DECLASSIFIED E.O. 12065 SECTION 3-402/NMSG NO.

4. Any student workers requisitioned by the army and navy and other workers employed by the military labor offices who have definite jobs to return to should be made to go home and civilians in the military service will be returned to complete civil status. Allowances for retirement will be provided by another order.

5. The records which are involved in the transfer of military stores and the military supplies being used by industries and also for the military stores sold by the government should be well adjusted and special care should be taken not to leave any discripancies which would arouse suspicion and cause trouble in the future. Secret documents must be burned except those especially needed to the last. The adjustment of records relating to civilian factories should be handled in the same manner.

6. Transfer of goods should ordinarily be handled as a rule through district offices, distribution organs, and those among civilians who have a close connection with transportation and other essential activities; monopoly by any infividual should be avoided by all means.

7. There is no restriction upon the use of army and navy vehicles and fuels for accomplishment of the above purpose.

8. Equipment for research work and associated materials and research personnel used by the military should be converted into civilian research projects.

NOTE: This order should be burned and completely obliterated before the enemy lands and proper measures should be taken to assure that it does not fall into enemy hands.

SUBJECT : Disposal of Medical Apparatus and Materials preserved in Palau.

1. Receipt is acknowledged of your memorandum, file number C.L.O. 96 (5.2), same subject dated 8 January 1946.

2. Your request that microscopes and surgical equipment be transferred from Palau to Japan is unfavorable considered. In view of your statement that these items are urgently needed in the Home Islands for public health work, your attention is invited to the large quantities of similar materials that have been returned to the Home Ministry in Japan Proper. Rapid utilization of this equipment by distribution to those engaged in health work is directed.

3. The transfer of anti-malarial supplies to New Guinea as requested in your letter is not considered necessary. Medical supplies required for treatment of prisoners of war are furnished by the responsible Allied officials.

Nagasaki Chinese Association,
17th January 1946.

To the Commanding Gineral,
American Occuperion Forces,
NAGASAKI

Dear Sir:

Request to take over the Chinese Consulate Property under Nagasaki Chinese Association's Control.

It is obvious that Mr. Kay Hsia is no longer an employee of the closed conulate of late Mr. Wang Ching Wei's regime, he has no right to control the properties of the Chinese Consulate.

The Association is now responsible for the public welfare of the Chinese residents here and is now ready to take over the properties from his hand.

The Association will not interfere his personal liberty except his declaration as a representative of the Chinese Consulate.

The Association will also accept him as a mombership if he agrees with the association's preposal that to withdraw his so-called "representateve", for it is an insult to the Chinese public here.

Hoping you will instruct him to hand over the properties to the Association at his soonest possioility.

Yours obediently,

Yu Ju-Hsu
Chairman,
Nagasaki Chinese Association

DECLASSIFIED

Tokuyama, October 24, 1945

To Supreme Commander
Allied Headquarters
Tokyo

Dear Sir:

Due to the aerial attacks of May 10 and July 27 of this year, the main part of Tokuyama City was left almost in ruins. Since then, reconstruction of the city, under a long term plan, has been proceeding earnestly. With the end of hostilities, the question arose of what should be emphasized in the reconstruction scheme.
The question of which has not yet been generally studied. However, without doubt, the reconstruction of the city will depend not only on the planning and managing of peace-time industries but also on the reconstruction of Tokuyama's great natural commercial port.
Many difficult obstacles must be overcome before the reconstruction of the peace-time industries can be considered. The primary task is the reconstruction of Tokuyama's harbor facilities.
The Tokuyama port is surrounded by a chain of islands, such as Senjima, Kurokami-jima, and Ozujima, which shelter it from the strong winds from W.N.W. On the southeastern side is Oshima Penninsula, which shelters it from the southeast winds; while to the north, there is a chain of mountain peaks which shelter it from the north winds. Thus, it can be seen that Tokuyama has all the requisites of a natural port. (Refer to attached map)
For these reasons, it was designated as an open port by the Government in February 1922, and at one time served many merchant ships from all parts of the globe. As a peace-time Commercial port, its future was promising.
However, in April 1938, it was redesignated as a base for the Imperial Navy, and as a result, the closing of Tokuyama port was inevitable. Consequently, Tokuyama City promptly lost its real value as a commercial port.
It was of great concern to the people of Tokuyama to see the development of their city thus hampered. The city authorities, therefore, planned a reconstruction program and although pressed for war funds and labor, managed to obtain a one million yen subsidy from the prefectural authorities for a two year continuous construction program.
The work started in earnest in May 1944, and is still continuing. It can be seen from the above mentioned facts that even during hostilities, Tokuyama City was greatly concerned about its possibilities as a commercial port. With the end of hostilities, all efforts are now centered around this work.

4

DECLASSIFIED E.O. 12065 SECTION 3 (E)(1)

The former Tokuyama port was very inadequate. On the greater part of the coastline at Tokuyama, the 3rd Naval fuel refinery was built, and its best harbors were monopolized by the Navy. Thus, although Tokuyama City has one of the longest coastlines in Japan, it was unable to make full use of it.
In compensation for these long years of sacrifice Tokuyama City should be given unconditionally all harbor facilities, including those within the bomb-blasted No.3 Navy oil refinery, for the rehabilitation of the citizens of Tokuyama.
For the reasons mentioned above, we ask for your kind consideration.

Sincerely yours,

SANPEI TAMANO,
Mayor of Tokuyama City,
Yamaguchi Prefecture.

AN ACCOUNT ON THE USAGE OF LANDS

Nippon Fertilizer Co. Ltd.

We are submitting this document by the request of the Administrating Officer, Lieutenant Schwartz on December 26, 1945, concerning the settlement on the section of land to be used between our Company and the City.

Our Company has received permission from the Headquarters of the Allied Forces to change the plants of the Third Naval Fuel Depot to manufacture ammonia sulphate. The output of ammonia sulphate after this conversion will be 50,000 tons per year, but with the utmost use of the present plants with the necessary reconstruction, the greatest amount we can manufacture immediately is 20,000 tons per year, which we intend to accomplish by August, 1946. With the necessary plants constructed, we expect to produce a total of 50,000 tons of ammonia sulphate per year.

The main plants that are to be utilized or to be reconstructed for the manufacture of ammonia sulphate are marked with diagonal lines on the map, and the red areas are the plant areas.

The raw materials for the manufacture of ammonia sulphate such as cokes, coals, sulphuric acids, etc., would have to be transported into the plant from the outside, and the ammonia sulphate manufactures must be distributed to consumption areas. Since it is convenient to utilize

can manufacture immediately is 20,000 tons per year, which we intend to accomplish by August, 1946. With the necessary plants constructed, we expect to produce a total of 50,000 tons of ammonia sulphate per year.

The main plants that are to be utilized or to be reconstructed for the manufacture of ammonia sulphate are marked with diagonal lines on the map, and the red areas are the plant areas.

The raw materials for the manufacture of ammonia sulphate such as cokes, coals, sulphuric acids, etc., would have to be transported into the plant from the outside, and the ammonia sulphate manufactures must be distributed to consumption areas. Since it is convenient to utilize the water transportation using motorized sail-boats to bring in raw materials into the plant and also to send out manufactures, it is absolutely necessary to have docking facilities for the usage of motorized sail-boats only.

The estimated amount of raw materials and the manufactures we are to handle at our plant are as follows:

(1) Raw Materials

Name	Usage	Amount(Av.per day)	From Shipped Area
Cokes	For Mfg. of gas	180 Tons	Yahata, Kyushu or Osaka
Coals	For Steam Boiler	50 "	Kyushu and Ube
Sulphuric Acid	For Mfg. of Ammonia Sulphate	120 "	Onoda, Yamaguchi-ken ~~Yotsuzakajima~~, ~~Aichi-ken~~ Shisakajima, Ehimeken

(2) Manufactures

Name	Amount (Aver. per day)	Area of Shipment
Ammonia Sulphate	150 Tons	Chugoku, Kinki, or Kyushu Areas

The amount of the above listed cargos depends on the weather and the distribution of the ships. Also, since the demand of ammonia sulphate differs in seasons, the actual amount handled will be increased more than as listed above (average per day). Therefore, to load and unload this amount of cargo, it is necessary to have the wharf space, at least, as diagramed.

Of this area the Ammonia Sulphate Manufacturing Plant and its Packing Material Storage crosses with the demand of the City. Therefore, we thought of other places within the Depot, but all of the seasides other than the present place are too shallow to dock the motorized sail-boat or not fit to establish immediately docking facilities. We were presented with a plan to construct the Ammonia Sulphate Manufacturing Plant away from the wharf, and to load the ammonia sulphate at the present appointed area, and though it excludes the increase in transportation expenses by transporting an average of over 150 tons per day or at times several hundred tons by crossing the main road and the side-lines that extends from the city to the wharf, it is practically impossible to do so, and also it is necessary to build a warehouse for

Of this area the Ammonia Sulphate Manufacturing Plant and the Packing Material Storage crosses with the demand of the City. Therefore, we thought of other places within the Depot, but all of the seasides other than the present place are too shallow to dock the motorized sail-boat or not fit to establish immediately docking facilities. We were presented with a plan to construct the Ammonia Sulphate Manufacturing Plant away from the wharf, and to load the ammonia sulphate at the present appointed area, and though it excludes the increase in transportation expenses by transporting an average of over 150 tons per day or at times several hundred tons by crossing the main road and the side-lines that extends from the city to the wharf, it is practically impossible to do so, and also it is necessary to build a warehouse for loading and unloading goods near the wharf. Our Company with a premise to construct our plant intensively in the future, have a proposition to make as follows:

We agree to let the City utilize the area within the line drawn from the middle wharf and the east wharf to the area of the city as a rule (58,529 tsubo), but we want the following conditions approved.

1. To let our Company use the ammonia sulphate manufacturing plant appointed area (b) for some period of time, but when the city especially needs the docking facilities, we will transfer to our area (c) within one year after notice.

2. To have priority use of the structure within the (a) area as storage for a period of time.

3. To use the boilers, can-making plant, storages and other necessary facilities within the city's area at the present place for a period of time.

4. To use the various pipe lines, side-lines and ~~telegraphic wires~~ *electric lines* that passes ~~thru~~ *through* the city's area and which are necessary for the operation of the plant.

5. The ammonia sulphate manufacturing plant will be constructed in the (c) area in the future. Therefore, we want the assistance of the city to establish wharfs for the exclusive use of the above plant and the reclamation work attached to this establishment.

We agree to the proposal of Nippon Fertilizer Company as mentioned above.

Tokuyama City,
mayor
Hofu, Jan. 11, 1946. S. Tamano

HEADQUARTERS
BOFU DETACHMENT
37th Mil. Govt. Hq. & Hq. Co.,
Bofu, Japan.

12 December, 1945

SUBJECT: Disposal of Facilities Belonging to the 3rd Naval Fuel Depot - City of Tokuyama.

TO : The Commanding General, Sixth Army, APO 442, Kyoto, Honshu.

1. On 11 December, 1945, in the City of Tokuyama, the undersigned officer conferred with the Mayor of Tokuyama, the Deputy Mayor of Tokuyama, the Chief Engineer of Tokuyama, the head of the Tokuyama Department of Transportation, and various representatives of the Municipal Council and Prefectural Assembly.

2. This conference produced the following information:

a. A map was produced, a copy of which is annexed hereto, showing the relation of the areas under consideration to the city as a whole, on which map such areas are marked repectively "A1", "A2", "B", "C" and "D".

b. The Deputy Mayor informed me that the NIPPON FERTILIZER COMPANY had indicated to him that the area included in "A1" plus "A2" as shown on the annexed map, totaling 3,439,368 sq. ft., was sufficient for their purposes.

c. The Mayor informed me that the city would prefer to take over both areas marked "B" and "C", totaling 5,061,632 sq. ft., in order to insure the proper developement of the port facilities in accordance with the master plan for the reconstruction of the city, which was almost entirely destroyed by bombardment.

d. I was further informed that plans were under consideration for the use of area marked "C", consisting of 2,968,618 sq. Ft., as the site of a factory for the manufacture of medicine; and that this information was supplied to them by Admiral AKSHIGE, formerely of the Supply Section of the Imperial Japanese Navy.

e. Area marked "D" is not under consideration at the present time by any interested party.

f. There is a uniform depth of 8 meters at low tide at the areas under consideration.

6

DECLASSIFIED E.O. 12065 SECTION 3-402/NNBB NO. [illegible]

3. I made a thorough inspection of the harbor area, checked the accuracy of the petition of the Deputy Mayor as to the past use and developement of the port, and discussed the proposed master plan for the reconstruction and developement of the city.

4. Upon such i nvestigation, the following recommendations are made:

a. To insure the proper developement of this port and city in accordance with the master plan for the reconstruction and developement as outlined, control over the area under considera- tion, or as much of it as is possible, should be vested in the lo- cal government, which is best able to integrate the proposed deve- lopements with its own future.

b. Any disposition of the land and facilities in ques- tion should be referred to the city for coordination with its mas- ter plan.

c. In any event, unless committments have been made, the city should be permitted complete freedom to develope areas "B" and "C" as a municipal asset.

d. Central control over rehabilitation of devestated areas should be restricted to permissive action with final appro- val dependant upon local agreement.

NATHANIEL W. SCHWARTZ,
1st Lt., CAC,
Mil. Govt. Officer.

NO.....75)

389.3

DISPOSITION OF JAPANESE EXPLOSIVES

1. GENERAL: To utilize the Japanese Home Ministry to the fullest extent in the destruction, salvage and disposal of enemy military explosives and ammunition consistant with carrying out the prescribed safety regulations. To turn over to the Japanese Home Ministry scrap metal components resulting from destruction. To turn over to the Japanese Home Ministry all bulk and reclaimed explosives that is acceptable for commercial use. To outline a policy in the collection and destruction of certain type ammunition by the Japanese Home Ministry under the direction of Divisional Sector Commanders in accordance with authority contained in Par 3, Adm O 19/14, dtd 10 Dec 1945, Hqs Sixth Army.

2. DUTIES OF U.S. PERSONNEL:

a. The Regimental Combat Team and Artillery Group Commanders, will continue to dispose of Japanese Ammunition, except [illegible] items listed in Par 3 below, in accordance with Attachment 3, Adm O 19/2, Sixth Army, dtd 6 Oct 1945; Adm O 19/11, dtd 17 Nov 1945 and letter this Hqs, Subject: Disposal of Japanese Small Arms Ammunition, dtd 8 Dec 1945. Japanese labor and technicians procured through the Home Ministry, should be utilized to the fullest extent in all disposal work under the supervision of U.S. Army personnel.

b. LOADING AT SEA: Where ammunition is dumped at sea by the Japanese, under the supervision of U.S. Army personnel, the procedure and safety regulations that apply thereto in Attachment 3, Sixth Army, will be enforced. Sector Commanders will assure that ample Japanese technical control personnel are present at loading and disposal areas to insure against safety and that barges disposing of ammunition at sea complete their mission and are checked when returned to port. When the port is closed to U.S. personnel by means except riding barges by military personnel or escorting by U.S. craft may be used to accomplish this. At no time will military personnel ride Japanese barges to sea.

3. DISPOSITION BY HOME MINISTRY:

a. The Japanese Home Ministry may be permitted to renovate certain type ammunition in accordance with authority in Par 3, Adm O 19/14, dtd 10 Dec 1945, Hqs Sixth Army, salvage the scrap metal and retain any explosives that is acceptable for commercial use. The Home Ministry may contract such work to be done by civilian Industrialists. The local Prefecture Government (Representative of the Home Ministry) will be furnished translated extracts on safety and disposal methods from Attachment 3, Adm O 19/2 and 19/11, Sixth Army wherein it applies to the type of disposal permitted to be done by the Home Ministry. These regulations will be furnished by the local U.S. Army Sector Commander wherein disposal work is being done by the

(Memo, Hqs 32d Inf Div, APO 32, Sub: Disposition of Japanese Explosives, dtd 17 Dec 45, Cont'd)

Japanese. Translations referred to above are being prepared by this Headquarters and will be furnished unit Commanders on request to this Headquarters.

b. All bulk explosives acceptable for commercial use may be turned over in place to the Japanese Home Ministry on receipt. Arrangements will be made for the Home Ministry to notify U.S. personnel when shipment of explosives are to be made to the disposal plant. Quantities shipped (by type) will be checked by U.S. personnel and records maintained. Shipments will be supervised to see that prescribed safety precautions are followed and that shipment reaches intended destination.

c. When complete rounds of ammunition or explosives are to be moved or shipped to disposal areas by the Japanese it must be checked and controlled enroute by U.S. military personnel. Any means of control except the riding of Japanese munition trains and vehicles by U.S. military personnel will be utilized to insure that ammunition reaches its destination. Escort vehicles, riding follow-up trains, establishing check points, issuing shipping manifests, conducting inspections at completion of shipments are examples of how control can be exercised by U.S. military personnel. Quantities shipped (by type), destination and records are to be maintained by U.S. personnel. The Japanese will be permitted to salvage metal, and retain for commercial use explosives from the following type of ammunition.

(1) Artillery and Mortars - Complete rounds (less fuzes) with high explosive fillers and inert projectiles up to including 8 inch caliber.

(2) Bombs - Complete units (less fuzes) with high explosive fillers.

d. The YAMADA ARSENAL will be permitted to be utilized by the Home Ministry to reclaim the high explosive filler of artillery shells. The FUKUMA ARSENAL will be permitted to be utilized to reclaim the high explosive from bombs. Bombs and shells shipped to these installations must lose their identity as complete rounds when stored therein for reclamation and salvage. The methods and techniques of reclamation by the Japanese will be approved by this Headquarters. The Home Ministry will be permitted to collect artillery and bombs in the installations listed below for the purpose of separating the component parts of complete rounds.

(1) YAMADA ARSENAL - (1380.3 - 1200.8 - 126th Infantry Sector. Map A.M.S. L571 Central Japan 1:250,000.

(2) FUKUMA ARSENAL - (1358.0 - 1194.0) - 127th Infantry Sector. Map A.M.S. L571 Central Japan 1:250,000.

(3) KOTO ARSENAL - (623.2 - 1223.5) - 128th Infantry Sector. Map A.M.S. L571 Central Japan 1:250,000.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNBS No:

(Memo, Hq 32d Inf Div, APO 32, Sub; Disposition of Japanese Explosives, dtd 17 Dec 45, Cont'd)

(4) OZAKI ARSENAL - (665.0 - 1125.0) - Division Artillery Group. Map A.M.S. L571 Central Japan 1:250,000.

e. All Japanese Civilians employed by civilian industrialists through the Home Ministry will be registered with the local U.S. Army Sector Commander. All civilians employed for disposition in arsenals and doing work in connection with disposal of munitions or explosives will be required to have military passes with definite limitations as to areas permitted. Under no circumstance will other than authorized civilians be permitted within areas of disposal or engaged in the disposal of explosives. Authorized civilians will constitute those employed by the Home Ministry for disposal work.

f. U.S. Army personnel will not supervise actual operations within the reclamation plants, or be responsible for accidents resulting from techniques or methods of reclamation within the plants when such methods and techniques of disposal have the approval of Ordnance Officers of this or higher Headquarters. However, it will be the responsibility of Sector Commanders to enforce the general provisions of this Memorandum wherein it applies to guard, general control, safety, and insurance that war materials are disposed of in a manner to lose their identity as such. Periodic inspections by U. S. Army personnel when reclamation operations are not in process should be made throughout plants and disposal grounds to insure the provisions of this Memorandum and Safety Regulations.

4. SAFETY: Safety must not be sacrificed for cost reduction and speed. The dangerous nature of explosives makes safety the major consideration in their destruction and disposal. The enforcement of safety regulations in the disposal of ammunition and explosives by U.S. Army or Japanese personnel is a command responsibility. Sector Commanders must assure themselves that every precaution in attachment 3, Adm O 19/2, Sixth Army, dtd 6 Oct 1945 and changes is adhered to wherein it applies to type of disposal work being done by troops or civilian personnel. Where arsenals are to be utilized for disposal by the Japanese, the general safety regulations in Annex 1 (attached) will be enforced by the U.S. Army personnel through the Japanese Home Ministry. Advice and technical assistance will be sought through the Division Ordnance Officer where there is doubt as to the safety in disposal methods or techniques employed by the Japanese.
