## Radical \& Logarithmic Functions (1)

$$
3^{2}=9
$$

$$
\begin{array}{ll}
\sqrt[2]{9}=X & 9=x^{2} \\
\operatorname{lox}_{3} 9=x & 9=3^{x}
\end{array}
$$

## Radical \& Logarithmic Functions (2)

## exponent <br> $$
\sqrt[n]{y}=x \quad y=x^{n}
$$ <br> x: base <br> $$
\log _{b} y=x
$$ <br> $$
y=b^{x}
$$

## Exponential \& Logarithmic Functions

$$
\begin{gathered}
\log _{b} y=x \quad \equiv \quad \underset{\uparrow}{q}=b^{x} \\
\log _{b} x=y \\
\hline
\end{gathered}
$$

## Inverse Function Relationship

$$
\log _{b} y=x \equiv y=b^{x}
$$

$$
\log _{b} x=y \equiv x=b^{y}
$$

## Properties

$$
\begin{gathered}
b^{\log _{b} x}=y \\
\log _{b}^{y} y=\log _{b} x \\
\log _{b} b^{x}=y \\
b^{y}=b^{x}
\end{gathered}
$$

$$
\begin{aligned}
& b^{\log _{b} x}=y \quad \Leftrightarrow x \\
& \log _{b} y=\log _{b} x \quad \Leftrightarrow \quad y=x
\end{aligned}
$$

$$
\log _{b} b^{x}=y \quad \Leftrightarrow x
$$

$$
b^{y}=b^{x}
$$

$$
\Leftrightarrow y=x
$$

## Properties

$\log _{b} x \quad \begin{aligned} & \text { The exponent that must be raised } \\ & \text { to the base } \boldsymbol{b} \text { to get } \boldsymbol{x}\end{aligned}$
${ }_{b} \log _{b} x \quad$ If the base $\boldsymbol{b}$ is raised to the power which must be raised to the base $\boldsymbol{b}$ to get $\boldsymbol{x}$

$$
\begin{aligned}
\log _{b} x=y & \Leftrightarrow x=b^{y} \\
b^{\log _{b} x}=b^{y} & \Leftrightarrow x
\end{aligned}
$$

$$
\begin{aligned}
& \log _{b} b^{x}=y \quad \Leftrightarrow \quad b^{y}=b^{x} \\
& \log _{b} b^{x}=y \quad \Leftrightarrow x
\end{aligned}
$$
