Construction of the tables	111
Average prices of commodities	112
Wholesale prices of commodities, mainly in London and Manchester, average six years, 1845-1850; selected dates, 1879-1902	118
Wholesale prices, 1845-1901: proportionate results	121

# WHOLESALE PRICES OF COMMODITIES IN THE UNITED STATES.

1840-1901.

The series of tables contained in this document is a continuation of the tables published in the Summary of Commerce and Finance, May, 1900. Two changes have been made to which attention is called, namely, (1) the addition of a series of tables of prices of farm products, and (2) the omission of certain tables of prices of articles whose relative importance has greatly diminished or whose place in the market has been taken by other grades of the same general class, thus making it necessary in some cases to discard the purpose of securing continuous quotations for that particular grade of commodity. In other cases, where continuity in quotations has been deemed important, any change in the grade to which quotations apply has been plainly indicated, so as to avoid any possibility of misleading.

The quotations of wholesale prices in the United States as they appear in these tables are, in most cases, reproduced from the results of the extensive inquiry made by the Aldrich committee and subsequent inquiries made by the Department of Labor. The first of these results is generally known as the Aldrich Report on Wholesale Prices, Wages, and Transportation, as submitted by Mr. Aldrich from the Senate Committee on Finance, March 3, 1893. This report covered the period from 1840 to 1891, and comprised 223 quotations of different articles and grades, derived in a great majority of cases from records of actual sales by firms in existence during all or most of that period.

The later inquiries by the Department of Labor covered the period from 1890 to 1901, inclusive, continuing, as a rule, the same general classes of articles represented in the Aldrich report, but adding some quotations for farm products. With this addition the same general series was brought down to the end of 1901. These results appeared in detail in Bulletin No. 27, March, 1900, and in Bulletin No. 39, March, 1902, of the Department of Labor.

Information derived from other sources than the Aldrich report or the bulletins of the Department of Labor is credited in footnotes to the proper authorities. This applies especially to cases in which prices have been brought down to a later date than October, 1901, the latest quotations given by the Department of Labor. For information as to the sources of data from which prices for the years prior to 1891 were obtained, reference should be made to Part II, Table XI, Wholesale Prices of Commodities for Fifty-two Years, in Volume II of the Aldrich report, also known as Senate Report No. 1394, Part 2, 1893.

Unless otherwise specified, prices quoted are those prevailing at New York for the dates given. In accordance with the plan followed in selecting the earlier quotations, the prices given for October, 1899, are those prevailing and thereafter at the beginning of each quarter year.

The tables following include a variety of standard articles in each of eight leading classes of commodities, as follows:

- |                        |                                |
|------------------------|--------------------------------|
| Food, etc.             | Fuel and lighting.             |
| Farm products.         | Lumber and building materials. |
| Metals and implements. | Drugs and chemicals.           |
| Cloths and clothing.   | House-furnishing goods.        |

a Previous to 1817 all tubs were sold unpainted and unfinished.

## COURSE OF RELATIVE PRICES FROM 1840 TO 1901, INCLUSIVE.

Relative prices in the United States for this period of years have been worked out on two different bases. For the period from 1840 to 1891, covered by the Aldrich report, prices were calculated from the level of the year 1860 as a basis. For the period between 1890-1901, covered by the Department of Labor, the calculation was made on the basis of the average price for the period 1890-1899. In each case 100 has been taken as the starting point to show the rise or fall from this assumed level. Each one of the results is given separately, inasmuch as each included a different number of commodities in its calculation, besides working from different bases.

The movement of prices in Great Britain for different groups of commodities has regularly appeared in the form of index numbers in the annual reports before the Royal Statistical Society of London, by A. Sauerbeck. Still another series of index numbers from the London Economist has been used to show price movements under a different grouping from that employed in Sauerbeck's index numbers.

## ALDRICH REPORT ON COURSE OF RELATIVE PRICES FROM 1840 TO 1891, INCLUSIVE.

In the following table of relative prices of groups, the prices of the year 1860 are taken as a basis (=100), and the rise or fall in price from this given base is expressed in form of relative prices or percentages. By this means the comparison of a large number of objects varying greatly in units of measurement as well as in price is rendered possible. The relative price of a group represents a simple arithmetical average of relative prices for all the articles constituting the particular group. Thus, for instance, in the case of group "Food" the sum of the relative prices for all the commodities constituting this group for the year 1891—5,507.1—was divided by the number of articles comprised in this group—53. The result of this division—103.9—represents the relative price for this group.

The relative price for all articles is found in a similar manner by dividing the sum total of all relative prices by the total number of articles.

Currency prices, during the period when gold was at a premium, have been reduced to a gold basis. In converting currency prices into gold the currency value of \$100 in gold, as given for January of each year in the American Almanac for 1878, was as follows: 1862, \$102.5; 1863, \$145.1; 1864, \$155.5; 1865, \$216.2; 1866, \$140.1; 1867, \$134.6; 1868, \$138.5; 1869, \$135.6; 1870, \$121.3; 1871, \$110.7; 1872, 109.1; 1873, \$112.7; 1874, \$111.4; 1875, \$112.5; 1876, \$112.8; 1877, \$106.2, and 1878, \$101.4.

## RELATIVE WHOLESALE PRICES IN GOLD, BY GROUPS OF ARTICLES, 1840-1891.

[From Senate Report No. 1394, second session Fifty-second Congress.]

## DEPARTMENT OF LABOR REPORT ON COURSE OF RELATIVE PRICES FROM 1890 TO 1901, INCLUSIVE.

In the following table similar commodities have been grouped, and the average of the relative prices shown for the commodities in each subgroup and in each of the nine general groups. The averages in all cases were found by dividing the sum of the relative prices by the number of commodities in the group under consideration. It should be borne constantly in mind that the term commodity is used here and elsewhere in a specific sense, "native" and "Western" sheep, for example, being considered different commodities. The method of securing average relative prices in this and other tables was as follows: The average relative price of cattle was found by adding the relative prices of the two grades of cattle and dividing the sum by 2. The average for hogs was found in the same manner, and also the average for sheep. The average for live stock was found by dividing the sum of the relative prices of the two grades of cattle, the two grades of hogs, and the two grades of sheep by 6, the total number of different descriptions of commodities or series of quotations in the live stock group. The average relative prices of each of the nine general groups were found by dividing the sum of the relative prices of the different descriptions of commodities for each year by the number of these commodities or series of quotations considered in that year. The sum of the relative prices in 1890 of the commodities shown under the general group, "Food, etc.," for example, is 53, which amount divided by 53, the number of different descriptions of commodities or series of quotations considered that year, gives 112.4—the average for the group "Food, etc.," for 1890. For 1893 to 1901, fifty-four commodities are quoted in this group, and the number is accordingly the divisor for each of those years.

The average relative prices of each of the nine general groups for each year of the period, and the average relative prices of all commodities for each year, are shown in the following summary:

## SUMMARY OF RELATIVE PRICES OF 261 COMMODITIES, 1890 TO 1901, BY GROUPS.

[Average price for 1890-1899 = 100.]

YEARS.	Farm products.	Food, etc.	Cloths and clothing.	Fuel and lighting.	Metals and implements.	Lumber and building materials.	Drugs and chemicals.	House-furnishing goods.	Miscellaneous.	All commodities.

1894	95.9	99.8	96.1	92.4	90.7	96.3	89.8	100.1	93.8	96.1
1895	93.3	91.6	92.7	98.1	92.0	94.1	87.9	96.5	91.5	93.6
1896	78.3	83.8	91.3	101.3	93.7	93.4	92.6	94.0	91.4	90.1
1897	85.2	87.7	91.1	96.4	86.6	90.1	91.4	89.8	92.1	89.7
1898	98.1	94.4	93.4	95.4	86.4	95.8	105.6	92.0	92.4	93.4
1899	100.0	98.3	96.7	105.0	111.7	105.8	111.3	95.1	97.7	101.7
1900	109.5	104.2	106.8	120.9	120.5	115.7	115.7	106.1	109.8	110.5
1901	116.9	105.9	101.0	119.5	111.9	116.7	115.2	110.9	107.4	108.5

In this table the average relative prices of farm products are based on 16 articles; of food, etc., on 53 articles from 1890 to 1892, and 54 from 1893 to 1901; of cloths and clothing, on 70 articles in 1890 and 1891, 72 in 1892, 73 in 1893 and 1894, 75 in 1895 and 1896, and 76 from 1897 to 1901; of fuel and lighting, on 13 articles; of metals and implements, on 37 articles from 1890 to 1893, 38 in 1894 and 1895 and from 1899 to 1901, and 39 from 1896 to 1898; of lumber and building materials, on 26 articles from 1890 to 1894, and 27 from 1895 to 1901; of drugs and chemicals, on 9 articles; of house-furnishing goods, on 14 articles; and of miscellaneous, on 13 articles. The average relative prices of all commodities are based on 251 articles in 1890 and 1891, on 253 in 1892, on 255 in 1893, on 256 in 1894, on 259 in 1895, on 260 in 1896 and from 1899 to 1901, and on 261 in 1897 and 1898.

A study of the table shows that the group of farm products reached the lowest average in 1896 and the highest in 1891; that of food, etc., the lowest in 1896 and the highest in 1891; that of cloths and clothing, the lowest in 1897 and the highest in 1890; that of fuel and lighting, the lowest in 1891 and the highest in 1900; that of metals and implements, the lowest in 1898 and the highest in 1900; that of lumber and building materials, the lowest in 1897 and the highest in 1901; that of drugs and chemicals, the lowest in 1895 and the highest in 1900; that of house-furnishing goods, the lowest in 1897 and the highest in 1890; while in the miscellaneous group the lowest average was reached in 1896 and the highest in 1890. The average for all the commodities combined was the lowest in 1897 and the highest in 1890. Of the nine groups it is seen that one reached its lowest point in 1894, one in 1895, three in 1896, three in 1897, and one in 1898. The highest point was reached by three groups in 1890, by two in 1891, by three in 1900, and by one in 1901.

## PRICES AND THE COST OF LIVING IN MASSACHUSETTS.

[From the Thirty-second Annual Report of the Massachusetts Bureau of Statistics of Labor, pp. 239-311.]

## COMPARISON OF PRICES.

The change in the price level since 1897 has made it advisable to present the statistics, contained in this part, relating to the retail prices of such commodities as are of ordinary household consumption in the families of workingmen. The figures cover retail prices in the different towns and cities in the Commonwealth in which considerable numbers of persons are employed in manufacturing industries, and they were obtained by the special agents of the bureau from establishments largely patronized by working people. The prices, therefore, represent average quotations for rent, board, and the various articles of household consumption. Similar statistics have been collected by the bureau from time to time, beginning with 1860, the last preceding summary having been published in our report for 1897. We are, therefore, able to present comparative figures, collected in the same manner at different periods, and to note the variation either upward or downward at the present time, that is to say, April, 1902.

The first table covers average retail prices, with quotations for 1872, 1881, 1897, and 1902, for certain standard articles classified as groceries, provisions, fuel, dry goods, and boots, and also for rents and board. The table also shows the increase or decrease in 1902 as compared with 1897, the latest preceding figure.

## COMPARISONS OF AVERAGE RETAIL PRICES, 1872, 1881, 1897, AND 1902.

WORKINGMEN'S EXPENSE BUDGETS.

Below are presented the results of an inquiry into the expenses of 104 families which may be termed normal, consisting of father, mother, and immediately dependent relatives, members of the family circle, principally minor children, subject to parental control, although in some cases contributing by their earnings to the family income. In order that we may analyze the income and expenditures of these normal families, whose income is based upon the labor of the family members and not obtained in part by taking boarders or lodgers, we confine the next presentation entirely to them, arranging the families in five groups, according to the graded scale of income.

EXPENSE CLASSIFICATION.	EXPENDITURES OF FAMILIES WITH INCOMES—									
	Under \$450.		From \$450 to \$600.		From \$600 to \$750.		From \$750 to \$1,200.		Above \$1,200.

In the following table the classification of expenses of 152 families is given, including 48 families whose income was enlarged by receipts from boarders and lodgers. The percentages in each group may be compared with those previously presented. In order to make the comparison complete, we present a condensed recapitulation similar to that in the more detailed statement above.

EXPENSE CLASSIFICATION.	EXPENDITURES OF FAMILIES WITH INCOMES—									
	Under \$450.		From \$450 to \$600.		From \$600 to \$750.		From \$750 to \$1,200.		Above \$1,200.	
	Average expense per family.	Per-centages.	Average expense per family.	Per-centages.	Average expense per family.	Per-centages.	Average expense per family.	Per-centages.	Average expense per family.	Per-centages.
	<i>Dollars.</i>		<i>Dollars.</i>		<i>Dollars.</i>		<i>Dollars.</i>		<i>Dollars.</i>	
Subsistence (principally food).....	214.18	56.00	303.81	54.89	367.13	53.30	471.45	53.18	687.49	54.87
Clothing.....	35.00	9.15	64.70	11.69	80.48	11.68	129.92	14.66	183.12	14.62
Rent.....	84.00	21.96	97.10	17.54	118.99	17.27	97.74	11.03	85.12	6.80
Fuel and light.....	30.25	7.91	38.23	6.91	46.48	6.75	47.82	5.39	56.31	4.49
Education, church, societies, newspapers, etc.....	6.16	1.61	16.19	2.92	27.44	3.99	36.54	4.12	57.22	4.58
Care of health, insurance.....	11.40	2.98	25.96	4.69	27.44	3.98	44.85	5.06	80.03	6.39
Sundry expenses (comfort, mental and bodily recreation, etc.).....	1.50	.39	7.54	1.36	20.91	3.03	58.18	6.56	103.30	8.25
Total.....	382.49	100.00	553.53	100.00	688.87	100.00	886.50	100.00	1,252.59	100.00

The percentage of expenditure for subsistence (principally food) is, as might be expected, highest in the class having lowest income, and diminishes, as income increases, although showing no great variation, except that nearly identical percentages are found in the classes having incomes from \$450 to \$600 and above \$1,200, respectively. The classes having largest incomes have the smallest percentages of expenditure for fuel and rent and the largest for clothing. As incomes increase, the proportionate expenditure for education, church, societies, newspapers, etc., and for the care of health, insurance, and especially for the sundry expenses classed as for comfort, mental and bodily recreation, etc., increase. That is, as income permits, expenditures are enlarged in the directions indicating a higher standard of living, rather than entirely reserved as surplus or savings. As in 1875, the results of the present investigation support fairly well the first and last propositions of the so-called law of expenditure, formulated by Dr. Engel of Prussia, but do not entirely agree with the others.<sup>a</sup>

Dr. Engel's theory was based on Prussian experience, confirmed in a general way by the similar investigations of Dupetiaux in Belgium and Le Play in France and German districts bordering upon it, in Switzerland, and in Savoy. It is of course true, and the distinction is perhaps more marked to-day than in 1875, that there is far less uniformity in the character of the clothing worn by workmen in this country than abroad, and also in the conditions under which they are housed; and this, no doubt, accounts in a measure for the differences in the percentile distribution of expenses under those heads.

The percentages for the different income classes reported in 1875 and at present compare as follows:

EXPENSE CLASSIFICATION.	PERCENTAGES OF EXPENDITURE OF FAMILIES WITH INCOMES—									
	Under \$450.		From \$450 to \$600.		From \$600 to \$750.		From \$750 to \$1,200.		Above \$1,200.	
	1875	At present.	1875	At present.	1875	At present.	1875	At present.	1875	At present.
Subsistence (principally food).....	64.00	56.00	63.00	54.89	60.00	53.30	56.00	53.18	51.00	54.87
Clothing.....	7.00	9.15	10.50	11.69	14.00	11.68	15.00	14.66	19.00	14.62
Rent.....	20.00	21.96	15.50	17.54	14.00	17.27	17.00	11.03	15.00	6.80
All other expenses.....	9.00	12.89	11.00	15.88	12.00	17.75	12.00	21.13	15.00	23.71
Total.....	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00

The percentages of expenditure for food show a decline in each group, except in that with income above \$1,200. The percentage expended for clothing appears unduly low in the lowest income class in 1875, the peculiarity being caused no doubt by some exceptional circumstance affecting one or more of the comparatively few families in this class in the year referred to. The percentages indicate a comparatively uniform proportionate expense for clothing in the families with incomes from \$450 to \$750, and also in the families with incomes from \$750 to \$1,200 or more. In the first two groups the percentage expenditure for clothing is higher than in 1875. The percentage expenditure for rent is lower in two of the groups and higher in the others than in 1875, and that for expenses outside of food, clothing, and rent considerably higher in all.

<sup>a</sup> Dr. Engel's propositions are as follows:

*First.* The greater the income, the smaller the relative percentage of outlay for subsistence. (To this the highest class shown in the table forms an exception.)

*Second.* The percentage of outlay for clothing is approximately the same, whatever the income. (This is confirmed in the second and third classes as compared with each other and also in the fourth and fifth classes as compared with each other, but not confirmed in general.)

*Third.* The percentage of outlay for lodging or rent and for fuel and light is invariably the same, whatever the income. (Confirmed in the second and third classes as compared with each other, but not confirmed in general.)

*Fourth.* As income increases, the percentage of outlay for sundries becomes greater. (Fully confirmed.)

# MOVEMENT OF PRICES IN GREAT BRITAIN.

By A. SAUERBECK.

[From the reports of the London Statistical Society.]

The following table shows the course of prices of forty-five commodities during the last twenty-four years as compared with the standard period of eleven years, 1867-1877, which in the aggregate is equivalent to the average of the twenty-five years 1853-1877.

## SUMMARY OF INDEX NUMBERS.<sup>a</sup>

[Groups of articles, 1867-1877 = 100.]

YEARS.	Vegetable food (corn, etc.).	Animal food (meat, etc.).	Sugar, coffee, and tea.	Total food.	Minerals.	Textiles.	Sundry materials.	Total materials.	Grand total.	Silver. <sup>b</sup>	Wheat harvest. <sup>c</sup>	Average price of consols. <sup>d</sup>	Average Bank of England rate. <sup>d</sup>
1878.....	95	101	90	96	74	78	88	81	87	86.4	108	95 $\frac{3}{4}$	3 $\frac{1}{2}$
1879.....	87	94	87	90	73	74	85	78	83	84.2	64	97 $\frac{1}{2}$	2 $\frac{1}{2}$

1889.....	65	86	75	75	75	70	68	70	72	70.2	103	98	3 $\frac{3}{8}$
1890.....	65	82	70	73	80	66	69	71	72	78.4	106	96 $\frac{1}{2}$	4 $\frac{5}{8}$
1891.....	75	81	71	77	76	59	69	68	72	74.1	108	95 $\frac{1}{2}$	3 $\frac{5}{8}$
1892.....	65	84	69	73	71	57	67	65	68	65.4	91	96 $\frac{1}{2}$	2 $\frac{5}{8}$
1893.....	59	85	75	72	68	59	68	65	68	58.6	90	98 $\frac{1}{2}$	3 $\frac{5}{8}$
1894.....	55	80	65	66	64	53	64	60	63	47.6	106	101	2 $\frac{1}{2}$
1895.....	54	78	62	64	62	52	65	60	62	49.1	91	106 $\frac{1}{2}$	2
1896.....	53	73	59	62	63	54	63	60	61	50.5	116	111	2 $\frac{3}{8}$
1897.....	60	79	52	65	66	51	62	59	62	45.3	100	112 $\frac{1}{2}$	2 $\frac{3}{8}$
1898.....	67	77	51	68	70	51	63	61	64	44.3	120	111	3 $\frac{1}{2}$
1899.....	60	79	53	65	92	58	65	70	68	45.1	113	107	3 $\frac{1}{2}$
1900.....	62	85	54	69	108	66	71	80	75	46.1	99	99 $\frac{1}{2}$	4
1901.....	62	85	46	67	89	60	71	72	70	44.7	106	94	3 $\frac{1}{2}$
Average 1892-1901.....	60	80	59	67	75	56	66	65	66	49.7	103	103 $\frac{1}{2}$	3
1888-1897.....	62	81	66	70	70	59	66	65	67	61.0	101	101 $\frac{1}{2}$	2 $\frac{3}{8}$
1885-1894.....	65	83	68	72	71	62	68	67	69	69.2	101	99	3 $\frac{1}{2}$
1878-1887.....	79	95	76	84	73	71	81	76	79	82.1	97	99 $\frac{1}{2}$	3 $\frac{5}{8}$

<sup>a</sup>The index number of all the groups of articles as given in the table was 100, for the years 1867-1877. This number is exactly the same as the average number for the twenty-five years from 1853 to 1877, during which time the new gold discoveries appear to have had an effect upon prices. Therefore a comparison of the aggregate prices of all commodities in a certain year with the eleven years from 1867 to 1877 is equivalent to a comparison of the whole twenty-five years from 1853 to 1877.

<sup>b</sup>Silver 60.84d. per ounce = 100.

<sup>c</sup>Wheat harvest in the United Kingdom, 1878-1883, 28 bushels per acre = 100; from 1884, 29 bushels = 100.

<sup>d</sup>Consols and bank rate actual figures, not index numbers; consols 2 $\frac{1}{2}$  per cent from 1889.

The index number for all commodities was 70, against 75 in 1900, or 7 per cent lower. It was 30 per cent below the standard period of 1867-1877, and 11 $\frac{1}{2}$  per cent below the ten years 1878-1887, but 6 per cent above the average of the last ten years. As compared with 1896, the lowest year on record, the rise amounted still to 15 per cent.

The fall last year was mainly due to minerals and textiles, to sugar, coffee, and tea. Corn, meat, and sundry materials were, on the average, practically the same, slightly lower prices for wheat, rice, beef, and mutton having been balanced by higher prices for maize, oats, pork, and butter.

## MONTHLY FLUCTUATIONS OF THE INDEX NUMBERS OF FORTY-FIVE COMMODITIES (1867-1877=100).

YEARS.	Jan.	Feb.	Mar.	Apr.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Year. <sup>a</sup>

1901.....	72.2	71.7	71.0	70.6	70.5	69.8	69.5	69.8	69.6	69.6	69.0	68.4	70

<sup>a</sup>The twelve monthly figures of each year do not in all cases exactly (in the decimals) agree with the annual averages, the latter having been calculated in part from revised figures.

With the exception of a slight rally in August, the monthly number went steadily down, and stood at the end of the year 7 per cent lower than in December, 1900.

Taking articles of food and materials separately, the index numbers compare thus (1867-1877=100):

	AVERAGE.			December, 1889	February, 1895	July, 1896	December, 1899	February, 1900	December, 1900	December, 1901
	1878-1887	1888-1897	1892-1901							
	Food .....	84	70							
Materials .....	76	65	65	74.2	57.0	58.6	77.5	81.9	76.5	70.0

Articles of food were at the end of the year  $4\frac{1}{2}$  per cent and materials  $8\frac{1}{2}$  per cent lower than in December, 1900.

The position of the six separate groups of commodities at the end of the last three years, in comparison with former periods, is illustrated by the following index numbers (1867-1877 = 100):

	AVERAGE.			December, 1889	December, 1900	December, 1901	Percent in- crease (+) or de- crease (-) in 1901.
	1878-1887	1888-1897	1892-1901				
	Vegetable food (corn, etc.) .....	79	62				
Animal food (meat and butter).....	95	81	80	78.9	87.3	83.1	- 5
Sugar, coffee, and tea .....	76	66	59	53.7	50.8	42.0	-18
Minerals .....	73	70	75	98.3	102.3	80.6	-21
Textiles.....	71	59	56	71.2	60.6	58.2	- 4
Sundry materials.....	81	66	66	68.8	71.5	71.8	+ 0½

Corn experienced a rise for maize and oats, and a fall for rice and potatoes, while the fluctuations in wheat and barley were unimportant. In the second group, beef and mutton were lower, pork and butter on the average higher, but butter ruled at the end of the year lower than a twelvemonth ago. Sugar fell heavily, beet from 9s. 1d. to 6s. 6d., Java from 12s. 9d. to 9s., and French loaves from 13s. to 10s. 3d. per hundredweight, and the last-named prices were the lowest on record. Coffee was on the average also lower than in 1900 but while declining up to July, recovered considerably later on, and stood at the end higher than a year ago. The lower classes of tea were very depressed, and the average annual import price—7½d. per pound—is the lowest on record. For metals generally the tendency was downward throughout the year. Scotch pig iron fell from 60s. to 49s., hematite from 63s. 9d. to 55s. 5d. per ton, standard copper from £72¼ to £48¾, and lead from £16½ to £10¼ per ton. Tin had great fluctuations; it declined in the first quarter from £121½ to £114, rose in July to £131, and closed at £106 per ton. Best house coal in London fell from 23s. in December, 1900, to 17s. in June, and rose again to 20s. 6d. per ton. The average export price of coal was 13s. 10d., against 16s. 9d. in 1900. Among textiles, cotton had a gradual fall from 5½d. for middling American to 4½d. per pound; flax was high during the greater part of the year, but declined toward the end; jute and silk were lower at the end, but Manila hemp rose from £29½ in December, 1900, to £46 per ton in December, 1901. Fine wool was firm and nearly 10 per cent higher at the end, but English and colonial coarse wool declined from 20 to 35 per cent, and the prices at the end of the year were the lowest on record—Lincoln hogs 7¾d. and wethers 4¾d. per pound. In the group of "sundry materials," hides and leather were well maintained; tallow and petroleum were higher at the end; linseed oil showed little change and was still comparatively dear, but wood was cheaper.

QUARTERLY MOVEMENTS OF PRICES<sup>a</sup>—SUMMARY OF INDEX NUMBERS (1866-1877=100).

YEARS.	Quarters.	Vegetable food (corn, etc.).	Animal food (meat, etc.).	Sugar, coffee, and tea.	Total food.	Minerals.	Textiles.	Sundry materials.	Total materials.	Grand total.	Silver. <sup>b</sup>
1889	IV	66.3	86.0	67.2	73.1	83.0	70.7	68.1	73.2	73.2	71.4
	I	63.7	86.3	68.6	73.1	80.6	69.1	68.7	72.0	72.5	72.6

	III	65.0	78.1	51.3	76.0	71.0	51.5	63.9	62.0	64.1	45.4
	IV	62.4	76.8	52.3	65.6	75.0	50.4	63.3	62.5	63.8	45.5
	I	61.4	78.8	53.2	66.0	83.7	52.8	62.6	65.6	65.6	45.1
1899	II	59.1	79.8	54.5	65.8	89.2	54.6	62.0	67.1	66.5	46.3
	III	59.4	79.6	53.7	65.6	96.3	57.5	64.4	70.9	68.6	44.9
	IV	59.6	77.4	53.6	64.8	98.8	68.7	68.7	76.8	71.8	44.5
	I	60.2	80.2	53.4	66.2	107.9	70.6	72.1	81.3	74.9	45.3
1900	II	62.3	87.5	55.0	70.0	108.6	65.4	71.4	79.6	75.6	45.6
	III	64.0	86.1	55.9	70.5	111.0	64.5	71.1	79.8	75.9	47.0
	IV	63.7	85.3	52.3	69.3	105.5	60.9	71.5	77.4	74.0	48.8
	I	62.5	87.4	48.6	68.7	94.0	60.3	70.6	73.7	71.6	45.7
1901	II	63.4	85.2	46.5	67.9	88.5	59.5	70.9	72.1	70.2	44.9
	III	61.5	85.8	43.8	66.7	86.7	59.6	71.1	71.7	69.6	44.3
	IV	62.3	84.1	42.3	66.1	83.0	58.2	72.2	71.0	63.0	42.6

<sup>a</sup>The four quarterly figures of each year do not in all cases exactly (in the decimals) agree with the annual averages, as the latter are partly calculated from revised figures. (See Journal of Royal Statistical Society, 1893, p. 221; 1895, p. 144; and 1900, p. 90.)

<sup>b</sup>Silver 60.84d. per ounce=100.

The quarterly numbers show the average of three monthly figures, and by thus eliminating minor fluctuations they give a more reliable comparison of the gradual changes of the various groups of commodities. Last year's figures indicate the gradual fall of food products, principally influenced by the third group (sugar, coffee, and tea), and also of materials generally, the latter ruled by the strong decline of minerals, and to a small extent by weaker prices of textiles, while sundry materials were slightly better in the second half of the year.

The following figures show in each case the average index numbers of all the forty-five commodities for ten years (see the dotted line in the diagram of the Journal, 1886, p. 648, and also the Journal, 1893, p. 220); they give the best picture of the gradual movement of the average prices of whole periods, as the ordinary fluctuations are still further obliterated:

1818-1827	111	1878-1887	79	1887-1896	68
1828-1837	93	1882-1891	74	1888-1897	67
1838-1847	93	1883-1892	72	1889-1898	66
1848-1857	89	1884-1893	71	1890-1899	66
1858-1867	99	1885-1894	69	1891-1900	66
1868-1877	100	1886-1895	68	1892-1901	66

*Silver.*—The average price was 27 $\frac{3}{4}$ d. per ounce, against 28 $\frac{1}{4}$ d. in 1900. It stood at 29 $\frac{1}{5}$ d. per ounce (index number 48.6) at the end of 1900, and went gradually lower, realizing about 28 $\frac{3}{4}$ d. in the first quarter, 27 $\frac{3}{4}$ d. in the second, and barely 27d. in the third quarter. It dropped more rapidly in November, and touched 24 $\frac{1}{2}$ d. in December, closing at 25 $\frac{1}{4}$ d. per ounce (index number 42.3).

From 1895 to 1899 silver was wanted in considerable quantities for currency purposes in Russia, and also in Spain, and the following figures show the amounts coined (high standard coins only, viz, one, one-half, and one-fourth rubles, and five-peseta pieces, as minor coins were mostly struck from old silver pieces):

YEARS.	COINAGE OF SILVER.	
	Russia.	Spain.
	<i>Mln. roubles.</i>	<i>Mln. pesetas.</i>
1895.....	4.6	6.9
1896.....	39.9	16.2
1897.....	67.9	30.9
1898.....	37.7	65.1
1899.....	37.2	204.9
1900.....	5.3	.....
Total, six years.....	192.6	324.0

Converting these into fine ounces at 277.7 grains per rouble, and 347 grains per five-peseta piece, the requirements compare as follows with the estimated production of silver:

YEARS.	Production.	Coinage of Spain and Russia.	Percentage of total production.	Average price of silver.
				<i>Pence per ounce standard.</i>
	<i>Mln. ounces fine.</i>	<i>Mln. ounces fine.</i>		
1895.....	167.5	3.7	2.2	29½
1896.....	157.1	25.4	16.1	30½
1897.....	160.4	43.8	27.3	27½
1898.....	173.2	31.1	18.0	26½
1899.....	167.2	51.1	30.6	27½
1900.....	178.8	3.1	1.7	28½

It will be seen that during the four years 1896–1899 the two countries absorbed between 16 and 30 per cent of the total production. In 1900 the coinage of silver in Russia was very small, and the quantity taken in 1901 was also quite unimportant, while in Spain the coinage of 5-peseta pieces has been entirely stopped. From 1900 to 1901 we had, on the other hand, the great currency demand for India, where the net amount coined (withdrawn pieces deducted) reached about 150,000,000 rupees during the financial year, equal to 51,500,000 fine ounces, being nearly 30 per cent of the total silver production of the world. This demand ceased in April, but the quantity of silver exported to India for other purposes remained on a large scale.

It may be useful to compare these figures, as no extra demand of any importance for coinage purposes can now be expected, all countries with an effective or nominal gold standard having much greater stocks of silver than they require, particularly the United States, France, Spain, Belgium, Italy, Holland, Germany, and Austria. The production of silver has, therefore, to depend solely on the industrial demand, on the coinage of tokens, and on the absorption by India and China.

*Gold.*—The production was as follows during the last few years, according to the Director of the Mint, at Washington:

YEARS.	Kilos, fine.	Million ounces fine and decimals.	Value.
1895.....	299,100	9.62	£ 40,800,000
1896.....	304,300	9.78	41,600,000
1897.....	355,200	11.42	48,500,000
1898.....	431,200	13.86	58,900,000
1899.....	461,300	14.83	63,000,000
1900.....	387,500	12.46	52,900,000

No reliable estimate for 1901 will be available for some time, but it is probable that the production was a little larger than in 1900. The rate of discount in the three principal markets is shown in the following table:

YEARS.	LONDON.		PARIS.		BERLIN.		AVERAGE OF THE THREE MARKETS.	
	Bank rate.	Market rate.	Bank rate.	Market rate.	Bank rate.	Market rate.	Bank rate.	Market rate.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
1895.....	2.00	0.80	2.10	1.59	3.14	2.02	2.41	1.47
1896.....	2.50	1.40	2.00	1.75	3.66	2.99	2.72	2.05
1897.....	2.60	1.80	2.00	1.81	3.81	3.08	2.80	2.23
1898.....	3.25	2.60	2.20	2.07	4.27	3.56	3.24	2.74
1899.....	3.75	3.25	3.06	2.96	5.04	4.45	3.95	3.55
1900.....	4.00	3.70	3.25	3.08	5.33	4.41	4.19	3.73
1901.....	3.75	3.14	3.00	2.43	4.10	3.06	3.62	2.88

The average rates in 1895 were the lowest on record; those in 1900 were the highest since 1873. Last year's average shows a very considerable reduction, the private rate having fallen from  $3\frac{1}{4}$  per cent to  $2\frac{1}{2}$  per cent.

The past year differed widely from its two predecessors. The great trade activity in Europe had received a check in the second half of 1900, which made further progress in 1901, and caused depression in many branches. There were certain occurrences which had a more or less unfavorable influence, such as the death of the Queen in January, the continuation of the war in South Africa, with its great expenditure, resulting in increased taxation, and the difficulties in China, now fortunately settled, but the main factor was the natural reaction from a period of great buoyancy. This reaction was particularly felt in the country that had experienced the greatest development during the last decade—Germany.

The export trade of the United Kingdom showed a decline, though not a very important one, everything considered. The outturn of the shipbuilding yards was still very large, but the engineering industries were on the whole in a less favorable position. The cotton, flax, and silk industries were unsatisfactory. The fine wool industry was busy, though profits were not great, but the trade in coarse wools was very depressed. The wheat harvest in several European countries was smaller, but large in the United States, while the failure of the maize crop in the latter country raised prices of feeding stuffs. The sugar and coffee crops were of unprecedented magnitude and seriously affected values. Wages are declining in several branches, and the number of unemployed has increased everywhere.

Unlike European countries, the United States enjoyed continued prosperity, leading to a further great boom in railway and industrial shares; but matters there have now reached such a height that the position is not free from danger.

It is not improbable that the present year will again see some improvement, but we must not expect too much. Liquidation will still go on in those countries and trades which have suffered most, and when all the losses are ascertained, confidence will probably return, and this will lead to renewed activity. If the South African war should at last be concluded and the working of the mines now partly opened become again more normal, it may, as is generally expected, have a great influence on trade; but it may also be that the effect will not be so great as might have been the case in 1900 or even in 1901. The boom is over, and experience teaches us that it always takes some time, often years, before a new period of great activity recommences.

The arithmetical mean of the forty-five index numbers, which is 70 (against 75 in 1900), has, as in former years, again been subject to two tests:

Firstly, by using the same index numbers of the separate articles, but calculating each article according to its importance in the United Kingdom on the average of the three years 1894–1896, when the mean for 1901 is 69.8, against 76.0 in 1900 and 67.0 in 1899; or, on the average of the five years 1871–1875, when the mean for 1901 is 69.5, against 75.3 in 1900 and 66.3 in 1899.

Secondly, by calculating the quantities in the United Kingdom at their actual values (the production on the basis of my price tables, the imports at Board of Trade values, and consequently a considerable portion according to a different set of prices) and at the nominal values on the basis of the average prices from 1867–1877. In this case the mean is 72.1, against 78.3 in 1900 and 67.3 in 1899. The figures for 1900 and 1901 are higher in this calculation than the ordinary index numbers, and this is principally due to the high export price of coal—an article of such enormous importance in this country—but partly also to the declared values of imports having been higher than those afterwards realized. The following table gives the figures which have served for the second test (see also the Society's Journal, 1886, pp. 613–619):

MOVEMENTS OF FORTY-FIVE COMMODITIES IN THE UNITED KINGDOM (PRODUCTION AND IMPORTS).

AVERAGE YEARS.	Estimated actual value in each period.	Nominal values at average prices of 1867–1877, showing increase in quantities.	MOVEMENT OF QUANTITIES.		Movement of quantities from period to period.	Ratio of prices according to this table (1867–1877 = 100).
			1848–1850 = 100.	1871–1875 = 100.		
	<i>Mln. £'s and dec.</i>	<i>Mln. £'s and dec.</i>				
1848–1850.....	219.8	294.8	100	56	.....	74.6
1859–1861.....	350.1	382.7	130	73	30 per cent over 1849..	91.5
1869–1871.....	456.6	484.6	164	92	27 per cent over 1860..	94.2
1871–1875.....	548.8	526.3	178	100	.....	101.3
1874–1876.....	537.8	538.4	183	102	.....	99.9
1879–1881.....	489.7	578.5	196	110	19 per cent over 1870..	84.6
1884–1886.....	445.7	610.1	207	116	.....	73.0
1889–1891.....	504.1	685.2	233	130	18 per cent over 1880..	73.6
1894–1896.....	433.7	723.5	245	137	.....	62.7
1898.....	498.7	772.4	262	147	.....	64.6
1899.....	519.8	772.5	262	147	13 per cent over 1890..	67.3
1900.....	599.5	765.3	260	145		78.3
1901 <i>a</i> .....	570.2	791.1	268	150		72.1

*a* 1901 subject to correction after publication of the complete mineral produce returns.

The nominal values at the uniform prices of 1867–1877 show the exact movements of quantities in the aggregate. After a falling off in quantities in 1900 there was again an increase last year. The last three years, taken on the average, show an increase of about 13 per cent on 1890, 47 per cent on 1871–1875, and 163 per cent on 1848–1850.

The price movements of the external trade of this country—total imports into the United Kingdom and exports of British and Irish produce—were as follows, 1873 called 111 in accordance with my index number (see the Society's Journal, 1897, p. 187):

YEARS.	TOTAL IMPORTS INTO UNITED KINGDOM AND EXPORTS OF BRITISH AND IRISH PRODUCE.			RATIOS (1873=111).	
	Declared value.	Values at prices of preceding year.	Values at prices in 1873.	British trade.	My arithmetical index numbers.
1873.....	<i>Mln. £'s.</i> 626.0	<i>Mln. £'s.</i> 626.0	<i>Mln. £'s.</i> 626	111.0	111
1889.....	673.3	664.5	1,005	74.6	72
1897.....	685.6	689.5	1,176	64.7	62
1898.....	704.0	703.1	1,201	64.8	64
1899.....	749.7	724.7	1,241	67.1	68
1900.....	815.1	739.1	1,224	73.9	75
1901.....	802.7	836.9	1,256	70.9	70

The total declared value last year was  $1\frac{1}{2}$  per cent less than in the preceding year, but the total quantity, as illustrated by the third column—values at prices in 1873—was  $2\frac{3}{4}$  per cent larger. It will be observed that since 1873 quantities have doubled, while the actual value is only 28 per cent larger. The index number in this table is only reduced by 3 points, or about 4 per cent, against 5 points in the case of the ordinary arithmetical index number. As pointed out last year, the influence of the great commodity coal is much less in this table, which contains only the exports—about 44,000,000 tons—than in the preceding calculations, where the total production—say 225,000,000 tons—is included.

#### CONSTRUCTION OF THE TABLES.

The table of index numbers is based on the average prices of the eleven years 1867–1877, and the index numbers have been calculated in the ordinary arithmetical way; for instance, English wheat:—

Average, 1867–1877, 54s. 6d. equal 100, average point.

Average, 1855, 74s. 8d. equal 137, or 37 per cent above the average point.

Average, 1901, 26s. 9d. equal 49, or 51 per cent below the average point.

The index numbers, therefore, represent simple percentages of the average point. Certain articles which appear to have something in common have been grouped together, with the following result:

COMMODITIES IN GROUP.	Index numbers in group.	EXAMPLE FOR 1899.	
		Total numbers.	Average.
1. Vegetable food (corn, etc.—wheat, flour, barley, oats, maize, potatoes, and rice).....	With 8 index numbers ....	498	62
2. Animal food (beef, mutton, pork, bacon, and butter) .....	With 7 index numbers ....	596	85
3. Sugar, coffee, and tea .....	With 4 index numbers ....	183	46
1-3. Food .....	With 19 index numbers ....	1,277	67
4. Minerals (iron, copper, tin, lead, and coals) .....	With 7 index numbers ....	621	89
5. Textiles (cotton, flax, hemp, jute, wool, and silk) .....	With 8 index numbers ....	478	60
6. Sundry materials (hides, leather, tallow, oils, soda, nitrate, indigo, and timber) .....	With 11 index numbers ....	782	71
4-6. Materials .....	With 26 index numbers ....	1,881	72
General average .....	With 45 index numbers ....	3,158	70

The general average is drawn from all forty-five descriptions, which are treated as of equal value, and is the simple arithmetical mean as shown above.

AVERAGE PRICES OF COMMODITIES.

[NOTE.—The annual prices are the averages of 12 monthly or 52 weekly quotations.]

WHOLESALE PRICES OF COMMODITIES, MAINLY IN LONDON AND MANCHESTER—AVERAGE SIX YEARS, 1845-1850, ETC.—Continued.

Table with columns for (III.) RAW MATERIALS OF MANUFACTURE—continued and (IV.) METALS. Sub-headers include Timber, Tallow, Leather, Saltpeter, Ashes, Copper, Iron, Lead, Steel, Tin, and Steam coal. Rows list dates from 1845-1850 to 1850.

Table with columns for (V.) MANCHESTER MARKETS and (VI.) BANK RETURNS AND RATE OF INTEREST. Sub-headers include Raw cotton, Yarn, Cotton cloth, Bank-note circulation, Rate of interest per annum, and Reserve of Bank of England. Rows list dates from 1845-1850 to 1850.

## WHOLESALE PRICES, 1845-1901—PROPORTIONATE RESULTS.

Deduced from the preceding tables on the basis of representing by the number 100 the average prices of the six years 1845-1850.

The construction is as follows: The basis of 100 represents the average prices of the six years 1845-1850, and all the subsequent figures are calculated from that datum line. Thus as regards coffee (column 1), the price of 1st July, 1857, was equal to 151, or 51 per cent above the average prices of 1845-1850. In order to ascertain the percentage rise or fall between one date and another—as, for example, coffee—comparing 1st July, 1857, when the figure was 151, with 1st January, 1894, when the figure was 179, or a difference of 28, the rise per cent has to be measured with the quantity 151, and given, of course, a result of 23 per cent as the real advance. In the course of so long a period of years since 1845 some variations have inevitably arisen in the mode of quoting prices in the usual Prices Current. In all such cases the nearest approach possible has been made to a uniform quotation throughout the table. In raw cotton especially there have been considerable changes of qualities introduced by the large use of Indian and Egyptian kinds. In tea, sugar, and wool also changes have occurred in the kinds most usually quoted.

[The column "Total index number" is the total for each date of all the percentage columns except that of the "Bank-note circulation." The "Total index number" does not, of course, present a full and accurate representation of the variations of prices, inasmuch as it can not allow for the relative importance of the different articles. Wheat, for example, reckons for no more in the "Total index number" than indigo; and during the years of the high price of cotton and cotton fabrics the total index number is, in a measure, unduly raised by that special cause. Still the total index number, read with the needful qualifications, may afford important inferences.]
