonis, Resta bovis, Ononis spinosa. Root diuretic, detersive, aperient; used in decoction.
*Kidney vetch. Anthyllis vulneraria. Herb diuretic, cuuses cows to give good milk, dyes yellow.

Earth pease, Pindars, Glound nuts. Arachis hypogrea. Seeds cily, nourishing, yield oil, and are also made into a common kind of chocolate; root sweet.

Paraguay tea. Psoralia glandulosa. Leaves stomachic, vulnerary, vermifuge.

Stiniing trefoil. Trifolium bituminosum, $P$. bitu minosa. Leaves diuretic, anticancerous; seeds yield oil.

Spanish Contrayerva. Contrayerva, $P$. pentaphylla. Root slightly aronatic, taste sharp, used in typhoid fevers.

Alpine trefoll. Trifolium alpinum. Root sweet, nay be used for liquorice.
*Hares foot. Lagopus, Pes leporinus, T. arvensc. eaves pectoral, antidysenteric.
*Melilot. Melilotus, T. M. officinale. Herb pectoral, iscussive, causes the peculiar flavour of the schab-ziger, or raped cheese of Germany.
Field trefoil. Lotus urbana, T. odoratum, T. ca«lerm. Herb diuretic, vúlnerary, anodyne.

* Lucerne. Medicago sativa.

Shrubby moon trefoil, M. arborea.
*Little yellow trefoil, Melilot trefoll. Trifoim lutcum minimum, M. lupulina. Herbs lenifying, exllent forage ; the seeds of lucerne dye yellow.
Fenugreek. Fonum gracum, Trigonella Fonum кcum. Seed odoriferous, ripening, mucous, resolvent, regoric ; it is eaten in the Levant, and considered stomac; dyes yellow.
White lotus, Lotus Dorycnium. Seeds useful in piles.

* Yellow lotus. L. corniculata. Anodyne, emollient; used in burns.

Blatik Egyptian bean, Lablab. Dolichus Lablab. Sceds nutritive.

Cowhage. Siliqua hirsutn, D. pruriens. The hair of the pods occasions violent itching, to be allayed ly a solution of green vitriol or oil; vermifuge, by scraping the hair off a pod into treacle or syrup for a morning dose, and giving a. brisk purge after two or three doses of the cowhage ; root in decoction, dimretic, and very useful in dropsy.

Doricnos Catiang.
D. Soja. Sceds used to make soy.
D. tuberosus.

1. buloosus. Roots catable.

French bean. Phaseolus vulgaris. Flour of the seed emollient, diurclic, nourishing.

Scarlet bean. P. Caracalla. Flowers sweet scented; pods eatable.

Dwarf midney bean. P. namus. Pod catable; nouv rishing.

Mungo. P. Mungo, Furnishes a kind of sago.
Erythrina monosperma. Yields a red resin used as gum lac.

Whid hiouorice vine. Glacine Abrus, Abrus precatorius. Root yields an extract like liquorice; herb, in infusion, diaphoretic, pectoral, demulcent; seeds ophthalmic, cephalic; when eaten whole they pass unchanged, indigestible by ordinary stomachs, very flatulent, said by some to be poisonous.

Dogwood. Piscidia crytherina. Bark of the root thrown into pends or still water stupifies the larger fish, without rendering them unwholesome, and bills the smaller ones; a decoction of it is used to cleanse foul ulcers.

Robinia Caragana. Seeds oleaginous, eatable; bark used for cordage.

Astragalus gummifer, and another undetemined epecies, yield gum tragacanth.

Goats thonn. A. Tragacantla, does not yield this gum, as is usially said.
 Root sweet, may be used for liquorice; leaves used in retention of urine.
A. Potcrium. Root vulnerary, nervine.
A. Glum. Herb, given in barley water, increases the milk in nurses.
A. Cicer. Seeds opening, detersive.
A. cascapus. Root antivenereal.

Blander semis. Colutca cruenta. Leaves and pods purgative, but not equal to semen; fruit fattens sheep, and makes them give plenty of milk.

Ltruonice. Glycyrrhiza, Liquivitia, G. glabra. Root sweet, opening, expectorant, pectoral, diuretic ; chewed, it extinguishes thirst ; its infusion covers the taste of unpalatable drugs more effectually than sugar.

Prickly devoice. G.echinata. Root sweet, and the juice is used externally in fetters and ringworms.

Goats rue. Galega, Rota cupraria, Galcegr officinalis. Sudorific, vermifuge, alexiterial, useful in epilepsy and convulsions.
G. tinctoria. Yields a pale indigo.
G. piscatorial. Intoxicates fish.

Indigo pliant, Anil. Indigofera tinctoria. Yields the blue fecula, indigo.

Guatranaa indigo. I. disperma.
I. Anil.
I. rita.

Wild indigo. I. argentea.
I. hirtusa, and some other species, also yield indigo.

Tuberous retch. Lathyrus tuberosus. Root tube rout, sweet, yielding a white nutritive fecula.

Chichi peas. L. sativus. Seeds nutritive.
*Narow-leaved everlasting peas. L. syluestris.
*Everlasting tare.- L. pratensis.
*Everlasting pea. L. latifólius.

* Yellow vetchling. $L$. Ahbiaca.

Sweet Pen, L, odoralus.
Painted lady pea. L. Clymenum.
Tangier pea. L. tingitumus. Plants detersive, astrinrent, vulnerary; make good forage ; seeds nutritive.
*Tare, Vetch. Vicia, V. sativio. Seeds detersive, atentrant, astringent. The Canadian variety makes good bread.

Garden bean. Paba major, V. Paba, Excels nuishing, difficult of digestion, flatulent.

Horse bean. Faba minor, F. aquina, F. Fuba $\beta$. seeds used as forage, and also roasted for coffee.
*Bastard verier. Orobus syjzeaticus.
O. lutcus.
O. vernus.
O. niger. Seeds yield a resolvent farina.

* Bitter vetcie, Heati rea. Orobus, Ervum, O. tuberosus. Roots nutritive; farina of the sceds resolvent.

Lextils. Lens vulgaris, Ervum Lens. Seeds difficult of digestion, astringent, hurfful to the cyes.

Ervon Ervilia. Farina of the seed highly maturative and resolvent.

Peas. Pisum, P. sativum. Green pods contain a saccharine principle, useful in the scurvy; dry seeds heavy and flatulent.

Chich peas. Cicer. C. arietinum. Seeds a heavy food, but very wholesome for labouring people, diuretic, vermifuge; farina resolvent; plant contains oxalic acid.

Caterpillars. Scorpiurus vermiculata. Desiccative.
*Smali birds foot. Ornithopus perpusillus. Herb lithontriptic, and used in ruptures.
*Horseshoe vetch. Ferrum equinum comosum, Hippocrepis comosa.

Scorpion senna. Coronilla Emerus. Leaves purgative; used instead of senna by the country people where it grows.

Securidaca. C. Securidaca. Seed brown, extremely bitter, nauseous, purgative; herb taken just before coition hinders conception, disorders the stomach.
*Sainfoin, Cockshead. Onobrychis, Hedysarum Ono, brychis. Herb ripening, and discussive in poultices; useful in strangury.

Sulla. H. coronarium. Has the same qualities, and they are both of them excellent forage.

Alhagi. Hedysurum Alhagi, Yields abundantly a kind of manna.

Sesban. AEshinomene Sesban. Seeds stomachic, emmenagoguc.

Bastard sensitive plant. Ae. grandiflora. Sceds eatable; yield gum agaty; useful in dyeing.

Angelin. Andira Pisonis. Seeds vermifugc.
Andina Alstectio. Alexipharmic.
Cabbage thee, Worn-isark tree. Geoffraa inermis. Bark bitter, astringent, febrifuge, and vermifuge, in doses of Эj to 5 j ; but as it is a violent medicine, the dose should be less at first, and gradually increased, lest it should occasion good purgative ; or ${ }^{\circ} \mathrm{j}$ fs boiled in water, dose coch. maj. ij-iv, onmi mane, tribus diebus sequentibus, and afterwards a dose of oil.

Georrrea surinamensis. Has the same qualities.
Red Sanders. Santalum rubrum, Pterocarpus Santalinus. Wood resinous, odoriferous, austere, astringent, tonic; used as a red colouring ingredient in spirituous tincture, rields a resin analogous to dragon's blood.

Pterocarpus Draco. Yields one sort of dragon's blood: see orders 11 and 12.

Coparfera officinalis. Yields the limpid turpentine, called balsam of copaiba.

Original Jesutits bark tree, Kina Kina of the South Americans. Myrospermum pedicellatum. The first kind of Peruvian bark brought to Europe; speckled on the outside, resinous, odoriferous, not so bitter or astringent as the present sorts from the Loxa tree, which are called there Cascarilla, i. e. small bark, while this is there known by the name of Kina kina-see order 5\%. The resin is used by gouty persons, to hold in the hand, as the Turks do their caddarum.

Myrospermum peruiferum. Yields, by incision, the turpentine called balsam of Peru,

Tonca bean. Dipterix odorata, Coumarouna odorata, Barmosma Tonga. Kernel odoriferous, used to scent snuff.

## 94. TEREBINTACE A.

Resinous, sometimes virose, or at least aromatic.
Cashew nut. Anacardium occidentale. Peduncle of he nut, like a pear, acidulous, astringent, eatable, and its aice may be made into a kind of wine; kernel of the nut phrodisiac; shell of the nut contains an acrid oil, marking nen in an indelible manner, and used for taking freckles :om the skin: the red gum that is exuded by the tree, is milar to gum Arabic, but astringent, and is used for varishing : expressed juice of the fruit, with red wine, astrinent, good in female weaknesses,

Malacca bean. A. orientale, Semecarpus Ancicarum. Nut heart-shaped, containing a caustic, black, oily ucilage, and then a sweet white kernel, which is cephalic, id increases the memory; the mucilage is used externally
in disorders of the skin; green fruit makes a grood ink fur marking, and is eatable.
Mangors. Mangifera indica. Fruit depurative, fine eating; kernels vermifuge.

Sumach. Rlues obsoniorm, R. coriariu. Leaves, flowers, and fruits acidulous, very astringent; bark astringent; used in dyeing.

Young fustici, Verice Sumacif, Red Sumach. $R$. Cotinus. Equally astringent, poisonous to sheep; wood, yellow, dyes coffee colour, and with nitromuriate of tin, an orange.

Poison oak. R. Toxicodendron. Juice eaustic, dyes linen, \&c. black, raises blisters on the skin, and is joisonous taken internally; leaves stimulant, narcotic, useful in palsy; dose gr. fs to gr. iv, twice or thrice a day.

Common Pensymanian Sumach. Mr. glubra. Berries covered with a red farinaccous matter, containing a large portion of an acid, which is probably the oxalic.

Rhus copallinum. Yields, by incision, the West India copal.

Rhus Vernix. A poisonous tree, which yields, by incision, the turpentine used as varnish by the Japanese; milky juice dyes linen, \&cc. black.

Myrtle-leaved Sumach. Coriaria myrfifolia. Used in tanning and dyeing the same as sumach; fruit sweet and beautiful to the eye, but causes convillsions, delirium, and even death to man and beast.

Widow' wail. Cheorum tricoccum. Acrid, caustic, drastic, a powerful detersive, but dangerous.

Red wood? Can woon? Comocladia dentata. Weml dark red, dyes like Brasil wood.

Balm of Gilisad tree. Amyris gileadensis.
Amyms Opobalsanum. Field, by incision, the true balm of Gilead, in very small quantities, generally at the rate of three or four drops a day from a branch; even the most resinous trees not yielding more than sixty, whence arises its value; fruit, carpobalsamum, and branches, wiglobalsamum, vumerary, aniseptic, and used argainst harrenness.

Amyras elcmifera. Yields, by incision, gum elemi.
Jamaica rose woon. A. bulsumifira. Wood, lighm rhodium, used in cephalic fumigations, burning with a seent of roses; leaves, in infusion, diaphometic, aromatic, cephalic: berries used for balsam of capivi: the tree might per haps
yield a resia like balm of Gilead, if it were tapped in a proper time.

From undescribed trees of this genus, amyris, are produced,

True or male frankincense, thus masculum, otibamum.
Manna theiris, the dust and small fragments of the preceding.

Myrri, myrrha.
Opocalpasum.
Bdeilizem.
Liçuid myrrh, stacte.
Amyms Auchini. Yields balsam acouchi.
A. toxiferu. Yields a resin, which is, perhaps, that called ticuma, used as a poison in war and hunting.

Icica heptapizizlict. Yields the turpentine arouarou.
Mrodendrcm Ïoumiri. Yields balsam houmiri; bark resinous, used for torches.

Paulimea Cururu.
P. pimnata. Leaves vulnerary; decoction used to inebriate fish.

Perurian Mastich. Śchinus Molle. Yields a resin smelling of pepper and fennel; wood purgative, detersive, astringent; fruits make a kind of wine.

Pistachia. Pistachia, $P$. vera. Kernel oily, sweeter than those of almonds, forms a green emulsion, cooling:

Turpentine tree. P. Tcrebinthurs. Yields, by incision, Chio turnentine; fruit styptic, pickled for eating; bark resimous, substituted for narcaphte.

Masticia tree. Lentiscus vulgoris, $P$. Lentiscus. Yields, by incision, the resin mastich; berries yield an oil fit for the table; wood used in dyspeptic affections, gout, and lysentery.

Babbaify mastich tree. Patlantice. Yields a kind of mastich; fruit acidulous.

Jamaica bheli rree. Bursera gummifera. Yields he resin chibou, which is excellent for vamishing: bark has he qualities of simarouba; see order 75 : root astringent.
13. orientalis. Also yields a tonic styptic resin.
'Tolmfera Balsamum. Y'ield's balsam of Tolu.
Monbin. Spondias Minrobutamus. Yields a kind of esin; fruit acerb, acidulous, lavative.

Hog plumb. S. Entra. Bark, externally, as a foment. tion in anasarca.

Bruckis antidysenterica. Inmer hark astringent.
Japan pepper. Piper Japonicum, Fagara piperita. Bark, leaves, and fruit aromatic, used as spice.

Cacatin. F. guianensis. Also used as spice.
Fagara octandra. Yields the true tacamaliaca.
Tooth-ach tree, Prickly yellow wood. Zanthoxylutm Clava herculis. Leaves sudorific, diuretic; expressed juice of the roots, coch. ij, antispasmodic; ronts, in infusion, used as a collyrium, powder of the bark of the roots useful in dressing putrid sores.

Zanthoxylum caribaum. Febrifuge; bark dyes yellow.
Averrioa Carambola. Fruit used in dysentery and bilious fever.
A. Bilimbi.
A. acida. Fruits acid, made into preserves with sugar.

Walnut. . Juglans, J. regia. Kernel cooling, but is difficult of digestion, when old, acrid; yields half its weight of oil by expression: peel of the fruit used in dyeing brown colours; leaves detersive, diaphoretic, anti-arthritic, anti-syphilitic; inner bark emetic; spongy substance inside the nut astringent.

Amleican hiccory. J. alba. Bark, green leaves, and rind of the fruit used in dyeing, with alum, a bright yellow colour.

## 95. RHAMNI,

The juice of these plants is generally green, and purgative.
Bladder nut tree. Siaphylca trifolia. Kemels supposed to be similar in quality to pistachias.
*Spindle tree, Prick wood. Evomymus curopceus. Seeds (three or four) emetic and purgative; externally used as a powder to kill lice, \&rc.

Paraguay tea. Cassine peragua, Ilex vomitoria. Leaves diuretic in infusion, and diminish hunger; but if too much is used, emetic: an infusion of the high-dried leaves is drank by the aboriginal Apalachians as an exhilarant.
*Holly. Ilex, I. Aquifolium. Rcot, bark, berries acrid, purgative, and externally used emollient and resolvent; the berries roasted may be used for coffee; bark yields birdlime by maceration.
*Buckthorn. Spina cervina, Rhammus catharticus. Berries, no. $x x$, or $\bar{j} j t i s$, when dried, very purgative, usually
made into a syrup; their inspissated juice is used by the painters under the name of sap-green; bark dyes yellow; imner bark is cathartic.

Rhamus infectorius. Berries purgative; unripe berries, dried, French berries, grana Avenionensia, dye yellow: a larger variety, called Turkey berries, is preferred by the dyers.
R. theesans. Leaves used to adulterate the coarser cinds of tea.
*Black alder tree. Alnus nigra, Frangula, R. Franrula. Unipe berries used to make sap-green ; ripe berries surgative: bark bitter, emetic, detersive, aperitive, and dyes. ellow : bark of the root violently purgative; charcoal, very ight, serves to make the best gunpowder.

Evergreen privet. R. Alatermus. Some sap-green iṣ nade from it ; laxative.
$J_{\text {ujeb. }}$ R. Ziziphus. Fruit, Jujubac, nourishing, mawkih, mucilaginous, pectoral.

Lotus. R. Lotus. Fruit makes a pleasant wine.
R. Jujuba. Fruit styptic.
R. soporiferus. Fruit anodyne, soporific; used in de action.
R. Paliurrus. Seeds diuretic; root and leaves astringent, letersive ; fruit incisive.

## 96. EUPHORBIA.

The millry juice is caustic, nauseous, and purgative.

* French Mercury. Mercurialis mas et focmina, M. mua. Herb detersive, purgative, resolvent, and emmenasue.
Euphorbia antiquorum.
E. canariensis.
E. officinarum. Yield gum euphorbium.
E. heptagona. Juice used to poison weapons.
E. edulis. Cultivated in Cochin China as a kitchen herb.
E. Tirucalli. Cathartic, emetic, antisyphilitic.
E. canescens. Antisyphilitic.
E. pilulifera. Antisyphilitic, useful in venomous bites. (Garden spurge. Cataputia minor, Lathyris, E. La ris. Seeds (no. 12 or 14) purge and vomit violently, ful in dropsy; leaves inebriate fish; milk corrodes warts; oction depilatory,
*Son spuraie, Wartwont. E. Helioscopia.
*Puipies ares spurere. E. Peplis. Purgative; milk acrid, the eyclids being toucheck with it, itech so as to hinder sleep, whence it is called, by the Preach, Reveille-matin.

Great spurge. E'sille major, Eipph. pulustris.
Lresser spliger. Esula mizor, Luph. Pithyusa. Milk purgative, corrected by acids.

Bastarid tpecacuanha. Eupht. Ipecacuanka. Root emetic, mixed with truc ipecacuanha.

Cataca, Creeping hairy spurge. E. hirta. Dried plant, 3 .i, purgative; used in dry belly-ache.
*E. Cupparissicus. Juice may he used for scammony.

* Broan-leavid spurge. E. platyphilla.
E. piscatoria. Used to inelriate fish.

Euphorbla. ....... Most of these and the other speeics are used as purgatives or emetics in their native places.

Phyllinthus Emblicu. Fruit, myrobalanus emblica, purgative, acidulous, rather austere ; when preserved excites the appetite; root astringent, used in dyeing.
P. Nirari.
P. urinaria. Febrifuge, diuretic, astringent.
*Bor mee. Burcus, B. sempervirens. Wood sudorific; leaves purgative in decoction.

Palana Christi, Oil bese. Ricinus commenis. Seeds, Wexico secds, castor secds, their corculum is violently purgative, but the perisperm is only slightly so; yield oil, by boiling or expression, of the same qualities, according as it wntains the oil of the corculum or not; root, in decocticn, diiuretic ; leaves, with lard, used externally, as an emoilisent poultice.

Molucca crains, Purging nuts. Grana tiglia, Croton Tiglium. Seeds veryhy dragogue, emetic, stronger than palma-Christi seeds, corrected by acids, roasting, or oils; wood has the same qualities, but weaker, sudorific in a small dose.

Cascarimia. Croton Cascarilla, C. Eleutcria, Clutia Eleuteria? Bark, called also narcuphte thymiama, bitter, very febrifuge, stops vomiting, the dysentery, and menorrhagia, dose gr. xy to $5 j$; aromatic when burnt, and used to secnt tobacco for sanoking, but incbriates; dyes a fine black.

Croron brlssemiferum, and some other species, are used to aromatise distilled liqueurs in the West Indies.
C. molucanum.
C. sebiferum. Seeds yield a kind of tallow.
C. lacciferum. Yields a kind of lac.

Turwsol. Heliotropium, C. tinctorium. Juice blue, ensily changed red by acids, and green by alkaties ; used to dye rags and paper.

Barbadoes nut, Common pirysic nut. Jatropha Curcas. Seeds very violently purgative and emetic, yield an oil similar to castor oil ; juice of the plant very acrid, dyes linen black; leaves rubefacient.

Wild cassada. J. gossypifolia. Young leaves, no. (l, loiled as greens, a powerful purge ; no. 15-20, in decoction, with some castor oil, used as a clyster in dry belly-ache; the powder of the gland contained in the stem is an errhine.

Jatropha glandulosa. Used for the same purposes.
French physic nut. J. multificta. Seed, Avellanga purgatrix, no. 1, a violent purge.

CASSAFA. J. Manihot. Root full of an acrid, pcisonous, milky juice, separable by expression, or corrected by roasting ; this virose principle is volatile, and of an insupportable odour ; juice of annotto, bixa orellana, is said to be an antidote, or a little salt of wormwood in mint water.
J. elastica, Hevea grianensis. Yields, by incision, at milky juice, which hardens into Indian rubber.

Urceola clastica. Yields very elastic Indian rubber.
Againochum. Lignum aloes, Excecaria Agallocha. Wood cordial, useful in rheumatism and gout, odoriferous.

Lignuar aloes. Aloexylum verum. Wood highly odoiferous, more esteemed in India than the former.

Maxchineal. Hippomane Mancinella. Fruit beautiful, wut so caustic, as to corrode the mouth and occasion vomiting; juice of the tree used to poison weapons; gum may be sed for guaiacum.
H. bigkardulosa. Yields a soft elastic-grum, used as irdlime.

## 97. CUCURBITACE $\not$.

## The juice of these plants is purgative and bitter.

 *W hite briony. Bryonia alba, B. dioica. Root, Эj , 3 j , in powder, or coch. j of its juice, is nauseous and viontly emetic and purgative ; externally, resolvent; yields, $y$ washing, a nutritive frecula, and on being treated like the rot of jatropha manihot, it makes good cassava.Wild cucumber, Spurting cucumber. Cuchmi.s
agrestris, C. asininus, Momordica Elaterium. Root and herb hydragogue, vermifuge ; leaves, externally used, detersive and resolvent; juice of the fruit a very violent hydragogue ; facula of this juice prepared by settling and prouring off the supernatant liguor, elaterium, milder, but still purgative from the remains of the juice left in it; dose, pr. is to gr. iij; some prefer the inspissated juice, although still more powerful, because its strength is more equal.

Balsame apyle, Cerasee. M. Bulsamina. Root purgative, $\mathrm{Aij}_{\mathrm{ij}}$ in powder; plant vulnerary, balsamic, refreshing; leaves used in decoctions for clysters; fruit, infused in oil, mates a vulnerary balsam; the juice that exudes upon cutting the ripe fruit, used for fresh wounds.
M. Charantia. Very bitter, vermifuge, substituted for hops in brewing.
M. Luffa. Used to rub the body in cutaneous eruptions ; fruit eatable.

Bitter apple, Coloruintida. Colocynthits, Cucumis Coiocyntliis. Pulp of the dry fruit purgative, in powder, gr. iij-viij, well rubbed with some gummy or farinaceous substance, or in clysters $3 j$; mixed with paste or other cements, to keep away insects by its extreme bitterness.

C'ucuarber. Cucumis hortensis, C. satious. Seed one of the four greater cold ones, used in cooling emulsions, yields an oil by expression.
C. Chate. Fruit filled with a sweet refreshing juice.

Water melon. C. Anguriu. Fruit eatable, refreshing.
Melon. Melo, C. Mclo. Fruit very'refreshing; seeds one of the four greater cold ones, used in cooling emulsions.

Gourd, Calebash. Cucurbita, Cucurbita lagenaria. Seeds also one of the four greater cold ones ; leaves, no. 15-20, in decoction, form a purgative clyster.

Pempron. Pepo, C. Pepo. The sanice qualities as the preceding; applied externally in burns, erysipelas, \&cc.

Squashr. C. Melopepo. Fruit better tasted than the preceding, but of the same quality.

Citrul, Water melon. Citrullus, Cuc. Citrullus. Flesh of the fruit saccharine and watery.

Coccoon. Fcuillea cordijolia. Alexiterial, febrifuge, useful in venomous bites; kernel of the fruit, called in St. Domingo, noix de serpente, infused in rum or water, used against cold poisons.

Calabash coccoon antidote. F. scandens. Seeds, stuck upon a stick, used to burn instead of candles; infused in rum bitter and laxative; a large dose vomits.

Passion flower. Passiffora coerulea.
Wild passion flower. Contrayeria, P. normalis.
Red passion flower. P. incarnata. Roots sudorific.
Bule hoor, Dutchman's laudanum. P. Muricuja. Herb made into syrup, or flowers infused in rum, narcotic, used for laudanum.

Papaw. Carica Papaya. Fruit nutritive; seeds an excellent vermifuge; leaves saponaceous; milky juice corrosive, is mixed with water, and used to wash meat to make it tender.

## 98. URTIC AE.

## The juice of these plants is acrid.

Fig tree. Ficus vullgaris, F. Carica. Fruit very mollient, laxative, pectoral, also used as a suppurative pouliee; milk of the tree caustic, consumes warts; leaves kept ong upon the skin, inflame it.

Srcamore fig. F. Sycomorus. Fruit less agreeable und less digestible than the other.
F. toxicaria. Used to impoison weapons.
F. septica. A powerful vermifuge; milky juice very crid.

Jamaica fig tree. F. benghaliensis. Milky juice sed against the poison of manchineel.

Indian fig tree. F. indica. Milky juice glutinous, ad becomes a soft kind of Indian rubber.
Lisbon contrayerva. Contrayerva, Dralkcna, Dorexia Contrayerva. Root, when fresh, acrid, when dry, comatic, stimulant, antiseptic, diaphoretic; dose, gr. $\mathrm{x}-\mathrm{xxx}$ decoction or infusion to 3 ij .
Bread fruit tree. Artocarpus incisa. Fruit, when rripe, contains a farinaceous pulp; when the seeds do not 1 the fruit, is very pulpy, tasting like new bread and boiled tichokes.
Jack tree. A. Jaca. Fruit eatable, juice yielded by cision, elastic like Indian rubber.
White mulberry. Morus alba. Leaves used to feed kworms; bark manufactured into hemp; fruit detersive, ade into a cooling syrup.
Red mithberay. M. rubran

Black mulberry. M. nigra. Fruits have the same qualities; bark of the root cathartic, vermifuge, dose 3 fs in powder.

Chinese mulberry. M. tartarica. Leaves used in China to feed the silkworm.

Fustic, Old fustic. M. tinetoria.
Fustic. M. Xanthoxylum. Wood sulphur-coloured, in large blocks, with alum dyes a very durable yellow colour, with iron liquor drab colours, and with both mordants, an olive.
*Common nettle. Urtica, U. dioica.
*Roman nettle. U. Romana, U. pilulifera.
*Small stinging nettle. U. urens. Roots astringent, diuretic, depurative; seeds of the Roman kind pectoral; stalk made into hemp; plant used in palsy and lethargy as an irritant, producing a crop of small blisters on the skin; the young shoots boiled as potherbs.
*Pellitory of the wall. Parietaria, Helxine, P. officinalis. Herb cooling, opening, diuretic, pectoral, antiasthmatic: strewed in granaries destroys the corn weevil.
*Hor. Lupulus, Humulus Lupulus. Young shoots eaten as a depurative, determine to the skin ; flowers bitter, inebriating, diuretic, excellent in diseases of the liver and spleen, also sedative; used to flavour beer, and the only legal substance for that purpose ; leaves, externally discussive and anodyne ; stalk made into hemp.

Hemp. Cannabis, C. sativa. Seeds oily, cooling, antiaphrodisiac, pectoral, aperitive, but inébriating; stalk manufactured into cordage, \&c.; the water in which it is soaked for this purpose, is poisonous to fish.

Bang. C. indica. Juice is made into an agreeable inebriating drink; leaves used as tobacco.

Black pepper. Piper nigrum. Herb acrid, aromatic, stimulant, sialogogue; berry the same: when the first skin of the berry is separated by soaking in salt water, it is milder, and called zohite pepper, piper album; an inferior kind of white pepper is prepared from the over-ripe berries that fall from the vine; dose gr. v. to $Э \mathrm{j}$, and has been given in large doses as a remedy for intermittent fevers; also used to drive away insects.

Long pepper. Piper longrum. Unripe fruit opening, attenuant, stimulant, in doses similar to the former; ; is distinguished into short long-pepper and long long-pepper.

Betel. P. Betele. Leaves bitter, stomachic, tonic, highly aphrodisiac; used as a masticatory with areka nut, order 11.

Jaborand. P. reticulatum. Juice an antidote against the poison of mushrooms and cassada.

Cubebs. Cubebre, P. Cubeba. Berry tailed, the same quality as the other peppers, used in gonorrhoea.

Santa Marta leaf. Piper umbellatum. Herb, in syrup, good in colds and coughs.

Pepper elder. P. Amalago. Used externally in baths and fomentations.

Piper. Other species are used in different countries to form inebriating drinks.

## 99. AMENTACETE.

The barks of these are astringent, and contain tanning. matter.

* Elm. Uimus, U. campestris. Inner tough bark astrinyent, febrifuge, in doses of $Э_{j}$ to 3 j ; leaves vulnerary.

Ulmus chinensis. Leaves used as tea:
Nettie tree. Celtis australis. Berries astringent; kernels oily; wood dyes brown.
*White willow. Salix, S. alba. Bark very bitter, ebrifuge, substituted for Peruvian bark, $Э \mathrm{j}$ to 5 j ; leaves stringent, antaphrodisiac.
${ }^{*}$ Crack willow. S.fragilis.
*Yellow dwarf willow, Rose willow. S. Helix, $S$. conandra.
*Norfolik purple willow. S. purpurea.
*Ozier. S. viminalis.

* Sallow. S. caprca.
*Almond-leaf willow. S. amygdalina.
Weeping willow. S. babylonica. Have all the same aalities. Of the latter, only female trees are to be found
Europe, as they have all been propagated by cuttings om a single tree brought from the Eiast.
*Sweet willow. S. pentandra. Leaves gathered about e end of August or beginning of September, and dried in e shade, with 1-30th of potash, dye sill, linen, and woola, impregnated with alum, of a fine yellow.
Caromisa porlar. Populus balsamifera. Yields the eerish yellow resin called tacamahaca; buds very resinous, fused in oil to form a vulnerary balsam.
*Black yorlar. P. nigra. Buds resinous, used in vulnerary ointments.
* Abele, White porlar. P. alba.
*Aspen, Trembling. poplar. P. tremula. Bark useful in strangury.

Lombardy porlar. $P$. pyramidalis. With nitromuriate of tin, dyes a fine yellow.

Itallan porlar. P. fastigiata. Bark dyes mordore colour.
*Sweet whlonv, Dutch myntle. Gale frutex, Myrica Gale. Strong smelling, driving away insects; leaves astringent, substituted for tea, antipsoric, vermifuge, and used as spice.

Candleberry myrtles. M. cerifera and M. pensyluanica. Berries yield, by decoction in water, one fourth of a green wax.
*Brach. Betula, B. alba. Sap, by incision, opening, yields sugar, and used for brewing; bark, split into leaves, used for books, its distilled oil used in currying Russia leather ; leaves antipsoric and antihydropic.
*Alder. Alnus, B. Alnus. Bark and leaves very as. tringent, vulnerary.
*Beech. Fag'us, F. syluatica. Seeds, called beech mast, useful in gravelly complaints, yield oil by expression.
*Spanish chestnut. Castanea, F. Castanea. Bark astringent; fruit nutritive, pectoral.
*OAk tree. Quercus, Q. Robur. Bark very astringent, febrifuge in doses of gr. xv to 3 fs, every' two hours, also externally in fomentation; seeds, acorns, glandes quercince, and their calyces, cups, cupulx, as also the wood, leaves, and the excrescences produced by the bite of insects, oak-apples, are equally astringent, and of great use in tanning and dreing: a decoction of the bark, with some alum, very uséful in relaxations of the uvula.
Q. Esculus. Acorns catable, inebriate a little.

Quenctrion. Q. nigra, Q. tinctoria. Bark used in dyeing yellow.

Hora оak. Q. Agylops. Cups, very large, used in dyeing instead of nut-galls.
Q. infectoria. Excrescences, nut galls, galla, very astringent, tonic, antiseptic; those from which the insect has not escaped, blue galls, are the most esteemed.

Cork тref. Q. Suber. Bark very light, elastie, as tringent, inore used for stopping vessels, than in medicine.

Evergreen oak. Q. Ilex. Astringent, more so than the common oak.
Q. Ballota. Acorns used as food, both raw and roasted; yield oil by expression.
*Hazel. Avellana, Corylus Avellana. Kemel of the nut oily, pectoral, used in emulsions, yields oil by expression.

Liquidambar styracifua. Bark odoriferous in fumigations, yields by incision or decoction liquid storax.
L. orientalis. Thought to yield cane storax.

Plane tree. Platames orientalis. Leaves ophthalmic in wine; bark antiscorbutic in vinegar.

Virginia plane tree. Poccidentalis. Root vulnerary, dyes red.

## 100. CONIFERA.

## These plants are mostly resinous,

Surubby horsetail. Ephedra distachya, Berries sweet, eatable; used in lientery and menorrhagia, given in wine.
*.'ew. T'axus, T. baccata. Wood thought to be poisonous, as were also the berries, but they may be eaten; leaves poisonous to cattle: pollen may be substituted for that of lycopodium.

Japan rew. T. nucifera. Berries eatable.

* Juniper. Juniperus, J. communis. Wood sudorific, antisyphilitic, may be substituted for guaiacum ; berries incisive, discussive, very stomachic; the infusion of them is drank as tea; if the seeds are broken, they communicate a bitter tart flavour:

Spanishifuniper. J. Oxycedrus. Does not yield gum andarac, as usually supposed; see Thuya, below:

Spanish cedar. J. thurifera. Does not yield real rankincense.

Sailine. Sabina, J. Sabina. Leaves emmenagogue, :apable of producing abortion, diuretic, vermifuge, dose, in oowder, gr. xy to $\mathrm{G}_{\mathrm{ij}}$ or 3 j , twice or thrice a day; externally ischarotic, applied to warts, \&c. once a day.

Cypress. Cupressus, C. sempervirens. Wood and oerries astringent, vermifuge.

Virginia cypress. C. disticha. Leaves dye cinnamon dour.

Tinuy a articulata. Yields gum sandarac.
Stone pine, Pinus Pinea. Kernels pectoral, used in
emulsions, yield oil by expression, are eaten raw or pre. served.

Aphernousli pixe. P. Cembra. Yields an agrecably scented turpentine, Briançon turpentine; kernels eatable, a pound yields, by expression, five ounces of oil; shoots yield true Riga balsam by distillation.

Frankincense pine. P. Toda. Wood very resinous, used for torches.

Common fir, Siliér fir, Pitch tree. Abies, $P$. Picea.. Yields Strasburg\% turpentine, by puncturing the small vesicles of the bark in which it is contained, and com. mon turpentine, by larger incisions.

Norwat spruce fir, Yew-leaved fir. Abies rubra, P. Abies. Exudes common frankincense, and yields the same by incision; tops used to make spruce beer.

Balm of Griead fir. $P$. balsamea; Yields the fine turpentine called Canada balsam.

Sprúce fir. $P$. canadensis. Young shoots, in beer, antiscorbutic, cooling, antiséptic.

Larci. Larix, P. Larix. Yields, by boring, common Venice turpentine, and its leaves exude an inferior kind of mạña.

Cedar of Lebanon: P: Cedrus. Wood astringent, antiseptic.

Mountian pine, Mugio pine. P. Pumilio. Exudes a turpentine called II ungariai balsam; cones yield the same by expression.
*Scotch Filr. P. sylvestris. Yields, by incision, com= mon turpentine; inner bark eaten raw, or made into cakes and baked; tar is distilled froni it, and lamp-black obtained by burning its refuse branches in tents.

## II. ANIMALS.

In a medical or chemical point of view, animals are inferior in rank to vegetables, as neither affording remedies of such power, nor consisting of so many distinct principles as the latter.

There is even reason to suppose that most of the virtues attributed to animal substances are innaginary, and that their apparent effects ought to be ascribed to the other substances exhibited with them.

As the perducent system of Linnæus has been abandoned in treating of vegetables for the system of Jussieu, so the perficient system: of the French naturalists has been also adopted in respect to animals.

In general only those animal substances are mentioned, which are, or rather have been, kept in the shops, as many of them are now seldom kept in England, except in certain situations, where there is a resort of foreigners, who still retain the use of them in their medical practice: a few others are added, on account of some peculiar qualities that they possess.

## 1. MAMMALIA,

Human skell. Cranium hominis. The powder, in doses of 5 j , used in epilepsy: those which have been long buried are to be preferred; and some even limit the effect to that triangular bone called the os triquetrum!

Paring of the nalls. Rasura unguis. Was a common vomit.

Munmy. Mumia. Either that brought from Egypt, or prepared at home, by dipping muscular flesh in spirit of м. 4
wine, and hanging it up in a brisk draft of air, or smoking it like ham, Used in bruises, epilepsy, asthma, phthisis, in powder $3^{f \text { fs }}$ to $弓_{j}$, in vino, horâ somni.

Puppies. Catelli. Live puppies, split in half, and ap. plied while warm, have been employed as poultices to draw out venom from sores or boils; they have also been boiled in oil to render it mucilaginous.

Wolf's liver. Hepar lupi. Used dried in diseases of the liver.

Fox lungs. Pulmones vulpis. Was used, when dried and powdered, in a pectoral linctus, still a favourite with the common people.

Huckle bone of a hare. Astragalus leporis, Talus leporinus, In powder diuretic!

Hare's fur. Pili leporis. Styptic.
Musí in the bags. Moschus in vesicá. The China, in thin bags, well filled, round, and with short hairs, is accounted the best; those which have been sewed up, are often adulterated by the Dutch drug-manufacturers.

Musk bags, from which the musk has been extracted, are used by perfumers to make the essence of musk, out of economy, as they communicate a considerable scent to liquids in which they are soaked.

Elk's hoof. Ungula alcis. Anti-epileptic, either worn externally, so as to touch the skin, or taken in powder in doses of 3 j : it smells very sweet when scraped, by which it may be distinguished from a buffaloe's hoof, which is sometimes sold for it,

Bone of a stag's heart. Os e corde cervi. Cardiac, esteemed good to remove barrenness and prevent abortion in women! dose, in powder, 3 fs, nocte maneque:

Harts horn shavings. Rasura comu cerir, Comina. P. L. ed, 1809. Are really the horns of the buck, or fallow deer, Cervus Dama, as those of the stag or hart, C. Elaphus, called foreign horns, are too brown on the inside; used to form a nutritive and restorative jelly, and as a substitute for isinglass in fining beer, wine, and other liquors.
"Stags pizzie. Priapus cervi. Aphrodisiac, Эj to $5 j$, in powder.

Raw mutson suet. Sevum ovillum, Sceum, P. L. 1809, Adleps Ovi Arietis. Used for preparing rendered mutton suet ; eaten as a pectoral medicine in coughs.

Rennet bag. One of the stomachs of a calf, which,
being dried, is used to coagulate milk, either by soaking a small piece of it in the milk, or by pouring some water on a piece, and mixing the strained infusion with the milk.

Stone-horse warts. Verruce pedum equinorum. Used, I believe, in intermittent fevers.

Boars tooth. Dens apri. Used as hartshorn shavings, but of greater value, as being dearer.

Huckle bone of a sow. Astragalus suillus, Talus suis.

Pigs flare. Adeps sailla, Adeps, P. L. 1809. Only used for extraction of hog's lard.

Rhinoceros horn. Cornu rhinocerotis. Alexiterial in powder to 5 j for a dose.

Ivory shavings and dust. Rasura eburis, Dens elephanti. Used, like hartshorn shavings, for making jelly.

Unicorne fossile.
Sea horse teeth. Dens equi marini. Used to make artificial teeth, as this sort of ivory does not grow yellow.

Manati stone. Lapis manati. The tooth of the sea cow, used also for artificial teeth.

Untcoris horn. Cornu unicornu, C. monoccrotis. Resists the operation of poisons!

## 2. AVES.

Inward skin of a fowl's gizzard. Pelliculce stomachi gallince interiores. To strengthen the stomach!

Egg shell. Ovi gallinacei testa. Antinephritic, cardialgic, in powder, 3 fs to 3 j.

## 3. REPTILIA.

Turtle. Caro testudinis. Highly nutritive, analeptic, antiscorbutic.

Turtle's pizzle. Priapus testudinis. Astringent, restopative.

Skinks. Scinci. Dried, salted, and powdered, alexipharmic, aphrodisiac, and diuretic:

Scaly lizard. Lacerta agilis. May be used instead of skinks.

Vipers. Viperce. Both live and dried, alexiterial, sudorific, depurative, very nutritive, but have given way to surtle,

Toad. Bufo. Dried, diuretic, antiliydropic, in powder to 3 j .

Frogs spawn. Sperniola. Used as an ingredient, from whence to distill a simple water.

Salamander. Salamandra. Infused in oil, renders it diaphoretic internally, and externally useful in rheumatism.

Hytas tinctoria. The native Americans rul the skin of perroquets with its blood, to cause the growth of various coloured feathers.

Serpents slovgh. Exiuvice serpentis, Spolium serpentis. Used as a ligature in intermittent fevers; a practice lately revived, but without the mummery of the serpents slough; also to facilitate delivery, bound round the belly or loins!

## 4. PISCES.

Isinglass, Fish glue. Ichthyocolla. The dried air-bladders of the acipenser huso form the best kind, but inferior sorts are the dried air-bladders and entrails of any other large fish found in cold countries: nutritive, demulcent; used by clear-starchers, as gr. vj form a stiff jelly with half a pint of water ; it is also used to fine wines and vinous liquors. The sorts found in trade are short staple, long staple, book, leaf and indissoluble: S. S. shred is usually employed in medicine.

Caviar. Salted and dried roes of sturgeon, used as a sauce.

Bone of a perch's mead. Os e capite percce. Absorbent, lithontriptic, and externally in tooth-powders, and to dry ulcers.

Barbel roe. Violently cathartic,
Scales of the bleak, Used to make the oriental essence with which artificial pearls are coloured.

Anchovies. The real, Encrasicolus, or the common made of sprats, much used as sauce.

Pikes jaw bonf. Mandibula lucii. The powder used in leucorrhoea, and to facilitate labour, in doses of 5 j to 5 jij .

Liver of eels. Hepar angrilla. Dried and powNered, facilitate labour, $Э j$ to $Э \mathrm{ij}$ in cyatho vini.

## 5. MOLLUSCA.

The Limean order is reversed by putting mollisca before insects, but the organization of these animals approaches the nearest to those of the more perfect orders.
Cuttle fish bone. Os sepia. Astringent, much used by calf farmers, also in dentifrices, and by silversmiths, \&c. to make moulds for spoons and other small work, as it is 'tender, and takes a good impression by merely pressing: together, with the pattern placed between them.

Purpura. Murex Brandaris. Its yellowish juice reddens in the sun, and dyes woollen cloth scarlet.

Sweet hoor. Unguis odoratus, Blatta Byzantiria. The horny operculum of the murex ramosus; hepatic, antiepileptic, in powder 5 fs to 3 j .

Buccinum Lapillus. Its juice used to dye red,
Herix Pomatia. A large kind of snail, used as food, transported from the south of Europe into this country by Sir Kenelm Digby, for his lady when in a decline, and now living wild in the neighbourhood of his seat in Sussex; highly restorative.

Tootir shell. Lapis dentalis, Dentalium, D. Entalis;
Fluted elephant tooth, Horn gheen pencil." En: talium, D. elephantinum.

Oyster shells. Testce ostreorum, Testo.
Mother of pearl. Mater perlarum.
Pearls, Seed pearl. Margaritoc, Uniones. Absorb ent, antacid, 3 fs to 3 j, or even more.

Umbilicus marinus. The shell-like operculum of se. veral- of the larger turbinated shells; aphrorlisiac.

## 6. ANELIDES SEU VERMES.

Leech. Hirudo, H. officinalis. Bite of these animals ased as an inartificial and clumsy mode of bleeding; of use in country places, where neither surgeons nor cuppers can be procured, and the animals are plentiful-and elsewhere, for the sake of increasing the charge to rich patients.

Earth woras: Lumbrici. Dried and powdered, ©j to jo diuretic.

## 7. CRUSTACEI.

Crawfisir. Cäncri fluviatiles, Cancer Astacus. Highly nutritive.

Cuabs eyes. Oculi cancrorum. A concrection found in the stomach of crawfish, cancer Astacus, at the season in whick they are about to change their shell.

Crabs cinaws. Chelo cancrorum, Cancri Paguri chela. The tips of the claws of the large sea crab, absorbent, antacid, zj to 5 gij , weaker than oyster shell.

## 8. INSECTA.

Internally diuretic, and in excess produce strangury or bloody urine; externally vesicatory.
Hogrice, Woodlice. Millepedes, Aselli, Oniscus Asellus. Alive, no. 12, or dried and powdered, $Э \mathrm{j}$ to $\breve{5} \mathrm{j}$, diuretic, aperitive, useful in jaundice.

Scorpions. Scorpiones. Infused in oil, render it alexipharmic.

Spanish flies, Buistering flies. Cantharides, Meloe vesicatorius, Lyttcc. Vesicatory; internally acrid, stimulant, and diuretic, gr. j to iv.

Oil beetle. Meloe Proscarabcuus.
Meloe majalis. Weaker than the former.
Riband cantharydes. M. cichorii, Milabris cichorii: The blistering fly of the antients, and still of the Chinese.

Lady birid, Lady cow. Coccinella septempunctata. Bruised upon an aching tooth, is odontalgic, as are also many other insects.

Comnon bed bug. Cimex lectularius, Powerfully emmenagogue.

Kermes berries. Kermes, Coccus infectorius, C. baphicus, C. ilicis. Dried, or their juice, aphrodisiac, alexipharmic, and used to promote delivery.

Wild cochlneal, Geanillo. Grana sylvestriu, which is smaller than the cultivated, and is not to be confounded with the gr. sylvestria of the present day.

Cochineal., Coccinella, Coccus, C. cacti. Cordial, alexipharmic, gr. viij to $\exists_{j}$, but chiefly used at present as a colouring drug for medicines, pickles, and in dyeing, for which last purpose 2400 cwt . are annually consumed in the British islands.

Scarlet grains. Coccus Polonicus. Used as the former.

Bees. Apes. Dried and powdered, $Э_{j}$, diuretic

## 9. ZOOPHYTAE.

Red coral. Corallium rubrum, Isis nobitis.
White coral. C. album, Madrepora oculata. Absorbent, antacid, to 3 j or more.

Black coral. C. nigrum, Gorgonium Antipathes. Used in epilepsy.

Coralline, Sea moss. Corallina, C. officinalis. Vermifuge, $3^{\text {fs }}$ to 3 j , in coarse powder.

Sponge. Spongia, S. officinalis. Externally to stop hæmorrhages, or dipped in melted wax and squeezed, ias a tent to dilate cavities, by its expansion when moistened.

Sea navel wort. Androsaces, Acetabulum, Tubularia Acetabulum. Of this, 3 ij drank in wine, are a powerful diuretic; has been confounded with umbilicus marinus, by Lewis.

## SPECIES.

Fovir greater carminative hot seeds, Quatuoy sca mina calida majora carminativa. Anise, Carui, Cummin, and Fennel.

Four lesser hot seeds, Quatuor semina calida minora. Bishops weed, Stone parsley, Smallage, and Wild Carrot.

Four cold seeds. Quatuor semina frigida. Cucumber, Gourd, Melon, and Water Melon.

Four lesser cold seeds. Quatuor semina frigida minora. Endive, Lettice, Purslain, and Succory.

Five opening roots. Quinque radices aperientes. Asparagus, Butcher's broom, Fennel, Parsley, and Smallage.

Five lesser opening roots. Quinque radices aperientes minores. Caper, Dandelion, Eryngo, Madder, and Restharrow.

Five emollient herbs. Quinque herboc emollientes. Beet, Mallow, Marshmallow, French mer'cury, and Violet.

Five capillary herbs. Quinque herbo capillares. Hartstongue, Black White and Golden Maidenhair, and Spleenwort.

Four sudorific woods. Quatuor ligna sudorifica. Guaiacum, Perfumed Cherry, Sarsaparilla, and Sassafras.

Four cordial flowers. Quatuor flores cordiales. Borage, Bugloss, Roses, and Violets.

Four carminative flowers. Quatuor flores carminativi. Canomile, Dill, Feverfew, and Mellilot.

Four resonvent meals. Quatuor farino resolventes. Barley, Bean, Linseed, and Ryc.

The five myrobalans. Myrobalani quinque. Belleric, Chebulic, Emblic the most purgative, Indian, and Yellow the most astringent.

Glyster hembs. Herbec pro encmate. Mallow leaves,
two parts, and camomile flowers one part: an ounce and a half to a pint of water. P. L.

Fomentation herbs. Herboc pro fotu. Leaves of southernwood, tops of sea wormwood, and camomile flowers, each two parts, bay leaves one part: three ounces and half to six pints of water. P. L.

Cake saffron. Crocus in placenta. Hay saffion one part, petals of marygolds or safflower nine parts, made into thin cakes with a little oil: sold at the small shops for saffron, and also as a cordial for birds when in moult.

Alexandrian Senna, Choice Senna. Senna Alex-andrina, S. electa. Made up, by the merchants of Gairo, of five cwt. of the leaves of cassia lanceolata, three cwit. of those of cassia senna, and two cwt. of those of cynanchums arguel.

Tripoli Senna, Common Senna. Senna Tripolitana, S. communis. Contains a larger proportion of cynanchum arguel, as also various proportions of periploca græca, and different species of apocynum.

Russian tea. Composed of the leaves of saxifraga crassifolia pyrola rotundifolia or winter green, clematis alba, pyrola uniflora, prunus padus or bird cherry, spiræa coronata, ulmus campestris or common elm, polypodium. fragrans, and rosa canina or dogrose.

Species for bitters. Rad. gentianæ $\mathrm{n}_{\mathrm{f}} \mathrm{f}$; cort. cinch. 3.1 ; cort. aurant. 3 ij ; canellæ allæ 5 j ; for two bottles of white wine.
 for a quart of brandy.
3. Rad. gent. cort. aurant. sicc. ana 3 ij ; cort. limon. recent. $\bar{y}$ fs ; for a pint and a half of boiling water.

Spectes for diet drink. Lign. guaiaci ${ }^{2} j f s$; rad.
 cyrrh. sicc. $3^{\text {iv }}$; for three quarts of water.
2. Lign. guaiaci, rad. sarsa. rad. chinæ, ana $\mathfrak{J} \mathrm{j}$; sennæ electæ $\mathrm{J}_{\mathrm{fs}}$; rad. rhæi 3 ij ; for four quarts of water, to which add, before it is boiled, subcarb. potassæ $3 j$; antimoiii crudi ${ }^{\text {Jinij }}:$ used in gonorrhœea and syphilis for common lrink.

British herb tobacco. Thyme, two oz. coltsfoot, hree oz. betony and eyebright, ana four oz. marjoram and lyssop, ana two oz. rosemary and lavender, ana eight oz. M.

## CONDITA.

Dried roots. They should be rubbed in water to get rid of the dirt, and also some of the mucous substance that would otherwise render them mouldy. The larger are then to be cut, split, or peeled: but in most aromatic roots, a3 those of the umbelliferous plants, the odout residing in the bark, they must not be peeled. They are then to be spread on sieves or hurdles, and dried in a heat of about 120 deg. Fahr. either on the top of an oven, in a stove, or a steam closet, taking care to shake them occasionally to change the surfaces exposed to the air. Thick and juicy roots, as those of rhubarb, bryony, piony, water lily, \&c. are cut in slices, strung upon a thread, and hung in garlands, in a heat of about 90 to 100 deg. Fahr. Squills are scaled, threaded, and dried in chaplets round the tube of a German stove, or in a hot closet; but they are very subject to grow soft. Beaume advises that rhubarb should be washed, in order to separate that mucous principle which would otherwise render it black and soft when powdered. Potatoes are first boiled, and then cut in slices and dried, to form a kind of sago. Orchis roots are boiled in water, and then dried to form saloop.

Dried woobs require little attention; but the silver grain is liable to the attack of insects. Buffon advised trees intended for timber to be barked a year before they were felled, as in that time the silver grain becomes as hard as the heart of the wood. 'Timber for ship-building is sometimes soaked in a solution of arsenic, to hinder it from affording a lodgment to marine worms. By floating timber for some time in water, it loses part of its extractive and saccharine juices, and becomes harder so as to be less liable to be attacked by insects or worms: by soaking in alum water, it is rendered less combustible.

Dried bariss, for medical purposes, require the outer.

## CONDITA.

shin to be peeled off, as it is usually coarse and inefficacious. The ordinary heat of the atmosphere is in general sulficient.

Drien peris of frutts, as those of pomegranates, oranges, or lemons. In this case, the outer peel should be sepaPated from the greatest part of the white fungous substance, and it should not be squeezed or moistened with the juice of the fruit.

Dried tops, leates, or whole herbs. They should e gathered in a dry season, cleansed from discoloured and - otten leaves, screened from eaith or dust, placed on hurdles, overed with blotting-paper, and exposed to the sun or the eat of a stove, in a dry airy place. The quicker they are Iried the better, as they have less time to ferment or grow nouldy; hence they should be spread thin, and frequently urried: when dried, they should be shaken in a large ieshied sieve to get rid of the eggs of any insects that would therwise be hatched amongst them. Aromatic herbs ought , be dríed quickly with a moderate heat, that their odour may ot be lost. Almost all plants, after they have been dried so ; to become brittle, give a little, and become more odorous, ; melilot, red roses, oak of Jerusalem, lesser centaury. rucform plants, or the tetradynamia of Linnæus, should it be diried, as in that case they lose all their antiscorbutic aalities. It is singular that although these plants are so it to the human taste, they are the most liable of any to e attacks of insects, and are always the first that are deoyed by them, when kept in a hortus siccus. Some pershave proposed to dry herbs in a water-bath, but this asions them to be as it were half boiled in their own ter, especially as the evaporation goes on slowly in close isels.
Dried flowers. They should be dried as speedily as isible, the calyces, claws, \&c. being previously taken off: en the flowers are very small, the calyx is left, or even whole flowering spike, as in the greatest portion of the iate flowers. Compound flowers, with pappous seeds, as isfoot, ought to be dried very high and before they are irely opened, otherwise the slight moisture that remains ild develope the pappi, and these would form a kind of ony nap, which would be very hurtful in infusions, by ing irritating particles in the throat. Flowers of little 10 smell may be dried in a heat of 75 to 100 deg . Fahn.

The succulent petals of the liliaceous plants, whose odour is very fugacious, cannot well be dried, as their mucilaginous substance rots and grows black. Several sorts of flowering tops, as those of lesser centaury, hily of the valley, wormwood, melilot, water germander, \&c. are tied in small parcels, and hung up, or else exposed to the sun, wrapped in paper cornets, that they may not be discoloured. The colour of the petals of red roses is preserved by their being quickly dried with heat, after which the yellow anthers are separated by sifting. The odour of Provence roses and red pinks is increased by drying. Much of the odour of labiate plants resides in their calyx.

After some time, the dried flowers of violets, bugloss, or borage grow yellow, and even become entirely discoloured, especially if they are kept in glass vessels that admit the light; if, however, they are dipped for a moment in boiling water, and slightly pressed before they are put into the drying stove, the blue colour is rendered permanent.
$\because$ Plants lose more or less by drying, according to their state of dryness or freshness.

The flowers of borage, bugloss, spotted lungwort, lily of the valley, violet, St. Joln's wort, red poppy, sundew, lose about fourteen ounces in the pound: water lily flowere lose still more. The flowers of marygold, broom, rosemary, sage, and almost all the labiate flowers, as also wet saffron as it is called, the tops of water germander, and wormwood, lose twelve and a half, or thirteen ounces. Roses, clove pinks, leaves of bugle, tops of wild marjoram, feverfew, camomile, arnica, gnaphalium dioicum, and other corymbiferous plants lose eleven and a half or twelve ounces. Flomers of the mallow kind, and elecampane root, lose nearly the same. Eyebright, yellow ladies' bedstraw or cheese rennet, melilot, and other herbs of the papilionaceous kind, sanicle, the flowers of the lime tree, lose ten or eleven ounces. Periwinkle, tops of lesser centaury, the excrescence of the dogrose called bedeguar, and all herbaceous stalks not of a woody nature, lose from nine to ten ounces. Saxifrage and other roots of a middling size, lose nine ounces, or rather more than a half. Rhubarb, the succulent roots of bryony or wild vine, wakerobin or cuckow pint, lose about 1 wo thirds. Barks, woods, especially those that are resinous, lose about one half.

Dried plants for a hortus siccus. The plants being
laid down, in their natural position as far as possible, upon some sheets of blotting paper, are then to be covered with two or more sheets of the same, and a board being laid upon the whole, to prevent the leaves, \&cc. from curling up, weights are put upon the board, and the whole exposed to the air in a dry place. If the stalks or other parts of the plants are rery thick, the lower part may be pared, so as to lay the whole as flat as possible. The paper should be changed every two or three days, and the weights increased until the plants are thoroughly dry. A number of plants may be slibmitted to the same press at once, placed one upon another, with two or three sheets of blotting paper between them.

A still better way is to have a box the size of a sheet of oaper, and about mine inches or a foot deep, then strew some iand abont an inch thick at the bottom, over which place a heet of blutting paper, and upon this, as many of the plants is will conveniently lie upon it, carefully expanding and moothing them; then put a sheet of blotting paper over hem, and the thic'mess of about half an inch of sand, pon which another sheet of paper, another layer of plants, raper, and sand may be placed, thus continuing till the tock of plants is exhausted, or the box filled, observing to ave a layer of sand at the top: the box is then to be put to a dry airy place, or near a common fire, till the drying complete: when the plants are dried, they may either be asted down on sheets of paper, or otherwise fastened by read, or slips of paper passed through slits in the sheet.
Instead of flattening the plants for the purpose of placing em in books, they are sometimes dried in their natural rim, by suspending them in a tin box of sufficient depth, ell carefully filling the box with sand, and placing it in a urm dry place for a few days; after which the sand is to taken out carefully, and the dry plants may be either ade into nosegays and covered with a glass case, or stuck pots, and seented with a few drops of a proper essential : even mushrooms may be dried under sand in a similar uner. The sand should be rather coarse, that the moise may breathe out the more freely.
Dried seeds. These require, in general, but little atition. The farinaceous and leguminous sorts may be dried a stove ; oily seeds, fit for making emulsions, must not dried by heat, but only in the free air, and even then they liable to berome rancid. The seeds of eruciferous plants
soon lose their gerninative faculty, unless they are kept under moist sand in a cool place; but those of black and white mustard, rape, and charlock are dried in stoves unil they become in some degree friable, for the purpose of being ground into flour of mustard. Almonds, pistachias, and in general all: seeds keep best in their shells or other integuments. Horny seeds, although highly dried, retain their germinative faculty for a long time. The seeds of umbelliferous plants, although they are oily, dry very well in the air, the oil being volatile.
$\therefore$ Seeds preserved for transport. Large seeds as acorns, have been sent to distant countries by being wiped dry, rolled up yery close in thin ribands of bees wax, put into boxes, and the interstices filled with melted wax, poured in when it was just upon the point of becoming solid: but the best way with all seeds is to put them in their natural covers among raisins or brown sugar, which keeps them moist, and in a state fit for vegetation.

Dried fruits. Fruits gathered before they are thoroughly ripe, are kept upon a layer of straw, in order to ripen, in a cool, dry, shady place. Citrons and oranges svill thus ripen, although gathered quite green. The fruit ought not to touch one another, lest they should grow rotten, for want of free evaporation at the place where they touch. Cherries and plumbs are usually dried in an oven heated to 110 deg. Fahr. Figs, dates, jujebs, sebestens, myrobalans, and other native fruits of warm climates, are dried in the sun upon hurdles. Dried grapes, raisins, and grocers' currants, are made by dipping the fruit into a ley made of wood ashe or barilla, at 12 or 15 degrees of Beaume's hydrometer, to every four gallons of which is added a handful of salt, and a pint of oil or a pound and a half of butter, and then drying them in the sun; they lose about two thirds of their weight, and become covered with a white saccharine exudation. Mangoes are peeled, pulped, pressed into thin sheets, like brown paper, and then dried. Chestnuts are dried upon hurdles over a clear fire.

Dried animal substances, for the materia medica. These are usually done in a stove or oven, as vipers, skinks, cantharides, cochineal, \&c.; but if any larve should hatch in them, they must be heated to 122 deg. Fahr. to destroy the insects.

Frozen substances. The action of frost has been used
ro dry some animal substances, as ling, haddocks, rein-deer tongues, \&c.

Substances prfserved by heating in well.-closed vessels. This mode of preserving vegetables as well as animals has been lately written upon by Appert, in France; and a patent has been taken out by Donkin and Co. in England, to prevent us from receiving any benefit'by 'Appert's work, unless through their medium. . The substances to be preserved are to be put into strong glass bottles, with necks of a proper size, corked with the greatest care, luted with a mixture of lime and soft cheese, spread on rags, and the whole bound down with wires across it: the bottles are then nclosed separately in canvass hags, and put into a copper of water, which is gradually heated till it boils, and thus kept intil it is presumed that the substances are, as it were, oiled in their own water. Meat or poultry ought to be hree quarters boiled or roasted before it is put into the ottles: the whole is then left to cool, the bottles taken out nd carefully examined before they are laid by, lest they hould have cracked, or the lute given way. The patentees se stone-ware jars and tin boxes soldered up, instead of lass bottles.

Fuidt, \&cc. preserved in water. This mode is in me measure similar to the preceding: the fruit not quite pe, pulse or other: substance, is put into wide-necked attles, which are placed in a copper of water nearly up to eir mouths, and they are lightly corked; the water is then sated till it is very hot, but does not scald, and this beat is pt up for half an hour: the bottles are then taken out, d immediately filled with boiling water to the very brim, refully corked, wred, placed on their sides, and turned at st every week, but afterwards seldomer, to prevent any rt , in consequence of the bubble of air that forms in. im, from getting dry, and thus becoming mouldy. Some. empt to preserve fruits, \&cc. without water, by heating the ter-bath to boiling, and corking the bottles while in the iling water, but this docs not succeed so well, unless the it is very green; and the water is at any rate useful to put orpies. Great quantitics of cranberies äre yearly brouglit $m$ the northern countries, in casks preserved in water. Piekles in buine. A brine is made of bay-salt and. er, thoroughly saturated, so that some of the sale reims undissolved; into this brine the substances to be pre-
served are plunged, and kept covered with it. Among vegetables, French beans, artichokes, olives, and the different sorts of samphire are thus preserved; and among animals, herrings and pork, but these latter can hardly be said to belong to this work. Specimens, of animals may also be preserved in brine, as also anatomical preparations; and this method, although it may not be so elegant as the use of spirit of wine, yet it answers nearly as well, and is much more economical: for this purpose, the brine shonld be filtered.

Pickies in dry salt. This mode of preservation is almost entirely confined to, beef and pork: the salt is to be well rubbed in, and the meat then laid on a table, or in a tub with a double bottom, that the brine may drain off as fast as it forms, and frequently turned; when the brine ceases to run, the meat is to be buried in salt, and thus kept closely packed. Meat which has had the bones taken out is the best for salting: in some places the salted meat is pressed by heavy, weights or a screw, to extract the moisture so much the sooner:

Salted flowers Flores saliti. Rose or elder flowers one bushel, brown salt 216; mix and beat them to a paste, which keep in a close vessel; by this means the chemists are enabled to distil rose or elder flower water at any time.

Preserves in oll. In some countries they keep salmon and tunny in olive oil, as also truffles; the jars are kept closely luted till the substauces are wanted, to prevent the oil from growing rancid.

Wet conserves in syrop. In making these, it is necessary to consider the manner in which the several degrees of strength in syrep is judged of in boiling: if moist sugar is used, the syrop must be clarified with white of eggs, but if refined sugar is used, it need only be melted over the fire in a quarter, or at most one third of water, and as the water evaporates, the syrop must be taken up with a large spoon, and let to fall into the pan again. If, during this manipulation, it forms a broad sheet as it falls, it is said tw be boiled to a candy height, and will exhibit when taken from the fire, but still warm, 36 deg. of Beaume's hydrometer: if it has not been boiled quite so far, the sheet is formed but imperfectly, and it exhibits a smaller number of degrees; it is then said to be boiled to a weak candy height. In shaking the ladie of syrop, when in this state, it runs over in the form of the feathers of a quill, or drops in the manner of pearls, which being received in a glass of water, ought to fall to the bot-
tom in solid and brittle globules. If the boiling is continued a little longer, these effects are produced in a more perfect manner, and the syrop exhibits 37 deg. by the hydrometer, it is then said to be boiled to a full candy height: if it be now stirred until it is cold, it forms a dry powdery mass: As all the water is now evaporated, if the sugar is continued on the fire, it begins to turn red, and acquires a burnt taste:

To preserve fruits, then, which are the substances usually preserved in syrop, the latter is boiled to a weak candy height, and poured hot upon the fruit so as to cover it ; the juice of the fruit of course weakens the syrop, which must; therefore, the next day be poured off the fiuit, and reboiled to the former height, and then poured on the fruit again; and this must be repeated if the fruit is very juicy, a third or fourth time, until the syrop is no longer weakened by being poured upon the fruit.

Dry preserves in sugar. The fruit, if very succulent, is first soaked for some hours, in very hard water, or in weak alum water, to harden it, and then drained. $\cdots$ Upon the fruit, either prepared or not, syrop boiled to a candy height, and half cold, is to be poured: after some hours, the syrop, weakened by the juice of the fruit, is poured off, eboiled, and poured on again, and this repeeited sometimes $t$ third time. When the syrop is judged to be no longer weakened, the fruit is taken out of it, and drained.

Candied angelica. Caules angelicae conditi. Thè talks are to be boiled for a quarter of an hour in water, to ake away their bitterness and some of the strong scent; hey are then to be put into syrop boiled to a full candy aeight, kept on the fire until they appear quite dry, and lieu taken out and drained. Cordial, aphrodisiac.

Candied eryngo. Radix eryngii condita, is prepared early in the same manner, but the roots are only slit, and rashed three or four times in cold water, before they are put ato the syrop. Highly aphrodisiac.

Candied orange peel. Cortex aurantiorum condita. Candied leanon peei. Cortex limomum condita. The eels are soaked in cold water, frequently changed, till they ose their bitterness, and are then put into syrop, till they ecome saft and transparent, when they are taken out and rained. Stomachic.

Candied orange flowers: Flores ausrantia conditi. range flowers, freed from their cups, stamina, and pistils,
four ounces are put into thij of sugar, boiled to a candy height, and poured on a slab, so as to be formed into cakes. Stomachic, antispasmodic.

Preserves in honey. Seeds and fruits may be preserved by being put into honey, and on being taken out, washed, and planted, they will vegetate. Honey has also been used to preserve the corpses of persons who have died at a distance from home, that they might be conveyed thither. The Spartans who fell in battle were usually buried on the spot, but the bodies of their kings were preserved in honey, and carried home.

Prestrves in brandy, or other spirits. Plumbs, apricocks, cherries, peaches, and other juicy fruits, ought to be gathered before they are perfectly ripe, and soaked for some hours in very hard water, on in alum water, to make them firm. As the moisture of the fruit weakens the spirit, it ought to be strong, and five oz: of sugar should be added to each quart of the spirit,

Objects of natural mistory presterved in spirit. In this case a small quantity of spirit of hartshorn is usually added to the spirit of wine, which prevents the specimens from growing so brittle as when preserved in pure vinous spirit, and renders them capable of being examined anatomically, even after being kept for several months. Flowers and fruits are also preserved in this manner, but in pure spirit of wine, or other similar liquor.

Pickles in vinegar. Many of these are kept in the shops in country places: the vegetables are usually soaked in salt and water for some hours, then drained, and boiling vinegar poured upon them; in a few days the vinegar is poured off, boiled a little, and then poured on again: if the vinegar is good, and the substances are not too moist, it is sufficient to pour it cold upon them, and keep the yessel closely covered.

Saur mraut. Brassica acidulata. Large white cal)bages are cut into thin horizontal slices, and placed in a harrel with a layer of salt at top and bottom, and between cach layer of cabbages. A board with some weights on it is then put on the top, and it is kept in a cool place for some weeks: a kind of fermentation takes place, and vinegar is formed. Some add juniper berries, coriander seeds, tops of anise, or carui seeds, to the salt, as a kind of spice. It may be dried in an oven withont any loss of its flavour.

Potred meats. Quails are taken at the time of their: passage in the Archipelago, and preserved by pouring melted butter over them. Char is also trated in this manner in England.

Smoked meats. They are usually salted previous to. the smoking, which ought to be done with a wood fire, or rather one of moist saw-dust, by which means the pyrolignequs acid is better enabled to penetrate into the substance exposed to its action.

Preserved mushrooms for specimens. The mushrooms should previously be allowed to remain in the air as long as their texture will permit, in order to allow some of the moisture to evaporate: then they are to be put into a solution of two oz. blue vitriol, in a pint of water, to which half a pint of spirit of wine has been afterwards added: the specimens should remain in this pickle for a day or two, and then put into a wide-mouth jar of a proper size, and the jar filled up with a mixture of eight parts of water with one and a half of spirit of wine, if the specimen is large, juicy, or fleshy; but if thin and woody, it will be sufficient to fill up the jar with a mixture of eight parts water, with one of spirit. The jar must be filled to the top, then corked very tight, and the cork and rim of the jar covered with Venice turpentine, by means of a painter's brush: in a few days the turpentine will be nearly dry, and a piece of wetted bladder should then be tied yery tight over the top of the jar. Lichens may also be preserved in this mode.

Stuffed antmals for sfecimens. The animal being carefully embowelled, the opening for that purpose being made in some place that will be out of sight, as, for ex:ample, under the wings of birds, gashes cut in the remaining flesh, and the brain extracted by a wire; the whole of the inside is washed with a ley of common soda, then dried with tow, and afterwards the inside is done over, by means of a brush, with Bécour's arsenical soot, which is prepared by melting thirty-two oz. of soap in a little water, addling twelve oz. of salt of tartar, and four oz. of quicklime, then mixing with these thirty-two oz. of white arsenic, and five oz. of camphor previously rubbed down with a little spirit of wine; more water is then added to form the whole into a thin gruel : this illinition drives away insects. Larger animals are usually merely skinned : the internal cavity is then filled ith tow, shred tobacco, straw, or this powder. To-
bacco and powder of black pepper, of each 17h, flowers of sulphur and sal prunellx, of each eight oz. burnt alum, four oz. to which may be added an ounce of corrosive sublimate, Animals have also been preserved by embowelling and keeping them for some time in a solution of corrosive sublimate, then hanging them up to dry in the air, and simply stuffing them with tow, which has been dipped in the same solution, Fish are sometimes skinned, the skin is then drawn over a mould made of clay, or plaister of Paris, and varnished with spirit varnish. False eyes are made for these specimens, by dropping some black sealing-wax upon a piece of card, cut a little larger than the size of the natural eye. For large eyes, common glazier's putty may be used, and when dry, painted of any required colour. Baking is not only useful in fresh specimens, but it should be a constant practice to bake them over again once in two or three years, and to have the cases washed with camphorated spirit of wine, or a solution of corrosive sublimate.

Insects for specimens, The hard-shelled winged insects to be pinned through the left wing, so that the pin may pass just under the first pair of feet: other insects to be pinned through the thorax. As their feet and antennæ generally fold under them, pin them at first upon a slice of cork, "pull out the feet and antennæ very carefully, with a small pair of forceps, and fix them in a proper position with pins for two or three days, after which they will retain their situation: if they are already stiff, breathing upon them for a few minutes will relax the muscles. For the sending of them to any distance, stick them in boxes about four inches deep, the top and bottom of which are lined with cork, or soft wax spread between paper, about 1 -8th of an inch thick, fixed to the box with glue and small tacks; into each box put a small bag of powdered canıphire, or a sponge impregnated with oil of cajeput, or any other strong scented oil. The larger insects must not be put in these boxes, along with small ones, lest they should get loose and break the others during the carriage.

Spiders are best kept in spirit of wine, by pimning them to a skewer of soft wood stuck into the cork of a wide-mouth vial, so as to keep it in the middle; but if they are desired to be kept along with other insects in boxes or drawers, then procure a glass tube, seven or eight inches long, and $\%$ - 4 this in. in diameter, open at both ends, with 2 cork fitted to one
end; as also a splinter of wood sharp at both ends, and so long, that one end may be stuck into the cork, and the other may reach to the middle of the tube. When you catch a spider, pin it through the thorax, put the legs in the right position with pins, as above ; cut off the abdomen with scissars, and stick it on the splinter of wood, put it into the tube, and hold this over the flame of a candle, turning it constantly, till the abdomen appears dry and round, then let it cool in the tube, and when cold, cut it off, and fasten it again to the thorax with gum water thickened with starch.

Caterpillars may be preserved in a similar way, by being dried over the fire or candle in a tube; a slit being made by which the inside may be pressed out, and the skin, by means of a blow-pipe, blown up to its proper size again,

## SIMPLE SUBSTANCES,

1. These substances have hitherto been generally arranged in two separate divisions; the first, including those found native, or bought of persons who either iniport them from foreign parts, or manufacture them on a large scale for the retailers; the second, including those which the retailers are accustomed, or at least expected to prepare at home, which are very few:
2. The substances to be arranged under these divisions vary, however, in different places, and therefore they are here mixed together under one head; the more so, because such division of them occasions substances nearly related to each other to be separated, as Spanish liquorice and extrac. tum glycyrrhizæ, the resinous exudations of plants, and the resins obtained from bark, jalap, \&cc. by treating them with spirit of wine, as also many others.
3. The name of simple substances, as applied to this division of the subjects of pharmacy, must be understood. with some latitude, they being far from absolutely simple; but they are designated in this manner to distinguish them from the compounds of the next division.

## 1. SUGARS.

Honey. Mel Anglicum. Collected by bees, and de posited in the cells of their nests as food in store for winter; being chiefly collected from furze and broom, it is more waxy than the foreign honeys from the south of Europe.

Narbonne honey: M. Narbonense. Chiefly fom rosemary and other labiate flowers.

## Minorca honey. M. Minorcense.

East country honey. From pines; birch, \&ic. only fit for making mead, ointments, and oxymels; on account of its strong taste and bad colour : when heated, this last sort passes almost entirely into scum. Honey is nutritive, laxative, but apt to gripe; it covers the taste of salts, \&ic. better than sugar; used externally or in gargles, detergent.

Stone honey. Found in the clefts of the rocks in Imerethi, a part of Georgia; it is as hard as sugar-candy, brittle, and not viscid, originally white, but becomes yellow by age. The Imerethians carry it about with them in their pockets, like lozenges.

Clarified honey. Mel despumatum. The best kind of honey is clarified by merely melting it in a water-bath, and taking off the scum; the middling kind by dissolving it in water, adding the white of an egg to each pint of the solution, and boiling it down to its original consistence, scumming it from time to time; the inferior kind requires solution in water, boiling the solution with bruised charcoal, Hbj to $\mathrm{H} x x y$ of honey, adding, when an excess of acid is apprehended, a small quantity of chalk or oyster-shell powder, straining it several times through flannel, and reducing the solution to its original consistence by evaporation. It has not the agreeable smell of crude honey, but does not ferment so soon, nor is it so apt to gripe as the other.

Manna in tears. Manna in lacrymis. Flows spontaneously from the manna ash tree, and dries upon the bark, in the months of June and July.

Common manna. Manna pinguis, M. vulgaris. Flows from incisions made after the first of August.

Flake manna. Manna cannilata. Hangs in stalactites from straw, \&c. bound round the tree in June and July. Manna is laxative, in a dose of 3 jj to J fs for children, or $\xi^{3}$ fs to ${ }^{3} j f_{\delta}$ for adults, in milk or any other liquid.

Briançon manna. Manna laricis. Exuded from the leaves of the larch in Dauphiny; laxative, but weaker than that of the ash.

Persian manna. Exuded from the shrub called alhagis, a species of hedysarum; also used as a purgative.

Bhown sugar, Moist sugar. Mel canna, Saccharum rubrum, S. non purificatum. Saccharum, P. L. 1809 \& 1815.

White sugar, Refined sugar. ${ }^{\text {St }}$, album, S. purise
simum, S. purificatum. The essential salt of the sugarcane, prepared by clarifying the juice with egg: or blood, getting rid of the superfluous acid by the addition of limewater, and evaporating it till the sugar crystallizes on cooling. The uncrystallizable portion (treacle) is then drained from the granular mass, and that which remains in the first instance got rid of by passing small portions of water, or according to a late improvement of saturated syrop through the mass: 112th of raw sugar yields, on refining, 56 of refined lump, 22 of bastards, 29 of melasses, and 5 of dregs. The different proportions of treacle left in the sugar, occasioning a corresponding variation of colour through all the shades, from dark reddish brown to a pure brilliant white: the brown, cheaper kinds being used in glysters, in making wines, and in those syrops which are of a dark colour; the white refined sugar for medicines and light coloured syrops. Sugar is nutritive, laxative, but griping; externally applied to ulcers it is escharotic.

Brown sugar candy. Saccharum candum rubrum.
White sugar candy. S. candum album. Sugar crystallized by the saturated syrop being left in a very warm place, from 90 to 100 deg. Fahr.; and the shooting promoted by placing sticks, or a net of threads at small distances from each other in the liquor; it is also deposited from compound syrops, and does not seem to retain any of the foreign substances with which they were loaded: It may however be coloured red by means of cochineal. Being longer in dissolving than sugar, it is used in coughs to keep the throat moist ; and is also blown into the eye as a very mild escharotic in films or dimness of that organ.

Treacle, Melasses. Melustum, Theriaca communis. The black uncrystallizable portion of the juice of the sugar, used as a cheap sweet, also for making beer, rum, and the very dark syrops, as those of white poppies, and of buckthorn berries.

## Parsnep sugar.

Skirret sugar.
Carrot sugar. Used in Thuringia.
Beet sugar. Made from any of these roots, by decoction in water, expression, and evaporation, or by simple expression of the juice: the beet yields only $1-100$ th of sugar; skirrets thfs yielded $3 i i j$ of sugar.

Maple sugar. Much used in America:

Walnut sugar. Made by the Tartars.
Birch sugar. Are all made by wounding the trees in the spring of the year, by boring a hole under a large arm of the tree, quite through the wood, as far as the bark on the opposite side, collecting the sap that flows from the wound, and evaporating it to a proper consistence. These are the native sugars of cold countries, and might be made in England for all the purposes of home consumption, but that the interest of the mercantile class would speedily procure a prohibition of the manufacture, if attempted in the way of trade. The sap of the sugar maple yields about 1-10th of a brown sugar:

Apple sugar.
Pear sugar. Obtained by expressing the juice, adding chalk to remove the superabundant acid, and evaporating it to a due consistence : it does not crystallize, and is a kind of white treacle. One cwt. of apples yields about 84 tb of juice, which will produce nearly 12 ft of this substance.

Palm sugar, Jagory, Is manufactired on a large scale, from various species of palms, particularly the palmyra, or borassus flabelliformis, which, by cutting off the tip of the spathe, furnishes daily, and for five successive montlis, about six pints of toddy, and this again affords, by evaporation, a pound of sugar. The wild date, or elate sylvestris, bleeds for three months successively, and the cultivation is so managed, that toddy may be procured all the year round. Fifty trees yield daily about seventeen gallons of toddy, furnishing, by evaporation, about 46 Ht of jagory.

Dulse sugar. Extractible from fuci, is analogous to the sugar extractible from onions, and the crystallizable sugar of manna: they do not form wine, but change at once to vinegar.

SAPA. Juice of grapes evaporated to the consistence of honey, much used in Palestine, Egypt, and other Mahome$\tan$ countries as a sweetmeat.

Grape sugar. The brown sugar obtained fiom grapes, by the usual process, being previously freed from the acids and sulphate of lime that existed in the original juice; yields, by refining, $75-100$ ths of a white granular sugar, 24 of a kind of treacle, with a little gum, and some malate of lime. This sugar does not sweeten so mtich as the cane sugar, and is apt to gripe.

Starch sugar. One hundred parts of starch are to be of water, previously mixed with one of oil of vitriol, and brought to a boiling heat in a tinnied copper vessel: the mixture is kept boiling for thirty-six hours, water being decasionally added to keep up the original quantity: some poirdered chareoal is then added, and atso some chalk to get rid of the acid; it is afterwards strained and evaporated by a geritle heat to the consistence of a syrop, and set by to crystallize: This sugar resembles that of grapes. If the quantity of oil of vittiol be increased to five or six parts, a few hours' boiling will suffice : it does not, however, seem probable that this will ever be a rival to cane sugar; or made as an article of trade.

Arbutús sugar. From the fruit of the strawberry tree, which has been found to yield 1-5th of its weight of sugar, while a sufficient quantity remains in the pressed cake; to give by dilution with water, fermentation; and distillation, a very plensant rum.

Sugar from holcus cafer. This large graśs was brought from the South of Africa, and has begun to be cultivated in some parts of Italy; Bavaria, and Hungary. The sugar that it yields is said to be equial to that of the cane.

Spanish liquorice. Succus glycyrrhiza simplex, $S$. Hispanicus. Made by boiling liquorice root in water; straining the decoction, and evaporating to dryness, but is inported from abroad. In the coarser kinds, the pulps of various plumbs are added. A very comnnon demuleent, taken ad libitum.

Extractum glycyrrhiza. The same, but evaporated only to a consistence fit for rolling into pills; or formed by dissolving Spanish liquorice in water, and evaporating: it is demulcent, 5 j to $\overline{5 i i j}$; frequently used to cover the taste of aloes and other medicines, in draughts or mixtures. The root yields about half its weight of this extract.

Cassia pulp. Pulpa cassice eatracta, Cuesioce pulpa. The pods of cassia fistula are brokeu, the pulp washed out with cold water, strained, and evaporated to a pilular consistence ; laxative, $\tilde{5}^{5}$ 's to ${ }^{5} \mathrm{j}$, but seldom used separate : is said to furm the basis of the essence of coffee now in use. Four th new pods yield about 1tt pulp.

Thmamid pule. Pulpa tamarindi eatracta, Tamarindi pulpa. Prepared like cassia pulp; cooling, lavative,
 er for a cooling drink:

Pulp of prunes. Prunorum Gallicorim pulpa. Prerared in the same manner from French prunes. Use the ame.

Rob of elder berries, without sugar. Rob bactrum sambuci, sine saccharo. "The juice of the berries is , be evaporated to a proper consistence by a gentle heat ; udorific, diuretic:

Rob of black currants, without sugar. Rol de ibes. As the preceding; diluted with water, it is used in eansing gargles.

The pulps or juices of other sweet fruits may be preared in a similar manner.
Sugar of milk. Saccharum lactis. İs deposited in a ystalline form from whey, clarified with white of eggs, and operly evaporated : it is not so sweet as the vegetable suirrs: used to make artificial whey, as a refreshing and laxive drink.

## 2. GUMS.

Gua Arabic. Gummi Arabicum, Acacice gummi, Miosec niloticce gummi: In small lumps, principally white. Gum barbary. In small lumps, but its colour is initior.
Gum Senegal. G. Senica. In large lumps, round, own: these are exuded from different species of mimosa, nence their different fineness; nutritive, and used as food some negro nations; demulcent, 3 j to 3 ij , ad libitum ; o used as a cement: to reduce it to a fine powder, it must previously dried, or the operation performed in a heated Irrtar, with at hot pestle.
Cherry tree gún. Gummi cerasí.
Plidmis tree guar. Gummi pruni. Substituted for gum abic, by country practitioners; differ, however, in their emical qualities from that gum.
Lichen gum. Several species of lichen yield a gum ilar to gum Arabic, and which may be applied to the ie uses; as lichen coralloides, which yields about 100ths; 1. esculentus, about 13; 1. pulmonarius; and 1 . inaceus.
Hyacinty cum. May be obtained from the roots of K
hyacinthus non scriptus, common wild hyacinth or harebell; formerly used by fletchers, to glue feathers to arrows.

Gum Kuteera. In loose wrinkled drops, without smell or taste, whitish, mostly transparent, forms a soft jelly in water, but if reduced to powder and boiled in water for a quarter of an hour, it is entirely dissolved ; a teaspoonful of the powder gives three pints of water the consistence of capillaire; used as a varnish.

Gum tragacanth. G. tragacantlue, Tragacantha, Astragali tragucanthce gummi. Is not exuded from the astragalus tragacantha, as it is said to be by the Edinburgh college; but according to Labillardière and Olivier, from the a. gummifer, and another nondescript species; has always more or less of a vermicular form; equally difficult to powder with gum Arabic, from which it differs in chemical qualities: $Э_{j}$ of this renders water as thick as would be done by $\frac{3 j}{}$ of gum Arabic, but it does not answer for electuaries, as it renders them slimy on keeping; demulcent, and from its viscidity used in sheathing the fauces, and in allaying tickling coughs.

## 3. EXTRACTS.

Under this general name are comprehended all those vegrtable simple substances miscible with water, which are not of a saccharine or g'ummy nature: they consist, indeed, of many various principles, and may hercafter be arranged in several orders, but at present neither their analysis nor properties are sufficiently kiowon for this purpose.
Gerinan acacta. Acacia Germanica, Succus prunorum sylvestrium. Prepared from the juice of unripe sloes, by inspissation; astringent, substituted for the true acacia.

Socotrine aloes. Aloe Socotrina, A. lucida, Alois spicatce extractum. Very pure, affording a gold-yellow powder.

Hepatic aloes. A. hepatici, A. vulgaris eatractum. Contains more rosin than the Socotrine. Distinguished by the druggists into Barbadoes, Bermuda, Cape, \&c. aloes; cathartic, gr. x to Эj ; stomachic, aperient, emmenagoguc, gr: ij $^{\text {ij }}$ to iiij, bis die; and in clysters $3 j$, as a cathartic, or to destroy ascarides: to horses $\frac{5}{3}$ fs to j j as a cathartic.

Horse aloes. Aloe cabatlina. Dark coloured, foctid, used only for inferior horses and other cattle. The better kinds of aloes are the juices that flow from the leaves of the
aloc plant when cut, inspissated; but this last is prepared by boiling the whole plant in water, and reducing the decoction to a proper conisistence.

Purified aloes. Aloes lota, Gummi aloes, Extractum aloes, Extr. al. purificatum. Made by soaking aloes in warm water, pouring off the clear liquid, and evaporating it to a proper consistence; more purgative than crude aloes, and less irritating; dose, gr. $x$ to xv.

Gum alouchi. Is supposed to come from the canella alba, very odoriferous.

Gum ammoniac. Gummi ammoniaciom, Ammoniacum. A gum resin; obtained by incision of a plant like fennel, or is is supposed, by Willdenow, from the heracleum gummierum, as its seeds are found in the gum; purified by being oftened in a gentle heat, or by a small quantity of water, and expressed through a canvass cloth; internally stimulant, xpectorant, gr. x to $3^{\text {fs }}$ diffused in water $\mathrm{Z}_{\mathrm{ij}}$.

Assa fextida. Assafietider gummi resina, Ferule asscecetico gummi resina. Exudes from the fresh cut surfaces the root of ferula assafætida, from which it is scraped off vhen dry, and a fresh surface made by paring the remainng root, till it is exhausted; it is purified the same way as um ammoniac; expectorant, stimulant, and antispasmodic, r. $x$ to $z^{f s}$ in water $\mathrm{y} i \mathrm{i}$; used also in clysters.

Gun bdelliun. Bdellium, Myrrha' imperfecta. Exudes om a nondescript amyris, called by Adanson, Niottout: it as most of the properties of myrrh, and they are used iniscriminately for one another.

Ganbooge. Gummi guttoe gambice, usually written by e druggists G. G. G. Gambogia, Cambogia. The best ret is procured by incision from the stalagmitis cambogioides
Murray; and an inferior kind from the carcapulli of heede, or cambogia gutta of Linnæus; hydragogue, use1 in dropsy, gr. iij or'iv, horis tertiis, until it operates : akes an elegant yellow for drawing or colouring maps. Cutch, Japan earth. Gummi Lycium, Terra Japoca, Ligni mimosa catechu extractum, Catechu, C. extracm, Kino. A reddish extract, chiefly prepared by boiling e pods or wood of mimosa catechu in water, and evapoting the decoction to dryness; and also from many other anis: if purified by solution in water, 91 t is reduced to 7 rtb.
Acacia vera. The juice expressed from the pods ut mosa nilotica, inspissated to dryness.

Juice of mypocistis. Succus liypocistidis. Prepared in like manner from the berries of asarum (or cytinus) hypocistis.

Common kino. Prepared from the sea-side grape of Jamaica, coceoloba uvifera, in the same manner as cutch; astringent, usefill in loosenesses, internal hemorrhages, the whites, and excess of the menstrual evacuation, gr. x to $\mathrm{Jj}^{\mathrm{j}}$.

Gum kino. Kino. Said, by the Dublin college, to be the resin of the butea frondosa, and by the London physicians, to be the product of a nondescript African tree, which is brought from Scnegal ; but is scarce, the common kino and red astringent gum of New South Wales being substituted for it; astringent, but not so certain as catechu in its operation : a very fine sort has been lately imported by the East India Company.

Euphorbicy: Euphorbice gummi-resina. Exuded from incisions made in the cuphorbia officinarum, e. antiquorum, and e. canariensis; a most violent drastic hydragogue, formerly used, to gr. v or $x$, corrected with vinegar or lemon juice, but its internal use is now laid aside; externally stimulant, ulcerating, much used by common ferriers.

Galbanum. Galbani gummi-resina, Bubonis galbani gummi-resina. Exudes spontaneously, but generally procured from incisions made in the bubon galbanum ; emmenagogue, antihysteric, and antispasmodic, gr. x to Эj; externally resolvent.

An inferior sort of galbanum, of a reddish colour analogous to sagapenum, is produced from the bubon gummiferum.

Gux ryy. Gummi hederce. Produced by wounding the tree; reddish brown, burning with an aromatic odour, acrid, exulcerating ; used, dissolved in vinegar, as a depilatory and odontalgic; and in substance to rub orer baits, to render them attractive to fish.

Mrrre. Myrrha. The plant that yields this gumresin is not determined: Forskahl thinks it comes from an amyris, nearly related to his am. kataf.; Bruce, from his minosa sassa $\overline{\%}$ it is indeed frequently mixed with gum Arabic, and leaves of mimosa (or acacia) we found in it, so that it is probably yielded by several different plants; attenuant, incisive, autiseptic, tonic, vermifuge, and very emmenagogue, gr. $x$ to 3 fs.

Itauid myrrir. Mymrha liquida, Stacte. Said to be

## SIMPLE SUBSTANCES.-8. Extracts. 133

obtained by the decoction of the above amyris; similar to myrrh in its qualities, differing only in consistence.

Incense, True frankincense. Thus mascuhum, Olibanum verum, Juniperi lycice gummi-resina. Some have upposed this to exude from a species of anyris not yet decribed; others, from the berry-bearing cedar, or from the uniperus lycia. What is at present sold in London, under his name, is obtained by incision from the salai tree of the nountains of India, the boswellia serrata of Roxburgh; ialogogue, astringent, stimulant, dose Эfs to Эij̣, triturated rith water ; used also as a perfume for fumigating sick ooms, and in religious ceremonies, as the odour is supposed o be agreeable to superior beings.

MaNNa thuris. The small fragments or dust produced y the friction of the above in carriage.
Gum opium, Opium, Meconium, Papateris somniini succus spissatus, of which there are two sorts, Turkey nd East Indian, which latter is of an inferior quality; exacted from the capsules of the white poppy by incision: ne of the principal instruments of physicians; anodyne, arcotic, gr. fs to gr. ij, or even more, as the person is acustomed to its use or not, and also according to the disease rat is present, so that it can only be exhibited with due efcet, or even with safety, by a person who is not only skilful, ut also acquainted with the constitutional habits of the paent as to this drug; some prefer a full dose at once, others peated small doses : it is thought to be anodyne, even hen used externally. When required in a pulverulent form, I which state it is kept ready in the shops, it must be preously dried in a gentle heat. The effect of opium taken aproperly is best obviated by a copious exhibition of vigar. O. purificatum P. L. is merely picked opium. Purified oprun. Extractum Thebaicum, Opium cola$m$, o. purificatum, Laudanum opiatum. The gum being ftened in a small quantity of water, not exceeding its own eight, is pressed through canvass, and reduced by evapotion to a proper consistence, either soft for pills, or hard r powdering. For the purfied opium of the Dublin phyians, see rosins, p. $14 \%$.
Extractum opii. Rub half a pound of opium with ree pints of water, added by degrees lest the mixture the; then strain, and evaporate to a proper consistence.

$$
\begin{aligned}
& \text { Extractum opii aquosum. Rub proper consistence. } \\
& \qquad 3
\end{aligned}
$$

pint of boiling water, for ten minutes, and pour off the solution; repeat this a second and third time; mix the liquors and expose them to the air in a broad flat vessel, for two days, then strain through linen, and evaporate.

Several other modes of purifying opium have been proposed: Homberg and afterward Beaume extracted from it all the part that is soluble by repeated decoction of 4 Hz in twelve or fifteen quarts of water, until no more was taken up, then mixed all these decoctions together, evaporated the whole to about fiye quarts, and kept it boiling for two, three, or even six months, addling fresh water from time to time, then strained the decoction, and evaporated it to the consistence for making pills.

Cornette endeavoured to separate the resin by the shorter process of redissolving the common extract in water, straining the solution, and again reducing it by evaporation to an extract, and repeating this process several times.

Josse worked a piece of opium in his hands under water, to separate the glutino-resinous part which remained in his hands: the water was then filtered and eraporated to an extract, which still contains some resin, but is much less disagreeable in its smell, and considerably improved as an antispasmodic.

Accarie digests opium with charcoal powder in water for some days, then strains the liquor, clarifies with whites of egg, and evaporates in a water-bath to an extract, which is said to be very mild in its effects, like the former.

Pozuel proposes to boil opium in water, as long as ainy thing is taken up by it, then to digest the residuum in spirit of wine, to mix the two solutions and cvaporate them to a proper consistence.

Oporonax. Opoponax, Pastinacer opoponacis gummiresince. Exudes from incisions made in the roots of the pastinaca opoponax, or of the daucus gummifera; carminative, attenuant, emmenagogue, and sometimes purgative, gr. x to sj .

Red astringent gun, Lrquid gun? Gummi rubruma astringens, Kino. Is brouglit from New South Wales, and said to exude from the cucalyptus resinifera; is the kino of the Edinburgh physicians.

Sagafenum. Supposed to be produced from the ferula persica, or some nondeseript species of that genus; its me-
dical properties are similar to those of assafoetida and galbanum ; dose gr. x to 5 fs.

Aleppo scammony. Scammonium Aleppense, Diagridium, Scammonice gummi-resina, Convolvuli scammonia summi-resina. Exudes from the root of convolvulus scaimnonia, the tops being cut off for that purpose; when reluced to a very fine powder, by trituration with loaf sugar or tartarum vitriolatum, it is the best vegetable purgative hat is known at present, as its effects can be exactly calcuated ; dose, from gr. iij to xv, or more. The juice of cyanchum monspeliacum is mixed with it by the wholesale lealers, which is a weaker cathartic.

Smyrna Scammony. Scammonium Smyrnense: The uice of the periploca scammonium, coarser than the Aleppo cammony, and very sandy; it is more violent in its operaion, and but little used at present, except for inferior cattle. 1 factitious compound is generally sold for the real article.

Essence of spruce. Is prepared by boiling the twigs if Scotch fir in water, and evaporating the decoction till it rows thick; used to flavour treacle beer, instead of hops.

Essence of malt. Is prepared by infusing malt in rater (first boiled and then cooled till it reflects the image of person's face in it), pouring off the infusion, and evapoating it to the consistence of new honey; used in sea voyges, and places where malt cannot be procured to make eer.

Extractum cacuminum absinthii. From wormwood ups, by boiling in eight times their weight of water, evapoating to one half, then strained with expression, and after re impurities have subsided, filtered and evaporated to a onsistence fit for making pills; bitter, stomachic, gr: x to fs, ter die.

Extractum aconiti. Succus spissatus aconiti napelli. rom the expressed juice of monkshood leaves, evaporated, ithout separating the sediment, to the consistence of thick oney ; anodyne, sudorific, deobstruent, gr. fs to gr. v, bis rve die.

Extractum anthemidis. E.florum chamcemeli, E. antheidis nobilis. Prepared by boiling camomile flowers in ater, straining the decoction while hot, and evaporating; tter, stomachic, gr. $x$ to $Э j$, bis terve die.
Extractum belladonno, Succus spissatus atropo bellaminc. Prepared from the leaves of deadly nightshade, in
the same manner as the extractum aconiti above; narcotic, diaphoretic, resolvent, gr. fs to gr. iij, bis terve die. It yields 1-6th of extract.

Extract of bark. Extractum corticis Peruviuni, Extr. cinchonce. Boil ibj of bark three times, in about a gallon of water, filtering each decoction while hot; add the several decoctions together, and evaporate by a gentle heat to a proper consistence for pills: 56 tb of bark yielded $13 \frac{1}{2} 1$ to of extract.

Hard extract of bark. Extractum corticis Perzviani durum, Extr. cinchonce durum. The former extract reduced by subsequent drying to a state fit for being powdered.

Extractum corticis Peruviani cum resina, Extr. cinchonce officinalis, Extr. cinch. resinosum. Soak Hbj of bark in rectified spirit tbiiij, for four days, and pour off the tincture ; boil the residuum in water, filter the decoction, and evaporate to the consistence of new honey, then add the tincture previously brought to the same consistence by distilling off the spirit, and evaporate the whole in a gentle heat to a proper consistence. Are astringent and tonic, and useful for those who cannot take the bark in substance, dose gr. x to xxx , in pills.

Extractun cascarillce resinosum. Prepared from cascarilla by means of spirit and water, as the extr. cort. Peruv. c. resinâ ; conic, gr. v-Эj, bis terve in die : 28 Ht of cascarilla yielded $5 \frac{1}{2}$ It of extract.

Extractum colocynthidis. Evaporate a decoction of pulp of bitter apples \#bj, in water tt viij, to a proper consistence for pills ; cathartic, gr. v-Эj.

Succus spissatus cicutce, Extractum conii, Succ. sp. conii maculati. Evaporate the expressed juice of hemlock leaves to a proper consistence ; alterative, resolvent, used in obstinate disorders ; beginning with a small dose, say gr. ij, bis terve in die, and increasing it as the constitution will bear its exhibition.

Extractum cacuminum genista. Evaporate a decoction of broom tops to a proper consistence for pills ; diuretic, 3 fs to 3 j or more in dropsy.

Extract of gentian. Eatractum gentiance, Entr. radicis gentiance, Extr. gentiance lutecu. As the former, from gentian root: bitter, tonic, gr. x to j fs , bis terre dic ;
lialf a cwt. of gentian yielded 251b of extract. Extract of lesser centaury is used for it, and is much cheaper.

Extractum ligni Campechensis, Eatr: Thematoxyli. As the former; from a decoction of finely powdered or rasped logwood; astringent, gr. x to $3^{\text {fs }}$ in cinnamon water, ter quaterve die vel post singulas sedes: 801 tb of logwood yielded 14 tb of extract.

Extractum radicis hellebori nigri. As usual, from black hellebore root ; alterative, emmenagoguc, gr. iij-viij, bis terve die; cathartic, resolvent, gr. x to $Э_{\mathrm{j}}$ : 28 HBb of the root yielded 11 H of extract.

Extract of hops. Extractum lummeli. From hops, in the usual manner; anodyne in cases which do not admit the use of opium, gr. v to $Э j$, pro re nata.

Extractum hyaseyami. Succus spissatus hyoscyami, Succ. spis. Iyyosc. nigrri. Prepared by evaporating the expressed juice of henbane leaves to a due consistence ; anodyne, antispasmodic, from gr. fs to as much as the patient will bear, which has been in some instances $5^{\text {fs a d day : a }}$ cwt. and three quarters of the green herb yieided 111t of extract; is very troublesome to make.

Extractum Jalapir. Extr.jalapce, Extr. jalapoc resinosum, Extr. convolvuli jalapa. Prepared from jalap, by means of spirit and water, in the same manner as the extr. cort. Peruv. c. resinâ above mentioned; an active purgative, gr. $x$ to $\exists_{j}$; it ought to be well ground with a little sugar or kali vitriolatum to hinder it from griping: 18tb of jalap yielded 16 tb of extract.

Extractum jalapae durum. For powdering:
Extractum radicis julapce. Prepared by water only, is much milder in its operation than the two former.

Lettuce opiun. 'Lactucarium, Prepared from the common garden lettuce, by expressing its juice, and subsequent evaporation of this juice to a due consistence; narcotic, used as a substitute for opium.

Succus spissatus lactucce virosce. Prepared from the expressed juice of strong scented wild lettuce, by evaporation; narcotic, laxative, and powerfully diuretic, gr. iij to xy or more daily, in obstinate dropsies.

Extractum papaveris, Extr. capitum papaveris somniferi. Prepared from broken poppy heads, the seed being taken out, by decoction and evaporation; narcotic,
anodyne, much weaker than opium, dose gr. ij to $Э \mathrm{j}$ : 2815 of broken heads yiclded 513 and a quarter of extract.

Extract of oak bark. Extr. corlicis quercús: By evaporating a decoction of oak bark in water to a consistence ; astringent, gr. $\mathrm{x}-Э \mathrm{Y}$, or more.

Extractuar rhci. Soak 11t of rhubarb in seven pints and a half of water, mixed with half a pint of rectified spirit, for four days, strain, let it settle, and evaporate the clear liquor; cathartic, gr. x to 3 fs, but principally used as a basis for purging pills.

Extractury foliorum rutce, Extr. fol. rutoce graceolentis. By evaporating a decoction of rue leaves; tonic, detergent, gr. x to $\mathrm{Э}_{\mathrm{j}}$, bis terve in die.

Extract of savine. Extr. foliorum sabince. As the former, stimulant, emmenagogue, gr. x to $Э \mathrm{j}$, bis terve in die.

Extractum sarsaparillow. By boiling sarsaparilla root in water, and subsequent evaporation; alterative, diaphoretic, gr. x to - j , in pills, or to increase the power of the decoction: 201t of fibres yieldcel 6 th of extract.

Extractum sennce, Extr. foliorum cassioe senna. From senna leaves, in the same manner; serves as a basis for purgative pills, having scarcely any power of its own.

Extractuar taraxaci. By soaking bruised fresh dandelion roots in boiling water, boiling down to one half, then straining and evaporating to an extract; resolvent, diuretic, gr. x to 5 j , with vitriolated tartar: a cwt, and three quarters of the herl yielded, by expressing of the juice and then evaporating, 81 b and a half of extract.

Extractuar valeriance. From the root of valerian, by soaking in boiling water in a covcred vessel, expressing the liquor and evaporating to a proper consistence ; antispasmodic, gr. x to $\overline{3}$ fs, or more.

Concentrated orange jutcr. Succus spissatus aurantiorum. The juice of oranges, reduced to a solid form by evaporation; for use in situations where the fruit camnot be obtained.

Concentrated hemon jucee. Succus spissatus limomum. Similar to the above in preparation and use; but neither of them is equal to the original juice, or even to the depurated juice, so long as they can be kept free from mouldiness.

Extractum anemonis pratensis. Is prepared froni
the undepurated juice boiled down; resolvent, useful in chronic diseases of the eyes, and in obstinate venereal complaints; beginning with small doses and gradually increasing them.

Extractum radicis bryoniz albe. Prepared by decoction of the root, and subsequent evaporation, in doses of 5 fs to 5 j , is safer and better than either the fresh root, or its juice.

Rob diacaryon sine melie. Extractum juglandis immaturi. Prepared from the juice of umripe walnuts boiled down; is an excellent vermifuge made into a draught, and its taste covered with cinnamon water.

Theriaca Germanorum optima. Extractum baccarum juniperi optimum. Prepared by soaking juniper berries in cold water, and evaporating the infusion carefully poured off from the sediment; this extract is sweet tasted, semitransparent, and amber coloured.

Theriaca Germanoruar altera. Ext. baćc. junip. sine contusione. By boiling juniper berries in water, and evaporating the decoction; agreeable to the taste, aromatic: about 1-8th of extract is obtained.

Thertaca pauperuma, Extr. bacc. junip. contusarum. Prepared in a similar way; but the berries are bruised previous to the decoction being made of them; is dark brown, thick, sharp tasted, and by no means agreeable. They are all excellent bitters, stomachics, and tonics.

Extract cf pepper. Extractum piperis nigri. From the decoction; it recquires 550 pints of water to extract all the sapidity of 1 tbj of pepper, and the extract is much stronger tasted than the pepper itself.

Extractuar stramonir. Prepared from the juice and decoction mixed together: 15815 of fresh stramonium yielded 37 th of juice ; the cake was boiled in water, and the decoction added to the juice yielded, by evaporation, 31 b and a half of extract, which was full of particles of nitre; narcotic, in doses of gr. j to v , bis in die.

Extract of tea. Is brought from China, dry, solid, blackish, shining, and very brittle; it has a very weak smell and taste of tea, mixed with a styptic flavour, is easily dissoluble in the mouth, and tinges the spittle green ; the solution in boiling water is brownish green, of a rough taste, and rather disagreeable smell.

OBS. To make extracts smooth, chemists sometimes add
to each quarter of a cwt. 1 th of gum Arabic, and a pint of olive oil.
9. Or to every 3 H , add a little gum, 3 ij of olive oil, and $3 j$ of rectified spirit, which will give it a gloss.

## 4. ANIMAL EXCREMENTS.

Stone-horse dung. Fimus equinus, Stercus equi non castrati. Antipleuritic, and of great efficiency in asthma and difficulty of breathing; infused in pennyroyal, or hyssop water, or in white wine, and the strained infusion drank: its effects probably owing to the sulphur that it contains.

Cow dung. Fimus vacco. Used as a cataplasm in erysipelatous swellings, being previously mixed with some unctuous matter to prevent its growing hard, and highly commended in the gout; also used in calico printing as a cheap mucilage, in such quantity, that the printers are obliged to keep great numbers of cows to supply this article.

Sheeps dung. Used in dyeing, for the purpose of preparing cotton and linen to receive certain colours, particularly the red of madder and crosswort, which it performs by impregnating the stuffs with an animal mucilage, of which it contains a large quantity, and thus assimilating them to wool or silk.

Arbun Grecum, Stercus cauis. The white excrements emitted by dogs in good health; detergent, also outwardly, with honey, in sore throats:

Pigeons dung. Stcraus colimbor.
Peacocks dung. Stercus pavonis.
Goose dung. Stercus anseris: Used as poultices to the feet in malignant fevers.

## 5. SERUM.

White of egg. Albumen ovi. Nutritive, coagulates like blood by heat, and therefore used to clarify turbid liquors, and also as a varnish.

Yelk of egg. Vitellus ovi. Nutritive, coagulable the same as the whites, and used along with them for that purpose, as also to render oily substances miscible with water.

Sepin, Cuttle fish ink. When fresh taken from the cuttle fish, it is a black glary liquid, of a viscid consistence. a peculiar fishy smell, and very little taste; it is preserved for use by being spread round saucers or grallipots, so as to
dry before putrefaction commences; used for writing ink, and for a paint, much superior in ease of working to Indian ink, which latter dries so quick, that it is difficult to colour a large pale shadow with it, and when once dry, some part always adheres to the paper, and cannot be removed, where as sepia may be washed almost clear off.

Human blood. Sanguis hominis. Anti-epileptic, dried 3 fs , in powder, in cimnamon water, omni mane.

Goats blood, dried. Sangeuis hirci siccatus. Sudorific, antipleuritic.

Sheers bloon.
Ox Blood. Used instead of eggs to clarify liquids; dried by a gentle heat, so as not to be coagulated, they have been exported for the purpose of clarifying cane juice.

Human urine. Urina hominis. Aperient; used in jaundice, $\overline{\mathrm{J} j}$-ij, omni mane.

Ox gall.: Fel tauri, Fel bovis. Enumerated separately in Pharm. Lond. ed. 1720: coametic, detergent, used in earach, also as a collyrium, and gtt. $\mathrm{xx}-\mathrm{xxx}$ in wine as an emmenagogue, and to facilitate labour.

Prepared ox gall. The fresh gall is left for a night to settle, the clear fluid poured off, and evaporated in a water-bath to a proper consistence; used by painters in water colours to destroy the greasiness of some of their colours, and thus enable them to form an even surface of colour; and also instead of soap to wash greasy cloth.

White-bear gall. Fel ursi. Anti-epileptic.
Hares gali. Fcl leporis. Used as a collyrium.
Gall of eels. Fel anguillarum. Used to facilitate labours.

Cows milk. Lac vaccinum. Nutritive, the fattest of hose usually employed.

Shimmed milk. Sits easier on the stomach; used as a varnish.

Asses milk.
Goats mile.
Ewes milk. Thinner than that of the cow; antiphthisic.
Mares milk. Like goats milk in quality, restorative.
Rennet whey. Serum lactis. Made by mixing an nfusion of rennet with milk, and straining.

Butter milk. Lac ebutyratum. By straining churned ream, the butter being left on the strainer, and the butter nilk passing.

Woman's midh. Lac mulieris. Are principally composed of sugar of milk dissolved in water; highly nutritive, laxative; popular remedies in atrophy and phthisis.

Frangipane. Prepared by evaporating skimmed milk to dryness, by a gentle heat; used to form artificial milk, when the real cannot be obtained.

## 6. ROSINS.

Arnotro. Orleana. Prepared from the seeds of bixa orellana, by steeping them in water for seven or eight days, stirring the liquid, passing it through a sieve, and boiling it when the colouring matter is scummed off and put up while soft into balls. Thrce sorts are distinguihed in England, Egg, Flag, and Spanish: when dry, the druggists beat it up with whale oil; astringent, discussive, febrifuge, but little used in medicine; chiefly employed as a dyeing drug: boiled in water, it gives a brownish yellow colour, with spirit of wine, it forms a high orange or yellowish red; alkalies render it perfectly soluble in water, and the solution communicates to wool or silk a deep, but not very durable orange dye, which is washed out by soap, and destroyed by exposure to air: much used for colouring cheese.

A superior kind of arnotto is said to be prepared, of a bright shining red, almost equal to carmine, by rubbing the seeds with the hands, previously dipt in oil, till the red pellicles come off, and are reduced into a clear paste, which is scraped off and dried in the shade: De Laet says this is used by the ladies as a paint.

Gum anime, Cancany. Gummi anime, Cancumam. The extravasated juice of hymonaca courbaril, in dry lumps of various sizes, outwardly white, inwardly yellowish white, somewhat transparent, friable, a resinous taste, sweet scented when burnt, and totally soluble in spirit of wine; cephalic, uterine; dose, in powder, aj .

Balm of Gifead. Balsamum Gilentense werm, Bals. Judaicum, Bals, de Mecha, Opobalsamum, Amyridis Giteadensis balsamum. Of which there are three sorts: 1. That which exudes from incisions made in the amyris Gileadensis; or in the amyris opobalsamum, and is limpid, white, of a very penctrating swcet turpentiny smell, and has a sharp bitter astringent taste, very rare; a drop of it, let fall on warm water, spreads over the whole swfaci, and on the:
water cooling again, contracts itself. 2. Obtained by boiling the twigs and leaves in water, thin and oily. 3. Obtained by a longer continued decoction, is thicker and less odoriferous; this is the most usual: antiseptic, vulnerary; its fumes are useful against barrenness: used also as a cosmetic, stimulating the skin so as to cause redness and swelling. Balsam of Canada, scented with essence of lemons, is usually sold for it in England.

Canada Balsam, Bala of Gilead. Balsamum Caradense, Terebinthina Canadensis, Pini balsamece resina, liquida. Contained in vesicles under the bark of the pinus balsamea, or balm of Gilead fir, limpid, yellowish, odoriferous, very fine: one of the finest of this class.

Balsar of Capivi. Balsamum Capaibo, Copaiba, Copaiferce afficinalis resina liquida. Flows from the copaifera officinalis; is limpid, yellowish, of a sharp bitter taste, aromatic penetrating smell, of a syrupy consistence; when pure, drops of it let fall into water, retain their spherical form, whether they sink or swim; detersive, vulnerary, diuretic, and astringent, may be given to gitt. lx, or more, if the stomach will bear it, in leucorrhœa and gonorrhœea. By taking about gtt. xxx of elixir of vitriol, in a glass of water, twice a day, the stomach may be made to retain gitt. lxx to c of the balsam nocte maneque; it is a good dressing for fresh wounds. Retailers usually mix an equal quantity, or even more, of rape oil with it, and some sell rape oil for it.

Hungarian balsam. Resina strobilina. Exudes from the extremities of the branches of the mountain or Mugho pine; it is also obtained by expression from the cones; highly esteemed in Germany : an essential oil, called oleum templinum, or Krumholtz oil, is obtained from it by distillation.

White balsam of Peru, Natural balsam. Balsamum album, Styrax alba, Balsametcoon. Obtained by incision from the myrospermum peruifera; liquid, yellow white, like honey: the turpentine of the fir, bijon, is usually sold for it on the continent.

Red balsain of Peru. Balsamum Peruvianum ruIrum. Brought over in cocoa shells, is red, dry, and less pure than the former: it has been dried in the air.

Black balsam of Peru, Comhon balsam of Peru: Myroxyli peruiferi balsamum, Balsamum Peruvianum vulrare, Balsamum Peruanum. Obtained by boiling the bark ind branches in water.

They all contain benzoic acid, which gives them a very fragrant smell, taste sharp and bitter ; are nervine, cephalic; stomachic, anti-asthmatic, externally vulnerary; dose gtt. x to xxx ; used also in perfumery.

Balsam of Tolu. B. Tolutanum, B. de Tolu, Toluiferce balsami balsamum. From the toluifera balsamum, a resin, of a reddish colour, an agreeable sweetish taste, of a middle consistence between liquid and solid, very glutinous, an excellent smell, and having the fragrance of lemons; anti-phthisical, vulnerary, anti-arthritic, nervine; is brought over either in gourds or jars, the latter is more than twice the price of the former; dose, gtt. x-xxx.

Balsam Acouchi. Flows from the amyris acuchini; odorous, vulnerary, nervine.

Balsam Arouarou. Flows from the icica heptaphylla; smells like citron.

Balsam Houmiri. Flows from the myrodendron houmiri ; red, transparent, balsamic.

Benjamin. Benzoinum, Assa dulcis, Styracis benzoini balsamuin. The best is obtained by incision from the styrax benzoin, and inferior sorts from the terminalia benzoin and the laurus benzoe; odoriferous, fragrant, of a resinous taste; fat, yet breaking readily between the fingers: the best is yellowish, with white spots in it, resembling blanched almonds: the next is grayish, inclining to a dark brown, and is very sweet scented: the worst is black, full of dross, and having but little scent; balsamic, anti-asthmatic, and used in perfumery and odoriferous fumigations.

Caqutchouc, Indian nubber. Gummi clasticum. The concrete juice of jatropha elastica; the bark being wounded, a milky juice flows out, which, being spread upon clay moulds, dries very soon in the air, or by being held over torches; in this manner are formed water-proof boots and portmanteaus, as also bottles, of which great numbers are brought to Europe, and used for rubbing out the traces of black-lead pencils, and for syringes: Caoutchouc softens by heat and dissolves in oils, petroleum, and ether; its brown colour is partly derived from the smoke of the torches used in drying it ; it is not used as a medicine, but only for varnish, and to make elastic catheters and probes.

A very elastic kind of caoutchoue is yielded by the urceola elastica of China. A soft kind is yielded by the ficus.
udica and other sorts by the jacktree, and the castilla elasca.

Caranna. Gummi Caragna, Tacamahaca Caragna. the tree which yields it is not well known: the rosin is, hen fresh, ductile like pitch, when old, hard, friable, outardly blackish grey, inwardly pitch-black, of a resinous, scous, bitterish taste, and when burnt sweet smelling: ought from New Spain in masses, covered with broad aves; less efficacious than true tacamahaca as a resolvent.
One kind of caranna lias a fetid smell when burnt, and thought to be the rosin of some sort of chamerops.
West India copal. Copal occidentale. Produced by e rhus copallinum of Spanish America; it is hard, transrent, yellowish, in lumps, and of a very weak smell.
East Inda copal, Copal orientale. Which is rarer, produced by the elæocarpus copallifera. They are both ed in cephalic fumigations and plaisters, but more comonly in varnishes. Great confusion exists between copal d anime, which are frequently mistaken for one another; $t$ anime is soluble in spirit of wine, and copal is not. It even difficult to dissolve copal in oils, but it is soluble in of rosemary; ground with camphor, it becomes in a few nutes a tough coherent mass.
West India elemi. Icica, Elemi occidentale. Obned, by incision, from the amyris elemifera of South nerica, is greenish and yellowish white, soft, almost trans--ent; brought over in longish cakes rolled up in flags, and lding a sweet odour when burnt. East India eleari. Elemi orientale, Cancame antirum? Obtained from the gardenia elemifera of Ceylon. ey are antiseptic, detergent, and used in the composition ointments.
Gum gualacum. Gummi guaiacum, Guaiaci resina. tained, by incision, from the guaiacum officinale, is dry, ble, transparent, rather blackish, of a sharp taste, and ler grateful smell; sometimes mixed with the juice of the achineel apple, and sometimes common rosin is sold for the powder changes to a green; is tonic, antiscorbutic, shoretic, in doses of gr. v to $Э \mathrm{j}$, in pills or in emulsion, gative in doses of gr. xv to Эij. To discover the addiof manchineel gum, dissolve it in spirit of wine, and a few drops of sweet spinit of nitre, then dilute with
water, the gum guaiacum is precipitated, but the adulteration floats. The gums of the courbaril and manchincel are, however, used for it in the West Indies.

Yellow gum. Gummi flautum N. S. W. Gummi resina acaroidis. Resin of the xanthorrhoea hastilis, or acarois resinifera; friable, easily separable into scales by the nails, fracture shining and compact, yellow, pleasant halsamic smell like poplar buds, clots in pounding, and adheres strongly to the mortar, becomes electric by friction; its powder stains the paper in which it is kept of a deep indclible yellow colour, swells up in boiling water like gum kutcera, but is not soluble; dissolves in spirit of wine learing seven per cent. of an insipid grumous substance, neither soluble nor diffusible in water; antidysenteric, and employed to unite the lips of wounds however large or dangerous; also used to compose a cement : strongly resembles bee bread.

Gem junifer, Gum sandaracir, Pounce. Gummi juniperi, Sandaraca. Yielded by the thuya articulata, and not by the juniperus oxycedrus, as supposed by Limnæus and his followers; astringent and tonic, used also to prevent ink from sinking in parchment, bad paper, or where they have been scraped, and to make a varnish by dissolving it in spirit of wine, or in oil of turpentine.

Stick lac. Lacca in ramulis, Lacca in baculis. Formed by the insects called coccus lacca, on the branches of trees. This sort, in its rough state adhering to the sticks, is of a deep red colour, which it gives out to water, for the purpose of dyeing.

Seed lac. Lacca in granis. Stick lac broke off the branches, and which has been digested in warns water by the dyers, for the extraction of its colour; is brownish.

Shell lac. Lacca in massis, Lacca in tabulis. Which has been boiled in water, by which it has been meited, and then poured upon a slab; transparent, lightish red. Calefacient, attenuant, aperitive, diaphoretic, diuretic; used iil dentifrices, in varnishes, and to form the basis of the best kinds of sealing-wax.

Ceylon lace. Lacca Zeylanica. Fxudes from the croton lacciferum; is in red sticks, purer than that collected by the insects just mentioned; is astringent, and dyes silk red.

Lravid amber. Iiquidambra, Ambra liquida. Oltained, by incision, from the liquidambar styraciflua ; is re
solvent, suppurative, and used in perfumes, as it has the smell of benzoin.

Labdanumi. Exudes from the cistus creticus; digestive, tonic, astringent, useful in tootl-ach: an inferior sort is obtained from the cistus ladaniferus, by boiling in water. What is, however, now sold under this name in the English hops is an artificial substitute for the real rosin.

Masticif. Mastiche, Resina lentiscina, Pistacire lenisci resina. Obtained, by incision, from the pistacia leniscus, and sometimes from the p. atlantica; tonic, detersive, and chewed to sweeten the breath and fasten the teeth.

Resiasa mucis vomico. Prepared by distilling slowly he tincture of nux vomica in rectified spirit; useful in paalysis, particularly in paraplegia; dose gr. viij, ter dic.

Opium purificalum, Pharm. Dubl. Digest thj of sliced pium in thxij of proof spirit of wine, and after filtration, istil off the spirit till the mass is reduced to a proper conistence; it is ordered to be kept in two states-one, O. $p$. volle, fit for pills, the other, O. p. durum, sufficiently hard powder. See opium, p. 133.

Burgundy pirch, White pitch. Pix Burgundica, ix alba, Resina abietis humida, Resina alba humida, ini abietis resina sponte concreta, Pix arida P. L. since 809. Obtained, by incision, from the Norway spruce fir, mus abies, and becomes solid immediately : a vigorous tree ill yield in one year 30 or 40 lb of juice: it is melted ith water and strained through coarse cloths: it is of a ose consistence, rather soft, of a reddish brown colour, id not unpleasant smell: it is very adhesive to the skin, id therefore forms excellent plaisters when they are wanted remain on for some timic; rubefacient, useful in colds, ort breath, \&c.
Common rrankincense, Perrosin. Thus fominim, T. vinlgarc, Olibanum vulgare, Resina abietis sicca. sina abietis P. L. since 1809. Exudes from the Norway ruce fir; it differs from Strasburg turpentine in heing comct, opake, and of a deep yellow; and also differs very shtly from Burgundy pitch, but is by no means so adsive : it yields, by distillation, an oil, substituted for oil turpentine, but very inferier, and not possessed of the ne qualities.
Common pitch, Stone pitch. Pix sicca, Pix atra, $x$ navalis, Pix arida P. L. before 1809. Obtained by
L. 2
boiling or distilling tar to the desired consistence; but very frequently an artificial compound is substituted for it: in medicine used only as a resolvent in plaisters.

Yellow rosin, White rosin. Pix Grocca? Colophonia, Terebinthina cocta, Resina alba, Resina flava, Resina pini oleo volatile deprivatum. Obtained by boiling or distilling turpentine with water, or by boiling or distilling turpentine per se, and pouring the residuum, while yet fluid, into water, of which it absorbs about 1-8th of its weight; suppurative externally, used in ointments and plaisters.

Native rosin. Resina pini nativa. Exudes from the pinus sylvestris, the turpentine drying upon the wound, and forming a white crust over it.

Common rosin. Resina pini communis. Prepared from native pine rosin by melting and straining through a cloth; used indifferently with Burgundy pitch; adheres to the fingers.

Brown rosin, Black rosin. Pix Graca, Colophonium, Resina nigra. Obtained by boiling or distilling turpentine without water; suppurative externally.

Resina Chibou. Obtained from the bursera gummifera; transparent, yellow, glutinous, but dries by time.

Resina strobilina. Exudes from the cones of the balm of Gilead fir, pinus balsamea ; similar to balsam of Canada.

Rosin of scammony. Resina scammonii.
Rosin of jalap. Resina jalapoc. One pound of root yiclded one oz. rosin ; 10tb yielded 11t.

Rosin of guaiacum. Resina gruaiaci.
Rosin of turbith. Resina turpethi. Eight oz. yieided 3v. Are all obtained by digesting spirit of wine upon the several substances repeatedly, till the last portion is not tinged; distilling off the spirit till but a fourth part remains, and then adding a little cold water, whieh causes the rosin to settle; this rosin is then washed and dried: they have the qualities of the substances from which they are extracted, but must be given in smaller doses.

Rosin of aloes. Resina aloes. Is the insoluble residuum left in making washed aloes.

Extractum cinchona resinosum. Soak 1th bruised bark in 4 th spirit of wine for four days, and distil off the spirit to a due consistence.

Dragons blood in tie tear. Sanguis draconis in
acrymis. Obtained from the dracena draco, by incision : he purest, used in varnishes and dentifrices; powder a bright ed: cinnabris of the ancients.
Dragons brood in sticks. Sanguis draconis in canis, Pterocarpi draconis resina. In small masses, wraped in leaves, dark red, breaks smooth; powder crimson: iso obtained from the red sanders tree.
Dragons blood in balls. Sanguis draconis in gloulis. Obtained by macerating or steaming the fruit of the alamus draco; in round masses wrapped up in leaves of eds, coarse grained; powder brownish red. Are all astrinent, especially this last, which contains a portion of tannin.
Sarcocolla. The dried sap of penæa sarcocolla and p. ucronata; sacclarine, vulnerary, astringent.
Red storax, Gum storax. Thus Judcoorum, Styrax thra, Styracis balsamum, Bals. Styracis officinalis. Obtain!, by incision, from the styrax officinale, and perhaps from e liquidambra orientalis ; the purest, in tears, but it has st some of its smell in drying.
Common storax. S. calamita. Has been received in eds or vessels, and saw-dust added immediately to thicken ; is preferred by the perfumers, as more fragrant : storax soluble in spirit of wine, but not in oil.
Purified storax. Styrax colata, S. purificata. The ublin college orders it to be heated till it softens, and then essed between heated iron plates ; the London college dicts it to be dissolved in spirit of wine, and the solution ained and distilled to a proper consistence : 1tt storax, urmed in bags, and pressed between iron plates, so hot, at they are nearly sufficient to make water hiss, yields o oz. and a half of strained storax. Storax is stimulant d expectorant in doses of gr. x to $5^{\mathrm{fs}}$.
Liquid storax. Styrax liquida. Is obtained by boil5 the young shogts of the liquidambar styraciflua in water; t much of that sold in the shops is an artificial compound; ating, drying, emollient.
Tacamahac. Tacamahaca. Is yielded by the fagara tandra; imported in gourds, greenish, soft, smells of lander, tastes aromatic, is rare; cephalic, nervine, and exnally suppurative, astringent; used in fumigations.
American tacamahac. Balsamum Focot. Is yielded the populus balsamifera; greenish yellow, in tears run o a mass; sweet scented; stomachic.

I 3

Bansamump populi. Expressed, between heated plates, from the buds of the propulus balsamifera, as those of the black poplar yield scarcely any; is huttery, brown, reddish, rather fragrant: 4 oz. of budis yielded sij of balsam.

East India taciamaifac. Balsamum vibide, Oleum Marixe, Balsamam Calubu. Is yielded by the calophyllum inophyllum; yellowish, becomes thick and green by drying, sweet scented.

Strasburg turpentine. Resina abietis P. L. before 1809. Oleum abietis, T'ercbinthina Argentoratensis. (Ol)tained by piercing the tubercles of the !ark of the silver fir, pinus picea. A man can collect only four oz. in a day, hence it is three times as dear as common Veriice turpentine; clear, but grows yellow when a year old, thin, smells like frankincense, and tastes like citron peel.

Chio turpentine, Cyphus turpextine, Thue Vemice: turpentine. Terebinthina vera, Terebinthina Chia, Terebinthina Cypria. Obtained, by incision, from the turpentine tree, pistacia terebinthus; white, pellucid, glass-like, with a blueish green cast, and a sharp taste.

Comion Venice turpentine. Resina laricis, Tercbinthina Veneta, Pini laricis resina liquida. Obtained from the larch by boring it nearly through; transparent, paie yellowish, bitter, smells resinous; substitutes are generally sold for all the above in this country.

Comaon turpentine, Horse turpentine. Resina pini, Terebinthina vulgaris, Ter. communis. Obtained from the Scotch fir, by cutting a hollow in the tree to catch the turpentine, and taking off the bark for a space of about eighteen inches above it: 8000 trees in North Carohim? are reckoned to keep a man in constant employ for four years, and wiil yield about 100 or 110 barrels of turpentine : distilled for oil of turpentine in large quantity.

Briancon turpentine. Terebinthina Brianconica. Obtained from the pinus cembro. All the turpentines are stimulant and diuretic; dose $Э j$ to 5 sj in pills, or made into an emulsion with yelk of egg or alnonds; used exterially. they are vulncrary and suppurative.

Brimplinge. Viscus aucupim. 'ithe hest is obtainad by boiling missletoe berries in water (ill they break, then pounding them in a mortar, and washing away the branny refuse with fresh water; but it is ustually made from the bark of holly stripped in June or July, and boiled in water for sis
$n$ eight hours, until it becomes tender: the water being then separated carefully from the bark, it is laid in layers with ern, and left to ferment for two or three weeks, until it goes nto a kind of mucilage, which is then to be pounded in a nortar into a mass; this mass is well rubbed in the hands tr running water, till all the refuse is worked out, and the irdlime then put into an earthen vessel and left for some lays to purge itself: it may also be made from other vegeables; it is discutient externally, and is also used from its dhesive quality to rub over twigs, for the purpose of catchig birds or small animals.

Rackasira balsamum. Is transparent, brownish red, hick drawing in threads, balsamic smell and taste, rather itter when tasted and glues the lips together.

## 7. GROSS OILS.

Oit of sweet almonds. Oleum amygdalarum, Ol. mygrlalce, Ol. amyg. communis. Is usually made from itter almonds for cheapness, or from old Jordan almonds, $y$ heat; the oil from which soon grows rank, while that om fresh Barbary almonds, drawn cold, will keep good for ame time. The almonds are either blanched by dipping in oiiing water, or by soaking for some hours in cold water, so ; to part with their skin easily: the blanched almonds are ien pounded or ground to a paste, which is put into canass bags, and pressed between iron plates in a screw press, - by means of a wedge: 1 cwt . of bitter almonds unblanch 1 produces 46 Hb of oil ; the cake pays for pressing.
Orl of ben. Oleum de ben. From the nuts of the ilandia moringa; scentless, colourless, keeps long withit growing rank, used in perfumery to receive and retain e odour of those vegetables that yield but little essential I, and thus forms the basis of the best sort of huiles anques.
Nut ols. Oleum nucum coryli. From the kernel of e hazel nut, very fine; substituted for oil of ben: as it ill keep better than that of almonds, it has been proposed be substituted for that oil in the college lists, being nearly ual to it; is drank with tea in China, probably in lieu of eam; used by painters as a superior vehicle for their com ars,

Hemp orl. Oleum cannabis. From hemp seed; good for frying in, used by the painters as a drying oil.

Beech mast on.. Oleum fugi. Very clear, keeps well, and is a very good salad oil, is used in Silesia in licu of butter.

Walnut orl. Ol. nucum juglandis. Makes good plaisters, will not keep; used by painters, is very drying: they yield about half their weight of oil.

Oil of bays. Ol. laurinim verum, Ol. fixum luuri nobilis. From bayberries, by pounding them into a mass, boiling it in water for some hours, and when the water is cold, skimming off the oil, which is thick like butter, and green.

Cold drawn linseed oll. Ol. lini sine igne, Ol. lini usitatissimi. Viscous, bitter ; makes but a soft soap; used in lamps, but chiefly in painting, is very drying, dissolves 1-4th of litharge, and forms with it a kind of transparent varnish.

Oil of mace in jars. Oleum macis in ollis. Obtained from nutmegs by the press; buttery, having the smell and colour of mace, but grows paler by age: 2tt nutmegs in Europe yielded six oz. of this oil.

Oil of mace in cakes. Oleum macis in massis. Is cut out of the above jars when the oil is discoloured and grown solid by age.

True oil of mace by expression. Olcum macis cipressum verum. Red, remains always liquid or soft, has a strong smell of mace, subacid taste, imported in jars or bottles, the lower part being rather thicker than the top: 1th and a half of mace yielded in Europe, $\overline{3}$ jifs of oil.

Olive oil, Salad oif: Oleum, Ol. olivarum, Ol. olier. Ol. fixum fructîs Olivex europece. The most agrecable of the oils when fresh; demulcent, emollient, gently laxative, also used as an emetic with warm water, dose $\bar{J} j$, , $r$ coch. maj. j ; externally, when warm, to the bites of venomons serpents, and cold to tumours and even dropsies; old ranh oil is best for plaisters; but fresh oil makes the best hard soap: when dear, oil of sweet almonds or oil of poppy seed, is substituted for it in the shops.

Palm oll, Mackaw fat. Olcum palma, Ol. palmere sebaceum, Ol. fixum mucum cocos butyracee. I ellow, butyraceous, sweet seented, used for food, and in emulsions as a
demulcent; externally it is peculiarly emollient, and well adapted for ointments.

Oil of stone-pine krrnel.s. Ol. nucis pini. Grows rank very soon : 16 Ht of kernels yield 5 th of oil.

Oil of poppy seeds, Poppy oil. Ol. papaveris. Used as a salad oil; is not narcotic, as has been supposed; keeps well, is drying, does not burn well, and smokes very much, makes a soft soap, but very good plaisters.

Rare oil. Ol. rapce, Ol. sinapeos. Is made from rape seed, mustard seed, and turnip seed: dries slowly, makes but a softish soap, fit for ointments, but does not make good plaisters : the mucilage it contains may be got rid of in great measure, by adding half an oz. of oil of vitriol to two pints of the oil.

Castor ois. Ol. de herven, Ol. kervinum, Oleum palnce liquidum, Ol. ricini. Commonly distinguished into the foreign oil, imported cither from the West Indies, where it is obtained by decoction with water: 101t of seeds yield 11tb of oil. 9. Or from the East Indies, where it is obtained by grinding in a mortar, with a hole in the side for the supernatant oil to run off, being in common use there for lamp oil. 3. That made at home by the press, which is the best, especially some that is prepared from cold blanched seeds, with the eye taken out. Some chemists are said to take out the colour from the foreign oils, by certain additions, and sell them for English, or as it is called, cold drawn castor oil. The virosity communicated to the oil by the eyes of the seeds, may be got rid of by washing the oil with boiling water, but it is seldom done in this country. It is soluble in warm spirit of wine, according to Rose, and its adulteration may thus be discovered if thought necessary; but as all the fat oils have nearly similar qualities, the taste is sufficient for practical purposes: purgative, in doses of ${ }_{5}$ fs to $\overline{3} j f$ s', floated on some distilled water or on wine, or, if it does not usually stay well on the stomach, on some tincture of senna; or made into an emulsion with yelk of egg, and a little distilled water, with gtt. xx of lavender drops, and a teaspoonful of simple syrop: it may also be used in clysters: is particularly uscful where a stimulant would be hurfful, as it operates puickly withont disturbing the systen : externally in swellngs, pains. Contrary to most medicines, on frequent repeition a less dose is sufficient.

## 154

 SIMPLE SUBSTANCES.-7. Gross Oils.Oin. of comanon physic nut. Ol. cicinum, Ol.jatropha cancudis. Used as castor oil for a purge.

Ol. Sinaplios, per expressionem validiorem. Obtained from mustard seed, after the common mild oil has been procured; is acrid, and recommended by Dr. Rutty in theumatism.

Gingelly ofl. Ol. sesami verum. From the seeds of the sesamun orientale; used for food, and in painting.

Oif of seshaum. Ol. sesumi communc. From the secds of gold of pleasure, myagrum sativum; used for burning in lamps and in ointments, \&c.

Butter of cacao. Ol. cacao. Obtained from the kernels of the chocolate nut; that by expression is liquid, but by boiling is concrete, and keeps well; used for food: yields about 1-8th of oil by expression, or 1-4 th by boiling.

American green wax. Cera ziridis. Obtained from the candleberry myrtle by boiling the berries in water, they yield 1-4th of their weight of wax; used to make sweetscented candles, and also for the darker ointments and plaisters, instead of bees wax.

Vegetablef tallow. Obtained from the seeds of the tallow tree, croton sebiferum, and from the Bencoolen nuts of the c. moluccanum, is concrete, and used for candles.

Guy-anadou. A concrete oil, like tallow, extracted from the fruits of the virola scbifera; used to make odoriferous candles.

Oil of faba pichumm. White, butter-like, smelling like sassafras, becomes yellowish and tallowy by age: 11t yields about one oz. and half of oil.

Oil of starl anise seidd, by expression. Ol. anisi stellati. Is of an agreeable fragrancy.

## 8. ANIMAL OILS.

Goose grease. Adeps anseris. From roasted geese: esteemed highly emollient, and used in clysters.

Time fat of eels. Adeps angiailla'. Collected from eels while roasting; used to preserve steel from rusting.

Capons crease. Adcps gallince caponis. Emollient, more so than hog's lard, but less than goose grease.

Human fat. Adeps hominis. The most emollient of any kind of fat; used in the Russian hospitals.

Hares fat. Adeps leporis. When old, used as a suppurative.

Prikes fat. Axungia lucii. Used to anoint the soles of the feet and chests of children in coughs and colds.

Badgers fat. Adeps melis. More solid than hog's lard, and more efficacious.

Vipers fat. Pinguedo ripera, Axungia viperina. Used in eye ointments, and to anoint the back in consumptions.

Bears grease. Pingucdo ursi. Emollient, discutient, and much used to make the hair grow.

Hogs lard. Aeleps suilla precparata, A proparata. Obtained, like the rest of the animal fats, from the raw lard, by chopping it fine, or rather rolling it out to break the cells in which the fat is lodged, and then melting the fat in a water bath, or other gentle heat, and straining it while warm : some boil them in water, but the fats thus obtained are apt to grow rank much sooner than when melted by themselves; emollient in ointments and poultices.

Mutton suet rendered bown. Sevum ovillum curatum, Sevum praparatum.

Beef suet rendeted down. Sevum bovinum curatum, IS. vaccinum curatum. Enumerated separately in the old lists of the materia medica of the London lharmaco preís, until 1745. S. preparatum.

Goats suet. Sevum hircinum.
Stags marrow. Medulla cercina.
Beisf mamon. Medulla bovina. Are all emollient.
Deers suet. Sevum cervinum. Used by the gilders: a small quantity is put by them into their gold size.

Yelk of wool. OĖsypus. Obtaincd by washing raw wool in warm water.

Nelts foot oll, Nerve oll, Trotter oll. Oicum nervinum. Obtained by boiling neat's fect, tripe, duc. in water: a coarse animal cil, very emollient, much used to wften leather, and keep it in that state.

Spemaceri. Cetaceum. Obtained from train oil by, filtration or long standing; pectoral internally; 5 fs to $3 j$ fs with sugar, or made into an emulsion, emollient externally.

Train oun. Oleum cetaceun. A coarse oil, of an ill mell ; used as food by the northern nations, but only for amp oil in the south; distincuished by the shops into whale iil, seal oil, liver oil, refined spermaceti oil: many methods
have been tried to get rid of its smell : the spermaceti contained in it is separated by repeated filtration, or by long standing, and the oil itself is purified by stirring it with limewater, or a weak ley of potash.

Bees wax. Cera flata. Deposited by bees in their hives, forming the partitions of the cells in which they store their honey: obtained from the honey-comb, by melting it ; demulcent, used in diarrhoea and dysentery, made into an emulsion by first melting it with olive oil, and triturating it with the yelk of an egg, adding by degrees some nucilaginous liquid, Эj, ter quaterve in dic. Adulterated with tallow coloured with turmeric: the fracture and taste are the marks by which druggists judge of it.

Cera flava purificata. Common bees wax is melted, scummed, and let to settle; the upper part is then only used.

Virgins wax. Cera alba. Obtained from bees wax, by expossing it in thin flakes to the action of the sun, wind, and rain; frequently changing the surface thus exposed, by remelting it and reducing it again to thin flakes; used in making candles, and in white ointments, for the sake of its colour: it is kept in the shops, either in round cakes, or in blocks, which latter is rather cheaper.

Bee bread. Propolis. Collected or formed by bees, for the purpose of covering the bottom of the hive, and every thing in their way which is too heavy to be renoved by them; it is a mixture of rosin with wax; fume antiasthmatic.

Fresh butter. Butyrum insulsum. © Obtained from cream by agicating it ; cmollient, used in ointments.

Clarified butter. B. purificatum. Made by melting fresh butter in a gentle heat, letting it settle, and pouring off the clear.

Oil of yeliks of eggs. Oleum e vitellis ocorum. Obtained by boiling eggs, so that the yelks may be hard, separating the whites, roasting the yelks, first broken in two or three pieces each, in a frying pan orer the fire till the oil begins to exude out of them, and then pressing them with great force; very emollient; fifty eggs yield about five oz. of oil. Old eggrs yield the greatest quantity. Morelot advises to dilute the raw yelks with a large proportion of water, and to add spirit of wine in order to scparate the albumen, after which, the oil will rise up to the top by standing some time, and thus may be separated by a fumel.

Axberghis. Ambra grisea. Found in the sea and in the intestines of the spermaceti whale, Plyseter macrocephalus, mixed with the beaks of the cuttle fish; appears to be the excrement of the animal when in a morbid state, though some still suppose it to be a fossil substance, oozing out into the sea, where, swimming about, it is sometimes swallowed by that whale ; aphrodisiac, gr. iij- x , triturated with sugar in wine ; principally used in perfumery, when diluted with spirit of wine. Adulterated, or even supplied by mixtures of musk, civet, aloes wood, storax, dried blood, and the like; but these never have the true smell: it is nearly totally soluble in warm spirit- of wine, although the paleness of the solution, and the apparent bulk of the residue, would induce an unwary person to suppose it was not at all dissolved.

Musk. Moschus in granis. Secreted by the mosclus moschiferus, or musk deer ; stimulant, autispasmodio, gr. ij - Эfs, horis tertiis vel quaternis, in a bolus. Adulterated with dried blood, and supplied by a substance obtained by mixing oil of amber with aquafortis. The true musk is much used in perfumery, having the strongest smell of any natural substance hitherto known, and, when used in a very small quantity, augmenting the smell of other substances without imparting its own.

Castor. Castoreum. Of which there are two sorts, Russian and New England; secreted by the beaver, in bags near the rectum: the best is orange brown, bitter, acrid, with a peculiar strong and unpleasant smell ; antispasmodic, perliaps emmenagogue, gr. x to $Э \mathrm{j}$, in a bolus.

Civer. Zibethum. Secreted by the civet cat, in follicles near the anus. Like musk, its smcll is unpleasant unless diluted. Adulterated with oxgall, storax, and honey. Antispasmodic, but scarcely ever used alone internally; used in perfumery to augment the smell of other odoriferous substances.

Raw sirk. Sericum. Secreted by the phalena bombyx, for its security while in the state of a pupa or grub; cordial, restorative, ${ }^{3} j$ in powder.

Cobweb. Tela arancarum. Secreted by spiders to form their nets; externally styptic, internally febrifuge; used in quartan agues, dose gr. x : the cobwebs of the different kinds of spiders appear, however, to differ in their effects.

Bezoar stone. Lapis bezoar. Of this there are several
kinds, but all sold under the same name. 1. From the stomach of the cercopithecus nemexns, which it throws up when it is beaten. 2. From the gall bladder of the porcupine. 3. From the several Asiatic gazelles, or antelopers, which is esteemed the best. 4. From the groat. 5. From the hos grumniens, or Tartar cattle. Divided, by the slops, into) oriental and occidental : that of the antelope being the oriental: formerly esteemed as the greatest known cordial, and much used, notwithstanding its dearness.

Cheese. Caseus. Separated from milk by the addition of rennet and subsequent straining; for the purpose of keeping, it is generally salted and pressed. There are many varieties of it arising from the subtraction or addition of cream to the milk, the separation of the whey with or without compression, the salting of the curd, the breaking of the curd before pressure, the making with pressure or without, the colouring with saffron or arnotto, the keeping, \&c..

## 9. MINERAL OLLS.

Oil of petre, Rock oil. Petroleum, Oleum petice. Red or brown.

Nafhtha. Oleum petrce album. Pale yellow, fine, thin, very inflammable.

Barbadoes tar. Pisseleon Indicum, Petroleum Barbadense, Bitumen Petroleum. Dark, very thick, semi-liquid.

Asphalitum. Pitch black, hard, strong seented; used in varnishes.

Amber. Succimum, Carabe. The whitest is preferred for medical use; balsamic, in powder, $\mathrm{Y}_{\mathrm{j}}$ to $\bar{\jmath} \mathrm{j}$, in gonorrhœea and the whites: the transparent hinds are used in jeirellcry, and the coarser are distilled for oil of amber.

Cologne eartir, Umber. Terra Coloniensis. Black, or blackish brown, mixed with brownish red, fine grained, earthy, smooth to the touch, becomes polished by scraping, very light, burns with a disagreeable smell : found near Colomne; used in painting, both in water colours or in nil: used also in Molland, to render suuff fine and smooth: very different from the brown ochre, which is also called Unber, and is not combustible.

Oif of amber. Oleum succini. Distilled from coarse pieces of amber, which are not fit for jewellery, and rectified hy mother distillation in a snall retort; stimulant, anti-
spasmodic; externally discutient, rubefacient, used in rheumatism, hooping congh, and paralytic limbs.

Oleum petrolei Barbudensis. Distilled from Barbadoes tar, by the retort, in a sand heat. Blue when viewed with the back to the light, and orange when placed between the eye and the light.

Coal tar. Distilled from fossil coals; used as a coarse cheap varnish, and, when rectified by a fresh distillation with water, sold for oil of amber.

Ampifichl ausir. Moschus factitius. Rectified oil of amber one part, nitric acid four parts ; digest, a black matter is deposited, to be well washed in water; smell similar to that of musk or ambergris, and may be used for them in medicine.

## 10. VOLATILE OILS.

Distilled oll of worawood. Oleutm essentiale absinthii. From the herb; stomachic: 25 tb of green wormwood yielded from 6 to 10 drachins of oil; 47 tb of dry yielded an oz. and 18th only ${ }^{\text {juj }} \mathrm{j}$ fs.

Oil of anise seeds. Oleum anisi, Ol. zolatile pimpinello anisi. From the seeds; is congealed, except in warm weather ; carminative; poisonous to pigeons, if rubbed on their bill or head: 1tt yielded 3 ij .

Oil of star anise seeds. Ol. anisi stelluti. From the capsules; liquid, very fragrant, has the scent of anise.

Distilled oil, of camonile. Ol. essentiale chamermeli, Ol. anthemidis. From the flowers; stomachic: 11 t yielded a drachm, 8oib yielded 5 xiij, and at another time 5 xviij : it is of a fine blue, even if distilled in glass vessels.

Oleum stillatitiun radicis carlince. From the root of he carline thistle; is fragrant, sinks in water.

Cajeput oil. Ol. cajuputi, Ol. volatile melatencer leuadendri. From the leaves; imported from the East Indies, rencrally in large copper flasks stimulant, antispasmodic, ft. iij- $r$, on sugar, and externally in rheumatism.

Ois of carul. Ol. curli. From the seeds; earminaive; 23 yiclded more than 1 oz., and 1 cwt. only 83 oz .

Distimaid orl of cacao. From the chocolate nut; hick, reddish, rather buttery.

Essence of neroli. Ol. florum aurantiorum. From he flowers of the orange tree: 6 cwt . of fowers yield only oz . of oil.
2. From orange peel; very fragrant.
3. From unripe oranges ; gold colour.

Essence of lemons. Essentia limonum, Olcum essentiale epidermidis fructus limonis, Ol. volatile citri Medica corticis fructus. From the fresh peels of lemons; limpid, watery, fragrant.

Essence of Bengamotte. Ol. limonis Bergamotto. From the peels of the Bergamott lemon ; very fragrant.

Essence de cedrat. Essentia citri. Erom the flowers of the citron tree; amber coloured, slightly fragrant: 601 b yield 1 oz .
2. From the yellow part of citron peel; colourless, very thin, and fragrant.
3. The second oil obtained by the distillation of the yellow part of citron peel; greenish: 100 citrons yield 1 oz . of the white essence, and half an oz. of this.
4. From the yellow part of citron peel by expression between two glass plates.
5. From citron peel by expression; very fragrant, but does not keep so well as the distilled oil.
6. From the cake left on squeezing citron peel, by distillation with water; thick.
7. Common essence of ccdrat. From the freces left in the casks of citron juice ; clear, fragrant, grecnish : 501t of fæces yield, by distillation, 31 tb of essence.

Oil of cloves. Oleum caryophallorum aromaticorum, Ol. caryophylli. From that spice, is very heavy, acrimonious; supposed to contain some part of the resinous part of the clove: 1th cloves vielded from ${ }_{3} j f_{s}$ to $\overline{3} \mathrm{ij} \mathrm{fs}_{\mathrm{s}}$ : 7 tb and a half yiclded 1 th of oil.
2. Expressed from the cloves when ripe.
3. Muller, by digesting ${ }^{3}$ fs of cloves in ether, and then mixing it with water, obtained Эvij of oil, greenish yellow, swimming upon water.

Oil of cloves is imported from the Spice islands, is stimulant, and added to purgative pills to prevent griping; externally applied to aching teeth.

Oil. of cinnaion. Oleum cinnamomi. From the fresh bark: imperted from Ceylon.

Oil of cassia, Common oll of cinnamon. Ol. cassict lignece. From the bark of inferior cinnamon, imported under the name of cassia: Itb yields from 3 j to sjf : stimulant, stomachic.

De Guignes says the cinnamon of Cochin China is so full of essential oil, that it may be pressed out by the fingers.

Olevar foeniculi. From sweet fennel seeds; carminative: bushel yielded 18 oz.
Oleum juniperi, ol. baccarum juniperi communis. From he berries; diuretic: 1 Ht yielded 3 iij , and 48 tb yielded oz.
Essence of lavender, English oil of lavender. Denm lavandula, Oleum lavandulda spicce. From the owers of narrow-leaved lavender.
Foreign oil of lavender, True oil of spike. Oleum nica verum. From the flowers and seeds of broad-leaved ivender, and more commonly those of French lavender, cechas, with a quick fire: sweet scented, but the oil of the arrow-leaved lavender, or English oil, is far the finest.
True Riga balsam, Baume de Carpathes. Balmum Libani. From the shoots of the Asphernousli pine, nus cembra, previously bruised and macerated for a nionth water ; pellucid, very liquid, whitish, smell and taste of 1 of juniper; vulnerary, diuretic.
Oil of peppermint. Oleum menthce piperitee, Oleum irbce menthice piperit. florescentis. From the dried plant: b of the fresh herb yielded ziij; in general it requires ctification to render it bright and fine ; stimulant, carmitive.
Oil of mint. Oleum menthce viridis, Ol. menthce saWe. From the dried plant: 6 tt of fresh leaves yielded ifs, and 4 tb dried yielded 1 oz , and a half; stimulant, carnative, antispasmodic.
Distilleed oil of mace. Olerm macis stillatitium. om that spice : liquid, pale citron, smelling of the mace.
Distilled oil of nutyegs. Oleum nucis moschate llatitium. From that spice : liquid, pale yellow; a selbaus insipid matter swims upon the water in the still.
Oil of thyme. Oleum origani. From the plant: a l. fresh yielded 5 oz. and half, $3 \frac{1}{2} \mathrm{ib}$ dried yielded $3 j \mathrm{fs}$; nulant, caustic, used in tooth-ache applied to the tooth, $d$ by the ferriers.
Oil of piaiento. Oleum pimenta, Oleum fructîs myrti nentu. From allspice; stimulant: 1 oz. yielded gtt. xxx. Orevar pimpinelloc. From the roots of pimpernell; blue. Oil of pennyroyal. Oleum pulegziz. From the herbs en in flower: 131b yielded $3_{\mathrm{M}}^{\mathrm{vj}}$; emmenagogue.

Oil of hhonium. Oleum c ligno rhodii. From the true lignum rhodium; genista C'anariensis? 801b yielded six ; and in another parcel of very resinous old wood, 807t yielded $2 \mathrm{oz} . ;$ light, yellowish, but by keeping grows red.
2. From the root of rosewort, rhodiola rosea; yellowish, having the smell and taste of that from the true lignum rhodium: Itt yielded 3 j .

Butter of roses. Adeps rosarum. From the flowers of damask roses, white, solid, separating slowly from the rose water: having but little scent of its own, it is used to dilute the scent of inusk, civet, and ambergrise: 1 cwt. of roses yielded from half an oz. to an oz.

Attar of roses. Imported from the East and the Barbary coast, where it is obtained from the evergreen rose and the musk rose; the newly distilled rose water being exposed to the cool night air.

Oil of rosemaiiy. Olcum rosmarini, Olcum summitatum fiorescentium rorismarini officinalis. From the flowering tops; sweet scented: 1 cwt . yielded 8 oz ; 1 1t of dry leaves yielded from 5 j to $\mathfrak{3 i i j}$; ro\#t of fresh leaves yielded 5 oz . It affords a good specimen of the sesquipedalian names of the Edinburgh college.
$\therefore$ Distilled oil of rue. Oleum rutoe. From the dried plant ; carminative, antispasmodic: 101b of leaves yielded 3 ij to 3 Biij ; 4 it in flower yielded $5 \mathrm{j} ; 60 \mathrm{Hb}$ yielded 2 oz . and a half; 7215 , with the seeds, yielded 3 oz .

Orl of anvine. Oleum sabince. From the dried plant: stimulant, powerfully emmenagogue; externally rubefacient.

Oil of sassafras. Olerm sassafiàs, Ol. rad. Tauri sassufras. From the root of sassafras: 241 b yielded 9 oz . 301 t yielded 7 oz . 5 j ; and 61 b vielded 2 oz .

OBS. All the above oils, unless otherwise expressed, are obtained by distillation, with a sufficient quantity of water to prevent the articles from adhering to the still and the oil and water acquiring a burnt taste; they are all stimulant, in doses of giti. ij to $x$ upon sugrar.

Oif of turpentine, Tulps, Cohmon oil of spike. Oleum terebinthina, Ol. spicec vulgare. Distilled from conimon turpentine, in Europe with the addition of about sis times as much water ; but in America, where the operation is carried on upon a very large scale, no water is added, and its accidental presence is cercil dreaded, lest it should produce a dissuption of the stilliag apparatus.

## SIMPLE SUBSTANCES.-10. Volatile Oils. 163

Spirit of turpentine, Rectified oil of turpectines. Oleum terebinthince athereum, Ol. volatile pini purissimum. From oil of turpentine, by a fresh distillation with a gentle heat, either with or without water, by which, however, it is very little improved; vermifuge, ${ }^{\mathrm{J} j}$ to Zjfs .

Krumholz oil. Ol. templinum. By distillation from Hungarian balsam: distinguished from oil of turpentine, which is commonly sold for it, by its golden colour, agreeable odour, and acrid oiliness of taste.

Balsair of turpentine, Dutch drops. Balsamum terebinthince. Obtained by distilling oil of turpentine. in a glass retort, till a red balsam is left.
2. By distilling rosin, and separating the oils as they come over; first a white oil, then yellow, lastly a thick red oil, which is the balsam; stimulant, diuretic.

Tar. Cedria, Pix liquida. From old trees of the Scotch fir, by distillation in a coarse manner: the heat produced by the combustion of one part of the pile being managed so as to carry on the distillation of the other part. The coarsest of these oils. Same qualities as the other terebinthaceous oils.

Jeran? Oleum pini, Ol. tceclar. Obtained by distilling ar: highly valued by painters, varnishers, \&c. on account of its drying qualities; it soon thickens of itself, almost to I balsam : the acid spirit that comes over with it, is useful or many purposes where an acid is wanted.

Orl of bricks. Ol. lateritium, From olive oil, mixed vith brick-dust or sand, and distilled; very resolvent, useul in palsy and gout.

Butter of wax. Oleum cerce. From wax by distillaion ; emollient.

Oll of box. Ol. buai. From box wood, by distillaion, without addition ; resolvent.

Dippel's oil, Animal ole, Rectified oit, of hartsa :orn. Ol. Dippelii, Ol. animale, Ol: cornu cervi rectificam . From hartshern, distilled without addition, rectifing the oil, either by a slow distillation, in a retort see. nio igger than is necessary, and saving only the first portion lat comes over, or with water, in a common still: very fine nd thin, and must be kept in an opake vessel, or in a rawer or dark place, as it is quickly discoloured by light; ntispasmodic, anodyne, diaphoretic, gtt. $x$-xxx in water; iternally stimulant.

Oir of wins. Ol. vini, Ol. cethereum. Is formed by either mixing equal measures of spirit of wine and oil of vitriol, and distilling by a gentle heat, taking care that the black scum does not pass over into the receiver; separating the oily portion that passes over, adding soap ley to it, to correct the acidity, then distilling it by a gentle heat, ether passes over, and the ol. vini P. L. 1788, remains floating on the watery liquor in the retort.
2. By continuing the distillation of the ingredients for ether, with a less degree of heat, after the ether is come over, until a black froth begins to rise, then removing the retort from the fire, adding sufficient water to the liquor in the retort; that the oil may float on the surface, separating this oil, and adding lime water, q. s. to neutralize the adherent acid, on which the ol. cethereum P. L. 1809, will separate itself: antispasmodic.

Ether. Ether sulphuricus, Ether rectificatus, Naphtha vini: Obtained by mixing gradually equal weights of spirit of wine and oil of vitriol, and as soon as the mixture is completed, placing the retort in a sand bath, previously heated to 200 deg. so that the liquor may boil as soon as possible, continuing the distillation until a heavier liquor begins to appear under the ether in the receiver, adding to every 14 oz . meas. of the ether thus obtained, half an oz. of pure potash, dissolved in 2 oz. of distilled water, and distilling, by a very gentle heat, 12 oz . meas. of rectified ether. If half the former quantity of spirit of wine is added to the residue left in the retort in the first distillation, more ether may be obtained, which may be rectified as the first portion: stimulant, antispasmodic, git. xx- jj f s, in water or wine; externally refrigerant, used in head-ach, and in burns, and dropped into the ear in ear-ach.

Nitrous ether. AEther nitrosus. Obtained by putting 5 xxiv of nitre into a retort, placed in a pan of cold water, and pouring upon it, by degrees, a mixture of $\mathfrak{z}$ xij of oil of vitriol with 5xix by measure of spirit of wine, which had been made gradually and grown cold, and letting the vapour, the evolution of which must be regulated with great caution by the addition of warm or cold water to that in the pan, pass through a pint of spirit of wine: to the ethereal liquor thus obtained, add q. s. of dried salt of tartar, about 5 j is generally sufficient, to neutralize the acid, upon which the ether will in a short time separate and swim on the surface:

## SIMPLE SUBSTANCES.-10. Volatile Oils. 165

if it be required very pure, it may be rectified to one half, by distillation in a water bath, at about 140 deg. Fahir.: scarcely ever used, probably stimulant, \&c. as common ether.

Camphire. Camphora. Obtained from the roots and shoots of the laurus camphora, by distillation with water, and distinguished in trade by the place from which it is imported into East India and China camphor' : this crude camphire is refined by sublimation with one sixteenth its weight of lime, in a very gentle heat. In Sumatra it is obtained by merely splitting a large tree not belonging to the genus laurus, being the dryobalanus camphora of Forster ; the heart of this tree containing camphire mixed with essential oil in lumps the thickness of a man's arm, 12 or 14 inches apart: a middling tree contains 117b; a large one, double that quantity: it is stimulant, narcotic, and diaphoretic, of great use in typhus, gr. v to $Э j$, in pills or a bolus; small doses frequently repeated being most stimulant, and a full dose at once most sedative; too large a dose occasions vomiting and convulsions, to be counteracted by the exhibition of opium: it may also be given suspended in liquids, by means of mucilage, yelk of egg, or almonds. Camphire is put into drawers or boxes to keep insects from them, and is used in fireworks: combined with drastic purgatives, it moderates their acrimony, and it augments the efficacy of the Peruyian bark, whether employed to cure fever or gangrenes.

Camphire from essential oils. Obtained from the pils of the labiate plants, by a careful distillation without adlition, of one third of the oil; the residuum will be found to ontain crystals of camphire, on separating which, and relistilling the remaining oil two or three times, the whole of he camphire may be obtained: oil of rosemary or of sweet narjoram yields about 1 oz . of camphire from 10 of the oil; of sage 1 oz . from 8 ; and of lavender 1 oz . from 4 , or even ess of oil: it seems to differ from that of the camphire of he laurel, as that from oil of thyme is in cubical crystals, loes not form a liquid solution either with nitric or sulphuic acid, and is precipitated from nitric acid in a glutinous nass: that from oil of marjoram is not volatile, and although $t$ takes fire it soon goes out. This resin, like the others. rom essential oils, may be obtained in a larger proportion if he oil is kept in slightly stopped bottles in a cool place,

Artificial camphire. Obtained from oil of turpen. ine, by passing the muriatic acid gas disengaged from
an equal weight of common salt by means of oil of vitriol through it, when about one half of the oil will be changed into camphire, which however differs from the common, in that it is not dissolved by aquafortis, and when dissolved by strong spirit of nitre, it is not separated by the addition of water.

Birci orl. Oleum betulce. Ohtained by distilling twenty parts of birch bark, and one of ledum palustre, crammed in layers into an earthen pot, with a handful of tripoli between each layer; the mouth of the pot is closed with a perforated oak plug, and being inverted, it is luted to the mouth of another pot sunk in the ground: the upper pot being then surrounded with fire, a brown empyreumatic oil distils per descensuin into the lower jar: an eight gallon pot, properly filled, yields about 2 Bb or 2 tb and a half of oil. In Siberia it is prepared without the ledum. This oil is liquid when fresh, but grows thick in time; used in Russia for currying leather, to which it gives a very peculiar smell, much disliked by insects.

## 11. ARDENT SPIRITS.

The various degree of strength of these is tectmically ditnominated by numbers, referring to an arbitrary strength, called, in the English lawos, proof spirit, a -gallon of zethich zoeighs 7tb 11 oz. 3 drachms av. When spirit is said to be 1 to 3 over proof, it is meant that 1 geall. of water added to 3 gall. of the spirit, will reduce it to proof'; on the contrary, 1 in 3 under proof, signifies that in 3 gall. of that spirit there is contained. 1 gall. of zvater, and the remaining 2 gall. are proof spirit. By the same authority a gallon of water weighls Stb 7 oz. 5 drachms, av.; so that the specific gravity of proof spirit is to that of water as 910 to 1000.
The spirit distilled from the zuash or vinous liquor, until a glass of $i t$, flung upon the still head, does not take fire by a candie or lighted paper, is called low wines, and this being again distilled, is called spirit.
Brandy, Eau de vie. Aqua vita, Spiritus vini Gallicus. From wine; the best is obtained from the wines of the middle of France; those of Languedoc and Spain yield about one quarter of brandy, Buroundy less than an eighth, Bourdeaux about a fifth. New wine yields more than old. An inferior sort is obtained from wines which hare turned

## SIMPLE SUBSTANCES.-11. Ardent Spirits. 167

sour, and from the lees left in the casks on racking the wine from one vessel to another for the sake of fining it; and a still worse sort from the cake and refuse of the wine-press, fermented for this purpose with the addition of water: when first distilled, it is white like water, but by keeping in oak casks it acquires a deep colour ; as it improves by keeping, extract of oak is frequently dissolved in it to give a false appearance of age.

Malt spirit is made by mixing 60 quarters of barley grist ground low, and 20 quarters of coarse ground pale malt, with 250 barrels of water, at about 170 deg. Fahr. taking out 30 barrels of the wort, and adding to this 10 store of fresh porter yeast, and when the remaining wort is cooled down to 55 deg. adding 10 quarters more malt, previously mixed with 30 barrels of warm water, stirring the whole well together, and putting it to ferment along with. the reserved yeasted wort: this wash will be found to weigh by the saccharometer $28-39$ tb per barrel, more than water. In the course of 12 or 14 days, the yeast head will fall quite flat, and the wash will have a vinous smell and taste, and not weigh more than 2-4ib per barrel, more than water. Some now add $201 t$ of commion salt, and 3011 of flour, and in three or four days put it into the still, previously stirring it well together. It is estimated that every 6 gall. of this wash will produce 1 gall. of spirit at 1 to 10 over proof, or about 18 gall. of spirit from each quarter of grain.

In Holland they first mix 10 quarters of rye meal with a small quantity of cold water, and then add as much boiling water as is necessary to make a thin mash, and set it to ferment with a small quantity of yeast; about the third day they add - 3 quarters of malt meal previously mixed with warm water, and as much yeast as at first, stirring the whole well together: this wash weighs only 181t per barrel, more than water, and sometimes less: their stills are from 300 to 500 gallons each, and they draw in the first distillation three cans of phlegm after the runnings cease to burn on the still head, and five cans when distilling lore zeines.

Rum is obtained from the refuse of the raw sugar mantifactories: the usual proportion being equal quantities of the skimmings of the sugar pans, of lees or returns as they are commonly called, and of water; and to 100 gallons of this wash are added 10 gallons of melasses; this affords from 10
to 17 gallons of proof rum, and twice as much low wines; it is sometimes rectified to a strength approaching to spirit of wine, and is then called double distilled rum.

Sugar spirit is obtained from the washings, skimmings, and other waste of the sugar boilers; it is a very pure spirit, free from the peculiar flavour of rum, and is used to mix with brandy.

Cane spimit is obtained from the juice of the sugar cane, and is the purest kind of rum.

Melasses spirit, Rumi, is obtained from melasses, by mixing 2 or 3 gall. of water with one gall. of melasses, and to every 200 gall. of this mixture adding a gall. of yeast; once or twice a day the head as it rises is stirred in, and in three or four days, 2 gall. more of water is added to each gall. of melasses originally used, and the same quantity of yeast as at first: four, five, or six days after this, there is added a third portion of yeast, as before, and about 1 oz . of jalap root powdered (or in winter $1 \frac{1}{2} \mathrm{oz}$.), on which the fermentation proceeds with great violence, and in three or four days, the wash is fit for the still : 100 gallons of this wash is computed to yield 22 gall. of spirit 1 to 10 over proof.

Raisin spirit is obtained from raisins fermented with-a proper quantity of water, and distilled with a quick fire, in order to bring over as much as possible of the flavour, this spirit being used to mix with malt spirit: 10 gall. is sufficient to give a vinous flavour to 1600 of conmon malt spirit.

Cyder spmit is obtained from cyder.
Batavia arrack is obtained from the juice of the palm tree.

China arrack is obtained from rough rice, or from millet.

Potatoe spirit, which turns blue when mixed with water.

Skirret spirit.
Carrot spirit. Axe obtained in the north of Euroje from those roots.

Whiskey, from oats, carelessly distilled and suffered to burn to; the empyreumatic flavour being by habit rendered agreeable.

Peact brandy. From that fruit; much drank in some parts of the United States.

## SIMPLE SUBSTANCES.-11. Ardent Spirits. 169

Bird cmerry spirit. Twelve gallons of the berries will yield 9 pints of spirit.

Juniper berry splurt. A tun measure of berries will vield 6 or 8 gallons of spirit.

Spirit from fants. In rectifying spirits, and in disilling compound spirits, after the first strong portion has een drawn off, the weaker, and in some cases discoloured, pirit that arises is saved, as long as it will take fire when hrown on the still head by a candle or lighted paper, unler the name of faints, and when a sufficient quantity has peen collected it is rectified : the spirit thus obtained is prinipally used to make aniseed cordial, as the strong flavour of he aniseed will overpower any other flavour the spirit may lave acquired.

Koumiss is obtained from mare's milk by the Tartars, he separation of the curd and cream being prevented by requent agitation. A similar spirit, but much weaker, has een obtained from cow's milk, by the same manœuvre being tactised.

Kirschenwasser. From common cherries.
Marasquina. From morello cherries.
Spirit of wine. Spiritus vinosus rectificatus, $S p$, ectificatus, Alcohol, Ph. Ed. All spirit 1 to 20 over proof thus deemed in the English laws: the London college and lat of Edinburgh order it for medical use to have the spefic gravity of .835 , but the Dublin only .840 .

Varnish makers spirit. Alcohol. Is obtained either $\checkmark$ careful rectification to the highest possible strength, or y distilling spirit of wine from dried pearl ash, or dry muate of lime. The London and Dublin colleges order it for edical use to have the specific gravity of .815 , but for cheical purposes it has been prepared as high as .800 and en . 798.
Proof sprrit. Spiritus vinosus tenuior, Sp. tenuior, lcohol dilutum. Differs from the raw spirits above deribed, although of the same strength, by being always rmed of spirit of wine, diluted with water. The London llege mentions no proportions, but requires the spec. grav.
.930 : the Dublin advises the mixture of four measures spirit with three of water, and the Edinburgh orders ual measures of their alcohol and water, the spec. grav. of hich mixture they quote as .935 . The chemists in London $\geq$ in the habit of making their proof spirit, by taking half

## 170 SIMPLE SUBSTANCES.-11. Ardent Spirits.

spirit of wine and half water, whenever it is required, as they seldom or never keep it in that state.

Tincture of salt of tamtar. Tinctura salis tartari. Melt 6 oz. of salt of tartar in a crucible; powder it while hot, and immediately pour upon the powder a quart of spirit of wine, and digest it for several days.

Trncture of antrmony. Tinctura antimonii. Take crude antimony 1 oz ., salt of tartar and saltpetre, of each 2 oz. and a half: mix and throw them into a red hot crucible; When melted, pour them out into an iron mortar, powder the mass while hot, and before it grows cold, put it into a bottle with q . s. of spirit of wine: this and the preceding are to be considered as alcohol made without distillation, but they receive an alkaline taint, which renders them impure.

All these spirits are stimulant, but more employed as luxuries than medicines; externally used in burns, and when diluted in ophthalmia; employed also in chemistry as a solvent of resinous matters. The rectified spirit is sold under the name of copying liquid, as it tenders paper transparent, and soon evaporating, the paper becomes opake again.

## 12. CARBONACEOUS SUBSTANCES.

Charcoal. Carbo ligni. Varies in its qualities according to the wood from which it is prepared: that of the soft woods, as the willow, alder, \&c. well burned, is best for crayons, for making gumpowder, and for clarifying liquids: that of the harder woods is used for fuel, or for a support for substances exposed to the flame of a blowpipe : the charcoal of the chestnut is employed by the smiths in the south of Europe, on account of its slow consumption when not urged by the blast of the bellows, and of the fire deadening immediately upon the blast being stopped. The charcoal of the holly, if the bark be left on, is believed to render iron hrittle when, worked by a fire made of it. Charcoal powder is used as a tooth-powder, and in poultices to correct fetid ulcers: that of the areca nut, is the most fashionable dentifrice, but is no otherwise preferable to any other soft charcoal.

Franhfort black. Charcoal made of the lees of wine and vine twigs; used to make printer's ink.

Noir d'Espagne. Charcoal made of cork burnt in close yessels'; used as a colour in painting.

## SIMPLE SUBSTANCES.-12. Carbon. Subst.

Burnt sponge. Spongia usta. The spunge being cut pieces, is well beat to separate the sand it contains, and hich makes up the far greater part of its weight, and is en burnt in a close vessel, until it is black and friable; sed in bronchocele and scrophulous complaints; 3 j - 5 iij , an electuary, or in lozenges held under the tongue.
Vegetable ethiops. Pulvis quercûs marince. From icus vesiculosus, or bladder wrack, burned in a close vessel, 11 it is black and friable : in bronchocele, \&c. as the preding.
Ivory black. Ebur ustum. From ivory shavings urned; used as a dentiffice and a paint; rare, bone black cing sold for it.
Bone biack. Ebur ustum vulgare. The residuum left the iron still, after the distillation of bone; is usually id under the name of ivory black, and for the same puroses, but especially for making blacking for shoes, \&cc.
Lanir black. Fiuligo lampadum. Originally made by susending a copper bason over a lamp having a long smoking ick; but now by burning the chips of resinous deals, made om old fir trees, in tents, to the inside of which it adheres. 'he lighter it is the more it is esteemed; used as a paint.
Wood soor. Fuligo ligrni. Collected from chimnies, nder which wood is burnt for fuel : bitter, antispasmodic.
Roasted coffee. The seeds of the coffee shrub roast1 by a gentle fire; used to make an infusion, which being rained, and sugar added to it, is a grateful drink.
English corfee. Wheat, barley, holly berries, acorns, iccory root, seeds of gooseberries and currants left in makg wine, and washed, and even sliced turnips have been jed as substitutes for foreign coffee, and roasted with the Idition of a little butter or oil; but they want the agreele aroma of the foreign : the best substitute is said to be te seeds of the yellow water flag, gladiolus luteus, or iris eudacorus, which is frequently found by the sides of pieces water.
Cacao. 'The roasted husks of the cacao bean, or choolate nut; used to make a poor kind of coffee drink.
Bistre. From wood soot, by pulverisation, decoction ith water, straining the decoction and evaporation, as in aking extracts; an excellent brown water colour, superior - Indian ink for drawings, when they are not intended to $\geq$ tinted with other colours.

## 13. FARINA.

Wheaten floun. Aldor, Farina, Farina tritici. The most nourishing of the flours, as containing a sulstance of an animal nature, called the gluten of flour, and which also causes it to make the best bread, when properly fermented; the mixture of the flour and water being raised either by a portion of old dough, leaven, or the froth of fermenting wort, yeast or barm.

It is generally supposed that an imperfect kind of fermentation analogous to that in the prepraration of wine or beer, takes place in making bread; but ohers deny this, hecause the dough does not rield any ardent spirit on distillation, although the same dough diluted with water and let to ferment for sixteen hours, yielded a portion of spirit; the dough also falls so rapidly, that it cannot be supposed the fermentation is finished; the bakers in summer time, when the yeast has turned acid, are in the habit of adding a little subcarbenate of potash or of ammonid, which raises the dough in a few minutes: mineral waters, containing much carbonic acid, raise the dough without the addition of yeast; and other substances which contain much enveloped air also render the dough spungy, as eggs beaten to a froth or snow water.

Rye flour. Farizat secalis. Used to make either a sweet bread, raising the dough by yeast, or an acid bread by using leaven for that purpose ; this last is cooling, not so nourishing as the former, but more suited to an animal diet.

Barlex fiour. Farina hoodes. When made into bread with yeast, it requires the dough to be baked very soon after it is made, as it grows sour almost immediately: a paste of barley meal and water is also used to take the hair off skins.

Oat midal. Farina auenacea. Used to make gruel, and also thin unleavened cakes; is very resulvent when einployed as a poultice.

Wheat starch. Amylum tritici. From wheat flour, by washing it in sacks in a current of water, which carries off the starch and saccliarine substauce, and leaves the gluten in the sacks: the water being received in troughs is left to ferment, which, decomposing the saccharine substance, renders the starch that is deposited, on standing, very pure and white: this starch is friable, easily pulverised, crimp betwean
fingers, without smell or taste. Wheat in France yielded most 3-4ths its weight of starch, but in Sweden not quite alf its weight. Does this depend upon climate? Demulent, perhaps astringent ; used for glysters in diarrhœea, dyintery, \&c.

Common starch is starch mixed with powder blue, to ve a blueish tinge to the linen, which is stiffened with its lution in boiling water ; this colour being given to it in oposition to the yellow starch, tinged with saffron or turmeric, mmerly employed, but which went out of fashion on the iecution of the famous midwife, Mrs. Cellier, who was anged in a ruff of that colour: used as a cement, but unfit or internal use.

Semolina. Is probably made of wheat starch, granuted while moist, and dried so as to deprive it in part of its lubility in hot water.

Kisel of the Russians. A moist kind of home-made arch; by mixing 1 or 2 Ht of wheat flour, a handful of heat bran, and a little yeast with some water, letting it stand I a warm place for a fortnight, when the supernatant acid quor is poured off, and the starch washed with cold water : rey boil this starch, while still moist, with a little cow's ilk, pour it into moulds to become solid, and eat it with eam, or wine and sugar.

Rye starch. Is Houry, greyish white, scarcely crimp, ad retains the smell and taste of the grain, which yields out half its weight of starch.

Barley starch. Powdery, greyish white, scarcely imp, and retains the smell and taste of the grain, which ields rather more than half its weight of starch.

Oat starch. Floury, greyish, not crimp, with a weak nell and taste of water-gruel: the grain yields half its eight of starch.

Indian arrow root. Fecula maranto. From the root - maranta arundinacea, by pounding or grating it in water, ad letting the fecule settle: when rubbed up smooth with little cold water, and boiling water poured upon this paste, dissolves easily by stirring into a transparent jelly, without quiring to be boiled: nutritive:

Potatole starch, Common arrow root. May be made om frozen potatoes in as large a quantity, and as good, as on those which have not been spoiled by the frost; very hite, crimp to the fingers, and colours them; friable, heavy,

## 174 STMPLE SUBSTANCES.-13. Farina.

simking in water; when held towards the light it has shining particles in it; dissolves in boiling water as easily as true arrow root: 1001t of potatoes yield 10 Ht of starch.

Dwarf hidney bean starch. Is very white and crimp: 1 oz . of beans yielded upon trial gr. 48.

Pea starch. White, crimp, and good; the peas yield 1-4th their weight.

Earth pea starch. From the bulbs of lathyrus tuberosus: 11b of the bulbs yielded 3 oz .

Bean starch. White, crimp: 1 oz. yielded gr. 75.
Lentil starch. Also white and crimp: 1 oz. yielded gr. 98.

Chich pea starch. From the seeds of cicer arietinum: white and good: 1 oz . yielded gr. 102.

Meadow saffron starch. May be prepared from the roots of meadow saffron, where those plants are plentiful; when boiled with water it is brown like sago, and cements well.

Fecule of briony. Fecula bryonice alba.
Skirret starch.
Peony starch.
Filipendula starch. From the roots.
All the above species of starch are prepared in a manner similar to that of wheat or potatoes, and others may be made from different roots or seeds; they are all nutritive.

Sago. Prepared from the trunk of the sago tree, by splitting it, bruising the logs in water to separate the fecule, pouring off the water and letting it stand to settle: when the sediment is half dried in the air, it is granulated by being passed through a coarse sieve, and the drying finished first in the sun, and then by fire : a single tree yields from 3 to $t$ cwt. of sago. Flat cakes are also made of the half-dried fecule by baking it in moulds.

Cassava. Prepared from the ront of the jatropha manihot, by expression of the juice, which is extremely acrid,: and baking the cake that is left.

Taproca. Prepared from the same root, in the manner of potatoe starch, breaking the moist fecule into roundish, lumps, and drying them in that form: this and cassava only swell and soften in water, and thus make good puddings.

Linseed meal. Farina lini vera. Emollient used in poultices, but the ground cake is usually sold for it.

Linseed cake. Left after the oil has been expressed
from the linseed; used for fattening cattle, for short-breathed horses, and for manure.

Ground linseed cate, Linseed powder. Farina ini vulgaris. Used for poultices, but requires in general ome oil or fat to be added to keep it from drying up too rard.

Almond care. Amygdalce placenta. Left after the expression of the oil.

Ground almond cake, Almond powider. Farina imy gdalarum. Used instead of soap for washing the hands.
Elateriuar album. The half ripe fruit of spurting cucumber cut in pieces, so that the juice may drain out, which s left to settle, the liquid part poured off, and the sediment lried in the sun.

Elaterium nigrum, Extractum elaterii, Succus spisatus momordica claterii. From the nearly ripe spurting ucumber, by expressing its juice, and proceeding as before, trying the fecule with a gentle heat: hydragogue, gr. fs -ij .

Woad. Glastum. From the leaves of the plant so ralled, by grinding them to a paste, of which balls are made, गlaced in heaps, and occasionally sprinkled with water, to oromote the fermentation; when this is finished, the woad is illowed to fall into a coarse powder; used as a blue dyetuff.

Indigo. Indicum. From the leaves and young shoots f several species of indigofera and nerium, by soaking them ither in cold water, or still better in water kept warm, and $t$ about 160 deg. Fahr. till the liquor becomes deep green, $t$ is then drawn off, and beat or churned till blue flakes aprear, when lime-water is added, the yellow liquor drawn off, nd the blue sediment dried, and formed into small lumps: $f$ this fecule many varieties are found in trade, owing to ariations in the process; the Guatimala indigo is generally steemed the best, and has, like some other kinds, a coplery tinge; used as a blue dye.

Carmine. Carminum, Purpura vegetabilis. Boil 5j of ochineal, finely powdered, in 12 or 14 ib of rain or distilled ater, in a tinned copper vessel for three minutes, then add lum gr. xxv , and continue the boiling for two minutes onger, and let it cool: draw off the clear liquor as soon as : is only blood warm, very carefully, into shallow vessels, nd put them by, laying a sheet of paper over them to keep ut the dust, for a couple of day's, by which time the car-
mine will have settled. In case the carmine does not separate properly, a few drops of a solution of tin, i. e. dyers' spirit, or of a solution of green vitriol, will throw it down immediately: the water being then drawn off, the carmine is dried in a warm stove. The first coarse sediment serves to make Florence lake; the water drawn off is liquid rouge.
2. Boil Hjj of cochineal powdered, and $弓 \mathrm{vj}$ of alum in 40 Ht of water, strain the decoction, add $\mathrm{y}^{\mathrm{f}}$ s of dyers' spirit, and after the carmine has settled, decant the liquid and dry the carmine: this process yields about ${ }_{j}^{2} \mathrm{jf}$; ; used as a paint for the ladies, and also by miniature painters.

## 14. SULPHURS.

Native suiphur, Rock sulphur. Sulpluer nativum. Found near volcanoes, fine yellow colour, burning away entirely, leaving no fæces; much used by silversniths.

Sulphur vivum verum. Found near Mount Vesuvius, grey, burns with a blue flame when heated, but the flame soon goes out, earthy; principally used for the manufacture of brimstone and alum.

Rough brimstone. Sulphur factitium. Obtained by sublimation from pyrites, or by eliquation from the earthy minerals containing sulphur.

Rowe brimstone. Sulphur in rotulis. Is brimstone, purified by redistillation, and poured into moulds.

Horse brinstone. Sulphur cabaltenum, S. vizum commune. The facces left in the purification or sublimation of sulphur ; very impure; used in external application to the inferior cattle.

Flowers of sulphur. Flores sulphhuris, Sulphur sub. limatum. From brimstone, by sublimation, into large chanibers built for the purpose; puilverulent: when kept in loosely stopped jars or drawers, the surface becomes acid.

Washed flowers of sulphur. Sulphur sublimatum lotum. The common flowers washed with water to get rid of the acid; ordered by the colleges when the flowers are intended for internal use, but scarcely ever performed, and seems an useless subtlety.

Sulphur is laxative, propelling the faxes with very little stimulus to the system; useful in piles, 5 fs to 5 j, nocte maneque; diaphoretic, communicatiing its peculiar smell to the sweat; used internally, and externally in ointments, as a
ecific in the itch and other cutaneous affections；its suffo－ ting fume while burning is used to whiten linen，straw nnets，\＆c．and to kill bees and other insects．
Milk of sulphur．Lac sulphuris，Sulphur procipi－ um．From sulphur 1 lt ，fresh burned lime 21t，boiled water，filtered，and the milk thrown down by adding spi－ of salt q．s．and washing the sediment till it is insipid． L． 1815.
2．From liver of sulphur $\mathrm{J} v j$ ，dissolved in water Hj fs ， ling spirit of vitriol q ．s．and washing the precipitate it is insipid．
3．Sulphur 1 part，quicklime or kali ppm． 3 parts，water $\therefore$ boil，filter while hot，add spirit of vitriol q．s．and wash precipitate．
Used internally in preference to the flowers，probably dains water．
ILiver of sulphur．Hepar sulphuris．Brimstone in der 1llt，kali ppm．31t：mix by fusion in a covered ves－ the most usual practice．
2．Fl．sulph．and pure caustic potash or soda，ana p．æq．
3．Fl．sulph．そiv：melt and add kali ppm．亏fs．P．L． 10.

4．Kali sulphuratum，Potassce sulphuretum P．L． 1809. rers of sulphur $\overline{5} \mathrm{j}$ ，Kali ppm．$\frac{3}{3} \mathrm{v}$ ：unite by fusion．
i．Potassa sulphuretum P．L．1815．Fi．sulph．${ }^{5} j$ ， ppin．气ij．Melt．
$\therefore$ Sulphuretum kali P．D．Sulphuretum potassa P．E． ulph．kali pp．ana p．æq．：mix and melt：expectorant， roretic；used in catarrh and cutaneous affections；dose， ：to xv；proposed as an antidote to arsenic，but of tful utility．
Ietallic arsenic，Regulus of arsenic，Arsenic． lus arsenici．From white arsenic mixed with oil or oal powder and sublimed；used in making metallic i． rpiment，King＇s yellow．Auripigmentum．Native nes，yellowish green，with brilliant gold－coloured span－ used by painters．Caustic：composed of about 43 of sulphur and 57 of metallic arsenic．
ealgar，Red arsenic．Risigallum，Sandaracha rum，Auripigmentum rubrum．Native in mines；fine

## 178

 SIMPLE SUBS'ANCES.-14. Sulphurs.red colour like vermilion; used also by painters: composed of about 25 parts of sulphur and 75 of metallic arsenic: made into cups, in which the juices of acid fruits being left become cathartic.

Yellow alsenic. Arsenicum flazum, A. citrimum. Made of white arsenic 100 Hz , brimstone 30 Ht , by sublimation; yellow, heavy, taste very sharp and burning.

Red arsenic. Arsenicum reubrum factitiom. From arsenical and sulphureous pyrites exposed to sublimation tosether.

Magnes arsenicalis of Angelus Sala. Sulphur, white arsenic, and crude antimony, ana p. æq. mix by fusion: corrosive.

Phospionus of urine, Kunchel's phosphorus. Plosphorus urino, P. Kunckelii. From urine putritied and distilled in an iron pot, with a glass or stone-ware head; the residuum taken out, ground, put into small earthen retorts, and distilled, with a very violent heat, into water.
2. From phosphoric acid mixed with charcoal powder, and distilled into water.
3. By pouring a solution of sugar of lead into urine. which precipitates a white powder, to be mixed with charcoal powder, and distilled with a violent heat into water. In flaminable at a very low heat, and therefore it must be kept under water, purified by being kept in fusion in a glass tule under water until the impurities have settled; principally used as an easier and speedier method of procuring fire than the common; also used to analyse atmospheric air and to form phosphoric ether.

## 15. IRON.

Yellow oker, Spruce oner. Octira flava. Found native; earthy, deep yellow, friable, taste astringent ; used as a paint.

Oxford oker, French oken. A finer colour than the preceding, preferred by the painters, and also used in making gilder's wax.

Ruddee, Red chalk. Rubrica fubrilis. Found ntive; stains the hands, deep red; plentiful in Rutlandshire. to which it communicated its name.

Red humber stone. Terra sigillata mbra. The same, but ground, made into small cakes and sealed.

Cobinon bole. Bolus communis. The same, but ground nd made into large round cakes; astringent, used for cattle, nd in tooth powders.
The foosdstone. Magnes. Found in iron mines; asingent; used externally to draw weapons out of wounds, so as an amulet against the gout, and by some to draw er or stroke certain parts in painful diseases, as a magical medy.
The blood stove. Lapis hocmatitis, Hoematitis, Found mines ; dark red, extremely hard, fibrous; made into pohers,; and when prepared by grinding and washing over, ying, astringent, agglutinating; used also as a polishing wifder.
Ealery., Smyris, Smerillus. Found in rocks; exomely hard; ground in mills, and sorted by being stirred th water, the water left to settle for a determinate number minutes, then drawn off into another vessel, and left tally to deposit the powder with which it is loaded; used polishing, either in the state of powder, or glued upon per for scouring.
Chalcitis. Found occasionally, being native green viol calcined by natural causes, but rare, and no ways preable to colcothar.
Iron. Ferrum: Several forms of this substance are unerated in the pharmacopeias, as Iron filings, Ferri nenta, Ferri limatura, Ferri scobs; Iron wire, Ferri 2. The filings are tonic and astringent, used in chlorosiss, $v-x$, bis terve in die: the wire is only used in prepegions.
Steve. Chalybs, Mars. Found native, and also made $m$ iron, by stratifying or melting it with charcoal, of which akes up a minute portion, which gives the hardness to the pound; the filing's are sopmetimes used as a stimulant I tonic ; also in fireworks.
Blacik lead. Plumbum nigrum, Cerussa nigra, Plumro. Found native; derives its name from its colour, as i really composed of iron and charcoal, the last being in ruch greater proportion than in steel; used for pencils, yons, and the coarser sort to give a metallic lustre to er bodies, or to diminish the friction, in cases where ase or oil would be improper. dim ferin nigrum. The scales of iron beaten off by x 2
the blacksmith in his work, separated from the dirt by means of a nagnet, reduced to powder in a mortar, and washed over; dissolve in acids without disengaging hydrogen gas, and therefore do not occasion flatulence, hence preferable to the filings.
2. Athiops Martialis. By keeping iron filings under water, shaking them occasionally (to hasten the process, a small quantity of any acid may be added), washing the black powder thus obtained, and drying it as quick as possible to prevent rust.
3. By heating, in a covered crucible, iron filings with half their weight of red oxide of iron.
4. By heating the red oxide of iron with oil; but this is either black lead, or contains a portion of it, and is therefore improper:

Rust of inon. Crocus Martis aperitivus, Ferri ribigo, Chalybs proparatus cum aceto, Chalybis rubigo, Carbonas ferri praparatus. Iron filings, or iron wire, is exposed to the air, and frequently moistened with water, to which a small quantity of vinegar may be added to hasten the process; the rust is then ground to powder and washed over: seems to be rather a red oxide, although referred to the carbonate by the Edinburgh college.
2. Carbonas ferri, C. ferri procipitatus. A solution of 4 oz . of green vitriol in water, is precipitated by another solution of 5 oz . of natron preparatum in water, the precipitate is washed with warm water, and dried without exposure to the air, that it may retain its green colour.
3. By precipitating the solution of green vitriol with kali proparatum, instead of natron, performing the process in hot water, and drying it by steam. Powell.
4. Subcarbonas ferri. By precipitating a solution of 8 oz. of green vitriol in water, by a solution of 6 oz . of natron præparatum. P. L. 1815.

Crocus Martis. C. Martis astringens, Oxidum ferri rubrum. By calcining iron or steel filings till they become of a red colour.
2. Crocus Martis aperitivus P. L. 1720. C. M. sulphuratus. By melting together equal parts of iron filing and sulphur, and calcining the mass till all the sulphur is driven off.
3. Brown red. Colcothet vitrioli, Oxidum ferri rubrum. By re-calcining green vitriol (previously calcined to
hiteness) by an intense heat until it becomes very red, and ashing the residuum. P. E. omits' this washing.
4. By washing the residuum left in the distillation of pua fortis till all the saline matter is abstracted.
5. Crocus Martis Zivelferi. Iron filings and nitre ant æq. injected into a red hot crucible, kept in the fire for an ur, and then well washed.
6. By pouring upon iron filings twice their weight of ua fortis, and washing the crocus with warm water.
7. Crocus Martis antimonialis Stahiti. Scoriæ of the artial regulus of antimony well washed, p. j, nitre p. 2 3 ; calcined together for some time, and then washed.
8. By precipitating a solution of green vitriol in water, a solution of natron præparatum or kali præparatum; d exposing the precipitate to the air while it is dried.
Is tonic, stimulant, gr. v to x ; used in the composition astringent, drying, and strengthening plaisters and ointents: employed for polishing metals.
Chalybs cum sulphure proparatus. With a red hot $r$ of stcel melt a roll of brimstone, so that it may fall into ressel of water; separate the brimstone which falls at the ne time into the water, and reduce the chalybs into a fine wder.
2. By melting iron filings and brimstone, p. æq. in a cored crucible.
3. Sulphuretum ferri. . Iron filings 6 oz. flowers of sulur 2 oz.: mix together and melt in a covered crucible. ed in preparing hepatized ammonia.
Prussian blue. Coeruleum Beralinense. Red argol I saltpetre, of each thij, throw the powder by degrees into ed hot crucible: dry bullock's blood over the fire, and Itiij of this dry blood with the prepared salt, and cal$a$ it in a crucible till it no longer emits a flame; then dis ve common alum Ibvj , in water tbxxyj , and strain the so-
 I strain while hot; mix the two solutions together while ling hot: dissolve the alkaline salt calcined with blood in er thxxvij, and filter through paper supported upon linen:; s this with the other solution, and strain through linen: put sediment left upon the linen, while moist, into an earthen , and add spirit of salt lbj fs , stir the mass, and when the rvescence is over, dilute with plenty of water, and strain
in: lastly, dry the sediment in : lastly, dry the sediment.
2. Mix 1th of kali proxparatum with 21 tb of dried blood, or any dry animal substance, put it into a high crucible, or long pot, and keep it in a red heat till it no longer flames or smokes; thei take out a small portion, dissolve it in water, and observe its colour and effects upon a solution of silver in aqua fortis; for, when sufficiently calcined, it will neither look yellowish, nor precipitate silver of a brownish or blackish colour: it is then to be taken out of the fire, and when cool dissolved in a pint and a half of water.

Take green vitriol p. j, common alum p. 1 to 3 , mix and dissolve them in a good quantity of water, by boiling, and filter while hot; precipitate this solution by adding $q$. s. of the solution of prepared alkali, and filter. The precipitate will be the darker the less alum is added, but at the same time it will be greener from the greater admixture of the oxide of iron which is precipitated, and which must be got rid of by adding, while moist, spirit of salt, diluting the mixture with water, and straining.
3. Precipitate a solution of green vitriol with the solution of prepared alkali, and purify the precipitate with spirit of salt; precipitate a solution of common alum with a solution of kali præparatum : mix the two sediments together while diffused in warm water, strain and dry.

## 16. MERCURY.

Quicrisilver, Quici, Mércuris. Argentim vivum, Mercurius, Hydrargyrus, Hydrargyrum. Found native, but mostly extracted from the native sulphurets.

Pútified quichsilver. Argentum vivum purificatum, Hydrargyrus purificatus, Hydrargyrum purificatun. Rub the quicksilver with 1-6th or 1-4th of iron filings, and distil it.
2. Distil 2-3rds. : P. D: Very wasteful.
3. Distil it without addition, and then wash it with vinegar or brine.
4. By staining through chamois leather: this is the most usual method; but if lead is mixed with bismuth by mélting them together in a gentle heat, and then put into quicksilver, they will pass along with it through leather: on standing, however, the bismuth is thrown up in the form of a dark coloured powder, the lead remaining combined:

## SIMPLE SUBSTANCES.-16. Mercury.

5. By distilling it from eimnabar and iron filings ana p. q. when great purity is required.

Given in obstinate costiveness to the extent of ltyj or ifs, in hopes of forcing a passage by its weight: used by ater gilders to dissolve their gold, by looking-glass makers soften their tinfoil, by barometer and thermometer makers ir their instruments, and in some other arts.

届thops pei se. By shaking quicksilver in a large ottle, or by triturating it with water ; pulverulent, black.

Cinnabar, Virmilion. Cinnabaris, Sulphuretum hyrargyri rubrum P. E. Found native, liable to be conunded with realgar or red arsenic, and also manufactured y the chemists, by grinding 1701 b of quicksilver and 50 th of rimstone together, throwing the mixture by ladle-finlls into eated earthen sublimers, where it takes fire, the superfluous Iphur is consumed, the mouths of the ressels are then coered with tiles, which stops the conflagration, when the subnation commences, and is continued intil the whole is risen p. The process of the Dutch manufacturers.
2. By making a paste of æthiops mineral, and spirit of tre, at 36. deg. Baumé; drying this paste the next day, ulverising it and subliming as usual. Martin.
3. By triturating 300 parts of quicksilver and 68 of wers of sulphur, with aqua kali $q$. s. to moisten them, atil they are converted into æthiops mineral, then add 160 arts of kali preparatum and as much water: continue the ituration over a fire, adding water occasionally, so that the wder may be constantly covered with about an inch deep water : in about two hours it turns brown and soon afterards red: no more water is then to be added, but the triration is continued until the colour has acquired its greatest auty, when it must be withdrawn from the fire, otherwise will pass to a dirty brown. Kirchoff,
4. Cinnabaris factitia. Quicksilver 25 oz . sulphur $70 z$. riturate and sublime.
5. Hydrargyrus sulphuratus ruber, Sulphuretum 7uyaroyri rubrum P.D. P. L. 1809. Quicksilver 40 oz . Iphur 8 oz . as before.
6. Extemporaneously, by shaking quicksilver in a soluon of liver of sulphur in water; and still better in Boyle's ming liquor or suhphuret of ammonia.
7. Cinnabaris antimonii. Is obtained as a secondary

## 184

product in the making of butter of antimony, by raising the fire after the butter has come over: brown.
8. Cinn. ant. Quicksilver 151t, rough brimstone 5th, crude antimony Itt and a half; mix and sublime.

Diaphoretic ; used in cutaneous diseases and gout; also as a vermifuge, gr. $x$ to $3^{f s}$; externally $z^{\text {fs }}$ thrown upon a red hot iron is used as a fumigation to check the progress of venereal ulcers in the throat, nose, or mouth.

Oxydum hydrargyri cinereum P. L. Boil calomel 5j in a gallon of lime water; wash the grey sediment with water, and dry it.

Pulvis hydrargyri cinereus. Quicksilver そij, dilute nitrous acid $\jmath_{3} \mathrm{ij}$, distilled water $\tilde{J}^{5}$ viij, aqua carbonatis ammoniæ q. s . about $\bar{\jmath} \mathrm{j} j \mathrm{~s}$.
2. Oxidum hydragyri cinereum P. E. Quicksilver 弓iv, dilute nitrous acid $z^{2} \mathrm{v}$, distilled water Jxv , aqua carbonatis ammoniæ q. s.

Dissolve the metal in the acid, dilute the solution with the water, and precipitate with the alkali, wash and dry the precipitate.

Totally different from the London oxide of the same name ; all three are used in syphilis, and are not apt to disorder the stomach and bowels; dose gr. j-iij, bis in die.

Calcined mercury, Precipitate per se. Mercurius proccipitatus per se, Mercurius calcinatus, Hydrargyrus calcinatus, Hydrargyri oxydum rubrum, Oxidum liydrargyri. By exposing a thin stratum of quicksilver to the action of heat sufficient to keep it boiling, in a vessel contrived to admit the air without letting the vapour of the quicksilver essape. In red scales, darker than red precipitate, may be used for the same purposes.

Red precipitate. Mercurius corrosivus rubcr, Hydrargyrus nitratus ruber. By dissolving quicksilver in an equal weight of spirit of nitre, previously adding to each pound of acid $\mathfrak{5 j}$ of spirit of salt, $\mathrm{P} . \mathrm{L} .1788$, or distilling it from common salt, $5, j$ to a $\mathrm{Ht}, \mathrm{P} . \mathrm{L} .1745$, then driving off the acids by leat in a flat bottom glass on a sand bath, till red crystals are produced: this compound acid is stated by Dr. Pemberton, Introd. P. L. 1745, to secure the crystalline appearance of the product.
2. Mercurius procipitatus corrosivus, Hydrargyri ni-trico-oxichim, Oxidum hydrargyri nitricum, Oxidum haydrargyri rubrum per acidum nitricum. By dissolving quick-

## SIMPLE SUBSTANCES.-16. Mercury. 185

silver in spirit of nitre with heat, and evaporating till a dry mass is left, which is then calcined in a broad shallow vesscl mtil it no longer emits red vapours.
3. Arcanum corallinum, Mercurius corallinus. By diresting the preceding in three times its weight of spirit of rine for two or three days, then setting fire to the spirit, and stirring the precipitate as the spirit burns.
4. Pulvis principis. By triturating the preceding with he oil of tartar, and then washing out the salt again with water : both this and the preceding manipulation are emoloyed with a view of rendering the preparation milder for nternal use.

Antisyphilitie, gr. $\mathrm{fs}_{\mathrm{s}}-\mathrm{ij}$ nocte maneque, but principally ised extermally as an escharotic, and stimulant to foul ulcers, or which purpose it must be finely pulverised.

Turbith mineral. T'urpethum minerale, Mercurius meticus flavus, Hydrargyrus vitriolatus, Oxidum hydrarYyri sulphuricum, Subsulphas hydrargyri flaus. The [uicksilver is to be corroded by boiling it in about an equal veight of oil of vitriol to dryness; the white mass is then lung into a large quantity of boiling water, it immediately. hanges to a yellow powder; which is to be well washed and tried; emetic in doses of gr. ij -viij ; useful in inveterate ;onorrhœa, and particularly in swelled testicles from a veneeal cause, has also been recommended as a preservative gainst hydrophobia ; alterative, gr. j - ij in leprosy and obtinate glandular obstructions; as an errhine, diffused among ther powders.

Sweet prechitate. Mercurius dulcis procipitatus, Iydrargyrus muriatus mitis, Submurias hydrargyri pro-ipitatam, Submurias hydrargyri procipitatus. Dissolve uicksilver in spirit of nitre, by boiling, observing to have nore quicksilver than the acid will take up, pour the soluon into a boiling brine, composed of common salt equal to alf the weight of the quicksilver dissolved in water in the roportion of about half an oz. of salt to a pint; the preciitate thus produced is to be well washed and dried.

Sweet sublilate, Calomel. Mercurius dulcis subliratus, Calomelas, Hydrargyri submurias, Submurias hyrargypri sublimatum. By grinding 40tb of corrosive sublilate with 301t of quicksilver,' sublining the grey powder, epeating this sublination two or three times, powdering and ashing the sublimate with builing water.

Both these are the same in quality, differing only in the mamer by which they have been prepared, and very slightly - in external appearance, the sweet precipitate being in very fine powder, and of a clear white, the sublimed preparation réquiring, iu gencral, levigation to reduce it to any fineness, and then of a dull white or ivory colour, though some few chemists distil the calomel into water, and thus render it as fine and white as the other.

Cathartic, sialogogue; the latter in particular has been justly called panacea, it being used as an almost universal inedicine by the English practitioners, unless the intestinal canal is inflamed, but usually united with other medicines whonse activity it increases ; dose, as an alterative, gr. $\mathrm{j}-\mathrm{ij}$ nocte maneque; if it does not pass through the bowels it affects the mouth, which may be avoided by joining purgatives with it ; as a cathartic, gr. v to viij or x , but was formerly, and still by some persons, given in doses of $Э \mathrm{j}$.

White precipitate. Mercurius precipitatus albus, Calx hydrargyri alba, Hydrargyrus prcecipitatus albus. Produced by dissolving corrosive sublimate and sal anmoniac ana 1th, in half a gallon of water, adding half a pint of aqua kali, washing the precipitate, and drying it.
2. Hydrargyriem pracipitatum album. Corrosive sublimate ${ }^{5} \mathrm{vj}$, sal ammoniac $\overline{5} \mathrm{iiij}$, aqua kali half a pint, distilled water four pints, proceeding as abore.
3. Submurias hydrargyri ammoniatum. Add to the liquor poured off from the sweet precipitate in its manufacture, spirit of sal ammoniac q. s. to throw down a new precipitate; wash this with cold distilled water, and dry it on blotting paper.
4. By dissolving 1 oz . of quicksilver in spirit of nitre q. s. diluting this solution with distilled water, adding to it a solution of sal ammoniac siij-iiij in half a pint of water, and precipitating by aqua kali q. s.; if, in consequence of adding too much kati, the fine white colour is injured, a few drops of spirit of sal ammoniac will restore it.

Was confounded with sweet precipitate, from which it may be readily distinguished by its not becoming black when rubibed with lime water; used externally in making a deterस̌eñ ointment.

Green rrecipitate. Mcrourius pracipitatus wiridis, Eacerta virictis. By dissolving quicksilver $\overline{5}, \mathrm{j}$ in spirit of : nitre q. s. at the same time dissolving also copper 5 j in ano-

## SIMPLE SUBSTANCES.-16. Mercury.

ther parcel of spirit of nitre, mixing the two solutions, cvaporating to dryness, and culcining the residum in a shallow vessel till no more red fumes appear : caustic.

## 1\%. ANTIMONIALS.

Crude antimony, Antimony of the world at large, Sulphuret of antmony. Antimoniugn crudum, Sulphuretum antimonii. Found native, separated from the stones with which it may be mixed by fusion and pouring into conical monds: prepared for medical use by trituration and washing over: diaphoretic, used in rheumatism, scrofula, and cutaneous diseases as an alterative, $Э j-3 j$ nocte maneque; given largely to horses, mixed with their food to smooth their coats ; used in the arts to purify gold, and' by the ladies to paint their eyebrows and eyelashes black.

Regulus of antmony, Antimony of the philosophical chemists. Regulus antimonii, Pliumbum antimonii. From crude antimony, saltpetre, and argol, ana p. æq. pulverised, injected by degrees into a red hot crucible, and melted"; the regulus settles at the bottom.
2. Crude antimony 1 ft , tartar 12 oz . nitre 6 oz . : melt and pour out into a melting cone; when cold, soparate the regulus, and if required to be very pure, remelt it once or twice, throw upon it, while in fusion, 1 oz . of nitre, and keep it melted for a quarter of an hour.
3. From crude antimony; calcined in a shallow vessel until no sulphureous vapour arises from it by a low red heat, then mixed with fat or oil and charcoal powder and melted.
4. Martial regulus of antrmony. Regutus antimonii Martialis. Upon 1tb and a half of small nails heated o redness in a crucible, throw a mixture of 1 tb crude antimony, 4 oz . nitre, and 2 oz tartar : melt and pour out; separate the regulus, and remelt it three or four times, throwing upon it each time' 2 oz . nitre.
5. Crude antimony 2Ht, iron 11t, potash half a pound: melt: productive, but impure.
6. Crude antimony 3 Ht , iron 11b, potash half a pound: melt : less productive, but purer.

When this operation is well performed, the regulus always has on its upper surface the appearance of a star, it is then called regulus antimonii stellatus $;$ used to form small cups, in which wine, being let to stand for a night; becomés
emetic, or balls are made of it, which are infused in wine for the same purpose; used also to harden lead, and thus make a compousd metal fit for the best kind of pewter and for printer's types.

Regulus Jovis. Made by melting regulus of antimony with tin, generally in equal quantities, and casting it into the form of a cup, for rendering wine emetic; is less brittle than the pure regulus: these metals, mixed in various pro. portion, are used for making mirrors, medals, \&c.

Protoxide of antimony, Powder of Aigarotyf. Mercurius vitce. Pour butter of antimony into distilled water, wash the precipitate, and dry it by a gentle heat.
2. Digest 1 ll of liver of antimony for a day in three pints of water, to which 1 lb of oil of vitriol and Itt of common salt has been previously added: decant the clear solution and pour it into hot water, wash the precipitate and dry it. Scheele.
3. Oxidum antimonii nitro-muriaticum. Spirit of salt 3 j , spirit of nitre 3 j , crude antimony $\mathrm{Jij}^{\mathrm{j}}$, dissolve, pour the clear solution into a gallon of water, and wash the precipitate. P. D.
4. Oxydum antimonii P. L. 1809. Mix in a matrass; spirit of nitre ${ }^{5} \mathrm{j}$, with spirit of salt $\overline{5} \mathrm{xj}$, add by degrees crude antimony ${ }^{5} \mathrm{ij}$, strain the solution and pour it into a gallon of water, in which kali ppm. Jij has been previously dissolved: wash and dry the precipitate; process very uncertain, often produces peroxide, J j of spirit of nitre having been directed instead of 5 j , as in the preecding.
5. Oxydum antimonii P. L. 1815. Dissolve emetic tartar $\mathrm{S}_{\mathrm{y}}^{\mathrm{ij}}$ in distilled water, and ammonia ppa, $y_{i j} \mathrm{ij}$ in another prortion of water, mix the two solutions, boil till the precipitation is complete, and wash the precipitate.
6. Peroxide of antimony 4 oz , regulus of antimony 1 oz. : mix and melt.

Dirty white, fusible in a low red heat, and may be kept melted in contact with regulus of antimony without undergoing any alteration, soluble in acids, and in a solution of cream of tartar in water : violently emetic, gr. fs-j.

Peroxide of antimony, Diaphoretic antimony. Antimonium diaphoreticum, Calx antimonii; Antimonium dx'cinatum. Crude antimony 1 tt , purified nitre 3 tt , inject by spounfuls into a red hot crucible, powder the mass, and wash it well ; the flowers that stick to the side of the cru-
cible must be carefully separated, otherwise they render it emetic.
9. Bezòar meneral. Bezoarticum minerale. Upon butter of antimony drop slowly as much spirit of nitre, disil it off, and pour it on again, adding one third new spirit of nitre; repeat this operation, and calcine the residuum:
3. To powder of algaroth add twice as much spirit of nitre, distil to dryness, calcine the residuum and edulcorate it with warm water.
4. Magistery of daphoretic antimony. Materia jerlata. To the water that was used in washing the diaohoretic antimony, add spirit of vitriol, or some other acid, is long as any precipitate is produced, which is to be washed.
5. Cerussa antimonii. Regulus of antimony 2\#t, puriied nitre 3 ft : grind together; and proceed as for diaphoretie untimony: in this operation and similar ones, the admixture of the emetic flowers may be avoided by sinking the crucible leep in the coals, so that the sides, up to the very top, may e too hot for them to settle on; or they may be collected by ising a tubulated earthen retort.
6. To 4 oz. of regulus of antimony finely powdered, add y degrees 12 oz . of spirit of nitre, distil to dryniess, powder he mass and wash it.

White, not soluble in acids as the protoxide, requires a iolent heat for its fusion, but rises in silvery white crystals t a lower heat; melted with a fourth part of regulus of animony it is changed into protoxide ; diaphoretic, in doses of r. ij-x; but TVilson, Course of Chymistry, p. 106, says e has known diaphoretic antimony given with good success y half an ounce at a dose, and repeated two or three times day, and that for several days successively.

Flowers of antriony. Flores antimonii. Throw, ito an ignited tubulated retort powdered crude antimony y spoonfuls, till as many flowers come over into the receivers s you desire; the bottom of the retort must be very hot, nd the fire kept up steadily ; emetic, in doses of gr. j -ij?

Argentine flowers of antmony. Flores antimonii. rgentei. Are obtained by keeping regulus of antimony ing state of fusion in vessels which admit the air, but prevent he escape of the flowers, and afford them a cool place on hhich they may settle: referred, by the philosophical cheiists, to the peroxide, but, unless they have been confounded.
with the preceding, they are considerably emetic, and therefore seem to be a protoxide.

Grass or an'rmony. Vitrum antimonii, Antimonium vitrificatum, Oxidum antimonii cum sulphure vitrificatum. Formed by roasting powdered crude antimony in a shallow vessel, over a gentle fire, till it is of a whitish grer, and emits no fumes in a red heat, then melting it in a quick fire into a clear brownish red glass. If the antimony has beens calcined too much, it will require a little crude antimony to be added to render it transparent: composed of eight parts of protoxide, united with one of crude antimony; violently emetic, in doses of gr. j-ij, and very uncertain in its operation; used in making antimonial wine and emetic tartar.

Crocus metalooum. Crocus antimonii P. L. 174.j.
Crude antimony and saltpetre ana equal weights, mix and melt.
2. Crocus antimonii P. L. 1788. Crude antimony and saltpetre, of each 1tb, common salt 1 oz . : mix and melt.
3. Crocus antimonii lotus, Oxidum antimonii cum sulphure per nitratem potassa. Crude antimony and saltpetre, of each equal weights: mix and melt, pour out, separate the reddish part from the whitish crust, reduce the former to powder, and wash it as long as it communicates any taste to the water; another beautiful sesquipedalian name.
4. Crude antimony 8 oz . rough saltpetre 7 oz . ground together, put into an iron mortar, and set on fire by a lighted coal: an inferior article.
5. By roasting crude antimony to a dull grey, and melting it : the common process.

These are emetic, in doses of gr. ij-riij, but uncertain and sometimes violent; used for making emetic wine, \&c. and a purge for cattle: the yellowish red varieties contain four parts of protoxide and one of antimony; the dark red two parts of protoxide to one of antimony.

Medicinal regules of anthony. Regulus antimonii medicinalis. Crude antimony 5 oz . kali ppm. 1 oz . common salt 4 oz . p powder, mix, melt; when cold, separate the scorixe at top, powder the mass, and wash it well: more active than crude antimony.

Liver of anrimony. Hepar antimonii. Crude antimony 2 tb , potash 11t : mix and melt; emetic, in doses of gr. iij-vj, but mostly uṣed as a violent purge for grease in horses' heels.

Kermes mineril. Crude antimeny, finely ground, 4 tt , kali ppm. 1th, soft water 2 galls.; boil for half an hour, filter through paper supported by linen, into deep pans previously warmed; let it cool very slowly; the kermes settles as it cools: the antimony left upon the filtre may be boiled again with fresh kali and water. Deyeux, the usual process.
2. Crude antimony 1 oz. aqua kali 61 t . Baumé.
3. Crude antimony 1th, aqua kali 61t. Chaptal.
4. Crude antimony 3 fb , hatron ppm . 3 lb , water q. p. Dizé. Proceeding as before.
5. Prepared antimony ${ }_{5} \mathrm{fs}$, natron ppm . $\tilde{3}^{\mathrm{s} x}$, distilled water a gallon; boil for half an hour, filter, let it settle; wash the precipitate with cold water which has been recently boiled, dry the precipitate by a heat of 90 deg. Fahr. folded up in glazed paper to keep the air and light from it : produces a very dark crimison powder, of a smooth velvety appearance. Cluzel: obtained the prize given by the Paris society of apothecaries.
6. Crude antimony 16 oz . kali ppm. 8 oz . flowers of sulphur $1 \mathrm{oz} .:$ mix, melt together, pour out; when cold, reduce the mass to powder and boil in water q. s.; filter while hot; the kermes precipitates as the water cools, and is to be well washed.

This preparation occupies in foreign practice the place of our James's powder, in doses of gr. fs-iij, as a diaphoretic, cathartic, and emetic.

Golden sulpher of antimony. Sulphur auratum antimonii. Is separated from the alkaline liquor, which has deposited the kermes mineral, by adding any acid, but generally the acetic: when the acid is added in separate portions, the precipitate may be obtained of different colours and strength, the first being redder and stronger, the latter yellower and weaker.
2. Crude antimony 2H, fowers of sulphur 11b, aq. kali puri q. s. to dissolve the whole; filtre, precipitate immediately with spirit of vitriol, wash and dry the precipitate. Weigleb.
3. Crude antimony 2 oz . sulphur 3 oz . and procced as in the preceding process. Goettling.

It may be used as kermes mineral, but requires a double or treble dose.

Sulphur antimonii pracipitatum P. L. before lif88.

## 199 SIMPLE SUBSTANCES.-1\%. Antiromials.

Sconix obtained in the process no. $\stackrel{2}{2}$, for regulus of antimony, q. p. dissolve in water, filter through praper, precipitate immediately by adding spirit of salt; wash and dry the precipitate.

Sulplatr antimonii pracipitatum. P. L. since 1788. Crude antimony powdered 24t, aqua kali 43 b , water 317 ; boil for three hours, strain while hot, and add immediately spirit of vitriol q. s. to precipitate the sulphur, which is to be well washed and dried.

Sulphur antimonii. fuscum. Crude antimony, kali ppm. ana 1 oz : : melt together, powder, and dissolve in water 4 tt : let it cool ; when cold, add spirit of vitriol q. s. to precipitate the remainder of the sulphur, agitate the mixture, that this last precipitate, which is yellow, may be mixed with the other; wash and dry : these are mixtures of kermes mineral with golden sulphur of antimony, and thercfore to be esteemed inferior to the former; duse, gr. j to r.

Antinonial powder. Puleis antimonialis P. L. 1788, Oxidum antimonii cum phosphate calcis. Crude antimony in gross powder, hartshorn shavings ana 217 : roast in an iron pot until they form a grey powder, put this into a long pot, with a small hole in the cover, keep it in a red heat for two hours, and grind it to a fine porder.
2. Dr. James's powder. Puilvis antimonialis P. L. since 1809. Crude antimony 11t, hartshorn shavings 2 tb ; proceed as in the former.
3. Precipitate obtained by pouring butter of antimony into water, and phosphate of lime obtained by dissolving burnt bones in spirit of salt and precipitating the solution by sp. corn. cervi, ana equal weights; dissolve these in spirit of salt, and pour the solution into water alkalized with spir. corn. cervi. Chenevix. Febrifuge and diaphoretic, gr. iij-viij; in larger doses, gr. $x-Э j$, emetic and purgative: used also as an alterative in cutaneous diseases.

## 18. LEAD.

Porters lead ore. Galena. Found in mines, breaks in cubes; used by the potters in glazing carthen vessels.

Lead dust. Pulvis plumbi. By melting lead, adding bruised charcoal, and diffusing the lead among it, then pounding and washing away the charcoal; used also by potters.

Granulatid lead. By melting lead, pouring it in a
nall stream, from an iron ladle, with a hole drilled in its uttom, into a pail of water : this operation is performed for ie purpose of facilitating its mixture with other bodies.
Dross of lead. Plumbum ustum. Obtained by meltg lead, and raking off the scum till it is entirely reduced dross.
2. By putting thin plates of lead into a pot with powered brimstome between them; setting it on fire, stirring it ntil it is reduced to ashes, and washing it with water; used making plaisters and ointments.
Massicot. Ochra phmbaria factitia. Made by roast${ }^{G}$ potter's lead ore, or dross of lead, until it acquires a yelw colour; used as a paint.
Lithalge of gold. Lithargyrus auri. Yellow, imwe.
Litharge of shlver. Lithargyrus argenti. White: tained in the extraction of silver.
English intharge. Lifhargyrus, Oxidum plumbi seiritreum. Made by melting red lead; used in making aister,, heing more convenient than red lead and from its culiar sealy appearance it cannot be adulterated. In grind${ }^{g}$ litharge, 12 oz . of olive oil are added to each cwt. to event dust.
Red lead. Sandix, Minium, Plum̄bi oxidum rubrum. $\checkmark$ roasting massicot or litharge in a flaming fire; used in ling plaisters, and as a paint: adulterated with red earths.
Fiake white. Cerissa vera, Plumbi carbonas, Plumbi. bearbonas, Plumbi oxidum album. Made by suspending Is of thin sheet learl over vinegrar in close vessels, the eraration from the rinegar being kept up by the vessels being ceed in a heap of dung, or a stean bath.
2. By dissolving litharge in dilute nitrous acid, and addrypd. chalk to the solution ; astringent, cooling; used exnally; also employed as paint, mixed with nut oil.
 ound tegether with water, kept for some time in a gentle at, water being added to supply the loss by evaporation, anatron then washed out with nore water, and the white idum heated till it acquires a fine yellow colour: used as jaint, instend of King's yellow, is not so bright, but does $t$ injure the health of the painters so much as that poisons colour.
Nosplss remow. Lead 7th and a half, crude antimony

## 194 SIMPLE SUJBSTANCES.-18. Y.ead.

1 Hb , alum and common salt ana 1 o . calcined together. Passeri.
2. Flake white 12 oz . diaphoretic antimony 2 oz . calcined alum half an oz. sal ammoniac 1 oz . calcine in a covered crucible with a moderate heat, for three hours, so that at the end of that it may be barely red hot: with a larger proportion of diaphoretic antimony and sal ammoniac, it verges to a gold colour. Fougeroux.

Pewter. Is made of lead hardened with tin, and in the best kinds with antimony; used for making ressels, which have unfortunately been proscribed by the colleges, who have in this instance been influenced by ridiculous prejudices, since Proust has shown, Journ. de Phys. for 1806, that acids boiled in pewter vessels took up none of the lead, which they will not touch while tin is present ; that when even a solution of sugar of lead was boiled in a pewter vessel, the lead was precipitated in its metallic state, and tin extracted from the vessel : lemon juice, diluted with water, left for a day and a night in the coarsest pewter vessels, did not dissolve an atom of lead, but acted only on the tin. Lead and tin ana p. æq. melted together, and 3 j, taken for two successive days, produced not the least inconvenience.

## 19. COPPER.

Copper. Cuprum. This, like pewter, is used for making vessels, which are now generally tinned on the inside: these vessels have also been proscribed by the colleges upon the same insufficient grounds, since, like lead, it cannot be dissolved while tin is co-existent in the mixture. When acids are boiled in vessels, part of whose tin lining is abraded. the acids take up some of the tin, and deposit it on the abraded part, thus repairing the damage, in the same manner as brass pins are tinned by boiling with tin filings and cream of tartar. Acid syrops and stews are and have been prepared for centuries in untinned copper vessels, uithout any ill effects, although in gentlemen's houses and elegant inns they have occasionally produced of late direful effects: but the trading cooks use only pewter spoons for stirring, and thus render the acids ineffective upon copper, which effect is not produced by the silver spoons of superior establishments. Although the salts of copper are violent emeties, yet 3 j of filings has been taken against the rheuma-
ism; and Rouelle exhibited in his lectures a lock of green tair he had himself cut from the head of an aged founder.
Brass. AEs, Orichalcum. Produced by stratifying graulated copper, with lapis calaminaris and charcoal powder, or hours in a red heat, and then melting the altered coper. Different varieties are produced by melting copper with inc in various proportions.
Dutch metal. Brass hammered into leaves like gold eaf; used for inferior gilding, but soon loses its colour, as lay be frequently observed in the dial plates of turret clocks, articularly when one part has been gilded with gold leaf, nd the other with Dutch gold.
Bele metal. Aes caldarium. Copper 100\#t, tin 20 -2517; melted together; used, on account of its toughness, Ir caldrons and mortars ; this has shared the same obloquy ; pewter and copper for vessels, and as unjustly.
White copper. Copper 40-5015, white arsenic 101t, d q. s. to make the latter into a paste; melted together; sed as an imitation of silver.
Powder gold. Aurum sophisticum. Verdigrise 8 oz. itty 4. oz. borax, nitre, ana 2 oz. corrosive sublimate 5 ij , :ade into a paste with oil, and melted together; used in pan work as a gold colourr.
Rough verdighis. TErugo, Viride ceris. Prepared by atting plates of copper into a cask between layers of vine vigs, and moistening them with sour wine.
2. By corroding copper with vinegar, tartar, and comon salt.
3. Blue vitriol 1tb, common alum or Epsom salt 1to ; dissolve in water 4 tt ; filter ; add kali ppm. q. s. and ash the precipitate.
4. Clippings of copper 2 tb , sal ammoniac 1 Ht ; moisten ith water, and when the corrosion is perfected, wash the ocus : emetic internally, in very small doses; externally ustic ; mostly used as a paint.
Scheele's green. Precipitate a solution of blue vitriol t , in water q . s. by a solution of white arsenic 11 oz. and li ppm. 2 tb, in boiling water 2 gall. and wash the precitate : used as a paint.
Es ustum. Copper, rough brimstone, ana p. æq. laid strata, common salt, a small quantity sprinkled on each yer, exposed to the fire till the brimstone is burned out.

## 196

 SIMPLE SUBSTANCYS.-19. Copper.when one piece is rubbed against another, it ought to have a red colour like cinnabar: caustic.

Verditer gheen, Copier greex. Viride montanum vulgare.

Green bice, Malachite. Viride montanum optimum, Chrysocolla.

Blue bice. Cceruleum montanum, Lapis Armenus proparatus. Found in mines, prepared by grinding and washing for paints.

Verditer blue. Azurum cinercum. Made by the refiners from the solution of copper obtained in precipitating silver from nitric acid by heating it in copper pans; this solution they heat, and pour upon whiting moistened with water; stirring the mixture every day, till the liquor loses its colour, when it is poured off, and a fresh portion of the solution poured on, until the proper colour is obtained: an uncertain process, the colour sometimes turning out a dirty green, instead of a fine blue.

## 20. TIN.

Tin forl. Stannuin foliatum, Stanniolum. In thin leaves; used for ornament, and to cover the hind surface of looking glasses, being softened with a small quantity of quicksilver, which is afterwards pressed out of it by heavy weights.

Tin filings. Limatura stanni. Vermifuge, $\tilde{J}_{\mathrm{J} j} \mathrm{j}$ in syrop, in the morning fasting.

Powder of tin. Pulvis stanni verus. Melt tin in an iron mortar, and stir it while cooling, until it become a powder, then sift it.
2. Melt tin and pour it into a wooden box, rubbed on the inside with chalk, put on a cover that fits close, and shake it violently, till the metal is reduced to powder; vermifugē, in doses of $3 \mathrm{ij}-\overline{5} \mathrm{f}$.

Potee powder. Cincres stanni. Procured by melting tin, raking off the dross as it is formed, and calcining this dross till it becomes whitish.
2. By melting tin with an equal weight of lead, and then raising the heat so as to render the mixed metal red hot, when the tin is immediately flung out in the state of potee powder: very hard, used for polishing glass and japan work.

Bezoardicum Joviafe. Tin il oz. nitre 3 oz. flung into a red hot crucible, and the calx well washed.

Antihecticum Poterii. Tin, regulus of antimony, ana - æq. melted together, then deflagrated with three times as luch nitre, and well washed; are astringent, $3 \mathrm{j}-\mathrm{ij}$, used phthisis.
Enamel colours. Encausta. Lead 101t, tin 31t, calcined gether; the calx mixed with white sand 10tb, kali ppm. At, forms a white enamel, to which the oxides of different retals being added, forms coloured enamels; used in glazg and painting earthen ware, the dial plates of clocks and atches, \&c. : imported from Venice in flat round cakes.
Aunum musivem. Aurum mosaicum. Quicksilver, tin, ilphur, sal ammoniac, ana p. eq. the tin being first melted, quicksilver poured into it, and then the whole ground rether, and sublimed in a bolt head, the aurum musivum as at the bottom.
2. Tin $16 j$, quicksilver 1 ff ; melt together, grind with wers of sulphur 合vij, sal ammoniac 1bl's: sublime.
3. Dissolve tin in spirit of salt, precipitate by natron m. : mix the precipitate with half its weight of sulphur, ad sublime.
4. Dissolve tin in spirit of salt; add liver of sulphur ssolved in water, which throws down the aurum musivum.
5. Tin filings, sulphur, sal ammoniac, ana p. æq.: subne. In these sublimations, if the fire is too great, only a ey sulphuret of tin is obtained. Used as a metallic gold lour in varnish work, sealing wax, \&c. : is supposed to be e basis of Blain's powder for the distemper in dogs.

## 21. GOLD.

Gold reaf. Aurum foliatum, Aurum in libellis. :ed to gild pills and other substances : there is a green vaty, not arising from any alloy, but tinged externally.
Party gold. Is gilt silver, hammered into leaves.
Shell cold. Aurum in musculis. Made by grinding cuttings of gold leaf with thick gum water, and spread; the ground gold in pond-muscle shells.
True gold powder. Aurum pulveratum. Grain gold 2z. quicksilver nearly boiling 6 oz ; rub together; then her distil off the quicksilver, or corrode it away with spirit nitre, and heat the black powder that is left red hot.
2. Grain gold 1 oz . dissolve in a mixture of spirit of re 16 oz . with common salt 4 oz .; add to the clear solu.
tion green vitriol 4 oz . dissolved in water; wash the precipitate and heat it red hot.
3. Dissolve gold in aqua regia, and draw off the acid by distillation; used in painting, gilding, \&c.

Purple prectpitate, Cassius' purple. Pracipitatum Cassii. Solution of gold in aqua regia 1 oz. distilled water Itb and a half; hang in the liquid slips of tin.
2. By precipitating the diluted solution of gold by dyers' spirit: used to communicate a purple colour to glass when melted in an open vessel; in a close vessel the glass receives no colour.

Crocus of gold. Crocus Solis. By dissolving gold in aqua regia, made of common salt, and adding kali ppm. q. s. to precipitate the whole; also used to colour glass purple; but it is difficult to produce by either of these means an equable colour: if heated strongly, it recovers its metallic lustre, and may be used for true gold powder.
2. By dipping rags in the solution of gold, drying and burning them: used to gild metals by rubbing it on them with a cork.

Aunum fulminans. By dissolving gold in aqua regia made with common salt, or a mixture of the spirits of nitre and of salt, and adding spirit of hartshorn q. s. to precipitate the gold.
2. By dissolving gold in aqua regia made with sal ammoniac, and precipitating the gold with kali ppm. Requires much care, as it explodes with the utmost violence, on the least friction, or a very slight heat: its fulminating quality may be destroyed, and the gold recovered, by boiling it in oil of vitriol, or oil of tartar, as also by mixing it with sul. phur, and exposing it to a gentle fire, which burns the sulphur away: it first becomes purple, and then appears in its metallic form. Aurum fulminans is sedative, antispasmodic. and carminative; used in spasmodic colic, in doses of gr. $i i j-v j . 」$

## 22. SILVER.

Silver leaf. Argentum foliatum. Used to corer pills and other substances.

Shell silver. Argentum in musculis. By grinding the cuttings of silver leaf with strong gum water, and spreading it in pond-muscle shells; used for writing silver coloured letters, but tarnishes, and is inferior to argentum musivum.

Silver dust. Crocus argenti. By adding slips of coper to a-solution of silver in spirit of nitre, and washing the recipitated metal with spirit of wine; used in japanning.
Fulminating silver, Brugnatelli's fulminating owder. By dissolving silver gr, xl, in spirit of nitre zij, or nar caustic 3 j , in distilled water $\tilde{\Sigma}_{\mathrm{J}}^{\mathrm{ij}}$; to this solution acad sirit of wine $\frac{3}{3} \mathrm{j}$, and boil the mixture in a retort or flask, that the condensed steam may run back into the boiling quid, a white crystalline powder forms at the bottom; when more seems to form, let it cool, wash the fulminating lver with river water, and dry it between bibulous paper, it without heat: explodes with the slightest friction; a nall portion, about 1-3rd of a grain, being put in the iddle of a bit of silver paper, the edge of which is smearI with paste, a bubble of glass is then wrapped up in is paper'; the bubble thus loaded will explode if thrown oon the ground, or trod upon: is a good alarm, if put in aces where it may be trodden upon by thieves, \&c.

## 23. ZINC.

Spelter, Zinc. Zincum. From lapis calaminaris, ixed with charcoal and distilled.
2. Sublimed, as a secondary product, in the fusion of me German ores; used to produce galvanism, and in fireorks.
Lapis calaminaris. Calamina, Cérbonas zinci impus. Found in mines; drying, astringent; used in ointents ; but cawk, sulphate of barytes, coloured has been ely sold for it; used also to furnish zinc, and for making ass.
Tutty. Tutia, Tuthia, Oxidum zinci impurum. The blimate collected in the chimnies of furnaces in which es mixed with lapis calaminaris are smelted, this sublimate ing mixed with clay and baked; or it is collected during the asting of blende, attaching itself to the upper part of the rnace : drying, astringent; used in eye waters and eye timents.
Amalgam of zine, Amalgama zinci. To zinc 2oz. ated in a crucible, add quicksilver 5 oz . also heated; used spread upon the rubbers of electrical machines.
Spefter solder, Brass and zinc ana p. æq. melted to $=$ ther.

Frowers of zinc. Flores zinci, Zincum calcinaterm, Zinci oxydum, Oxidum zinci. Procured by burning zinc in a long deep crucible, conveniently placed to collect the flowers as they form: antispasmodic ; used in epilepsy, gr. $v-x$; also in painting, as a substitute for white lead.
2. Pompholix, Nihil album. Collected in the smelting furnaces, wherein zinc ores or brass are melted: used in oint. ments for tutty.

## 24. BISMUTH.

Tin glass, Bishuth. Marcasita argentea. Eliguated from its ores; used in metallic mixtures to communicate fusibility; also in powder, as an imitation of silver for writing and painting.

Fusible metal. Bismuth 8 oz . lead 5 oz . tin 3 oz , melted together : spoons are made of this mixed metal and used for toys, as they melt in boiling water.

Silvering for globes. Bismuth 2 oz . lead, tin, ana 1 oz . quicksilver 4-10 oz.: when used, the uiternal surface of the giobes must be made very clean and dry, when the liquid metal is to be strained through linen, poured in, and when every part has been covered the superfluous flnid is withdrawn.

Argentur musivium. Bismuth, tin, ana 2\#b ; melt together, and add quicksilver 1 lb : brittle, used as a silver colour.

Soft metal. Bismuth, tin, and regulus of antimony, ana 1 th, melted together; used for taking impressions of medals or coins.

Tutenag. Bismuth 1 Hb , tin 21 tb ; melt together: used for buttons and vessels.

Magisteriy of bisiduth, Pearl white, Fard, SpaNISH white. Magisterium marcasita. Dissolve bismuth in spirit of nitre q. s. and add river or distilled water, which throws down a white powder, to be washed and dried in the shade.
2. Bismuth thfs, nitre Hij; grind together, and inject by degrees into an ignited tubulated earthen retort, with receivers annexed to catch the flowers.
3. Bismuth 42 b , spirit of nitre q . s. alout 2 th ; dissolve and precipitate by kali ppm .4 Hb , in water 6 lb ; wash the precipitate well: used as a cosmetic paint; grows yellow by keeping, especially in the light.

## 25. COBAI'T.

Zaffre. Saffica. Is a mixture of one part of roasted obalt, ground with two or three parts of yery pure quartzose and; is either in a cake, or reduced to powder; used as a lue colow for painting glass.

Smalit, Powder blue. Smalta, Azurum. Is made rom roasted cobalt, melted with twice or thrice its weight of and, and an equal weight of potash: the glass is poured ut into cold water, ground to powder, washed over and orted by its fineness, and the richness of its colour: used ${ }^{1}$ painting and in getting up linen.

## 26. MANGANESE.

Minganese. Magnesia nigra. Found in mines; used a a small proportion to render glass colourless, or in a ure proportion to colour it purple; and in chemical proesses to produce oxygen gas by distilling, or to supply oxyen to the species for spirit of salt, and thus convert it into xymuriatic acid.

Perigord stone. Lapis Petracorius. Found in mines; sed to colour glass black.

## 2\%. METALLIC SAL'TS.

Butter of antmony. Butyrum antimonii, Causticum utimoniale, Antimonium muriatum, Murias antimonii. rude antimony, corrosive sublimate, ana p. æq.; grind toether ; distil in a wide necked retort, and let the buttery atter that comes over run in a moist place to a liquid oil.

2 . Crude antimony 1 lb , corrosive sublimate 2 Hb : proed as before.
3. Liver of antimony 1 tt , dry common salt 2 th ; mix, ad add them to oil of vitriol 11b; distil, and let the buttery ass run into a liquid.
4. Antimony calcined to greyness, or powdered glass of limony 9 oz common salt 32 oz . oil of vitriol 2 toz oz water 3 oz. ; distil : this yields 40 oz . of butter of antimony.
5. Crude antimony, or glass of antimony 1th, common It 4 th , vil of vitriol 3 Ht , water 2 Ht ; distil. Caustic, but it to spread; used, however, largely by the ferriers.
Emetic tartar, Tarturus emeticus, 'Tartarum eme-
ticum, Antimonium tartarizatum, Tartarum antimoniatum, Tartris antimonii. Crocus metallorum 1tb, white tartar 4 ft ; boil them in water, filter, evaporate to a pellicle, and crystallise: the common process.
2. Crocus metallorum, or glass of antimony 317, cream of tartar 4 Ht , water four gallons: proceed as usual.
3. Protoxide of antimony P. D). ₹ij, cream of tartar zijfs, distilled water $\mathfrak{J}$ xviij : proceed as before.
4. Oxide of antimony P.L. 1809, 䧲i, cream of tartar Biij, distilled water ${ }^{5}$ xviij: very uncertain, as depending upon the state of the oxide.
5. Oil of vitriol ${ }^{3} \mathrm{ij}$, distilled water . . viij, heat, and add gradually crude antimony $\mathcal{Z}_{\mathrm{ij}}$, mixed with nitre $\bar{j}$; boil to dryness, wash the residuum until it is insipid; while moist, mix it with cream of tartar ${ }^{3} \mathrm{ij}$, distilled water 1 Ht ; boil and crystallize.
6. Boil 8 Hb of crude antimony with 16 Ht of oit of vitriol in an iron pot to dryness, wash the grey mass until the uncombined sulphuric acid is carried off, mix it with an equal weight of crude tartar; boil in water, and crystallise : 10Hb of the grey mass yields about 9 of emetic tartar in the first crop of crystals, the second crop will require to be redissolved and crystallised afresh. Philips. Emetic, in doses of gr. j-iv; alterative and diaphoretic, in very small doses, as gr. 1-16th to 1-4th.

Lunar caustic. Causticum Irunare, Argentum nitratum, Nitras argenti. Formed by dissolving pure silver in spirit of nitre, evaporating to dryness, melting and pouring the melted mass into moulds, which may be made by thrusting a greased stick into a piece of clay: deliquescent; used as a caustic.

Lunar crystals. Crystalli Lunares. By dissolving silver in spirit of nitre, and crystallising the salt, in the usual method; hydragogue, gr. fs-iij, made into pills with crumb of bread.

Blue vitrolo, Brue stone, Roman mitriol. Vitriclum coruleum, V. Romanum. Dbtained by evaporating the waters of copper mines, or hy roasting copper, then beiling the oxide in oil of vitriol, adding water, and erystallising: tonic, astringent in doses of gr. fs- ij ; cmetic, gr. ij-x, either in substance, or dissolved in water; externally escharotic; used to keep down fungrous flesh.

Cuprum ammoniatum, Ammoniaretum cupri. Blue vi-
riol $\mathfrak{j}$ iv, ammonia ppa. 3 vj̣; grind together, and dry by neans of bibulous paper: tonic, antispasmorlic ; used in epiepsy, gr. fs, gradually increased to gr. v.
French verdigris, Distilled verdigris. AErugo rystallisata, Crystalli Veneris. From verdigrise, dissolved a distilled vinegar; the solution filtered and crystallised.
2. Blue vitriol 24 oz . dissolved in water q. s. sugar of ead 30 oz . and a half, also dissolved in water; mix the soutions, filter, and crystallise by evaporation : yields about 0 oz. of crystals: a superior paint to common verdigrise, and certainly ought to be used in medicine, instead of the ther.

Green vtrriol, Copperas. Vitriolum vivide. Obained by moistening Martial pyrites, or leaving them exposd to the weather, washing out the vitriol which effloesces over them with water, and crystallising: strikes a lack colour with astringent substances; used in dyeing lack, blacking leather, making aqua fortis, and many other rades.

Sal Martis. Ferrum vitriolatum, Ferri sulphas. Oil f vitriol 8 oz. water 4 tb ; mix, and add clean nails till they re no longer dissolved; filter, evaporate, and crystallise.
2. Green vitriol 11t, water 41t; dissolve, filter, add oil f vitriol $\overline{3}$ ij; crystallise : tonic, emmenagogue, anthelmintic, T. j-v; used in glysters against ascarides.

Vitriol calcined to whiteness. Vitriolum ad albe'inem calcinatum, Sulphas ferri exsiccatum, Sulphas ferri xsiccatus, Green vitriol heated in an unglazed pot, or pread upon the top of an oven, or in a sunny place, until is white: astringent, drying; and as a preparative for disllation.

Ferrumi tartarizatum. Rub iron (not steel) filings 1th, ith cream of tartar 2 th , and water 1 Ht ; expose to the air I a week, dry, powder; add water 11t, expose it again to the ir for a week, dry and powder.
2. Tartarum ferri. Carbonas ferri (or rust of iron) oz. creaun of tartar 2 oz . water 1 th ; boil, filter, cool, filter gain, evaporate to a pellicle, cool, it will form a saline mass, hich is to be powdered : tonic, gr. $\mathrm{x}-3 \mathrm{fs}$, being less nauzons than other preparations of iron is preferred for feaales and children; employed also, dissolved in water, as an stringent lotion.
Ens Martis. Flores salis ammoniaci Murtiales, Florcs

## 204 SIMPLE SUBS'TANCES.-27. Metallic Salts.

Martiales, Ferrum ammoniacale, Ferrum ammoniatum, Murias ammonice et ferri. By subliming with a quick sudden heat sal ammoniac, rubbed with 8 -3ds or an equal weight of iron filings, or red oxide of iron; and repeat the sublimation with fresh salt, as long as the flowers are well coloured.
2. Sal ammoniac $6 i \mathrm{i}$, iron filings, not steel, 4 oz . sublime.
3. Disssolve iron in spirit of salt, add water and sal ammoniac, then evaporate to dryness.
4. Green ritriol 1tt, water 4th; dissolve, add kali ppm. 8 oz . dissolved in water; wash the precipitate, mix it, while moist, with sal ammoniac 6 th , spirit of salt 2 oz . : sublime in a short wide-neek retort into a receiver : deobstruent, astringent, gr. iij-xv; useful in glandular enlargements of the breests.

Hyprargyrus acetatus. Accias hydrargyri, Aeetis hydrargyri. Quicksilver ₹iij, diluted spirit of nitre q. s.; dissolve it, without heat; dissolve also kali acetatum $\frac{5}{3}$ iij, in boiling water 1 gall.; mix the two solutions, set them to crystallise, and wash the crystals.
2. Quicksilver 115, diluted spirit of nitre q. s. to dissolve it ; precipitate with aqua kali, wash and chry the precipitate; dissolve this precipitate in spirit of verdigris $q$. $s_{,}$; filter, evaporate to a pellicle, and crystallise: antivenereal, gr. $j$ nocte maneque, increasing the dose gradually.

Corrosive sublimate. Mercurius sublimatus corrosivus, Mercurius corrosizus albus, Hydraigyrus muriatus, Murias hydrargyri, Oxymurias hydrargyri, Murias hydravgyri corrosivum. Boil quicksilver 2H, in oil of vitriol 2 to 3th, to dryness; when cold, add common salt 2tb and a half to 4 ft , and sublime.
2. Green vitriol calcined to redness 400 tt , nitre and common salt ana 2001t, quicksilver 1801t, residtum of a preceding operation 50 Hb , impure corrosive sublimate of a preceding operation 20 th ; moisten with a portion of the acid that distilled over in a former process, and sublime.
3. Green vitriol calcined to redness 2 th , nitre, common salt ana 1th, quicksilver 1th: mix and sublime.
4. Quicksilver 40 oz. common salt 33 o. nitre 28 o\%. green vitriol cal. to redness 66 oz : mix and sublime.
5. Quicksilver 2Hb, spirit of salt 2H, spirit of nitre 1 tb : distil ; it yields 2th and a half of sublimate.
(i. Dissolve red precipitate in spirit of salt, and erystal-
se: antisyphilitic, acting quickly, but not permanently, $\therefore$ 1-Sth to $j$, twice a day, in gargles gr. iij to water 17b, or a wash in itch.
Sal alembioth. Corrosive sublimate, sal ammoniac ana æq. water q. s. to dissolve them; evaporate and crystallise: sily soluble in water, and on that account preferable to rosive sublimate as a medicine.
Prussiate of quicksilver. Red precipitate 1 oz. Prusin blue 2 oz . distilled water 6 oz . ; boil for half an hour, ter, pour on fresh water, boil and filter ; mix the two sotions, evaporate and crystallise : antisyphilitic $Э j$, taken in stilled water.
Sugall of lead. Sacchárum Saturni, Cerussa acetata, etis plumbi, Acetas plumbi, Superacetas phumbi. Ceruss $\hbar$, distilled vinegar 10 or 12 荿; boil, filter, evaporate to oellicle, and crystallise : the manufacturers use flake white: ernally, orr. iij-vij, as a specific in hooping-cough; exnally gr. ij to water $\overline{3} \mathrm{j}$, as an eye-water; 莐 to water $\frac{3}{3} \mathrm{v}$, as trong lotion, or $\tilde{5}^{x}$, for a weak. Precipitates the colouring itter from wine and spirit, is used by the excise office to re out of seized Holland gin the colour it obtains by being pt for some time in the tubs in which it is smuggled over, $d$ by which its value is depreciated; but this practice renis the gin liable to produce the colic, if drank liberally. White vitriol, White copperas. Vitriolum album, ncum vitriolatum. Obtained- at Goslar, by quenching the stel silver ores in troughs of water, evaporating this wasetting it by to crystallise, melting the crystals, skim1g off the impurities, pouring the melied mass into wooden ees, and disturbing the regular arystallisation by frequent ring.
2. Vitriolum album depuratum. By dissolving white viin water and recrystallising it.
3. Sal vitrioli P. L. 1745. Zincum vitriolatum purifiam. White vitriol 1tb, oil of vitriol 3 j , water 3 tb ; dise and crystallise.
5. White vitriol q. p. dissolve in water, add a piece of and digest for some hours; filter, evaporate, and crysise: tonic and antispasmodic, gr. $\mathrm{j}-\mathrm{ij}$; emetic and openg very quickly, gl: $x$ to $3^{f} \mathrm{f}$; externally astringent.

## 28. NEUTRAL SAL'TS.

Common alum, Rock alum. Alumen commune, Alumen rupeum, Sulphas ahomione. In large lunips, formed by pouring a saturated solution into barrels, where it forms a solid mass.

Roman alum. Alumen Romanum. In crystals, pale red when broken, and covered with a reddish efflorescence: not refined, used by the dyers, contains no ammonia.

Roche alum. Alumen de Rochi. From the original manufactory at Roccha, formerly called Edessa, in Syria, in pieces the size of an almond to that of an egg, covered with a reddish efflorescence.

Common Roche alum. Alumen rupeum vulgare. Fragments of common alum, moistened and shaken with prepared lapis calaminaris. Obtained from different minerals by elixation and crystallisation, previously adding potashes or urine, or both: tonic, astringent, gr. v- $x x$, in gargles $3^{\text {fs }}$ to water $\frac{7 v}{} \mathrm{iv}$, in eye-waters and injections gr. xij to water亏vj ; used largely by the dyers, also to harden tallow for mould candles, and many other purposes in the arts.

Burnt alum. Alumen ustum, Alumen exsiccatum, Sulphas alumince exsiccatum. By melting common alum, and keeping it on the fire until it cease to boil; used in colic, $Э \mathrm{j}$ for a dose; externally escharotic.

Sal ammoniac. Sal ammoniacus, Murias ammoniue. Originally manufactured by subliming the soot formed by burning camel's dung; 26苂 of that soot yielding 6 tt .
2. By adding oil of vitriol to spirit of hartshorn, or ammonia ppa. crystallising the product, mixing it with common salt, and subliming: in this process the residuum, by solution in water and crystallisation, yields Glauber's salt.
3. By adding spirit of salt to spirit of hartshorn or ammonia ppa. and either crystallising or subliming the sal ammoniac. Diuretic, also added to Peruvian bark to increase its febrifuge power ; externally stimulant, $\bar{\jmath} \mathrm{J}$ to water $\bar{J}$ viij, as a lotion in gangrene, indolent tumours, and chilblains; used in dyeing to brighten certain colours, and by other artists for various purposes.

Sal secretus Glauberi. By adding spirit of vitriol either to sal ammoniac or ammonia ppa. evaporating and crystallising: diuretic, aperitive.

Murias barytie. Dissolve carbonate of barytes, i. e.
ockscomb spar 1 tt , in spinit of salt 1 tb previously mixed ith water 3 lb ; filter, and crystallise by repeated evaporaon.
2. Mix sulphate of barytes, i. e. cawk, 12 tb , with charal 4 oz ; keep it red hot in a covered vessel for six hours, oil the mass in water 8tt, strain, and to the clear liquor id spirit of salt as long as it produces any effervescence; stly, crystallise by evaporation. Vermifuge, alterant; used r. $j$, bis terve in die, in cancer and scrophula.

Murras calcis. Dissolve the mass left in the distillation lime and sal ammoniac in water; filter, and evaporate to ryness.
2. Dissolve white marble or chalk in spirit of salt, and aporate to dryness. Used for preparing the liquid muriate nployed as a substitute for the preceding.
Epsom salt. S'al Epsomensis, Sal catharticus amarus, ragnesia vitriolata, Sulphas magnesio. Originally obined from the springs at Epsom in Surry, but'since from a water: the residuum in the salt-pans after the common It has crystallised, usually called bittern, is an almost pure lution of this salt: purgative $\overline{3} j-\mathcal{F}^{\mathrm{J}} \mathrm{ij}$; allays the pain of e colic; although nauseous to the taste, yet if taken in zall, but repeated doses largely diluted, it is usually retainon the stomach, although other substances are rejected by also used in purgative clysters.
Sal diureticus. Terra foliata tartari, Kali acetatum, eetis potassce, Acetas potassce, Acetas kali. Saturate kali m. with distilled vinegar, and evaporate to dryness; reisolve the salt in distilled water, and evaporate until it acretes on cooling into a crystalline foliated mass: diuretic cathartic, as it is managed, dose $Э \mathrm{fs}$ to 3 ij .
Rough sait petre. Sul petra, Nitrum. Obtained m the putrefaction of animal matters in contact with caleous or alkaline earths, by elixiviation, adding, if necesy, wood ashes to supply the alkaline basis.
Refined safit petre, Nitre. Sal nitri, Kali nitran, Nitras potassce. Obtained from rough salt petre, by lissolving it in water, and crystallising.
2. By adding only a small quantity of water to the rough re, and draining it off, as the nitre itself is the least sole of the salts contained in rough salt petre. A cooling Hetic in small repeated doses of gr. v-x each, every two urs; taken to $\tilde{\tilde{5}} \mathrm{j}$ it occasions bloody stools, and even
death; a small piece dissolved slowly in the mouth fiequently stops a sore throat in the beginning; used also in gargles: employed in artillery and fireworks.

Cristal innerad. Leipis prunelle, S'el pruneller. Melt nitre 1th, inject upon it gradually flowers of sulphur 2 oz . and pour it out into moulds, either balls or cakes
2. Melt nitre, and when it flows smouth, pour it into warm moulds; used in medicine as nitre.

Macruer's neutral arsenical, salt. Arsenias tiali. Distil white arsenic and nitre ana p. xeq.; dissolve the residuum in water, evaporate and crystallise: tonic, gr. 1-1 (ith to 1 -4th in pills; the liquid that comes over, although generally blue, is spirit of nitre.

Sal febrifugus Sylvit. Spiritus salis marini coagulatus. By saturating spirit of salt with kali ppm. evaporating and crystallising.
2. By heating or distilling sal ammoniac and kali ppm. dissolving the residuum in water, craporating and crystailising: aperient, diuretic.

Oxymunate of potash. Potasse oxymurias. Mix common salt $3 \%$, manmanese $2 t h$, and add oil of vitriol 2 市, previously diluted with water q. s.: distil into a receiver containing kali ppm. 6 oz . dissolved in water 3 tb : when the distillation is finished, evaporate the liquid in the receiver slowly in the dark, the oxymuriate will crystallise first in flakes: stimulant, gr. j-ij; explodes when struck, or dropped into acids.

Salt of somet. Sal acetosclice revas. From the leaves of wood sorrel, bruised and expressed, the juice is then left to settle, poured off clear, and crystallised by sluw evaporation : 1 cwt. of wood sorrel yields 5 or 6 nz .
2. From the leaves of sheeps' sorrel, treated in the same manner.
3. By dropping aqua kali into a saturated solution of oxalic acid in water, when it precipitates, and may he separated by filtration: "if too much alkali is added, it is taken up, and will reguire an addition of the acid to throw it down again: cooling; used to make lemonade and whey, as also salt of lamons.

Vithiohated tartar. Tartarum eitrioiatum, Nitrum ritriolutum, Kali ritriolatum, Sulphas potassser. Saturate spirit of vitriol with aqua kali, add water if amy salt is precipitated; filter the liquor, evapomate, and crystallise.
2. Dissolve green vitriol in water, precipitate with aq. li, wash the precipitate, filter, evaporate, and crystallise.
3. Dissolve the residuum left in distilling Glauber's spirit nitre in water, add aqua kali, if necessary, to saturate superfluous acid, evaporate and crystallise.
4. Evaporate the liquid that is left in making magnesia a, and crystallise : aperient, $Э \mathrm{j}$ to 5 fs ; cathartic, ziiij to $j$; useful in visceral obstructions: being very hard, it is, ed in compound powders to divide jalap or scammony while turating with them.
Sal enixum. Obtained by boiling the residuum left in distillation of aqua fortis in water, straining and evapoing to dryness: used as a flux by silversmiths and pla;, also to adulterate creain of tartar, and, being powdered I rubbed into the wood with a hard brush, to stop the raes of the dry rot; contains superabundant acid, but less n the next substance.
Supersulphas potassce. Dissolve the salt that remains listilling nitre with an equal weight of oil of vitriol in er, evaporate to a pellicle, crystallise, and dry the cryson bibulous paper : a cooling purgative, $Э \mathrm{j}$ to b ij . Sulphas potassee cum sulphure. Mix nitre and flowers ulphur ana p. rq. throw them by small portions into a hot crucible; let the mass cool as soon as the deflagrais over.
2. S'al polychrestus Glaseri. Proceed as before; but as as the deflagration is over, raise the heat, keep the mass ision for some time, pour it out, dissolve it in water ; , evaporate, and crystallise : use the same as vitriolated $x$, from which that of Glaser differs very little, if at all. Zed argol. Tartarum rubrum. From red wines, Vhite argol. Tartarum album, Supertartris potassoe rus. From white wines: the essential salt of the grape, sited during the fermentation of the wine, especially in orthern wine countries, where the fruit does not ripen ughly. Choice white argol is preferred by some, for a cine, in preference to cream of tartar, as less apt to : used as fluxes, for preparing the best kali preparain dyeing and many arts.
rystals of tartar, Cream of tartar when in er. Crystalli tartari, Cremor tartari, Potassa superis. Obtained by boiling white argol in water, with white clay; filtrating, evaporating, and crystallising.

## 210 SIMPLE SUBSTANCES.-28. Neutral Salts.

2. By clarifying the solution with white of eggs and wood ashes, instead of white clay, as in the former.
3. By dissolving argol thrce parts, sal enixum one part in water, and crystallising: cooling, laxative, may be taken ad libitum; used as a diuretic in dropsy.

Sonuble tartar. Tartarum solubile, Tartarum tartarisatum, Kali tartarisatum, 'Tartris potassce, 'I'artras potasse, Tartarus Rati. Dissolve kali ppm. 111 b in a gallon of water, add cream of tartar as long as any effervescence arises, i. c. rather less than 31b ; evaporate and crystallise: purgative ${ }^{2} \mathrm{j}$; laxative 3 j -iij ; also added to sema and resinous purgatives $Э j-3 j$, to prevent their griping.

Tincar, Rough borax. Chrysocolla, Borax cruda. Found in lakes, dried upon their edges; used in soldering, and for a flux.

Refned borax.: Borax raffinata, Sodx boras, Soda subboras. By dissolving tincar in water, boiling the solution for some time, filtering, and crystallising by slowly cooling the liquor: diuretic, emmenagogue, 3 fs- $\mathrm{Sij}_{\mathrm{ij}}$; externall, as a gargle in thrush, or to stop excessive salivation: used also in soldering.

Rock sait. Sal gemma, Sal fossilis. Found native in mines.

Bay salt. Sal marinus, Sal niger. From sea water slowly evaporated by the sun, in warm countries; is in larg crystals, preferred for salting meat and fish, contains iodine.

Common salt. Sal communis, Sal culinaris, Sodu murvis. From rock salt, dissolved in water, and crystallised by boiling down the liquor as long as any crystals are produced, taking out the crystals as they are formed, and puiting them in baskets to drain; or from sea water and salt spring water, by boiling down in like manner: stimulant antiseptic ; but more used as seasoning for food, or to preserve animal substances, than in medicine, $\overline{\tilde{J} j}$ in clysters a-s
 wens :and bruises.

Decmeprtated comanon salit. Sal communis decrefitutus, Muricts socter siccatus. Heat the salt in a covernt ressel till it ceases to crackle.

MAstraiss pergive nint. Soda phosphorata, plosplacts scolle: 'Lo phosphoric acid dissolved in water, add nairon ppm. also dissohved in water, q. s. to saturate the atid evaporate and crystallse.
2. Dissolve well-burnt bones in spirit of nitre; dissolve Glauber's salt in water, and pour it into the nitrous soon, as long as a precipitation takes place; distil to recothe spirit of nitre, wash the residum, evaporate the ley s produced and crystallise: purgative $3 v j-3 x$, in broth ead of common salt, the difference of taste being very c to those who are accustomed to eat much salt with, $r$ broth.
Glauber's salt. Sal mirabilis Glauberi, Sal cathars Glauberi, Natron vitriolatum, Sodo sulphas. Dis$e$ the residuum left in making Glauber's spirit of salt, in er, saturate the excess of acid, either with natron ppm. owdered chalk: filter, evaporate, and crystallise.
2. To common spirit of hartshorn add oil of vitriol, tallise the sulphate of ammonia thus made, mix this with nou salt, sublime the sal ammoniac from it, and the iber's salt remains, which is to be dissolved in water, and allised. This is the process of the manufacturers.
. Comnon Epsom salt. When the erystallisation of ber's salt is disturbed by stirring the liquor, it shoots nall spiculæ, and is sold under this name: purgative, Jjfs, if in crystals; but when it has dried to a white ler, the dose must be reduced one half.
Zochelde salt. Sal Rupellensis, Natron tartarisaSoda tartarisata, Tartris potasse et sodo, Tartras sce et sodoc. Dissolve natron ppm. 20 oz . in water ; add, while boiling, cream of tartar 24 oz .: filter, rate to a pellicle, and crystallise.
Dissolve cream of tartar đbiij, in water 3 gall. add pin. q. s. to saturate the superfluous acid, as in making e tartar: filter, add common salt $\overline{3} \mathrm{xj}$, evaporate and llise. P. Sirec. A more agreeable purgative than Glaiiialt, but rather weaker. indiver, Glass gall. Fel vitri. The saline scum wims on the glass when first made ; is principally comof common salt and vitriolated tartar: used as a flux ne artists.

## 29. ALKALIES.

Under rehich are included, not only the pure alkalies, but also the carbonates of them, as the acid combined reith them is so weak as scarcely to alter their properties.
Ashr batcs. Principally the ashes of fern, made up into balls: used for washing instead of soap.

Potash. Alumen catinum. From land plants burned to ashes, part of the ashes elixated with water, and the ley used to moisten the remainder of the ashes, mixed with quicklime, stratifying this paste with billets of wood, and setting the pile on fire: contains more earth than pearl ash, but is more pungent; saturates more acid, and dissolves nil more powerfully.

Pearl ashr. Cineres Russici, Cineres clavellati, Po tassa carbonas impurus, Potassa impura. From the ashes of land plants, by calcination, solution in water, filtration, and evaporation.

Burnt lees of wine. Cinis infectorites, Cinis fucum, Alumen focciom. From the ashes of lees of wine, and rine twigs, very pure : used by the Continental dyers, in prefer. ence to pearl ash.

Salt of wormwood. Sal absynthii, Sal herbarum, Kali proparatum, Subcarbonas kali, Carbonas potassce P.E. Potassce subcarbonas. Pour upon péarl ash an equal weight of boiling water; filter and eraporate until the liquor gros thick, then remove the fire and stir the salt continually, und it concretes into small grains.
2. Salt of tartar. Sal tartari, Kali ppm. e tartetes, Kati e tartaro, Carbonas potassa purissimus, Potassce subcarbonas e tartaro. Burn argol in a crucible until it enits no more smoke, then powder and calcine it afresh till it is nearly white; dissolve it in water, filtre and evaporate.
3. Fised nitre. Nitrum fixatum. Nitre and charcoll powder ana nens. æq.; mix, throw into a red hot crucible.
4. White flux. Fluxus albus. Nitre and tartar ane p. seg. : deflagrate as before: diuretic, in doses gr. y to $3 \%$; cathartic in larger doses; used in making glass, in bleaching and scouring cloth, and to precipitate alum.

Saline oil of tamtar. Olcum tartari per deliquizm, Aqua kali, Liquor potassa subcarbonatis, Aqua subcurbonatis liali. Kali ppm. 1iti, distilled water $\mathrm{F}^{\mathrm{J}} \mathrm{xj}$; dissohe and filter.
2. Spread potash, or any other of the above alkalies, n , on plates, in a damp cellar, and when it has run into ter, strain through linen: used in scouring.
Kali aeratum. Potassa carbonas P. L. Salt of tartar, er ana 11 b ; dissolve, add ammonia preparata ${ }^{5} \mathrm{iij}$, keep a heat of 180 deg . Fahr. for three hours, and set it by crystallise: by evaporation with a gentle heat a second crop crystals may be obtained.
2. Dissolve kali ppm. 11b in water 31b, and pass through liquor, the gas expelled by adding pounded marble to it of vitriol; the kali aeratum crystallises as fast as it is ned : preferable, as being milder tasted than the subcarate; used to form effervescent mixtures.
Lapis infernalis. Lapis septicus, Kali purum, Poa, Potassa fissa, Kali causticum. Soft-soap ley q. s. oorate till the boiling ceases, and the salt melts smoothly oil, then pour it out on an iron plate, and cut it into es : caustic, but is apt to spread.
Soft-soap ley. Lixivium saponarium P. L. 1745. a leali puri, Aqua potassa, Liquor potassa, Aqua kali tici. Upon quick lime 11b pour boiling distilled water and add kali ppm. 115, dissolved in water 21b : cover vessel, and when cool filter through cotton cloth; if it vesce with a dilute acid, it must be treated again with lime. A pint should weigh exactly $3 x v j$; if it weigh 2 , for every drachm of excess add ${ }_{5} \mathrm{fs}$ of distilled water ch to troy; if less, evaporate some part of it: used in ng soap.
3artlha ashes. Sal alkali, Barilla, Soda impura, ronus sodee impurus. The ashes of salicornia europæa. Kelp. The ashes of fucus vesiculosus and several other es; used in bleaching. joda of the shops. From kelp, by boiling in water, tion, and evaporation to dryness : used in washing, not ing the hands so much as pearl ash.
Jatron praparatum. Sodoe subcarbonas, Carbonas P. E. \& D. Dissolve barilha ashes or kelp 1tb, in water 11. filter and evaporate to 21 t , set it aside to crystalantacid, deobstruent, gr. $x-3$ s., bis terve in die.
ode subcarbonas exsiccata. Carbonas sodce sicca-
Melt natron ppm. until it becomes dry, stirring it aually: antacid; used also in calculous complaints, in

## 214 SIMPLE SUBSTANCES．－29．Alkalies．

small doses frequently repeated so as to take $Э j-i j$ in the day．

Sode，carboncas P．L．Natron ppin．distilled water ana 11b ；dissolve and add ammonia ppa．亏iij，apply a gentle heat of 180 deg．Fahr．for three hours，and set it by to crys－ tallise ；a second crop of crystals may be obtained by evapo－ rating what remains．

2．Pass the gas from pounded marble，dissolving in spirit of vitriol through a solution of natron ppm．in water，as in making acrated kali：antacid，gr．x－Эi．

Soap ley．From barilha or kelp，treated with quick－ lime，as in making soft－soap ley ：used in making hard soap．

Spirit of hartshorn．Spiritus cornu cervi，Liquor volatilis cornu cervi．Obtained from bones which have been previously ground and boiled to separate the grease they contain，as also from the guts and garbage of the slaughter－ houses，by distillation in iron pots with stone－ware heads； separating the oil and salt by filtration；it is then rectified for sale by distillation from 1－8th of wood ashes，or charcoal powder，ammonia ppa．first arises；when it begins to melt by the spirit that succeeds，the distillation is stopped for the present，the ammonia taken out，and then the distillation begun again，till nearly the whole of the liquor has come over．It is also obtained largely from urine．

2．Spiritus salis ammoniaci，Aqua ammonice P．I． Aqua car－bonatis ammoniac．Kali ppm．sal ammoniac ana 315，water 6 II ；distil to dryness．

3．Liquoŕ ammonia carbonatis．Ammonia ppa．$亏 3$ riii， distilled water $1 \mathrm{Dj} j$ ；dissolve and filter．

4．Liquor ammonice subcarbonatis．Ammonia pla亏iiij，distilled water 1 bj ；dissolve and filter：stimulant， $\mathrm{gtt}$. to 3 j ，also as an crrhine．

Salt of hartshorin，Volatile salit，Sublling salt． Bakers＇salt．Sal cornu cervi，Sal volatilis salis ammo－ niaci，Ammonia proparata，Carbonas ammonio，Subcar－ bonas ammonio．Is obtained in the same process with spirit of hartshorn，and is purified by mixture with 1－Sth of chall and sublimation with a gentle heat．

2．Sal ammoniac 1 F ，powdered chalk 21b；mix accu－ rately，and sublime．

3．Sal ammoniac，natron ppm．ana tbj ；sublime．P．D． Stimulant，and used as an errhine，like the spirit：mudh used by the bakers，as it makes better bread with unsound

Ir than either natron or kali ppm. : if the flour is not very sound, 1 oz . of this salt is sufficient for 141 古 of flour ; but very worst of flour may be brought into use if sufficient this salt is added. The salt is dissolved in the water, and dough kneaded up very stiff.
Spirit of sal amionlac. Aqua ammonice pura. Lime, er ana Hij; slake, and add sal ammoniac \#jj, boiling waItbvj, cover the vessel immediately, when cold pour off liquor, and distil with a gentle heat itj.
2. Liquor ammonice P. L. 1809. Quicklime, sal ammoc ana Ibij; mix and pour immediately into a retort coning water tbj, distil into water $\overline{3}$ viij, kept cool until the ort becomes red.
3. Aqua ammonice causticce. Lime \#1ij, water ībj, slake cover it up ; the next day add sal ammoniac $\tilde{5} \mathrm{xvj}$, walbv, distil $\tilde{5} x \mathrm{j}$. The specific gravity of this Huid ought e. 934.
4. Aqua ammonice P. E. Lime tbjfs, water Jix, slake, in cool, add sal ammoniac 1tbj; distil into distilled water until the retort becomes red hot.
5. Liquor ammonice P. L. 1815. Lime $\overline{5} \mathrm{vj}$, water 1 bj ; e, and cover up for an hour, then add sal ammoniac j, boiling water 1biij, and cover till cold, then strain and 1 zxij. Specific gravity should be 960 .
6. Spirit of hartshorn q. v. fresh slaked lime 1-4th its ht; distil into water kept cool, and if necessary, adits specific gravity by the addition of distilled water, or epeating the operation : antacid, stimulant.

## 30. ACIDS.

Vinegar. Acetum vini, Acidum acetosum. From wine, exposed to the air; those wines that contain the most lage are fittest for the purpose.
Common white wine vinegar, Alegar. Acetum ccice. From ale, treated in the same way.
Jommon vinegar. Acetum. From weak malt liquor, ed for the purpose; its various strength is in England ted by numbers, 18 being the lowest, and $2 \mathscr{2}$ the est.
yooseberry vinegar. From gooseberries smashed with r, and exposed to the sun, until the liquor seems to have ired its utmost acidity: used principally as a sauce, and
to preserve vegetable substances; but is emploved externally as a refrigerant and repeller ; useful also internally when an over-dose of strong wine, spirit, upium, or other narcotic poison has been taken. A false strength is given to it by adding oil of vitriol, or some acrid vegetable, as pellitory of Spain, grana Cnidia, capsicum; it is rendered colourless by adding fresh burned bone black, ; oz. to a gallon.

Quass. Posca? Is made by mixing rye flour and water together, and leaving it till it has turned sour : much drank in Russia, looks thick and unpleasing at first, but becomes agreeable by use.

Distilled vinegar. Acetum distillatum, Acidum aceticum P. L. Acidum acetosum distillatum. From vinegar by distillation, rejecting the 4 th or 8 th part that comes over first, and avoiding its acquiring a burnt flavour. P. D. requires it to have the specific gravity of 1.006 , but in general it is distilled as long as it comes over clear: used sometimes in pickles, where its want of colour is an advantage.

Vinegar of wood. Acetum lignorum. From wood distilled in large iron cylinders for the manufacture of charcoal for gunpowder; may be used for all the purposes of distilled vinegar.

Strong acetous acid. Acidum acetosum forte. Vitriol calcined to whiteness Hj , sugar of lead $\tilde{5} \mathrm{x}$; rub together and distil.
2. Acidum aceticum P. D. Kali acetatum 号vj, add gradually oil of vitriol ${ }_{3} \mathrm{iij}$, allowing the mixture to cool between each addition; distil to dryness.
3. Spiritus Veneris, Acidum acetosum. Verdigris 2ij. dry it in a water-bath, then distil in a sand heat, and redistil the produced liquor. Its specific gravity is stated to be 1.0.50.
4. Sugar of lead 917 , oil of vitriol 4 1 tb and a half, distil 21 b and a half" used to make aromatic vinegar, and as a very active errhine.

Flowers of benjamin. Flores benzoini, Flores benzoes, Acidum benzoicum. Melt benjamin in a glazed carthen pot, to the neck of which a paper cone or chamber is annexed, regulating the heat with great care that little or no oil may arise with the flowers; if the flowers are tinged with oil, press them between bibulous paper, mix with white clay, and sublime again: 1 bj of benjamin yielded Fij of flowers.
2. Benjamin ibjfs, lime 告iiij; rub together and boil in water 1 gall.; decant the clear, and boil the sediment in
water tbiiij; decant, mix the two liquors and boil down to a half, filter, add spirit of salt q. s. to precipitate the flowers, decant the liquor, dry and sublime the flowers. Scheele. 1 thj of benjamin yields ${ }^{5} \mathrm{j} 3 \mathrm{rj} Э \mathrm{jij}$ of flowers.
3. Benjanin Fxxiv, natron ppm. Jviiij; rub together, boil in water 1 bxvj , strain, boil the residue in water 1 tvj , strain, mix the two liquors, boil to 1 lbij ; filter and precipitate with spirit of vitriol q.s.; dissolve the precipitate in boiling water, strain and crystallise. Gren. toj benjamin yielded $\overline{\mathrm{J} j} 3 \mathrm{j} Э \mathrm{j}$ of flowers.
4. May be obtained from urine. A manufactory of sal ammomiac at Schoenbec, near Magdeburgh, which uses urine, is able to supply flowers of benjamin by the cwt. Expectorant; used in chronic coughs, gr. x- 3 fs.

Sedative salt. Sal acidum boracis. Borax 3 от. water 1bij ; dissolve, add oil of vitriol $5^{\mathrm{rj}}$, evaporate to a pellicle and crystallise: sedative.

Concrete acid of lemons. Acidum citricum, Acidum. citricum crystallis concretum. Saturate lemon or lime juice with powdered chalk, wash the sediment with cold water and dry it;; each gallon of lemon juice forms 8 oz . 1-4th to 19 oz. 3-4ths of this citrate of lime: upon this powder pour spirit of vitriol fl. 5 ix to each $\frac{5}{5}$ of chalk previously used; or, if the imported citrate of lime is used, 15 th will require 401 b of a spirit of vitriol, whose specific gravity is 1.15 : strain through a cloth and expose the liquor in shallow vessels, that it may crystallise by spontaneous evaporation: an agreeable acid, cooling, and antiseptic ; 3 j in water $\overline{\mathrm{J}} \mathrm{j}$, is equal to lemon juice. Gr. xxvj saturate kali ppm. gr. lixj, or ammon. ppa. gr. xlij, or magnesia alba gr. xl. If heat is culployed for the evaporation it is apt to become brown, and is hus spoiled.

Acid of ants. Acidum formicarum. Ants 1bj, boilng water Hbiiij; infuse for three hours, press out the liquor, and strain : stimulant; used as a lotion in impotency.

Honey water. Aqua mellis. Honey 4tb, very dry sand 21 b , put into a vessel that will hold five times as much, distil with a gentle heat a yellowish acid water : encourages the growth of the hair.

Spirit of salt. Spiritus salis communis, Acidum muriaticum. Common salt 101b, common clay 201b, water sufficient to make them into balls: distil while moist with a violent heat, and rectify by redistillation.

## 218

2. Dried common salt 24th, oil of vitriol 2015, water 615 ; mix and distil into 1215 more of water kept cool ; when distilled in an iron pot with a stone-ware head, all the water is put into the receivers. A bottle that holds $60 \%$. of water, ought to hold 7 oz . of this acid, and an ounce measure of it should dissolve 3 iij Эij of limestone, which will show if it is free from oil of vitriol.
3. Bittern', or residuum of sea-water after the common salt has been obtained by evaporation, 5 Ht , oil of vitriol 1 H previously diluted with water 2th; distil: tonic, diuretic, antiseptic, gtt. $x-x x$, well diluted in typhus, 3 fs- 3 ij in water ${ }^{\circ} \mathrm{vj}$ as a gargle in putrid sore throat, gtt. viij in water $\mathcal{J}^{\text {iv }}$ as an injection in gonorrhœa: used in the arts as a cheap acid; a small portion improves salted provisions.

Acidum muriaticum dilutum. Spirit of salt, spec. grav. 1.170 , distilled water ana p. æq.; mix: the specific gravity should be 1.080 : as the former.

Strong spirit of nitre, Nitre fortis. Spiritus nitri, Acidum nitrosum. Nitre 615, oil of vitriol 4itb; distil to dryness. A bottle that holds 4 oz . of water ought to hold 6 oz . of this acid, and an ounce measure of it, diluted with water, should dissolve 3 vij of limestone.
2. Nitre 11 t , clay or brickcust 4 tb : mix and distil.

Colourless spirit of ntrre. Acidum nitricum. Distil nitrous acid in a glass retort into an unluted receiver until the acid in the retort has lost its colour.
2. Nitre very pure and dried, oil of vitriol, ana 2 Db ; distil till red fumes appear; redistil from nitre 1 oz : produces 4 th.

Aqua fortis duplex. Green vitriol calcined almost to redness, nitre, ana p. æq.: distil.
2. Spirit of nitre 31 b , water 21 b , or q. s. that a bottle holding 6 oz . of water shall hold 8 oz . of this acid.
3. Spirit of nitre 4th, aqua fortis simplex 61t, oil of vitriol 2lb; mix : for ferriers only.

Aqua fortis communis. Acidum nitrosum ditutum. Nitre, green vitriol not calcined, ana 61b, green vitriol calcined 3 th : distil.
2. Spirit of nitre, distilled water, ana p. æq. by weight. A bottle that holds 6 oz . and a quarter of water should hold 8 oz . of this acid.

Aqua fortis simplex. Green vitriol Q1t, nitre 1th: distil. 2. Spirit of nitre 2 Hj , water 3 Ht , or q . s. that a bottle
bolding 4 oz . and a half of water should hold 5 oz . of this acid.
3. Aqua fortis duplex, water, ana p. æq. by weight.

Acidim nitricum dilutiom. Colourless spirit of nitre $\overline{5} \mathrm{j}$ measure, distilled water ${ }^{5} \mathrm{Jix}$ measure.

The stronger kinds of this acid are used as a caustic to warts, Scc. particularly by ferriers, for which the addition of oil of vitriol is an advantage ; diluted so as not to injure the teeth, viz. of the strong acid gtt. $\mathrm{j}-\mathrm{x}$, in a small tumbler of water, is useful in liver complaints, lues venerea, nausea from dyspepsia, sea-sickness, \&rc.: in the arts to dissolve metals or cleanse their surfaces. The accidental misture of spirit of salt, arising from impurities in the nitre, may be got rid of by dissolving refined silver in some of the acid, pouring off the clear, and dropping it into the remainler as long as any precipitation takes place; the mixture of jil of vitriol is best got rid of by distilling again with the addition of some nitre, if such precision is necessary.

Aqua regla, Spirit of nitre 16 oz . common salt 4 oz.. : lissolve.
2. Spirit of nitre 16 oz . sal ammoniac 4 oz : dissolve.
3. Common aqua regia. Spirit of salt 211b, spirit of aitre 1tb; dissolves gold; used in some arts.

Dephlogisticated spirit of salt, Oxymurtatic acid. Acidum oxymuriaticum, Aqua oxymuriatica. Common salt 31t, manganese 1 tb , oil of vitriol 91 b , water 1 Hb : distil, olacing water q.s. in the receiver: pale greenish yellow, carcely heavier than water ; used in syphilis and scarlatina, 3 fs - $3 i i j$, in water 5 viij, taken, by small doses, in a day: sleaches linen, straw, and takes out fruit spots, iron moulds, or ink marks.

Acid of Prussian blue. Acidum Prussicum. Prusian blue 10 oz . calcined mercury 5 oz . distilled water 30 oz .: oil till the blue colour is changed to a yellowish green, filer, add hot water 10 oz . to wash the sediment perfectly ; our the liquor upon clean iron filings 2 oz . and a half, and idd oil of vitriol 1 oz ; pour the liquid from the quicksilver hat has separated, and distil till 1-4th part has passed. scheele.
2. Proceed as before, but instead of distilling 1-4th part, lraw off only $1-6$ th, and redistil upon chalk, gr. ij to the iz. drawing off only 3 -4ths; this is of an uniform strength,
and may be kept some time, provided the place is cool and dark. La Planche.
3. Prussian blue 4 oz . oil of vitriol, water, ana 2 oz : distil. Parkes. Strong Prussic acid in very small quantity, gtt. $j$ - $i j$, cither applied to the tongue or even to the skin, kills instantancously, as if by lightning, and the body exhales for several days a strong smell of bitter almonds: gitt. vj-x of Scheele's or La Planclic's acid in water yiij to iv, taken by tea-spoonfuls every two hours, is beneficial in chronic cough and in phthisis.

Sal succini. Acidum succini. Obtained by distillation from amber, expressing the acid salt between blotting-paper, and either subliming it again, or dissolving it in water and crystallising : antispasmodic, diuretic, gr. v-Эj.

Oil of vitriol. Oleum vitrioli, Spiritus vitrioli. fortis, Acidum vitriolicum, Acidum sulphuricum. From green vitriol, calcined till it is yellow, by distillation.
2. Common oll of vitriol. Oleum vitrioli vulgare, Oleum sulphuris per campanam. Sulphur 1 cwt . nitre 121t; mixed together and burned gradually in large chambers, lined with lead or varnished inside, the bottom being covered with a thin surface of water to absorb the acid: the acid liquor is then exposed for some time to the air, the superfluous water abstracted by evaporation in leaden boilers, and the operation finished by distilling till the acid in the retort is sufficiently concentrated. A bottle that holds 12 oz . of water should hold full 22 oz . of this acid. 'The contact of any organic matter renders it black; it is rendered clear again by adding a little spirit of nitre, gitt. ij to each oz. and heating it to boiling: used as a caustic to warts, wounds, \&c. and by many artisans to dissolve metals or alter colours.

Spirit of vitriol, Vitriol to clean coppers. Spiritus vitrioli, Spiritus vitrioli tenuis, Acidum vitriolicum dilutum, Acidum sulphuricum dilutum. Oil of vitriol ${ }_{5} \mathrm{iij}$ measures, distilled water $\overline{5}$ xxix meas. : mix. P. L.
2. Oil of vitriol 1 oz . distilled water 7 oz . mix. P. E. and P. D. Astringent, tonic; gtt. $x x-5 i j$, in a cup of water; in a gargle 3 j to ${ }^{5}$ viij water to check salivation; by workmen and maid-servants to clean copper and irou work: also used as a cheap acid in punch and acid stews, instead of lemons, and to give strength to poor vinegar.

Sulphubeous Acib. Gas sulphuris P. L. 1720. Collected by burning brimstore under a glass jar, standing with
its mouth downwards in a plate of water, till the water is sufficiently acid.
2. Oil of vitriol, quicksilver, ana p. æq. boil in a retort and pass the gas into water q.s.: used to bleach silk, straw, take fruit stains out of linen, or stop the fermentation of wine.

Spirit of tartar. Spiritus tartari. Distil argol and separate the acid spirit from the oil by a funnel ; the residuum yields, by burning in the open air, very pure kali ppm. : may be used for distilled vinegar.

Crystallised acid of tartar. Acidum tartari crystallisatum. Ppd. chalk 215, river water 4 gall. : boil, add cream of tartar or argol q. s. to saturate the chalk, about 7tb; cool a little, pour off the clear, and wash the sediment once or twice: upon this sediment pour spirit of vitriol, no. $2,151 \mathrm{t}$, stirring it often for a day, pour off the liquid, and wash the residuum with water 2 gall. which mix with the liquid, evaporate to the consistence of a syrop; then examine whether hitherto successful by diluting a small portion with four times as much water, and adding a solution of sugar of lead, which throws down a white precipitate, if this is redissolved on adding a little spirit of nitre all is right; but if the liquor remains milky, the whole must be diluted with water 61t, and digested for some hours upon a few oz. of the sediment left when the cream of tartar was added to the chaik, which must be kept for this purpose: this point being ascertained, and corrected if necessary, strain, and evaporate gently till all the acid is crystallised, breaking the crystalline crust at top every two hours: yields about 1-3d the weight of the tartar; used instead of citric acid as a substitute for lemon juice.

White arsenic. Arseniclin album, Oxydum arsenici. Obtained by subliming some kind of cobalt ores.

Oxydum arsenici proparatum. From the former by a fresh sublimation : this preparation seems useless, as plenty of fine transparent pieces may be picked from the crude arsenic: tonic, but scarcely ever used in medicine, although frequently for empoisoning or self-destruction; in metallic mixtures to whiten copper, and in dyeing.

Sparry acid, Fluoric acid. Acidum spathosum, Acidum fluoricum. Derbyshire spar, oil of vitriol, ana p. æq. distil in a leaden retort into a leaden receiver containing water: the acid must be kept in a leaden or silver bottle, as it
dissolves glass: very caustic, producing deep and painful sores; used to engrave upon glass, which is to be covered with wax, the parts to be acted upon are then laid bare, a border of soft wax put round the place, and the acid poured on, the surface it leaves is rough; but when glass, thus partly defended, is exposed to the vapour arising from the mixture of spar and oil of vitriol heated in a leaden vessel, the corroded surface is left smooth, and by this means a rariety of etchings upon glass may be made.

## 31. WATER.

## River water. Aqua fluviatilis.

Rain water. Aqua pluvialis. Are the purest of the common waters, and those generally employed.

Acidulous waters. Acidulo. Taste acid, sparkle on being poured out; contain an excess of carbonic acid, and almost constantly common salt, with some of the earthy carbonates.

Chalybeatr waters. Aquee chalybeatce. Strike a black colour with oak-bark or other vegetable astringents, sometimes are also acidulous, these deposit their iron upon beiling, as those of the Spa and Pyrmont; others are vitriolic and retain their power of striking a black colour after being boiled and filtered, as that of Westwood in Derbyshire.

Sulphurfous waters. Aqua sulphuree. Stink like rotten eggs, blacken silver and lead, contain sulphuretted hydrogen, either uncombined or united to lime or an alkali. Harrowgate is well known.

Hard waters? Aque fontance. C'urdle soap even after boiling, contain sulphate of lime.

Salt waters. Aqua salince. Easily recognised by their saline taste, and the salt crystallising in cubes; precipitate the solution of silver, lead, or quicksilver in spirit of nitre, forming a white cloud.

Purging waters. Aquce catharticre. Bitter, purgative, precipitate the solution of silver, lead, or quicksilver in spirit of nitre, forming a yeilow cloud; not affected by acids, but afford a precipitate with kali ppm. ; contain Epsonn salt; the springs of Bagnigge Wells, Dulwich, and Finsom. are of this nature.

Alfaline waters, Aqua allalina: Change line re-
getable colours to a greer, effervesce with acids, yield a precipitate with alum water. .'Tilbury water is an example.

Copper waters. Aquce cuprece. Turn blue with spirit of hartshorn, if not already of that colour, cover iron left in them with a coat of copper: contain blue vitriol: found near copper mines.

Aluminous waters. Aquoe aluminosce. Change vegetable blues to a red, even after standing some time in the open air, effervesce with alkalies, and are decomposed, precipitating in flocculi.

Petrifying waters. Aquo lapidificántes. Deposit an earthy sediment on standing or by boiling; unwholesome.

Stygian water. Aqua Stygis. Corrodes glass and earthen ware, contains fluoric acid: poisonous, reported to have been exhibited to Alexander the Great, and to have occasioned his death, the water being carried from the spring n Arcadia in a horse's hoof: another spring of this kind has jeen lately found in Prussia, and closed up by the governnent.

Sea water. Aqua marina. Contains common salt and Epsom salt in large quantity ; purgative, and the usual lyster at sea: many attempts have been made, by landsmen, to obtain fresh water from it at sea: distillation is the only method known, but sea captains say they may as well carry water with them as fuel to distil the sea water, not to menion the cost of the apparatus and the trouble; most large hips, however, have a rude method of saving the steam arising in boiling their victuals; and when only one of the wo parts into which their large copper boiler is divided is ased, they put sea water into the other part, and distil it by he same rude way. A person of the name of Beaumont t Calcutta, is said, in Heyne's India, p. 422, to have offerd, for $£ 25,000$, to disclose the secret of converting salt vater into fresh water in large quantity, without lieat, and with very little expense: he says the process is so simple, hat he can scarce speak of it without betraying the secret.

OBS. The quantity of salts contained in any mineral vater may be estimated with considerable accuracy, by findng the difference of weight between a bottle filled to a cerain mark with distilled water, and the same filled with the nineral water: to this difference add 1-5th, and again anoher fiith, the weight will then denote that of the salts conained in the bottle of water: large square case-bottles are.
wel! adapted for this purpose. Let the difference be 3.1 , Эfs, gr. ix, or 79 gr .; $1-5$ th is 15 gr . 4-5ths, the other 5 th the same; total $110 \mathrm{gr} .3-5$ ths, or 3 j , Эijiss, and gr. 3-5ths.

Distilled water. Aqua distillata. Water 10 gall. distil ; throw away the first half gall. and draw off four gall. which keep in glass or stone ware: used as a diet drink in cancerous diseases, and should be used in making medicines when the salts contained in common water would decompose them.

## 32. EARTHS.

Bole Armeniac. Bolus Armena. Pale red; alexipharmic, drying.

German bole. Bolus Bohemica. Pale red; used for the former, and has the same qualities.

Clay. Argilla. Drying, astringent.
Terra Lemnia. Reddish yellow; alexipharmic, sudorific.

Fullers earth. Cimolia purpurascens. Grey, very fine, cleansing cloth without tearing it.

Tobacco pipe clay. Cimolia alba. Used for tobacco pipes, and to take grease spots out of woollen cloth.

White lumber stone. Terra Samia vulgaris. The same made into cakes with a stamp.

Venice Tripoli. Terra Tripolitana vera. Fellow, fine; used for polishing.

Chalk. Creta. Antacid; used in the heart-bum and other diseases arising from acidity, gr. x-Эij, externally absorbent.

Fiench chalf. Creta Brianzonica, Talcum officinale. Comes really from Piedmont, the people of Briançon procuring it from thence : in flakes; used in cosmetic powders, and to cleanse silks.

Spanish chale, Steatite. Creta Hispanica, Creta sartoria. White, soft; used by tailors to mark cloth where it is to be cut, also to take out grease spots.

Spanisti brown. Ochra Hispanica. Fine deep red; used in painting.

Indian red. Ochra Persica. Fine purple; used in painting.

Rotten stone. Terra cariosa. Used by braziers and lapidaries for polishing.

Frenca bole. Bolus Gallica. Pale red; astringent.

## Limestone. Lapis calcarizs.

Marble. Marmor. Used to ascertain the strength of acids, to yield carbonic acid gas while dissolving in them, 100 gr. yields $90-100$ cub. in., or to make lime.

Fine white sand, Maidstone sand. 'Arena rotuinda. To dry up ink, and to filter acid and corrosive liquors.

Stone lime. Calx viva: From liméstone by a red heat.

Shell lime. Calx e testis. From oyster-shells, by a similar calcination : corrosive, antacid, depilatory; used for cements, to make lime water, and render the alkalies caustic.

Whiting. Prepared from the soft variety of chalk; by diffusion in water, letting the water settle for two hours, that the impurities and coarser particles may subside, then drawing off the still milky water, letting it deposit the finer sediment, decanting the water when clear, and drying the sediment; is much finer than the common ppd. chalk of the apothecaries, but is principally used as a cheap white paint.
$\therefore$ Irish slate; Alum slate. Lapis Hibernicus. Sweetish, agglutinant, in bruises, fractures, a spoonful in beer.

Pumice stone. Lapis Pumex. Spongy, swims upon water; used whole as a kind of file, in powder as a polishing powder, added to some: dentifrices.

Terre verte. Terra viridis. Celadon green, burns black; used for a paint.

Bohemian tripoli. Schistus mollis. Yellowish grey; used as a polishing powder.

Yellow earth. Argilla lutea. Ochre yellow, burns rose red; used for a paint.

Umber. Umbra. Liver brown, friable; used as a paint.

Osteocolla. Agglutinant; used in fractures, Эj, night and morning.

Five precious stones. Garnet, hyacinth, sapphire, carnelian, emerald : cordial!

Powdered glass. Vitrum pulverisatum. Used to filter acids.

English talc. Asbestus. Fibrous; used to make wicks for lamps, and cloth which is incombustible by a moderate heat; also to absorb oil of vitriol and prevent its being accidentally spilled from the bottles sold with chemical. matches.

Parker's cement. Is made from the indurated marle salled clay balls, or the waxen vein found in the London clay strata, by calcining and then grinding them, without any admisture whatever: used as a cement, and also for coating the outside of houses.

Magnesta arba. Magnesia P. D. Magnesioc carbonas. Obtained by precipitating the bittern or liquor left in the boiling of sea water, after the common salt has been separated by evaporation, by a ley of wood ashes or kali ppm.
2. Epsom salt, kali ppm. ana p. xq.; dissolve separately in plenty of water, add the two solutions while boiling hot, strain, and wash the sediment till the water is insipid.
3. Epsom salt 5615 , dissolve in water, and precipitate with natron ppm. q. s. dissolved in water, wash the sediment well, and finish the washing with rose water : is made up while drying, either into large cubes with the edges bevelled, or in small dice; is powdered by being rubbed through a sieve; antacid, laxative, 3 fs- 3 ij , mixes well with milk, sometimes occasions flatulence, recommended in calculous complaints.

Calcined magnesla. Magnesia usta, Magnesia P.L. and P.E. Expose magnesia alba to a red heat for tro hours, or until it exhibits a peculiar luminous appearance: antacid, laxative, $3^{f s}-3 i \mathrm{i}$, does not occasion flatulence, but is not so soluble in the stomach as the other.

Cawn, Heavy spar. Spathum ponderosum, Sulphas barytce. Found in mines, very heavy: used to mix with flake white, to make muriate of barytes, and lately sold far lapis calaminaris, but is not soluble in spirit of vitriol.

Cocks comb spar, Witherite. Terra ponderosa, Carbonas barytce. Found in mines, but rare; used as a poison for rats, and to prepare muriate of barytes.

Creta precipitata. Precipitate a solution of muriate of lime by a solution of natron ppm . in water, and wash the sediment: no ways different from common whiting.

Eagle stone. Atites. A hollow stone with another in it, that may be heard to rattle when shaken: facilitates delivery if bound upon the thigh, prevents abortion if bound upon the arm!

Plaster of paris. Gypsum ustum. Used as a cement, and to take models of statues, \&c.

Uitranarine blue. Caruleum ultramontamum. Lar

## SIMPLE SUBSTANCES.-32. Earths.

s lazuli 1 tb is heated to redness, quenched in water, and ound to a fine powder; to this is added yellow rosin 6 oz . rpentine, bees' wax, linseed oil, ana 2 oz ; previously elted together, and the whole made into a mass, this is readed in successive portions of warm water, which it cours blue, and from whence it is deposited by standing, and ated according to its qualities: a fine blue colour in oil.

## OFFICINAL COMPOUNDS.

UXDER this division are usually included, not only the medicinal compounds which are kept ready in the shops for sale, but also the extemporaneous formule that the col. leges have mentioned as a standard of professional intercourse, and as being the mode of preparing certain medicines which their own members intend should be understood when they direct these forms in their prescriptions : these formulx were in the old pharmacopocias very few, but they have of late been much increased, and, therefore, as these compositions are intended only for present use, and to be made when wanted, the example of the Dublin college has been folluwed in separating them from the standing compositions of the shops, and in referring them to their proper head of extemporaneous formule.

## 1. DISTILLED WATERS.

Some of these are intended for medieal purposes mostly as veluicles, others for perfume. In respect to the first, in great care is usually judgred necessary, the herb or its oil is added to the water, distilled in a short-necked wide still as quickly as possible, and spirit of wine bij, or even more, addded to each pint. Many do not even take this trouble, but rub a drop or two of the oit, with a little sugar, and add it to common weater.
But for perfumes, as rose water, elder-flowe: water, $\$$ more care is requisite, as the buyeris must be pleased with their smell and appearance; Thence these waters must be carefully distilled in a high narrow-necked still, in order that no part of the inficsion may be thrown oner with the distilled water, as this would render them liable

## FICINAL COMPOUNDS.-1. Distilled Waters. 229

to become mothery in a short time; and if a superior ariticle is required, the zoaters must be redistilled reithe the addition of a little spirit zwhich has not got any ill. scent, by a gentle leat.

Sea-nommood water. Aqua absinthii maritimi. Sth green leaves to the gallon.
COMMON-WORMWOOD water. Aq. absinth. vulgaris. e same; stomachic.
AQua alexiteria simplex. Green mint thfs, tops of sea inwood, green angelica leaves, ana Hj ; draw three gall.
Dill water. Aq. anethi. Seeds llb to the gallon; ninative.
Angelica water. Aq. angelica. Leaves 81 tb to the on; cordial.
Anise seed water. Aq. anisi. Collected in the distion of the oil; carminative.
Star-anise water. Aq. anisi stellati. Very fragrant. Orange flower witer. Aq. napho, Aq. aurantiorum um. Tbiij to thiij of water.
2. 值iij to thvj of water: very odoriferous.

Orange peel water. Aq. cortic. aurant. simplex. ille orange peel ${ }^{3}$ iiij to the gallon.
2. Peel 2tb to the gallon; as agreeable vehicles.

Marygold water: Aq. calandulo.
Carnuls water. Aq. cardui benedicti. Leaves Sib to rallon; vehicles for diaphoretic medicines.
Carline-thistle water. Aq. carlince radicis. Fra.t.

Carti water. Aq. carui. Seeds 11b to the gallon; inative.
Iassia water. Aq. lauri cassioc. 1tb to the gallon. cinnamon water.
Black cherry water. Aqua cerasorum nigrorum. fruit with the stores bruised: 1txij to the gallon. 2. Almond (bitter) cake bruised 4175, draw five gallons; pasmodic, contains prussic acid, when drawn very Ig, thvj of cherry stones to the pint, is deleterious; ex;ed from the pharmacopoia in 1745. As late experis have shown the efficacy of prussic acid, when suffily diluted, in phthisis; may not the increase of that dis be referred to the diminished use of this medicine?

## 230 OFFICINAL COMPOUNDS.-1. Distilled Waters.

Camomile water. Aq. chamomeli. Flowers 猜viij to the gallon; stomachic.

Celandine water. Aq. chelidonii majoris. Leaves Hoviij to the gallon.

Succory water. Aq. cichorii. From the leaves; Hbviij to the gallon.

Cinnamon water. Aq. cinnamomi temuis, Aq. cinnamomi, Aq. lauri cinnamomi. Ibj to the gallon.
2. Bruised cinnamon Hj , water 2 gall.; simmer in a still for half an hour, put what comes over into the still again; when cold strain through flannel. Cassia must be distilled, as its infusion is yellow.
3. Cassia (parva) 8tb ; draw 12 gallons.
4. Cassia buds 17t, cassia lignea 2 Ht ; draw 8 gallons.
5. Cassia (parva) 6tb, spirit of wine 2 gall. water q. s. draw 4 gall. of spiritus cinnamomi, and 10 gall. of aq. cin. nam. : stomachic, tonic, and covers the disagreeable taste of some medicines.

Cumin water. Aq. cumini. From the seeds; carminative.

Aqua cymbalarice. From the herb; used in Italy as the vehiclè for exhibiting arsenic as a poison.

Eyebright water. Aq. cuphrasio. From the herb: ophthalmic.

Bean flower water. Aq. fabarum florum. Fragrant; used in perfumery.

Spearwort water. Aq. flammulce. From the herb; acrid, vomits instantly, and in cases of poison being taken, is preferable to any medicine yet known, as it does not ercite any contraction of the upper part of the stomach, and thus defeat its own intention, as white vitriol sometimes docs

Strawberry water. Aq. fragaria. Fruit bruised 201t, water q. s. ; draw 2 gall. and a half: very fragrant.

Sweet fennel watek. Aq. forviculi. Seeds Itt to the gallon; a weak carminative.

Fennel water. Aq. foniculi vulgaris. From the herb.

Fumitory water. Aq.fumarice. From the herb.
Arse-smalt water. Aq. hydropiperis. From the herb; acrid, Hj - $\mathrm{Hbj} f \mathrm{~s}$, drank in a day, very effectual in nephritic cases.

Hyssop water. Ag. hyssopi, From the herb; pectoral, stomachic.

## EFICINAL COMPOUNDS.-1. Distilled Waters. 981

Juniper water. Aq. jumiperi baccarum. Stimulant. The water of green walnuts. Aq. mucum juglandis maturarum.
Smple lavender water. Aq. lavandulet florum. llected in the distillation of the oil; mostly used to scent ps.
Laurel water. Aq. lauro-cerasi. From the leaves; itains prussic acid, is stronger than black-cherry water; $s$ been used for poisoning, and therefore labours under an name, although doubtless one of the most efficacious of s sort of medicines.
Aqua ledi palustris. Very fragrant; may be sold for e water.
Lovage water. Aq. levistici. From the herb; carnative.
Lily of the valley water. Aq. lilii convallium: magrant; used as a perfume to scent soaps.
Iemon peel water. Aq. e corticibus citri, Aq. citri dicce. Fresh peel 21 b to the gallon.
Marjoram water. Aq. marjorance. Fresh herb 81b the gallon; strong scented; used in cookery.
Baulm water. Aq. melisso. From the herb; cephacordial.
Peppermint water. Aq. menthoe piperitidis simplex, menthec piperitcx. Green herb tbviij to the gallon, P.L. ore 1745 .
2. Dried herb Thjfs, or green 1tiiij to the gallon, P. I. 1745. P. D.
3. Herb in flower tbiij to the gallon, P. E.
4. Oil of peppermint 1 oz . water q. s. ; draw 10 gallons.
5. Oil 2 oz ; draw 9 gallons.
6. Oil 1 tb; draw 30 gallons : stimulant, carminative; 1 covers disagreeable flavours.
Mint water. Aq. menthee, Aq. menthoe vulgaris sim$x$, Aq. menthace sativar, Aq. menthue viridis. Green herb iiij to the gallon, P. L. before 1745 .
2. Dried herb 1bjfs to the gallon, P. L. since 1745 . D.
3. Oil of spear mint 1 oz ; draw 10 gallons; antispasdic, allays vomiting.
Myrtle flower water, Eau d'ange. Aq. myrti rum. Fresh flowers tbiij; draw a gallon: very fragrant; d as a perfume.

## 232 OFFICINAL COMPOUNDS. - 1. Distilled Waters.

White poppy water. Aq. papazeris albi. From the flowers; narcotic, much used in some parts of Lincolnshire, every cottager growing the plant for his own consumption in making this water.

Red poppy water. Aq. papaveris rhaerdos. From the flowers; narcotic, but less so than the former.

Cowslip water. Aq. paralyseos. From the flowers; slightly narcotic.

Prony water. Aq. peonioe. From the flowers, gathered in May.

Aqua persicario. From the herb; useful in calculous complaints.

Parsley water. Aq. petroselini. From the whole plant, with the root, gathered in spring; nephritic, diuretic.

Allspice water. Aq. piperis Jamaicensis, Aq. pimento, Aq. pimentce, Aq. myrti pimentce. Half a to to a gallon: stimulant; used in hospitals as a cheap spicy vehicle.

Pimpernell water. Aq. pimpinellce. From the roots; acrid, blue.

Plantain water. Aq. plantaginis. From the herb when in flower; vulnerary.

Silver weed water. Aq. potentilloc. From the herb; is used in the dressing of French gauzes, and although it has neither taste nor smell, common.water will not supply its place.

Pennyroyal water, Aq. pulegii, Aq. pulegii simplex, Aq. menthce pulegii. Green herb Ibviij to the gallon, P.L. before 1745 .
2. Dry herb tibjes to the gall. P. L. since 1745. P. D.
3. Fresh herb thiij to the gall. P. E.
4. Oil of pennyroyal 1 oz . ; draw 12 gallons.
5. Oil of pennyroyal 1 th ; draw 30 gallons. Emmenagogue.

Oak water. Aq. quercûs. From the young leares, gathered in May, tb viij to the gallon.

Rose water. Aq. rosarum: Damasccnarum, Aq. rosa; Aq. rosce centifolio. Petals of the flowers 6 Ht to the gall.
2. Petals 10 bushels; draw 14 gallons.
3. Pickled roses 60 lt , yellow sanders 8 oz.; draw 16 gallons.
4. Attar of roses 1 oz . spirit of wine cong. $j$, aq. distill, q. s. : distil 40 gallons.
5. Lignum rhodium.

## JFFICNAL COMPOUNDS.-1: Distilled Waters. 233

6. Radix rhodia; may either of them be distilled and he water sold as rose water.

Water of pale roses. Aq. rosarum albarum. From thite roses.

Water of red roses. Aq. rosarum rubrairum. Frarant, but inferior to the common rose.

Rosemary water. Aq. rorismarini. From the tops; cagrant.

Rasp-berry water. Aq. rubi Idwi. From the fruit; agrant.

Rue water. Aq. rutce. From the herb; stimulant, mmenagogue.

Elder-flower water. Aq. sambuci florum. From ne fresh flowers.
2. Pickled flowers 50 th ; draw 20 gallons.
3. Orange flower water 1 oz . water a pint; mix : agrecboly aromatic, cooling.

Sassafras water. Aq. sassafias. From the root; iaphoretic.

Saxifrage water. Aq. saxifragce. From the herb.
Water of camels hay: Aq: schoonanthi. From the erb; fragrant ; used in perfumery.

Germaxder water. Aq. scoordii. From the herb; agrant, although no oil comes over with it.
Lime-flower water. Aq. tilice. From the flowers; aggrant ; used in perfumery.

Meadow sweet water. Aq. ulmaric. From the Dwers; has a fine flavour, but must be infused in warm ater as soon as gathered.

Vaxilla water. Aq. vanillarum. From the pods; eagrant ; used in perfumery.

Frog-spawn water. Aq. sperniolue, Aq. spermatis ran arum. Collected in February or March; and distilled: oling.

Aqua castorci. Russian castor ${ }^{3} \mathrm{j}$, water q . s ; distil mij.
Small smail water. Aq. limacum tenuis. Baulm, int, harts-tongue, ground ivy, flowers of the dead nettle, allow flowers, elder flowers, ana $M$. j, smails freed from eir shells, whites of eggs, ana $\frac{\pi i i i j}{}$, nutmegs ${ }_{5} f \mathrm{fs}$, milk a Hon, distil in a water bath to dryness.
2. Nutmegs 1 oz. water q. s.; distil a gallon : used in cipient phthisis.
Aqua hactis alcriteria. Leaves of meadow sweet, car-

## 2s 4 OFFICINAL COMPOUNDS.-1. Distilled Waters.

duus benedictus, groats' rue, ana M. vj; of mint, wormwood, ana MI. $v$; of rue M. iij ; of angelica M. ij ; milk gall. iij: distil to dryness; diaphoretic.

Aqua omnium florum. From cows' dung, collected in May; used in phthisis.

## 2. SALINE LIQUORS.

Solutio acetitis zinci. White vitriol 3 j , dissolve in distilled water $\tilde{y}^{\mathrm{x}}$; sugar of lead Эiiij, dissolve in distilled water $\tilde{j}^{\mathrm{y}} \mathrm{x}$ : mix and filter: astringent; used as a collyrium and injection.

Bleaching liquid, Eau de Javelle. Aqua allialinca oxymuriatica. Common salt \#bij, manganese thj, water \#bij, put into a retort, and add gradually oil of vitriol ttij : pass the vapour through a solution of kali ppm . $\overline{3} \mathrm{iiij}$ in water $5 x x i x$, applying heat towards the last. Specific gravity is 1.08\%. Stimulant, antisyphilitic; used to bleach limen and take out spots, and to clear books from what has been scribbled on their margins.

Aqua aluminosa of Fallopius. Corr. sublim., alum, ana弓ij, rose water, plantain water, ana 1 tj , boil to a half and filter.

Aqua aluminosa Bateana, Aqua aluminis composita, Liquor aluminis compositus. Alum, white vitriol, ana $\bar{\jmath} \mathrm{fs}$, water H ij ; dissolve and filter : astringent ; used in washing ulcers and eruptions, or as an injection in gonorrhoea and the whites.

Spiritus Mindereri. Aqua ammonice acetata, Liquor ammonice acetatis, Aq. acetatis ammonia, Aq. acetitis ammonic. Ammonia ppa. 2 oz . distilled vinegar q. s. (about itiiij) as long as any effervescence is produced, or rather more ; diaphoretic ${ }^{5}$ fs ; externally as a collyrium in ophthalmia.

Fowler's solution of arsenic. Liquor arsenicalis. White arsenic, salt of tartar, ana gr. lxiv, distilled water Hj : boil, and when cold, add lavender drops jiiij, distilled water q. s. to make an exact pint ; tonic, febrifuge; used in agues; doses to adults gtt. xij, ter in die; stout boys, $g t t . x-x i j$; young boys and girls, git. vij-x; children under seven, gtt . $\mathrm{v}-\mathrm{vij}$; from two to four, gtt. $\mathrm{ij}-\mathrm{v}$.
2. T'asteless ague drop. White arsenic gr. j, water

## OFFICINAL COMPOUNDS．－2．Saline Liquors． 295

L oz．；dissolve：dose a tea－spoonful night and morning； used in the fen countries by private practitioners．

3．Italian porson．Áqua toffana．White arsenic，kali ppm．ana p．æq．aqua cymbalariæe q．p．；used by the Ita－ cians in secret poisoning，produces phthisis．

Lime water．Aqua calcis，Liquor calcis．Fresh surned lime 8 oz．pour upon it boiling，water a gallon，cover up close，and when cold，keep the whole in a glass bottle， our off the clear when wanterl ：astringent，antacid，登iv to Wj，in small draughts；its taste is best covered with 1－5th of nilk；also externally to ulcers．

Liquid shell．Liquor calcis muriatis．Murias calcis發ij，distilled water $\mathfrak{z} \mathrm{iij}$ ：dissolve and filter．

2．Aqua calcis muriatis．Chalk ${ }_{5} \mathrm{j}$ ，diluted spirit of salt街ij ：dissolve and filter．

3．Solutio muriatis calcis．White marble 9 oz ．spirit of salt 16 oz ．water Soz ：dissolve，evaporate to dryness；dis－ aolve the dried mass in once and a half its weight of dis－ iilled water，and filter：deobstruent，in scrophulous and landular diseases，gtt．xl to 3 j ，diluted，bis terve die；also n calculous diseases．

Blue eye water．Aqua sapphirina，Aqua cupri am－ noniati P．L．Lime water 1 bj ，sal ammoniac 3 j ；mix and eet them stand upon a small piece of clean copper till they acquire a fine blue colour．

2．Liquor cupri ammoniati．Cuprum ammoniatum $\mathfrak{j}$ ， vater tbj ：dissolve and filter．

3．Aqua cupri ammoniati P．D．Eine water ${ }^{5}$ viij，sal mmmoniac Đij，verdigris gr．iiij；digest for a day and pour off the clear：a slight stimulant and escharotic used to ul－ eeers，and diluted to remove specks on the cornea，also as how liquor in the window．

Styptic water，Sydenham＇s．Aqua vïtriolica carulea．
 lissolve and filter．

2．Solutio sulphatis cupri composita．Blue vitriol，alum， ma 3 oz ．water 24 oz ．oil of vitriol 2 oz ．and a half：dis－ colve and filter：used to stop bleeding at the nose，applied with dossils of lint．

Bronzing liquor．Is blue vitriol dissolved in water； ：ised to bronze tea－urns，\＆c．the surface being previously well cleansed．

Irquor ferri allatini，Iron 3 ijfs，dissolve in spirit of
nitre ${ }^{3} \mathrm{ij}$, distilled water ${ }^{\text {onj }} \mathrm{vj}$; add by degrees aqua kali pupi. 5 j ; let it stand six hours and pour off the clear: tonic, 3 is- 5 j, bis terve die.

Tinctura Martis glauberi. Iron filings, crude tartar, ana Hiiij, boil in water Thexxvy, to 2 gall. : filter while hot, and evaporate to ltb : deobstruent.

Acetas ferri. Protoxide of iron $\mathrm{y}^{\mathrm{j}} \mathrm{iv}$, distilled vinegar ofiij, dissolve and strain; tonic, astringent.

Liquon hydrargyri oxymuriatis. Corrosive sublimate gr. viij, distilled water ${ }^{3} \mathrm{xv}$, spirit of wine j ; dissolve: alterative, $5 \mathrm{ij}-5 \mathrm{vj}$, bis terve die ; $\mathrm{O}_{3} \mathrm{j}$ contains gr. fs of corrosive sublimate.

Yellow wash. Aqua phagedenica. Lime water ibj, corrosive sublimate 3 fs ; rub together; shake up when used as a wash for foul ulcers, particularly syphilitic.

Goulard’s extractum Saturni. Aqua lithargyri acetati, Liquor plumbi acctatis P. L. 1809. Litharge itij ${ }^{2} \mathrm{iv}$, distilled vinegar 1 gall. boil to $\mathrm{\# bvj}$; let it settle and pour off the clear.
2. Liquor subacetatis lithargyri. Litharge Hj , distilled vinegar ltviij; proceed as before.
8. Liquor plumbi acctatis P. L. 1815. Litharge 1tij, distilled vinegar 1 gallon.

4 Litharge $20-24 \mathrm{tt}$, common vinegar 10 gall. : fouls the bottles very much, cannot be cleaned off with kali ppm. requires oil of vitriol or aqua fortis : cooling, astringent; used to make white wash.

White wash, Aqua lithargyri acetati composita, Liquor plumbi acetatis dilutus, Liq. subacetatis lithargyri compositus. Extr. Saturni, proof spirit, ana $5 \mathfrak{j}$, distilled water tbj: cooling, astringent; used as a lotion in inflammations and burns.

Aqua supercarbonatis potassex. Oil of vitriol \%iij, water fiiij: mix, and add gradually marble powder 气iij; pass the gas that is discharged through water 1bx (with kali ppm. .j. dissolved in it), in a proper apparatus, to secure considerable pressure, and enable the bottles containing it to be corked without letting the gas escape till drank.

Soda water. Aqua supercarbonatis sodo. Prepared in the same manner, putting water ftx , and natron ppm. 5ii in tho bottles: used in large quantities as a cooling beverage in summer; supposed beneficial in caleulous complaints.

Liquin lipeer of stluiur, Aqua sulphuiretikali. Flowers of sulplrur $\mathrm{j}^{\mathrm{fs}}$, aq. kali puri $\mathrm{y}^{\mathrm{ix}}$; boil for ten minutes, fil.

## FFICINAL COMPOUNIS．－2．Saline Liquors． $23 \%$

$r$ ，and keep in well－closed vials；used as an antidote to ineral poisons；externally in tinea and the itch．

Boyle＇s fuming liquor．Tinctura sulphuris volatilis， ？ua sulphureti ammonice：Fresh burned lime 氕iv，water ；slake，and when cold，add sal ammoniac 第iv，flowers of Iphur： $\mathfrak{j} i j$ ；distil：used as a proof liquor for wine，but it quires the precipitate to be examined，by fusion，whether． be really lead．

Lact virginale．Alum 第iv，water tbij；boil to one third； d Goulard＇s extract 1 Hj ，and shake well together until ite．

Common eye water．Aqua ophthalmica，Aqua vitrio－ a camphorata．White vitriol $\tilde{\jmath}^{\text {fs }}$ ，camphire $\mathrm{y}_{\mathrm{y}} \mathrm{j}$ ，boiling iter Hij；dissolve and filter．
2．Aq．zinci vitriolati cum camphora．White vitriol $f^{5}$ s， ritus camphoratus ${ }^{\circ} \mathrm{fs}$ ，boiling water Hbij ；dissolve and er ：discutient；used as a lotion for ulcers，or diluted with ter p．æq．as a collyrium．
Solu＇rio muriatis barytce．Murias barytæ ，j，distilled ter ${ }^{3} \mathrm{iij}$ ；dissolve：deobstruent，gtt．v－－viij，bis terve die， cancer and scrophula；externally escharotic，to fungous ers and specks on the cornea．
Artificlal Spa water．Natron ppm．gr．vij，magne－ alba $Э j$ ，iron filings gr．iij，common salt gr．j，water tbiij， 1 impregnate it with the gas from marble powder and oil vitriol ana Эx，sufficiently diluted with water．
Artificial Pyrnont water．Epsom salt gr．xv，com－ $n$ salt gr．v，magnesia alba gr．$x$ ；iron filings gr．v，wa－
Hiiij，and impregnate it with the gas from marble powder I oil of vitriol ana 5 vij．
Artificlal Seltzer watid：Common salt 3 j ，mag－ ia alba Эj，natron ppm．gr．xv，chalk gr．vij，water Hbiij， $!$ impregnate with the gas from marble powder and oil of iol ana 3 vj．
Artificial Harrowgate water．Common salt $5 v$ ， er Hiiij，and impregnate it with the gas from liver of sul－ ir and oil of vitriol ana 3 ziij．
Artificial Cheltenham water．Epsom salt gr．xij； 1 filings gr．j，Glauber＇s salt ziiij，water 4 gall．and im－ gnate with the gas from marble poweler and oil of vitriol方ij。
Wine test．Liquor probatorius rini．Quicklime ojo iment ${ }^{3}$ fs，distilled water lt fs：dissolve and filter．

## 238

 OFFICINAL COMPOUNDS - -2. Saline Liquors.2. Oyster shells, sulphur, ana $3 j$, keep red hot for a quarter of an hour, when cold, add cream of tartar $p$. xq. water thj, boil for an hour, decant into ounce phials and add to each spirit of salt gitt. $x x$ : a few drops of this liquor, added to any kind of wine, precipitate any metal that may be contained in it, except iron, which is prevented by the addition of the spirit of salt.

Young's purging drink. Crystallised natron 3 ijfis, crystals of tartar $3 i \mathrm{ij}$, water $弓$ viij, corked up immediately in stone bottles and wired; a pleasant cooling laxative in summer.

Ward's wirte drors. Quicksilver 12 oz . spir. nitre 2 tb ; dissolve, add ammonia ppa. 14 oz. evaporate so as to form a light salt, which drain and dissolve in rose water 31t and a half.
2. Quicksilver 4 oz . spir. nitre 7 j$j$; dissolve, add ammonia ppa. 7 oz. evaporate and crystallise, then dissolve each pound of salt in 3 pints and a half of rose water.
3. Corrosive sublimate $3 \mathrm{j} f \mathrm{~s}$, spirit of salt 2 oz . water .15jfs: very inferior.

Liqueur de Pressanin. Dissolve quicksilver in spirit of nitre and precipitate it with kali ppm. then take this precipitate and cream of tartar ana 1 oz . distilled water 40 oz .; dissolve: two spoonfuls of this liquor is diluted with 2 pints of distilled water, and a wine glass, i. e. 2 oz. taken ter quaterve die, avoiding the use of common salt in the food; used in syphilis.

Marking ink. Lunar caustic 3 ij , distilled water $\mathrm{J}_{3} \mathrm{vj}$; dissolve and add gum water 3 jij : dissolve also natron ppm. $\mathcal{F}_{5} \mathrm{fs}^{\circ}$ in water $\mathfrak{z i v}$, and add gum water ${ }^{3} \mathrm{fs}$ : wet the linen where you intend to write with this last solution, dry it, and then write upon it with the first liquor, using a clean pen.

Greek water. Is prepared and used in the same manner, for turning the hair black.

Fiy water. White arsenic $3 j$, water a pint ; dissolve by boiling and sweeten with treacle; used to destroy flies.

Green sympathetic ink. Saturate spirit of salt or aqua regia with zaffre or cobalt ore, free from iron, and dilute with distilled water; what is drawn upon paper with this liquor will appear green when it is warm, and lose its colour again when cold, unless it has been heated too much.

Blue sympathetic ink. Dissolve cobalt or zaffre in spirit of nitre, precipitate by kali ppm. wash the precipitate,

## JFFICINAL COMPOUNDS.-2. Saline Liquors.

nd dissolve it in distilled vinegar, avoiding an excess of the cid: to be used in the same manner as the last.

Dyers' spirit, Composition for scarlér dye. Is a blution of tin in spirit of salt or aqua regia: the proper anner of making it is not determined, every workman havg his own way. Spirit of nitre 10 oz . sal ammon. 1 oz . n 1 oz. 3-Sths is a good proportion for its preparation in small way; used in dyeing scarlet, and in making many egetable red colours.

## 3. WATERY COMPOUNDS.

Liquid rouge. The liquid left in the preparation of urmine, v. p. 175.

Almond bloom. Brasil dust 1 oz. water 3 pints; boil, rain, add isinglass 3 vj , grana sylvestria 2 oz . (or cochineal ij), alum 1 oz. borax ziij; boil again and strain through a se cloth: used as liquid cosmetics.

Pink dye. Tie safflower in a bag and wash it in water 1 it no longer colours the water, then dry it; of this take ij, salt of tartar gr. xviij, spirit of wine 3 viij, digest for ro hours, add distilled water $\overline{3} \mathrm{ij}$, digest for two hours more, ad add distilled vinegar or lemon juice q. s. to reduce it
a fine rose colour: used as a cosmetic, and to make French vuge.

Saxon blue, Scot's liquid blue. Indigo 1th, oil of triol 4tb ; dissolve, by keeping the bottle in boiling water, een add water 12 tb , or $\mathrm{q} . \mathrm{p}$.

Wash colours for maps or writing. Lacca fluida. ellow. Gamboge, dissolved in water q. s.

French berries steeped in water, the liquor strained, and $m$ Arabic added.
2. Red. Brasil dust steeped in vinegar and alum added.

Litmus dissolved in water and spirit of wine added.'
Cochineal steeped in water, strained, and gum added.
3. Blue. Saxon blue diluted with water q. p.

Litmus rendered blue by adding distilled vinegar to. its lution.
4. Green. Distilled verdigris dissolved in water, and m added.
Sap green dissolved in water and alum added.
Litmus rendered green by adding kali ppm. to its sorion.

## 240 OFFICINAL COMIOUNISS.-9. Watery Comp.

- Nenkeen dye. Armotto, kali ppm. ana p. seq. boiled. in water : the proportion of kali is altered as the colour is required to be decper or lighter; used to restore the colour of faded nankeen clothing.

Black ink. Atramentum. Galls in sorts 21t, logwocd, green vitriol, ana 1 tb , water 81 lb , gum Arabic q. 1. very good.
2. Bruised galls 1 lt , green vitriol 8 oz . gum Arabic 4 oz . water 2 gall. for common sale.
3. Uncia sit gallæ, semisque sit uncia gummi, Vitrioli pars quarta : his addas ocio Falerni.
Used for writing, but is destroyed by acids and even by age; its restoration may be attempted by wetting the place with an infusion of galls, or with the solution of alkali calcined with blood (as in making Prussian blue) alternately with diluted spirit of salt.

Refined ox gall.: Fel bovis purificatum. Fresh ox gall 11t; boil, skim, add alum 1 oz. and keep it on the fire for some time; to another pint add common salt 1 oz . in the same manner; keep them bottled up for three months, then decant off the clear; mix them in an equal proportion; a thick yellow coagulum is immediately formed, leaving the refined gall clear and colourless: used by limners, enabling them to lay several successive coats of colours upon drawings, to fix chalk and pencil drawings so that they may be tinted, to remove the greasiness of ivory, and even allowing them to paint with water colours upon oiled paper or satin.

Corouns for show bottles. Yellow. Dissolve iron in spirit of salt and dilute.
2. Red. Spirit of hartshorn $\mathrm{q} . \mathrm{p}$. dilute with water and tinge with cochineal.

Dissolve sal ammoniac in water and tinge with cochineal.
3. Blue. Blue vitriol, alum, ana 2 oz . water 2 Ht , spirit of vitriol q. s.

Blue vitriol 4 oz . water 3 th .
4. Green. Rough verdigris 3 oz . dissolve in spirit of vitriol, and add water 4 tt .

Add distilled verdigris and blue vitriol to a strong decoction of turmeric.
5. Purple. Verdigris $y^{\mathrm{j} j}$, spirit of hartshorn 4 oz . W2ter 1th and a half.

Sugar of lead 1 oz . cochineal Эj, water q. p.

## EFICINAL COMPOUNDS.-3. Watery Comp. 241

Add a little spirit of hartshorn to an infusion of logwood. Boot top riquid. Sour milk 31t, oil of vitriol 2 oz . npound tincture of lavender 3 oz . gum Arab. 1 oz . lemon ce 2 oz. white of two eggs. M.
2. Sour milk 3 Hb , spirit of salt, spirit of vitriol ana 2 oz . pound tincture of lavender $1 \mathrm{oz} . \mathrm{M}$.
3. Sour milk 3 pints, butter of antimony, cream of tarana 2 oz citric acid, burnt alum, common alum ana $z$.

Blacking. Lamp black 61t, sugar 6 Hb dissolved in er 2 hb , sperm oil 1tb, gum Arabic 3 oz . dissolved in viar 2 1 b , vinegar 3 gall. oil of vitriol 1 tt and a half:
S. a.
99. Ivory black, cominon treacle ana 12 oz . sperm oil, of vitriol ana 3 oz . vinegar (no. 18) 4 pints : mix.
43. Ivory black, treacle ana 21t, neats foot oil 8 oz . oil ritriol 1 oz. gum tragacanth 2 oz . vinegar 6 pints: mix. 44. Ivory black 6 tb , vinegar, water, ana 2 gall. treacle oil of vitriol 1tb.
5. Ivory black 1 oz . small beer or water 1 tb , brown nir, gum Arabic ana half an oz. or, if required to be very ing, the white of an egg.
6. Ivory black 4 oz . treacle 8 oz . vinegar 1 H : used to th leather.
IEssence of anchovies. Anchovies 2tb to 4 tb and a pulp through a fine hair sieve, boil the bones with comsalt 7 oz . in water 6 Hb ; strain, add flour 7 oz . and the of the fish; boil, pass the whole through the sieve, cowith Venetian red to your fancy; it should produce 1 n:
Rutix's sauce. Soy 81b, walnut katchup, mushroom rup ana 2 gall. anchovies 81 b , Cayenne pepper 8 oz . (c) 1 H ).
$\because$ Distilled vinegar 1 , gall. soy 1 ft , allspice 8 oz .
Foy. Seeds of dolichos soja (peas or kidney beans may -sed for them) 1 gall. boil till soft, add bruised wheat 1 keep in a warm place for 24 hours, then add common l gall. water 2 gall., put the whole in a stone jar, bung for two or three months, shaking it very frequently, out the liquor? the residuum may be treated afresh water and salt, for soy of an inferior quality. . Seeds or beans 357 tb , stew in a little water for 2 or 3 $\therefore$, till they can be bruised between the fingers; drain

## 242

on a sieve, roll them while moist in flour of the same seeds, spread them upon strainers placed one upon another in a hamper, cover with a blanket for 3 or 4 days, or till the seeds are quite mouldy, then expose them to the Sun or a fire until they are so hard that the mouldy crust may be rubbed off; now pour upon them water 1001 b , and add common sali 20tb, let the whole stand in a warm place for six week, pour off the now brown liquor and evaporate gently to a proper consistence: some add spice.

Lemon prckle. Lemon juice, vinegar ana 3 gall. gin. ger 1 1tb, allspice, pepper, grated lemon peel ana 8 oz . com. mon salt 31 b and a half, cloves, bird pepper ana 2 oz . mace, nutmegs ana 1 oz .

Tomatoe sauce. Love apples q. p. stew them in a little water and pulp them through a sieve, then add com. mon salt an equal weight, and 1-4th of allspice whole; boi and bottle.

Katchup. Mushrooms, common salt ana 4itb, sprinhip the salt over them, when the juice is drawn out add piment 8 oz . cloves 1 oz ., boil for a short time, and press out the liquor: what remains may be treated again with salt and water for an inferior kind.

Walnut katchup. Green shells of walnuts 1 bushel common salt 6 Ht , let them remain for two or three day: stirring them occasionally that the air may turn them black press out the liquor, add spices to the palate of the country, and boil it. Are all used for sauces.

Mirk of roses. Kali ppi. gr. vj, ol. amygd. I or ess. Bergam. $3^{i j}$, aquæ rosæ 3 oz . aq. flor. aurant. 亏ij. M
2. Jordan almonds 8 oz . oil of almonds, Castille soap, white wax ana half an oz. sperma ceti $\zeta \mathrm{j} \mathrm{ij}$, ol. lavand. Argi. 3 fs , rose water 31b, S. V. R. 11b. M.
3. Bitter almonds 8 oz . distilled water 6 oz . elder-flower water 4. oz: make an emulsion, and add ol. tart. p. deliq. $\zeta^{3 i j}$, tinct. benz. 5 ij . M. Used as a cosmetic wash.

Gowland's lo'tion. Bitter almonds 1 oz . sugar 200 . distilled water 21b; grind together, strain, and add corros sublim. Эij, previously ground with S. V. R. इjij; used as a wash in obstinate eruptions.

Tincture of euphorbium made witil oll of tartar. Tinctura cuphorbia alkalina. Gum euphorbium 8 oz. aq. kali ppi. 315: caustic, much used by the common ferriers.

Linmentum calcis. Linim. aquacalcis. Linseed or umon olive oil, lime water ana p. æq. shake them toger.

Soot drops. Tinctura fulliginis. Wood soot ${ }^{5} \mathrm{ij}$, kali m. Hffs, sal ammon. §j.j, aq. fluvial. 1tiij; digest for three s, and strain : antispasmodic.

## 4. VINOUS LIQUORS.

Madeira sack. Vinum Canarinum. Rich, full bodied, et ; fermentation checked by adding gypsum.
Sherry. Vinum album Hispanicum, Vinum P. L. since 19. Dry, well fermented.

Mountain wine. Vinum album montanum. Sweet. Rhenish wine, Hock. Vinum Rhenamum. Acerb, the from scarcely ripened grapes; when made into hypo; has a fine perfume.
Port wise. Vinum rubrum Portugallicum. Dark , made from grapes gathered without selection flung into stern, trod, and their skins and stalks left in the mass, ch separate during fermentation, and form a dry head $r$ the liquid; when the fermentation is completed, the or underneath is drawn out, and casked; before being ught to England it is mixed with 1-3d of brandy to en$?$ it to keep during the voyage, otherwise the carriage igs on the acetous fermentation, and the wine is convertnto vinegar; acerb.
French wines. Vina Gallica. Made from selected ppes (the bad ones being cut off the stalks with brass surs), pressed, and only the expressed juice fermented: (se are cordial, but seldom used in making medicines, cur$\therefore$ or raisin wine being substituted.
Rasin wine. Raisins 1 cwt . water 16 gall. soak for a night, stirring every day, press, put the liquor in a cask i1 the bung loose till it has done hissing, then add brandy , and bung up close : some use little more than half, or ds of this quantity of raisins.
Gooseberry wine. Ripe berries bruised 10 gall. water gall. soak 24 hours, strain ; to cacl gallon add Lisbon su$21 t$, and ferment.
2. Bruised berries 801 b , water 10 gall. soak for a day, in ; to each gallon add loaf sugar 61t, and ferment.
3. Juice 10 gall. water 20 gall. sugar 70 Hb ; ferment.

## 244 OFEICINAL COMPOUNDS. - 4. Vinous Liquors.

4. Berries 100 th , brown sugar 6 th, water q . s . to fill a 15 -gall. cask; yields a good yellowish white, very transparent wine.
5. Green berries 401 tb , water 4 gall. bruise together, the next day press out the juice; to every gallon add sugar 315 : ferment.

Currant wine. Red currants 70H5, bruised and pressed, brown sugar 10 Ht , water q . s. to fill up a 15 -gall. cask; yields a pleasant red wine, rather tart, but keeping well.
2. White currants 1 sieve, red currants 1 gall. press; to each gall: of juice add 3 gall. water; to 10 gall. liquor add 30 th sugar, and ferment; when you bung it up, add brandy 2 tb to each 10 gall. of wine.
3. Juice 11 quarts, i. e. the produce of a sieve, sugar 201 t , water q . s. to fill up a 9 -gall. cask; ferment, and when it has done working, add brandy 4tt : for a half hegshead use curxants 3 sieves, sugar 3-4ths cwt. brandy 1 gall.

Black currant wine. Berries 201b, brandy 9-4it, water 12-14 gall. yeast 2 spoonfuls, fermented for 8 days, then bottled and well corked; yields a pleasant, rather vinous, cooling liquor of a purple colour; or they may be made into wine like the common currants: by the first process the wine is dark purple, rather thick but good.

Mixed fluit wine. White currants 3 sieves, red gooseberries $\underset{\sim}{2}$ sieves, these should yield 40 pints of juice: to each gallon add water 2 gall. sugar 31 b and a half; ferment.
2. White, red, and black currants, cherries especiall! blackheart, raspberries ana p. æq. to each 4 th of the bruised fruit add water 1 gall. steep for three days, press, and to each gallon of liquor add yellow sugar 3 H ; ferment, and when finished add to each 9 gall. 2 pints of brandy; if it does not fine soon enough, add half an oz. of isinglass diesolved in a pint of water to each 9 gallons.

Cherry wine. Cherries 301t, moist sugar 51t, watel q. s. to fill a 7 -gall. cask; ferment.

Parsinf yine. May be made by cutting the root into thin slices, boiling them in water, pressing out the liquor and fermenting it: this wine, when made strong, is of a rich and excellent quality and flavour.

Metheglin. Honey 1 cwt. boiling water q. s. to fill a half hogshead or 32 -gall. cask, stir it well for a day or two.

## EFICINAL COMPOUNDS.-4. Vinous Liquors. 245

d yeast, and ferment: some boil the honey in the water - an hour or two, but this hinders its due fermentation.

Mead. Is made from the honey combs, from which ney has been drained out, by boiling in water, and then menting; generally confounded with metheglin.
Englisif Cifampagne. Raw sugar 10tb, loaf sugar it, water 9 gall. concrete acid of lemons or crystallised d of tartar 3 vj ; dissolve by a gentle boil, before it grows ld add yeast about 1tb, and ferment; when the working nearly over, add perry 1 gall. brandy 31 b , and bung it up
three months, then draw out 2 tb of the wine, dissolve iglass 1 oz . in it, pour it again into the cask, and in a tnight bottle it: it may be coloured pink by adding cochihl 1 oz . when first bunged up.
English port. Cider 24 gall. juice of elder berries all. port wine 4 gall. brandy 1 gall. and a half, logwood , isinglass 12 oz. dissolved in a gallon of the cider: bung lown; in two months it will be fit to bottle, but should be drank till the next year: if a rough flavour is requiralum 4 to 6 oz . may be added.
Southampton port. Cyder 36 gall. elder wine 11 gall. ndy 5 gall. damson wine 11 gall. M.
Einglish Madeira. Pale malt ground 4 bushels, boilwater 44 gall. infuse, strain, of this wort, while warm, ce 244 gall. sugar candy 141 t ; when dissolved, add yeast
; ferment, keep scumming off the yeast; when the ferantation is nearly finished, add raisin wine 2 gall. and a ff, brandy, port wine ana $\underset{\sim}{2}$ gall. bung it down for six or e. months. A second infusion of the wort may be brewed beer.
English sherry. Loaf sugar 321b, sugar candy 101b, (er 16 gall. boil, add pale ale wort (as for English Ma(a) 6 gall. yeast 11 b : on the third day add raisins stoned $i t$, and in another two or three days brandy 1 gall. bung own for four. months, draw it off into another cask, add ndy 1 gall. and in three months bottle it. Imitations of ign wines for those who wish to make a show above their umstances, but far inferior to our own fruit wines.
Elder wine. Juice of the berries 8 gall. water 12 gall. wn sugar 60 th, dissolve by boiling, add yeast, and ferint, then add brandy 4tt, and bung it up for three months: arceable when cold, but is mulled with allspice, and nk warm in winter time as a stimulant.

## 246 OFFICINAL COMPOUNDS .-4. Vinous Liquors.

Ginger wine. Bruised ginger 1中tit, water 10 gall. boil for half an hour, add sugar 2815, boil till dissolved, then cool, and put the liquor along with 14 lemons sliced, and 31 b of brandy, add a little yeast, and ferment; bung it up for three months, and then bottle it.

Orange wine. Sugar 231b, water 10 gall. boil, clarify with the white of six eggs, pour the boiling liquor upon parings of oranges, no. 100 , add the strained juice of these oranges and yeast 6 oz . let it work for three or four days, then strain it into a barrel, bung it up loosely; in a month add brandy 4 Tb , and in three months it will be fit to drink.

Cowsirip wine. Sugar 121t, water 6 gall. white of eggs no. 4 ; boil, skim, pour it upon cowslips 1 to 3 pecks, and the yellow peel of 6 lemons, add some yeast, the third day strain the liquor, and finish the fermentation.

Wines may also be made of blackberries and other Eng. lish fruits upon the same principles. The above are the methods generally employed, but most persons have peculiar ways of proceeding, which may indeed be varied to infinity, and so as to produce at pleasure a sweet or dry wine ; the sweet not being so thoroughly fermented as the dry. The addition of brandy destroys the proper flavour of the wine, and it is better to omit it entirely (except for elder or port wine, whose flavour is so strong that it cannot well be in. jured), and to increase the strength by augmenting the quanttidy of the raisins or sugar. In general, the must for wines ought to be made of raisins 61 t , or sugar. 4 th , to the gall. al. lowing for that contained in the fruit.

Cyder. From the juice of apples.
Perry. From the juice of pears, particularly the rough tasted sorts.

Mus. From wheat malt.
Ale. Ala, Cerevisia alba. For 36 gall.: malt (usually pale) 2 bushels and a half, sugar 3 tb , just boiled to 2 colour, hops 21b 8 oz. coriander seeds 1 oz . capsicum $5^{\text {fsf }}$ work it two or three days, beating it well up once or twice a day; when it begins to fall, cleanse it by adding a handful of salt, and some wheat flour mixed with cocculus Indices 9 ).

Twopenny. For 36 gall.: malt 1 bushel and a half. hops 1t5, liquorice root $1 \mathrm{t} \mathrm{\hbar} 8 \mathrm{oz}$. treacle 5 th , Spanish liquorrice 2 oz capsicum siij; frequently drank the week after it is brewed : used in cold weather as a stimulant.

Beer. Cerevisia. For 10 barrels : malt 8 bush. hops

## 'FICINAL COMPOUNDS.-4. Vinous Liquors. 247

i, sugar 81t, made into colour, Spanish liquorice 8 oz. acle 101 b.
Lundon porter. For 5 barrels: malt 8 bushels, water . mash at twice, add in the boiling hops 8 to 121t, treacle , liquorice root 815 , "moist sugar 161 b , one half of which usually made into essentia binx, and the other half into our, capsicum ziiij, Spanish liquorice 2 oz . lintseed 1 oz. namon $3 i j$, heading $5 i j$; cool, add yeast 1 to 2 gall.; when las got a good head, cleanse it with ginger 3 oz . cocculus licus 1 oz . then barrel and finish the working; fine with Iglass. The public brewers use a mixture of pale, amber,
1 brown malt, but amber alone is best for private families.
Sugar 61 tb is esteemed equal in strength, and coriander id 1 tb in intoxicating power, to a bushel of malt : the car employed is burnt to colour the beer instead of brown It, and it has been proposed to employ roasted coffee for ; purpose; the other substances are merely to flavour the $10 r$, and may be varied at pleasure.
The desire of evading the duty on malt has occasioned discovery of its being necessary to malt only. 1-3d of the n , as this portion will couvert the other into its own nae during the process.
Ginger beer. Lump sugar 31b, bruised ginger 2 oz. am of tartar 1 oz. lemons sliced no. 4 , pour on them boilwater 4 gall., add yeast 8 oz . work for four days, then ttle in half pints, and tie the corks down.
2. Moist sugar 6 tb , ginger 5 oz . cream of tartar 2 oz . ons no. 4 , yeast 8 oz. water 7 gall. work two or three is, strain, add brandy 1tb, bung very close, and in fourn days bottle it: a cooling effervescent drink in summer.
White spruce beer. To water 10 gall. put sugar ( 61 tb , ence of spruce 4 oz . (a 3 s . pot), add yeast, work as in king ginger beer, and bottle immediately in half pints.
Brown spruce beer. As the white, using treacle in of sugar.
The purer kinds of the above liquors are mixtures of rit of wine, water, and extractive matter ; the spirit may separated by careful distillation, or, if the extractive matbe first got rid of by the addition of extractum Saturni filtration, the spirit may be separated by adding very re and dry kali ppm . when it will swim upon the liquor: : spirit constitutes from 12 to 25 per cent. of the proper aes, and from 2 to 8 per cent. of the malt liquors.

## 248 OFFICINAL COMPOUNDS－4．Vinous Liquors．

The fermentation of these liguors is usually hastened by the addition of yeast，crude tartar or bruised vine leaves， but this is seldom necessary for wines if the liguor be kept in a proper warmth，but malt liquors are more sluggish．

If the fermentation is in danger of proceeding too far， it may be stopped by drawing off the liguor clear into ano－ ther vessel，in which some brimstone has been newly burned， or in the case of red wine，some nutmeg powder upon a hot shovel，or which has been washed with brandy；the se－ diment left in the old cask may be strained through flannel or paper till clear，and added to the other；instead of this a part only may be drawn out of the cask，and some rags dipped in melted brimstone and lighted may be held by a pair of tongs in the bung－hole，slightly covered，so as to impregnate the liquor with the fumes，about 1 oz ．brimstone to a hhd．then returning what had been drawn out，and bunging up very close；or a small quantity of oil of vitriol may be poured in：lastly，the addition of black manganese has been proposed on theoretical grounds．

If the fermentation has already proceeded too far，and the liquor become sour，the further fermentation must be stopped as above，and some lumps of chalk，or burned oyster shells added to saturate the acid already generated．

If the liquors do not become clear soon enough，for each 36 gall．dissolve isinglass 1 oz ．in water 2Ht，strain，and mix this with part of the liquor；beat it up to a froth and pour it into the rest of the liquor，stir the whole well and bung it up：instead of isinglass some use hartshorn shavings in rather larger quantity：red wines are fined with egas no． 12 to the pipe，beaten up to a froth，mixed with the wine and well stirred in．

If the liquor has acquired a bad flarour，the best way is to let the fermentation go on，and convert it at once into vinegar．

## 250 OFFICINAL COMPOUNDS.-4. Vinous Liquors.

2. Vinum ipecacuanhoce. Rad. ipecac. ${ }^{3} \mathrm{jij}$, sherry 1bij; emetic, ${ }^{3} \mathrm{j}$.

Laudanum. Laudanum liquidum Sydenhami. Opii
 three days: contains 1-8th of opium.
2. Tinctura Thebaica. Opii colati 年ij, cinnam. caryoph. ana 3 j , white wine 1 Dj : D. a week: the same strength.
3. Vinum opii. Extract. opii ${ }_{3} \mathrm{j}$, cinnam. caryoph. ana Jj, sherry IDj: D. eight days : only half the strength of the former : anodyne, narcotic, gtt. v-lxviij or more.

Rhubarb wine. Tinctura rhabarbari spirituosa. Rha-

2. Vinum rhabarbari. Rhabarb. Jijfs, cardam. min. ${ }^{5} \mathrm{f}$, croci 3 ij , white wine Itij, proof spir. 气viij : D.
3. Vinum rhei palmati. Rhabarb. ${ }^{2} \mathrm{Kij}$, canell. alb. 3 j , proof spir. ${ }^{2} \mathrm{ij}$, white wine J xv : D. seven days: laxative, tonic, $\bar{J} f s$-jfs. The saffron is frequently omitted.

Wine, of squills. Vinum scilliticum. Rad. scill. alb. 1 Hj , old French white wine 1 gall. D. fourteen days: emetic in a large dose, expectorant in small doses.

Vinum nicotiance tabaci. Fol. tabaci sicc. Fjj, white wine 1 tbj : D. seven days: antispasmodic, diuretic, gtt. x to xxx .

Viper wine. Vinum vipeiinum P. L. before 1745. Viperæ sicc. no. 6, Spanish wine 1 bij : D. three days.
2. Vin. viperinum P. L. since 1745 . Vip. sicc. گ̄ij, Mountain Htiij: D. for a week: restorative, stimulant.

Although some of the wines are obscurely ordered by their mere colour and country, of which, however, many sorts are sold; yet this is of less consequence, as the retailers usually employ raisin or currant wine instead of the more expensive foreign ones. The P. L, 1745 was the only one that determined the exact sorts the college wished to have employed, until 1809, when the college rejected all wine but sherry, to which alone they restricted the generic term of vinum.

## 5. MEDICATED VINEGARS.

Squill vinegar. Acetum scilliticum P. L. before 1745. Rad. scill. sicc. Tbj, aceti Tbvj; bottle up and expose to the sun for a month.
2. Acetum scilliticum P. L. since $1 \% 45$. Acctum scilla. Scill. sicc. $1 \mathrm{H} j$, aceti T vj , proof spirit 1 b fs.

## OFFICINAL COMPOUNDS.-5. Medic. Vinegars. 251

3. Acetum scillce maritimce. Rad. scillæ sicc. $\overline{3 i j}$, acet. list. 1bijifs, S. V. R. 乞iij; attenuant, expectorant, diuretic, $j$ fs to 5 j . The shops use common vinegar.

Acetum colchici. Rad. colchici ${ }_{3} \mathrm{j}$, acet. distill. Hjo : D. for a day, and express, add proof spirit $\mathrm{Zj}^{\mathrm{j}}$ : diuretic, fs- 3 j , bis dic.

Vinegar of the four thieves. Acetum theriacale, Acetum aromaticum. Summit. rosmar. sicc., fol. salvix, sicc.
 rall. D. seven days, press, and filter: used as a corrector of jad smells. The old process was more complicated.

Aromatic spirit of vinegar. Acidum aceticum camibhoratum, Acidum acetosum camphoratum. Acid. acetos.

2. Strong acetous acid (no. 4) 2tb and a half, camphire ?? oz. ol. caryoph. ver. 3 ij, S. V. R. 8 oz. M. Used as an errhine.

Vinaigre rosat. Acetum rosatum. Petal. ros. rubr. sicc. 1 मjj, acet. opt. tbxij; infuse eight days, strain, and reoeat the infusion with fresh roses.

Vinalgre de ronarin. Acetum anthosatum. Fronz cosemary flowers, as the vinaigre rosat.

Vinaigee de sureau. Acetum sambucinum. From elder flowers, the same.

Vinaigre d'eilleets. Acetum caryophyllatum. From ted pinks.

Tarragon vinegar. Tarragon 8 oz . distilled vinegar 11 gall.: all these, and many similar ones, are used as sauces in foreign cookery, and as refreshing errhines.

Vinaigre distillé de lavande. From the flowering tops by infusing them in vinegar, and then distilling 3-4ths.
2. Vinegar, distilled in glass, Tjj, oil of lavender q. p. M. Many other vinegars of this kind may be made from odoriferous plants or their oils; they are used as cooling odoriferous cosmetics.

Vixaigre dentifiquue. Rad. pyrethri zij, cinnam. caryoph. guaiac. ana $\mathrm{sij}^{\mathrm{ij}}$, spirit. cochlear. ${ }^{3} \mathrm{jij}$, aq. vulncr. rubr. Šiv, acet. opt. alb. गtiiij: used to wash the mouth in toothach, or carious teeth, either by itself or diluted.

Tschillie vinegar. Bird pepper 4 oz . white wine vinegar 1 gall. infuse a few days, and strain; a warm sauce.

Common black drop. Opium 8 oz. distilled vinegar 2tb: infuse.

## \％．SPIRITS．

When these liquors are intended for the toilcttc，or for pia－ tent medicines，care must be iaken to choose a spirit that has no ill scent；the＇distillation must be made in a uater bath，and the distilled spirit kept for some time in a cool cellar，or rather in an icc－horse：but if they are to b： used as common shop medicines，this care is unnciessary． and the most usual method in this case is to mix a small quantity of essential oil rcith proof spirit，and thus to avoid the trouble of distilling：the usual dose is zij to ${ }^{3} \mathrm{j}$ ．

## OFFICINAL COMPOUNDS. - \% Spirits. 255

Spirit of worniwood. Aqua absinthii mimus compoita. Fol. absin. sicc. Jtiij, cardam. min., sem. coriand. ana bfs, proof spir. 4 gall. distil 4 gall.
2. Absinth. 21t, sem. coriand., calam. aromat. ana 1 tb , V. R. 2 gall. distil 4 gall. : stomachic.

Elixir of garlicks. Rad. allii contus. no. 80, S. V. R. $0 j$; distil to dryness, and repeat the distillation upon fresh loves of garlic a second and third time, then add camph. ij : diaphoretic, 5 fs , bis die.

Spirit of angelica. Aqua angelica. Leaves 1bj to e gallon of proof spirit.

3．White sugar $24 t \mathrm{t}$ ，water 16 pints，boil nearly to a syrop，clarify with white of 3 eggs，scurn，and finish the boiling，adding，while warm，aq．naphæ 1 pint．

4．Gum．tragacanth． 3 oz．water 2 gall．；boil，strain， and make it up 3 gall．；add white sugar 2415 ，clarify with the white of 5 eggs，and then add aq．flor．aurant． 2 pints and a half．

5．Capill．Veneris ${ }^{3} \mathrm{j}$ ，water 6 pints；steep，strain，add white sugar tbriij，boil to a syrop，adding；when cold，aq． flor．aurant．${ }^{5} \mathrm{ij}$ ．

6．Lump sugar $81 t$ ，water 1 gallon；hoil，scum，and clarify with the white of an egg，when nearly cold add rose water 1 pint，put it up in very dry warm bottles；it may be coloured with brandy colouring if desired ：nutritive，resto－ rative，an elegant addition to pump water in summer time．

Syror or clove pinks．Syrupus infistonis forum ca－ ryophylloriom，shir：caryophytlorim，rubrorum，Syir．caryo－ phylli rubri，Syr．diunthi caryophylli．Fresh petals of clove pinks，the white points beingr cut off，thii，looiling water 6 pints；infuse for 12 hours，strain，and add white sugar q．s．

2．Clove pinks 1 peck，white sugar $24 i b$ ；produces syrop 40tí and a half．

3．Cochineal 5 j ，sugar 2 Zb 1 oz ．water a pint：used as a red colouring syrop．

SyROp of cloves．Syrupus caryophlyllorum aromatico－ rum．Caryoph．亏̌iii，white winc tty；，infuise，strain，and add sugar q．s．：stomachic．

## OFFICINAL COMPOUNDS.-9. Syrops. 281

Syrop of cinnamon. Syrupus de cinnamomo. Cinm nam. $3^{\text {iij }}$, boiling water tibj; infuse, strain, and add sugar q. s. : stomachic.

Syrupus corallii simplex. Red coral in powder ${ }^{3}$ iiij, juice of berberries Thiiij; filter, to each pint add white sugar \#bjfs; to each to add syr. caryoph. rubr. (e. coccin.) 气as iv: astringent, $3^{\mathrm{ij}}-\mathrm{O}_{\mathrm{j}} \mathrm{j}$, in loosenesses.

Syrop of saffron. Syrupus croci P.L. before 1788. Croci ${ }_{5 j}$, Vin. Canar. Hj : infuse three days, press and add sugar q. s.
2. Spir. croci P. L. since 1788 . Is made with water instead of wine.
3. Croo 4 oz. coccin. 3 ij, boiling water 1 gallon ; strain and add white sugar 12 tb .
4. Croci 3 oz, coccin. ziv, boiling water 1 gallon, sugar 1635.
5. Croci in fœno 6 oz . water 121 b , white sugar 281 bb , produced 403 z : cordial, but since it has been made with water, used only to colour medicines.

Syrop or quinces. Syrupus cydoniorum. Succ. cydon. defxecati 1tiij, cimnam. $3 j$, caryoph. arom., zz. ana $5^{\text {fs }}$ : digest for six hours, then add vini rubri 1 15j, sacch. alb. 1bxv: astringent, in loosenesses.

Syror of liquortee. Rad. glycyrih. 亏ij Ki, hyssop. ${ }^{\circ}$ fs, boiling water tbiij; steep for twenty-four hours, press, add mell. opt., sacch. alb. ana $j^{2} x$, boil to a syrop: demulcent, ad libitum, in coughs.

Syhop of lemon juice. Syrupus e succo limonum, Syr. succi limonis, Syr. limonis. Juice, rendered clear by settling and subsequent filtering 1 pint, white sugar 1 bij.
2. Syr. citri Medicte. Juice rendered clear as before, 3 Ht , sugar 5 Ht : cooling, expectorant, pleasanter than oxymel.

Syrop of horemound. Syrupus de Prassio, Syr. marrubii. White horehound man. j, boiling water q. s. to strain a pint; infuse, strain, add sugar q. s. : is sold for any syrop of herbs that is demanded, and which is not in the shop.

Symor of mulberries. Syrupus e succo mororum, Syr. succi mori, Syr: mori. Is made in the same manner as the syrop of lemon juice.
2. Juice 711 , water $11 t$, cocein. 3 , saceh. alb. $16 \#$.
3. Fruit 18 gall. produced juice 30 It, sugar 35 tb : produces 56 it of syrop.

## 282

 OFFICINAL COMPOUNDS.-9. Syrops.4. Syr. rhœeados $\xi_{j}$, spir. vitriol. 3 fs, or q. s. to give the proper colour and taste: grateful, cooling.

Common syrop or ropries. Syrupus opii. Extr. opii aquosi gr. xviij, boiling water ${ }^{3}$ viiij: dissolve, add sugar q. s.
2. Opium pur: 2 oz . 3 iiij, water 20 H t , sugar $24 \mathrm{\sharp}$; boil to a proper consistence.
3. Extr. opii گiv, white sugar 10 Hb , water 6 tb .
4. Extr. opii gr. xvj, simple syrop 11b.
5. Simple syrop $\mathrm{Z}_{3}$, tinct. opii gtt. xxv: Narcotic, $\mathrm{Z}^{\text {fs }}$ to ${ }^{5} \mathrm{j}$ : is sold for the syrop of poppies.

Sirop p’orgeat. Syrupus amygdidianus, Syr. hordeatus. Amygd. dulc. T5j, amygd. amar. 3 ij ; make an emulsion by adding decoct. hord. Hij; strain, to the strained liquor ${ }^{3} \mathrm{x}$, add sacch. alb. \#bjifs, and when the sugar is dissolved, aq. flor. aurant. 3 j.
2. Jordan almonds 8 oz, bitter almonds 4 oz . water $\mathrm{q} . \mathrm{s}$. to make a very thick emulsion, strain, add the remainder of 2 pints of water, sugar 31b, orange flower water 2 oz . sp. limon. cort. 3 vj , strain through flannel.

True syrop of pò̀pies. Syrupus de meconio, Dia, codiom, Syr. papaveris albi, Syr: papaveris P. L. Poppy heads, without the seeds, Exiv, boiling water 2 gall, and a half; boil to one half, press out the liquor with great force, boil again to 2 pints, strain while hot, boil down to a pint, and dissolve in it white sugar Itij.
2. Syr. papaveris P. D. Poppy heads 1 Jj , water Hiiij; boil, express, and eraporate to 1 bj , strain, add sugar q. s. to make a syrop.
3. Syr. papaveris somniferi. Poppy heads thij, water Tbxxx, sugar tbiiij.
4. Poppy heads, broken, 5 th 4 oz . water $q$. s. sugar 35 th .
5. Broken heads 121 tb , sugar 48 tb , produced 67 Tt : narcotic, $3 \mathrm{ij}-5 \mathrm{~F}_{\mathrm{s}}$, or more; as the preparation is so troublesome, the common syrop made of opium is usually sold in its stead: many make it of treacle.

Syroo of cowsirps.: Syrupis c floribus paralyscos. Is made as the syrop of clove pinks : slightly narcotic.

Syror of peach noossoms. Syriupus a floribus malorum Persicorum. Peach blossoms thij, warm water thiiij; soak for a day, press out, and repeat the infusion with fresh flowers four times more; strain, and to 3 pints of the liquor add sugar lbijfs, boil to a syrop: nildly callartic; used for infants.

Syrop of buckthorn. Syrupus de spina cervina, Syr. spince cervince. Juice of buckthorn berriés full ripe \#biiij; steep ginger and allspice ana giv in one pint of it, then strain, boil the rest to Hj f s, mix the two liquors, and add sugar triijfs.
2. Syr. rhamni cathartici. Juice, clarified by settling, 21 t , white sugar 31 t .
3. Juice 1 gallon, brown sugar 1215.
4. Juice 3 gall. brown sugar: 2815, piment. 6 oz. zz. 4 oz. produced 381 tb ; cathartic, but apt to gripe, $3 \mathrm{fs}-5 \mathrm{j} \mathrm{fs}$, seldom used but in clysters, except by the ferriers, who employ it very liberally.

Syrop of red poppies. Syripus de papavere erratico, Syr. papaveris crratici, Syr. rheeados. Scald and steep wild poppy flowers ttj in boiling water ${ }^{\prime}$ xxiij, press out the liquor, let it settle, decant, and add white sugar tibijfs.
2. Flowers 14 Tt , water 42 tb , sugar 3 qrs. 7 th , produced 132 Tt : narcotic, but principally used to colour medicines.

Syrop of rhubarb. Syyrupus de rhabarbaro. Rhabarb., fol. sennæ ana $z_{i j} \mathrm{f}$ s, cinnam. $\bar{j} \mathrm{jfs}$, ginger $z^{\mathrm{fs}}$, warm water triiij; steep all night, strain, and boil to a syrop with white sugar 仿ij.
2. Rhabarb. E. Ind., fol. senix, raisins ana 4 oz. ginger 弓iiij, white sugar 9 tb, water 1 gallon : cathartic.

Syrop of black currants. Syrupus e ribis nigris. As syrop of lemon juice : cooling.

Syrop of red currants. Syrupus e ribis rubris. Pres\$ out the juice, strain, put it into a glass or China vessel, cover with paper in which holes are pricked, expose it to the sun for a fortnight, take off the crust at top, add to each 4 tb of the clear liquor, 7 tb of sugar, and give it a quick boil: this preparation prevents any further fermentation.

Syrop of pale roses. Syrupus rosaccus solutivus, Syr. rosarum solutivus. Liquor left in distilling 61 th of damask roses, boiled down to 3 pints; let it settle for a night, decant, add white sugar thv, and boil till it weighs tbviiffs.
2. Syr. rosa P. L. before 1809. Damask rose petals,
 add sugar $1 \hbar \mathrm{j}$.
3. Syr: ross P. L. siuce 1809. The same, but made with pale-rose petals.
4. Syrup. rosce centifolice. Fresh petals 1tj, boiling water tbiiij; infuse, add sugar tbiij : slightly purgative; used for children.

Syror of red roses. Syrupus de rosis siccis. Dried petals thfs, boiling water thiiij; infuse, strain with expression, add sugar fb f , boil to a syrop.
2. Syr. rosce Gallicce. Dried petals , Jvij, boiling water thv, sugar thrj: is slightly astringent, but more used as a red colour.

Syrop of barberries. Syjupus de berberis. Juice, cleared by settling, ttij, white sugar thjfs, boil to a syrop.
2. Syyr. rubri Idaci. Juice Itiji, sugar ${ }_{j} j$; dissolve: a grateful acid cooler.

Syrop of ree. Syrupus rutco. Rue man. j, boiling water q. s. to strain a pint, add sugar q. s. : antispasmodic.

Syrop of elder berries. Syrupus sambuciuus. Juice of the berries q.p. sugar q. s. to make a syrop.

Syrupus rosaceus solutives cum seinad. Fol. sennx
 mask roses tbiij, sugar tobij.
2. Syr. sennce P.D. Senna ${ }^{\text {fins }}$, boiling water Itj ; infuse, strain, add manna, sugar ana thj.
3. Syr. sennce P. L. 1809. Senna そjj, sem. feenic. đ̛. 3 j , boiling water 1 Hj ; infuse, strain, add manna, sugar ana \#jj: this and the preceding are more properly electuaries.
 boiling water 1 Hj ; infuse, strain, add manina ${ }^{\text {jiij }}$, sugar 1 it : purgative; used for children, $3 \mathrm{jj}-\mathrm{y}$ fs.

Balsamic syrop. Syrupus balsamicus, Syr. Tolutamus P. L. before 1809. Balsam of Tolu 今riiij, water ttiij; boil for two hours in a still, and return what comes over ; strain, and add sugar flxxx.
2. Syr. Toluianus P. L. since 1809. Bals. Tolu 5 j , water thj; boil in a close ressel, strain, add sugar trij.
3. Syr. toluiferce balsami. Simple syrop Hiij, tinct. bals. Tolu ${ }_{\mathrm{j}} \mathrm{j}$ : M.

Syrop of riolets. Syprupus violarum. P. L. before 1745. Fresh flowers libj, boiling water tijijfs; iufuse for a day, press out the liquor; in every 2 pints dissolve sugar 1tiiii; scem, and boil to a syrop.
2. Syr. e succo violarum. Juice expressed from the flowers tibj, sugar Hiji, or rather more ; beil to a syrop.
3. Syr. violarum P. L. since 1ris. Sylr. ziolkit, Syr. viole odoratere. From the infusion, strained through a fine cloth, carefully avoidthg the least pressure.

4, Lign. Campech. 1th, rad. ireos Flor. S oz. water th
pints ainfuse when cold, strain, to each pint add white sugar 81t, water 6 pints.
5. Flowers of columbine $\mathrm{Hbj}^{2}$, rad. ireos Flor. $5^{\mathrm{iv}}$, water thijfs, sugar q.s.; or the flowers of the purple flag, iris biflora Linn. may be used: laxative, to children $3 \mathrm{ij}-\mathrm{y}$ §s.
6. Colour simple syrop, scented by orrice, with litmus or indigo: but the last does not turn red with acids.

Syrop of ginger. Syrupus zingiberis P. L. before 1745. Root bruised $\mathfrak{3} i \mathrm{iij}$, white wine Hj ; infuse warm for three days, strain, add sugar lbjfs.
2. Syr. zingiberis P. L. 1745 to 1809, P. D. Root sliced jiv, boiling water tbiij; infuse, add sugar q. s.
3. Sypr. zingoiberis P. L. since 1809. Root sliced ${ }^{5} \mathrm{ij}$, boiling water \#\#j, sugar tbij.
4. Syr. amomi zingiberis. Root sliced ter thiv, sugar thvijfs : carminative, stomachic.

Confectio alkermes. Sugar 1bj, rose water $\frac{3}{3} \mathrm{vj}$; dissolve, add juice of kermes tbiij, ol. cinnam. Эj; the older receipts ordered a little gold leaf to float about in it, also musk and ambergris : stimulant.

Syror of nutmegs. Syrupus mucum moschatarum. Nutmegs ${ }^{3} \mathrm{iij}$, white wine tbj; infuse three days, strain, add sugar Hijfs: stomachic, stimulant.

Syrop of red cabbage. Syrupus brassicce rubrce. Juice of red cabbage thij, sigar tibv, make a syrop; some steam the leaves before they press them.
2. Leaves q. p. boiling water q. s. to cover them; infuse, strain, add sugar q. s. : pectoral, much used in some places.

Hippocias. Canary, Lisbon ana 12 pints, cinnam. 2 07. canel. alb. ziiij, caryoph., macis, nuc. mosch., zingib., galang. ana 3 j ; digest three days, strain, add white sugar 40 oz .

Oxymel. Oxymel simplex. Honey lbij, white wine vinegar thj: M.
2. Syrupus acetosus. White wine vinegar libij, white sugar thv: dissolve.
3. Syr. acidi acetosi. White wine vineģar thijfs, white sugar thiijfs; boil to a syrop : diluted with water, form acidulous drinks and gargles.

Oxpmeí ex allio. Vinegar tofs, sem. carni, sem. foen. d. ana $z_{i j}$; boil, add garlick inf $_{5}$, cover, and, when cold strain, then add honey, .7 x .

Oxymel colchici. Freslı roots ${ }_{5}^{2} \mathrm{j}$, distilled vinegrar 15j, soak for 2 days, press, to the liquor add honey thij, and boil to a syrop: in asthma and dropsy 3 j, bis die, gradually increased:

Oxymel of squills. Oxymel scilliticum, Oxymel scille. Honey tbiij, aceti scille thiij; boil to a proper consistence.
2. Syrupus scillce maritimo. White sugar tbiijfs, aceti scille thiij: expectorant, detergent, $3 \mathrm{ij}-3 \mathrm{iij}$; in larger doses to children as an emetic.

Syrupus volatilis. S. V. R. 1 pint, white sugar as much as it will dissolve : stimulant, anti-emetic.

Ratafia dangeliques Angelica seeds $3 j$, stalks of angelica, bitter almonds blanclied ana 4 oz: proof spirit 12 pints, white sugai 2tb; digest, strain, and filter: carminative.

Ratafia danis. Anise seed 2 oz. proof spirit 4 pints, sugar 10 oz.: it may be made of star anise seed.

Huile d'anis. Anise seed 2 oz. S. V. R. 4 pints, simp. syrop 4th: tincture of vanilla may be added if agreeable.

Anisette de Bourdeaux. Sugar 9 oz. ol. anisi gtt. vj; rub together, add by degrees S. V. R. 2 pints, water 4 pints: filter.

Eau de vie d'Andaye. The same ingredients as the former, but less sugar and oil.
$\mathrm{R}_{\text {atafia de }}$ caffé. Roasted coffee, ground, 1tb, proof spirit 1 gallon, sugar 20 oz .: digest for a week.

Ratafia de cassis. Ripe black currants 67 tb , cloves $5_{5} \mathrm{f}$, cinnamon 3 j , proof spirit 18 pints, sugar 31 th 8 oz . : digest a fortnight.

Ratafia des cerises. Morello cherries with their kernels bruised 81b, piroof spirit 8 pints; digest for a month, strain with expression, add sugar 11t 8 oz.

Ratafia de Grenoble. Small wild black cherries with their kernels bruised 12th, proof spirit 6 gall. : digest for a month, strain, add sugar 1211, a little citron peel may be added at pleasure.

Ratafia de cacao. R. de chocolat. Caracca cacao nuts roasted 1 tb , West Indian cacao nuts roasted 8 oz . prf. spirit 1 gallon : diçest for a fortnight, strain, add sugar 1 tb 8 oz . tinct. of vanilla gtt. xxx.

Cliniret. Rossolis des six graines. The seeds of anise, fennel, dill, coriander, carui, and daucus Creticus ana 1 oz. proof spirit 4 pints, sugar 1 fb .

## OFFICINAL COMPOUNDS．－9．Syrops．

Ratafia de coings．Juice of quinces 6 pints，cinnam．弓iij，coriander seed bruised $弓 \mathbf{j i j}$ ，cloves bruised gr．xv；mace 3 fs，bitter almonds ziiij，S．V．R． 3 pints ：digest for a week， add sugar 2tb 8 oz ．

Escubac．Üsquebaug：Saffron 1 oz．juniper berries ziv，dates without their kernels，raisins ana 3 oz．jujebs 6 oz ．anise seed，mace，cloves，coriander seed ana 3 j ，cin－ nam． 5 ij ，proof spirit 12 pints，simple syrop 6 tb ：pectoral， emmenagogue．

Ratafia de framboises．Strawberries 81b，proof spirit 4 pints，sugar 12 oz．

Ratafia de genièvire．Dried juniper berries not bruis－ ed 2 oz ．proof spirit 4 pints，sugar 10 oz．

Ratafia de brou de noix．Young walnuts，whose shells are not yet hard，no． 60 ，brandy 4 pints，sugar 12 oz ．mace， cinnamon，cloves ana gr．xv；digest for two or three months， press out the liquor，filter，and keep it for two or three years： stomachic．

Ratafia de noyauc．Peach or apricock kernels，with their shells，bruised，no．120，proof spirit 4 pints，sugar 10 oz．：some reduce S．V．R．to proof，with the juice of apri－ cocks or peaches，to make this liqueur．

Ratafla deeillets．Clove pinks，the white heels pulled off，4th，cimnamon，cloves ana gr．xv，proof spirit 1 gallon， sugar 11 t ．

Ratafia à la Provencale．Striped pinks 1th，proof spirit 2 pints，sugar 8 oz．juice of strawberries 11 oz ．saf－ fron gr．xv．

Ratafia decorces doranges．Fresh peel of Seville oranges 4 oz ．proof spirit 1 gallon，sugar 1th：digest for six hours．

Ratafia de fleurs dooranges．Fresh flowers of the orange tree 21 t ，proof spirit 1 gallon，sugar 11 b 8 oz．：di－ gest for six hours only．

Huille de vanille．S．V．R． 2 pints，simple syrop 2五， tincture of vanilla q．s．

Vesperro．Angelica seed 2 oz ．coriander seed 1 oz ． fennel seed，anise seed ana 5 ij，lemons sliced，no． $\mathscr{2}$ ，proof spirit 4 pints，sugar 1 lb．

Rarafia à la violette．Flor．orrice root 3 jij ，archel 1 oz. S．V．R． 4 pints：digest，strain，and add sugar 41 j ．

Fexounlette de lile de Rhe．Fennel seed 2 oz．herb of the same 8 oz ．S．V．R． 2 pts．water 4 ．pts．sugar． 10 cz ．

Urinte deleplunt. Benjamin 2 o\%. S. V. R. 1 pint, boiling water 2 pints and a half: when cold, strain, and add sugar 1th 8 oz.

Ratafia de baume de Tolu. Balsam of Tolui 2 oz. S. V. R. 1 pint, bciling water 3 pints, sugar 11 方 $80 \%$.

Citronelle. Eau de Barbades. Fresh orange peel 1 oz. fresh lemon peel 4 oz. cloves 5 fs, coriander $3 j$, proof spirit 4 pints: distil in B. M. and add white sugar p. æq.

Chrème des Barbades. Orange peels, lemon peels ana no. 3 , cinnamon 4 oz. mace 3 ij, cloves 5 j , rum 18 pints: distil in B. M. and add sugar p. xq.

Cedrat. Lemon peels no. 12, S. V. R. 2 gallons: distil in B. M. and add simple syrop p. xq.

Parfatt amour. The same, coloured with a little cochineal.

Marasquin de groscilles: Gooseberries quite ripe $102 \mathrm{H}_{\mathrm{s}}$ black-cherry leaves 12ib; bruise and ferment ; distil and rectify the spirit: to each pint of this spirit add as much distilled water, and sugar 1 tb .

Huile de Venis. Flowers of the wild carrot, picked, 6 oz. S. V. R. 10 pints; distil in B. M.: to the spirit add as much syrop of capillaire, it may be coloured with cochineal.

Eav divine. S, V. R. 1 gall. ess. of lemons, ess. of Bergamotte ana 3 .j; distil in B. M. add sugar 4 H , dissolved in pure water 2 g gall. and lastly orange flower water 5 oz .

Bramdy shrub. Brandy 9 pints, lemon juice, orange juice ana 1 pint, orange peels no. 4, lemon peels no. 2 , sugar 21 D , water 5 pints.

Rum shrub. The same, using ruma instead of brandy.
2. Concrete acid of lemons 8 oz. water 5 gall. raisin' wine 4 gall. rum 10 gall. orange flower water 4 pints, honey 6 根.

Chreme de noyaux. English. Bitter almonds blanched 4 oz. proof spirit 2 pints, sugar 1 th.

Chreme dorange. English. Oranges sliced no. 36, S. V. R. 2 gall. sugar 181 b , water 4 gall. 4 pints, tincture of safilon 1 oz. 3 iv , orange flower water 4 pints: digest for a fortuight, strain.

Chreme des Barinades. English. Lemons sliced no. 24, citrons sliced no. 6, S. V. R. 2 gall. 4 . pints, fresh baulm leaves 8 oz . water 3 grallons 4 pints: digest for a fortuight, straun.

All the above liqueurs are stimulant, and taken ad libitum for pleasure.

Huile inquoreuse de fleurs d'oranges. Orange flower "water, simple syrop ana p. æq.

Huile liruoreuse de la rose. Julepum rosatum. 1 Rose water, simple syrop ana p. æq.

Strop d'orgeat. Syrupus amygdalinus. Jordan almonds 1tb, bitter almonds 2 oz . rub with barley water 2 tpints into an emulsion and strain; to 10 oz . add white suygar 18 oz. orange flower water 3 j .
2. New almonds 8 oz. bitter almonds 4 oz . rub with a little water into an emulsion, strain, rub what is left upon the strainer afresh, with the emulsion, to make it as rich as possible, add white sugar 31 b , orange flower water 2 oz . spirit of lemon peel 3 vj ; strain through flannel, and put up iinto bottles : cooling, demulcent.

Syrop of gatl. Syrupus fellis. Tincture of bullock's crall 1 oz . simple syrop 1 Ib ; mix: stomachic, promotes difrestion, iin doses of ${ }^{3} \mathrm{j}$.

Syrop of ipecacuanha. Syrupus ipecacuanhco. Tincture of ipecacuanha in S. V. R. made as strong as possible, II oz. simple syrop 1tb; mix : antidysenteric, expectorant, $53 \mathrm{j}-3 \mathrm{ij}$, in larger doses $3 \mathrm{j}-3 \mathrm{j} \mathrm{fs}$, emetic.
2. Ipecacuanha 1 oz . boiling water 1 pint; infuse, strain, add sugar trij : this is much weaker.

Black drop, the true. Opium sliced 8 oz. juice of crab pples 3 pints, nutmegs 1 oz . and a half, saffion 3 jij ; boil till nooth, add sugar 4 oz. yeast 2 table-spoonfuls; keep it hear the fire for six or eight weeks, and then place it in the open air till it becomes a syrop; decant, filter, and put It into small bottles, adding a little sugar to each bottle: These quantities should produce about 2 pints.

Elixir de Garus. Myrrl, aloes ana $3 j f$ f, cloves, nut-
 llistil 9 pints, then make an infusion of maidenhair 4 oz . iiquorice root $z^{\mathrm{iv}}$, figs 3 oz . in boiling water 1 gall. ; strain rvith expression, dissolve in it white sugar 121b, add orange Hower water 12 oz: to each th of this syrop add half its rveight of the distilled spirit, and keep it for some time in a tellar.
2. Myrrh. 3 iv, aloes, croci ana 3 ij , cinnam., caryoph., muc. mosch. ana $Э \mathrm{j}$, proof spirit 2 pints; make a tincture, itrain, add syr. capilli Veneris tij, aq. flor. aurant. 3xij.

Godfrey's cordial. Venice treacle, ginger ana 2 oz. S. V. R. 3 pints, ol. sassafr. 3 vj , water 3 gall. treacle $14 \mathrm{3b}$, tinct. 'Theb. 4 pints.
2. Sassafras $11 \mathrm{~b}, \mathrm{zz} .4 \mathrm{oz}$. water 3 gall.; boil gently to 2 gall. add treacle 161 b , S. V. R. 7 pts. tinc. Thelb. 1 pint.
3. Opium 8 oz. ol. carui, ol. sassafi. ana 5 oz. treacle 56 tt, S. V. R. 1 gallon, water 8 gallons.
4. Opium ziiij, treacle 4 H , boiling water 1 gallon : dissolve, add S. V. R. 2 oz. ol. sassafr. gtt. xl.
5. Opium 1 oz . and a half, treacle 7 lb , S. V. R. 2 pints, ol. sassafr. 3 ij, extr. jalapæ 3 iiij, water 2 gallons; produces 21 pints.
6. Sem. carui, sem. coriandri, sem. anisi ana 41 b , water q. s. : distil 16 gall. to which add opium 12 oz . ol. sassafr. 41 oz. dissolved in S. V. R. 2 gall. proof spirit 5 gall. treaclo 84 tb .
7. S. V. R. 1 pint, tinct. opii 2 oz. ol. sassafr. Jjjfs, water 10 th ; treacle 7 F tb :
8. Sassafras 2tb, boil in water 1 gall. to 7 pints; strain, add brown sugar 71t, opium 2 oz. previously dissolved in a pint of water, and S. V. R. 1tb. Anodyne, narcotic; chiefly used to prevent the crying of children.

Dal.by's carminative. Tinct. opii givfs, tinct. ass. foet. 3 ijfs , ol. carui Эiij, ol. menth. pip. Эrj, tinct. castor. $3^{\text {vifs. }}$ S. V. R. 3 vj; put 3 ij into each bottle with magnesia $3 j$, and fill up with simple syrop and a little S. V. R.

Essentia bine. Brown sugar melted in an iron pot, and kept on the fire till it is quite black and bitter, then removed, and lime water added to reduce it to the consistence of a syrop.

Colour for brewing, Brandy cololring. Brown sugar melted until it begins to grow bitter, and then made into a syrop with lime water.

OBS. Syrops are judged to be sufficiently boiled when some taken up in a spoon pours out like oil; and when a thin skin appears on blowing upon the syrop, it is judged to be completely saturated : a bottle that holds 3 oz . of water, ought to hold 4 oz. of syrop, at 54 deg . Fahr. or it should exhibit while hot, 32 deg. of Baumés hydrometer for salts, and 33 or 34 deg. when cold.

Syrops should be kept in small bottles, in a cool place, and only a small quantity brought into the shop for present use.

## 10．CONSERVES．

Rob de berberis．Juice of barberries strained 1 pint， white sugar $\tilde{5} \mathrm{vj}$ ；boil down to a jelly．

2．Juice and sugar ana p．æq．；boil down ：refrigerant．
Rob de cerasis．Kentish cherry juice，strained， 1 pint， sugar ${ }^{2} \mathrm{vj}$ ；boil down：refrigerant．

Rob de cornis．Cornelian cherries 1 tjj；boil in a little water，pulp through the sieve，add sugar $\tilde{\xi}^{\mathrm{Vj}}$ ，and boil down．

Rов сydoniorum．Juice of quinces，cleared by settling a while，Hvj；boil to 1bij，add sugar ${ }^{\text {vij }}$ ，and boil down．

Diacydoniuni．Flesh of quinces，boiled soft in water， Htviij，white sugar thvj，boil to a jelly，and pour into moulds．

Ros prunorum acidorum．As the former，from unripe plums ：astringent．

Currant jelly．Rob de ribes．Juice of red currants Hjj，sugar ${ }^{3} \mathrm{vj}$ ；boil down．

2．Juice of red currants，white sugar ana p．xq．stir it gently and smoothly for three hours，put it into glasses，and in three days it will concrete into a firm jelly．

Rob of elder berries with sugar．Rob baccatum sambuci cum saccharo．Juice 1biiij，sugar 1tj；boil down ： detergent，used in gargles．

2．Juice 16 gall．sugar $8 \%$ tb ；produced 1301 tb ．
Jelly of apples．Apple juice strained 1 biiij，sugar 1 ibj ； boil to a jelly．

Strawberdy jelly．Juice of strawberries 莸iij，sugar Hiji ；boil down．

Gooseberry Jelly．Dissolve sugar in about half its weight of water，boil：it will be nearly solid when cold；to this syrop add an equal weight of gooseberry juice，and give it a boil，but not long，for otherwise it will not fix．

Scotch marmerade．Juice of Seville oranges 2 pints， yellow honey 2 tb ；boil to a proper consistence．

Mex helleboratum．Rad．helleb．alb．形，water $\mathrm{H} i i i j$ ； soak，boil，press out the liquor，strain again，add honey thiij， and boil to a proper consistence ：cathartic，in mania．

Honey of roses．Mel rosatum，Mel rosaceum，Mel rosct．Dried red roses 亏iv，boiling water thiij；infuse， strain，add honey tbv，and boil down：used in cooling，de－ tergent gargles．

Mee solutivum．Liquor left in distilling 61 it of pale

## 292 OFFICINAL COMPOUNDS.-10. Conserves.

roses, boiled down to tbiij, putting in towards the end sem. cymini ${ }^{3} \mathrm{j}$, tied up in a rag, then add moist sugar Hiiij. honey 16ij, and boil down : laxative.

Ros diacaryon. Juice of green walnut husks, 41tb, honey 2 lb ; boil down: stomachic $3 \mathrm{j}-3 \mathrm{fs}$.

Ros diamorum. Juice of mulberries 4tt, honey 21b; boil down: cooling.

Conserve of wormwood. Conserva absinthii maritimi. Leaves 1 Ibj , sugar 1biij; beat or grind into a conserve: tonic, stomachic.

Conserva cochlearice hortensis. Leaves Hbj, sugar \#biij: stimulant, antiscorbutic.

Conserve of hips. Conserva cynosbati, Cons. fructûs cynosbati, Conféctio rosce canince. Fruit, carefully separated from the seeds and their down, 荷, sugar $3 \times x$.
2. Conserva rosce canince. Fruit pulped 1 Itj, sugar \#tiij : cooling.
3. Hips 2 cwt . 71 tb , before pulping, after being pulped and beat up with white sugar 21615, produced 3881 Hi .

Converve of mint. Conserva menthce foliorum, Cons. menthoc sativce. Leaves 1 Dj , sugar 1biij: allays vomiting.

Conserve of red reses. Conserva florum rosarum rubrarum, Cons. flor rose rubra, Cons. rosa rubra, Confectio rosce Gallicce, Conserva rose Gallica. Petals 1bj, sugar 1tbiij : astringent.

Conserve of rue. Conseroa rutce foliorum. Leaves I bj , sugar Ibiij : antispasmodic.

Conserve of orange peel. Conscrua corticum aurantiorum, Cons. flavedinis corticum aurantiorum. Hispalensium, Cons. corticis exterioris aurantii Hispalensis, Confectio aurantii, Cons. aurantii, Cons. citri aurantii. Yellow part of the peel of Seville oranges thj, sugar Hiiij: stomachic.

Conserve of slozs. Pulpa prunorum syluestrium condita, Conserva prunorum sylicstrium, Cons. pruna sylvestris. Soften the slues by simmering then orer the fire in a little water, taking care that they do not burst, pulp them through a sieve, add to the pulp three times its weight of sugar: astringent.

Conserva ari. Fresh roots tbfs, sugar Thjfs: diuretic, attenuant.

Conserve of wood somrel. Conserva foliorum lujula,

Cons. lujulce. Leaves of wood sorrel Hj, sugar 1biij: gratefully acid, of an elegant red colour, cooling.

Conserva scillce. Fresh squills ${ }_{5}^{5} j$, sugar ${ }^{5} \mathrm{~J}$ : diuretic, attenuant.

## 11. ELECTARIES.

Erectarium e baccis lauri. Fol. rute sicc., sem. carui, sem. petrosel. vulg., bacc. lauri ana ${ }^{2} \mathrm{j}$, sagapeni ${ }^{\boldsymbol{J}} \mathrm{f}$, piper. nigri, castor. Russ. ana 3 ij , mell. $\mathrm{F}^{\mathrm{xv}}$.

Confectio amygdalce，Conf．amygdalarum．Sweet al－ monds，blanched，高，gum Arabic $3 j$ ，white sugar fis ．used to make emulsions when required，by merely rubbing down with distilled water．

Ward＇s paste for fistula．Piper．nigri，rad．enulæ camp．ana 11t，sem．foenic．dulc．31t，honey，white sugar ana 21b ：in fistula，dose the size of a nutmeg，three or four times a day．

Confectio Japonica．Electuarium mimoso catechu． Catechu Jiiij，gum．kino そiij，cinnam．，nuc．mosch．ana ${ }^{\circ} \mathrm{j}$ ， opii 3 j （dissolved in sherry q．s．），syr．rosar．rubr．boiled to the consistence of honey 1 tij $\tilde{z}^{\mathrm{iij}}$ ．

2．Elect．catechu compositum．Catechu $\mathrm{J}^{\mathrm{iv}}$ ，cinnam． ziij，kino ₹iiij，opii pur．そjfs（dissolved in sherry q．s．）syr． zZ．boiled to the consistence of honey Hbij $\mathrm{J}_{\mathrm{iij}}$ ．

3．Catechu 11 b ，cassiæ，pulv．nuc．mosch．comm． 4 oz ． opii ziiij，syr．rosæ 71b ：astringent．

Almond paste．Almonds blanched 4 oz．lemon juice 2 oz ．oil of almonds 3 oz ．water 1 oz ．proof spirit 6 oz ．

2．Bitter almonds blanched 11 b ，white of 4 eggs ，rose water，S．V．R．ana q．s．

Brown almond paste．Bitter almonds blanched，pulp of raisins ana 11t，proof spirit q．s．：cosmetic，softens the skin and prevents chaps．

Fox lungs．Lohoch e pulmone vulpium．The lungs of a fox dried and powdered，Span．liquorice，maidenhair， anise seed，fennel seed ana p．æq．white sugar made into a syrop with coltsfoot and scabious water three times the weight of the species：the original prescription of Mesue has heney instead of syrop．

## 298 OFFICINAL COMPOUNDS．－11．Electaries．

2．Cons．cynosb．，cons．rosæ，syr．Tolut．ana 8 oz ．sperm． ceti，syr．simpl．，ol．amygd．ana $40 \%$ ．spir．vitrioli to give a grateful acidity．

3．Sperm．ceti，succ．glycyrrh．ana 8 oz ．water q．s．to soften the liquorice and make an electary，then add honey 31b，ol．anisi q．s．to flavour it rather strongly：pectoral； used in coughs，although omitted by the college for more than a century，still retains its place in the public opinion， the chemists having substituted sperma ceti for fox lungs， and thus evidently improved it．

Quince marmelade．Miva vel Gelatina cydoniorum． Juice of quinces 1 Ibxij，boil to a half，add white wine tov， simmer away about 3 or 4 pints，let it settle，strain，add white sugar \＃biij，and boil till it fixes when cold．

Unguentuar Egyptiacum．Rough verdigris ppd．年r， honey $\frac{3}{3} \mathrm{xiv}$ ，vinegar $\tilde{J} \mathrm{vij}$ ；boil to a proper consistence．

2．Mel Egyptiacum．This is the thin portion that se－ parates from unguentum Egyptiacum by keeping．

3．Oxymel aruginis，Linimentum aruginis．Verdigris そj，vinegar ${ }^{3}$ vij ：dissolve，strain，add honey ${ }^{2} \mathrm{Jiv}$ ；boil to a proper consistence：detergent，and used to keep down fun－ gous flesh；diluted，is used in detergent gargles．

Tapsimel．Succ．chelidonii，succ．tapsi．barbati ana foij， honey tibij ：boil down，add vitriol．virid．，alum．ust．q．s．to make an ointment：used to cure the iteh，by being exhibited as a suppository，or by being merely smelled！

Mex solutivum．Liquor left on distilling 6ïb of damask roses，cumin seed ${ }_{5}^{2} \mathrm{j}$ ，moist sugar Hiiij honey Hij；boil down．

Empl．ammoniaci．Gum ammoniac $\tilde{5}^{5} v$ ，distilled vine－ gar 予viij；evaporate to a proper thickness：diseutient，in scrophula and white swellings．The empl．ex ammon．P．L， 7720，was a hard unguent，coutaining 6 oz ．ammon．in＇26 $0 \%$ and a lialf．

Emffastrum ex ammonlaco cem Mercurio．Empl． rmmoniaci cum haydrargyro P．L．Hydrarg．气iij，balsam． sulph．aj；；rub together，add gum．ammon．1tj．

2．Empl．ammoniaci cum hydrargyro P．D．Use tereb． com． 5 i ，to kill the quicksilver：

Ready made mestard．Flour of black mustard seed， well sifted from the bran， 3 Ht ，salt 1th；make it up with currant wine，and add 3 or 4 spoonfuls of sugar to each pim．

Miss Greenlandig congoshtions for macaustic paint－
rag. Gum Arabic 9 oz . water a pint; dissolve, add mastich in fine powder 14 oz . boil to a paste, add white wax 10 oz . in small pieces, and whilst hot, add by degrees cold spring water 2 pints, then strain the composition, which will be like cream.
2. Or mix mastich 24 oz . with the gum water, leaving out the wax, and when sufficiently beaten and mixed orer the fire, add by degrees cold water 24 oz . and strain.
3. Or dissolve gum Arabic. 9 oz . in water 24 oz . then add 1 Itb of white wax, boil them over a slow fire, pour it into a cold vessel, beat it well together: when this is mixed with the colours, it will require more water than the others. Used in painting, the colours being mixed with these compositions as with oil, adding water, if necessary; when the painting is finished, melt some white wax, and with a hard brush varnish the painting, and when cold, rub it to make it entirely smooth.

Blacking paste. Rape oil 3 oz . oil of vitriol 3 oz : mix; the next day add treacle, ivory black ana 3tb, stone blue 0 oz . vinegar q . s . to form a stiff paste : this will fill 1 doz. tin boxes.
2. Rape oil 3 oz. treacle, brown sugar ana 9 oz . ; mix, add ivory black 3 Ht , flour paste 2 tt ; when the paste is quite smooth, thin it to the consistence of honey, with vinegar $q$ : $s$. : used for making blacking for leather.

Moschus reductus. Nuc. mosch., macis, cimiam., caryoph. arom., spicæ nardi ana p. æq. blood q. s.: beat it into a paste, dry in the sun, moisten it with musk water, and add 1-4th of pure musk.
2. Toasted bread, goat's blood ana p. ${ }^{2}$, pure musk p. 1; beat well together, and fill the bags.
3. Styrax, labdanum, lign. aloes pulv. ana 4. oz. musk, civette ana ziiij; mix.
4. Musk, rad. angelicæ, goat's blood .na p. æq.

Ambragrisea reducta. Ben nuts 3 oz . sperm. ceti 3 oz . benjamin, Flor. onrice root, starch ana 7 oz. asphaltum 1 oz . musk 弓iv, ambergris 6 oz . mucilage of gum tragacanth $\mathrm{q} . \mathrm{s}$.

Zrbethuạ reductum. Civette q.p.; mix it with oxgall and storax.
2. Civcte 18 oz. pulp of raisins 8 oz . musk 1 oz.: mix, and keep it in a warm place for 3 weeks or a month.
3. Civette 20 oz. styr. liquid., honey, oxgall, pulp of figs ana 2 oz . and a half, musk 1 oz .

## 300

## OFFICINAL COMPOUNDS.-11. Electaries.

Sap green. Juice of buckthorn berries 12 pints, limewater 8 pints, gum Arabic $6 \mathrm{oz} . ;$ evaporate till quite thick, and put it into bladders.

Gum kino factitium. Lign. campech. 481 b , rad. torment. 16 Ht , rad. rubire tinct. 121b, water q. s.; make a strong decoction, dissolve in it catechu 161b, strain, and evaporate to dryness ; it will produce 241 tb .

## 12. PILLS.

These differ from electaries as being solely designed for medicines, which are of a powerful nature, and whose doses must be determined with some accuracy.
Although called pills, the greater number of them are kept in the shops in mass, and are only made into pills when reanted for use, or sale by retail.
The horse balls usually kept in the shops are also included under this title, as they in fact differ only in magnitude.
Aromatic pills. Pilulce diambra sine odoratis, Pil. aromatica. Aloes Soc. ${ }^{2} j \mathrm{js}$, gum. guaiaci $\mathrm{J}, \mathrm{j}$, species aromat., bals. Peruv. ana ${ }^{5} f_{s}$ : in small doses diaphoretic ; in larger, purgative; now kept in powder, by the name of pulv. aloes comp., and pulv. aloes cum guaiaco.

Pilule Coccie minores. Pil. ex colocynthide cum aloe. Al. Soc., scammon. ana ${ }^{3} \mathrm{ij}$, pulp. colocynth. $\bar{J} j$, ol. caryoph. arom. 3 ij .
2. Pil. aloes cum colocynthide. Aloes Soc., scammon. ana p. viij, colocynth. p. iiij, ol. caryoph. arom. sulph. potassæ cum sulphure ana p . j .
3. Pil. colocynthidis composito. Pulp. colocynth. ${ }^{\circ} \mathrm{fs}$, alocs hepat., scammon. ana ${ }_{3} \mathrm{j}$, sapo. Cast. $\mathfrak{j}_{\mathrm{j}} \mathrm{j}$, ol. caryoph. $3 j$.
4. Aloes, pulp. colocynth., pulv. jalapii ana 11tb, ol. caryoph. 2 oz. syr. spin. cervi q. s.
5. Scammon. Alep., jalapii ana 11b, pulp. colocynth., aloes Soc. ana 8 oz. kali vitriolati 2 oz . ol. caryoph. 2nd. 1 oz. syr. spin. cervi 2 th 12 oz. : cathartic, gr. $v-x$, or more.

Aioe pills, Family pills, Antibihious pidls. Aloc rosata. Aloes Socotr. 4 oz. succ. rosar. Damasc. Hjj ; evaporate to a proper consistence
 syr. zz. q. s.
3. Pil. aloes compositco. Instead of the syr. zz. of the last, use ol. carui min. xl, and syr. simp.
4. Pil. aloes cum zingibere. Aloes hep. ${ }^{2} \mathrm{j}$, rad. zingib. 3 j , sapo. alb. ${ }^{5} \mathrm{f}$, ol. menth. pip. $z^{\mathrm{fs}}$.
5. Pil. aloetica. Al. Socotr., sapon. alb. ana p. æq. syr. simp. q. s. : cathartic, gr. v-xv.

Coloquintida pills. Pilulce e duobus. Pulp. colocynth., scammonii ana ${ }_{j} \mathrm{j}$, ol. caryophyll. arom. $\xi^{\mathrm{fs}}$, syr. de spin. cerv. q. s.
2. Pil. ex colocynthide simpliciores. The same, with a double proportion of oil of cloves.

Female pills. Pilula ecphractica. Pil. aromatic. 予ij, rhabarb., extr. gentian., sal. Martis ana ${ }^{5} \mathrm{j}$, kali ppi. そfs, syr. rosar. solut. q. s.
2. Pilulce benedictor. Aloes Soc. 6 oz . galbani, assæ fæe . tidæ, myrrh. ana 1 oz. 3 iv, macis, croci ana 3 vj, sal Martis 9 oz . fol. sennæ 3 oz . ol. succin. rect. 1 oz . Emmenagogue, gr. v-xv.

Fetid pills. Pilula faetido, Pil. gummosce. Galbani, myrrhæ, opoponacis, sagapeni ana $\jmath^{3} \mathrm{j}$, assæ foetidæ $\jmath^{7} \mathrm{~s}$, syr. croci q. s.
2. Pil. galbani compositce. Omit the opoponax, and put in an extra ${ }^{3}$ fs of myrrh and sagapenum.
3. Pil. assw fuetidx compositox. Assæ fætidæ, galbani, myrrhæ ana ${ }^{3} \mathrm{j}$, ol. succini rect. 3 j , syr. simpl. q. s.
4. Pil. aloes et assw fretidce. Aloes Socotr., assæ foetidæ, sapon. alb. ana p. æq. mucilag. gum. Arab. q. s.
5. Galbani, myrrhæ, sagapeni ana 12 oz . opoponacis 8 oz. guin. foetidæ 6 oz . syr. croci 1 th 8 oz .: antispasmodic, gr. $\mathrm{x}-3 \mathrm{fs}$, bis terve die, in hysterics and nervous complaints.

Gambooge pills. Pilule de gutta gramandra. Resinæ jalap., scammonii, gutt. gam., calomel. ana ${ }^{5}$ fs, gum. ammon. ziij (dissolved in succ. irid. nostr.), tartar. vitriol. зij, mastich. 3 j , croci $\mathrm{Gj}_{\mathrm{j}}$, ol. terebinth. gtt. xl, syr. spinæ cervinæ q. s.
2. Pil. cambogice compositco. Gutt. gamb., aloes Socotr. pulv. cinnam. comp. ana 3 j , sapon. Cast. $3 \mathrm{jij}:$ dose, gr. $\mathrm{x}-\mathrm{xx}$.
3. Pil. hydragoga. Gum. ammon. Jijj, aloes Socotr., G. G. G. ana $z^{i j}$, elaterii contriti $z^{\text {fss }}$, tinct. gentianæ $\mathfrak{q}$. s. to form pills of gr. ij, each : violently cathartic; used in dropsy.

Rhubarb pirls. Piluloe de rfabarbaro. Rhabarb. ${ }^{3} \mathrm{j}$.
resin．jalap．，tartar．vitriol．ana 3 jijfs，ol．dist．nuc．moch． 3 fs， extr．gentian．liq．q．s．

㡙．Extractum catharticum．Pulp．colocynth． $5 v j$ ，car－ dam．min．$\tilde{j}^{f} \mathrm{~s}$ ，proof spirit 1 tbj ；digest，express，and dissolve
 the spirit，and reduce the remainder to a proper consistence．

3．Extractum colocynthidis compositam P．L．before 1809．Pulp．colocynth．3rj，proof spir．गौj；digest，press out the tincture，add aloes Socotr．Jjfs，scammon． $\bar{j}$ fs，distil off the spirit，adding towards the end cardan．min． $\mathrm{z}_{3}$ ．

4．Eatr．coloc．comp．P．L．1809．Pulp．colocynth．syi， water ibij；digest，stram，add aloes Socutr．亏jfs，scammon．解，sapon．duri 5 iij，evaporate，adding as before，cardam． min．． j ．

5．Sxtr．coloc．comp．P．I． 181 ．5．As the last，omitting the sony．

6．Eiatr．colve．comp．P．D．As no．4，using only \＃ij of
water, and adding the soap, previously reduced to a jelly by water, along with the cardamoms towards the end.
7. Colocynth. 15 oz. aloes Soc. 31 tb , gum. scam. 10 oz . sem. coriand. 2 oz. 3 iv , proof spirit 2 gall.: cathartic, gr. v -xxx, ter die, till it operates, the original formula esteemed one of the most certain purges known, and used when evacuation was difficult to be procured, but yet absolutely necessary.

Storax pills. Pilulce e styrace P. L. before 1745. Sty1. calam., olibani, myrrhæ, succ. glycymrh., opii ana $3^{5} \mathrm{~s}$, croci 3 j , syr. papav. alb. q. s.
2. Pil. e styrace P. L. since 1745 . Styr. calam. colati Эij, opii colati 3 v : M .
3. Pil. e styrace P.D. Styr. purif. ziij, opii pur. moll., croci ana 3 j : M. Anodyne, gr. ij -x; used in the coughs of aged persons as a night pill.

Common night pills, Anodyne pills. Laudanum. Extr. opii (made with proof spirit) $\mathrm{J}_{\mathrm{j}}$, extr. croci (also made with proof spirit) $3 j \mathrm{fs}$, castor. 3 j , tinct. spec. diambræ sine odor. (made of spec. ziiij in S. V. R. q. s.) ol. nuc. mosch. gitt. x ; evaporate to a mass for pills.
2. Pil. saponacea. Opii colati (moistened with wine) ${ }^{3} \mathrm{fs}$, sapon. alb. ${ }^{5} \mathrm{iv}$, ess. limon. $\mathfrak{z j}: \mathrm{M}$.
3. Pil. ex opio. Opii purif. duri $3 i j$, extr. glycyrrh. $\mathfrak{z} \mathrm{j}$ : M.
4. Pil. saponis cum opio. Opii sicc. pulv. $\tilde{J}^{\text {fs }}$, sapon. alb. Jij : M.: twice the strength of the pil. saponaceæ of: the older pharmacopøeia.
5. Pil. opiata, P. Thebaica. Opii 弱, extr. glycyrrh.第viij, soften with proof spirit, add pip. Jamaic. Jij. Anodyne, narcotic, gr. v-xx ; but the very different strength of the several formulæ must be considered: dissolve quicker in the stomach than storax pills, and better adapted for occasional exhibition.

Mercurial pills, The blue pill. Pilulce Mercurialis. Hydrar. 3 r, terebinth. Argent. $z_{i j}$; grind together, add extract. cathart. Эiiij, rhabarb. 3j.
2. Pil. ex hydrargyro. Hydrarg. pur., extr. glycyrrh. ana $\frac{3}{} \mathrm{ij}$, rad. glycyrrh. 3 j .
3. Pil. hydrargyri P. L. \& D. Hydrarg. pur. 3ij, conserv. rosar. 3 jij , rad. glycyrrh. 3 j .
4. Pil. hydrargyri P.E. Hydrarg. pur., conserv. ro-
sar. ana $z_{3} j$, amyli zii, mucil. gum. Arab. q. s. and make the whole into 480 pills.
5. Beloste's pills. Hydrarg. 1 th, sacch. 4 oz . scammon., rad. jalap. ana Ittb, vini alb. q. s.; some use cream of tartar instead of sugar.
6. Hydrarg. 12 oz. tereb. comm. q. s. rhabarb. 2 oz .3 jij , pulp. colocynth. 4 oz . Deobstruent, alterative, gr. v-xx, bis terve die, in syphilis, and most chronic or little known complaints.

Calomel pills, Plummer's pills, The red pill. Pilulce hydrargyri submuriatis P. L. 1809. Calomel., sulph. antim. precip. ana 3 j , gum. guaiaci 3 jij , bals. Copaibæ q. s.
2. Pil. hydr. submuriatis P. L. 1s15. As the former, substituting mucil. gum. Arab. for balsam. Copaibæ.

James's analeptic pills. Pil. Rufi 1tb, calc.' antimonii lotæ 8 oz. gum. guaiaci 8 oz . : M. and make 32 pills from each drachm.
2. Pil. Rufi, pulv. antimonialis, gum. guaiaci ana $Э_{j}$ : make into 20 pills.

Anderson's Scots pilis. Aloes Bbds. 1th, rad. helleb. nigr., rad. jalapii, kali ppi. ana 1 oz . ol. anisi $j^{i v}$, syr. simp. q. s.
2. Aloes B. B. 21t 8 oz . water 8 oz . ; soften, add jalap., sem. anisi pulv., ebor. usti ana 8 oz. ol. anisi' 1 oz .
3. Aloes (Bermudas) 1tb, rad. jalap., flor. sulph., ebor. usti, rad. glycyrrh. ana ${ }_{2}^{2}$ oz. ol. anisi 3 j , G. G. G. zij, sap. Castil. 4 oz. syr. sp. cervin. q. s.

Hooper's pills. Vitriol. virid., aquæ ana 8 oz. : dissolve, add aloes Barb. 2th 8 oz . canellæ albæ 6 oz . gum. myrrh. $\xlongequal{2}$ oz. opoponacis ziiij.
2. Sal Martis ${ }^{2}$ oz. pulv. aloes c. canella 1tb, mucilag. gum. tragacanthx, tinct. aloes ana q. s. ; cut each drachm into 18 pills, put 40 in a box.

Matthew's pills, Starket's plels. Rad. helleb. nigri, rad. helleb. albi, rad. glycyrrh., opii ana 2 oz. sapon. Starkeii 6 cz . ol. terebinth. q. s.
2. Rad. helleb. nigri, rad. glycyrrh., sapen. Castill., rad. curcumæ, opii purif., syr. croci ana 4 oz. ol. terebinth. q. S.

Warid's antimonisl pill. Glass of antimony, finely levigated, 4 cz. dragen's blood 1 от. mountain wine q. s. make into pills of gr. jfs each.
 resin. jalap. 3 j, sapon. amygdal. $3 j$ js, guaiaci ziij, tart. eme- $^{2}$
tic. gr. viij, ol. junip., ol: carui, ol. rorismar, ana gtt. iv, syr. spin. cerv. q. s. : make into 64 pills.

Worm pills. Calomel 1 oz . sugar 2 oz . starch 1 oz . mucil. gum. tragac. q. s. to make 248 pills: dose no. 1 , night and morning, for children.

Keyser's pills. Hydrarg. acetat. 4 oz. mannæ 30 oz. starch $\Omega_{2}$ oz. mucil. gum. tragac. q. s. make into pills of gr. vj each : dose no. 2, nocte maneque, increasing the dose to no. 25 or more : a box of 1000 or 1200 pills is usually sufficient.

Purging balls. Aloes B. B. 31b, zz. 6 oz. ol. anisi 1 oz . sap. mollis q. s.
2. Aloes 101b, rad. jalapæ, rhabarb. ana 8 oz zz. 12 oz . ol. carui 4 oz . sap. mollis 11 b , syr. spin. cerv. q. s. about. 41 b 2 oz.

Cordial balls. Rad. curcumæ, rad. glycyrrh., sem. foenugr., sem. anisi, sem. carui, flor. sulph. ana 31b, zz., ol. olivar. 2nd. ana 1 tb 8 oz. succ. glycyrrh., ol. anisi, ol. carui ana 1 oz . honey q. s.
2. Sem. anisi 8 oz . rad. glycyrrl., pulv. diapente, flor. sulph., rad. curcumæ, sem. coriandri, sem. carui, rad. aristoloch. ol. olivæ 2nd. ana 4 oz . treacle q. s.
3. Figs, sem. carui ana 2tb, succ. Hispan., sem. anisi ana 17 lb , zz. 8 oz . ol. olivæ 1 pint, honey q.s.
4. Common. Sem. anisi, sem. coriand. ana 11b; zz. 4 oz. syr. sp. cerv. q. s. : produces about 41b.

Diuretic balls, Urine balls. Resinæ nigr. 21t, sal. nitri 8 oz. kali ppi. 4 oz. sapon. com. 6 oz ,, rose pink 1 oz . ol. junip. 1 oz.
2. Rosin 315, nitre 215, common soap, Venice turpentine ana 8 oz . honey q. s.
3. Resin. nigr., sapon. moll. ana 311; sal. ammon. 21b, sal. nitri 1 tī, ol. junip. 2 oz . ol. tereb. 6 oz .

Barbadoes balls. Cordial balls coloured with petrol. Bbds.

Fever balls. Flor. sulph., sal. nitri ana 11tb, camphoræ, Mithridatii ana 8 oz . tartar. emet. 4 oz .
2. Cordial ball 11 b , tart. emet. 1 oz .

Alterative balls, Condition balls. Purging balls, urine balls ana 21 b .

Farcy balls. Athiop. miner. 12 oz. croc. metall., kali ppi. ana 1南, bals. copaibæ 2 oz . syr. sp. cerv. q. s.

Grease balls．Croc．metall．，gum．guaiaci，sem．for－ nugr．，sem．petroselini ana 4 oz ．treacle q． s ．

## 13．DIIY CONFECTIONS．

Marshmallow rozenges．Trochisci althcecr．Rad． althææ，in powder， 1 Ht，white sugar $41 t$ ，muc．g．tragac．q．s．

OFFICINAL COMPOUNDS.-13. Dry Confec. 307
3. Troch. carbonalis calcis. Cret. ppx. گiv, gum. Arab. ${ }_{3} \mathrm{j}$, nuc. mosch. 3 j , sugar ${ }^{2} \mathrm{zj}$, water q. s .

Clove lozenges. Cloves 3 v , sugar 1tb 8 oz. muc. g. tragac. q. s.: make 150 lozenges, containing gr. ij of cloves each : put into chocolate drink to render it stomachic, or used as restoratives after fatigue.

Cachou hozenges. Catechu 3 oz. sugar 12 oz muc. g : trag. q. s.

Cachou à l'ambre gris. The same, with aunbr. gris. gr. viij.

Cachou musqué. The same, with mosch. gr: viij.
Сachou à la fleur d'oranges. The same. with ess. neroli $\mathrm{gtt} . \mathrm{vj}$.

Cachou à la réglisse. Catechu 2 oz. extr. glycyrr. pur. 1 oz . sugar 10 oz. muc. g. trag. q. s.

Cachou à la violette. The same, with rad. ir. Flor. 3 j fs.
 cassix gtt. v , sugar 14 oz . muc. g. trag. q. s.

Cinnamon lozenges. Cinnamon 7 oz. sugar 12 oz . muc. g. trag. q. s. : stomachic.

Saffron lozenges. Hay saffron, dried and powdered, 1 oz. sugar 11t, muc. g. trag. q. s. : anodyne, pectoral, emmenagogue.

Refined juice, Refined liquorice. Spanish liquorice 4 Tb , gum Arab. 21b, water q. s. : dissolve, strain, evaporate gently to a soft extract, roll into cylinders, cut into lengths, and polish by rubbing them together in a box: expectorant, in coughs, \&c.

Black pectoral lozenges. Trochisci bechici nigri P. L. before 1745. Extr. glycyrrh., sacch. ana ${ }^{3} \mathrm{x}$, gum. tragacanth., amygd. dulc. decort. ana $\overline{3}$ vj. muc. sem. cydon. made with rose water q. s.
2. Troch. bechici nigri P. L. since 1745. Extr. glycyrrh., sacch. ana $\overline{3} \mathrm{x}$, gum. tragac. 1 tbfs , water q. s.
3. Troch. glycyrrhiza. Extr. glycyrrh., sacch, ana ${ }^{3}$ x, gum. tragac. $\tilde{\jmath}^{\mathrm{j}} \mathrm{ij}$, water q. s.
4. Troch. glycyrrhizo glabra. Extr. glycyrrh., gum. Arab. ana 1 tj , sacchari 1 tbj , warm water q. s.: dissolve, strain, and evaporate.

Pate de réclisse notre. Refined liquorice 8 oz. gura Arabic 2tt, sugar 11t, water q.s.: dissolve, and evaporate till it forms a rery thick syrop, add rad. enulx camp., rad.

## 308 OFFICINAL COMPOUNDS.-13. Dry Confec.

inid. Flor. ana $\begin{gathered}\text { fiss, essi de cedrat a few drops, put into tin }\end{gathered}$ moulds, and dry in a stove.

Thochescr ciycranhize cum opio. Opii zij, dissolved in tinct. bals. Tolut. ${ }^{5}$ fs, syr. simpl. ${ }^{3}$ viij, extr. glycyrrlı, gum. Aurab. ana ${ }^{5} \mathrm{v}$, make into troches of gr. x each.

Pate blanciee de réglisse. From the roots of liquorice, in the same manner as pâte de guimauve: pectoral.

Ipecacuanha lozenges. Ipecac. ziv, sugar 21b, muc. g. trag. q. s.; make 480 lozengés; containing each gr. fs of ipecacuanha: expectorant; used in coughs, also stomachic.

Oraice lozenges, Violét rozenges: Rad.itid. Flor., gum. Aräb. ana sij, rad. glycyrrh. $3 \ddot{\mathrm{vj}}$, sugar 11b 8 oz . muc. g. trag. q. s.

Gum lozenges. Troehisci gummosi. Gum. Arab. 4 oz . starch 1 oz. sugar 12 oẑ. ăq. rose q. s.

Lexón drops. Sugar 1 thi in very fine powder, dissolve one half along with salt of sorrel $3 i i j$, in the smallest quantity of water; as soon as it boils; add the other half of the sugar, and ess. limon. gitt. viij, pour it out immediately in drops upon a slab; concrete acid of lemons, or acid of tartar may be used instead of the salt of sorrel; and they are sometimes coloured with turmeric.
2. Morsuli citri. Sugar 4it, lemon juice 8 oz . dissolve, dry by a gentle heat.

Steel lozenges. Sugar 81 b 8 oz . iron flings, or rust of iron, 8 oz. cinnamon $20 \%$. muc. g. trag. q. s. : stomachic, tonic.

Candied horehound. Marrubium conditum. Juice of horehound 1 pint, white sugar 41b, brown sugar 61 t .

Magnesía lozenges. Troochisci e magnesia. Magnes, ustæ 亏iiij, zz. Эj; sugar 弓ij, muc. g. Arab. q. s.
2. Magnesia 1 oz. sugar 4 oz . mut. g. trag. made with àq. fior. áurant. q. s.

Pepperminit drops. Suggar 21t, pepperinint water 407. made into dropS, as those of lemons: essence of peppermint may be added, if they are required to be tery warm.

Peiperimist lozenges. Sifgiar 2tb, starch 2 oz. essence of peppermint q. p. muc. g. trag. q. s. : some use plaister of Paris, instead of starch, to give a body to these fozenges : stimulant.

Nitre nrofs. Sal. nitri 4 oz. sugar 1 th, water $20 z$.
Nuthe lodfindtas. Sal. nitfi 4 oz. sugat 11t, muc. g.

## OFFICINAL COMPOUNDS.-18. Dry Confec. 309

trag. q. s.: diuretic internally, held in the mouth remove incipient sore throats.

Pastilles de rose, Sugar 215, rose water 4 oz .; made into drops.

Pate de bose lozenges. Sugar 21 b , starch 4 oz . ol. rhodii gtt. vj, muc. g. trag. made with rose water coloured with cochineal q. s. : pectoral.

Rhubarb lozenges. Rhabarb. 1 oz. sugar 6 oz. muc, g. trag. made with aq. cimnam. q. s.: cathartic.

Sulphur rozenges. Flor, sulph. 1 oz. sugar 8 oz. muc. g. trag. q. s.: pectoral; used in asthma.

Pectoral lozenges. Fl. sulph. 3vj, Fl. benz. 3 fs, gum. Arab., rad. irid. Flor. ana siij, balsam. sulph. anis. jj, sugar 18 oz. muc. g. trag. q. s.

Tolu lozenges. Sugar 21t, crean of tartar 3 oz . starch 1 oz. tinct. bals. Tolu ziv, mucil. g. tragac. q. s.: pectoral.

Pate de tussilage à Tanis. Extr. glycyrrh. dissolved in a strong decoction of the fiowers of coltsfoot and cudweed, strained and evaporated to a paste, adding a little ol. anisi towards the end : pectoral.

Vanilla lozenges. Vanilla in powder 3 oz, sugar 18 oz. muc. g. trag. q. s. : each lozenge ought to contain gr. ij of vanilla: odoriferous, stomachic.

Griger lozenges. Zz. 1 oz. sugar 1卉, muc. g. trag. q. s.: stimulant, stomachic.

Ginger candy. Zz. 2 oz, boiling water q. s. to strain a pint, white sugar 6 tt , brown sugar 8 tb .

Ginger draps. Sugar 2tb, strong infusion of ginger 4 oz.

Pate de jujubfs. Raisins stoned 1th, currants picked, jujubes opened ana 4 or. water q. s.; boil, strain with expression, add sugar 2 tb 4 oz . gum. Arab. 2 tb 8 oz . previously made into a mucilage with some water, and strain; evaporate gently, pour into moulds, finish the drying in a stove, and then divide it : expectorant, in coughs.

Tabpettes pe spitzlatt, Raisins 115, pearl barley 1th 8 oz. water q. s.; boil for a short time, dissolve opii 3 fis, gum. Arab. 4 oz. Spanish liquorice 1 oz , in water ; mix the two liquors, strain, add brown sugar 4tt, clarify the syrop with white of eggs, evaporate to a paste, adding anise seed, in powder, niij, towards the end, pour it out upon a slab ${ }_{2}$ divide and iny : pectoral, in obstimate coughs.

## 310 OFFICINAL COMPOUNDS.-15. Dry Confec.

Chocolate: Cacao nuts shelled and fanned while warm from being roasted 101t, pound in a warm mortar to a paste, and until the pestle will descend through the mass by its own weight, then keep it warm in a pot upon the fire, take out about a tb at a time, and roll it upon a very hot slab with a fire under it, then add an equal weight of sugrar, and roll it out again, to mix them together : the cacao of the Caraccas, which has been buried for some weeks in moist ground, is less oily than that of the islands, and is ton dry to use by itself; some, instead of the island cacao, use sweet almonds: the greatest care must be taken to separate the eye of the seed, which is woody, and hinders the paste from being made smooth.
2. Caracca cacao 81b, Island cacao 215, sugar 101t, cinnamon, vanilla ana 3 oz . cloves $Э \mathrm{j}$ : these spices are powdered and mixed with the sugar, they are varied to the palate of the country, and the vanilla is either supplied by storax, or, as in England, totally omitted.

Barley sugar. Saccharum hordeatum. Sugar 11b, saffron 12 grains, water q. s.; boil to a full candy height, pour it out upon an oiled slab, and roll it in cylinders: formerly a decoction of barley was used, some employ a mucilage of gum Arabic, and flavour with lemons.

Penides. Alphenic. Sugar q. p. decoction of barley q. s. : boil to full candy height, add a few drops of ess. Bergamotte or ess. of lemons, and twist it together, that the air may render it white, but in general starch is added for this purpose.

Worm cakes. Scamm. Alepp. 2 oz. calomel ppd. 3 oz. res. jalapii 2 oz . crem. tartari 4 oz . white sugar 3 H̄̈, mucil. g. trag. q. s.
2. Storey's zoorm cakies. Calomel, jalap. ana 5 j , zz. Эij, sacch. 1 oz . cinnabar. antim. q. s. to colour them, syr. simp. q. s. to make into cakes.
3. Ching's yellow zvorm lozenges. Saffron ziiij, water 1 pint; boil, strain, add calomel 1 th, white sugar $281 t$, muc. g. trag. q. s. : each lozenge should contain gr. j of calomel.
4. Ching's brown worm. lozenges. Calomel y oz. extr. jalapii resinos. 31b 8 oz . white sugar 9 Ht , muc. g. trag. q. s. : each lozenge should contain gr. fs of calomel.
5. Calomel 1 oz . res. jalap. 2 oz . white sugar 21t, muc. S. tragac. made with rose water q. s. : make 2520 lozenges
wweighing gr. viij, and containing calom. gr. 1-4th, res. jalap. gr. fs, each.

## 14. POWDERS AND STONES.

True Gascolgne's powders. Pulv.e chelis cancrorum compositus P. L. before 1745. Margarit. ppm., ocul. cancr., corall. rubr., succin. alb., corn. cervi calc., lap. bezoard. Orient. ana ${ }_{5} \mathrm{j}$, chel. canc. $\tilde{y}^{\mathrm{zj}}$; make into balls.
2. Pulvis bezoarticus. Chel. cancr. Jviij, marg. pp., coral. rubr. pp. ana ${ }_{5}^{2 j}$, lap. bezoar. Orient. ${ }^{5} \mathrm{j} . \quad$ Cordial, in great esteem, although few will go to the price of it.

Cephalic snuff. Pulvis cephalicus. Fol. asari, fol. majoran., fol. lil. convall. ana p. æq.
2. Pulv. sternutatorius, P. asari compositus P. L. Fol. sicc. asari, fol. major., fol. mari Syr., flor. lavand. ana p. æq-
3. P. asari comp. P. D. Fol. sicc. asari 3 j , flor. lavand. 3 jij .
4. $P$. asari comp. P. E. Fol. asari 3 oz. fol. majoran., flor. lavand. ana 1 oz .

Puivis Cornachini. Scammon. 3x, antim. diaphoret. $3^{\mathrm{vj}}$, crem. tart. $\mathrm{z}_{\mathrm{ijj} \text { fs }}$ : cathartic, febrifuge.

Species diambre sine odoratis. Species aromatica, Pulvis aromaticus P. L. \& D. Cinnam. Sij, sem. card. min, zz, piper. long. ana $z_{j}$; the old receipt was more compounded.
2. Pulv. cinnamomi compositus. Cinnam. $\overline{\mathrm{z}} \mathrm{j}$, sem.

3. Pulv. aromaticus P, E. Cimnam., 27., piper. long. ana p. æq.: stimulant, carminative, stomachic, gr. $\mathrm{v}-\mathrm{x}$.

Species diatragacanthi frigide, Pulvis e tragacantha compasitus P. L. before 1788. Gum. tragac., gum. Arab., rad. althææ ana $\bar{f} \mathrm{fs}$, amyli, rad. glycyrrh. ana $\jmath^{2} \mathrm{~s}$, sacch. albi $\overline{3}$ fs : the old formula had all the cold seeds.
2. Pulv. e tragacantha compositus P. L. since 1788, Pulv. tragacanthce compositus. Gum. tragac., gum. Arab., amyli ana ${ }_{j} \mathrm{f}$ s, sacch. alb. $z^{\mathrm{iij}}$ : demulcent, ${ }_{5}$ fs- 3 j ; used in tickling coughs.

Species hieref picree. Cinnam., zedoar., asari, sem. cardam. min., croci ana $3^{v j}$, coccinel. $\mathrm{Jj}^{2}$, aloes Socotr. §xij.
2. Hiera picra. Gummi aloes tijj, canel. alb. 亏 $\mathbf{3} \mathrm{ij}$.
3. Pulvis aloeticus. Aloes Socotr. 1tjj, canel. alb. 亏̌iij.

## OPFICINAL COMPOUNDS.-14. Powders, \&c.

myrrh. 3 fs, ol. nuc. moseh., ol. caryoph. ana gtt. xv, sal. nitri $5 j$, carb. lign. 亏jifs, muc. g. trag. q. s.
2. Benz., oliban., styracis, gum. thuris, mastic. ana 1 oz . carb. lign. Ith 8 oz . gum. tragac. ziiij, water q. s. camphire nay be added if for a sick chamber.
3. Benz. 乡iij, mastich., oliban. ana $3^{\text {fs }}$, cascarillæ, ol. caryoph., bals. Peru. ana 5 j , carb. lign. 2 oz. $3 i j$, ol. lavand, gitt. x , camph. Эij, moschi gr. x , gum. tragac. $3^{\mathrm{iv}}$.
4. Clous odorans. Benz. 8 oz. styr. calam. 3 xij, labdani, olibani, mastiches, caryoph. arom. ana zjfs, carb. lign. 21b 4 oz . muc. g. trag. q. s.
5. Styracis, benz: ana 4 oz. santal. citr. 1 oz. carb. lign. 24 oz . labdani $\frac{3}{} \mathrm{ij}$, set on fire, and burnt to correct bad smells.

Indian ink. Indicum, Atramentume Indicum. The best kind is made of real lamp black, procured by burning oil under shades, mixed up with glue mate of an ass's skin, to which is added a little musk: astringent, $5 \mathrm{j}-\mathrm{ij}$, dissolved in water or wine, in hemorrhages, also stomachic.

- The common sort is common lamp black from the fir, made up with glue.

3. Horse beans burnt perfectly black, ground fine, and made up into sticks with gum water : is very inferior, to the others.
4. Honey 1 Ht , yelk of eggrs no. $\stackrel{\text {, gum Arab. half oz. }}{\text {, }}$, lamp black q. s. : beat into a mass.

Lump archel. Lacmus tinctorius. Prepared from Canary archel, ground archel, and some other lichens, by reducing them to powder, adding half as much pearl ashes, and noistening the whole with mine or ermmon spirit of hartshorn; a small proportion of lime is then added, and the archel cut into cubes and dried.

Litmus. Lacmas tincterius albo-cceruleus. Prepared like the former, adding a large proportion of whiting at the end, which renders it of a light blue colour.

Cudbear. Another: preparation of the lichens, made in a similar manner. All are used. in dyeing rinlet coloure, which, however, do not stand well, also employed by the chemists as very delicate tests for acids and alkalies, the infusion or tincture being reddened by the first. and rendered green by the second.

Florence lake. Lacca Florentina. Pearl ashes 1 oz. jiv, water q.s. dissolve; alum, Rom. \% oz. siv, water q.s.
dissolve: filter both solutions, and add the first to the alum solution while warm, strain, mix the sediment upon the strainer with the first coarse residuum obtained in boiling cochineal with alum for making carmine, and dry it.

Common lake. Lacca in globulis. Make a magistery of alum, as in making Florence lake; boil Brasil dust 1 oz. , iv, in water 3 pints ; strain, add the magistery or sediment of alum to the strained liquor, stir it well, let it settle, and dry the sediment in small lumps.

Fine madder lake. Lacca columbina. Dutch grappe madder (that is, madder root ground between two millstones a small distance apart, as in grinding pearl or French barley, so that only the bark, which contains the most colour, is reduced to powder, and the central woody part of the root left) 2 oz . .tie it up in a cloth, beat it in a pint of water in a stone mortar, repeat with fresh water, in general 5 pints will take out all the colour, boil, add alum 1 oz . dissolved in a pint of water, then add oil of tartar 1 oz . and half, wash the sediment and dry; produces half an oz.

Rose pink. Whiting coloured with a decoction of Brasil wood and alum.

Dutcir pink. Whiting coloured by a decoction of birch leaves, dyer's weed, or French berries, with alum.

Stone blue. Indicum vulgare. Starch coloured with indigo.

Lapis bezoar factitius. Bol. Armen., blood ana p.req. muc. g. tragac. q. s.

Crayons. Sperma ceti 3 oz . boiling water 1 pint, add bone ashes finely ground 1tb, colouring matter as oker, \&c. I. p. roll out the paste, and when half dry cut it in pipes.
2. Pipe clay, coloured with oker, \&c. q.p.make it a paste with ale wort.

Common Smyrna scammony. Scammonium Smyrnense factitium. Scamm. Alepp. 8 oz . rad. jalap. 4 Hb , fol. senne, ehor. usti ana 1 th, zz. 2 oz. manua comm. 31 , G. G. G. 21b, syr. spinæ cervi 2tb.
2. Rad. jalap. 2th, fol. sennæ, scamm. Alep., G. G. G. ana 8 oz. eboris usti, zz. ana 4 oz .

Ink powder. Green vitriol 11t, galls 21 t , gum Arab. 8 oz : 2 oz. make a pint of ink.

Alumfen saccharinum. Common alum made up into small sugur loaves, with white of egg and rose water; used. by females to make an astringent wash.:

## OFFICINAL COMPOUNDS.-14. Powders, \&c. 317

Sweet balls. Pomambra. Rad. iridis Flor. zjjfs, cinnam. $\overline{3} f$, caryoph. arom., lign. rhodii, flor. lavand. ana 3 jij , ambr. gris., mosch. ana gr. iiij, muc. g. tragac. made with rose water q. s.; some cover the ball with spirit varnish, but this keeps in the scent; worn in the pocket as a perfume.
2. Plaister of Paris $\mathrm{z}_{\mathrm{ji}} \mathrm{j}$, lign. santali citr., rad. cyperi rot., caryoph. arom. ana $z \mathrm{jij}$, benz., styr. calam. ana $\mathrm{J}_{\mathrm{fs}}$, ebor. usti ${ }_{j j} \mathrm{j}$ fs, mosch., zibethi ana Ofs, bals. Per. $\mathrm{hij}^{\mathrm{ij}}$, ol. cinnam. gtt. v, ol. lign. rhod. gtt. xv, ess. de jasmine 3 j , ess. neroli $Э$ j, muc. g. tragac. made with rose water q. s.: make into beads, and pierce them while yet soft for necklaces, \&c.

Tooti powders. Pulvis dentifricus. Rad. irid. Flor. 4 oz . oss. sepiæ 2 oz. crem. tart. 1 oz . ol. caryoph. gtt. xvj, lake 16 drops.
2. Catechu 1 oz . cort. Peruv. flav., crem. tart., cassiæ, bol. Armen. ana $j^{i i i j}$, sang. dracon., myrrhæ ana $3^{\mathrm{ij}}$.
3. Rose pink 20 oz. bol. Armen., oss. sepiæ, crem. tart. ana 8 oz . myrrh. 4 oz . rad. irid. Flor. 3 oz. ess. Bergam. $\mathrm{h}_{\mathrm{fs} \text {. }}$
4. Oss. sepix 4 oz. crem. tart., rad. irid. Flor. ana 2 oz. alum. usti, rose pink ana 1 oz.
5. Magnesix, rad. irid. Flor., rose pink, cretre ppæ. ana 2 oz . natr. ppi. $3^{\text {vj }}$, ol. rhodii gtt. ij.

Turpethum minerale reductum. Turbith mineral, lowered in price by massicot.

Perfumed powder for scent boxes. Sem. coriandri, rad. irid. Flor., fol. rosar., rad. calam. arom. ana 4 oz . $f$. lavand. 8 oz . moschi $\mathrm{Jj}^{\mathrm{j}}$, lign. rhodii j j .
2. Sem. coriandri, rad. irid. Flor., fol. rosar. rubr. ana 1 oz . macis, caryoph. arom. ana 3 j , flor. lavand. $1 \mathrm{oz} . \mathrm{g}_{\mathrm{iiij}}$, rad. calam. arom. 1 oz . moschi gr. iij, if agreeable.

Species odonirera for zoash balls. Amyli 20 oz. rad. irid. Flor. 12 oz . ol. rorism., ol. lavand. Angl. ana 3 j , sem. bamix moschatr 2 oz.

Silvering powder. Silver dust gr. $\mathrm{xy}-\mathrm{xx}$, cream of tartar, common salt ana 3 ij , alum 3 fs.
2. Silver dust $\bar{\xi}$ fs, common salt, sal ammoniac ana ${ }^{5} \mathrm{ij}$, corros. sublimate 3 j; make into a paste with water: used to silver copper, which is to be cleaned by boiling with argol and alum, then rub it with either of these powders, and polish with soft leather.

Currite powner. Sem. coriandri 13 oz. pip. nigri 2 oz.

## 318 OFHICINAL COMPOUNDS.-14. Powders, \&

pip. Cayenne 1 oz. rad. curcuma, sem. cumini ana 3 cz sem. foenugr. $5^{\text {ir. }}$
2. Vir., pimentx, rad. curcumx ana 11t, caryoph. arom: 1 oz . pip. Cayenne, sem. coriandri ana 8 oz .
3. Sem. coriandri 13 oz. pip. nigri 5 oz. pip. Cayenne I oz. sem. fcenugr., sem. cymini ana 3 oz. rad. curcumæ 6 oz.
4. Sem. coriandri 1tb, rad. curcumæ 8 oz. zz. 6 oz. sem. cumini, pip. Indic. ana 4 oz. pip. nigri 3 o7. cinnam., sem. cardam. min. ana 1 oz. tamarind. nigr. 21tb.
5. Rice 36 tb , rad. curcumæ 181t, sem. coriand. 16115, sem. cymini 9 Ht , farinæ sinapis 14 Ht , pip. nig. 281 t , pip. Cayenne 31t 8 oz.
6. Sem. coriand., rad. curcumæ ana 4tb, zz, pimentæ, pip. Cayenne, capsici bacc. ana 1 Hb , sem. cardam. min. 4 oz . macis, caryoph. arom., cinnam. ana 1 oz . Used as a seasoning to meat.

Pultis guataci compositus. Argent. viv. 4 oz . lac sulphur., gum. guaiaci ana 6 oz .

Pulvis antimonialis factitius. Antimon. diaphor. 10 oz. tart. emetic. 1 oz .; some put only 6 oz . of ant. diaph.
2. Corn. cervi usti 18 oz. tart. emet. 1 oz .

Venetian ceruss. Cerussa Veneta, Plambum album. Flake white, cawk ana p. æq.
2. Hamburgh rohite lead. Flake white 1 cwt. cawk 2 cwt .
3. Best Dutch white lead. Flake white 1 cwt. cawk 3 cwt .
4. Common Duich rohite lead. Flake white 1 cwt. cawk 7 cwt .
5. English rwhite lead. Flake white reduced in price by cha!k, inferior to the preceding.

Kemp's white for water colours. Cockscomb spar. q. p. spirit of salt q. s.; dissolve, add carbonate of ammonia to precipitate the white, wash, and dry in cakes for use.

Pearl powder. Magistery of bismuth, French chalk scraped fine by Dutch rushes ana p. æq. : cosmetic.

Tartarum sulublee extemporancum. Crem. tart. 31t, kali pp. 1卉.

Extempore smeiding salts. Sal. ammon. Эj, kali pp. 3j, ess. limon. gtt. v.

Grana sylvestria of the present day has the appearance of a dry powder, with many small fragments of some

## OFFICINAL COMPOUNDS.-14. Powders, \&cc. 319

thing that has been made into a dry uniform cake, it has only $1-6$ th of the colouring power of fine cochineal, and is in general about 1-8th of its price; it is probably composed of the white downy substance left by the wild cocci upon the plants on which they feed, along with fragments and dust of the insects themselves, with perhaps some vegetable substance. Cochineal itself seems formerly to have been made into a paste and dried.

Essential salt of lemons. Crem. tart. 4 oz. sal. acetosellæ 8 oz .: used to take iron moulds out of linen.

Engish verdigris. Blue vitriol 24tb, white vitriol 16 tb , sugar of lead 191t, alum 21b; all coarsely powdered, put in a pot over the fire, and stirred till they are united into a mass.

Heading for beer. Alum, green vitriol ana p. æq.
Pulvis colocynthidis factitius. Sem. colocynth. 31b, rad. bryoniæ 1itb.

Rouge. French chalk ppd. 4 oz . ol. amygd. $j \mathrm{ij}$, carmine 3 j .
2. Safflower, previously washed in water until it no longer gives out any colour, and dried, $z_{i i i j}$, kali pp. 3 j , watcr 1 pint; infuse, strain, add French chalk, scraped fine with Dutch rushes 4 oz . and precipitate the colour upon it with lemon juice q. s.

Sucre vermifuge. Quicksilver 1 oz . white sugar $2 \mathrm{oz} .:$ vermifuge, gr. vj-xx, omni mane.

Ginger beer powders. White sugar j $j \mathrm{j}$ Эij, zz. gr. v, natr. pp. gr. xxyj, in each blue paper; acid of tartar Эjfs, in each white paper: these quantities are for half a pint of water.

Spruce beer powners. White sugar jj Эij, natr. pp. gr. xxvj, essence of spruce gr. $x$, in each blue paper; acid of tartar $3^{f \mathrm{~s}}$, in each white paper ; for half a pint of water.

Sodalc rowders. Sodæ carbonatis $3^{\text {fs }}$ in each blue paper ; acid of tartar gr. xxv in each white paper; for half a pint of water: pleasant, cooling beverages in summer.

Cheltenham salis. Glauber's salt, Epsom salt, common salt ana 281b; dry in an oven and powder : purgative, $3^{\mathrm{rj}}$ - jjfs.

Horse spice. Pulvis equinus. Rasur. guaiaci lib, zz. nigri, pimentr, sem. cymini ana 215, rad. curcumæ, canellæ alber ana 1位.
2. Rad. curcumx, sein. cymini ana 5ib, zz. 2108 oz.

Cowspres. Rad. curcumx, sem. anisi, rad. gljcyrrh., pul. diapente ana p. æq.

Diapente. Rad. aristol. longi, myrthac, bacc. lauri, ras. eboris, rad. gentiane ana thj.
2. Fol. lauri 4215, ras. guaiaci 281b, rad. gentianx 143 b , Bol. comm. 217.
3. Bacc. lauri 281t, remains of all tinctures made 561 t , far. tritici 211 t , bone ashes 211 t , rad. gentim. 141t, red wine 5 pints : used by ferriers as a tonic.

Puivis glycyrrhizis reductus. Rad. glycymh., ras: guaiaci, far. tritici ana p. req.
2. Rad. glycyrrh. 7tt, brown sugar 14 tb .

Pulvis enular reductus. Rad. enulæ, barley meal ana p. æq.

Pulvis feenugreec reductus. Sem. foenugroc., pea meal sna p. жq.

Pulvis anisi reductus. Sem. anisi, ras. guaiaci ana p. æq.

Pulvis curcume reductus. Rad. curcumæ, ras. guiaci ana p. æq.

Pulvis corticis Peruviani factitius. Cort. quercus, dyed of a proper colour : Godfrey in Miscellaaca utilia.

Cremor tartari reductus. Cryst. tartari 31b, sal. enixi 11 b .

Cayenne pepper. Piper Cayenne. Bacc. capsici, sal. comm. ana lhj; grind together; colour with vermillion; some use red lead, but this is injurious.
2. Capsicum q. p. bury in flour, bake till they are dry enough to powder, then, holding them by a pair of pincers, cut them in small pieces, to each oz. add flour 111, water and yeast $\mathrm{q} . \mathrm{s}$. to make them into small cakes, bakc, slice the cakes, lake over again, powder the biscuit and sift it.

Portable hemonalie. Acid of tartar 1 oz. sugar 6 oz. ess. limon. $3 j$; rul together, divide into 24 papers, for a tumbler of water cach.
2. Concrete acid of lemons 1 oz . white sugar 4 Hb , ess. limon. $3^{\text {ij }}$.

Powder for destroying mice. Rad. helleb. nigri, sem. staphisagrixe ana 1 oz . oatineal 21 t , ol. carui gtt . xxx.

Plate powder. Hydrarg. c. creta 1 o\%. cretre pp. 4 oz. 2. Potee powder, corn. cerv. ust. ana 8 oz. whiting 1 Ht .

Pulvis stanni. Potee powder 41 lb , ivory black $4 \mathrm{oz}^{2}$

## OFFICINAL COMPOUNDS.-14. Powders, \&c. 321

the ill effects sontetimes arising from tin as a vermifuge, are perhaps owing to the substitution of this powder for the filings.

Clothes powder. Pipe clay 11 b 8 oz . pip. alb., amyli ana 1 oz. rad. irid. Flor. 1 oz. Зiv, S. V. R. 2 oz.

Clothes ball. Pipe clay 21 b , fuller's earth, whiting ana 4 oz . pip. alb. 2 oz . fel. bovis 4 oz . ; used for cleaning clothes.

Breeches ball. Bath brick 11b, pipe clay 21b, pumice stone 4 oz . ox gall 6 oz ; they may be coloured with rose pink, yellow oker, umber, Irish slate, \&c. to any desired shade.

Silver boiling powder. White argol, common salt, alum ana p. æq.: a small quantity of this powder is put. into water, and plate is boiled in it, to which it gives a brilliant whiteness.

## 15. COMPOUND OILS.

Orl of roses by infusion. Oleum rosaceum. Rose. petals, not fully blown, picked, heeled, and beat to a pulp, 4 oz . olive oil 1 pint; expose to the sun for a week, press out the oil, repeat the insolation with fresh roses twice more, then leave the roses in the oil for use.

Oil of canomile by rnfusion. Oleusm chamoemelinium, From the flowers, as that of roses; used in sprains.

Oil of St. John's wort. Oleum hyperici, Balsamum hyperici simplex. Flor. hyper. Jiv, ol. olivæ tbij; infuse till the oil is well coloured; originally the expressed oil of sem. hyperici was used instead of olive oil.
2. Ol. viride, rendered paler by adding rape oil.
3. Ol. oliv. comm, 1 gall. rad. anchusæ 8 oz. Vulnerary.

Oil of white lilies. Oleum liliorum. As oil of roses: emollient. Ol. oliv. is usually sold for it.

Oil of earthworms. Oleum lumbricorum. Lumb. terr. Ht fs , ol. oliv. H ijig, vini albi $\mathrm{Hb} \mathrm{f}_{\mathrm{s}}$; boil till the wine is consumed, then press out the oil.
2. Ol. olivæ com., ol. lini ana p. æq.

Oil of elder flowers. Oleum sambucinum. Fl. sambuci 1 bbj , ol. oliv. 1bij ; boil till crisp, press out the oil, and let it settle: emollient.

Exeter oil. Oleum Excestrense. Ol. viride is usually

## 522 OFFICINAL COMPOUNDS.-15. Comp. Dils.

sold under this name: the original formula had about 20 herbs to be infused, and euphorb., sinapeos, castor., pyrethri ana ${ }_{5} \mathrm{j}$ to thxyj of oil, but is seldom, if ever, made.

Oil of mucleages. Oleun e mucilagrenibus. Rad. althere rec. Itsfs, sem. lini, sem. foeni Greci ana ${ }^{5} \mathrm{jij}$, aque Thij; boil for half an hour, add ol. oliva thiv, continue boiling till the water is nearly consumed, pour off the oil.
2. Rad. althææ rec. 4th, sem. foenugr., sem. lini ana $2 \pi 5$, a mixture of common olive oil, sperm oil; and seal oil in equal parts, 4 gallons.
3. Sem. foenugr. 8 oz. ol. lini 2 pints; infuse for a week, strain. Very emollient.

Green oir. Oleum' viride. Fol. lauri, fol. rutæ, fol. majaoran., fol. absinth. mar., fol. chamæmeli (all fresh) ana Ziij, ol. oliv. tijij ; boil till crisp, press out the oil and let it settle: emollient.

Oil of scorproxs. Oleun scorpionum. Live scorpions no. 30 , ol. amygd. Thij; expose to the sun for forty days; centipedes are usually substituted for scorpions, as being more easily procurable ; externally emollient, internally diaphoretic, occasioning a prickly heat on the skin.

Camphorated oil. Linimentam camphora, Oleum camphoratum. Camphore ${ }_{j} f \mathrm{fs}$, ol. olivar. $\overline{\mathrm{F}} . \mathrm{ij}$; dissolve : anodyne, discutient : the only compound oil in the present college lists, although all the preceding are in high esteens with private practitioners.

Mixture for bugs. Corros. sublimate sij, S. V. R. 8 oz ; rub together, add ol. terebinth. 8 oz .

Common oir, of spire. Olerm spicer zulgare. Ol. tereb. 3 pints, ol. lavand. 1 pint: this is used by enamellers to mix their colours.
2. Ol. tereb. coloured with rad. anchuse q. s.
3. Ol. terel. 6 pints, petrol. Bbd. 4 oz . rad. anch. 2 nz .: used by ferriers as a hiniment.

Mixed oils, Nine oifs. Oleum ex omnibus. Train oil 231t, ol. terebinth. 6 Ht , ol. lateritii, ol. succini ana 1 fb , spir, vin. campl. 2 lt , petrol. Bbd. 7ith, ol. vitrioli 2 oz : used in spraius.

Connon oie of petre. Olcum petree eulgarc. Ol. tereb. 161t, ol. rorism. 2 oz. petrol. Bbd. 8 o\%.

Balsair of sulphur. Balsamum sulphenris simplex, oleum sulphurutumi P. L. Fl, sulph. ₹iv; ol. oliva $\overline{5} \times \mathrm{jv}$.

OFFICINAL COMPOUNDS.-15. Comp. Oils. 393
2. Ol. sulphuratum P. E. Fl. sulph. Fij, ol. olivæ \%xvij: dissolve.
3. Fl. sulph. 31t, ol. lini 4 gall.

Balsamum sulphuris Baibadense. Petroleum sul-,
 to ulcers.

Batsamum sulphuris anisatum. Fl. sulph. 1 oz, ol. anisi 4 oz: : dissolve.
2. Bals. sulph. simpl. scented with ol. anisi : pectoral, gtt. x -xxx.

Common Dutch drops. Balsamum sulphuris terebinthinatum. Fl. sulph. 4 oz. ol. terebinth. 8 oz.: dissolve.
2. Bals. sulph. simpl. 4 oz. ol. terebinth. 1 pint; dissolve: diuretic, detergent.

Scouring drops. Ol. tereb. scented with ess. limon.
Furniture oil. Ol. lini coloured with rad. anchusæ.
Ol. soccini reductum. Ol. succin. Ibj, petrol. Bbd. Ibij.
British oil. Ol. tereb, 8 oz. petrol Bbd. 4 oz . ol. ros zism. 3iv.
2. Ol. tereb. 51 b , asphalt. 12 oz . ol. lateritii 8 oz ,
8. Ol. tereb. 5 thb, ol. laterit. ver. 8 oz .

Ol. anisi reductum. Ol. anisi 1tb, rape oil 8 oz , sperm; seti q. s. to make it candy in winter.
2. Ol. anisi 31t, ol. olivæ opt. 11tb.

Charity oil. Fl. chamxm., fol. rorismar., summ. lan vand., fol. absinthii, fol. salvix, fol. valer. ana man. j, ol. oliv. Hbij; infuse, press out the oil: ol. viride is usually sold for it.

Balsamuar Peruvianum reductum. Bals. Peru, 31t, benz. 11t, S. V. R. q. s. to give it a proper consistence.
2. Bals. Tolu 6 tb , gum. benz. 14 tb , S. V. R. 2 gall.

Batsamum Copaibe reductum. Bals, Copaib. 6it, pale rape oil 2 tt , resin. fl. 1tb.

Oleum menthe pipertits reductum. Ol. menth. pip. 31t, S. V. R. 1tt.

Oleum ortgani reductum. Ol. origani 71b, ol. terebin: 2 tb , petrol. Bbd. q. s. to colour it.

Oleum ricini reductum. Ol. ricini 81b, ol. amygd. 21t.
Newmarket oil. Ol. lini, ol. terebinth., ol. hypericj ana 31b, ol. vitrioli 1 oz.

English Venice turpentine. Res. nigr. 12th, ol. terebinth. 1 gall. ; melt the rosin, take it from the fire, and add the oil.

## 324 OFFICINAL COMPOUNDS. -15 . Comp. Oik.

Balsamum terebinthine vulgare. Res. nigræ, ol. tereb. ana 1th.

Balsamum Saturni. Sacch. Saturni 8 oz. ol. terebinth. q. s.: dissolve, and pour off.

Huile antique a la rose.
Huile antique a la tuberose.
Huile antique a la fleur d'orajge.
Hule antique au jasmin. Oil of ben nuts, scented with the essences of the different flowers.
2. Olive oil or almond oil, scented the same.

Hulee antique a la violettre. Oil of ben, olives, or almonds, scented with orrice, in the same manner as in making essence de jasmin (p.261), and then pressed out of the wool or cotton.

Huile antique au mille fleurs. Oil of ben or almonds, mixed with different essences to the fancy of the perfumer.

Furniture varnish. White wax 8 oz . ol. terebinth. 1 pint.

Picturia varnish. Mastich 12 oz. Ven. turp. 2 oz .3 ziv , camphire gr. xxx, pounded glass 4 oz . oil of turpentine 3 pints and a half; pour off the clear: used to oil paintings.

Gold varnish for leather. Turmeric, gambooge ana $Э j \mathrm{j}$ s, oil of turpentine 2 pints, add seed lac, gum sandarac ana 4 oz. dragon's blood ziv, Ven. turp. 2 oz . pounded glass 4 oz . pour off the clear.

Copal varnish. Oil of turpentine, thickened by keeping, 8 oz . copal 2 oz . and a half.
2. Oil of turpentine 6 oz . oil of lavender 2 oz . copal 1 oz .

Transpartit tapan for tin ware. Oil of turpentine 8 oz . oil of lavender 6 oz . copal 2 oz . camphire 3 j .

Drying orl. Linseed oil 2 pints, litharge or ceruss 1 oz.; dissolve with heat: added to paints to make them dry the sooner.

Le Blond's varnish for prints. Balsam. copaibæ 4ib, copal in powder 1tb; add by single ounces every day to the balsam, keeping it in a warm place, or the sun, stirring it often: when all is dissolved, add Chio turpentine q.p.

Sheldrake's copal varnisif. Ol. terebinth. rectif. veri 1 pint, spir. sal. amm. 2 oz .; mix, add copal in small pieces 2 oz .: stop the vessel with a cork cut in grooves, bring it quickly to boil so that the bubbles may be counted as they rise, aud keep it at that heat : if the least stoppage

## OFFICINAL COMPOUNDS. -15 . Comp. Oils. 325

or overheating takes place, it is in vain to proceed, then leave the vessel till quite cold before you open it, otherwise the varnish will be blown out with violence.

Varnish for coloured drawings. Canada balsam 1. oz. oil of turpentine 2 oz : size the drawing first with a jelly of isinglass, and when dry, apply the varnish, which will make them resemble oil paintings.

Common turpentine varnish. Resin. flav. 31b 8 oz. ol. tereb. 1 gall.

Sheldrake's oll for painting. Nut or poppy oil 1 pint; boil, add ceruss 2 oz . when dissolved, add a pint of his copal varnish, previously warmed, and stir till the oil of turpentine is evaporated: gives more brightness than common drying oil, but less than varnish only; loses its drying quality in time, therefore only so much as is sufficient for a month or six weeks' consumption should be made at once.

Black japan for leather. Boiled linseed oil 1 gallon, burnt umber 8 oz. asphaltum 3 oz . boil, and add ol. terebinth. q. s,

Vainish for grates, Brunswick black, Asphalt. comm. 4 tb ; melt, add ol. lini 21 tb , ol. terebinth. 1 gallon.

Nonfolk fluid for preserving leather. Linseed oil 3 pints, res. flav. 4 oz . thuris 2 oz . cer. flav. 12 oz .; melt, add neat's foot oil 2 pints, ol. terebinth, 1 pint: used to pre? serve and soften leather.

## 16. SOAPS.

Almond soap. Sapo amygdalinus. Oil of almonds q.v. lixivii saponarii 3 times as much, simmer together for some hours, until the oil forms a jelly when cooled, add common salt q. s. and continue the boiling until the soap is solid when cooled, skim it off the water and pour it into moulds.
2. Soap ley made of barilha or kelp (at 38 deg. Baumé's hydrom. or so strong, that a bottle holding 8 oz . water will hold 11 of the ley) 21 t , oil of almonds 4 tb ; rub them together in a mortar, and put the mixture in tin moulds for some weeks, to perfect the combination.

Venice soaip. Sapo durus Hispanicus, Sapo. Is made from olive oil and barilha; white : are aperient, diuretic, detergent, gr. $x-3$ fs, bis die ; used also in calculous complaints, $\mathrm{J}^{\mathrm{f}} \mathrm{f}-\mathrm{J} \mathrm{j}$, daily.

## 326

 OFFICINAL COMPOUNDS.-16. Suapes.Green Venice soap. S'apo viridis. Is coloured with juice of beet leaves for the German market.

Castille soap. Sapo Castiliensis. From olive oil and barilha, white, with veins either of green soap, or made by adding a solution of green vitriol to the soap: a detergent cosmetic.

Soft soap. From the coarser oils and a ley of potash: transparent, yellowish, with small seed-like lumps of tallow diffused through it; used in washing.

Black soap. From fish oil and a ley of potash, without any tallow, dark coloured, ill smelling.
2. Soft soap 71b, train oil 111 , water 7 pints; boil together, add common ivory black q. s. to colour it : used in ointments by cattle doctors.

White wash bacl.s. Sapon. alb. 61 tb , amyli 3 th , aq. rosæ 8 oz. aq. rorismar. 4 oz . camphoræ $\mathrm{j}^{\mathrm{iv}}$, species odorifer. (see p. 317) 2 oz .
2. Sap. alb. Hisp. 17b, aq. rosar, 3 pints, album. ovor. no. ij, aq, kali ppi. 1 oz.; boil till hard again, add ol. lign. rhod. $Э j$, ol. caryoph. gtt. x, ess. jasmin. 3 j, ess. neroli 3 fs, and form into squares.
3. White soap 51t, rad, irid. Flor. 4 oz. amyli 3 oz . styrac. calam. 1 oz. aq. rosar. q. s.
4. Sap, alb. Hisp. 11b, almonds blanched, beat up into a paste with rose water and orange flower water 3 oz . magister. marcasitæ $3_{j}$, kali ppi. $\mathrm{z}^{\mathrm{ij}}$, moschi gr. vj, zibethi gr. iij, ol. lign. rhodii Эj, ess. jasmin. 3 j .
5. Cream balls. White curd soap 71t, amyli 11t, water q. s.; beat it together, weigh into ounce balls, and roll in pulv. amyli.
6. White soap, starch ana 1 th, ess. limon. hiv, aq. rosar. 8 oz . ; make into balls of 3 oz , and a half each.

Red mottled wasif balis. Cut white soap into small square pieces, roll them in vermillion, and squeeze the pieces together into balls, without mixing them more than is necessaly.

Blue mottled wasy balls. In like manner, rolling the pieces in powder bluc.

Windsor soap. Hard curd soap, melted and scented with ol. carui and ess. Bergamotte ; an inferior sort is made with ol. carui only.

Starkey's soar. Made by rubbing warm kali ppd. with oil of turpentine, adding a little water.

3．Adip．ppæ． 5 th，ol．palmæ 1th，cerussæ 6 oz ．alum． rupei，Merc．corros．subl．，lithargyri ana 4 oz．

Heel onvment．Axungia 31t，mellis 215，tereb． comm．1tt，vitriol．carul．，ærug．aris，alum．comm．ana 8 oz． train oil 8 oz ；used by ferriers and grooms．

## OFFICINAL COMPOUNDS，－17．Ointments．

Blistering ointment for horses．Ung．laurini，ung． sambucini ana $1 i$ it，canthar．，euphorbii，ol．origani ana 8 oz． Merc．corr．subl． 3 j ．

2．Pic．Burgund． 12 oz ．tereb．comm． 5 oz ．canthar． 10 oz ．euphorbii 1 oz ．axung．porc． 1 tb 8 oz ．aceti comm． S oz．

3．Ung．laurini 4 oz ，ol．origani 1 oz．canthar．，euphorbii ana siji $^{2}$ ．

4．Ung．viridis 1 th 8 oz．euphorb． 3 jij ，ol．origani 1 oz ． canthar． 2 oz．tereb．comm． 1 oz ．and a half．

Dressing for leather to render it zeater proof．Ol． lini 11 b ，ceræ fl．，tereb．comm．ana $\stackrel{9}{\sim} \mathrm{oz}$ ．picis Burg． 1 oz.

2．Ol．lini 11t，sevi 8 oz ．ceræ fl． 6 oz ．resinæ fl． 1 oz ．
Comion orl of bays．Unguentum laurinum vulgares Fol．lauri ibj，bacc．lauri ibfs，fol．brassicæ ${ }^{3} \mathrm{iv}$ ，neats foot oil tbv，beef suet tbij；boil and express．

Unguentum catechu．Catechu 马iv，alum．zix，res．fl．亏̄iv，ol．oliv．$\tilde{j}^{2} \mathrm{x}$ ，water q．s．：a good application to ulcers in warm climates，as the fat and resinous ointments of the colder countries have a bad effect．

Anti－attrition．Hog＇s lard tixx，camph．4oz．black lead q．s．to colour it；used to rub on iron to prevent rust and diminish friction．

Cold cream．Ceratum Galeni．Ol．amygd． 1 th，ceræ albæ 4 oz ．；melt，pour into a warm mortar，add by degrees， 2q．rosar． $\mathrm{\# j}$ ；it should be very light and white．

2．Trotter oil 1 pint，aq．rose 2 pints，sperm．ceti melt－ ed 11 b 8 oz ．ceræ albæ melted 1 oz ．ol．amygd． 2 oz ．ess． Berg．I oz．；beat it up together，and keep it floating upon some rose water．

Orange pomade．Axung．porc．11t，ol．palmæ 8 oz. ess．neroli 1 oz．

Sevuar melliloti．Suet 8南，mellilot leaves 21t ；boil till crisp．

Blackmann＇s colouns in bladders．Are prepared with the spermaceti mixture like his oil colour cakes，but the pro－ portion of oil is larger．

Vanherman＇s fish－oil parnts．The oil for grinding white is made by putting litharge and white vitriol ana 121b， into vinegar 32 gall．adding，after some time，a ton of whale， seal，or cod oil；the next day the clear part is poured off， and linseed oil 12 gall．oil of turpentine 2 gall．are added．

2．The sediment，left when the clear oil was poured off：
mixed with half its quantity of lime water, is also used under the name of prepared residue oil for common colours.
3. Pale green. Lime water 6 gall. whiting and road dust of each 1 cwt . blue black 30 Ht , yellow oker 24 Ht , wet blue (previously ground in prepared residue oil) 201 th ; thin with ppd. residue oil 1 quart to each 81t, and the same quantity of linseed oil.
4. Bright green. Yellow oker 1 cwt. road dust 1 cwt. and a half, wet blue 1 cwt . blue black 10 tt , lime water 6 gall. ppd. fish oil 4 gall. ppd. residue oil and linseed oil, of each 7 gall. and a half.
5. Lead colour. Whiting I cwt. blue black 51 t , white lead ground in oil 28 tt , road dust 561 tb , lime water 5 gall. ppd. residue oil 2 gall. and a half.
6. Brown red. Lime water 8 gall. Spanish brown 1 cwt. road dust 2 cwt . ppd. fish oil 4 gall. ppd. residue oil and linseed oil, of each 4 gall.
7. Yellorw. Put in yellow oker instead of Spanish brown, as in the last.
8. Black. Put in lamp black or blue black.
9. Stone colour. Lime water 4 gall. whiting 1 cwt . white lead ground in oil 2St市, road dust 561 th , ppd. fish oil 3 gall. ppd. residue oil and linseed oil, of each 3 gall. and a half. The cheapness of these paints, and the hardness and durability given to them by the road dust (or ground gravel) has brought them into great use for common out-door painting.

Common oil of mace. Unguentum macis. Macis, ol. palmæ ana 11 t ; beat to a paste, add beef marrow melted 31 b .

Styrax colata. Bals. Tolu 61b, bals. Peruv. 11b 8 oz.
2. Gım. benzoin. 81t, styr. liquidæ 61t, bals. Tolu 31t, bals. Peruv. 2th, gum. flavi N. S. W. 7th, S. V. R. 6 gall.; let them stand for a fortnight, strain, distil to a proper consistence, about 12 pints of the spirit is consumed, what comes over will scrve for the same purpose another time, produced about 24tb.

Galbanum colatum reductum. Galbani col. veri \%1b, picis Burgund. 31b, tereb. Venetre 2tb.

Terebinthina Chla fuectitia. Balsami Canad., resinæ flavæ ana p. æ.

Styrax ligunda rechucta. Styrac. liquidæ 1 oz. bals. Tolu 21t, S. V. 12. q. s.

## 18. PLAISTERS.

Adhesive plaister: Emplastrum adhcesivum, Empl. commune adhcesivum, Empl. lithargyri cum resina P. L. Empl. resince. Diachyl. simpl. Hiij, resimæ fl. tbfs.
2. Empl. lithargyri c. resina P. D. Diachyl. simp. Hiiijfs, resinæ fl. tbfs.
3. Empl. resinosum. Diachyl. simp. tibv, resinæ fl. tbj.
4. Ol. oliv. 79 Ht , litharg. 46 Ht 8 oz . resinæ fl. 16 Hb : used to bring together the edges of wounds, or confine other dressings.
5. Baynton's adhesive plaister. Diachyl. simp. 11t, resinæ fl. $\mathrm{J}^{\mathrm{vj}}$; used for roll up limbs with old ulcers.

Cephalic plaister. Empl. cephalicum, Empl. picis Burgundica. Picis Burgund. Hbij, labdani 1bj, resinæ fl., ceræ fl. ana $\mathfrak{J} \mathrm{iv}$, ol. macis ${ }^{5} \mathrm{j}$.
2. Emp. picis compositum. Picis aridæ P. L. 1809 1bij, thuris 1 bj, resinæ fl., ceræ fl. ana ${ }^{\text {Jiv, }} \mathrm{iv}$ ol. nuc. mosch. expr. 3 J .
3. Pic. Burg. 61t, ceræ fl. 31t, resinæ fl. 81 t , axung. pore. 71 tb , tereb. comm., ol. palmæ, ol. lini ana 17t. Rubefacient, stimulant; used in head-ach, applied to the temples or forehead.

Eipplastruir e cymino. Empl. cumini. Pic. Burg. 1biij, sem. cymini, sem. carui, bacc. lauri, ceræ fl. ana $\tilde{\Xi}^{i j i j}$; discutient, to the stomach and belly in flatulence, also to indolent tumours.

White diachy lon. Diachylon simplex, Empl. commune, Empl. lithargyri P. L. Empl. plumbi. Litharg. Hbv, ol. oliv. 故iij, water q. s. about 2 pints.
2. Empl. lithargyri P.D. Litharg. $\mathrm{Hb} v$, ol. oliv. Hix, aque libij.
3. Einpl. oxidi plımbi semivitrei. Litharg. Itv, ol. oliv. tibx by weight.
4. Ol. oliv. comm. 84tb, litharg. 53 th , aquæ q. s.
5. Ol. oliv. comm., axung. porc., litharg. ana 28 th.
6. Ol. oliv., axung. porc. ana 15 th , litharg. 16 tb , cerusse 4 tb , water q. s. Defensive, to keep the air from wounds and ulcers; also to repel milk in women weaning their children.

Yeliow diachyion, Gum diachylon. Diachylon cume gummi, Empl. commune c. gummi. Diachyl. simpl. 1biij, galbani col. $\frac{z}{3}$ viij, tercb. comm., thuris ana miij.

Emplastrun calefaciens．Empl．cantharidis P．D． 1 bj， picis Burgund．Ibvij：stimulant，more active than Burgun＝ dy pitch alone，and yet seldom raises a blister．

Blistering plaister for hoorses．Tereb．Venetæ，ung． ex althæa ana 2 oz ．canthar． 1 oz ．Merc．corros．subl．ziv，ol． origani 3 j ．

Black ball．Bees＇wax 8 oz．tallow 1 oz．gum．Arab． 1 oz．lamp black q．s．

Roll pomatum．Suet 571 ，white wax 8 oz．sperm．cetil 2 oz．ol．lavand．，ess．Bergam．ana 3 iv ．

2．Mutton suet 3 lb ，white wax 8 oz．ess．limon．q．p．
Blackmann＇s oll－colour cakes．Grind the colours first with oil of turpentine，and a varnish made of gum mastich in powder 4 oz ．dissolved without heat in a pint of oil of turpentine；let them dry，then heat a grinding stone， by putting a charcoal fire under it，grind the colours upon it，and add an ointment made by adding melted sper－ maceti 3 tb to a pint of poppy oil，take a piece of the propex

## 34~ OFFICINAL COMPOUNDS.-18. Plaisters.

size, make it into a ball, put this into a mould and press it. When these cakes are used, rub them down with poppy oil, oil of turpentine, or any other convenient vehicle.

Furniture balls. Ol. lini 1 pint, rad. anchuse 2 oz. heat together, strain, add ceræ fl. 18 oz , resinæ fl. 2 oz .

Red sealing wax. Gum lac 2tb, vermillion 4 oz . ol. tereb., ol. oliv. ana 8 oz . roll in cakes, and polish with a rag till quite cold.
2. Shell lac 51b, resinæ fl. 31 b , ol. tereb. 1itb, vermillion 12 oz . chalk ppd. 4 oz .
3. Resinæ fl. 61b, shell lac 21b, tereb. Venet. 2tb, vermillion 8 oz .
4. Shell lac, resinæ fl. ana 41b, tereb. Ven. 11b, add vermillion or bole Armen. ppd. q. p.

Black sealing wax. As the red, using lamp black instead of vermillion.

Seal engraver's cement. Common rosin and brick dust; it grows harder every time it is melted, but always remains inferior to Botany Bay cement.

Botany Bay cement. Yellow gum and brick dust ana p. æq.; used to cement China ware.

Gilders' wax. Ceræ fl. 11 b 8 oz . ærug. æris, vitrioli albi ana 8 oz . colcothar. 21b 12 oz ; the dry species must be powdered very fine; borac. 4 oz . may be added.
2. Ceræ f. 151 bb , colcothar. 71 lb , ærug. æris, vitrioli albi ana 31 b 8 oz . boracis 8 oz .
3. Ceræ fl., colcothar. ana 4tb, ærug. æris 2 Ht , borac. usti, alum. usti ana 2 oz .
4. Colcothar. 181 tb , ceræ fl. 10 Hb 8 oz . ærug. æris, ritrioli albi ana 3 茢 8 oz :

Issue peas. Pisa pro fonticulis. Ceræ fl. 1th, rad. curcumæ 8 oz. rad. irid. Flor. 4 oz. tereb. Ven. q. s. make into peas.
2. Ceræ fl. 6 oz. rad. irid. Flor. 2 oz . vermillion 4 oz . tereb. Ven. q. s. ; form into peas.
3. Ceræ fl. 6 oz. ærug. æris, rad. helleb. albi ana 2 oz, cantharidum $1 \mathrm{oz} . \mathrm{rad}$. irid. Flor. 1 oz. and a half, tereb. Ven. q. s.: this last is caustic, and will open issues itself, the others are used to put into issucs that begin to close up, to keep them open longer.

## APPARATUS AND CHESTS.

Issue plaisters. Sparadrapum pro fonticulis. Ceræ fl. Ibfs, minii, tereb. Chiæ ana Jiv, cinnab., rad. irid. Flor. ana ${ }^{3} \mathrm{j}$, mosch. gr. iv; melted, spread upon linen, polished with a moistened calendering glass rubiber, and lastly cut in small squares.
2. Diachyl. simpl. thj, rad. irid. Flor. $\overline{3} \mathrm{j}$; spread, and polished.
3. Diachyl. simpl. 21b, pic. Burg., sarcocollæ ana 4 oz tereb. comm. 1 oz : : spread and polished.

Corn plaisters. Sparadrapum viride. Ceræ fl. 2tb, pic. Burgund. 12 oz . tereb. comm, 6 oz . ærug. ppæ. $3 \mathrm{oz} . ;$ spread on cloth, cut and polished,

Defensive plaisters. Sparadrapum seu Tela Galteri. Ol. oliv. 1 tbs , sevi ovill. \%iv, ceræ $3^{\mathrm{j}} \mathrm{x}$, litharg., tereb, comm., thuris, mastiches ana ${ }^{3} \mathrm{j} j$, boli Armen. ppæ., farinæ tritici ana ${ }^{3} \mathrm{j}$; pour it, while liquid, upon cloth, and spread it : used for issues, and to keep on dressings.

Adhesive plaistrers, Strapping. Sparadrapum adhasivum. Diachyl. 1th, resinæ fl. 4 oz. tereb. comm. half an oz. or in summer time only 3 ij ; melt, pour upon cloth, and spread it rather thick; much used by surgeons to close the lips of wounds, and retain dressings.

Bougres. Candelce probatorice. Catgut, of different thicknesses, dipped in emplastr. hydrargyri, and rolled smooth upon a slab.
2. Pieces of old linen about a foot long, wide at one end, and tapering to the other, dipped in empl. hydrargyri, empl. saponis, or diachyl. simpl. and rolled up while the plaister is yet warm, upon a heated slab.
3. Elastic gum bougies, Catgut dipped repeatedly in a solution of elastic gum or Indian rubber, in ether or naph.
tha, until a sufficient thickness of gum is deposited upon the catgut.

Elastic gum catheters. A bougie, made of finc catgut, very thickly coated with wax, bent to the proper curve, is dipped repeatedly in the ethereal solution of elastic gurr, until a sufficient thickness of gum is deposited upon the bougic, it is then dried perfectly in a warm room or stove; and finally boiled in water to melt out the wax and allow the catgut to be withdrawn.
2. A wire bent to the proper curve is wrapped round spirally, the turns overlapping each other, with a thin riband of elastic gum, whose surface has been softened by dipping in boiling water, or still better in ether, or in a solution of camphire in spirit of nitre to which some spirit of wine has been added; over this is wound a silk riband, and over that another worm of packthread to bind down the whole: when the gum is judged to be dry enough, the packthread and riband are removed, the catheter dipped for a moment in boiling water to expand it, and allow the wire to be withdrawn, and one or two holes are then made at the close end.
3. A fine tiseue of silk is wove upon a wire properly bent; and the wire thus clothed is dipped in the ethereal solution of elastic gum, and treated as in the first method; when properly covered and dried, the wire is withdrawn, and the aperture at the closed end made.

Lead tree. Sugar of lead 3 vj , distilled or rain water 2 pints; dissolve, and hang in it, by a thread, a small piecs of zinc.

Phosphorus bottlas. Phosphorus 5 ij , lime 5 j , mixed together, put into a loosely stopped phial, and heat it before the fire, or in a ladle of sand, for about half an hour.
2. Phosphorus 3 j , cera alba gr. xr, put it into a bottle under water, and melt them together, let the water cool, and as it begins to grow solid, turn the bottle round, that the sides may be coated, then pour out the water, and dry it in a cool place.

Matciles for instantaneous heigit. Oxymuriate of potash, flowers of sulphur ana Эfs, vermillion gr. ij, oil of turpentine q. s. to make a paste, with which coat the ends of slips of wood, previously dipped in oil of turpentine and dried: when these matches are plunged into oil of vitriol and immediately withdrawn, they take fire instantaneously.
'To prevent the oil of vitriol from spilling, if the bottle should accidentally fall on one side, pounded asbestus or sand is put into the bottle to soak up the acid.
2. Oxymuriate of potash gr. ix, sugar gr. iij, flowers of sulphtir gr. ij, vermillion gr. j, flour gr. ij, spirit of wine q. s. ; the wood to be previously primed with camphire dissolved in spirit of wine.

Sponge tents. Turundo intumescentes. Soft sponge is dipped in melted wax, and squeezed in a press while warn, when cold it is taken out, and cut into the required form; used to dilate fistulous ulecrs by its expanding force when softened by warmth and mbisture.

Vaccine matter. Collected either upon lancets, or by opening the pustule, and applying a small glass ball and tube (like those called by the boys in London, candle pops, or fire pops) to the opening, expelling part of the air in the ball by hringing a lighted taper near it, then withdrawing the taper the matter is drawn into the ball, in which it may be scaled up hermetically or cemented, and thus kept for a length of time: used lately for an absolute preventive of the small pox, but now with a view of diminishing the susceptibility of acquiring that disease, and to render it milder if acquired.

Smafle pox matter. Collected from the pustules upon lancets, or the scales of the pustules are preserved: used to communicate the disease under farourable circumstances, instead of hazarding its being acquired when circumstances are unfavourable.

Court plaister, Sticking plaister. Black silk is strained and brushed orer with a solution of isinglass 1 oz . in proof spirit 12 oz . to which tinct. benz. 2 oz . is added; when dry, this is repeated five times more, after which, two coats are given it of a solution of tereb. Chia 4 oz . in tinct. benz. 6 oz . which renders it less liable to crack; but some fimish it with a simple tincture of black balsam of Peru.

Medicine chests for siips that carry a surgeon. Some idea of what ought to be shipped for a voyage, may be formed from the following lists which the physician of Greenwich hospital, Dr. Blane, judged necessary for the service of 100 men for 12 months; viz.

1. Pharmaceutic articles. Cort. Peruv. 101t, if for a Narm climate 20 tt, Glatiber's or Epsom salt 101 H, senna 9 \#h, ipecac. 4 oz , tartar. cmetic 1 oz . and a half, calomel 2 oz .
and a half, opium 1, oz. aloes half an oz. gum ammoniae 2 oz . bals. copaibæ 3 oz . cantharides 1 oz . capsicum 3 oz . tinct. benz. comp. 4 oz. camphire 3 oz . castor 1 oz . and a half, camomile fl. or hops 2 th, cinnamon 1 oz. chalk pped. or oyster-shells 6 oz . conserve of roses 8 oz . confectio cardiaca 207. extract. cathart. half an oz. extr. conii 3 oz . extr. hxmatoxyli 1 oz . gentian root 5 oz . ginger 3 oz . gum Arabic 4 oz . gum guaiacum 3 oz . jalap 1 oz . and a half, laudanıim (tinct.) 4 oz . linseed 117 l , magnesia (carbonate) 6 oz . manna 8 oz . mustard seed whole 8 oz . myrrh 4 oz . quicksilver 20 oz. corrosive sublimate 1 oz. sal nitri 8 oz. almond cil 1 pint, castor vil 8 cz . linseed oil 3 pints, oleum mentize 1 oz. Jamaica pepper 4 oz . quassia 8 oz . volatile salis " oz . sal Martis half an nz. kali ppi. 10 oz. Venice sozp i oz. sarsaparilla 31t, Virginia snake root 4. oz. spermaceia 4 o\%. spirit of wine 1 pint, spirit of vitriol 8 oz . ammonise accias (or materials for preparing it) 2 pints, oil of turpentine 4 oz . dried squills half an oz. flowers of sulphur 1 oz. golden sulphur of antimony half an oz. cream of tartar 1 th, vinegar 6 pints, white vitriol 1 oz. wormwood 1卉, flowers of zine 3 jij .
2. Surgical applications. Simple cerate 615, spermaceti ointment 615, red precipitate 11t, blue vitriol 8 oz . blister plaister 6ib, extr. Saturni 4 1 b, sugar of lead $41 \pi$, cantharides in powder llb; strapping, lint, tow, rags at discretion.
3. Dietetic articles. Barley 3 cwt. eggs greased and packed in salt 20 doz. extract of spruce 1215 , lemon juice clarified and rum added to make it keep 5 gall. raisins 501 th, rice 2 cwt . coarse sugar $\underset{\sim}{2} \mathrm{cwt}$. sago 20 Ht , salep powder 1015 , portable soup 5015, tamarinds 1015, white wine 300 gall. red wine 100 gallons.

Medicine rhests for plantation service. Dancer, in his Medical Assistant, gives the following list of medicines as necessary (along with indigenous remedies) for 100 negroes for a year. Aloes 8 oz . alum 8 oz . Peruvian bark 41t, balsam Copaibe 8 oz . cantharides 8 oz . calomel 1 oz . camphire 8 oz . catechu 117, camomile flowers 1Hb, clixir of vitriol S oz. elixir paregoric 8 oz. extr. cathart. half an oz. flowers of sulphur 1th, flowers of zine 1 oz . gamboge 1 oz . gum ammoniac 4 oz . gum Arabic 8 oz . ipecacuanha 4 oz . iron filings ppd. 2tb, jalap 4 oz. linseed 2th, liquorice $S$ oz. magnesia alba 4 oz. mezereon 4 oz . myrrh 4 oz. sal nitri 4 oz. spirit of nitre 4 oz . opium 4 oz . oil of anise seed 2 oz . olive wil 4 pints, oil of peppermint 1 oz . oil of turpentinc 11 b ,
yellow basilicon 1tb, simple cerate 1 fb , mercurial ointment 4 oz. gum plaister 8 oz. mercurial plaister 4 oz. sumach 2 oz . sal ammoniac 4 cz . Glauber's salt 101b, kali ppd. 8 oz . sal Martis ${ }_{2}^{2}$ oz. senna 4 oz . snake ront 4 oz. spirit of sal ammoniac 6 oz. ammonix acetas 2 pints, double distilled lavender water 4 oz . Hoffman's anodyne liquór 4 oz . sweet spirit of nitre 4 oz . emetic tartar half an oz. rhubarb 4 oz . Strasburgh turpentine 4 oz . vinegar 2 gall. extractum Saturni 8 oz . white vitriol $\mathscr{L}_{2} \mathrm{oz}$. blue vitriol 4 oz . verdigris 8 oz . red precipitate 4 oz . corrosive sublimate half an oz.
2. Necessaries. 1 large clyster syringe, 1 small ditto, 6 for injections, 4 lancets, 1 tooth instrument, 3 or 4 eye cups, 1 doz. bougies in sorts, 3 doz. phials with corks, 1 paper of pill boxes, 1 set of scales and weights, lint and tow.

Medicine chests for small vessels, or families in the country. These are usually made up to some book of directions, of which three are in general use in London, viz.

1. A Companion to the Medicine Chest, published by Tindal, which, being well written, is adapted for chests ordered by persons of cducation, for whose diseases also the medicines are selected. By a singular error, the words laudanum and opium are throughout used as synonymous to each other, while at the same time the tincture of opium is probably meant by both.
2. Directions for the Use, \&c. published by Shaw, the druggists' printer. These directions and medicines are principally intended for the diseases of the lower classes, hence this is the book by which druggists generally make up medicine chests for small vessels which do not carry a surgeon, unless they have books of their own, as is the case with most of the druggists in sea ports, or the easterin side of London.
3. The Family Medicine Chest Book, published by Cox, which would not be worth mentioning, if her situation, close to the two most frequented hospitals in London, did not generally introduce it to the notice of the young medical men from the country.

Besides these three books, which contain what may be called sets of medicines for ordinary cases, there is a fourth, called An Index to the portable Dispensary, published by Phillips, which merely describes the uses and doses of the most common medicines, and is adapted for small cabinets, containing only a few articles, for which purpose it may in some cases be cut up, and used as descriptive labels.

## EXTEMPORANEOUS COMPOSITIONS.

These may be varied to infinity, yet there are certain formulse, which, by common consent, have obtained a currency among medical men, or which the members of the several colleges have published as a standard of intercourse among themselves: the principal of these formuls, particularly those useful in counter practice, are here descrioucd, in an alphabetical order.
Aqua picis liquida. Tar watcr. Tar 2 pints, boiling water 1 gall.; strain : stimulant, diuretic 1 or $\xlongequal[\sim]{\sim}$ pints in a day.

Bolus aluminis. Alum. gr. xv, cons. rosar. Эj, syr. cort. aurant. q. s. in fluxes.
B. moschi. Moschi gr. xv, camph. gr. v, syr. q. s.: in convulsive affections in typhoid fevers.
2. Moschi, ammonix carb. ana Эfs, cons. rosar. q. s. every three hours in mortifications accompanied with spasms.
B. vitrioli albi. Vitr. alli pur. gr. xxv, cons. rosar. q.s. : in camomile or green tea, when poison has been swallowed.

Cataplasial aluminis. Alum. $Э_{j}$, cons. rosar. 亏jjfs, album. unius ovi; in ophthalmia.
C. carbonis ligni. Farinæ lini thfs, ligni carb. ppe. 亏̄̃ij, aq. ferv. q. s. : in gangrene and fetid ulcers.
C. cicutce. Cicuta fol. m. i. , coque in aq. Hbj, adde farina lini, vel avenæ q. s. : in open cancer.

C'. duaci. Rad. dauci ibfs, coque in aque q. s. ut fit mollis: in scorbutic ulcers.
C. digitatis. Fol. digitalis sicc. $\mathrm{J}^{\mathrm{in}}$ (or fol. dig. rec. Kiv), aquæ triij, coque ad dimidium; strain, and with the decoction and linseed meal make a poultice for irritable, painful ulecrs.
C. effercescens. Far. tritici 1bj, cerev. fermenti 1 Bb fs mix, expose to a gentle heat until it begins to ferment: in gangrene.
C. Goulardi. Extract. Saturni $3 j \mathrm{fs}$ (spir. vini rect. ${ }^{3} \mathrm{j}$ ), aquæ 等xij, micæ panis q.s.: in inflammations.
C. firince lini. Far. lini q. p. aquæ ferv. q. s.; smear the surface with oil before it is applied: to promote suppuration.
C. panis. Micæ panis, far. lini ana p. æq. lactis ferventis q. s.: for the same purpose.
C. rosce. Cons. rosar. ${ }^{2} \mathrm{j}$, alum. $3 \mathrm{fs}-3 \mathrm{j}$ : for weak eyes, or chronic ophthalmia.
C. salis communis. Pulv. lini, micæ panis ana p. æq. aquæ sale commune saturatæ q. s.: in enlarged glands or wens.
C. salis Glauberi. Sal. Glauberi ${ }^{2} j$, aq. ferv. q. s. ; solve et adde micæ panis q. s. : in inflammation of the eyes.

Causticum commune c. opio. Potasse c. calce 3 ij , opii pulv. $\mathcal{Z}^{\text {fs }}$, sapon. moll. q. s. : to fungous ulcers.

Collyrium acetosum. Aceti dist. $\overline{3} \mathrm{j}$, spir. vini 3 ij , aq. rosæ $\frac{3}{} \mathrm{vij}$ : in ophthalmia.
C. aloes, De Brun's. Aloes hep. 3j, vini albi, aq. rosar. ana $\overline{3} \mathrm{jfs}$ : in ulcerated eyelids.
C. ammonice acetatis. Opii gr. x, aquæ ferv. ${ }^{3} \mathrm{vj}$; solve, cola et adde liq. ammon. acet. 予ij: when ophthalmia is very painful.
2. Liq. ammon. acet. ${ }^{3} \mathrm{ij}$, mist. camph. $3^{2} \mathrm{vj}$ : when ophthalmia has left the eyes relaxed and weak.
C. Goulardi. Extr. Saturni gtt. x, aq. rosar. 3 vj.
2. Extr. Saturni gtt. x, spir. camph. gtt. xx, aq. rosar. zviij: in the inflammatery stage of ophthalmia.
C. opii. Opii gr. x, camphoræ gr. vj, aq. ferv. ${ }^{2} \times \mathrm{xij}$, colatur : if ophthalmia is very painful.
C. succhari Saturni. Gr. vj to aq. rosar. $\mathrm{F}^{\mathrm{vj}}$.
C. vitrioli albi. Gr. x to aq. rosar. ${ }^{3} \mathrm{viij}$.
2. Vitrioli alli 3 j , spir. camph. 3 j fs, aq. fervent. $\mathrm{z}_{\mathrm{ij}}$, aq. rosar. $J$ iv: in the weak state of the eyes after ophthalmia.
3. Vitr. alb. $5^{\text {fs, album. unius ovi, aq. rosar. }{ }^{\text {giv }} \text {; the }}$ same, but much stronger.
C. vitrioli carulei. Vitr. cærul. gr. iij, mist. camph. $\overline{3}^{\mathbf{y}}$ : in the purulent ophthalmia of infants.

Decoctuan atthere officinalis. Rad. althres sicc. $\mathfrak{z}$ iv, uvar. pass. $\mathrm{z}_{\mathrm{j}} \mathrm{j}$, aq. 1 tvvij .

Nartis $Э j$; pour immediately into draught phials, so as to quite fill them, and keep them close stopt till used: tonic, antihysteric, ${ }^{5}$ fs to

Mist. grusuci. Gum. guaiaci $̧ \mathrm{jf} \mathrm{f}$, sacch. albi zij, muc.
 nocte mancque, with barley water or gruel.

Mist. moschi. Moschi, gum. Aral., sacch. pur. ana ai., aq. rose ${ }^{3} \mathrm{rj}$ : antispasmodic, $\mathrm{z}_{\mathrm{s}}$ to $\overline{\mathrm{S}} \mathrm{ij}$, every four hours.

## 356 EXTEMPORANEOUS COMPOSITIONS.

Mist. tartari emetici. Liq. antim. tart. $\mathcal{F} \mathfrak{f s}$, salis nitri Эij, aq. menthre viridis ${ }_{5}^{5} \mathrm{vj}$, syr. simpl. 弓fs : diaphoretic, three spoonfuls every three hours.

Mucilago acaciu, M. gummi Arabici. Jiv to half a pint : demulcent.

Muc. amyli. siij to a pint boiled: as a restringent glyster.

Muc. gummi tragacanthce. Ejj to half a pint, soak for twenty-four hours, then rub, and press through a cloth: principally used to make lozenges.

Oxyriodinum. Ol. rosati ${ }_{5} \mathrm{jj}$, aceti rosati $\mathrm{z}_{\mathrm{j}}$ : used as a liniment in herpes and erysipelas.

Pasta epipastica. Canthar., farimæ tritici ana p. æq. acet. q. s. : superior to blistering plaister.

Pilule arsenici. Arsen. alb. gr. j, sacch. albi gr. x , micæ panis $q$. s. fiant pil. $x$ : tonic, in periodical headaches, agues.

Pil. calomelanos. Calomel. gr. iij, jalapæ gr. ix, muc. gum. Arab. q. s. fiant pil. iij: to be taken at night.
2. Merc. cerros. subl. Эj, lydrarg. . j j , gum. tragac. gr. xij, scammonii, jalapr aua $5^{\text {v }}$, syr. simpl. q. s.; make into pills of gr. iv each : usually employed in syphilis, two or four pills every night.

Pil. conii. Calomel. gr. ix, extr. conii 3j, camplorse $3^{\mathrm{fs}}$, spir. rect. gtt. v, fiant pil. xxiv: two to be taken every three or four loours; in spasmodic difficulty of urine.

Pil. ferri cum myrrha. Myrrliæ $3^{\mathrm{ij}}$, natri ppi., sal. Martis, sacch. albi ana 3 j : tonic, emmenagogue, two or four, thrice a day.

Pil. scillơ compositce. Scillæ rec. 5j, zingib., sapon. duri ańa giij, gum. ammon. siji, syr. simp. q. s. $^{\text {s. }}$
2. Pil. scillitica. Scillæ sicc. Эj , gum. ammou., sem. cardà., extr. glycyrrl. ana 5 j , syr. simp. q. s.
3. Pil. scillx cum zingibere. Scillæ pulv: 5j, zingib. zij, ol. anisi gtt. $x$, saponis in gelatinam reducti q. s.: expectorant, two to four, thrice a day.

Pil. terebinthina. Tereb. Chix zij, rhabarb. 3j, bals. Copaibr q. s.
2. Tereb. Chix, olibani ana 3 j , sal. Martis Эj, bals. Copaibe q. s.: tonic, astringent, three or six, bis terve in die, in gonorrlıea.

Potus imperialis. Crem. tartari $\mathrm{J}_{\mathrm{f}}$, sacch. albi 亏ूiv,

## EXTEMPORANEOUS COMPOSITIONS.

cort. aurantii rec. $3 i i j$, aq. ferv. Hbiij : for common drink in inflammatory fevers.

Pulvis diaphoreticus. Pulv. antimonialis gr. viij, crem. tartari gr. vj.
2. Pulv. antimonialis gr. vij, salis nitri gr. v: diapharetic, in fevers.

Pulv. jalapa. Jalapæ Эj, crem. tartari 3 j .
Pulv. rhabarbari. Rhabarb. gr. xxv, crem. tart. 3 j : purging.

Pulv. sabince. Fol. sabinæ pulv. 弱ij, æruginis, Merc. præcip. rubri ana ${ }_{5} \mathrm{f}_{\mathrm{s}}$ : to stimulate and consume fleshy tumours.

Unguentur ammonice. Ammoniæ carbon. $3^{\text {fs }}$, cerati simpl. $5^{\text {fis }}$ : for scrophulous ulcers.

Ung. calaminaris. Cer. calam. zj, extr. Saturni 3 j : for burns.

Ung. conii. Fol. conii rec., adipis ana 弓iv; well beat together, then melted and strained: in ophthalmia tarsi.
2. To $\frac{\mathrm{J}}{\mathrm{j}}$ of the former, add sperm. ceti 3 j , ceræ albæ. $3 j$ fs : for painful and irritable ulcers.

Ung. ophthalmicum. Merc. præc. rubri, lap. calam. ppi. ana 3 jfs , litharg. 3 j , tutiæ ppæ. 3 fs , cinnabaris $Э \mathrm{j}$, adipis suill. ${ }_{5} \mathrm{ij}$, bals. Peruv. gtt. xv : in specks on the eyes, arising from small ulcers which have healed up.

Ung. plumbi compositum. Camph. Ffs, ol. olivæ Fix, ceræ ff. „iv, extr. Saturni $\tilde{\jmath}^{\text {fs }}$ : in ulcers of difficult cure.
2. Ung. ceræ $\mathrm{K}_{\mathrm{j}}$, Merc. præc. rubri 3 j , extr. Saturni 3 j , extr. opii 3 ij : for ulcers that slough.

## CONTRACTIONG.

A. Aa. Ana, of each ingredient.

Abdom. Abdorren, the belly; abdominis, of the behy; abdomini, to the belly.

Abs. febr. Absente febre, in the absence of the ferer.
Ad 2 vic. Ad duas vices, at twice taking.
Ad libit. Ad libitum, at pleasure.
Add. Adde, or addantur, add; addendus, to be added: addendo, by adding.

Admov. Admoveatur, or admoveantur, apply.
Adst. febre. Adstante febre, while the fever is on.
Aggred. febre. Aggrediente febre, when the fever is coming on.

Altern. horis. Alternis horis, every other hour.
Altern. dieb. Alternis diebus, every other day.
Alvo adst. Alvo adstricto, when the belly is bound,
Aq. bull. Aqua bulliens, boiling water.
Aq. ferv. Aqua fervens, boiling water.
BB. Bbds, Barbadenses, Barbadoes.
Bull. Bulliat, or bulliant, boil.
Carul. Carruleus; blue.
Cap. Capiat, take.
C. m. Cras mane, to-morrow morning.

Coch. ampl. Cochleare amplum, a large spoon.
Coch. infant. Cochleare infantis, a child's spoon.
Coch. magn. Cochleare magnum, a large spoon.
Coch. mod. Cochleare modicum, a dessert spoon.
Coch. parv. Cochleare parvum, a small spoon.
Col. Colatus, strained.
Colat. Colatur, let it be strained; colaturx, to tho strained liquor.

Colent. Colentur, let them be strained.

Comp. Compositus, compounded.
Cont. rem. Continuantur remedia, let the medicines be sontinued.

Coq. Coque, boil; coquantur, let them be boiled.
Crast. Crastinus, for to-morrow.
Cuj. Cujus, of which.
Cujusl. Cujuslibet, of any.
Cyath. thear. Cyatho thex, in a cup of tea.
Deaur. pil. Deaurentur pilulx, let the pills be gilt.
Deb. spiss. Debita spissitudo, a proper consistence.
Decub. Decubitus, of lying down.
De d. in d. De die in diem, from day to day.
Dej. alvi. Dejectiones alvi, stools.
Det. Detur, let it be given.
Dieb. alt. Diebus alternis, every other day.
Dieb. tert. Diebus tertiis, every third day.
Dim. Dimidius, one half.
Dir. prop. Directione propria, with a proper direction.
Donec alv. bis dej. Donec alvus bis dejiciat, until two stools have been obtained.

Donec alv. sol. fuer. Donec alvus soluta fuerit, until a stool has been obtained.

Ejusd. Ejusdem, of the same.
Enem. Enema, a clyster; enemata, clysters.
Ext. sup. ahut. Extende super alutam, spread upon leather.
F. pil. $x i j$. Fac pilulas duodecin, make 12 pills.

Feb. dur. Febre durante, during the fever.
Fem. intern. Femoribus internis, to the inner part of the thighs.
$F$. venues. Fiat venæsectio, bleed.
Fist. arm. Fistula armata, a clyster pipe and bladder fitted for use.

Fl. Fluidus, liquid; also, by measure.
Gel. querv. Gelatina quervis, any kind of jelly.
G. G. G. Gummi guttae Gambix, gambooge

Gr. Granum, a grain; grana, grains.
Gtt. Gutta, a drop; gutte, drops.
Gutt. quibusd. Guttis quibusdam, with a few drops.
Har. pil. sum. iij. Harum pilularum sumantur tres,
let three of these pills be taken.
Hor. decub. Hora decubitus, at going to bed.

Hor. som. Hora somni, just before gring to sleep; or on retiring to rest.

Hor. un. spatio. Horre unius spatio, at the expirations of an hour.

Hor. interm. Horis intermediis, at the intermediate hours between what has been ordered at stated times.

Inj. cnom. Injiciatur enema, let a clyster be given.
Lat. dol. Lateri dolente, to the side that is affected.
M. Misce, mix : mensura, by nreasure.

Mrenc pr. Manc primo, very early in the morning.
Min. Minimum, the 60 th part of a draclin measure.
Mitt. Mitte, send; mittatur, or mittantur, let there be sent.

Mitt. sang. ad ${ }^{5} x i j$. Take away 12 o\%. of bloorl.
Mod. praisc. Modo prescripto, in the mamer directed.
Mor. sol. More solito, in the usual manner.
Ne tr. s. num. Ne tradas sine nummo, do not deliver it unless paid, as a caution to the shopman.
N. M. Nux moschata, a nutneg.
O. Octarius, a wine pint.

Ol. lini s. i. Oleum lini sine igne, cold drawn linseed oil.
Omn. hor. Omni hora, every hour.
Omn. bid. Omni biduo, every two days.
Omn. bih. Omni bihorio, every two hours.
Omn. man. Omni mane, every morning.
Omn. noct. Omni nocte, every night.
Omn. quadr. hor. Omni quadrante horæ, every quarter of an hour.
$P$. Yondo, by weight.
Part. vic. Partitis vicibus, to be given in divided doses, instead of all at once.

Per. op. cmet. Peracta operatione emetici, when the operation of the emetic is finished.
P.r.n. Pio re nata, according as circumstances may require.
P. rat. oxt. Pro ratione atatis, according to the age of the patient.
Q. S. Quantum sufficiat, as much as is sufficient.

Quor. Quorum, of which.
R. Recipe, take.

Red. in pulv. lkedactus in pulverem, powdered.
Rectlig. in pulv. Redigatur in pulveren, let it be reduced to powder.

Reg: umbil. Regio umbilici, the parts near the navel. Repet. Repetatur, or repetantur, let it be continued.
$S . A$. Secundum artem. According to art.
Semidr. Semidrachma, half a drachm.
Semih. Semihora, half an hour.
Sesunc. Sesuncia, an ounce and a half.
Sesquih. Sesquihora, an hour and a half.
Si n. val. Si non valeat, if it does not answer.
Si op. sit. Si opus sit, if there be occasion.
Si vir. perm. Si vires permittant, if the strength will bear it.

Sign. n. pr. Signetur nomine proprio, write upon it the usual name, not the trade name.

Ss. Semi, an half.
St. Stet, let it stand; stent, let them stand.
Sub fin. coct. Sub finem coctionis, when the boiling is nearly finished.

Sum. tal. Sumat talem, let the patient take one like this.
S.V. Spiritus vinosus, ardent spirit of any strength.
S. V. R. Spiritus vinosus rectificatus, spirit of wine.
S.V.T. Spiritus vinosus tenuis, proof spirit, or half and half spirit of wine and water.

Temp. dext. - Tempori dextro, to the right temple.
T. O. Tinctura opii, tincture of opium, generally confounded with laudanum, which is properly the wine of opium.
T.O.C. Tinctura opii camphorata, paregoric elixir.

Ult. prascr. Ultimo prescriptus, the last ordered.
V.O.S. Vitello ovi solutus, dissolved in the yelk of an egg.

Vom. urg. Vomitione urgente, when the vomiting begins.

Z\%. Zinziber, ginger.
Э. Scrupulum, a scruple, equal to 20 grains Troy.
3. Drachma, a drachm, equal to 3 scruples, or the 8 th part of an ounce measure.
$\overline{3}$. Uncia, an ounce Troy, or the 1 th part of a wine pint.
th. Libra, a pound weight, or a wine pint; when preceded by Arabic figures, Avoirdupois weight is meant, but when succeeded by Roman numerals, 'roy weight, or pint measures.
oz. The ounce Avoirdupois, or common weight, as distinguished from that prescribed by physicians in their orders.

## COLLEGE LIST．

In this list of the medicines solected by the London College， the medicines are arranged according to $D r$ ．Young （Med．Literature），quoted by the college names，and the usual doses of those given internally mentioned．

Caustics．
Argent．nitras．
Arsenici oxyduns sublimatum．
Calx．
Potassa．
－cum calce．
－fusa．
Antiseptics．
Carbo ligni． Sodæ murias．

Antidotes，i．e．Antacids．
Cornu ustum， 3 fs -3 ij ．
－mistura，そ̌iv—ろzviij．
Creta ppa．， 3 fs－${ }^{2} \mathrm{ij}$ ．
－mistura，${ }^{2} \mathrm{j}$－${ }^{\text {3iv．}}$
－pulv．comp．， 3 fs -3 j ．
Liquor calcis，${ }_{3} \mathrm{ij}$－${ }^{2} \mathrm{viij}$ ．
－potassæ，min．$x$－ 3 个s．
－pot．subcarb．， 3 fs $-3 j / s$ ．
Magnesia， 3 fs－ 3 j．
－carbonas，3／s－3ij．
Potassæ carbonas，gr．x－3／s．
－subcarbonas，gr．$x$－ 3 fs．
－sulphuretum，gr．v－xv．

Sodæ carbonas，gr．x－jj．
－subcarbonas，gr．x—jfs．
－subcarb．exsicc．gr．v－xw．
Testæ ppæ．， 3 fs－ jij ．
Demulcents and Emollients．
Acacix gummi，ad lib．
－mucilago， 3 j － 3 j ．
Adeps．
Althæa．
－syrupus， 3 j － jij ．
Amygdalæ．

－mistura，${ }^{3} \mathrm{j}$－${ }^{\text {3 }}$ viij．
－oleum， $3 \mathrm{j}-3 \mathrm{j}$ ．
Amylum，3is－ 3 j ．
－mucilago， 3 j －$\overline{\mathrm{j}} \mathrm{j}$ ．
Avena．
Cera．
－emplastrum．
Ceratum simplex．
Cetaceum，gr． $\mathrm{v}-\mathrm{O}_{\mathrm{j}}$ ．
－ceratum．
－unguentum．
Confectio rosx caninx， $\bar{j} j-j\lceil$ s．
Cornu．
Cydonix semina．

Cydoniæ decoctum, ${ }^{3} j$ -
Emplastrum saponis.
Farina.
Glycyrrhiza.

- extractum, 3 j - 3 is .

Hordeum.

- decoctum, 乞iv そ̌viij.
- dec. compos. ${ }^{\text {ziv }}$ — ${ }^{2}$ viij.

Lichen.

Lini semen.

- infusum, ${ }^{2} j$ - $\mathfrak{3} v i i j$.
- oleum, $3^{\mathrm{ij}}$ - ${ }^{2} \mathrm{j}$.

Malva.

- decoct. comp.

Mel.
Oxymel simplex, $3 \mathrm{j}-3 \mathrm{z} j$.
Olivæ oleum.
Ovum.
Saccharum.
Syr. aurantiorum. Syr. croci. Syr. simplex.
Sevum.
Tragacantha.

- pulv. compos. gr. $x-3$..

T'ussilago.
Uvæ passæ.

## Diluent.

Aqua distillata.
Expergefacients, formerly called Alcxipharmacs.
Aqua rosæ.
Assafætida, gr. $x-3 \mathrm{fs}$.

- mistura, ${ }^{3} \mathrm{fs}-3 \mathrm{j}$.
- tinctura, $3^{\text {is }}-3 \mathrm{ij}$. Spir. ammon. fort. 3 fs $-3 j$.
Camphora, gr. iij-Эj.

- spiritus, 3 fs- 3 j 1 s .

Castoreum, gr.v- $\mathrm{Oj}_{\mathrm{j}}$.

- tinctura, 3 fs- 3 ij .

Crocus, 3 fs -3 j .
Galbanum, 9 is- 3 fs.

- emplastr. comp.

Oleum succini, min. $x-3$ is.
Spir. ammon. sucçin. 3 fs.
Opoponax, Эfs-3fs.
Rosmarinus, $9 \mathrm{fs}-3 \mathrm{is}$.

- oleum, min. ij -v.
- spir., $3 \mathrm{j}-3$ ₹is.

Sagapenum, $Э$ fs- 3 fs.
Valeriana, $\mathrm{Jj}_{\mathrm{j}}$ - $\mathrm{ij}^{\mathrm{j}}$.

- tinctura, 3 fs -3 ij .
- tinct. ammon. 3 fs- 3 ij .

Excitants and Aromalics.
Allium (succus), $3 \mathrm{j}-\frac{3}{3}$ fs.
Ammonire subcarbonas, gr. to $\mathrm{Эj}^{\mathrm{j}}$.

- linim. subcarbon.
- linim. fortius.
- liquor, min. x-xx.
- liquaor subcarb., 3 fs- 3 j f.
- spirit., 3 fs- 3 ij.
- spir. aromaticus, 3 fs-3ij.

Armoracia (succus), 3 Ts- 3 j .

- infus. comp., ${ }^{2} j$ -
- spir. comp., $3 \mathrm{j}-3$ fs.

Cajuputi oleum, min. j-v.
Calamus, Эrs-3j.
Capsicum, gr. iij-x.

- tinctura, min. $x$ - 3 ij .

Cardamomum, gr. v- 3 fs.

- tinctura, 3 fs- 3 fs.
- tinct. comp. 3 fs -3 fs.

Carui, 9 fs- 3 j .

- aqua, ${ }^{2} \mathrm{ij}$ - $\overline{\mathrm{j}} \mathrm{iv}$.
- oleum, min. $\mathrm{j}-\mathrm{v}$.

Caryophylli, gr. v-3fs.
- infusum, ${ }^{3} \mathrm{j}$ - 3 iv .
- oleum, min. ij - vj .

Cinnamomum, gr. v-Эj.
— aqua, $\overline{3} j-{ }_{j}^{2 i v}$.

- oleum, min. j-iij.
- pulv. comp, gr. v-Эrs.
- spiritus, 3 j - $\mathrm{E}_{5} \mathrm{f}$.
- tinctura, 3 fs- 3 fis.
- tinct. comp. min. xx- 3 iij.

Confectio aromatica, $\mathcal{T}$ is to $3 i j$.

Coriandrum， $\mathrm{Oj}_{\mathrm{j}}$－ j ．
Cuminum， $\mathrm{Эj}_{\mathrm{j}}-3 \mathrm{j}$ ．
－emplastrum．
Emplastrum picis comp．
Euphorbiæ resina．
Lavandula，Эj－3j．
－oleum，min．j－v．
－spiritus， $3 \mathrm{j}-{ }_{3}^{7}$ fs．
－spir．comp． 3 fs－ 3 fs．
Lauri baccæ，Э（s－5fs．
－folia，Эfs－jfs．
Limonum cortex．
－oleum．
Lytta，gr．fs－iij．
－tinctura， 3 fs－ 3 jij ．
Mastiche， 9 f － 3 fs．
Mentha piperita，$\partial \mathrm{f}-\mathrm{Jj}$ ．
－aqua，${ }^{2} \mathrm{zij}$－亏̌iv．
－oleum，min． j －iij．
－spiritus， 3 j －${ }^{\text {sffs }}$ ．
Mezereum，gr． j － $\mathrm{DIS}_{\mathrm{s}}$ ．
Myristica，gr．v－ $\mathrm{Oj}^{\mathrm{j}}$ ．

Origanum．
－oleum，min．j－iij．
Petroleum，min． $\mathrm{x}-3 \mathrm{Fs}$ ．
Pimenta，gr．v－． j ．

－oleum，min． ij － v ．
－spiritus， 3 j － 3 fs．
Piper longum，gr．iv－9j．
Piperis nigri baccæ，gr．iv－-j ．
Porrum（succus）， 3 j －${ }^{2}$ fs．
Pulegium，${ }^{\text {ffs }-3 j}$ ．
－aqua，${ }_{3} \mathrm{ij}$－${ }^{\text {3iv．}}$
－oleum，min．j－v．
－spiritus， $3 \mathrm{j}-\overline{3} \mathrm{f}$ s．
Sapo，gr．v－31s．
Sinapis，gr．v－3fs．
－cataplasma．
Sulphuris anguentum．
－ung．compositum．
Terebinthinæ oleum，min．$x$ to xl ．
－linimentum．
Toxicodendron，gr． ij －v．
Veratri decoctum．
－vinum，min．x－xl．
－unguentum．

Zingiber，gr．v－3／s．
－syrupus， $3 j$－ $3 i j$ j．
－tinctura， 3 fs $-3 j \mathrm{fr}$ ．

## Caléacients．

Ether rectificatus， 3 fs $-3 i j$ ．
－spir．aromaticus， $3 \int_{s}-3 i j$ ．
－spir．compositus， 3 fs－ 3 ij ．
Spir．ætheris nitrici， 3 fs -3 jij ．
－ætheris sulphurici composi－
tus， 3 fs -3 jij ．
Spir．rectificatus．
－tenuior．
Vinum（sherry）．

## Sudorifics．

Aconitum，gr．j－v．
－extractum，gr．j－v．
Antimonii oxydum，gr． $\mathrm{j}-\mathrm{r}$ ？
－sulphuretum，Эfs－Эjis．
－sulphur．præcipitatum，gr． $\mathfrak{j}$
to v ．
Pulvis antimonialis，gr．iij to $x$ ．
Contrayervæ，gr． $\mathrm{x}-\mathrm{j}_{\mathrm{f}}$ ．
－pulv．compos．gr．$x v-j$ 「s．
Dulcamara， $9 \mathrm{j}-3 \mathrm{j}$ ．
－decoctum，$\overline{3}$ 「s－$\overline{5} \mathrm{ij}$ ．
Guaiacum，Эfs -5 fs．
－mistura，${ }^{2} \mathrm{fs}$－$\overline{\mathrm{j}} \mathrm{ij}$ ．
－tinctura， $3^{\mathrm{fs}}-\mathrm{j}_{\mathrm{ij}}$ ．
－tinct．comp． $\mathrm{jj}-\mathrm{j} \mathrm{ij}$ ．
Liquor ammoniæ acetatis， 5 ij to $\mathrm{j} j$／s．
Sarsaparilla， $\mathrm{Yj}_{\mathrm{j}}$－jj．
－decoctum，亏ัंiv－亏̌viij．
－decoct．comp．ラiv－Jivii．
－extractum， $91 \mathrm{~s}-3 \mathrm{j}$ ．
Sassafras，$Э j-5$ j．

## Errhines．

Asarum，Эrs－${ }^{\text {Sj }}$ ．
Veratrum，gr．ij－v．

## Sialagogiues．

Hydrargyrum，亏̂̊－ 5 iv．
－cum creta，Эfs－5fs．

Hydrargyri liquor oxymuria- Centaurium, gr, xv- $\mathbf{j j}$. tis, $3 \mathrm{j}-\mathrm{y} . \mathrm{j}$.

- oxyd. cinereum, gr. ij- ${ }^{\text {Ifs. }}$
- oxyd. rubrum, gr. is-ij.
- oxymurias, gr. $\frac{1}{8}$-gr. fs.
- pilula, gr.v-Эj.
- pil. submuriatis comp.gr.v to x .
- precipitatum album, gr. v to 3 fs.

## INDIGENOUS BOTANICAL MEDICINE.

In this list the native plants of the British islands, which are known to possess any medical virtues, are arranged, according to the employment that may be made of them, for the use of practitioners who reside in the country.
The plants are quoted by their botanical names, as being more familiar to medical students than the real names, which may however be readily found, by referring to the body of the reork.

Acid.
Berberis vulgaris, bacc. Oxalis Acetosella, fol., succ. Rosa spinosissima, fruct. Bellis perennis, fol. Rubus idæus, fruct.

Acrid.
Sedum acre,

- rupestre.

Chelidonium majus, succ. Ranunculus Flammula. - sceleratus.

Anemone Pulsatilla. Arum maculatum, rad., fol. Thymus Serpyllum, ol. ess. Colchicum autumnale, rad. Fraxinus excelsior, sem.

Ague.
Salix triandra, cort.

Salix vitellina, cort.

- alba, cort.

Phellandrium aquaticum, sem. Athamanta Meum, rad., sem. Imperatoria Obstruthium, inf. rad.
Pástinaca sativa, sem. Carum Carui, sem. Acorus Calamus, rad.
Geum urbanum, rad.

- rivale, rad.

Prunus spinosa, cort. Arum maculatum, rad.
Anemome nemorosa.
Teucrium Chamæpitys, Artemisia vulgaris.
Anthemis nobilis, $f$. in large doses.
Dianthus deltoides.
Antiscorbutic.
Apium graveolens.

Rubus Chamæmorus, bacc.
Lepidium latifolium. Coclilcaria officinalis. Sisymbrium Nasturtium. Eupatoriun caimabinum. Iucus natans.

Antispasmodic.
Valeriana officinalis.
Anthemis nobilis.
Tilia europæa, inf. flor.
Mentha piperita, aq. dist., ol. ess.
Galium verum.
Buxus sempervirens, ol. eimp.

Rhodiola rosea, rad. Arloutus Lva ursi.
Fragaria Vesca, cont., rad.
Potentilla aneerina, fol.

- reptans, cort. rad.

Tormentilla officinalis, rad.
Delphinium consolida, föl., scm.
Clematis Vitalba.
Euphrasia officinalis.
Linnæa borealis.
Senecio sarracenicus.

## I N D E X.

To facilitate the finding out of those names that consist of sereral words, is must be observed,

1. Substances deriving their names from any drug, must be souglit for under that drug, provided its name be omployed as a substantive, as aqua ammonia acetatæ, under ammonix; oil of amber, under amber.
2. The same rule is to be observed, in respect to vegetables or animals giving their names to any drug, as olemn amygdalarum is to be sought for under amygdalarum, gum juniper, under juniper.
3. In other cases the substantive is to be sought for, as acidum sulphuricum is placed under acidum; antibilious pills, under pills.
4. In the English names of plants, the adjective sometimes precedes, the word being esteemed a compound, although we are accustomed to write then separately, as marsh mallows, golden rod, dead nettle.
5. Minnte variations of spelling, as sena or senna, oxidum or oxydum, tartras or tartris, are not noticed, one, and generally the most usual, only being quoted.

## CORRECTIONS AND ADDITIONS.

Page 47, line 4 from bottom, for 83 , read 93.

- 74, - 2, for calycinum, read calycina.
- $10 n,-7$ from bottom, These cups are known in trade by the name of valonia.

Page 191. Gambooge must not be confounded with gutta gambir, which is an extract, from the nauclea gambir, of which there are two sorts, one of a white colour, in lozenges and balls, used in India as a masticatory with the leaves of betel ; the other prepared with less care, of a red colour, strong tasted and rant, used in dyeing and tanning : this is now not found in the shops, but seems to bave been formerly inserted into the Pharmacopecia.

Page 144: - Balsam of Tolu is now said to be yielded by the myrospermum pedicellatum, p. 89, and this to be the same tree as is also known by the name of m . peruiferum; so that the two balsams of Peru and Tolu are merely different varieties of the same substance.

Page 170, line 20, after charcoal, insert blue black, by which name ground charcoal is used as an oil paint.

Page 171, last article. One kind of bistre is not an extract; but prepared from wood-soot by the pulverising and washing over.

Page 202, line 7 from bottom, after Romanum, insert Cupri sulphas.

- 250, - 3; for spirituosa, read vinosa.
- 281, - 11; for spiritus, readl syrupus. aride; and for nigrum, read nigre. after tetraplharmacum, insert Ung. picio

## THE END.
