of the streets from Cold-bath-square down to Holborn-bridge on the east of Saffron-hill; and at the bottom of Chick-lane, close to Saffron-hill, it is still visible to the eye. At this end of Saffron-hill we come to that narrow and dangerous passage called Field-lane, the common repair of pickpockets, to sell their booty there, or acquire new spoils from the late or unwary passenger. It is astonishing, that, while we witness so many most useful improvements, this scandalous lane has been allowed to remain as it is, and that a proper opening from Holborn to Saffron-hill has not been yet contrived for the security of the public, and to facilitate the trade of the inhabitants of the adjoining streets. The name of *Saffron-hill* evinces the anciently of this neighbourhood, not as an inhabited place, but as the slope of a hill covered with a plant useful to dye the garments of our ancestors, who, like the Picts their neighbours, were, by custom or religion, very fond of colouring their skins with various dyes extracted from vegetables.

After these transitory observations, we shall return once more to St. John-street, near the spot where we left that neighbourhood.—Pardon-passage, on the south-east side of that street, is the ancient entrance into Pardon church-yard, the ground purchased by Ralph Stratford, bishop of London, for a cemetery during the pestilence which raged in the year 1348. It was situated to the east of St. John-street, between the north wall of the Charter-house garden and Sutton-street; where now is Wildernews-row, leading from St. John-street to Goswell-street. At the foundation of the Carthusian monastery adjoining, now the CHARTER-HOUSE, this piece of ground became their property: but, says Stow, (edit. 1603,) “remained till our time, by the name of Pardon church-yard, and served for burying such as desperately ended their lives, or were executed for felonies, who were fetched thither, usually, in a close cart, bayled over, and covered with blacke, having a plaine white crosse thwarting, and, at the fore end, a Saint-John’s crosse without, and within a bell ringing by shaking of the cart, whereby the same might be heard when it passed: and this was called the Fraerie cart, which belonged to St. John’s, and had the privilege of sanctuarie.”—Hence it appears, that in those times there were here, as in Italy down to our days, fraternities or fellowships of religious men attending the funerals of those who had died by the hands of justice, or had fallen in duels; for suicide was then not only very rare, but, when committed, the horror it excited prevented even the most humane from giving a public funeral to the body. Here superstition, as it is called, produced some good; for the unfortunate man who was tired of his life, being afraid lest he should be deprived of sepulture in consecrated ground, and punished in another world by tormenting demons, if he were to leave his post in this life without the will or order of his Creator, would suffer the utmost pressure of misery before he would attempt his own life; and therefore contrive to become useful to society, in spite of all the frowns and reverses of fortune.

The Spittle-croft, adjoining to Pardon church-yard, was, in the following year, purchased, and converted to the same use, by sir Walter Manny, who, in the year 1370, founded a Carthusian monastery upon the site of both. Sir Walter’s charter of donation is dated on the 28th of March, in the forty-fifth year of Edward III. and is still preserved, and perfectly legible, in the Evidence-house of the Charter-house. In this charter, after the usual salutation, sir Walter Manny recites his original donation of thirteen acres and a rod for a burial-ground, and gives them, and the buildings thereon, for a convent of Carthusian Friars, to be called the House of the Salutation of the Mother of God; and appoints John Lustote, with the consent of the chief prior of the order, to be the first prior of this convent; he likewise gives three acres adjoining, consecrated for a burial-ground by bishop Stratford, and of which he appears to have a grant; and concludes with ordering the monks to pray for the good estate of the

king, of himself, of lady Margaret his wife, and of the bishop of London, for the time being; as likewise for the soul of Alice de Henault, and for the souls of all those that had died by his hands, (he having been a great warrior;) and for the souls of all his benefactors, especially for the soul of Michael de Northburgh, late bishop of London; and for the souls of all that lay buried in that ground.

This convent was surrendered to Henry VIII. in the year 1538; and, on the 12th of June, 1542, was granted to John Bridges and Thomas Hale, for their joint lives, in consideration of the safe-keeping of the king’s tents and pavilions, &c. which had been some time there; and on the 14th of April, 1545, it was given in perpetuity to sir Edward North, chancellor of the court of augmentations, and valued in the grant at fifty pounds per annum. The annual revenues, at the dissolution, amounted to 642l. 4s. 6d. Sir Edward North fold it to Thomas duke Norfolk, for two thousand five hundred pounds; and in 1611 it was purchased of his son, the earl of Suffolk, by Mr. Thomas Sutton, for thirteen thousand pounds, in order to establish it as a charitable foundation for pensioners and scholars; for which he obtained letters patent from the king, that were afterwards confirmed by parliament. The expense of fitting up this house, amounted to seven thousand pounds; and he endowed the hospital and school with fifteen manors and other lands, to the annual value of 4493l. but the estates have been since considerably improved.

This charitable foundation was instituted for the maintenance of a master, a preacher, a head school-master, a second master, and eighty pensioners, consisting of decayed gentlemen, merchants, or others, reduced by misfortunes, who are provided with handsome apartments, and all the necessaries of life except clothes; instead of which, each of them is allowed a cloak and fourteen pounds per annum. There are also forty-four boys supported in the house, where they have good lodgings, and are instructed in classical learning. From among these, are chosen twenty-nine students at the universities, who are each allowed twenty pounds per annum for eight years; others, who are judged more fit for trades, are put out apprentices, and the sum of forty pounds is given with each of them. As a farther encouragement to the scholars brought up in this foundation, there are nine ecclesiastical preferments in the patronage of the governors, who, according to the constitution of the charity, are to confer them upon those who receive their education in that school. The pensioners and scholars are taken in at the recommendation of the governors, who appoint in rotation.

The Charter-house is situated between St. John’s-street on the west, Goswell-street on the east, Long-lane on the south, and Wildernews-row on the north. There is scarcely any vestige of the conventual building, which is said to have stood where the garden now is. The present buildings were erected by Thomas duke of Norfolk; they are very irregular, and have little to recommend them but their convenience and situation. The rooms are well disposed; and the court within, though small, is very neat. In one corner of this court is a handsome chapel, in which, among others, is a very superb monument erected to the memory of Mr. Thomas Sutton, the founder; on which is his effigy, habited in a gown, and in a recumbent posture. On each side is a man in armour, standing upright; and above a preacher in the act of addressing a full congregation. In the front of these buildings is a very handsome square; and behind a large garden; which at once contribute to the health and to the pleasure of those who receive the benefit of so valuable a foundation. These gardens are opened generally on a summer evening to decent people who wish to enjoy a walk under the lofty trees arching most elegantly over the heads of the visitors, or in the kitchen-department of the same spot, where all sorts of useful vegetables seem to grow plentifully and most luxuriantly for the use of the school.

We now arrive at Smithfield Bars, so called from the bars dividing

dividing the city liberty from the county.—It appears that Smithfield took its name from a smith's shop originally upon the spot; some authors derive it from the circumstance of the plain being there particularly *smooth*. There was formerly a pond in the middle; "for that men watered horses there, and was a great water. In the sixth of Henry the Fifth, a new building was made in the west of Smithfield betwixt the said poole and the river Wells, in a place then called the *Elmes*, for that there grew many elm-trees." It seems that many encroachments had been made upon the place before the time of Stow, who observes, "that whereby remaineth but a small portion for the old uses, to wit for markets of horses and cattell; neither for military exercises, as joustings, turnings, and great triumphs which have been there performed before the princes and nobility both of this realme and foraine countries." Then the chronicler relates several jousts, among which the following is not the least singular: "The 43 of Edw. III. Dame Alice Perrers, or Pierce, (the king's concubine,) as Lady of the Sunne, rode from the Tower of London through Cheape, accompanied of many lords and ladies, every lady leading a lord by his horse-bridle, till they came into West Smithfield, and then began a great joust which endured seven days after." This place was not paved all over before the year 1614, just two hundred years ago; the paving cost six hundred pounds.

Having said thus much upon the ancient appearance of this place, we must now consider it as it is. The west side is, as it was anciently, well furnished with inns for the accommodation of drovers, horse-dealers, and others, whom the cattle-market, which is held every Monday and Friday, calls to the place. The Ram, which is on the north side, is mostly frequented by the highest class of dealers. The form of this market is very irregular; but the access to it is multifarious.—St.-John-street and Giltspur-street, at the opposite sides, are the most considerable; but Cock-lane, Hosier-lane, Long-lane, Cow-lane, Duke-street, and Chick-lane, pour every Sunday and Thursday night immense flocks and droves, from all parts of the kingdom. The area of the place is intersected by standing pen-folds, where numbers of sheep are divided into parcels for sale, and wherein the butchers or salemen are admitted in order to examine and feel the flesh they intend to purchase; whilst cows, oxen, and bulls, their heads bent to the surrounding posts, and their horns nearly close to the ground, are tied up, or rather down, for inspection. It is hardly possible to convey an idea of the bustle and agitation of the whole market on Monday and Friday mornings—the bleating of sheep on the west, the squeaking of pigs on the east, the lowing of cows and oxen in the centre; the rattlings of butchers' carts, the barkings of dogs, the chatterings of pie-men, the bawlings of salemen, carmen, drovers, and waiters of public houses bringing "a drop of the creature" to horse-mongers, butchers, porkmen, and all the rest; besides the dust rising in clouds over the scene on fine days, and, in dirty weather, the mud splashing in every direction;—all these and more than these would hardly sketch on the mind of the reader a faint image of West Smithfield on a market-day.

Smithfield is the only public market, within the bills of mortality, for the sale of live-cattle—the number of which now sent to market is more, by 30,000, than it was twenty-five years ago; and of sheep 150,000. And, as it is a matter of general notoriety, that the cattle and sheep of England have also been gradually and progressively increasing in their individual weight, owing partly to the attention paid of late years to the improvement of the breed, and partly to their being much better fed now than formerly, and indeed much better than they could possibly have been before the introduction of turnips and clover; it is not perhaps an unreasonable or unfounded conjecture, to suppose that the increase, in point of weight, has kept pace with the advance in respect to numbers, during the aforesaid period. If so, it will follow, that, including number and weight, the annual increase in forty-five

years is, in neat cattle, upwards of 72 per cent. and in sheep near 53. Upon the whole, we may safely affirm, that including all the other supplies of animal food, and considering that they also, as well as cattle and sheep, come to market much better fed, and consequently much increased in weight, above what they were forty-five years ago, the consumption of the metropolis is at this time full one-half more than it was then. And, since this last period, the increase has gone on in a progressive manner.

It is a general opinion among butchers, that they can buy live cattle in Smithfield cheaper than at any other place. But it must be observed, that the cattle exposed for sale at this market have been driven until they are empty, weary, wasted, and foot-sore, and consequently show to a great disadvantage; so much so, that graziers who have followed their cattle, especially sheep, to Smithfield, frequently do not know their own flock; and, when they have been shown to them, they were shocked at their deteriorated appearance. If they should not then be sold and slaughtered, the wasting would continue so much, that it would require several weeks of rich food to raise them to their former fatness! The bullocks and sheep driven to these markets are not only over-heated by the journey, but they are also often most cruelly beaten with bludgeons, goaded with darts, and hocked about the legs in the market during perhaps ten hours, and then driven to the slaughter-house (if they have the good luck to escape thieves in the character of bullock-hunters), and knocked down while their blood is yet in that inflamed state, and their flesh bruised. Such meat must, it is conceived, be very detrimental to the health of man. Much better is that which is killed in the country without driving, when the animal is in full health, and sent to Newgate and Leadenhall in clean and cool packages. If this could be done by all, it would remove a great nuisance from London, would probably improve the health of its inhabitants, and certainly prevent many, and sometimes fatal, accidents.

Several attempts have been made to remove this market, but all hitherto ineffectual. A few years ago, a bill was brought into parliament for erecting a market at or near Illington, where there is still some open ground very fit for the purpose; but the measure was petitioned against by both parties; i. e. by many housekeepers in and about Smithfield, as well as by those near whom the market was proposed to be removed; and the bill was of course thrown out. More recently a bill was brought in for enlarging the market; but that was thrown out by the wisdom of parliament, from a thorough conviction that no improvement would answer the purpose, and that the parties interested ought to be induced, by every means, to remove the nuisance altogether.

The market on Friday is not in general so crowded with horned cattle as that on Monday; but on the former day is added, *en revanche*, the intolerable and dangerous nuisance of a horse-market. None but those whose business leads them to cross (or endeavour to cross) Smithfield on that day, can have an idea of it.—There is also a market for hay on Tuesdays, Thursdays, and Saturdays; to this we have no objection; the smell of hay is at all times pleasant, especially in a crowded city, where the odours are not all of the sweetest kind.

But the time when Smithfield is, or seems to be, at the height of its glory, is when Bartholomew Fair sets every thing in motion, from the large swinging-boat to the half-penny rattle; and assumes the appearance of the temple of madness.—Compared to this, the market-day, which we have been lamenting as a nuisance, is but a silent melancholy scene. But, as the pencil of the ablest artist could give but a faint idea of what the votaries of the goddess of Folly achieve there, it is not to be expected that the pen of the historian can be in any degree adequate to the task. Suffice it to say, that, if ever posterity is allowed by Providence to be wiser than we are, they will

smile to think that their ancestors could have endured so long such preposterous sort of entertainment!

King Henry II. granted to the priory of St. Bartholomew the privilege of a fair to be kept annually at Bartholomew-tide, on the eve, the day, and the morrow, to which the clothiers in England and the drapers of London repaired, and had their booths and standings in the church-yard within the priory, which was separated from Smithfield by walls and gates that were locked every night, and watched, for the safety of the goods deposited there; and the narrow street or lane afterwards built where the cloth was sold still retains the name of ClothFair.

Fairs of this description originated in Roman-catholic countries on account of "pilgrims and other devout men" coming to do homage to the shrine of a saint on the day of his commemoration, which was called *the feast*. Their number being generally very considerable, and their coming from a certain distance out of the country making them need refreshment previous to entering the church, the object of their journey, or at any rate previous to their return home, —hence many people came with stalls lining the avenues to the sacred spot, and offering gingerbread, pasties, &c. for travellers and others, besides toys for the children, and small images and books for the more religious among them. What a spirit of religion had suggested was soon adopted and extended by a spirit of trade; and, under proper regulations, produced the most beneficial effects; as to which, see the article FAIR, vol. vii. p. 165. But fairs are not now of that utility or necessity that they were in former days; and therefore Bartholomew-fair, which was chartered for three days, but had extended by sufferance to a fortnight or more, was again reduced to three days by an order of council in the year 1708.—The ceremony of proclaiming the fair, by the lord-mayor in person, takes place on the eve of St. Bartholomew's day, old style; that is, on the 3d of September, new style. It is performed about twelve o'clock at noon; —and it is curious to see all kinds of instruments falsely called musical, ready to strike up, and as if suspended till the last words of the proclamation are pronounced; then begins the mighty din, and a sudden bustle pervades all Smithfield.

We need not recall the painful remembrance of those days of horror when parties of bigots threw their adversaries into the flames, while the surrounding walls resounded with the screams of martyrs burnt at the stake for their adherence to principles of religion adverse to the reigning doctrines. See the article ENGLAND, vol. vi. p. 637—41, 647.

Advancing towards the east from Smithfield Bars, we find Long-lane, which communicates with Charter-House-square, the area of which, though far from being uniform, is surrounded with many decent houses, and planted with shrubs. See p. 492.

On the same side, between Cloth-fair and Duke-street, (formerly *Duck-lane*,) stands the parish-church of St. Bartholomew the Great. It was originally a parish-church adjoining to the priory of St. Bartholomew; but, when the latter was pulled down to the choir, that part was annexed by the king's order, for the enlargement of the old church; in which manner it continued till queen Mary gave the remnant of the priory-church to the Black Friars, who used it as their conventual church till the first year of queen Elizabeth, when the friars were turned out, and the church was restored, by act of parliament, to the parish. The present church is the same as it stood in the reign of Edward VI. except the steeple, which, being of timber, was taken down in the year 1628, and a new one, of brick and stone, erected. It is a spacious edifice of the Gothic and Tuscan orders, one hundred and thirty-two feet long, fifty-seven broad, and forty-seven high; and the altitude of the tower is seventy-five feet. On the north side of the chancel is an elegant monument of Rahere, beneath an arch, supported by tabernacle-work. His effigy is recumbent, with his hands joined over his breast. There is an angel at his feet, and a friar in the

attitude of prayer on each side of him. This monument was repaired and beautified by William Bolton, the last prior. The patronage of this church, which, in all probability, was anciently in the prior and canons of St. Bartholomew, is now in private hands. This parish still claims an exemption from the jurisdiction of the city, so far as to protect non-freemen in carrying on their respective trades.

On the south side of this church is a large open piece of ground, called Bartholomew Close, where was anciently a cemetery, and the court-yard belonging to the old priory of St. Bartholomew; in which the fair was kept till it was removed into Smithfield. Part of the cloisters is still preserved in the Black-horse livery-stables, consisting of eight arches, ornamented with the rude sculpture of the times; and there are several vestiges of the priory to be seen in a narrow passage to the north of the stable; adjacent to which is part of the south transept, now converted into a small burial-ground.—In this Close is the principal part of those extensive buildings formerly called the London House, (see p. 487;) now separately occupied, near Queen-square by Mr. Willan, the celebrated coach-master of the Bull-and-Mouth Inn, which we noticed at p. 486; and in the centre by Mr. J. Adlard, of Duke-street, who has converted his detached part into a commodious printing-office, whence, among other respectable periodical works, issues the Encyclopædia Londinensis.

This neighbourhood contains many remains of the style of building which generally obtained two centuries ago. They appear as an aggregate of the rude dwellings of our forefathers, inhabitants of the metropolis—the uncouthness of the shape, the combustibility of the materials of which they are composed, and the narrowness of the streets, made still narrower by the odd custom of erecting one story shelving over another, as if space had been wanted in the wide world to build a city—are most astonishing, and have contributed undoubtedly to the frequency and extent of conflagrations, as well as of pestilential diseases with which London was formerly afflicted. Not very many of these curious fabrics have resisted the tasteful zeal for improvement lately evinced in London; and, although we like to see memoranda of them in neat engravings, we wish it were our lot to publish a likeness of the last remnant of that preposterous style.

On the south-east side of Smithfield is the magnificent hospital of St. Bartholomew, which appears to have been the first establishment of this nature in London, having been founded in the year 1102, by Rahere, mentioned above, minstrel to Henry I. who, quitting his gay life, founded a priory of black canons, which he dedicated to St. Bartholomew, and became himself the first prior. He afterwards obtained from the king a piece of waste ground, on which he built an hospital, for a master, brethren, and sisters, and for the relief of the diseased and maimed poor, which he placed under the care of the priory. Both the priory and hospital were surrendered to Henry VIII. who, in the last year of his reign, re-founded the latter, and endowed it with an annual revenue of five hundred marks, on condition that the city should pay an equal sum; which proposal being accepted, the new foundation was incorporated by the name of "The Hospital of the Mayor, Commonalty, and Citizens, of London, Governors for the Poor, called Little St. Bartholomew's, near West Smithfield." Since this time the hospital has received considerable benefactions from charitable persons, by which means the governors have been enabled to admit all indigent persons maimed by accident, at any hour of the day or night, without previous recommendation; and the sick on Thursdays, on which days a committee of governors sit to examine persons applying for admission. The patients, whether sick or maimed, are provided with lodging, food, medicine, and attendance, and have the advice and assistance of some of the most eminent physicians and surgeons in the kingdom.

Notwithstanding the old building escaped the dreadful fire in 1666, yet, the chief part of its revenues being in houses,

in breadth, and thirty-four in height, and the altitude of the tower is seventy-four feet; and, as the building escaped the fire in 1666, it is very ancient; but has been lately repaired.

Nearly adjoining to this hospital we find another establishment, which does great honour to its founder, the young king Edward VI. and is of the greatest utility in diffusing knowledge and bestowing other benefits upon successive generations; we mean what is vulgarly called *The Blue-Coat Hospital*, a royal foundation for the maintenance and education of poor and fatherless children, to be virtuously brought up, and fitted for trades. It was originally granted to the city by Henry VIII. in the year 1537; and confirmed in 1552 by charter of Edward VI. who also endowed the hospital with certain lands and tenements, belonging to the Savoy, of the yearly value of six hundred pounds; which so animated the citizens, that, on the 26th of July, 1552, they began to fit up the late Grey-Friars' monastery, for the reception of poor orphans; and prosecuted the work with such zeal and alacrity, that, on the 23d of November in the same year, three hundred and forty boys were admitted; which number was increased, by the end of the year, to three hundred and eighty. Almost the last action of this young king's life, was granting permission to the governors of this hospital to purchase lands in mortmain to the value of four thousand marks per annum. This laudable foundation of Edward VI. was greatly increased by the benefactions of his subjects. Sir William Chester, knt. and alderman, and John Calthrop, citizen and draper, built the brick walls on the side next to Bartholomew's Hospital, and arched over the town-ditch, from Aldersgate to Newgate, as being offensive to the hospital.

The principal buildings of this hospital form the four sides of a large area, which have porticoes continued round them. These have Gothic arches, and the walls are supported by abutments, being the remaining cloister of the old priory. This part was repaired by the direction of sir Christopher Wren, and serves for a thoroughfare, as well as a place of recreation for the boys, especially in rainy weather. The exterior view of the hospital is very irregular; the several parts having been erected at different times, and being therefore a mixture of the gothic and modern styles of building. The great hall was built at the expense of sir John Frederic, alderman of London; and here the boys occasionally dine and sup. On the western side of this room is a large picture, by Verrio, (who has introduced his own portrait, in a long wig,) representing James II. sitting with his nobles, the governors, &c. with the half-figures of Edward VI. and Charles II. hanging as pictures in the same piece. Beyond this is a very handsome picture of Charles II. at full length, dressed in his royal robes, painted by Lely in 1662. At the other end of the hall is a large piece representing Edward VI. delivering the charter to the lord-mayor, who with the aldermen behind him are kneeling; the young king is accompanied by bishop Ridley and several others. In this hall is a good organ that is played when the boys sing their psalms or anthems on Sundays and other special days. In the court-room are portraits of Edward VI. and the chief benefactors to the hospital: that of the king is a capital picture, and indisputably one of Holbein's best productions. The records and other papers belonging to this hospital are kept in a room, all the walls of which are stone: among them is a curious piece of antiquity, being the earliest record of the charity, and containing the anthem sung by the first children, very beautifully illuminated.

There are twelve wards in the hospital, each of which contains upwards of fifty beds for the children. There is also another convenient ward set apart for the sick; which is accommodated with a kitchen, a consultation-chamber, and other convenient offices.

The writing-school is a neat edifice, supported on pillars, and built with brick and stone, in the year 1694, at the end of the great hall. It was founded by sir John

Moore, one of the aldermen of the city, and president of the house, whom it is said to have cost five thousand pounds, and contains long writing-boards sufficient for the use of five hundred boys. At the upper end of the room is a niche, in which was formerly the statue that is now placed on the outside of the school, under which is the following inscription: "Anno Dom. 1694. This Writing-School, and stately building, was begun, and completely finished, at the sole charge of Sir John Moore, Knt. and Lord Mayor of the city, in the year MDCLXXXI. now President of this house, he having been otherwise a liberal benefactor of the same." The grammar-school is situated on the north side of the hospital, near the passage into Little Britain. It was erected in the year 1793; and is wholly of brick, except the ornamental parts, which are stone.

Over the south gate that leads into the cloisters, is a statue of Edward VI. now much mutilated, beneath which is written, in letters of gold, the following inscription: "Edward the Sixth of famous memory, King of England, was the founder of Christ's Hospital; and Sir Robert Clayton, Knt. and Alderman, sometime Lord-mayor of this city of London, erected this statue of King Edward, and built most part of this fabric, Anno Dom. 1682." It is only from the passage leading to this gate, and the backs of the houses in Newgate-street, that the principal or south front of the hospital can be seen. It is a handsome piece of brick-work ornamented with pilasters of the Ionic order, and having a circular pediment in the centre. On the east side of the building, opposite to the counting-house, is a much more perfect statue of Edward VI. standing on a slab of black marble, in the attitude of delivering the charter. And in the niche, over the western entrance from the Grey Friars, is a statue of Charles II. in the royal robes.

In the year 1673, king Charles II. added a mathematical school, for the instruction of forty boys in navigation, and endowed it, for seven years, with one thousand pounds per annum, to be paid out of the Exchequer. Ten of these boys are put apprentice, every year, to masters of ships; and ten others, of the best genius, are elected to supply their places. But, lest this mathematical school should fail, for want of boys properly qualified to supply it, one Mr. Stone, a governor, left a legacy to maintain a subordinate mathematical school, of twelve boys; which is called Stone's School, where they were prepared for reception into the King's Ward. Another mathematical school, for thirty-seven boys, was founded by Mr. Travers. But the mathematical schools are now united; where practical mathematics, especially navigation, are taught.—The boys not intended for the sea are in general bound out apprentices at fourteen or fifteen years of age; and some, properly qualified, are sent to Oxford or Cambridge, where they are maintained for a like term: one scholar is sent every year, except on the return of every seventh year when two scholars are sent; the scholars have their choice of the college to which they are to go, but Pembroke-hall in Cambridge is generally preferred as most advantageous to them; and one scholar is also sent to Oxford in eight years. The allowance paid to each of them during the first seven years is 60l. per annum.

On St. Matthew's day, the 21st of September, yearly, the lord-mayor in state, with the president, aldermen, sheriffs, treasurer, and governors, and other company, assemble in the great hall after divine service at Christ-church, to hear orations from the elder scholars; one of them speaks in Latin, and the other in English; the latter of these, having spoken in Latin on the preceding year, is now elected off to college, and leaves the school in about a month afterwards; on this occasion a glove is handed about among the audience for their contribution.

The dress of the children in this hospital consists of a long coat of blue cloth hanging loose to their heels, girt about their waist with a red leather girdle, buckled; a loose petticoat underneath, of yellow cloth, (of late years the boys are allowed breeches,) a round useless thrum cap,

cap, tied with a band; yellow stockings, and black low-heeled shoes. The boys in the mathematical school, as a badge of distinction, wear on the left breast of their coat a plate of silver, with an emblematical device on it, the dye of which is kept in the Tower, where they are all stamped. The principal figures on this plate are, Arithmetic, with a scroll of accounts in one hand, and her other hand placed on a blue-coat boy's head; Geometry, with a triangle in her hand; and Astronomy, with a quadrant in one hand, and a sphere in the other. Round the plate is the following inscription: *Auspicio Caroli Secundi Regis, 1673.* This badge they retain during their apprenticeship, as a security against being pressed into the king's service in times of war.

The children are received into this hospital at seven years of age; and those who have not already been taught to read are sent down to Hertford; at which place there is a school and proper instructors to prepare them for being sent to the hospital in London; where they are received as room is made for their admission by the elder boys being bound out apprentices. The girls (about seventy in number) are also all sent to Hertford, where they receive the whole of their education.

The children to be maintained at Christ's hospital were, by the original charter, described to be *poor and fatherless*; but it is a long time since the limitation of them to orphans has ceased. Another of the regulations prescribed by the charter and rules of this charity for the admission of children is, that "no children who have any probable means of being otherwise provided for shall be taken into the hospital on any account whatsoever; and that the minister and churchwardens, and three or four of the principal inhabitants of his parish, are required to certify the incapacity of the parents to maintain and educate them; and on these grounds the petitioner humbly beseeches their worships, in their usual pity and charity to distressed men, poor widows, and fatherless children, to grant admission to the child in question." The precision with which the qualification of the pupil is here marked has not always been observed, and its protection has in some cases been given to the children of those who were able to afford protection to the institution itself; this has however very recently been fully and ably discussed, and some resolutions passed, which will most probably prevent the recurrence of a similar abuse. Nothing can more clearly show what kind of children were formerly received as fit objects of the charity, than a precept to be found among the archives at Guildhall, dated on the 27th of September, 1582, by which the lord-mayor required the aldermen, or their deputies, not to subscribe any bill from any of the parishes of their ward for the admitting of any child into Christ's Hospital, except that promise be made therein from a vestry of every such parish to receive such child back again from the charge of the hospital, at the age of sixteen years, (being required thereto by the governors,) if in the mean time such child be not sent to service, dead, or otherwise provided for.

The children of the grammar-school are examined in the months of March and September by an experienced person, who is appointed by the governors. The upper and under masters commence teaching at seven in the morning from March to November, and at eight during the remainder of the year; dismiss the boys at eleven, return at one, and conclude at five, or at four in the winter. No child is to be taught Latin till he can read English perfectly, and write it grammatically. The upper master examines the under master's highest form twice yearly, and takes thence such as he judges ready for his instruction. A catalogue of the children with their forms is called over every morning and afternoon, and a copy delivered at the counting-house, previous to each visitation by the committee; and the masters are required to observe the dress of their scholars as to their cleanliness, and the propriety of their demeanor. The holidays allowed are eleven days at Easter, including Sundays; one

week at Whitfuntide, and at Bartholomewide three weeks; and at Christmas fifteen days, and the usual saints' days, &c.

An exhibition of drawing and specimens of writing takes place in the hall on the 31st of March and 30th of September; each boy is seated at the tables with his performances before him. Many of the latter are, says Malcolm, (and what any visitor may corroborate,) of superlative excellence; and the worst would procure the writer a situation in the most fastidious merchant's counting-house.

Among the peculiarities of Christ's Hospital, a fight is exhibited from Christmas to Easter every year, which no other institution, lay, civil, ecclesiastical, or eleemosynary, has ever equalled in their grandest ceremonies, or which is more calculated to impress the heart of a spectator with the liveliest sentiments of sympathetic pleasure; that is, the supper of all the children on Sunday evenings at six o'clock, to which strangers are admitted by tickets. The great hall, which was rebuilt after the fire of London, contains several tables which are covered with table-cloths, wooden platters, and buckets of beer, with bread and cheese. The treasurer and governors take their seats at the upper end, at a semicircular table; the boys, attended by the nurses of their several wards, enter in order, and arrange themselves on each side of the hall; strangers are then admitted, who go along the centre of the hall to the upper end; the masters of the school, the steward, and the matron, take their places there also; and the nurses preside at each table, on which a great number of candles are placed, and these, with many lamps and a large lustre, illuminate the room. The ceremony then commences by the steward striking upon one of the tables three times with a mallet, which produces a profound silence; one of the boys intended for the church, having ascended a pulpit on one side of the hall, then reads the second lesson for the afternoon-service of the day, and an evening-prayer composed for the occasion, at the close of which the response of Amen, from about eight hundred youthful voices, has a very interesting effect; a psalm or hymn is next sung by the whole assembly, accompanied by the organ; the same youth then delivers the grace, after which the boys take their seats, and the supper proceeds. When the repast is concluded, the steward again strikes the table as before, and the boys instantly arrange themselves again on each side of the hall, and a grace is said from the pulpit; an anthem is then sung; after which the boys collect all the fragments into small baskets; and each ward, preceded by its nurse with lighted candles, marches in order past the upper table, where they bow to the governors, and file off to an adjoining school-room, the doors of which are thrown open to receive them, and the ceremony is closed. There is no person who has ever witnessed this ceremony that does not feel the sublimest and the tenderest emotions: it is a combined offering of the gratitude of hundreds to the throne of Divine Mercy!

The following is an abstract of the account presented to the lord-mayor and the rest of the governors on Easter Monday last (1814):

Children put forth apprentices, and discharged from Christ's Hospital, the year last past, 207, eleven whereof, being instructed in the mathematics and navigation, were placed forth apprentices to commanders of ships, out of the mathematical school, founded by his majesty king Charles II. of blessed memory	- - - - -	207	
Children buried the year last past	- - - - -	7	
Now under the care and charge of the hospital, in London and at Hertford	- - - - -	1060	} 1178
To be admitted on presentations granted to this time	- - - - -	118	

The permanent funds of this charity consist in an annual revenue in houses and lands; the licensing and looking after the carts allowed by the city, each of which pays a certain sum for *sealing*; and a duty of three farthings, paid upon every piece of cloth brought to Blackwell-hall.

It is computed that the annual expenditure of this hospital amounts to thirty thousand pounds per annum, including the board and clothing of the children and the salaries to the officers and servants of the foundation.

The upright administration of this hospital has in no instance been more acknowledged than in the trusts which have been reposed in them, by those who have founded other charities, entirely unconnected with the nature of this foundation, and wholly without their previous knowledge: viz. 1st, The alms-houses founded by David Smith, citizen and embroiderer, in 1584, which was destroyed by the fire in 1666, and afterwards rebuilt by sir Thomas Fitch; the pensioners at first received only 1l. 9s. 4d. but the daughter of sir T. Fitch added a further gift sufficient to allow them from the company of embroiders 1l. 14s. 6d. each. 2dly, The far more extensive and important trust of Mr. Hetherington's charity for the blind, by which no fewer than 450 blind persons (not beggars) are relieved with 10l. per ann. each.

We now come up a narrow winding passage between Christ's and Bartholomew's hospitals, into *Giltspur-street*, so named most probably from a sign at some inn in that place, or out of compliment to the knights who used to come by in their way to the tilts and tournaments generally held in Smithfield. *Cock-lane* and *Pie-corner* obtained their names, as it should seem, from the same circumstance. Both these birds are known for their propensity to fight, their courage and obstinacy. It is therefore probable that public houses, or inns in this neighbourhood, had adopted these badges on account of the wranglers who made their way through this street to the spot where their disputes were to be settled. The words of our most estimable chronicler and keen surveyor, John Stow, about *Pie-corner*, are curious, and give consistence, as they gave rise, to our hypothesis. He says: "Pie-corner, a place so called of such a signe, sometimes a fair inne for receipt of travellers, but now (1633) divided into tenements; and, over against the said Pie-corner lyeth Cocke-lane, which runneth down to Oldbourne conduit." It is clear that the *pie*, in this circumstance, did not mean any thing to eat, but the bird of that name, the pie or mag-pie. The original word is *pica* in Latin, from which, in imitation of, or contemporaneously with, the French, we made *pie*; hence every thing which, like that bird, is made up into the two colours, white and black, obtained this appellation. The well-known dish of that name, contrasting the whiteness of the crust with the darker colour of the meat or fruit which the paste contains, was so called from that circumstance; and the coincidence of the fire of London beginning at Pudding-lane, and ending at Pie-corner, led the mind astray, and distorted the original sense of the denomination.—This short explanation, which we have thought interesting and useful, leads us to consider the figure of a boy placed many years since at the corner of *Cock-lane* and *Giltspur-street*. It has been there for many years; and, if recollection does not deceive them, several old friends of ours have assured us that they remember the little figure for more than sixty years; but their opinion is, that the statue was of stone. We have ourselves some faint recollection of having seen the one now existing there (and of which we gave an engraving in Plate VII. b.) more than twenty years ago. The boy, though partly disfigured, exhibits still some remains of the luffy style of Rubens, being overloaded with fat. A kind of drapery, which is at this time painted blue, is seen behind him; and the poor little creature, either originally, or from subsequent alterations, seems really to labour under the most excruciating torture. Is it intended to represent the Dutch boy, mentioned by some Londinographers as having confessed to have been, with his father, the baker, the cause of the conflagration? But an inscription upon the folded arms and part of the belly, runs as follows: "This boy was put up in memory of the great fire of London, occasioned by the lin of gluttony—1666." Hence some suppose this tun-bellied boy might have been in-

tended as a personification of Gluttony itself. In another view, the aching face, uplifted eyes, and shrinking muscles, of the fat infant, supported by the inscription, and the flame-colour paint with which he is generally besmeared once in two or three years, combine to make others believe that it was carved for the special purpose of representing a young and unfortunate victim of the devouring fire. But no such thing. We have looked at it with the unprejudiced eye of an antiquary; and, to our great astonishment, we have discovered, that the now-existing figure is that of *CUPID*! The son of Venus is famed, in mythological lore, for setting hearts on fire, but not whole cities. However, this little statue was, no doubt, originally carved for the son of Venus; for he has wings, and they are conspicuous, as they happen to be now painted bright yellow. Hence we are led to conclude that this supposed, or however-adopted, memento of the fire of London, was borrowed from some groupe in wood representing Cupid child by his mother, or, as we see him in many places, scourged by Jealousy or the Graces.

We hope our readers will not think our criticism misplaced, though this memento of the fire of London is evidently so; for we omitted to mention that the figure is set against a public-house at the corner of *Cock-lane*; whereas there can be little doubt that the fire stopped at the opposite corner; as Stow expressly informs us, in the passage already quoted, "that over against Pie-corner lyeth *Cock-lane*." The figure might have been removed, and set up opposite, when the houses on that side were last rebuilt; or it might have been originally placed there (which better agrees with the traditions we have been able to collect) as a convenient situation to point to the spot where the fire stopped; just as the Monument is not placed on the spot where the fire began, but 202 feet from it. Upon the whole, there is little doubt but that *Pie-corner*, properly so called, is at this time occupied by a baker (of *pies* and other things), at the corner of the passage we have mentioned, which is now commonly called *Plough-court*, from a public-house of that name; but formerly *Windmill-court*, from the windmill at the top of *Old Newgate*; and more anciently *Pie-corner-lane*; and is so named in Wilkes's British Directory.

Having finished the digression which brought us to the upper corner of this passage, court, or lane, we shall retreat the same way we come, and then pass through Christ's Hospital, and out at the south-west avenue, the Grey Friars, into *Newgate-street*.—Exactly opposite the Grey Friars' gate is *Warwick-lane*, which derives its name from the inn or house of Richard Nevil, the king-making earl of Warwick. Speaking of his coming to London to the convention of 1453, Stow says, he was accompanied by "six hundred men, all in red jackets imbroidered with ragged staves before and behind, and was lodged in *Warwicke-lane*; in whose house there was often six oxen eaten at a breakfast; and every tavern was full of his meate; for he that had any acquaintance in that house might have there so much of sodden and rost meate as he could pricke and carry upon a long dagger." The memory of this earl is still preserved by a stone carving against the side of a house at the north-west corner, whose front is in *Newgate-street*. This figure, not for the elegance of the workmanship, but on account of its antiquity, and the reflections it may give rise to, we have thought worthy of preservation. It is represented on Plate VII. a. at fig. 8.—Considering attentively this little piece of bas relief, we suspect that the design has been partly taken from the drawing of that famous character Guy earl of Warwick, in the curious roll of the earls of Warwick, now in the possession of the corporation of Heralds; and hence arose a sort of mistake in the shield, showing a bend sinister instead of a chevron, ermine, the second leg of the chevron being nearly lost in the concealed part of the buckler, as represented upon the roll. The warrior is dressed in a coat of mail, with the military *jacum* or frock over it. The letters G. C. at bottom might be supposed to stand

stand for *Guido Comes*, "Earl Guy;" but, when on the other side of the figure we take notice of a coat of arms consisting of a bend charged with three maces, we are inclined to suppose that the letters mean George or Guy Carlton or Carrington, to which names such arms belong; and, were we allowed to indulge our fancy on the subject, we would suppose that these were the initials of the possessor of the house at the time it was first rebuilt, two years after the great conflagration; and that, confounding the ancient earl Guy with Richard Nevil, he caused the said arms and figure to be carved in allusion to the circumstance mentioned above. Yet the arms on the shield are not those of Richard Nevil earl of Warwick, who bore Gules, a saltire argent, with a label in chief; but they are lozengy, as the most ancient arms of the earls of Warwick appear on record to have been, with a chevron either fancifully diapered or ermine, as he bore his arms; with this difference, that the field here is lozengy instead of chequy. However, this deep research and heraldic discussion may have no other foundation than the ignorance of the sculptor or his employer; and our intention was merely to elucidate a point of history connected with this piece of carving, to render our survey the more interesting by it, and to bring the bas relief itself into notice; for it is curious that many of our acquaintance, who have lived for years in the neighbourhood, have never noticed this little piece of antiquity, though it is now nearly a century and a half old. We have made many inquiries about the owner of the house at the probable time of this little sculpture being put up: the only information we could get was, that the house has been in the tobacco and snuff trade ever since the year 1660, as stated over the door of Mr. Parry, who now inhabits it, and who is as innocent of any antiquarian knowledge as one of his own snuff-jars.

Exactly opposite to this ancient sculpture is a public-house called the Guy earl of Warwick; and, crossing Warwick-lane again, we find at the corner of Warwick-square the Three Jolly Butchers, a very appropriate sign, as Newgate Market is contiguous, and holds a square area between this lane on the west, Ivy-lane on the east, Paternoster-row on the south, and Newgate-street on the north. The piece of ground which is occupied by it, measures 194 feet from east to west, and 148 from north to south, with a large market-house in the centre. Under the market-house are vaults, or cellars; and the upper part of it is principally used as warehouses for fruiterers and gardeners. The shops within this building are for the sale of tripe, butter, eggs, &c. The houses that extend on each of the sides, which form the square, are most of them occupied by butchers; and the avenues that lead to the market, from Paternoster-row and Newgate-street, are occupied by poulterers, fishmongers, &c.

Before the fire of London, this market was held in Newgate-street, (see p. 416.) where there was a market-house for meal, and a middle row of sheds, which were afterward converted into houses, inhabited by butchers, tripe-sellers, &c. while the country people, who brought provisions to the city, were forced to stand with their stalls in the open street, where their persons and goods were exposed to danger, from the coaches, carts, and cattle, that passed through the streets. At that time, Butcherhall-lane was filled with slaughter-houses for the use of this market; and Blowbladder-street was rendered remarkable by blown bladders hanging in the windows of the shops where they were sold.

On the west side of Warwick-lane, near the north end, is the College of Physicians. This is a very noble structure built with brick and stone, the entrance to which is through a grand octangular porch, crowned with a dome that terminates in a gilt ball, which the witty Garth calls the *gilded pill*.

Here stands a dome majestic to the sight,  
And sumptuous arches bear its oval height;  
A golden globe, plac'd high with artful skill,  
Seems to the distant sight a gilded pill.

*Dispensary.*

On the summit of the centre is the bird of *Æscu-*

lapius, the admonishing cock.—The inside was designed by sir Christopher Wren, and is very elegant. The central building, which contains the library and other rooms of state and convenience, was the design of Inigo Jones. The ascent to the door is by a flight of steps; and in the under part is a basement story. The whole front is decorated with pilasters of the Ionic and Corinthian orders. The buildings that compose the two sides of the court are uniform, and have the window-cases handsomely ornamented. The orders are well executed, and the whole edifice is both beautiful and commodious.

In the centre of the front, over the door-case, is a niche containing a statue of Charles II. under which is the following inscription:

Utriusque fortunæ exemplar ingens

Adversis rebus Deum probavit prosperis scipsum .

Collegii hujusce itator.

The style of this is not very Ciceronian, and the sense is rather intricate. It signifies, that "Charles, the founder of this college, had been a great example of the *protection* of God in adversity, and of *moderation* (we suppose) in prosperity." It is pity that a few words were not added in order to convey the meaning more decidedly. But there was no sir George Baker in that day to treat the college with elegant Latin; neither is there now, or we should not have presumed to suggest the following alteration: "Utriusque fortunæ exemplar ingens, adversis rebus Deum moderatorem, prosperis seipsum moderatum, probavit Collegii hujusce itator."

Opposite to the statue of our merry and profuse monarch is that of a person of a character extremely different, the notorious sir John Cutler. It appears, by the annals of the college, that in the year 1674 a considerable sum of money had been subscribed by the fellows, for the erection of a new college, the old one having been consumed in the great fire, eight years before. It also appears, that sir John Cutler, a near relation of Dr. Whistler, the president, was desirous of becoming a benefactor. A committee was appointed to wait upon sir John, to thank him for his kind intentions. He accepted their thanks, renewed his promise, and specified the part of the building of which he intended to bear the expense. In the year 1680, statues in honour of the king and sir John were voted by the members; and nine years afterward, the college being then completed, it was resolved to borrow money of sir John Cutler, to discharge the college-debt; but the sum is not specified. It appears however, that, in 1699, sir John's executors made a demand on the college of 7000l. which sum was supposed to include the money actually lent and the money pretended to be given, but set down as a debt in sir John's books, with the interest on both. Lord Radnor, however, and Mr. Boulter, sir John Cutler's executors, were prevailed upon to accept 2000l. from the college, and actually remitted the other five. So that sir John's promise, which he never performed, obtained him the statue, and the liberality of his executors has kept it in its place ever since. But the college have wisely obliterated the inscription, which, in the warmth of its gratitude, it had placed beneath the figure: *Omnis Cutleri cedat labor Amphitheatro*. But his arms, elegantly carved in an ancient escutcheon, with mantlings and crest, are suffered to remain.

The different apartments belonging to this college, consist of a committee-room; a library furnished with books by sir Theodore Mayerne and the marquis of Dorchester; a great hall for the quarterly meetings of the doctors; a theatre for anatomical dissections, but never used; a preparing-room, where are thirteen tables, containing all the muscles in the human body: and, over all, there are garrets to dry the herbs for the use of the dispensary.

In the hall are the portraits of several of the most eminent of the faculty, among which are those of sir Theodore Mayerne, a native of Geneva, physician to James and Charles I. the great Sydenham, to whom thousands owe  
their

their lives, by his daring attempt of the cool regimen in the small-pox; Harvey, who first discovered the circulation of the blood; and the learned and pious sir Thomas Brown, who said that the discovery of that great man's was preferable to the discovery of the new world.—Sir Edmund King, a favourite of Charles II. When that monarch was first struck with the apoplexy, he had the courage to relieve his majesty by instant bleeding; putting the rigour of the law to defiance in case of failure of success. A thousand pounds was ordered as a reward, but never paid. He was among the philosophers of his time, who made the famous experiment of transfusing the blood of one animal into another. The blood of a healthy young spaniel was conveyed into the veins of an old mangy dog, who they say was perfectly cured in less than a fortnight. The blood of a young dog was transfused into one almost blind with age, and which, before, could scarcely move: the latter did in two hours leap and frisk; and yet the young dog, which received in return the blood of the old or distempered, felt no sort of injury. The same experiment, when extended to the human species, has not been successful.—A very good portrait of the anatomist Vesalius, on board, by John Calkar, a painter from the duchy of Cleves, who died in 1546. This celebrated character had filled the professor's chair at Venice; after that, was for some time physician to Charles V. Disgusted with the manners of a court, he determined on a voyage to the Holy Land. The republic of Venice sent to him to fill the professorship of medicine at Padua, vacant by the death of Fallopius. On his return, in 1564, he was shipwrecked on the isle of Zante, where he perished by hunger.—Dr. Goodal, the Stentor of Garth's Dispensary.—Dr. Millington, whom the witty author compliments with the following lines:

Machaon, whose experience we adore,  
Great as your matchless merit is your power:  
At your approach the baffled tyrant Death  
Breaks his keen shafts, and grinds his clashing teeth.

The portrait of Dr. Freind, the historian of physic, and the most able in his profession, and the most elegant writer of his time, must not be omitted. See vol. viii. p. 32.—Here are also fine busts of Harvey, Sydenham, and Mead.—The celebrated and worthy George Edwards was library-keeper for the last forty years of his life. See vol. vi. p. 277.

This society's first college, which was given them by Dr. Linacre, physician to Henry VIII. was in Knight-riding-street. They afterwards removed to a house which they purchased in Amen-corner, where Dr. Harvey built a library and a public hall, which he granted for ever to the college, and endowed it with his estate, which he resigned to them in his life-time. Part of this estate is assigned for an annual oration in commemoration of their benefactor, and to provide a good dinner for the society. This building perished in the flames, in 1666; after which the present edifice was erected on a piece of ground purchased by the fellows.

Going again into Newgate-street, and turning to the right, we soon came opposite to Bagnio-court, which took its name from the first *bagnio* introduced in this city. The word is Italian, and means a bathing-place, a house where you can conveniently indulge in the luxury of bathing. *Hammum*, which is the word employed at the other end of the town for houses of this kind, is corrupted from the Arabic *hammam*, which also signifies a bath.

Near this, to the west, is Bull-head-court, over the entrance to which (and not at Bagnio-court, where Pennant directs us to look for it) we found a small sculpture in stone of William Evans, gigantic porter to Charles I. and his diminutive fellow-servant, Jeffrey Hudson, dwarf to the same monarch. We are told that this small gentleman commanded, with much reputation, a troop of horse in his majesty's service; and, in 1644, killed Mr.

Crofts in a duel, who had ventured to ridicule him.—This sculpture, which is fixed between the windows of the first and second stories of the house of Mr. Payne the hatter, seems to have been either renewed or repaired since its being originally placed there; and is just now fresh painted; the mantles or overalls of these odd fellows are made red, the royal livery, and their waistcoats white. At the west corner of the house, there is also a painting of the giant and dwarf, by way of sign. The height of the porter was seven feet and a half, the dwarf three feet nine inches; therefore the idle story of the porter putting the dwarf, in his pocket, related by Fuller, is not worth repeating, but as it shows how easy people of a certain description are able to swallow any sort of bait trimmed up to catch their credulity; for, unless the giant had been all pocket from the shoulder to the knee, Hudson, diminutive as he was, could never have been carried in that curious guise.

A passage still farther west on the same side of the street, leads to Christ-church, which is dedicated to the name and honour of our Saviour, and originally belonged to the convent of Grey Friars, or Franciscans; but, falling to the crown at the dissolution of that religious house, Henry VIII. gave it to the mayor, commonalty, and citizens, of London, to make a parish-church, in lieu of the two churches of St. Ewen, in Newgate-market, near the north corner of Eldeneffs, now called Warwick-lane, and of St. Nicholas in the Shambles, on the north side of Newgate; both which churches, and their parishes, were thereupon demolished; and as much of St. Sepulchre's parish as lay within Newgate was added to this new-erected parish, which was then ordered to be called by the name of *Christ-church*; from which time it was made a vicarage, in the patronage of the mayor, commonalty, and citizens, of London, as governors of the hospital of St. Bartholomew, also of the foundation of Henry VIII. and the king gave five hundred marks per annum, in land, for ever, for the maintenance of the said church, with divine service, repairs, &c. In consideration whereof, the mayor, commonalty, and citizens, did covenant and grant (inter alia), to find and sustain one preacher at this church, who was to be, from time to time, vicar thereof; giving unto him, yearly, for his stipend, 16l. 13s. 4d. to the visitor (now called the Ordinary of Newgate) ten pounds; and to the other five priests in Christ-church, all to be helping in divine service, ministering the sacraments and sacramentals, eight pounds a-piece; to two clerks, six pounds each; and to a sexton, four pounds yearly.—The old church was destroyed by the fire of London, after which the present structure was erected. It is built of stone, very strong, spacious, and handsome. The tower is square, and of a considerable height, crowned with a light handsome turret, adorned with vases. The inside is neatly ornamented; the walls and pillars are wainscoted, and there are very large galleries at the west end, and on the north and south sides. On the south side of the church without, has been lately erected a plain but neat brick building, to be used as a vestry-room, for the better convenience of the ministers who officiate in the church. After the fire of London, the parish of St. Leonard, Foster-lane, whose church was destroyed, and not rebuilt, was annexed to Christ-church; and the patronage of the former, which is a rectory, being in the dean and chapter of Westminster, they, and the governors of St. Bartholomew's Hospital, present alternately to these united livings.

The Grey Friars were friars minors of a religious order, or society, founded by St. Francis of Assisi, who was canonized by pope Gregory IX. in 1228; of whom a detached body of nine brethren, viz. five priests and four lay brothers, was sent from Italy to settle and propagate their order in England. They arrived at Dover in 1224, from whence four of them repaired to London, and the other five settled at Canterbury. Those who came to London were received and entertained by the Friars-preachers, at their house in Holborn; from whence they removed to

a house

a house in Cornhill, provided for them by John Travers, wherein they continued for about a-year; but, being much straitened for room, in consequence of the great increase of their numbers, John Ewyn, citizen and mercer of London, who afterwards became a lay brother among them, purchased a plot of ground in the parish of St. Nicholas Shambles, which he gave in trust to the mayor and commonalty of London, for the purpose of providing them with a spot of ground, whereon a building for their use might be erected.—A site being thus procured, which was considerably enlarged by the additional benefactions of the mayor and commonalty, as well as by the munificence of private citizens, divers of the principal inhabitants of the city began, in the year 1225, to erect, at their own expense, a house and chapel, for the better accommodation of these friars. But, their numbers continuing to increase, the chapel became too small for the celebration of the divine offices; wherefore Margaret, consort to king Edward I. began a stately and very spacious church, which was twenty-one years in building, and, in dimensions, exceeded all the places of worship in this city, except the cathedral; it being no less than three hundred feet in length, eighty-nine in breadth, and sixty-four feet in height: this magnificent structure extended from Butcher-hall-lane to the Grey-Friars' gateway. Among other benefactors to this convent, was sir Richard Whittington, so often mentioned with honour, who, at his own expense, erected a library, one hundred and twenty-nine feet long, and thirty-one broad, and furnished it with good store of books. Weaver, in his *Funeral Monuments*, informs us, that here were buried four queens, four duchesses, four countesses, one duke, two earls, eight barons, and thirty-five knights; and, in all, six hundred and sixty-three persons of quality were here interred, before the dissolution of the convent. In the choir were nine tombs of alabaster and marble, inclosed with iron bars. One tomb, in the body of the church, coped with iron; and one hundred and forty marble grave-stones, in divers places; all which were pulled down, removed, and sold, by sir Martin Bowes, lord-mayor of London, in 1545, for fifty pounds.

The account which Stow gives us of this ancient foundation is interesting, but too extensive for our columns. The names of the citizens and others who so liberally contributed to the erection of the convent and church belonging to the Grey Friars; the list of nearly all those that had been buried in the same church; the description of their monuments and epitaphs; are curious, and of importance in tracing families and in connecting them in genealogical order; but are foreign to our purpose. We shall, however, present to our readers part of an epitaph which was engraved there on the monument of Master Robert Rogers, who died anno 1601. It is a dialogue between Death, Time, and Rogers.

DEATH. Stand fairly encountred both. Grave soveraigne Time,  
Borne of eternity, age's father,  
Prince of all power—all powers on earth are thine  
That doest my ruine's truest records gather.  
Lend thy consent, thy helping hand to mine  
And Death will make Time's sovereignty as great  
As the three sisters, ladies of sterne fate.

TIME. Impartiall Death, honour's respectlesse foe,  
Grim meagre caytiffe, wherefore doest thou come?  
Must virtue's children to the slaughter goe,  
In thy blood-yawning cell to fill a roome?  
Cannone but they quench thy bloody thirst?—DEATH. No.  
Rogers I come for: Time, thou canst not save him:  
This dart must strike him, and grim Death will have him.

ROGERS. Death, welcome; all by thee, I know, must end;  
Nor doe I care for longer life than this:  
I thank thee thou hast staid so long, kinde friend.  
Sweet Time, be patient, pardon my amisse,  
If I have time mispent, alas! we all offend.  
If, said I?—yes, 'tis certain sure I have;  
For which offence, deare Time, pardon I crave.

The answer of Time, the peremptory reply of Death, and the epitaph written by Time, conclude this dramatic piece of funeral poetry, and yield no bad specimen of the elegiac style of that age, when the British Muse, still in her childhood, was trifling and toying with antitheses and conceits.

The church of St. Nicholas Shambles, which was pulled down when Christ-church was erected, took its name from its dedication to St. Nicholas, and its additional epithet from its situation; the Shambles having been the ancient name of Newgate-freet, from the flesh-market therein. It stood at the corner of Butcher-hall-lane.—That of St. Ewen, or Owen, was on the south side of Newgate-freet, between the market and Warwick-lane; the remains of which were very lately existing in the cellars of the houses on that spot.

Butcher-hall-lane, as it is now called, was anciently denominated Stinking-lane, and Chick-lane, on account of the strong smell which arose from the slaughter houses and poultry-shops there. It was contiguous to, and at the east of, the Grey Friars. A motion was made in the 3d year of Richard II. that "no butcher should kill any flesh within London, but at Knight's-bridge, or such-like distant place from the walls of the citie."—A most wholesome regulation, if it had taken place, and which would be even now strongly supported by the inhabitants of the ward of Farringdon within, on account of the nuisances daily committed in Warwick-lane and thereabouts. We understand, that the slaughter-houses in Warwick-lane have been presented and represented by the inhabitants as a nuisance, and that proceedings are instituted for the purpose of removing them; but we do not expect the application will be attended with success: the butchers may plead such a long prescription, that they can hardly be proscribed.

Newgate-freet is well built and of a noble breadth, full of trade and of bustle. It has moreover this remarkable feature, that most of those persons who prepare canvas and sell worsted for the small pieces of tapestry which have been of late the amusement of our ladies of rank, seem to have gathered themselves together in this street. The number of carriages which this street pours into Cheap-side, and those it receives in return, makes it rather incumbered, and, at certain times, an impeded sort of passage to the heart of the city. It is one of those large arteries and veins, which, notwithstanding their width, are liable to become obstructed. From the point where on one side you have the strong building of Newgate and on the other the corner-house adjoining the Compter, the view is most interesting. On the right you cast a long glance at Smithfield; on the left you reach nearly to Ludgate-hill; but, straight forward, or to the west, the scene displays itself with real grandeur and magnificence. St. Sepulchre's church on one hand; the steeple and pinnacles of St. Andrew Holborn, at a distance, on the other; the noble breadth of Skinner-street, sloping down to the end of the market, and, by an undulating continuation, rising to Holborn-hill;—gives a particular and most characteristic aspect to this part of the metropolis.

The church of St. Sepulchre, which is so dedicated in commemoration of our Saviour's sepulchre or grave at Jerusalem, is now a spacious building, but not so large as of old time, part of the site of it being let out upon a building-lease. It is supposed to have been founded about the year 1100, at which time a particular devotion was paid to the Holy Sepulchre; and was so decayed in the reign of Edward IV. as to require re-building. Roger bishop of Salisbury, in the reign of Henry I. had given the patronage of this church to the prior and convent of St. Bartholomew in West Smithfield, who established a perpetual vicarage in it, and held it till their dissolution, when it fell to the crown. King James I. in the seventh year of his reign granted the rectory and its appurtenances, and the advowson of this vicarage, to Francis Philips and others; after which the parishioners purchased the rectory and its appurtenances, and held them in fee-farm of the crown;

and the advowson of the vicarage was purchased by the president and fellows of St. John's College, Oxford, who continue patrons thereof.—The present structure was much damaged by the fire of London in 1666. The outward walls and the tower were, however, capable of reparation; and the middle aisle of the church was at the same time made with an arched roof, which was not so originally. This church, in its present situation, measures one hundred and twenty-six feet in length, exclusive of the broad passage at the west end; the breadth, exclusive of the north chapel, is fifty-eight feet; the height of the roof in the middle aisle is thirty-five feet; and the height of the steeple, to the top of the pinnacles, a hundred and forty-six feet. The body of the church is lighted with a row of very large Gothic windows, with buttresses between, over which runs a slight cornice; and on the top a plain and substantial battlement-work, in the style of the public buildings in the reign of Edward IV. At the steeple is a plain square tower, crowned with four pinnacles.—The organ of this church is an extremely good one; there is not perhaps in England an organ with so fine a trumpet-stop.

Opposite St. Sepulchre's church is Angel-court, at the upper end of which is a handsome old house, formerly the Farthing-office. It was afterwards occupied by the Hand-in-Hand fire-office; and is now the residence of Mr. Buckle, printer; the rest is let in tenements. The access to it is also through Green-Arbour-court.

Between Snow-hill and Ludgate-hill runs the street called the Old Bailey, which many of our antiquaries are of opinion is a corruption of *Bale-hill*, an eminence whereon was situated the *bale*, or bailiff's house, wherein he held a court for the trial of malefactors; and this opinion seems to be corroborated by such a court having been held here for many centuries, in which there is a place of security, where the sheriffs keep their prisoners during the session, which still retains the name of the *Bale-dock*. On the east side of the Old Bailey, and contiguous to the place where the Newgate of the city formerly stood, is the gaol for the county of Middlesex, which, from being appropriated to the same uses, also bears the name of Newgate. It is a massy stone building, consisting of two parts, that on the north being appropriated for debtors, and that on the south for felons, between which is a dwelling-house, occupied by the keeper. The whole of the front is formed of rustic work, and at the extremities of each face is an arched niche for a statue, but only two in the south front of the felons' side are yet occupied. Contiguous to this building, and only separated from it by a square court, is Justice-hall, commonly called the Sessions-house. This was formerly a plain brick edifice; but it has lately been rebuilt entirely of stone, and is brought so much forwarder than the old one as to be parallel with the street. On each of the sides is a flight of steps that lead to the court-room, which has a gallery on each side for the accommodation of spectators. The prisoners are brought to this court from Newgate by a passage that closely connects the two buildings; and there is a convenient place under the sessions-house in front, for detaining the prisoners till they are called upon their trials. There are also rooms for the grand and petty jury, with other necessary accommodations. A court is held here eight times a-year by the king's commission of oyer and terminer, for the trial of prisoners for crimes committed within the city of London and county of Middlesex. The judges are the lord-mayor, the aldermen past the chair, and the recorder; who, on such occasions, are attended by both the sheriffs, and by one or more of the national judges. The offences committed in the city are tried by a jury of citizens, and those committed in the county by a jury formed of the house-keepers in the county.

As the frequency of the sessions occasions a great resort of strangers to this place, it is well furnished with houses of refreshment: the Old Bailey, though not a long street, contains seven eating-houses and plenty of drinking-houses.

Opposite to the north end of the Old Bailey in a line with Newgate, is Giltspur-street Compter. It is composed of three pavilions crowned with triangular pediments, and connected by two galleries with flat roofs. The whole of this building, like Newgate, is of rustic stone work; but, having arched windows to the front, it has a lighter appearance. In 1518, there was a prison in Bread-street, Cheap-side, belonging to the sheriff's court for small debts. In 1622, it was removed to Wood-street, and called the New Compter. This prison was destroyed by the fire of London, and rebuilt. In 1791 it again changed its situation as well as name, and it is now called Giltspur-street Compter. The north side is occupied on the ground-floor by female debtors; on the second story is the gaoler's kitchen; the third story is inhabited by persons fined. The fourth side belongs to men-debtors. The centre is the gaoler's house. At the entrance, on the right-hand, is the sheriff's office. The prison is divided into nine wards, appropriated to prisoners of different descriptions; debtors, male and female; felons; persons fined; committed for misdemeanors; and vagrants. The debtors have two courts, nearly of the same dimensions, twenty-eight or thirty feet by eighteen or twenty, both well supplied with water. The fourth court has seven rooms. The north court has five rooms, inhabited by such as have been committed for small offences. Cold and warm baths are provided, and the prisoners are admitted to the use of them on proper occasions; and all the rooms have fire-places. The chapel, and indeed the entire building, is the neatest of all the London prisons.

Ludgate is situated close behind the last-mentioned prison, being part of the same building, and is appropriated to debtors, citizens of London. The prisoners were brought to this place in 1794. This prison is very small, but has every indulgence and accommodation which such narrow premises admit of. The court is but twenty-five feet by ten, but there are two pumps in it. There are in all eleven rooms, of which one is a hall, where the debtors associate in the day. There is also a long room, admitting six inhabitants; and another, the women's ward, that admits two; and also a small chapel.

If we return now to that elevated spot in the *quadri-vium* of Giltspur-street and the Old Bailey, of Newgate and Skinner-street, we find there a pump, handsome enough, but which excites in our mind the wish of seeing some monument and a fountain on this spot. It would certainly be a great ornament to the place; and indeed it is extraordinary that "fontaines," this branch of ornamental architecture, have been so neglected in this country, when nearly all the towns of Italy, and many in France, present some beautiful specimens of the kind.—A fountain is not only a picturesque object and an ornament, but the flowing of lympid crystal in large masses, the running of the stream along the streets, would be truly conducive to the salubrity of the air and to the health of the inhabitants, whilst the perennial murmur of the waters would lull the pensive mind into soft moods of the most pleasing melancholy.

This place is the centre of that long artery of the town which, nearly in a direct line, extends from Tyburn to Mile-end. Descending the slope of Skinner-street, we remark on one side the remains of the Commercial Hall, reduced to ashes a few years since; (see p. 362.) on the other side the still winding and steep remains of Snow-hill, the only access which, for a long lapse of years, existed from Holborn to Newgate-street. Several elegant shops adorn both sides of Skinner-street; and this new-made communication increases every day in respectability and trade. At the bottom is the entrance into Fleet Market. We have already traced the river Fleet nearly from its source. Suffice it now to add, that over this canal were four bridges, not inelegant, since they were built of Portland-stone; the first was at the bottom of Holborn, or Oldbourne; the second where now Fleet-lane on one side leads to Harp-alley on the other; the third at the bottom

of Ludgate-hill and Fleet-street; the fourth opposite to Bridewell, uniting the blackfriars with the white ones. In clearing this rivulet from the rubbish of the fire four years after that dreadful catastrophe, many Roman utensils were found at a depth of fifteen feet; and, still lower, a great quantity of Roman coins, in silver, copper, brass, and other metals, which were conjectured to have been thrown in by the terrified inhabitants at the approach of Boadicea with her army of Britons. The silver coins were the ring-money of several sizes, from that of a crown to a silver two-pence, each having a snip in the edge. Besides these antiquities, a number of others were found, marked with Saxon characters; such as arrow-heads, spurrows of a hand's breadth, daggers, seals, and keys, and a considerable number of modern medals with crosses, crucifixes, &c. But the expense of keeping this canal navigable, proving extremely burthenome to the citizens, it was at last neglected, and became a great and dangerous nuisance, which occasioned the city to apply to parliament for power to arch it over, and make it level with the street; and, having obtained an act for that purpose, the work was begun in the year 1734; and, a market-house with other conveniences being erected on the place, it was opened on the 30th of September, 1737, by the name of Fleet Market. This market consists of two rows of shops, almost the whole length of it, with a passage between, paved with rag-stone. In the centre is a turret, with a clock. The north end is for dealers in vegetables. By the act of parliament to enable the citizens to erect this market, the fee-simple of the ground on which it stands is vested in the mayor, commonalty, and citizens, of London, for ever; with a proviso that sufficient drains shall be kept through the channel; and that no houses, or sheds, exceeding fifteen feet in height, shall be erected thereon.

On the east side of this market, between Ludgate-hill and Fleet-lane, is the Fleet Prison, which was a place of confinement for debtors as early as the reign of Richard I. It is a brick building of considerable length, with galleries in each story, that reach from one end to the other, in which are the rooms for the prisoners. There are about one hundred and twenty-five of these rooms, besides a common kitchen, coffee-room, and tap-room; and behind the prison is a spacious area, in which the prisoners walk, and exercise themselves at different diversions. It is properly the prison belonging to the court of Common Pleas; but persons in contempt of the court of Chancery are also committed to it. The keeper is called Warden of the Fleet; and his place is of very great profit, as well as trust. Prisoners for debt, in any part of England, may be removed to the Fleet by habeas corpus, and enjoy the rules, or keep a house within the liberties, provided they give sufficient security to the warden, to indemnify him in case they should exceed them. The rules, or *liberties*, of the Fleet, are, the north side of Ludgate-hill, as far as the London coffee-house, a part of which only was within the rules, but the whole of which has been lately declared to be in them, since the door-way is in the rules; the Old Bailey, up to Fleet-lane, down that lane into the market, and then, turning the corner on the left, all the east side, along by the Fleet-prison to the bottom of Ludgate-hill.

Directly opposite to Fleet-market is an elegant spacious opening, called Bridge-street, leading to Blackfriars-bridge. On the west side of this street is Bridewell Hospital. This building is situated on the spot where once stood a royal palace, even before the conquest; and which continued, with some little intermission, in that state, till the reign of king Edward VI. In 1087, William the Conqueror gave many of the best materials of it towards rebuilding St. Paul's cathedral, which had then been destroyed by fire; and Henry I. gave also as many stones from the walls of the castle-yard as served to inclose and to form the gates and precincts of the church. Notwithstanding this, the dwelling remained, and became

the residence of several subsequent monarchs. After this it was neglected, until Henry VIII. repaired it for the reception of the emperor Charles V. who visited England in 1522, at a considerable expense: but the emperor lodged in the Blackfriars, and his suite in the palace; and a gallery of communication was flung over the ditch, and a passage cut through the city-wall into the emperor's apartments. Cardinal Wolsey afterwards resided there during his prosperity; and to this palace it was that he convened all the abbots and other heads of religious houses, English and foreign, and squeezed out of them 100,000*l.* an enormous sum in those days; and from the Cistercians, who rejected his supremacy, he extracted 33,000*l.* After Wolsey's fall, Henry VIII. resided there, particularly in 1529, and during the agitation at Blackfriars of the grand question concerning his marriage with queen Catharine; after which it was suffered to decay, and the pious bishop Ridley begged it of Edward VI. to be converted to some charitable use. See the article BRIDEWELL, vol. iii. p. 392.

The hospital was nearly destroyed by the general conflagration in 1666, and many of the houses belonging to it. Immediately after this calamity, places were provided by the governors for the reception of the arts-masters, apprentices, &c. and every possible effort made to restore the buildings, which cost upwards of 6000*l.* At present there is but one vast quadrangle, as the remnants of the old structure which crossed it north and south have lately been taken down; and the perfectly plain chapel which has risen upon the ruins has nothing to recommend it. The whole front has also been taken down, and rebuilt: it is now faced with stone, and presents a noble, though simple, appearance. On the pediment, we find the arms of the city most properly sculptured there.

The prison's gloomy front occupies the south-west corner; and the hall the greater part of the south side. This vast room is thirty-nine paces in length and fifteen in breadth, with a handsome chimney-piece at each end, and arcades at the sides. The ceiling is horizontal, and without other ornament than two flowers wherefrom the lustres depend. Facing each other on the north and south sides are bow-windows, ornamented with semi-domes, brackets, festoons, &c. &c. The other windows are arched, and rows of oval apertures are extended above them. At the west end, and over the chimney, is a large picture, nearly square, by Holbein, representing Edward VI. in the act of delivering the charter for the hospital to the mayor and citizens of London: the king holds it in his left hand, and rests the base of the sceptre gently upon it. He is seated on the throne, and clothed in robes of crimson lined with ermine, and is crowned. The doublet is of white cloth embroidered with gold, and the legs are covered by silk stockings. The lord-mayor, in scarlet robes, kneels at the king's right hand, and receives the charter with the right hand crossing the left on his breast: the head, very much thrown back, is covered by a close black cap, and he wears a small ruff: his knees rest on the two steps of the throne, covered by crimson velvet; but the only two of his brethren shown kneel on the floor. Seven of the great officers of state are placed near the king, under the crimson canopy of the throne, which is drawn in an awkward manner across the upper part of the picture. On the left side of this painting is a seated whole-length of Charles II. and on the right another of his brother: both tolerably painted. On the north wall is a whole length of sir Richard Carr Glynn, bart. president in 1755, full dressed with the civic robes; the city regalia are spread near him. Directly facing him is another whole-length, and a very good picture, of sir Richard Carr Glyn, bart. and alderman, president in 1798, (son of the former.) On the east wall is a large picture of William Withers, esq. lord-mayor, on horseback, preceding queen Anne to St. Paul's cathedral, in 1708: the mayor is seated on a dark bay horse, richly caparisoned. The benefactions are painted on the intermediate pannels.

This foundation is of a mixed nature, partaking of the hospital, the school of industry, the work-house, and the prison

prison for correction. Little can be said of the former department, as it does not receive sick patients; as to the school, it is conducted by six masters of different arts, who are elected by the governors, viz. a printer, bookbinder, ferret, orris, and galloon, weavers, and a silversmith; to whom twenty-eight youths are bound from Christ's Hospital, as apprentices; and these lads are clothed at the charge of Bridewell Hospital, but maintained by their masters, who receive all the profit of their work. They were formerly habited in a blue jacket and trowsers, with a white hat; but this singularity has of late years been judiciously abolished in favour of the usual clothing of other people. When they have served their apprenticeship of seven years, they receive their freedom, and a gift of 10l. towards establishing themselves in business. The work-house, and the prison for vagrants, and idle and disorderly persons of both sexes, are separated into solitary rooms, where employments are provided, which it is a part of their punishment to execute, and which are exacted by their task-masters, and sometimes accompanied with coercion. The chamberlain of London, to whom the administration of justice between master and apprentice is referred, has the power of committing the latter to this place for improper conduct, not amounting to fraud. In visiting these apartments, says Mr. Highmore, "I found in three adjoining rooms three apprentices to an eminent printer, who were committed for having joined with the journeymen in giving their master what is called the *grand wash*; or, in other words, having upset all the frames, types, papers, and every apparatus in his printing-office; when I saw them, they had a log of wood fixed by a chain to their leg, with a quantity of oakum to pick, and the addition of very little light and profound silence, for the occasion of rumination and repentance."

Great improvements have been made upon this estate: new houses have been lately erected in front of the hospital, at an expense of about 3500l. which is thereby inclosed, and its grated windows concealed from view, reserving a handsome entrance from Bridge-street; over which is the treasurer's house. The affairs of this hospital are managed by the governors, who are above three hundred, besides the lord-mayor and court of aldermen, all of whom are likewise governors of Bethlehem Hospital; for, these hospitals being one corporation, they have the same president, governors, clerk, physician, surgeon, and apothecary. This hospital, however, has its own steward, porter, matron, and four beadles, one of whom has the business of correcting the criminals. But, notwithstanding the union of Bridewell and Bethlehem hospitals as above-mentioned, yet it is to be observed that distinct accounts of their respective revenues are kept, although they are governed by the same members.—The account exhibited at Christmas 1803, stated a net income of 6201. 6s. 11d. arising from rents of the estates and the dividends on 3000l. 3 per cents, to which legacies and donations are to be subjoined. The expenses attending the arts-masters and apprentices amounted to 645l. 4s. 6d. the charges attending the vagrants, to 706l. 19s. and the salaries and gratuities to the several officers and servants, and to those attending the vagrants and clothing for the beadles, including the surveyor's per-centage and clerk of the works, amounted to 1586l. 14s. 2d. making a total of 11,618l. 2s. 6d. which exceeded the receipt by 3313l. 3s. 5d.—The following statement was read to the lord-mayor, aldermen, &c. after the Spital Sermon, on Easter Monday, 17814:

Vagrants received by commitments from the lord-mayor and aldermen last year	- - - -	242
Poor persons received to be passed	- - - -	860
Apprentices brought up to trades	- - - -	36
Ditto sent for confinement	- - - -	30
		1168

The Rock assurance-office, the Hand-in-hand, and the

Albion, adorn this large avenue to the magnificent bridge called Blackfriars; and many elegant private houses of reputable tradesmen and others, are seen along towards the handsome area called Chatham Place, from which the view extends right and left from London-bridge to Westminster, with, above the houses, a distant aspect of the undulating hills of Surry as far as the thick woods near Sydenham and the shady groves on the heights of Norwood. At night, the different foundries on the opposite bank of the river, with their chimney-tops burning in the darkened air, and the red flames reflected in long and quivering streaks on the rippling surface of the water, are not without their share of interest.

On the east side of Bridge-street, and opposite to Bridewell, is Apothecaries' Hall, at the top of Union-street, in Water-lane. It is a very handsome building, with a pair of gates in front that lead into a paved court; at the upper end of which is a grand flight of stairs leading into the hall-room, which is built with brick and stone, and adorned with columns of the Tuscan order. The ceiling of the court-room and of the hall are elegantly ornamented with fret-work; the wall is waincoted to the height of fourteen feet, and adorned with the bust of Dr. Gideon Delaun, apothecary to king James I. and with several pieces of exceeding good painting; among which are portraits of James I. and of the gentleman who procured their charter, and who had been obliged to leave France on account of religion. In this building are two large laboratories, one for chemical, and the other for galeucial, preparations; where great quantities of the best medicines are prepared for the use of apothecaries and others; particularly for the surgeons of the royal navy, who here furnish their chests with all useful and necessary medicines.—The arms of the company, (see Plate XI.) carved in stone on the pediment over the entrance-door, are very spiritedly executed. It is a pity that this building does not front Union-street, as it would certainly make a fine contrast with the front of Bridewell.

Just by Apothecaries' Hall is Printing-office court, and Playhouse-street; the last a memento of a theatre once existing there. The other leads to the Times newspaper-office: it is an elegant building in a small square, which by a flight of steps communicates with Earl-street.

On the greatest part of the ground now occupied by several streets and lanes, which offer nothing really worthy of notice, once stood the convent of the Dominicans, called Black Friars, or Friars Preachers, founded about the year 1276, by the interest and exhortations of Robert Kilwarby, archbishop of Canterbury. Edward I. by whose assistance the archbishop was enabled to build the monastery and a large church richly ornamented, kept his charters and records here; and in his time the precinct was crowded with the habitations of the nobility. This monastery obtained every immunity which any religious house had. Its precinct, which was very extensive, was surrounded by a wall with four gates, and contained a great number of shops, the occupiers of which exercised their trades and mysteries, though not free of the city, being subject only to the king, the superior of the house, and their own justices. These ample privileges of the Blackfriars precinct, though now lost, were preserved long after the suppression of religious houses; for when, after the dissolution of the priory, the mayor interfered with them, he was peremptorily commanded to desist, by Henry VIII. who sent him word that "He was as well able to keep the liberties as the friars were:" and in the reign of Mary the citizens made a fruitless application to parliament to grant them jurisdiction over the Blackfriars' precinct; but at length, in the year 1735, they succeeded (see p. 96.) At present, it is included in the ward of Farringdon Within, by the name of the precinct of St. Anne, Blackfriars; the church of which, being destroyed by the fire in 1666, was not rebuilt, and the parish was annexed to that of St. Andrew Wardrobe.

The continuator of Stow, in the edition of the Survey published

published in 1633, has preserved a very interesting account of an event which happened here only ten years before, and was therefore fresh in the memory of every one. We cannot resist extracting some particulars from it. It begins as follows: "The Fatal Vesper, or dismall evensong, happening at the Blackfriars on Sunday in the afternoone, it being the 26 day of October, 1623. There were upon that day, being dedicated to the service of God, assembled together in the Blackfriars, nere the French ambassador's house in ordinary, above three hundred persons of fundry nations, as English, Scottish, Welch, and Irish, to heare a sermon, and after that to celebrate evensong, according to the rites and ceremonies of the Romish church. Hee that was to supply that exercise for the present was father Drury, a Jesuite by profession, and by birth a gentleman, being extracted out of the house of the Norfolkian Druries. Hee was by those of the Romish religion reputed to be a man of great learning, as having studied many years beyond the sea with much approbation and allowance of his superiors; and, although he were opposite in point of faith and beliefe unto the religion now professed in England, yet was he held by the generality of our nation, both protestants and papists, who knew him, to be a man of good morall life, and of a plausible and laudable conversation. So that, in respect to those endowments, there could nothing have been desired more by us, than that hee had not bene a papist, but a member of our church, religion, and profession. The place wherein this congregation was assembled was a chamber nere unto the gate, three stories high, some threescore foot long, and twenty foot broad or thereabouts; the wals were of brick and stone, which are held by all architects to bee the strongest and the surest building." It was observed to the reverend father, that it might be dangerous to preach in that place; but he "would goe forward, with the greatest expedition he could, with his intended sermon; for the accomplishment of which designe, being clad in those robes and ornaments which are used by those of his order, being a Jesuit, having a surplice girt about his middle with a linnen girdle, a red cap with a white one underneath, turned up about the brimmes of his cap, and his other accoutrements belonging, which the Ignatian orders have imposed upon them; and, being placed in a chaire about the middest of the roome, which chaire was raised up something higher than the ordinary levell of the floore; hee crossing himself with the signe of the crosse, and having ended some private prayers, accommodated himselfe to his text, between three and foure of the clocke in the afternoon of the foresaid Sunday.—Having proceeded thus farre, (about the middle of his discourse,) loe what a sudden and unexpected accident fell out.—The sermon inclining towards the middest, and the day declining towards an end, it being almost foure of the clocke in the afternoone, the multitude and crowde of the assembly breaking downe with their overbearing weight the beames and side-timbers wherewith this roome was supported, they fell downe into the next chamber, the floore whereof being broken also with the descending weight of them and the ruines, they fell at last upon the lowest chamber of the edifice, where some of them perished, some were hurted and maymed, other some were free from all hurt and danger, except of that which the present fright and terror did impose upon them; and those were they especially who fell not at all, but remained in one angle or corner of the chamber which was free from falling."—The historian of this sad catastrophe goes on describing with warmth and feeling the consequence of this fall, and says: "So that, since the Sicilian Vespers, there was never an evensong more dolorous unto the French, nor more lamentable unto the Scots and English." Then follows a strong invective against the manners of the day.—"Fornications and adulteries are so frequent in this place," says the zealous writer, "that in vaine may we speake of the bordellas of Rome or the stewes of Venice, since the suburbs of this sinfull city are as bad as the suburbs of Rome or Venice. Moreover our drunkennesse

is such, that, although our eyes look red and our hearts are as fat as brawn with drinking of wine, yet we rise up early to drinke strong drinke;" &c. &c.—The list of those who died by, or in consequence of, this accident, amounts to ninety-four persons, besides the preacher. It is disgusting to reflect on the uncharitable bigotry of the times. The protestants considered the accident as a judgment on the catholics, for their idolatry: the catholics attributed it to a plot of the protestants, to bring destruction on their dissenting brethren.

From the spot where this convent of Dominican friars once existed, we come down, by St. Andrew's Hill, to Earl-street, a place the river-side of which is occupied by several iron and lime wharfs. And now, leaving the city for a few hours, we shall bestow our attention upon *SOÜTK-WARK*, in the county of *Surry*; which some very naturally derive from *south* and *rea*, or *sud* and *ree*, indicating that it is situated on the *sud* or *south* of the river; but others will have it derived from the French *sur* and *rea*, "on the river."

Having crossed the river on the noble bridge of Blackfriars, we shall enter the first opening on our left, after having passed Albion Place, which answers at the south side of the bridge to Chatham Place on the north. It is still in the recollection of several of our readers, that on this spot a mill was erected, which, having excited the animadversion of the public, was supposed to have been set on fire by the malevolent intention of some interested parties, and suffered to be reduced to ashes without any exertions to quench the conflagration. Long has the shell remained a sad momento of the transaction; but, the walls having been found still in a sufficient state of strength, several elegant houses are now made out, and have been for a few years the residence of very respectable families.

The street called Holland-street leads first to the Falcon glass-house, so named from an ancient inn, the remains of which were lately visible on the side of the river at the beginning of Bank-side, but which have been converted to other purposes. This part of the winding banks of the Thames is one of the most interesting, as from hence the astonished eye can enjoy the display of the greatest part of the city, and St. Paul's rising with unparalleled grandeur in the centre.

But, ere we proceed farther along Bank-side, let us turn to the left into John-street, a place so called from an ancient public-house, under the sign of John the Baptist's Head, still existing at the east corner of the northern entrance into the street, which is straight, regularly though modestly built with houses of two stories, and an attic concealed behind the parapet and its *colleague* the gutter. About fifteen or twenty years ago most of the lodgings of this street were consecrated to the Cyprian worship; but by dint of perseverance the church-wardens of Christ-church have cleansed the Augean stables; and, except perhaps a few doubtful second-floors, the place is now perfectly clear.

In the middle of the east side of this street is an opening called Cumberland-street, which leads to Hopton's Alms-houses. Their appearance is neat, presenting to the view three parts of a quadrangle. Over the middle-door, in the centre building, which has a goodly appearance, we read, upon a plain stone tablet, the following simple inscription: "CHARLES HOPTON, Sole Founder of this Charity, 1752." The area is well set with nice turf; and a stone pavement, running all around before the buildings, seems a gentle invitation not to tread upon the emerald tenderness of the green. A small but well-proportioned obelisk, surmounted by a lamp, rises in the middle, and has a good effect through the iron railing set upon a dwarf-wall, on the east side of Green Walk. But what particularly attracted our attention, is a pump contrived in the pedestal of the obelisk, for the common use of the alms-people, and occasionally for the accommodation of the neighbours: above the handle of the pump we read with pleasure this appropriate quo-

tation, engraved, conspicuously enough, but without ostentation, on a small plate, level with the eye of the person who sets the pump at work: "Fear God, and give glory to him; and worship him that made heaven and earth, and the sea, and the fountains of waters." This is truly beautiful, because it is simple: for, if we consider that water is, after the air we breathe, the greatest benefit bestowed by the Almighty upon mankind, we ought naturally to wish such warnings oftener to accompany these public establishments. Hobbling along from the pump, as we have often seen her, the good old woman blesses, after her Creator, the benevolence of Hopton at her evening board,

"Where clear and sparkling in the humble glass  
The wholesome crystal, by sweet blooming fruit  
Gather'd at home, and loaves of home-bak'd bread,  
Invites the thirst."

We had wished to give a more explicit description of this excellent foundation; but the limits of our work do not allow us to expatiate longer about it.

After crossing Church-street, facing Christ-church in the Surrey Road, of which we shall speak presently, we enter Bear-lane. As a slight memento of Bear-gardens, which once existed hereabouts, we find a public-house with the sign of the Bear. A few yards on the right is a very extensive iron-foundry, and above a workhouse.—Dreary windings, intricate lanes and alleys, give to this spot, at night, an appearance the contrary of safety; but, owing to their loneliness and solitude, one may often pass there more securely than in Fleet-street or the Strand. These places were formerly the stews, or public bawdy-houses, licensed and regulated (though it must appear now most preposterous) by the bishop of Winchester—for the government of which certain regulations were made by the said bishop, that were confirmed by parliament. These orders were to be observed by the said stew-holders on very severe penalties; and, for securing all persons accused of crimes committed in this district, a prison was erected, denominated the Clink. This prison is still in being, and the bishop of Winchester's steward tries pleas of debt, damages, or trespass, in the liberty, for any sum. These stews were plundered by Wat Tyler in the year 1381, at which time it appears that they were kept by Flemings. In the year 1506, they were shut up by order of Henry VII. but, being again opened soon after, their number was reduced from eighteen to twelve; and, in the year 1546, they were, by proclamation of Henry VIII. entirely suppressed. See the article *BAWDY-HOUSE*, vol. ii. p. 818.

Much has been said, and with apparent ground, upon the preposterousness of a bishop's granting licenses to *bordellos*, as Stow and other ancient writers call them, (from the *borders* or outskirts of towns where they were hardly suffered.) Yet, if we consider that the sacredness of the matrimonial couch was at that time, as it is now, under the jurisdiction of an ecclesiastical court, which was and still is the proper tribunal to decide upon adultery, fornications, divorces, and other matters relating to matrimony; the stews, being as a sort of remedy against the ruthless lust of some individuals, were supposed to be so connected with the objects of the said jurisdiction, that it was naturally thought convenient and proper that the prevention of the *cause* might be properly placed in the hands of those who were, by the law, the proper judges of the ultimate effect.

On the south of these was Paris Garden, in which was situated one of the ancient play-houses of the metropolis, and here were also exhibited the bear-baitings so much in request among our ancestors. Speaking of the Bear-garden, Stow says; "Herein were kept bears, bulls, and other beasts to be bayted; as also mastives in several kennels, nourished to bayt them. These bears and other beasts are there kept in plots of ground scaffolded about for the beholders to stand safe." The safety of this scaffolding was, however, very problematical; for, in the year

1582, one of them suddenly fell, by which accident multitudes of people were killed, or miserably maimed.

The remembrance of these places still exist, as we said above, in Bear-lane, which leads to Gravel-lane, in a winding road towards the Bench.

Gravel-lane, Ewer-street, and others in the neighbourhood, are particularly inhabited by Irishmen, most of them of the lower class. A sign of which is the show of salt fish generally exhibited on the eve of Friday, Saturday, and Wednesday, in Ember-weeks, as well as in Advent and in Lent, when these good catholics strictly abstain from flesh-eating; but not always from flesh-bruising—for this spot is a sort of diminutive of St. Giles's. On a Sunday evening sometimes, or on any particular occasion, these gentry exhibit their pugilistic skill and bodily strength, first in public-houses, and, when the tap-room begins to be too hot for their exertions and too small for the display of their *milling* talents, then they all together turn out, pell-mell, into the street, which becomes directly the arena of their sports. We happened to witness once a specimen of one of these Hibernian jokes, and feats of bravery; and, though taking no active part in the fray, we could not refrain engraving upon our mind the oddity of a scene the representation of which in words would cover several of our columns; we therefore give up the task.

Gravel-lane winds down to the back of the Falcon-glass-house, the manufactory belonging to Messrs. Pellatt and Green, whose principal chimney often exhibits the most curious and bulky volumes of curled fleecy and brown smoke, warped by the wind into multifarious shapes.—On the east side of Gravel-lane we long sought for the remains of the house where John Bunyan, of *Pilgrim* memory, is said to have broken the "bread of the word" to a rising congregation. The house was in Zoar-street, most likely and scripturally called so from the place where Lot *seceded* from Abraham.

Having been indefatigable in our researches about this house, we at last alighted upon the spot, where we could obtain a comfortable view of the premises *supposed* to have been the place where this strange man exerted himself for the comfort of fearful souls in the dangerous pilgrimage of life. We could only get at the *back-front*; and indeed it has a very romantic appearance, on account of several wooden houses of all shapes, and placed in curious guise about it, besides the brook, which, oscillating along with slow and silent rippings as the tide orders it, seems to nibble gently, but perpetually, at the foundations of these ancient messuages and tenements. Just adjoining to the supposed meeting-house of John Bunyan, is a small cottage, which attracted our attention. It is decorated with shrubs and creeping plants, in a little garden sloping to the paling that fences its flower-plats from the water of the stream. The neat disposition of this little pleasure-ground, the luxuriant and spontaneous plants, uniting with those which seem to evince the hand of industry, were animated by the presence of a good-looking old man, "bordering," as he said, "upon eighty;" with the contrast of a little living flower, a girl, his relation, about ten years of age, fluttering, with butterflies and moths, about him. The whole of this pleasant, though confined, scenery, was so interesting, that we could not help bringing back to our recollection the fourth book of Virgil's *Georgics*, where he describes the old gardener, who, under the high walls and towers of *Cebalia*, now *Taranto* in Italy, cultivated his lilies, his poppies, the rose and the vervain, on the banks of the *Galefus*, and used to chide, the pruning hook in his hand, the tardiness of the summer.

When our old man, here, was talking freely though respectfully of *Squire Pott*, the vinegar-merchant, and *Squire Brady*, a wealthy citizen of the neighbourhood, the words of the Latin poet, "*Regum aquabat opes animis*," flashed at once full upon our mind. We saw the Corycian happy in his little garden, and envying not the wealth or power of kings.—These transitory ideas brought us to a conversation with this old tenant of one of the houses in

Zoar-

*John Bunyan's Meeting-house, Loar-street, Gravel-lane, Southwark.*

*Entrance to Montague Close, and part of St. Saviour's Church, Southwark.*

Zoar-street; and from him we gathered the following interesting, though not very satisfactory, information. He is of opinion that the name of *Bunyan* given to this meeting-house must have originated from some other preacher, relation or descendant of the celebrated one; since Bunyan himself died in 1688, and the houses seem plainly to be of a later date. He recollects that a friend of his told him that he had heard *the* Mr. Bunyan who gave name to the house; but surely it could not be the author of the "Progress," since he has been now dead 126 years. A Dr. Bradbury, our authority remembers well, used to preach there a number of years ago; and he has not forgotten to have seen the sconces and lights for the use of his congregation, the pulpit and benches of which were sold only about four years ago.—Added to this, John Bunyan's meeting-house was at Bedford; and it appears very doubtful whether he ever had any congregation in London, though he died there. See the word BUNYAN, vol. iii. p. 509. Our opinion upon the houses is, however, that they are of very old standing; and there are some of those wooden abodes in the neighbourhood which we could easily believe to have been coeval with the reign of Elizabeth. These buildings may have been often repaired and propped up; but the window of the meeting is apparently of a less ancient date than the rest; the panes of glass being much larger than they were usually even at the end of the seventeenth century.

Between this and Bandy-leg Walk, now straightened to the better denomination of Great Guilford-street, is a large piece of unoccupied ground, crossed over by a dirty brook, which receives the tide, and was useful to the dyers who had their factory there. From the Dyers' Field we enter Maid-lane, now called, as a continuation, Great Guilford-street. This street is most certainly one of the best in the Borough. It is of a new creation: the east side has but few houses; they are new built, high and handsome; and, above the wall which parts them, and is elegantly ornamented with plain modillions under a running course of flag-stones, rises in great majesty, at a distance, the cupola of St. Paul's, which seems insulated in the vast expanse of the skies. This view is interesting, and presents something new to the perambulator.

From Great Guilford-street we enter the eastern part of Maid-lane, which leads us to the very place where the stews mentioned above were kept. Maid-lane, Rose-lane, Bear-gardens, and several others, are sufficient mementos; and we could not help smiling, when on our left we discovered a small *cul de sac*, with, at the corner, the inscription of *Cuckold's Court*; the whole in perfect analogy with the old trade carried on there. For, although it is not liberal to suppose that *decent* married women went to those haunts, for the purpose of bestowing crooked honours on the foreheads of their husbands, yet this little snug court has all the appearance of a lurking-place, where very likely suspicion used to lead, by the nose and in the dark, the fearful husband, there to watch, and fret and sob, in the apprehension lest his stray rib should be one of the priestesses at the altar of the *God of the Gardens*, and (if he could) to catch her in *flagrante delicto*.

Leaving Maid-lane on our right, we come to Bank-side; and following our intended track, through windings and mills, narrow and crooked passages, we arrive, after some trouble, at the old gate in Montague Close, and next to St. Mary-Overy. What remains of this gate, the mere vault of the arch, is remarkable for the purity of its style, which is Norman, and gives us an idea of what the whole edifice to which it was annexed must have been.—The sexton's booth, or shop, or whatever it may be called, occupies the angle, between the opening of Montague Close and the west front of the church, on the south transept of which we read engraved on a stone plinth: "This and the east fronts were repaired in 1735."

An epitome of the interesting history of this church, which is next to Westminster-abbey in antiquity and magnificence of Gothic architecture, will follow.—Where the

church now stands, was anciently situated a priory of nuns, founded by one Mary, the owner of a ferry over the river Thames, before the building of London-bridge. This accounts for the derivation of the latter name, which appears to have been originally called St. Mary of the Ferry; but at length, as we now find it, St. Mary Overy. The priory was afterwards converted into a college of priests; but that establishment, as well as the former, proving of no long duration, it was, in the year 1106, founded by two Norman knights, William Pont de l'Arche, and William Dauncy, and the bishop of Winchester, for canons regular; and dedicated to the Virgin Mary. In the year 1207, this college was burnt down; but Peter de Rupibus, bishop of Winchester, rebuilt it, and added to it a fine chapel for the use of the canons, which he dedicated to St. Mary Magdalen. This structure remained till the reign of Richard II. when the whole was pulled down and rebuilt, together with the conventual church, which, by act of parliament in the reign of Henry VIII. was made parochial, and sold by that prince to the inhabitants of St. Margaret's on the Hill and St. Mary's; after which it was called by the name of St. Saviour's.

This is, perhaps, the largest parish-church in the kingdom; and is a noble Gothic structure in the form of a cathedral, only that some additions of brick have been made to it: these, however, being placed in the room of such parts as were decayed, the uniformity of it is not hurt, and the whole has a grand and venerable appearance. The length of the church is two hundred and sixty feet, and that of the cross-aisle one hundred and nine; the breadth of the body is fifty-four feet, and the height of the tower, including the pinnacles, is one hundred and fifty feet. The construction of the windows, entrance, and every other part, except one door, which is modern, is purely in the Gothic style. The tower, which is square, and well-proportioned, is supported by massy pillars over the meeting of the middle and cross aisles: it is crowned with battlements, and at each corner is a tall slender pinnacle.—Upon the platform of the tower, on a summer evening, the sexton often admits people to enjoy a fine view of the river and of the metropolis, with the adjacent parts. And we are told that they are provided there with all the requisites for enjoying a comfortable cup of tea, which, being drunk in the clouds, must of course appear to participate in taste with the nectar of the gods, and have a heavenly flavour; unless the treacherous winds choose to waft thither the black and dusty breathings of the neighbouring glass-houses and iron-foundries.—However, a painter would have from hence a most beautiful scope for his glowing pallet, and an artist of genius might here find sufficient objects for his studies; even the humble limner might exercise his pencil in portraying the sexton himself. The peal of bells contained in the tower is reckoned among the most harmonious in England; and people fond of that sort of entertainment, are often seen in boats moored about the middle of the distance between Blackfriars and London-bridge, listening with delight to the melodious sound, "swinging slow" with the evening breeze, and dying away on the water. Among these bells, one in particular, which belonged to the ancient set, surpasses all the rest in sweetness of tone, and is, on that account, easily distinguished among her chiming sisters; so much greater was the skill of bell-founders in ancient times!

The inside of the church is extremely grand; and in it are many monuments to the memory of eminent persons, some of which have been lately repaired by the descendants of those families who have made choice of this place for their interment. Among these, in a chapel at the east end of the church, is a remarkable monument belonging to the family of the Austins, erected in the year 1626; and against the north wall, is that of the celebrated English poet John Gower, a great benefactor to the church in the reigns of Edward III. and Richard II. Little remains

now outside of the ancient fabric; yet the sweep of the windows, and the style of the buttresses, evince great antiquity. The access to it is narrow, and cramped by the building of many houses in the neighbourhood; and in the church-yard is a school, which belongs to the establishment of the church, and is called "the Navy School." It is old and neat, and over the door is a circular pediment, under the shell of which are represented two boys holding an open book.

Adjoining to this church is Montague Close, so called from the mansion of the lord Montague, which was formerly situated on this spot, as was also that of the lord Montague. In this close it is said the gun-powder plot was discovered by the miscarriage of a letter, to one of which lords it was delivered by mistake instead of the other; for which happy discovery, Montague Close enjoyed several distinguishing privileges, particularly one, viz. that whoever dwelt there was exempt from having any actions of debt, trespass, &c. served on them. But this privilege, with several others, has been long suppressed. At the west end of St. Saviour's church was anciently situated Winchester-house, which was at first erected by William Gifford, bishop of that see, about the year 1107. Till the civil wars, this was the town-residence of the prelates of that see during their attendance on parliament. Much of it is yet standing, tenanted by different families, or converted into warehouses. Adjoining to it on the south, stood the mansion of the bishop of Rochester; but when, or by whom, erected, is not known. A faint remembrance of Winchester-house still exists in a narrow, short, and dirty, thoroughfare, at the west of the church, and called Winchester-street. Mills of different kinds occupy the space from this to the bank of the river, to which the access is divided into several lanes and narrow passages, which, when well known, shorten the way considerably towards London-bridge.

A little to the west of St. Saviour's is Stoney-street, which, terminating on the bank of the Thames nearly opposite to Dowgate, was probably the continuation of the Watling-road, with the intermediate assistance of the ferry plying there.

The church of St. Olave is at the entrance of Tooley-street, which is long, but in some parts narrow, and is in general exceedingly dirty, owing to the great number of carts that are continually passing with goods from the different wharfs on the south side of the river Thames. Though it cannot be ascertained at what time a church was first situated on this spot, yet it is mentioned as early as the year 1281. However, part of the old church falling down in 1736, and the rest being in a ruinous condition, the parishioners applied to parliament for a power to rebuild it; which being granted, the remains of the old building were taken down in the year 1737, and the present structure finished in 1739. It consists of a plain body strengthened with rustic quoins at the corners; the door is well proportioned, without ornament, and the windows are placed in three series; the lowest is upright, but considerably broad; those above them circular, and the others on the roof are large and semi-circular. The tower consists of three stages, the uppermost of which is considerably diminished; in this is the clock, and in the stages below are large windows. The top of the tower is surrounded by a plain substantial balustrade, and the whole has an air of plainness and simplicity. This parish is a rectory, the patronage of which is in the gift of the crown.

The parish of St. Olave, like many others in the suburbs of London, being greatly increased both in number of houses and inhabitants, the commissioners for erecting fifty new churches within the bills of mortality, purchased the ground, in which the trained bands of Southwark formerly exercised, and, from that circumstance, called the artillery-ground, whereon they erected a parish-church for the district of Horsleydown, and dedicated it to St. John the Evangelist, the inhabitants having obtained an act of parliament for constituting this portion of the parish of St.

Olave into a separate parish, and making a provision for its rector. This church was finished in 1732. The body of it is lighted by two ranges of windows, with a venetian one in the centre, over the door. The east end is circular, and with a dome; and at the west end is a square tower rising from the roof, ornamented with pilasters, and having a balustrade on the top, within which is a square course supporting a neat fluted spire crowned with the volutes of the Ionic order. This parish is a rectory; and, being taken out of St. Olave's, the patronage is also in the crown.

Near St. Olave's church is situated the Bridge-house, which consists of several buildings adapted as store-houses for timber, stone, and other materials for repairing London-bridge. In former times here were several granaries for the service of the city in times of scarcity; and also ten ovens and a brew-house for making bread and beer for the relief of the poor citizens; but these granaries are now applied to the use of the cornfactors, who here lay in considerable quantities of corn. The Bridge-house is under the management of the bridge-masters, whose office is to look after the reparation of London-bridge.—Adjoining to the Bridge-house-yard formerly stood a large house of stone and wood, the city residence of the abbot of St. Augustine's in Canterbury; which afterwards descending to Sir Anthony Sentleger, or Saint Leger, *Sanctus Ledgarius*, a very ancient French family, the site thereof was converted into a wharf, which by an easy transition, is now called Sellenger's Wharf.—On the east side of the Bridge-yard was formerly situated the mansion of the abbot of Battle in Suffex, the name whereof is partly preserved by the place called Battle-Bridge; opposite to which, on the south, lay its fine and spacious garden, wherein was a maze, or labyrinth, the name whereof is also preserved by the spot of ground, which consists of several streets, being at this time called the Maze.

Opposite to St. Olave's is Church-yard Alley, leading to an inclosure before the opening of the church-yard belonging to that parish. Here we find alms-houses called *Queen Elizabeth's*. A passage on the north of these alms-houses leads to High-street in the Borough. Bermondsey-street, a noble thoroughfare, opens on the left side of Tooley-street, and leads to the road called by the name of the *Blue Anchor*, where a public-house and tea-gardens under that name are well attended on summer evenings.

The Borough of Southwark, of which High-street is a principal and perhaps the most ancient part inhabited, is a ward belonging to the city, but it may be said to be only nominal; for, though it has an alderman, he is not elected by the inhabitants, nor have they any representatives in the court of common-council. The senior alderman of London, who is termed *father of the city*, is therefore removed to this ward, whenever a vacancy occurs, as an honourable sinecure, which relieves him from the fatigues of ward-busines.

Some authors have supposed that Southwark was the first place of trade with the Romans, and that London arose from it; but, although this opinion is without foundation, it is however certain that, ever since London began to flourish, Southwark, as one of its appendages, and connected with it in commerce, has experienced a proportionate prosperity. The first mention we find of Southwark in history, is in the reign of Edward the Confessor, about the year 1053; at which time it appears to have been a corporation governed by a bailiff; and it continued in that state till the year 1327, when the city of London obtained a grant of it from the crown, and the mayor was to appoint all its officers. Some few years after, the inhabitants recovered their former privileges, and kept possession of them till the reign of Edward VI. when the crown made a second grant of it to the city of London, for a valuable consideration. At the same time London purchased all the privileges belonging to the archbishops of Canterbury and the abbots of Bermondsey in Southwark; and from that period it has been annexed to London,

don, and is governed by one of the aldermen, and a steward and bailiff appointed by the mayor and common-council; the former of whom holds a court of record at St. Margaret's Hill, for all debts, damages, and trespasses, within his limits. That part of the Borough of Southwark, which is subject to the city of London, is called the Borough Liberty; the other division is called the Clink, and belongs to the bishop of Winchester, who appoints a steward and bailiff, under whom that district is governed. Notwithstanding the royal grants of the Borough of Southwark to the city of London, the Surrey magistrates preserve an authority of appointing constables, licensing victuallers, and exercising other powers as justices of the peace for the county.

In High-street, which is long, populous, and at the opening towards the bridge very narrow, we find still a few old houses, two in particular with curious ornaments in plaster, and their first floors hanging over the pavement of the street; in the centre of these we perceive the remains of a coat of arms, composed probably (for the bottom part of the shield is gone) of three cinquefoils and a chief charged with a lion passant; belonging most likely to the owner of the houses by whom they were so ornamented. But the most interesting object in the place is that benevolent and useful foundation called **ST. THOMAS'S HOSPITAL**, a very handsome stone building for the reception of necessitous sick and wounded. — Camden and Maitland agree in stating, that it owes its foundation to a casual fire which happened in that neighbourhood in the year 1207, which destroyed the priory of St. Mary over Rhe, or Overy, or Of the Ferry. The canons erected an hospital near the spot for the celebration of mass until the monastery could be rebuilt. This was soon after accomplished; but Peter de Rupibus, bishop of Winchester, for the greater convenience of air and water, removed the hospital in the year 1215, and erected it in a place where Richard prior of Bermondsey had only two years before built an almonry or alms-house for the reception of indigent children and necessitous proselytes; and, having dedicated it to St. Thomas the Apostle, endowed it with land of the value of 343*l.* per annum, from which time it was held of the abbot of Bermondsey, and afterwards of the bishops of Winton, who were its patrons at the time of the Reformation, when its value was estimated at 266*l.* 17*s.* 6*d.* It was surrendered to the crown in 1538, by Nicholas Buckland the then master. Besides the estates belonging to this hospital, was the site of an ancient mansion-house called Skinner's Place, forty acres of land, with certain rents and services in West Greenwich in Kent, which were conveyed in 1349, by Ralph Nonthey, to William bishop of Winchester and others, who conveyed them in the same year to this hospital. In the year 1551 the mayor and citizens of London, having purchased of Edward VI. the manor of Southwark, for the sum of 647*l.* 2*s.* 1*d.* which comprised the site of this hospital, repaired and enlarged it at an expense of 1100*l.* and in the following month of November, received into it 260 poor sick and helpless objects; upon which the king, in 1553, incorporated it with St. Bartholomew's, Bridewell, Bethlem, and Christ's, hospitals.

Although the great fire in London did not reach this place, yet the revenues of the hospital suffered considerable injury by it, and also by three great fires in Southwark in 1676, 1681, and 1689, and further by the decay of some of its buildings, which were very ancient, and in a low, damp, and incommodious, situation, unfit for the reception of the sick. A subscription for the purpose of rebuilding them was accordingly set on foot; and this great object was accomplished in 1693, when the buildings were erected, consisting of three quadrangles, one facing the street, and two interior squares; the three wards on the south side of the first were erected at the charge of Thomas Guy (of whom we are presently to speak more at large) in 1707; and three on the north side by Thomas Frederick, one of the governors in 1708; the whole containing nineteen wards

and four hundred and seventy-four beds, which are always occupied; and many out-patients are also relieved. To this a new building was added in 1732, consisting of several wards, a brew-house, and offices, at the expense of the funds of the charity; so that it now consists of four quadrangular courts; in the first of which are wards for women; in the second two chapels, the smallest of which is for the private use of the hospital, and the largest is for parochial use; in the same court, and adjoining to them, are the houses of the treasurer and other officers; in the third court are wards for men: and the fourth contains wards, hot and cold baths, a surgery, theatre, apothecary's shop, &c. Amongst the numerous benefactors to this foundation sir Robert Clayton is mentioned as one of the chief; and the society, to commemorate his liberal character, erected, during his life-time, in 1701, a statue in the second court, with appropriate inscriptions on the north and south sides of the pedestal; whereby it appears that he was native of Northampton, was lord-mayor of London, and having contributed 600*l.* in his life-time, bequeathed by his will 2300*l.* to this hospital, besides having built the girls' ward in Christ's Hospital, &c. He died in 1714, when the statue was repaired. Although it does not appear that there were any estates annexed to the city's original purchase of this hospital, yet the beneficence of the corporation and their fellow-citizens, and others, contributed to raise a very considerable endowment, so as to secure the permanent objects of it, and even to extend its designs; and its progressive utility has been proved by the increase of the numbers who have required its relief; their number, including out-patients, may be taken at an average of six or seven years at nine thousand, and the expenditure at about 10,000*l.* The governors consist of the lord-mayor and court of aldermen *ex officio*, and others who qualify by a donation of 50*l.* their number is unlimited. They choose their officers and servants, who are a president, treasurer, hospitaler, a chaplain, besides the minister of the parish, who is remunerated by the hospital, three physicians, three surgeons, apothecary, clerk, receiver, steward, matron, butler, and brewer, baker, cook, assistant, and servant, an assistant clerk in the counting-house, two porters, four beadles, nineteen sisters, nineteen nurses, nineteen watch-women, a chapel-clerk, sexton, and watchman.

Another establishment of the same kind, another proof of the humanity and benevolence of our ancestors, and particularly of **THOMAS GUY**, who, from his own unassisted funds, founded this hospital which bears his name, will attract, as it does well deserve, the attention of the perambulator, on the south side of St. Thomas's-street. — It is little inferior in its extent to St. Thomas's Hospital, and stands open also for the reception of the sick and wounded. — Mr. Thomas Guy, the founder, was the son of Thomas Guy, a lighterman and coal-dealer in Horsleydown. He had arrived at his eighth year only when his father died. In the year 1660, he was put apprentice to John Clarke, a bookseller and binder, in the porch of Mercers' Hall, in Cheapside: on the 7th of October, 1668, he was admitted by servitude a freeman of the Stationers' Company, and in 1673 was sworn of their livery. He began business with a stock of the value of about 200*l.* Being a single man, he spent little of his profits; he dined on his counter, with no other table-cloth than a newspaper; and was not more nice about his apparel. The public are indebted to a trifling circumstance for the application of this fortune to charitable uses. He employed a female servant, whom he had agreed to marry. Some days previous to the intended ceremony, he had ordered the pavement before his door to be mended up to a particular stone which he had marked, and then left his house on business. This servant, in his absence, looking at the workmen, saw a broken stone beyond this mark which they had not repaired; and, on pointing to it with that design, they acquainted her that Mr. Guy had not ordered them to go so far; she however directed it to be done, adding, with the security incidental to her expectation

tation of soon becoming his wife, "Tell him I bade you, and he will not be angry." But she too soon learnt how fatal it is for any one in a dependent situation to exceed the limits of their authority; for her master, on his return, was enraged at finding that they had stretched beyond his orders, renounced his engagement to his servant, and devoted his ample fortune to public charity. See the word GUY, vol. ix. p. 132.

The only motive which induced Mr. Guy to erect this hospital in so low and close a situation, was, his design of putting it under the management and direction of the governors of that of St. Thomas's. By the advice of his friends, he altered his resolution; but it was then too late to think of choosing another situation; for the building was at that time raised to the second story. However, he rendered the place as agreeable as possible, by its elevation above the neighbouring streets. The building consists of two quadrangles, besides the two wings that extend from the front to the street. The wing on the west side has been lately added; and is built with such elegance and uniformity, as to make the whole a very handsome and regular edifice. The entrance into the building is by an elegant and noble iron gate, supported by stone piers. These gates open into a square, in the centre of which is a brazen statue of the founder, dressed in a livery-gown, and well executed. In the front of the pedestal is this inscription: THOMAS GUY, SOLE FOUNDER OF THIS HOSPITAL IN HIS LIFE-TIME. A.D. MDCCXXI. On the west side of the pedestal is represented, in basso-relievo, the parable of the Good Samaritan; on the south side are Mr. Guy's arms; and on that side of the pedestal facing the east, is our Saviour healing the impotent man.—The centre building is very noble. In the tympanum of the pediment we remark a medallion containing an allegorical figure of Physiology, supported by two patients; one seems to be labouring under acute pains, the other lost in spasmodic lethargy. Underneath are four bas-reliefs with children holding appropriate attributes; and below two niches; one containing Esculapius, with his club and serpent, the other Hygeia with the patera in her right hand. A representation of this beautiful pediment is given in the centre of Plate VII n.

A short time after Mr. Guy's decease, his executors, pursuant to his last will, applied to parliament, to get themselves, with fifty-one other gentlemen nominated by the testator, to be incorporated governors of the intended hospital; upon which all these gentlemen were constituted a body politic and corporate, by the name of the President and Governors of Guy's Hospital. By this act of incorporation, they were to have perpetual succession, and a common seal, with the power of possessing the real and personal estates of the late Thomas Guy, for the purposes of the will, and to purchase, in perpetuity, or for any term of years, any other estate whatsoever, not exceeding twelve thousand pounds per annum. As soon as this corporation was established by parliament, the governors immediately set about completing the work, by finishing and furnishing the hospital, and taking in patients, the number of whom, at first, amounted to four hundred and two. The officers and servants belonging to this hospital are chosen by the governors, who have, ever since, carried on this noble charity in such a manner as to answer, in the strictest degree, the benevolent intentions of the founder.

This institution is under the medical inspection of three physicians and three surgeons, who are allowed 40l. a-year each; and an apothecary, who has a salary of 90l. for himself and assistant, and a house. The officers are a clerk, chaplain, steward, accomptant, matron, butler, and assistant surgery-man, porter, beadle, keeper of the lunatic men, and keeper of the lunatic women. It contains at this time thirteen wards, and four hundred and eleven beds; and behind the hospital is a small neat building for unatic patients. The day of admission is Wednesday. Guy's Hospital is joined with the universities and colleges of Eton, Winchester, and Westminster, the royal hos-

pitals, and the Foundling, in the act of 1708, in the clause of exemption from the tax on servants. The buildings are airy and well calculated to promote recovery; the hospital stands in the centre, and the houses of the principal officers on each side; there is also a theatre for medical lectures, and on Saturday evenings medical subjects are debated there for the improvement of the science and practice. A library is also a part of the establishment, well furnished with professional works, and a collection of anatomical preparations. The petition for patients' admission is delivered gratis, stating the complaint, "and being in low circumstances, and destitute of friends, whereby to obtain a cure;"—this is to be countersigned by a housekeeper undertaking to remove him at his discharge, or death, or pay 1l. for burial to the steward. The expenses of admission amount to 3s. 3d. for a clean patient, and 7s. for a foul patient.

Behind this hospital, and near a place called the Maze, we find Meeting Walk, and a large piece of unoccupied ground, on the side of which we could not help admiring a clump of very old willow trees, which seem to mourn for the departure of the ancient rope-makers who used to make their *retrograde progress* under their shades.

Nearly opposite the hospital, and on the north side of the street, is the parish-church of St. Thomas, which owed its erection to the service of the hospital; but, the number of houses within the precinct having considerably increased, it was judged necessary to leave this church for the use of the inhabitants, and to make it parochial, erecting at the same time a chapel in the hospital more convenient for the access of the patients. This church is therefore in the gift of the governors, who choose one out of two persons returned by the parishioners. This church is a plain brick building; one series of windows, and the corners, strengthened and adorned with rustic work, give it an agreeable appearance: the length of it is a hundred and fifty feet, the breadth thirty-three, the height of the roof twenty-eight, and that of the tower ninety-two.

Going on towards the south, and proceeding through High-street, we find on our right a passage that leads to the Borough Market, a place which has considerably increased within these few years. In shape it is very irregular; and of no very brisk trade; yet the appearance is pleasing, on account of many piazzas with columns built on several parts of the area.—Higher up, where the space widens, we have on our left the *Talbot* inn, properly and originally the *Tabard* or *Tabard* inn. Stow mentions, that, "among the faire innes for receipt of travellers, by the signes of the Spurre, Christopher, Bull, Queen's Head, Tabard, George, Hart, King's Head, &c. the most ancient is the Tabard, so called of the signe, which, as we now term it, is of a jacket, or sleeveless coate, whole before, open on both sides, with a square collar, winged at the shoulders; a stately garment, of old time commonly worn by noblemen and others both at home and abroad, in the warres; but then (to wit in the warres), their armes were embroidered or otherwise depict upon them, that every man by his coate of armes might bee knowne from others. But now these tabards are onely worn by the heralds, and bee called their coates of armes in service. For the inne of the Tabard, Geoffrey Chaucer, esquire, the most famous poet of England, in commendation thereof, writeth thus:

"It befell in that season, on a-day  
In Southwark, at the *Tabert*, as I lay,  
Ready to wend on my pilgrimage  
To Canterbury, with full devout courage;  
That night was comen into the hoftery  
Well nine-and-twenty in a company  
Of fundry folke, by adventure y fall,  
In fellowship, and pilgrims were they all,  
That towards Canterbury wolden ride;  
The stables and chambers werein wide,  
And well we were eased at the best," &c.

*Pediment of St. George's Hospital.*

*The New Bethlem Hospital.*

London, Published as the Act directs, Decber 1. 1811, by G. Jones.

1799

Behind this part of St. George's parish, to the east, is that of St. Mary Magdalen, Bermondsey, which has usually been described by the historiographers of London as part of the Borough, with which, however, it is wholly unconnected. The church is of very great antiquity, it appearing, from a survey made by William the Conqueror, to have been founded during the time of the Saxons. It received the addition of Bermondsey, from its situation in or near the royal manor called Bermond's Eye, corruptly Bermondsey. Adjoining to the spot where this church now stands, was founded a priory of Cluniac monks, dedicated to St. Saviour, by Alwine Child, a citizen of London, in the year 1082. In 1094, William Rufus endowed it with the manor of Bermond's Eye, which was confirmed by Henry I. in 1127, who at the same time gave to this priory the manor of Rotherhithe and Dulwich; and William Maminot gave them a moiety of the manor of Greenwich. In 1159, Henry II. confirmed to them the donation of the church of Camberwell, and others. And Henry III. granted these monks a market every Monday at their market of Charlton, in the county of Kent; and a fair on Trinity Sunday yearly.

The manor of Bermond's Eye was an ancient demesne of the crown, and all the lands and tenements belonging to it, among which were Camberwell, Rotherhithe, the hide of Southwark, Dulwich, Waddon, and Reyham, with their appurtenances, were impleadable in the court of this manor only, and not at the common law: though this house was no more than a cell to the priory of La Charité, in France; and therefore accounted a priory alien till the year 1380, when Richard II. in consideration of two hundred marks paid into his exchequer, made it a denizen; it was also then made an abbey, and Attleborough became first abbot. At the general suppression of monasteries, this house was surrendered to Henry VIII. by whom it was granted to sir Robert Southwell, Master of the Rolls, who sold it to sir Thomas Pope; the latter pulled down the church, and built a large house upon its site, which afterwards became the possession and residence of the earls of Suffex, who were obliged to build a place for public worship, which was done in or near the place where the church now stands. Some remains of the abbey, we are told, are still to be seen in St. John's Court, on the south side of the church.

The present edifice, which was built in 1680, at the charge of the parish, has been often repaired since, and has suffered material changes. It is a plain structure, seventy-six feet long, sixty-one feet broad, thirty feet high to the roof, and eighty-seven feet to the top of the steeple, which is a low square tower. The walls are brick, covered with stucco, and the door-cases and arched windows are cased with stone. The west front has been adorned of late with a piazza and wooden columns of the Tuscan order. On each side is a iron railing, through which the church-yard and the tomb-stones are seen; and at the north end the engine-house, answering to the watch-house at the south end.—This church is a rectory, the advowson of which, having belonged to the monastery, has undergone various alienations, and is now in private hands.

There are some very singular entries in the register-book of this parish, one of which occurs in 1604, and is entitled "The forme of a solemne vowe made betwixt a man and his wife, havinge bene longe absent, through which occasion the woman beinge married to another man, he took her again as followeth." Then come the declarations of the man to the woman, and of the woman to the man, of their determination to take each other again; after which is a short prayer; and the entry concludes thus: "The first day of August, 1604, Raphe Goodchild, of the parish of Barking, in Thames-street, and Elizabeth his wife, were agreed to live together, and therefore gave their hands one to another, makinge either of them a solemne vow so to doe, in the presence of us, William Stere, parson; Edward Coker; and Richard Eires, clerk." To the entry of the marriage of James Herriott, esq. on

the 4th of January, 1624-5, a N. B. is added, "This James Herriott was one of the forty children of his father, a Scotchman."

In this parish is a free-school, founded in the year 1718, in pursuance of the will of Joliah Bacon; citizen and merchant of London, who bequeathed seven hundred pounds for purchasing the site and erecting the school, which he endowed with an annual income of one hundred and fifty pounds. It is for the education of poor boys, not more than sixty, nor fewer than forty, of the parish of St. Mary Magdalen, Bermondsey.

Here also was a place of entertainment in the summer season, called Bermondsey Spa, from a chalybeate spring discovered there about the year 1770. Previous to this discovery, the premises had been opened by the name of Bermondsey Gardens, for tea-drinking, &c. and had obtained great celebrity from the paintings with which Mr. Keyse, the proprietor, a self-taught artist, had decorated them. About thirty years ago, having obtained a licence for that purpose, he opened his gardens with musical entertainments, fireworks, &c. but all these have disappeared, and the spa is turned into a private house and gardens.

Bermondsey-street may at present be called the great wool-staple of the kingdom, most of the weaving counties being supplied with that commodity from hence.—The various preparations of skins are also carried on to a great extent in this parish. The tanners are incorporated by a charter of queen Anne, dated July 5, in the second year of her reign, by the name of "The Master, Wardens, and Commonalty, of the Art or Mystery of Tanners, of the Parish of St. Mary Magdalen, Bermondsey."

To the east of Bermondsey is *Rotherhithe*, which consists chiefly of one street of great length, running along the shore, and following the bend of the river, nearly as far as Deptford. Henry I. gave the manor to the priory of Bermondsey, by the name of *Rederhithe*; whence it may be inferred, that its name is of Saxon origin, although it does not appear in the Conqueror's Survey.

There is no account extant of the foundation of the original church, which, from the statement of the parishioners, when they applied to have a new one for this parish included among the fifty built by authority of parliament, had stood upwards of four hundred years. Their application failing, the present church was erected at the charge of the parish, assisted by a brief, and some liberal contributions, amounting together to near three thousand pounds. It is dedicated to the Virgin Mary, and, from its situation, is called St. Mary, Rotherhithe. This edifice is built with brick, and ornamented with stone. It is lighted by a double range of windows; and the corners, both in the tower and body, are strengthened with a handsome rustic. The tower consists of two stages: in the lower are a door and window; in the upper a window and dial; and the whole is terminated by a balustrade, from which rises a circular base, that supports a kind of lantern, very elegantly constructed with Corinthian columns: over these are urns with flames; and from the roof of this lantern rises a well-constructed spire, terminated by a ball and vane. In the veltry is a portrait of king Charles I. in his robes, kneeling at a table, and holding a crown of thorns: this formerly hung in the south aisle. It is a rectory, the advowson of which was anciently in the abbey of Bermondsey; but, since the suppression of that monastery, it has passed through various hands, and now belongs to Clare-hall, Cambridge.

There is a free school in this parish, founded in 1612, by Peter Hills and Robert Bell, for educating eight sons of poor seamen. The school-house was rebuilt by subscription in 1745; and the endowment has been so augmented by donations and bequests, that, at present, thirty-three boys and twenty-two girls, are not only educated, but also clothed.

An attempt was made, in East-lane, in this parish, about the year 1720, to restore the cultivation of the vine, which, whether from the inauspicious climate of our

island, or the want of skill in the cultivator, was at that time nearly lost; although there are authentic documents to prove that vineyards did flourish in this country in ancient times. About the time mentioned, a gentleman named Warner, observing that the *munier*, or Burgundy-grape, ripened early, conceived that it might do in a vineyard, and accordingly procured some cuttings, which he planted as standards in his garden, in East-lane; and, though the soil was not favourable, yet, by proper care and cultivation, his fruit was, in a few years, so matured, as to yield good wine, and his vintage so ample, as to afford him upwards of a hundred gallons annually. It is believed, that, of the few vineyards which have been since established, the greater part were supplied from Mr. Warner's cuttings.

On the right side, and at the south extremity of the Borough, formerly stood a church dedicated to St. Margaret on the Hill, the site of which is now occupied by a court of justice, or town-hall. It is a modern-built brick edifice, the front of which is ornamented with stone, and consists of a rustic basement-story, above which are a series of Ionic pilasters; and the whole is crowned with a handsome balustrade. The steward for the city of London holds a court of record here, every Monday, for all debts, damages, and trespasses, within his limits. Besides this court, there are three court-leets held in the borough, for its three liberties, or manors, viz. the Great Liberty, the Guildable, and the King's Manor; in which are chosen constables, ale-conners, &c.

From this court, which fronts the south, runs a spacious well-built street, inhabited by substantial tradesmen, livery-stables, and innkeepers. It was called St. Margaret's Hill, and now the Borough, or Blackman-street; on the east side of which is the Marshalsea Prison, which is a place of confinement for persons who have committed crimes at sea, as pirates, &c. and also for debtors. In this prison is the Marshalsea Court, the judges of which are the steward of his majesty's household for the time being, the steward of the court, who must be a barrister-at-law, and a deputy-steward. In all civil actions tried in this court, both plaintiff and defendant must belong to his majesty's household. The persons confined in this prison for crimes at sea, are tried at the admiralty-sessions in the Old Bailey. In the same prison is the Palace Court, the jurisdiction of which extends twelve miles round the palace of Westminster, the city of London excepted. Actions for debt are tried in this court every Friday; and there are the same judges as in the Marshalsea-court, and a prothonotary, a secondary, deputy prothonotary, four counsellors, and six attorneys. But, in this court, neither plaintiff or defendant must belong to his majesty's household. The buildings of this prison are greatly decayed, but the court-room is spacious and convenient.

Farther to the south is situated the parish-church of St. George; which is of some antiquity, as appears from its having been given by Thomas Arderne to the abbot and monks of Bermondsey in the year 1122. In the year 1629, the old church was repaired and beautified; but the decays of age at length rendered it necessary to take it down; the parishioners therefore applied to parliament for power to erect a new one, and, having obtained an act for that purpose, the first stone of the present edifice was laid on St. George's day, in the year 1734, by Dr. Hough, the rector, as proxy for king George II. and the building was completed in 1736. It is a very handsome structure, with a lofty and noble spire. The ascent to the great door is by a flight of steps, within a row of plain iron rails, that extend along the whole front of the building. The door-case, which is of the Ionic order, has a circular pediment, ornamented with the heads of cherubs in clouds, and, above this pediment, the front is adorned with balustrades and vases. From this place rises a plain square tower, strengthened with rustic quoins, as is the body of the building; and on the corners of the tower

are again placed vases. Above this is an octagonal tower with arched openings on the four principal faces, and a series of Ionic columns at the corners supporting the base of the spire, which is also octangular, and crowned at its apex with a ball, from which rises the vane. This church is a rectory, which, as has been observed before, was anciently belonging to the prior of Bermondsey. It is at present in the gift of the crown.

A very useful and elegant improvement has been made near this church, by opening a turnpike-road towards Greenwich and the south-eastern communications, as far as the Bricklayers' Arms, in order to avoid the ill-paved Kent-street and the round-about way by the Elephant and Castle. Besides its noble appearance, it gives a free circulation to the air; and Dover-street will in time, most likely, be one of the finest streets in the Borough.

On the south side of the street we find the large opening called Union-street; in which we remark Union-hall, one of the police-offices. The building is of brick, but faced elegantly with stucco, and having two niches, one of each side of the entrance. It retires a little from the line of building in the street; and the next neighbours, in adorning and facing also with stucco the front of their houses, seem to have emulated between themselves who could render his house most ornamental to the hall. At the corner of Union-street and Redcross-street is a neat square building consecrated to the instruction of children, and called St. Saviour's Charity-school; annexed to which is a church-yard, belonging to the said parish, and denominated most curiously, "Raw-bones church-yard."—Union-street, crossing Redcross-street, part of which is entirely inhabited by brokers, extends now as far as Gravel-lane, and, opening into Charlotte-street, runs by Rowland Hill's chapel; then enters the marsh of Lambeth, and thus makes a free and exceedingly-good communication between the three bridges; it was formerly called Duke-street from Gravel-lane to the Roebuck public-house; then Queen-street to Redcross-street; and then Union-street to Blackman-street; but now it continues this last denomination all through, and very properly, since it *unites* the eastern with the western parts of Southwark.

Blackman-street, which we left a few lines above, bears that name from the church to Stones End. It has on the west several openings, of which Mint-street, opposite to the church, is the narrowest; and leads to the place where stood anciently a magnificent mansion belonging to Charles Brandon, duke of Suffolk, the favourite of our fickle king Harry the Eighth. After the death of the duke it fell into the king's hands, who erected there a royal mint. At that time it was called Southwark-place; and was afterwards given by queen Mary to the archbishop of York, as an inn or residence for him and his successors, whenever they repaired to London. This place continued for many years an asylum for fraudulent debtors, who took refuge here with their effects, and set their creditors at defiance; but, becoming at length a pest to the neighbourhood, by giving shelter to villains of every description, the attention of parliament was directed to it, and in the reign of George I. all its privileges were totally suppressed.

The place now called the Mint, contains several dirty narrow streets, inhabited by very low people, many of them employed in the sedentary and unprofitable business of pin's-head making.—A place between four little streets is emphatically called Mint-square, but scarcely deserves notice. Between this place and the northern walls of the King's-Bench prison, hardly one house was to be seen about six years ago. It was bought upon building-leases by Mr. Spiller, (the great distiller in the Surry Road;) and now it is covered with streets and lanes intersecting each other at right angles, and crossed through by Lant-street and Great-Suffolk-street, the last so called in remembrance of the duke above mentioned, instead of its ancient and most appropriate denomination of *Dirty-lane*.—Opposite to this street another opening is making, to have a continuation

*Asylum for the Deaf and Dumb.*

*Freemason's Charity for Female Children.*

ation to, and communication with, the New Cut from the church to the Bricklayers' Arms. This noble road, communicating with the Surry Road, connects also the cities of London and Westminster with Southwark and the adjacent places.

The number of little preaching and singing houses in this neighbourhood is astonishing.—In one of the small streets near Mint-square is a sort of ground-floor, where in the course of the week rusty iron, bug-haunted bedsteads, broken-winded bellows, deformed shovels, limping tongs, and incurably-crooked pokers, are exposed to sale; but on Sunday all this trumpery disappears, a blanket is spread before the door, and a congregation listen most devoutly to the licensed nonfence of a man who seems to have forgotten, if he ever knew it, the ancient adage! *Ne furor ultra crepidam*; "Let the cobbler stick to his last."—On the south of Lant-street, at the entrance of John-street, was erected, in 1811, Sion Chapel, a neat building, and now pretty well attended. Originally, the walls resounded only with the timid voices of a rising and modest congregation; but now an organ has been introduced; tenors, basses, and sopranos, of both sexes, unite in *methodical*, or rather *methodistical*, harmony, and gladden the neighbours with their evening melody. However, religious concerns, like others, have their ups and downs; for we remarked at each entrance a modest mahogany box with this inscription: "Contributions are received here for liquidating the debts of this chapel."—Farther on, in a narrow and hitherto-nameless street, leading from Great Suffolk-street to Stones End, and at the foot of the solemn and grim-looking walls of the Bench, is another place of worship: but here the success has been small; for the poor preacher spends his time and lungs on an empty house or to a sleeping auditory.—The best-attended chapel in this quarter, is the Welsh one in Little Guilford-street. This was erected about seven years ago, and continues flourishing and increasing. Those who are not acquainted with the Celtic liturgy are astonished at the tones which the preacher assumes in the pulpit: sometimes it is a monotonous and rapid delivery of words upon the same key, touching at times the fifth above, or grazing lightly upon the fourth below; sometimes getting into a lively mood, in the same way as an *aria* seems to issue out of a *recitativo*; at other times the thumping of the Bible, and the wiping of his oozing forehead, sets by degrees the whole congregation a-groaning, and sighing, and sobbing, till at last they disperse.

At the end of Blackman-street, and where the road branches on one side towards Newington, and on the other towards the Obelisk, is the King's-Bench prison. It is a place of confinement for debtors; and for those sentenced by the court of King's-Bench to suffer imprisonment for libels and other misdemeanors; but those who can purchase the *liberties* have the benefit of walking through a part of the Borough, and in St. George's Fields. This prison is situated in a fine air; but all prospect of the fields, even from the uppermost windows, is excluded by the height of the walls with which it is surrounded. It has a neat chapel; and only one bed in each room; but these rooms are extremely small; they are all exactly alike, and none above nine feet in length. It is a very extensive brick building, outside of which the marshal, who has the keeping of this gaol, has very handsome apartments.

Nearly opposite to this prison, in Horsfonger-lane, is the New Gaol for the county of Surry. It is a massy brick building, surrounded with a strong wall; and the place of execution is a temporary scaffold erected on the top of the lodge on the north side of it. The keeper's house is a handsome building on the west side.—Annexed to it, and making part of the whole plan, is the sessions-house, where causes are tried for the county.

A little farther, towards the fields, is a delightful spot, where a pensive mind may, in a summer-evening, indulge

an hour or two of delightful musing and wholesome promenade. It is planted with poplars and willow-trees, surrounded and intersected by small canals of water, which should always be kept pure and limpid; but this sort of desideratum does not always meet the satisfaction of the visitors.—The solitary walks breathe a sweet melancholy air that pervades the feeling mind; and the gentle rippling of the water, united to the soft rustling of the leaves, amuses the soul, and, when unhappy, soothes it into a welcome repose. The place is well frequented in general, and reminds us of the lines of the poet:

There see  
The tall grey poplars nodding in the wind;  
A faithful image of my waving mind,  
When, with contending passions daily tost,  
'Twixt hopes and fears, it seems oft to be lost:  
The trembling leaf to ev'ry breeze obey,  
And yields indiff'rent to the strongest sway.

It is surrounded by a number of small private gardens, whose shrubs and flowers pay incessantly their tribute of sweets to the ambient air. The place is called the *Half-penny Hatch*; and the passage through it shortens the way considerably from Stones End to the Greenwich Road.

At the end of this road we find the Paragon, a neat circle of houses, faced by a thick row of beautiful Italian poplars; and the Bricklayers' Arms, mentioned at p. 51.—A little farther on the right we meet with the excellent establishment lately appropriated for the Deaf and Dumb. See Plate VII. o. where this simple but elegant building is faithfully represented. It was with pleasure that, passing near the Obelisk in our survey, we heard the blind executing pieces of instrumental music and military marches in the yard of their school; this appeared to us an excellent plan; that is, employing the blind in an art which requires keenness and correctness in the sense of hearing. And it presently struck us that the art of drawing and painting should be taught and learned at the Asylum for the Deaf and Dumb. It has been observed that the loss of one of the five senses is generally compensated by a superior correctness in those which remain; and that the hearing and touch of the blind is more perfect, and, vice versa, the sight of the dumb more keen, than in others. It would be therefore a wise speculation to profit by the advantages which nature presents to us in those unfortunate individuals whom Providence has visited with such privations.—The plan of this Asylum, however, does not extend to drawing. Writing and arithmetic are taught; and also *speaking*, in the manner described under DUMBNESS, vol. vi. p. 115. The present building was completed in the year 1809; and, since that time, the old Asylum, in Fort Place, Bermondsey, has been fitted up as a manufactory, and proper masters are engaged to instruct in useful trades such of the poor children as have no parents or friends to whom they can be returned with a prospect of future maintenance. The trades at present selected for this purpose are those of printers, tailors, and shoemakers. Many of the boys are now under this highly-useful instruction; and, as the several works are executed at the usual prices, the humane and benevolent have here the opportunity of performing a very essential act of charity, without a direct contribution, by sending some of their orders to this manufactory.

At the bifurcation between the Borough Road and Newington Causeway, are St. George's alms-houses, and a school supported by voluntary contribution.—This small mass of houses, fenced on one side by a low wall, and adorned with an old ycamore-tree, is exceedingly picturesque, having on the right a distant view of the Obelisk, and on the left another nearly as far as the Elephant and Cattle.—One of the ornaments of Newington Causeway is the front of Hayward's floor-cloth manufactory, executed in composition or stucco, with handsome pilasters, and the inscription raised boldly on the ground.—On the right we find a large piece of ground commonly called

St. George's Fields. It was for a long time the repository of all the filth which nightmen gather in their operations, and remains still unoccupied. We understand that a handsome square is to be built there as an ornament to this part of the Borough; and we hope that scented shrubs and odoriferous plants will at last cleanse the air of the mephitic vapours which still circulate there.

Having passed the turnpike, we reach that public house, a place of rendezvous for a numerous quantity of stages, and called, as mentioned before, the Elephant and Castle.—It is amusing to see the rapid succession of those public vehicles coming from all parts, and stopping a few minutes there to receive or deliver, to take up or set down, parcels and passengers.

Near to this place of resort we find, what we should have expected far from the bustle of coachmen and grooms, from the swearing of impatient travellers, the snorting of horses, the cracks of whips—we find a place called the *House of God*; a small meeting-house with a portico supported by two columns of brick faced with plaster.—Here Mrs. Joanna Southcott began her public exhibitions, under the protection of, and in spiritual partnership with, Mr. Carpenter; but the holy firm has been dissolved several years: a schism took place; some of the customers, detained we suppose by the enchantment and charms of the allegoric daubs with which the sides of the House of God are *ungodly* besmeared, remained staunch and fixed to the place—while others, drawn off by the more powerful attraction of Joanna, migrated with her high destiny towards the spot where once the Dog and Duck called the profane on a Sunday evening, to sip tea and quaff ale in a garden. Thus the patriarchs of old are said to have parted on the flowery meadows of Jordan, before the well-irrigated vales and fruitful plains of Zoar. The place where the pretended future mother of Shiloh vends her spiritual warrants for a place in the house of God in heaven, under the direction and partnership of Mr. Tozer, a shop-keeper, is in a court at the end of Duke-street, behind the Freemasons' Charity School, where a crowd of pious hearers swallow the blasphematory pills.

We expected, by the time we reached this part of our survey, to have been able to announce the accouchment of Mrs. or rather Miss Southcott. This, however, has not yet taken place, though, reckoning after the manner of women, the time of gestation, from the 11th of October, 1813, (see p. 369,) to the present month of August 1814, might be expected to have been accomplished. Some say that the lady has miscarried. But these are scoffers. Her Fourth Book of Wonders, dated April 13, 1814, has the following passage: (it is the Spirit that speaks.) "Thou May thou wilt feel the life of the child within thee, that will be announced throughout the land. For, as I spoke of May, in May it will be; and then they will see, from the shadow, what the substance meaneth, of the second Star, and my second coming; and, as I told thee that my harvest was fast approaching, so they will find, before the *ensuing harvest is ended, that the Son whom I have warned thee of will be born.*" The time, however, has been probably, and for wise reasons no doubt, enlarged; for Mr. Tozer in his sermon of Sunday, July 31, informed us, that "our spiritual mother will bring forth the true Messiah *some time before the twelfth of next January,*" (1815.)—In the mean time she has been literally overwhelmed with presents. Laced caps, embroidered bibs, and worked robes, a mohair mantle which cost 150l. splendid silver pap-spoons and caudle-cups (one shaped like a dove)—have been poured in upon her, till she has at length determined to receive no more of such things. To complete the desired apparatus, a magnificent crib has just been finished by one of our first upholsterers, of which a friend has favoured us with the following particulars. "A short Description of a Crib, made by Mr. Seddons, of Alder-gate-street, according to the order of some Gentlemen, who are members of the Church established by Joanna Southcott, for the New Messiah, with whom they believe she is now pregnant. This

crib, which is made of an oblong square, is of the usual size of modern cribs; the frame is made with satin-wood, richly ornamented with gold; the sides and ends filled with lattice-work of gold. The body of the crib, which they call the *manger*, is richly lined with blue satin, drawn together so as to give it the appearance of fluted work. The pillars on which it stands are taper, with ribbands of gold entwining round them. The head-cloth is of blue satin, with a celestial crown of gold embroidered upon it, and underneath this appears the word SHILOH, in Hebrew characters, richly drawn, and exhibited in gold spangles. Over the head-part of the crib appears an elegant canopy of blue satin, lined with the finest white muslin, which is drawn together to a point, and fastened underneath, or within the canopy, by a rose of blue satin. The outer point of the canopy is finished with the figure of a dove in gold, resting on a small white ball, and bearing a branch of olive in its mouth. Around the outer rim of the canopy is this inscription, in letters of gold: *A free-will offering by Faith to the promised Seed.* The curtains and other drapery are blue satin edged with gold fringe, and looped up with gold line and gold tassels. The inner curtains are of fine white muslin. The above is a description of what they call the *manger*; besides which they have a crib which fits within the former, and hangs upon swivels, that a proper motion may be given to it whenever the young prince may require rocking. The crib itself is made with satin wood, fitted in with the most beautiful cane-work, from which passes a cord of gold to a pedal, which is designed to rock the cradle whenever this may be proper for the infant, and to prevent the necessity of leaning over the manger, which might incommode the supernatural babe. The bed is of the finest eider-down, in a white covering; the coverlet is of the richest white satin, with a medallion in the centre, bearing the figure of a lamb lying down with a lion. The lamb is worked in silver, the lion in gold. These are furnished by a tree of life, worked in gold also. The sheets for the bed are made of the best cambric edged with expensive lace.—July 29, 1814."

While pondering upon these things, in the neighbourhood of the Obelisk, on Sunday evening last, the 7th of August, we were roused by a sort of hissing, hooting, or shouting, issuing from Duke-street, just behind the Surry Theatre; and we had the fortune to meet Mr. Tozer followed by about six score of boys, assailing his ears with no pleasing music; but we became sore afraid lest these obstreperous youths should have been treated as the little children were by the prophet Elijah. 2 Kings, ii. 24. Our prophet, however, who had no *she-bears* at hand, took all in good part, and went his way.—This made us desirous to see the chapel where Mr. Tozer had just displayed his *timber-strong* eloquence; for we understand that, besides keeping a chandler's shop, he exercises the trade of *carpenter* and *timber-merchant*; and it is a curious coincidence, that, whilst we are told that Joseph, the supposed father of Christ, was by profession a *carpenter*, Joanna should have had for her friends two *carpenters*, one by name and the other by trade. The chapel is a plain low building of brick: under the gable-end is a white dove, in the act of descending from above, carved in wood or stone upon a yellow ground; and under it this mystical inscription: "Built by William Tozer, April 16, 1803, by voluntary contributions." The meaning of which we do not perfectly understand.

We presently come to a much more useful and more rational establishment; a place of silence, solitude, and comfort, for old and infirm tradesmen: two sets of almshouses belonging to the Fishmongers' Company. The most ancient of these is St. Peter's Hospital, erected by the Company of Fishmongers, who procured letters patent for that purpose, from king James I. in the year 1618. It is a plain Gothic structure, built with brick and stone, with a wall before it, within which are two rows of tall trees, and behind the building is a large garden. The entrance

entrance is by a pair of iron gates, opening to the centre of the building, which is lofty, but very irregular. On the inside are two courts, behind each other, in one of which is a hall, with painted windows, and a chapel. On the sides of these courts are inscriptions, signifying that they were erected at different periods. This charitable foundation was established for the relief of poor decayed members of the Fishmongers' Company, twenty-two of whom are constantly in it; each of whom has two rooms, three shillings per week, fifteen shillings at Christmas, a chaldron of coals, and a gown. One of the pensioners is appointed to read prayers twice a-day in the chapel; and is allowed forty shillings at Christmas, over and above the common salary.

To the south of this hospital is another, founded by Mr. James Hulbert, a liveryman of the Fishmongers' Company, in the year 1719, for twenty poor men and women, whose accommodations are much the same as those in the one already mentioned. This building has pleasant walks before it, and within the wall, fronting the house, is the statue of the founder, placed on a pedestal. The benevolent old liveryman is here represented with his livery-gown and fur; and, with an old-fashioned walking stick in his hand, he seems to point out the ground where the first stone of the foundation was to be laid. The view, through an iron railing, is most picturesque; and indeed, the whole of this establishment conveys more to the mind than the pen can express. The entrance has a sort of lobby with a lantern at top, which, when lighted, on a winter's evening, and when the bell tolls for prayers, reminds us of an Italian hermitage surrounded with trees in the vales of the Apennine or on the banks of the Arno.

From hence we proceed towards the Obelisk, placed between five handsome roads which meet there and seem to form a far-radiating star.—This monument is noble and simple, surrounded by an iron railing, and ends at top in a diamond-head. It is not gorgeously adorned with bas-reliefs or other sculptured ornaments; but each of the sides has an inscription which is more useful than any other could have been. On the north front we read, "One Mile CCCL feet from Fleet-street;" and underneath are the arms of the city plainly carved. On the west side: "One Mile from Palace-yard, Westminster." On the east side: "One Mile XXXX feet from London Bridge." At the back or south side: "Erected in (the) XIth year of the reign of King George the Third, M.DCC.LXXI." and on the plinth below: "The Right Honourable BRASS CROSBY, Esquire, Lord Mayor."

This spot is surrounded by several very useful establishments—the Philanthropic School, the Blind Hospital, the Royal Freemasons' School, the Asylum, the New Bedlam, and the MAGDALEN. This last is a benevolent institution, projected in the year 1758, by Mr. Robert Dingley. It was at first kept in a large house, formerly the London Infirmary, in Prescot-street, Goodman's Fields. The utility of this charity was so conspicuous, and so well supported, that the views of the benefactors extended to the building an edifice more enlarged and convenient for the purpose; in consequence of which, the spot on which the present edifice stands was made choice of; and on the 28th of July, in the year 1769, the earl of Hertford, president, with the vice-president and governors, laid the first stone at the altar of the chapel. This hospital consists of four brick buildings, which enclose a quadrangle, with a basin in the centre. The chapel is an octangular edifice erected at one of the back corners; and, to give the inclosed court an uniformity, a building of a similar front is placed at the opposite corner.

The unhappy women for whose benefit this hospital was erected, are received by petition, a printed form of which may be obtained gratis on application at the door; and there is a distinction in the wards, according to the education or behaviour of the persons admitted. Each ward is entrusted to its particular assistant, and the whole is under the inspection of a matron. The treatment of

the women is accompanied with every possible degree of tenderness, in order that the establishment, instead of being considered as a house of correction or labour, may be thought a safe retreat from error, and its attendant wretchedness. They are instructed and practised in the duties of the Christian religion; and each one is employed in such kind of work as is suitable to her abilities, or trained in the various branches of domestic employment, in order to qualify her to obtain an honest livelihood by service. When a young woman is admitted into the house, and has given satisfactory proofs of her inclination to quit the paths of vice, great pains are taken to bring about a reconciliation between her and her friends, and, if they are people of honest fame, to put her under their protection; but no woman who behaves well in the house is ever dismissed from it, except at her own request, until she is provided with the means of obtaining a reputable livelihood; and, as a further encouragement to a perseverance in rectitude, every woman placed in service from this institution, who, at the end of a year, can obtain a satisfactory testimonial of her good behaviour for that time, receives a gratuity from the committee as a reward for the past, and an encouragement for her future good conduct.

To enlarge on the utility of such an institution must be needless. It is obvious that there cannot be greater objects of compassion than young thoughtless females, plunged into vice and ruin, by temptations to which their youth and personal advantages, no less than those passions implanted by nature for wise, good, and great ends, expose them. But to no class is such a sanctuary more beneficial than to those who, having been seduced by promises of marriage, are deserted by their seducers. These have never been in public prostitution; but, abandoned by their relations in the first moments of anger, thrown upon an unfeeling world, without money, without character, and without a friend, the stern impulse of hunger would compel them to embrace a life of guilt and misery, or to seek a more dreadful alternative in suicide, did not this mansion offer them a secure retreat from further temptation, and a peaceful virtuous abode, until the repentment of their parents became cooled by reflection, or they had acquired the means of procuring a creditable maintenance by honest industry. The seeds of virtue are not suddenly destroyed; and, though paralyzed for a time by delusion, would frequently revive, were an assisting hand stretched forth. This truth was never more strongly exemplified than in the annals of the Magdalen Hospital. Of several thousands received into it since its institution, very few have been discharged for improper behaviour, or from dislike to the constraint; and upwards of two-thirds have been restored to society, have become reputable and industrious members of it, many of them virtuous wives, and tender mothers, who, but for it, might have been forced to linger out a miserable existence, by preying on the unwary, and spreading profligacy, ruin, disease, and death, through the human species.

Nearly behind this house, in the road leading to Westminster-bridge, stands a kindred institution: the Freemasons' Charity for Female Children; originally called the Royal Cumberland Freemasons' School, because founded under the patronage of the late duchess of Cumberland.

Freemasonry, which proudly boasts of its antiquity, and imperiously demands the practice of every moral virtue, had not, till this institution was established, extended its beneficence to female objects. The purpose of this institution is to preserve the female offspring of indigent freemasons from the dangers and misfortunes to which a distressed situation naturally exposes them. On the 25th of March, 1788, this charity was instituted for maintaining, clothing, and educating, the female children and orphans of indigent brethren belonging to the ancient and honourable society of free and accepted masons. At first, a house for their reception was taken at Somers' Town. But the liberal support which the charity experienced

from

from the fraternity enabling the governors to extend its benefits much beyond their original plan, the piece of ground on which the school now stands was hired on lease from the city of London, and the present commodious structure erected at an expense of upwards of two thousand five hundred pounds, in the year 1793. It is a neat plain building with a rustic basement-story, which contains the kitchens, offices, &c. The ascent to the principal entrance is by a flight of steps from a small garden. In the front are three elegant and appropriate statues of Faith, Hope, and Charity; the two former in niches on the two sides, and the latter on the top of the structure. These were a present to the institution, in the year 1801, from Messrs. Van Spangen and Co. Of this building we have given a representation on Plate VII. but whether its triangular shape and slant position have been purposely chosen in allusion to some tenets of masonry, we dare not scrutinize. The premises are sufficiently capacious to contain one hundred children, who are trained up in the knowledge of virtue and religion, in early detestation of vice and its unhappy consequences, in industry, and, to impress strongly on their minds a due sense of subordination, in true humility and obedience to their superiors. They are admitted into the school from the age of five to ten years, without any restriction as to their parochial settlement, whether in town or country, and continued therein until they attain the age of fifteen years; during which time they are carefully instructed in every domestic employment; and when they quit the school are bound apprentice for four years, either to trades, or as domestic servants, whichever may be found most suitable to their respective capacities, and have a supply of clothing given them to the value of four guineas; and, as an encouragement for serving their apprenticeship faithfully, a premium of five guineas is also given them, on producing their master or mistress's testimonial of their good behaviour. No child who has not had the small-pox, or who has any defect in its sight or limbs, or is weak, sickly, or afflicted with any disorder or infirmity whatever, can be admitted. And every applicant must produce a certificate, from the master and wardens of the lodge in which *her father was made a mason*, that he had been at last three years a member of the fraternity previous to such application; the grand secretary's certificate, that he has been duly registered in the grand-lodge books; a certificate of the marriage of her parents; a register of her age from the parish where she was born; and a certificate from two of the medical governors of the state of her health. A considerable part of the children's time is employed in needle-work, executed in the neatest manner, on the following terms:—a plain shirt 1s. 9d. a ruffled ditto 2s. a shift 1s. 6d. sheets from 10d. to 1s. 6d. and all other sorts of needle-work in the same reasonable proportions. The charity is supported by benefactions, legacies, and annual contributions. Of the lodges which have subscribed, the Grand Lodge of England, the Grand and Royal Conclave of Knights Templars of England, and sixteen other lodges, subscribed twenty guineas, the masters of which are perpetual governors; seventeen lodges subscribed ten guineas each, and their masters are governors for fifteen years from the time of subscribing; eighty-eight other lodges in the metropolis, and other parts of the kingdom, and at Calcutta, subscribe annually: benefactions have been constantly received from other lodges. A grand concert has been annually performed at Freemasons' Hall, the profits of which have seldom amounted to less than 200l. and a benefit was given for several years at the Royal Circus, which produced about 100l. each year.

In the London Road, we remark a Roman-catholic chapel, established there several years ago. We have often admired the altar-piece, which was a Descent from the Cross, and a good specimen of the chromatic art, painted by one of the modern Italian masters in the beginning of the last century; and which has been copied by Mrs. Col-

way for the Bavarian chapel, in Warwick-street, Golden-square. The picture being much decayed, a plain crucifixion has been substituted for it.

On the east of the Obelisk we discover the workshops, chapel, &c. of the Philanthropic Society, for the prevention of crimes, and the reform of the criminal poor; contrary, therefore, to all other establishments, depravity is a recommendation to this. Prisons, and the hiding-places of villany, supply the children for this school of reform. The intention of this society, which was instituted in 1788, is to give a good education, with the means of acquiring an honest livelihood, to children of both sexes, the offspring of convicted felons, or such as have themselves been engaged in criminal practices. Previous to the institution of this society, both these classes of children were, with strong claims on public compassion, the objects of public neglect. Involved in disgrace, which prevented them from experiencing the countenance of the honest part of mankind, they were compelled to be criminal for an existence, and to continue in a progressive course of vice, until overtaken by the hand of justice. To snatch these outcasts of society from perdition, and to make them honest and useful members of the community, this institution was commenced upon a small scale; but the experience of a few years made its utility so evident, that the plan was considerably extended. At first, the children were all within one building; those, in whose reform had begun to operate, were sometimes unavoidably exposed to the society of the last admitted. At present, however, the different descriptions are separated. A house has been taken in Bermondsey, to which those who have been guilty of any crime are sent, until such a reformation has been effected in their morals, that they may be admitted with safety into one of the workshops. The trades carried on here are, printing, both letter-press and copper-plate, book-binding, shoe-making, tailors' work, rope-making, and twine-spinning.—The girls, who are kept in a distinct building, separated from that of the boys by a very high wall, are brought up for menial servants: they make, mend, and wash, their own clothing, and the boys' linen; besides which, they are employed in plain-work. A sufficient portion of their time is, however, devoted to the cultivation of their minds. They all receive a good education, and are carefully instructed in the principles of religion and morality; and, as a stimulus to industry, a part of the profits of each one's earnings is reserved until their apprenticeship expires, or they are otherwise qualified to obtain an honest livelihood in the world. The sum thus acquired has, in some instances, amounted to twenty pounds. Every part of the institution may be seen, on application, by any respectable person, except the Reform; to which no visitors are admitted, but the magistrates of Kent, Surry, or Middlesex, without an order signed by three of the committee. The whole of the premises are surrounded with a very high wall. The workshops for the boys are in the front, and the house for the girls behind; and at one end is a neat chapel. The number of boys in this institution is now about one hundred; that of the girls, fifty. The entrance-gate on the road, accompanied by two small ones, and surmounted on the pediment by an allegorical bee-hive, unites simplicity with elegance; and, when open, displays the ground, in the middle of which a weeping willow bends its pliant branches towards the crystal surface of a basin of pure water, as if in allusion to the necessity of yielding to instruction with docility in order to recover that purity of mind which former conduct may have impaired and stained.

The next place is the School for the Indigent Blind.—We cannot much praise the appearance of this building; which, standing in a position to be seen from Blackfriars-bridge, might have been made a great ornament to the Surry Road, had the architect displayed more elegance in the ornamental part of the portal. Though he was working for the blind, he might have considered that those who enjoy the sense of sight expected a better proof of his

his skill.—However, this want of ornament may have arisen from the low state of the society's funds; for it appears, from their Address to the Public in 1814, that they were very unwilling to incur the expense of a new building: "When the School was originally established, in the year 1800, upon the premises which it first occupied, (the site of the Dog and Duck,) and which were held of the city of London, it was hoped that the trustees of the charity would be able to obtain from the city a renewal of the existing lease, which had then about ten years to run. In this case, such additions might have been made to the buildings already on the ground, at a very moderate expense, as would have been sufficient for the accommodation of a larger number of pupils. This expectation, however, was disappointed, owing to the transfer of Bethlehem Hospital to St. George's Fields, which wholly precluded the continuance of the school on that site. It having also been found impossible to procure any house, or existing building, capable of accommodating so large an establishment, the committee were reluctantly obliged (at the expiration of their lease in 1810) to erect new buildings for their reception, upon the present ground near the Obelisk, which the corporation of the city of London very liberally granted on moderate terms. These are merely plain and commodious, and have been executed at the least possible expense, consistent with the object of providing suitable accommodation for an increased number of pupils." State of the Building Fund, 1814.

The object of the School for the Indigent Blind is, to instruct persons of that description in a trade, by which they may be able to provide, either wholly or in part, for their own subsistence; an useful act of charity, were no other good to result from their labour than the relief afforded by it to their poor friends or relations, on whom the cost of maintaining them is frequently a heavy charge; but of which the benefits will appear far more important, when considered with reference to the comfort of the blind themselves, and to the effect which habits of industry must necessarily produce on their feelings and general character.—It is perhaps difficult to conceive any two situations in the infinite varieties of civilized life, more different from each other, in respect to happiness, than the condition of a blind person, with his faculties benumbed by sloth, and his spirits depressed by the consciousness of being a burthen to those about him, and that of the same individual engaged in constant employment, and feeling that he contributes, by his daily occupation, to the comforts of the family of which he forms a part.—Subscriptions were first solicited for the institution in the month of December, 1799; but so much time was unavoidably spent in procuring a proper place for the school, in providing accommodations for the reception of the pupils, and in other necessary arrangements, that very few admissions could take place till towards the end of the following year, viz. 1800. Its effects, since that time, on the class of persons for whose benefit it was established, and the encouragement which it has received from the public, have been such as to answer the most sanguine expectations of its friends. It has, during a period of little more than thirteen years, returned fifty persons to their families, able to earn, according to their several abilities, from 3s. to 1l. 5s. per week. It has been able to increase the number of its pupils from fifteen males, with which it commenced in 1800, to upwards of forty males, and twenty females; and it has established a manufactory, where articles made last year, by the hands of blind persons, sold for 1300l. 7s. 1d.

The benefits of this institution are extended to the blind of both sexes, who, when admitted, are boarded, lodged, and instructed. All objects under twelve years of age are now deemed absolutely inadmissible; but no age above that is considered as a disqualification, while the strength remains unimpaired, and the fingers are flexible. It is proper also to observe here, that cases of *extreme indigence* are not those, in which admission into this school is likely

to be of most use; for, when the pupil is dismissed, the value of the instruction he has received must entirely depend upon the means he may possess of putting in practice the art in which he has been instructed; and, unless his friends shall be in a condition to furnish him with a constant supply of materials for the regular exercise of the skill he may have acquired, the society will have taught, and he will have learned, to very little purpose. The articles at present manufactured in the school, are, shoemakers' thread, fine and coarse thread, window sash line, and clothes-line (of a peculiar construction, and made on a machine adopted to the use of blind persons), by the females; and window and sash-line, clothes line, lampers, and wicker-baskets, rough and white rope-mats, and fine mats for hearths and carriages, by the males. A large quantity of the fine thread has been woven, by order of the committee, into cloth of good quality, specimens of which may be seen at the school, and the coarse is worked up into clothes-line and window sash-line. In the manufacture of these different kinds of line, a very material improvement has taken place since it was commenced; and specimens of those articles have been approved of by artificers of the first eminence in their profession. The sale of baskets, rope-mats, and white and coloured fine-mats, at the school, has also very much increased; and orders are constantly executed by the pupils to a great extent. A large assortment of baskets of different sorts and sizes, and of rough and white, and coloured, rope-mats, is always kept at the school for sale, so well made, that persons inclined to patronize the charity will experience no inconvenience by taking from it such articles as may be wanted for the use of their families. The pupils are only kept in the school till they have attained a sufficient knowledge of their trade; which, in general, where there is no want of diligence or capacity, will be in about three or four years; they are then discharged, to make room for others, with a portion of their earnings by way of encouragement, and a set of tools; and many have already been returned to their friends, grateful for the instruction they have received in religion and morality during their continuance in the school, and qualified, by the skill they have acquired there, to contribute, in a great degree, towards their maintenance. A few of those instructed in the school, have, however, been kept upon a permanent establishment, on a supposition that their earnings have been found sufficient to maintain them, and their skill being also necessary to enable the institution to keep up the credit of its manufacture with its customers; with this view, two males and three females, who would otherwise have been some time since dismissed as having received sufficient instruction, have been allowed to remain at the school.

Such are the nature and present state of the School for the Indigent Blind; a charity which, it may be hoped, will prove, in no slight degree, the means of bettering the condition and increasing the comforts of a portion of the community whose claims to compassion and assistance cannot be disputed. Those who may be desirous of seeing to what extent the situation and faculties of the blind are capable of improvement, may easily satisfy themselves on that head by visiting the school, which will be readily shown to them. They need not be apprehensive of meeting with any thing which can shock their feelings, or give rise to melancholy reflections; they will not find the pupils sitting (as is commonly the case with the blind) in listless indolence, or brooding in silence over their own defects, and their inferiority to the rest of mankind; but they will behold a number of individuals, of a class hitherto considered as doomed to a life of sorrow and discontent, not less animated in their amusements during the hours of recreation, and far more cheerfully attentive to their work in those of employment, than persons possessed of sight.

Any person (whether a subscriber or not), desirous of applying for the admission of an object, may have a printed paper of questions at the school, to which answers in writing

ing will be expected, attested in the manner therein specified; and the paper, when properly filled up, may be sent under cover, to the Rev. Dr. Grindlay, secretary to the institution, at the School for the Indigent Blind, in St. George's Fields, Surry. It will be by him laid before the school-committee for examination, and their report on the case submitted for confirmation to the general committee; upon whose order alone the name may be placed on the list of candidates. If the party, on whose behalf the application is made, be chargeable to his parish, it is required that such parish shall contribute a weekly allowance towards his maintenance in the school; and, if the parish be at a distance from town, then some respectable housekeeper, in or very near London, must become responsible for the regular payment of the sum stipulated. It is also expected, in all cases, that some respectable person, resident in London or Westminster, shall engage to take the pupil back again, when discharged from the school, either in consequence of being sufficiently instructed, or on account of misconduct, or for any other cause; and likewise to defray the expenses of burial, if he dies there.

This institution is under the direction of a president, eight vice-presidents, a treasurer, and a committee of twenty-four members. A subscription of one guinea annually, or of not less than ten guineas at once, or within one year, constitutes a member. The principal officers are annually elected; but the same person is not capable of being re-elected to the office of vice-president more than three times successively. They, together with the president and treasurer, are members of all committees. The chaplain is annually elected on the second Thursday in February, by the committee. He performs divine service at the school once on every Sunday, and attends twice in every week for the purpose of giving religious and moral instructions to the pupils. Three visitors are elected half-yearly by the committee, to visit the school from time to time, to inspect the conduct of all persons employed for the institution, and of all the pupils; to inquire into the circumstances of the persons applying for admission when necessary, and into any other incidental affairs, and report the result to the committee. The secretary is appointed by the committee; and upon his appointment joins with some other person to be approved of by the committee in a bond, with the penalty of 200l. to the treasurer, for his fidelity. No officer, instructor, or servant, can accept of any fee or gratuity from the pupils or their friends, on pain of dismissal.

The trade account of 1813, consisting of articles sold and unsold, implements, &c. amounted to 2460l. 8s. 10½d. and the expenditure for raw materials, and wages of four masters, one mistress, and a porter, amounted to 1883l. 4s. 0½d. which left a surplus in favour of the charity of 577l. 4s. 10d. The account for general purposes stated annual subscriptions under twenty guineas, at 1566l. 4s. these with other benefactions, and the balance of the trade account, amounted to 6109l. 5s. 2½d. the expenditure in house-keeping, rent, wages, rewards to pupils, &c. amounted to 4979l. 13s. 8d. leaving a surplus in favour of the charity of 1129l. 11s. 6½d. The funded capital, however, has been of course diminished by the new buildings: it amounted, on the 31st of December, 1813, to 4050l. 17s. 3d. cons. 200l. navy, and 150l. of 4 per cent. consols.

The next object which from the Obelisk attracts our notice is the New Bethlehem Hospital, which is nearly finished, and presents already a noble aspect to the passenger. We went on purpose to get a view of it. The sun was setting on the left, and its declining rays were glancing afloat over the broad face of this extensive building: The yellow-tints of the brick were animated by the purple light of the evening; and the deep azure of the skies served as an harmonious background to the whole. The portico, which consists of six gigantic columns of the Ionic order, supports a massy entablature, surmounted by a large pediment. On the sides of the entrance will be stone pillars, upon which, we are told, the two celebrated brazen figures

at the gate of the old Bedlam in Moorfields are to be placed. The whole façade is composed of three double *avant-corps*, or projecting bodies, one at each extremity, and one in the centre. The number of the windows is one hundred and eighty-nine in front, including the doors at the top of the flight of steps under the portico. The solemnity, extent, solidity, and noble elegance, of the whole edifice, reminds us of the famous palace of Priam and his fifty sons; whilst some will naturally exclaim: "And all this for inhabitants unconscious of its worth!" Yet we exult, in the mean time, in the reflection that it stands as a solemn proof of the sober and solid taste, as well as of the moral feelings and humane disposition, of the British nation. The flat cupola, which surmounts the central corps of the building, has a grave and appropriate appearance; yet a wag said in our hearing that it looked like *an empty skull*—a proper *sign* for such a *public house*. See Plate VII n. The whole is executed after the design of Mr. Lewis, at an expense of 95,000l. It is 580 feet long, and capable of receiving in this front two hundred patients. Another line of building, extending towards the south, is designed for an equal number of those unfortunate beings; and also for sixty criminal lunatics, the charge of which latter department exclusively belongs to the government. The ground occupied by the buildings, and intended for the exercise of the patients, is twelve acres.

With a new Bedlam it is to be hoped we shall have a new and improved mode of treatment; for though, in our article *INSANITY*, vol. xi. we have spoken with commendation of the treatment, general and particular, pursued in the old one, yet it is to be observed, that our statements, particularly p. 126 of that article, were taken chiefly from Mr. Haslam, himself the apothecary to the institution. But the attention of the public has been lately turned more particularly to the subject in consequence of the very humane treatment of insane persons at a hospital called the Friends' Retreat, near York; the fame of which having reached the metropolis, a plan is now in agitation to institute a "London Asylum for the Care and Cure of the Insane," upon a similar plan and principle. The persons with whom this idea originated thought it might deserve inquiry, whether the extensive practice of coercion, which obtains in those institutions, does not arise from erroneous views of the character of insane persons; from indifference to their comfort; or from having rendered coercion necessary by previous unkind treatment. It did not appear to them, that, because a man is mad upon one particular subject, he is to be considered in a state of complete mental degradation, or insensible to the feelings of kindness and gratitude. When a madman does not do what he is bid to do, the shortest method, to be sure, is to knock him down; and straps and chains are the species of prohibitions which are the least frequently disregarded. But we ought rather to consult the interest of the patient than the ease of his keeper; and to aim at the government of the insane, by creating in them the kindest disposition towards those who have the command over them.

The aversion to inspect places of this sort is so great, and the temptation to neglect and oppress the insane so strong, both from the love of power and the improbability of detection, that there was every reason to suppose, the existence of great abuses in the interior of many mad-houses. A great deal had been done for prisons; but the order of benevolence had been broken through by this preference; for the voice of misery may sooner come up from a dungeon, than the oppression of a madman be healed by the hand of justice.—A committee of gentlemen was at length appointed to investigate the subject; and they have drawn up a report which every philanthropist would wish to be made as public as possible, because it displays a system of negligence and cruelty which must excite universal horror, and consequently cause its immediate abolition. The committee not, however, being invested with government-authority, their inspection has

been in a degree superficial; but they have been enabled to obtain an inspection of the major part of the houses for the reception of the insane within the bills of mortality. At three houses they were refused admittance: viz. at Gore-house at Kensington; at Miles's receiving-houses at Hoxton; and at Brook-house. They encountered great difficulties in obtaining a view of the interior of Berthlem Hospital; at length, on Monday the 25th of April, they were introduced by one of the governors, being refused admission unless so accompanied; but he felt himself unable to attend them through; his feelings were quite overpowered. On the 2d of May, the attempt was renewed, and the following is the description of what they witnessed. "One of the side-rooms contained about ten patients, each chained by one arm to the wall; the chain allowing them merely to stand up by the bench or form fixed to the wall, or to sit down on it. The nakedness of each patient was covered by a blanket-gown only. The *blanket-gown* is a blanket formed something like a dressing-gown, with nothing to fasten it with in front; this constitutes the whole covering; even the feet were naked. One female in this side-room, thus chained, was an object remarkably striking: she mentioned her maiden and married names, and stated that she had been a teacher of languages. The keepers described her as a very accomplished lady, mistress of many languages; and corroborated her account of herself. The committee can hardly imagine a human being in a more degraded and humiliating situation, than that in which they found this female, who held a coherent conversation with them; and was, of course, fully sensible of the mental and bodily condition of those wretched beings who, equally without clothing, were closely chained to the same wall with herself. Unaware of the necessities of nature, some of them, though they contained life, appeared totally inanimate, and unconscious of existence. The few minutes which the committee passed with this lady did not permit them to form a judgment of the degree of restraint to which she ought to be subject; but they unhesitatingly affirm, that her confinement with patients, in whom she was compelled to witness the most disgusting idiocy, and the most terrifying distraction of the human intellect, is injudicious and improper. She entreated to be allowed pencil and paper, for the purpose of amusing herself with drawing; which were given her by one of the committee. Many other unfortunate women were locked up in their cells, naked, and chained on straw, with only one blanket for a covering. One, who was in that state by way of punishment, the keeper described as the most dissatisfied patient in the house; but she talked coherently, complained of the want of tea and sugar, and lamented that her friends, whom she stated to be respectable people, neither came to see her nor supplied her with little necessary comforts. The patients generally complained much of being deprived of tea and sugar. On leaving the gallery, the committee inquired of them, whether the visit had been inconvenient or unpleasant; they all joined in saying no, but (which was sufficiently apparent) that the visit of a friend was always pleasant.

"In the men's wing, in the side-room, six patients were chained close to the wall—five hand-cuffed, and one locked to the wall by the right arm, as well as by the right leg; he was very noisy. All were naked, except as to the blanket-gown, or a small rug on the shoulders, and without shoes; a lad complained much of the coldness of his feet; one of the committee felt them—they were very cold. The patients in this room, except the noisy one, and the poor lad with cold feet, who was lucid when the committee saw him, were dreadful idiots. Their nakedness, and their mode of confinement, gave this room the complete appearance of a dog-kennel. Chains are universally substituted for the straight waistcoat; (but in Guy's Hospital a leather belt is used, with side-traps to confine the arms, which in many instances is greatly superior.")

In the men's wing were about seventy-six patients, with two keepers and an assistant; and about the same number on the women's side. The patients were in no way distinguished from each other as to disease; but those who were not walking about, or chained in the side-rooms, were lying stark-naked upon straw, on their bedsteads, each in a separate cell, with a single blanket or rug, in which the patient usually lay huddled up as if impatient of cold, and generally chained to the bed-place, in the shape of a trough. About one fifth were in this state, or chained in the side-rooms. In the private mad-houses, the patients are universally made to rise, to wear clothes, to take exercise, and, from being confined in a waistcoat when necessary, are prevented injuring each other; but here the wet patients, and all who were inclined to be a-bed, were allowed to do so, from being less troublesome in that state than when up and dressed.

In one of the cells of the lower gallery, the committee saw *William Norris*. He stated himself to be fifty-five years of age, and that he had been confined about fourteen years; that, in consequence of attempting to defend himself from what he conceived improper treatment of his keeper, he was fastened by a long chain, which, passing through a partition, enabled the keeper, by going into the next cell, to draw him close to the wall at pleasure, in the same manner as a bull is drawn close to the rail in Smithfield-market; that, to prevent this, Norris muffled the chain with straw, so as to hinder its passing through the wall; that he afterwards was confined in the manner the committee saw him, viz. a stout iron ring was rivetted round his neck, from which a short chain passed to a ring made to slide upwards or downwards on an upright massive iron bar, more than six feet high, inserted into the wall; round his body, a strong iron bar, about two inches wide, was rivetted; on each side the bar was a circular projection, which being fashioned to, and enclosing, each of his arms, pinioned them close to his sides; this waist-bar was secured by two similar bars, which, passing over his shoulders, were rivetted to the waist-bar both before and behind; the iron ring round his neck was connected to the bars on his shoulders by a double link; from each of these bars another short chain passed to the ring on an upright bar. "We were informed he was enabled to raise himself, so as to stand against the wall, on the pillow of his bed, in the trough-bed in which he lay; but it is impossible for him to advance from the wall in which the iron bar is soldered, on account of the shortness of his chains, which were *only twelve inches long*. It is conceived equally out of his power to repose in any other position than on his back, the projections, which on each side of the waist-bar enclosed his arms, rendering it impossible for him to lie on his side, even if the length of the chains from his neck and shoulders would permit it. His right leg was chained to the trough, in which he had remained thus engaged and chained *more than twelve years*. To prove the unnecessary restraints inflicted on this unfortunate man, he informed the committee, that he had for some years been able to withdraw his arms from the manacles which encompassed them. He then withdrew one of them; and, observing an expression of surprise, he said, that, when his arms were withdrawn, he was compelled to rest them on the edges of the circular projections, which was more painful than keeping them within. His position, we were informed, was mostly lying down, and that, as it was inconvenient to raise himself and stand upright, he very seldom did so; that he read a great deal, books of all kinds, history, lives, or any thing that the keepers could get him, the newspaper every day, and conversed quite coherently on the passing topics and events of the war; in which he felt particular interest. On each day that the committee saw him he discoursed coolly, and gave rational and deliberate answers to the different questions put to him. The whole of this statement relative to Norris was confirmed by the keepers."

In consequence of the discovery made by the committee

of the situation of William Norris, and of a drawing which they procured to be made of him in his irons; he was visited by Messrs. Home Sumner, lord Robert Seymour, William Smith, G. Bennett, R. J. Lambton, Thos. Thompson, and other members of the house of commons; and the committee at their last visit observed that the whole of the irons had been removed from Norris's body, and that the length of chain from his neck, which was only twelve inches, had been doubled, so that the man can now move the extent of *two feet* from the wall! and for this indulgence he expresses himself very thankful.

The committee conclude this document by stating, that, they have been forcibly impressed by contrasting these practices with the general economy of the "Friends' Retreat," near York; where neither chains nor corporal punishment are tolerated on any pretext; where the conveniences provided, within doors and without, are suitable to patients in any station of life; and where every appearance is avoided that can afflict the mind by painful recollections; and where regulation and control are governed by the experienced efficacy of the important principle—that whatever tends to promote the happiness of the patient increases his desire to restrain himself.—A very attractive account has lately been published at Paris of this Retreat at York, which deserves to become the model of our lunatic asylums. But the French have advanced a step beyond us in the discipline of insanity. M. Salgues, in a recent work, informs us, that at the lunatic hospital of Charenton near Paris, the experiment has been tried with admirable success of inducing the lunatic patients to act plays together for their common amusement. This exertion of the memory to get a part by heart cures one cause of absence of mind; and this exertion of self-command to assume the character imposed cures another cause of disorder.—For a full account of the various modes of cure employed in England and on the continent, we beg to refer to our article *INSANITY*, vol. xi. p. 110–130. and we earnestly entreat every lover of humanity to peruse a Description of the Retreat, near York, for Insane Persons of the Society of Friends, by Samuel Tuke; York, 1813.

The next object is the Asylum; as to which, see the article *LAMBETH*, vol. xii. p. 102. The part which is on the west of Southwark having been pretty fully described under the above-mentioned head, we must refer our readers to it, in order to complete that part of the survey.

The road which leads towards the north, from the Obelisk to Blackfriars-bridge, is broad and airy. On the left side we find the Surry Theatre, formerly called the *Circus*, at which time equestrian feats were the principal source of amusement. This sort of entertainment having, like other things, fallen into discredit, or rather a kind of lethargy from which it may rise again with new vigour and activity a few years hence; Mr. Elliston undertook the management of the place; and, under the name of "Surry Theatre," made it, in imitation of the inferior playhouses on the Parisian Boulevards, a secondary source of dramatic mirth.—Here several of the principal plays of our best authors have been accommodated to the regulations under which these sorts of minor theatres are subjected; and the additional exhibition of rope-dancing and grand pantomimes has contributed to obtain in general a pretty numerous audience. We must lament, however, that at the second-price hour, a swarm of those gawdy flies who flutter about Highlers'-lane, (now called Friar-street,) Artillery and Gun streets, and particularly the noted Dover-street, should infest the pit, boxes, galleries, and lobbies, of the house. Their noise, their bare-faced impudence, the gross and disgusting dialect they use, are a great drawback upon the respectability of this theatre.

Farther up towards the bridge we find Christ-church, which was anciently a dependence of St. Saviour's, or St. Mary Overy's, parish, and was founded in 1627, in pursuance of the will of John Marshal, gent. of the borough of Southwark, who devised the sum of seven hundred pounds towards erecting a church, and endowed it with

sixty pounds per annum for the maintenance of a minister. With this sum, and others collected by the trustees under the will, a church was built; and the inhabitants of the district applied to parliament, in the year 1676, for an act to make it a distinct parish from St. Saviour's, which being granted, it has been ever since independent thereof. In the year 1737, the foundations of the old church having become very ruinous, a new application was made to parliament; and the present edifice was erected at the expense of the parishioners. It is a regular well-constructed building, consisting of a plain body, enlightened by two ranges of windows, with a square tower and a turret. This church is a rectory, the patronage of which is at present in thirteen persons, the representatives of the founder. The church-yard is planted with trees, and presents a pleasing aspect to the road.

On the east side is Temple Place, a well-built row of houses so called, mostly inhabited by gentlemen and ladies under the name of *rulers*, as this spot has the good fortune of being within the extensive precincts of the King's-Bench prison.

Opposite to the road called the New Cut, leading to the Marsh-gate, where a mill, by its daily turning, seems gently to insinuate how many have looked at its circumvolutions and are no more; and stands as a sad index of the life of man, whose course is merely a circle which he runs more or less according to the order of Providence—Opposite to this road we find a well-built edifice, called Surry Chapel, which owes its origin and its support to the Rev. Mr. Rowland Hill and the congregation which follows his religious tenets. The history of Rowland Hill is pretty well known. Belonging to a respectable family at Hawkstone in Shropshire, his expulsion from the university of Oxford in 1768, together with five other students, for assembling to pray and preach at prohibited seasons and in unauthorised places, excited no inconsiderable share of popular attention. Mr. Hill afterwards became a member of St. John's college at Cambridge. Whether the motives which have induced Mr. Hill to persist in his secession from the establishment were perfectly conscientious, or whether, on the other hand, he was at all decided by the affectation of singularity and the ambition of notoriety, are questions which must rest with himself. He was once found, by the late Cornelius Winter, in the situation of "a distressed gentleman;" and was then considered as suffering for the cause that he espoused.

Mr. Hill's discourses are incoherent in arrangement, whimsical in illustration, commonly colloquial in language, and abounding in strange flights of fancy, and apt but humorous stories. He absolutely labours for his metaphors: and, in his zeal to lower himself to what he conceives to be the aptitude or capability of his audience, he sometimes mistakes vulgarity for simplicity. Yet he has the happy knack, if such it is, of immediately arresting the contemplation of the commonality, and obtaining their attention. Naturally eccentric, he is unequalled in the excitation of religious merriment. Perhaps he is the only living preacher (and this he has done) who could make the people smile during a funeral sermon. His stories are uniformly amusing: his jokes are jokes of the heart. Proper things, however, in proper places. Is it now too late to dissuade Mr. Hill from extravagantly pursuing a system of preaching, of which the beneficial effects are so extremely doubtful? Cannot he be familiar, without being funny; or, mult illustration be necessarily irreverential? What gratification can he find in being considered as the great head of story-telling and stamping preachers; of evangelical eccentrics; of mountebank pulpiteers? His example has wrought incalculable ill. It is not easy to say how many an S. S. or M. G. we owe to him; men who, either as to goodness or talents, are not worthy of being associated with Mr. Hill, even as the hewers of wood and drawers of water to the temple of our religion.

While it is incumbent on us not to conceal the defects of

*Surry Chapel.*

*Hill's Alms-houses, Gravel-lane, Southwark.*

of Mr. Hill, let his merits obtain honourable mention. He possesses a strong reasoning mind. He readily seizes the prominent bearings of his subjects, fixes them in the clearest point of view, and is easily apprehended by his auditory. His addresses, as they seem to flow from the fervour of feeling, often strongly affect the feelings of those to whom they are directed; and the very tremulousness of his under-tones contributes, at times, to solemnize the minds of the people. His action, though too frequently ludicrously distorted, is, when occasionally he places his hands on the sconces of the pulpit, really graceful and highly dignified.—Evangelical ministers, it should seem, are sometimes rather earthly-minded. What other feeling than that of fallible vanity, the poor love of poor fame, induced Mr. Hill to tolerate, and patronize too, prints of his house, in which he is drawn as setting out from home, fully robed; while a medallion profile of him appears suspended, amidst the clouds? Charity urges us to refrain from severely animadverting on Mr. Hill's reiterated invectives against regular clergymen, and his ill-dissembled confidence in his own preaching.

These remarks are gathered chiefly from a very popular work called the Pulpit. In the following opinion of the author, however, we do not coincide. Oneimus says, p. 183, "I imagine that Surry Chapel will not always continue so profitable as it may hitherto have proved. Novelty ceases to attract its crowds to this evangelical octagon, or religious round-house; and the popular influence of its founder, for whom there will not soon be found an adequate substitute, is now rapidly declining." This is contrary to fact: the chapel is as fully attended as ever it was; and it is observed, that Mr. Hill's substitutes attract even greater audiences than he does himself.

Surry Chapel was built in the year 1784. It is a sort of rotunda, with four porticoes and a cupola; and, though not an elegant building, is certainly a great ornament to the road. It is a very capacious edifice; and the congregation is very numerous, and very charitable; for we are informed that greater collections have been made here for charitable purposes, upon some occasions, than at any church whatever of the establishment. We had been promised some particulars upon the subject to lay before our readers; but the nature of a weekly publication has prevented us from waiting for the desired information.—Of the style of singing early adopted, and still practised, in this chapel, it must with justice be asserted, in the verification of Pope, that

The blessing thrills through all the labouring throng;  
And heaven is won by—violence of song.

To this "violence of song" has been occasionally added a kind of machinery appended to the organ, to imitate, in a most theatrical manner, the roaring of thunder, in order to give stage-effect to particular passages. But this exhibition is now discontinued.

To the south-east of this chapel, in Gravel-lane, we meet with a charmingly picturesque set of alms-houses, erected in 1812, which owe their origin to the religious philanthropy of the same celebrated clergyman, Mr. R. Hill. The building consists of three *corps de logis*, for the accommodation of twenty-four poor old women belonging to the congregation; and we understand, that, although the whole is supported and managed solely by the kindness of Mr. Hill, these alms-houses afford great comforts to their inhabitants. The establishment also includes a free day-school for twenty-four girls, who are well educated and completely clothed, but not boarded: this is called the school of industry, and occupies the centre part of the building. The whole edifice is in the modern Gothic style, and by its regularity presents a neat and interesting appearance. We refer the readers to our Plate VII. p. exhibiting both the alms-houses and the chapel.

Before we take leave of Mr. Rowland Hill, we should observe, that we have been informed, that the first Sun-

day-school in London originated at Surry-chapel; and that the committee of managers of that chapel are the guardians of all the Sunday-schools throughout the Borough of Southwark—and lastly, that Mr. Hill devotes the whole of his time, and the whole of his fortune, to the most benevolent and charitable purposes.

Hill's alms-houses are nearly surrounded, on the south, by new streets and neat rows of comfortable dwellings; but, unfortunately, too near the polluted street anciently called Highers-lane, and now Friar-street, (not, we hope, on account of its being peopled with *nuns* of the cyprian order,) which is certainly a nuisance to the whole neighbourhood.

On the west of the alms-houses we found a stone, having the following inscription, engraved, as it appears by the character of the letters, more than a hundred years ago: "This stone is the boundary of Hangman's Acre." Whence this denomination arose we cannot tell.—On another stone just by, and indeed upon several hereabouts, we noticed the arms or badge of the borough of Southwark, consisting of an annulet surmounted by a cross pattée, and interlaced with a saltire conjoined at the bottom. See Plate VII. fig. 1. This, and similar figures, used to be anciently the sign of marts and staples, and particularly of wool-staples; the bales were marked with it, as being an easy figure to draw. Some of these marks have, instead of the cross pattée, a plain cross with a line drawn from the top to the left arm of the cross, (as shown at fig. 2.) intended perhaps to represent a vessel, with sail and oars. At Collumpton, in Devonshire, we have seen many badges, somewhat similar to this, carved in several parts of John Lane's chapel, who was himself a considerable wool-merchant and cloth-manufacturer. We may therefore infer, that the borough of Southwark adopted this badge on account of a great trade of wool going on there. The skin-market in Great Suffolk-street, is a faint remembrance of it. See p. 511.

Great Surry Road, which, from the nature of the gravel and sand laid over the *encaissement*, would be intolerably dusty, is in general well-watered in summer, and thus becomes cool and pleasant.—Having returned this way to the centre of our perambulations, by once more crossing Blackfriars-bridge, we shall now follow a western direction from the city obelisk to the farthest verge of Westminster.

From the south end of Fleet Market, we ascend the counter-part of Ludgate-hill, called Fleet-street; leaving on our left the Obelisk, erected in 1775, at the opening of Bridge-street, by alderman John Wilkes, of patriotic memory, then lord-mayor of London, and often mentioned in our annals, and in the article ENGLAND, vol. vi.—We perceive every moment the great utility of the shelter furnished by the posts surrounding this obelisk, to passengers assailed on every side by horses, carriages, and cattle.—We leave the well-known negro who, for so many years has swept the crossing and bowed to the public, and who is now considered as a natural appurtenance to the spot.—We leave also the celebrated patriot's elegant shop at the corner, Waithman's shawl and printed-linen warehouse; and we proceed. The old saloop-shop is still here; and still the perfume of wholesome saffras keeps the mind awake, in spite of all the opiate farrago of daily publications: but we beg pardon—the place is now called "Read's Coffee-house." A few doors farther, Bride-lane brings us into St. Bride's church-yard, which surrounds the church. The ground here is so unequal, that on one side the path of the church-yard is about twenty feet in height, while on the other it is level with Salisbury-court. St. Bridget, or St. Bride, well known in legendary lore, for her visions and ascetic spasms, is the patroness of this church, which seems to be of some antiquity, from its having had three rectors before the year 1362. It was a very small building till about the year 1480, when it was greatly enlarged by William Venor, warden of the Fleet Prison, who caused a spacious fabric to be erected at the

west of it, consisting of a middle and two side aisles; to which the old church served as a choir. It was originally a rectory in the patronage of the abbot and convent of Westminster, and is supposed to have been converted to a vicarage about the year 1529. When Henry VIII. dissolved the convent of Westminster, and formed it into a bishopric, this church was conferred upon the new bishop; and, when Edward restored the deanery, the patronage was granted to the dean and chapter, in whom it has ever since continued, except during the reign of Mary, who re-established the dissolved convent. In 1610, the earl of Dorset gave a parcel of ground, on the west side of Fleet-ditch, for a new church-yard; which was consecrated on the 2d of August that same year, by Dr. George Abbot, bishop of London. The old church having been destroyed by the fire of London in 1666, the present edifice which was designed by sir Christopher Wren, was completed by him within fourteen years, in such a masterly and elegant manner, as to exceed most of our parish-churches in delicacy and beauty; it is 111 feet long, 87 broad, and the steeple is 234 feet high, which is thirty-two feet higher than the monument. It has a plain and regular body, the openings all answering to each other: the roof is raised on pillars; and the altar-piece, like the outside of the church, is very magnificent. The circular pediment, over the lower part, is supported by six Corinthian columns. The steeple is a spire of extremely-delicate workmanship, raised upon a solid yet light tower: and the several stages by which the spire gradually decreases are well designed, and skilfully executed. In this steeple is a ring of twelve bells so much noticed for the melody of their tones, that, when they are rung by day, it is not uncommon to see groups of gaping people, imbibing with open mouth and ears the sweet harmony.

Under the east end of the church-yard was a spring of the purest water, which had anciently a very great name for curing diseased eyes. It has been for some years confined into a well, and is dealt out by means of a pump under an arch of brick without any ornament, which is visited by many people, and even by some who live far from the place.—Most ancient churches have such springs; the reason of which is, that those churches belonged to convents, or particular congregations, who would naturally seek for a spot where clear and perennial water was flowing for their use. The same coincidence is observable nearly every-where on the continent.

The convent of the Carmelites, or White Friars, so called from their clothing, which according to the rules of the order, is white, occupied the space from Fleet-street down to the Thames, on the banks of which was their garden. These friars were mendicant, although some lands and messuages belonged to their community. Their convent was founded in 1241, by sir Richard Grey, ancestor of the lords Grey of Codnor in Derbyshire; and was rebuilt by Hugh Courteney, earl of Devonshire, about the year 1350, when the ground given to the order by Edward I. to enlarge their buildings was taken in. Many persons of distinction were interred in the conventual church, which was built by sir Robert Knolles, a great warrior in the reigns of Edward III. and Richard II. The company of Carriers had a guild in this church, whence it is probable that many of that profession resided in the vicinity. At the dissolution of this convent in the 30th of Henry VIII. the revenues of the house were valued at 62l. 7s. 3d. when the king conferred different portions of the building upon his favourites; and in 1557, Edward VI. granted the church, chapter-house, and other parts of the priory, to the bishop of Worcester and his successors. In the year 1608, the inhabitants of this district obtained a charter from James I. to entitle them to several liberties and privileges, and an exemption from the jurisdiction of the city of London; which soon rendered the place an asylum for insolvent debtors, cheats, and gamesters, who gave it the name of Alsatia. But the inconveniences produced by this sanctuary, and the riot-

ous proceedings carried on there, at length induced the legislature to interpose their authority; and, in the year 1696, an act of parliament was passed to deprive the district of privileges so injurious to the community.

Between St. Bride's and the spot where the White Friars were, we have Salisbury-court, street, and square, Dorset-street, &c.—Salisbury-court is still famous for a long-established cook's shop, where, five-and-thirty years ago, when it was under the direction of Mr. Simpson, a man could get a very substantial plate of "roast or sodden meate" for 4d. and dine for 5½d. beer and bread included.—From the profits of such moderate charges, Simpson made a handsome fortune, and retired; but afterwards, by speculations in building, and the extravagance of his son, became poor, and, we understand, died lately in the post of beadle to St. Bride's parish.

Salisbury-square is so called from being the site of the bishops of Salisbury, who resided there when their parliamentary duties required that they should live in or near the metropolis. But, when the clergy became less connected with affairs of state, the earls of Dorset inhabited the house, and caused the name of the street abovementioned.

Between Salisbury-square and the Thames is the office belonging to the New River Company, with all its appendages and wharfs.—It is a handsome brick edifice, built in a very neat and uniform style. Descending the hill from the top of Dorset-street, this fabric, divided in three corps, each adorned with a pediment, and the middle one with a portico, brings to the recollection of a classical mind, the fanes of Athens and Rome. The wide expanse of the river behind, and the mass of buildings on the other side of the Thames, add considerable interest to a view, of which very few people ever take any notice.

Somewhere about the bottom of Bouverie or Silver-street, and below the Bolt-and-Tun inn, was a magnificent and spacious theatre, wherein plays were acted till the abdication of James II. A few years since a plan was in agitation to enliven this part of the city by the presence of a third play-house, but leave has not yet been obtained; and it is worthy of remark, that the city has not had a play-house within her walls for a great number of years. However, there is still a large piece of ground unoccupied; and indeed, this is perhaps the largest spot of land within the limits of the city which has remained unbuild upon for so many years. Perhaps the owners of it may still indulge the hope of obtaining a patent or license; and that the only absolute monopoly existing in this country may yet be got rid of. See LETTERS PATENT, vol. xii. p. 541.

The north side of Fleet-street does not furnish us with any thing worthy of being pointed out to our readers.—Several courts communicating with the market, and Harp-alley (a row of houses occupied by brokers), and Shoe-lane, are hardly worth mentioning. The last winds gently towards Holborn-hill, where it ends at the north-east wall of St. Andrew's church-yard. Lower down towards the south, on the same side of Shoe-lane, is a burial-place, belonging to the parish of St. Andrew, over the entrance to which is a carving of the general resurrection, which is well executed; but, having been repeatedly covered with paint, all the sharpness of the figures is lost.

Nearly opposite to this, is Bangor-court, and the remains of the city-mansion of the bishops of Bangor; the east end of which has some appearance of having been formerly used as a chapel. In the window, at this end, is a coat of arms, in stained glass, with the name of Fleetwood. On the south side of the building is an ancient door-way, ornamented with military trophies. The reversion of this messuage, with a quantity of waste-land belonging to it, measuring a hundred and sixty-eight feet in length from north to south, and a hundred and sixty-four in breadth from east to west, was sold in the year 1647, by the trustees for the sale of bishops' lands, to

John Barkstead, knt. who purchased it for the purpose of building on the vacant ground; as appears by an act of parliament passed in 1656, for restraining new buildings in and about the suburbs of London, in which there is a special proviso to enable him to build thereon, in consideration of his having given a greater sum for the purchase of it, on that account, than he would otherwise have done. The last bishop of Bangor, who appears to have resided here, was bishop Dolben, who, having been formerly vicar of Hackney, contributed thirty pounds for repairing the causeway leading from Clapton and Hackney to Shoreditch, of which he informed the inhabitants of these villages, by a letter dated from Bangor-house, in Shoe-lane, the 11th of November, 1633.

Above this we have Gough-square, particularly and almost exclusively inhabited by furriers. It is a small place, but pleasant on account of its comparative silence and apparent solitude in the centre of noise and bustle. The access to it is multifarious.—One is by Wine-office-court, where we find an old-established drinking and smoking house, called the Cheffire Cheese.—Another is through Johnson's court, where the celebrated Dr. Johnson lived for some years; and afterwards removed to Bolt-court, another of the inlets to Gough-square, where he died; and where also lived and died that worthy character and self-taught philosopher, James Ferguson; and also the ingenious Mr. Whitehurst, a well-known writer on mechanics. Amid this learned society lived a man of very modest and retired habits, yet not quite unknown to the literary world: Mr. Griffith Jones was for many years editor of the Daily Advertiser, at that time a paper of the greatest circulation of any in London; and of the London Chronicle, to which he contributed many essays in prose and verse; he was also the author, compiler, and translator, of many other publications: but never put his name to any. The Chronicle, however, was his principal labour for many years; and his son takes a pleasure in quoting the testimony of Mr. Boswell, that "it was all along distinguished for good-sense, accuracy, moderation, and delicacy." Life of Johnson, vol. i. p. 297.—The house is now occupied by the Medical Society of London. A considerable part of Bolt-court is at present taken up with the printing-offices and warehouses of Mr. Bensley, from whose presses have proceeded some of the most elegant typography that England or any country can boast.

To the west of Gough-square we find Fetter-lane, which unites Fleet-street with Holborn. Its entrance at both ends is narrow, and particularly at the south end. We are told it was anciently called *Fewters' lane*, from the number of idle and loose persons who used to frequent the place, it being surrounded with gardens and houses for dissipation. Why perkins should flock to this lane, and why sausage-meat should be made here in greater quantity and with more credit than at any other place in town, is not easily accounted for.

Beyond the south end of Fetter-lane is the parish-church of St. Dunstan in the West. It is a very ancient foundation, in the gift of the abbot and convent of Westminster, who, in the year 1237, presented it to king Henry III. towards the maintenance of the foundation of the house called the Roils, for the reception of converted Jews. It was afterwards conveyed to the abbot and convent of Alnwick in Northumberland, in which patronage it continued till that religious house was suppressed by Henry VIII. Edward VI. granted the advowson of this church, under the name of a vicarage, to lord Dudley. Soon after this, the rectory and vicarage were granted to sir Richard Sackville; and the impropriation has continued ever since in private hands. This is one of the churches that escaped the fire of London, the flames having stopped within three doors of it; since which time, however, it has been frequently repaired; and at length a number of small shops, or sheds, that stood in the front of it, have been removed. The church, which is built of brick and stone, consists of a large body, with a very dif-

proportionate square tower. It is ninety feet in length, sixty in breadth, thirty-six in height to the roof, and the altitude of the turret is one hundred. Here is a good organ, remarkable for a fine *vox-humana* stop. The dial of the clock projects over the street, on the south side of the church; and the clock-house is formed of an Ionic porch, containing two figures erect, carved and painted, and as large as life, which with knotted clubs alternately strike the quarters on two bells hung between them: these figures were set up in the year 1671. In a niche, at the east end of the church, is the statue of queen Elizabeth, which formerly stood on Ludgate, and, when that gate was taken down, was purchased by alderman Gosling, and placed in its present situation. See p. 104 of this article.

A little to the east of St. Dunstan's church, and near the south end of Fetter-lane, is Crane-court, in which is a neat plain building, called the Scots' Hall. This corporation was instituted for the relief of the poor and necessitous people of Scotland, that reside within the cities of London and Westminster. It owes its origin to James Kinnier, a Scotchman, and a merchant of this city; who, on his recovery from a long and dangerous illness, resolved to give part of his estate towards the relief of his indigent countrymen; for which purpose, having prevailed with a society of Scotchmen, who composed a box-club, to join their stock, he obtained a charter, by which he and his coadjutors were, in the year 1665, constituted a body politic and corporate, with several privileges, which king Charles II. confirmed the following year by letters patent; wherein are recited the privileges granted in the former charter, with the addition of several new ones, viz. that they might erect an hospital, within the city or liberties of London and Westminster, to be called, "The Scots Hospital of King Charles II." to be governed by eight Scotchmen, who were to choose from among themselves a master, and who, together with these governors, was declared to be a body politic and corporate, and to have a common seal. They were also empowered to elect thirty-three assistants, and to purchase, in mortmain, four hundred pounds per annum, over and above the annual sum mentioned in the first charter; the profits arising from these purchases to be employed in relieving poor old Scotch men and women, and in instructing and employing poor orphans, the descendants of Scotchmen, within this city. The extensive plan of an hospital was soon abandoned for the present mode of relief by assisting persons at their own habitations. And a third charter was granted in 1775. The annual subscription is one or two guineas, and ten guineas for life-governors. The fund raised by these contributions is applied to the relief of poor Scotchmen who have not acquired any parochial settlement in England, and who have survived the power of labour, or are disabled by disease or casualty to earn a livelihood, or are desirous of returning to their native country, and are destitute of the means.

Crane-court is no throughfare; but, passing through the back-door of one of the houses at the north-east side, we come to the top of Red-lion-court, called Red-lion-passage, where lived the learned printer, Mr. William Bowyer. See vol. iii. p. 326. The house was burned down at the beginning of February 1808, (not January, as erroneously stated at p. 185.) but has risen with greater splendour by the exertions of Mr. Nichols, once the apprentice and then the partner of Bowyer; now one of the most respectable printers in London, and himself a veteran and a giant in literature, having produced immense tomes of topography and biography; and having moreover established a character for integrity and benevolence that makes every man his friend.

Going round this celebrated printing-office to the north-west, a delicate passage called Featherbed-lane brings us again into Fetter-lane; and we presently find, to the south-west, one of the entrances into Clifford's Inn. This communicates immediately with Serjeants' Inn, Chancery-lane, the only remaining inn of court for.

for the judges and serjeants of the law, and containing chambers only for the accommodation of these gentlemen; whereas, in that in Fleet-street, each one possessed a distinct house. The degree of a serjeant being the highest in the law, except that of a judge, it is conferred, by the sovereign, on those of the profession most eminently distinguished for their abilities and probity; and this order is held so honourable, that none are admitted to the dignity of a judge but the members of it. According to the opinion of some of our ablest lawyers, among whom may be named sir Edward Coke, this degree is of very ancient standing; and it is expressly mentioned in stat. 3 Edw. I. c. 29. See the article INNS OF COURT, vol. xi. p. 76, 84.

We have now reached Chancery-lane, the opening of which from Fleet-street has received of late very material improvements. Several over-shadowing houses have been taken down; and, when a few more on the east of the lane, belonging to Serjeants' inn, shall be rebuilt in a better way, this third communication from Fleet-street to Holborn will be still more frequented and more airy. In this lane we find the Rolls Chapel, and opposite Rolls Buildings.—The Rolls Chapel is the place for keeping the rolls, or records in chancery. This house was founded by king Henry III. in the place where stood a Jew's house, seized upon by that prince in the year 1233. In this chapel all such Jews and infidels as were converted to the Christian faith were ordained, and in the buildings belonging to it were appointed a sufficient maintenance; by which means a great number of converts were baptized, instructed in the doctrines of Christianity, and lived under a learned Christian appointed to govern them; but, in the year 1290, all the Jews being banished, the number of converts decreased; and, in the year 1377, the house, with its chapel, was annexed by patent to the keeper of the rolls of chancery. The chapel, which is of brick, pebbles, and some free-stone, is sixty feet long, and thirty-three in breadth; the doors and windows are gothic, and the roof covered with slate. In this chapel the rolls are kept in presses fixed to the sides, and ornamented with columns and pilasters of the Ionic and Composite orders. These rolls contain all the records, as charters, patents, &c. since the beginning of the reign of Richard III. those before that time being deposited in the record-office in the Tower; and, these being made up in rolls of parchment, gave occasion to the name. At the north-west angle of this chapel is a bench, where the master of the rolls hears causes in chancery; and attendance is given in this chapel, from ten o'clock till twelve, for taking in and paying out money, according to order of court, and for giving an opportunity to those who come for that purpose to search the rolls. The minister of the chapel is appointed by the master of the rolls; and divine service is performed there on Sundays and holidays, at eleven and three. On the walls are several old monuments; particularly at the east end is that of Dr. Young, master of the rolls, who died in the year 1516: on a well-wrought stone coffin lies the effigy of the doctor in a scarlet gown; his hands lie across upon his breast, and a cap with corners covers his ears: on the wall, just above him, our Saviour is looking down upon him, his head and shoulders appearing out of the clouds, accompanied by two angels.

The office of the rolls is under the government of the master of the rolls, whose house is by the chapel. The place of master of the rolls is an office of great dignity, and is in the gift of the king, either for life or during pleasure. He is always the principal master in chancery, and has in his gift the office of the six clerks in chancery, of the two examiners of the same court, and of the clerk of the chapel of the rolls, who acts immediately under him in that office. He has several revenues belonging to the office of the rolls; and, by act of parliament, receives a salary of twelve hundred pounds per annum out of the hanaper.

Nearly opposite to the Rolls chapel, is the main access to that noble and long-celebrated place called Lincoln's

Inn, of which we have spoken very much at large under the article INNS OF COURT, vol. xi. p. 78-82. so that we can only add a few remarks which have occurred to us on our present survey.

The chapel (see p. 80) was built by Inigo Jones, about the year 1622, on pillars, with an ambulatory, or walk, underneath, paved with broad stones, and used as a place of interment for the benchers. The outside of this chapel is a very indifferent specimen of Gothic architecture, and the windows are painted with the figures, at full length, of the principal personages mentioned in the scriptures. On the twelve windows on the north side, are Abraham, Moses, Eli, David, and the prophets Daniel, Isaiah, Jeremiah, Ezekiel, Amos, and Zechariah, with John the Baptist and St. Paul; and on the south side are the rest of the apostles. Under these figures are the arms of a great number of gentlemen belonging to this society; a most preposterous union of sacred worthies with modern heraldry. In fact, the whole does but little honour to Inigo Jones; and does not even retain any mark of what it was the fashion to call *his style*.

In speaking of the hall, p. 80. we noticed Hogarth's picture of St. Paul before Felix. To the painting of this picture belongs an anecdote which the reader will not be displeased with, as it proves that our great artist endeavoured to represent the most evanescent objects in the fleeting actions of man.—He had nearly finished this picture, in which he intended to display all the powers of his mind; and we know that they were greater than even his powers of execution. A friend of his was admitted to see the progress of the work; and, after examining the whole and the details, said; "Well, my dear sir, I am sure, when the whole is *complete*, this will be what you expect it to be, your best work, and the admiration of the world."—"Complete!" replied Hogarth with a sudden flush on his face, "complete? Why—it is complete now—What do you want more? I am sure it is as complete as I can make it."—The visitor smiled, and hummed, and snattered most diffidently; "I mean simply this; that when, for instance, you have finished the hands of Felix, all then will be done."—"Now," said the painter, "I do clearly understand you—that is, I understand that you do not understand nature—for look here;" and then (to imitate the trembling of Felix) he put both his hands into such a quick and quivering agitation that they ceased to be seen. "Now," added he triumphantly, "*I have painted motion*."—However the fallacy of his hypothesis was soon made so clear to him, that he condescended to put at the ends of Felix's arms the hands we now see in the picture.

Sets of chambers in the Stone Buildings, the most modern and elegant part of Lincoln's Inn, let for from fifty guineas to 120l. per annum, and sell for from 350l. to 2500l. they are held for 99 years certain from 1780, on three lives, with the privilege of nominating a fourth life after the death of those three.—In the Old Buildings, chambers let from 25l. per annum, to 80l. and sell from 200l. to 1000l. They are held for the life of one member of the society; but on payment of a small fine they may be transferred.—These buildings denominated the New Square are fee-simple, and entitle the owners to a vote for the county. These let from 40l. to 100 guineas per annum, and are occupied by solicitors, conveyancers, and special pleaders, frequently to the exclusion of the members of the inn; they sell from 350l. up to 2500l. per double set. All these chambers pay 4l. 2s. annually to the society.

Lincoln's-inn Fields, as it is sometimes called, is the most extensive square in the metropolis, or perhaps in Europe, the area containing not less than ten acres. This spacious square is situated north-west of the inn, between the south side of Holborn and the north side of Portugal-street. The sides of it, within the railing, are the exact measure of the base of the greatest pyramid of Egypt. The area of this square is formed into grass plats and gravel walks; and the whole is encompassed with an iron palisade

*The Royal College of Surgeons, in Lincoln's Inn Square.*

*View of Covent Garden Theatre, from Bow Street.*

*J. Chapman, sc.*

liffade fixed upon a stone plinth. The north, west, and south, sides of it, are adorned with very elegant buildings, among which are those formerly belonging to the dukes of Ancafter and Newcastle; the first in the centre of the west side, and the other, which is now divided into two, is at the corner of Great Queen-street; and the east side of it is bounded by the wall of the terrace in Lincoln's-inn-gardens. The north-side of the square is called Holborn-row; the west side Arch-row; the south side, Portugal-row; and the east side Lincoln's-inn-wall. Had this square been completed according to Inigo Jones's plan, it would have been the most beautiful in London. The design was formed with that simple grandeur which characterises most of his works. Ancafter house, near Duke-street, is a specimen; and it was intended that the whole should have been built in the same style; but there were not a sufficient number of people of taste to accomplish so great a work. In its present state, many of the houses are grand and noble; but the beauty arising from uniformity is wanting. This square was the place chosen for the execution of lord Russell, who was beheaded in the middle of it on the 21st of July, 1683.

It would certainly be a most desirable thing if the centre of this square were occupied by some national monument devoted to the memory of all the worthies of Britain, from Alfred to the duke of Wellington, to whose valour and bravery we are happy to find that a monument is going to be raised, by a subscription set on foot, not by stock-jobbers and wealthy nabobs, but by *the fair*. A most gratifying and delicate idea; for if, as Dryden says in Alexander's Feast, "None but the brave deserve the fair," so none but the fair should crown the brave. The duchess of York is at the head of the subscribers, and the sum already received is considerable. We recollect with pride that we hinted the idea at page 472.—Were we to suggest a plan, it would be, to erect a building fit to receive in the inside paintings and statues produced by English genius; and outside should be pedestals and niches destined for the statues and busts of our poets, historians, and naval as well as military heroes. It might occupy about a tenth of the whole area; i. e. about an acre, including a canal of water which should surround and secure the national temple. At present this large square is almost without ornament; for the whimsical projection of Mr. Soane, with statues and a sort of loggia, the subject of a long litigation, is not of importance sufficient to be taken notice of; but the College of Surgeons deserves our attention. It is situated on the south side of the square; and has a back-entrance in Portugal-street. Now this is one of those productions of the art which will always add consequence to the spot they are placed upon, and show the magnificence and wealth of a great nation. Here we find that solemn grandeur which arises from a proper union of regularity and simplicity; and, although hypercritics have found fault with some parts of the building, we were so pleased with the whole together, that we have caused a drawing and an engraving of it to be made, in order that our readers may judge for themselves. See Plate VII. *d.* The front is adorned with a noble portico of the Ionic order, supported by six plain columns; and we cannot help admiring the good sense and classicality of the architect in choosing that peculiar order of architecture, since it took its origin where the first man who exercised successfully the art of healing wounds and curing diseases, was born.—Hippocrates was a native of Ionia. The architrave tells the purport of the edifice by this simple inscription in raised brass letters: COLLEGIUM REGALE CHIRURGORVM; "Royal College of Surgeons." In the centre of a plain course, above the entablature, are placed the arms of the college, with the supporters; they may be described technically thus: Quarterly; first and fourth or, a serpent nowed with the head erect, vert; second and third argent, a lion couchant proper; over all, on a cross engrailed, azure, a regal crown between two portcullisses in fess, and as many an-

chors in pale, gold. Crest; on a wreath a hawk regardant holding in his beak a broken arrow, all proper. Supporters. The dexter, the figure of Machaon, holding in his dexter hand an arrow, the point downward and broken off; the sinister, the figure of Podalirius, habited all proper.—Machaon was a celebrated surgeon, son of Esculapius, and brother to Podalirius. He went to the Trojan war with the inhabitants of Trica, Ithome, and Cechalia; and exercised the art of surgery among the Greeks. Homer says, in his catalogue of ships,

Ἀσκληπιὸν δύο παῖδες  
Ἰντηρ' ἀγαθὸν Ποδάλειοιο, καὶ Μάχων.  
Il. ii. 240.

Those Podalirius and Machaon guide.  
To these his skill their parent-god imparts,  
Divine professors of the healing arts.

Pope.

Machaon is mentioned by Virgil as having been concealed in the wooden horse on the famous night which witnessed the destruction of Troy. *Æn.* ii. 263. Some suppose that he was killed before the walls of Ilium by Eurypylos, the son of Telephus.—Podalirius, his brother, was one of the pupils of the famous centaur Chiron. At his return from the Trojan war, he was shipwrecked on the coast of Caria, where he cured a daughter of the king of that place of a severe and dangerous illness by bleeding her in both arms; which is the first authentic record of the operation of blood-letting. This and other eminent proofs of his skill in the art of healing endeared him so much to the Carians, that after his death they built him a temple, and paid him divine honours.—From this it may be inferred how appropriately these two characters were chosen to support the arms of the College of Surgeons.—On the eastern side of the building, arranged in distinct apartments, is the Hunterian Museum, purchased by parliament for the use of the college: it consists of above 20,000 anatomical preparations, forming one of the greatest curiosities, and the most extraordinary assemblage of the wonders and harmonies of nature, to be met with in any country.

Portugal-street leads into Clare-market, so called from John earl of Clare, by whom, it was built and opened in the year 1656. It contains two market-houses, many hutchers and green-shops, where provisions are sold perhaps more reasonable than in any other market in or near London.

A large portion of Vere-street, Clare-market, and the adjoining neighbourhood, was built on land called St. Clement's Fields; and one of the earliest erections was a bowling-alley and tennis-court, situate in Bear-yard; a name which is still continued, and leaves no doubt the premises were occasionally used for the once-popular diversion of bear-baiting. The tennis-court communicated with Vere-street by a passage, according to repute, near where the Bull's Head is now situate, and where Charles Gibbons, esq. (as he is styled in the parish books,) the proprietor, then resided. In 1660, there was erected on the site of the tennis-court a small theatre, being the first built after the restoration; and on Thursday, November 28th, in that year, it was opened with the play of Henry the Fourth, by the company from the Red Bull under the direction of Thomas Killigrew. One event has given some importance to this theatre, in the history of the drama. Mr. Malone, with a discrimination not easy to be controverted, supposes that here, on Saturday, Dec. 6, 1660, upon the performance of Othello, the first time that season, "it is probable an actress first appeared on the English stage." Though the prologue and epilogue spoken on the occasion are in print, yet the name of the heroine is not preserved. At this house, Killigrew's company continued during the seasons of 1661, 1662, and part of 1663; and within that period obtained the title of "The Kings and Queens's Company of Players." In the latter year they removed to the new-built theatre in Drury-lane; and it does not appear that this house was again used for dramatic representations. Davenant, who

shortly afterwards produced his *Play-houfe to Lett*, alludes to it by making a musician fay, "Rest you merry; there is another play-houfe to lett in Vere-ftreet." Probably it remained unoccupied until Mr. Ogilby, the author of "*Itinerarium Angliæ*, or Book of Roads," adopted it, as ftanding in a populous neighbourhood, for the temporary purpose of drawing a lottery of books, which took place in 1668; and it was then, to diftinguifh it from the two neighbouring edifices in Lincoln's-inn Fields and Drury-lane, called the "Old Theatre." By another tranfition we find the volatile players fucceeded by austerè puritans. In 1675, the parifh-rates paid by the widow Gibbons (whose husband had then been dead feveral years) are entered for the "Tennis-court;" which might be an error in the collector, who could not but remember that "fuch things were," as in the following year it is fitly described as "The Meeting-houfe." The fame title is used in 1682, when, in confequence of an order in council for fuppreffing conventicles, feveral attempts were made by the conftables to take into cuftody the preachers who held forth at the "Old Play-houfe in Vere-ftreet." The building muft have been very fubftantial, as, reputedly, it was the fame that was destroyed by fire in 1809.

From Clare-market we naturally drop, through a narrow paffage on the left, into Clement's Inn.—The antiquity of this inn cannot be afcertained, but it is mentioned in a book of entries, dated in the 19th of Edward IV. Could Shakefpeare's authority on the fubject of dates be relied on, it muft have been much older; for in the fecond part of his hiftorical play of Henry IV. he makes one of his juftices a member of that fociety: "He muft to the inns of court. I was of Clement's once myfelf, where they will talk of mad Shallow ftill."—Adjoining to Clement's Inn, on the weft, is New Inn.—Paffing through this on the left, we get into Wych-ftreet, and crofs over into Lion's Inn, faid to have been anciently a common inn, having the fign of the lion, and yet to have been in the poffeffion of the ftudents and practitioners of the law ever fince the year 1420. For farther particulars of thefe three inns, fee vol. xi. p. 76, 7.—The opening into Holywell-ftreet has been lately faced, elegantly enough, with compofition or ftucco; and a fhield, bearing the uncouth representation of an ill-looking and clumsily-drawn lion, imperfectly informs the paffenger that this leads to Lion's Inn.

Meditating on this ill-used and misrepresented animal, we prefently came to a fmoke-jack manufactory at the corner of Holywell-ftreet and Newcastle-ftreet: this reminded us of another fet of formerly ill-used animals; for here the jacks, themfelves in motion with every breath of wind, feemed to proclaim a fweet and lafting repofe to the poor dogs, who, fome forty or fifty years paff, ufed to travel the whole day in a wheel, without getting any forwarder, in order to forward the meat to their mafters. The turnfpite-race of dogs is now loft in England, and we hope every where elfe—for indeed, but little ingenuity was required to invent fome fort of machine to fet the mutton in motion before the fire. Farther, we confeff that it pains us to fee this faithful friend of man, the guardian of our houfes, who facrifices his own fleep to our fecurity, the *averruncus* or defender of our perfons, debafed to drag in unfitting harnefs the butcher's or baker's truck.

From Lion's Inn we return to Temple Bar, in order to proceed from that point by another route.—TEMPLE BAR has been fufficiently described at p. 106. and the TEMPLE, part of which is within and part without the city, under the article INNS of COURT, vol. xi. p. 68 & feq.

Close to Temple Bar is *Shire lane*, fo called from the circumftance of its dividing the city from the fhire or county of Middlefex. It would be a work deferving of the thanks of the neighbourhood, if the magiftrates could hunt out a neft of cyprian harpies who hover about the entrance of this lane, to the great annoyance of the paf-

fengers. But thofe wasps have their hive there; and, till it is completely overturned, there is no remedy to the evil. It is a curious remark, that moft of thofe ftreet-walkers have their particular diftrict, a certain length upon which they may parade night and day, but the limits of which they are not allowed to pafs. From the top of Ludgate-hill to Temple Bar, is one of the moft extenfive walks; but fome are confined to the fpace from Bridge-ftreet to the Bar, while another fet goes as far as the entrance of St. Paul's church-yard, but not a ftep farther.—The law, of course, can have nothing to do with thefe regulations; but they arife from certain bye-laws, or a kind of convention which they have made among themfelves; and an initiation to the fiftershood is generally paid in gin or other palatable fees. One fet does not crofs the way, to intrude on the other fide, which excluſively belongs to another fet entirely different in manners and drefs, and not appearing abroad perhaps till a later hour in the evening. "They manage thefe matters better in France;" where we underftand that every convent where thefe nuns go to perform their *vefpers* is under the direktion of an *abbeſs*, jocoſely fo called; and that the whole eftablifhment is under the immediate eye of the police.

It might be interefting, perhaps, to fome of our readers, to have here a topographical defcription, and a fort of ichnography, of the appearance which the STRAND, at its opening from the weft front of Temple Bar prefented a few years ago. The houfes approached in the fhape of a wedge between the narrow opening of the Strand on the fouth, (fome of the houfes of which are yet ftanding with over-hanging ftories,) and on the north a narrow lane called *Butcher-row*. There were old and ill-looking almshoufes on the eaft of the church; and Butcher-row was continued by Holywell-ftreet, which ftill preferves a likenefs of it in the architecture of feveral of its houfes as well as in the narrownefs of the place.—Picket-ftreet, a noble and femicircular place, fo called in honour of the projector of this improvement, an alderman of London, has fuperſeded that dark and dirty row, and winds round the north fide of the church called St. Clement Danes: The houfes, which have been very unwifely built of an uncommon height, are more elegant than commodious; and the difficulty of finding purchaſers fuggelted the neceffity of difpofing of moft of them by lottery. Several are ftill uninhabited; others are let to auctioneers, who feem to be eager to make this ſpot a fort of emulative market-place for all kind of merchandife of which their owners may wifh to difpofe for ready money. The entrance towards Clement's Inn prefents a ſhort piazza adorned with columns, and contraſting moft abſurdly with the ſhabby and narrow lanes to which it leads on the right, filled up with old-iron-fhops, ballad-fingers, bird-fellers, and beggars. The other fide of the Strand has alfo reſpectfully retired about forty feet from the church towards the fouth; daylight has been let into Milford-lane; and a ſemi-circular or crefcent-like row of good houfes, already inhabited by reputable tradefmen, answers the north fide, and opens an eaſier paffage to carriages.

This part of the county of Middlefex is called the Liberty of the Duchy of Lancafter, which was granted to Peter of Savoy, from whom it paffed to the houfe of Lancafter, by Henry III. in the thirtieth year of his reign, in the following words: "All thofe houfes upon the Thames, which ſometimes pertained to Brian de Inſula, or l'Ifle, without the walls of the city of London, in the way or ſtreet called the Strand, to hold to him and to his heirs, yielding yearly in the Exchequer, at the feaft of St. Michael the Archangel, three barbed arrows, for all ſervices. Dated at Reading, &c." The extent of this liberty includes all the buildings between the fouth fide of the Strand and the Thames, from Temple Bar to the eaft fide of Cecil-ftreet. On the north fide of the Strand, it reaches from Temple Bar to where the may-pole flood; that is, near the weft end of the church of St. Mary-le-Strand, and re-

turns from thence through Holywell-street, including all Butcher-row, (when standing,) to Temple-Bar. Beyond the may-pole, the liberty begins again in Catharine-street, at the Fountain-tavern, and reaches from thence into the Strand, as far as Exeter Change; then turning up Burleigh-street, it runs to within four houses of Exeter-street, whence it passes through the buildings to the Fountain-tavern. Anciently this spot was occupied by the palaces of the chief nobility, the names of which are still preserved in the streets, &c. built on the sites of these mansions, and the gardens belonging to them. Hence we find here, Essex-street, Devereux-court, Arundel-street, Norfolk-street, Howard-street, Surrey-street, Burleigh-street, Exeter-street, Craven-buildings, Drury-lane, &c.

Since the improvement lately made, the first object which strikes the eye, as we leave Temple-bar, is the parish-church of St. Clement, and its steeple; which contains a set of bells, and a barrel-chime that plays every three hours a psalm-tune, the 104th, in so melancholy a mood, that the neighbours, waking in the dead of night, must have been long tired of the too-often repeated strain.—These chimes were frequent here anciently, and are still common in Germany and the Netherlands.—Cripplegate-church and St. Clement's are the only ones in London, if we are not mistaken, which have retained the old and useless fashion of setting church-bells to play musical tones to the sleeping parishioners in the night, or to the "vacant air" in the day, when the over-powering bustle and rattling of the streets make it impossible for the drawing melody to be heard. To St. Clement's chimes, however, we have no particular objection, as the sacred bells perform a sacred tune; but what can the good citizens of Salisbury think, when they stately hear the well-known tune of the anti-christian song "Life let us cherish" played off by the bells of one of their churches?

This church was dedicated to St. Clement, a disciple of St. Peter—but whence the distinctive appellation of "Danes?" Baker says it derived this name from having been the place of re-interment of Harold, whose brother, Hardicanute, had caused his body to be dug up and thrown into the Thames, where it was found by a fisherman, who "buried it in the church-yard of St. Clement, without Temple-bar; then called the church of the Danes." William of Malmesbury mentions a church here, before the arrival of the Danes, which, he says, they burnt, together with the monks and abbot; and that they continued their savage and sacrilegious fury throughout the land. He then goes on; "Desirous at length, to return to Denmark, they were about to embark; when they were, by the just judgment of God, all slain at London, in a place which has since been called the Church of the Danes." There is also another reason given for the denomination of this church; namely, that, when most of the Danes were driven out of this kingdom, those few that remained, being married to English women, were obliged to live between the Isle of Thorney (Westminster) and Caer Lud (Lud-town, or London), where they built a synagogue, which was afterwards consecrated, and called, "Ecclesia Clementis Danorum." This is the account given by Fleetwood, the antiquary, recorder of London, to the lord-treasurer Burleigh, who referred in this parish. The old church was taken down in 1680, and the present structure erected in 1682, under the direction of sir Christopher Wren; but the steeple was not added to it till some years after. It is a very handsome structure, built entirely of stone. The body of it is lighted by two series of windows; the lower plain, but the upper well ornamented; and the termination is by an attic, whose pilasters are crowned with vases. The entrance, on the south side, is by a portico, to which there is an ascent of a few steps; the portico is covered with a dome, supported by Ionic columns. On each side the base of the steeple, in the west front, is a small square tower, with its dome. The steeple is carried to a great height in several stages; where it begins to diminish, the Ionic order takes place,

and its entablature supports vases. The next stage is of the Corinthian order; and above that stands the Composite, supporting a dome, which is crowned with a smaller one, whence rises the ball and its vane. This church is a rectory, the patronage of which was anciently in the Knights Templars; but, after passing through several hands, it at length came to the ears of Exeter, in whom it still remains. The length of this church is ninety-six feet, its breadth sixty-three, and its height, to the roof, forty-eight feet; and the altitude of the steeple is about a hundred and forty feet.

From the west end of St. Clement's, the Strand continues on the south; and Holywell-street and Wych-street, on the north, run up to St. Mary's, commonly called the New Church in the Strand. The original church belonging to this parish is mentioned so early as the year 1222, when it was named "St. Mary and the Innocents of the Strand;" but how long it had stood before that time is uncertain. It was then situated on the south side of the Strand, nearly opposite to the present edifice; but was taken down in 1549, by order of Edward Seymour, duke of Somerset; which depriving the parishioners of a place of worship, they joined themselves to the church of St. Clement Danes; and afterwards to that of St. John Baptist in the Savoy, where they continued till the year 1723. At length, the act having passed for erecting the fifty new churches within the bills of mortality, one was appointed for this parish, and the first stone laid on the 25th of February, 1714. It was finished in three years and a half, though it was not consecrated till the first of January, 1723, when, instead of its ancient name, it was called St. Mary-le-Strand. It was the first built of the fifty new churches; and is a very superb, though not a very extensive, edifice: it is massy, without the appearance of being heavy, and formed to stand for ages. At the entrance on the west end is an ascent by a flight of steps cut in the sweep of a circle. These lead to a circular portico of Ionic columns covered with a dome, which is crowned with an elegant vase. The columns are continued along the body of the church, with pilasters of the same order at the corners, and in the intercolumniations are niches handsomely ornamented. Over the dome is a pediment supported by Corinthian columns, which are also continued round the body of the structure, over those of the Ionic order beneath; between which are the windows placed over the niches. These columns are supported on pedestals, and have pilasters behind with arches sprung from them, and the windows have angular and circular pediments alternately. A handsome balustrade is carried round the top, and its summit is adorned with vases, one of which fell down a few years since, and killed a man on the spot. The steeple is light though solid, and ornamented with composite columns and capitals. The whole building is surrounded by a dwarf stone wall, ornamented with very strong and handsome iron rails. This church is a rectory, the patronage of which is in the bishop of Winchester. The value of the living is two hundred and twenty-five pounds per annum, besides surplice-fees; of which sum one hundred pounds was settled by act of parliament, and one hundred and twenty-five pounds is raised by a pound-rate upon the inhabitants in lieu of tythes.

On the site of this church, until its erection, stood a maypole, which on May-morning, as well as on other days of festivity, was decorated with streamers and garlands of flowers, and much resorted to by the maidens and youths of London and Westminster; when taken down, it was found to be one hundred feet in length. It was obtained by sir Isaac Newton, and conveyed to Wansstead Park in Essex, at that time the seat of sir Richard Child, afterwards lord Castlemain, where, under the direction of the Rev. Mr. Pound, it was placed for the erection of a telescope one hundred and twenty-five feet long, the largest then in the world, which was given to the Royal Society by Mons. Hugon, one of its members. Pope has immortalized this maypole in the following lines.

Amidst

Amidst the area wide they took their stand,  
Where the tall maypole once o'erlook'd the Strand:  
But now, so Anne and piety ordain,  
A church collects the faints of Drury-lane.

We may, at a proper time, say something more upon the origin of May-games and May-poles, which, though now out of fashion, are still connected with some parts of our history.—See p. 72, 73, and 451, of this volume; also the article GAME, vol. viii. p. 201-3.

Westward from Essex House, mentioned vol. xi. p. 68. stood the bishop of Bath's inn, which in the reign of Edward VI. was severed from the bishopric, and granted to lord Thomas Seymour, high admiral, when it received the name of Seymour Place. It came afterwards into the possession of Thomas Howard, earl of Arundel, who, on the attainder of the high admiral, purchased it of Edward VI. with several other messuages in the parish, for 41l. 6s. 8d. when its appellation was changed to Arundel House. Though this building covered great extent of ground, it appears from Thane's views of it to have been low and mean. When it was pulled down, and the four streets bearing the family name and titles were erected on its site, there was a design to build a mansion-house for the family out of the accumulated rents, on that part of the gardens next to the river, and an act of parliament was obtained for the purpose; but the plan was never executed. We have seen two views of this house on the bank of the Thames well executed, though on a very small scale, by Hollar; and they sold for eleven guineas each, although four guineas might have covered the engraved part of the copper upon which they were originally etched. They were scarce—and our readers know that, with print, picture, coin, and manuscript, collectors, scarcity is every thing! It turns nonsense into wit, unfinished engravings into master-pieces, daubs into fine productions, rubbish and obliterated pieces of metal into valuable medals, and gives credit to unedited or unprinted old pamphlets, which to their want of intrinsic merit alone owe their having never been thought worthy of revival. See p. 317.

At the west end of Wych-street, and the south end of Drury-lane, stood the ancient mansion of the noble families of Drury and Craven, and also that of the queen of Bohemia, the unfortunate daughter of James I. The remains of the latter have been lately taken down to make way for a new equestrian theatre, under the direction of Mr. Aitley, called the Olympic Pavilion, which, in competition with the Amphitheatre near Westminster-bridge, exhibits feats of horsemanship, rope-dancing, &c. &c.

Drury-house was built, according to Pennant, by sir William Drury, a most able commander in the Irish wars, who unfortunately fell in a duel with sir John Borroughs, in a foolish quarrel about precedence. During the time of the fatal discontents of the favourite Essex, it was the place where his imprudent advisers resolved on such counsels as terminated in the destruction of him and his adherents. This house afterwards came into possession of the heroic William lord Craven, who, in 1673, was created earl Craven. Part of it is now a public house; and on the site of another part is erected a court called Craven-buildings, at the upper end of which was a portrait of this hero in armour, with a truncheon in his hand, mounted on a white horse. It was supposed that this illustrious nobleman aspired to the hand of his royal neighbour, whose battles he had fought; and that he succeeded, and married her privately. This conjecture was not a little strengthened some years ago, when, on digging in the stable-yard behind both houses, a subterraneous communication was discovered between them.

Crossing over from Little Drury-lane, we find Somerset House.—This is one of the noblest pieces of architecture which London can boast of; and, when you have seen St. Paul's basilica and the royal-looking palace of Somerset House, you seek in vain within the bills of mortality for any thing that can be compared to them. Foreigners,

used to the lofty ruins of ancient Rome, and of the high edifices of modern Paris, are naturally apt to find this building too low; and indeed, were it twenty feet higher, it would have much more effect and majesty. The celebrated and justly-admired hospital at Greenwich labours under the same defect. If Somerset House displays a noble appearance in the Strand, what shall we say of the view of it from the Thames? Here the astonished eye ranges from the rippling surface of the waves to the top of the "grand corps," which is the centre of the whole; and a noble terrace supported by arches, through which the curious sight winds along, as we row before them, into mysterious cavities, seems to defy other countries to boast of a more majestic fabric.

It was originally built, about the year 1549, by the duke of Somerset, uncle to Edward VI. and protector of England, who demolished the palaces of the bishops of Chester and Worcester, and an inn of chancery called Strand-inn, with the church of St. Mary le Strand, that stood there; and also the Strand-bridge. Mr. Pegge gives a particular account of these places respectively; and then proceeds—"What is now a street, called *the Strand*, was at that time no more than a highway, leading from London westward to the village of Charing, where stood queen Eleanor's cross, and a few houses; from whence, in a right line, you was led on, through open fields, to St. James's house, lately an hospital, but then a royal house. This highway, being the property of the crown, as such was easily modified to accommodate the king's uncle, and consequently there was little difficulty or hardship upon the subject in the change it underwent by levelling; and on the whole, perhaps, the road was rendered better by the change." By Stowe's account, there was not any current of water under this bridge; for, says he, in the autograph remaining in the British Museum, "then had ye, in the high street, a fair bridge, called Strand-bridge, and under it a lane, which went down to the Strand, so called from being a banque of the river of Thames." But here Stowe speaks of it as if it were in his own time, and not with reference to the reign of king Edward VI. or to any prior period. Maitland, on the other hand, tells us, that there was a rivulet under the bridge; for, says he, "a little to the east of the present Catharine-street, and in the high street, was a handsome bridge, denominated, from its situation, Strand-bridge, through which ran a small water-course from the fields, which, gliding along a lane below, had its influx to the Thames near Somerset-stairs." In this account we should incline to believe Maitland; because lanes do not often become rivers, though the beds of rivers, by a diversion of their courses, may become lanes.

Besides demolishing the places we have mentioned, the duke availed himself of the materials he obtained from the church of St. John of Jerusalem with its tower, (see p. 106.) and the cloisters on the north side of St. Paul's church, together with the chapel and charnel-house, all of which he caused to be destroyed for this purpose; and the building from him obtained the name of Somerset-house: but, the duke being soon after attainted, it fell to the crown.

In this palace Anne of Denmark, queen to James I. kept her court, whence it was called Denmark-house during that reign; but it soon after recovered the name of the founder. It was afterwards the residence of queen Catharine, dowager of Charles II. and, by an act passed in the second year of the reign of his present majesty George III. it was settled upon his queen for life; but has since been exchanged for Buckingham-house.

This palace consisted of several courts, and had a garden behind it situated on the bank of the Thames. The front next the Strand was adorned with columns and other decorations, and in the centre was a handsome gate that opened into a quadrangle. On the south side of this quadrangle was a piazza before the great hall, or guard-room: beyond which were other courts that lay on a descent towards the garden. The back-front next the Thames

Thames was added to it by Charles II. and was a magnificent structure of free-stone, with a noble piazza, built by Inigo Jones. In this new building were the royal apartments, which commanded a beautiful prospect of the river and the adjacent country. The garden was ornamented with statues, shady walks, and a bowling-green; but, as none of the royal family had resided there after queen Catharine, dowager of Charles II. several of the officers belonging to the court were permitted to lodge in it; and a great part of it was for some time used as barracks for soldiers. In Somers-et-yard, on the west side of the palace, were coach-houses, stables, and a guard-room for the use of the soldiers on duty; the gateway to which fronted Catharine-street.

The propriety of erecting the public offices, necessarily connected with each other, on the same spot, had long been perceived by the government; when, in 1775, the conveniency of this old building, which already belonged to the crown, pointed it out as the most eligible situation for the purpose. An act of parliament was therefore obtained for embanking the river Thames before Somers-et-house, and for building on the ground thereof various public offices which were specified, together with such others as his majesty should think proper. See the article ARCHITECTURE, vol. ii. p. 119, 20. To the account there given we have little to add.—The entrance from the Strand is by three arches, which open to a spacious vestibule, uniting the street with the back front, and serving as the general access to the whole edifice; but more particularly to the Royal Academy, and to the Royal and Antiquarian Societies; the entrances to all which are under cover. This vestibule is decorated with columns of the Doric order, whose entablatures support the vaults, ornamented with well-chosen antiques; among which the ciphers of their majesties and the prince of Wales are judiciously intermixed. Over the central doors, in this vestibule, are two busts, executed in Portland-stone, by Mr. Wilton; that on the Academy-side represents Michael Angelo Buonarrotti, the first of artists; that on the side of the learned Societies, sir Isaac Newton, the first of philosophers.—The Royal Academy, by the kindness of his present majesty, has been accommodated with the whole of the right side of the vestibule; where a lobby, decorated with casts of the best antique statues and bas-reliefs, opens on the right into the secretary's apartments and the Model Academy. Facing the entrance, the noble staircase presents itself, most majestically adorned with a gigantic cast of the famous Farnesian Hercules, fenced behind with brass-wire to prevent its receiving any injury. The rooms above are—the Library; the Antique Academy; the Council Room, containing the diploma-pictures of the academicians for several years; and above, the Large Room, where the students receive lectures upon the particular sciences connected with the art of painting, as anatomy, drawing, perspective, &c. and where they study the naked figure under the direction of able professors. See ACADEMY, vol. i. p. 46. The exhibition of paintings, drawings, and sculpture, is every year in the months of May and June.—On the other side, the Royal Society has part of the whole pavillion. An anti-chamber, which is common to them and the Society of Antiquaries, leads to the Meeting-room, where we find several portraits of the successive presidents.—The Antiquarian Society has its library on the ground-floor, which is open to the members every Wednesday. The day of meeting is every Thursday, except vacation-times. It is the same for the Royal Academy. See farther under the article SOCIETY.

Nearly opposite to Somers-et-house is Catharine-street, in which we find the Morning Herald, the Champion, the Morning Advertiser; and above, in Brydges-street, the News, the Antigallican; whilst below, in the Strand, and only a few yards from them, we meet the Morning Post and Morning Chronicle, as opposite in principles as in situation, the Courier, the Pilot, &c. &c. as if these paper-kites to which morning and evening the eyes of the cu-

rious are powerfully drawn, had tacitely agreed to nestle all together in one place.—Nothing can more plainly show the reading-character of the present times, than a statement of the number of newspapers printed and circulated. In London there are published seventeen newspapers daily, and eighteen or nineteen every Sunday, besides eighteen once or twice a-week. The following particulars are added from the Picture of London for 1812: "Of the morning-papers, there are sold about 17,000; of the daily evening-papers, about 12,000; and of those published every other day, about 10,000. There are also about 26,000 sold of the various Sunday papers; and about 20,000 of the other weekly papers: in all, the enormous number of 232,000 copies per week; yielding to their proprietors from the sale 5800l. and from advertisements 2000l. more; of which the revenue to government is full 4000l. and the net proceeds to the proprietors about 1000l. per week. The remaining 2800l. affords employment and subsistence to about 50 writers and reporters, 300 printers, 100 vendors, and 100 clerks and assistants; besides paper-makers, stationers, type-founders, &c. full 200 more. If to these be added the weekly calculation of 250,000 copies of provincial papers, yielding 10,000l. per week, and supporting the industry of 1500 persons;—what a wonderful idea is afforded of the agency and influence of the press in this empire; and how easily is it accounted for, that we are the most free and most intelligent people on the face of the earth!" See MAGAZINE, NEWSPAPER, and REVIEW; also JOURNAL, vol. xi. p. 273.

Catharine-street ascends by a gentle slope towards Russell-street, changing its name at the corner of Exeter-street, and assuming that of Brydges-street; on the north-east end of which, rose at last, from its nearly-forgotten ashes, the play-house of Drury-lane, which now stands in noble simplicity to greet our sight. But this building does not make at distance so fine an object as did the former one. From Blackfriars-bridge we could see that noble roof, crowned by the fane, upon which stood the statue of the god of music and poetry, who,

— when vengeful Vulcan's flames arose,  
And roll'd in raging volumes through the shades  
Of startled night, elate and fierce, assail'd  
His tripod-trampling feet, and sacred lyre—  
Indignant fell amidst the inferior blaze  
Of sublunary fire!—with dreadful crash  
He fell—and groan'd!—the parched walls around  
Shook to their bases, and return'd the sound.

The grand entrance is in Brydges-street, as before; and leads to a capacious hall, on one side of which, and fronting the entrance, is a large door leading to a rotunda, in which the passages to the different parts of the theatre are concentrated. This is surmounted by a hemispherical lantern, round the inside of which is a passage leading to the saloon. The saloon is a spacious room over the hall, and of the same dimensions as the hall beneath. A great advantage in point of decorum is obtained by this arrangement, as the company in the saloon is completely separated from the boxes, the whole diameter of the rotunda being interposed between them. The stairs are broad, capacious, and lead in the most convenient manner to the different tiers of boxes; the pit is smaller than that of Covent-garden theatre. From the stage to the back of the dress-boxes, the space is sixteen feet less than in that theatre; and, between box and box across, the distance is also less by seven feet. As in old Drury, there are private boxes round the pit, and under the dress circle. These are eight on each side, but with only four compartments in front, in the form of Saxon arches. There are three circles for boxes, each of which contains twenty-six boxes in thirteen compartments, except the front of the upper tier, in which the two-shilling gallery advances. The upper boxes project over the lower, the whole being supported by twelve gilt fluted columns, with Egyptian pedestals. The area of the boxes, following the form of

the whole building, are in the shape of a horse-shoe; but the extremities are not made to approximate in order to meet the narrow front of the stage, but, by taking a sweep in the contrary direction, afford to the company nearest to the performances an excellent view. Thus the audience-part forms three-fourths of a circle, which, making some little allowance for the deviation in the drop within the proscenium, may be said to be completed by the circular sweep which connects the outer wall of the boxes with the proscenium. The lustres by which the house is lighted, are made from designs formed by the architect. On the staircases, at each pillar, are placed antique lamps. Melpomene and Thalia are placed in the niches on either side of the proscenium, above the cornice; and the royal arms are painted on the semi-circular pannel formed by the arch which appears to surmount the two pillars over the proscenium. These are done with a most astonishing strength of relief, so that the eye can hardly decide whether they are carved or painted. The uniform shape of the back wall of the boxes gives an unobstructed range to the sound, at the same time that its thickness (three feet) is an effectual security against the spreading of flames. In the corridors which surround and lead to the boxes, the floors are formed of stone, and rest upon brick arches without any intermixture of timber. Another wall, three feet thick, surrounds these corridors. By an invention of Col. Congreve, water is laid on to all parts of the building: the reservoir will contain 200 hogheads, which will supply the pipes for half an hour; and the directors of the York-buildings Waterworks have engaged, by means of steam-engines, to replenish the reservoir. The scenes move on an iron railway. The whole amount of expenditure, including scenery, wardrobe, and all the other property necessary to be provided for opening the theatre for theatrical performances, amounted to about 150,000l.

Thus much of the interior, in which there is nothing wanting to elegance, convenience, comfort, or security. But experience has often taught us, that we should form very erroneous conceptions of the interior structure of the mind, both as to its elegance and utility of attainment, were we judge of it from the first impressions produced by the exterior frame in which it is embodied. It is thus with the new Drury-lane theatre. The façade or front exhibits a long square and almost-flat mass of stonework. It may be divided into a centre and sides. The sides about half the breadth of the centre; and each constituted by a pilastrade of two columns, supporting the plainest entablature possible. This entablature extends along the centre, but with only the moulding of the architrave in the latter. On the entablature is an unadorned parapet, or surmounting of the front. Between each pilaster is an aperture, or blank door, corresponding in circular shape and size with three doors in a line with these two; above which doors are five windows, the centre ones ornamented with pediments. The centre stands on an elevation of three steps. Two pedestals immediately project from the wall, in the shape of half a hexagon or six angled figure, on each side the middle door; they are each surmounted by an elegant iron tripod, on which rests a handsome lamp, and two cylindrical pedestals, surmounted by similar objects, are, except their bases, detached about two feet from the building. The side of the structure exhibits a long range of fifteen arched doors and windows, above which is another row of thirteen windows, running a little above the middle elevation of the wall, the remainder of which is ornamented with a cornice, and has an attic elevation at the corners. Two niches, in a line with the upper windows, appear in the wall immediately over the side doors. The whole is in unison with the front. In fine, the proportions are all symmetrical, harmonious, and agreeable; and its aspect would have been more pleasing, had the whole building been faced with artificial stone, instead of the front alone. But, if the appearance of a structure should be as expres-

sive as possible of its use, then this is not the exterior of a theatre, but rather of a Quakers' Meeting, for it exhibits very little indication of a place appropriated to dramatic amusements. Of all its deficiencies, its greatest is, its being without either colonade, arcade, or portico; not merely because those objects are in themselves beautiful, but because they are essentially useful to the visitors in rainy weather. For this useful purpose, porticos and ambulatories were generally attached to the Roman theatres. From an account published in the Monthly Magazine for Jan. 1812, it appears, that the entrance of this house was intended to be "surmounted by a fine colonade supported by eight pillars."

The beauty of the interior, the natural curiosity of the public to see a new thing, and the circumstance of there being but one other theatre in this vast metropolis, contributed to fill the house during the first season; and the second season, which has lately closed, has been rendered highly productive by the first appearance of Mr. Kean, whose powers of acting have rendered it extremely difficult to procure a seat in the theatre on his nights of performance. — This house is built to afford sitting-room for 2810 persons: 1200 in the boxes, 850 in the pit, 480 in the lower gallery, and 280 in the upper gallery. The architect is Mr. B. Wyatt.

Drury-lane, is so called from Drury-house, which stood at the south end of it near Little Drury-lane. Pennant, says, "It is singular that this lane, of later times so notorious for intrigue, should receive its title from a family-name, which, in the language of Chaucer had an amorous signification:

"Of bataille and of chevalrie,  
Of ladies love and *druerie*,  
Anon I wol you tell."

Some writers have lately found fault with Pennant for understanding here the word *druerie* in a sense so contrary, *they say*, so diametrically opposite, to its original signification, which they pretend is "modesty and decency of deportment." We must in this instance support Mr. Pennant, and observe, that the word, as used in Chaucer, is entirely French; and comes from the adjective *drû*, "well-fledged, strong, frolicsome;" as a bird that has all his feathers, and is ready for amorous strife. The French say, *Ce gaillard est drû*; meaning, that "he is a frolicsome young man, fit for love and courtship." Hence we conclude, that, if ever the word has obtained the other meaning, it must have been taken astray from the genuine signification.—This place was not less famous for intrigue formerly than it has been in later times. In the forty-sixth number of the Tatler it is thus humourously described: "There is near Covent-garden a street, known by the name of Drury, which before the days of Christianity, was purchased by the queen of Paphos, and is the only part of Great Britain where the tenure of vassalage is still in being. All that long course of building is under particular districts, or *ladyships*, after the manner of lordships in other parts, over which matrons of known abilities preside, and have, for the support of their age and infirmities, certain taxes paid out of the rewards of the amorous labours of the young. This seraglio of Great Britain is disposed into convenient alleys and apartments, and every house, from the cellar to the garret, inhabited by nymphs of different orders, that persons of every rank may be accommodated with an immediate consort to allay their flames, and partake of their cares."

A few yards from the front of Drury-lane theatre, we get a side view of that of Covent-garden; and approaching the south entrance of Bow-street, a place long famous for the attendance and transactions at the head office of the police kept there, we catch the aspect of that elegant play-house, as we have had it represented in Plate VII *d*. To our engraving, which, as far as the limits of the copper would allow, most faithfully represents this building, we shall join some observations upon the architecture, in-

terior and exterior, of this magnificent structure; and endeavour to explain those principles of science, by which alone such a building ought to be judged.

Mr. Smirke, jun. the architect, has selected, and upon very just grounds of preference, the Doric style of architecture, which, in majesty, simplicity, and strength, so much excels the other orders. The front of the theatre occupies one half of that side of Bow-street nearest to Covent-garden; and, upon our first approach, we are struck with the astonishing breadth and majestic simplicity of the building. The portico, in the centre, is of the same proportions as those in the portico of the temple of Minerva at Athens; and the characteristics of Greek architecture are preserved in the other parts of the front. The columns of the portico, we believe, with the exception of those of St. Peter's at Rome, and those in the temple of the Acropolis, are the largest of any existing building in Europe. The mouldings on the exterior of the building, the architraves round the windows, in short every part, are correct examples of Greek forms and purity. In the lower part of the front a suite of arcades extends from one end to the other; and there is no decoration introduced which does not tend to the general effect and character of the whole.—The front of the building is terminated at each end by two pilasters; and the figures of Comedy and Tragedy are placed in niches between them. There is a breadth of plain surface under each niche, by means of which the effect of the figures is very much assisted. The *basso-relievs* in front are each about forty-five feet long, and are executed with the same relief as those in the temple of Minerva, which were the work of Phidias. The projection of the most prominent figure not exceeding three inches, they have a peculiar effect from the plain surface behind them, and, being slightly indented, harsh shadows are avoided. They thus form a part of the general character and prevailing simplicity of the structure, and constitute a modest decoration and delicate enrichment. Under the portico, in the same relief as the other *basso-relievs*, the king's arms are introduced.

The main walls of the theatre, which are about one hundred feet in height, and of a proportionate thickness, rise considerably above the other parts of the front; and arched openings have been judiciously introduced, by which the chimneys are concealed, and the water is discharged from the great roof. In the other fronts of the building all architectural decoration has been omitted; but the same flowing lines, the same exactness of proportions and purity of parts, the same noble simplicity and character of severe grandeur, is preserved throughout.—The building is entirely insulated; but a communication has been preserved between Hart-street and Bow-street, and the piazzas in Covent-garden.

But in a work conducted upon principle, having said thus much, having praised the architect, not only for his taste and genius, but for his knowledge of the rule, and strict conformity to it; it is but justice to the public not to cover him with indiscriminate eulogy, but to apply the rule as well where it apparently makes against him as where it is in his favour. Ought not the entablature in the front of the building to have been one unbroken line? ought it to have been divided into compartments? In this style of building, the Doric order, nothing is admissible for the mere purpose of ornament. Every thing must have an immediate or presumable reference to utility. According to this principle, the entablature is supposed to be the strap, or *vinculum*, by which the parts are bound together. Now it is evident that this idea necessarily involves unity and continuity. There is no strength in a cord thus minutely snapped. This division, moreover, was not necessary for the purpose of comprehending the figures of the *basso-relievs*. According to all existing reliques of the pure Greek Doric, they might have been introduced in the interstices of the tryglyphs. Division always takes from effect: it belongs to ornament, but not to simplicity.

There is one peculiar praise which belongs to this building—It is the only existing specimen of pure Greek architecture, uncorrupted by Roman or Gothic appendages. It is filled up as it were from the remaining shell of the Acropolis at Athens. Mr. Smirke has caught from the temple of Minerva the general idea; the proportions, the parts, the finishing, are all his own; in a word, it is a building of which Athens would not have been ashamed, and of which England, therefore, may be reasonably proud.—Like every true work of art, it does not command attention by its mere mass; the effect is purely given to it by the art, the harmony, the mind, of the workman. The mass, the brick and mortar, and all that was done by the trowel and the plane, belong to Mr. Copeland; the order and effect, the *mens agitans molem*, to Mr. Smirke. It is he that has lifted the mass into lightness, and, like the Atlas in the fable, carries it with majesty and simplicity on his shoulders.

The specimens of the fine arts exhibited in the sculpture of the front are representations of the ancient and modern drama, in *basso-relievo*. The designs are classical, and the execution masterly. The piece representing the ancient drama is to the north of the portico, and that representing the modern drama is on the south side.

*Ancient Drama.*—In the centre three Greek poets are sitting. The two looking towards the portico are Aristophanes, representing the old comedy, and (nearest to the spectator) Menander representing the new comedy. Before them Thalia presents herself with her crook and comic mask, as the object of their imitation. She is followed by Polyhymnia playing on the greater lyre, and by Euterpe on the smaller lyre; Clio with the long pipes, and Terpsichore, the muse of action or pantomime. These are succeeded by three nymphs crowned with the leaves of the fir-pine, and in succinct tunics, representing the hours or seasons, governing and attending the winged horse Pegasus. The third sitting figure in the centre, looking from the portico, is Æschylus, the father of tragedy. He holds a scroll open upon his knee; his attention is fixed on Wisdom, or Minerva, seated opposite to the poet, and distinguished by her helmet and shield. Between Æschylus and Minerva, Bacchus stands leaning on his fawn, because the Greeks represented tragedies in honour of Bacchus. Behind Minerva stands Melpomene, or Tragedy, holding a sword and mask; then follow two Furies, with snakes and torches, pursuing Orestes, who stretches out his hands to supplicate Apollo for protection. Apollo is represented in the quadriga, or four-horsed chariot of the sun. The last-described figures relate to part of Æschylus's tragedy of Orestes.

*Modern Drama.*—In the centre (looking from the portico) Shakespeare is sitting; the comic and tragic masks, with the lyre, are about his seat; his right hand is raised, expressive of calling up the following characters in the Tempest: first, Caliban, laden with wood; next, Ferdinand, sheathing his sword; then, Miranda, entreating Prospero in behalf of her lover; they are led on by Ariel above, playing on a lyre. This part of the composition is terminated by Hecate (the three-formed goddess) in her car, drawn by oxen, descending. She is attended by Lady Macbeth, with the daggers in her hands, followed by Macbeth turning in horror from the body of Duncan behind him. In the centre (looking towards the portico) is Milton, seated, contemplating Urania, according to his own description in the Paradise Lost. Urania is seated facing him above; at his feet is Sampson Agonistes chained. The remaining figures represent the masque of Comus; the two Brothers drive out three Bacchanals, with their staggering leader Comus. The enchanted Lady is seated in the chair; and the series is ended by two tigers, representing the transformation of Comus's devotees. The designs of both *basso-relievs*, and the models of the ancient drama, are by Mr. Flaxman. The models of the modern drama, and the execution in stone, are by Mr. Rossi.

The composition and executive part of these bassos-relievos, are entitled to every praise; the characters, in the main, are marked with much boldness and precision: there is a spirit of poetical imagery in the allegorical and ideal appendages, which gives to this sculpture a kind of epic dignity, not unworthy the genius of the master, from whom the general idea has been caught. With respect, however, to character and propriety and that peculiar correctness which one expects to find in a work aiming at refinement, there is an error of such magnitude as to deserve pointing out. The artist has very properly introduced Shakespeare as the head of the modern drama, conjuring up his Prospero, his Caliban, and Ariel, and all the creation of the Tempest; but Prospero, Caliban, and Ariel, are real embodied characters—they have a dramatic personal entity, and are not, like the *air-drawn* dagger of Macbeth, the mere idea and notion of the mind, under the impulse of violent passion. But in the sculpture of the ancient drama the artist has confounded the two ideas, and given a personal form and representation to a mere notion and affection of the mind. In the Choephoroi of Æschylus, the Furies have no existence beyond what they assume in the terror of Orestes: he sees them in his mind's eye, and in the distracted vision of his fears and remorse. The fiction of poetry will allow this; but the sculptor must not out-herod Herod: he must not play the poet with the poet—he must not extend the extravagance, and give flesh and blood to what the poet has been contented to leave mere fancy and passion. This is certainly an error on the part of propriety.

Statues seven feet in height, representing Tragedy and Comedy, are placed in niches in the wings of the theatre. Tragedy, on the south wing, is a fine figure, holding the tragic mask and dagger: the sculptor is Mr. Rossi. Comedy holds the shepherd's crook or pedum on her right shoulder, and the comic mask in her left hand: this is the workmanship of Mr. Flaxman, and occupies the northern wing.—We have little to remark upon the statues. The figures are good in themselves; but, if we regard them distinctly from their appendages, they are not sufficiently characteristic: a statue or painting should declare itself, seen at any distance, without requiring a minute inspection of the attributes; but these statues, stripped of their attributes, convey no precise idea: they are what you please; a Muse or a Pomona. Let us carry our minds forward, and suppose that we should find these statues a hundred years hence, stripped by rapine or accident of their appendages—would it be possible to affix to either of them the character of Tragedy or of Comedy? Now Tragedy and Comedy are decided characters of themselves: the mask, the bowl, and buskin, should not be required to distinguish them. Sculpture and fancy have already assigned to them naked and abstract peculiarities. They are, moreover, too small for the building; as mere figures, the parts of them, the adjustment of the drapery, and the quantities, are excellent; we could only wish to have seen what would have distinctly marked them as Tragedy and Comedy. It was not correct, we think, nor consistent with the ample grandeur and severe dignity of the Doric order to mount them upon lofty pedestals, and to cut them down to the size of the human figure. It would have been better if they had no other pedestal than the basement of the niche in which they stand, and had mounted to the spring of the arch without artificial elevation.

*Interior of the Theatre.*—The entrance from the piazza is by a double flight of stone steps; the walls are also of stone, and the whole is lighted by antique lamps, placed on tripods of bronze. Taste and judgment have concurred in producing the union of beauty and convenience. Nothing can be more elegant than the ornaments, and nothing more perfect than the accommodation provided for the public. The communication from one part of the house to another is complete, being facilitated by staircases, by which one may go from the stage or the pit to

the upper gallery, in a few minutes. Large reservoirs of water have been judiciously formed, from which pipes lead to every part of the house. These conduits are of a very considerable diameter, and would in an instant inundate any spot to which it might be necessary to direct the flood. Within the solid parts of the walls, and indeed in the very heart of the building, are introduced ventilators, for the purpose of economising and distributing the air. The house, therefore, is always capable of being purified and refreshed, and, in figurative language, may even be said to *respire*.

The stage, in height, breadth, and especially in depth, appears to be of admirable dimensions, and excellently adapted to scenic show and processions. The boxes, except those over the side-doors, are not suffered to intrude upon the *proscenium*; a proper departure from the common practice. On each side of the proscenium are two lofty pilasters in scagliola, with light gilt capitals; between which, are the stage-doors and managers' boxes, &c. These support an elliptical arch, the centre of which rises to the height of the ceiling; the whole forming a species of cove. It is divided into compartments by burnished-gold mouldings and stiles with wreaths of oak and the double rose of England; the thistle and shamrock in gold are likewise introduced. In the centre of each compartment is a silver branch of palm; all these ornaments are carved in bas-relief. The king's arms are placed upon the entablature, in the centre, below the arch; they are carved into alto-relievo, and gilt. The drop curtain represents a grand national square, surrounded by the statues of military and naval officers, with characteristic basso-relievos. Standards taken from the foe appear suspended between the pillars of an open colonnade. A triumphal arch opens into the square, in the centre of which is a magnificent structure, encircled also with basso-relievos; and on a pedestal at the top of the dome stand three statues, representing the sister kingdoms pointing to their heroes, and their trophies of victory. The ventilator, which is the cap of the ceiling, is made upon an entirely new principle: instead of coming down, and forming a dark gap, as it did formerly, it is now level with the rest of the ceiling, and can be opened and shut at pleasure, according to the temperature of the house. The whole forms an union shield, the centre of which is the rose of England, encircled with the fleur-de-lis; and the other national ornaments are picked in with the union colours. The blue, which was found rather too dark at the first lighting up, has been softened, and now accords better with the general effect.

There are three tiers of boxes, which are disposed in a semicircular form, and afford a perfect view of the stage from every point. The front of the boxes was at first uniformly of a cream colour with Greek ornaments in gold upon a pink ground and gold mouldings. But at present, the ornament in the first circle of boxes consists of wreaths of oak, encircling the red and white rose; on the second circle is introduced the thistle, in octagon panels, with sprigs of oak in the spandrills; and on the third circle is the shamrock, impannelled by closely-woven laurel, and having sprigs of oak, as in the circle below. These ornaments are carved in bas-relief and gilt, and are laid on a ground of light stone-colour; they continue throughout each circle, separated only by small gilt pilasters, on which are carved a lion's head over a branch of palm, silvered on a panel of laurel foliage. These carry the columns, supporting each circle, which are of burnished silver. The horizontal mouldings on each circle are richly carved and gilt. The cushions and seats are scarlet, and the backs of the boxes are painted with a rich rose-coloured red. In each box there are three rows of seats, with light-blue coverings; but to the dress-boxes have been lately added an additional row of seats in the front; the basket boxes are consequently diminished, and thrown back. A skreen, to prevent the draught of air, has been made on each side. The three circles of  
boxes

Boxes are furnished with large chandeliers, elegantly mounted, made by Collins at Temple-bar: they are chaste and beautiful in their design, which appears to be after the style of Piranesi, forming a graceful canopy of the richest cut drops, of which there are at least five and twenty thousand: they were all modelled and cut for the purpose on an entire new fashion, and they produce a lustre almost equal to the diamond. The mountings are also costly and elegant, combining strength and beauty. They are forty in number, suspended from a rich silver bracket in front of the three tier of boxes and over the stage-doors; the latter are large and magnificent, bearing nine lights each; those in front of the boxes bear five and six lights each. The pit, besides its usual lateral passages, has two central ones, which extend through its whole length from the front boxes to the orchestra, an improvement, the advantage of which is most beneficially felt, both in egress and ingress, when the house is crowded. It ought also to be mentioned, that the seats in the pit are gradually elevated in a manner which greatly conduces to the convenience of the audience. The eye of each individual is raised so high, that the head of the person sitting before him will seldom intercept his view of the stage. The seats are twenty-five inches broad. The upper gallery is divided into five compartments, and may be thus considered a tier of five boxes, with a separate door at the back to each; these doors open into a spacious lobby, one side of which is the back of the gallery, and the other the exterior wall of the theatre, with the windows into the street. The lobby to the middle gallery beneath is similarly situated. One great advantage attends this construction; in summer, the doors of the galleries and the windows of the lobbies being left open, the audience in those parts cannot be oppressed by the heat, as in the former theatre. The flight of stairs to the upper gallery consists of 120 steps; and the number of bricks laid down in seven months amounted to seven millions; a circumstance which may afford an idea of the magnitude of the edifice, and the celerity with which it was built. The materials are of the best quality, and the building is most substantial and secure. Previous to its opening, its strength was tried by immense leaden weights placed on the several tiers, greatly exceeding the weight of the most crowded audience that could be compressed into the house, and yet the building did not in any point give way. In the construction of this splendid edifice, the calamitous fate of the late two great winter-theatres was not forgotten. Every means of safety against fire, or other accident, that ingenuity could devise, has been adopted. At all convenient intervals are strong party-walls, with iron doors, by which, if a fire were to break out, it would be confined within that particular compartment, and be prevented from spreading through the house. The fire-places are also made with the grates turning upon a pivot, by which means the front can be moved round to the back, and the fire is thus extinguished without the possibility of accident. Water-pipes are also insinuated into every part of the house, through which they are spread like veins through the human body. Great brass cocks, which, when turned, would pour the contents into the house, present themselves to the eye in the lobbies and other open places. We ought to have mentioned a very great improvement in the doors, which not only facilitates admission, but which affords the most satisfactory means of security, in case any accident should render the immediate evacuation of the theatre necessary: the doors, now, instead of opening backwards or forwards, upon touching a spring, slide laterally, and are wholly removed from the passages.

In spite of the late din of Bellona, the peaceful influences of Thalia and Melpomene have maintained their ascendancy in the British metropolis. The absurd modern dinner hours of 7, 8, and 9, o'clock, have doubtless interfered with the frequent attendance of the upper ranks at entertainments which take place between the hours of

six and eleven; yet two theatres, each capable of containing 3000 persons, are moderately filled, and often crowded, through a season of 200 playing nights. It is a prevailing weakness of mankind to depreciate the merit of every thing contemporary, and to refer all greatness to past ages. This prejudice tinctures the writings of dramatic not less than those of all other critics; yet we are convinced, that, in all the varied and essential features of dramatic entertainments, no age has approached the perfection of the present. We may not have as contemporaries a Shakespeare, an Otway, a Rowe, or a Congreve; neither were those men contemporaries of any single age; but we enjoy an equal degree of diverse genius in our contemporaries, Sheridan, Colman, Cumberland, O'Keefe, Dibdin, Tobin, Murphy, Inchbald, Cowley, Hoare, Morton, Holcroft, and Reynolds, names which characterize the age of George III. and which will be duly estimated by posterity when viewed in conjunction with their predecessors in the line presented by the common perspective of all past time. In like manner, if in regard to actors we do not enjoy the contemporaneous talents of such phenomena as Garrick, Booth, Cibber, Quin, Woodward, Foote, Shuter, Pritchard, and Clive; yet no age could boast in their respective lines of acting, of powers, greater than those exhibited by our own contemporaries—Henderfon, Kemble, Siddons, Edwin, Lewis, Munden, Fawcett, Cooke, Young, Farren, King, Bannister, Jordan, Emery, Matthews, Liston, Lovegrove, Elliott, and Kean. No single age ever possessed so great a variety of real excellence, or more originality, disciplined by education and by the improved taste of the public, which has reduced the business of the stage to the precision of a science. Greater public encouragement was certainly never bestowed on dramatic genius in all its departments, than in our days. Mr. Sheridan realized 3000l. by the sale only of his altered play of Pizarro; and authors of successful pieces receive from the theatre, from 250l. to 500l. and of the purchaser of the copy-right for publication, from 100l. to 400l. Each theatre employs as actors, artists, musicians, and mechanics, from 200 to 250 persons, at salaries, which vary from 30l. to 21. a week. Many favourite performers receive 50l. a night as often as they perform; and thirty or forty performers belonging to each house have benefit-nights, by which many of them net 5 or 600l. Nor are the liberal profits derived from the London boards the sole reward of favourite performers; for, during the summer recess, they make from 30l. to 100l. per week by engagements at various provincial theatres, many of which vie in size and splendour with the metropolitan establishments. The present theatres hold about 650l. each, and when crowded about 750l. The nightly expenses arising from salaries, and various incumbrances on the proprietors, are about 200l. so that, if the houses be taken at a mean of 400l. per night, the net profits of a season of 200 nights, can be little short of 40,000l. to the proprietors. Hence the reader will perceive, that, if dramatic genius were not respectable in the present day, it would not be for want of recompence; for the theatres in Goodman's Fields and Old Drury, in which Garrick acquired his fame and fortune, did not hold above 200l. and could not therefore be expected to net to the proprietors above 10,000l. per annum. And to go a little farther back, in the year 1731-2, the sum of ten or twelve thousand pounds was thought amply sufficient for building a new play-house; and the expected profits were about 3000l. per ann. See *Gent. Mag.* for Feb. 1732. and *Monthly Mag.* for June 1814.

We now come to Covent-Garden Market; and, had we the pen of the most elegant Persian poets, so fond of introducing flowers and fruit in their love-songs and erotic poetry; were we possessed of that glowing imagination with which they borrow similes from the daughters of the gardens to exemplify the sweet objects of their love; we could not give our readers an adequate idea of the aspect of this place at an early hour in the months of May, June, and

July. It seems as if Flora had transported thither the whole of her empire; and the perfumes of the divers fruits and flowers brought from under the dewy hands of morn, with all their native flavour and delightful bloom, is, without exaggeration, wafted by the rising zephyr to a great distance around.—We have sometimes surmised the presence of that combination of multifarious sweets from Temple Bar between four and five o'clock in the morning, when the wind blew gently from the west; and it reminded us of the pleasant groves of Portugal, Provence, Italy, and the Archipelago Islands. As an original description of this market will undoubtedly be relished by our readers, we shall endeavour to write it on the spot, as the present objects strike us, and the moving scene sets our mind also in sympathetic motion.

Approaching from Russel-street, we are at first invited to take a walk under the piazza, which extends from part of the east to nearly the whole northern side of the square. This piazza, which, we doubt not, the architect had in his mental view when he erected the Palais Royal at Paris, as it now stands, is a remaining proof of the skill of Inigo Jones, who here is more himself than where we mentioned him last. It was intended to go all round the square. Hotels, confectioners' shops, and auctioneers' rooms, occupy the ground-floor of the colonnade, if we may call it so, and add considerable life and agitation to the place. The south-east side of the market is occupied by the Hummums, a sort of bagnio, where, upon temporary emergencies, town and country gentlemen may find all sorts of accommodations consistent with morality and decency, if not more. The fourth side offers nothing worthy of our mention; but on the west we find the church of St. Paul, Covent-garden; for this distinctive appellation is generally and properly added, in order to prevent confusion. This church was erected by the earl of Bedford, for the use of his tenants, prior to the year 1638; in which year, as appears from a manuscript in the Harleian collection, a dispute between the earl and the vicar of St. Martin's in the Fields, relative to the right of patronage, was heard before the privy council; by whom it was determined, that it should be a chapel of ease to St. Martin's parish, until an act of parliament could be passed for making it parochial. After the settlement of this dispute, the chapel was consecrated by William Juxon, bishop of London, on the 27th of September in the same year. The unsettled period which followed prevented the passing of an act as agreed on; however, on the 7th of January, 1645, the lords and commons, sitting at Westminster, issued an ordinance, whereby it was separated from St. Martin's, and constituted an independent parish, with power to elect officers, and raise money for the necessary expenses of the new establishment. But, this being an illegal ordinance, an act of parliament was obtained immediately after the restoration of Charles II. for the same purpose, by which the patronage of it was vested in the earl of Bedford, his heirs and assigns.

This church is remarkable for its majestic simplicity. It is said, on the authority of lord Oxford, that, when the earl engaged Inigo Jones to build it, he told him that the parishioners had long importuned him with begging for a church, "were it even as plain as a barn." To which the architect replied, "Well, then, they shall have the handsomest barn in England." In the front is a plain but noble portico, of the Tuscan order, executed in the most masterly manner; the columns are massy, and the intercolumniation large. Though as plain as possible, the building is happily proportioned. The walls are of brick, but were cased with stone about the year 1783, at an expense of eleven thousand pounds, including the other repairs at that time. The windows are of the Tuscan order, to correspond with the portico; and the altar-piece is adorned with eight fluted columns of the Corinthian order. The roof was entirely of wood, and considered a most inimitable piece of architecture, being supported by the walls alone. Unfortunately this was destroyed by a

fire, which consumed the whole interior of the church on the 17th of September, 1795; since which it has been repaired, and is very little different from its original appearance. The patron of this parish enjoys the unusual privilege of nominating a churchwarden; the rector nominates another, and the parishioners elect a third.

In front of this church, whenever an election of members to serve in parliament for the city of Westminster takes place, temporary hustings are erected, wherefrom pledges of honour, of impartiality, and of patriotism chiefly, are verbally given to the gaping constituents and the multitude attending the ceremony—where the most gross abuse flies from the mouths, and sometimes the hands, of the liberty-boys and democracy-mad populace, to the very face and ears of the patient candidates, who, like martyrs in their agonies, bear the cruelty of their tormentors with cheerfulness and good grace, in hopes of obtaining the crown of victory. *Chairing* is a ceremony often performed round the market and adjacent streets, when, after a strenuous opposition and a labouring poll, some favourite of the free people is carried in a chair upon the shoulders of the mob; a scene not peculiar to Westminster, and so well represented by the celebrated Hogarth, that we need only refer our readers to it. From these hustings the populace generally repair to their public breakfasts, dinners, and other entertainments offered to the independent electors as far as can be done *circa* the limits of "bribery and corruption." And then we are reminded of what Montesquieu in his *Esprit des Loix*, tells us about "a people who are never free but one fortnight in seven years, and then do not know how to use their liberty:" an observation the depth of which is astonishing in a *foreign* author, and ought to have been made by a countryman of Locke. Yet justice compels us to own, that our best historian, and our best commentator on the English laws, were both Frenchmen. It is curious to remark, that the light and volatile spirits of that nation will sometimes take the trouble of thinking for others, when they generally shrink from the task of thinking for themselves.

Within the square is held the market for vegetables, flowers, and fruit; and it is indisputably the best for those articles in the metropolis. Several rows of booths and shops are erected transversely from north to south and from east to west. The herb-shops, and higher class of fruiterers, whose windows often exhibit the anticipated produce of summer in spring, and the hastened treasures of autumn at the beginning of summer, occupy the fourth row, with two or three delightful nursery-like shops for living plants, blowing and blossoming opposite to them; and where the decent matron purchases beauties to adorn her drawing-room; the humble mechanic mignonet and sweet-williams to decorate the little garden at the front of his house; and the Cyprian, a well-known index to her apartments in setting-off her window with flower-pots. This last custom, it is worthy of remark, was known so early as the times of Horace and Juvenal. The west side is occupied by flowers and nosegay-sellers; the north is more particularly devoted to roots and larger sorts of kitchen-garden produce, as cabbages, carrots, cauliflowers, artichokes, &c. whilst the east seems to have appropriated to itself the department of smaller merchandise, as peas and beans in their season, cherries and strawberries in their turn, &c. The centre (by what sort of accident and incongruous association, we cannot guess) is filled up with bird-sellers, dealers in old iron, and large displays of crockery-ware.

The place whereon the greatest part of the church and market is situated, was anciently a large garden, belonging to the abbot and convent of Westminster; whence it received the appellation of the Convent Garden, which it still retains, with a trifling variation. At the suppression of the religious houses by Henry VIII. this garden devolved to the crown; and, in the year 1547, Edward VI. conferred it upon the duke of Somerset. Upon his attainer, it returned into the hands of the king; who, on the

the 9th of May, 1552, granted it, with a field on the north side, denominated the Seven Acres, though, from its length, more commonly called the Long Acres, to John earl of Bedford. Long Acre is now a handsome street, abounding with coach-makers.—Soon after Edward had granted the precinct of Covent-garden to the earl of Bedford, he built a house therein for his town residence. This house, which, till the year 1704, stood on the north side of the Strand, where at present the lower end of Southampton-street is situated, was a mean wooden building, shut out from the street by a brick wall, and with a garden behind, under the north wall of which the market was kept; but, when Southampton-street, Tavistock-street, and Maiden-lane, were erected on the site of Bedford-house and gardens, the market was moved farther into the square.

Coming down again into the Strand, through Catharine-street, we turn west toward Exeter 'Change. Where Doiley's warehouse now stands, was a large mansion, erected by sir Edward Cecil, son of the first earl of Exeter, who was, by Charles I. created Viscount Wimbledon and Baron Putney. Stow, in his *Annales*, p. 1044, says, that it was burned quite down in November 1623; and that the day before his lordship had the misfortune of having part of his house at Wimbledon, in Surry, blown up by gunpowder. At the back of Doiley's, toward Exeter-street, there were formerly ruins, which were probably once a part of Wimbledon-house.—There have been few shops in the metropolis that have acquired more celebrity than Doiley's warehouse; which induces us to go a little into the history of it, indeed as far as the tradition of the neighbourhood has furnished us with the means. We have been told, that the original founder of the house (who probably was a refugee that, after the revocation of the edict of Nantz, sought an asylum in this kingdom) formed a connexion in the weaving-branch of business with some persons in Spital-fields, whose manufactures, most judiciously fostered by government, and most patriotically encouraged by the nobility, &c. were just then ascending toward that eminence which they afterward attained. Doiley was a man, it is said, of great ingenuity; and probably having also the best assistance, he invented, fabricated, and introduced, a variety of stuffs, some of which were new, and all such as had never been seen in this kingdom. He combined the different articles, silk and woollen, and spread them into such an infinite number of forms and patterns, that his shop became a mart of taste, and his goods, when first issued, the height of fashion. To this the *Spectator* alludes in one of his papers, when he says to this effect, viz. that, "if Doiley had not, by his ingenious inventions, enabled us to dress our wives and daughters in cheap stuffs, we should not have had the means to carry on the war."—In another paper, the gentleman that was so fond of striking bold strokes in dress characteristically observes, "A few months after I brought up the modish jacket, or the coat with close sleeves. I struck this first in a plain Doiley; but, that failing, I struck it a second time in blue camlet;" which also was one of Doiley's stuffs.—In Vanbrugh's *Provok'd Wife*, the scene Spring Gardens, Lady Fanciful says to Mademoiselle, pointing to Lady Brute and Belinda; "I fear those Doiley stuffs are not worn for the want of better clothes."—This warehouse was equally famous, indeed, in our very early times; it was the grand emporium for gentlemen's night-gowns and caps. In the former part of the eighteenth century, all the beaux that used to breakfast in the coffee-houses appendant to the inns of court struck their morning strokes in this elegant dishabille, which was carelessly confined by a fash of yellow, red, blue, green, &c. according to the taste of the wearer; these were also of Doiley's manufacture. This idle fashion was not quite worn out even in the year 1765; we can remember having seen some of those early loungers, in their night-gowns, caps, &c. at Will's, (Lincoln's-inn-gate, Serle-street,) about that period.

It appears, by the plan of London published in the year 1600, that the great width of the Strand lay before the (at that time) magnificent palace of Somerfet-house; which width continued exactly as it does at present, to the buildings of the earl of Exeter, the wall of whose court made the same angle as is now to be observed at the corner of Polito's Menagerie. The ground behind the adjoining houses, and extending to the backs of those on the fourth side of Exeter-street, for a great number of years lay entirely waste. When the surveyors, appointed by Messrs. Garrick and Lacey to examine Old Drury, reported that that theatre was in a very infirm state, they contemplated the purchase of this ground in order to erect a new one upon it. But whether the two managers wanted to make too good a bargain, or the proprietor had too great an idea of its value; or whether, upon a closer inspection, they found, by lightening the upper works and extending the lower, (that is, taking off half the shilling-gallery and adding it to the boxes, thus inverting the column of society and placing the capital at the base,) Drury, as Quidnunc says, "would last their time," is uncertain; but certain it is, that the negotiation failed; and, although they did not wish to pull an old house over their heads, still they thought the chance of it was a less evil than the risk of building a new one: they therefore, by the help of propping, patching, and plastering, supported, in its declining state, the old fabric which had long supported them.

Upon the incorporation of the Society of Artists in 1765, a part of the ground that we have mentioned was taken by James Paine, esq. who had just then finished Salisbury-street, and who built upon it that elegant fabric which is now the LYCEUM. This was intended for an academy and exhibition-room to anticipate the royal establishment then in contemplation; and we think that there were several annual exhibitions in it. To erect this building the last vestiges of Exeter-house were demolished. These consisted of a large room, and one or two smaller, which had been used for a variety of purposes. As, for instances; one time, in an evening, a square paper lantern, in illuminated characters, informed the public, that books, &c. were to be sold by auction; at another, the ingenious Mr. Flockton, with a brazen trumpet and a brazen face, announced that the facetious Mr. Punch and his merry family were ready to receive company of any description. This room had first been used as a Roman-catholic private chapel; and in our own times had, we think, been a receptacle of wild beasts, a school of defence, the audience-chamber of those beautiful Houynhms the panther mare and colt, the apartment wherein the white negro girl and the porcupine man held their levees; and, in short, applied to many other purposes equally extraordinary.—The Lyceum itself, to come to our own time, has been employed for various purposes, having had no fixed designation. In the year 1789, the veteran Dibdin (lately deceased) first occupied a part of it, where he produced his *Whim of the Moment*, the first of a series of entertainments of a similar kind (under other names and at different places), of which the whole was written and composed, recited and sung, by himself. Here he produced his *Poor Jack*, his *Greenwich Pensioner*, *Chelsea Pensioner*, and many more of the best songs in the English language; and some persons will still contrast the excellence of these songs with the trifling (not to say despicable) nature of the recitations by which they were strung together and introduced.—This place has been more recently used for exhibitions of views on the panorama principle, *Monf. Philippsall's Phantasmagoria*, and other marvellous shows. It was occupied by the Drury-lane company while that theatre lay in its ashes; and at present it is fitted up for the performance of English operas, under the direction of Mr. Arnold, son of the late sound musician, Dr. Arnold.

Exeter 'Change was erected as a new mart for millinery, clothes, trinkets, hangings, books, &c. with an intention

tention to rival, or rather to supplant, the Bourse of Britain, or New Exchange, the building of which is noticed a little farther on. At any rate it has survived it. It was originally a handsome building, with an arcade in front, and two ranges or stories of shops, one above the other. But, as the plan did not succeed so well as might have been expected, the arcades were filled up, and the place now contains two rows of dark shops, principally for hardware, with a paved passage between them. The upper story is chiefly used as lodgings for the shopkeepers; and at the east end is an exhibition of living subjects of natural history. On this spot formerly stood the parsonage-house of the parish of St. Martin; but Sir Thomas Palmer, a dependent of the protector Somerset, emulating the example of his patron, obtained it by composition, and began to erect a stately mansion of brick and timber. This afterwards came into the hands of the lord-treasurer Burleigh, who finished it in a very magnificent manner, and adorned it with four square turrets. He died here in 1598; after which it descended to his son, and took the name of Exeter House from his title.—The passage, as it now stands, is much frequented, particularly in showery weather, and being at all times a pleasanter road than the narrow part of the Strand outside, which now remains to remind us of what the path by St. Clement's once was. The shops, or stalls as some are so rude as to call them, are very smart; and a great deal of money is taken there. The congregation above, under the direction and correction of Mr. Polito, is at times rather noisy, and becomes a nuisance to the sedentary shopwoman below.

Opposite to Exeter 'Change, a passage with steps leads us to the old Savoy palace, the ruins of which are still extant. We have often, for more than twenty years, taken great pleasure in pacing the remains of this ancient place. The contrast arising from the stately and solid edifice of Somerset-house and of the Adelphi Terrace, and the fallen grandeur of the Savoy, when seen on an evening from the water, brings to the mind a melancholy train of ideas upon the subject of transactions long gone by, and by most people forgotten. Some of these transactions we must endeavour to renew in the mind of the reader, by the history of this celebrated palace. It was named, records say, from Peter earl of Savoy and Richmond, who built it about the year 1245, and afterwards transferred it to the Friars of Montjoy; of whom queen Eleanor, the wife of Henry III. purchased it for her son, Henry duke of Lancaster. The duke, in 1328, enlarged and beautified it, at the expense of fifty-two thousand marks; and so superb was it, at that time, as to exceed in magnificence every other structure in the kingdom. In this palace John king of France resided, when a prisoner in England in the year 1357, as also on his return thither in the year 1363. In 1381, this stately palace, with all its furniture, was destroyed by the Kentish rebels; but, the ground devolving to the crown, Henry VII. began to rebuild it in the manner it now appears, as an hospital for the reception of one hundred distressed objects. He says, in his will, he intended, by this foundation, "to do and execute VI out of the VII works of pitie and mercy, by means of keeping, susteynyng, and mayntenyng, of common hospitallis; wherein, if they be duly kept, the said nede pover people bee lodged, visited in their sicknesses, refreshed with mete and drinke, and, if nede be, with clothe, and also buried, yf thei fourtune to die within the same; for lack of theim, infinite nombre of pover nede people miserably daillie die, no man putting hande of helpe or remedie." That prince, however, not living to see it completed, his son Henry VIII. in the year 1511, not only granted his manor of the Savoy to the bishop of Winchester, and others, executors of his father's will, towards finishing the hospital; but by his charter, dated July 5, 1513, constituted them a body politic and corporate, to consist of a master, five secular chaplains, and four regulars, in honour of Jesus Christ, the Virgin Mary, and St. John the Baptist; and at the

same time directed, that the foundation should be called, "The Hospital of King Henry VII. late King of England, of the Savoy." This hospital was suppressed in the reign of Edward VI. when the revenues amounted to 529l. 15s. 7d. per annum; which, with all its furniture, that prince gave to the citizens of London, towards the new foundations of Bridewell and St. Thomas's Hospitals. Upon the demise of Edward, his sister Mary re-founded this hospital, and endowed it anew; when her ladies and maids of honour completely furnished it with all necessaries, at their own expense; but it was again suppressed on the accession of Elizabeth to the crown. At present, the Savoy is the property of the crown; an act of resumption having passed in the 4th and 5th of William and Mary. Part of it is used as habitations and warehouses for private people, and part as a prison for deserters from the army, and other military offenders. Here is also the ancient chapel belonging to the hospital, which was originally dedicated to St. John the Baptist; but, when the old church of St. Mary-le-Strand was destroyed by the protector Somerset, the inhabitants of that parish united themselves to those of the precinct of the Savoy; and, this chapel being consequently used as their parish-church, it acquired the name of St. Mary-le-Savoy. This structure, being built of squared stone and boulder, in the Gothic style, has an aspect of great antiquity. Contrary to the general construction of religious edifices, its greatest length is north and south; and the altar is placed at the north end. The roof is remarkably fine, being adorned with carved figures of the Holy Lamb, shields of arms, and other decorations, within elegant circular compartments. It was completely repaired in the year 1721, at the expense of king George I. who also inclosed the burial-ground with a wall; and it has been repaired and beautified within a few years. There are many ancient monuments in this chapel, some of which are very magnificent. This precinct is extra-parochial, and the right of presentation to the chapel is in the lord high-treasurer, or the commissioners for executing that office.—Within the Savoy are also two German chapels: a Lutheran, in which is a very fine organ with pedals; and a Calvinist.

Farther to the west, on the same bank of the river, are wharfs for coals, which waggons with long teams of horses bring up to the Strand, wherefrom they deal them out chiefly in the western part of the town. There we find also a small neat place called Beaufort Buildings, of some notoriety in the latter end of the last century, where for a few years Mr. Thelwall gave proofs of his democratic eloquence to a numerous assembly, till a bill of parliament put an end to these patriotic conventicles, and "all was hushed." On the site of Beaufort Buildings was formerly the mansion-house of the earls of Worcester. Speaking of this place, Pennant says, "The earls of Worcester had a very large house, between Durham-place and the Savoy, with gardens to the water-side. The great earl of Clarendon lived in it before his own was built, and paid for it the extravagant rent of five hundred pounds a-year. This was pulled down by their descendant, the duke of Beaufort; and the present Beaufort Buildings rose on its site. This had originally been the town-house of the bishops of Carlisle."

Immediately after quitting the duchy of Lancaster, which we have just surveyed, and several parts adjoining to it, we enter the large parish of St. Martin, once in the fields, but now nearly in the centre of what is generally called the west end of the town, and which in ancient times included the whole liberty of Westminster.—This famous convent had under its direction, and indeed in its possession, the whole of Thorney, Charing, and all the adjacent places, down to their garden on the borders of the duchy. St. Martin's was at first a fort of chapel of ease, where the monks performed mass for the inhabitants of the neighbourhood; and, these having considerably increased, and the parish displayed itself to a great extent, it generated, in course of time, other parishes. St. James, St. George,

George, St. Anne, and St. Paul, are offsprings of St. Martin.

Cecil-street, as we mentioned before, is the western boundary of the duchy of Lancaster; and built upon the site of Great Salisbury House, a memento of which remains in Salisbury-street. Adjoining to it was, on the west, Durham House, built by Thomas Hatfield, bishop of Durham in 1345; but, according to others, it was built originally by Anthony de Beck, patriarch of Jerusalem, and bishop of Durham, in the reign of Edward I. and designed by him for the town-residence of him and his successors; and was rebuilt by Hatfield in 1381. In the 26th of Henry VIII. bishop Tonstal conveyed this house to the king, and received, in exchange, Cold-Harborough, and other houses in London. About the second year of his reign, Edward VI. gave Durham House to his sister Elizabeth, for life. Queen Mary, however, restored it to the see, by granting the reversion to the bishop; and, upon the death of Elizabeth, Toby Mathew, the then bishop, afterwards archbishop of York, entered into possession of it, under the authority of an opinion of the judges, against the claim of sir Walter Raleigh, to whose use it was granted by queen Elizabeth. In 1640, it was purchased of the see by the earl of Pembroke, who pulled it down, and converted it into a range of buildings and wharfs, which were called by the general name of Durham-yard.

These buildings having become very ruinous, three brothers of the name of Adam, purchased the ground, and covered it with a magnificent mass of buildings, which, in honour of their fraternal partnership, was called the ADELPHI, the Greek word for *brothers*. In the year 1773, the whole was disposed of by lottery, the tickets in which fold for fifty pounds each. The great descent to the river, that ran down Durham-yard, is entirely removed by these buildings being raised on strong lofty arches. Fronting the Thames is a most beautiful row of houses, before which is a spacious terrace, secured by very handsome iron rails. At the east end of the Terrace is Adam-street, which communicates with the Strand. John-street extends between the river and the Strand, parallel to the Terrace; and leads to York Buildings. In this street is a very handsome edifice, used by the Society for the Encouragement of Arts, Manufactures, and Commerce. The exterior is in a noble style of architecture; but that is in a great measure lost from its being of brick, ornamented with stone, a mixture inconsistent with grandeur. The interior is peculiarly elegant, and very commodious for the uses of the society; the chief objects of which are, to promote the arts, manufactures, and commerce, of this kingdom, by giving premiums for all useful inventions, discoveries, and improvements; and, in pursuance of this plan, the society has already expended near fifty thousand pounds, advanced by voluntary subscriptions of their members, and legacies bequeathed. The society distributes premiums for any new discovery in agriculture, chemistry, dyeing, mineralogy, the polite arts, manufactures, and mechanics; also premiums for the advantage of British colonies, and for the settlements in the East Indies, and a correspondence in each branch is maintained; and the Transactions of the society are published annually. But that which characterises this building, and has rendered it and the society to which it belongs, celebrated on the continent, is the great room of the society. This is a finely-proportioned apartment, being forty-seven feet in length, forty-two feet in breadth, and forty feet in height. It is lighted at the top by a dome. The walls are ornamented with a series of exquisite pictures, by the late Mr. Barry, designed to illustrate this maxim, "That the attainment of happiness, individual and public, depends on the cultivation of the human faculties." The first picture represents Mankind in a Savage State, with its attendant misery; the second, a Grecian Harvest-home, or a thanksgiving to Ceres and Bacchus; the third, the Victors at the Olympic Games; the fourth, Navigation; the fifth, the Society of Arts, &c. and the last, Elysium, or the state of final retribution. These pictures are among the chief orna-

ments of this capital, whether national or foreign; and, to the honour of our country, are the production of the English school. The Society for the Encouragement of Arts, &c. was instituted in 1753. The idea was suggested by Mr. Shipley, an ingenious artist, and eagerly patronized by the late lord Folkestone and the late lord Romney. The institution consists of a president, twelve vice-presidents, various officers, and an indefinite number of subscribers, it being supported solely by voluntary subscriptions. Among many liberal rules of this society, there is one of peculiar merit, by which strangers are permitted to be present at the sittings of the society, on the introduction of members; the stranger's name being proposed for that purpose, and no objection made.

Nearly opposite to this building is Robert-street, leading to the west end of the Terrace. The end and central houses of the Terrace are particularly handsome, and are distinguished by being ornamented with pilasters and cornices of artificial stone. The centre-house is still occupied by the reliet of our famous actor David Garrick—the is 90 years of age, and enjoys all her faculties.

The vaults under the houses are very extensive, and are converted into ranges of warehouses, coach-houses, and stables, with proper subterraneous communications between, lighted from the back yards of the houses above. From the old entrance to Durham-yard is a wide passage for carriages, under the houses, down to these warehouses, and to a spacious wharf below the Terrace; and there is another entrance that opens to the street, on the side next York Buildings. The summits of the arches, fronting the river, are adapted as counting-houses for the warehouses below, or as kitchens to the houses above.

From this Terrace, Westminster-bridge on the right, Blackfriars on the left, exhibit a charming view; and the rising STRAND-BRIDGE in its embryo shape, with its timber erections waiting to receive the stone-work—its fire-engines putting wheels in rattling motion night and day to dry the bottoms of the dams—presents a most interesting aspect. This bridge, which is now constructing in the form of the ancient Roman bridges, that is, entirely flat from one end to the other, will be, when completed, the largest upon the Thames, and perhaps in the world. It is to consist of nine arches, all of equal size: their elliptical form, which can already be seen from Blackfriars-bridge and other parts near it, will be an ornament to the metropolis; and its utility very considerable.—We are happy to have it in our power to gratify our readers with an exact representation of this bridge, engraved after a drawing with which we have been favoured by Mr. Rennie himself, as well as with the dimensions of the different parts of this majestic building.—They are as follow: Nine arches, each 120 feet span; the piers, each 20 feet thick. Width of the bridge, with the parapets, 42 feet; of the foot-path, 7 feet; of the road-way, 28 feet. Height of columns, including capital, 26 feet; capital of columns, 2 feet 9 inches; diameter of column, at top 4 feet 4 inches, at bottom 5 feet 8½ inches. Height of the cornice above the columns, 9 feet; height of the parapets, including blocking, 5 feet 6 inches. Depth of arch-stones, at top 5, at bottom 10. See Plate VII n.

The ceremony of laying the first stone was performed on the 11th of October, 1811. Several gold and silver coins of the present reign were deposited underneath, and covered with a plate of block-tin, bearing the following inscription: "This Foundation-stone of the Strand-bridge was laid on Friday the 11th day of October, A.D. 1811, by the directors for executing the same; Henry Swann, Esq. M.P. Chairman; in the 51st year of the reign of King George III. and during the Regency of H. R. H. George prince of Wales. The money for building which was raised by Subscription under the authority of an Act of Parliament. John Rennie, Architect."—This will open an excellent communication from the Strand and the west and north of the town to Southwark, and the whole county of Surry. The north abutment will

be nearly level with the Strand; but the fourth end will require a long slope to make an easy ascent. The ornaments will consist of a couple of Tuscan columns before each pier; and the balusters will be executed in the most elegant manner. We are sorry that some very preponderant reasons weigh against ornamenting our bridges with the statues of our heroes and worthies; and we hope to see these reasons soon removed.

Between Durham-house and the Strand, was the old stabling belonging to the mansion, which being a great eye-sore in so conspicuous a situation, Robert earl of Salisbury, lord high treasurer to James I. purchased it, and, under the auspices of his royal master, in the year 1608, erected a magnificent stone building upon the site, nearly on a similar plan to that of the Royal Exchange; there being an open paved walk, with rows of shops below and above, and cellars beneath. When this building was finished, the king, attended by the royal family, and many lords and ladies of his court, honoured its opening with their presence, and bestowed on it the name of *Britain's Bourse*, which was afterwards changed to that of the *New Exchange*. The building was taken down in the year 1737, and a handsome and uniform row of houses erected in its stead, which form a part of the street.

Westward from the Adelphi are several streets, which are included under the denomination of York Buildings, from having been built upon the site of the town mansion of the archbishops of York. This had originally belonged to the bishops of Norwich; but, about the year 1556, Nicholas Heath, archbishop of York, purchased it for the use of himself and his successors, in consequence of Whitehall, their ancient palace, having been sold by Wolfsey to Henry VIII. Mathew Toby, who had before exchanged Durham-house with the crown, also exchanged this, and received several manors in lieu of it. After this, it was granted to Villiers duke of Buckingham, whose son George disposed of it to builders; and they converted it into streets and alleys, in which his name and title are still preserved; they being called George-street, Villiers-street, Duke-street, Of-alley, and Buckingham-street.

At the bottom of these streets, next the river, is a neat gravelled walk, or terrace, for the inhabitants and their children to promenade in. There is a lodge at one end of it, where a porter is kept, to open and shut the gates, and to prevent the intrusion of improper company. This post was enjoyed for many years by Mr. Hugh Hewson, a man of no mean celebrity, though no funeral escutcheons adorned his hearse, or heir expectant graced his obsequies. He was no less a personage than the identical Hugh Strap, whom Dr. Smollett has rendered so conspicuously interesting in his *Life of Roderic Random*. He had kept a barber's shop in the parish of St. Martin for more than forty years. He was a very intelligent man, and took delight in recounting the adventures of his early life. He spoke with pleasure of the time he passed in the service of the doctor; and it was his pride, as well as boast, to say that he had been educated in the same seminary with so distinguished a character. His shop was hung round with Latin quotations; and he would frequently point out to his customers and acquaintances the several scenes in *Roderic Random*, relating to himself, which had their foundation, not in the doctor's inventive fancy, but in truth and reality. The meeting in a barber's shop at Newcastle-upon-Tyne, the subsequent mistake at the inn, their arrival together in London, and the assistance they experienced from Strap's friend, were all of that description. We understand, that Hewson left behind him an interlined copy of *Roderic Random*, pointing out these facts, showing how far they were indebted to the genius of the doctor, and to what extent they were founded in reality. He could never succeed in gaining more than a bare subsistence by his trade; but he possessed an independence of mind superior to his humble condition. At length he gained this retreat, where he continued to be much re-

spected; and where he tranquilly ended his days in the month of March, 1809, at the ripe age of eighty-five.

From this terrace there is a very elegant stone gate to the stairs. The design of this gate is greatly admired, and is every way worthy of its architect, Inigo Jones. It is of the Tuscan order, and ornamented with rustic work. The stairs have fallen into disuse within the last twenty years, from the causeway to them having been so long neglected, as to render the approach of boats almost impossible, except at high water. Near these stairs, at the bottom of Villiers-street, is the machinery of the York-buildings Water-works. The company to whom it belongs, were incorporated by act of parliament in the year 1691.

Hungerford Stairs lie a little farther west, and below the market of that name. Several boats ply there, in order to "waft over the gentle waves" the calculating man, who finds that a hackney-coach would cost him three times as much to jolt him as far as Blackfriars-bridge.—The market is not handsome, but some good shops and thriving stalls are to be found there.—In this place was anciently a large house and garden belonging to the Hungerfords of Fairleigh in Wiltshire. In the reign of Charles II. sir Edward pulled down the family-mansion, and converted it into several buildings, and among them this market, which, from its proximity to the Thames, and the conveniency of the stairs for gardeners to land their goods at, was principally designed as a market for vegetables: the plan, however, failed, and the market never flourished. Here is a good market-house; and on the north side of it is still remaining a bust of one of the Hungerfords, in a large wig.

The north side of the Strand does not furnish us with any interesting object from Exeter 'Change down to Charing Cross. Many very handsome shops—Southampton-street, that leads to Covent-garden—Bedford-street, whose entrance is steep and narrow—the little theatre called Sans Pareil, created and almost entirely supported by Miss Scott, a young lady of multifarious talent, a poetess and an actress, and the very *genie* of the place—these are the only objects of attention on that part of the Strand.—Behind these, farther on the north, are Maiden-lane, well-known for a cellar where every one, for a few pence, is entered in a book as a member of a society, which is now so extensive that it loses its characteristics—and farther on, Chandos-street, well known also for the Society of the Eccentrics, who held their evening meetings there for many years, and used to amuse themselves and their visitors with all that extempore wit can produce. We shall not mention a notorious establishment which even the flames of a conflagration could not burn out of the place, but, like a deep-rooted disease, baffled the skill of the physician, and re-appears. A Key to what we mean will be found at p. 142.

Chandos-street leads us to St. Martin's lane, which has its principal opening at the west end of the Strand, opposite to Northumberland-house. The origin of St. Martin's church is nearly as ancient as the convent of Westminster, and is connected with the history of it: but we have, on that account, very little upon record. We find, however, that in 1222 there was a serious contention between the abbot of Westminster and the bishop of London, who claimed the jurisdiction of it; but the abbot and monks retained the disputed patronage till the time of Henry VIII. when the endowments of the church shared the fate of the monastery to which it was attached. A small church was built there at the king's expense; but, this structure not being capacious enough to accommodate the parishioners, it was greatly enlarged in 1607, by the addition of a spacious chancel, which was erected at the expense of prince Henry (son of James I.) and some of the nobility. At length, after many expensive repairs, the whole of that building was taken down in 1721, and soon after the first stone of the present edifice was laid. Five years completed the work, and in 1726 it was consecrated. On lay-

ing the first stone, his majesty king George I. gave one hundred guineas, to be distributed among the workmen; and some time after, he also gave fifteen hundred pounds to purchase an organ, which has been lately replaced by a new one, not so good as the old one. The whole expense of building and decorating this church, amounted to 60,891l. 10s. 4d. of which, 33,450l. were granted by parliament, and the rest raised by voluntary subscriptions, added to the above royal benefaction. The church of St. Martin in the Fields is a very elegant edifice, built with stone. In the west front is an ascent, by a long flight of steps, to a very noble portico of Corinthian columns, that support a pediment, in which are the royal arms in bas-relief. The same order is continued round in pilasters; and in the intercolumniations are two series of windows, surrounded with rustic. The doors on the sides are near the corners, and are ornamented with lofty Corinthian columns: the roof is concealed by a handsome balustrade, and the spire is stately and elegant. The decorations within are extremely beautiful; the roof is richly adorned with fret-work; slender Corinthian columns, raised on high pedestals, in the front of the galleries, serve to support both them and the roof, which, on the sides, rests upon them in a very ornamented arch-work. The east end is richly adorned with fret-work and gilding, and over the altar is a large window finely painted. With respect to this edifice, the author of the *Critical Review* remarks, that it would be a great advantage to the building, if the front were laid open to the Mews. "The portico," says he, "is at once elegant and august; and if the steps, rising from the street to the front, could have been made regular, and on a line from end to end, it would have given it a very considerable grace; but, as the situation of the ground would not allow it, this is to be esteemed a misfortune rather than a fault. The round columns at each angle of the church are well contrived, and have a very fine effect in the profile of the building; the east end is remarkably elegant, and very justly challenges a particular applause." In the steeple of this church is a ring of bells greatly admired for the harmony of their found. The church is a vicarage, the patronage of which is in the gift of the bishop of London.

At the south-west corner of the Strand, opposite to the end of St. Martin's lane, stands Northumberland-house, which was erected on the site of the hospital of St. Mary Rounceval, a cell to the priory of the same name in Navarre, founded and endowed by the earl of Pembroke in the reign of Henry III. This hospital was suppressed, with other alien-priorities, by Henry V. but was re-founded, in 1476, by Edward IV. After the general suppression of religious houses, Edward VI. in the year 1549, granted the chapel, with its appurtenances, to sir Thomas Cawarden. After this, it came into the possession of Henry Howard earl of Northampton, who, in the reign of James I. erected three sides of the quadrangle. After the death of this nobleman, it became the property of his relation, the earl of Suffolk, and was then known by the name of Suffolk-house. In the reign of Charles I. Algernon earl of Northumberland, lord high admiral, married the daughter of the earl of Suffolk, and, about the year 1642, became the proprietor of this house; from which time it has borne its present name. This earl, finding it inconvenient to reside in the apartments built by lord Northampton, on account of their nearness to the street, completed the quadrangle by building the fourth or south side, which is at such a distance from the street as to avoid the noise of the carriages, &c. and enjoy all the advantages of retirement. This part was built under the direction of Inigo Jones, as the other three sides had been under that of Bernard Janßen. The front, next the street, was begun to be rebuilt by Algernon duke of Somerset, who became possessed of it in 1743, in right of his mother, the daughter and heiress of the earl of Northumberland; and from him it descended to his son-in-law and daughter, the late duke and duchess of Northumberland, by

whom the new front was completed, and such improvements made, as have rendered this building an object of admiration for its elegance and grandeur.

The front of this building, next the street, is exceedingly magnificent. In the centre of it is a grand arched gate, the piers of which are continued to the top of the building, with niches on each side of the ground, decorated with carvings, in a sort of Gothic style. They are connected at the top, by uniting to form an arch in the centre, opening from the top of the house to a circular balcony, standing on a small bow-window over the gate beneath. Over the arch, on a pedestal, is a lion in stone, the crest of the duke of Northumberland's arms. The building, on each side the centre, is of brick, containing two series of regular windows, five on each side, over a like series of niches on the ground story. At each extremity is a tower, with rustic stone corners, containing one window each in front, corresponding with the building. These towers rise above the rest of the front, first with an arched window, above that a port-hole window, and the top is terminated with a dome, crowned with a vane. The centre is connected with the turrets over the building, by a breast-work of solid piers, and open lattice-work, alternately, corresponding with the windows beneath, which have stone-work under them, carved in like manner. The four sides of the inner court are faced with Portland-stone; and the two wings, which extend from the garden-front towards the river, are above one hundred feet in length. The principal door of the house opens to a vestibule, about eighty-two feet long, and upwards of twelve feet wide, ornamented with columns of the Doric order. Each end of it communicates with a stair-case leading to the principal apartments, which face the garden. They consist of several spacious rooms, fitted up in the most elegant manner: the ceilings are embellished with copies of antique paintings, or fine ornaments of stucco, richly gilt: the chimney-pieces are of curious marble, carved and finished in the most correct taste: the rooms are hung either with beautiful tapestry or the richest damasks; magnificently furnished with large glasses, settees, marble tables, &c. with frames of exquisite workmanship, richly gilt. They also contain a great variety of pictures, executed by the most distinguished masters, particularly Raphael, Titian, Paul Veronese, Salvator Rosa, Rubens, Vandyke, &c. Among these is the Cornaro family, painted by Titian, which was sold to Algernon earl of Northumberland, in the reign of Charles I. by Vandyke, for one thousand guineas. In some of the rooms are large chests, embellished with old genuine Japan, which being great rarities, are esteemed invaluable. The gallery, or ball-room, in the east wing, is decorated in a very elegant manner. It is one hundred and six feet long, and twenty-seven feet wide. The ceiling is carved and ornamented with figures and festoons, richly gilt. The flat part of the ceiling is divided into five compartments, ornamented with fine imitations of some antique figures; particularly, Fame, blowing a trumpet; a Diana; a Triumphant Car, drawn by two horses; a Flora; and a Victory, holding out a wreath of laurel. The entablature is Corinthian, and of most exquisite workmanship. The garden lies between the house and the Thames; and, with a little expense, might have a terrace-walk on the bank of the river, equal, in the extent and beauty of its prospect, to either Somerset-house or the Adelphi. Some years back it was hoped that this improvement would have taken place, the duke having obtained all the ground from the garden to the river from the crown, in exchange for lands in Northumberland, which were wanted for the erection of batteries to protect that coast.

From Hungerford Market, behind Northumberland House, is a way to Whitehall, well known to those who wish, by threading narrow streets, passages, and alleys, to make the best use of their time, and to spare their legs. There we find Scotland-yard, which derives its name from a magnificent palace built for the reception of the  
Scottish

Scottish monarchs, whenever they visited this capital. It was originally given by Edgar of England to Kenneth III. of Scotland, for the humiliating purpose of his making an annual journey to this place to do homage for his kingdom of Scotland. In after-times it was used by his successors when they came to Westminster to do homage for the counties of Cumberland and Huntingdon, and other fiefs held by them of the crown of England.

These passages lead us to a court behind the Banqueting-house, where we have always admired an excellent statue in brass, of the ill-advised James II. executed the year previous to his abdication, by Grinlyn Gibbons. Now that all the strife about the Stuarts has been put an end to by the death of the last of the family, it is a pity this statue, the workmanship of which is admirable, should be thus buried in an obscure place, behind the magnificent house which his grandfather built, and his father so gorgeously decorated.

The old palace of Whitehall, to which this building was annexed, owes its origin to Hubert de Burgh, earl of Kent, who, in the year 1242, bequeathed it to the black friars in Chancery-lane, Holborn, in whose church he was interred. But in 1248, these friars having disposed of it to Walter de Grey, archbishop of York, he left it to his successors, the archbishops of that see, for their city mansion; and hence it obtained the name of York Place. This mansion, with two gardens, three acres of land, and the appurtenances, were seized by Henry VIII. in the twenty-first year of his reign, when cardinal Wolsey incurred the punishment by which all his goods and possessions were forfeited to the crown; and, when the king afterwards restored the possessions of the archbishopric of York to him, this place was reserved. Henry was no sooner possessed of this palace, than he enclosed the park for the use of this and the palace of St. James; and also built a beautiful gate across the street, with a magnificent gallery for the accommodation of the royal family, the nobility, and great officers of state, who sat there to see the tournaments and military exercises performed in the tilt-yard; and, soon after, the king, who had a greater taste for pleasure than for elegance in his mansions, ordered a tennis-court, a cockpit, and bowling-greens, to be formed, with other places for different kinds of diversion. The design of the gate was by Holbein. It was built with bricks of two colours, glazed and disposed in a tessellated fashion. The top of it, as well as those of an elegant tower on each side, were embattled. On each front were four busts in baked clay, in proper colours, which resisted every attack of the weather to the last. When this gate was taken down, about fifty years ago, William duke of Cumberland had all the parts of it numbered, with an intention of rebuilding it at the top of the long walk at Windsor; but this design was never carried into execution.—From the time of Henry, Whitehall became the royal residence of the kings of England; and so continued till the year 1697, when, by an accidental fire, it was entirely destroyed, except the present edifice, which had been added to the old King James I. in the year 1619, according to a design of Inigo Jones.

This magnificent structure is built entirely of stone, and is divided into three stories. The lowest story has a rustic wall with small square windows, and serves as a basis for the orders. On this is raised the Ionic, with columns and pilasters; and between the columns are well-proportioned windows, with arched and painted pediments. Over these is placed the proper entablature, on which is raised a second series of the Corinthian order, consisting of columns and pilasters like the other. From the capitals are carried festoons, which meet with masks and other ornaments in the centre. This series is also crowned with its proper entablatures, whereon is raised a balustrade with attic pedestals between, which crown the work. This building was only a small part of king James's plan for rebuilding the royal palace; the remainder was left unexecuted on account of the turbulence of the times. It

was to have consisted of four fronts, each with an entrance between two square towers. The interior was to have contained five courts; viz. a large one in the centre, and two smaller at the ends; and between two of the latter, a beautiful circus with an arcade below, the pillars of which were to have been ornamented with caryatides. The length of this palace was to have been 1152 feet, and the depth 874.

Part of this edifice is converted into a military chapel, in which service is performed every Sunday morning and afternoon; George I. having granted a salary of thirty pounds per annum to each of twelve clergymen, selected equally from Oxford and Cambridge, who officiate a month in turn. The ceiling is richly painted by Rubens: the subject is the Apotheosis of James I. which is treated in nine compartments, and for boldness of design and successful execution cannot be too much admired. This fine performance is painted on canvass, and is in fine preservation. A few years since, these paintings were retouched by Cipriani, with so much address as to leave no apparent difference in the work. The altar-piece was preserved from the fire which destroyed Whitehall, and given to this chapel by queen Anne. The cost of erecting the Banqueting-house was seventeen thousand pounds, Rubens received three thousand pounds for painting the ceiling; but the remuneration to the architect was very disproportionate; who, according to Mr. Walpole, received only eight shillings and four-pence a-day as surveyor of the works, and forty-six pounds per annum for house-rent, a clerk, and incidental expenses. This place was chosen by the regicides who brought Charles I. to the block, for the last act of his mortal existence. On the morning of his execution he was conducted hither from St. James's; and, after passing a space in his bed-room, went from thence through a breach in the wall at the north end of the room upon the scaffold. The passage still remains, and is the door of a small additional building.

The old palace lay in ruins for many years. At present the site of it, with a part of the privy-garden, is covered by the dwelling-houses of different noblemen and gentlemen, among which, those of the dukes of Richmond and Buccleugh, and the earl of Eife, are the most conspicuous; the embankment behind the latter is a great improvement to this part of the bank of the Thames, and commands a very extensive view of the water between Blackfriars and Westminster Bridges. Several improvements have been made of late in front of these houses; railings, letting in the light to grounds planted with shrubs and trees, have taken the place of dead walls covered with lottery-bills and ballads; and the circulation of the air, perfumed by these plants and plots of flowers, has become more free and wholesome.

Nearly opposite to Scotland yard, is situated the Admiralty-office, a massy building of brick and stone. It has two deep wings, and is entered by a lofty portico, supported by four very tall stone columns, with Ionic capitals, to which there is an ascent by a few steps; but this portico, which was intended as an ornament to the building rather disgusts than pleases, in consequence of the immoderate height of the columns. It is said that the architect who built this portico had made the shafts of a just length, when it was observed that the pediment interrupted the light of some of the apartments, in consequence of which he was compelled to violate every rule of architectural proportion, and carry his columns to the roof of the building. Happily, however, this clumsy pile is concealed from view by a very handsome screen, built by Messrs. Adams, in the centre of which is an arched gateway, over which runs a balustrade. On each side of the gate is a niche, surmounted by a pedestal, on which is the figure of a winged sea-horse. In front of the screen is a colonnade of the Doric order; and at each extremity are three niches, above which are triangular pediments; in one of these pediments is a basso-relievo of the prow of a Roman galley, and in the other the bow of a British three-decked

man-of-war. Besides a hall and other commodious apartments for transacting business in the main building, the wings are formed into six spacious houses, and are adapted for the residence of the lords commissioners of the admiralty. This office was originally held in the large house at the south end of Duke-street, Westminster, which overlooks St. James's Park; but in the reign of king William it was removed to Wallingford-house, on the same spot as the present building, which was erected in the late reign.

Next to the Admiralty, on the same side of the street, we find the Horse-Guards, so called on account of the circumstance of the king's guard of horse being stationed there.—It is a very solid, not to say heavy, sort of building, answering to no particular order of architecture. It consists of a centre and two wings. In the middle is an arched passage into St. James's Park, with a postern on each side for foot-passengers; above is a pediment, having the royal arms in bas relief in the tympanum; and over all is a cupola, serving as a clock-tower. At each extremity of the centre is a pavilion. The wings are plainer than the centre; they consist of a front projecting a little, with ornamented windows in the principal face, and a plain one in the sides. Each has its pediment, with a circular window in the centre. At the front to the street is a noble iron railing, on each side of which stands a sort of stone watch-house or sentry-box, where a horse-centinel is doing duty day and night. This has a noble appearance. The view from the street through the archway towards the Canal and Buckingham-house in St. James's Park, reminds us of a similar aspect through the main archway of the Thuilleries towards the garden and the equestrian statue of Louis the Fifteenth, the grandfather of the present king.—This leads us to the recollection of an epigram placed at the foot of that statue when the king was forgetting his duties in the arms of a courtesan, which the kings of France, from time immemorial, have been very apt to do. The king was on horseback, and the four cardinal virtues standing one at each corner of the pedestal. The sarcastic epigram was as follows:

Autour et sur ce piedestal,  
Les Vertus font à pied, et le Vice à cheval.

“Around and upon this pedestal, the Virtues are on foot and Vice on horseback.”—The author was never discovered; and the craving gates of the Bastille, Fort l'Eveque, and Salpetriere, gaped in vain to receive him in their unrelenting jaws—*fauces Acherontis avari*. All the cunning of the *mouchards*, or police-officers, (the Townsends, the Adkins's, the Vickeries, of that country and time;) all the conjurations of Sartine himself, then at the head of the police-department, were defeated—for the author had declared upon his paper, *J'étois seul quand je le fis*; “I was alone when I did it.” And, since no accomplice, in that case, could turn king's evidence; since the author did not think proper to get the reputation of a wag at the expense of his life; the secret was never revealed, and the mystery buried in eternal oblivion.—We are obliged to confess, that the epigram met with as many applauders as admirers.

This digression, in which we have indulged for the very purpose of relieving our readers from the monotony of a survey, leads us to the TREASURY.—The whole front of this edifice, which follows the Horse-guards in a line towards the south, is rustic; it consists of three stories, of which the lowest is of the basement kind, with small windows, though they are contained in large arches. This story has the Tuscan proportion; and the second the Doric, with arched windows of a larger size; the upper part of this story is, with great inconsistency, adorned with the triglyphs and metopes of the Doric frieze, though the range of ornament is supported by neither columns nor pilasters. Over this story is a range of Ionic columns in the centre, supporting a pediment. A variety of offices are under the roof of this building, among which is the council-chamber, commonly called the cockpit, where, until within

a few years, his majesty's intended speech was read to certain members of both houses on the evening previous to opening the parliament. There are vaulted passages through this building into Downing-street and Parliament-street. The front towards the street is very old, but the entrances have been restored to their classical and elegant gothic style, with heads at the drops of the water-tablets, and with pure ogee-branches in the vaulting of the tops.

On the south of this large and elegant opening, is a continuation of it more particularly called Parliament-street, which leads to one of the finest spots that any metropolis in the world can boast of. At the end of Parliament-street the eye is struck at once by so many grand and interesting objects, that the traveller is at a loss which to examine first. On his left hand he sees the avenue to Westminster-bridge, and part of that noble fabric—on the right his view extends to the Birdcage, (or *Bocage*, as it ought to be called,) a shady and solitary walk in St. James's Park—before him bursts at once a wonderful cluster of grand edifices: Westminster-hall, the House of Lords, Westminster-abbey and Henry the Seventh's chapel, St. Margaret's, and the Sessions-house, all nearly on the same point of view.—Several of these great objects will be found in Plate I. but it is erroneously stated, in some copies of that engraving, that the view is taken from Westminster-bridge; the point of sight is near the bridge, and in a situation where the objects might be grouped with the greatest advantage.—The survey of each of these magnificent objects will be successively offered to our readers: but first we shall introduce a few remarks upon the antiquity and present government of the city of Westminster.

Westminster received its name from the abbey, or minster, situated westward of the city of London; and, according to several historians, was thus denominated to distinguish it from the Abbey of Grace, on Tower-hill, called *Eastminster*; but Maitland proves this to be a mistake, by showing that the former is called Westminster in an undated Charter of Sanctuary granted by Edward the Confessor, who died in 1066; and that the latter was not founded till 1359; he therefore supposes, that the appellation of Westminster was given to distinguish it from St. Paul's church, in the city of London, which lay so far to the east of it.

In ancient times, this was a mean unhealthy place, remarkable for nothing but the abbey, which was situated on a marshy island, surrounded on one side by the Thames, and on the other by what was called Long Ditch. This ditch was a branch of the river, which began nearly where Manchester-buildings now stand; and, crossing King-street, ran westward to Delahay-street, where it turned to the south, and continued its course along Princes-street, until it crossed Tothill-street, from whence it passed along the south wall of the abbey-garden, to the Thames again. It has, however, been arched over for many years, and is at present a common sewer. This island was, exclusive of the minster, an entire waste, and so overgrown with thorns and briars, that it obtained the appellation of *Thorney Island*.

In process of time, however, a few houses were erected round the monastery, which, at length, grew into a small town, called in ancient books “The town of Westminster.” But the principal cause of the increase of Westminster, was the continual jealousy of the government against the privileges and immunities claimed by the citizens of London. To this cause must be attributed the establishment of the wool-staple at Westminster, in preference to London, which occasioned a great resort of merchants thither. Another cause of its growth, was, the royal residence being general here; for which reason, most of the chief nobility also erected *mans*, or town-houses, in its vicinity, the sites of many of which still retain the names of their former owners.

Westminster continued for many ages a distinct town from London; and the road between them, on the sides of which the street called the Strand was afterwards built, passed along the river side, and through the village of

Charing. This road, however, from the frequent passing of horses and carts, had become so dangerous both to men and carriages, that, in the year 1353, a toll was laid on all merchandise and provisions carried to the staple of Westminster, for repairing it. In 1385, it was new paved from Temple-bar to the Savoy; and some years after, by the interest of sir Robert Cecil, who had an elegant mansion where Cecil-street now stands, the pavement was continued as far as his house. In course of time Westminster became a place of some consideration; but it received its most distinguished honours from Henry VIII. who, on the dissolution of the monastery of St. Peter, converted it into a bishopric, with a dean and twelve prebendaries; and appointed the whole county of Middlesex, except Fulham, which was to remain to the bishop of London, for its diocese. On this occasion Westminster became a city; for the making of which, according to lord-chief-justice Coke, "nothing more is required, than to be the seat of episcopal power."

The old palace, near the abbey, having been nearly destroyed by fire in 1512, Henry VIII. took up his residence at Whitehall, which he purchased, in 1530, of cardinal Wolsey. He also built the palace of St. James; and inclosed a fine spot of ground, which he converted into a park, for the accommodation of both palaces. From this period, the buildings about Westminster began greatly to increase; but it did not long enjoy the honour of being a city; for it never had but one bishop, Thomas Thirlby, who being translated to the see of Norwich, by Edward VI. in 1550, the new bishopric was dissolved. However, Westminster is still considered as a city, and is so styled in our statutes.

The city of Westminster, properly so called, consists but of two parishes, viz. St. Margaret, and St. John the Evangelist; but the liberties contain seven parishes, which are as follow: St. Martin in the fields, St. James, St. Anne, St. Paul, Covent-garden, St. Mary-le-Strand, St. Clement Danes, and St. George Hanover-square; to which must be added, the precinct of the Savoy, and that of St. Martin-le-grand. The government of both the city and liberties of Westminster is under the jurisdiction of the dean and chapter of St. Peter's, as well in civil as in ecclesiastical affairs, whose authority also extends to some towns in Essex; and the whole of their district is exempt from the jurisdiction of the bishop of London, and of the archbishop of Canterbury. Since the Reformation, the management of the civil part of the government has been in the hands of laymen, elected, or, when appointed by their principals, confirmed, by the dean and chapter.

The form of the civil government of Westminster was settled by an act of parliament passed in the 27th of queen Elizabeth, entitled, "An Act for the good Government of the City and Borough of Westminster;" which directs the appointment of twelve burgesses, and twelve assistants, annually, to preside over the twelve wards into which Westminster was at that time divided; and gives power to the dean, high steward, or his deputy, and the twelve burgesses, or any three of them, whereof the dean, high steward, or his deputy, to be one, to hear, determine, and punish, according to the laws of the realm, or laudable and lawful customs of the city of London, all matters of incontinency, common scolds, inmates, common annoyances, &c. and to commit persons, offending against the peace, to prison; but to give notice, within twenty-four hours, to some justice of the peace for the county. All good orders and ordinances, made by the dean and high steward with the assistance of the burgesses, concerning the government of the inhabitants, and not repugnant to the queen's prerogative or the laws of the land, to be of full force and strength. Though the increase of the liberties of Westminster has rendered some alterations in this statute necessary, yet the substance of it is still the basis of the government of this city.

The first of these magistrates is the high steward, who is usually one of the chief nobility, chosen by the dean and chapter. His office has some affinity to that of a chan-

cellor of an university; and he holds his place during life. On his death or resignation, a chapter is called for the election of another, in which the dean sits as high steward until the election is determined. The deputy steward is appointed by the high steward, and confirmed by the dean and chapter. He is chairman of the court-leet; by which the high constable, the petty constables, and the annoyance-juries, are appointed. The high-bailiff is nominated by the dean, and confirmed by the high steward, and holds his place for life. He is returning-officer at the election for members of parliament; and enjoys considerable profits from fines, forfeitures, &c. The burgesses are at present sixteen in number, each of whom has an assistant. They are nearly similar to the aldermen and deputies in the city of London; but the exercise of their office is now principally confined to attending the court-leets, &c. Under the high constable, who cannot hold his office more than three years, are eighty petty constables, appointed annually, at Michaelmas, viz. fourteen for the parish of St. Margaret; four for that of St. John the Evangelist; twelve for St. George, Hanover-square; fourteen for St. Martin's in the Fields; fourteen for St. James's; eight for St. Anne's, six for St. Paul's Covent-garden; six for St. Clement Danes; and two for St. Mary-le-Strand. Before the year 1696, the inhabitants of Westminster were liable to be called upon to serve as jurors at the quarter-sessions for the county of Middlesex; but a clause was introduced into an act, passed in that year for regulating jurors, by which they were exempted from this duty.—Notwithstanding the great extent of Westminster, the government of it bears but little resemblance to that of a large city. The inhabitants have no exclusive corporation-privileges, nor are there any trading-companies within its jurisdiction. The two members who represent it in parliament, like those of a common-country borough, are chosen by the inhabitant-householders at large; and the only courts held in Westminster, are, the court-leet, the quarter-sessions, and two courts of requests for the recovery of small debts. Westminster has, however, long been the seat of the royal palace, of the high-court of parliament, and of our law-tribunals.

WESTMINSTER ABBEY.—In whatever point of view we consider this edifice, whether in regard to its antiquity, the great and worthy personages whose ashes it contains, or the beauty of its architecture, it equally claims our respect and admiration. No building in the world can rival it under the aspect of these three points. If the abbey of St. Denys, when it existed unimpaired and unspoiled by the more-than-barbarian hands of the French themselves, could approach Westminster in respect to its antiquity, and the high estimation of its august contents, yet for its architecture that sacred pile could not have the least pretensions to a comparison. Besides, there the partiality of the French for rank and hereditary honours, had consecrated the tombs exclusively, with very few exceptions, to royal relics. None but crowned heads, or bodies closely allied to royalty, were allowed to crumble to dust in that place; and it was by a most special condescension that the bones of the great Turenne were allowed to rest there. But here, the hand that guided the pen or struck the lyre withers contiguous to that which wielded the sword or held the scepter: here, kings, princes, orators, poets, warriors, statesmen, and magistrates, lie undistinguished, on an awful level. Any one who has deserved well of his country may hope for a place here; and in the dreadful hour of fight the hero keeps Westminster-abbey in view as the spot where his honoured remains may be laid. "A peerage or Westminster-abbey!" exclaimed Nelson just before he entered upon the battle of the Nile.

Were we to compile and relate all the miraculous stories that have been told and written concerning the origin of this famous abbey, and listen for any considerable time to its legendary historiographers, we might, in this self-called enlightened age, give offence to those who will read nought but what they can believe; and perhaps lull into

unwarranted belief the opposite class of readers, whose fondness for romantic assertions is ready to swallow the marvellous without difficulty or discrimination. We shall content ourselves with presenting to our readers whatever we can gather of a warrantable nature; and therefore merely mention the following story of the dedication of the church as a matter of curiosity.

It cannot be denied, as far as historical authority can retain its weight, that Sebert king of the East Saxons, (see p. 56 of this volume,) who died in 616, being, by Augustine's preaching and his uncle Ethelbert's example, converted to Christianity, threw down the temple of Apollo, west of London, and there most devoutly erected a church, which he dedicated to St. Peter; and appointed Mellitus, then bishop of London, to consecrate it accordingly. Ranulphus, indeed, does not particularly mention Sebert, but has these remarkable words; "That *some one*, at the instigation of Ethelbert, built a church to the honour of St. Peter, in the west part of the city of London, in a place called Thorney, which signifies an island of thorns, but is now called Westminster."

We are told that sir Christopher Wren rejects as fabulous the notion of a temple to Apollo in Thorney-island; and the rather, because it is said to have been destroyed by an earthquake in the reign of Antonius Pius, in order to make way for a Christian church to be erected by king Lucius upon its ruins. Sir Christopher declares, that when he was employed to survey Westminster-abbey, though he examined both the walls and ornaments about it with the nicest care, yet he could not discover the least fragment of cornice or capital, to indicate the work of a Roman builder, which he thinks he must undoubtedly have done had the fact been true, as earthquakes break few stones, though they overturn edifices.—Now, though we have a respect for the authority of sir Christopher Wren, we do not see how his arguments, which are merely negative, can refute statements which are positive as to the worship of Apollo having been held in great repute in Thorney. The *not finding* of ruins at the place, is no proof that no temple existed there. Besides, we are not told that this temple was an immense edifice, like those in Greece and Italy: a simple *jacellum* (and we could expect nothing more in an island where, before the arrival of the Romans, little, if any thing, was known of the ancient polytheism) would have been enough to authorise the writer quoted page 397, to say that this part of Great Britain sacrificed to Apollo; and the authors who followed him to admit the existence of a temple where the abbey now stands, as well as of a temple to Diana on the site of St. Paul's.—Had sir Christopher Wren been allowed to examine, stone by stone, the deep foundations of either or both of these edifices, he might have found some fragments of rude architecture, denoting that a building had preceded them; and yet he might have been still unable to decide whether it had been a temple, a villa, or a *corps de garde*.

As to the dedication of the abbey, it is reported that the king had ordered Mellitus to perform the ceremony; but St. Peter, as the legend says, was beforehand with him; for over-night he called upon Edricus, a fisherman, and desired to be ferried over to Thorney, which happened to be then flooded round by heavy rains. The fisherman obeyed; and the apostle then consecrated the church, amidst a grand chorus of heavenly music, and a glorious appearance of burning lights; of which Edricus was both an ear and an eye witness. The saint then discovered himself to the fisherman; and bade him tell Mellitus what he had heard and seen; giving him at the same time a specimen of his divine mission, by a miraculous draught of salmon, of which kind of fish, when in season, the apostle assured him, none of his occupation should ever want, provided they honestly made an offering of the tenth fish to the use of the newly-consecrated church. This custom appears to have been continued until the end of the fourteenth century.—That this romantic tale was generally credited

for many ages after, is evident from two royal charters. The first is a charter of king Edgar, which says, "This church was dedicated by no less than St. Peter, the prince of apostles, to his own honour." The other is a charter of Edward the Confessor, which is still more explicit, affirming it to be "dedicated by St. Peter himself, with the attendance of angels, by the impression of the holy cross, and the anointment of the holy chrism."

This church and its monastery were repaired and enlarged by Offa king of Mercia; but, being destroyed by the pagan Danes, they were rebuilt by Edgar, who endowed them, and, in the year 969, granted them many great privileges. But, having again suffered by the ravages of the Danes, Edward the Confessor pulled down the old church, and erected a most magnificent one, for that age, in its place, in the form of a cross, which was begun in the year 1049, and became a pattern for that kind of building. The work being finished in the year 1066, he caused it to be consecrated with the greatest pomp and solemnity; and by several charters not only confirmed all its ancient rights and privileges, but endowed it with many rich manors and additional immunities; and the church, by a bull of pope Nicholas I. was constituted the place for the inauguration of the kings of England. And, as an abbey in those days would have been nothing without relics, here were to be found the veil and some drops of the milk of the Virgin; the blade-bone of St. Benedict; the finger of St. Alphage; the head of St. Maxilla; and half the jaw-bone of St. Anastasia.

William the Conqueror, to show his regard to the memory of his late friend king Edward, no sooner arrived in London, than he repaired to this church, and offered a sumptuous pall, as a covering for Edward's tomb. He also gave fifty marks of silver, together with a very rich altar-cloth, and two caskets of gold; and the Christmas following was solemnly crowned there, which was the first coronation performed in that place.

The next prince that undertook to enlarge this great work was Henry III. who built a chapel to the Blessed Virgin, then called the New Work at Westminster, the first stone whereof he laid himself on the Saturday before his coronation in the year 1220. But, about twenty years after, finding the walls and steeple of the old structure much decayed, he pulled them all down, with a design to enlarge and rebuild them in a more regular manner. He commenced this great work in 1245, in the style of architecture which began to prevail in his days, but did not carry it further than four arches west of the middle tower; and the vaulting of this part was not completed until 1295. He did not live to accomplish his design. It was continued by his successor, and carried on slowly by succeeding princes; and from the portcullises on the roof of the last arches it appears, that either Henry VII. or VIII. had some concern in it, that being the device of these monarchs. The building was never finished; the great tower and the two western towers remaining incomplete at the reformation, after which the two present towers were erected.

About the year 1502, Henry VII. began that magnificent structure, which is now generally called by his name. For this purpose, he pulled down the chapel of Henry III. already mentioned, and an adjoining house called the White-Rose Tavern. This chapel, like the former, he dedicated to the Blessed Virgin; and, designing it for a burial-place for himself and his posterity, he carefully ordered in his will, that none but those of royal blood should be permitted to lie therein: and, for the health of his soul, he procured a bull from the pope, for uniting to this abbey the collegiate church of St. Martin's-le-Grand, and the manor of Tykill in Yorkshire, for the maintenance of a chantry of three monks and two lay brethren. This was the origin of the jurisdiction of the dean and chapter of Westminster in St. Martin's-le-grand.

At the head of seventeen monks, William Benson, the abbot, surrendered the abbey to Henry VIII. at the general suppression of religious houses, in the year 1539, when

when its revenues amounted, according to Speed, to 3977l. 6s. 4d. per annum, a sum at least equal to twenty thousand pounds a-year of present money. Besides its furniture, which was of inestimable value, it had, in different parts of the kingdom, no less than two hundred and sixteen manors, seventeen hamlets, with ninety-seven towns and villages; and, though the abbey was only the second in rank, yet in all other respects it was the chief in the kingdom, and its abbots had a seat in the house of lords. It has been often observed, that most of these great conventualities (since, with all the gluttony and other capital sins attributed to monks, they could not swallow the whole revenue of their property) used to do a great deal of good to the surrounding country, by relieving the poor; and that, since their suppression, here as well as in the sister kingdoms, beggars sprang up every-where, on account of the subtraction of that daily support which the cottage received from the neighbouring abbey; and that thus our *poor-laws*, which did not subsist before, became necessary; for Dugdale remarks, that, while the convents stood, there was no act for the relief of the poor, so amply were they provided for by these houses; whereas in the next age there were no less than eleven bills brought into the house of commons for that purpose. That the monasteries afforded relief to the poor is a position maintained also by Smith and Blackstone; and the latter attributes to the dissolution of these the numerous statutes made in the reign of Henry VIII. and his children, for providing for the poor and impotent. Indeed from the 22d of Henry VIII. to the 43d of Elizabeth, hardly a parliament met, in which some laws that regarded the poor were not enacted.—As for the abbots of Westminster having a seat in the house of lords, that was perfectly in unison with the established religion of those times. Abbots, as well as bishops, were prelates of the realm; they were the heads of communities holding immense landed property, and therefore intimately connected with and interested in the welfare of the kingdom. Their contributions were often very acceptable to the minister and his king. The only difference that, in exterior ornaments, distinguished them from bishops, was that the latter wore the crozier with its spiral without, and the abbot with the spiral within, to show the jurisdiction of the first was abroad, and that of the second at home. A fact the more interesting, as it is little known.

After the dissolution of the abbey, the sickle monarch Henry VIII. erected it first into a college of secular canons, under the government of a dean, an honour which he chose to confer on the last abbot; and the accepting of which plainly shows the character of the monk, who, like some churchmen in the course of the temporary revolution in France, quietly made this interested calculation, viz. that it is better to be any thing than nothing at all. This establishment, however, was of no long duration; for two years after Henry converted it into a bishopric, as we have noticed before. His son Edward VI. broke the crozier, and again reduced the establishment to a deanery, which continued till Mary's accession to the crown. After a lapse of eighteen years, the conventual existence was restored; and the cloisters again saw the monks pacing their gloomy walks. No scenery in a playhouse shifts faster than the successive situations of this abbey; for, three years after, the monks were obliged to pack up their cowls, rosaries, and breviaries, and leave their dear convent, by order of Elizabeth. In 1560 she re-erected Westminster-abbey into a college as before, under the government of a dean and twelve secular canons, or prebendaries. She also founded a school for forty scholars, denominated *the Queen's*, to be educated in the liberal sciences preparatory to their going to the university, and to have all the necessaries of life, except clothing, of which they were to have only a gown each year. To this abbey belong choristers, singing-men, an organist, twelve almshouses, &c.—We might add several particulars to this epitome of the origin, building, and his-

tory, of Westminster-abbey; but we find not, in many of them, that appearance of truth which ought to be the guide of an historian; and we shall therefore proceed with our survey.

The appearance of the west front is extremely magnificent. The gate is wrought with much delicacy; and the screen above it wants neither elegance nor lightness, and agrees with the large window which it supports, in tracings and other ornaments peculiar to Gothic architecture. The two towers, it is plain, are of later construction; and indeed, the execution of some of the parts is so clumsy, that it clashes considerably with the original slenderness of mouldings, as well as depth of carvings, so justly admired throughout the whole work. Sir Christopher Wren repaired these two towers; and, although his fame stands almost unparalleled in the stately monument he raised to his own reputation when he built St. Paul's, yet it is plain that he could not step out of the five ancient orders of architecture into that fantastical one, which, when well executed, is, as well as the others, worthy of admiration. Here we do not find that delicacy, that whimsical originality of tracery, so conspicuous in ancient buildings of that description; and the two towers look like a second-hand fac-simile, or the worn-out cast of a once-elegant mould. The north side, which is the only one exposed to view, (the other being so incumbered with buildings, that even its situation can hardly be distinguished,) presents a noble range of substantial buttresses; but to a certain height, the *edacity* of time, *Tempus edax*, has flattened the boldly-raised mouldings, and levelled all to a plain surface, except where the drippings of water, the pickings of pigeons at sunrise, and (as some people say and believe) the worm-like-eating beams of the moon, have excavated little holes in the stone, and properly honey-combed these noble supports of one of the noblest piles which the world can boast of in this style of architecture. The top and canopied pinnacles of these buttresses were, each of them, adorned with a statue of one of our kings, of no bad workmanship. Some of them have been presented upon paper, in their justly-supposed original shapes by several antiquaries and draughtmen, among whom we are proud to mention that very zealous and undaunted defender of the ancient honours of, as he calls it, English architecture, Mr. John Carter; and we would advise that portion of our readers who may be fond of such pursuits to follow his very interesting observations and profound strictures in several numbers of the Gentleman's Magazine.—Had the restless hand of Time itself crumbled into dust the representatives of those whom he had long before reduced to their original clay, we could have no license to complain—but here it is not the case.—They were statues of kings; and, when the majesty of the people is allowed to reign with unlimited and truly-unqualified sway, statues of kings are condemned as idols; submission to power, superstition; and loyalty, a deadly sin. Most of these statues were brought down by the raging hands of an infuriated and blind multitude in those unhappy civil commotions that defaced, in childish revenge, the beauty of most of the religious edifices in this kingdom.

This beautiful range of buttresses leads the eye gently and pleasingly to the north transept, projecting out with great promineny. Three large windows on each stage add light to the interior, and ornament to the exterior.—When we turn to the aspect of the north porch, we let loose the reins of our praising faculties; for the portico, that leads into the north cross, is looked upon as magnificent, and has been called the *beautiful*, or *Solomon's Gate*.—Now this is very fine; but, as no men are more ready to do justice to real merit and beauty than we are, (and we are conscious of having, throughout our work, given reiterated proofs of it,) and yet, as we declared it from the beginning, (see p. 396.) none less apt or liable to swerve from truth, we must indeed confess that we do not see any ground for comparing this handsome Gothic gate with what we may suppose the *Porta formosa* of the Temple of Jerusalem.

*North-west View of Westminster Abbey.*

*Published as the Act directs Feb 24 1835*

to have been.—Raphael, in his famous cartoon of Peter and John curing the lame man at this gate, endeavoured to give an idea of what this portico was; and from scattered fruits and capitals, architraves and broken columns, he made out what he had some right to call “beautiful.” The prints after this celebrated cartoon are common; and we therefore leave our readers at liberty to compare. It is probable that this gate was built by Richard II. as we are told that his arms, carved in stone, were formerly over it. Above the portico is a most elegant window of modern date, and admirably well executed. It is in the form of a rose, made by the intersection of concentric lines; but such roses are to be seen in nearly all ancient buildings.—On the south side is a window set up in 1705, which is likewise very masterly executed, and is no disparagement to the other. It is now undergoing a repair.

Following the north flank of this beautiful building, we come to the side of the choir, and then to Henry the Seventh’s chapel, a most elegant appendage to the whole building. It is a pleasing task for us to record that, within these few years, the buttresses and intermediate part of this chapel are, by the liberality of the dean and chapter, undergoing a thorough repair; and we have the satisfaction to suppose, that from old drawings, originally made, it is said, at the time of building the buttresses, and lately discovered, the whole is to be restored to its original neatness.—Surely we cannot pass unnoticed the whimsicality of the ornaments. We do not mean the portcullises and roses—all these are historically and heraldically right; but that terrible running-down of starved dogs, creeping cats, rats, mice, frogs, and non-descript monsters, on the elbow of the buttresses, will certainly bring a smile on the face of the minute observer. However, this must be the essence of the style; for, if you take it away, you destroy all the charm. To reduce them to another style would be as preposterous as to transform *Hudibras* into an epic poem.

Now that we have walked round this venerable pile as far as the incroachments of buildings on the south side (where a small court leads snugly to the east flank of the south transept called “Poets’ Corner”) have permitted us, we must, with *uncalculated* feet, and impressed with due respect, enter this celebrated and awful abode of the dead, this grand and bold exertion of mental power in architecture. Indeed we think we read, engraved on the sacred threshold, *Procul o procul, este profani*; “Ye profane, stand aloof!” for, at whatever door we enter, we may conceive the venerable shade of some great man to hover over us, and to bid us hide our “diminished heads.” The majestic shade of some worthy stalks before us in the gloomy aisles, and, pointing to the surrounding monuments, makes us say with Addison, “When I look on the tombs of the great, every emotion of envy dies in me: When I read the epitaphs of the beautiful, every inordinate desire goes out. When I meet with the grief of parents on a tombstone, my heart melts with compassion; when I see the tombs of parents themselves, I consider the vanity of grieving for those we must quickly follow. When I see kings lying by those who deposed them; when I behold rival wits placed side by side, or the holy men that divided the world with their contentions and disputes; I reflect with sorrow and astonishment on the little competitions, factions, and debates, of mankind. When I read the several dates of those who died but as yesterday, and some six hundred years ago, I consider that great day when we shall all of us be contemporaries, and make our appearance together.”—We are sorry, however, that the increasing multitude of modern monuments has so much crowded all the parts of Westminster-abbey; and indeed, if we go on at this rate, the edifice will look like a tomb-warehouse, where goods of that description will appear as if piled one upon another in the expectation of customers, and create a sort of confusion most inimical to the solemnity of the place.

The length of the building, from east to west, is three hundred and seventy-five feet, measuring from the steps

leading to Henry the Seventh’s chapel. The length of the cross, from north to south, is a hundred and ninety-five feet; and the breadth of the nave and side-aisles is seventy-two feet. The height, from the pavement of the nave to the inner roof, is a hundred feet, and from the choir-pavement to the roof of the lantern, a hundred and forty.

On entering the west door, the whole body of the church presents itself at one view; the pillars which divide the nave from the side-aisles being so curiously formed as not to obstruct the side-openings; nor is the sight terminated to the east, but by the fine painted window over the portico of Henry VIIth’s chapel, which anciently, when the altar was low, and the beautiful shrine of Edward the Confessor was included in the prospect, must have afforded one of the grandest sights the imagination can paint. These pillars terminate toward the east by a sweep, thereby inclosing the chapel of Edward the Confessor in a kind of semi-circle; and it is worthy of observation, that, as far as the gates of the choir, the pillars are filleted with brass, but all beyond with free-stone; from which circumstance, some take occasion to determine the bounds of the different enlargements of this church at different times, but with much uncertainty. Answerable to the middle range of pillars are others in the walls, which, as they rise, spring into semi-arches, and are everywhere met in acute angles by their opposites; thereby throwing the roof into a variety of segments of arches, decorated with ornamental carvings at the closings and crossings of the lines. On the arches of the pillars are galleries of double columns fifteen feet wide, covering the side-aisles, and lighted by a middle range of windows, over which there is an upper range of larger windows; by these and the under range, together with the four capital windows, facing the north, east, south, and west, the whole fabric is admirably lighted. At the bottom of the walls, between the columns, are shallow niches, arched about eight or ten feet high, on which the arms of the original benefactors are depicted; and over them, in Saxon characters, their titles, &c. but these are almost all hid from the sight, by the monuments of the dead being placed before them.

The next objects of attention, are, the fine paintings in the great west window, of Abraham, Isaac, and Jacob; Moses and Aaron, and the twelve patriarchs; the arms of king Sebert, king Edward the Confessor, queen Elizabeth, king George II. and dean Wilcox, bishop of Rochester. This window was set up in the year 1733; and is very curious. To the left of it, in a smaller window, is a painting of one of our kings, supposed to be Richard II. but, the colours being of a water-blue, the features of the face cannot be distinguished. In the window on the other side the great window, is a lively representation of Edward the Confessor, in his robes; and under his feet his arms painted. These are the most perfect of the many remains of this ancient art to be seen in the different windows of the abbey.

After surveying this part of the church, the next thing to be noticed is the choir, which may always be seen during divine service, and at other times is shown to those who pay for seeing the monuments in the north cross and western end of the abbey. The grand entrance to it is by a pair of beautiful iron gates; and the floor is paved with black and white marble. The stalls in this choir were formerly painted of a purple colour; and in it, near the pulpit, was an ancient portrait of Richard II. six feet eleven inches high, by three feet seven inches broad. Latterly, the choir has undergone a considerable alteration in the position of the stalls and seats, which are rendered much more commodious for public worship; and are so contrived, that they can be removed to make room for the celebration of any service which requires greater space, and can be replaced without injury, or much expense. Since this improvement, the portrait of Richard has been hung up in the Jerusalem Chamber. Beyond the choir is the fine altar, surrounded with a curious balustrade,

lustrade, within which is a pavement of Mosaic work, made at the charge of abbot Ware, and said to be the most beautiful in its kind of any in the world. By some Latin verses it appears, that it is composed of porphyry, and some other stones of various colours; and that it was laid in the year 1272. This beautiful pavement sustained irreparable injury during a fire, which destroyed the roof of the lantern above it; on the 9th of July, 1803.

On each side of the altar are marble doors, opening into St. Edward's chapel, where, at the coronation, our kings retire to refresh themselves.—The chapel of St. Edward the Confessor is inclosed in the body of the church, at the east end of the choir, and directly behind the altar. The principal object in this chapel is the ancient shrine, erected by Henry III. to the memory of Edward the Confessor, the last of the Saxon race. He died in the year 1066, and was canonized in 1269, by pope Alexander III. who issued his bull to the abbot Lawrence, and the convent of Westminster, enjoining, "That his body be honoured here on earth, as his soul was glorified in heaven." A bold assertion indeed, but not so bad as some writers will have it, viz. that the bull ordered "his soul to be glorified in heaven!" A cloistered life was his sole happiness; and, though married eighteen years to one of the most accomplished women of her time, daughter to earl Godwin, yet it is said, she confessed on her death-bed, that he suffered her to live and die a virgin; a circumstance not uncommon in those days; and which sometimes arose from the folly of the husband, as in the above instance; and sometimes (still more incredible) when a young woman had made an early vow of chastity, and yet complied with the wish of her friends to marry, as was the case with St. Cecilia.—This shrine, which was once esteemed the glory of England, is now much defaced and neglected. It was composed of stones of various colours, beautifully enriched with all the cost and art that human imagination could project; and consists of three rows of arches, the lower pointed, the upper round; and on each side of the lower is a most elegant twisted pillar; a lamp was kept continually burning before it till the breath of the reformation put it out. On one side stood a silver image of the Virgin, which, with two jewels of immense value, was presented by queen Eleanor, the wife of Henry III. On the other side stood another image of the Virgin, wrought in ivory, presented by Thomas Becket, archbishop of Canterbury. To this shrine Edward I. offered the regalia and chair in which the kings of Scotland used to be crowned. About the year 1280, Alphonso, third son to Edward I. offered here the golden coronet of Llewellyn prince of Wales, and other jewels. The beautiful mosaic pavement of this chapel was the performance of Peter Cavalini, inventor of that species of ornament. It is supposed that he was brought into England by the abbot Ware, who visited Rome in 1256. Weever, in his Funeral Monuments, says; "He brought from thence certain workmen, and rich porphyry stones, whereof he made that curious, singular, rare, pavement before the high altar; and with these stones and workmen he did also frame the shrine of Edward the Confessor." This shrine is now so stripped as to afford but little satisfaction, except to the curious; however, some of the stone-work with which it was adorned is still to be seen. This stone-work is hollow within, and now encloses a large chest, which Mr. Keep, soon after the coronation of James II. found to contain the remains of St. Edward; for, it being broken by accident, he discovered a number of bones; and, turning them up, found a crucifix richly ornamented and enamelled, with a gold chain twenty inches long, both which he presented to the king, who ordered the bones to be re-placed in the old coffin, and inclosed in a new one made very strong, and bound with iron.

In this chapel are several other memorials of deceased royalty. On the south side of the shrine lies Editha, queen to St. Edward, one of the most accomplished women of her age, who survived her husband eight years,

and beheld all the miseries consequent on his dying without issue. She was however treated with great respect by William the Conqueror, who allowed her an apartment in his palace at Winchester, where she died, and was interred here by his express orders.—On the north side of the chapel is the tomb of Henry III. the panels of which are of polished porphyry, surrounded by mosaic work of scarlet and gold. At the corners are twisted pillars, gilt and enamelled; and upon it is the effigy of that king in brass, gilt, finely executed, and supposed to be the first brazen statue cast in this kingdom. At the feet of Henry III. is a table-monument of grey marble, on which lies the effigy, of Eleanor, queen to Edward I. Her body was interred here, and her heart was placed in the choir of the Friars Predicants in London, according to ancient and even modern custom.—Here is also a large plain coffin of grey marble, composed of seven slabs; four of which form the sides, two the ends, and one the cover. This rough unpolished tomb incloses the remains of Edward I. just mentioned, who was named in honour of the Confessor, and surnamed Longshanks, from his tall and slender habit of body.—On the fourth side of this chapel is a black marble monument to the memory of Philippa, queen of Edward III. to whom she was married forty-two years, and bore him fourteen children. Edward bestowed a profusion of expense on her tomb, round which were placed, as ornaments, the brazen statues of thirty kings, princes, and noble personages, her relations. Adjoining to this, under a gothic canopy, is the tomb of Edward III. himself. The effigy of this prince is placed recumbent upon a table of grey marble; and, though his tomb is distinct from that of the queen, yet their bodies were deposited in the same grave, according to her request on her death-bed. Like the former, this tomb is surrounded with statues, particularly those of his children; and at the head of it are placed the sword and shield carried before him in France. The sword is seven feet long, and weighs eighteen pounds.—Next to this is a tomb erected to the memory of Richard II. and his first consort Anne; over which is a canopy of wood, remarkable for a curious painting, still visible upon it, of our Saviour and the Virgin Mary. The robing of his effigy is curiously wrought with peascods open and the pease out, the badge which this prince had adopted for reasons we have not been able to ascertain.—In this chapel are deposited the coronation-chairs of our kings and queens, the most ancient of which, as has been already mentioned, was brought with the regalia from Scotland, by Edward I. in the year 1297, and offered at the shrine of St. Edward. Under the seat of this chair is a square stone, which, according to the Scots tradition, is believed to have been Jacob's pillow. The other chair was made for Mary II. At the coronation, one or both of these chairs, as circumstances require, are covered with gold tissue, and placed before the altar, behind which they now stand.—Along the frieze of the screen of this chapel are fourteen legendary bas-reliefs respecting the Confessor. Their subjects are, of course, of that nature, which, for invention and execution, may have pleased our ancestors; but, in our improved and enlightened days, a long and minute description of them would not excite that interest which was so lively eight centuries ago. We have other objects of wonder and belief; and indeed no mean ones. The doubtful story of a queen of England walking bare-footed among burning plough-shares, (a representation of which forms the first of these legendary sculptures,) vanishes now, like the morning mist before the sun, when compared with the miraculous feats of Miss Josephine Girardelli. The swallowing of swords had its run; and was even lessened in the consideration of the curious by the fact of a sailor having, in our time, swallowed, and, *mirabile dictu!* half digested, more than a dozen of clasp-knives, (see vol. xi. p. 784) But now we are to witness, in Bond-street, the drinking of boiling oil and melted lead, the washing of the hands with aqua fortis, walking deliberately upon iron bars in

the full perfection of *incandescence*; and therefore are ready to exclaim with the high priest in the *Athalia* of Racine, *Et quel temps fut jamais plus fertile en miracles!* Whilst some thousands of our cotemporaries are at this moment gaping in all the ardour of hope, the heat of desire, and the complacency of confidence, for a second birth of the Messiah!

To return to our survey. We next visit the chapel of Henry the Fifth, which is separated from that of St. Edward only by an iron screen, on each side of which are images as large as life, guarding, as it were, the staircase ascending to the chantry over it. In it is his monument, which is of black marble, surrounded with iron rails and gates; and on it is placed his statue made of heart of oak; but the head, with the sceptre and regalia, being of silver, were stolen, according to the account of the guides, in the time of Oliver Cromwell. The beautiful gothic inclosure of this tomb was erected by Henry VII. in compliment to his illustrious relation and predecessor; but he paid less respect to the memory of his grandmother, Catharine, the relic of this prince, who was interred in the Chapel of the Virgin. When Henry VII. ordered that to be pulled down to make way for his own magnificent chapel, he neglected her remains, which he suffered to be carelessly flung into a wooden chest, and removed into this chapel. The reason was, she had disgraced herself by marrying a private gentleman, after having been the wife of the conqueror of France. On each side of this chapel is a winding staircase, inclosed in a turret of iron-work, the tops of which spread into roofs of uncommon elegance. These stairs lead to a chantry, over the chapel, from which the inner part of the Confessor's shrine can be seen. Here are a helmet, shield, and saddle, which are believed to be those used by Henry V. at the battle of Agincourt, and brought here, as the custom was, at his funeral. The various models designed by sir Christopher Wren and other eminent architects, which had remained for many years in an obscure part of this church, were brought here in 1779. The section of the abbey, with the spire, as designed by sir Christopher, is greatly admired.

Around the chapel of St. Edward are nine chapels, besides that of Henry the Seventh, which appear not to have been comprehended in the original plan of the building, though they were erected by Henry III. Beginning at the north cross, and passing round to the south, they are in the following order: St. Andrew's; St. Michael's; St. John the Evangelist's; Islip's, or St. John the Baptist's; St. Erasmus's; St. Paul's; St. Nicholas's; St. Edmund's, and St. Benedict's. These chapels, with the whole of the area, the aisles, the nave, and the north and south crosses, are filled with such a wilderness of monuments, that it would require a volume to give the descriptions of them all; we shall therefore confine ourselves to noticing some of the most remarkable.

In St. Michael's chapel is a monument to the memory of Joseph Gascoigne Nightingale and his lady, which is one of the capital performances of that great master in sculpture, Roubiliac, and is visited and admired by all judges of elegance and ingenuity. Above is represented a lady expiring in the arms of her husband; and beneath, sily creeping from a tomb, the king of terrors presents his grim visage, pointing his unerring dart to the dying figure, at which fight the husband, struck with astonishment, horror, and despair, endeavours to ward off the fatal stroke from the distressed object of his care.—If we are not mistaken, there is in the church of St. Sulpice at Paris, a monument of one of the Harcourt or Harecourt family, which presents nearly the same animated and beautifully-allegorical theme: the skeleton of death is dragging down a beloved object to the grave, while the surviving one strives to keep him off.

In the centre of the chapel of St. John the Evangelist is a curious monument, erected to the memory of sir Francis Vere, a gentleman well skilled both in learning and arms; but, being brought up from his youth in the camp, he dedicated his study to the art of war, in which

he was equalled by few, and not excelled by any. The monument is a table, supported by four knights kneeling; on which lie the several parts of a complete suit of armour; and underneath the effigy of sir Francis, in a loose gown, lying on a quilt of alabaster. He died in the fifty-fourth year of his age, on the 28th of August, 1603.—In former times, there were many ancient monuments in this chapel, of which only one is now remaining. It has the figure of an abbot, in his pontifical habit, curiously engraved on brass, representing John de Eastrey, who died on the 4th of March, 1498. By the records of the church, he appears to have been a great benefactor to it. He adorned the west window with many grand paintings on glass, a small part of which still remains: he built the screen to this chapel, and presented two images, gilt, for the altars of St. Peter and St. Paul; and one for the Chapter-house. In breaking up the grave in the year 1706, the body of this abbot was discovered in a coffin quilted with yellow satin, dressed in a gown of crimson silk, fastened round his waist with a black girdle. On his legs were white silk stockings, and over his face a clean napkin, doubled up and laid corner-ways. The face was in some degree discoloured, but the legs and arms were firm. We could quote many facts of this nature, as to the long preservation of dead bodies under peculiar circumstances; but we need only refer to that of king Charles I. at p. 361 of this article.

In the chapel of Islip are two monuments deserving of notice; that of John Islip, abbot of Westminster, and founder of this chapel, and that of sir Christopher Hatton.—Islip's monument is a plain marble table, supported by four pillars of brass: above it, on the roof, was formerly a fine painting of our Saviour on the cross; which was destroyed in Cromwell's time by the puritans, who, thinking they possessed the "inward and spiritual grace," were enemies to every "outward and visible sign." Islip was employed by Henry VII. in decorating his new chapel, and in repairing and beautifying the whole abbey, to which he added several embellishments, especially the statues of our kings along the buttresses. He also projected a most superb dome, or lantern, to be erected in the centre of the cross; but the pillars were found too weak to support it. His own chapel he dedicated to St. John the Baptist; and died the second of January, in the year 1510.—The other monument is to the memory of sir Christopher Hatton, (a descendant of sir Christopher Hatton, who was chancellor of England in the reign of queen Elizabeth.) According to the inscription, he died on the 10th of September, 1619. He is represented with his lady under a handsome and well-wrought canopy, in the centre whereof is a scroll with their arms held up by naked boys. A curious conceit, and not a bad one, accompanies these two little figures: the one over the knight holds the hymeneal torch put out and reversed, to show that sir Christopher died first; the other holds his torch erect and burning over the lady, to signify that she survived him.

To please the curious and gaping multitude, in a chantry over this chapel are some oaken presses, containing the effigies in wax of queen Elizabeth, king William and queen Mary, queen Anne, general Monk, the earl of Chatham, &c. But we really think that, in the present day, such an exhibition might be dismissed to the neighbourhood of Temple Bar, to increase the stock of the celebrated Mrs. Salmon. However, a similar exhibition of crowned heads was shown at St. Denis in France; and it must be confessed that the custom of keeping waxen images of departed sovereigns, noblemen, and heroes, has been consecrated by high antiquity, since it goes back to the Augustan age, and indeed one or two centuries before the Christian æra. The funeral obsequies of the great, in ancient times, were so constantly adorned with these waxen effigies, that the word *imagines* became synonymous with *nobility*; and when, they were well executed, they really seemed to smile at the power of death.

Against the south wall of St. Erasmus's chapel is an antique stone monument, on which, under a Gothic canopy, lies the figure of a bishop properly habited, and supposed to be Thomas Ruthal, made bishop of Durham by king Henry VIII. He had been secretary of state to Henry VII. and was made a privy-counsellor, and sent abroad on various embassies by Henry VIII. He died in the year 1524. Bishop Goodwin relates the following circumstance, relative to the discovery of his possessions, which occasioned his death: Being commanded to write down a true state of the kingdom in general, for his majesty's private information, he took great pains in the performance; and, having fairly transcribed it, caused the book to be bound in vellum, gilt, and variously ornamented; and, at the same time, having taken an account of his own private estate, with an inventory of his jewels, plate, and money, he caused that likewise to be bound and ornamented exactly like the other, and laid them both carefully together in his closet. It so fell out, that the king, on some occasion, sent cardinal Wolsey in haste for the national tract which he had so long expected from Ruthal; but, by mistake, Wolsey received the book containing the schedule of the bishop's own wealth. The cardinal soon discovered the mistake, but, being willing to do Ruthal, to whom he had no liking, an ill turn, he delivered the book to the king, just as he received it, telling his majesty, that now, if he wanted money, that book would inform him where he might command a million; for so much did the bishop's inventory amount to. When the bishop discovered his error, and the trick of his enemy, it affected him so much, that he died soon after.

In the middle of this chapel is a large table-monument, erected to the memory of Thomas Cecil, earl of Exeter, a privy-counsellor to king James; on which is his effigy, in his robes, with a lady on his right side, and a vacant space for another on his left. Dorothy Nevil, his first wife, who was daughter of lord Latimer, lies on his right side; and the vacant place was intended for his second wife, Frances Bridges, of the noble family of Chandos: this lady, however, gave express orders in her will, that, as the right side was taken up, her effigy should not be placed on the left; but the bodies, agreeable to the inscription, are buried together in one vault.—On the south side of this chapel is a monument to the memory of Col. Edward Popham, and his lady; the statues of whom are in white marble, as large as the life, and stand under a lofty canopy, resting their arms in a thoughtful position on a marble altar, on which lie the gloves of an armed knight. This gentleman was an active officer in Cromwell's army, and his achievements were inscribed on his tomb. At the time of the restoration, the inscription was ordered to be defaced, and the whole monument destroyed; but at the intercession of some of his lady's relations, who had been particularly useful to his majesty, the stone on which the inscription was engraved was only inverted, and the monument received no other injury.

Nearly in the centre of St. Paul's chapel is a magnificent monument of alabaster, with pillars of Lydian marble, gilt; on the table of which lies the effigy of an old man, in a chancellor's habit, with the figures of his eight children, four sons and four daughters, kneeling on the base. This monument was erected to the memory of sir Thomas Bromley, privy-counsellor, and eight years chancellor, to queen Elizabeth, in which office he died April 12, 1587.—Here is also a monument of black touchstone, remarkably different from any other in the abbey. On the top is a circular frame of gilt brass, which encloses the bust of Anne lady Cottington, wife to Francis lord Cottington. Beneath, on a table monument, lies the effigy of her husband, resting on his left arm; and over the head of a satyr is the following inscription: "Here lies Francis lord Cottington, of Hanworth, who, in the reign of king Charles I. was chancellor of his majesty's exchequer, master of the court of wards, constable of the Tower, lord high treasurer of

England, and one of the privy-council. He was twice ambassador in Spain, once for the said king, and a second time for king Charles II. now reigning, to both which he most signally shewed his allegiance and fidelity, during the unhappy civil broils of those times; and for his faithful adherence to the crown (the usurper prevailing) was forced to fly his country, and during his exile died at Valladolid in Spain, June 19th, 1752, in the 74th year of his age; whence his body was brought, and here interred, by Charles Cottington, esq. his nephew and heir, in 1679." This great man was secretary to Charles prince of Wales, whom he attended on his journey to visit the infanta of Spain. Lady Cottington died on 22d of February, 1633, in the 33d year of her age.

Adjoining to the east wall of the chapel of St. Nicholas is a stately monument of various-coloured marble, erected to the memory of Anne duchess of Somerset, wife to Edward duke of Somerset, brother to Jane Seymour, third wife of Henry VIII. uncle to Edward VI. and sometime regent during his minority; from whom Somerset-house took its name, as related at p. 528 of this volume; and of whose disgrace and death we have spoken at large under the article ENGLAND, vol. vi. p. 644, 5. The inscription on the tomb is in Latin and English, and describes the noble lineage of this great lady, who died at Hanworth, the 16th of April, 1587, in the ninetieth year of her age.—At the door of this chapel lie the remains of that great and learned antiquary, sir Henry Spelman, who died at upwards of eighty years of age, in the year 1641.

At the entrance of St. Edmund's chapel, on the right hand, is the ancient monument of William de Valence, whose effigy lies in a cumbent posture on a chest of wainscot placed upon a tomb of grey marble; the figure is wood, covered originally with copper gilt, as was the chest in which it lies; but the greatest part has been taken away; and, of thirty small images that were placed in little brass niches round, scarcely one remains entire. He was treacherously slain at Bayonne in the year 1296; but his body, being brought to England, was interred in this chapel, and an indulgence of one hundred days granted to all devout people who should pray for the welfare of his soul.—Near this is a most magnificent monument, partly inclosed, to the memory of Edward Talbot, eighth earl of Shrewsbury, who died February the 8th, 1617, aged fifty-seven; and his lady, Jane, eldest daughter and coheirs of Cuthbert baron Ogle, whose effigies in their robes lie on a black marble table, supported by a pedestal of alabaster. This monument is finely ornamented, and the carving on the various-coloured marble is exquisite. The inscription contains nothing more than his titles and character, which is indeed very high: he was honourable without pride; potent without ostentation; religious without superstition; liberal both in mind and bounty; warded ever against fortune, his whole life was a path of justice; and his innocence, escaping envy, continued through the whole course of his life.—On the east side of this chapel is a monument erected to the memory of John of Eltham, second son of king Edward II. and so called from Eltham in Kent, the place of his nativity. His statue is of white alabaster, the head encircled in a coronet of greater and less leaves, and his habit is that of an armed knight. He died in Scotland at the age of nineteen, unmarried, though three different matches had been proposed to him; the last of which, to Mary, daughter of Ferdinand king of Spain, he accepted, but did not live to consummate it. His funeral was so magnificent and costly, that the prior and convent demanded one hundred pounds (a great sum at that time) for a horse and armour presented there on the day of his interment.

On the east side of St. Benedict's chapel, where once stood the altar of St. Benedict, is a beautiful monument, composed of various kinds of marble, erected to the memory of Frances countess of Hertford, who is here represented in her robes in a cumbent posture, with her head resting on an embroidered cushion, and her feet on a lion's back.

back.—Between this chapel and the next, against the wall, is a monument of mosaic work, the sides in plain panels, but the top of the table wrought in figures, said to be done with the same kind of stones as the floor before the altar, and erected for the children of Henry I. and Edward I. Over this tomb is something which seems to have been a piece of church-persepective, but now almost defaced. This certainly was once a rich and costly monument; for in the records of the Tower, there is the king's order for erecting such a one in this place, and for allowing Master Simon de Wells five marks and a half, to defray his expenses in bringing from the city a handsome brass image to set upon his daughter Catharine's tomb; and for paying to Simon de Gloucester, the king's goldsmith, for a silver image for the like purpose, the sum of seventy marks.

On the north side of the area, adjoining to St. Andrew's chapel, is the superb monument erected at the expense of the nation to the memory of general Wolfe. The front of the pediment represents the landing of the troops at Quebec, and the difficulties they had to encounter in getting up their cannon and climbing the rocks; and in the background is a representation of the city, with the engagement. The monument is supported by lions; and on each side of it is a medallion, with a wolf's head. The general appears in the agonies of death, supported by a grenadier, who seems to express, by pointing with his finger to a distance, that the victory is gained. Behind the general is the faithful Highland serjeant who attended him, leaning on his halbert, and looking at the dying hero with admiration and grief. At the feet of the general lie his hat, fusée, gorget, &c. Near these is the representation of a tent, underneath which is a group of figures. Behind the tent is seen a large tree, and by it lie a tomahawk, scalping-knife, and hatchet, the Indian weapons of war. On the top of the monument is the figure of Victory descending with a crown of laurel to immortalize the dying victor. See the article ENGLAND, vol. vi. p. 725.

Nearly opposite to these are three ancient tombs, now almost obliterated.—The first of free-stone, made like a close bed, was walled up, and another tomb placed against it. This monument was covered with an ancient Gothic arch, the sides adorned with vine-branches in relief, and the roof within springing into many angles, under which lies the image of a lady in a very antique dress, her feet resting upon lions, and her head on pillows supported by angels, sitting on each side the effigy, gilt and painted. On the side of the tomb are six niches, in which seem to have been painted monks, and on the pedestal are still to be seen some remains of paintings. This monument covered the remains of Aveline countess of Lancaster, who died the 4th of November, 1293, the very year of her marriage. This lady was daughter to William de Fortibus, earl of Albemarle and Holderness, and married Edmund earl of Lancaster, son to king Henry II.—Adjoining to this is another ancient monument of grey marble, erected to the memory of Aymer de Valence, second and last earl of Pembroke of this family, who was poisoned in France, by the contrivance of the earl of Arundel, the 23d of June, 1324. He had been three times married, but had no issue by either of his wives. In the time of Edward I. he was a great general; and not only attended that prince in his expedition to Flanders, but likewise accompanied him to Scotland, where that king died.—The third is an ancient monument to the memory of Edmund Crouchback, fourth son to Henry III. so called, as is supposed by some, from the deformity of his person; while others imagine it arose from his attending his brother in the holy wars, where they wore a crouch, or cross, on their shoulders, as a badge of Christianity. On the base of the tomb, towards the area, are the remains of a curious, and perhaps the most antique English painting extant, but much defaced; being ten knights armed with banners, surcoats of armour, and cross-belted, representing undoubtedly his expedition to

the Holy Land, the number exactly agreeing with what Matthew Paris reports, namely, Edward and his brother, four earls and four knights. It was originally a very lofty monument, painted, gilt, and inlaid with stained glass. The inside of the canopy has been a sky with stars, but by time is changed into a dull red.—From this prince the house of Lancaster claimed their right to the crown.

In this area lie the remains of many persons of note, among whom may be mentioned Anne of Cleves, who was married to Henry VIII. on the 9th of January, 1539, and in July following divorced, with liberty to retire to the continent, and to marry again; but she remained in England, and saw the rival who had supplanted her in the king's affection suffer a worse fate. (See vol. vi. p. 640.) She died in 1557, four years after the king.—Near the ashes of this lady lie those of a more unfortunate queen, Anne, daughter of the great earl of Warwick, and wife to Richard III. She was poisoned by her husband to make way for his marriage with Elizabeth, daughter of his brother Edward IV. This marriage, however, was never consummated, Richard being slain at the battle of Bosworth.—Here are also the remains of an ancient monument, erected to the memory of Sebert king of the East Saxons, who first built this church, and died in July 616, as mentioned more than once in our survey. This monument is one of the most respectable in the whole minister, on account of its antiquity; but is little remarked, because of its simplicity, except when the verger, with his learned wand, chooses to descant upon it. We find, above this small monument, four canopies supported with slender columns, and in the middle an ancient painting of some saint, as we suppose by the faded honours of a halo round the head; but we are told that it is the effigy of Sebert himself, and we see no harm in believing it. We first noticed this precious specimen of ancient painting about two and twenty years ago; it seemed to have been painted about the time of building this part of the church; and, when we surveyed it lately, found the colours much more faded. We take it to be painted on wood, and in water-colours.

Leaving this, we proceed to one of the most interesting spots in the whole church; since it is not a long descent of royal ancestors, or the splendour of titles, or the immensity of wealth, that has obtained a place in this south part of the transept, but genius, wit, and individual worth; on that account it is called the Poets' Corner. Here the monuments, as we remarked before in general, are so particularly crowded upon each other, that they obscure or entirely conceal from the view some of the most ancient; as if it were, with the dead as with the living, an unavoidable rule, that new comers should supersede the old ones. And besides, the confusion amongst those which are visible is such as to bewilder the eye of the spectator, and cause him to pass over, unheeded, many beautiful specimens of sepulchral architecture, which, were they isolated, would command his admiration. What must be our feelings of respect and regret, when we consider that we are treading the ashes and surrounded by the effigies of the favorites of the muses, whose works have immortalized their names, and with them the country which gave them birth. Could the wand of the verger call these worthies out of the "chambers of Death," how should we shrink at the sight of the *magna umbra*, the venerable shade, of the father of our poetry, Chaucer; of the elegant Spenser; of the first dramatist in the world, Shakespeare; of the most elevated epic writer, Milton! Dryden and Addison, Cowley, Prior, Butler, Rowe, Gay, Goldsmith, Mason, Thomson, and others, would surround us; whilst our attention would be taken up by the acting of Garrick, and the melodious sounds vibrating in the air about the ghost of Handel!

To return to the monuments. Several of them are very elegant, and do honour at once to their objects, their erectors, and the artists who executed them. That to the memory of Matthew Prior is beautiful, and richly ornamented. On one side of the pedestal stands the figure of Thalia, one of the nine muses, with a flute in her hand; and

on the other, History, with her book shut; between both is the bust of the deceased upon a raised altar of fine marble. Over this is a handsome pediment, on the ascending sides of which are two boys, one with an hour-glass in his hand run out; the other holding a torch reversed. On the apex of the pediment is an urn, and on the base of the monument a long inscription, setting forth the principal employments in which he had been engaged; all which he executed with uncommon address, and the most firm integrity. On the outermost side of the bust is a Latin inscription, importing, that, while he was busied in writing the history of his own times, death interposed, and broke the thread of his discourse and of his life, on the 18th of September, 1721, in the 57th year of his age.

The design and workmanship of Shakespeare's monument are both extremely elegant. In the figure of the immortal bard the sculptor has most delicately expressed his attitude, his dress, his genteel air, and fine composure. The heads on the altar on which he leans, which are likewise proper ornaments to grace the tomb, represent Henry V. Richard III. and queen Elizabeth. In short, the taste here shown does honour to those great names under whose direction, by the public favour, it was so elegantly constructed; namely, the earl of Burlington, Dr. Mead, Mr. Pope, and Mr. Martin. It was designed by Kent, and executed by Scheemakers; and the expense defrayed by the grateful contributions of the public. Instead of a long and labour'd inscription, the following appropriate lines, from his own play of the Tempest, appear on a scroll:

The cloud-capp'd towers, the gorgeous palaces,  
The solemn temples, the great globe itself;  
Yea, all which it inherit, shall dissolve,  
And, like the baseless fabric of a vision,  
Leave not a wreck behind.

The monument erected in 1762 to the memory of the elegant poet of the Seasons, &c. is well designed and well executed. The invention we owe to Mr. Adam, the workmanship to Michael Henry Spang. Thomson is represented sitting with his left arm leaning on a pedestal; holding a book in one hand, and in the other the cap of Liberty, in allusion to his poem of that name and his independent principles. Bas-relievs on the pedestal exhibit the four seasons, to which a boy points with his finger, and offers a crown of laurel to the genius who sang them so well. An ancient lyre and a mask are deposited at the feet of the figure; and the whole is supported by a socle, upon which we read the following inscription: JAMES THOMSON, Ætatis 48. Obiit 27 Aug. 1748. "Tutored by thee, sweet Poetry exalts her voice to ages, and informs the page with music, image, sentiment, and thought, never to die."

Against the fourth wall of this cross is a lofty and magnificent monument, inclosed with rails, and decorated with figures as large as life, erected to the memory of John duke of Argyle and Greenwich. The figure of Minerva is on one side of the base, and that of Eloquence on the other; the one looking sorrowfully up at the principal figure above, the other pathetically displaying the public loss at his death. On the top is the figure of History, with one hand holding a book, and with the other writing, on a pyramid of finely-coloured marble, the titles of the hero whose actions are supposed to be contained in the book; on the cover of which, in letters of gold are inscribed the date of his grace's death, Oct. 1743. On the pyramid is the epitaph in verse; under which is written in large letters,

JOHN DUKE OF ARGYLE AND GR  
at which point the pen of History stops; the latter title having become extinct on his death.

On the west wall is Handel's monument, the last which that eminent statuary Roubiliac lived to finish; and it is a curious fact, that this ingenious sculptor first became conspicuous, and afterwards closed his labours as an artist, with a figure of this extraordinary man. The first was erected in the gardens at Vauxhall, (see LAMBERT, vol. xii. p. 804.) and the last is this monument; in which

the whole figure is very elegant and highly finished, and the face is said to be a strong likeness. The left arm is resting on a group of musical instruments, and the attitude is expressive of great attention to the harmony of an angel playing on a harp in the clouds over his head. Before it lies the celebrated Messiah, with that part open, where is the much-admired air, *I know that my Redeemer liveth*. Underneath is the following short inscription: "George Frederic Handel, born February 23, 1684, died April, 14, 1759."

Near this is a very elegant monument, erected to the memory of that eminent divine and philosopher, Dr. Stephen Hales. In the front are two beautiful figures in relief; the one representing Botany, the other Religion. The first is presenting a medallion of this great explorer of nature to public view; the latter is deploring the loss of the divine. At the feet of Botany, the winds are displayed on a globe, which alludes to his invention of ventilators. See vol. ix. p. 171.

On the same side is the monument erected to the memory of David Garrick. It consists of a figure of this unrivalled actor, in an animated position, throwing aside a curtain, which discovers a medallion of the great poet whom he has illustrated; while Tragedy and Comedy, adorned with their respective emblems, and supported by a pedestal, seem to approve the tribute. The caressing attitude, airy figure, and smiling countenance, of the Comic Muse, is indicative of the satisfaction she derives from at length beholding a memorial of her favourite; while Melpomene, with a more majestic and dignified mien, raising her veil, gazes with characteristic admiration on the "sovereign of the willing soul," whom she at once delights in and deplors. The similitude to Garrick will be felt by every spectator who holds the features of the original in remembrance; and where is the person of taste, who has seen him, even once, and can forget the resemblance? The back ground is formed of a beautiful dove-coloured marble, to relieve the figures, which are in pure statuary marble. Garrick died in January 1779, when he wanted about a month to complete his 62d year, though on this monument he is declared to be 63 years old, and on that in Lichfield cathedral 64.

The tomb to the memory of Geoffrey Chaucer was erected by, and at the expense of, Nicholas Bingham, in 1556. It is elegant; and, though small, displays the luxuriance of the Gothic style of that time.

A plain tablet with a pediment, and supported by two consols with wreaths of laurel, constitutes the monument of Spenser. The following inscription is neatly engraved on the tablet. "Here lyes (expecting the second comynge of our Saviour Christ Jesus) the body of EDMOND SPENSER, the prince of poets in his tyme; whose divine spirit needs noe othir witnesse then the works which he left behind him. He was born in London in the yeare 1510, and died in the yeare 1596." According to Camden, the original inscription was in Latin; and, as Spenser was buried near the tomb of Chaucer, the following allusive epitaph was added to the inscription; though it tastes a little of the monkish style, it has yet so much point about it that we think it worthy of being preserved in our survey. It runs thus:

*Hic prope Chaucerum situs est Spenserus, ut illi,  
Proximus ingenio, proximus et tumulo.  
Hic prope Chaucerum, Spensere poeta, poetam  
Conderis, et versu quam tumulo proprior.  
Anglica, te vivo, vixit viguitque poësis:  
Nunc peritura timet, te moriente, mori.*

Dart, in his beautiful History of the Antiquities of Westminster Abbey, has it translated as follows:

Here plac'd near Chaucer, Spenser claims a room;  
As next to him in merit, next his tomb.  
To place near Chaucer, Spenser lays a claim:  
Near him his tomb, but nearer still his fame.  
With thee, our English verse was rais'd on high;  
But, now declining, fears with thee to die.

The next monument, which calls our attention, is that of Butler, the justly-celebrated author of "Hudibras." His fame, like the report of a gun in the vales and on the lakes of Scotland, Wales, or Cumberland, still resounds in our ears, long after the flash has vanished from the sight. Many of the allusions which were so plain to our ancestors, have lost their sharpness of point; yet the composition is so original, and the verse so pleasingly quaint, that the work will be read and admired as long as our tongue shall last. It is a plain monument, consisting merely of a pyramidal slab of marble; and a bust crowned with ivy, to denote his propensity to satirize; for it must not be forgotten, that the ivy-leaf was used to adorn the heads of the satiric, as the laurel did the temples of the lyric poets. Two antique masks support the inscription, which is in Latin, and ends to the following purport: "Lest he, who (when alive) was destitute of all things, should (when dead) want a monument, John Barber, citizen of London, took care, &c." It will be seen, by referring to our article BUTLER, vol. iii. p. 550, that a subscription was solicited, but in vain, for his interment in this place; and that it was not till fifty years after that an admirer of wit and talent was found to erect a monument to his memory at his own expense. Our printer desires us to add, that Mr. Barber was a printer, and lord-mayor of London; and that no printer since his time has attained that high honour.

It is curious enough to find here a monument erected to a French nobleman. *Mons. de St. Evremond*, so well known for his bravery and his literary talents, (see vol. vii. p. 82.) has here his bust and an elegant inscription. The whole is in marble. A curious prominence is very conspicuous between his eyebrows, and gives a sort of frown to the countenance of a man who was so eminent for his amiability.

Cowley's memory is preserved by a simple funeral urn elegantly carved and adorned with a laurel wreath. Under it, is a long and elegant Latin epitaph.—Dryden's bust is adorned with a laurel-branch encircling his head; here good sense has prevailed for once over the rage for long epitaphs; and it has been esteemed a sublime thought to place only his name under his image. The fame is remarked on the grave of the author of the "Jerusalem Delivered:" *Ossa di Tasso*, "The bones of Tasso."—And indeed, why should more be said upon the sepulchres of men whose fame extends over the literary world, and will survive the hardest marble; of men who may say with Horace, *Execi monumentum ere perennius, non omnis moriar*; "I have achieved a monument more durable than brass—I shall not entirely die." Indeed we are told that this very ode was sung over his remains previous to interment. See DRYDEN, vol. vi. p. 96.

The author of the "Splendid Shilling" has not been forgotten; and indeed, though his works are not very numerous, they perhaps make up in quality for what they may appear to want in quantity; a medallion, containing his profile, is surrounded by a laurel-tree on one side and the branches of an apple-tree on the other; this last, in allusion to his native country Herefordshire, and his ingenious poem on Cyder. Above we read this motto from Virgil's Second Eclogue: *Honus erit huic quoque pomo*; "Honour shall also be paid to this apple;" a very happy and appropriate allusion.—Our modern poet Mason has here his profile in a circle, with two ancient masks; and Addison has of late received the long-merited honours of a statue which is very masterly executed: he stands aloft on a high pedestal, as an intelligent "Spectator" of what surrounds him, and seems to utter what we quoted above in speaking of Dryden's monument. The inscription is elegant and classical, but too prolix for our columns.

At the north-west corner of this cross is an ancient monument to the great recorder of our antiquities, William Camden, who is represented in a half-length; in the habit of his time, with his left hand holding a book, and in his right his gloves, resting on an altar, on the body of

which is a Latin inscription, setting forth his indefatigable industry in illustrating the British antiquities, and his candour, sincerity, and pleasant good humour, in private life. This monument has been repaired and beautified, and inclosed with iron rails, at the expense of the university of Oxford, where he received his education.

Among the stones which compose the pavement of this cross, are many memorials of "the silent tenants of the house appointed for all living;" which barely record their names and ages. The most remarkable of these, is that which covers the ashes of Thomas Parr, who was born in the county of Salop, in the year 1483. He lived in the reigns of ten princes, namely, Edward IV. Edward V. Richard III. Henry VII. Henry VIII. Edward VI. queen Mary, queen Elizabeth, James I. and Charles I. and, having attained the great age of 152 years, was buried here, November 15th, 1635. One of the extraordinary circumstances attending the life of this wonderful old man, is, that at the age of one hundred and thirty, a prosecution was instituted against him for bastardy, and with such effect, that he did penance publicly in church for that offence.

Almost at the south-west corner, is an ancient stone of grey marble, on which, by the marks, has been the figure of a man in armour. It covers the remains of John Haule, a soldier of fortune in the reign of Richard II. and Henry IV. At the battle of Najara in Spain, he, together with John Shakel, his comrade, took the earl of Denia prisoner, who, under pretence of raising money for his ransom, obtained his liberty, leaving his son as surety in their hands. Upon their coming to England, John of Gaunt, duke of Lancaster, demanded him for the king; but they refused to deliver him up without a ransom, and were therefore both committed to the Tower; from whence escaping, they took sanctuary in this abbey. Sir Ralph Ferreris and Alan Buxal, the one governor, the other captain, of the Tower, with fifty men, pursued them; and having, by fair promises, gained over Shakel, they attempted to seize Haule by force, who made a desperate defence; but, being overpowered by numbers, was slain Aug. 11, 1378, in the choir, before the prior's stall, commending himself to God the avenger of wrongs; and, at the same, a servant of the abbey fell with him. Sudbury, archbishop of Canterbury, made this breach of privilege the ground of a complaint to parliament; and the church was shut up for four months, till it was purified from this profanation. The offenders were excommunicated, a large sum of money paid to the church, and all its privileges, confirmed in the next parliament. Shakel had been thrown into prison, but was afterwards set at liberty; and the king and council of England agreed to pay him, for the ransom of his prisoner, five hundred marks, and one hundred marks per annum. Some years afterwards Shakel died, and was likewise buried here, in 1396.

In the south aisle is a stately monument to the memory of sir Cloudesey Shovel; on the base of which is represented in bas-relief the ship Association, in which the admiral failed, striking against a rock, with several others perishing at the same time. See the article ENGLAND, vol. vi. p. 705.—The execution of this monument has been censured by many men of judgment, and among others by Mr. Addison, who complains, that, instead of the rough bravery which should characterize a seaman, the figure of the gallant admiral is represented in the garb of a beau, reposing on velvet cushions under a canopy of state; he likewise objects to the inscription, which, instead of reciting the long and faithful services of which this memorial is said to be the just reward, relates only the manner of his death, from which he could not obtain any glory. But, with all these defects, the aggregate is not undeserving of notice.

Within the gates which separate the western part of the church from the south cross is a neat monument in statuary marble, composed of a sarcophagus elevated on a pedestal, to the memory of major André, who was hanged

as a spy during the American war. The story is told on the front of the sarcophagus; but several of the figures have been mutilated by party-hands.

General Hargrave's monument is the production of Roubiliac. It consists of the representation of the resurrection of a body from a sarcophagus, and of a conflict between Time and Death, wherein the former, proving victorious, divests his antagonist of his power by breaking his dart, and tumbling him down. Above is a great pile of building in a state of dissolution, and a cherub in the clouds sounding the last trumpet. The whole is finely imagined, and as ingeniously executed. This gentleman was lieutenant general of his majesty's forces, colonel of the royal English fusileers, and governor of Gibraltar; who, having been fifty-seven years a commissioned officer, died the 21st of January, 1748, aged 79.

Over the door which opens into the cloisters is a very stately monument for general Wade. In the centre is a beautiful marble pillar, enriched with military trophies exquisitely wrought. The principal figures represent Fame pushing back Time, who is eagerly approaching to pull down the pillar, with the ensigns of honour that adorn it. Wade had deserved a monument for the improvement he made in the roads through the Highlands of Scotland, and afterwards for his services during the rebellion. See the article ENGLAND, vol. vi. p. 718. The general's head is in a medallion; and the inscription bears, that he died March 14, 1748, aged 75.

Between the pillars on the south side of the nave, stood very awkwardly for some time a monument to the memory of captain Montague, who was killed in the engagement on the 1st of June, 1794, under earl Howe. A majestic figure of the captain stands on a marble pedestal, with his hand resting on a sword. Over his head is a figure of Victory descending with a crown of laurel. In front of the pedestal is a representation of the engagement; and on the back of it a trophy of naval flags waving over a group of prisoners. This is a very classical composition, and does honour to the artist, Mr. Flaxman, who first introduced detached monuments into this abbey.—Directly opposite, and in a similar situation, was a monument to the memory of captains Harvey and Hutt, who died of the wounds they received in the same action. It is composed of two colossal figures of Britannia and Fame, placed one on each side of a large vase, on which are medallions of the deceased captains. Britannia is decorating the vase with laurel, while Fame points to the names of the heroes engraved on the base which supports it. On the front of the pedestal is a representation in alto-relievo of that part of the action in which they were engaged; over which is a small flying angel, with a palm-branch in one hand, and a pair of scales in the other. The design of this monument, which is by Mr. Bacon, jun. is very happy; and the figures are very elegantly sculptured.—Both of these monuments were erected at the public expence: they have since been removed from their unsightly position, and carried against the wall on the north side.

On the south side is a very magnificent monument to the memory of admiral Tyrrell, designed and executed by Mr. Read, who was pupil to the celebrated Roubiliac. On the top of the monument is an archangel descending with a trumpet, summoning the admiral to eternity from the sea. The clouds, moving and separating, discover the celestial light and choir of cherubs, who appear singing praises to the Almighty; the back-ground representing darkness. The admiral's countenance, with his right-hand to his breast, is expressive of conscientious hope; his left arm significant of seeing something wonderfully awful. He appears rising out of the sea from behind a large rock, whereon are placed his arms, with the emblems of Valour, Prudence, and Justice. The sea is discerned over the rock at the extremity of sight, where clouds and water seem to join. On one side the rock, an angel has written this inscription: "The sea shall give up her dead, and every one shall be rewarded according to their works." In her

left hand is a celestial crown, the reward of virtue, and her right hand is extended towards the admiral. Hibernia is leaning on a globe, with her finger on that part of it where his body was committed to the sea, lamenting the loss of her favourite son. On one side the rock is the Buckingham (the admiral's ship), the masts disabled; on the other side a large flag, with the trophies of war, near which is the following inscription; "Sacred to the memory of Richard Tyrrel, esq. who was descended from an ancient family in Ireland, and died rear-admiral of the white on the 26th day of June, 1766, in the 50th year of his age. He distinguished himself as an able and experienced officer in many gallant actions, particularly on the third of November, 1758, when, commanding the Buckingham of 66 guns, he attacked and defeated three French ships of war. In this action he received several wounds, and lost three fingers of his right hand. Dying on his return to England from the Leeward Islands, where he had for three years commanded a squadron of his majesty's ships, his body, according to his own desire, was committed to the sea, with the proper honours and ceremonies."

On the same side, near the great west door, is a noble monument to the memory of captain Cornwall, who was killed in the battle between the English fleet under Matthews and Lestock, and the combined French and Spanish fleets. This monument, which is thirty-six feet high, has at the back of it a pyramid of rich Sicilian marble, beautifully variegated and finely polished, standing upon a base of the same marble. Against the pyramid is a rock, embellished with naval trophies, sea-weeds, &c. in which are two cavities: in the one is a Latin epitaph; in the other, a view of the sea-fight before Toulon, in basso relievo; in the fore-ground whereof, the Marlborough, of 90 guns, is seen fiercely engaged with admiral Navarro's ship, the Real, of 114 guns, and her two seconds, all raking the Marlborough fore and aft. On the rock stand two figures: the one represents Britannia under the character of Minerva, accompanied with a lion; the other is expressive of Fame, who, having presented to Minerva a medallion of the hero, supports it, whilst exhibited to public view. The medallion is accompanied with a globe, and various honorary crowns, as due to valour. Behind the figures is a lofty spreading palm-tree, whereon is fixed the hero's shield or coat of arms, together with a laurel-tree; both which issue from the naturally-barren rock, as alluding to some heroic and uncommon event.

Over the door is the monument voted by parliament to Mr. Pitt, which was opened on Sunday, the 8th of August, 1813; and of which we have spoken slightly at p. 142 of this article. Mr. Carter, in the Gentleman's Magazine for that month, has spoken of it also, and in the following terms: "The Pittite groupe, hoisted so far above the ken of human sight, is a composition of the enormous kind, in bringing out a colossal Statesman, Anarchy as a true monster, and History, moulded in a Patagonian frame, destitute of grace or delicacy. Mr. Pitt's brawny and athletic contour makes the beholder tremble; who, doubtful whether the uplifted arm is intended to enforce attention, or to fell the foes of Old England into dust and atoms, shrinks from the investigation of the skill of the artist; and, as he re-treads his steps towards the door, looks up apace, and sees the leg-like arch of mortal frame—striding over the subdued foe to his country's peace, fell Anarchy. If I cannot delight in certain strokes of the chisel in this portion of the sepulchral analogy, what will be expected from me in describing the beauties of the statue of History? Indeed, were we not told that such is the intention of the character, no one could possibly discover the same. A huge *masculine* female form, sitting, most unmannerly, with the back towards you, and what is more, towards the altar; scorning to show her face (not through bashfulness forsooth) or the employ she is engaged in." We know that the City of London turns her back to the people at Guildhall on the monuments of lord Chatham and of Nelson: the first was forgiven on

account of the beauty of the execution; the second was severely and justly reprov'd in the public prints at the time; and we are sorry to find here the same *preposterous* attitude. Were this figure to turn about, and were a high pyramidal slab of grey marble placed behind, the whole would assume an air of grandeur and a fitness of composition which are now wanting.—The figure of Anarchy is a good one, but not well defined; and a friend has suggested that it is meant for the Demon of War; but to this we cannot assent; for Mr. Pitt gained no advantage over the Demon of War, but that personage most assuredly slew Mr. Pitt at (or by means of) the battle of Austerlitz. To this our friend replies, that it may have been designed prematurely and prophetically, and that it has turned eventually to the honour of the prophetic mind of the artist, because Mr. Pitt's plan of foreign coalition has ultimately, though *posthumously*, prostrated the Demon of War, and given peace to Europe. We must leave the reader to judge between our friend and us, according to the rule of his own political creed. We have but one more remark to make; viz. it is not true that the higher an object the more conspicuous; and this is another defect attached to this monument: it is placed too high to be seen with advantage.

We looked on every side for the monument of Mr. Pitt's great rival, Mr. Fox, whose friends might have long ago honoured the eloquent marble with the faithful expression of their regret; but our search was fruitless.

Turning, therefore, right to the north, we visit the monument of Gen. Killigrew, a fine piece of sculpture, the embellishments very picturesque, and the inscription modest. It is as follows: "Robert Killigrew, of Arwenack, in Cornwall, esq. Page of Honour to Charles II. Brigadier-general of her Majesty's Forces; killed in Spain, in the Battle of Almanza, April 14th, 1707. *Ætatis suæ* 47. Militavit Annis 24." But the greatest singularity of this monument is, that it is cut out of a single stone.

In the north cross, on the west side of the screen of the transept, is a monument to the memory of the benevolent Jonas Hanway, erected by the voluntary subscription of his friends and of the Marine Society, of which he was one of the founders. It consists of a pyramid of black marble, standing on a pedestal of the same. At the top of the pyramid is a lamp, emblematic of eternal light; and on the face of it is a medallion of the deceased, immediately under which is a sarcophagus, supposed to contain his remains. It is decorated at the top with his arms, festoons, &c. and on the body of it is a relieve of Britannia, seated on her lion, and surrounded by the emblems of Government, Peace and War, Trade and Navigation, with a benign countenance, distributing clothing to an almost-naked boy, alluding to the charitable purpose for which the Marine Society was instituted. A second boy is supplicating for the like bounty, his distress is visible in his imploring countenance; and a third, who appears to be made happy, by being fitted out, and trained for sea, supports a ship's rudder with one hand, and, with the other, points up to his benefactor. Above the sarcophagus, on the right-hand side of the pyramid, flies the British flag over a conquered one; and on the other side is the banner of the Society, with its motto, "Charity and Policy United." See HANWAY, vol. ix. p. 217, 18.

On the east side of the screen, near the north door, is a most magnificent monument erected by a vote of parliament to the memory of the late earl of Chatham, and executed by Mr. Bacon, the same ingenious artist that was employed to erect his lordship's monument in Guildhall. It consists of six principal figures: in a niche, in the upper part of a grand pyramid, is placed the statue of the earl of Chatham, in his parliamentary robes; he is represented in the action of speaking, the right-hand thrown forward, and elevated, and the whole attitude strongly expressive of that species of oratory for which his lordship was so deservedly famed. On a sarcophagus, underneath, recline Prudence and Fortitude; and below these

is Britannia seated on a rock, with Ocean and the Earth at her feet; intended to depict the effect of his wisdom and fortitude in the greatness and glory of the nation. Prudence has her usual symbols, a serpent twisted round a mirror: Fortitude is characterized by the shaft of a column, and is clothed in a lion's skin: the energy of this figure is strongly contrasted by the repose and contemplative character of Prudence. Britannia, as mistress of the sea, holds in her right hand the trident of Neptune, while her left is supported by her own shield. Ocean is represented leaning on a dolphin, with a severe countenance and an agitated action, which is opposed by the great ease in the figure of the Earth, who reclines on a terrestrial globe, with her head crowned with fruit, which also lies in profusion at the foot of the pyramid.

Adjoining to this is another national monument, erected to the memory of three captains, who lost their lives in the engagements between the British fleet under lord Rodney, and the French fleet under count de Grasse, in the West Indies, in April 1782. The back ground is formed by a tall pyramid, before which stands a rostrated column of black marble, on which a genius hangs three medallions, containing the portraits of the captains. Round the upper one is inscribed, LORD ROBERT MANNERS, aged 24; and round the other two, CAPTAIN WILLIAM BAYNE, aged 50, and CAPTAIN WILLIAM BLAIR, aged 41. At the foot of the column is the figure of Neptune, sitting on a sea-horse, and pointing out the portraits of the heroes to Britannia, (who stands on the other side, with a countenance finely expressive of sorrow,) as examples for posterity to emulate, and worthy of their country's gratitude. On the top of the column is an elegant figure of Fame, holding a crown of laurel. On the right side of the pedestal, which supports the pyramid, is a globe, &c. and on the left a naval trophy.—Considered as a whole, this monument, which is by Nollekins, has a grand and impressive effect. The figure of Neptune is particularly classical, the left hand and arm imitatively executed; and the grouping of the figures does great honour to the taste, talents, and genius, of the sculptor.

Between this monument and the nave, is that erected to the memory of the earl of Mansfield, and the first which was placed between the pillars of the abbey, without a wall to block up the arch, and destroy the beauty of the building for the sake of the monument. This monument is by Flaxman. The earl is represented in judge's robes, sitting on the judgment-seat, which is placed on a circular elevation of peculiar elegance: in his left hand he holds a scroll of parchment; his right hand rests on his knees, and his left foot is a little advanced. This attitude is taken from the celebrated painting by sir Joshua Reynolds; but is executed with so much judgment and spirit by the sculptor, that it has the appearance of being done from the life. On his right hand, Justice holds a balance equally poised; and on his left hand, Wisdom is reading in the Book of Law. Between the statues of Wisdom and Justice is a trophy, composed of the earl's family-arms, surmounted by the coronet, the mantle of honour, the fasces, or rods of justice, and the currana, or sword of mercy. On the back of the chair is the earl's motto, *Uni Æquus Virtuti*, inclosed in a crown of laurel. Under it is a figure of Death, as sometimes represented by the ancients; a beautiful youth, leaning on an extinguished torch; and on each side of this figure is a funeral altar.

Sir Peter Warren's is a most superb monument of white marble, executed by Roubiliac. Against the wall is a large flag hanging to the flag-staff, and spreading in natural folds behind the whole monument. In the front is a fine figure of Hercules placing sir Peter's bust on its pedestal; and on one side is a figure of Navigation, with a wreath of laurel in her hand, gazing on the bust, with a look of melancholy mixed with admiration. Behind her is a cornucopia, pouring out fruit, corn, the fleece, &c. and by it is a cannon, an anchor, and other decorations.

Through a certain policy of the vergers or of those under whose orders they act, the public has been long excluded from the chapels, and the aisles which surround the choir; but, till lately, the nave and the monuments which it contains were still accessible to public curiosity; and we remember the time when, from Poets' Corner to the other part of the transept, we could freely indulge in meditative contemplation upon the havock death has made among our worthies: the west door was kept open from morning till dusk. But now, that policy has shut us out almost entirely from the abbey. Poets' Corner and a few yards of the south aisle are the only places of free admittance; and it is curious to see the *cicerones* of freebribery exhibition running after their customers, and keeping a vigilant eye upon strangers and stragglers, lest they should steal into these sacred abodes without paying their one-and-ninence, the present fee to see the tombs.

In that little nook of the south aisle, we have remarked, among others, two new but small mementos in white marble.—The first is to the worthy Isaac Watts, D.D. A tablet with a plain inscription, containing his name; the time of his birth, July 17, 1674; and of his death, Nov. 25, 1748; is surmounted by a very striking likeness of this celebrated man, who was at once a profound philosopher, a respectable divine, and an elegant poet. Under the inscription is a sort of medallion allusive to his poetical genius, well designed and executed by Mr. Banks: but we are sorry to find, that, though placed, as it was supposed, out of the reach of boys, the delicacy of the figures has yielded to the destructive hands of carelessness or wantonness. The head of the Genius who seemed to inspire the writer, has been knocked off.—Nearly opposite, half hidden from sight by the prominence of the pillar and the *cartouche* of another monument, we find the bust of Paschale Paoli, with a long epitaph. This Corsican, who, in his time made some noise, and was most benevolently treated by our monarch, was, we understand, the godfather of another Corsican, who has likewise made a very great noise in the world; and, after swaying nearly the whole of the continent of Europe, is now quiet in the neighbouring island of Elba, where, like the empty shell of a bomb after its explosion, he remains silent; but, perhaps at a future time he may again rise, again astonish and terrify, and then sink for ever into oblivion.—Under the tablet which contains the inscription, is a small shield surmounted with a ducal coronet. The bearing is a dexter arm in armour holding a sword. Whether these are family-arms, or a device adopted by Paoli, we have not been able to ascertain. Why the ducal coronet should be there, is, to us, another problem; upon which we can only remark, that, in general, the coronet commonly set upon arms in Italy and some other foreign countries, resembles the ducal coronet of the English blazon.

On the north side of the entrance into the choir is a beautiful monument erected to the great sir Isaac Newton. He is represented in a recumbent posture, leaning his right arm on four books, thus titled: Divinity, Chronology, Optics, and Phil. Prin. Math. and pointing to a scroll supported by winged cherubs. Over him is a large globe, projecting from a pyramid behind, whereon is delineated the course of the comet in 1680, with the signs, constellations, and planets. On this globe sits the figure of Astronomy, with her book shut, and in a thoughtful and composed mood. Beneath the principal figure is a most curious relief, representing the various labours in which sir Isaac chiefly employed his time; such as discovering the cause of gravitation, settling the principles of light and colours, and reducing the coinage to a determined standard. The device of weighing the sun by the steel-yard, has been thought at once bold and striking; and, indeed, the whole monument does honour to the sculptor. The inscription on the pedestal is in Latin, short, but full of meaning; and intimates, that, by a spirit nearly divine, he solved, on principles of his own, the motion and figure of the planets, the paths of the comets, and the ebbing

and flowing of the sea; that he discovered the dissimilarity of the rays of light, and the properties of colours from thence arising, which none but himself had ever thought of; that he was a diligent, wise, and faithful, interpreter of nature, antiquity, and the holy scriptures; that by his philosophy he maintained the dignity of the Supreme Being; and, by the purity of his life, the simplicity of the gospel. He was born on the 25th of December, 1642; and died on the 20th of March, 1726-7. See the article NEWTON.—On the other side of the entrance into the choir is a magnificent monument, erected to the memory of James earl of Stanhope; the principal figure of which represents the earl leaning upon his arm, in a cumbent posture, holding in his right hand a general's staff, and in his left a parchment scroll. Before him stands a boy resting upon a shield. Over a martial tent sits a beautiful Pallas, holding in her right hand a javelin, and in the other a scroll. On the middle of the pedestal are two medals, and one on each side the pilasters. Under the principal figure is a Latin inscription, setting forth the merits of this great man as a soldier, a statesman, and a senator. He died in 1721, in the 47th year of his age.—These two monuments at the entrance of the choir, and appearing each a companion to the other, are certainly a great ornament to the nave of the abbey: they present themselves to the view as soon as you enter the west door, and produce a grand effect.

Near the gate leading to the chapels is a handsome memorial of the celebrated Dr. Busby. On it is the figure of the doctor, in his gown, looking earnestly on the inscription. In his right hand he holds a pen, and in his left a book open. Underneath, on the pedestal, are a variety of books, and at the top his family-arms. The inscription is elegantly written, and highly to his praise: it intimates, that whatever fame the school of Westminster boasts, and whatever advantages mankind shall reap from thence in time to come, are all principally owing to the wise institutions of this great man. See the article BUSBY, vol. iii. p. 515.

And now, having described the principal monuments in this part, we shall return to Henry the Seventh's chapel, which, as has been already mentioned, is a distinct building from the abbey. This chapel, which is styled by Leland the Wonder of the World, is situated to the east of the abbey; to which it is so neatly joined, that, on a superficial view, it appears to belong to the same building. It is supported without by fourteen Gothic buttresses, all beautifully ornamented, and projecting from the building in different angles; and is lighted by a double range of windows, that throw the light into such an advantageous disposition, as at once to please the eye and inspire reverence. The buttresses extend up to the roof, and are made to strengthen it by their being crowned with gothic arches. In these buttresses are niches, in which formerly stood a number of statues; but, being greatly decayed, they have been long taken down. We have already noticed the repairs which are going on at this moment.

The entrance to this edifice is from the east end of the abbey, by a flight of steps of black marble, under a very noble arch that leads to the gates opening to the body or nave of the chapel; for, like a cathedral, it is divided into a nave and side aisles, to which there is a passage by a door on each side. The gates, at the entrance of the nave, are of brass framè-work, curiously wrought, and have, in every open pannel, a rose and portcullis alternately. Being entered, the eye is naturally directed to the lofty ceiling, which is wrought with such astonishing variety of figures as almost to exceed description. The stalls are of brown waincot, with gothic canopies, most beautifully carved, as are the seats, with strange devices; more particularly the carving under the seats, which are monstrous representations of beasts, in a similar style with the buttresses, as noticed at p. 545.—The pavement is of black and white marble, laid at the charge of Dr. Killigrew, once prebendary of this abbey, as appears from two inscriptions, one on a  
brass

brass plate, near the founder's tomb, and the other cut in the pavement. The view from the entrance presents the brass chapel and superb tomb of the founder; the work of Pietro Torregiano, an Italian sculptor, who had, for his labour and the materials, one thousand pounds; and round it, where the east end forms a semi-circle, are the chapels of the dukes of Buckingham and Richmond.

This chapel is composed of a choir and two narrow aisles running on each side and meeting at the east end. It is astonishing to what a pitch of perfection the Gothic or English style had arrived at the time when the piety of our otherwise not very commendable king Henry VII. prompted him to build this chapel; for in no country of the Christian world is there any thing to be compared to it, not only for the grandeur of the design upon so small an area, but even for the fertility of invention in furnishing the ornamental parts. The roof, which is fan-work, a sort of luxuriance which is not found before that period, is astonishing. The drop at the centre of every fan seems suspended in the air; and the tracery and imagery are every-where most beautiful. The walls are adorned with the most curious clusters of slender columns, rising in all the elegance of healthy vegetation, and running to feed in beautifully-carved crockets and finials. Within these compartments we reckon a hundred and twenty statues of patriarchs, saints, martyrs, and confessors; under which are angels supporting imperial crowns, besides innumerable small ones; all of them esteemed so curious, that the best masters are said to have come from abroad to take copies of them. The roof of the side aisles is flat, and supported by arches turning upon twelve stately Gothic pillars, curiously adorned with figures, fruitage, and foliage. The windows, besides a spacious one at the east end, are thirteen on each side above, and as many below; and were formerly of painted glass, having in each pane a white rose, the badge of the house of Lancaster, an H, the initial letter of the founder's name, or portcullises crowned, the badge of the Beaufort family; of which there are some still remaining.

The length of this chapel, within, is ninety-nine feet, the breadth sixty-six, and the height fifty-four. The original intent of it was as a sepulchre, in which none but the remains of the royal family were to be deposited; and so far has the will of the founder been observed, that none have yet been interred there but those of high quality, whose descent may generally be traced from some of our ancient kings. In the middle of the east end of the nave is situated the magnificent tomb of Henry VII. and Elizabeth his queen. It is inclosed in a curious screen of cast brass, beautifully designed and well executed. This screen is nineteen feet in length, eleven in breadth, and the same in height; and ornamented with statues, of which those only of St. George, St. James, St. Bartholomew, and St. Edward, are now remaining. Within it are the effigies of the royal pair in their robes of state, lying close to each other on a tomb formed of a basaltic stone called in the language of those days *Pierre de touche*, the head of which is supported by a red dragon, the ensign of Cadwallader, the last king of the Britons, from whom king Henry VII. was fond of tracing his descent; and the foot by an angel. There are various devices alluding to his family and alliances; such as portcullises, signifying his relation to the Beauforts by his mother's side; roses twisted and crowned, in memory of the union of the two houses of Lancaster and York, by his marriage; and at each end a crown in a bush, alluding to the crown of Richard III. found in a hawthorn in Bosworth field. Within the grate of the tomb was an altar, of a single piece of touchstone, to which he bequeathed "our grete piece of the holie crosse, which, by the high provision of our Lord God, was conveyed, brought, and delivered to us, from the isle of Cyo, in Greece, set in gold and garnished with perles and precious stones; and also the precious relique of oon of the legges of St. George, set in silver, parcel gilte, which came into the hands of our broder and cousyn, Lewys of

France, the time that he wan and recovered the cite of Millein, and given and sent to us by our cousyne the cardinal of Amboise." This altar was destroyed by the fanatics during the civil wars.

At the head of this tomb lie the remains of Edward VI. grandson to Henry VII. who died in the sixteenth year of his age, and the seventh of his reign. A fine monument was erected to his memory by queen Mary, his sister and successor; but it was afterwards demolished as a relique of popish superstition.

On one side of Henry's tomb, in a small chapel, is a monument of cast brass, in which are the effigies of Louis Stuart, duke of Richmond, and Frances his wife. They are represented as lying on a marble table under a canopy of brass curiously wrought, and supported by the figures of Faith, Hope, Charity, and Prudence. On the top is a figure of Fame taking her flight, and resting only on her toe. This illustrious nobleman died the 16th of February, 1623; and his lady the 8th of October, 1639.—Here is likewise a pyramid of black and white marble supporting a small urn, in which is contained the heart of Esme Stuart, son to the duke of Richmond and Lenox, who died in France the 14th of August, 1661.

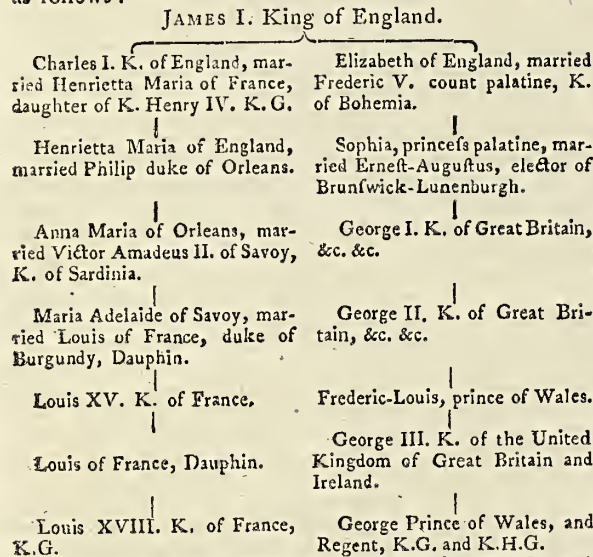

On the north side of this tomb is a monument decorated with several emblematical figures in gilt brass; the principal of which are Neptune in a pensive posture with his trident reversed, and Mars with his head crushed. These figures support the tomb on which lies the effigy of George Villiers, duke of Buckingham, the great favourite of king James and king Charles I. His duchess, Catharine, daughter of the earl of Rutland, who caused this monument to be erected to his memory, lies in effigy by his side on the same tomb. There is a Latin inscription, which represents his high titles and honours, and alludes to the unhappy cause of his death. See the article ENGLAND, vol. vi. p. 668.—Of a later date, and superior in design and workmanship, is a noble monument erected to the memory of John Sheffield, duke of Buckingham; in which his grace's statue, in a Roman habit, is laid in a half-raised posture on an altar of fine marble; and his duchess, Catharine, natural daughter of the duke of York, afterwards James II. is standing at his feet weeping. On each side are military trophies; and over all an admirable figure of Time, holding several medallions representing the heads of their children. This monument is greatly admired. It has been observed that the duke himself appears the principal figure in the group; and, though he lies in a recumbent posture, and his lady is placed in the most beautiful attitude at his feet, yet her figure is so characterised, as to be only a guide to his, and both reflect back a beauty on each other. The decorations are extremely picturesque and elegant; the trophies at his head, the figure of Time above, with the medallions of his children, fill up all the spaces with such propriety, that little could be added, and nothing appears superfluous. The inscription sets forth the duke of Buckingham's poëts, and his qualifications as a poet and a fine writer; and over his statue is inscribed some Latin sentences to the following purport: "I lived doubtful, not dissolute; I die unresolved, not unresigned. Ignorance and error are incident to human nature. I trust in an Almighty and Allgood God. Thou King of Kings, have mercy upon me." And underneath: "For my King often, for my Country always."

At the end of the north aisle, against the east wall, is a monument in the form of a beautiful altar, raised by king Charles II. to the memory of Edward V. and his brother. The inscription, which is in Latin, is thus translated: "Here lie the reliques of Edward V. king of England, and Richard duke of York; who, being confined in the Tower, and there stifled with pillows, were privately and meanly buried by order of their perfidious uncle Richard the usurper: their bones, long enquired after and wished for, after lying 201 years in the rubbish of the stairs, (those lately leading to the chapel of the White Tower,) were, on the 7th of July, 1674, by undoubted proofs disco-

vered, being buried deep in that place. Charles II. pitying their unhappy fate, ordered those unfortunate princes to be laid amongst the reliques of their predeceffors, in the year 1678, and in the 20th of his reign."

At the east end of the same aisle is a vault, in which are deposited the remains of king James I. And here we must notice a very curious piece of coincidence in heraldic connection, which has been communicated to us by a friend. If the dead, as we may religiously suppose, take any concern in the transactions of this sublunary planet, it must have been truly gratifying for James I. to see, from the eternal mansions, two of his illustrious descendants giving each other the respective accolade of knighthood; the prince-regent of England investing Louis XVIII. king of France with the ribbon of the Garter, and his most Christian majesty investing the prince with the ribbon of the Holy Ghost; both issuing from him, and standing in the same degree of consanguinity. This curious pedigree is as follows:

We cannot help remarking, that Louis XVIII. and his elder and unfortunate brother Louis XVI. bring up their pedigree to James I. through Charles I. from whom none of our present royal family descends; so that the protection given to James II. and his descendants by France may assume a stronger plausibility, on account of the kings of France being nearer related to the pretender, by one degree, than was the house of Brunfwick. Louis XV's grandmother was first cousin to the pretender, son of James II. We need not apologize to our readers for this digression, since the degree of consanguinity between the royal families of England and France is so little known in both countries.—In the same vault are also the remains of Anne, daughter to Frederic II. king of Denmark, and queen to king James I. Hence the consanguinity between the Danish dynasty and those of England and France.

In this aisle is a lofty and beautiful monument, with a canopy over it, erected to the memory of queen Elizabeth, by her successor king James I. The inscription describes her character thus: "She was the mother of her country, and the patroness of religion and learning: she was skilled in many languages, adorned with every excellence of mind and person, and endowed with princely virtues beyond her sex; in her reign religion was refined to its primitive purity; peace was established; money restored to its just value; domestic insurrections quelled; France delivered from intestine troubles; the Netherlands supported; the Spanish armada defeated; Ireland, almost lost by the secret contrivance of Spain, recovered; the revenues of both universities improved by a law of provisions; and, in short, all England enriched. She was a most prudent governess; forty-five years a virtuous and triumphant

phant queen; truly religious, and blessed in all her great affairs; and, after a calm and resigned death in the seventieth year of her age, she left her mortal part to be deposited in this church, which she established on a new footing, till by Christ's word she is called to immortality."

Awful as it is to think upon the works of that great leveller Death, yet it soothes the noble pride of a just man to find the arrogant by the humble, the rich by the poor, the persecutor by the persecuted, and the tyrant rotting by the bones of his slave.—Had Elizabeth thought that her remains would lie so close to those of Mary queen of Scots, her hand would have trembled when she signed the death-warrant, and the fine flourish she used to adorn her name with would have been shaken into a wavering scrawl. Elizabeth had ordered her murdered rival to be pompously interred in the cathedral of Peterborough; but James, on his accession to the throne of England, immediately ordered his mother's remains to be removed, with all possible care and decency, and brought to Westminster-abbey, in order that they might be deposited among those of her ancestors; and he subsequently erected a magnificent monument to her memory in the south aisle of this chapel.

Near this, inclosed with iron rails, is a handsome table-monument, on which lies, finely robed, the effigy of Margaret Douglas, daughter of Margaret queen of Scots by the earl of Angus. Her son, the murdered lord Darnley, father to king James I. is represented foremost on the tomb, kneeling, with the crown over his head; and seven others of her children are represented round the tomb. This great lady, though she herself never sat on the throne, had, according to the English inscription, king Edward IV. for her great-grandfather; Henry VII. for her grandfather; Henry VIII. for her uncle; Edward VI. for her cousin german; James V. of Scotland for her brother; Henry king of Scotland for her son; and James VI. for her grandson. She had for her great-grandmother and grandmother, two queens, both named Elizabeth; for her mother, Margaret queen of Scots; for her aunt, Mary the French queen; for her cousins german, Mary and Elizabeth, queens of England; and for her niece and daughter-in-law, Mary queen of Scots. She died March 10th, 1577.

At the east end of this aisle is the royal vault, in which are deposited the coffins of Charles II. William and Mary, queen Anne, and prince George of Denmark.

The nave of this chapel is used for the ceremony of the installation of the knights of the Bath. In their stalls, which are ranged on each side of the nave, are brass plates of their arms, &c. and over them hang their banners, swords, and helmets. Under the stalls are seats for the esquires, of whom each knight has three: their arms are also engraved on brass, and placed upon the back of the seats. Of the ancient ceremonies with which the knights were installed we have given an account under the article KNIGHTHOOD, vol. xi. p. 319. and of a recent installation, at p. 391 of the same article. But a contrast, of which an instance had not occurred since the revival of the order in 1725, has lately presented itself to us—a degradation!—and we are sorry to say, that of a man every one was inclined to admire for his talents and bravery.—Lord Cochrane was convicted in the court of King's Bench of being concerned in a conspiracy to disseminate false news, (on the 21st of February, 1814,) in order to raise the price of omnium. He was sentenced to fine, imprisonment, and the pillory. The latter part of the sentence has been remitted; but it was thought fit to expel him from the house of commons, (though he has been since re-elected,) and to degrade him from being a knight of the Bath. At a meeting, therefore, of the knights of the order, the degradation was carried into effect; and a warrant was agreed upon, authorising Francis Townsend, esq. deputy Bath king of arms, to remove the insignia of sir Thomas Cochrane, commonly called lord Cochrane, from the chapel. Mr. Townsend accordingly attended, on Thursday, August

gust the 11th, with a warrant, signed by lord Sidmouth, as secretary of state for the home department, at this chapel; and proceeded to ascend a ladder, placed for that purpose, to remove the banner of lord Cochrane from its situation, which was the fourth from the top on the right side of the chapel, between those of lord Beresford and sir Brent Spencer. His lordship's arms were afterwards unscrewed from his stall. The helmet, crest, mantling, and sword, and all his lordship's insignia of the order, were then taken down from the top of the stall. The most degrading part of the ceremony then took place, that of his lordship's banner being kicked out of the chapel, and down the steps, by Mr. Townsend.

Underneath the body of this chapel is the vault prepared in 1737, on the death of queen Caroline, for the reception of the present royal family. It consists of a double range of arched chambers, three on each side, open to the middle walk between them. This middle walk terminates with the principal vault in front, where, in a large marble sarcophagus, lie the two coffins of the late king George II. and his queen Caroline; the side-boards of which were, by the express command of the king, so constructed as to be removed, in order that their dust might intermingle. The coffins of Frederic prince of Wales, his princess, two dukes of Cumberland, the duke of York, prince Frederic William, the princesses Amelia, Caroline, Elizabeth, and Louisa-Anne, and two infant sons of their present majesties, the princes Alfred and Octavius, also lie here. This vault filling up perhaps quicker than the projector had foreseen, his present majesty, who has always shown a predilection for Windsor, caused a vault to be constructed there, in which several of his nearest relations are already deposited; viz. the duke of Gloucester his brother, the princess Amelia his daughter, and the duchess of Brunswick his sister. But we understand that a more capacious one is preparing under Wolfey's tomb-house, behind St. George's chapel.

Such an important abbey as this could not, of course, have been built without the common and necessary appendage of cloisters, where the monks in rainy weather might walk and say their rosary; meditate upon given themes; or preconceive the grand ideas of the beautiful fabrics which are still admired as rising to the highest pitch of gothic architecture. From the south aisle of the abbey, there are two entrances into these cloisters, which are entire, and consist of four arched walks on the sides of an open quadrangle, anciently set with turf and shrubs, but now occasionally covered with fragments of stones prepared for the repairs of various parts of the abbey.

The walls are nearly covered with small monuments, and the ground with tomb-stones. Among the last we remark four very ancient ones, under which lie the remains of four abbots of Westminster.—The first is of black marble, called Long Meg, from its extraordinary length of eleven feet eight inches, and covers the ashes of Gervais de Blois, natural son to king Stephen, who died in 1106.—The second is a raised stone of Suffex marble, under which lies interred the abbot Laurentius, who died in 1176, and is said to have been the first who obtained from pope Alexander III. the privilege of using the mitre, ring, and globe.—The third is a stone of grey marble, to the memory of Geslebertus Crispinus, who died in the year 1114. His effigy may be still traced on his grave-stone by the fragments of his mitre and pastoral staff.—The fourth is the most ancient of all, and was formerly covered with plates of brass inscribed to the abbot Vitalis, who died in 1082.—All these seem to have had their names and dates cut afresh; and are indeed fragments worthy of preservation.

Among the monuments in the cloisters, we cannot pass over a medallion containing the profile of Dr. Buchan, with a tablet bearing his name, and the dates of his birth and death. See p. 411.—We were pleased also to see a small memento dedicated to one of the best engravers of the last century, Mr. Woollett. His bust is above a fort

of bas-relief containing several figures, in which, as in many other instances, allegory is united with truth, and fancy-beings with the individuality of real existence. We have remonstrated against this branch of thriving incongruity, creeping from ancient sprouts to modern compositions, in another part of this article. The sculptor, Mr. Banks, has certainly exerted himself as far as his imagination could conceive and his chisel achieve, to embody the following given theme, upon which we think he sat down to work; for, were the inscription beneath, not the *datum*, but the explanation, of the design, we should not be much roused to admiration at the sight of the bas-relief.—In the inelegant attitude of digging into copper, the artist is meanly represented seated at his work with his tools about him; whilst, around this home-found reality, heavenly angels, with fanciful wings, are seen trumpeting over one of Mr. Adams's terrestrial globes, as identically sold in Fleet-street; and, under such traffic as would have softened the steel of Woollett's burin into a leaden stump, we read the following *explanation*, if it were not an ill-understood and mistaken *original theme*, laid down for the artist to work upon. The words are these; "The Genius of Engraving, handing to posterity the works of painting, sculpture, and architecture; whilst Fame is distributing them over the four quarters of the world."—Several other little monumental pieces, stuck against the walls, whisper modestly to the idler in these arcades, that their owners were of some fame and of some worth; but that they were cloistered there, not for want of individual merit, but of money.

The Chapter-house, the door opening into which is well worth attention, is of an octangular form, and was originally very lofty, with a clustered column rising from the floor to support it, the groins arching towards the several angles of the structure. From what remains uncovered and unmutated of the ancient part of this building, there can be no doubt that it was decorated with every degree of excellence which the endless variety of gothic ornament could afford; but, since the place has been employed as a repository for the public records belonging to the Treasury of the Exchequer, all the lower parts are so hidden by presses and galleries, filled with rolls of parchment, that very little of its original magnificence can be seen. This structure owes its foundation to that magnificent monarch Henry III. and was used for the meetings of the commons in the time of Edward III. and several succeeding monarchs. Among the ancient records at present deposited here, the curious enquirer will find those of the court of Star-chamber, and the original Domesday-book, as to which see vol. vi. p. 14 and 561.—Beneath the Chapter-house is a very singular crypt: The roof, on which rests the floor of the former, is supported by a short round pillar, quite hollow, and spreads into plain massy ribs. The walls are not less than eighteen feet thick, and form a secure base to the superstructure. They were formerly pierced with several small windows, which are now concealed by the vast increase of earth on the outside: one only is just visible in the garden of an adjoining house, and from this alone the crypt is accessible.

Against the south-west part of the west front of the abbey is the north front of the Jerusalem Chamber, which was built by abbot Littleton, and was part of the abbot's lodgings. It is remarkable for being the place where Henry IV. breathed his last.

North from the abbey stood the Sanctuary, the place of refuge allowed, in old times, to criminals of a certain description. The church belonging to it was in the form of a cross, and double; one being above the other. It was of vast strength, and required great labour to demolish it. Edward the Confessor is supposed to have founded it. Within its precinct Edward V. was born; and here his unhappy mother took refuge, with her younger son Richard, to secure him from his uncle, who had already possession of the king. The site of this sanctuary was afterwards

terwards occupied by Westminster-market; which, in its turn, has given way to a new sessions-house, for the accommodation of the Westminster magistrates.

To the west of the Sanctuary stood the Eleemosynary, or Almonry, where the alms of the abbey used to be distributed; but it is more remarkable for having been the place where the first printing-press ever known in England was set up. Here, in 1474, William Caxton, probably encouraged by the learned Thomas Milling, at that time abbot, produced "The Game and Play of the Chesse," the first book printed in these kingdoms. There is a slight difference of opinion respecting the exact place where this book was printed; but all agree that it was somewhere within the precincts of this religious house.

Not more than thirty feet from the north door of the abbey, stands the parish-church of St. Margaret, originally erected by Edward the Confessor, who, having resolved to rebuild the conventual church of St. Peter with great magnificence, imagined that it would be a dishonour to his new and stately edifice, to have the neighbouring common people assemble in it as usual for religious worship, as well as prove troublesome and inconvenient to the monks; therefore, about the year 1064, he caused a church to be erected on the north side of St. Peter's, for the use of the neighbouring inhabitants, and dedicated it to St. Margaret, the virgin and martyr of Antioch. This church was rebuilt in the reign of king Edward I. by the parishioners and the merchants of the staple, except the chancel, which was erected at the charge of the abbot of Westminster. In the year 1735, it was not only repaired, but its tower was cased, at the expense of three thousand five hundred pounds, granted by parliament, in consideration of its being the church where the house of commons attend divine service on stated holidays, as the peers do in Westminster-abbey. This church is honoured with the remains of the great sir Walter Raleigh, who was interred here the same day he was beheaded in Old Palace-yard.—It is a plain, neat, and not-inelegant, gothic structure, well lighted by a series of large windows. It has two handsome galleries of considerable length, adorned in the front with carved work: these are supported by slender pillars, which rise to the roof, and have four small black pillars running along each of them, adorned with gilded capitals both at the galleries and at the top, where the flat roof is neatly ornamented with stucco. The steeple consists of a tower, which rises to a considerable height, and is crowned with a turret at each corner, and a small lantern, ornamented with carved work in the centre; from whence rises a flag-staff. In 1758, this church was again repaired and ornamented at the public expense; and, recently, the inside has been entirely rebuilt, and a new porch added at the west end. At the east end of the church is a very beautiful window of painted glass, made by order of the magistrates of Dort, in Holland, and designed by them as a present to king Henry VII. for his chapel in the abbey. But, that monarch dying before it was finished, it was set up in the private chapel of the abbot of Waltham, at Copt-hall, near Epping. At the dissolution of that monastery, it was removed to New-hall, in Essex, which coming afterwards into the possession of general Monk, he preserved the window from the destroying hands of the fanatics. In 1758, when this church underwent a thorough repair, it was purchased by the inhabitants, from the then owner, for four hundred guineas, and placed in its present situation. The subject is the Crucifixion; a devil is represented carrying off the soul of the hardened thief, and an angel receiving that of the penitent one. There are many subordinate figures, which are finely executed. On one side is Henry VII. and on the other his queen, both kneeling: their portraits were taken from original pictures sent to Dort for that purpose. Over the king is the figure of St. George, the patron-saint of England; and, above that, a white rose and a red one. Over the queen is the figure of St. Catharine of Alexandria, and, above her head, the arms of the kingdom of Grenada.

This church is a rectory, in the gift of the dean and chapter of Westminster. It is a hundred and thirty feet in length, sixty-five in breadth, and forty-five in height; the altitude of the tower, to the top of the pinnacles, is eighty-five feet.

Mentioning, at p. 527, the chimes of St. Clement's Dances and of Cripplegate-church, we passed our opinion upon this sort of amusement, and proved that it is of no use to us either by night or by day.—We have now to mention the chimes of this church, which furnish one of the most melancholy and dismal tunes that could possibly be chosen. It is not the tune of a hymn or of a psalm; but the sickeningly-drawling air of "At the siege of Bellise; I was there all the while." The bells acquit themselves of their duty every hour in the day-time; and the learnedly-pinned barrel goes on uninterruptedly from the first note to the last; but, during the night, by the order, we suppose, of some high churchman sleeping in the neighbourhood, the tune is not played through at once, but in portions. At twelve o'clock, the two first bars, "At the siege of Bellise," are rung, and the conscious barrel politely stops, till the prebendary goes to sleep: at one, the barrel is again set in motion, and the reverend gentleman awakes, perhaps, to hear the two next bars, "I was there all the while;" and then quietly resumes the comfortable tenor of his nap. At two, follows the next line of the song; and so on till the morning, when the barrel, once more set at full liberty, flourishes off with the whole of the air.

To the east of this church, and extending to the Thames, is the site of the original royal palace of Westminster, founded by Edward the Confessor, the first prince who had a regular residence here. The stairs from it to the river still retain the name of Palace-stairs; and the two Palace-yards, the one before Westminster Hall, the other before the House of Lords, were parts of the body of this extensive palace, of which many scattered limbs still exist, but are converted to different uses. The principal of these remains is the great HALL, built, or possibly rebuilt, by William Rufus, as such a place was at those chivalrous times reckoned an indispensable appendage to a palace.—The entrance into it from New Palace-yard is very magnificent, and has lately been disencumbered from modern buildings, which had been barbarously erected in such a way as to screen entirely the beautiful rows of niches, canopies, and statues, which ornamented the towers of each side of the entrance, seven or eight of which still remain in a most venerable, though mutilated, state. The figures were bigger than the common proportions of nature; and the few parts that have been respected or overlooked by the edacity of time, are sufficient to give us an idea of the original grandeur of the whole. The pedestals were beautifully wrought with wreaths of leguminous plants, or vine and ivy-leaves, (see p. 403, 4.) and had each a shield of the Norman or heater shape; but few have preserved the devices which they bore. Above the lower row of statues was a window on each side, and each accompanied by a niche, canopy, pedestal, and statue, also; but nothing of these now remains except the prominency of the mouldings out of the wall. The gateway is very rich, and the cornice above most curiously decorated. The grand centre window is divided into three compartments, of three stages each, and has a noble appearance. At the top of the pediment, or gable-end, is a pinnacle, so disfigured that it appears but the skeleton or shade of what it originally was.

In the reign of Richard II. the old building had become so ruinous, that he ordered it to be pulled down; and the present hall, which is now known by the name of Westminster-hall, was erected in its stead, and completed in the year 1397. It was then called the New Palace, to distinguish it from the Old Palace, where the houses of lords and commons meet. This ancient building is of stone, the front of which is ornamented with two towers, adorned with carved work. The hall within is reckoned the largest room, unsupported by pillars, in Europe; being two hun-

dred and seventy feet in length, and seventy-four in breadth. The pavement is of stone; the roof of oak, of curious gothic workmanship, and is greatly admired. The cantilivers which support the roof are decorated with angels, each bearing in his hands a shield, with the arms of Richard II. or those of Edward the Confessor. It was formerly covered with lead; but for some years past it has been covered with slate.

In the year 1399, king Richard held his Christmas here; during which time, the number of his guests, who were entertained in this hall and the other rooms of the palace, amounted to ten thousand; for whose supply, eighty oxen, three hundred sheep, and an innumerable quantity of poultry, were daily killed.—What would our economical cotemporaries have said, had they witnessed such an expence incurred by eating and drinking only; they who lament so deplorably the loss of a few trusses of hay trodden down by the feet of the happy on the night of the jubilee? When the Roman people called for “bread and games,” *panem et circenses*, they were grateful for the imperial munificence, and did not abuse the Cæsar who endeavoured to make them happy—but here we load with sarcasms and lampoons the authors of our amusements, though we readily risk our limbs and lives to enjoy them. We intend a little farther on to give an account of the fêtes here alluded to.

Parliaments frequently sat in this hall; and in it was held the ancient court of justice, in which the king presided in person. In this hall the kings of England have for many ages past held their coronation-feasts. It is also generally used for the trying of peers accused of crimes against the state; and it was in this hall that Charles I. was tried.—We remember to have assisted at the long and tedious trial of Mr. Hastings, and more recently at that of lord Melville. Upon such occasions, a temporary stage is erected in the hall, with galleries and seats; passages to the courts of justice being contrived underneath. These courts, namely the Chancery, King’s Bench, and Common Pleas, have been held here ever since the reign of Henry III. and the Court of Exchequer is also held in an apartment belonging to the old palace, the entrance to which is from this hall.

To the south of Westminster-hall is that part of the old palace which was used for the meetings of the peers, and thence called the House of Lords. But since the late union of Great Britain and Ireland, the spacious room called the Court of Requests has been fitted up for that purpose; and the tapestry-hangings and furniture of the former house of lords have been removed hither. The outside of the south end of this room shows the great antiquity of the building, having in it two great round arches, with zigzag mouldings, our most ancient species of architecture. This court took its name from being that wherein all suits made to the king by way of petition were heard and ended; and it was also called the Poor Man’s Court, because there he could have right without being put to expence.

The present HOUSE OF LORDS does not occupy the whole of the Court of Requests, part of the north end being formed into a lobby, by which the commons pass to the upper house; the height is also greatly reduced by an elevated floor of wood over the original stone pavement. The fitting-up of the room is nearly similar to that of the old one. The design of the fine old tapestry with which it is hung was drawn by Cornelius Vroom, and the work was executed by Francis Spiering. Vroom had a hundred pieces of gold for his labour; the tapestry itself cost 1628l. It represents the defeat of the Spanish armada in 1588, and was bespoke by the earl of Nottingham, lord high admiral, and commander in chief in the engagement. The earl sold it to James I. but it was not put up till the year 1650, two years after the extinction of monarchy, when the house of lords was used as a committee-room by the commons. Before it was put up in its present

situation, it was cleaned; and is now judiciously set off by large frames of brown stained wood, that divide it into four compartments, respectively containing the several portions of the story, viz. 1. The first appearance of the Spanish fleet. 2. The several forms in which it lay at different times on our coasts. 3. The place and disposition of it when engaged with the English fleet. And lastly, its departure. The heads of the naval heroes who commanded on that glorious day, form a matchless border round the work, animating posterity to emulate their illustrious example.

At the upper end of the room is the throne, on which the king is seated, on particular occasions, in his robes, with the crown on his head, and adorned with all the ensigns of majesty. On the right hand of the throne is a seat for the prince of Wales; on the left is another for the next person of the royal family; and behind the throne are places for the young peers who have no votes in the house. Beneath the throne, on the king’s right hand, are the seats of the two archbishops, and a little below them the bench of bishops. Before the throne are three broad seats across the room, on which are seated the dignitaries of the law. On the first of these nearest the throne sits the lord-chancellor, or keeper of the great seal, who, by his office, is speaker of the house of lords: on the other two sit the lord chief justice, the master of the rolls, and the other judges, who attend occasionally to be consulted on points of law. The benches for the lords are covered with red cloth; and there is a bar across the house at the end opposite to the throne. Without the bar sits the king’s first gentleman usher, called the Black Rod, from a black wand he carries in his hand. Under him is a yeoman-usher, who waits at the inside of the door; a crier without; and a serjeant at mace, who always attends the lord-chancellor. When the king is present with the crown on his head, the lords sit uncovered, and the judges stand till his majesty gives them leave to sit. In the king’s absence, the lords, at their entrance, do reverence to the throne; as do all who enter the presence-chamber. The judges, in the king’s absence, must not be covered till the lord-chancellor, or keeper, signifies to them that the lords permit them so to be. The king usually goes in state to the house of lords on the first and last days of the sessions, when he opens or closes the parliament with a speech from the throne; and he also goes occasionally during the session to pass such bills as require dispatch; but either of these parts of the royal office may be exercised by commissioners specially authorized for that purpose. On his majesty’s arrival at the house of lords, he enters a room adjoining to it, called the Prince’s Chamber, where he puts on his robes and crown, and from thence is conducted into the house by the lord-chamberlain, where all the lords are dressed in their scarlet robes; and his majesty, being seated on the throne, sends for the commons by the gentleman usher of the black rod. When the commons appear, his majesty’s speech is read to this grand united assembly; after which the king returns in the same state as he came.

Adjoining to the south-east angle of Westminster-hall is a building called St. Stephen’s Chapel, from having been formerly dedicated to that saint. In the year 1347, it was rebuilt in a magnificent manner by king Edward III. who converted it into a collegiate church; but, on its suppression in the reign of Edward VI. it was adapted for the assembly of the representatives of the commons of England; for which purpose it has been used from that time to the present, and is now generally known by the name of the HOUSE OF COMMONS. It is a spacious room, wainscoted to the ceiling, from the centre of which hangs a very handsome branch. It is large enough to hold six or seven hundred persons; and about it are very commodious apartments. The benches for the members gradually ascend one above another, and are covered with green cloth; the floor is matted. Round the house are galleries supported by slender iron pillars adorned with Corinthian capitals.

capitals and fionces, in which strangers are generally permitted to sit and hear the debates. The chair in which the speaker sits is at the upper end of the room; it is ornamented behind with Corinthian columns, and over it are the king's arms carved, and placed on a pediment. Before the speaker is a table, at which the clerk and his assistant sit near him on each hand, just below the chair; and on either side the room, as well below as in the galleries, the members are placed promiscuously. The speaker and clerks always wear gowns in the house, as do the professors of the law do in term-time; but no other of the members ever wear robes, except on the first day of a new parliament, when the four representatives for the city of London are dressed in scarlet gowns, and sit all together on the right hand of the chair next to the speaker.

The west front of this ancient building, with its beautiful gothic window, is still to be seen in ascending the stairs to the Court of Requests; it consists of the sharp-pointed species of gothic. Between it and the lobby of the house is a small vestibule of the same sort of work, and of great elegance. At each end is a gothic door, and one in the middle, which is the passage into the lobby. On the south side of the outer wall of the chapel, appear the marks of some large gothic windows, with abutments between, and beneath, some smaller windows, once of use to light an under-chapel. The under-croft, or basement-chapel, has been a most beautiful building; a great part of which is still preserved. It consists of five divisions, made by clusters of columns supporting the groins, in which are bosses, with rich religious basso-relievos, of simple and massy forms, well calculated to sustain, and give a pleasing introduction to, the light and refined elegance of the profuse enrichments in the chapel above. A part of it is the present passage from Palace-yard to Westminster-hall. One side of the cloister is entirely preserved, by being found convenient as a passage; the roof is gothic workmanship, so elegant as to surpass the beautiful roof of Henry VII's chapel. A gallery runs over each side of the cloister, from one part of which is a flight of stairs leading to a very ancient square tower of stone, standing almost close to the side of Westminster-hall, which probably was a belfry, to hold the bells that roused the members of the chapel to prayers.

Adjoining to the House of Lords is the Prince's Chamber, where the king is robed, as we mentioned above, when he comes in state to the parliament. This apartment is hung all round with tapestry. The subject of the compartment on the west side is the birth of queen Elizabeth. Anne Boleyn is in a grand bed, with hangings and appropriate decorations, receiving cordials from her attendants, some others of whom are employed in taking care of the royal infant. On the right is Henry VIII. in regal state, surrounded by his nobles and guards, giving his orders on this important occasion. The remainder of the compartments, except one which contains a rural subject, is made up with the different occurrences attendant on a battle, and total discomfiture of one party.

On the other side is the Painted Chamber, which is at present used for the occasional conferences between the two houses of parliament. It is a long lofty room, lighted by windows of the ancient simple gothic; and was formerly hung with beautiful ancient tapestry, in six different compartments, representing some of the principal events in the siege of Troy. From the circumstance of part of the history of that celebrated siege being wanting, it is presumed that it did not then occupy its original situation, which, from the height of the hangings agreeing with that of the walls of the great hall, from the pavement to the bottom of the windows, is supposed to have been there; and this conjecture is in some degree corroborated by an observation of Stow, (Survey, p. 470. edit. 1603.) who, speaking of a royal feast, given by Henry VII. on Twelfth-day, in the ninth year of his reign, to the lord-mayor, aldermen, and commoners, of London, says, "And after dinner, dubbing the maior knight, caused

him, with his brethren, to stay and behold the disguisings, and other disports, in the night following shewed in the great hall, which was richly hanged with arras." Where this beautiful tapestry, which we have often seen, and as often admired, is gone, we have not been able to learn; but the writer was present when Mr. John Carter, the architect, took sketches of it, which, if we are not mistaken, have been published.—It was in this room that the warrant for the execution of Charles I. was signed; and here was held that celebrated conference between the lords and commons, which, though ineffectual at the time, was followed by the glorious revolution.—Besides its being a place of conference between the two houses of parliament, as mentioned above, this chamber has from an early period been used as a *chambre ardente*, (as the French call it,) where the remains of sovereigns, princes, and other great personages, have been deposited for public inspection previous to their interment; and here Mr. Pitt lay in state in January 1806.—Besides these uses, the Painted Chamber also serves as a place of meeting for the knights of the Bath previous to their proceeding for the installation in the chapel of Henry VII.

We read in Stow's Survey, that Edward III. "buildd to the use of St. Stephen's chappell, (though out of the Palace-court,) some distance west, in the Little Sanctuarie, a strong clochard of stone and timber covered with lead, and placed therein three great bells, since usually rung at coronations, triumphs, funerals of princes, and their obits, (the anniversary of their death.) Of these bells men fabuled that their ringing sowerd all the druke in the towne." This is one of the most curious assertions that can be found in the whole of this most estimable Londinographer; but we must confess that we are at a loss to find out the meaning of it. We know that, by counteracting the vibrations of the air through the simultaneous and shrill union of two discordant sounds, a wine-glass may be forced to snap and fly in pieces; but that the sound of bells should agitate the air with so much violence as to discompose the internal combination of fermented liquids, is truly above our conception. It is another vulgar error to suppose that thunder has a similar effect.

On the south side of Westminster-abbey is WESTMINSTER SCHOOL, or COLLEGE, founded by queen Elizabeth, in the year 1590, for the education of forty boys, who have been ever since called the Queen's or King's scholars, as the case happens to be. This school has been rendered one of the most considerable in the kingdom; it having, for several years past, been likewise the place of education for many of the sons of the nobility and gentry, for the accommodation of whom there are several boarding-houses in the neighbourhood. Out of the scholars on the foundation, a certain number, when properly qualified, are sent to the universities, viz. to Trinity-college in Cambridge, and to Christ-church in Oxford, where they have a competent maintenance from the foundation; at the former till they are fit for the ministry, at the latter for life. The scholars have each a black gown every year; and four of them are distinguished by the name of Lords Scholars, who wear purple gowns, and receive an annual stipend from the treasurer of the college, out of certain rents, settled for that purpose by John Williams, D.D. lord-keeper of the great seal, and archbishop of York. This prelate was also a great benefactor to the library of this college, which is well furnished with a good collection of books, to which strangers can have access in term-time.

There appears to have been a school here from the first foundation of the abbey. Ingulphus, abbot of Crowland, speaks of his having been educated at it; and of the disputations he had with the queen of the Confessor, and of the presents she made him, in money, in his boyish days.

Every year, a few weeks before Christmas, the scholars of Westminster-school perform a Latin play, generally one of Plautus's or Terence's. A temporary theatre is erected

On the end of the dormitory, which is parted off for the purpose; and seats prepared for the company, which is of the greatest respectability, and admitted by tickets. The play is repeated three times; and at the last performance a collection is made, and the money received is employed to buy books for the scholars; a custom more respectable for its antiquity, than for its object. In these plays, the female parts must of course be performed by boys; and there is little doubt but they are acted as well as they would be by girls of the same age; the only defect is, that the delusion of the difference of voices cannot be kept up: the principal woman's part is generally assigned to one of the biggest boys, whose voice may be more manly than that of the lover, or even father, in the same scene. In the colleges of France, and other Roman-catholic countries, when plays were occasionally acted by the scholars, their superiors took the precaution, (inasmuch as women were to be kept from their minds as much as possible) so to alter the drama as to make it consist of male characters only. And we know, on the other hand, that at those ladies' boarding-schools where the vile custom of acting plays at breaking-up still continues, the said plays undergo strange castigations and castrations.

In St. Margaret's parish there are many charitable foundations, by different persons, for the relief of the poor. Among these, near Tothill-fields, is the GREY-COAT HOSPITAL, founded by letters patent, in the year 1706. This school, in 1727, was in so flourishing a state, that it contained eighty boys and fifty girls, in which year the charge of all its disbursements amounted to 1457l. 7s. 6d. In September 1739, a mathematical school was added to this foundation, and a proper master retained to instruct the boys in navigation, and to fit them for the sea-service; several of them have since done honour to their profession, and have become captains in the navy. There are at this time in the school ninety poor children, who are not only clothed and instructed, but maintained in lodging, washing, and board; they are taught reading, writing, and arithmetic, and are carefully educated in the principles of the Christian religion according to the church of England. They are publicly examined every Sunday evening at seven o'clock. Since the original foundation in 1698, the number of children who have been bound apprentices from this school amounts to 1498. The charge of each child is computed at 18l. 18s. per annum, including salaries and wages of master, mistresses, servants, and the expenses of the infirmary; so that the yearly expenditure in these respects amounts to 1700l. In addition to the endowment, the finances are assisted by contributions at sermons, and voluntary benefactions and legacies.

The GREEN-COAT HOSPITAL, for the relief of poor fatherless children of this parish, was established by Charles I. in the year 1633, who endowed it with fifty pounds per annum, which is paid out of the treasury. This hospital was rebuilt at the charge of Dr. Busby, and Charles Twitty, esq. in the year 1700.—We had very lately the pleasure of seeing the children of this school walking in procession through the church-yard, going to the Sunday-afternoon service; and the neatness of their dress, their modest behaviour, and even the lively emerald of their garments, were pleasing to the eye.

Near the Green-coat Hospital, by Tothill-fields, is a Bridewell, or house of correction, for such as beg, live idly, or lead loose lives, in this city or its liberties. It is also a gaol for criminals who commit offences within the said city and liberties; and was so made by act of parliament, in the reign of queen Anne.

Lady Anne Dacres's Alms-houses, called Emanuel-College, were founded by her, on the 17th of December, anno 1601, for ten poor men and ten poor women, (each of whom has liberty to bring up one poor child.) She gave a hundred pounds per annum, issuing out of the manor of Brainsburton, in the county of York, until the expiration of a lease of a hundred and ninety-nine years; and afterwards, the whole manor to accrue, to augment

this foundation. The hundred pounds is paid out of the chamber of London, and is under the care and inspection of the lord-mayor and court of aldermen. The rental of the manor of Brainsburton, and the lands given to this foundation, being increased so much beyond the founder's expectation, as to yield an income exceeding the plan and intention of distributing it to such a limited number of the class of people who were the objects of her benevolence; the governors, not having the power of themselves to increase the number, and being at the same time desirous of applying the income of their trust to the intended purpose, preferred a bill to parliament in 1795, stating the nature and documents of the foundation, and that the income and revenues were more than sufficient for the maintenance and support of the objects directed by the will and charter, and that it was probable they would be farther increased by granting building-leases and other means. The statute therefore empowered the court of aldermen, as governors, to extend and increase the number of objects of the charity, by electing and admitting, as members, such additional numbers of poor aged persons, and poor children, or either of them, according to their directions and descriptions, as the governors should think proper objects, and as the revenues should be found adequate to maintain and support. In consequence of this act, further statutes were immediately made by the court, whereby five men and five women were admitted as out-pensioners, with such allowances as the court should think fit; and the parish of St. John, Westminster, was added to those out of whom they were all to be chosen; out of every ten, eight from St. Margaret's and St. John's, one from Chelsea, and one from Hayes. The vacancies of in-pensioners to be filled up by out-pensioners, so that every one to be elected shall be an out-pensioner in the first instance. Thus the whole charity now consists of a master and mistress, and twenty in-pensioners, viz. ten men, of whom one is the warden; and ten women, of whom one is the matron; five men and five women as out-pensioners; also, ten boys and ten girls, who are in-pensioners, and have a school-room, who are all apprenticed to trades, with a premium of 10l. half of which is paid at the time of their binding, and the remainder when they have served half their apprenticeship.

South of Westminster-abbey stands the parochial church of St. John the Evangelist. The parish of St. Margaret being greatly increased in the number of houses and inhabitants, it was judged necessary to erect one of the fifty new churches within it. This church, being finished, was dedicated to St. John the Evangelist; a parish was taken out of St. Margaret's; and the parliament granted the sum of two thousand five hundred pounds, to be laid out in the purchase of lands, tenements, &c. for the maintenance of the rector; but, besides the profits arising from this purchase, it was also enacted, that, as a farther provision for the rector, the sum of one hundred and twenty-five pounds should be annually raised, by an equal pound-rate upon the inhabitants. This church was begun in 1721, and finished in 1728; and is remarkable only for having sunk while it was building, which occasioned an alteration in the plan. On the north and south sides are magnificent porticos, supported by vast stone pillars, as is also the roof of the church. At each of the four corners is a beautiful stone tower and pinnacle: these additions were erected, that the whole might sink equally, and owe their magnitude to the same cause. The parts of this building are held together by iron bars, which cross even the aisles. The advowson of this church is in the dean and chapter of Westminster; and, to prevent this rectory being held in commendam, all licenses and dispensations for holding it are, by act of parliament, declared null and void.

Beyond this church is the ancient Horse-ferry between Westminster and Lambeth, which was suppressed on the building of Westminster-bridge; and a sum of three thousand pounds settled on the archbishops of Canter-

bury, who were the proprietors of this ferry, in lieu of the profits arising therefrom.

At the Horse-ferry begins Mill-bank, leading to Chelsea; and here we find the unfinished Penitentiary-houses, intended for the reformation of thieves, instead of transporting them.—The design of a building of this nature, for the punishment, employment, and reformation, of offenders of secondary turpitude, usually punished by transportation for a term of years, was conceived after the disputes which terminated in the separation of the American states. The plan for colonizing New South Wales, led to a general system of expatriation to the antipodes; which, as applied to definite periods, was cruel and unjust, because the wretched objects were precluded from the power of ever returning, however short might be the intended period of their punishment. A strong and affecting memorial of the sheriffs of London, in 1807, led to several parliamentary notices and remonstrances against this indiscriminate mode of transportation, which was in all cases, in effect; for life; and, in consequence, this place of punishment and reform has been projected at Mill-bank; and no culprits are, we understand, in future to be sent to New South Wales, except those irretrievable and enormous cases that require transportation for life.—The plan of this erection is partly that of Mr. Jeremy Bentham—the culprits are to be confined in circular buildings, with windows so constructed that the overseer from a room in the centre may be able to view every one of their rooms. The external wall encloses no less than eighteen acres of ground; and within that space there are to be six of these circular buildings, each capable of lodging and employing from 150 to 200 prisoners; with a chapel, infirmary, and other conveniences.—We heartily wish success to the undertaking. After what we have read of the reformation-prisons of Philadelphia and Rotterdam, may we not hope to see, what we certainly never have seen yet, a man (in England) come out of a prison better than he went in!

A little farther on is the intended Vauxhall Bridge, or rather the Regent's Bridge, for so the work was named when the first stone was laid (by lord Dundas as proxy for the regent), which was on the 9th of May, 1811. We then understood that the bridge was to be built of Scotch granite, with the ornaments and finishings of Portland-stone; and to consist of seven arches. The work stood still for a long time, but now (Aug. 1814.) seems to be again proceeding; and we are told that it is to consist of nine arches of equal span, in squares of cast-iron, on piers of ruficated stone, formed of fragments united by means of Parker's cement; the total width to be 809 feet, the span of the arches 78, the height 29, and the clear breadth of the road-way 36. This bridge is to extend from Mill-bank to Smith's Tea-gardens, which nearly adjoin Vauxhall-gardens; and is intended to connect the roads branching from that spot to Hyde Park Corner, by a straight road and street across Tothill-fields to Eaton-street, Pimlico, and Grosvenor-place.

Returning now towards Charing Cross, we find, adjoining to the Horse-guards, the Tilt-yard, well known as the scene of Henry VIII's military amusements.—It retained its use during the reign of his masculine daughter Elizabeth, who was not less fond of witnessing athletic exercises than her father. Here, on the first of January, 1581, was held a most sumptuous tournament, in honour of the commissioners sent from France to propose a marriage between the queen and the duke of Anjou; and here were the annual exercises of arms during her reign, by a society of knights consisting of twenty-five of the most distinguished personages of the court. But this place was not the scene of chivalrous exploits alone; it was sometimes devoted to more ignoble purposes, as may be seen in Sydney's State Papers, vol. i. p. 194. where, in an account of queen Elizabeth's amusements in her sixty-seventh year, it is said, "Her majesty says she is very well. This day she appoints a Frenchman to doe feates upon a rope

in the Conduit-court. To-morrow she hath commanded the bear, the bull, and the ape, to be bayted in the Tilt-yard." The site of this place is now occupied by a convenient guard-room, and other offices for the use of the foot-guards.

That part of St. James's Park behind the Horse-guards is called the Parade, from being the place where the reliefs for the different guards about the palace are paraded and inspected every morning, attended by an excellent band of military music.—Two telegraphs have been erected on the heights of the Admiralty; one towards the road to Dover, the other towards Portsmouth and Plymouth; an invention which took its origin, or at least was revived and greatly improved, at the beginning of the French revolution; and which we have simplified, and consequently improved. These machines were of great use during the war; and we hope that they will long stand at rest, since their particular usefulness is only felt in war-time.

Arrived at Charing Cross, we salute the statue of the unfortunate Charles, generally adorned with bouquets of oak on the anniversary of the restoration.—This place was so denominated from having been anciently a village named Charing, in which king Edward I. caused a magnificent cross to be erected in commemoration of his beloved queen Eleanor, part of which continued till the civil wars in the reign of Charles I. when it was entirely destroyed by the populace, as a monument of popish superstition. In the year 1633, an equestrian statue of king Charles I. was erected on the spot where this cross stood, which is still called Charing Cross. It has the advantage of being well placed at the meeting of three great streets. The pedestal on which it stands is finely elevated, and the horse full of fire and spirit; but the man is not thought to be equally well executed, and indeed appears too small in proportion to the horse. This statue, which is of brass, was cast by Le Sueur, who made the curious brass monument of the duke of Buckingham in Henry VII's chapel. After the execution of Charles I. the parliament ordered it to be destroyed; it was however purchased by a brazier in Holborn, of the name of Revet, who concealed it until the restoration, when he presented it to Charles II. who caused it to be erected in its present situation. On this subject, M. Grosley, in his Tour to London, vol. i. p. 203, says, "I shall speak of it only to remind the reader that this statue, being in the heat of the rebellion sold by auction, was knocked down at a low price to a cutler, who declared by advertisement, he would melt it down, and make handles for knives of it. He, in fact, caused knives with bronze handles to be exposed to sale in his shop, by which he soon made a fortune; the faction which opposed the king being all desirous of having some part of his statue debased to a knife-handle."—We must take this opportunity for writing down an idle story reported of the founder of this elegant statue, who is said to have hanged himself in a fit of despair on being reminded that he had forgotten to put a girth to the horse. The fact is, the artist knew very well that nearly all ancient equestrian statues, and that of Marcus Aurelius in particular, are without this modern appendage to the saddle; and he most probably omitted it on purpose.—A similar story was told of the man who cast the once-admired and nearly-adored statue of Henry IV. of France placed upon the Pont Neuf, because he had forgotten to put the well-known hat and feathers in his hand. We have no doubt but such anecdotes have been related of statues and their makers all over the world; and, although we have not lived yet the age of Nestor or Tithon, we may really and truly assert, that we have heard, read, or seen, hardly any thing truly original: *Nil sub sole novum*; "Nothing new under the sun;" and that, were we acquainted with the most ancient Chinese writings or traditions, we might find in them nearly the whole of what we read in ancient and modern authors. The imagination of man is a wheel—after one complete revolution, the same spoke must meet the eye again.—The Golden Cross, a

very famous inn situated behind the statue, presents a would-be gothic appearance, and is well known for the immense number of stages that resort there. Opposite are two or three fire-offices handsomely built; and a row of lottery-offices, decked in all the nonsense of multicolor letters, vaunting bills, gaudy decorations, and puffs.

A little to the west of Charing Cross is a large square, on one side of which is a handsome building, used as stables for his majesty's state-horses, and known by the name of the King's *Mews*. This word is borrowed from the diversion of hawking. When kings, in this and other countries, used to take delight in hunting the smaller inhabitants of the air with the help of some of the tyrants of that free element, places were assigned to keep the hawks or falcons drilled to the fight and trained to the game. These royal houses were like palaces, and went under the names of *falconry*. One of this sort near Paris is still called *la Muette*. The birds were placed there, and kept with great care, particularly when the time of moulting or casting feathers was approaching. The word *mew* is derived from the French *muer*, "to moult;" and thence from the Latin *mutare*, to change.—This place is of great antiquity, having been used for the accommodation of the king's falconers and hawks so early as the year 1377; but, the king's stables Lomesbury (now called Bloomsbury) being destroyed by fire in the year 1537, Henry VIII. caused the birds to be removed, and the mews enlarged and fitted up for the reception of his horses; and the royal stables have ever since been kept in this place. Here the beautiful cream-coloured horses enjoy their undisturbed repose, after prancing among the huzzas of the London crowd; and there the redoubted Cofacs used to bivouac during their short residence in this metropolis.—Thus, though the word *mew* bears no relation to horses, and does not signify any enclosure except to confine birds, as a hen-coop, &c. yet so polite and royal are our nobility and gentry, that every set of stables appended to an elegant modern street is called a *Mews*!—The old building being greatly decayed, the north side was erected in a magnificent manner by his late majesty, in the year 1732. This side of the *Mews* is exceedingly noble, particularly the centre, which is enriched with columns of the Doric order, and a pediment. The smaller pediments, and rustic arches under the cupolas or lanterns, are properly subordinate to the principal one; but set so close to the balustrade, that its intention as a gallery is destroyed. The edifice itself is greatly injured by the mean buildings that form the other sides of the quadrangle. If these were made to correspond with the main building, and a suitable entrance formed from Charing Cross, the royal stables would be a distinguished ornament to this part of the metropolis; but there is some talk of removing them entirely, to make way for new improvements.

In Castle-street, near the back of the *Mews*, is a free-school, with an excellent library over it, both founded and endowed in the year 1685, by Dr. Thomas Tennison, vicar of this parish, and afterwards archbishop of Canterbury. Adjoining to this library and school is the work-house for the poor; all of them erected upon a piece of ground granted to the inhabitants of this parish by king James I. for a burial-ground.

Returning through the *Mews*, we cross over, and soon come to the Spring-garden entrance into St. James's Park, a place noted for exhibitions of Panoramas, Panharmonicon, mechanical wonders, &c. &c. These words, *Panorama*, *Panharmonicon*, to which we might have added *Phantasmagoria*, and many other Greek words, call upon us to animadvert upon the folly of printing in gold letters on our walls or over our doors, inscriptions or words which can never enter the understanding of those whose eyes they happen to meet. We find in Leicester-square an office, or house of call, for servants out of place; and THE INSCRIPTION IS IN GREEK! Now this is truly ridiculous. Shall we have Sunday-schools where our servants may learn Greek, in order to understand where they are to go

when they want employment? and will the friends to the diffusion of *general knowledge* lend to both our universities for young professors in the language of Anacreon to teach our nursery-maids in St. James's Park or the Temple Gardens?—Down with Greek or any other foreign supercriptions. Our tongue, the venerable tongue of our forefathers, the idiom of Milton, Addison, Dryden, and Pope, wants not the flimsy aid of extraneous words; it has its own pathos and strength. These great masters of the vernacular tongue never were at a loss to express their ideas in English; why should a *fire-grate maker*, for instance, call his new contrivance a *metastatic grate*? Boileau says,

*Ce que l'on conçoit bien s'exprime clairement,  
Et les mots pour le dire arrivent aisément.*

What we well understand and feel, the word  
To render it comes of its own accord.

Agreeable to this axiom, those Grecians do not understand their own calling, since they are obliged to have recourse to *outlandish* expressions to make it known. We confess that there are adopted words of long standing, which it would be now pedantry to discard; but every one should oppose as strenuously as he can the introduction of others. Dr. Johnson has opened the flood-gate to these useless innovations.

Having stopped *in limine* to enter our protest against foreign disguises, we enter the Park, and shall describe its appearance in plain English, and in the words of Common Sense, as we find it in the Monthly Magazine for April 1813. In passing through the narrow entrance at Spring Gardens, about nine in the morning, "I found the lame and blind taking their periodical stations on each side the passage. I paused a few minutes to see them approach one after another, as to a regular calling; or like players taking their stations to act their settled part in the drama of life. One fellow, who had a withered leg, approached his post with cheerfulness; but he had no sooner seated himself, and stripped it bare, than he began such hideous moans as in a few minutes attracted several donations. Another, a blind woman, was brought to her post by a little boy; who carelessly leading her against the step of a door, she gave him a smart box on the ear, and exclaimed, D— you, you rascal, can't you mind what you're about?"—and then, leaning her back to the wall, she, in the same breath, began to chaunt a *hymn*, which soon brought donations from many pious passengers. The systematic movements of these people led me to inquire about their conduct and policy from a shopkeeper in the neighbourhood. He told me that about a dozen of them obtained a good living in that passage; that an attendance of about two hours per day sufficed to each of them; when, by an arrangement among themselves, they regularly succeed each other. He could not guess at the amounts thus collected; but he said, that he had once watched a noisy blind fellow for half an hour, and in that time saw thirty-four people give him at least as many halfpence; he thence, and from other observations, concluded, that in a couple of hours each of them collects five or six shillings. We cannot wonder, then, at the aversion entertained by these objects to the discipline of our workhouses.

"On my entrance into the Park, I was amused and interested by an assemblage of a hundred mothers, nurses, and valetudinarians, accompanied by as many children, who are drawn together every fine morning at this hour by the metropolitan luxury of warm milk from the cow. Seats are provided, as well as biscuits, and other conveniences; and here from sun-rise till ten o'clock continues a *milk-fair*, distinguished by its peculiar music, the lowing of cows and the squalling of children. The privilege of keeping these cows, and of selling their milk on this spot, belongs to the gate-keepers of the Park; and it must be allowed to be a great convenience to invalids and children, to whom this wholesome beverage and its attendant walk are often prescribed.

"In my way towards and along the Mall, I remarked that few were walking my way; but that all the faces and footsteps

footsteps were earnestly directed towards London. The circumstance exemplified that feature of modern manners which leads thousands of those engaged in the active business of the metropolis to sleep and keep their families in the neighbouring villages. These thousands walk or ride therefore every day to and from London at hours corresponding with the nature and urgency of their employments. Before nine o'clock the various roads are covered with clerks belonging to the public offices, bankers' and merchants' clerks, who are obliged to be at their posts at that hour." It is well known that the business at the Bank commences at nine, and that a small fine is levied upon every clerk who is not present within a few minutes after that time. A few years ago, these gentlemen presented a memorial to Mr. Abraham Newland, to be laid before the directors, praying that an additional hour might be allowed them in the morning, at least in the winter, "because many of them slept out of town, and found it extremely difficult to get their breakfasts and arrive at the Bank so early as nine o'clock." But they were politely informed, in reply, that the public business could not be impeded, merely because gentlemen whose employment was in town chose to live out of it.—"From nine till eleven, you see shop-keepers, stock-brokers, lawyers, and principals in various establishments, bustling along with careful and anxious countenances, indicative of their various prospects and responsibilities. At twelve, faunters along the man of wealth and ease, going perhaps to look at his balances, orders, or remittances; and indicating the folly of wealth by his gouty legs, or cautious rheumatic step. Such is the routine of the Park, through which no carriages are allowed to pass; but other avenues into the metropolis present, through every forenoon, besides the lines of pedestrians, crowded stage-coaches, private coaches, and chariots, numerous gigs and chaises, and many equestrians. I amused myself with a calculation of the probable number of persons who thus every day, between eight and six, pass to and from London within a distance of seven miles. In the present route I concluded the numbers to be something like the following: 200 from Pimlico, 300 from Chelsea, 200 from the King's Road and Sloane-street, 50 from Fulham and Putney, and 50 from Battersea and Wandsworth; making 800 per day. If then there are twenty such avenues to the metropolis, it appears that the total of the regular ingress and egress will be 16,000 persons, of whom perhaps 8000 walk, 2000 arrive in public conveyances, and 6000 on horseback, or in open or close private carriages! Such a phenomenon is presented nowhere else in the world; and it never can exist except in a city which unites the same features of population, wealth, commerce, and varied employment, which belong to our own vast metropolis.

"It concerned me to observe that this Park presents at this time a neglected appearance. The seats are old and without paint, and many vacancies exist in the lines of the trees. The railing round the centre is heavy and decayed; and the appearance of every part is unworthy of a metropolitan royal park, adjoining to the constant residence of the court. My heart ached, and the tears started from my eyes, as I brought to mind the crowds of beauty, rank, and fashion, which till within these few years, used to be displayed in the centre Mall, on Sunday evenings during the spring and summer! How often in my youth had I been a delighted spectator of the enchanted and enchanting assemblage! Here used to promenade, for one or two hours after dinner, the whole British world of gaiety, beauty, and splendour! Here could be seen in one moving mass, extending the whole length of the Mall, ten thousand of the most lovely women, in this country of female beauty, all splendidly attired, and accompanied by as many well-dressed men! What a change has time wrought in these once happy and cheerful personages! How many of those who on this spot delighted my own eyes are now mouldering in the silent grave? And how altered are all the persons, and perhaps the fortunes and feelings, of others!

Alas, that gay and fascinating scene no longer continues! The change of manners has put an end to this unparalleled assemblage, which alone was worth any sacrifice. The dinner-hour of four and five, among the great, having shifted to the unhealthy hours of eight or nine, the walk after dinner, in the dinner full dress, is consequently lost. The present promenade, which is now shifted to the Green Park, does not possess therefore the splendour of high rank; and the morning assemblage in Hyde Park, and Kensington Gardens; though gay and imposing, has little splendour of dress, and loses the effect produced by rank and distinguished character, owing to those classes being shut up in carriages. The modern custom too of abandoning the metropolis for the sea-coast, or the country, as soon as the fine weather sets in, is another drawback from the fascination and agreeableness of those Sunday promenades.

"These Parks may be denominated the lungs of the metropolis. They are essential to the healthful respiration of its inhabitants; they contribute to their innocent pleasures; and, under a wife and benevolent administration, they might be made to add greatly to the public happiness. It would be a suitable homage of the government to the people, if the promenades were made as great a luxury as possible; and particularly if the bands of the guards were to play in the Malls of St. James's Park for two hours every evening, between Lady-day and Michaelmas. This would indicate a desire in the governors to contribute to the happiness of the governed; and would make the former appear to the latter in a more grateful character than as the mere assessor of taxes, and as the organ of legal coercion."—Thus far our friend Common Sense; who, it will be seen, cannot conclude without a touch of politics, and a fling at the "powers that be." We have just to mention, that the Mall, which proceeds between rows of lofty elms, chestnuts, and lime-trees, derives its name from an ancient game played there with sticks and balls, and still used in the Champs Elysées at Paris, called *maille*.

In the reign of Henry VIII. St. James's Park was a desolate marshy field; but that prince, on his building the palace, inclosed it, laid it out in walks, and, collecting the waters together, gave to the new-inclosed ground, and new-raised building, the name of St. James. It was afterwards much enlarged and improved by Charles II. who added to it several fields, planted it with rows of lime-trees, laid out the Mall, which is a vista half a mile in length, and was, at that time, formed into a hollow smooth walk, inclosed by a border of wood on each side, with an iron hoop at one end, for the purpose of playing the game above-mentioned. He also formed the water into a canal of one hundred feet broad, and two thousand eight hundred long, with a decoy and other ponds for water-fowl. One of the avenues formed by him acquired the name of the Birdcage-walk, which it still retains, from his aviary beside it, and the number of cages hung in the trees. "Here," says Cibber, in the Apology for his Life, "Charles was often seen, amidst crowds of spectators, feeding his ducks, and playing with his dogs, and passing his idle moments in affability, even to the meanest of his subjects, which made him to be adored by the common people." It was upon one of these occasions that the duke of York, afterwards James II. cautioned his majesty not to expose his person so freely. Charles's answer is well known: "Take care of yourself, brother; nobody will think of killing me to make you king."—This park is nearly a mile and a half in circumference, surrounded by many magnificent structures, and always open for the accommodation and recreation of the public.

On the north side of the park, and about half way up the Mall, is situated the royal palace of St. James. On the site of this palace there was anciently a hospital dedicated to St. James, founded by the citizens of London, for fourteen women afflicted with the leprosy; afterwards the charity was extended, and eight brethren were added to administer divine service. This hospital is mentioned in a manuscript in the Cottonian library, so early as the

year 1100. In the year 1531, it was surrendered to Henry VIII. who took down the whole edifice, except the chapel, and erected the present palace in its stead, which, from the faint to whom the hospital was dedicated, was called St. James's Palace. In this edifice our kings have kept their court ever since the palace at Whitehall was consumed by fire, in 1697. It is an irregular brick building, without the least ornament. In the front, next St. James's street, is a gothic arched gateway, that leads into a small square court, with a piazza on the west side: on the south side of this court is the guard-room, the entrance to which is by the grand stair-case, situated at the south-west corner of the piazza. The buildings are low and plain; and there are two other courts beyond, that have very little the appearance of a palace. The windows, however, look into a large garden, and command a very pleasant view of St. James's Park. On the west side of the square is the chapel, which is the same as belonged to the ancient hospital; and, ever since that building was demolished, has been converted to the use of the royal family. It is a royal peculiar, and exempt from all episcopal jurisdiction. The service is performed in this chapel in the same manner as at cathedrals; and there belong to it a dean, a lord-almoner, a sub-dean, ten singing-boys, and forty-eight chaplains, who preach in turn before the royal family.

The external appearance of this palace is inconsiderable, yet certainly not mean. That part in which the rooms of state are, being only one story, gives it a regular appearance on the outside. Although there is nothing very superb or grand in the decorations or furniture of the state-apartments, they are commodious and handsome. The entrance to these rooms is by a stair-case that opens into the principal court, next to Pall Mall. At the top of the stair-case are two guard-rooms; one to the left, called the Queen's, and the other the King's, guard-room, leading to the state-apartments. Immediately beyond the king's guard-room is the Presence-chamber, which contains a canopy, and is hung with tapestry; it is now used as a passage to the principal rooms. There is a suite of five of these, opening into each other successively, and fronting the park. The presence-chamber opens into the centre room, called the Privy-chamber, where is a canopy of flowered crimson velvet, under which the king receives the quakers. On the right are two drawing-rooms, one within the other. At the upper end of the farther one is a throne with its canopy, on which the king receives certain formal addresses. This apartment is the grand drawing-room, in which the king and queen are present on certain days, the nearer room being a kind of anti-chamber, in which the nobility are permitted to sit down while their majesties are present in the farther room, there being stools and sofas for the purpose. On the left, on entering the privy-chamber from the king's guard-room and presence-chamber, there are two levee-rooms, the nearer serving as an anti-chamber to the other. All these rooms were formerly very mean in their furniture: on the marriage of the prince of Wales, they were fitted up in their present state. The walls are covered with tapestry, very beautiful, and quite fresh in the colours; for, though made for Charles II. it had never been put up, having by some accident lain in a chest, till discovered a little before the marriage of the prince. The canopy of the throne was made for the queen's birth-day, the first which happened after the union of the kingdoms of Great Britain and Ireland. It is of crimson velvet, with broad gold lace, having embroidered crowns, set with real and fine pearls: the shamrock, the badge of the Irish nation, forms one of the decorations of the crown, and is accurately executed. In the grand drawing-room is a large magnificent chandelier of gilt silver; and in the grand levee-room is a very noble bed, the furniture of which is of crimson velvet, manufactured in Spitalfields. This bed was put up, with the tapestry, on the marriage of the prince of Wales,

The sole use made latterly of St. James's Palace, is for purposes of state. In 1809, the south eastern wing of the building was destroyed by fire; (see p. 213.) The state-apartments were, however, uninjured; and the court is still held here. A private dwelling after such a fire would have been restored in a few weeks or months; but the nominal palace of the three last kings of England, the scene of all their grandeur, presents even to the contemporary generation a monument of the instability of every human work. The door at which Margaret Nicholson made her attempt on the life of his present majesty, and at which the public were used to see their sovereign enter and depart for many years past, is now a dismal chaos of ruins; as is the entire suite of rooms which led from it to those drawing-rooms in which the court of England used to assemble, till within these six years, on birth and gala days! He would have been deemed a false and malignant prophet, who in 1808 might have foretold, that, "during the next seven years, the public palace of England would remain a heap of ruins, the undisturbed resort of noxious reptiles, and its chambers the habitation of the fowls of the air." Yet such is literally the fact, in regard to the eastern apartments of the palace of St. James.

The queen has a separate palace at the west end of the Park, fronting the Mall. The first edifice on this spot was originally known by the name of Arlington-house; which being purchased by the duke of Buckingham, who rebuilt it in 1703, it was called Buckingham-house till the year 1762, when his present majesty bought it; and it has obtained the name of the Queen's Palace, from having been settled on her majesty in 1775, in lieu of Somersethouse. This edifice is a mixture of brick and stone, in the front of which is a spacious court-yard, enclosed by a semi-circular sweep of iron-rails. The principal door is placed between four tall Corinthian pilasters, which are fluted, and reach to the top of the second story. Within this compass are two series of very large and lofty windows, over which is the entablature. Above is an attic story, with square windows and Tuscan pilasters; and the whole is crowned with a balustrade, which conceals the roof. On each side of the building are circular colonades of the Ionic order, also crowned with a balustrade and vases. These colonades join the offices at the extremity of the wings to the main building; and on the top of each of these offices is a turret, supporting a dome, from which rises a weather-cock. The situation of this palace is extremely pleasant; for it not only commands a prospect of St. James's Park in front, but has also a spacious park behind it, together with a large garden and terrace; from the latter of which, as well as from the apartments, there is a beautiful prospect of the adjacent country. Several new buildings have been lately added to it, particularly a library and a riding-school. The library is furnished with the best authors, in various languages; and in both that and the gallery are great numbers of curious prints and paintings, by the best masters. The collection of drawings is exceedingly precious, and used to be a great source of entertainment for our venerable king previous to his illness. We are told, by one of the keepers of this valuable collection, that the king, by the strength of his uncommon memory, used to direct them to such a drawer, there to find, among several bundles or sets of drawings or prints, all marked with a peculiar number, the very piece he wanted to be carried or sent to him. The best works of Canaletti are in the vestibule; where we have remarked also a painted stair-case, representing the arrival of Æneas before the Queen of Carthage.

One nuisance disgraces the queen's palace; namely, a small barrack, or guard-house, lately erected to the south of it; on the other side of Buckingham-gate.

On the north-west side of the Queen's Palace is the Green Park, which extends from St. James's Park to Piccadilly; from the latter of which it is separated, in some parts, by a wall, and by an iron railing in others. The

Ranger's Lodge at the top of the hill, fronting towards Piccadilly, with its gardens and pleasure-grounds, forms a very picturesque object, and is seen to advantage from the ride on the south side of the park, called Constitution-hill. This park contributes greatly to the pleasantness of the two palaces, as well as of the surrounding houses, that are situated so as to command a view of it.

We cross the west extremity of Piccadilly, into Hyde Park. It is a royal demesne, extending, between the great western road on the south side and the road to Oxford on the north, to Kensington. It is part of the ancient manor of Hida, which belonged to the monastery of St. Peter at Westminster, till, in the reign of Henry VIII. it became the property of the crown. It was originally much larger than it is at present, having been reduced since the survey in 1652, when it contained six hundred and twenty acres, by inclosing Kensington gardens, and by grants of land, between Hyde-park Corner and Park-lane, for building on. According to a survey taken in the year 1790, its present extent is three hundred and ninety-four acres, two roods, and thirty-eight poles.

The scenery of this park is very pleasing, and its natural beauties will be greatly heightened, when the plantations made in it lately have reached maturity. The Serpentine River, at the west end, is a fine sheet of water, formed by queen Caroline, in the year 1730, by enlarging the bed of the stream, which, taking its rise to the north-west of Bayswater, on the Uxbridge road, passes through Kensington-gardens and this park, and falls into the Thames near Ranelagh. On the north side of the Serpentine River is a cluster of houses for the keepers and deputy-rangers of the park, which, being built on the edge of a grove of tall oaks, forms a pleasing and picturesque object in the landscape. The one nearest the river is built of timber and plaster, and is of considerable antiquity. It was known by the name of the Cake-house in the beginning of the last century, and probably much earlier. In the garden belonging to this house, is the building erected by the Humane Society, as a receiving-house for those who are apparently drowned in the neighbouring river.

The space between the margin of the Serpentine River and the back of the houses at Knightsbridge, is studded here and there with beautiful elm-trees, some of them are of an astonishing size; and, when seen grouped together in the purple ocean of light poured upon them on a summer evening a few minutes after sunset, they remind us of the charming scene which the woody hills of St. Cloud and Bellevue present to the Parisians at the same hour and on the same point of the horizon. There is between these two landscapes something so similar, that he who has seen them both finds them generally united on the canvas of his recollection, and both apparently painted with the same glowing pallet.

At the north-west corner of this park is a very beautiful inclosed eminence, called Buckden-hill, which, being separated from Kensington-gardens only by a haia, appears, at a distance, to be a part of it. On the declivity of this hill is the grove of oaks mentioned before, in which are two medicinal springs; the one, a slight chalybeate, is drunk as a tonic, but its virtues ought probably to be attributed to the exercise taken in going thither; the other is reputed a specific in some disorders of the eyes. There is a foot-path across this hill to Kensington-gardens.—On the south side of the park are very handsome barracks for the horse-guards; and on this side are two carriage-roads to Kensington; one of which is better known by the name of Rotten-row. These have become the resort of the fashionable world, as well as the Ring, and are as much frequented, especially on Sundays. No nation in the universe can approach us in this point of luxuriant ostentation; and the splendour of the equipages, their fanciful variety, the richness and particular elegance of the harness, the beauty and spirit of the cattle that draw them, combine, under this unrivalled point of view,

all that is necessary to convey at once the idea of a rich and highly-cultivated nation. The noble objects within view of this park add an inexpressible grandeur to its natural beauties. The venerable pile of Westminster-abbey, the modern mansions of the nobility, and many public buildings, form a boundary on the side of the town, which makes a fine contrast with the rural prospect opposite, of the Surry hills.

The open part of the park was, till lately, used for the field-days and reviews of the horse and foot guards, and also for those of the volunteers; by which the sward of it was so much injured, that it had become a dry sandy plain, with scarcely a vestige of verdure. At present, however, it is used only for occasional reviews; and the surface is sown with grass-seeds, and covered with the mud taken from the reservoir at the lower part of the Serpentine River, which will restore it to its pristine beauty. This restoration, however, has been a little retarded by the pressure of feet and temporary booths upon a late joyful occasion; we mean the celebration of peace by means of a fair, and other amusements, the scene of which was laid in the three parks, on Monday, the 1st of August last.

Never, perhaps, in the annals of this vast metropolis had the curiosity of hundreds of thousands of the public been more eagerly and anxiously excited, than by the announcement of the Grand Jubilee of this day. It is an indisputable fact, that so immense a number of the people at large were never brought together, in any previous instance, by any description of public rejoicings, on any of the great events which have so often gilded the pages of British story. After repeated delays, the centenary of the accession of the house of Brunswick to the throne, and the anniversary of the glorious victory of the Nile, was selected as the day for a jubilee in celebration of peace. It was announced that further postponement would be necessary in case of unfavourable weather. The morning came: the sky was darkened, the rain descended in torrents, and the expected pleasures of the day were given up for the moment as lost. Sunday had been fine. The eve of the festival day had in a manner commenced the entertainment; and thousands, promenading the parks, had almost outwatched the moon.—The apprehension of disappointment was, however, suddenly relieved; for between ten and eleven the sun re-appeared, beaming in all his glory, and shedding his brightest refulgence on the scene. The inhabitants of the metropolis, and the countless numbers who had come to it from "all the country round," had nothing now to interfere with their hopes, or to prevent them from getting ready as soon as they pleased, and throwing themselves into the vortex of festivity and rejoicing. In Hyde Park was the fair, properly so called. It had booths, shows, and swings, in profusion; and to these was added a naumachia in miniature on the Serpentine River. But we must be brief in our description. The naval engagement on the Serpentine commenced about six in the evening by a cannonading between the foremost vessels, some of which hoisted the American, and others the English, colours. Both shores were lined with people, anxious to witness this mimic fight; and in the public eagerness many were forced into the water. The Americans were of course compelled to strike their colours. An interval of near an hour and a half followed without further movement. At dark, however, the English fleet formed, and came down with a fair wind to attack that of the Americans lying at anchor. A tremendous cannonade followed, when the American fleet was driven on-shore, and the English ships were towed back to their original moorings.—About ten o'clock the spectators were suddenly surprised by the instantaneous burst on their sight of a ship on fire. This was at first beheld as a calamity; but in a few minutes it was universally perceived that she was bearing down on the American fleet previously driven on-shore. The awful grandeur and the still-increasing splendour of the scene, drew forth bursts of applause from both shores of the Serpentine;

pentine; and in a few minutes the first ship of the American fleet which lay in her line, and with which she came in contact, was set on fire, and added to the magnificence of a scene which, in its real occurrence, has been universally allowed to exceed all others in terrific pomp, viz. that of a ship of war on fire at sea. This frigate was followed by a second; and by the two, the whole American fleet was set on fire and demolished.—Soon after this the fireworks began; and Hyde Park presented a phenomenon nowhere else to be seen, namely, the water-rockets. They commence with a report, which draws the attention of the spectators to them; they are then seen whirling about with great rapidity on the surface of the water, imitating the rotatory motion of a mill-wheel. In a few seconds there is an addition of a very beautiful fountain, which, after displaying its elegant spoutings for some time, bursts forth with a loud report into what are called water-snakes. These, after flying into the air, descend again into the water, into which they immerse for a minute or two, and then rise at the distance of a few feet; and keep thus continually bounding in all directions, till, after various immersions, at last they expire in a loud explosion. With these the exhibition in Hyde Park terminated.

The Green Park, at an early hour, began to display its attractions: besides the Balloon, it was here that the Castle-Temple was to be seen: here the royal booth displayed its crimson tapestry and its illuminated front; and here the splendid Bridge across Constitution-hill presented the names of the chief naval heroes of the war.—The attractions in this quarter were increased by the presence, at Buckingham-house, of the princesses and queen, who had invited the regent and 250 of the nobility and gentry to dinner, and to view the different exhibitions. The royal family paraded the lawn for a short time. The duke of Cambridge and the princess Sophia of Gloucester were particularly anxious to see and understand the process of filling the balloon. It was ready to ascend about six o'clock; but its flight was delayed a few minutes, that her majesty and the princesses might witness the ascent. At twenty minutes past six, when the cords which held the balloon were ready to be cut, it was found that the fastening which secures the network to the valve at the top of the balloon had by some means been disengaged, and was held only by a slight twine. Under these circumstances, the new aspirant to celestial excursions, Mrs. Henry Johnston, an actress, was informed that she could not possibly accompany Mr. Sadler on his voyage without imminent danger to both. The duke of Wellington, having ascertained the danger, recommended both to decline the voyage. But young Sadler, who is only seventeen years of age, feeling for the disappointment of the public, and for his own honour, was determined to go up; and he ascended about twenty-four minutes past six. When over the London Docks, the balloon appeared for a short time nearly stationary; and it was not until a quantity of ballast was thrown out, that a quicker motion could be given to it. On passing over Deptford, at a considerable height, Mr. Sadler went through a cloud which left behind it, on the railing of the car and on various parts of the balloon, a thick moisture, which soon became frozen; and Mr. Sadler, for a short time, felt the cold as intense as in winter. Immediately over Woolwich the string which fastened the net, as was apprehended, suddenly broke, and the main body of the balloon was forced quickly through the aperture nearly eighteen feet. Mr. Sadler, to prevent the danger which threatened him, caught the pipe at the bottom of the balloon; and, by hanging on it and the valve-line, he prevented the balloon from further escaping. The valve, which had for some time resisted every attempt to open it, in consequence of being frozen, at this time gave way, and suffered the gas to escape. A sudden shift of wind, whilst the balloon was apparently falling into the middle of the Thames at Sea Reach, carried it about one hundred yards over the marshes on the Essex side, when the aeronaut seized the opportunity of making a gash in the balloon.

with his knife, which the wind considerably widened, and occasioned the escape of the gas in great quantities. Mr. Sadler's descent on this account was rather more precipitate and violent than he could have wished. He landed however in Mucking Marshes, sixteen miles below Gravesend, on the Essex coast, without sustaining any other injury than a slight sprain, in about forty minutes after his departure from the Park. A fisherman, of the name of Mansbridge, fearing that the balloon might fall into the Thames, had followed its course as nearly as he could with his boat, to afford any assistance in his power. Mr. S. with his balloon, was conveyed by him to Gravesend, from whence he took a post-chaise and four to town, and arrived at Buckingham-house at half past three on Tuesday morning.

Scarcely had the moon risen in unclouded majesty—

“Unveil'd her peerless light,  
And o'er the dark her silver mantle threw;”

than the bridge and the royal booth were illuminated, and the Chinese lanterns here and there showed their fantastic transparencies; they were, however, too few in number, and not sufficiently lighted to produce much effect, and were only pretty when viewed in detail. The illuminations did not pretend to any extraordinary magnificence; they merely exhibited, amidst a profuse blaze of lamps, the names of all the illustrious companions of Wellington in the peninsular war, and of the principal naval heroes, dead and living, who during the last twenty years have upheld and increased the maritime glory of their country. At ten o'clock a loud and long-continued discharge of artillery announced the commencement of the fireworks, which were, certainly, if not the most tasteful, yet on the grandest and most extensive scale that we have ever witnessed. From the battlements of the Castle, at one moment, ascended the most brilliant rockets; presently the walls disclosed all the rarest and most complicated ornaments of which the art is susceptible: the senses were next astonished and enchanted with a pacific exhibition of those tremendous instruments of destruction invented by Col. Congreve. Some notion even of their terrible power might be formed from the display of the night, and their exceeding beauty could be contemplated divested of its usual awful associations. Each rocket contains in itself a world of smaller rockets: as soon as it is discharged from the gun, it bursts, and flings aloft in the air innumerable parcels of flame, brilliant as the brightest stars; the whole atmosphere was illuminated by a delicate blue light, which threw an air of enchantment over the trees and lawns, and made even the motley groups of universal London become interesting as an assembly in romance. These several smaller rockets then burst again, and a shower of fiery light descended to the earth, and extended over many yards. Such was one of the beautiful fireworks which, during the space of two hours, amused and astonished the people.—The public were now becoming weary, when the grand metamorphosis took place of the Fortress into the Temple of Concord, by the removal of the fortifications, displaying the Temple moving upon an axis, ornamented with allegorical paintings. The upper and lower pictures on each side were connected in subject, those beneath being sequels to the above. They were illustrative of the Origin and Effects of War—the Deliverance of Europe from Tyranny—the Restoration of the Bourbons by the aid of the Allies—the return of Peace, and its happy consequences—and the Triumph of Britain under the government of the Prince Regent.—On the first side, Strife, as described by the ancient poets, was represented expelled from Heaven, and sent to excite dissensions among men. Jupiter is seen (accompanied by other divinities) dismissing her from above, and the inhabitants of the earth are flying, terrified at her approach. The lower picture represents the effect of her descent. On one side, the Cyclops are forging implements of war. Mars, in his car, driven by Bellona, and hurried on by the Furies, is overturning all before him. In the back-ground are seen towns on fire, and

and a desolated plain. In front are Charity flying in dismay; Truth and Justice quitting the earth, and Hope lingering behind.—The second side represents Europe struggling with Tyranny. He is tearing off her diadem, and trampling on her balance; at his feet, among emblems of Religion, Justice, &c. Liberty lies prostrate; Wisdom, brandishing the *fulmen*, is descending to the rescue of Europe. In the picture beneath, the Genius of France is restoring the sceptre to the dynasty of the Bourbons, personified by a female seated on a throne, in a regal mantle, ornamented with fleurs-de-lis; and on the other, Russia, Prussia, Austria, and Sweden, are witnessing the event with delight; a group of subjects behind are expressing their joy and homage, and Genii are descending with emblems of Peace, Plenty, Justice, Honour, Liberty, Religion, &c. At one end of this composition, Strength is driving out Anarchy, Fraud, and Rebellion: at the other end, Victory is inscribing on a shield the names of the great Commanders of the Allied Powers, and Fame is sounding her trumpet.—On the third side, Peace is seen in the clouds with her olive-branch; Time looks at her with transport, and the Earth hails her return. Beneath is represented her reign, or the renewal of the Golden Age. She is surrounded by Plenty, the Rural Deities, Agriculture, Commerce, the Arts, Minerva, and the Muses.—The fourth side displays a colossal statue of the Prince Regent crowned by Victory: Discord is chained by force to the pedestal: Truth and Justice are returning to earth: and Britannia is looking up to Heaven with gratitude for the blessings of her government. Below is the triumph of Britain. Britannia is in a car of state, accompanied by Neptune with his trident, and Mars displaying the British standard: Fame and Victory attend upon her. She is preceded by Prudence, Temperance, Justice, and Fortitude, and followed by the Arts, Commerce, Industry, and Domestic Virtues.—We have endeavoured to represent the third and fourth sides of these beautiful transparencies in the annexed Plate; for undoubtedly no display of artificial and ornamental light was ever condensed in a smaller compass, and heightened into more magnificent effect. Some disappointment was felt that no person of political or military importance was in the royal booth.

The fireworks and the temple together certainly gave in the general gaze a very brilliant gratification in the Green Park. But St. James's Park was the chief place of attraction for all those who feared to encounter the trouble of mixing in the crowd, and who could afford to pay half-a-guinea in the expectation of personal security and comfort. Notwithstanding the immense crowds in the streets, which we have before noticed, the access to this park was very easy at several gates. Between two and three o'clock some thousands entered, and their numbers gradually increased till dusk, when they augmented very considerably, and the place had all the appearance of Vauxhall on a full night. Besides the Birdcage-walk, the Parade, and the front of Buckingham-house, outside of the semicircular railing, were appropriated to that part of the public who paid for admission. Over the Canal was erected a Bridge of timber elegantly ornamented with temples and pillars, surmounted by a lofty Pagoda. Tents were pitched in rows along the sides of the Canal; and at regular intervals national flags were hoisted. A number of Thames-watermen had permission to ply on the Canal; and many worthy citizens and their families enjoyed an aquatic diversion for the first, and perhaps the last, time on this regal stream. Several boat-races took place before dusk; but the boats were just as they are seen on the river, not painted, decorated, and ensigned, as was expected. Of the booths erected for the accommodation of the company, many were untenanted; those, however, which were occupied, had a pretty good share of business: the charges were enormous. The time, till dark, was chiefly employed by the company in walking backwards and forwards, or getting their dinner. The only public amuse-

ment consisted in the ascent of the balloon from the front of the queen's house, which was preceded by the flight of one or two of a small and insignificant size. From six to nine, people beguiled their tedious hours with eating and drinking, or observing the progress of the illumination of the Chinese Bridge, or the somewhat distant noise of the firing on the Serpentine River. About nine, the Bridge and the Pagoda were nearly, though they were not all night completely, illuminated according to the design, either through the wind, or some other accidental circumstance. The lawn was lighted up by two rows, on each side of the Canal, of stars and crescents placed alternately. The Mall, Birdcage-walk, &c. were illuminated by circles of lamps, embracing the trunks of most of the trees. The Chinese lanterns, which promised something fantastically fascinating, by no means answered expectation; not from any inherent fault in them, but from the poverty of the lights placed within them, which were not sufficient to show off the whimsical and pretty devices painted on them. If they formed a correct idea of Chinese illumination, it must be *sombre* indeed. About ten, the bridge, with its temples and pillars, and its towering superstructure, became an object of singular beauty and magnificence. Whether such a character of design had or had not any thing to do with the matters of celebration, it unquestionably combined the elegant and the picturesque in the highest degree. It appeared a blazing edifice of golden fire. Every part of it was covered with lamps, the glass reflectors, in proper places, relieving the dazzling splendour with their silver lustre; the canopies of the temple throwing up their bright wheels and stars, the pillars enriched with radiance, every rising tower of the Pagoda pouring forth its fiery showers, and rockets springing from its lofty top, in majestic flights, almost presuming to out-rival the ancient inhabitants of the firmament. The effect of its vivid lights on the calm water which flowed beneath, the verdant foliage of the surrounding trees, the scattered tents, and the assemblage of spectators on the lawn, might, without much of hyperbole, be called magical and enchanting.

At ten, discharges of artillery hurried all the spectators to the western end of the Park, as they announced the commencement of the superior fireworks in the Green Park. Benches innumerable were brought by soldiers to enable the fair portion of the assemblage to obtain a view of the Castle, of which after all only the upper part could be seen distinctly; that edifice being placed in a low situation, instead of being raised on a mound so as to render it conspicuous. Then the grand display of pyrotechnics took place, in number we readily believe never exceeded. Rockets in profusion led the way, and were continued at every interval from both parks. Jerbs, maroons, Roman candles, catharine-wheels, serpents, stars, flower-pots, and girandoles, succeeded each other, and were discharged with excellent skill and effect. That sort of firework called the girandole was very frequently displayed, in different colours, and was decidedly the most beautiful of the whole. Nothing of the kind could be imagined finer. But the repetition of these things, with occasional pauses, for more than two hours, became tedious. It told no intelligible tale; though the public had been informed that the affairs of the Castle were to give something like a representation of a battle and a siege. Instead of sending up the fireworks one or two at a time, if they had been thrown up more in masses, relieved by candles and rockets, and continued in larger masses gradually, they would have reached the climax of magnificence in this kind of exhibition, and would have produced a most striking effect in less than half the time employed in frittering away all the advantages of this splendid art.

About twelve o'clock, and near the expiration of the fireworks, the Pagoda, which was covered with lamps, and at intervals showed a calm mass of uniform light, exhibited an appearance that excited much doubt. Its upper towers appeared enveloped in flame, and it was at first thought

*Chinese Pagoda and Bridge, in St. James's Park.*

*The Temple of Concord, erected for the Celebration of Peace, on the 1<sup>st</sup> of Aug. 1814.*

thought by many that it was intended to burn it down; but it was soon learned that the fire was accidental. The flames spread rapidly. Several engines were procured, and played upon it; but it continued burning till, in a short time, the five upper towers were destroyed, or fell over the eastern side of the Bridge: the lower ones were in a state little better, and some part of the substructure was much deteriorated. The fate of this erection was much regretted, as it was deservedly a favourite; and still more for the calamity by which it was attended, namely, the loss of two lives; besides which, five other fire-workers were much hurt. The accident is said to have been occasioned by the hurry of discharging some of the fireworks; room was not left for a rocket-wheel to play, and the flame, burbling constantly on one spot, ignited the timber, and thus produced the calamity.—After the cessation of the fireworks in Hyde Park, several accidents occurred: the limb of a tree broke down, by which a young woman who was standing under had her thigh broken, and two young men their arms; a rocket took off the calf of a gentleman's leg.

The three parks remained much in the same state as on the day of Jubilee, for some days after. In Hyde Park, the booths, shows, gaming-tables, printing and copper-plate presses, &c. amounted to four hundred: every day added to their number and attractions. The booth-keepers were thrice ordered away on Saturday the 6th; but they drew up a petition to remain till the 12th. They however received an order to quit at night, which they set at defiance. On Sunday, the fair, with the exception of the shows, was continued. On Monday, the order from the secretary of state was renewed; and on Tuesday morning the magistrates, with the police-officers, compelled obedience.—Still an opinion almost universally prevailed, that on the regent's birth-night the fireworks and illuminations would be repeated. Thousands of people assembled; and, being disappointed, some of them made a bonfire of the palings and sentry-boxes which surrounded the Temple in the Green Park, and great fears were entertained lest the Temple of Concord itself should be destroyed, and thus Discord be again let loose in Europe. Horse and foot guards arrived about two in the morning, and the multitude immediately dispersed. On the Monday following the workmen began to dismantle the Temple; but the shell of it, (the paintings only being taken away,) and the royal booths also, were sold by auction in lots. The burnt pagoda has been so far repaired as now to consist of a single story, instead of seven; and is probably intended to remain. The bridge, we are told, is at any rate to be permanent, and is already open to the public: we have therefore given a representation of it, with the pagoda in its original state.

Here we cannot resist the temptation of presenting to the reader, from Philip de Comines, a short account of a fête given at Paris in the fifteenth century, on the joyous occasion of the accession of Louis XI. to the crown. "Louis had already been crowned at Rheims; and, on the 31st of August, 1461, his majesty set out from an hotel named Les Porcherons, which was in the suburbs near the gate of St. Honoré, in order to make his public entry into Paris; upon which the whole body of the clergy, nobility, and gentry, came out to pay their homage to him, and welcome him to their city. As the king passed through the gate of St. Dennis, he found near the church of St. Ladre (Lazarus) a herald mounted on horseback and clothed in the city-livery, who presented to him five ladies on the part of the city, richly dressed, and mounted on five fine horses sumptuously accoutred with rich furniture, on which were embroidered the city-arms; and these five ladies were habited after a sort of a manner representing the five letters of the word PARIS; and every one of them made a speech to the king, which was prepared for them before-hand. The Parisians on this occasion caused a very fine ship to be cast in silver, which was borne aloft upon men's shoulders; and, just as the king made his entry

through the gate of St. Dennis, it was placed upon the draw-bridge near the said gate, to represent the city-arms. In it were placed three persons representing the three estates of the kingdom; in the stern and poop sat two more personating Justice and Equity; and out of the scuttle, which was formed in the shape of a flower-de-luce, issued a king dressed in royal robes, and attended by two angels. A little farther, at the Fontaine du Ponceau, there were wild men that played the parts of gladiators; and near them were placed three handsome wenches stark naked, representing mermaids, sporting and singing gay enlivening airs, which were humoured and accompanied with the melodious harmony of soft music. And, to comfort and refresh the people, there were several pipes in the said fountain that ran milk, wine, and hippocras, of which every one drank what he pleased; and a little below the fountain the passion of our Saviour was represented, as he was crucified between two thieves. At a little distance from this, there were posted a band of men richly dressed, representing hunters that had just run down a stag; whose death was accompanied with the melodious noise of dogs and horns. In the Rue de la Boucherie there were large scaffolds erected in the form of the Bastion at Dieppe; and, when the king had passed by them, the English who were within the Bastion were furiously attacked by the king's soldiers, taken prisoners, and had all their throats cut. Opposite to the gate of the Chatelet there was a fine appearance of persons of quality; all the windows were hung with rich tapestry, and the streets through which the king passed were crowded with a prodigious number of people. In this pompous manner he proceeded to the church of Notre Dame; and, having performed his devotions to the Blessed Virgin, he returned to his royal palace, where he had a splendid and magnificent entertainment."

Passing now from St. James's Park, through the Stable-yard, we enter Pall Mall, the seat of royalty, and undoubtedly one of the noblest streets in the metropolis. The first object of attraction we meet with is the British Gallery of Paintings, in the rooms originally built by that liberal patron of the arts, alderman Boydell, under the denomination of the Shakespeare Gallery, for the purpose of exhibiting the paintings, originals of the copper plates destined to adorn his splendid edition of the works of our first of dramatic poets. The group representing Shakespeare between Comedy and Tragedy, executed in stone by the learned chisel of the late Mr. Bacon, remains still over the main entrance for the admiration of every man of taste. It is simple, yet elegant; and the attitudes of the figures, as well as the flowing style of their draperies, deserve every tribute of praise.—On the same side of Pall Mall we find two openings into St. James's square, which has been lately, can we say ornamented? by an equestrian statue of William III. in which we see very little to praise and much to reprove. Norfolk-house and several others are a greater ornament to this square than the statue. Near this spot is St. James's market.

Lower down, in the Haymarket, is the begun, never to be finished, Doric front of the Opera-house.—On this spot was built a house for the purpose of representing Italian operas, by sir John Vanburgh, of whose taste in architecture we have many weighty proofs still remaining. It is curious that our indefatigable surveyor and generally-correct annalist Pennant should have attributed the building to sir Christopher Wren, who had not, nor could have, any thing to do with it. The fabric erected by Vanburgh stood till the raging demon that has so often persecuted this metropolis, the cruel element of fire, destroyed it in 1789. Immediately after, the present edifice was erected; but want of money bade the workman cease their labour, and the exterior was left as it is; a sort of upbraiding disgrace to those who might, by a voluntary subscription of no great extent, have contributed to the adorning the front of a place where they so often repair to indulge their fancies in the latter part of the evening. The interior of this

theatre is fitted up in a style of great magnificence, and very suitable to the object. The drop-scene, representing the Castalian vale at the foot of mount Helicon, is particularly beautiful. Under the romantic shade of laurels and poplars, the Muses and Graces sing and dance around a statue of the God of Love, which they entwine with garlands of flowers; whilst, at the top of the sacred hill, Pegasus wings his flight through the air, and gives birth to the famous fountain Aganippe, the inebriating waters of which, flowing in fanciful divisions from rock to rock, irrigate the enamelled meadows at the bottom of the mountain. This truly poetical composition was executed after the design and under the direction of Cypriani, and does great honour to his inventive genius, as well as to his graceful taste in distributing his groups.—The fronts of the boxes are painted in compartments, a silver ground, with small gold frames. The several tiers are distinguished from each other by a difference in the ornaments in the centre of the compartments. The dome presents a sky, in which the flame-colour predominates. The *coup d'ail* of the whole is rich and magnificent. The interior of the house is within two feet in dimensions of the great theatre at Milan. The stage is sixty feet in length from the wall to the orchestra, eighty feet in breadth from wall to wall, and forty-six feet across from box to box. From the orchestra to the centre of the front boxes, the pit is sixty-six feet in length and sixty-five in breadth, and contains twenty-one benches, besides passage-room of about three feet wide, which goes round the seats, and down the centre of the pit to the orchestra. The pit will hold eight hundred persons: price of admission, half-a-guinea. In altitude, the internal part of the house is fifty-five feet from the floor of the pit to the dome. There are five tiers of boxes, and each box is about seven feet in depth, and four feet in breadth, and is so constructed as to hold six persons with ease, all of whom command a full view of the stage. Each box has curtains to inclose it, according to the fashion of the Neapolitan theatres, and is furnished with six chairs, but not raised above each other like the seats of our English theatres. The boxes hold near nine hundred persons; and the price of admission to them is half-a-guinea. The gallery is forty-two feet in depth, sixty-two in breadth, contains seventeen benches, and holds eight hundred persons; price of admission five shillings. In the former opera-houses there was an upper gallery at 3s. 6d. The lobbies are about twenty feet square, where women attend to accommodate the company with coffee, tea, and fruit. Formerly the opera-performers were not only all Italians, or nearly so, but consisted of the best that Italy could furnish. Latterly, however, dancing has so greatly prevailed, as to have threatened to triumph over the more refined and noble art of music. To allow time for the performance of ballets, operas which originally consisted of three acts have been reduced to two; and a ballet is now often extended to a greater length than an act of an opera. The instrumental band has generally been esteemed the best in this kingdom, and the second in Europe. The opera usually opens for the season in December, and continues its representations till June or July, on the Tuesday and Saturday of every week; and sometimes on Thursday, which day is particularly set apart for the benefits.

Opposite to this, is the Little Theatre, for which a patent was originally granted to Mr. Foote, upon the occasion mentioned vol. vii. p. 549. It is a plain brick building with nothing to make it conspicuous, except a portico, so much wanted at Drury-lane, to shelter the persons waiting for admittance in bad weather. This summer-theatre, though not so elegant and spacious as either of the winter-houses, is fitted up in a neat and tasteful style, and is capable of containing a numerous audience. It is opened, during the summer-months, for the representation of plays and English operas. The term of its patent extends from the 15th of May to the 15th of September. This house contains three tiers of boxes, a pit, and two galleries. The price of admission to the boxes is five shillings, to the pit

three shillings, to the first gallery two shillings, and the second gallery one shilling. The doors are open at six o'clock, and the performance begins at seven. Half-price is not taken at this theatre. For an account of a dreadful accident which happened here about twenty years ago, see p. 125, 6. of this article.

The Haymarket is a large street ascending by a gentle slope to the top of Coventry-street; and received its name from being the principal market for hay and straw, which are sold here thrice a-week, Tuesday, Thursday, and Saturday.

To the east of the Haymarket is a spacious square, containing an area of between two and three acres, which is called Leicester-square, from a large mansion which formerly stood on the north side of it, belonging to the earls of Leicester. This house was the residence of Frederic prince of Wales, father of his present majesty; and was the birth-place of the whole of the family, except the king, who was born at Norfolk-house, in St. James's-square. This building was afterwards occupied by the curious and valuable museum of sir Ashton Lever. See vol. xii. p. 554. The site is now occupied by a handsome modern street, called Leicester-place. Adjoining to this is a large brick building, called Saville-house, which was the residence of his majesty when prince of Wales, and afterwards of sir George Saville; from whose family the name of the house is derived. The inner part of the square is inclosed with iron rails, and adorned with grass plats, plantations of trees, and gravel walks. In the centre is a gilt equestrian statue of his late majesty, George II. which was brought from Canons, the magnificent seat of the duke of Chandos.

In Leicester-street is the house where the great sir Isaac Newton resided; it is now an hotel.—In Lisle-street, at the back of Leicester Place, is the principal chapel of the Swedenborgians, or followers of Emanuel Swedenborg, a Swedish nobleman, who died in London in the year 1772. He was a man of extraordinary talent and erudition, as we shall evince when we come to his article. At present we are to speak only of the religious part of his character. He professed himself to be the founder (under the Lord) of the *New Jerusalem Church*, alluding to the New Jerusalem spoken of in the Book of the Revelation. His tenets, although peculiarly distinct from every other system of divinity in Christendom, are nevertheless drawn from the Scriptures, and supported by quotations from them. He asserts, that in the year 1743 the Lord manifested himself to him in a personal appearance; and at the same time opened his spiritual eyes, so that he was enabled constantly to see and converse with spirits and angels. He now began to print and publish various wonderful things, which, he says, were revealed to him, relating to heaven and hell, the state of men after death, the worship of God, the spiritual sense of the Scriptures, the various earths in the universe, and their inhabitants, with many other extraordinary particulars, the knowledge of which was perhaps never pretended to by any other writer, before or since his time. Baron Swedenborg, in his Treatise concerning Heaven and Hell, and of the wonderful things therein, as heard and seen by him, makes the following declaration: "As often as I conversed with angels face to face, it was in their habitations, which are like to our houses on earth, but far more beautiful and magnificent, having rooms, chambers, and apartments, in great variety; as also spacious courts belonging to them, together with gardens, parterres of flowers, fields, &c. where the angels are formed into societies. They dwell in contiguous habitations, disposed after the manner of our cities, in streets, walks, and squares. I have had the privilege to walk through them, to examine all around about me, and to enter their houses; and this when I was fully awake, having my inward eyes opened."

The discriminating tenets of this sect seem to be the following: Holding the doctrine of one God, they maintain that this one God is no other than Jesus Christ, and that he always existed in a human form; that, for the sake

of redeeming the world, he took upon himself a proper human or material body, but not a human soul; that this redemption consists in bringing the *hells*, or evil spirits, into subjection, and the *heavens* into order and regulation, and thereby preparing the way for a new spiritual church; that without such redemption no man could be saved, nor could the angels retain their state of integrity; that their redemption was effected by means of trials, temptations, or conflicts with evil spirits; and that the last of them, by which Christ glorified his humanity, perfecting the union of his divine with his human nature, was the passion of the cross. Though they maintain that there is but one God, and one divine person, they hold that in this person there is a real Trinity; consisting of the divinity, the humanity, and the operation of them both, in the Lord Jesus; a Trinity which did not exist from all eternity, but commenced at the incarnation. They believe that there are angels attending upon men, residing, as Swedenborg says, in their affections; that temptation consists in a struggle between good and bad angels within men; and that by this means God assists men in these temptations, since of themselves they could do nothing. Indeed Swedenborg maintains, that there is an universal influx from God into the souls of men, inspiring them especially with the belief of the divine unity. This efflux of divine light on the spiritual world he compares to the efflux of the light from the sun in the natural world.

Baron Swedenborg farther maintains, that the sacred Scripture contains three distinct senses, the celestial, the spiritual, and the natural, which are united by correspondencies; and that in each sense it is divine truth, accommodated respectively to the angels of the three heavens, and also to men on earth. This *science of correspondencies* (it is said) had been lost for some thousands of years, viz. ever since the time of Job; but is now revived by Emanuel Swedenborg, who uses it as a key to the spiritual or internal sense of the sacred Scripture, every page of which, he says, is written by correspondencies, that is, by such things in the natural world as correspond unto, and signify, things in the spiritual world.—He denies the doctrine of atonement, or vicarious sacrifice, together with the doctrines of predestination, unconditional election, justification by faith alone, the resurrection of the material body, &c. and, in opposition thereto, maintains, that man is possessed of free will in spiritual things; that salvation is not attainable without repentance, that is, abstaining from *evils*, because they are sins against God, and living a life of charity and faith, according to the commandments; that man, *immediately on his decease*, rises again in a spiritual body, which was enclosed in his material body, and that in this spiritual body he lives as a man to eternity, either in heaven or hell, according to the quality of his past life. It is farther maintained by Swedenborg and his followers, that all those passages in the sacred Scripture, generally supposed to signify the destruction of the world by fire, &c. commonly called the last judgment, must be understood according to the above-mentioned science of *correspondencies*; which teaches, that by the end of the world, or consummation of the age, is not signified the destruction of the world, but the destruction or end of the present Christian church; both among Roman Catholics and Protestants of every description or denomination;—and that the last judgment actually took place in the spiritual world in the year 1757; from which æra is dated the second advent of the Lord, and the commencement of a New Christian Church, which, they say, is meant by the new heaven and new earth in the Revelation, and the New Jerusalem thence descending.

Such are the outlines of baron Swedenborg's principal doctrines, collected from his voluminous writings. His followers are numerous in England, Germany, Sweden, &c. and also in America. They use a liturgy in their worship, which, except being much shorter, is as near to that of the church of England as the difference of doctrines will

admit. They likewise introduce a great deal of vocal music, accompanied by an organ; and the minister's dress is now exactly similar to that of the established church. We find three small places of worship in London agreeable to this form; viz. the one we are speaking of, which has Mr. Proud for a minister; another in Friar-street, Blackfriars, of which Mr. Sibly is the minister; and the other in Dudley-court, near St. Giles's church.

Again crossing the Haymarket, and approaching Duke street, we find in our way an establishment of about sixteen years standing, called the European Museum, containing an exhibition of pictures on sale by private contract; to which we might apply the line in which Martial modestly describes the nature of his own book: *Sunt bona, sunt quædam mediocria, sunt mala multa*: "Some pieces of great value, some of middling value, and many of no value at all."

Returning to our survey of Pall Mall, we find the ancient Cumberland House, now used for the Ordnance-office, in the stead of a *new* ordnance-office, lately pulled down.—Next to it the Auction-rooms of Mr. Christie, where so many valuable articles of all descriptions have been sold.—And on the same side the temporary exhibition of the Indian jugglers, which has so greatly astonished those who are unacquainted with the manners of the Hindoos. We cannot enter here into a long discussion upon these supposed magicians, who, as far as we know, may trace an uninterrupted line of descent, from master to scholar, in order of instruction, from the Magi who dared to challenge, before the throne of Pharaoh, the superior power of the Hebrew chiefs, Moses and Aaron. These *legerdemain* gentlemen have preserved to this moment the old trick of turning sticks, stones, any thing, into apparently living serpents; and their dexterity certainly exceeds all we have seen. But one of their most astonishing feats is to swallow a sword; a common practice among these circulatoraneous thaumaturgi of the country of Mysore, and on the coast of Coromandel. We have seen the frightful performance; and are decidedly of opinion that the sword, or piece of steel looking like it, does not descend into the stomach, or at all through the œsophagus; but through the trachea, or wind-pipe, which by early attempts has been made callous and able to bear the friction. When the sword has descended as far as the lobes of the lungs, it there finds a small aperture obtained by the experiments often made from infancy, and which, by the reiteration of the exercise, is prevented closing. The proof which we can allege for this assertion is, that the man, whom we have often seen, can breathe, and does breathe, all the time of the performance, which could never be the case if the sword were swallowed by the common way.—We have taken this opportunity of solving to many of our readers a problem which they have very probably been long inquiring about; in the persuasion that the perambulator of a metropolis like this, does not only owe to his readers the description of what he sees, but his opinion upon the objects he meets with; otherwise a survey would be but a skeleton, an uninteresting and dry topography of the skin, without entering into the causes which animate the body.

A row of elegant houses on both sides leads us to the principal ornament of Pall Mall—we mean the residence of the prince of Wales, now prince-regent. The old house was the favourite residence of his majesty's mother when princess dowager of Wales. The present building was erected thirty years ago; and is a very handsome, though low, structure. It is of stone, with two projecting wings, and contains a principal and a mezzanine story. The grand entrance is by a magnificent Corinthian portico, over which is a triangular pediment, containing the prince's arms in basso-relievo. Round the top of the whole building is a balustrade, which conceals the roof. In front is a handsome colonade of the Ionic order, on the centre of the entablature of which is a very neat military trophy, between the royal supporters; and behind

the house is a very handsome garden, extending to St. James's Park, in the wall of which there was a gate, with a summer-house over it; but, though elegant, it has been lately taken down.

The interior of the house is extremely magnificent, and the alterations that have been going on at various times for these ten years past have amounted to a vast expense. On a debate in the house of commons, on Friday, July 15, 1814, it was observed by Mr. Tierney, that there was "a sum for Carlton-house of 22,000*l.* for upholsters and *or moult*, for clocks and watches, and all the rest; last year it was said that 61,000*l.* were spent for the inside of Carlton-house; yet this year Carlton-house costs 76,000*l.* what with wardrobe, and board of works, and new rooms, and so forth; all this on the back of 61,000*l.* so that Carlton-house alone in fifteen months cost 137,000*l.*"—Mr. Tierney also mentioned "an outfit of 100,000*l.* expended not long ago." If this statement be correct, deducting even the swelling of furnishers' bills, and other modes of pilfering the public money or of distorting it from its ostensible object, no wonder if the interior of this princely residence surpasses all mansions of that description in Europe. The furniture is every-where most elegant and tasteful; the ornamental part has, perhaps, no rival in the world for neatness and costliness; and the small collection of paintings which enrich the walls, certainly contains, although in a limited number, the best specimens of some of the most famous artists.

Adjoining nearly to Carlton-house, we find, at the end of Warwick-street, that creeps obscurely behind that limb of Cockspur-street which extends from the silversmith's to the entrance of Pall Mall, Warwick-house, the mansion assigned for the residence of her royal highness the princess Charlotte of Wales, upon her attaining the age of eighteen; but from which she was suddenly withdrawn, for reasons which have not been explained to the public, to be kept under the more immediate inspection of the prince-regent her father, and of the queen her grandmother. Upon this occasion, an extraordinary circumstance occurred: the young princess, who had retired as was supposed to prepare for obeying her father's orders, suddenly quitted the house and ran into the street, where she jumped into a hackney-coach, and hastened to throw herself into the arms of her mother: she was, however, obliged to return.

Pall Mall has long been a favourite spot for tasteful and fashionable exhibitions. We have already noticed the British Gallery; and might have mentioned a very charming exhibition of the works of Hogarth, but that it has lately been removed.—Mr. West's last great work, "Christ rejected by the Jews," is now (Sept. 1814.) open to the public in a large room, one of the appendages to the estate of Carlton-house, and formerly the Royal Academy. One cause of astonishment at viewing this great performance, is that the artist Mr. West, president for many years of the Royal Academy of Painting, and in his 75th year, achieved it in less than two years; and he declares it to be his fiftieth annual exhibition to the public without an omission.—It has been a constant practice with those who have attempted to treat any tragical subject of high import, either in poetry, sculpture, or painting, to combine *terror* and *pity* together, in order that, working at the same time upon the heart and the mind, these two powerful agents should have their full effect in exciting the greatest interest in the beholder. It is owing to this sort of magic, that performances, in which these two powers are properly employed, have secured to themselves and their authors the admiration of the world for ages, from Homer to Milton, from Sophocles to Shakespeare, from the painters and sculptors of Athens and Corinth, down to our contemporary artists. Upon this general and unailing principle the venerable president of the royal academy has conceived and designed this great picture. The design may be divided into five principal groups. On the right of the performance, before one of the porticos which adorn

the Gabbatha, or paved court belonging to the *Pretorium*, (a majestic building, supposed to have been erected under the direction of Herod the Great,) stands the first group, composed of our Saviour, the guards attending him, the grateful centurion, and others. The noble and elegant figure of Pilate connects the first group with the second, which contains the high priest Caiaphas, followed by the rulers of the people, and some of the most inveterate enemies of Christ, mixed in the crowd with Peter, Joseph of Arimathea, and a few other disciples. The third group, contrasting that of Christ by the character of its personages, yet bearing a pictorial analogy to it by its passiveness and repose, comprehends the murderer Barabbas, the thieves condemned to be crucified, and some Roman soldiers. In opposition to this, and in perfect sympathy with that of Christ, the group of the holy women appears on the foreground; it contains the mother of Jesus supported by St. John, and surrounded by several women attached by affection, respect, or gratitude, to our Saviour; before them, Magdalen throws herself upon the cross; and, contrasting the figure of the high priest, unites this group with the fifth, which, made up of the Roman guards, the executioners and lictors preparing the instruments for the crucifixion, and opposed most ingeniously to the figures above, closes an uninterrupted chain of most interesting objects. The area upon which this grand epic drama is displayed, measures 16 feet by 23, and contains about a hundred figures, among which not one can be pointed out that does not take evidently some share in the action. Every one is alive and at his post, acts in his own character, and appears to be an indispensable part of the whole; which exemplifies most completely the principle laid down by De Marfy, in his elegant Latin poem upon Painting:

— *Elingui quoniam natura negavit  
Picturæ eloquium, gestus simulacra disertos  
Saltem habeant, et muta licet Pictura loquatur.*

By nature dumb, yet eloquent by art,  
The Graphic Muse must, what she feels, express  
In speaking gestures—and, by signs, address,  
Through wond'ring eyes, the passions of the heart.

As to correctness of drawing, harmony of colouring, and truth of expression, qualities which are so conspicuous from one side of the canvas to the other, we may leave them to the spectator's judgment; and conclude by observing, that, were the different groups separately presented to the eye, each of them would work impressively upon the feelings of the beholder; no wonder, therefore, if united together, and mutually supporting each other by analogies and oppositions, by contrasts and sympathies, they so irresistibly call forth warm expressions of unrestrained applause.

To the west of Carlton-house, and behind the houses in Pall Mall, stands Marlborough-house, built in the reign of queen Anne, at the public expense. This is a very large brick edifice, ornamented with stone, and built in a peculiar taste. The front is extensive; and the wings are decorated at the corners with a stone rustick. The top was originally finished with a balustrade; but that has been since altered, and the first story is crowned with an attic raised above the cornice. A small colonade extends on the side of the area next the wings; and the opposite side of the area is occupied by offices. When this structure was finished, the late duchess of Marlborough intended to have opened a way to it from Pall Mall, directly in the front, as appears from the manner in which the courtyard is formed; but, sir Robert Walpole having purchased the house before it, and not being upon good terms with the duchess, she was prevented from executing her design. The front, next the park, resembles the other; only, instead of the two middle windows in the wings, there are niches for statues; and, instead of the area in front, there is a descent by steps into the garden. The apartments within are noble and well disposed; and the furniture

furniture is extremely magnificent. In the vestibule, at the entrance, is painted the Battle of Hochstet, in which the most remarkable scene is the taking the French general, marshal Tallard, and several other officers of great distinction, prisoners. The figures of the great duke of Marlborough, prince Eugene of Savoy, and general Cadogan, are finely executed. The expense of this building exceeded forty thousand pounds.

Having pretty accurately surveyed this neighbourhood, we now take our route through Piccadilly. The name of this long and famous street seems to have originated from a gaming-house erected there, and much frequented at one time by the nobility. The French word *peccadille*, "venial sin, slight deviation from rectitude," may have given some reason for the name of Piccadilly. Lord Clarendon, in his History of the Rebellion, describes it as "a place called Pickadilly, which was a fair house for entertainment, and gaming, with handsome gravel-walks, with shade, and where were an upper and lower bowling-green, whither very many of the nobility, and gentry of the best quality, resorted, both for exercise and conversation." This was in the year 1640: the street was completed in the year 1642, as far as the present Berkeley-street. The first good house built in it was Burlington-house; the site of which was chosen by its noble founder, "because he was certain no one would build beyond him." It is on the north side of the street, and fenced in with a brick wall, about two hundred and twenty feet in length, in which are three gates for the admission of carriages. The front of the house is of stone, and is remarkable for the beauty of the design and workmanship. It has two wings, joined by a circular colonnade of the Doric order. The front was built by the father of the late earl of Burlington, and is more modern than the house. The apartments are in a fine taste; and the staircase painted with great spirit, by Ricci. This house at this moment contains the greatest curiosity in England, the Elgin-marbles, the works of Phidias, the finest sculptor in the world, who died 432 years before Christ. They were taken from the Acropolis of Athens.—On the 21st of June last, this house and its beautiful spacious gardens were the scene of a most elegant fete, given by the members of White's Club to the royal and illustrious personages who were in London at that time. A ball was of course a part of the entertainment, which was graced by a vast number of the most beautiful and elegant women in the world; and we are told that the emperor of Russia danced till five in the morning. At p. 367, we noticed how possible it was to get rid of an impossibility; in plain English, how futile it was to say that the prince-regent, as sovereign, could not attend at a subscription-entertainment: he attended at this, a contrivance having been hit upon to prevent the princess of Wales from being present.

Devonshire-house, built upon the site of the ancient mansion of the Berkeley family, is farther west, and presents a noble appearance.—On the north side of Burlington-gardens, is Paget-house, the town-residence of the earl of Uxbridge.—But, leaving these stately mansions, the tenants of which are but fleeting guests, we turn to an object which generally attracts, and in many points deserves, the attention of the perambulator: we mean St. James's church, on the south side of Piccadilly. It is one of the churches that owes its rise to the rapid increase of buildings in this part of the town; for, the church of St. Martin in the Fields being too small for the inhabitants, and too remote from those in this quarter, Henry Jermy, earl of St. Alban's, with other persons of distinction in that neighbourhood, erected this edifice at the expense of about seven thousand pounds. It was built in the reign of Charles II. and, though a large fabric, was considered as a chapel of ease to St. Martin's. It was consecrated in 1684, and dedicated to St. James, in compliment to the duke of York; and the next year, when that prince had ascended the throne, the district for which it was built was by act of parliament separated from

St. Martin's, and made a distinct parish. The walls are brick, supported by rustic quoins of stone; and the windows, which are large, are also cas'd with stone. The tower at the west end rises regularly from the ground to a considerable height, and is crowned with a neat well-constructed spire; and furnished with a clock more useful than elegant. In this church is a most beautiful baptismal font, of white marble, by Grinlyn Gibbons. It is supported by a column, representing the Tree of the Knowledge of Good and Evil, on which is the serpent offering the fruit to our first parents, who are standing beneath. On the font are three pieces of sculpture: John baptizing Christ; Philip baptizing the Eunuch; and Noah's Ark, with the dove bearing the olive-branch. We must refer our readers to what we have said on the subject of adorning baptismal fonts when we surveyed the church of St. Margaret, Lothbury. We find here nearly the same intention in design; and the execution is even superior.—Over the altar are some exquisite carvings in wood by the same artist, whose elegant and steady chisel seems to have had the privilege of bestowing life on whatever it touched. The principal object is a pelican feeding her young, an ancient emblem of Christ who shed his blood to redeem mankind. The allegory is unfortunately without ground; for it is not true that the female of this solitary inhabitant of the cliffs, and great tyrant of the marthy shores, (where she catches the strayed tribes of young fishes, and carries them in the bag of her beak to her craving nestlings,) ever draws blood from her breast to feed her offspring. The attitude of scratching her feathers and baring her pectoral bone to perform the duty of incubation, has led most innocently to the mistake. However, tenderness, maternal love, and charity, are equally symbolized by either of these allusions.—The organ was presented to this church by queen Mary, the consort of William III. in 1691; three years after the revolution.—The parish is a rectory, in the gift of the bishop of London; and the church is generally well attended on Sundays, and on Wednesdays and Fridays in Lent, on account of the excellent sermons that are preached there by several very popular orators.

We find nothing worthy of notice on this side the street, till we reach that curious Egyptian Temple, called Bullock's Museum, containing one of the most complete collections of natural subjects and works of art now existing. This building was erected in 1811-12, by Mr. William Bullock, as an establishment for the advancement of the science of natural history. In magnitude and expense, it is presumed to be unparalleled as the work of an individual. The specimens it contains are arranged according to the Linnæan system; and consist of upwards of fifteen thousand species of quadrupeds, birds, reptiles, fishes, insects, shells, corals, &c. which have been collected at an expense exceeding thirty thousand pounds. The building was designed and executed under the direction of Mr. P. F. Robinson. In choosing the Egyptian style, the architect has endeavoured to afford a correct specimen of that mode of building, of which we have not another in this country. The artist has succeeded in his attempt; for the architecture is classically Egyptian, the forms and ornaments having been scrupulously copied from the prints which accompany the "*Voyage en Egypte*," published by Denon. The interior surpasses much the expectation of the visitor, who, instead of a few sarcophagi and mummies, embalmed ibises, and dried alligators, finds specimens of nearly all the works of nature.

The Temple is divided in two parts. The large room, with galleries round it, contains the birds, fishes, amphibians, insects, &c. besides many works of art, particularly various specimens of ancient and modern armour, and curiosities from America, Africa, and Asia; and is called the *London Museum*. This may be seen separately, the price only one shilling; and indeed here are curiosities enough to occupy the attention as long as it can be kept on the stretch at one time without fatigue.—The other part contains the quadrupeds; and (according to the modern taste for

Greek names) is called the *Pantherion*, from *παν*, all, and *Σαρπη*, a wild beast. The arrangement of this place is on a plan entirely novel, intended to display the whole of the known quadrupeds in a manner that will convey a more perfect idea of their haunts and mode of life than has hitherto been done, keeping them at the same time in their classical arrangement, and preserving them from the injury of dust and air. It occupies an extensive apartment, nearly forty feet high, erected for the purpose. The visitor is introduced through a basaltic cavern (of the same kind as the Giants' Causeway, or Fingall's Cave, in the Isle of Staffa) into an Indian hut, situated in a tropical forest, in which are displayed most of the quadrupeds described by naturalists; with correct models from nature, or the best authorities, of the trees and other vegetable productions of the torrid climes, remarkable for the richness or beauty of their fruit, or the singularity of their foliage; the whole assisted by an appropriate panoramic effect of distance, which makes the illusion produced so strong, that the surprised visitor finds himself suddenly transported from a crowded metropolis to the depth of an Indian forest, every part of which is occupied by its various savage inhabitants.

From these we turn to the polished inhabitants of Jermyn-street, who, though directly behind St. James's church, do not seem to profit much by the excellent principles delivered from that pulpit, as they fill harbour disgraceful nests of gamblers, and tolerate those houses where several of our young nobility ruin themselves in the genteel and most elegant manner.

At the end of Piccadilly, on the south side of the road leading to Kensington, stands St. George's Hospital. This undertaking was set on foot, in the year 1733, by some gentlemen who had been concerned in a charity of similar description in Chapel-street, Westminster. But, the house in which that institution had been carried on being old and ruinous, it was found necessary to remove; when a considerable number, but not the majority, gave the preference to this building, which had been the residence of lord Lanesborough, who died there in 1724, but was then vacant. Having determined upon this spot, and being supported by the medical department, the minority separated from the old institution, and solicited subscriptions for their new establishment, with such zeal, that in less than three months the wings were built, and in a condition to receive patients. This hospital enjoys a fine situation, and has all the benefit of a clear and pure air. It is a very neat building, and, though extremely plain, yet is not devoid of elegance. It has two small wings, and a large front, with only one door, which is in the middle, and to which there is an ascent by a few steps. On the top of this part of the building is a pediment raised above the rest of the edifice; and under this ornament is a stone with an inscription, expressing the noble use to which this structure is applied.

Returning through Piccadilly on the north side, we pass many elegant houses of the nobility, and come again opposite to St. James's church, where we find the Albany, which extends backward to Burlington Gardens, a street so called from the north wall of the gardens of Burlington-house forming one side of it. The front of the Albany, in Piccadilly, is formed by two handsome buildings, between which is a passage into the court-yard of Melbourne-house, late the residence of the duke of York, from whose second title its name is derived. It is now converted into an hotel; and in the gardens behind are two rows of convenient chambers, on a plan nearly resembling those of the inns of court; to which there are entrances at each end. Between these ranges of buildings is a long paved passage, covered by a roof, supported on small pillars; and the entrance to each door is sheltered from the weather in a similar manner. This leads to Saville-row.

St. Martin, as we are told in the legend, divided his mantle in two, gave a part to a naked beggar, and kept

the other for himself; a most excellent instance of charity and disinterestedness, which, whether founded upon fact or not, may, like other *apocrypha*, be read "for example of life and instruction of manners." The church of St. Martin in the Fields has divided its mantle, or parish, among many others; and St. Anne's was separated from it, as well as St. James's. This sort of extra-secration took place in the year 1661; previous to which, a piece of ground was laid out, under the authority of the bishop of London, in Kemp's field, now King-street, for the site of a church and church-yard, and also for a glebe for the support of a rector. But, the inhabitants not being empowered by this act to raise money for accomplishing their purpose, the building of the church was long interrupted; at length a second act was obtained to enable them to raise the sum of five thousand pounds, for the completion of the church, rectory-house, &c. and on the 25th of March, 1685, the church and cemetery were consecrated by the bishop of London. The walls of this church are of brick, with rustic quoins of stone, and at the east end is a large modillion-cornice and triangular pediment. This church has been lately repaired, and a handsome painted-glass window has been put up at the east end. The tower and steeple at the west end were also rebuilt at the same time. The interior of the building is handsome: the roof is arched, and divided into pannels; it is supported by columns of the Ionic order; and the gallery is raised on those of the Tuscan order. The organ is the gift of king William. The parish is a rectory, in the gift of the bishop of London.

Against the tower is a tablet erected to the memory of Theodore-Anthony Newhoff, king of Corsica, who died in this parish in the year 1756, soon after his liberation from the King's Bench prison by an act of insolvency. The malice of fortune pursued this unfortunate man even after death. The friend, who sheltered him in the last days of his wretched existence, was himself so poor as to be unable to defray the cost of his funeral; and his remains were about to be consigned to the grave by the parish, when a Mr. Wright, an oilman, in Compton-street, declared that he, for once, would pay the funeral expenses of a king; which he actually did. The marble was erected, and the epitaph written by Horace Walpole. It is as follows:

The grave, great teacher, to a level brings  
Heroes and beggars, galley-slaves and kings.  
But Theodore this moral learn'd ere dead;  
Fate pour'd its lessons on his living head,  
Bestow'd a kingdom, and denied him bread.

We cannot help observing here the preposterous idea, that Theodore learned the moral, hinted in the two first lines, *before he was dead*. Surely we are not to expect any such learning when cold and deaf in the grave, which, if a teacher, *must* give its lessons to the living. This epigrammatical epitaph is altogether unworthy of the witty and learned author, who most likely produced it as an *extempore* effusion of his sensibility, without intending to have it recorded.

In the parish of St. Anne we find Soho-square, which was built in the reign of Charles II. It is of considerable extent, with a garden in the middle, enclosed with iron rails. In the centre is a statue of Charles II. standing upon a pedestal, placed in the midst of a small basin; at his feet lie the representations of the four principal rivers, the Thames, the Trent, the Humber, and the Severn. This square was originally called Monmouth-square, in honour of the duke of Monmouth, whose mansion stood on the south side of it. This house afterwards came into the possession of lord Bateman, by whom it was pulled down, and the site of it and the gardens covered with a number of dwelling-houses. The name of the square was probably altered to King's square after the downfall of the duke; which Mr. Pennant, upon the authority of Samuel Pegge, esq. says was changed to Soho by the admirers of that unfortunate man, that being the word of the day at the battle of Sedgemoor.—On the east side of Soho-square,

at the corner of Sutton-street, is Carlisle-house, celebrated some years ago as a place of evening-entertainment for the nobility and gentry; and immediately adjoining is Berkeley-house, now converted into a coffee-house.—But, the most worthy subject of notice in this square is, that it has been long the residence of a most respectable and beloved man, sir Joseph Banks, whose travels round the world with captain Cook, and whose liberality in encouraging the arts and sciences, and instructive hospitality, are too well known and too justly appreciated to want our encomiums.

In Sutton-street, leading from the square to Crown-street, (formerly Hog-lane,) is St. Patrick's chapel, a considerable establishment supported by Roman catholics. The organ, which is particularly fine, has been played for many years by one of the first organists of France, who emigrated at the beginning of the revolution; and the altar-piece does honour to Mrs. Cowley. It is a Descent from the Cross; and the composition evinces a great deal of pathos and taste.

We now enter Oxford-street, or as it is sometimes called Oxford-road; on the left-hand side of which, the first public building we find is that called the Pantheon, originally begun in 1768, and finished in 1771, being intended for concerts and other musical performances. It was built by Mr. James Wyatt, (a first-rate architect, who lately met his death by being unfortunately overturned in a chariot;) and regarded both by natives and foreigners, as the most elegant structure in Europe, if not on the globe. This splendid and elegant edifice was opened as a place of public entertainment, on Monday, January 27, 1772; and, as we are informed by the Gentleman's Magazine of that month, "to a crowded company of between fifteen hundred and two thousand people. Imagination cannot well surpass the elegance and magnificence of the apartments, the boldness of the paintings, or the disposition of the lights, which last are reflected from gilt vases, suspended by gilt chains. Besides the splendid ornaments that decorate the rotundo or great room, there are a number of statues, in niches below the dome, representing most of the heathen gods and goddesses supposed to be in the ancient Pantheon of Rome. To these are added three more of white porphyry, the two first representing the present King and Queen, the last Britannia. The whole building is composed of a suite of fourteen rooms, all of which are adapted to particular uses, and each affording a striking instance of the splendour and profusion of modern times." During the first winter there were assemblies only, without dancing or music, three times a-week. On other days, each person paid five shillings for seeing the building only. But the great room, though spacious, was so crowded on all these occasions, that in July a general meeting of the proprietors was advertised, in order to take into consideration the enlarging of the building. After the opera-house in the Haymarket was burnt down in 1790, this matter-piece of architecture was transformed into a theatre for the performance of operas; when, though many of its internal beauties were hidden or annihilated, it still was a perfect model of a complete theatre in its new form. But unhappily, before it had been used as a lyric theatre two seasons, it was burnt down by some fatal accident or design, which has never yet been divulged to the satisfaction of the public. During its pre-existent state, it was here that the Agujari and Pacchierotti exercised their talents; it was here that the king, queen, and royal family, with all the first nobility in the kingdom, assembled at the commemoration of Handel in 1784; and it was here that one of the first bands in Europe graced the orchestra, alternately headed by Giardini, La Motte, Cramer, or Giornovich, who, with Fischer, Crosdil, Cervetto, &c. produced effects in symphonies, concertos, solos, and vocal accompaniments, which had never before been heard in this country. No person of taste in architecture or music, who remembers the Pantheon, its exhibitions, its numerous, splendid, and

elegant, assemblies, can hear it mentioned without a sigh! The front in Oxford-street still remains, and presents a simple but classical portico. The building has been of late years principally used for exhibitions, and occasionally for masquerades and operas. About ten years ago, an ingenious French emigrant exhibited there a sort of orrery, called Cosinorama, in which, by the contrivance of an interior moveable roof, the revolutions of the heavenly bodies were made conspicuous and perfectly intelligible to the visitors; but, the expenses exceeding considerably the sums of money received at the door, the proprietors were obliged to give up the concern, and a total eclipse took place.

On the south of Oxford-street we find Golden-square, which is very neat, though small, containing about two acres. The centre of it is encompassed by a plain iron railing, within which are grass-plats and gravel-walks; and the whole is surrounded with handsome and uniform buildings. It was originally called Gelding-square, from the sign of a neighbouring inn.

West of St. James's parish, is that of St. George, Hanover-square, the church of which stands in Great George-street. This parish was also taken out of St. Martin's in the Fields. The commissioners for building the fifty new churches, appointed by act of parliament in the reign of queen Anne, observing the want of one in this part of the town, on account of the great increase of buildings and inhabitants, erected this elegant structure, which was finished in 1724, and, in compliment to the reigning monarch, was dedicated to St. George the Martyr. It has a plain body, with an elegant portico; the columns, which are Corinthian, are of a large diameter, and the pediment has an acroteria, but without further ornament. It has a tower, which is elegantly adorned at the corners, with coupled Corinthian columns that are very lofty; these are crowned with an entablature, which, at each corner, supports two vases; and over these the tower still rises, till it is terminated by a dome, crowned with a turret, that supports a ball, over which is a vane. It is a rectory, the patronage of which is in the bishop of London. The ground on which this church stands was given by lieutenant-general William Stewart, who also bequeathed four thousand pounds to the parish, towards erecting and endowing a charity-school.

At the north end of George-street is Hanover-square, from which the church receives its distinctive appellation. This square is so called in compliment to the present royal family. It contains about two acres of ground, in the centre of which is a garden, enclosed with rails; the houses, which are built in the modern taste, make an elegant appearance, and are inhabited by persons of the first distinction. The house in the south-west corner is considered the best piece of brick-work in the metropolis.

West from Hanover-square is Grosvenor-square, which is so named from sir Thomas Grosvenor, its original proprietor. The area of this square contains about five acres; and in the middle is a large garden, surrounded with palisado-rails, placed upon a circular dwarf wall. The garden is laid out into walks, and adorned with an equestrian statue of king George I. gilt, which stands on a pedestal in the centre. The square is surrounded with elegant houses, which, however, are very far from being uniform; some being of stone, others of brick and stone, and others of brick only. Indeed, here is the greatest variety of handsome buildings that is any where to be met with in so small a compass.

It is curious to see the difference between this western part of the metropolis, and the city. Here we do not find that hurry, that trepidation occasioned by urgent business. The pavements, if crowded, exhibit another sort of beings; the streets are much larger, and skies clearer, the houses free from the besmearing breath of smoking chimneys; the carriages of the nobility are substituted for carts and drays. In fact, the *viator* thinks himself transported to another hemisphere. The shops are perhaps

haps not so brilliant as they are in the best streets of the city and in the Strand, which is a sort of a continuation to it; but their uniformity and neatness make full amends for an inferior look as to richness and wealth.—This is generally and not improperly called the fashionable part of the town. Indeed many streets are entirely built for the residence of private families, without a shop to be seen from one end to the other. Public-houses are concealed in smaller streets; and stables, always called Mews, are placed away from public view.

Conduit-street with a gentle slope leads from Swallow-street to Bond-street; and is built, as well as a great part of the last-mentioned street, upon the site of a field formerly called Conduit Mead, from one of the conduits which supplied this part of the town with water.—Here is a chapel, called Trinity-chapel, the history of which is very remarkable. It was originally a wooden field-chapel, erected by James II. and fixed upon wheels, for the purpose of being conveyed whenever his majesty went; it being fitted up for his private masses. In the year 1686, it was in his camp at Hounslow-heath, where it remained until some time after the revolution, when it was removed, and placed near the north end of Old Bond-street. Here it remained, and was used as a chapel by the neighbouring inhabitants, until the year 1716, when it was demolished, and the present building erected for the same use.

From the west end of Conduit-street, is a street called Bruton-street, leading into Berkeley-square, which derives its name from its vicinity to the former mansion of lord Berkeley of Stratton. This square contains about three acres of ground, laid out in the form of a long parallelogram. It is surrounded with very elegant buildings; and in the centre is an equestrian statue of his present majesty, erected by the princess Amelia, his majesty's aunt. The whole of the south side of it is occupied by the magnificent mansion and gardens of the marquis of Lansdown, which are separated from the square by a brick wall.—On Hay-hill, at the south-east corner of this square, a skirmish took place, in the year 1554, between a party of insurgents, under sir Thomas Wyatt, and a detachment from the royal army, in which the former were repulsed. After the subsequent defeat and capture of sir Thomas, at Ludgate, he was executed, and his head set up on a gallows, at this place; and three of his associates were hung in chains near their leader.

West of Berkeley-square is May-fair, formerly an open space, whereon a fair was held annually in the month of May; but now covered with a chapel, several streets, and a small market, called Shepherd's Market. On the north side of May-fair is Chesterfield-house, an elegant structure built by the late earl of Chesterfield, from whom it derives its name. It consists of a main body with detached wings, connected by a very beautiful colonnade, the entablature of which is crowned with an attic balustrade and pedestals above each column, on which are placed elegant vases. This is one of the very few buildings in London, which M. Grosley allows to be equal to the hotels of the nobility in Paris. See his *Tour to London*, vol. i. p. 42.

Having surveyed all that deserves notice on the south of Oxford-street, we cross over to the north, in order to describe a part of the metropolis which has been entirely built within the latter half of the last century. To begin by that place so often the scene of executions, (see p. 118.) we must acquaint our readers with the origin of Tyburn. The village of that name appears to have been nearly where the north-west part of Oxford-street now is: Mary-bone Court-house being supposed, from the number of human bones dug up there in 1729, to stand upon the site of the old church and cemetery belonging to it. This church, which was dedicated to John the Evangelist, being left alone by the highway side, in consequence of the decay of the village, was robbed of its books, vestments, bells, images, and other decorations; wherefore, the parishioners petitioned the bishop of London for leave to take down their old church, and erect a new one else-

where; which being readily granted, they, in the year 1400, built a church, where they had for some time a chapel; and the structure, being dedicated to the virgin *Mary*, received the additional epithet of *borne*, or *bourne*, from the neighbouring brook. This is the best etymon that can be given of the name of this parish. Some have supposed it to arise from the circumstance of so many bodies having been buried anciently in the cemetery, as if "St. Mary le bone," *Sæta Maria ab ossibus*: others as if it was originally *Sæta Maria Bona*, "St. Mary the Good;" but we are of opinion it meant St. Mary le bourne, or brook, *Sæta Maria à rivulo*, "St. Mary by the brook." However, if this were of any consequence, it might be easily settled by looking at the ancient deeds, if they are still in existence any where, which belonged to the convent erected at Barking in Essex for the sister of St. Erkenwald, as mentioned at p. 398. The ancient custom, we embrace this opportunity shortly to observe, was to take a brook or a river as a steady and lasting sort of limit to property: hence the word *bourne*, or brook, was used for *borne*, or limit, a boundary to any fixed place; and both words became synonymous. Tyburn, therefore, is not derived, as some will have it, of *tye* and *burn*, from the old manner of capital punishments; but from the *bourne*, or brook, called *Tye*, *Ty-bourne*, running by the village to which it gave its name; and mentioned in the Domesday-book, as a manor at that time belonging to the abbess and nuns of the convent mentioned above; and, in the decretal sentence of Stephen archbishop of Canterbury, in the great controversy between Eustace bishop of London, and William abbot of Westminster, in the year 1222, this rivulet is expressly called Tyburn.

There was formerly a bridge over this rivulet, in Oxford-road; and at the east end of it stood the lord-mayor's banqueting-house, in the neighbourhood of which the citizens of London had nine conduits, that were erected about the year 1238, for supplying the city with water; but, having been since better supplied from the New River, the citizens, in the year 1703, let the water of these conduits on lease, for seven hundred pounds per annum. While the water for the use of the city was derived from these conduits, it was usual for the lord-mayor and aldermen on horseback, accompanied by their ladies in waggons, to ride thither, occasionally, to view them; after which they were entertained at the banqueting-house. Stow gives the following account of one of these visitations, on the 18th of September, 1562. "The lord-mayor (Harper,) aldermen, and many worshipful persons, and divers of the masters and wardens of the twelve companies, rid to the conduit heads, for to see them, after the old custom: and afore dinner they hunted the hare, and killed her, and thence to dinner at the head of the conduit. There was a good number, entertained with good cheer by the chamberlain. And after dinner they went to hunting the fox. There was a great cry for a mile; and at length the hounds killed him, at the end of St. Giles's. Great hallowing at his death, and blowing of horns. And thence the lord-mayor, with all his company, rode through London, to his place in Lombard-street." This banqueting-house, under which were two cisterns for the reception of the water of the conduits, having been many years neglected by the citizens, was in the year 1737, taken down, and the cisterns arched over.

The old church, which was a very mean edifice, was pulled down, and the present edifice erected, in 1741. It is a plain brick building, on each side of which is a series of small arched windows; and the only ornaments belonging to it, are a vase at each corner, and a turret at the west end. The church of Tyborne appears to have been anciently a vicarage, in the gift of the prior and convent of St. Lawrence de Blackmore, in the county of Essex, who converted it into a curacy; the advowson of which continued in them till the dissolution of their priory. In the year 1553, Edward VI. granted it to Thomas Reve, to be held in soccage of the manor of East Greenwich;

since which it has come into the possession of the earls of Oxford; in whose hands it still remains. At a short distance from the church, in the New Road, is the work-house for this parish, which is one of the largest and most commodious establishments of that description, in or near the metropolis. It was erected in the year 1773, and, with the infirmary adjoining, is fitted up with every convenience which philanthropy could suggest, for the comfort of those whose age or infirmities compels them to seek such an asylum.

To the east of the church was a place of public entertainment, nearly upon the plan of Vauxhall, called Marybone Gardens. In the reign of queen Anne there had been a noted tavern in this place, with bowling-greens, much frequented by persons of the first rank. It afterwards grew into disrepute, and is made by Gay the scene of Macheath's debauches. About the year 1740, Marybone Gardens were famed for public breakfasts and evening concerts. Some of the first singers were generally engaged there; and fire-works were frequently exhibited. In 1777, or 1778, the gardens were shut up, and the site let to builders. The ground is now occupied by Beaumont-street, part of Devonshire-street, and part of Devonshire-place. From the name of Bowling-green-alley, still given to the street which formed their southern boundary, this was probably the place alluded to by lady Mary Wortley Montague, in this line: "Some dukes at Marybone bowl time away;" and which is meant by Penruan, who, when speaking of the duke of Buckingham's description of the house, now the Queen's Palace, and his manner of living there, inserted in Doddsley's London and its Environs, says, "He has omitted his constant visits to the noted gaming-house at Marybone; the place of assemblage of all the infamous sharpers of the time;" to whom his grace always gave a dinner at the conclusion of the season; and his parting toast was, "May as many of us as remain unchanged, next spring, meet here again."

Near this spot, and to a considerable distance to the north and west of it, was once a royal park, well stocked with game; and in queen Elizabeth's Progresses it is recorded, that, "on the third of February, 1600, the ambassadors from the emperor of Russia, and other Muscovites, rode through the city of London to Marybone Park, and there hunted at their pleasure; and shortly after returned homeward." If, two hundred years ago, the annalist was proud to mention the procession of ambassadors from the Hyperborean countries through the city of London to Marybone Park, with what self-satisfaction may we not look at our own times, when the very wrist of the emperor of Russia fell down benumbed with the long ceremony of shaking hands with Mr. Bull and his numerous family. Had some prophet at that time been able to reveal to our ancestors the sum of our happiness, they would have died with regret at having been *born too soon*.

Near the place where the lord-mayor's banqueting-house stood, is Stratford Place, which, for uniformity and neatness, may be classed among the principal ornaments of this parish. It consists of two uniform rows of houses, leading into a small area, or square, the upper or north side of which is formed by an elegant edifice, with a stone front, which is composed of a rustic basement-story, supporting a range of columns of the Ionic order, crowned with an entablature, decorated with ox-sculls, from the horns of which hang neat festoons of flowers and foliage. Above this entablature rises a triangular pediment, from the sides of which a balustrade, ornamented with elegant vases, is continued along the top of the building. From each side of this building, a Doric colonnade, crowned with a balustrade, and ornamented with vases, extends to the east and west sides of the area, the fronts of the houses in which are stuccoed, and the windows of the principal story ornamented with a triangular and a circular pediment, alternately. The sides of the street, leading into the area, are exactly similar. All the houses are of brick; but those in the centre, and at the ends, are ornamented with stone, in

a style corresponding with the principal building in the area. On each side of the entrance is a small house for a watchman, on the top of which is the figure of a lion, carved in stone.

Farther to the east, in Vere-street, is Oxford Chapel; a handsome brick building, strengthened with rustic quoins of stone. The principal entrance, at the west end, is by a flight of steps leading to a porch of the Doric order; the entablature of which supports a triangular pediment, containing a carving in stone of the arms of the founder, who appears from them to have been a descendant of Aubrey de Vere, the last earl of Oxford of that family, who died in 1702. The steeple springs from the centre of the roof, at this end, and consists of three stages, viz. a square tower of brick, above which is an octagon tower, open on all the sides, and crowned with a dome, from which springs a second, and smaller, octagon tower, which supports a ball and vane. At the east end is a Venetian window, above which is a triangular pediment. A modillion-cornice of stone is continued all round the building, and at each cornice is a handsome stone vase.

The particular increase of this part of Marybone began between the years 1716 and 1720, by the building of Cavendish-square, which contains an area of between two and three acres, and is encompassed with handsome buildings, particularly on the north side, which is formed by four detached edifices. Of these, the two in the centre have elegant stone fronts, and, as well as the two at the extremities, are exactly similar to each other. They contain a rustic basement-story, which supports a range of handsome Corinthian columns, crowned with their proper entablature. Above these is a triangular pediment, in which is a circular port-hole window, ornamented with a wreath; and the roof is concealed by an attic balustrade. The other two houses on this side are neat brick buildings, with rustic quoins of stone; the ornaments of the windows are also of stone, and above the centre one is a carved tablet, with a handsome festoon of flowers. On the west side of the square is the noble mansion of the earl of Harcourt; but it is entirely concealed from view by a high brick wall. In the centre of the square is an equestrian statue of William duke of Cumberland, who gained the battle of Culloden, which terminated the rebellion in Scotland, in the reign of George II.

Maitland, in his History of London, published in the year 1739, states the number of houses in Marybone to be five hundred and seventy-seven, and the persons who kept coaches to be thirty-five. At present, the number of houses is more than twelve thousand, and the number of coaches must have increased in a proportionate, if not a greater, ratio. Some idea may be formed of the immense increase in the rental of this parish, from the land-tax assessment; the quota to which, 564l. 5s. 10d. was raised eight years ago by a rate of only one farthing in the pound. This, allowing for some deficiencies in collecting, makes the rental amount to nearly five hundred and fifty thousand pounds. All the north side of Oxford-street, which Pennant says he remembered "a deep hollow road, full of sloughs, with here and there a ragged house, the lurking place of cut-throats," is in this parish.

Portman-square is one of the largest and handsomest squares in the metropolis. The centre is laid out in shrubberies and grass-plats, intersected with gravel-walks; and the surrounding buildings are very elegant; it is, however, to be regretted, that the *coup d'œil* is wounded by the want of correspondence among them; some being remarkable for a profusion of architectural elegance, while others are distinguished only by a neat simplicity. At the north-west angle is the elegant mansion which was the residence of the late Mrs. Montague, who was celebrated for the dinner she annually gave to the chimney-sweepers, on the 1st of May, on the lawn before her house.

Were we to notice all the private houses which deserve to be looked at for their elegance and neatness in this part of the town, we might swell this article to many

volumes. We must therefore confine ourselves to the duty of a surveyor, and merely point out streets and squares as they suggest any thing interesting to our readers. —The late duke of Manchester built a house in a square which from it received its name. The square is small, but neat; and the centre, surrounded with iron railing, is tastefully laid out in compartments of shrubs and flowers. Near this, is the Spanish ambassador's chapel, which was kept open all through the French revolution, and even when we were at war with Spain, for the accommodation of the Roman catholics of the neighbourhood. And, indeed, what has war to do with the religious sensibilities of man? Nothing but a narrow-minded speculation would have suggested the idea of shutting up this and other places of worship, viz. the Sardinian, Bavarian, &c. chapels. Thanks to the spirit of toleration, this was not the case.

On the east of Cavendish-square, is one of the broadest and best-built streets in the metropolis: it is called PORTLAND PLACE. Its breadth is upwards of a hundred and twenty feet; and the houses on each side are regular, lofty, and elegant; the middle ones are particularly adorned with composition bas-reliefs and cornices. This place leads to the New Road; and the extensive plantations and preparations made, or making, on the crown-land, to the north of the New Road, called Marybone Park, though more commonly the Regent's Park, and the passing of an act of parliament for a grand new street from the proposed Park to Charing Cross, having attracted the general attention of the public, we submit to our readers so much of the accepted Plan of Mr. John Nash, architect, as will convey a clear idea of the intended improvements.

"Marybone Park lies on the north-west boundary of the town, abutting south on the New Road from Paddington to Islington; and part of it advances southward of the New Road to the ends of Portland Place, Harley-street, and Portland Road, all which parts of the town have long since been built upon to the southern boundary of Marybone Park. The northern boundary lies open to Hampstead and Highgate; and, great as the speculations in building are, the period must be very remote when Marybone Park shall be enclosed on its northern side. The houses forming the streets abutting on the southern boundary of Marybone Park, such as Baker-street, Nottingham-street, Nottingham Place, High-street, Devonshire Place, Harley-street, and Portland Place, are of the general class of houses occupied by the gentry of the metropolis. Portland Place is the most magnificent street in London; and, in point of breadth, Devonshire Place and Baker-street are next in rank.

"The artificial causes of the extension of London are the speculations of builders, encouraged and promoted by merchants dealing in the materials of building, and attorneys with moneyed clients facilitating, and indeed putting in motion, the whole system, by disposing of their clients' money in premature mortgages, the sale of improved ground-rents, and by numerous other devices, by which their clients make an advantageous use of their money, and the attorneys create to themselves a lucrative business from the agreements, assignments, leases, mortgages, bonds, and other instruments of law, which become necessary throughout such complicated and intricate transactions. It is not necessary for the present purpose to enumerate the bad consequences and pernicious effects which arise from such an unnatural and forced enlargement of the town, further than to observe, that it is the interest of those concerned in such buildings that they should be of as little cost as possible, preserving an attractive exterior, which Parker's stucco, coloured bricks, and balconies, accomplish; and a fashionable arrangement of rooms on the principal floors, embellished by the paper-hanger, and a few flimsy marble chimney-pieces, are the attractions of the interior. These are sufficient allurements to the public, and ensure the sale of the houses, which is the ultimate object of the builders; and to this jinery every thing out of sight is sacrificed, or is no fur-

ther an object of attention, than that no defects in the constructive and substantial parts shall make their appearance while the houses are on sale.

"The principles on which this Plan, and the designs accompanying it, are formed, and the objects proposed to be obtained, are, that Marybone Park shall be made to contribute to the healthfulness, beauty, and advantage, of that quarter of the metropolis; that the houses and buildings to be erected shall be of that useful description, and permanent construction, and possess such local advantages, as shall be likely to assure a great augmentation of revenue to the crown at the expiration of the leases; that the attraction of open space, free air, and the scenery of nature, with the means and invitation of exercise on horseback, on foot, and in carriages, shall be preserved or created in Marybone Park, as allurements and motives for the wealthy part of the public to establish themselves there; and, that the advantages which the circumstances of the situation itself present shall be improved and advanced; and that markets, and conveniences essential to the comforts of life, shall be placed in situations, and under such circumstances, as may induce tradesmen to settle there.

"It is proposed that the two principal entrances into Marybone Park shall be Portland Place and Baker-street; that Portland Place shall be continued in the present direction, and of the same width, for the length of fifty yards northwards into Marybone Park; that Baker-street (widened to the same breadth as Portland Place) shall also be continued northward to the same distance, and that the extreme ends of those streets shall be united by a cross street. The whole area enclosed by those streets (which will contain a space considerably larger than St. James's and the Green Parks together) is proposed to be laid out and planted as a Park, and appropriated to houses of the first magnificence; for which reason there will be no other access to them but Portland Place, Baker-street, and a street opposite Devonshire Place; and to disguise the appearance, and to prevent the impression of having crossed the New Road, it is proposed that the field immediately adjoining the end of Portland Place, together with the like quantity of the field beyond the New Road, shall be converted into a large circus: the intervention of the plantation in the area within the railing of which circus, and the continuation of the street all round, will effectually connect Portland Place with Marybone Park, without producing the least sensation of having crossed the New Road. This Circus will enclose an area equal to that of Lincoln's-inn-fields, and be in unison with the magnificent sale of Portland Place.

"In the centre of the Park, on the summit of the rising ground from which it falls on every side, it is proposed to erect another circus, with the fronts of the houses looking externally over the Park which surrounds it; and round the circus so formed, to make a circular road, separated only from the Park by a ha-ha, or sunk fence, such as divides Kensington Gardens from Hyde Park; the circumference of the road will be  $\frac{3}{4}$ ths of a mile. Within the external curve of houses an inner circus is proposed to be formed, of equal magnitude with that proposed at the end of Portland Place. The Park may be embellished with a lake of water in the form of a river, equal in magnitude to the Serpentine River in Hyde Park. At the upper part of the Park it is proposed to make a canal or basin of water, of the length and breadth of that in St. James's Park; and round the sides of the Canal to form three terraces of gravel, the upper terrace being the street, with easy slopes of turf between, and rows of trees regularly planted, forming avenues to the terraces. The canal or basin to be surrounded by a stone balustrade, and fed from the spring on Primrose-hill, through an ornamented fountain erected in the centre of the canal; those promenades, and that style of decoration, will be novelties to the metropolis, and the houses which surround the terraces will also participate in the scenery of the parks behind them. A square is also proposed to be built on the south

South side of the Park, immediately beyond the New Road, of the size of Ruffel-square, (the largest in London,) with a street at each end, of the same breadth as Portland Place, leading to it. The houses on the north side of this square and street will enjoy the scenery of the Park, as will also the two great streets which surround the middle park.

"The houses before described, and the park which they enclose, are situated in the middle of Marybone Park, and occupy 250 acres, leaving 260 acres round them, which it is proposed to appropriate in the following manner. A circular road to be made round the boundary, leaving a breadth of 120 feet next the boundary-line for building; the road to be 50 feet wide, and the remaining ground in front of the road to be laid out and planted as lawns or parks; the road to be separated from the scenery only by a sunk fence, as before described, affording to the houses that may be built on the ground between the road and the boundary-line views over those lawns or parks; and it is presumed, that those who are tempted to build or purchase houses by the sides of the dusty roads at the outlets of the town, for the sake of looking over fields or gardens, often naked and without trees, with the continual apprehension of those fields and gardens being also covered with buildings, and their prospects destroyed, will prefer to establish themselves by the side of a road faced with such dressed scenery as it is proposed to make round Marybone Park, and which will be continually improving as the plantations flourish, and of the view of which their houses cannot be deprived. At the westernmost part of the circular road, the ground to be planted is so broad as to admit of two crescents of houses, each fronting the most beautiful part of the scenery, each crescent having a sort of park of its own in front, and the water which adorns it full of variety; besides the beauties of such a road and scenery, it will form a ride or drive, three miles in length, (besides the circular road in the interior of the Park before described,) a circumstance which none of the old Parks possess; and, when all those attractions and advantages are considered, a reasonable hope may be entertained that the great and opulent will settle here in preference to the present favoured spots in the vicinity of the old Parks, particularly if the grand approach from the houses of parliament, courts of law, and state-offices in Westminster, to Portland Place, herein-after recommended, should ever be accomplished; for then Marybone Park will be brought as near by distance, and nearer by time, to those places of constant resort, as either Hyde Park or Grosvenor Place; and the grandeur of the access, and the vicinity of the great, will all be additional inducements to the wealthy who seek for residences where there is country scenery, to establish themselves on the sides of the circular road.

"The interior and exterior Parks are proposed to be let in parcels, of from four to twenty acres, for the purpose of building villas; and so planted that no villa should see any other, but each should appear to possess the whole of the Park; and that the streets of houses which overlook the Park should not see the villas, nor one street of houses overlook those of another street.

"After having thus transferred to Marybone Park the allurements which are the obvious causes of the preference given to the favourite spots of residence in the neighbourhood of the Parks, and to other favourite situations on the skirts of the town, it remains to consider and take advantage of the local circumstances favourable to improvement presented by the place itself. The first of these is the intended navigation between the Grand Junction Canal at Paddington, and the River Thames below London bridge; by the extension of that canal eastward behind Camden Town, by Islington, Hoxton, and Bethnal Green; and, thence bending southward by Stepney, to unite, just above Poplar cut, with the Thames at Limehouse; (thus the metropolis will be nearly insulated.) The line of that canal will be across the ground of Marybone Park, in a north-easterly direction; and it is proposed to take

advantage of that canal in the formation and supply of the ornamental water which is to embellish the Parks, and to carry a lateral cut, just before it leaves Marybone, in the direction and nearly as far as the New Road, a few yards to the east of the point where Portland Road enters the New Road, at which place the proposed lateral cut will terminate in a large basin." This is already done.

"The advantages of this cut are obvious. It will bring the produce of the country, and the articles which the sea and Thames supply, at a cheaper rate to the most central situation of that populous neighbourhood. And round this basin it is proposed to establish a MARKET, as large as Covent-Garden market, for the supply of vegetables; also a hay-and-straw market, as large as that at the end of Piccadilly; a corn-market, and corn-exchange, as in the city; coal-wharfs and coal-exchange; a meat-and-poultry market, and butter-and-eggs market, on extensive scales; all of which will be supplied by the easy and cheap means of water-carriage. On the sides of this branch of the canal will be established wharfs for timber, lime, stone, manure, &c. and on each side a row of houses for those employed in the commerce of the canal. By this cut all the conveniences of life will be brought home to the doors of those who establish themselves on the lands of Marybone Park; and the revenue arising to the crown from property so circumstanced will not only be great but permanent, the sources from which it arises being identified with the comforts and necessities of the public.

"The NEW STREET direct from Charing-Cross to Marybone Park, would be of such advantage to the crown-lands of Marybone Park, by the additional value it would give to that property, as alone to justify the crown in carrying it into execution; and of such advantage to the nobility and gentry occupying the principal houses in the west and north-west quarters of the town, in their communication with the houses of parliament, the courts of law, the treasury, admiralty, and other public offices in the lower parts of Westminster, that I have considered it under three distinct heads: its utility to the public; beauty to the metropolis; and the practicability of the measure.

"In considering the arrangement of the streets and squares of the west and north-west quarters of the town, it will be seen, that, northwards of Oxford-street, the principal streets and squares are situated west of Portland Place; and that, between Oxford-street and Piccadilly, the line of separation between the habitations of the first classes of society and those of the inferior classes, is Swallow-street; and that, if St. Alban's street should be continued northward into Piccadilly, such a street would make a like separation of the houses of the different classes of society lying between Piccadilly and Pall Mall, excepting only those on the west side of St. James's market. The street, therefore, which is here recommended, begins at Charing Cross, and terminates in Portland Place; and Portland Place, being the widest street in London, is taken as a model for the breadth of such new street. Pall Mall must be always one of the inlets to the west end of the town, on account of Carlton-house, and other magnificent houses which it contains, and the Palace and Cleveland-row at the extremity of it; and the club-houses in St. James's street, and the superb residences on the east side of the Green Park. It is proposed, therefore, that Pall Mall shall be continued eastward, of the full width of its broadest part, until it intersects the Haymarket on one side, and Cockspur-street on the other, at which place the street will be then of that ample breadth it should be, for the passage of the concourse of people coming from every part of the metropolis, all of whom must meet at that place in their way to and from the public offices, courts of law, and houses of parliament.

"From Carlton-house it is proposed to carry the new street at right angles with Pall Mall into Piccadilly, the west side of St. Alban's street forming one side of it, out of which Charles-street will run as it now does, into St. James's square; and it is proposed to continue Charles-street eastward, until it intersects the Haymarket. By this

this arrangement the Opera-house will be insulated, and stand in the middle of a large area formed by Pall Mall on the south, Charles-street (continued) on the north, St. Alban's-street on the west, and the Haymarket on the east side. King-street, leading to St. James's square, is now on the same line, and of the same breadth as Charles-street on the opposite side of the square; and, if King-street be continued and opened into St. James's street, King-street and Charles-street will form a vista, and handsome communication between St. James's street and the Haymarket, parallel with Pall Mall, and improve the outlet from St. James's square; and, if it should be thought advisable to take down one side of Jernyn-street, and widen it, another good communication would be formed from the proposed new street, into St. James's street, Arlington-street, and the upper part of Piccadilly.

"The point where the proposed street would enter Piccadilly, is half-way between Air-street and the end of Titchborne-street, from which point it is proposed that the new street shall be continued into Oxford-street, entering Oxford-street at the point where King-street and Swallow-street unite; this line of the street will stand in an oblique position to that of Piccadilly to Pall Mall; and, to disguise the deviation from a straight line, it is proposed to form a small circus where the oblique lines meet in Piccadilly, and to place a column, or other public monument, in the centre; at the same time that the obliquity of the lines of street is concealed, the situation will be most eligible for a public monument, as it will interrupt the view, and arrest the attention of all who pass along those streets of general intercourse; it will also contribute to the beauty of that part of the new communication from Carlton-house; it will be a central object terminating that vista, at the same time that Carlton-house will terminate the same vista from the opposite end.

"From the west side of this length of new street will diverge New Burlington-street, leading to the respectable houses in Saville-row, Old Burlington and Clifford streets; next, Conduit-street, leading through Bruton-street into Berkeley-square; next Madox-street, leading towards Grosvenor-square; then, Hanover-street, and Princes-street, leading into Hanover-square; and it is proposed that none of the smaller streets on the west side shall open into the new street, except Vigo-lane, all the rest having access to them from that part of Swallow-street which remains, and through Swallow-street into Piccadilly. On the east side, the only streets which will necessarily enter this street will be Brewer-street, as a continuation of Vigo-lane, Silver-street, Marlborough-street, and Argyle-street; thus in the whole extent from Piccadilly to Oxford-street there will be but four crossings on either side of the street, and carts and drays can carry on their traffic by means of the back streets, without interfering with the principal street. It will also be seen by the plan, that the whole communication from Charing Cross to Oxford-street will be a boundary and complete separation between the streets and squares occupied by the nobility and gentry, and the narrow streets and meaner houses occupied by mechanics and the trading part of the community.

"A street so formed, of such ample breadth, and so circumstanced, being the nearest and most commodious approach from every part of the best-inhabited quarters of the west and north-west ends of the town to Charing Cross, will be used by every one who has any thing to do with Westminster-hall, the houses of parliament, treasury, admiralty, or any other of the public offices in their vicinity; and shops appropriated to articles of taste and fashion will, when this new street shall become the great thoroughfare, range themselves along it, and the stream of fashion be diverted to a new street, where the footpath will be fifteen feet wide, instead of seven feet, and the carriage-way double the width of that in Bond-street, and where there will be room for all the fashionable shops to be assembled in one street; and, if the foot-pavements were to be covered by a light colonnade, surmounted by a balustrade,

those who have daily intercourse with the public establishments in Westminster may go two-thirds of the way on foot under cover, and those who have nothing to do but walk about and amuse themselves, may do so every day in the week, instead of being frequently confined many days together to their houses by rain; and such a covered colonnade would be of peculiar convenience to those who require daily exercise. The balustrades over the colonnades will form balconies to the lodging-rooms over the shops, from which the occupiers of the lodgings can see and converse with those passing in the carriages underneath, and which will add to the gaiety of the scene, and induce single men, and others who only visit town occasionally, to give a preference to such lodgings. Those who may fear that the shops under colonnades would be dark and gloomy, are requested to consider the great width (120 feet) of the street, and that the mezzanines between the shops and lodging-rooms, necessary for the sleeping apartments of the proprietors of the shops, will make the colonnades very lofty; and that, if small areas are made in the flats over the colonnade, immediately above the shop windows, and the projecting part of the windows roofed with glass, the articles in those windows having a light immediately over them, such shops will be better lighted, and have a more brilliant effect, than by light received in the ordinary way. And those who may suppose that the pillars to support the colonnade may become nuisances, are requested to consider that they are not proposed to be square pillars, or piers, but round columns, the receding form of which will preclude any shelter to those who may be disposed to commit nuisances against them; and that they will be so far apart, and so small in diameter, that they will be no impediment to the return of any one pressed from the foot-pavement to the carriage-way; and that even such accidents, from a pavement fifteen feet wide, are scarcely ever liable to happen.

"The proposed street is described as entering Oxford-street at the point of junction of Swallow-street with King-street; and, if Portland Place were elongated until it should intersect Oxford-street, it would be exactly opposite that point of junction. Foley-house is immediately to be pulled down, and Portland Place continued, through Foley-house gardens, to their southern extremity; and this survey proposes to extend that continuation until it shall enter Oxford-street.

"The magnificent squares and streets north of Oxford-street are so numerous and extensive, that they form the largest portion of the fashionable part of the town; but, for want of direct and suitable approaches, it has been always considered as a distant quarter; it is not yet forgotten that Oxford-street was once one of the turnpike-roads forming the boundary of the town; and the buildings even now retain something of the appearance of houses seen by the sides of roads immediately round the metropolis. Crossing Oxford-street has always been a fashionable objection to the residences north of Oxford-street; to do away that impression, it is proposed, that, where the continuation of Portland Place with Oxford-street unites with the new street intended from Oxford-street to Piccadilly, namely, at the end of Swallow-street, a circus should be formed, Oxford-street crossing it from east to west, and the new street from south to north; in the centre of which circus, if a public monument were placed, as before described for the crossing of Piccadilly, and the same colonnade and shops be continued round such circus, as recommended for the sides of the new street, the sensation of having passed Oxford-street will be entirely done away, and the two divisions of the town insensibly united in the best manner possible.

"There is no direct way from the end of Bond-street to the principal streets north of Oxford-road, which strengthens the impression of those two divisions of the town being distinct and separate; but Portland Place will form one continued street from Charing Cross, intersecting many of the principal streets north of Oxford-street at right angles, and afford the nearest and best communication

ation from Charing Crofs, and the lower parts of Westminster, to every part of that magnificent and extensive neighbourhood; and, if the utility of such a street to that part of the parish of Marybone would be so great, the advantage of it to the crown-lands of Marybone Park would be incalculable; no part of the unbuilt ground surrounding the town would have so good or so direct an approach; and, in the future enlargement of the town, the north-west part of Marybone must have a preference to every other situation. By the straight direction of this street, Marybone Park is brought nearer the houses of parliament, courts of law, the treasury, admiralty, &c. than many other parts of the town in the highest request of fashion: it is within 170 yards as near as the nearest part of Grosvenor-place, and half a mile nearer than the lower end of that street; it is within 80 yards as near as the west side of Grosvenor-square, and 70 yards nearer than the nearest end of Upper Brook-street, and 300 yards nearer than the upper end of Upper Grosvenor-street; it is within 90 yards as near as Stanhope-street; it is more than one-third of a mile nearer than Portman-square or Manchester-square; it is three quarters of a mile nearer than the upper end of Park-lane, Cumberland-place, &c. and, incredible as it may appear, it will be only 50 yards further to Marybone Park, at the extreme end of Portland Place, than it is by the present circuitous route to the entrance of Cavendish-square, and 50 yards nearer than it is to the north side of that square. Such are the advantages of a direct street; and if, as the late surveyor-general observes, 'distance is best measured by time,' Marybone Park, being without the impediments and interruptions of turning corners and crossing streets, will be nearer to the houses of parliament, courts of law, and public offices, than four parts out of five of the principal residences in the west and north-west ends of the town.

"Such are the advantages, and such will be the utility, of the street proposed. The beauty of the town, it is presumed, would be advanced by a street of such magnificent dimensions; by the colonnades and balustrades which will adorn its sides; by insulating the public building of the Opera; by the effect of the monuments in the centre of the crossing streets; by the vista between Carlton-house and Piccadilly, terminated by a public monument at one end, and by the palace of Carlton-house at the other; every length of street would be terminated by a façade of beautiful architecture; and, to add to the beauty of the approach from Westminster to Charing Crofs, a square or crescent, open to, and looking down, Parliament-street, might be built round the equestrian statue at Charing Crofs, which, at the same time that it would open and enlarge that space, from whence, as before observed, the greatest part of the population of the metropolis meet and diverge, it would afford a magnificent and beautiful termination of the street from Westminster. The lofty situation of Charing Crofs, and gradual ascent to it, are peculiarly calculated to produce a grand and striking effect. Such a building might be appropriated to additional offices for the government, which it is understood are much wanted; or the Royal Society, Royal Academy, and Antiquarian Society, might be placed there; and the apartments in Somerset-house, now occupied by those societies, be appropriated to such public offices as the rest of the buildings of Somerset-place."

Mr. Nash, in his estimate of the value of the improved property, conceives that the immediate ground-rent will produce 59,429l. per annum, and that the property, at the end of the building leases, will be worth 187,724l. The making, planting, and watering, the parks, he estimates at 12,115l. And the purchase of the old houses between Charing Crofs and Portland Place he values at 399,803l. after deducting the value of the old materials; while their ground-rents would be worth 28,734l. per annum, under the new plan, as part of the new street. The length of the new street, from Charing Crofs to Oxford-street, will be 1700 yards, of which it appears that 1280

yards will pass through property already belonging to the crown. The cost of a common sewer to drain the houses in Marybone Park, and in the new street, he values at 112,330l. and its revenue paid by the tenants at 19,105l.

Mr. Nash has since presented a supplementary plan, by desire of government, containing fewer buildings, and a larger extent of Park. The revenue of the park, on this new plan, will be reduced from 59,429l. to 45,269l. owing to there being fewer of the higher class of houses; but the scenery will be equally beautiful, and, so far as relates to the ornamental canal, with its terraces and ample areas of the two upper crescents, still more magnificent. These plans of Mr. Nash having been approved of by the lords of the treasury, the Park has been enclosed; the roads through it, and the circular drive, formed; the plantations too have been made; houses have been built, with elegant porticos, in a line with the sides of Portland Place; in short, the whole design is proceeding towards its completion with extraordinary activity.

At a short distance from the south end of Portland Place is Portland Chapel, a handsome brick building, ornamented with stone, and having a stone steeple at the west end; erected about forty years ago, on the site of Marybone-bafon, which was anciently a reservoir of water for the supply of that part of the metropolis, but had been many years disused.

To the east of Portland Chapel is a plain but commodious brick building, called the Middlesex Hospital. This hospital was instituted in the year 1745, for the relief of the indigent sick and lame, at which time, and for several years after, it was carried on in two convenient houses adjoining to each other, in Windmill-street, Tottenham-court-road. The benefactions of the public having greatly increased, the governors, in 1747, extended their plan to the relief of pregnant wives of the industrious poor; when the great increase of patients soon obliged them to think of enlarging their edifice as well as their plan; and, by the benevolence of the contributors, they were enabled, in 1755, to erect the present building, which at that time was situated in the open fields. That part of the institution which relates to the admission of pregnant women, was altered about fifteen years ago, in consequence of an offer made by an unknown person, through the medium of a respectable surgeon, to advance three thousand pounds, and to settle three hundred pounds per annum on the hospital, provided the governors would appropriate a ward for the reception and cure of cancerous diseases. Such an offer was not to be rejected; but the obstacle to its adoption was the unwillingness of the governors to narrow the extent of their charity, to the exclusion of some part of those who were already within its scope. It being however suggested, that delivering married women at home would, in most cases, be a more effectual and beneficial relief to them than obliging them to pass the period of their confinement in a hospital, secluded from their families, it was determined to appropriate the lying-in ward to the desired purpose, and to provide those who might want it, with obstetrical assistance, medicine, and nurses, at their own habitations; by which means the managers of this charity were enabled to accept the benevolent offer; and since that period the upper part of the hospital has been devoted solely to the cure of that disease.

The improvements which are making in every part of the New Road, invite the perambulator to a survey of the elegant houses which have been lately built at the top of Portland Road, and all along to Tottenham-court-road. Between these roads is Fitzroy-square, a place which we have seen in an unfinished state for more than twenty years. Some unknown cause has prevented this spot becoming fashionable; and this sort of fatality, which has lain heavy upon some other places, as Golden-square and Leicester-square, is not likely to be soon removed.

From Fitzroy-square we enter Tottenham-court-road, a wide street leading southward to that part of the metro-

polis called St. Giles's.—St. Giles's church is supposed to owe its origin to the chapel belonging to an hospital founded here about the year 1117, by Matilda, queen of Henry I. for the reception of a certain number of leprosy people belonging to London and Middlesex. In the year 1354, Edward III. granted this hospital to the master and brethren of the order of Burton St. Lazer, in Leicestershire, in consideration of their having remitted forty marks, and the arrears thereof, payable out of the exchequer; by which means it became a cell to that order, and so it continued until the general suppression of religious houses. In the year 1545, Henry VIII. granted this hospital, with its chapel, to lord Dudley; soon after which it appears to have been made parochial; for, on the 20th of April, 1547, William Rawlinson was instituted rector of it. The small old church of this parish being taken down in the year 1623, a church of brick was erected in its stead; but, the ground in its neighbourhood being gradually raised to the height of eight feet above the floor, it became very damp and unwholesome. On this, the inhabitants applied to parliament to have it rebuilt, when, the sum of eight thousand pounds being granted for that purpose, the old fabric was taken down in 1730, and the present structure was completed in three years after. This magnificent edifice is exceeding lofty, and the whole of it is built of Portland stone. The area of the church within the walls is sixty feet wide and seventy-five in length, exclusive of the recess for the altar. The roof is supported with Ionic pillars and piers of Portland stone, and is vaulted underneath. The outside of the church has a rustic basement; and the windows of the galleries have femi-circular heads, over which is a modillion-cornice. The steeple is a hundred and sixty feet high, and consists of a rustic pedestal, supporting a Doric order of pilasters; and over the clock is an octangular tower, with three-quarter Ionic columns, supporting a balustrade with vases; on this tower stands the spire, which is also octangular, and belted. The expense of erecting this church amounted to 10,026l. 15s. 9d. including the eight thousand pounds granted by parliament. It is a rectory in the gift of the crown. Over the north-west door into the church-yard is a curious piece of sculpture, representing the Day of Resurrection: it contains a great number of figures, and was set up about the year 1686.

Near this church was the house of Alice duchess Dudley, who died here in 1669, aged ninety. She was the widow of the great sir Robert Dudley, son to Robert earl of Leicester, who, by various untoward circumstances, was denied legitimacy and his paternal estates. He had been created a duke of the Roman empire, and lived and died in Tuscany, by the title of duke of Northumberland. His widow was advanced to the dignity of a duchess, by letters patent of Charles I. which were afterwards confirmed by Charles II. but the title died with her. The name is still preserved in Dudley-court, at present a most wretched and dirty place.

In ancient times it was customary to present to malefactors, on their way to the place of execution, (which, about the year 1413, was removed from Smithfield and placed between High-street, St. Giles's, and Hog-lane,) a bowl of ale, as the last refreshment they were to receive in this life. Such a custom prevailed at York; which gave rise to the saying, that "the sadler of Bawtry was hanged for *leaving his liquor*." Had he stopped, as usual, his reprieve, which was actually on the road, would have arrived time enough to have saved him.—Here was executed, in the most barbarous manner, the famous sir John Oldcastle, lord Cobham. His crime was that of adopting the tenets of Wycliffe. He was misrepresented to our heroic prince Henry V. by the bigoted clergy, as a heretic and traitor; and as having been actually at the head of thirty thousand Lollards, in these very fields. About a hundred inoffensive people were found there: Cobham escaped; but was taken some time after in Wales. He suffered death on this spot: was hung on a gallows, by a

chain fastened round his body, and, thus suspended, burnt alive.

About this spot, between Tottenham-court-road and St. Giles's church, and indeed below it, quite to Drury-lane, we find several small narrow streets, chiefly inhabited by low Hibernians, who have given a peculiar character to the place; and the natural warmth (we might say heat) of their temper displays itself here with all its energy. Broken heads, black eyes, and bruises of all colours and hues, are generally the result of these Irish games.

Great Russel-street, leading to Bloomsbury-square, is a noble street, and respectably inhabited. It has on its north side, Bedford-square, one of the most uniform places in London. The centre houses on each of the four sides of this quadrangle are particularly decorated; and indeed, elegance and taste seem to have affixed their seal on every house. These centre houses are distinguished from the others, which are of brick, by having a stone façade upon a rustic pediment; the order is Ionic, and of good effect. The middle of the area is formed into a circular grass-plot, having a broad gravel-walk around it, on the outside of which is a parterre of shrubs and flowers; and the whole is encompassed with an iron-railing.

On the north side of Great Russel-street is Montague-house, better known by the name of the BRITISH MUSEUM, from being the depository of that extensive national collection. This noble building was erected by John duke of Montague, keeper of the wardrobe to king Charles II. and who was afterwards in high favour with king William and queen Anne. The front of the building is very extensive; two large wings, for offices, join it at right angles, and form a handsome court, inclosed from the street by a high brick wall, in the centre of which is a spacious gate, under a dome: the inside of the wall is formed into a grand colonnade, reaching to the wings on either side. The house is adorned with very curious paintings, (particularly the hall and staircase,) executed by La Fosse, Bap-tiste, and Rousseau; and behind it is an extensive garden.

The first rise of this splendid collection was in consequence of the will of sir Hans Sloane, who left his museum to the nation, which he declared in his will cost him upwards of 50,000l. on condition that parliament paid 20,000l. to his executors, and purchased a house sufficiently commodious for it. The parliament acted with great liberality on this occasion; several other valuable collections were united to this of sir Hans Sloane, and the whole establishment completed for the sum of 85,000l. which was raised by a lottery.

A beginning having been thus made of a public scientific repository, it was deemed expedient to enlarge its extent, and increase its importance by adding to it whatever happened to be at that time within the reach of the legislature. Parliament accordingly added at various times to the Sloanean Museum; the Cottonian library; major Edwards's library; the Harleian collection of manuscripts; sir Wm. Hamilton's collection of fictile or Greek vases; the Townleian collection of antique marbles; the manuscripts of the late marquis Lansdown; the minerals of the hon. Charles Greville; and lastly, in 1813, the library of counsellor Hargrave, as noticed at p. 367.

Among other benefactors to this (now called British) Museum are, his majesty king George II. who gave the whole of the important library of printed books and manuscripts which had been gradually collected by our kings from Henry VII. to William III. and which is still annually increasing by the privilege of being supplied with a copy of every publication entered at Stationers' Hall. His present majesty, equally desirous of promoting the Museum, has given a numerous collection of valuable pamphlets which were published in the convulsive interval between 1640 and 1660. His majesty has also contributed the two finest mummies in Europe, which were presented to him by the late earl of Bute; a sum of money arising from lottery-tickets, which belonged to his royal predecessors, amounting to 1123l. in 1772, a complete set of

the Journals of the Lords and Commons; a collection of natural and artificial curiosities sent to him in 1796, by Mr. Menzie, from the north-west coast of America, and several single books of great value and utility; also many articles of Egyptian antiquities, which were acquired from the French by the capitulation of Alexandria in 1802. The trustees have added Greenwood's collection of stuffed birds; Hachet's minerals; Halhed's oriental manuscripts; Tyssen's collection of Saxon coins; Dr. Bentley's classics; and Roberts's English coins. Private donations have afforded Dr. Birch's library, by will of the learned doctor, and an annual sum of 52*l.* 18*s.* in the funds for ever. A collection of fossils by Gustavus Brander, esq. a select library of classics by Thomas Tyrwhitt, esq. a similar bequest of sir Wm. Mufgrave; Mr. Garrick's collection of old plays; a most magnificent collection of printed books, prints, coins, medals, minerals, shells, gems, &c. which, by the spontaneous and splendid munificence of the Rev. Mordaunt Cracherode, were bequeathed to the public; and a series of Peruvian ores, consisting of nearly 200 articles, presented by lord Grenville. Add to these, some other benefactors, as sir Joseph Banks, of curiosities from the South Seas; Icelandic books, and many valuable books and other presents, from the emperors Francis I. and II. and the empress Maria-Theresa, from Catharine II. of Russia, their majesties Charles III. of Spain, and Frederic V. of Denmark. From our own boards of Admiralty, of Longitude, and of the East-India Company; the various numerous literary societies of London, Edinburgh, Oxford, Cambridge, and Leyden; the royal and imperial academies of Brussels, Lisbon, &c. whose donations have been and are no less frequent than valuable. Among the multitude of private individuals, not members of the trust, who have enriched this museum and their country, stand most prominent the names of Col. Wm. Pitt, Smart Lethiullier, Thomas Hollis, esqrs. and the late earl of Exeter. For more detailed particulars of this splendid collection, alike attractive and useful to the learned of all classes, we refer our readers to a Synopsis of their general contents, sold at the Museum.

For the admission of companies to a sight of the Museum, various regulations have from time to time been formed; every successive alteration having had for its object to add to the facility of access, and in every respect to the accommodation of the public. According to the present regulations, the Museum is open for public inspection, on the Monday, Wednesday, and Friday, in every week, (the Christmas, Easter, and Whitfun, weeks, thanksgiving and fast days, and the whole months of August and September, excepted,) from ten till four o'clock; and all persons of decent appearance, who apply between the hours of ten and two, are immediately admitted, and may tarry in the apartments, or the gallery of antiquities, without any limitation of time, except the shutting of the house at four o'clock.

On entering the gate of the Museum, a spacious quadrangle presents itself, with an Ionic colonnade on the south side, and the main building on north, which measures 216 feet in length, and 57 in height, to the top of the cornice.

The first floor consists of twelve rooms, and contains the library of printed books. Strangers are not conducted through these apartments, as the mere sight of the outside of books cannot convey either instruction or amusement; but, by applying at the Museum, and conforming with the rules, it is not difficult for a respectable person to get admitted as a student to the reading-rooms.

The companies, having been admitted according to the regulations, are immediately conducted up the great staircase, the decorations of which have lately been restored, and are worthy of admiration. The ceiling is painted by Chas. de la Fosse, who was reckoned one of the best colourists of the French school, and who painted the cupola of the dome of the Invalids at Paris. This ceiling represents Phaeton petitioning Apollo for leave to drive his

chariot. The landscape and decorations are by James Rousseau, whose skill in perspective has always been justly held in high estimation.

The first room of the upper story contains modern works of art from all parts of the world, arranged in cases, several printed tables of which lie on the case in the centre of the room. This case contains some very beautiful miniatures; among them, sir Thomas More, king Charles I. and Oliver Cromwell, with his watch by the side of it. Two curious portraits of king William and queen Mary, carved on two walnut-shells. In the presses round the rooms are arranged, in a geographical order, some fine specimens of china, a variety of implements of war from different quarters of the globe, and a rich collection of curiosities from the South Pacific Ocean, brought by Capt. Cook. In the left corner is the mourning dress of an Otaheitean lady, in which taste and barbarity are singularly blended; and opposite are the rich cloaks and helmets of feathers from the Sandwich Islands. Among these is one which, in elegance of form, vies even with the Grecian helmets. In another case are the cava-bowls; and above them baltoons, and other weapons of war. The next objects of attention are the idols of the different islands, presenting, in their hideous rudeness, a singular contrast with many of the works of art formed by the same people; near these are the drums and other instruments of music, and a breast-plate from the Friendly Islands. These selections, numerous as they are, are taken from a large store of similar curiosities deposited in a less conspicuous part of the house; and a preference is wisely given to such articles as best serve to illustrate some local custom, art, manufacture, or point of history. Many of these the trustees mean gradually to set aside, to make room for others of more intrinsic value.—The ceiling of this room or vestibule is also painted by la Fosse, and represents the Fall of Phaeton.

The second room is empty at present, its contents having been removed into the new apartments.—The third room is exclusively devoted to the Lansdown collection of manuscripts, which have been handsomely bound and lettered by order of the trustees.—In the fourth room are the Sloanean and Birchean collections of manuscripts. It also contains Kämpfer's manuscripts; several journals of voyages; and some oriental manuscripts. In a recess, within this room, are placed Mr. Halhed's and some other collections of oriental manuscripts; and over the chimney is a drawing of the palace of Colonna, near Moscow, which belonged to the czars of Moscow; it was built of wood, and is now demolished.—The fifth room contains part of the Harleian library of manuscripts; and the sixth the remaining part of the same, and additions made since the establishment of the Museum; particularly an original deed in Latin, written on papyrus, being a conveyance of some land to a monastery; dated Ravenna, anno 572, bought at the sale of the Pinelli library; and a large specimen of the reed (*Cyperus papyrus*) of which that kind of paper is made; also an Italian note to sir William Hamilton, written on modern papyrus, explaining the mode of preparing it.—The seventh room is appropriated to the Royal and Cottonian library of manuscripts. On a table in a glazed frame, is the original of the Magna Charta, and on the side of it is a fac-simile engraving of it by Pine. Here is also the original of the articles preparatory to the signing of the great charter, perfect, with the seal; presented by the late earl Stanhope.

The company are next introduced into the magnificent saloon, the dome of which was painted by the before-mentioned la Fosse, which has been described by Walpole as the apotheosis of Isis; and by others, much nearer the truth, as that of Iris; but the most probable conjecture is, that the painter meant it to exhibit the birth of Minerva; that goddess, fully attired, being the most prominent figure. Jupiter is immediately above her. The other heathen deities surround this groupe in admiration of the event. And in a lower compartment the Vices are being expelled

expelled from heaven on the manifestation of Wisdom. In the six medallions near the corner of the room are represented some of the principal achievements of Minerva. The landscapes and architectural decorations are by the same J. Rousseau who painted the staircase; and the flowers are by John Baptiste Monoyer, the most eminent flower-painter of his time. The whole of them were lately cleaned and ably repaired by the late F. Rigaud, esq. R. A. in a manner that does him infinite credit. Over the chimney is a full-length portrait of George II. by Shackleton; and in the middle of the window stands a table, composed of a variety of lavas from Mount Vesuvius, presented by the earl of Exeter.—This apartment contains the united collections of minerals, the greater part of which formerly constituted the collection of the late right hon. Charles Greville. These consolidated collections are arranged in cabinets containing upwards of 550 drawers, independently of the specimens exhibited in the glazed compartments above, which form a suite for study, and respectively indicate the contents of the drawers below. In the arrangement of this collection, a natural order founded on external characters has been followed; not, however, without consulting the chemical composition of the substances, so far as convenience would admit. In order to facilitate the distinction of the specimens in the glazed compartments, the separations of their different genera and species are marked by lines of various colours, corresponding to those on the tickets which bear their respective names and synonyms; besides which, almost every specimen has its *habitat* (or place where it is found) written upon it, to which is annexed a ticket indicating the external character for the illustration of which the specimen is deposited.

The eighth room contains a department of natural history, part of which is the valuable donation of Mr. Cracherode, disposed in two tables, nearly in the Linnæan order; and a much more extensive series arranged according to the Wernerian system. The principal productions are very valuable, consisting of minerals from Derbyshire, Siberia, and the South Seas, with volcanic and rock stones from Germany. One very curious specimen of natural history is pointed out in the fifth division of the Cracherodean collection, an egg-shaped piece of calcedony, containing water (enhydros), which may be seen by gently shaking the vase. Another curious specimen is an Egyptian pebble, which has been broken by accident, and discovers on both pieces a portrait of the poet Chaucer; a more remarkable *lusus nature* is not in existence.

The ninth room is appropriated to petrifications and shells. In the first division of the cases in the middle of the room is a valuable univalve shell of the species called the paper nautilus, or Argonauta argo, remarkable for the lightness of its fabric, and the elegance of its shape; of which a representation is given in our CONCHOLOGY Plate V. fig. 1. vol. v. p. 24. It is inhabited by an animal not unlike a cuttle-fish, which, by extending a pair of membranes adhering to the top of its longest arms, has the power of sailing on the surface of the sea. Some beautiful multivalves, fossil shells, echini, &c. Under the tables are deposited, in this and the next room, a great number of volumes and parcels, containing collections of dried plants; which, from the fragile nature of their contents, are shown only by particular leave.

The tenth room is entirely vegetable productions, zoophytes, sponges, &c.—The contents of the eleventh room are birds, and arranged, as far as convenience would admit, according to the Linnæan system. In this room there is a curious picture, executed many years ago in Holland, of that extremely rare and curious bird the dodo, belonging to the tribe gallinæ. It was once the property of sir Hans Sloane, and afterwards of the celebrated naturalist George Edwards, who presented it to the British Museum. In the table in the middle of the room are preserved the nests of several birds, among the most curious of which are several hanging nests, chiefly formed by birds of the oriole tribe; nests of a substance resem-

bling isinglass, which the Chinese make into a rich soup; scarce feathers, &c. In the second table are deposited a variety of eggs and nests: among the former may be noticed the eggs of the ostrich, the cassowary, the crocodile, &c. In the cases between the windows are several of the rarer quadrupeds; among these the most curious are, two ourang-outangs, in a young state, a long-tailed macaoco, ermine, &c. in cases under the tables are an armadillo, a porcupine, several young sloths, and a fine specimen of the two-toed ant-eater.

The twelfth room contains a general and extensive arrangement of fishes, serpents, lizards, frogs, as well as many specimens of quadrupeds, which are all pointed out by the attendant. The most curious are, the torpedo, the remora, the flying-fish, &c. and, among the quadrupeds, the three-toed sloth, the silky monkey, &c. Among the frog tribe, the argus frogs, the Surinam toad, &c. Among the lizard tribes, the salamander, the cameleon, several young crocodiles, and in one bottle the egg of a crocodile, with a young one of a day's growth; several serpents, rattle-snakes, &c. and some fine dried fishes.

The next department you are conducted to down stairs, over which hangs a young crocodile, well preserved, is the Department of Antiquities. These are deposited in a very elegant suite of rooms, built purposely for them, after the design of Mr. Saunders. The principal of the articles of this beautiful collection belonged to the late Charles Townley, esq. They are all accurately and separately described in a catalogue, sold at the doors.—The first room is devoted to the basso-relievos, in terra cotta, and have been pronounced the finest collection in Europe.—The second room is a beautiful circular room, from whence you have a fine view of the whole suite of apartments bounded at the end by a fine *discobolos*, or ancient quoit-player. This room is devoted to Greek and Roman sculptures, among which are a fine candelabrum, some exquisite busts, and beautiful statues, particularly a Venus.—The third and fourth rooms are also filled with Greek and Roman sculptures, as is the last with the addition of many grand basso-relievos.—The fifth has a very fine collection of Roman sepulchral antiquities, and a beautiful mosaic pavement, lately discovered in digging the foundations for the new building at the Bank of England, and which was presented to the Museum by the directors of that opulent body.—The sixth contains 100 grand pieces of Greek and Roman sculptures of every sort.—The seventh, Roman antiquities; and the eighth, which is on the left, Egyptian antiquities, among which are two mummies with their coffins, presented by the present king; a manuscript or papyrus taken from a mummy; and an innumerable quantity of smaller articles, of great antiquity and curiosity.—The ninth room contains Egyptian sculptures, among which is the celebrated sarcophagus, commonly called the tomb of Alexander the Great, an engraving and dissertation on which is in the Monthly Magazine for February, 1809; and many other antique curiosities.—The tenth room has more Greek and Roman sculptures of singular beauty.

From hence you return, and go up-stairs to the eleventh room, which is devoted to ancient and modern coins and medals, arranged in geographical order, those of each country being kept separate.—In the centre of the anti-room, at the head of the stairs, is placed the celebrated Barberini Vase, which was for more than two centuries the principal ornament of the Barberini collection. This vase was purchased of sir William Hamilton, nearly thirty years ago, by the duchess of Portland; since which period it has been more generally known by the name of the Portland Vase. It was found about the middle of the sixteenth century, two miles and a half from Rome, in the road leading to Frascati. At the time of its discovery, the vase was enclosed in a marble sarcophagus, within a sepulchral chamber, under the mount called Monte del Grano. The material of which the vase is formed, is glass; the figures, which are executed in relief,

are of a beautiful opaque white; and the ground, which is in perfect harmony with the figures, is of a dark transparent blue. The subject of these figures is extremely obscure, and has not hitherto received a satisfactory elucidation; but the design and the sculpture are both truly admirable. This superb specimen of Greek art was deposited in the British Museum, in 1810, by the present duke of Portland.—The twelfth room is the collection of the late sir William Hamilton, which has been removed from the saloon. It principally consists of *penates*, or household goods, bronze vessels, utensils, &c. specimens of ancient glass, necklaces, bullæ, fragments of basso-relievos, and ancient armour, tripods, knives, pateræ, lamps, seals, weights, sculpture in ivory, bracelets, bits, spurs, and ancient paintings, from Herculaneum, Babylonish bricks, and his unrivalled collection of Greek vases; the greater part of which were found in the sepulchres of Magna Grecia. The forms of the vases are much varied, and are equally simple and beautiful.—In the thirteenth room is deposited the extensive and valuable collection of prints and drawings, the most important part of which was bequeathed by the Rev. William Cracherode. The contents of this room, as well as those of the coins and medals, can be seen only by a few persons at a time, by particular permission.

The reading-room of the Museum is kept open from ten till four every day in the week, except Saturday and Sunday, and for one week at Christmas, Easter, and Whitsuntide, and on thanksgiving and fast days. One of the librarians constantly attends during the above hours. Persons desirous of admission into this room, are to send their applications in writing to the principal librarian, who will lay the same before the trustees, when, if they see no objection, they will grant admission for a term not exceeding six months; and every reader, at the expiration of his term, may apply for a prolongation of the same without a fresh recommendation. In applications for admission to this room, it will be necessary to specify the description of the person, and his place of abode; and it is expected that a recommendation from some person of known and approved character may accompany the application. Readers are allowed to take one or more extracts from any printed book or manuscript; but no whole or greater part of a manuscript is to be transcribed without a particular leave from the trustees. In all cases where persons engaged in works of learning, or in the prosecutions of any useful design, have occasion to examine any part of the collection with more attention than can be done according to the ordinary rules of the Museum, or who wish to make any drawing of any thing contained in the Museum, they are to apply to the trustees in a general meeting, or to the standing committee, for particular leave for that purpose, who will give directions according to the circumstances of the case.

The collection of coins and medals is not shown but by leave of the trustees, or of the principal librarian. Not more than two persons are admitted at the same time, unless the principal librarian, or some officer, is present.

At the east end of Great Russell-street is Bloomsbury, formerly Southampton, square; a very handsome square, in the centre of which are grass-plats and a gravel walk, encompassed with neat iron rails. On the east, south, and west, sides, are some handsome buildings; but much of their beauty is taken off by their want of symmetry. The whole of the north side was occupied by Bedford-house; a magnificent mansion, built after a design of Inigo Jones, which was taken down in the year 1800; and the north side of the square is now formed by a row of uniform brick buildings. Behind this row, on the site of the gardens of Bedford-house, and of some fields to the north of them, called the Long Fields, several good streets, and a handsome square, called Russell-square, have been erected.

Russell-square is considerably larger than any other in London, Lincoln's-Inn Fields excepted. Its dimensions nearly (for it is not perfectly at right angles) are 678 feet

on each side. The north and south sides are built in an uniform manner; but the west and east sides are totally dissimilar; the latter consisting partly of the old buildings at the north end of Southampton-row, and of Bolton house, so called from its noble founder, but last the residence of the late earl Rofslyn. Since his decease, it has been new fronted, and, with some additions made in the court-yard of it, has been formed into three separate houses. The area of the square is laid out in grass-plats, shrubberies, and gravel walks, and encompassed with an iron railing; and on the south side of it, fronting Bedford Place, which leads into the centre of Bloomsbury-square, is the statue in bronze of the late Francis duke of Bedford, by Mr. Westmacott. This piece of foundery does the sculptor great honour. The noble duke is represented in his parliamentary robes, standing in a graceful attitude and one of his hands resting on a ploughshare, in allusion to his successful and expensive exertions in bringing the first of all arts, agriculture, to that state of perfection which so particularly distinguishes this country. Four children at the corners of the pedestal exemplify by their attributes the four seasons of the year; and we congratulate the artist on having given free scope to his imagination, and having left the common track so often trod by uninventive sculptors. The bas-reliefs are boldly executed; and the whole, surrounded by an iron railing, has an excellent effect. We should have wished that the sheep, which is squatted at the feet of the statue, had been left out; its insulated situation renders it awkward, and its allegorical meaning is useless, as the basso-relievos and other accompaniments are more than sufficiently expressive of the noble duke's partiality for the triptoleman art. We hope that this first attempt of adorning public places and squares with the statues of our worthies will be followed, in order that we may behold the sculptured image of departed worth without being obliged to pay for it. The streets of Corinth and Athens were peopled with those representations; and we doubt not but their presence had an excellent effect upon the morals of the people. Who would have dared to tell a lie at the foot of Aristides' statue; or to prove a coward before the pedestal that supported the image of Cynegyras!

These reflections lead us to mention the statue of sir Joshua Reynolds, the late president of the Royal Academy, placed in the north-west corner of the great area under the dome of St. Paul's. It has been exposed to view since we surveyed the metropolitan church; and is not one of the least ornaments to the interior of that noble pile. It is the work of Mr. Flaxman, and does him much honour; for, as long as simplicity is united with elegance, character and likeness with unencumbered fluency of drapery and dignified attitude, the strokes of the chisel are sure to please the sculptor and the public. What emulation may not the introduction of this worthy favourite of the chromatic muse into the company of the illustrious characters who have already obtained a place in our Christian Pantheon, create among our artists!—The statuary himself, whose genius, like Rhea, gives a stone to old Time to devour, in order to preserve the life of her son, (for this mythological allegory had sculpture in view,) has identified the block of marble with our affections and regrets; and the painters who have succeeded sir Joshua in the same career, will not fail to hear sweet whisperings of hope, that, when their mortal labours are at an end, their effigies will be placed in the other recesses of this church. Let us beg the reader's indulgence for this digression, and we will conclude by remarking, that under the dome of St. Paul's, in the most conspicuous station, the trustees of the cathedral have not admitted the heroes, who, by sea and land, could not fight their country's cause without shedding the blood of their fellow-creatures; but that they have consecrated this solemn spot to the memorials of those who practised the milder arts; those arts so intimately connected with the charities of our bosom. Philanthropy in Howard, domestic philology

in Johnson, foreign philology in Jones, and the pleasing and bewitching art of painting in Reynolds—these daughters of heaven, these comforters of man, have obtained, by due right of precedence, the first, the central, the most august, place in this national edifice; a discernment in choice which ought to be properly felt by all, and which reflects unprecedented honour upon the feelings of those who preconceived this admirable disposition. This happy thought had not been yet made obvious to the public mind; and we are proud to think that our readers will find it clearly explained and justly praised, for the first time, in our work. Every one will be delighted to know that a regular system has been adopted for the placing of the monuments; and that they are not to be jumbled together, but disposed according to the directions of sensible minds.

Another square is laid out, to the north of Russell-square, which is called Tavistock-square. The area is inclosed and planted, and the east side of it is formed by the continuation of Southampton-row; but the other three sides are scarcely begun.—Tavistock Place enters the square at the top of Southampton-row. Here is an elegant chapel lately built on ground belonging to the Foundling Hospital, and within the precincts of the parish of St. Pancras; whence it is properly one of the chapels-of-ease to that extensive and now very-populous parish. The rapid and extraordinary increase in the population of this parochial district, may be adduced as one of the singular features of modern London. All the houses and streets which are now the ornament of that part of the metropolis have been built within these fifteen years, but are not all inhabited; indeed, speculations have ruined many of the builders in this as in several other parts of this immense town.

Yet still they go on.—To the north of Tavistock-square, an area of about twenty acres is proposed to be surrounded with buildings; the centre to be occupied and dressed as nursery-grounds; the Paddington-road running between them. This is to be called Euston-square, of which the north side is nearly completed in a very elegant style; and it is said that directly northward, from the centre of this large area, a wide grand road is to lead to the Hampstead-road at Camden Town; the sides to be planted with double rows of trees, and the houses to be coupled or detached, allowing abundant space to each for respectable inhabitants.

Coming back to Bloomsbury, we find, in Hart-street, the church of St. George. It is one of the fifty churches appointed to be built by act of parliament within the bills of mortality. The name of St. George was given to it in honour of his late majesty; and it received the additional epithet of Bloomsbury, from its situation in the ancient village of Lomesbury, corruptly called Bloombury, to distinguish it from others of the same name. It is likewise farther distinguished by standing north and south. Mr. Walpole calls this building a matter-piece of absurdity. The portico on the south side is of the Corinthian order, and makes a very good figure in the street, but has no affinity with the church, which is plain and heavy, and might have corresponded with a Tuscan portico. The tower and steeple on the west side is a very extraordinary structure: on the top, standing on a round pedestal or altar, is a colossal statue of George I. supported by a square pyramid; at the corners of which, near the base, are a lion and unicorn, alternately, the first with his heels in the air; and between them are festoons: these animals, being very large, are injudiciously placed over very small columns, which appear hardly strong enough to support them. The under part of the tower is not less heavy than the church. This church was erected at the public expense, and consecrated in January 1731. A district, for its parish was, by authority of parliament, taken out of that of St. Giles; and the sum of three thousand pounds was given towards the support of its rector, to which one thousand two hundred and fifty pounds being added, by the inhabitants of St. Giles's parish, both sums were ordered to be laid out

in the purchase of lands, tenements, &c. in fee simple, as a perpetual fund for the maintenance of the rector and his successors; but the poor of this parish and that of St. Giles in the Fields are to be maintained by the joint assessment of both parishes, in the same manner as before their being divided. This church is a rectory, in the gift of the crown, but cannot be held *in commendam*; and all licenses to that effect are made void by the act of parliament for separating this parish from St. Giles's.

Coming down Southampton-street, from which, turning round, the perambulator has an excellent view, at a distance, of the duke of Bedford's statue, we follow Holborn, that noble street, which unfortunately has hardly any thing besides its length and its breadth to recommend it.—Between Bloomsbury-square and Red-lion-street, we find Red-lion-square, a small area, particularly inhabited by families of middling income and limbs of the law. Although the buildings are mostly uniform and neat, with a shrubbery surrounded with railing in the middle; although there is no lack of busy passengers pacing the sides of the square; yet we find, without knowing well why, that this place has an indelible melancholy look; and North-street, particularly, seems so silently dull, so quietly dismal, that the idea of becoming an inhabitant of it would be enough to create the most incurable vapours.

North of this is Queen-square; it is of an oblong form, and contains about four acres. It is built only on three sides, the north side having been formerly open, which not only rendered the square very airy and pleasant, but also admitted a beautiful landscape, terminated by the hills of Highgate and Hampstead. Of late years, however, this view has been intercepted by the houses in Guildford-street, which is built across the north end of the square. The houses on the east and west sides are very handsome; the area is laid out in grass-plats, shrubberies, and gravel-walks, and is inclosed with iron rails; and at the north end is a statue of her present majesty.

The origin of the parish of St. George, Queen-square, like that of many others round the metropolis, is to be attributed to the increase of buildings. Several gentlemen at the extremity of the parish of St. Andrew, Holborn, having proposed the erecting of a chapel for religious worship, six Streytham Masters, and fourteen others, were appointed trustees for the management of this affair. These gentlemen, in the year 1705, agreed with Mr. Tooley to give him three thousand five hundred pounds for erecting a chapel and two houses, on the south side of Queen-square, intending to reimburse themselves by the sale of the pews; and, this edifice being finished the next year, they settled annual stipends for the maintenance of a chaplain, an afternoon-preacher, who was also reader, and a clerk. But the commissioners for erecting the fifty new churches, resolving to make this one of the number, purchased it of the proprietors, caused a certain district to be appointed for its parish, and had it consecrated in the year 1723, when it was dedicated to St. George, in compliment to six Streytham Masters, who had been governor of Fort St. George, in the East Indies. This church is a very plain brick building, void of all elegance both within and without; it is however convenient and well lighted. The rectory, like that of St. Andrew's, is in the gift of the Montague family.

The improvements which have been made of late years in this northern district of the town are so considerable, that a man who has been absent since the commencement of the war in 1793, vainly looks out for fields, cricket-grounds, and nurseries, where however nothing but handsome streets intersecting each others at right angles can now be found.—Indeed Greenland-place, and the Bowling-green adjoining to it, which could not be reached from town but by crossing extended and grassy meadows, and where, a book in one hand and a glass of sparkling beer in the other, we have enjoyed many evening hours of rest and pleasure, are now surrounded by elegant houses and rows of edifices which would grace any metropolis in Europe.

From

From this curiously-metamorphosed place we come back to Brunswick-square, of modern creation, the ornaments of which consist, on three of the sides, in elegant mansions, with a delightful shrubbery in the middle. Here the highly-perfumed syringa, the sweet lilac, the sunac with red berries, the yellow groups of acacia-flowers, and the multicolor daisies studding the well-shaved plots of grass, exhibit all the luxuriance of a cultivated garden in the centre of the "busy haunts of men;" and on the east side the long walls and enclosure of the FOUNDLING HOSPITAL fill the mind with congenial ideas of humanity and benevolence.

An attempt was made in the reign of queen Anne, by several eminent merchants, to establish an hospital for the reception of such infants as the misfortunes or inhumanity of their parents should leave destitute of other support; and to bring them up in such a manner as to fit them for the most laborious offices and the lowest stations. With this view they opened a subscription, and solicited a charter, but without success, owing to the prejudices of some people, who conceived that such an undertaking would perhaps encourage vice in the parents, by making too easy a provision for their illegitimate children. But the design, though suspended, was not defeated; and several of its promoters left large benefactions for the use of such an hospital, as soon as it should be erected. Among the most zealous of its promoters was Mr. Thomas Coram, commander of a ship in the merchant-service, who was so earnest in the prosecution of the benevolent scheme, that he left the sea about the year 1722, and, after an unwearied exertion of seventeen years, accomplished it. Previous to presenting his petition to the king, he procured a recommendation of his design from a considerable number of noblemen and gentlemen, and a second from several of the female nobility, both of which he annexed to it; and these, with the plan itself, were so well received by his majesty, that he immediately granted his royal charter, dated October 17, 1739, for establishing the hospital.

The work now went on with spirit; books were opened, and large subscriptions being received, an act of parliament was obtained to confirm and enlarge the powers granted by his majesty to the governors and guardians of the hospital. A piece of ground was purchased in Lamb's-conduit-fields, of the earl of Salisbury, which his lordship not only sold at a very reasonable consideration, but promoted the charity by a noble contribution. The governors were so anxious for the commencement of this charity, that, during the building of the hospital, they hired a large house in Hatton Garden; nurses were provided, and it was resolved that sixty children should be admitted; but, as the funds increased, so a greater number were received in proportion. As soon as one wing of the hospital was finished, the committee ordered the children to be removed thither, and quitted the house in Hatton Garden. A chapel being much wanted, and several ladies of quality expressing their desire of contributing to it, a subscription was opened for that purpose, and a neat and elegant edifice was soon erected. Two years after, the governors being informed of the increase of benefactions to this charity, of the number of the children, and the expediency of keeping the boys separate from the girls, gave directions for building the other wing of the hospital; since which the whole design has been completed.

The Foundling Hospital is a very handsome building, and consists of two large wings directly opposite to each other, one of which is for the boys, and the other for the girls. They are built of brick, in a plain, but regular, substantial, and convenient manner, and with handsome piazzas. At the farthest end is the chapel, which is joined to the wings by an arch on each side, and is very elegant within. In the front is a large piece of ground, on each side whereof is a colonnade of great length, which also extends towards the gates, that are double, with a masonry pier between them, so that coaches may pass and repass at the same time. The large area between the gates and

the hospital is adorned with grass-plats, gravel-walks, and lamps erected upon handsome posts; besides which, there are two convenient gardens.

In erecting these buildings, particular care was taken to render them neat and substantial, without any costly decorations; but the first wing of the hospital was scarcely inhabited, when several eminent masters in painting, carving, and other of the polite arts, were pleased to contribute many elegant ornaments, which are preserved as monuments of the abilities and charitable benefactions of the respective artists. In the court-room are four capital pictures, taken from sacred history, the subjects of which are properly adapted to their situation. The first of these paintings was executed by Mr. Hayman, the subject of which is taken from Exod. ii. 8, 9. *The maid went and called the child's mother; and Pharaoh's daughter said unto her, Take this child away, and nurse it for me, and I will give thee thy wages.* The second piece was done by Mr. Hogarth, and the subject taken from the following words, viz. *And the child grew up, and she brought him to Pharaoh's daughter, and he became her son, and she called his name Moses.* The third painting represents the history of Ishmael, painted by Mr. Highmore, from Gen. xxii. 17. *And the angel of God called to Hagar out of heaven, and said to her, What aileth thee, Hagar? Fear not; for God hath heard the voice of the lad where he is.* The last piece was painted by Mr. Wills, and is taken from Luke xviii. 16. *Jesus said, Suffer little children to come unto me, and forbid them not, for of such is the kingdom of God.*—On each side of these paintings are small drawings in circular frames, of the most considerable hospitals in and about London, done by Mr. Hartley, Mr. Wilton, Mr. Wale, and Mr. Gainsborough. Over the chimney is a very curious bas-relief, executed and presented by Mr. Rysbrack, representing children employed in husbandry and navigation. The other ornaments in this room were given by several ingenious workmen, who had been employed in building the hospital, and were desirous of contributing to adorn it. In the other rooms of the hospital are portraits of several of the governors and benefactors, viz. his late majesty, by Mr. Shackelton; captain Coram, by Mr. Hogarth, &c. &c. In the dining-room is a large and beautiful sea-piece of the English Fleet in the Downs, by Mr. Monamy; and over the chimney in another room is Mr. Hogarth's original painting of the March to Finchley. The altar-piece in the chapel, which is most beautifully executed, is accounted one of Mr. West's best productions. It was painted for Macklin's Bible, and the subject is, *Except ye become as little children, &c.* The first organ was presented by Handel, and was rendered particularly useful, in the infancy of the institution, by that great musician performing on it at certain times for the benefit of the charity; but, this organ having become defective through time and use, a new one was put up in its stead.

The number of children received into this hospital, before the end of the year 1752, was 1040, of which 559 were at that time maintained by the charity, at an expense to which its income was by no means adequate. In 1756, therefore, the parliament voted the sum of 10,000. to the hospital, and large sums were afterwards granted. It was found, however, that the scheme of it was extended too far; numerous abuses crept in; the governors were finally obliged to contract their views; but, at present, from the income of their landed and funded property, and the collections of the chapel, sufficient is raised to maintain upwards of 400 children.

The ordinary age of reception is under two months. The previous good character and present necessity of the mother, and the desertion of the father, are enquired into; and also whether reception and secrecy will be attended with the consequence of the mother's being replaced in a course of virtue, and in a way of obtaining an honest livelihood. Where these concurrent circumstances can be ascertained on the testimony of credible persons, the unfortunate mother is requested to apply herself with her own  
petition;

petition; and is assured that both *recommendation and patronage will be unnecessary and useless*. The general committee sit every Wednesday morning at ten o'clock to receive petitions; upon the first hearing of which, the mother is examined, and an enquiry directed into the truth of the allegations; and the petition is decided upon at the next meeting. The age limited for children is twelve months, after which they cannot be received, unless they are the children of soldiers and sailors, the time for whose reception is extended to five years of age. If the mothers are in distress, the general committee have a discretion to make them some weekly allowance till the day of the child's mittance; exclusive of which, the governors have formed a fund for the occasional relief of those whose circumstances have compelled them to part with or pawn their clothes for the maintenance of their children, and other unavoidable expenses, and thereby have been prevented from getting into service or obtaining other means of livelihood. The children are received on the Saturday at noon preceding the public baptism, the circumstances of each case having been investigated during the preceding month; and proper nurses sent up by the inspectors in the country for the children to be admitted. The children are then numbered and registered, and their billets made up; the secretary writes a number on a slip of parchment, and affixes it to their clothes; these numbers follow each other in succession, and great care is taken that they remain fixed to the children while they remain at nurse: the secretary then makes up the billet, which contains the number, sex, and supposed age, the date of reception, and any particular writing or token brought with it, which is also marked with the child's number; the billet is marked on the outside with the number, date, and letter M or F to distinguish the sex. These billets, being the only means which can enable the governors to know the children, in case they should be enquired for, are kept with great secrecy and care, and are never opened but by order of the general committee.

No nurse has more than one wet-nurse child at one time; and, in case of the death of a child, the nurse is not to be entrusted with another, unless upon inquiry the case is very favourable to her. She is allowed 3s. per week; and, if the child is living at the end of the first year, she is entitled to a reward of 10s. The mortality is very small; the average of those who died under twelve months in ten years was only one in six, and for the last four or five years even less than that proportion. They continue with their nurses during four years, under the controul of their inspectors, and subject to frequent visits, without notice, by the general committee; and a written report of each child is read and preserved. They are then placed in the schools, and occasionally assist in the house-work: they are instructed in singing the Foundling hymns and anthems, and in their catechism, in reading, writing, and accounts, and in spinning of worsted yarn. The boys are fitted to be apprentices to London shopkeepers, without any apprentice-fee, and therefore writing and accounts are more particularly attended to, and found upon experience to be far more useful, than learning manufactures, which has been relinquished. The boys and girls are kept entirely separate.—The girls are divided into three classes, under the care of three different mistresses, by whom they are taught needle-work and reading, to assist in the house-work, kitchen, and laundry, &c. for this purpose needle-work is taken in and done for hire, in addition to all which this large family requires; the average produce of their work is 12l. each, from eleven to fourteen years of age; and 2l. 13s. from the age of seven to eleven. The boys are put out as apprentices at twelve or thirteen years of age, and the girls at fourteen. The applications for them exceed the number who are ready, notwithstanding several restrictions and precautions which the corporation adopt. No child is apprenticed to any other than a housekeeper, a very strict enquiry being made relative to

situation and character. No girl is apprenticed to an unmarried man, nor to a married man, unless the wife has seen the girl, and has expressed her concurrence in the application; nor, except in a few instances, are the girls apprenticed to any family that lets lodgings, nor unless there is an established servant engaged in the house. During their apprenticeship they are frequently visited by the matron, and the boys by the schoolmaster; and the general committee are always ready to interfere when necessary, their duty as guardians not being discharged until after the term of their apprenticeship at the age of twenty-one years.

The reports on this subject have always been very interesting, and redound greatly to the honour of the matron and the master, for the careful attention paid to the progress and welfare of the children; the publication of one of them in 1798, by sir T. Bernard, sufficiently shows the excellent method pursued; and by which it appeared, that, out of two hundred and fifty-two apprentices, one hundred and sixty-six were doing well and giving satisfaction; of the remaining eighty-six, fifteen had turned out ill, some from their own fault, and some from that of their masters. Of twenty-seven in distant situations, no complaint had been made; twenty-three apprenticed to their own relations; and twenty-one not free from blame, but requiring judicious treatment. The proportions of good servants in place, and good apprentices, far exceeds the number of the others; and there are many respectable persons at present in London married and settled in business, who have been thus educated and apprenticed by this charity.—The parents of the children are not informed of the place where they are apprenticed, without an order of committee, made after the master or mistress has been consulted. In case any of the girls are returned from any places where they may have been apprenticed, they are employed in the laundry or kitchen, or in other house-work, till otherwise disposed of, and are not permitted to intermix with the other girls. None of the children are ever suffered to go beyond the gates of the hospital.

Such are the principles of benevolence, and the excellent effects, of this most humane institution; the long establishment of which has been an invariable proof of the good sense which suggested the plan of it. When innocence, seduced, is led astray to the dark abodes of illicit pleasures, she seldom thinks of the dreadful consequences which may arise from her folly. When the guilt is committed; when left to herself by the ungenerous behaviour of the seducer, the future mother, in the vacant hours of abandonment, reflects upon her situation; if a distant idea of this kind establishment perchance alights, like a ray from heaven, upon her aching heart, then she feels comforted; and, determined to bear her misfortune on the wings of soothing hope, she shrinks from the unnatural idea of veiling her present shame by the commission of a much greater crime. Foundling Hospitals have been erected and endowed in other countries; in some no such establishment ever took place; and yet we cannot discover that the existence or absence of such a refuge for the spurious offspring of unauthorized love ever occasioned an increase or decrease in the daily commission of the sin of fornication, in large towns; and we therefore think, with the ever-to-be-praised founders of this hospital, that the encouragement (if there is any) given by these sort of houses to the loose passion of lust, does not bear proportion with the horrors which would result from the non-existence of such establishments.

This noble charity may be visited any Tuesday, Thursday, or Friday, for a small gratuity, on application to the porter at the gates. The kitchen, in particular, is an object worthy of inspection to all strangers: it is constructed on the plan of count Rumford, and is said to have caused a saving to the charity of twenty-five chaldrons of coals in the year.

To the eastward of the Foundling Hospital, a square is begun, of the same dimensions as Brunswick-square; to be called Mecklenburg-square. Northward of the hospital-garden, is the estate of Mr. Harrison, where a respectable neighbourhood is rapidly forming; and nearly adjoining, is a large field belonging to the Skinners' Company, for which extensive building-plans have been projected; but, through some extraordinary inadvertence, no agreement has been effected, to insure respectable accesses either by the south, east, or west, sides.

Opposite the Foundling Hospital is Lamb's-Conduit-street. We are told that Mr. William Lamb erected a conduit here in the year 1577, as a reservoir to supply another conduit on Snow-hill. Although we do not find, even with several maps of London before our eyes, how this conduit might have been carried over the vale of Oldbourne up to Snow-hill, yet we must yield to, supposed better, authorities, and leave the pretended fact as it is.—Of these conduits, we meet, in the course of our survey, with notices of many, within and without the metropolis; and indeed, we find that there was one called the Devil's Conduit, which stood on the west side of Queen's Square, somewhere about Southampton-row, and supplied Christ's Hospital with water. Yet we have not been able to procure any print, drawing, or written description, of these sorts of conduits. Had they been like the aqueducts of the Greeks and Romans, and those of Arceuil and Marli in France, we surely should find remains of them: but we verily believe, that at this moment no antiquarian can tell us, for a certainty, what these conduits were!

Gray's-Inn-lane, on the east of the Foundling Hospital, communicates from Holborn to the fine road which, as a continuation of the City Road, leads to Paddington. It has been lately much improved, by being paved to a greater extent towards the north, and by the erection of several rows of buildings which unite to exterior elegance all the internal advantages requisite for the habitation of genteel families. We remark particularly those which have been erected, within a few years, under the title of Verulam Buildings; but, unless we are told that they are particularly and purposely built for lawyers and men of learning who wish not to be disturbed by the bustle of a street, we cannot fancy the long and dead screen placed before them to be a very agreeable prospect for those who inhabit the ground-apartments.

We have mentioned above, p. 368, that the religious establishment of the *Sinner Saved*, the coal-heaver orator, was in this lane. The chapel makes no particular show; it retires gently and modestly a few feet from the row of houses on the east side of the street, and bears its title and date of existence on its plain and unaffected front. We understand that some Elihu (who did not catch the mantle of the prophet when falling from the fiery chariot, but who may have bought it at the famous auction of which all London has heard) is keeping up the firm, and that the spirit of the departed is still quickening among the living.

Higher up, to the north, we find the Welsh Charity-school.—The Society of Ancient Britons was originally established on the first of March, 1714, in honour of the birth-day of her royal highness Caroline, then princess of Wales, which happened to be coincident to the anniversary commemoration of the titular saint of the principality. About the year 1718, a few public-spirited gentlemen of Wales, stimulated by the same laudable zeal which gave birth to this noble institution, and observing that many poor children of their unfortunate countrymen, born in or near London, were not entitled to any parochial settlement, entered into a voluntary subscription for setting up and supporting a school in or near London, for instructing, clothing, and putting forth apprentices, poor children descended of Welsh parents, born in or near London, having no parochial settlement within ten miles of the Royal Exchange. The subscriptions at first being small, the society engaged a room near Hatton Garden, and took only

twelve poor children upon the establishment, until their charitable designs became better known, and the subscriptions increased. They afterwards increased the number to forty, until the year 1737, when a subscription was begun for erecting a school on Clerkenwell Green; this was completed by public generosity. The society, in the year 1768, on the recommendation of several ladies, enlarged their plan, and took six girls into the house, to be boarded, educated, and clothed. The patronage afforded by his royal highness the prince of Wales, the nobility, gentry, and public in general, induced the treasurer and trustees, in the year 1771, to attempt a further enlargement of their plan, and to undertake, in future, the education and *entire maintenance* of a certain number of boys and girls. As the school-house on Clerkenwell Green would not admit of enlargement sufficient for this purpose, the present building was begun in 1772, and secured to the use of the charity; and is sufficient to accommodate one hundred children. The school at present supports 75 boys and 25 girls; and from the secretary's account it appears, that 1043 boys and 162 girls had been entered upon the establishment; of the former 627 had been apprenticed with a fee, 164 had gone to sea, and 177 to service. Of the girls, 97 were sent to service, and 40 put out apprentices.

Gray's Inn, from which this lane received its name, occupies the site of the ancient manor-house of Portpool, one of the prebends to St. Paul's cathedral. See *INNS OF COURT*, vol. xi. p. 83.—The principal entrance is in Holborn, though the buildings are situated at some distance from the street. There is another entrance to it in Gray's-Inn-lane; part of the west side of which is occupied by the back of the buildings, and the wall that incloses the gardens. The inn consists of several well-built courts, particularly Holborn-court and Gray's-Inn-square; the latter of which was built in 1637. But the chief ornament of this inn is the spacious garden behind it, which consists of gravel-walks between lofty trees, grass-plats, agreeable slopes, and a long terrace, with a portico and seats at each end. It is open to the public in the summer season. There is, in the aspect of these gardens, when, on a summer evening, genteel companies repair thither to enjoy an undisturbed hour of conversation, something peculiarly pleasing, which reminds us of ancient times. The entrance into this place is by a handsome iron gate; and no improper persons are admitted; and indeed, we may bestow this general sprig of praise upon a certain class of our countrymen, that they seldom intrude where they suspect that they are not really welcome.

Opposite to Gray's-Inn-lane are the Bars of Holborn, the limits of the city-jurisdiction at this part.—A small mass of houses, with a passage on the south, might be taken out, and then the appearance of the street at the top of Holborn-hill, would be much improved. This little passage is called Middle Row, and communicates to Southampton Buildings behind Staple Inn, and leads to Chancery-lane. Several streets, intersecting each other most irregularly, form here a sort of labyrinth, the egresses of which are to Fetter-lane, Curstort-street, Castle-street, and Chancery-lane.

Opposite to Staple Inn is Furnival's Inn; and, crossing again, we come directly to Bernard's Inn. These inns of chancery have been fully described at p. 82, 84, of vol. xi. The chambers of these quiet retreats are not occupied by lawyers exclusively, but by many other persons of retired habits, chiefly single and independent gentlemen.—One of the oldest inhabitants of Bernard's Inn has been described in a late publication called "London Characters;" and, as the performance gives a general idea of the regular habits of a respectable member of society, and may serve to illustrate the customs and manners of some of our cotemporaries, we shall present it to our readers.

"J. M. is a native of Suffolk; but has been an inhabitant of London for these last thirty years. Liberally educated, literature and antiquarian pursuits are his hobby-horse; but too small an income has restrained the bent of his soul

nearly in all the circumstances of his life. However, perseverance and economy have conquered all. Retired, like a lonely anchorite, in the attic apartment of an inn of court, there, not unlike the bird of Minerva, who perches on the neighbouring gutter, and "moping to the moon complains," our friend silently and wisely enjoys what he calls (and who dares say he is not right?) a comfortable life. He is fond of old engravings and musty pictures; his room does not exhibit an inch of plaster that is not closely covered with such precious decorations. His tolerance has allowed him to be fond of popish relics; and pieces of copes and chalices, from the times of the heptarchy to this day, are respectfully hung around his bed-chamber. Old missals, and curious editions of scarce books, sleep on his shelves; and precious medals repose in his cabinets. Ancient stained glass chequers his window-frames with the seven-fold glories of the rainbow; and Mambrino's helmet chides its neighbour, the real bit of copper-ore, for not exposing more significantly the greenish treasures of its bosom. In fact, Mr. M's small apartment is truly a kind of microcosm, where time and place have lost their distances; where the productions of Oracheite and Mexico are contiguous to the English and French beautiful china; where the Etruscan vase displays its red and black allegories by the side of modern filagree.

"But how could any body gather so many and valuable curiosities, with no other help but a very small patrimony, which prudence bids him to preserve, and natural fearfulness forbids him to increase? For these last thirty years he has employed the same hair-dresser, who, out of respect (we suppose), never raised his price; the same laundress and her daughter have constantly attended him for the same wages, because, as they say, they are sure of their money, let it be ever so little; and the same eating-house has contributed to his subsistence. A constant customer for so long a period, is sure to be well-treated; and Mr. M. never found cause to change his board, though the landlord of the house he uses has been changed more than once. Sobriety with him is the order of the day; but a friend can enjoy, at his chambers, as comfortable a cup of tea as at any alderman's rose-wood table. Generally averse to crowds, he runs through the street; and, if he is ever pressed or jammed any where, it must be in some foreign chapel, where, though bred up a member of the established church, he often repairs to witness the Russian or Roman liturgies. As his days are peaceful and harmless, his nights are undisturbed and happy. His diet is regular, light, and wholesome; therefore he enjoys his health. But do not suppose that the overplus of his income is exclusively spent to satisfy his whims, and buy fodder for his hobby-horse. He feels as a man ought for the miseries of others; the fly shilling often drops from his hand into the worn-out hat of the blind and lame, and they bless him, as they would an angel, invisible and unknown.

"In a word, Mr. M's life, which, we are sorry to say, is now on the decline, has been like the nightly lamp, that keeps itself in darkness, whilst it illuminates others; and, for the many years we have observed him attentively, we never heard him complain of any body, nor any body of him. Mr. M. is a bachelor; therefore he never enjoyed the sweets of conjugal love, and the comforts of a father; no—nor the bitterness of jealousy, and the continual anxieties of a tender parent for his children. The journal of his daily conduct is as follows:—Mr. M. rises at half past seven in winter, and at half past five in summer; lights his fire himself, and dusts his curiosities; breakfasts exactly at nine; remains in his red damask morning-gown till ten or eleven; dresses, and goes to take a walk if the weather proves fine; returns home at one, studies till three, goes to Salisbury-court and dines, takes a second walk, or returns home if it rains; drinks tea at six precisely; writes or reads till nine; takes a glass of ale, with a crust of bread; and at half past nine retires to his bed, where he sleeps soundly till the next day brings the same routine over again." The reader will by this

time begin to think of "the diary of a single gentleman" mentioned in the Spectator.

The passage through Bernard's Inn into Fetter-lane encloses the buildings of an immense distillery which has been restored since it fell a prey to the infuriated mob in the year 1780, on account of the owner being a Roman catholic. The north access to Fetter-lane is as narrow as the south, and exhibits still one or two old houses with projecting stories.—Beyond Fetter-lane we find Bartlett's Buildings, a neat court well stored with neat houses; and a little farther on the same side of the street is Thavies' Inn, concerning which we can add nothing to what we have said at p. 82. of vol. xi.

Contiguous to this inn, and at the north-west angle of Shoe-lane, stands the parish-church of St. Andrew, Holborn. This church escaped the fire of London; notwithstanding which, it was found so ruinous, that it was entirely rebuilt in 1687, except the tower, which was not erected till 1704. The body of the church is a hundred and five feet long, sixty-three broad, and forty-three high, and the height of the tower is a hundred and ten feet. The body is well built, and lighted by two series of windows; and on the top of it runs a handsome balustrade. The tower rises a square, and consists only of two stages, crowned with battlements and pinnacles at the corners. The first stage, which is plain, has the dial; in the upper stage there is a very handsome window to each front; tall, arched, and decorated with Doric pilasters, which support a lofty arched pediment, decorated within by a shield. The cornice, that crowns the tower, is supported by scrolls; and the balustrade that rises above this has a very firm base. Each corner of the tower has an ornamental pinnacle, consisting of four large scrolls, which, meeting in a body, support a pine-apple; and from the crown of the fruit rises a vane. The inside is extremely neat, and well finished. Over the communion-table is a large painted window, the lower part of which represents the Messiah and his disciples at the Last Supper; and in a compartment above is represented his resurrection from the grave. The church stands at an advantageous distance from the street, from which it is separated by a wall, that incloses the church-yard, and the entrance to it is by large and elegant iron gates. This church is a rectory, the patronage of which was originally in the dean and canons of St. Paul's, who transferred it to the abbot and convent of Bermondsey, and they continued patrons of it till their convent was dissolved by Henry VIII. when that prince granted it to Thomas lord Wriothesley, afterwards earl of Southampton, from whom it descended by marriage to the late duke of Montague, in whose family the patronage still remains. Wriothesley was lord chancellor in the latter part of the life of Henry VIII. He was a fiery zealot, who, not content with seeing the amiable and innocent Anne Askew put to the torture, for no other crime than difference of faith, flung off his gown, degraded the chancellor into the *bourreau*, and with his own hands gave force to the rack. He was created earl of Southampton just before the coronation of Edward VI. but, obstinately adhering to the old religion, he was dismissed from his post, and confined to Southampton-house, where he died in 1550; and was buried in this church. The well-known party-tool Dr. Sacheverel was rector of this church. He had the chance of meeting in his parish a person as turbulent as himself, the noted Mr. Whiston: that singular character took it into his head to disturb the doctor while he was in his pulpit venting some doctrine contrary to the opinion of that heterodox man. The doctor in great wrath descended from on high, and fairly turned "wicked Will. Whiston" out of the church.

Nearly opposite St. Andrew's church is Ely Place, communicating by a narrow passage with Harton Garden, which is one of the handomest streets in London, and was built upon the site of the town-house and gardens of the Hartons, founded by sir Christopher Hatton, lord-keeper in the reign of queen Elizabeth. He first attracted the

royal notice by his fine person and fine dancing; but his intellectual accomplishments were far from superficial. The place he built his house upon was the orchard and garden belonging to Ely-house. Here sir Christopher died in 1591. By his interest with the queen he had extorted the ground from the bishop, Richard Cox, who for a long time resisted the sacrilege. Her letter to the poor bishop was dictated in terms as insolent as indecent. "Proud Prelate! You know what you was before I made you what you are now. If you do not immediately comply with my request, by G—d I will unfrock you. ELIZABETH."—This palace was long before distinguished by the death of a much greater man; for, at this house of the bishop of Ely, say historians, John duke of Lancaster, otherwise John of Gaunt, breathed his last, in 1399, after (according to Shakespeare) giving his dying fruitless admonition to his dissipated nephew Richard II. It was possibly lent to him, during the long possession that bishop Fordham had of the see, after the duke's own palace, the Savoy, was burnt by the insurgents.

Adjacent stood, in my memory, (says Pennant,) Ely House, the residence of the bishops of Ely. John de Kirkby, who died bishop of Ely in 1290, laid the foundation of this palace, by bequeathing several messuages in this place; others were purchased by his successor William de Luda: at length the whole, consisting of twenty, some say of forty, acres, was inclosed within a wall. Holinshed has recorded the excellency of the strawberries cultivated in the garden by bishop Morton: he informs us that Richard duke of Gloucester (afterwards Richard III.) at the council held in the Tower on the morning he put Hastings to death, requested a dish of them from the bishop. Grose has given two representations of the buildings and chapel. Here was a most venerable hall, seventy-four feet long; lighted with six gothic windows; and the furniture suited the hospitality of the times. This room the serjants at law frequently borrowed to hold their feasts in, on account of its size. In the year 1531, eleven gentlemen, who had just been honoured with the coif, gave a grand feast here five days successively. On the first, the king and his queen, Catharine of Arragon, graced them with their presence. For quantity of provisions it resembled a coronation-feast: the minutiae are not given; but the following particulars (from Stow) will suffice to show its greatness, as well as the wonderful scarcity of money in those days, evinced by the smallness of the prices compared those of the present day:

Brought to the slaughter-house 24 beeves, each	£1	6	8
One carcase of an ox from the shambles	-	1	4
One hundred fat muttons, each	-	0	2
Fifty-one great veales, at	-	0	4
Thirty-four porkes, at	-	0	3
Ninety-one pigs, at	-	0	0
Capons of Greece, ten dozens, at apiece	-	0	1
Capons of Kent, nine dozen and six, at	-	0	1
Cocks of grose, seven dozen and nine, at	-	0	0
Cocks course xiiii dozen at 8d. and 3d. apiece.	-	-	-
Pullets, the best 2 <sup>d</sup> . each. Other pullets	-	0	0
Pigeons 37 dozen, each dozen	-	0	0
Swans xiiii dozen.	-	-	-
Larkes 340 dozen, each dozen	-	0	0

The chapel (which was dedicated to St. Etheldreda, foundress of the monastery at Ely) has at the east end a very handsome gothic window, which looks into the court called Ely Place. Beneath is a crypt of the length of the chapel. The cloisters formed a square on the south side. The several buildings belonging to this palace falling into ruin, it was thought proper to enable, by act of parliament, in 1772, the bishop to alienate the whole. It was accordingly sold to the crown, for the sum of six thousand five hundred pounds, together with an annuity of two hundred pounds a-year, to be paid to the bishop and his successors for ever. Out of the first five thousand, six hundred was applied towards the purchase of Albermarle-house, in Dover-street, with other messuages and

gardens. The remainder, together with three thousand pounds paid as dilapidations by the executors of bishop Mawson, was applied towards building a handsome house in Dover-street, which was named Ely-house, and is settled on the bishops of Ely for ever.

At the eastern extremity of Holborn is Snow-hill, (Stow writes it *Snore-hill*;) an irregular and formerly very-inconvenient avenue into the city from the north western parts of the metropolis; but the erection of a new street, in a direct line from the bottom of the hill to the end of the Old Bailey, has removed the inconvenience, and added greatly to the beauty of this part of the city. It is named Skinner-street, in honour of the late alderman Skinner, an active member of the committee for improving the entrances into the city at Temple-bar and Snow-hill.—We are of opinion, that, if a bridge had been erected between the *croupe* of Snow-hill and that of Holborn, leaving on each side a passage for foot-passengers, it would have made a grander appearance, and been more commodious. The market might have been removed under the arches of this bridge, and thus have been sheltered from the inclemency of the weather. A large centre-arch might have opened into a prolongation of the street leading to Clerkenwell Green, opposite to Hicks's Hall. However, it has in its present state a fine appearance; and the perambulator cannot help stopping a few minutes on the brow of Holborn to give a circumspective glance to the objects which surround him.

Having once more arrived nearly at the point whence we set out at p. 51. we here take our leave; and, though we have drawn this article to an unprecedented length, we are sensible how much it still wants to make it complete; yet we hope it will not suffer by a comparison with others. We have, as carefully as it was in our power, perambulated the whole of this wonderful and extensive metropolis, sowing now and then our paths with the flowers of description, and reaping here and there the fruit of reflection and observation; endeavouring, at all times, to conform to the principle of the poet, *utile dulci*, mingling constantly pleasure and amusement with real utility. We conclude by referring our readers to the Plan of Survey which we have given upon Plate V. but we ought particularly to warn them not to look, in this sort of synopsis, for correctness and accuracy of distances, since our intention has been merely to show the tracks we have perused, and to bring under the eye, through the attraction of several focusses of light, some of the most striking objects described in this article. The Arabic characters mark the pages of the survey, and the Roman letters the plates; in order that, at first sight, any one may find the spot, where either the pen or the graver seems to have dwelt with well-grounded partiality or pardonable complacency.

#### GOVERNMENT AND POLICE OF THE CITY OF LONDON.

**CIVIL GOVERNMENT.**—No authentic documents are in existence to show what was the nature of the government of London during the time it was under the dominion of the Romans and Saxons; and as, when it was brought under the Danish yoke, they made no other use of it but as a place of security to fly to, in case of necessity, for shelter and defence; there is, therefore, no probability that a regular government existed during that period. At length, in 886, Alfred, having dislodged these freebooters, rebuilt the city in a more magnificent manner than it had formerly been, and committed the government of it to Ethelred duke of Mercia. From this time to the reign of Edward the Confessor, no mention is made of the names or functions of the municipal officers, though it is evident that London had a government and privileges peculiar to itself, before the reign of the last-named king, from some fragments of a charter granted by him, and addressed to the *portgrave*, whereby all the ancient customs and usages were confirmed, and others were added. This title of portgrave, or portreve, in its more confined sense, belonged to an officer appointed by the king, whose duty it was to collect the public imposts of a commer-

cial port; but from this charter, and that of William the Conqueror, the portreve of London appears to have been also at the head of its civil government. Of the change of the name of this high officer from portreve to *bailiff*, and from *bailiff* to *mayor*, we have spoken at p. 61.

In the year 1213, the citizens of London obtained the privilege of choosing their own mayor, but with this condition, that he should be presented annually to the king, or, in his absence, to his justice, to be sworn into office. King Edward III. a few years after his second charter, by which Southwark was granted to the citizens, added these privileges—that a gold or silver mace should be carried before the chief magistrate, and that the title of *lord* should be prefixed to that of mayor.

In these remote times, we understand that the elections for city-officers were made tumultuously, by all the citizens, without distinction; but, this giving rise to great disturbances, the magistrates were afterwards chosen by a select number, sometimes more, and sometimes fewer, out of each ward; and this select number was called the *commonalty*. This mode of election by delegates continued from the reign of Edward I. or perhaps earlier, to that of Edward IV. in whose reign (by act of common council, anno 1471) the elections were made by the liverymen of the respective companies; which method has continued ever since, and is established by act of parliament, 11 Geo. I. c. 18. By virtue of this authority the livery assemble annually, on Michaelmas day, at Guildhall for that purpose.

Soon after the election, the new lord-mayor, accompanied by the recorder and several of the aldermen, is presented to the lord-chancellor, as his majesty's representative, for his approbation, without which the person elected has no legal authority to execute the office; but, this being obtained, he is, on the 8th of November, sworn into the office of lord-mayor at Guildhall, and, the next day, before the barons of the exchequer at Westminster. On the morning of the 9th of November, being the day on which the lord-mayor elect enters upon his office, the aldermen and sheriffs repair to his residence, from whence they attend him to Guildhall, in a procession formed by coaches, which, about noon, proceed to Blackfriars, where the lord-mayor, aldermen, recorder, and sheriffs, go on-board the city-berge, (see p. 64.) attended by several corporations of the citizens, in their formalities, and stately barges, and thence proceed to Westminster, forming a grand and magnificent appearance. The ceremony being over at Westminster, the procession returns by water to Blackfriars-bridge, whence the livery of many of the city-companies, preceded by colours and bands of music, march to their halls to dinner. When the lord-mayor lands at Blackfriars, he is received by the artillery-company, a military body composed principally of young citizens, who take the lead of the procession, and are followed by the company to which his lordship belongs; after these come some others of the city companies, among whom, that of the Armourers frequently attends, preceded by a person on horseback dressed in polished armour. Next march the lord-mayor's officers and servants, followed by his lordship in the city state-coach; and after him come the aldermen, recorder, sheriffs, chamberlain, common-serjeant, town-clerk, &c. in their several carriages and splendid equipages; and in this manner they proceed to Guildhall, where an elegant entertainment is provided.

On all public occasions the lord-mayor is clothed, according to the season, either in scarlet or purple robes, richly furred, with a velvet hood, and golden chain, or collar of S.S. with a rich jewel appendant. Many conjectures and antiquarian disquisitions have been made upon the signification of the S.S. which compose the collar of the lord-mayor, as well as that of the heralds and serjeants at arms: some take them as the first letter of *Scutifer*, shield-bearer; esquire, *ecuyer*; others as the initials of *Senus Sulpicius*, &c. After long researches of our own on the subject, and nearly bewildered by the number of opinions, we simply return to our original surmise, that the S.S. are nothing more than an ornament without

special meaning, and merely chosen on account of their shape, which being bent contrary ways, forms naturally, when united, the links of a chain. See the article *HERALDRY*, vol. ix. p. 450.—When the lord-mayor, goes abroad in his state-coach, the mace-bearer sits upon a stool in the middle, facing one of the windows, and the sword-bearer upon another stool, opposite the other; when on foot, his train is supported by a page, and the mace and sword are carried before him. The first lord-mayor who had six horses to his coach was Humphrey Parsons, anno 1730.

The principal officers belonging to the lord-mayor, for the support of his dignity, are, the sword-bearer, the common hunt, the common crier, and the water-bailiff; who have all good salaries or perquisites, with each the title of Esquire. He has also three serjeant carvers, three serjeants of the chamber, a serjeant of the channel, two yeomen of the chamber, four yeomen of the water-side, a yeoman of the channel, an under water-bailiff, six young men waiters, three meal-weighers, two yeomen of the wood-wharf, an officer called a foreign taker, and the city marshals. There are, besides these, seven gentlemen's men; as, the sword-bearer's man, the common hunt's two men, the common crier's man, and the carver's three men. Nine of the foregoing officers have liveries of the lord-mayor, viz. the sword-bearer and his man, the three carvers, and the four yeomen of the water-side. All the rest have liveries from the chamber of London.

Although the office of lord-mayor is elective, it may be said to be, in some measure, perpetual; for his power does not cease on the death of the king. When this circumstance happens, the lord-mayor is the principal officer in the kingdom, and takes his place accordingly in the privy-council, until the new king is proclaimed; in proof of which, when James I. was invited to come and take possession of the throne of England, Robert Lee, the then lord-mayor, signed the invitation before all the great officers of state and the nobility. His power is very considerable; for he is not only the king's representative in the civil government of the city, but also first commissioner of the lieutenantancy, perpetual coroner, and escheator, within the city and liberties of London, and the borough of Southwark, chief justice of oyer and terminer and gaol-delivery of Newgate, judge of the court of wardmote at the election of an alderman, conservator of the rivers Thames and Medway, perpetual commissioner in all affairs relating to the river Lea, and chief butler of the kingdom at all coronations. He sits every morning at the mansion-house, to determine differences among the citizens, and to do the other business incident to his office of chief magistrate. The person of the lord-mayor is inviolable, and it is a high crime to assault or resist him. Thus, in the year 1339, in the mayoralty of Andrew Aubrey, he, with some of his servants, being assaulted in a popular tumult, headed by two persons of the names of Haunsart and Brewere, these two ringleaders were apprehended and tried for that offence at Guildhall, and, being convicted, were immediately beheaded in Cheapside.

The title of dignity, Alderman, is of Saxon original, and of the greatest honour, answering to that of earl; though now it is no-where to be found but in chartered societies. And from hence we may account for the reason why the aldermen and commonalty of London were called *barons* after the conquest. These magistrates are properly the subordinate governors of their respective wards, under the lord-mayor's jurisdiction; and they originally held their aldermanries either by inheritance or purchase; at which time the aldermanries, or wards, changed their names as often as their governors or aldermen. The oppressions, to which the citizens were subject from such a government, put them upon means to abolish the perpetuity of that office; and they brought it to an annual election. But, that manner of election being attended with many inconveniences, and becoming a continual bone of contention amongst the citizens, the parliament, in the year 1394, enacted, "That the aldermen of London

Shall continue in their several offices during life, or good behaviour:” and so it still continues, though the manner of electing has several times varied. At present it is regulated by an act of parliament, passed in the year 1725; and the person so elected is to be returned by the lord-mayor (or other returning officer in his stead, duly qualified to hold a court of wardmote) to the court of lord-mayor and aldermen, by whom the person so returned must be admitted and sworn into the office of alderman, before he can act. If the person chosen refuses to serve the office of alderman, he is subject to a fine of five hundred pounds. See p. 97, 243.

Their high officers constitute a second part of the city legislature, when assembled in a corporate capacity, and exercise an executive power in their respective wards. All the aldermen keep their wardmote for choosing ward-officers, and settling the business of the ward, for redressing grievances, &c. In the management of these affairs, every alderman has his deputy, who is by him appointed out of the common-council of his ward; and, in some of the wards that are very large, the alderman has two deputies. The aldermen who have passed the chair are justices of the quorum, and all the other aldermen are justices of the peace.

The division of the city into wards, under the government of an alderman to each, is as old as the year 1285. See p. 65. They were at that time twenty-four in number; but, by the dividing of Farringdon-ward into two, and the addition of Bridge-ward Without, in the borough of Southwark, they are now twenty-six; of which the following are the names and boundaries at the present time.

1. *Aldersgate-ward* takes its name from a city-gate which stood in the neighbourhood. It is bounded on the east by Cripplegate-ward; on the west, by Farringdon-ward Within and Without; and on the south, by Farringdon-ward Within. It is very large, and is divided into Aldersgate Within and Aldersgate Without. Each of these divisions consists of four precincts, under one alderman, eight common-councilmen, of whom two are the alderman's deputies, eight constables, fourteen inquest-men, eight scavengers, and a beadle; exclusive of the officers belonging to the liberty of St. Martin's-le-Grand, which contains 168 houses.

2. *Aldgate-ward* takes its name also from the ancient gate. The ward of Aldgate is bounded on the east by the city-wall, which divides it from Portoken-ward; on the north, by Bishopsgate-ward; on the west, by Lime-street and Langbourn wards; and on the south, by Tower-street-ward. It is governed by an alderman, six common-councilmen, six constables, twenty inquest-men, seven scavengers, and a beadle; besides the officers belonging to St. James's, Duke's Place. It is divided into seven precincts.

3. *Bassishaw or Basinghall-ward*, is bounded on the east and south by Coleman-street-ward, on the north by part of Cripplegate, and on the west by part of the wards of Cheap and Cripplegate. On the south, it begins at Blackwell-hall; and runs northward to that part of London-wall which was pulled down some time ago to make way for new buildings in Fore-street; and spreads eighty-eight feet east, and fifty-four feet west, against the place where that wall stood. This is a very small ward, and consists only of two precincts: the upper precinct contains no more than 66, and the lower only 76, houses. It is governed by an alderman, four common-councilmen, of whom one is the alderman's deputy, three constables, seventeen inquest-men, three scavengers, and a beadle. It has its name from Basinghall, the mansion-house of the family of *Basings*, which was the principal house in it, and stood in the place of Blackwell-hall. See p. 420.

4. *Billinggate-ward* is bounded on the east by Tower-street ward; on the north, by Langbourn-ward; on the west, by the ward of Bridge Within; and on the south, by the river Thames. It is divided into twelve precincts; and is governed by an alderman, ten common-councilmen, one of whom is the alderman's deputy, eleven constables,

fourteen inquest-men, six scavengers, and a beadle. The situation of Billinggate, on the river, gives it great advantages with respect to trade and merchandise; so that it is well inhabited, and is in a continual hurry of business at the several wharfs or quays.

5. *Bishopsgate-ward* is bounded on the east by Aldgate-ward, Portoken-ward, and part of the Tower-liberty, or Norton Falgate; on the west, by Broad-street ward and Moorfields; and on the south, by Langbourn-ward. It is very large, and divided into Bishopsgate Within and Bishopsgate Without. The first contains all that part of the ward within the city-wall and gate, and is divided into five precincts; the second lies without the wall, and is divided into four precincts. Bishopsgate Without extends to Shoreditch. This ward is governed by an alderman, two deputies, one within and the other without, twelve common-councilmen, seven constables, thirteen inquest-men, nine scavengers, and two beadles. It took its name from the gate, which was pulled down to make that part of the city more airy and commodious. See p. 104.

6. *Bread-street-ward* is encompassed on the north and north-west by the ward of Farringdon Within; on the east, by Cordwainers-ward; on the south, by Queenhithe-ward; and on the west, by Castle-Baynard-ward. It is divided into thirteen precincts; and is governed by an alderman, twelve common-councilmen, of whom one is the alderman's deputy, thirteen constables, thirteen inquest-men, thirteen scavengers, and a beadle; and yet contains no more than 331 houses. It takes its name from the ancient bread-market, which was kept in the place now called Bread-street; the bakers being obliged to sell their bread only in the open market, and not in shops.

7. *Bridge-ward Within* is bounded on the south by the river Thames and Southwark; on the north, by Langbourn and Bishopsgate wards; on the east, by Billinggate; and on the west, by Candlewick and Dowgate wards. It is divided into fourteen precincts, three of which were on London-bridge; and is governed by an alderman, fifteen common-councilmen, fourteen constables, fifteen inquest-men, fourteen scavengers, and a beadle. It takes its name from its connexion with London-bridge.

8. *Broad-street-ward* is bounded on the north and east by Bishopsgate-ward; on the south, by Cornhill and Wallbrook wards; and on the west by Coleman-street-ward. It is divided into ten precincts; and governed by an alderman, ten common-councilmen, ten constables, thirteen inquest-men, eight scavengers, and a beadle. It has its name from that part of it now distinguished by the name of Old Broad-street; and which, before the fire of 1666, was accounted one of the broadest streets in London.

9. *Candlewick-ward, Candlewick-street, or Candlewright-street-ward* as it is called in some ancient records, is bounded on the east by Bridge-ward; on the south, by Dowgate and part of Bridge-ward; on the west, by Dowgate and Wallbrook; and on the north, by Langbourn-ward. It is but a small ward, consisting of about 236 houses; yet is divided into seven precincts. It is governed by an alderman, eight common-council men, seven constables, thirteen inquest-men, seven scavengers, and a beadle. It has its name from a street, formerly inhabited chiefly by candle-wrights or candle-makers, both in tallow and wax. That street, however, or at least its name, *Candlewick*, is lost since the great conflagration, for which the name *Canon-street* is substituted, the candle-wrights being at that time burnt out, and dispersed through the city.

10. *Castle-Baynard-ward* is bounded by Queenhithe and Bread-street wards on the east; on the south, by the Thames; and on the west and north, by the ward of Farringdon Within. It is divided into ten precincts, under the government of an alderman, ten common-councilmen, nine constables, fourteen inquest-men, seven scavengers, and a beadle.

11. *Cheap-ward* is bounded on the east by Broad-street and Wallbrook wards; on the north, by Coleman-street, Bassishaw, and Cripplegate; and on the south, by Cord-

wainers-ward. It is divided into nine precincts; and is governed by an alderman, twelve common-councilmen, eleven constables, thirteen inquest-men, nine scavengers and a beadle. It has its name from the Saxon word *chepe*, which signifies a market, kept in this division of the city, now called *Cheapside*; but then known by the name of *Westcheap*, to distinguish it from the market then also kept in Eastcheap, between Canon or Candlewick street and Tower-street.

12. *Coleman-street-ward* is bounded on the east by Bishopsgate, Broad-street, and Cheap, wards; on the north, by Cripplegate-ward, Middle Moorfields, and Bishopsgate; on the south, by Cheap-ward; and on the west, by Bassishaw-ward. It is divided into six precincts; and is governed by an alderman, six common-councilmen, one of whom is the alderman's deputy, six constables, thirteen inquest-men, six scavengers, and a beadle.

13. *Cordwainers-ward* is bounded on the east by Wallbrook, on the south by Vintry-ward, on the west by Bread-street, and on the north by Cheap-ward. It is divided into eight precincts; and is governed by an alderman, eight common-councilmen, eight constables, fourteen inquest-men, eight scavengers, and a beadle. Its proper name is *Cordwainers-street-ward*; which it has from Cordwainers-street, now Bow-lane, formerly occupied chiefly by shoemakers and others that dealt or worked in leather.

14. *Cornhill-ward* is but of small extent. It is bounded on the east by Bishopsgate, on the north by Broad-street, on the west by Cheap-ward, and on the south by Langbourn-ward. It is divided into four precincts, which are governed by one alderman, six common council men, four constables, sixteen inquest-men, four scavengers, and a beadle. It takes its name from the principal street in it, known from the earliest ages by the name of *Cornhill*, because the corn-market was kept there.

15. *Cripplegate-ward* is bounded on the east by Moorfields, Coleman-street-ward, Bassishaw-ward, and Cheap-ward; on the north, by the parish of St. Luke's, Old-street; on the west, by Aldersgate-ward; and on the south, by Cheap-ward. It is divided into thirteen precincts, nine within and four without the wall; and is governed by an alderman, twelve common-councilmen, of whom two are the alderman's deputies, thirteen constables, thirty-four inquest-men, sixteen scavengers, and three beadles. It takes its name from Cripplegate, which stood on the north-west part of the city-wall. See p. 105.

16. *Dowgate-ward* is bounded on the east by Candlewick and Bridge wards, on the north by Wallbrook-ward, on the west by Vintry-ward, and on the south by the Thames. It is divided into eight precincts, under the government of an alderman, eight common-councilmen, of whom one is the alderman's deputy, eight constables, fifteen inquest-men, five scavengers, and a beadle. It has its name from the ancient watergate, called *Dowgate*, which was made in the original wall that ran along the north side of the Thames, for the security of the city against all attempts to invade it by water.

17. *Farringdon-ward Within* is bounded on the east by Cheap-ward and Baynard-castle-ward; on the north, by Aldersgate and Cripplegate wards, and the liberty of St. Martin's le Grand; on the west by Farringdon Without; and on the south, by Baynard-castle-ward, and the river Thames. It is divided into eighteen precincts; and governed by one alderman, seventeen common-councilmen, nineteen constables, seventeen inquest-men, nineteen scavengers, and two beadles. It takes its name from William Farringdon, citizen and goldsmith of London, who, in 1279, purchased all the aldermanry with the appurtenances, within the city of London and suburbs of the same, between Ludgate and Newgate, and also without these gates.

18. *Farringdon-ward Without* is bounded on the east by Farringdon Within, the precinct of the late priory of St. Bartholomew near Smithfield, and the ward of Aldersgate; on the north, by the Charter-house, the parish of St. John's Clerkenwell, and part of St. Andrew's parish without the freedom; on the west, by High Holborn and St. Clement's

parish in the Strand; and on the south by the river Thames. It is governed by one alderman, sixteen common-councilmen, of whom two are the alderman's deputies, twenty-three constables, forty-eight inquest-men, twenty-four scavengers, and four beadles. It takes its name from the same goldsmith who gave name to Farringdon Within.

19. *Langbourn-ward* is bounded on the east by Aldgate-ward; on the north, by part of the same, and Lime-street-ward; on the south, by Tower-street, Billingsgate, Bridge, and Candlewick, wards; and on the west by Wallbrook. It is divided into twelve precincts. It had its name from a rivulet or long bourn of fresh water, which anciently flowed from a spring near Magpye-alley, adjoining to St. Catharine Coleman's church.

20. *Lime-street-ward* is bounded on the east and north by Aldgate-ward, on the west by Bishopsgate, and on the south by Langbourn, wards. It is divided into four precincts; and governed by an alderman, four common-councilmen, four constables, thirteen inquest-men, four scavengers, and a beadle. It is very small; and has its name from some lime-kilns that were formerly built in or near Lime-street.

21. *Portoken-ward* is bounded on the east by the parishes of Spitalfields, Stepney, and St. George's in the East; on the north, by Bishopsgate-ward, and on the west by Aldgate-ward. It is divided into five precincts; and is governed by an alderman, five common-councilmen, five constables, nineteen inquest-men, five scavengers, and a beadle. See p. 438.

22. *Queenhithe-ward* is bound on the east by Dowgate, on the north by Bread-street and Cordwainers wards, on the south by the Thames, and on the west by Castle-Baynard-ward. It is divided into nine precincts; and is governed by one alderman, six common-councilmen, and nine constables. It has its name from the *hithe*, or harbour for large boats, barges, and lighters; for which, and even for ships, it was the anchoring-place, and the quay for loading and unloading vessels almost of any burden used in ancient times. It has the name of *queen*, because the queens of England usually possessed the tolls and customs of vessels that unloaded goods at this hithe, which were very considerable.

23. *Tower-ward, or Tower-street-ward*, is bounded on the south by the river Thames, on the east by Tower-hill and Aldgate-ward, on the north by Langbourn-ward, and on the west by Billingsgate-ward. It is governed by one alderman, twelve common-councilmen, twelve constables, thirteen inquest-men, twelve scavengers, and one beadle. It takes its name from *Tower-street*, so called because it leads out of the city in a direct line to the principal entrance of the Tower of London.

24. *Vintry-ward* is bounded on the east by Dowgate, on the south by the Thames, on the west by Queenhithe-ward, and on the north by Cordwainers-ward. It is a small ward, containing only 418 houses; but is divided into nine precincts, and governed by an alderman, nine common-councilmen, nine constables, thirteen inquest-men, three scavengers, and a beadle. It takes its name from the vintners or wine-merchants of Bourdeaux, who formerly dwelt in this part of the city, being obliged to land their wines on this spot, and to sell them in forty days, till the 23th of Edward I.

25. *Wallbrook-ward* is bounded on the east by Langbourn, on the south by Dowgate, wards; on the west by Cordwainers-ward, and on the north by Cheap-ward. It is small, containing only 306 houses; but is divided into seven precincts, and governed by an alderman, eight common-councilmen, seven constables, thirteen inquest-men, six scavengers, and a beadle. It has its name from the rivulet *Wallbrook*, that ran down the street of this name into the river Thames near Dowgate; but in process of time it was so lost, by covering it with bridges, and buildings upon those bridges, that its channel became a common sewer. See p. 426.

26. The ward of *Bridge Without* includes the borough of Southwark, and the parishes of Rotherhithe, Newington,

and Lambeth. It has its name from London-bridge, with the addition of the word *without*, because the bridge must be passed in order to come at it.

The office of *sheriff*, or governor of the shire, or county, is an office of great antiquity, trust, and authority. The lord-mayor and citizens of London have the sheriffalty of London and Middlesex, in fee, by charter; and the two sheriffs are by them annually elected. If one of the sheriffs dies, the other cannot act till a new one is chosen; for there must be two sheriffs for London, which is a city and a county, though they make but one sheriff for the county of Middlesex. Any citizen may be chosen alderman before he has served the office of sheriff; but he must discharge that office before he can be lord-mayor. The sheriffs are chosen on Midsummer-day, and enter into the office on Michaelmas-day. If a person chosen sheriff refuses to serve, he pays a fine of four hundred pounds to the city, and 13l. 16s. 8d. to the ministers of the city-prisons, unless he swears himself not worth fifteen thousand pounds; and, if he serves, he is obliged to give bond to the corporation. Their business, in general, is to collect the public revenues within their jurisdictions; to gather into the exchequer all fines belonging to the crown; to serve the king's writs of process; to attend the judges, and execute their orders; to impanel juries, and to take care that all condemned criminals are duly punished and executed. In particular, they are to discharge the orders of the court of common-council, when they have resolved to petition parliament, or to address his majesty. They have also a power to make arrests, and serve executions, on the river Thames.

The election of city-officers, in *common-halls*, as has been already mentioned, was regulated by an act of parliament passed in the year 1725; in conformity with which, it is now the custom for the lord-mayor, attended by the aldermen and sheriffs, to appear on the hustings; when, proclamation being made by the common crier, for the liverymen to draw near and give attention, according to their summons, and for all others to depart the hall on pain of imprisonment, the recorder, or common-ferjeant, declares to the livery the purport of their meeting; after which the lord-mayor and aldermen retire, leaving the intermediate proceedings of election to the sheriffs only. The common-ferjeant then proposing the candidates, the sheriffs form a judgment in whose favour the majority of hands appear. If a poll is demanded, it is taken by clerks under their appointment: if a scrutiny is demanded, it is referred to their judgment; and, after all, it is they who make a declaration of the majority to the lord mayor and aldermen.

In the election of a lord-mayor, all the aldermen under the chair, who have served the office of sheriff, are proposed in rotation, two of which are to be returned by the common-hall to the court of aldermen; and the majority of that court determine on which of the two the election is fallen. It has been the usual custom of the liverymen to nominate the two senior aldermen under the chair; and the court of aldermen, upon the like example, have usually elected the senior of those two into the office. Each of them, however, has a right to deviate from this usual method; and, in cases where a particular dislike is taken to any of the aldermen, especially when the city is divided into parties on political disputes, the order of rotation is seldom regarded. In like manner, upon the election of sheriffs, all the aldermen who have not served that office are first put up in their order of seniority; notwithstanding which, the livery have the privilege of choosing whom they think proper, either out of that court, or of those persons, who, having been drunk to by a lord-mayor as proper to be chosen to that office, are also put in nomination on Midsummer-day. After the sheriffs are elected, on Midsummer-day, the livery choose the chamberlain of the city, and other officers, such as the bridge-masters, the auditors of the city and bridge-house accounts, and the ale-conners.

The chamberlain is an officer of great trust, and, though

elective annually, is never displaced, unless for some great crime. He is the city-treasurer; he receives all the money belonging to the corporation, for which he annually accounts to the proper auditors; and in his custody are all the bonds and securities taken by the city, and the counterparts of the city-leases; for which reason he gives great security for the fidelity of his conduct.

The recorder, who is a counsellor experienced in the law, is chosen by the lord-mayor and aldermen for their instruction and assistance in matters of justice and proceedings according to law; and continues in his office during life. He takes place in all courts, and in that of the common-council, before any one that hath not been mayor. He is one of the justices of oyer and terminer, and a justice of peace for putting the laws in execution to preserve the peace and government of the city. He speaks in the name of the city upon all extraordinary occasions; reads and presents their addresses to the king; and, when seated upon the bench, delivers the sentence of the court. He is the first officer in order of precedence who is paid a salary, which originally (anno 1304) was no more than ten pounds per annum, with some perquisites; but it has been from time to time augmented to one thousand pounds per annum.

Besides these officers of trust belonging to the corporation, there are the following, viz. the common-ferjeant, the town-clerk, and the city-remembrancer; all of whom are appointed by the court of common-council.—The common-ferjeant is to attend the lord-mayor and court of aldermen on court-days, and to be in council with them, on all occasions, within or without the precincts or liberties of the city. He is to take care of orphans' estates, either by taking account of them, or to sign their indentures, before their passing the lord-mayor and court of aldermen. He is likewise to let, sell, and manage, the orphans' estates, according to his judgment, to their best advantage.—The town-clerk, or common-clerk, is an officer who keeps the original charters of the city, the books, rolls, and other records, wherein are registered the acts and proceedings of the city; so that he may not be improperly styled the city-register. He attends the lord-mayor and aldermen at their courts, in order to take down any extraordinary proceeding that may occur. The town-clerk and common-ferjeant take place according to seniority.—The city-remembrancer is to attend the lord-mayor on certain days, and to put his lordship in mind of the select days when he is to go abroad with the aldermen. He invites the great officers of state on lord-mayor's day; and is also to attend daily at the parliament-house during the sessions, and to report to the lord-mayor such proceedings of the house as may affect the city of London.

The four following officers, viz. the sword-bearer, common-hunt, common-crier, and water-bailiff, belong to the lord-mayor's household, and are esquires by virtue of their places. The two first purchase their offices, and the other two are in the appointment of the common-council.—The sword-bearer is to attend the lord-mayor, and carry the sword before him on all public occasions. The carrying of the sword before the lord-mayor being an honour he is entitled to as the representative of his majesty, Gerard Leigh, in his *Accidence of Armoury*, p. 94, says "That the bearer must carry it upright, the hilt being holden under his bulk, and the blade directly up the midst of his breast, and so forth between the sword-bearer's brows. This in distinction from bearing the sword in any town for a duke, or an earl, or a baron: if for a duke, the blade thereof must lean from the head, between the neck and the right shoulder, nearer to the neck than the shoulder: for an earl, the bearer must carry the same between the point of the shoulder and the elbow; and there is another different bearing of the sword for a baron."—The common hunt, whose business was formerly to take care of the hounds belonging to the city, and to attend the lord-mayor and citizens in hunting on those grounds which they were authorized by different charters to do, is now chiefly occupied in attendance upon the lady-mayorefs, and acts as  
makef

master of the ceremonies at public balls, &c.—The common crier is to summon all executors and administrators of freemen to appear, and to bring in inventories of the personal estates of freemen, within two months after their decease; and he is to have notice of their appraisements. He is likewise to attend the lord-mayor on set days, and at the courts held by the mayor, aldermen, and common-council; and he carries the mace on public occasions.—The water-bailiff is to look after the preservation of the river Thames against all encroachments, and to prevent the fishermen from destroying the young fry by unlawful nets. For that end there are juries for each county that lieth any part of it lying on the sides or shores of the said river: which juries, summoned by the water-bailiff at certain times, make enquiry of all offences relating to the river and the fish, and make their presentments accordingly. He is also bound to attend the lord-mayor on set days in the week.

There have been various opinions respecting the share which the commonalty of London anciently possessed in the government of it. That the government by aldermen is of Saxon origin, is almost demonstrable by the charter of Henry I. which was granted to the city only thirty-five years after the conquest, whereby all strangers are commanded to "give custom to none but to him to whom the shoke appertains," i. e. the alderman, "or to his officer." But it is equally evident from the same charter, that the government was not vested in the aldermen exclusive of the commons, for the citizens are empowered to choose their sheriff and justice; wherefore it cannot be doubted that they constituted a part of the city-legislature. In the absence of Richard I. in Palestine, John earl of Moreton, his brother, attended by the archbishop of Rouen, and most of the nobility and bishops, repaired to St. Paul's church-yard, where, being met by the *folkmote* of London, they unanimously agreed to degrade the bishop of Ely, chancellor, and one of the regents, for his tyrannical government. Many other instances will be found in the former part of this article, to prove that the great body of the citizens were always considered an integral part of the government of the city; but, when by the great increase of the citizens, these folknotes were found to be attended with inconvenience from the numbers who frequented them, they were discontinued, and the citizens chose from among themselves a certain number out of each ward as their representatives; who, being added to the lord-mayor and aldermen, constituted the court, denominated the *common-council*.

At first the number returned for each ward was only two; but, these being thought by the citizens insufficient to represent their numerous body, it was agreed in the year 1347, that each ward should choose a number of common-council-men proportionate to its extent, but none to exceed twelve, or be less than six; which has been since increased to the present number of two hundred and thirty-six. The common-council are chosen after the same manner as the aldermen; only with this difference, that, as the lord-mayor presides in the wardmote, and is judge of the poll at the election of an alderman, so the alderman of each ward is judge of the poll at the election of a common-council-man. No act can be performed in the name of the city of London, without their concurrence; but they cannot assemble without a summons from the lord-mayor, whose duty it is, nevertheless, to call a common-council, whenever it shall be demanded, on extraordinary occasions.

There are various courts held in the city of London, for the due administration of justice among the citizens; the most ancient of which is the Court of Hustings, it being of Saxon origin: *hus*, in the Saxon language, signifying a house, and *ding*, a plea, or cause; whence the term hustings implies a "house of pleas." This is a court of record, and the supreme judicature of the city of London. It is held weekly, on Tuesdays, and was originally established for the preservation of the laws, franchises, and customs, of the city. The judges are, the

lord-mayor and sheriffs, who are assisted by the recorder upon all causes of consequence. See COURTS, vol. v. p. 30.

The Lord-Mayor's Court is a court of record, held before the lord-mayor, aldermen, and recorder, every Tuesday, in Guildhall, wherein actions of debt, trespass, attachments, covenants, &c. arising within the city and liberties, of any value, may be tried; and actions from the sheriffs' court may be removed hither, before the jury be sworn. This is also a court of chancery, or equity, respecting affairs transacted in the city and liberties; and gives relief when judgment is obtained in the sheriffs' court for more than a just debt. This court has an office peculiar to itself, consisting of four attorneys, by whom all actions cognizable therein are entered, for the execution whereof there are six serjeants at mace, who daily attend in the said office. It is the most extensive court in the kingdom; for, whatever is cognizable in any of the several courts of England, can be brought before this, if the cause arises within the city of London. The juries for trying causes in this and the sheriffs' courts, are chosen annually in their respective wards, and serve monthly in the following rotation:

January,	Aldgate, Portfoken, and Cornhill.
February,	Cheap-ward.
March,	Bassishaw and Cripplegate.
April,	Vintry and Bread-street.
May,	Tower and Billingsgate.
June,	Farringdon Without.
July,	Bridge-ward.
August,	Aldersgate, Coleman-street, and Broad-street.
September,	Farringdon Within, and Cattle-Baynard.
October,	Queenhithe, Dowgate, and Wallbrook.
November,	Langbourn and Lime-street.
December,	Candlewick, Cordwainer, and Bishopsgate.

The Court of Lord-Mayor and Aldermen is a court of record, wherein is lodged a great part of the executive power of the city of London. All leases, and other instruments that pass the city-seal, are executed, the assize of bread is ascertained, contests relating to water-courses, lights, and party-walls, are adjusted, and the city-officers suspended and punished according to the notoriety of their several offences, in this court. It has also the power of appointing many of the city-officers, such as the recorder, the justice of the bridge-yard, the steward of Southwark, the clerks to the lord-mayor and the sitting aldermen, the keepers of the different prisons, and some others of inferior note: and no person can be admitted to the freedom of the city by purchase, or without serving a regular apprenticeship, unless by an order obtained from this court.

The Court of Common Council consists of the lord-mayor, aldermen, and representatives of the several wards, who assemble in Guildhall as often as the lord-mayor, by his summons, thinks proper to convene them; and their general business is to make laws for the due government of the city. Out of this body are chosen the various committees for managing all the concerns of the corporation; but it is a standing order of the court, that no commoner be eligible to serve on more than four committees. This court has the appointment of the common-serjeant, the town-clerk, the judges of the sheriffs' courts, the comptroller, the remembrancer, the solicitor, the common-crier, the bailiff of Southwark, the comptroller of the bridge-house, the water-bailiff, and most of the subordinate officers.

The Sheriffs' Courts are courts of record, held at Guildhall, every Wednesday and Friday for actions entered at Giltspur-street Compter; and on Thursdays and Saturdays for those entered at the Poultry Compter; of which the sheriffs being judges, each has his assistant or deputy, who are called the *judges* of those courts; before whom are tried actions of debt, trespass, covenant, &c. To each of these courts likewise belong a secondary, a clerk of the papers, a prothonotary, and four clerks sitters. There are also sixteen serjeants at mace, for each of the prisons belonging to these courts.

The Courts of Wardmote are the reliques of the Saxon folkmote, from which they only differ in being composed of the inhabitants of a single ward. They are summoned by the lord-mayor, and are held before the alderman of the ward, or his deputy, to correct disorders, remove annoyances, and to promote the common interest of the ward; but, when the business of the court is the election of an alderman, the lord-mayor presides. In this city, parishes being as towns, and wards as hundreds, this court resembles that of the leet in the county; for, as the latter derives its authority from the county-court, so does the former from that of the lord-mayor; as is manifest by the annual precept issued by the lord-mayor to the several aldermen, for holding their respective wardmotes on St. Thomas's day, for the election of proper officers in each ward.

The Court of Conservancy is held four times a-year, before the lord-mayor, at such places and times as he shall appoint, within the respective counties of Middlesex, Essex, Kent, and Surry; in which several counties he has a power of summoning juries, who, for the better preservation of the fishery of the river Thames, and regulation of the fishermen that fish therein, are, upon oath, to make inquisition of all offences committed in and upon the said river, from Staines-bridge, in the west, to Yen-fleet, in the east.

Court of Requests, or Court of Conscience. This court determines all disputes between citizens, where the debt is under five pounds. It is of great use to persons who have small debts owing to them, which they could not otherwise recover without entering into expensive proceedings; and it is also of great benefit to such persons as are not able to pay their debts at once, as the court can order the payment to be made in such portions as are suitable to the debtor's circumstances. The lord-mayor and court of aldermen appoint, monthly, such aldermen and commons to sit as commissioners in this court, as they think fit; any three of whom compose a court, kept in Guildhall-chapel, every Wednesday and Saturday, from eleven till two o'clock, to hear and determine such cases as are brought before them. See p. 73, 85, of this article; and COURTS, vol. v. p. 299.

The Chamberlain's Court is held daily, before the chamberlain, to determine differences between masters and apprentices, to enroll and turn over the latter, and to admit all who are duly qualified to the freedom of the city.

The Court of Orphans is held, occasionally, before the lord-mayor and aldermen, who are guardians to the children of all freemen, under the age of twenty-one years, at the decease of their fathers. The common-serjeant of the city is authorized by the court of aldermen to take accounts and inventories of freemen's estates; and the youngest attorney of the mayor's court, being clerk to that of the orphans, is appointed to take securities for their several portions, in the name of the chamberlain of London, who, for this purpose, is a sole corporation of himself, for the service of the said orphans. A recognizance, or bond, therefore, made to him upon the account of an orphan, shall, by the custom of London, descend to his successor.

Justice-hall Court, in the Old Bailey, is held eight times in a year, by the king's commission of oyer and terminer, for trying offenders for crimes committed within the city of London and county of Middlesex. The judges of this court are, the lord-mayor, the aldermen past the chair, and the recorder; who, on all such occasions, are attended by both the sheriffs, and, generally, by one or more of the national judges. The offenders, for crimes committed in the city, are tried by a jury of citizens; and those committed in the county by a Middlesex jury.

The Coroner's Court is held before the lord-mayor, who is perpetual coroner of the city, or his deputy, to enquire into the cause of the death of any person supposed to have come to an untimely end; and likewise into the escape of the murderer. It is also the duty of the coroner

to make inquisition respecting treasure-trove, deadlands, and wrecks at sea. See the article CORONER, vol. v. p. 220.

To these courts may be added that called the Pie-powder Court, a court of record incident to every fair, which is held in London before the lord-mayor and the steward, during Bartholomew-fair, to administer justice between buyers and sellers, and for the redress of such disorders as may arise there, in breach of the following proclamation, which is annually made before the lord-mayor, on the eve of St. Bartholomew, for the better regulation of the said fair; which, being little known, and seldom distinctly heard, we shall here set down at length. "The Right Honourable Sir William Domville, Bart. lord-mayor of the city of London, and his right worshipful brethren, the aldermen of the said city, straightly charge and command, on the behalf of our sovereign lord the king, that all manner of persons, of whatsoever estate, degree, or condition, they be, having recourse to this fair, keep the peace of our sovereign lord the king. That no person or persons make any congregation, conventicles, or affrays, by the which the same peace may be broken or disturbed, upon pain of imprisonment, and fine, to be made after the direction of the lord-mayor and aldermen. Also, that all manner of sellers of wine, ale, or beer, sell by measures ensealed, as by gallon, pottle, quart, and pint, upon pain that will fall thereof. And that no person shall sell any bread, except it keep the assise; and that it be good and wholesome for man's body, upon pain that will follow thereof. And that no manner of cook, pie-baker, nor huckster, sell or put to sale any manner of victual, except it be good and wholesome for man's body, upon pain that will fall thereof. And that no manner of person buy, nor sell but with true weights and measures, sealed according to the statute in that behalf made, upon pain that will fall thereof. And that no person or persons take upon him or them, within this fair, to make any manner of arrest, attachment, summons, or execution, except it be done by the officers of this city thereunto assigned, upon pain that will befall thereof. And that no person or persons whatsoever, within the limits or bounds of this fair, presume to break the Lord's day, in selling, showing, or offering to sale, or in buying, or offering to buy, any commodities whatsoever; or in sitting, tipping, or drinking, in any tavern, inn, ale-house, tipping-house, or cook's house, or in doing any other thing that may tend to the breach thereof, upon the pains and penalties contained in several acts of parliament, which will be severely inflicted upon the breakers thereof. And, finally, that what persons soever find themselves grieved, injured, or wronged, by any manner of person, in this fair, that they come with their complaints before the stewards, in this fair, assigned to hear and determine pleas; and they will minister to all parties justice, according to the laws of the land, and customs of this city."

The suburbs of the city of London in Middlesex, are under the jurisdiction of the justices of the peace for the county, as part of the county. The county-hall for Middlesex is on Clerkenwell-green; and, in sessions held there quarterly, great part of the civil government of the suburbs in Middlesex is exercised. As it is of the highest importance to strangers to be able to obtain redress in cases of injury, a list is subjoined of the police-offices in London, Westminster, and Southwark, in which magistrates sit every day:

The Mansion-house.

Guildhall.

Bow-street, Covent Garden.

Queen-square, Westminster.

Great Marlborough-street.

Hatton Garden, Holborn.

Worship-street, Shoreditch.

Lambeth-street, Whitechapel.

High-street, Shadwell.

Union-street, Southwark.

Wapping New-stairs, for offences connected with the shipping and port of London.

The magistrates of these offices are appointed to hear and determine in a summary way; particularly in cases relative to the customs, excise, and stamps; the game-laws; hawkers and pedlars; pawnbrokers; friendly societies; highwaymen; hackney-coaches, carts, and other carriages; quakers and others refusing to pay tithes; appeals of defaulters in parochial rates; misdemeanors committed by persons unlawfully pawning property not their own; bakers for short weight, &c. journeymen leaving their services in different trades; labourers not complying with their agreements, and disorderly apprentices; persons keeping disorderly houses; nuisances against different acts of parliament; acts of vagrancy by fraudulent lottery-insurers; gaming-houses; fortune-tellers; or persons of ill-fame found in avenues to public places, with an intent to rob; watching over the conduct of publicans; swearing in; charging and intrusting parochial constables and headboroughs from year to year, with regard to their duty; issuing warrants for privy searches; and in considering the cases of persons charged with being disorderly persons, or rogues and vagabonds, liable to be punished under the act of 17 Geo. II. c. 5, and subsequent acts of parliament; in making orders to parish-officers, beadles, and constables, in a variety of cases; in parish removals; in billeting soldiers; in considering the cases of poor persons applying for assistance, or admission to work-houses; in granting certificates and orders to the wives of persons serving in the militia, and also in attesting recruits for the army, and for examining persons accused of treason, murder, coinage, and uttering base money; arson; manslaughter; forgery; burglary; larceny; sedition; felonies of various descriptions; conspiracies; frauds; riots; assaults, and misdemeanors of different kinds.—To each of these police-offices three justices are attached; the chief-magistrate at Bow-street, has a salary of 1000l. per ann. and the other two 500l. each. A number of police-officers, constables, and patrols, parade the streets, avenues, and outskirts, day and night. The Thames police-office, in particular, has belonging to it 21 river-furveyors, 8 land-constables, and 60 river-constables, or watermen. As to the establishment of this office, and for some general remarks on police, see p. 122 of this article.

The following is a Statement of the Force of the Police existing in the Metropolis, copied from Sir Richard Phillips's Picture of London :

In the City of London—the marshalsmen, beadles, and constables, amount to	319
Watchmen and patrols	803
In the City and Liberty of Westminster—Constables	71

Borough of Southwark—Constables	38
Watchmen and patrols	79
Seven Police-offices, including Bow-street—Officers and patrols	150
Total number of persons	3077

Our system of police, though thief-takers are continually upon the alert in our streets at every hour in the day, may be reckoned mild when compared with that of other countries. The police of Paris was carried to the greatest perfection of espionage under M. de Sartine. The minister

of police under the emperor Napoleon did not derogate from his predecessor in office. The system of police, particularly among servants, who were made spies over the families in which they are employed, was carried to a state of mechanical perfection; and the budgets of the fruits of espionage were as regularly conveyed to the office of the minister of police as a ditch-draining mill fills and discharges its buckets into the reservoir. Of this fact many woeful examples could be produced by the inhabitants of the French metropolis. A gentleman, who was a friend of the minister of police, on one occasion, in a select party, had been guilty of some unguarded expressions; he was sent for, and warned by the minister, who assured him that nothing even of the most private nature could escape his vigilance; for, says he, "by means of my agents, you may literally apply to me the words of Scripture, (Math. xviii. 20.) *Where two or three are gathered together, there am I in the midst of them!*"

**MILITARY GOVERNMENT.**—Though the origin of the military government of London cannot be ascertained, it nevertheless must be of great antiquity; for, in the reign of Alfred, the London forces being joined to the regular army, they, in 885, besieged and took a castle, or fort, erected by the Danes on the coast of Essex; and, in the following spring, in conjunction with the neighbouring auxiliaries, dislodged the Danes from a strong position they occupied near the site of the present town of Hertford. Hence it is highly probable, that a military government was established by that prince in London, immediately after he had recovered it from the Danes.

How soon the city became possessed of a military government, distinct from that of the state, does not appear; but Edward II. having received military assistance from the city of London, in the year 1321, in besieging the castle of Leeds in Kent, granted a charter to the citizens, whereby it is declared, that the same shall not be prejudicial to the mayor and good men of the city of London, their heirs, &c. nor be drawn into example in time to come. In a muster of the citizens in 1585, the men were provided by the different companies, in proportion to their abilities; an account of which was delivered to sir Thomas Pullyson, the lord-mayor, from which the following list of the numbers sent by the twelve principal companies is extracted; viz.

Mercers	-	294	Haberdashers	-	395
Drapers	-	347	Salters	-	160
Grocers	-	395	Ironmongers	-	147
Fishmongers	-	200	Vintners	-	107
Goldsmiths	-	284	Merchant Taylors	-	395
Skinners	-	174	Cloth-workers	-	214

In the middle of April, 1660, about six weeks before the restoration, there was a muster in Hyde Park of the troops belonging to the city, when there appeared six regiments of trained bands, six regiments of auxiliaries, and one regiment of horse. Of the twelve regiments of foot, eight had seven companies, and the other four had six companies, in each; in all, eighty companies of two hundred and fifty men, making eighteen thousand effective infantry. The regiment of horse consisted of six troops of one hundred men each. The assembling of this force before his majesty's return, was judged to be highly instrumental in facilitating that happy work. This force being judged very useful, not only for the defence of the city, but for the safety of the king's person, his majesty, soon after his restoration, appointed a commission of lieutenancy for the city of London, which he invested with the same powers as those possessed by the lord-lieutenants of counties, by whom the trained bands were new-modelled. The number of the regiments of infantry remained the same, but the cavalry was increased to two regiments of five troops, with eighty men in each. The six regiments of auxiliary infantry and the cavalry were not however kept up longer than necessity required; and the permanent military force of the city of London was settled

settled in the six regiments of trained bands, the effective strength of which was as follows :

Number of men in the Blue Regiment	1411
in the Green	1566
in the Yellow	1526
in the Orange	1740
in the Red	2089
in the White	1630
	9962
Officers and drums	336
Total	10,298

Subsequent to the period when this establishment was made, the continued tranquillity of the city rendered any call upon their own forces unnecessary; in consequence of which, the trained bands went to decay, though they were nominally kept up, and the commissions filled with the chief citizens; each regiment being commanded by an alderman, who was also usually a knight. But when, on the breaking out of the war with France, it was found necessary to put forth all the energies of the country, the insufficiency of the *trained bands* was so apparent, that a new system was resorted to; and, in July 1794, an act of parliament was passed, for raising two regiments of militia for the defence of the city, to be trained and exercised under the superintendance of the commissioners of lieutenancy; for which purpose, two courts of lieutenancy are held annually, viz. on the third Wednesdays in January and June. By the above act, it was proposed to raise the men by ballot, in the following manner: every person or corporation within the city, possessed of a tenement of the annual value of fifteen pounds, and less than one hundred pounds, if ballotted, was to serve, or find one substitute: from one to two hundred pounds, to find two substitutes; and above two hundred pounds, three substitutes. This mode of ballot, however, being found on trial to be attended with many inconveniencies, a second act was passed in May 1796, by which it was enacted, that a certain number of men should be raised, to be called the East and West Regiments of London Militia; and the expense be defrayed by an equal assessment upon the different parishes. The commissioners of lieutenancy for the city of London, are the lord-mayor, aldermen and their deputies, the recorder, chamberlain, and common-ferjeant, for the time being, with one hundred and fifty-five of the principal citizens, appointed by his majesty. Their usual place of meeting is at Barbers' Hall.

Besides these two regiments of militia, the city is defended by the Artillery Company, which is a voluntary enrolment of the younger citizens, and others, of long standing. See ARCHERY, and ARTILLERY COMPANY, vol. ii.—In addition to this force, which may be considered as peculiar to the city of London, there is also a regiment of volunteer infantry belonging to the Bank, and three regiments of the same description belonging to the East-India Company; all of which are composed of the servants of these two companies, and are officered by the directors and the principal persons in their employ. These regiments were raised for the purpose of defending the immense property belonging to these bodies, in case of insurrection or invasion: but whether they will be kept up, now that peace is restored, we are not informed.

ECCLESIASTICAL GOVERNMENT.—We have already shown at p. 55, that the Christian religion was introduced into Britain, and that London was a bishop's see, before the Romans abandoned it, although the Pagan worship of the Saxons appears to have supplanted Christianity in the interval between that event and the conversion of the latter people, which is attributed to Augustine the monk, a missionary from pope Gregory, who, in 604, constituted Mellitus a bishop, and sent him to preach among the East Saxons, of whose kingdom London was, at that time, the capital; and it has ever since remained the chief city of the see. This diocese, which has never experienced any alter-

ation, being formed of the ancient kingdom of the East Saxons, is in the province of Canterbury, and is composed of the counties of Middlesex, Essex, and part of Hertfordshire. It is governed by a bishop, who is assisted by a dean, precentor, chancellor, treasurer, five archdeacons, thirty canons or prebendaries, twelve petty or minor canons, six vicars choral, a sub-dean, and other inferior officers. The diocese comprehends not only Middlesex, Essex, and part of Hertfordshire, but the British plantations in America. The bishop of London, in common with all the bishops of the realm, has the power of holding a court in his own diocese, for the trial and punishment of spiritual offences; in which he may either sit as judge himself, or depute his power to a chancellor, suffragan, or other officer. The bishops' courts, therefore, though held by the king's authority, are not properly to be accounted the king's courts, since none of the judges possess this privilege, neither are writs from them issued in the name of the king, but of the bishop. In precedence, the bishop of London ranks next after the two archbishops, and is styled, in some of the old statutes, *primus baro regni*, "first baron of the kingdom;" the ecclesiastical barons taking precedence of all the temporal barons. It is also the privilege of this diocese, not to be subject to the visitation of the archbishop of Canterbury; there are, however, thirteen parishes in the city under his immediate government, and styled his *peculiars*, which are exempt from the bishop's jurisdiction; viz. Allhallows, Breadstreet; Allhallows, Lombard-street; St. Dionis Backchurch, Fenchurch-street; St. Dunstan in the East; St. John Baptist; St. Leonard Eastcheap; St. Mary Aldermary; St. Mary Bothaw; St. Mary le Bow; St. Michael, Crooked lane; St. Michael Royal; St. Pancras, Soper-lane; and St. Vedast, Foster-lane.

The dean is to assist the bishop in ordinations, deprivations, and other affairs of the church; and, on the king's writ of *congé d'élire*, the dean and prebendaries elect the bishop; but this election is now a mere matter of form, since the person recommended by the king is always chosen. The dean is also elected by the chapter, on letters missive from the king, whose assent must be obtained before the bishop can confirm and give power to install him. The precentor, or chanter, is to superintend the church-music. Under him is a sub-chanter, who officiates in his absence. The second stall, on the north side of the choir of St. Paul's cathedral, belongs to this officer, whose corps is in the church of Stortford, of which he is proprietor, and perpetual rector, and patron of the vicarage.—The chancellor was anciently called *magister scholarum*, from having had the charge of literature within the city of London, whereby he was empowered to license all the school-masters in the city, except those of St. Mary-le-Bow and St. Martin-le-Grand; but at present, he is only secretary to the chapter. He has the third stall on the north side of the choir, and his corps is in the church of Boreham and Yelling.—The treasurer has the custody of the valuables belonging to the cathedral church of St. Paul; for the faithful keeping of which he is sworn before the dean and chapter. He has the third stall on the south side of the choir, and his corps is in the church of Pelham and Aldebri. Under him is the sacrist, who is also sworn to the faithful discharge of his office, three vergers, and the inferior servants of the church.

The five archdeaconries are those of London, Essex, Middlesex, Colchester, and St. Alban's. Their office is to visit the several cures within their respective archdeaconries, and to enquire into the reparations and moveables belonging to them; to reform slight abuses in ecclesiastical matters, and to bring affairs of moment before the bishop. It is also the office of the archdeacon to induct clerks into their benefices upon the bishop's mandate.—The thirty canons, or prebendaries, with the bishop, compose the *chapter*, by which the affairs of the church are managed. All the prebends are in the collation of the bishop, and out of them there are three residentiaries, besides the dean;

so called from their (supposed) continual residence in the church. The disposition of the prebendal stalls has been spoken of at p. 410.

The twelve petty canons are usually chosen out of the ministers and officers belonging to the church. They were constituted a body politic and corporate, by letters patent of Richard II. dated in 1399, under the denomination of "The College of the Twelve Petty Canons of Paul's." They are governed by a warden chosen from among themselves, and have the privilege of a common seal. One of the petty canons is appointed sub-dean, by the dean with the consent of the chapter and minor canons. His office is to supply the dean's place in the choir. Two others are denominated cardinals of the choir, to which office they are elected by the dean and chapter, and are to superintend the duty of the choir.

Of the management of the choir, and of the claims of the singing-boys to have a house provided for their accommodation, where they might be boarded, and properly educated, in grammar as well as in music, we have spoken at p. 414, 15. Since those leaves were printed, namely, on the 5th of August last, the Master of the Rolls has delivered his opinion upon the allegations of the Petition which had been presented to him on behalf of these Choristers. We are sorry to find, that farther proceedings must be instituted before the matter can be fully decided; but, as his honour's opinion will give the reader a farther insight into the subject, we shall set down the substance of it, happy to find that some enquiry is to be entered into, and in anxious hope that more will be done; while the public will fully appreciate the disinterested zeal of an individual, who, at a great expense, has undertaken the cause of these friendless youths. His honour spoke to the following effect:

"A very considerable proportion of this petition relates to objects either wholly out of the jurisdiction of the court, or with regard to which the court cannot exercise its jurisdiction in this summary mode of proceeding. It complains that the statutes of St. Paul's Cathedral have not been obeyed; that there are various duties to be performed by the precentor and the almoner, and that these duties are not performed at all, or at least to the extent, or in the manner, enjoined by the statutes. I conceive that *this court has nothing to do with the observance or non-observance of the statutes of a cathedral*, or the performance of the duties of its various ministers and officers. It then states, that there are certain charitable funds, which are not applied to the purposes for which they were given according to the intention of the donors. It is an application to the jurisdiction of the court; and, *if it had jurisdiction*, it would be a proper ground of complain; but it is not every question of charitable trust that now can be decided here. The act gives the court jurisdiction to proceed in a summary manner to rectify abuses of a trust, and to give directions relative to the administration of it; but, where the question is as to the existence of a charitable trust, it becomes a question of property, and ought to be decided in the same solemn manner as every other question of property is decided. I conceive that in that case it is fitting that an information should be filed, or that a bill should be filed, in order to litigate the question in the same manner as every other question of property should be litigated. Now in this case, it is the existence of the trust that is the thing in controversy between these parties. It is attempted to be shown, that the estates of the dean and chapter, and of the chancellor, are liable to certain burthens and trusts, to which within living memory they have never been subjected. Documents are produced, which are ancient instruments, for the purpose of showing that grants have been made to the chancellor, of lands, tythes, and other property, for the purpose of supporting and maintaining a school for the education of the choristers; but *it does not appear to me that these documents do at any time distinctly show that to have been the purpose of these grants*. The officer (the registrar to the dean and chapter) does not admit the existence of any

such trust; and the question is, whether there is any trust, (and that must be decided in another form, not upon petition,) whether the dean and chapter of St. Paul's can be subjected to the payment of any grants to them, or any other sums than those which they confess themselves to be bound to pay to the almoner, to be applied for the support and maintenance of the choristers. The act of parliament says, not that this court is summarily to decide whether an estate be subject to a charitable trust, but that, in every case of a breach, or supposed breach, of any trust created for charitable purposes, or where an order of a court of equity was deemed necessary, it should be lawful for the court to proceed upon petition. It assumes the existence of the charitable trust as something that is admitted, or as so plain that there can be no question relative to it. The only case in which it is stated that there is any devise or grant to the almoner, for a charitable purpose, is that of the will of Richard de Newport, who gave certain houses to the almoner for the maintenance of one or two boys for a period not exceeding two years after their voices are broken. The petition states that as a charitable use; but *the almoner in his affidavit takes no notice whatever of that allegation in the petition*; he does not say whether these houses do or do not exist; whether they are or are not liable to the charitable use; he passes it by entirely. Now the trust by the will is plain and express; and I find that Mr. Hodgson (the registrar), in one of his affidavits, says, 'he is informed and believes that the almoner of the cathedral, for the time being, has been in the habit occasionally of maintaining a chorister or two after they have ceased to sing in the cathedral in consequence of the breaking of their voices, until they have been otherwise provided for.' This, therefore, should seem to be *a subsisting and an undisputed charity*; and it appears to me, that *there must be an enquiry what the trusts consist of, what are the rents and profits, and how those rents and profits are applied*. That is the only part of the petition upon which I can make any order, however laudable the motives may have been by which this petition has been set on foot, or however desirable the object to which it is applied."

With respect to the ancient state of the parish-priests of London, it is to be observed that their revenues did not arise from a glebe, or from tythe of lands, but from customary payments issuing out of the houses of their parishioners according to the value of the rents, which were called *oblations*, because they were small pieces of money offered by each parishioner to God and the church, on certain holydays. This custom had been used for many ages; but the earliest document on record for regulating the amount of the payments, is the Constitution of Roger Niger, bishop of London from 1229 to 1241, whereby the citizens were enjoined to pay to their respective parish-priests on all Sundays and festivals, the vigils of which were to be observed as feasts, one farthing for every house at ten shillings a-year rent; a halfpenny for one of twenty, and for those of forty shillings one penny each; all which amounted to about two shillings and sixpence in the pound; for there were but eight apostles' days on which these payments were to be made; and, if any of these chanced to fall on a Sunday, there was only one payment made for that day. This mode of payment continued until the 13th Richard II. when Thomas Arundel, archbishop of Canterbury, published "An Explanation" of the Constitution made by Niger, in which he added twenty-two other saints' days, by which the payments were increased to three shillings and five pence in the pound; this the citizens were constrained to pay until the seventeenth of Henry VIII. when an act of parliament was passed, by which the rate was reduced to two shillings and nine pence in the pound. But, although the citizens obtained this diminution of the rate, they remained equally unwilling to pay it, and sought to reduce it by various stratagems, particularly by taking their houses at low nominal rents, and making up the difference to the landlord by yearly or quarterly fines, annuities, new-years' gifts, &c. whereby

whereby the clergy were defrauded of their just demands, which occasioned repeated applications to parliament, and to the king and council; but no effectual redress was obtained until after the fire of London. By this event, eighty-four of the ninety-seven parish-churches within the walls were destroyed; and, their number being greatly reduced by the uniting of several parishes into one, in pursuance of the act for rebuilding the city, it was found necessary to make a more certain provision for the incumbents of the several livings; in consequence of which an act was passed in 1671, for providing a fixed annual revenue for the maintenance of the parsons, vicars, and curates, of the respective single or united parishes, to be raised by an equal assessment. This act remained in force until the year 1804, when, in consequence of a petition of the London clergy for an increase of their annual stipends, a new act was passed, by which they were settled as follows:

Allhallows, Lombard-street	-	-	£200	0	0

These annual stipends are over and above glebes, gifts, bequests, and surplice-fees; and the vicar of St. Sepulchre's is entitled to one third part of the appropriate tythes, in respect of that part of the parish which is within the county of Middlesex.

We learn from Fabian's Chronicle, that, in his time, the number of parish-churches in London amounted to one hundred and thirteen, and that there were also twenty-seven houses of religion, monasteries, colleges, and chapels, which were not parochial.

The first instance of prefixing the word Saint to the name of the parish, occurred in the weekly bill of mortality from January 15th to January 22d, 1634; but this was thought so great a profanation, that in 1642, in the mayoralty of alderman Pennington, the title of Saint was ordered to be expunged for the future; and so it continued till the restoration of Charles II. when it was again brought into use.—The origin of the weekly bills of mortality is involved in great obscurity. In a work entitled "Reflections on the Weekly Bills of Mortality," published in 1665, it is said that the keeping of them began in the year 1592, being a great year of sickness; and, after some dispute, was established by order in the year 1603, the next year of sickness; the first of the continued weekly bills of mortality commencing October 29th, in the same year being the first year of the reign of James I. Diseases began first to be distinctly taken notice of in the year 1629. On this subject, however, Strype says, "I meet with an older bill of mortality, viz. for the year 1562, and ending 1563, when a plague raged in the city." The account whereof was as follows:

Buried in London, and the places near adjoining, from the 1st of January, 1562, to the 1st of January, 1563, in the whole number	-	-	23630
Whereof of the plague	-	-	20136

Here is set down likewise, how many died in each parish. This bill of mortality might be the first of this kind; at least it is much older than that mentioned by Capt. Grant, viz. 1592, 1593, which he seems to hold to be the oldest.

OF THE LIVERY COMPANIES OF THE CITY OF LONDON.

Although the word *livery* is indisputably derived from the latin *liber* (anciently pronounced *liver*), "free," yet the liverymen of London are a body distinct from the freemen at large; and, besides the advantages they gain in their respective companies, are invested with the sole privilege of electing the magistrates of the city, and its representatives to parliament. This privilege appears to have been obtained about the fifteenth year of the reign of Edward IV. when the master, wardens, and liveries, of the several companies were taken in to assist at the election of mayor, sheriffs, &c. and has continued uninterrupted ever since. They are all members of some one of the city-companies, each of which is a corporation within itself, possessed of the power of holding courts called hall-motes, for regulating the concerns of the company.

These companies were anciently called *guilds*; a term which, in its earliest use, was only applied in a secular sense to the body or community of a city or town; for there were also ecclesiastical guilds. Afterwards we find the aggregate body of the merchants or traders of a city or town, called by the name of *Gilda Mercatoria*; and the head officer thereof was usually called *alderman* of the merchant's guild, whose office seems to have been similar to that of the Dean of Guild in the royal boroughs of Scotland at the present day. In process of time, as trading towns increased in number of inhabitants, the retailers and artificers in great towns obtained charters for incorporating their respective callings; i. e. for engrossing and monopolizing all the business of their town, to the exclusion of non-freemen: they also obtained the names of guild, fraternity, and corporation. We find the last-named kind of guilds in London pretty soon after the Norman conquest: Mr. Madox, in his *Firma Burgi*, takes notice of several

several guilds in London as early as 1180, that were amerced to the crown as *adulterine*, i. e. set up without warrant from the king; as the Goldsmiths, Butchers, Glovers, Curriers, &c. On the other hand, there were then also several warranted or lawful guilds; for it appears that the Weavers of London paid a rent, or *ferme*, as it is called in the style of the exchequer, to king Henry I. who reigned between 1100 and 1135, for their guild; and had, in after times, great disputes with the city of London concerning their high immunities and privileges. But the oldest charters now in being, of the most eminent companies in London, are of a later date; viz. the Goldsmiths and Skinners, not till the year 1327; the Grocers, in 1345; and the other companies still later.

But, in respect to the livery companies, it is to be remarked, that they are not only establishments for carrying on trades, although that was the leading cause of their original incorporation; but they have been always in the practice of admitting upon their rolls persons who have no connection with that or any other trade, who desire to become members of the first corporation in the world, in order to enjoy its privileges, or to represent it in parliament; or of admitting others to whom the high estimation in which it is held throughout the united kingdom has rendered it the first compliment which the city of London can offer to their magnanimity and bravery, to their loyalty and patriotism, to their conduct in the field or on the seas, in the senate or in the cabinet, in the service of their king and country, or to their exemplary worth and integrity as upright citizens. Amongst such as these, the twelve first companies in particular can exhibit names which have been dignified with the applause and admiration of their country, and will ever live in the records of history. But these establishments do not stop here; for they are possessed of endowments which render them trustees for the benefit of their poorer brethren to a very large extent; so that it will be readily seen that every company is an institution of brotherhood and charity, and manifests how numerous and ample are the provisions against the misfortunes to which every class of human life is subjected. The twelve principal companies are seized of Irish estates in the county of Ulster; these were forfeited lands during the rebellion, and thence vested in the crown in 1609. King James proposed to the corporation of London to take them, on condition of their planting and repopling them; the corporation agreed to the proposal, and erected a society for this purpose, called the Irish Society, to treat with the king; and, having agreed to accept the terms, they raised a contribution among the companies of 60,000*l.* for the purchase. On the 29th of May, 11 James I. they were incorporated by the name of "The Governors and Assistants of the New Plantation in Ulster within the Realm of Ireland;" with the grant of cities, manors, and lands, and power to create manors and privileges, not exceeding 1000 acres. This charter vests the estates, in trust, for the ultimate benefit of the twelve chief companies, who were the contributors to this purchase, and hold the estates as a feignory.

Subjoined the reader will find a brief but correct account of every company, placed according to an order of precedence long established, but the motives of which we cannot find, since they are not ranged according to the chronology of their foundations. This order we have also followed in the Plates; while the name of each company will be found in its alphabetical order in the Index at the end of the volume.

PLATE VIII. contains the Armorial Bearings of the City of London, and of the Twelve Principal Companies.

*Arms of the CITY of LONDON.*—Argent, a cross, and in the first quarter a dagger in pale, point elevated; gules. Crest; a dragon's wing argent, charged with a cross as in the arms. Supporters; on each side a dragon argent, wings elevated and charged with a cross as in the crest.

It is generally understood, that the dagger became part of the arms of the city of London after the death of Wat Tyler in 1381; but we are told that there is a stone near Runnymede, bearing date 1285, on which the city-arms appear with a dagger. Yet who can say that the dagger has not been added since? See p. 66.

1. *MERCERS.*—The Company of Mercers, which is the first of the twelve principal companies, was incorporated by letters patent, granted by king Richard II. in the year 1393, under the title of "The Wardens and Commonalty of the Mystery of the Mercers of the City of London," with a licence to purchase an estate of twenty pounds per annum in mortmain, which by numerous gifts and additional grants is so increased, that when, in 1698, the company accepted of Dr. Astton's project for providing a maintenance for clergymen's widows, they invested upwards of fourteen thousand pounds in a fund for securing thirty pounds per cent. per annum, to the widow of each subscriber, during life; but, this annuity being found larger than the fund could bear, it was afterwards reduced to twenty per cent. The members of this company are not only exempt from quarterage, but, upon their admission to the livery, pay only a small fine. They are governed by a prime and three other wardens, and a court of assistants. It is a wealthy company, and they pay in charitable benefactions about three thousand pounds per ann.

The Mercers' Company are trustees for the management of an hospital called Norfolk College, founded in 1613, by Henry earl of Northampton, and by him dedicated to the Holy Trinity. He endowed it with lands and revenues for the support of a warden and twenty pensioners, twelve of whom are to be of the parish of Greenwich, and eight of the parish of Shotisham in Norfolk; they must have been inhabitants four years of the parish whence they are chosen, unmarried, fifty-six years of age at the least, able to repeat the Creed, Lord's Prayer, and Ten Commandments; neither common beggars, drunkards, or otherwise of immoral behaviour; neither idiots, blind, or in any way so impotent as to be unable to attend divine service in the chapel daily; and not possessing property to the amount of 1*l.* per annum; they receive 8*s.* a week for commons, the warden 16*s.* besides clothes, lodging, and salaries, variable at the discretion of the company. The present annual revenue of the college, which is in a very flourishing condition, is about 1100*l.* It stands by the river side, at the east end of the town of Greenwich; it is a brick structure, forming a small quadrangle. At the south-east end of the chapel is a handsome monument of the founder, which was removed with his body from the chapel at Dover Castle, where he had been buried. On a table-tomb, under a canopy supported by eight square pillars, stands a black sarcophagus, on which are inscriptions enumerating his titles and charities, &c. &c.—The Mercers' Company are also vested with the trust of an alms-house, which was founded in 1413, by sir Richard Whittington, thrice lord-mayor of London, for thirteen poor men; this establishment arose out of a college which he had founded on the north side of the church of St. Michael Paternoster, for a master, four fellows, clerks, chorists, &c.—They are also trustees for St. Paul's school.—Their hall is in Cheapside. See p. 470.

*Arms:* Gules, a demi-*virgin* couped below the shoulders, issuing from clouds, all proper, vested or, crowned with an eastern crown of the last, her hair dishevelled, and wreathed round the temples with roses of the second, all within an orle of clouds proper. Motto, *Honor Deo.*—Every company was anciently placed under the protection of some particular saint; and, on the commemoration-day assigned to that saint in the calendar, the company used to meet, go to church, transact the business of their guild, and dine together. These ancient customs have been kept up to this moment, except that of hearing church-service. The patroness of this company is the *Virgin Mary*, their dealings being mostly in silks, threads,  
and

and other articles useful to ladies. The etymology of the word *Mercer* comes from the Latin *merx*, merchandise. This company have no crest nor supporters to their arms.

2. GROCERS.—The Grocers' Company, anciently denominated *Pepperers*, were incorporated by letters-patent of Edward III. in the year 1345, by the name of "The Wardens and Commonalty of the Mystery of the Grocery of the City of London;" which was afterwards confirmed by Henry VI. in 1429, who also granted to this company the office of garbling, in all places throughout the kingdom of England, the city of London only excepted. These grants were confirmed by a new charter, granted by Charles I. in the 15th year of his reign, with an additional power of searching and inspecting the goods and weights of all persons, using or exercising the trade of a grocer in the city and suburbs of London, or within three miles round the same. Anciently they had also the management of the king's beam in this city, with a right of appointing a master weigher and four porters to attend it. This company formerly held the highest rank among the city companies; for in the reign of Henry IV. there were no less than twelve of the aldermen, at one time, belonging to it. It has also been dignified with the names of five kings enrolled among its members. Hall in Grocers' alley, Poultry; (see p. 470.) The livery-fine is 20l. Their estates are of considerable magnitude; out of which they distribute yearly about 1000l. to the poor, and maintain a set of alms-houses on their estate in Northamptonshire.

Arms: Argent, a chevron gules between nine cloves fable, 4, 2, and 3. Crest; a camel proper, bridled gules, on his back a bale argent, corded gules. Supporters; two griffins per fess gules and or. Motto; God grant grace.—We suppose the alliteration of the three G G G in the motto to have been made in allusion to the word Grocer, the etymology of which is *grofs*, as they were originally wholesale dealers in merchandises coming from the Levant.—Patron, St. Anthony, an hermit of the Thebais in Egypt, from and through which country the oriental drugs used to be conveyed to Europe.

3. DRAPERS.—Incorporated anno 1439, by the style and title of "The Master, Wardens, Brethren, and Sisters, of the Guild or Fraternity of the Blessed Mary the Virgin, of the Mystery of Drapers of the City of London." The hall is a spacious edifice, on the north side of Throgmorton-street, built upon the ruins of a palace belonging to Thomas Cromwell, earl of Essex, which stood upon the site of a priory, dedicated to St. Augustine. Being condemned for treason, his property fell to the crown; and this mansion was purchased by the Drapers, who converted it into a handsome hall. That being consumed by the great fire, the present elegant building arose from its ashes. It forms four sides of a square, surrounded by a piazza, composed of columns and arches. The common hall is adorned with portraits of several of the English monarchs, and of Henry Fitz-Alwyn, the first lord-mayor of London, who was a member of this corporation. The court-room, and the other apartments, are handsomely furnished. In one of them is an original picture of Mary queen of Scots, with her infant son, afterwards king James. A pleasant garden, allowing for its situation in the midst of a city, belongs to this hall, which is politely kept open for the accommodation of the public, and affords a safe and airy retreat for the children of the neighbourhood.—In Howel's Familiar Letters, we meet with the following passage relative to a privilege which may be claimed by persons of that name who become members of the Drapers' Company. "Sept. 30, 1629. When I went to bind my brother Ned apprentice in Drapers' Hall, casting my eyes upon the chimney-piece of the great room, I might see a picture of an ancient gentleman, and underneath, *Thomas Howel*. I asked the clerk about him; and he told me that he had been a Spanish merchant in Henry the Eighth's time; and, coming home rich, and dying a bachelor, he gave that hall to the Company of Drapers,

with other things, so that he is accounted one of their chiefest benefactors. I told the clerk, that one of the sons of Thomas Howel came now thither to be bound. He answered, If he be a right Howel, he may have, when he is free, three hundred pounds to help to set up, and pay no interest for five years. It may be hereafter we may make use of this. He told me also, that any maid, that can prove her father to be a true Howel, may come and demand fifty pounds towards her portion, of the said hall."

The company is governed by a master, four wardens, and thirty assistants; livery-fine 25l. Their charitable donations annually were estimated by Maitland, in 1760, at about 4000l. besides which, they are vested with trusts to a considerable amount for such purposes.—Among the charities, the administration of which is vested in the Drapers' Company, is a very ancient one, established on the south-west side of the town of Greenwich, where the roads branch off to London and Lewitham. It is an hospital consisting of twenty small tenements with gardens, which stand very low, and are separated by a dwarf-wall from the London-road; it was founded and endowed anno 1576, by William Lambard, author of the Perambulation of Kent, with the title of Queen Elizabeth's College, for twenty poor persons: he committed it to the trust of the Master of the Rolls (for the time being) and the Drapers' Company. It is said to be the first hospital which was founded by a protestant. The pensioners are appointed in the following manner: One by the Master of the Rolls, one by the two elder wardens of the Drapers' Company, one by the steward of the manor of Greenwich, out of the poor of that parish, one by the vicar and parish-officers, one from Deptford, three from Lewitham, one from Lee, three from Eltham, one from Charlton and Kidbrook, and one from Woolwich. They must be poor, honest, and godly, persons, who have been three years resident in the parish whence they are chosen; they may be either men or women, married or unmarried; the preference is to be given, in the first place, to the aged, who are past their work; secondly, to those who have been maimed; thirdly, to the blind; fourthly, to such as have been impoverished by casualty; fifthly, to those afflicted by any continual sickness, not contagious; and, lastly, to such as are burdened with a numerous family. Other secondary preferences are laid down also to be observed among those in other respects of equal pretensions; such as a man to be preferred before a woman, the married before the unmarried, the person who has been longer of the household of faith before him who has continued later in popish idolatry, &c. The original allowance to the pensioners was 6s. per month; it is now increased to 15s. per month, and one chaldron and a half of coals yearly to each pensioner.—The Drapers' Company are also the trustees for the management of the alms-houses of Francis Bancroft, as mentioned at p. 450. and of those of lady Aikew, noted at p. 458.—Finding the charities of the companies to be so extremely numerous, that it will be impossible for us to enumerate them all, we shall at once beg to refer the reader for full information to a work from which ourselves have derived very great assistance; namely, "*Pietas Londinensis*;" the History of the Public Charities in and near London, by A. Highmore."

Arms: Azure, three clouds proper, radiated or, each surmounted with a triple crown or, caps gules. Crest; on a mount vert, a ram couchant or, attired fable. Supporters; two lions argent pelletée. Motto, Unto God only be honour and glory.—Patroness, the virgin Mary, most likely for the reason assigned at the article MERCERS.

4. FISHMONGERS.—The Fishmongers were originally two bodies, viz. Stock-fishmongers and Salt-fishmongers; and between them had no less than six halls; two in Thames-street, two in New Fish-street, and two in Old Fish-street. Their present and only hall is in Thames-street. See p. 432.—This company, as well as other persons concerned in furnishing the city with provisions,

WERE

were anciently under the immediate direction of the court of lord-mayor and aldermen, to whom this power was confirmed by an act of parliament in the seventh of Richard II. in the year 1384. The Salt-fishmongers were incorporated, A. D. 1433; the Stock-fishmongers not till 1509. But, this separation proving prejudicial to both, they united, and obtained a charter from Henry VIII. in 1536, by which they were incorporated by the name of "The Wardens and Commonalty of the Mystery of Fishmongers of the City of London." After this, a desperate feud arose between this company and the Goldsmiths, about precedency; they grew so violent, that the court of aldermen, by their own authority, were obliged to pronounce them rebellious, and even *bannifati*, or banished the city, such of them as persisted in their contumacy. But, this charter becoming insufficient for the purposes of the company, whose estates and concerns considerably increased, they received from James I. the charter under which they are still incorporated; it bears date the 23d of August, 1604, retains the same title as the charter of Henry VIII. with power to purchase and take lands of the yearly value of 20l. and to any person to give, &c. lands of that value. The corporation consists of a prime and five other wardens, twenty-eight assistants, and a livery, who are not to exceed two hundred, and their fine is 13l. 6s. 8d.—There are, in the gift of the court of assistants, twelve exhibitions, of 10l. a-year each, to students, in either of the universities, except one, which is confined to Cambridge. The students enjoy them for seven years, from the time they are entered at college. If any candidate has been entered at their school at Holt, he has sometimes the preference, but not always; and no person can be admitted a candidate who has any annual employment of 30l. There are also in the gift of the court six presentations to Christ's Hospital, of children of freemen of this company, which are filled up by death or removal from the hospital of any such children as the court may from time to time present. The court has also the nomination of a person to the fellowship of Sidney Sussex College, Cambridge, called Smith's Fellowship; the value of which is supposed to be from 70l. to 100l. per annum; also of a scholar from Holt School, to Smith's Scholarship in the same college, with an exhibition of 12l. per annum, paid by the company, exclusive of the profits of the scholarships: this constitutes one of the twelve exhibitions above mentioned. They have also the nomination of a master to Sir John Gresham's free grammar-school at Holt in Norfolk, which is under the government of the company. The court also appoint two persons, freemen of the company, to be their tackle-porters at the water-side, for shipping and unshipping goods; and two other freemen to be the company's fish-meters, to prevent the landing and disposing of unwholesome fish, within the jurisdiction of London and the suburbs, at 10l. per annum each. Their alms-houses are ninety-four in number, viz. forty-two at Newington, Surry, called St. Peter's Hospital, noticed at p. 514, 15. forty at Jesus Hospital, at Bray in Berkshire; and twelve at Harrietham in Kent; all which are particularly described in Highmore's Public Charities, referred to above.

Arms: Azure, three dolphins naiant in pale argent, finned and ducally crowned or, between two pair of lucies (or pikes, in Latin, *lucius*) in saltier proper, over the head of each lucy a ducal crown gold; on a chief gules three pair of keys indorsed in saltier or. Crest; two cubit-arms erect, the dexter vested or, the sinister azure, both cuffed argent, holding in the hands proper a regal crown of the last. Supporters; the dexter a merman proper, on his head a helmet, the body in armour, in his dexter hand a sabre, all of the first; the sinister a mermaid proper, crined or, in her sinister hand a mirror of the last. Motto, All worship be to God only.—Patron, St. Peter, on account of his having been a fisherman.

5. **GOLDSMITHS.**—The Company of Goldsmiths appears to be of great antiquity; for in the reign of Henry II. in

the year 1180, it was, among other guilds, fined for being adulterine, that is, setting up without the king's special license. But at length, in 1327, Edward III. in consideration of the sum of ten marks, incorporated this company by letters patent, by the name of "The Wardens and Commonalty of the Mystery of Goldsmiths of the City of London;" and granted them the privilege of purchasing an estate of twenty pounds per annum in mortmain, for the support of their valetudinary members; which grant, in the year 1394, was confirmed by Richard II. for the sum of twenty marks. These grants were afterwards confirmed by Edward IV. in the year 1462, who also constituted this society a body politic and corporate, to have a perpetual succession, and a common seal. By the said grant they had likewise the privilege of inspecting, trying, and regulating, all gold and silver wares, not only in this city, but in other parts of the kingdom; and this privilege has been since so materially enlarged, that they have the power of inspecting all gold and silver wares in the following particular places, viz. Birmingham, Sheffield, Chester, Newcastle, Norwich, and Exeter; with the power of punishing all offenders concerned in working adulterated gold and silver; and of making bye-laws for their better government. This company is governed by a master, four wardens, and ninety-eight assistants; the livery-fine is 21l. Hall in Foster-lane; see p. 485.

Arms: Quarterly, gules and azure; in the first and fourth a leopard's head or; second and third, a covered cup; and in chief two round buckles, the tongues fesswise, points to the dexter, all of the third. Crest; a demi-lady, her arms extended proper, issuing out of clouds of the last, vested gules, garnished or, cuffed argent, round her neck a ruff of the last; in her dexter hand a pair of scales gold, in her sinister hand a touchstone sable. Supporters; two unicorns or, armed, crined, and hooped, argent. Motto, *Justitia virtutum regina*. They used also the motto, To God only be all glory.—Patron, St. Dunstan, whom tradition reports to have been a goldsmith by trade.

6. **SKINNERS.**—The Skinners' Company was incorporated by Edward III. in the year 1327, by the appellation of "The Master and Wardens of the Guild or Fraternity of the Body of Christ, of the Skinners of London." This charter was afterwards confirmed by Henry VI. in the year 1438; which deed of confirmation directs, that every person, on his being admitted to the freedom of the company, is to be presented to the lord-mayor. By these grants the corporation were restrained from making bye-laws. This company is governed by a master, four wardens, and sixty assistants. The fine on admission is 15l. The members of this company pay no quarterage, owing to their being possessed of great estates left in trust to them by several benefactors, out of which they pay 700l. annually to charitable purposes.—Their hall is on Dowgate hill, and has been noticed at p. 429. Besides their alms-houses mentioned at p. 455, they have another set, (adjoining those of the Trinity-house, p. 450.) founded by Louis Newbury in 1698, for twelve poor widows, who receive each 18l. per ann.

Arms: Ermine, on a chief gules, three crowns composed of crosses patée and fleurs de lis or, with caps of the first. Crest; a Norwegian cat gardant proper, wreathed about the neck with laurel-leaves vert, purfled or. Supporters; the dexter a cat as above, rampant gardant, proper; the sinister a martin sable; each gorged as above. Motto, To God only be all glory.—Patroness the virgin Mary, for reasons similar to those stated at the articles Mercers and Drapers.

7. **MERCHANT TAYLORS.**—The Company of Merchant Taylors, which was anciently denominated "Taylors and Linen-Armourers," was incorporated by letters patent of Edward IV. in the year 1466; but, many of the members of the company being great merchants, and Henry VII. a member thereof, he, in the year 1503, re-incorporated the same, by the name of "The Master and Wardens of the Merchant Taylors, of the Fraternity of St. John the Baptist, in the City of London." They

are governed by a master, four wardens, and a court of thirty-eight assistants. Their livery is numerous; and their estates are very considerable; out of which they pay to charitable uses, pursuant to the wills of the respective donors, about two thousand pounds per annum. Their hall is in Thread-needle-street. In the front is a large handsome door-case, adorned with two demi-columns; the entablature and pediment of which are of the composite order. Above the entrance are the arms of the company, finely carved in stone. Within are tapestry hangings, containing the history of their patron, St. John the Baptist, which, though very old, are curious and valuable. The great hall is so extensive, that it is better adapted for the reception of large assemblies than any other in the city; and is therefore often used for such purposes; and it was particularly honoured on the 17th of June last, by being made the scene of a grand entertainment given by the merchants and bankers of the city of London to the emperor of Russia, the king of Prussia, the duchess of Oldenburg, and the other illustrious visitors who honoured this country with their presence upon the occasion of the conclusion of a long and disastrous war. Merchant Taylors' School is a noble foundation, which has been noticed at p. 428.

Arms: A royal tent between two parliament-robos gules, lined ermine, the tent garnished or, tent-staff and pennon of the same; on a chief azure a lion passant gardant of the third. Crest; on a mount vert, a lamb passant holding a banner argent, the staff proper; on the banner a cross gules, all within a glory of the third. Supporters; two camels or. Motto, *Concordia parva res crescunt*.—Patron, St. John the Baptist; on account of his having made himself, as it is supposed, clothes of camel's hair in the desert, it being related in Mark. i. 6. that he wore such. The supporters and crest are allusive to the same text.

8. HABERDASHERS.—This company was anciently known by the name of Hurriers and Milainers, from their dealing principally in merchandise imported from Milan in Italy. They were afterwards incorporated by Henry VI. in the year 1467, by the style of "The Fraternity of St. Catharine the Virgin, of the Haberdashers of the City of London." At present, however, they are denominated "The Master and Four Wardens of the Fraternity of the Art or Mystery of Haberdashers in the City of London;" but by what authority does not appear. This corporation is governed by a master, four wardens, and ninety-three assistants. It has at all times been of such repute, that it has been intrusted with the benefactions of many pious persons, pursuant to the wills and directions of whom, they pay annually for charitable uses about three thousand five hundred pounds. The livery-fine is twenty-five pounds.—Their hall, which is in Maiden-lane Wood-street, has been noticed at p. 483, and their alms-houses, otherwise called Aske's hospital, at p. 460.

Arms: Barry nebuly of six, argent and azure; on a bend gules, a lion passant gardant or. Crest; two arms embowed proper, issuing from clouds of the last, holding a chaplet of laurel vert. Supporters; two Indian goats argent, attired and unguled or. Motto, *Serve and obey*.

9. SALTERS.—This company appears to be of great antiquity, from the grant of a livery from Richard II. in the year 1394; but we do not find they were incorporated till the first of Elizabeth, in the year 1558, when, by letters patent, they were styled, "The Master, Wardens, and Commonalty, of the Art or Mystery of Salters of London." This company is governed by a master, two wardens, and twenty-three assistants. Livery-fine, twenty pounds.—Their hall is in Swithin's lane. They expend large sums in charitable foundations, some of which we have noticed in the course of our survey, at p. 422 and 483.

Arms: Per chevron azure and gules, three covered salts, or sprinkling-salt-cups, argent. Crest; a cubit-arm erect, issuing from clouds, all proper, holding a salt-cup as in the arms. Supporters; two otters sable, bezantée ducally collared and chained or. Motto, *Sal sapit omnia*, "Salt seasons all things." This motto is appropriate;

but we cannot guess what analogy the supporters (otters) have to salt.—We do not find under whose protection this company was placed. The wife of the patriarch Lot would have been a proper person; had not her fatal curiosity prevented her being placed among the saints.

10. IRONMONGERS.—The Ironmongers' Company was incorporated in the year 1464, by the name and style of "The Master and Keepers, or Wardens, and Commonalty, of the Art or Mystery of Ironmongers of London;" and, by virtue of the charter, the government of it is now in a master, two wardens, and a court of assistants, which consists of the whole livery, and represents the commonalty, or whole freedom.

This company enjoys very great estates both in their own right and in trust from several donors, by whose wills they pay yearly near 1800l. in charities; besides the interest or profits of 26,000l. left to them by Mr. Thomas Betton, a Turkey merchant, in the year 1724, under the special trust of employing one moiety of the said profits perpetually in the redemption of British captives from Moorish slavery; and the other moiety to be equally distributed between the poor of the Company of Ironmongers, and the several charity-schools within the bills of mortality. In the year 1734, about a hundred and thirty-five captive Britons, nine of whom were commanders of vessels, arrived in England from the states of Barbary, and were presented to the king and the lords of the admiralty. The king gave them 100l. and several of the nobility and gentry five and ten guineas each, to which Sir Charles Wager added 50l. They afterwards dined together at the company's hall. The company, through correspondence with the British consuls at Algiers and its dependencies, have been continually instrumental in effecting the liberty of many slaves, about thirty of whom (says Highmore) have been emancipated within the last six years, and some of them have presented themselves at the company's great meetings. When will the powers of Europe combine to render such a charity unnecessary?

The Ironmongers have a stately and spacious hall on the north side of Fenchurch-street; erected in the year 1748. It is entirely fronted with stone, and the whole lower story is wrought in rustic. The centre projects a little; and presents a large arched entrance, and two windows, with two others on each side. Over this rustic story rises the superstructure, which has a light rustic at the corners, to keep up a correspondence with the rest of the building: the part which projects is ornamented with four Ionic pilasters, coupled, but with a large intercolumniation. In the middle is a very noble Venetian window, and over it a circular one. In each space, between the pilasters, is a smaller window, with an angular pediment; and over these are also circular ones; but the sides have arched windows, with square ones over them. The central part is crowned with a pediment, supported by these pilasters, and in its plane are carved the arms of the company, with handsome decorations in relieve. The rest of the building is terminated by a balustrade crowned with vases.

Arms: Argent, on a chevron gules, three swivels or, between three steel-gads azure. Crest; two scaly lizards, combatant, vert, gorged with a plain collar, the collars chained together; a chain with a ring at the end, pendant between the two lizards, collars, chain, and ring, or. Supporters; none. Motto, anciently *Affer (affiez) dure*; "Hard enough;" now, God is our strength. Patron, St. Laurence, on account of the instrument of his martyrdom, the gridiron.

11. VINTNERS.—The Vintners' Company was anciently denominated *Merchant Wine-tunners of Gascoyne*; and was composed of two sorts of dealers; viz. the *Vintinarii*, who were the importers of the wine; and the *Tabernarii*, who were the retailers of it. Some authors have erroneously asserted, that the craft of Vintners was incorporated by Edward III. which mistake arises from his charter, granted in the year 1365, to enable them to carry on an exclusive

importation.

importation-trade from Gascony. They were incorporated in the year 1437, by letters patent of Henry VI. by the name of "The Master, Wardens, and Freemen and Commonalty, of the Myftery of Vintners of the City of London;" but without the power of making bye-laws. This company is governed by a master, three wardens, and twenty-eight assistants. The freemen belonging to this company have the peculiar privilege of retailing wine without a license. They have considerable possessions, out of which they pay large sums annually for the relief of the poor.

Arms: Sable, a chevron between three tuns argent. We find neither supporters, crest, nor motto, to these arms, which were granted by Clarenceux in 1442.—The reason why this company chose St. Martin for their patron is fully stated in the account of the hall, at p. 425.

12. CLOTHWORKERS.—This company was at first incorporated by letters patent of Edward IV. in the year 1482, by the name of "The Fraternity of the Assumption of the Blessed Virgin Mary, of the Shearmen of London;" which was confirmed by Henry VIII. in the year 1528. But, they being afterwards re-incorporated by queen Elizabeth, she changed their first title to that of "The Master, Wardens, and Commonalty of Freemen, of the Art and Myftery of Clothworkers of the City of London." The last charter was confirmed by Charles I. in 1634. They are governed by a master, four wardens, and thirty-nine (Highmore says 33) assistants. The livery-fine is twenty pounds. They have considerable estates both in their own right, and in trust for others; out of which they pay large sums of annually to charitable purposes.—Their hall, which is in Mincing-lane, Fenchurch-street, has been described at p. 437.

Arms: Sable, a chevron argent, between habics in chief argent, and a thistle in base slipped or. Crest; on a mount vert, a ram statant or. Supporters; two griffins or, pelletée. Motto, My trust is in God alone.—Patrons; the Virgin Mary, for the reasons stated before.

#### PLATE IX.

13. DYERS.—This company was incorporated by Edward IV. in the year 1472, by the name of "The Wardens and Commonalty of the Myftery of Dyers of London." Among other privileges granted to this company by their charter, is that of keeping swans on the river Thames. This was originally one of the twelve principal companies. It is governed by two wardens and thirty assistants; the livery-fine is fifteen pounds.—Their hall is in Elbow-lane, for a description of which, see p. 429. and for a short account of their alms-houses, see p. 489.

Arms: Azure, a chevron engrailed argent, between three bags of madder of the last, corded or. Crest; an eastern crown or, filled with green. Supporters; two leopards, rampant gardant argent, spotted with various roundels, fire issuing from their ears and mouth proper, both ducally crowned or. Motto, *Da gloriam Deo*, "Give glory to God."

14. BREWERS.—The Brewers' Company was incorporated by Henry VI. in the year 1438, by the name of "The Master, and Keepers or Wardens, and Commonalty, of the Myftery or Art of Brewers of the City of London." Edward IV. not only confirmed that charter, but granted them a further power to make bye-laws. They are governed by a master, three wardens, and twenty-eight assistants; livery-fine, 6l. 13s. 4d.—Their hall is in Alder-street: it is a large and commodious building, supported by very neat pillars, and with a handsome entrance into a court paved with free-stone.

Arms: Gules, on a chevron argent, between three pair of barley-garbs in saltier or, three tuns sable. This corporation anciently bore the arms of Thomas-à-Becket impaled with their own; but, that saint's bones being taken up and burnt, and unfainted, by the powers in being, Clarenceux king at arms, in the year 1544, separated them, and gave the Brewers a crest in lieu thereof; which is,

a demi Moorish woman, couped at the knees proper, her hair dishevelled or, habited sable, fretté argent, her arms extended, holding in each hand three ears of barley of the cond. Motto, In God is all our trust.

15. LEATHER-SELLERS.—These were incorporated by a charter from Henry VI. in 1442, by the style of "The Wardens and Society of the Myftery, or Art, of Leather-sellers of the City of London." And, by a grant from Henry VII. the wardens of this company were empowered to inspect sheep, lamb, and calf, leather, throughout the kingdom, in order to prevent frauds in those commodities. The corporation is governed by a master, who is called *prime*, three wardens, and twenty-six assistants; and the fine, on admission to the livery, is twenty pounds.—Since their hall has been pulled down, this company meets in a house in Little St. Helen's. See p. 455 and 483.

Arms: Argent, three bucks trippant regardant gules, attired and unguled sable. Crest; a buck trippant gules. Supporters; the dexter a buck or, attired sable; the sinister a ram argent, attired or. Motto, *Soli Deo honor et gloria*, "To God alone be honour and glory."

16. PEWTERERS.—Incorporated by letters patent of Edward IV. in the year 1474, by the title of "The Master, Wardens, and Commonalty, of the Art and Myftery of Pewterers of the City of London." In the year 1534, the wardens of this company, or their deputies, were empowered by act of parliament to have the inspection of pewter in all parts of the kingdom, in order to prevent the sale of base pewter, and the importation of pewter vessels from abroad; and, as a farther encouragement to this company, all Englishmen are by the said act strictly enjoined not to repair to any foreign country to teach the art or myftery of pewterers, on pain of disfranchisement; and, for the more effectually preventing the art from being carried abroad, no pewterer shall take as an apprentice the son of an alien. This corporation is governed by a master, two wardens, and twenty-eight assistants: livery-fine, twenty pounds. Their hall is in Lime-street. See p. 453.

Arms: Argent, on a chevron or, between three antique limbecs argent, as many roses gules, seeded of the second, barbed vert. Crest; out of a mount vert, two arms embowed proper, vested argent, cuffed gules, holding in both hands erect a dish of the third. Supporters; two sea-horses or, their tails proper. Motto, In God is all my trust.

17. BARBERS.—The art of surgery was anciently practised in this city only by the barbers, who were incorporated by letters patent in the year 1461; and in 1512, an act was passed to prevent any persons besides the barbers from practising surgery within the city of London, and seven miles round, except such as were duly examined and admitted by the bishop of London, or dean of St. Paul's, and such persons expert in surgery as they should think proper to call to their assistance. At length, several persons who were not barbers being examined and admitted as practitioners in the art of surgery, the parliament united them in the thirty-second year of Henry VIII. by the appellation of "The Master or Governors of the Myftery or Commonalty of Barbers and Surgeons of the City of London;" and, by this act, all persons practising the art of shaving were strictly enjoined not to intermeddle with that of surgery, except what belonged to drawing of teeth. Thus this company obtained the name of Barber-Surgeons, which they continued to enjoy till the eighteenth of George II. when the Surgeons, applying to parliament to have this union dissolved, were formed into a separate company; though the Barbers were left in possession of the hall and theatre, and were constituted a body politic, under the name of "The Master, Governors, and Commonalty, of the Myftery of Barbers of London." This company is under the government of a master, three wardens, and twenty-six assistants; the livery-fine is ten pounds. The hall is in Monkwell-street: see p. 483.

Arms: Quarterly, first and fourth sable, a chevron between three razors argent; second and third argent, a rose gules

gules crowned with an imperial crown proper; over all a cross, also gules, charged in the centre with a lion passant guardant or. Crest; a dragon passant proper, wings elevated and purfled gules. Supporters; on each side a leopard argent, semé of roundels, gules, sable, and azure; collared with a ducal coronet and chain or. Motto, *De præscientiâ Dei*; "From the foreknowledge of God."

18. CUTLERS.—The Company of Cutlers was incorporated in the year 1417, by the style of "The Master, Wardens, and Commonalty, of the Mystery of Cutlers of London." And they were afterwards united to the Belt and Sheath Makers. They are governed by a master, two wardens, and twenty-one assistants; the livery-fine is ten pounds.—Their hall is in Cloak-lane; it is a small but very neat brick building, conveniently fitted-up for transacting the business of the company.

Arms: Gules, three pair of swords in saltier argent, hilted and pomelled or, two and one. Crest; an elephant argent, armed or, on his back a tower of the first; the trappings, ornaments, &c. of the second. Supporters; two elephants argent.

19. BAKERS.—The Company of Bakers appears to be of great antiquity, (see p. 60.) In the year 1155, it was charged in the great roll of the exchequer with a debt of one mark of gold for their guild; by which it seems as if the ancient guilds had held their privileges in fee-farm of the crown. This company, however, was not incorporated till about the year 1307; after which their charter was renewed by Henry VII. and confirmed by divers of his successors. It is incorporated by the name of "The Master and Wardens of the Mystery or Art of Bakers of the City of London." Livery-fine, ten pounds.—Their hall is in Harp-lane; see p. 435.

Arms: Gules, a balance between three garbs or; on a chief Barry wavy of six argent and azure, between two anchors in pale, the flukes in chief, an arm embowed proper, vested gules, cuffed or, holding a balance, and issuing from clouds proper. Crest; issuing from clouds proper, two arms embowed, vested gules, cuffed or, holding in the hands a chaplet of wheat gold. Supporters; two flags proper, attired or, each gorged with a wreath as in the crest.

20. WAX-CHANDLERS.—This was a flourishing company in days of old, when gratitude to saints called so frequently for lights. How many thousands of wax-candles were consumed on those occasions, and what quantities the expiatory offerings of private persons, none can enumerate. *Candle-mass* day wasted its thousands; and those all blessed by the priests, and adjoined in solemn terms: as "I adjure thee, O waxen creature, that thou repel the devil and his sprights, &c. &c." (Bourne's Antiq. Vulg.) This company was incorporated in 1483; and the following repait, more frugal than elegant, was given on the occasion:

	£.	s.	d.
Two loins of mutton, and two of veal	0	1	4
A loin of beef	0	0	4
A leg of mutton	0	0	2½
A pig	0	0	4
A capon	0	0	6
A coney	0	0	2
One dozen of pigeons	0	0	7
A hundred eggs	0	0	8½
A goose	0	0	6
A gallon of red wine	0	0	8
A kilderkin of ale	0	0	8
	£	0	7 0

They are governed by a master, wardens, and assistants: the livery-fine is five pounds.—Hall in Maiden-lane; see p. 483.

Arms: Azure, on a chevron argent, between three lamps or, as many roses gules, seeded of the third, and barbed vert. Crest; a demi-maiden, vested or, in her hand a chaplet of roses gules, leafed vert. Supporters;

two unicorns gules, gorged with a chaplet of roses as in the crest. Motto, Truth is the light.

21. TALLOW-CHANDLERS.—Incorporated by Edward IV. in the year 1460, by the name of "The Master and Keepers of the Art and Mystery of Tallow-chandlers of the City of London." It is governed by a master, four wardens, and a court of assistants: livery-fine, 15l. 8s.—Hall on Dowgate-hill.

Arms: Per fefs azure and argent, a pale counterchanged, three doves volant of the last, each holding in the beak an olive-branch vert. Crest; a demi-angel, vested azure, wings expanded or, crined of the last, holding a dish argent, thereon the head of St. John the Baptist, proper. Supporters; two angels proper, vested argent, wings and hair or, crowned with a celestial crown of the last. Motto, *Ecce Agnus Dei, qui tollit peccata mundi*; "Behold the Lamb of God, which taketh away the sins of the world." John i. 29.

22. ARMOURERS and BRAZIERERS.—The Company of Armourers was incorporated by Henry VI. about the year 1423, by the title of "The Master and Wardens, Brothers and Sisters, of the Fraternity or Guild of St. George, of the Men of the Mysteries of the Armourers of the City of London." The same prince also honoured the company by becoming one of their members. To this company, which formerly made coats of mail, is united that of the Braziers; and they are jointly governed by a master, two wardens, and twenty-one assistants: livery-fine, fifteen pounds.—Their hall is near the north-east corner of Coleman-street. It is an old plain brick-building; the court-room has been lately decorated with a painting by Northcote of the Entrance of Richard II. and Bolingbroke into London, purchased by the company for 113l. 8s.

Arms: Argent, on a chevron sable a hand proper; on a chief of the second, a shield between two helmets argent; impaling for the Braziers, azure, on a chief argent, between two ewers in chief and a pot in base or, three roses gules, seeded or, barbed vert. Crest; a demi-man in armour proper, garnished or; on his head a plume of three feathers, two argent, one gules, round the waist a sash of the last; holding in his dexter hand a sword proper. Supporters; two men in armour proper; the plume, sash, and sword, as in the crest. Motto, We are one.

23. GIRDLEERS.—This company was incorporated in the twenty-seventh of Henry VI. on the 6th of August, 1449; and re-incorporated with the Pinners and Wire-drawers by queen Elizabeth on the 12th of October, 1568, by the name of "The Master and Wardens or Keepers of the Art or Mystery of the Girdlers of London." It is governed by a master, three wardens, and twenty-four assistants: livery-fine, 10l. Hall in Basinghall-street. See p. 480.

Arms: Per fefs azure and or, a pale counterchanged; three gridirons of the last, the handles in chief. Crest; a demi-man proper, vested azure, holding a gridiron as in the arms.—From the arms, we should suppose, that the original and proper name of the company was Gridlers, or gridiron-makers.

24. BUTCHERS.—The Company of Butchers appears to be of great antiquity; for, in the 26th of Henry II. it was fined for setting up a guild without the king's license. Its present charter was not granted till the third of James I. who, on the 16th of September, 1605, did by letters patent incorporate them by the name of "The Master, Wardens, and Commonalty, of the Art or Mystery of Butchers of the City of London." They are governed by a master, five wardens, and twenty-one assistants: livery-fine, ten guineas.—Their hall is in Padding-lane: the building is small and neat, containing three handsome rooms, wainscoted and decorated with fret-work.

Arms: Azure, two slaughter-axes indorfed in saltier argent, handled or, between three bulls' heads coupéd of the second, armed of the third, two and one; on a chief argent a boar's head coupéd gules, between two bushes of knee-holly vert. Crest; a bull argent, with wings indorfed,

dorfed, armed and hoofed or, a halo of the laft around the head. Motto, *Omnia fubjecifti fub pedibus, oves et boves*; "Thou haft put all things under his feet; fheep and oxen." Pf. viii. 6, 7.

25. **SADLERS.**—The fraternity of Sadlers appears to be of great antiquity, by a convention between them and the dean and chapter of St. Martin's-le-Grand, about the reign of Richard I. but we do not find that they were legally incorporated till Edward I. granted them a charter by the ftyle of "The Wardens or Keepers, and Commonalty, of the Myftery or Art of Sadlers of London." They are governed by a prime, three other wardens, and a court of affiftants: livery-fine, ten pounds.—Hall in Cheapfide.

Arms: Azure, a chevron between three faddles complete or. Crest; a horfe paffant argent, crined, bridled, faddled, and trappings, or. Supporters, two horfes argent, hoofed and bridled or.

26. **CARPENTERS.**—This ancient fraternity was incorporated by letters patent of Edward III. in the year 1344, by the name of "The Mafter, Wardens, Affiftants, and Commonalty, of the Myftery of the Freemen of the Carpenters of the City of London;" with a power to make bye-laws for their better regulation. It is governed by a mafter, wardens, and court of affiftants: livery-fine, twelve pounds.—The hall is in the ftreet called London Wall, nearly oppofite the eaft end of old Bethlem Hofpital. This building is very old; and, like many of the city-halls before the fire of London, is principally compofed of timber and plafter; yet it is not devoid of beauty. It has a very pleafant profpect into the gardens of Drapers' Hall. At prefent it is ufed as a carpet-warehouse.

Arms: Argent, a chevron engrailed between three pair of compaffes expanded at the points, fable. We find neither creft, fupporters, nor motto.

27. **CORDWAINERS.**—The Company of Cordwainers, or Shoemakers, was at firft incorporated by Henry IV. in the year 1410, by the name of Cordwainers and Coblers, the latter of which names was at that time far from being contemptible, as it fignified not only a shoemaker, but a dealer in fhoes; nor does it appear that the word shoemaker was then in ufe. Since the original incorporation, the company have obtained a fresh charter, by which they are now called "The Mafter, Wardens, and Commonalty, of the Myftery of Cordwainers of the City of London." Livery-fine, ten pounds.—Their hall is in Dittaff-lane. See p. 483.

A fund is vefted, by the will of Mr. Came, in the Cordwainers' Company, for the relief, by penfion, of the widows of clergymen who had a fettled duty, at their deceafe, as clergymen in London, or within twenty miles thereof; the widows, having no children, muft be of forty years of age, and, having children unprovided for, they muft be thirty-five years at leaft.—Alfo another fund, by the will of the fame gentleman, for blind men of forty-five years of age, and blind women of forty years of age. The forms, and information how to proceed in claiming either of thefe charities, are readily furnished by the clerk at the hall.

Arms: Azure, a chevron or, between three goats' heads erafed argent, attired of the fecond. Crest; a goat's head as in the arms.

28. **PAINTER STAINERS.**—Incorporated by letters-patent of queen Elizabeth in the year 1581, by the name of "The Mafter, Wardens, and Commonalty, of the Freedom of the Art and Myftery of Painting, called Painter Stainers, within the City of London." They are governed by a mafter, two wardens, and nineteen affiftants: livery-fine, fourteen pounds. For a further account of this company, and of their hall in Little Trinity-lane, fee p. 423, 4.

A fund is vefted in this company, by the wills of Mr. Stock and others, which is fufficient to enable them to relieve 175 blind penfioners at 10l. each. For which application is made by petition: the forms are to be had of the clerk, at the company's hall.

Arms: Quarterly, firft and fourth azure, three ef-cutcheons, two and one, argent; fecond and third azure, a chevron argent between three griffins' heads erafed proper. Crest; a phoenix, wings expanded or, iffuing out of flames proper. Supporters; two leopards argent, spotted with various colours, ducally crowned, collared and chained or. Motto, *Amor et obedientia*, "Love and obedience."

29. **CURRIERS.**—The Curriers are a company of confiderable antiquity; and founded a guild, or brotherhood, in the conventual church of White Friars, in Fleet-ftreet, in the year 1367. James I. incorporated them on the 30th of April, 1605, by the ftyle of "The Mafter, Wardens, and Commonalty, of the Art or Myftery of the Curriers of the City of London." By Jac. I. c. 22. they were empowered to buy leather, curry it, and fell it again in pieces; whereas, previous to that, they could only curry the leather lent them by others. Since that time, therefore, they have flourifhed as individuals; though, as a company, they are poor, becaufe they have fpent all their money in law-fuits with their journeymen. They are governed, like moft of the other companies, by a mafter, two wardens, and a court of affiftants. Their hall is near Philip-lane, Cripplegate.

Arms: Sable, a crofs engrailed or, between four pair of currier's fhaves in falzier argent, handled of the fecond. Crest; two arms embowed proper, vefted to the elbow argent, holding in their hands a shave as in the arms. Supporters; on the dexter a buck proper, attired and hoofed or; on the finifter a goat argent, armed and hoofed or. Motto, *Spes noftra Deus*, "God is our hope."

30. **MASONS.**—This company was originally incorporated about the year 1410, by the name and ftyle of "The Free Mafons." In 1474, William Hanckflow, Clarenceux king at arms, granted them the arms of their fociety, as borne at this time; but the prefent company aft under the incorporation granted by letters patent of the twenty-ninth of Charles II. on the 17th of September, 1677, by the name of "The Mafter, Wardens, Affiftants, and Commonalty, of the Company of Mafons of the City of London." They are governed by a mafter, two wardens, and twenty-two affiftants: livery-fine, 11. 16s. Hall in Mafons'-alley, Bafinghall-ftreet.

Arms: Azure, on a chevron between three towers argent, a pair of compaffes open fable. Crest; a tower as in the arms.

31. **PLUMBERS.**—This company was incorporated on the 12th of April, 1611, by the name of "The Mafter, Wardens, and Commonalty, of the Myftery of Plumbers of the City of London." It is governed by a mafter, two wardens, and twenty-four affiftants: livery-fine, thirteen pounds.

Arms: Or, on a chevron fable, between two plummets in chief, and a level reverfed in bafe, two foldering-irons in falzier, between a cutting-knife on the dexter and a shave-hook on the finifter, argent; in the chief point a crofs-ftaff feffwife of the fecond. Crest; a triple fountain or, iffuing water proper; on the top an angel of the laft, vefted argent, ducally crowned and winged of the firft, holding in the dexter hand a fword, and in the finifter a pair of fcales, both or. See Plate IX. where the creft has been executed with the greateft care and correftnefs; and does credit to the engraver, who has made the whole of it plain in fo fmall a fpace.

32. **INNOLDERS.**—Thefe were incorporated by Henry VIII. on the 21ft of December, 1515, by the name of "The Mafter, Wardens, and Company, of the Art or Myftery of Innholders of the City of London." It is governed by a mafter, three wardens, and twenty affiftants: livery-fine, ten pounds. Hall, Great Elbow-lane.

Arms: Azure, a chevron quarterly argent and gules, between three garbs or; on a chief or St. Julian's crofs fable. Crest; an etoile of fix points or, in clouds proper, iffuing its rays gold. Supporters; two horfes regardant argent.

## PLATE X.

33. **FOUNDERS.**—The Founders were incorporated by letters patent of the twelfth of James I. in the year 1614, by the name of “The Master, Wardens, and Commonalty, of the Mystery of Founders of the City of London;” and they have power to search all brass weights, and brass and copper wares, within the city of London, and three miles round; and all makers of brass weights within that circuit are obliged to have their several weights sized by the company’s standard, and marked with their common mark; and such of these weights as are of avoirdupois weight, to be sealed at Guildhall; and those of troy-weight at Goldsmiths’-hall. The Founders are governed by a master, two wardens, and twenty-four assistants: livery-fine, 8l. 7s. 6d. Hall in Lothbury. See p. 479.

Arms: Azure, a laver-pot (i. e. vase) between two taper candlesticks or. Crest; a fiery furnace, two arms issuing from clouds, on the sinister side, proper, vested azure, holding in both hands a pair of closing-tongs sable, taking hold of the melting-pot in the furnace proper. Motto, God the only Founder.

34. **POULTERERS.**—Incorporated by letters patent of Henry VII. in the year 1504, by the name of “The Master, Wardens, and Assistants, of Poulterers, London.” Governed by a master, two wardens, and twenty-three assistants: livery fine, twenty pounds. They have no hall.

Arms: Argent, on a chevron between three storks azure, as many swans proper. Crest; on a mural coronet sable, a stork with wings expanded gules. Supporters; two pelicans or, with wings close, vulning their breasts proper.

35. **COOKS.**—This society was incorporated by letters patent of Edward IV. in the year 1480, by the name of “The Masters, and Governors, and Commonalty, of the Mystery of Cooks, in London.” Every person desirous of becoming a member of this company must be presented to the lord-mayor before he can be admitted to the freedom. It is governed by a master, wardens, and twenty-five assistants. Livery-fine, 10l. They had formerly a convenient hall in Alderfgate-street, which was destroyed by fire in 1771; and, not being rebuilt, the business of the company is transacted at Guildhall.

Arms: Argent, a chevron ingrailed gules, between three columbines proper, stalked and leaved vert. Crest; a mount vert; thereon a cock-pheasant proper. Supporters; the dexter a buck proper, attired or; the sinister a hind proper; each pierced in the shoulder with an arrow or. Motto, *Vulnerati, non victu*; “Wounded, not conquered.”

36. **COOPERS.**—The Coopers’ Company was incorporated in 1501, by letters patent of Henry VII. under the title of “The Master, Wardens, and Assistants, of the Company of Coopers of London and Suburbs thereof;” and, in the succeeding reign, was empowered, by an act of parliament, to search and gauge all beer, ale, and soap, vessels, within the city of London, and two miles round its suburbs, for which they were allowed a farthing for each cask. They are governed by a master, three wardens, and twenty assistants: their livery are very numerous; fine, fifteen pounds. Their hall is in Basinghall-street.—Alms-houses for six of their poor members, founded in 1613, by Toby Wood, esq. are situated at Ratcliffe.

Arms: Gyronny of eight gules and sable; on a chevron between three annulets or, a grose between two adzes (i. e. axes) argent; on a chief, vert, three lilies slipped, stalked, and leaved, argent. Crest; a demi-heathcock, with wings expanded, azure, powdered with annulets or; in the beak a lily argent. Supporters; two camels gules, bridled or, powdered with annulets of the last.

37. **TILERS and BRICKLAYERS.**—Though this fraternity appears to be very ancient, yet they were not incorporated till the reign of Elizabeth, who, by her letters patent, dated the 3d of August, 1568, incorporated them by the name of “The Master and Keepers, or Wardens, of the Society of Freeman of the Mystery or Art of Tilers and Bricklayers of London.” This company is governed

by a master, two wardens, and thirty-eight assistants: livery-fine, 12l. They had formerly a convenient hall in a court on the fourth side of Leadenhall-street; but it has been long deserted by the company, and is now used as a Jews’ synagogue. The business of the company is transacted at the New London Tavern.

Arms: Azure, a chevron or; in chief a fleur de lis argent, between two brick-axes, palewise, of the second; in base a bundle of laths of the last. Crest; a dexter arm embowed, vested per pale or and azure, cuffed argent, holding in the hand proper a brick-axe or.

38. **BOWYERS.**—The Bowyers were a fraternity by prescription, till the 18th of James I. anno 1620, when they were incorporated by the name of “The Master, Wardens, and Society, of the Mystery of Bowyers of the City of London.” It is somewhat singular, that this company should not have been incorporated until the above period; and that it should have been incorporated then, when the use of the bow, as a military engine, was superseded by the introduction of fire-arms. It is under the government of a master, two wardens, and twelve assistants; livery-fine, 8l. Having no hall, their business is transacted at the New London Tavern.

Arms: Sable, on a chevron between three floats or, as many mullets of the first. Crest; three long bows interlaced, one erect and two in saltier, gules.

39. **FLETCHERS.**—Though this is only a company by prescription, it has nevertheless obtained a coat of arms and a livery; and it appears to be in all respects as firmly established as those incorporated by letters patent. It is governed by two wardens and ten assistants: livery-fine, 10l. They had formerly a convenient hall in St. Mary-Axe; but, it having for some years past been used as a warehouse for goods, they now meet at the George and Vulture in Cornhill.

Arms: Azure, a chevron between three arrows or, headed and feathered argent. Crest; a demi-angel proper, with wings endorsed and vested, holding a bundle of arrows, and round the head a halo, all or.

40. **BLACKSMITHS.**—The Company of Blacksmiths was anciently a guild or fraternity by prescription, in which state it continued till the reign of queen Elizabeth, in the year 1571, when they obtained a charter of incorporation, by the name of “The Keepers, or Wardens, and Society, of the Art and Mystery de les Blacksmiths, of London;” which was confirmed by king James I. This company is governed by a master, three wardens, and twenty-one assistants: livery-fine, eight pounds. Since the company has abandoned the hall on Lambeth-hill, the business of it is transacted at Cutlers’ Hall.

Arms: Sable, a chevron or, between three hammers argent, handled of the second, ducally crowned of the last. Crest; a phoenix with wings elevated issuing out of flames proper.

41. **JOINERS.**—Incorporated by queen Elizabeth, in the year 1569, by the name of “The Master, and Wardens, and Commonalty, of the Faculty of the Joiners and Cielers of London.” They are governed by a master, wardens, and twenty-four assistants: livery-fine, eight pounds. Their hall is in Thames-street: see p. 429.

Arms: Gules, a chevron argent, between two pair of compasses in chief, extended at the points, and a sphere in base, or; a chief of the last, on a pale azure between two roses gules, seeded of the third, barbed vert, an escallop-shell of the second. Crest; a demi-savage proper, wreathed about the head and waist with leaves vert, holding in his dexter hand, over his shoulder, a tilting-spear or, headed argent. Supporters; two naked boys proper, the dexter holding in his hand an emblematical female figure; the sinister holding in his hand a square. Motto, Join truth with trust.

42. **WEAVERS.**—This fraternity is very ancient, and appears to be one of the first incorporated societies in the city of London. The Weavers were originally called *Theclarii*; and in the reign of Henry I. they paid sixteen

pounds annually to the crown for their immunities. See p. 60. The company originally consisted of tapestry and cloth weavers; and by an act of parliament passed in the reign of Henry IV. they were put under the management and authority of the lord-mayor and aldermen of the city. At present, however, the company chiefly consists of worsted, cotton, and silk, weavers. It is governed by two bailiffs, two wardens, and sixteen assistants; livery-fine, ten pounds. Hall, Basinghall-street.

Arms: Azure, on a chevron argent, between three leopards' heads, each having in the mouth a shuttle or, as many roses gules, seeded of the third, barbed vert. Crest; a leopard's head or, ducally crowned gules; in his mouth a shuttle of the first. Supporters; two wiverns with wings indorced argent, purled or; on each wing a rose gules, seeded or, barbed vert. Motto, Weave truth with trust.

43. WOOLMEN.—Though the antiquity of this society may reasonably be supposed to be equal to that of the wool-trade in this kingdom, yet it is only a fraternity by prescription. However, it is one of the city-companies, and is distinguished by the name of "The Master, Wardens, and Assistants, of the Fraternity or Company of Woolmen of the City of London." It consists of a master, two wardens, and eleven assistants; but has neither hall, livery, nor charter.—Arms: Gules, a woolpack argent.

44. SCRIVENERS.—This company, which was originally denominated "The Writers of the Court Letter of the City of London," was incorporated by letters patent of James I. in the year 1616, by the name of "The Master, Wardens, and Assistants, of the Society of Writers of the City of London." This is called a livery-company; and is governed by a master, two wardens, and twenty-four assistants. They had formerly a hall in Noble-street; but, being reduced to low circumstances, they sold it the Company of Coach-makers, in whose possession it still remains. The trade of a scrivener, if not the company itself, may be considered as extinct. In the case of Rague's bankruptcy, the lord-chancellor observed, (Aug. 9.) "that there was a company in the city of London, under the title of the Scriveners' Company; but there was not, he understood, a single member of that company now in existence, such a profession as that of a scrivener not now existing; and he believed Dr. Johnson was right that there had been no scrivener in this country since the time of Jack Ellis, of the Royal Exchange. His lordship added, that almost all the commissions sued out against attorneys were in the character of money-scriveners, whereas, he was persuaded not one in five hundred was really such."

Arms: Azure, an eagle with wings expanded or, standing on a book in base, lying fesswise gules, close clasped and garnished of the second; holding in his mouth an ink-horn sable, stringed gules. Crest; a dexter arm issuing from clouds proper, in the hand a pen as if writing on the wreath.

45. FRUITERERS.—This company was incorporated by letters patent of James I. in the year 1605, by the name of "The Master, Wardens, and Commonalty, of the Mystery of Fruiterers of London; and is governed by a master, two wardens, and thirty assistants; livery-fine, five pounds.—They have no hall.

Arms: Azure, on a mount in base vert, the tree of paradise, environed with the serpent, between Adam and Eve, all proper. Motto, *Arbor Vita Christus*; "Christ the tree of life."

46. PLASTERERS.—This company was incorporated by Henry VII. in the year 1501, by the name of "The Master and Wardens of the Guild or Fraternity of the blessed Mary, of Plasterers, London;" and this charter was confirmed by Charles II. in the year 1667. It is governed by a master, two wardens, and thirty-two assistants; livery-fine, eight pounds.—Hall in Addle-street.

Arms: Azure, a chevron engrailed between two plasterer's hammers or, and a trowel argent, in chief; and a treble flat brush in base of the second; a rose gules, seeded or, barbed vert, between two fleurs-de-

lis of the first. Crest; a dexter arm embowed, habited or, cuffed gules, holding in the hand proper, a hammer as in the arms. Supporters; two griffins vert, purled or, beaked sable, winged gules.

47. STATIONERS.—This company was incorporated by Philip and Mary, in the year 1557, by the name of "The Master, and Keepers or Wardens, and Commonalty, of the Mystery or Art of a Stationer of the City of London." It is governed by a master, two wardens, and twenty-four assistants; livery, 50s; fine, fifty pounds.—Their hall is on the north side of Ludgate-street, on the site of a mansion which anciently belonged to the dukes of Bretagne; after which it was possessed by the earls of Pembroke, and, in queen Elizabeth's time, by Henry lord Abergavenny; finally it belonged to the Stationers' Company, who rebuilt it of wood, and made it their hall. This building, however, shared in the common calamity of 1666, (by which the company lost 200,000l. the spacious warehouses under the hall being filled with printed books,) and was succeeded by the present brick edifice, which was newly fronted with stone, about ten years ago. It is a spacious convenient building, lighted by a single series of windows, over each of which is placed a neat medallion. The entrance is from a small paved court, enclosed with a dwarf wall, surmounted by an iron railing.—John Boydel, esq. an alderman and lord-mayor of London, presented to this hall two good pictures, one of George Douglas assisting Mary Stuart in her escape from Lochleven Castle: the queen and the gallant Douglas are represented by the painter, Mr. Graham, of exquisite beauty. The other is of Alfred dividing his loaf with a pilgrim, the work of Mr. West. In the stock-room is a well-painted portrait of Tycho Wing, son of Vincent Wing, a celebrated astrologer and almanac-maker. There is, besides, a bust of the celebrated printer William Bowyer, a man equally distinguished by his erudition and his probity; also a good portrait of his father, to whom he succeeded in business and reputation. The father died in December 1737, aged 74; the son in November 1777, aged 78. See vol. iii. p. 326. Both were patronised by the most respectable characters of the age. The father was honoured with the friendship of the pious Nelson, whose portrait is also in this hall.

This company, which also includes booksellers, letter-founders, printers, and bookbinders, have a stock which is employed in printing almanacs, primers, psalters, school-books, &c. of which they have the privilege, by virtue of a grant from the crown. This stock consists of shares, which are distributed in different proportions among those who have fined for, or served, the office of renter-warden; and whose shares, if they die married, devolve to their widows.

The Stationers' Company has a share in the Irish estates, noticed at p. 601, and others of considerable value, out of which they pay, in pensions, and other charities, considerable sums every year; and these have been much augmented of late years by the benevolence of some of their principal members.—Mr. Bowyer's bequests have been noticed under the article above referred to.—Mrs. Beata Wilkins, by will, dated November 24, 1773, after giving the picture of bishop Hoadly to the company, bequeathed the interest of her 40l. share in the company's stock to them in trust, to be annually distributed between six poor men and six poor widows, not pensioners of the company. The amount of this share was 320l. which was invested in the purchase of 358l. 11s. 4d. 5 per cent. navy annuities, in the name of the company; the dividend amounts to 17l. 18s. 6d. to which the court add 1s. 6d. to make the annuity 30s. to each person. Wm. Strahan, esq. by his will dated July 2, 1784, gave them 1000l. in trust, to be vested in government-securities, and to distribute one moiety of the dividends at Christmas, equally amongst five poor journeyman-printers, natives of England or Wales, and freemen of the company, to be selected by the court; and the other moiety to such five poor journeyman-printers, natives of Scotland, without regard to their being freemen.

freemen or non-freemen of the company, as the court should select. This sum was invested in 1324. 15s. 9d. 3 per cent. annuities of 1726, in their name; and, the dividend being 39l. 14s. 10d. the company add 5s. 2d. to make the annuities 4l. each.—Mr. Richard Johnson, by his will, dated January 3, 1795, gave the residue of his property to the company, subject to two annuities, to divide the interest among five very poor widows, who have seen better days, above the age of sixty years, whose husbands were liverymen, and in a good way of business, either as stationers, printers, bookfellers, or binders, in the selection of the court; 1800l. 4 per cent. annuities were transferred to the company, with 42l. 10s. 10d. in cash, by which 50l. annuities have been added, and 50l. 5 per cents. are yet in reversion.—Thos. Wright, esq. alderman, by his will, dated November 24, 1794, gave 2000l. 4 per cents. in trust, to pay 50l. 8s. among twenty-four poor freemen of the company, not receiving any other pension therefrom, at two guineas per annum; three guineas to the clerk for his trouble; and 26l. 9s. the remainder, for a dinner on the day of this distribution. The worthy alderman died on the 9th of April, 1798; and the above capital was soon after transferred.—Mr. Charles Dilly, who died in 1807, gave, during his life-time, 700l. consols. for the purpose of securing perpetual annuities of ten guineas each, to the widows of two liverymen of the company.

Arms: Azure, on a chevron or, between three bibles lying fesswise gules, garnished, leaved, and clasped, of the second, (the clasps downwards,) an eagle rising proper, between two roses gules seeded or barbed vert; on the chief point a demi-circle of glory, edged with clouds proper, therein a dove displayed argent, over the head a circle of the last. Crest; within a glory or, an eagle rising proper. Supporters; on each side an angel, habited azure, winged and sounding a trumpet or. Motto, *Verbum Domini manet in eternum*; "The word of the Lord endureth forever."

48. EMBROIDERERS.—The Embroiderers were incorporated in 1561, by letters patent of queen Elizabeth, by the name of "The Keepers, or Wardens, and Company, of the Art or Mystery of Broderers, of the City of London." They are governed by two keepers, or wardens, and forty assistants; livery-fine, 5l.—Their hall is a small but very handsome building, in Gutter-lane, Cheapside.

Arms: Paly of six argent and azure; on a fesse gules, between three lions passant gardant or, two broaches in saltier, between two trundles (i. e. quills of gold-thread) or. Crest; a dove displayed argent, encircled with a glory proper. Supporters; two lions or, guttée de sang. Motto, *Omnia de super*, "All from above."

49. UPHOLDERS.—This company was incorporated by letters patent of king Charles I. in the year 1627, by the name of "The Wardens and Commonalty of the Mystery or Art of the Upholders of the City of London." Livery-fine, 4l. 10s.—Hall, none.

Arms: Sable, on a chevron argent, between three pavillions ermine, lined azure, garnished or, as many roses gules; within the pavillion in base a lamb couchant argent.—These arms are found also without the lamb, and sometimes without the chevron, as may be seen over Crane-court, St. Peter's Hill, Doctors' Commons; where is also a smaller specimen of the same arms composed of three pavillions, the lamb in base, and two roses without the chevron. We must observe here, that in general we have found it extremely difficult to ascertain the original and true bearing of several of the arms of the companies, owing to the different manner in which we have seen them carved or painted in several places, and even in their halls.

50. MUSICIANS.—Incorporated by letters patent of James I. in 1604, by the name of "The Master, Wardens, and Commonalty, of the Art or Science of the Musicians of London." It is governed by a master, two wardens, and twenty assistants: livery-fine, 10l.—This company has no hall, nor is it of any respectability; few, if any, musicians, properly so called, belong to it.

Arms: Azure, a swan with wings expanded argent, within a double tressure flory-counterflory or; on a chief gules, on a pale argent, between two lions passant gardant or, a rose of the fourth, seeded of the third, barbed vert. Crest; a lyre or.

51. TURNERS.—The fraternity of Turners was incorporated by letters patent of king James I. by the name of "The Master, Wardens, and Commonalty, of the Art or Mystery de lez Turners of London." This company is under the government of a master, two wardens, and twenty-four assistants: livery-fine, eight pounds. Hall, on College-Hill.

Arms: Azure, a Catharine-wheel between two columns or; in chief a regal crown proper; in base an axe argent, handled of the second, lying fesswise, the blade downwards. Crest; a female figure proper, representing St. Catharine; her hair dishevelled; her head within a circle of glory of the first, and ducally crowned or, vested azure, lined with ermine; supporting with her dexter hand a Catharine-wheel of the second; in her sinister hand a sword, the point resting on the wreath, argent, hilt and pommel or.

52. BASKET-MAKERS.—These are a fraternity by prescription, and not by charter; but when, or by whom, erected into a fellowship, is unknown. They are, however, included in the list of the city-companies, by the title of "The Wardens, Assistants, and Freemen, of the Company of Basket-makers of the City of London." This community has neither livery nor hall.

Arms: Azure, three cross-baskets in pale argent, between a prime and an iron on the dexter, and a cutting-knife and an outticker on the sinister, of the second. The prime and cutting-knife are in chief, and the iron and outticker in base: they are the tools made use of in the business. Crest; a cradle, therein a child, rocked at the head by a girl, and at the feet by a boy, both vested, all proper.

## PLATE XI.

53. GLAZIERS.—This company was incorporated with that of the Glass-painters by letters patent of Charles I. in the year 1637, by the appellation of "The Master, Wardens, and Commonalty, of the Art or Mystery of Glaziers and Painters of Glass of the City of London." It is a livery-company, and is governed by a master, two wardens, and twenty-one assistants; but their hall, having been destroyed by the fire in 1666, was not rebuilt: their meetings are held at present at the New London Tavern. Livery-fine, three pounds.

Arms: Argent, two grozing-irons in saltier between four closing-nails sable; on a chief gules a lion passant gardant or. Crest; a lion's head coupé or, between two wings expanded azure. Supporters; two naked boys, each holding a torch-inflamed proper. Motto, *Lucem tuam da nobis, O Deus*; "O God, give us your light."

54. HORNERS.—The Horners were incorporated by letters patent of Charles I. in the year 1638, by the name of "The Master, Wardens, Assistants, and Commonalty, of the Art and Mystery of Horners of the City of London." It consists of a master, two wardens, and nine assistants; but has no livery nor hall. They have, however, a warehouse in Spital-fields; where they divide in lots, among themselves, such horns as are bought up by their members in Leadenhall and other markets: and in 1465, they obtained an act of parliament that none should be exported but such as they refused.

Arms: Argent, on a chevron, between three leather-bottles sable, as many bugle-horns stringed of the first. Neither crest, supporters, nor motto.

55. FARRIERS.—This fraternity was incorporated by Charles II. in the year 1673, by the style of "The Master, Wardens, Assistants, and Commonalty, of the Company of Farriers, London." It is a livery-company; and is governed by a master, three wardens, and twenty-four assistants: livery-fine, five pounds. Having no hall, they meet at the George and Vulture, Cornhill.

**Arms:** Argent, three horse-shoes fable. Crest; an arm embowed, issuing from clouds on the sinister side, all proper, holding in the hand a hammer azure, handled and ducally crowned or. Motto, *Vi et virtute*; "By strength and courage."

56. **PAVIORS.**—This is a company only by prescription, and may therefore be esteemed an adulterine guild. It is governed by a master, three wardens, and twenty-five assistants; but has neither hall nor livery.

**Arms:** Argent, a chevron between three flag-stones fable. Crest; an arm embowed, vested azure, cuffed argent, holding in the hand a pick-axe proper. Motto, God can raise to Abraham children of stones. Matth. iii. 9.

57. **LORINERS, or LORIMERS;** *lorimier*, Fr. from *lorum*, Lat. a thong; their trade being to make spurs, bits for bridles, and such-like small iron-ware.—This company, though it appears to be very ancient, and though mentioned stat. 1 Rich. II. c. 12. yet was not incorporated till the year 1712, by the name of "The Master, Wardens, Assistants, and Commonalty, of Loriners of London." It is a livery-company, under the government of a master, two wardens, and twenty-four assistants; livery-fine, ten pounds. Not having had a hall for some years, the affairs of the company are transacted at the Nag's Head in Leadenhall-street.

**Arms:** Azure, on a chevron argent, between three manger-bits or, as many bosses fable. We find neither crest, supporters, nor motto.

58. **APOTHECARIES.**—The Company of Apothecaries was incorporated at first with the Grocers by James I. in the year 1606; but were separated by another charter granted by the same king in the year 1617, and incorporated by the name of "The Master, Wardens, and Society, of the Art and Mystery of Apothecaries of the City of London;" at which time there were no more than one hundred and four apothecaries' shops within the city and suburbs of London. See APOTHECARY, vol. i. p. 311.—The members of this company, who by divers acts of parliament are exempt from ward and parish offices, have a spacious physic-garden at Chelsea; which, in 1721, was granted to the company for ever by sir Hans Sloane, the lord of the manor, on condition of their paying a quit-rent of 5l. and continuing it always as a physic-garden, and of presenting every year to the Royal Society fifty samples of different sorts of plants, there grown, till they amount to two thousand. The latter of these conditions hath been long since more than completed. The affairs of the company are managed by a master, two wardens, and twenty-one assistants. Livery-fine, sixteen pounds. Hall, Water-lane, Blackfriars: see p. 504.

**Arms:** Azure, Apollo with his head radiant, holding in his left-hand a bow, in his right an arrow, all or; riding a serpent azure. Crest; a rhinoceros statant proper. Supporters; two unicorns argent, armed, crined, and hooped, or. Motto, *Opiferaque per orbem dicor*; "And I shall be called a helper through all the world."

59. **SHIPWRIGHTS.**—This was a society by prescription for a great number of years, but was at length incorporated by James II. in the year 1605, by the name of "The Master, Wardens, and Commonalty, of the Art or Mystery of Shipwrights, London;" but was not admitted to have a livery till the year 1782. See p. 117.—Their hall, which stood at Ratcliff Cross, being pulled down, they now meet in the Irish Chamber, at Guildhall.

**Arms:** Azure, an antique hulk or; in a chief argent, the cross of St. George gules, charged in the centre with a lion passant gardant of the second. Crest; an ark or, on the top of the ark a dove argent, holding in the beak an olive-branch vert.

60. **SPECTACLE-MAKERS.**—Incorporated by letters patent of Charles I. in the year 1630, by the name of "The Master, Wardens, and Fellowship, of Spectacle-makers of London." They consist of a master, two wardens, and fifteen assistants; but have no livery.

**Arms:** Argent, three pair of spectacles vert, garnished or, two and one. Motto, A blessing to the aged.

61. **CLOCK-MAKERS.**—This fraternity was incorporated by Charles I. in the year 1632, by the name of "The Master, Wardens, and Society, of the Art of Clock-makers of the City of London." It is governed by a master, wardens, and twenty-eight assistants: livery, about 200; fine, 21l. Hall, none.

**Arms:** Sable, a time-piece, or clock, surmounted at top with a square pedestal supporting a crown, upon which a lion passant gardant is placed; all or. (The clock-makers of the present day do not admit the lion to be a part of their arms.) Crest; a sphere or. Supporters; on the dexter the figure of Time with his scythe, holding the hour-glass in his right-hand proper; on the sinister an emperor in his robes, on his head an imperial crown, and in his sinister hand a sceptre surmounted of a dove, all proper. Motto, *Tempus rerum imperator*; "Time governs all things."

62. **GLOVERS.**—The Company of Glovers was incorporated by Charles I. who, on the 5th of September, 1638, granted them a charter by the name and style of "The Master, Wardens, and Fellowship, of the Company of Glovers of the City of London." It is governed by a master, four wardens, and thirty assistants; livery-fine, 5l. 13s. 4d. Hall, see p. 438.

**Arms:** Per fess fable and argent, a pale counter-changed; three rams salient of the second, two and one, armed and unguled or. Crest; a ram's head issuing from a basket argent, between two wings expanded gules.

63. **COMB-MAKERS.**—The Comb-makers' Company was incorporated by Charles I. in the year 1636, by the name of "The Master, Wardens, and Fellowship, of the Comb-makers of London." It consists of a master, two wardens, and thirteen assistants; but has neither livery nor hall.

**Arms:** Argent, a lion passant gardant between three combs or. Crest; a mount, thereon an elephant standing against a tree, all proper.

64. **FELT-MAKERS.**—The Felt or Hat makers were anciently united with the Haberdashers; but, a separation being obtained by the former, they were, by letters patent of James I. in the year 1604, incorporated by the name of "The Master, Wardens, and Commonalty, of the Art or Mystery of Felt-makers of London." They are governed by a master, four wardens, and twenty-five assistants; livery-fine, 5l. They hold their meetings at Pewterers' Hall.

**Arms:** Argent, a dexter hand couped at the wrist gules, between two hat-bands nowed azure; in chief a hat fable banded of the third. Crest; a naked arm embowed proper, holding in the hand a hat fable, banded azure.

65. **FRAME-WORK KNITTERS.**—This fraternity was incorporated by letters patent of king Charles II. in the year 1663, by the name of "The Master, Wardens, Assistants, and Society, of the Art and Mystery of Framework Knitters in the Cities of London and Westminster, the Kingdom of England, and Dominion of Wales." It is under the direction of a master, two wardens, and eighteen assistants: livery-fine, 10l. They meet at the King's Head tavern, in the Poultry.

**Arms:** Argent, a knitting-frame sable, garnished or, with work pendant in base gules. Supporters; the dexter, a student of the university of Oxford, vested proper; the sinister, a woman proper, vested azure, handkerchief, apron, and cuffs to the gown, argent; in her dexter hand a knitting-needle, and in her sinister a piece of worried-knit gules.

66. **SILK THROWSTERS, or THROWERS.**—This art was first practised in London, in the reign of queen Elizabeth, by foreigners; whose descendants, and others, in the year 1562, were constituted a fellowship of this city; and by letters patent of Charles I. in the year 1630, were incorporated by the name of "The Master, Wardens, Assistants, and Commonalty, of the Trade, Art, or Mystery, of Silk-throwers of the City of London." They are governed by a master, two wardens, and twenty assistants; but have no livery nor hall.

**Arms:**

**Arms:** Argent, three bundles or hanks of silk in fess sable; on a chief azure, a silk-thrower's mill or. Crest; a mount vert, thereon a mulberry-tree, with silk-worms variously dispersed, all proper. Supporters; two workmen silk-throwers, each having a hank of silk hanging over his exterior arm. Motto, God in his least creatures.

67. **CARMEN.**—By an act of common-council, passed in the reign of Henry VIII. the Carmen were constituted a fellowship of the city of London; and, in 1605, they were incorporated with the fraternity of Fuellers, under the denomination of Woodmongers, with whom they continued till the year 1668; when the latter, having been convicted by the parliament of enormous frauds in the sale of coals, and being apprehensive of the consequences, threw up their charter; on which the Carmen were re-appointed a fellowship, by an act of common-council, under the title of "The Free Carmen of the City of London." The carts that belong to this fellowship, which are between four and five hundred, are, by an act of common-council, subjected to the rule of the president and governors of Christ's Hospital; to whom the owner of every cart pays 17s. 4d. a-year for a license to work it; and every cart is brought to the hospital annually to be marked. The Carmen are governed by a master, two wardens, and forty-one assistants, under the direction of the court of lord-mayor and aldermen; but have neither charter, hall, nor livery.

The Arms, which have been transmitted to our engraver as belonging to the Carmen and Woodmongers while they were united, appear to us rather to have belonged to the Woodmongers only. They are—Gules, a sword erect argent, hilt and pommel or, on the point a ducal coronet gold, between two branches of the second, each charged with a faggot proper. Crest, a mount vert, thereon a grove of trees all proper; a lion issuing from the grove or. Motto, *Vis unita fortior*; "Strength united becomes stronger;" which may allude either to the union of the companies, or to the union of the sticks of a faggot.

68. **PIN-MAKERS.**—This company was incorporated by Charles I. in the year 1636, by the name of "The Master, Wardens, Assistants, and Commonalty, of the Art or Mystery of Pin-makers of the City of London." It is governed by a master, two wardens, and eighteen assistants; but has no livery. Hall, see p. 464.

**Arms:** Vert, a demi-vein, couped at the waist proper, mantled gules, turned down ermine; her hair dishevelled; on her head an eastern crown or.

69. **NEEDLE-MAKERS.**—This fraternity was incorporated by letters patent of Oliver Cromwell, in the year 1656, by the name of "The Master, Wardens, and Society, of the Art and Mystery of Needle-makers of the City of London." It is a livery-company, under the government of a master, two wardens, and eighteen assistants; the livery-fine is 3l. 6s. 8d. Having no hall, this company meets at that belonging to the Cutlers.

**Arms:** Vert, three needles in fess argent; over each a ducal coronet or. Crest; a Moor's head, couped at the shoulders, in profile, proper, wreathed about the temples argent and gules, in his ear a pearl. Supporters; a man on the dexter side, a woman on the sinister, each wreathed round the waist with leaves proper; in the woman's dexter hand a needle argent.

70. **GARDENERS.**—The Gardeners were incorporated by letters patent of James I. in the year 1616, by the name of "The Master, Wardens, Assistants, and Commonalty, of the Company of Gardeners of London." Though this company is incorporated, yet it has neither hall or livery. It is governed by a master, two wardens, and eighteen assistants; and its meetings are held at Guildhall.

**Arms:** Azure, on a mount vert a man proper, vested round the loins with linen argent, digging with a spade, all of the first. Crest; a basket of fruit, all proper. Motto, *Arbor vite Christus*. "Christ is the tree of life."

VOL. XIII. No. 212.

71. **SOAP-MAKERS.**—Incorporated by Charles I. in the year 1638, by the name of "The Master, Wardens, and Commonalty, of Soap-makers, London." They consist of a master, two wardens, and eighteen assistants; but have no livery nor hall.

**Arms:** Azure, a dolphin naiant, between three eel-spears, or. Crest; a mount vert; thereon a tree proper, enfiled with a ducal coronet or. Motto, *Deus rexque secundet*; "May God and the king favour us."—What analogy these arms have with the making of soap, we cannot divine.

72. **TIN-PLATE-WORKERS.**—This fraternity was incorporated by Charles II. in 1670, by the name of "The Master, Wardens, Assistants, and Commonalty, of the Art and Mystery of Tin-plate-workers, alias Wire-workers, of the City of London." It consists of a master, two wardens, and twenty assistants; but has neither livery nor hall. Their meetings are held at Guildhall.

**Arms:** Sable, a chevron or, between three lamps argent, garnished or, illuminated proper. Crest, a globular ship-lantern or lamp, ensigned with a royal crown, all proper. Motto, *Amore fitis uniti*; "Be united in love."

#### PLATE XII.

73. **WHEELWRIGHTS.**—Incorporated by letters patent, in the year 1670, by the name of "The Master, Wardens, Assistants, and Commonalty, of the Art and Mystery of Wheelwrights of the City of London." They consist of a master, two wardens, and twenty-two assistants; livery-fine, fifteen guineas. Hall, none.

**Arms:** Gules, a chevron between three wheels or; on a chief argent an axe lying fesswise proper. Crest; a dexter arm embowed, vested gules, cuffed argent, holding in the hand proper, a mallet or. Supporters; two horses argent.

74. **DISTILLERS.**—They were incorporated in the year 1638, by the name of "The Master, Wardens, Assistants, and Commonalty, of the Trade, Art, or Mystery, of Distillers of London." This is governed by a master, three wardens, and nineteen assistants; livery-fine, 13l. 6s. 8d. Having no hall, the meetings are held at Drapers' Hall.

**Arms:** Azure, a fess wavy argent, in chief the sun in splendour, encircled with a cloud, all proper, in base a still, on a fire proper, with two worms and bolt-receivers of the second. Crest; a garb of barley, environed with a vine fruited, both proper. Supporters, the dexter the figure of a man representing a Russian, habited in the dress of the country, all proper; the sinister an Indian, vested round the waist with feathers of various colours, wreathed about the temples with feathers as the last; in his hand a bow, at his back a quiver of arrows, all proper. Motto, *Drop as rain, distil as dew*.

75. **HATBAND-MAKERS.**—This fraternity was incorporated by letters patent of king Charles I. in the year 1638, by the appellation of "The Master, Wardens, Assistants, and Fellowship, of the Mystery of Hatband-makers of the City of London." It is governed by a master, two wardens, and twelve assistants. We are told that they were at one time united with the Needle-makers; which may account for their having at present neither livery nor hall.

**Arms:** Azure, on a chevron between three hatbands or, as many merillions sable. Crest; an arm erect, vested and cuffed proper; in the hand a round hat sable, banded argent.

76. **PATTEN-MAKERS.**—The Company of Patten-makers was incorporated by letters patent of Charles II. in the year 1670, by the name of "The Master, Wardens, Assistants, and Fellowship, of the Company of Patten-makers of the City of London." It is a livery-company; and is governed by a master, two wardens, and twenty-four assistants: the livery-fine 6l. and, having no hall, the meetings of the company are held at Guildhall.

**Arms:** Gules, a chevron argent between three pattens or, tied of the second, the ties lined azure, two cutting-

7 R

knives

knives conjoined fable. Crest; a patten as in the arms. Motto, *Recipiunt à nobis femine sustentacula*; "Women receive supports from us."

77. GLASS-SELLERS.—The Glafs-sellers and Looking-glafs-makers were incorporated by king Charles II. in the year 1664, by the name of "The Master, Wardens, Assistants, and Commonalty, of Glafs-sellers of the City of London." This company is under the direction of a master, two wardens, and twenty-four assistants; livery-fine, five pounds. They meet at the Antwerp Tavern, having no hall.

Arms: Azure, two serpents interlaced on a stand, in pale two phials of different shapes, in chief a bowl, argent. We find neither crest, supporters, nor motto, to these arms.

78. TOBACCO-PIPE-MAKERS.—This company was incorporated by letters patent of Charles II. in the year 1663, by the style and title of "The Master, Wardens, Assistants, and Fellowship, of the Company of Pipe-makers of the Cities of London and Westminster." They are governed by a master, two wardens, and eighteen assistants; but have no livery nor hall, and hold their meetings at Curriers' hall.

Arms: Argent, on a mount in base vert, three plants of tobacco growing and flowering, all proper. Crest; a Demi Moor; in his dexter hand a tobacco-pipe, in the sinister a roll of tobacco, all proper. Supporters, two young Moors proper, wreathed about the loins with tobacco-leaves vert. Motto, *Let brotherly love continue*.

79. COACH and HARNESS MAKERS.—The Company of Coach-makers was incorporated in 1671, by the name and style of "The Master, Wardens, Assistants, and Commonalty, of the Company of Coach and Coach-harness makers of London." It is governed by a master, three wardens, and twenty-three assistants; livery-fine, 10*l*. Their hall, in Noble-street, formerly belonging to the Scriveners, was used for a great many years in our remembrance by a weekly debating-society.

Arms: Azure, a chevron between three coaches or. Crest: the figure of Phœbus driving the chariot of the sun or, drawn by four horses argent, harnessed, reined, and bridled, of the second. Supporters; two horses argent, harnessed and bridled fable, saddled or, garnished gules; housings azure, fringed and purfled of the third. Motto, *Surgit post nubila Phœbus*; "After clouds, sun-shine."

80. GUN-MAKERS.—Incorporated by letters patent in the year 1638, by the name of "The Master, Wardens, and Society, of Gun-makers of the City of London." They consist of a master, two wardens, and eighteen assistants; livery-fine, 10*l*. they have no hall, but hold their meetings at Guildhall.

Arms: Argent, two guns in saltier proper; in chief the letter G, in base the letter V, fable, each letter crowned with a regal crown; on the dexter side, in fess, a barrel, and on the sinister three balls, all of the second.

81. WIRE-DRAWERS.—This fraternity was incorporated by letters patent of king James I. in the year 1623, by the name of "The Governor, Assistants, and Commonalty, &c." but, being re-incorporated by William and Mary, in the year 1693, the title was changed to "The Master, Wardens, Assistants, and Commonalty, of the Art and Mystery of Drawing and Flating Gold and Silver Wire, and Making and Spinning of Gold and Silver Thread and Stuffs, in our City of London." This company is governed by a master, two wardens, and eighteen assistants: they have neither livery nor hall, and hold their meetings at the New London Tavern.

Arms: Azure, on a chevron or, between two coppers in chief of the second, in base two points in saltier argent, a drawing-iron between two annulets fable. Crest; two arms embowed, vested gules, cuffed argent, holding between their hands proper, an engrossing-block or. Motto, *Amicitiam trahit amor*; "Friendship draws love."

82. BOWSTRING-MAKERS.—This is not a company by charter, but only by prescription; and may therefore be considered as an adulterine guild. It consists of two wardens and nineteen assistants; but has no livery nor hall.

Arms: Argent, a quiver with arrows in pale or, on a chief three bows gules. Crest; a man vested proper, shooting with a bow and arrow of the last. Motto, *Nec habeo, nec curio, nec curo*; "I neither have, lack, nor care."

83. CARD-MAKERS.—Incorporated by letters patent of Charles I. in the year 1629, by the name of "The Master, Wardens, and Commonalty, of the Mystery of the Makers of Playing-cards of the City of London." They are governed by a master, two wardens, and eighteen assistants; but have neither livery nor hall.

Arms: Gules, on a cross argent, between the four ace-cards proper, (viz. the aces of hearts and diamonds in chief, the aces of spades and clubs in base,) a lion passant gardant of the first. Crest; an arm embowed in armour, holding in the hand an ace of hearts, all proper. Supporters; two men in armour complete proper, garnished or, on each a fash gules.

84. FAN-MAKERS.—This company was incorporated by queen Anne, in the year 1709, by the appellation of "The Master, Wardens, Assistants, and Society, of the Art or Mystery of Fan-makers, in the Cities of London and Westminster, and twenty miles round the same." It is governed by a master, two wardens, and twenty assistants; but has neither livery nor hall: their meetings are held at the London Tavern, Bishopsgate-street.

Arms: Or, a fan displayed with a mount of various devices and colours, the sticks gules; on a chief, per fess gules and fable, on the dexter side, a shaving-iron over a bundle of fan-sticks tied together or, on the sinister side a frame-saw in pale of the last. Crest; a hand coupé proper, holding a fan displayed or. Motto, *Arts and trade united*.

85. WOODMONGERS.—This fraternity was incorporated with that of the Carmen, by letters patent of James I. in the year 1605, with whom they continued till the year 1668, when, being found guilty of mal-practices, they threw up their charter to avoid a more severe punishment. However, by an act of common-council passed in the year 1694, they obtained the privilege of keeping a hundred and twenty carts (exclusive of those kept by carmen), for the more effectually executing their business. This company had the management of the public carts committed to them for some time; but, by reason of their bad conduct, the privilege was taken from them, and the charge of inspection restored to Christ's Hospital.—Arms, see Plate XI.

86. STARCH-MAKERS.—These were incorporated by letters patent of James I. in the year 1662, by the appellation of "The Master, Wardens, Assistants, and Commonalty, of the Art or Mystery of Starch-makers, London." They are governed by a master, two wardens, and twenty-four assistants; but have neither livery nor hall.

Arms: Azure, two garbs in saltier or; on a chief gules, a lion passant gardant or. Crest; a woman's head and breast proper, vested argent, her hair distwelled, all within a chaplet of ears of wheat proper. Supporters; the dexter represents a labouring man, on his head a cap, habited in a short jacket and trowsers azure, stockings argent, and shoes fable; in his dexter hand a hammer erect of the last; the sinister a female figure representing Plenty; in her sinister hand a cornucopia, and round her temples ears of wheat proper.

87. SILKMEN.—Incorporated by letters patent in 1637, by the name of "The Governor, Commonalty, and Assistants, of the Art or Mystery of Silkmen of the City of London." They are under the direction of a governor and twenty assistants; but have neither livery nor hall.

Arms: Argent, a ship of three masts in full sail on the sea, in base, all proper; on a chief or, a bale of silk, corded proper, between two bundles of silk pendant of the last. Neither crest, supporters, nor motto.

88. FISHERMEN.

88. FISHERMEN.—They were incorporated by letters patent of James II. in the year 1687, by the name of "The Free Fishermen of London." But they have neither livery, hall, nor arms; and, with the three preceding companies, may be considered as extinct.

89. PARISH CLERKS.—This company was incorporated by letters patent of Henry III. in the year 1233, by the name of "The Fraternity of St. Nicholas;" by which they were known till re-incorporated by James I. in the year 1611. These grants were afterwards confirmed by letters patent of Charles I. in the year 1636, who incorporated them by the name of "The Master, Wardens, and Fellowship, of Parish Clerks of the Cities of London and Westminster, Borough of Southwark, and fifteen out-parishes." This company consists not only of a master, two wardens, and nineteen assistants, but also the whole body of parish-clerks within the bills of mortality. By a decree of the Star-chamber court in 1625, they obtained a privilege to keep a press in their hall, for printing the weekly bills of mortality, by a person appointed by the archbishop of Canterbury. They are, by their charter, to make a report of all the weekly christenings and burials in their several parishes every Tuesday. Their hall is in Woodstreet.

Arms: Azure, a fleur-de-lis argent; on a chief gules, a leopard's head between two books of the second, fringed vert. Crest; a cubit-arm erect, holding in the hand proper a music-book open of the last, garnished or, fringed vert. Motto, *Unitas societas stabilitas*; "The union of a society is its strength."

90. PORTERS.—This fraternity, or fellowship, which consists of Tackle and Ticket Porters, was constituted by act of common-council in the year 1646, with a power of annually choosing from among themselves twelve rulers, viz. six of each denomination, for their good government, and for hearing and determining all differences that might arise between the members of the united body. However, the court of lord-mayor and aldermen have reserved to themselves a power of appointing one of their own body as the chief determinator of all controversies. See p. 433. This fraternity has neither hall, livery, nor arms.

91. WATERMAN.—The Watermen do not appear to have had any charter of incorporation before the reign of Philip and Mary, when they were established by parliament; and it was enacted in the 2d and 3d of that reign, cap. 16, that, out of the watermen between Gravesend and Windsor, eight overseers shall be chosen by the court of aldermen of the city of London, to keep order over the whole body. Besides it is ordained, that their wherries are to be twelve feet and a half long, and four feet and a half broad in the midship, or be liable to forfeiture: watermen's names are to be registered by the overseers, and their fares appointed by the court of aldermen, &c. and the lord-mayor and aldermen of London, and the justices of the peace of the counties adjoining to the Thames, have power to determine offences. By stat. 11 and 12 W. III. 21. lightermen, &c. on the Thames, between Gravesend and Windsor, are to be of the Society of Watermen and Wherry-men, who are made a company.

The lord-mayor and court of aldermen shall yearly elect eight of the best watermen, and three of the best lightermen, to be overseers and rulers; and the watermen shall choose assistants, not exceeding sixty, nor less than forty, and the lightermen nine, at the principal stairs, for preserving good government. The rulers, &c. on their court-days, are to appoint forty watermen to ply on Sundays, betwixt Vauxhall and Limehouse, for carrying passengers across the river, and to pay them for their labour, and apply the overplus of the money for decayed watermen, &c. They may make rules to be observed under penalties; and the lord-mayor and aldermen, on complaint, are to hear and determine offences, &c. None but such as have served their time, or are servants or apprentices to watermen, shall row or ply on the river. By an act passed in the second year of the reign of George II. no waterman on the Thames shall take any apprentice or servant, unless he registers the place of his known habitation with the clerk of the company, on pain of forfeiting ten pounds; and, if any person, not having served seven years to a waterman, shall row any boat for hire, he incurs the like penalty; but gardeners' boats, dung-boats, lighters, &c. are excepted. There is also a court of assistants, which, by the same act, is restrained to the number of thirty. It is said that they are to furnish 1000 men for the navy, upon demand by the admiralty. They have a hall at St. Mary's Hill, (see p. 429.) and pay to their poor about 800l. a-year, chiefly raised by ferries over the Thames on Sunday.—The Companies of Parish-clerks, Porters, and Watermen, have not the privilege of making their members freemen of the city of London.

Arms: Barry wavy of six, argent and azure; on the middle bar a boat or, on a chief of the second two oars in saltier of the third, between two cushions of the first, tasselled or. Crest; a dexter hand couped at the wrist in bend proper, holding an oar in bend sinister or. Supporters; two dolphins azure, finned or. Motto, *At the command of our superiors.*

92. BROWN BAKERS.—They were incorporated in the 19th year of James I. but are now considered as extinct, or as confounded with the ancient company of Bakers, or White Bakers, from whom their armorial bearings do not greatly differ.

Arms: Gules, on a chevron quarterly argent and azure, between three garbs, a pair of scales or, sustained by a hand issuant from a cloud at the centre chief point; on a chief, barry wavy of six, argent and azure, an anchor in fess, the fluke towards the dexter, or. They appear to have assumed neither crest, supporters, nor motto.

93. MARBLERS.—The company called by the name of Marblers, for their excellent knowledge and skill in the art of insculping figures on grave-stones, monuments, and the like, were an ancient fellowship; but, being no incorporated company of themselves, are now joined with the company of Masons.

Arms: Gules, a chevron between two chipping-axes in chief argent, and a mallet in base or. Crest; an arm embowed vested azure, cuffed argent, holding in the hand proper, an engraving-chisel of the last. Motto, *Grind well.*

LIST of the LORD-MAYORS of the CITY OF LONDON from the Year 1735 to the present Time, being a Period of Eighty Years; with the Price of the Quartern Loaf of Wheaten Bread at the Beginning of each Mayoralty, as entered in the Town-Clerk's Office, at Guildhall. The Quartern Loaf should weigh 4lb. 5oz. 8 dwts.

\* This year the quartern loaf was at 4d. for two weeks. † In this mayoralty the bread was 9½d. the quartern loaf for four weeks. ‡ During this mayoralty the quartern loaf was 1s. 3d. for five weeks. § Whilst Sir William Staines was lord-mayor, the quartern loaf was at its highest price, being for four weeks at 1s. 10½d.

ADDENDUM.—Since the printing of p. 520, 1. we have been favoured with the following correct account of Surry Chapel and the charities connected with it, which we take this opportunity of inserting.

Surry Chapel was opened in 1783. Mr. Hill has ever since been the stated minister of it; and, during his absence from town in the summer months, it has been supplied by various ministers of all denominations, churchmen as well as dissenters.

The Surry Chapel Almshouses were built in 1811. They are intended for twenty-four poor women, but are not confined to the members of the congregation at Surry Chapel, as any aged pious women are eligible.

Besides these, there are various charitable institutions connected with the chapel.

1. The Benevolent Society, for visiting and relieving the sick poor at their own habitations, established in 1784, by which from 600l. to 700l. is now annually distributed.

2. The Southwark Sunday-School Society, by which upwards of 2000 children are educated. They have seven schools in different parts of the Borough; and are now building one in Amicable Row, Kent-street, which will cost upwards of 1000l.

3. The School of Industry, by which 24 girls are educated and clothed, instructed in needle-work, and fitted for service.

4. The Dorcas Society, for assisting poor women in their lying-in, by lending them linen, &c.

5. The Surry-Chapel Bible-Association, by which in two years 900l. have been remitted to the Southwark Auxiliary Bible Society, and upwards of 5000 Bibles and Testaments sold at reduced prices.

6. The Surry-Chapel Female Missionary Association, by which upwards of 100l. a-year is raised for the Missionary Society.

All this is exclusive of the assistance rendered to other charitable institutions, such as the Missionary Society, which generally receives 400l. or 500l. by annual collection at Surry Chapel; and the distribution of the sacramental money to the poor, amounting to upwards of 150l. a-year; besides occasional collections for other objects of public benevolence, by which at one time upwards of 400l. was obtained for the Patriotic Fund, and nearly the same sum last year for the distressed Germans.

LONDON, a town of the state of Maryland, on a river which runs into the Chesapeake: five miles south-west of Annapolis.

LONDON (Little), a village in Essex, near Samford Magna.—A village in Middlesex, south of Hillingdon-leath.

LONDON (New), a town of the state of Connecticut: seventy-five miles south-west of Boston, and 100 east-north-east of New York.

LONDON E'ASTCOTE, a village in Lincolnshire, among the fens upon Boston-dyke.

LONDON GROVE, a township in Chester-county, Pennsylvania, containing 921 inhabitants.

LONDON HARBOUR, a bay and harbour on the north coast of the island of St. John, in the gulf of St. Laurence. Lat. 46. 26. N. lon. 63. 8. W.

LONDON PRIDE, in botany. See SAXIFRAGA.

LONDON THORP, a village of Lincolnshire; north-east of Grantham.

LONDONDER'RY, a county of Ireland, in the province of Ulster; bounded on the north by Lough Foyle and the Atlantic Ocean, on the east by the county of Antrim, on the south-west by the county of Tyrone, and on the west by Donegal; extending in its greatest dimensions thirty-two miles from north to south, and about the same from east to west. It contains thirty-one parishes, in which are about 25,000 houses, and 125,000 inhabitants. This county was formerly called *Coleraine*, but changed its name in the reign of James I. who granted the principal part of the county, with the towns of Londonderry and Coleraine, to the citizens of London, in consideration of their settling an English colony after the rebellion, in the north of Ireland, under the name of the Society of the Governors and Assistants at London, of the New Plantation of Ulster, in the Realm of Ireland. See p. 600. and the article IRELAND, vol. xi. p. 307. The linen-manufacture prospers through every part of the county. Two members are returned to the Irish parliament; and one for the city of Londonderry, the capital.

LONDONDER'RY, or DERRY, the capital of the county, and the see of a bishop, stands at the bottom of Lough-Foyle. This city has a very good port, to which ships of the greatest burden have access, and a considerable trade. It will be ever famous for the gallantry and perseverance with which it defended itself in three memorable sieges, in defiance of the greatest hardships and discouragements; namely, 1st, In 1641, when the rebels could not reduce it either by fraud or force. 2dly, In 1649, when it was besieged by the lord Ardes, and reduced almost to extremity by famine, till at last relieved by troops sent from England. 3dly, When it held out against the French and Irish from the 7th of December, 1688, to the last day of July, 1689, though it was neither well fortified nor provided with a garrison or stores of provision and ammunition, and hardly any attempt made to relieve it during so long a time. See the article IRELAND, vol. xi. p. 321. Though the city is twenty miles up the river, yet very large ships can come up to the quay, where there are four or five fathoms of water. It is now well fortified with a strong wall, besides outworks; and along the banks of the river are several castles and a fort. This city is of no great antiquity, having been built and planted in the reign of James I. by a colony sent by the society above mentioned. The trade of the town is very considerable, having not only a large share in the herring-fishery, but sending ships also to the West Indies, New England, and Newfoundland, for which they are so advantageously situated, that a vessel bound from thence to America often arrives there before a London ship can get clear of the soundings, or arrive in the latitude of Londonderry. Though there are a great many shallows in Lough-Foyle, which serves it instead of a road; yet they are easily avoided, as there are deep channels between them. These points, called Emistone, Rufferhull, or Cald-head, which lie a little to the west of the mouth of the

harbour, are counted the most northerly of Ireland. The inhabitants of this city are almost all Protestants. It gave title of earl and baron to a branch of the family of Pitt, which became extinct in 1764; but part of the title was revived in Robert Stewart, who was created Baron Londonderry in 1789. A late traveller says, "Derry is perhaps the cleanest, best-built, and most beautifully-situated, town in Ireland; and, excepting Cork, as convenient as any for commerce, foreign and domestic." The lake almost surrounds it; and the whole ground-plot both of it and its liberties belongs to the 12 great companies of London. Great quantities of salmon, salted and barrelled, are exported from hence to America. It contains 10,000 inhabitants; and has a wooden bridge 1068 feet long, which was erected in 1791. Lat. 55. 4. N. lon. 7. 5. W.

LONDONDER'RY, a post town of America, in Rockingham county, New Hampshire, near the head of Beaver-river, which discharges itself into Merrimack-river at Pawtucket Falls; settled in 1718, incorporated in 1722, and containing 2650 inhabitants, mostly the descendants of emigrants from Ulster-county, Ireland; and employed in the manufacture of linen-cloth and thread: thirty-six miles south-west-by-south from Portsmouth.—A township in Halifax-county, Nova Scotia, on the north side of Cobequid or Colchester river, about thirty miles from its mouth, at the basin of Minas; settled by North Irish and Scotch.—A township in the north-west part of Windham-city, Vermont, on the head-waters of West-river, about thirty-three miles north-east of Bennington. In 1795 it was divided into two parts, the east half being called *Windham*, and the west part retaining its original name.—Two townships in Pennsylvania; one in Dauphin-county, and the other in Somerset-county.

LONDONER, *f.* One born in the city of London; an inhabitant of London.

LONDRES, or LONDON, a town of South America, in the province of Tucuman, built by Tarita, then governor, in 1555, in compliment to Mary queen of England, then married to Philip king of Spain. Lat. 29. 12. S.

LONE, *adj.* [contracted from *alone*.] Solitary; unrequented; having no company.—Here the lone hour a blank of life displays. *Savage*.

Thus vanish sceptres, coronets, and balls,  
And leave you in lone woods, or empty walls. *Pope*.

Single; not conjoined or neighbouring to others.—No lone house in Wales, with a mountain and a rookery, is more contemplative than this court. *Pope*.

LONE'E, a town of Hindoostan: twelve miles east-south-east of Poonah.

LONEL', a town of the island of Sardinia: twenty-two miles south-east of Bosa.

LONELINESS, *f.* Solitude; want of company.—The huge and sportful assembly grew to him a tedious loneliness, esteeming nobody since Daiphantus was lost. *Sidney*.—Disposition to solitude:

I see  
The mystery of your loneliness, and find  
Your salt tears' head. *Shakespeare*.

LO'NELY, *adj.* Solitary:  
Why thus close up the stars  
That nature hung in heav'n, and fill'd their lamps  
With everlasting oil, to give due light  
To the misted and lonely traveller? *Milton*.  
Addicted to solitude:

When, fairest princess,  
You lonely thus from the full court retire,  
Love and the graces follow to your solitude. *Rowe*.

LO'NENESS, *f.* Solitude; dislike of company.—I can love her who loves loneness best. *Donne*.  
If of court-life you knew the good,  
You would leave loneness. *Donne*.

LO'NER, a town of Hindooftan, in Baglana: sixteen miles north-west of Chander.

LO'NESOME, *adj.* Solitary; dismal:

You either must the earth from rest disturb,  
Or roll around the heavens the solar orb;  
Else what a dreadful face will nature wear!  
How horrid will these *lonesome* feats appear! *Blackman.*

LO'NERSLATT, a town of Bavaria: fourteen miles south-south-west of Bamberg.

LONFEL'DEN, a town of Austria: six miles west of Freiskatt.

LONG, *adj.* [Fr. from *longus*, Lat.] Not short: used of time.—He talked a *long* while, even till break of day. *Aëts* xx.—He was desirous to see him of a *long* season. *Luke* xxiii.—Not short: used of space.—Emp'refs, the way is ready, and not *long*. *Milton*.—Having one of its geometrical dimensions in a greater degree than either of the other.—His branches became *long* because of the waters. *Ezekiel*.—Of any certain measure in length.—Shall women eat their children of a span *long*? *Lam.* ii. 20.

The fig-tree spreads her arms,  
Branching so broad and *long*. *Milton.*

Not soon ceasing, or at an end.—Man goeth to his *long* home. *Ecclef.* xii. 5.—Honour thy father and thy mother, that thy days may be *long* upon the land. *Exodus* xx. 12.

They open to themselves at length a way  
Up hither, under *long* obedience try'd. *Milton.*

Him after *long* debate of thoughts revolv'd  
Irresolute, his final sentence chose. *Milton.*

Dilatory.—Death will not be *long* in coming, and the covenant of the grave is not shlowed unto thee. *Eccles.* xiv. 12.—Tedious in narration.

Reduce, my muse, the wand'ring song,  
A tale should never be too *long*. *Prior.*

Continued by succession to a great series.—But first a *long* succession must ensue. *Milton*.—[From the verb *To long*.] Longing; desirous; or perhaps long-continued, from the disposition to continue looking at any thing desired.—Praying for him, and casting a *long* look that way, he saw the galley leave the pursuit. *Sidney.*

By ev'ry circumstance I know he loves;  
Yet he but doubts, and parlies, and casts out  
Many a *long* look for succour. *Dryden.*

[In music and pronunciation.] Protracted: as, A *long* note; a *long* syllable.

LONG, *adv.* To a great length in space:

The marble brought, erects the spacious dome,  
Or forms the pillars *long*-extended rows,  
On which the planted grove and pensile garden grows. *Prior.*

Not for a short time.—When the trumpet soundeth *long*, they shall come up to the mount. *Exodus* xix. 13.

So stood the pious prince unmov'd, and *long*  
Sustain'd the madness of the noisy throng. *Dryden.*

In the comparative, it signifies for more time; and in the superlative, for most time.—When he could not *longer* hide him, he took for him an ark of bullrushes. *Exodus* ii. 3.—Eldest parents signifies either the eldest men and women that have had children, or those who have *longest* had issue. *Locke*.—Not soon.—Not *long* after there arose against it a tempestuous wind. *Aëts* xxvii. 14.—At a point of duration far distant.—If the world had been eternal, those would have been found in it, and generally spread *long* ago, and beyond the memory of all ages. *Tillotson.*

Say, that you once were virtuous *long* ago?  
A frugal, hardy people. *Philips.*

[For along; *au long*, Fr.] All along; throughout: of time.—Forty years *long* was I grieved with this generation. *Psalms.*

Some say, that ever 'gainst that season comes,  
Wherein our Saviour's birth is celebrated,  
The bird of dawning singeth all night *long*. *Shakespeare.*

LONG, *adv.* [Zelang, Sax. a fault.] By the fault; by the failure. *Out of use*.—If we owe it to him that we know so much, it is perhaps *long* of his fond adorers that we know so little more. *Glanville.*

Maine, Blois, Poitiers, and Tours, are won away,  
*Long* all of Somerset, and his delay. *Shakespeare.*

LONG, *f.* in music, a character for time in the first time-table, half the duration of the *maxima*, or large, and twice the length of the *breve*. See *MUSIC*.

To LONG, *v. n.* [Zelangen, Germ. to ask.] To desire earnestly; to wish with eagerness continued: with *for* or *after* before the thing desired.—If erst he wished, now he *longed* sore. *Fairfax*.—And thine eyes shall look, and fail with *longing* for them. *Deut.* xxviii. 32.—Nicomedes, *longing* for herrings, was supplied with fresh ones by his cook, at a great distance from the sea. *Arbutnot*.—The great master perceived, that Rhodes was the place the Turkish tyrant *longed* after. *Knolles.*

There's the tie that binds you;  
You *long* to call him father: Marcia's charms  
Work in your heart unseen, and plead for Cato. *Addison.*

His sons, who seek the tyrant to sustain,  
And *long* for arbitrary lords again,  
He dooms to death deserv'd. *Dryden.*

Fresh expectation troubled not the land  
With any *long'd* for change, or better state. *Shakespeare.*

To belong.—But wit's ambition *longeth* to the best. *Davies*.  
But he me first through pride and puifance strong  
Assay'd, not knowing what to arms doth *long*. *Spenser.*

LONG, a city of China, of the second rank, in Quang-fu: 1195 miles south-south-west of Pekin. Lat. 22. 22. N. lon. 106. 21. E.

LONG, a city of China, of the second rank, in Chen-fu: 562 miles south-west of Pekin. Lat. 34. 39. N. lon. 106. 32. E.

LONG (Thomas), a learned divine, was born at Exeter in 1621, and educated at the college of that name in Oxford. His highest preferment was a prebend in Exeter cathedral, of which he was deprived at the revolution for refusing the oaths. He died in 1700. He was author of many theological pieces; of a *Life of Julian*; *History of all the Popish and Fanatical Plots and Conspiracies*; and a *Vindication of the Claim of King Charles I. to the Authorship of the Eikon Basilike*.

LONG (James le), an industrious and learned writer, was born at Paris in 1665. He occupied the post of professor in several houses of the society of the Oratory, and finally was appointed their librarian at St. Honoré. He passed his life in learned labours, and died of a pulmonary disorder in 1721, with the character of a virtuous and estimable man. Father le Long was well versed in the ancient and in many modern languages, and had a thorough acquaintance with the history of literature, of bibliography, and printing. When bantered for the pains he took in verifying a date, or investigating some minute fact, he would say, "Truth is so desirable a thing, that no labour should be spared in discovering it, even in trifles." With this disposition, it is no wonder that he had no taste for poetry, and that his erudition was without amenity. Of his works, one of the principal is his *Bibliotheca Sacra*, containing a catalogue of all the editions and translations of the Scriptures, in 2 vols. 8vo. 1709; to which he subjoined, in a second part, a list of all the authors who had written upon the Scriptures: this was printed in a new edition after his death by father Desmolets, his successor in the library, in 2 vols. folio, 1723. It is accounted a very valuable performance, though not without mistakes. His *Bibliothèque Historique de la France*, being an account of all

all the historical works relative to that country, is highly esteemed by all engaged in similar studies, and ranks among the great productions of the reign of Louis XV. A new edition of it in five volumes folio, was given by M. de Fontete in 1768 et seq. Father le Long also published an Historical Discourse on Polyglot Bibles, and their several editions, 8vo. 1713. He had planned a new collection of the French historians, but did not live to put into execution. *Moreri.*

LONG (Roger), a learned English divine and astronomical professor, was born about the year 1679, in the county of Norfolk, but in what place we are not informed. Cambridge was his *alma mater*; and in that university he became master of Pembroke-hall, was admitted to the degree of D.D. and appointed Lowndes's professor of astronomy and geometry. Dr. Long had also the honour of being elected a fellow of the Royal Society. His ecclesiastical preferments were, the rectory of Cherry Hinton in Huntingdonshire, and of Bradwell juxta Mare in Essex. He was the author of a well-known and much-approved treatise of Astronomy, in five books, forming two volumes 4to. the first of which was published in 1742, the second in 1764; and he was the inventor of a very curious astronomical machine, erected in a room at Pembroke-hall; which was a hollow sphere, of eighteen feet diameter, in which more than thirty persons might sit conveniently. Within-side the surface, which represented the heavens, were painted the stars and constellations, with the zodiac, meridians; and it had an axis, parallel to the axis of the world, upon which it was easily turned round by a winch. An engraving of this *Uranium*, as the doctor called it, is given as a frontispiece to the second volume of his Astronomy, to which is also prefixed a particular description and explanation of the machine. *Hutton's Math. Dict.*

LONG AS'TON, a village in Somersetshire; four miles from Bristol.

LONG-BACKED, *adj.* Having a long back.

LONG BA'LL, a village in Dorsetshire, near Brandsey-island.

LONG BA'Y, a bay on the east coast of Jamaica. Lat. 18. 8. N. lon. 76. W.—A bay on the west coast of the same island. Lat. 18. 20. N. lon. 78. 21. W.—A bay on the south coast of the same island; six miles east of Callibath bay.—A bay of America, extending along the shore of North and South Carolina, from Cape Fear to the mouth of Pedee-river.—A bay on the west side of the island of Barbadoes; another on the south side of the same island.

LONG BE'ACH, a village in Kent, near Charing.

LONG-BOAT, *f.* The largest boat belonging to a ship.—At the first descent on shore, he did countenance the landing in his *long-boat.* *Wotton.*

LONG-BOW. See ARCHERY, vol. ii.

LONG-BREATHED, *adj.* Having good breath; long-winded.

LONG-CANE CREEK, a river of South Carolina, which runs into the Savanna in lat. 33. 45. N. lon. 82. 11. W.

LONG CHAPEL, a village in Shropshire; north-west of Wellington.

LONG COP'PICE, a village in Hampshire, in the parish of Warblington.

LONG DIT'CH, Northamptonshire, a causeway that runs by Collham-bridge, through West-Deeping, to Lincolnshire.

LONG DIT'TON. See KINGSTON, vol. xi. p. 749.

LONG-EA'RED, *adj.* Having long ears.

LONG FOR'GAN, a town of Scotland, in the county of Perth, erected into a burgh of barony in 1674, by Charles II. twelve miles east-north-east of Perth.

LONG-HAN'DED, *adj.* Having long hands. *Johnson.*

LONG-HEAD'ED, *adj.* Having a large stretch of thought; penetrating, subtle.

LONG HOR'SLEY, a village in Northumberland, near Widdrington Castle. The church stands at a distance from the town.

LONG-HOU-KO'EN, a town of China, in the province of Hou-quang: fifty-two miles south-south-west of Tao.

LONG-JOINT'ED, *adj.* Having long loose joints.

LONG I'SLAND, a small island near the west coast of Scotland. Lat. 56. 15. N. lon. 5. 37. W.

LONG I'SLAND, an island of America, formerly called *Manhattan*, afterwards *Nassau Island*, discovered by Henry Hudson, an Englishman, in 1609; and now belonging to the state of New York. It extends from Hudson-river, opposite to Staten-island, almost to the western boundaries of the coast of Rhode-island, terminating with Montauk-point. Its length is about 104 miles, and its medial breadth from ten to fourteen miles; and it is separated from Connecticut by Long-Island Sound. It contains 1400 square miles, and is divided into three counties, viz. King's, Queen's, and Suffolk; and these are again subdivided into nineteen townships. The north side of the island is rough and hilly, but the soil is well adapted for raising grain, hay, and fruit. The south side of the island lies low, and its soil is light and sandy. On the sea-coast are extensive tracts of salt-meadow, which extend from Southampton to the west end of the island. Nevertheless, the soil is well adapted to the culture of grain, especially Indian corn. Near the middle of the island is Hempstead-plain, in Queen's County, which is sixteen miles long, and about eight broad. This plain, the soil of which is black, and apparently rich, yields naturally a particular kind of wild grass and a few shrubs; but it produces some rye, and furnishes, together with the salt marshes, food for large herds of cattle. On the east part of the island, east of Hempstead-plain, is a large barren heath, called Brushy-plain, overgrown with shrub-oak, intermixed with a few pine-trees, which afford harbour to wild deer and grouse. In a bay on the south side of the island, vast quantities of oysters are taken, and also of bafs. The largest river in the island is Peakonok, which is but an inconsiderable stream; it runs east, and discharges itself into a large bay that separates Southhold from Southampton. In this bay are Robin and Shelter islands. Rockonkama-pond lies about the centre of the island, between Smith-town and Illip; it is about a mile in circumference, and has been found to rise gradually for several years, until it had arrived to a certain height, and then to fall more rapidly to its lowest bed; and thus it is continually ebbing and flowing. Two miles to the southward of the pond is a stream called Connecticut River, which runs into the bay. There are two whale-fisheries; one from Sogg-harbour, which produces about 1000 barrels of oil annually; the other is much smaller, and is carried on by the inhabitants in the winter season, from the south side of the island. They commonly catch from three to seven whales in a season, which produce from twenty-five to forty barrels of oil each. This fishery was formerly a source of considerable wealth to the inhabitants, but, on account of a scarcity of whales, it has of late years much declined. From Sogg-harbour to the West Indies and other places, there is a considerable trade in whale-oil, pitch, pine-boards, horses, cattle, flax-seed, beef, &c. The produce of the middle and western parts of the island is carried to New York. The island contains 42,097 inhabitants, of whom 3893 are slaves. *Morfe.*

LONG I'SLAND, an island of Virginia, at the mouth of York River.

LONG I'SLAND, an island in Penobscot Bay, on the coast of Main: ten miles long, and one and a half broad.

LONG I'SLAND, an island of America, on the coast of Main: four miles long, and one and a half wide. Lat. 44. 20. N. lon. 68. 20. W.

LONG I'SLAND, an island near the south coast of Jamaica. Lat. 17. 51. N. lon. 76. 58. W.

LONG I'SLAND, an island near the north coast of the island of Antigua. Lat. 17. 17. N. lon. 61. 28. W.

LONG I'SLAND, an island in Hudson's Straits. Lat. 61. N. lon. 75. W.

LONG ISLAND, an island in Hudson's Bay. Lat. 55. 10. N. lon. 78. 30. W.

LONG ISLAND, a narrow island, about two miles in length, on the south coast of Ireland, and county of Cork, in Roaring-Water Bay. Lat. 51. 26. N. lon. 9. 27. W.

LONG ISLAND, one of the smaller Bermuda Islands.

LONG ISLAND, a small island in the Gulf of Mexico, near the coast of East Florida. Lat. 27. 50. N. lon. 82. 55. W.

LONG ISLAND, a small island, near the coast of South-Carolina. Lat. 32. 50. N. lon. 79. 45. W.

LONG ISLAND, a small island, near the coast of Virginia, at the mouth of York River. Lat. 37. 16. N. lon. 76. 35. W.

LONG ISLAND, a small island in the Atlantic, near the coast of Brazil. Lat. 16. 30. S.

LONG ISLAND, a small island in Pool Harbour.

LONG ISLAND, a small island in the Eastern Indian Sea, near the west coast of Billiton. Lat. 2. 51. S. lon. 107. 30. E.

LONG ISLAND, a small island in the Eastern Indian Sea, near the south-east coast of the island of Madura. Lat. 7. 16. S. lon. 113. 5. E.

LONG ISLAND, a small island in the Eastern Indian Sea, near the north coast of the island of Flores. Lat. 8. 6. S. lon. 122. 27. E.

LONG ISLAND, a small island in a bay on the north coast of New Guinea. Lat. 1. 4. S. lon. 135. 18. E.

LONG ISLAND, an island in Queen Charlotte's Sound, on the coast of New Zealand, called by the natives Hamote, about four miles in length: nine miles south of Port Jackson.

LONG ISLAND, an island in the South Pacific Ocean, at the entrance of Broad Sound, on the north-north-east coast of New Holland, about thirty miles in length. Lat. 22. 24. S. lon. 210. 33. N.

LONG ISLAND, a small island in the Eastern Indian Sea, near the coast of Africa. Lat. 10. 25. S.

LONG ISLAND, one of the islands, in the Mergui Archipelago. Lat. 12. 36. N. lon. 98. 12. E.

LONG ISLAND. See YUMA.

LONG ISLAND SOUND, a kind of inland sea, from three to twenty-five miles broad, and about 140 miles long, extending the whole length of Long Island, in the state of New York, and dividing it from Connecticut. This sound communicates with the ocean at both ends of the island, and affords a very safe and convenient inland navigation.

LONG ISLE, or ISLE-RIVER, Indians, are Indians who inhabit the territory on Isle, or White, river, which runs west into the Wabash-river. The mouth of White-river is in lat. 38. 58. N. lon. 90. 7. W.

LONG KA'NG, a town of Corea: thirty miles west-north-west of Hoang-tcheou.

LONG KE'Y (Middle), a small island in the bay of Honduras, near the coast of Mexico. Lat. 17. 10. N. lon. 88. 48. W.

LONG KE'Y (North), a small island in the bay of Honduras, near the coast of Mexico. Lat. 17. 50. N. lon. 88. 40. W.

LONG KE'Y (South), a small island in the bay of Honduras, near the coast of Mexico. Lat. 16. 57. N. lon. 88. 50. W.

LONG KOU'ANG, a town of Corea: 125 miles south-fourth-east of King-ki-tao. Lat. 35. 55. N. lon. 127. 54. E.

LONG LA'KES, a chain of small lakes in Upper Canada, extending westerly from the grand portage of lake Superior toward Rain lake.

LONG LE'AT. See WARMINSTER.

LONG'-LEGGED, *adj.* Having long legs.

LONG'-LEGS, *f.* in entomology. See TIPULA.

LONG'-LIVED, *adj.* Living long.

LONG ME'ADOW, a town of America, in Hampshire-county, Massachusetts, on the east bank of Connecticut-

river, about four miles south of Springfield, and twenty-three north of Hartford; incorporated in 1783, and containing a congregational church, and about seventy houses, forming a street parallel with the river.

LONG MEASURE. See the article ARITHMETIC, vol. ii.

LONG-MEG'. See KESWICK, vol. xi. p. 692.

LONG MEL'FORD, Suffolk, within three miles of Sudbury, is a pleasant village, and perhaps one of the largest in England, being about a mile in length. Melford has an annual fair, several good inns, many handsome houses, and creditable inhabitants. Here lived the unhappy Mr. Drew, who, in the year 1739, was barbarously murdered; and his son, Charles Drew, executed for it, who effected it either with his own hands, or by those of another person whom he procured to do it, by shooting him, for the sake of enjoying his estate. This parricide was attended with circumstances of great horror. *British Directory*, vol. iv.

Few villages in England can boast of a more agreeable situation than this, the immediate vicinity being distinguished by much beautiful and picturesque scenery. The church, which stands on an elevated spot at the north end of it, is a curious piece of architecture in the pointed style of the fifteenth century: its length is 120 feet, exclusive of the school-house at the western extremity: the chancel, or east end, is distinguished for its masonry, consisting of flint-work, and square stones; and beneath the parapet is an inscription in old letters. In the north aisle is an altar-tomb for William Clopton, esq. whose statue, in armour, rests on the top; he died in 1446. His son, John Clopton, who was sheriff of the counties of Norfolk and Suffolk in the time of Henry VI. was interred under an altar-tomb in the chancel. Near the communion-table is a large and stately marble monument to the memory of sir William Cordell, who was speaker of the house of commons in the reign of queen Mary: this gentleman founded an hospital here, which is still standing, almost close to the church: it is a respectable brick building, and is sufficiently endowed for the support of a warden, twelve poor men, and two women, who are required to be old and decayed housekeepers of Melford. Several Roman urns have been dug up in this parish within these few years.

At a short distance east of the church is Melford Hall, the seat of sir H. Parker, bart. lately killed in America. The house, a large brick building, appears to be of the age of queen Elizabeth. At the dissolution of religious houses, this estate was granted to sir William Cordell.—About half a mile north of the church is Kentwell Hall, formerly the seat of the Cloptons, but now of Richard Moore, esq. The house is large, and was formerly surrounded by a moat, three sides of which are still remaining; the fourth or east side has been filled up. *Shoberl's Beauties of England and Wales*.

LONG MEN', a town of China, of the third rank, in Quang-tong: forty-two miles north of Hoi-tcheou.

LONG MOUNTAIN, a mountain of Virginia: eighty miles west-south-west of Richmond. Lat. 37. 15. N. lon. 79. 20. W.

LONG-NAN', a city of China, of the first rank, in Setchuen, on the river Mou-qua. This city is considered as one of the most important of the province, having several forts under its jurisdiction, which were formerly of great use to prevent the invasions of the Tartars. It is 710 miles south-west of Peking. Lat. 32. 22. N. lon. 104. 18. E.

LONG-NAN', a town of China, of the third rank, in Kiang-si: fifty miles south of Nan-ngan.

LONG'-NECKED, *adj.* Having a long neck.

LONG-NEN', a town of China, of the third rank, in Pe-tche-li: twenty-seven miles north-west of Yen-king.

LONG NESS POINT', a cape on the south coast of the Isle of Man: ten miles south-south-west of Douglas.

LONG NEWTON, a town of Scotland, in the county of Roxburgh: six miles north-west of Jedburgh.

LONG-

LONG-NGAN', a town of China, of the third rank, in Quang-si: seven miles south-west of Tou-nang.

LONG' NOSE, a cape on the east coast of New Holland, in the South Pacific Ocean. Lat. 35. 6. S. lon. 151. 15. E.

LONG'-PATED, *adj.* Having a long head; more than commonly discerning.

LONG POINT, is a long beach or sand-bank, on Lake Erie, in Upper Canada, now called the North Foreland, stretching into Lake Erie from the township of Walsingham, and forming the deep bay of Long Point, upwards of twenty miles in length.

LONG PRIMER, *f.* A printing-type, one size larger than the present.

LONG RE'ACH, a narrow part of the Straits of Magellan, between Cape Quad and Buckley Point.

LONG RE'EF, a shoal in the Spanish Main, near the Mosquito Shore. Lat. 12. 22. N. lon. 82. 50. W.

LONG SAU'T, a small island in the river St. Laurence, Lat. 55. 2. N. lon. 74. 55. W.

LONG SHO'AL, a river of North Carolina, which runs into Pamlico Sound in lat. 35. 21. N. lon. 76. 4. W.

LONG SHOAL POINT', a cape on the coast of North Carolina, at the mouth of Long Shoal River. Lat. 35. 22. N. lon. 76. 2. W.

LONG-SI'UEN, a town of China, of the third rank, in Kiang-si: forty-two miles south of Ki-ngan.

LONG-SI'UEN, a town of China, of the third rank, in Tche-kiang: forty-five miles west-fourth-west of Tchu-tcheo.

LONG STO'W, a village in Cambridgeshire, from which the hundred takes its name; two miles from Caxton. The neighbourhood is remarkable for its fine woods.

LONG-SUF'FERING, *adj.* Patient; not easily provoked.—The Lord God, merciful, and gracious, *long-suffering*, and abundant in goodness. *Exod.* xxxiv. 6.

LONG-SUF'FERING, *f.* Patience of offence; clemency.—We infer from the mercy and *long-suffering* of God, that they were themselves sufficiently secure of his favour. *Rogers.*

LONG SUT'TON, or SUTTON ST. MARY'S, a small market-town in Lincolnshire; five miles east of Holbeach.

LONG'-TAIL, *f.* *Cut and long tail:* a canting-term for one or another. A phrase taken perhaps from dogs, which, belonging to men not qualified to hunt, had their tails cut.—I will come cut and *long-tail* under the degree of a squire. *Shakespeare.*

LONG'-TAILED, *adj.* Having a long tail.

LONG-TAN', a town of Corea: forty-two miles south-east of Hetsin.

LONG-TCHANG', a town of China, of the third rank, in Se-tchuen: thirty-five miles north-north-west of Tche-li-leou.

LONG-TCHANG-CHING', a town of China, in Chang-tong: fifteen miles east of Tci-nan.

LONG-TCHI'AN, a mountain of Thibet. Lat. 27. 48. N. lon. 86. 39. E.

LONG-TCHU'EN, a town of Corea: fifty-five miles west-north-west of Han-tcheou.

LONG-TCHU'EN, a town of China, of the third rank, in Quang-tong: fifty miles east-south-east of Lien-ping.

LONG-TE', a town of China, of the third rank, in Chen-si: twenty-two miles west of Pin-leang.

LONG-TONGUED, *adj.* Loquacious.—A *long-tongued* babbling gossip! *Titus Andronicus.*

LONG-TSU'EN, a town of China, of the third rank, in Koei-tcheou: twenty-seven miles south-west of Se-nan.

LONG-TY', a town of China, of the third rank, in Koei-tcheou: twelve miles south-east Koei-yang.

LONG-WINDED, *adj.* Long-breathed; tedious:

My simile you minded,  
Which, I confess, is too *long-winded*.

*Swift.*

LONG-YANG', a town of China, of the third rank, in Hou-quang: fifteen miles south-east of Tchan-te.

LONG-YEN', a town of China, of the third rank, in Fo-kien: fifty-two miles south-east of Ting-tcheou.

VOL. XIII. No. 932.

LONG-YE'OU, a town of China of the third rank, in Tche-kiang: fifteen miles east-north-east of Kiu-tcheou.

LON'GA, one of the smaller Shetland Islands. Lat. 60. 12. N. lon. 1. 37. W.

LON'GA, a small island near the west coast of Scotland. Lat. 56. 12. N. lon. 5. 40. W.

LONGAHOO', one of the smaller Friendly Islands: twelve miles east-fourth-east of Neeneeva.

LONGANIMITY, *f.* [*longanimitas*, Lat.] Forbearance; patience of offences.—It had overcome the patience of Job, as it did the meekness of Moses; and surely had mattered any but the *longanimity* and lasting sufferance of God. *Brown's Vulgar Errors.*—That innocent and holy matron had rather go clad in the snowy-white robes of meekness and *longanimity*, than in the purple mantle of blood. *Howel's England's Tears.*

LONGA'RA, a town of Naples, in Calabria Ultra: twenty miles west-north-west of St. Severina.

LONGA'RES, a town of Spain, in Arragon: twenty miles south-south-west of Saragossa.

LONGA'Y, a small island near the east coast of Skye. Lat. 57. 19. N. lon. 5. 53. W.

LONG'BOROUGH, a village in Gloucestershire: three miles north from Stow, seven south from Campden, and twenty-five east from Gloucester.

LONG'BRIDGE, a town of Scotland, in the county of Murray: four miles east of Elgin.

LONG'BRIDGE, a village in Dorsetshire; north-west of Axminster.—A village in Gloucestershire, near Ashelworth.—Another, north of Berkeley; where formerly was a monastery.—A village in Warwickshire; on the south side of Warwick.

LONG'CHAMP, a town of France, in the department of the Upper Marne: twelve miles east of Chaumont.

LONG'CHAMP, a town of France, in the department of Paris: three miles west of Paris.

LONG'CHAMPS, a town of France, in the department of the Vosges: three miles north-north-east of Epinal, and seven west of Bruyeres.

LONG'COMB, a village in Oxfordshire, near Woodstock-park.

LONG'COT, a village in Berkshire, near Farringdon.

LONG'DON, a decayed market-town in Staffordshire; four miles from Lichfield, in the road to Chester, on a brook that runs into the Trent.

LONG'DON, the name of two villages in Shropshire; one near Drayton, the other south of Shrewsbury.

LONG'DON, a village in Worcestershire; south of Upton, and north-west of Tewkesbury.

LONG'DRIDGE, a village in Cornwall; north-west of Kellington.

LONGEAU', a town of France, in the department of the Upper Marne: six miles south of Langres.

LONGE'E, *f.* [French.] A thrust at fencing; a lunge.—When he accosts a lady, he stamps with his foot like a French fencer, and makes a *longee* at her. *Butler's Characters.*

LONGE'E, in geography. See LOONGHEE.

LONGEPIERRE, a town of France, in the department of the Saône and Loire, situated near the river Doubs: sixteen miles north-east of Châlons sur Saône, and seven east-north-east of Verdun sur Saône.

LONGEPIERRE (Hilaire-Bernard de Roqueleyne, lord of), born of a noble family at Dijon in 1659, was secretary of commands to the duke of Berry. He distinguished himself by an accurate knowledge of the Greek language, and taste for the beauties of its authors. In 1685, he published notes upon Anacreon, Sappho, Bion, and Moschus, and the Idylls of Theocritus, with a French translation in verse, or rather in measured prose, which had considerable success. In 1690, he gave to the public a collection of Idylls of his own invention, which are said to contain natural painting, but to be feeble and profane in their versification. His tragedies of Medea and Electra, written in the manner of the Greek tragedians, were both acted, and gave him a reputation among dra-

matic poets. Voltaire says of the first, that, although unequal, and too declamatory, it is superior to the *Medea* of Peter Corneille. He wrote other tragedies in the same style, which had the merit of not enfeebling the grand and terrible by the intermixture of insipid love-scenes; but at the same time they too closely imitated the prolix common-place and the naked plots of the Greek theatre, without emulating its beauty of diction. Longepierre died at Paris in 1721. *Moreri*.

LONGERI, a town of Africa, in the kingdom of Loango, where the kings are generally interred.

LONGETERRE, a small island near the west coast of France: two miles west of Bourg Neuf. Lat. 47. 1.

LONGEVILLE, a town of France, in the department of the Moselle: four miles east-south-east of Boulay, and three west of St. Avold.

LONGEVILLE, a town of France, in the department of the Upper Marne: fifteen miles south-south-west of St. Dizier.

LONGEVITY, *f.* [*longævus*, Lat.] Length of life.—The instances of *longevity* are chiefly amongst the abstemious. *Arbuthnot on Aliments*.—See the article LIFE, vol. xii. p. 634.

LONGVOUS, *adj.* [from the Lat. *longus*, long, and *ævum*, an age.] Living long, long-lived.

LONGFIELD, a village in Buckinghamshire, near Fenny Stratford.

LONGFIELD, a village in Kent, between Dartford and Cobham.

LONGFLEET, Dorset, at the bottom of Poole-harbour; a member of Great Lanford.

LONGFORD, a county of Ireland, in the province of Leinster, bounded on the north-west by the county of Leitrim, on the north-east by Cavan, on the south and south-east by Westmeath, and on the west by Roscommon, about 21 miles in length, and 14 in its general breadth. It contains 23 parishes, about 10,000 houses, and rather more than 50,000 inhabitants. Towards the north it is mountainous, but the other part is in general flat, in some places subject to be overflowed by the Shannon, which bounds it on the west, and the Inny, which crosses it on the south. A considerable quantity of linen is manufactured in the county, and great quantities of flax are sent to other parts. It is intended that the Royal Canal should cross this county, and join the Shannon at Tarrionbury; a measure which cannot fail of leading to much improvement, if it should be ever completed. The towns are small. For Longford, the county-town, see the next article; and for Granard and Laneshorough, those names in their alphabetical order.

Edgeworthstown, though not of importance enough to form a separate article in this work, is remarkable for the residence of a family distinguished for literary and scientific attainments. The name of Maria Edgeworth is too well known, and her talents as a pleasing and useful author too generally acknowledged, to need our praise. The same may be said of her lively, ingenious, and patriotic father, Richard Lovell Edgeworth; and there is reason to expect that some of the younger branches of this family will add to a celebrity already very great. We might instance the reports of the bog-commissioners, the eighth of which contains many proofs of the ingenuity of Mr. William Edgeworth. Mr. Edgeworth's house and the adjoining church contain many proofs of his mechanical skill.—The whole of the county of Longford was formerly called *Annaly*, and was a principality so late as the fifteenth century. It is now only represented in parliament by two knights of the shire; though it had, before the union, no less than four boroughs, which sent two members each.

LONGFORD, a town of Ireland, in the county of that name, on the river Cammin. Here was formerly a Dominican convent, founded in 1400, by O'Farrel bishop of Ardagh. In 1641, this town was taken by the Irish rebels, and the garrison in the castle murdered after a promise of quarter. It has a charter-school for sixty boys.

It is forty miles south-south-west of Sligo, and fifty-eight west-north-west of Dublin. Lat. 52. 42. N. lon. 7. 45. W.

LONGFORD, a village in Derbyshire, west of Derby.—A village in Gloucestershire, near Gloucester.—A village in Middlesex, south-east of Colnbrook.—A village in Shropshire, near Drayton.

LONGFORD'S BURLEY, a hamlet in the parish of Hampton, Gloucestershire.

LONGHAM, a village in Dorsetshire, east of Winburnminster; with a bridge, built in 1740.

LONGHAM, a village in Norfolk, north-west of East Dereham.—A village in Somersetshire, north-west of Somerton.

LONGHAVEN, a bay of Scotland, on the coast of Aberdeenshire: four miles south of Peterhead.

LONGHOLM. See LANGHOLM, vol. xii. p. 150.

LONGHOPE, a village and parish in Gloucestershire; three miles north-east of Mitchel-Dean, and nine north-west of Gloucester. Part of Yartleton-hill lies in this parish. Annually on the first of May, there is a custom of assembling in bodies on the top of that hill, from the several parishes, to fight for the possession of it, upon which account it is sometimes called May-hill. What gave rise to this custom is the ancient Campus Martius, which was an annual assembly of the people upon May-day, when they confederated together to defend the kingdom against all foreigners and enemies, as mentioned in the laws of Edward the Confessor. The church is a large building in form of a cross; and has a spire with five bells at the west end. The chancel was rebuilt, and the church repaired, in the year 1771.

LONGHURST, a village in Northumberlandshire, north-east of Morpeth.

LONGIANO, a town of Italy, in the department of the Rubicon: twelve miles north-west of Rimini.

LONGILO'QUY, *f.* [from the Lat. *longus*, long, and *loquor*, to speak.] A long discourse. *Bailey*.

LONGIMANOUS, *adj.* [*longimanus*, Lat.] Long-handed; having long hands.—The villainy of this Christian exceeded the persecution of heathens, whose malice was never so *longimanous* as to reach the soul of their enemies, or to extend unto the exile of their elyiums. *Brown*.

LONGIMANUS, a surname of Artaxerxes from his having one hand longer than the other. The Greeks called him *Macrochir*, which signifies the same.

LONGIMETRY, *f.* [*longus*, and *metrew*.] The art or practice of measuring distances.—Our two eyes are like two different stations in *longimetry*, by the assistance of which the distance between two objects is measured. *Cheyne's Phil. Pr.*

LONGING, *f.* [from *To long*.] Earnest; desire; continual wish.—Within short time I came to the degree of uncertain wishes, and that those wishes grew to unquiet longings, when I would fix my thoughts upon nothing, but that within little varying they should end with Philoclea. *Sidney*.

I have a woman's *longing*,  
An appetite that I am sick withal,  
To see great Hector in the weeds of peace. *Shakespeare*.

Sometimes with *after*.—The will is left to the pursuit of nearer satisfactions, and to the removal of those uneasinesses which it then feels in its want of, and *longings after*, them. *Locke*.

Whence then this pleasing hope, this fond desire,  
This *longing after* immortality. *Addison's Cato*.

LONGING in pregnant women, an inordinate desire for some particular kind of food, which, if not procured for them, was supposed to occasion wasting, and sometimes hysteric affections, in the woman; and on the child, besides impairing its health, to impress the figure of the object longed for. This affection, which heretofore occasioned in families much anxiety and uneasiness, seems wearing away, just in proportion as the belief in witches, ghosts,

ghosts, and hobgoblins, vanishes, or as reason and common sense procure an ascendancy over superstition and folly.

LONG'INGLY, *adv.* With incessant wishes :

To his first bias *longingly* he leans,  
And rather would be great by wicked means. *Dryden.*

LONG'ISH, *adj.* Somewhat long.

LONGINICO, a town of Turkey in Europe, in the Morea, anciently called *Olympia*, famous for being the place where the Olympic games were celebrated, and for the temple of Jupiter Olympus, about a mile distant. It is now but a small place, seated on the river Alpheus, ten miles from its mouth, and fifty south of Lepanto. Lat. 37. 50. N. lon. 22. 0. E.

LONGINUS (Dionysius), a celebrated Greek critic and philosopher of the third century, is supposed by some to have been an Athenian, by others a Syrian. He was first the disciple, and then the heir, of Cornelius Fronto, the nephew of Plutarch. In his youth Longinus travelled for improvement to Athens, Rome, Alexandria, and other cities distinguished for literature; and attended the lectures of all the eminent masters in eloquence and philosophy. The system he chiefly followed was the eclectic of Ammonius Sacca: he was likewise a great admirer of Plato, whose memory he honoured by an annual festival. Such was the extent of his erudition, that he was called by his cotemporaries "the living library." He appears to have taught philosophy at Athens, where Porphyry was one of his disciples. His reputation caused him to be invited to the court of the celebrated Zenobia, queen of Palmyra, who took his instructions in the Greek language, and made use of his counsels on political occasions. This distinction was fatal to him. After the emperor Aurelian, in his expedition against Zenobia, had defeated her troops, and made her captive, she attempted to avert the resentment of the conqueror by imputing her resistance to the advice of her ministers and counsellors. Longinus, who fell into his hands among the rest, was particularly suspected of having composed the spirited answer of the queen to Aurelian's summons; and, without respect for his genius and learning, he was ordered for instant execution. His philosophy supported him in this hour of trial; and he calmly submitted to his fate, with expressions of pity for his unfortunate mistress, and consolation to his afflicted friends. This event took place A.D. 273. Among the numerous writings of Longinus, his "Treatise on the Sublime" is the only one remaining, and this, too, in a mutilated and imperfect state. It has always been greatly admired for the elevation of its language and sentiments, which has caused one of our poets to characterize him as being "himself the great sublime he draws." He is one of the very few ancients who appear to have been acquainted with the Jewish scriptures. Of the editions of Longinus, the most esteemed are that of Tallius, Traj. ad Rhen. 1694, 4to. of Hudson, Oxon. 1710, 8vo. of Pearce, Lond. 1724, 4to. and of Toup, with Ruhnken's emendations, Oxon. 1778, 8vo. An excellent English translation of Longinus was published in 1739, by Dr. Smith, whose version of Thucydides also gained him great reputation: but such changes have insensibly crept into our language during the last 70 years, that, though faithful, the English Longinus seems now to want elegance.

LONGITUDE, *f.* [*longitude*, Fr. *longitudo*, Lat.] Length; the greatest dimension.—The ancients did determine the *longitude* of all rooms, which were longer than broad, by the double of their latitude. *Wotton*.—The circumference of the earth measured from any meridian.—Some of Magellanus's company were the first that did compass the world through all the degrees of *longitude*. *Abbot*.—The distance of any part of the earth to the east or west of any place.—His was the method of discovering the *longitude* by bomb-veffels. *Arbutnot*.

To conclude;  
Of *longitudes*, what other way have we,  
But to mark when and where the dark eclipses be? *Donne*.

The position of any thing to east or west.—The *longitude* of a star is its distance from the first point of numeration towards the east, which first point, unto the ancients, was the vernal equinox. *Brown's Vulgar Errors*.—See the articles ASTRONOMY, GEOGRAPHY, and HOROLOGY.

LONGITU'DINAL, *adj.* [from *longitude*.] Measured by the length; running in the longest direction.—*Longitudinal* is opposed to transverse: these vesiculæ are distended, and their *longitudinal* diameters straitened, and so the length of the whole muscle shortened. *Cheyne*.

LONGITU'DINALLY, *adv.* Lengthwise, in the direction of the longitude.

LONGJUMEAU, a town of France, in the department of the Seine and Oise, and chief place of a canton, in the district of Corbeil: ten miles south of Paris. The place contains 1434, and the canton 13,650, inhabitants.

LONG'LY, *adv.* [from *To long*.] Longingly; with great liking:

Master, you look'd so *longly* on the maid,  
Perhaps you mark not what's the pith of all. *Shakespeare*.

LONG'MAY, a town of Scotland, in the county of Aberdeen: five miles south of Fraserburgh.

LONG'NEY, a village in Gloucestershire, seven miles north-west of Stroud, three east of Newnham, and seven south-west of Gloucester.

LONG'NON, a village in Salop, near the river Warren, west of Wenlock.

LONG'NOR, a town of England, in the county of Stafford, on the borders of Derbyshire, with a weekly market on Wednesday: 32 miles north of Stafford, and 167 north-west of London.

LONG'NY, a town of France, in the department of the Orne: nine miles east of Mortagne, and twelve north-east of Bellefme.

LONGOBAR'DI. See LOMBARDS.

LONGOBAR'DO, a town of Naples, in Calabria Citra: ten miles south-west of Cosenza.

LONGOBU'CO, a town of Naples, in Calabria Citra: fourteen miles south of Rosano.

LONGOMONTANUS (Christian), an eminent Danish astronomer, was the son of a poor labouring peasant, and born at Longomontium, an obscure village in Jutland, whence he took his surname, in the year 1562. Having afforded early indications of a love for learning, his father did all that lay in his power to procure him instruction; and, upon the death of that parent when he was only eight years of age, one of his uncles took him to reside for some time with him, and had him taught by the minister of the place. That relation, however, finding that the expence of paying for his education was greater than his circumstances would afford, at last advised him to return to his mother, and to earn his living, as his brothers did, by ploughing. Notwithstanding this sad disappointment, young Longomontanus was not disheartened; but, possessing an inextinguishable thirst for knowledge, improved every opportunity which his laborious life permitted, in endeavouring to acquire it. At length, by his earnest intreaties he prevailed so far, that his mother gave him leave to study all the winter, upon the condition that he worked all the summer in the fields. He went on thus for some time; but, being tired out with the ill-treatment and reproaches of his brothers and sisters, who could not bear to see him surpass them as he did, he determined to steal away from his family, and to try his fortune in the world. Accordingly, at the age of fifteen, he suddenly left his mother's house, and went to Wiburg, a town twelve miles distant from his native place, where there was a college. Here he spent eleven years; and, though he was forced to procure the means of support by his industry, he nevertheless applied to his studies with extreme ardour, and made a great progress in learning, particularly in the mathematical sciences. Afterwards he went from Wiburg to Copenhagen; where, by the great proficiency which he had already made, and his incessant application,

he in one year so far secured the good opinion of the professors of that university, that they recommended him, in the strongest terms, as an assistant to the illustrious Tycho Brahe. It was in 1589 that he waited on that celebrated astronomer, who then resided in the island of Huen, from whom he met with so favourable a reception, that he continued with him eight years. During that period, he afforded Tycho much assistance in observing the heavens, and in his calculations; and was so accurate, so laborious, and skilful, that he won the particular regard and esteem of that great man. This is evident from the letters which Tycho wrote to him in 1598 and 1599, after his departure from Denmark to Bohemia; in which he strongly urged Longomontanus to join him in that country. With this request the latter complied, and went to Tycho at the castle of Benach near Prague, where he continued to assist him for some time in his astronomical labours. At length, the desire which he had of filling a professor's chair in Denmark determined him to return to his native country; when Tycho, who parted with him very reluctantly, gave him a discharge filled with the highest testimonies of his esteem, and furnished him with sufficient money to defray the expense of his long journey.

Longomontanus returned to Denmark by a circuitous route through Poland, in order to view the scene of Copernicus's astronomical labours; and, when he arrived at Copenhagen, the chancellor Christian Friis proved a Meccenas to him, and gave him an honourable employment in his family. In 1603, he quitted the chancellor, upon his having received the appointment of rector of the college of Wiburg; which he retained till the year 1605, when he was nominated to a professorship of mathematics in the university of Copenhagen. He was now placed in a situation which had ever been the object of his highest ambition, and for which his genius and talents peculiarly qualified him; and he discharged the duties of it with the greatest ability, and highest reputation, till his death, which took place in 1647, when he was about the age of eighty-five. He was the author of various works, which discover great talents in mathematics and astronomy. The most distinguished of them, is his *Astronomia Danica*, first printed in 1622, in 4to. and afterwards in folio, with considerable augmentations, in 1633 and 1640. It contains all the great discoveries of Regiomontanus, Purbach, and Tycho Brahe; and it proposes some alterations in the system of the latter, which, without disconcerting any of its parts, would, he imagined, preclude some of the strongest objections which were made to it. Gassendi says, in the life of Tycho Brahe, that this work belongs to Tycho rather than to Longomontanus; because that the tables of the celestial motions, contained in them, were begun under the inspection of Tycho Brahe, and were completed from a collection of his select observations, which Longomontanus had copied for his use. Longomontanus amused himself with endeavouring to square the circle, and pretended that he had made the discovery of it; but our countryman Dr. Pell proved that he was mistaken. It is remarkable that, obscure as his native place and father were, he contrived to dignify and eternize them both; by taking his name from that village, and in the title-page to some of his works, calling himself, Christianus Longomontanus, Severini Filius, his father's name being Severin, or Severianus. *Hutton*.

LONGOTO'MA, a river of Chili, which runs into the Pacific Ocean in lat. 31. 30. S.

LONGOTO'MA, a town of Chili, on the north side of the river so called: eighty-four miles south of Coquimbo.

LONG'PARISH, a village in Hampshire, between Barton-Stacey and Andover.

LONG'PORT, a village in Staffordshire, near Newcastle-under-Line, on the line of the Staffordshire Canal, with a wharf belonging to the company.

LONG'SIDE, a town of Scotland, in the county of Aberdeen: four miles west of Peterhead.

LONG SOME, *adj.* [from *long*.] Tedious; wearisome

by its length.—They found the war so churlish and *longsome*, as they grew then to a resolution, that, as long as England stood in state to succour those countries, they should but consume themselves in an endless war. *Bacon's War with Spain*.

When chill'd by adverse snows, and beating rain,  
We tread with wearied steps the *longsome* plain. *Prior*.

LONG'SPIEL, *f.* A very ancient musical instrument, found by sir Joseph Banks and Dr. Solander in Iceland, when they visited that country in 1773. This instrument, of a long and narrow form, and strung with four strings of copper, is extremely rude and clumsy. One of the four strings is used as a drone; the rest are played with a bow. Pieces of wood are placed at different distances on the finger-board, to serve as frets. It seems, indeed, to have been the primitive idea of a fiddle; and is a proof that the use of the bow, that wonderful engine, which the ancients, with all their ingenuity and musical refinements, had never been able to discover, was known by the Scalds in Iceland at least as early as in any other part of Europe.

LONG'STOCK, a village in Hampshire, between Dunbury-hill and Stockbridge.

LONG'STON, a village in Derbyshire, in the high peak.

LONG'THORP, a village in the north riding of Yorkshire, near Bedale.—A village near Peterborough in Northamptonshire.

LONG'TON, a village of Staffordshire, in the parish of Stoke-upon-Trent, near Rudgley. Its church lies on the west side of the village, which consists of scattered houses, extending for a vast way on each side of the road. It was formerly full of gentlemen's seats.

LONG'TON, a township of Lancashire, with a population of 904: six miles south-west of Preston.

LONG'TON, or LONGTOWN, a town in Cumberland, on the Scottish borders, near the conflux of the Esk and Kirkclop: nine miles from Carlisle, and 307 from London. It has a market on Thursday, and a charity-school for sixty children; fairs on Whit-Monday, and Thursday after November 22.

Longtown stands in the midst of the estate of sir James Graham, of Netherby, whose predecessor, Dr. Robert Graham, may be considered as having been the principal cause of the prosperous state of this part of Cumberland. Under his patronage Longtown became populous; and, by constructing the little harbour at Sarkfoot, he furnished the people with an easy mode of exporting their produce, and supplying themselves with necessaries. Netherby, the seat of sir James Graham, is much celebrated in the topographical annals of this county, from the vast improvements that were made here during the latter part of the last century; nor is it less interesting to the antiquary from the assemblage of Roman remains that have been here preserved; and from its having been a Roman station. The mansion, which stands on an eminence near the river Esk, was erected by the late Dr. Graham, about the year 1760, but has been much improved by the present proprietor. It is elegantly fitted up; and contains a valuable collection of ancient and modern medals, and a library furnished with a selection of classic and other valuable authors. The gardens and pleasure grounds are disposed with much taste and judgment. *Beauties of England and Wales*.

LONG'TOWN, a township of Herefordshire, on the borders of Monmouthshire, with 768 inhabitants: eighteen miles west-south-west of Hereford.

LONGUE', a town of France, in the department of the Mayne and Loire: seven miles north of Saumur, and ten south of Baugé.

LONGUE', a small island in the Indian Sea, ten miles north of the Mauritius.

LONGU'EIL, a town of Canada, on the St. Laurence. Lat. 45. 36. N. lon. 73. W.

LONGU'EIL (Christopher de), a man of letters, born at Mechlin in 1488, was natural son of Antony de Longueuil, bishop of Leon. He was taken young to Paris, where

where he was carefully educated in classical learning and the sciences, in every branch of which he distinguished himself. He practised as a lawyer in that capital, and obtained the place of a counsellor in parliament. For the purpose of improvement he travelled into Italy, Spain, England, and Germany; and in Switzerland was near falling a victim to the hatred of the people against the French after the battle of Marignano. At Rome he made an harangue before pope Leo X. who was greatly struck with his eloquence. Such was his attachment to Italy, that his friends in vain attempted to keep him in France, when he revisited it; and, returning to the former country, he died at Padua in 1522, at the early age of thirty-four. Longueil, or Longolius, acquired a great name among those scholars in that age who were so peculiarly studious of the purity of their Latin style, that they were termed *Ciceronians*, that great writer being almost the sole object of their imitation. In Erasmus's dialogue entitled *Ciceronianus*, several pages are devoted to Longolius, as being the only Cisalpine writer to whom the Italians allowed classical purity of style. The works of Longolius consist of epistles and harangues, in which more attention is paid to the manner than the matter. They were published at Paris, in 1533, 8vo. with his life by cardinal Pole. In this collection was omitted his "Oratio de Laudibus D. Ludovici Francorum Regis," 1510, on account of its free strictures on the court of Rome.

LONGUEIL (Gilbert), a physician and philologist, was born at Utrecht in 1507. After an education in classical literature and philology in his own country, he went to Italy, where he took the degree of doctor of physic. On his return he taught the learned languages, first at Deventer, and afterwards at Andernach and Cologne. In this last city he also practised medicine, and was made physician to the archbishop Herman. He died there in 1543; and, being suspected of attachment to the principles of the reformation, was refused burial, so that his friends interred him at Bonn. He compiled a Lexicon Græco-Latinum, 8vo. Colon. 1533; published notes upon Ovid's *Metamorphoses*, Plautus, Cicero's *Epistles*, Cornelius Nepos, and Laurentius Valla, forming four vols. 8vo. edited Philostratus's *Life of Apollonius Tyaneus*, and the *History of the Second Council of Nice*; translated several pieces of Plutarch; and wrote a *Dialogue on Birds*, with their Names in Greek, Latin, and German.

LONGUEMARCH, a town of France, in the department of the Lys: seven miles north-north-east of Ypres.

LONGUERUE (Louis Dufour de), abbot of Sept-Fontaines and Jard, a person of extraordinary erudition, was born in 1652, at Charleville, of a noble family in Normandy. The singular quickness of parts which he displayed almost from infancy was so well improved by an excellent education, that he became at a very early age a prodigy of learning. He made himself master of the classical and several of the oriental languages, and the principal tongues of modern Europe. His memory retained a vast store of facts in history, chronology, and geography, together with philosophical systems and theological dogmas; so that scarcely any literary topic could be started on which he did not possess more than common information. He had a profound knowledge of the text of the Scriptures, which he studied philologically, paying little regard to scholastic divinity; hence he was supposed in many points to accede to the opinions of the Protestants; nor did he at all enter into the disputes concerning grace and predestination which so much agitated the Gallican church in his time. He published little, but was extremely communicative of his knowledge in conversation; in which, however, he assumed an air of superiority, with a decisive and dogmatic tone, that exercised the patience of those who consulted him. He was vehement in dispute, full of sarcastic sallies, and often rash and hasty in his judgments; but the learned men who enjoyed his intimacy were often greatly benefited by his assistance in their researches. He was intimately connected with Mont-

faucón, and with Pagi, author of the *Critique on the annals of Baronius*, to which work he was a large contributor. The abbé Longuerue died at Paris, in 1733, at the age of eighty-two. His printed works are, 1. A Latin Dissertation upon Tatian, prefixed to the Oxford edition of this author in 1700. 2. *Remarques sur la Vie de Cardinal Wolsey*, published in the eighth volume of the *Mémoires*, historical and literary, collected by Father Desmolets. 3. *Description Historique & Géographique de la France, Ancienne & Moderne*, fol. 1719: this gave so much offence, by its arguments against the immediate rights of the kings of France to Transjuran Gaul, and some other provinces, that its sale was prohibited. 4. *Annales Arfacidarum*; Strasbourg, 1732, 4to. 5. *Dissertation sur la Transubstantiation*: this piece, which passed under the name of his friend the protestant minister Allix, is not doubted to be the abbé's composition. 6. Two Latin Dissertations on the early History of France, printed in the third volume of the new *Recueil des Historiens des France*, 1741. After the abbé's death, in 1754, appeared, 7. *Longueruana, ou Recueil des Pensées, des Discours, & des Conversations, de M. de Longuerue*. This is formed from collections made by his friend the abbé de Guignon, and contains free opinions on various subjects. To it is prefixed a long catalogue of writings of the author left in manuscript.

LONGUEVAL, a town of France, in the department of the Somme: nine miles north-west of Peronne.

LONGUEVAL (James), a learned French Jesuit and ecclesiastical historian, was descended from a family in humble life, and born at Santerre, near Peronne, in Picardy, in the year 1680. He was educated in grammar-learning at Amiens, and pursued his philosophical studies at Paris, where he distinguished himself among his fellow-students by his abilities and proficiency. In the year 1699 he entered into the society of Jesus; in which, after completing his course of academic studies, he taught the belles lettres during five years at the college of La Fleche with great applause, and afterwards delivered lectures for four years on divinity and the sacred scriptures. He embarked in the religious controversies of the times, and wrote a variety of pieces, which were published without his name, excepting two treatises; one on Schism, 1718, 12mo. and the other on Miracles, 1730, 4to. But his reputation is chiefly founded on his elaborate *History of the Gallican Church*, in 4to. which displays profound erudition, deep research, judicious criticism, and, upon the whole, great moderation, and is written in a beautifully-simple style. Of this work he lived only to publish eight volumes, which bring his history down to the year 1137. He had nearly completed the ninth and tenth volumes, when his labours were terminated by a stroke of apoplexy in 1735, when he was in his fifty-fifth year. The volumes which he left in an imperfect state, were completed and published by father Fontenay; who, with fathers Brumoy and Berthier, continued the author's plan, till the whole work amounted to eighteen volumes 4to. *Moreri*.

LONGUEVILLE, a town of France, in the department of the Lower Seine: nine miles south of Dieppe.

LONGUEVILLE (Mary, Duchess of Nemours), daughter of the duke de Longueville, born in the year 1625. She was married to the duke de Nemours; and wrote "Memoirs of the Court of France during the Minority of Louis XIV." which are composed with spirit, and with the fidelity of an historian who had an opportunity of becoming well acquainted with the facts recorded. They are commonly united with those of Joly, but have been printed separately. The duchess died at the age of 82, in the year 1707.

LONGUILLE, or as the Indians call it *Kenapacomaqua*, an Indian village on the north bank of Eel-river, in the north-west territory. It was destroyed by general Scott in 1791, with two hundred acres of corn in its neighbourhood.

LONGUION, a town of France, and seat of a tribunal, in the department of the Moselle. Here is a considerable

iron-forge and cannon-foundry: seven miles south-west of Longwy, and twenty-two west of Thionville. Lat. 49. 27. N. lon. 5. 41. E.

LONGUS, the author of a romance in Greek prose, entitled *Ποσειδωνία*, Pastorals, relating the loves of Daphnis and Chloe, is supposed to have lived as late as the reign of Theodosius the Great; but nothing is known of him, nor is he mentioned by any of the ancients. His work is a curious specimen of that kind of composition in its simplest form, and contains many descriptive beauties; but some of its scenes are such as the lowest modern writer would scarcely venture to paint. Several editions of it have been given, among which is one at Paris, 4to. 1713, decorated with plates from the designs of the regent duke of Orleans, to whose taste it was suited. The best edition is that of Villoison, Gr. Lat. 8vo. 2 vols. Paris, 1773. It has also appeared in the splendid typography of Bodoni at Parma. There is an English translation of this author, which is ascribed to Mr. J. Craggs, once secretary of state.

LONGWARD, a village in Herefordshire, east of Hereford.

LONGWAYS, *adv.* In the longitudinal direction.—This island stands as a vast mole, which lies *longways*, almost in a parallel line to Naples. *Addison*.

LONGWISE, *adv.* In the longitudinal direction.—He was laid upon two beds, the one joined *longwise* unto the other, both which he filled with his length. *Hakewill*.

LONGWORTH, a village in Berkshire, on the Thames; to the west of Abingdon.

LONGWORTH, a village in Lancashire, to the east of Chorley.

LONGWORTH (Lower), a village in Herefordshire, near Hereford.

LONGWY, a town of France, and principal place of a district, in the department of the Moselle, situated on the Chiers. This place was only a village, surrounded with three sharp mountains, on which a new town was built by Louis XIV. and fortified by Vauban. In the year 1792, this town was taken by the Austrians, under the command of general Clairfait, who presented himself before it at the head of 60,000 men, on the 21st of August, and bombarded the town for fifteen hours, when it surrendered; not without suspicion of treachery, as the garrison was furnished with 3500 men, and well supplied with provisions, artillery, and ammunition; this was the first place attacked, but it did not remain long in the hands of the enemy, for it was retaken in October following, the capitulation being signed the 14th of October, and possession given to general Valence on the 22d: seven posts north-north-west of Mentz, and 37½ east of Paris. Lat. 49. 32. N. lon. 5. 50. E.

LONGWY, a town of France, in the department of the Jura, on the Doubs: nine miles south of Dôle.

LONHAN/KO, a town of Birmah: sixty-five miles north of Munchaboo.

LO'NIA, a river of Croatia, which rises near Graben, and runs into the Velika six miles south of Ivantz.

LO'NICER (John), a learned German, born in 1499: after having received a good education, he became a professor at Marburg, where he died about the year 1560. He was author of a Greek and Latin Lexicon, and published an edition of Dioscorides.

LO'NICER (Adam), a physician and writer in natural history, son of the preceding, was born at Marburg in 1528. He studied at his native place and at Mentz; and, after taking the degree of doctor of physic in 1554, settled at Frankfort on the Maine as public physician of that city. He exercised this office with great reputation for thirty-two years, and died in 1586. He wrote some professional works; but is only known by his publication on natural history, entitled, "Naturalis Historiæ Opus novum, quo tractantur de Natura Arborum, Fructuum, Herbarum, Animantiumque Terrestrium, Volatillum & Aquatilium, item Gemmarum, Metallorum, &c. Delectu & Usu," in two parts, fol. Frankf. 1551 and 1555, both reprinted in 1660. The second part chiefly treats on

plants, especially those growing about Frankfort; and contains an onomasticon, or catalogue of names in various languages. The work is founded on that of Cuba, with great improvements and additions, in which Lonicer was assisted by his father-in-law Egenolf. It has been translated into German, and frequently reprinted.

LO'NICERA, *f.* [so named by Linnæus, from the subject of the preceding article.] The HONEY-SUCKLE, or WOODBINE; in botany, a genus of the class pentandria, order monogynia, natural order of aggregatæ, (caprifolia, *Juss.*) The generic characters are—Calyx: perianthium five parted, superior, small. Corolla: one-petalled, tubular; tube oblong, gibbous; border five-parted; divisions revolute, one of which is more deeply separated. Stamina: filaments five, awl-shaped, nearly the length of the corolla; antheræ oblong. Pistillum: germ roundish, inferior; style filiform, the length of the corolla; stigma obtuse-headed. Pericarpium: berry umbilicated, two-celled. Seeds: roundish, compressed.—*Essential Character.* Corolla one-petalled, irregular; berry many-seeded, two-celled, inferior; (in xylosteum one-celled, in alpigena three-celled. *Gartner.*)

Some authors separate this natural genus of shrubs; keeping the first section, or Periclymena of Linnæus together under the name of *Caprifolium*; the second, section or Chamæcerasa, under the name of *Xylosteum*; and the third with the name of *Diervilla*. The first have twining stems, the leaves of some connate, the flowers sessile in terminating heads or whorls several together. The second have upright stems, and the peduncles two-flowered, axillary and solitary. The third have many-flowered axillary and terminating peduncles.

*Species.* I. Periclymena, with a twining stem. 1. Loniceræ caprifolium, or Italian honeysuckle: flowers ringent in terminating whorls; leaves deciduous; the upper ones connate-perfoliate. The first sort is commonly called the Italian honeysuckle; of this there are two or three varieties. The early white honeysuckle is one; this is the first which flowers, always appearing in May. The branches of this are slender, covered with a light green bark, and garnished with oval leaves of a thin texture, placed by pairs, sitting close to the branches, but those which are situated towards the end of the branches, join at their base, so that the stalk seems as if it came through the leaves. The flowers are produced in whorled bunches at the end of the branches; they are white, and have a very fragrant odour, but are of short duration, so that in about a fortnight they are entirely over; and soon after the leaves appear as if blighted and sickly, making an indifferant appearance the whole summer, which has rendered them less valued than the others. The other variety is the yellow Italian honeysuckle, which is the next in succession to the white. The shoots of this are much like those of the former, but have a darker bark; the leaves are also of a deeper green; the flowers are of a yellowish red, and appear soon after the white; they are not of much longer duration, and are succeeded by red berries, containing one hard seed inclosed in a soft pulp, which ripens in the autumn. Native of the south of Europe. Cultivated by Gerard in 1596. It seems then not to have been long known; for Gerard says, "the double honeysuckle groweth now in my garden, and many others likewise in great plenty, although not long since very rare and hard to be found, except in the garden of some diligent herbarist." Italian honeysuckle is named in German *geißblatt, durchwachs, je langer je lieber, waldlilie, waldwinde, gülgensfort*; in Dutch, *italiansche kamperfolie, caprifolie, geitenblad*; in Danish, *italienske gedeblad, Skovlilie*; in Swedish, *italienske getblad*; in French, *chevre-feuille des jardins, or d'Italie*; in Italian, *madreselva, caprifoglio*; in Spanish, *madreselva*; in Portuguese, *matrisylva*.

2. Loniceræ dioica, or glaucous honeysuckle: whorls subcapitate bracted; leaves deciduous, glaucous beneath, the upper ones connate-perfoliate; corollas ringent, gibbous at the base. Murray called this species *media*, because it has the stem and manner of flowering as in the Periclymena,

LONICERA.

*The Common Honeysuckle, or Wood-bind.*

*Flora Danica*

*Tissot del.*

London: Published as the Act directs, Nov. 16. 1811. by G. Jones.

*Periclymena*, but a short corolla with a gibbous tube, as in the *Chamaecerafa*. It is a native of North America; and was introduced in 1766, by Peter Collinson, Esq. It flowers in June and July.

3. *Lonicera sempervirens*, or trumpet-honeysuckle: spikes naked, terminating; the upper leaves connate-perfoliate; corollas almost regular; tube bellying at top. This sort grows naturally in Virginia, and many other parts of North America, but has been long cultivated in the English gardens by the title of Virginia trumpet-honeysuckle. Of these there are two varieties, if not distinct species, one being much hardier than the other. The old sort, which came from Virginia, has stronger shoots; the leaves are of a brighter green; the bunches of flowers are larger, and deeper-coloured, the other which came from Carolina. These plants have the appearance of the common honeysuckle, but the shoots are weaker than any of those, except the wild sort called woodbine; they are of a purplish red colour, and smooth. The leaves are of an oblong oval shape inverted, and closely surround the stalk; of a lucid green on their upper side, but pale on their under. The flowers are produced in bunches at the end of the branches; these have long slender tubes, which are enlarged at the top, where they are cut into five almost equal segments. The outside of the flower is a bright scarlet, and the inside yellow; they have great appearance of the honeysuckle, but are not so deeply divided, nor are the segments reflexed. They have no odour; but for the beauty of their flowers, and their long continuance, together with their leaves being evergreen, they are preserved in most curious gardens. Ray mentions its being cultivated at Fulham, in the garden of bishop Compton. It was however cultivated earlier than this; namely in 1636, by John Tradescant, junior. It flowers from May to August.

4. *Lonicera grata*, or evergreen honeysuckle: flowers in terminating whorls; leaves perennial, obovate, glaucous beneath; the upper ones connate-subperfoliate; corollas ringent. This sort grows naturally in North America; it has strong branches, covered with a purple bark, which are garnished with lucid green leaves embracing the stalks, and continuing their verdure all the year. The flowers are produced in whorled bunches at the end of the branches; there are frequently two, and sometimes three, of these bunches rising one out of another; they are of a bright red on their outside, and yellow within, of a strong aromatic flavour. This sort begins to flower in June, and there is a succession of flowers till the frost puts a stop to them, so that it is the most valuable of all the sorts. Cultivated in 1739, by Mr. Miller.

5. *Lonicera implexa*, or Minorca honeysuckle: flowers ringent in whorls; bractes even: leaves perennial, smooth, oblong; the upper ones, connate-perfoliate; the uppermost dilated. Leaves smaller and narrower than in the other sorts: Native of Minorca. Introduced about 1772, by Mons. Richard. It flowers from June to September.

6. *Lonicera periclymenum*, common honeysuckle, or woodbine: flowers ringent, in terminating heads; leaves deciduous, all distinct. The common wild English honeysuckle, or woodbine, trails over bushes, and twines round the boughs of trees, with its very slender branches, which are opposite, and commonly stained with purple, in part at least or on one side. Leaves opposite ovate, underneath glaucous, all distinct, and more separated from the stem; though even in these there is a slight membranaceous ring running round the branch, and connecting the two opposite leaves. Flowers in a thick roundish whorled spike, many together, from ten or twelve to nineteen or twenty; tube an inch long, curved a little; border two-parted, both parts reflex, the upper one divided into four blunt and nearly-equal segments, the lower one linear and entire. The tube is wider and shorter, the border much longer, than in the Italian honeysuckle. On account of the border being turned back, the stamens stand much above the corolla, and the pistil much above

them. The corollas are usually red on the outside, and yellowish within; but they vary much in colour, between red, purple, and yellow, and in the shade are very pale. They are very sweet, especially in the evening. There are very small whitish blunt bodies at the base of the style, which are supposed to be the nectaries. Berries roundish, red, distinct, having the remains of the calyx adhering to them, and containing several seeds, of a yellowish-brown colour, round on one side, and flattish on the other. Native of most parts of Europe in woods and hedges, also in many parts of the Chinese empire. With us it flowers from the end of May to July. See the annexed Plate.

The early writers attribute virtues to this shrub which are now quite given up; but the beauty and exquisite fragrance of the flower still give it a place in our ornamental plantations. In climbing it turns from east to west, with most of our other English climbers; and in common with them it bears clipping and pruning well; for in a state of nature those plants that cannot ascend without the assistance of others, are often liable to lose large branches, they have therefore a proportional vigour of growth to restore accidental damages. This shrub is subject, when placed near buildings, to be disfigured and injured by aphides, vulgarly called blights; these insects were formerly supposed to be brought by the east wind, and consequently the mischief was looked upon as inevitable; but observation has corrected that error; their history is well known, but no effectual remedy against them is as yet discovered. These insects are not very numerous in spring, but as the summer advances they increase in a surprising degree; their first attacks therefore should be watched, and the branches they first appear on cut off and destroyed; for, when they have once gained ground, they are defended by their numbers. Small plants may be cleared of them by tobacco-dust or Spanish snuff, but this is not practicable for large trees. The leaves are likewise liable to be curled up by a small caterpillar, which produces a beautiful little moth, *Phalæna tortrix*. In the evening some species of Sphinges, or hawk-moths, are frequently observed to hover over the blossoms, and with their long tongues to extract the honey from the very bottom of the flowers. A considerable quantity of nectareous juice may sometimes be discerned in the tube. Insects that are too large to penetrate into the narrow part of the tube, and have not a long tongue, like the sphinges, to reach the juice, let it out by making a puncture towards the bottom, and thus tapping the liquor. The resources of animals in procuring their food are innumerable.

In English this shrub is called woodbine, honeysuckle; suckling, and caprifoly. Shakespeare seems to have distinguished the honeysuckle from the woodbind, or woodbine:

So doth the woodbine, the sweet honeysuckle  
Gently entwine. *Midf. Night Dream.*

Milton appears to have mistaken it, when he calls it the eglantine, which is the sweet briar:

Through the sweet briar or the vine,  
Or the twisted eglantine.

Shakespeare clearly distinguishes the woodbine from the eglantine:

I know a bank whereon the wild thyme blows,  
Where ox-lip and the nodding violet grows,  
O'er-canopied with luscious woodbine,  
With sweet musk-roses, and with eglantine. *Midf. N. D.*

The same poet alludes to the use of this ramping shrub for forming arbours:

And bid her steal into the pleached bower,  
Where honeysuckles ripened by the sun  
Forbid the sun to enter.—

————— Beatrice, who e'en now  
Is couched in the woodbine coverture. *Much Ado.*

In German, this shrub is called *specklilie*, *geißlilie*, *zaun-gilgen*, *waldgilgen*, *baumlilie*, *lilie unter den dornen*, *lilien-frucht*, *Deutsche gesblatt*, *Deutsche je langer je lieber*; in Dutch, *gewoone hamperfolie*, *mammetsjeskruid*; in Danish, *gedeblad*, *stoolilie*, *loberosse*, *lobelilie*; in Swedish, *malleskrad*; in French, *chevrefeuille des bois*; in Italian, *caprifoglio*, *madriveslva*, *vincibosco*, *legabosco*, *periclimeno*; in Spanish, *madriveslva*, *periclimeno*; in Portuguese, *matrisflora do norte*.

There are several varieties of this wild species; among which may be noted

β. *L. ferotina*, the late-red honeysuckle, produces a greater quantity of flowers together than either the Italian or Dutch honeysuckle, so that it makes a finer appearance than either of them during the time of flowering. It has not been so long an inhabitant of the English gardens as the Dutch honeysuckle; for about the year 1715 it was esteemed a great curiosity; when it was called the *Flemish honeysuckle*, and was probably brought over by the Flemish florists, who at that time came over annually with flowers and plants for sale.

γ. *L. Belgica*, the Dutch honeysuckle, may be trained with stems, and formed into heads, which the wild sort cannot, the branches being too weak and trailing for this purpose. The branches of this are smooth, of a purplish colour, garnished with oblong oval leaves, three inches long and an inch and three quarters broad, of a lucid green on their upper side, but pale on their under, having very short foot-stalks; they are placed by pairs, but are not joined at their base. The flowers are produced in bunches at the end of the branches, each flower arising out of a scaly cover, which cover, after the flowers fade, forms an oval head, whose scales lie over each other like those of fish. The flowers are of a reddish colour on their outside, and yellowish within, of a very agreeable odour. This sort flowers in June, July, and August. The stems are stronger, the leaves larger, the flowers and heads of berries larger, and the corollas redder, than in our wood-bird.

δ. *L. quercifolia*, has sinuate leaves, cut like the oak, and smooth. Found first near Oxford by Mr. Jenner; and afterwards by Mr. Knowlton, in the way from Hitchin to Wembly; also in Sir John Woodhouse's woods, Norfolk, by Mr. Woodward. There is also a variety with variegated leaves.

7. *Lonicera Japonica*, or Japanese honeysuckle: flowers terminating in pairs, sessile; all the leaves distinct; stem twining. Native of Japan.

8. *Chamaecerasa*, with two-flowered peduncles. 8. *Lonicera nigra*, or black-berried upright honeysuckle: peduncles two-flowered; berries distinct; leaves elliptic, quite entire. Height three or four feet. Leaves small, the younger ones hirsute, quite entire, but plaited a little, so as to appear serrate. Berries black, a little oblong, containing three, five, and sometimes ten, seeds. Native of France, Switzerland, Austria, Silesia, and Piedmont; and flowers in March, April, and May; cultivated in 1683.

9. *Lonicera Tatarica*, or Tartarian upright honeysuckle: peduncles two-flowered; berries distinct; leaves cordate, obtuse. This grows about the same height with the preceding and fourteenth sort, and bears a great resemblance to them in the branches. But the leaves are heart-shaped; and the berries red, growing sometimes single, at others double, and frequently there are three joined together; they are about the same size with the preceding. Professor Pallas describes it more particularly thus: It is a tree frequently a fathom in height, but commonly less, rising with several trunks, often thicker than the wrist, spreading, branched very much from the bottom; covered with a brownish-grey smoothish bark, cloven longitudinally. Branches knobbed, with a whitish-grey smooth bark, shooting off the epidermis. Shoots opposite, smooth, bearing both leaves and flowers. Leaves opposite, tender, bright glaucous green, petioled, cordate-lanceolate, very smooth, except the edge which is ciliated

with very tender hairs. Calyx above the germ, minute, five-toothed, the teeth blunt and erose, reddish; corollas before they open parallel, club-shaped, of a deep rose colour; when open flesh-coloured, diverging; when the flower is imperfectly expanded, the three upper segments frequently, the two lower sometimes, are glued together. Berries distinct, scarlet, succulent, one of them often abortive. Seeds oblong, flat, yellowish. In shady groves it varies with a white flower. In autumn the leaves put off their fringes, and become quite smooth. Native of Russia, but not beyond 55° of latitude. In the more southern parts it flowers in May, in the eastern and in gardens at Petersburg in June. With us it flowers in April, and the fruit is ripe in July. It is frequented by the *Meloe veficatoria*, or blister-insect, which is collected from this shrub for the apothecaries. The berries are eaten by the common people, though they are nauseously bitter, and are apt to purge. The flowers have hardly any smell; the leaves are bitterish. The wood is very hard and solid, of a yellowish-grey colour, beautifully veined, and used to make walking-sticks and the handles of tools.

10. *Lonicera xylosteum*, or fly-honeysuckle: peduncles two-flowered; berries distinct; leaves quite entire, pubescent. Fly-honeysuckle rises with a strong woody stalk six or eight feet high, covered with a whitish bark, dividing into many branches. Leaves ovate, opposite, entire, and covered with a short hairy down. The flowers come out on each side of the branches, opposite, on slender peduncles, each sustaining two white flowers standing erect. The three lower segments of the corolla are narrow and reflex, the other two are broader and upright, Scopoli and Adanson say, that the berries have three cells, with two seeds in each. Miller says, that they are red and clammy, joined at their base, and ripe in the beginning of September. Linnæus tells us, that this shrub makes excellent hedges in a dry soil; that the clear parts between the joints of the shoots are used in Sweden for tobacco-pipes, and that the wood, being extremely hard, makes teeth for rakes, &c. Gmelin informs us, that the Russians prepare an empyreumatic oil from the wood, which they recommend for cold tumours and chronic pains. Animals seldom touch the leaves. Birds eat the berries only in hard weather; they are reputed purgative and emetic. Native of the north of Europe, and even of the south of France, Italy, and Hungary; common in Russia, especially the more northern parts, and in Siberia as far as the river Jenisea; also in Kamtschatka, with black berries; and in Cochinchina, according to Loureiro. According to Withering, it is a native of England. It appears in all our plantations of shrubs; and was cultivated, according to Sutherland, in 1683. It flowers in May.

11. *Lonicera Pyrenaica*, or Pyrenean upright honeysuckle: peduncles two-flowered; berries distinct; leaves oblong, smooth. This seldom rises more than three or four feet high, dividing into several spreading irregular branches. The flowers come out from the side of these, on slender peduncles, each sustaining two white flowers, which are cut into five segments almost to the bottom. It differs from the preceding in having regular corollas, divaricated branches, and smooth leaves. Native of the Pyrenean mountains and Siberia. Cultivated in 1739, by Mr. Miller; who received a plant of it from the duke d'Ayen's garden at St. Germain's. He says that it grows also naturally in Canada; and that it flowers in April.

12. *Lonicera alpigena*, or red-berried upright honeysuckle: peduncles two-flowered; berries cordate-twin; leaves oval-lanceolate. This has a short thick woody stem, which divides into many strong woody branches growing erect. Flowers upon very long slender peduncles, which come out opposite on each side of the branches, at the base of the leaves; they are red on the outside, but pale within, shaped like those of the fly-honeysuckle, but a little larger, and standing erect: they appear at the end of April, and are commonly succeeded by two ovate red berries,

berries, joined at the base, and having two punctures. They ripen at the beginning of August. Sometimes there is but one berry, which is frequently as large as a Kentish cherry. Because the berry is three-celled, and the seeds loose and shining, Adanson has separated this from the other species, under the name of *Ispica*; and Gärtner seems inclined to follow him. At this rate, we might form a genus of almost every species. Linnæus remarks, that the leaves are smooth; the corollas without any spur, and irregular; the two upper segments of the calyx scarcely distinct. Scopoli, that the leaves are shining underneath; the peduncles striated, a finger's length, with two bractes on them; the filaments hairy at the base, and the anthers of the same colour with the corolla, which according to him is red, but according to Linnæus yellow; Krocker says it is blood-red. Native of the south of Europe; cultivated by Gerard in 1596.

13. *Lonicera caucasica*, or Caucasian honeysuckle: peduncles two flowered; berries coadunate-twin; ovate-lanceolate, quite entire. Height about five feet; trunk covered with a whitish bark; branches spreading, red or hoary-testaceous; branches long, slender, wand-like. The wood is hard, weighty, like ivory, beautifully veined with green; much esteemed for walking-sticks, which are sent to Petersburg. Native of Caucasus. Called by the Russians *tozyskun*, and by the Tartars *tokus-tuuu*, which signifies nine skins; this shrub every year casting its epidermis, which adheres copiously to the twigs.

14. *Lonicera cærulea*, or blue-berried upright honeysuckle: peduncles two-flowered; berries coadunate-globular; styles undivided. This seldom rises more than four or five feet high. The flowers appear in March, April, or May; and the berries ripen in August. The wood is very hard, beautifully veined with grey and pale yellow. Berries at first subglobular; when ripe oblong, large, dark blue, with a bitterish purple juice, and six or eight small, oblong, acute, yellow seeds; the purple juice stains paper of a strong colour, and might perhaps be useful in dyeing. Native of Switzerland, Austria, Siberia as far as Kamtschatka, and in the islands adjacent to America. Cultivated here in 1724.

III. Stem upright, peduncles many-flowered. 15. *Lonicera mongolica*, or Russian honeysuckle: peduncles many-flowered; berries simple, one-flowered; leaves ovate, serrate, pubescent. This is smaller than *L. xylosteum*; upright, with slender branches, and with a whitish-grey outer bark; leaves fewer, opposite, petioled, hoary underneath. Grows not only in the desert of the Mongols in the Russian empire, but in Dauria.

16. *Lonicera symphoricarpos*, or shrubby St. Peter's-wort: heads lateral, peduncled; leaves petioled. Height about four feet, sending out many slender branches. The flowers are produced in whorls round the stalk; they are of an herbaceous colour, and appear in August. The fruit, which is hollow, and shaped like a pottage-pot, ripens in the winter: it is fleshy, globular, of the form and size of the flowers of *Arbutus*, four-celled, containing cartilaginous roundish seeds. The flowers and fruits are axillary; and, being in close clusters, Dillenius gave this shrub the name of *Symphoricarpos*. Native of Virginia and Carolina; flowers in August and September.

17. *Lonicera bubalina*, or Cape honeysuckle: heads terminating, peduncled; leaves oblong, quite entire, smooth. Found by Sparrman at the Cape of Good Hope, where the Dutch call it *buffelhorn*.

18. *Lonicera diervilla*, or yellow-flowered upright honeysuckle: racemes terminating; leaves serrate. This is a low shrub, seldom rising more than three feet high. The berries are oval, black, four-celled, with one hard seed in each cell; in England they are rarely formed, and never come to maturity. The roots creep far under ground, and send out many stems; many of these which come up in the spring produce flowers the same year, so that there is generally a succession of them from May to September; the shoots of the former year flowering early,

the side branches soon following, and then the young shoots. It is a native of North America, and was first brought to Europe from Acadie by Monf. Dierville, a French surgeon, whence Tournefort gave it the name of *Diervilla*.

19. *Lonicera corymbosa*, or corymbed honeysuckle: corymbs terminating; leaves ovate, acute. Native of Peru.

*Propagation and Culture.* All the sorts of honeysuckle are propagated either by layers or cuttings. When by layers, the young shoots only should be chosen. They should be layed in the autumn, and by the following autumn they will have taken root, when they should be cut off from the plants, and either planted where they are to remain, or into a nursery to be trained up, either for standards, which must be done by fixing down stakes to the stem of each plant, to which their principal stalk should be fastened, and all the others cut off; the principal stalk must be trained to the intended height of the stem, then it should be shortened to force out lateral branches, and these should be again stopped to prevent their growing too long. By the constant repeating this as the shoots are produced, they may be formed into a sort of standard; but, if any regard is had to their flowering, they cannot be formed into regular heads; for, by constantly shortening their branches, the flower-buds will be cut off, so that few flowers can be expected; and, as it is an unnatural form for these trees, so there should be but few of them reduced to it; for, when they are planted near other bushes, in whose branches the shoots of the honeysuckles may run and mix, they will flower much better, and have a finer appearance, than when they are more regularly trained; therefore, when the plants are in the nursery, if two or three of the principal shoots are trained up to the stakes, and the others are entirely cut off, they will be fit to transplant the following autumn to the places where they are to remain; for, though the roots may be transplanted of a greater age, yet they do not thrive so well as when they are removed while they are young. When these plants are propagated by cuttings, they should be planted in September, as soon as the ground is moistened by rain. The cuttings should have four joints, three of which should be buried in the ground, and the fourth above the surface, from which the shoot should be produced. These may be planted in rows, at about a foot distance row from row, and four inches asunder in the rows, treading the earth close to them; and, as the evergreen and late-red honeysuckles are a little more tender than the other sorts, if the ground between the rows where these are planted be covered with tanners' bark, or other mulch, to keep out the frost in winter, and the drying winds of the spring, it will be of great advantage to the cuttings; and, if the cuttings of these sorts have a small piece of the two-year wood at their bottom, there will be no hazard of their taking root. The plants which are raised from cuttings are preferable to those which are propagated by layers, as they have generally better roots. These plants will grow in almost any soil or situation, except the fourth, which will not thrive where it is too much exposed to the cold in winter; it thrives best in a soft sandy loam, and will retain its leaves in greater verdure in such ground than if planted in a dry gravelly soil, where in warm dry seasons the leaves often shrink, and hang in a very disagreeable manner; nor will those sorts which naturally flower late in the autumn, continue so long in beauty on a dry ground, unless the season should prove moist and cold, as those in a gentle loam, not too stiff or wet. There are few sorts of shrubs which deserve cultivation better than most of these; for their flowers are very beautiful, and perfume the air to a great distance with their odour, especially in the mornings and evenings, and in cloudy weather, when the sun does not exhale their odour, and raise it too high to be perceptible; so that, in all retired walks, there cannot be too many of these intermixed with the other shrubs. We have seen these plants intermixed in

hedges planted either with alder or laurel, where the branches have been artfully trained between those of the hedge; from which the flowers have appeared dispersed from the bottom of the hedge to the top; and, being intermixed with the strong green leaves of the plants which principally compose the hedge, they have made a charming appearance: but the best sorts for this purpose are the evergreen and long-blowing honeysuckles, because their flowers continue in succession much longer than the others. These shrubs may also be propagated by seeds; but, unless they are sown in the autumn soon after they are ripe, the plants will not come up the first year.

The trumpet-honeysuckle is usually planted against walls or pales, to which their branches are trained; for they are too weak and rambling to be reduced to heads, and are liable to be killed in severe winters. This sort therefore should have a warm aspect, where it will begin to flower at the end of June, and there will be a succession of flowers till the autumn. It may, however, be trained like the other honeysuckles, and will flower among other shrubs, in the south border of a plantation in a warm soil, till a winter more than ordinarily severe injures or kills it. It is propagated by laying down the young branches, which will easily take root, and may be afterwards treated like the common honeysuckles. See CHIOCOCCA, HALLERIA, LORANTHUS, MITCHELLA, SPIGELIA, and TRIOSTEUM.

LONIGGO, or LEONICO, a town of Italy, in the Vicentin, on a river called Fiume Novo: it contains several churches and monasteries: fourteen miles south-south-west of Vicenza.

LONINGEN, a town of the bishopric of Munster: eight miles south-south-west of Cloppenburg.

LONJUMEAU, a town of France, in the department of the Seine and Oise: nine miles south-east of Versailles, and ten south of Paris.

LONKA, a river of Bohemia, which runs into the Elbe three miles south-east of Leitmeritz.

LONKA, a town of Poland, in the palatinate of Podolia: forty-four miles north of Kaminiac.

LONLAY, a town of France, in the department of the Lower Charente: six miles north of St. Jean d'Angely.

LONLAY L'ABBAYE, a town of France, in the department of the Orne: four miles north-west of Domfront, and nine south of Mortain.

LONS LE SAUNIER, a city of France, and capital of the department of the Jura, formerly celebrated for its salt-works, not now carried on: eleven and a half posts south-south-west of Besançon, and forty-eight and a half east of Paris. Lat. 46. 40. N. lon. 5. 38. E.

LONSCHAKOVA, a town of Russia, in the government of Irkutsk: forty miles north-north-east of Stretenski.

LON'SCHIN, a town of Prussia, in the palatinate of Culm: ten miles south of Culm.

LONSDALE. See KIRKBY LONSDALE, vol. xii. p. 759.

LON'TARUS, *f.* in botany. See BORASSUS.

LONT CHOUDSONG, a town of Thibet: thirty-five miles north-north-east of Lassa. Lat. 29. 58. N. lon. 29. 14. N.

LON'THAL, a river of Wurtemberg, which runs into the Brentz between Giengen and Brentz.

LONTHOIR, a town of the island of Banda, in the Eastern Indian Sea.

LONTOU, a town of Africa, in Galam, on the Senegal: sixty miles south-east of Galam.

LOO, a town of France, in the department of the Lys: six miles south-south-east of Dixmude.

LOO, a river of France, which runs into the Dyle near Louvain.

LOO, a river of England, which runs into the sea a little below East and West Looe.

LOO, *f.* A game at cards.—A secret indignation, that all those affections of the mind should be thus vilely thrown away upon a hand at *loo*. *Addison*.

To LOO, *v. a.* [from the sub.] To beat so as to win every trick.

To LOO, *v. a.* [from *halloo*.] To set on a dog by crying halloo. *Boyer*.

LOO'BILLY, *adj.* Awkward; clumsy.—The plot of the farce was a grammar-school; the master setting his boys their lessons, and a *loobily* country fellow putting in for a part among the scholars. *L'Esfrange*.

LOOBO'E, a town on the south coast of the island of Celebes, in Bony Bay. Lat. 2. 42. S. lon. 121. 25. E.

LOO'BY, *f.* [from *lapp*, Ger. foolish; or *llabe*, Welsh, a clown.] A lubber; a clumsy clown:

The vices trace

From the father's scoundrel race.

Who could give the *looby* such airs?

Were they mafons, were they butchers?

*Swift*.

LOOCALLA, a town of Congo, on the Zaire: nine-tens miles west of St. Salvador.

LOOCHRIS'TI, a town of France, in the department of the Scheldt, and chief place of a canton, in the district of Ghent. The place contains 3056, and the canton 14,432, inhabitants, in seven communes.

LOODUE'RA, a town of Bengal: eleven miles south of Rogonatpour.

LOOE, a small island near the coast of Cornwall: two miles south-east of Looe.

LOOE (East), a borough and market-town in Cornwall, situated at the mouth of the river Looe, twelve miles from Plymouth, and 233 west from London. It is mostly built on a flat piece of ground, having the river on the west, and the sea on the south. The streets are narrow, and the houses built with slate. The port is protected by a small battery and breast-work. The town was incorporated by queen Elizabeth in 1587; the government is vested in a mayor and nine burgesses, who jointly elect a recorder. Two members have been returned to parliament ever since 13 Elizabeth; the right of election is in the mayor, burgesses, and freemen; in number about fifty. Four annual fairs are held, and a weekly market on Saturdays.

LOOE (West), originally named *Portpigham*, a borough and market-town also situated at the mouth of the river Looe, and connected with East Looe by a stone-bridge of fifteen arches. West Looe formerly was much more considerable in point of trade, &c. than East Looe; it now presents a long street of mean irregular houses, with a small town-hall, anciently a chapel, and a few other buildings on the brink of the river. This borough, as well as the adjoining one, received its first charter of incorporation from queen Elizabeth, vesting the government in a mayor, and twelve burgesses, who with the freemen, in the whole about fifty, elect two members of parliament. A fair is held annually, and a market every Saturday.

LOOF, *f.* That part aloft of the ship which lies just before the chefs-trees, as far as the bulkhead of the caitle.

To LOOF, or LOFF, *v. a.* To bring the ship close to a wind.

LOO'FED, *adj.* [from *aloof*.] Gone to a distance:

She once being *loof*, Antony

Claps on his sea-wing, like a doating mallard.

Leaving the fight. *Shakespeare's Ant. and Cleopatra*.

LOOHOG'GO, one of the smaller Friendly Islands, surrounded by a reef of rocks. Lat. 19. 41. S. lon. 185. 36. E.

LOOJA'MA, a town on the east coast of the island of Timor. Lat. 8. 27. S. lon. 126. 18. E.

LOO'ING, *f.* The act of setting on a dog; is the act of beating the adversary so as not to let him get one trick.

To LOOK, *v. n.* [locan, Sax.] To direct the eye to or from any object. When the present object is mentioned, the preposition after *look* is either *on* or *at*; if it is sent, we use *for*; if distant, *after*; *to* was sometimes used anciently for *at*.—Abimelech *looked out at* a window, and saw Isaac. *Genesis*.—The optick nerves of such animals as *look*  
the

the same way with both eyes, as of men, meet before they come into the brain; but the optick nerves of such animals as do not look the same way with both eyes, as of fishes, do not meet. *Newton's Opticks.*

Your queen died: she was more worth such gazes Than what you look on now. *Shakespeare's Winter's Tale.*

To have power of seeing:

Fate sees thy life lodg'd in a brittle glass,  
And looks it through, but to it cannot pass. *Dryden.*

To direct the intellectual eye.—In regard of our deliverance past, and our danger present and to come, let us look up to God, and every man reform his own ways. *Bacon's New Atlas.*—We are not only to look at the bare action, but at the reason of it. *Stillingfleet.*—The man only saved the pigeon from the hawk, that he might eat it himself; and, if we look well about us, we shall find this to be the case of most mediations. *L'Estrange.*—Every one, if he would look into himself, would find some defect of his particular genius. *Locke.*—Change a man's view of things; let him look into the future state of bliss and misery, and see God, the righteous Judge, ready to render every man according to his deed. *Locke.*—To expect.—If he long deferred the march, he must look to fight another battle before he could reach Oxford. *Clarendon.*—To take care; to watch.—He that gathered a hundred bushels of apples, had thereby a property in them: he was only to look that he used them before they spoiled, else he robbed others. *Locke.*—To be directed with regard to any object.—Let thine eyes look right on, and let thine eyelids look straight before thee. *Prov. iv. 25.*—To have any particular appearance; to seem.—That spotless modesty of private and public life, that generous spirit which all other Christians ought to labour after, should look in us as if they were natural. *Spratt.*

I took the way  
Which through a path, but scarcely printed, lay;  
And look'd as lightly press'd by fairy feet. *Dryden.*

To have any air, mien, or manner.—Though I cannot tell what a man says; if he will be sincere, I may easily know what he looks. *Collier.*

What haste looks through his eyes?  
So should he look that seems to speak things strange. *Shakespeare.*

To form the air in any particular manner, in regarding or beholding.—These look up to you with reverence, and would be animated by the sight of him at whose soul they have taken fire in his writings. *Swift to Pope.*

I welcome the condition of the time,  
Which cannot look more hideously on me,  
Than I have drawn it in my fantasy. *Shakespeare.*

To Look about one. To be alarmed; to be vigilant.—If you find a waiting of your flesh, then look about you, especially if troubled with a cough. *Harvey on Consumptions.*

To Look after. To attend; to take care of; to observe with care, anxiety, or tenderness.—Politeness of manners, and knowledge of the world, should principally be looked after in a tutor. *Locke on Education.*—A mother was wont to indulge her daughters, when any of them desired dogs, squirrels, or birds; but then they must be sure to look diligently after them, that they were not ill-used. *Locke.*

To Look for. To expect.—If we sin wilfully after that we have received the knowledge of the truth, there remaineth no more sacrifice for sins, but a certain fearful looking for of judgment. *Heb. x.*

Drown'd in deep despair,  
He dares not offer one repenting prayer;  
Amaz'd he lies, and sadly looks for death. *Dryden.*

To Look into. To examine; to sift; to inspect closely; to observe narrowly.—The more frequently and narrowly we look into the works of nature, the more occasion we shall have to admire their beauty. *Atterbury.*

His nephew's levies to him appear'd  
To be a preparation 'gainst the Polack;  
But, better look'd into, he truly found  
It was against her highness. *Shakespeare's Hamlet.*

To Look on. To respect; to esteem; to regard as good or bad.—Ambitious men, if they be checked in their desires, become secretly discontent, and look upon men and matters with an evil eye. *Bacon's Essays.*

If a harmless maid  
Should ere a wife become a nurse,  
Her friends would look on her the worse. *Prior.*

To consider; to conceive of; to think.—Do we not all profess to be of this excellent religion? but who will believe that we do so, that shall look upon the actions, and consider the lives, of the greatest part of Christians? *Tillotson.*—To be a mere idle spectator.—I'll be a candle-holder, and look on. *Shakespeare.*

To Look over. To examine; to try one by one.—A young child, distracted with the variety of his play-games, tired his maid every day to look them over. *Locke.*  
Look o'er the present and the former time,  
If no example of so vile a crime  
Appears, then mourn. *Dryden's Juvenal.*

To Look out. To search; to seek.—When the thriving tradesman has got more than he can well employ in trade, his next thoughts are to look out for a purchase. *Locke.*—To be on the watch.—Is a man bound to look out sharp to plague himself? *Collier.*

To Look to. To watch; to take care of.—The dog's running away with the flesh, bids the cook look better to it another time. *L'Estrange.*

Who knocks so loud at door?  
Look to the door there, Francis. *Shakespeare.*

To LOOK, *v. a.* To seek; to search for:  
Looking my love, I go from place to place,  
Like a young fawn that late hath lost the hind,  
And seek each where. *Spenser.*

To turn the eye upon.—Let us look one another in the face. *2 Kings xiv. 8.*—To influence by looks:

Such a spirit must be left behind!  
A spirit fit to start into an empire,  
And look the world to law. *Dryden's Cleomenes.*

To Look out To discover by searching.—Casting my eye upon so many of the general bills as next came to hand, I found encouragement from them to look out all the bills I could. *Graunt.*

LOOK, *interj.* [properly the imperative mood of the verb: it is sometimes look ye.] See! lo! behold! observe!  
—Look where he comes, and my good man too; he's as far from jealousy as I am from giving him cause. *Shakespeare.*  
—Look you! we that pretend to be subject to a constitution, must not carve out our own quality; for at this rate a cobbler may make himself a lord. *Collier on Pride.*

LOOK, *f.* Air of the face; mien; cast of the countenance.—And, though death be the king of terrors, yet pain, disgrace, and poverty, have frightful looks, able to discompose most men. *Locke.*

Them gracious Heav'n for nobler ends design'd,  
Their looks erected, and their clay refin'd. *J. Dryden, jun.*

The act of looking or seeing:  
Then on the croud he cast a furious look,  
And wither'd all their strength. *Dryden.*

LOOK'-OUT, *f.* in sea-language, denotes a watchful attention to some important object, or event, which is expected to arise from the present situation of a ship, &c. It is principally used when there is a probability of danger from the real or supposed proximity of land, rocks, enemies, &c. There is always a look-out kept on a ship's fore-castle

forecastle at sea, to watch for any dangerous objects lying near her track; the mate of the watch accordingly calls often from the quarter-deck, "Look out afore there!" to the persons appointed to this service. *Falconer*.

**LOOK'-OUT**, in geography, a cape on the coast of North Carolina, being the southern part of a long, insulated, and narrow, strip of land, east of Core Sound. Its north point forms the south side of Ocrecoch-inlet, which leads into Pamlico-sound; north-east of Cape Fear, and south of Cape Hatteras, in about lat. 34. 50. N. Its excellent harbour has been filled up with sand since the year 1777.—A cape on the southern coast of Hudson's Bay, in New South Wales, east-south-east of the mouth of Severn-river. Lat. 56. N. lon. 84. W.

**LOOKE**, Higher and Lower, two hamlets near Abotsbury, Dorset.

**LOOK'ER**, *f.* One that looks :

For through infusion of celestial powre  
The duller earth it quickneth with delight,  
And lifeless spirits privily doth poure  
Through all the parts, that to the *lookers'* sight  
They seem to please. *Spenser's Hymns.*

**LOOKER-ON**, *f.* Spectator, not agent.—The Spaniard's valour lieth in the eyes of the *looker-on*; but the English valour lieth about the soldier's heart: a valour of glory and a valour of natural courage are two things. *Bacon*.

The people love him ;  
The *lookers-on*, and the enquiring vulgar,  
Will talk themselves to action. *Denham's Sophy.*

**LOOK'ING-GLASS**, *f.* A plain polished glass speculum, or mirror, to one side of which a plate of tin-foil is made to adhere by means of quicksilver; which, being impervious to the light, reflects its rays, and so exhibits the images of objects placed before it.—The surface of the lake of Nemi is never ruffled with the least breath of wind, which perhaps, together with the clearness of its waters, gave it formerly the name of Diana's *looking-glass*. *Addison*.

Command a mirror hither straight,  
That it may show me what a face I have.  
Go some of you and fetch a *looking-glass*. *Shakespeare.*

For the phenomena of looking-glass mirrors, see the article **OPTICS**; and for the most approved method of polishing and silvering looking-glasses, see **GLASS**, vol. viii. p. 605.

**LOOK'ING-GLASS PLANT**; see **HERITIERA**. *Venus's*; see **CAMPANULA**.

**LOOKNAPOUR**, a town of Hindoostan, in Oude: fifteen miles south-west of Kairabad.

**LOOKSENGA'H**, a town of Bengal: thirty-five miles north-west of Ramgur.

**LOOL**, *f.* in metallurgy, a vessel made to receive the washings of ores or metals. The heavier or more metal-line parts of the ores remain in the trough in which they are washed; the lighter and more earthy run off with the water, but settle in the lool.

**LOOM**, *f.* [from *glomus*, a bottom of thread. *Minshew*.] *Lome* is a general name for a tool or instrument. *Junius*.—The frame in which the weavers work their cloth.—He must leave no uneven thread in his loom, or, by indulging to any one sort of reprovable discourse himself, defeat all his endeavours against the rest. *Government of the Tongue*.

A thousand maidens ply the purple loom,  
To weave the bed and deck the regal room. *Prior*.

Looms are of various structures, accommodated to the various kinds of materials to be woven, and the various manner of weaving them; viz. for woollens, silks, linens, cottons, cloths of gold, and other works, as tapestry, ribbands, stockings, &c. See the article **WEAVING**.

**LOOM**, *f.* A bird.—A loom is as big as a goose; of a dark colour, dappled with white spots on the neck, back,

and wings; each feather marked near the point with two spots; they breed in Farr Island. *Grew's Museum*.

**LOOM**, a town of Norway: sixty miles south-east of Romsdal.

To **LOOM**, *v. n.* [leoman, Sax.] To appear at sea. If a ship appears big, when at a distance, they say she looms, or appears a great sail. The term is also used to denote the indistinct appearance of any distant object through a thick or misty atmosphere.

**LOOM-GA'LE**, *f.* A gentle easy gale of wind, in which a ship can carry her top-sails a-trip.

**LOOMA'KA**, a town of Bootan: twenty-eight miles south of Tassafudon.

**LOON**, *f.* [used only in Scotland.] A forry fellow; a scoundrel; a rascal.—This young lord had an old cunning rogue, or as the Scots call it, a false loon, of a grandfather, that one might call a Jack of all trades. *Arbuthnot's History of John Bull*.

**LOO'NENBURGH**, a town of New York: fifteen miles north of Kingston.

**LOONGHE'E**, a town of the kingdom of Birmah, on the Irawaddy. The meaning of the word is Great Cable, and is said to be so called from a ligament of stone which passes from a rock to the opposite shore, and which the inhabitants believe was once a rope, which, floating down the stream, was stopped and petrified. Here is a celebrated temple: fifty-five miles north of Brome. Lat. 19. 42. N.

**LOONPOU'R**, a town of Hindoostan, in Guzerat: forty miles east of Junagur.

**LOON'ZAY**. See **MAYAHOUN**.

**LOOP**, *f.* [from *loopen*, Dutch, to run.] A double through which a string or lace is drawn; an ornamental double or fringe.—An old fellow shall wear this or that sort of cut in his cloaths with great integrity, while all the rest of the world are degenerated into buttons, pockets, and loops. *Addison*.

Make me to see it, or at least to prove it,  
That the probation bear no hinge, nor loop,  
To hang a doubt on. *Shakespeare's Othello*.

[Formerly also] A loop hole.—Some dy'd, some at the loops durst scant out peep. *Fairfax*.

**Loop**, in the iron-works, is a part of a sowl or block of cast iron broken or melted off from the rest, and prepared for the forge or hammer. The usual method is, to break off the loop of about three quarters of a hundred weight. This loop they take up with their flinging-tongs, and beat it with iron sledges upon an iron plate near the fire, that so it may not fall to pieces, but be in a condition to be carried under the hammer. It is then placed under the hammer; and, a little water being drawn to make the hammer move but softly, it is beat very gently, and by this means the dross and foulness are forced off; and after this they draw more and more water by degrees, and beat it more and more till they bring it to a four-square mass, of about two feet long, which they call a bloom.

**LOOP HE'AD**, or **CAPE LEAN**, a cape on the coast of Ireland at the mouth of the Shannon. Lat. 52. 32. N. lon. 9. 49. W.

**LOO'P-HOLE**, *f.* Aperture; hole to give a passage.—Walk not near yon corner house by night; for there are blunderbusses planted in every loop-hole, that go off at the squeaking of a fiddle. *Dryden's Spanish Fryar*.

The Indian herdsman, shunning heat,  
Shelters in cool, and tends his pasturing herds,  
At loop-holes cut through thicket shades. *Milton*.

*Loop-holes*, in sea-language, are holes made in the coamings of the hatches of a ship, to fire muskets through in a close fight.—A thift; an evasion:

Needless, or needful, I not now contend,  
For still you have a loop-hole for a friend. *Dryden*.

**LOO'P-HOLED**, *adj.* Full of holes; full of openings, or void spaces:

This

This uneasy loop-hol'd gaol,  
In which y' are hamper'd by the serlock,  
Cannot but put y' in mind of wedlock. *Hudibras.*

LOOPED, *adj.* Full of holes:

Poor naked wretches, wherefoe'er you are,  
That bide the pelting of this pitiless storm!  
How shall your houselefs heads and unform sides,  
Your loop'd and window'd raggedness, defend you  
From seasons such as these? *Shakesp. King Lear.*

LOO/PING, *f.* in metallurgy, a word used by the miners of some counties of England, to express the running-together of the matter of an ore into a mass, in the roasting or first burning, intended only to calcine it so far as to make it fit for powdering. This accident, which gives the miners some trouble, is generally owing to continuing the fire too long in this process.

LOO'POOL, a lake two miles long, near Helston, in Cornwall.

LOORD, *f.* [*loerd*, Dut. *loordaut*, Fr. *lurdan*, Erse; a heavy, stupid, or witless, fellow.] A drone:

Siker, thou'st but a lazy loord,  
And rekes much of thy swinke,  
That with fond terms and witless words  
To bleer mine eyes do'st think. *Spenser's Pastorals.*

LOOS, *f.* [*los*, old Fr.] Glory:

That much he feared, least reprochfull blame  
With foule dishonour him mote blot therefore;  
Besides the losse of so much loos and fame,  
As through the world therefore should glorifie his name. *Spenser.*

LOOS, or LOO'SEUS (Cornelius), who in some of his writings assumed the name of *Cornelius Callidius*, was a Dutch catholic divine in the sixteenth century, who pursued his studies at Mentz, where he was admitted to the degree of doctor, and afterwards obtained the canonry of Gouda, which was his native place. Being obliged to quit his country during the civil wars, he retired to Brussels, where he was appointed a vicar of a parish, and spent the remainder of his life. He is entitled to notice for the liberality with which he surmounted the prejudices of his age, and the boldness with which he ventured to expose the prevailing superstitious notions relating to persons pretendedly bewitched, or said to be possessed, whom he pronounced to be weak ignorant fools, or impudent impostors. This opinion he frankly avowed in conversation, and endeavoured to disabuse the public on the subject, by printing a treatise, *De variis et falsis Magia*. But the clergy took an alarm at the author's freedom, which threatened ruin to their gainful practice of exorcisms; and, having been denounced by the jesuit Delzio, he was condemned to imprisonment, from which he was not liberated till he had retracted his opinion. For asserting it again, he was a second time committed to temporary custody; and, after his release, not being able to conceal his contempt of fraud and priestly knavery, he would have been imprisoned for the third time, and most probably proved a martyr to his honest zeal against imposture, had he not been removed by death in 1595. He was the author of some other works, which were well received, such as, 2. *Illustrium Germaniæ utriusque Scriptorum Catalogus*, 1581, 8vo. 3. *De tumultuosa Belgarum Rebelliones sedanda*, 1579, 8vo. 4. *Defensio Urbis et Orbis*, 1581, 8vo. 5. *Duellum Fidei et Rationis*, 1581, 8vo. 6. *Scopiæ Latinæ, ad purgandam Linguam a Barbarie*, 1582, 8vo. and other works, enumerated in *Valeri Andree Bibl. Belgic.*

LO'OSA, *f.* in botany. See LOASA, vol. xii. p. 852, 3.

To LOOSE, *v. a.* [*leſan*, Sax.] To unbind; to untie any thing fastened.—The shoes of his feet I am not worthy to loose. *Acts.*—Can'st thou loose the bands of Orion? *Job.*—To relax.—The joints of his loins were loosed. *Daniel.*—To unbind any one bound.—Loose him, and bring

Vol. XIII. No. 933.

him to me. *Luke.*—To free from imprisonment.—The captive hasteneth that he may be loosed. *Isaiah.*—He loosed and set at liberty four or five kings of the people of that country that Berok kept in chains. *Abbot.*—To free from any obligation.—Art thou loosed from a wife? seek not a wife. *1 Corinthians.*—To free from any thing that shackles the mind:

Ay; there's the man, who, loos'd from lust and self,  
Lest to the pretor owes than to himself. *Dryden.*

To free from any thing painful.—Woman, thou art loosed from thy infirmity. *Luke.*—To disengage:

When heav'n was nam'd, they loos'd their hold again,  
Then sprung she forth, they follow'd her again. *Dryden.*  
To solve:

Much like in foulness and deformity  
Unto that monster, whom the Theban knight  
(The father of the fatal progeny)  
Made kill herselfe for very heart's despight  
That he had red her riddle, which no wight  
Could ever loose. *Spenser.*

To LOOSE, *v. n.* To set sail; to depart by loosing the anchor.—The emperor, loosing from Barcelona, came to the port of Mago, in the island of Minorca. *Knolles.*

LOOSE, *adj.* Unbound; untied.—Lo! I see four men loose walking. *Dan. iii. 25.*—Not fast; not fixed.—Those few that clashed might rebound after the collision; or, if they cohered, yet by the next conflict might be separated again, and so on in an eternal vicissitude of fast and loose, though without ever confociating into the bodies of planets. *Bentley.*—Not tight: as, a loose robe.—Not crowded; not close:

With extended wings a host might pass,  
With horse and chariots rank'd in loose array. *Milton.*

Wanton; not chaste:

When loose epistles violate chaste eyes,  
She half consents who silently denies. *Dryden's Ovid.*

Not close; not concise; lax.—If an author be loose and diffuse in his style, the translator needs only regard the propriety of the language. *Felton.*—Vague; indeterminate; not accurate.—It is but a loose thing to speak of possibilities, without the particular designs; so is it to speak of lawfulness without the particular cases. *Bacon.*—Not strict; not rigid.—Because conscience, and the fear of swerving from that which is right, maketh them diligent observers of circumstances, the loose regard whereof is the nurse of vulgar folly. *Hooker.*—Unconnected; rambling.—Vario spends whole mornings in running over loose and unconnected pages, and with fresh curiosity is ever glancing over new words and ideas, and yet treasures up but little knowledge. *Watts on the Mind.*—Lax of body; not costive.—What hath a great influence upon the health, is going to stool regularly; people that are very loose have seldom strong thoughts or strong bodies. *Locke on Education.*—Disengaged; not enslaved.—Their principle is, to fit as loose from pleasures, and be as moderate in the use of them, as they can. *Atterbury.*—Disengaged from obligation: commonly with *from*; in the following line with *of*:

Now I stand

Loose of my vow; but who knows Cato's thoughts? *Add.*  
Free from confinement.—They did not let prisoners loose homeward. *Isaiah.*—Remiss; not attentive.

To break LOOSE. To gain liberty.—If to break loose from the conduct of reason, and to want that restraint of examination which keeps us from chusing the worse, be liberty, madmen and fools are only the freemen. *Locke.*

Like two black storms on either hand,  
Our Spanish army and the Indians stand;  
This only space betwixt the clouds is clear,  
Where you, like day, broke loose from both appear. *Dryden.*

To let LOOSE. To set at liberty; to set at large; to free

from any restraint.—And let the living bird *loose* into the open field. *Lev. xiv.*—We ourselves make our fortunes good or bad; and when God *lets loose* a tyrant upon us, or a sickness, if we fear to die, or know not to be patient, the calamity fits heavy upon us. *Taylor.*

LOOSE, *f.* Liberty; freedom from restraint.—Poets should not, under a pretence of imitating the ancients, give themselves such a *loose* in lyrics, as if there were no connection in the world. *Felton on the Classics.*

The fiery Pegasus disdain  
To mind the rider's voice, or hear the reins;  
When glorious fields and opening camps he views,  
He runs with an unbounded *loose*. *Prior.*

Dismission from any restraining force.—Air at large maketh no noise, except it be sharply percussed; as in the sound of a string, where air is percussed by a hard and stiff body, and with a sharp *loose*. *Bacon.*

LOOSE-STRIFE, *f.* in botany. See ANAGALLIS and LYSIMACHIA:

The royal *loose-strife*, royal gentian, grace  
Our gardens. *Tate's Cowley.*

LOOSE-STRIFE, CODDED. See EPILOBIUM.

LOOSE-STRIFE, PURPLE, AND SPIKED. See LYTHRUM.

LOOSE-STRIFE, VIRGINIAN. See GAURA.

LOOSEDUYNEN, or LAUSDUN, a village of Holland, four miles south-south-west from the Hague. Mr. Ray, in his Journey through the Low Countries, &c. says, "Whilst we were at the Hague, we took the opportunity of viewing the burial-place of a certain lady of Zealand, in the church of Lausdun, a village of about five or six English miles from the Hague; who, as the inscription tells you, was Margaret, the wife of Herman earl of Henneberg, and daughter of Florentius earl of Holland and Zealand, and sister to William king of the Romans, &c. This lady, being about forty years of age, and meeting with a poor woman that had twins in her arms, told her that she must have been dishonest to her husband, as not believing that two children could be got at once; at which the poor woman, being highly concerned, wished that she might bring forth as many children at a birth as there were days in the year; which was fulfilled in 1276, when at one birth she was brought to bed of 365 children, of both sexes, who were baptised by Guido, a suffragan of Utrecht, in two brass basins, the sons having the name of John, and the daughters that of Elizabeth, given them; and soon after died, all in one day, as did also the mother, and were buried in this church of the village of Lausdun. This inscription is to be seen in Latin, over the two basins in which they say these children were baptised, and beneath it also this following distich:

*En tibi monstrorum nimis & memorabile factum,  
Quale nec a mundi conditione datum.*

This history is found in Erasmus, Vives, Guichardin, Camerarius, Gui Dominique, Pierre d'Oudergest, author of the Annals of Flanders, and many other authors; and what is extraordinary, as a thing well attested."

LOOSELY, *adv.* Not fast; not finally; easily to be disengaged:

I thought your love eternal: was it ty'd  
So *loosely*, that a quarrel could divide? *Dryden.*

Without bandage:  
Her golden locks for haste were *loosely* shed  
About her ears. *Fairy Queen.*

Without union or connection.—He has within himself, all degrees of perfection that exist *loosely* and separately in all second beings. *Norris.*

Part *loosely* wing the region, part more wise  
In common, rang'd in figure, wedge their way. *Milton.*

Irregularly.—A bishop, living *loosely*, was charged that

his conversation was not according to the apostles' lives. *Camden.*—Negligently; carelessly.—The chiming of some particular words in the memory, and making a noise in the head, seldom happens but when the mind is lazy, or very *loosely* and negligently employed. *Locke.*—Unsolidly; meanly; without dignity.—A prince should not be so *loosely* studied, as to remember so weak a composition. *Shakespeare.*—Unchastely:

The stage how *loosely* does Astræa tread,  
Who fairly puts all characters to bed? *Pope.*

To LOO'SEN, *v. n.* To part; to tend to separation.—When the polypus appears in the throat, extract it that way, it being more ready to *loosen* when pulled in that direction than by the nose. *Sharp's Surgery.*

To LO'OLEN, *v. a.* To relax any thing tied.—To make less coherent.—After a year's rooting, then shaking doth the tree good, by *loosening* of the earth. *Bacon's Nat. Hist.*—To separate a compages:

She breaks her back, the *loosen'd* sides give way,  
And plunge the Tuscan soldiers in the sea. *Dryden.*

To free from restraint.—It resolves those difficulties which the rules beget; it *loosens* his hands, and assists his understanding. *Dryden's Dufresnoy.*—To make not costive.—Fear *loosens* the belly; because, the heat retiring towards the heart, the guts are relaxed, in the same manner as fear also causeth trembling. *Bacon's Nat. Hist.*

LOOSENESS, *f.* State contrary to that of being fast or fixed.—The cause of the casting of skin and shell should seem to be the *looseness* of the skin or shell, that sticketh not close to the flesh. *Bacon*—Latitude; criminal levity.—A general *looseness* of principles and manners hath seized on us like a pestilence, that walketh not in darkness, but wasteth at noon-day. *Atterbury.*—Irregularity; neglect of laws.—He endeavoured to win the common people, both by strained courtesy and by *looseness* of life. *Hayward.*—Lewdness; unchastity:

Courtly court he made still to his dame,  
Pour'd out in *looseness* on the grassy ground,  
Both careless of his health and of his fame. *Spenser.*

Diarrhoea; flux of the belly.—Taking cold moveth *looseness* by contraction of the skin and outward parts. *Bacon's Nat. History.*

LOOSING, *f.* The act of unbinding; of relaxing; of delivering from any thing disagreeable.

LOO'SER, *adj.* Loose in a greater degree.

LOO'SEST, *adj.* Loose in the greatest degree.

LOOT, *f.* A weight in Holland, 32 of which are equal to 1lb. of commercial weight, and 24 = 1lb. of apothecaries' weight, or  $\frac{2}{3}$  lb. troy.

LOOTIES, *f.* [from *loot*, Arab. plunder, or pillage.] Irregular horsemen belonging to the native princes of Hindoostan, who plunder and lay waste the country, and harass the enemy in their march.

LOOTZMAN, *f.* A coasting pilot. *Phillips.*

LOO'VER, *f.* An open place on the roof of a house. *Phillips.*

LOOZ, or LOOTZ. See BORCHLOEN, vol. iii.

LOP. See TANTABEE.

To LOP, *v. a.* [derived by Skinner from *laube*, Ger. a leaf.] To cut the branches of trees.—The oak, growing from a plant to a great tree, and then *lopped*, is still the same oak. *Locke.*

The hook she bore, instead of Cynthia's spear,  
To *lop* the growth of the luxuriant year. *Pope.*

To cut any thing.—All that denominated it paradise was *lopped* off by the deluge, and that only left which it enjoyed in common with its neighbour countries. *Woodward's Nat. Hist.*

Rhyme sure in needless bonds the poet ties,  
Procrustus like, the ax or wheel applies,  
To *lop* the mangled sense, or stretch it into size. *Smith.*

LOP,

**LOP**, *f.* That which is cut from trees.—Nor should the boughs grow too big, because they give opportunity to the rain to soak into the tree, which will quickly cause it to decay, so that you must cut it down, or else both body and *lop* will be of little value. *Mortimer*.

Now thyself hath lost both *lop* and top,  
As my budding branch thou would'st crop. *Spenser*.

[From *loppa*, Swed.] A flea.

**LOP-KENT-CHIAN'**, a mountain of Thibet. Lat. 30. 14. N. lon. 85. 54. E.

**LO'PARY**, a town of Hindoostan, in Benares: ten miles north of Jionpour.

**To LOPE**, *v. n.* In the Scotch dialect, to elope, to run away.

**LOPE**, *pret. of leap*. Obsolete :

With that sprang forth a naked swain,  
With spotted wings like peacock's train,  
And laughing *lope* to a tree. *Spenser's Pastorals*.

**LO'PE DE VE'GA**. See **VEGA**.

**LO'PEN**, a village in Somersetshire; two miles from Petherton.

**LO'PES** (Fernam), the oldest of the Portuguese chroniclers, and one of the best chroniclers that any country can boast. The year of his birth is not known. He was private secretary to the infant Don Fernando, who died in captivity at Fez; afterwards chief chronicler and head keeper of the archives. He died in 1449.

It has been the subject of much discussion among the historians and bibliologists of his own country, to ascertain what are the chronicles which he wrote; but it is admitted by all, that those of Pedro I. of Fernando, and of Joam I. to the conclusion of peace with Castile, are his. The chronicles of the earlier kings (except that of Alfonso Henriques, the founder of the monarchy, which is known to be the work of Duarte Galvam), are variously attributed to him, or to Ruy de Pina, in whose name they are published. The Chronicle of Pedro was edited in 1734, by P. Joze Pereira Bayam, and reprinted in 1760. He has most absurdly and inexcusably disfigured it by substituting modern words for such as were obsolete, and torturing the orthography to the fashion of his own days. The Chronicle of Fernando, which is of considerably greater length and value, has never been published; the academy promised to edit it fifteen years ago, but it has not yet appeared. A manuscript of this work is in the possession of Mr. Southey. But the most valuable of all Fernam Lopes's writings, is his Chronicle of Joam, which is the history of the great struggle between Portugal and Castile towards the close of the fourteenth century. No pains were spared to render it as complete as possible, neither on the part of the historian himself, nor of king Duarte, by whose command this history of his father was written. The king sent into Castile to collect documents; and the chronicler, independent of the information which he received at court from persons who had borne a part in the councils and actions of those times, went over the whole kingdom to collect testimony from all the actors in the wars which he recorded. This was first published in 1644, shortly after the Braganzan revolution; never was publication better timed; never was any book better calculated to rouse a nation by the example of their fathers, and encourage them to resist those enemies whom their fathers, under like circumstances, had conquered. It is a truly excellent and admirable work. With the great advantages of singleness and wholeness of subject, it has all the manners, painting, and dramatic reality, of Froissart, conveyed in a nobler language, and vivified by a more patriotic and more poetical mind. *R. S. in Gen. Biog.*

**LOPES'CO**, a town of Naples, in Abruzzo Ultra: nineteen miles south-west of Aquila.

**LO'PEZ** (Gregorio), a celebrated Spanish lawyer, born at Guadaloupe at the latter end of the fifteenth or commencement of the sixteenth century. He collated and

edited the laws of Alonso the Wise, known by the title of *Las Siete Partidas*, and added a commentary, which has been retained in most of the subsequent editions; and, so far as this commentary, or gloss as it is called, refers to the sources of the Partidas in the canon and civil law, it is important; but in other respects it seems to be of little value. Lopez studied at Salamanca, and was one of the royal council of the Indies. The time of his death is not known. *R. S. in Gen. Biog.*

**LOPE'ZIA**, *f.* [dedicated by Cavanilles to the memory of the licentiate *Thomas Lopez*, a native of Burgos, who had an honourable appointment in America in the reign of the emperor Charles V. and is said to have written a compendium of natural history, after his return; which still remains in manuscript, under the title of a Treatise on the Three Elements of Air, Water, and Earth.] In botany, a genus of the class monandria order monogynia, natural order onagræ, *Juss.* (See Sims and König's Annals of Botany, 532.) The generic characters are—Calyx: perianthium superior, of four oblong concave coloured deciduous leaves; three of them ascending; the fourth, rather the largest, pointing downwards. Corolla: irregular. Petals four, spreading, longer than the calyx; the two uppermost oblong, erect, parallel, with a gland at the base, and supported by cylindrical claws; two lateral ones spatulate, widely spreading. Nectary obovate, folded, on a bent elastic stalk, parallel to the lower leaf of the calyx. Stamina: filament one, awl-shaped, ascending, opposite to the nectary, half as long as the upper petals; antheræ terminal, ovate, simple, of two cells, embraced in an early state by the folded limb of the nectary. Pistillum: germen inferior, nearly globose, smooth; style thread-shaped, somewhat declining, as long as the stamen; stigma capitate, downy. Pericarpium: capsule globular, of four cells, opening at the top by four valves. Seeds: minute, ovate, numerous. Receptacle: square.—*Essential Character.* Calyx superior, of four unequal leaves; corolla irregular, of four petals; nectary stalked, folded, opposite to the stamen; capsule of four cells and four valves; seeds numerous.

*Species*. 1. *Lopezia hirsuta*, or hairy *lopezia*: leaves ovate, downy. Stem round, hairy. Native of Mexico. Mr. John Hunnemann obtained seeds from Germany, for Kew garden, in 1796. The plant is annual, kept in the stove, and flowers from September to November: stem two or three feet high, branched, pale green, clothed with longish soft hairs. Leaves alternate, stalked, ovate, pointed, minutely toothed, an inch or an inch and half long, of a bright light green, clothed on both sides with short soft hairs; those near the flowers small and sessile. Flowers spreading, prettily variegated with pink, deep red, and white, in shape not unlike some sort of little flies: when touched, they exhibit a striking elasticity, if not irritability, in the manner in which the nectary on one hand, and the stamen on the other, fly from the pistil.

2. *Lopezia racemosa*, or smooth *lopezia*: stem square, smooth, as well as the leaves. Floral leaves minute. Native of Mexico. The first seeds that arrived in this country, were sent in a letter from Madrid in 1791, by the abbé Cavanilles to Dr. Smith, Pres. Linn. Soc. and produced plants at Kew and Chelsea the following year, which bloomed abundantly in the autumn, and were much admired. This species differs from the former chiefly in its smoothness, and the squareness of its stem. In other respects they are very much alike, especially in the flowers and inflorescence, so as to have been generally thought varieties.

3. *Lopezia coronata*, or coronet-flowered *lopezia*: leaves smooth and shining; stem angular, from the decurrent footstalks; floral leaves mostly longer than the flower-stalks. Native of Mexico. Messrs. Lee and Kennedy are said to have introduced this species in 1805, which is marked as a hardy annual in Hort. Kew. It differs from the last in being of more luxuriant growth, with larger floral leaves, the whole foliage being of a deeper

deeper and more shining green. We are much inclined to suspect these differences to have arisen from differences of treatment; and that the fading of the lateral petals, as they advance in age, may be attributed to the action of strong sunshine.

LOPHANTHUS, *f.* in botany. See HYSSOPUS.

LOPHIUS, *f.* in ichthyology, the ANGLER, or SEA DEVIL; a genus of fishes of the order of branchiostegi. Generic characters—Head compressed downwards; teeth sharp, numerous; tongue broad, armed with teeth; eyes vertical; nostrils small; gills three, the aperture lateral, simple; pectoral fins broad, thick, and more or less resembling feet; dorsal and anal opposite and near the tail; body naked, covered with a thin loose skin; vent in the middle of the body; lateral line not visible.

These fish live on prey, they increase from eggs, and haunt the sea. They were by the ancients called *sea-frogs*, from their resemblance to that animal; the English have given them a still more hideous name, that of *sea toads*, or *sea-devils*; appellations which these animals seem to merit by their extraordinary deformity. The head and mouth, in some species, are far larger than all the rest of the body; the latter being in some a yard wide, and furnished all round with an infinite number of small teeth.

1. *Lophius piscatorius*, the common angler, or sea-devil. Specific character, body depressed, head rounded. This species has a terrific aspect; the mouth, which is very large and armed with five rows of teeth, standing always open, which has probably occasioned the name. The roof of the mouth, and the tongue, which is broad, short, and thick, are armed with similar teeth; and in the throat also there are two long bones with several sharp teeth. Outwardly there appear no apertures for either nostrils or ears; but there are two in the upper jaw within the mouth, which are supposed to answer the purposes of smell, if not of hearing also; for, as the mouth is always open, they are as well situated to receive the impressions of these sensations as if they were outside. Two long tufts of a horny substance, which Aristotle compares to hairs, Pliny to horns, Oppian to warts, and Belon to a fin, serve this animal to *angle* for its prey; hence Pennant's name, the *angler*. These horns have been seen two feet long in a fish of four feet three inches. Besides these, there are four more of the same kind on the back, fastened at bottom by a membrane. The eyes are placed in the upper superficies of the head; they have a black pupil, the iris is formed of white and brown streaks. Some prickles rise on the upper surface both of the head and body; and at the edges of the under surface are several little fin-like appendages at equal distances. The under surface is white, the upper brownish, without scales, and nearly smooth. The skin is thin, and so loose from the body, that it may be drawn away from the flesh. The head is flattened above and below, and the tail is compressed on both sides. In fact the fish seems made up of head and tail only. The aperture of the gills lies underneath, near the pectoral fin; the membrane is thin, and extends beyond the width of the lower flat side of the head; this membrane is fastened in front to a very strong arched cartilage; and on the sides it forms two large pouches, which some have supposed to be a retreat for their young; here it is sustained by six large round rays which extend longitudinally. The ventral fins, which lie under the pectorals, are short, broad, thick, and fleshy, jointed like arms, and on the inner side divided into fingers, resembling what is seen on the foot of a mole. With these instruments Belon asserts, that the animal walks at the bottom of the water; but their use is probably to attach themselves to hard bodies; they are of a white colour. The pectoral fins are brown above, white below, with a black border. The anal and dorsal fins are brown; the tail black. This species is found in the North Sea, in the Southern Ocean, the Mediterranean, &c. Bloch had one in his possession which was two feet nine inches long; and by no means one of the largest, if we

may believe the wonder-dealing Pontoppidan, who had one, as he says, twelve feet long; Linnæus describes one which was as thick round as a man. Some are caught near Scarborough between four and five feet in length, and whose mouth is near three feet wide. The fishermen no sooner take them, than they give them their liberty, from the supposition that they destroy the dog-fish; and, in support of that idea, some of these voracious animals have been found in their stomachs. It has been very lately discovered that this fish is viviparous, but they are not numerous. The flesh is white when dressed, and is said to taste like a frog; but, as our countrymen seldom eat frogs, we must take this upon the word of a foreigner.

Though this hideous creature might be supposed to make great ravages among the fish, yet it appears by no means to be the case; for, being a slow swimmer, probably occasioned by the great size of his head, he can only catch his prey by stratagem. He hides himself in the seaweed, behind sand-hills, stones, or pieces of rock; then, with his mouth open, he watches the fish that swim about, and throws out the slender appendages of his head, to draw their attention, moving them about in the mud; the little fish approach without fear, taking them for worms; neither are they scared at the dirty colour of the angler, which they take for a lump of earth; nor at his open mouth, which looks like a hole; and, when they think to catch these supposed worms, the angler seizes them at his ease. This fish, who swims ill, might perish for want of food, had it not these filaments, and claspers or feet likewise to stop itself and resist the violence of the waves. Being a solitary fish, and living in almost inaccessible places, they are very rarely caught. See the annexed Plate, fig. 1.

2. *Lophius Cornubicus*, the Cornish angler: body depressed, fringed at the hind-part. It may perhaps be doubted whether this be truly distinct from the preceding, or whether it may not rather constitute a sexual difference or a variety. It is mentioned by Dr. Borlase in his Natural History of Cornwall; and is said to be of a longer form than the common angler, (whence Pennant calls it the *long angler*;) with the head more bony, rough, and aculeated, as well as destitute of the fringed appendages, which take place only towards the hind-part of the body; the pectoral fins are tipped with spines, of about an inch and three quarters in length; and on the tail are similar ones, but somewhat shorter, measuring only an inch. Observed about Mount's Bay in Cornwall.

3. *Lophius mucicatus*, the mucicated angler: body depressed, orbicular, mucicated above with radiated spines. Described by Cedepe from a specimen formerly in the museum of the prince of Orange, but brought from the Hague to Paris, during the late revolutionary war, by citizen Faujas; Cedepe therefore calls it *Lophie Faujas*. Its shape is extremely flat; if the pectoral fins and tail were removed, it would be a perfect circle. The aperture of the mouth is somewhat underneath the front part of the head; above which, just at the extremity, is a little cavity, out of which arises a rounded protuberance. The nostrils are very near this cavity; each has a double aperture, of which the front one is the narrowest, and communicates with a little tube. The eyes are not large; they are so placed as with the two nostrils almost to form a square. The apertures of the gills are more backwards towards the tail than in most of the species. The jugular fins are fastened to fleshy prolongations composed of five rays divided at the extremities, similar to hands, or at least to paws; they are farther back than in the preceding species, being midway between the mouth and the pectoral fins. The pectoral fins are near the anus, consequently not far from the apertures of the gills; their fleshy productions are seen underneath. The vent is in that place where the tail joins to the body. The tail is a cone flattened underneath, about half as long as the body; its fin is rounded at the end; a small dorsal fin appears on its upper surface, and an anal on the lower.

**Lower.** All the upper part of the body and tail is armed with little tubercles and prickles with branched roots. On the under part there are two or three rows of nipples or warts, with little filaments springing from them which are more visible in the outer row; the same elevations are found along the under lip. This species is about four inches long; it is shown on the annexed Plate at fig. 2. and, for the better understanding of its conformation, the under surface is exhibited at fig. 3 of the same Plate.

4. *Lophius barbatus*, the bearded angler: body depressed, barbules from the lower jaw. Inhabits the North Sea, and is very rapacious, though only three inches and a half long. Gmelin doubts whether it be sufficiently distinguished from the following to constitute a separate species.

5. *Lophius vespertilio*, the American toad-fish: body depressed, a sharp snout. The ventral fins in this species much more strongly resemble feet, and the pectorals hands. There are tubercles on the body, which make it rough; they are hollowed out, and radiated like those on the sturgeon. The ground-colour all over is reddish; the tubercles are yellow; as are the ventral and dorsal fins, those of the breast and tail being of a fainter yellow. The eyes are large, with a black pupil enclosed in a yellow-and-white striped iris. The aperture of the mouth is small, lying underneath, and both jaws are armed with a row of little teeth bent inwards. Above the mouth are the nostrils; and over them a single barble of a horny nature, ending in a small point, which barble has no doubt the same use as in the preceding, to attract its prey. The body is broad at top, narrow towards the tail; the under surface has no tubercles, except at the edges, yet it is covered with little prickles, which make it rough to the touch. The anus is near the tail-fin. The aperture of the gills is small, crescent-shaped, and lies on the surface behind the pectoral fins. This fish is found in America, especially the southern parts. Dr. Schæpf saw it at the Bahama isles, where it is called *sea-bat*. It grows about a foot and a half long; it is very thin, and has little flesh, consequently makes but indifferent food. See the Plate, fig. 4.

3. The blunt-headed angler in Brown's Jamaica, is supposed to be a variety of this.

6. *Lophius histrio*, the spotted toad-fish: body compressed, rugged; head blunt. The head is small; the lower jaw protrudes beyond the upper, both furnished with very small teeth like a file; in the middle there is a small cartilage, which serves instead of a tongue; the lips, and indeed many other parts of the body, send out barbules. The body is laterally compressed, and exasperated with crooked spines. The head and back are broad in front, but go tapering towards the tail; the belly is thick and swelling out. From the upper lip shoots out an elastic barble, at the end of which are two long fleshy substances which seem as if formed for holding prey; behind this barble is another fleshy ray and stronger, and between that and the dorsal fin another still thicker; both are fastened to the back by a skin; these instruments help this clumsy slow-swimming animal in catching its prey. The nostrils are near the mouth; the eyes are round, they have a black pupil, and the iris is yellow, striped with brown. This fish is yellow on the sides and back, brown on the belly. The body and fins are varied with stripes and spots of a brown colour, and of different shapes; the stripes are broad in some subjects, in others only strokes; some have white spots, others brown edged with white. The pectoral and ventral fins give this animal the look of a quadruped, but the other fins show it to be a fish. The skin on the belly is thin, and only fastened to the flesh here and there by little bandages. This species is found at Brazil and in China; it generally keeps at the bottom of the water among sea-weed, or behind stones; and grows to the length of nine or ten inches. The aperture of the gills is small, lying under the pectoral fins, and goes to the middle of the lower jaw. According to Maregrave,

this fish has the quality of inflating the belly. Renard (Hist. des Poissons, tom. ii.) relates, that he had a toad-fish, which lived three days out of the water, and followed him about like a dog; but this cannot be true from the nature of fish. It has its name *histrio*, the jack-pudding, from its nimble and varied motions: it is also called *harlequin*, from its variegated skin. See the Plate, fig. 5.

The *antennarius antenna tricorni* of Commerçon's manuscript, is a variety of this, described by Cæpede. The barble which rises from the upper lip divides into three instead of two. This variety was observed by Commerçon on the east coast of Africa; it was five inches long, and about two broad.

7. *Lophius chironectes*, the black-spotted angler: body laterally compressed; a long filament from the upper lip terminating in a small fleshy mass; the body reddish, with a few black spots. The name of this species, *chironectes*, is from the similarity of its fins to hands: Commerçon calls it, "the horned fish swimming with hands," or with fins in the form of hands. The filament which rises behind the mouth is very thin and long, not divided at the summit, but terminated with a knob like what appears on the antennæ of insects; and behind this, instead of two fleshy and filamentous prolongations, there are two lumps or prominences without any filaments, the posterior one the largest and highest.

8. *Lophius bigibbus*, the variegated angler: body compressed, variegated with black and grey. The variation in the colour is the only difference exhibited by Commerçon between this species and the preceding.

9. *Lophius Commerçonii*, the black angler: body compressed; a long filament from the upper lip terminating in a knob; black, with one small white spot on each side. This species is remarkable for being almost entirely of a black colour; besides the white spots mentioned above, there is a whitish one on the upper edge of the tail-fin, and the extremities of the jugular and pectoral fins are coloured in some resemblance to the nails of feet or hands. The body is much compressed at the sides, and covered with thick-grained rough skin. The mouth opens at the extremity, or rather on the upper part of the muzzle; the upper jaw, the lip of which can be expanded or contracted at the pleasure of the animal, makes a semicircular orifice, by Commerçon compared to a small oven, which the under jaw at its rising closes up. Both jaws are exasperated by little teeth very close together, which are equally spread over the surface of the tongue, palate, and upon two bones at the entrance to the gullet. Beyond the long filament, which Commerçon calls *antenna*, rise two lumps as in the preceding species, though somewhat differing in shape. The gills are small, three on each side, sustained by a membrane; and behind the pectoral fins are two round apertures, scarcely visible, which admit water for the refreshment of these organs. Commerçon says that the jugular (or ventral) fins much resemble the fore paws of a mole. The last rays of the dorsal fin are shorter than those adjoining to them; in the black-spotted angler they are longer. The stomach is very large, the peritoneum of a blackish colour; the air-bladder very white, egg-shaped, and adheres to the back.

10. *Lophius Fergusonii*, Ferguson's Angler: two filaments from the upper lip; angular protuberances on the upper surface of the body. For this species we are indebted to our countryman, that self-taught philosopher Mr. James Ferguson. The specimen he describes in the Phil. Trans. vol. liii. pl. 13. was caught in Bristol roads in 1763. It measured four feet nine inches in length. The body was not flatted above and below, nor compressed on the sides; but was rather cylindrical, and terminated conically. The mouth was just at the extremity of the muzzle, and was armed with three rows of sharp teeth. Some sharp protuberances of a blackish colour appear on the head; and behind the upper lip are two hard yet elastic filaments, one before the other, very long, but without any membrane at their extremity. The rays of the jugular

fins are represented on the plate in the Phil. Trans. as ending in a nail; but this is a mistake. The colour is dark brown, shaded with black.

11. *Lophius striatus*, the streaked angler: this and the three following are added by Turton from the Naturalist's Miscellany. The body of the present species is compressed, and of a brown colour, marked all over, chiefly in a transverse direction, with very numerous and closely-placed narrow black streaks of unequal lengths, with fine black lines interposed; the streaks round the eyes are placed in a radiated direction. Fins as in the hifrio, and marked with black spots: mouth wide; tongue broad, and paved above with flattened teeth. From the top of the mouth a long filament, slightly dilated into an oval shape at the tip; at some distance beyond this, two strong and thick processes, as in the former species, but without filaments at their tip. Rays of the dorsal fin each terminating in a fine cirrus. Native of the South Seas; observed about the coasts of Otaheite during the first voyage of Capt. Cook. Length of the specimen described about five inches.

12. *Lophius pictus*, the painted angler: body compressed, brown, with yellowish blotches margined with red. Allied in some degree to the *Lophius hifrio*: length of the specimen described about four inches; colour dull brown, with a few very large irregular patches of pale yellow, strongly clouded on the edges with deep crimson; between these blotches are interposed a few rather small roundish black spots; over the mouth a long filament, dividing, into three at the top; beyond this a pair of thick processes, as in the two preceding species; pectoral and ventral fins strongly radiated at the ends by the fibres: Native of the Pacific Ocean; observed about Otaheite, New-Holland, &c. See the Plate, fig. 6.

13. *Lophius marmoratus*, the marbled angler: body sub-compressed, livid, with whitish and ferruginous variations, and single dorsal fin. Length of the specimen described about five inches; shape oval, or nearly resembling that of the generality of fishes; body slightly compressed; back arched, and furnished with a single and rather shallow fin, commencing at some distance beyond the head, and extending to within a small distance from the tail, where it is somewhat broader than at its origin. Pectoral fins much resembling those of the generality of fishes, the bases or arms being scarce apparent; ventrals short, arm-shaped, and terminated by thick and slightly-marked lobes, so as to resemble the paws of a quadruped; anal fin longish, and situated near the tail, which is slightly rounded. Colour on the upper parts black-brown with a few bluish clouds and spots; on the lower parts whitish; both colours breaking into each other on the sides of the fish, and the white parts being edged with dull red; eyes white, radiated with black; mouth wide; above the upper lip a long filament, forking into two at the tip. Observed about the coast of Otaheite, &c. See the Plate, fig. 7.

14. *Lophius monopterygius*, the one-finned angler: body depressed, blackish, beneath whitish; fin above the tail sub erect, ramose. This very singular fish, Dr. Shaw is doubtful where to place; it has no fin except the lobate one just above the tail; the eyes are vertical, approximate, and far behind the snout; the body roundish, a little tapering to both ends, and the tail or lobe at the end of the body rounded. It inhabits the seas of Australasia.

LO'FO, a lake of Thibet, about eighteen miles long, and nine broad. Lat. 42. 20. N. lon. 89. 52. E.

LO'PEN, a small island in the North Sea, near the coast of Lapland. Lat. 69. 43. N.

LO'PER, *f.* One that cuts trees.

LO'PERED, *adj.* Coagulated: as, *loppered* milk. Thus it is still called in Scotland.

LO'PING, *f.* The operation of cutting off the lateral or other branches of trees. Most old trees are found hollow within, which frequently proceeds from the fault of those who have the management of them, by suffering the tops to grow too large before they are lopped; this is common in the ash, elm, hornbeam, &c. It is done in or-

der to have more great wood; but the cutting off great tops often endangers the life of the trees, or wounds them, so that they yearly decay more in their bodies than the annual value of the tops; hence it is to the loss of the owner to have them so managed; and, though the hornbeam and elm will bear great tops when the body is little more than a shell, the ash, when it comes to take wet at the head, and decays, rarely bears any more at top. When timber-trees of this kind begin to decay, they should be cut down as soon as possible. When trees are at full growth, the signs of their decay are the withering or dying of many of their top branches, and the wet entering at some knots, or their being otherwise hollow or discoloured; also by their making but poor shoots, and the woodpeckers making holes in them. But the lopping of trees at ten or twelve years old, in general, preserves them much longer, and occasions the shoots to grow more into wood in one year than they do in old tops in two or three. As great boughs, ill taken off, spoil trees, they should always be taken off close and smooth, and not in a slanting manner, as is a common practice. The wood should be covered with loam and horse-dung mixed, or some of Mr. Forsyth's composition, to prevent the wet from entering the bodies of the trees, and destroying them by bringing on the rot.

The above method of lopping of trees is only, however, proper for pollard-trees; nothing being more injurious to the growth of timber-trees than lopping or cutting off great branches from them. Miller observes, that whoever will be at the trouble of trying the experiment upon two trees of equal age and size, growing near each other, by lopping or cutting off the side branches from one of them, and suffering all the branches to grow upon the other, will in a few years find the latter to exceed the former in growth every way, and not decay nearly so soon. It is generally recommended not to prune timber-trees at all; and, where they naturally grow straight and regular, they are much better let alone. But all common faults in shape may be regulated by lopping them while young, without any ill consequences to the timber. The very large forest-trees should not be lopped at all, except in cases of great necessity; and then only the side-branches should be removed, which must be done as close to the trunk as possible. The most proper seasons for the performance of this sort of business are those of the very early autumn and spring months, in most instances. It may be observed, that most sorts of resinous trees, or such as abound with a milky juice, should be lopped very sparingly, as they are subject to decay when often lopped, or cut over in their branches. The best season for lopping those kind of trees is the latter end of summer or beginning of autumn; they then seldom bleed much, and the wounds are commonly healed over before the weather sets in to be bad and severe. But very few sorts of ornamental trees should be much lopped, as it greatly injures their beauty and appearance. The only thing necessary is to take off such straggling branches as may grow out in an awkward or improper direction, and render them less ornamental. See *Martin's edit. of Miller's Gardener's Dict.*

LOP'PIS, a town of Sweden, in the province of Nyland; thirty-six miles north-north-west of Helsingfors.

LOPSCHENSKOI, a town of Russia, in the government of Archangel, on the coast of the White Sea: sixty miles west of Archangel.

LOQUA'BYR. See LOCHABER, vol. xii. p. 866.

LOQUA'CIOUS, *adj.* [*loquax*, Lat.] Full of talk; full of tongue:

In council she gives licence to her tongue;  
*Loquacious*, brawling, ever in the wrong. *Dryden.*

Speaking:

Blind British bards, with volant touch  
Traverse *loquacious* strings, whose solemn notes  
Provoke to harmless revels,

*Phillips.*

Apt to blab; not secret,

LOQUA'CIOUSNESS,

LORANTHUS.

15F76  
MF ML  
Cyphers of Melchior Lorch.

*Loranthus bicolor*, from the Coast of Coromandel.

**LOQUACIOUSNESS**, *f.* The same as  
**LOQUACITY**, *f.* Too much talk.—Why *loquacity* is  
to be avoided, the wife man gives sufficient reason; for  
in the multitude of words there wanteth not sin. *Ray*.

**LOR'A**, a woman's name.

**LOR'A**, a town of Spain, in the province of Seville: eight miles north of Carmona.

**LOR'A**, a castle of Westphalia, in the county of Hohenstein, which gives name to a lordship late belonging to the king of Prussia: three miles south-east of Bleicherode, eighteen north of Muhlhausen.

**LOR'A**, a river of Chili, which runs into the Pacific Ocean in lat. 34. 46. S.

**LOR'A**, a town of Chili, on a river of the same name: 205 miles south of Valparayso.

**LORAH**, a town of Hindoostan, in Bahar: twenty-five miles west-south-west of Rotasgur.

**LORAMENT**, *f.* [*loramentum*, Lat.] A large thong; a band made of thongs. *Colz*.

**LORANCA**, a town of Spain, in New Castile: eight miles south of Huete.

**LORANGA**, a river of Africa, which runs into the Straits of Mozambique in lat. 17. 30. S.

**LORANTHUS**, *f.* [from the Gr. *λωρος*, a strap, and *ανθος*, a flower: the corolla being cut into straps.] In botany, a genus of the class hexandria, order monogynia, natural order of aggregatae, (caprifolia, *Juss.*) The generic characters are—Calyx: perianthium of the fruit inferior; margin entire, concave; of the flower superior, or the margin entire, concave. Corolla: petals six, oblong, revolute, equal. Stamina: filaments six, awl-shaped, fastened to the bases of the petals, the length of the corolla; antherae oblong. Pistillum: germ oblong, between the two calyces, or inferior; style simple, the length of the stamens; stigma blunt. Pericarpium: berry oblong, one-celled. Seed: oblong.—*Essential Character.* Germ inferior; calyx none; corolla six-cleft, revolute; stamina at the tips of the petals; berry one-seeded.

These are mostly parasitical shrubs; the leaves thickish, often opposite, but sometimes alternate. Flowers axillary, sometimes but seldom terminating, corymbed or spiked, or on one-flowered pedicels; some five-petalled, five-stamened; some one-petalled, the petals being united at the base. Jussieu suggests, that the genus might perhaps be divided, by restoring the name of *Lonicera* to such species as have six stamens, and giving that of *Loranthus* to those which have five. Some of these plants were named *Scurrula* by Browne, from *scerra*, a parasite; on account of their drawing nourishment from other trees.

*Species.* 1. *Loranthus bicolor*, or two-coloured loranthus, described and figured by Dr. Roxburgh. It is the yelling wadinika of the Telingas: *wadinika* means parasitical. Trunk scarcely any; branches numerous, ascending, woody; bark grey. Leaves nearly opposite, sessile, very short petioled; below oval, oblong, or lanced; above linear-lanced, waved, entire, reclined; veins scarcely any; from three to five inches long, and from half an inch to an inch and a half broad. Racemes axillary, single, simple, erect, many-flowered; flowers in size and appearance very like those of the honeysuckle; corolla one-petalled; tube long, a little curved, swelling from the bottom to within a third of the mouth, then contracts a little; border five-parted, upper fissure much the deepest; segments linear, reflected; filaments five, from the base of the segments of the corolla, short; antherae linear. Germ beneath naked; style the length of the corolla; stigma headed. Berry below crowned with the remaining calyx, oblong, smooth, pulpy, one-celled; seed single. This beautiful parasite, which is represented in the annexed Plate, is a native of the coast of Coromandel, growing upon the branches of various trees; it is very ramous, and flowers during the greatest part of the year; the flowers numerous and beautiful; its foliage is also beautiful. Dr. Roxburgh adds, that the upper part of the branch of the tree on which this parasite grows soon perishes.

2. *Loranthus tetrapetalus*, or four-petalled loranthus; peduncles one-flowered, subsolitary; leaves ovate, obtuse, subsessile. Leaves opposite, quite entire. There is a single flower on each side by the leaves, making four at each joint, and so along the whole stem. Native of New Zealand.

3. *Loranthus scurrula*, or Chinese loranthus: peduncles one-flowered, heaped; leaves obovate. Leaves opposite, petioled, quite entire, smooth, a little broader on one side than on the other. Flowers axillary, three to six, each on its proper pedicel. Native of China, the Philippine islands, and the coast of Coromandel, where it flowers during the wet season.

4. *Loranthus uniflorus*, or one-flowered loranthus: racemes quite simple. Leaves suboval, blunt, with a small point, entire, very smooth, coriaceous, petioled, opposite, frequently irregular. Flowers small, inodorous. Native of St. Domingo, in woods; flowering in November and December.

5. *Loranthus glaucus*, or sea-green loranthus: peduncles axillary, one-flowered; leaves ovate, glaucous. Native of the Cape of Good Hope.

6. *Loranthus Europæus*, or European loranthus: racemes simple, terminating; flowers dioecous. This has the stature of *Viscum album*, or mistletoe; flowers male and female on separate plants; berry yellow, containing one seed. Native of Austria, parasitical on oaks; also of Siberia.

7. *Loranthus Americanus*, or American loranthus: racemes somewhat branched, cymed; flowers nodding; leaves ovate, difform. Branches subdivided, leafy, smooth, pale green, brittle. It climbs over the highest trees in Jamaica, Martinico, &c. especially the *Coccoloba grandifolia*, with the root adhering firmly to the bark like mistletoe. If a large bough, on which it grows, be cut off, the next day it withers and perishes.

8. *Loranthus emarginatus*, or margined loranthus: racemes axillary, simple; leaves wedge-shaped, ovate, emarginate. Native of Hispaniola.

9. *Loranthus occidentalis*, or eastern loranthus: racemes simple; flowers irregular. Branches divaricating, subdivided, loose, round, rugged, brittle. Native of South America and the West-India Islands. Carthagena, Jamaica, &c. on trees; flowering in April and May.

10. *Loranthus loniceroides*, or lonicer-like loranthus: flowers aggregate-capitate. This has long flexuose branches; and is a native of the East Indies.

Gartner has a species of this genus, which he names *Lonicera Zeylanica*. He says, that it is not *Loranthus loniceroides*; which has the flowers sessile in a peduncled umbel; and that it does not agree with *Loranthus Americanus*, which has spherical berries disposed in a cyme; whereas in this the berries are oval in a much-lengthened raceme. The corolla is six-cleft, and it has six stamens: The embryo is inverted, and has only one cotyledon, which is almost as long as the albumen, subfusiform, solid, and without any vestige of a division. In the cavity of the albumen of old berries there is often a white pellucid crystallized resin like camphor.

11. *Loranthus stelis*: racemes trichotomous; peduncles three-cornered; flowers equal. Native of South America, and the Society Isles.

12. *Loranthus parvifolius*, or small-leaved loranthus: peduncles axillary, trifid; pedicels one-flowered; leaves ovate, entire. 13. *Loranthus pauciflorus*, or few-flowered loranthus: peduncles trichotomous, shorter than the leaves; leaves obovate. Natives of Jamaica.

14. *Loranthus pentandrus*, or five-stamened loranthus: racemes simple; flowers five-cleft; leaves alternate, petioled. Branches dilated at the leaves, which are of the same form with those of the bay, with scarcely any nerves. Native of the East Indies.

15. *Loranthus falcatus*, or sickled loranthus: racemes few-flowered, axillary; leaves linear, blunt; laterally-sickled, glaucous. Leaves sickle-shaped, with the edge

serging

verging downwards, quite entire, veinless, hoary. Flowers sickle-shaped, orange. Found by Koenig, growing on trees about Madras.

16. *Loranthus spicatus*, or spiked loranthus: spikes quadrangular. This branching shrubby plant grows on other shrubs. The root divides in two, surrounding the branch to which it fastens itself, and then uniting again; it there puts out fibres on every side, and runs along the branch frequently to a great length. Branches woody, diffused, brittle. Leaves quite entire, blunt, smooth, coriaceous, fat to the touch, petioled, opposite, with ascending veins or nerves almost all springing from the base; their figure varies, being ovate, oval, obovate, or roundish. Flowers small, inodorous, red, very many, deeply sessile in four longitudinal rows. Berry ovate-oblong, green with a red tip, and containing a milky glutinous juice. Native of Carthage in New Spain, in woods; flowering in April and May.

17. *Loranthus Cochinchensis*, or Cochin-china loranthus: peduncles many-flowered, heaped; leaves acute. Stem woody, twisted, short, very much branched. Native of Cochin-china, on the branches of trees in gardens.

18. *Loranthus pedunculatus*, or peduncled loranthus: racemes simple, solitary; flowers in threes, peduncled. Root as in *L. spicatus*; branches shining, long, reclined. Leaves cordate-ovate, quite entire, with a short point, shining, opposite, two inches long, with veins from the midrib. Flowers inodorous, small; calyx of the fruit ovate, concave, entire; petals white: it happens frequently that there are no antheræ, but cusped upright bodies in their place; and hence the flowers in this species are very frequently abortive. Native of Carthage, in woods, especially in salt marshes.

19. *Loranthus sessilis*, or sessile loranthus: racemes simple, solitary; flowers in threes, sessile. This has the habit of the preceding, but the branches as in *L. spicatus*. Leaves ovate, an inch and a half long. The flowers have no proper peduncles, but are placed on the thickened top of the partial peduncle. All the filaments are always antheriferous. Berries of a dusky greenish red colour. Native of Carthage, in woods.

LORARI, *f.* Among the Romans, officers whose business it was, with whips and scourges, to compel the gladiators to engage. The *lorarii* also punished slaves who disobeyed their masters.

LORBUS, or LERBA, a town of Africa, in the country of Tunis; anciently called *Laribus Colonia*: ten miles west-south-west of Tuberlake.

LORCA, anciently called *Cliocrata*, a town of Spain, of considerable size, in Murcia, situated very near the confines of the kingdom of Granada, at the foot of a steep mountain, consisting almost wholly of schist, and denominated the Sierra del Cano, on the right bank of the Guadalentin. It lies at the entrance of a fine rich country, abounding with trees, particularly olive and mulberry, fertilized by the above-mentioned river. The town had formerly a castle, advantageously situated on the top of the mountain, which was strong under the Moors and under the kings of Castile; but it is now in ruins. Lorca is now much larger than it was under the Moors, by whom it was taken in 714. It is divided into the upper and lower town; the former being the old part on the declivity of the hill formerly occupied by the Moors; and the latter, which is more modern and better built, stands altogether on level ground; it has four gates and several squares, and two suburbs; and its extent is sufficient to accommodate 1200 persons. The population of Lorca is computed at about 30,000 inhabitants, partly of noble ancient families, and devoted to agriculture, and partly very poor; intermixed with the other inhabitants are several wandering vagabonds, called Gitanos, or gypsies. Lorca has at present a collegiate chapter, eight parish-churches, seven monasteries, two nunneries, two hospitals, one for men and the other for women, and a college for

the instruction of youth. It is governed by a corregidor, and twenty-four regidores, who form the principality; it has a manufacture of salt-petre, but no kind of commerce. Some of the produce of the country is taken from it, particularly silk and kali; but this trade is carried on by foreigners, especially the French, who are settled here. The town suffered much in 1802 by an inundation from a large basin or reservoir, which had been constructed of an immense size in order to water the whole of its adjacent territory. This basin being undermined, the water rushed from it with such impetuosity, that it wholly destroyed one of its suburbs, consisting of about 600 houses, and several public buildings, and extended its destructive ravages to an extent of 16 leagues; so that the number of people who perished was estimated at 6000, and the animals at 24,000. The whole loss was estimated at 200 millions of reals, or about 2,083,333 $\frac{1}{3}$  sterling. Lorca is distant forty-two miles west of Carthage. Lat. 37. 38. N. lon. 2. W.

LORCH, a town of Germany, whose inhabitants subsist principally by cultivating vineyards and making wine. In 1707, 3000 Germans were defeated here by the marshal de Villars, and their commander general Janus made prisoner: twenty-four miles west-south-west of Mentz, and five south-south-east of Caub.

LORCH, or LORICH, (Melchior), an engraver of the German school, was born at Flensburg, in the duchy of Sleswic, in the year 1527; and died at Rome in 1586. He was distinguished as an artist and an antiquary: some time about the middle period of his life, he made a voyage to Constantinople, where he painted and engraved the portraits of the grand seignior and his favourite, which are now become very rare, and where he formed that collection of Turkish dresses, which were afterwards engraven on wood, and published in the year 1576, in a folio volume. His engravings are decidedly those of a man of talent: he drew with considerable spirit, and a tolerable degree of correctness. His works on wood are executed with much freedom and boldness; while in those on copper these qualities are in some degree lost in the neatness to which he laboured his finishing. Strutt speaks of a crucified figure, which is designed so much in the style of Michael Angelo, that he supposes it to be engraven after some work of that great master, as a very extraordinary production. The works of Lorich, which are held in most request among connoisseurs, are—The portrait of Martin Luther, dated 1548; that of Albert Durer, with four Latin verses, dated 1550, a very rare print; done in imitation of a cameo; Aristotle, dated 1561; St. Jerome in the Desert, dated 1546; these are on copper. His best engravings on wood, are a set mentioned above, of the costume of Turkey, in small folio, dated from 1570 to 1581; the Tiburtine Sybil, dated 1571; a woman pressing her breast, with numerous animals below, and inscribed *Ops Saturni conjux materque Deorum*, a very spirited engraving in folio, dated 1565; and the deluge, a large folio, engraven on two blocks, the impressions from which are afterwards pasted together. The works of Lorich may be known by one or other of the monograms annexed to the preceding Plate.

LORCHHAUSEN, a town of Germany, situated on the Rhine: twenty-seven miles west of Mentz

LORD, *f.* [hlæpɔd, Sax.] Monarch; ruler; governor.—We have our author's only arguments to prove, that heirs are lords over their brethren. *Locke.*

O'er love, o'er fear, extends his wide domain,  
Unconquer'd lord of pleasure and of pain.

*Johnson.*

Master; supreme person:

But now I was the lord

Of this fair mansion, master of my servants,  
Queen o'er myself; and even now, but now,

This house, these servants, and this same myself,

Arc yours, my lord.

*Shakesp. Merch. of Venice.*

A tyrant; an oppressive ruler.—Now being assembled into one company, rather without a *lord* than at liberty to accomplish their misery, they fall to division. *Hayward.*

'Tis death to fight, but kingly to controul  
Lord-like at ease, with arbitrary power,  
To peell the chiefs, the people to devour.

*Dryden.*

A husband:

I oft in bitterness of soul deplor'd  
My absent daughter, and my dearer *lord*.

*Pope.*

One who is at the head of any business; an overseer:

Grant harvest-*lord* more by a penny or two,  
To call on his fellows the better to do.

*Tusser.*

A nobleman.—Thou art a *lord*, and nothing but a *lord*. *Shakespeare.*—A general name for a peer of England.—Nor were the crimes objected against him so clear, as to give convincing satisfaction to the major part of both houses, especially that of the *lords*. *King Charles.*—A baron, as distinguished from those of higher title. The title is by courtesy also given to all the sons of dukes and marquises, and to the eldest sons of earls; and it is also a title of honour bestowed on those who are honourable by their employments; as *lord chamberlain*, *lord chancellor*, *lord chief-justice*, *lord-mayor*, &c.—The word is Saxon, but abbreviated from two syllables into one; for it was originally *hlaford*, which, by dropping the aspiration became *laford*, and afterwards, by contraction, *lord*. "The etymology of the word (says J. Coates) is well worth observing; for it was composed of *hla*, a loaf of bread, and *ford*, to give or afford; so that *hlaford*, now *lord*, implies "a giver of bread;" because, in those ages, such great men kept extraordinary houses, and fed all the poor; for which reason they were called *givers of bread*, a thing now much out of date, great men being fond of retaining the title, but few regarding the practice for which it was first given. See *LADY*.

The distinction of ranks and honours is necessary in every well-governed state; in order to reward such as are eminent for their services to the public, in a manner the most desirable to individuals, and yet without burden to the community; exciting thereby an ambitious yet laudable ardour and generous emulation in others. And emulation, or virtuous ambition, is a spring of action which, however dangerous or invidious in a mere republic or under a despotic sway, will certainly be attended with good effects under a free monarchy; where, without destroying its existence, its excesses may be continually restrained by that superior power from which all honour is derived. Such a spirit, when nationally diffused, gives life and vigour to the community; it sets all the wheels of government in motion, which, under a wise regulator, may be directed to any beneficial purpose; and thereby every individual may be made subservient to the public good, while he principally means to promote his own particular views. A body of nobility is also more particularly necessary in our mixed and compounded constitution, in order to support the rights of both the crown and the people, by forming a barrier to withstand the encroachments of both. It creates and preserves that gradual scale of dignity which proceeds from the peasant to the prince; rising like a pyramid from a broad foundation, and diminishing to a point as it rises. It is this ascending and contracting proportion that adds stability to any government; for, when the departure is sudden from one extreme to another, we may pronounce that state to be precarious. The nobility therefore are the pillars, which are reared from among the people, more immediately to support the throne; and, if that falls, they must also be buried under its ruins. Accordingly, when in the 17th century the commons had determined to extirpate monarchy, they also voted the house of lords to be useless and dangerous. And, since titles of nobility are thus expedient in the state, it is also expedient that their owners should form an independent and separate branch of the legislature. If they were con-

founded with the mass of the people, and like them had only a vote in electing representatives, their privileges would soon be borne down and overwhelmed by the popular torrent, which would effectually level all distinctions. It is therefore highly necessary that the body of nobles should have a distinct assembly, distinct deliberations, and distinct powers, from the commons. See *NOBILITY*, *PARLIAMENT*, and *PEER*.

*LORD* is also a title sometimes given to an inferior person who has a fee, and consequently the homage of tenants within his manor. For by his tenants he is called *lord*, and in some places, for distinction sake, *land-lord*. It is in this last signification that the word *lord* is principally used in our law-books, where it is divided into *lord paramount*, and *lord mesne*. *Lord mesne* is he that is owner of a manor, and by virtue thereof hath tenants holding of him in fee, and by copy of court-roll; and yet holds himself of a superior lord called *lord paramount*.

*LORD of a MANOR.* See *COPYHOLD*.

*LORD in GROSS*, he who is lord, not by reason of any manor, as the king in respect of his crown, &c. *Very Lord*, is he who is immediate lord to his tenant; and *very tenant*, he who holds immediately of that lord. So that, where there is lord paramount, lord mesne, and tenant; the lord paramount is not very lord to the tenant.

*LORD HIGH ADMIRAL.* See *ADMIRAL*, vol. i. p. 119.

*LORD CHAMBERLAIN.* See *CHAMBERLAIN*, vol. v.

*LORD CHANCELLOR.* See *CHANCELLOR*, vol. v.

*LORD LIEUTENANT*, the name of the chief governor, or viceroy, of Ireland.

*Lord Lieutenant of a County*, an officer of great distinction, appointed by the king for the managing of the standing militia of the county, and all military matters therein. They are supposed to have been introduced about the reign of Henry VIII. for they are mentioned as known officers in the statute 4 and 5 Ph. & M. c. 3. though they had not been then long in use; for Camden speaks of them, in the time of queen Elizabeth, as extraordinary magistrates constituted only in times of difficulty and danger. They are generally of the principal nobility, and of the best interest in the county; they are to form the militia in case of a rebellion, &c. and march at the head of them, as the king shall direct. They have the power of commissioning colonels, majors, captains, and subaltern officers; also to present the king with the names of deputy-lieutenants, who are to be selected from the best gentry in the county, and act in the absence of the lord-lieutenants. Subservient to the lord-lieutenants and deputy-lieutenants, are the justices of peace; who, according to the order they receive from them, are to issue out warrants to the high and petty constables, &c. for military service, &c.

*LORDS MARCHERS*, those noblemen that lived on the marches of Wales or Scotland; who in times past had their laws, and power of life and death, like petty kings; which are abolished by stat. 27 Hen. VIII. c. 26. and 1 Ed. VI. c. 10. See farther under the article *WALES*.

*LORD MAYOR of LONDON.* See p. 592 of this volume.

*LORD PRIVY SEAL*, before the 30th of Henry VIII. was generally an ecclesiastic; since which, the office has been usually conferred on temporal peers, above the degree of barons. His office is by patent. The lord privy-seal, receiving a warrant from the signet-office, issues the privy-seal, which is an authority to the lord-chancellor to pass the great seal, where the nature of the grant requires the seal. But the privy-seals for money begin in the treasury, from whence the first warrant issues, countersigned by the lord-treasurer. On the lord privy-seal are attendant clerks, who have two deputies to act for them.

*LORD STEWARD of the King's Household*, is the principal officer for the civil government of the king's servants below-stairs; over the officers of which he has jurisdiction. He is constituted by the delivery of the white staff, which is esteemed his commission. By virtue of his office, without any other commission, he judges of all offences com-

mitted within the court, or the verge thereof; and gives judgment according to their several deserts. At the death of the sovereign he breaks his staff over the grave in which the royal corpse is deposited, and thereby discharges all the officers under his power.

To LORD, *v. n.* To domineer; to rule despotically; with *over* before the subject of power.—I should choose rather to be tumbled into the dust in blood, bearing witness to any known truth of our Lord, than by a denial of truths, through blood and perjury, wade to a sceptre, and lord it in a throne. *South.*

But, if thy passions lord it in thy breast,  
Art thou not still a slave?

*Dryden's Persius.*

LORD'S DAY, or SUNDAY, the day set apart for the service of God, to be kept religiously, and not be profaned. Profanation of the Lord's Day, vulgarly called sabbath-breaking, is classed by Blackstone amongst offences against God and religion, punished by the laws of England; for, besides the notorious indecency and scandal of permitting any secular business to be publicly transacted on that day in a country professing Christianity, and the corruption of morals which usually follows its profanation, the keeping one day in seven holy, as a time of relaxation and refreshment, as well as for public worship, is of admirable service to a state, considered merely as a civil institution. The laws of king Athelstan forbade all merchandising on the Lord's Day, under very severe penalties. And by the stat. 27 Hen. VI. c. 5, no fair or market shall be held on the principal festivals, Good Friday, or any Sunday, (except the four Sundays in harvest,) on pain of forfeiting the goods exposed to sale. And by the stat. 1 Car. I. c. 1, no person shall assemble, out of their own parishes, for any sport whatsoever, upon this day; nor, in their parishes, shall use any bull or bear-bating, interludes, plays, or other unlawful exercises, or pastimes; on pain that every offender shall pay 3s. 4d. to the poor. This statute does not prohibit, but rather impliedly allows, any innocent recreation or amusement, *within their respective parishes*, even on the Lord's Day, after divine service is over; and with good reason, for at what other time can many servants and labouring men recreate themselves? By stat. 29 Car. II. c. 7, no person is allowed to do any worldly labour on the Lord's Day, (except works of necessity and charity,) or to use any boat or barge, or expose any goods to sale; except meat in public-houses, and milk before nine in the morning, and after four in the afternoon; on forfeiture of 5s. Nor shall any drover, carrier, or the like, travel upon that day, under pain of 20s. The goods exposed to sale on a Sunday to be forfeited to the poor, &c. on conviction before a justice of the peace, who may order the penalties and forfeitures to be levied by distress; and may allow one third to the informer. But this is not to extend to dressing meat in families, inns, cook-shops, or victualling-houses. Mackrel may be sold on Sundays, before and after divine service; stat. 10 and 11 Will. III. c. 24.—Forty watermen are permitted to ply on the Thames, between Vauxhall and Limehouse, on Sundays; stat. 11 and 12 Will. III. c. 21. and see the article LONDON, p. 615.—Fish-carriages are allowed to travel on Sundays, either laden or returning empty; 2 Geo. III. c. 15.—Bakers were permitted to dress dinners on a Sunday, as a work of necessity; (5 Term Rep. 449.) but, by stat. 34 Geo. III. c. 61, every baker shall be subject to a penalty of 10s. to the use of the poor, for exercising his business in any manner as a baker on the Lord's Day: except that he may sell bread between nine in the morning and one in the afternoon; and may also, within that time, bake meat, puddings, and pies, for any person who shall carry or send the same to be baked; and see the local act 48 Geo. III. c. lxx.—By stat. 21 Geo. III. c. 49, passed to restrain an indecent practice which had become very prevalent, it is enacted, that any house or place opened for public entertainment, or for publicly *debating* on any subject, upon the Lord's

Day, and to which persons shall be admitted by money or tickets sold, shall be deemed a disorderly house; the keeper (or person acting as such) shall forfeit 200l. and be punished as in the case of keeping a disorderly house; the person managing such entertainment, or acting as president, &c. of any public debate, shall forfeit 100l. every servant receiving money or tickets from the persons coming, or delivering out tickets of admission, shall forfeit 50l. and every person advertising, or printing an advertisement of such meeting, shall also forfeit 50l. Actions to be brought within six months. § 3. Law processes are not to be served on a Sunday, unless it be in cases of treason or felony; or on an escape, by virtue of stat. 5 Ann. c. 9. Sunday is not a day in law for proceedings, contracts, &c. and a sale of goods on this day in a market overt is not good. If any part of the proceedings of a suit, in any court of justice, be entered and recorded to be done on a Sunday, it makes it all void. 2 *Inst.* 264.

LORD EDGECUMB'S ISLAND, or NEW SARK, one of Queen Charlotte's Islands, in the South Pacific Ocean; about ten miles long, and three broad. Lat. 11. 10. S. lon. 165. 54. E.

LORD HOOD'S CANAL, an inlet in the gulf of New Georgia, discovered and examined by Vancouver; about forty miles in length from north to south, and three in breadth. Towards the north it communicates with Admiralty Inlet; on the south it is closed by the land. Captain Vancouver says, "We beheld a number of the natives, who did not betray the smallest apprehension at our approach. The whole assembly remained quietly seated on the grass, except two or three, whose particular office seemed to be that of making us welcome to their country. These presented us with some fish; and received in return trinkets of various kinds, which delighted them exceedingly. They attended us to their companions, who amounted in number to about sixty, including the women and children. We were received by them with equal cordiality, and treated with marks of great friendship and hospitality. A short time was here employed in exchanges of mutual civilities. The females on this occasion took a very active part. They presented us with fish, arrows, and other trifles, in a way that convinced us they have much pleasure in so doing. They did not appear to differ in any respect from the inhabitants we had before seen; and some of our gentlemen were of opinion, that they recognised the persons of one or two who had visited us on the preceding Thursday morning; particularly one man, who had suffered very much from the small-pox. This deplorable disease is not only common, but it is greatly to be apprehended is very fatal amongst them, as indelible marks were seen on many; and several had lost the sight of one eye, which was remarked to be generally the left; owing, most likely, to the virulent effects of this baneful disorder. The residence of these people here was doubtless of a temporary nature: few had taken the trouble of erecting their usual miserable huts, being content to lodge on the ground, with loose mats only for their covering." The southern extremity is situated in lat. 47. 20. N. lon. 237. 9. E.

LORD HOWE'S GROUP, a cluster of islands in the Pacific Ocean, discovered by Capt. Hunter in the year 1791. Thirty-two of these islands were distinctly counted from the mast-head, bearing north-west half north, to north-east half east; many of them at such a distance, as made it probably the whole number was not seen. Some of the men, who appeared in a boat, were a stout, clean, well-made, people, of a dark copper colour; their hair was tied in a knot on the back of their head, and they seemed to have some method of taking off their beards; for they appeared as if quite clean shaved; but they had an ornament, consisting of a number of fringes, like an artificial beard, which was fastened on between the nose and mouth, and close under the nose; to that beard hung a row of teeth, which gave them the appearance of having a mouth lower than their natural one; they had holes run through the sides of the nose into the passage, into which,

as well as through the septum, were thrust pieces of reed or bone; their arms and thighs were marked in the manner described by Capt. Cook, of some of the natives of the islands he visited in these seas, called *tatwing*, and some were painted with red and white streaks; they wore a wrapper round their middle. Their canoe was about forty feet long: it was badly made, and had an outrigger. The islands appeared very thickly covered with wood, among which the cocoa-nut was very distinguishable. Lat. 5. 30. S. lon. 159. 24. E.

LORD HOWE'S ISLAND. See HOWE'S ISLAND, vol. x. p. 436.

LORDS AND LA'DIES, *f.* in botany. See ARUM.

LORD OF MISRULE, or KING OF CHRISTMAS. It is said of the English, that formerly they were remarkable for the manner in which they celebrated the festival of Christmas; at which season they admitted variety of sports and pastimes, not known, or little practised, in other countries. The mock Prince or Lord of Misrule, whose reign extended through the greater part of the holydays, is particularly remarked by foreign writers, who consider him as a personage rarely to be met with out of England; (see the article GAME, vol. viii. p. 261.) and two or three centuries back, perhaps, this observation might be consistent with truth; but we shall upon due examination be ready to conclude, that anciently this frolicsome monarch was well known upon the continent, where he probably received his first honours. In this kingdom his power and dignities were established by royal authority, and continued after they had ceased to exist elsewhere. But even with us his government has been extinct for many years; and his name and his offices are nearly forgotten. No doubt in many instances the privileges allowed to this merry despot were abused, and not unfrequently productive of immorality; the institution itself, even if we view it in its most favourable light, is puerile and ridiculous, adapted to the ages of ignorance, when more rational amusements were not known, or at least not fashionable. "At the feast of Christmas," says Stow, "in the king's court wherever he chanced to reside, there was appointed a Lord of Misrule, or master of merry disports; the same merry fellow made his appearance at the house of every nobleman and person of distinction; and among the rest, the lord-mayor of London and the sheriffs had severally of them their Lord of Misrule, ever contending, without quarrel or offence, who should make the rarest pastimes to delight the beholders. This pageant potentate began his rule at Allhallow-eve, and continued the same till the morrow after the Feast of the Purification; in which space there were fine and subtle disguisings, masks, and mummeries." In the fifth year of Edward VI. at Christmas-time, a gentleman named George Ferrers, who was a lawyer, a poet, and an historian, was appointed by the council to bear this office; "and he," says Holinshed, "being of better calling than commonly his predecessors had been before, received all his commissions and warrauntes by the name of Maister of the Kinges Pastimes; which gentleman so well supplied his office, both of shew of sundry sights, and devises of rare invention, and in act of divers interludes, and matters of pastime, as not only satisfied the common sorte, but also were verie well liked and allowed by the council, and others of skill in lyke pastimes; but best by the young king himselfe, as appeared by his princely liberalitie in rewarding that service." It was certainly an act of much policy in the council to appoint so judicious and respectable an officer for the department at this time, and was done in order to counteract by shews and pastimes the discontent that prevailed, and divert the mind of the king from reflecting too deeply upon the condemnation of his uncle the duke of Somerset.

This master of merry disports was not confined to the court, nor to the houses of the opulent; he was also elected in various parishes, where, indeed, his reign seems to have been of shorter date. Stubbs, who lived at the close of the sixteenth century, places this whimsical personage, with his

followers, in a very degrading point of view. "First of all, the wilde heades of the parish, flocking together, chuse them a graunde captaine of mischiefe, whom they ennoble with the title of Lord of Misrule; and him they crowne with great solemnity, and adopt for their king. This king annoynted chooseth forth twentie, fourty, three-score, or an hundred, lustie guttes, like to himselfe, to waite upon his lordly majesty, and to guarde his noble person. Then every one of these men he investeth with his liveries of greene, yellow, or some other light wanton colour; and, as though they were not gawdy ynough, they bedecke themselves with scarffes, ribbons, and laces, hanged all over with gold ringes, pretious stones, and other jewels. This done, they tie aboute either legge twentie or fortie belles, with riche handkerchiefs in their handes, and sometimes laide acrosse over their sholders and neckes, borrowed, for the most part, of their pretie Mopsies and loving Bessies. Thus all things set in order, then have they their hobby-horses, their dragons, and other antiques, together with their baudie pipers, and thundring drummers, to strike up the devil's daunce with all. Then march this heathen company towards the church, their pypers piping, their drummers thundring, their stumps dauncing, their belles jynghing, their handkerchiefs fluttering aboute their heades like madde men, their hobbie-horses and other monsters skirmishing amongst the throng; and in this sorte they go to the church, though the minister be at prayer or preaching, dauncing and singing like devils incarnate, with such a confused noise that no man can heare his own voyce. Then the foolish people, they looke, they stare, they laugh, they fleere, and mount upon the formes and pewes to see these goodly pageants solemnized. Then after this, aboute the church they goe againe and againe, and so fourthe into the church-yard, where they have commonly their former-halls, their bowers, arbours, and banquetting-houfes, set up, wherein they feast, banquet, and daunce, all that day, and peradventure all that night too; and thus these tresstriall furies spend the sabbath-day. Then, for the further innobling of this honourable *lardane*, lord I should say, they have certaine papers wherein is painted some babelerie or other of imagerie worke, and these they call my Lord of Misrule's badges or cognizances. These they give to every one that will give them money to maintain them in this their heathenish devilerie; and who will not shew himselfe buxome [obedient] to them, and give them money, they shall be mocked and flouted shamefully; yea, and many times carried upon a cowlstaffe, and dived over heade and eares in water, or otherwise most horribly abused. And so besfotted are some, that they not only give them money, but weare their badges or cognizances in their hats or cappes openly. Another sorte of fantasticall foolles bring to these helhounds, the Lord of Misrule and his complices, some bread, some good ale, some new cheefe, some old cheefe, some custardes, some cracknels, some cakes, some flauns, some tartes, some creame, some meat, some one thing, and some another." *Anatomic of Abuses*, 1595.

The societies of the Temple and of Lincoln's Inn had anciently their Lord of Misrule, called King of Christmas, because he presided in the hall upon that day. This temporary potentate had a *marshal* and a *steward* to attend upon him. The marshal, in the absence of the monarch, was permitted to assume his state; and upon New-year's day he sat as *king* in the hall, when the *master of the revels*, during the time of dining, supplied the marshal's place. Upon Childermas-day they had another officer, denominated the King of the Cockneys, who also presided on the day of his appointment, and his inferior officers to wait upon him. See INNS OF COURT, vol. xi. p. 75, 81.

In Bloomfield's History of Norfolk mention is made of a pageant exhibited at Norwich upon a Shrove Tuesday, which happened in the month of March, "when one rode through the street, having his horse trapped with tynfoyle and other nyse disgyfynges, crowned as King of Christmas,

mas, in token that the season should end with the twelve moneths of the year; and afore hym went yche [each] moneth dysgyfyd as the season requiryd." *Hist. Norfolk*, vol. ii.

The dignified persons above mentioned were probably upon an equal footing with the King of the Bean, whose reign commenced upon the vigil of the Epiphany, or upon the day itself. We read, that, some time back, "it was a common Christmas gambol in both our universities," and continued, at the commencement of the 17th century, "to be usual in other places, to give the name of king or queen to that person whose extraordinary good luck it was to hit upon that part of a divided cake which was honoured above the others by having a bean in it." *Bourne's Antiq. Vulg.* chap. xvii. The reader will readily trace the vestige of this custom, though somewhat differently managed, and without the bean, in the present method of drawing, as it is called, for king and queen upon Twelfth-day.

Selden asserts, and apparently with great justice, that all these whimsical transpositions of dignity are derived from the ancient *Saturnalia*, or Feasts of Saturn, when the masters waited upon their servants, who were honoured with mock titles, and permitted to assume the state and deportment of their lords. These foolries were exceedingly popular, and continued to be practised long after the establishment of Christianity, in defiance of the threatenings and remonstrances of the clergy, who, finding it impossible to divert the stream of vulgar prejudice, permitted them to be exercised, but changed the primitive object of devotion; so that the same unhallowed orgies, which had disgraced the worship of a heathen deity, were dedicated, as it was called, to the service of the true God, and sanctioned by the appellation of a Christian institution. From this polluted stock branched out variety of unseemly and immoral sports; but none of them more daringly impious, and outrageous to common sense, than the *Festival of Fools*, in which the most sacred rites and ceremonies of the church were turned into ridicule, and the ecclesiastics themselves participated in the abominable profanations. The following outlines of this absurd diversion will no doubt be thought sufficient. In each of the cathedral churches there was a *Bishop* or an *Archbishop of Fools*, elected; and, in the churches immediately dependent upon the papal see, a *Pope of Fools*. These mock pontiffs had usually a proper suite of ecclesiastics who attended upon them, and assisted at the divine service, most of them attired in ridiculous dresses resembling pantomimical players and buffoons; they were accompanied by large crowds of the laity, some being disguised with masks of a monstrous fashion, and others having their faces smudged; in one instance to frighten the beholders, and in the other to excite their laughter; and some, again, assuming the habits of females, practised all the wanton airs of the loosest and most abandoned of the sex. During the divine service this motley crowd were not contented with singing of indecent songs in the choir, but some of them ate and drank, and played at dice, upon the altar, by the side of the priest who celebrated the mass. After the service they put filth into the censers, and ran about the church, leaping, dancing, laughing, singing, breaking obscene jests, and exposing themselves in the most unseemly attitudes with shameless impudence." Another part of these ridiculous ceremonies was, to shave the Precentor of Fools upon a stage, erected before the church, in the presence of the populace; and, during the operation, he amused them with lewd and vulgar discourses, accompanied by actions equally reprehensible. The bishop or the pope of fools performed the divine service habited in the pontifical garments, and gave his benediction to the people before they quitted the church. He was afterwards seated in an open carriage, and drawn about to the different parts of the town, attended by a large train of ecclesiastics and laymen promiscuously mingled together; and many of the most profligate of the latter assumed clerical

habits, in order to give their impious fooleries the greater effect; they had also with them carts filled with ordure, which they threw occasionally upon the populace assembled to see the procession. These spectacles were always exhibited at Christmas-time, or near to it, but not confined to one particular day; being sometimes on the feast of St. Stephen, St. John, the Innocents, the Circumcision, the Epiphany, &c. See *Encyclopedie Françoise*, under the article *Fete des Fous*.—Grotelque ceremonies, something similar to those above mentioned, certainly took place in England; but probably they were not carried to that extent of impiety, nor so grossly offensive to decency. We had a King of the Fools; but his office was suppressed at an early period, (1391.) and, we believe, not revived in the succeeding times.

The election and the investment of the *Boy-Bishop* was certainly derived from the Festival of Fools. In all the collegiate churches, at the feast of St. Nicholas, or of the Holy Innocents, and frequently at both, it was customary for one of the children of the choir, completely apparelled in the episcopal vestments, with a mitre and crozier, to bear the title and state of a bishop. He exacted a ceremonial obedience from his fellows, who, being dressed like priests, took possession of the church, and performed all the ceremonies and offices which might have been celebrated by a bishop and his prebendaries. Colet, dean of St. Paul's, though a wife and good man, countenanced this idle farce; and, in the statutes for his school at St. Paul's, expressly orders that the scholars "shall, every Childermas, that is, Innocents-day, come to Paule's church, and hear the *childe-bishop's* sermon, and after be at high masse, and each of them offer a penny to the childe-bishop; and with them the maisters and surveyors of the schole." Knight's *Life of Colet*, p. 362. and see the article LONDON, p. 214 of this volume. After having performed divine service, the bishop and his associates went about to different parts of the town, and visited the religious houses, collecting money: upon which Warton observes, "I take this opportunity of intimating, that the custom at Eton of going *ad montem*, originated from the ancient and popular practice of these theatrical processions in collegiate bodies." *History of English Poetry*, vol. iii. p. 390. These ceremonies and processions were formally abrogated by proclamation from the king and council, in the thirty-third year of Henry VIII. anno. 1542. The concluding clause of the ordinance runs thus: "Whereas heretofore dyvers and many superstitious and chylidish observances have been used, and yet to this day are observed and kept, in many and sundry places of this realm, upon St. Nicholas', St. Catharine's, St. Clement's, and Holy Innocents, and such-like holydaies; children be strangelic decked and apparayled as counterfeit priests, bishops, and women, and so ledde with songs and dances from house to house, blessing the people, and gathering of money; and boyes do singe masse, and preache in the pulpits, with such other unfitting and inconvenient usages, which tend rather to deryfyon than enie true glorie to God, or honor of his sayntes." This idle pageantry was revived by his daughter Mary; and in the second year of her reign an edict was issued from the bishop of London to all the clergy of his diocese, to have a boy-bishop in procession. The year following, 1555, "the child-bishop of Paule's church, with his company," were admitted into the queen's privy chamber, where he sang before her on Saint Nicholas-day and upon Holy Innocents day." Again the next year, says Strype, "on Saint Nicholas even, *Saint Nicholas*, that is, a boy habited like a bishop *in pontificalibus*, went abroad in most parts of London, singing after the old fashion; and was received by many ignorant but well-disposed people into their houses, and had as much good cheer as ever was wont to be had before." We may observe here, that most of the churches in which these mock ceremonies were performed, had dresses and ornaments proper for the occasion, and suited to the size of the wearers, but in every other respect resembling those appropriated to the

the real dignitaries of the church; hence it is we frequently meet with entries of diminutive habits and ornaments in the church inventories: as, *una mitra parva, cum petris, pro episcopo puerorum*; that is, "a small mitre, with jewels, for the bishop of the boys." Invent. York Cathedral. See also Dugdale's Hist. of St. Paul's, p. 205.—After the death of Mary, this silly mummery was totally discontinued. *Strutt's Sports and Pastimes*, b. iv. ch. 3.

LORD NORTH'S ISLAND, a small low and uninhabited island in the Pacific Ocean, so called in 1781. It has also been called *Nevil's Island*, and *Johnston's Island*. Lat. 3. 8. N. lon. 131. 12. E.

LORD'S SUPPER, commonly called the COMMUNION, one of the sacraments in the Christian church; in the protestant churches but one other rite is called a sacrament, which is baptism. The fourth council of Lateran decrees, that every believer shall receive the Lord's Supper, at least, at Easter; which seems to import a tacit desire that they should do it oftener, as in effect they did much oftener in the primitive days. Gratian, and the Master of the Sentences, prescribe it as a rule for the laity, to communicate three times a-year; at Easter, Whitsuntide, and Christmas. But in the thirteenth century, the practice was got on foot, never to approach the Lord's table except at Easter; and the council thought fit to enjoin it then by a law, lest the coldness and remissness should go farther still. The council of Trent renewed the same injunction, and recommended frequent communion, without enforcing it by an express decree. In the ninth century, the communion was still received by the laity in both kinds; or rather the species of bread was dipped in the wine, as is owned by the Romanists themselves. M. de Marca observes, that they received it at first in their hands; and believes the communion under one kind alone to have had its rise in the West under pope Urban, 1096, at the time of the conquest of the Holy Land; and it was more solemnly enjoined by the council of Constance in 1414. The twenty-eighth canon of the council of Clermont enjoins the communion to be received under both kinds, distinctly; adding, however, two exceptions; the one of necessity, the other of caution: the first in favour of the sick, the second of the abtemperious, or those who had an aversion for wine. It was formerly a kind of canonical punishment, for clerks guilty of any crime, to be reduced to *lay-communion*, i. e. only to receive as the laity did, viz. under one kind.

It is an important doctrine of the Romish church, that the words of the priest transubstantiate the bread and the wine into the body and blood of Christ. Hence, in that church, proceeds the custom of taking the sacred wafer in the kneeling posture, the posture of adoration: hence too, in the church of England, that embraces the doctrine of the divinity of Christ, the consecrated bread is received in the same posture of adoration, kneeling: whereas the Socinians, who believe that Christ is only a man, and a few other Christians, receive it sitting.

Some instances occur in the early ages of the church, of the practice of administering the eucharist to infants; and some few have imitated this practice in more modern times. Mr. Pierce pleads the use of it even to this day among the Greeks, and in the Bohemian churches, till near the time of the reformation; and he refers to the usage of the ancient churches, recorded by Photius, Augustine, and Cyprian. He urges from Scripture the right which children have to all the privileges of which they are capable, as well as the Jewish children under the law, who were allowed to eat of the passover, and other sacrifices; and he replies to the objection founded on the incapacity of infants to *examine themselves*, and *discern the Lord's body*, (1 Cor. xi. 28, 29.) by observing, that the precept extends only to those who were capable of understanding and complying with it; on the same ground that faith is required previous to baptism. So children were circumcised, who could not understand the reason of it, and the same also did eat the passover; and so did children bap-

tized, in the primitive church, communicate in the Lord's Supper. But it has been alleged, that the foundation of this practice was a mistaken apprehension of the absolute necessity of this ordinance in order to salvation, resulting from an erroneous interpretation of John vi. 53.

From the early accounts of this ceremony, it is unquestionable, that it received its origin from the last passover-supper which Christ ate with his disciples; at which time, agreeable to the custom of the Jews at their ordinary meals, (and continued to this day, every sabbath-night,) Christ took bread, and blessed it, or gave thanks, and afterwards gave thanks for the wine. At the passover-supper, it was usual for the master of the house to break the bread into morsels and to deliver it to the guests, in commemoration of the deliverance of the Jews out of Egypt, saying, "This is the bread of affliction, which your fathers did eat in Egypt." In allusion to this custom, Christ said, "This do in remembrance of me," speaking to persons (Jews) in the habit of practising such ceremonies; and, in order to preserve the distinction from *the body of the passover*, (for so the lamb was called,) he said, "Take eat, this is *my body*." In the new edition of Calmet's Dictionary of the Bible, Fragment CIX. we have the following passage: "It will be observed of this loaf [engraved in that work], that it is divided into *twelve* parts; I would not affirm, that the loaf used by our Lord at the eucharist was also divided into twelve parts; but, if it was, it shows how conveniently it might be distributed among his disciples; to each a part: and, *possibly*, may be thought to tend toward settling the question whether Judas partook of it? I conceive too, that such a divided loaf gives no improper comment on the passage, *We, being many, are one bread*—many partakers, each having his portion from the same loaf." 1 Cor. x. 17. Upon referring to the article EATING, in the same work, we find this paragraph. After describing certain Jewish ceremonies at table, the author says, "They take care, that after meals there shall be a piece of bread, remaining on the table; the master of the house orders a glass to be washed, fills it with wine, and, elevating it, says, *Let us bless him of whose benefits we have been partaking*: the rest answer, *Blessed be he, who has heaped favours on us, and by his goodness has now fed us*. Then he recites a pretty long prayer; all present answer *Amen!* They recite Psalm xxiv. 9, 10. *Fear the Lord, O ye his saints, &c.* Then, giving the glass with the little wine in it to be drunk round, he takes off what is left, and the table is cleared."

By way of exposing a principle when carried too far in practice, we shall insert the following quotation from "*Observations on a Journey to Naples, 1704.*" Does the custom still exist? Is it not analogous to what Bruce relates of Abyinia? Which is furthest removed from the original institution, the denial of the cup to the communicants, or the too frequent potations of its contents? "I will give you a relation here of what I have seen practised at Mentz in Germany, where I happened to be for two years together on Holy Thursday. This day, after morning service, and washing of feet, the archbishop, the great canons, and all the other priests that serve the cathedral, go in procession to a great hall, that is near the church, which they call the chapter-house, there to celebrate the supper. The seculars, that are of rank, also enter. Great benches are placed round the hall, where the company seat themselves; in the midst is a great table, covered with a table-cloth, upon which are placed large cups, with other vessels full of wine, and a vast quantity of great wafers, divided into pounds and half-pounds. The archbishop, arrayed in his pontifical habits, reads aloud the gospel, and blesses the bread and wine; having taken his part of the wafers, which is two or three pounds, because of his dignity, he goes and distributes to the rest, one pound to every grand canon, and half a pound to the rest. This they begin to eat. The archbishop in the mean time takes the cup, or rather it is held to him while he drinks; for it is so large, and so full of wine, that two of the canons can hardly support it. After he hath drunk, he sends it

round. They do not amuse themselves with taking a little, but drinking in good earnest the greatest draughts they can; and there are some of these German gentlemen who can drink a quart at a draught; so that the cup, big as it is, must soon be filled anew. The wine must be of the best Rhenish; and the officers of the cathedral have power to go and choose it that day, with great ceremony, in the elector's cellars. While the cup goes round, the musicians strike up their notes, and sing, what the papists call the *Improperia*. The company, at first, were modest and cautious; but, after the good wine began to display its virtue, they became foolish and riotous; the cup circulates five times. My host owned he had drank so many quarts of wine."

LORDA'NE, or LORDANT, *f.* [from *lord* and *Dane*.] A lazy lordly fellow. *Scott.*

LOR'DING, *f.* The act of domineering.

LOR'DING, *f.* A little lord; a lord in contempt or ridicule.—I'll question you of my lord's tricks, and yours, when you were boys. You were pretty *lordings* then. *Shakespeare's Winter's Tale.*

To *lordings* proud I tune my lay,

Who feast in bower or hall;

Though dukes they be, to dukes I say,

That pride will have a fall.

*Swift.*

A general appellation of people above the vulgar:

Then listen, *lordings*, if ye list to weat

The cause, why Satyrane and Paridell

Mote not be entertayn'd, as seemed meet,

Into that castle, (as that squire does tell.)

*Spenser.*

He call'd the worthies then, and spake them so:

*Lordings*, you know, I yielded to your will,

And gave you license with this dame to go,

To win her kingdom, and that tyrant kill.

*Fairfax.*

LOR'DLING, *f.* A diminutive lord:

Tralus, of amphibious breed,

By the dam from *lordlings* sprung,

By the fire exhal'd from dung.

*Swift.*

LOR'DLINESS, *f.* Dignity; high station:

Thou vouchsafest here to visit me,

Doing the honour of thy *lordliness*

To one so weak. *Shakespeare's Antony and Cleopatra.*

Pride; haughtiness.

LOR'DLY, *adj.* Befitting a lord.—*Lordly* sins require *lordly* estates to support them. *South*.—Proud; haughty; imperious; insolent:

Bad as yourself, my lord;

An't like your *lordly* lord protectorship! *Shakespeare.*

LOR'DLY, *adv.* Imperiously; despotically; proudly:

So when a tiger sucks the bullock's blood,

A famish'd lion, issuing from the wood,

Roars *lordly* fierce, and challenges the food.

*Dryden.*

LORDO'SIS, *f.* [*λοεδος*, Gr. bent inwards.] A distempered state of the spine, in which it is bent inwards, or towards the anterior parts. It is used in opposition to *gibbous*, or *hump-backed*.

LOR'DSHIP, *f.* Dominion; power.—Let me never know that any base affection should get any *lordship* in your thoughts. *Sidney*.—They which are accounted to rule over the Gentiles exercise *lordship* over them, and their great ones exercise authority upon them. *Mark* x. 42.

—Seignior; domain.—How can those grants of the kings be avoided, without wronging of those lords which had those lands and *lordships* given them? *Spenser on Ireland.*

What lands and *lordships* for their owner know

My quondam barber, but his worship now.

*Dryden.*

Title of honour used to a nobleman not a duke.—I could not answer it to the world, if I gave not your *lordship* my testimony of being the best husband now living. *Dryden.*

I assure your *lordship*,

The extreme horror of it almost turned me

To air, when first I heard it.

*Ben Jonson.*

Titular compellation of judges, and some other persons in authority and office.

LORE, a town of the principality of Georgia, in the province of Carduel: sixty miles south-south-west of Teflis, and sixty-five north-east of Erivan.

LORE, *f.* [from *lapan*, Sax. to learn.] Lesson; doctrine; instruction.—The law of nations, or the *lore* of war. *Fairfax.*

And, for the modest *lore* of maidenhood

Bids me not sojourn with these armed men,

Oh, whither shall I fly?

*Fairfax.*

The subtle fiend his *lore*

Soon learn'd, now milder, and thus answer'd smooth. *Milton.*

Lo! Rome herself, proud mistress now no more

Of arts, but thund'ring against heathen *lore*.

*Pope.*

Workmanship:

In her right hand a rod of peace she bore,

About the which two serpents were wound,

Entrayled mutually in lovely *lore*.

*Spenser.*

In ornithology, a naked line between the base of the bill and the eye in birds.

To LORE, *v. a.* To leave.—Neither of them she found where she them *lore*. *Spenser.*

LORE'DO, or LOREO, a town of Italy, near a canal of the Adige; anciently called *Lauretum Venetum*. It is the principal place of a district, and contains about 2300 inhabitants: twenty miles south of Venice.

LOR'EL, *f.* [from *leolan*, Sax.] An abandoned scoundrel. *Obsolete*:

Siker thou speakest like a lewd *lorell*

Of heaven to deemen so:

How be I am but rude and borrell,

Yet nearer ways I know.

*Spenser's Pastorals.*

LO'REMBERG, a town of the county of Goritz: seven miles east of Goritz.

LOREN'TE (Andres), a Spanish writer on music, and author of a book, now become very scarce, intitled *El Porque del la Musica*, in which are contained the four arts of plain-song, figurative music, or proportion of time or measure, plain counterpoint, and composition. Printed at Alcalá in 4to. 1672. This treatise defines and explains the whole art of music, as far as it was known at the time it was written.

LORENZA'GO, a town of Italy, in the Cadurin: seven miles north-east of Cadora.

LORENZINI (Francis-Maria), an eminent Italian poet, was born at Rome of a respectable family in 1680. He was educated among the Jesuits; and, although his inclination led him to the studies of polite literature, yet, a profession being necessary to his maintenance, he engaged in that of the law, which he practised with success. At length, however, he devoted himself solely to letters; and, in 1705, he entered into the Academy of the Arcadi, the chief object of which was the reformation of the bad taste which had infected Italian poetry. See vol. i. p. 46. The founders of this society proposed the simple and natural style of Petrarch as a model, in opposition to the affected and constrained diction of Marino and others. Lorenzini, though sensible of the merit of Petrarch, yet feared that the imitation of him alone would bring back the languor of the poets of the sixteenth century; and therefore borrowed for his own practice some of the force and freedom of Dante, and thus formed a manner which gave him a high reputation. He also exercised himself in Latin poetry, particularly in what were termed *Melodrames*, or pieces on religious subjects, adapted for being sung. Of these he published several, which obtained the praise of elegance, the only praise which he sought from them.

Cardinal

Cardinal Alexander Falconeri, prefect of Rome, gave him a place in his household. He had now leisure and spirits sufficient to indulge his poetical genius, and no day passed in which he did not write verses. In these he displayed an enthusiasm of conception, and elevation of language, which distinguished him among his contemporaries. They are particularly conspicuous in his pieces entitled *Capitoli*, in which he gives a free course to his ardour. He has been called the Michael Angelo of Italian poets, on account of the boldness and energy of his expressions. To excite wonder and admiration he regarded as the peculiar office of poetry, whence he was an assiduous reader of the Hebrew prophets, which never failed to inspire him with rapture. Among his tastes was a great love for anatomical researches, in which he was the associate of Cajetano Petriolo, an eminent surgeon in Rome. They conjointly made several new observations, which they meant to publish, but were anticipated by one Chermesius de Fulget, who procured them by bribing the bookseller, and added them to his Commentary on the Anatomical Tables of Eustachius. With this theft, at least, he was charged by Lorenzini, in a dialogue entitled *Il Cardo*, which was the beginning of a virulent controversy between them.

After the death of Crescembini in 1728, our poet was chosen his successor, as president or custos of the Academy of Arcadi, but not without much opposition from a party. He distinguished his presidentship by several remarkable acts. He founded five academical colonies in the neighbouring towns; and instituted a private weekly meeting of the Arcadi, at which plays of Plautus or Terence, in the original language, were performed by youths trained for the purpose. Some dialogues of Cicero, and the contest between Ajax and Ulysses from Ovid, were also dramatically recited on these occasions. These exhibitions were frequented by several persons of rank, and were favoured by pope Clement XII. who often sent considerable sums to Lorenzini to defray his expenses. After the death of cardinal Falconeri, he had fallen into necessitous circumstances, from which he was relieved by cardinal Borghese, who entered him among his noble domestics, and paid him a salary without requiring any service. He continued his theatrical exhibitions till after the death of Clement, when, in 1741, he quitted all occupations of that kind, and retired to apartments in the Borghese palace, where he applied to letters with more assiduity than ever. He wrote both Italian and Latin verses; and in the latter composed some pieces in imitation of the concise and keen style of Persius, but without his obscurity. But his studies were especially directed to the sacred writings, and he paraphrased the book of Job, and the songs of the prophets, in Italian verse. In the midst of these employments he was seized with a lingering disorder, of which he died in June 1743.

Lorenzini had a commanding person, but was negligent in his appearance. He was fond of convivial society, and jocular; but suspicious, prone to anger, somewhat turbulent and intriguing. To his friends he was singularly faithful and liberal; and his house was always open to young men who were desirous of improvement. He was a weighty and persuasive speaker, and often expressed himself with great animation. His Italian poems are few in number, but of great excellence. His *Rime* have been printed at various places. His *Melodrames* were printed at Rome separately as they appeared. He also published the lives of two of the Falconeri family, and some other pieces. *Fabroni Vit. Italor.*

LOREN'ZO, a small island in the Pacific Ocean, near the coast of Peru. Lat. 12. 4. S.

LOREN'ZO, a town of Istria, and capital of a district: nine miles north-north-east of Rovigno. Lat. 45. 16. N. lon. 13. 52. E.

LOREN'ZO, a town of South America, in Brasil, and government of Pernambuco.—A town of Naples, in Basilicata: nine miles north-east of Venosa.—A town of Naples, in Capitanata: three miles south-east of Lefina.—

A town of Naples, in Calabria Ultra: eight miles west of Bova.—A town of Campagna di Roma, near the sea-coast: eight miles east-south-east of Ostia.—A town of Paraguay: 270 miles south-east of Assumption.—A river of Sicily, which runs into the sea, on the west coast, in lat. 38. N. lon. 12. 40. E.—A town of Mexico, in the province of New Biscay: eighty-five miles north-west of Parral.—A town of Italy, in the Polesine di Rovigo: two miles south-west of Rovigo.

LOREN'ZO (Cape), a cape on the coast of Peru, in the province of Quito, west of the city of that name. Lat. 6. 20. S. lon. 80. 20. W.

LOREN'ZO DE BORUCAS, a town of Mexico, in the province of Costa Rica: sixty-five miles south of Carthago. Lat. 9. 15. N. lon. 84. 6. W.

LOREN'ZO DE PECURIES, a town of New Mexico, on the Bravo: forty-five miles north of Santa Fé.

LOREN'ZO EL REAL, a town of Spain, in Old Castile: twenty-six miles south of Segovia.

LOREN'ZO, in biography. See MEDICI, vol. xiv.

LORE'O. See LOREDO.

LORET'TO, a town of the Popedom, in the marquise of Ancona; situated on a hill, about half a league from the Adriatic. It is small, but fortified, yet not of strength sufficient to stand a siege. It is the see of a bishop, under the pope. The consequence of the place arises from the *Santa Casa*, or Holy House, so much visited by pilgrims. This chapel, according to the legend, was originally a small house in Nazareth, inhabited by the Virgin Mary, in which she was saluted by the angel, and where she bred our Saviour. After their deaths, it was held in great veneration by all believers in Jesus; and at length consecrated into a chapel, and dedicated to the Virgin; upon which occasion St. Luke made that identical image, which is still preserved here, and dignified with the name of our Lady of Loretto. This sanctified edifice was allowed to sojourn in Galilee as long as that district was inhabited by Christians; but, when infidels got possession of the country, a band of angels, to save it from pollution, took it in their arms, and conveyed it from Nazareth to a castle in Dalmatia. This fact might have been called in question by incredulous people, had it been performed in a secret manner; but, that it might be manifest to the most short-sighted spectator, and evident to all who were not perfectly deaf as well as blind, a blaze of celestial light, and a concert of divine music, accompanied it during the whole journey; besides, when the angels, to rest themselves, set it down in a little wood near the road, all the trees of the forest bowed their heads to the ground, and continued in that respectful posture as long as the sacred chapel remained among them. But, not having been entertained with suitable respect at the castle above mentioned, the same indefatigable angels carried it over the sea, and placed it in a field belonging to a noble lady called *Lauretta*, from whom the chapel takes its name. This field happened unfortunately to be frequented at that time by highwaymen and murderers; a circumstance with which the angels undoubtedly were not acquainted when they placed it there. After they were better informed, they removed it to the top of a hill belonging to two brothers, where they imagined it would be perfectly secure from the dangers of robbery or assassination; but the two brothers, the proprietors of the ground, being equally enamoured of their new visitor, became jealous of each other, quarrelled, fought, and fell by mutual wounds. After this fatal catastrophe, the angels in waiting finally moved the holy chapel to the eminence where it now stands, and has stood these 400 years, having lost all relish for travelling.

Mr. Eustace treats the subject with great liberality and good sense. In truth, no protestant can make lighter of the legendary tale than he does. At a period when so much is said of the superstition and intolerance of the catholics, we are glad to have such an opposite testimony as the following passage on this subject affords. "Every reader

der is acquainted with the legendary history of the Santissima Casa, or most holy house; that it was the very house which the Virgin Mother, with the Infant Saviour and St. Joseph, inhabited at Nazareth; that it was transported by angels from Palestine, when that country was totally abandoned to the infidels; and placed, first in Dalmatia, and afterwards on the opposite shore in Italy, close to the sea-side, whence, in consequence of a quarrel between two brothers, the proprietors of the ground, it was removed, and finally fixed on its present site. This wonderful event is said to have taken place in the year 1294, and is attested by the *ocular* evidence of some Dalmatian peasants, the testimony of the two quarrelsome brothers, and, I believe, the declaration of a good old lady of the name of Lauretta. Some had seen it in Dalmatia, others beheld it hovering in the air, and many had found it in the morning on a spot which they knew to have been vacant the evening before. Such is, at least in general, the account given at Loretto, circulated all over Italy, piously admitted by many holy persons, and not a little encouraged by the popes. I need not say, however, that many men of reflection in Italy, and indeed within the precincts of Loretto itself, consider this wonderful story as an idle tale, or, at best, a pious dream, conceived by a heated imagination, and circulated among an ignorant race of peasants and fishermen. They suppose the holy house to have been a cottage or building long buried in a pathless forest, and unnoticed in a country turned almost into a desert by a succession of civil wars, invasions, and revolutions, during the space of ten or twelve centuries. A dream, an accidental coincidence of circumstances, might have led one or more persons to the discovery of this long-forgotten edifice; and such an incident, working on minds heated by solitude and enthusiasm, might easily have produced the conviction, and propagated the belief, of the wonderful tale. But, be the origin of the holy house what it may, the effect of artifice or of credulity, it gradually attracted the attention, first of the country round, then of Italy at large, and at length of the whole Christian world. The miracle was every-where heard with joy and admiration, and every-where welcomed with implicit unsuspecting faith. Princes and prelates, rich and poor, hastened with pious alacrity to venerate the terrestrial abode of the incarnate Word, and implore the present aid and influence of his Virgin Mother. Gifts and votive offerings accumulated; a magnificent church was erected; gold, silver, and diamonds, blazed round every altar, and heaps of treasures loaded the shelves of the sacrists; various edifices rose around the new temple, and Loretto became, as it still remains, a large and populous city." Tour in Italy, 1813.

The sacred chapel stands due east and west, at the farther end of a large church of the most durable stone of Istria, which has been built around it. This may be considered as the external covering, or as a kind of great-coat to the Casa Santa, which has a smaller coat of more precious materials and workmanship nearer its body. This internal covering or case is of the choicest marble, after a plan of San Savino's, and ornamented with basso relievos, the workmanship of the best sculptors which Italy could furnish in the reign of Leo X. The subject of these basso relievos are the history of the Blessed Virgin, and other parts of the Bible. The whole case is about 50 feet long, 30 in breadth, and the same in height; but the real house itself is no more than 32 feet in length, 14 in breadth, and at the sides about 18 feet in height; the centre of the roof is four or five feet higher. The walls of this little holy chapel are composed of pieces of a reddish substance, of an oblong square shape, laid one upon another, in the manner of brick. At first sight, on a superficial view, these red-coloured oblong substances appear to be nothing else than common Italian bricks; and, which is still more extraordinary, on a second and third view, with all possible attention, they still have the same appearance. Travellers, however, are assured with great earnestness, that

there is not a single particle of brick in their whole composition, being entirely of a stone, which, though it cannot now be found in Palestine, was formerly very common, particularly in the neighbourhood of Nazareth. The holy house is divided within into two unequal portions, by a kind of grate-work of silver. The division towards the west is about three-fourths of the whole; that to the east is called the *Sanctuary*. In the larger division, which may be considered as the main body of the house, the walls are left bare, to show the true original fabric of Nazareth stone; for, once more, they must not be supposed to be bricks. At the lower or western wall there is a window, the same through which the angel Gabriel entered at the Annunciation. The architraves of this window are covered with silver. There are a great number of golden and silver lamps in this chapel: one of the former, a present from the republic of Venice, is said to weigh 37 pounds, and some of the silver lamps weigh from 120 to 130 pounds. At the upper end of the largest room is an altar; but so low, that from it you may see the famous image, which stands over the chimney in the small room or sanctuary. Golden and silver angels, of considerable size, kneel around her, some offering hearts of gold enriched with diamonds, and one an infant of pure gold. The wall of the sanctuary is plated with silver, and adorned with crucifixes, precious stones, and votive gifts of various kinds. The figure of the Virgin herself by no means corresponds with the fine furniture of her house. She is a little woman, about four feet in height, with the features and complexion of a negro. Of all the sculptors that ever existed, assuredly St. Luke, by whom this figure is said to have been made, is the least of a flatterer; and nothing can be a stronger proof of the Blessed Virgin's contempt for external beauty than her being satisfied with this representation of her. The figure of the infant Jesus, by St. Luke, is of a piece with that of the Virgin; he holds a large golden globe in one hand, and the other is extended in the act of blessing. Both figures have crowns on their heads, enriched with diamonds, these were presents from Anne of Austria, queen of France. Both arms of the Virgin are enclosed within her robes, and no part but her face is to be seen; her dress is most magnificent, but in a wretched bad taste; this is not surprising, for she has no female attendant. She has particular clothes for the different feasts held in honour of her; and, which is not quite so decent, is always dressed and undressed by the priests belonging to the chapel; her robes are ornamented with all kinds of precious stones down to the hem of her garment. The niche in which the image stands is adorned with seventy-one large Bohemian topazes; and on the right side of the image is an angel of cast gold, profusely enriched with diamonds and other gems, which is said to have cost 50,000 ducats, and which was offered by Maria Beatrix Eleonora, of the house of Este, queen of king James II. of England, that, by the intercession of the Virgin Mary, she might conceive a son. Accordingly, soon after, as it is said, she had a son; who has since occasioned so much noise in Europe, under the name of the Pretender. On the left side of the Virgin's image is a silver angel; and on the right hand another costly one; which was the gift of Louis XIII. king of France, for the birth of the dauphin, afterwards Louis XIV. The robe which this famous image wore, when it was brought from Dalmatia into Italy, is of red camlet, and kept in a glass shrine. The dish out of which she and her divine infant are said to have eaten is a shallow bowl, of glazed earthen-ware, plated over with silver. This utensil is not only kissed, but rosaries, medals, agnus dei's, crucifixes, and paper caps painted with the image of the Madonna of Loretto, are rubbed against it, from a firm persuasion that they thus become an infallible remedy against the head-ache, and other diseases. *Keyser's Travels*, vol. iii.

In the year 1797, the French republicans plundered the chapel, and carried off the image of the Virgin, which however they restored to the pope in 1802, and we are told

that

that it still remains at Rome, whilst the throne at Loretto is usurped by another; and the contending partisans have not yet been able to settle which of them is genuine. Soon after the virgin was carried away from Loretto by the sacrilegious French ravishers, a holy monk of that town introduced another into the chapel, asserting that, having been forewarned of her danger in a vision, he had concealed the genuine miraculous statue, and delivered a substitute into the hands of the enemy. The question has been vehemently agitated, whether the story of the French or of the monk be deserving of credit.

In these enlightened days of returning darkness and superstition, when the Inquisition is suddenly revived and the Jesuits happily restored—when the discovery of two teeth and a piece of the chin of Henry IV. of France has given so much comfort to all true believers—we may expect that the Santa Casa will be raised to a pitch of glory equal to what it was in its most flourishing days; for it is to be observed, that the jewels and riches to be seen at any one time in the holy chapel were of small value in comparison of those in the treasury, which is a large room adjoining to the vestry of the great church. In the presses of this room were kept those presents which royal, noble, and rich, bigots of all ranks, had, by oppressing their subjects and injuring their families, sent to this place. To enumerate every particular would fill volumes. They consisted of various utensils and other things in silver and gold; as lamps, candlesticks, goblets, crowns, and crucifixes; lambs, eagles, saints, apottles, angels, virgins, and infants; then there were cameos, pearls, gems, and precious stones of all kinds, and in great numbers. What was valued above all the other jewels was the miraculous pearl, wherein they assert that nature has given a faithful delineation of the Virgin sitting on a cloud with the infant Jesus in her arms. There was not room in the presses of the treasury to hold all the silver pieces which had been presented to the Virgin. Several other presses in the vestry were completely full.

Pilgrimages to Loretto had become less frequent with foreigners, or with Italians of fortune and distinction; but we may expect they will now revive. Nineteen out of twenty of those who make this journey are poor people, who depend for their maintenance on the charity they receive on the road. To those who are in such a rank in life as precludes them from availing themselves of the charitable institutions for the maintenance of pilgrims, such journeys are attended with expense and inconvenience; and fathers and husbands, in moderate or confined circumstances, are frequently brought to disagreeable dilemmas, by the rash vows of going to Loretto which their wives or daughters are apt to make on any supposed deliverance from danger. To refuse, is considered by the whole neighbourhood as cruel, and even impious; and to grant, is often highly distressing, particularly to such husbands as, from affection or other motives, do not choose that their wives should be long out of their sight. But the poor, who are maintained during their whole journey, and have nothing more than a bare maintenance to expect from their labour at home, to them a journey to Loretto is a party of pleasure, as well as devotion, and by much the most agreeable road they can take to heaven. The greatest concourse of people is at Easter and Whitsuntide. The rich travel in their carriages; a greater number come on horseback or on mules; or, what is still more common, on asses. Great numbers of females come in this manner, with a male friend walking by them as their guide and protector; but the greatest number of both sexes are on foot. The pilgrims on foot, as soon as they enter the suburbs, begin a hymn in honour of the Virgin, which they continue till they reach the church. The poorer sort are received into an hospital, where they have bed and board for three days.

The only trade of Loretto consists of rosaries, crucifixes, little madonnas, agnus dei's, and medals, which are manufactured here, and sold to pilgrims. There are great

numbers of shops full of these commodities, some of them of a high price; but infinitely the greater part are adapted to the purses of the buyers, and sold for a mere trifle. In the great church, which contains the holy chapel, are confessionals, where the penitents from every country of Europe may be confessed in their own language, priests being always in waiting for that purpose: each of them has a long white rod in his hand, with which he touches the heads of those to whom he thinks it proper to give absolution. They place themselves on their knees in groups around the confessional chair; and, when the holy father has touched their heads with the expiatory rod, they retire, freed from the burden of their sins, and with renewed courage to begin a fresh account.

In the spacious area before this church there is an elegant marble fountain, supplied with water from an adjoining hill by an aqueduct. Few even of the most inconsiderable towns of Italy are without the useful ornament of a public fountain. The embellishments of sculpture and architecture are employed with great propriety on such works, which are continually in the people's view; the air is refreshed, and the eye delighted, by the streams of water they pour forth; a sight peculiarly agreeable in a warm climate. In this area there is also a statue of Sixtus V. in bronze. Over the portal of the church itself is a statue of the Virgin; and above the middle gate is a Latin inscription, importing that within "is the house of the mother of God, in which the Word was made flesh." The gates of the church are likewise of bronze, embellished with baso-relievs of admirable workmanship; the subjects taken partly from the Old and partly from the New Testament, and divided into different compartments. As the gates of this church are shut at noon, the pilgrims who arrive after that time can get no nearer the Santa Casa than these gates, which are by this means sometimes exposed to the first violence of that holy ardour which was designed for the chapel itself. All the sculpture upon the gates which is within reach of the mouths of those zealots, is in some degree effaced by their kisses. There are also several paintings to be seen here, some of which are highly esteemed, particularly two in the treasury. The subject of one of these is the Virgin's Nativity, by Annibal Caracci; and of the other, a Holy Family, by Raphael. There are some others of considerable merit which ornament the altars of the great church. These altars, or little chapels, of which this fabric contains a great number, are lined with marble and embellished by sculpture; but nothing with this church interests a traveller of sensibility so much as the iron grates before those chapels, which were made of the fetters and chains of the Christian slaves, who were freed from bondage by the glorious victory of Lepanto.

The palace where the governor resides stands near the church; and the ecclesiastics who are employed in it lodge in the same palace, where they receive the pilgrims of high distinction. The environs of this town are very agreeable, and in fine weather the high mountains of Croatia may be seen from hence. Loretto is seated on a mountain, in lat. 43. 24. N. lon. 13. 50. E.

LORETTO, a town of the island of Corsica: seven miles north-east of Porta.

LORETTO, a river of Naples, in Calabria Citra, which runs into the Trionto.

LORETTO, or NOTRE DAME DE LORETTO, a town of North America, in California. Lat. 25. 30. N. lon. 113. W.

LORETTO, a town of New Mexico, in the province of Mayo: 105 miles east-north-east of Santa Cruz.

LORETTO, a town of Canada, eight miles north-west of Quebec.

LORETTO, a town of South America, in the province of Buenos: 200 mile east of Corientes.

LORETTO, a town of South America, in the government of Mojos, on the Marmora: fifty miles south of Trinidad.

LORETTO (Order of). See the article KNIGHTHOOD, vol. xi. p. 816.

LORETZ, a river of Swisserland, which forms a communication between lake Zug and the river Reufs.

LOR'GUES, a town of France, in the department of the Var: six miles south-west of Draguinan, and fifteen west of Frejus.

LOR'ICA, *f.* A cuirass, brigantine, or coat of mail, in use among the Roman soldiers. It was generally made of leather; and is supposed to be derived from *lorum*, Lat. a thong. The loricae were set with plates of metal in various forms; sometimes in hooks or rings like a chain, sometimes like feathers, and sometimes like the scales of serpents or fishes, to which plates of gold were often added. There were other lighter cuirasses, consisting only of many folds of linen cloth, or of flax made strong enough to resist weapons. Such soldiers as were rated under 1000 drams, instead of the lorica now described, wore a *pectorale* only.

LORICARIA, *f.* the CUIRASSIER; in ichthyology, a genus of fishes of the order abdominales. Generic characters—Head depressed, mouth opening underneath, lips retractile. The upper surface of the head is covered with a large bone. The body is short; the tail long. The pectoral fins are on the edge of the under surface, and close to the aperture of the gills; the first ray is long and strong, and fastened to the clavicle by a joint, as in the silures. There is no corselet on the belly. The mouth opens crosswise; the jaws are cartilaginous, and have a broad outer membrane to cover them. These, in the offensive tribe, may be called the representatives of the sturgeons among the cartilaginous, being similarly armed: Linnæus gives six rays in the branchial membrane for the generic character, Gronovius three; but the fact is, that membrane contains four rays. Part of the Linnæan character also is "the mouth without teeth," which is not correct.—There are but two species, with their varieties, properly belonging to the genus. Bloch has made them three, by adopting a variety as a species, not perhaps without reason. Dr. Shaw, by doing the same, and by removing some of the Silures into this genus, has described seven. We have confined ourselves to the two original species, with the addition only of an individual from Ceppe, which seems to belong to this genus.

1. *Loricaria cataphracta*, the cataphracted cuirassier. Specific character, one dorsal fin, cirri two. There are four rays in the membrane of the gills,  $\frac{3}{4}$  in the pectoral fins,  $\frac{1}{2}$  in the ventrals and anal,  $\frac{1}{2}$  in the tail, and  $\frac{1}{2}$  in the dorsal. The head is rounded in front, hard, rough, and arched at top; underneath smooth, broad, flat, and shaped like a horse's hoof. A broad membrane surrounds the mouth, which terminates on each side in a short barble. In the palate is a loose bristly membrane; there are two bones above in the throat, and one below, like a file. The nostrils are single; the eyes, which are near them, have a black pupil in a yellowish-green iris. The gill-cover is very small; and the aperture, which is small, is at the edge of the bony covering; the membrane is at liberty, with flexible rays. The first ray of the pectoral fin is broad, long, and serrated on both sides; the first of the ventral is serrated also; but all the rays are rough. The belly is broad, and covered with rough plates joining to each other, but not knit one into the other like those on the body. The front of the body is broad and square; and the corselets are lozenge-shaped; behind the ventral fin the body grows narrower, and the sides carinated. The tail is covered with connected rings to the number of eighteen. The anus is much nearer to the head than to the tail-fin, there is no appearance of a lateral line; the fins have ramified rays, that of the tail is bifurcated, its upper ray like a bristle, but brittle, and longer than the rest. The colour of this fish is a brownish yellow, irregularly marked with dark-brown spots; there is a large dark-coloured spot on the tail-fin. This is shown on the annexed Engraving, at fig. 1.

The variety  $\beta$ , which has the outer and upper ray of the

tail-fin as long as the whole body, is considered by Bloch as a distinct species; but the characters of the species and the variety have been greatly confounded. Gronovius states the *variety*, which has the long ray in the tail-fin, to be toothless, while Bloch describes the mouth furnished with teeth. It will be sufficient to point out wherein it differs, which is chiefly in the head. 1. The head is narrower, and ends in a blunt snout, but not rounded; so that this forms a triangle, whereas the other was like a horse-shoe. 2. This has a quantity of barbules at the mouth, and the mouth is larger, and furnished with bristly teeth. 3. This not spotted, and the long ray of the tail-fin is sometimes as long as the whole-body. 4. The belly is smooth, and covered with scales, not rough armour. It would be necessary to be on the spot where the fish are caught to determine with certainty whether these differences arise from age or sex, or whether they be really two distinct species. From the representation given by Ceppe, (see fig. 2.) they certainly appear very distinct.

2. *Loricaria plecostomus*, the guacari, or yellow cuirassier. Specific character, two fins on the back. The membrane of the gills has four rays, the pectoral fins seven, ventrals six, the anal five, the tail sixteen, the first dorsal eight, the second one only. The head is flat, bony at top, rough, and sloping; underneath it is broad, soft, smooth, and straight. The aperture of the mouth is small, opening transversely; the teeth are like bristles; the lips are thin and broad; the lower one is warty, and has a barble on each side; the palate and tongue are smooth. The nostrils are single, and nearer the eyes than the muzzle; the pupil of the eye is black, the iris white and green. The corselets, or bony armour, are rough, with a sharp spine in the middle of each piece; each side is covered longitudinally with four rows of these pieces; the middle rows are larger than those near the back and belly. The anus is in the middle of the body; the lateral line is not perceptible. The fins are long, with rough four-branched rays; the first ray of the dorsal and pectorals is stiff, strong, serrated, and furnished with a joint or hinge; the first ray of the ventrals is a stiff ray also. The outer rays of the tail-fin are long, and the two ends of the fork are seldom equal. Orange is the prevailing colour in this fish, growing lighter towards the belly, which is whitish; the fins are of the same colour with the body, except the membranous part of the dorsal, which is blackish. There are brown spots all over the body and fins; those caught in St. François river have the brown spots intermingled with black ones; and these are more fleshy and better food than such as are found in other parts of South America, which is their natural abode. When the shell is taken off, they may be eaten either boiled or fried. The intestinal canal is very long; Margrave found it to be eight feet in length in a fish of fifteen inches. See fig. 3.

As Ceppe makes a single dorsal fin part of the generic character of the *Loricaria*, he places this in a separate genus, and calls it *Hypostomus guacari*; and he has given a variety of it, which we have copied at fig. 4.

3. *Loricaria corydoras*, the helmeted cuirassier. Specific character, head covered with broad hard plates, mouth at the extremity; two dorsal fins, cirri none. In the first dorsal fin  $\frac{2}{3}$  rays, two in the second, eleven in the pectorals, six in the ventrals, seven in the anal, and fourteen in the tail. This is from the Dutch collection at Paris. It departs from the generic character, in having the mouth at the end of the snout, not underneath, and therefore Ceppe makes it a distinct genus, *Corydoras*; from *corys*, which in Greek signifies a helmet, and *doras*, a cuirass. The pieces of armour are disposed in two rows; they are very broad, and of an hexagonal form. The two rays of the second dorsal fin are separated by a long membrane; the first ray of each pectoral is beset with very small prickles; the second ray of the first dorsal is serrated on one side; the first ray is not serrated, and is very short, but stiff. The nostrils are double. A large lamina lies over each pectoral fin.

To LOR'ICATE, *v. a.* To plate over.—Nature hath  
*loricated.*

LORICARIA

1 - The Cataphracted Cuirassier.      2 - Variety of the same.  
3 - The Yellow Cuirassier.              4 - Variety of the same.

*loricated*, or plastered over, the sides of the tympanum in animals with ear-wax, to stop and entangle any insects that should attempt to creep in there. *Ray*.

**LORICATING**, *f.* The act of plating over; of defending with a coat of mail.

**LORICATION**, or **LORIFICATION**, *f.* in chemistry, is the covering of a glass or earthen vessel with a coat or crust of a matter able to resist the fire, to prevent its breaking in the performing of an operation that requires great violence of heat. When vessels are exposed to a fire too strong for their structure, or to the corrosive quality contained in them, or on the throwing on of fresh cold fuel into the fire where they stand, it frequently happens that they crack and burst; for the preventing of which, the operator has recourse to this method of coating or lorication his vessels. It is performed in the following manner: Take a quantity of washed clay, with an admixture of pure sand, powder of calcined flints, or broken crucibles; and, instead of pure water, moisten it with fresh blood that has not yet been coagulated, diluted with twice or three times its quantity of water; make the clay with this into a thin paste, and work into it some cow's hair, or other hair not too long nor too stiff, and a little powdered and sifted glass, if you have it at hand; smear over the vessel intended to be used with this paste, by means of a pencil, and set it to dry; when dry, besmear it again, and repeat the operation till the vessel have a crust of a third, or a quarter of an inch, at least, thick of this matter, and let it be thoroughly dry before it is used. To keep blood in a proper state for this use, it must, when just let out from the animal, be well stirred about with a stick for some time, at least till it is quite cold; and, being thus prepared, it will keep for some days without coagulating, and fit for use. This composition, with an admixture of bole, worked into a paste with the whites of eggs, diluted with water, makes also the proper lute for closing the junctures of other chemical vessels, in the distilling strong spirits. Chaptal recommends a soft mixture of marly earth, first soaked in water, and then kneaded with fresh horse-dung, as a most excellent coating. The valuable method used by Mr. Willis of Wapping to secure or repair his retorts used in the distillation of phosphorus, deserves to be mentioned here. The retorts are smeared with a solution of borax to which some slaked lime has been added; and, when dry, they are again smeared with a thin paste of slaked lime and linseed oil. This paste, being made somewhat thicker, is applied with success, during the distillation, to mend such retorts as crack by the fire. *Nicholson's Chem. Dict.* vol. i.

**LORIMER**, or **LORINER**. See p. 612.

**LORIN** (John), a learned French Jesuit, was born at Avignon in the year 1559. He filled the divinity-chair with great reputation, at Paris, Rome, Milan, and other places; and died at Dole, in 1634, when about seventy-five years of age. He was the author of long Commentaries on Leviticus, Numbers, Deuteronomy, the Psalms, Ecclesiastes, the Book of Wisdom, the Acts of the Apostles, and the Catholic Epistles. They display much erudition, and a critical knowledge of the Greek and Hebrew languages; and they contain much valuable information on questions relating to history, doctrinal points, and ecclesiastical discipline; but they would have been much more useful and acceptable, had the author reduced them within a narrower compass.

**LORING**, *f.* [from *lore*.] Instructive discourse:

That all they, as a goddess her adoring,  
Her wisdom did admire, and hearkened to her *loring*. *Sp.*

**LORIO'L**, a town of France, in the department of the Drôme: twelve miles south of Valence, and nine west of Crest.

**LO'RIOT**, *f.* A name sometimes used for the golden oriole, or **ORIO'LUS** galbula, which see.

**LOR'IPES**, *adj.* [Latin.] Club-footed.

**LOR'IPES**, *f.* A name used by some authors for the

long-legged plover, a bird remarkable for the length and weakness of its legs. See **CHARADRIUS** himantopus, vol. iv. p. 105.

**LO'RIS**. See **LEMUR** tardigradus, vol. xii. p. 413.

**LO'R'ME**, a town of France, and seat of a tribunal, in the department of the Nievre: thirty-three miles north-east of Nevers, and six east-north-east of Corbigny.

**LO'R'ME** (Philibert de), an eminent French architect, was born at Lyons in the early part of the sixteenth century. He went to Italy at the age of fourteen, to study the beauties of ancient art, when his zeal and assiduity attracted the notice of cardinal Cervino, afterwards pope Marcellus II. who took him into his palace, and assisted him in his pursuits. He returned to France in 1536, and was employed in several buildings, in which he introduced contrivances not before known in that country; and to him is attributed the banishment of the Gothic taste from France, and the substitution of the Grecian. Cardinal du Bellay made him known to Henry II. for whom he planned the horse-shoe at Fontainebleau, and the chateaus of Anet and Meudon. After the death of that king, Catharine de Medicis made him intendant of her buildings. Under her direction he repaired and augmented several of the royal residences, and made a commencement of the palace of the Thuilleries. As a recompence for his services, he was presented in 1555 with two abbacies, and created counsellor and almoner in ordinary to the king. These favours are said to have made him insolent; and the poet Ronfard conceived so much displeasure or jealousy against him, that he satirised him in a piece entitled *La Truelle Croffée*, the Croziered Trowel: De Lorme in return shut the garden of the Thuilleries against him; but the queen took the part of the poet, and reprimanded the reverend architect. He died in 1577. De Lorme published, 1. *Dix Livres d'Architecture*, fol. 1567. in which there is much useful instruction concerning the manner of cutting stones, and constructing a building, in which he excelled more than in knowledge of the architectural orders. 2. *Nouvelles Inventions pour bien batir & à petits frais*, fol. 1576: the plan of saving expense consists chiefly in substituting fir to the usual building-timber, which he first proposed and practised in France. *D'Argenville Vies des Architectes*.

**LORN**, *pret. pass.* [loptian, Sax.] Forfaken; lost:

Who after that he had fair *Una lorn*,  
Through light misdeeming of her loyalty. *Fairy Queen*.

**LORN**, a division of Argyllshire in Scotland, which gives the title of marquis to the duke of Argyll. It extends above thirty miles in length from north to south, and about nine at its utmost breadth; bounded on the east by Braidalbin; on the west by the islands; on the north, by Lochaber; and is divided from Knappdale, on the south, by Loch Etive, on the banks of which stands the castle of Bergomarn, wherein the courts of justice were anciently held. This district, abounding with lakes, is the most pleasant and fertile part of Argyllshire, producing plenty of oats and barley. It once belonged to the ancient family of Macdougall, still residing on the spot; but devolved to the lords of Argyll in consequence of a marriage with the heiress, at that time a branch of the Stuart family.

The chief place of note in this district is the castle of Dunstaffnage, a seat of the Scottish kings previous to the conquest of the Picts in 843 by Kenneth II. In this place was long preserved the famous stone, the palladium of North Britain; brought, says legend, out of Spain, where it was first used as a seat of justice by Gathelus, coeval with Moses. It continued here as the coronation-chair till the reign of Kenneth II. who removed it to Scone, anno 849, in order to secure his reign; for, according to the inscription,

*Ni fallat fatum, Scoti quocunque locatum,  
Invenient lapidem, regnare teneantur ibidem.*

Edward I. of England carried it away, in 1297, after he had in a manner subdued the whole kingdom of Scotland; it is now in Westminster-abbey, and is used as the coronation-chair for our kings; but some of the ancient regalia were preserved here till the present century, when the keeper's servants, during his infirm years, embezzled them for the silver ornaments; and left only a battle-axe, nine feet long, of beautiful workmanship, and ornamented with silver.

The castle is square; partly ruinous, partly habitable. At three of the corners are round towers. The entrance is towards the sea at present by a staircase, in old times probably by a drawbridge, which fell from a little gateway. The masonry appears very ancient; the tops battlemented. This pile is seated on a rock at the mouth of Loch Etive, whose waters expand within to a beautiful bay, where ships may safely ride in all weathers. Of this building, the founder of which is unknown, nothing remains except the outer walls, which, though roofless, are still in good order; and within which some buildings have been erected, which serve as the residence of the laird. The duke of Argyll is hereditary keeper under the crown.—At a small distance from the castle is a ruined chapel, once an elegant building; and at one end an enclosure, a family cemetery. Opposite to these is a high precipice, ending abrupt, and turning suddenly toward the south-east. A person concealed in the recess of the rock, a little beyond the angle, surprises friends stationed at some distance beneath the precipice with a very remarkable echo of any word, or even sentence, he pronounces; which reaches the last distinct and unbroken. The repetition is single, but remarkably clear.

In 1307, this castle was possessed by Alexander Macdougall lord of Argyll, a friend to the English; but was that year reduced by Robert Bruce, when Macdougall sued for peace with that prince, and was received into favour. We find, about the year 1455, this to have been a residence of the Lords of the Isles; for here James last earl of Douglas, after his defeat in Annandale, fled to Donald, the Regulus of the time, and prevailed on him to take arms, and carry on a plundering war against his monarch James II.

The situation of this regal seat was calculated for pleasure as well as strength. The views of mountains, valleys, waters, and islands, are delightful. On the north side of Loch Etive stood the town of Beregonium, supposed to have been the capital of the West Highlands. It seems, from certain mounds, excavations, and other appearances, to have been a strong fortress, to prevent invasion, or to secure a retreat, as occasion might require. On the bank of the same loch is the site of Ardchattan, a priory of monks of Valliscaullium in Burgundy, founded in 1230 by Donald Maccoull, ancestor of the Macdougalls of Lorne. Here Robert Bruce, who remained master of this country before he got entire possession of Scotland, held a parliament or council. The country abounds in Druidical, Danish, and other, monuments.

LOR'OMIE'S STONE, a place of America, in the state of Ohio, westerly from Fort Lawrence, and near a branch of the Great Miami River, which falls into the Ohio. At this spot, bounded west by the Indian line, the Indians ceded a tract of land to the United States, six miles square, by a treaty signed August 3, 1795. Here the portage commences between the Miami of the Ohio and St. Mary's River, which runs into Lake Erie.

LO'ROUS, a town of Tunis, anciently called *Laribus*: sixty miles south-west of Tunis.

LOROU'X BECONNOIS, a town of France, in the department of the Maine and Loire: thirteen miles west-north-west of Angers, and twenty-seven north of Collet.

LOROU'X BOTTEREAU, a town of France, in the department of the Lower Loire: ten miles north of Clifton and nine east of Angers.

LOR'QUI, a town of Spain, in Murcia: twelve miles north-west of Murcia.

LOR'QUIN, a town of France, in the department of the Meurte: four miles south-south-east of Sarrebourg, and nineteen east of Luneville.

LOR'RACH, or LARACH, a town of the duchy of Baden: six miles north-west of Rheinfelden, and six north-east of Bâle.

LORRA'IN (Claude le), an eminent painter. See CLAUDE, vol. iv.

LORRA'IN (Robert le), an eminent sculptor, was born in 1666 at Paris, of a family from Champagne. He was a pupil of Girardon, who confided to him, at the age of eighteen, the instruction of his own children, and the correction of the designs of the other pupils. After having distinguished himself by several works, and gained the first prize at the academy, he went to Rome, where he pursued his improvement with so much assiduity as to injure his constitution. He returned to France in 1693, when the misfortunes of the times had suspended all the public works, so that he found very little employment, and had full leisure to meditate his art in retirement. In 1701 he was admitted into the Academy of Painting and Sculpture, having executed a fine figure of Galatea for his masterpiece. He made a fawn for the cascade at Marly, which obtained the royal applause; and continually advanced his reputation by other excellent performances. The academy showed its sense of his merits by nominating him to the post of adjunct professor in 1710, and of professor in 1717. He fulfilled the duties of these offices with great attention, and could boast of Le Moine and Pigalle among his pupils. When the cardinal de Rohan formed the design of decorating his palace of Saverne near Straßburg, he fixed upon Lorraine, with other artists; and much of the exterior sculpture was executed by him. In the midst of his labours, he was attacked with a stroke of apoplexy in 1738, which obliged him to return to Paris. After repeated seizures, he was carried off in 1743, at the age of seventy-seven. Le Lorraine was thoroughly acquainted with the principles of his art, and worked with great facility, frequently from a slight design, or even from the idea in his imagination: he particularly distinguished himself by his character-heads, of which those of women and young persons are often exquisitely beautiful, with airs of singular grace and elegance. Le Moine said of him, that his chisel was guided by Corregio and Parmegiano. *D'Argenville Vies des Sculpt.*

LORRA'IN (Duchy of), united to France; and, with the duchy of Bar, now divided into the departments of the Meuse, the Meurte, the Moselle, and the Vosges. This country forms only a small part of a kingdom, which bore that name, and which extended from Vienne, on the Rhone, to Cologne. It owes its name to Lothaire II, grandson of Louis le Debonnaire; and after many revolutions it was annexed to France, in the year 1766, at the death of Stanislaus, the last duke. Separated from Bar, it is about 90 miles in length, and 69 in breadth. The air is thick and cold, but healthy; the plains, watered by divers rivers, are fertile in corn and fruit; the mountains and valleys are covered with wood, which harbour great quantities of game. The country has salt springs, together with some mines of iron, copper, tin, and silver. Its lakes abound in fish, and in the mountains of the Vosges are found agates, granates, chalcedonies, and other gems; as also a particular substance for making cups and other vessels. The principal rivers are the Meuse, the Moselle, the Meurte, and the Saar.

LOR'RES, a town of France, in the department of the Seine and Marne, and chief place of a canton, in the district of Fontainebleau. The place contains 610, and the canton 9193, inhabitants, in 18 communes.

LOR'RIS, a town of France, in the department of the Loiret: 12 miles south-west of Montargis, and 24 east of Orleans.

LOR'RIS (William de), a French poet of the thirteenth century, was a student of jurisprudence, and died about 1260. He is known as the author of the Roman de la

Rose, a poem famous in the middle ages. Under the allegory of a rose planted in a delicious garden, and protected by walls and bulwarks, it describes a lover's pursuit and final acquisition of the object of his passion. Lorrin left the work unfinished; and it was completed in the next century by John Clopinel, or de Meun. Not one quarter of the whole was composed by Lorrin; but his part is by much the most poetical, abounding in rich and elegant description, and in the lively portraiture of allegorical personages. Much morality and satire is interspersed, especially in the part written by John de Meun. The best edition of the *Roman de la Rose* is that of the abbé de Lenglet, Amst. 3 volumes 12mo. 1735. Chaucer has given a translation of the greater part of it, comprising all belonging to William de Lorrin. *Warton's Hist. of English Poetry.*

LOR'RY (Anne-Charles), a learned French physician, was born in 1725, at Crosny, near Paris. He became doctor-regent of the faculty of Paris, and exercised his profession with equal reputation and modesty. After a successful case, he was used to say, "I will never permit myself to assert that *I have cured* such a patient; but that he was under my care, and the disease terminated happily." He was the author of the following works: 1. *Essai sur l'Usage des Alimens, pour servir de commentaire aux livres dietetiques d'Hippocrate*, 1753 and 1757. 2. *De Melancholia et Morbis Melancholicis*, 2 vols. 8vo. 1765. 3. *Tractatus de Morbis Cutaneis*, 4to. 1777. He also gave an edition of the Aphorisms of Hippocrates, Gr. and Lat. 8vo. 1759; of the Works of Dr. Mead, in Latin, 2 vols. 8vo. of the *Medicina Statica* of Sanctorius, with Commentaries, 1770, 12mo. and of Dr. Astruc's *Memoires pour servir à l'Histoire de la Faculté de Montpellier*, 4to. 1767. Dr. Lorry died at the baths of Bourbonne in 1783. *Eloy, Dict. de la Med.*

LORSCH, or LAU'RESHEIM, an abbey of Germany, situated on a narrow island in the electorate of Mentz, founded by Pepin king of France. The emperor Frederic ceded it to the archbishop of Mentz in 1232, as a fief of the empire. In the year 1768, a work was printed at Manheim, called *Codex Laurensheimensis Diplomaticus*, of considerable use in the geography of the middle age. It is 6 miles east of Worms.

LOR'SQUEN, a town of France, in the department of the Meurthe, and chief place of a canton, in the district of Sarrebourg; four miles south-south-east of Sarrebourg. The place contains 1164, and the canton 13,680, inhabitants, in 29 communes.

LORUHA'MA, [Heb. unpitied.] The name of a woman. *Hofea.*

LORUN'GAH, a pass in the mountains of Bengal: eighteen miles west of Ramgur.

LOS CHAR'CAS. See CHARCAS.

LOS REY'ES. See the article LIMA, vol. xii. See also REYES.

LOSA'RI, a town of the island of Corfica: fifteen miles north of Calvi.

LOS'CHAN, a town of Bohemia: four miles east of Prague.

LOS'CHETZ, or LOSTITZ, a town of Moravia, in Olmutz: two miles south of Muglitz.

LOS'DORF, a town of Bohemia, in Leitmeritz: six miles west-south-west of Kamnitz.

To LOSE, *v. a.* [leopan, Sax.] To forfeit by unsuccessful contest: the contrary to *win*:

The lighten'd courfers ran;  
They rush'd, and *won* by turns, and *lost* the day. *Dryden.*

To forfeit as a penalty. In this sense is *Paradise lost*:

Fame! few, alas! the casual blessing boast,  
So hard to gain, so easy to be *lost*!

*Pope.*

To be deprived of.—He *lost* his right hand with a shot, and, instead thereof, ever after used a hand of iron. *Knolles.*

VOL. XIII. No. 935.

Who conquer'd him, and in what fatal strife  
The youth, without a wound, could *lose* his life. *Dryden.*

To suffer diminution of.—The fear of the Lord goeth before obtaining of authority; but roughness and pride is the *losing* thereof. *Ecclus. x. 21.*—If salt have *lost* his favour, wherewith shall it be salted? *Matthew.*—To possess no longer: contrary to *keep*.—They have *lost* their trade of woollen-drapery. *Graunt.*

No youth shall equal hopes of glory give,  
The Trojan honour and the Roman boast,  
Admir'd when living, and ador'd when *lost*. *Dryden.*

To miss, so as not to find:

Venus wept the sad disaster  
Of having *lost* her fav'rite dove. *Prior.*

To separate or alienate. It is perhaps in this sense always used passively, with *to* before that from which the separation is made.—When men are openly abandoned, and *lost* to all shame, they have no reason to think it hard if their memory be reproached. *Swift.*

But if to honour *lost* 'tis still decreed  
For you my bowl shall flow, my flocks shall bleed;  
Judge and assert my right, impartial Jove. *Pope.*

To ruin; to send in perdition:

In spite of all the virtue we can boast,  
The woman that deliberates is *lost*. *Addison.*

To bewilder; so as that the way is no longer known.—Nor are constant forms of prayer more likely to flat and hinder the spirit of prayer and devotion, than unpremeditated and confused variety to distract and *lose* it. *King Charles.*

I will go *lose* myself,  
And wander up and down to view the city. *Shakespeare.*

To deprive of.—How should you go about to *lose* him a wife he loves with so much passion? *Temple.*—Not to employ; not to enjoy:

The happy have whole days, and those they use;  
Th' unhappy have but hours, and these they *lose*. *Dryden.*

To squander; to throw away:

I no more complain,  
Time, health, and fortune, are not *lost* in vain. *Pope.*

To suffer to vanish from view:

Of in the passions wild rotation tost,  
Our spring of action to ourselves is *lost*. *Pope.*

To destroy by shipwreck:

The coast  
Where first my shipwreck'd heart was *lost*. *Prior.*

To throw away; to employ ineffectually.—He has merit, good-nature, and integrity, that are not often *lost* upon great men, or at least are not all three a match for flattery. *Pope's Letters.*—To miss; to part with, so as not to recover.—These sharp encounters, where always many more men are *lost* than are killed or taken prisoners, put such a stop to Middleton's march, that he was glad to retire. *Clarendon.*—To be freed from: as, to *lose* a fever;

His feely back the bunch has got  
Which Edwin *lost* before. *Parnel.*

To LOSE, *v. n.* Not to win:

We'll hear poor rogues  
Talk of court-news, and we'll talk with them too;  
Who *loses*, and who wins; who's in, who's out. *Shakespeare.*  
To decline; to fail:

Wisdom in discourse with her  
*Loses* discountenanc'd, and like folly shews. *Milton.*

LOSE CREEK, a river of Kentucky, which runs into the Ohio in lat. 37. 32. N. lon. 88. 24. W.

§ D

LOSENIT'ZA,

LOSENIT'ZA, a town of European Turkey, in Servia: thirty miles south-south-west of Sabacz.

LO'SEABLE, *adj.* Subject to privation.—Consider whether motion or a propensity to it, be an inherent quality belonging to atoms in general, and not *loseable* by them. *Boyle*.

LO'SEL, *f.* [from *loþan*, Sax. to perish.] A scoundrel; a forry worthless fellow. *Obsolete*.—Such *lofels* and scatterlings cannot easily, by any sheriff, be gotten, when they are challenged for any such fact. *Spenser*.

Be not with work of *lofels* wit defamed,  
Ne let such verses poetry be named. *Hubberd's Tale*.

LOSENGE, *f.* [*lofange*, Fr.] The old and correct way of spelling LOZENGE, which see. As lozenges were generally composed of substances sweet and grateful to the palate, hence the same word is used in Chaucer to signify flattering lies; and hence we have *Lofenger*, a liar, a deceiver, a flatterer; and *Lofengery*, for flattery and deceit.

LOSEN'KO (Anthony,) an history-painter, who flourished at Peterburgh during the last century. He was admitted in 1759 into the Academy of Arts, who sent him to Italy and France, where he exercised his talents. His sketches are in great request. His most admired pieces are, the portrait of the princess Potozka, and the Parting of Hector and Andromache. After being appointed director of the academy, he died in 1773.

LO'SER, *f.* One that is deprived of any thing; one that forfeits any thing; one that is impaired in his possession or hope: the contrary to *winner* or *gainer*.—No man can be provident of his time that is not prudent in the choice of his company; and, if one of the speakers be vain, tedious, and trifling, he that hears, and he that answers, are equal *losers* of their time. *Taylor's Holy Living*.

With the *losers* let it sympathize,  
For nothing can seem fowl to those that win. *Shakespeare*.

LO'SER, a town of the electorate of Salzburg, on the Stampach: twenty miles east of Kuffstein, and twenty-one south-west Salzburg.

LO'SING, *f.* The act by which loss is sustained, the state of being lost.

LOSI'TO, a town of Naples, in the province of Bari: six miles east of Bittetto.

LOSOR'GA, a town of the island of Sardinia, eleven miles south of Bosa.

LOS'QUET, a small island in the English Channel, near the coast of France. Lat. 43. 49. N. lon. 3. 31. W.

LOSS, *f.* Detriment; privation; diminution of good; the contrary to *gain*.—The only gain he purchased was to be capable of *loss* and detriment for the good of others. *Hooker*.—An evil-natured son is the dishonour of his father that begat him; and a foolish daughter is born to his *loss*. *Ecclus*.—Mitts; privation:

If he were dead, what would betide of me?—

No other harm but *loss* of such a lord.—

The *loss* of such a lord includes all harms. *Shakespeare*.

Deprivation; forfeiture:

*Loss* of Eden, till one greater man  
Restore it, and regain. *Milton*.

Destruction.—There succeeded an absolute victory for the English, with the slaughter of above two thousand of the enemy, with the *loss* but of one man, though not a few hurt. *Bacon*.

Her fellow-ships from far her *loss* descry'd,  
But only she was sunk, and all were safe beside. *Dryden*.

Fault; puzzle: used only in the following phrase:—Reason is always striving, and always at a *loss*, while it is exercised about that which is not its proper object. *Dryden*.—A man may sometimes be at a *loss* which side to close with. *Baker on Learning*.—Useless application.—It would be *loss* of time to explain any farther our superiority to the enemy in numbers of men and horse. *Adiscn*.

LOSS, a cluster of small islands in the Atlantic, near the coast of Africa. Lat. 9. 16. N. lon. 13. W.

LOS'SA, a town of Silesia, in the principality of Brieg: five miles south-east of Brieg.

LOS'SA, or Los'se, a river of Thuringia, which runs into the Unfrutt.

LOS'SABACH, a river of Saxony, which runs into the Mulda near Eulenburg.

LOSSAU', a town of Germany, in the principality of Bayreuth: nine miles south-east of Bayreuth.

LOSS'EN, a town of the duchy of Courland: thirty-two miles south-east of Seelburg.

LOSS'IE, a river of Scotland, which rises in the county of Murray, and runs into the sea at Lossiemouth. It is celebrated for its trout.

LOSS'LEMOUTH, a seaport town of Scotland, in the county of Murray, situated at the mouth of the Lossie. It has only a sloop and a few fishing-vessels which belong to the place; the harbour is convenient for vessels of 80 tons. In 1793, it had only 180 inhabitants: six miles north of Elgin.

LOSS'IN (Great), a town in the south part of the island of Cherso, containing about 1800 inhabitants.

LOSS'IN (Little), a town of the island Cherso, containing about 1600 inhabitants: one mile south of Great Lossin.

LOSS'IUS (Lucas), of Lunenburg, a Lutheran divine and school-master, well skilled in music, who published at Nuremberg, in 1553, *Erotomata Musicae practicae*, and Lutheran Psalmodia. At the time of the Reformation, the Lutherans preserved more music in their liturgy than the Calvinists, or the Church of England.

LOSS'NITZ, a town of Saxony, in the lordship of Schönberg, ten miles south-east of Zwicka, and fifty south-west of Dresden. Lat. 50. 32. N. lon. 12. 37. E.

LOST, *participle adj.* No longer perceptible:

In seventeen days appear'd your pleasing coast,  
And woody mountains, half in vapours *lost*. *Pope*.

LOS'TITZ. See LOSCHETZ.

LOS'TORFF, a town of Austria: nine miles west of St. Polten.

LOSTWITH'IEL. See LESTWITHIEL, vol. xii. p. 535.

LOS'VA, a river of Russia, which runs into the Solva in the government of Tobolsk, forty miles west of Pelim.

LOS'ZLAU, or WODISLAU, a town of Silesia, and principal place of a lordship in the principality of Ratibor: eighteen miles north-north-west of Teschen, and eleven south-east of Ratibor. Lat. 49. 57. N. lon. 18. 18. E.

LOT, *f.* [*hlaut*, Gothic; *hlot*, Sax. *lot*, Dut.] Fortune; state assigned.—Our own *lot* is best; and, by aiming at what we have not, we lose what we have already. *L'Esrange*.

Prepar'd I stand; he was but born to try  
The *lot* of man, to suffer and to die. *Pope's Odyssey*.

A die, or any thing used in determining chances.—Aaron shall cast *lots* upon the two goats; one *lot* for the Lord, and the other *lot* for the scape-goat. *Lev. xvi. 8*.

Their tasks in equal portions she divides;  
And, where unequal, there by *lots* decides. *Dryden*.

It seems in Shakespeare to signify a lucky or wished chance: If you have heard your general talk of Rome,  
And of his friends there, it is *lots* to blanks  
My name hath touch'd your ears; it is Menenius. *Shakefp.*

A portion; a parcel of goods as being drawn by lot: as, What *lot* of silks had you at the sale?—Proportion of taxes: as, To pay scot and *lot*.

LOT is in Persian *pur*; whence the Purim, or feast of lots. *Ezther* iii. Casting lots is authorized in many parts of Scripture. God commanded that lots should be cast upon the two goats, offered for the sins of the multitude, on the solemn day of expiation; to ascertain which of the two should be sacrificed, and which set at liberty. *Lev.*

*Lev. xvi.* He required also, that the land of promise should be divided by lot. *Numb. xxxvi. xxxiii. xxxvi.* The priests and levites in like manner had cities given them by lot. *Josh. xxi.* In the time of David, the twenty-four classes of the priests and levites were distributed by lot to determine their order of waiting in the temple. *1 Chr. xxiv. xxv. xxvi.* In the division of the spoil after victory, lots were cast likewise, to distribute to each his portion. In the New Testament, the soldiers cast lots for Jesus Christ's garments, (*Matth. xxvii. 35.*) as had been foretold by the prophet, (*Pf. xxii. 18.*) After the death of Judas, lots were cast to decide which of the persons should succeed that traitor. *Acts i. 26.*—The manner of casting lots, we do not find described clearly in Scripture; and interpreters disagree about it; several methods were used. Solomon in the Proverbs, points out one mode: *The lot is cast into the lap; but the whole disposing thereof is of the Lord.* *Prov. xvi. 3.* Lots therefore were cast into some person's lap, or into a helmet, or an urn; there they were shaken together, and afterwards drawn out. Whatever might have been the mode, the use of lots is not prohibited; for God even enjoins it on some occasions; and the most holy persons of the Old and New Testament practised it. The wise man acknowledges the usefulness of this custom in these words: *The lot causeth contentions to cease, and parteth between the mighty.* *Prov. xviii. 18.* But it cannot be denied that casting lots is sometimes forbidden: as when it is practised without necessity; or with superstition; or with a design of tempting the Lord; or in things wherein there are other natural means of discovering truth; lastly, when reason and religion furnish other ways to guide us. Haman (*Esther iii. 7.*) seems to have used lots not only out of superstition, but likewise in an unjust and criminal matter, when he undertook to destroy the Jews; that is, if we suppose the 7th verse of that chapter to have any connection with the eighth. Nebuchadnezzar did so in a superstitious manner, when, being on the way to Jerusalem, and Rabbath of the Ammonites, he cast lots to determine to which of the two cities he should go. *Ezek. xxi. 18-24.* The mariners who had Jonah in their vessel, tempted God, by drawing lots to know whence the tempest originated with which they were overtaken. Yet, upon that occasion, the Almighty was pleased to answer them by making the lot to fall upon Jonah. *Jonah i. 7.*

LOT, or LOTH, *f.* in mining, the thirteenth dish, measure, or part, of the miner's ore, which the bar-master takes up for the king, or the farmer.

LOT, or POR, *f.* A liquid measure in French Flanders, equal at Lille to 126 cubic inches, and 183'33 = 100 English gallons.

LOT, son of Haran, and nephew to Abraham. He followed his uncle from Ur, and afterwards from Haran, to settle in the land of Canaan. *Gen. xi. 38.* This was in the year of the world 2070, and before Christ 1920. Abraham had always a great tenderness for Lot. He took him with him into Egypt, and brought him back to Canaan. But they could not continue longer together: they were obliged to separate, because, as they both had large flocks, their shepherds sometimes quarrelled. *Gen. xiii. 6, 7.* Lot therefore chose Sodom for his abode, the country around it being very beautiful. About eight years after, King Cherdorloamer and his allies having attacked the kings of Sodom and the neighbouring cities, routed them, pillaged Sodom, took many captives, and, among the rest, Lot himself. Abraham, being informed of this, armed his servants, pursued the confederate kings, overtook them near the springs of Jordan, recovered the spoil, and brought back the captives, including his nephew Lot. *Gen. xii.* Some years after, the sins of the Sodomites and of the neighbouring cities being at their height, God sent three angels to punish and destroy them. Towards the evening, two of these angels being come to Sodom, Lot, who was sitting at the city-

gate, perceived them, and intreated them to lodge in his house. The angels at first refused; but, Lot pressing them, they went in, and he provided an entertainment for them. But, before they were retired to rest, the inhabitants of the city besieged Lot's house, exclaiming, *Where are the men which came in to thee this night? bring them out unto us, that we may know them.* As they were on the point of breaking open the door, the angels struck all those detestably-wicked men with blindness. They then directed Lot, to collect his family together, and to quit the city, as being condemned to destruction. Lot went and informed his sons in law of this dreadful denunciation; but his intelligence they regarded as an idle fancy. In the morning, as soon as it was day, the angels took Lot, his wife, and daughters, by the hand, and drew them forcibly, as it were, out of their house, saying, "Save yourselves in all haste; look not behind you, lest you be involved in the general destruction." Lot intreated the angels that he might retire to Zoar, which was one of the five cities doomed to be destroyed. The angels consented: but Lot's wife, looking behind her, was overtaken in the flame, which fell from heaven, and which consumed Sodom, with the country about it; whereby she was changed into a pillar of salt. Lot, having beheld the sad calamity of Sodom, had not courage to abide in Zoar; but left it, and retreated with his two daughters to a cave in some mountain near it. They, imagining that all mankind was destroyed, and that the world would have an end unless they provided new inhabitants for it, made their father drunk, and the eldest lay with him without his perceiving it; she conceived a son by him, whom she called Moab. The second daughter did the same, and had Ammon by him. Their whole history is related in the sixth chapter of Genesis.

LOT, a river of France, which rises in the department of the Lozere; passes by or near to Mende, St. Genies, St. Come, Bitang, Elagnac, Cahors, Alban, Villeneuve d'Agen, &c. and joins the Garonne near Aiguillon.

LOT, a department of France, bounded on the north by the department of the Correze, on the east by the Cantal, on the south-east by the Aveyron, on the south by the Tarn and Upper Garonne, on the west by the Lot and Garonne, and on the north-west by the Dordogne; seventy miles in length and thirty-five in breadth. Cahors is the capital.

LOT AND GARONNE, a department of France, bounded on the north by the department of the Dordogne, on the east by the Lot, on the south by the Gers, and on the west by the Landes and Gironde: about forty-five miles from east to west, and thirty-six from north to south. Agen is the capital.

LOT'S WIFE, a stupendous rock in the sea, encompassing the Ladrones, which rises in the form of a pyramid, and is thus described by Mr. Meares in his voyage, cited by Mr. Pinkerton. "The latitude was 29. 50. N. the longitude 142. 23. E. of Greenwich. The waves broke against its rugged front, with a fury proportioned to the immense distance they had to roll before they were interrupted by it. It rose almost perpendicular to the height of near 350 feet. A small black rock appeared just above the water, at about 40 or 50 yards from the western edge. There was a cavern on its south-eastern side, into which the waters rolled with an awful and tremendous noise. In regarding this stupendous rock, which stood alone in an immense ocean, we could not but consider it as an object which had been able to resist one of those great convulsions of nature that change the very form of those parts of the globe which they are permitted to desolate."

LO'TAN, [Hebrew.] A man's name.

LO'TE-TREE, or NET'TLE-TREE, *f.* See CELTIS.—The leaves of the *lote*-tree are like those of the nettle. The fruit of this tree is not so tempting to us as it was to the companions of Ulysses: the wood is durable, and used.

used to make pipes for wind-instruments: the root is proper for hafts of knives, and was highly esteemed by the Romans for its beauty and use. *Miller.*

Next comes the *lot-tree*, in whose dusky hue,  
Her black and sun-burnt country you might view. *Tate.*

LO'TEN (John), a good landscape-painter of the English school, though a native of Switzerland. His taste led him to solemn and dreary scenes, as land-forms accompanied with showers of rain, &c. and he seldom omitted to introduce oak-trees in his prospects. His landscapes are generally large; and he painted with nature, truth, and force: but the effect of his compositions had been much greater if he had been less cold in his colouring; for the judicious eye is not pleased with the darkish tint that predominates in it. He died in London about 1681.

LO'TEN (John Gideon), a distinguished friend to natural history, was by birth a Dutchman, and born at Utrecht. In the year 1732 he went to India, where he exercised some of the highest employments in the islands of Celebes and Ceylon with great reputation, and alleviated the cares of his important duties by cultivating the liberal arts. At Columbo he established a botanical garden; and in every place of India where he resided made the pleasing study of natural history a principal object of his care. On his return he brought over with him a large collection of drawings, done with equal neatness and accuracy, some by natives, and others by Europeans whom he found in the country. Mr. Pennant was indebted to his friendship for copies of several of them; but the greater part he at his request communicated to Peter Brown, an ingenious artist, by birth a Dane, who engraved twenty-one of them; and, with several others from different places, published a splendid work, in 1776, entitled *New Illustrations of Zoology*, under the patronage of Marnaduke Tunstall, esq. and Mr. Pennant. From the same collection was formed Pennant's *Indian Zoology*, begun in 1789 and left unfinished, but resumed and published more complete in one volume quarto in 1790. Mr. Loten returned to Europe in 1758; and coming to England, where he lived several years, married in 1765 his second wife, Letitia Cotes, of the reputable family of Cotes in Shropshire; several years after which he retired to Holland, and died at Utrecht in the month of February 1789, aged eighty, and was interred in St. Jacob's church in that city. In the north aisle westward of Westminster-abbey is a most magnificent cenotaph, the performance of Banks, erected in 1795, to perpetuate the memory of this excellent man. *Pennant's View of Hindoostan.*

LOTEWART, a town of Germany, in the county of Henneberg: three miles west-south-west of Smalkalden.

LOTH, a town of Scotland, in the county of Sutherland, on the east coast: sixteen miles north-north-east of Dornoch.

LOTH, or LO'THE. See LOATH, vol. xii. p. 853.

LOTH', or LOD, *f.* A weight in Germany; 2 loths being = 1 oz. and 16 oz. = 2 marks = 1 pfund or pound. In estimating the fineness of silver, the mark fine is divided into 16 loths, and the loth into 18 grains.

LOTHAU', a town of Germany, in the principality of Culmbach: nine miles south of Culmbach.

LO'THIAN, an extensive district in Scotland, divided, like Yorkshire in England, into three parts; viz. East-Lothian, called also HADDINGTONSHIRE; Mid-Lothian, or EDINBURGHSHIRE; and West-Lothian, or LINLITHGOWSHIRE; which see respectively.

LO'THING, a lake of England, in the county of Suffolk, near Lowestoff.

LO'THINGLAND, once an island, and part of the county of Suffolk, towards the German Ocean, situated in the north-east part of the county, and the most eastern part of Great Britain; now a peninsula. The river Yare bounds it on the north, the sea on the east, the lake of Lothing on the south, and the river Wavcny on the west; it is only joined to the main land by a narrow neck near

Lowestoff, formed as is supposed about the year 1722. It is above ten miles in length from north to south, and six in breadth; and contains sixteen parishes, of which Lowestoff is the principal and only market-town.

LO'TI ARBO'RIS FO'LIO. See MUNTINGIA.

LO'TI SIM'ILIS. See DIOSPYROS.

LO'TICH, or LOTICH'IVS (Peter), surnamed *Secundus*, a distinguished modern Latin poet, was born in 1528, at Schluttern, in the county of Hanau, in Germany. He had his first education at the convent of that place, under his uncle of the same name, who introduced the reformation into it. He afterwards pursued his studies at Frankfurt, Marburg, and Wittemberg; at which last university he contracted an intimacy with Melancthon and Camerarius. During the war in Saxony he served a campaign in the protestant army. In 1550 he visited France with some youths to whom he was governor, and continued in that country nearly four years. He afterwards made the tour of Italy, where a misfortune befel him, the consequences of which he felt as long as he lived. He lodged at Bologna in the same house with a young canon of Munich, of whom the hostess was desperately enamoured. Apprehensive of his infidelity, she prepared a philtre, which was in fact a strong poison, and presented it in soup to the canon. Unfortunately for Lotich, he made an exchange of dishes with him; and its effects were so violent, as to bring him into imminent danger of his life; and, although he recovered for the present, not a year passed afterwards in which he had not a relapse, whereby his health was ruined and his days shortened. He took at Padua the degree of doctor of physic; and on his return to Germany was chosen professor in that science at Heidelberg, in 1557. He there acquired the good graces of the elector-palatine; and, by his amiable disposition, and the singular frankness and sincerity of his character, rendered himself universally beloved. He did not long enjoy these advantages, being carried off by a renewal of his complaint in November 1560. A collection of the Latin poems of Lotich was published in 1561, with a dedicatory epistle by Joachim Camerarius, who praises him as the best poet of his age. Other learned men have bestowed similar applause upon him, and several successive editions have been given of his works. He is reckoned to excel particularly in elegy, and occupies the first rank among the Latin poets of Germany.

*Christian*, a younger brother of Peter, was also an elegant scholar, and a poet. A collection of his poems, with these of John Peter Lotich, was published in 1620.

*John-Peter*, grandson of Christian above-mentioned, was born at Frankfurt on the Maine in 1598. He was a physician, and maintained the literary character of his family, as he proved by a variety of writings. He exercised his profession at Minden and in Hesse, and was finally invited to a medical chair at Rintlen in Westphalia. This he occupied many years, till he died greatly regretted in 1652. Of his medical works the principal is *Consiliorum et Observationum Medicinalium*, Lib. v. 4to. 1644, and with an additional book in 1658. His Latin poems were published with those of his grandfather. He published in 1629 a Commentary on Petronius, 4to. which is much applauded by Guy Patin, and as much depreciated by Goldast. A History of the Emperors Ferdinand II. and III. 4 tom. fol. 1646, is attributed to him. *Bayle. Eloy, Dict. de la Med.*

LOTIE'RO, a town of Naples, in the Principato Ultra: fifteen miles east-north-east of Benevento.

LO'TION, *f.* [*lotio*, Lat. *lotion*, Fr.] A *lotion* is a form of medicine compounded of aqueous liquids, used to wash any part with. *Quincy.*

LOTION is, strictly speaking, such washing as concerns beautifying the skin, by cleansing it of those deformities which disordered blood throws upon it. Medicines of this kind, however, are for the most part insignificant, and sometimes very dangerous; the only proper method of treating these disorders is, by administering such medicines

cines as tend to correct the morbid state of the constitution from whence they arise.

**LOTION**, in pharmacy, denotes a preparation of medicines, by washing them in some liquid, either made very light, so as to take away only the dregs; or sharp, so as to penetrate them, in order to clear them of some salt, or corrosive spirit, as is done to antimony, precipitates, magisteries, &c. or intended to take away some foulness or ill quality, or to communicate some good one.

**LO'TIS**, or **Lo'tos**, a beautiful nymph, daughter of Neptune. Priapus offered her violence; and, to save herself from his importunities, she implored the gods, who changed her into a tree called lotus. *Ovid.*

**LO'TO AFFINIS**. See **ANTHYLLIS**, **CASSIA**, **EBENUS**, **MEDICAGO**, and **PSORALEA**.

**LO'TO SIM'ILIS**. See **HEDYSARUM**.

**LOTOPH'AGI**, in ancient geography, a people of the Regio Syrtica, so called from their living on the lotus; inhabiting between the two Syrtis, from the Cinyphus to the Triton. The lotus was said to be a food so luscious, as to make strangers forget their native country. A sweet wine was expressed from it, which did not keep above ten days. *Pliny.*

**LOTOPH'AGI** of Homer. See **MENINX**.

**LOT'TERY**, *f.* [from *lot.*] A kind of public game at hazard, frequent in Britain, France, and Holland, in order to raise money for the service of the state; being appointed with us by the authority of parliament, and managed by commissioners appointed by the lords of the treasury for that purpose. It consists of several numbers of blanks and prizes, which are drawn out of wheels, one of which contains the numbers, and the other the corresponding blanks or prizes.

The Romans invented lotteries to enliven their Saturnalia. This festival began by the distribution of tickets which gained some prize. Augustus made lotteries which consisted of things of little value; but Nero established some for the people, in which 1000 tickets were distributed daily, and several of those who were favoured by Fortune got rich by them. Heliogabalus invented some very singular; the prizes were either of great value or of none at all; one gained a prize of six slaves, and another of six flies; some got valuable vases, and others vases of common earth. A lottery of this kind exhibited an excellent picture of the inequality with which Fortune distributes her favours.

The first English lottery we find mentioned in history was drawn A. D. 1569. It consisted of 400,000 lots, or tickets, at 10s. each; the prizes were plate; and the profits were to go towards repairing the havens of the kingdom. It was drawn at the west door of St. Paul's cathedral. The drawing began on the 11th of January, 1569, and continued incessantly, *day and night*, till the 6th of May following; as Maitland, from Stowe, informs us in his history, vol. i. p. 257. There were then only three lottery-offices in London. The proposals for this lottery were published in the years 1567 and 1568. It was at first intended to have been drawn at the house of Mr. Dericke, her majesty's servant, i. e. her jeweller, but was afterwards drawn as above mentioned. In the year 1612, James I. granted permission for a lottery to be held also at the west end of St. Paul's, of which the highest prize was of the value of 4000 crowns, in fair plate; this was for the assistance of the Virginia company, who were licensed to open lottery-offices in any part of England, by which means they raised 29,000l. At length these lotteries came to be considered as public evils, and attracted the attention of parliament; they were repressed by the commons as a grievance, and were suppressed by an order of council. In 1630, however, Charles I. granted a special license for a lottery or lotteries, according to the course of other lotteries hitherto used or practised, for defraying the expense of a project for conveying water to London. Lotteries also were instituted by patent soon after the restoration, for the purpose of creating a fund for the suffering loyalists; and books were often the spe-

cies of property held out as a lure to the adventurer. Among these, Blome's Recreations, and Swillim's Heraldry, first edition, may be remembered. In the Gazette of May 18, 1668, is the following advertisement. "Mr. Ogilby's Lottery of Books opens on Monday the 25th instant, at the Old Theatre, between Lincoln's-Inn Fields and Vere-street; where all persons concerned may repair on Monday, May 18; and see the volumes, and put in their money." On May 25th is announced "Mr. Ogilby's Lottery of Books (adventurers coming in so fast that they cannot in so short a time be methodically registered) opens not till Tuesday the 2d of June; then not failing to draw; at the Old Theatre between Lincoln's-Inn Fields and Vere-street." A catalogue of the prizes, with some other curious particulars, may be seen in the Gentleman's Magazine, Suppl. for June last, p. 646.—The letters patent were from time to time renewed; and by those dated June 19, and Dec. 17, 1674, there was granted for thirteen years to come, all lotteries whatsoever, invented or to be invented, to several truly loyal and indigent officers, in consideration of their many faithful services and sufferings, with prohibition to all others to use or set up the said lotteries, unless deputations were obtained from those officers. Gazette, Oct. 11, 1675.

After the revolution, lotteries were again resorted to, among other expedients, for raising part of the extraordinary sums necessary for the public service; by which means the disposition for this species of gambling was greatly encouraged and extended. Of all the schemes, the most popular one was that drawn at the Dorset-Garden Theatre, with the capital prize of a thousand pounds for a penny. The drawing began Oct. 19, 1698; and in the Protestant Mercury of the following day, "its fairness (was said) to give universal content to all that were concerned." In the next paper is found an inconsistent and frivolous story as to the possessor of the prize: "Some time since a boy near Branford, going to school one morning, met an old woman, who asked his charity; the boy replied, he had nothing to give her but a piece of bread and butter, which she accepted. Some time after she met the boy again, and told him she had good luck for his bread and butter, and therefore would give him a penny, which, after some years keeping would produce many pounds; he accordingly kept it a great while; and at last, with some friend's advice, put it into the penny lottery; and we are informed that on Tuesday last it came up 1000l. prize." However absurd this relation appears, it must be recollected those to whom it was principally addressed, had given proof of having sufficient credulity for such a tale, in believing that two hundred and forty thousand shares could be disposed of and appropriated to a single number, independent of other prizes. The scheme was afterwards attacked in a pamphlet, which was not sufficient to prevent a further attempt at a fraud upon the public. In 1698, 9, schemes were started, called "the Lucky Adventure, or Fortunate Chance, being 2000l. for a groat, or 3000l. for a shilling;" and "Fortunatus, or another Adventure of 1000l. for a penny." But purchasers were more wary, and the money was returned in both cases.—The patentees also advertised against the "Marble-board, alias the Woolwich-board lotteries; the Figure-board, alias the Whimsey-board; and the Wyre-board lotteries." This nefarious system was at length struck at by act of parliament in the 10th and 11th of William III. c. 17, which declared such lotteries unlawful after 29th December, 1699; and by which a penalty of 500l. was laid on the proprietors of any such, and 20l. upon every adventurer in them. Notwithstanding which, the disposition to fraud on the one hand, and for adventure on the other, continued to prevail; and small lotteries were carried on under the denomination of sales of gloves, fans, cards, plate, &c. This was attempted to be checked by a clause in an act passed 1712; but which only gave rise to a new mode of carrying on this kind of gambling. Government-lotteries were still practised; and the adventure was now made to

depend upon the drawing of the former; and the buying and selling of chances and parts of chances of tickets in the state-lotteries became a general practice, till it was prohibited by an act passed in 1718, by which all the undertakings resembling lotteries, or being dependent on the state-lottery, were strictly prohibited, under the penalty of 100*l.* over and above all penalties enjoined by former acts of parliament against private lotteries.

During the reign of queen Anne, the lotteries were generally for terminable annuities, to which both blanks and prizes were entitled at different rates; thus in 1710, the lottery consisted of 150,000 tickets, valued at 1*l.* each, every ticket being entitled to an annuity for 32 years, the blanks at 14*s.* per annum, and the prizes to greater annuities, from 5*l.* to 1000*l.* per annum. This was the first lottery for which the Bank of England received the subscriptions for government. In the following year, the whole of the money advanced for the tickets was to be repaid, both in blanks and prizes, in 32 years, with interest at 6 per cent. and an additional sum of nearly half a million to be divided, in order to form prizes, which additional capital was to be paid with the like interest within the same period as the original sum. In this manner they were conducted for several years; and a very considerable premium was given for the money advanced, in addition to a high rate of interest.

According to the lottery-plans which prevailed from Sir Robert Walpole's administration to that of the duke of Grafton, the tickets were issued at 1*l.* each; and occasionally the subscription was open to the public at large. The highest prize was generally 10,000*l.* and the lowest 20*l.* There were from four to six blanks to a prize, and the blanks entitled the bearers to 5*l.* or 6*l.* stock in the three or four per cent. bank-annuities, the value of the blanks and prizes being generally funded. The lottery-office keepers divided the tickets into shares and chances, the former entitling the holders to the proportion they had purchased of blanks and prizes, the chances to prizes only; that is, they had no return if the ticket was drawn a blank. The tickets, according to the advantage or disadvantage of the scheme, in respect of the number of blanks to a prize, and the number of high prizes, generally sold at from 11*l.* to 12*l.* before the drawing. When the tickets sold for 11*l.* and the blanks were entitled to 6*l.* in the three per cents. as the blank might be sold for 5*l.* 8*s.* ready money when the three per cents. were at 90, the adventurer only gambled at a risk of 5*l.* 12*s.* and at the highest calculation, when tickets were worth 13*l.* he never staked more than 7*l.* 12*s.* for a ticket before the drawing.

In 1759, the scheme of the lottery included two prizes of 20,000*l.* each, which had not been the case in any preceding lottery since the time of queen Anne. The scheme for the year 1767, contained one prize of 20,000*l.* and this was many years after the usual amount of the highest prize. About this time a material alteration was made in the plan of the lotteries; the allowance to blanks was discontinued, the whole sum being divided into prizes, the number of which was of course considerably increased, particularly as the proportion of small prizes was much greater than it has since been, and in several of the following years was less than two blanks to a prize. All the lotteries during the time Lord North was chancellor of the exchequer were formed on this principle, with some variation in the schemes, which favoured the holders of tickets and the lottery-office keepers, and greatly increased the spirit of gaming, such as paying the prizes in money instead of stock, and making the first-drawn ticket for several successive days a prize of 1000*l.* or more, which enhanced the price of the tickets, and encouraged persons who had blanks drawn to buy again. Some judicious regulations were, however, adopted for the security of persons purchasing shares of tickets, by limiting the shares into which tickets may be divided to halves, quarters, eighths, and sixteenths; and obliging all lottery-

office keepers to deposit the tickets they divided into shares in the bank, and to have the said shares examined and stamped. The practice of insuring tickets and shares was likewise restrained, by enacting, that "no person shall sell the chance or chances of any ticket or any share for any time less than the whole time of drawing from the day of sale; nor shall receive any sum of money whatsoever in consideration for the repayment of any sum, in case any ticket shall prove fortunate, or in any case of any chance or event relating to the drawing, either as to time or its being fortunate, nor shall publish proposals for the same, under the penalty of 500*l.* one-half to be paid to the person suing for the same, and the other moiety to his majesty."

An act passed in 1778, for regulating the conduct of the lottery, restrains any person from keeping an office for the sale of tickets, shares, or chances, or for buying, selling, insuring, or registering, without a license; for which license each office-keeper must pay 50*l.* if it be in or within twenty miles of London, Edinburgh, or Dublin, and 10*l.* for every license for every other office, to continue in force for one year; and the produce to be applied towards defraying the expenses of the lottery. And no person is allowed to sell any share or chance less than a sixteenth, on the penalty of 50*l.* All tickets divided into shares or chances are to be deposited in an office, to be established in London by the commissioners of the treasury, who are to appoint a person to conduct the business thereof; and all shares are to be stamped by the said officer, who is to give a receipt for every ticket deposited with him. The numbers of all tickets so deposited are to be entered in a book, with the names of the owners, and the number of shares into which they are divided; and two-pence for each share is to be paid to the officer on depositing such tickets, who is therewith to pay all expenses incident to the office. All tickets deposited in the office are to remain there three days after the drawing. And any person keeping an office, or selling shares, or who shall publish any scheme for receiving moneys in consideration of any interest to be granted in any ticket in the said lottery, &c. without being in possession of such ticket, shall forfeit 500*l.* and suffer three months imprisonment. And no business is to be transacted at any of the offices after eight in the evening, except on the evening of the Saturday preceding the drawing. No person is to keep any office for the sale of tickets, &c. in Oxford or Cambridge, on penalty of 20*l.* Before this regulating statute took place, there were upwards of 400 lottery-offices in and about London only; but the whole number afterwards, for all England, as appeared by the list published by authority, amounted to no more than 51. They are, however, at this time much more numerous; but the list is not now made public.

By 42 Geo. III. c. 119, all games or lotteries called *little-goes* are declared public nuisances; and all persons keeping an office or place for any game or lottery not authorized by law, shall forfeit 500*l.* and be deemed rogues and vagabonds. The proprietor of a whole ticket may nevertheless insure it for its value only, with any licensed office, for the whole time of drawing, from the time of insurance, under a *bonâ-fide* agreement, without a stamp. The last state-lottery act enacting various new regulations was 49 Geo. III. c. 94.

During Mr. Pitt's administration, the lotteries were contracted for entirely distinct from the loans of the respective years; and, as it became necessary to endeavour to augment every source of the revenue as much as possible, various alterations were made in the lottery-schemes, chiefly with a view of raising the price of tickets, and of keeping up the price during the time of drawing. The number and amount of the highest prizes were increased, some schemes containing four prizes of 20,000*l.* each, others of two 30,000*l.* prizes; while, for the purpose of disposing of a greater number of tickets in the course of the year, the lottery was divided into two or three smaller ones, drawn at different times: the amount of the principal

cipal prize was still farther augmented; the lottery drawn in October 1807, containing a prize of 40,000*l.*, and that drawn in June 1808 six prizes of 20,000*l.* each. But, notwithstanding the temptations, which these schemes held out to the inconsiderate, the contractors found, either from the greater frequency of lotteries, or the increased number of tickets, that it became impossible to get the tickets off their hands, without resorting to a variety of expedients for attracting the public attention, which were carried to such a length as to become a public nuisance. This and many serious evils which were known to exist relating to lotteries, particularly that of illegal insurances, gave rise, in 1808, to a committee of the house of commons, which was appointed in order to enquire "how far the evils attending lotteries had been remedied by the laws passed respecting the same." In the report of this committee, various instances were adduced of the most serious evils, attested by the most respectable witnesses, some of which are so striking, that we cannot resist the mention of them in the present article. One case, which was attested by the Rev. Mr. Gurney, is particularly interesting, as it shows to what an amazing extent this kind of gambling will carry persons; who, had it not been for the temptations held out by lotteries, might have lived with comfort and respectability, but who, from these kinds of speculations, have been reduced to the most abject state of poverty and distress. "I knew," says Mr. Gurney, "a widow in a good line of business, as a silk-dyer, which, I suppose, brought her in about 400*l.* a-year. She kept a very good house, and I was in habits of intimacy with the family. The foreman she had was in the habit of insuring in the lottery; he was led astray by an acquaintance, and he and his mistress insured to the amount of from 300*l.* to 400*l.* in a night, although the foreman had only 30*l.* a-year wages. It appeared, on his decease, he had insured immense sums of money within the last year of his life. I found that he had expended upwards of 100 guineas in the lottery, purchasing one ticket at 1*l.* and insuring away the rest. It came up a blank at last; and I verily believe the disappointment was the cause of his death. He died insolvent, and I acted as his executor, and paid three or four shillings in the pound to his creditors. He had received a great many bills for his mistress, which he had never accounted for, and was the ruin of her also; she was not able to pay three shillings in the pound. She was obliged to go into an alms-house, and died there in four or five months. They would send all the plate she possessed to raise money to carry on an insurance, which had begun perhaps at a low rate. The gentleman who drew the foreman into this practice was himself also ruined by it. His wife had an annuity of 400*l.* per annum settled upon her, he sold her life-interest, and she was obliged to live afterwards upon charity, while her husband, who had formerly kept his carriage, and lived in a good house in Queen-square, spent the last hours of his miserable existence within the rules of the Fleet prison." Various other instances of a similar kind were mentioned in the appendix to the report of the committee, where the parties, formerly in respectable circumstances, were reduced to misery and distress. But what serves to mark the evils of lotteries the stronger is, that it is not only the unsuccessful adventurer that is ruined by the failure of his speculation, but there are many cases where a successful speculator has had equal reason to deplore his first connection with this species of gambling. Robert Baker, esq. deposed, that "he remembered one very strong instance of distress arising out of the transactions in the lottery four or five years ago. It was the case of a journeyman who belonged to a club, which club purchased a ticket that came up the great prize. The share of this man was 100*l.* or thereabouts; he had been an industrious working man before, and he was persuaded by his friends to invest the money in the stocks, in the joint name of himself and wife, in order to prevent his making away with it. He did so, but soon got into habits of

idleness after he was possessed of the money; and he wanted his wife to join in the transfer of it. This occasioned quarrels, which proceeded to assaults; he changed his habits of industry to those of drunkenness and idleness, he destroyed all his domestic comforts, and was the ruin of his family." Many other cases of a similar description are given in the appendix to this report; in some of them mothers have neglected their children, and left them destitute of the common necessaries of life, while the money by which those necessaries should have been purchased has been gambled away in the insurance of certain numbers in the lottery. In other cases the wife has robbed an industrious and careful husband and father of the small and hard-earned savings of many months, and even of many years; and who, instead of finding his little treasure in the drawer in which it was deposited, and which he was about to increase by another small addition, found that the whole had been gambled away in lottery-speculations, and every article of his clothes, which were not likely to be immediately wanted, had been pawned in order to recover the former loss. In other cases, children have robbed their parents; servants their masters; suicides have been committed; and almost every crime that can be imagined, has been occasioned, either directly or indirectly, through the baneful influence of lotteries.

The committee before which the above mentioned facts were disclosed, were fully aware of all the evils we have recounted, and in the course of their report, declared, that "the foundation of the lottery-system is so radically vicious, that your committee feel convinced, that under no system of regulations which can be devised will it be possible for parliament to adopt it as an efficacious source of revenue, and at the same time divest it of all the evils of which it has hitherto proved so baneful a source. But, in case it should be thought expedient to continue state-lotteries, the number in each year should be limited to two lotteries, of not more than 30,000 tickets each; that the number of days allowed for drawing, instead of ten, should be brought down to eight for each lottery, the number fixed in 1802; that the number of tickets to be drawn each day should be uncertain, and left to the direction of the commissioners of the stamp-duties, and kept secret till the close of the drawing each day; care being taken, as the lottery proceeds, not to leave too great a number undrawn on the latter days of drawing; but that one moiety, or upwards, be drawn on the four first days thereof; that every lottery-office keeper should, in addition to his own license, take out a limited number of licenses for his agents; that the limitation of hours during which lottery-offices may be open for the transaction of business, viz. from eight o'clock in the morning till eight o'clock in the evening, enacted by 22 Geo. III. c. 47, and renewed in the lottery-acts in 1802 and the three following years, but omitted in those of 1806 and 1807, ought in future to be re-enacted, without the exception therein made, to Saturday evenings." These suggestions have been attended to in the lotteries of the last two or three years, which have been several of them drawn in one day, and consequently a considerable check has been given to illegal insurances. Still, however, many evils remain, which are so blended with the nature of lotteries, that it is impossible to separate them; but while, in a moral view, lotteries are to be reprobated, in the department of finance they are found so convenient to a minister, that we cannot flatter ourselves with the hope of their annihilation; and the application of palliatives to the disease is all that the nation must expect. In stating the lottery-scheme, the minister generally assures the house that he has taken great pains to prevent its mischievous operation; but, when the principle itself is radically vicious, it is impossible to obviate all the evil consequences. Considered as a tax, or mode of raising money for the state, we may say on the one hand that no one is taxed without his own consent, and on the other that trade is hurt by many persons employing their money that way rather

rather than in the purchase of necessaries, or of luxuries which are the great support of trade. That they are not ungrateful to the people of this country is evident, from the price the tickets have borne of late years above their intrinsic value: for it is to be observed, that, whatever may be the nature of the scheme, the exact sum of 10*l.* per ticket is allotted for prizes. Ten pounds therefore is the precise value of a ticket, though at present they do not come into the hands of the public under 2*l.* or 2*l.* a ticket, and in shares not under the rate of 2*l.* The contractors are allowed (with some small restrictions) to form the scheme, that is, to dispose of this 10*l.* a ticket as they please. Every scheme, and there are at present five in a year, is trumpeted forth as being, like Cassio's song, "more excellent than the last;" and it requires no small share of ingenuity to vary them. Sometimes the variation is in the mode of drawing, sometimes in the distribution of the prizes. A very short time has been lately allowed for drawing, in order to prevent insuring, because the government get nothing by that, and the people please themselves to their own injury. No lottery can be set on foot by private persons without the sanction of an act of parliament. If people have a mind to risque their money foolishly or wisely, it must be for the benefit of the government, not of each other.

Some persons are apt to suppose, that, as the rising generation becomes wiser, and better instructed, the evils of lotteries will cease of themselves, because nobody will engage in such unprofitable speculations. But, as the Edinburgh Review very justly observes, "the whole mischief and hazard of such practices is just as thoroughly known at present as it will be when the world is five thousand years older; and as much pains are taken to impress the ardent spirits of youth with the belief of those hazards as can well be taken by the monitors who may discharge that office in the most remote futurity. The truth is, that the offenders do not offend so much in ignorance as in presumption. They know very well, that men are oftener ruined than enriched by lotteries and the gaming-table; but they know too, that this is not always the case; and they flatter themselves that their good luck, and good judgment, will class them among the exceptions, and not among the ordinary examples of the rule. They are told well enough, for the most part, of the excessive folly of acting upon such a presumption, in matters of serious importance; but it is the nature of youth, to despise much of the wisdom that is pressed upon them, and to think well of their fortune and sagacity, till they have actually had experience of their slipperiness. We really have no idea that their future teachers will be able to change this nature, or to destroy the external distinction between the character of early and mature life; and therefore it is, that we despair of the cure of the manifold evils that spring from this source; and remain persuaded, that young men will be nearly as foolish, and as incapable of profiting by the experience of their seniors, ten thousand years hence, as they are at this moment."

But let us not suppose that this species of folly is more grateful to Englishmen than to the inhabitants of other countries. Games of chance are fascinating every-where: "Hope follows through." We shall quote but one instance, from Mr. Professor Martyn's Tour through Italy, of the popular fondness of the modern Romans for this gambling species of taxation: "The common people of Rome are in a ferment during all the time of the lottery, which is drawn eight times a-year. Such is the rage for it, that the quantity of bread baked in the city is at these seasons considerably less than usual: in short, it is the locust which consumes what the caterpillar had left." By the caterpillar, Mr. M. no doubt alludes to the miserable government of that country, once the mistress, now the contempt, of the world.

LOTTI (Antonio,) principal organist of St. Mark's at Venice, and afterward maestro di capella of the same cathedral, was one of the greatest men of his profession. In

his compositions, he combined with the learning of the old school all the grace, rich harmony, and brilliancy, of the new. He was long at the head of the Venetian school. His ecclesiastical compositions were only used at St. Mark's on great and solemn occasions: they are truly sublime. The kind of pathos in his style elevates the soul, and expresses all the grandeur and reverence of devotion. *Essais sur la Mus.* tom. iii. Lotti was the disciple of Legrenzi, the model of Haffé, one of the masters of Marcello, Galuppi, and Pescetti. His name is chiefly known in England by the dispute in the Academy of Ancient Music, at the Crown and Anchor, in 1732, concerning a madrigal which Bononcini was accused of having stolen from him. Lotti composed for the Venetian theatres, between the years 1698 and 1717, fifteen operas. His cantatas furnish specimens of recitatives that do honour to his sensibility. He was opera-composer at the court of Dresden, when the Santa Stelli, his wife, performed the part of first woman there, in 1718; and in 1720 he returned to Venice, where he was living in 1733. The time of his death is not known.

LO'TUL, a town of Bengal: sixteen miles west of Toree.

LOTUS, *f.* [from *λωτος*, sweet.] BIRD'S-FOOT TREFOIL; in botany, a genus of the class diadelphia, order decandria, natural order of papilionaceæ, or leguminosæ. The generic characters are—Calyx: umbel simple; perianthium one-leaved, tubular, half-five-cleft; teeth acute, equal, erect; permanent. Corolla: papilionaceous; banner roundish, bent down; claw oblong, concave; wings roundish, shorter than the banner, broad, converging upwards; keel gibbous below, closed above, acuminate, ascending, short. Stamina: filaments diadelphous, simple and nine-cleft, ascending, with broadish tips; antheræ small, simple. Pistillum: germ columnar, oblong; style simple, ascending; stigma an inflexed point. Pericarpium: legume cylindrical, stiff and straight, stuffed, longer than the calyx, many-celled, two-valved; seeds several, cylindrical.—*Essential Character.* Calyx tubular; wings converging longitudinally upwards; legume cylindrical, straight.

The name *λωτος*, or *lotus*, is given by the ancients both to an herb and a tree, each different from the plants contained in this genus. The herb is a species of Nymphaea; and the tree-lotus is now supposed to be the RHAMNUS lotus, which see.

*Species.* I. With few legumes, not forming a head.

1. Lotus maritimus, or sea bird's-foot trefoil: legumes solitary, membranaceous, quadrangular; leaves smooth, bractes lanceolate. Root perennial. Stems several, decumbent, slender, a foot and a half long, round, simple, or with a few branches at the base, having stiffish hairs scattered over them, pressed close to the stem. Leaves ternate; leaflets obovate, fleshy, sessile, even, the edge towards the top having hairs scattered over it. Stipules ovate, acute, even, longer than the petioles, the same size with the leaves. Peduncles axillary, solitary, twice as long as the leaves, round, commonly one-flowered, seldom two-flowered. Bractee three-leaved, a little shorter than the calyx, the middle one longer than the others. Calyx oblong, even, hairy at the edge: corolla large, yellow, with flesh-coloured veins on the middle of the banner underneath, the wings of a deeper yellow; keel short, with a greenish tip. The legume has four longitudinal wings. It differs from the third species, by its perennial root, by the smoothness and greater fleshyiness of the leaves, by the floral leaflets being lanceolate and not like those on the stem, and by the calyxes being less deeply cut. Native of many parts of Europe, on the sea-coast, as Sweden, Denmark, Silesia, the south of France, the county of Nice, &c. Ray found it at the mouth of the Tiber. Cultivated by Mr. Miller in 1759. It flowers from May to October.

2. Lotus siliquosus, or square-podded bird's-foot trefoil: legumes solitary, membranaceous-quadrangular; stems procumbent, leaves pubescent, underneath. This is distinguished from the preceding, to which it is very nearly allied, by its procumbent stems, white pubescent, a foot long;

long; its hairy leaves and calyxes. Leaves alternate, petioled; leaflets subsessile, cordate-obovate, blunt, terminated by a spinule, quite entire, bright green and smooth above, white and silky underneath. Flower solitary, terminating, large, pale yellow, subsessile, surrounded by lanceolate ternate leaflets. Native of the south of Europe, in moist meadows. Mr. Professor Martyn gathered it near Lancy, Vevay, and Aigle, in May 1779. Cultivated in 1683 by Mr. James Sutherland. Gerard calls it "horned or codded claver;" Parkinson, "smooth codded trefoile of Mompelier." Gerard and Leyfer do not distinguish this from the preceding. Magnol, who first separated the sea from the meadow lotus, says that the latter has smooth fat thick leaves, and narrower pods.

3. *Lotus tetragonolobos*, or winged bird's-foot trefoil: legumes solitary, membranaceous-quadrangular, bractes ovate. Root annual. Stems several, about a foot long, having at each joint a ternate leaf. Seeds subglobular, the size of a small pea, smooth, pale or livid purple, without spots. It flowers in June and July, and the seeds ripen in autumn. It was formerly cultivated as an esculent plant, for the green pods, which are said to be still eaten in some of our northern counties, but they are very coarse. This plant is now chiefly cultivated in flower-gardens for ornament. It is a native of Sicily, where Ray found it on the hills above Messina; and was cultivated in 1596 by Gerard. Parkinson calls it "crimson-blossomed or square-codded pease." In Johnson's edition of Gerard's Herbal, it is named square crimson-velvet pease. Ray calls it square-codded vetch. None of these authors speak of the pods being esculent. Clusius says the seeds were frequently sent out of Italy under the name of *sandalida*, which Adanson has adopted for the generic name of these winged lotuses, and Scopoli for the trivial of the second species.

4. *Lotus conjugatus*, or twin-podded bird's-foot trefoil: legumes conjugate, membranaceous-quadrangular, bractes oblong-ovate. This agrees with the preceding in habit, age, leaves, hairiness, and legumes; but, differs in the corollas being only half the size; the legumes in pairs, with the wings, entire, and less waved or curled; and the leaves not embracing the stem at the base, but gaping on the opposite sides. The stems are branching, and a foot long. It flowers in July, and the seeds ripen in the autumn. Native of France about Montpellier.

5. *Lotus tetraphyllus*, or four-leaved bird's-foot trefoil: legumes solitary; leaves ternate, obcordate-wedge-shaped; stipule solitary, similar; bractes one-leaved. Stems filiform. Corolla yellow, with the back of the banner dark purple. It is distinguished from all the other species by its solitary stipules and one-leaved bractes. The former are lanceolate-oblong, and the latter sometimes, but seldom, two-leaved. Native of Majorca.

6. *Lotus edulis*, or esculent bird's-foot trefoil: legumes subsolitary, gibbous, curved in. This is an annual plant, with several trailing stalks, a foot long. The flowers stand singly on long axillary peduncles; they are yellow and small; and are succeeded by thick pods, arched with a deep furrow on the outside. Native of Italy and Candia. Ray says that he met with this, or one very like it, about Naples and in Sicily. Miller, who cultivated it in 1759, had the seeds sent him from Nice. The pods are eaten in Candia, when young, by the poorer inhabitants. It flowers here in July, but the seeds do not ripen in cold summers.

7. *Lotus peregrinus*, or flat-podded bird's-foot trefoil: legumes subbinate, linear, compressed, nodding. This is an annual plant like the eleventh, but does not branch so much; the leaflets are rounder at their ends, and smoother; the peduncles are shorter, and seldom sustain more than two flowers; they are succeeded by two very narrow pods about two inches long, and hanging downwards. Native of Spain and Portugal. Cultivated here in 1713. It flowers in July.

8. *Lotus angustissimus*, or narrow-podded bird's-foot tre-

foil: legumes subbinate, linear, stiff upright; stem upright; peduncles alternate. Root weak, branched. Stems straight, numerous, a foot high, branched, reddish, beset with long whitish hairs; at each joint a ternate leaf; leaflets oblong, acute. Peduncles axillary, solitary, an inch or more in length, with a yellow flower or two at top, in hairy calyxes. Legumes generally one, very seldom two; slender, near two inches in length, obsolete torulose where the seeds are: these are twenty or even twenty-three in number, spherical, pale sulphur-coloured, very smooth, shining like pearls, the size of a pin's head. Native of the south of France; Ray gathered it near Naples. Miller has confounded this with one of the varieties of *L. corniculata*.

9. *Lotus glaucous*, or glaucous bird's-foot trefoil: legumes subbinate, cylindrical, smooth; leaflets somewhat wedge-shaped, fleshy, hoary; stipules leaf-form. Native of Madeira, where it was found by Mr. Francis Masson. Introduced in 1777. It is biennial; and flowers from June to August.

10. *Lotus Arabicus*, or red-flowered bird's-foot trefoil: legumes cylindrical, awned; stems prostrate; peduncles three-flowered; bractes one-leaved. Root perennial. Stems several, a foot and a half high, scarcely pubescent. Native of Arabia, where it was found by Forskahl, and in Surat by Brad. Introduced in 1773, by the chevalier Murray. It flowers from July to November.

11. *Lotus ornithopodioides*, or claw-podded bird's-foot trefoil: legumes subternate, bowed, compressed; stems diffusid. This is an annual plant, which sends up many stiff stalks from one to two feet high, dividing into many branches. Leaves ternate, with two appendages or stipules. Peduncles axillary, two or three inches long, terminated by a cluster of yellow flowers: these sleep during the night with the bractes covering them. Native of Sicily. It flowers in July, and the seeds ripen in autumn. Cultivated in 1683, by Mr. James Sutherland: it was found by Ray on the hills above Messina, and at Capo Passaro; by Gerard, Sauvages, &c. in Provence; and by Pallas in Siberia.

12. *Lotus jacobæus*, or dark-flowered bird's-foot trefoil: legumes subternate; stem herbaceous, upright; leaflets linear. Stem slender, woody, from two to three feet high, sending out many slender herbaceous branches. Flowers axillary from the upper part of the stem, four or five on very slender peduncles, of a yellowish deep purple colour. Native of the Cape Verd Islands. Cultivated in 1714, by the dukes of Beaufort, at Badminton. It flowers all the summer and autumn, and many times great part of the winter. Mr. Miller says that he had the seeds from the Cape of Good Hope.

13. *Lotus Creticus*, or silvery bird's-foot trefoil: legumes subternate; stem suffrutescens; leaves silky, thinning. This rises with slender stems which require support, from three to four feet high, sending out a few side branches. At each joint is a neat silvery ternate leaf, with two appendages, or stipules. Peduncles axillary, from two to three inches long, sustaining heads of yellow flowers, which part in the middle, each head containing four or six flowers. These appear in May, June, and July, and are succeeded by long taper pods filled with roundish seeds, which ripen in the autumn. Native of Spain and the Levant. Morison had seeds from Aleppo, which produced plants at Oxford, before 1680.

14. *Lotus Dioscorides*, or Dioscorides's lotus: stem upright, branched; peduncles subbiflorous: legumes columnar, ovate, torose. Root annual. Stems a palm and half in height, round. Flowers yellow, small. Found near Villafranca, in the county of Nice, on the sea-coast.

15. *Lotus arboreus*, or tree bird's-foot trefoil: legumes quinque; leaflets obcordate; stem arboreous. Native of New Zealand.

11. With many-flowered peduncles, forming a head.  
16. *Lotus hirsutus*, or hairy bird's-foot trefoil: heads roundish; stem upright, rough-haired, legumes ovate.

This has a perennial stalk, three feet high. When the roots are large, they frequently send up several of these stalks, especially if the old ones be cut down; they are hairy, and divide into several branches. John Bauhin says it is from half a yard to a yard in height; and Magnol observed it in a wood a yard and a half high. Several of the species are very short in open situation, but are drawn up very much when they grow among bushes. Native of the south of France, Italy, and Sicily; also of the Levant. It was cultivated in 1683, by Mr. James Sutherland; and flowers from June to August. — It is called by Gerard *heary clover*; and by Parkinson *greater pile trefoil*.

17. *Lotus Græcus*, or five-leaved bird's-foot trefoil: heads roundish; stem upright, rough-haired; leaves quinate; legumes ovate. This is a middle species between the preceding and following, inasmuch that it is difficult to say which it approaches the nearest. Stem annual, but more spreadingly branched. Flowers white, less than in *hirsutus*, larger than in *rectus*. It differs from all the rest in having quinate (not ternate) leaves; that is, five leaflets, besides the stipules; which are oblong, as in *L. hirsutus*; not cordate, as in *L. rectus*. Native of the Levant; Greece, and Arabia.

18. *Lotus rectus*, or upright bird's-foot trefoil: heads subglobular; stem upright, even; legume straight, smooth. This has a strong perennial root; from which arise many upright strong stalks, from three to four feet high, covered with a purplish bark, and towards the top sending out a few side branches. Flowers whitish, numerous, in a horizontal bundle. Legumes more than twenty, whereas in *L. hirsutus* there are fewer than ten; they are cylindrical, obsoletely torulose at the seeds, black, the length of the human nail; and contain six or eight small globular black seeds, which are not shining. Native of the south of Europe; observed in the south of France, Calabria, and Sicily, by Ray; in Arragon, by d'Affo; near Lyons, Turin, &c. by Morison; in the county of Nice, by Allione. Parkinson calls it *lesser pile trefoil*. It was cultivated in 1683, by Mr. James Sutherland.

19. *Lotus corniculata*, or common bird's-foot trefoil: stems prostrate; heads of flowers flat; legumes cylindrical, spreading. Root perennial, tapering, striking deeply into the earth. Stems several, slender, bluntly four-cornered, procumbent except where supported, as in meadows or among bushes, from six or seven inches to a foot and a half in length; varying even more in different soils and situation, and in the several varieties. "I have now before me, August 17, 1797," says Mr. Professor Martyn, "specimens from the same spot; some growing detached, perfectly procumbent, and only six inches long; others three feet and a half high, by having run up among bushes, which they do without either twisting or clasping by tendrils. Leaves ternate, petioled, one at each joint, the leaflets differing extremely in form, in the several varieties, from bluntly ovate to linear-lanceolate; those in the specimens before me are ovate, terminating in a short point, on very short pedicels, the middle one narrowing towards the base, so as to be almost wedge-shaped; they are smooth, and the common petiole is membranaceous. The flowers grow in flattened heads resembling umbels, on peduncles from two to three inches and a half in length, but on pedicels hardly a line long. There is a single sessile ternate leaf at the base of each head without any stipules; and sometimes there is only one leaflet or two; the number of flowers varies from three or four to twelve or thirteen; none of my specimens have more than six, very few more than four, and some only one or two. Calyx fringed with long soft hairs; corolla, before it opens, of a bloody red on the outside, and of a yellowish green within; when expanded, of a full yellow; all the petals are equal, and stand each on narrow separate claws; the banner bent back, and the wings oblong-ovate. Legumes smooth, spreading like the spokes of a wheel, or rather like the fingers, or birds' claws, and ending in a long straight point. Seeds many, sometimes more than twenty, small,

somewhat kidney-shaped, and spotted. I do not find that more than three or four pods in a head come to maturity." Native of all parts of Europe, and also of Japan, in meadows, pastures, heaths, by road-sides, in hedges, among bushes, and in woods: flowering from June to August. The similitude of the stipules to leaves occasioned some of the old writers to call it *Lotus pentaphyllos*; Gerard however calls it *small coddled trefoil*; and Ray, *bird's-foot trefoil*, which is the name now commonly retained. Withering calls it *bird's-foot clover*. In Yorkshire it is said to be called *cheescake-groß*, and in some other counties, *butter-jags*, and *crow-toes*. It has been recommended for cultivation by Ellis under the name of *ladies finger*, by which it is confounded with *Anthyllis vulneraria*, a much inferior plant in rural economy; and by Dr. Anderson under the name of *Astragalus glycyphyllos*, or milkwort, which is a strong-smelling sticky plant, that does not seem to be agreeable to cattle, though Linnæus affirms that horses, kine, goats, and sheep, eat it. In Germany it is named *gehornie schotenklee*, *wilder fleinklee*, *gelber sunsolattriger klee*, *gelbe vogelwicke*, *kleiner hornklee*, *hornwicke*, *walzenkraut*, *frauenfingerkraut*, *unserer lieben frauens schuhlein*; in Dutch, *gehoornde klaveren*, *gekroonde melken*, *jufferfchoentjes*; in Danish, *kierringtand*, *kraeklover*; in Swedish, *haringetander*; in French, *lotier corniculé ou des pres*, *trefle jaune*.

Mr. Miller has made three species out of this; and several varieties are admitted. But Mons. Villars justly calls this species a Proteus, and remarks that he has seen individuals of one of the varieties of it, that approached nearer to *Lotus hirsutus*, in appearance, than to many individuals of this species. Where plants are so given to change, it is easy, but dangerous, to multiply species. Linnæus, in distinguishing the first and second species, only mentions that the appearance and place of growth are different, whereas the place of growth may probably occasion the difference in the appearance.

The flowers of bird's-foot trefoil become green when dried, in which respect they resemble those of Indigo. Mr. Miller says, he has always observed, that cattle of all sorts avoid eating this plant, whilst the grass all round it has been eaten very bare. But he ought to have remarked, that it is the designation of Providence, that, whilst cattle crop the herbage, they generally leave the flowering stems untouched, otherwise many plants could not be propagated. When he goes farther indeed, and affirms that he has cut the plant when young, and given it to various animals, but could never get them to eat it; we can only say that more modern experience contradicts his experience, whatever it might be. Linnæus's account is, that kine, goats, and horses, eat it; but that sheep and swine are not fond of it. On the contrary we are told, that it is cultivated in Hertfordshire as paturage for sheep. It makes extremely good hay; in moist meadows grows to a greater height than the other trefoils, and seems to be of a quality equal, if not superior, to most of them. In common with several other leguminous plants, it gives substance to the hay, and perhaps contributes to render it more palatable and wholesome for cattle. Dr. Anderson affirms, that, as every species of domestic animal eats the bird's-foot trefoil, (or milkwort, as he calls it, having mistaken it for *Astragalus glycyphyllos*, a plant totally different in appearance, character, and qualities,) in preference to every other plant, it seldom comes to flower in pasture-grounds, unless where they have been saved from cattle for some time. What first recommended it to his notice, was the having observed it to grow and flourish in poor ground; as in the midst of a barren moor, where the soil was so poor that even heath could hardly grow; upon bare obdurate clays; and in dry and barren sands. It certainly flourishes not only in these, but also in a chalky soil; and we may add, that on moors, heaths, and downs, hard stocked with sheep, we may observe the surface to be yellow with the flowers of this plant; which contradicts what Dr. Anderson asserts above, that it seldom

dom comes to flower in pastures; without however confirming the assertion of Linnæus, that sheep dislike it; or of Miller, that no cattle will eat it; for they devour the herbage, though they leave the flowering-stalks untouched, as we remarked above. Dr. Anderson's figure is not exact in the leaves, there being always three leaflets with two stipules, whereas he has never more than four, and frequently only two.

20. *Lotus cytifoides*, or downy bird's-foot trefoil: heads halved; stem diffused, very much branched; leaves tomentose. This is a perennial plant, sending out from the root many stalks, which branch out their whole length. Flowers on short peduncles, four or six in a divided head; they are yellow, and appear in July. Pods taper, with roundish seeds, ripening in autumn. Native of the south of Europe, on the sea-coast.

21. *Lotus dorycnium*, or shrubby bird's-foot trefoil: heads leafless; leaves sessile, quinate. This rises with weak shrubby stalks, three or four feet high, sending out many slender branches, thinly set with small hoary leaves, having five leaflets, spreading like the fingers, and sessile. Flowers at the extremity of the branches in small heads; they are very small and white, appear at the end of June, or in July, continue to September, and are succeeded by short pods, containing two or three small round seeds. Native of the south of Europe. Cultivated before 1640, by Parkinson.

Vahl remarks, that there are many specimens in the herbariums of several botanists, so different, that they are probably distinct species. Almost all the old writers, some of the moderns, and Linnæus himself in his earlier works, made the *Dorycnium* a distinct genus. Villars says it forms a genus between *Lotus* and *Trifolium*, differing from the former in the shortness of its legume, its woodiness, its distinct and more regular leaves, its calyx and very small flowers. It would range better with the trefoils, if it were not an absurdity to speak of a trefoil with quinate leaves, and if that genus were not much loaded with species already. He makes two species of *Dorycnium*. 1. *D. suffruticosum*; with suffruticose upright stems. 2. *D. herbaceum*, with a diffused herbaceous stem.

22. *Lotus medicaginoïdes*: legumes umbelled, bowed; leaflets obcordate, toothletted. Native of Siberia, resembling *Medicago polymorpha* when in flower, but smaller, with the legumes of *Trigonella*. Doubtful whether it be of this genus, or a *Trigonella*.

23. *Lotus oligoceros*: legumes binate, round, straight, striated, villose, dotted with white. Root annual. Stems branched, villose, half a foot or more in height. It approaches to *L. angustissimus*; but the stem is upright. It differs from *L. corniculata* in the stems, floescence, life, &c. The legume also is not one-celled; nor are the seeds cylindrical, but spherical. It flowers the beginning of July (in Italy), and perfects the seeds by the end of that month. This species should have been placed in the first division.

*Propagation and Culture*.—1, 2, 4, 6, 7, 11, 20. These are propagated by seeds, which should be sown early in April upon an open bed or border exposed to the sun, where the plants are to remain; when they come up they must be thinned, leaving them near two feet asunder, and afterwards they must be kept clean from weeds, which is all the culture they require.

3. The winged pea is an annual plant commonly cultivated in flower-gardens for ornament. The seeds are sown in patches, five or six together, where they are designed to remain. If the seeds all grow, some of the plants may be pulled up, leaving only two or three in each patch, and afterwards they will require no other care but to keep them clean from weeds.

12, 13, 16. These are too tender to live abroad; the plants therefore are kept in pots, which in winter are placed in a warm airy glass-case or dry stove, but in summer are placed abroad in a sheltered situation. They may be easily propagated by cuttings during the summer sea-

son, and also by seeds; but the plants which have been two or three times increased by cuttings, are seldom fruitful. The plants are subject to go off at once, and therefore new ones should be constantly raised, especially as they are beautiful, and almost always in flower.

18. This sort may be cultivated for feeding cattle in the same manner as lucern. It rises easily from seeds, is very hardy, and will thrive on any light dry poor-ground.

19. Dr. Anderson sowed the common bird's-foot trefoil with his ordinary hay-feeds. It grew the first season as tall as the great clover, and was scarcely distinguishable from lucern, but by the slenderness of the stalk, and proportional smallness of the leaf. Like lucern, it is perennial, sends down a long root to a great depth, at first small, but becoming at length of a considerable size; so that it is several years before it attains its full perfection; but, when once established, it remains many years in full vigour, and produces annually a great quantity of fodder. In autumn 1773, he cut the stalk from an old plant in an indifferent soil, and, having dried it, found that it weighed fourteen ounces and a half. Like lucern, it is never affected with the severest drought; but it does not resemble that plant in delicateness of constitution; as it thrives in the stiffest clays, and stands its ground among grass and weeds. The stalks die down entirely in winter, and do not come up in the spring till clover begins to advance, so that it can never be of use but as a summer-pasture. Neither does it advance very fast after it is cut down, or eat over, even in summer. Mr. Curtis justly remarks; whether this plant be deserving of the encomiums here bestowed upon it, the practical farmer must determine. There appears no reason why feed might not be obtained from it; and it should seem that land not strong enough to bear clover might be improved by the introduction of bird's-foot trefoil. "August 18, 1797. I gave a handful of it in full flower and seed to a working horse, who ate it greedily in preference to very good hay on which he was then feeding. A cow also in full pasture received it with seeming avidity." *Martyn's Miller*.—See ANTHYLIS, ASPALATHUS, CELTIS, CORONILLA, CYTISUS, DIOSPYROS, EBENUS, INDIGOPERA, LIPARIA, NYMPHÆA, ONONIS, RHAMNUS, TRIFOLIUM, and TRIGONELLA.

LOU'ZIN, a town of Prussia, in the province of Natangen, with a castle; situated on a canal, which joins the Angerburg and Leventin lakes. It is fifty-six miles south-east of Königsburg. Lat. 53. 53. N. lon 21. 57. E.

LOU-CHI', a town of China, of the third rank, in Honan: forty-five miles south-east of Tchen.

LOU-KI', a town of China, of the third rank, in Kiangsi: twenty miles east of Kien-tchang.

LOU-KI', a town of China, of the third rank, in Hou-quang: seventeen miles south-west of Tching-tcheou.

LOU-KIANG', a town of China, of the third rank, in Kiang-nan: forty miles south of Lin-tcheou.

LOU-KIANG', a river which rises in the south-west part of China, and runs into the sea at Mastaban. In the Birmah dominions it is called *Thakwayn*, or *Thanluayn*.

LOU-KI'EN, a river of China, which runs into the Hoang about two miles west of Ho-kiu.

LOU-LEANG', a city of China, of the second rank, in Yun-nan: 1145 miles south-south-west of Peking. Lat. 25. 6. N. lon. 103. 21. E.

LOU-NGAN', a city of China, of the first rank, in Chen-si: 267 miles south-south-west of Peking. Lat. 36. 42. N. lon. 116. 54. E.

LOU-NGAN', a city of China, of the second rank, in Kiang-nan: 500 miles south of Peking. Lat. 31. 48. N. lon. 116. 14. E.

LOU-PAN', a city of China, of the second rank, in Yun-nan: 1147 miles south-south-west of Peking. Lat. 24. 50. N. lon. 103. E.

LOU-TCHOU', a river of Thibet, which runs into the Sanpoo twenty-two miles south-west of Tankia.

LOU-Y', a town of China, of the third rank, in Honan: thirty-five miles south-south-west of Coue-te.

LOU-Y',

LOU-Y', a city of China, of the second rank, in Quang-tong: 1225 miles south-south-west of Peking. Lat. 20. 51. N. lon. 109. 22. E.

LOVA, a river of Russia, which runs into the Velika eight miles north-west of Onogka.

LOVA, a town of Hungary: twenty miles west of St. Croit.

LOV'AGE, *f.* in botany. See *LIGUSTICUM*, vol. xii. p. 699.

LOV'AGE (Bastard.) See *LASERPITIUM* filer, vol. xii. p. 256.

LOUANG', a river of France, which runs into the Laye five miles north of Bethune.

LOUAR', a town of Hindoostan, in Dowlatabad: ten miles west-north-west of Kondur.

LOV'AT, a river of Russia, which rises from three lakes in the province of Polotsk, and runs into the Lake Ilmen, near Stara Rusa, in the government of Novgorod.

LOV'AT, a town of European Turkey, in Bulgaria: sixty-four miles east of Sofia.

LOV'AT (Lord), who was beheaded for treason in the year 1745. See the article ENGLAND, vol. vi. p. 718, 20. Mr. Boswell tells us, that Dr. Johnson used to repeat with great energy the following verses "On Lord Lovat's Execution," which appeared in the Gentleman's Magazine for April 1747; but there is no authority to say they were his own. Indeed one of the best critics of our age suggests, that the word "indifferently" being used in the sense of "without concern," and being also very unpoetical, renders it improbable that they should have been his composition. The lines are these:

Pity'd by gentle minds, Kilmarnock died:  
The brave, Balmerino, were on thy side;  
Radcliffe, unhappy in his crimes of youth,  
Steady in what he still mistook for truth,  
Beheld his death so decently unmov'd,  
The soft lamented, and the brave approv'd.  
But Lovat's fate indifferently we view,  
True to no king, to no religion true:  
No fair forgets the ruin he has done;  
No child laments the tyrant of his son;  
No tory pities, thinking what he was;  
No whig compassions, for he left the cause;  
The brave regret not, for he was not brave;  
The honest mourn not, knowing him a knave!

Mr. B. justly observes, that these verses are somewhat too severe on the extraordinary person who is the chief figure in them; for he was undoubtedly brave. His pleantry during his solemn trial was very remarkable. When asked if he had any questions to put to sir Everard Fawcener, who was one of the strongest witnesses against him, he answered "I only wish him joy of his young wife." And after sentence of death, in the horrible terms in such cases of treason, was pronounced upon him, and he was retiring from the bar, he said, "Fare you well, my lords; we shall not all meet again in one place." He behaved with perfect composure at his execution, and called out *Dulce et decorum est pro patria mori*; "It is pleasing and honourable to die for one's country!" Boswell's Life of Johnson, vol. i.

LOVATOVA, a town on the east coast of the island of Flores. Lat. 8. 30. S. lon. 122. 50. E.

LOU'BENS, a town of France, in the department of the Upper Garonne: twelve miles north-west of Revel, and fifteen east of Toulouse.

LOUBE'RE (Simon de la), son of the judge-criminal of Toulouse, was born at that city in 1642. He studied in the Jesuits' College, and displayed the vivacity of his parts by an abundance of light compositions, such as songs, vaudevilles, and verses of gallantry, in the number of which he was scarcely surpassed by any man of his time. He did not, however, neglect more serious pursuits; and particularly attended to politics and public law. He commenced his political career with being secretary to M. de St. Romain, ambassador to Switzerland. In 1687 he was

appointed by Louis XIV. his envoy-extraordinary to the court of Siam, between which and that of France an intercourse had been formed by the artifices of the Jesuits. Loubere remained only about three months in the country, during which he made it his business to collect information concerning its natural and civil history, the religion, manners, &c. of the people. From these materials, and the account of his voyage, he composed a "Relation," on his return, first printed at Paris in 1691, 2 vols. 12mo. which became a popular work. He was afterwards sent without a public character into Spain, on a secret commission, supposed to have been that of detaching the Spanish and Portuguese courts from their alliance with England; but, the design transpiring, he was arrested at Madrid, and obtained his release only in consequence of reprisals upon some Spaniards in France. He attached himself to the chancellor Pontchartrain, minister of the finances and marine, with whose son he travelled. By the minister's influence, he was elected in 1693 into the French academy; on which occasion la Fontaine wrote an epigram, the point of which was, that this election was an impost laid by Pontchartrain on the academy; whence his literary character may be estimated. He afterwards retired to his native city, where he re-established the *floral games*, which had sunk into decay. His long life of eighty-seven years complete closed in 1729. Loubere was a man of very general knowledge, acquainted with several languages ancient and modern, and a writer in poetry, history, politics, mathematics, and other branches. He is, however, only remembered for his account of Siam. *Moreri.*

LOU'BES, a town of France, in the department of the Gironde; twelve miles north-east of Bourdeaux.

LOUBI'ERE, a town of the island of Dominica, on the west coast: seventeen miles south of Portsmouth.

LOU'BO, a town of Benin, at the mouth of the river Formosa: sixty miles south-west of Benin.

LOUBOU'X, a town of France, in the department of the Landes; nine miles south-east of St. Sever.

LOUBRESSAC', a town of France, in the department of the Lot: four miles west of St. Cere.

LOUCHOU', a town of Persia, in the province of Mazanderan: forty-five miles north-east of Casbin.

LOUD, *adj.* Noisy: striking the ear with great force:

Contending on the Lesbian shore,  
His prowess Philomelides confests'd,  
And loud acclaiming Greeks the victor blefs'd. *Pope.*

The numbers soft and clear,  
Gently steal upon the ear;  
Now louder, and yet louder rise,  
And fill with spreading sounds the skies. *Pope.*

Clamorous; turbulent.—She is loud and stubborn; her sect abide not in her house. *Proverbs.*

LOU'DE, a town of France, in the department of the Upper Loire: six miles north-west of Le Puy en Velay.

LOUDEAC', a town of France, and principal place of a district, in the department of the North Coasts. Here is an iron-forge, and a manufacture of thread. It is twenty miles south of St. Brieu, and twenty-seven south-fourth-east of Guingamp. Lat. 48. 8. N. lon. 2. 40. W.

LOU'DES, a town of France, in the department of the Upper Loire, and chief place of a canton, in the district of Le Puy: six miles north-west of Le Puy. The place contains 800, and the canton 5377, inhabitants, in nine communes.

LOU'DLY, *adv.* Noisily; so as to be heard far:

The soldier that philosopher well blam'd,  
Who long and loudly in the schools declaim'd. *Denham.*

Clamorously; with violence of voice.—I read above fifty pamphlets, written by as many presbyterian divines, loudly disclaiming toleration. *Swift.*

LOU'DNESS, *f.* Noise; force of sound; turbulence; vehemence or furiousness of clamour.—Had any disaster made room for grief, it would have moved according to prudence,

prudence, and the proportions of the provocation: it would not have fallied out into complaint or *loudness*. *South*.

LOU'DON, a county of Virginia, in America, on the river Potowmac, adjoining Fairfax, Berkeley, and Faquier, counties; about fifty miles long and twenty broad; containing 15,533 free inhabitants, and 4990 slaves. Its chief town is Leesburg. Quarries of grey stone, white flint, and lime, are found in this county. The climate is favourable to apples, pears, peaches, plums, cherries, and grapes. The county was first settled from Pennsylvania and New Jersey.

LOU'DON, a township in Rockingham county, New Hampshire, taken from Canterbury, and incorporated in 1773; situated east of the Merrimack-river; and containing 1279 inhabitants.—A township in Berkshire county, Massachusetts; twenty-one miles south-east of Lenox; incorporated in 1773; containing 614 inhabitants, and 13,000 acres, of which 2944 are ponds.

LOUDUN, a town of France, and principal place of a district, in the department of the Vienne, situated on an eminence between the Creuse and the Dive; twelve miles east of Thouars. The place contains 5138, and the canton 11,299, inhabitants, in eighteen communes. Lat. 47. 0. N. lon. 0. 10. E.

LOUE, a town of France, in the department of the Sarthe, and chief place of a canton, in the district of Le Mans; fifteen miles west of Le Mans. The place contains 1204, and the canton 12,563, inhabitants, in sixteen communes.

To LOVE, *v. a.* [*lupian*, *San.*] To regard with passionate affection, as that of one sex to the other.—The jealous man wishes himself a kind of deity to the person he loves; he would be the only employment of her thoughts. *Addison*.

Good shepherd, tell this youth what 'tis to love.

—It is to be made all of sighs and tears;

It is to be made all of faith and service;

It is to be all made of fantasy,

All made of passion, and all made of wishes;

All adoration, duty, and obedience;

All humbleness, all patience, all impatience,

All purity, all trial, all observance. *Shakespeare.*

To regard with the affection of a friend:

None but his brethren he, and sisters, knew,

Whom the kind youth preferred to me,

And much above myself I lov'd them too. *Cowley.*

To regard with parental tenderness.—He that loveth me shall be loved of my Father; and I will love him, and will manifest myself to him. *John*.—To be pleased with; to delight in.—Fish used to salt water delight more in fresh: we see that salmons and smelts love to get into rivers, though against the stream. *Bacon's Nat. Hist.*

He lov'd my worthless rhimes, and, like a friend,  
Would find out something to commend. *Cowley.*

To regard with reverent unwillingness to offend.—Love the Lord thy God with all thine heart. *Deut. vi. 5.*

LOVE, *f.* The passion between the sexes.—You know y'are in my pow'r by making love. *Dryden.*

Let mutual joys our mutual trust combine,  
And love and love-born confidence be thine. *Pope.*

Kindness; good-will; friendship.—By this shall all men know that ye are my disciples, if ye have love one to another. *John xiii. 35.*

What love, think't thou, I sue so much to get?

That love which virtue begs, and virtue grants. *Shakespeare.*

Courtship:

Demetrius

Made love to Nedar's daughter Helena,  
And won her soul. *Shakesp. Midf. Night's Dream.*

If you will marry, make your loves to me;

My lady is bespoken. *Shakespeare's King Lear.*

Tenderness; parental care.—No religion that ever was, so fully represents the goodness of God, and his tender love to mankind, which is the most powerful argument to the love of God. *Tillotson*.—Liking; inclination to: as, The love of one's country:

In youth, of patrimonial wealth posselt,  
The love of science faintly warm'd his breast. *Fenton.*

Object beloved.—The lover and the love of human kind. *Pope.*

If that the world and love were young  
And truth in every shepherd's tongue;  
These pretty pleasures might me move,  
To live with thee, and be thy love. *Shakespeare.*

Lewdness:

He is not lolling on a lewd love bed,  
But on his knees at meditation. *Shakespeare.*

Unreasonable liking.—The love to sin makes a man sin against his own reason. *Taylor*.—Fondness; concord.—Shall I come unto you with a rod, or in love, and in the spirit of meekness? *1 Cor. iv. 21.*

Come, love and health to all!

Then I'll sit down: give me some wine; fill full. *Shakesp.*

Principle of union.—Love is the great instrument of nature, the bond and cement of society, the spirit and spring of the universe: love is such an affection as cannot so properly be said to be in the soul, as the soul to be in that: it is the whole man wrapt up into one desire. *South*.—Picturesque representation of love:

The lovely babe was born with every grace:  
Such was his form as painters, when they show  
Their utmost art, on naked loves bestow. *Dryden.*

A word of endearment:

'Tis no dishonour, trust me, love, 'tis none:  
I would die for thee. *Dryden's Don Sebastian.*

Due reverence to God.—Love is of two sorts, of friendship and of desire; the one betwixt friends, the other betwixt lovers; the one a rational, the other a sensitive, love: so our love of God consists of two parts, as esteeming of God, and desiring of him. *Hammond*.—The love of God makes a man chaste without the laborious arts of fasting, and exterior disciplines; he reaches at glory without any other arms but those of love. *Taylor*.—A kind of thin silk stuff.—This leaf held near the eye, and obverted to the light, appeared so full of pores, with such a transparency as that of a sieve, a piece of cypress, or love hood. *Boyle on Colours*. [Used poetically by Spenser for] Lover:

He unto her a penance did impose,  
Which was, that through the world's wyde wilderness  
She wander should in companie of those,  
Till she had sav'd so many loves as she did lose. *Fairy Queen.*

LOVE, in a large sense of the word, denotes all those affections of the pleasing kind which objects and incidents raise in us; thus we are said to love not only intelligent agents of morally good dispositions, but also sensual pleasures, riches, and honours. But love in its usual and more appropriate signification, may be defined, "that affection which, being compounded of animal desire, esteem, and benevolence, becomes the bond of attachment and union between individuals of the different sexes; and makes them feel in the society of each other a species of happiness which they experience no-where else." We call it an *affection* rather than a *passion*, because it involves a desire of the happiness of its object: and that its constituent parts are those which have been just enumerated, we shall first endeavour to prove, and then proceed to trace its rise and progress from a selfish appetite to a generous sentiment.

Animal desire is the actual energy of the sensual appetite: and that it is an essential part of the complex affection, which is properly called love, is apparent from this consideration,

consideration, that, though a man may have sentiments of esteem and benevolence towards women who are both old and ugly, he never supposes himself to be in love with any woman to whom he feels not the sensual appetite to have a stronger tendency than to other individuals of her sex. On the other hand, that animal desire *alone* cannot be called the affection of love is evident; because he who gratifies such a desire without esteeming its object, and willing to communicate at the same time that he receives enjoyment, loves not the woman, but himself. Mere animal desire has nothing in view but the species and the sex of its object; and, before it make a selection, it must be combined with sentiments very different from itself. The first sentiment with which it is combined, and by which a man is induced to prefer one woman to another, seems to be that by which we are delighted with gracefulness of person, regularity of features, and beauty of complexion. It is not indeed to be denied that there is something irresistible in female beauty. The most severe will not pretend that they do not feel an immediate prepossession in favour of a handsome woman; but this prepossession, even when combined with animal desire, does not constitute the whole of that affection which is called *love*. Savages feel the influence of the sensual appetite, and it is extremely probable that they have some ideas of beauty; but among savages the affection of love is seldom felt. Even among the lower orders in civil society it seems to be a very-gross passion, and to have in it more of the selfishness of appetite than of the generosity of esteem. To these observations many exceptions will no doubt be found; but we speak of savages in general, and of the great body of the labouring poor, who in the choice of their mates do not study, who indeed are incapable of studying, that rectitude of mind, and those delicacies of sentiment, without which neither man nor woman can deserve to be esteemed.

Sweetness of temper, a capital article with us in the female character, displays itself externally in mild looks and gentle manners, and is the first and perhaps the most powerful inducement to love in a cultivated mind. But such graces are scarcely discernible in a female savage; and even in the most polished woman would not be perceived by a male savage. Among savages, strength and boldness are the only valuable qualities. In these, females are miserably deficient; for which reason they are contemned by the males as beings of an inferior order. The North American tribes glory in idleness; the drudgery of labour degrades a *man* in their opinion, and is proper for *women* only. To join young persons in marriage is accordingly the business of the parents; and it would be unpardonable meanness in the bridegroom to show any fondness for the bride. In Guiana a woman never eats with her husband, but after every meal attends him with water for washing; and in the Caribbee islands she is not even permitted to eat in the *presence* of her husband. Dampier observes in general, that among all the wild nations with which he was acquainted, the women carry the burdens, while the men walk before and carry nothing but their arms; and that women even of the highest rank are not better treated. In Siberia, and even in Russia, the capital excepted, men till very lately treated their wives in every respect like slaves. It might indeed be thought, that animal desire, were there nothing else, should have raised women to some degree of estimation among men; but male savages, utter strangers to decency and refinement, gratify animal desire with as little ceremony as they do hunger or thirst. Hence it was that in the early ages of society a man *purchased* a woman to be his wife, as one purchases an ox or a sheep to be food; and valued her only as she contributed to his sensual gratification. Instances innumerable might be collected from every nation of which we are acquainted with the early history; but we shall content ourselves with mentioning a few. Abraham bought Rebekah, and gave her to his son Isaac for a wife. (Gen. xxiv.) Jacob, having nothing else to give,

served Laban fourteen years for two wives. (Gen. xxix.) To David, demanding Saul's daughter in marriage, it was said, *The king desireth not any dowry, but an hundred foreskins of the Philistines.* (1 Sam. xviii. 28.) In the Iliad (lib. ix.) Agamemnon offers his daughter to Achilles for his wife; and says that he would not demand for her any *price*. By the laws of Ethelbert king of England, a man who committed adultery with his neighbour's wife was obliged to pay the husband a fine, and to *buy him another wife*. (Sect. 32.) But it is needless to multiply instances; the practice has prevailed universally among nations emerging from the savage state, or in the rudest stage of society; and, wherever it prevailed, men could not possibly have for the fair sex any of that tender regard and esteem which constitute so essential a part of the complex affection of love.

Accordingly we find the magnanimous Achilles an absolute stranger to that generous affection, though his heart was susceptible of the warmest and purest friendship. His attachment to Patroclus was so heroically disinterested, that he willingly sacrificed his own life to revenge the death of his friend; but, when Agamemnon threatened to rob him of his favourite female captive, though he felt the insult offered to his *pride*, he never spoke of the *woman* but as a *slave*, whom he was concerned to preserve in point of *honour*, and as a testimony of his glory. Hence it is that we never hear him mention her but as his *spoils*, the *reward of war*, or the *gift* which the Grecians gave him. Pope has made the language of this rough warrior less inconsistent with the peculiar resentment natural to an injured lover than it is in the original; for in the original the hero says expressly, "I will not fight with you or with any other man for the sake of a *girl*; but you shall not rob me of any other part of my *property*;" which is surely the language of a man to whose heart love must have been an utter stranger.

Since, then, it is so apparent, that in the heroic age of Greece even princes and kings were strangers to the generous affection of love, it need not occasion much surprise that the same affection has very little influence upon mankind in the lowest ranks of the most polished societies of modern Europe. That this is actually the case, that among the generality of uneducated men and women there is no other bond of attachment than the sensual appetite, every year furnishes multiplied proofs. We daily see youths, rejected by their mistresses, paying their addresses without delay to girls who, in looks, temper, and disposition, are diametrically opposite to those whom so lately they pretended to love: we daily see maidens, slighted by their lovers, receiving the addresses of men, who in nothing but their sex resemble those to whom a week before they wished to be married; and we believe it is not very uncommon to find a girl entertaining several lovers together, that, if one or more of them should prove false, she may still have a chance not to be totally deserted. Did esteem and benevolence, placed on manners and character, constitute any part of vulgar love, these people would act very differently; for they would find it impossible to change their lovers and their mistresses with the same ease that they change their clothes.

To this account of love, as it appears in savage nations, some one may perhaps oppose the paintings of the softer passion in the poems of Ossian. That bard describes the female character as commanding respect and esteem, and the Caledonian heroes as cherishing for their mistresses a flame so pure and elevated as never was surpassed, and has seldom been equalled, in those ages which we commonly call most enlightened. This is indeed true; and it is one of the many reasons which have induced Johnson and others to pronounce the whole a modern fiction. Into that debate we do not enter at present. (See the article OSSIAN.) We might admit the authenticity of the poems, without acknowledging that they furnish any exception to our general theory. They furnish indeed, in the manners which they describe, a wonderful anomaly in the general history of man. All other nations of which we read were

In the hunter-state savage and cruel; the Caledonians, as exhibited by Ossian, are gentle and magnanimous. The heroes of Homer fought for plunder, and felt no clemency for a vanquished foe; the heroes of Ossian fought for fame; and, when their enemies were subdued, they took them to their bosoms. The first of Greeks committed a mean insult on the dead body of the first of Trojans; among the Caledonians, insults offered to the dead, as well as cruelty to the living, were condemned as infamous. The heroes of Ossian appear in no instance as savages. How they came to be polished and refined before they were acquainted with agriculture and the most useful arts of life, it is not our business to inquire. Perhaps the Caledonian ladies of Ossian resembled in their manners the German ladies of Tacitus, who accompanied their husbands to the chase, fought by their sides in battle, and partook with them of every danger. If so, they could not fail to be respected by a race of heroes among whom courage took place of all other virtues; and this single circumstance, from whatever cause it might proceed, will sufficiently account for the estimation of the female character among the ancient Germans and Caledonians, so different from that in which it has been held in almost every other barbarous nation.

But if, among savages and the vulgar, love be unknown, it cannot possibly be an *instinctive affection*; and therefore it may be asked, How it gets possession of the human heart? and by what means we can judge whether in any particular instance it be real or imaginary? These questions are of importance, and deserve to be fully answered; though many circumstances conspire to render it no easy task to give to them such answers as shall be perfectly satisfactory. Love can subsist only between individuals of the different sexes. A man can hardly love two women at the same time; and we believe that a woman is still less capable of loving at once more than one man. Love, therefore, has a natural tendency to make men and women pair, or, in other words, it is the source of marriage; but in polished society, where alone this affection has any place, so many things besides mutual attachment are necessary to make the married life comfortable, that we rarely see young persons uniting from the impulse of love; and have therefore but few opportunities of tracing the rise, progress, and consequences, of the affection. We shall, however, throw together such reflections as have occurred to us on the subject, not without indulging a hope, that they may be useful to the younger part of our readers when forming the most important connexion in life.

We have said, that the perception of beauty, combined with animal desire, is the first inducement which a man can have to prefer one woman to another. It may be added, that elegance of figure, a placid masculine countenance, with a person which indicates strength and agility, are the qualities which first tend to attach any woman to a particular man. Beauty has been defined, by pere Buffier in his *First Truths*, and sir Joshua Reynolds in the *Idler*, "That particular form, which is the most common of all particular forms to be met with in the same species of beings." Let us apply this definition to our own species, and try, by means of it, to ascertain what constitutes the beauty of the human face. It is evident that of countenances we find a number almost infinite of different forms, of which forms one only constitutes beauty, whilst the rest, however, numerous, constitute what is not beauty, but deformity, or ugliness. To an attentive observer, however, it is evident, that, of the numerous particular forms of ugliness, there is not one which includes so many faces as are formed after that particular cast which constitutes beauty. Every particular species of the animal as well of the vegetable creation, may be said to have a fixed or determinate form, to which, as to a centre, nature is continually inclining. Or it may be compared to pendulums vibrating in different directions over one central point; and, as they all cross the centre, though only one passes

through any other point; so it will be found that perfect beauty is oftener produced by nature than deformity: we do not mean than deformity in general, but than any one kind and degree of deformity. As we are then more accustomed to beauty than deformity, we may conclude that to be the reason why we approve and admire it, just as we approve and admire, fashions of dress for no other reason than what we are used to them. The same thing may be said of colour as of form: it is custom alone which determines our preference of the colour of the Europeans to that of the Ethiopians, and which makes them prefer their own colour to ours; so that, though habit and custom cannot be the *cause* of beauty, (see *BEAUTY*, vol. ii.) they are certainly the cause of our liking it.

That we *do like it* cannot be denied. Every one is conscious of a pleasing emotion when contemplating beauty either in man or woman; and, when that pleasure is combined with the gratification of the sensual appetite, it is obvious that the sum of enjoyment must be greatly increased. The perception of beauty, therefore, necessarily directs the energy of the sensual appetite to a *particular* object; but still this combination is a mere selfish feeling, which regards its object only as the best of many similar instruments of pleasure. Before it can deserve the name of *love*, it must be combined with esteem, which is never bestowed but upon moral character and internal worth; for, let a woman be ever so beautiful, and of course ever so desirable as an instrument of sensual gratification, if she be not possessed of the virtues and dispositions which are peculiar to her sex, she will inspire no man with a generous affection. With regard to the outlines, indeed, whether of internal disposition or of external form, men and women are the same; but nature, intending them for mates, has given them dispositions, which, though concordant, are however different, so as to produce together delicious harmony. The man, more robust, is fitted for severe labour, and for field exercises; the woman, more delicate, is fitted for sedentary occupations, and particularly for nursing children. The man, bold and vigorous, is qualified for being a protector; the woman, delicate and timid, requires protection. Hence it is, that a man never admires a woman for possessing bodily strength or personal courage; and women always despise men who are totally destitute of these qualities. The man, as a protector, is directed by nature to govern; the woman, conscious of inferiority, is disposed to obey. Their intellectual powers correspond to the destination of nature. Men have penetration and solid judgment to fit them for governing; women have sufficient understanding to make an engaging figure under good government: a greater proportion would excite dangerous rivalry between the sexes, which nature has avoided by giving them different talents. Women have more imagination and sensibility than men, which make all their enjoyments more exquisite, at the same time that they are better qualified to communicate enjoyment. Add another capital difference of disposition: the gentle and insinuating manners of the female tend to soften roughness of the other sex; and, wherever women are indulged with any freedom, they polish sooner than men.

These are not the only particulars that distinguish the sexes. With respect to the ultimate end of love, it is the privilege of the male, as superior and protector, to make a choice; the female, preferred, has no privilege but barely to consent or to refuse. Whether this distinction be the immediate result of the originally different dispositions of the sexes, or only the effect of associations inevitably formed, may be questioned; but among all nations it is the practice for men to court, and for women to be courted; and, were the most beautiful woman on earth to invert this practice, she would forfeit the esteem, however by the external grace she might excite the desire, of the man whom she addressed. The great moral virtues which may be comprehended under the general term

term *integrity*, are all absolutely necessary to make either men or women estimable; but to procure esteem to the female character, the modesty peculiar to their sex is a very essential circumstance. Nature hath provided them with it as a defence against the artful solicitations of the other sex before marriage, and also as a support of conjugal fidelity. A woman, therefore, whose dispositions are gentle, delicate, and rather timid than bold, who is possessed of a large share of sensibility and modesty, and whose manners are soft and insinuating, must, upon moral principles, command the esteem and benevolence of every individual of the other sex who is possessed of sound understanding; but, if her person be deformed, or not such as to excite some degree of animal desire, she will attract no man's love. In like manner, a man whose moral character is good; whose understanding is acute, and whose conversation is instructive, must command the esteem of every sensible and virtuous woman; but, if his figure be disagreeable, his manner unpolished, his habits slovenly, and, above all, if he be deficient in *personal courage*, he will hardly excite desire in the female breast. It is only when the qualities which command esteem are, in the same person, united with those which excite desire, that the individual so accomplished can be an object of love to one of the other sex; but, when these qualities are thus united, each of them increases the other in the imagination of the lover. The beauty of his mistress gives her, in his apprehension, a greater share of gentleness, modesty, and every thing which adorns the female character, than perhaps she really possesses; whilst his persuasion of her internal worth makes him, on the other hand, apprehend her beauty to be absolutely unrivalled.

To this theory an objection readily offers itself, which it is incumbent upon us to obviate. Men and women sometimes fall in love at first sight, and very often before they have opportunities of forming a just estimate of each other's moral character: How is this circumstance to be reconciled with the progressive generation of love? We answer, By an association of ideas which is formed upon principles of physiognomy. Every passion and habitual disposition of mind gives a particular cast to the countenance, and is apt to discover itself in some feature of the face. This we learn by experience; and in time, without any effort of our own, the idea of each particular cast of countenance comes to be so closely associated in our minds with the internal disposition which it indicates, that the one can never afterwards be presented to our view without instantly suggesting the other to the imagination. Hence it is that every man, who has been accustomed to make observations, naturally forms to himself, from the features and lineaments of a stranger's face, some opinion of his character and fortune. We are no sooner presented to a person for the first time, than we are immediately impressed with the idea of a proud, a reserved, an affable, or a good natured, man; and, upon our going into a company of absolute strangers, our benevolence or aversion, our awe or contempt, rises instantly towards particular persons, before we have heard them speak a word, or know so much as their names or designations. The same thing happens when we are presented to the fair sex. If a woman, seen for the first time, have that particular cast of countenance, and that expression of features, to which we have associated notions of gentleness, modesty, and other female virtues, she instantly commands our *esteem*; and, if she have likewise so much beauty as to make her an object of particular desire, esteem and desire become suddenly combined; and that combination constitutes the affection, of *love*. Such, too, is the nature of all mental associations, that each part of which they are composed adds strength and vividness to the other parts; so that, in the present instance, desire makes us imagine virtues in the woman which her countenance perhaps does not indicate; and the virtues which are there actually visible, make us apprehend her beauty as more perfect than it is.

The affection thus generated is more or less pure, and

will be more or less permanent, according as the one or the other part of which it is compounded predominates. "Where desire of possession prevails over our esteem of the person and merits of the desirable object, love loses its benevolent character: the appetite for gratification becomes ungovernable, and tends violently to its end; regardless of the misery that must follow. In that state, love is no longer a sweet agreeable *affection*; it becomes a selfish painful *passion*, which, like hunger and thirst, produces no happiness but in the instant of fruition; and, when fruition is over, disgust and aversion generally succeed to desire. On the other hand, where esteem, founded on a virtuous character and gentle manners, prevails over animal desire, the lover would not for the world gratify his appetite at the expense of his mistress's honour or peace of mind. He wishes, indeed, for enjoyment; and to him enjoyment is more exquisite than to the mere sensual lover, because it unites sentiment with the gratification of sense; at the same time that, so far from being succeeded by disgust or aversion, it increases his benevolence to the woman, whose character and manners he esteems, and who has contributed so much to his pleasure. Benevolence to an individual, having a general end, admits of acts without number, and is seldom fully accomplished. Hence mutual love, which is composed chiefly of esteem and benevolence, can hardly be of a shorter duration than its objects. Frequent enjoyment endears such lovers to each other, and makes constancy a pleasure; and, when the days of sensual enjoyment are over, esteem and benevolence will remain in the mind, making sweet, even in old age, the society of that pair, in whom are collected the affections of husband, wife, lover, friend, the tenderest affections of human nature.

From the whole of this investigation, we think it appears, that the affection between the sexes which deserves the name of *love*, is inseparably connected with virtue and delicacy; that a man of loose morals cannot be a faithful or a generous lover; that in the breast of him who has ranged from woman to woman for the mere gratification of his sensual appetite, desire must have effaced all esteem for the female character; and that, therefore, the maxim too generally received, that "a reformed rake makes the best husband," has very seldom a chance to be true. We think it may likewise be inferred, that thousands fancy themselves in love who know not what love is, or how it is generated in the human breast; and therefore we beg leave to advise such of our readers as may imagine themselves to be in that state, to examine their own minds, with a view to discover, whether, if the objects of their love were old or ugly, they would still esteem them for the virtues of their character, and the propriety of their manners. This is a question which deserves to be well weighed by the young and the amorous, who, in forming the matrimonial connexion, are too often blindly impelled by the mere animal desire inflamed by beauty. It may indeed happen, after the pleasure of gratifying that desire is gone (and, if not refined by esteem and benevolence, go it must with a swift pace), that a new bond of attachment may be formed upon more dignified and more lasting principles; but this is a dangerous experiment. Even supposing good sense, good temper, and internal worth of every sort, yet a new attachment upon such qualifications is rarely formed; because it *commonly* or rather *always*, happens, that such qualifications, the only solid foundation of an indissoluble connexion, if they did not originally make esteem predominate over animal desire, are afterwards rendered altogether invisible by satiety of enjoyment creating disgust; which is generally the case with violent love, founded on the desire of enjoyment only. As the delicate nature of female honour and decorum, and the inexpressible grace of a chaste and modest behaviour, are the surest and indeed the only means of kindling at first, and ever after of keeping alive, this tender and elegant flame, and of accomplishing the excellent ends designed by it; to attempt by fraud to violate the one,

er, under pretence of passion, to fully and corrupt the other, and, by so doing, to expose the too-often credulous and unguarded object, with a wanton cruelty, to the hatred of her own sex and the scorn of ours, and to the lowest infamy of both, is a conduct not only base and criminal, but inconsistent with that truly rational and refined enjoyment, the spirit and quintessence of which is derived from the bashful and sacred charms of virtue kept untainted, and therefore ever alluring to the lover's heart.

Violent love without affection is finely exemplified in the following story. When Constantinople was taken by the Turks, Irene, a young Greek of an illustrious family, fell into the hands of Mahomet II. who was at that time in the prime of youth and glory. His savage heart being subdued by her charms, he shut himself up with her, denying access even to his ministers. Love obtained such ascendancy, as to make him frequently abandon the army and fly to his Irene. War relaxed, for victory was no longer the monarch's favourite passion. The soldiers, accustomed to boory, began to murmur; and the infection spread even among the commanders. The basha Mustapha, consulting the fidelity he owed his master, was the first who durst acquaint him of the discourses held publicly to the prejudice of his glory. The sultan, after a gloomy silence, formed his resolution. He ordered Mustapha to assemble the troops next morning; and then with precipitation retired to Irene's apartment. Never before did that princess appear so charming; never before did the prince bestow so many warm caresses. To give a new lustre to her beauty, he exhorted her women next morning to bestow their utmost art and care on her dress. He took her by the hand, led her into the middle of the army, and, pulling off her veil, demanded of the basha, with a fierce look, whether they had ever beheld such a beauty? After an awful pause, Mahomet, with one hand laying hold of the young Greek by her beautiful locks, and with the other pulling out his scymetar, severed her head from her body at one stroke. Then, turning to his grandees, with eyes wild and furious, "This sword," says he, "when it is my will, knows to cut the bands of love." *Britannic Mag.* vol. i. *Sibyl's Key to Physic; Sketches of the Hist. of Man; Elements of Criticism; Ency. Brit.*

M. Retz, physician to the late king of France, has, in a work addressed to the youth of each sex on their entrance into life, defined and explained *love* in the following pleasing and instructive manner: "What is termed love, in the present day, is an ardent desire, which assumes the name of a *tender sentiment*. It is an honourable pretext to solicit something that is not so honourable. It is the seducing error of the young, the serious occupation of women, the wreck of men, the regret of the aged, and the real secret of Nature to perpetuate her works. Noble and well-formed minds are alone susceptible of a pure, disinterested, elevated, passion. To love a beautiful and virtuous woman, requires a taste for what is beautiful and honourable. To please her, we must resemble her. A lover is not courageous, sensible, humane, generous, because he loves; he loves because these qualities are innate; and it is with the mask of these qualities that men seduce the female who has not a sufficient degree of patience to put them to the trial. Genuine affection is the lot of a few. It requires too many qualities to be general. It demands too much constancy for the volatile, too much ardour for the sedate, too much restraint for the turbulent, too much delicacy for the simple, too much enthusiasm for the cold and icy, too much activity for the indolent, too much desire for the philosopher, too much self-denial for the libertine. Genuine love demands a considerable degree of elevation and energy of soul; generosity, sensibility, and rectitude of heart; a warm imagination; and inviolate attachment to the principles of virtue and honour. It cannot exist in the bosom of luxury and pleasure, in the midst of tumult, and the distractions of numerous and polite assemblies. It requires

simplicity of manners, and retired life. In times of happier manners, when the sex was *adored* by the men, they respected themselves, and endeavoured to render themselves worthy of the religious homage that was paid to them. Their esteem was the recompence of courage and virtue. The desire of pleasing them exalted the imagination, and was productive of heroes; but voluptuousness and sensuality have degraded us. We are no longer gallant; we are depraved. Since they are no longer considered as divinities, the sex is become too *human*; their influence on the character of men is now as pernicious as it was formerly beneficial. To soft illusions, to the enthusiasms of love, succeed facility of enjoyment, followed by quick disgust. *Philosophy* and debauchery take place of that heroic gallantry which constituted love and virtue. Formerly, as it was more difficult to please one woman, than it is now to seduce many, the reign of moral affection prolonged the power of *passion*. By refraining, directing, and fanning, the passion with delusive hopes, desires were perpetuated, while they preserved their force. Love could not be *made*, it was an *impulse*; it was even the child of innocence, and was nourished by the sacrifices which it made, instead of being extinguished by voluptuous gratification. True love mingles *respect* with the passion. If it was placed on mental qualities alone, the senses would be without energy; if placed solely on the charms of *person*, the *head* would be vacant. A genuine lover is equally struck with the virtues and with the attractions of his mistress.

"If we be deprived of love, what remains? For libertines, there is gallantry, its perpetual counterfeit; to the honest and feeling heart, tenderness; to *all*, the pleasures of friendship, less voluptuous than the pleasures of love, but mingled with fewer pains. It is too generally thought, that illicit amours may be pursued by a young man, without any pernicious consequences; but this is a fatal error. To what misfortunes does not criminal indulgence expose our youth? Remorse, shame, the loss of the esteem, not merely of the virtuous, but even of the vile accomplices of his pleasures, plunge his existence into a sea of sorrows. A woman who has yielded to the impulse of desire, seeks in vain to be indifferent to her situation, or to vindicate her errors to herself. In vain she attempts to believe that there are some passions which it is not in the power of human nature to conquer. Alas! less exertion is required to subdue the criminal passion, than is often employed to keep it alive." *Guide des Jeunes Gens; Paris, 1790.*

Dr. Mackenzie, in his discourse on Criminal Pleasure, feelingly describes the affection of love, and then exhibits the advantages of a married life compared with libertine indulgence: "How pleasing (says he) is the affection of love, when it first approaches the soul, arrayed with its native innocence and simplicity? It is ushered into the breast with the most delightful emotions, and awakens all the tenderest sympathies. It transports us beyond ourselves, creates a paradise around us, and gives us new interests and enjoyments. The selfish passions then cease to be regarded, and the generous affections take their turn to reign. All nature appears in her most pleasing form, and we feel ourselves in harmony with the universe. The mind is then in its highest and its best state. Why should I describe it! You, who have felt the impression, and can recall the ideas of the pleasing morning of your lives, can tell us that this affection is one of the perfect gifts of heaven, dispensed to mankind to heal their cares, and multiply their enjoyments, by creating the tenderest relations among the species, and uniting them more intimately with one another.

"There are two systems with respect to this affection, which offer themselves to our consideration; the libertine system, and the system of the married life. The effects of the former we have described. It presents us with all the melancholy effects of vitiated passions. If our argu-

ment upon it has been just, it is evident that it goes directly in opposition to the happiness of the species, and to the great object of the Creator. The individual it corrupts, the society it disorders. It ruins the affections, and destroys the tenderest connections of the species. It is a system selfish and mischievous. Like all other selfish systems, too, it defeats itself. Instead of multiplying our enjoyments, it contracts them; instead of expanding the mind, it renders it illiberal; and destroys all the nobler affections of the soul, by debasing its regards, and teaching it to confine all its views to one unprofitable gratification. The system of the *married life* is, in all respects, different. The obvious effect of it is to multiply our enjoyments, by carrying us beyond ourselves, and giving us the tenderest interest in others. The gratification of the passion is but the opening of the scene. The tenderest relations are created, the most delightful connections of life arise around us. We acquire the fidelity of friendship, and the delights of children. These are by far the purest pleasures of our state. They teach us the value of our nature, and connect us strongly with our kind. They give us an interest in the world, and make us enter intimately into the society of our species. Exhausted with our exertions, and satiated as we should be with our own experience, we resume our lives, and renew our pursuits, in our children. These give us an interest in life to the last. In these we feel a concern superior to any that we can feel for ourselves. They present an important object to our mind, which furnishes the most delightful employment of our lives; redoubles the enjoyments, and enables us to bear the difficulties of our state with cheerfulness and perseverance." *Mackenzie's Sermons*.—We may add, that *maternal affection* is the pledge of love, by which nature derives from the heart of a mother an ample compensation for all her sufferings. Nothing equals the anxiety with which a mother seeks her lost child; nothing can exceed her transport when, after fatiguing search, after a tedious separation, she at length recovers it, and embraces it as if it were just then born. The desire of fecundity is the brightest charm in the cestus of Venus; nay, it seems to be the only one that can be valuable in the estimation of chaste and virtuous women. These are the priestesses who keep alive the sacred fire of Vesta; and perish that contemptible wretch who, instead of being warmed with this pure flame, burns with a gross and brutal lust! Love has dipped only the point of his shaft with desire; when the whole weapon is envenomed by it, misery must attend those whom it wounds. *Hemsterhuis's Oeuvres Philosophiques*; Paris, 1792.

The manners of the Greeks and Romans were similar to each other in the affairs of love. They generally made a discovery of their passion by writing upon trees, walls, doors, &c. the name of their beloved. They usually decked the door of their dulcinea with flowers and garlands, made libations of wine before their houses, sprinkling the posts with the same liquor, as if the object of their affection were a real goddess. For a man's garland to be untied, and for a woman to compose a garland, were held to be indubitable indications of their love. When their love was without success, they used several arts to excite affection in the object of their desire. They had recourse to enchantresses, of whom the Thesalian were in the highest estimation. The means made use of were most commonly *philtres*, or love-potions, the operation of which was violent and dangerous, and frequently deprived such as drank them of their reason. Some of the most remarkable ingredients of which they were composed were: the hippomanes, the jynx, insects bred from putrefaction, the fish remora, the lizard, brains of a calf, the hairs on the tip of a wolf's tail, his secret parts, the bones of the left side of a toad eaten with ants, the blood of doves, bones of snakes, feathers of screech-owls, twisted cords of wool in which a person had hanged himself, rags, torches, a nest of swallows buried and famished in the earth, bones snatched from hungry bitches, the marrow of a boy fa-

mished in the midst of plenty, dried human liver; to these may be added several herbs growing out of putrid substances. Such were the ingredients that entered into the composition of that infernal draught a love-potion. But, besides the philtres, various other arts were used to excite love, in which the application of certain substances was to have a magical influence on the person against whom they levelled their skill. A hyæna's udder worn under the left arm, they fancied would draw the affections of whatever woman they fixed their eyes upon. That species of olives called *πύργα*, and barley-bran made up into a paste, and thrown into the fire, they thought would excite the flame of love. Flour was used with the same intention. Burning laurel, and melted wax, were supposed to have the like effect. When one heart was to be hardened, and another mollified, clay and wax were exposed to the same fire together. Images of wax were frequently used, representing the persons on whom they wished to make an impression; and whatever was done to the substitute of wax, they imagined was felt by the person represented. Enchanted medicaments were often sprinkled on some part of the house where the person resided. Love-pledges were supposed to be of singular use and efficacy: these they placed under their threshold, to preserve the affections of the owner from wandering. Love-knots were of singular power, and the number three was particularly observed in all they did. But no good effect was expected, if the use of these things was not attended with charms or magical verses and forms of words.

Having mentioned their arts of exciting love, it may not be amiss to take notice, that the ancients imagined, that love excited by magic might be allayed by more powerful spells and medicaments, or by applying to demons more powerful than those who had been concerned in raising that passion. But love inspired without magic had no cure; Apollo himself could find no remedy, but cried out *Hei mihi quod nullis amor est medicabilis herbis*. The antidotes against love were generally *agnus castus*, which has the power of weakening the generative faculty; sprinkling the dust in which a mule had rolled herself; tying toads in the hide of a beast newly slain; applying amulets of minerals or herbs, which were supposed of great efficacy in other cases; and invoking the assistance of the inferior deities. Another cure for love was bathing in the waters of the river Selemnus; to which we may add the *lover's leap*, or jumping down from the Leucadian promontory. This last, indeed, was the most effectual cure, because the party was generally killed; though some escaped; as to which see LEUCADIA, vol. xii. p. 547.

*Platonic Love* denotes a pure spiritual affection, subsisting between the different sexes, abstracted from all carnal appetites, and regarding no other object but the mind, and its beauties; or it is even a sincere disinterested friendship subsisting between persons of the same sex, abstracted from any selfish views, and regarding no other object but the person. The term took its rise from the philosopher Plato, a strenuous advocate for each kind. The world has a long time laughed at Plato's notions of love and friendship. In effect, they appear contrary to the intentions of nature, and inconsistent with the great law of self-preservation, into which love and friendship are both ultimately resolvable.

LOVE (James), whose real name was Dance, was one of the sons of Mr. Dance, the city-surveyor, (whose memory will be transmitted to posterity on account of the edifice which he erected for the residence of the city's chief magistrate,) received, it is said, his education at Westminster-school, from whence he removed to Cambridge, which he left without taking any degree. About that time a severe poetical satire against sir Robert Walpole, then minister, appeared under the title of "Are these Things so?" which, though written by Mr. Miller, was ascribed to Mr. Pope. To this Mr. Love immediately wrote a reply, called "Yes, they are; what then?" which proved so satisfactory to the minister, that he made him a

handsome present, and gave him expectations of preferment. Elated with this distinction, with the vanity of a young author and the credulity of a young man, he considered his fortune as established; and, neglecting every other pursuit, became an attendant at the minister's levees, where he contracted habits of indolence and expense without obtaining any advantage. The stage now offered itself as an asylum from the difficulties he had involved himself in; and therefore, changing his name to Love, (it is said from his wife's maiden name *L'Amour*;) he made his first essays in strolling companies. He afterwards performed both at Dublin and Edinburgh, and at the latter place resided some years as manager. At length he received, in the year 1762, an invitation to Drury-lane theatre, where he continued during the remainder of his life. In 1763, with the assistance of his brother, he erected a theatre at Richmond, and obtained a license for performing in it; but did not receive any benefit from it, as the success by no means answered his expectations. He died about the beginning of the year 1774. He neither as an actor or author attained any high degree of excellence. Falstaff was the character in which he most excelled. As an author he has given the world the following pieces: 1. Pamela, a comedy, 1742. 2. The Witches, a pantomime, 1762. 3. Rites of Hecate, a pantomime, 1764. 4. The Hermit, a pantomime, 1766. 5. Village Wedding, 1767. 6. Ladies' Frolic, an opera, 1770. 7. City Madam, a comedy, 1771.

LOVE (Tree of.) See CERCIS.

LOVE-AFFAMISHED, *adj.* Famished through love: With light thereof I do myself sustain,  
And thereon feed my *love-affamish'd* heart. *Spenser.*

LOVE-APPLE. See SOLANUM lycopersicum.

*Love-apple*, though its flower less fair appears,  
Its golden fruit deserves the name it bears. *Tate.*

LOVE-LIES-A-BLEEDING. See AMARANTHUS caudatus, vol. i.

LOVE-BORN, *adj.* Produced by love; the consequence of love:

Let mutual joys our mutual trust combine,  
And love and *love-born* confidence be thine. *Pope.*

LOVE-BROKER, *f.* A go-between in matters of love.—There is no *love-broker* in the world can more prevail in man's commendation with woman, than report of valour. *Shakespeare's Twelfth Night.*

LOVE-CHILD, *f.* A low phrase for a bastard.

LOVE-DARTING, *adj.* Darting love:

What need a vermeil-tinctur'd lip for that,  
*Love-darting* eyes, and tresses like the morn? *Milton.*

LOVE-DAY, *f.* The day on which any dispute was amicably settled between neighbours; a day in which one neighbour helps another without hire.

LOVE-DE'AN, a village in Hampshire: three miles and a half from Hambledon.

LOVE-DISCOURSE, *f.* Conversation upon the subject of love:

My tales of love were wont to weary you:  
I know you joy not in a *love-discourse*. *Shakespeare.*

LOVE-FLOWER. See XYLOPHYLLA.

LOVE-FLOWER (Indian.) See PHYLANTHUS.

LOVE-JUICE, *f.* Juice to create love:

Thou hast mistaken quite,  
And laid the *love-juice* on some true-love's fight. *Shaksp.*

LOVE-KNOT, *f.* A complicated figure, by which affection interchanged is figured.

LOVE-LABOURED, *adj.* Laboured through love:

Where silence yields  
To the night-warbling bird, that now awake  
Tunes sweetest his *love-labour'd* song. *Milton.*

LOVE-LEAR'NED, *adj.* Acquired in consequence of love:

Hearken to the birds' *love-learned* song  
The dewy leaves among. *Spenser's Epithalam.*

LOVE-LETTER, *f.* Letter of courtship.—The children are educated in the different notions of their parents: the sons follow the father, while the daughters read *love-letters* and romances to their mother. *Addison's Spectator.*

LOVE-LORN, *adj.* Forsaken of one's love:

The *love-lorn* nightingale  
Nightly to thee her sad song mourneth well. *Milton.*

LOVE-MAKING, *f.* Courtship.—The enquiry of truth, which is the *love-making* or wooing of it; the knowledge of truth, the preference of it; and the belief of truth, the enjoying of it, is the sovereign good of human nature. *Bacon.*

LOVE-IN-A-MIS'T. See PASSIFLORA.

LOVE-MONGER, *f.* One who deals in affairs of love.—Thou art an old *love-monger*, and speakest skilfully. *Shakespeare.*

LOVE-PINED, *adj.* Wasted by love:

Unquiet thought? whom at the first I bred  
Of th' inward bale of my *love-pined* heart,  
And sithence have with sighs and sorrows fed,  
Till greater than my womb thou waxen art. *Spenser.*

LOVE-POTION, *f.* (see p. 690.) A medicine to excite love.—A *love-potion* works more by the strength of charm than nature. *Collier on Popularity.*

LOVE-QUAR'REL, *f.* The falling-out of lovers.—*Love-quarrels* oft in pleasing concord end. *Milton.*

LOVE-SE'CRET, *f.* Secret between lovers:

What danger, Arimant, is this you fear?  
Or what *love-secret* which I must not hear? *Dryden.*

LOVE-SHAFT, *f.* Cupid's arrow:

A certain aim he took  
At a fair vestal throned by the west,  
And loos'd his *love-shaft* finartly from his bow. *Shakespeare.*

LOVE-SICK, *adj.* Disordered with love; languishing with amorous desire:

To the dear mistress of my *love-sick* mind,  
Her swain a pretty present has design'd. *Dryden.*

LOVE-SONG, *f.* Song expressing love:

Poor Romeo is already dead!  
Stabb'd with a white wench's black eye,  
Run through the ear with a *love-song*. *Shakespeare.*

LOVE-SONG, *adj.* Trifling; unprofitable:

*Love-song* weeds and fatyrick thorns are grown,  
Where seeds of better arts were early sown. *Donne.*

LOVE-SUIT, *f.* Courtship:

His *love-suit* hath been to me  
As fearful as a siege. *Shakespeare's Cymbeline.*

LOVE-TALE, *f.* Narrative of love.—Cato's a proper person to entrust a *love-tale* with! *Addison.*

The *love-tale*

Infested Sion's daughters with like heat;  
Whose wanton passions in the sacred porch  
Ezekiel saw. *Milton's Paradise Lost.*

LOVE-THOUGHT, *f.* Amorous fancy:

Away to sweet beds of flowers,  
*Love-thoughts* lie rich when canopied with bowers. *Shaksp.*

LOVE-TOY, *f.* Small presents given by lovers.—Has this amorous gentleman presented himself with any *love-toys*, such as gold snuff-boxes? *Arbutnot and Pope.*

LOVE-TRICK, *f.* Art of expressing love:

Other disports than dancing jollities;  
Other *love-tricks* than glancing with the eyes, *Donne.*

LOU'ECH,

LOUECH. See LEUK, vol. xii. p. 557, where the baths near this place have been slightly mentioned. These baths are situated in deep valley, surrounded on the east, west, and north, by mountains; hence the temperature of the air is remarkably mild, and the soil fertile; the Dala, which flows from the neighbouring glaciers, winds through the valley, and runs into the Rhone near Louech. The heat of the principal spring is estimated equal to forty-three degrees of Reaumur's thermometer. The baths are emptied, cleaned, and filled again, every evening, that the water may cool during the night, and be ready for the bathers in the morning; its temperature is thus reduced to about twenty-eight degrees.

These waters have no peculiar flavour either of sulphur or fixed air; and, notwithstanding their great heat, do not boil sooner on the fire than those of the coldest spring. They abound with *crocus martis*; and the internal and external use of them is recommended in all those cases in which warm mineral baths are usually prescribed. *Hist. of the Phil. Soc. of Laujanne.*

LOVELACE (Richard), an elegant poet of the seventeenth century, was the eldest son of sir William Lovelace, of Woolwich in Kent, and was born in that country about 1618. He received his grammar-learning at the Charter-house; and, in the year 1634, became a gentleman-commoner of Gloucester-hall, Oxford; being then, as Wood observes, "accounted the most amiable and beautiful person that eye ever beheld, a person also of innate modesty, virtue, and courtly deportment; which made him then, but especially after, when he retired to the great city, much admired by the female sex." In 1636, on the king's coming to Oxford, he was created M. A. and, leaving the university, retired, as Wood phrases it, in great splendour to the court, where, being taken into the favour of lord Goring, he became a soldier; and was first an ensign, and afterwards a captain. On the pacification at Berwick, he returned to his native country, and took possession of his estate, worth about five hundred pounds per annum; and about the same time was deputed by the county to deliver the Kentish petition to the house of commons; which giving offence, he was ordered into custody, and confined in the Gate-house, from whence he was released on giving bail, in 40,000*l.* not to go beyond the lines of communication without a pass from the Speaker. During the time of his confinement to London, he lived beyond the income of his estate, chiefly to support the credit of the royal cause; and in the year 1646 he formed a regiment for the service of the French king, was colonel of it, and wounded at Dunkirk. In 1648 he returned to England with his brother, and was again committed prisoner to Peter-house in London, where he remained until after the king's death. At that period he was set at liberty; but, (says Wood,) "having then consumed all his estate, he grew very melancholy, (which at length brought him into a consumption,) became very poor in body and purse, was the object of charity, went in ragged clothes, (whereas when he was in his glory he wore cloth of gold and silver,) and mostly lodged in obscure and dirty places, more befitting the worst of beggars than poorest of servants. He died in a very mean lodging in Gunpowder-alley, near Shoe-lane, in 1658, and was buried at the west end of St. Bride's church." He wrote two plays, neither of which has been printed, viz. 1. The Scholar, a comedy acted at Gloucester-hall and Salisbury-court. 2. The Soldier, a tragedy. 3. Lucastra, a collection of poems.

Surely Wood has aggravated the poverty of Lovelace; for his daughter and sole heir, Margaret, married Henry, fifth son of lord chief justice Coke, and carried to her husband the estates of her father at Kingdown in Kent. In possession of these, it is highly improbable that he should die poor and in rags, in a mean lodging, as Wood describes.

LOVELACE, a village in the parish of Betherden, Dorset.

LOVELESS, *adj.* Void of affection, destitute of love.

LOVELILY, *adv.* Amiably; in such a manner as to

excite love.—Thou look'st *lovelily* dreadful. *Otway's Venice Preserv'd.*

LOVELINESS, *f.* Amiability; qualities of mind or body that excite love.—If there is such a native *loveliness* in the sex as to make them victorious when in the wrong, how resistless is their power when they are on the side of truth? *Addison.*

When I approach  
Her *loveliness*, so absolute she seems,  
That what she wills to do, or say,  
Seems wisest, virtuourest, discreetest, best. *Milton.*

LOVELL, a town of America, in York county, Maine, north of Great Ossipee: eighty-nine miles north of York.  
LOVELL, a village in the parish of West Knighton, Dorset.

LOVELL'S CROSS AND HEATH, north-east of Horsham, in Suffex, on the borders of Surrey.

LOVELSTON, a village in the parish of Hevrish, Devon.  
LOVELY, *adj.* Amiable; exciting love.—Saul and Jonathan were *lovely* and pleasant in their lives, and in their death they were not divided. 2 *Samuel.*—The Christian religion gives us a more *lovely* character of God than any religion ever did. *Tillotson.*

The flowers which it had press'd  
Appeared to my view  
More fresh and *lovely* than the rest  
That in the meadows grew. *Denham.*

LOVENTINUM, or LUENTINUM, in ancient geography, a town of the Demetæ, in Britain; supposed by some, without sufficient reason, to have been swallowed up by an earthquake in the site of the present Llyn Savanathan, near Brecknock; but by others, with great probability, to have been situated at or near Llan-Dewi-Brevi, in Cardiganshire; where, in a field called Caer-Cestlib, or Castlefield, Roman coins and bricks are sometimes found.

LOVENTOR, a village in Devonshire, in the parish of Berry Pomeroy.

LOVER, *f.* One who is in love:  
Love is blind, and *lovers* cannot see  
The pretty follies that themselves commit. *Shakespeare.*

A friend; one who regards with kindness.—Your brother and his *lover* have embrac'd. *Shakespeare.*

I tell thee, fellow,  
Thy general is my *lover*: I have been  
The book of his good act, whence men have read  
His fame unparallel'd haply amplified. *Shakespeare.*

One who likes any thing.—To be good and gracious, and a *lover* of knowledge, are amiable things. *Burnet.*

LOVER, or LOU'VER, *f.* [from *Louvert*, Fr. an opening.] An opening for the smoke to go out at in the roof of a cottage:

But darkness drest and daily night did hover  
Through all the inner part wherein they dwelt;  
Ne lighten'd was with window, nor with *lover*;  
But with continuall candle-light, which delt  
A doubtful sense of things. *Fairy Queen.*

LOVERANO, a town of Naples, in the province of Otranto: five miles north-north-east of Nardo.

LOVESKATA, a town of Russia, on the Caspian Sea: twenty-seven miles south-east of Aitrachan.

LOVESOME, *adj.* Lovely. A word not used:

Nothing new can spring  
Without thy warmth, without thy influence bear,  
Or beautiful or *lovesome* can appear. *Dryden.*

LOVESTAIN, or LOU'VESTEIN, a fortress of Holland, situated in the island of Bommelweert, at the conflux of the Meuse and the Wahal. Hugo Grotius was confined here, in 1619, on a sentence of perpetual imprisonment, for having been connected with Barneveldt, who had been beheaded

beheaded the preceding year; and for favouring Arminianism, which had been condemned by the synod of Dort; but he was delivered by a stratagem of his wife. See GROTIUS, vol. ix. p. 38. This place is three miles east of Corcum.

LOUGH, *f.* [*loch*, Irish, a lake.] A lake; a large inland standing water:

A people near the northern pole that won,  
Whom Ireland sent from *loughs* and forests here,  
Divided far by sea from Europe's shore. *Fairfax.*

LOUGH A'BER, or LOCHA'BER, a small settlement in Georgia, on a branch of Savannah river, above its confluence with the Tugalo.

LOUGH AL'LEN, a lake of Ireland, formed by the widening of the Shannon: seven miles north of Leitrim.

LOUGH AR'ROW, a lake of Ireland: fourteen miles south of Sligo.

LOUGH BAR'RA. See BARRA.

LOUGH BEAT'TA. See BEATTA.

LOUGH BEG'. See BEG.

LOUGH BOFFIN. See BOFFIN.

LOUGH CAR'RAGH. See CARRAGH.

LOUGH CAL'T. See CALT.

LOUGH CLAY. See CLAY.

LOUGH CLE'AN. See CLEAN.

LOUGH CON'N. See CONN.

LOUGH COR'RIB. See CORRIE.

LOUGH COU'TRA. See COUTRA.

LOUGH CUR'LAN. See CURRAN.

LOUGH DE'LE. See DELE.

LOUGH DER'G. See DERG.

LOUGH DER'IG. See DERIG.

LOUGH DER'INA. See DERINA.

LOUGH DERVERA'GH. See DERVERAGH.

LOUGH EASK. See EASK.

LOUGH ENNEL. See ENNEL.

LOUGH ER'NE. See ERNE.

LOUGH FOY'LE. See FOYLE.

LOUGH FUR'REN. See FURREN.

LOUGH GA'RA. See GARA.

LOUGH GAW'NAGH. See GAWNAGH.

LOUGH GIL'LY. See GILLY.

LOUGH GLIN'. See GLIN.

LOUGH GUR'. See GUR.

LOUGH HOY'LE. See HOYLE.

LOUGH HY'NE. See HYNE.

LOUGH I'RON, a lake of Ireland, in the county of Westmeath: five miles north-west of Mullingar.

LOUGH KA'Y, a lake of Ireland, in the county of Roscommon: six miles north-west of Carrick.

LOUGH LA'NE, a lake of Ireland, near Killarney: fifteen miles south of Tralee.

LOUGH LAR'NE. See LARNE.

LOUGH LE'NE. See LENE.

LOUGH MAL'AR, a lake of the island of Man: three miles north of Ramsey.

LOUGH MAS'K, a lake of Ireland, in the county of Galway, about ten miles long and from one to three broad: ten miles south of Castlebar.

LOUGH MEL'VIN, a lake of Ireland, in the county of Fermanagh, about seven miles long and one or two wide: five miles south of Ballyshannon.

LOUGH NAF'TAY, a lake of Ireland, in the county of Galway: nineteen miles south Castlebar.

LOUGH NAL'LENROE, a lake of Ireland, in the county of Mayo: nineteen miles west of Killaloe.

LOUGH NE'AGH, a large lake of Ireland, about fifteen miles in length and eight in breadth, situated between the counties of Antrim, Down, Armagh, Tyrone, and Londonderry. The river Ban is the only outlet. A petrifying quality is ascribed to the water of this lake.

LOUGH OG'RAM, a lake of Ireland in the county of Clare: eight miles north-west of Killaloe.

VOL. XIII. No. 936.

LOUGH OU'GHTER, a lake of Ireland, in the county of Cavan: six miles west of Cavan.

LOUGH PAL'LIS, a lake of Ireland, in King's county: twelve miles west-north-west of Portarlington.

LOUGH RA'MAR, a lake of Ireland, in the county of Cavan: twelve miles south of Cavan.

LOUGH RAPH'AM, a lake of Ireland, in the county of Mayo: twelve miles south-west of Castlebar.

LOUGH REA, a lake of Ireland, in the county of Galway, near the town of Loughrea, containing several small islands, on which were formerly some monasteries.

LOUGH RE'E, a lake of Ireland, formed by a considerable expansion of the river Shannon, between the county of Roscommon and the counties of Longford and Westmeath, reaching from Laneshorough to Athlone, and in some places three miles broad.

LOUGH SALEEN, a lake of Ireland, in the county of Mayo, near Castlebar.

LOUGH SHE'HAN, a lake of Ireland, in the county of Cavan: thirteen miles south of Cavan.

LOUGH STRANG'FORD. See STRANGFORD.

LOUGH SWIL'LY, a bay on the north coast of Ireland, in the county of Donegal, eighteen miles in length, and from one to four in breadth; but upwards of thirty in circumference. This bay, thought to be the Argite of Ptolemy, is one of the noblest ports in Ireland, or perhaps in Europe, with good anchorage and deep water: a whole fleet may anchor with safety.

LOUGH TA', a lake near the south coast of Ireland, in the county of Wexford, which receives several rivers, but having no outlet it overflows the county if care be not taken to cut away the banks, near the sea, which soon fill up again: three miles north-west of Carnfore Point, and nine south-fourth-east of Wexford.

LOUGH TRIOR'TY, a lake of Ireland, in the county of Donegal: seven miles south-south-east of Donegal.

LOUGH TRA', or LAKE OF THE LA'DIES ISLAND, a lake of Ireland in the county of Wexford, near the sea: six miles south of Wexford.

LOUGH'BOROUGH, a market-town in the county of Leicester, is situated twelve miles distant from the county town, and 108 miles from London, on the banks of the river Soar, over which it has a good stone bridge. According to its size and population, it may be esteemed the second town in the county. Leland says, "The town of Lughborow is yn largeness and good building next to Leyrcester, of all the markette-tounes yn the shire; and hath in it a four faire strates or mo, well pavid. The paroch-chirche is faire; chapelles or chirches besides, yn the towne, be none. The hole towne is builded of tymbre. At the southeft end of the church is a faire house of tymbre, wher ons king Henry VII. did lye." Loughborough consists of one parish, to which belong the two hamlets of Wood-thorpe and Knight-thorne, both about a mile distant; each having its proper officers, and maintaining its poor. Great part of the town is the property of the earl of Meira, to whom it came from his uncle the late earl of Huntingdon, in whose family it has been since the time of queen Mary. The church is a large pile of building, consisting of a nave, side aisles, chancel, transept, and tower; the latter was built by subscription, towards the end of the sixteenth century. In the church-yard is a free grammar-school, which was endowed with the rents of certain lands, &c. left by Thomas Burton for the maintenance of a chantry within the church. Here is also a charity-school for eighty boys and twenty girls. Four meeting-houses are appropriated to the Presbyterians, Baptists, Quakers, and Wesleyan Methodists. On the site of an old cross, a modern market-house, or what is called the butter-and-hen cross, was erected in 1742; it is supported by eight round brick pillars. At the upper end of the market-place stands a ruinous brick edifice, called the court chamber, where the lord of the manor's court-leet is annually held: the building appears to have been erect-

ed in 1688; it is sometimes used as a theatre and ball-room. The town suffered severely by the plague at various periods in the sixteenth and seventeenth centuries. Under the act of 1810, the population was returned as 5400. The chief manufactures carried on here are hosiery, wool-combing, and framework-knitting. Six annual fairs are held, and a weekly market on Thursdays.

The Loughborough Canal, which communicates with that called the Union Canal, and with the river Soar, has proved very serviceable to this town, and an advantageous concern to the original proprietors; as 95l. a-year dividend has been paid on a share of 125l. and one of these shares has been sold for 1800l. See the article CANAL NAVIGATION, vol. iii. p. 633.

The following villages are the neighbourhood of Loughborough: Coats, one mile distant; Stanford, one; Normanston (south of Ashby-de-la-Zouch), two; Hathern, two north-west; Dibly, or Dibly-Thorp, one; Sheephead, three; Thorpe-Acre, one; Woodthorpe, one; Quarendon, two; here is an hospital lately erected and well endowed, for the old bachelors and widowers of this parish and that of Barrow-upon-Soar, two miles from Loughborough, and opposite to the last-mentioned village; it lies in a chalky soil, of which the best lime is made for durable buildings; here is a charity-school. Walton-on-the-Woulds, distant two miles; Prestwold, two; and Woodhouse, three miles distant.

LOUGH'BOROUGH, a township of Upper Canada, in Frontenac county, north of Kingston.

LOUGH'BOROUGH CANAL, an inlet on the west coast of North America, in the gulf of Georgia, about thirty miles long, and one broad; between mountains nearly perpendicular. The entrance is in lat. 30. 27. N. lon. 234. 35. E.

LOUGHBOROUGH'S ISLAND, an island in the Mergui Archipelago, of an oval form, about ten miles long and five broad. Lat. 10. 38. N.

LOUGHBRICK'LAND, a post-town of Ireland, in the county of Down, on the road to Belfast. It is fifty-eight miles north from Dublin, and twenty-two from Belfast.

LOUGHGA'LL, a small post-town of Ireland, in the county of Armagh. It is sixty-six miles north from Dublin, and three miles north-north-west from Richhill.

LOUGHRE'A, a town of Ireland, in the county of Galway, near a lake of the same name: fifteen miles south-west of Galway.

LOUGNON, a river of France, which runs into the Saône near Pontarlier.

LOUHA'NS, a town of France, and principal place of a district, in the department of the Saône and Loire, situated at the conflux of the Seille and Solnan. It is a place of resort for the merchants of France and Switzerland, who meet there for the purpose of commerce: fifteen miles south-east of Châlons sur Saône, and twenty-four north-north-east of Mâcon. Lat. 46. 38. N. lon. 5. 18. E.

LOUICH'EA, *f.* in botany. See CAMPHOROSMA pteranthus, vol. iii. p. 667.

LOVIGNA'NO, a town of Naples, in the province of Otranto: twelve miles south-south-west of Brindisi.

LOVING, *participial adj.* Kind; affectionate.—This earl was of great courage, and much loved of his soldiers, to whom he was no less loving again. *Hayward.*

So loving to my mother,  
That he would not let ev'n the winds of heav'n  
Visit her face too roughly. *Shakespeare's Hamlet.*

Expressing kindness.—The king took her in his arms till she came to herself, and comforted her with loving words. *Esther xv. 8.*

LOVING, *f.* The act of regarding with tender affection. A long line to call in a hawk.

LOVING-KINDNESS, *f.* Tenderness; favour; mercy. A scriptural word.—Remember, O Lord, thy tender mer-

cies, and thy loving-kindnesses. *Psalms xxv. 6.*—He has adapted the arguments of obedience to the imperfection of our understanding, requiring us to consider him only under the amiable attributes of goodness and loving-kindness, and to adore him as our friend and patron. *Rogers.*

LOVINGLY, *adv.* Affectionately; with kindness.—It is no great matter to live lovingly with good-natured and meek persons; but he that can do so with the froward and perverse, he only hath true charity. *Taylor.*

LOVINGNESS, *f.* Kindness; affection.—Carrying thus in one person the only two bands of good-will, love-liness and lovingness. *Sidney.*

LOVINGTON, a village in Somersetshire, between Bruton and Somerton.

LOUIS, or LEWIS, a male Christian name, sometimes assumed as a surname. The name of many of the kings of FRANCE, see that article, vol. vii. and, for a few particulars relating to the present king, Louis XVIII. see the article LONDON, p. 158, 323, 377-391.

LOUIS (Order of St.) See the article KNIGHTHOOD, vol. xi. p. 818.

LOUIS (Anthony), an eminent French surgeon, was born at Metz in 1723. He rose to great distinction in his profession, and had the offices of consulting surgeon to the army, surgeon-major to the Hospital of la Charité, demonstrator and censor-royal, member and secretary of the Royal Academy of Surgery, and member of a great number of scientific societies in France and foreign countries. The time of his death is not mentioned; but the latest of his publications is dated in 1777. Mr. Louis was the author of many ingenious works on chirurgical and anatomical subjects; of which the following are the principal: 1. Observations sur l'Électricité, 1741, 1747. 2. Essai sur la Nature de l'Âme, où l'on tâche d'expliquer son Union avec le Corps, 1746. 3. Cours de Chirurgie sur les Plaies d'Armes à Feu, 1746. 4. Observations et Remarques sur les Effets du Virus cancreux, 1748. 5. Observations sur les Noyés, 1748. 6. Positiones Anatomico-chirurgicæ de Capite ejusque Vulneribus, 1749. 7. Lettres sur la Certitude de la Mort; avec des Observations et des Experiences sur les Noyés, 1752. The object of the first of these pieces is to lay down certain tokens of death, and remove the fears of being buried alive, without the necessity of long keeping of the body; with respect to the drowned, he thinks that their death is owing to water admitted into the trachæa, and that blowing air into it is the most powerful means of revival. 8. Experiences sur la Lithotomie, 1757. 9. Mémoire sur un Question Anatomique relatif à la Jurisprudence, 1763. The purpose of this memoir, written after the shocking affair of Calas, is to distinguish between voluntary death by hanging, and murder by that mode. 10. Mémoire sur la Légimité des Naissances prétendues tardives, 1764. In this piece he lays it down as a maxim, that the retardation of delivery beyond the natural period of gestation is physically impossible. 11. Recueil d'Observations pour servir de Base de la Théorie des Lésions de la Tête par contrecoup, 1766. 12. Histoire de l'Académie Royale de Chirurgie jusqu'en 1743. printed with the fourth volume of Memoirs of that Academy, 1768. He also wrote separate eulogies on several of the members. 13. Aphorismes de Chirurgie par Boerhaave, commentés par Van-Swieten, nouvelle Traduction avec des Notes, 7 vols. 12mô. 1768. 14. Traité des Maladies Veneriennes, traduit du Latin de M. Astruc, 4 vols. 12mô. 1777. M. Louis also wrote several papers in the Memoirs of the Academy of Surgery; and various controversial tracts. *Halleri Bibl. Anatom. et Chirurg.*

LOUIS (St.), an island on the west coast of Africa, at the mouth of the river Senegal; flat, sandy, and barren. Its name is derived from a fort built by the French. Both were ceded to the English by the treaty of Versailles, in 1763. During the American war it was taken by the French, and kept by them after the peace of 1783. Lat. 16. N. lon. 16. 8. W.

**LOUIS (St.),** a seaport-town on the south coast of the island of Hispaniola; situated at the head of a bay of its name. Lat. 18. 16. N. lon. 74. 19. W.—A seaport-town of Hispaniola, on the north coast; ruined in 1797 by a hurricane: five miles south-east of Cape François.—A town of South America, in the province of Guiana. Lat. 3. 55. N. lon. 52. 30. W.—The capital town of Guadeloupe, Grand Terre, with a fortress: three leagues south-east of the Salt river.

**LOUIS (St.),** a town on the west side of the river Mississippi, twenty-five miles below the mouth of the Missouri. It is situated on a pleasant and healthy eminence; and contained, in 1799, 130 large commodious houses, built of stone, and 925 inhabitants, of whom 268 are slaves. In this year the productions of the settlement were 4300 bushels of wheat, 10,300 bushels of corn, and 1650 pounds of tobacco. The inhabitants possessed 1140 horned cattle, and 215 horses.—A small compact bay in West Florida, with about seven feet water: the land near it is of a light soil, and good for pasture. Formerly here were several settlers; but in the year 1767 the Choctaw Indians killed their cattle, and obliged them to remove.

**LOUIS (St.),** a lake of Canada, commencing, or rather terminating, at La Chine, a village which stands at the lower end of it. The lake is about twelve miles in length, and four in breadth. At its uppermost extremity it receives a large branch of the Utawas river, and also the south-west branch of the river St. Lawrence, which by some geographers is called the river Cadaraqui, and by others the river Iroquis; but in the country, generally speaking, the whole of that river, running from lake Ontario to the gulf of St. Lawrence, goes simply under the name of St. Lawrence. At the upper end of lake St. Louis, the water is very shallow, owing to the banks of mud and sand washed up by the two rivers; and these banks are entirely covered with reeds, so that, when a vessel sails over them, she appears at a little distance to be absolutely sailing over dry land. This part of the lake is infested with clouds of insects, similar to those which have been commonly observed on various parts of the river St. Lawrence. Their size is about that of a gnat; their colour is white; and their form so delicate, that the slightest touch destroys them, and reduces them to powder. Their wings are broad in proportion to their size; and they fly heavily; so that it is only when the air is remarkably calm that they can venture to make their appearance. Lat. 45. 25. N. lon. 73. 20. W. *Weld's Travels through Canada.*

**LOUIS (St.),** a group of small islands in the river St. Lawrence. Lat. 45. 23. N. lon. 73. 30. W.—A river of America, which runs into lake Superior in lat. 46. 44. N. lon. 91. 52. W.

**LOUIS DE MARANHAM (St.),** a town on the north coast of Brazil, and on the Atlantic Ocean; situated on the east side of Mearim river, about halfway between point Mocaripe and the mouth of the river Para.

**LOUIS D'OR, f.** [French.] A golden coin of France, valued at about twenty shillings.—In 1700 the council made an order and a proclamation, that the *Louis d'or* should not go for above seventeen shillings. *Leake.*

Louis d'ors were first struck in 1641, under the reign of Louis XIII. and were valued at ten livres, afterwards at eleven, and at length at twelve and fourteen. In the latter end of the reign of Louis XIV. they had risen to twenty, and in the beginning of that of Louis XV. to thirty and thirty-six, nay forty and upwards; with this difference, however, that in the last coinings the weight was augmented in some proportion to the price, which in the former reign was never regarded. The Louis d'ors coined before 1726, which then passed for twenty livres, were coined at the rate of 36½ per French mark of gold, twenty two carats fine: these ceased to be a legal coin in France as far back as 1726; but they still continued to circulate through many parts of Germany and Switzerland, where they had a fixed value, and were known by the name of "Old Louis d'Ors:" of these few are now in circulation, From the year 1726

to 1785, Louis d'ors were coined at the rate of thirty to the mark of gold, twenty-two carats fine. Accordingly, before 1786, the Louis weighed 5 dwt. 5½ gr. contained in pure gold 112¼ gr. and was valued at 19s. 10½d. sterling; and the demi-louis weighed 2 dwt. 14¾ gr. contained in pure gold 56½ gr. and was valued at 9s. 11½d. sterling. These coins ceased to be current in France in 1786. In Holland, Germany, &c. they were called "New Louis d'ors," by way of distinction from those which we have before mentioned; though these are now become the old ones. The intrinsic value of such a Louis d'or is very little more than a pound sterling. In 1785 and 1786, all the gold coins in France were called in, and ordered to be melted down; and a new coinage took place, at the rate of thirty-two Louis d'ors to the mark of the same degree of fineness. Accordingly, the Louis coined since 1786, weighed 4 dwt. 22 gr. contained of pure gold 106½ gr. and was valued at 18s. 10d. sterling. The intrinsic value of this new Louis d'or is 18s. 9½d. sterling.

Louis d'ors may be considered as a current coin in most parts of the continent; but in England they are sold merely as merchandise, and their price has fluctuated from 18s. 6d. to 21s. sterling. On one side of the coin is the king's head, with his name and title, thus: LUD. XVI. D.G. FR. ET. NAV. REX. i. e. "Louis XVI. king of France and Navarre;" on the reverse, the arms of France and Navarre, with a crown over them. On the pieces coined before 1786, there are two distinct shields; and on those coined since 1786, a double shield; the legend is, CHR. REGN. VINC. IMPER. i. e. "Christ reigns, conquers, governs:" under the arms is a letter, by which the mint where the piece was coined is distinguished. The double and half Louis bear the same impression.

There are also white Louises, or Louis d'argent, some of 120, others of 60, sols apiece, called also *écus*; and among us French crowns, half crowns, &c. The old *écus*, coined before 1726, were coined at the rate of nine pieces to the mark of 10 deniers 22 grains fine; these, like the Louis d'ors of the same period, after they had ceased to be current in France, still preserved a fixed value in some parts of Germany; but they are now scarcely in circulation. In 1726, the coinage of *écus* was regulated, and continued without alteration, as follows: 8⅓ *écus* of six livres, or 16⅓ *écus* of three livres, were to be coined from a mark of silver eleven deniers fine; and their intrinsic value is 4s. 9½d. sterling. On the one side of these is the king's head, and on the other the French arms, with this legend, *Sit nomen Domini benedictum*; "Blessed be the name of the Lord."

The Louis d'or is also a gold coin of Malta. The double, single, and half, Louis d'ors, were coined by the grand master Rohan, at twenty, ten, and five, scudi, copper or current money. The double Louis weighs 10 dwt. 16 gr. contains of pure gold 215½ gr. and is valued at 1l. 18s. 1½d. sterling; the Louis and half Louis in proportion; but the fineness of the gold coins of Malta undergoes great variation. *Kelly's Universal Cambist.*

**LOUISA,** a sea-port town of Sweden, in the province of Nyland, on the north-coast of the gulf of Finland, built in 1745 as a frontier town towards Russia, and at first called *Degerby*, but afterwards Louisa, in 1752, by king Adolphus Frederic. It is an open town, defended towards the sea by a small fortress. The houses are all of wood, and of two stories, painted with a red colour, and appearing much neater than the common towns in Russia. Lat. 60. 27. N. lon. 26. 16. E.

**LOUISA,** a county of Virginia, adjoining Orange, Albemarle, Fluvanna, Spottsylvania, and Goochland, counties. It is about thirty-five miles long, and twenty broad; and contains 5900 free inhabitants, and 5992 slaves. Many parts of this county are covered with pine.—A river of Virginia, the head-water of Cole-river, a south-west branch of the Great Kanhaway.—A river of Africa, which runs into the Atlantic in lat. 5. 10. S.

**LOUISA CHITTO,** or **LOOSA CHITTO,** a river of America, which rises on the borders of South Carolina, and

and runs a south-westerly course, through the Georgia western lands, and joins the Mississippi just below the Walnut-hills, and ten miles from Stony-river. It is thirty yards wide at its mouth, and said to be navigable for canoes thirty or forty leagues.

**LOUISBURG**, a town and capital of the island of Cape Breton, situated on a point of land on the south-east side of the island. Its streets are regular and broad, consisting for the most part of stone houses, with a large parade at a little distance from the citadel; the inside of which is a fine square, near 200 feet every way. On its north side, while possessed by the French, stood the governor's house, and the church; the other sides were taken up with barracks, bomb-proof; in which the French secured their women and children during the siege. The town is near half an English mile in length, and two in circuit. The harbour is more than half an English mile in breadth, from north-west to south-east in the narrowest part, and six miles in length from north-east to south-west. In the north-east part of the harbour is a fine careening wharf to heave down; and very secure from all winds. On the opposite side are the fishing-stages, and room for 2000 boats to cure their fish. In winter, the harbour is totally impracticable, being entirely frozen, so as to be walked over; that season begins here at the close of November, and lasts till May or June: sometimes the frosts set in sooner, and are more intense; as particularly in 1745, when by the middle of October a great part of the harbour was already frozen. The principal if not the only trade of Louisburg, is the cod-fishery, the plenty of fish being remarkable, and at the same time better than any about Newfoundland. The anchorage, or mooring, is good, and ships may run a-ground without any danger. Its entrance is not above 300 toises in breadth, formed by two small islands. Here is plenty of cod; and the fishery may, in general, be continued from April to the close of December. It was taken from the French by the English fleet under sir Peter Warren, and our American forces commanded by sir William Pepperel, in the year 1745; but afterwards restored to France by the treaty of Aix-la-Chapelle, in 1748. It was again taken by the English under the command of admiral Boscawen and lieutenant-general Amherst, on the 27th of July, 1758; and its fortifications since demolished. Lat. 45. 55. N. lon. 59. 50. W.

**LOUISBURG**, in Pennsylvania. See **HARRISBURG**, vol. ix.

**LOUISBURG**, a county in Orangeburgh district, South Carolina.—A post-town of North Carolina, and capital of Franklin county, which lies on Tar river, and contains between twenty and thirty houses, a court-house, and gaol; thirty miles north of Raleigh.—A post-town and chief town of Greenbriar county, Virginia, on the north side of Greenbriar river, containing about sixty houses, a court-house, and gaol; 250 miles west-by-north of Richmond. Lat. 38. 8. N.—A post-town of Northumberland county, Pennsylvania, called also Tarstown, on the west side of the Susquehanna, seven miles above Northumberland; containing about sixty houses, and well situated for a good trade with the north-west part of the state; thirty miles east-by-north from Aaronburg.

**LOUISIA'DE**, the southern coast of a considerable island belonging to New Guinea; so called by Bougainville in 1768.

**LOUISIANA**, a country of North America, first discovered by Ferdinand de Soto in 1541, and afterwards visited by Col. Wood in 1654, and by Capt. Bolt in 1670. But the first person who attempted to settle in this country was M. de la Salle, who, in 1682, traversed the Mississippi; and in the following year he repaired to France, and, in consequence of the representations which he made of his discoveries, obtained a grant of four small vessels and 170 men; with which armament he set sail for the mouth of the Mississippi. In 1685, this small colony, under the direction of their leader, landed in the Bay of St. Bernard's, about 300 miles west of the place of their destination.

After struggling with many hardships, both in their landing and in their endeavours to settle, some of this colony murdered La Salle, and all the rest perished, except seven persons, who penetrated through the country of Canada. In 1699, M. Ibberville, of Canada, a brave naval officer, having obtained the patronage of the French court, sailed from Rochfort with two ships and a number of men, and laid the foundation of the first French colony on the Mississippi. This colony was diminished by some unfavourable circumstances, in 1712, to twenty-eight families. At this time, Crozat, a merchant of great opulence and an adventuring spirit, obtained the exclusive trade of Louisiana; but his plans, which were extensive and patriotic, proving ineffectual, he resigned his charter, in 1717, to a company formed by the famous projector John Law. From this period the country became an object of interest to speculative adventurers; so that, in 1718 and 1719, a numerous colony of labourers, collected from France, Germany, and Swisserland, was conveyed to Louisiana, and settled in a district called Biloxi, on the island of New Orleans, a barren and unhealthy situation, where many hundreds died through want and vexation. This event ruined the reputation of the country; and, the colony having languished till the year 1731, the company at length, for the sum of 1,450,000 livres, purchased the favour of surrendering their concerns into the hands of the government. The French continued in quiet possession of Louisiana, frequent contests with the Indians excepted, till the year 1762. Among these tribes of hostile Indians, we may reckon the Natchez, who appear in the year 1731 to have been almost wholly extirpated. In 1736 and 1740 the colonists were engaged in bloody wars with the Chickasaw Indians; but these, in process of time, terminated in permanent peace. From this time the prospects of the colonists were brightening, as their peltry-trade with the Indians and their commerce with the West Indies were increasing. Several hundred Canadians and recruits of inhabitants from other countries settled on the banks of the Mississippi, and imparted additional strength and prosperity to the original colony.

Such was the state of the country, when in the year 1764 the inhabitants received information, that in November 1762, Louisiana, comprehending New Orleans and the whole territory west of the Mississippi, had been ceded to Spain by a secret treaty. This measure incensed the colonists, and was vigorously opposed, so that complete possession of the country was not obtained by Spain till the 17th of August, 1769; after which event, several victims were sacrificed to atone for the delay of submission, and others were conveyed away to languish out their lives in the dungeons of the Havannah. By the treaty of peace in 1763, which ceded Canada to Great Britain, the boundaries of the British provinces were extended southward to the Gulf of Mexico, and westward to the Mississippi; and Louisiana was limited north by Canada, and east by the Mississippi, excepting that it included the island of New Orleans on its east bank. This state of things remained till the American revolutionary war, during which Spain took from Great Britain the two Floridas. The United States, according to their present limits, became an independent government; and left to Great Britain, of all her American provinces, those only which lie north and east of the United States. All these changes were sanctioned and confirmed by the treaty of 1783.

Thus things continued till the treaty of St. Ildefonso, October 1, 1800, by which Spain engaged to cede to the French republic, on certain conditions, the colony or province of Louisiana, with the same extent which it actually had when France possessed it. This treaty was confirmed and enforced by the treaty of Madrid, March 12, 1801. From France it passed to the United States by the treaty of the 30th of April, 1803. In consideration of this cession, the government of the United States engaged to pay to the French government, under certain stipulations, the sum of 60,000,000 francs, independent of the sum which should

should be fixed by another convention for the payment of the debts due by France to the citizens of the United States.

The boundaries of Louisiana, as formerly possessed by France and Spain, and now held by the United States, are stated as follows: viz. south on the Gulf of Mexico, from the bay of St. Bernard, south-west of the Mississippi to the mouth of the *Rio Perdido*, or Lost River, so called by the Spaniards, because it loses itself under ground, and afterwards appears again, and discharges itself into the sea a little to the east of Mobile, on which the first French planters settled; up the Perdido to its source, and thence (if it rise not north of the 31st degree of lat.) in a straight line north to that parallel; thence along the southern boundary of the United States, west to the Mississippi; then up this river to its source, as established by the treaty of 1783. Beyond this point, the limits (which have never been accurately ascertained) may be considered as including the whole country between the White-Bear lake, or other head of the Mississippi, and the source of the Missouri; and between the last and the head springs of the Arkansas, Red River, and other copious streams, which fall into the Mississippi. In other words, Louisiana may be considered as bounded north and north-west by the high lands which divide the waters that fall into the St. Lawrence and Hudson's Bay from those which fall into the Mississippi; west by that high chain of mountains, known by the name of the Shining Mountains, which may be called the Spine, or Andes, of that part of North America, and which turn the waters on the west of them to the Pacific, and those on the east to the Atlantic Ocean. In a word, it embraces the whole slope, or inclined plain, fronting the south-east and east, down which the various streams flow into the bed of the Mississippi. On the south-west it is bounded by New Mexico, between which and Louisiana the divisional line has never been settled. Some pretend that this boundary is a right line from the head of Red River to that of Rio Bravo, and thence down its channel to the Gulf of Mexico. Others make the Rio Colorado, and others, with greater probability, make the Rio Mexicano, the south-west boundary of Louisiana.

Louisiana may naturally be divided into the three following districts; viz. Eastern, Lower, and Upper.—The *Eastern* division comprehends all that part of this territory which lies east of the Mississippi, bounded south by the gulf of Mexico, east by Perdido river, north by the Mississippi territory, and west by the Mississippi river. This division includes the island of New Orleans, and is watered by the Mobile, Pascagoula, Pearl, Bouquechito, Tanfipaho, and Amit, rivers, with Thompson's creek, and Bayou Sara. The whole coast, embracing the old Biloxi district, consists of a fine white sand, injurious to the eyes, and so dry as not to be fit to produce any thing but pine, cedar, and some ever-green oaks. The Mobile river has few fish, and its banks and vicinity are not very fertile. Between Pascagoula and Mississippi rivers, the country is intermixed with extensive hills, fine meadows, numerous thickets, and in some places woods thick set with cane, particularly on the banks of rivers and brooks, and proper for agriculture. Its coast, though flat, dry, and sandy, abounds with delicious shell and other fish, and affords security against the invasion of an enemy.

*Lower Louisiana* comprehends that part of this territory bounded east by the Mississippi River, south by the gulf of Mexico, south-west and west by New Mexico, north by a line drawn from the Mississippi west, dividing the country in which stone is found from that in which there is none. This part of Louisiana is watered by Red River, and many others which fall into the gulf of Mexico. On both sides of the mouths of the Mississippi are quagmires, affording a safe retreat for water-fowl, gnats, and mosquitoes, and extending for more than twenty miles. The whole coast from the Mississippi, west as far as St. Bernard's Bay and beyond it, resembles that already described of the eastern division; and the soil is barren. In ascending the

Mississippi, beyond the marshes are some narrow strips of firm land, partly bare of trees and partly thickly covered with them; which are fit for cultivation. This part seems to have been either recovered from the sea, or formed by various materials that have descended to it; and it is not unreasonable to imagine, that in process of time the river and sea may form another tract of country like Lower Louisiana. The principal river is the Mississippi; which see. The Red River has its source not far from that of Rio Bravo, or Rio del Norte, on which the city of Sanra Fé is built, and in the mountain which has the springs of the Missouri. On each side of this river are some scattered settlements, for about fifty miles to Bayan Rapide, in which are about one hundred families. The land here is not inferior to any in the world with regard to fertility; and, for a space of about forty miles from hence to the commencement of the Appalusa prairies, the country is equally rich and well-timbered. It is perfectly level, and the soil twenty feet deep, and like a bed of manure. Higher up, the banks and low lands are of similar quality with the lands on Bayan Rapide, the texture of the soil being somewhat looser; but there are few settlements, till you come to the River Cane settlements, sixty or seventy miles higher up Red River. Hence to the village or port of Natchitoches, about fifty miles, and twenty-five miles above it, the banks of one branch of Red River are settled like those of the Mississippi; and the country abounds with beautiful fields and plantations, and luxuriant crops of corn, cotton, and tobacco. The low grounds of Red River, generally five or six miles wide, have an uncommonly rich soil, which is overflowed annually in the month of April. The crops of corn and tobacco are plentiful, and never fail. The soil is particularly favourable for tobacco; an acre yields from eighty to a hundred bushels of corn; and it is no less productive of cotton. Two men, with ten or twelve old pots with kettles, supply the settlement on Red River with salt, the springs of which are almost inexhaustible. Here is likewise plenty of iron and copper ore, pit-coal, shell and stone lime. The different branches of the river, the lakes, creeks, and bayans, furnish abundance of very fine fish, cockles, soft-shelled turtle and shrimps, and in winter great varieties of wild fowl. The country is far from being sickly. The mosquito is rarely seen. The high lands are covered with oak, hickory, ash, gum, sassafras, dogwood, vines, &c. intermixed with short-leaved pine, and interspersed with prairies, creeks, lakes, and fountains. Its hills and valleys are gently varied; and the soil is generally a stony clay. The country on Red River is most valuable, beginning about fifty or sixty miles above the upper settlements, and extending four or five hundred miles. The low lands about forty miles on each side are remarkably rich, interspersed with prairies, and beautiful streams and fountains; also quarries of free-stone, lime, flint, slate, grit, and almost every kind of stone. About thirty miles from the mouth of Red River, Black River falls into it on the north side, which is a clear and navigable stream for five or six hundred miles; about one hundred miles upwards, it branches in three different directions; the eastern branch, called the Tensaw, is navigable for many miles, and affords rich land; the middle or main branch, called Washeta, is navigable five hundred miles, and affords excellent lands, salt-springs, lead-ore, and plenty of very good mill and grind stones; the western branch, called Catahola, runs through a beautiful rich prairie country, in which is a large lake, called Catahola lake. On this lake are salt-springs; and it abounds with fish and fowl. On the river called Ozark are many valuable tracts of land, which is likewise the case with respect to White River and St. Francois.

*Upper Louisiana* comprehends all the remainder of this territory, and is the largest and most valuable part. It is bound on the south by Lower Louisiana, on the east by Mississippi, north and west by the highlands and mountains which divide the waters of St. Lawrence, Hudson's Bay, and the Pacific Ocean, from those of the Mississippi.

It is watered by the Red River, the Arkansas, St. Francis, and the Missouri, with a vast number of smaller streams which fall into these or the Mississippi. From the lower settlement at Sans la Grace, to the upper settlement on the Missouri, about the distance of two hundred and fifty miles, is a country equal to any part of the western territory, containing a population of fifty or sixty thousand, and furnishing lead and iron mines. The soil is at the bottom a solid red clay; and this is covered by a light earth, almost black, and very fertile. The grass grows here to a great height; towards the end of September it is set on fire; and, in eight or ten days after, the young grass shoots up half a foot high. In advancing northwards towards the Arkansas and St. Francis, the country becomes more beautiful and fertile, abounding with various kinds of game, as beavers, &c. and herds of deer, elks, and buffaloes, from ten to a hundred in a drove. Here have been also found specimens of rock-crystal, plaster of Paris, lead and iron ore, lime-stone, and pit-coal. It has all the trees known in Europe, besides others that are there unknown. The cedars are remarkably fine; the cotton-trees grow to such a size, that the Indians make canoes out of their trunks; hemp grows naturally; tar is made from the pines on the sea-coast; and the country affords every material for ship-building. Beans grow to a large size without culture; peach-trees are heavily laden with fruit; and the forests are full of mulberry and plum-trees. Pomegranate and chestnut trees are covered with vines, whose grapes are very large and sweet. They have three or four crops of Indian corn in the year; as they have no other winter besides some rains. Here are also mines of pit-coal, lead and copper, quarries of free-stone, and of black, white, and jasper-like, marble, of which they make their calumets. One species of timber, which is common from the mouth of the Ohio down the Mississippi swamp, is cotton-wood, resembling the Lombardy poplar in the quickness of its growth, and the softness of the timber. Here are also the papaw and black ash, button-wood or sycamore, hickory and cypress; wild cherry, sassafras, beech, chestnut, and Bermudian mulberry-trees. From the Walnut-hills to Point Coupee, and easterly fifteen or thirty miles, the whole country in its natural state is one-continued cane-brake. The cane in general is thirty-six feet high, often forty-two; intermingled with a smaller species, which continue thence on all the creeks to the gulf of Mexico.

As to the climate of this country, during the winter the weather is very changeable, generally throughout Lower and the southern part of Upper Louisiana. In summer it is regularly hot. In the latitude of the Natchez, Fahrenheit's thermometer ranges from 70° to 96°. The average degree of heat is stated to be 14° greater than in Pennsylvania. The climate of Louisiana varies in proportion as it extends northward. Its southern parts are not subject to the same degree of heat as the same latitudes in Africa, nor its northern parts to the same degree of cold as the corresponding latitudes in Europe; owing to the thick woods which cover the country, and to the great number of rivers which intersect it. The prevailing diseases on the lower part of the Ohio, on the Mississippi, and through the Floridas, are bilious fevers. In some seasons they are mild, and are little more than common intermittents; in others they are very malignant, and approach the genuine yellow fever of the West Indies.

The total population of all the parts or districts of Louisiana, including whites, free people of colour, and slaves, is said to be 42,375, of whom 12,920 are slaves. But it is apprehended that this number is too small. The Spanish government is fully persuaded that the population considerably exceeds 50,000 persons. The inhabitants of this country are chiefly the descendants of the French and Canadians. In New Orleans there is a considerable number of English and Americans. The two German coasts are peopled by the descendants of settlers from Germany, and by French mixed with them. The three succeeding settlements, up to Baton Rouge contain mostly Acadians;

banished from Nova Scotia by the English, and their descendants. The government of Baton Rouge, especially on the east side, which includes the whole country between the Iberville and the American line, is composed partly of Acadians, a few French, and a great majority of Americans. On the west side they are mostly Acadians; at Point Coupee and Fauffee River they are French and Acadians; of the population of the Atacapas and Opelousas, a considerable part is Americans; Natchitoches, on the Red River, contains but a few Americans, and the rest of the inhabitants are French; but the former are more numerous in the other settlements on that river, viz. Avoyelles, Rapide, and Ouacheta. At Arkansas they are mostly French; and at New Madrid, Americans. At least two-fifths, if not a greater proportion, of all the settlers on the Spanish side of the Mississippi, in the Illinois country, are likewise supposed to be Americans. Below New Orleans the population is altogether French, and the descendants of Frenchmen. The natives of the southern part of the Mississippi are sprightly; they have a turn for mechanics and the fine arts; but their system of education is so wretched, that little real science is obtained. Many of the planters are opulent, industrious, and hospitable. There is a militia in Louisiana, amounting, as it is said, to about 10,340.

The Indian nations within the limits of Louisiana, are as follow, according to the statement of the late president of the United States, Mr. Jefferson:—On the east bank of the Mississippi, about twenty-five leagues above Orleans, are the remains of the Houmas, or red men, amounting to about 60 persons; on the west side of the same river are the remains of the Tunicas, settled near and above Point Coupee, consisting of 50 or 60 persons.—In the Atacapas, on the lower part of the Bayou Teche, about eleven or twelve leagues from the sea, are two villages of Chitimachas, consisting of about 100 persons; the Atacapas, properly so called, dispersed throughout the district, are about 100; and there are about 50 wanderers of the tribes of Biloxis and Choctaws on Bayou Crocodile, which empties into the Teche.—In the Opelousas, north-west of Atacapas, are two villages of Alibamas in the centre of the district, consisting of 100 persons; and the Conchates dispersed through the country as far as the Sabinas and its neighbourhood, are about 350. On the river Rouge, at Avoyelles, nineteen leagues from the Mississippi, is a village of the Biloni nation, and another on the lake of the Avoyelles, the whole including about 60 persons.—At the Rapide, twenty-six leagues from the Mississippi, is a village of Choctaws, consisting of 100 persons, and another of Biloxes, about two leagues from it, of about 100 more; and at about eight or nine leagues higher up the Red River is a village including about 50 persons. All these are occasionally employed by the settlers as boatmen.—About eighty leagues above Natchitoches, on the Red River, is the nation of the Cadoquies, or Cados, who can raise from three to four hundred warriors, the friends of the whites, and esteemed the bravest and most generous of all the nations in this vast country; they are rapidly declining by their intemperance, and by the attacks of the Osages and Choctaws. Near one of their villages is a rich silver-mine; another lies further north. Lead ore is also found in different places, and also iron-ore, pit-coal, marble, slate, and plaster of Paris. There are 500 families of the Choctaws dispersed on the west side of the Mississippi, on the Ouacheta and Red Rivers, as far west as Natchitoches. On the river Arkansas is a nation of the same name, consisting of about 260 warriors, brave, yet peaceable and well-disposed, attached to the French, and disposed to engage in their wars with the Chickasaws. They live in three villages at eighteen leagues from the Mississippi on the Arkansas river; and the others are at three and six leagues from the first. A scarcity of game on the east side of the Mississippi has induced a number of Cherokees, Choctaws, Chickasaws, &c. to frequent the neighbourhood of Arkansas, where game is still abundant, where

where they have contracted marriages with the Ankanfas, and incorporated themselves with that nation.—On the river St. Francis, in the vicinity of New Madrid, &c. are settled a number of vagabonds from the Delawares, Shawnee, Miamis, Chickasaws, Cherokees, and Piorias; supposed to consist in all of 500 families. They are piratical in their disposition, attached to liquor, unsettled and vagrant in their habits; some of them speak English, all understand it, and some of them can even read and write it. At St. Genevieve, about 30 Piorias, Kaskaskias, and Illinois, are settled among the whites. These are the remains of a nation, which fifty years ago could bring into the field 1200 warriors.

On the Missouri and its waters, are many and numerous nations, the best known of which are—The Osages, situated on the river of the same name on the right bank of the Missouri, at about eighty leagues from its confluence with it; they consist of 1000 warriors, who live in two settlements at no great distance from each other. They are of a gigantic stature and well proportioned, are enemies of the white and of all other Indian nations, and commit depredations from the Illinois to the Arkansas. The trade of this nation is said to be under an exclusive grant. They are a cruel and ferocious race, and are hated and feared by all the other Indians. The confluence of the Osage River with the Missouri is about eight leagues from the Mississippi. Sixty leagues higher up the Missouri, and on the same bank, is the river Kansas, and on it the nation of the same name, but at about seventy or eighty leagues from its mouth. It consists of about 250 warriors, who are as fierce and cruel as the Osages, and often molest and ill-treat those who go to trade among them.—Sixty leagues above the river Kansas, and at about two hundred from the mouth of the Missouri, still on the right bank, is the Riviere Platte, or Shallow River, remarkable for its quicksands and bad navigation; and near its confluence with the Missouri dwells the nation of Otolactos, commonly called Otos, consisting of about 200 warriors, among whom are 25 or 30 of the nation of Missouri, who took refuge among them about twenty-five years since.—Forty leagues up the river Platte you come to the nation of Panis, composed of about 700 warriors in four neighbouring villages; they hunt but little, and are ill provided with fire-arms; they often make war on the Spaniards in the neighbourhood of Sante Fé, from which they are not far distant.—At 3000 leagues from the Mississippi, and one hundred from the river Platte on the same banks, are situated the villages of the Mahas. They consisted, in 1799, of 500 warriors; but are said to have been almost cut off by the small-pox.—At fifty leagues above the Mahas, and on the left bank of the Missouri dwell the Poncas, to the number of 250 warriors, possessing in common with the Mahas, their language, ferocity, and vices. Their trade has never been of much value; and those engaged in it are exposed to pillage and ill treatment.—At the distance of 450 leagues from the Mississippi, and on the right bank of the Missouri, dwell the Aricaras, to the number of 700 warriors; and sixty leagues above them, the Mandane nation, consisting of about 700 warriors likewise. These two last nations are well disposed to the whites, but have been the victims of the Sioux, or Mandowessies, who being themselves well provided with fire-arms, have taken advantage of the defenceless situation of the others, and have on all occasions murdered them without mercy. No discoveries on the Missouri, beyond the Mandane nation, have been accurately detailed; though the traders have been informed, that many navigable rivers discharge their waters into it, above it, and that there are many numerous nations settled on them. The Sioux, or Mandowessies, who frequent the country between the north bank of the Missouri and Mississippi, are a great impediment to trade and navigation. They endeavour to prevent all communication with the nations higher up the Missouri, to deprive them of ammunition and arms, and thus keep them subservient to themselves. In the winter they are chiefly on the banks of the Missouri,

and massacre all who fall into their hands. There are a number of nations at a distance from the banks of the Missouri to the north and south, concerning whom but little information has been received.—Returning to the Mississippi, and ascending it from the Missouri, about seventy-five leagues above the mouth of the latter, the river Moingona, or Riviere de Moine, enters the Mississippi on the west side; and on it are situated the Ayoas, a nation originally from the Missouri, speaking the language of the Otachatas; it consisted of 200 warriors before the small-pox lately raged among them. The Saes and Renards dwell on the Mississippi, about three hundred leagues above St. Louis, and frequently trade with it; they live together, and consisted of 500 warriors; their chief trade is with Michilimackinack, and they have always been peaceable and friendly. The other nations on the Mississippi, higher up, are but little known to us.—The Sac and Fox nations of India have ceded to the United States a valuable country, with a front of 600 miles on the Mississippi. It contains 80,000 square miles, and is equal to 51,200,000 acres. The nations of the Missouri, though cruel, treacherous, and insolent, may doubtless be kept in order by the United States, if proper regulations are adopted with respect to them.

The productions of Louisiana are sugar, cotton, indigo, rice, furs and peltry, lumber, tar, pitch, lead, flour, horses, and cattle. The soil is fertile, the climate salubrious, and the means of communication between most parts of the province certain, and by water. The exports of Louisiana amount in value to 2,158,000 dollars; and the imports, in merchandise, plantation-utensils, slaves, &c. amount to 2¼ millions, the difference being made up by the money introduced by the government, to pay the expenses of governing and protecting the colony. The imports to the United States from Louisiana and the Floridas amounted in 1803 to 1,006,214 dollars, and the exports to Louisiana and the Floridas in the same year to 1,224,710 dollars. In Louisiana there are few domestic manufactures. The Acadians manufacture a little cotton into quilts and cottonades; and, in the remoter parts of the province, the poorer planters spin and weave some negro-cloths of cotton and wool mixed. In the city, besides the trades which are absolutely necessary, there is a considerable manufacture of cordage, and four small ones of shot and hair-powder; and within a few leagues of the town are twelve distilleries for making tafia, which are said to distil annually a considerable quantity; and one sugar-refinery, which is said to make about 200,000lbs. of loaf-sugar.

There are no colleges, and but one public school, which is at New Orleans. There are a few private schools for children. Not more than half of the inhabitants are able to read and write. In general the learning of the inhabitants does not extend beyond those two arts; though they seem to be endowed with a good natural genius, and an uncommon facility of learning whatever they undertake. The clergy consists of a bishop, who does not reside in the province, whose salary of 4000 dollars is charged on the revenue of certain bishoprics in Mexico and Cuba; two canons and twenty-five curates, receive each from 360 to 480 dollars a-year. At Orleans there is a convent of Ursulines, to which is attached about 1000 acres of land. Soon after Louisiana was ceded to the United States, there were two societies established for the promotion of science and literature; one of them at New Orleans, and another at Natchez. The former publishes a monthly magazine for the purpose of diffusing a knowledge of the country, and to amuse the readers with a variety of useful subjects. The latter, which was established in 1803, called the Mississippi Society for the Acquisition and Diffusion of useful Knowledge, consists of forty members, and has correspondents in various parts of the United States: the American government has granted it a charter of incorporation. See NEW ORLEANS.

LOUISTOWN, a town of America, in Talbot county, Maryland, on the west side of Tuckahoe Creek: four miles north of King's Town.

LOUISTOWN, a post-town in Lincoln county, Maine, on the east side of Androscoggin-river, and bounded south-west by Bowdoin; containing 948 inhabitants: thirty-six miles north-east of Portland.

LOUISTOWN, a post-town in Suffex county, Delaware, pleasantly situated on Lewes-creek, three miles above its mouth in Delaware-bay; containing a presbyterian and methodist meetings, and about eighty houses, in a street more than three miles in length, extending along a creek which separates the town from the pitch of the cape. The court-house and gaol are commodious buildings. The entrance of the bay is crowded with vessels from all parts of the world; but during part of the winter is closed with ice. The circumjacent country is beautifully diversified with hills, woods, streams, and lakes, but much infested with mosquitoes and sand-flies. This town carries on a small trade with Philadelphia in the productions of the country. A manufacture of marine and Glauber salts, and magnesia, has been established here. It is 113 miles south of Philadelphia. Lat. 38 6. N. lon. 75. 18. W.

LOUISTOWN, the chief and post-town of Mifflin-county, Pennsylvania, situated on the north side of Juniatta-river, on the west side of, and at the mouth of, Cishicoquilis-creek: about twenty-three miles north-east of Huntingdon; incorporated in 1795, and containing about 120 dwelling-houses, 523 inhabitants, a court-house, and gaol. It is 150 miles west-north-west of Philadelphia. Lat. 40. 33. N. lon. 77. 23. W.

LOUISVILLE, a town of the state of Georgia, on the Ogechee: forty-five miles south-west of Augusta. Lat. 32. 55. N. lon. 82. 42. W.

LOUISVILLE, a town of the state of Kentucky, on the south side of the Ohio: seventy miles west of Lexington. Lat. 38. 4. N. lon. 86. 6. W.

LOULAY, a town of France, in the department of the Lower Charente: six miles north of St. Jean d'Angely, and seventeen south of Niort.

LOULE, a town of Portugal, in the province of Algarva, on a river of the same name, near the sea; surrounded with antique walls, and containing a castle, hospital, three convents, and about 4400 inhabitants: nine miles north of Faro, and fifteen west of Tavira. Lat. 37. 5. N. lon. 7. 54. W.

LOULIE' (François), a French musician, who published in 1696 an ingenious and useful book, entitled "Elements of Music," with a description of a chronometer to measure time by a pendulum; and in 1698, another book was printed at Amsterdam, called "A New System of Music," by the same author. In this work, besides the usual instructions in elementary books, he explains the nature of transposition, and proposes a method of reducing a piece of music into any key different from that in which it was originally composed, by means of imaginary clefs.

LOUND (East), a village in the isle of Axholme, Lincolnshire.

LOUND HALL, a place in Nottinghamshire, north of Redford, on the river Idle.

LOUNG, a town of Hindoostan, in the circar of Sehaurumpour: twenty-eight miles south of Merat.

To LOUNGE, *v. n.* [*lunderen*, Dut.] To idle; to live lazily.

LOUNGER, *f.* An idler.

LOUNGING, *f.* The act of living in idleness.

LOUP, a river of France, which runs into the Mediterranean in lat. 43. 38. N. lon. 7. 12. E.

LOUP, a river of Canada, which runs into lake St. Pierre in lat. 46. 13. N. lon. 72. 47. E.

LOUP (St.) a town of France, in the department of the Upper Saone, and chief place of a canton, in the district of Lure: six miles north-west of Luxeuil. The place contains 1891, and the district 13,366, inhabitants, in fourteen communes.

LOUP (St.), a town of France, in the department of the Two Seves, and chief place of a canton, in the district of Parthenay, near the river Thoue; nine miles north-north-east of Parthenay. The place contains 1649, and the canton 5968, inhabitants, in nine communes.

LOUP DE SALLE (St.), a town of France, in the department of the Saone and Loire, near the river Heune: eleven miles north of Chalons sur Saone.

LOUPE, *f.* [French.] A magnifying-glass. *Obsolete.*

LOUPPE, a town of France, in the department of the Eure and Loire: twelve miles south-west of Châteauneuf en Thimerais, and eighteen west of Chartres.

LOUR'BOTTLE, a village in Northumberland, south of Whittingham.

LOUPTE'RE (John Charles de Relongue), was born in the diocese of Sens in 1727; he became a member of the Academy of the Arcadi at Rome; and died in the year 1788. He is known by a collection of poems in two volumes 12mo. written with much spirit and elegance; and by six parts of a Journal for Ladies, printed in 1761.

LOURDE, a town of France, and seat of a tribunal, in the department of the Higher Pyrenees: six miles north of Argeltez, and eleven south of Tarbe. Lat. 43. 6. N. lon. 0. 1. E.

LOURE, *f.* In French music, a kind of dance, of which the tune is rather slow, and generally in the measure of  $\frac{3}{4}$ , or six crotchets in a bar. Likewise the name of an instrument resembling bagpipe, to the music of which the tune is danced.

LOURE'ZA, a town of Spain, in the province of Galicia: eight miles west of Tuy.

LOURGE, *f.* [from the Lat. *longurio*.] A tall loose-made fellow; a gangrel.

LOURICAL, a town of Portugal, in the province of Estremadura: twelve miles south of Montemor Velho, and six north of Leiria.

LOURIN'HA, a town of Portugal, in the province of Entre Duero e Minho: eight miles south-south-east of Peniche.

LOURISTAN, a district of Persia, forming the northern part of the province of Chufistan.

LOUSE, *f.* plural *lice*; [*luz*, Sax. *lays*, Dut.] A small animal, of which different species live on the bodies of men, beasts, and perhaps of all living creatures. See PEDICULUS.—There were *lice* upon man and beast. *Exod.* viii. 18.

Frogs, *lice*, and flies, must all his palace fill  
With loath'd intrusion.

*Milton.*

Wood-LOUSE. See MILLEPEDES.

To LOUSE, *v. a.* [pronounced *louze*.] To clean from lice.—As for all other good women, that love to do but little work, how handsome it is to *louse* themselves in the sunshine, they that have been but a while in Ireland can well witness. *Spenser on Ireland.*

LOU'SEWORT, *f.* in botany. See DELPHINIUM, STAPHISAGRIA, and PEDICULARIS.

LOU'SEWORT, (Yellow.) See RHINANTHUS.

LOU'SILY, *adv.* In a paltry, mean, and scurvy, way.

LOU'SINESS, *f.* The state of abounding with lice.

LOU'SY, *adj.* Swarming with lice; over-run with lice.—Sweetbriar and gooseberry are only *lousy* in dry times, or very hot places. *Mortimer's Husbandry.*

Let him be daub'd with lace, live high and whore,  
Sometimes be *lousy*, but be never poor.

*Dryden.*

Mean; low-born; bred on the dunghill.—I pray you now remembrance on the *lousy* knave mine host: a *lousy* knave, to have his gibes and his mockeries. *Shakespeare.*

To LOU'T, *v. n.* [*hluzan*, to bend, Sax.] To pay obedience; to bend; to bow; to stoop, *Obsolete.* It was used in a good sense:

He fair the knight saluted, *louting* low,  
Who fair him quitted, as that courteous was.

*Spenser.*

The

The palmer, grey with age, with count'nance *louting* low,  
His head ev'n to the earth, before the king did bow. *Drayt.*

To LOU**T**, or Low**T**, *v. a.* [This word seems in  
Shakespeare to signify] To overpower :

I'm *louted* by a traitor villain,  
And cannot help the noble chevalier. *Shakespeare.*

LOU**T**, *f.* [*loete*, old Dut.] A mean awkward fellow;  
a bumpkin; a clown.—Pamela, whose noble heart doth  
disdain that the trust of her virtue is reposed in such a  
*lout's* hands, had yet, to show an obedience, taken on  
shepherdish apparel. *Sidney.*

I've need of such a youth,  
That can with some discretion do my business;  
For 'tis no trusting to yon foolish *lout*. *Shakespeare.*

LOUTETS'NA, a town of Croatia: twelve miles  
south of Creutz.

LOUTH, a large market-town in Lincolnshire, situated  
in a fertile valley at the eastern foot of the Wolds, twenty-  
six miles distant from Lincoln, and 153 from London.  
It was anciently called *Luda*, from its proximity to the  
Ludd, a small rivulet formed by the confluence of two  
streams. Among the few historical events relative to Louth,  
we find that in the rebellion of the year 1536, occasioned  
by the suppression of the religious houses, the inhabitants  
took an active part, under Dr. Mackerel, who was known  
by the name of Captain Cobler, when the prior of Barling's  
abbey, with the vicar and thirteen other ring-leaders, suf-  
fered death. In this town were anciently established three  
religious fraternities, called the Guild of our Blessed Lady,  
the Guild of the Holy Trinity, and the Chantry of John  
of Louth. King Edward VI. alienated the funds of these  
guilds, and granted them for the purpose of erecting and  
endowing a free grammar-school. The lands then pro-  
duced 40*l.* per annum, but are now let at 400*l.* One-half  
of the produce was granted for a head-master's salary, one-  
fourth for the usher's, and the remainder for the perpetual  
maintenance of twelve poor women. The trustees of this  
foundation were incorporated by the name of "The  
Wardens and Six Assistants of the Town of Louth, and  
Free School of King Edward VI. in Louth." Another  
free-school on a very respectable scale, was founded in  
pursuance of the will of Dr. Mapletoft, dean of Ely, bear-  
ing date August 17, 1677.

The parish-church of St. James is a spacious edifice,  
consisting of a nave, two aisles, with an elegant tower and  
spire at the west end. The east end, which presents a fine  
elevation, exhibits a large central window, having six up-  
right mullions and varied tracery, with two lateral win-  
dows opening into the aisles. Internally the nave is sepa-  
rated from the aisles by octagonal columns, the alterna-  
te sides of which are relieved by single flutes. The  
chancel, which has an altar-piece containing a picture of  
the Descent from the Cross, by Williams, is of more mo-  
dern date than the body of the church, and is probably  
coeval with the justly-admired steeple. The latter was  
begun in the year 1501, and completed in fifteen years.  
The height was originally 360 feet; but the flat stone on  
the summit was blown off in 1587, and carried with it  
part of the building into the body of the church. The  
whole spire being blown down October 11th, 1634, the  
present one was erected. The tower-part of the steeple  
consists of three stories: each stage terminates with ele-  
gant pediments, supported by ornamental corbels; in this  
manner diminishing to the top, where are four octagonal  
embattled turrets. At eighty feet from the base, round  
the exterior of the tower, runs a gallery, guarded by a  
parapet wall; and at the height of 170 feet the battle-  
ments commence. The top stone projects with a cornice;  
the height of the spire to the cross is 141 feet; the total  
height of the whole 283 feet. A few years ago, a sailor  
undertook to climb to the top of it on the outside, sup-  
porting himself by means of small stones regularly pro-  
jecting out of the angles; one of the stones giving way,  
he was near falling, but fortunately recovered himself.

VOL XIII. No. 937.

After dancing round the weathercock for some time, he  
descended by the same means, in safety, contrary to the  
expectations of the townsmen, who had gazed at him  
with sensations of anxiety and horror. The living of St.  
James is a vicarage, in the gift of a prebendary of Lin-  
coln cathedral, to which it was annexed by the Conque-  
ror. The vicarage-house, which stands contiguous to the  
church-yard, is an old thatched building; and the pre-  
sent vicar has, in unison with its appearance, laid out his  
garden in a curious style of ingenious rusticity: it is de-  
nominated the Hermitage, and deservedly claims the at-  
tention of the curious. It is constructed of local mate-  
rials, chiefly collected out of the neighbouring fields and  
hedges; and appears as if it were formed by nature rather  
than art.

In Louth was formerly another church, named St.  
Mary's; it is now totally demolished; but the church-  
yard is the place of sepulture for the town, as that of St.  
James has not been used for that purpose for forty years  
past. The dissenters from the establishment have three  
places of worship; one for catholics, one for baptists, and  
one for methodists. The other principal buildings are a  
town-hall, an assembly room, and a theatre.

The civil government of the town is vested in the war-  
den and six assistants, incorporated, as already mentioned,  
by Edward VI. who in the same charter granted two mar-  
kets, to be held on Wednesdays and Saturdays; and three  
fairs, to commence on the third Sunday after Easter, St.  
James's day, and the feast of St. Martin; with a particular  
injunction, that they should continue two whole days af-  
ter, that the first day of each fair might be appropriated  
"to hearing the word of God." Queen Elizabeth gave  
to the corporation the manor of Louth, of which the  
annual value was then 78*l.* 14*s.* 4*d.* for the better sup-  
port of the corporate dignity; and some additional pri-  
vileges were granted by James I. In the year 1811, the  
inhabitants of Louth, as appears by the return under the  
population-act, were—2247 males, and 2481 females; to-  
tal 4728; and it is remarkable, that for the last ten years  
the births and deaths were exactly equal. A carpet and  
blanket manufactory has been recently established here,  
and is now in a very prosperous state; here is also a large  
manufactory of soap, and a mill for making coarse paper.  
In the year 1761 an act was obtained for cutting a canal  
between Louth and the North Sea. It commences about  
half a mile from the town, and keeps parallel with the  
Ludd, which supplies it with water; leaving the river  
about four miles from the town, it sweeps to the north,  
and joins the sea at a place called Tetney lock. The un-  
dertaking cost 12,000*l.* which brings in very good in-  
terest. By this channel, vessels of considerable burthen  
regularly trade to London, Hull, and several parts of  
Yorkshire, carrying out corn and wool, and bringing  
home timber, coals, grocery, &c. In Louth and its vicin-  
ity are various springs of a very peculiar nature, worthy  
of investigation by the philosopher and chemist.

About a mile from the town is the site of Louth-park  
abbey, which was built by Alexander bishop of Lincoln  
in the year 1139, and appropriated to Cistercian monks.  
In the time of Henry III. this house contained 66 monks,  
and 150 converts, or labourers.—The following are the  
principal villages in the neighbourhood of Louth: Tath-  
well, three miles distant; Haugham, four; Ruckland  
(north-east of Horncastle,) six; Farforth, six; Tedford,  
ten; South Ormesby, nine; Burwell, near Althorp, six;  
Muckton, six; Swaby, nine; South Thoresby, ten; Bellen,  
nine; Authorpe, eight; North and South Reston, five;  
south-east; Castle Carleton six; Great Carlton, eight;  
Manby, seven, north-east; Grimoldby (south-west of Sal-  
fleet), seven; Stewton, two; North and South Cocker-  
ington, six, north-east; Alvingham, five; Keddington, two;  
Yarborough, five; Cawthorpe and Covenham, seven;  
Fullston (near Granthorp), eight; Tetney, twelve; North  
Thoresby, seven; Grainsby, eight; Wayth, nine; Haw-  
ardby, ten; Wyham, eight; Utterby, five; Fotherby,

8 L

three;

three; Little Grimsby, three; North Ormesby, seven, north-west; Ludborough (near Wyham, west of Salfleet), six; Kellstern, six, west; Ludford, nine; at this place Roman coins have been dug up; it is near Market Raisin; Brough, eight; Gayton on the Wold, six; Cawkwell (east of Stanton), six; Scamblesby, seven; North Elkington, four; South Elkington, two; Welton, three; Withcall, five; Hallington, two, south-west; and Raithby, two.

**LOUTH**, a county of Ireland, in the province of Leinster, bounded on the north by the county of Armagh, on the east by the Irish Sea, on the south by Meath, and on the west by Meath and Monaghan. It is the smallest county of Ireland, but very fertile and pleasant, and abounding with many remains of antiquities, of which Mr. Wright, in his *Louthiana*, has given a very ample description. It contains 111,180 Irish plantation acres, 50 parishes, five baronies, and five boroughs; and formerly returned ten members to parliament: it is about twenty-two miles in length from north to south, and from nine to fourteen in breadth from east to west. It contains 61 parishes, upwards of 11,500 houses, and about 57,750 souls. Except on the side of Carlingford Bay, which is mountainous, the soil is in general rich and fertile. The principal towns are Drogheda, Carlingford, Dundalk, Ardee, and Dunleer. Two members are returned to the imperial parliament for the county, and for Drogheda and Dundalk one each.—**LOUTH**, which gives name to the county, is a village, six miles from Dundalk, with one annual fair.

**LOUTH**, a township of Upper Canada, west of Grantham, and fronting Lake Ontario.

**LOUTHERBOURG** (Philip James de), was born at Strasburg on the Rhine, Nov. 1, 1740. His family was originally of Poland, where his ancestors had been ennobled by king Sigismund, whose letters of nobility bear date at Warsaw, A. D. 1564; but, when the reformation began to spread in that kingdom, about the year 1537, one branch of the family dissented from the church of Rome, and retired, to avoid impending persecution, into Switzerland, where it continued, till, on Mr. de Louthembourg's father being appointed principal painter to the prince of Hanau Darmstadt, he removed to Strasburg. As Mr. de Louthembourg's father was a painter of eminence (who had been a disciple of Largilliere, the celebrated portrait-painter), it was natural to suppose he would have brought up his son to that profession: however, that was not the case; his parents were divided in their destination of their child's future occupation. The one designed he should be an engineer; and the other insisted on his being bred a Lutheran minister. The difference of the two professions was, indeed, very great; but, till that should be decided, it was resolved he should receive an education that should fit him for either. For this purpose he was entered at the university of Strasburg; where he studied mathematics, to qualify him for an engineer; and philosophy, languages, and theology, to enable him to take orders. It is frequently seen that the intentions of parents for the establishment of their children are frustrated, especially when the inclinations of the child are not consulted; so it was the case of young Philip. His genius led him to painting; and, though he had made a rapid progress in mathematics and theology, particularly in the deepest and most abstruse points of mystics, yet he snatched every opportunity to prosecute his favourite study: and, as he was strongly attached to chemistry, he found, by following the principles of nature, a method of preparing and blending his colours (unknown to other artists), by which they were rendered more vivid and durable, as one component part did not destroy the effect of the other. Thus qualified by genius, learning, and industry, he quitted Strasburg, and went to Paris, where he became a disciple of the great Carlo Vanloo. Mr. de Louthembourg, by keeping an attentive eye on nature, soon rose to excellence. He struck out a new manner peculiar to himself; for he scorned to be a servile imitator of the manner of any mas-

ter, however excellent: he adopted the beauties of Vanloo without copying his defects; his outline became free, his drawing correct, and his colouring rich. In a word, he gained the height of eminence so early in life, that the Royal Academy of Painting and Sculpture broke through the fundamental law in his favour, by electing him an academical, in the year 1762, at the age of 22, when that law forbade any one from being a member till turned 30. Indeed, he anticipated age by merit; and, though younger in years than the letter of the law prescribed, he was more mature in art than the spirit of it required; and in 1782 stood the twenty-eighth in seniority of fifty-nine academicians. Five years after (1767), he was admitted a member of the Academy of Marseilles. He quitted Paris; and visited those parts of Germany, Switzerland, and Italy, where he could observe the most perfect works of art, or the most picturesque views of nature; and about the year 1771 came to England, where his fame had arrived. He was soon particularly distinguished by Mr. Garrick, who engaged him as superintendent of the scenery and machinery at Drury-lane; which office he constantly executed in such a style and manner as almost to realize fancy, and add to the illusion of the drama. His other works, seen in several exhibitions, and in the cabinets of royalty and nobility, have stamped his merit with a currency that will never fail. Nov. 23, 1781, he was elected a member of the Royal Academy of Arts in London. He died at his house at Hammer-smith, on the 11th of March, 1812.

The various compositions of Mr. de Louthembourg—his historical pictures, battles, sea-pieces; landscapes and convulsions of nature; together with his vignettes for Macklin's Bible—are fully known to the public; and his character is fully established; but it will still bear an addition with those who knew that he was as amiable in private life; so that in him was happily blended the scholar, the artist, and the gentleman. The greatest collection of his productions, in this country, is in the possession of Henry Von Boadicoate, esq. of Hammer-smith. From a portrait of M. de L. painted by Ickle, a German artist, about twenty years ago, the engraving which accompanies this article was taken, by permission of Mrs. de Louthembourg. Mr. de L. has a monument in Chiswick church-yard, (which the reader will not forget contains the ashes of Hogarth;) with an epitaph written by Dr. Moody, which concludes as follows:

Here, Louthembourg, repose thy laurel'd head!  
While Art is cherish'd, thou canst ne'er be dead:  
Salvator, Poussin, Claude, thy skill combines,  
And beauteous Nature lives in thy designs.

**LOUT'ISH**, *adj.* Clownish; bumkinly.—This *lout'ish* clown is such, that you never saw so ill favoured a vitar; his behaviour such, that he is beyond the degree of ridiculous. *Sidney*.

**LOUT'ISHLY**, *adv.* With the air of a clown; with the gait of a bumpkin.

**LOU'TRA** (Great and Little), two small Greek islands in the gulf of Engia: seven miles north-west of Engia.

**LOUTZO'VA**, a town of Russia, in the government of Irkutsk: ten miles north-east of Verchnei Udinsk.

**LOUVAIN**, or **LOE'VEN**, a city of France, in the department of the Dyle, heretofore the capital of Brabant, founded, according to some, by Julius Cæsar, according to others by one Lupus, who lived a long time before him; but on this there can be no reliance. It is however certain, that Louvain was known in the year 885, when Godfrey duke of Normandy, having ravaged the country, encamped near the Dyle, on the plain of Louvain. The emperor Arnulph built a castle to defend the country against the Normans, about this time, which was called *Laven*, and afterwards *le Chateau de Cæsar*, or Cæsar's Castle, and was a long time the ordinary residence of the dukes of Brabant; in this castle Henry I. was assassinated in the year 1038; Thierry, comte of Holland, was kept prisoner in the year 1200; the emperor

LOUTHERBOURG.

*London. Published as the Act directs Aug. 1811 by G. Jones.*

emperor Charles V. and his sisters, were brought up here till 1510; and formerly the assembly of the states was held here. It is now in ruins. The city was first surrounded with walls in the year 1165, and afterwards very much enlarged in the 14th century, by Wenceslaus and John, dukes of Brabant. The trade at present is not very considerable; the principal article is beer, of which a great quantity is sent to Brussels, Antwerp, Liege, Tirlmont, and other cities and towns. It was formerly much larger than it now is, much richer, and carried on more trade than any other place in the country. At the beginning of the fourteenth century, four thousand houses were inhabited by clothiers, and their manufactories employed above 150,000 workmen. It is related in their annals, that, when, this crowd of weavers left work, they were compelled to found a large bell, that the women might keep their children within doors, lest they should be thrown down and trampled to death. This is probably the reason that the magistrates are here more numerous than in other cities; for, besides two burgo-masters, seven echevins, two pensioners, six secretaries, and four receivers, they had a council of 21; eleven of whom are nobles, and the other ten merchants or tradesmen. The town-house where they assembled is a beautiful Gothic structure. In the year 1382, the weavers and other tradesmen revolted against Wenceslaus, duke of Brabant, and cruelly threw seventeen of the magistrates out of the town-house windows; took arms against their prince, and laid waste the province; but being besieged, they implored for mercy, and obtained pardon at the intreaty of Arnold de Hornes, bishop of Liege, only the most culpable being punished; and the weavers, who were the authors of the insurrection, were banished; they retired for the most part to England, where they were very well received. Louvain being thus nearly deprived of commerce and inhabitants, John IV. duke of Brabant, with the consent of Pope Martin V. in the year 1426, founded an university, which has since been the chief ornament and glory of the place, and is said to resemble those in England more than any other abroad. There are sixty colleges in this university, which, though much admired for their situation and building, are not however so sumptuous as those of Oxford and Cambridge. The Dutch have a college here for Roman Catholics; the English one of Dominican friars; the Irish one of secular priests, another of Dominican friars, and another of Franciscans. There is a convent here of English nuns, which is reckoned the best of any of this nation in the Low Counties. Louvain long prided itself as never having been taken by arms. In the year 1542, Martin Roslen, general of the Gueldrians, attempted it in vain; and, in 1572, William prince of Orange was compelled to raise the siege by the vigorous resistance of the citizens and students. On the first Sunday of July, they have an annual fête in memory of their deliverance from the Dutch and the French in 1635, who were compelled by famine to retire. And on the 5th of August, 1710, the French, under the partisan du Moulin, attempted to surprize the city, but were repuffed by the citizens, and obliged to retire in confusion; this bravery was rewarded by a present of a golden key, sent them by Charles III. king of Spain, as an acknowledgment of their fidelity, which they preserve in their town-house, as a memorial of his majesty's good-will. But, nevertheless, this city was taken by the French in the year 1746; and again by the soldiers of the French republic, under Dumourier, in their hasty progress through Brabant; but was evacuated on the 22d of March, 1793; and indeed it is but ill adapted for defence, the walls being nine miles in circumference, though not a third part of the inclosure is built on; the rest being occupied for gardens and vineyards. Louvain was anciently situated part in the diocese of Liege, and part in the diocese of Cambrai, but, on the erection of the archbishopric of Malines, it was placed under that diocese, and so remained till its union with France. The number of inhabitants is estimated at 18,000. It is twenty-one miles south-west of

Antwerp, and thirteen north-east of Brussels. Lat. 50. 34. N. lon. 4. 40. E.

LOU'VE, a river of France, which runs into the Adour near Castlenau.

LOUVEN, a river of Norway, which runs into the sea at Lauvig, in the province of Aggerhuus.

LOUVET' (Peter), a French advocate, ecclesiastical writer, and antiquary, in the seventeenth century, was a native of Reinville, two leagues from Beauvais: he was educated to the legal profession, and became master of requests to queen Margaret, in whose service he died in 1646. He was the author of several works, which, though not to be commended for the style in which they are written, will be found to contain much useful and curious matter, valuable to the civil and ecclesiastical historian. Of this description, are, 1. The History of the Antiquities of the Diocese of Beauvais, 2 vols. 8vo. 1609 and 1614. 2. Nomenclatura et Chronologia Rerum Ecclesiasticarum Diocesis Bellovacensis, 8vo. 1618. 3. Remarks on the ancient State of the Nobility in the Beauvaisin, and of several French Families, 8vo. 1631 and 1640; which is very rare, and in an unfinished state: it is drawn up in alphabetical order, and reaches no farther than to the commencement of the letter N. 4. An Abstract of Constitutions and Regulations, for general provincial, and particular, Chapters, designed to effectuate a Reform in the Convent of Jacobins at Beauvais, 1618. *Moreri*.

LOUVET DE COUVRA'Y (John Baptist), one of the members of the French convention of France. He was of the Brissotine party, and had the courage to oppose the savage Robespierre, when at the very height of his power; yet he escaped the slaughter which that tyrant inflicted on a multitude of good men, and died in the year 1797. He was author of; 1. A romance, entitled the Amours of the Chevalier Faublas. 2. A political journal, called the Sentinel. 3. A Justification of Paris in 1789. 4. Emily de Varmont. 5. An Account of himself, and of the Dangers which he had passed through.

LOUVIER'S, a town of France, and principal place of a district, in the department of the Eure: twelve miles north of Evreux, and fifteen south of Rouen. Lat. 49. 3. N. lon. 2. 55. E.

LOUVIGNE', a town of France, in the department of the Ourthe, and chief place of a canton, in the district of Liege. The place contains 1541, and the canton 5925, inhabitants, in seven communes.

LOUVIGNE', a town of France, in the department of the Ile and Vilaine: eight miles north-north-east of Fougères, and twenty-four east of Dol.

LOUVIGNE' EN BAIN, a town of France, in the department of the Ile and Vilaine: seven miles south-west of Vitre, and eight north-west of La Guerche.

LOUVIL'LE D'ALONVIL'LE (Eugene), a French mathematician and astronomer, was descended from an ancient and noble family, and born at the chateau de Louville in the diocese of Chartres, in the year 1671. He received an education intended to qualify him for assuming the naval or military profession; and, having served for some time at sea, and afterwards on land, was made brigadier in the armies of Philip V. king of Spain, and colonel of a regiment of dragoons. Being disbanded upon the peace of Utrecht, he devoted himself entirely to the study of the mathematics, and particularly of astronomy. In the year 1713 or 1714, he went to Marseilles, for the sole purpose of precisely ascertaining the latitude of that place, that his observations might correspond the more exactly with those of Pytheas, made almost two thousand years before that time. In the last of the years above-mentioned, he was admitted a member of the Academy of Sciences at Paris, and appointed astronomer at the observatory of that city. During the year 1715, he came into England, in order to observe the total eclipse of the sun in that year, which was to be more perfectly visible about London than in any other part of the northern hemisphere. While he was in this country, or not long afterwards, he

was elected a fellow of the Royal Society. Upon his return into France, he fixed his residence at a small country-house within a quarter of a league of Orleans, where he applied himself most assiduously to his astronomical studies. So intent was he in prosecuting them, that he became a philosophical recluse, and was never to be spoken with but during the time when he was at his meals. At the same time, however, that he led this solitary life, and seemed to be wholly wrapt up in himself, and to regard external objects with stoical apathy, he was friendly, obliging, and liberal. Fontenelle also relates, that, though he was thus strictly studious, he was noted for a degree of delicacy and niceness with respect to dress, and articles for the table, which one would not expect to observe in so profound and abstract a philosopher. In the year 1732, he was attacked by a lethargic disorder; and soon afterwards a relapse proved fatal to him, when he was about the age of sixty-one. He was the author of a great number of curious Dissertations on physical and astronomical subjects, several of which are inserted in the Memoirs of the Academy of Sciences, and others in the French Mercury, after the year 1720. He was a good scientific mechanic, and had an excellent collection of the best astronomical instruments, of which the most difficult and ingenious were made with his own hands. *Moreri.*

LOU'VO, a town of Siam, on a river which runs into the Mecon. The ancient kings had here a pleasure-house or palace, which was rebuilt in 1687. The situation is charming, and the air so good, that the king resides here the greatest part of the year. It is forty miles south of Siam. Lat. 14. 55. N. lon. 100. 30. E.

LOUVOIS, a town of France, in the department of the Marne: nine miles north-east of Epemay.

LOUVOIS (Marquis). See TELLIER.

LOU'VRE, *f.* The name of the royal palace at Paris.

The *Honours of the Louvre*, were certain privileges (which we may now suppose will be or are restored in the ancient form) annexed to divers dignities, or offices, particularly those of duke, peer, chancellor, &c. as to enter the Louvre in a coach, to have the tabouret, or stool, in the queen's presence, &c.

LOU'VRE, *f.* [from its being first used at the above place.] A well-known dance-tune.

LOU'VRES, a town of France, in the department of the Seine and Oise: twelve miles north of Paris. Lat. 49. 3. N. lon. 2. 35. E.

LOU'YS, or Louis (John), an engraver of considerable eminence, who flourished about the middle of the sixteenth century. According to Basan, he was a native of Flanders. He learned the art of engraving from Peter Soutman, at the time that Suyderhoef studied under the same master; and his usual style of engraving bears some resemblance to that of his master. One of his best prints is Diana, with her nymphs, reposing after the chase; a middling-sized plate, lengthwise, from Rubens.

LOUZAC', a town of France, in the department of the Correze: seven miles north-east of Uzerches, and twelve north of Tulle.

LOW, *adj.* Not high:

Their wand'ring course now high, now low, then hid,  
Progressive, retrograde. *Milton.*

Not rising far upwards.—It became a spreading vine of low stature. *Ezek. xvii. 6.*—Not elevated in place, or local situation.—Whatsoever is washed away from them is carried down into the lower grounds, and into the sea, and nothing is brought back. *Burnet's Theory of the Earth.*

O mighty Cæsar! dost thou lye so low?  
Are all thy conquests, glories, triumphs, spoils,  
Shrunk to this little measure? *Shakespeare's Julius Cæsar.*

Descending far downwards; deep.—The lowest bottom  
snook of Erebus. *Milton.*

So high as heav'd the tumid hills, so low  
Down sunk a hollow bottom, broad and deep,  
Capacious bed of waters. *Milton.*

Not deep; not swelling high; shallow; used of water—  
As two men were walking by the sea-side at low water,  
they saw an oyster, and both pointed at it together.  
*L'Étrange.*—Not of high price: as, corn is low.—Not loud;  
not noisy.—The theatre is so well-contrived, that, from  
the very deep of the stage, the lowest sound may be heard  
distinctly to the farthest part of the audience; and yet, if  
you raise your voice as high as you please, there is nothing  
like an echo to cause confusion. *Addison on Italy.*

As when in open air we blow,  
The breath, though strain'd, sounds flat and low:  
But, if a trumpet take the blast,  
It lifts it high, and makes it last. *Waller.*

In latitudes near to the line.—They take their course  
either high to the north, or low to the south. *Abbot's De-  
scription of the World.*—Not rising to so great a sum as some  
other accumulation of particulars.—Who can imagine,  
that in sixteen or seventeen hundred years time, taking  
the lower chronology, that the earth had then stood, man-  
kind should be propagated no farther than Judæa? *Bur-  
net.*—Late in time: as, the lower empire.—Dejected; de-  
pressed:

His spirits are so low, his voice is drown'd,  
He hears as from afar, or in a swoon,  
Like the deaf murmur of a distant sound. *Dryden.*

Impotent; subdued.—To keep them all quiet, he must  
keep them in greater awe and less splendour; which power  
he will use to keep them as low as he pleases, and at no  
more cost than makes for his own pleasure. *Graunt.*

To be worst,  
The lowest, most dejected, thing of fortune,  
Stands still in esperance. *Shakespeare.*

Not elevated in rank or station; abject.—He woos both  
high and low, both rich and poor. *Shakespeare.*—Dis-  
honourable; betokening meanness of mind: as, low tricks:  
Yet sometimes nations will decline so low  
From virtue, which is reason, that no wrong  
But justice, and some fatal course annex'd,  
Deprives them of their outward liberty,  
Their inward lost. *Milton.*

Not sublime; not exalted in thought or diction.—In com-  
parison of these divine writers, the noblest wits of the  
heathen world are low and dull. *Felton.*—Submissive; hum-  
ble; reverent:

I bring them to receive  
From thee their names, and pay their fealty  
With low subjection. *Milton.*

LOW, *adv.* In times approaching towards our own.—  
In that part of the world which was first inhabited, even  
as low down as Abraham's time, they wandered with their  
flocks and herds. *Locke.*—With a depression of the voice.  
—Lucia, speak low; he is retired to rest. *Addison.*—In a state  
of subjection.—How comes it that, having been once so  
low brought and thoroughly subjected, they afterwards  
lifted themselves so strongly again? *Spenser.*

To LOW, *v. a.* To sink; to make low. Probably mis-  
printed for lower.—The value of guineas was loved from  
one-and-twenty and sixpence to one-and-twenty shillings.  
*Swift.*

To LOW, *v. n.* [hlopan, Sax. The adjective low, not  
high, is pronounced lo, and would rhyme to no: the verb  
low, to bellow, is by Dryden rhymed to now.] To bellow  
as a cow.—Doth the wild ass bray when he has grafs? or  
loweth the ox over his fodder? *Job, vi. 5.*

Fair Iô grac'd his shield, but Iô now,  
With horns exalted stands, and seems to low. *Dryden.*

LOW (Edward), a musician of the seventeenth century;  
brought up in Salisbury cathedral, and was appointed or-  
ganist of Christ-church, Oxford, in 1630, where he was  
deputy

deputy music-professor under Dr. Wilson; and, upon his quitting the university, Low was appointed his successor in the professorship. Low published, in 1661, an useful little book of "Short Directions for the Performance of the Cathedral Service;" which was reprinted in 1664, under the title of "A Review of some short Directions, formerly printed, for the Performance of Cathedral Service, with many useful Additions according to the Common Prayer Book, as it is now established: published for the information of such as are ignorant in the Performance of that Service, and shall be called to officiate in Cathedral or Collegiate Churches; or any other that religiously desire to beare a Part in that Service. By E. L. Oxon. 1664." At the restoration, he was appointed one of the organists of the chapel royal. He died in 1682, and was succeeded in the king's chapel by Henry Purcell.

LOW (Thomas), a stage-finger, with an exquisite tenor voice. His first profession was that of a gold and silver lace manufacturer; and he began music too late to read it as a language, so that he learned the songs, which he performed in public, by his ear, to the end of his life. He stood, however, very high in the favour of lovers of English ballads, particularly those of Dr. Arne at Drury-lane and Vauxhall, composed expressly for his voice and bounded abilities. He was the rival of Beard, and gained as much applause by the sweetness of his voice, through all his ignorance, as Beard, a regular-bred musician, brought up in the king's chapel, could do by knowledge of music, humour, and good acting. Low, like many other actors and singers, was profligate, extravagant, and unprincipled; which rendered the latter part of his life disgraceful and wretched. From acquiring unbounded applause, and an income of more than 1000*l.* a-year, he was reduced to the lowest state of indigence, and degraded into a chorus-finger at Sadler's Wells, Cuper's Gardens, and some say as a ballad-finger in the streets; but we believe this last particular is not correct. He ended his days as the keeper of an alehouse at Otter's Pool in Hertfordshire, where the remains of his fine voice drew much company from the neighbouring towns and villages; he lived to a great age.

LOW-BELL, *f.* A name given to a bell by means of which, assisted by a flame of light, larks, woodcocks, partridges, &c. may be caught in open champaign countries, and in stubble-fields, especially those of wheat, from the middle of October to the end of March. *Low*, in this case, is derived from *laeye*, Dut. *leg*, Sax. or *log*, Islandic, a flame. *Lowe* denotes a flame in Scotland also; and *to lowe*, to flame.

LOW-BELLERS, *f.* in our statute-books, are persons who go in the night-time with a light and bell, by the sight and noise whereof, birds sitting on the ground become stupified, and so are covered with a net, and taken. They are stigmatized as poachers, or petty thieves, because partridges are caught in this way.

LOW-BELLING, or BIRD-BATTING, *f.* Catching birds with a low-bell. It is performed in the following manner: When the air is mild, about nine o'clock at night, the moon not shining, take the low-bell, which should be of a deep hollow sound, and of such a size as may be conveniently carried in one hand; toll this bell just as a wether-sheep does while he is feeding in pasture-ground. You must also have a box, much like a lantern, about a foot and a half square, big enough to hold two or three great lights, lined with tin, and one side open to send forth the light: fix this box to your breast, and the light will cast at a great distance before you, very broad, by which means you may see any thing on the ground within the compass of the light, and consequently the birds that roost thereon. You are to have two men with you, one on each side, but a little after you, that they may not be within the reflection of the light. Each of them should be provided with a hand-net, about three or four feet square, which must be fixed to a long stick, to carry in their hands; so that, when either of them sees any

birds on his side, he is to cast his net over them, and so take them up with as little noise as may be. When the net is over the birds, the person who laid it is not to be in a hurry to take them, but must stay till he who carries the light is got beyond it, that the motions may not be discovered. The blaze of the light and the noise of the bell terrify and amaze the birds in such a manner, that they remain still to be taken; but the people who are about the work must keep the greatest quiet and stillness that may be.

Some people are fond of going alone in this sport. The person then fixes the light-box to his breast, and carries the bell in one hand and the net in the other; the net in this case may be somewhat smaller, and the handle shorter. But some persons, instead of having the light to their breast, tie the low-bell to their girdle, and their motion causes the bell to strike; and, as for the light, they carry it in their hand, extending the arm before them; but then their lantern or box is not so large as that which is hung at the breast. *Osbaldiston's British Sportsman.*

LOW-BORN, *adj.* Born of mean parents:

This is the prettiest *low-born* lass that ever  
Ran the green-sward; nothing she does or seems,  
But smacks of something greater than herself. *Shakespeare.*

Corruption, like a general flood,  
Shall deluge all; and a'rice, creeping on,  
Shall spread a *low-born* mist, and blot the sun. *Pope.*

LOW-BROWED, *adj.* Having a low forehead, or front:

We wand'ring go through dreary wastes,  
Where round some mould'ring tower pale ivy creeps,  
And *low-brow'd* rocks hang nodding o'er the deeps. *Pope.*

LOW-BUILT, *adj.* Built low; constructed so as to rise but little from the surface.

Vast yellow offsprings are the German's pride;  
But hotter climates narrower frames obtain,  
And *low-built* houses are the growth of Spain. *Creech.*

LOW COUNTRIES. See BRABANT, FLANDERS, and NETHERLANDS.

LOW GREEN POINT, a cape on the east coast of the island of Sumatra. Lat. 3 12. S. lon. 106. E.

LOW-HA-REA'H, a town of Africa, in the country of Tunis, anciently called *Aquilaria*, situated at the point of the peninsula of Dackbul, near Cape Bon: fifteen miles north of Clybea, and forty-five east-north-east of Tunis.

LOW HILL, a township of America, in Northampton county, Pennsylvania, containing 545 inhabitants.

LOW-HUNG, *adj.* Hanging low; situate in the lower region of the air:

My eyes no object met  
But *low-hung* clouds that dipt themselves in rain  
To shake their fleeces on the earth again. *Dryden.*

LOW ISLAND, a small island in the Eastern Indian Sea, near the south coast of Cumbava. Lat. 9. 1. S. lon. 117. 34. E.

LOW LAYTON. See LAYTONSTONE, vol. xii. p. 407.

LOW-MINDED, *adj.* Mean; grovelling.

LOW-RATED, *adj.* At a low price; valued at a low rate:

Proud of their numbers, and secure in soul;  
The confident and over-lusty French  
Do the *low-rated* English play at dice. *Shakespeare.*

LOW-ROOFED, *adj.* Built low; having the roof not far from the ground:

No luxury found room  
In *low-roof'd* houses and in walls of loom. *Dryden.*

LOW-SPIRITED, *adj.* Dejected; depressed; not lively; not vivacious; not sprightly.—Severity carried to the highest pitch breaks the mind; and then, in the place of a disorderly young fellow, you have a *low-spirited* moped creature. *Locke.*

LOW-THOU'GHTED, *adj.* Having the thoughts withheld from sublime or heavenly meditations; mean of sentiment; narrow-minded:

Oh grace serene! Oh virtue heav'nly fair!  
Divine oblation of *low-thoughted* care!

Pope.

LOW WATER, *f.* The lowest ebb of the tide.

LOWANG', one of the Chu-fan islands in China, which was visited by the gentlemen, belonging to lord Macartney's embassy in the year 1793. It was not easy to effect a landing, as the Lowang shore was surrounded by soft deep clay and mud wherever the bank run out, and by steep rocks elsewhere. They found, at last, means to climb up the latter. From one of the neighbouring hills the passage in which the Clarence brig lay had the appearance of a river, while the sea beyond it might be considered as an immense lake studded with innumerable islands. The hill on which they stood was covered with strong grasses, reeds, and shrubbery, together with plants sufficiently denoting a situation remote from Europe. There were so few trees or cattle, that the country had the appearance of nakedness to an European eye. Descending from the hill, they came to a small level plain recovered from the sea, which was kept out by an embankment of earth, at least thirty feet thick. The quantity of ground gained by it seemed scarcely to be worth the labour that it must have cost. The plain was indeed cultivated with the utmost care, and laid out chiefly in rice-plats, supplied with water collected from the adjacent hills into little channels, through which it was conveyed to every part of those plantations. It was manured, instead of the dung of animals, with matters more offensive to the human senses, and which are not very generally applied to the purposes of agriculture in England. Earthen vessels were sunk into the ground for the reception of such manure; and for containing liquids of an analogous nature, in which the grain was steeped previously to its being sown; an operation which is supposed to hasten the growth of the future plant, as well as to prevent any injury from insects in its tender state. The party fell in with a peasant, who, though struck with their appearance, was not so scared by it as to shun them. He was dressed in loose garments of blue cotton, a straw hat upon his head fastened by a string under his chin, and half-boots upon his legs. He seemed to enter into the spirit of curiosity naturally animating travellers, and readily led them towards an adjoining village. Passing by a small farm-house, they were invited into it by the tenant, who, together with his son, observed them with astonished eyes. The house was built of wood, the uprights of the natural form of the timber. No ceiling concealed the inside of the roof, which was put together strongly, and covered with the straw of rice. The floor was of earth beaten hard, and the partitions between the rooms consisted of mats hanging from the beams. Two spinning-wheels for cotton were seen in the outer room; but the seats for the spinners were empty. They had probably been filled by females, who retired on the approach of strangers; while they remained, none of that sex appeared. Round the house were planted clusters of bamboo, and of that species of palm, of which each leaf resembles the form of a fan; and, used as such, becomes an article of merchandize. The return of the tide put an end to this visit to Lowang, of which place one of the natives said that it was so considerable, and so well peopled, as to contain near ten thousand inhabitants. *Staunton*, vol. i.

LOWBY'ER, a village in Cumberland, near Kirkhaugh.

LOWCOO'TY, a town of Hindoostan, in Bahar: eight miles west of Mongir.

LOWDE'HA, a town of Hindoostan, in Allahabad: twenty-four miles south-fourth-west of Allahabad.

LOW'DHAM, a village between Nottingham and Southwell: one mile from Trent.

LO'WE, a termination of local names.—*Lowe, loc.* comes

from the Saxon *hleap*, a hill, heap, or barrow; and so the Gothic *hlaiw* is a monument or barrow. *Gibson*.

LO'WE (Peter), a surgeon of the sixteenth century, was born in Scotland. In a work, entitled "A Discourse on the whole Art of Chirurgery," published at Glasgow in 1612, he acquaints his readers, that he had practised twenty-two years in France and Flanders; that he had been two years surgeon-major to the Spanish regiment at Paris; and had then followed his master, the king of France, (Henry IV.) six years in his wars. It does not appear how long he had resided at Glasgow; but he mentions that, fourteen years before the publication of his book, he had complained of the ignorant persons who intruded into the practice of surgery, and that in consequence the king (of Scotland) granted him a privilege, under his privy-seal, of examining all practitioners in surgery in the western parts of Scotland. He refers to a former work of his own, entitled "The Poor Man's Guide," and speaks of an intended publication concerning the diseases of women. His epitaph in the cathedral church-yard of Glasgow (see Pennant's *Tour to the Hebrides*, p. 134) is, however, dated 1612, in December of which year the work just mentioned was published; so that he was probably prevented by death from fulfilling his intention. The Discourse on Chirurgery appears to have been in esteem; for the fourth edition of it was printed in London in 1654. It is indeed copious, plain, and methodical; full of references to ancient and modern authors; and, in fact, like the majority of books of those times, is more founded on authority than observation. Ames mentions another work of his with the following title: "An easy, certain, and perfect, Method to cure and prevent the Spanish Sickness;" by Peter Lowe, Doctor in the Faculty of Chirurgerie at Paris, Chirurgeon to Henry IV." London 1596, 4to. *Aikin's Biog. Mem. of Med.*

LO'WEN, a town of Silesia, in the county of Glatz, situated in a valley. It is a royal town; the principal employment of the inhabitants is in turning: thirteen miles west of Glatz. Lat. 50. 13. N. lon. 16. 3. E.

LO'WEN, LO'WEN, or LEW'IN, a town of Silesia, in the principality of Brieg, on the Neisse: nine miles south-east of Brieg, and ten east-north-east of Grotkau. Lat. 50. 40. N. lon. 17. 33. E.

LO'WENBERG, or LEMBERG, a town of Silesia, in the principality of Jauer, near the Bober: twenty-five miles west of Jauer, and thirty-four south of Sagan. Lat. 51. 5. N. lon. 15. 42. E.

LO'WENDAHL (Ulric-Frederic, Woldemar, Count of), a celebrated general, born at Hamburg in the year 1700. His father, grand marshal and minister of the king of Poland, elector of Saxony, inured him to arms when he was only thirteen years old. He rose gradually in the army, and served in several campaigns, exposed to the dangers and fatigues of warfare, proving himself, on all occasions, worthy of the rank he held, by his valour and prudence. In 1721, the king of Poland gave him the command of his horse-guards and a regiment of infantry; his leisure time he employed in the profound study of gunnery and fortification; and in 1728 he was made field-marshal and inspector-general of the Saxon infantry. After the death of the king he distinguished himself in the defence of Cracow; in the following campaigns he commanded the Saxon auxiliaries on the Rhine under prince Eugene, and had a chief command at the storming of Otchakof. In 1743 he entered the service of the king of France, and was for some years actively employed in the war in which that monarch was engaged. In 1747 he attained the summit of his glory as a besieging general, by making a sweep of several towns of Flanders, concluding with that of Bergen-op-Zoom, which had been deemed impregnable. Immediately after the capture of this last place, Lowendahl was declared a marshal of France. He now retired from the active scenes of war, and distinguished himself as a worthy estimable character in private life, equally agreeable

able and instructive in conversation, and furnished with a variety of knowledge. He was conversant with many languages, and devoted a large portion of his time to reading. He died at the age of fifty-five. His name had been some time enrolled among the honorary members of the Academy of Sciences. *Moreri*.

LO'WENDOLLAR, or LYONDOLLAR, *f.* A Dutch silver coin, valued at 42 stivers, or a little more. This coin is  $\frac{2}{3}$  of the ducatoon, weighs 17 dwts. 14 grs. and is valued at 43'07d. in Sir I. Newton's Table of Assays, &c.

LO'WENSTEIN, a town and capital of a county, annexed as a fief to Wurtemberg: nine miles east-south-east of Heilbron, and twenty north-east of Stuttgart. Lat. 49. 6. N. lon. 9. 23. E.

LO'WENSTEIN. See LAUENSTEIN, vol. xii. p. 295.

To LO'WER, *v. a.* To bring low; to bring down by way of submission:

As our high vessels pass their wat'ry way,  
Let all the naval world due homage pay;  
With hasty reverence their top-honours lower,  
Confessing the asserted power. *Prior*.

To suffer to sink down.—When water issues out of the apertures with more than ordinary rapidity, it bears along with it such particles of loose matter as it met with in its passage through the stone; and it sustains those particles till its motion begins to remit, when by degrees it lowers them, and lets them fall. *Woodward*.—To lessen; to make less in price or value.—The kingdom will lose by this lowering of interest, if it makes foreigners withdraw any of their money. *Locke*.—Some people know it is for their advantage to lower their interest. *Child on Trade*.

To LO'WER, *v. n.* To grow less; to fall; to sink:

The present pleasure,  
By revolution low'ring, does become  
The opposite of itself. *Shakespeare's Ant. and Cleopatra*.

To LO'WER, *v. n.* [It is doubtful what was the primitive meaning of this word: if it was originally applied to the appearance of the sky, it is no more than to grow low, as the sky seems to do in dark weather: if it was first used of the countenance, it may be derived from the Dut. *laeren*, to look askance: the *ow* sounds as *ou* in *hour*.] To appear dark, stormy, and gloomy; to be clouded.—When the heavens are filled with clouds, and all nature wears a lowering countenance, I withdraw myself from these uncomfortable scenes. *Addison*.

If on St. Swithin's feast the welkin lours,  
And ev'ry penthouse streams with hasty show'rs,  
Twice twenty days shall clouds their fleeces drain. *Gay*.

To frown; to pout; to look sullen.—There was Diana when Actæon saw her, and one of her foolish nymphs, who weeping, and withal lowering, one might see the workman meant to set forth tears of anger. *Sidney*.

He mounts the throne, and Juno took her place,  
But sullen discontent sat low'ring on her face. *Dryden*.

LOW'ER, *f.* Cloudiness; gloominess.—Cloudiness of look.—Philoclea was jealous for Zelmane, not without foighty a lower as that face could yield. *Sidney*.

WER, *adj.* More low.

LOW'ER (Sir William), a noted cavalier in the reign of Charles I. was born at a place called Tremere in Cornwall. During the heat of the civil wars he took refuge in Holland, where, being strongly attached to the males, he had an opportunity of enjoying their society, and pursuing his study in peace and privacy. He died in 1662. He was a very great admirer of the French poets, particularly Corneille and Quinault, on whose works he has built the plans of four out of the eight plays which he wrote. The titles of his dramatic works are—1. Phoenix in her Flames, a tragedy, 1639. 2. Polyuctes, or the Martyr, a tragedy, 1655. 3. Horatius, a tragedy, 1656. 4. The Three Dorotheas, a comedy, 1657. 5. Don Japhet of Armenia, a comedy, 1657. 6. Enchanted Lovers, a

pastoral, 1658. 7. Noble Ingratitude, a pastoral tragedy-comedy, 1659. 8. Amorous Fantafme, a tragedy-comedy, 1660.

LOW'ER (Richard,) an eminent physician and anatomist, descended from a good family in Cornwall, was born at Tremere, near Bodmin, about 1631. He was admitted as king's scholar at Westminster-school, whence he was selected to Christ's-church college, in Oxford, in 1649. He passed through the usual course of the university, and, commencing M.A. in 1655, entered upon the physic-line. By the able assistance which he afforded to Dr. Willis in his dissections, he ingratiated himself with that celebrated physician, so far as to be introduced by him into practice, and employed in visiting his country patients. In one of his professional journeys, he discovered the medicinal spring of East Thorpe, or Altrop, in Northamptonshire, which his recommendations, with those of Dr. Willis, brought into repute. He took the degree of M. D. in 1665, and in that year published a defence of Willis's work on fevers, entitled "Diatribæ Thomæ Willisii, M. D. et Prof. Oxon. de Febribus Vindicatio adversus Edm. de Meara Ormondienfem Hibern. M. D." 8vo. About this time he occupied himself in experiments of the transfusion of blood from one animal to another, which he performed for the first time at Oxford, in February 1665. The Hon. Robert Boyle, hearing of this, requested a particular account of it from Dr. Lower, who conveyed it in a letter to him, printed in the Phil. Transf. 1666. Lower says, that he was led to this experiment from having frequently injected fluids into the veins of living animals; but with whom the thought first originated is a matter of dispute. (See LIBAVIUS, vol. xii.) He removed soon after to London, and was elected a fellow of the Royal Society in 1667, and in the same year became a fellow of the College of Physicians. His celebrated work, entitled "Tractatus de Corde, item de Motu et Colore Sanguinis, et Chyli in eum transitu," was first printed in London in 1669. This is a very valuable performance, and stands conspicuous among those which have contributed to the modern perfection of anatomy. In the chapter concerning the transfusion of the blood, he mentions having practised it upon an insane person before the Royal Society; but it is allowed that the French first tried this experiment upon the human subject. To an edition of this work in 1680, is added a chapter on catarrh, in which the author refutes the notion of a descent of serous matter from the brain in that disease. This had been printed in 1672, as a separate work. Lower's Treatise on the Heart was many times edited abroad, and was translated into French. The reputation acquired by his publications brought him into extensive practice; and after the death of Dr. Willis, he was considered as one of the ablest physicians in London. But his attachment to the whig-party at the time of the popish plot brought him into disfavour at court, so that his business was considerably diminished before his death, which happened in January 1690-91. He had purchased an estate at St. Tudy, near Bodmin, at which he was buried, leaving two unmarried daughters.

LOWER ALLOWAY'S CREEK, a township of America, in Salem county, New Jersey.

LOWER CREEK, a river of America, in the western territory, which runs into the Ohio in lat. 40. 9. N. lon. 80. 43. W.

LOWER DUB'LIN, a township of America, in Philadelphia county, Pennsylvania; containing 1495 inhabitants.

LOWER LAN'DING, or EAST LAN'DING, lies on Niagara-river, Upper Canada, opposite to Queenstown on the Niagara-fort side.

LOWER LA'NE, a village in Staffordshire, near Newcastle-under-line.

LOWER MAR'LBOROUGH, a post-town of America, in Maryland; thirty miles from Annapolis, and twelve from Calvert court-house

LOWER MIL'FORD, a township of America, in Burk's county, Pennsylvania.

LOWER.

**LOWER PENN's NECK**, a township of America, in Salem county, New Jersey.

**LOWER STRATTON**, a village in Somersetshire, one mile from Petherton.

**LOWER WEAU' TOWNS**, lie in the territory north-west of the Ohio, twenty miles below Rippacanoë creek, at its mouth in Wabash river.

**LOWERING**, *f.* The process or method of weakening spirits by mixing them with water. The standard and marketable price of these liquors are fixed, in regard to a certain strength in them called *proof*; this is that strength, which makes them, when shook in a phial, or poured from on high into a glass, retain a froth or crown of bubbles for some time. In this state spirits consist of about half pure or totally-inflammable spirit, and half water; and if any foreign or home spirit is to be exposed to sale, and is found to have that proof wanting, scarce any one will buy it, till it has been distilled again and brought to that strength; and, if it is above that strength, the proprietor usually adds water to it to bring it down to that standard. This addition of water, to debase the strength, is what is called lowering it. People well acquainted with the goods will indeed buy spirits at any strength, only lowering a sample to the proof-strength, and by that judging of the strength of the whole; but the generality of the buyers will not enter into this, but have it all lowered for them.

There is another kind of lowering in practice among the retailers of spirituous liquors to the vulgar; this is the reducing it under the standard of proof. They buy it proof, and afterwards increase their profit upon it, by lowering it with water one-eighth part. The quantity of spirit is what they allow themselves for the addition of water; and whoever has the art of doing this, without destroying the bubble proof, as this is easily done by means of some addition that gives a greater tenacity to the parts of the spirit, will deceive all that judge by this proof alone; that is, very nearly all who are concerned in the spirit-trade. Such an additional quantity of water as one-eighth makes the spirit taste softer and cooler, and will make many prefer it to the stronger spirit, which is hotter and more fiery; but unless the spirit, thus lowered, were tolerably clean, or the proof be some other way preserved, the addition of the water lets loose some of the coarse oil, which makes the liquor milky, and leaves a very nauseous taste in the mouth. *Shaw's Essay on Distillery.*

**LOWERINGLY**, *adv.* With cloudiness; gloomily.

**LOWERMOST**, *adj.* Lowest.—Plants have their seminal parts uppermost, living creatures have them *lowermost*. *Bacon's Nat. Hist.*—It will also happen, that the same part of the pipe which was now *lowermost*, will presently become higher, so that the water does ascend by descending; ascending in comparison to the whole instrument, and descending in respect of its several parts. *Wilkins.*

**LOWES FOREST**, in the south-west part of the county of Northumberland.

**LOWES WATER**, a lake in the county of Cumberland, about six miles in circumference: ten miles south of Cockermouth.

The chapel of Lowes-water is a picturesque object, on a cultivated slope, surrounded with scattered farms. "Having passed through a gate that leads to the common, the lake spreads out before you, a mile in length, and of an equal breadth of about a quarter of a mile. The extremities are rivals in beauty of hanging woods, little groves, and waving inclosures, with farms seated in the sweetest points of view. The south end is overlooked by lofty Mellbreak, at whose foot a white house, within some grass-inclosures, under a few trees, stands in the point of beauty. The eastern shore is open, and indented with small bays; but the opposite side is more pleasing. Carling-knot presents a broad pyramidal front of swift ascent, covered with soft vegetation, and spotted with many aged solitary thorns. On each side the outlines wave upward in the finest manner, terminating in a cone of grey rock, patched with verdure. This lake, in

opposition to all the other lakes, has its course from north to south; and under Mellbreak falls into Cromack-water. It is of no great depth; but it abounds with pike, and perch, and has some trout. An evening-view of both lakes is from the side of Mellbreak, at the gate, under a coppice of oak, in the road to Ennerdale. Nothing exceeds, in composition, the parts of this landscape. They are all great, and lie in fine order of perspective. If the view be taken from the round knoll at the lower end of the lake, the appearance of the mountains that bound it is astonishing. You have Mellbreak on the right, and Grasmire on the left; and, betwixt them, a stupendous amphitheatre of mountains, whose tops are all broken and dissimilar, and of different hues, and their bases skirted with wood; or clothed with verdure. In the centre point of this amphitheatre, is a huge pyramidal broken rock, that seems with its figure to change place as you move across the fore-ground, and gives much variety to the scene, and alters the picture at every pace. In short, the picturesque views in this district are many, some mixt, others purely sublime, but all surprize and please. The genius of the greatest adepts in landscape might here improve in taste and judgment; and the most enthusiastic ardour for pastoral poetry and painting will here find an inexhaustible source of scenes and images." *Guide to the Lakes.*

**LOWEST**, *adj.* Low in the greatest degree.

**LOWESTOFF**, or **LES'TOFF**, a town on the coast of Sussex, situated on the most eastern point of land in England; and, standing upon a lofty eminence, commands a very extensive prospect of the German Ocean, as all the traders, &c. from the north, pass and repass very near the shore; and it has the noblest and most beautiful appearance from the sea of any town upon the coast. This town was formerly called *Lohnwist*, as some think from *Lothbroch*, a noble Dane, who landed in this neighbourhood about the year 864, and *wista*, a half-hide of land. The town, however, is certainly of much earlier origin. Gillingwater, in his "History of Lowestoft," says it can be traced back to a period anterior to the fourth century. This town has suffered much from the plague at different periods, particularly in the years 1348 and 1547. It has likewise sustained frequent plundering and depredations, on account of the attachment of its inhabitants to the cause of royalty. The town extends about a mile in length, and consists chiefly of one principal street, running in a gradual descent from north to south, which is intersected by several smaller streets or lanes from the west. The whole is in general well paved, and many of the houses, having been lately rebuilt in the modern style, give the town an appearance of great neatness. From its situation and exposure to the northern ocean, over which it commands an extensive prospect, it enjoys a most salubrious air, keen, but bracing. On the declivity of the cliff a number of hanging gardens are formed, which are interspersed with alcoves and summer-houses. At the foot of these gardens is a long arrangement of fishing-houses, extending the whole length of the town. Between these and the beach stand the boats (about 40) employed in the herring-fishery, which is the chief support of the town, 70,000 barrels being exported from hence every season. Here are also two light-houses, conveniences for boat-building, and accommodations for bathing. A considerable number of families resort here for the benefit of the salt-water. Besides these sources of wealth to the inhabitants, there is a tolerable mackerel-fishery, which commences in May and continues till the latter end of June, and supplies the adjacent markets, as well as the metropolis. A small china-manufactory, and a ropery, also belong to the town. The church, situated about half a mile west from the town, is a very fine building, in the pointed style of architecture, and consists of a nave with two side-aisles. The principal entrance is by a stately porch, on the south side of which are three niches, the centre one intended for the reception of a statue of St. Margaret, the saint to whom the church is dedicated. The chancel is particularly neat and elegant.

gant. The font, which is very ancient, is ascended by three stone steps, the upper one bearing an inscription, but so much corroded as to be almost unintelligible. It is surrounded by three rows of saints, each row containing twelve figures; and is otherwise finely adorned with carved work. Mr. Whiston, the friend of sir Isaac Newton, and some time professor of mathematics in the university of Cambridge, from which he was expelled for his Arian principles, was long vicar of this church. This town had likewise formerly three chapels of ease, but only one of them now continues to be used. There are meeting-houses here for methodists and presbyterians. A theatre was erected in 1790.

Lowestoff, from its extensive fishery, is a good nursery for seamen; and has given birth to several eminent naval officers. A great sea-fight took place off this town on the 3d of June, 1665, between the British fleet under the duke of York, and the Dutch fleet commanded by admirals Opdam and Van Tromp; in which the latter were defeated, with the loss of eighteen ships taken and fourteen sunk. In this action, admiral sir Thomas Allen, a native of this town, particularly distinguished himself. An opinion prevails, that the bold and decisive manœuvre of breaking the enemy's line has been lately introduced into our naval tactics; but, in Gillingwater's Account of the above famous engagement, he says, "The fight began at three o'clock in the morning, and for some time victory was doubtful; but, about noon, the earl of Sandwich, with the blue squadron, forced himself into the centre of the Dutch fleet, divided it into two parts, and began that confusion which ended in total defeat."

In the year 1744, a battery of six pieces of cannon, 18-pounders, was erected at the south end of the town, for protecting ships in the south roads, and guarding the passage of the Stanford. In the year 1756, a battery was erected on the beach at the north end of the town, and two pieces of cannon brought thither from the south battery. In the year 1782, a new fort was erected at the fourth end of the town, furnished with thirteen pieces of cannon; and another fort was erected at the north end of the town, besides a battery near the Ness. The market-day is Wednesday; fairs, May 12 and October 10. The inhabitants are exempt from serving on juries either at assises or quarter-sessions, by writ 15 Eliz. 1573.

Near Lowestoff stood formerly the village of Newton; but it has been entirely swallowed up by the sea.

Gunton, to the north of Lowestoff, is a small parish, containing only five houses, one of which is the hall or mansion-house, the seat of Gerard Montague, esq. The church is a small plain building, with a round tower, rebuilt by Charles Boyce in 1700, and dedicated to St. Peter; there is a very old architrave for the north door. The whole parish was purchased by the late sir Charles Saunders in 1762.

Blundeston is three miles north-west from Lowestoff, where is a very pleasant house, the residence of the Rev. Norton Nichols, with a beautiful pleasure-ground and fine piece of water; and likewise a neat modern-built house, the residence of Nathaniel Rix, esq.—Benacre-hall, the seat of sir Thomas Gooch, bart. about seven miles distant, between Southwold and Lowestoff.—Burch Castle, about seven miles from Lowestoff, and near Clopton, is the ancient Garionorum of the Romans, and worthy the attention of the antiquary.

Herringfleet-hall is about six miles from Lowestoff. The site of this house, together with a considerable estate, comprehending almost the whole parish of Herringfleet, about half a century ago passed from the Bacon family to Hill Muffendon, esq. who bequeathed it to his elder brother Carteret, who had taken the name of Leathes; from him it descended to John Leathes, esq. his son. There was a priory of black canons founded here by Roger Fitz-Osbert, of Somerly, (the last of that family,) to the honour of St. Mary and St. Olave the king and martyr, in the beginning of the reign of Henry III. Herein

were, about the time of the dissolution, five or six religious, who were endowed with 49l. 11s. 7d. per annum. The site of this house, with great part of the lands, were granted to Henry Jerningham, esq. patron, 26th Jan. 38 Henry VIII. The remains of the priory were chiefly taken down in 1784, but some parts of it are still left. Somerly-hall was the residence of Roger Fitz-Osbert, who founded the priory at Herringfleet. In the reign of queen Elizabeth, the estate, which consisted of the greatest part of the island of Lothingland, was in the possession of sir Henry Jerningham. From the Jerningham family it went to the Wentworths. Sir Thomas Wentworth held the manor about the year 1627, and afterwards sold it to admiral sir Thomas Allen about 1669. The admiral's son, dying a bachelor, gave the estate, &c. to Mr. Richard Anguist, upon condition of his taking the name of Allen, who then became sir Richard Allen; and from this gentleman it descended to the present sir Thomas Allen. In this parish is an exceeding good parsonage-house, rebuilt, at a considerable expense, by the Rev. Mr. Love, the rector.

Corton is a pleasant village about two miles to the north of Lowestoff: it stands on a high cliff that commands an extensive sea-prospect. The property of the parish belongs chiefly to John Ives, esq. The church has been very large, but it is now delapidated, and the chancel converted into a place of public worship, and some years ago rendered very neat by the exertions of the Rev. Francis Bowness, the vicar.—Six miles to the north of Lowestoff is Hobland-hall, a good modern-built house, late the residence and property of the Rev. D. H. Urquhart, an acting magistrate for the county of Suffolk; but now belonging to the family of the Ives's. *Gillingwater's Historical Account*, 1790. *British Directory*, vol. iii.

LOWICK, a village in Northamptonshire, two miles and a half from Thrapston, has a handsome church, with curious stained glass windows. Here is a charity-school for poor boys and girls.—Lord Sackville has a seat, Drayton, half a mile to the westward of Lowick: the situation of Drayton is low, but the house has a good free-stone front; and some judicious alterations have been made by the present lord.

LOWICK CHAPEL, a village in Lancashire, north of Ulverstone.—A village in Northumberland, between Woller and Berwick.

LOWICZ, a town of the duchy of Warsaw, on the Bfura, in which stands a palace belonging to the archbishop of Gnesna. This town lies in a morass; and, besides a cathedral, has three other churches, and some convents. Among the inhabitants are great numbers of artificers; and the fairs held in this town are famous for the variety of goods which are exposed to sale. It is twenty-eight miles north of Rawa, and fifty south-west of Warsaw. Lat. 51. 50. N. lon. 20. E.

LOWIN. See LOWEN, p. 706.

LOWING, *f.* A bellowing; the noise of black cattle.

LOWITZ (George Moritz), professor at Gottingen, and member of the Imperial Academy of Sciences at Petersburg, was born in 1722, at Fürth, near Nuremberg. He was put apprentice to the trade of a goldsmith; and by his expertness in the business he was enabled afterwards to construct and improve mathematical instruments, with the use of which he was well acquainted. He now turned his attention to science, and made a very uncommon progress in mathematics and natural philosophy. In 1748, he distinguished himself by constructing two charts of the solar eclipse which was to take place in the following July. He afterwards observed the eclipse with great accuracy, by a new method of his own invention. Next year he published a chart representing the solar eclipse announced for the 8th of January, 1750, as it would appear to the inhabitants of Petersburg, Rome, Berlin, Nuremberg, Lisbon, &c. During these years he had been employed in the education of young persons; and in 1751 he was appointed professor of mathematics and natural

philosophy in the Egidian seminary at Nuremberg, and was entrusted with the care of the observatory. On his entrance into this new office, he pronounced an oration on the advantages which might be derived from the study of the higher branches of mathematics, which was printed in 1752. He published in the same year an account of various experiments on the properties of the air, which he employed as a guide in his lectures. About this time he removed to Gottingen, and was made professor of practical mathematics, with a salary of four hundred dollars. Having little to do as professor, he filled up his vacant hours in writing papers on various useful subjects; the greater part of these were read before the Royal Society of Gottingen, and they added, in a considerable degree, to his reputation. He was at the same time employed by the Cosmological Society in constructing globes; but, after a time, conceiving his services had not been sufficiently remunerated, he quitted the society with disgust. After this he was appointed, by the Hanoverian government, director of the observatory, an office which he resigned in 1764, together with the professorship; and he now resided at Gottingen as a private individual. He soon found that his means were insufficient for his support: his affairs became embarrassed, and his situation would probably have been forlorn, had not the Academy of Sciences at Petersburg invited him into Russia for the purpose of observing the transit of Venus, which was to take place in the year 1769. In a short time after this he was appointed a member of the Academy of Sciences in the astronomical department; and he was ordered to repair to Surjev, a small town on the river Ural, a few miles from the Caspian Sea, the place destined for observing this curious phenomenon. This mission he accomplished in the completest manner, and published an account of it in the year 1770. He then proceeded, in the month of September, by the Caspian Sea, to Astracan; and, having determined the geographical position of that city, he repaired to some other places for the like purposes. He was next engaged in surveys for a new canal, which he continued, at different periods, till the month of August, 1774, when the whole undertaking was unfortunately stopped by a sudden and unexpected irruption of some rebel troops. Lowitz, and his friend and assistant, betook themselves to places which they hoped would afford them shelter and security. The latter, after burying his books, instruments, and other property, sought for safety in the fortress of Dmetriefsk, from whence he proceeded to Astracan. Lowitz, with his family, set out for the German colony of Dobrinka; but unfortunately fell into the hands of the rebel chief, who put him to death in the most barbarous manner. His wife and son were suffered to escape after they had been plundered of the best part of their property; but Lowitz's books, papers, and instruments, having been deposited in an unoccupied house, were, by good fortune, preserved. *Gen. Biog.*

LO'WKOW, a town of Poland, in the palatinate of Volhynia: ten miles east of Zytomiers.

LO'WLAND, *f.* The country that is low in respect of neighbouring hills; the marsh:

His errand was to draw the *lowland* damps,  
And noisome vapours, from the foggy fens;  
Then breathe the baleful stench with all his force. *Dryd.*

LOWLAND BA'Y, a bay on the north-east coast of New Zealand, west of Highland Point.

LO'WLANDS OF SCOTLAND, a term applied to the southern parts of Scotland, in contradistinction to the Highlands; the country is more level, and the manners of the people more like those of England.

LO'WLILY, *adv.* Humbly; without pride. Meanly; without dignity.

LO'WLINESS, *f.* Humility; freedom from pride.—If with a true Christian *lowliness* of heart, and a devout fervency of soul, we perform them, we shall find, that they

will turn to a greater account to us, than all the warlike preparations in which we trust. *Atterbury.*

*Lowliness* is young ambition's ladder,  
Whereto the climber turns his face. *Shakespeare.*

Meanness; want of dignity; abject depression.—The *lowliness* of my fortune has not brought me to flatter vice; it is my duty to give testimony to virtue. *Dryden.*

LOW'LOWORTH, a village seven miles north-west of Cambridge.

LO'WLY, *adj.* Humble; meek; mild.—Take my yoke upon you, and learn of me; for I am meek and *lowly* in heart. *Matth. xi. 29.*—The heavens are not pure in his sight, and he charges even his angels with folly; with how *lowly* a reverence must we bow down our souls before so excellent a Being, and adore a nature so much superior to our own! *Rogers.*

With cries they fill'd the holy fane;  
Then thus with *lowly* voice Ilioneus began. *Dryden.*

Mean; wanting dignity; not great:  
For from the natal hour distinctive names,  
One common right, the great and *lowly* claims. *Pope.*  
Not lofty; not sublime:

For all who read, and reading not disdain,  
These rural poems, and their *lowly* strain,  
The name of Varus oft inscrib'd shall see. *Dryden.*

LO'WLY, *adv.* Not highly; meanly: without grandeur; without dignity.—I will show myself highly fed, and *lowly* taught; I know my business is but to the court. *Shakespeare.*

'Tis better to be *lowly* born,  
And range with humble livers in content,  
Than to be perk'd up in a glitt'ring grief,  
And wear a golden sorrow. *Shakespeare's Hen. VIII.*

Humbly; meekly; modestly:

Heav'n is for thee too high  
To know what passes there; be *lowly* wise:  
Think only what concerns thee, and thy being. *Milton.*

LO'WLYN, a village in Northumberland, between Lowick and Berwick.

LO'WMAN (Moses), an eminent and learned English dissenting divine, was a native of London, where he was born in the year 1679. Being originally designed for the profession of the law, he received a liberal and learned education; and, in 1697, was entered a student in the Middle Temple. Not long afterwards, however, he gave up all thoughts of following that profession, and determined to qualify himself for the ministerial office among the dissenters. With this view he went to Holland in 1699; and pursued his studies, partly at Utrecht, and partly at Leyden, under the most celebrated professors in philosophy, divinity, oriental learning, and Jewish antiquities; and ably profited by their instructions, as was shown by his future labours. Having commenced the work of the ministry, in the year 1710, he was chosen assistant preacher in a dissenting congregation at Clapham, where he was ordained in 1714; and afterwards he became their pastor. In this connection he continued during the remainder of his life, discharging the duties of his station with constancy and regularity, esteemed and beloved by his flock, and highly respected by all who knew him. Such parts of his time as he was able to devote to study, were most diligently improved by him, till he became furnished with an extraordinary stock of useful knowledge; but he particularly devoted himself to the study of the Scriptures, and of those branches of learning more immediately necessary for their elucidation. In this light he considered Jewish learning and antiquities, of which he became a thorough master. The first evidence which he laid before the public of the success with which he had cultivated this part of knowledge, was in a valuable

valuable treatise published in 1740, entitled, "A Dissertation on the Civil Government of the Hebrews: in which the true Design and Nature of their Government are explained; and the Justice, Wisdom, and Goodness, of the Mosaic Constitutions, are vindicated, in particular, from some late unfair and false Representations of them in the Moral Philosopher," 8vo. In the year 1743, Mr. Lowman published "A Paraphrase and Notes upon the Revelation of St. John," in 4to. which is deservedly held in the highest esteem by the most judicious critics, and considered to exhibit the most unexceptionable scheme for interpreting this dark and enigmatical book. In 1748, our author gave to the world another work on Jewish antiquities, entitled, "A Rational of the Ritual of Hebrew Worship; in which the wise Designs and Usefulness of that Ritual are explained, and vindicated from Objections," 8vo. This piece, as well as the former, reflects great credit on Mr. Lowman's judgment and penetration; and in both, many things will be found, not only curious, but entirely new. The author also acquired much applause by a little tract concerning "The Demonstration of a God, from the Argument *à priori*." We have no recollection of any other of his productions, published during his life, excepting a sermon, entitled, "The Principles of Popery schismatical;" which forms one of a collection of "Sermons against Popery, preached at Salters' Hall, in 1735, by several Ministers," in 2 vols. 8vo.

Some time before his death Mr. Lowman was seized with a painful disorder, under which his sufferings were very great; but he endured them with a fortitude and patience becoming one who had the principles of religion and the prospects of Christianity to support him. He died in 1752, in the seventy-third year of his age. A few years after his death, Dr. Chandler, Dr. Lardner, and another of his friends, revised and published a work intended by himself for the press; in which the same learning, ingenuity, and candour, are observable, as distinguish his other writings. It is entitled, "Three Tracts. I. Remarks upon this Question; Whether the Appearances under the Old Testament were Appearances of the true God himself, or only of some other spiritual Being, representing the true God, and acting in his name? II. An Essay on the *Schechinah*; or, Considerations on the divine Appearances mentioned in the Scriptures. III. Texts of Scripture relating to the *Logos* considered." 1756, 8vo.

LOW'N, *f.* [*liun*, Irish; *loen*, Dut. a stupid drone.] A scoundrel; a rascal. *Not in use.*

King Stephen was a worthy peer,  
His breeches cost him but a crown;  
He thought them sixpence all too dear,  
And therefore call'd the taylor *low'n*.

*Shakespeare.*

LOW'ND, a village in Lincolnshire, north of Stamford.—A village in Suffolk, near the coast, between Lowestoff and Yarmouth.

LOW'NESS, *f.* Contrariety to height; small distance from the ground.—The *lowness* of the bough where the fruit cometh, maketh the fruit greater, and to ripen better; for you shall even see, in apricots upon a wall, the greatest fruits towards the bottom. *Bacon*.—In Gothic cathedrals, the narrowness of the arch makes it rise in height, the *lowness* opens it in breadth. *Addison*.

They know

By th' height, the *lowness*, or the mean, if dearth  
Or foizon follow. *Shakefp. Ant. and Cleopatra.*

Meanness of character or condition, whether mental or external:

Nothing could have subdu'd nature  
To such a *lowness* but his unkind daughter. *Shakefp.*

Now I must

To the young man send humble treaties,  
And palter in the shift of *lowness*, *Shakespeare.*

Want of rank; want of dignity.—The name of servants has of old been reckoned to imply a certain meanness of mind, as well as *lowness* of condition. *South*.—Want of sublimity; contrary to loftiness of stile or sentiment.—His stile is accommodated to his subject, either high or low; if his fault be too much *lowness*, that of Perflus is the hardness of his metaphors. *Dryden*.—Submissiveness.—The people were in such *lowness* of obedience as subjects were like to yield, who had lived almost four-and-twenty years under so politic a king as his father. *Bacon*.—Depression; dejection.—Hence that poverty and *lowness* of spirit to which a kingdom may be subject, as well as a particular person. *Swift*.

LOW'NSBOROUGH, a village in the east riding of Yorkshire; north of Wigton.

LO'WOSITZ, a town of Bohemia, in the circle of Leitmeritz. On the 1st of October, 1756, a battle was fought near this place, between the Prussians and the Saxons under the king of Poland, in which the latter were defeated, with the loss of upwards of 6000 men killed and wounded, and 500 prisoners. The Prussians lost about 2000; this was soon after followed by the surrender of the whole of the Saxon army. It is four miles west-south-west of Leitmeritz. Lat. 50. 30. N. lon. 14. 9. E.

LOWOWECH', or NEU'STAT, a town of the duchy of Warlaw: thirty two miles west of Posen.

LOWREY, a town of Hindoostan, in the circar of Gohud: thirty-six miles east-south-east of Raat.

LOWTA'IAH, a town of Algiers: twenty-seven miles south of Tubnah.

LOW'TH (William), a very learned and eminent English divine and commentator on the Scriptures, was the son of an apothecary, and born in the parish of St. Martin's, Ludgate, in the city of London, in the year 1661. The care of his early education was undertaken by his grandfather, the Rev. Simon Lowth, rector of Tylehurst in Berkshire. Afterwards he was sent to Merchant-Taylor's school in London; where he made such a rapid proficiency, that he was judged to be qualified for the university before he was quite fourteen years of age; and was elected thence into St. John's college, Oxford, in 1675. Here he pursued his studies with the greatest diligence; and acquired the esteem of his superiors and fellow collegians, both by his literary improvement and excellent character. In 1683 he was admitted to the degree of M.A. and proceeded bachelor of divinity in 1688. Four years afterwards he published, "A Vindication of the divine Authority and Inspiration of the Old and New Testament, in answer to a Treatise lately translated out of French, entitled, Five Letters concerning the Inspiration of the Holy Scriptures;" 12mo. These letters were written by the celebrated M. Le Clerc, though published without his name. A second edition of Mr. Lowth's treatise appeared in 1699, "With Amendments, and a new Preface, wherein the Antiquity of the Pentateuch is asserted and vindicated from some late Objections." In the mean time, our author's eminent worth, and his reputation as a scholar, had recommended him to Dr. Mew, bishop of Winchester, and formerly president of St. John's college, who made him his chaplain. By this patron he was promoted to a prebend in the cathedral church of Winchester, in the year 1696; and presented to the rectory of Buriton, with the chapel of Petersfield, in Hampshire, in 1699. The next piece which Mr. Lowth published was an useful little tract, which was very favourably received, and has since gone through several editions: it is entitled, "Directions for the profitable Reading of the Holy Scriptures; together with some Observations for the confirming their divine Authority, and illustrating the Difficulties thereof;" 1708. 12mo. In 1714, he published "Two Sermons preached in the Cathedral Church of Winchester, at the Assizes;" and in the same year, "A Commentary on the Prophet Isaiah," in 4to. This was followed by a Commentary on the Prophet Jeremiah, in 1718,

4to. In the year 1722, some protestant dissenters having built a new meeting-house in the town of Petersfield, Mr. Lowth thought it incumbent upon him to preach a sermon, intended to confirm his parishioners in their communion with the church of England; and, at the request of several of his friends, he was induced to publish it. This discourse was entitled, "The Characters of an Apostolical Church fulfilled in the Church of England; and our Obligations to continue in the Communion of it." The publication of this sermon soon produced "Remarks" on it, in a letter to the author, "in which his Characters of an Apostolical Church are considered; the Dissenters' Right to them is asserted and maintained; their Ministers' Call and Ordination defended; their public Worship vindicated; and Mr. Lowth's Reflections on them and their Assemblies proved to be unjust and groundless." These Remarks were written by Mr. John Norman, a dissenting minister at Portsmouth. Mr. Lowth soon published An Answer to Mr. Norman's Remarks; which that gentleman defended in another pamphlet. To this defence Mr. Lowth made no other reply, than in a private letter to his antagonist; being determined to quit the field of controversy, that he might have leisure for prosecuting his exegetical labours. In 1723, he published his "Commentary on the Prophet Ezekiel;" and in 1726, that on Daniel, and the minor prophets. These truly learned and valuable illustrations of the prophetic writings were afterwards republished together, with additions, in one volume folio, as a continuation of Bishop Patrick's Commentary on the other parts of the Old Testament, in which form they have undergone repeated impressions.

Mr. Lowth's labours appear to have been chiefly confined within his province as a divine. Yet, to acquit himself the better in that character, he had taken an extensive range in his studies. There is scarcely any ancient author, whether Latin or Greek, profane or ecclesiastical, especially the latter, but what he had read with critical accuracy. While reading, it was his custom to make marginal remarks relating to criticism and philology, or to enter his observations in his adversaria; and of his collections in this way, he was upon all occasions extremely communicative. He furnished Dr. Potter, afterwards archbishop of Canterbury, with notes on Clemens Alexandrinus, which were published, with the author's name to each, in the doctor's edition of that father. He communicated to Dr. Hudson remarks on Josephus, of which that editor availed himself, and acknowledged his obligations in the preface to his edition of the Jewish historian. To him Mr. Reading was indebted for numerous annotations, with which he enriched his edition of the Ecclesiastical Historians, published at Cambridge in 1720; and the author of the Bibliotheca Biblica received from him the same kind of assistance, as we are informed in the preface to the last posthumous volume. The learned Dr. Chandler, bishop of Durham, while he was engaged in writing his Defence of Christianity, and his Vindication of the same, maintained a constant correspondence with Mr. Lowth, and consulted him upon many difficulties which occurred in the course of that undertaking. But we should not do justice to Mr. Lowth's character, if we did not add, that the most valuable part of it was what was least apparent to the eyes of the world; the private and retired part, that of the good Christian, and the useful parish-priest. His unaffected piety, his most exemplary life, his zeal and diligence in the discharge of the pastoral functions, his hospitality, and the readiness with which he embraced every opportunity of being serviceable to his parishioners; these were features by which he was eminently distinguished. Mr. Lowth died in 1732, in the seventy-first year of his age.

LOWTH (Robert), son of the preceding, and an ornament to the church of England, of which he was an eminent prelate, was born at Winchester, in the year 1710. He was educated in grammar-learning at the celebrated seminary in that place, founded by William of Wykeham,

in which he acquired an accurate knowledge of the Greek and Roman classics, and made no little progress in oriental literature. While here, his poetical genius discovered itself in the compositions on which he employed himself during his hours of relaxation from his classical pursuits; one of which was a beautiful poem on the Genealogy of Christ, as it is represented on the east window of Winchester-college chapel; and is inserted in Pearch's collection; and another, which appeared in the twenty-third volume of the Gentleman's Magazine, celebrated Catharine Hill, the place where the Winchester scholars are allowed to play on holidays. In his eighteenth year, Mr. Lowth was sent to New College, where he distinguished himself by the assiduity with which he applied to his studies, his uncommon acquisitions in learning, his regular and virtuous conduct, and his amiable manners. Of this institution he was elected a fellow in 1734. In 1737 he proceeded M. A. and in 1741 was elected professor of poetry in the university of Oxford. While discharging the duties of this office, he delivered his excellent selections on Hebrew poetry, which, as we shall see, he afterwards sent to the press. The first preferment which he obtained in the church, was the rectory of Ovington in Hampshire, to which he was presented by bishop Hoadly in the year 1744. In 1748, Mr. Lowth accompanied to Berlin Mr. Legge, afterwards chancellor of the exchequer, who went to that court in a public character; and with whom, from his earliest years, he lived on terms of the most intimate and uninterrupted friendship. In the following year the duke of Devonshire engaged him to attend his sons, lord George and lord Frederic Cavendish in the capacity of tutor, during their travels on the continent; and was so well satisfied with the manner in which he conducted himself in this employment, that he ever afterwards proved the steady friend and patron of our divine. Bishop Hoadly, too, gave fresh proofs of his regard for Mr. Lowth's character and merits, in the year 1750, by appointing him archdeacon of Winchester; and, three years afterwards, by presenting him to the rectory of East Woodhay, in the county of Southampton. In 1752, he married Mary, daughter of Lawrence Jackson, esq. of Christ Church, in that county; with whom he lived in much conjugal felicity, and who proved the mother of seven children, two of whom only survived their father. In 1753, he gave to the public his *De sacra Poesi Hebraeorum Praelectiones Academicæ*, in 4to. of which a new edition, corrected and enlarged, appeared in 1763, in 2 vols. 8vo. The second volume consists of the preface, notes, and additions, to this work, in the Gottingen edition, published under the inspection of the learned and ingenious Michaelis, professor of philosophy in that university, and greatly improved and illustrated by him. Of this work, to which the duties of the author's professorship gave occasion, it would not be easy to speak in too high terms of praise. For, though it is entitled only Lectures on the Hebrew Poetry, it will be found an excellent compendium of all the best rules of taste, and of all the principles of composition, illustrated by the boldest and most exalted specimens of genius (if no higher title be allowed them) which antiquity has transmitted to us; and which have hitherto seldom fallen under the inspection of rational criticism. But these lectures teach us not only taste, but virtue; not only to admire and revere the Scriptures, but to profit by their precepts. The author has penetrated into the very sanctuaries of Hebrew literature; he has investigated, with a degree of precision which few critics have attained, the very nature and character of their composition; by accurately examining, and cautiously comparing, every part of the sacred writings; by a force of genius, which could enter into the very design of the authors; and by a comprehensiveness of mind, which could embrace at a single view a vast series of corresponding passages; he has discovered the manner, the spirit, the idiom, of the original; and has laid down such axioms as cannot fail to facilitate our knowledge and understanding of the scriptures.

scriptures. This character of our author's *Prelections*, against which few competent judges will except, is given by Dr. G. Gregory, to whom the English reader is greatly indebted for a well-executed translation of them, in two volumes 8vo. first published in 1787, with notes selected from Michaelis, or added by himself. Subjoined to the *Prelections* is a *Short Confutation of Bishop Hare's System of Hebrew Metre*; which occasioned a Latin letter to be addressed to Dr. Lowth, by Dr. Thomas Edwards of Cambridge, in defence of that system. Dr. Lowth satisfactorily replied in *A larger Confutation of the bishop's system*, which was published in 1766.

In the year 1754, the university of Oxford honoured our author with the degree of doctor of divinity, conferred by diploma. During the following year, he received from the Cavendish family a distinguished proof of their regard for him, by being nominated first chaplain to the marquis of Hartington, who was appointed lord-lieutenant of Ireland. Thither he accompanied that nobleman, who was soon furnished with an opportunity of bestowing high preferment upon him, by a vacancy taking in the see of Limerick. This bishopric was immediately promised to Dr. Lowth; but, as his native country was peculiarly endeared to him by family connections, and the superior advantages which it afforded him for prosecuting his literary pursuits, he endeavoured to negotiate an exchange of that dignity for some English preferment. Very fortunately, Dr. Leslie, a prebendary of Durham, and rector of Sedgfield in that diocese, was at the same time desirous of being transplanted into Ireland. No great difficulty, therefore, occurred, in settling matters between these gentlemen, in a manner that was perfectly conformable to both their wishes; and Dr. Butler, who was then bishop of Durham, collated Dr. Lowth to those preferments in his diocese, with expressions of no little satisfaction at receiving a man of such superior talents into the number of his clergy. In the year 1758, at the visitation of the bishop, Dr. Lowth preached a sermon at Durham, in which, with generous ardour and irresistible force, he pleaded the cause of free enquiry in matters of religion; and cautioned against entertaining suspicions of any proposal for the advancement of religious knowledge, or for the farther illustration of the great scheme of the gospel in general, or the removal of error in any part, in faith, in doctrine, in practice, or in worship. "An opinion," he well observed, "is not therefore, false, because it contradicts received notions; but, whether true or false, let it be submitted to a fair examination; truth must in the end be a gainer by it, and appear with the greater evidence." This sermon has been frequently printed, and merits a place in the collections of all consistent friends of liberty and Christianity. In the same year, Dr. Lowth published in 8vo. his *Life of Wykeham*, bishop of Winchester, and founder of the colleges in which he had received his education. This work is collected from authentic documents; and, besides matters of a more private and local kind, chiefly respecting the two societies above alluded to, will furnish the reader with valuable information concerning the manners, and some of the public transactions, of the period in which Wykeham lived. Our author's "*Short Introduction to English Grammar*," in 8vo. made its first appearance in 1762, and has gone through numerous editions. This valuable piece was originally designed only for domestic use; but its utility in recommending a greater attention to grammatical form and accuracy in our language than had hitherto been observed in it, and the many judicious remarks which occur therein, together with the very favourable reception which it has met with, fully justified its being given to the public, and indeed, have conferred on the author a high degree of reputation as a grammarian.

In the year 1756, a misunderstanding had taken place between Dr. Lowth and Dr. Warburton, the latter of whom took offence at some things advanced in the *Prelections* on the subject of the Book of Job, which he con-

sidered to be aimed at his own peculiar opinions. In consequence of this, a private correspondence took place between them; and, after some explanations, their difference seemed to be amicably composed. But it revived again in 1765, owing to the appearance of "An Appendix concerning the Book of Job," printed at the end of the last volume of a new edition of the second part of "*The Divine Legation*," in which the author employed himself in repelling the supposed attack upon him already mentioned. This challenge brought Dr. Lowth into the field, who published "*A Letter to the Bishop of Gloucester*," on that Appendix; which was followed by "*Remarks upon Dr. Lowth's Letter to the Bishop of Gloucester*;" "*A Letter to Dr. Lowth on his Letter*," &c. by Dr. Brown; "*A Letter to Dr. Brown*," from Dr. Lowth; "*The Epistolary Correspondence between the Bishop of Gloucester and Dr. Lowth*;" and other pieces. This dispute was managed on both sides with a degree of heat and acrimony which reflected disgrace on the parties concerned, in their character as gentlemen and scholars, and was still more dishonourable to them as Christians and Christian ministers.

In the year 1765, Dr. Lowth was admitted a fellow of the Royal Society; and not long afterwards we find that he was chosen a member of the Royal Society at Göttingen. Upon the formation of the new ministry under the auspices of the duke of Cumberland, Dr. Lowth's particular friends had such influence with the men in power, that it was resolved to elevate him to the episcopal bench upon the first vacancy. Accordingly, on the death of bishop Squire, he was promoted to the see of St. David's, in May 1766; and in the month of September, or October, of the same year, he was translated to the bishopric of Oxford. In this situation he continued, diligently and honourably discharging the duties of the episcopal office, till the year 1777: when, upon the death of bishop Terrick, he was translated to the see of London. In the following year, he presented to the public the last of his literary labours, entitled, "*Isaiah; a new Translation; with a preliminary Dissertation, and Notes, critical, philological, and explanatory*;" 4to. For such an undertaking he was eminently qualified, by his critical knowledge of the original language, his peculiar acquaintance with the character and spirit of its poetry, which perpetually occurs in the effusions of this sublime prophet, and by his general erudition, both literary and theological. His design in it, was "not only to give an exact and faithful representation of the words and of the sense of the prophet, by adhering closely to the letter of the text, and treading as nearly as may be in his footsteps; but, moreover, to imitate the air and manner of the author, to express the form and fashion of the composition, and to give the English reader some notion of the peculiar turn and cast of the original." How well he has succeeded, upon the whole, in the elegant and beautiful version which he has given the world, is too well known, and has been too generally acknowledged by the learned in every part of Europe, to require any encomium in our pages. In his translation he has adopted the metrical form; for the choice of which he has assigned very powerful reasons, in his preliminary dissertation. It was not to be expected, however, that his version should be faultless. Among other learned men who undertook to point out some mistakes in it, was the late Michael Dodson, esq. who, among the papers of a small society, instituted for the purpose of promoting the knowledge of the scriptures, and entitled, "*Commentaries and Essays*," &c. furnished new translations of Isaiah li. 13.—lii. 12; and of Isaiah i. —xii. both pieces with notes, containing criticisms on the bishop's version. These pieces he transmitted, as soon as they were printed, to our prelate; who, on the reception of each, expressed himself in very handsome terms, in notes written to Mr. Dodson, of the manner in which he had conducted his strictures; but pleaded his declining health, as the only reason for his not giving these papers the attention which they were otherwise entitled to receive.

ceive from him. The bishop's vindication, however, was afterwards undertaken by his nephew, Dr. Sturges.

In the year 1779, bishop Lowth preached before the king at the chapel-royal, on Ath-Wednesday; and in a note to this sermon, which was afterwards published, he threw out invidious reflections against the opponents to the ministerial system of government, evidently aimed at the celebrated Dr. Price. The courtly adulation, to which these reflections were by many ascribed, gave much pain to several of the bishop's friends, who, from his former writings, had been accustomed to venerate him not only as a most excellent prelate, but as a sound constitutional whig. Dr. Price, however, in a postscript to one of his own sermons, defended himself against this attack with great spirit, and pointedly contrasted the language of the bishop at St. James's with extracts from his visitation-sermon preached at Durham in 1758. (See the preceding page.) On this occasion, likewise, the bishop provoked the remonstrances of Mr. Hayley, in an Elegy on the ancient Greek Model, addressed to the Right Rev. Robert Lowth, Lord Bishop of London. In the year 1781, bishop Lowth was engaged in a law-suit with Louis Disney Ffytche, esq. concerning the legality of general bonds of resignation; which he considered, and not without reason, to be unfavourable to the independence and integrity of the clergy. Mr. Ffytche had presented a clergyman to a living; but the bishop refused to grant him institution, because he had given to his patron a bond of resignation. The cause was fully argued in the court of Common Pleas, the judges of which delivered their unanimous opinion in favour of Mr. Ffytche. In the court of King's Bench, to which the cause was removed by a writ of error, this judgment was unanimously affirmed. The bishop then brought a writ of error into the House of Peers; and, after the cause had been argued, and the opinion of all the judges taken, who, with only one exception, were all clearly and decidedly in favour of Mr. Ffytche, the decisions of the courts of law were unexpectedly reversed by the lords, though by a majority of one only. Fourteen, out of the nineteen who formed this majority, were bishops. Bonds of resignation were certainly liable to very just objections; but, if the law respecting them was wrong, it should have been altered by an act of parliament. For, whether it was quite decent, in a cause between a bishop and a private gentleman, for fourteen bishops and five lay-lords to determine that not to be law which the judges had declared to be law, and which had been universally understood to be law for at least two centuries, may possibly be questioned.

In the direction, however, of his own patronage, the bishop's conduct was highly praiseworthy; for desert was with him the most powerful recommendation to favour; and, whenever it was eminently conspicuous in any individual, no person could be more ready spontaneously to reward it than bishop Lowth. With respect to every other point of episcopal duty, likewise, he conducted himself in a manner which reflected honour on himself and on his station. No prelate, therefore, could have been fixed upon, as more deserving of the highest rank in the English church. Accordingly, on the death of Abp. Cornwallis in 1783, the king made an offer of the see of Canterbury to Dr. Lowth; but he declined it, on account of his advanced age and growing infirmities, which would have rendered the cares and grandeur connected with that high station an oppressive burden. In the latter years of his life he had a very ill state of health, and endured most severe sufferings from that dreadful disorder the stone; which, however, he bore with exemplary fortitude and resignation. He had also experienced some painful strokes of domestic calamity. In the year 1768, he lost his eldest daughter at the age of thirteen, of whom he was passionately fond, and whom he lamented in an exquisitely beautiful and pathetic epitaph, which is inscribed on her tomb. In 1783, his second daughter, as she was presiding

at the tea-table, suddenly expired; and his eldest son, whose proficiency as a scholar had answered his most sanguine hopes, and whose prospect of an honourable establishment in life was most flattering, he had the affliction of seeing prematurely hurried to the grave. To these trials also he submitted without repining, supported by the principles and hopes of a Christian philosopher: but they must have inflicted those wounds on his feelings, which could not but contribute to aid his disorder in undermining his constitution. He died at Fulham in 1787, when he had nearly completed the seventy-seventh year of his age.

Of bishop Lowth's extensive learning, fine taste, firm manly mind, and peculiar qualifications for the station which he filled, we have already taken notice. With these he possessed a temper, which in private and domestic life endeared him in the highest degree to those who were most nearly connected with him, and towards all others produced an habitual complacency, and agreeableness of manners. To these abilities and dispositions were added qualities still more estimable, the virtues of a good man, and of a sincere Christian. Besides the articles mentioned in the preceding narrative, he published several single sermons, preached on particular occasions, and the following poems: 1. *Ad ornatissimam Puellam*, addressed to a lady of the name of Molyneux, and first printed in the Poetical Calendar, vol. xii. and afterwards in Nichols's Select Collection of Miscellany Poems, from a copy corrected by the author. 2. On the Marriage of the Princess Royal with the Prince of Orange, 1734. 3. An Ode to the People of Great Britain, in Imitation of the sixth Ode of the third Book of Horace, 1744. 4. A translation of Prodicus's Choice of Hercules, 1747, which appeared first in Spence's Polymetis, afterwards in Doddsley's Collection of Poems. 5. The Link, a Ballad, to be found in the same collection. 6. On the Death of the Prince of Wales, 1751. 7. On the Death of King George II. and the Inauguration of George III. 1761. 8. On the Marriage of their present Majesties. 9. On the Birth of the Prince of Wales. *Ann. Reg.* 1787 and 1788. *Genl. Mag.* 1787 and 1790.

LOW'THER, a village in Westmoreland, on the river Loder, from whence it is supposed to take its name, is two miles from Penrith. Not far from the river there is a row of pyramidal stones, eight or nine feet high, extending a mile.

Lowther Castle, in this village, the seat of the earl of Lonsdale, we believe is not yet completed. The first stone of this noble edifice was laid on the 29th of December, 1806. The fronts (for there are two) are each of them 340 feet in length, and the breadth of the building 140 feet. Within this area are a number of spacious and magnificent apartments, such as can hardly be paralleled in the kingdom. The grand staircase will exceed any thing of the kind that is to be met with any-where. The expense (including the furniture) was estimated at 300,000*l.* The former house, called Lowther Hall, was burnt down anno 1770. It was in height three stories, and extended 337 feet. It contained a number of stately apartments, corridors, large galleries, a noble library, and a chapel. The windows of the middle story were dressed with pediments, in a handsome manner. The fabric was finished with a balustrade, figures, and vases, and a large pediment at each end, which had a good effect. *Monthly Mag.* Nov. 1811.

LOW'THORP, a village in the east riding of Yorkshire, near Kilham.

LOW'VILLE, a post-town of America, in Oneida county, New York: 550 miles from Washington.

LO'WTON, a township of England, in Lancashire, with 1400 inhabitants: seven miles north of Warrington.

LOWY'A, a town of Hindoostan, in Bahar: fifteen miles south-south-east of Bettiah. Lat. 26. 35. N. lon. 84. 43. E.

LOX'A, or LO'JA, a town of Spain, in the province of Grenada, on the Xenil, containing three parishes, and

four convents, a royal salt-work, and a copper-forge; the environs produce abundance of fruit, legumes, saffron, and olives. In 1486, it was taken from the Moors. It is twenty-seven miles west of Grenada, and sixteen south-south-east of Cordova. Lat. 37. 18. N. lon. 4. 18. W.

LOX'A, or LO'JA, a town of South America, the capital of a jurisdiction of the same name, in the province of Quito, founded, in the year 1546, by Alonso de Mercadillo. Besides two churches, Loja has several convents, a nunnery, a college of Jesuits, and an hospital. In its district are fourteen villages; and within the territory of its jurisdiction is produced the famous specific for intermitting fevers, well known by the name of Cascarella de Loja, or Quinquina. See CINCHONA. The jurisdiction of Loja derives also great advantage from breeding the COCHINEAL; which see. The inhabitants of Loja, known over the whole province by the name of Lojanos, do not exceed 10,000 souls; though formerly, when the city was in its greatest prosperity, they were much more numerous. In this jurisdiction such vast droves of horned cattle and mules are bred, that it supplies the others of this province, and that of Piura in Valles. The carpets also manufactured here are of such remarkable fineness, that they find a ready sale wherever they are sent. The corregidor of Loja is governor of Yaguarfongo, and principal alcalde of the mines of Zaruma; but the post of governor of Yaguarfongo is at present a mere title without any jurisdiction; part of the villages which formed it being lost by the revolt of the Indians, and the others added to the government of Jaen; so that the corregidor of Loja enjoys only those honours intended to preserve the remembrance of that government. The town of Zaruma, in the jurisdiction of which are mines of gold, has presented the corregidor of Loja with the title of its alcalde mayor. It was one of the first towns founded in this province, and at the same time one of the most opulent; but it is at present in a mean condition, owing chiefly to the decay of its mines, on which account most of the Spanish families have retired, some to Cuenca, and others to Loja; so that at present its inhabitants are said not to exceed 6000. The declension of these mines, which is owing to the negligence of those that are concerned in working them, more than to a scarcity of the metal, has been disadvantageous to the whole department of Loja; and consequently diminished the number of its inhabitants. Lat. 4. S. lon. 79. 14. W.

LOX'A, a town of Sweden, in the province of Savolax: 108 miles north of Nyfot.

LOX'A, a rock near the north coast of the island of Cuba. Lat. 23. 13. N. lon. 83. 57. W.

LOXAN', a town of China, of the third rank, in the province of Ho-nan: thirty miles west-north-west of Kou-ang.

LOX'BEER, a parish in the hundred of Tiverton, Devon; four miles north-west of Tiverton.

LOX'FORD, a village in Essex, near Barking.

LOX'HORN, a village near Barnitaple, Devon.

LOX'IA, *f.* [from *λοξος*, Gr. oblique, on account of the crossing of the bill.] The CROSSBILL, GROSBEAK, BULL-FINCH, &c. a genus of birds of the order passeres. Generic characters—Bill strong, thick, convex, rounded at the base; the lower mandible bent in at the edge; nostrils small, and round at the base of the bill; tongue truncate. In the *Loxia*, *Emberiza*, and *Fringilla*, genera, both mandibles are moveable, by which means they are able to snell and break in pieces the seeds they feed upon.

1. *Loxia curvirostra*, the common crossbill. Specific character, mandibles crossing each other; body varying in colour; wings and forked tail brown. This is the most remarkable bird of the whole genus. Both mandibles are hooked, and turned different ways, so that they do not meet in a point. The bill, however, is not uniformly in the same direction; in some individuals the under mandible is twisted to the right, in others to the left, side; a circumstance that has been noticed, to prove that

the variation in the bill is rather owing to certain uses to which it is applied by the bird than to any fixed appointment in nature. This species is found sometimes in Britain, though it is not by any means a constant visitor in these islands. In 1756 and 1757, great numbers were seen in the neighbourhood of London. It inhabits more generally the northern countries of Europe, especially some parts of Germany, Switzerland, Russia, Sweden, &c. where it is permanent the whole year. Birds of this species migrate, from unknown causes, into other countries; not regularly, but in the course of several years. They inhabit the pine-forests, and feed upon the cones; for the scaling of which their bills are admirably formed. This bird is observed to hold the cone in one claw, like the parrot; and to have all the actions of that bird, when kept in a cage. It is said to make its nest in the very highest parts of the fir-trees, fastening it to the branch with the resinous matter which exudes from the trees. Mr. Latham says, "I have never heard of its breeding in England, but know one instance of its being shot at large in the middle of summer." I have been told that they have done great damage in orchards, by tearing the apples to pieces for the sake of the seeds, the only part they delight in. Many are taken with a bird-call and bird-lime, and others by a horse-hair noose fixed to a long fishing-rod; for so intent are they on picking out the seeds of the cone, that they will suffer themselves to be taken by the noose being put over the head." This species is represented on the annexed Plate, at fig. 1.

There are two varieties: the one reddish, head scarlet; the other larger, bill thicker and shorter. The male is red, varied with brown and green, and is said to change its colours thrice a-year; the female is olive-green, mixed with brown. But the crossbill is one of those birds whose colours are the most subject to vary; among a great number we can scarcely find two individuals that are exactly similar; not only are the shades of the plumage different, but the position of the colours change with the season and the age. Edwards, who examined many of them, and sought to mark the limits of variation, paints the male with a rose-colour, and the female with a yellowish green; but in both, the bill, the eyes, the thighs, and the legs, are nearly the same in regard to shape and colours. Gerner tells us that he kept one of these birds, which was blackish in September, and assumed a red colour in October. He adds, that the parts where the red began to appear, were the under-side of the neck, the breast, and the belly; that this red afterwards became yellow, and that winter especially is the season when these changes take place; and that, at different times, it is said they receive a red, yellow, green, and cinereous, cast. The crossbill is quite placid in captivity, and lives long in a cage. In summer, its flesh is said to be good eating. These birds delight only in the dark forests of pines and firs, and seem to dread the effulgence of day. Nor do they yield to the genial influence of the seasons; it is not in spring, but in the depth of winter, that their loves commence. They build as early as January, and their young are grown before the other birds begin to lay. They lay four or five eggs, and hatch only once a-year.

2. *Loxia leucoptera*, the white-winged crossbill. This is a small species, about the size of a goldfinch, and measures only five inches and three quarters in length. The bill is crossed like the preceding, and of a dusky horn-colour; nostrils covered with reflected bristles, of a pale buff-colour; at the base of the bill, from eye to eye, goes a streak of brown; the feathers on the head, neck, back, and under parts, are whitish, deeply margined with crimson; and, as some part of the white appears not fully covered with the crimson, it gives the bird a mottled appearance; the rump is pale crimson; the vent dirty white; the wing is black, marked with a bar of white from the shoulder, passing obliquely backwards, and a second bar, or rather spot, of the same below that, but only in the inner half; the second quills are each of them tipped with white;

white; the tail black; legs brown. Comes from Hudson's Bay and New York.

3. *Loxia coccothraustes*, the grosbeak, or hawfinch. This bird is an inhabitant of the temperate climates; and the species, though rather stationary, is not numerous. Its Latin name, *coccothraustes*, is derived from *κοκκος*, a grain or kernel, and *θραυω*, to break, because it feeds upon cherry-stones. This bird is six inches and three quarters in length. The bill is three quarters of an inch, and not much less in depth at the base; in shape conical, and prodigiously strong; the colour in some is black, in others horn-colour; irides ash-colour; between the bill and the eye, round the nostrils, and on the chin, the feathers are black; the crown of the head rufous chestnut; sides of it the same, but paler; hind part of the neck ash-colour; the back and smaller wing-coverts chestnut, inclining to grey on the rump; the greater wing-coverts grey. The under parts are pale rufous blossom-colour, growing almost white towards the vent; the quills are all black, except some nearest the body of the secondaries, which are brown; the four outer ones seem to be cut off at the tips, and are besides bent at the end, giving an odd appearance; the prime quills have each of them a spot of white about the middle of the inner web; the tail is also black, but the two middle feathers incline to cinereous near the end, and all the outer ones have the end half white on the inner webs and tip; legs pale brown. See the Plate, fig. 2. The female is less bright in colour; the part between the bill and eye is grey instead of black. This may serve for a general description, but the colours vary much: the head in some parts has the top whitish, surrounded with rufous; in others wholly black; the band of the wings in some is almost white, in others grey, and again wholly wanting. Specimens have also been seen with the body wholly black, the breast and belly spotted with rufous, and the upper mandible the longest; and some have been met with which were wholly white, the quills excepted.

This species is ranked among the British birds; but it only visits these kingdoms occasionally, and for the most part in winter, and is never known to breed here. It is more plentiful in France, coming into Burgundy in small flocks about the beginning of April; and soon after makes the nest, which is placed between the bifurcation of the branches of trees, about twelve feet from the ground; it is composed of small dry fibres, intermixed with liverwort, and lined with finer materials. The eggs are of a roundish shape, of a bluish green spotted with olive brown, with a few irregular black markings interspersed. It is also common in Italy, Germany, Sweden, and the west and southern parts of Russia, where the wild fruits grow; in the rest of the empire it is scarce, except beyond Lake Baikal, where they arrive from the south in great plenty, to feed on the berries of a tree, the *Pyrus baccata*, peculiar to that country. From the great strength of its bill, it cracks nuts, the stones of the fruit of the haws, cherries, &c. with the greatest ease: hence the name of *hawfinch*. They feed their young with insects, chrysalids, &c. and, when they are about to be robbed of their family, they make a vigorous defence, and bite fiercely. Though they are granivorous, they also live much upon insects. They must be confined in a separate cage when bred up; for, without seeming at all discomposed, or making the least noise, they kill the weaker birds that are lodged with them. They attack, not by striking with the point of the bill, but by biting out a piece of the flesh. When at liberty, they live upon all sorts of grain, and kernels of fruits, and feed also on fir and pine cones, and on beech-mast, &c. The tongue is fleshy, small, and pointed; the gizzard is very muscular, preceded by a pouch, containing in summer bruised hemp-seeds, green caterpillars almost entire, and very small stones.

4. *Loxia pittacea*, the parrot-billed grosbeak. Size only of the hedge-sparrow: length seven inches; the bill fashioned much like that of a parrot, the upper mandible being elongated and curved at the point, the under one

short; colour of the bill pale, with a dusky tip; the head and part of the neck in the male are yellow; the rest of the plumage a greenish olive brown, palest beneath; the edges of the quills and tail yellowish; the last even at the ends; legs pale brown. The plumage in the female is not unlike that of the male, except the head, which is the same as the other parts of the body, with a mixture of yellowish grey about the sides of the head. Native of the Sandwich islands.

5. *Loxia enucleator*, the pine-grosbeak, or greatest bullfinch: tail black. This is nine inches in length; the bill half an inch long, and dusky; it is stout at the base, and the upper mandible hooked at the tip; the nostrils are covered with recumbent brown feathers; the head, neck, breast, and rump, are of a rose-coloured crimson; the back and smaller wing-coverts black, edged with reddish; the greater wing-coverts the same, tipped with white, forming two bars on the wings; the quills are black; the secondaries have the outer border white, and the primaries grey margins; the belly and vent are ash-coloured; tail forked, and marked as the quills; legs brown. The female is mostly of a greenish brown colour, with here and there a reddish or yellowish tinge. She lays four eggs, and the young are hatched about the middle of June. This species is met with in Scotland, and especially the Highlands, where it breeds and inhabits the pine-forests, feeding on the seeds, like the crossbill. It is also found in all the pine-forests of Siberia, Lapland, and the northern parts of Russia; common about St. Petersburg in autumn, and is caught in great plenty at that time for the use of the table, returning north in spring. They are likewise common to the northern parts of America; appear at Hudson's Bay in May, to which place they are said to come from the south, and are observed to feed on the buds of willow. The southern settlements are inhabited by them throughout the year, but the northern only in the summer season. Our last voyagers met with this bird in Norton Sound; it was also found at Oonalashta.

6. *Loxia naevia*, the freckled grosbeak: head, neck, and upper parts, freckled with black and grey spots; wing-coverts and rump yellow; quill feathers and tail, black. From the Cape of Good Hope.

7. *Loxia macroura*, the long-tailed grosbeak: black. Size of a house-sparrow, but measures more, as the tail is long; the whole length is full seven inches. The general colour of the plumage is black, with a bar of rufous yellow across the back and wing-coverts; the tail is cuneiform, and nearly half the length of the bird; bill and legs dusky. Inhabits Whidah in Africa; and is sometimes met with in Senegal.

8. *Loxia aurea*, the golden-backed grosbeak: black, back golden. Length six inches; bill, head, and neck, deep black; back a rich golden yellow; wing-coverts light brown, spotted with black; breast and belly black; legs bluish. The female is of a dark brown; and it is remarkable that the cocks change their colour twice a-year, and in the winter exactly resemble the hens. It inhabits Benguela in Africa.

9. *Loxia rubicilla*, the Caucasian grosbeak: scarlet spotted with white. Length eight inches. The upper mandible brown, the under whitish; eyes brown. The upper part of the head and body, the fore part of the neck and breast, deep crimson, marked with triangular spots of white; belly and vent pale rose-colour; undulated with whitish; under tail-coverts rose-coloured brown; thighs hoary; base of all the feathers deep ash-colour, giving an undulated appearance throughout; prime coverts and quills brown, edged with rose-colour; tail three inches and a half long, even, of a glossy black, the outer feathers margined with whitish, the rest with rose-colour; legs black. The female differs very little, except in having the colours more dull. This species inhabits the coldest parts of the Caucasian mountains, especially the gravelly hollows; and lives on the sea-buckthorn berries, which grow there plentifully, and is the means of propagating

gating that plant, the seeds passing through them; often fly in vast flocks; the note not unlike that of a bullfinch.

10. *Loxia pyrrhula*, the bullfinch. The name of this bird is from the head appearing too large in proportion to the body. Nature has been liberal in bestowing upon it a beautiful plumage, and a fine voice. The colours become perfect after the first moulting, but the song must be assisted and formed by art. In the state of freedom, the bullfinch has three cries, which are all unpleasant; the first, which is the most common, is a sort of whoop; the second is an air of greater extent, but lower, almost hoarse, and running into a discord; and the third is a feeble stifled cry, which it vents at intervals, exceedingly shrill and broken, but at the same time so soft and delicate, that it scarcely can be heard; it emits this sound much in the same way as a ventriloquist, without any apparent motion of the mouth or throat, only with a sensible action of the abdominal muscles. Such is the song of the bullfinch when left to the education of its parents; but, if man deigns to instruct it methodically, and accustom it to finer, mellower, and more-lengthened, strains, it will listen with singular attention; and the docile bird, whether male or female, without relinquishing its native airs, will imitate exactly, and sometimes surpass, its master. Thus educated, bullfinches will fetch from five to ten guineas each. It also learns to articulate words and phrases, and utters them with so tender an accent, that we might almost suppose it felt their force. The bullfinch is besides susceptible of personal attachment, which is often strong and durable. Some have been known, after escaping from the cage, and living a whole year in the woods, to recognize the voice of the mistress, and return, to forsake her no more. Others have died of melancholy, on being removed from the first object of their attachment. These birds well remember injuries received. Buffon informs us, that a bullfinch, which had been thrown to the ground in its cage by some of the rabble, though it did not appear much affected at the time, fell into convulsions ever after, at the sight of any mean-looking fellow, and expired in one of these fits eight months from the date of its first accident.

The bullfinches spend the summer in the woods or on the mountains; they make their nest in the bushes, five or six feet from the ground, and sometimes lower; this consists of moss, lined with soft materials; and its opening is said to be least exposed to the prevailing wind. The female lays from four to six eggs, of a dirty white and a little bluish, encircled near the large end with a zone, formed by spots of two colours, some of an ill-defined violet, others of a distinct black. She disgorges the food for the young like the gold-finches, the linnets, &c. The male is attentive to his mate; and Linnæus relates, that he sometimes holds out to her a spider in his bill a very long time. The young begin not to whistle till they are able to eat without assistance; and then they seem instinctively benevolent, if what is related be true, that, in a hatch of four, the three elder will feed their puny brother. After the breeding is over, the parents still continue associated through the winter, for they are always seen in pairs; those which remain in the country, leave the woods when the snow falls, and lodge among hedges by the road-sides; those which migrate, depart about November, and return in the month of April. They feed in summer upon all sorts of seeds, insects, and forbs; and in the winter upon juniper-berries, upon the buds of aspen, of alder, of oak, of fruit-trees, of the marsh-willow, &c. whence the name *ebourgeonneaux*, (from *bourgeon*, a bud,) which they sometimes have in France. In that forbidding season, they are heard to whistle; and their song, though somewhat sad, cheers the torpid gloom of nature.

It has been asserted, that the canary, which breeds with so many other species, will never submit to the embrace of the bullfinch; and it is alleged as the reason, that the cock-bullfinch, when in heat, holds his bill open, which frightens the canary. But the marquis de Piolenc paired

a bullfinch with a hen-canary, which had five young ones about the beginning of April; their bill was larger than that of canaries of the same age, and they began to be covered with a blackish down, which seemed to show that they had more of the father than the mother; unfortunately they all died in performing a short journey. What adds more weight to this observation, is, that Frisch gives directions for the experiment: he advises that the cock-bullfinch be the smallest of its kind, and be kept long in the same cage with the hen-canary; he subjoins, that sometimes a whole year elapses before the female will allow the bullfinch to come near, or to eat out of the same tray; which shows that the union is difficult, but not impossible.

It has been observed that the bullfinches jerk their tail briskly upwards and downwards, though not in so remarkable a degree as the wagtails. They live five or six years; their flesh is palatable according to some, and not fit to be eaten according to others, by reason of its bitterness; but this must depend upon the age, season, and food. They are a size larger than the house-sparrow, and weigh about one ounce. The upper part of the head, the ring round the bill, and the origin of the neck, are fine glossy black, which extends more or less forwards and backwards; hence the name of *monk*, or *pope*, which this bird has in many languages, and that of *coally-hood*, given to it by the people in Scotland. The fore-part of the neck, the breast, and the top of the belly, are a beautiful red; the abdomen, and the inferior coverts of the tail and wings, white; the upper part of the neck, the back, and the shoulders, cinereous; the rump white; the superior coverts and the quills of the tail, fine black, verging to violet, a whitish spot on the outermost quills; the quills of the wings blackish cinereous, and deeper the nearer to the body; the last of all red on the outside; the great coverts of the wings of a fine changing black, terminated with reddish light grey; the middle ones cinereous; the small ones blackish ash-colour, edged with reddish; the iris hazel; the bill blackish; and the legs brown. See the Plate, fig. 3. The sides of the head, and the fore part of the neck, the breast, the top of the belly, and almost all that appears red in the male, is vinous ash-colour in the female, and sometimes even the abdomen; nor has it the fine glossy changing black that occurs on the head and other parts of the male. It is in length six inches; the bill five lines, thick, and forked; the alar extent nine inches and one-fourth; the tail two inches and one-third, somewhat forked, (but not always in the females,) consisting of twelve quills; the outer toe joined by its first phalanx to the mid toe; the hind nail stronger and more hooked than the rest.

There are two varieties of the bullfinch: one white, the other black. Schwenckfeld mentions a white bullfinch that was caught near Frischbach, in Silesia, and which had only some black feathers on the back. This is confirmed by Delisle, who says, "There are in Siberia white bullfinches, whose back is somewhat blackish and grey in summer; these birds have a delicate song, much superior to that of European bullfinches." It is probable that the northern climate much contributes to this change of plumage. The Leverian Museum contained a bullfinch entirely of a snowy white.

The black variety includes not only those which are entirely black, but also those which have perceptibly begun to assume that complexion. Those mentioned by Anderson and Salerne were entirely of a jet black; that of Reaumur, noticed by Brisson, was only black over the body. Buffon observed one which assumed a fine glossy black after the first moulting, but which still retained a little red on each side of the neck, and a little grey behind the neck, and on the small superior coverts of the wings; its legs were flesh-coloured; and the inside of its bill red; that of Albin had some red feathers under the belly; the five first quills of the wing edged with white; the iris white; and the legs flesh-coloured. Albin remarks that this bird was exceedingly gentle, like all the bullfinches. It often happens that

this robe of black disappears in moulting, and gives place to the natural colours; but often it renews each time, and remains for several years; such was the case with Reaumur's. This would imply that the change of colour is not the effect of disease. Mr. White, in his Natural History of Selburne in Hampshire, relates an instance of a cock bullfinch turning dingy, and afterwards black.

The bullfinch breeds late in the spring; seldom has young ones before the end of May, or beginning of June; she builds in an orchard, wood, or park, where there are plenty of trees, or on heaths; but her nest is not very common to be found; it is an ordinary mean fabric, made with seemingly little art; she lays four or five eggs, of a bluish colour spotted at the biggest end with large dark-brown and faint-reddish spots. Those who wish to bring up these birds should not take them from the nest too young; let them be well feathered first; at least twelve or fourteen days old; keep them warm and clean; feed them every two hours, from morning until night, giving them little at a time; their meat must be rape-feed soaked in clean water eight or ten hours; then scalded, strained, and bruised, mixt with an equal quantity of white-bread soaked in fair water, boiled with a little milk to a thick consistency; make but a little at a time, and let them have fresh every day, it being apt to sour in two days, and such meat will spoil the birds. When they begin to feed themselves, break them from this soft meat as soon as you can; then give them rape and canary seed, the same as you do the linnet, but more of the former than the latter. If at any time you perceive them out of order, put a blade of saffron in their water; and you may try them with the woodlark's meat, or fine hemp-feed; but keep mostly to rape, with a little canary-feed mixed with it. Often pipe, whistle, or talk, to them, whilst they are young, what they should learn; and they will soon take it; for the bullfinch is by bird-fanciers supposed to excel all other small birds in the softness of his tones and variety of his notes, except the linnet. In domesticity, we should rather say in captivity, his melody seems to be as great a solace to himself as a pleasure to his master. By day, and even when the evening has called for the artificial light of candles, he pursues his melodious exertions; and, if there are any other birds in the apartment, wakes them gently to the pleasing task of singing in concert with him. His notes are upon one of the lowest keys of the gamut of birds.

11. *Loxia cardinalis*, the cardinal grosbeak, or Virginia nightingale; crested; red. Near eight inches in length; bill stout, and of a pale red colour; irides hazel; the head greatly crested, the feathers rising up to a point when erect; round the bill, and on the throat, black; the rest of the plumage fine red; the quills and tail duller than the rest, and brownish within; legs pale red. The female differs from the male, being mostly of a reddish brown. This species is met with in several parts of North America, where it has attained the name of *nightingale*, having a remarkably fine song. In the spring and summer it sits on the tops of the highest trees, singing early in the morning, so loud as almost to pierce the ears; is frequently kept in cages, in which it sings throughout the year. It is fond of maize and buck-wheat; and will get together great hoards of these, often as much as a bushel, which it artfully covers with leaves and small twigs, leaving only a little hole for its entrance into the magazine; it is also fond of bees. It appears the beginning of April in New York and the Jerseys, and frequents the Magnolia swamps during the summer; in autumn departs towards Carolina. It is not gregarious, scarcely ever more than three or four being met with together. From their being familiar birds, attempts have been made to breed them in cages, but without success.

12. *Loxia Carlini*, the Carlinian grosbeak; general colour of the plumage red; chin black; rump, tail, and legs, brown. Found in the islands of the Indian Ocean.

13. *Loxia Indica*, the Indian grosbeak; red, legs yel-

low, bigger than the hawfinch; length eight inches; bill one inch, and yellow; the head is crested; the whole plumage fine red; the base of the bill, and wing-coverts, more dull than the rest; legs yellow; toes long; claws sharp and bent. Native of India.

14. *Loxia Madagascariensis*, the Madagascar grosbeak. Length five inches and a third. Bill dusky; through the eye a streak of black; general colour of the plumage red, but the middle of each feather on the back is black; quills and tail brown, margined with olive-green; legs grey brown. The young birds at first are olive, and do not arrive at the red colour but by degrees. It is called at Madagascar, *foudi lahé mena*. It is also an inhabitant of India.

15. *Loxia Mexicana*, the Mexican grosbeak. Length six inches and three quarters. The whole body is covered with feathers of a blood-red colour; upper tail-coverts blackish, with a mixture of red; quills and tail blackish; the wings reach the middle of the tail. Native of Mexico.

16. *Loxia Brasiliensis*, the Brazilian grosbeak. Length five inches and three quarters. Bill short, thick, and of a flesh-colour; head and chin red; beneath this a ring of white, not quite meeting on the fore part; back and wing-coverts brown; quills and tail black; the coverts and secondaries have pale reddish tips; end of the tail white; the breast, belly, and sides, reddish white, marked with round spots of white, encircled with black; middle of the belly red; rump dusky. Native of Brasil.

17. *Loxia Dominicana*, the Dominican grosbeak. Size of a lark. Upper mandible brown; under pale flesh-colour; eyes bluish; the head, throat, and fore-part of the neck, deep red; hind part of the neck blackish, with a slight mixture of white; wing-coverts, back, rump, upper tail-coverts, and scapulars, grey mixed with a few black spots; sides of the neck, breast, belly, thighs, and vent, whitish; quills black, edged with white; tail black; legs cinereous. Of this species there are two other varieties, one of them crested, and made a separate species by Dr. Turton. They all inhabit Brasil.

18. *Loxia Sibirica*, the Siberian grosbeak. Size of a linnet, but fuller of feathers. Bill a trifle longer than in the bullfinch; round the base the feathers are of a deep purple; head and back of a deep rose-colour, marked with brown, as in the linnet; the under parts paler, and not spotted; the feathers about the head have the tips of a polished white, appearing very vivid in some lights; base of the wings white; coverts the same, with black tips, forming a double oblique bar on the wings; quills edged with white; tail longer than the body; the outer feathers white; the others black, with pale margins. The female and young birds are the colour of a linnet, with a tinge of red on the belly and rump. This inhabits the bushy shrubs about the rivers and torrents of the southern mountains of Siberia, and particularly about the Lake Baikal; is fond of the seeds of the mugworts; is a restless bird, and in winter unites into small flocks, and keeps in the warmer situations among the shrubs.

19. *Loxia Virginica*, the Virginian grosbeak: bill yellow; head red; nape olive brown; hind part of the neck, and under parts, of a fine red; belly yellow; wings, lower part of the back, and tail, olive, except the two middle feathers of the last, which are red. Native of Virginia.

20. *Loxia cristata*, the crested grosbeak. A large species; general colour whitish; forehead crested; the crest, breast, and rump, red; of the female white; tail cinereous; the two middle feathers twice as long as the rest; legs red. Native of Ethiopia.

21. *Loxia erythrocephala*, the paradise grosbeak. Length nearly six inches. Bill flesh-colour; head and chin red; hind part of the neck, back, rump, and wing-coverts, bluish ash-colour; upper tail coverts margined with grey; the under parts white, marbled with curved spots of black on the sides; the wing-coverts tipped with white.

white, forming two bars of the same on the wing; quills and tail deep blue ash, tipped with grey; the legs flesh-colour. Native of Angola.

22. *Loxia maja*, the white-headed grosbeak. Length four inches. Bill grey brown, palest beneath; head and neck dirty white; upper parts of the body, wings, and tail, chestnut brown; belly and vent blackish; second and fourth quills white; legs grey. Inhabits Malacca and China.

23. *Loxia flavicans*, the yellow grosbeak: size of a canary-bird. Bill short and thick, the base going far back on the forehead; head, neck, breast, belly, and vent, yellow; top of the head the same, but paler; back, wings, and tail, greenish yellow; bend of the wing deep yellow; quills and tail margined with yellow; legs pale. Native of Asia.

24. *Loxia Bonariensis*, the marigold grosbeak. Length seven inches. Bill black, short, strong, and convex; the under mandible paler; the nostrils are round, placed at the base, and perforated; the head, and upper part of the neck, blue; the body blackish; the throat, fore part of the neck, and breast, of the colour of a marigold; the belly and vent brimstone-colour; quills and tail blackish, edged with blue; legs red; the middle and outer toe united as far as the first joint; all of them sharp, bent, and channelled. This inhabits Buenos Ayres, where it is rarely seen till September; it frequents cultivated places and gardens; seen in pairs, and apparently very much attached to each other; feeds on grass and on seeds.

25. *Loxia oryzivora*, the rice-bird, or Java grosbeak. Length five inches. Bill stout and red; eye-lids of the same colour; the head and throat black; sides of the head under the eyes white; upper parts of the body, neck, and breast, pale ash-colour; belly and thighs pale rose-colour; the vent and under tail-coverts nearly white; the tail black; legs flesh-coloured. The female has the bill and eye-lids very pale red, and wants the white on the cheeks; but the edge of the wing is white as well as the under tail-coverts. This species is met with at Java and the Cape of Good Hope, where it does much damage to the rice-grounds. It is probably a Chinese bird likewise, as we often meet with it in paper-hangings from that country; and Latham thinks this the more likely, as he has seen it among some Chinese paintings, in which it bore the name of *hung-tzy*.

26. *Loxia flabellifera*, the fan-tailed grosbeak. Length about five inches. Bill stout and dusky; the upper parts of the body reddish-brown, palest on the rump; the under the same, but somewhat paler, and more inclined to red; quills, tail, and legs, dusky. One of these birds had a grey breast and belly. They inhabit Virginia, where they are called *fan-tails*; and continually carry the tail spread in a horizontal direction, as represented on the Plate at fig. 4.

27. *Loxia panicivora*, the white-winged grosbeak. Size of the hawfinch; length seven inches and a quarter; bill half an inch, grey; the eyes black, as is the whole plumage, except a spot of white on the wing-coverts; the legs are ash-coloured. Native of Africa.

28. *Loxia Malacca*, the Malacca grosbeak. Length four inches and a quarter. Bill bluish ash-colour; irides black; head, neck, middle of the belly, thighs, and under tail-coverts, black; breast, and sides of the belly, white; back, wings, and tail, chestnut; legs brown. The female has the thighs chestnut, and the colours are less vivid. Native of Java.

There is a beautiful variety found in China, with the head, throat, and fore part of the neck, black; the rest of the plumage chestnut; bill and legs cinereous. The female has the top of the head, and upper parts, cinereous brown; sides of the head, and under parts, reddish white; quills and tail blackish; legs flesh-colour. These birds are also found in India.

29. *Loxia Molucca*, the Molucca grosbeak. Length four inches. Bill dusky; the fore-part of the head, and

sides and fore-part of the neck, black; hind part of the head, and upper parts, brown; rump, and under parts, from the breast, transversely barred with black and white; the upper tail-coverts, and tail, black; the quills deep brown; legs brown. Inhabits the Molucca Isles.

30. *Loxia punctularia*, the cowry, or punctulated grosbeak. Length four inches and a quarter. Bill dusky; fore-part of the head, and sides, throat, and fore-part of the neck, chestnut; hind part of the head, and rest of the upper parts, rufous brown; the rump feathers edged with grey; breast and sides dusky, marked with cordated white spots; middle of the belly, and vent, white; legs dusky. Inhabits the island of Java.

31. *Loxia undulata*, the undulated grosbeak. Size of the preceding; length six inches. Bill dusky, short, and stout, as in the bullfinch; head, neck, and back, red brown; beneath, from the breast, undulated with dusky; vent yellowish; tail pale reddish ash-colour; legs dusky. Brought from India.

32. *Loxia hordeacea*, the yellow-rumped grosbeak. Size of the *Motacilla alba*, or wagtail. The head, neck, and rump, fulvous; temples white; from thence to the bill, the breast, wings, and tail, black; shoulders, thighs, vent, and margins of the tail-feathers, grey. Native of India.

33. *Loxia sanguinifrons*, the red-billed grosbeak. A small species. Bill thick, bare at the base, and of a deep blood red; forehead black; the head, neck, back, and wings, grey brown; breast, belly, and bend of the wing, yellowish white; quills and tail brown; legs pale red. Inhabits Africa and Asia.

34. *Loxia atrild*, the waxbill. Size of a wren; only four inches and a quarter in length. Bill gibbous at the base, and of a deep red colour; a streak of red passes through the eye, and the middle of the breast and belly is of the same colour; the upper parts of the body are brown, the under reddish grey, crossed with transverse blackish lines; quills and tail brown; crossed with lines of darker brown; legs brown. They inhabit the Canary Islands, Madeira, Senegal, Angola, the Cape of Good Hope, and India. This small species is shown at fig. 5.

There are two other varieties of this bird, which inhabit Benguela, and Senegal, in Africa. In the first variety the rump is red; the under parts inclined to yellow, and have the sides of the rump and wing-coverts spotted with white; the base of the bill bordered with black. One of these was brought from the Ile of France, by M. Sonnerat. Others have the under parts of a pale yellow; neither the bill nor rump red; the legs yellowish, and totally without white spots; perhaps of a different sex. There is also in some birds a tinge of red on the breast, and fore-part of the neck; and the tail somewhat longer in proportion. These are found at the Cape of Good Hope.

The other variety has a white rump; bill red; through the eyes a streak of the same; throat, and sides of the neck, bluish white; the rest of the under-parts of the body, and rump, rose-coloured white, more or less deep; the top of the head, neck, and back, blue, lightest on the head; wings brown; tail blackish; legs red. Inhabits Senegal.

35. *Loxia leucum*, the white-tailed waxbill. Length only three inches. Bill like red sealing-wax; head and wing-coverts cinereous; back of a rich yellow; breast and belly pale yellow; tail white; the two outer feathers black; legs flesh-colour. Inhabits Brazil.

36. *Loxia cyanea*, the azure grosbeak. This is about the size of the hawfinch; and is a native of Angola. The general colour of the plumage is a fine lively azure blue, brightest on the head and breast; the quill-feathers, tail, and legs, black.

37. *Loxia virens*, the blue-shouldered grosbeak. The general colour of this bird is green; but the wing-coverts on the shoulders are blue; the quills and tail black, with greenish margins. Native of Surinam.

38. *Loxia Angolensis*, the Angola grosbeak. Size of

our bullfinch; length five inches. Bill dusky; eyes dark; general colour of the plumage black, except from the breast to the vent, where it is of a dull red, and a spot of white on the middle of the wing near the edge; the ridge of the wing is also white; legs of a purplish flesh-colour. Inhabits Angola.

39. *Loxia ferruginea*, the ferruginous grosbeak. Length six inches. Bill stout, and horn-coloured, one inch long; head and chin dusky brown; back and wing-coverts black, the feathers deeply margined with yellow; breast deep ferruginous; from thence to the vent rusty yellow, very pale at the vent; quills and tail dusky, edged with yellow; legs pale.

40. *Loxia melanura*, the grey-necked grosbeak. Size of the hawfinch. Bill and irides yellow; head black; hind-part of the neck brown, fore-part grey; wing-coverts bluish black; about the middle a spot of white; the second quills black, bordered with white on the inner web; the prime quills black for two-thirds, and white from thence to the end; the rump grey; the tail black; the belly pale rufous; vent white; legs yellow. The female has the head grey, and the quills black, bordered only with white. Inhabits China.

41. *Loxia aurantia*, the orange grosbeak. Length four inches and a half; bill dusky; top of the head black; wings and tail dusky black, edged with orange, and some of the inner quills with white; the rest of the bird fine orange; legs pale red. The female has the whole head, and fore part of the neck, black; the under part of the body white; the rest orange, but less bright; and the quills edged with grey. Inhabits the Isle of Bourbon and the Cape of Good Hope.

42. *Loxia torrida*, the white-billed grosbeak. General colour black; breast and belly chestnut; the two middle tail feathers longest. This was sent from South America by Jacquin, and described from the living bird by Scopoli. That mentioned by Buffon had a white bill, and came from Guiana.

43. *Loxia lineola*, the lined grosbeak. A small species; length  $4\frac{1}{4}$  inches. Bill black; at the base of the upper mandible a spot of white, and a white line from the forehead to the crown; the plumage on the upper parts glossy blue-black; beneath white; the quills black; base of the prime ones white, forming a spot of white on the wing; tail black, bifurcated. Native of Asia.—There is a variety, with the feathers of the lower part of the body curled.

44. *Loxia Hamburgia*, the Hamburg grosbeak. Size of a bullfinch. Bill black; irides yellow; upper part of the head and neck reddish brown, with a purplish tinge; throat brown; fore part of the neck white, across the middle of it a brown band; breast, back, rump, scapulars, and upper tail-coverts, yellowish brown, marked with black; belly, sides, thighs, and vent, white; on the wing-coverts two white bands; quills yellowish brown; tail brown. This is found about Hamburg, running up and down the trees like a creeper or titmouse; and feeds on insects.

45. *Loxia passerina*, the yellow-headed grosbeak. Length five inches three quarters. Bill pale flesh-colour; irides hazel; the upper parts of the body dull brown, spotted with black; beneath pale brown, with spots of dull brown; the fore part of the head, cheeks, and throat, are yellow; behind the eyes a brown band, which passes towards the back; quills and tail blackish; legs brownish horn-colour. Inhabits Mexico; but the name has here been changed, because in the Linnæan System we find two species denominated Mexicana.

46. *Loxia chloris*, the greenfinch: a well-known bird; the general colour yellowish green, paler on the rump and breast, and inclining to white on the belly; the quills are edged with yellow, and the four outer tail-feathers are yellow from the middle to the base; the bill is pale brown, and stout; and the legs flesh-colour. The female inclines more to brown. The greenfinch is very common in

Great Britain, and makes its nest in some low bush or hedge, composed of dry grass, and lined with hair, wool, &c. laying five or six greenish eggs, marked at the larger end with red brown; and is so careful of her charge during incubation, that she is easily taken on the nest. The male takes his turn in sitting. This species soon becomes tame; even old birds are familiar almost as soon as caught; they are apt to grow blind, if exposed to the sun, like the chaffinch; fly in troops in winter; live five or six years; and have been known to breed with the canary-bird. It is also common on the continent of Europe, but not very frequent in Russia, and not at all in Siberia; which gives reason to suppose that it shifts its quarters according to the season. It is found in Cumberland and Scotland; yet in the first it is scarcely ever observed in the winter season; but the last week in March becomes plentiful, and breeds as in other parts of England.

47. *Loxia sinensis*, the Chinese grosbeak. Not unlike the greenfinch. Bill greenish yellow; the head and neck greenish grey; back and wing-coverts light brown; those on the edge of the wing black; the second quills are black within, and grey on the outer edge; the prime quills are yellow half-way from the base, black the rest of their length, tipped with grey; the belly dirty rufous; vent yellow; tail black, tipped with white; legs greenish yellow. Native of China.

48. *Loxia butyracea*, the yellow-fronted grosbeak: forehead yellow; above the eyes a yellow line; temples the same colour; the rest of the plumage green, spotted with brown above, beneath wholly yellow; tail blackish, a little forked, tipped with white. Native of India.

49. *Loxia dominicensis*, the St. Domingo grosbeak. Size of the greenfinch; length five inches and three quarters. Bill reddish; the eyes are placed in a patch of white; the upper parts of the plumage green brown, the edges of the feathers paler; the under parts dull rufous, spotted with brown; lower belly and vent white; quills black; tail and legs dusky brown. Inhabits St. Domingo.

50. *Loxia africana*, the African grosbeak. Length six inches and a third. The upper parts in this bird are greenish brown and grey, mixed, inclining to rufous on the rump; upper wing-coverts rufous; second quills edged with the same; the greater quills, and side feathers of the tail, edged with rufous white, and the outer feather of the last marked with a spot of white; the under parts of the body are white, varied with brown on the breast. This was brought from the Cape of Good Hope by M. Sonnerat. Buffon considers this as a greenfinch; and he calls it *le verdier sans vert*.

51. *Loxia hypoxantha*, the Sumatra grosbeak: yellowish; front and eyebrows pale-yellow; quill and tail feathers black, edged with yellowish. Bill pale; irides rufous; legs pale. Inhabits Sumatra; five inches long.

52. *Loxia canadensis*, the Canada grosbeak: size of a sparrow; length six inches and three quarters. Bill ash-colour, the edges somewhat projecting in the middle; the upper parts of the plumage olive-green; the under paler, inclining to yellow; the feathers round the base of the bill, and the chin, black; legs grey. Inhabits Cayenne, and Canada occasionally.

53. *Loxia sulphurata*, the brimstone-coloured grosbeak. Length five inches and three quarters; bill seven lines long, stout, and of a horn-colour; head, neck, breast, and upper parts of the body, olive green; throat, belly, and vent, yellow; over the eye a yellow streak; quills brown, edged with olive green; tail the same, except the two middle feathers, which are wholly olive green; legs brownish grey. Inhabits the Cape of Good Hope.

54. *Loxia flaviventris*, the yellow-bellied grosbeak: smaller than the preceding, bill the same colour; head, hind part of the neck, and back, olive-green, dashed with brown; rump plain olive-green; under parts of the body full yellow; on each side of the head a band of yellow, which passes over the eye; quills and tail brown, with olive-green edges; the last somewhat forked; legs grey.

The female is less brilliant in colour.—There is a variety of this species, of a much brighter green; and both inhabit the Cape of Good Hope.

55. *Loxia collaris*, the collared grosbeak. Length four inches and a half. Bill black; the forehead bare; the top of the head and upper part of the body, greenish-blue; temples black; under parts and rump rufous white; round the neck a handsome collar of the same; across the breast a mottled black band; wings rufous yellow and black, mixed; tail black; legs pale brown. Inhabits the East Indies.—There is a variety of this same species peculiar to Angola.

56. *Loxia grisea*, the grey grosbeak. Size of the titmouse; length four inches; bill dark brown; neck, and fore part of the head, white; the rest of the body blue grey; legs red. Inhabits Virginia.

57. *Loxia Bengalensis*, the Bengal grosbeak: length five inches and a half. Bill flesh-colour; irides whitish; the top of the head of a golden yellow; the upper parts of the body brown, with paler edges; sides of the head and under parts rufous white; across the breast a broad band, uniting to, and of the same colour with, the upper parts of the body; legs pale yellow. The female is like the male in all things; except that the colours are much less vivid. Native of Bengal.

“This bird,” says Mr William Jones, “is exceedingly common in Hindoostan; he is astonishingly sensible, faithful, and docile; never voluntarily deserting the place where his young are hatched, but not averse, like most other birds, to the society of mankind; and easily taught to perch on the hand of his master. In a state of nature he generally builds his nest on the highest tree he can find; especially on the Palmyra, or on the Indian fig-tree; and he prefers that which happens to overhang a well or a rivulet: he makes it of grass, which he weaves like cloth, and shapes like a bottle, suspending it firmly on the branches; but so as to rock with the wind, and placing it with its entrance downward, to secure it from the birds of prey. His nest usually consists of two or three chambers; and it is popularly believed that he lights them with fire-flies, which he is said to catch alive at night, and confine with moist clay or with cow-dung. That such flies are often found in his nest, where pieces of cow-dung are also stuck, is indubitable; but, as their light could be of little use to him, it seems probable that he only feeds on them. He may be taught with ease to fetch a piece of paper, or any small thing that his master points out to him. It is an attested fact, that, if a ring be dropped into a deep well, and a signal be given to him, he will fly down with amazing celerity, catch the ring before it touches the water, and bring it up to his master with apparent exultation; and it is confidently asserted, that if a house, or any other place, be shown to him once or twice, he will carry a note thither immediately on a proper signal being made. The young Hindoo women at Benares, and in other places, wear very thin plates of gold called *nicas*, slightly fixed, by way of ornament, between their eye-brows; and, when they pass through the streets, it is not uncommon for the youthful libertines, who amuse themselves with training these birds, to give them a signal which they understand, and send them to pluck the pieces of gold from the foreheads of their mistresses, which they bring in triumph to their lovers.”

58. *Loxia Malabarica*, the Malabar grosbeak. Size and shape of a titmouse. Bill black; throat white; body cinereous; quills and tail black; vent whitish. Inhabits the East Indies, Malabar, &c.

59. *Loxia Africa*, the black-bellied grosbeak: head, sides, and coverts of the tail, of a rich yellow, mixed with light brown; chin, breast, and belly, black; wings and tail brownish; bill black. Inhabits Africa.

60. *Loxia Caffra*, the Caffre grosbeak: general plumage velvet black; wing-coverts blood red; quill-feathers brown, edged with white; legs grey; bill brown. Na-

tive of Caffraria, and brought from the Cape of Good Hope.

61. *Loxia totta*, the totty or Hottentot grosbeak. Length four inches. Bill nearly white; forehead greenish brown; the crown of the head, hind part of the neck, and upper wing-coverts, testaceous brown; the under parts of the body brownish white; the quills and tail black, and the feathers of both tipped with white; tail forked at the end; feet black. Found in the Hottentots' country, in the neighbourhood of the Cape of Good Hope, and in India.

62. *Loxia cinerea*, the ash-headed grosbeak: blackish, beneath whitish; head and neck cinereous; tail tipped with white. Bill and legs blue. Inhabits India: very small. This is from Dr. Turton, who calls it *Indica*, having changed the name of *L. Indica* to *L. Boetonensis*.

63. *Loxia Asiatica*, the Asiatic grosbeak. Size of a bullfinch. Bill yellow; head black; plumage on the upper parts of a reddish ash-colour; beneath cinereous; belly pale red; the greater wing-coverts, quills, and tips of the tail, black; the last forked in shape; legs red. Inhabits China, where it is called *lap-tsoy*.

64. *Loxia canora*, the brown-cheeked grosbeak: bill stout, thick, dusky; cheeks brown, surrounded by a border of yellow, reaching beyond the ears, and beginning at the throat; the rest of the head, back, wings, and tail, pale dirty green; breast and belly cinereous; legs whitish. Inhabits Mexico.

65. *Loxia lineata*, the striated grosbeak. Size of a linnet; length four inches. Bill stout, thick, and white; head, neck, breast, small wing-coverts, and tail, black; secondaries, sides the body, and half of the prime quills, striated with black and white; belly and vent white; legs dusky.

66. *Loxia perlata*, the pearl-coloured grosbeak. Size of a wren. Head, and upper parts of the body, black; beneath brown; with an agreeable mixture of black and pearl-colour towards the thighs and tail. Inhabits Whidah in Africa; lives on grain; and has an agreeable note.

67. *Loxia fasciata*, the fasciated grosbeak. Length four inches and a half. Bill bluish grey; crown, hind part of the neck, the back, and smaller wing-coverts, pale brown, marked with semicircular lines of black; cheeks plain brown, bounded beneath with a rich crimson band, under which is a black line; breast and belly pale brown, slightly marked with semicircular lines; quills and tail brown; legs flesh-colour. Inhabits Africa.

68. *Loxia cantans*, the warbling grosbeak. Length four inches. Bill dusky; plumage on the upper parts brown, marked with narrow dusky lines; belly white; tail deep brown; legs bluish. Inhabits Africa; and said to sing well.

69. *Loxia melanocephala*, the Gambia grosbeak. Length six inches and a quarter. Bill cinereous; irides black; head, throat, and fore-part of the neck, black; rest of the body yellow, mixed with green; legs bluish ash-colour. Native of Gambia in Africa.

70. *Loxia erythromelas*, the black-headed grosbeak. Length nine inches. Bill very stout, one inch long, and black; at the middle of the edge of the upper mandible a sharp process, and a notch on the under one partly corresponding with it; the base white; head and throat black; general colour of the plumage deep crimson, inclining to pink on the under parts; quills and tail of a dusky red; legs brown. The female has the head and throat black; the upper part of the body greenish orange, with a mixture of red; sides of the neck of a deep orange red, quills olive-green, with the outer edges rufous. Inhabits Cayenne.

71. *Loxia coronata*, the crowned grosbeak. Larger than our bullfinch. Bill white, half an inch long; on the head is a full black crest; the upper parts of the body, wings, and tail, are scarlet; the under blue; on the middle of the fore-part of the neck a black spot. Inhabits America.

72. *Loxia cana*, the cinereous grosbeak. Size of a lin-

net. Bill ash-colour; base of the under mandible surrounded with white; eyes blackish; plumage on the upper parts deep ash-colour, growing paler towards the rump; beneath pale bluish ash-colour; greater quills white at the base, and blackish at the ends; tail blackish, margined with pale ash-colour; legs flesh-colour. Native of Asia.

73. *Loxia Philippina*, the Philippine grosbeak. Length five inches and a quarter. Bill brown; round the base and sides of the head, under the eyes, and the chin, of the same colour; the top of the head is yellow; the hind part of the neck and back, and scapulars, the same; the middle of the feathers brown; the lower part of the back brown, with white margins; fore-part of the neck and breast yellow, from thence to the vent yellowish-white; wing-coverts brown, edged with white; the quills brown, with pale rufous edges; tail as the quills; legs yellowish. The female has the upper parts brown, margined with rufous; under pale rufous; quills and tail margined with pale rufous.

These inhabit the Philippine islands, and are noted for making a most curious nest, in form of a long cylinder, swelling out into a globose form in the middle. This is composed of the fine fibres of leaves, &c. fastened by the upper part of the extreme branch of a tree. The entrance is from beneath; and, after ascending the cylinder as far as the globular cavity, the true nest is placed on one side of it; where this little architect lays her eggs, and hatches her brood in perfect security. This species is represented on the annexed Plate, at fig. 6. and its nest, which is similar to that made by the penfilis, and several of the smaller species, is shown at fig. 7.

There is also a variety of this bird, found in Abyssinia, with the tail and quill feathers greenish-brown, edged with yellow. This makes a nest somewhat like the former, of a spiral shape, not unlike that of a nautilus. It suspends it, like the other, on the extreme twig of some tree, chiefly one that hangs over some still water; and always turns the opening towards that quarter from whence least rain may be expected.

74. *Loxia Abyssinica*, the Abyssinian grosbeak: yellowish; crown, temples, throat, and breast, black; shoulders blackish; quill and tail feathers brown, edged with yellow. Inhabits Abyssinia; size of the hawkfinch. This bird also makes a curious nest: it is of a pyramidal shape, suspended from the ends of branches, like the others: the opening is on one side, facing the east, the cavity separated in the middle by a partition, up which the bird rises perpendicularly about half way, when, descending, the nest is within the cavity on one side. By this means the brood is defended from snakes, squirrels, monkeys, and other mischievous animals, besides being secure from the westerly rains, which in that country sometimes continue for six months together.

75. *Loxia penfilis*, the penfile grosbeak. Size of the sparrow. Bill black; irides yellow; the head, throat, and fore-part of the neck, of the last colour; from the nostrils springs a dull green stripe, which passes through the eye and beyond it, where it is broader; the hind part of the head and neck, the back, rump, and wing-coverts, the same; the quills black, edged with green; the belly deep grey; the vent of a rufous red; tail and legs black. This species is found at Madagascar, and fabricates a nest of a curious construction, composed of straw and reeds interwoven in the shape of a bag, opening beneath. It is fastened to a twig of some tree; mostly to those growing on the borders of streams. On one side of this, within, is the true nest. The bird does not form a new nest every year, but fastens a new one to the end of the last; and often as far as five in number, one hanging from another. These build in society, like rooks; they have three young at each hatch.

A bird similar to this is mentioned in Kämpfer's History of Japan, which makes the nest, near Siam, on a tree, with narrow leaves and spreading branches, the size of an apple-tree; the nest in the shape of a purse, with a long neck,

made of dry grass and other materials, and suspended at the end of the branches; the opening always to the north-west. The historian says he counted fifty on one tree only; and describes the bird itself as being like a canary-bird in colour, but as chirping like a sparrow.

76. *Loxia socia*; the sociable grosbeak: rufous brown, beneath yellowish; frontlet black; tail short. This species inhabits the interior parts of the Cape of Good Hope; they live together in vast tribes under one common roof, containing several nests, which are built on a large species of mimosa; this, from its size, its ample head, and strong wide spreading branches, is well calculated to admit and support their dwellings. The tallness and smoothness of its trunk are also a perfect defence against the invasions of the serpent and monkey tribes. In one tree, described by a very intelligent traveller, Mr. Paterfon, there were several hundred nests under one general roof. It is described as a roof, because it resembles that of a thatched house, and projects over the entrance of the nest below in a singular manner. "The industry of these birds," says this author, "seems almost equal to that of the bee. Throughout the day they seem to be busily employed in carrying a fine species of grass, which is the principal material they use for the purpose of erecting this extraordinary work, as well as for additions and repairs. Though my short stay in the country was not sufficient to satisfy me by ocular proof that they added to their nest as they annually increased in numbers; still, from the many trees which I have seen borne down by the weight, and others which I have observed with their boughs completely covered over, it would appear that this is really the case. When the tree, which is the support of this aerial city, is obliged to give way to the increase of weight, it is obvious that they are no longer protected, and are under the necessity of building in other trees. One of these deserted nests I had the curiosity to break down, to inform myself of the internal structure of it; and found it equally ingenious with that of the external. There are many entrances, each of which forms a regular street, with nests on both sides, at about two inches distance from each other. The grass with which they build is called the Boshman's grass, and I believe the seed of it to be their principal food; though, on examining their nests, I found the wings and legs of different insects. From every appearance, the nest which I dissected had been inhabited for many years, and some parts of it were much more complete than others. This, therefore, I conceive to amount nearly to a proof that the animals added to it at different times, as they found necessary from the increase of the family, or rather of the nation or community."

77. *Loxia striata*, the striated grosbeak. Not much bigger than a wren; length three inches two thirds. Bill dusky; head, and upper part of the body, brown, with a dash of paler rufous brown down each shaft; throat, and fore-part of the neck, blackish; from the breast to the vent white; quills and tail blackish brown; legs blackish. Found in the Isle of Bourbon.

78. *Loxia Zeylonica*, the Ceylon grosbeak: ferruginous-brown, beneath purple, waved with black; front and rump bluish. Bill and legs reddish-brown; hind-head, back, and long quill-feathers, brown; tail rusty-brown tipped with white; wing-coverts slightly edged and tipped with white, those nearest the back with bluish-ash; vent white. Female, head, neck, and body beneath, bright ferruginous; wings brown; tail beneath ash-colour. Inhabits Ceylon.

79. *Loxia Ludoviciana*, the red-breasted grosbeak. Length six inches and three quarters. Bill like that of a bullfinch; head, upper parts of the body, and half of the tail, black; breast, and under wing-coverts, light-purple; belly, thighs, vent, and rump, white, varied on the belly with purple spots; on the wings are three white marks; the lower half of the three outer tail-feathers is white, and the inner web at the tip of the fourth of the same colour; legs brown. Native of Louisiana.

80. *Loxia maculata*, the spotted grosbeak. Size of the yellow-hammer. Bill pale, with a dusky tip; the plumage on the upper parts dusky; every feather, except the greater coverts and quills, spotted at the end with white; the under parts marked with dusky streaks; over the eye is a pale streak; the outer tail-feathers have the outer webs white almost to the tip, and a white spot on the inner web near the tip; both quills and tail are fringed on the outer web with dusky white; legs pale brown. Native of North America.

81. *Loxia obscura*, the dusky grosbeak: head, neck, and back, dusky, edged with pale brown; wing-coverts dusky, crossed with two bars of white; quills green; middle of the throat white; sides of the breast, and sides of the belly, white, spotted with brown. Found at New York, in the month of June.

82. *Loxia Hudsonica*, the Hudson's-Bay grosbeak: brown; belly white; sides spotted with brown; wing-coverts with two red bands. Short strong bill and legs brown; feathers of the back and rump, secondary quill and tail feathers, edged with pale rufous; tail a little forked. Inhabits Hudson's Bay; five inches long.

83. *Loxia Capensis*, the Cape grosbeak. Size of a chaffinch: length six inches and a quarter. Bill very stout, and of a dusky colour; the head, neck, upper part of the back, and under parts of the body, and tail, are of a deep black; the feathers of the head short, like plush or velvet; the shoulders of the wings, and lower part of the back and rump, of a fine deep yellow; the rest of the wings reddish brown, edged with grey; the greater quills with yellow; the feathers round the knee are pale brown; the legs dusky. Inhabits the coasts of Coromandel; and is also frequently brought from the Cape of Hope. Buffon has, by mistake, made two species of this bird.

84. *Loxia nigra*, the black grosbeak. Size of a canary-bird; length five inches and a quarter. Bill black, stout, and deeply notched in the middle of the upper mandible; plumage black, except a little white on the fore-part of the wing, and base of the two first quills; legs black. Native of Mexico.

85. *Loxia crassirostris*, the thick-billed grosbeak. Size of a bullfinch; length five inches three quarters. The bill is of a large size, and deeper than it is long, being three quarters of an inch from the base on the forehead to that of the under jaw; the base of the upper mandible passes backward some way on the forehead; about one third from the tip is a deep notch, the colour of the bill a pale yellow; the plumage is wholly black, except the bottoms of the quills, which are white, forming a spot on the wing; tail two inches long; base of the middle feathers white; legs whitish.

86. *Loxia regulus*, the crimson-crested grosbeak: black; wings with a white spot; hind-head with a crimson crest-like band. Bill very thick and strong.

87. *Loxia Americana*, the American grosbeak. Size of the smallest titmouse; length not four inches. Bill black; the plumage on the upper parts black; beneath white, except a band of black across the breast, above which the white passes in a narrow crescent almost round the neck; on the wings are two bands of white; tail rounded, and black; legs brown. This is in the British Museum; and came from America.

88. *Loxia cerulea*, the blue grosbeak. Size of the bullfinch; length six inches. Bill half an inch, stout, brown; the base furrounded with black feathers, which reach on each side as far as the eye; the whole plumage besides is of a deep blue, except the quills and tail, which are brown, with a mixture of green; and across the wing-coverts a band of red; legs dusky. There are two other varieties of this bird; one wholly blue, inhabiting Brazil; the other blue and black, from Angola. The female is brown, with a very little mixture of blue.

89. *Loxia orix*, the grenadier grosbeak. Size of a chaffinch. The forehead, sides of the head, and chin, are black; breast and belly the same; wings brown, with

pale edges; the rest of the body of a beautiful red colour; round the knee pale brown; legs pale. These are inhabitants of St. Helena, and are also in plenty at the Cape of Good Hope, frequenting watery places where reeds grow, among which they make the nest. The appearance of these birds among the green reeds has a wonderful effect; for, from the brightness of their colours, they appear like so many scarlet lilies.

90. *Loxia erythrina*, the red-capped grosbeak. Size of the greenfinch, but the head smaller; length near five inches. Bill horn-colour; between that and the eyes cinereous grey; head, neck, and throat, red; lower part of the neck whitish; nape and back cinereous, with a reddish cast; wing-coverts brown, edged with red; quills brown, margined with luteous; the under parts white, tinged with red on the breast and sides; tail forked; legs brown. The female is wholly of a yellowish ash-colour on the upper parts, marked on the crown with yellowish spots; sides of the head almost white; chin white; on the neck a few obscure brown markings; tail dusky brown, margined with grey. This inhabits the thick woods about the Volga and Samara, where it is called the *red sparrow*; it makes a nest of hay between the branches of trees; is found in small numbers in winter among the flocks of snowflakes; and feeds on the seeds of plants. It is also met with in Siberia, about the river Tomik.

91. *Loxia flamingo*, the flamingo grosbeak. Bill red, furrounded with feathers tipped with black; forehead and space round the eyes white; the rest of the head above fine rose-colour; sides of the head and neck the same, but deeper; fore part of the neck, breast, and belly, pale rose-colour, very much like the flamingo; the third and fourth quills black; the tips of the lower order of wing-coverts dusky, forming a bar of the same on the wing; on the rump a spot of black; the upper surface of the tail pale foot-colour; the rest of the body, viz. back, thighs, under part of the tail, and the rest of the wings, white; legs sanguineous. Brought from Upsal in Sweden.

92. *Loxia violacea*, the purple grosbeak. Size of a sparrow; length five inches three quarters. Bill black; plumage violet black, except the irides, a streak over the eye, the chin, and the vent, which are red; legs dusky grey. The female is brown where the male is black, and the red not so bright. Native of the Bahama islands, Jamaica, and the warmer parts of America.

93. *Loxia grossa*, the white-throated grosbeak. Seven inches and a half in length. Bill very stout and red; general colour of the plumage deep blue; the bill is furrounded with black, which passes downwards before, and covers the fore part of the neck; in the middle of this, on the chin and throat, is a large patch of white; legs dusky-blue colour. The female has less of the white on the chin; and this is not furrounded with black as in the male. The bills in both have a process on each side of the upper mandible, about the middle of the edges; which circumstance is not noticed in Buffon, and is more considerable than in that figured by Brisson. These specimens are in the British Museum; and are said to have come from Surinam, where they are named *corn-biters*.

94. *Loxia minima*, the dwarf grosbeak. Size of a wren. Bill very short and thick; upper parts of the plumage brown; rump and under parts testaceous; prime quills white at the base; secondaries white on the inside, towards the base; tail even; the feathers somewhat sharp at the tip, and of a pale colour. Inhabits Surinam, in South America, and is found in China and the East Indies.

95. *Loxia fusca*, the brown grosbeak. Size of a canary-bird. Bill short and thick, and of a lead-colour; the head and upper parts of the body brown; the under of a pale ash-colour; vent pure white; the quills dusky black; the base of eight of the middle quills white; tail the colour of the quills, with palish ends; legs pale. Inhabits Africa and Bengal.

96. *Loxia guttata*, the New-Holland grosbeak: brown; breast

breast black; bill and rump red; sides of the body black spotted with white. Inhabits New Holland.

97. *Loxia septentrionalis*, the northern grosbeak: wholly black, except a spot of white on the wing. Inhabits the northern parts of Europe.

98. *Loxia minuta*, the minute grosbeak. A small species. Bill stout, thick, short, brown; upper parts of the plumage grey brown; the under parts and the rump ferruginous chestnut; the fourth, fifth, and sixth, quills white at the base; legs brown. Inhabits Surinam and Cayenne. This bird is said to keep paired to its mate the whole year; frequents lands which have lain for some time uncultivated; lives both on fruits and seeds; cries like a sparrow, but sharper; makes a roundish nest, the hollow of which is two inches in diameter, composed of a reddish herb, and placed on the trees which it frequents. The female lays three or four eggs.

99. *Loxia bicolor*, the two-coloured grosbeak. About the size of a wren. Bill short, thick, and whitish; upper parts of the body brown, under parts reddish orange; legs brown. Native of India.—There is a variety of this bird found in China, with the upper parts pale brown; under parts white, inclined to ferruginous on the chin; tail rounded; legs bluish.

100. *Loxia prafina*, the red-rumped grosbeak: olive green, beneath yellowish hoary; rump red; legs yellow; (male.) Olive brown, beneath yellowish hoary; rump pale red; legs yellow; (female.) Male: bill black; tail-feathers black, the two middle ones on the upper surface, and eight on the outer edge red. Female: bill above black, beneath yellowish; wings with yellowish white bands; quill-feathers cinereous, the eight secondary on the anterior edge whitish at the tips; tail-feathers black, tipped with white. Inhabits Java; length five inches.

101. *Loxia tridactyla*, the three-toed grosbeak: feet three-toed. The bill of this species is toothed on the edges; the head, throat, and fore part of the neck, of a beautiful red, which is prolonged in a narrow band quite to the vent; the upper part of the neck, back, and tail, black; the wing-coverts brown edged with white; quills brown, with greenish edges; legs red; the toes three only, two before and one behind. This inhabits Abyssinia; frequents the woods; feeds on the kernels of nuts, which it breaks with ease with its bill; discovered by Mr. Bruce.

LOX'IAS, one of the names of Apollo.

LOX'LEY, a village near Needwood-forest, in Staffordshire.—A village in Surrey, south-east of Godalmin, towards Suffex.—A village in Warwickshire, south-east of Stratford-upon-Avon.

LOXOCARY'A, *f.* in botany. See RESTIO cinerea.

LOXODROM'IC, or LOXODROM'ICAL, *adj.* [from the Gr. λοξος, oblique, and δρομος, a course.] Belonging to oblique sailing.

LOXODROM'ICS, *f.* The art of oblique sailing, the method of sailing on the rhomb-line.

LOXOD'ROMY, *f.* The line which a ship describes in sailing on the same collateral rhomb. The loxodromy, called also the *loxodromic line*, cuts all the meridians in the same angle, called the *loxodromic angle*. This line is a species of the logarithmic spiral, described on the surface of the sphere, having the meridians for its radii.

LOXWOOD CHAPEL AND PARK, in Suffex, on the borders of Surrey, towards Awfold.

LOY, a river of Prussia, which runs into the Curisch Haff nine miles south of Rufs.

LOY'AL, *adj.* [*loy*, Fr. law.] Obedient; true to the prince.—The regard of duty in that most *loyal* nation overcame all other difficulties. *Knolles*.

*Loyal* subjects often seize their prince,  
Yet mean his sacred person not the least offence. *Dryden*.

Faithful in love; true to a lady, or lover:

Hail, wedded love! by thee

Founded in reason *loyal*, just, and pure. *Milton*.

In the manege, a horse is said to be *loyal*, that freely

bends all his force in obeying and performing any manege he is put to; and does not defend himself, or resist, notwithstanding his being ill treated. A *loyal* mouth is an excellent mouth, of the nature of such as we call mouths with a full rest upon the hand.

LOY'ALIST, *f.* One who professes uncommon adherence to his king.—The cedar, by the intigation of the *loyalists*, fell out with the Pomebians. *Howel's Vocal Forest*.

LOY'ALLY, *adv.* With fidelity; with true adherence to a king; with fidelity to a lover:

The circling year I wait, with ampler stores,  
And fitter pomp, to hail my native shores;  
Then by my realms due homage would be paid,  
For wealthy kings are *loyally* obey'd. *Pope's Odyssey*.

LOY'ALNESS, *f.* The same as LOYALTY.

LOY'ALSOCK CREEK, a river of Pennsylvania, which runs into the west branch of the Susquehanna in lat. 41.15. N. lon. 77.1. W.

LOY'ALTY, *f.* Firm and faithful adherence to a prince:

Though *loyalty*, well held, to fools does make  
Our faith mere folly; yet he that can endure  
To follow with allegiance a fall'n lord,  
Does conquer him that did his master conquer. *Shakespeare*  
Fidelity to a lady or lover.—And then end life, when I  
end *loyalty*. *Shakespeare's Mid. Night Dream*.

It has been remarked by those who consider language in connexion with manners and opinions, that, from the shades of difference which words often acquire in passing from a primary tongue to derivative ones, inferences may be deduced concerning the modes of thinking in different countries. *Leale*, *lealta*, in Italian; *loyal*, *loyaulté*, in French; have the signification of *frank*, *sincere*, *faithful*, *honest*; whereas, in English, *loyal* and *loyalty* (evidently derived from the above) are, and have long been, entirely limited to the sense of fidelity and attachment to a king; except that, by a kind of metaphor, our poets have sometimes applied them to the same affections towards a *mistress*: and these are the only meanings assigned by Johnson. Many persons were much surpris'd at the frequent use of the word *loyalty* made by the French in their public addresses when they discarded monarchy; for our newspaper translators, not knowing the true meaning of the term, long rendered it into the literal English. But the sense in which they applied it is by no means modern or republican. Indeed, it is so ancient, that it had begun to be obsolete; and the revolutionists seem to have revived it in order to throw an air of antique plainness and integrity over their proceedings. The motto of one of our old noble families says, *Loyaulté n'a honte*; i. e. "Faithfulness, honesty, incurs no shame." That such is the primitive sense, cannot be doubted. Moliere, in his *Tartuffe*, ironically names a Norman serjeant at inace, *Monfr. Loyal*; upon which one of the characters remarks, *Ce Monfr. Loyal porte un air bien déloyal*; "This Mr. Honest looks much like a knave."

It is easy to conceive how a word implying fidelity in general, should come to be exclusively applied to what might appear the highest and most important exertion of it; but who would have thought that *England* should have been the country in which every idea of faithfulness in public concerns should be sunk in exclusive devotion to the interests of a king? Does not this seem to confirm the doctrine which has been thought to obnoxious, that monarchy is the only essential part of the English constitution? For, were it in reality that mixture of different sovereign powers, or, still more, that radical sovereignty of the people which a certain party has been fond of representing it, the application of the term *loyalty* to attachment to the royal authority alone would be a high degree of incivism, if not a species of treason. In the American contest, though the supremacy of the British parliament was nominally the point at issue, yet the sovereignty of the king was really the object in view; and the terms *loyalists*

*Loye*

*Sculpt.*

LOYOLA.

*London Published as the Act directs June 1781, by G. Jones.*

*loyalist* and *royalist* were used as perfectly synonymous. At the present day, it cannot escape any observer, that *loyalty to royalty* is the great passion of the nation, and is inculcated from the bench and the pulpit as the prime public virtue, and a duty scarcely inferior to piety towards the Supreme Being. This we only mean to remark as a trait of national character; just as Virgil has done with respect to his bees:

*Præterea regem non sic Aegyptus, et ingens  
Lydia, nec populi Parthorum, aut Medus Hydaspes,  
Observant.*

Georg. iv.

Besides, not Egypt, India, Media, more  
With servile awe their idol king adore.

Dryden.

And then Dryden goes on to paint this passion of loyalty in colours which he seems to have derived from the court of Charles II. rather than from Virgil's Georgics:

The king presides, his subjects' toil surveys;  
The servile rout their careful Cæsar praise;  
Him they extol, they worship him alone;  
They crowd his levees and support his throne:  
They raise him on their shoulders with a shout;  
And, when their sovereign's quarrel calls them out,  
His foes to mortal combat they defy,  
And think it honour at his feet to die.

This is somewhat more than *insect-loyalty*; for we do not believe that any creature *without reason* would be capable of so passionate an attachment to a being of its own class, endeared by no friendship, and known by no benefits. The warm devotion attached to a mere name, in which loyalty consists (for it is transferred with the crown, and expects no particular virtues in the wearer), is a refinement of sentiment much beyond the instinctive emotions of common affection. A spaniel may lick the hand that feeds him; but a man only can set up a metaphysical idol, and pay it worship.

After all, considering the matter philologically, it may be difficult to account for this variation in the use of the word *loyalty*. Perhaps, as the French language was introduced among us in company with conquest and a high degree of monarchical power, some of its terms might acquire a more servile meaning than they possessed in their native country. It appears certain that many of our early kings had more of the regal state and authority than their contemporaries of France; and even so late as Henry VIII. and Elizabeth, more exterior homage was paid to royalty in England than (probably) in any other country in Europe. In the person of Elizabeth, the sacred character of majesty was united with the prerogatives of the sex, which, in that age, when the spirit of chivalry was not yet extinct, were of high consideration. Accordingly, she was the object of a most romantic *loyalty*, which she was wise enough to support by great real or affected regard to the welfare of her people. When the contest between monarchy and republicanism commenced under Charles I. the partisans of the first thought they could not go too far in manifesting their alienation from the second; and besides, the sufferings of the king, and his heroic conduct under them, were calculated to excite the warmest emotions in his favour. Loyalty, therefore, was renewed in all its force both as a passion and a principle; and in the breast of a cavalier took place of every public, and almost every private, affection. It required no personal favour for its support; for, as Butler, in a *serious strain*, observes,

*Loyalty* is still the same,

Whether it win or loose the game;  
True as the dial to the sun,  
Although it be not thone upon.

Shakespeare has employed it also to signify the attachment of a servant to his master. Old Adam says to Orlando, in *As you like it*,

I will follow thee

To the last gasp with truth and *loyalty*.

VOL. XIII. No. 939.

We shall conclude with just suggesting, that it might, perhaps, be as well to revert to Clarendon's idea of this political virtue; for surely a more orthodox authority, with respect to monarchical principles, need not be sought. He says, speaking of a public character, "He had never any veneration for the court, but only such *loyalty* to the king as the *law* required."—Thus we have at length arrived at the point whence we ought to have set out; namely, at the true derivation of *loyalty*, from *loy*, "the law." *Loyalty*, therefore, in its primary sense, should be taken to signify "faithfulness or firm adherence to the *law*;" and *loyalist* for one who is so adherent. And, as we have *royalist* for one who is particularly devoted to a *king*, why might we not use *royalty*, in a secondary sense, to signify that devotedness, that preference of royalty to loyalty? *Monthly Mag.* Dec. 1800.

LOYANG', a town of China, of the third rank, in the province of Quang-si: twenty-five miles south of Tou-yang.

LOYAT', or LOIAT, a town of France, in the department of the Morbihan; four miles north of Ploermel, and seven east of Josselin.

LOY'DERS, a town of Prussia, in Oberland: eight miles south of Liebitatt.

LOY'ES, a town of France, in the department of the Ain: two miles north-east of Meximieux, and six south-west of Amberieu.

LOY'HA, a small island on the east side of the gulf of Bothnia. Lat. 65. 6. N. lon. 25. E.

LOY'OLA, a village of Spain, in the province of Guipuscoa, which once belonged to the family of the celebrated Ignatius, founder of the order of Jesuits, near Apeytia.

LOY'OLA, a town of South America, in the audience of Quito: fifty miles south of Loxa.

LOY'OLA (Ignatius de), founder of the order of the Jesuits, and a saint in the Romish calendar, was descended from a noble Spanish family, and born in the year 1491, at the castle of Loyola in the province of Guipuscoa, whence he took his surname, by which he is most commonly known. At an early age he was sent to the court of Ferdinand and Isabella, where he was appointed page to the king, who was pleased with his liveliness and activity, and distinguished him by marks of favour. But the indolence of a courtier's life soon became disgusting to young Loyola; and the accounts he received of the distinction acquired by his brothers, who served in the army of Naples, fired him with the love of glory, and turned the bent of his inclination towards the military profession. Having communicated his wishes to the duke de Najara, a grandee of Spain, who was his relation, that nobleman, who was himself a soldier, and reckoned one of the most accomplished cavaliers of his time, cherished the martial spirit of Loyola. With the greatest care, he himself taught him his exercises. Under the instructions of so good a master, Ignatius was soon prepared for entering the army, where he passed through different degrees of military rank, and discovered on all occasions great courage, and a strong attachment to the service, both while he was in a subordinate station and after he became a commander. His morals, which had been corrupted at court, were not reformed in the army, where he addicted himself to the licentiousness too prevalent in the military life; but at the same time he was a good officer, possessed a high sense of honour, was frank, disinterested, and generous, and was greatly beloved by the soldiers. When, in the year 1521, the citadel of Pampeluna was besieged by the French, his influence and exhortations encouraged the garrison to hold out to the last extremity, though weak and ill furnished with provisions; and when the enemy, after having made a breach with their artillery, mounted to the assault, he gallantly met them sword in hand, and repulsed them with great slaughter, till he was disabled by a severe wound in his left leg, and by a cannon-shot which in the same moment broke his right. Disheartened

at his fall, the garrison immediately surrendered at discretion; and the French used their victory with moderation. Out of respect for the valour which Loyola had displayed, they hastened to his assistance, and carried him to the quarters of their general, where his broken leg was set; and, as soon as he was in a fit state for being removed, they sent him in a litter to his native place, which was at no great distance from Pampeluna. During the progress of a lingering cure, he happened to have no other amusement than what he found in reading the lives of the saints; the effect of which on his mind, naturally enthusiastic, but ambitious and daring, was to inspire him with a desire of emulating the glory of the most celebrated among them, particularly of St. Dominic and St. Francis. See *JESUIT*, vol. x. p. 785. From this time he resolved to renounce the vanities of the world; to visit the Holy Land, and to devote himself to an austere religious life. In pursuance of this resolution, as soon as he was cured he undertook a pilgrimage to our Lady of Montserrat, to hang up his arms near her altar. Being arrived at Montserrat, he adopted a new method of consecrating himself to the service of the Virgin, borrowed from the practice in ancient chivalry of knights-errant watching their arms all night, before the day of their admission into the order. On this occasion, he stripped off his clothes, which he gave to a poor man, put on a coarse garment of sackcloth, girded himself with a cord, from which was suspended a gourd for carrying water, put a matted shoe on one foot which had not yet recovered the injury produced by his wounds, leaving the other naked and his head exposed to the violence of the weather, and substituting in the place of his lance a plain crab-tree staff. Thus equipped, he presented himself before the altar of the Virgin, hung his sword and other arms on a pillar near the altar, and watched all night, sometimes kneeling and sometimes standing, devoting himself as a champion to the service of the Virgin and of Jesus. Early on the morning, after he had gone through this ceremony, Loyola departed on foot for Manresa, three leagues from Montserrat, where he intended going through a course of penance, by way of preparation for his expedition to the Holy Land. Here he staid about a year, living chiefly with the poor of the hospital, begging his bread from door to door; occasionally retiring to a cavern in a mountain near Manresa; and for a short time inhabiting a cell in the Dominican convent. This time he spent in the most rigorous mortifications of every kind; not indulging himself with any other food but bread and water, excepting a few herbs on Sundays; fasting six days in the week; wearing a coarse hair-cloth next his skin; whipping himself three times a-day; spending seven hours every day in vocal prayer; suffering his hair and nails to grow, till he became so squalid a figure, that the boys hooted at him and pelted him whenever he made his appearance abroad; lying only on the bare ground, and permitting himself very little sleep; and enduring numerous spiritual conflicts, during which, like other superstitious and melancholy enthusiasts, he was more than once tempted to put an end to his life. At length, having persuaded himself that he had obtained a complete victory over the devil by these penances, and that God had given him a special call to convert sinners from their wickedness, he moderated his austerities; rendered his person less repulsive, by cleansing himself from his filth, and wearing a decent habit of coarse cloth; and commenced his labours of spiritual exhortation, both in private families and in public places. At Manresa also he wrote his book of Spiritual Exercises; but whether it was his own composition, or stolen from the works of others, as some Benedictines have maintained, we leave to the consideration of those readers who may deem it a subject deserving of enquiry, whom Bayle has furnished with the evidence on both sides the question. Intent, however, on his visit to Palestine, Loyola departed from Manresa in the year 1523, and embarked on-board a vessel at Barcelona,

from which he landed in five days at Gaeta. Being now in Italy, he proceeded without delay to Rome, that he might receive the pope's blessing; and, having arrived at that city on Palm-Sunday, his holiness Adrian VI. gave him his benediction, and his leave to pursue his pilgrimage to Jerusalem. From Rome he travelled on foot, begging his bread from day to day, till he arrived at Venice. Here he procured a passage to the east, and after a voyage of about six weeks arrived at Joppa on the last day of August, and at Jerusalem on the fourth of September. After visiting the scenes of our Saviour's principal transactions in that city and the surrounding country, and going through the exercises usually performed by pilgrims, Loyola formed the design of remaining in Palestine, for the purpose of devoting himself to the conversion of the inhabitants of the east. This design he communicated to the father guardian of the Franciscans, who referred him to the father provincial. That father, well knowing the danger to which an attempt at carrying such a design into execution would expose not only Loyola himself but all the Christians at Jerusalem, exercised the authority with which he was invested by a papal bull, and obliged our pilgrim to return to Europe. During his voyage on-board a vessel bound to Venice, while reflecting on the great object which he had principally at heart, that of employing himself in the work of converting sinners, he became fully sensible of his lamentable deficiency in the learning and knowledge requisite for such an undertaking. He therefore determined, though he was now about thirty-three years of age, to go through a course of studies, commencing with grammar-learning; and, as he was acquainted with the master of the public school at Barcelona, and trusted that he should be able to find the means of subsistence there, he determined to repair as speedily as possible to that city. He had therefore no sooner landed at Venice, than he proceeded without delay to Genoa, where he obtained a passage by sea to Barcelona. Here he first began to learn the rudiments of grammar, in the year 1524; and when, after much difficulty and labour, he had made so much progress as to be able to understand a Latin author, he began to read the *Enchiridion Militis Christiani* of Erasmus. But that book, in which a purity of style is united with the most sage rules of Christian morality, did not suit the fanatical taste of Loyola, who relinquished it for the study of Thomas à Kempis. Erasmus's work, he said, was like so much ice, which abated the fervour of his devotion, and cooled the fire of divine love in him; on which account he took an aversion to it, and would never read any of that author's writings, nor suffer his disciples to read them. In two years time, Loyola was judged to have made such a progress in grammar-learning, as to be qualified for entering on academic studies; and, in 1526, he went to the university of Alcalá de Henares. Here he passed through his courses of philosophy and divinity, but with little success, because, as father Maffei relates in his life, he was in too much haste, and observed no method or regularity in his studies; rendering his mind confused by attending several confessors every day, and attempting at the same time to become acquainted with rhetoric, logic, metaphysics, natural philosophy, and, above all, scholastic divinity. Besides, he was diverted from his studies by the very considerable portion of his time which he devoted to spiritual exercises and contemplations, to the service of the sick at the hospitals, to his begging excursions, and to the pious instructions and exhortations which he delivered to the people.

Loyola had now associated himself with four companions, who imitated his course of life, and went clothed, like him, in brown woollen habits. An account of their extraordinary manner of living, and of the crowds who followed to hear their exhortations, being brought to Toledo, the jealousy of the inquisitors was awakened, who instituted enquiries relative to Loyola's doctrine and behaviour;

haviour; and, having found that there was no reason for suspecting him of heresy, they referred all other matters to the discretion of the grand vicar of Alcalá. This dignity, in the first instance, only prohibited them from distinguishing themselves by their dress from the other scholars of the university. But soon afterwards, Loyola having been accused of instigating a woman of quality and her daughter to undertake a long pilgrimage bare-foot, as beggars, he was committed to prison for giving them such indiscreet advice. Hither he was followed by a great concourse of people who came to hear him. The return of the ladies, and their declaration that Loyola, so far from instigating, had dissuaded them from their pilgrimage, induced the grand-vicar to give him his liberty; but with a prohibition against continuing his exhortations to the people, till he had studied divinity four years. To this constraint Loyola was determined not to submit; and therefore removed to the university of Salamanca, where he pursued his practice of exhorting in private and public, and drew after him numerous auditors. This conduct excited the jealousy of the Dominican monks, on whose complaint against him, for intruding into the province of the clergy when he was only a simple laic, he was a second time committed to prison; and, when liberated, it was under a similar prohibitory sentence against his practice of exhortation with that pronounced at Alcalá. Mortified with being thus repeatedly silenced, he determined to quit his native country, and to repair to Paris, which was at that time the most celebrated university in Europe.

Loyola arrived at Paris in the beginning of the year 1528, with a firm resolution to pursue his studies with the utmost vigour; but his poverty, which reduced him to the necessity of lodging in the hospital of St. James, and begging his bread about the city, proved a great obstacle to his proficiency for some time. Afterwards he received assistance from some Spaniards in Flanders and England, which countries he visited during his vacation, and also from his friends at Barcelona; by which means he was enabled to provide for himself in a manner that was more reputable, as well as more favourable to his improvement. He re-commenced the study of the Latin language at Montague-college; went through a course of philosophy in the college of St. Barbara; and studied divinity under the Dominicans. His zeal, however, for instructing others, and for making converts to his practice of spiritual exercises, exposed him to trouble in Paris, as well as in the Spanish universities. Here an accusation was preferred against him before the inquisitor Matthew Ory, that without being licensed he had attempted to preach, and that by his spiritual exercises he seduced young men to neglect their duties at college; and he narrowly escaped the punishment of whipping in St. Barbara's college-hall. But, notwithstanding these checks to his zeal, he formed an association among the scholars of that college, the members of which took a vow to conform to a strict religious discipline, and to engage in a new undertaking for promoting the interests of the catholic faith, particularly by the conversion of infidels. This vow, after they had been confessed and communicated, they solemnly entered into in the church of Montmartre, on the 15th of August, 1534; and they renewed it twice in the same place, and on the same day, with the like ceremonies. Before this, upon finishing his divinity course, Loyola had been admitted to the degree of M. A. in 1532. The number of these associators was in the first instance seven, but they afterwards increased to ten. When all the members had completed their divinity course, they entered into an engagement to go in pilgrimage to Jerusalem; and, as Loyola found it expedient to pay a visit to Spain, for the settlement of some affairs, they agreed to meet him at Venice, at an appointed time, in order to embark for the Holy Land. When in Spain, Loyola went about the country preaching repentance, and drew together a prodigious crowd of auditors.

Among other things, he exclaimed against the fornication of priests, which was almost grown to be no scandal at that time; and by his representations procured severe laws to be enacted against gaming, and the concubinage of the regular clergy. He also recommended rules for the reformation of general manners, which are said to have been followed by good effects on public morals, and the increase of piety. Not forgetful, however, of the engagement with his companions, he took leave of his native country, and went by sea to Genoa; whence he travelled by land to Venice, and met them there in January 1537. They now prepared for their voyage to the east; but, before they embarked, they conceived that they ought to obtain the leave and benediction of the pope. They all of them, therefore, went to Rome, excepting Loyola, who had formerly received the papal license and blessing; and, having readily obtained what they asked of the pope, as well as permission for their being ordained priests, they returned to Venice. During his residence in this city, Loyola, formed an acquaintance with John-Peter Caraffa, afterwards pope by the name of Paul IV. After having been admitted into priests' orders, Loyola and his companions were desirous of proceeding immediately on their pilgrimage, when the breaking-out of war between the Turks and Venetians created an insurmountable obstacle to their undertaking. Thus circumstanced, they resolved to disperse themselves throughout the cities of the Venetian state, for the purpose of promoting a reformation of manners by their preaching and spiritual exercises; and that Loyola and two others should go to Rome, to offer their services to the pope in that employment.

Before the companions separated, they agreed to observe an uniform mode of life, under the following regulations: that they should lodge in hospitals, and subsist only upon alms; that, where several of them were together, they should be superiors by turns, each in his week, left their fervour should carry them too far, were they not to prescribe limits to one another in their penance and labours; that they should preach in public places, and in every other place where they could obtain permission, recommending the beauty and rewards of virtue, and pointing out the deformity and punishments of vice, and this in a simple evangelical manner, without the vain ornaments of eloquence; that they should instruct children in the Christian doctrine, and the principles of right conduct; and that they should receive no money for exercising their functions, but be governed in all their proceedings purely by a view to the glory of God. To these regulations they all consented; and, as it might be expected that they would often be asked questions concerning their denomination, and their institute, Loyola intrusted them to answer, that, having united to combat heresies and vices under the standard of Jesus Christ, they had no other name by which to distinguish themselves than that of "The Company of Jesus." This, it is said, was in consequence of a vision wherewith Loyola was favoured; in which God the Father appeared to him visibly, and desired his son Jesus Christ, who was loaded with a heavy cross, to take a special care both of him and his companions. Christ promised he would not fail, and said to Ignatius, *Ego vobis Romæ propitijs ero*; "I will be propitious to you at Rome." This made them take the name of the Company of Jesus, because the Eternal Father had given them (they say) for companions to his Son, who received them as such. See the annexed Plate.

Loyola arrived at Rome towards the end of the year 1537, and was introduced to pope Paul III. who received him very favourably, and encouraged him to proceed with zeal and vigour in his plan for reformation. Soon afterwards Loyola projected the institution of a new religious order, and summoned his companions to Rome, from the different places in which they were dispersed, that he might consult with them on the subject. After several meetings, they acceded to the plan proposed by him; the outlines of which were, that, to the vows of poverty and chastity, which

which they had already taken, they should add that of obedience; that a superior-general should be elected, to whom they must submit as to God himself; that they should readily and cheerfully undertake the missions to which he might appoint them, living upon alms, if he should so require; that the professed should possess nothing, either in particular or in common; but that in the universities they might have colleges, with revenues and rents for the subsistence of students. This plan Loyola laid before pope Paul III. and applied to him for the confirmation of the new society. The obstacles that intervened, and how they were removed, have been noticed under the article JESUIT, vol. x. p. 785. The papal bull for the establishment of the order, under the name of the Company or Society of Jesus, was granted in the year 1540, limiting the number of the professed to sixty; but, by a second bull in 1543, the society was empowered to extend the number of members without any restriction, and to enact particular statutes, or to alter the original ones, as circumstances might render it expedient. Loyola was created general of the order in the year 1541, and established his head-quarters at Rome, whence his companions were sent on missions into every part of the world.

Besides conducting the government of the society, Loyola employed himself in several occupations, particularly the conversion of the Jews. Some Jews who were baptized he maintained in the house of the Jesuits, and by his solicitations obtained an order from his holiness, that all Jews who became converts to Christianity should be provided for in a house appointed for that purpose. At his request, pope Paul III. enacted that they should preserve all their possessions; unjustly decreeing at the same time, that, if any of them who were well descended should turn Christians contrary to their parents' will, the whole property of the family should devolve to them. Popes Julius III. and Paul IV. afterwards added a new ordinance, namely, that all the synagogues in Italy should be taxed every year in a certain sum, to be applied to the maintenance of the profelytes. Loyola also extended his attention and zeal to the reformation of common prostitutes, and other lewd women. There was at this time in Rome a convent of Magdalenists, into which such dissolute women were admitted as were desirous of leaving their abandoned courses, provided they would oblige themselves to lead a conventual life during the remainder of their days, and take all the vows of the order. This condition Loyola justly conceived to be too severe, and calculated to prevent the good effects which had been expected from the founding of this convent. He therefore founded a new community, for the admission of such single or married women as were willing to renounce criminal pleasures, without bidding adieu to those of an honest and virtuous kind. It was called "The Community of the Grace of the Blessed Virgin," and occupied apartments built in St. Martin's church, to which Loyola conducted several women himself; and, when he was sometimes told, that the labour which he took for the conversion of those prostitutes was all to no purpose, since they were hardened in iniquity, and would return to their bad courses, he replied, that he should think his time well employed, if he could prevent them but one night from offending God. Calumny, we are informed, now levelled all her artillery at him; and the Jesuits in general were accused by their enemies of so many crimes, that the inhabitants of Rome became highly prejudiced against them, and they could scarcely appear in any place without meeting with persons who insulted and cursed them. In these circumstances Loyola petitioned the pope to appoint commissioners, for the purpose of examining these accusations; and by the governor and sub-governor of Rome they were pronounced to be malignant calumnies. Like most other founders of religious orders, Loyola had some female devotees, who assiduously attended him; but he did not permit convents of nuns to be founded who should follow his rule; and, when some females had obtained leave from the pope to

take the same vow with the Jesuits, he found so much inconvenience arising from their spiritual direction, that he applied to his holiness, who was so far influenced by his representations, that he exonerated the order from that perplexing task.

Soon after the accession of pope Julius III. in 1550, having obtained the confirmation of his order anew by that pontiff, Loyola was desirous of resigning his office of general; but the society would not consent to such a measure, and he retained it till his death, which took place in 1556, when he was in the sixty-sixth year of his age. Before that event, he had seen his order spread over the greatest part of the old and new worlds, and in the short space of sixteen years forming twelve large provinces, containing at least an hundred colleges. Loyola was in person of a middle stature, and of an olive complexion, with a bald head, eyes full of fire, a large forehead, and an aquiline nose. He was a little lame in consequence of the wound which he received at Pampeluna, though that defect was scarcely perceivable as he walked. Of fanaticism he had an abundant portion in his composition; and seems to have persuaded himself into a firm belief, that, as he gave out, and his followers afterwards taught, the plan which he formed of the constitution and laws of his society was suggested to him by the immediate inspiration of Heaven. But on him cannot be charged the worldliness and intrigues of the Jesuits. He declared, that, if he had four companions detached from all worldly interests, he would not despair of being able to convert the whole world. (Gent. Mag. i. 152.) In 1609, pope Paul V. beatified him; and, in 1622, he was canonized by Gregory XV. Innocent X. gave orders that he should have an ecclesiastical office said in his honour throughout the world, under the semi-double rite, in 1644; and Clement IX. raised it to the double rite in 1667.

But, whatever might be the honours which were paid to Loyola, the most surprising to which his history engages our attention, is the prodigious influence and power which his order acquired in a few years, both in the old world and in America, notwithstanding the opposition which it met with from his adversaries. In the year 1608, sixty-eight years after their first institution, the number of Jesuits had increased to 10,581. In the year 1710, the order possessed twenty-four *professed* houses; fifty-nine houses of probation; three hundred and forty residences; six hundred and twelve colleges; two hundred missions; one hundred and fifty seminaries and boarding-schools; and consisted of 19,998 persons. Of this formidable body, the constitution, genius, progress, and effects, are highly interesting objects; and under the article JESUIT, before quoted, we thought we had pursued the history of this formidable society to its *final* close. No sooner, however, is Pius VII. restored to power, than he issues a bull, by which the order is formally re-established. The following is an account of this curious transaction. On the 7th of August last, (1814.) the pope celebrated high mass at the altar of St. Ignatius, in the church of Jesus at Rome; and afterwards, ascending a throne, ordered a bull to be read, re-establishing the Order of Jesuits. The motives which his holiness assigns for this act are as singular, as the act itself is important. He had been called upon some thirteen years ago by the emperor Paul of Russia; and king Ferdinand of Naples, (the first professing the Greek faith, and unquestionably out of his mind; the latter acknowledged to be of imbecile understanding), to allow of the establishment of the Jesuits in their dominions; and, having kindly condescended to grant their request, he now distrusts that which their *enlightened* minds esteemed so great a blessing, over the rest of Europe. The bull says, "The catholic world demands, with one unanimous voice, the re-establishment of the Company of Jesus; and we daily receive pressing petitions from the archbishops and bishops to that effect." The bull re-establishes the order of Jesuits by name in the empire of Russia, in the kingdom of the Two Sicilies, the Ecclesiastical States, and all other

other states; constitutes Taddeo Barzozowski, *ad interim*, General of the Company of Jesus; lawfully delegates to him and the other members of the company all suitable and necessary powers, to receive and distribute those who may wish to enter the order among the different colleges, where they shall conform their mode of life to the rules prescribed by St. Ignatius of Loyola. It also declares, that they "may freely and lawfully apply to the education of youth in the principles of the Catholic faith, and to direct colleges and seminaries; likewise hear confessions, preach the word of God, and administer the sacraments in the places of their residence." The most offensive passage is in the conclusion; it presents a clear view of the pope's pretensions: "We ordain, that the present letters be inviolably observed, according to their form and tenour, in all time coming; that they enjoy their full and entire effect; that they shall never be submitted to the judgment or revision of any judge, with whatever power he may be clothed." Again; "Should any one attempt to infringe, or by an audacious temerity oppose, any part of this ordinance, let him know that he will thereby incur the indignation of Almighty God, and of the holy apostles Peter and Paul." Thus the pope, whose firmness was admired even by his persecutors while he was at Fontainebleau, has entirely lost his credit since he has proceeded to re-establish the Jesuits and persecute the Freemasons. The emperor of Germany, however, is not convinced, like the pope, of the necessity of recalling the Jesuits. The holy father made several ineffectual attempts to obtain their re-establishment in the Austrian states. His majesty gave a decided refusal. We trust the king of France will do the same; and, as to Russia, it is to be remembered, that Paul does not reign there at present. In Spain and Portugal, it is most likely the Jesuits will be cordially received: they had always been the chief directors of the Inquisition, now so happily restored by Ferdinand the Beloved.—*Robertson's Hist. of Cha. V. Emilianna's Hist. of the Monastic Orders. Gent. Mag. Apr. 1731. and Sept. 1814.*

LOYUNG', a town of China, of the third rank, in the province of Quang-si: seventeen miles north-east of Lieou-tcheou.

LOZAY', a town of France, in the department of the Lower Charente: six miles north of St. Jean d'Angely, and eighteen east-north-east of Rochefort.

LO'ZE, a river of Lunenburg, which runs into the Elbe at Harburg.

LO'ZE, a river of Congo, which runs into the Atlantic. It is navigable for boats, but there is no harbour at its mouth. Lat. 7. 55. S.

LOZ'ENGE, *f.* [*lofenge*, Fr.] A rhomb.—The best builders resolve upon rectangular squares, as a mean between too few and too many angles; and, through the equal inclination of the sides, they are stronger than the rhomb or *lofenge*. *Wotton's Architecture*.—A form of a medicine made into small pieces, to be held or chewed in the mouth till melted or wasted. A cake of preserved fruit. Both these are so denominated from the original form, which was rhomboidal.

LOZENGE, in heraldry, a four-cornered figure resembling a pane of glass in old casements. Though all heralds agree, that single ladies are to place their arms on lozenges, (see *HERALDRY*, vol. ix. p. 427, 435. and Plate I. XVI. XXXIX. XLVII. CVII.) yet they differ with respect to the causes that gave rise to it. Plutarch says, in the life of Theseus, that in Megara, an ancient town of Greece, the tomb-stones, under which the bodies of the Amazons lay, were shaped after that form; which some conjecture to be the cause why ladies have their arms on lozenges. Petra Sancta will have this shield to represent a cushion, whereupon women used to sit and spin, or do other housewifery. Sir J. Ferne thinks it is formed from the shield called *teffera*, which the Romans, finding unfit for war, did allow to women to place their ensigns

upon, with one of its angles always uppermost. Others say it was the ancient figure of the spindle.

LOZENGE', or LOZ'ENGY, *adj.* See *HERALDRY*, vol. ix. p. 422.

LOZE'RE, a department of France, bounded on the north by the departments of the Cantal and Upper Loire, on the east by the Ardèche, on the south by the Gard, and on the west by the Aveyron and Cantal; about fifty-five miles long; and thirty-three wide. It derives its name from a ridge of mountains, about twelve miles south-east from Mendé. Mendé is the capital.

LOZIO'ZE, a town of Poland, in the palatinate of Bielsk: fifty-six miles south-west of Bielsk.

LOZ'SNITZ. See *LOSSNITZ*, p. 674.

LOZ'ZI, a town of the island of Corfica: eleven miles north-west of Corte.

LOZ'ZO, a town of Italy, in the Paduan: eight miles south-south-west of Padua.

LU, a town of France, in the department of Marengo: eight miles south of Casale, and eight west of Alexandria.

LU, a city of China, of the second rank, in Chantong: three hundred miles south-south-east of Pekin. Lat. 35. 36. N. lon. 119. E.

LU, *f.* [see *LOO*, p. 630.] A game at cards:

Ev'n mighty pam, who kings and queens o'erthrew,  
And mow'd down armies in the fights of *lu*. *Pope.*

LU, *f.* in Chinese music, implies a key. Dividing the octave into twelve semitones, they give the name of *lu* to each, numerically.

LU-KI', a city of China, in Hou-quang. Lat. 59. 22. N. lon. 108. 42. E.

LU-KI', a city of China, in the province of Kiang-si. Lat. 27. 43. N. lon. 116. 18. E.

LU-NAN', a fortress of China, in the province of Yunnan. Lat. 24. 31. N. lon. 102. 39. E.

LU'A, a river of the island of Cuba, which runs into the sea twenty-five miles north-east of Cape Cruz.

LU'A, a town of Arabia, in the province of Oman, on the coast: ten miles north of Sohar.

LU'A, in mythology, a Roman divinity mentioned by Livy, lib. viii. and invoked in war: the name is supposed to be derived from *luere*, to expiate.—A goddess at Rome, who presided over things which were purified by lustrations, whence the name, *à luendo*.

LUA'BO, a river of Africa, which branches off from the Zambeze, and runs into the Atlantic in lat. 19. S.

LUA'BO, an island on the west coast of Africa, between the mouths of the rivers Luabo and Zambeze.

LUA'NA POINT, a cape of the island of Jamaica, on the south coast. Lat. 18. 2. N. lon. 77. 51. W.

LUAN'CO, a town of Spain, in Asturia, near the west coast: twenty miles north of Oviedo.

LUAN'ZA, a town of Africa, in the country of Morcaranga. Lat. 17. 15. S. lon. 32. 30. E.

LUAR'CA, a town of Spain, on the north coast, in the province of Asturia: thirty miles north-west of Oviedo.

LU'BAD, a town of Asiatic Turkey, in Natolia, on a lake to which it gives name: seven miles south of Burfa.

LU'BAD, a lake of Natolia: twenty-one miles long, and four broad; south of Burfa.

LU'BAN, a town of Lithuania, in the palatinate of Novogrodek: twenty miles south-east of Sluck.

LU'BAN, or LOU'BAN, one of the Philippine Islands, in the Eastern Indian Sea, about twelve miles in circumference; subject to the Spaniards.

LU'BAN. See *LAUBAN*, vol. xii. p. 286.

LUBAR'TOW, a town of Poland, in Volhynia: thirty-six miles west of Berdiczow.

LUBAS'ZYN, a town of Lithuania, in the palatinate of Minsk: fifty-two miles east of Minsk.

LU'BAT, a town of Asiatic Turkey, in Natolia: twenty-eight miles west of Burfa.

LUBATCH'OW, a town of Austrian Poland, in Galicia: sixteen miles north of Lemberg, and seventy-five south-south-east of Lublin.

LUB'BARD, *f.* A lazy sturdy fellow:

Yet their wine and their victuals those curmudgeon *lubbards* Lock up from my sight, in cellars and cupboards. *Swift.*

LUB'BERT (Sibrand), a learned Dutch Calvinist divine, was born at Langoworde in Friesland, about the year 1556. After studying polite learning in the college of Bremen, he removed to the university of Wittemberg, where he distinguished himself by his application and proficiency, particularly in his acquaintance with the Hebrew language. Afterwards he went to Geneva, and diligently attended the lectures of Beza, Casaubon, and Francis Portus. From Geneva he went to Newstadt, to which place prince Casimir had removed the professors of the reformed religion. When he was prepared for entering on the ministerial profession, he was invited to undertake the pastoral care by the reformed church at Brussels, and by that of Embden. He accepted of the offer of the latter, and discharged the duties of his post with great fidelity and zeal. In the year 1584, he accepted of an invitation, to remove into Friesland, where he was appointed preacher to the governor and to the deputies of the states of that province, and also professor of divinity in the new university of Franeker. On this occasion he went to Heidelberg, where he was admitted to the degree of doctor of divinity; and then returned to his professorship, which he occupied with reputation for nearly forty years, during which period he was often employed in very important affairs. He was one of the deputies to the synod of Dort, and one of the wisest and most learned men of the anti-remonstrant party in that assembly. In the university, he was a strict observer of the statutes; and frequently refused the rectorship, on account of the remissness in discipline which had been suffered to take place, and which he was fearful he should not be able to controul. A year before his death, however, he was prevailed upon by intreaties and solicitations to accept of that dignity, there being a probability that the authority of the sovereign would support his measures for promoting reformation and order. He died at Franeker in 1625, about the age of sixty-nine. He was the author of several learned and esteemed treatises against Bellarmine, and his second, Gretzer, in the controversies relating to the scriptures, the pope, the church, and the councils. He also published a work against Socinus, entitled *De Christo Salvatore*; and he exerted his pen against Arminius, Vorstius, Grotius, and the other assertors of the cause of the remonstrants. The last work which he published, was A Commentary on the Catechism of Heidelberg. Even Scaliger himself, who scarcely gave any person a good word, acknowledged that he was a learned man. *Bayle.*

LUB'BECKE, or LUTHICKE, a town of Westphalia, in the county of Minden, consisting of about 258 dwelling-houses; and which, ever since the year 1270, when it obtained the privileges of a city, has been environed with ramparts, ditches, and walls. This place enjoys considerable immunities, and in particular the territorial jurisdiction over a considerable district. Its magistracy is possessed of the civil and criminal jurisdiction in the first instance. The chief trade is in yarn and linen, breeding cattle, and brewing beer. The town was wholly destroyed by fire in the years 1368 and 1519, as also almost one half of it in 1705; and in 1734 it likewise sustained great damage by the same dreadful calamity. It is fourteen miles west of Minden.

LUB'BEN, or LU'BNO, a town of Lower Lusatia, in a circle to which it gives name, on the Spree: thirty-six miles south of Berlin, and fifty-four north of Dresden. Lat. 51. 57. N. lon. 13. 45. E.

LUB'BER, *f.* [from *lubber*, said by Junius to signify in Danish *fat*.] A sturdy drone; an idle, fat, bulky, lovel; a booby.—These chase the smaller shoals of fish from the

main sea into the havens, leaping up and down, puffing like a fat *lubber* out of breath. *Carew.*

Venétians do me more uncouthly ride

Than did your *lubber* state mankind bespide. *Dryden.*

LUB'BERLY, *adj.* Lazy and bulky.—I came to Eaton to marry Mrs. Anne Page; and she's a great *lubberly* boy. *Shakespeare.*

LUB'BERLY, *adv.* Awkwardly; clumsily.—Merry Andrew on the low rope copies *lubberly* the same tricks which his master is so dexterously performing on the high. *Dryden.*

LUB' CZ, a town of Russian Lithuania: twenty-five miles north of Novogrodek.

LU'BEC, a city of Germany, situated within the limits of Holstein, on the river Trave, which is a navigable river, and above the city receives the Steckenitz, another navigable stream, by means of which it communicates with the Elbe; and below is the Wackenitz, which is likewise navigable, and issues from the Lake of Ratzeburg. After joining the Sewartau in its progress, this river falls into the Baltic. By means of these several streams, long and flat-bottomed vessels pass from the Baltic along the Trave, the Steckenitz, and the Elbe, into the German Ocean. The town stands on the two sides of a long hill, of a moderate height, the eastern part extending itself, down the declivity towards the Wackenitz, as the western does towards the Trave. Exclusive of walls and towers, it is farther surrounded with strong ramparts, and to these has the addition of wide moats. The streets are for the most part steep, and the houses all of stone, and old fashioned. Ever since the year 1530, Lutheranism has been the established religion of the place. Besides the cathedral of an ancient see, it has also four parochial churches. This city was the head of the Hanse-towns; and in the town-house is a large hall, called *Hanse-saal*, where their deputies used to meet. See HANSEATIC LEAGUE, vol. ix. On the spot where the city now stands, was formerly a town named *Bucu*; on the demolition of which, about the year 1144, Adolphus II. count of Holstein and Schauenburg, laid the first foundations of the celebrated city of Lubec. Its speedy increase, and the resort thither of all the merchants from Bardewick, created such umbrage to Henry the Lion duke of Saxony, that he gave orders that nothing should be sold at this place but provisions. In 1156, Lubec being burnt down, duke Henry, after a long negotiation, prevailed on count Adolphus to give him the town; which having rebuilt, he erected it into a free port; and, in 1158, conferred on it the stadtrecht, or municipal right, which took its rise from Seest, and was then become very famous. This right was confirmed to it, in 1183, by the emperor Frederick I. and, in 1226, by Frederick II. and afterwards by the succeeding emperors. In 1276, the whole city was destroyed by fire, five houses only excepted. In the matricula of the empire, its contingent was 480 florins; and to the chamber of Wetzlar it paid 557 rix-dollars, and 88 kruitzers. Its see was first erected by the emperor Otho I. at Oldenburg, a city of Holstein, in the year 951, for the conversion of the Wends, who inhabited this country, and removed to Lubec in the year 1164. The reformation of the diocese was begun under bishop Henry of Bo-cholt, and, being forwarded by his successor, Detley, of Reventlau, who was promoted to the see in 1535, as also by the succeeding protestant bishop, it was accomplished in 1561. The bishop of Lubec, though a prince of the empire, yet in the college of princes sat neither on the spiritual nor temporal bench, but on a particular one placed crosswise, and laid there purely for him and the bishop of Osnabruck, when a Lutheran. He had also a vote among the princes of the circle of Lower Saxony. The cathedral stands in the imperial city of Lubec, where however, it is invested with no manner of authority. The chapter consists of thirty persons, who, four Roman catholics excepted, are all Lutherans.

At the settling the indemnities at Ratisbon in 1802, it was decreed that the bishopric with its chapter should be secularised in favour of the duke of Oldenburg; reserving only the property within the city, which was to be added to the domain of the city. In the *definitive* treaty of indemnities, Feb. 25, 1803, it was again acknowledged as one of the three cities of the Hanseatic League, (together with Hamburg and Bremen,) with the guarantee of their jurisdiction and *perpetual neutrality*. However, when Bonaparte over-ran the Prussian dominions in 1806, Lubec fell entirely into the hands of the French, and the inhabitants were cruelly plundered, and many of them massacred. On the 1st of January, 1811, Lubec, Bremen, and Hamburg, were formally annexed to the French empire; and Davoust was appointed governor-general of the Hanse-towns and the districts thereto appertaining. In gratitude for these benefits, they sent a deputation to Paris to wait on the emperor, who, being admitted into the imperial presence on Sunday the 17th of March, 1811, Mr. Doorman, as president of the deputation, presented an address, from which we shall extract a few passages.

"Sire; At all times we have been Frenchmen in our hearts, and from preference. If the anarchy which preceded your majesty's reign, relaxed, for a moment, ties of such long standing and so agreeable, we hastened to draw them closer the instant your accession to power re-assured to the world social order; and your new subjects, sire, cannot swear to be more faithful to you than they have shown themselves to be for these ten years past; more devoted to your pleasure, more obedient to your system, nor more disposed to contribute to the accomplishment of your designs, by every effort and sacrifice in their power; and it is a pleasing consolation to the honourable remembrances of our country, to reflect, that our independence could yield only to him to whom every thing has yielded, and that our political existence was to cease only at that epoch when the destinies had determined that the Tiber and the Elbe should flow under the same laws. If your majesty, from that devoted point whence you take a view of human affairs, permit our feebleness to indulge in any degree of pride, we still venture to think that we enter not as a vulgar territory, as an obscure acquisition, into that immense circle of provinces, struck with admiration, and happy in obeying a single master."

We shall, in like manner, give a few passages from the reply of his majesty the Emperor and King.

"Gentlemen, Deputies of the Hanse Towns of Hamburg, Bremen, and Lubec; You formed part of the Germanic empire; your constitution terminated with its existence. Since that time your situation was uncertain. I intended to re-constitute your cities under an independent administration, when the changes produced in the world by the new laws of the British council rendered the project impracticable. It was impossible for me to give you an independent administration, since you could no longer have an independent flag. Your union with the empire is the necessary result of the British laws in 1806 and 1807, and not the effect of any ambitious calculation. In my civil laws you will find a protection, which, in your maritime position, you can no longer find in the political code. That maritime commerce, which constituted your prosperity, cannot henceforth be revived, but in conjunction with the restoration of my maritime power. The rights of nations, the liberty of the seas, and a general peace, must be re-conquered at one and the same time. When I shall have upwards of 100 sail of the line, I shall subjugate England in a few campaigns. The seamen of your coasts, and the materials conveyed to the mouths of your rivers, are necessary to my purpose. France, within her old limits, could not construct a marine in time of war. When her coasts were blockaded, she was compelled to receive the law. Now, from the increase my empire has received within the last six years, I can build, equip, and arm, twenty-five sail of the line yearly, without the slightest delay or obstruction from the existence of a ma-

ritime war. The accounts that have been given me of the good disposition which animates your fellow-citizens have afforded me pleasure; and I hope, in a short time, to have to praise the zeal and bravery of your seamen."

The above extracts will certainly be read with marked attention and curiosity at the present day; and deserve to remain upon record.—Lubec was taken by the allies (Swedes, Russians, and Austrians) on the 5th of December, 1813. Its fate remains to be decided by the Congress at Vienna, which is daily expected to open (Dec. 1814.) for the *definitive* adjustment of that and many other most important interests. Lat. 53. 52. N. lon. 10. 40. E.

LU'BEĆ, or LUBOI, an island in the Eastern Indian Ocean, near the island of Madura. Lat. 5. 45. N. lon. 112. 44. E.

LU'BEN, a town of Silesia, in the principality of Lignitz; the town itself is small, but the suburbs are large: here is a Lutheran college. It is twelve miles north of Lignitz, and eighteen west of Wohlau. Lat. 51. 22. N. lon. 16. 15. E.

LU'BENAU, or LUB'NOW, a town of Lower Lusatia, in the circle of Calau, on a small river which runs into the Spree, the chief place of a barony, with a chateau: fifteen miles south-south-east of Lubben, and fifty north of Dresden. Lat. 51. 53. N. lon. 13. 52. E.

LU'BENAU. See LIEBENAU, vol. xii.

LU'BENTHAL. See LIEBENTHAL, vol. xii.

LU'BERSAC, a town of France, in the department of the Corrze: eight miles west of Uzerche, and twenty-one north-west of Tulle.

LU'BIEN, a town of the duchy of Warsaw: twenty-six miles south-south-west of Posen.

LUBIENIETZ/KI (Stanislaus), a celebrated Polish Unitarian minister, was descended from a noble family, related to the house of Sobieski, and born at Racow in the year 1623. His father, who was minister of that city, educated him with particular care, and not only sent him to the public schools, but took him to the diets of Poland, in order that he might introduce him to the *grandeess*, and instruct him in every thing that was suitable to his birth. Afterwards our young scholar was sent to Thorn, where he continued two years, and joined the two Socinian deputies who were sent to that city in 1644, during a conference which was held on the subject of a re-union of religions, and of which he drew up an account. About the year 1648, he was admitted into the ministry by the synod of Czarcow, and appointed pastor of a church of that name. This situation he was obliged to quit in 1655, upon the irruption of the Swedes into that neighbourhood; and in the following year he retired with his family to Cracow. Here he employed much of his time with the other ministers, in frequent fasting, prayer, and preaching; and for the benefit of the Hungarian Unitarians, who came thither with prince Ragotki, he frequently preached in the Latin language. While he continued at Cracow he was much noticed by the king of Sweden, who did him the honour of admitting him to his table. After that city fell again into the hands of the Poles, in 1657, he followed the Swedish garrison, with two other Unitarians, to supplicate that they and their friends of the same religious persuasion, who had placed themselves under his protection, might be comprehended in the amnesty to be granted at the conclusion of the peace with Poland. This was not granted; and, finding that there was no hope of remaining in safety in his native country, he went to Copenhagen, in 1660, to seek an asylum from the king of Denmark for his persecuted brethren, who had been banished from Poland. He received kind treatment from his majesty, who could do nothing more than promise to connive at their settlement at Altona. Thus circumstanced, he thought it advisable to return to Pomerania, and arrived at Stettin in 1661. Persecution followed him to this place, and he was obliged to remove to Hamburg, where he directed his family to join him in the year 1662; from this city he was driven by the same

same fiend in 1667, and took refuge again at Copenhagen. During this second visit to Denmark, he was led to indulge the hope, that he had at length a prospect of a peaceful settlement; for the magistrates of Fredericburg consented that the Unitarians should reside in their town, and enjoy without molestation the private exercise of their religion. Upon this he removed to that city, and invited his banished brethren to join him; sparing no pains nor cost, to the great injury of his own estate, that he might settle and provide for them there. The enemies of the Unitarians, however, soon pursued them into this hospitable retreat from persecution. As the duke of Holstein-Gottorp, to whose territory Fredericburg belonged, had not given his formal consent to the settlement of the unitarian refugees in that place, he was persuaded to publish an edict, by which they were banished from that city, and from every part of his dominions. In this emergency, Lubienietzki ventured to repair once more to Hamburgh, where the intercession of the king of Denmark with the magistrates induced them for some time to connive at his residence. But the intolerant zeal of the Lutheran ministers would not suffer him to remain long in peace; and, by their incessant solicitations, the magistrates were at last prevailed upon to issue an injunction for his departure from their jurisdiction. He was then sick, but promised to obey them as speedily as possible. Some wicked enemy, however, to make sure of his destruction, contrived that poison should be administered to him in his food, to which two of his daughters, as well as himself, fell a sacrifice, while his wife, who had eaten very sparingly, narrowly escaped the same fate. He died in 1675, about the age of fifty-two, and was buried in the church of Altena, notwithstanding the opposition of the Lutheran clergy, who, like their persecuting prototypes in the church of Rome, were desirous of pursuing him to the grave, and treating what they were pleased to term a heretic's corpse with marks of infamy. Before his death, he had the satisfaction of having obtained for his banished brethren a retreat at Manheim, under the protection of the Elector Palatine, who is styled the most latitudinarian prince at that time in the world, and who is certainly entitled to the honour of being the most tolerant. Lubienietzki wrote a vast number of books, the greater number of which has not been committed to the press. The titles of them may be seen in Sandius's *Bibliotheca Antitrinitariorum*, p. 165, &c. The most considerable of his published works shows him to have been well skilled in astronomy, and is entitled, *Theatrum Cometicum*, &c. in 2 vols. folio, 1667. It is a most elaborate performance, and contains a minute historical account of every single comet which had been seen or recorded from the deluge to the year 1665. At the time of his death, he was engaged in writing a History of the Reformation in Poland; of which all that was found among his papers was printed in Holland in 1685, in 8vo. with an account of the author's life prefixed to it. *Bayle*, *Hutton's Math. Dict.*

LU'BIM, [Hebrew.] A man's name.

LU'BIMS, the descendants of Lubim.

LU'BIN (Augustine), a learned French Augustine monk and able geographer, was born at Paris in the year 1624. He entered at an early age among the religious of the reformed order of St. Augustine; and, applying with great diligence to his studies, distinguished himself by his proficiency, particularly in ancient and modern geography, and in sacred and profane history. His scientific skill was rewarded with the post of geographer to the king. He died in a convent belonging to his order at Paris in 1695, when he was in the seventy-second year of his age. He enriched the republic of letters with several works, which, if they are not recommended by the graces of style, abound in useful and curious researches, and are monuments of the erudition of the author. They consist of, 1. *Martyrologium Romanum, cum Tabulis Geographicis et Notis Historicis*, 4to. 1660. 2. *Tabulæ Sacræ Geogra-*

*phicæ, five Notitia antiqua, medii temporis, et nova, Nominum utriusque Testamenti ad Geographiam pertinentium*, 8vo. 1670, forming a dictionary of all the places mentioned in the Bible. 3. Geographical Tables, drawn up to illustrate the abbé Tallemant's translation of the Lives of Plutarch from the original Greek; 12mo. 1670. 4. A Sequel to the Key of the grand Register of the French Benefices; containing the Names of Abbays, and their Founders, their Situation, &c. 12mo. 1671. 5. An Account of the Abbays in Italy; 4to. in Latin. 6. *Orbis Augustinianus, five Conventuum Ordinis Eremitarum S. Augustini Chorographica et Topographica Descriptio*; with a number of maps and designs engraved by the author; 12mo. 1672. 7. *Index Geographicus, five in Anales Ufferianos Tabulæ et Observationes Geographicæ*; prefixed to an edition of Uther, printed at Paris in 1673, folio. 8. History of Lapland, translated from Scheffer; 4to. 1678. 9. *The Geographical Mercury, or Guide to the Curious in Maps*; 12mo. 1678. which, though a work of value when it was first published, is obviously not adapted to modern times. *Moreri*.

LU'BIN (Eilhard), a theologian and philologist, was born in 1565, at Welterstedt, in the county of Oldenburg, of which place his father was minister. He studied at several German universities, and acquired an exact knowledge of the Greek language, with the branches of science usually taught in those seminaries. He was appointed professor of poetry at Rostock in 1595, and of theology ten years afterwards. He was twice married; and died in 1621. He made himself known by several philological publications, of which were, 1. *Antiquarius, five Priscorum et minus Usitatorum Vocabulorum Brevis Interpretatio*. 2. *Clavis Linguæ Græcæ, five Vocabula Latino-Græca*. 3. Editions of Anacreon, Juvenal, and Persius, with notes. 4. Horace and Juvenal, with a paraphrase. 5. *The Anthologia, with a Latin version*. 6. *Epistolæ veterum Græcorum, Gr. et Lat.* 7. *The Dionysiacs of Nonnus, Gr. and Lat.* 8. Commentaries on the Epistles of St. Paul. 9. *Monotessaron*, being a harmony of the evangelists. His Latin poems are printed in the third volume of the *Deliciæ Poetar. German.* The work, however, by which he obtained most fame in his life, though now forgotten, was a treatise on the origin of evil, entitled, "*Phosphorus, de Prima Causa et Natura Mali, Tractatus Hypermetaphysicus*." The hypothesis he proposed was that of two co-eternal principles, God and Nothing, of which the latter stood in the place of the evil principle of the Manicheans and other theorists. To those who are conversant in the history of metaphysical controversies, it will not appear extraordinary that this unintelligible system had its opponents and defenders. *Bayle*.

LUBINIA, *f.* [so named by Commerçon, in honour of his friend the chevalier de *St. Lubin*, who distinguished himself at the siege of Madras, and was, in the confidence of Hyder Ali.] In botany, a genus of the class pentandria, order monogynia, natural order lysimachia, *Juss.* The generic characters are—Calyx: perianthium in five deep, ovate, rather unequal, inferior, segments, with membranous edges, permanent. Corolla: of one petal, nearly salver-shaped, slightly irregular; tube funnel-shaped, the length of the calyx; limb in five deep obtuse segments, the two lowermost rather the smallest. Stamina: filaments five, awl-shaped, inserted into the lower part of the corolla, equal, the length of the tube; anthers erect, oval, two-lobed. Pistillum: germen superior, almost globular, smooth; style cylindrical, the length of the filaments, permanent; stigma simple, obtuse. Pericarpium: capsule roundish-oval, crowned by the style, with five notches at the top, of one cell, not bursting. Seeds: numerous, roundish, compressed, rough. Receptacle: central, ovate, somewhat compressed, unconnected with the capsule except at the base, from which it separates as the seeds ripen.—*Essential Character*. Corolla salver-shaped, irregular; capsule ovate, not bursting, crowned with

with the style, of one cell; seeds numerous, attached to a central receptacle.

*Lubinia spatulata*, the only known species. The root is said by Ventenat to be biennial, and the flowers to be produced in the beginning of summer. This plant has something of the aspect of *Convolvulus tricolor*, but is firmer, and quite smooth. The woody stem produces a few simple branches, a span long, clothed with numerous, scattered, spatulate, obtuse, entire, rather-fleshy leaves, above an inch long, tapering down into a bordered foot-stalk. Flowers axillary, solitary, on simple stalks, half as long as the leaves; calyx dark brown, dotted with black, white at the edge; corolla yellow, nearly as broad as that of *Lysimachia nemorum*. Capsule when pressed bursting irregularly, sometimes at the sides, sometimes, according to Ventenat, into two or four apparent valves. Lamarck says it has five valves, but he perhaps judged from the notches at the top. The fruit therefore, and the irregular corolla, mark this genus as sufficiently distinct from *Lysimachia*; to which may be added, on the score of habit, its alternate, not opposite or whorled, leaves. Native of the Isle of Bourbon.

LU'BIO. See LUBBEN.

LU'BISCHAW, a town of Prussia, in the province of Pomerelia: eighteen miles south of Dantzic.

LU'BISCHMAT, a town of Prussia, in the palatinate of Culm: five miles east of Thorn.

LUBLENIETZ', or LUBEN'SKY, a town of Silesia, in the principality of Oppeln: forty-two miles north of Beuthen, and twenty-nine east of Oppeln. Lat. 50. 39. N. lon. 18. 42. E.

LUB'LIN, a city of Poland, and capital of a palatinate; part of which is annexed to the new country of Galicia. It is surrounded with a wall and ditch; and a place of good trade, but not very large. It has a castle, built on a high rock, and stands on the little river Bystrzyna, in a very pleasant and fertile country. Here are several churches and convents. Great numbers of Jews live in the suburbs of Lublin, and have a spacious synagogue there. Three annual fairs are held here, and each of them lasts a month; which are frequented by great numbers of German, Greek, Armenian, Arabian, Rutilian, Turkish, and other, traders and merchants. The chief tribunal for Little Poland was held here, besides a provincial diet, and a court of judicature. In the year 1240, Lublin was set on fire by the Tartars; and after that continued for a long time in the possession of the Russians. In 1447, and 1606, this town also suffered greatly by fire; and in 1656 it was laid in ashes by the Swedes. It is 115 miles east-north-east of Cracow, and eighty-five south-east of Warsaw. Lat. 51. 6. N. lon. 22. 45. E.

LUBLY'O, a town and citadel of Hungary: four miles west-north-west of Palotza. Lat. 49. 13. N. lon. 20. 44. E.

LUB'NAIG LOCH, the lowest lake on the river Balvaig, in Perthshire. It is above four miles in length; but is extremely narrow, presenting the same picture with most of the highland lakes, of a sheet of water arrested in a deep ravine, and thrown back by obstacles from the lower extremity. Such is likewise the character of Loch Doine and Loch Voil, which are placed higher up the same river. In the middle of Loch Lubnaig is a tremendous rock, called *Craig-na-Cokeilg*, or the "Rock of the Joint Hunting," from having been the boundary between the estates of two ancient chieftains, who were wont to meet here on sporting days, and to hunt round the rock in common, after which they separated, each turning towards his own property, to denote that he was at the utmost boundary of his possession.

LUBNE'KI, a town of Samogitia: ten miles north of Miedniki.

LUB'NI, a town of Russia, in the government of Kiev, on the Sula: eighty miles east-south-east of Kiev. Lat. 50. N. lon. 32. 54. E.

VOL. XIII. No. 940.

LUB'NITZ, a town of Germany, in the principality of Culmbach: two miles north-north-west of Gefres.

LUB'NOW. See LUBENAU.

LU'BOK, commonly called the *Bavian*, or Baboon, an island in the East Indian sea, near the coast of Java; not large, but extremely populous. Seventy or eighty vessels are continually passing to and fro between this island and the coasts of Java and Borneo.

LUBO'LO, a province of Angola, on the banks of the Coanza.

LUBOM'LA, a town of Austrian Poland, in Galicia: thirty-two miles east of Chelm.

LU'BOZ, a town of Lithuania, in the palatinate of Novogrodek: sixteen miles north-east of Novogrodek.

LU'BRIC, *adj.* [*lubricus*, Lat.] Slippery; smooth on the surface:

A throng

Of short thick sobs, whose thund'ring volleys float

And roul themselves over her *lubric* throat

In panting murmurs.

*Crashaw.*

Uncertain; unsteady.—I will deduce him from his cradle through the deep and *lubric* waves of fate, till he is swallowed in the gulf of fatality. *Wotton*.—Wanton; lewd; [from *lubrique*, Fr.]

Why were we hurry'd down

This *lubric* and adul'rate age;

Nay, added fat pollutions of our own,

T' increase the streaming ordures of the stage? *Dryden.*

To LU'BRICATE, *v. a.* To make smooth, or slippery; to smoothe.—The patient is relieved by the mucilaginous and the saponaceous remedies, some of which *lubricate*, and others both *lubricate* and stimulate. *Sharp.*

LU'BRICATING, *f.* The act of making smooth and slippery.

LUBRICIOUS, *adj.* See LUBRICOUS.

LUBRICITY, *f.* Slipperiness; smoothness of surface.

Aptness to glide over any part, or to facilitate motion.—Both the ingredients are of a lubricating nature; the mucilage adds to the *lubricity* of the oil, and the oil preserves the mucilage from inspissation. *Ray on Creation.*

Uncertainty; slipperiness; instability.—A state of tranquillity is never to be attained, but by keeping perpetually in our thoughts the certainty of death, and the *lubricity* of fortune. *L'Esrange*.—Wantonness; lewdness.—From the lechery of these fauns, he thinks that satyr is derived from them, as if wantonness and *lubricity* were essential to that poem, which ought in all to be avoided. *Dryden.*

LU'BRICOUS, *adj.* Slippery; smooth.—The parts of water being voluble and *lubricous* as well as fine, it easily insinuates itself into the tubes of vegetables, and by that means introduces into them the matter it bears along with it. *Woodward's Nat. Hist.*—Uncertain.—The judgment being the leading power, if it be stored with *lubricous* opinions instead of clearly-conceived truths, and peremptorily resolved in them, the practice will be as irregular as the conceptions. *Glanville's Scep sis.*

LUBRIFICATION, *f.* The act of lubricating or smoothing.—The cause is *lubrifaction* and relaxation, as in medicines emollient; such as milk, honey, and mallows. *Bacon.*

LUBRIFICATION, *f.* The act of smoothing.—A twofold liquor is prepared for the insertion and *lubrifaction* of the heads of the bones; an oily one, furnished by the marrow; a mucilaginous, supplied by certain glands seated in the articulations. *Ray on Creation.*

To LU'BRIFY, *v. a.* To smoothe and soften.—Euphorbium fretteth the entrails, therefore must be tempered with something that *lubrifeth* and allayeth its heat and sharpness. *Culpeper.*

LU'BRIN, a town of Spain, in the province of Grenada: five miles west of Vera.

LUBRONG', or TESHOO-LOOMBOO, a town of Thibet,

the residence of the Teshoo Lama, and capital of that part of the country which is immediately subject to his authority; situated in lat. 29. 4. 20. N. lon. 89. 7. E. This is a large monastery, consisting of three or four hundred houses, the habitations of the Gylongs, besides temples, mausoleums, and the palace of the sovereign pontiff; in which are comprehended also the residence of the regent, and the dwellings of all the subordinate officers, both ecclesiastical and civil, belonging to the court. It is included within the hollow face of a high rock, and has a southern aspect. Its buildings are all of stone, none less than two stories high, flat-roofed, and covered with a parapet, rising considerably above the roof, composed of heath and birchwood, inserted between frames of timber, which form a ledge below, and are fashioned above into a cornice, capped with masonry. All the houses have windows; that in the centre projecting beyond the walls, and forming a balcony: they are not closed with shutters, but black mohair curtains. The principal apartment in the upper story has an opening over it, covered with a moveable shed, which serves the purpose of sometimes admitting light and air, and in the winter season occasionally, the grateful warmth of the sun. *Turner's Tibet.*

LUBUNGAN, a town on the north coast of the island of Mindanao.

LUBWACH, a town of Germany, in the bishopric of Bamberg: eight miles north-east of Bamberg.

LUB'Z, or LU'BITZ, a town of the duchy of Mecklenberg: twenty-three miles south-south-west of Guttrow. Lat. 53. 30. N. lon. 12. E.

LUC, a town of Bavaria, on the Nab: six miles north of Pfreimbtt, and twelve east-north-east of Amberg.

LUC, a town of France, in the department of the Lower Pyrenées: six miles north of Oleron, and twelve west of Pau.

LUC, a town of France, in the department of the Lozere: five miles south of Langogne.

LUC EN DIO'IS, a town of France, in the department of the Drôme, on the Drôme: nine miles south of Die.

LUC (Le), a town of France, in the department of the Var: fifteen miles south of Draguignan, and twelve east of Brignolle.

LUC (St.), the chief town of the captainship of Petagues, in the north division of Brasil.

LU'CA, in ancient geography, a city of Etruria, on the river Aufer. Now LUCCA.

LU'CA (John-Baptist de), a learned Neapolitan cardinal, was of humble origin, and born at Venozza, in the Basilicate, about the year 1617. Having been educated to the church, he obtained preferment by dint of merit, and became auditor to pope Innocent XI. By that pontiff he was nominated cardinal in 1681; and died within eighteen months after his elevation to the purple, about the age of sixty-six. He was the author of, 1. *Annotationes ad Concilium Tridentinum.* 2. *Relatio Curia Romanæ*, 4to. 1680, containing a full account of all the congregations, tribunals, jurisdictions, &c. of that court, and much other curious matter. 3. *Il Dottor Volgare*; treating on several legal topics. 4. *A Discourse in Favour of the Italian Language.* 5. An immense compilation of ecclesiastical law, entitled, *Theatrum Justitia et Veritatis*, &c. in twenty-one volumes folio. *Moreri.*

LUCA'LA, a river of Angola, which runs into the Coanza at Massangano.

LUCA'LA, a town of Angola, on a river of the same name: thirty miles north-north-east of Massangano.

LU'CAN. MARCUS ANNÆUS LUCANUS, a celebrated Roman poet, was born at Corduba in Spain, about A. D. 39. His father, Annæus Mela, a Roman knight, was the youngest brother of Seneca the philosopher. His mother, Acilia, was daughter of Acilius Lucanus, an eminent orator. Lucan was brought to Rome at the age of eight months; whence his education could have contributed nothing to a provincial impurity of taste and language which some critics have fancied in him. He was early

committed to the care of the ablest masters in grammar and rhetoric; and he studied philosophy under the stoic Cornutus (also the preceptor of Perseus), from whom he derived the lofty and free strain of sentiment by which he is so much distinguished. He is supposed to have completed his education at Athens. His uncle Seneca, then tutor to the emperor Nero, brought him into public life; and he obtained the office of quaestor before he was of the legal age to exercise it. He was admitted to the college of augurs, and was regarded as one in the favour of his prince, and in the full career of honour and opulence. His union with Polla Argentaria, the daughter of a Roman senator, whose merits have been celebrated by the two poets Statius and Martial, added domestic felicity to his external prosperity. Lucan had at an early age given proofs of poetical talents, and had acquired reputation by several compositions. This circumstance excited the jealousy of Nero, one of whose passions was that of being regarded as the greatest poet and musician of his time. Greedy of public adulation in this favourite point, he recited before a large assembly, at the festival of the Quinquennialia, a piece of his own composing on the story of Niobe. Notwithstanding the plaudits with which it was received, Lucan, who also seems to have felt in no small degree the love of admiration, ventured to recite a poem on the fable of Orpheus, in competition with that of the emperor; and, strange to tell, the judges awarded to him the prize. From this period, Nero looked upon Lucan with all the malignity of a vanquished rival, and made use of his power in forbidding him again to repeat any of his verses in public. To this tyrannical mandate, he added the insult of ridiculing and depreciating his works. When the enormities of this imperial monster had excited a conspiracy against him of several persons of distinction, with Piso, at their head, Lucan took part in it. To the indignation of an injured author, which Tacitus suggests as his motive, may surely be added the virtuous and patriotic feelings of an enthusiast for liberty and his country, who could not but execrate a tyrant and oppressor. He has, indeed, addressed some very adulatory lines to this same tyrant; but they were probably written while he appeared under the mask of a benevolent and well-disposed young prince. The plot was discovered; and Lucan was apprehended among the other conspirators. It must mortify every lover of genius and liberal principles to learn that he failed in the trial, and incurred a stain of baseness which will ever adhere to his name. Tacitus (*Annal.* xv. 55.) expressly affirms that, overcome by a promise of pardon, he accused as an accomplice, among others, his own mother. This direct charge from so weighty an historian, who certainly was not inclined to calumniate the friends of freedom, can scarcely be set aside by the mere surmises which some defenders of Lucan have offered. The circumstance most in his favour, which has been forcibly dwelt upon by Mr. Hayley, in the notes to his Second Epistle on Epic Poetry, is that (according to Tacitus) the mother of Lucan was passed over without either absolution or punishment; whence it may be conjectured that no evidence existed of her having been charged by her son, but popular rumour; for no other person, however distantly implicated in the conspiracy, seems to have escaped without some kind of penalty. If, however, the virtue of Lucan was betrayed by a moment of weakness, his mind recovered its firmness for the concluding scene. Being ordered to die, he chose the same death with his uncle Seneca; and had his veins opened. When he found himself growing cold and faint through loss of blood, he repeated some of his own lines, describing a wounded soldier sinking in a similar manner; and these were the last words he uttered. He died A. D. 65, in the twenty-seventh year of his age.

Of the various poems of Lucan, his *Pharsalia* only has come down to modern times. This is an unfinished piece, relating the causes and events of the civil war between Cæsar and Pompey. Its title to the name of an epic poem

has been disputed by those critics who, from the examples of Homer and Virgil, have maintained that machinery, or the intervention of supernatural agency, is essential to that species of composition. Whatever it be entitled, it certainly ranks among the capital productions of the Latin muse; and will be read and admired as long as the language in which it is written shall endure. It is, indeed, not without great faults, such as harshness and obscurity of style, extravagant descriptions, turgid metaphors, and bombastic sentiments. But these are redeemed by a strain of moral sublimity superior to that of any other ancient, by a noble spirit of freedom, and by frequent instances of genuine poetry, both in the thoughts and expressions. Hence he has had admirers who have placed him at the very head of epic poets; while others have treated him with great severity, and degraded him to the class of rhetoricians and declaimers; for Quintilian, by a frivolous distinction, disputes his title to be classed among the poets; and Scaliger says, with a brutality of language disgraceful only to himself, that he seems rather to *bark* than to *sing*. But these insults may appear amply compensated, when we remember that, in the most polished nations of modern Europe, the most elevated and poetic spirits have been his warmest admirers; that in France he was idolized by Corneille, and in England translated by Rowe. The severest censures on Lucan have proceeded from those who have unfairly compared his language to that of Virgil. But how unjust and absurd is such a comparison! it is comparing an uneven block of porphyry, taken rough from the quarry, to the most beautiful superficies of polished marble. How differently should we think of Virgil as a poet, if we possessed only the verses which he wrote at that period of life when Lucan composed his *Pharsalia*! In the disposition of his subject, in the propriety and elegance of diction, he is undoubtedly far inferior to Virgil: but if we attend to the bold originality of his design, and to the vigour of his sentiments; if we consider the *Pharsalia* as the rapid and uncorrected sketch of a young poet, executed in an age when the spirit of his countrymen was broken, and their taste in literature corrupted; it may justly be esteemed as one of the most noble and most wonderful productions of the human mind.

The *subject* of the *Pharsalia* presents to us the most dreadful picture of the miseries of civil war. It inculcates the same moral as the *Iliad*; but in another point of view, and under a different form. It is more particularly intended to convey this useful lesson to the people, that in domestic contentions they are only the instruments of the great; for the gratification of whose ambition they madly shed their blood, and forge their own fetters. But the subject has two defects. Civil wars, especially when so fierce and violent as those of the Romans, present objects too shocking for the epopee, and give odious and disgusting views of human nature. Gallant and honourable achievements are much more proper themes for the epic muse. But the genius of Lucan seemed to delight in scenes of blood. Not content with those which his plan abundantly furnished, he introduces, by way of episode, a long detail of the proscriptions of Marius and Sylla, which present all the forms of ingenious and systematic cruelty. The other defect of the subject is, that it is too near the times in which the poet lived. This is a circumstance always unfortunate for a poet, as it in a great measure deprives him of the assistance of fiction and imagery, which add a degree of splendour, as well as amusement, to his work. Lucan appears to have submitted to this disadvantage of the subject; with what propriety, has been often considered doubtful. That he himself thought it susceptible of such embellishment is evident, from the circumstance of his having once, though only once, employed it. It is true that the fables of the *Odyssey* would ill agree with the serious conversations of Cato and Brutus; but it was possible for a man of genius and taste to select a species of machinery more suitable to the subject. The gods and the Romans might have been

made to act together in the same stage, as well as the gods and the heroes of Homer. Destiny itself might have interfered in so great a quarrel, during which the safety and repose of the world hung in trembling suspense. That beautiful fiction, unfortunately the only one that is to be found in the *Pharsalia*, of the appearance to Cæsar of his weeping country, on the borders of the Rubicon, sufficiently proves what assistance Lucan might have derived from fable, without injuring the interest of his subject, or the dignity of history.

The *characters* in the *Pharsalia* are not numerous. There are but three distinctly marked, those of Pompey, Cato, and Cæsar; but it is in the exposition of these different characters, in the contrast of their virtues and their vices, that the excellence of Lucan peculiarly displays itself. They are drawn with spirit and energy. Pompey is the nominal hero of the poem; but, whether considered as delineated by the pen of history, or painted by the imagination of the poet, he appears little deserving of this distinction. We seldom discover in him either magnanimity in sentiment, or bravery in action. He is rash, arrogant, and weak. Corrupted by flattery, enervated by prosperity, he seems contentedly to repose under the shade of a mighty name. *Stat magni nominis umbra*. When opposed to the spirit and perseverance of Cæsar, he is eclipsed by the superior abilities of his rival. He is rash in his designs, but cowardly in the execution; and, in the very crisis of his fate, he seems to lose all presence of mind, and, without further struggle, surrenders the world to Cæsar. The simple manners and austere virtues of Cato, however venerable in history, would seem to be little adapted to make any forcible impression in an epic poem. But he is a favourite personage with Lucan, who, in the delineation of his character, appears to rise above himself. It has been remarked, that the most striking passages in the *Pharsalia* for beauty and energy are referred to Cato, either in speeches which he is made to utter, or in descriptions of his behaviour. Such are his nuptials with Marcia, his march over the sands of Africa, and his noble answer to the speech of Labienus on the oracle of Jupiter Ammon.

There are in the *Pharsalia* several very poetical and animated *descriptions*. But the author's chief strength does not lie either in narration or description. His narration is often dry and harsh; his descriptions are often too highly coloured, and sometimes employed on disagreeable objects. His principal merit consists in his *sentiments*, which are always noble and striking, and expressed in that glowing and ardent style that peculiarly distinguishes him. Lucan is the most philosophical and the most public-spirited of the ancient poets. He was the nephew of Seneca, the philosopher; was himself a stoic, and the spirit of that philosophy breathes throughout his poem. We must observe, too, that he is the only ancient epic poet whom the subject of his poem really and deeply interested. He relates no fiction; he was a Roman, and had felt all the cruel consequences of the civil wars of Rome, and of that severe despotism which succeeded the loss of liberty. His high and bold spirit made him enter deeply into the subject, and kindle, on many occasions, the most rational warmth. He abounds, too, in exclamations and apostrophes, which are always well timed, and supported with a vivacity and fire that do him the highest honour.

But it is the fate of Lucan that his beauties can never be mentioned, without suggesting his blemishes. As his principal excellence is a lively and glowing genius, which appears sometimes in his descriptions, and always in his sentiments, his great defect in both is want of moderation. He carries every thing to an extreme. He knows not where to stop. From an effort to aggrandise his object, he becomes tumid and unnatural; and it frequently happens that, where the second line of one of his descriptions is sublime, the third, in which he intended to rise still higher, is perfectly bombast. Lucan lived in an age when the schools of sophists and declaimers had begun to corrupt

corrupt the eloquence and the taste of the Romans. He was, unfortunately, not free from the infection; and too frequently, instead of showing the genius of a poet, he betrays the spirit of a declaimer. It was this defect that probably produced the observation of Quintilian, that Lucan's place was rather among the orators than among the poets: *Oratoribus magis quam poetis annumerandus*. But, if he was not a poet, where is poetry to be found? Upon the whole, it may be collected from the preceding observations, that Lucan was more remarkable for splendour of genius, than for soundness of judgment, or correctness of taste. He had more strength than tenderness; greater force than sweetness. He will not often bear a comparison with Virgil; but, if he wanted the purity and elegance of the Mantuan bard, he will be found to surpass him in the energy and boldness of his sentiments. Taken from the Pharsalia a few uninteresting episodes, and the tediousness of some of its details, and it will exhibit beauties sufficient to justify the assertion that Lucan was not only a poet, but deserves the next place in the epos after Homer and Virgil.

Of the editions of Lucan, the best are, the Variorum, Lugd. B. 8vo. 1669; Oudendorp's, with May's supplement, 4to. 1728; Burman's, 4to. 1740; Bentley's, Strawberry-hill, 4to. 1760. It is remarkable that there is no Delphin edition of this poet of liberty; and that one of the first classics printed under the short-lived French republic was a Lucan in splendid folio by Didot. He has been translated into French verse by Brebeuf, and into English verse by Rowe. *Taciti Annal. Vossii Poet. Lat. Crusius's Latin Poets. Hayley's Essay. Monthly Mag.* vol. xxiv.

LU'CAN, in geography, a village of the county of Dublin, Ireland, pleasantly situated on the banks of the Liffey: six miles and a half west from Dublin.

LU'CAN (Al), a town of Asiatic Turkey, in Aladulia: fifteen miles east of Marasch.

LUCA'NAS, a jurisdiction of the diocese of Guamanga, in the viceroyalty of Peru, commencing about twenty-five or thirty leagues south-west of Guamanga. Its temperature is cool and moderate. It abounds in valuable silver-mines, in which the riches of Peru chiefly consist; and by these means it becomes the centre of a very extensive commerce; great numbers of merchants resorting hither with their goods, and others for purchasing such provisions as their own respective countries do not afford, for which they give in exchange ingots and pinuas of silver.

LUCA'NI, a people of Italy, descended from the Samnites, or from the Brutii.

LUCA'NIA, a country of Italy, between the Tyrrhene and Sicilian seas, and bounded by Picenum, Pucetia, and the country of the Brutii. The country was famous for its grapes.

LUCA'NUS, *f.* The STAG-BEETLE; in entomology, a genus of coleopterous insects. Generic characters: Antennæ clavate; the club compressed, and divided into short pectinate leaves; jaws projecting beyond the head, so as to resemble horns, toothed; two palpigerous tufts under the lip. These are the largest of British insects; and differ chiefly from the SCARABÆI, or beetles properly so called, in having the jaws considerably elongated, so as to give the appearance of a pair of denticulated horns; while the antennæ terminate in a laterally-flattened tip, divided on the interior side into several lamellæ. There are twenty-nine species.

1. Lucanus alces: jaws exerted, four-toothed at the tip. It inhabits several parts of Asia. The head is large, depressed, black, sinuate on each side; jaws longer than the head, compressed at the tip, and armed with a strong tooth in the middle within.

2. Lucanus giraffa: jaws exerted, depressed, with many different-sized teeth; lip rounded. Inhabits Asia. The jaws are likewise very long; the teeth at both ends larger; thorax with an unequal margin; body black.

3. Lucanus cervus, the stag-beetle, or stag-chaffer;

jaws exerted, forked at the tip; a small branch near the middle within. This is readily distinguished by its superior magnitude, which entitles it to the first rank among the coleopterous tribe, being nearly two inches and a half in extreme length. It is however characterized by another peculiarity no less singular; and that is the large moveable jaws, resembling in form the horns of a stag. These instruments are broad and flat, projecting from the head nearly one third of the animal's length; they have in the middle, towards the inner part, a small branch, and at their extremity are forked. Their similarity in shape to the horns of the stag has struck every naturalist, and has procured for the insect the appellation of the *flying stag*.

The horns are sometimes as red as coral, which gives these animals a very beautiful appearance. The head that supports these romantic horns, is broad, short, and irregular; and the thorax, which intervenes between it and the body, is narrower than either, and margined around. The clytra are very plain, being unadorned with either streaks or lines. The general colour is a deep chestnut, with the thorax and head of a blacker cast; the legs and under-parts are coal-black; and the wings which, except during flight, are concealed under the shells, are large, and of a fine pale yellowish-brown. This remarkable insect is chiefly found in the neighbourhood of oak-trees, delighting in the sweet exudation, or honey-dew, so frequently observed on the leaves. Its larva, which perfectly resembles that of the genuine beetle, is also found in the hollows of oak-trees; residing in the fine vegetable mould usually seen in such cavities, and feeding on the softer parts of the decayed wood. It is of a very considerable size, of a pale yellowish or whitish-brown colour; and, when stretched out at full length, measures nearly four inches. It has been supposed by Roefel, that these larvæ were the *coffi* of the ancient Romans, which, according to Pliny, were in high esteem as an article of luxury. What renders this supposition the more probable is, that the larvæ of a species of *Cerambyx*, as well as of a *Curculio*, are well known to be greatly admired by the inhabitants of the West Indian islands, and are frequently collected at a great expense, as a highly delicate dish, being broiled or fried for that purpose. When arrived at its full size, which, according to some, is hardly sooner than the fifth or sixth year, it forms, by frequently turning itself, and moistening it with its glutinous saliva, a smooth oval hollow in the earth, in which it lies; and afterwards remaining perfectly still for the space of nearly a month, divests itself of its skin, and commences pupa or chrysalis. It is now of a shorter form than before, of a rather deeper colour, and exhibits, in a striking manner, the rudiments of the large extended jaws and broad head, so conspicuous in the perfect insect: the legs are also proportionably larger and longer than in the larva state. The ball of earth, in which this chrysalis is contained, is considerably larger than a hen's egg, and of a rough exterior surface, but perfectly smooth and polished within. The chrysalis lies about three months before it gives birth to the complete insect; which usually emerges in the months of July and August. The time, however, of this insect's growth and appearance in all its states varies much, according to the difference of seasons. It is met with in many parts of England; but is scarce in the neighbourhood of London; and, though the largest of insects to be met with in this part of the world, it is much smaller than those of the same species that are found in woody countries. This creature is strong and vigorous; and its horns, with which it pinches severely, are carefully to be avoided.

The perfect male insect is shown in the act of flying, at fig. 1. of the annexed Plate; and with wings folded at fig. 2. The commonly-supposed female differs so much in appearance from the male, that it has by some authors been considered as a distinct species. It is not only smaller than the former, but totally destitute of the long and large ramified jaws; instead of which it has a pair of very short curved ones, slightly denticulated on their inner side; the head

head is also of considerably smaller diameter than the thorax. In point of colour it resembles the former. Among those who consider it as a distinct species may be numbered the ingenious Mr. Marfham, F.L.S. who, in his *Entomologia Britannica*, assures us that the real female insect extremely resembles the male, but is smaller, and wants the larger denticulation on the inner side of each horn. The generally-suppofed female he distinguishes by the title of *Lucanus inermis*. This is shown at fig. 3 of the same Plate.

4. *Lucanus tridentatus*: jaws depressed, black; thorax three-toothed on each side. Inhabits Oeland. Perhaps a variety of the preceding; and therefore suppressed by Dr. Turton.

5. *Lucanus saiga*: jaws exerted, many-toothed; lip abbreviated, emarginate. Inhabits America. Body depressed, smooth, black; jaws hardly forked at the end.

6. *Lucanus elaphus*: jaws exerted, one-toothed, forked at the tip; lip deflected, conic; hind margin of the head much elevated, emarginate. Female less; the jaws not exerted. Inhabits Virginia.

7. *Lucanus capreolus*: jaws exerted, the middle denticles differently shaped, forked at the tip. This is particularly described by De Geer, who received the specimens from Pennsylvania, where they inhabit the woods. It somewhat resembles the *cervus*, but is less, varying from ten to fourteen lines in length, and the horns are less, nor do they branch out; but are curved, and meet at the tips; as will be evident by inspecting the Plate, fig. 4 for the male, fig. 5 for the female. Colour brown-maroon, shining; thighs yellow; eyes (in the dead insect) light grey; wings light yellow, and transparent, with lines of a darker yellow. The upper lip is not pointed, but rounded at the end; and between the lips is the trunk, which is hairy, and of a gold-yellow colour.

8. *Lucanus dama*: jaws exerted, two-toothed within, as long as the head. Inhabits Virginia. A variety has the jaws entire at the end; thighs ferruginous.

9. *Lucanus femoratus*: jaws exerted, three-toothed; body black; thighs ferruginous. It inhabits Cayenne. The head is plain, almost without lip; thorax more dusky; the fore margin fulvous, ciliate, the hind margin two-toothed each side; scutellum fulvous, silky.

10. *Lucanus bison*: jaws exerted, many-toothed; thorax and shells edged with red. Inhabits America. Edge of the thorax rufous, with a black line.

11. *Lucanus gazella*: jaws two-toothed within; body black; shells edged with testaceous. Inhabits Siam. The jaws are short; head with a small plate before the eyes; hind edge of the thorax notched on each side; shanks angular, grooved.

12. *Lucanus lama*: jaws exerted, three-toothed, shorter than the head; thorax angular. Inhabits India.

13. *Lucanus futuralis*: jaws exerted, three-toothed at the base within; body testaceous, with a dorsal black line. The head is testaceous, with a black margin and dorsal line, which is bifid at the tip; thorax testaceous, with a black dorsal line and spot each side at the base. A small species.

14. *Lucanus carinatus*: depressed; thorax unarmed, shorter than the head, the hinder-angles excavated. Abdomen very short; breast ending behind in an acute angle. Inhabits India.

15. *Lucanus parallelepipedus*: jaws with a lateral elevated tooth within; body depressed. It inhabits Europe. The body of this species is black; the horns much smaller than those of the *cervus*, which in other respects it nearly resembles; and the body is oblong, and of that shape expressed by the Linnæan name. See fig. 6. It frequents the meadow-grounds, about willow-trees; and its habits are therefore probably different from those of the stag-beetle; but very little relating to its economy is known.

16. *Lucanus tenebrioides*: jaws lunate, one-toothed; body black; thorax margined; shells substriate. Inhabits Russia.

17. *Lucanus virefcens*: jaws tridentate; body greenish. Inhabits America.

18. *Lucanus cancrioides*: jaws incurved, with a thick differently-shaped tooth within; shells punctured, slightly downy; thorax a little grooved; shanks ferrate. Inhabits Van Diemen's Land.

19. *Lucanus caraboides*: bluish; jaws lunate; thorax margined. Varies in being greenish, with reddish legs and abdomen. Inhabits Europe. See fig. 7.

20. *Lucanus piceus*: black, smooth, striate; antennæ, abdomen, and legs, pitchy. Inhabits Sweden.

21. *Lucanus Capensis*: exscutellate, black; body depressed; thorax striate. Inhabits the Cape.

22. *Lucanus pilinus*: exscutellate, black; shells with punctured grooves. Found in Chili, South America.

23. *Lucanus tarandus*: scutellate, black, very smooth; jaws exerted, three-toothed at the tip, two-toothed on the inner side. Inhabits Africa.

24. *Lucanus antilope*: jaws exerted, edged on the inner side, the upper margin two-toothed, the lower five-toothed. Body brown, nearly smooth. Found in different parts of Africa.

25. *Lucanus bubalus*: black; jaws bifid; one part projecting, sub-lunate, three-toothed within; the other larger, deflected, arched, entire. Inhabits Georgia.

26. *Lucanus interruptus*: antennæ arched; body black, with a recumbent spine on the crown; thorax and abdomen remote; wings yellow. Inhabits America and the West-India islands, under rotten sugar-canes. This is the *Passalus interruptus* of Fabricius. It varies in size, becoming sometimes two inches long. The antennæ consist of eight articulations, nearly round, exclusive of the first joint, or root; the upper joints increase in thickness, are arched forward, and terminate in three pectinated teeth. On each of the elytra are ten furrows, the three first smooth inside, but rough beneath; the other three are ornamented with round hollow dots. The fore-legs have six little notches, or teeth, on their exterior edges. A representation of the larva and pupa of this species has been given on the ENTOMOLOGY Plate II. fig. 21, 22. vol. vi. p. 840. and the perfect insect (all drawn from nature by Mad. Merian) is delineated on the Plate annexed to this article, at fig. 8.

27. *Lucanus dentatus*: antennæ arched; head many-toothed; thorax punctured at the sides; thorax and abdomen remote. Found in the island of Guadaloupe. This is the *Passalus dentatus* of Fabricius.

28. *Lucanus minutus*: antennæ arched; thorax and abdomen remote, ferruginous; shells testaceous. This is the *Passalus minutus* of Fabricius, and is found in the South-American islands. The body is much depressed, hardly larger than a louse; jaws exerted, short, unarmed, pointed; shells hardly striate.

29. Dr. Shaw mentions a highly-elegant species, that has lately been discovered in New Holland, which differs from the rest in being entirely of a beautiful golden-green colour, with short, sharp-pointed, denticulated, jaws of a brilliant copper colour. The whole length of the insect is rather more than an inch. *Gmelin's Linn. Shaw's Zoology. Barbut. Martyn. De Geer. Merian.*

LUCANUS (Ocellus, or Ucellus). See OCELLUS.

LUCANUS (M. Annæus). See LUCAN.

LUCAR', *J.* Among the Romans, an appellation given to the money expended upon plays and public shows.

LUCAR' DE BARAME'DA (St.) a handsome and considerable town of Spain, with a very good harbour, well defended, in Andalusia. It was once the greatest port in Spain, before the galleons unloaded their treasure at Cadiz. It is seated at the mouth of the river Guadalquivir. Lat. 36. 40. N. lon. 6. 5. W.

LUCAR' DE GUADIANA (St.) a strong town of Spain, in Andalusia, on the confines of Algarve; seated on the river Guadiana, with a little harbour. Lat. 37. 32. N. lon. 5. 59. W.

LUCAR' LA MAJO'R (St.) a small town of Spain, in Andalusia,

Andalusia, with the title of a duchy. It is seated on the river Guadiana in lat. 37. 21. N. lon. 6. 32. W.

LUCARIA, or LUCE'RIA, festivals at Rome, celebrated in a large grove between the Via Salaria and the Tiber, where the Romans hid themselves when besieged by the Gauls.

LUCAS, a surname of men and women.

LUCAS, a celebrated Spanish prelate and writer who flourished in the thirteenth century, became first deacon, and afterwards bishop, of Tuy, a city in Galicia, whence he derived the surname of *Tudensis*. He made several voyages into the East, and other countries, while he was yet a deacon, for the purpose of obtaining information concerning the religion and ceremonies of different nations; and, during a visit to Rome, acquired the esteem of pope Gregory IX. who raised him to the episcopal rank. He was the author of, 1. A treatise against the Albigenes, in three books, first published by John Mariana, at Ingolstadt, in 1612, 4to. and afterwards inserted, with notes by Mariana, Gretzer, and Scot, in the twenty-fifth volume of the *Bibl. Patr.* 2. The Life of St. Isidore of Seville; and he made considerable additions to the Chronicle of St. Isidore, bringing it down to the year 1236. *Cave's Hist. Lit.*

LUCAS (Francis), surnamed *Brugensis*, a learned Flemish divine in the seventeenth century, was a native of Bruges, and educated at Louvain, where he was admitted to the degree of doctor, and made dean of the church of St. Omer's. He died in the year 1619. He was profoundly skilled in the Greek, Hebrew, Syriac, and Chaldee, languages, and was an expert judicious critic. His principal works were, 1. Notations in Sacra Biblia, quibus variantia discrepantibus Loca exemplaribus summo Studio discutuntur, 4to. 1580, of which father Simon gives a particular account, with high commendations. 2. Commentaria in Evangel. 5 vols. folio. *Simon's Crit. Hist.*

LUCAS (Richard), a learned divine of the church of England, was a native of Wales, and born at Presteigne in Radnorshire, in the year 1648. When he had acquired the requisite grammar-learning, he was sent to the university of Oxford, and entered a student at Jesus-college in 1664. He was admitted to the degree of B.A. in 1668; and proceeded M.A. in 1672. Afterwards he entered into holy orders; and was for some time master of the free-school at Abergavenny in Monmouthshire. From that place he removed to London, where his pulpitations were much admired; and he became vicar of St. Stephen's, Coleman-street, and lecturer of St. Olave's, Southwark, in 1683. In 1691, he took his degree of D.D. and was installed prebendary of Westminster in 1696. From his youth his eye-sight had been gradually failing; and about this time he had the misfortune to become totally blind. He died in 1715, about the age of sixty-seven. He was highly esteemed for his piety and learning; and his valuable writings will transmit his name with honour to posterity. The most important of these is his *Enquiry after Happiness*, in two volumes 8vo. which has passed through a great number of editions, and is deservedly held in high estimation. It was composed by the author after he had lost his sight, and was rendered incapable of public services; and it is to be regretted that he did not live to complete his whole design. He was also the author of, 2. *Practical Christianity*, or an Account of the Holiness which the Gospel enjoins, with the Motives to it, 8vo. 8vo. 3. *The Morality of the Gospel*, 8vo. 4. *Christian Thoughts for every Day in the Week*, 8vo. 5. *A Guide to Heaven*, 8vo. 6. *The Duty of Servants*, 8vo. 7. *Sermons*, in 5 vols. 8vo. some of which were published by his son. 8. He translated into Latin the *Whole Duty of Man*, which was printed at London in 1680, 8vo. *Wood's Athen. Oxon. Monthly Mag.* vol. i.

LUCAS (Paul), a celebrated traveller, was born at Rouen in 1664. He felt an early inclination to travel into foreign countries, which he gratified by several tours through the Levant, Egypt, Turkey, and other parts. He brought back a rich treasure of medals and other cu-

riofities for the king's cabinet, who ordered him to draw up an account of his travels, and, in 1714, nominated him one of his antiquaries. The duchess of Burgundy gave him a place in her household, and he married one of his own relations. In 1723, he took another voyage to the Levant by order of Louis XV. whence he brought back several rare manuscripts and medals. After some years of repose, his passion for travelling revived; and in 1736 he visited Spain, which country he had not before seen. He was very well received by the king, who engaged him to arrange his cabinet of medals; but during this employment he was taken ill, and died at Madrid in 1737, at the age of seventy-two. The *Travels of Paul Lucas* form 7 vols. 12mo. His first travels in 1699, with his second in 1704, were printed at Paris in 4 vols. 1712-14; these contain his voyage to the Levant, to Greece, Asia Minor, Macedonia, and Africa. His travels, in 1714, in Turkey, Asia, Syria, Palestine, and Egypt, were published at Rouen, in 3 vols. 1719. It is asserted that these several relations were drawn up and put in order from his journals by different men of letters; the first travels by Baudelot de Dairval; the second by Fourmont; the third by the abbé Banier. They are accounted amusing and instructive, though not without a mixture of fiction. *Moreri.*

LUCAS (Charles), a celebrated Irish patriot. See the article IRELAND, vol. xi. p. 328.

LUCAS (Henry), son of the preceding, was a student at the Middle Temple; and the author of, 1. *Love in Disguise*, an opera, 1776. 2. *The Earl of Somerset*, a tragedy, 1779. 3. *Cælina*, a masque, 1795.

LUCAS VAN LEYDEN. See LEYDEN, vol. xii. p. 566.

LUCAS (St.), a town of Mexico, in the province of Guatimala: twelve miles east of Guatimala.—A small island near the coast of Mexico, in Salinas bay. Lat. 10. 15. N. lon. 85. 22. W.

LUCAU, a town of the duchy of Carinthia, near the Geil: thirteen miles west of Mauten, and thirty-two east of Brixen.

LUCAU, or LUC'CA, a town of Saxony, in the principality of Altenburg: eight miles north-north-west of Altenburg, and thirteen south of Leipzig. Lat. 51. 6. N. lon. 12. 13. E.

LUCAYA ISLANDS. See BAHAMA, vol. ii. p. 622.

LUCAYO, one of the Bahama Islands, twenty miles long, and five broad. Lat. 27. 25. N. lon. 78. W.

LUCAYONE'QUE, one of the Bahama Islands, seventy-five miles long, and five or six wide, but of an irregular form. Lat. 27. N. lon. 77. 30. W.

LUC'CA, a small republic of Italy, on the coast of the Tuscan sea, in lat. 43. 50. N. It is bounded north by the late duchy of Modena; on the south-west by the Mediterranean; and every where else by Etruria. It is computed to be upwards of 35 miles in length, and from 15 to 20 in breadth, and to contain 283 square miles, and within its extent one city, 150 villages, and 120,000 inhabitants, of whom, it is said, that from 20,000 to 30,000 are able, on occasion, to bear arms. The Luccanese are the most industrious people of Italy, and no spot of ground is left uncultivated; the hills being covered with vines, olives, chestnut and mulberry trees, while the meadows near the coast nourish numerous cattle; but the country does not produce corn sufficient for the consumption of its inhabitants. Oil and silk are the chief exports of Lucca; and their motto is LIBERTAS, a goddefs, rarely found in her proper dress. Lucca was anciently a Roman colony; when the Lombards overran Italy, it became tributary to them; afterwards it was annexed to the dominion of the Franks, and from them the emperors of Germany claimed its sovereignty. In the reign of Charles IV. it became an independent state, and has, during three centuries, maintained its liberty, under the protection of some foreign power. In the recent revolutions of Italy, this state adopted a constitution similar to the French; and became a principality, with the addition of Massa Carrara, and Garfagnana. The fate of Lucca, and of all Italy,

Italy, now hangs upon the decisions of the grand Congress just expected to open at Vienna. (Dec. 12, 1814.)

LUC'CA, a city of Italy, and capital of the republic, anciently a Roman colony, the residence of the government, most delightfully situated in a plain, terminating in eminences, and diversified with villages, seats, summer-houses, vineyards, meadows, and corn-fields. Every thing, either for utility or pleasure, is here in great plenty. The city is regularly fortified with eleven bastions. Its circuit is three Italian miles. The houses are handsome, the streets broad and well paved, but most of them irregular. The inhabitants are somewhat above 40,000; and among them great numbers of artificers and manufacturers, who carry on a considerable trade, particularly in silk goods. The state palace is a large building; and includes the arsenal, which has arms for 20,000 men. The bishop held immediately of the pope, and was entitled to the pallium or crucifix, as an archbishop. The cathedral is a Gothic building. In 1799, the French entered this city, and imposed on it a contribution of 2,000,000 livres.

The following extract is from the MSS. of Dr. John Bargrave, son of Dr. B. dean of Canterbury, a great traveller. "I have been often at Lucca, a strong neat little city. The city is very ancient, C. Sempronius retiring hither when Hannibal had rowed him at Trebbia and Piacenza; this being not only a colony, but a municipal city of the Romans, Julius Cæsar wintering here, together with whome Pompey and Crassus made the first triumph in this city. The Volto Santo, that is, Our Saviour's face on a linnen cloath, standeth with magnificence in the cathedrall. In the church St. Fridianis is the tomb of one of our English kings, being one of the Richards, as the epitaph rudely speaketh thus:

*Hic rex Richardus requiescit sceptrifer almus,  
Rex fuit Anglorum, &c.*

When I went one time to Lucca, this epitaph was so covered with the ornaments of the altar, that I could not finde it, neither could they tell vs of any such king buried there whose shewed vs the church; but I, being confident it shold be there, caused some of the obstacles to be removed, and so found out the epitaph which I had formerly reade; and I desired them to take care that that king's memory might not be forgotten amongst them. Dr. John Bargrave, canon of Xt ch. Canterb."

Lassels, in 1670, says, "In the church of St. Frediano, belonging to the canons regulars, in a chappel on the left hand, is the tombe of St. Richard, king of England, who dyed here in his pilgrimage to Rome." Travels, Part I. p. 27.—Misson, who was in Italy about 1688, describes, in the middle of the church of St. Fredian, a flat tomb, inscribed, *Hic iacet corpus Sancti Ricardi, regis Angliæ*; whom he cannot make out; Richard I. being, as he observes, buried at Font Evraud, Richard II. at Westminster, and Richard III. at Leicester; and there was no king of that name under the Heptarchy. *Novv. Voy. d'Italie*.—Mr. Wright, who saw this tomb about 1719-20, says, p. 389, that this Richard, "a king of England unknown to our Chronicles, was father to St. Valburga, to St. Villebald, and St. Vinebald, as some monkish verses there set forth, which he forbears troubling the reader with."

Mr. Breval says (vol. i. p. 140.) "The supposed English king, who lies buried in one of these churches, and has puzzled most of our travellers, is no other than the son of a Kentish Saxon monarch, whom the calamities of his house forced into a monastic state, the *dernier resort*, in that superstitious age, of unfortunate princes. The ignorance of the Lucques themselves in this point has kept travellers in the dark with regard to this pretended king of England, who was no other than the son of Lothaire, king of Kent, joined in the government of that branch of the Heptarchy with his father. Both of them being dispossessed by their cousin Edric, Richard fled over the seas to Mentz, where there was an English bishop, by whose interest he is said to have obtained the crown of Suabia.

He retired from the world at last, and came and ended his days at Lucca, where they show his stone coffin under the great altar at the *Canonici regolari*. This happened in the 8th century." Lothaire usurped the crown of Kent from his nephew Edric, 673, and associated with him this his son Richard; but, after holding it twelve years, being defeated by his nephew assisted by Adelwalch king of Suffex, he died of his wounds 685, and his son fled into Germany, where he married a daughter of Boniface archbishop of Mentz, became king of Suabia, and died and was buried at Lucca. His mother was daughter of Siger, king of Essex, and sister to Offa. *Hasted xxxiv. v. Gent. Mag.* Jan. 1799.—Lucca is thirty-four miles west of Florence, and nineteen north-north-east of Leghorn. Lat. 43. 54. N. lon. 10. 34. E.

LUC'CA, a river of Asia, which rises in Persia, and runs into the Indus about eighteen miles above the conflux with the Chunaub.

LUC'CA, or LUCKAU', a town of Lower Lusatia, in a circle to which it gives name, on the river Preste. It contains four churches, a Latin school, and an hospital. It was surrounded with walls in the twelfth century. It is fifty miles south-east of Frankfort on the Oder, and forty-nine north of Dresden. Lat. 51. 51. N. lon. 13. 40. E.

LUC'CADIVE ISLANDS. See LACCADIVE, vol. xii. p. 27.

LUCCE'IUS, a celebrated historian, asked by Cicero to write a history of his consulship. He favoured the cause of Pompey, but was afterwards pardoned by Julius Cæsar.

LUC'CI, a town of Naples, in Calabria Citra: three miles south of Bisignano.

LUC'COS, a river of Morocco, anciently called *Lixos*, which runs into the Atlantic at Laracha.

LUCE, *f.* [perhaps from *lupus*, Lat.] A pike full grown.—They give the dozen white *lucis* in their coat. *Shakspeare*.

LUCE, a river of Scotland, which runs into the sea, in a large bay, about two miles south of Glenluce.

LUCE, or GLEN'LUCE, a town of Scotland, in the county of Wigton, which owes its rise to an abbey of Cistercians, founded in 1190, called Vallis Lucis. It is situated at the northern extremity of a large bay to which it gives name. It is sixteen miles east of Portpatrick, and eighteen west of Wigton. Lat. 54. 58. N. lon. 4. 17. W.

LUCE, or GLENLUCE BAY, a large bay on the south coast of Scotland extending from the Mull of Galloway to Burrow Head. It is named from the above town of Glenluce. Lat. 54. 50. N. lon. 4. 50. W.

LUCE (St.) a cluster of small islands in the Indian Sea, near the east coast of Madagascar. Lat. 24. 30. S. lon. 47. 40. E.

*Eau de LUCE*, a kind of volatile liquid soap, of a strong penetrating smell. The following instructions will serve for making it: Take four ounces of rectified spirit of wine, and in it dissolve ten or twelve grains of white soap; filtrate this solution, then dissolve it in a dram of rectified oil of amber, and filtrate again: mix as much of this solution with the strongest volatile spirit of sal ammoniac, in a crystal-glass bottle, as, when sufficiently shaken, shall produce a beautiful milky-liquor. If upon its surface be formed a cream, some more of the oily spirit of wine ought to be added.

LUCE'A (East and West), two rivers of Jamaica, which empty themselves into Luca Harbour.

LUCE'A HARBOUR, a bay or harbour on the north side of the island of Jamaica: fourteen miles west of Montego Bay. Lat. 18. 28. N. lon. 78. 9. W.

LUCEL'LE, or LUT'ZEL, a town of France, in the department of the Upper Rhine: two miles west of Lauffen.

LUCENA, a town of Spain, in the province of Cordova; here are ten convents: twenty-nine miles south-east of Cordova, and forty north-west of Grenada. Lat. 37. 32. N. lon. 4. 29. W.

LUCE'NA, a town of Spain, in the province of Valencia: eighteen miles north-east of Segorbe.

LUCE'NA (Joam de), a Portuguese Jesuit, and one of the

the many members of that extraordinary society who have honourably distinguished themselves. He was born at Trancofo in 1550, and entered the order in the fifteenth year of his age. His talents soon raised him to the rank of a professor in Cardinal Henrique's University of Evora, a distinction which Lucena seems to have merited in the learned age of his country. He is said to have been so excellent or so popular a preacher, that, when he had ended his sermon, it was not unusual for his auditors, with one common and unpremeditated cry, to beseech him to proceed. The work which he left behind him is, in his own language, *Historia da Vida do Padre S. Francisco de Xavier, e do que fizeram na India os mais Religiozos da Companhia de Jesu*; the History of the Life of St. Francisco de Xavier, and of what the other Religious of the Company of Jesus have done in India. It was published at Lisbon in 1600, the year of his death. An Italian version appeared at Rome in 1613, and a Spanish one at Seville in 1619. It was re-edited at Lisbon in 1788, by Bento Joze de Souza Farinha, of the Royal Academy, and regius professor of philosophy, to whom his countrymen are indebted for accurate re-éditions of many old and valuable works. Lucena's history ends with the death of Xavier in 1552. After the fall of the Portuguese empire in India, the villany of the Dutch in Japan, and the folly of the Dominicans in China, a work which records the progress of Christianity in the east is read with diminished interest. The style of the book is praised by those who can best appreciate it; it contains much to edify a catholic, and some valuable information for more reasonable readers. The author was a good man, *multis virtutibus doctrinaque merito carus omnibus ac venerabilis*. He died at St. Roques, Lisbon, in his fifty-first year. *R. S. in Gen. Biog.*

LUCENAY-LES-AÏX, a town of France, in the department of the Nievre: nine miles south of Decize.

LUCENAY L'ÈVEQUE, a town of France, in the department of the Saône: seven miles north of Autun, and ten west-south-west of Arnay le Duc. Lat. 47. 5. N. lon. 4. 20. E.

LUCENT, *adj.* [*lucens*, Lat.] Shining; bright; splendid: I meant the day-star should not brighter rise,  
Nor lend like influence from his *lucent* seat. *Ben Jonson.*

LUCEN'TUM, in ancient geography, a town of Spain. Now ALICANT.

LU'CERA, a town of Naples, in Calabria Citra: seven miles south of Cofenza.

LU'CERA, or LUCERA DELLI PAGA'NI, a city of Naples, and capital of the province of Capitanata; containing four churches, and nine monasteries; the see of a bishop, suffragan of Benevento. The jurisdiction of the province is held here: it is small, but populous, and has a manufacture of cloth. It is 62 miles north-east of Naples, and 130 east of Rome. Lat. 41. 28. N. lon. 15. 16. E.

LU'CERES, *f.* A body of horse composed of Roman knights, first established by Romulus and Tatius. It received its name either from *Lucumo*, an Etrurian who assisted the Romans against the Sabines, or from *lucus*, a grove where Romulus had erected an asylum, or a place of refuge for all fugitives, slaves, homicides, &c. that he might people his city. The Luceres were some of these men, and they were incorporated with the legions. *Propertius*.

LUCE'RIUS, in mythology, a name given to Jupiter, as *Luceria* was to Juno, as the deities which gave light to the world.

LUCE'RN, *f.* A kind of artificial grass. See MEDICAGO; and the article HUSBANDRY, vol. x. p. 554.

LUCER'NA, a town of France, in the department of the Po, late belonging to Piedmont, in the province of the Four Valleys, to one of which it gives name: five miles south-west of Pinerolo.

LUCERNA'RIA, *f.* The LANTERN-WORM; in helminthology, a genus of vermes mollusca. Generic characters—Body gelatinous, shining, wrinkled, branched; mouth

beneath. There are three species, which inhabit the Northern Seas, and live among the fuci and ulvæ, generally adhering firmly to their habitation, and rarely changing their abode; they feed on polypes, or onisci; the body is commonly headless and eyeless, with granulated tubercles.

1. *Lucernaria quadricornis*, the four-horned lantern-worm: body long, coiled; with four forked arms, tentaculate at the tip. This is an animal consisting of a lump of glistening jelly, without head or eyes; it however protrudes an arm from each of the angles of the body, which is furnished with from thirty to forty tentacula, retractile, and employed in catching its prey, which it turns into an orifice in the centre of its mass of body. The tail is flexuous in the middle, and disposed in numerous plaits and folds, thickened at the base and tapering gradually, obtuse at the tip, and extensile, like the tentaculæ; mouth white with cinereous striæ, and four-toothed. This curious worm is shown in three different positions at fig. 9, 10, and 11, of the preceding Engraving; one of the forked arms at fig. 12, the four-toothed mouth at fig. 13, and one of the tentacula with its globular tip greatly magnified at fig. 14.

2. *Lucernaria phrygia*: body long, papillous, with numerous globeriferous arms deflected into an hemisphere; fixed at the base by a byffus, or mass of filaments. This is found in the Greenland Seas at a considerable depth, and seldom changes its abode. The body varies in shape; is about half an inch long, reddish, with white globules and papillæ; neck erect, exsertile, and beset with numerous exsertile papillæ; arms short, slender, and entangled together.

3. *Lucernaria auricula*: resembling an oil-flask; neck round, the lower extremities dilated and surrounded with eight fasciculi of tentacula. This species is likewise found in the Greenland Seas, adhering very firmly to the largest ulvæ, from which it rarely moves; feeds on onisci, and is about an inch and a half long. Body black or reddish, rarely chestnut-brown with a gold tinge, lubricose, glabrous, the margin surrounded with eight granulate tubercles, resembling so many fasciculi of tentacula containing about sixty in each; these are black tipped with white; mouth white. *Gmelin's Lion. Zool. Dan.*

LUCERNA'TES, *f.* in ecclesiastical history, a term used by the primitive Christians for canticles which they sung in their nocturnal assemblies; probably from these rites being performed by lamp-light.

LUCER'NE, a canton of Switzerland, bounded on the east by the cantons of Zug and Schwitz, on the south by the canton of Unterwalden, and elsewhere by the canton of Berne; about thirty miles long, and in its greatest breadth nearly as much; esteemed the largest and the first in rank among the Catholic cantons, and the third among the whole. The soil is fertile, but unequal: some parts are only fit for pastures and the cultivation of fruit, others are arable, and produce good corn; in other parts are found most of the European productions. The wine of the country is not sufficient for the consumption of the inhabitants; and of this article they purchase, every year, to the amount of 200,000 crowns from France and Baden; salt is procured from France and Bavaria. The exportation of cheese is very considerable. The ordinary food of the husbandman is potatoes, fruit, legumes, bread, and milk. The woodlands are considerable; game would be abundant if there were fewer sportsmen. Chamois, deer, hares, black foxes, badgers, and martens, are the principal wild animals. The southern part is mountainous, but nevertheless without glaciers; the mountains are covered with forests and pastures fit for cattle. Here and there are found some natural curiosities, petrified shells, lac lunæ, some metallic ores, mineral waters, pit-coal, &c. The principal lake is the Waldstätter See, or Lake of Lucerne; the principal river is the Reufs; the principal mountain is Mount Pilate, of which hereafter.

The government of Lucerne was entirely aristocratical,

or rather oligarchical. The sovereign power resided in the council of 100, comprising the senate, or little council. The great council was the nominal sovereign; but the whole power actually resided in the senate, consisting of thirty-six members, who were formed into two divisions, exercising the office by rotation. The administration of the current affairs, the care of the police, the management of the finances, and the whole executive power, resided in the senate, which sat constantly; whereas the sovereign council was assembled only upon important occasions. The senate had cognizance of criminal causes; but in case of capital condemnation the sovereign council was convoked, in order to pronounce the sentence. In civil causes, an appeal lay from the senate to the sovereign council; which, in reality, was a matter of mere form, as it was an appeal from the senators in one court to the same senators in another. The influence of the senate over the sovereign council was absolute; for they constituted above a third of that body, chose their own members, conferred the principal charges of government, and nominated to the ecclesiastical benefices, which were considerable; nearly two-thirds of the revenue of the canton belonging to the clergy. From a view of this constitution, it appears, that, when the spirit of a government is oligarchical, all laws enacted for the purpose of counteracting the power of the nobles are mere ciphers. However, in some instances, the authority of the nobles was controlled; for, in declaring war and peace, forming new alliances, or imposing taxes, the citizens were to be assembled, and to give their consent. We have entered into these particulars, because the ancient government of the cantons will probably be now restored. See HELVETIA, vol. ix. p. 375.—Lucerne being the first in rank and power among the Catholic cantons, was the residence of the pope's nuncio, and all affairs relating to religion were discussed in the annual diet, which assembled in the town, and which was composed of the deputies of those cantons.

Lucerne, though an oligarchical state, manifested, at the time of the French revolution, an aversion from all innovation. The people appeared to be satisfied with their government, and resisted all attempts to effect a change. During the progress of the revolution, Lucerne acted with great spirit, and was inclined to join in defence of her own independence, as well as in support of the Helvetic union. Even after the surrender of Bern and the desertion of Zurich, a numerous body of peasants demanded the re-establishment of the ancient government, and joined the troops of the small cantons to resist the entrance of the French; and the whole canton did not acquiesce without much opposition and bloodshed. At length a corps of French, after a short investment, entered the town of Lucerne, and reduced the people to unconditional submission. Soon after this event, Lucerne became the seat of the new Helvetic government. According to the constitution of the 29th of May, 1801, Lucerne was one of the seventeen departments, or cantons, into which Switzerland was divided: it retained its former extent, and deputed five representatives to the diet.

LUCERNE, the capital of the above-described canton, a small, tolerably-built, walled, trading-town, containing about 3300 inhabitants, and agreeably situated on a plain almost environed by hills, at the efflux of the river Reufs from the lake of Lucerne, and at the north-west extremity of the lake: thirty miles south-west of Zurich, and forty east of Bern. The cathedral and Jesuits' church are the only public buildings worthy of notice; but they are overloaded with rich ornaments, and disgraced by bad paintings. In the cathedral is an organ of fine tone, and extraordinary size; the centre pipe is forty feet long, near three in diameter, and weighs 1100 pounds. The bridges which skirt the town, round the edge of the lake, are the fashionable walks of the place, and remarkable for their length; being covered at the top, and open at the sides, they afford a constant view of the delightful and romantic country; they are decorated with coarse paintings, repre-

senting the histories of the Old Testament, the Battles of the Swiss, and the Dance of Death. In the Wasserthurm-tower, the treasure of the republic is deposited. The arsenal is well furnished with arms. What greatly attracts the notice of most strangers is, a plan in relief of part of the cantons of Lucerne, Zug, and Berne, and the whole of Schweitz, Uri, and Unterwald, executed by general Pfiffer on a large scale. He has completed about sixty square leagues; the plan is twelve feet long, and nine and a half broad; every mountain is accurately measured; and every object distinctly placed. Lucerne is a thoroughfare from Italy by Mount St. Gothard; but it has no manufacture of consequence, and little commerce. Of late, the principles of toleration have been better understood and more widely diffused than they were formerly; and a literary society has been established for the promotion of polite learning. The lake is bounded towards the town of Lucerne by cultivated hills sloping gradually to the water, contrasted on the opposite side by an enormous mass of barren and craggy rocks. Lat. 46. 56. N. lon. 8. 6. E.

Near the town of Lucerne is Mount Pilate, formerly called Mons *Pileatus*, from the Latin word *pilea*, because its top is generally covered with a cloud or cap. This word has been corrupted into Pilatus, whence some have ridiculously contended that Pontius Pilate, after having condemned our Saviour to death, was seized with remorse, made an excursion into Switzerland, and drowned himself in a lake at the top of the mountain. At the elevation of 5000 feet, and in the most perpendicular part of this mountain, near the pasture of Brunlen, is observed, in the middle of a cavern hollowed in a black rock, a colossal statue, which appears to be of white stone. It is the figure of a man, in drapery, leaning one elbow on a pedestal, with one leg crossed over the other; and so regularly formed, that it can scarcely be a lusus nature. This statue is called Dominic by the peasants, who frequently accost it from the only place in which it can be seen; and, when their voices are re-echoed from the cavern, they say, in the simplicity of their hearts, "Dominic has answered us." It is difficult to imagine by whom, or in what manner, this statue could be placed in a situation which has hitherto proved inaccessible to all who have endeavoured to approach it. This is, perhaps, one of the highest mountains in Switzerland, if estimated from its base, and not from the level of the sea; its elevation above the lake being more than 6000 feet. Soon after the French took possession of Lucerne, general Brune erected, with great solemnity, the standard of liberty on the top of Mount Pilate; thus, as Coxe says, conferring on the Swiss the shadow, while he deprived them of the substance, of freedom. *Coxe's Switzerland*, vol. i.

LUCERNE (Lake of), in the Swiss canton of that name, (also called the Vierwaldstatter Sea,) is situated 1320 feet above the level of the sea, according to Pfiffer; 1314, according to De Luc; 1350, according to Trembley; and 1392 feet, according to Wyfs. The river Reufs enters it at Fluelin, and is again emitted near Lucerne. This most romantic of all lakes is surrounded by rocks, consisting partly of lime-stone, partly of the calcareous breccia, called nagelfluhe, and by sand-stone mountains. The line of demarcation between these two formations of rocks runs in a direction from east to west; to the south of this line nothing is seen but lime-stone, and nothing but calcareous breccia and sand-stone in a northern direction. The lake of Lucerne exhibits greater variety and more picturesque scenery than any other of the Swiss lakes. It is seven leagues long in a right line, and three wide about Kuffnacht; but the shape is very irregular. The whole south side is bordered by high mountains; but the north exhibits hills of no great height. The narrow gulf that extends towards the west, is bordered on the west and north-west by Mount Pilate, and on the south by Mount Birgenberg. Stanz Stadt, belonging to the canton of Unterwald, is on this side; and hereabouts the

lake is deepest. Kuffnacht is on the point of the other gulf, which extends towards the east, and is wider than the former. All the country to the west of these gulfs, and part of it to the north of the latter, belongs to the canton of Lucerne; but that which is to the south and north-east is dependent on the canton of Zug. All the mountains on the left shore of the lake belong to the canton of Underwald; those on the right, partly to the canton of Uri, partly to that of Schwytz, partly to the little republic of Gerfau, but principally to the canton of Lucerne.

**LUCERNE, f.** A lamp, or candle; a light in general. *Obsolete.*

**LE'CEY**, a town of France, in the department of the Meurte: three miles north-west of Toul, and thirteen south-south-west of Pont a Mousson.

**LU'CEY**, a town of France, in the department of Mont Blanc, on the Rhône: fifteen miles north-west of Chambery.

**LUCEY LE BOIS**, a town of France, in the department of the Yonne, and chief place of a canton, in the district of Avallon. The place contains 830, and the canton 7886, inhabitants.

**LUCHEU'X**, a town of France, in the department of the Somme: four miles north-east of Doullens, and fifteen south-west of Arras.

**LUCH'NOW HILLS**, a range of mountains in Hindoostan, between the circars of Ruttanpour and Goondwana; the passage over which is called *Luchnow Pass*, and is situated about eight miles west of Kyragur.

**LUCH'O**, a town of Pomerelia: twelve miles south-west of Dantzig.

**LUCH'O**, a town of the principality of Lunenburg, on the Jetze; being situated in a marshy soil, most of the houses are built on piles: fifty-four miles north-east of Zell, and forty east-south-east of Lunenburg. Lat. 52. 58. N. lon. 11. 17. E.

**LUCH'OWICZE**, a town of Lithuania, in the palatinate of Novogrodek: forty miles south-south-east of Novogrodek.

**LU'CHY**, a town of France, in the department of the Oise: nine miles north of Beauvais.

**LU'CIA**, or **LU'CY**, the name of a woman.

**LU'CIA (St.)**, so called from its having been discovered on St. Lucia's day, one of the Charaibe or Caribbee islands in the West-Indies, about twenty-seven miles in length from north to south, and twelve broad. In this island are several hills, two of which are remarkably round and high, and said to have been volcanoes. At the foot of these hills are fine valleys, well-watered, and having a good soil, that produces trees, the timber of which serves the planters of Martinico and Barbadoes for building their houses and windmills. The island also supplies plenty of cocoa and fustic. The air, fanned by the trade-winds, which, by the arrangement of the hills, are admitted into the island, and thus moderating the heat, is reckoned salubrious. The island has several good harbours and bays, which afford commodious anchorage; particularly the Little Carénage, which is accounted the best in all the Caribbees, and which induced the French to prefer it to the other neutral islands. This harbour possesses several advantages, such as its depth, the excellent quality of its bottom, and its convenient careening places. Thirty ships of the line may lie here, sheltered from hurricanes, without the trouble of mooring them. As to the other harbours, the winds are always favourable for going out, and the largest squadron may be in the offing in less than an hour. In the island are nine parishes, eight to the leeward, and only one to the windward. A high road is made round the island, and two others which cross it from east to west, and thus afford an easy conveyance of the commodities of the plantations to the barcades, or landing-places.

After the English had been settled for some time in this island, the Charaibes, instigated by the French, in the year

1638, either killed or drove from the island the English settlers with their governor. When the civil wars broke out in England, a party of French arrived here, under a person named Rouffelan, well provided with stores and ammunition. Rouffelan recommended himself to the Charaibes by marrying one of their women; so that he and his colony carried on an advantageous trade; but, upon his death in 1654, he was succeeded by one La Riviere, who, with his whole colony, was massacred by the Charaibes. It is needless to recount the attempts made by the French, and also by the English in 1672, and at a later period in 1723, to obtain and preserve a settlement in this island. At length, when the English were compelled to relinquish all hopes of obtaining this and other islands by force, St. Vincent, Dominica, Tobago, and St. Lucia, were declared neutral by the treaty of Aix-la-Chapelle in 1748; and those who remained of the ancient proprietors were left in unmolested possession. The treaty of neutrality was no sooner concluded, than both English and French appeared dissatisfied with the arrangement they had made. The English, in particular, discovered, that by acceding to the compromise, they had given up St. Lucia, an island worth all the rest, and to which, it must be owned, they had some colourable pretensions, founded on a treaty entered into with the Charibbean inhabitants in 1664, six hundred of whom attended an armament that was sent thither by lord Willoughby, and actually put the English publicly and formally into possession. By the peace of Paris, February 1763, the three islands of Dominica, St. Vincent, and Tobago, were assigned to Great Britain; and St. Lucia to France in full and perpetual sovereignty; the Charibbes not being once mentioned in the whole transaction, as if no such people existed. From this time, the colony flourished considerably. In the beginning of the year 1772, the number of white people amounted to 2018 souls, men, women, and children; that of the blacks to 663 free men, and 12,795 slaves. The cattle consisted of 928 mules or horses, 2070 head of horned cattle, and 3184 sheep or goats. There were thirty-eight fugar plantations, which occupied 978 pieces of land; 5,595,889 coffee-trees; 1,321,600 cocoa-plants; and 367 plots of cotton. There were 706 dwelling-places. The annual revenue at that time was about 175,000*l.* which, according to the abbé Raynal, must have increased one-eighth yearly for some time. The English took this island in the year 1779, but restored it at the peace in 1783; it was retaken by the English in 1794, restored in 1795, and retaken in 1796; restored at the peace of Amiens; recaptured in 1803; and secured to Great Britain by the treaty of Paris, May 30, 1814.

The soil of St. Lucia is tolerably good, even at the seaside; and is much better the farther we advance into the country. The whole of it is capable of cultivation, except some high and craggy mountains, which bear evident marks of old volcanoes. In one deep valley there are still eight or ten ponds, the water of which boils up in a dreadful manner, and retains some of its heat at the distance of 6000 toises from its reservoirs. The air in the inland parts, like that of all other uninhabited counties, is foul and unwholesome; but grows less noxious as the woods are cleared and the ground laid open. On some parts of the sea-coast, the air is still more unhealthy, on account of some small rivers which spring from the foot of the mountains, and have not sufficient slope to wash down the sands with which the influx of the ocean stops up their mouths, by which means they spread themselves into unwholesome marshes on the neighbouring grounds. Lat. 13. 37. N. lon. 60. 30. W.

**LU'CIA (St.)** a high and mountainous island of Africa, and one of those of Cape Verde, is about nine leagues long, and lies in the latitude of 16. 18. N. according to the English geographers; but, according to all others, it is a degree farther to the northward. On the east-south-east side is a harbour, with a bottom and shore of white sand; but its best road is opposite St. Vincent's to the south-

LUCIAN.

*London. Published as the Act directs. May. 1784. by G. Jones.*

south-west, where there are at least twenty fathoms of water. On the west side there is no water: it abounds with goats, sea and land fowl, tortoises, &c. but whether it hath any inhabitants is not certainly known.

LU'CIA (St.) a town of Sicily, in the valley of Demona; seven miles north of Messina.—Also, a town of the island of Corsica; six miles north-east of Corte.—Also, a town of South America, in the government of Buenos Ayres, on the east side of the river Plata; 140 miles north of Santa Fé.—Also a town of Brasil, in the government of Goyas, on the river Tocantins. Lat. 12. 20. S.—Also, a town of South America, in the government of Buenos Ayres, on the Parana; 110 miles south of Corientes.—Also a town of Peru, in the government of Arequipa; fifty miles south-east of Arequipa.—Also, a town of South America, in the audience of Quito, on the Daulé; thirty-five miles north-north-west of Guayaquil.—Also, a town of Italy, in the Trevisan; twenty miles east-south-east of Treviso.—Also, a river of Africa, which runs into the Indian Sea in lat. 28. S.—Also a river of America, in East Florida, which runs south-east along the east side of the peninsula, and communicates inland with the Indian river.—A bay on the east coast of the island of Borneo. Lat. 4. 16. N. lon. 117. 18. E.

LU'CIAN, a distinguished Greek writer, was a native of Samosata, the capital of Comagene, on the banks of the Euphrates. He was born in the reign of Trajan, of mean parentage; and in his youth was placed with an uncle to learn the art of statuary. Having contracted a disgust for this employment by the bad success of his first attempts, he withdrew from his master, and went to Antioch, where he engaged in literary studies; and afterwards improved himself so much by travelling, that no man now-a-days can distinguish him from a native Athenian. He taught rhetoric in Gaul and other places. In Antioch he was a pleader at the bar. In this profession he took a dislike to noise and lying; and sat down to write dialogues on the folly of mankind. He was about forty years of age when he began to imagine himself wiser than the philosophers of his time, with whose respective lives and opinions he was well enough acquainted to have abundant matter for ridicule. He makes continual allusions to Homer, perhaps thinking himself, like Persius, a wiser man than the writer of an Iliad: "Hoc ridere meum, tam nil, nullâ tibi vendo Iliade." In his old age he was appointed to some place of consequence under the emperor in Egypt, though it is not easy to determine exactly what. He married when somewhat advanced in age; and had a son, who was a favourite with Julian the Apostate: a letter of that emperor to him is still extant: the same talents that recommended the father to Aurelius, appear to have been possessed in some degree by the son. It is most probable that Lucian died about the year 180, at the age of ninety; and it is more likely that he died of the gout than that he was devoured by dogs enraged to find an apostate. The story of his embracing and afterwards renouncing the Christian religion, with that dreadful consequence, seems to have been the invention of some bigot absurd enough to dream of an alliance between truth and falsehood. Zuingerus has disposed of Lucian's body and soul to his heart's content: "Quare et rabiei istius poenas sufficientes in presenti vita dedit, et in futurum hæres æterni ignis una cum Satana erit."

The works of Lucian, of which a large number have reached our times, consist of a variety of pieces, narrative, rhetorical, critical, and satirical, partly in the historical and dialectical form, but principally in that of dialogue. Of these, the most popular, and those which have stamped his character as a writer, are such as are distinguished by a vein of humour employed in ridiculing the heathen mythology, or the sects of philosophers which then divided the schools of Greece. He is accounted the principal master of witty raillery among the ancients; and ranks with Swift and Voltaire among the moderns, though his satire is less delicate and ingenious than theirs. Some of

his keenest strokes against false religion and philosophy are put into the mouth of the Cynics, Diogenes and Menippus. He himself seems to have adopted no particular system, but to have been the general foe of imposture and superstition in all. As the Epicurean sect concurred with him in this respect, he treats it with more favour than the rest. He likewise frequently assumes the strong sense and acuteness of the Socratics. The Christian religion comes in for a share of his ridicule; but he appears to have been acquainted with it only in the garb of mystery and fanaticism. The style of Lucian being more pure than that of his contemporaries, two or three of the most celebrated fathers are reported to have improved themselves in composition by studying his works, and to have turned the artillery of his wit against his own party. Those who are conversant with the fathers may possibly know where this wit is written. Like his brother satirists, he is little restricted by truth and moderation in his sarcasms, and readily admits calumnious reports relative to eminent characters. Some of his pieces offend against decency; but in general he is a friend to morality. He is the only ancient writer who has dared to doubt of the musical abilities of swans. He tells us, with his usual pleasantry, that he tried to ascertain the fact by making a voyage on the coasts of Italy; and that, being arrived at the mouth of the Po, he and his friends had the curiosity to sail up the river, in order to ask the watermen and inhabitants concerning the tragical fate of Phaeton; and to examine the poplars, descendants of his sisters, whom they expected to shed amber instead of tears; as well as to see the swans represent the friends of this unfortunate prince, and hear them sing lamentations and sorrowful hymns, night and day, to his praise, as they used to do, in the character of musicians and favourites of Apollo, before their change. However, these good people, who never had heard of any such metamorphoses, freely confessed, that they had indeed sometimes seen swans in the marshes near the river, and had heard them croak and scream in such a disagreeable manner, that crows and jays would be sirens, compared with them; but that they had never even dreamed of swans singing a single note that was pleasing, or fit to be heard.

The best editions of Lucian's works entire are those of Bourdelot, Paris, folio, 1615; of Grævius, Amst. 2 vols. 8vo. 1687; of Reitzius, Amst. 4 vols. 4to. 1743, and the Bipontine, 10 vols. 8vo. 1789-93. Editions of his select dialogues, and of other detached pieces, are extremely numerous, and much used in schools. Lucian has been translated into French by d'Ablandcourt and others. There is an English translation which bears the name of Dryden, perhaps from a sense of justice to some bookseller, who had paid a sum of money, that it might be called so. The translation by Mr. Francis Hickes appears, by the language, to have been made about the beginning of the 17th century. At least it was before that of Jasper Mayne, done in 1638, and published in 1664. Their translations taken together extend to only a small part of Lucian. Spence, according to lord Dorset, "was so cunning a translator, that a man must read the original to understand the version." These are all the English translations of Lucian that we have seen previous to that of Mr. John Carr, who at first published a selection from the Dialogues in a single volume: this coming to a second edition in the year 1774, he was induced to publish a second volume in 1779, when he again took leave of his readers; a third volume, however, appeared in 1786; and a fourth and fifth, completing the translation, in 1798. *Vossii Hist. Græc. Carr's Preface.*

LU'CIAN, an eminent Christian martyr in the fourth century, according to the most unexceptionable authorities, was a native of Antioch, of which place he became presbyter. From the testimonies of St. Jerome, Eusebius, and Sozomen, it appears that he was a very learned and pious man, of an unblemished and excellent character in all respects, of great eloquence, and particularly well skilled in the knowledge of the Scriptures. He published

an edition of the Septuagint, with corrections suggested by a collation of ancient copies; which version was generally used, in Jerome's time, by the churches from Constantinople to Antioch. Lucian also published an edition of the New Testament, the canon of which appears to have been much the same with that of other Christians. Jerome, however, does not commend these editions, but accuses them of containing readings and interpolations not warranted by good authorities; and he depreciates Lucian's Septuagint in comparison with Origen's, which last he himself followed in his translation of the Old Testament from the Greek. During the persecution of the Christians in the reign of Maximin, Lucian was taken into custody, and conducted to Nicomedia, where the emperor then was. Here, in the presence of the emperor, he was commanded to renounce the Christian faith; which he steadily refused, and delivered an eloquent and able apology for it. Upon this he was sent to prison, where he was put to death; but in what manner we are not precisely informed. In St. Jerome's time there were extant some small treatises of his concerning the faith, and some letters; of which there are no remains now in existence excepting a fragment of one letter preserved in the Paschal Chronicle, if that be genuine. As to the creed or formulary of faith concerning the Trinity, which is sometimes called Lucian's, its claim to genuineness cannot be reconciled with the testimony of antiquity. In "the Acts of Lucian," inserted in the first volume of Bollandus's *Acta Sanctorum*, many additional circumstances are mentioned respecting Lucian, which are either evidently fabulous, or contradictory to the established truth of history; and are therefore undeserving of notice.

LUCIA'NA, a town of Spain, in the country of Seville: eight miles west-north-west of Ecija.

LUCIANA'NO, a town of Etruria: twelve miles west of Cortona.

LUCIANISTS, or LUCANISTS, *f.* A religious sect, so called from Lucianus, or Lucanus, a heretic of the second century, being a disciple of Marcion, whose errors he followed, adding some new ones to them. Epiphanius says, he abandoned Marcion; teaching, that people ought not to marry for fear of enriching the Creator: and yet other authors maintain, that he held this error in common with Marcion, and other Gnostics. He denied the immortality of the soul; asserting it to be material.

There was another sect of Lucianists, who appeared some time after the Arians. They taught that the Father had been a Father always, and that he had the name even before he begot the Son, as having in him the power or faculty of generation; and in this manner they accounted for the eternity of the Son.

LUCIA'NO, a town of Spain, in New Castile: nineteen miles west of Ciudad Real.

LUCIBLE, *adj.* Capable of shining; apt to shine. *Cole.*

LUCID, *adj.* Shining; bright; glittering:

The pearly shell its *lucid* globe unfold,  
And Phœbus warm the rip'ning ore to gold. *Pope.*

Pellucid; transparent.—On the transparent side of a globe, half silver and half of a transparent metal, we saw certain strange figures circularly drawn, and thought we could touch them, till we found our fingers stopped by that *lucid* substance. *Gulliver's Travels.*

On the fertile banks  
Of Abbana and Pharpar, *lucid* streams. *Milton.*

Bright with the radiance of intellect; not darkened with madness.—A few sensual and voluptuous persons may, for a season, eclipse this native light of the soul; but can never so wholly smother and extinguish it, but that, at some *lucid* intervals, it will recover itself again, and shine forth to the conviction of their conscience. *Bentley.*

Some beams of wit on other souls may fall,  
Strike through and make a *lucid* interval;

But Shadwell's genuine night admits no ray,  
His rising fogs prevail upon the day. *Dryden.*

LUCIDA CORO'NÆ, in astronomy, a fixed star of the second magnitude in the Northern Crown. See CORONA BOREALIS.

LUCIDA HY'DRÆ. See COR HYDRÆ, vol. v.

LUCIDA LY'RÆ, a bright star of the first magnitude in the constellation *Lyra*.

LUCID'ITY, or LU'CIDNESS, *f.* Splendour; brightness.

LU'CIDO (St.), a town of Naples, in Calabria Citra: eleven miles west-north-west of Cosenza.

LU'CIENSTEIG (St.), a very narrow pass from the country of the Grisons into Germany. At this place all merchandise and goods pay a toll to the Grisons. It is defended by a fort: three miles north of Meyenfeld.

LU'CIFER, the name of the planet Venus, or morning star. It is called *Lucifer* when appearing in the morning before the sun; but, when it follows it, and appears some time after its setting, it is called *Hesperus*. According to some mythologists, Lucifer was son of Jupiter and Aurora.

LU'CIFER, in the holy Scripture, is taken, 1. for the morning-star; 2. for Jesus Christ, who is the light of the world; 3. for the devil, who by the fathers is often called Lucifer. Zophar says to Job, "If thou art innocent, thou shalt shine forth as the morning-(star)." Job. xi. 17. Isaiah, xiv. 12, &c. speaks of the fall of Lucifer; *How art thou fallen from Heaven, O Lucifer, son of the morning!* In this way several fathers, and other commentators, have explained it; but others are of opinion that it literally refers to the king of Babylon, who fell from his state of glory and elevation, and was cast headlong into hell; i. e. into *hades*, the state of the dead. St. Peter (2 Pet. i. 19.) tells the faithful, that "they have the sure word of prophecy whereunto they do well that take heed, as unto a light that shineth in a dark place, until the day dawn, and the day-star arise in their hearts." This *day-star*, this *light*, set in opposition to the oracles of the preceding prophets, and over which they have so much advantage by its clearness, denotes the Gospel and doctrine of Jesus Christ. Some are of opinion, that Phosphorus and Lucifer signify the sun. The Arabians call Lucifer *Eblis*; and likewise *Azazel*, which is the name of the scape-goat that was driven into the wilderness, loaded with the sins of the Jewish people. They relate, that the angels, having God's order to fall prostrate before Adam immediately after his Creation, all complied, except *Eblis*, who obstinately refused, alleging, that, he and his companions having been derived from the element of fire, which is much purer and more excellent than that of earth, whereof Adam was formed, it was not just that they should be obliged to pay homage to their inferior. Whereupon God said to him, "Be gone from hence; for thou shalt be deprived for ever of my peace, and shalt be cursed to the day of judgment." *Eblis* desired of God that he would grant him respite till the time of the general resurrection; but all the delay he could obtain, was till the sound of the first trumpet; that is to say, forty years after. *Eblis* therefore died according to the Mahometans, but he will hereafter rise with all men, in order to be plunged in flames. I relate all these idle traditions only to shew, that the theology of the eastern people is but a corruption of Christianity. *Cabnet's Dict. of the Bible.*

LU'CIFER, the celebrated bishop of Cagliari, or Calaris as the ancients wrote it, the metropolitan city of the island of Sardinia, flourished in the fourth century. He was one of the deputies sent by pope Liberius to Milan in the year 354, whither the emperor Constantius had summoned a council for the purpose of condemning Athanasius. At that council Lucifer and Eusebius bishops of Vercell adhered most strenuously to the cause of the Alexandrian prelate, whom they defended with undaunted courage. Provoked at their firmness, which few had the  
spirit

spirit or integrity to imitate, the emperor banished them into the East. Lucifer's place of exile was at first at Germanicia, a city in Syria; whence he was afterwards removed to Eleutheropolis in Palestine, where he resided for the longest period. Here he wrote two books in defence of Athanasius and his supporters, against the emperor Constantius, with so much boldness, and even indecent violence, that, as St. Jerome observes, when he wrote them, his mind must have been prepared to suffer martyrdom. These books he not only published, but sent a copy of them to Constantius to be presented to him in his own name. Astonished at his intrepidity, the emperor delivered them to Florentius, grand master of his palace, to send them to Lucifer, that he might either acknowledge or disavow them. Without hesitation the bishop openly declared himself to be the author, and wrote to Florentius that he was ready to suffer death in defence of what he had written and done. But, if he courted the honours of martyrdom, he did not obtain them. About this time Athanasius sent a deacon to him, with a letter of thanks for the service which he had rendered the catholic cause, and requesting a copy of his works, which he either translated himself, or caused to be translated, from the Latin into Greek. On the death of Constantius, Lucifer, who with his fellow-sufferer Eusebius, had been exiled into the upper Thebais, recovered his liberty in common with the other catholic bishops, and came to Antioch, where the Catholics were divided into two parties. Instead of contributing to heal the breach, Lucifer widened it, by joining with the opponents of the bishop Meletius, who, though a Catholic, was ordained by bishops suspected of Arianism, and had communicated with them; and he intemperately ordained Paulinus, a presbyter among the malcontents, to the episcopal office. This step was condemned by his friend Eusebius of Verceil, who had been sent to Antioch by the synod of Alexandria, with the view of re-establishing the peace of that church. But Lucifer, determined to maintain what he had done, indignantly withdrew from the communion of Eusebius; and formed a party, called after him *Luciferians*, who resolved to avoid all commerce or fellowship with those bishops who had declared themselves in favour of the Arians, or acceded to the act of absolution, which the Catholic world in general had passed in favour of those who in the time of Constantius had deserted to the Arians. Lucifer and his followers, it seems, were willing to receive the laity who came over from the Arians, upon renouncing their error; but they would not consent that bishops, who had complied with the Arians, should be received as such. They might, upon their returning to the Catholics, be received as laymen; but they were not any more to officiate in the church. With this resolution Lucifer withdrew into Sardinia, and produced a schism in the church; which spread very widely, but did not obtain numerous adherents, and does not appear to have outlived the current century. Lucifer is supposed to have died in the year 370. His works are written without art and eloquence, with much heat and passion, and in a harsh and barbarous style. Dupin pronounces them to be "nothing but a collection of passages of Scripture, mixed with apostrophes, applications, and reflections." They were collected together, and published at Paris by John Till, bishop of Meaux, in 1568, 2vo. *Fabricii Bibl. Eccl. Cave's Hist. Lit. Lardner's Cred.*

**LUCIFERA**, in mythology, a surname given to Diana, under which title she was invoked by the Greeks in child-bed. She was represented as covered with a large veil, interspersed with stars, bearing a crescent on her head, and holding in her hand a lighted flambeau.

**LUCIFERIAN**, *adj.* [from *Lucifer*.] Belonging to Lucifer; proud; haughty. *Bailey*.

**LUCIFERIAN**, *f.* A religious sect, who adhered to the schism of Lucifer, bishop of Cagliari, who was banished by the emperor Constantius, for having defended the Nigenic doctrine concerning the three persons in the God-VOL. XIII. No. 941.

head. St. Augustine seems to intimate, that they believed the soul, which they considered as of a carnal nature, to be transmitted to the children from their fathers. The Luciferians increased mightily in Gaul, Spain, Egypt, &c. The occasion of the schism was, that Lucifer would not allow any acts he had done to be abolished. There were but two Luciferian bishops, but a great number of priests and deacons. The Luciferians bore a peculiar aversion to the Arians.

**LUCIFEROUS**, *adj.* [*lucifer*, Lat.] Giving light; affording means of discovery.—The experiment is not ignoble; and *luciferous* enough, as showing a new way to produce a volatile salt. *Boyle*.

**LUCIFIC**, *adj.* [*lux* and *facio*, Lat.] Making light; producing light.—When made to converge, and so mixed together; though their *lucific* motion be continued, yet by interfering, that equal motion, which is the colorific, is interrupted. *Grewo*.

**LUCIFUGOUS**, *adj.* [from the Lat. *lux*, light, and *fugo*, to fly.] Shunning the light; flying from the light. *Scott*.

**LUCIG'ENOUS**, *adj.* [from the Lat. *lux*, light, and *gigno*, to beget.] Begotten in the day-time; born in the day-time. *Scott*.

**LUCILIUS** (Caius), a Roman poet, was born at Suessa in the country of the Aurunci, about B. C. 148. He was of a good family, and was great-uncle to Pompey the Great. In the Numantine war he bore arms under Scipio Africanus the Younger, with whom and his friend Lælius he lived upon familiar terms. It is said in the Eusebian Chronicle, that he died at Naples B. C. 103, at the age of forty-six; but this is probably a mistake, since Horace speaks of him as an old man, and Aulus Gellius mentions him as citing the Licinian Law, which was not passed till five or six years after the alleged time of his death. Lucilius rendered himself famous as the first Latin satirist, at least the first of note; and his verses appear to have been extremely popular in Rome. From Horace, who refers to them several times in his own satires, we learn that he imitated the old Greek comedians in marking out by his censure individuals notorious for their vices, though of the highest rank; being (says this poet) *Uni aequus Virtuti, atque ejus amicis*; "To Virtue only and her friends a friend." Horace, however, describes him as harsh and negligent in his verification, hasty, and unwilling to submit to the toil of correctness. He was likewise censured for the frequent mixture of Greek with Latin words. He appears to have been a great egotist, committing (says Horace) "all his secrets to his books, whence the whole life of the old man is displayed, as in a votive tablet." He was a keen and vehement satirist; who, according to the metaphor of Juvenal, pursued the guilty "sword in hand." Of his thirty books of verses only some scattered fragments are come down to modern times. These were published separately, with annotations by Francis Douza, in 4to. Amst. 1593; reprinted at Padua, 1713. The fragments are also given in Mattaire's *Corpus Poetarum. Vossii Poet. Lat.*

**LUCILLA**, a Roman lady, the daughter of Marcus Aurelius, celebrated for the virtues of her youth, her beauty, her debaucheries, and her misfortunes. At the age of sixteen her father sent her to Syria to marry the emperor Verus, who was then employed in a war with the Parthians and Armenians. The conjugal virtues of Lucilla were great at first; but, when she saw Verus plunge himself into debauchery and dissipation, she followed his example, and prostituted herself. At her return to Rome, she saw the incestuous commerce of her husband with her mother, &c. and at last poisoned him. She afterwards married an old but virtuous senator, by order of her father; and was not ashamed soon to gratify the criminal sensualities of her brother Commodus. The coldness and indifference with which Commodus treated her afterwards determined her on revenge; and she, with many illustrious senators, conspired against his life, A. D. 185. The plot was discovered; Lucilla

was banished, and soon after put to death by her brother, in the 38th year of her age.

LUCINA, a goddess, daughter of Jupiter and Juno. As her mother brought her into the world without pain, she became the goddess whom women in labour invoked, and she presided over the birth of children. She receives this name either from *lucus*, or from *lux*, as Ovid explains it:

*Gratia Lucina, dedit hæc tibi nomine lucus;  
Aut quia principium tu, dea, lucis habes.*

Some suppose her to be the same as Diana and Juno, because these two goddesses were also sometimes called Lucina, and presided over the labours of women. She is called *Ilithya* by the Greeks. She had a famous temple at Rome. *Ovid. Fast.*

LUCINISSA, a town of Germany, in the county of Goritz: four miles south of Goritz.

LUCINIUM, *f.* in botany. See AMYRIS.

LUCINO, a river of Naples, which runs into the gulf of Tarento in lat. 39.40. N. lon. 16.50. E.

LU'CIO (St.) a town of Etruria; fourteen miles east-fourth-east of Leghorn.

LUCIPA'RA, or LUSIPARA, a small barren island, in the Eastern Indian Sea, near the south coast of the island of Banca. Lat. 3.14. S. lon. 106.20. E.

LUCITO, a town of Naples, in the county of Molise; eleven miles north-east of Molise.

LU'CIUS, a man's name.

LU'CIUS, a Scripture-name, mentioned Rom. xvi. 21. and styled St. Paul's kinsman, is, say some, the same as Lucius the Cyrenian; but the generality with more reason distinguish them; and others again suppose him and St. Luke to be the same person, which seems very credible. See LUKE.

LU'CIUS OF CYRE'NE, mentioned Acts xiii. 1. was one of the prophets of the Christian church at Antioch. Some believe Lucius to have been one of the seventy. Ufuardus and Ado assert, that the apostles ordained him first bishop of Cyrene. The Latins honour him on the 6th of May.

LU'CIUS I. (Pope), succeeded to the see of Rome upon the death of Cornelius, in the year 252. In this statement Jerom and Eusebius concur; while the latter adds, that he did not preside over the Roman church quite eight months. At present, the day of his ordination and the duration of his episcopate are reckoned uncertain. Bishop Pearson thought it probable, that he was ordained on the twenty-fifth of September, and sat five whole months and ten days, dying on the fourth of March 253; which hypothesis nearly agrees with the conjectures of other modern writers. He was banished from Rome immediately after his ordination, under the reign of Gallus; but he soon returned, to the great joy of his flock, who crowded to meet him. On this occasion St. Cyprian wrote him a letter, congratulating him upon his return from his exile, as he says he had done before upon his ordination and confession. In this letter St. Cyprian observes, that he was perhaps recalled to be immolated in the sight of his flock, that they might be encouraged and animated by his Christian constancy and resolution. In a letter afterwards written to pope Stephen, Cyprian calls Lucius a *martyr*; but the ancient writers are silent on the subject of his death; and perhaps the expression is not to be understood strictly, but would be more properly rendered a *confessor*.

LU'CIUS II. (Pope), formerly called *Gerard de Caccianemici*, was raised to that dignity on the death of Celestine II. in the year 1144. He was a native of Bologna, who embraced the ecclesiastical life among the canons regular of St. Augustine. In the year 1125, pope Honorius II. created him a cardinal, by the title of Cardinal of the holy cross at Jerusalem, and appointed him librarian of the Roman church. By pope Innocent II. he was nominated chancel-

lor of the same. Being made governor of Beneventum by pope Innocent, in 1132, he bravely defended that city against the army of Roger king of Sicily. A little before the death of Innocent II. the Romans threw off the papal yoke in temporal matters, restoring the senate, and creating their own magistrates, to whom alone they would yield obedience. This attempt to recover their ancient liberties they persisted in after the election of Lucius, whom they acknowledged for lawful pope, but would not own him for their sovereign. They maintained that it was inconsistent with the profession of the clergy, that they should possess lordships, estates, or temporal dominion; and that they ought to content themselves with such decent subsistence as they might derive from voluntary tithes and oblations. To Lucius, as their bishop, they paid all due respect; but soon after his election, assembling in the capitol, they vested the patrician dignity in one of their own body, and submitted to him as their prince. In these circumstances, finding himself unable to oppose them, Lucius wrote to Conrad king of Germany, imploring his protection in very humble terms. At the same time the Romans also sent letters and an embassy to that prince, to invite him to take possession of the metropolis of the empire, which they had rescued from the slavery under which it had long groaned, and were ready to deliver up to him as their liege lord and sovereign. They likewise entreated him to fix his residence at Rome, and to restore that city, which had been the seat of the empire till it was usurped by the popes, to its ancient splendour. These transactions remind us of some recent events. To their application Conrad paid no regard; but he treated cardinal Guido, the bearer of the pope's letter, with the utmost marks of respect, and expressed great concern at not being in a condition to send his holiness any assistance. Notwithstanding that Lucius was thus deprived of all hope of relief from the king of Germany, yet, being able no longer to brook the haughty behaviour of the senate and their patrician, who treated him as their subject, he determined, with the assistance of his friends in Rome and the neighbourhood, to attempt the recovery of his temporal power. Accordingly, having assembled a body of troops, he put himself at their head, and marched against the Capitol, where the senate was sitting. He met, however, with so vigorous a resistance from the Roman people, that his troops were repulsed; and, while he was endeavouring to encourage them, he received so severe a wound from a stone, that he died a few days afterwards. This event took place in February 1145, after a pontificate of between eleven and twelve months. Ten of his Letters are extant in the tenth vol. of the Collect. Concil. and two in the second volume of Baluze's *Miscellanea*. *Cave's Hist. Lit.* vol. ii

LU'CIUS III. (pope), originally named *Humbaldo Allucingoli*, was a native of Lucca. Having been educated to the church, he first obtained a canonry in the cathedral of that city; and in the year 1142 was created cardinal-priest by Innocent II. Adrian IV. sent him legate into Sicily, where he maintained the interests of the holy see with great zeal and prudence, and on his return was nominated bishop of Ostia. In the year 1177, pope Alexander III. appointed him his legate to the emperor Frederic Barbarossa, where by his negotiations he prepared the way for the reconciliation which took place between the emperor and the pope at Venice, in the same year. About that time we find that he was dean of the sacred college. In the year 1181, upon the death of Alexander III. Humbaldo was chosen his successor in the papacy, and at his consecration took the name of Lucius. At his election, the decree of the Lateran council was put into execution for the first time, which declared the concurrence of two thirds of the electors present sufficient to render an election valid; and he was the first pope who was elected by the cardinals alone, to the exclusion of the people and clergy, who had hitherto taken a part in the choice of a new pope.

pope. Towards the close of the year, a quarrel took place between the pope and the Romans, said to have been occasioned by his refusal to comply with some customs which had been observed by all his predecessors. Provoked at his refusal, the Romans broke out into insurrection, and drove him out of the city, pursuing him from one strong-hold to another, till he retired for safety to Verona. From this place he wrote to the emperor, imploring his protection; who espoused his cause with great zeal, and ordered Christian, archbishop of Mentz, to march at the head of a powerful army to his assistance. This prelate soon reduced all the strong holds in the neighbourhood of Rome, and, encamping at Tusculum, so harassed the Romans by the parties which he daily sent out against them, that they were ready to receive the pope on his own terms, when the death of Christian produced a sudden alteration in the state of affairs. For, on that event, his army immediately dispersed, and the Romans became more determined than before in their opposition to the pope. Lucius, finding himself incapable, for want of money, to raise sufficient forces for reducing them to submission, sent nuncios to all the Christian princes and bishops, to gather contributions in aid of the holy see. He thought it more prudent, however, to make use of the sums which he received in gaining over some of the leading men among the Romans, than in levying troops; and, having succeeded in this object, he ventured to return under their protection to Rome. Not long afterwards, the Romans rose in the insurrection a second time, laying waste the lands of the church, and treating all whom they thought favoured the cause of the pope with the greatest barbarity. Upon this, Lucius, after anathematizing all the accessories to the deeds of rapine and cruelty which had been committed, retired in great haste to Anagni; whence he went into Lombardy, to implore the protection of the emperor, who was then on his march to Italy, for the purpose of holding a council at Verona. To that city the pope repaired in July 1184; and, on the arrival of the emperor, a council was opened on the first of August, at which that prince and his holiness, with the lords and bishops of Lombardy, and other nobles and prelates, attended. In this council the pope preferred his complaints against the Romans, painting in the strongest colours the enormities which they had perpetrated; and they were declared by the whole assembly enemies to the church. To this council may also be traced the origin of the inquisition against heretics. For not only were the Albigenses condemned and anathematized anew, under different names, but all who should admit them into their houses, suffer them in their territories, or afford them any sort of relief. Under the same sentence were included all who held or taught different doctrines from those held and taught by the Roman church. Some grounds of difference, however, arose between the emperor and pope, with respect to subjects which the former had at heart. He warmly espoused the cause of several bishops and other ecclesiastics, who had been suspended from their benefices and functions for adhering to the antipopes during the schism under the pontificate of Alexander III. and who now appeared at the council professing great sorrow for what they had done, and earnestly entreating forgiveness and a reinstatement in their former conditions. At first the pope gave his promise that he would comply with their request; but this he afterwards retracted, alleging that, as they had been deposed in a general council, they ought to be restored in a general council, which he promised to assemble for that purpose at Lyons. This opposition to his wishes gave umbrage to the emperor; as did more particularly the pope's refusal to crown his son Henry, and to give him the title of emperor. To this measure Lucius would by no means give his consent, unless the father resigned his crown; pretending, that it would be as absurd that two emperors should occupy the same throne, as that two popes should sit in the same chair. Another dispute arose between them concerning the elec-

tion of an archbishop of Treves. The electors having been divided among themselves, and made a return of both the candidates, Fulmar and Rudolph; though the former had the majority on his side, the emperor had put the latter in possession of the see. Upon this, Fulmar appealed to the pope, who readily espoused his cause, and the affair was warmly discussed in the council. But the pope, thinking it not prudent to proceed to a direct rupture with the emperor, at so critical a juncture in his own situation, found means to delay the final decision of this business; and, matters being accommodated, the pope once more returned to Rome.

Before the meeting of this council, Lucius had sent legates with letters addressed to the Saracen princes Saladin and his brother Saphadin, who had reduced the Christians in Palestine to the most desperate condition, in order to treat of a peace between them and the Christian princes. These legates were received by the Saracen chiefs with all possible marks of honour; and were dismissed with letters to the pope, written in the most respectful terms, and still extant, in which they declared their readiness to conclude a peace with the Christians, and to agree to a mutual exchange of prisoners upon just and equitable conditions. But this treaty between the pope and the two Saracen princes, if there were sincerity in either or both sides, had not the wished-for success; and we find the pope pressing with great earnestness the Christian princes, in 1184, to send powerful succours to the assistance of their friends and brethren in the Holy Land. But, while Lucius was promoting to the utmost of his power a new crusade, he died at Verona in November 1184, after a pontificate of four years and between two and three months. Though he did not possess a great share of learning, he is commended for prudence, piety, and unblemished manners. Two of his Letters, and a Decree, are inserted in the tenth volume of the *Collect Concil.* Mr. Gibbon, speaking of the second and third Lucius, says, "I cannot forget the sufferings of two pontiffs of the same age, the second and third of the name of Lucius. The former, as he ascended in battle array to assault the Capitol, was struck on the temple by a stone, and expired in a few days. The latter was severely wounded in the persons of his servants: in a civil commotion several of his priests had been made prisoners, and the inhuman Romans, reserving one as a guide for his brethren, put out their eyes, crowned them with ludicrous mitres, mounted them on asses with their faces to the tail, and extorted an oath, that in this wretched condition they should offer themselves as a lesson to the head of the church. *Bower. Gibbon, vol. xii.*

**LUCK**, *f.* [*geluck*, Dut.] Chance; accident; fortune; hap; casual event.—Some such method may be found by human industry or *luck*, by which compound bodies may be resolved into other substances than they are divided into by the fire. *Boyle.*

He forc'd his neck into a noose,  
To show his play at fat and loose;  
And, when he chanc'd t' escape, mistook,  
For art and subtlety, his *luck*.

*Hudibras.*

Fortune, good or bad.—That part of mankind who have had the justice, or the *luck*, to pass, in common opinion, for the wisest, have followed a very different scent. *Temple.*

Glad of such *luck*, the luckless lucky maid  
A long time with that savage people staid,  
To gather breath in many miseries.

*Spenser.*

**LUCKAMPOUR**, a town of Bengal: seventy miles north-west of Midnapour.

**LUCKAU**. See **LUCCA**, p. 739.

**LUCK'ENS**, a town of Sweden, in the province of Dronheim: twenty-five miles south-south-west of Dronheim.

**LUCK'ENWALDE**, a town and principal place of a district or circle, in the duchy of Magdeburg. In the  
year

year 1723, great part of the town was destroyed by fire: fifty miles east of Magdeburg, and eighteen south of Potsdam. Lat. 52. 6. N. lon. 13. 3. E.

LUCK'ERCOOT, a town of Hindoostan, in Guzerat: thirty miles east of Godra.

LUCK'FORD, a village in Dorsetshire, near the river Frome, a little west from Holme, gives name to a river that empties itself into the Frome; forms the western boundaries of the Isle of Purbeck; and divides East Lulworth from Steple and West Tineham.

LUCK'HAM, a village in the parish of Uffecolomb, Devon.

LUCK'IA, a town of Hindoostan, in Oude: forty miles north-east of Gooracpour.

LUCK'IA, a river of Bengal, which runs into the Megna near Naramungue.

LUCK'IDER, a town of Bootan, forty miles north of Beyhar.

LUCKIGAT'CHY, a town of Bengal: ten miles north-east of Kishenagur.

LUCK'ILY, *adv.* Fortunately; by good hap.—It is the pencil thrown *luckily* full upon the horse's mouth, to express the foam, which the painter with all his skill could not form. *Dryden's Dufresnoy*.—It happens *luckily* for the establishment of a new race of kings upon the British throne, that the first of this royal line has all high qualifications. *Addison*.

LUCK'INESS, *f.* Good fortune; good hap; casual happiness.—He who sometimes lights on truth, is in the right but by chance; and I know not whether the *luckiness* of the accident will excuse the irregularity of his proceeding. *Locke*.

LUCK'INGTON, a village to the south-west of Malmesbury, Wilts.

LUCKINPOUR, a town of Hindoostan, in the circar of Cicacole: twenty-four miles north of Cicacole.—A town of Hindoostan, in Surgooja: ten miles south-west of Surgooja.

LUCKIPOUR, a town of Bengal: forty miles south-east of Calcutta.—A town of Bootan: fifty-five miles south of Tassafudon.—A town of Hindoostan, in Bengal: thirty-five miles south-west of Comillah.—An island in the mouth of the river Ganges, about nine miles in length and two in breadth. Lat. 22. 27. N. lon. 90. 48. E.—A town of Bengal, on an island of the same name: fifty miles south of Dacca.

LUCK'LESS, *adj.* Unfortunate; unhappy.

Glad of such luck, the *luckless* lucky maid  
A long time with that savage people staid,  
To gather breath in many miseries.

*Fairy Queen.*

Never shall my thoughts be base,  
Though *luckless*, yet without disgrace.

*Suckling.*

LUCK'MERSER, a lake of Hindoostan, in Oude, a little to the east of Buckrah.

LUCKMIPOUR, a town of Bengal: thirty-two miles south-south-east of Curruckpour.—A town of Hindoostan, in Bahar: thirty miles east of Bahar.

LUCKNADANG', a town of Goondwana: eighty-eight miles north of Nagpour.

LUCKNOR', a village in Northumberland, on the Wame; west of Sunderland.

LUCKNO'RE, a town of Hindoostan, in Bahar: twenty-eight miles south of Patna. Lat. 25. 8. N. lon. 85. 16. E.

LUCKNOU'TI. See GOUR, vol. viii. p. 752.

LUCK'NOW, a circar of Hindoostan, in Oude, bounded on the north by Kairabad, on the east by Oude circar, on the south by Manickpour, and on the west by Canoge; about seventy-five miles long, and forty-five broad.

LUCK'NOW, a large and populous, but irregular and inelegant, city of Bengal, of late years become capital of the fore-mentioned circar, and of the subah of Oude; situated on the Goonty, which runs on the north side of the town, and is navigable for boats of a common size at all seasons of the year; founded by Latschman, or Lac-

man, and rebuilt by Bikarmadjit, king of Oude. The spot on which the founder resided is preserved in remembrance by a mosque, erected for this purpose by Aurungzebe. This is a very ancient city, and moderately extensive, but meanly built. The walls of the houses are chiefly mud, covered with thatch, and many entirely consist of mats and bamboos. A few houses are built of brick; the streets narrow, crooked, and the worst contrived of any in India. In the dry season the heat, dust, and insects, make them intolerable; in the wet season they are scarcely passable. Yet this was a great city in the time of Abulfazel; how small has been the improvement since his days! Most of the old palaces were destroyed by Sujah Dowlah; for, says Mr. Pennant, no son ever lives in the palace of a deceased father, but builds a new one for his own use. This is the cause of so many ruins of magnificent modern foundations. Sujah Dowlah finished his course in 1775. Mr. Hodges, in his Travels, has given a view of the palace of the nabob, begun by Sujah Dowlah, and continued by his successor Atop. It is built on an eminence, and commands a fine view of the Goonty, and the country to the east, a plain of five hundred miles, extending as far as Calcutta. Lucknow is distant from Sionpour, 55 miles; from Sionpour, 92; from Allahabad, 127; from Agimere, 428; from Arcot, 1147; from Bahar, 388; from Cabul, 1118; from Dacca, 790; from Dowlatabad, 728; from Golconda, 794; from Gwalior, 211; from Oude or Fyzabad, the former capital, 85; from Patna, 316; from Seringapatam, 1201; and from Vissapour, 902. Lat. 26. 52. N. lon. 81. 14. E. *Gibson's Geography*, vol. i.

LUCK'O LUCK', or Luz'k, a city of Russian Poland, capital of the palatinate of Volhynia, with a castle, where the bishop of Volhynia resided, and the Jesuits had a college. This city is also the residence of a Russian bishop; and has a provincial diet and court of judicature. In 1752, the greatest part of this city was destroyed by fire. It is 200 miles east-north-east of Cracow, and 176 south-east of Warsaw. Lat. 50. 40. N. lon. 25. 19. E.

LUCK'OMB, a village near Porlock, Somerset.—A village in Dorsetshire, two miles north of West Chelburgh.

LUCKOU'R, a town of Hindoostan, in the circar of Sohajepour: twenty miles south of Sohajepour.

LUCK'TON, a village in Herefordshire, near Croft Castle.

LUCKUM'RY, a town of Meckley: thirty-five miles west of Munnypour.

LUCK'Y, *adj.* Fortunate; happy by chance:

Perhaps some arm, more *lucky* than the rest,  
May reach his heart, and free the world from bondage,  
*Addison*.

LU'CO, a town of Naples, in Abruzzo Ultra: nine miles south-south-west of Celano.

LUÇON, a town of France, in the department of the Vendée, situated on a canal, about six miles in length, which communicates with the sea. The environs are marshy, and the air is unwholesome. Before the revolution it was the see of a bishop: fifteen miles west of Fontenay le Comte. Lat. 46. 29. N. lon. 1. 4. W.

LUÇON, or Luzon, sometimes called *Manilla*, from its capital, is the largest and most important of the Philippine isles, being more than seven degrees, or near 500 British miles, in length, and about 100 of medial breadth. This island is pervaded in its length by a high chain of mountains towards the east, so that its interior parts are difficult of access; and the examination of it is also restrained by the jealousy of the Spaniards. It is also traversed by the branches of a considerable river, on the banks of which the capital is seated; and its lakes are numerous, the largest of which is the source of the river Manilla. Several volcanoes occur in this island; nor are earthquakes uncommon. Its soil is uncommonly fertile; and its products are gold, copper, and iron. Such is the fertility of the soil, that rice, which in other countries requires

requires much cultivation, grows every-where with little or no attention, and even in the highest mountains without being watered. Of rice they have different kinds, some of which requires four or five months between the sowing and the harvest, and some which is sown and reaped within forty days. Although they have no wheat but that which is imported, the soil is very capable of bearing it, as appeared by an experiment, in which one bushel produced 130. The grass grows, the trees bud, blossom, and bear fruit, all the year, not only in the gardens, but on the mountains. The richest fruits of the West Indies, as well as of the East, are here abundant, and some that are found no where else. Here are forty different sorts of palms, the most excellent cocoas, and callia, the sugar-cane, and cotton of peculiar beauty. In the mountains are wild cinnamon, wild nutmugs, ebony, sandal wood, together with excellent timber for building and shipping. Gold is found upon the mountains in every part of the island, washed out of the earth by the heavy rains; in the mould of their valleys, carried down by their rivulets; and in the sand and mud of their lakes, brooks, and rivers. The Spaniards obtain about 1000 or 1500 pounds weight every year, as a tribute from the inhabitants. All kinds of cattle abound, so that a large fat ox does not cost above four pieces of eight. Civet-cats are also very common, and their civet is highly valuable. Ambergris is also thrown on their coasts in prodigious quantities. The natives, who are of a mild character, are called Tagals, like all those of the Philippines, and seem to be of Malay origin. They are tall and well made, wearing only a kind of shirt, with loose drawers; but the dresses of the women is chiefly a large mantle, and their black and beautiful hair sometimes reaches the ground; their complexion is a deep tawny. Their houses are of bamboo covered with palm-leaves, raised on pillars to the height of eight or ten feet. The chief food is rice, which is often eaten with salted fish.

M. Sonnerat has given some account of the interior part of the country, as far as he was able to penetrate it. At the distance of about a day's journey from the capital, he found himself buried in woods, no habitation nor appearance of cultivation presenting themselves to his view. Some scattered Indians, having their shoulders covered with the skins of wild goats, the rest of the body being naked, with a bow in their hands and arrows on their back, were discovered. Their looks were haggard, and their countenances very unprepossessing. They seemed to be timid, and disposed to flee from the face of man, and even from one another. They have no society; they are solitary wanderers; stopping when night overtakes them, and sleeping in the hollows of trees. They have no families, and they seem to be constrained merely by instinct to sue the females whom chance has thrown in their way. After traversing the wood above-mentioned, M. Sonnerat was led to a large lake, in the middle of which is an island, where some Indian families have taken refuge; here they live by fishing, and preserve their liberty, suffering no one to land on the place which serves them for an asylum. On the east-south-east the lake is bounded by high mountains; the soil is fertile, and there are many fruit-trees; and hence Manilla is supplied with fruit. These mountains are inhabited by a mild set of people, who employ themselves in making mats, cloth, and different works with the *abacca*, a kind of banana which bears no fruit, and of which the filaments are very strong. These people have laws, and punish crimes, the chief, in their estimation, being adultery. On the other side of the mountains, which bound the lake on the east-south-east, are immense plains, traversed by large and deep rivers, which diffuse fertility. Here are a few scattered villages inhabited by men without morals, without virtue, without equity; who fear each other, and, having no protection from laws, trust to the force of arms alone for their safety. In a word, they live in perpetual distrust and dread of one another. Nevertheless, says our traveller, the arts have

VOL. XIII. No. 941.

reduced this savage nation, without softening their ferocious manners. Columba was the name of one of the largest villages possessed by this savage tribe; and on the day of his arrival the people had a grand festival, which they celebrated with divers spectacles. Part of these spectacles was the exhibition of a tragedy; and this was preceded by a cock-fight, and by other games, at which large sums were won and lost. Two leagues from Columba, in a village of less extent, was a rivulet whose water was hot and boiling; and yet on the banks of this rivulet were vigorous shrubs; one of these shrubs was an agnus castus, and the two others *apalatus*. The Spanish governor, conceiving that these waters possess some good qualities, has constructed near them several baths. Fish were found swimming in this water, the heat of which was so great, that our author could not bear his hand in it. In the interior of the country, he says, there are many nations which the Spaniards have in vain endeavoured to subdue. No force is sufficient to subjugate them; they fly to a distant asylum, and there it is said they swear an implacable hatred against the oppressors of their country, meditating and preparing means of vengeance. From thence they issue in mean boats; fortified by courage, and animated by hatred, they dare to approach the gates of the capital; and their incursions are a succession of pillages, murders, ravages, and rapes. On leaving the village traversed by the rivulet of hot water, our author took an easterly route, and, after three hours' journey, found himself in an immense plain, which was watered and rendered fertile by a rivulet of clear, light, and wholesome water, that descended from the top of a neighbouring mountain. Large meadows were enamelled with flowers, whose variety of colour and perfume delighted equally the sight and the smell. The inhabitants were friendly and hospitable.

This island is divided into provinces, most of which are under the jurisdiction of the Spaniards. The principal are the Balayan, in which are 2500 tributary Indians; in that of Camarinas is the city of New Caceres, the see of a bishop. Paracale contains 7000 Indians, who pay tribute to Spain; this province abounds in mines of gold and other metals, and of valuable load-stones. In Cagayan are 9000 tributaries; but the richest and most populous province is said to be that of Illocos, whose coast extends upwards of ninety miles. There are several others, such as Pangasian, Bahi, Balacan, &c. Lat. 12. 48. to 18. 48. N. lon. 120. 6. to 124. 10. E.

LUCOS. See LUCOS, p. 739.

LUCOTTA, a small island in the Eastern Indian Sea, near the west coast of Sumatra. Lat. 1. 43. N. lon. 97. 25. E.

LUCRATION, *f.* [*lucrum*, Lat. gain.] The act of gaining. *Scott.*

LUCRATIVE, *adj.* Gainful; profitable; bringing money.—The trade of merchandize, being the most *lucrative*, may bear usury at a good rate: other contracts not so. *Bacon.*

LUCRE, *f.* Gain; profit; pecuniary advantage. In an ill sense:

A soul supreme in each hard instance try'd,  
Above all pain, all anger, and all pride,  
The rage of pow'r, the blast of public breath,  
The lust of lucre, and the dread of death.

*Pope.*

LUCRETIA. The story of Lucretia, whose fate was the immediate cause of the expulsion of the Tarquins, and the change in the form of the Roman government, (A.U.C. 244.) is well known, and has been related by us under the article CHASTITY, vol. iv. p. 122. Some persons have arraigned the prudence of her conduct in that lamentable situation; but Count Verri, in his *Notte Romane al Sepolchro de Scipioni*, (Paris, 1797,) brings forward Pomponius Atticus to arraign even the *virtue* of Lucretia. That nice enquiry is conducted in the following manner: "As a storm suddenly agitates the waves of the sea, so the spectres, who were listening with calm attention, then,

trembling, murmured like the wind in the forest. In the mean time, a female shade appeared, who advanced clothed in a white veil, desirous of drawing attention by her tears and her expressions of grief. She now plunged into the thickest of the crowd, and now appeared out of it, like the moon among the clouds; when the multitude, which she had disturbed, leaving an opening, she remained distinct in the midst, and stopped. Through the transparent veil which descended to her feet, was seen her lovely form, like a rose clothed in morning dew; but suddenly rending it from a new impulse of anger, she discovered the whiteness of her well-formed shoulders and her heaving bosom, upon which, however, with modest repentance, she held with her right-hand the disordered veil, leaving a great part of her figure uncovered. She cast down her weeping eyes; anguish was painted upon her forehead, from which the thick golden hair fell upon her snowy limbs. How the heart is chilled by the sight of beauty in distress! As I looked upon her, I already felt the thrill of soft compassion run through my limbs, when my attention was drawn by a general whisper, which repeated the name of *Lucretia*. Pomponius, not disturbed by the tumult, nor by the fame of so illustrious a woman, approaching her, thus intrepidly continued: "O celebrated consort of Collatinus, do not be offended at my conjectures concerning thee, since they arise, not from hatred to thee, but from love for *truth*. Now thou mayest thyself declare it, after so many ages of uncertain opinion." Then the lady raised her disconsolate countenance, and turned towards him who questioned her her mournful eyes. She panted for breath, she trembled, and anguish seemed to choke her utterance. A mournful silence prevailed in the air: the crowd, waiting in an attitude of astonishment, expected to hear from her some interesting information; such is the attention of the audience when a skilful musician is ready to delight them with his harmonious voice. But the lady remained in that distressful situation, as if unable to speak, or as if doubtful which of the many words that crowded to her lips she should utter or retain. At length, in an humble manner, she bowed her head upon her delicate breast; and, as if overcome with grief, threw herself upon a tomb. All hope of hearing her being now not only deluded, but extinguished, Tullius thus broke silence: "I do not know, my Atticus, why thou now takest pleasure to offend this lady with thy severe words, though, when amongst us, they flowed so mildly from thy lips. Certainly silence and darkness are not the only testimonies of the insults she suffered; but the magnanimous penalty she inflicted on herself is a demonstration of her innocence. Neither her bed nor her thoughts were contaminated by the royal licentiousness; her body only was defiled by it; in which, as being profaned, this chaste spirit disdained afterwards to dwell. See the deep wound in her beauteous bosom, the pure asylum of lovely children. Is not the sword by which it was torn sufficient to destroy calumny?" Atticus answered: "Although it be a bold attempt to dispute with thee, O father of the Roman eloquence, yet we are at length permitted to judge here of human affairs without the confinement of timid opinion; and, as thou defendest, with wonderful art and eloquence, not only the innocent, but the guilty, so here thou speakest decidedly on a very uncertain subject. I freely declare, that her story seems very improbable." Marcus Brutus was grieved at these words, recollecting that Junius Brutus, from whom he was descended, took the yet-reeking dagger from her bosom, and promoted the severe and memorable revenge. But Atticus continued:—"For she was not threatened with death, according to her own account, by a cruel lover, against whom her complaints would have been vain, but in her husband's house, full of slaves and relations, and for the simplicity of those times magnificent. Sextus, it seems, threatened to lay a dead slave by her side, as an ignominious proof of her guilt; yet it is evident that such a crime was difficult to be executed, and easy to be pre-

vented by loud and desperate cries. I am sorry, for the sake of her reputation, that in that hateful trial she should imagine the best way to escape infamy, was to comply with the will of her lover. A surprising docility this, in a pattern of Chastity, to refrain not only from defending herself, but from calling for assistance in that distressing situation! An astonishing determination to contaminate her bed, and then purify it with her own blood! Nor was the royal youth deformed or disagreeable, but handsome and valiant: he was courteously received by her; he sat down with her to the social supper, and was afterwards conducted by the slaves to the hospitable chamber. O thy childish simplicity, that in harbouring that guest, in whose eyes female penetration must have seen the flames of desire, thou didst not fasten thy chamber! Nor hadst thou near thee any maid-servant; so that the midnight traitor, like the most favoured lover, came unopposed to the altar of thy faith, ill-defended by frail virtue!" Here Brutus interrupted: "Why then did she reveal with infamy, what she might have denied with honour, and concealed with grateful impunity? Could there be a more foolish resolution, than to excite a fatal quarrel against the lover? She alone was her own voluntary accuser, and the instigator of vengeance against her perfidious ravisher. Had she yielded unreluctantly to the embraces of the youthful seducer, what madness more improbable, than to accuse herself, to kill herself, while love alone, silent, and satisfied, was privy to the secrets of the night?" Pomponius quietly replied: "Those who lived in those times, know that Sextus was a vain-glorious young man, who, instead of concealing his success in love-intrigues, shamelessly boasted of it. It is also known from history, that he undertook to conquer her virtue for the sake of laughing at Collatinus, who held it up as a model, and invincible. Proud, therefore, of this difficult triumph, he was eager to display it in derision of the credulous husband. When the intoxication of illicit pleasure was removed from the lady's mind, she perceived herself to be on the brink of a precipice, and resolved to die illustrious by a falsehood, rather than live to inevitable and infamous punishment." Then Brutus turned towards her, and said: "Thou, who in life revealedst the secret disgrace, why dost thou not now speak, and at once put thy detractors to silence?" Alas, at this invitation, I saw tears flow from her disconsolate eyes, which wiping away with her veil, she afterwards concealed her features with it entirely, as if to prevent their being suffused with painful blushes; she then sat down in affliction upon the ground, hid her face with both her hands, and rested it on her knees, as overwhelmed with misery. The surrounding shades looked at each other with mutual astonishment at that silence; and Brutus with a compassionate voice, added: "O unhappy, if thou wert innocent, and art not by some unknown fate deprived of speech, whence sufferest thou the new insult of being accused, and art unable to speak freely in thy own defence!" Hearing this, she rose up in distress, and seemed to declare that she was dumb from a celestial decree; on which account Brutus, consoling her, concluded: "If thou wert frail in that night for ever doubtful, thou becamest magnanimous the following day, and mayest boast of having, by thy striking example, founded our liberty." While he went on with soothing words, relating the banishment of the kings, the glorious vengeance, the illustrious events that succeeded, her eyes seemed joyful as she listened to him, and her countenance less melancholy, as the sky is refreshed by the breath of the zephyr. She then disappeared, leaving every mind in the same uncertainty as at first, concerning her reputation. The crowd in the mean time disputed with various opinions, concerning that event, over which was spread the veil of time, and the impenetrable silence of love."

LUCRETILIS, now *Libretti*, a mountain in the country of the Sabines, hanging over a pleasant valley, near which the house and farm of Horace were situate.

LUCRETIVS, TITUS LUCRETIUS CARUS, an eminent Latin

Latin poet, was a Roman, but whether of the ancient Lucretian family is uncertain. According to the Eusebian Chronicle, he was born about B. C. 96. It is probable that he was sent to Athens when young, and there studied philosophy under Zeno the Sidonian, a celebrated Epicurean, and Phædrus. We have no other anecdote of his life than the romantic one, that an amatory philtre being administered to him by his wife, he was rendered insane, and thenceforth had only intervals of reason, during which he composed the poem which has conferred so much celebrity on his name. It is said that he died by his own hand, in the forty-fourth year of his age.

The poem of Lucretius in six books, entitled *De Rerum Natura*, was the first accurate statement of the Epicurean philosophy in the Latin language. It is an example of the great freedom with which opinions contradictory to the established religion were at that time maintained; for no writer has in stronger terms controverted all the popular notions of heathenism, and even those fundamental points in all religion, the existence of a creative power, a providence, and the immortality of the soul. His language and versification partake of the rudeness of an early period of literature; and, in the argumentative parts of his works the poet is frequently scarce discernible. But, where the subject admits of elevated sentiment or descriptive beauty, no poet, at least no Roman poet, has taken a loftier flight, or exhibited more spirit and sublimity. Nor is it only in detached passages that he has displayed the genius of a true poet; the same animated strain is supported almost throughout entire books, when he gets free from the trammels of his system. Virgil studied him closely, and has borrowed much of his diction. The morality of Lucretius is generally pure, although some of his descriptions are gross and licentious. The absurd impiety of his philosophy cannot now be accounted dangerous; and the gravest characters in modern times have not scrupled the office of his editors and commentators.

The best editions of his work are those of Creech, Oxon. 8vo. 1695; of Havercamp, Lugd. B. 2 vol. 4to. 1725; and of Wakefield, Lond. 3 vols. 1796. This last edition had become extremely rare, on account of the fire which destroyed the greater part of the impression. Mr. Good, the translator of the poem into blank verse, and whose work was published in 1805, has therefore given the entire text from Mr. Wakefield's edition, which had been collated and printed with the utmost care by that learned and much-to-be-lamented classical scholar. In the translation just referred to, there are, besides elaborate annotations, a critical account of the principal editions and translations of his author, a history of the poet, a vindication of his character and philosophy from vulgar misrepresentation, and a comparative statement of the rival systems of philosophy that flourished in the time of Lucretius. In this poem the translator imagines he has discovered the inductive method of the illustrious Bacon; part of the sublime physics of sir I. Newton, and various chemical discoveries of our own days, in a surprising degree anticipated, as to their principles and many important results.—The first translation of Lucretius into a living language was, we believe, that of Marolles into French about the middle of the 17th century. At nearly the same period, a version of this poet was attempted by our countryman Evelyn: but, having completed only a sixth part of his task, he abandoned it as too weighty for his powers; and he resigned to Creech the merit of first placing an entire translation of the poem in the hand of the English reader. As a scholar and a poet, Creech was eminently qualified for the undertaking in which he engaged, and yet his success cannot be pronounced to be great. His production betrays everywhere the inaccuracies of a writer who acquiesces in the first suggestions of his mind, and who is more desirous of finishing, than ambitious of finishing well. His pages are at once redundant and defective; and occasionally they discover the conceits of a vitiated taste in the most direct opposition to the simple character and the majestic genius

of the Roman original. On some of the more poetic passages of this author, the great Dryden bestowed the vigour and the harmony of his muse; and his translations in this instance, which are executed with his accustomed superiority of power, leave us only to regret that they are not extended to every part of this illustrious and philosophic bard. Lucretius has been translated very recently by Dr. Busby.

**LUCRIFEROUS**, *adj.* Gainful; profitable.—Silver was afterwards separated from the gold, but in so small a quantity, that the experiment, the cost and pains considered, was not *lucriferous*. *Boyle*.

**LUCRIFIC**, *adj.* Producing gain.

**LUCRIFICABLE**, *adj.* Bringing gain. *Bailey*.

**LUCRINO**, a lake near Naples, anciently celebrated for its green oysters and other fish; it was separated from the sea only by a bank thrown up by the labour of man. In the year 1538, an earthquake formed a mountain near two miles in circumference, and two hundred feet in height; (Lempriere says, four miles round, and 1000 feet high;) with a crater in the middle, consisting of lava, burned stones, scoria, &c. which left no appearance of a lake, but a morass; filled with grass and rushes.

**LU'CROUS**, *adj.* Full of gain. *Bailey*.

**LUCTATION**, *f.* [*luctor*, Lat.] Struggle; effort; contest.

**LUCTIFEROUS**, *adj.* [from the Lat. *luctus*, sorrow, and *fero*, to bring.] Producing sorrow. *Scott*.

**LUCTIFIC**, *adj.* Causing sorrow. *Scott*.

**LUCTISONOUS**, *adj.* Uttering sorrow; making a mournful sound. *Scott*.

**LUC'TUOUS**, *adj.* Sorrowful; full of sorrow. *Scott*.

**To LU'CUBRATE**, *v. a.* [*lucubror*, Lat.] To watch; to study by night.

**LUCUBRATION**, *f.* Study by candle-light; nocturnal study; any thing composed by night.—Thy *lucubrations* have been perused by several of our friends. *Tatler*.

**LUCUBRATORY**, *adj.* Composed by candle-light.—You must have a dish of coffee, and a solitary candle at your side, to write an epistle *lucubratory* to your friends. *Pope*.

**LU'CULENCE**, *f.* [from *luculent*.] Clearness; certainty.

**LU'CULENT**, *adj.* [*luculentus*, Lat.] Clear; transparent; lucid. This word is perhaps not used in this sense by any other writer:

And *luculent* along  
The purer rivers flow.

*Thomson's Winter.*

Certain; evident.—They are, against the obstinate incredulity of the Jews, the most *luculent* testimonies that Christian religion hath. *Hooker*.

**LUCULIAN GAMES**, in antiquity, were annual games decreed by the province of Asia, about the year 70 before Christ, in honour of the exploits of Lucullus.

**LUCULUS** (Lucius Licinus), a Roman commander, who has been celebrated for his luxury, as well as for his military talents, was born about the year 115 before the Christian era. As a military man, he was first noticed with applause in the Marian war; and was, on account of his good conduct, made an edile. He was employed by Sylla in many important concerns, and during the siege of Athens was sent by that commander into Egypt and Lybia, to procure a supply of ships. With respect to king Ptolemy he was unsuccessful; but he pleaded the cause of his employer with more effect in other places, and collected a fleet, with which he gave two defeats to that of Mithridates, and convoyed Sylla's troops from the Thracian Chersonesus. After the peace he was appointed quaestor in Asia, and prætor in Africa, in which offices he rendered himself illustrious by his justice, moderation, and humanity. He was raised to the consulship when he was about forty years of age, and entrusted with the care of the Mithridatic war; his first prowess was conspicuous in rescuing his colleague Cotta, whom the enemy had besieged in Chalcedonia. This was soon followed by a ce-

lebrated

lebrated victory over the forces of Mithridates, on the borders of the Granicus, and by the conquest of all Bithynia. His victories by sea were as great as those by land; and Mithridates was driven with great loss towards Armenia, to the court of Tigranes his father-in-law. His flight was quickly discovered; and Lucullus crossed the Euphrates, and gave battle to the vast army which Tigranes had assembled to support the cause of his son. It is not easy to give entire credit to the account of the numbers said to have been slain on this occasion; but the slaughter must have been prodigious, when Plutarch estimates that no less than 100,000 foot, and 55,000 horse, soldiers lost their lives in this battle; and this at the expense of very few Roman lives. The taking of Tigranocerta, the capital of Armenia, was the consequence of the victory; and Lucullus there obtained the greater part of the royal treasures. This continued success rendered the commander haughty and imperious; and his changed manners were offensive to the soldiers, and displeasing to those who adhered to the cause of Rome. He was accused in the senate with designedly protracting the war for his own emolument; and discontents proceeded so far that he was superseded, first by the consul Glabrio; after which Pompey was sent to succeed him, and to continue the Mithridatic war. His interview with Lucullus began with acts of mutual kindness, and ended in the most determined enmity. Lucullus was however permitted to retire to Rome; and 1600 soldiers, who had shared his fortune and his glories, were allowed to accompany him. At Rome he was coldly received; and he obtained with difficulty a triumph which was claimed by his fame, his successes, and his victories. The spectacle, as might be expected, was splendid; and, besides a large sum conveyed to the treasury, it exhibited registers of much more which he had expended on the public service. His own private fortune was greater than ever before had been possessed by a Roman citizen; and he resolved to enjoy it at his ease, without troubling himself with political concerns. He occasionally, indeed, gave a vote with his friends of the senatorial party, and joined the true republicans in checking the ambition of Pompey; but his efforts were faint, and at length totally ceased. Soon after his return, he divorced his wife Clodia, the sister of the infamous Clodius, and herself scarcely less infamous; and he contracted a new alliance with Servilia, the sister of Cato, whose irregularities of conduct equalled those of her predecessor. In his mode of living he adopted a luxurious profusion scarcely paralleled by a private citizen in any age or country, but under the direction of a refined taste, and not excluding the rational pleasures of literature and cultivated society. At a vast expense, he collected a library more numerous and select than Rome had before possessed, which he threw open to all persons of learning and curiosity. It was particularly the resort of the Greeks who visited Rome, and whom he treated with great hospitality, delighting to converse with them on topics of philosophy, with all the sects of which he was well acquainted. He was himself principally attached to the doctrines of the Old Academy, the defence of which is put into his mouth by Cicero, in a dialogue entitled "Lucullus." His philosophy, however, was expended in words; for no man carried further that personal luxury which all moral systems so much decry. The profusion of his table was constant and perpetual. Some Greek strangers whom he had for several days entertained sumptuously, modestly excusing themselves from further attendance at his board on account of the expense to which they put him, he smiled, and told them, that "part, indeed, of what was provided was for them, but the greater share was for Lucullus." Supping once alone, and finding a scanty fare set before him, he called for his house-steward, and asked the reason of it. The man excused himself, from his knowledge that there was to be no company that evening. "What! (said the master,) did you not know that Lucullus was to sup with Lucullus?" His fame in this point

once induced Cicero and Pompey, by way of putting him to the test, to invite themselves in a free way to sup with him the same evening, on condition that he should give them nothing but what was provided for himself. Lucullus consented, but requested in their presence to give a single order to a servant, and this was, that "supper was to be served in the Apollo." Every eating-room in his domestic arrangement had a stated sum allotted for an entertainment given in it; and the Apollo stood highest. The two illustrious visitors were therefore surprised with a most costly banquet, which appeared as a matter of course. As an instance of that superfluity of wealth in which the owner does not know what he possesses, Horace tells a story of Lucullus, that, being once asked if he could lend a hundred military tunics (chlamydes) for a scenic entertainment, he replied, "Where should I find so many? however, I will see." Soon after, he wrote word that he had at home five thousand of them, and they might have all if they pleased. His magnificence in building was not inferior to his other displays of expensive luxury. He had a superb summer-villa at Tusculum, and a winter-residence in the bay of Naples, at which last were vast excavations in the rock for reservoirs of salt water to keep live sea-fish, the great object of Roman epicurism. His gardens at Rome were upon a scale of regal grandeur, and long subsisted among the principal decorations of that metropolis. It is not extraordinary that one who thus exhausted every source of gratification should in the decline of life fall into a state of mental imbecility. He died at the age of sixty-seven or sixty-eight; and was much regretted by the Roman people, who, doubtless, had tasted the fruits of his munificence. They would willingly have given him an honourable funeral in the Campus Martius, but their offers were rejected, and he was privately buried by his brother at Tusculum. Lucullus may rank among the great men of Rome, both for his civil and military qualifications. He was also estimable in many points of moral character; he was generous, humane, mild, and equitable. He was a perfect master of the Greek and Latin languages, and employed himself sometimes in composing a concise history of the Marsi in Greek hexameters.

**LUCUMA**, *f.* in botany, the Peruvian name of the Linnæan *Achras mammosa*, which Jussieu has separated, under this appellation, as a distinct genus; chiefly, as it appears, on account of the flowers being pentandrous and five-cleft, and the corolla globose rather than bell-shaped. The seeds moreover are round or angular, not of that elliptical compressed form, with the peculiar long scar of attachment, which characterises *ACHRAS*. See that article, vol. i. p. 73.

**LUCUS**, *f.* [Latin.] A wood or grove sacred to a deity; so called *à lucendo*, because a great number of lights were usually burning in honour of the god; a practice common with idolaters, as we learn from Scripture: hence Homer's *αγλαον αλοος*.

**LUCY**, a Christian name of women.

**LUCY**, in geography. See **LUCY**.

**LUCZA**'Y, a town of Lithuania, in the palatinate of Wilna: thirty-six miles south of Braclaw.

**LUCZYN**'CZ, a town of Poland, in the palatinate of Braclaw: forty-eight miles west-south-west of Braclaw.

**LUD**, fourth son of Shem, (Gen. x. 22.) peopled, say the generality of ancients and moderns, Lydia, a province of Asia the Less. Arias Montanus places the descendants of Lud where the Tigris and Euphrates meet; and M. Le Clerc, between the rivers Chaboras and Saocoras or Masca. These descendants of Lud, commonly called *Ludim*, must be distinguished from the descendants of Ludim, the son of Mizraim. See **LUDIM**, p. 753.

**LUD**, the name of a place. *Judith* ii. 23.

**LUD**, a British king mentioned in our old chronicles, and said to have reigned about the year of the world 3782. He is reported to have enlarged and walled about *Troynavant*, or New Troy, where he kept his court, and made it his capital. The name of *London* is hence derived from *Lud*'s

*Lud's Town*; and *Ludgate* from his being buried near it; but this is only one among many other derivations of the name of London, which are at least equally probable. See the article LONDON, p. 49, 50, of this volume.

LUDA'IA, a town and district of the island of Java, near the south coast.

LUDAMA'R, a country of Africa, bounded on the north by the Desert, on the east by Bambarra, on the south by Kaarta, and on the west by Jafnoo; it is governed by a Mahometan prince. The country is not fertile; the principal article of trade is salt, which they exchange for slaves, to be disposed of to the Europeans. Benowm is the capital, which lies in lat. 15. 0. N. lon. 6. 50. W. but the whole kingdom extends from lat. 15. to 16. lon. 5. to 8.

The Moors of this, and the other states adjoining the country of the negroes, resemble in their persons the Mulattoes of the West Indies to so great a degree as not easily to be distinguished from them; and in reality, the present generation seems to be a mixed race between the Moors (properly so called) of the north, and the Africans of the south; possessing many of the worst qualities of both nations. By these Moors, Mr. Park was taken captive, and confined for some weeks at Benowm. He states the barrenness of the country to be such, that it furnishes hardly any materials for manufacture; but the inhabitants contrive to weave a strong cloth, with which their tents are covered; the thread is spun by the women from goats' hair, and with the hides of their cattle they furnish saddles, bridles, pouches, and other articles of leather. They can also convert the native iron procured from the negroes into spurs, knives, and pots for boiling their food; but they purchase their fire-arms and other weapons of a similar nature from the Europeans, in exchange for slaves. Their ideas of female perfection are truly singular; since a woman, to have the smallest pretensions to beauty, must be one who requires a slave under each arm to support her as she walks; and a perfect beauty, according to Mr. Park, is a load for a camel. The wealth of the Moors chiefly consists in their numerous herds of cattle; yet the majority of the people spend their days in a state of idleness. The tent of the king is the common place of rendezvous for the indolent, where they appear to enjoy an unlimited liberty of speech; yet in the praise of their sovereign they are wholly unanimous, singing songs to his honour, which never fail to be filled with the grossest adulations. The king sometimes eats out of the same basin with the driver of his camels, and during the heat of the day reposes himself upon the same bed. Cavalry constitute the chief military strength of Ludamar; these are well mounted, and are very expert in attacking by surprise. The horse of every soldier is furnished by himself, as also his military implements, consisting of a large sabre, a double-barrelled gun, a red leather bag for holding his balls, and a powder-bag slung over his shoulder. He has no pay; and his only compensation arises from plunder. They have no intercourse with civilized nations; yet they boast an advantage over the negroes, as they possess, though in a very limited degree, the knowledge of letters. They are esteemed the vainest, proudest, and most bigoted, ferocious, and intolerant, of all the nations of the earth, blending in their character the blind superstition of the negro with the savage cruelty and treachery of the Arab. It was with the utmost difficulty that Mr. Park made his escape from this cruel and inhospitable people.

LUD'BROOK, a village of Devonshire, in the parishes of Errington and Modbury.

LUD'BURGH, a village in Lincolnshire; west of Saltfleet, and near Wyham.

LUD'COMB CHINE, rocks on the east coast of the Isle of Wight, in the English Channel, a little to the north of Dunnofe. Lat. 50. 38. N. lon. 1. 12. W.

LUD'DENHAM, a village in Kent, two miles from Feverham.

LUD'DERTON, a village in the west riding of Yorkshire, north-west of Sherborn.

VOL. XIII. No. 941.

LUD'DESDON, a village in Kent, south-east of Haleshead.

LUD'DINGHAUSEN, a town of Germany, in the bishopric of Munster, on the Stever; twelve miles south-west of Munster. Lat. 51. 45. N. lon. 7. 36. E.

LUD'DINGTON, a village in Huntingdonshire, north-west of the Giddings.—A village in Lincolnshire, in Axholm Isle, near Burton on Trent.—A village in Northamptonshire, north-east of Thrapston.—A village in Warwickshire, south-west of Stratford upon Avon.—A village in Wilts, south of Highworth.—A village in the west riding of Yorkshire, north-west of Halifax.

LUD'DITES, *f.* The name assumed by a set of rioters in Nottinghamshire in the year 1811. See the article LONDON, p. 272, 3, of this volume.

LUD'DE, a town of France, in the department of the Sarthe: two and a half poits east of La Flèche, and thirty-two south-west of Paris.

LUD'DENSCHIED, or LUD'ESCHADE, a town of Germany, in the county of Mark, erected into a town in the thirteenth century; the principal trade of the inhabitants is in manufactures of iron. In the year 1723, it was almost wholly destroyed by fire, since which time it has been rebuilt with stone. It is twenty-eight miles north-east of Cologne. Lat. 51. 8. N. lon. 7. 42 E.

LUD'DER, a town of Germany, in the bishopric of Fulda, the seat of a jurisdiction: six miles west-north-west of Fulda.

LUD'DERBACH, a town of Germany, in the county of Henneberg: five miles north of Smalkalden.

LUD'DERSBURG, a town of Germany, in the duchy of Lauenburg, on the south side of the Elbe: five-miles east of Lauenburg.

LUD'ESCENT, *adj.* [*ludo*, Lat. to play.] Playful; beginning to play.

LUD'FORD, a village near Ludlow in Herefordshire.—A village in Lincolnshire, near Market-Raisin, where Roman coins have often been dug up.

LUD'GERSHALL. See LUGGERSHALL.

LUD'GRAVES, a village in Middlesex, near Hadley and Enfield Chase.

LUD'HAM, a village in Norfolk, between Acle and Hickling.

LUDHA'NA, a town of Hindoostan, in the circar of Sirhind, on the Selledge: fifty miles south-east of Sultanpour, and eighteen north-west of Sirhind. Lat. 30. 2. N. lon. 74. 57. E.

LUDHO'A, a town of Sweden, in East Bothnia: thirty-six miles south-east of Brahetad.

LUDI, *f.* in Roman antiquity; public games; plays.

LUD'IA, *f.* [from *ludo*, Lat. to sport. The name was given by Commerfon, as Jussieu informs us, because nature, to use a common expression, sports remarkably in the shape of the leaves; which in the young shrub are minute, with spinous teeth, but in the adult one much larger, and entire.] In botany, a genus of the class polyandria, order monogynia, natural order rosaceæ, *Juss.* The generic characters are—Calyx: perianth inferior, of one leaf, in from four to seven deep, nearly-equal, roundish, spreading, fringed, segments, permanent. Corolla: none. Stamina filaments numerous, thread-shaped, inserted into the receptacle, twice or thrice the length of the calyx; antheræ roundish, of two lobes. Pistillum: germen superior, sessile, ovate; style columnar, scarcely so long as the stamens; stigma obtuse, three or four cleft, more or less deeply. Pericarpium: berry dry, globose, tipped with the permanent style, and standing on the reflexed, deformed, permanent calyx, of one cell. Seeds numerous, somewhat angular.—*Essential Character.* Calyx in several deep segments; corolla none; stigma three or four cleft; berry dry, superior, of one cell, with many seeds.

1. *Ludia heterophylla*: leaves of the adult shrub ovate, coriaceous, shining; of the young one sharply toothed; stigma slightly notched. Gathered by Commerfon in the island of Mauritius, where it is called *bois*

*fans ecorce*, or tree without bark. Lamarck describes and figures the young shrub with small roundish leaves, furnished with strong spinous teeth, somewhat like *Quercus coccifera*, or *Malpigia coccifera*. Jussieu also relates the same. The flowers are axillary, solitary or in pairs, on short thick scarred stalks, with numerous minute imbricated roundish concave bractæas at the base of the stalks; the calyx is green, finely downy; stamens long and slender: style short, erect and thick.

2. *Ludia myrtifolia*: leaves ovate, nearly entire: style somewhat curved; stigma with three notches. Native of the Isle of Bourbon. This is what Jussieu intends when he says the leaves of the increasing shrub are like myrtle or box, and entire; as however the specimens are in flower, Lamarck judged them to be arrived at perfection, and a distinct species from the above; especially as the style is somewhat incurved, and the stigma has only three notches, instead of four. The leaves of the present plant are much smaller, thinner, and generally more pointed, than in the former; but we perceive here and there among them rudiments of teeth, and minute spines, as if they were in a progressive state from one shape to the other. Neither are the differences indicated in the style and stigma very striking or decided. We are therefore most inclined to adopt the opinion of Jussieu, that the present is only the advancing, or first-flowering, state of the above very extraordinary species.

3. *Ludia sessiliflora*: leaves elliptic-lanceolate: stigma deeply three-cleft. Native of the island of Mauritius. It flowered under Jacquin's observation, in the stove at Schoenbrun in June and July, and formed imperfect fruit, which he thought did not agree with Jussieu's character, and which Willdenow has, from his figure, described as being, in this species, a berry of three cells, with solitary seeds. But we presume nothing can be judged from such an abortion. This is a small tree, with drooping subdivided branches. Leaves scattered, stalked, more or less elliptical, but rather irregular in shape, coriaceous, veiny, smooth, and shining, both sides nearly of the same hue. Flowers axillary, solitary; calyx all over very downy.

LU'DIBLE, *adj.* [*ludo*, Lat. to play.] Apt to play.

LUDIB'RIOUS, *adj.* Reproachful, shameful. *Scott.*

LU'DIBUND, *adj.* Full of play. *Scott.*

LU'DICROUS, *adj.* [*ludicer*, Lat.] Burlesque; merry; sportive; exciting laughter.—Plutarch quotes this instance of Homer's judgment, in closing a *ludicrous* scene with decency and instruction. *Broome.*

LU'DICROUSLY, *adv.* Sportively; in burlesque; in a manner that may excite laughter.—Cicero *ludicrously* describes Cato as endeavouring to act in the commonwealth upon the school-paradoxes, which exercised the wits of the junior students in the Stoic philosophy. *Burke.*

LU'DICROUSNESS, *f.* Burlesque; sportiveness; merry cast or manner; ridiculousness.

LUDIF'ICABLE, *adj.* [from the Lat. *ludus*, a play, and *facio*, to make.] Capable of making sports; suited to diversions. *Bailey.*

LUDIF'ICATE, *v. a.* To mock, to deceive, to frustrate. *Bailey.*

LUDIF'ICATION, *f.* The act of mocking, or making sport with another.

LU'DIM, the son of Mizraim. *Gen. x. 13.* Josephus affirmed that the descendants of Ludim had been long extinct, having been destroyed in the Ethiopian wars. The Jerusalem paraphrast translates Ludim, "the inhabitants of the Mareotis, part of Egypt;" but Bochart maintains, that we should read *Mereotis*, or the land of Meroe. The paraphrast Jonathan translates it, "those of the canton of Neut, or Naut, in Egypt;" the Arabic, "the inhabitants of Tenezus, near Pelusium." Ezekiel places the Ludim with Phut and Pharas, or perhaps Pathras. These people were in Egypt. But it is not easy to show exactly where the Ludim dwelt.

LU'DINWORTH, a town of Germany, in the duchy of Saxe-Lauenburg: five miles south-west of Ottendorf.

LUDISER'RUD, a river of Persia, which runs into Magrab at Maru-errud.

LU'DITZ, a town of Bohemia, in the circle of Saatz.

LU'DIUS, a celebrated painter, lived in the reign of Augustus Cæsar, and excelled in grand compositions. He was the first who painted the fronts of houses in the streets of Rome; which he beautified with great variety of landscapes, and many other subjects.

LU'DLEY, a village in Suffex, west of Pevensey Marth, or Level.

LUD'LOW, a market-town in the county of Salop. It stands on an eminence at the junction of the rivers Teme and Corve, in a fertile and picturesque district, and commands a variety of beautiful prospects. The ancient British name of this place was *Dinan*, also *Llys Twysfog*, or the Prince's Court. Hence it is supposed to have been the residence of some prince of the country, prior to the subjection of Wales by Edward I. This town extends about a mile in length, and in its broadest part is somewhat more than half a mile in that direction. It was formerly surrounded by a wall, some part of which is still standing, but in a state of great dilapidation. Towers were placed at certain distances; and there were formerly seven gates, of which only one now remains. The streets are mostly wide, and well paved, and lie in a diverging and inclined direction from the highest or central part of the town. The houses, in general, present rather an elegant appearance, and are more regularly disposed than in most inland towns of the same antiquity. Gloves constitute the principal manufacture; besides which, however, there is a considerable trade in the tanning, timber, and cabinet-making, lines. A number of persons are likewise employed in the various branches of mechanism. There are four markets during the week; but the most important one is held on Monday, and is well supplied with every article necessary for the support of man.

Ludlow was incorporated by charter in the reign of Edward IV. The government is now vested in a recorder, two bailiffs, two capital justices, twelve aldermen, twenty-five common councilmen, a town-clerk, a coroner, and several other inferior officers. The election of the bailiffs is usually attended with a degree of magnificence and splendour far surpassing the same ceremony in other towns of similar extent. The quarter-sessions are held here before the recorder and justices of the town, who, in former times, had the power of inflicting capital punishments; but, the recorders of late not being barristers at law, all persons liable to be tried for capital offences are removed by habeas corpus to the county gaol. Here is held weekly, every Tuesday, a court of record of judicature, in which court the recorder and bailiffs sit as judges. Ludlow sends two members to parliament. The right of election is in all the resident common burgesses, as well as the twelve aldermen, and twenty-five common-councilmen. The sons of burgesses of Ludlow, and those that marry the daughters of burgesses, have a right to be made burgesses of the said borough; and every person having a right to be made a burgett of the borough of Ludlow ought to demand such his right by petition, signed by the petitioner, according to the bye-law made in the year 1663, and not otherwise. The number of voters is nearly five hundred. The two bailiffs are the returning officers. Earl Powis is patron of the borough; and the members are his brother and son.

Several of the public buildings of Ludlow are remarkably neat structures. The church, situated in the highest portion of the town, is a very spacious and elegant edifice, in the form of a cross, and seems to have been built in the reigns of Henry VII. and VIII. In the centre rises a lofty square tower, embattled at the top, and very handsomely embellished. This tower adds in no small degree to the beauty of many of the views from the neighbouring country. The principal entrance to the church is under a large hexagonal porch. The nave is divided from

from its aisles by six lofty pointed arches on each side. The choir is of large dimensions, and lighted by five lofty pointed windows on each side, and one at the east end, which occupies the whole breadth, and nearly the whole height, of the choir. This great window is entirely filled with painted glass, representing chiefly the legend of St. Lawrence, the patron-saint of the church. On each side of the choir stands a chantry-chapel. That on the north exhibits some very splendid remnants of painted glass, portraying the story of the ring presented by some pilgrims to Edward the Confessor; which pilgrims, the legend recites were *men* of Ludlow. The whole of this noble church is ceiled with fine oak, and embellished with carving. It is 228 feet in length, and 73 in breadth. In the chancel are many fine monuments of the lords presidents of the council of Wales, who resided in the neighbouring castle. A variety of tombs likewise appear in the church-yard; adjoining to which stands an alms-house, founded in 1486, by Mr. John Hofier, merchant, for aged widows and widowers, and rebuilt by the corporation in 1758. Another alms-house, situated at the bottom of Corve-freet, was founded in the year 1590. The grammar-school, erected by Edward IV. in Mill-freet, is a very excellent institution, where both the ancient and modern languages are taught. Nearly in the centre of the town, at the top of Broad-freet, stands the cross, a handsome stone building, with rooms over it used as a public school. The market-house, in Castle-freet, is a large building; beneath which is an area, serving as a corn-market; and the upper rooms, which are very extensive, are used for corporation-meetings, balls, assemblies, &c. The guild-hall, where the quarter-sessions, &c. are held, is a neat commodious modern structure; and to the west of the church stands a range of buildings, called the College. There is likewise a prison, named Gosalford's Tower.

But the object of greatest interest in Ludlow, and that to which it owes its celebrity and importance, is its castle, which stands on a bold wooded rock at the north-west angle of the town. It was founded, according to the generally-received opinion, by Roger de Montgomery, about the year 1130; though some writers maintain it to be of earlier origin, and with reason, as that person died in 1094. Much, however, was added by others at different periods, particularly by sir Henry Sidney. Robert de Belesme, grandson of the founder, having engaged in rebellion against Henry I. it was seized by that monarch. The castle, now made a princely residence, was greatly augmented in the strength of its fortifications, and supplied with a numerous garrison. In the reign of king Stephen it was besieged in consequence of the governor, Gervas Paganel, having been induced to espouse the cause of the empress Matilda. During this siege, Stephen gave a signal proof of his personal bravery, in rescuing prince Henry of Scotland, who had advanced too near the walls, and had been caught from his horse by a grappling-iron fastened to the end of a rope. In the troublesome reign of Henry III. the ambitious Simon Montfort, earl of Leicester, seized upon this castle, in conjunction with Llewellyn. From this period nothing remarkable happened till the time of Henry VI. when it was held by Richard duke of York, who laid claim to the crown. Having assembled an army of ten thousand men in the Marches, he drew up a declaration of *allegiance to the king*, pretending that this large army was only raised for the security of the public peace. Time, however, disclosed the perfidy of his views; for no sooner was he informed of the defeat of lord Audley at Bloreheath, but he threw off the mask, avowed his pretensions to the throne, and appointed the castle of Ludlow as a place of rendezvous for his adherents. Upon this, the king's forces advanced to Ludford, a vill at a little distance from hence. The king's troops preparing for the attack, the duke's forces began to disband. Sir Andrew Trollop likewise went over to the royal standard with a large body; whereupon the duke and his two sons, with the earl of Warwick and other chiefs,

fled with precipitation. Edward, his eldest son, obtained possession of Ludlow in the course of the war; and upon his accession to the throne repaired it, and made it the court of his son the prince of Wales. Here the latter, after his father's death, was proclaimed king before he removed to London, at the instigation of his uncle, Gloucester, whose barbarous usurpation is not paralleled in the annals of England. Arthur, son to Henry VII. fixed his residence at this castle, and held a court here with vast splendour and magnificence after his marriage with Catharine of Arragon, afterwards the wife of Henry VIII. At this time the court of the marches for the principality of Wales was established here, and continued for many years with much grandeur and solemnity. The power of this court was very extensive, and consisted of a lord-president, as many counsellors as the prince pleased, a secretary, an attorney, a solicitor, and four justices for the counties of Wales. Charles I. when prince of Wales, visited this castle. It was next distinguished by the representation of the celebrated Masque of Comus in 1634, during the presidency of John earl of Bridgewater. This exquisite effusion of Milton's genius was founded on a real incident. The two sons of the earl, and his daughter lady Alice, being on their way from a house belonging to their family in Herefordshire to Ludlow, were benighted in Haywood forest, where the lady was lost for a short time. The adventure being related to the earl on their arrival at the castle, Milton, at the request of his friend Mr. Henry Lawes, who taught music in the family, wrote the masque. Lawes set it to music, and performed the character of the attendant spirit; the lady herself playing the part which she had already acted in real life.

During the civil wars in the reign of Charles I. this castle was for some time kept as a garrison for the king. In 1645, a small part of the royal army was defeated in this neighbourhood, and on the 9th of June, in the following year, the fortress was surrendered to parliament. After the restoration, the celebrated Samuel Butler, secretary to the earl of Carbery, then appointed lord-president, wrote here a great part of his incomparable poem of Hudibras. From this period nothing remarkable happened till the reign of William and Mary, when the Court of the Marches was dissolved by act of parliament, being, as therein recited, "a great grievance to the subject." After this event the castle gradually fell into decay, and was despoiled of its curious and valuable ornaments. In the days of its prosperity it seems to have been one of the most extensive and superb baronial fortresses in Europe. It commands grand and extensive prospects, and is strongly environed by embattled walls of great height and thickness, with towers placed at convenient distances. That portion of it which lies nearest the town, was likewise defended by a deep ditch. The whole was divided into two distinct parts or courts, one of which contained the palace and lodgings, and the other the court of judicature and records, stables, garden, and other offices. The former constituted what was properly denominated the Castle, and the latter was called the Green, or Barbican. This noble fabric now presents a mass of magnificent ruins, retaining, however, ample assurances of its former glory. Of the chapel, a circular building, in the inner court, is all that remains. Over several of the stable-doors, the arms of Elizabeth and the earl of Pembroke are still visible; and over the inner gate of the castle are the arms of the Sidney family, with an inscription beneath. Along the sides of the eminence on which these splendid ruins are seated are some public walks, which were laid out in 1772, at the instigation of the countess of Powis. Part of Ludlow Castle was recently occupied by Lucian Bonaparte, his family, and suite, while refugees in this country. Ludlow is distant from Church Stretton, fifteen miles; Shrewsbury, twenty-nine; Much Wenlock, twenty; Cleobury Mortimer, eleven; Bridgnorth, twenty; Bewdley, nineteen; Tenbury, nine; Worcester, thirty-one; Leominster, eleven; Hereford, twenty-three; Presteign, six-

teen; Kington, twenty-two; Knighton, sixteen; Clun, sixteen; Bishop's Castle, seventeen; and London, 142. Lat. 52.25. N. lon. 2.48. W.

In the neighbourhood of Ludlow are several pleasant villages and seats.—In the village of Bromefield are the remains of a cell of Benedictine monks, formerly belonging to the abbey of St. Peter, Gloucester. These ruins stand on a delightful situation within the grounds of Oakley Park, the residence of the dowager lady Clive.—Richard's Castle lies about three miles from Ludlow. The town contiguous was originally called Gayton, or Boytane; but the lustre of the castle afterwards eclipsed that name, and it is now called by the same appellation as the castle. This was once a place of considerable importance, as is evident from several old records prior to the time of Henry II. when it began to decay, in spite of the exertions of the noble family of Mortimer to support its declining state. Some part of the keep and walls of the castle are still remaining.—About four miles north-west of the town is Dowton Castle, the seat of Mr. Knight, brother to R. P. Knight, author of a poem called the Landscape, and of several other literary productions. This gentleman built an irregular and singular mansion here, and called it a castle. He also laid out the grounds, immediately adjoining the house, in a style corresponding to his theoretical principles of the picturesque. On this subject Mr. Knight and his friend Mr. Price have published some essays. The grounds and woods of this demesne are particularly bold, grand, and diversified.—At Benford, eight miles distant, is a monument for Elizabeth, daughter of John of Gaunt, and sister to Henry IV. whose last husband was sir John Cornwall; she died 1426. *British Directory*; *Oldfield's Hist. of Boroughs*; *Byrne's Antiq. of Great Britain*; *Price's Ludlow Guide*; *Hodges's Account of Ludlow Castle*.

LUD'LOW, a township of America, in Hampshire county, Massachusetts: ninety miles west of Boston; incorporated in 1784, and containing 650 inhabitants.—Also, a township on Black River, Windsor County, Vermont, containing 410 inhabitants: ten or twelve miles west of Weathersfield, on Connecticut River.

LUD'LOW (Edmund), a distinguished leader of the republican party in the civil wars of Charles I. was descended from a family of rank originally settled in Shropshire, but removed to the county of Wilts. He was born about 1620, at Maiden-Bradley in that county, being the eldest son of sir Henry Ludlow, knt. He received his academical education at Trinity-college, Oxford, whence he was removed to the Temple for the study of the law. His father, who was chosen a representative for Wiltshire to the long parliament of 1640, having joined the party in opposition to the court, Edmund warmly adopted the same principles, and entered into a military association among the students of the law, with most of whom he joined the army as one of the life-guards of the earl of Essex. In this situation he was present at the battle of Edge-hill, in which it appears that he endured much personal fatigue and suffering. Speaking of the night after the battle, he says, "No man nor horse got any meat that night, and I had touched none since the Saturday before; (this was Monday;) neither could I find my servant, who had my cloak, so that, having nothing to keep me warm but a suit of iron, I was obliged to walk about all night, which proved very cold by reason of a sharp frost." And he farther adds, "When I got meat, I could scarcely eat it, my jaws, for want of use, having lost almost their natural faculty." Soon after this, Ludlow raised a troop of horse, which he commanded at the siege of Wardour castle. Of this fortress, when taken, he was made governor, and he held it ten months against all the efforts of the king's party, till it was battered to ruins. He was taken prisoner on its surrender, but was soon exchanged, and then appointed by the parliament sheriff of the county of Wilts. He took a commission under sir William Waller, and was present at the second battle of Newbury, and at several

other important actions, in which he displayed equal valour and good conduct. When the leaders of the presbyterian party were thrown out of power by the self-denying ordinance, Ludlow seceded with them, and remained without public employment till he was chosen, in 1645, knight of the shire for the county of Wilts in the place of his father, who died two years before. At this period the plans of Cromwell began to be developed, and Ludlow was one of those who opposed them with the greatest firmness and openness. He thought it necessary, however, in order to establish his favourite republic, to join with the army against the parliament, when the latter had voted that the king's concessions were ground for a treaty; and he was active in the arbitrary measure of purging the house by excluding the members who had promoted that vote. He was one of those who, according to his own expression, "had the honour" of sitting in judgment upon the king. Soon after that event he married, and with his wife's portion and part of his patrimony made a purchase of two manors in Wiltshire out of the alienated dean-and-chapter lands. Cromwell, probably for the purpose of keeping him out of his way, caused him to be nominated lieutenant-general of horse in Ireland, and one of the commissioners for civil affairs in that kingdom. He arrived there in the beginning of 1650; and, joining the army under lord-deputy Ireton, performed many services with great vigour and ability. After the death of Ireton, the chief command of the army devolved upon Ludlow; but, as he continued to oppose the ambitious schemes of Cromwell, he was superseded by Fleetwood. After some delay, he was permitted to come to London, where he had a long conference with Cromwell and his principal partisans. In this he maintained, with great freedom and presence of mind, the republican principles upon which he acted, and could not be induced to make any absolute engagement for his future submission: he denied he had done any thing contrary to law, and refused to owe his liberty to compliance with an unjust requisition: in the end, his brother Thomas was induced to engage for him, though without his consent; and he went into Essex, where he continued till Cromwell's death. When Richard was declared protector, Ludlow, with other republicans, joined the army-party of Wallingford-house, and was instrumental in the restoration of the long parliament, in which he took his former seat. He was appointed one of the committee of safety, and had the command of a regiment. His attachment to the parliament, however, rendering him suspected by the army-faction, whose designs he thwarted, he was again sent to Ireland as commander-in-chief of the forces there. He arrived at Dublin in August 1659, and immediately took measures to fix the officers in the interest of the parliament. When he found things taking a decided turn towards monarchy, he hastened to London with a view of preventing this change; and, when he found the effort hopeless, and that the tide of public inclination in favour of a king was irresistible, he began to consider of his own safety. His name was not among the seven excepted in the bill of indemnity; nevertheless, the proclamation respecting the persons who sat in judgment on the late king Charles filled him with just apprehension; and, notwithstanding the remonstrances of his friends to the contrary, he determined, as his safest course, to withdraw from the kingdom. He landed at Dieppe in 1660, whence he proceeded to Geneva, where he was joined by two other persons who had likewise been judges of the late king; but, thinking themselves not sufficiently secure, they withdrew into Switzerland. Even here, the vengeance of the royal family pursued the regicides, some of whom were actually assassinated by the agents of the English government; an attempt was made against the life of Ludlow, but, being discovered, he evaded the blow, and passed the remainder of his life in the neighbourhood of Berne, highly respected and esteemed by the magistrates and people of that city, as well for his private virtues as his public charac-

ter. In 1639 he ventured to come over to England, and appear openly in London; but, a motion being made in the house of commons for an address to the king to issue a proclamation for his apprehension, he returned to the continent, and closed his life in exile, at the age of seventy-three. A monument was erected to his memory, in the principal church at Vevay, by his widow, who had been the faithful and courageous partner in all his fortunes. Edmund Ludlow was undoubtedly one of the purest and most disinterested persons who flourished in those times. He was equitable and humane, calm and sedate, yet resolute; virtuous without austerity, and pious without fanaticism. His "Memoirs" were first printed at Vevay, in 2 vols. 8vo. 1698, to which, in the following year, another volume was added. They were reprinted in one volume folio, London 1751; to this edition was added "The Case of King Charles I." drawn up by John Cook, solicitor to the high court of justice on his trial. In the same year, the work was printed in 3 vols. 12mo. at Edinburgh. An edition in 4to. was published in 1771. The Memoirs contain an account of the author's own transactions during the civil wars, and the subsequent period, together with many particulars relative to the general history of the times, written in a clear, interesting, and unaffected style. *Biog. Brit. Ludlow's Memoirs.*

LUDOLF (Job), a learned orientalist, was born in 1624, of an ancient family, at Erfurt in Thuringia. He was educated in the university of his native place, and particularly attended to the study of jurisprudence, and of the learned languages, especially those of the east. For the purpose of instruction, he travelled into several countries of Europe; and, after an absence of six years, returned to Erfurt. He exercised there during eighteen years the functions of a counsellor, and was frequently deputed to assist at the diets held upon the subject of the contests between the dukes of Saxony and the archbishops of Mentz. Wearied at length with public business, and impatient to devote himself entirely to his studies, he obtained his dismissal from Frederic duke of Saxony, who granted him the title of honorary counsellor. He chose for the place of his retreat the city of Frankfort on the Mayne; but scarcely had he settled his family there, when the elector-palatine placed him at the head of his finances. In his service he made two journeys to France, where he consulted the libraries of Paris, in order to obtain every information connected with his favourite oriental studies. At length he returned to Frankfort, and employed himself for the remainder of his life in finishing and revising the different works he had composed. He died in 1704, at the age of eighty, in universal esteem, as well for his virtues as his talents. He possessed a great fund of knowledge, acquired by indefatigable industry; and was equally fitted for the dispatch of public business, and the retired pursuits of the closet. Of the numerous writings of Ludolf, the principal are, 1. *Historia Aethiopiae*, folio, 1681. 2. *A Commentary on the same*, folio, 1691. 3. *An Appendix to the same*, 4to. 1693. In these works the history, religion, and manners, of the Ethiopians, are detailed at length; and, though some errors and inaccuracies have been pointed out, they are allowed to contain a great mass of authentic information. 4. *An Abyssinian Grammar and Dictionary*, folio, 1698. 5. *Dissertatio de Locutis*, folio, 1694. 6. *Fasti Ecclesiae Alexandrinae*, folio, 1691. 7. *De Bello Turcico feliciter Consciendo*, 4to. 1686. *Morevi.*

LUDOLF (Henry-William), nephew of the preceding, and a learned as well as pious writer, was born at Erfurt in the year 1655. His father, who was a counsellor of that city, gave him a liberal education; and his uncle instructed him in the oriental languages, particularly the Hebrew and the Arabic, in which he became a considerable proficient. He obtained the post of secretary to M. Lenthe, envoy from Christian V. king of Denmark to the court of Great Britain; who was so well satisfied with the manner in which he acquitted himself in that em-

ployment, that he afterwards recommended him to prince George of Denmark, who in 1680 appointed him his secretary. This situation he retained for some years, till the attack of a violent disorder rendered him incapable of discharging his duties; when he was permitted to retire, with a handsome pension. Upon his recovery, he resolved to visit foreign countries, and particularly such as were little known to travellers, that he might become acquainted with their manners, and learn their languages. Russia was the first country of this description which excited his curiosity; and, as he had acquired some knowledge of the Russian language before he left England, he was soon able to converse with the natives, and met with a polite reception from the principal persons in that country. As he understood music, and was an able performer on several instruments, he had the honour to display his accomplishments in this art before the czar at Moscow, to the great surprise and delight of that prince. The various knowledge, likewise, which he discovered in his conversations with the Russian clergy, led them to consider him as a prodigy of learning; and particularly the facility with which he discoursed in the Hebrew tongue, with some Jews who were in that country. Upon his return to London in 1694, he was obliged to undergo the operation of cutting for the stone; and as soon as his health would permit he set about the composition of "A Russian Grammar," intended for the use not only of traders and travellers, but of the natives themselves, by exhibiting the principles of their language in a more regular form than had been before laid down. This work was printed at the Oxford university press, and published in 1696. Ludolf's curiosity now determined him to take a voyage into the east, that he might obtain information concerning the state of the Christian church in the Levant. He arrived at Smyrna in November 1698; whence he went to Jassa, from Jassa to Jerusalem, and from Jerusalem to Cairo; making useful observations on the productions of nature and art, and carefully examining the state of government and religion in the different countries through which he passed. An anecdote which he relates of a conversation which took place between him and the commander of a Turkish vessel, on-board of which he had taken his passage for Alexandria, is not unworthy of being preserved. He was one day reading aloud our Saviour's sermon in the mount, out of the Arabic version of the New Testament, which had been printed at the expense of Mr. Boyle; when the captain, after having listened for some time, asked him, "What book that was?" Upon his answering, that "it was the system of the Christian religion;" the captain replied, "that could not possibly be true, since the practice of the Christians was directly the reverse." To this Ludolf rejoined, that "he was mistaken, and that it was easy to account for his being so; since the Turks had little opportunity of conversing with, or observing the manners of, any other Christians than sailors or merchants, who were too commonly a disgrace to their religion." With this answer the Turk appeared to be well satisfied, and afterwards treated our traveller with great civility and kindness. As soon as Ludolf had returned to England, his reflections on the deplorable state of Christianity among those who professed that religion under the Turkish government induced him to undertake an impression of the New Testament in the vulgar Greek, and to present it to the members of the Greek church. In the year 1709, Ludolf was appointed by queen Anne one of the commissioners for managing the charities collected for the relief of the poor Palatines, whom the severe exactions of the French, and the calamities of war, had driven from their native country. He died in the year 1710, in the fifty-fifth year of his age. Besides his Russian Grammar, he was the author of, 2. *Meditations on Retirement from the World.* 3. *Meditations upon divers Subjects, tending to promote the inward Life of Faith, &c.* 4. *Considerations on the Interest of the Church Universal.* 5. *A Proposal for pro-*

moting the Cause of Religion in the Churches of the Levant. 6. Reflections on the present State of the Christian Church. 7. A Homily of Macarius, done out of Greek. Some of these pieces were printed separately; and they were all published in a collective form in the year 1712. *Gen. Biog.*

LUDOLPHIA, *f.* in botany, the name of a genus instituted by Adanson, for a species of TETRAGONIA, which see.

LUDSCHEN, a town of Prussia, in Oberland: seven miles east-south-east of Marienwerder.

LUDSHAM, a village in Suffex, near Marshfield and Cuckfield.

LUDSHELF, the name of a decayed, or rather extinguished town, near Whitchurch in Hampshire. In the time of the Heptarchy, the city of Ludshelf, or Lychfeldt, stood on the cow-down, about a mile north of the town of Whitchurch. It was founded by the Romans; but was sacked and destroyed in the wars between some of the petty Saxon monarchs. Scarcely any vestiges of it remain, but a Roman way through Cold Henley, and across the down and fields, to Egbury, north-west of Whitchurch.

LUDSTON, a village in Shropshire, five miles from Bridgenorth.

LUDSWIGSBURG, a town of Wirtemberg. Towards the beginning of the 18th century, in this place were no more than two farms. In 1704, duke Eberhard Louis built him a hunting-seat here, and called it *Ludswigsburg*. To this he afterwards added a stately building, which was completed in the year 1733. In it are two chapels; one for Roman Catholics; the other, built in 1748, for Lutherans. The picture-gallery here is very fine. In the pleasant garden too, which stands opposite to the old castle, is a building called *Favorita*. Near the castle houses have been gradually built, so as at length to form a handsome town, which lies higher than the castle, and is the seat of a special superintendency. In the manufactures here is made a good cloth, as also damask linen and marble paper. In the years 1727 and 1730, the principal ducal colleges were removed hither from Stuttgart; but in 1733, on the decease of duke Eberhard Louis, they were remanded back again to that place. It is sixteen miles south of Heilbron, and five north-north-east of Stuttgart. Lat. 48. 54. N. lon. 9. 18. E.

LUDUS, *f.* [Latin.] A play, a frolic; a school, a place of exercise.

LUDWELL, a village in Hertfordshire, north of Hitchin.—A village in Wiltshire, near Wardour Castle.

LUDWICK HALL, a village in Hertfordshire, north-east of Hatfield.

LUDWIG (Christian-Theophilus), an eminent botanist, was born in Silesia in 1709, and educated for the medical profession. Having a strong bias towards natural history, he was appointed to accompany Hebenstreit in his expedition to the north of Africa. (See *HEBENSTREIT*, vol. ix.) Soon after his return in 1733, he became professor of medicine at Leipzig. The first thesis defended there under his presidency, in 1736, related to the manner in which marine plants are nourished: these he showed to differ essentially from the generality of the vegetable kingdom, as not deriving their nourishment by the root. In 1737 he published a *Programma* in support of the doctrine of the sexes of plants, from his own observations upon the date-palm. Two years afterwards he, nevertheless, advanced some objections to the Linnæan system of arrangement by the organs of impregnation, under the title of *Observationes in Methodum Plantarum Sexualem Cel. Linnæi*. This work begins with much just commendation of Linnæus, and even with great admiration of his system; accompanied however, by an attempt at depriving him of the merit of originality, by insinuating that this system had been "indicated by others;" without saying by whom.

Ludwig published in 1737 his *Definitiones Plantarum*, in 8vo. for the use of his pupils. In this the genera of plants are arranged in a method supposed to be natural, founded

on the corolla in the first place, the subordinate characters being taken from the fruit. The generic distinctions are derived from the herbage, flower, smell, taste, colour, or any thing that came in the author's way; certainly with no advantage whatever over the laws and practice of Linnæus, but rather evincing, at every step, the superiority of the latter to the vague scheme of his opponent. In another little volume of Ludwig, the *Aphorismi Botanici*, published in 1738, the assertion of his being "a Linnæan in disguise" is strongly justified. In vain does the writer try to forget the *Philosophia Botanica*, and to seek originality, at any rate, by wandering from its light. In vain does he extol the system of Rivinus in preference to all others. He is brought back by his own judgment, in spite of himself, at every step; and, as he could never give the least degree of popularity to the system he extolled, the slightest study of his works will show it to have been a mill-stone about his own neck. Boehmer gave a new and improved edition of the *Definitiones Plantarum* in 1760. In 1742, and again in 1757, our author published his *Institutiones Historico-Physicæ Regni Vegetabilis*, in 8vo. Still in pursuit of novelty rather than of truth, he rejects the Linnæan distinctions between animals and vegetables, founding the characteristic mark of the latter on the supposed propulsion of their fluids through a cellular texture, and not through a vascular system as in animals. This distinction is now known to have no foundation. In this work at length even the disguise of a Linnæan is almost laid aside, a system of arrangement being proposed in which the stamens and styles make an essential, if not a leading, feature. The favourite old system of Rivinus still takes precedence, though it serves only as an additional impediment in the way of natural affinities; which defect is in some measure concealed by the primary characters not being strictly followed. It is remarkable that our author, in thus professedly adopting the principles of Rivinus and Linnæus combined, and disclaiming as he does all pretensions to originality, never mentions those persons from whom he had long ago asserted that Linnæus borrowed his system. This volume may therefore be considered as a tacit tribute of respect to the illustrious Swede, arising from its author's progress in judgment and experience. He had no motive to withhold this tribute, as Linnæus never resented nor repelled his attacks, and even named a genus of plants in his honour. See the following article.

Our author began, in 1760, to publish impressions, chiefly of medicinal plants, taken from the dried specimens with printer's ink, or with smoked paper, in folio, under the title of *Eclypa Vegetabilium*, which he continued from time to time. Such impressions give undoubtedly a correct outline, at least if the plant be fully displayed; but the rest is a mass of confusion; especially as the more elevated parts, which should be light, are necessarily the darkest. He wrote also occasionally on medico-botanical subjects, as on the effects of extract of Stramonium, and of the Belladonna, or deadly nightshade, in the epilepsy. His opinion seems not to have been favourable to either. Ludwig died at Leipzig in 1773, aged sixty-four.—He left a son named Christian Frederic, born in 1751, who became professor of natural history in the same university, and is the author of various tracts on botany, anatomy, and physiology.—*Ludwig's Works. Hall. Bibl. Bot. Dryander. Bibl. Banks. S. in New Cyclopædia.*

LUDWIGIA, *f.* [so named by Linnæus, in honour of the subject of the preceding article.] In botany, a genus of the class tetrandria, order monogynia, natural order of calycanthemæ, (onagræ, *Juss.*) The generic characters are—Calyx: perianthium one-leaved, four-parted, superior, permanent; segments lanceolate, spreading very much, length of the corolla. Corolla: petals four, obcordate, flat, spreading very much, equal. Stamina: filaments four, awl-shaped, upright, short; antheræ simple, oblong, upright. Pistillum: germ four-cornered, covered with the base of the calyx, inferior; style cylindrical,

cal, length of the stamens; stigma obsolete four-cornered, capitate. Pericarpium: capsule four-cornered, blunt, covered and crowned by the calyx, four-celled, four-valved; partitions opposite to the valves. Seeds: numerous, small. Receptacle: columnar, membranaceous, four-winged; wings in the angles of the partitions, feed-bearing on each side.—*Essential Character.* Calyx four-parted, superior; corolla four-petalled; capsule inferior, four-cornered, four-celled; receptacle distinct from the axis of the fruit, bearing the seeds on each side.

*Species.* 1. *Ludwigia alternifolia*, or alternate-leaved ludwigia: leaves alternate, lanceolate; stem upright. This is an annual plant, rising with an upright branching stalk a foot high. The flowers come out singly at the axils: they are small, on short peduncles; corolla yellow. Capsule shorter than the permanent calyx, from a rounded base, cubical, opening at the angles; partitions membranaceous, inserted on one side into the middle of the valves, on the other into the axis, not separating; receptacle, a compressed fungose lamina, or plate, fixed to the inner angle of each cell, covered on both sides with the seeds; which are ovate, smooth, somewhat shining, pale yellow. Native of Virginia; or, according to Mr. Miller, of South Carolina, whence the seeds were sent him by Thomas Dale, M.D. before 1752. It flowers in June and July.

2. *Ludwigia oppositifolia*, or opposite-leaved ludwigia: leaves opposite, lanceolate; stem diffused. Stems procumbent, a span long. Branches at the root, and scarcely any others. Leaves smooth, quite entire, striated, ending in the petioles: in *Flora Zeylanica* the leaves are said to be *alternate*; the herb like *Lythrum hystopifolium*, and the flower in the form of *Caryophyllus officinarum*. Native of the East-Indies.

3. *Ludwigia repens*, or creeping ludwigia: leaves opposite, ovate; peduncles solitary, axillary; stem creeping. This is an annual plant, native of Jamaica. See *ISNARDIA palustris*, which is the same; vol. xi.

4. *Ludwigia erigata*, or upright ludwigia: leaves opposite, lanceolate; stem upright. This also is annual. Stem herbaceous, a foot high, and smooth. Native of the East-Indies. Jussieu doubts whether this species belongs to the genus; the leaves being opposite, and the flowers terminating.

*Propagation and Culture.*—The plants must be raised from seed in a hot-bed, in the spring, and treated as directed for *Amaranthus*. If they be not brought forward in the spring, they seldom produce good seeds in England. See *AMMANNIA*, *ISNARDIA*, and *JUSSEUA*.

**LUDWIGSBURG**, a town of Anterior Pomerania, on the coast of the Baltic: five miles east-north-east of Griefswalde.

**LUDWIGSTAT**, a town of the principality of Culmbach: fourteen miles north-west of Lichtenburg, and thirteen south of Saalfeld.

**LUDWIGSTEIN**, a town of the principality of Hesse Rhinels: fourteen miles east of Cassel, and sixteen south of Göttingen.

**LUDWIGSTHAL**, a town of Wirtemberg, noted for its iron-forges: about a mile from Duttlingen.

**LUDWIGWALL**, a town of Prussia, in Natangen: four miles south of Königsberg.

**LUDWORTH**, a village of Derbyshire, in the high peak.—A village in the county of Durham, east of Durham.

**LU'EG**, or **JAM'MA**, a citadel of Carniola, on the centre of a high mountain, which rises perpendicularly. This large building stands so in a hole in the rock, that no rain falls on it; notwithstanding which, it has a roof for its defence against the water which trickles down from the rock. From this citadel is no other prospect than that which looks up towards the heavens. One half of the fort tower alone projects. It is six miles north-west of Cirknitz.

**LU'EG**, a pass in the archbishopric of Salzburg: four miles south of Golling.

**LU'ES**, *f.* A destruction; a great mortality.

**LU'ES VENE'REA**, *f.* [from the Lat. *lues*, a disease, and *Venus*, the patroness of love.] The foul disease; called also *morbus gallicus*, *syphilis*, *morbus neapolitanus*, *morbus aphrodisius*, &c.

Several writers have endeavoured to prove the great antiquity of this distemper. The principal of these are, Mr. William Becket, whose papers are contained in the 30th and 31st vols. of the Philosophical Transactions; Dr. Charles Patin, and Dr. Sanchez, authors of dissertations on the origin of the disease. The opinion has even been maintained, that the venereal malady has existed from time immemorial; and passages in support of this sentiment are referred to in Hippocrates, Galen, Avicenna, Celsus, and likewise the Holy Scriptures. But that the Greeks and Romans were at all acquainted with the venereal disease seems extremely improbable, and is an assertion quite unestablished. Dr. Adams has well observed, that the ancient physicians, being ignorant of the medical powers of mercury, must have been infinitely more familiar with every form of the disease, had it been known, than ourselves: yet, till near the close of the fifteenth century, we have no description of local appearances that can be mistaken for venereal; and during the following century, the industrious Astruc enumerates more than a hundred writers on the subject. If other proofs are required, let us mark the difference between the licentious poets of former times and our own. Can a reader of common sense suppose that Horace, Juvenal, Persius, or Ovid, could have been silent on a subject so perpetually occurring in the satirical writings of Pope and Swift?

Giving up the supposition of *lues venerea* being of such antiquity, still it is contended that the disorder prevailed in Europe long before the return of Columbus from his voyage to America, or Charles VIII. besieged Naples; two events which happened at the close of the fifteenth century, when it is commonly thought that the disease first began its ravages in Spain and Italy, and thence spread to other parts of the old world. We are told that Gulielmus Salicetus, who practised at Verona in 1210, was well acquainted with the cause and effects of syphilis; and, in confirmation of this remark, we are referred to his work on surgery, where may be found a chapter, intitled, “*De pustulis albis, et scissuris et corruptionibus quæ sunt in virga et circa præputium, propter coitum cum meretrice, vel alia causa.*” Gordon, who lectured on physic at the university of Montpellier in 1289, mentions in chap. 5, “*De passionibus virgæ,*” the affections originating from connections with women whose wombs are foul, virulent, fanious, infectious, &c. and he likewise specifies a remedy for a chancre proceeding from such a cause. *Lombard sur la Maladie Vén.*

In the 30th and 31st vols. of the Philosophical Transactions, Mr. W. Becket published his papers in support of the antiquity of *lues venerea*. In the first dissertation, he labours to prove that a venereal gonorrhœa was known in England some ages before the year 1494, under the name of *ardor*, *arsura*, *incendium*, &c. in English, *brenning* or *burning*; of which, indeed, there is frequent mention made by British historians. In confirmation of this opinion, Mr. Becket produces authorities, of which some are earlier, and others later, than the year 1494, the period when *lues venerea* is generally imagined to have first shown itself in Europe.

The earliest of these authorities, being the most material, will alone be noticed by us. 1. The first is a manuscript treatise of John Arden, an eminent surgeon in England, about the close of the fourteenth century. In this book mention is made of *burning*, which, according to Becket, is defined “a certain inward heat and excoriation of the urethra.” 2. The second authority rests upon certain physical pieces supposed to have been written about the years 1390 and 1440. These works are said to contain some receipts for the cure of this *brenning*, both in men and women. 3. The third and last that we shall notice is founded upon

upon the manuscript rules and ordinances of the stewes, which were by public authority allowed to be kept at London, in the Borough of Southwark, under the controul of the bishop of Winchester. These documents are supposed to have been drawn up about the year 1430. One of them begins thus: "Of those, who keep women having a wicked infirmity." And further, it is ordered, under a severe penalty, that no steward keep any woman "wythin his hous that hath any syckness of brenning." See vol. ii. p. 818.

The celebrated Dr. Astruc, on the other hand, has deduced a different inference from these productions, without denying that they may be authentic; for he will not admit that this *burning* was the same disease as a venereal gonorrhœa, or that a venereal gonorrhœa was at any time expressed by such a term. His arguments are supported by considerations of the following kind. 1. The *leprosy* of the Arabians, which was formerly a common disease in England; as well as in other parts of Europe, was exceedingly contagious and infectious; and, therefore, lepers were, by several severe edicts, prohibited from having intercourse with the rest of mankind. In case any had carnal knowledge of a leprous woman, the leprosy was communicated to him by almost immediate infection. 3. When the case did not turn out to be leprosy in the worst form, yet the pudenda were for the most part affected with an inflammation, erysipelas, herpetic or miliary exulcerations, cuticular eruptions, &c. whence arose a dysuria, called, in old language, *ardor, arfura, incendium, calefactio*, and, in English, *brenning*. Upon the whole, Astruc infers that the *burning*, or *brenning*, referred to by Mr. Becket, was the same disorder as might arise from connection with a leprous woman; or one who had lately cohabited with a leprous man. As for the *nefanda infirmitas* mentioned in the laws of the stewes, Dr. Astruc conceives it must have been the leprosy itself. *De Morb. Venereis*.

We shall not follow these gentlemen through the whole of their arguments. The most important are set before the reader, and he must judge of them himself. That discharges from the urethra, attended with heat and pain in making water, must have existed from time immemorial, we decidedly believe; because experience has well proved that such complaints may often proceed from causes which are decidedly not venereal. Becket, we think, has fully proved that inflammations, discharges, &c. existed long before the year 1494; but his evidence fails in establishing that they were actually venereal. Astruc himself has very sensibly remarked, "that the genitals are no less subject to violent diseases than the other parts of the body, that they are equally exposed to all the causes of indisposition, and that they enjoy no prerogative above the rest to guard them against the attack of distempers. From the very infancy of physic, and long before the venereal disease was known, several writers have treated at large of an abscess, ulcer, cancer, and mortification, in the genitals." The phimosi, paraphimosi, and hypercarcosi, or caruncle of the urethra, among other cases, were undoubtedly known to the Greek physicians; but then, these disorders proceeded from an ordinary cause, and not from any venereal contagion, as will be plain to any one who will take the trouble to consult the old writers.

Dismissing the idea of the venereal disease being so ancient as some have supposed, let us examine what grounds there are for believing that the close of the fifteenth century was the era, when the disorder first commenced its ravages in Europe. The authorities in support of the opinion, that the venereal distemper first made its appearance in this quarter of the world towards the latter end of the year 1494, are the united testimonies of all the medical writers who at that time flourished in Italy, and who could not confound it with the leprosy, which, being then a common disease, was well known to them. The practitioners of that period were astonished at the novelty of the malady; and finding, from the experience, that the medicines, which were usually given in analogous cases, proved in-

effectual, were at a loss what method to pursue, and, for a time gave up the treatment into the hands of quacks.

Joseph Grunpech, a German physician, published, in the year 1496, *Traſtatum de Peſtilentiali Scorra, five Malade Frantzoi*, in which he affirms, that it was a disease so lately inflicted on mankind, that it seemed to be a plague sent down from heaven; that it was a new kind of disease, hateful to nature, a most horrid and terrible prodigy, and altogether known to mortals before that time. Alexander Benedict of Verona, who was physician in the Venetian army, which Charles VIII. of France destroyed in the battle of Fornova, in the year 1495, and therefore had the opportunity of observing the first appearance of this new disease, asserts in his work, *De omnibus Morbis*, published in 1496, that, "by the venereal contact, a new French disease, or, at least, one that was unknown to former physicians, owing to the pestiferous aspect of the stars, had burst in upon them from the west;" and, in another part of his work, that "the French disease, a new plague which had sprung up in the world, contracted by lying together and contact, was reckoned in his time incurable." Nicolaus Leoniceus of Vicenza, professor of physic at Ferrara, in a treatise which he wrote in 1496, *De Morbo Gallico*, observes, that "new diseases had appeared in Italy, which were unknown to former ages, after the manner of the lichenis, which, according to Pliny, Hist. Nat. lib. xvi. were never known before the time of Claudius." Then he continues: "Something like this has happened in this age; for now a new disease, of an unusual nature, has attacked Italy and several other countries: however, this disease has obtained no proper name hitherto by our present physicians, but they commonly call it the French disease; as if the contagion had been imported by the French into Italy, and that this country was infested both by the disease and the arms of France at the same time. I, for my part, am forced to believe, (nor, indeed, can I conceive the case to be otherwise,) that this infectious disease, which has lately sprung up, has harassed this present age as it never did any former one." Coradinus Gilinus, in his *Opusculum de Morbo Gallico*, begins thus: "Last year (1496) a very violent disease attacked great numbers of people, both in Italy and on the other side of the mountains, which the Italians call the French disease, affirming that the French introduced it into Italy; which the French call the Italian or Neapolitan disease, because, they say, they were first infested in Italy, and especially at Naples, with this cruel plague; or, because the disease appeared first in Italy at the time of the passage of the French over the mountains. And as this disease is yet unknown to the moderns, and there have been, and still subsist, great debates about it amongst physicians, I have therefore determined to write something upon it."

That the venereal disease first began to make ravages in Europe, and in particular that it afflicted many soldiers of the army of Charles VIII. at the siege of Naples, towards the close of the fifteenth century, appears then to be proved beyond dispute. But still other questions remain for determination. Was the venereal infection originally produced in Italy? or, was it conveyed thither from America, which had been discovered a little before the breaking out of the distemper in Europe?

We learn from history, that the new world was first found out by Christopher Columbus. In August 1492, he set sail with three ships and 120 men, arrived at Hispaniola in December of the same year, and returned to Spain in March 1493. On the 25th of September following, he departed from Cadiz again with seventeen ships and 1500 men, besides mariners and workmen; and, in November, he arrived once more at Hispaniola. In the following year, 1494, he dispatched fourteen ships back to Spain. In April 1494, Bartholomew Columbus, the brother of Christopher, arrived at Hispaniola with three ships, which returned to Spain, about the conclusion of the same year, with Pedro de Margarit, a Catalonian gentleman, and father Bayl, a Benedictine monk: the former was, at that

that time, severely afflicted with the venereal disease. In August 1494, four other ships arrived at Hispaniola from Spain, under the command of Antonio de Torrez, and returned at the same time as those last specified. Lastly, in October 1495, John Aguado, the envoy of their Catholic majesties, came to Hispaniola with four ships, to inquire into the crimes of which Christopher Columbus stood accused; and the year following departed for Cadiz, where he arrived with Christopher on the 11th of June 1496, and with 200 soldiers, who were infected with the venereal disease. The first conveyance of this distemper from the West Indies to Europe, by the followers of Columbus, is supported by numerous testimonies; among which are those of Anthony Mufa Bravavolus, John Baptista Montanus, Gabriel Fallopius, and Roderic Diaz. These confirm the disease to have originated in the West Indies, and to have been brought over by Columbus's men; that it appeared in Spain first in 1493, at Barcelona, and there spread immediately through the whole city; that, in Hispaniola and the adjacent West-India islands, the disease was very frequent and familiar to the natives, who had found out an antidote called guaiacum-wood; and, lastly, that the distemper in America was milder than in Europe, where, on its first breaking out, it was undoubtedly more severe than at subsequent periods.

There is only one other sentiment, which we have to notice, respecting the first origin of syphilis, namely, that it was not brought from the West Indies, but began in Europe, as an epidemical affection. Mr. Hunter seems inclined to think, that the distemper did not originally come from the West Indies; and he was led into this persuasion by reading a short treatise, entitled, "A Dissertation on the Origin of the Venereal Disease; proving, that it was not brought from America, but began in Europe from an epidemical distemper. Translated from the original Manuscript of an eminent Physician. London, printed for Robert Griffiths, 1751." In our opinion, however, Astruc has adduced abundant proofs of the distemper having existed in Hispaniola before it was at all known in Europe; and he has explained, as satisfactorily as can reasonably be expected, how the disease was conveyed from the West Indies to Barcelona in 1493, and to Italy shortly afterwards.

The subject is highly interesting; though the time that has now elapsed, since the commencement of lues venerea in Europe, forbids any advantageous investigation of the controverted points. That the ancient leprosy could not be syphilis, Dr. Astruc has entirely satisfied us; and we join him in the belief that the latter disease was originally imported into Europe from the West Indies. It is unquestionably a matter of infinite curiosity, that the leprosy, common as it was in former times, should scarcely ever have made its appearance after the venereal disease spread over Europe; but this may not be more curious and unaccountable than the departure of the plague, and the access of the small-pox. Mr. Hunter has remarked, that, in whatever manner the disease arose, it certainly began in the human race; for we know of no other animal that is capable of being infected with this poison. It is probable, too, that the parts of generation were the first affected; for, if the disorder had occurred in any other part of the body, it might probably never have gone further than the person in whom it first arose, and therefore never have excited public attention; but, as it was seated in the parts of generation, where the only natural connection takes place between one human being and another, it was in the most favourable situation for being propagated. For the symptoms and cure of this disease, see the article PATHOLOGY.

LUE'SIA, a town of Spain, in the province of Arragon: twenty miles south-west of Jaca.

LUFF, *f.* [In Scotland.] The palm of the hand.  
To LUFF, or LOOF, *v. n.* To keep close to the wind. Sea term.—Contract your swelling sails, and luff to wind. *Dryden.*

LUFF'-TACKLE, *f.* A name given by sailors to any

large tackle that is not destined for a particular place, but may be variously employed as occasion requires. It is generally somewhat larger than the jigger-tackle, although smaller than those which serve to hoist the heavier materials into and out of the vessel, which latter are the main and fore tackles, the stay and quarter tackles, &c.

LUFFA, *f.* in botany. See MOMORDICA.  
LUFFENCOT, a village in Devonshire, near Holf-worthy.

LUFFENHALL, a village to the north-east of Stevenage, Herts.

LUFFENHAM (North and South), villages in Rutlandshire, four miles from Uppingham; supposed to have been anciently one town.

LUFFIELD, a village partly in Bucks, and partly in Northamptonshire. It once had a priory; and is taxed in the parish of Stow.

LUFFWICK, a village in Northamptonshire, north-west of Thrapston.

LUFVIA, a town of Sweden, in the province of Finland: ten miles south of Biorneborg.

LUFUNA, a river of Africa, which divides Congo from Angola, and runs into the Atlantic in lat. 8. 26. S.

LUG, a river in Herefordshire, which runs into the Wye near Hereford.

LUG, a river of Wales, which rises in the county of Radnor, passes through Shropshire and Monmouthshire, and runs into the Severn near Chepstow.

To LUG, *v. a.* [aluccan, Sax. to pull; *loga*, Swed. the hollow of the hand.] To hale or drag; to pull with rugged violence.—Either every single animal spirit must convey a whole representation, or else they must divide the image amongst them, and so lug off every one his share. *Collier.*

Thy bear is safe, and out of peril,  
Though lugg'd indeed, and wounded very ill. *Hudibras.*

To LUG out. To draw a sword, in burlesque language: But buff and beltmen never know these cares,  
No time, nor trick of law, their action bars;  
They will be heard, or they lug out and cut. *Dryden.*

To LUG, *v. n.* To drag; to come heavily: perhaps only misprinted for lag:

My flagging fowl flies under her own pitch,  
Like fowl in air, too damp, and lugs along,  
As if she were a body in a body. *Dryden.*

LUG, *f.* A kind of small fish.—They feed on salt unmerchantable pilchards, tag worms, lugs, and little crabs. *Carew.*—[In Scotland.] An ear.—A land measure; a pole or perch:

That ample pit, yet far renown'd  
For the large leap which Debon did compel  
Ceaulin to make, being eight lugs of ground. *Spenser.*

LUG'-SAIL, *f.* A square sail, hoisted occasionally on the mast of a boat or small vessel upon a yard which hangs nearly at right angles with the mast. These are more particularly used in the barca longas, navigated by the Spaniards in the Mediterranean.

LUGA, a river of Russia, which runs into the gulf of Finland sixteen miles west of Kopore.

LUGA, a town of Russia, in the government of Petersburg, on a river of the same name: eighty miles south of Petersburg. Lat. 58. 25. N. lon. 29. 30. E.

LUGA, a mountain of Italy, in the county of Bormis: ten miles south of Bormis.

LUGA'NO, a bailiwick of Italy, granted by the duke of Milan, in the year 1513, to the Swiss cantons. It is about twenty miles in length and thirteen in breadth; containing 106 towns and villages, and 53,000 inhabitants, who all profess the Roman Catholic religion. Under the Swiss it was governed by a bailiff, sent every two years by each canton in its turn. The soil is fertile in pasture, corn, fruit, and silk; olives are produced in great abundance. It is now annexed to Italy.

LUGA'NO, the capital of the fore-mentioned bailiwick or district, is a small, tolerably-built, trading town, delightfully situated round the curve of a bay, and backed by a succession of hills, rising in gentle swells to a considerable height. In front a bold mountain clothed with forest projects into the lake, of which a noble branch extends to its right and left. To that spot boats of various sizes are continually passing and repassing; its base being perforated with *cantine*, or caverns, to which the inhabitants send their meat, and all sorts of provision, where it is kept untainted for seven or eight days, and the wine preserved with delicious coolness. The heats are moderated by the surrounding hills, and the cool breezes from the lake. It is no less sheltered from the alpine blasts, which, chilled by the neighbouring snows, would otherwise destroy the temperature of this equal climate. Olive, almond, and all the southern fruits ripen here to perfection. Lugano is the emporium of the greater part of the merchandise which passes from Italy over the St. Gothard, or the Bernardin. At the end of autumn, the Swiss mountaineers bring down numerous herds of cattle for sale, and return with less bulky commodities. The town contains about 8000 inhabitants; most of the houses are built of tuff-stone; the residence of the *capitano*, or governor, is a low building; and on the walls are the arms of the twelve regent cantons. On an eminence above the town stands the principal church, remarkable only for the beautiful carvings in stone round the doors and rose-window, and for the delicious prospect from its towers. In the cloister of the Recollets is a capital picture attributed to Luvino; their church is handsome, and the screen is ornamented with the paintings of the Passion by the same maker. It is sixteen miles north-west of Como. Lat. 45. 50. N. lon. 8. 53. E.

LUGA'NO (Lake of), a lake adjoining to the town above described, about twenty-five miles in length, and from two to four in breadth; its form is irregular, and bending into continued sinuosities. From Porto, a small village situated at its southern extremity, an arm of the lake bends northward, and discharges itself into the Lago Maggiore, by means of the river Trifa. It is scarcely possible, says Mr. Coxe, to imagine a more perfect or greater variety of beauties than this noble piece of water affords. The vast overhanging woods, the bold precipices, the transparency of the water, unite to form a scenery in the highest degree luxuriant. This lake is about one hundred and ninety feet perpendicular higher than the Lake of Como and Lago Maggiore. The two last mentioned lakes are of the same level, and about two hundred and forty feet higher than the city of Milan. *Coxe's Switzerland*, vol. iii.

LU'GAR NUE'VO, a town of Spain, in Valencia, on the coast: eight miles south of Alicante.

LUGAR' BEN, a town of Prussia, in the province of Natangen: thirty-six miles south-east of Königsberg.

LUG'DE, or LU'DE, a town of Westphalia, in the bishopric of Paderborn, on the Emmer: twenty-four miles north-north-east of Paderborn, and two south-west of Pymont. Lat. 51. 55. N. lon. 9. 18. E.

LUGDU'NUM, in ancient geography, the capital of the Segusiani in Gallia Celtica, situated at the conflux of the Arar and Rhodanus, on an eminence, as the Celtic term *dane* signifies; built by Manutius Plancus under Augustus, while commanding in that part of Gaul; and whither he led a colony. Now Lyons, in France.

LUGDU'NUM BATAVO'RUM, a town of the Batavi in Gallia Belgica. Now Leyden, in Holland.

LUGDU'NUM CONVERA'RUM, a town of Gaul, in Aquitain, at the foot of the Pyrenees. Now St. Bertrand, in Gascony.

LU'GE, a river of the duchy of Bremen, which runs into the Elbe six miles north-east of Stade, in lat. 53. 37. N. lon. 9. 33. E.

LUGE'US LA'CUS, in ancient geography, a lake of Japydia, the westmost district of Illyricum, to the south

of the Save, and near the head of the Arfia. Now commonly called the *Zirichnitz Lake*, from a small adjoining town. It is locked on every side with mountains, from which scanty currents run down; the less in quantity are their waters, because drunk up by the earth; till at length they are swallowed up in rocky furrows, so formed as to resemble artificial. In these the water being so redundant as to refuse receiving any more, they regurgitate, and return the water with extraordinary celerity, which, thus spreading itself, forms a lake, in most places eighteen cubits deep. These waters afterwards retire with no less celerity than they came on, not only through the furrows, but pass through the whole of the bottom, as through a sieve; which, when perceived by the inhabitants, they directly stop up the larger apertures, and thus take large quantities of fish; when the lake is dry, they cut down their harvest on the spot where they sowed, and sow again before the inundation comes on; and grass shoots so quick on it, that it may be cut down in three weeks time.

LUG'GAGE, *f.* [from *lug.*] Any thing cumbrous and unwieldy, that is to be carried away; any thing of more weight than value.—I am gathering up my *luggage*, and preparing for my journey. *Swift to Pope.*

A lively faith will bear aloft the mind,  
And leave the *luggage* of good works behind. *Dryden.*

LUG'GERSHALL, LUD'GERSHALL, or LUR'GERSHALL, a village in Wiltshire, twelve miles north of Salisbury, and seventy-five north by west of London. It is situated near the forest of Chute, in a delightful country; and was the residence of several kings. On the neighbouring downs there used to be horse-races. It has a fair on the 25th of July.

The principal object of curiosity, or historical interest, in this place, is its castle, built in 1197; a small fragment of which only remains. According to a legendary account, but which is not entitled to much credit, this fortress was erected by king Lud, and thence obtained the name of *Lud-gars-hall*. Stow, in his *Annals*, relates that Richard I. gave this castle, with another at Marlborough, to his brother John, in the first year of his reign. Gough, in his additions to Camden's *Britannia*, states that it belonged to "Geoffrey Fitz-Piers, the wealthy chief-justice of England, and earl of Essex." It was possessed by this family till the reign of Henry III. when Jollan de Nevill was appointed its governor. In the reign of Edward III. the manor, castle, &c. were vested in John lord Molins, who obtained a grant from that monarch to impark the woods with one hundred acres adjoining. See *Grose's Antiquities of England*, and *Britton's Beauties of Wiltshire*, vol. ii.

Luggershall is an ancient borough by prescription, governed by a bailiff, annually chosen at the court-leet of the lord of the manor. This borough, which sent to all the parliaments in the reign of king Edward I. made three returns in the reign of Edward II. and three in the reign of Edward III. ceased sending after 9 Richard II. till 9 Henry V. The right of election is of a very complicated kind, "being in such persons who have any estate of inheritance, or freehold or leasehold, determinable upon life or lives, within the borough, not confined to entire ancient houses, or the sites of ancient houses, within the said borough." The majority of these estates was formerly the property of George Augustus Selwyn, esq. of facetious memory; of whose demise they descended to the late lord viscount Sydney: the minority of them was the property of Mr. Everett, a banker in London. This division of local suffrage has been the cause of litigation between the parties, and has produced several petitions to the house of commons. The matter in question, between the contending parties, depends upon the legality of splitting those estates to which the right of voting is annexed: the number of votes, in Browne Willis's time, was seventy; but they are now divided into one hundred and forty-nine, and are held by the tenants and friends of the

two proprietors, who reside in different parts of Wiltshire and Hampshire, but who are kind enough to come here at the time of election, to perform the ceremonial part of delegating a representative for this borough to the legislative assembly of the British nation. Returning officer, the lord's bailiff. (Oldfield's Hist. Bor.) The members in the last parliament were Magens Dorrien Magens and J. H. Everett, esqrs. in the present, Sandford Graham and Joseph Birch, esqrs.

Michaelham priory, near this place, was built in 1230. It has now given place to a gentleman's seat and park.—To the west is Chidbury, or Shidbury, hill, said to be the highest eminence in Salisbury plain. Its summit is inclosed with an entrenchment, which is deep, and which Aubrey attributes to the Britons. From the top, a ditch extends down the northern slope, and terminates at the bottom, where the inequality of the ground shows that a permanent encampment, or town, formerly existed. The open downs in this part of the county abound with barrows, or tumuli, of various sizes, and encampments.

LUG'GING, *f.* The act of pulling with violence.

LUG'HAM, a village near Mount's Bay, Cornwall.

LUG'HAN, or LUG'GAN, a village among hills, to the north of Redruth, in Cornwall.

LUGNAQUILLA, mountains of Ireland, in the county of Wicklow: seven miles east-north-east of Balinglass.

LU'GNY, a town of France, in the department of the Saône and Loire: six miles east-north-east of Cluny, and ten north of Mâcon.

LU'GO, a city of Spain, in the province of Galicia, on the Minho, the see of a bishop, suffragan of Compostella; containing three parishes, four convents, a seminary, and two hospitals. It was called by the Romans *Lucus Augusti*, and was once the metropolis of Spain. The walls are ancient, and from twelve to fifteen feet thick. It is at present chiefly celebrated for its warm medicinal springs. About the year 459, a battle was fought here between the Suevians and the Goths, in which the former were defeated, and their king or leader Acliulphus slain. It is forty miles north of Orense. Lat. 43. 2. N. lon. 7. 32. W.

LU'GO, a town of Italy, in the Veronese: eight miles north of Verona.

LU'GO, a town of Italy, in the Paduan: ten miles east of Padua.

LU'GO, a town of Italy, in the department of the Lower Po. In the month of July, after the whole of the Ferrarese had submitted to the French republic, the tocin was founded, and the inhabitants took up arms against their conquerors; a bloody battle ensued, which lasted three hours; upwards of 1000 of the insurgents were killed or wounded, the rest escaped: 200 French fell in the action: the town was given up to pillage for three hours. It is eighteen miles west of Ravenna, and fifteen south of Ferrara.

LU'GO (John de), a learned Spanish Jesuit and cardinal, was the son of the deputy from Seville to the states of the kingdom convened at Madrid, where he was born in the year 1583. He discovered early proofs of capacity, being able to read printed books and written hand at three years of age; and at fourteen he gave evidence of his qualifications for entering on academic studies, by maintaining theses on different subjects. Soon afterwards he was sent to the university of Salamanca to study the law; where he was induced by the example of an elder brother to enter among the Jesuits in the year 1603, notwithstanding the opposition which his father made to that step. He went through his course of philosophy in the seminary belonging to the order at Pampeluna, and studied divinity at Salamanca. Upon his father's death, he was sent by his superiors to Seville, to take possession of a very considerable inheritance which fell to him and his brother; and, with the consent of the latter, he divided it among the Jesuits of Seville and Salamanca. During five years he taught philosophy with great applause at Medina del

Campo; and afterwards he was appointed professor of divinity at Valladolid. In this employment he acquitted himself with so much success, that his superiors thought him worthy of a professorship of greater eminence; and accordingly, in 1621, they sent him to fill their divinity-chair at Rome. This post he occupied during twenty years, with very distinguished reputation, devoting himself entirely to the duties of his employment, without spending his time in paying court to the cardinals, and visiting ambassadors. In the year 1643, pope Urban VIII. raised him to the purple, without his knowledge, or his entertaining the least suspicion that his holiness had such a design. Many singular particulars are related of the unambitious disposition which this Jesuit displayed, when he was made acquainted with his promotion, and in his subsequent conduct, which those of our readers who have any curiosity on the subject may find recorded in Bayle. He died in 1660, about the age of seventy-seven. He published seven ponderous folio volumes, in Latin, on questions in scholastic divinity and morals; of which those only maintain any reputation in the catholic schools which treat "De Virtute et Sacramento Penitentiae," and "De Juititia et Jure." What principally entitles his name to be transmitted to posterity is the circumstance of his having been the first person who brought into repute that excellent febrifuge the *quinquina*, and who introduced it into France in the year 1650, where it was called at first *Cardinal de Lugo's powder*. This drug he administered gratis to the poor who were afflicted with aguish complaints, but obliged the rich to purchase it with its weight in gold.—His elder brother, *Francis de Lugo*, taught divinity in Spain, Mexico, and Santa Fe; and died in 1652, about the age of seventy-two. He was the author of "Commentarii in primam Partem S. Thomæ de Deo, Trinitate, et Angelis," 1647, in 2 vols. folio; and other treatises in scholastic divinity and morals.

LU'GOS, a town of Hungary: sixteen miles east-north-east of Gros Warden, and thirty-seven south-west of Colofvar.

LU'GOS, a town of Hungary, in the bannat of Temesvar, on the Temes: twenty-three miles east of Temesvar, and seventy-six south-west of Hermanstadt.

LUGU'BRIOUS, *adj.* [*lugubre*, Fr. *lugubris*, Lat.] Mournful; sorrowful.—A demure, or rather a *lugubrious*, look, a whining tone, makes up the sum of many men's humiliations. *Decay of Piety.*

LUG'WARDINE, a village near Hereford.

LUHAN'GO, a town of Sweden, in the province of Tavastland: sixty miles north-north-east of Tavasthus.

LUHE, a river of Westphalia, which joins the Ilmenau near Winfen, in the principality of Lunenburg Zelle.

LUHE'A, *f.* [so named by Wildenow, in compliment to F. K. Freyherr von der Lühe, who published at Vienna, in 1797, a German hymn to Flora. His poetry ought to be very fine to merit so magnificent a plant.] In botany, a genus of the class polyadelphia, order polyandria, natural order of columniferæ, Linn. (malvaceæ, *Juss.*) The generic characters are—Calyx: perianthium interior, double; the outer of nine equal linear leaves, channelled at the back; inner in five deep lanceolate segments, internally smooth, naked, and coloured. Corolla: petals five, longer than the calyx, broad, roundish, wavy, crenate, veiny. Nectaries five, stalked, pencil-shaped, hairy. Stamina: filaments numerous, hairy, united into five sets at their base; antheræ incumbent, roundish, smooth. Pistillum: germens roundish, or conical, with five angles, hairy; style columnar, thick, shorter than the stamens, smooth upwards; stigma orbicular, broad, depressed, with several radiant furrows. Pericarpium: capsule of five cells. Seeds: winged.—*Essential Character.* Calyx double; the outer of nine leaves, inner in five deep segments; petals five; nectaries five, pencil-shaped; style one; capsule of five cells; seeds winged.

Luhea speciosa, the only known species, is a tree twenty or thirty feet high, with alternate round brown branches, downy

downy when young. Leaves alternate, on short thick downy stalks, roundish-oblong, pointed, slightly heart-shaped, and a little unequal at the base, three or four inches long, unequally and sharply serrated; smooth and naked above; white, with dense stellated down, furnished with three prominent ribs, and numerous transverse parallel veins, beneath. Flowers white, large, and handsome, not many together, in downy terminal simple clusters. This plant is closely allied in habit and fruit to the *Pterospermum* of Schreber and Willdenow, (*Pentapetes suberifolia* and *acerifolia* of Linnæus;) the differences in their flowers however seem essential, especially as the calyx of *Pterospermum* is simple. Native of lofty mountains in the Caraccas, from whence we have a specimen, gathered by Dr. J. Marter, to whom, though we do not meet with his name, the Vienna gardens are indebted for many of the finest plants published by Jacquin. From him we learn what is mentioned above respecting the capsule and seeds, about which professor Willdenow had no information.

LU'HITH, a place or district in the Moabites' country, *Isa.* xv. 5. *Jerem.* xlvi. 5. Eusebius and Jerome say, Luthith is situated between the cities of Ar and Zoar, and consequently east of the Dead Sea.

LUHY'NY, a town of Russian Poland: twenty-four miles west-south-west of Owrucze.

LUI-CHEU', a city of China, in Quang-tong, situated in a fertile and pleasant country, near the sea. Lat. 28. 58. N. lon. 110. 8. E.

LUI-LUNG-TA'. See SE-CHOU'I.

LUI-SHIN', in mythology, the Jupiter of the Chinese, or spirit that presides over thunder. The figure of it has the wings, beak, and talons, of an eagle. In his right hand he holds a mallet, to strike the kettle-drums with which he is surrounded, whose noise is intended to convey the idea of thunder; while his left is filled with a volume of undulating lines, very much resembling those in the hands of some of the Grecian Jupiters, and evidently meant to convey the same idea, viz. that of the thunder-bolts and lightning. The eagle's talons are sometimes represented as fixed upon the axis of a wheel, round which the kettle-drums are hung, and by means of which, with aided velocity, he rolls among the clouds. Sir George Staunton has given a figure of this deity and his accompaniments, from one of the temples at Pekin; (see his account of the Embassy to China, vol. ii. p. 304. 5.) and he adds, that "in the original from whence the figure was taken, the dreadful effects of this terrific spirit beneath the clouds are pointed out by the appearance of animals struck dead, and lying prostrate on the ground, buildings overturned, and trees torn up by the roots."

LUIDA, *f.* in botany, a genus so called by Adanson after Mr. Edward Llwyd, the correspondent of Ray, who is mentioned in his Synopsis as the discoverer of several mosses and other plants in Wales. This supposed genus however will neither immortalize him, nor its whimsical author, being made up of various species of *Hypnum*, *Bryum*, *Splachnum*, &c. characterised by having some leaves triangular and some orbicular.

LU'GI ROS'SI, one of the earliest and most voluminous composers of cantatas in the seventeenth century. He is celebrated in 1640 by Pietro della Valle, in his letter to Guiddicioni, for his grave canzonettes, particularly that which begins *Or che la notte del silenzio amica*. Many of his cantatas are preserved in all the collections which include the music of the last century; particularly in the Brit. Mus. Bibl. Harl. 1265 and 1273, and in Dr. Aldrich's Collections, Christchurch, Oxon. His cantata, *La fortuna*, in the Museum collection, No. 1265, is of an immeasurable length. The recitative, however, with formal closes, has pleasing expressions in it, that still live. No *da capo*, or sign of reference, appears in his cantatas, and he writes twice or three times over the same air; a trouble which these expedients would have spared. He seems to have started several flimsy divisions, which afterwards became

common; and, indeed, it appears from his cantatas, that, as soon as secular music had divested itself of the pedantry of perpetual canons, fugues, and multiplied parts, another vice crept into the art, by the frequent and excessive use of divisions. Luigi, in songs for a single voice, has some of this kind as long as those in modern bravura airs. In the Magliabecchi library at Florence is a part of an oratorio called "Giuseppe Figlio di Giacobe, opera spirituale fatta in musica da Aloigi de Rossi, Napolitano, in Roma." And under the name of Rossi many of his compositions may be found in the Museum. *Burney*.

LUIG'NA, a town of Spain, in Aituria: twenty miles north-north-west of Oviedo.

LU'NES, a town of France, in the department of the Indre and Loire, on the Loire: six miles west of Tours, and six east-north-east of Longeais.

LU'ING, or LONG ISLAND, one of the smaller Western Islands of Scotland, between Scarba and Kerrera.

LU'IS (St.), a town of South America, in the government of Buenos Ayres, and province of Cordova, 170 miles south-west of Cordova. Lat. 32. 10. S. lon. 67. 12. W. — A town of South America, in the province of Moyes: seventy-two miles north-west of Trinidad. — A mission of Spanish monks in New Albion: ten miles north-east of Punta el Eferos. — A town of New Navarre; ninety miles south of Casa Grande.

LU'IS DE LA PAZ, a town of Mexico, in the province of Mechoacan: 100 miles north of Mechoacan. Lat. 21. 50. N. lon. 102. 16. W.

LU'IS DE MARANO'N. See St. FELIPE.

LU'IS DE POTO'SI, a city of Mexico, in the province of Guatteca, pleasantly situated, and environed with rich gold mines. This town is handsome and well built, considerable in size, and populous. The streets are straight and neat, the churches magnificent; and the inhabitants, who are chiefly Indians, possessing all the conveniences and comforts of life. It is 190 miles north-north-west of Mexico. Lat. 22. 25. N. lon. 103. 6. W.

LU'IS DE ZACATECAS, a town of Mexico, capital of the province of Zacatecas, the see of a bishop, and residence of a governor: 240 miles north-north-west of Mexico. Lat. 22. 50. W. lon. 103. 46. W.

LUISIA'NA, a district of Spain, between Carmona and Ecija, lately settled by a company of Germans, who live not far from the high road. Their houses are built at regular distances on one simple model, with an allotment of land to each house.

LUIS'NUS (Louis), a physician, was born at Udina, in the state of Venice, where he obtained considerable reputation about the middle of the sixteenth century, and was not less distinguished by his acquisitions in literature than by his medical skill. He was author of the following works: 1. *Aphorismi Hippocratis hexametro carmine conscripti*, Venice, 1552. 2. *De compendendis animi affectibus per moralem philosophiam et medendi artem*, Basle, 1562. 3. *Aphrodisiacus, five de Lue Venerea*, in duos tomos; Venice, 1566, folio. The first volume contained an account of the printed treatises on the lues up to that year; the second, published in the year following, comprehended principally the manuscript works on the subject, which had not then been committed to the press.

LU'ISNARSBURG, a town of Sweden, in Westmanland: forty-eight miles north-west of Stroemholm.

LUIS'TRE, a town of France, in the department of the Aube: six miles north-east of Arcis sur Aube, and nine north-west Bar sur Aube.

LU'ITION, *f.* [*luo*, Lat. to expiate.] An expiation. *Cole*.

LU'ITPRAND, King of the LOMBARDS. See that article, p. 43, 4, of this volume.

LUJU'LA, *f.* in botany. See OXALIS acetosella.

LUK, a town of Bohemia, in the circle of Saatz: six miles east of Carlsbad.

LUKAU', a town of Moravia, in the circle of Znaym: eight miles west-north-west of Znaym.

LUKAVET'ZI,

LUKAVET'ZI, a river of Walachia, which runs into the Alaut sixteen miles north of Brancovani.

LUKAWET'Z, a town of Bohemia, in the circle of Czaflau: twenty-eight miles south-west of Czaflau.

LUKE, a Christian name of men: sometimes adopted for a surname.

LUKE (St.), an evangelist, and the companion of St. Paul in his labours, as St. Mark was of St. Peter. According to Eusebius of Cæsarea and St. Jerome, who are followed by some ancient and the greater number of modern writers, he was a native of Antioch; but we do not find that hypothesis countenanced by any other fathers before Eusebius. Grotius and Wetstein are of opinion that he was not only born at Antioch, but was also a slave, either at Rome or in Greece; who, having obtained his freedom, returned to his native place, where he became first a Jewish proselyte, and then a Christian. And Cave as well as Mill think it likely, that he was converted by Paul at Antioch. These notions, however, appear to be entirely destitute of foundation in antiquity. If he is the Lucius mentioned in Romans xvi. 21. the Lucius of Cyrene in Acts xiii. 1. Luke the beloved physician, in Coloss. iv. 14. and the Lucas spoken of in Philem. verse 24. as seems probable in the judgment of some ancient and modern critics; he must have been of Jewish descent, a relation of St. Paul, and not unlikely a native of Judea. His profession, it appears, was that of a physician; but that he was also a painter, as the catholic legends pretend, is rejected as a fable by the most judicious writers in that communion. Luke must have been an early believer; and upon the supposition that he was one of the two whom our Lord met with on the way to Emmaus, on the day of his resurrection, which has a great appearance of probability, he was a hearer and a disciple of Christ himself. Fabricius, Dr. Whitby, and other learned men among the moderns as well as ancients, have been of the opinion that he was one of the seventy disciples; which seems to have been founded rather on conjecture, than on the authority of testimony. It is certain, however, that he was held in high esteem by St. Paul, who expressly calls him his fellow-labourer, and whom he accompanied when that apostle first went into Macedonia. Jerome says, that he was the constant companion of St. Paul in his travels. This at least we may assert, on the authority of Scripture-history, that he was with St. Paul at Troas, whence they went by sea to Samothracia, thence to Neapolis, and thence to Philippi. We find no express mention of him afterwards till St. Paul was a second time in Greece, and was setting out for Jerusalem with the collections which had been made for the poor Christians in Judea. On this occasion he accompanied St. Paul from Greece through Macedonia to Philippi, and in his subsequent voyages along the coast of Asia to Cæsarea; whence they travelled to Jerusalem. Here he continued with the apostle till the insurrection of the Jews against him in the Temple, and attended him during his imprisonment at Cæsarea, after he had made his appeal to Cæsar. And, when St. Paul was sent prisoner from Cæsarea to Rome, Luke went with him in the same ship, and remained with him during the two years of his imprisonment in that city, beyond which period the history of the Acts of the Apostles is not carried. After the enlargement of St. Paul, it appears most probable that St. Luke went into Greece, and continued to preach the Gospel in different parts of that country till his death. With respect to the precise time, place, and manner, of that event, we have no certain information; but from a comparison of the accounts handed down by tradition it seems probable that he lived a single life, and died a natural death in Achaia, in the 84th year of his age, about the year of Christ 70, but of what death is uncertain. Philostorgius informs us, that in the reign of the emperor Constantius the relics of St. Luke were translated from Achaia to Constantinople; and therefore it must have been a general persuasion in those times, that he had died, and had

been buried, in Achaia, which, Gregory Nazianzen says, was the province assigned to St. Luke.

The writings for which the Christian church is indebted to St. Luke, are his Gospel, and the history of The Acts of the Apostles. These books are inscribed to a person named Theophilus, who appears from the titles to have been a man of rank; but whether he was a Gentile, or a Jew, it is difficult, if not impossible, and certainly of no moment, to determine. The Gospel of St. Luke presents us with the history of the life and actions of Christ, from his birth till his ascension; to which is prefixed an account of the birth of his forerunner, John the Baptist. His motive for undertaking it was, to give an accurate history of the events in our Saviour's life, founded on the testimony of the apostles and eye-witnesses; of which many had attempted to furnish narratives, which were either imperfect or erroneous. Among the productions of these many, St. Luke could not mean to include the Gospels of St. Matthew and St. Mark; for it may be satisfactorily shown from internal evidence, that, if those Gospels were written and published at so early a period as his own, which there is strong reason for questioning, they were at the time when he wrote unknown to him. And he speaks of the authors of those narratives as if they themselves were not eye-witnesses of the facts which they recorded; and, therefore, at any rate he could not have Matthew in view. But whether those histories were the productions of honest men, who had given defective accounts, as some maintain, or were erroneous and fabulous narratives, as others contend, are questions which it does not belong to our province to discuss; and we refer our readers for the arguments in support of those opposite hypotheses to Lardner and Michaelis. With respect to the time when this Gospel was written, the commonly-received opinion is, that St. Luke wrote it not long before the Acts of the Apostles, which were published in the year 63 or 64; and our English critic just mentioned has pointed out some marks of time in the Gospel itself, which serve considerably to support that hypothesis. On the other hand, the learned German employs much ingenuity in endeavouring to invalidate that opinion, and to prove that for aught we know it may have been written many years before the Acts of the Apostles. But the place where St. Luke wrote his Gospel has given rise to a still greater variation in sentiment than the time when it was composed. Michaelis enumerates no less than nine different opinions which have been advanced in ancient or in modern times, on this subject; and, after enquiring into the evidence on which each is built, concluded it to be most probable that St. Luke wrote his Gospel in Palestine, while St. Paul was a prisoner at Cæsarea. Lardner coincides in opinion with Jerome, that it was written in Achaia, and supposes that, during St. Paul's imprisonment in Judea, St. Luke embraced the opportunity of completing his collections for it, in his conversations with several of the apostles, and other eye-witnesses of our Lord's person and works; and that when he left St. Paul at Rome, on the termination of his imprisonment, he went into Greece, and there composed and published his Gospel. It must be acknowledged, however, that the different hypotheses on this subject are all founded on traditionary reports; and it is not easy to determine which is the most eligible conjecture.

The other work of our evangelist is the history of The Acts of the Apostles; which was intended, as appears from the very first sentence, to be a continuation of his Gospel. According to Mill, it was written in the year 64. That it was not written before the year 63 must be granted, since it continues the history of the actions of the apostles to the termination of St. Paul's imprisonment, which is allowed to have taken place in that year. It is not improbable, therefore, that St. Luke finished it either in that or the following year at Rome or in Greece. From a survey of its contents, it will be sufficiently obvious, that St. Luke did not intend to write a general history of the

Christian church during the first thirty years after Christ's ascension; for he has wholly omitted many facts, which an historian who designed to write a general account of the Christian church would not have passed over in silence. He has also omitted many material transactions in the life of the apostle Paul, and given no account of some of the controversies which took place, and of the heretical opinions which distracted the church. Of these omissions Michælis, and more particularly Lardner, have selected several remarkable instances. But these omissions are no disparagement to his history; and the relation of the particulars which they have selected was not necessary for the object which he had in view. That object seems to have been two-fold: to relate in what manner the gifts of the Holy Spirit were communicated on the day of Pentecost, and the subsequent miracles performed by the apostles, by which the truth of Christianity was confirmed; and to deliver such accounts as proved the claim of the Gentiles to admission into the church of Christ, a claim disputed by the Jews, especially at the time when St. Luke wrote the Acts of the Apostles. And it was the circumstance last mentioned which excited the hatred of the Jews against St. Paul, and occasioned his imprisonment in Rome, with the period of which St. Luke closes his history.

Marcion, a heretic who lived in the first half of the second century, rejected all the Gospels except that of St. Luke; and this he mutilated and altered, and interpolated in a great variety of places. He would not allow it to be called the Gospel of St. Luke, erasing the name of that evangelist from the beginning of his copy. Some of his followers considered it as written partly by Christ himself, and partly by the apostle Paul. Marcion retrenched the first and second chapters entirely, and began his Gospel at the first verse of the third chapter, and even read this in a manner different from our copies, viz. "In the 15th year of Tiberius Cæsar, God descended into Capernaum, a city of Galilee." Some late Christian writers have concurred in Marcion's retrenchment; but without sufficient authority.

St. Luke, says a modern writer, is pure, copious, and flowing in his language, and has a wonderful and entertaining variety of select circumstances in his narration of our Saviour's divine actions. He acquaints us with numerous passages of the evangelical history not related by any other evangelist; both in his Gospel and Apotolical Acts, he is accurate and neat, clear and flowing, with a natural and easy grace; his style is admirably accommodated to the design of history; it had a very considerable resemblance to that of his great master St. Paul; and, like him, he had a learned and liberal education, and appears to have been very conversant with the best classics; for many of his words and expressions are exactly parallel to their's. *Blackwall's Sacred Classics. Lardner.*

LUKE'S DAY, a festival in the Christian church, observed on the 18th of October.

LUKE'S HOSPITAL. See the article LONDON; p. 460 of this volume.

LUKE'S KEYS, two small islands near the coast of Honduras. Lat. 15. 50. N. lon. 86. 35. W.

LU'KEWARM, *adj.* [*Warmth*, in Saxon, is hleoð; in old Frisic *hlij*; in Dutch, *hewte*; whence probably our *luke*, to which *warm* may be added, to determine, by the first word, the force of the second; as we say, *boiling hot*.] Moderately or mildly warm; so warm as to give only a pleasing sensation.—Bathing the body in *lukewarm* water is of great advantage to temperate hot and sharp humours. *Wifeman's Surgery.*

May you a better feast never behold,  
Is your knot of mouth-friends: smoke and *lukewarm* water  
Is your perfection. *Shakespeare's Timon of Athens.*

Indifferent; not ardent; not zealous.—If some few continue stedfast, it is an obedience so *lukewarm* and languishing, that it merits not the name of passion. *Dryden.*

This sober conduct is a mighty virtue  
In *lukewarm* patriots.

*Addison's Cato.*

LUKEWARMLY, *adv.* With moderate warmth.—With indifference.

LUKEWARMNESS, *f.* Moderate or pleasing heat.—Indifference; want of ardour.—Some kind of zeal counts all merciful moderation *lukewarmness*. *King Charles.*

LU'KIN, a town of Poland, in Volhynia: fifty-six miles north of Zytomiers.

LUKIN'GA, a town of Samogitia: twenty-four miles north of Miedniki.

LUKOI'ANOV, a town of Russia, in the government of Niznei Novgorod: eighty miles south of Niznei Novgorod. Lat. 54. 58. N. lon. 44. 20. E.

LUKOM'LA, a town of Russia, in the government of Polotk: sixty miles south-south-east of Polotk.

LUKO'W, a town of Poland, in the palatinate of Lublin: forty miles north of Lublin, and fifty-six east-south-east of Warsaw.

LUKO'WA, a town of Poland, in the palatinate of Belcz: forty-four miles west-south-west of Belcz.

LUKO'WO, a town of Lithuania, in the palatinate of Brzecz: eighty miles east of Pinsk.

LU'LA, a river of Sweden, which runs into the Gulf of Bothnia six miles east-south-east of Lula.

LU'LA, or LULEA, a seaport town of Sweden, in West Bothnia, on the north side of the river Lula, at the north-west extremity of the Gulf of Bothnia, with a good harbour. It is 110 miles north-north-east of Umea, and sixty-eight west of Tornea. Lat. 65. 38. N. lon. 22. 4. E.

LU'LA (Old), a town of Sweden, in West Bothnia; five miles east of Lulea.

LU'LA LAP'MARK, a province of Swedish Lapland; bounded by that of Tornea on the north, by the Bothnic gulf on the east, by Pithia Lapmark on the south, and by Norway on the west.

LU'LAND ISLE, at the mouth of Padstow-haven, Cornwall.

LULES (Los), a town of South America, in the province of Tucuman: fifty miles north of St. Miguel de Tucuman.

To LULL, *v. a.* [*lulu*, Danish; *lallo*, Lat.] To compose to sleep by a pleasing sound:

There trickled softly down  
A gentle stream, whose murmuring wave did play  
Amongst the pumy stones, and made a sound  
To lull him soft asleep that by it lay. *Fairy Queen.*

To compose; to quiet; to put to rest:

To find a foe it shall not be his hap,  
And peace shall lull him in her flow'ry lap. *Milton.*

LULLABY', *f.* [from *lull*: it is observable, that the nurses call sleep *by-by*; *lullaby* is therefore lull to sleep.] A song to still babes.—Drinking is the *lullaby* used by nurses to still crying children.

Only that noise heav'n's rolling circles keft,  
Sung *lullaby*, to bring the world to rest. *Fairfax.*

LUL'LESLEY, a village in Worcestershire: two miles east of Suckley.

LULLI (John-Baptist), an eminent musician, was born of obscure parents near Florence in 1633. Discovering almost from his infancy a propensity to music, he was instructed in the guitar by a benevolent cordelier. He soon after applied himself to the violin. He was only twelve when the chevalier de Guise, being on his travels in Italy, proposed to his parents to take him into France, and engage mademoiselle de Guise, his sister, to receive him among the officers of her kitchen.

This princess, having accidentally heard him play on the violin, had him taught, and he became in a short time an excellent performer. Louis XIV. being desirous to hear him, was so pleased with his performance, that in 1652 he appointed him inspector-general of his violins; and soon after created a new band, which was called *les petits violons*. These new musicians formed by Lulli soon became the first in Europe, which is not saying much for them

them, as such was the ignorance of the generality of instrumental performers at this time, that they could execute nothing which they did not know by heart. The genius, therefore, of Lulli was obliged to contract itself to the abilities of his orchestra; and it is supposed that he would have written as well as his successors, if he had lived a hundred years later.

Before the establishment of the opera in France, the king every year gave to his court magnificent spectacles called *ballets*, in which there was a great number of symphonies, mixed with recitatives. Lulli first began by only composing the music to the dances in these ballets; but the king became so fond of his compositions, that he would hear no other. In 1672, Perrin, to whom the patent for an opera was first granted, resigned it to Lulli, whose genius began to expand; and he may be regarded as the creator of this kind of music, which (according to M. Laborde) has not been so much improved (in France, he should have said) as some imagine, and in many particulars has, perhaps, lost more than it has gained. It is true that he was assisted by the immortal Quinault, of whom he had the penetration to discover the genius, and the dexterity to secure the assistance by a deed, in which the poet engaged to supply him every year with a new drama, for 4000 livres, about 200*l*. Quinault sketched many plans, and carried them to the king for his approbation; after which Lulli pointed out to him the places where the dances were to be introduced, and let him hear the airs. The scenes were examined, by his majesty's command, in the Académie des Belles Lettres. Thus by their united opinions all the dramas of Quinault were regulated, which remain the best that were produced in France during the seventeenth century, and will probably continue the best, if new set, for many ages yet to come. The enemies of Quinault, jealous of his glory and talents, contrived to bring about a quarrel between the poet and musician. Lulli had recourse to La Fontaine, who, at his request, produced the opera of Daphne; but, as soon as Lulli had heard it read, he did not conceal from the author, that he thought his talents did not extend to writing operas. La Fontaine, piqued at having laboured in vain, to revenge himself on Lulli, for his coarse rejection of his drama, wrote his comedy, or rather satire, of the Florentine; but, as he had a good heart, he soon subdued his wrath, and they were sincerely reconciled. The king, more and more pleased with his music, conferred on him the title and emoluments of secretary to his majesty, and heaped upon him many other favours for his family.

The king having been extremely ill in 1686, Lulli composed a *Te Deum* on his recovery, which was executed in the church of the Feuillans, Rue Saint Honoré, on the 8th of January, 1687. While enthusiastically regulating the time with his cane, he struck his foot so violently, that, probably from a bad habit of body, a mortification came on: and it was announced to him that he must prepare for death. His confessor was summoned, who refused to give him absolution, unless he would deliver to him a new opera he was composing, to be committed to the flames. This was done; and Lulli, being somewhat better, was soon after visited by a prince of the blood, who reproached him with having burned his music in compliance with a gloomy Jansenist. "Hush! my lord, (said Lulli,) I have another copy." This sally, however, was soon succeeded by a relapse, in which the confessor had all the advantage. The poor penitent submitted to be laid upon a heap of ashes with a cord about his neck, in which situation he sung to an air of his own composing, *Il faut mourir, pêcheur, il faut mourir!* He soon after expired, at the age of fifty-four, on the 22d of March, 1687: he was buried in the church of Les petits Pères, in the Place des Victoires, where a fine monument was erected to his memory, with the following epitaph by Santeuil:

Perfida mors, inimica auidax, temeraria et excors,  
Crudelisque, et cæca probris te absolvimus istis,

Non de te querimur, tua sint hæc munia magna.  
Sed quando per te populi regisque voluptas,  
Non ante auditis rapuit qui cantibus forbem  
LULLIUS eripitur, querimur modo, surdus fuisti.

Lulli was a fortunate man to arrive in a country where music had been so little cultivated, that he never had any rival; nor was there throughout the whole kingdom of France an individual who had the courage to doubt of his infallibility in his art. He was fortunate in so magnificent a patron; and still more fortunate in a lyric poet, who could interest an audience by all the powers of poetry, by the contexture of his fables, and variety and force of his characters. Lulli was rough, rude, and coarse in his manners, but without malice. His greatest frailties were the love of wine and money. There were found in his coffer 630,000 livres in gold, an exorbitant sum for the time in which he lived. He had the art of making himself at once beloved and feared by the performers of his music, which is doubtless the most essential talent for governing such eccentric and mutinous subjects. Lulli married the only daughter of Michel Lambert, the celebrated musician, and the best singing-master of his time. By this marriage he had three sons and three daughters; to all of whom he left an ample provision, and friends in power, who conferred on them places, pensions, and kindness. *Burney and Hawkins.*

LUL/LING, *f.* The act of quieting; of laying to rest.

LUL/LINGSTON, a village in Kent, on the Derwent.

LUL/LINGTON, a village near Philip's Norton, Somerset.—A village in Derbyshire, south-west of Castle Gresley, and including the hamlet of Coton in the Elms.

LUL/LY, a village in Hertfordshire, south-west of Hitchin.

LUL/LY (Raymond), a philosopher of great note in the dark ages, was born at Majorca in 1234. In his youth he bore arms, and led the life of a man of pleasure. Falling in love with a young maid, who obstinately rejected his addresses, she at length, to free herself from his importunities, displayed to him her breast consumed with a cancerous ulcer. The spectacle had such an effect upon him, that he plunged into religious retirement, and devoted the rest of his days to pious pursuits. Others, however, say that it inspired him with the resolution of seeking a remedy for her disease, and was the motive for the chemical studies for which he became famous. It appears certain that he undertook a course of travels into Africa and the east, for the purpose of converting the Mahometans to the Christian faith, where he incurred great hardships and dangers. He was so much inflamed with zeal for this object, that, not succeeding in his application to various Christian princes for assistance, he entered into the Franciscan order, and returned to Africa with the hope of obtaining the crown of martyrdom. When he was again found in that country, from which he had been permitted to depart only on condition of not returning, he was thrown into prison, and, after suffering much torture, was freed through the interest of some Genoese traders, who took him on-board their ship to convey him home. On the passage, when just in sight of his native land, he died, in 1315.

From this narrative, which represents Lully in the light of a fanatic missionary, we should not expect that scientific character which has caused his name to be preferred to modern times. He is celebrated in a two-fold capacity, that of a scholastic metaphysician, and that of an experimental chemist. In the first department he was the inventor of a *great art* which exactly suited the genius of the age. It consisted in collecting a number of general terms, common to all the sciences, and predicates taken from these were to be respectively inscribed in angular spaces upon circular papers. The essences, affections, qualities, and relations, of things, being thus mechanically brought together, the circular papers of subjects were fixed in a frame, and those of predi-

icates

cases were so placed upon them as to move freely, and in their revolutions to produce various combinations of subjects and predicates, whence would arise definitions, axioms, and propositions, varying infinitely. This contrivance, worthy of Laputa, was greatly admired in its time; and its author acquired the title of *the most enlightened doctor*.

As a chemist Lully appears in a very different light; for, although the chief object of his pursuit was the philosopher's stone and fancied universal remedy, yet he was aware that it could only be acquired by a series of experiments. Boerhaave says of the chemical works extant in Lully's name, that he has perused most of them, and finds them, beyond all expectation, excellent, so that he has been tempted to doubt whether they could be the work of that age. "So full (says he) are they of the experiments and observations which occur in later writers, that either they must be supposititious, or the ancient chemists must have been acquainted with many things which pass for modern discoveries." Lully is supposed to have derived his chemical knowledge from his travels in the East, and particularly from the writings of Geber; but great doubt prevails concerning the genuineness of the works passing under his name, and some have questioned whether he ever applied to the science. A complete edition of all the writings attributed to him, in theology, morals, medicine, physics, chemistry, &c. was printed some years ago at Mentz. *Boerhaave's Chemistry. Brucker's Hist. of Philosophy.*

LULO'LA, a strong town of Angola, in Africa, situated on an island about 100 miles from the mouth of the Coanza; fortified by the Portuguese.

LUL'SEY, a village south-west of the city of Worcester.

LUL'STOFF, a town of the duchy of Berg, on the Rhine: six miles above Duitz.

LUL'WORTH (East), a village in Dorsetshire, situated six miles from Weymouth, and 116 from London; and contains 74 houses, and 364 inhabitants.

LUL'WORTH (West), a village united with the parish of East Lulworth, and about a mile distant towards the sea. It contains, as near as can be, the same number of houses and inhabitants.

About two miles from West Lulworth is the Castle, the seat of Mr. Weld; justly admired, not only for its situation, but as being one of the most magnificent in the county. It is certainly a most superb pile of building; and, view it from which side you will, it strikes the eye with pleasure. It is situated in the south-east corner of an extensive park, which occupies a circuit of nearly four miles and a half; and has been lately surrounded by an excellent stone wall, upwards of eight feet high. The present edifice, which was built on or near the site of a castle mentioned so far back as the year 1146, was commenced in 1588, and finished in 1610, except the internal decorations, which were not completed till after the year 1641, when the ancestor of the late owner purchased the estate. The castle is an exact cube of eighty feet, with a round tower at each corner thirty feet in diameter, and rising sixteen feet above the walls, which, as well as the towers, are embattled. The hall and dining-room are spacious, and the rooms in general eighteen feet high. The principal front is on the east, and is faced with Chilmark stone, decorated with statuary. The interior is furnished with good taste, and furnished with many excellent pictures: it may be seen by strangers on a Wednesday, between the hours of ten and two. In the year 1789, during their majesties' residence at Weymouth, Mr. Weld had several royal visits, the particulars of which are recorded in two inscriptions over the entrance to the castle. Mr. Weld has lately erected an elegant little chapel for the convenience of his family; this structure is of a circular form, increased by four sections of a circle, so as to form a cross, and finished with a dome and lantern. The parish-church of St. Andrew, which was an ancient and curious fabric, has been recently rebuilt at the expense of Mr. Weld.

Lulworth Cove, which is just by, is a remarkable na-

tural curiosity. Here you will see a snug harbour, of a circular form, and appearing as if scooped out of the rock, where vessels of sixty or eighty tons burthen may ride in safety. It is surrounded by lofty hills; and the entrance to it is narrow, with rocky cliffs on each side. About a mile from the cove is the Arched Rock, which projects from the land into the sea, having an opening near twenty feet high in the middle, formed like an arch, through which the prospect of the sea has a peculiar effect. Lat. 50.35. N. lon. 2.22. W. *Beauties of England and Wales*, vol. iv. *Wilkes's British Directory*, vol. iv.

LUMAM'PA, a town of South America, in the province of Tucuman: ninety miles south of St. Yago del Eitero.

LUMBA'GO, *f.* [from *lumbi*, Lat. the loins] *Lumbagos* are pains very troublesome about the loins, and small of the back, such as precede ague-fits and fevers: they go off with evacuation, generally by sweat, and other critical discharges of fevers. *Quincy*.

LUM'BAR, *adj.* belonging to the loins; affecting the loins.

LUM'BER, a town of Spain, in Navarre: fifteen miles north of Sanguesa, and eighteen east of Pamplona.

LUM'BER, *f.* [from *loma*, *geloma*, Sax. household-stuff; or *lommering*, the dirt of an house, Dut.] Any thing useless or cumbersome; any thing of more bulk than value.

—If God intended not the precise use of every single atom, that atom had been no better than a piece of *lumber*. *Greiv*.

One son at home

Concerns thee more than many guests to come.

If to some useful art he be not bred,

He grows mere *lumber*, and is worse than dead. *Dryden*.

To LUM'BER, *v. a.* To heap like useless goods irregularly.—In Rollo we must have so much stuff *lumbered* together, that not the least beauty of tragedy can appear. *Rymer*.

To LUM'BER, *v. n.* To move heavily, as burthened with his own bulk:

First let them run at large,

Nor *lumber* o'er the meads, nor cross the wood. *Dryden*.

LUM'BER-ROOM, *f.* A room to put lumber in.—Many great readers load their memories, and make *lumber-rooms* of their heads instead of furnishing them usefully. *Chesterfield*.

LUM'BERING, *f.* The act of filling with lumber; or making a noise as if moving goods about.

LUM'BERTON, a post-town of America, in North Carolina, and capital of Robeson county, on Drowning Creek: thirty-two miles south of Fayetteville.

LUM'BIER, or LOMBIER, a town of Spain, in Navarre: three miles north of Sanguesa.

LUM'BO, a town of Benguela: 120 miles east-north-east of Benguela. Lat. 11.45. S.

LUM'BRE, a town of France, in the department of the Straits of Calais, and chief place of a canton in the district of St. Omer. The place contains 502, and the canton 13,655, inhabitants.

LUM'BRE'RAS, a town of Spain, in Leon: twenty-two miles north-north-west of Ciudad Rodrigo.

LUM'BRICAL, *adj.* [from *lumbricus*.] Belonging to the earthworm; belonging to the muscles of the hands and feet which resemble worms.

LUM'BRICUS, *f.* in helminthology, the EARTHWORM; a genus of vermes intestinales. Generic characters—Body round, annulate, with generally an elevated fleshy belt near the head, mostly rough with minute concealed prickles placed longitudinally, and furnished with a lateral aperture. There are sixteen species; and, though called *intestinal worms*, they not only do not breed in the intestines, but none of them ever enters the body of any animal unless by accident; as to which, see the article HELMINTHOLOGY, vol. ix. p. 340, 1.

1. *Lumbricus terrestris*, the common earth-worm, or dew-worm. Specific character, body red, with eight rows of prickles. It inhabits decayed wood and the common soil, which by perforating it renders fit to receive the rain; devours the cotyledons of plants, and wanders about by night; is the food of moles, hedgehogs, and various birds. On the body there are about 140 rings, each of which contains four pair of prickles, not visible to the eye, but discoverable by the touch: when expanded is convex each side, and when contracted is flattish beneath, with a red canal down the whole body.

This worm has neither bones, brains, eyes, nor feet. It has a number of breathing-holes situated along the back, and near each ring. The heart is placed near the head, and may be observed to beat with a very distinct motion. The small rings are furnished with a set of muscles, that enable it to act in a sort of spiral direction; and by this means it is capable, in the most complete manner, of creeping on the earth, or penetrating into its substance. These muscles enable the worm to contract or dilate its body with great force. The rings of each are armed with small stiff sharp prickles, which the animal is able to open out or close upon its body; and from beneath the skin there is secreted a slimy matter, which, by lubricating the body, greatly facilitates its passage through the earth.

Dew-worms though a small and frequently regarded as a despicable link in the chain of nature, would, if lost, be greatly missed by those who are apt to consider them as a nuisance. For, independently of their affording a large supply of food to birds, &c. already noticed, they are of great use in promoting vegetation, by boring, perforating, and loosening the soil, and rendering it pervious to rain and the fibres of plants; by drawing straws and stalks of leaves and twigs into it; and, most of all, by throwing up such numbers of lumps called worm-casts, which act as a fine manure for grain and grass. Worms probably provide new soil for hills and slopes when the rain washes the earth away; and they affect slopes probably to avoid being flooded. Gardeners and farmers express their detestation of worms: the former, because they render their works unsightly, and make them much work; and the latter because they think worms eat their green corn. But these men would find, that the earth, without worms, would soon become cold, hard-bound, and void of fermentation, and consequently sterile; and besides, in favour of worms, it should be hinted, that green corn, plants, and flowers, are not so much injured by them as by many species of insects in their larva or grub state, and by unnoticed myriads of those small shell-less snails called slugs, which silently and imperceptibly make amazing havock in the field and garden. *Bingley's Animal Biography*, vol. iii.

Earth-worms are plentifully found in moist fat grounds, but rarely, if ever, in dry sands. M. Reaumur proposed collecting them as a cheap substitute for grain in feeding domestic poultry. The physicians, who appear to have overlooked scarcely any produce of the three kingdoms of nature, have used these creatures, under the notion of their possessing an antispasmodic and diuretic virtue. Neumann relates several experiments made with them. They are cleansed by washing, and suffering them to creep through dry woollen cloths. Unless hastily dried by the heat of the sun or a fire, they are very apt to putrefy. Moistened with wine or vinous spirit, to prevent their putrefaction, and set in a cellar in a wide-mouthed glass, they are almost wholly resolved in a few days into a slimy liquor. This liquor is by some esteemed of great virtue in medicine, and said to be discutient, emollient, and an opener of obstructions; and has been prescribed in apoplexies, spasms, and all nervous affections, and in the jaundice, dropsies, and colics.

The earth-worm has been often confounded with the *Ascaris lumbricoides*, or round worm of the human intestines. The difference has been already pointed out in the article HELMINTHOLOGY, vol. ix. p. 343. but the reader

may now compare them, by referring for the intestinal worm, to the Plate ASCARIS, fig. 1. in our second volume; and, for the common earth-worm, to fig. 1. of the annexed Plate.

2. *Lumbricus marinus*, the lug: back with two rows of bristly tubercles. This inhabits the shores of Europe, where it buries itself deep in the sand, leaving a little rising with an aperture on the surface; and is used as a bait for fish. Body pale red, round, and annulate.

3. *Lumbricoides vermicularis*: body white, with two rows of prickles. It inhabits the wet and decayed trunks of trees, and among moist leaves; moving very expeditiously in moist places, but twisting itself up in dry ones. Its body is polished and glabrous.

4. *Lumbricus variegatus*: rufous spotted, with six rows of prickles. It inhabits wet plantations, and is the most beautiful of the whole genus. The body red, very finely tessellate with brown, having a sanguineous line running down the whole body. It easily breaks in pieces, and as easily reproduces what has been lost by accident or otherwise.

5. *Lumbricus tubifex*: body reddish, with two rows of prickles. The body is pellucid, very simple, thin, and truncate at the tip, with a dark intestine. They are found at the bottom of rivulets, where they form a perpendicular tube of earth for their habitation; as may be seen at fig. 2. which represents a lump of earth with the tubes erect, and some of the worms appearing exerted; they move themselves about in various directions, as if to inhale the air, or perhaps in search of food, but upon the least interruption they quickly withdraw each into its separate tube. One of these worms, highly magnified, is shown at fig. 3. Fig. 4 is a variety of the same, larger, and with longer bristles, which conceals itself in the same kind of earth, but has not been observed to form tubes: fig. 5. is a section of the middle of the body, showing the bristles and the alimentary canal.

6. *Lumbricus lineatus*: body white, with a longitudinal red line. Found very abundantly on the shores of the Baltic, among sea-weed. It is pellucid, with rather a short body, having a yellow artery on the back, and a bifid vein towards the head.

7. *Lumbricus ciliatus*: body rufous, and ciliate between the rings; the body is glabrous, with about forty segments; the interfections armed with four tufts of short bristles.

8. *Lumbricus tubicola*: white, with a red dorsal spot on each of the segments. This species is found in the bays of Norway that have a clayey bottom, in a round membranaceous tube, covered with mud, and about an inch longer than itself. It has twenty-five segments in the body, of which the interfections are armed with two bristles on each side; the intestine is black, and running down the whole body. This worm is shown of the natural size at fig. 6. The segments of the body are of unequal length; those at the head end being so short as to be scarcely distinguishable, and becoming longer towards the tail, the last being more than half an inch long; and is shown magnified at fig. 7.

9. *Lumbricus echiurus*: body covered with rows of granulations; the hind-part obtusely truncate, and surrounded with a double crown of bristles. It inhabits the sandy bottom of the shores of Belgium; is most observable in winter, and is the chief food of cod-fish. Body whitish-grey, with fulvous viscera, about the size of a middle finger; tongue fleshy, thickish, and boat-shaped.

10. *Lumbricus thalassema*: body striate, dirty red, with shining red spots, beneath grey; mouth surrounded with a funnel-like tube, which is wrinkled within, and plaited at the margin; the body is glabrous, mucous, thicker at one end, and somewhat pointed at the other; the mouth is placed above, with a saffron funnel. Inhabits the shores of Cornwall.

11. *Lumbricus edulis*: body whitish; flesh-colour; sub-

clavate behind, dilated and papillous before; mouth terminal, and surrounded with a villous rim or wrinkle. There are two hundred and seventy-eight rings between the villous part and the hinder end, separated by an annular striæ; the hind part bulbous, with a double papilla; the fore-part beset with numerous flesh-coloured ones disposed in transverse rows.

12. *Lumbricus oxyurus*; body whitish livid, very sharp at the hind extremity, and obtuse before, with a round retractile and exsertible proboscis. This species is found on the Sussex coast, is about an inch and a half long, and annulate with very fine striæ; snout truncate, and very fine, granulate, with a pore at the base scarcely visible.

13. *Lumbricus fragilis*: body red, with lateral divided warts, and fasciculate bristles. The body of this species resembles the terrestris, with above two hundred smooth and very brittle rings; the head is conic, with an approximate wrinkled mouth. It inhabits the muddy bottom of the bays of Norway. It is shown of the natural size at fig. 8. and the six upper segments, with the head, are magnified at fig. 9.

14. *Lumbricus armiger*: body red, with double lanceolate lamellæ on the belly, and none on the fore-part; is about two inches long, and consisting of about one hundred rings. Found in the islands of Norway. This is shown of the natural size at fig. 10. Fig. 11 represents the upper or anterior part magnified, from which it will be observed, that the bristles which start from the jointings of the rings in most of the species do not, in this, begin to show themselves till about the eighteenth ring from the head.

15. *Lumbricus cirratus*: body with annular joints, and very long cirri. Inhabits the seas of Norway.

16. *Lumbricus fabellaris*: body jointed, and truncate at the upper end; interfections of the joints thick, and armed (except the first four) with a prickle on each side. This species in some respects resembles the tubicola, and has been mistaken for it; but it is longer and thicker; the sections are 21 or 22 in number, of which the anterior four are the shortest, the middle ones the longest, and each segment is narrower in the middle than at the joint. It is a very rare species; and the upper part, or mouth, is of a very peculiar form. See the Plate, fig. 12. which shows it of the natural size. It inhabits the seas of Norway. *Gmelin's Linn. Zoologia Danica*, tom. i. ii. iii.

LUM'BUS, *f.* [from the Lat.] The loin, the haunch, the flank.

LUMEL'LO, a town of Italy, in the department of the Gogna, which lately gave name to a district in the duchy of Milan, called the *Lumelline*, on the Gogna; once the residence of the kings of Lombardy, and now reduced to the state of a village. It is twenty-six miles south-west of Milan, and forty-four east-north-east of Turin. Lat. 48. 57. N. lon. 8. 47. E.

LUMHAGAN, an island in the Straits of Malacca, near the coast of Salengore, twelve miles long and five broad; separated from the continent by a narrow channel, called the *Straits of Lumhagan*. Lat. 2. 54. N. lon. 101. 24. E.

LUMIJOCK'I, a town of Sweden, in East Bothnia; twelve miles south-west of Ulea.

LUMINA'RE, *f.* [Latin.] The lamp that burns before the altar in the church. *Scott.*

LUMINA'RIA, *f.* in the ancient western churches, the time of our Saviour's nativity; Christmas.

LUMINARY, *f.* [*luminaire*, Fr.] Any body which gives light:

The great luminary  
Dispenses light from far.

*Milton.*

Any thing which gives intelligence.—Sir John Graham, I know not upon what *luminaries* he espied in his face, disfructed him from marriage. *Wootton*.—Any one that instructs mankind.—The circulation of the blood, and the weight and spring of the air, had been reserved for a late

happy discovery by two great *luminaries* of this island. *Bentley.*

LUMINARY, *adj.* Giving light.

LUMINA'TION, *f.* [from *lumen*, Lat.] Emission of light.

LUMINOUS, *adj.* Shining; emitting light.—How came the sun to be *luminous*? Not from the necessity of natural causes. *Bentley.*

Its first convex divides  
The *luminous* inferior orbs inclos'd,  
From chaos.

*Milton.*

Enlightened:

Earth may, industrious of herself, fetch day,  
Travelling east; and, with her part averse  
From the sun's beam, meet night; her other part  
Still *luminous* by his ray.

*Milton's Paradise Lost.*

Shining; bright.—The most *luminous* of the prismatic colours are the yellow and orange; these affect the senses more strongly than all the rest together. *Newton.*

LUMINOUSNESS, *f.* Lustre.—That *luminousness* that appears in some eyes. *Spence's Critic.*

LUM'IO, a town of the island of Corsica: five miles north-east of Calvi.

LUM'LEY, a township of England, in the county of Durham: six miles north of Durham.—Near this is Lumley Castle, the seat of the earls of Scarborough. See vol. iv. p. 419.

LUM'MEN, a town of France, in the department of the Dyle: five miles east of Dieft.

LUM'MO, a town of the island of Cuba: forty-five miles south-south-west of Havannah.

LUMP, *f.* [*lompe*, Dut.] A small mass of any matter.—The weed *kal* is by the Egyptians used first for fuel; and then they crush the ashes into *lumps* like a stone, and so sell them to the Venetians. *Bacon.*

A wretch is pris'ner made;  
Whose flesh, torn off by *lumps*, the rav'nous foe  
In morsels cut.

*Tate.*

A shapeless mass.—Why might there not have been, in this great mass, huge *lumps* of solid matter, which, without any form or order, might be jumbled together? *Kiel against Burnet.*

Hence, heap of wrath, foul indigested *lump*;  
As crooked in thy manners as thy shape. *Shakespeare.*

Mass undistinguished.—It is rare to find any of these metals pure: but copper, iron, gold, silver, lead, and tin, all promiscuously in one *lump*. *Woodward's Natural History.*

All men's honours  
Lie like one *lump* before him, to be fashion'd  
Into what pinch he please. *Shakespeare. Henry VIII.*

The whole together; the gross.—If my readers will not go to the price of buying my papers by retail, they may buy them in the *lump*. *Addison.*

To LUMP, *v. a.* To take in the gross, without attention to particulars.—Boccalina, in his political balance, after laying France in one scale, throws Spain into the other, which wanted but very little of being a counterpoise: the Spaniards upon this reckoned, that, if Spain of itself weighed so well, they could not fail of success when the several parts of the monarchy were *lumped* in the same scale. *Addison.*

LUM'P-FISH, *f.* in ichthyology. See CYCLOPTERUS, vol. v.

LUMPA'REN, an island of Sweden, situated to the east of Aland, between the Baltic and the Gulf of Bothnia. Lat. 60. 7. N. lon. 20. 3. E.

LUMPHAN'AN, a town of Scotland, in the county of Aberdeen. About a mile from the church is a cairn called Macbeth's, and the tradition of the country is, that flying he was pursued by Macduff, and killed on the spot where

where the cairn now is. It is eight miles north of Kincardine.

LUM'PING, *adj.* Large; heavy; great. *A low word.*  
—Nick, thou shalt have a *lumping* pennyworth. *Arbutnot.*  
LUM'PING, *f.* The act of giving or taking in the lump; of giving a lump, or blow.

LUM'PISH, *adj.* Heavy; gross; dull; unactive; bulky.—Out of the earth was formed the flesh of man, and therefore heavy and *lumpish*. *Raleigh.*

How dull and how insensible a beast  
Is man, who yet wou'd lord it o'er the rest!  
Philosophers and poets vainly strove  
In every age the *lumpish* mass to move.

*Dryden.*

LUM'PISHLY, *adv.* With heaviness; with stupidity.

LUM'PISHNESS, *f.* Stupid heaviness.

LUMPOKOL/SKOI (Niznei), a town Russia, in the government of Tobolsk, on the Oby: 112 miles east-fourth-east of Surgut. Lat. 61. N. lon. 76. 54. E.

LUMPOKOL/SKOI (Verchnei), a town of Russia, in the government of Tobolsk: 152 miles east-fourth-east of Surgut. Lat. 60. 54. N. lon. 78. 22. E.

LUM'PY, *adj.* Full of lumps; full of compact masses.—One of the best spades to dig hard *lumpy* clays, but too small for light garden mould. *Mortimer.*

LUN, a town of China, of the third rank, in Hou-quang: twenty-five miles fourth-east of Tcha-lin.

LUN, or LUNE, a river of Germany, which runs into the Weser about sixteen miles from its mouth.

LUNA, the MOON, in mythology, was daughter of Hyperion and Terra; and was the same, according to some mythologists, as Diana. She was worshipped by the ancient inhabitants of the earth with many superstitious forms and ceremonies. It was supposed that magicians and enchanters, particularly those of Thessaly, had an uncontrollable power over the moon, and that they could draw her down from heaven at pleasure by the mere force of their incantations. Her eclipses, according to their opinion, proceeded from thence; and, on that account, it was usual to beat drums and cymbals to ease her labours, and to render the power of magic less effectual. The Arcadians believed that they were older than the moon. Dr. Bryant observes, that "the same deity was often masculine and feminine: what was Dea Luna in one country, was Deus Lunus in another.

LUNA, in ancient geography, a town situated on the Macra, which had a port in Liguria, called *Lunæ Portus*, which, according to Strabo, was a very large and fine harbour, containing several others. The town was situated to the west of the mouth of the river Macra, and was afterwards called *Cariaram*; both names alike signifying Luna, the moon, and referring to its form, which was that of a crescent. Lucan speaks of its aruspices; Servius and Martial of its cheese, marble, and wine. According to Strabo, it was destroyed by Nero; and some of its ruins are still visible in a place called *Lunigona*, and its small territory is named *Lunegiano*. M. Gebelin conjectures that the name Luna was derived from the Celtic *lun*, water.

LUNA, a forest of Germany, at no great distance from the Hercynian; below which were the Boemi; it was therefore in Moravia, near the springs of the Marus, now March, which runs into the Danube over against Carnutum.

LUNA, or LUN'NA, a town of Gallia Celtica. Now *Clugny* in Burgundy.

LUNA, a decayed town of Liguria: two miles south of Sarzana.

LUNA, a town of Spain, in Arragon, taken and burned by the Moors in 985: twenty miles from Saragossa.

LUNA, a town of Spain, in Arragon: twenty-two miles west of Huelva.

LUNA, a town of Lithuania, in the palatinate of Troki: sixteen miles south-east of Grodno.

LUNA, *f.* in the ancient chemistry, signifies *silver*; so called from the supposed influence of the moon thereupon.

LUNA CORNEA, in chemistry, is the combination of marine acid with silver, or the white curdy precipitate of muriatic acid, which takes place, when the nitrat, acetat, or any other soluble salt, of silver, comes in contact with muriatic acid, either single or in any soluble combination. See the article CHEMISTRY, vol. iv. p. 312.—Luna cornea mixed with sea-salt and tartar, rubbed on brass, gives a silver-like appearance; and is the substance employed for the silvering of the dial-plates for clocks. A more substantial silvering may be given by the above mixture, if the piece of brass to be silvered be previously heated considerably, and cleaned with a scratch-brush; and if the operation be repeated till the silver seems to be sufficiently thick. The brass, having a stronger disposition to unite with the marine acid than the silver has, separates this acid from the silver, which is then precipitated upon the surface of the brass plate. Luna cornea will also serve in examination of mineral waters, or of any other liquor, to discover if they contain marine acid in whatever base it be engaged, except metallic bases; for, if these waters contain the smallest quantities of marine acid, luna cornea will be precipitated by them from a solution of silver in nitrous acid, and this luna cornea is known by its acid-like appearance. *Macquer.*

LUNA (Miguel de), a Granadan of Moorish extraction, and royal interpreter of Arabic in Spain. He published, as a translation from Abucacim, *La Historia del Rey D. Rodrigo y Perdida de Espana*, and also *Segunda Parte de la Perdida de Espana; Vida del Rey Jacob Almanzor*. These works, which have been translated, and are still sometimes quoted as true history, are now known to have been his own; and Miguel de Luna must be ranked among literary impostors. *R. S. in Gen. Biog.*

LUNA/CHI, a town of Chili: forty-two miles east-north-east of Valparaiso.

LUNACY, *f.* [from *luna*, the moon.] A kind of madness supposed to be influenced by the moon; madness in general.—There is difference of *lunacy*: I had rather be mad with him, that, when he had nothing, thought all the ships that came into the haven his, than with you, who, when you have so much coming in, think you have nothing. *Suckling.*

Your kindred shun your house,  
As beaten hence by your strange *lunacy*. *Shakespeare.*

LUNÆ MON'S, in ancient geography, a promontory of Lusitania. Now the Rock of Lisbon. Lat. 38. 50. N. lon. 10. W.—Another in Ethiopia, from which the Nile was supposed to take its rise.

LUNÆ POR'TUS, a very extensive port, or more truly a bay, of Liguria, between Portus Veneris and Portus Ericis, twenty miles in compass. Now the *Golfo della Spezia*, on the east coast of the territory of Genoa.

LUNAHO/LM, a small island among the Shetlands. Lat. 60. 44. N. lon. 1. 16. W.

LUNAGUA'NA, a town of Peru, in the audience of Lima: eighty miles south-fourth-east of Lima.

LUNAN BAY, a bay on the east coast of Scotland, celebrated as a place of safety against all but easterly winds; four miles south of Montrose. Lat. 56. 37. N. lon. 4. 27. W.

LUNAN NESS', a cape on the east coast of Shetland. Lat. 60. 43. N. lon. 1. 17. W.

LUNAR, or LUNARY, *adj.* Relating to the moon.—They that have resolved that these years were but *lunary* years, viz. of a month, or Egyptian years, are easily confuted. *Raleigh.*

Then we upon our globe's last verge shall go,  
And view the ocean leaning on the sky;  
From thence our rolling neighbours we shall know,  
And on the *lunar* world securely pry.

*Dryden.*

Being

Being under the dominion of the moon.—They have denominated some herbs solar, and some *lunar*; and such-like toys put into great words. *Bacon's Nat. Hist.*—The figure of its seed much resembles a horse-shoe, which Baptista Porta hath thought too low a signification, and raised the same into a *lunary* representation. *Brown's Vulgar Errors.*

LUNA'RIA, *f.* [so named from the form of the fruit, like a full moon.] HONESTY; in botany, a genus of the class tetradynamia, order siliculosa, natural order of siliquosæ or cruciformes, (cruciferæ, *Juss.*) The generic characters are—Calyx: perianthium four-leaved, oblong; leaflets ovate-oblong, blunt, converging, deciduous, of which the two alternate ones are gibbous and bagged at the base. Corolla: four-petalled, cruciform; petals entire, blunt, large, the length of the calyx, ending in claws of the same length. Stamina: filaments six, awl-shaped, four the length of the calyx, two a little shorter; antheræ from upright spreading. Pistillum: germ pedicelled, ovate-oblong; style short; stigma blunt, entire. Pericarpium: silicle, elliptic, flat, entire, upright, very large, pedicelled, terminated by the style, two-celled, two-valved; partition parallel and equal to the valves, flat. Seeds: some, kidney-shaped, compressed, marginal, in the middle of the silicle; receptacles filiform, long, inserted into the lateral sutures.—*Essential Characters.* Silicle entire, elliptic, compressed-flat, pedicelled; valves equal and parallel to the partition, flat; calyx with bagged leaflets.

*Species.* 1. *Lunaria rediviva*, or perennial honesty: silicles lanceolate; root perennial. This is a very large plant. Root perennial, white. Stem from three to four feet high, upright, simple, channelled, green tinged with purple, hirsute. Lower leaves opposite, upper alternate, on long petioles, smooth or rough-haired, cordate, unequally serrate, nerved, acuminate, near a span long, and three or four inches wide. Flowers terminating, on long slender peduncles, often bifid and trifid; calyxes of a white purple colour, and smooth; petals purple, odorous. Silicles acuminate, an inch and half wide, three inches long, with the permanent style half an inch in length: they contain three, four, or five, roundish seeds fastened to the margin of the future by a thread. Native of the South of France, Italy, Switzerland, Silesia, Austria, Hungary. Cultivated by Gerard in 1597.

2. *Lunaria annua*, common honesty, or moonwort: silicles roundish; root biennial. Root biennial, knobbed. Stem smaller than the preceding, upright, branched, hirsute, round, half a yard high. Leaves rough-haired, the floral ones almost always opposite, sessile; stem-leaves petioled, much smaller than those of the preceding, cordate, dull green, serrate. Calyx purplish ash-colour, hirsute; petals violet or blue-purple, inodorous. Style two lines long, permanent: silicles broader, blunter, shorter; seeds five or six. The seed-vessels, when full ripe, become transparent, and of a clear shining white like satin, whence this plant has acquired the name of *white satin*. The branches used to be dried and preserved to place in chimneys. Native of Germany. Gerard says it is called in English pennie-flower, or money-flower, silver-plate, prick-songwort; in Norfolk, satin and white satin, and among our women *honestie*. This last name now most commonly obtains, and may be derived from the transparency of the seed-vessels, in which the whole may be viewed, without deceit. In German, it is named *mondviole*, *mondkraut*, *silberblume*, *silberblatt*, *stütern*, *Atlas-blume*, *waldriegel*; in Dutch, *maankruid*, *penningkruid*, *zilverbloem*; in Danish, *maaneviol*; in Swedish, *manefioler*; in French, *la lunaire*, *satinée*, *satin blanc*, *passé-satin*, *medaille*, *herbe aux lunettes*, and *bulbonac*, from its stromous or glandular root.

Gærtner regards these two species as one, and asserts that there is no true distinction between them besides duration; that the colour of the calyx and corolla, or the odour of the flowers, is nothing; and that Linnæus's specific difference from the situation of the leaves is fictitious. They both flower in May and June. If the species be

distinct, they are certainly very nearly allied, and have been confounded. According to Linnæus, the root of the first is perennial; the flowers odorous; the leaves alternate except the lowest, and more rough-haired. In the second, the root is biennial; the flowers inodorous; the stem hirsute; the leaves opposite, at least in the cultivated plant; but he questions whether it be so always. He makes the latter a native of Scania; but it appears that it is the former which was found there. Gerard says that they are found wild about Pinner, Harrow, Watford, and Hornchurch. Johnson does not correct him; but Parkinson says, he could never certainly be assured of it; and no one, that I have heard, has found them since. Monf. Villars is of opinion that the lengthened pointed form of the fruit, is sufficient, independent of the duration, villose calyx, &c. to distinguish the first species from the second, which is that most commonly cultivated in old flower-gardens.

This being a disputed case, we think it right to give Mr. Professor Martyn's accurate account of the plant, as we find it in his edition of Miller's Gardener's Dictionary. "I have a seedling plant of this now (Aug. 21, 1797) before me, which has seven full-grown leaves on it, and two young ones springing from the centre. The former are of an oblong cordate form, from six to seven inches long, and five inches wide near the base, light green, villose on the upper surface, and rough-haired along the veins of the lower surface, which are very prominent; the edge is rather crenate than serrate; the petioles are seven or eight inches long, very rough-haired, and channelled. A plant of the second year, now in full seed, is five feet high; the stem round, somewhat flexuose, quite simple, having no branches but those which produce the flowers; white pellucid hairs are scattered over it, and it is spotted with brownish purple towards the bottom. The root-leaves are gone, having left only the withered petioles. The stem-leaves are solitary, alternate, cordate-oblong, almost sagittate, drawn to a point, pale green, villose, the midrib and principal veins rough-haired, the edge unequally serrate, with larger and smaller serratures alternately: the lowest leaves are nine inches in length, and six in breadth where the petiole is inserted, which is three inches long; but this gradually shortens to about the middle of the stem, and then the other leaves to the top are sessile; the uppermost leaf (or two) is even jagged. From each axil to within a foot of the bottom comes out a single flowering stalk; the lower ones near a foot long, with a few leaves on them, like the stem-leaves, but smaller, sometimes opposite, but more frequently alternate; these have but few flowers on them; the upper flowering-stalks are shorter, have no leaves, but more flowers; and a bunch or spike of flowers terminates the whole. Silicles alternate, broad-elliptic, an inch and a half long, an inch and a quarter broad, on pedicels above an inch and a half in length; the permanent style three-eighths of an inch long. The number of seeds is uncertain, from two or three to six or seven, but some of these are generally abortive. I do not discern any traces of that attenuation of the silicle which Gærtner speaks of. Mr. Miller has given the specific differences right, from the silicles; but in his descriptions he has reversed them; ascribing large roundish pods to *L. rediviva*, and longer narrower pods to *L. annua*, which he says also has larger flowers, and of a lighter purple colour." The blossom of this species is shown open on the BOTANY Plate X. fig. 15. vol. iii. p. 258.

3. *Lunaria Ægyptiaca*, or Egyptian honesty; silicles oblong, pendulous; leaves superdecipound, with trifid leaflets. This is an annual plant, with a smooth branching stalk little more than a foot high. Leaves unequally pinnate; leaflets differing in size and form; some almost entire, others cut at their extremities into three parts; they are smooth, and of a lucid green. The flowers stand each upon pretty long slender peduncles, which come out from the side, and also at the end of the branches, in loose small clusters; they are of a purple colour, and are suc-

ceeded by oblong compressed pods, which hang downward, and when ripe are of a feuille-mort colour. Silicle ovate-oblong or rhomb-elliptic, flattened like a leaf, two-celled, two-valved; partition parallel to the valves, thin almost as a cobweb, generally glued fast to the valves when the seed-vessel is ripe, so that it escaped Linnæus and others, who accordingly supposed the fruit to be one-celled. Seeds in each cell one or two, subcordate, or deeply emarginate at the umbilicus, compressed, somewhat rugged to the touch, obsoletely margined, brown. There being certainly a partition in the silicle, this species ought not to be separated from Lunaria, since there is such a conformity in the fructification, although the outward habit be peculiar, and very different from the others. Native of Egypt. It flowers here in June and July; the seeds ripen the beginning of September, and the plants decay soon after.

*Propagation and Culture.* The first and second are propagated by seeds sown in the autumn. Those sown in the spring often miscarry, or lie a long time in the ground. They will grow in almost any soil, but love a shady situation; and require only to be kept clean from weeds. If the seeds be permitted to scatter, the plants will rise without farther care; and, if they be left unremoved, they will grow much larger than those which are transplanted. Sow the seeds of N<sup>o</sup> 3 in an open border, where they are to remain; if they be sown soon after they are ripe, the plants will come up in the autumn, and live through the winter in a sheltered situation; these will flower early the following summer, whereby ripe seeds may be obtained; they may also be sown in the spring. Keep them clean, and thin them where they are too close. If the seeds be permitted to scatter, these also will come up without care. See ALYSSUM, MEDICAGO, MARCHANTIA, OSMUNDA, and RUMEX.

LUNA'RIAN, *f.* An inhabitant of the moon.—The Lunarians in the opposite hemisphere never see our earth. *Adams on Globes.*

LUNARIUM, in ancient geography, a promontory of the Hither Spain, between Blanda and Bætulo. Commonly called *Cabo de Palafugel*, in Catalonia, on the Mediterranean; or *Cabo de Tofa*, on the same coast, and in Catalonia, fifteen miles from the former, to the west.

LUNARY, *f.* Moonwort, or honesty. See LUNARIA.

Then sprinkles she the juice of rue,  
With nine drops of the midnight dew,  
From *lunary* distilling. *Drayton's Nymphid.*

LUNATED, or LUNULATED, *adj.* Formed like a half moon; crescent-shaped.

LUNATIC, *adj.* Mad; having the imagination influenced by the moon:

Bedlam beggars, from low farms,  
Sometimes with *lunatic* bans, sometimes with prayers,  
Enforce their charity. *Shakespeare.*

LUNATIC, *f.* A madman.—I dare ensure any men well in his wits, for one in the thousand, that he shall not die a *lunatic* in Bedlam within these seven years; because not above one in about one thousand five hundred have done so. *Graunt's Bills.*—The residue of the yearly profits shall be laid out in purchasing a piece of land, and in building thereon an hospital for the reception of idiots and lunatics. *Swift's Will.*

See the blind beggar dance, the cripple sing,  
The sot a hero, *lunatic* a king. *Pope.*

A person supposed to be affected or governed by the moon. Hence, epileptics were anciently called *lunatic*, because the paroxysms of that disease seemed to be regulated by the changes of the moon. Thus Galen (*De Diebus criticis*, lib. iii.) says, the moon governs the periods of epileptic cases; and others referred the disease entirely to this

planet. Mad people are still called lunatics, from an ancient but now almost-exploded opinion, that they are much influenced by that planet. A founder philosophy hath taught us, that, if there be any thing in it, it must be accounted for, not in the manner the ancients imagined, nor otherwise than what the moon has in common with other heavenly bodies, occasioning various alterations in the gravity of our atmosphere, and thereby affecting human bodies. However, there is considerable reason to doubt the fact; and it is certain that the moon has no perceivable influence on our most accurate barometers. See the article INSANITY, vol. xi. p. 120.

A lunatic, in the contemplation of the law, is properly a person who hath lucid intervals; sometimes enjoying his senses, and sometimes not. See the article IDIOCY, vol. x. p. 756.

It is a melancholy fact, that in the whole kingdom of Ireland, containing a population of nearly five millions and a half, and where insanity is a disease of as frequent occurrence as in any other country in Europe, there is not even one asylum for the reception and cure of insane paupers. It appears that sir John Newport, aware of the evil, brought a bill into parliament about ten years ago, in which it was proposed to establish four large provincial asylums; but from some cause, with which we are not acquainted, the bill was rejected. The consequences of the deficiency are indeed deplorable. The unfortunate sufferers are scarcely ever considered as objects of medical treatment; but, when harmless, are suffered to ramble about the country, exposed to the insults and ridicule of the populace; and, when they show a disposition to mischief, they are removed to gaols, or workhouses, or some other place of security, where they are confined in gloomy cells, chained in sheds, or have clogs fastened to their legs to prevent their escape. Every man of common feeling must be sensible that some remedy is necessary; but we should doubt whether the erection of public asylums at the expense of government be desirable. It seems to be the inevitable result in Ireland of all such schemes, that they sooner or later degenerate into *jobs*; and that what was apparently well calculated to accomplish the object in view serves no other purpose than to put money into the pockets of a few contractors. The path which ought to be pursued, we think, is very obvious; viz. that lunatic asylums should be erected and supported, as they are in Liverpool, Manchester, and many others of the large towns in England, by voluntary subscription. Although great objections may be made to placing lunatics in general hospitals, we see none against making an asylum an appendage to an infirmary; and not only some peculiar conveniences, but a considerable saving of expense, would result from this arrangement. The known liberality of the Irish would certainly enable any one to execute the plan, who would take a little pains to effect it.

LUNA'TION, *f.* The revolution of the moon.—If the *lunations* be observed for a cycle of nineteen years, which is the cycle of the moon, the same observations will be verified for succeeding cycles for ever. *Holder on Time.*

LUNAWA'RA, a town of Hindoostan, in Guzerat; fifty miles east of Amedabad.

LUNCAR'TY, or LONG CARTY, a town of Scotland, in the county of Perth, where is one of the most extensive bleaching-grounds in Scotland. This place is signalized by the great victory obtained by the Scots over the Danes, in 970, where the gallant Hay and his two sons are said to have turned the tide of conquest in favour of their countrymen. See the article HERALDRY, vol. ix. p. 412. In these fields, which are now covered with linen cloth, or luxuriant crops of wheat and other grain, swords, spears, and targets, occasionally dug up in the course of agriculture, and in the formation of canals for the purposes of bleaching, furnish every day fresh proofs of the authenticity of Scottish history: five miles north of Perth.

LUNCH, or LUN'CHEON, *f.* [from *lunja*, Span. or from *kleinken*,

*kleinken*, a small piece, Teutonic; or from *clutch* or *clunch*.] As much food as one's hand can hold:

When hungry thou stood'st staring like an oaf,  
I slic'd the *luncheon* from the barley loaf.

Gay.

LUND, a small town in the east riding of Yorkshire; with a fair on the 1st and 2d of November.—A village in the north riding, near New Malton.

LUND, a town of Sweden, in West Gothland, on the Wenner lake: thirty-six miles north-north-east of Uddevalla.

LUND, or LUN'DEN, the most ancient town of Sweden, the capital of Scania, Schonen, or Skonen, of which a proverb is recorded, viz. that, "when our Saviour was born, Lund was in its glory." Lund contains scarcely more than 800 inhabitants, carries on but little trade, and is principally supported by the university established by Charles XI. and called, from the name of its founder, *Academia Carolina Gothorum*. When Mr. Coxe visited Sweden, it had 21 professors and 300 students. The library contains 20,000 volumes. The botanical garden was not in a flourishing state, the number of plants not exceeding 1200. Linnæus was matriculated at this university. At Lund was instituted, in 1776, a Royal Physiographical Society, which was incorporated by the king in 1778. The subjects treated of in its acts relate only to natural history, chemistry, and agriculture. Lund is an archbishopric. The cathedral is an ancient irregular building, raised at different intervals. Lund is twenty-one miles east of Copenhagen. Lat. 55.44. N. lon. 13. E.

LUN'DA, a town of Sweden, in Sudermanland: ten miles west of Nyköping.

LUND'BY, a town of Norway, in the province of Aggerhuus, on the Glomme: sixty miles north-east of Christiania.

LUN'DE, a town of Norway, near a lake of the same name: twenty-eight miles west-north-west of Christianland.—A town of Norway, seventeen miles north-west of Skeen.

LUN'DEN, a town of the duchy of Holstein: twenty-four miles west of Rendsburg, and fifty-seven north-north-west of Hamburg.

LUN'DIE, a town of Scotland, in the county of Angus: eight miles north-west of Dundee.

LUN'DO, a town of Sweden, in the government of Abo: eight miles north-east of Abo.

LUN'DRES, *f.* A sterling silver penny, which had its name from being coined only at London, and not at the country mints. *Lowndes's Essay on Coin*, p. 17.

LUN'DSEY, a town of Pegu, on the west side of the river Ava: sixty miles west-north-west of Pegu. Lat. 18. 30. N. lon. 95.43. E.

LUNDS'JE, a town of Persia, in the province of Laristan, on the Persian gulf: 100 miles west-south-west of Gamberon. Lat. 26. 38. N. lon. 54. 36. E.

LUNDSKORON, a town of Poland: eighteen miles south of Cracow.

LUN'DY ISLAND, in the mouth of the Bristol channel, nearly four leagues from the coast of Devonshire, England. It is rather more than three miles in length, and about one in breadth; contains about 2000 acres; and is environed by high and steep rocks, which render it inaccessible, except in one or two places. The only safe landing-place is on the east side; where a small beach admits a secure approach, and is sheltered by a detached portion of rock, called the Isle of Rats, from the great number of those animals which burrow here. On landing, visitors are obliged to climb over various craggy masses, before they can reach the steep and winding tract that leads to the summit, which commands views of the English and Welsh coasts. About 400 acres only of this island are in cultivation; of which 300 are arable, and the rest pasture; wheat is the chief produce. The elevated situation of the land, in some places 800 feet above the sea, and the violence of the north-east winds, prevent

any trees from growing, though a considerable expense has been incurred in planting. Rabbits and rock-birds are numerous; and in the season, lobsters, crabs, and other fish, may be obtained in abundance. About four hundred head of sheep, and eighty of cattle, are fed here; but the former do not thrive. The inclosures are stone fences. Of the history of the island but little is known. Rifdon relates that one Morisco, who had conspired to kill king Henry III. retired hither, and, turning pirate, committed great depredations; on which the king arrested, and had him executed on an elevated part. About the middle of the last century, it was purchased of government by a nobleman, who entrusted it to the care of a person named Benson, a notorious smuggler, who carried on a considerable illicit traffic. The next proprietor of the island was sir John Borlase Warren, who, about the year 1781, sold it to John Cleveland, esq. but it appears to have been recently re-purchased by government. The whole rent is 70l. per annum; no taxes are paid; nor can it maintain any revenue-officer, the duties in seven years scarcely amounting to five pounds. The number of houses is only seven; the inhabitants, in the year 1794, were but twenty-three. The population of the isle was probably greater at some distant period, as many human bones have been ploughed up; and Camden says, "the furrows show it to have been once cultivated." The chief antiquities are, the ruins of St. Anne's chapel, and what is termed Morisco's castle. The latter is near the south-east end, and was strongly fortified with large out-works and a ditch; a few old dismounted cannon occupy the battlement, beneath which is a curious cavern. In the reign of Charles I. lord Say and Seale held the castle for the king; and in the time of William and Mary, the French surprised it by a stratagem, plundered it, and kept possession for some time. *England's Gaz. Beauties of England and Wales*.

LUNE, *f.* Any thing in the shape of an half-moon:

A troop of Janizaries strew'd the field,  
Fall'n in just ranks or wedges, *lunes*, or squares,  
Firm as they stood. *Watts*.

Fits of lunacy or phrenzy; mad freaks. The French say of a man fantastical or whimsical, *Il a des lunes*. *Hammer*.

Bethrew them,  
These dangerous unsafe *lunes* i' th' king;  
He must be told on't, and he shall; the office  
Becomes a woman's best. *Shakespeare's Winter's Tale*.

A leath; as, the *lune* of a hawk.

LUNE, *lunula*, in geometry, is the space included between the arcs of two unequal circles, forming a sort of crescent, or half-moon, the area of which may in many cases be as accurately determined as that of any rectilinear figure. The lune was the first curvilinear space of which the quadrature was ascertained; and this is said to have been first effected by Hippocrates of Chios, though others say it was discovered by Ctenopidas of Chios. However this may be, the former geometer has generally had the honour of the discovery attributed to him, and the figure still bears his name, being commonly denominated the lune of Hippocrates.

LUNE, a town of Westphalia, in the principality of Lunenburg Zelle: two miles north of Lunenburg.

LUNE, a river of England, which rises in Westmoreland, and runs into the Tees about six miles above Barnard Castle.

LUNE, or LOYNE, a river of England, which rises in the county of York, and runs into the Irish Sea a few miles below Lancaster, in lat. 53. 57. N. lon. 2. 49. W.

LUNE FOREST, in the north riding of Yorkshire, near Richmond.

LUNEBURG. See LUNENBURG.

LUNEL LA VILLE, a town of France, in the department of the Herault: two and half posts east of Montpellier, and ninety-three south of Paris. Lat. 43. 40. N. lon. 4. 13. E.

LUNEN,

**LU'NEN**, a town of Germany, in the county of Mark, at the conflux of the Zefick and Lippe: twenty miles south-fourth-west of Munster. Lat. 51. 36. N. lon. 7. 37. E.

**LU'NEN**, a town of Germany, in the county of Verden: three miles north-north-west of Rotenburg.

**LU'NENBURG**, or **LU'NEBURG ZEL'LE**, a principality of Westphalia, bounded on the north by the duchy of Lauenburg and the Elbe, on the east by the duchies of Brunswick and Mecklenburg, on the south by the principality of Calenberg and the duchy of Brunswick, and on the west by the duchies of Bremen and Verden, the county of Höya, and the principality of Calenberg. The soil here is various; along the Elbe, the Aller, the Jetze, and some other small rivers, are fruitful marsh-lands; but other parts of it, to the amount of upwards of three thousand acres, are sandy; others again consist of heaths, others of turf-moors, and some are swampy. The worst parts in it are towards its centre, through which lie the main roads. Agreeably to the diversity of its soil, it produces wheat, rye, barley, oats, pease, buck-wheat, flax, hemp, hops, garden-stuff, oak, beech, firs, pines, birch, and elder. Some bailiwicks do not produce a sufficiency of wheat, but others again have a superfluity; some likewise breed but few horned cattle and horses, though they abound in others. The heaths are covered with numerous flocks of a small kind of sheep, having long coarse wool. The culture of bees on them is such, as to yield considerable quantities of honey and wax. The rivers afford plenty of good fish. Lunenburg abounds in excellent lime-stone, and very profitable salt-springs. The Elbe, which traverses the east and north sides of this principality, is of great advantage to it, by fertilizing the adjacent marsh-lands, as also with respect to its fisheries, navigation, and tolls. Other rivers are the Jetze, the Old Mark, the Ilmenau, the Luffie, the Seeve, the Aller, &c. In this principality are three large towns, namely, Lunenburg, Velzen, and Zelle, with eleven smaller, and thirteen boroughs, or large villages. The principal manufactures and fabrics in this principality are those of linen, cotton, cloth, ribbons, stockings, and hats. This principality was formed out of the hereditary lands of the Billungs, one of whom was by the emperor Otho I. created duke of Saxony. His male issue failed in the person of duke Magnus, by whose eldest daughter Wulfhild, the hereditary estates of the house of Billung came to her husband Henry the Black, duke of Bavaria, and his descendants. This principality entitled the king of Great Britain to both a seat and voice in the college of the princes of the empire, and the circle of Lower Saxony. Its matricular assessment was 20 horse, and 120 foot, or 720 florins per month. By the peace of Tilfit, (1807.) this principality was annexed to the *then-created* kingdom of Westphalia, now no more; and may soon perhaps form a part of the *now-created* (Oct. 1814.) kingdom of Hanover.

**LU'NENBURG**, or **LU'NEBURG**, a city of Westphalia, capital of the principality, situated on the Ilmenau, surrounded with moats and walls, fortified with towers, and containing three churches, about 1300 houses, and 9000 inhabitants. It has also three hospitals, of which two contain each a church. The prince's palace and the guild-hall are in the market-place. The anatomical theatre was built in 1713; and an academy for martial exercises was founded on the site of the convent of St. Michael, which was suppressed. The burghers consist of four orders; the patricians, the brewers, the merchants and tradesmen, and the artisans; and to these four classes some others might be added. Since the year 1639, the magistracy has been composed of one moiety of patricians, and of another of men of letters. The Salze, which is a distinct part of the town, enclosed by walls, has its own separate magistracy. This part consists of fifty-four small houses, sunk in the ground, in each of which are four large leaden pans, containing brine, which is left to exhale for the manufacture of salt; and the salt-water is conveyed into them by a common pipe from the several springs. The

salt-houses, being 54 in number, and containing 216 pans, which are daily boiled, and every salt-house being estimated at 40,000 rix-dollars, the capital of the whole Salze much exceeds two millions of rix-dollars. Of these salt-works, a fifth belongs to the sovereign's due; but the town of Lunenburg pays annually to the treasury near 6000 rix-dollars; of late the salt-trade has very much declined. The exports of the town are salt, lime furnished by two rocks in its vicinity, and beer. It likewise carries on a trade in wax, honey, wool, flax, linen, and frize. Goods are also brought here from all parts of Germany, and forwarded by the Ilmenau to Hamburg and to Lubec. Lunenburg is thirty-six miles south-east from Hamburg. Lat. 53. 15. N. lon. 10. 36. E.

**LU'NENBURG**, a town of Prussia, in the province of Natangen: thirty-four miles south-south-east of Konigsberg.

**LU'NENBURG**, a county of Nova Scotia, on Mahone bay, on the south coast of the province, facing the Atlantic ocean. Its chief towns are New Dublin, Lunenburg, Chester, and Blanford. In Mahone bay, La Have, and Liverpool, several ships trade to England with timber and boards.—Also, a township in the above county, situated on Merliqueth or Merliquah bay, well settled by a number of industrious Germans. The lands are good, and well cultivated. It is thirty-five miles south-west by south from Halifax.

**LU'NENBURG**, a county of Virginia, adjoining Nottaway, Brunswick, Mecklenburg, and Charlotte, counties; about thirty miles long, and twenty broad. It contains 4505 free inhabitants, and 5876 slaves.—A township in Essex county, in Vermont, seated on Connecticut-river, south-west of Guildhall, and north-east of Concord; and containing 393 inhabitants.—A township of Worcester county, Massachusetts, on an elevated situation, twenty-five miles from the Great Monadnock Mountain, in New Hampshire. It contains 14,000 acres of land, on which are 1243 inhabitants, who have little intercourse or trade with their neighbours; but they carry on the nailing business to advantage.—A town of the state of New York, in Green-county, now called *Esperanza*, situated on the west side of Hudson's river, opposite to the city of Hudson, and thirty miles south of Albany.

**LUNES'TINS**, a town of the island of Shetland: twelve miles north of Lerwick.

**LUNETTE**, *f.* [French.] A small half-moon. See **FORTIFICATION**, vol. vii.—*Lunette* is a covered place made before the courtine, which consists of two faces that form an angle inwards; and is commonly raised in fosses full of water, to serve instead of a fausse braye, and to dispute the enemy's passage: it is six toises in extent, of which the parapet is four. *Trevoux*.

**LUNETTE**, in the manege, is a half horse-shoe, or such a shoe as wants the sponge, i. e. that part or the branch which runs towards the quarters of the foot. *Lunette* is also the name of two small pieces of felt, made round and hollow, to clap upon the eyes of a vicious horse that is apt to bite, and strike with his fore feet, or that will not suffer his rider to mount him.

**LUNEVILLE**, a town of France, and principal place of a district, in the department of the Meurte; situated between the Vesouze and the Meurte, which unite a little below, in a marshy country, which has been drained. In the sixth century it was a county of itself; united in the twelfth to Lorraine. An academy was instituted here by king Stanislaus, and furnished with a good library. In 1801, a peace was signed here between France and Austria; for the terms of which (which will be perused with interest at this time) see the article **ENGLAND**, vol. vi. p. 793. Luneville is thirteen miles east-south-east of Nancy, and twenty-four east of Toul. Lat. 48. 36. N. lon. 6. 34. E.

**LUNG**, a town of China, in the province of Quang-si. Lat. 23. 12. N. lon. 103. 43. E.

**LUNG**, a fortress of China, in the province of Chen-si. Lat. 36. 25. N. lon. 106. 43. E.

**LUNG**, or **LUNGS**, but generally used in the plural; *f.* [from *lungen*, Sax. *long*, Dut.] The lights; the part by which breath is inspired and expired.—See the article **ANATOMY**, vol. i. p. 610–12.

Had I a hundred mouths, a hundred tongues,  
And throats of brass inspir'd with iron *lungs*;  
I could not half those horrid crimes repeat,  
Nor half the punishments those crimes have met. *Milton.*

Breathing begins immediately after birth; the enlargement of the chest occasions the lungs to be distended with air, and consequently to become specifically lighter; a greater quantity of blood passes through them, and thus they acquire greater absolute weight. The increase of volume must be limited by the capability of enlargement in the chest; and this cannot be very considerable immediately on birth. This enlarged size is not, therefore, sufficiently marked, to be relied on as a proof that respiration has begun. It is a well-known fact, that the lungs of an individual who has breathed swim in water, whether they be immersed entire or in slices. This is a property remarkably contrasted with what takes place under the same treatment before birth. A criterion has been sought for in this source, to determine, in doubtful cases, whether a child has been born dead or alive; and the consideration is a highly-important one, from the influence it may produce on medical opinions, in cases of suspected child-murder. We shall only observe here, that the convulsive attempts to establish respiration, although not successful, may introduce air enough into the lungs to make them buoyant in water; that attempts to inflate them, in order to preserve the child, or after it has died, may have the same effect; that the disengagement of air by putrefaction may thus make them specifically lighter than water; not to mention, that the child may have breathed and died afterwards; so that the mere naked circumstance of the lung swimming is altogether an insufficient proof that the child has been murdered; and to condemn a mother to death on such grounds, exhibits a degree of ignorance and barbarity worthy only of the dark ages. The increase of absolute bulk in the lungs after birth is a phenomenon very worthy of being remarked. These organs in the fœtus, at full time, are  $\frac{1}{70}$ th of the body. According to the researches of some German and French anatomists, they are more than  $\frac{1}{30}$ th, or  $\frac{1}{25}$ th in a child who has breathed. There may be some variation in this point, but the organs are never so light as to approach at all to the proportion which they exhibit before birth; a fact which is highly important in its application to questions of supposed infanticide.

**LUNG'-GROWN**, *adj.* Having the lungs adhering to the membrane that lines the breast.—The lungs sometimes grow fast to the skin that lines the breast within; whence such as are detained with that accident are *lung-grown*. *Harvey.*

**LUNG'-WORT**, *f.* in botany. See **PULMONARIA**.

**LUNG'-WORT**, Cow's. See **VERBASCUM**.

**LUNG'-WORT**, Golden. See **HEIRACIUM**.

**LUNG'DRIDGE**, a village in Northumberland, near Tweedmouth.

**LUNGE**, *f.* A pass or thrust in fencing.

**LUNG'ED**, *adj.* Having lungs; having the nature of lungs; drawing in and emitting air, as the lungs in an animal body:

The smith prepares his hammer for the stroke,  
While the *lung'd* bellows hissing fire provoke. *Dryden.*

**LUNG'KORCHE**, a town of Prussia, in the palatinate of Culm: ten miles north of Strasburg.

**LUN'GON**, a small island on the west side of the gulf of Bothnia. Lat. 62.40. N. lon. 17.48. E.

**LUNGPOUR**, a town of the country of Cachar: fifteen miles east of Cospour.

**LUN'GRO**, a town of Naples, in Calabria Citra, chiefly inhabited by Greeks: ten miles south-south-west of Casano.

**LUN'GRY**, a town of Bengal: thirty-six miles south of Calcutta. Lat. 21.58. N. lon. 87.35. E.

**LUNG'SARP**, a town of Sweden, in West Gothland: fifty-seven miles from Gotheborg.

**LUNG'SUND**, a town of Sweden, in Werneland: twenty-five miles north-east of Carlstadt. Lat. 59.48. N. lon. 13.54. E.

**LUNGU**, a small island in the Eastern Indian Sea, near the coast of Queda. Lat. 6.39. N. lon. 99.42. E.

**LUNISO'LAR**, *adj.* [from the Lat. *luna*, the moon, and *sol*, the sun.] Compounded of the revolution of sun and moon.

**LUNISO'LAR YE'AR**, or **VICTORIAN PERIOD**. See the article **CHRONOLOGY**, vol. iv. p. 538.

**LUN'KA**, a town of Samogitia: forty miles north-east of Miedniki.

**LUNT**, *f.* [*lunte*, Dut.] The match-cord with which guns are fired.

**LUN'TENBURG**, or **BRZED'SLAW**, a town of Moravia, in Brunn; taken and burned by the Prussians in the year 1742: thirty-six miles south-east of Brunn.

**LUNT'LEY**, a village in Herefordshire, south of Pembridge.

**LUN'TON**, a village in the north riding of Yorkshire, on the Tees, to the north-west of Rombald Kirk.

**LUNTZ**, a town of Austria: fifteen miles south-east of Bavarian Waidhofen.

**LU'NULA**, *f.* [Latin.] In geometry, a plain figure in the form of a crescent.

**LU'NULA'RIA**, *f.* in botany. See **MARCHANTIA**.

**LU'NULATE**, or **LU'NATE**, *adj.* Shaped like a crescent, or half-moon.

**LU'NZENAU**, a town of Saxony, in the lordship of Schonburg: two miles north-east of Penig.

**LUOPI'OS**, a town of Sweden, in the province of Tavastland: twenty-three miles north of Tavasthus.

**LU'PA** [Lat. a she-wolf.] Was held in great veneration at Rome, because Romulus and Remus, according to an ancient tradition, were suckled and preserved by one of these animals. This fabulous story arises from the surname of Lupa, *prostitute*, which was given to the wife of the shepherd Faustulus, to whose care and humanity these children owed their preservation. *Ovid. Fast. Plut. in Romul.*

**LUPAN'NA**, an island in the Adriatic, near Ragusa, with a good and safe harbour. The soil is stony, but by the industry of the inhabitants is rendered fertile. The coasts abound with fish.

**LUPA'RA**, a town of Naples, in the Molise: seventeen miles north-east of Molise.

**LUPA'TA**, a chain of mountains in Africa, and country of Mocaranga. Lat. 13. to 17. S.

**LUPER'CAL**, a place at the foot of Mount Aventine, sacred to Pan, where festivals called Lupercalia were yearly celebrated. *Virg.*

**LUPERCA'LIA**, a yearly festival observed at Rome the 15th of February, in honour of the god Pan. It was usual first to sacrifice two goats and a dog, and to touch with a bloody knife the foreheads of two illustrious youths, who always were obliged to smile while they were touched. The blood was wiped away with soft wool dipped in milk. After this the skins of the victims were cut into thongs, with which whips were made for the youths. With these whips the youths ran about the streets all naked except the middle, and whipped freely all those they met. Women in particular were fond of receiving the lashes, as they superstitiously believed that they removed barrenness, and eased the pains of child-birth. This excursion in the streets of Rome was performed by naked youths, because Pan is always represented naked; and a goat was sacrificed, because that deity was supposed to have the feet of a goat. A dog was added, as a necessary and useful guardian of the sheepfold. This festival, as Plutarch mentions, was first instituted by the Romans in honour of the she-wolf which suckled Romulus and Remus. This opinion

nion is controverted by others; and Livy, with Dionysius of Halicarnassus, observes, that they were introduced into Italy by Evander. The name seems to be borrowed from the Greek name of Pan, *Lycæus*, from *λύκος*, a wolf; because Pan, as god of shepherds, protected the sheep from the rapacity of the wolves. The priests which officiated at the Lupercalia were called *Luperci*. Augustus forbade any person above the age of fourteen to appear naked, or to run about the streets, during the Lupercalia. Cicero, in his Philippics, reproaches Antony for having disgraced the dignity of the consulship by running naked, and armed with a whip, about the streets. It was during the celebration of these festivals that Antony offered a crown to Julius Cæsar, which the indignation of the populace obliged him to refuse.

**LUPER'CI**, a number of priests at Rome, who assisted at the celebration of the Lupercalia, in honour of the god Pan, to whose service they were dedicated. This order of priests was the most ancient and respectable of all the sacerdotal offices. It was divided into two separate colleges, called *Fabiani* and *Quintiliani*, from Fabius and Quintilius, two of their high priests. The former were instituted in honour of Romulus, and the latter of Remus. To these two sacerdotal bodies Julius Cæsar added a third, called, from himself, the *Julii*; and this action contributed not a little to render his cause unpopular, and to betray his ambitious and aspiring views.

**LUPER'CUS**, a grammarian in the reign of the emperor Gallienus. He wrote a few grammatical pieces, which some have preferred to Herodian's compositions.

**LU'PIA**, *f.* [from *λύπεω*, Gr. to molest.] In surgery, a tumour of the ganglion kind; or, according to Cullen, a wen.

**LUPIAC'**, a town of France, in the department of the Gers: ten miles south-east of Nogaro, and eighteen north-west of Auch.

**LU'PIÆ**, in ancient geography, a town and colony of Italy, in Messapia, supposed to have been near the scite of the modern Lecce, twenty-four miles south-east of Brundisium; but in that vicinity no vestige of antiquity remains.

**LUPIAS**, or **LU'PIA**, now *Lippe*, a town of Germany, with a small river of the same name, falling into the Rhine. See **LIPPE**, vol. xii. p. 772.

**LUPINAS'TER**, *f.* in botany. See **TRIFOLIUM lupinaster**.

**LUPINE**, *f.* The common name of a species of wild pea, cultivated principally for being turned in as a manure.—When Protagenes would undertake any excellent piece, he used to diet himself with pease and *lupines*, that his invention might be quick and refined. *Peacham on Drawing*.

Where stalks of *lupines* grow,  
The ensuing season, in return, may bear  
The bearded product of the golden year.

*Dryden.*

This plant requires but little trouble or labour in its cultivation, as it will thrive in any soil, except the bad chalky, and such as are very wet. It will even grow well upon poor hungry worn-out land, especially if it be dry and sandy. When sown in February or March, after a single very shallow ploughing, and slightly harrowed in, it will blossom two or three times between May and August, and prove an excellent enricher of the ground, when ploughed in just after its second blooming. The best time for mowing this sort of crop, is after a shower of rain, as the seeds drop easily out of the pods when they are gathered too dry. They must, however, be laid up very dry, or worms soon breed in them. They are inferior to many other plants for the above use.

**LUPINUS**, *f.* [so called by Pliny and other ancient writers. Professor Martyn says that the word owes its origin to *lupus*, a wolf, because plants of this genus ravage the ground, by over-running it, after the manner of that animal: it is also said to be derived from *λύπη*, grief, whence Virgil's epithet, *tristes lupini*, from the fanciful

idea of its acrid juices when tasted producing a sorrowful appearance in the countenance. Both these ideas are awedly taken from Vossius.] **LUPINE**; in botany, a genus of the class diadelphia, order decandria, natural order of papilionaceæ or leguminosæ. The generic characters are—Calyx: perianthium one-leaved, bifid. Corolla: papilionaceous; banner cordate-roundish, emarginate, bent back at the sides, compressed; wings subovate, almost the length of the banner, not fastened to the keel, converging below; keel two-parted at the base, sickle-shaped upwards, acuminate, entire, the length of the wings, narrower. Stamina: filaments ten, united, somewhat ascending, distinct above; anthers five, roundish, and as many oblong. Pistillum: germ awl-shaped, compressed, villose; style awl-shaped, ascending; stigma terminating, blunt. Pericarpium: legume large, oblong, coriaceous, compressed, acuminate, one-celled. Seeds: several, roundish, compressed.—*Essential Character*. Calyx two-lipped; anthers five oblong, five roundish; legume coriaceous.

These are mostly herbaceous annual plants. The leaves digitate, with stipules at the base of the petiole. Flowers in terminating spikes, either placed alternately, or in a sort of whorl; some naked, others bracted. The first species is perennial; the ninth shrubby. The leaves are simple in the eighth, ternate in the ninth and tenth species. The flowers are white in the second sort, flesh-coloured in the fifth; yellow in the seventh, eighth, and ninth; in the rest blue.

*Species*. 1. *Lupinus perennis*, or perennial lupine: calyxes alternate, without appendices, upper lip emarginate, lower entire. This has a perennial creeping root, from which arise several erect channelled stalks a foot and a half high, sending out two or three small side-branches, garnished with digitate leaves, composed of from five to ten or eleven narrow spear-shaped leaflets, which join at their base, and stand upon very long foot-stalks, having a few hairs on their edges. The flowers grow in long loose spikes, which terminate the stalks, and are placed without order on each side; they are of a pale blue colour, and on short peduncles. These appear in June, and the seeds ripen in August, which are soon scattered if they are not gathered when ripe; for, after a little moisture, the sun causes the pods to open with elasticity, and cast out the seeds to a distance all around. Linnæus says that the leaves consist of eight lanceolate blunt smooth leaflets; and that the flowers are placed alternately in very long racemes, commonly two together from one point, each on its proper pedicel. According to Miller, the number of leaflets varies much, and the flowers are either in pairs, or else three or four from the same joint. It is a native of Virginia, and other parts of North America; and was cultivated in the botanic garden at Oxford in 1658. Kalm informs us that perennial lupine is abundant in the woods in New Jersey; and that he has often found it thriving on very poor sandy fields, and on heaths, where no other plants would grow. The flowers, which commonly appear there in the middle of May, make a fine show by their purple hue. He was told that the cattle would eat these flowers very greedily; but found that they were not fond of this plant when they had any thing else. Horses, indeed, ate the flowers, but left the stalk and leaves; and, if cattle ate the plant in the spring, it was from necessity. However, he is of opinion that it might be tried on dry sandy heaths, and that means may be found to make it palatable to cattle.

2. *Lupinus albus*, or white lupine: calyxes alternate, without appendices, upper lip entire, lower three-toothed. This has a thick upright stalk, about two feet high, dividing towards the top into several smaller hairy branches. Leaves digitate, composed of seven or eight narrow oblong leaflets, joining at the base; they are hairy, of a dark greyish colour, and have a silvery down. The flowers are produced in loose spikes at the end of the branches; they are white and sessile. Legumes straight, hairy, about three inches long, containing five or six seeds, which are

roundish, flattened like a lens, extremely smooth and even, perfectly white, without any spots, smaller than most of the others. The umbilicus, or navel, has a prominent ring. It flowers in July, and the seeds ripen in the autumn. It grows naturally in the Levant; and is cultivated in some parts of Italy, as other pulse, for food; also in the south of France, in poor dry extensive plains, as a meliorating crop, to be ploughed in, where no manure is to be had, and the ground is too barren for clover or other better plants. With us it is used only among other annuals in the flower-garden, and was thus cultivated by Gerard in 1596. He says, it is named in English, garden or tame lupine; and of some, after the German name, *figbeane*. Ray, who has described this plant very well, remarks that the leaves, which are not unaptly named *digitate* by Jungius, have the sides contracted at night, and hang down, being bent back to the petiole. This was a phenomenon before the time of Linnæus very little attended to. He also observed the cultivation of the lupine in Tuscany, not only for food, but for improving the land by ploughing it in; a practice continued from the time of the ancient Romans, as may be seen by consulting Pliny and Columella.

3. *Lupinus varius*, or small blue lupine: calyxes half-whorled, appendicled, upper lip bifid, lower slightly three-toothed. This is an annual plant, with a firm straight channelled stalk, near three feet high, divided towards the top into several branches. Leaves digitate, composed of five, six, or seven, oblong or linear leaflets, which join at their base, and are hairy. The flowers are produced in spikes at the end of the branches, standing round the stalk in half-whorls; they are of a light-blue colour. Legumes ovate, thick, flattened a little, villose, swelling where the seeds are, in a manner four-celled; partitions cellular-membranaceous, becoming obsolete, or wearing out when ripe. Seeds solitary, (two, or seldom more, in all,) large, irregularly round, beaked above the navel by a short knob, flattish on both sides, marked in the middle with a broad ferruginous spot; from which circumstance, we presume, and not from the corolla, Linnæus derived the trivial name. Linnæus, indeed, says the corolla is red; John Bauhin that it is purple; Rivinius that it is blue or red; with us it is blue. Native of the south of France, Spain, Italy, and Sicily. It flowers in July, and was cultivated by Gerard in 1596.

4. *Lupinus hirsutus*, or great blue lupine: calyxes alternate, appendicled, upper lip two-parted, lower three-toothed. This is an annual plant, which rises with a strong firm channelled stalk from three to four feet high, covered with a soft brownish down, dividing upward into several strong branches, garnished with digitate leaves, composed of nine, ten, or eleven, wedge-shaped hairy leaflets, which are narrow at their base where they join the foot-stalk, but enlarge upward, and are rounded at the top, where they are broadest; the foot-stalks of the leaves are three or four inches long. The flowers are placed in whorls round the stalks above each other, forming a loose spike, which proceeds from the end of the branches; they are large, and of a beautiful blue colour, but have no scent. They appear in July, and the seeds ripen in autumn. The pods are large, almost an inch broad, and three inches long; inclosing three large roundish seeds, compressed on their sides, very rough, of a purplish brown colour. In its wild state this plant has quinate leaves, on long petioles: the leaflets are spatulate; the flowers blue; the legumes, and the whole plant, clothed with long close ferruginous hairs. The flowers are often lateral. The native place of this species is given very differently: by Linnæus, Arabia, the islands of the Archipelago, and Spain; Miller says it is supposed to be a native of India; Parkinson reports, that it is thought to come from beyond Persia, in Caramania; in the Kew Catalogue it is assigned to the south of Europe and the Levant. It was cultivated here in 1629.

There is a variety with flesh-coloured flowers, com-

monly called *rose-lupine*. It differs only in the colour of the flower; but that difference is permanent.

5. *Lupinus pilosus*, or rose-lupine: calyxes in whorls, appendicled; upper lip two-parted, lower entire. This has the stature of the preceding. It is a hairy plant. The corollas are a pale flesh-colour, with the middle of the banner red. Leaves lanceolate, bluntish. Native of the south of Europe; and flowers in July and August.

6. *Lupinus angustifolius*, or narrow-leaved blue lupine: calyxes alternate, appendicled; upper lip two-parted, lower entire. This has much the appearance of the third species; but the stalks rise higher, being eighteen inches high, and as tall as the white or cultivated lupine. Leaflets narrow, commonly nine, blunter at the end than in the other sorts, so as to have the appearance of being truncate. Native of Spain and Sicily. Ray informs us, that the seeds were sent to him from Cadiz; it is probable, therefore, that he cultivated it before 1686.

7. *Lupinus luteus*, or yellow lupine: calyxes in whorls, appendicled; upper lip two-parted, lower three-toothed. Stem from a foot to eighteen inches high, branching. Leaves digitate, composed of seven, eight, or nine, narrow hairy leaflets, near two inches long; petioles three inches long. Flowers yellow, odorous, in loose spikes at the end of the branches, composed of six or seven whorls, with spaces between them, and about five flowers in each, terminated by three or four flowers, sitting close at the top; these are succeeded by ovate flattish hairy pods, about two inches long, standing erect, and inclosing three, four, or five, roundish seeds, a little compressed, yellowish white, variegated with dark spots. Native of Sicily and Silesia; flowering in June and July. Cultivated by Gerard in 1596.

8. *Lupinus Cochinchinensis*, or single-leaved lupine: calyxes appendicled, in spikes; upper lip bifid, lower three-toothed; leaves simple, oval. Stem herbaceous, annual, roundish, upright, striated, two feet high, with ascending branches. Leaves emarginate, smooth, whitish, alternate; flowers yellow. Native of Cochinchina and Bengal.

9. *Lupinus Africanus*, or African lupine: calyxes appendicled, five-cleft; peduncles many-flowered, terminating; leaves ternate, lanceolate; stem shrubby, diffused, three feet high, with diffused branches; leaves smooth, on alternate petioles; flowers yellow. Native of the eastern coast of Africa.

10. *Lupinus trifoliatus*, or three-leaved lupine: calyxes five-toothed; legumes in spikes, upright; leaves ternate, ovate; stem herbaceous. Stem simple, a foot high, angular, somewhat rugged at the angles. Leaves alternate, crenate-toothed, glaucous beneath, somewhat rugged at the nerves, two opposite subsessile, the third petioled; the petiole an inch and a half long, blunt beneath, channelled above, running down the stem, which it marks with grooves. Flowers blue, in short axillary spikes. Native of Mexico; cultivated in the royal garden at Madrid before 1791; flowers there in July.

*Propagation and Culture.* These plants are cultivated for ornament in the borders of the flower-garden, and are sown in patches with other annuals in the spring, where they are to remain; thinning them where they are too close, and keeping them clean from weeds. To have a succession of flowers, the seeds may be sown at different times, viz. in April, May, and June; but the seeds of those only which are first sown will ripen. The first sort only is perennial. This, however, is propagated by seeds as the former, which should be sown where the plants are to remain; for, although the root is perennial, yet it runs so deep into the ground, that it cannot be taken up entire; and, if the root is cut or broken, the plant seldom thrives well afterwards. Some of the roots of this plant have been three feet deep in the ground in one year from seed, and spread out as far on every side, so that they must have room; therefore the young plants should not be left nearer than three feet asunder. If this plant is in a light dry soil, the roots will continue several years, and produce

duce many spikes of flowers; and, although the usual season of flowering is in June and July, yet when rain falls in August fresh stalks arise from the roots, which flower at the end of September, or beginning of October. The seeds of the second sort were formerly used in medicine; and are sometimes eaten in Italy, but they are bitter, and are accounted hard of digestion. All the sorts of lupine make a pretty appearance when they are in flower; but the yellow sort is preferred for its sweetness, though the flowers are of short duration, especially in warm weather; therefore the seeds should be sown at several times, that there may be a succession of flowers through the season; for they will continue flowering till they are stopped by hard frost; and those which come in the autumn to flower will continue in beauty a longer time than the early ones. If some of the seeds are sown in the autumn on a warm border, the plants will often live through the winter, and flower early in the spring.

LUPPO, a town of Hinder Pomerania, on a river of the same name: fifteen miles east of Stolpe.

LUPOGLA'VO, a town of Iliria: twelve miles west of St. Veit, and twenty-two south-east of Trieste.

LUPO'GLA, a mountain of Bosnia: twelve miles east of Zwoornick.

LUPO'W, a town of Pomerania, on a river of the same name: twenty-eight miles east-north-east of Polow, and sixteen north of Butow.

LUPPIAT, Upper and Nether, villages near Stroud in Gloucestershire.

LUP'PIT, or LOVEPIT, a village in Devonshire, on the river that comes from Up-Ottery.

LUP'PURG, a town of Bavaria, in the principality of Neuburg: sixteen miles north-west of Ratibon, and ten north-east of Dietfurt.

LUP'TE, or HO'HEN LUPTE, a town of Germany, in the principality of Anhalt Zerbst: three miles west of Zerbst.

LUP'TON, a village in Devonshire, in the parish of Brixham.—A village in Westmoreland, near Kirkby Lonsdale.

LUPULO SIM'ILIS. See URTICA.

LUPU'LUS, *f.* in botany, the diminutive of *lupus*, a wolf, a name applied by the older botanists to the hop, because, as the wolf preys upon other animals, so this plant, by immoderately impoverishing the soil in which it grows, starves its vegetable neighbours. Such at least is the explanation of Ambrosinus. See DALECAMPIA, GONANIA, and HUMULUS.

LUP'US, the WOLF, in astronomy, a southern constellation joined to the Centaur, whose stars in Ptolemy's Catalogue are nineteen; in the Britannic Catalogue, with Sharp's Appendix, twenty-four.

LUPUS (Servatus), a French abbot, celebrated for his learning, eloquence, and piety, was descended from a considerable family in the diocese of Sens, and born about the commencement of the ninth century. After having received a learned education, he embraced the ecclesiastical life in the abbey of Ferrieres, under Alaric or Aldric, who was then abbot, and afterwards archbishop of Sens. About the year 828 he went from his monastery to the abbey of Fulda in Germany, where he studied the Scriptures under the celebrated Rabanus: and returned to France in the year 836, with a high reputation for his proficiency in scriptural knowledge. In the year 842, he was fixed upon by Charles the Bald to supersede Odo in the abbacy of Ferrieres, whom that prince was determined to deprive of his monastery, on account of his having embraced the party of Lotharius. In the year 844, Lupus assisted at the council of Verneuil, and was selected to draw up the canons of the council. He also assisted at other assemblies of the French bishops, particularly at the council of Soissons, in 853. Some time before the year 855, he was sent ambassador from Charles the Bald to pope Leo IV. and that prince afterwards gave him a commission jointly with the celebrated Prudentius, to reform

all the monasteries in France. These two illustrious characters were zealous defenders of St. Augustine's doctrine of Grace. The time of his death is uncertain; but he was living at the close of the year 861, and maintained a high reputation, not only for his extensive acquaintance with profane and general literature, but for his knowledge of the doctrine and discipline of the church, of the writings of the Latin fathers, and his extraordinary sanctity of manners. A collection has been made of 130 of his Letters, upon different subjects, relating to difficulties in grammar, civil and ecclesiastical affairs, points of doctrine, discipline, and morals; which are written with solidity, correctness, and elegance, and throw considerable light on the history of the period in which he lived. There are also still extant, by Lupus, 2. A Book of the three Questions, relating to free will, predestination, and the redemption by the blood of Christ; written against Godeschale. 3. The Life of St. Wigbert, Abbot of Fritzlar. 4. The Life of St. Maximin, Bishop of Treves, published by Busæus in 1602. In 1664, M. Baluze printed a neat edition of all the works of Lupus, in 8vo. enriched with learned and curious notes, and some additional fragments. *Cave's Hist. Litt.*

LUPUS (Christian), vernacularly *Wolf*, a learned Flemish monk of the order of St. Augustine, was born at Ypres in the year 1612, and embraced the religious life at the age of fifteen. As soon as he had completed his course of divinity at Louvain, he was sent to teach philosophy at Cologne; and in the year 1655, he was one of the deputies sent to Rome by the university of Louvain, to negotiate some matters of moment with the papal court, and obtained the object of his mission. Soon after his return home, he was appointed professor of divinity at Louvain, where he devoted almost fifteen hours a-day to the studies appropriate to his department, and was distinguished by extraordinary success. Afterwards he filled the first posts belonging to his order in that province. As a reward of his merits, pope Clement IX. was desirous of creating him a bishop, and appointing him sacristan of the Roman church; but his love of study and repose induced him to decline both these dignities. From pope Innocent XI. and the grand duke of Tuscany he also received marks of esteem, and the latter in vain repeatedly offered him a considerable pension, that he might attach him to his court. He died in 1681, when he was about seventy years of age, after having published a number of works, in Latin, replete with erudition. They consist of, 1. Commentaries on the History and on the Canons of Councils, both general and particular, 5 vols. 4to. 1665-1673. 2. A Treatise on Appeals to the Holy See, 4to. in which he is the advocate for the most blind submission to the papal authority. 3. A Collection of Letters and Monuments, relating to the Councils of Ephesus and Chalcedon, in 2 vols. 4to. 4. A Collection of the Letters of St. Thomas of Canterbury, with his life prefixed. 5. A Commentary on the Rescriptions of Tertullian. 6. A Treatise on Contrition, 12mo. and a vast number of Disputations, &c.

LUR'A, a town of South America, in the province of St. Martha, on the Madalena: eight miles south of Teneriffe.

LUR'A, *f.* [Latin.] The mouth of a sack; the mouth of a bottle. *Col.*

LUR'BAH, a town of Bengal: twenty miles south-west of Doeca. Lat. 22. 41. N. lon. 85. E.

LUR'BOTTLE, a village in Northumberland, south-west of Alnwick.

LURCA'TION, *f.* [from *lurca*, Lat.] Gluttony; the act of devouring with greediness. *Col.*

LURCH, *f.* [derived by Skinner from *fourche*, a game of draughts, much used, as he says, among the Dutch; *ourche* he derives from *arca*, so that those that are lost are left in *lorche*, in the *lurch*, or box.] A forlorn condition; a helpless state.

*To leave in the LURCH.* To leave in a forlorn or deserted condition

condition; to leave without help. *A ludicrous phrase.*—Have a care how you keep company with those that, when they find themselves upon a pinch, will leave their friends in the lurch. *L'Esfrange.*

But, though thou'rt of a different church,  
I will not leave thee in the lurch.

*Hudibras.*

To LURCH, *v. n.* To shift; to play tricks.—I myself, sometimes leaving goodness on my left hand, and hiding mine honour in my necessity, am fain to shuffle, to hedge, and to lurch. *Shakespeare.*—To lie in wait: we now rather use *lurk*.—While the one was upon wing, the other stood *lurching* upon the ground, and flew away with the fish. *L'Esfrange.*

To LURCH, *v. a.* [*lurcor*, Lat.] To devour; to swallow greedily.—Too far off from great cities may hinder business; or too-near *lurcheth* all provisions, and maketh every thing dear. *Bacon.*—To defeat; to disappoint. A word now used only in burlesque; [from the game *lurch*.]—God never designed the use of them to be continual; by putting such an emptiness in them, as should so quickly fail and lurch the expectation. *South.*

He waxed like a sea;  
And, in the brunt of seventeen battles since,  
He *lurcht* all swords o' the' garland.

*Shakespeare.*

To steal privily; to filch; to pilfer.—At cribbage, to get the game on the adversary before he has counted forty-five, in which case he loses a double stake.

LUR'CHER, *f.* One that watches to steal, or to betray or entrap:

His thefts some tradesman spies.  
Swift from his play the scudding *lurcher* flies;  
Whilst ev'ry honest tongue Stop thief refounds.

*Gay.*

A dog that watches for his game.—I cannot represent those worthies more naturally than under the shadow of a pack of dogs, made up of finders, *lurchers*, and setters. *Tatler.*—[*Lurco*, Lat.] A glutton; a gormandizer. *Not used.*

LUR'CHING, *f.* The act of beating the adversary before he has counted forty-five; the act of leaving in a state of embarrassment.

LUR'CY, a town of France, in the department of the Allier: seven miles east-north-east of Dunjon.

LUR'CY LE'VY, a town of France, in the department of the Allier: nine miles north-north-east of Cerilly, and nine north-north-west of Bourbon l'Archambault.

LUR'DANE. See LORDANE.

LURE, *f.* [from *allure*.] Any enticement; any thing that promises advantage.—A great estate to an heir, is a *lure* to all the birds of prey round about to seize on him. *Bacon.*

How many have with a smile made small account  
Of beauty and her lures, easily scorn'd  
All her assaults, on worthier things intent?

*Milton.*

In falconry, a piece of red leather cut in form of a bird, with two wings fluck with feathers, and sometimes baited with a piece of flesh; wherewith to reclaim, or call back, a hawk. The word comes from the French *leurre*, which signifies the same; formed, according to Skinner, from the Anglo-Saxon, *leura*, traitor; or, according to Tripan, from *leora*, craftiness.—This *lure* she cast abroad, thinking that this fame and belief would draw, at one time or other, some birds to strike upon it. *Bacon's Henry VII.*

My falcon now is sharp and passing empty,  
And, till she stoop, he must not be full gorg'd,  
For then she never looks upon her *lure*.

*Shakespeare.*

To LURE, *v. n.* To call hawks.—Standing near one that *lured* loud and shrill, I had suddenly an offence, as if somewhat had broken, or been dislocated, in my ear; and immediately after a loud ringing. *Bacon.*

To LURE, *v. a.* To attract; to entice; to draw.—A man spent one day in labour, that he might pass the other at ease; and, *lured* on by the pleasure of this bait, when he was in vigour he would provide for as many days as he could. *Temple.*

Would you *lure*

From his dark haunt, beneath the tangled roots  
Of pendant trees, the monarch of the brook,  
Behoves you then to ply your finest art.

*Thomson.*

LURE, a town of France, and principal place of a district, in the department of the Upper Saône, near the Ougnon: three posts north-east of Vesoul, and 5½ south-east of Paris. Lat. 47. 41. N. lon. 6. 34. E.

LURE, a town of France, in the department of the Allier: eighteen miles north-west of Moulins.

LUR'GAN, a town of Ireland, in the county of Armagh, on the borders of Down. Here is a very large weekly market for cambrics and Irish cloth, manufactured in the neighbourhood, to the amount, it is said, of 270,000l. a year. It is fourteen miles north-east of Armagh, and sixty-eight north of Antrim.

LUR'GAN, a township of America, in Franklin county, Pennsylvania; containing 758 inhabitants.

LUR'GAN GREE'N, a small post-town of the county of Louth, Ireland, pleasantly situated on Dundalk-bay. It is on the great northern road, thirty-seven miles north from Dublin.

LUR'GERSHALL, a village near Blackdown Beacon in Suffex.

LUR'GERSHALL, in Wiltshire. See LUGGERSHALL, p. 762.

LUR'RID, *adj.* [*luridus*, Lat.] Gloomy; dismal. *Not used.*

Slow settling o'er the *lurid* grove,  
Unusual darkness broods.

*Thomson's Summer.*

LUR'RIDÆ, *f.* [from *luridus*, Lat. pale, livid, or ghastly, alluding to the livid and bluish aspect frequent in the tribe of plants thus denominated, which seems to announce their deadly effects on animal life.] In botany, the 28th natural order among the *Fragmenta* of Linnæus. See the article BOTANY, vol. iii. p. 296. The true *lurida* have commonly a fetid herbage, though sometimes a sweet-smelling flower. They act powerfully upon the nerves, in whatever manner they are taken inwardly; and prove, under careful management, in some cases, very valuable medicines, though naturally violent poisons.

LURIGAN'CHE, a town of Peru, in the jurisdiction of Lima.

LUR'IN, a town of Peru, in the jurisdiction of Lima.

LUR'ING, *f.* The act of enticing.

To LURK, *v. n.* [probably *lurch* and *lurk* are the same word.]—To lie in wait; to lie hidden; to lie close.—Milbrook *lurketh* between two hills, a village of some eighty houses, and borrowing his name from a mill and little brook running therethrough. *Carew's Survey of Cornwall.*

The wife, when danger or dishonour *lurks*,  
Safest and seemliest by her husband stays.

*Milton.*

LUR'KER, *f.* A thief that lies in wait.

LURKIAN, a town of Persia, in the province of Chulistan: fifty miles north of Sulter, and 155 west of Isfahan.

LUR'KING, *f.* The act of lying in wait.

LUR'KING-PLACE, *f.* Hiding-place; secret place.—Take knowledge of all the *lurking-places* where he hideth himself. 1 *Sam.* xxiii. 23.

LURS, a town of France, in the department of the Lower Alps: four miles north-east of Forcalquier, and fifteen south-west of Digne.

LUR'RY, a town of France, in the department of the Cher, situated on the river Amon: five miles south of Vierzon, and thirteen west of Bourges.

LUR'RY, or LURI, a town of the island of Corsica, thirteen miles north of Bastia.

LUS, a town of France, in the department of the Upper Pyrenees: three miles south-west of Barège, and nine south of Argellez.

LUS LA CROIX HAUTE, a town of France, in the department of the Drôme: fifteen miles east-south-east of Die.

LUSATIA, a country and marquisate of Saxony, bounded on the north by the Mark of Brandenburg, on the east by Silesia, on the south by Bohemia, and on the west by Saxony. It is about eighty-four miles long, and forty-five wide, and is divided into Upper and Lower. Upper Lusatia abounds more in mountains and hills, and enjoys a purer air than the Lower, in which are many boggy and moorish tracts. The latter, on the contrary, has a great number of woods, and those finer ones than are to be met with in the first, the fat tracts of which generally feel a great scarcity of timber; with which the others, notwithstanding, are sufficiently provided. Peat and turf are found in different parts. The mountainous tracts of Upper Lusatia are poor, and little adapted to agriculture, but abound in game. The champaign consists partly of a meagre land, and partly of a flat and very profitable marsh land, the latter of which is met with in the centre of Upper Lusatia. In Lower Lusatia are both heathy and fertile tracts. In each of these marquisates, rye, wheat, barley, and oats, are cultivated, as also much buck-wheat, together with pease, lentils, beans, and millet. In it likewise we find what is usually called *mannä*. The culture of flax here is pretty good. With respect to orchard and garden fruits, as also to the culture of hops, tobacco, and wine, Lower Lusatia has greatly the preference to the Upper. They make likewise some white and red wine. The products of this country, however, do not sufficiently answer the necessities of the inhabitants; corn, fruit, hops, garden-stuff, and wine, being imported into the Lusatias. The breeding of cattle is very considerable, and the rivers, lakes, and ponds, yield divers sorts of good fish. Here and there we find pipe-makers' clay, and stone quarries. On some of the mountains diamonds are dug, which resemble the Bohemian; and in the tracts near Lauban we sometimes meet with agates and jaspers. In several places a pretty good iron-stone is found and worked. The medicinal springs are not inconsiderable. The principal rivers are the Spree, the Black Elster, and the Pulsnitz. In Upper Lusatia are reckoned six towns, which are called, by way of eminence, *the Towns*, or the Six Towns, sixteen smaller country towns, and four market towns; but in the Lower only four towns which appear at the land-diets, together with thirteen country towns, and two market towns.

The most ancient inhabitants of this country, of whom we have any certain knowledge, were the Semnonnes or Senones, who gave place to the Wandalers, and these again in the seventh century to the Sorber-Wends, who were a Slavonian people. In the twelfth century, also, some new inhabitants from the Low Countries and the Rhine arrived in these parts. Even to this day, the towns are almost wholly peopled with German inhabitants; but in the villages a greater number of Wends than Germans is to be met with. Some small sparks of the Christian doctrine were for the first time made known to the Wends here in the seventh century. Luther's doctrine, so early as the year 1521, found acceptance among them, as well in the Upper as in the Lower Lusatia; which doctrine so spread itself by degrees, that the protestant became the prevailing church there, as it continues even to this day. In the year 1750, a royal mandate was addressed to count Gersdorf, at that time superintendent of Budiszin, purporting that the fraternal community of Hernhutters, in Upper Lusatia, should be indulged and protected in quality of faithful subjects. By the purchase too and possession of several noble estates, as Hernhuth, Bertholdorf, Hennerdorf, Nischky, Trabus, &c. they obtained not only civil power, but also the patronage of churches. Without the assistance of manufactures, Lusatia would be

unable to support its inhabitants; but in the numerous and good woollen and linen stuffs, it enjoys an important means of subsistence. These flourish principally in Upper Lusatia. The cloth-manufactures are the oldest, having been in vogue in several towns so early as the thirteenth century. The linen-manufactures here are also important; and the most considerable of these lie in Upper Lusatia. The conduct of the emperors Ferdinand II. and III. as also of Leopold, towards the protestants in Bohemia and Silesia, caused vast numbers of people to retire to Upper Lusatia; who, upon that, erected the several villages which stood on the borders of these countries, being mostly situated in mountains, and for the generality followed the linen-weaving business. From this time, that is, from the year 1623, this country met with a quite different and better reception, for it became more populous and powerful; and to these new inhabitants, whose posterity were so greatly increased, are owing the succeeding inundation of linen manufactures and trade in Upper Lusatia, which happened principally between the years 1660 and 1690. In Lusatia are made all sorts of linen, from unbleached yarn, common and fine, as also fine white damask for table and bed cloths, and white tick. The black and fine dyings also support many hands; and, exclusive of these, there are good manufactures of hats, leather, paper, gunpowder, iron, glass, and wax-bleaching, together with other works of artists and handicrafts-people. By means of these manufactures, and in particular by means of the cloths and linens, a considerable trade is carried on there; which indeed is not at present so great as it was formerly, but still is important, being productive of much advantage to Lusatia, as it exceeds the importation in wool, yarn, and silk, which are employed for their manufactures in foreign silk, and woollen commodities, gold and silver lace-points, &c. in wines, spices, corn, fresh and baked fruits, garden-stuff, and hops. The great trade carried on in linen had its beginning in the year 1684. Upper Lusatia formerly belonged to Bohemia. Lower Lusatia, which alone, till the 15th century, was called *Lusatia*, was first erected into a marquisate in the year 931, by Henry I. king of Germany. In the middle of the 16th century, they were both ceded to the elector of Saxony, in consideration of a large sum of money, which the elector had advanced to the emperor, in his war with the Bohemians, with condition only that the kings of Bohemia should retain the armorial bearings. The fate of this country, as to future ownership, is not (Jan. 1815) absolutely determined; but it is understood, that Saxony will be deprived of it; and that Upper Lusatia will fall to Austria, Lower Lusatia to Prussia.

LUSBY, a village in Lincolnshire, north-west of Spilsby.

LUSCHETZ, a town of Bohemia, in the circle of Schlan: eight miles south-west of Prague.

LUSCINIUS (Ottomarus), a Benedictine monk, born at Strasburg, but an inhabitant of Augsburg. He published in 1536 a work, entitled *Musurgia, seu Praxis Musica*, in small oblong 4to. a book chiefly curious and valuable for the representations of such musical instruments as were used in Germany at the time it was written, which, though coarsely cut in wood, are accurately drawn. They are, among keyed-instruments, the virginal, spinnet, and clavicord, all three in the form of a small modern pianoforte; an upright harpsichord; a regal, or portable organ, chiefly composed of reed-stops, and in Roman-catholic countries used in processions; and a large or church organ. Of bowed instruments, we have here only the monochord, rebec, or three-stringed violin, and the viola da gamba. The vielle, lute, harp, and dulcimer; cornet, schalmey, or base clarinet, both played with reeds; flutes of various size; among which is the *zwerchpfeiff*, or, as we call it, the *German flute*; which accounts for its name, as we believe, at this early period, it was unknown to the rest of Europe. There are four other wind-instruments, peculiar to Germany and northern countries, exhibited here; as, first, the *russpfeiff*, or Russian flute; second, the *trumhorn*,

or crooked horn, a kind of shawm, in imitation of which we have a reed-stop in our old organs, called the *cromhorn*, which has by some been imagined to be a corruption of the word *Cremona*; third, *gemfen-horn*, or wild-goat's horn; and, fourth, the *zinke*, or small cornet. After these we have the bag-pipe, trumpet, sackbut, side-drum, kettle-drum, French-horn, bugle-horn, and even the Jews-harp, and clappers.

**LUS'CIOUS**, *adj.* [from *delicious*, say some; but more probably from *luxurious*, corruptly pronounced.] Sweet, so as to nauseate.—Sweet in a great degree.—The food that to him now is as *luscious* as loches, shall shortly be as bitter as *coloquintida*. *Shakespeare*.

Blown roses hold their sweetness to the last,  
And raisins keep their *luscious* native taste. *Dryden*.

Pleasing; delightful.—He will bait him in with the *luscious* proposal of some gainful purpose. *South*.

**LUS'CIOUSLY**, *adv.* Sweet to a great degree.

**LUS'CIOUSNESS**, *f.* Immoderate sweetness.—Can there be a greater indulgence in God, than to embitter sensibilities whose *lusciousness* intoxicates us, and to clip wings which carry us from him? *Decay of Piety*.

**LUSCITION**, *f.* [*luscitio*, Lat.] A disorder of the eyes; a dimness of sight. *Cole*.

**LUSENU'H**, a town of Hindoostan, in Bahar: ten miles north of Chittra.

**LUSH**, *adj.* Of a dark deep full colour, opposite to pale and faint; from *loushe*. *Hanmer*.—How *lush* and lusty the grass looks! how green! *Shakespeare*.

**LUSH'BURG**, or **LUXENBURGH**, *f.* A base sort of foreign coin, made of the likeness of English money, and brought into England in the reign of king Edward III. to deceive the king and his people; on account of which, it was made treason for any one wittingly to bring any such money into the realm, knowing it to be false. 25 Edward III. *stat.* 5, c. 2.

**LUSH'COMB**, a village in the parish of Rattery, Devon.

**LU'SIGNAN**, a town of France, and principal place of a district, in the department of the Vienne. In 1346, this town was taken by the duke of Lancaster; in 1572, it was seized by the Huguenots; and the year following taken by the Catholics, under the duke de Montpensier. It is three and half poits south-west of Poitiers, and ninety-three and half fourth-west of Paris. Lat. 46. 26. N. lon. 0. 14. E.

**LU'SIGNY**, a town of France, in the department of the Aube, and chief place of a canton, in the district of Troyes. The place contains 1155, and the canton 7225, inhabitants, on a territory of 180 kilometres, in 14 communes.

**LUSION**, *f.* [from the Lat. *ludo*, to play.] A play; a pastime. *Bailey*.

**LUSIPARA**. See **LUCIPARA**, p. 746.

**LUSITANIA**, [from *luz*; an almond, and *tani*, a fig, on account of its productions; or from *los*, a tail or end, *tan*, land, and *ia*, country, on account of its situation; q. d. Land's-End Territory.] In ancient geography, one of the divisions of Spain, extending to the north of the Tagus, quite to the sea of Cantabria, at least to the Promontorium Celticum. But Augustus, by a new regulation, made the Anas its boundary to the south, the Durus to the north; and thus constituting only a part of the modern Portugal. The inhabitants were warlike, and were conquered by the Roman army under Dolabella, B.C. 99, with great difficulty. They generally lived upon plunder, and were rude and unpolished in their manners. It was usual among them to expose their sick in the high roads, that their diseases might be cured by the directions and advice of travellers. They were very moderate in their meals, and never ate but of one dish. Their clothes were commonly black; and they generally warmed themselves by means of stones heated in the fire. *Strabo*.

**LU'SITZ**, or **MUN'CHBACH**, a river of Saxony, which passes through the town of Freyberg.

**LUSK**, a village of Ireland, in the county of Dublin. Here was an abbey founded in the earliest ages of Christianity, which in 1135, together with the town, was burned down by Donald M'Murragh O'Melaghtlin, for the murder of his brother Connor prince of Meath. The church is a very curious and uncommon structure: it consists of two long aisles, divided by a range of seven arches: the east end is the parish-church; at the west end, is a handsome square steeple, three angles of which are supported by round towers; and near to the fourth angle is an insulated round tower, in good preservation, which rises several feet above the battlements of the steeple. Lusk is twelve miles north of Dublin.

**LUSK**, *adj.* [*lusche*, Fr.] Idle; lazy; worthless.

**LUSK**, *f.* A lazy worthless fellow.—Up, you *lusk*. *Brewer's Lingua*.

**LUS'KISH**, *adj.* Somewhat inclinable to laziness or indolence.

**LUS'KISHLY**, *adv.* Lazily; indolently.

**LUS'KISHNESS**, *f.* A disposition to laziness:

He shooke off *luskishness*; and courage chill

Kindling afresh, gan battell to renew. *Spenser*.

**LU'SO**, a river which rises in the duchy of Urbino, and runs into the Adriatic a little to the north of Rimini; by some supposed to be the ancient Rubicon.

**LUSO'RIOUS**, *adj.* [*lusorius*, Lat.] Used in play; sportive.—Things more open to exception, yet unjustly condemned as unlawful; such as the *lusorious* lots, dancing, and stage-plays. *Bishop Sanderfon*.

**LUS'ORY**, *adj.* [*lusorius*, Lat.] Used to play.—There might be many entertaining contrivances for the instruction of children in geometry and geography, in such alluring and *lusory* methods, which would make a most agreeable and lasting impression. *Watts on the Mind*.

**LUS'PA**, a town of Sweden, in East Bothnia: twenty-eight miles east of Christinestadt.

**LUSS**, a village of Scotland, in the county of Dumbarton, on the west coast of Loch Lomond: thirteen miles north-north-west of Dumbarton.

In the immediate vicinity of this village, Rosedoe, the mansion-house of sir James Colquhoun of Luss, is placed on a rich peninsula, projecting so far into the lake as to appear insulated. The ground is finely wooded; and a tower of the ancient castle, or habitation of the family, forms an excellent contrast to the modern house. Some very bold and rugged mountains compose the back ground of this charming scenery. Between Luss and Tarbet the road diminishes in breadth very rapidly. Passing the water of Uglas, which discharges itself into the lake, it ascends a lofty promontory, projecting considerably in the lake, which is called the Point of Firkin. The ascent to the summit of this eminence is abrupt, difficult, and tedious; but the view which displays itself from it amply repays the admirer of nature for the labour attending it. Nearly opposite to this point Benlomond rears his lofty head on the eastern side.

**LUSSAC'**, a town of France, in the department of the Gironde: six miles east-north-east of Libourne.

**LUSSAC LES CHATEAU'X**, a town of France, in the department of the Vienne: eighteen miles south-east of Poitiers, and six west of Moutmorillon. Lat. 46. 25. N. lon. 0. 48. E.

**LUSSAC LES EGLI'SES**, a town of France, in the department of the Upper Vienne: thirty-three miles north of Limoges.

**LUSSAN'**, a town of France, in the department of the Gard; nine miles north of Uzès.

**LUSSAN** (Margaret de), a copious French novelist, was born at Paris in 1682. Her parents were a celebrated fortune-teller named Fleury, and a coachman; but she received an education beyond what might be expected from her birth. It is said that the learned Huet, becoming acquainted with the vivacity of her parts, encouraged her to write romances. She likewise derived great advantage

in the formation of her taste from her connexion with la Serre de Langlade, an unfortunate author, but a good critic. With him she always lived upon the most intimate terms, and he was supposed to be married to her; but, although her sentiments for him are said to have passed the bounds of friendship, it does not appear that the flame was mutual. Indeed her charms were exclusively mental; for she is described as being excessively brown, with a cast in her eye, and in voice and air totally unfeminine. Her soul, however, was of an amiable mould: she was generous, feeling, humane, constant in friendship, and, though subject to anger, yet free from malignity. She delighted to perform good actions, was gay and lively, and had virtues which more than compensated her weaknesses. Among the latter was an immoderate attachment to the pleasures of the table, which at length brought on an indigestion that proved fatal to her, but not until she had attained to the ripe age of seventy-five. The titles of her works are, 1. L'Histoire de la Comtesse de Gondés. 2. Anecdotes de la Cour de Philippe Auguste. 3. Memoires Secrets et Intrigues de la Cour de France sous Charles VIII. 4. Marie d'Angleterre. 5. Annales de la Cour de Henri II. 6. La Vie du brave Crillon. From this list it will appear that she was a proficient in that kind of fiction which has real characters and events for its basis; a favourite species of writing with French authors in particular, who are too apt in more serious works to confound truth and falsehood. Her reputation rose so high at one time, that her name was borrowed for some works not her own. *Nov. Dict. Hist.*

LUSS'EMEN, a town of Prussia, in the province of Ermeland: eighteen miles east-south-east of Heilsberg.

LUSS'I, a country of Africa, situated on the borders of a large lake to the south of Begarmee. It is otherwise called Fittre or Fiddy, and Cauga or Cougu. It is governed by a sultan; and the dominions were once much larger than they now are, being considerably diminished by the sultans of Begarmee and Wadey. The inhabitants live in small huts, and are said to be in a low degree of civilization. They have no salt except what they procure from the ashes of gossab. The lake is situated 210 miles south of Bornou. Lat. 15. 50. N. Lon. 22. 30. E.

LUSS'IN. See LOSSIN, p. 674.

LUSSINGE, a town of France, in the department of Mont Blanc: three miles west-north-west of Bonne.

LUST, *f.* [Saxon.] Carnal desire.—When a temptation of *lust* assaults thee, do not resist it by disputing with it, but fly from it; that is, think not at all of it. *Taylor's Holy Living.*

This our court, infected with their manners,  
Shows like a riotous inn; epicurism and *lust*  
Make it more like a tavern or a brothel

Than a grac'd palace. *Shakespeare's King Lear.*

Any violent or irregular desire.—The ungodly, for his own *lust*, doth persecute the poor: let them be taken in the crafty wiliness they imagined. *Psalms.*

All weigh our acts, and whate'er seems unjust,  
Impute not to necessity, but *lust.* *Dryden.*

It is also a sea-phrase: thus, if a ship heel either to the starboard or port, the seamen say she has a *lust* that way; and they say so though it be occasioned only by the shooting of her ballast, or by the unequal stowing of things in the hold; though it is more properly said of a ship, when she is inclined to heel any way upon account of her mould or make. *Chambers.*—Vigour; active power; lustiness. *Not used.*—Trees will grow greater, and bear better fruit, if you put salt, or lees of wine, or blood, to the root; the cause may be, the increasing the *lust* or spirit of the root. *Bacon.*

LUST, Graves of; in Hebrew, *Kibroth-hattaavah*; an encampment of the Hebrews in the wilderness, whither they arrived after having decamped from Sinai. It was so called because 23,000 Israelites died there, who were

smitten by God for murmuring, and eating to excess of those quails which God in his anger had caused to fall upon the camp. See Numb. xi. 34. Deut. ix. 22.

To LUST, *v. n.* To desire carnally:

Inconstant man, that loved all he saw,  
And *lusted* after all that he did love. *Roscommon.*

To desire vehemently.—Giving sometimes prodigally; not because he loved them to whom he gave, but because he *lusted* to give. *Sidney.*—To lift; to like. *Out of use.*—Their eyes swell with fatness; and they do even what they *lust.* *Psal. lxxiii. 7.*—To have irregular dispositions, or desires. —The spirit that dwelleth in us *lusteth* to envy. *James, iv. 5.*

LUST'-DIETED, *adj.* Pampered:

Let the superfluous and *lust-dieted* man,  
That slaves your ordinance, that will not see  
Because he doth not feel, feel your power quickly. *Shakesf.*

LUST'-STAINED, *adj.* Stained by lust.—Thy bed *lust-stain'd* shall with lust's blood be spotted. *Shakesf. Othello.*

LUST'-WEARIED, *adj.* Satiated with lust:

Our stirring  
Can from the lap of Egypt's widow pluck  
The ne'er *lust-wearied* Antony. *Shakespeare.*

LUST'-WORT. See DROSERA.

LUST'ELEIGH, a village in Devonshire, near the river Bovey, not far from Bovey-Tracey.

LUST'ENAU, a town of Germany, in the marggravate of Anspach: five miles south-west of Feuchtwang.

LUST'ENFELDEN, a town of Austria: three miles east of Lintz.

LUST'FUL, *adj.* Libidinous; having irregular desires. —There is no man that is intemperate or *lustful*, but besides the guilt likewise stains and obscures his soul. *Tillotson.*

Turning wrathful fire to *lustful* heat,  
With beastly sin thought her to have desil'd. *Fairy Queen.*  
Provoking to sensuality; inciting to lust.—Thence his *lustful* orgies he enlarg'd. *Milton.*

LUST'FULLY, *adv.* With sensual concupiscence.

LUST'FULNESS, *f.* Libidinousness.

LUST'IHED, or LUSTIHOOD, *f.* [from *lusty.*] Vigour; sprightliness; corporal ability. *Not now in use.*—His May of youth, and bloom of *lustyhood.* *Shakespeare.*

A goodly personage,  
Now in his freshest flower of *lustyhed*,  
Fit to inflame fair lady with love's rage. *Spenser.*

Reason and respect  
Make livers pale, and *lustihood* dejected. *Shakespeare.*

LUSTILY, *adv.* [from *lusty.*] Stoutly; with vigour; with mettle.—Barbarossa took upon him that painful journey, which the old king *lustily* performed. *Knolles.*

Now, gentlemen,  
Let's tune, and to it *lustily* a while. *Shakespeare.*

LUST'INESS, *f.* Stoutness; sturdiness; strength; vigour of body.—Cappadocian slaves were famous for their *lustiness*; and, being in good liking, were set on a stall to shew the good habit of their body, and made to play tricks before the buyers, to shew their activity and strength. *Dryden's Persius.*

Fresh Clarion being ready dight,  
He with good speed began to take his flight  
Over the fields in his frank *lustiness.* *Spenser.*

LUST'ING, *f.* Inordinate desire.

LUST'LESS, *adj.* Not vigorous; weak. Listless:

Nath'lesse at length himselfe he did upreare  
In *lustlesse* wise, as if against his will  
Ere he had slept his fill he waken'd were. *Spenser.*

LUST'TON, a village in Herefordshire, north-west of Leominster.—A village in Somersetshire, two miles from Yeovil.

LUSTRABLE,

**LUSTRABLE**, *adj.* [*lustrō*, Lat. to purify.] Capable of purification.

**LUSTRAL**, *adj.* [*lustrale*, Fr. *lustralis*, Lat.] Used in purification.—From the *lustral* water used by the ancients in their ceremonies to sprinkle and purify the people, the Romanists have borrowed the holy water used in their churches. *Ency. Brit.*

His better parts by *lustral* waves refin'd,  
More pure, and nearer to æthereal mind.

Garth.

**LUSTRAL DAY**, *dies lustricus*, that whereon the lustrations were performed for a child, and its name given; which was usually the ninth day from the birth of a boy, and the eighth from that of a girl: though others performed the ceremony on the last day of that week wherein the child was born, and others on the fifth day from its birth. Over this feast-day the goddesses Nundina was supposed to preside; the midwives, nurses, and domestics, handed the child backwards and forwards, round a fire burning on the altars of the gods, after which they sprinkled it with water; hence this feast had the name of *amphidromia*. The old women mixed saliva and dust with the water. The whole ended with a sumptuous entertainment. The parents received gifts from their friends on this occasion. If the child was a male, their door was decked with an olive garland; if a female, with wool, denoting the work about which women were to be employed. *Potter.*

**LUSTRATION**, *f.* [Fr. from *lustratio*, Lat.] Purification by water.—What were all their *lustrations*, but so many solemn purifyings, to render both themselves and their sacrifices acceptable to their gods? *South.*

By ardent pray'r, and clear *lustration*,  
Purge the contagious spots of human weakness. *Prior.*

**LUSTRATION**, or **EXPIATION**, in antiquity, sacrifices or ceremonies by which the ancients purified their cities, fields, armies, or people, defiled by any crime or impurity. Some of these lustrations were public, others private. There were three species or manners of performing lustration, viz. by fire and sulphur, by water, and by air; which last was done by fanning and agitating the air round the thing to be purified. Some of these lustrations were necessary, i. e. could not be dispensed with; as lustrations of houses in time of a plague, or upon the death of any person: others again were done out of choice, and at pleasure. The public lustrations at Rome were celebrated every fifth year; in which they led a victim thrice round the place to be purified, and in the mean time burnt a great quantity of perfumes. Their country lustrations, which they called *ambarvalia*, (see that word, vol. i.) were celebrated before they began to reap their corn: in those of their armies, which they called *armilustria*, some chosen soldiers, crowned with laurel, led the victims, which were a cow, a sheep, and a bull, thrice round the army, ranged in battle-array in the field of Mars, to which deity the victims were afterwards sacrificed, after pouring out many imprecations upon the enemies of the Romans. The lustrations of their flocks were performed in this manner: the shepherd sprinkled them with pure water, and thrice surrounded his sheepfold with a composition of favin, laurel, and brimstone, set on fire; and afterwards sacrificed to the goddess Pales an offering of milk boiled, wine, a cake, and millet. As for private houses, they were lustrated with water, a fumigation of laurel, juniper, olive-tree, favin, and such-like; and the victim commonly was a pig. Lustrations made for particular persons were commonly called *expiations*, and the victims *piacula*.

All sorts of perfumes, and odoriferous herbs, had place in lustration. The egg was much used among them, as being the symbol of the four elements: its shell, they say, represents the earth; the yolk, a globe of fire; the white, resembles the water; and besides it has a spirit, they say, which represents the air. For this reason it is, that the bonzes, or Indian priests, believe to this day that the world came out of an egg. There is scarcely any pot-herb,

pulse, tree, mineral, or metal, which they did not offer to their gods by way of expiation: nor did they forget milk, bread, wine, and honey; what is more, they made use of the very spittle, and urine.

The poets had feigned, that the gods purified themselves; and they did not omit to purify their statues. When a man who had been falsely reputed dead, returned home, he was not to enter the house by the door. It was a settled custom to offer no expiation for those who were hanged by order of justice, or that were killed by thunder. Neither did they offer any for those who were drowned in the sea; it being the common opinion, that their souls perished with their bodies. And hence it was, that persons in danger of shipwreck sometimes thrust their swords through their bodies, that they might not die in the sea; where they thought their soul, which they supposed to be a flame, would be totally extinguished. The most celebrated expiatory sacrifice was the hecatomb, when they offered a hundred beasts; though they commonly did not offer so many, but contented themselves with killing twenty-five; but, those being quadrupeds, their feet came to a hundred.

The manner of the Macedonians purifying their army by lustration was this: At the time of their festival Xanthica, they divided a bitch into two halves, one of which, together with the entrails, was placed upon the right hand, the other upon the left; between these the army marched in this order: after the arms of the Macedonian kings, came the first line of the army, consisting of horse; these were followed by the king and his children, after whom went the life-guards; then followed the rest of the army: this done, the army was divided into two parts, one of which being set in array against the other, there followed a short encounter in imitation of a fight. *Potter, Archaeol. Græc.*

Lustrations and lustratory sacrifices were not only performed for men, but also for temples, altars, theatres, trees, fountains, rivers, sheep, fields, and villages. Cities were also to be purified, from time to time: some made the victim walk round their walls, and then slew him. The Athenians sacrificed two men, one for the men of their city, and the other for the women. The Corinthians sacrificed the children of Medea so: though the poets say, Medea killed them herself. The Romans performed the ceremony of purifying their city every fifth year; whence the name of *lustrum* was given to the space of five years.

Divers of the expiations were austere: some fasted; others abstained from all sensual pleasures; some, as the priests of Cybele, castrated themselves; others, that they might live chaste, ate rue, or lay under the branches of a shrub called *agnus castus*. They cast into the river, or at least out of the city, the animals or other things that had served for a lustration, or sacrifice of atonement; and thought themselves threatened with some great misfortune, when by chance they trod upon them. At Marseilles they took care to feed a poor man for some time; after which, they charged him with all the sins of the country, and drove him away: those of Leucade fastened a number of birds to a man charged with their sins, and in that condition cast him headlong from a high tower; and, if the birds hindered his being killed, they drove him out of the country. Some of these ceremonies were abolished by the emperor Constantine, and his successors; the rest subsisted till the Gothic kings were masters of Rome, under whom they expired; except that several of them were adopted by the popes, and brought into the church, where they make a figure to this day: witness the numerous consecrations, benedictions, exorcisms, ablutions, sprinklings, processions, feasts, &c. still in use in the Roman church.

The method of lustration, or expiation, among the Jews, was chiefly by sacrifice, whether for sins of ignorance, or to purify themselves from certain pollutions. The feast of expiation, called by our translators the *day of atonement*,

was held on the tenth day of Tisri, or the seventh month of the Jewish year, answering to part of our September and October. It was instituted by God himself; (Levit. xxiii. 27, &c.) On that day the high-priest, the figure or type of Jesus Christ, entered into the most holy place, and confessed his sins; and, after several ceremonies, made an atonement for all the people, to wash them from their sins. And, as the heathens either destroyed or drove away those animals or persons who had served in the lustration, so the Jews set at liberty the *scape-goat* on the day of solemn expiation. For the ceremonies on this occasion, see Levit. xvi. 5, 6, &c. Some say, that a piece of scarlet cloth, in form of a tongue, was tied on the forehead of the *scape-goat*. *Hoff. Lex. Univ. in voc. Lingua.*

Many have been the disputes among the interpreters concerning the meaning of the word *scape goat*; or rather of *azazel*, for which *scape-goat* is put in our version of the Bible. Spencer is of opinion, that *Azazel* is a proper name, signifying the devil, or evil dæmon; and that the genuine reasons of the ceremony were, 1. That the goat, loaded with the sins of the people, and sent to *Azazel*, might be a symbolical representation of the miserable condition of sinners. 2. God sent the goat thus loaded to the evil dæmons, to show that they were impure, thereby to deter the people from any conversation or familiarity with them. 3. That, the goat sent to *Azazel* sufficiently expiating all evils, the Israelites might the more willingly abstain from the expiatory sacrifices of the Gentiles. *Spencer de Leg. Heb. Ritual. Diss. viii.*

**LUSTRE**, *f.* [*lustre*, Fr.] Brightness; splendour; glitter.—Out, vile jelly! where is thy *lustre* now? *Shakespeare's King Lear.*

Pass but some fleeting years, and these poor eyes,  
Where now without a boast some *lustre* lies,  
No longer shall their little honours keep,  
But only be of use to read or weep.

*Prior.*

A sounce with lights:

Ridotta sips, and dances till she see  
The doubling *lustres* dance as quick as she.

*Pope.*

Eminence; renown.—His ancestors continued about four hundred years, rather without obscurity than with any great *lustre*. *Wotton.*—I used to wonder how a man of birth and spirit could endure to be wholly insignificant and obscure in a foreign country, when he might live with *lustre* in his own. *Swift.*

**LUSTRE** is particularly used to denote the gloss or brightness appearing on any thing, particularly on manufactures of silk, wool, or stuff. It is likewise used to denote the composition or manner of giving that gloss. The lustre of silks is given them by washing in soap, then in clear water, and dipping them in alum-water cold. To give stuffs a beautiful lustre: For every eight pounds of stuff allow a quarter of a pound of linseed; boil it half an hour, and then strain it through a cloth, and let it stand till it is turned almost to a jelly; afterwards put an ounce and a half of gum to dissolve twenty-four hours; then mix the liquor, and put the cloth into this mixture; take it out, dry it in the shade, and press it. If once doing is not sufficient, repeat the operation. Curriers give a lustre to black leather first with juice of barberries, then with gum-arabic, ale, vinegar, and Flanders glue, boiled together. For coloured leather, they use the white of an egg beaten in water. Morocoes have their lustre from juice of barberries, and lemon or orange. For hats, the lustre is frequently given with common water; sometimes a little black dye is added: the same lustre serves for furs, except that for very black furs they sometimes prepare a lustre of galls, copperas, Roman alum, ox's marrow, and other ingredients. *Ency. Brit.*

**LUSTRIFICAL**, *adj.* [from *lustrum*, Lat. a purification, and *facio*, to make.] Purifying, expiating. *Cole.*

**LUSTRING**, *f.* [from *lustre*.] A shining silk; commonly pronounced *lutestring*, and sometimes written so.—

Charles Townshend calls the present a *lutestring* ministry. *Chesterfield.*

A company was incorporated for making, dressing, and lustrating, alamodes and lustrings in England, who were to have the sole benefit thereof, by stat. 4 and 5 William and Mary. And no foreign silks known by the name of *lustrings*, or alamodes, are to be imported but at the port of London, &c. 9, 10, William III. c. 43. See **SILK**.

**LUSTROUS**, *adj.* Bright; shining; luminous.—Noble heroes, my sword and yours are kin, good sparks and *lustrous*. *Shakespeare.*—The more *lustrous* the imagination is, it filleth and fixeth the better. *Bacon's Nat. Hist.*

**LUSTRUM**, *f.* A term used by the Romans, to signify a space of five years. Varro derives the word from *lucro*, to pay; because at the beginning of every fifth year they paid the census, or tribute imposed by the censors; whose authority, at their first institution, was continued them for five years; though afterwards it was abridged to one. Others rather derive the word from *lustrare*, to make a review; because once in five years the censors reviewed the army.

**LUSTRUM** was also a ceremony, or sacrifice, used by the Romans, after numbering their people, once in five years. See **LUSTRATION**. The census was accompanied always by a lustration of the people, hence the word *lustrum* has constantly been taken by the ancients and moderns for a term of five years; yet, if we enquire into the real state of the case, we shall find no good ground for fixing so precise a signification to it; but, on the contrary, that the census and lustrum were, for the most part, held irregularly and uncertainly, at very different and various intervals of time, as the particular exigencies of the state required. Thus, though the custom was first instituted by Servius Tullius about 180 years after the foundation of Rome, we find the fifth lustrum celebrated at Rome only in the 574th year of that city.

**LUSTY**, *adj.* [*lustig*, Dut.] Stout; vigorous; healthy; able of body:

If *lusty* love should go in quest of beauty,  
Where should he find it fairer than in Blanch? *Shakespeare.*

We yet may see the old man in a morning,  
*Lusty* as health, come ruddy to the field,  
And there pursue the chace.

*Otway.*

Proud; conceited:

Proud of their numbers, and secure in soul,  
The confident and over-*lusty* French

Do the low-rated English play at dice. *Shakespeare.*

**LUSUC**. See **LUCKO**, p. 764.

**LUSUS**, *f.* [Latin.] A sport; a frolic; a natural production out of the common way.

**LUTANGE**, a town of France, in the department of the Moselle: eight miles south-east of Thionville, and eleven north-north-east of Metz.

**LUTANGER**, a small island in the Eastern Indian Sea, near the south coast of Mindanao. Lat. 7. 19. N. lon. 123. 15. E.

**LUTANIST**, *f.* [from *lute*.] One who plays upon the lute.

**LUTARIOUS**, *adj.* [*lutarius*, Lat.] Living in mud.—Of the colour of mud.—A scaly tortoise-shell, of the *lutarius* kind. *Grew.*

**LUTA'YA**, one of the smaller Philippine islands, near the island of Panay.

**LUTE**, *f.* [*luto*, Ital. *lauten*, Germ. to found.] A musical stringed instrument, of which, though the shape or found is now hardly known, yet during the sixteenth and seventeenth centuries it was the favourite chamber-instrument of every nation in Europe; and in the beginning of dramatic music the recitatives were accompanied by the arch-lute, or theorbo, instead of the harpsichord. Sir Thomas Wyatt, the elder, one of the best early poets, has left us a sonnet to his lute, written very early in the sixteenth century;

tury; and Congreve, at the end of the seventeenth, has celebrated the performance of Mrs. Arabella Hunt on that instrument. The earliest mention of the lute that we have found among the moderns is in Boccaccio, *Giornata prima*, where the singing is generally said to have been accompanied by the lute. In Chaucer's Pardoner's Tale, we are told:

In Flanders whilom was a compaignie  
Of youngè folke that haunted in folie,  
As hazard, riot, stews and tavernes  
Whereas with harpes, lutes, and guitèrnes  
They daunce and play.

In Shakespear's First Part of Henry IV. Mortimer tells his lady, who can speak no English, that her tongue

Makes Welsh as sweet as ditties highly penn'd,  
Sung by a fair queen in a summer's bower,  
With ravishing division, to her lute.

And in lord-commissioner Whitelocke's manuscript narrative of a masque given in 1633, to Charles I. and his queen, by the four inns of court, he says, that "he engaged forty lutes, besides other instruments, and voyces of the most excellent kind in consort."

There was a lute at the Italian opera in England to the end of Handel's regency; and the place of lutenist in the king's chapel was continued till the death of Gigglier, about the middle of the last century. It seems as if in France there had been a time when there were no other instruments in use than lutes, as *luthier* not only implies the maker of lutes, but violins, violoncellos, and other instruments of the same kind.

The stringed instruments of the ancients were so numerous, and so various in their forms, that we know not the precise difference between the lyre and cithara. The testudo, among poets, not only implies the lyre, said to have been originally made by Mercury of the back or hollow shell of the Testudo aquatica, or sea-tortoise, but music itself.

Vincenzo Galileo (Dial.) says the best lutes were made in England; but those of Bologna are most famous. This instrument consists of four parts, the table, the body or belly, which has nine or ten sides, the neck or finger-board, which has nine or ten frets or divisions marked with catgut or bowel-strings, and the head or cross, where the screws or pins for tightening or relaxing the strings in tuning are fastened. This is called the lute with two necks, or the theorbo, which has sometimes only one string to each note. In the middle of the belly, or table, there is a rose, or passage for the sound. There is also a bridge, to which the strings are fastened; and a piece of ivory between the head and the neck, to which the other extremities of the strings are fitted. In performing on the lute, the strings are struck with the right hand, and pressed upon the frets with the left.

The inhabitants of Congo have a lute of a singular kind. The body and neck of this instrument resemble ours; but the belly, that is, the place where the rose or sound-hole has place in our lutes, is of very thin parchment; which probably implies that the whole table or belly of this instrument is covered with parchment instead of wood. It is strung with the hair of an elephant's tail, the strongest and the best that can be chosen; or else with the bark of the palm-tree. The strings reach from one end of the instrument to the other, and are fastened to rings fixed at different places of the lute one above the other. To these rings are suspended small plates of iron and silver of different sizes and different tones. In thrumming the strings, these rings are put in motion, which likewise move the little metal plates, and the whole forms a kind of murmuring harmony, or rather a confused noise, which is not disagreeable. Indeed, the inhabitants add, that by means of this instrument the musician expresses his thoughts as clearly as if he were speaking.

LUTE, *f.* [*lutum*, Lat. clay.] In chemistry, a composition of certain tenacious substances, wherewith to close

the apertures and junctures of vessels in distillation, &c. See LUTING.

Some temper *lute*, some spacious vessels move;  
These furnaces erect, and those approve.

Garth.

To LUTE, *v. a.* To close with lute, or chemists' clay.—Iron may be so heated, that, being closely luted in a glass, it shall constantly retain the fire. *Wilkins's Math. Magick.*

LU'TE-CASE, *f.* A case for a lute.—Bardolph stole a lute-case, bore it twelve leagues, and sold it for three halfpence. *Shakesp. Hen. V.*

LU'TE-RESOUNDING, *adj.* Responsive to the sound of a lute:

In lands of singing or of dancing slaves,  
Love-whispering woods, and lute-resounding waves. *Pope.*

LU'TE-STRING, *f.* The string of a lute.—Nay, but his jesting spirit; which is now crept into a lute-string, and now governed by stops. *Shakesp. Much Ado.*

LUTEEFGUR', or LUTTEEF-GHUR, a town of Hindoostan, situated in a pass between the mountains of Rennares. The air is very unwholesome. It is fifteen miles south-east of Chunar.

LUTEO'LA, *f.* in botany. See DATISCA and RESEDE.  
LU'TEOUS, *adj.* [from *lute*.] Full of clay; resembling clay.

LUTEREE', a town of Hindoostan, in Lahore: thirty-three miles north of Jummo.

LU'TE'TIA, in ancient geography, a town of the Parthi, in Gallia Celtica, situated in an island in the Sequana, or Seine. It received its name, as some suppose, from the quantity of clay, *lutum*, in its neighbourhood. Julius Cæsar fortified and embellished it; from which circumstance some authors call it *Julii Civitas*. It is now PARIS, the capital of France.

LU'THER (Martin), the illustrious author of the reformation in Germany, was descended from parents in humble circumstances and born at Eisleben in Saxony, in the year 1483. Having discovered an early inclination for learning, he was initiated in the rudiments of grammar while he continued at his father's house; and, when he had entered on his fourteenth year, was sent to a school at Magdeburg. Owing to the poverty of his parents, however, he was not able to remain there more than one year; and during that time was obliged, like many other poor German scholars to support himself by begging his bread. From Magdeburg he was sent to Eysenach in Thuringia, where he was amongst the relations of his mother, who was descended from an ancient and reputable family in that place. Here he attended a celebrated school for four years, and distinguished himself by his diligence and proficiency, while he afforded many indications of uncommon vigour and acuteness of genius. In the year 1501, he went to the university of Erfurt, where he passed through the courses of logic and philosophy, according to the scholastic methods then in vogue, under very able masters; and wanted not penetration to comprehend all the niceties and distinctions with which they abounded; but his understanding, naturally sound, and superior to every thing frivolous, soon became disgusted with those subtle and unimportant sciences. He therefore studied with great assiduity the works of the ancient Latin writers, such as Cicero, Virgil, Livy, &c. and, as he possessed a wonderfully-retentive memory, laid in from them such a fund of knowledge and good sense, as rendered him the object of admiration to the whole university. Having obtained the degree of M. A. when he was only twenty years of age, he afterwards read lectures on Aristotle's physics, on ethics, and other branches of philosophy; and acquired no little reputation for eloquence, as well as learning, acuteness, and vigour of mind. As he was thus possessed of talents and acquirements which would appear with eminent advantage in the legal profession, by the advice of his relations he applied to the study of jurisprudence: but he was soon diverted from this pursuit, and led entirely to change his views in life, by an accident. While walking out one day with a friend into the fields,

MARTIN LUTHER

*London. Published April 6. 1704. by G. Jones.*

By the discharge of a thunder-cloud his companion was killed, and he was himself thrown on the ground, though he sustained no personal injury. This event affected him very sensibly; and, as his mind was naturally susceptible of serious impressions, and tinged with somewhat of that religious melancholy which delights in the solitude of a monastic life, he determined to retire from the world into a convent of Augustinian friars; and, without suffering the entreaties of his parents to divert him from what he thought his duty to God, he assumed the habit of that order. Here he applied himself closely to the study of divinity, as laid down in the writings of the schoolmen; but was soon furnished with a more solid foundation of knowledge and piety in the sacred Scriptures. Having accidentally met with a copy of the Latin Bible, which lay neglected in the library of his monastery, and which he had never before seen, his curiosity was so highly raised, that he abandoned all other pursuits, and devoted himself to the study of it with such eagerness and assiduity as astonished the monks, who were little accustomed to derive their theological notions from that source. After having passed a year in the monastery of Erfurt, he took the vows; and he was admitted to priests' orders in the year 1507.

The fame of Luther's sanctity and learning, and particularly his knowledge of the scriptures, was now widely diffused; and, in the year 1508, Frederic elector of Saxony, having lately founded an university at Wittemberg, the place of his residence, chose Luther to fill at first the chair of philosophy, and afterwards that of divinity, in the new seminary. The duties of these employments, he discharged with so much ability, and in a method so different from the usual mechanical and dull forms of lecturing, that he was crowded with pupils from all quarters, and was deservedly esteemed the chief ornament of the university. At the same time Luther distinguished himself by the superiority of his talents as a pulpit-orator. In the year 1510, the monks in different convents belonging to his order, being embroiled in some disputes with their vicar-general, fixed upon Luther to go to Rome, for the purpose of defending their cause at the papal court: an employment for which his abilities, and firm undaunted mind, peculiarly qualified him. While in that city, he made his observations on the pope, and the government of the Romish church; he also examined the manners of the clergy, which he severely censures, and particularly condemns the haste and indifference with which they discharged the public duties of their sacred function: "I had not been long at Rome," says he, "before I performed mass; and I frequently saw it performed by others, but in such an indecent manner, that I can never think of it without horror." Of the effects produced on his mind by the observations which he made in this journey he afterwards often spoke with pleasure, declaring, "that he would not but have made it for a thousand florins."

Luther, as soon as he had accomplished the object of his mission, returned to Wittemberg; where, in the year 1512, he had the degree of doctor of divinity conferred on him, at the expense of Frederic elector of Saxony, who frequently heard him preach, and was fully sensible of his extraordinary merit. At first, he was desirous of declining this honour, considering himself too young for such a distinction, as he was only in his thirtieth year; but his objection was over-ruled, and he was told that he must suffer himself to be dignified, "for that God had important services to be performed in the church, and through his instrumentality." Lightly as this expression might at the time be uttered, subsequent events proved it to be a serious truth. Luther now applied himself with the greatest diligence to the duties of his divinity-chair. He read lectures on the books of Scripture. He explained the Epistle to the Romans, and afterwards the Psalms; of which his illustrations were so satisfactory, that, in the judgment of pious and thinking men, he was regarded as the harbinger of a new day which was to succeed the long night of darkness and ignorance. He also boldly opposed, both in

his lectures and in his sermons, many erroneous notions which had been received in the church and in the schools, renouncing all other tests of their truth but the Scriptures. To qualify himself the better for his important office, he applied himself with diligence to the study of the Greek and Hebrew languages, and encouraged their cultivation in the university: he also recommended the perusal of the writings of Erasmus, as admirable antidotes to monastic ignorance, and helps in acquiring just sentiments, and awakening a liberal spirit of enquiry. While Luther was thus active in propagating knowledge by his lectures and sermons, he was a rigid exactor of discipline among the students, and was himself an example of strict obedience to the laws of the university, of indefatigable application, and of unimpeachable morals. By these means he acquired vast credit and authority, and contributed to raise the university of Wittemberg to a height of reputation, which amply gratified the elector for his munificence in founding it. In these circumstances, a general sale of indulgences published by pope Leo X. proved the first link in a chain of causes which produced a revolution in the sentiments of mankind, "the greatest," says Dr. Robertson, "as well as the most beneficial, that has happened since the publication of Christianity." When Leo was raised to the papal throne, he found the revenues of the church exhausted by the vast projects of his two ambitious predecessors, Alexander VI. and Julius II. His own temper, naturally liberal and enterprising, rendered him incapable of that severe and patient economy which the situation of his finances required. On the contrary, his schemes for aggrandizing the family of Medici, his love of splendour, his taste for pleasure, and his munificence in rewarding men of genius, involved him daily in new expenses; in order to provide for which, he tried every device that the fertile invention of priests had suggested, to drain the credulous multitude of their wealth. Among others, he had recourse to a sale of indulgences. The *indulgences* pretended to convey to the possessor either the pardon of his own sins, or the release of any one in whose happiness he is interested, from the pains of purgatory. They were first invented in the eleventh century by Urban II. as a recompense for those who went in person to join the armies of the crusaders in the Holy Land. Afterwards they were granted to those who hired a soldier for that purpose; and in process of time were bestowed on such as gave money for accomplishing any pious work enjoined by the pope. Julius II. had bestowed indulgences on all who contributed towards building the church of St. Peter at Rome; and, as Leo was carrying on that expensive fabric, his grant was founded on the same pretence. The right of promulgating these indulgences in Germany, together with a share in the profits arising from the sale of them, was granted to Albert, elector of Mentz and archbishop of Magdeburg; who, as his chief agent for retailing them in Saxony, employed Tetzel, a Dominican friar, of licentious morals, but of an active spirit, and remarkable for his noisy and popular eloquence. This man, assisted by the monks of his order, executed the commission with great zeal and success, but with little discretion or decency. For though, by magnifying the benefit of their indulgences, and selling them at a low price, they for a time carried on a lucrative traffic among the credulous and the ignorant; yet the extravagance of their encomiums, and the irregularities in their conduct, came at last to give general offence, and to make it the general wish that some check were given to this commerce, no less detrimental to society than destructive to religion.

Luther, in the mean time, beheld with the utmost concern the artifices of those who sold, and the simplicity of those who bought, indulgences. Boldly rejecting the opinions of the schoolmen, on which the practice was founded, and finding that it derived no countenance from the Scriptures, he determined openly to protest against such a scandalous imposition on his deluded countrymen. Accordingly,

cordingly, in the year 1517, from the pulpit in the great church at Wittemberg, he inveighed bitterly against the irregularities and vices of the monks who distributed indulgences; tried the doctrines which they taught by the test of Scripture; and pointed out to the people the danger of relying for salvation on any other means than those appointed by God in his word. The boldness and novelty of these opinions excited great attention; and, being recommended by the authority of Luther's personal character, and delivered with a popular and persuasive eloquence, they made a great impression on his hearers. Luther also wrote to Albert, elector of Mentz and archbishop of Magdeburg, remonstrating against the false opinions, as well as wicked lives, of the preachers of indulgences; entreating him to exercise the authority vested in him in correcting these evils; and apologizing for the freedom which he had taken in his letter, influenced solely by a sense of duty, and no want of submission to ecclesiastical authority. To this letter the archbishop paid no attention, being too deeply interested in the success of his agents to correct their abuses. He paid equal disregard to the theses, containing Luther's sentiments concerning indulgences, which he transmitted on this occasion to that prelate. These *theses*, which were ninety-five in number, he proposed as subjects of enquiry and disputation, and publicly fixed them up in a church at Wittemberg, with a challenge to the learned to oppose them on a day which he appointed, either in person or by writing; and to the whole he added a solemn protestation of his profound respect for the apostolic see, and implicit submission to its authority. On the day fixed, no person appeared to contest Luther's theses, which rapidly spread all over Germany, and excited universal admiration of the boldness which he discovered in venturing to call in question the plenitude of papal power, and to attack the Dominicans, armed as they were with all the terrors of inquisitorial authority. With his invectives against these monks the friars of his own order were highly pleased, and hoped to see them exposed to the hatred and scorn of the people; and he was secretly encouraged in his proceedings by his sovereign, the elector of Saxony, who flattered himself that they might contribute to give some check to the exactions of the court of Rome, which the secular princes had been long unsuccessfully endeavouring to oppose.

The publication of Luther's theses soon brought into the field many zealous champions in defence of the opinions on which the wealth and power of the church were founded. In opposition to them, Tetzels published *counter theses*, at Frankfort on the Oder. He also endeavoured to excite the indignation of the clergy and populace against Luther, by the most bitter invectives, denouncing him from the pulpit as a heretic; and, in his character of inquisitor, burnt his theses publicly at Frankfort. This insult the students of Wittemberg retaliated upon the theses of Tetzels, by committing them to the flames in the public market-place, but without the knowledge of Luther, who expressed his disapprobation of that procedure. In the year 1518, two famous Dominicans, Prierias, master of the sacred palace, and inquisitor-general, and James Hogstrat, rose up also against the adventurous reformer, and attacked him at Cologne, with the utmost vehemence and ardour. Their example was soon followed by another formidable champion, the celebrated Eckius, professor of divinity at Ingolstadt, and one of the most zealous supporters of the Dominican order. But the manner in which they conducted the controversy did little service to their cause. Luther combated indulgences by arguments founded in reason, or derived from Scripture; while they produced nothing in support of them but the sentiments of schoolmen, the conclusions of the canon-law, and the decrees of popes. The people, however, now began to be dissatisfied with an appeal to those guides, when they were found to stand in opposition to the dictates of reason, and the determinations of the divine law; and they were strongly impressed by Luther's

intrepid declaration, "that, if the pope and cardinals entertained the same opinion with his opponents, and set up any authority against that of Scripture, there could be no doubt but that Rome was itself the very seat of antichrist, and that it would be happy for those countries who should separate themselves from her." At the same time, however, Luther addressed himself by letters, written in the most submissive and respectful terms, to the Roman pontiff and to several of the bishops, showing them the uprightness of his intentions, as well as the justice of his cause; and declaring his readiness to change his sentiments, as soon as he should see them fairly proved to be erroneous.

But, while all Germany was interested by these novelties in Luther's doctrines, they excited little attention and no alarm at the court of Rome. A stranger to theological controversies, and apt to despise them, Leo X. viewed the quarrels of German monks with indifference and contempt. He imputed the whole to monastic enmity and emulation, and seemed inclined not to interpose in the contest, but to allow the Augustinians and the Dominicans to wrangle about the matter with their usual animosity. The incessant representations, however, of Luther's adversaries, that the heresies which he propagated threatened the most fatal mischiefs to the interests of the church, and, in particular, the application of the emperor Maximilian to his holiness, that he would by his authority terminate disputes which otherwise would produce the most fatal divisions in Germany, at length roused the attention of Leo, who directed a summons to be issued, citing Luther to appear at Rome within sixty days, and give an account of the doctrines which he had maintained. The persons appointed to be his judges were—the bishop of Ascoli, auditor of the sacred chamber, and the inquisitor-general Prierias, who by writing against Luther had already prejudged his cause. Leo wrote at the same time to the elector of Saxony, beseeching him not to protect a man whose tenets were shocking to all pious ears; and he enjoined the provincial of the Augustinians to check the rashness of an arrogant monk, which disgraced his order, and gave offence and disturbance to the whole church.

The strain of these letters, and the appointment of Prierias to sit in judgment on him, afforded unequivocal indications of what sentence Luther might expect at Rome. He, therefore, made use of every effort to obtain a hearing of his cause in Germany. With this view, the professors of the university of Wittemberg wrote to the pope, excusing Luther from going to Rome, under various pretexts, and praying that some persons of learning and authority might be commissioned to decide on his doctrines in that country. The elector of Saxony also desired the same thing of the pope's legate at the diet of Augsburg; maintaining, that the cause of Luther belonged to a German tribunal, and that it ought to be decided by the ecclesiastical laws of the empire. At the same time Luther himself, who had not then the most distant intention of questioning the papal authority, wrote a most submissive letter to Leo, in which he promised an unreserved compliance with his will. Influenced by these letters and applications, the pope empowered his legate in Germany, cardinal Cajetan, to hear and determine the cause. In this first step, observes Dr. Mosheim, the court of Rome gave a specimen of that temerity and imprudence, with which all its negotiations, in this weighty affair, were afterwards conducted. For, instead of reconciling, nothing could tend more to inflame matters than the appointment of Cajetan, a Dominican, and, consequently, the declared enemy of Luther, and friend of Tetzels, as judge and arbitrator in this nice and perilous controversy.

Luther, notwithstanding the reason which he had to complain that his judge was selected from among his adversaries, after having obtained the emperor's safe conduct, repaired to Augsburg in the month of October 1518. Here he was admitted into the cardinal's presence, who conferred with him on the points in debate at three dif-

ferent meetings. The legate, however, would not condescend to enter into a formal dispute with a person of such inferior rank; and even disdained to resort to any other methods of persuasion, than the arrogant dictates of mere authority. In a high and overbearing tone, he required Luther, by virtue of the apostolic powers with which he was invested, to retract the opinions which he had advanced, humbly to confess his fault in publishing them, and to submit respectfully to the judgment of the Roman pontiff. But the intrepid spirit of Luther was not to be daunted by such a haughty and violent manner of proceeding. Though surprised at the abrupt mention of a recantation, before any endeavours had been used to convince him that he was mistaken, his presence of mind did not forsake him, and he declared, with the utmost firmness, that he could not, with a safe conscience, renounce opinions which he believed to be true; nor should any consideration induce him to do what would be so base in itself, and so offensive to God. At the same time he expressed the same respect as formerly for the papal authority, and declared his readiness to submit to the lawful determination of the church. He also expressed his willingness to refer the controversy to certain universities which he named; and promised neither to write nor preach concerning indulgences, provided the same silence with respect to them were enjoined on his adversaries. These declarations and offers Cajetan disregarded or rejected, and still peremptorily insisted on Luther's simple recantation; threatening him with the censures of the church, and forbidding him to appear in his presence any more, unless he came prepared to comply with what he required. This imperious and imprudent manner of proceeding, as well as other circumstances, gave Luther reason to suspect that his person was in danger from the legate's power and resentment, notwithstanding the emperor's safe-conduct; and he determined, by the advice of his friends, to withdraw suddenly and secretly from Augsburg. But, before his departure, he prepared a formal and solemn appeal, from the pope, ill-informed as he then was concerning his cause, to the pope when he should receive more full information with respect to it.

Luther's sudden departure from Augsburg, and the publication of his appeal, enraged the papal legate, who wrote to the elector of Saxony, complaining of both; and requiring him, as he regarded the peace of the church, to withdraw his protection from that seditious monk, and either to send him a prisoner to Rome, or to banish him from his territories. The elector, however, declined complying with either of these requests, under various pretexts, and with many professions of esteem for the cardinal, as well as of reverence for the pope; and he also gave assurances to Luther that he would not desert him. Thus supported, that reformer continued to vindicate his own opinions, and to inveigh against those of his adversaries, with more freedom and vehemence than ever; and he gave a challenge to all the inquisitors to come and dispute with him at Wittemberg, promising them not only a safe conduct from the elector, but liberal entertainment, free from any expense, while they continued at that place.

In the mean time, Leo's ambition and despotism urged him to issue a bull, in the month of November 1518, by which he attempted, by his own decision, to put an end to the dispute about indulgences. In this bull he magnified the virtue and efficacy of indulgences, in terms as extravagant as any of his predecessors had ventured to use in the darkest ages; and commanded all Christians to assent to what he delivered as the doctrine of the catholic church, under the penalty of the heaviest ecclesiastical censures. No sooner did Luther receive information of this inconsiderate and violent measure, than he was convinced that the pope would soon proceed to extremities against him; and therefore had recourse to the only expedient in his power for preventing the effect of the papal censures, by appealing from the pontiff to a gene-

ral council, which he affirmed to be superior in authority to the pope. The death of the emperor, however, in January 1519, rendered it expedient for the court of Rome to suspend any direct proceedings against Luther: for, by that event, the vicariat of that part of Germany which is governed by the Saxon laws devolved to the elector of Saxony, and was executed by him during the interregnum which preceded the election of the emperor Charles V. Under his administration Luther enjoyed tranquillity; and his opinions were suffered to take root in different places, and to grow up to some degree of strength and firmness. At the same time Leo, who was much interested in the succession to the empire, that he might avoid irritating a prince who had such influence in the electoral college as Frederic, thought it expedient to have recourse to negotiation, that he might bring back our reformer to submission and obedience. For this purpose he fixed upon Charles Miltitz, a Saxon knight, who belonged to his court, and was a person of great prudence, penetration, and dexterity, and in every respect qualified for such a delicate commission. This person Leo sent as his legate into Saxony, to present to Frederic a golden consecrated rose, such as the popes had been accustomed to bestow, as a peculiar mark of distinction, on those princes for whom they professed an uncommon friendship and esteem; and also to treat with Luther about the means of reconciling him to the court of Rome. Miltitz artfully commenced the business of his legation, by loading Tetzl with the bitterest reproaches, on account of the irregular and superstitious means which he had employed for promoting the sale of indulgences, and attributed to him all the abuses that Luther had complained of. This incendiary having been sacrificed as a victim to cover the Roman pontiff from reproach, Miltitz entered into a particular conference with Luther; and, by the concessions which he made, his encomiums on Luther's character, capacity, and talents, his soothing language, and his pathetic expostulations in favour of union and concord in an afflicted and divided church, produced a considerable impression on Luther's mind. Upon this occasion he led him to make submissions, which showed that his views were not, as yet, very extensive, his former prejudices quite expelled, nor his reforming principles steadily fixed. For he not only offered to observe a profound silence in future on the subject of indulgences, provided that the same conditions were imposed upon his adversaries, but he wrote an humble and submissive letter to the pope, acknowledging that he had carried his zeal and animosity too far; and he even consented to publish a circular letter, exhorting all his followers to reverence and obey the dictates of the holy Roman church: a measure which could scarcely have been expected from a man who had already appealed from the pope to a general council.

Had the court of Rome been prudent enough to have been satisfied with the submission of Luther, and repressed the forwardness of its champions to appear in the field of theological controversy, the cause of the reformation would have been almost nipped in its bud; at least its growth and progress would have been considerably retarded. But the excessive zeal of some inconsiderate bigots, renewed the divisions which were so near being healed, and animated Luther and his followers to examine deeper into the enormities which prevailed in the papal hierarchy, as well as the doctrines of the church of Rome. One of the circumstances that contributed principally, at least by its consequences, to render the legation of Miltitz ineffectual for the restoration of peace, was a famous controversy carried on at Leipzig in the year 1519. It originated in a challenge from Eckius, who had before drawn his pen against Luther, to Carlostadt, his colleague and companion, to a public dispute concerning the freedom of the will; and to Luther, to enter the lists with him, while he defended the authority and supremacy of the Roman pontiff. The challenge was accepted; and on the appointed day the three champions appeared in the field.

The assembly which met to witness the combat was numerous and splendid, and each of the combatants conducted himself with great skill and dexterity; but, in the opinion of the majority of those who were present, the victory was not obtained by the challenger. In the dispute concerning the papal supremacy and authority, Luther demonstrated, that the church of Rome, in the earlier ages, had never been considered as superior to other churches; and combated the pretensions of that church and its bishop, from the testimony of Scripture, the authority of the fathers, and the best ecclesiastical historians, and even from the decrees of the council of Nice; while the arguments of Eckius were derived from the spurious and insipid decretals, which were scarcely of four hundred years standing. This controversy, however, was left undecided, as Hoffman, who was at that time rector of the university of Leipzig, and who had been appointed judge of the arguments alleged on both sides, refused to declare to whom the victory belonged; so that the decision of this matter was left to the universities of Paris and Erfurt. One of the immediate effects of this dispute was an increase of the enmity which Eckius had conceived against Luther; and from this time the former breathed nothing but fury against the Saxon reformer. Luther, however, had the satisfaction to find that his dispute with Eckius had convinced the excellent Philip Melancthon, at that time professor of Greek at the university of Wittemberg, of the justice of his cause; and he had soon afterwards the farther satisfaction of seeing a vigorous auxiliary arise in Switzerland, in the person of Ulric Zuingli, a canon of Zurich, whose extensive learning and uncommon sagacity were accompanied with the most heroic intrepidity and resolution. In this same year, the opinions of Luther concerning indulgences were censured by the universities of Cologne and Louvain; against whose decrees he immediately wrote with his usual spirit and intrepidity, which acquired additional strength from every instance of opposition.

While such was the state of things in Germany, Eckius repaired to Rome, intent on accomplishing the ruin of Luther. There he entered into a league with the Dominicans, who were in high credit at the papal court, and more especially with their two zealous patrons, Prierias and Cajetan; supported by whom, he earnestly solicited Leo to condemn Luther, and to exclude him from the communion of the church. At length, overcome by the importunity of these pernicious counsellors, the pontiff determined to comply with their request; and frequently assembled the college of cardinals, in order to prepare the sentence with due deliberation, and consulted the ablest canonists how it might be expressed with unexceptionable formality. After these preparations, on the 15th of June, 1520, the bull was issued; in which forty-one propositions, extracted from Luther's works, were condemned as heretical, scandalous, and offensive to pious ears; all persons were forbidden to read his writings, on pain of excommunication; those who possessed any of them were commanded to commit them to the flames; he himself, if he did not, within sixty days, publicly recant his errors, and burn his books, was pronounced an obstinate heretic, excommunicated, and delivered unto Satan for the destruction of his flesh; and all secular princes were required, under pain of incurring the same censure, to seize his person, that he might be punished as his crimes deserved. Short-sighted priests, and rash bigots, contemplated in this sentence the ruin of Luther, and the termination of those principles which he had espoused; but it proved fatal only to the church which uttered it, and to the cause which it was intended to support. When an account of what had happened was brought to Luther, he was neither disconcerted nor intimidated, but calmly consulted the most proper means of present defence and future security. After renewing his appeal to a general council, he came to the bold determination of absolutely renouncing the communion of the church of Rome, and of exposing to

the world, without the least disguise or ceremony, the abominable corruptions and delusions of the papal hierarchy. He began by publishing severe remarks upon the bull of excommunication; and, being now persuaded that Leo had been guilty both of impiety and injustice in his proceedings against him, he intrepidly declared the pope to be that *man of sin*, or antichrist, whose appearance is foretold in the New Testament; he declaimed against his tyranny and usurpations with greater violence than ever; he exhorted all Christian princes to shake off such an ignominious yoke; and boasted of his own happiness in being marked out as the object of ecclesiastical indignation, because he had ventured to assert the liberty of mankind. Nor did he confine his expressions of contempt for the papal power to words alone. As Leo, in the execution of the bull, had appointed Luther's books to be burnt at Rome, he, by way of retaliation, assembled all the professors and students in the university of Wittemberg, and with great pomp, in the presence of a prodigious multitude of people of all ranks and orders, committed to the flames the pope's bull, and the decretals and canons relating to his supreme jurisdiction; and his example was followed in several of the cities of Germany. The manner in which this action was justified gave still more offence than the action itself; for Luther, having collected from the canon-law some of the most extravagant propositions with regard to the plenitude and omnipotence of the pope's power, as well as the subordination of all secular jurisdiction to his authority, he published these with a commentary, pointing out the impiety of such tenets, and their evident tendency to subvert all civil government.

On the accession of Charles V. to the empire, Luther found himself in a very dangerous situation. It is to be observed, that hitherto no secular prince had openly embraced his opinions; no change in the established forms of worship had been introduced; no encroachments had been made upon the possessions or jurisdiction of the clergy; and the controversy, though conducted with great heat and passion on both sides, was still carried on with theses, disputations, and replies. A deep impression, however, was made upon the minds of the people; their reverence for ancient institutions and doctrines was shaken; and the materials were already scattered, which kindled into the combustion that soon spread over all Germany. Students crowded from every part of the empire to Wittemberg; and under Luther, Melancthon, Carlostadt, and other masters then reckoned eminent, imbibed opinions, which, on their return, they propagated among their countrymen, who listened to them with that fond attention, which truth, when accompanied with novelty, naturally commands.

In this state of things the emperor Charles V. arrived in Germany; and the first act of his administration, after he had been crowned at Aix-la-Chapelle, was to appoint a diet of the empire to be held at Worms, on the 6th of January, 1521. In his circular letter to the different princes, he informed them, that he called this assembly in order to concert with them the most proper measures for checking the progress of those new and dangerous opinions, which threatened to disturb the peace of Germany, and to overturn the religion of their ancestors. Previously to the meeting of the diet, the pope caused a brief to be presented to the elector of Saxony, by which he gave him notice of the decree which he had made against the opinions of Luther; and accompanied it with a request, that he would cause all Luther's books to be burnt, and that he would either put him to death, or imprison him, or send him to Rome: he also sent a brief to the university of Wittemberg, exhorting them to put his bull into execution against Luther: but to these briefs and exhortations, neither the elector nor the university paid any regard. The emperor and other princes, however, showed greater readiness to gratify his holiness; and, at the instance of his legates, Luther's books were burnt in several cities of Germany. Charles would also have yielded

yielded to their solicitation, that an imperial edict should without delay be issued against that reformer, had he not been unwilling to give offence to the elector of Saxony, to whom he was under much greater obligations than to any other of the German princes, as it was chiefly owing to his disinterestedness, as well as zealous and important services, that he had been raised to the empire, in opposition to the pretensions of such a formidable rival as Francis I. king of France.

The diet having assembled at Worms at the time appointed, when the state of religion was taken into consideration, the papal legates insisted that, without any delay or formal deliberation, the diet ought to condemn a man whom the pope had already excommunicated as an incorrigible heretic. In this demand the emperor, to the success of whose political views the pope's friendship was at that time of the utmost importance, appeared desirous of gratifying them. However, the elector of Saxony employed his credit with Charles, to prevent the publication of any unjust edict against Luther, and to have his cause tried by the canons of the Germanic church, and the laws of the empire. And such an abrupt manner of proceeding, as was moved for by the legates, being deemed unprecedented and unjust by the other members of the diet, they made a point of Luther's appearing in person, and declaring whether he adhered or not to those opinions which had drawn upon him the censures of the church. The emperor therefore resolved, that Luther should be called before the diet, and that he should be publicly heard before any final sentence should be pronounced against him. For his protection against the violence of his enemies, not only the emperor, but all the princes through whose territories he had to pass, granted him a safe-conduct; and Charles wrote to him at the same time, requiring his immediate attendance on the diet, and renewing his promises of protection from any injury or ill-treatment. This letter and safe-conduct were delivered to Luther by an officer, who was sent to accompany him to Worms; and were no sooner received by him, than without a moment's hesitation he prepared to obey the summons. Many of his friends, however, were greatly against his going to the diet, observing, that from the late burning of his books he might anticipate the sentence which would be passed on himself. Others reminded him of the fate of Huss, under similar circumstances, and protected by the same security of an imperial safe-conduct; and, filled with solicitude, advised and entreated him not to rush wantonly into the midst of danger. But Luther, superior to such terrors, silenced them with this reply: "I am lawfully called," said he, "to appear in that city; and thither will I go in the name of the Lord, though as many devils, as there are tiles on the houses, were there combined against me."

Luther arrived at Worms on the 16th of April, where greater crowds assembled to behold him than had appeared at the emperor's public entry. While he continued in that city, his apartments were daily filled with princes and personages of the highest rank, and he was treated with all the respect paid to those who possess the power of directing the understanding and sentiments of other men. When he appeared before the diet, he behaved with the greatest decency and propriety, and readily acknowledged an excess of vehemence and acrimony in his controversial writings. At the same time he displayed the utmost resolution and presence of mind, while (on the 17th and 18th of April, 1521) he pleaded his cause before that grand assembly. At length, in answer to the demand that he should renounce the opinions which he had hitherto held, he firmly and solemnly declared, that he would neither abandon them, nor change his conduct, unless he were previously convinced, by the word of God, or the dictates of right reason, that his sentiments were erroneous, and his conduct unlawful. To this resolution he steadily adhered, notwithstanding the entreaties and threatenings which were employed to conquer the firm-

ness of his purpose. Irritated at his unbending spirit, some of the ecclesiastics present had the baseness to propose, that they should imitate the example of the council of Constance, and avail themselves of the opportunity of having the enemy in their power, to deliver the church at once from such a pestilent heretic. But the members of the diet refusing to expose the German integrity to a fresh reproach by a second violation of public faith, and Charles being no less unwilling to bring a stain upon the beginning of his administration by such an ignominious action, Luther was permitted to depart in safety. A few days after he had left Worms, an excessively-severe edict was published in the emperor's name, and by the authority of the diet, in which he was declared a member cut off from the church, a schismatic, a notorious and obstinate heretic, deprived of all the privileges which he enjoyed as a subject of the empire; the severest punishments were denounced against those who should receive, entertain, or countenance him, either by acts of hospitality by conversation, or by writing; and all were required to concur in seizing his person, as soon as the term of his safe-conduct expired. But, after all, this rigorous decree produced scarcely any effect, as the emperor, whose presence, authority, and zeal, were necessary to render it respectable, was involved in a multiplicity of occupations, created by the commotions in Spain, and the wars in Italy and the Low Countries, which made him lose sight of the edict of Worms; while all those sovereign princes who had not been present at the diet, and who had any regard for the liberties of the empire and the rights of the Germanic church, treated it with the highest indignation, or the utmost contempt. And some days before the publication of this edict, the elector of Saxony had employed a prudent precaution, which effectually secured Luther from the storm. For, in consequence of a preconcerted plan, and, as some have imagined upon probable grounds, not without the knowledge of the emperor, as Luther, on his return from Worms, was passing near Eysenach, a number of horsemen in masks rushed out of a wood, and, surrounding his company, carried him, after dismissing all his attendants, with the utmost secrecy to the castle of Wartenberg.

This sudden disappearance of Luther not only occasioned the most bitter disappointment to his adversaries, but rendered them doubly odious to the people in Germany, who, not knowing what was become of their favourite reformer, imagined that he was imprisoned, or perhaps destroyed, by the emissaries of Rome. In the mean time, Luther lived in peace and quiet, supplied by the elector with every thing necessary or agreeable; but the place of his retreat was carefully concealed, until the fury of the present storm against him began to abate, upon a change in the political situation of Europe. Nor was his confinement here inconsistent with amusement and relaxation; for he enjoyed frequently the pleasure of hunting in company with his keepers, passing for a country gentleman, under the name of Yonker George. In this solitude, which he frequently called his Patmos, he translated a great part of the New Testament into the German language; wrote and published several treatises in defence of his doctrines, or in confutation of his adversaries, which revived and animated the spirit of his followers; and wrote frequent letters to his trusty friends and intimates, to comfort them during his absence. During his confinement, he had the satisfaction of learning that his opinions continued to gain ground, and had acquired the ascendancy in almost every city in Saxony. At this time, the Augustinians of Wittemberg, with the approbation of the university, and the connivance of the elector, ventured upon the first step towards an alteration in the established forms of worship, by abolishing the celebration of private masses, and by giving the cup as well as the bread to the laity in administering the sacrament of the Lord's supper. But, whatever consolation the courage and success of his disciples, or the progress of his doctrines in his own country, afforded

Luther in his retreat, it was in some degree damped by the information which he received, that the university of Paris, the most ancient, and at that time the most respectable, of the learned societies in Europe, had published a solemn decree, condemning his opinions: and that king Henry VIII. of England had published a treatise against him. These events seemed to oppose insuperable obstacles to the propagation of his principles in the two most powerful kingdoms of Europe. But Luther was not overawed, either by the authority of the university or the dignity of the monarch; and he soon published his animadversions on both, in a style no less vehement and severe than he would have used in confuting his meanest antagonist. His contemporaries, however, were so far from being shocked by the manner of his answering them, that they considered it as a new proof of his undaunted spirit; and a controversy in which such illustrious disputants had embarked drew such general attention to our reformer's doctrines in France and England, that, in spite of the civil and ecclesiastical powers, daily converts were gained to them in both those countries.

The active spirit of Luther, however, could not long bear a state of retirement; and, after an absence of about ten months, he returned to Wittemberg, March 6, 1522, without the permission, or even the knowledge, of his patron and protector Frederic. One of his principal motives for taking this bold step was the information which he received of the proceedings of Carlostadt, one of his disciples, who was animated with the same zeal, but possessed less prudence and moderation than his master. During the absence of Luther, he endeavoured to abolish the use of mass, auricular confession, the invocation of saints, and abstinence from meats. He also threw down and broke the images of the saints that were placed in the churches, and instigated the multitude to proceed to dangerous excesses in destroying the relics of popish idolatry. Encouraged by his exhortations, they rose in several villages of Saxony, broke into the churches with the multinary violence, and threw down and destroyed the images which were erected in them. Such irregular and outrageous proceedings were so repugnant to all the elector's cautious maxims, that, if they had not received a timely check, they could have hardly failed of alienating from the reformers a prince, no less jealous of his own authority than afraid of giving offence to the emperor and other patrons of the ancient opinions. Sensible of the danger, Luther quitted his retreat, and condemned in strong terms the conduct to which Carlostadt's impetuosity and rashness had given rise. Happily for the reformation, the veneration for his person and authority was still so great, that his appearance alone suppressed that spirit of extravagance which began to seize his party. Carlostadt, and his fanatical followers, struck dumb by his rebukes, submitted at once, and declared that they heard the voice of an angel, not of a man.

At this time the doctrines of the reformer were not known in France; and in England, the sovereign, Henry VIII. had made the most vigorous exertions to prevent them from invading his realms; he even undertook to write them down, in a treatise entitled "Of the Seven Sacraments," &c. This work he presented to Leo X. in October 1521. The pope was so well pleased with the royal attempt to confute the arguments of Luther, that he complimented him with the title of "Defender of the Faith." Whatever respect and reverence Luther might show to kings as such, he had none for the arguments of an antagonist, though armed with royal authority; and answered Henry with much severity, treating his performance in the most contemptuous manner.

We have already mentioned that, while Luther was concealed in the castle of Wartenberg, he translated a great part of the New Testament into the German language. He now applied himself with redoubled industry and zeal to that work; and, with the assistance of Melancthon, and several others of his disciples, he finished it in the present year. The publication of this per-

formance, which was gradually followed by translations of the other parts of Scripture, produced sudden and incredible effects, and proved more fatal to the church of Rome than that of all Luther's other works. It was read with wonderful avidity and attention by persons of all ranks. With astonishment they discovered how contrary the precepts of Christ are to the inventions of his pretended vicegerents; and, being now put into possession of the rule of faith, they conceived themselves qualified, by applying it, to judge of the established opinions, and to pronounce when they were conformable to the standard, or when they departed from it. About this time, Nuremberg, Frankfort, Hamburg, and several other imperial cities in Germany, abolished the mass, and the other superstitious rites of popery, and openly embraced the reformed religion. The elector of Brandenburg, likewise, together with the dukes of Brunswick and Lunenburg, and the prince of Anhalt, became avowed patrons of Luther's opinions, and countenanced the preaching of them in their territories.

In this state of things pope Leo X. died, and was succeeded in the pontificate by Adrian VI. who had formerly been preceptor to the emperor. One of the first objects of Adrian's care after his elevation to the papacy was, to deliberate with the cardinals concerning the proper means of putting a stop to the growing defection from the catholic pale in Germany. With this design he sent Francis Cheregato, his legate, to the diet which was assembled at Nuremberg in November 1522. In the brief which he addressed to that assembly, he condemned Luther's opinions with more asperity and rancour of expression than Leo had ever used; severely censured the princes of Germany for suffering him to spread his pernicious tenets; and required the speedy and vigorous execution of the sentence which had been pronounced against Luther and his followers at the diet of Worms. At the same time he acknowledged, with great candour, the corruptions and abuses of the Roman court to be the source whence most of the evils which the church now felt or dreaded, had flowed; promising the exertion of all his authority to reform them, and requesting their advice respecting the most effectual means of suppressing the heresy which had sprung up among them. The members of the diet, after praising the pope's pious and laudable intentions, excused themselves from not executing the edict of Worms, on account of the prodigious increase of Luther's followers, and the aversion to the court of Rome among their other subjects, owing to its innumerable exactions; both which circumstances rendered such an attempt not only dangerous, but impossible. They also transmitted to his holiness a list of a hundred grievances, which the empire imputed to the iniquitous dominion of the papal see; and proposed the assembling, without delay, a general council in one of the great cities of Germany, as the only adequate measure for correcting the evils complained of, and for restoring the church to tranquillity, soundness, and vigour. Afterwards they passed an edict, on the 6th of March 1523, prohibiting all innovations in religious matters, until a general council should decide what was to be done in an affair of such high moment and importance. But this edict was no more carried into execution than that of Worms; and Luther still went on successfully in laying the foundations of a new church in direct opposition to that of Rome. Among the other numerous subjects which employed his pen during the present year, were those of the monastic life, and vows of celibacy, against which he directed not only the force of weighty arguments, but the weapons of satire. One of the earliest effects of his labours on these points, was the elopement of nine nuns from the nunnery of Nimptschen, who were conducted by a burgher of Torgaw to Wittemberg. This proceeding, as may be imagined, gave high offence to the papists; but Luther warmly extolled it, in a publication written in the German language; and compared the deliverance of these nuns from the slavery of a monastic

naftic life to that of souls redeemed by the death of Christ. He did more; he married one of these same nuns, Catharine à Boria, who was of a noble family. This step was far from meeting with the approbation of his friends; and his enemies took occasion from it to be profuse in their censures, and in their calumnious misrepresentations. Indeed, Luther himself was sensible of the impression which it had made to his disadvantage, as appears from his declaration in one of his letters, that "it had made him so despicable, that he hoped his humiliation would rejoice the angels, and vex the devils." But, if he was at first so much affected by this circumstance as to need the consolation of Melancthon, he soon recovered his self-possession; and, being satisfied with the motives of his conduct, bore the censures of his friends, and the reproaches of his adversaries, with his usual fortitude. Of those motives the reader may meet with a particular account in Bayle, under the article Catharine de Bore; where they may also find some amusing anecdotes relative to Luther's wedding, the estimation in which he held his wife, and his subsequent behaviour in the conjugal connection.

In the year 1523, two of the followers of Luther were burnt at Brussels, and these were the first who suffered martyrdom for his cause; and about the same time that this tragical event was perpetrated, he wrote a consolatory letter to three noble ladies at Misnia, who were banished from the duke of Saxony's court at Friburg for reading his books.

About this period Luther lost by death his friend, and the fast friend of the reformation, Frederic elector of Saxony; but the blow was less sensibly felt, as he was succeeded by his brother John, a more avowed and zealous, though less able, patron of Luther and his doctrines. Frederic had been a kind of mediator between the Roman pontiff and the reformers of Wittemberg, and had always entertained the hope of restoring peace in the church, and of reconciling the contending parties, as to prevent a separation either in point of ecclesiastical jurisdiction or religious communion; hence, though rather favourable to the innovations of Luther, he took no pains to introduce any change into the churches of his own dominions, nor to subject them to his jurisdiction. But his successor acted in quite a different manner. Fully satisfied of the truth of Luther's doctrine, and persuaded that it must lose ground and soon be suppressed if the despotic authority of the Roman pontiff remained undisputed and entire, he, without hesitation or delay, assumed to himself the supremacy in ecclesiastical matters, and established a church in his dominions, totally different from the church of Rome, in doctrine, discipline, and government. He also ordered a body of laws, relating to the form of ecclesiastical government, the method of public worship, the rank, offices, and revenues, of the priesthood, and other matters of that nature, to be drawn up by Luther and Melancthon, which he afterwards promulgated throughout his dominions. No sooner had the elector taken this decisive and undisguised line of conduct, than the religious differences between the German princes, which had hitherto kept within the bounds of moderation, broke out into a violent and lasting flame. By the patrons of popery evident intimations were given of their intention to make war upon the Lutheran party, and to compel them by force to renounce the doctrines of the reformation; and this design would certainly have been put into execution, had not the troubles of Europe disconcerted their measures. The Lutherans, on the other hand, began to deliberate concerning the most effectual means of defending themselves against superstition armed with violence; and formed the plan of a confederacy for that prudent purpose.

In the mean time the diet of the empire assembled at Spire, in June 1526, at which Ferdinand, the emperor's brother, presided; Charles being fully occupied with the troubled state of his dominions in Spain and Italy. When

the state of religion came to be considered in the diet, the emperor's ambassadors used their utmost endeavours to obtain a resolution, that all disputes about religion should be suppressed, and the sentence which had been pronounced at Worms against Luther and his followers put into rigorous execution. This was firmly opposed by the greater part of the German princes, who maintained that they could not execute that sentence, nor come to any determination with respect to the doctrines by which it had been occasioned, before the whole matter was submitted to the cognizance of a general council, lawfully assembled. This opinion, after long and warm debates, was adopted by a great majority; and at length the whole assembly unanimously agreed to present a solemn address to the emperor, beseeching him to assemble, without delay, a free and general council; and it was also agreed that, in the mean time, the princes and states of the empire should, in their respective dominions, be at liberty to manage ecclesiastical matters in the manner which they should think the most expedient, yet so as to be able to give an account of their administration to God and the emperor. Nothing could be more favourable to the cause of Lutheranism than this resolution. Several princes, whom the fear of persecution and punishment had hitherto prevented from declaring for the reformation, being now delivered from their restraint, renounced publicly the superstition of Rome, and introduced among their subjects the same form of religious worship, and the same system of doctrine, which had been received in Saxony. And in general, all the Germans who had before rejected the papal discipline and doctrine were now employed in bringing their schemes and plans to a certain degree of consistence, and in adding vigour and firmness to the glorious cause in which they were engaged. In the mean time, Luther and his fellow-labourers, by their writings, their instructions, their admonitions, and counsels, inspired the timorous with fortitude, dispelled the doubts of the ignorant, fixed the principles and resolution of the wavering, and inconstant, and animated all the friends of the reformation with a spirit suitable to the importance and grandeur of their undertaking.

But this encouraging state of things was of no long duration. For the emperor, as soon as he had appeased the troubles which had engaged his attention in different parts of Europe, directed his view to Germany, and determined to attempt the recovery of those prerogatives which his predecessors had lost; and which were necessary to the promotion of his ambitious schemes. Nothing, he saw, was more essential towards attaining this object, than to suppress opinions which might form new bonds of confederacy among the princes of the empire, and unite them by ties stronger and more sacred than any political connection. Nothing seemed to lead more certainly to the accomplishment of this design, than to employ zeal for the established religion, of which he was the natural protector, as the instrument of extending his civil authority. Accordingly, he appointed a diet of the empire to be held at Spire, in March 1529, in order to take into consideration the state of religion. In that diet the archduke Ferdinand presided; and, after several long debates, had the address to procure a majority of voices approving a decree, which revoked the resolution of the former diet of Spire, and declared unlawful every change which should be introduced into the doctrine, discipline, or worship, of the established religion, before the determination of a general council was known. This decree was justly considered to be iniquitous and intolerable by the elector of Saxony, the marquis of Brandenburg, the landgrave of Hesse, the duke of Lunenburgh, the prince of Anhalt, together with the deputies of fourteen imperial cities; who, when they found that all their arguments and remonstrances made no impression upon Ferdinand, and the abettors of the Romish church, entered their solemn protest against it, on the 19th of April, 1529, and appealed to the emperor and a future council. On that account they

were distinguished by the name of PROTESTANTS, which from this period has been applied to all sects, of whatever denomination, which have revolted from the Roman see.

No sooner had the dissenting princes and deputies entered their protest against the decree of the diet, than they sent ambassadors into Italy, to lay their grievances before the emperor. The persons employed in this commission executed the orders which they had received with the greatest resolution and presence of mind; and conducted themselves, in all respects, in a manner worthy of the principals whose sentiments and conduct they were sent to justify and explain. The emperor, whose pride was wounded by this spirit and firmness in persons who dared to oppose his designs, ordered these ambassadors to be apprehended and put under arrest for several days. The news of this violent step soon reached the protestant princes, and convinced them that their personal safety, and the success of their cause, depended upon their courage and concord. They, therefore, held several meetings, in different places, for the purpose of forming such a powerful league as might enable them to repel the violence of their enemies; but, while they were preparing a new embassy to the emperor, they received an account that he was determined to come into Germany, with a view to terminate, in a diet which he had already appointed to be held at Augsberg, in June 1530, the religious disputes which had produced such animosities and divisions in the empire. In order that the emperor might be able to form a clear idea of the matters to be debated, the elector of Saxony ordered Luther, and other eminent divines, to commit to writing the chief articles of their religious system, and the principal points in which they differed from the church of Rome. In compliance with this order, Luther delivered to the elector at Torgau the seventeen articles, hence called the *Articles of Torgau*, which were deemed by him a sufficient declaration of the sentiments of the reformers. It was judged proper, however, to enlarge them; and, by a judicious detail, to give perspicuity to their arguments, and thereby strength to their cause. For this purpose the protestant princes employed the pen of Melancthon, who, with a due regard to the counsels of Luther, expressed his sentiments and doctrine with the greatest elegance and perspicuity, and in terms as little offensive to the Roman Catholics as a regard for truth would permit. Such was the origin of the famous creed, known by the name of the *Confession of Augsberg*.

On the 20th of June, 1530, the diet was opened; and, as it was unanimously agreed that the affairs of religion should be discussed before any other matters, the protestants received from the emperor a formal permission to give in an account of their religious principles and tenets. Accordingly, on the 25th of the same month, the chancellor of Saxony read, in the German language, in presence of the emperor and the assembled princes, the Confession above mentioned, which was presented to the emperor, signed by the princes and deputies of the Lutheran party. At the same time the protestants who had adopted the opinions of Zuingle delivered in their confession, drawn up by Martin Bucer. Of these confessions a refutation was undertaken by John Faber, Eckius, and another doctor, named Cochläus, which was also read publicly in the diet; and the unlimited submission of the protestants to the doctrines and opinions contained in this refutation was required by the emperor. But, instead of yielding obedience to the imperial command, they declared themselves by no means satisfied with the reply of their adversaries, and requested a copy of it, that they might demonstrate more fully its extreme insufficiency and weakness. This reasonable request, however, the emperor refused to grant; but he did not discourage the respective parties from meeting, to try whether it were not possible to bring about a reconciliation upon fair, candid, and equitable terms. For this purpose, various conferences were held between persons of eminence, piety, and learning, chosen from both sides; and nothing was omitted that

might have the least tendency to calm the animosity, heal the divisions, and unite the hearts, of the contending parties: but all in vain, since the difference between their opinions was too considerable, and of too much importance, to admit of a reconciliation. Finding the divines immovable, Charles turned to the princes their patrons, whom he solicited separately, and allured by promises of those advantages which it was known they were most solicitous of obtaining. But, however desirous they were of obliging the emperor, they would not make sacrifices to him of their integrity; and, with a zeal and fortitude which redound to their immortal honour, refused to abandon what they deemed the cause of God, for the sake of any earthly acquisition.

Every scheme to gain or disunite the protestant party thus proving abortive, the emperor was determined to take vigorous measures for asserting the doctrines and authority of the established church, and enforcing the submission of such obstinate heretics. By his express order, on the 19th of November, during the absence of the Hessian and Saxon princes, the diet issued a severe decree, condemning most of the peculiar tenets held by the protestants; forbidding any person to protect or tolerate such as taught them; enjoining a strict observance of the established rites; and prohibiting any further innovation under severe penalties. All orders of men were required to assist with their persons and fortunes in carrying this decree into execution; and such as refused to obey it were declared incapable of acting as judges, or of appearing as parties in the imperial chamber, the supreme court of judicature in the empire. To all which was subjoined a promise, that an application should be made to the pope, requiring him to call a general council within six months, in order to terminate all controversies by its sovereign decisions. The severity of this decree, which was considered as a prelude to the most violent persecution, convinced the protestants that the emperor was resolved on their destruction; and the dread of the calamities which were ready to fall on the church oppressed the feeble spirit of Melancthon, who gave himself up to melancholy and lamentation. But Luther, who, during the sitting of the diet had endeavoured to confirm and animate his party by several treatises which he addressed to them, was not disconcerted or dismayed at the prospect of this new danger. He comforted Melancthon and his other desponding disciples, and exhorted the princes not to abandon those truths which they had lately asserted with such laudable boldness. His exhortations made the deeper impression upon them, as they had at that time received an account of a combination among the popish princes of the empire for the maintenance of the established religion, to which Charles himself had acceded. This circumstance convinced them, that their own safety, as well as the success of their cause, depended on union. They, therefore, assembled, in the year 1530, and the year following, first at Smalkalde, and afterwards at Frankfort, and formed a solemn alliance and confederacy, with the resolution of defending vigorously their religion and liberties against the dangers and encroachments with which they were threatened by the edict of Augsberg. Into this confederacy they invited the kings of England, France, and Denmark; and by their negotiations secured powerful foreign protection and assistance, in case of necessity. In this state of things, which portended an approaching rupture, the elector palatine, and the elector of Mentz, offered their mediation, and endeavoured to reconcile the contending princes. With respect to the emperor, many circumstances combined to convince him, that this was not a juncture when the extirpation of heresy was to be attempted by violence and rigour. He saw that the imprudent precipitation with which he had already proceeded, in compliance with the pope's inclinations, had forced the protestants into a formidable union, which put them into a capacity of setting the head of the empire at defiance. He saw the Turks preparing to enter Austria with im-

menſe

menfe forces; and stood in need of succours, which the protestant princes refused to grant as long as the edicts of Worms and Augsbuꝛg remained in force. And he was anxious to obtain from those princes an approbation of his favourite measure for continuing the imperial crown in his family, the election of his brother Ferdinand to the dignity of king of the Romans, which had been concluded by a majority of votes at the diet of Cologne, in the year 1531, but contested by them as contrary to the fundamental laws of the empire. On these accounts, he could not but be aware of the policy and necessity of coming to a speedy accommodation with the malcontent princes. Negotiations were, accordingly, carried on by his direction with the confederates of Smalkalde, and, after many delays and difficulties, terms of pacification were agreed upon at Nuremberg, and ratified solemnly in the diet at Ratifbon, August 3, 1532. By this treaty, the protestant princes engaged to assist the emperor with all their forces in resisting the invasion of the Turks; and it was stipulated, that universal peace should be established in Germany until the meeting of a general council, the convocation of which within six months the emperor was to endeavour to procure; that no person should be molested on account of religion; that a stop should be put to all processes begun by the imperial chamber against protestants, and the sentences already passed to their detriment be declared void.

Luther had now the satisfaction of seeing, in consequence of this religious truce, one of the principal obstacles to the undisguised profession of his opinions removed. Encouraged by it, those who had been hitherto only secret enemies to the Roman pontiff, now spurned his yoke publicly, and renounced his jurisdiction. This appears from the various cities and provinces in Germany, which, about this time, boldly enlisted themselves under the standard of our reformer. Henceforth the protestants of Germany, who had hitherto been viewed only as a religious sect, came to be considered as a political body of no small consequence; and Luther was incessant in his exhortations to them to confirm the REFORMATION, their grand bond of union, publishing from time to time such writings as might encourage, direct, and aid, them in strengthening and extending their glorious cause.

Soon after the truce of Nuremberg, the elector of Saxony died, and was succeeded by his son John Frederic, who was no less attached than his predecessor to the opinions of Luther, and prepared to defend them with equal zeal and magnanimity. In the mean time the emperor, in conformity to the stipulations of the truce lately concluded, applied to pope Clement VII. by his ambassadors, to call a general council without delay; and in an interview which he had with that pontiff at Bologna, during his journey into Spain, urged the same thing in person. Clement endeavoured at first to divert Charles from the measure; but, finding him inflexible, he had recourse to artifices which he knew would delay, if not entirely defeat, the calling of that assembly. Under the plausible pretext of settling, with all the parties concerned, the preliminaries for such a meeting, he dispatched a nuncio, accompanied by an ambassador from the emperor, to the elector of Saxony as the head of the protestants. In discussing these preliminaries, inextricable difficulties and contests arose. The protestants demanded a council to be held in Germany; the pope insisted that it should meet in Italy; they contended, that all matters in dispute should be determined by the words of Scripture alone; he considered not only the decrees of the church, but the opinions of fathers and doctors, as of equal authority; they required a free council, in which the divines, commissioned by different churches, should be allowed a voice; he aimed at modelling the council in such a manner as would render it entirely dependant on his pleasure. Above all, the protestants thought it unreasonable, that they should bind themselves to submit to the decrees of a council, before they knew on what principles those decrees were to

be founded, by what persons they were to be pronounced, and what forms of proceeding they would observe. The pope maintained it to be altogether unnecessary to call a council, if those who demanded it did not previously declare their resolution to acquiesce in its decrees. In order to adjust such a variety of points, the negotiations were spun out to such a length, as effectually answered the purpose of putting off the meeting of the council during his pontificate.

In 1533, Luther wrote a consolatory epistle to some persons who had suffered hardships for adhering to the Augsbuꝛg confession of faith, in which he says, "The devil is the host, and the world is his inn; so that, wherever you come, you will be sure to find this ugly host." He had also, about this time, a terrible controversy with George duke of Saxony, who had such an aversion to the doctrines promulgated by Luther, that he obliged his subjects to take an oath that they would never embrace them. At Leipsic there were found sixty or seventy persons, who could not be restrained within the boundaries of the established creed, and it was discovered that they had consulted Luther about it; upon which the duke complained to the elector, that Luther had not only abused his person, but had preached up rebellion among his subjects. Luther refused the accusation, by proving that he had been so far from stirring up his subjects against him on the score of religion, that he had exhorted them rather to undergo the greatest hardships, and even suffer themselves to be banished. In the following year, the Bible, translated by Luther into German, was first printed, with the privilege of the elector; and it was published the year after. He likewise gave to the world a book against masses and the consecration of priests, in which he relates a conference which he had with the devil upon those points; for it is a circumstance worthy of observation, that, in the whole history of this great man, he never had any conflicts of any kind, but the devil was always his antagonist. In 1535, the new pope Paul III. was applied to for a general council; and, in the hope of preventing it, he appointed Mantua as the proper place. To this some of the catholic sovereigns, and all the German protestants, strongly objected; being fully persuaded that, in such a council, nothing would be concluded but what would be agreeable to the sentiments and ambition of the pontiff; and they demanded the performance of the emperor's promise, that they should have a council in Germany. At the same time, that they might not be taken by surprise, they desired Luther to draw up a summary of their doctrine, in order to present it to the assembled bishops, if it should be required of them. This summary, which was distinguished by the name of the Articles of Smalkalde, from the place at which they were assembled, is generally joined with the creeds and confessions of the Lutheran church. While our reformer was busily engaged in this work, he was seized with a grievous and very painful disease, a fit of the stone and obstruction of urine, which continued so long as to give his friends serious apprehensions for his life. In the midst of his agonies, and after eleven days' torture, without the smallest relief, he set out, contrary to the advice of his friends, on his return home. The motion of the carriage, which it was expected would prove fatal to him, was the cause of removing the evil under which he was labouring.

In the year 1538, as a general assembly seemed impracticable, the pope, that he might not seem to neglect that degree of reformation which was unquestionably within his power, deputed a certain number of cardinals and bishops, with full authority, to enquire into the abuses and corruptions of the Roman court, and to propose the most effectual method of removing them. It was intended to do as little as possible; still a multitude of enormities were unveiled, an account of which was soon transmitted into Germany, much to the satisfaction of the protestants there. This investigation, partial as it was, proved the necessity of a reformation in the head as well as the members

bers of the church; and it even pointed out many of the corruptions against which Luther had remonstrated with the greatest vehemence. It was, however, intended only as a farce, and as such Luther treated it; and, to ridicule it more strongly, he wrote a short treatise on the subject, to which was prefixed a caricature, representing the pope seated on a high throne, and some cardinals about him with foxes' tails, with which they were brushing off the dust on all sides. Luther published, about the same time, "A Confutation of the pretended Grant of Constantine to Sylvester bishop of Rome; and also some Letters of John Hufs, written from his Prison at Constance, to the Bohemians."

At this time also an event of great advantage to the reformation took place in the death of George duke of Saxony; for his brother Henry, on whom the succession devolved, was as zealously attached to the protestant religion as his predecessor had been to popery: and no sooner was he in possession of his new dominions, than, disregarding a clause in George's will, by which he bequeathed all his territories to the emperor if his brother should attempt any innovation in religion, he immediately invited Luther and some other protestant divines to Leipsic. By their advice and assistance, he soon overturned the whole system of popish rites and doctrines, and established the full exercise of the reformed religion, with the universal applause of his subjects, who had long wished for this change. By this revolution, the whole of Saxony was brought within the protestant pale.

From this time till the latter end of the year 1544, the emperor was so entirely occupied with his wars against the Turks, and Francis I. king of France, that he found it necessary not only to connive at the proceedings of the Protestants, and the progress which their opinions daily made, but to court their favour by repeated acts of indulgence. At length, however, in the year 1545, he came to a resolution to terminate the debates about religion by the force of arms. This resolution he carefully concealed, till the preparations which he had privately made for carrying it into effect were far advanced; when the protestant princes received certain information, from the king of England, and through other channels, of his hostile designs against them, and of the confederacy for the destruction of their cause into which he had entered with the pope. The greater number of them, therefore, after communicating their intelligence and sentiments to each other, determined on taking the proper measures for their own defence; and the elector of Saxony, and the landgrave of Hesse, to prevent being surprised and overwhelmed unawares by a superior force, with wonderful rapidity raised a formidable army.

While this terrible storm was rising, Luther was saved, by a seasonable death, from feeling or beholding its destructive rage. For some time before that event he felt his strength declining, his constitution being worn out by a prodigious multiplicity of business, added to the labour of discharging his ministerial function with unremitting diligence, to the fatigue of constant study, besides the composition of works as voluminous as if he had enjoyed uninterrupted leisure and retirement. However, in the beginning of the year 1546, he was able to pay a visit to his native country, accompanied by Melancthon, and returned in safety to Wittemberg. Soon afterwards he was induced to pay a second to Eyleben, on the invitation of the counts of Mansfeldt, in order to compose a diffension which had arisen among them respecting the boundaries of their territories. Though he had not been accustomed to meddle in such affairs, yet, as he was born at Eyleben, which was dependant on those counts, he could not refuse the service which he might be able to render, by his advice or authority, in accommodating their differences. On this occasion, he met with a splendid reception from the counts; and afterwards made use of his best endeavours to settle the matters in dispute, and sometimes preached in the church, where he likewise administered the sacrament. While he was

thus engaged, he was seized with a violent inflammation in the stomach, which threatened a speedy and fatal issue. In this situation, his natural intrepidity did not forsake him; and his last conversation with his friends, on the day preceding that of his death, was concerning the happiness reserved for good men in a future life, of which he spoke with the fervour and delight natural to one who expected and wished to enter soon upon the enjoyment of it. On the morning of the 18th of February, 1546, being awakened from sleep by his disorder, and perceiving his end approaching, he commended his spirit into the hands of God, and quietly departed this life, in the sixty-third year of his age. The account of his death filled the Roman-catholic party with excessive as well as indecent joy, and damped the spirit of all his followers; neither party sufficiently considering that his doctrines were now so firmly rooted, as to be in a condition to flourish independently of the hand which had planted them. The counts of Mansfeldt were desirous that he might be buried in their territories; but, by the express order of the elector of Saxony, his remains were conveyed to Wittemberg, where they were interred with more extraordinary pomp than was perhaps ever displayed at the funeral of any private person; princes, counts, nobles, and students, without number, attending the procession. Innumerable were the falsehoods invented by the papists concerning the manner of his death; and innumerable were the calumnies which they propagated concerning his principles and conduct. In Bayle the reader may meet with an ample collection and refutation of these weak efforts of malignity. He has related, however, an anecdote of the emperor Charles V. which deserves to be mentioned in honour of the generous treatment which he showed to the memory of our reformer. While, in the year 1547, his troops were quartered in Wittemberg, a soldier gave Luther's effigy in the church of the castle two stabs with a dagger; and the Spaniards were very urgent with him to cause the monument of the pretended heresiarch to be demolished, and his bones to be dug up and burnt. But the emperor instantly forbade that any insult should be offered to his tomb or remains, upon pain of death: "I have nothing farther to do with Luther," he nobly said; "and he is henceforth subject to another Judge, whose jurisdiction it is not lawful for me to usurp. I make no war with the dead, but with the living, who are still in arms against me."

We cannot bring this article to a close, without referring to the testimonies of the learned and the wise respecting the character of Luther, who introduced, not into Germany only, but into the world, a new and most important era, and whose name can never be forgotten while any thing of principle remains that is deserving of remembrance. It must not be overlooked, that the grand and leading doctrine of Lutheranism, and that on which the permanent foundation of the reformed religion was laid, is the right of private judgment in matters of religion. To this, as we have seen, he was at all times ready to devote his talents, his character, and his life; and, says the biographer of Leo X. "the great and imperishable merit of the reformer consists in his having demonstrated it by such arguments, as neither the efforts of his adversaries, nor his own subsequent conduct, have been able either to confute or invalidate." In passing judgment upon the characters of men, says Robertson, we ought to try them by the principles and maxims of their own age, and not by those of another; for, although virtue and vice are at all times the same, manners and customs are continually varying. Some parts of Luther's behaviour, which to us appear most culpable, gave no disgust to his contemporaries. It was even by some of those qualities, which we are now apt to blame, that he was fitted for accomplishing the great work in which he embarked. See KNOX, vol. xi. p. 842.

Luther himself was sensible of defects, which he pathetically acknowledges in an address to the reader of his works: "I intreat you," says he, "to read my writings with

with cool consideration, and even with much pity. I wish you to know, that, when I began the affair of indulgences, I was a monk, and a most mad papist. So intoxicated was I, and drenched in papal dogmas, that I would have been most ready at all times to murder, or assist in murdering, any person who should utter a syllable against the pope. I was always earnest in defending doctrines I professed. I went seriously to work, as one who had a horrible dread of the day of judgment, and who from his inmost soul was anxious for salvation. You will find, therefore, in my earlier writings, with how much humility, on many occasions, I gave up considerable points to the pope, which I now detest as blasphemous and abominable in the highest degree. This error my slanderers may call inconsistency; but you, my pious readers, will have the kindness to make some allowance, on account of the times, and my own inexperience. I stood absolutely alone at first; and certainly was very unlearned, and very unfit to undertake matters of such vast importance. It was by accident, not willingly or by design, that I fell into those violent disputes. God is my witness."

Dr. Campbell, in his Lectures on Ecclesiastical History, has rendered our reformer his testimony of respect and gratitude; but, as this is conveyed in sentiments and language but little different from the observations of Dr. Robertson, we shall extract the account from the latter rather than the former: "As he was raised up by Providence to be the author of one of the greatest and most interesting revolutions in history, there is not any person, perhaps, whose character had been drawn with such opposite colours. In his own age, one party, struck with horror and inflamed with rage, when they saw with what a daring hand he overturned every thing which they held to be sacred, or valued as beneficial, imputed to him not only all the defects and vices of a man, but the qualities of a dæmon. The other, warmed with admiration and gratitude, which they thought he merited as the restorer of light and liberty to the Christian church, ascribed to him perfections above the condition of humanity, and viewed all his actions with a veneration, bordering on that which should be paid only to those who are guided by the immediate inspiration of heaven. It is his own conduct, not the undistinguishing censure or the exaggerated praise of his contemporaries, that ought to regulate the opinions of the present age concerning him. Zeal for what he regarded as truth, undaunted intrepidity to maintain his own system, abilities, both natural and acquired, to defend his principles, and unwearied industry in propagating them, are virtues which shine so conspicuously in every part of his behaviour, that even his enemies must allow him to have possessed them in an eminent degree. To these may be added, with equal justice, such purity, and even austerities, of manners, as became one who assumed the character of a reformer; such sanctity of life as suited the doctrine which he delivered; and such perfect disinterestedness as affords no slight presumption of his sincerity. Superior to all selfish considerations, a stranger to all the elegancies of life, and despising its pleasures, he left the honours and emoluments of the church to his disciples, remaining satisfied himself in his original state of professor of the university, and pastor of the town of Wittenburg, with the moderate appointment annexed to each. His extraordinary qualities were allayed with no inconsiderable mixture of human frailty and human passions. These, however, were of a nature, that they cannot be imputed to malevolence or corruption of heart, but seem to have taken their rise from the same source with many of his virtues. Accustomed himself to consider every thing as subordinate to truth, he expected the same deference for it from other men; and, without making any allowances for their timidity or prejudices, he poured forth against such as disappointed him in this particular, a torrent of invective and abuse. Regardless of any distinction of rank or character when his doctrines

were attacked, he chastised all his adversaries indiscriminately, with the same rough hand; neither the royal dignity of Henry VIII. nor the eminent learning and abilities of Erasmus, screened them from the same gross abuse with which he treated Tetzel or Eckius. To rouse mankind, when sunk in ignorance and superstition, and to encounter the rage of bigotry armed with power, required the utmost vehemence of zeal, as well as a temper daring to excess. A gentle call would neither have reached nor have excited those to whom it must have been addressed. A spirit more able but less vigorous than Luther's would have shrunk back from dangers which he braved and surmounted. Towards the close of Luther's life, though without any perceptible diminution of his zeal and abilities, the infirmities of his temper increased upon him, so that he grew daily more peevish, more irascible, and more impatient of contradiction. Having lived to be a witness of his own amazing success, to see a great part of Europe embrace his doctrines, and to shake the foundation of papal Rome, before which the mightiest monarchs had trembled, he discovered, on some occasions, symptoms of vanity and self-applause. He must have been, indeed, more than man, if, upon contemplating all that he actually accomplished, he had never felt any sentiment of this kind rising in his breast."

There is yet another testimony to the life and labours of this great man that we cannot omit: "Martin Luther's life," says bishop Atterbury, "was a continual warfare; he was engaged against the united forces of the papal world, and he stood the shock of them bravely, both with courage and success. He was a man certainly of high endowments of mind, and great virtues: he had a vast understanding, which raised him up to a pitch of learning unknown to the age in which he lived; his knowledge in scripture was admirable, his elocution manly, and his way of reasoning with all the subtilty that those plain truths he delivered would bear; his thoughts were bent always on great designs, and he had a resolution fitted to go through with them, and the assurance of his mind was not to be shaken or surpris'd, and that *παρρησία* of his (for I know not what else to call it) before the diet of Worms, was such as might have become the days of the apostles. His life was holy, and, when he had leisure for retirement, severe; his virtues active chiefly, and hominical, and not those lazy sullen ones of the cloister. He had no ambition but in the service of God: for other things, neither his enjoyment nor wishes ever went higher than the bare conveniences of living. He was of a temper particularly averse to covetousness or any base sin, and charitable even to a fault, without respect to his own occasions. If, among this crowd of virtues, a failing crept in, we must remember that an apostle himself had not been irreproachable; if, in the body of his doctrine, one flaw is to be seen, yet the greatest lights of the church, and in the purest times of it, were, we know, not exact in all their opinions. Upon the whole, we have certainly great reason to break out in the phrase of the prophet, and say, How beautiful, upon the mountains, are the feet of him that bringeth glad tidings!" Gibbon, speaking of the effects produced by the exertions of Luther and his contemporaries, says, "The philosopher must own his obligations to these fearless enthusiasts. By their hands the lofty fabric of superstition, from the abuse of indulgences to the intercession of the Virgin, has been levelled with the ground. Myriads of both sexes of the monastic profession were restored to liberty and the labours of social life. The chain of authority was broken which restrains the bigot from thinking as he pleases, and the slave from speaking as he thinks. The popes, fathers, and councils, were no longer the supreme and infallible judges of the world; and each Christian was taught to acknowledge no law but the scriptures, no interpreter but his own conscience."

Luther left behind him three sons; and his wife, Catharina

tharine à Boria, survived him almost seven years. She remained during the first year of her widowhood at Wittemberg, though Luther had advised her to seek another place of residence. She went from thence in the year 1547, when the town was surrendered to the emperor Charles V. Before her departure, she had received a present of fifty crowns from Christian III. king of Denmark; and the elector of Saxony, and the counts of Mansfeldt, gave her tokens of their liberality. With these additions to what Luther had left her, she had wherewithal to maintain herself and her family handsomely. She returned to Wittemberg when the town was restored to the elector; where she lived in a very devout and pious manner, till the plague obliged her to leave it again in the year 1552. She sold what she had at Wittemberg; and retired to Torgau, with a resolution to end her days there. An unfortunate mischance befel her in her journey thither, which proved fatal to her. The horses growing unruly, and attempting to run away, she leaped out of the vehicle she was conveyed in, and got a fall, of

which she died about a quarter of a year after at Torgau, upon the 20th of December, 1552. She was buried there in the great church, where her tomb and epitaph are still to be seen; and the university of Wittemberg, which was then at Torgau because the plague raged at Wittemberg, published an account of the funeral.

The numerous works of Luther, in the Latin and German languages, which are partly exegetical, partly didactic, and partly polemical, were collected together after his death, and published at Jena, in 1556, in 4 vols. folio, and afterwards at Wittemberg, in 1572, in 7 vols. folio. We believe our readers will be gratified by being presented with a fac-simile of the hand-writing of this great reformer. It is copied from his own Bible, preserved at Erfurt in Germany, in the dissolved priory of St. Augustine, of which, as we have noticed at the beginning of this article, he was for some time a monk, and where he first had the good fortune to meet with a perfect copy of the sacred volume.

*Ab sorpla est Mors in Vitoria  
Murchy Lubber J*

**LUTHERAN**, *f.* One who professes the Christian religion as reformed by Luther.—I know her for a spleeny Lutheran. *Shakespeare's Henry VIII.*

**LUTHERAN**, *adj.* According to the doctrine of Luther.—Their religion is Lutheran, which was propagated among them by Gustavus Vasa about the year 1523. *Guthrie.*

**LUTHERANISM**, *f.* The religion of Lutherans.—Protestantism is divided into *Lutheranism* and Calvinism, so called from Luther and Calvin, the two distinguished reformers of the sixteenth century. *Guthrie.*

Lutheranism has undergone some alteration since the time of its founder. Luther rejected the Epistle of St. James, as inconsistent with the doctrine of St. Paul in relation to justification; he also set aside the Apocalypse; both which are now received as canonical in the Lutheran church. Luther reduced the number of sacraments to two, viz. baptism and the eucharist; but he believed the impanation, or consubstantiation; that is, that the matter of the bread and wine remain with the body and blood of Christ; and it is in this article, that the main difference between the Lutheran and English churches consists. Luther maintained the mass to be no sacrifice; he exploded the adoration of the host, auricular confession, meritorious works, indulgences, purgatory, the worship of images, &c. which had been introduced in the corrupt times of the Romish church. He also opposed the doctrine of free-will; maintained predestination; asserted that we are necessitated in all we do; that all our actions done in a state of sin, and even the virtues themselves of heathens, are crimes; that we are only justified by the imputation of the merits and satisfaction of Christ. He also opposed the fastings in the Romish church, monastic vows, the celibacy of the clergy, &c.

Some authors reckon thirty-nine different sects, which at different times have sprung up among the Lutherans.

The Lutherans, of all protestants, are those who differ least from the Romish church; as they affirm, that the body and blood of Christ are materially present in the sacrament of the Lord's supper, though in an incomprehensible manner; and likewise represent some religious rites and institutions, as the use of images in churches, the distinguishing vestments of the clergy, the private confession of sins, the use of wafers in the administration of the Lord's supper, the form of exorcism in the celebra-

tion of baptism, and other ceremonies of the like nature, as tolerable, and some of them as useful. The Lutherans maintain, with regard to the divine decrees, that they respect the salvation or misery of men, in consequence of a previous knowledge of their sentiments and characters, and not as free and unconditional, and as founded on the mere will of God. Towards the close of the 17th century, the Lutherans began to entertain a greater liberality of sentiment than they had before adopted; though in many places they persevered longer in severe and despotic principles than other protestant churches. Their public teachers now enjoy an unbounded liberty of dissenting from the decisions of those symbols, or creeds, which were once deemed almost infallible rules of faith and practice; and of declaring their dissent in the manner they judge the most expedient. Mosheim attributes this change in their sentiments to the maxim, which they generally adopted, That Christians were accountable to God alone for their religious opinions; and that no individual could be justly punished by the magistrate for his erroneous opinions, while he conducted himself like a virtuous and obedient subject, and made no attempts to disturb the peace and order of civil society.

**LUTHER'N**, *f.* [*lucarne*, Fr. from the Lat. *lucerna*, light, or lantern.] A kind of window over the cornice, in the roof of a building; standing perpendicularly over the naked of the wall; and serving to illuminate the upper story. Architects distinguish them into various kinds, according to their forms; as square, semicircular, bulls' eyes, flat arches, Flemish lutherns, &c.

**LUTHINGLAND**, a village in Suffolk, by the lake Luthing, near the river Yare.

**LUTI** (Benedetto), an eminent painter, born at Florence in 1666, was the disciple of Gabbiani, and from him went to Rome, to put himself under the direction of Ciro Ferri; but, being disappointed by his death, formed a style of his own, the result of various imitations; select in design, amene and lucid in colour, well contrasted by masses of light and shade, and harmonious to the eye. He painted not without merit in fresco, and with greater merit in oil: his "Cain flying from his murdered brother" has something of sublimity and pathos, breathing refinement of taste and elegance. He died in 1724, at the age of fifty-eight. *Fuseli's Pilkington.*

**LUTIANUS**, *f.* in ichthyology, a genus of fishes instituted

rated by Bloch, and adopted by Cedepe; but not by Dr. Turton in his translation of Gmelin's Linnæus, nor by Dr. Shaw in his more recent work on General Zoology. We shall follow the example of the latter, who has placed all the species under the genus SPARUS.

Nearly the same remarks will apply to the genus HOLOCENTRUS, which we omitted to notice in its proper place, at vol. x. p. 244. But it should be observed, that neither of those genera could have been known by Gmelin, as the last six parts of Bloch's great work had not then appeared; and Dr. Turton, adhering to his text, has omitted them. Dr. Shaw has adopted the Holocentrus; but, as we have passed it by, we shall place the species among those of the genus they most resemble, the PERCA.

LUTING, *f.* The method or process of closing with clay. The composition with which vessels are closed for chemical purposes. See the article CHEMISTRY, vol. iv. p. 192, 374, 5.

It is generally agreed, that the rapid progress made in chemistry within the last twenty years, is partly owing to the various apparatus invented by the celebrated Lavoisier, and to the additional precautions that have been adopted in the art of luting them. Luting has rendered essential services to chemistry; for, by facilitating the condensation of many aeriform products, it has furnished the means of determining their nature, and ascertaining their quantity and weight. This did not escape the sagacity of that ingenious French chemist M. Chaptal: "It is on the art of properly luting an apparatus," says he, "that the whole success of an operation depends." Among the substances most commonly used for this purpose are the greasy lutings, paste of almonds, or lincsed from which the oil has been expressed, and mixed with glue; that made of white of eggs, and of soft cheese mixed with lime. The use of these different kinds is attended with inconveniences which render them improper to be employed in all circumstances. The greasy luting, for instance, composed of dried clay and oil combined with an oxyd of lead, can only be applied on such parts as are not exposed to too violent a degree of heat; they melt with a high temperature, and of course do more harm than good. Those made with lincsed and almonds mixed with glue or gelatine, are frequently too porous, easily destroyed by acids, and by ammoniac reduced to a gaseous state. The inconvenience of those prepared from white of egg and cream-cheese, mixed with lime, is, that they become solid very soon after they are incorporated, so that it is extremely difficult to lay them on. The following therefore, which avoids all the above inconveniences, is recommended in the Annales de Chimie, by professor Payssé: "Take white of eggs together with the yolks; carbonated lime pulverised, or lime well flaked in the air, half the weight of the eggs; apply it to a linen cloth, and lute with it." This composition, it is observed, dries very slowly, and possesses a certain elasticity when dry; yet is so compact, that vessels impermeable to water have been formed of it, which were even capable of being highly polished; it resists any degree of heat, and the action of any vapour, even that of oxygenated muriatic acid.

LUTISPURG, a town of Switzerland, in the county of Tecklenburg: four miles north of Lichtensteig.

LUTKE, a town of Prussia, in the province of Natangen: three miles east of Johannesburg.

LUTKEN DORTMUND, a town of Germany, in the county of Mark: three miles south of Catrop.

LUTKENBORG, a town of the duchy of Holstein: thirty miles north Lubec, and fifty-five north-north-east of Hamburg.

LUTMA (Janus or John), an engraver and goldsmith of Amsterdam, in the sixteenth century, who distinguished himself by the invention of a new mode of art, which had its day of novelty, and was for a time popular among superficial connoisseurs; it was termed *opus mallei*, being performed with a hammer, and small pointed punches, which made an impression upon the copper; and, by being

repeated as occasion required, the shadows were formed either darker or fainter, at pleasure. The burr, which was necessarily raised upon the surface of the copper by such an operation, was not entirely removed by the scraper; and, in the early impressions, is the means of producing a soft and agreeable effect. He engraved four plates in this style, which are as follows: Janus Lutma; John Lutma, his father; the poet Vondel; and P. C. Hooft, the historian; all of them in folio, and apparently from his own drawings.

LUTMA (John), the son of the preceding, was born at Amsterdam, A. D. 1609. He was likewise a goldsmith, and executed some few plates; among others the following: The portrait of John Lutma the father, habited in a robe bordered with ermine, holding spectacles and a pencil; portrait of himself, seated at a table, drawing; he has on a broad-brimmed hat, which overshadows his face: this print is very rare; both in folio; and a view of a large fountain with statues, and the Antonine column, with some other ruins at Rome. It is first etched in a coarse bold style, and the shadows are worked upon with a fine mezzotinto tool. The effect produced by this mixture is confused and heavy, but not altogether disagreeable to the eye.

JAMES LUTMA was of the same family, and also resided at Amsterdam; by this artist we have a set of twelve middling-sized upright plates of ornamental shields and foliage, etched in a neat style and finished with the graver; likewise the portraits of the three Lutmas, marked "John Lutma of Oude inv. James Lutma fecit, aqua forti."

LUTOMIR'SK, a town of the duchy of Warfaw: eighteen miles south-south-east of Lencicz, and eighty west-fourth-west of Warfaw.

LUTON, a considerable market-town in Bedfordshire, situated among some hills on the banks of the river Lea; three miles from Dunstable, and thirty-one from London. The town is long and irregular, shaped something like the Roman Y, the angles branching off from the market-house, which is an extensive building. The population of the hundred of Flitt, (of which Luton is the only considerable place,) according to the returns in the year 1811, was 2597, inhabiting 1644 houses. The only structure in the town deserving attention is the church, which consists of a choir, a nave and two aisles, supported by ten pointed arches, two transepts, and a handsome embattled tower at the west end, checkered with flint and free-stone; at the corners are hexangular turrets, similar to that at Dunstable. The arch of the west door is ornamented with mouldings of various flowers, &c. Within the church is a singular piece of ancient architecture, an octagonal stone font, inclosed in a lofty wooden frame of pointed arches, terminated with elegant tabernacle-work. The consecrated water, during the prevalence of the Roman ceremonies, was kept in a large basin at the top, whence it was let down by the priest, through a pipe, into the font. On the inside of the roof a vine is represented, guarded by a lamb from the assaults of a dragon: emblematical of the defence which baptism affords to the church from the attempts of the devil. On the north side of the choir is an elegant chapel, founded by John lord Wenlock, who bore a distinguished part in the contest between the houses of York and Lancaster. The principal manufacture carried on in Luton is that of straw bonnets. A weekly market, noted for its abundant supply of corn, is held on Mondays; it is of great antiquity, being mentioned in the Domesday Survey, where the tolls are valued at 190s. per annum; and here are two annual fairs. Pomfret, the poet, was a native of this town: his father was first curate, and then vicar, of the parish.

About three miles from the town, on an elevated situation at the border of the Bedfordshire downs, in the midst of a well-wooded park, stands Luton-Hoo, the seat of the marquis of Bute. The old park, which consisted of about 300 acres, inclosed by Mr Robert Napier, was enlarged to

1200 by the late earl of Bute, and now contains about 1500 acres. The mansion was in a great measure rebuilt by the late earl, who employed Mr. Adam the architect. The principal rooms, particularly the library, drawing-room, and saloon, are on a magnificent scale. The library, which is 146 feet in length, is esteemed but little inferior to that of Blenheim. The collection of pictures is very large and valuable, chiefly of the Italian and Flemish schools. The chapel is fitted up with carving in wood, which was originally executed for sir Thomas Pope, at Tittenhanger, Herts, in 1548, and removed to Luton in perfect preservation by sir Robert Napier. In the adjoining wood is a portico, a beautiful piece of brick-building, designed for a mansion intended to have been built by lord Wenlock, but which was never completed; and in the park is a stone tower of great antiquity.

Silfoe, or Sivilsho, between Luton and Bedford, has fairs on May 12 and Sept. 20. At Pullox-Hill, near Silfoe, about eighty years ago a gold mine was discovered, which was seized for the king by the society of royal mine-adventurers; but the refiners, finding what gold they extracted from the ore did not always answer the charge of separation, did not go on with it.

Sommeris is two miles north-east of Luton, where is the elegant gate-house of brick, now belonging to the park of Luton-house, and makes one of the beauties of that delightful seat.

The river Lea, which rises near Luton, runs south-east by Wheat-Hampstead in Hertfordshire, then east through Hertford and Ware, and afterwards south, dividing Essex from Hertfordshire, and Essex from Middlesex, falls into the Thames a little below Blackwall. By this river there are large quantities of corn and malt brought out of Hertfordshire to London. A canal has lately been made from this river, which runs into the Thames near Limehouse, for the passage of barges. *British Directory*, vol. v. *Lyttons. Beauties of England and Wales*.

LUTON, a town of Bengal: thirteen miles north-west of Kishenagur.

LUTRI, a town of Swisserland, in the county of Vaud, situated on the north coast of the lake of Geneva: three miles east of Laufanne.

LUTTENBURG, or LUTEMBERG, a town of the duchy of Stiria, on the river Stantz: twelve miles east of Pettau, and one hundred south of Vienna. Lat. 46. 35. N. lon. 16. 8. E.

LUTTENBERG (Ober), a town of Stiria: three miles south of Luttenberg.

LUTTER, a river of Germany, which runs into the Bega two miles south of Hervorden.—A river of Germany, which runs into the Lachte twelve miles north-east of Zelle.—A town of Westphalia, in the duchy of Brunswick: eleven miles north-west of Goslar.

LUTTERBERG, a town of Westphalia, in the principality of Grubenhagen. It was formerly a county, and for a long time was governed by lords of its own: fifteen miles south of Goslar.

LUTTERBERG. See LAUTERBERG, vol. xii. p. 315.

LUTTEREL, an island of North America, in Machias Bay, on the coast of Maine.

LUTTERHAUSEN, a town of the duchy of Holstein: eight miles from Hamburg.

LUTTERINGHAUSER, a town of the duchy of Berg: two miles north-east of Lennep.

LUTTERLOCK, a township of America, in Orleans county, Vermont: north of Craftsborough.

LUTTERWORTH, a market-town in Leicestershire, is situated on the bank of the river Swift; about two miles from the Watling-street road; thirteen miles from Leicester, and eighty-three from London. Leland describes this "towne as scant half so bigge as Lughborrow; but in it there is an hospital of the foundation of two or three of the Verdounes, that were lords of auncient tyme of the towne." This hospital was founded in the reign of king

John, by Roise de Verdon and Nicholas her son, for a priest and six poor men, and to keep hospitality for poor men travelling that way. The parish-church of Lutterworth is a spacious structure, with a nave, two aisles, a chancel, and a tower with four turrets. The chancel, which is separated from the nave by a beautiful screen, is supposed by Burton to have been built by lord Ferrers of Groby, as his arms are cut on the outside over the great window. By the great storm, in 1703, the spire, which was forty-seven feet higher than the present turrets, was blown down, and, falling on the roof of the church, did great damage to the body, pews, &c. About the year 1740, the whole was repaired, a pavement of chequered stone laid, and all the interior made new, except the pulpit, which is of thick oak planks, of an hexagonal shape, and has a seam of carved work in the joints; this pulpit is preserved with great veneration, in memory of the distinguished reformer, John Wickliffe, who was rector of this parish, and died suddenly, while hearing mass, December 31st, 1387. The chair in which he breathed his last is also preserved with great care; as is likewise another relic used by him, the communion-cloth of purple velvet trimmed with gold. His body was buried in this church; but, his doctrines having been condemned, his remains were taken up and burned, by order of the council of Sienna, in 1428, and his ashes cast into the river. His portrait, by S. Fielding, hangs over the gallery at the west end of the church. The font was given by Basil earl of Denbigh; the canopy or covering, which is very neat, and was erected in 1704, is pretended to be an exact model of the old spire. The rectory, which is valuable, is in the gift of the crown.

A meeting-house for dissenters was built here in 1777, and is numerously attended. Here are also a school-house and alms-house built by the bequest of Mr. Edward Sherrier. Among other benefactions to this town, Mr. Richard Elkington, by his will dated May 29th, 1607, left in trust to the mayor, bailiff, and burgesses, of Leicester, 50l. to be lent in sums of 10l. each to five tradesmen of Lutterworth for one year at five per cent. the interest to be distributed among certain poor persons. The cotton-manufacture is carried on here to considerable extent; and some large buildings have been lately erected as factories and workshops. Many hands are also employed in making stockings. A weekly market is held on Thursdays, granted, with an annual fair, by king Henry V. in the second year of his reign; three other fairs have since been obtained; the fair-days are, Feb. 18, April 2, Holy Thursday, and Sept. 16.

In the year 1789, there were in Lutterworth 360 houses; which, on the average of  $4\frac{1}{2}$  to a house, would make the number of inhabitants 1620. In the return under the population-act in 1801, the number of houses is stated at only 277, and of inhabitants 1632. The whole hundred of Guthlanton, in which Lutterworth is the only market-town, is stated, in the returns of 1811, to contain 3606 inhabited houses, and 17,622 inhabitants.

The whole people of Lutterworth, till within these fifty years, were obliged to grind all their malt at one particular mill, and their corn at another; and to bake all their bread in one oven; and so very arbitrary was the proprietor, that he once brought an action against a person for having a cake baked in his house, which was deemed *town-bread*. In those days of Egyptian bondage, an inhabitant of Lutterworth durst not buy so much as a pint of flour of a neighbouring miller. The people submitted to this oppression for a long time with painful reluctance; till at length a patriot arose, whose name was Bickley, who not only roused his fellow-citizens to resistance, but had spirit enough to erect a mill of his own; his example was followed by others, and several mills soon raised their heads in defiance of the 'squire's mill, who immediately commenced actions against all who had the presumption to dispute his right. All the inhabitants entered into a bond

to defend the action; and the contest was finally decided at Leicester assizes, on July 24, 1758, and given in favour of the parishioners, with costs of suit.

Near the town formerly stood a mansion house called Spital, belonging to the Shuckburgh family.—About a mile from this place, on the London road, is Misterton-lodge, the seat of Jacob-Henry Franks, esq.—About a mile and a half south-west is Cotesbach, where resides the Rev.—Marriott, LL.D.—About five miles from Lutterworth in the Watling-street road, stands a stone which terminates the three counties of Leicester, Warwick, and Northampton. *British Directory*, vol. iii. *Nichols's Hist. of Leicestershire*.

LUTTON, a village in the parish of Steeple, and isle of Purbeck, Dorset.—A village in Northamptonshire, south-east of Oundle.

LUTTON (East and West), two villages in the east riding of Yorkshire, east of Malton.

LUTTONBORN, a village near Holbeach, Lincolnshire.

LUTREL, an island of North America, in Machias Bay, on the coast of Maine.

LU'TULENCE, *f.* [from *lutulent.*] Muddiness; dirtiness.

LU'TULENT, *adj.* [*lutulentus*, Lat.] Muddy; turbid.

LU'TUM, *f.* [Latin.] Clay; mud; loam.

LU'TUM, *f.* in botany. See RESEDA.

LU'TUM SAPIENTIAE, *f.* The hermetical seal; made by melting the end of a glass vessel by a lamp, and twisting it up with a pair of pliers.

LUTZELSTEIN, or PETITE PIERRE, a town of France, in the department of the Lower Rhine, situated on a mountain, and defended by a castle; heretofore the capital of a principality, belonging to the elector palatine, which comprehended a few villages, with the title of county. It is twenty-four miles north-west of Strasburg.

LUTZEN, a town of Saxony, in the territory of Merseburg, containing a citadel. Near this town, in 1632, happened the famous battle between the Swedes and the Imperialists, in which the former got the better, but at the same time lost their great king Gustavus Adolphus: on the spot where he was found dead, nothing more than a bare stone has been erected, which is still to be seen. Here also was fought a great battle between the French and Russians on the 2d of May, 1813, in which both sides claimed the victory, but which however seems to have belonged to the French, who lost 10,000 men, while the allied Russians and Prussians lost 25,000. See the article LONDON, vol. xiii. p. 338. Lutzen is nine miles east-south-east of Merseburg, and ten west-south-west of Leipzig. Lat. 51. 16. N. lon. 12. 8. E.

LUTZENREUT, a town of Germany, in the principality of Bayreuth: three miles north-north-east of Bayreuth.

LUVINO, a town of Italy, in the department of the Verbano, on the east bank of Lake Maggiore: twenty miles north-west of Como, and thirty-six north-north-west of Milan.

LU'VIO, a town of Sweden, in the government of Abo: nine miles south-south-west of Biornborg.

To LUX, or LUX'ATE, *v. a.* [*luxer*, Fr. *luxo*, Lat.] To put out of joint; to disjoint.—Consider well the *luxated* joint, which way it stripped off; it requireth to be returned in the same manner. *Wifeman*.

Descending carelessly from his couch, the fall  
Lux'd his joint neck, and spinal marrow bruised. *Philips*.

LUX'ATING, or LUXING, *f.* The act of putting out of joint.

LUXA'TION, *f.* The act of disjointing.—Any thing disjointed.—The undue situation or connection of parts, in fractures and *luxations*, are to be rectified by chirurgical means. *Floyer*.

LUXATION, or DISLOCATION, in surgery, denotes any case where the articular extremities of bones abandon their

natural relations, whether the head of a bone escapes from a cavity defined for its reception, or whether the surfaces of the joint cease to correspond properly one to the other. A luxation is termed *complete*, when the surfaces of the joint are totally separated; *incomplete*, when they remain partially in contact, though in a state of displacement with respect to each other. Like fractures, dislocations are also divided into *simple* and *compound*; simple, when there is no external wound communicating with the joint; compound, when the case is conjoined with such an accident. Other general differences of luxations depend upon the articulation in which they take place; the direction in which the bone is displaced; the length of time the accident has continued; the cause that has produced it, &c. &c. for all which, see the article SURGERY.

LUX'BOROUGH, a village near Dunster, Somerset.

LUX'BURG. See LYSEBURG.

LUX'E, *f.* [Fr. *luxus*, Lat.] Luxury; voluptuousness. *Not used*:

The pow'r of wealth I try'd,  
And all the various *luxes* of costly pride. *Prior*.

LUX'EMBURG, formerly a duchy of Germany, and one of the provinces of the Netherlands; bounded on the north by the bishopric of Liege and duchies of Limburg and Juliers, on the east by the electorate of Treves, and on the south and west by France. It lies in the centre of the forest of Ardennes. Its soil is not very fertile, but it produces some corn; and the country has other advantages belonging to it, as, namely, a good breed of cattle, wine, and all sorts of game, with several kinds of metals, and particularly many iron-works, and founderies for cannon, which last constitute its greatest riches. It is watered also by many small rivers, the principal of which are the Ourt, the Semois, the Sals, and the Cliers, which discharge themselves into the Meuse, with several others which flow into the Moselle. The Meuse washes this duchy on the west, and the Moselle runs through a part of it to the south-east. In the whole duchy, exclusive of the principal town, (Luxemburg,) are twenty-three smaller ones. Charles IV. emperor of the Romans, raised the county of Luxemburg, in the year 1354, to a duchy; but, he dying without heirs, it came by virtue of his testament to Wenzel, king of the Romans and Bohemia, who succeeded him; and who, by way of mortgage, ceded to the princess Elizabeth, daughter to his brother John of Luxemburg, and duke of Gorlitz, (who was first married to Anthony duke of Burgundy, and afterwards to John of Bavaria,) this duchy in lieu of the dowry of 120,000 Rhenish florins which he had promised to give her. In the year 1444, this princess ceded all her right in the duchy of Luxemburg to Philip the Good, duke of Burgundy. Afterwards this duchy underwent the same fate with the other provinces of the Netherlands. By the peace of the Pyrennees in 1659, France obtained a part thereof: the part ceded to France at that time included the districts and towns of Thionville, Montmedy, Marville, Chevancy, Carignan, and Damvilliers; but, during the late war, the whole submitted to the French *republic*; and, by a much later treaty, it was formally annexed to the French *empire*, and became a part of the Department of the FORESTS, which see, vol. vii. p. 568.—This country will certainly not now remain with its late conquerors, neither will it be restored to its former owners; but will probably form a part of the new kingdom of Belgium.

LUX'EMBURG, capital of the above province. From being anciently only a castle, built by the people of Treves, it was afterwards enlarged by the Romans, who gave it the name of *Augusta Romanorum*. When Merovingus king of France conquered the country, it changed its name, and was called *Lucis Burgum*, i. e. The City of the Sun, because the Sun was anciently adored there, as the Moon was at Arlon, Jupiter at Ivoy, now called Carignan, and Mars at Marche en Famine. The city of Luxemburg is small, but strong as well from its situation as its fortifications.

ations. Sigefroy I. comte of Luxemburg, built a wall round it in the tenth century. In 1543 Luxemburg was taken and pillaged by the French, commanded by Charles duke of Orleans, second son of Francis I. but in the year 1544, Ferdinand de Gonzago, viceroy of Sicily, and general under Charles V. retook it after a siege of fifteen days. It remained under the dominion of Spain till the year 1684, when the French came to assault it, under the command of mareschal de Crequy, after they had bombarded it the preceding year; the trenches were opened the 8th of May, and the city surrendered the 4th of June. The French continued its masters, by virtue of a treaty made at Ratisbon the same year, and very much extended the fortifications; but, by the peace of Ryswick, in 1697, it was restored to Spain in the condition it then was. It was again taken by the French in 1701, and by the barrier treaty it was ceded to the States-general; but in 1715 it was restored to the emperor, whose troops took possession of it the 16th of January, 1715. The river Alsit runs through it, and divides it into Upper Town and Lower; the former situated on a rock, the latter in a plain; the fortifications of it were thought to be almost the strongest in Europe. Luxemburg was blockaded by the French, as soon as they had made themselves masters of the surrounding country; and surrendered to them on the 7th of June, 1795, by capitulation. The surrender of Luxemburg put the French in possession of the whole country on the left of the Rhine, except Mentz. Population about 10,000. It is fifty miles south-south-east of Liege, and sixteen south-west of Treves. Lat. 49. 40. N. lon. 6. 13. E.

**LUXEMBURG** (Francis-Henry de Montmorenci, Duke of), marshal of France, and a celebrated general, was born in 1628, being the posthumous son of the count of Boutteville, who was beheaded under Louis XIII. for fighting a duel. Devoting himself to a military life, he was present in 1643 at the battle of Rocroi gained by the great Condé, whose various fortunes he followed. He resembled that hero in several of his qualities: in ardour of mind, quick and sure judgment, prompt execution, and an avidity for the acquisition of knowledge. In 1662 he was admitted a duke and peer of France; and in 1667 he was made a lieutenant-general, in which station he distinguished himself at the conquest of Franche Comté. In the war of 1672, he commanded in chief at the invasion of Holland, where in one campaign he took a number of towns, and gained the battles of Bodegrave and Woerden. He is charged by the Dutch historians with stimulating his soldiers to all manner of barbarous and licentious outrage; at least it is certain that under his command they committed every excess without restraint. When it became necessary to evacuate that country, he made a retreat which was universally admired. In 1674 and 1675 he was opposed to the prince of Orange, and by his success obtained the staff of marshal of France. After the death of Turenne he had the command of a division of the French army, with which he was unable to prevent the capture of Philipsburg by prince Charles of Lorraine.

Marshal Luxemburg was a man of a very licentious character, greatly addicted to the fair sex, though deformed in person and not agreeable in feature. The connexion of one of his agents with certain females of intrigue caused him to be involved in the horrid affair of the poisonings which excited so much alarm in 1680. He repaired voluntarily to the Bastille, where he was treated with rigour, through the dislike and jealousy of Louvois. He underwent some examinations on frivolous and ridiculous charges; and, after a detention of fourteen months, was dismissed without any sentence being given either for or against him. He was not deprived of his command in the army; and, when the war of 1690 broke out, he was sent into Flanders as general in chief. He gained the battle of Fleurus against the prince of Waldeck, and those of Leuze and Steinkerck against king William. In the latter, through the false information of a spy, he was sur-

prised, and part of his army was routed before he discovered the enemy's intention; but he exerted himself with so much vigour and ability, that he recovered the day, and repulsed the allied army with loss. In 1693 he gained against William the bloody battle of Nerwinden, and took Charleroi. He terminated his services the next year by a long march in presence of the enemy from Viganont to the Scheld near Tournay, by which he rendered abortive the designs of the allies upon the maritime places of France. He died at Versailles in January 1695, at the age of sixty-seven, and with him the victories of Louis XIV. ended. No general after him possessed to such a degree the attachment and confidence of the soldiers, who were always ready to follow whithersoever he led, and thought themselves invincible under his command. His success in the field against king William was almost invariable; and, when that prince in a fit of spleen called him hump-back—"What does he know of my back? (said Luxemburg;) he never saw it."

**LUXEU'IL**, a town of France, and principal place of a district, in the department of the Upper Saône. Near it are some chalybeate springs, and some warm baths. It is fourteen miles north-east of Vesoul, and thirty-seven north of Besançon. Lat. 47. 49. N. lon. 6. 27. E.

**LUXFORD LAKE**, an arm of the sea which encompasses the town of Pool in Dorsetshire.

**LUX'OR**, a village of Egypt, on the right side of the Nile, situated on a part of the ancient Thebes, where are the ruins of a large and magnificent temple supposed to be a part of the sepulchre of Osymandyas. See the article **EGYPT**, vol. vi. p. 347, 8. with the accompanying engraving, representing the remains of this temple or sepulchre, at the entrance of the ancient city of Thebes.

**LUX'TON**, a village in Somersetshire, near the Axeriver, between Axbridge and Uphill.

**LUXULIAN'**, a village in Cornwall, among the mineral hills, to the west of Lestwithiel.

**LUX'UR**, *f.* [from *luxure*, Fr.] A lecher.—A parch'd and juiceless *luxur*. *Revenge's Tragedy*.

**LUXU'RIANCE**, or **LUXU'RIANCY**, *f.* [*luxurians*, Lat.] Exuberance; abundant or wanton plenty or growth.—A fungus prevents healing only by its *luxuriance*. *Wise man*.

While through the parting robe th' alternate breast  
In full *luxuriance* rose. *Thomson's Summer*.

**LUXU'RIANT**, *adj.* Exuberant; superfluously plentiful.—If the fancy of Ovid be *luxuriant*, it is his character to be so. *Dryden's Pref. to Ovid's Epistles*.

Prune the *luxuriant*, the uncouth refine,  
But show no mercy to an empty line. *Pope*.

To **LUXU'RIATE**, *v. n.* To grow exuberantly; to shoot with superfluous plenty.

**LUXU'RIOUS**, *adj.* Delighting in the pleasures of the table. Administering to luxury; as, the *luxurious* board:

Those whom last thou saw'st

In triumph, and *luxurious* wealth, are they

First seen in acts of prowess eminent,

And great exploits; but of true virtue void. *Milton*.

Lustful; libidinous:

She knows the heat of a *luxurious* bed:

Her blush is guiltiness, not modesty. *Shakespeare*.

Voluptuous; enslaved to pleasure:

*Luxurious* cities, where the noise

Of riot ascends above the loftiest tow'rs. *Milton*.

Softening by pleasure:

Repel the Tuscan foes, their city seize,

Protect the Latians in *luxurious* ease. *Dryden*.

Luxuriant; exuberant:

Till more hands

Aid us, the work under our labour grows

*Luxurious* by restraint. *Milton's Paradise Lost*.

**LUXU'RIOUSLY**,

**LUXURIOUSLY**, *adv.* Deliciously; voluptuously:

He never sapt in solemn state;  
Nor day to night *luxuriously* did join.

*Dryden.*

**LUXURIOUSNESS**, *f.* The state or quality of being luxurious; luxury.

**LUXURY**, *f.* [*luxure*, old French; *luxuria*, Lat.] Voluptuousness; addictedness to pleasure.—Riches expose a man to pride and *luxury*, and a foolish elation of heart. *Addison's Spectator.*

Egypt with Assyria strove  
In wealth and *luxury*.

*Milton.*

Lust; lewdness:

Urge his hateful *luxury*,  
His bestial appetite in change of lust,  
Which stretch'd unto their servants, daughters, wives.

*Shakespeare.*

**Luxuriance**; exuberance.—Young trees of several kinds set contiguous in a fruitful ground, with the *luxury* of the trees will incorporate. *Bacon.*—Delicious fare.—He cut the side of the rock for a garden; and, by laying on it earth, furnished out a kind of *luxury* for a hermit. *Addison.*

Luxury, among the Romans, prevailed to such a degree, that several laws were made to suppress, or at least limit, it. The extravagance of the table began about the time of the battle of Actium, and continued in great excess till the reign of Galba. Peacocks, cranes of Malta, nightingales, venison, wild and tame fowl, were considered as delicacies. A profusion of provisions was the reigning taste. Whole wild boars were often served up, and sometimes they were filled with various small animals, and birds of different kinds: this dish they called the *Trojan horse*, in allusion to the wooden horse filled with soldiers. Fowls and game of all sorts were served up in whole pyramids, piled up in dishes as broad as moderate tables. Lucullus had a particular name for each apartment; and in whatever room he ordered his servants to prepare the entertainment, they knew by the direction the expense to which they were to go. When he supped in the Apollo, the expence was fixed at 50,000 drachmæ, that is, 1250l. See **LUCULLUS**, p. 752. Mark Antony provided eight boars for twelve guests. Vitellius had a large silver platter, said to have cost a million of sesterces, called *Minerva's buckler*: in this he blended together the livers of gilt-heads, the brains of pheasants and peacocks, the tongues of phenicopters, and the milts of lampreys. Caligula served up to his guests pearls of great value dissolved in vinegar; the same was done also by Clodius the son of Æsop the tragedian. Apicius laid aside 90,000,000 of sesterces, besides a mighty revenue, for no other purpose but to be sacrificed to luxury; finding himself involved in debt, he looked over his accounts, and, though he had the sum of 10,000,000 of sesterces still left, he poisoned himself for fear of being starved to death. The Roman laws to restrain luxury were *Lex Orchia*, *Fannia*, *Didia*, *Licinia*, *Cornelia*, and many others: but all these were too little; for, as riches increased amongst them, so did sensuality.

What were the ideas of luxury entertained in England about two centuries ago, may be gathered from the following passage of Holinshed; who, in a discourse prefixed to his History, (first published in 1577,) speaking of the increase of luxury, says, "Neither do I speak in reproach of any man, God is my judge; but to show, that I do rejoice rather to see how God has blessed us with his good gifts, and to behold how that, in a time wherein all things are grown to the most excessive prices, we yet do find means to obtain and atchieve such furniture as heretofore was impossible. There are old men yet dwelling in the village where I remain, which have noted three things to be marvelously altered in England within their sound remembrance. One is the multitude of chimneys lately erected; whereas in their young days there were not

above two or three, if so many, in most uplandish towns of the realm (the religious houses, and manor places of their lords always excepted, and peradventure some great personages), but each made his fire against a reredose [screen] in the hall where he dressed his meat and dined. The second is the great amendment of lodging; for, said they, our fathers and we ourselves have lain full oft upon straw pallets covered only with a sheet, under coverlits made of a dogswaine or horbarriets (to use their own terms), and a good log under their head instead of a bolster. If it were so that the father or good man of the house had a mattrafs, or flock-bed, and sheets, a sack of chaff to rest his head upon, he thought himself to be as well lodged as the lord of the town. So well were they contented, that pillows (said they) were thought meet only for women in childbed; as for servants, if they had any sheet above them, it was well; for seldom had they any under their bodies to keep them from pricking straws, that ran off through the canvas and their hardened hides. The third thing they tell of, is the exchange of treene [wooden] platters into pewter, and wooden spoons into silver or tin; for so common were all sorts of treene vessels in old times, that a man should hardly find four pieces of pewter (of which one was peradventure a salt) in a good farmer's house. Again; in times past, men were contented to dwell in houses builded of fallow, willow, &c. so that the use of oak was in a manner dedicated wholly unto churches, religious houses, palaces, navigation, &c. But now willow, &c. are rejected, and nothing but oak any where regarded. And yet see the change; for, when our houses were builded of willow, then had we oaken men; but now that our houses are come to be made of oak, our men are not only become willow, but a great many altogether of straw; which is a fore alteration. In these the courage of the owner was a sufficient defence to keep the house in safety; but now the assurance of the timber must defend the men from robbing. Now have we many chimneys, and yet our tenderliis complain of rheums, catarrhs, and poses; then had we none but reredoses, and our heads did never ach. For, as the smoke in those days was supposed to be a sufficient hardening for the timber of the house; so it was reputed a far better medicine to keep the good man and his family from the quacks or pose; wherewith, as then, very few were acquainted. Again; our pewterers in time past employed the use of pewter only upon dishes and pots, and a few other trifles for service; whereas now they are grown into such exquisite cunning, that they can in a manner imitate by infusion any form or fashion, of cup, dish, salt, bowl, or goblet, which is made by the goldsmith's craft, though they be ever so curious and very artificially forged. In some places beyond the sea, a garnish of good flat English pewter (I say flat, because dishes and platters in my time began to be made deep, and like basons, and are indeed more convenient both for sauce and keeping the meat warm) is esteemed so precious as the like number of vessels that are made of fine silver."

Particular instances of luxury, in *eating*, however, might be adduced from an earlier period, surpassing even the extravagance of the Romans. Thus, in the 10th year of the reign of Edward IV. (1470), George Nevill, brother to the earl of Warwick, at his instalment into the archiepiscopal see of York, entertained most of the nobility and principal clergy, when his bill of fare was 300 quarters of wheat, 350 tuns of ale, 104 tuns of wine, a pipe of spiced wine, 80 fat oxen, six wild bulls, 1004 weathers, 300 hogs, 300 calves, 3000 geese, 3000 capons, 300 pigs, 100 peacocks, 200 cranes, 200 kids, 2000 chickens, 4000 pigeons, 4000 rabbits, 204 bitterns, 4000 ducks, 200 pheasants, 500 partridges, 200 woodcocks, 400 plovers, 100 curlews, 100 quails, 1000 egrets, 200 rees, 400 bucks, does, and roebucks, 1506 hot venison pasties, 4000 cold ditto, 1000 dishes of jelly parted, 4000 dishes of jelly plain, 4000 cold custards, 2000 hot custards, 300 pikes, 300 breams, eight

*scale.*

seals, four porpusses, and 400 tarts. At this feast the earl of Warwick was steward, the earl of Bedford treasurer, and lord Hastings comptroller, with many more noble officers; 1000 servitors, 62 cooks, and 515 menial apparitors in the kitchen. But such was the fortune of the man, that, after his extreme prodigality, he died in the most abject but unpitied poverty.

And as to *dresses*, luxury in that article seems to have attained a great height long before Holinshed's time. For in the reign of Edward III. we find no fewer than seven sumptuary laws passed in one session of parliament to restrain it. It was enacted, that men-servants of lords, as also of tradesmen and artificers, shall be content with one meal of fish or flesh every day; and the other meals, daily, shall be of milk, cheese, butter, and the like. Neither shall they use any ornaments of gold, silk, or embroidery; nor their wives and daughters any veils above the price of twelvenpence. Artisans and yeomen shall not wear cloth above 40s. the whole piece (the finest then being about 6l. per piece), nor the ornaments before named; nor the women any veils of silk, but only those of thread made in England. Gentlemen under the degree of knights, not having 100l. yearly in land, shall not wear any cloth above 4½ marks the whole piece. Neither shall they or their females use cloth of gold, silver, or embroidery, &c. But esquires having 200l. per annum or upwards of rent, may wear cloths of five marks the whole piece of cloth; and they and their females may also wear stuff of silk, silver, ribbons, girdles, or furs. Merchants, citizens, burghers, and artificers or tradesmen, as well of London as elsewhere, who have goods and chattels of the clear value of 500l. and their females, may wear as is allowed to gentlemen and esquires of 100l. per annum. And merchants, citizens, and burghers, worth above 1000l. in goods and chattels, may (and their females) wear the same as gentlemen of 200l. per annum. Knights of 200 marks yearly may wear cloth of six marks the cloth, but no higher; but no cloth of gold, nor furred with ermine; but all knights and ladies having above 400 marks yearly, up to 1000l. per annum, may wear as they please, ermine excepted; and they may wear ornaments of pearl and precious stones for their heads only. Clerks having degrees in cathedrals, colleges, &c. may wear as knights and esquires of the same income. Ploughmen, carters, shepherds, and such like, not having 40s. value in goods or chattels, shall wear no sort of cloth but blanket and russet lawn of 12d. and shall wear girdles and belts; and they shall only eat and drink suitable to their stations. And whosoever uses other apparel than is prescribed by the above laws shall forfeit the same.

Concerning the general utility of luxury to a state, there is much controversy among the political writers. Baron Montesquieu lays it down, that luxury is necessary in monarchies, as in France; but ruinous to democracies, as in Holland. With regard therefore to Britain, whose government is compounded of both species, it is held to be a dubious question, how far private luxury is a public evil; and, as such, cognizable by public laws. And indeed our legislators have several times changed their sentiments as to this point; for formerly there was a number of penal laws existing to restrain excess in apparel, chiefly made in the reigns of Edward III. IV. and Henry VIII. a specimen of which we have inserted above; and, as to eating, see the article LONDON, p. 77. But most of them it appeared expedient to repeal at an after-period. In fact, although luxury will of necessity increase according to the influx of wealth, and it may not be for the general benefit of commerce to impose, as in the above-cited laws, an absolute prohibition of every degree of it; yet, for the good of the public, it may be necessary that such as go beyond proper bounds in eating, drinking, and wearing what by no means is suitable to their station, should be taxed accordingly, could it be done without including those who have a better title to such indulgence. This is certainly, however, a point which should be maturely

weighed before executed; and, in mercantile countries at least, such restraints may be found prejudicial, most likely impracticable, especially where true liberty is established. Sir William Temple observes, speaking of the trade and riches, and at the same time of the *frugality*, of the Hollanders, "That some of our maxims are not so certain as *current* in politics; as, that encouragement of excess and luxury, if employed in the consumption of *native* commodities, is of advantage to trade. It may be so to that which impoverishes, but not to that which enriches, a country. It is indeed less prejudicial, if it lies in *native* than in *foreign* wares: but the humour of *luxury* and expense cannot stop at certain bounds; what begins in *native* will proceed to *foreign* commodities; and, though the example arise among idle persons, yet the imitation will run into all degrees, even of those men by whose industry the nation subsists. And besides, the more of *our own* we spend, the less shall we have to send abroad; and so it will come to pass, that, while we drive a vast trade, yet, by buying much more than we sell, we shall come to be poor at last."

Luxury, says Mr. Hume, (*Essays*, vol. i.) is a word of an uncertain signification, and may be taken in a good as well as a bad sense. In general, it means great refinement in the gratification of the senses; and any degree of it may be innocent or blameable, according to the age, or country, or condition, of the person. The bounds between the virtue and the vice cannot here be exactly fixed, more than in other moral subjects. To imagine, that the gratifying of any sense, or the indulging of any delicacy in meat, drink, or apparel, is of itself a vice, can never enter into a head that is not disordered by the frenzies of enthusiasm. "I have, indeed," says our author, "heard of a monk abroad, who, because the windows of his cell opened upon a noble prospect, made a covenant with his eyes never to turn that way, or receive so sensual a gratification." Such is the crime of drinking Champagne or Burgundy, preferably to small beer or porter. These indulgences are only vices, when they are pursued at the expense of some virtue, as liberality or charity; in like manner as they are follies, when for them a man ruins his fortune, and reduces himself to want and beggary. When they intrench upon no virtue; but leave ample subject whence to provide for friends, family, and every proper object of generosity or compassion; they are entirely innocent, and have in every age been acknowledged such by almost all moralists. To be entirely occupied with the luxury of the table, for instance, without any relish for the pleasures of ambition, study, or conversation, is a mark of stupidity, and is incompatible with any vigour of temper or genius. To confine one's expense entirely to such a gratification, without regard to friends or family, is an indication of an heart destitute of humanity or benevolence; but, if a man reserve time sufficient for all laudable purposes, and money sufficient for all generous purposes, he is free from every shadow of blame or reproach. Since luxury may be considered either as innocent or blameable, one may be surpris'd at those preposterous opinions which have been entertained concerning it; while men of libertine principles bestow praises even on vicious luxury, and represent it as highly advantageous to society; and, on the other hand, men of pure morals blame even the most innocent luxury, and represent it as the source of all the corruption, disorders, and factions, incident to civil government. Our author endeavours to correct both these extremes, by proving, first, that the ages of refinement are both the happiest and the most virtuous; and, 2dly, that, wherever luxury ceases to be innocent, it also ceases to be beneficial; and, when carried a degree too far, is a quality pernicious, though perhaps not the most pernicious, to political society. Industry, knowledge, and humanity, (says he,) are linked together by an indissoluble chain; and are found, from experience as well as reason, to be peculiar to the more polished, and what are commonly denominated the more luxurious, ages. He adds, that these

these advantages are not attended with any disadvantages that bear any proportion to them. The more men refine upon pleasure, the less will they indulge in excesses of any kind; because nothing is more destructive to true pleasure than such excesses. Besides, industry, knowledge, and humanity, diffuse their beneficial influence beyond the sphere of *private* life, on the *public*, and render the government as great and flourishing as they make individuals prosperous and happy. Our author concludes his Essay on Refinement in the Arts, with the following observations: "Luxury, when excessive, is the source of many ills; but is in general preferable to sloth and idleness, which would commonly succeed in its place, and are more hurtful both to private persons and to the public. When sloth reigns, a mean uncultivated way of life prevails amongst individuals, without society, without enjoyment. And if the sovereign, in such a situation, demands the service of his subjects, the labour of the state suffices only to furnish the necessaries of life to the labourers, and can afford nothing to those who are employed in the public service."

Archdeacon Paley takes occasion, from a consideration of the mode of living which actually obtains in any country, to illustrate the true evil and proper danger of luxury. Luxury, as it supplies employment and promotes industry, assists population. But it is attended with a consequence which counteracts, and often overbalances, these advantages. When, by introducing more superfluities into general reception, luxury has rendered the usual accommodations of life more expensive, artificial, and elaborate; the difficulty of maintaining a family, conformably with the *established mode of living*, becomes greater, and what each man has to spare from his personal consumption proportionably less; the effect of which is, that marriages become less frequent, agreeably to the maxim, which lies at the foundation of this reasoning, that men will not marry to *sink* their place or condition in society, or to forego those indulgencies, which their own habits, or what they observe amongst their equals, have rendered necessary to their satisfaction. This principle is applicable to every article of diet and dress, to houses, furniture, and attendance; and this effect will be felt in every class of the community. For instance, the custom of wearing broad cloth and fine linen repays the shepherd and flax-grower, feeds the manufacturer, enriches the merchant, gives not only support but existence to multitudes of families: hitherto, therefore, the effects are beneficial; and, were these the only effects, such elegancies, or if they be so called, such luxuries, could not be too general. But here follows the mischief; when once fashion hath annexed the use of these articles of dress to any certain class, to the middling rank, for example, of the community, each individual of that rank finds them to be *necessaries of life*; that is, finds himself obliged to comply with the example of his equals, and to maintain that appearance which the custom of society requires. This obligation creates such a demand upon his income, and withal adds so much to the cost and burthen of a family; as to put it out of his power to marry, with the prospect of continuing his habits or of maintaining his place and situation in the world. We see, in this description, the cause which induces men to waste their lives in a barren celibacy; and this cause, which impairs the very source of population, is justly placed to the account of luxury. It appears, upon the whole, to be the tendency of luxury to diminish marriages, and that in this tendency the evil of it resides. Hence it may be inferred, that, of different kinds of luxury, those are the most innocent which afford employment to the greatest number of artists and manufacturers; as those, in other words, in which the price of the work bears the greatest proportion to that of the raw material. Thus, luxury in dress, in furniture, is universally preferable to luxury in eating, because the articles which constitute the one are more the production of human art and industry than those which supply the other. *Princ. of Mor. and Pol. Phil.* vol. ii.

Few writers have properly distinguished between private luxury and public; i. e. between the luxury of individuals and the luxury of the state. We shall conclude with a short extract upon this subject from a French writer. "The luxury of individuals (says Mons. Peltier) often renders effeminate those who enjoy, and humiliates those who miss, its delights; but public luxury, necessarily stamped with decency and majesty, elevates the minds of the citizens for whom it is provided, and produces an exquisite and delicate impression which humanizes the manners of the multitude. It connects, by the bands of the common enjoyments, the citizen who is *not* rich with the citizen who *is* rich. It thus enfeebles that tendency to envy which is not less painful to its subject than dangerous to its object. When I see a public garden embellished, I think it is my own that has been improved; and why not? were it exclusively my own, could I enjoy it more than by inviting my neighbours to walk there with me! Cannot every one say and feel as much?" *Paris pendant* 1796.

In our country there were formerly various laws to restrain excess in apparel; all repealed by stat. 1 Jac. I. c. 25. But, as to excess in diet, there still remains one ancient statute unrepealed, viz. 10 Ed. III. stat. 3. which ordains, that no man shall be served, at dinner or supper, with more than two courses; except upon some great holidays there specified, in which he may be served with three. 4 Com. 170, 1.

LUY'A, a town of Peru, and capital of a jurisdiction, north of Chachapoyas, bordering on Popayan: 360 miles north of Lima. Lat. 6. S. lon. 77. 45. W.

LUY'KEN (John), a Dutch engraver, was born at Amsterdam some time about the middle of the seventeenth century, and died in that city in the year 1712. He studied the arts under Martin Zaagmoelen. Baſſan ſays of his prints, "We remark in them a fertility of genius, joined with great ſpirit, judgment, and facility of execution: he is the Callot, the Della Bella, and the Le Clerc, of Holland." But this is ſaying a great deal too much. He neither drew ſo correſtly, nor etched in ſo clear and determined a ſtyle, as either of thoſe diſtinguiſhed engravers. It is true there are few of his prints, into which he has not introduced a great number of figures; but the groups are ſeldom artfully managed; the lights, for want of harmony, and being too much ſcattered, confuſe the ſubject, and fatigue the eye. This is ſpeaking of them, however, only comparatively; conſidering them by themſelves, they poſſeſs great merit. He chiefly engraved after his own deſigns, and the moſt conſiderable of his works is the large Bible, (which was publiſhed by Montier in two folio volumes,) and the following: A ſet of the Ten Commandments, in 8vo. a ſet of ſeventeen, of the Hiſtory of Lapland and Finland, in 4to. a ſet of ſeventeen views, &c. which accompany the Eaſtern Travels of M. Thevenot, in 4to. The Hiſtory of William III. king of England, in 8vo. The Republic of the Hebrews, in twenty-eight plates, in 8vo. and 4to. The Theatre of Martyrs, from the time of Jeſus Chriſt to modern times, in a ſet of 105 plates, in 4to. Jonas preaching to the Ninevites, in large folio. The Aſſaſination of Henry IV. of France, in folio. The Flight of the Reformers at the Revocation of the Ediſt of Nantes, large folio. The Maſſacre of St. Bartholomew, or the Death of Admiral Coligny, a very capital print, engraved on two large folio plates.

LUY'KEN (Gaſpar), was the ſon of John, mentioned in the preceding article, and was born at Amsterdam in the year 1660. He learned engraving from his father, and deſigned and engraved a conſiderable number of plates; but his works are neither ſo numerous nor ſo meritorious as thoſe of his father, whoſe ſtyle he imitated. Among them the following will probably be found moſt worthy of ſeleſtion: St. Francis Xavier preaching before the Emperor of Japan; the Jeſuit Miſſionaries obtaining Audience of the Emperor of China; the Emperor Joſeph I. receiving the Holy Sacrament; the Miracle of the Five Loaves; all of large folio ſize. The Twelve Months

of the Year; the Four Seasons; and the Grand Roman Cabinet; all in folio.

LUYTS (John), a philosopher and astronomer, was born in North Holland in 1665. He became professor of philosophy and mathematics at Utrecht, where he died in 1721. He wrote, 1. An astronomical work, in which he rejected the Copernican system, entitled "Institutio Astronomica, in qua doctrina spherica, atque theorica, intermixto usu spheræ cœlestis, et variis chronologicis, pertractantur." 2. An Introduction to Modern and Ancient Geography, with many plates. In all that he wrote and taught, he showed himself a great partisan of the Aristotelian philosophy, in opposition to that of Descartes. *Morevi.*

LUZ, [Heb. separation.] The original name of Bethel. —Also, a city in Arabia Petrea, built by a man of Bethel, who, while the tribe of Ephraim besieged that place, showed them a secret entrance, whereby they took the city; for which, they spared him and his family. He retired into the land of the Hittites, and there built Luz, otherwise called Lefā, Lafa, or Luffa. *Jud. i. 23-26.*

LUZ, a seaport town of the island of Canary: five miles north of Ciudad de los Palmas.

LUZ, a town of France, in the department of the Higher Pyrenées, and chief place of a canton, in the district of Argeles. The place contains 2135, and the canton 6222, inhabitants.

LU'ZA, a river of Russia, which runs into the Dwina at Uting.

LUZA'RA, a town of Italy, in the department of the Mincio. In the year 1702, a battle was fought near this town, between the troops of the empire under the command of prince Eugene, and the French and Spaniards commanded by the duke of Anjou; the dispute was long and bloody, and the victory was only known by the duke of Anjou becoming master of Luzara. It is sixteen miles south of Mantua.

LUZAR'CHES, a town of France, in the department of the Seine and Oise: fifteen miles north of Paris. Lat. 49. 7. N. lon. 2. 30. E.

LU'ZEBURG, a town of East Friesland: two miles north-east of Norden.

LUZECH', a town of France, in the department of the Lot: seven miles west-north-west of Cahors, and fifteen south of Gourdon. Lat. 44. 29. N. lon. 1. 23. E.

LU'ZERATH, a town of France, in the department of the Rhine and Moselle, and chief place of a canton, in the district of Coblenz. The place contains 614, and the canton 2525, inhabitants.

LUZER'NE, a county of Pennsylvania, bordering on New York, seventy-nine miles from north to south, and seventy-five from east to west, well watered by the Susquehanna. It contains 12,839 inhabitants. The chief town is Wilkesbarre.

LUZIL'LE, a town of France, in the department of the Indre: nine miles south of Amboise.

LUZK. See LUCKO, p. 748.

LUZO'N. See LUÇON, p. 748.

LUZURIA'GA, *f.* [so called by the authors of the Flora Peruviana, in honour of a Spanish botanist, or patron of the science, of the same name.] In botany, a genus of the class hexandria, order monogynia, natural order samentaceæ, *Linn.* (asphodeli, *Juss.* asphodeleæ, *Brown.*) Generic essential characters.—Calyx none; corolla in six deep equal spreading beardless segments, deciduous; filaments inserted into the base of each segment, thread-shaped, smooth, curved at the point; antheræ arrow-shaped, cohering, longer than the filaments; style thread-shaped, with three furrows; stigma simple; berry with a few, nearly globose, seeds.

This genus consists of climbing weak shrubs, with simple ribbed leaves. Flowers cymose or umbellate, terminal and axillary; their footstalks as it were articulated with the rather-tapering base of the flower. Berry black, sometimes enclosing only a single seed. Mr. Brown is not

quite certain of this genus being precisely the same with that of the Flora Peruviana. He defines two New-Holland species.

1. Luzuriaga cymosa: cymes terminal, deeply divided; branches round; young branches striated, smooth. Found near Port Jackson, as well as within the tropic.

2. Luzuriaga montana: umbels axillary, stalked; branches striated, rough. Found near Port Jackson. *Brown's Prodr. Nov. Holl. i. 281.*

LU'ZY, a town of France, in the department of the Nievre: fifteen miles south-south-east of Moulins en Gilbert, and sixteen south-west of Aufun.

LUZZANA, a town of Italy: twenty-two miles south of Mantua.

LUZ'ZI, a town of Naples, in Calabria Citra: four miles south of Bisignano.

LWOW. See LEMBERG, vol. xii. p. 467.

LY, a very frequent termination both of names of places and of adjectives and adverbs; when *ly* terminates the name of a place, it is derived from leag, Sax. a field. *Gibson.* When it ends an adjective or adverb, it is contracted from *lich*, like: as, *beastly*, beast-like; *plainly*, plain-like.

LY'ÆUS, a surname of Bacchus. It is derived from *λυειν*, to melt; because wine, over which Bacchus presides, gives freedom to the mind, and delivers it from all cares and melancholy. *Horace.*

LY'AM, *f.* [possibly from *lygan*, Sax. to lead.] A thong for holding a greyhound in hand:

My dog-hook at my helt to which my *lyam's* ty'd,  
My sheaf of arrows by, my wood-knife by my side,  
My hound then in my *lyam.* *Drayton's Mufe's Elizium.*

LYAU'. See LBAO, vol. xii. p. 416.

LYB'IA. See LIBYA, vol. xii.

LYB'IA, or LYBIS'SA, a small village of Bithynia, where Hannibal was buried.

LYCABETUS, a mountain of Attica, near Athens. *Statius.*

LYCÆ'A, in antiquity, an Arcadian festival resembling the Roman *lupercalia*, in which the conqueror was rewarded with a suit of brazen armour.—Also, a festival at Argos, in honour of Apollo Lycæus, who delivered the Argives from wolves, &c.

LYCÆ'UM. See LYCEUM.

LYCÆ'US, a mountain of Arcadia, sacred to Jupiter, where a temple was built in honour of the god Lycæus, by Lycaon, the son of Pelasgus. It was also sacred to Pan, whose festivals, called *Lycaea*, were celebrated there.

LYCAM'BES, the father of Neobule. He promised his daughter in marriage to the poet Archilochus, and afterwards refused to fulfil his engagement when she had been courted by a man of opulence. This irritated Archilochus; he wrote a bitter invective against Lycambes and his daughter, and rendered them both so desperate by the satire of his composition, that they hanged themselves.

LYCAN'THROPY, [*lycanthropia*, Lat. from the Gr. *λυκος*, a wolf, and *ανθρωπος*, a man; i. e. a wolf-man, or man-wolf.] A term in ancient medicine, applied to that variety of insanity or melancholy, which induced the persons affected to wander out in the night, howling and making other noises, frequenting church-yards, or places of burial; in which circumstances they were supposed to imitate or resemble wolves. Aëtius and Paul of Ægina have described such patients as pale, with dry and hollow eyes, parched tongue and mouth, excessive thirst, and perpetual sores on their legs, in consequence of the frequent accidents which they met with. The term was also applied to those maniacs, who fancied themselves transformed into wolves. The appellation of *cynanthropia* was also given to the disease, when the patients imitated the manners of dogs, or imagined themselves to be changed into these animals.—He sees like a man in his sleep, and grows as much the wiser as the man that dreamt of a *lycanthropy*, and was for ever after wary not to come near a river. *Taylor.*

LYCA'ON,

**LYCA'ON**, the first king of Arcadia, son of Pelasgus and Melibœa. He built a town called Lycosura on the top of Mount Lycæus, in honour of Jupiter. He had many wives, by whom he had a daughter, called Calista, and fifty sons. He was succeeded on the throne by Nyc-timus, the eldest of his sons. He lived about 1820 years before the Christian era. *Apollod.* 3. *Hygin.* fab. 176.—Another king of Arcadia, celebrated for his cruelties. He was changed into a wolf by Jupiter, because he offered human victims on the altars of the god Pan. Some attribute this metamorphosis to another cause. The sins of mankind, as they relate, were become so enormous, that Jupiter visited the earth to punish wickedness and impiety. He came to Arcadia, where he was announced as a god, and the people began to pay proper adoration to his divinity. Lycaon, however, who used to sacrifice all strangers to his wanton cruelty, laughed at the pious prayers of his subjects, and, to try the divinity of the gods, served up human flesh on his table. This impiety so irritated Jupiter, that he immediately destroyed the house of Lycaon, and changed him into a wolf. *Ovid. Met.*—These two monarchs are often confounded together, though it appears that they were two different characters, and that not less than an age elapsed between their reigns.

**LYCAON'IA**, in ancient geography, a province of Asia Minor, south of Galatia. According to Strabo, Mysia made a part of it. It was situated between mountains; and is supposed to have derived its name from *λυκος*, a wolf, because the country, from its situation, formed a proper retreat for those animals. The principal places of Lycaonia, according to Ptolemy, were Adopissus, Canna, Iconium, Paralais Corna, Casbia, and Baratta. The apostles of this country are said to have been St. Paul and St. Barnabas. The Notitia of Hierocles reckons in this province eighteen episcopal towns.

**LYCAON'IAN**, *f.* An inhabitant of Lycaonia, or one born there.

**LYCAON'IAN**, *adj.* Appertaining to Lycaonia.

**LYCAONIAN LANGUAGE**. St. Paul, preaching at Lystra, a town in Lycaonia, (*Acts* xiv. 8.) cured a man who had been lame from his mother's womb, and had never walked. Whereupon the inhabitants of Lystra said, *in the speech of Lycaonia*, (*ver.* 11.) "the gods are come down to us in the likeness of men." The question is, what this speech of Lycaonia was? It is generally believed to have been a corrupt Greek; and it is certain that Greek was spoken in Asia Minor. Paul Ernest Jablonki has written a learned dissertation on the Lycaonian tongue; he supposes it was the same with the Cappadocian, i. e. Greek mingled with a great deal of Syriac; an opinion which has been followed by Grotius, and is very probable, by reason of the neighbourhood of Syria, Cappadocia, and Lycaonia; for, had there been only a difference of dialect, St. Luke would not have said, that these people cried in the speech of Lycaonia; a dialect is not a particular language, or speech. *Calmet.*

**LYCASTE**, an ancient town of Crete, whose inhabitants accompanied Idomeneus to the Trojan war. *Homer.* *Il.* ii.—A daughter of Priam by a concubine. She married Polydamas, the son of Antenor.—A famous courtesan of Drepanum, called Venus on account of her great beauty. She had a son called Eryx by Butes, son of Amycus.

**LYCEUM**, [*Λυκειον*, Gr.] The name of a celebrated school, or academy, at Athens, where Aristotle explained his philosophy. The place was a grove in the suburbs of Athens, which had previously been used for military exercises. It was composed of porticos, and trees planted in the quincunx form, where the philosophers disputed walking. Hence *philosophy of the Lyceum* is used to signify the philosophy of Aristotle, or the Peripatetic philosophy. Suidas observes, that the Lyceum took its name from its having been originally a temple of Apollo Lyceus; or rather, a portico or gallery built by Lyceus, son of Apollo; but others mention it to have been built by Pisistratus, or

Pericles. Here Aristotle delivered his lectures to a promiscuous auditory in the evening, when the Lyceum was open to all young men without distinction; but in the morning his disciples were more select, and such as had been previously instructed in the elements of learning, and discovered abilities and dispositions suited to the study of philosophy. The latter he called his morning-walk, and the former his evening-walk. Aristotle continued his school in the Lyceum twelve years.

Public schools, under the name of Lyceums, were established in France by the authority of the late emperor; and in this way not fewer than 6400 scholars were maintained by the state. Even here, however, it is curious to observe the efforts of Bonaparte to escape from the performance of pecuniary obligations, and to throw the expense of these institutions on the particular quarters of the country in which they were situated. Having passed a decree commanding the mayors and municipal councils to supply the wants of young students on their arrival, this power was so far abused, that troops of boys, collected in various departments, were sent to be newly clothed and equipped at the expense of any town wherein a Lyceum was established. From M. Faber's Sketches of the Internal State of France (between the years 1807 and 1811), printed at Petersburg, we shall select some passages which will convey an idea of the course of instruction which was pursued at those Lyceums, and of the stress laid on those habits of military subordination which were always uppermost in Bonaparte's mind: "Latin and mathematics are the main objects of the Lyceums. For each of the two branches of instruction there are six classes, under the superintendance of three professors, each of whom gives instruction in arithmetic as well as Latin. In the fourth class, the Latin professor teaches geography; in the third, the elements of chronology and ancient history; in the second, those of mythology; in the first, history, and the geography and history of France. No pupil is admitted into the mathematical class, till he has passed the fifth Latin form. Two committees, one for Latin, the other for the mathematics, directed the printing of such class-books as they considered to be adapted to the system. There are as many volumes as classes, arranged in such a manner, that each volume, for Latin as well as for the mathematics, comprehends what a professor is to go through with one class; and no professor must, upon any pretext whatever, presume to teach from any other book. Besides a writing, drawing, and dancing, master, there is a military instructor, whose business it is to teach all the pupils above twelve years old their exercise; those who have attained that age he instructs in the use of arms, and in military manœuvres; and he attends all their lessons, to command the marches of the pupils in the various movements of the day. The scholars are divided into companies; for their meals, private study, school-hours, recreations, prayers, church, and bed-time, the signal is given by beat of drum. [Here we are reminded of our military asylum at Chelsea.] They rise at half-past five, and on Sundays and holidays at six: prayers, studies, and all their exercises, take place at one and the same time, and in common. The pupils are not allowed to go out of the Lyceum but by permission of the director, who sends some person with them; none of them must sleep out of the seminary. They must not have any correspondence except with their parents, or persons authorized by their parents in their stead. All letters which they write and receive pass through the hands of the censor. The access to the Lyceums is prohibited to all persons of the other sex; the mothers, sisters, and female relatives, of the pupils, are not allowed to enter without the permission of the director. The boys must not even pull off their coats in their hours of recreation without leave from the censor. Each Lyceum may have a library of fifteen hundred volumes; all these libraries must be composed of the same works, and no book must be placed in it unless by the authority of the minister of the interior."

Lyceums for the study of natural philosophy were established about the same time at Krzemnico and Winnica in Russian Poland. The library and philosophical apparatus of the late unfortunate king of Poland were purchased for their use; and the rich land-owners of the Ukraine and Volhynia contributed liberally to make the collection complete. Each has an observatory, extremely well furnished with astronomical instruments.

LYCHNIDE'A. See BUCHNERA, ERINUS, PHLOX, and SELAGO.

LYCHNIDUS, now *Acrida*, a city with a lake of the same name, in Illyricum. *Livy*.

LYCHNIS, *f.* [Gr. signifying a lamp; hence some have supposed that its application arose from the down of the plant having been used to make wicks for lamps. This, however, by no means appears to have been the fact; the most probable and apparent explanation of the name is from the resemblance of the calyx to a lantern, its sides being semi-transparent between the ribs or veins; or the whole, in some instances, quite membranous, round, and inflated, like the horn lanterns still used by the Chinese. Possibly the appearance of the stigmas, stamens, or crown of the corolla, in several species, might favour the idea of a lamp with its flame. See the Plate, fig. 1. We must recollect that this name of *Lychnis* has been always used, with great latitude, for all the Campion-tribe, by the old botanists; though now restricted, by Linnæus and his followers, to one particular genus of that family. The short mention in Dioscorides, of his *λυχνίς*, is quite insufficient to determine either the wild or garden plant of which he speaks.] In botany, a genus of the class decandria, order pentagynia, natural order of caryophyllei. The generic characters are—Calyx: perianthium one-leaved, oblong, membranaceous, five-toothed, permanent. Corolla: petals five; claws the length of the calyx, flat, margined; border often cloven, flat. Stamina: filaments ten, longer than the calyx, alternately shorter, each of these fixed to a claw of each petal; antheræ incumbent. Pistillum: germ subovate; styles five, awl-shaped, longer than the stamens; stigmas reflex against the sun, pubescent. Pericarpium: capsule approaching to an ovate form, covered; one, three, or five, celled, five-valved. Seeds: very many, roundish.—*Essential Character*. Calyx one-leaved, oblong, even; petals five, with claws, and a subbid border; capsule five-celled; (in most one-celled. *Gartner*.)

*Species*. 1. *Lychnis Chalcedonica*, or scarlet *lychnis*: flowers fasciated, fastigiate. Of this there are three varieties; two with single flowers, and one with double. Indeed, most of the species vary with double flowers. The single scarlet *lychnis* has a perennial root: stems three feet high, upright, stiff, round, jointed, hairy; at every joint two large leaves of a brownish green colour; flowers terminating, in a large flat-topped tuft, consisting of several bundles; corolla of a scarlet or bright red orange colour, (var. *α.*) varying to white, blush, and variable, that is, pale red, growing paler till it becomes almost white, (var. *β.*) Native of Russia and Japan. Cultivated in 1596 by Gerard; in his time it was common in almost every garden; but he does not mention any of the varieties. Parkinson in 1629, and Johnson in 1633, have the varieties; but the latter says, that "the white and bluish single and the double one are not to be found but in the gardens of our prime florists." These authors call it, flower of Constantinople, *campion* of Constantinople, flower of Britow, and *nonefuch*; it seems to have lost these names, and to be known generally by the name of scarlet *lychnis*. The French call it *lychnoïde de Calcedoine*, *croix de Jerusalem*, ou de *Malthe*; the Italians also name it *croce di cavaliere*; the Spaniards *cruces de Jerusalem*; and the Portuguese *cruz de Malta*. A kind of soap is occasionally made from the flowers.

γ. The variety with double flowers is a valuable plant. The flowers are very double, and of a beautiful scarlet colour. This has a perennial root, from which arise two, three, or four, stalks, according to the strength of the roots; these, in rich moist land, grow upwards of four feet high; the stalks are strong, erect, and hairy; garnished the whole length with spear-shaped leaves sitting close to the stalks, placed opposite; and just above each pair of leaves, there are four smaller leaves standing round the stalk. The flowers are produced in close clusters sitting upon the top of the stalk; when the roots are strong, the clusters of flowers will be very large, and make a fine appearance. They appear the latter end of June, and in moderate seasons continue near a month in beauty. The stalks decay in autumn, and new ones arise in the spring.

2. *Lychnis flos cuculi*, or red-flowered meadow-*lychnis*: petals quadrid; fruit roundish, one-celled. Root perennial, brownish-white, subacrid. Stems from one to three feet high, upright, somewhat angular and grooved, swelled at the joints, purplish. Linnæus remarks, that they are procumbent, and become upright at the time of flowering. Calyx ten-angled, of a deep purple colour; corolla pink or purplish red, varying sometimes to white; the border of the petals dividing into four segments, of which the two outer are shorter and narrower; the claws have two small spear-shaped teeth at the top. Capsule one-celled, the mouth having five teeth which turn back; seeds flatish, rugged, of a brown ash-colour. Native of most parts of Europe in moist meadows; flowering in May and June. This plant has a variety of names in English; as meadow-pink, wild williams, cuckoo-flower, ragged robin, crow-flower. Parkinson calls it feathered wild *campion*; Gerard, *crow-flowers*, *wilde williams*, *marsh-gillo-flowers*, and *cockowe-gillo-flowers*; Ray, meadow-*campion*: to Mr. Curtis, meadow-*lychnis* seems most eligible. Several plants have the name of cuckoo-flower from their appearing about the same time with that bird. Gerard says the true cuckoo-flower is *Cardamine pratensis*. Shakespeare's cuckoo-buds are of a yellow hue, and probably *ranunculus*, or *crowfoot*. Goats, sheep, and horses, are said to eat it; but it seems generally agreed that none of our domesticated quadrupeds are fond of it. The beauty of the flowers entitles it to a place in the gardens of the curious.

γ. The variety with double flowers is frequently cultivated in flower-gardens for ornament. It only differs from the single in the multiplicity of the petals; and is commonly known by the title of *double ragged robin*. Some call it, says Parkinson, the *fair maide of France*. It is sometimes found wild in England, as near Bungay in Suffolk by Mr. Woodward.

3. *Lychnis alpestris*: petals four-cleft, crowned; leaves recurved. Root perennial. Stems a span high, upright, smooth. Flowers in a dichotomous panicle; calyx smooth, with blunt teeth; petals white, the length of the calyx. Native of Switzerland and Austria.

4. *Lychnis quadridentata*, or four-toothed *lychnis*: petals four-toothed; stem dichotomous; leaves smooth, recurved. Stems a span high, with the upper joints viscid. Leaves lanceolate, an inch long. Native of Austria.

5. *Lychnis coronata*, or Chinese *lychnis*: smooth; flowers axillary, and terminating, solitary; petals lacinated. The whole plant is smooth. Stem simple round upright, a foot high. Leaves opposite, embracing, oblong-ovate, acute, entire; an inch or a little more in length. Flowers aggregate, about three, sessile; calyx ten-angled. Native of China and Japan. Introduced in 1774, by John Fothergill, M.D. It flowers in June and July.

6. *Lychnis viscaria*, viscous *lychnis*, or *catchfly*: petals nearly equal. This has long narrow grass-like leaves, which come out from the root without order, sitting close to the ground; between these come up straight single stalks, which in good ground rise a foot and a half high; at each joint of the stalk come out two leaves opposite,

LYCHNIS AND LYCIUM.

*Rigid Bar-therm.*

*Four-cleft Bar-therm.*

*Alpine Campion.*

Thomson, scilicet, Dury, St. Blomond?

of the same form as the lower, but decreasing in their size upwards; under each pair of leaves, for an inch in length, there sweats out of the stalk a glutinous liquor, which is almost as clammy as birdlime, so that ants and other insects which happen to light upon these places, or attempt to creep up to the flowers, are fastened to the stalk, whence this plant has the title of *catchfly*. The stalk is terminated by a cluster of purple flowers, and from the two upper joints come out on each side of the stalk a cluster of the same flowers; so that the whole forms a sort of loose spike; these appear in the beginning of May, and the single flowers are succeeded by roundish seed-vessels, which are full of small angular seeds ripening in July. The flowers terminate in close whorls, all together forming a spike; others come out from the axis on long peduncles. Very small lanceolate red bractes separate the flowers; which are seven lines or somewhat more in diameter; calyx purple, swelling, viscid, with ten red streaks; petals entire, sometimes slightly waved about the edge and emarginate at the top, bright red-purple, with white claws, almost half an inch long, and three lines wide, having two appendices at the throat. It varies with white flowers; and is sold in foreign countries for *Centaurium minus*. Native of most parts of Europe, in dry and mountainous pastures, especially among bushes. In Britain it is rare. Llwyd and Tancred Robinfon found it in Wales; Thomas Willifell upon the rocks in Edinburgh Park; and Mr. Crow near Croydon in Surry. It flowers in May and June.

7. *Lychnis alpina*, or alpine lychnis: petals bifid; flowers four-styled. Root perennial. Root leaves in a tuft, linear, slightly keeled, acute, smooth, thickish, somewhat channelled, subciliate at the base. Stem a finger, half a foot, or a span, in height, simple, round, upright, having four or five joints flattened a little at top. Stem-leaves narrow, pointed, upright, somewhat rugged; the uppermost membranaceous. Flowers collected into a thyrse or corymb, on three-flowered very short peduncles; bractes between the flowers subdiaphanous; calyx pale, with blunt concave claws. Petals purple, cloven half way, sharp, without any crown; antheræ red. Germ roundish. Styles four or five. It resembles the preceding species very much, but is not viscid, and is only half the size; the petals are not entire, but cloven. The pistils, which are often six and even more, are shorter than the petals before the flowers open; but during the time of flowering lengthen gradually, till they become longer than the petals. See the annexed Plate, fig. 1. Native of the Alps in Europe, and Siberia. It flowers in April and May; Mr. Miller says the beginning of June; and that the seeds ripen in August.

8. *Lychnis læta*, small Portugal lychnis, or campion: petals bifid; flowers solitary; leaves linear-lanceolate, smooth; calyxes ten-keeled. This is an annual plant, native of Portugal. Introduced in 1778, by Edward Gray, M.D. It flowers in July.

9. *Lychnis Sibirica*, or Siberian lychnis: petals bifid; stem dichotomous; leaves somewhat rough-haired. Root perennial, from which arise many narrow leaves sitting close to the ground. Stalks a foot high, dividing into branches by pairs. Flowers from the divisions of the branches, and at the top of the stalks; petals white. Native of Siberia. Cultivated by Mr. Miller in 1759.

10. *Lychnis diurna*, rose-flowered lychnis, or wild red campion: flowers dioecous; capsules one-celled, roundish. Root perennial, the thickness of the little finger; white, of a slightly acrid and bitter taste, furnished with numerous fibres. Stalks several, upright, from one to three feet high, round, hirsute, jointed, purple; the joints swelled; the uppermost branches forked. Native of many parts of Europe, in moist shady ditches, by the sides of hedges, and sometimes in woods; flowering in May and June.

β. A variety of this with double flowers is cultivated in gardens by the name of *red bachelor's buttons*. It is an ornamental plant, and continues long in flower.

11. *Lychnis vespertini*, white-flowered lychnis, or wild white campion: flower dioecous; capsules one-celled, conical. The white wild campion was regarded as a distinct species from the preceding, or red, by all the old botanists. Linnæus supposed them to be only varieties, and he has been followed by most modern botanists; by several, however, with marks of doubt. The two plants agree in most points, they certainly correspond in structure; both have male and female flowers on separate roots, and both are sometimes found with hermaphrodite flowers. There are many circumstances, however, in which they differ; whether sufficiently or not to constitute different species, let others determine from more accurate examination, or from culture. Mr. Miller, who regards them as distinct species, informs us, that the stalks of this are branched out much more than in the red, the leaves are longer and more veined, the flowers stand singly upon pretty long peduncles, and are not produced in clusters as in the red; it is very hairy, the calyx is more swollen, and it flowers a month after the red. Ray observes, that in the red the stems are weaker and more flaccid than in the white. Krocker reports, that in Silesia the plant with white flowers is entirely different from that which has red: the stem being higher, more diffused, suberect; the leaves longer, but narrower, less hirsute, with whitish veins; the joints of the stalk bigger; calyxes in the male cylindrical, in the female ventricose, in both longer than in the red, whitish, with ten green veins; the claws of the petals longer, the petals themselves white, with white appendices or earlets: antheræ ash-coloured; styles white; this is common in fields, &c. that only on mountains.

The late lamented Dr. John Sibthorp is the first among the moderns who has given them as distinct species; having remarked, that in the red lychnis the capsules are roundish, and that its *scentless* flowers stand open through the day; whereas the white has conical capsules, and its *odoriferous* flowers open only towards evening. Hence his specific characters, and trivial names. The colour, with other circumstances relative to the two plants, led Mr. Curtis to suspect that they are not varieties but distinct species, and he remarks that cultivation and farther attention to them will probably enable him to speak of this with more certainty. Mr. Robson, having cultivated both, is satisfied they are distinct species, though both liable to change the colour of their flowers to flesh-colour. To all this we may add, that the red and the white affect different situations, and are never found promiscuously. The white is frequent in fallow fields, sometimes so plentifully as to make them appear at a distance quite white; but the red is never found there. The white seems to prefer dry soils, and the red moist ones. The former is very common in Sweden, not so the latter. No one ever saw the red campion in the county of Cambridge, though the white is common there, and the red no less common in some of the neighbouring counties. Mr. Lightfoot says, the rocks in the island of Ailfa are covered with the red-flowered only. According to Krocker, the white is very common in Silesia on the borders of fields, but the red is found only in the mountainous parts. So also says Allione, that the red occurs in wet shady places and springs at the foot of the Alps; but that the white is every where common in the plains by hedges, ditches, and highways. And Pollich, that the white is every where on banks, among bushes, by walls and among rubbish; the red in woods and hedges. And Villars, that the red occurs on the alps and mountains by the sides of streams; differing from the white not only in colour and place, but in having the upper leaves coloured, and the calyx villose without any distinct veins. The white is found in stony places, by way-sides, in low situations; its calyx is thicker, harder, almost cartilaginous, covered with veins forming a kind of net.

12. *Lychnis apetala*: calyx inflated; corolla shorter than the calyx; flowers hermaphrodite; one or two on the stem. Root fibrous. Stem single, upright, a span high,

high, entire, having three or four joints, scarce apparently rugged. A single flower terminates the stem, nodding horizontally. Native of the mountains of Lapland and Siberia. In the latter it occurs with several flowers on the stem.

Mr. Miller has another sort, which he calls *L. Lusitânica*, it having been introduced from Portugal by John Browning, esq. of Chelsea, a master in chancery, and a great cultivator of exotic plants, before 1759. He thinks it probably a variety of one with single flowers that is wild in that country, and that it approaches nearest to the double ragged robin. It is perennial, with many oblong narrow leaves sitting close to the ground. It divides into separate heads, like *L. vicaria*; and from each of these comes out an upright stalk nine inches high, dividing at top by pairs, and from the middle of each division comes out a slender peduncle two inches long, with one double purple flower at the top, the petals of which are much jagged, and the calyx marked with deep purple stripes; there are other peduncles from the axils, sustaining one or two flowers.—May not this be a variety of *L. læta*, N° 8?

**Propagation and Culture.** Single scarlet lychnis is easily propagated by seeds, which should be sown on a border exposed to the east, in the middle of March. The plants will appear in April, when, if the season is dry, they should be refreshed with water two or three times a-week. By the beginning of June the plants will be fit to remove, when there should be a bed of common earth prepared to receive them; into which they should be planted at about four inches apart, observing to water and shade them till they have taken root; after which time they will require no other care but to keep them clean from weeds till the following autumn, when they should be transplanted into the borders of the pleasure-ground, where they are to continue. The summer following, these plants will flower and produce ripe seeds; but the roots will abide several years, and continue to flower. This sort flowers in June and July, and the seeds ripen in autumn. It may also be propagated by off-sets; but, as the seeds ripen so freely, few persons trouble themselves to propagate the plants any other way. Double scarlet lychnis is propagated by slips taken from the roots in autumn; but, as this is a slow method of increasing the plants, the best way to have them in plenty, is to cut off the flower-stalks in June, before the flowers appear, which may be cut into small lengths, each of which should have three or four joints, which should be planted on an east border of soft loamy earth, putting three of the joints into the ground, leaving one eye just level with the surface; these must be watered, and then covered close with bell or hand-glasses, so as to exclude the outward air, and shaded with mats when the sun shines hot upon them. The cuttings so managed will put out roots in five or six weeks, when they must be exposed to the open air; and in very dry weather they should be now and then refreshed with water; but it must not be repeated too often, nor given in large quantities; for too much moisture will cause them to rot. These will make good plants by the following autumn, when they may be transplanted into the borders of the pleasure-garden, where they will flower the following summer.

The single meadow-lychnis is not kept in gardens, though by no means destitute of beauty; but the variety with very double flowers is propagated for ornament. It is commonly known by the name of double ragged robin; and is increased by slipping the roots in September. Vicarious lychnis, or red German catchfly, was formerly cultivated in flower-gardens; but, since the variety with double flowers has been produced, the single one has been neglected. It may however be propagated in plenty by parting the roots in autumn, at which time every slip will grow; or, if the seeds are sown in the same manner as is directed for the first sort, the plants with single flowers may be raised in plenty. This delights in a light moist soil and a shady situation. The double-flowering catchfly has not been known forty years in the English gardens;

but it is now so common as to have excluded that with single flowers. As this never produces seeds, it can only be propagated by parting and slipping the roots; the best time for this is in autumn, at which time every slip will grow. If this be performed in September, the slips will have taken good root before the frost, and will flower well the following summer; but, if they are expected to flower strong, the roots must not be divided into small slips, though, for multiplying the plants, it matters not how small the slips are. These should be planted on a border exposed to the morning sun, and shaded when the sun is warm till they have taken root. If the slips are planted in the beginning of September, they will be rooted strong enough to plant in the borders of the flower-garden by the middle or latter end of October. The roots of this multiply so fast, as to make it necessary to transplant and part them every year; for, when they are let remain longer, they are very apt to rot.

The double varieties of red and white wild campions, commonly called *bachelor's buttons*, are ornamental plants, and continue long in flower. They are propagated by slips, planted the beginning of August in a shady border of loamy earth, where they will take root in six weeks or two months, and may then be transplanted into the borders of the flower-garden. These roots should be annually removed, otherwise they frequently rot; and young plants must be propagated by slips to supply the decay of the old roots, which are not of very long duration. The red thrives best in a soft loamy soil, and in a shady situation, where it has only the morning sun. The double white does not make to good an appearance as the red; but it will thrive in a drier soil, and a more open exposure. See AGROSTEMMA, CERASTIUM, CHERLERIA, CUCUBALUS, FRANKENIA, GYPSOPHILA, HOLOSTEMUM, PHLOX, PLUMBAGO, SAPONARIA, SILENE, and VELEZIA.

LYCHNIS, Bate. See PHLOX.

LYCHNIS, Wild. See AGROSTEMMA.

LYCHNITIS. See AMELLUS and VERBASCUM.

LYCHNOBITE, *f.* [from Gr. *λυχνος*, a candle, and *βίος*, life.] One that turns the day into night; one that does his business by night, and sleeps by day.

LYCHNOIDES. See ARENARIA and PHLOX.

LYCIA, in ancient geography, a country of Asia Minor, bounded by the Mediterranean on the south, Caria on the west, Pamphylia on the east, and Phrygia on the north. It was anciently called *Milyæ* and *Tremile*, from the *Milyæ*, or *Solymi*, a people of Crete, who came to settle there. The country received the name of *Lycia* from Lycus the son of Pandion, who established himself there. The inhabitants have been greatly commended by all the ancients for their sobriety and justice. They were conquered by Cræsus king of Lydia, and afterwards by Cyrus. Though they were subject to the power of Persia, yet they were governed by their own kings, and only paid a yearly tribute to the Persian monarch. They became part of the Macedonian empire when Alexander came into the east; and afterwards were ceded to the house of the Seleucidæ. The country was reduced into a Roman province by the emperor Claudius.

LYCIDAS, a Centaur, killed by the Lapithæ at the nuptials of Pirithous. *Ovid*.—A shepherd's name. *Virg.*—A beautiful youth, the admiration of Rome in the age of Horace. *Horace, Ode 4.*

LYCII SIMILIS, or LYCIOIDES. See SIDEROXYLON.

LYCIUM, *f.* [so called, as is generally supposed, from Lycia, its native country; but what was the precise plant intended, has never been settled by commentators. Dioscorides describes it as a "spinous tree, with twigs three cubits or more in length, bearing thick-set leaves, like box. The fruit is like pepper, black thick-set, bitter, and smooth. Bark pale. Roots woody." This description accords in many points with some species of the received Lycium; but with none, that we are acquainted with, in every point.] BOX-THORN; in botany, a genus of the class pentandria, order monogynia, natural order of luidæ,

ridæ, (solanæx, Juff.) The generic characters are—Calyx: perianth subquinquefid, obtuse, erect, very small, permanent. Corolla: monopetalous, funnel-form; tube cylindric, spreading, incurved; border five-parted, obtuse, spreading, small. Stamina: filaments five, awl-shaped, from the middle of the tube, shorter than the corolla, closing the tube with a beard; anthers erect. Pistillum: germ roundish; style simple, longer than the stamens; stigma bifid; thickish. Pericarpium: berry roundish, two-celled. Seeds: several, kidney-form: receptacles convex, affixed to the partition.—*Essential Character.* Corolla tubular, closed at the throat by the beard of the filaments; berry two-celled, many-seeded.

*Species.* 1. *Lycium Japonicum*, or Japan box-thorn: unarmed, leaves nerved, ovate, flat, flowers sessile. This shrub is scarcely a fathom in height, very much branched, upright. Branches and branchlets scattered, round, slender or filiform, ash-coloured, smooth, spreading, drooping at top. Leaves opposite, subsessile, attenuated below, blunt with a point, quite entire, smooth, spreading, dark green above, half an inch long; there are clusters of many smaller leaves in the axils. Flowers on the branchlets from a cluster of leaves, sessile, upright, solitary or aggregate, deciduous; calyx much shorter than the corolla, smooth, five-toothed; tube of the corolla greenish-white, a line in length; segments or the border ovate, pale flesh-colour, a little shorter than the tube; the opening of which is closed with villose hairs; filaments fastened to the tube longitudinally below the opening; anthers oblong, standing, a little white. Germ superior; style capillary, white, the length of the corolla; stigmas two, seldom three, oblong, whitish, villose. It varies with double flowers.

It occurs twice in the Syst. Veget. In the Supplement it was named *setidum*, Kämpfer and Kœnig having reported that the bruised leaves smell like dung; which is not true of this shrub, but of a tree called by the Dutch *Srunthout*. It is described by Retzius from Kœnig's specimens; and it is made a distinct genus under the name of *Serissa*, by l'Heritier called *Bochozi*, and by Loureiro *Dy-soda*. Native of Japan; Thouin found it in China, and Kœnig in Madeira. Introduced in 1787, by Monf. Cels. It flowers here most part of the summer; in Japan from April to November. This small handsome shrub is planted frequently for hedges in Japan.

2. *Lycium barbatum*, or fringed box-thorn: unarmed, leaves ovate, smooth; branches flexuose; flowers panicled. Native of the Cape of Good Hope, where it was found by Thunberg. This stands in Linnaeus's Supplement under the name of *L. inerme*. Mr. Miller has one with the same name; but his is a Chinese plant.

3. *Lycium Afrum*, or African box-thorn: thorny, leaves linear, fascicled, branchlets stiff. This rises with irregular shrubby stalks ten or twelve feet high, sending out several crooked knotty branches, covered with a whitish bark, and armed with long sharp spines, upon which grow many clusters of narrow leaves; these thorns often put out one or two smaller on their sides, which have some clusters of smaller leaves upon them; the branches are garnished with very narrow leaves an inch and a half long, and at the base of these come out clusters of shorter and narrower leaves. The flowers come out from the side of the branches, standing upon short foot-stalks; they are of a dull purple colour. The berry is of a yellowish colour when ripe, inclosing several hard seeds. This usually flowers in June and July, and the seeds ripen in the autumn; but frequently a few flowers come out in all the summer months. Native of the Cape of Good Hope; where sheep feed on it. Cultivated in 1712, by the dukes of Beaufort.

β. *L. falicifolium*. This has many irregular shrubby stalks, which rise eight or nine feet high, sending out several irregular branches, covered with a white bark, and armed with pretty strong thorns; the leaves are narrow at bottom, growing broader upward, and are

of a pale green colour. The flowers come out from the side of the branches; they are of a purplish-white colour and small, and make no great appearance. This sort flowers in June and July, but rarely produces any seeds in this country. The leaves remain till winter, when they fall off. It is a native of the South of France, Spain, and Italy, in hedges.

4. *Lycium rigidum*, or rigid box-thorn: leaves clustered, linear; branches straight, ending in a spine. Flowers nearly sessile. Gathered by Thunberg near Cape Town, flowering in July and August. It differs from the preceding chiefly in having the flowers nearly sessile, white with a much shorter and broader corolla; the leaves also are narrower. See the preceding Plate, fig. 2.

5. *Lycium Ruthenicum*, or Russian box-thorn: thorny; leaves linear, fascicled; branches hanging down. This is a shrub of about six feet high, if measured to the tips of the pendent branches; the stems are many, branching almost immediately from the root; branches long, dependent, or procumbent, unless supported; of the thickness of a tobacco-pipe, round, spinose, leafless; decomposed from about the middle, where they shoot into smaller branchlets, which are spiny, very spreading, and leafy towards their tips. Leaves fascicled, growing by fives, and sometimes by nines, or more, juicy, linear, glaucous, obtuse at margin and tip, attenuated towards the base. Flowers two or four together, outwardly pale, and of a greenish-purple; within purple, with a pale throat, marked by fifteen deeper streaks; stamens longer than the corolla; antheræ sulphur-colour, oblong, incumbent.

6. *Lycium tetrandrum*, or four-cleft box-thorn: thorny; leaves ovate obtuse; branches angular; corollas four-cleft. This is a rigid, branched, smooth, shrub, with the habit of the first two species; but with very small fleshy obovate leaves, and small funnel-shaped short white flowers, whose corolla is four-cleft, and stamens four only. Found by Thunberg at the Cape of Good Hope, towards the sea, flowering in June. See the Plate, fig. 3.

7. *Lycium boerhaaviaefolium*, or glaucous-leaved box-thorn: thorny; leaves ovate, quite entire, acute, glaucous; flowers panicled. Stem upright, round, branched, full of chinks, ash-coloured. Branches alternate, spreading, smooth. Spines axillary, solitary, spreading very much, awl-shaped, shorter than the petiole. Leaves alternate, spreading, from twelve to twenty lines long, from eight to fifteen lines wide. Petioles one third of the length of the leaves, spreading very much, round, pale purple. Flowers peduncled, upright, white; corolla blue, smelling very sweet. It has the flowers of *Lycium*, with bearded stamens; but the fruit of *Ehretia*, with bony, three-toothed, two-celled, seeds, but only two in number. It varies with waved leaves. Native of Peru, where it was found by Dombey; Jos. Jussieu introduced it many years since into the Paris garden, where it flowers in summer and autumn, but seldom produces berries. Introduced here in 1780, by Monf. Thouin.

8. *Lycium barbarum*, willow-leaved box-thorn, or blue jasmine: thorny; leaves lanceolate; branches loose; calyxes bifid. This is a weak shrub, nodding and decumbent unless supported. Bark of the branches whitish. Flowers from each bud from two to five, each on its proper peduncle. It differs from all the other sorts, in having the mouth of the calyx two-lobed, or sometimes three-lobed; border of the corolla spreading, with the throat pale, streaked with black, and purple or pale red within. Berries ovate, yellow, or vermillion red, fleshy, with a longitudinal depressed streak on each side, smooth, shining, two-celled; seeds about twelve in each cell, roundish, compressed, with small raised dots on them, whitish. Native of Europe, Asia, and the Cape of Good Hope; cultivated in 1709, by the dukes of Beaufort; it flowers from May to October.

β. *L. Chinense* of Miller rises with weak irregular diffused branches to a great height, requiring support; some of these branches have in one year been upwards of twelve

feet long. The lower leaves are more than four inches long and three broad in the middle; they are of a light green and a thin consistence, placed without order on every side the branches. As the shoots advance in length, the leaves diminish in size, and towards the upper part they are not more than an inch long, and a quarter of an inch broad; they sit close to the stalks on every side. The flowers come out singly at every joint towards the upper part of the branches, on short slender peduncles; they are of a pale colour, with short tubes; the brims are spread open broader than either of the former sorts, and the style is considerably longer than the tube of the corolla. It flowers in August, September, and October; and retains its leaves till November. It is a native of China, whence the seeds were brought to England a few years before 1759; and, being raised in several gardens, by some were thought to be Thea, or tea-tree. The Chinese use a decoction in wine, or an infusion in water; of the berries, as a tonic, analeptic, and cephalic.

9. *Lycium Europæum*, or European box-thorn: thorny; leaves oblique; branches flexuose, round. This differs from *L. barbarum* in being able to stand upright without assistance; in having the leaves, though lanceolate as in that, not flat, but oblique or flexuose; the branchlets flexuose, not rendered angular by a line running down from the petiole; the surface not smooth, but subtomentose; and, finally, spines from every bud. It differs from *L. afrum* in having lanceolate leaves, and round flexuose branchlets. Native of the south of Europe; as Spain, Portugal, and the south of France, observed by Clusius; and by Ray about Montpellier and Florence, flowering both in March and autumn. Clusius says they eat the tender shoots in Spain, with oil and vinegar; and Micheli, that it is used for hedges in Tuscany, where they call it *Spina da corone di crocifissi*; supposing it, in common with several other prickly shrubs, to be that which afforded the crown of thorns to our Saviour before his crucifixion. It was introduced in 1780, by Peter Simon Pallas, M. D.

10. *Lycium Tataricum*, or Tartarian box-thorn: thorny; leaves linear, fasciated; branches supine. This is an elegant shrub, on account of the whiteness of the branches, rods, or twigs, which are many, a foot or eighteen inches long or more, branched, ascending. Spines alternate, awl-shaped, rigid, spreading, white or yellowish, surrounded with leaves and flowers at the base. Flowers from the upper part of the twigs among the leaves, two or three to each spine, on short peduncles. It differs from *L. Europæum*, to which it bears great affinity, in size, and both the colour and form of the flower. Native of Tartary about the Volga; in the deserts of Turcomannia and Hyrcania, especially in sandy soils replete with nitre. When out of flower, it bears great resemblance to *Nitraria*, except that it is more thorny. Gmelin observed a dwarf and very-thorny variety in the sands near the Caspian Sea.

11. *Lycium capsulare*, or capsular box-thorn: thorny; leaves lanceolate, thin, smooth; peduncles and calyxes pubescent; pericarps capsular. This is said by Linnæus to be a native of Mexico, on the authority of Miller; but we do not find it among his species.

12. *Lycium cinereum*, or grey-barked box-thorn: thorny; leaves lanceolate, smooth; branches spineless; peduncles very short. Native of the Cape.

13. *Lycium horridum*, or succulent-leaved box-thorn: thorny; leaves obovate, fleshy, smooth; branches numerous, ending in a spine. Flowers white, on very short stalks. Grows in maritime situations at the Cape, flowering from September to November. The stem is three feet high, rigid, abounding with short spinous branches in every direction. Leaves from three to seven in a cluster, not half an inch long, sessile, thick, smooth; flattish and green above; convex, white, and marked with a green line, beneath. Flowers solitary, small, on short stalks.

14. *Lycium Cochinchinense*, or Cochin-china box-thorn: unarmed; leaves oblong, blunt; cymes termi-

nating. This shrub is four feet high, almost upright, branched. Flowers white, in peduncled cymes. Native of Cochin-china, in woods.

15. *Lycium Carolinianum*, or Carolina box-thorn: leaves spatulate-oblong; branches without spines; flowers four-cleft. Native of the rushy salt-marshes of Carolina, Georgia, and Florida; said to have been brought to England in 1806. The stem is shrubby; leaves narrow; flowers bluish, four-cleft, with four stamens. *Michaux.*

*Propagation and Culture.* Most of these plants may be increased by seeds, cuttings, or layers. If by seeds, they should be sown in the autumn soon after they are ripe; for, if they are kept out of the ground till spring, they seldom come up the first year. If the seeds are sown in pots, the pots should be plunged into some old tan in the winter, and in very severe froit covered with pease-haulm or straw; but in mild weather should be open to receive the wet: in the spring the pots should be plunged into a moderate hot-bed, which will soon bring up the plants; these must be inured to bear the open-air as soon as the danger of frost is over; and, when they are three inches high, they may be shaken out of the pots, and each planted in a small separate pot, filled with loamy earth, and placed in the shade till they have taken new root, when they may be removed to a sheltered situation, where they may remain till the autumn; then they should be either removed into the green-house, or placed under a hot-bed frame to shelter them from hard froit; for, these plants being too tender to live in the open air in England, they must be kept in pots and treated in the same way as myrtles, as other hardy green-house plants; but, when the plants are grown strong, there may be a few of them planted in the full ground in a warm situation, where they will live in moderate winters, but in hard froits they are commonly destroyed. If the cuttings of these plants are planted in a shady border in July, and duly watered, they will take root, and may then be treated in the same way as the seedling plants. This is the common mode of increasing them; for some never produce seeds in England. Several of these shrubs, from China and the Cape will bear the open air in a warm situation and dry soil, when they have once acquired strength; except in very severe winters; especially if the roots be covered with litter, and the branches with mats. See ARDUINA, BARBERIA, BERBERIS, CARISSA, CEANOTHUS, CELASTRUS, GMELENA, RANDIA, RHAMNUS, and SIDEROXYLON.

LY'CIUS, an epithet given to Apollo from his temple in Lycia, where he gave oracles; particularly at Patara, where the appellation of *Lycia sortes* was given to his answers, and even to the will of the Fates. *Virg. Æn.*

LYCK'. See LICK, vol. xii. p. 622.

LYCOCTO'NUM, *f.* in botany. See ACONITUM.

LYCODON'TES. See BUFONITIS, vol. iii. p. 493.

LYCOGA'LA, *f.* in botany, [so named by Micheli, from *λυκος*, a wolf, and *γαλα*, milk.] A genus of the fungus tribe, whose internal appearance and substance, in an early state, are like a mass of thick cream. It is included by Linnæus, Schreber, and others, under MUCOR, which see.

LYCOIDES, *f.* A term used by medical writers to express the disorders which arise in the human body by a long retention of the feed. These are sometimes madness, and very often dangerous quinies and swellings, and inflammations about the neck and throat. If we consider the natural tendency of the disorders of this kind to affect the neck, and the remarkable swelling of the necks of bucks, and some other animals, at rutting-time, it may give some rational hints towards understanding the alteration of the voice in boys who arrive at puberty. Blancard derives the word from *λυκος*, a wolf, and *ειδος*, form, from a supposition that wolves are subject to this disorder.

LYCOME'DES, in fabulous history, a king of Scyros, an island in the Ægean sea. He was son of Apollo and Parthenope. He was secretly intrusted with the care of young Achilles, whom his mother Thetis had disguised

LYCOPERDON AND LYCOPODIUM.

1. The Puff-ball or Puff-ball; 2. the same at the moment of explosion. 3. Lycoperdon of the Oak, s.w. Star Puff-ball, 8 to 11. Species of Club-moss or Wolf's-claw.

*Lycopodium puberulum* at the Act. deprec. Jan. 4. 1816. by Schimper.

in woman's clothes, to detain him from the Trojan war, where she knew he must unavoidably perish. Lycomedes has rendered himself famous for his treachery to Theseus, who had implored his protection when driven from his throne of Athens by the usurper Mnestheus. Lycomedes, as it is reported, either envious of the name of his illustrious guest, or bribed by the emissaries of Mnestheus, led Theseus to an elevated place, on pretence of showing him the extent of his dominions, and perfidiously threw him down a precipice, where he was killed. *Plut. in Theseus.*

LYCOM'ING, a county in the north part of Pennsylvania, 150 miles long, and 86 broad, with 5414 inhabitants.

LYCOM'ING, a town of Pennsylvania: 150 miles north of Philadelphia.

LYCOMING CREEK, a river of Pennsylvania, which runs into the Susquehanna in lat. 41. 10. N. lon. 77. 9. W.

LY'CON, a philosopher of Troas, in the age of Aristotle. He was greatly esteemed by Eumenes, Antiochus, &c. He died in the 74th year of his age. *Diog. in vit.*

LYCO'NE, a city of Thrace.—A mountain of Argolis. *Pauf.*

LYCOPERDAS'TRUM, *f.* in botany. See LYCOPERDON.

LYCOPERDOI'DES. See LYCOPERDON.

LYCOPER'DON, *f.* [so called by Tournefort, from *λυκος*, a wolf, and *περδω*, to explode backwards; this author having certainly improved the old foolish name, *Crepitus lupi*, by making it less generally intelligible. The French call the fungus to which it is applied *vesse-loup*, or wolf-bladder; the English, *puff-ball*; and the Germans, *böfist*; from which last Dillenius contrived the barbarous name *bovifsta*.] In botany, a genus of the class cryptogamia, order fungi, and natural order of fungi, or mushrooms. Generic essential characters—Fungus roundish, opening irregularly at the top, full of powder-like impalpable seeds intermixed with wool-like filaments.

*Species.* Eleven species are enumerated in Murray's edition of *Systema Vegetabilium*. Dr. Withering has twenty-five British species in the third edition of his *Arrangement*. And some of Linnæus's species are disposed of under other genera. Thus the most interesting of the number, *L. tuber*, with the other solid Lycoperdons, is separated, and made a distinct genus, under its old name of TUBER. Persoon has fourteen species, excluding the starchy puff-balls, which he places under a distinct genus, *GEASTRUM*; and some others under the genera TUBER, *SCLERODERMA*, and *BOVISTA*. Some of the species are caulescent; i. e. furnished with a stem; others lie flat upon the ground; others again are parasitical, being found on the bark, and even on the leaves, of trees, (as to which, see the *Linn. Transf.* vol. v. p. 305.) and also on the horns of cattle and sheep, and the hoofs of horses; (Withering.) The seed or dust is in some of the species green, but mostly black; it may vary, however, with the size and age of the fungus. The different species vary in bigness from the size of a pin's head to a diameter of fifteen inches. We shall present the description of a few species, as examples to illustrate the genus.

1. *Lycoperdon proteus*, the large puckfish, or puff-ball: roundish; white or greyish, becoming brown; opening with a rent; seeds dark. This is found often as big as a man's head, in dry upland pastures, in various parts of England and the south of Europe. When the upper part, and the whole powdery contents, are blown away, the spongy base, with a thin torn edge, remains for a considerable time. This species is shown on the annexed Plate, in its quiescent and ripe state, at fig. 1. at the moment of puffing out its dust, it assumes the appearance of fig. 2. This dust, when examined by the microscope, appears to be a multitude of regularly figured, though extremely small, bodies. These require the most powerful magnifiers to distinguish them, and are found to be little globules of an orange colour,

and somewhat transparent; and so small, that the cube of the diameter of a hair would be equal to a hundred and twenty-five thousand of them. In others of this mushroom, the globules are evidently seen to be so many puff-balls, being of a darker colour, and having each a little stalk or tail; by means of these stalks they penetrate into the ground, when shed from their parent plant. The dust of these mushrooms is very hurtful to the eyes, and we have had instances of persons being blinded for a long time by it, with violent pain, swelling and inflammation; and this is probably owing to the sharpness of these almost inconceivably minute stalks or tails. The fumes of this fungus, when burnt, have a narcotic quality, of which some people avail themselves to take a hive without destroying the bees. It is sometimes administered as a stiptic; and (Withering adds) it is used to carry fuel in from a distance.

Of this species there is a great number of varieties, differing in size and habits. Among these may perhaps be reckoned the *L. quercinum* of Albertini. These fungi generally meet in great number, and by their accidental association form large caespites. They adhere to the spot by long and copious roots on the bark of the oak-tree, in the manner represented at fig. 3.

2. *Lycoperdon coliforme*, or colander puff-ball: wrapper many-cleft, expanding; head spherical, depressed; fruit-stalks and mouths numerous. This lycoperdon springs from an egg which lies on a level with, or just below, the surface of the ground. In this state it is nearly globular, but slightly compressed, of a dirty white, wrinkled, scaly; with a short thick root terminated by a few fibres. Cut open it shows a soft leathery coat, covering another which is thicker and much more tough, filled with a white curd-like substance of a disagreeable smell. As yet there was no appearance of a head. One found in August remained in this state to the end of November before it expanded; when in a single day it was entirely raised out of the ground, and fully expanded. The root breaks off, and is left in the earth; and the inversion of the plant necessarily raises it to the surface; what was before the upper and the outer part of the wrapper being now next the ground. This description of the method of opening applies to the *L. stellatum* and *L. recolligens*, as well as to this species. The head in the larger specimens is considerably compressed, of a brownish colour, covered with a very thin pellicle of a beautiful silver grey, peculiar to this species. The apertures are very numerous, slightly elevated, and fringed with fine hairs. The pedicles, which do not appear till the thick brittle coat (which is common to this and the other stellated species) dries or peels off, are very numerous, woody, thread or strap shaped. In one specimen they filled up a circle of half an inch diameter; and this had at least forty apertures. In the small specimens the head is nearly spherical, and sometimes the pedicles and apertures are not more than three or four; but these are hardly to be considered as varieties. Notwithstanding there seems to be a sort of correspondence between the number of pedicles and of apertures, they have no direct communication, nor any corresponding cells; the head forming a single cavity, as in the other species. The apertures are not accidental ruptures, but originally formed; for in an abortive plant, in which the dust never ripened, there was observed a puckering of the skin in the same situation where the mouths usually appear. Found in the lane from Crayford to Bexley Common, Kent; on sandy banks near Mettingham, Suffolk; and Gillingham, and Earsham, Norfolk; from August to November.

3. *Lycoperdon stellatum*, or starchy puff-ball: wrapper many-cleft, expanding; segments unequal; head on a short stem, smooth; mouth tapering upwards, toothed. The head of this, when it first appears above ground, is nearly spherical, as shown at fig. 4. the volva, or sheath, entirely covering the capitulum, or head. In a little time the

wrapper bursts, and expands into many segments, which are fleshy, brittle, and of a pale brown colour; the flesh may be taken off, and a thin coriaceous substance remains. The head then becomes globose, smooth, of a bluish-brown colour; and at first appears sessile, or stemless, owing to the thickness of the interior spongy coat of the wrapper. After a few days, this cracks and peels off, the stem appears, and the whole assumes the form of fig. 5. Owing to this, some authors have described the head as sitting, and others as supported on a stem; and it is therefore very difficult to ascertain whether they speak of this plant or of the *L. recolligens*. The whole plant generally of a dirty white, but the head has sometimes a greyish tinge. The mouth is often smooth when first open, but in time splits into *teeth*. Head about one inch diameter bluish brown. Wrapper brown within, but bright silvery white on the outside. When kept under a glass in a moist state, it gets the cadaverous smell of the Phallus impudicus, but in a less degree. Found in hedge-banks and pastures, in April, September, and October.

A variety of this is figured in the Flora Danica, showing the *teeth* very evidently. This we have copied at fig. 6. and a section of the same, to show the stem at fig. 7.

4. *Lycoperdon fornicatum*, or turret puff-ball: wrapper double, four-cleft, arched; head smooth; mouth blunt, fringed; stem short. This has been often confounded with the preceding, and Bryant regards them as one species; but the double wrapper adhering by the points, which is never seen in any of the varieties of the *L. stellatum*, is a grand distinctive mark; for the outer wrapper remains sunk in the ground, not being reversed and thrown out as in the *stellatum*. This plant, in its expanded state, has a very singular and fanciful appearance. The outer coat or wrapper remains in the ground, whilst the inner, separating from it, is raised up, and bears the head upon its most elevated part, and the points of its segments remain united with those of the outer wrapper so that it is a globe supported upon four arched rays, the four points of the arches resting upon the four points of the outer wrapper which form an inverted arch. See Linn. Tr. vol. ii. p. 38. for an excellent dissertation on the stellated lycoperdons, by Thomas Jenkinson Woodward, esq.

It must have been observed, that the *lycogala* and the *lycoperdon* borrow part of their etymon from the Greek *λυκος*, a wolf. What analogy these humble and harmless inhabitants of the dampest margins of bogs and fens, in the shady bosom of forests, bear to the destructive animal whose name they retain to this day and in many languages, is not easy to perceive; yet we may suppose, that, in ancient and superstitious ages, the idea of a plant, the origin of which was perfectly unknown, its generation a mystery, its growth nearly instantaneous, and its destruction attended with a sort of explosion, might have been connected, in the imagination of the people, with the habits of the wolf, whose favourite haunts are the darkest recesses of the wood, and whose sudden appearance at night, in the neighbourhood of the penfold, is always attended with mischief to the flock, and terror to the shepherd.

**LYCOPER'SICON.** See SOLANUM.

**LYCOPHRON**, son of Periander, king of Corinth, flourished about 550 years before the Christian era. The murder of his mother Melissa, by his father, had such an effect upon him, that he resolved never more to speak to him. This resolution was strengthened by their uncle Proclus, king of Epidaurus, who took Lycophron and his brother under his protection. When the infirmities of Periander obliged him to look for a successor, Lycophron, who was then in the island of Corcyra, refused to come to Corinth while his father was there, and he was induced to promise to settle in that city, only on condition that his father would come and dwell on the island which he left. So fearful, however, were the Corcyrians of the tyranny of Periander, that they killed the son to prevent the meditated exchange from taking place.

**LYCOPHRON**, a Greek grammarian and poet, was a native of Chalcis in Euboea, and flourished about B. C. 504. He appears to have attained a considerable degree of poetical reputation, as his name occurs among the seven who formed what is called the *Pleias* at the court of Ptolemy Philadelphus. Suidas has preserved the titles of twenty tragedies composed by him; but the only work of Lycophron's which has come down to modern times is a very singular poem entitled "Alexandra," or Cassandra, the subject of which is a series of predictions feigned by him to have been uttered by that daughter of Priam. This obscure topic is treated in a more obscure style; and it is thought that the writer's purpose was to puzzle the critics. It would perhaps have been wise to have defeated his design by total neglect; but the pride and curiosity of learned men has not suffered the work to sink into merited oblivion. On the contrary, it has furnished a frequent trial of skill to Greek scholars. Ovid, who terms Lycophron *cothurnatus*, (the buckined or tragic,) mentions that he is recorded to have been slain by an arrow. The Cassandra of Lycophron has been several times edited. The best edition is accounted that of bishop Potter, Oxon. folio, 1697 and 1702. *Vossii Poet. Græc. Bibliograph. Dicct.*

**LYCOPODIODES.** See LYCOPODIUM.

**LYCOPODIUM**, *f.* [from the Gr. *λυκος*, a wolf, and *πους*, the foot, from the incurved, and often finger-like, shape of the spikes or extreme branches.] **CLUB-MOSS**, or **WOLF'S-CLAW**; in botany, a genus of the class cryptogamia, order musci, Linn. (filices, Smith,) natural order of musci, Linn. (musci spurii, Juss. lycopodineæ, Brown.) Generic essential character—Capsules axillary, sessile, naked, mostly solitary, of one cell; some kidney-shaped, of two elastic valves, and full of fine powder; others two or three-lobed, of two or three valves, lodging from one to six globose bodies.

This genus holds as it were an intermediate place between the ferns and mosses. Some botanists have therefore been most inclined to refer it to one tribe, others to the other. Its habit, most like the mosses, does yet by no means strictly accord with that order; and their fructification, being now well understood, separates them distinctly from Lycopodium, whose nature in that respect is almost totally in the dark, agreeing so far with ferns. The seeds of the latter, however produced, agree as nearly as can be with the powder found in the compressed or kidney-shaped capsules of the genus in question, which powder moreover has been likewise proved, by experiment, to be real seed. But the globular bodies found in peculiar capsules upon *L. denticulatum* and other species, proved themselves seeds by germinating, according to Brotero, (Linn. Transf. v. 162.) yet such species are furnished besides with what seems to be the genuine fruit of the genus. In this difficulty, Swartz and Brown have prudently contented themselves, in the generic character, with mentioning these two kinds of apparent capsules and seeds, without positively asserting either to be such. Joseph Fox, a poor journeyman weaver of Norwich, is the first person upon record who ever raised plants of Lycopodium selago from the dust of the kidney-shaped capsules. See Linn. Transf. ii. 314. where Mr. Lindsey's account of having succeeded equally well with the dust of *L. cernuum* in Jamaica, is also to be found. Sprengel cites the authority of professor Willdenow in confirmation of this. We cannot but admit therefore that this dust, so exactly resembling the known seed of ferns, is real seed. This is the *pulvis lycopodii*, formerly kept in the apothecaries' shops, on account of some reputed qualities long since disbelieved. It is still used in Germany to produce the appearance of lightning upon the stage; for, being very light and highly inflammable, it takes fire instantaneously, with a sort of hissing explosion, while floating in the air. The dust of *L. clavatum* is collected and sold on the continent, for this purpose. With respect to the globular bodies, whose bulk is beyond all measure greater than that of these minute seeds, it is impossible to doubt the assertion of Brotero, who in the fifth volume of the Linn. Transf. describes

scribes their germination, radicle, cotyledons, &c. so that we must allow the existence of two kinds of seed on the same plant. The same phenomenon has been suspected in the genera *Fucus* and *Conserva*; though botanists have been so justly cautious of admitting it, that they have not dared to trust their own eyes. Perhaps the actual existence of the fact in *Lycopodium* may sanction our belief of it in these other instances. The difference however between these two kinds of seeds in *Lycopodium* is far more essential than Sprengel seems to insinuate, when he says it "only proves that the capsules of several species of this genus are of two different shapes." Nothing can be greater than the apparent difference betwixt the two kinds of seeds themselves, which is such as to overstep all analogy hitherto known. We ought not to omit that Dillenius first observed these different kinds of seeds in *Lycopodium*, and has founded upon them the different genera into which he has divided it.

The 14th edition of the *Syst. Veg.* contains 29 species of *Lycopodium*, six of which are British. Professor Swartz defines 65; exclusive of the Linnæan *rudum*, which he establishes as a distinct genus, by the name of *Psilotum*; as well as of several others, which he finds mentioned in books, but could not satisfactorily ascertain. Fifteen species have axillary sessile capsules, all uniform, of two valves, containing the above-described powdery kind of seeds. The remaining 50 bear their capsules in terminal spikes, each capsule being accompanied by a peculiar scale or bractea, generally toothed or fringed, totally unlike the leaves, and mostly of a paler or more tawny colour. Of these 50, twenty-six have the same kind of capsules and seeds as the above 15, and no other; one, *L. selaginoides*, has, besides such capsules, very remarkable four-lobed ones, of two three-lobed valves, and containing four globose white seeds. The remainder have kidney-shaped as well as roundish, rarely three-lobed, capsules, either intermixed in the same spike, or the former are in the upper part, the latter in the lower. By this statement it appears, that no known species is without the kidney-shaped compressed capsule, bearing the minute dust-like seed, analogous to that of ferns; the larger globose seed being, as it seems, more of an adventitious nature.

Dr. Weftring, physician to the king of Sweden, has obtained excellent dyes from different species of *Lycopodium*. The following is the method which he has found to be the most simple: Take a quantity of this moss, dried and chopped, nearly double the weight of the cloth to be dyed. Put them into a proper vessel, a stratum of the moss between every fold of the cloth, and pour on a quantity of water sufficient to cover the whole. Boil them together for two or three hours, adding more water from time to time, to supply the place of what is waisted by evaporation. Take out the cloth thus prepared, wring it, and hang it up to dry without rinsing. When the cloth is to be dyed, it must be rinsed carefully in cold water, put into a well-tinned copper with cold water, and a small quantity of brasil-wood, and then boiled gently for half an hour or more, according as the tint is to be deeper or lighter. If too much brasil be used, the dye will have a violet hue. When it is taken from the fire, the cloth is to be rinsed in cold water. Care must be taken that none of the common mordants, either saline or astringent, are used; for they would alter the colour.

M. Buchholz has, from various experiments upon the seeds of *Lycopodium*, found that they contain, 1. a sixteenth part of a fat oil of brownish yellow, and soluble in alcohol; 2. a portion of real sugar; 3. a viscous extract of a brownish yellow, and an insipid taste; 4. the residue, after being treated with alcohol and water, may be regarded as a peculiar product of the vegetable kingdom; 5. the yellowish aspect of the seed in this latter state indicates the union of a species of pigment with the first principle of the seed, or, at least, a very intimate union of the constituent parts of this seed; 6. the oily part which enters into the composition of this seed

occasions its lively combustion, and its constant separation from water.

We shall now, as in the case of *Lycoperdon*, select a few species as examples, and illustrate them with figures; but these figures would not bear us out in joining with a brother cyclopædist, who calls this genus "one of the most elegant in the whole vegetable kingdom."

1. *Lycopodium linifolium*, or flax-leaved club-moss: leaves alternate, remote, lanceolate. Native of South America and the West Indies. The root is fibrous. Stems seemingly pendulous, above two feet long, slender, slightly branched, leafy throughout. Leaves scattered, half an inch at least distant from each other, often near two inches long, entire, taper-pointed, somewhat ovate, and twisted at the base. Capsules axillary, solitary, kidney-shaped. No other known species can vie with this in the size and distance of its leaves.

2. *Lycopodium gnidioides*: leaves three in a whorl, imbricated, ovate-lanceolate, obtuse, entire. Branches elongated. Gathered in the island of Mauritius by Sonnerat or Commerçon, and given by Thouin to the younger Linnæus. No other botanist seems to have seen the plant. It appears to be very tall, with the habit of the former, but differs essentially in its much closed and whorled leaves, not half an inch long, blunt and concave, without rib or vein; the upper ones very gradually shorter and more ovate, with solitary, palish, axillary, roundish, slightly-reniforme, capsules.

3. *Lycopodium selago*, or fir-leaved club-moss: leaves scattered; pointing eight ways; stem forked, upright; branches all of the same height; flowers scattered. The leaves are obliquely disposed in eight rows, which may be best observed by holding the ends of the branches perpendicular to the eye. Stems upright, branched, from three to seven inches high, forked; branches again forked, closely covered with leaves. Leaves spear-shaped, sharp-pointed, stiff, smooth, shining, scolloped or serrated, and cartilaginous at the edge. Capsules in the bosom of the upper leaves, kidney-shaped, flattened, yellow, opening like an oyster, and pouring out a pale yellow powder. Root dividing into forks like the stem. The whole plant very firm and stiff; from two to five inches high. Inhabits mountainous heaths, in the clefts of rocks, in Yorkshire, Lancashire, Westmoreland, Cumberland, the Highlands and Hebrides; near the top of Ingleborough, Yorkshire; mountains in the north; and on Dartmoor; flowers from April to October. It purges, vomits, and destroys worms. A decoction of it is a cure for lice in swine and cattle. Its properties seem to challenge further inquiry.

4. *Lycopodium phlegmaria*: leaves ovate, heart-shaped, entire; the lower ones four in a whorl. Spikes thread-shaped, forked. This grows in various parts of the East Indies, as well as in the Isle of Bourbon; Mr. Menzies gathered it in Otaheite. It is eighteen inches or more in height, slightly forked or branched, clothed with numerous shining leaves, not so regularly whorled, at least the upper ones, as Dillenius found them. The long, terminal, slender forked spikes, with their little roundish bracteas scarcely broader than the accompanying capsules, are very singular.

5. *Lycopodium alpinum*, or mountain club-moss: leaves pointing four ways; tiled, acute; stems upright, cloven; spikes sitting, cylindrical. The stem creeping, from a span to a foot long. Branches alternate, at an inch distance from each other, upright, forked, length of a little finger. Little branches bundled, from twenty to thirty together, exactly four-cornered, the angles blunt. Leaves thickish. Fruit-stalks terminating a branch here and there, scarcely two or three lines high, forked, scarcely distinguishable from the branches, covered with smaller leaves, bearing as many spikes. Spikes egg-shaped, nearly smooth. All the branches divided, and frequently subdivided into forks. Upright shoots one and a half to three inches long; thinner than the spikes which they support. Inhabits mountainous heaths in Yorkshire, Cumberland,

and the mountains of Wales, the Highlands and Hebrides, found near the Holme, about five miles from Burnley, Lancashire, by Mr. Woodward; on Yew-barrow, in Furness Fells, along with *L. selago*, by Mr. Jackson; from July to October.

6. *Lycopodium annotinum*, or Welsh club-moss: leaves scattered, pointing five ways; somewhat serrated; stem jointed at each year's shoot; spikes terminating, smooth, upright. The branches contracted at the last year's shoots, as in the female of the *Polytrichum commune*. Root branched; trailing stem very long; upright shoots from one to two and a half inches high, generally branched, supporting the spikes of fructification. Found on the mountains of Caernarvonshire, as about two hundred yards south-west of *Llyn y Cwn*; from June to September. A branch of this, magnified, is shown on the preceding Plate, at fig. 8. and a leaf more highly magnified, at *a*.

7. *Lycopodium clavatum*, common club-moss, or wolf's-claw: leaves scattered, terminating in threads; spikes cylindrical, on fruit-stalks, in pairs. Stem creeping. Shoots from one to several feet in length, firmly attached to the earth by woody fibres. Branches expanding, distant, trailing; the lower ones again subdividing into forks. Leaves closely tiled, strap-spear-shaped, pointed, and hooked; with long white hairs at the end. In the summer, from the ends of the branches, the fruit-stalks rise up, almost leafless, jointed, straight, rigid, from two to four inches high, bearing at the top one, two, or three, cylindrical flowering spikes, closely tiled with scales or hooks pointed, hairy at the end, ragged at the edges. Each of these scales incloses a kidney-shaped yellow capsule, exploding when ripe a yellow powder, which resembles sulphur, and burns with an explosion. Grows abundantly in dry places on mountains, heaths, and woods; as on Hampstead and Hounslow heaths, near Esher; Monksfold-heath, near Norwich; Cannock-heath, Staffordshire, &c. flowers in July and August. In Sweden they form it into mats or busses, which lie at their doors to clean shoes upon. It restores ropy wine in a few days. The seeds are with difficulty made wet; and, if scattered upon a basin of water, you may dip your hand to the bottom of the basin without wetting it. See a branch magnified at fig. 9.

8. *Lycopodium inundatum*, or marsh club-moss: leaves scattered, very entire; spikes terminating leafy. Stem creeping; spikes solitary, sitting, smooth. Branched; the length of a finger or more; cylindrical. Leaves awl-shaped, pointed, smooth, on the creeping shoots, pointing one way, two lines long, and one broad at the base. Shoots creeping, pointing one way; those bearing spikes an inch long, upright, cylindrical; spikes not different from the shoots except in being thicker. Capsules compressed, roundish, not kidney-shaped. Found on moist heaths and turfy bogs, from June to September. See fig. 10.

9. *Lycopodium selaginoides*, or prickly club-moss: leaves scattered, fringed, spear-shaped; spikes solitary, terminating, leafy. The capsules, those at the base of the lower leaves when viewed sideways apparently in threes, but really in fours, one pair above and the other pair below; at length gaping, and disclosing as many large solid seeds; those at the base of the upper leaves yellower, of a looser texture, entirely simple, round, not containing seeds, but pollen. Plant from one to three inches high. Inhabits mountainous heaths and pastures, in Scotland, the north of England, and Wales; from June to September.

10. *Lycopodium complanatum*; leaves in two rows, united, superficial ones solitary; spikes in pairs, each on a distinct peduncle. See the Plate, fig. 11.

11. *Lycopodium flabellatum*, or fan club-moss: leaves in two rows, ovate, oblique, fringed at the base, accompanied by a double row of smaller imbricated ones in front. Stem round, repeatedly branched, flattened above. The figures of this species, which is found in the West Indies,

give but an inadequate idea of its beauty. Its flat fan-like shape, and the exquisitely neat arrangement of the innumerable little shining leaves, give it a peculiar and striking aspect. The spikes are small, and sparingly produced the root fibrous. The whole plant from one to two feet high.

LYCOP'OLIS, [Gr. the City of the Wolves.] An ancient city of Upper Egypt, in the Thebais, situated on the western side of the Nile, at the foot of the Libyan chain of mountains; and so called, because extraordinary worship was paid here to wolves, which, according to Diodorus Siculus, drove back the Ethiopians when they invaded Egypt, and pursued them to Elephantina, on the borders of Ethiopia. This city is supposed to have stood where the town of *Siat* now stands. See the article EGYPT, vol. vi. p. 359.—Some authors mention another Lycopolis, in the Delta, or Lower Egypt, near the Mediterranean.

LYCOP'SIS, *f.* [so called by Pliny and Dioscorides; owes its derivation to *λυκος*, a wolf, and *οψη*, a face, or countenance, from the circumstance of the flowers being ringent, and having the appearance of a grinning mouth; the herbage is also furnished, says Ambrosinus, with a sort of rigid hairiness similar to the coat of a wolf.] WILD BUGLOSS; in botany, a genus of the class pentandria, order monogynia, natural order of asperifoliae, (borraginæ, *Juss.*) The generic characters are—Calyx: perianthium five-parted; segments oblong, acute, spreading, permanent. Corolla: one petalled, funnel-form; tube cylindrical, from curved bent; border half five-cleft, blunt; throat closed with five convex prominent converging scales. Stamina: filaments five, very small, at the bending of the tube of the corolla; antheræ small, covered. Pistillum: germs four; style filiform, the length of the stamens; stigma blunt, bifid. Pericarpium: none; calyx very large, inflated. Seeds: four, longish. The essence of the genus consists in the curvature of the tube of the corolla.—*Essential Character.* Corolla with the tube bent in.

*Species.* 1. *Lycopsis vesicaria*, or bladder-podded wild bugloss: leaves quite entire; stem prostrate; fruiting calyxes inflated, pendulous. Root annual. It resembles the next species very much; but the stem is prostrate, the root not creeping or abiding, the habit smaller and less villose, the corollas small and brown. Stem angular, hirsute, solid, weak, a long span or more in length. Leaves an inch and a half or two inches long, half an inch wide, sessile, lanceolate, pubescent, with a short soft hoary wool. Flowers axillary, from the top of the stem and branches, in swelling hirsute striated calyxes, on short peduncles; corolla very small, scarcely appearing out of the calyx. As the flower withers, the calyx swells very much into a sort of bladder. Native of the south of Europe, in dry hilly situations; it flowers in June and July.

2. *Lycopsis pulla*, or dark-flowered wild bugloss: leaves quite entire; stem upright; fruiting calyxes inflated, pendulous. Root creeping, perennial, (or rather biennial.) Stem upright, branched. Leaves and calyxes rough; corolla small, dark blackish purple. More villose than the preceding. Gartner considers the seeds of this natural order as nuts. They are four in number (except when some are abortive) in every calyx. These are middle-sized, crustaceous, ovate-acuminate, oblique, incumbent on their umbilicus, obsoletely netted-wrinkled above, grooved on the sides with parallel streaks, straw-coloured, one-celled, valveless; aperture of the umbilicus very wide, above the base of the nut, on the inner side. Seeds solitary, that is, one within each cell or crust, ovate-acuminate, turbidly lenticular, dark or black-brown. Native of Germany and Austria, in dry pastures, flowering in May and June; with us in June and July.

3. *Lycopsis Ægyptia*, or Egyptian wild bugloss: leaves quite entire, rugged; stems ascending; fruiting calyxes inflated, pendulous. This plant in reality appears to be the *Asperugo Ægyptiaca* of Linnæus's *Spec. Pl.* edit. 2.

4. *Lycopsis variegata*, or variegated wild bugloss: leaves repand,

repand, toothed, callous; stem decumbent; corollas drooping. This is a low trailing annual plant, the branches seldom extending more than six inches, and thinly set with small spear-shaped warty leaves, half surrounding the stalk. Flowers small, bright blue, collected into small bunches at the extremity of the branches. Native of Nice, and the island of Candia, on the walls of the city.

It varies with red flowers, elegantly streaked with white. Sir George Wheeler found a variety of it on Mount Hy-mettus near Athens.

5. *Lycopsis arvensis*, or small wild bugloss: leaves lanceolate, hispid, flowering; calyxes upright. Root annual, simple, fibrous, whitish. It is an extremely-harsh, rough, and bristly, plant. Stems thick, cylindrical, or slightly angular, upright, hispid, a foot or more in height, branched for the most part at top only. Flowers in spikes, all one way, sessile, and turned backward; corolla sky-blue, but varies, like many others of this colour, to red and white. When the plants grow on dunghills, the leaves are often an inch and a half broad. Native of most parts of Europe, in corn-fields, especially where the soil is sandy, and on dry banks. It flowers from May to July, as Mr. Curtis says; from June to September, according to Dr. Withering and Mr. Hudson. It has lately been recommended as a remedy against the *anthrax*, or corrosive ulcer, commonly called a carbuncle, by laying the bruised plant on the tumour.

6. *Lycopsis bullata*, or bladdery-leaved wild bugloss: leaves lanceolate-ovate, hispid, bladdery; stem procumbent. Root annual, simple. Stems clustered, nine inches or a foot high, round, hispid, purple, procumbent. Root-leaves numerous, lanceolate-ovate, hispid, dark green, with prominent white bladders. Stem-leaves sessile, somewhat stem-clasping, with a few teeth, acuminate. Flowers several, at the extremity of the stem; calyx erect, hispid, ferruginous; corolla at first purple, then blue. It differs from the preceding in having the leaves constantly bladdery. Common on waste-grounds about Naples; flowering from February through the whole summer.

7. *Lycopsis orientalis*, or oriental wild bugloss: leaves ovate, quite entire, rugged; calyxes upright. This is an annual plant, a native of the Levant.

8. *Lycopsis Virginica*, or Virginian wild bugloss: leaves linear-lanceolate, clustered, tomentose; soft; stem upright. A perennial plant; native of Virginia, by way-sides.

*Propagation and Culture.* See ANCHUSA. They are hardy plants, will generally rise from scattered seeds, and do not bear transplanting well. See ASPERUGO, ECHIUM, and MYOSOTIS.

LYCO'PUS, *f.* [said to be derived from *λυκος*, a wolf, and *πους*, a foot; though we are perfectly incompetent to trace the origin of such a derivation.] WATER HOREHOUND; in botany, a genus of the class djandria, order monogynia, natural order of verticillatæ, (labiatæ, *Tourn. Juss. &c.*) The generic characters are—Calyx: perianthium one-leaved, tubular, half-five-cleft; segments narrow, acute. Corolla: one-petalled, unequal; tube cylindrical, the length of the calyx; border four-cleft, blunt, spreading; segments almost equal; upper broader, emarginate; lower smaller. Stamina: filaments two, commonly longer than the corolla, inclining to the upper segments; antheræ small. Pistillum: germ four-cleft; style filiform, straight, the length of the filaments; stigma bifid, reflex. Pericarpium: none; calyx containing the seeds in its bottom.—*Essential Character.* Corolla four-cleft, with one division emarginate; stamina distant; seeds four, retuse.

*Species.* 1. *Lycopus Europæus*, water horehound, or gypsy-wort: leaves sinuate-ferrate. Root perennial, creeping. This plant has the square stalks, opposite leaves, inflorescence, flowers, and seeds, of the natural order verticillatæ; differing only in having two stamens, whence it is separated in the artificial system of Linnæus from its congeners, with which this, as well as Verbena, might be united; Dr. Withering having remarked, that it is not uncommon between the two stamens to find two shorter

filaments without antheræ; and that he once found them with antheræ. Stems commonly from one to four feet in height, upright, the sides deeply channelled, rough-haired at the corners, branched from the bottom. Branches opposite, brachiate, axillary, almost erect, the lower ones reaching almost as high as the main stem. Leaves ovate, ovate-oblong, or almost lanceolate, pointed, sessile, somewhat wrinkled, slightly hirsute, dark green above, pale green beneath, the midrib and veins very strong, the edge cut with deep serratures; many of the leaves of the main stem, especially the lower ones, pinnatifid at the base; these are five inches long and two broad; the upper ones and those on the branches are from three to four inches in length, and not pinnatifid, but simply serrate. Flowers small, many together, disposed in dense whorls, at each joint, from the axils of the leaves, almost from top to bottom of the branches, and in the main stem great part of the length; calyx hirsute, divided into five (sometimes four) unequal awned clefts; corolla white with a tinge of purple, somewhat hairy or villose within; the upper segment slightly notched, the lower dotted with purple; filaments first bent in, then straight; antheræ somewhat crescent-shaped and whitish. Germ set upon a yellow glandular receptacle. Seeds brown, shining, subtriangular, outwardly flatish, impressed with a subcordate line in the middle; inwardly the middle running out to a point, and the sides somewhat rolled in. The leaves vary, in being more or less hairy, and more or less divided. Leers mentions a variety, with all the flowers female, or without stamens. It is common in most parts of Europe in meadows, and on the banks of streams and ponds; flowering from July to September. In some meadows it abounds so much as to be noxious. Cattle appear not to touch it; and its root being of the creeping kind, renders it difficult of extirpation. It dyes black, and gives a permanent colour to linen, wool, and silk. Gypsies are said to stain their skin with it. This common plant, which on trial might probably be found useful to dyers, is called by all English writers *water-horehound*; in German it is *wolfsfuß*, *wasserandorn*, *sumpsandorn*, *bruchandorn*, *wieswandorn*, *weiherandorn*, *wolfsbein*, *sparrsaden*, *zigennerkraut*, *ghedkraut*, *Christusflanze*; in Dutch, *wolfsfoot*, *waterandorn*; in Danish, *vandmarru*; in Swedish, *varg fot*; in French, *marrube aquatique*, *licope*, *patte de loup*; in Italian, *licopo*.

2. *Lycopus Virginicus*, or Virginian water-horehound: leaves equally serrate. Native of Virginia. The leaves are lanceolate, and very finely serrate.

3. *Lycopus exaltatus*, or lofty water-horehound: leaves pinnatifid-serrate at the base. Stem the height of a man, branched, angular, rugged. Leaves deeply serrate, the lowest serratures deeper, so as to be almost pinnatifid at bottom, with subserrate segments. Corollas four-cleft, white, the segments dotted with red, the uppermost emarginate, the lowest broader. Native of Italy.

4. Besides the three species above described, Mr. Brown, in his Prodrômus to the Flora of New Holland, mentions another, which he calls *australis*, with the following character: "Leaves lanceolate, pointed, serrated, downy, roughish above, glandular beneath, entire, and attenuated at the base: serratures remote, equal, very acute. Stems striated." This is found all over New Holland; and in Mr. Brown's opinion is very nearly allied to *L. Europæus*.

5. Michaux has another species under the name of *uniflorus*, which is thus characterized: "Plant very small; root tuberous; stems simple; leaves oval, obtuse, obsoletely toothed; flowers axillary, solitary." This is a native of North America.

LYCORE'A, a town of Phocis, at the top of Parnassus, where the people of Delphi took refuge during Deucalion's deluge, directed by the howlings of wolves. *Pausanias*.

LYC'ORIS, a freedwoman of the senator Volumnius, also called *Cytheris*, and *Volumnia* from her master. She is celebrated for her beauty and intrigues. The poet Gallus was greatly enamoured of her; and his friend Virgil comforts him in his 10th Eclogue for the loss of the favours.

of Cytheris, who followed Mark Antony's camp, and was become the Aspasia of Rome. The charms of Cleopatra, however, prevailed over those of Cytheris; and the unfortunate courtisan lost the favours of Antony and of all the world at the same time. Lycoris was originally a comedian.

**LYCORMAS**, a river of Ætolia, whose sands were of a golden colour. It was afterwards called *Evenus* from king Evenus, who threw himself into it. *Ovid. Met.*

**LYC'OROUS**, *adj.* Dainty; gluttonous; lewd. *Chaucer.*

**LYCORTAS**, the father of Polybius, who flourished B. C. 184. He was chosen general of the Achæan league; and revenged the death of Philopœmen, &c. *Plutarch.*

**LYCOSU'RA**, a city built by Lycaon, on Mount Lycæus in Arcadia.

**LYC'TUS**, a town of Crete, the country of Idomeneus, whence he is often called *Lyctius*. *Virg. Æn.*

**LYCUR'GUS**, the celebrated legislator of Sparta, is reckoned by the best chronologers to have been born about B. C. 926. He is commonly said to have been the son of Eunomus king of Sparta, who was succeeded by Polydectes, his eldest son; on the death of whom, Lycurgus, his brother, was called to the succession. The pregnancy of the widow of Polydectes, however, being soon made known, Lycurgus publicly declared that he should only hold the crown in trust for the child, provided it should prove a son. It did prove a son; and Lycurgus now contented himself with being tutor to his nephew Charillus, and restored to him the government when he came of age; but, notwithstanding this regular and generous conduct, he was accused of a design to usurp the crown. This calumny obliged him to retire to the island of Crete, where he applied himself to the study of the laws and customs of nations. At his return to Lacedæmon, he reformed the government; and introduced those admirable laws which (a few excepted) have been celebrated by all historians. He was equally averse to a tyranny and a democracy; and to one who once extolled the latter form, he shrewdly recommended to *try it first in his own family*. Indeed the wisdom of Lycurgus, and the excellency of his polity, chiefly appeared in effectually guarding against the licentiousness of democracy on the one hand, and the oppression of despotism on the other. Power was so exactly balanced, and so checked and guarded on every hand, that no sooner did one branch of the body politic overstretch its just limits, and aim at the ascendancy, than the others combined to curb and restrain it. This afforded the surest pledge of stability and almost invincible power; this rendered Sparta the bulwark of all Greece; this constituted the inhabitants of Lacedæmon a band of heroes, who feared not to combat singly the innumerable myriads of Persia. The British constitution, which has been so long and deservedly admired through the whole world, is formed in a great degree upon this model; since the three branches of the executive power amongst us bear a close analogy to those of Sparta, and are calculated in the same manner to preserve the balance of power.

Besides the grand outline sketched by the masterly hand of Lycurgus, some of the more minute features of this civil code have been held in universal admiration. The influence of education upon the national character, and its importance to the state, did not escape the penetrating sight of this truly-wise man. He felt the necessity of cleansing the fountain-head, in order that the streams might be rendered pure, or (to borrow a metaphor from the sacred Scriptures) first to make the tree good, that its fruit might be good also. Such were the designs of those laws which rendered the children the property of the state, which provided for their public education, by means of which patriotism, magnanimity, and subordination, were instilled into their minds from the tenderest infancy. Some of these minor regulations proved very grievous to the richer classes, and even produced a tumult, in which Lycurgus had one of his eyes struck out by a violent youth. His behaviour under this outrage was truly phi-

losophical. He showed his face streaming with blood to the people, who were struck with shame and grief at the spectacle, and delivered up the offender to his disposal. Lycurgus took him home; and, without offering him any injury, employed him to dress his wound and wait upon him, till by his mild demeanour he had entirely converted the youth into a peaceable and orderly citizen. Every particular concerning this great man's life and government has been given (with his portrait) under the article **GREECE**, vol. viii. p. 838-841. and some remarks upon his laws, as contrasted with those of Solon, will be found under the article **LAW**, vol. xii. p. 353-355. Upon the whole, if an estimate of the excellence of a constitution be deduced from its permanent effects, that of Lycurgus has no common claims. It stood upwards of five hundred years, during which period intestine commotions were scarcely known, nor did hostile armies dare to invade them. If any foe presumed to attack them, they were either completely subdued, or, covered with shame, retreated. Sparta stood alone when all the other states of Greece bowed either to the shrine of wealth or to the sceptre of despotic power, and defended with her blood the expiring liberties of Greece. Nor was she weakened by intestine commotions, or subjugated to a foreign yoke, till the spirit and force of these wise laws enacted by Lycurgus were lost, and her rigid simplicity was exchanged for the inebriating luxuries of foreign courts. Plutarch affirms that Lycurgus voluntarily put an end to his life by abstinence, while he was yet of an age to enjoy it; yet Lucian says that he died at the age of eighty-five. The place of his death is differently stated to have been Cirrha, Elis, and Crete. His memory was honoured at Sparta by an anniversary festival, at which his praises were recited, and which was observed for several ages.

**LYCUR'GUS**, an Athenian orator, son of Lycophon, flourished in the time of Philip of Macedon, about B. C. 356. He studied philosophy under Plato, and oratory under Isocrates; and, attaching himself to a political life, rose to public employments. The superintendance of the public revenue was entrusted to him; in which office he conducted himself with strict integrity, and augmented the marine of Athens. He was also appointed one of the judges, or magistrates; and exercised his charge with great vigour and severity. He banished from the city all persons of dissolute character, and made a number of useful regulations. Persuaded of the utility of the higher kinds of poetry to the public morals, he favoured dramatic exhibitions, and caused statues to be erected in honour of the principal tragedians. He was a friend to philosophers; and, being once present when Xenocrates was dragged to prison because he had not paid the tribute exacted from strangers, he liberated him, and confined the farmer of the tax in his stead. He kept an exact register of all the acts of his administration, which, after the period of his office, he fixed to a column, that all the citizens might make their remarks upon it. In his last illness he caused himself to be carried to the senate, in order to give an account of all his actions; and, having refuted the charge of a single accuser, he was brought back, and died soon after. Lycurgus was one of the thirty orators whom the Athenians refused to deliver up to Alexander. Some of his orations are preserved, and have been printed in collections of the Greek orators. *Plutarch Vit. Orator.*

**LYC'US**, a king of Bœotia, successor to his brother Nycteus, who left no male issue. He was entrusted with the government only during the minority of Labdacus, the son of the daughter of Nycteus. He was farther enjoined to make war against Epopeus, who had carried away by force Antiope the daughter of Nycteus. He was successful in this expedition: Epopeus was killed; and Lycus recovered Antiope, and married her, though she was his niece. This new connection highly displeased his first wife Dirce; and Antiope was delivered to the unfeeling queen, and tortured in the most cruel manner. Antiope at last escaped, and entreated her sons, Zethus and Am-

phion,

plion, to avenge her wrongs. The children, incensed on account of the cruelties which their mother had suffered, besieged Thebes, killed Lycus, and tied Dirce to the tail of a wild bull, who dragged her till she died. *Paus. Apollod.*

LY'CUS, a king of Libya, who sacrificed whatever strangers came upon his coast. When Diomedes, at his return from the Trojan war, had been shipwrecked there, the tyrant seized him and confined him. He, however, escaped by means of Callirhoe, the tyrant's daughter, who was enamoured of him, and who hung herself when she saw herself deserted.

LY'CUS, a son of Neptune by Celæno, made king of a part of Mysia by Hercules. He offered violence to Megara, the wife of Hercules, for which he was killed by the incensed hero. Lycus gave a kind reception to the Argonauts. *Apollodorus.*

LY'CUS, in ancient geography, a river of Sarmatia, south-west of Rhodus, which discharged itself into the Euxine sea. It is mentioned by Ovid.—A river, which, according to Herodotus, took its rise in the country inhabited by the Thyrsagetæ, and, traversing that of the Mæotæ, ran into the Palus Mæotis. Ptolemy mentions this river, which is supposed to be the same with the preceding.—A river of Asia, in Phrygia.—A river of Asia Minor, in Caria, the source of which was in mount Cadmus, and it formed a lake in Latmicus Sinus.—A river in Sicily, the same with Halycus.—A river of Macedonia, mentioned by Plutarch.—A river of Asia Minor, in Mysia, in the canton of Pergamus.—A river of Asia, which, proceeding from Armenia, watered the plain near the town of Heraclea, and discharged itself into the Iris.—A river of Asia, in Bithynia, the same with Rhyndacus, according to Pliny.—A river of Asia, in Pontus, which mixed its waters with those of the Iris.—A river of Asia, in Cappadocia, according to Ptolemy, who says that it was one of the branches of the Aborrus, which fell into the Euxine sea.—A river of Asia, in Assyria, according to Polybius and Ptolemy.—A river of Asia, in Syria, near the gulf of Issus, according to Pliny.—A small river of the island of Cyprus, which had its source in the interior of the island at mount Olympus, and discharged itself into the sea to the west of Amathus.—A river of Phœnicia, which ran between Byblos and Beryta, according to the Itinerary of Antonine.

LYD. See LID, vol. xii. p. 623.

LYDD, a small market-town in the county of Kent, occupies a low site near the south-western extremity of the county, where a point of land running out into the sea forms Dengeness-bay, which, though very open, is of great service for vessels when the wind sets violently from particular quarters. Leland says, "Lydd is counted as a part of Rumney, is iii myles beyond Rumney town, and is a market. The town is of a pretty quantite, and the townesh men uses botes to the se, the which at this time is a myle of. The hole town is conteyned in one parochie, but that is very large. Ther is a place beyond Lydde, wher at a great nombre of holme trees groueth upon a banke of baches throwen up by the se: and ther they bat fowle, and kill many birdes." The church, which is a spacious edifice, consists of a nave, chancel, and aisles, with a massive tower, ornamented with pinnacles at the west end. The monuments are numerous, and among them are many brasses, chiefly for bailiffs and jurats of the town. Lydd is a corporate town by prescription, and, like Romney, of which it is a member, is governed by a bailiff, jurats, chamberlain, and commonalty. The inhabitants are chiefly engaged in fishing, and other maritime employments, of which smuggling is considered as forming a material branch. Lydd has a small market on Thursdays, and an annual fair on the first Monday in September. The holm-trees, or sea-hollies, mentioned by Leland, still grow on the beach near the town. On the point of land called Dengeness, is a light-house, 110 feet high, erected a few years ago, in place of a more ancient one, from which the sea had retired so far as to require a

new one in a more advanced situation. This point is also defended by a fort, and several ranges of barracks have been erected in the vicinity. The distance from Lydd to Rye is twelve miles, Tenterden sixteen, Appledore ten, Brookland five, Brenset five, Old Romney three, and New Romney three and a half. The town of Lydd was for many years remarkable for a fishery carried on at the Ness Beach; but it has lately decreased, and is not now of much account. In the beach near Stone-end, is a heap of stones, fancifully called the tombs of Crispin and Crispianus.

Promhill, or Bromhill, in Kent and Suffex, is three miles south-west of Lydd. The least part of it, which is in Kent, is said to be a member of the town and port of New Romney, but is claimed by the corporation of Lydd. It was a pretty town, and much resorted to, before it was drowned by the sea in the reign of Edward the First. *British Directory. England's Gaz. Beauties of Engl.*

LYDDA, in Hebrew LUD or LOB, by the Greeks and Latins called *Lydda* and *Diospolis*; a town of Judea, in the way from Jerusalem to Cæsaria Philippi. It lay east of Joppa, four or five leagues from that city, and belonged to the tribe of Ephraim; but seems to have been inhabited by the Benjamites at the return from the Babylonish captivity. *Neh. xi. 35.* Lydda is one of the three toparchies which were dismembered from Samaria, and given to the Jews. *1 Macc. xi. 34. Joseph. Antiq. lib. xiv. cap. 8.* St. Peter, coming to Lydda, cured a man there sick of the palsy, whose name was Æneas. *Acts ix. 32, 33, 34.* The Jews inform us, that, after the destruction of Jerusalem, they set up several academies in different places of Palestine, and in particular at Lydda, where the famous Akiba was a professor for some time. Gamaliel succeeded him; and after them appeared Taspho, or Trypho, another famous rabbin, whom some have confounded with Trypho the Jew who has a part in Justin's Dialogue.

LYDDAM, a village in Shropshire, north of Bishop's Castle.

LYDDEN, a village in Kent, south-east of Barham Downs.

LYDDON, a river in Dorsetshire, which rises on the western side of a ridge of hills in Buckland hundred, and continues running, in a northern direction, about five miles to Bagborough, where it is joined by a considerable brook, and falls into the Stour a little above Sturminster Newton.

LYDE, a woman's name; the wife of Antimachus.

LYDFORD. See LIDFORD, vol. xii. p. 624, 5.

LYD'GATE (John), an early English versifier, was born at Hatfield Broadoak in Essex, and became a black monk of the Benedictine abbey at Bury St. Edmund's; he flourished in the earlier part of the fifteenth century, and reign of Henry VI. He received part of his education at Oxford; and then travelled into France and Italy, from which countries he brought an acquaintance with polite literature, such as it was, of the times. It is affirmed by some biographers that he was well versed in languages; yet he himself, in his "Fall of Princes," mentioning that he translated it out of the French, says, "Of other tongue I have no suffisance." He was, however, regarded in his age as an extraordinary proficient in learning; and is said to have been not only a poet and rhetorician, but a geometrician, astronomer, theologian, and dialectic. He opened a school in his monastery for teaching the sons of the nobility the arts of versification and composition. He was himself an imitator of Chaucer; and, though he possessed very little invention or poetical spirit, yet he may be reckoned among those who contributed to the improvement of the English language and versification. His style, though rude and prolix, is perspicuous, and sufficiently intelligible at the present day. That he versified with great facility is evident from the prodigious number and variety of his performances; but it is rarely that a melodious or elegant line cheers the dryness and ruggedness of his tedious pages. His principal pieces are the Fall of Princes, from Boccaccio; the Story of Thebes,

chiefly

chiefly from Guido Colonna; and the Troy Boke, or Destruction of Troy, from the same writer: the two latter have been printed. Of his other pieces Mr. Ritson has given a list amounting to 251, existing in MS. in different libraries. *Warton's Hist. of Engl. Poetry.*

LYDIA, in ancient geography, a celebrated kingdom of Asia Minor. All the ancient writers tell us, that Lydia was first called *Mæonia* or *Meonia*, from Meon king of Phrygia and Lydia; and that it was known under no other denomination till the reign of Atys, when it began to be called *Lydia* from his son Lydus. Bochart, finding in his learned collection of Phœnician words the verb *luz*, signifying "to wind;" and observing that the country we are speaking of is watered by the Mæander, so famous for its windings; concludes that it was thence named *Lydia*, or *Ludia*. As to the ancient name of Mæonia, he takes it to be a Greek translation of the Phœnician word *lud*; wherein he agrees in some measure with Stephanus, who derives the name of *Mæonia* from Mæon, the ancient name of the Mæander. Some take the word *mæonia* to be a translation of a Hebrew word signifying "metal," because that country, say they, was in former times enriched above any other with mines. Though Lydia and Mæonia are by most authors indifferently used for one and the same country, yet they are sometimes distinguished; that part where Mount Tmolus stood, watered by the Pactolus, being properly called *Mæonia*; and the other, lying on the coast, *Lydia*. This distinction is used by Homer, Callimachus, Dionysius, and other ancient writers. In after-ages, when the Ionians, who had planted a colony on the coast of the Egean Sea, began to make some figure, that part was called *Ionia*, and the name of *Lydia* given to the ancient Mæonia.—Lydia, according to Pliny, Ptolemy, and other ancient geographers, was bounded by Mysia Major on the north, by Caria on the south, by Phrygia Major on the east, and Ionia on the west, lying between the 37th and 39th degrees of north latitude. What the ancients style the kingdom of *Lydia*, was not confined within these narrow boundaries, but extended from Halys to the Egean Sea. Pliny's description includes *Æolia*, lying between the Hermus and the Caucasus.

As to the origin of the Lydians, Josephus, and after him all the ecclesiastical writers, derive them from *Lud*, Shem's fourth son; (*Gen. x. 22.*) but this opinion has no other foundation than the similitude of names. Some of the ancients will have the Lydians to be a mixed colony of Phrygians, Mysians, and Carians. Others, finding some conformity in religion and religious ceremonies between the Egyptians and the Tuscans, who were a Lydian colony, conclude them, without any farther evidence, to be originally Egyptians, descending from *Ludim*, the son of Mizraim, (*Gen. x. 13.*) and famed for their skill in the use of the bow, (*Isa. lxvi. 19. Jer. xlvi. 9. See also Ezek. xxx. 5. and 1 Macc. viii. 8.*) All we know for certain is, that the Lydians were a very ancient nation, as is manifest from their very fables; for Atys, Tantalus, Pelops, Niobe, and Arachne, are all said to have been the children of Lydus. And Zanthus, in his *Lydiaca*, quoted by Stephanus, informs us, that the ancient city of Apsalon, one of the five satrapies of the Philistines, mentioned in the books of Joshua and the Judges, was built by one Apsalon, a Lydian, whom Achiamus king of Lydia had appointed to command a body of troops which he sent, we know not on what occasion, into Syria. The Heraclidæ, or kings of Lydia descended from Hercules, began to reign before the Trojan war; and had been preceded by a long series of sovereigns sprung from Atys, and hence styled *Atyadæ*; a strong proof of the antiquity of that kingdom.

The Lydians began very early to be ruled by kings, whose government seems to have been truly despotic, and the crown hereditary. We read of three distinct races of kings reigning over Lydia, viz. the *Atyadæ*, the *Heraclidæ*, and the *Mermnadæ*.

The *Atyadæ* were so called from Atys the son of Cotys,

and grandson of Manes the first Lydian king. But the history of this family is obscure and fabulous.

The *Atyadæ* were succeeded by the *Heraclidæ*, or the descendants of Hercules. For Hercules being, by the direction of the oracle, sold as a slave to Omphale, a queen of Lydia, to expiate the murder of Iphitus, had, during his captivity, by one of her slaves, a son named *Cleolæus*; whose grandson Argon was the first of the *Heraclidæ* that ascended the throne of Lydia. This race is said to have reigned five hundred and five years, the son succeeding the father for twenty-two generations. They began to reign about the time of the Trojan war. The last of the family was the unhappy Candaules, who lost both his life and kingdom by his imprudence: an event of which we have given an account under the article *GREECE*, vol. viii. p. 819. and *GYGES*, vol. ix.

Gyges, having thus possessed himself of the kingdom of Lydia, sent many rich and valuable presents to the oracle of Delphos; among others, six cups of gold weighing thirty talents, and greatly esteemed for the workmanship. He made war on Miletus and Smyrna, took the city of Colophon, and subdued the whole country of Troas. In his reign, and by his permission, the city of Abydus was built by the Milesians. Plutarch and other writers relate his accession to the crown of Lydia in a quite different manner; and tell us, without making any mention of the queen, that Gyges rebelled against Candaules, and slew him in an engagement. In Gyges began the third race, called *Mermnadæ*; who were also, properly speaking, *Heraclidæ*, being descended from a son of Hercules by Omphale. Gyges reigned thirty-eight years, and was succeeded by his son Ardyes.

This prince carried on the war against the Milesians which his father had begun; and possessed himself of Priene, in those days a strong city. In his reign the Cimmerians invaded and overran all Asia Minor; but what battles were fought between the Lydians and these invaders, and with what success, we find no where mentioned. Herodotus only informs us, that in the time of Ardyes they possessed themselves of Sardis, the metropolis of Lydia, but could never reduce the castle. Ardyes reigned forty-nine years, and was succeeded by his son Sadyattes, who reigned twelve years, and warred most part of his reign with the Milesians.

After him came his son Alyattes, who continued the war which his father had begun against the Milesians, ravaging their country, and about harvest-time carrying away all their corn yearly, in order to oblige them, for want of provisions, to surrender their city, which he knew he could not reduce any other way, the Milesians being at that time masters of the sea. In the twelfth year of this war, Alyattes having (for the reason assigned under the article *GREECE*) dispatched ambassadors to Miletus, to conclude a truce; Thrafsybulus, then king of Miletus, commanded all the corn that was at that time in the city to be brought into the market-place, ordering the citizens to banquet in public, and revel as if the city were plentifully stored with all manner of provisions. This stratagem Thrafsybulus practised, to the end that the ambassadors seeing such quantities of corn, and the people every where diverting themselves, might acquaint their master with their affluence, and divert him from pursuing the war. As Thrafsybulus had designed, so it happened; for Alyattes, who believed the Milesians greatly distressed for provisions, receiving a different account from his ambassadors, changed the truce into a lasting peace, and ever afterwards lived in amity and friendship with Thrafsybulus and the Milesians. He was succeeded, after a reign of fifty-seven years, by his son Croesus, whose uninterrupted prosperity, in the first years of his reign, far eclipsed the glory of all his predecessors. He was the first that made war on the Ephesians, whose city he besieged and took, notwithstanding their consecrating it to Diana, and fastening the walls by a rope to her temple, which was seven stadia distant from the city. After the reduction of Ephe-

fus, he attacked, under various pretences, the Ionians and Æolians, obliging them, and all the other Greek states of Asia, to pay him a yearly tribute.

Cræsus continued in this prosperous and happy state, till the conquests of Cyrus, and growing power of the Persians, began to give him uneasiness. He apprehended that the success which attended Cyrus in all his undertakings, might at last prove dangerous to himself; and therefore resolved to put a stop, if possible, to his progress. In taking this resolution, which might probably be attended with the most important consequences, he was desirous to learn the will of heaven concerning the issue of the war. The principal oracles which he consulted were those of Branchis in Ionia, of Ammon in Libya, and of Delphi in Greece. Among these respected shrines, the oracle of Delphi maintained its ascendancy, as the most faithful interpreter of fate. Cræsus was fully persuaded of its veracity; and, desirous generously to compensate for the trouble which he had already given, and still meant to give, the priests of Apollo, he sacrificed three thousand oxen to the god, and adorned his shrine with dedications equally valuable for the workmanship and for the materials; precious vessels of silver, ewers of iron beautifully inlaid and enamelled; various ornaments of pure gold, particularly a golden lion weighing ten talents, and a female figure three cubits or near five feet high. In return for these magnificent presents, the oracle, in ambiguous language, flattered Cræsus with obtaining an easy victory over his enemies, and with enjoying a long life and a prosperous reign. The god at the same time enjoined him to contract an alliance with the *most powerful* of the Grecian states. Elevated with these favourable predictions of Apollo, Cræsus prepared to yield a ready obedience to the only condition required on his part for the accomplishment of his aspiring purpose. Not deeming himself sufficiently acquainted with the affairs of Greece, to know what particular republic was meant by the oracle, he made particular inquiry of those best informed concerning the state of Europe; and discovered that, among all the members of the Grecian confederacy, the Athenians and Lacedæmonians were justly entitled to the pre-eminence. In order to learn which of these communities deserved the epithet of *most powerful*, it was necessary to send ambassadors into Greece. The Lydians dispatched with this important commission, soon discovered that the Athenians, after having been long harassed by internal dissensions, were actually governed by the tyrant Pisistratus. The Spartans, on the other hand, though anciently the worst regulated of all the Grecian communities, had enjoyed domestic peace and foreign prosperity ever since they had adopted the wise institutions of Lycurgus. After that memorable period, they had repeatedly conquered the warlike Argives; triumphed over the hardy Arcadians; and, notwithstanding the heroic exploits of Aristomenes, subdued and enslaved their unfortunate rivals of Messene. To the Lydian ambassadors, therefore, the Spartan republic appeared to be pointed out by the oracle as the community whose alliance they were enjoined to solicit. Having repaired accordingly to Sparta, they were introduced not only to the kings and senate, but, as the importance of the negotiation required, to the general assembly of the Lacedæmonians, to whom they, in few words, declared the object of their commission: "We are sent, O Lacedæmonians! by Cræsus, king of the Lydians and of many other nations, who, being commanded by the oracle of Apollo to seek the friendship of the most powerful people of Greece, now summons you, who justly merit that epithet, to become his faithful allies, in obedience to the will of the god whose authority you acknowledge." The Lacedæmonians, pleased with the alliance of a warlike king, and still more with the fame of their valour, readily accepted the proposal. To the strict connexion of an offensive and defensive league, they joined the more respected ties of sacred hospitality. A few years before this transaction, they had sent to purchase gold at Sardis for making

a statue of Apollo: Cræsus had on that occasion gratuitously supplied their want. Remembering this generosity, they gave the Lydian ambassadors at their departure, as a present for their master, a vessel of brass, containing three hundred amphoras (above twelve hogheads), and beautifully carved on the outside with various forms of animals. Cræsus, having thus happily accomplished the design recommended by the oracle, was eager to set out upon his intended expedition. He had formerly entered into alliance with Amasis king of Egypt, and Labynetus king of Babylon. He had now obtained the friendship of the most warlike nation of Europe. The newly-raised power of Cyrus and the Persians seemed incapable of resisting such a formidable confederacy.

Elevated with these flattering ideas of his own invincible greatness, Cræsus waited not to attack the Persian dominions until he had collected the strength of his allies. The sanguine impetuosity of his temper, unexperienced in adversity, unfortunately precipitated him into measures no less ruinous than daring. Attended only by the arms of Lydia, and a numerous band of mercenaries, whom his immense wealth enabled him at any time to call into his service, he marched towards the river Halys; here he was deceived by an oracle; (see Cræsus, vol. v. p. 372.) and, having crossed with much difficulty that deep and broad stream, entered the province of Cappadocia, which formed the western frontier of the Median dominions. That unfortunate country soon experienced all the calamities of invasion. The Pterian plain, the most beautiful and the most fertile district of Cappadocia, was laid waste; the ports of the Euxine, as well as several inland cities, were plundered; and the inoffensive inhabitants were either put to the sword or dragged into captivity. Encouraged by the unresisting softness of the natives of those parts, Cræsus was eager to push forwards; and, if Cyrus did not previously meet him in the field, he had determined to proceed in triumph to the mountains of Persia. Against this dangerous resolution he was in vain exhorted by a Lydian, named Sandanis; who, when asked his opinion of the war, declared it with that freedom which the princes of the east have in every age permitted, amidst all the pride and caprices of despotic power, to men distinguished by the gifts of nature or education. "You are preparing, O king, to march against a people who lead a laborious and a miserable life; whose daily subsistence is often denied them, and is always scanty and precarious; who drink only water, and who are clothed with the skins of wild beasts. What can the Lydians gain by the conquest of Persia; they who enjoy all the advantages of which the Persians are destitute? For my part, I deem it a blessing of the gods, that they have not excited the warlike poverty of these miserable barbarians to invade and plunder the luxurious wealth of Lydia." The moderation of this advice was rejected by the fatal presumption of Cræsus; who, confounding the dictates of experienced wisdom with the mean suggestions of pusillanimity, dismissed the counsellor with contempt.

Meanwhile, the approach of Cyrus, who was not of a temper to permit his dominions to be ravaged with impunity, afforded the Lydian king an opportunity of bringing the war to a more speedy issue than by his intended expedition into Persia. The army of Cyrus gradually augmented on his march: the tributary princes cheerfully contributing with their united strength towards the assistance of a master whose valour and generosity they admired, and who now took arms to protect the safety of his subjects, as well as to support the grandeur of his throne. Such was the rapidity of his movement, especially after being informed of the destructive ravages of the enemy in Cappadocia, that he arrived from the shores of the Caspian to those of the Euxine sea, before the army of Cræsus had provided the necessaries for their journey. That prince, when apprised of the neighbourhood of the Persians, encamped on the Pterian plain; Cyrus likewise encamped at no great distance; frequent skirmishes hap-

pened between the light troops; and at length a general engagement was fought with equal fury and perseverance, and only terminated by the darkness of night. The loss on both sides hindered a renewal of the battle. The numbers, as well as the courage, of the Persians, much exceeded the expectation of Cræsus. As they discovered not any intention to harass his retreat, he determined to move back towards Sardis, to spend the winter in the amusements of his palace; and, after summoning his numerous allies to his standard, to take the field early in the spring with such increase of force as seemed sufficient to overpower the Persians.

But this design was defeated by the careful vigilance of Cyrus. That experienced leader allowed the enemy to retire without molestation; carefully informing himself of every step which they took, and of every measure which they seemed determined to pursue. Patiently watching the opportunity of a just revenge, he waited until Cræsus had re-entered his capital, and had disbanded the foreign mercenaries who composed the most numerous division of his army. It then seemed the proper time for Cyrus to put his Persians in motion; and such was his celerity, that he brought the first news of his own arrival in the plain of Sardis. Cræsus, whose firmness might well have been shaken by the imminence of this unforeseen danger, was not wanting on the present occasion to the duties which he owed to his fame and the lustre of the Lydian throne. Though his mercenaries were disbanded, his own subjects, who served him from attachment, who had been long accustomed to victory, and who were animated with a high sense of national honour, burned with a desire of enjoying an opportunity to check the daring insolence of the invaders. Cræsus indulged and encouraged this generous ardour. The Lydians in that age fought on horseback, armed with long spears; the strength of the Persians consisted in infantry. They were so little accustomed to the use of horses, that camels were almost the only animals which they employed as beasts of burden. This circumstance suggested to a Mede, by name Harpagus, a stratagem, which being communicated to Cyrus, was immediately adopted with approbation by that prince. Harpagus, having observed that horses had a strong aversion to the shape and smell of camels, advised the Persian army to be drawn up in the following order: All the camels which had been employed to carry baggage and provisions were collected into one body, arranged in a long line fronting the Lydian cavalry. The foot-soldiers of the Persians were posted immediately behind the line, and placed at a due distance. The Median horse (for a few squadrons of these followed the standard of Cyrus) formed the rear of the army. As the troops on both sides approached to join battle, the Lydian cavalry, terrified at the unusual appearance of the camels, mounted with men in arms, were thrown into disorder, and, turning their heads, endeavoured to escape from the field. Cræsus, who perceived the confusion, was ready to despair of his fortune; but the Lydians, abandoning their horses, prepared with uncommon bravery to attack the enemy on foot. Their courage deserved a better fate; but, unaccustomed as they were to this mode of fighting, they were received and repelled by the experienced valour of the Persian infantry, and obliged to take refuge within the fortified strength of Sardis, where they imagined themselves secure. The walls of that city bade defiance to the rude art of attack, as then practised by the most warlike nations. If the Persian army should invest it, the Lydians were provided with provisions for several years; and there was reason to expect, that in a few months, and even weeks, they would receive such assistance from Egypt, Babylonia, and Greece, (to which countries they had already sent ambassadors,) as would oblige the Persians to raise the siege. The Lydian ministers dispatched into Greece met with great sympathy from the Spartans. That people were particularly observant of the faith of treaties; and, while they punished their enemies with unexampled severity, they behaved with generous compassion

towards those whom they had once accepted for allies. They immediately resolved therefore to send him a speedy and effectual relief; and for this purpose assembled their troops, made ready their vessels, and prepared every thing necessary for the expedition. The valour of the Spartans might perhaps have upheld the sinking empire of Lydia; but, before their armament could set sail, Cræsus was no longer a sovereign. Notwithstanding the strength of Sardis, that city had been taken by storm on the twentieth day of the siege; the walls having been scaled in a quarter, which, appearing altogether inaccessible, was too carelessly guarded. This was effected by the enterprize of Hyreades a Mede, who accidentally observed a sentinel descend part of the rock in order to recover his helmet. Hyreades was a native of the mountainous province of Mardia; and, being accustomed to clamber over the dangerous precipices of his native country, resolved to try his activity in passing the rock upon which he had discovered the Lydian. The design was more easily accomplished than he had reason to expect: emulation and success encouraged the bravest of the Persians to follow his example; these were supported by great numbers of their countrymen; the garrison of Sardis was surprized; the citadel stormed; the rich capital of Lower Asia subjected to the vengeful rapacity of an indignant victor. Thus ended the ancient kingdom of Lydia, which continued subject to the Persians till they also were conquered by the Macedonians. For the fate of the Lydian monarch, see the article CRÆSUS, vol. v. p. 372, 3.

The religion of the Lydians seems to have been much the same with that of the Phrygians: they worshipped Diana, Jupiter, and Cybele, at Magnesia. Their customs were similar to those of the Greeks, except that they used to prostitute their daughters, who had no other fortune but what they earned in this way. They punished idleness as a crime, and inured their children from their infancy to hardships. Their arms were not so much bows and arrows as long spears used by the cavalry; and, if we may believe Herodotus, the Lydians excelled all other nations in horsemanship. They were the first that introduced the art of coining gold and silver, for facilitating trade; the first that sold by retail, that kept eating-houses and taverns, and that invented public sports and shows, which were therefore called *ludi* by the Romans, who borrowed them of the Tuscans, the descendants of the Lydians. To these diversions they recurred for relief at a time, during the reign of Atys, when a great scarcity of provisions prevailed through the whole kingdom of Lydia. Having contrived various kinds of diversions, as Herodotus informs us, they used to play one whole day without intermission, eating and drinking the next day without other amusement. After they had continued thus alternately fasting and feasting, and finding that their calamities increased rather than abated, the king divided the whole nation into two bodies, commanding them to determine by lot, which of the two should remain at home, and which should go abroad in quest of new habitations, since their native country could not afford them sufficient maintenance. Those who by lot were constrained to abandon their country, after many adventures, arrived in that part of Italy which was then called Umbria, and is now named Tuscany. Thus they changed their name, being no longer called Lydians, but Tyrrhenians, from their leader Tyrrhenus.

Although the trade of the Lydians is no where particularly mentioned, we may well imagine that it was considerable, especially under their latter kings, when Lydia was in the meridian of its glory; on account of the splendour of this monarchy and the advantageous situation of the country. The same inference is justified by adverting to the immense riches, not only of the Lydian princes, but of several private persons. Herodotus (lib. vii. c. 23.) mentions one, named Pythius, who not only entertained Xerxes and his whole army, while he was marching with innumerable forces to invade Greece, but made him an offer of 2000 talents of silver, 3,993,000 pieces of gold, bearing

bearing the stamp of Darius. This same Pythius was reckoned the richest man in the then known world.

LYD'IA, a woman of Thyatira, a seller of purple, who dwelt in the city of Philippi in Macedonia. *Acts* xvi. 14, 40. She was converted by St. Paul's preaching, and was baptized, she and all her family. She offered her house to St. Paul so earnestly, that he was prevailed upon by her entreaties. This woman was not by birth a Jewess, but a profelyte. The Roman martyrology commemorates her on Aug. 3d. Lydia is perhaps the name of her country; and she might thence have been called Lydia, or the Lydian.

LYD'IAN, *s.* An inhabitant or a native of Lydia.

LYD'IAN, *adj.* Brought from, made at, or appertaining to, Lydia; as,

LYDIAN GAMES, a name given to the exercises and amusements invented by the Lydians; they are said to have invented the quoit, and games of chance played with dice. These Asiatics, after they had lost their city, emigrated into Etruria, whither they carried their ceremonies and games. Some Romans, having a passion for foreign play, adopted the Lydian method of gaming, which in the time of the emperors was pursued with such excess, that Juvenal is very severe on the great number of those who were hastening to ruin by that means. The Lydian games were at first called *Lydi* by the Romans, but afterwards, by corruption, *Ludi*.

LYDIAN MODE, in the Greek music, occupied the middle place between the Æolian and Hypodorian. It was also sometimes called the Barbarian mode, from its being invented by a people of Asia. It corresponded with our key of E. Euclid distinguishes two Lydian modes; that of which we have been speaking, and another called a *low Lydian*, and which is the same as the Æolian mode, at least as to its fundamental. The character of the Lydian mode was animated and interesting, yet melancholy, pathetic, and proper for voluptuous occasions; on which account Plato banished it his republic. It was said that by this mode Orpheus tamed wild beasts, and Amphion built the walls of Thebes. Some say that it was invented by Amphion, the son of Jupiter and Antiope; others by Olympus the musician, and disciple of Marfyas; while there are still others who assign it to Melampides. Pindar says, that it was first used at the nuptials of Niobe. See the article MUSIC.

LYDIAN STONE. See LYDIUS.

LYDIAT (Thomas), a learned English divine, and eminent mathematician and chronologer, was the son of a citizen of London, who was lord of the manor of Alkington, or Okerton, near Banbury, in Oxfordshire, where the subject of this article was born in the year 1572. As he gave early indications of good natural abilities, his father determined to give him a learned education, and sent him to Winchester school, where he was admitted a scholar upon the foundation when he was thirteen years of age. After having made a sufficient progress in grammar-learning, he was elected thence to New College, Oxford, where he was placed under doctor, afterwards the famous sir Henry, Martin; and was chosen fellow in 1593: he took the degree of B. A. in 1595, and that of M. A. in 1598. He applied himself with great assiduity to the study of the languages, philosophy, astronomy, the mathematics, and divinity, and felt a strong inclination to become intimately conversant in the latter science; but he was discouraged from pursuing it by the circumstances of his having a defective memory and imperfect utterance. In the year 1603, therefore, he resigned his fellowship, which by the statutes of the college he could not retain without proceeding in divinity; and contented himself with living on the income arising from a small patrimonial estate. The seven following years he spent in finishing and publishing such books as he had begun in the college, particularly his "Emendatio Temporum ab Initio Mundi huc usque Compendio facta, contra Scaligerum et alios," 1609, 2vo. By his animadversions in this, and some other pieces,

Scaliger was highly exasperated against him, and replied in his usual haughty manner, affecting to treat his character and chronological learning with the utmost contempt. His Emendatio was dedicated to Henry prince of Wales, who entertained a great regard for him, and appointed him his chronographer and cosmographer; and, if he had lived, would most probably have proved his generous patron; but the premature death of this promising prince put an end to any expectations which he might have formed of a provision from royal munificence. About the year 1609, he became acquainted with Dr. James Usher, afterwards archbishop of Armagh, who carried Lydiat with him to Ireland, and placed him in the college at Dublin, where he continued about two years, according to Anthony Wood's account. Soon after his return to his native country in 1612, a vacancy having taken place in the rectory of Okerton, an offer was made him of that benefice. This preferment he had formerly refused, when fellow of New College, and his father was patron; but he was now persuaded to accept of it, though, Wood says, after several demurs, and with much reluctance. No sooner, however, had he undertaken the duties of a parish-priest, than he entered on the discharge of them with the utmost diligence and fidelity; and in the course of less than twelve years composed and preached more than six hundred sermons on the harmony of the gospels. During that time, he also wrote several learned works, and laid the foundation of several others; all of which he would have completed and published, had he not unfortunately been prevented by the involved state of his circumstances. For his little patrimony was exhausted by the expense of what he had already printed; and, having unwarily become responsible for the debts of a near relation, which he was unable to pay, in the year 1629 or 1630 he was arrested and thrown into prison at Oxford, and afterwards into the King's Bench. Here he remained in confinement till sir William Boswell, a generous patron of learned men, Dr. Pink, warden of New College, and Dr. Usher, released him by discharging the debt; and Dr. Laud also, at the request of sir Henry Martin, contributed to his assistance on this occasion. When the civil wars commenced in 1624, he adhered steadily to the cause of the king, and was a considerable sufferer from the exactions and depredations of the parliament-party. From a letter written by him in 1644, to sir William Compton, governor of Banbury Castle, it appears, that his rectory-house at Okerton was four times pillaged by the parliament-garrison at Compton-house in Warwickshire, to the amount of at least seventy pounds; and that they had so completely stripped him of decent necessaries, that for a quarter of a-year together he was obliged to borrow a shirt, to be able to change his linen. He was also twice forced away from his own house; once to Warwick, and another time to Banbury; and he was personally ill-used by the soldiers, for refusing them money, defending his books and papers, and speaking boldly in favour of the king and of the bishops, while he was a prisoner in Warwick Castle. At length, after he had lived several years at Okerton, in great indigence and obscurity, he died there in 1646, when about seventy-four years of age. In 1669, a stone, with an inscription, was placed over his grave, at the expense of the warden and fellows of New College, Oxford; and an honorary monument was also erected to his memory by the same society, in the cloister of their college. Wood says, that he was "a person of small stature, but of great parts, and of a public soul; and, though a poor and contemptible priest to look upon, (for he was so held by the vulgar,) yet he not only puzzled Christopher Clavius, and the whole college of mathematicians, but also that great goliath of literature Joseph Scaliger." He was, indeed, a man of considerable and various erudition; and held in high estimation by learned men, both at home and abroad. By some learned foreigners he has been ranked with lord Bacon and Mr. Joseph Mede; and, when speaking of the trifling prefer-

ment which Mr. Mede and Mr. Lydiat obtained, they have observed, that the neglect of so much merit proved the English to be unworthy of having such eminent scholars among them. Mr. Lydiat was the author of a great number of books, besides that already referred to; as, 1. *De variis annorum formis*; and a defence of the same in reply to Clavius and Scaliger. 2. On the Origin of Fountains. 3. Several treatises on Philosophy and Astronomy, &c. &c. He also left behind him a number of manuscripts, many of which are enumerated by Anthony Wood in his *Athen. Oxon.* vol. ii.

LYD'IUS, *f.* LYDIAN STONE, or TOUCHSTONE; in mineralogy, a genus of siliceous earth—Consisting of silica, a small quantity of lime, magnesia, oxyd of iron and inflammable matter; hard, lightish, opaque, compact, cinereous, black or greenish-black, slaty, of a common form, breaking into indeterminate fragments, detached or constituting mountains; not fusible *per se*. There are two species.

1. *Lydias siliceus*, or siliceous lydian stone: subopaque, of a splintery fracture, without internal lustre. Found in various parts of Europe, in blocks and amorphous masses of various sizes, and very often in the beds of rivers; colour blackish-grey or greenish, often intersected with veins of grey quartz or blood-red iron-stone. This is a variety of primitive schistus, the structure of which is so compact, that the schistose character is often not distinctly perceptible, except in great masses; its texture in particular parts is as close as flint; and hence the term *siliceous schistus* is applied to it.

2. *Lydius genuinus*, genuine lydian-stone, basanite, or touchstone: of an even texture, sometimes approaching to the conchoidal, shining a little internally. Found in various parts of Europe, detached or in masses, and is commonly intersected by veins of quartz; colour dark-greyish-black; its powder black. Specific gravity 2.596. It is called *basanite* from its occasional use in assaying the purity of gold and silver. The use of the *touchstone* for the purpose of ascertaining the degree of purity of gold and silver is spoken of frequently in the writings of the ancients. Theophrastus gives an accurate description of its use; and describes an apparatus very analogous to the touching-needles of the present day; by which, in employing various artificial alloys as a standard of comparison, the purity of gold was readily ascertained by the colour of the streak impressed on the stone. But it is to be observed, that both this name and *Heracius lapis* were also applied by the ancients to the loadstone; and hence has arisen no small misunderstanding of their works. Pliny has observed, that both the loadstone and touchstone were at times called *Lydius* and *Heracius lapis*. The true *lapis Lydius*, or touchstone, was anciently found only in the river *Tmolus*; but was afterwards found in many other places, and is now very common in many of the German rivers. The ancients give us very remarkable and circumstantial accounts of the uses they made of it; and it is plain they were able to discern the alloys of gold by means of it with very great exactness. We at present use several different stones under this name, and for the same purpose. In Italy, a green marble called *verdello* is most frequently used; and with us, very frequently small pieces of *basalt*.

LYD'IUS, an epithet applied to the Tyber, because it passed near *Etruria*, whose inhabitants were originally a Lydian colony. *Virgil*.

LYD'IUS (Balthazar), the son of a German protestant minister in the Palatinate, who took refuge from persecution in the United Provinces, and became professor of divinity in Franeker. We are not furnished with any other particulars concerning the life of the subject of the present article, than that he began the exercise of the ministerial functions at Dort, about the year 1603, and died in 1629. Among other works, he was the author of some pieces interesting to the ecclesiastical historian, entitled "*Waldensia, id est, Conservatio veræ Ecclesiæ demon-*

*strata ex Confessionibus Taboritarum et Bohemiorum*," 2 vols. 8vo. the first of which was published at Rotterdam in 1619, and the other at Dort in the following year; and "*Facula accensa Historiæ Valdensium*." He also published a treatise relating to the first visits paid by the Europeans to the new world, entitled "*Novus Orbis, seu Navigationes primæ in Americam*."

He had a younger brother, named JOHN LYDIUS, who was minister at Oudewater in Holland, and published a work of Prateolus, entitled "*Concilia Ecclesiæ Christianæ*," with his own critical remarks, 1610; an edition of "*Nicol. de Clemangis de Corrupto Ecclesiæ Statu*," with notes, and a glossary, 1613; and "*The Lives of the Popes*," by Robert Barnes and John Bale, with a continuation to his own time by himself, in 1615.

LYD'IUS (James), son of Balthazar, and like him a minister at Dort, was distinguished for his acquaintance with criticism and polite literature, as well as divinity. Besides several controversial pieces against the Catholics, and several poems in the Dutch language, he published some works abounding in learned and curious research: such as, 1. *Sermonum convivalium Libri duo, quibus variarum Gentium Mores et Ritus in Uxore expectanda, Sponsalibus contrahendis, Nuptiisque faciendis et perficiendis, enarrantur*, 1643, 4to. 2. *Agonistica Sacra*, 1657, 12mo. After his death, professor Van Till, of Dort, printed from his manuscripts, with notes by the editor, 3. *Syntagma sacrum de Re militari*; 1698, 4to. *Gen. Biog.*

LYDOWI'ANY, a town of Samogitia: eight miles north-west of Rostenne.

LY'DUS, a son of Atys and Callithea, king of Mæonia, which from him received the name of Lydia. His brother Tyrrhenus led a colony to Italy, and gave the name of Tyrrhenia to the settlement he made on the coast of the Mediterranean. See the article LYDIA, p. 822.

LYD'SING, a village in Kent, near Gravesend; here it was that 600 Norman young gentlemen, who came over with the young princes Alfred and Edward, the sons of king Ethelred, after the death of the Danish king, Canute, to take possession of their father's throne, were massacred by Godwin earl of Kent, who sought thereby to secure it to himself and his family. Here is a chapel of ease to Gillingham.

LYE, *f.* [*lize*, Sax.] Water impregnated with the salts of ashes. In husbandry, the term is generally applied to such fluids as are employed for the purpose of steeping grain; in which cases the best criterion of their strength is that of the swimming of an egg.

LYE (Edward), a learned antiquary and great master of the Gothic and Saxon tongues, was born in 1694, at Totness in Devonshire, where his father kept a school. His early education was chiefly domestic; but at the age of nineteen he was admitted at Hertford-college, Oxford, where he took a bachelor's degree in 1716. He was ordained priest in 1719, and presented to the living of Houghton-parva in Northamptonshire. In this retreat he employed himself in a profound study of the Anglo-Saxon language. His first literary undertaking was to publish an edition of the *Etymologicum Anglicanum* of Francis Junius, from the author's manuscript in the Bodleian library. This he completed in the seventh year from the commencement of his task, prefixing to the work an Anglo-Saxon grammar. It was very well received by the learned; and, in 1750, Mr. Lye was made a member of the Society of Antiquaries, and was presented to the vicarage of Yardley-Hastings. On this promotion he resigned his former living, though he had hitherto maintained his mother, and had two sisters dependent upon him. His next publication was of the Gothic Gospels, at the request of Eric Benzelius, bishop of Upsal. This appeared from the university-press of Oxford, with a Gothic grammar prefixed. The great labour of the latter part of his life was his Anglo-Saxon and Gothic Dictionary, which he had finished and put to the press at the time of his death in 1767. About thirty sheets were then

printed; and it was his dying request to his friend the Rev. Owen Manning, that he would undertake the charge of seeing it brought to publication. This was effected in 1772, when the work appeared with the title of "Dictionarium Saxonico et Gothico Latinum, auctore Edwardo Lye, A.M." 2 vols. folio. There are added to it some fragments of the Ulphilian version, and other pieces in the Anglo-Saxon; and a grammar of both languages is prefixed. *Life by Mr. Manning prefixed to the Dict.*

LYE, a village north-west of Cheltenham, Gloucestershire.—A village south of the Teme, near Worcester.—A village near Ryegate in Surry.

LYE (North and South), villages near Witney in Oxfordshire.

LYEHOUSE, a village near Bolney in Suffolk.

LYEMMER, or LEV'NER, *f.* A kind of hound.

LYEDEN, a village in Northamptonshire, south-west of Oundle.

LYFORD, a village near Wantage, Berks.

LYGDOMIUS, a man's name.

LYGE, a town of Norway, near a lake of the same name: sixteen miles north-west of Christianfand.

LYGEUM, *f.* [from *λυγος*, Gr. a rod or twig, in allusion to the tough pliant rushy nature of the plant.] In botany, a genus of the class triandria, order monogynia, natural order gramina, or grasses. The generic characters are—Calyx: glume of one ovate convoluted pointed permanent valve, at length inflexed, separating at the lower side, and containing two equal opposite parallel level florets. Corolla: of two valves, very hairy at the base, permanent; the outermost ovate, pointed, convex, awnless; inner twice as long, linear, narrow, acute, cloven at the summit, awnless. Stamina: filaments (in each floret) three, equal, longer than the corolla, flattish, very narrow; antheræ vertical, linear, cloven at each end. Pistillum: germen *superior*, oblong, convex at the outside, flat at the inner; style simple, compressed, the length of the stamens; stigma simple, taper-pointed, incurved. Pericarpium: none, except the hardened hairy base of the corolla of each floret, united longitudinally to the other. Seeds: solitary, linear-oblong, convex at the outside, flattish, with a longitudinal furrow, at the inside.—*Essential Character.* Glume of one valve, convoluted, two-flowered; corolla of two valves, the innermost twice as long as the outer, awnless; seed solitary, inclosed in the hardened combined base of each floret.

*Lygeum spartum*, or bastard mat-weed: the only known species. Observed by Loefling to be very abundant in the south of Spain, always growing in low places, on a clay soil, where the water stands after much rain. The root is creeping and perennial. Stems about a span high, erect, rushy, round, slender, smooth, nearly naked, with one joint, above which they are much extended after flowering. Leaves sheathing the lower part of the stem, and about equal to it in height, narrow, convoluted, taper-pointed, rushy, smooth; the upper or floral one shorter, with a longer sheath. Flower large, terminal, solitary, at first erect, inclining as the seeds ripen, with a knot at the base; calyx smooth, delicately striped with green, at length opening and exposing the long dense hairs which clothe the base of the permanent corolla, investing the seed. The error of Linnæus and Loefling, who supposed the germen to be inferior, and common to two florets, is properly corrected by Richard, who shows the supposed two-celled nut to be formed merely of the hardened combined bases of the corollas of the two florets. This is analogous to many other true grasses, (as this is,) whose hardened corolla becomes a husk or shell to the seed. This plant, being far inferior in tenacity, as well as length, to the true mat-weed, *Stipa tenacissima* of Linnæus, serves chiefly in Spain for making baskets and ropes, and also for stuffing the inferior kinds of mattresses. It flowers in May and June, ripening seed in autumn, and often retaining its empty sheath or calyx till the following summer. The

VOL. XIII. No. 948.

parts of fructification are, on the whole, perhaps larger than those of any other grass.

LYGH, a village in Hampshire, on the border of Suffex toward Eastbourn.

LY'GIL, or LUGII, in ancient geography, a people of Germany, to the west of the Vistula, where it forms a bend like a crescent; called *Ligii* by Dio, *Lugii* by Strabo, and *Logiones* by Zofimus. Their name *Lugii* is conjectured to be derived from their mutually-close confederacy or league. The Vistula was their boundary to the north, east, and south, with Mount Asciburgius to the west. Now the whole of that country lies in Poland, on this side the Vistula.

LYGIN'IA, *f.* [*λυγινος*, Gr. twiggy, alluding to its hard tough rushy habit.] In botany, a genus of the class dioecia, order monadelphia, natural order of tripetaloidææ, *Lin.* (junci, *Juss.* restiææ, *Brown.*) Essential character—Male: spatha of one valve; petals six; filaments united lengthwise; antheræ three, didymous, cloven at each end. Female: spatha of one valve; petals six; style in three deep divisions; capsule three-lobed, three-celled, bursting at the prominent angles; seeds solitary. The root is scaly, creeping, with thick downy fibres. Stems simple, round, leafless, with several sheathing scales, easily breaking at the joints. Spike terminal, of several crowded tufts of flowers, each accompanied by a common sheathing bractæa, the female flowers sometimes solitary.

*Species.* 1. *Lyginia imberbis*, or unarmed lyginia: bractæas and spathas beardless; male and female tufts many-flowered. Native of the south part of New Holland. This is *Schœnodum tenax*, the male plant of Labillardiere. Mr. Brown observes, that this supposed species of the French author is made up of two different genera; he therefore thinks it safer to reject the generic name entirely, than to retain it for either the male or female plant, which might lead to error.

2. *Lyginia barbata*, or bearded lyginia: bractæas and spathas bearded; male tufts of few flowers; female ones single-flowered, nearly solitary. From the same country. These plants have much of the habit of *RESTIO*, *ELEGIA*, &c. See also *LEPYRODIA*, vol. xii. p. 523.

LYGIS'MUS, *f.* [from *λυγίζω*, Gr. to distort.] A distortion of the limbs; sometimes a luxation.

LYGIS'TUM, *f.* in botany. See *PETESIA*.

LYGMOIDES, *f.* [from *λυγίζω*, Gr. a hiccup, and *ειδος*, a form.] A fever attended with a hiccup.

LYG'MUS, *f.* [Greek.] A hiccup.

LYGODIUM, *f.* in botany. See *OPHIOGLOSSUM*.

LYGUM, a town of Denmark, in the duchy of Sleswick: fourteen miles west of Apenrade.

LYGUS'TRUM, *f.* in botany. See *LIGUSTRUM*, vol. xii. p. 700.

LY'HAM, a village in Northumberland, north-east of Woller.

LY'ING, *f.* [from *lie.*] The act of telling untruth.—They will have me whipt for speaking true, thou wilt have me wipt for *lying*, and sometimes I am whipt for holding my peace. *Shakespeare's King Lear.*

LY'ING, *f.* [from *to lie.*] The act of placing one's self in a recumbent posture.—Many tears and temptations besal me by the *lying* in wait of the Jews. *Acts* xx. 19.

LYING *to*, denotes the situation of a ship when she is retarded in her course, by arranging the sails in such a manner, as to counteract each other with nearly an equal effort, and render the ship almost immovable, with respect to her progressive motion or head-way. A ship is usually brought-*to* by the main or fore-top-sails, one of which is laid a-back, whilst the other is full; so that the latter pushes the ship forward, whilst the former resists the impulle, by forcing her a-sterm. This is particularly practised in a general engagement, when the hostile fleets are drawn up in two lines of battle opposite to each other; it is also used to wait for some other ship, either approaching or expected; or to avoid pursuing a dangerous course, especially in dark or foggy weather, &c. *Falconer.*

9 T

LYK'SBORG,

LYK'SBORG, or LUX'BURG, a town of Denmark, in the duchy of Sleswick, on a point of land near the Baltic: seven miles north-east of Flensborg.

LYK'SELE, a town of Sweden, in the lapmark of Umea: eighty miles south-south-west of Umea.

LYL'BORN, a village in Northamptonshire, to the north-east of Hilmerton, near Dow-Bridge, over the Avon. It is supposed to have been one of the Roman stations, by its situation on the Watling-street, one of their highways, and by the pavements, trenches, ruins of walls and houses, hills for castles, hillocks for bastions, &c. at and near it, and particularly by the vestigia of a fort at the town called Round-Hill.

LY'LESHILL, a village to the south of Newport in Shropshire.

LY'LY. See LILLY, vol. xii. p. 708.

LYM, *f.* [*limier*, Fr.] A bloodhound:

Mastiff, greyhound, mungrel grim, Hound or spaniel, brache or *lym*. *Shakespeare's King Lear*.

LY'MAN, a town of the province of Maine: six miles north of Wells.

LYM'BERG (Great and Little), villages in Lincolnshire, west of Great Grimsby.

LYME, a village in Cheshire, east of Warrington.

LYME, a river of England, which for some distance divides the county of Dorset from Devonshire, and runs into the sea near the town of Lyme.

LYME, or LYME REGIS, a seaport, borough, and market, town, in Dorsetshire; twenty-three miles from Dorchester, twenty-eight from Exeter, and 148 from London. This town was, at the conquest, part of the demesne lands of the convent of Sherborne, and probably so continued until 12 Edward I. when it was annexed to the crown, and thus derives the title of *Lyme Regis*, or King's Lyme. We read, that, in 774, the Saxon king Kinwulf gave land hereabouts to the church of Sherborne, for the boiling of salt there to supply its necessities. Edward I. made it a free borough, and granted it every privilege that is enjoyed even by the city of London, with a court of hustings, and freedom from all tolls and lastage. These privileges were confirmed by the succeeding princes; and Edward II. also granted to the burgesses the town in fee-farm, upon paying thirty-three marks every year into the exchequer. In the reigns of Henry IV. and V. the French attacked, plundered, and burnt it; upon which, the king forgave the inhabitants all their arrears, and reduced their fee-farm rent from 21l. to 5l. which sum was, in consequence of their misfortunes, again lessened to 3l. 6s. 8d. which they still continue to pay. In Camden's time (James I.) it was a small inconsiderable place, inhabited by fishermen; but it has since greatly improved, and grown a considerable sea-port. During the civil war in the reign of Charles I. Lyme was a place of great consequence to the contending parties, especially to the royalists; great part of their dependence on the west of England arising from being in possession of this town. The siege of Lyme was one of the most remarkable that occurred during that eventful period.

The privileges granted by Edward I. to this town have been confirmed and increased by several succeeding sovereigns. Lyme may be deemed one of those many dependant boroughs, which is wholly under the controul of an individual; the earl of Westmoreland and his ancestors having had the entire influence in the corporation for the last century. It was represented in parliament as early as 23 Edward I. The last charter was granted by William III. by which it is governed by a mayor, who is a justice of peace during his mayoralty and the year following; and in the third year he is both justice and coroner. Here also are a recorder, fifteen capital burgesses, two of whom are justices, a town-clerk, and other officers. There having been a contest, time immemorial, between the corporation and the freeholders of the borough, for the right of election; on the 21st of May, 1689, it was determined to be

in the corporation and freeholders. On the 28th of February, 1727, it was resolved to be in the corporation. The same question has been twice agitated before committees of the house of commons, constituted under the Grenville act. In the first of these, Lionel Darel, esq. and Henry Harford, esq. were petitioners; when, upon hearing, it was determined by a committee of the house of commons, that the right was in the corporation only; and that the hon. Henry Fane, and David Robert Mitchell, esq. the sitting members, were duly elected. The right of the freeholders was again contested at a general election in 1784, and tried before a second committee, on the 15th of February, 1785, when Robert Wood, esq. and John Cator, esq. were petitioners, and the hon. Henry Fane and the hon. T. Fane, were the sitting members. The claims of each party were the same in both petitions; each contending for the right of election in the freeholders of the borough as well as the corporators, superadding to both the qualification of residents; but in both these cases, as in the remarkable one of Poole, the committees determined, that an usage of eighty years superseded the ancient right, which was proved to have been in the freeholders, the same as was proved to be in the commonalty of Poole. The capital burgesses make a certain number of freemen; resident or non-resident, who elect the members of parliament. Number of voters, thirty-one. The present members are—Lord Burghersh, eldest son of the earl of Westmoreland; and major-general H. Fane, aid-de-camp to the king.

Lyme lies near the sea, on the very borders of Devonshire, in a cavity between two rocky hills, which makes it difficult of access. It is about five furlongs long, and contains about three hundred houses. As it lies on the declivity of a hill, the houses make a good show, one above another; and some of them are built of free-stone, and covered with blue slate. This place had formerly a very flourishing trade to France, Spain, the Straits, Newfoundland, and the West Indies; during which, the customs amounted some years to 16,000l. but it stands on such a high steep rock, that the merchants are obliged to load and unload their goods at a place a quarter of a mile off, called the *Cobb*, originally built in the reign of Edward III. which costs a great sum to maintain, but forms such a harbour as perhaps is not to be equalled in the world, the ships being sheltered by a high thick stone wall, raised in the main sea a good way from the shore, broad enough for carriages and warehouses; and the custom-house officers have one upon it. The materials for this singular work were vast rocks weighed up out of the sea with empty casks, (at what time we know not;) which casks being placed in a regular order to a considerable breadth, and carried out a great way, some say three hundred yards, the interstices being filled up with earth, high and thick walls of stone were built upon those rocks, and so thick that large buildings (among them a handsome custom-house upon pillars, with a corn-market under it) have been erected thereon. Opposite to this, but farther into the sea, is another wall of the same workmanship, which crosses the end of the first, and comes about with a tail parallel to that. But the point of the first or main wall is the entrance into the port; and, the second or opposite wall breaking the violence of the sea from the entrance, the ships go into the basin, and, being defended from all winds, ride there as secure as in a mill-pond or wet-dock. For keeping it in constant repair, there are annually chosen two cobb-wardens. The cellars of the low part of the town, near the sea, are often overflowed by the spring-tides ten or twelve feet.

Lyme might be strengthened by a fort; but, as the walls of the Cobb are firm enough to carry what guns they pleased to plant upon them, they did not think it needful, especially as the shore is convenient for batteries; they have therefore some guns planted in proper places, for the defence of the Cobb and the town. Nevertheless

it suffered by the French war in the reign of queen Anne; but has recovered since. Many handsome stone houses have been lately built by merchants residing there; and it might be rendered of much greater importance than it is, if any new manufacture could be introduced in the country behind it; which is certainly plentiful enough to admit not only of one, but of many improvements. It is not however unlikely, that, if the inhabitants of this part recurred to the very arts from which, according to the best authorities, the town derived its existence near 1000 years ago, that is, making salt, it might very speedily and effectually answer their purposes, since by the help of shallow marshes, (into which the sea-water being admitted, the rest of the work could be easily performed by the heat of the sun, as is done on the opposite coast of France), as good salt as any might be produced; for which the place seems to be exceedingly well situated, and to have very commodious advantages, as their concern in the fishery would furnish an immediate market for all they could possibly make. Before we leave the subject of the pier, it may not be amiss to mention, that, notwithstanding modern as well as ancient writers speak of the construction of this port as something very singular and extraordinary, yet none have proposed the imitation of it, though there cannot be a more pregnant instance than this of the possibility of making (though it may be in a better manner) a port upon almost any part of our coast where the conveniency of the country required, or the opening such a port should appear the most probable means of improving it; one or other of which circumstances would turn such ports to the advantage of most of all the maritime counties in this island. After all, Lyme, considering the largeness of it, may pass for a place of wealth. The unfortunate duke of Monmouth, having with him a frigate of thirty guns and two merchant-ships, landed here June 11, 1685. Many of his party were afterwards put to death on the spot, and their limbs hung up in the town.

Here was formerly a house of Carmelite friars, of which there are no remains. There is an almshouse in Church-street; also presbyterian and anabaptist meeting-houses. The town-hall is near Broad-street. The church stands at the east end of the town, on a rising ground, moderately large, but not high: the western end is the most ancient. Adjoining the church is a large stone building, and over it a school. The market is on Friday; the fairs, Feb. 2 and Sept. 21. April 28, 1786, above 2000l. worth of silver and gold coin of Charles I. and II. was discovered here by some labourers.

Lyme was the birth-place of Thomas Coram, the benevolent patron and contriver of the Foundling Hospital. See CORAM, vol. v. p. 192. and the article LONDON, p. 587 of this volume.

Marshwood, with its vale and park, is between Lyme and Beminster. This formerly was a barony of great honour. The vale includes the parishes of Whitchurch, Bettecomb, and Pillefson; and extends into several adjacent ones. Marshwood had formerly a chapel of ease to Whitchurch; but it was destroyed in the civil wars. *Wilkes's British Dictionary*, vol. v. *Oldfield's Hist. Bor.*

LYMEGRASS. See ELYMUS.

LYMFIO'RD, or LYMFUR'T, a gulf of Denmark, near the west coast of North Jutland, which communicates with the Cattegat, and runs eighty miles inland, widening gradually, and forming several branches; it is separated from the North Sea only by a narrow bank. Lat. 56. 59. N. lon. 10. 20. E.

LY'MING, a village in Kent, two miles from Elham, in the road to Hythe.

LYMINGTON, a borough and market-town in the parish of Boldre, in the New Forest of Hampshire, is situated on the declivity of a rising ground, on the eastern bank of the Lymington river, about a mile from its confluence with the sea; sixteen miles from Southampton, and ninety-five from London. It is of remote, though

unknown, origin; from a consideration of local circumstances, Mr. Warner supposes that a town or village was formed near this spot by the Britons. That the Romans were acquainted with it, is evinced by the contiguity of an encampment called Buckland Rings, or Cattle Field, and by the evidence of Roman coins, nearly 200lbs. weight of which, of the Lower Empire, were discovered here in two urns in the year 1744. Lymington occurs in Domesday-book under the name of *Lentune*, (which probably denoted the whole manor;) but it does not seem to have attained any considerable importance till it became the property of baron de Redvers, in the time of Henry I. when, a port being established, the wines of France, and other foreign commodities, were unshipped at its quays. It then also became famous for its salt-works; though its manufacture is, with great probability, supposed to have been established at a much earlier period. A very extensive manufacture of marine salt is now carried on here; the works are situated on the borders of the sea-shore, and reach nearly three miles in a south-west direction.

Little of the local history of Lymington is to be found on record. It is said to have been thrice plundered by the French; and it was invaded a fourth time, but saved from pillage by the address of a woman. The story is thus related by Mr. Warner: "A party of these marauders had landed on a similar scheme of depredation; but the leader of it, being extremely hungry, determined to satiate his appetite before he completed the purpose of his visit. The tutelary genius of the place directed him to the habitation of a Mrs. Dore, a person of some consequence, who at that instant was seated at a plentiful table. The abrupt entrance of the foreign visitor discovered to her in a moment the danger which threatened the town and its inhabitants. There was no time for deliberation. An intuitive quickness of thought, and an uncommon degree of fortitude, pointed out to her, immediately, the proper line of behaviour. She received the Frenchman, and his boisterous retinue, with the greatest affability; produced all the delicacies of her house; and enlivened the repast with many sprightly remarks, and the most unrestrained pleasantry. The commander, who possessed, I presume, a large share of national gallantry, was so fascinated by the winning manners and profuse bounty of this generous hostess, that he sacrificed his interest to his gratitude, and left the town without perpetrating the least act of devastation or exaction." The name of Dore was again remarkable in the history of this place in the time of James II. When the duke of Monmouth rebelled against the government, Col. Thomas Dore, being then mayor of Lymington, declared for the duke immediately on his landing at Lyme, and raised a hundred men to join and assist him; but, before he put his purpose into execution, the king's army was victorious and prevented him; and, because he was not actually but only intentionally in the rebellion, king James pardoned him.

The town is situated about a mile from the channel which runs between the main land of England and the Isle of Wight. It consists principally of one long street; and is divided into the new and old town by the church, which, though originally a regular pile, consisting of a nave, chancel, and aisles, with a spire in the centre, is now, through successive alterations, become extremely informal. The town-hall is a neat building; and here are two sets of baths, which are rendered very convenient, and are much frequented. The situation of Lymington, on the banks of a navigable river, and so contiguous to the sea, is extremely favourable to trade; but this advantage was formerly much greater than at present, as, by the injudicious construction of a causeway, the depth of the river has been considerably lessened, and its channel contracted. Previous to the making of this causeway, which was about the year 1730, vessels of upwards of 500 tons burthen could be brought up to the quay; though now one of 300 tons can scarcely be navigated.

Lymington

Lymington is a borough by prescription. It was first summoned to send members to parliament in the reign of Edward III. but the first actual return of members was 27 Eliz. The corporation consists of a titular mayor, aldermen, and burgesses, without limitation; the mayor is annually chosen by the burgesses within and without the borough, and sworn at the court-leet of the lord of the manor. The number of voters is about eighty; "all (says Mr. Oldfield in his Hist. Bor.) under the influence of sir Harry Burrard Neale, bart. who is one of the members, and by whose means the majority of them have obtained a number of those benevolences, which render them indeed obnoxious to Mr. Crew's bill; but are, notwithstanding that, liberally distributed by the treasury amongst the immaculate boroughs." The market is on Saturdays; fairs May 12 and Oct. 13.

The Roman encampment before alluded to is about three quarters of a mile to the north of Lymington; and is now called Castle-field, or Buckland-rings. Its dimensions are as follow: length, from east to west, 200 yards; breadth, towards the west, 125 yards, and towards the east, 135. The whole camp, in its original state, might cover about twenty acres of ground. Mr. Warner is inclined to think it a work of Vespasian, intended for the protection of such Roman ships as might have accompanied him in his expedition.—At the distance of two miles from this camp, are the tumuli of Sway-common: Mr. W. thinks they are partly British and partly Saxon.

Boldre, late the residence of the elegant, the venerable, the pious, Gilpin, is near Lymington. The house, which is sweetly sheltered from the road, stands on a gently-rising ground, bounded by a sweeping wood of oaks. The arm of the sea separating the Isle of Wight from the main land is seen from the windows, and the island with its white cliffs bounds the picture. Pomegranates and myrtles adorn the front of the house; and its apartments are ornamented with the elegant drawings of him who could furnish views for "Forest Scenery," and write initiatory books for parish-children. This elegant retirement seems the abode of peace, taste, and virtue; and its last proprietor possessed that refined wisdom, which enabled him to make it such. The hamlet of Boldre is at some distance in the back ground: the cottages are neat and comfortable. Here is a school for the children of the poor, built and endowed by Mr. Gilpin. It is situated on a little knoll, ornamented with shrubs. The apartments of the boys and girls are separate; and the walls are hung round with tablets containing appropriate texts of Scripture, and printed instructions for the children, which breathe the benevolence and piety of their revered pastor. Few parishes perhaps can equal Boldre in their readiness to confirm that interesting and important truth, "The memory of the just is blessed." The heart-felt encomiums poured into the ear of a stranger, confirm the conviction of the powerful permanent influence which one individual may have, who is habitually and judiciously aiming to do all the good he can. Boldre church is a mile from the hamlet, situated in a sequestered and romantic part of the New Forest. The silence and solitariness of the spot, the deep shade of the woods, the last memento of him who has taught the love of heavenly wisdom to the inhabitants, and immortalized the scenery, all conspire to render Boldre church-yard a spot not to be visited without enthusiasm, nor quitted without regret.

LYMINSTER, a village near Arundel in Suffex.

LYMPH, [*lympa*, Lat.] A term given to the transparent fluid conveyed in the absorbing vessels of the body; also to a part of the blood. It is often applied also to other animal fluids, chiefly when clear and nearly transparent.—When the chyle passeth through the mesentery, it is mixed with the *lymph*, the most spirituous and elaborated part of the blood. *Arbutnot on Aliments.*

LYMPHA, in heathen mythology, a goddess worshipped by the shepherds when they wanted rain.—Also, among the Romans, a kind of grotto or artificial cave,

so called from *lympa*, water; because furnished with a great many tubes, canals, and secret passages, through which the water suddenly gushed upon the spectators, while busy in admiring the great variety and beautiful arrangement of shells, with which the grotto was adorned.

LYMPHAD, *f.* An ancient ship or sloop of war, peculiar to Scotland, and particularly to the Isle of Arran; whence it is borne in the arms of Hamilton duke of Brandon and earl of Arran, and of Hamilton marquis of Abercorn. See the article HERALDRY, vol. ix. Plate XVIII. XIX.

LYMPHA'TI, or LYMPHA'TICI, in antiquity, a name given by the Latins to possessed or mad persons, because they were thought to be gifted with divination. *Plin. Nat. Hist.* lib. xxv. c. v. These answer to the *νεμφολατῆσαι* of the Greeks. The ancient Greeks called water *lympa*, which the Latins changed into *lympa*. "The term *omphi* (says Mr. Bryant) is of great antiquity, and denotes an oracular influence, by which people obtained an insight into the secrets of futurity: it was written *omphi* or *amphi*, and signified the Oracle of Ham, who, according to the Egyptian theology, was the same as the Sun, or Osiris; and, as fountains were deemed sacred, these were styled by the Ammonians *Ain Omphi*, or the Fountains of the Oracle; from the divine influence with which they were supposed to abound, which terms were afterwards contracted by the Greeks into *νυμφη*, a nymph, who supposed such a person to be an inferior goddess who presided over waters. In the same manner from *al omphia* was derived *lympa*, which differed from *aqua*, or common water, because it was of a sacred or prophetic nature. *Analysis of Ant. Myth.* vol. i.—It appears likely, that distracted people were called *lymphati*, from the circumstance of madmen being affected with the *hydrophobia*, or dread of water, after the bite of a mad dog; for this peculiarity, in cases of canine madness, was not unknown to the Romans. *Ency. Brit.*

LYMPHAT'IC, *f.* [*lymphatique*, Fr. from *lympa*, Lat.] The *lymphatics* are slender pellucid tubes, whose cavities are contracted at small and unequal distances: they are carried into the glands of the mesentery, receiving first a fine thin lymph from the lymphatic ducts, which dilutes the chylous fluid. *Cheyne.*

The lymphatics are the absorbing vessels. This system is an assemblage of numerous small vessels, arising from all parts of the body, carrying from them various fluids, which they pour into the venous system, after making them pass through certain small bodies called lymphatic glands, and forming part of the same system with them. The term lymphatics was applied to these tubes in consequence of their containing, in general, a transparent fluid, or *lymph*; and it designates, therefore, properly speaking, only those absorbents of which the contents resemble lymph. The vessels, which take up the chyle from the intestines, are called *lacteals*, from the appearance of their contents. As the structure and offices of the organs are the same in all parts, these distinctions might lead to erroneous views of the subject; and the term *absorbents*, which denotes their general function, seems the most appropriate. Names derived from the nature of the fluid absorbed are more particularly objectionable, because that is very imperfectly known to us. We cannot suppose that one and the same fluid is absorbed from ferous cavities, from the adipous cells, from muscles, glands, bones, &c. yet in all these cases it goes under the common and very indefinite term *lymph*. See the article ANATOMY, vol. i. p. 629-632.

LYMPHAT'IC, *adj.* [*lymphaticus*, Lat.] Enthusiastical.—Horace either is or teigns himself *lymphatic*. *Shafesbury.*

LYMPHATIC, *f.* A mad enthusiast; a lunatic.—All nations have their *lymphatics* of some kind or other. *Shafesbury.*—From Bethlem's walls the poor *lymphatic* stray'd. *Shenstone.*

LYMPHEDUCT, *f.* A vessel which conveys the lymph:

The glands,  
All artful knots of various hollow threads,  
Which *lympheducts*, an artery, nerve, and vein,  
Involv'd and close together wound, contain. *Blackmore.*

LYN'BRIDGE, a village near Harbottle-castle, on the river Coquet, in Northumberland.

LYNCE'US, in fabulous history, one of the fifty sons of Ægeus, married Hypermetra, one of the fifty daughters of DANAEUS. See that article.

LYNCE'US, one of the Argonauts, who went with Jason in the expedition to obtain the golden fleece. He was of great use to the Argonauts, by enabling them to avoid the sand-banks and rocks they found in their way. The poets say, that Lynceus had so piercing a sight, that it could not only penetrate to the bottom of the sea, but even to hell. Some mythologists suppose, that this fable is taken from Lynceus's skill in observing the stars, and discovering the mines of gold and silver concealed in the earth.

LYNCH, a town of South Carolina: eleven miles south of George Town.

LYNCHBURG, a town of Virginia, beyond the north-west mountains: 150 miles west of Richmond.

LYNCHES CREEK, a river of South Carolina, which runs into the great Pedee in lat. 33.44. N. lon. 79. 15. W.

LYNCHES RIVER, a river of Virginia, which runs into James River in lat. 37.42. N. lon. 78. 21. W.

LYN'CHET, *f.* Among farmers, a line of green-sward, serving as a boundary to separate ploughed land in common fields.

LYNCHVILLE, a post-town of Marion county, South Carolina, 450 miles from Washington.

LYNCURIUM, or LYNCURIUS, *f.* [from the Gr. λυγξ, lynx, and *ουρος*, urine; as being supposed to be produced from the urine of the lynx.] A mineral substance, respecting the nature of which the wildest conjectures have been broached from the time of Pliny down to the present day. The opinions of the modern mineralogists appear to be divided between amber and hyacinth; but it is most probable that both these substances have been confounded under the name of Lyncurium. Pliny, in speaking of the mineral in question, is inclined to deny its very existence: (*Hist. Nat.* xxxvii. 3.) and it is remarkable that he, whose incredulity upon other occasions, was certainly not over great, should have treated the whole of what has been said of the lyncurium as a mere fable, when his scepticism might have more properly been confined to that part of the story which relates to the origin of the substance in question. Instead of this, in speaking of the lynx, he actually gives credit to what has been said of the extraordinary quality of its urine. "Lyncum humor (he says) ita redditus ubi gignuntur glaciatur, arefcitve in gemmas, carbunculis similes, et igneo colore fulgentes, lyncurium vacatas, atque ob id succino a plerisque ita generari prodito." *Ib.* viii. 38. Theophrastus, from whom Pliny has principally derived his information respecting lyncurium, mentions among its qualities that of attracting, like amber, particles of straw, and even thin laminæ of copper or iron. Our hyacinth does not possess the quality of becoming electric by friction; a circumstance to which sir John Hill does not advert in his observations on this stone, which he considers as the only one that can be said to answer the description given of the lyncurium by Theophrastus. On the other hand, it must be confessed that its remaining qualities, as mentioned by that philosopher, viz. the considerable hardness attributed to it, and the consequent use made of it for engraving seals on, do not exactly square with the well-known characters of amber, which is moreover separately described in his work as a substance perfectly distinct from lyncurium. It is more than probable, that in this case, as in many others, the qualities of two distinct substances have been erroneously combined by the ancients, who, in their attempt to identify natural bodies, were but too often strangely misled by a fancied similarity of characters, where the eye of a modern naturalist would scarcely discover traces of the most distant resemblance. See LYDIUS.

It would appear that the finest amber, and a particular deep-coloured variety of it, was formerly obtained from  
VOL XIII. No. 948.

Liguria, where, indeed, it still occurs, though not in the same quantity in which it is found on the sea-coast of Prussia. If we may suppose the word *lycurium* to have been derived from that part of Italy, it is certainly equally probable that ignorance and the love of the marvellous may afterwards have substituted that of *lyncurium*, implying the fabulous origin of this substance from the urine of the lynx. Similarity of colour appears to have been sufficient afterwards to affix the same appellation to the hyacinth; and it is probably this confusion which produced the description of Theophrastus above alluded to, and which is partly applicable to amber, and partly to the hyacinth, or any other hard stone of similar colour and transparency, such as yellow garnet, yellow calcedony, &c. Among the authors who have considered amber to be the lyncurium of the ancients, are Geoffroy, Gesner, Beckman, and Napione; most of the other modern writers on mineralogy follow St. Epiphanius, Lefler, and Hill, who are decidedly of opinion that the hyacinth alone could have been meant by it. Sir William Watson supposes that Theophrastus's description is applicable to the *tourmalin*, the electrical phenomena of which are however of a peculiar nature; not to mention other objections that may be urged against the identity of the two substances. In the Vulgate, mention is made of the *lygurius*, as one of the twelve precious stones in the breast-plate of the high priest. In the version of Septuagint, it is called the *λυγκουριον*. St. Epiphanius and St. Jerome suspect the lyncurium to be the hyacinth; but how unsettled the ideas of St. Epiphanius were respecting the latter gem, appears from the following account he gives of it: "Hyacinthus igitur diversa habet formas; quo enim reperitur colore profundior, eo cæteris præstantior est. Similis est lanæ quæ subpurpurascit aliquate- nus." *Ib.* c. p. 110.

But the ancients had not exhausted all the absurdities upon this subject: it remained for the moderns to discover that the lyncurium lapis was a stone capable of producing mushrooms. In the "Ephemerides of the Curious," we find mention made of a stone, so called by Dr. John George Wolckamerus, who saw one in Italy, which never ceases to produce in a few days mushrooms of an excellent flavour by the most simple and easy process imaginable. "It is (says he) of the bigness of an ox's head, rough and uneven on its surface, and on which also are perceived some clefts and crevices. It is black in some parts, and in others of a lighter and greyish colour. Internally it is porous, and nearly of the nature of the pumice-stone, but much heavier; and it contains a small piece of flint, which is so incorporated with it as to appear to have been formed at the same time the stone itself received its form. This gives room to judge, that those stones have been produced by a fat and viscid juice, which has the property of indurating whatever matter it filtrates into. The stone here spoken of, when it has been lightly covered with earth, and sprinkled with warm water, produces mushrooms of an exquisite flavour, which are usually round, sometimes oval, and whose borders, by their inflexions and different curvities, represent in some measure human ears. The principal colour of these mushrooms is sometimes yellowish, and sometimes of a bright purple; but they are always disseminated with different spots, of a deep orange-colour, or red brown; and, when these spots are recent, and still in full bloom, they produce a very agreeable effect to the sight. But what appears admirable is, that the part of the stalk which remains adhering to the stone, when the mushroom has been separated from it, grows gradually hard, and petrifies in time, so that it seems that this fungites restores to the stone the nutritive juice it received from it, and that it thus contributes to its increase." John Baptist Porta pretends, that this stone is found in several parts of Italy; and that it is not only to be met with at Naples, taken out of Mount Vesuvius, but also on Mount Pantherico, in the principality of Arellino; on Mount Garganus, in Apulia; and on the summits of some other very high mountains. He adds, that the mush-

rooms which grow on those sorts of stones, and are usually called *fungi lycurii*, have the property of dissolving and breaking the stone of the kidneys and bladder; and that, for this purpose, nothing more is required than to dry them in the shade, and, being reduced to powder, to make the patient, fasting, take a sufficient quantity of this powder in a glass of white wine, which will so cleanse the excretory ducts of the urine, that no stones will ever after be collected in them. As to the form of those mushrooms, their root is stony, uneven, divided according to its longitudinal direction, and composed of fibres as fine as hairs, interwoven one with another. Their form, on first shooting out, resembles a small bladder, scarcely then larger than the bud of a vine; and, if in this state they are squeezed between the fingers, an aqueous subacid liquor issues out. When they are at their full growth, their pedicle is of a finger's length, larger at top than at bottom, and becomes insensibly slender in proportion as it is nearer the earth.

LYNCUS, LYNCÆUS, or LYNX, a cruel king of Scythia; or, according to others, of Sicily. He received, with feigned hospitality, Triptolemus, whom Ceres had sent all over the world to teach mankind agriculture; and, as he was jealous of his commission, he resolved to murder this favorite of the gods in his sleep. As he was going to give the deadly blow to Triptolemus, he was suddenly changed into a lynx, an animal which is the emblem of perfidy and ingratitude. *Ovid.*

LYNCUS, a town of Macedonia, of which the inhabitants were called Lyncestæ. *Pliny.*

LYNDALS, a river of Norway, which runs into the sea ten miles north-north-west of Christianfand.

LYN'DEBOROUGH, a township of North America, in Hillsborough county, New Hampshire, about seventy miles from Portsmouth; incorporated in 1764, and containing 976 inhabitants.

LYN'DEL, a village near Cartmel in Lancashire.

LYN'DHURST, a village in the parish of Minsted, in the New Forest of Hampshire, situated nine miles from Southampton and eighty-six from London, nearly in the centre of the New Forest, of which it has been, from the formation of the forest, considered as a sort of capital; and here was exercised the jurisdiction of the chief justice in eyre for this forest, so long as he continued to exercise it, of which there are no traces subsequent to the reign of Charles II. All the forest-courts under the verderors are still held here; as well as those of attachment, &c. and the swanimote; the former are held on such days as the presiding judges appoint, three times in a year; the latter on the 14th of September annually. See the article FOREST, vol. vii. p. 566. The king's house in this village, though but an indifferent residence, is occupied by the lord warden whenever he visits the Forest. The late duke of Gloucester was lord-warden; and, Lyndhurst being situated about midway between Windsor and Weymouth, his majesty George III. &c. in his visit to the latter place, took up a short residence here in June 1789. An ancient stirrup is preserved here, said to have been worn by William Rufus at the time he was shot by sir Walter Tyrrell. The king's stables are very large, and were probably considered as magnificent when first erected, which appears to have been about the time Charles II. From the hotel at Lyndhurst, which is newly built, and fitted up with every convenience, is a fine view of the sea, and of the Needle rocks at the west end of the Isle of Wight.

About one mile west of Lyndhurst is Cuffnells, the seat of the right honourable George Rose, who has been here honoured with two visits from their majesties and the royal family, in the years 1801 and 1804.

What is now called the New Forest is a tract of at least forty miles in compass, which had many populous towns and villages, till (as is said) it was destroyed and turned into a forest by William the Conqueror. But Mr. Warner (*Topographical Remarks on Hampshire*) is of opinion with Voltaire and Warton, that the monkish accounts of

its formation are greatly exaggerated. We believe that they are; and we are not much disinclined to fall in with Mr. W.'s conclusions: namely, "1st, That, in times previous to the reign of William, the tract of country, now denominated New Forest, was a sterile and woody district, with a few spots, here and there, of the rude tillage of that age. 2dly, That William fixed on this corner of Hampshire as a spot proper for hunting; and converted, accordingly, a large portion of it into a forest. 3dly, That the afforestation was made without much injury to the subject, or offence to religion." Our author, however, allows that it was a despotic act; but, in those days, what king was not a despot? Overcharged as the crime of William in making his great forest may have been by his irritated enemies the monks, yet his injustice and cruelty in forming his forest-laws admit of no apology nor extenuation. It is when beheld in this character, that he appears the sanguinary and vindictive tyrant; oppressing his people, perverting justice, and trampling upon the most sacred rights of man. The institutions which he framed for the correction of offenders in hunting, breathe a spirit of refined cruelty, only to be equalled by the severity with which they were enforced. Confiscation of goods, loss of liberty, and mutilation of person, form the fearful list of punishments which awaited those who had dared to infringe on the sports of royalty. Well might an early author, (Matthew Paris,) when adverting to this sanguinary code, exclaim—"Dreadful are the distresses of that land, whose monarch is the careful preserver of noxious animals, and the unmerciful destroyer of his own subjects."

The following correct particulars respecting the New Forest are copied from Wilkes's British Directory, now become a scarce book.—There are nine walks in it; and to every one a keeper, under the lord warden, besides two rangers and a bow-bearer. As this large tract lay many ages open and exposed to invasions from foreigners, king Henry VIII. built some castles in it; and it has now several pretty towns and villages. It is situated in that part of Hampshire which is bounded on the east by Southampton River, and on the south by the British Channel. It possesses advantages of situation, with respect to the convenience of water-carriage and nearness to the dock-yards, superior to every other forest, having in its neighbourhood several ports, and places of shelter for shipping timber, among which Lymington is at the distance of only two miles, Bewley about half a mile, and Redbridge three or four miles, from the Forest; and the navigation to Portsmouth, the most considerable dock-yard in the kingdom, is only about thirty miles from the nearest of those places. This is the only forest belonging to the crown of which the origin is known. Domesday book contains the most distinct account of its afforestation by William the Conqueror; the contents of every field, farm, or estate, afforested, in hides, carucates, or virgates, by which the extent of land was then computed, together with the names of the hundreds and villages, and of the former proprietors (which are for the most part Saxon), the rent or yearly value of each possession, and the tax which had been paid for it to the crown during the reign of Edward the Confessor before the inhabitants were expelled and that part of the country laid waste, are all to be found in that most curious and venerable record. Wishing to discover the original extent of the forest, we extracted for our own information all that relates to it in that ancient survey. The extract is by far too voluminous to be inserted. The names of many of the places having been changed since that time, it is difficult to ascertain with precision what were then the limits of the forest. The oldest perambulation we have met with is among the Pleas of the Forest, in the eighth year of king Edward I. preserved in the chapter-house at Westminster. The boundaries there described include all the country from Southampton-river on the east, to the Avon on the west, following the sea-coast as far as the southern boundary between those rivers, and

and extending northwards as far as North Chardeford, or North Charford, on the west, and to Wade and Orebrugg, or Owerbridge, on the east; and the greatest part, if not the whole, of that extensive district is mentioned in Doomsday-book to be forest belonging to the crown. Another perambulation was however made in the 29th of the same king, which leaves out a great part of the country contained within the former. This perambulation which is preserved in the Tower of London, confines the forest to limits which, as far as we can trace them, appear to have been followed in the 22d year of Charles II. when the forest was again perambulated. By the Charta de Foresta, all lands not belonging to the crown, which had been afforested by Henry II. Richard I. or king John, were to be disafforested; but, as no provision was made for the reduction of the more ancient afforestations, it is not easy to account for the great diminution of this forest in the reign of Edward I. who was not a prince likely to submit to any encroachment on his rights. The perambulation of the 22d Charles II. is the last we find on record; it contains the present legal bounds of the forest, and was given to the surveyors as their guide, in taking the plan which they made some years ago by order of the government. From that plan, with the approbation of the lords commissioners of his majesty's treasury, an engraving was made. According to the last-mentioned perambulation, and the plan, the forest extends from Godshill on the north-west to the sea on the south-east, about twenty miles; and from Hardley on the east to Ringwood on the west, about fifteen miles; and contains within those limits about 92,365 acres, statute-measure. The whole of that quantity, however, is not forest-land, nor now the property of the crown: there are several manors and other considerable freehold estates within the perambulation, belonging to individuals, to the amount of about 24,797 acres; about six hundred and twenty-five acres are copyhold or customary lands belonging to his majesty's manor of Lyndhurst; about one thousand and four acres are leasehold under the crown, granted for certain terms of years, and forming part of the demised land-revenue, under the management of the surveyor general of crown-lands; about nine hundred and one acres are *purprestures*, or encroachments on the forest; about one thousand one hundred and ninety-three acres more are inclosed lands held by the master-keepers and groom-keepers, with their respective lodges; and the remainder, being about 63,845 acres, are woods and waste lands of the forest. To perpetuate the spot where William Rufus was killed, by the glance of an arrow shot at a stag, a triangular stone was erected in 1745. His majesty George III. visited this spot in 1789. In August 1782, a curious ancient golden cross was found here by a labouring man digging turf. It weighed above an ounce of gold, and had on one side an engraving of our Saviour, and on the other the ladder, spear, nails, and other emblems of his sufferings.

"A proposal was made to the lord-treasurer Godolphin, for re-peopling this forest. The celebrated Daniel de Foe drew up the scheme, and argued it before that noble lord and some others, who were principally concerned at that time in bringing over, or rather providing for when they were come over, the poor inhabitants of the Palatinate; a thing in itself commendable, but, as it was managed, made of no benefit to England, and miserable to those poor people. Some persons being ordered, by the noble lord above-mentioned, to consider how those people should be provided for without injury to the public, the New Forest in Hampshire was singled out to be the place for them. Here it was proposed to draw a great square line, containing four thousand acres of land, marking out two large highways or roads through the centre, crossing both ways; so that there should be one thousand acres in each division, exclusive of the land contained in the said cross-roads. Then to single out twenty men and their families, who should be recommended as honest in-

dustrious people, expert in husbandry, or at least capable of being instructed in it. To each of these should be parcelled, but in equal distributions, two hundred acres of this land; so that the whole four thousand acres should be distributed to the said twenty families; for which they should have no rent to pay, and be liable to no taxes but such as would provide for their own sick or poor, repair their own roads, &c. this exemption to continue for twenty years, and then to pay each fifty pounds to the crown. To each of these families it was proposed to advance two hundred pounds in ready money, as a stock to set them to work, and to hire and pay labourers to inclose, clear, and cure, the land; which, it was supposed, the first year, could not be so much to their advantage as the following years; allowing them timber out of the forest to build themselves houses and barns, sheds, and offices, as they should have occasion; also for carts, waggons, ploughs, harrows, and the like necessary implements. These twenty families would, by the consequence of their own settlements, employ and maintain such a proportion of others of their own people; that the whole number of Palatines would have been provided for, had they been many more than they were, and that without being any burden upon, or injury to, the people of England; on the contrary, they would have been an advantage, and an addition of wealth and strength, to the nation, and to the county in particular where they should be thus seated. Two things would have been answered by the execution of this scheme; viz. 1. That the annual rent to be received in all these lands, after twenty years, would abundantly pay the public for the first disbursements. 2. More money than would have done this was thrown away upon them here, to keep them in suspense, and afterwards starve them; sending them begging all over the nation, and shipping them off to perish in other countries. The spot where the design was laid out was near Lyndhurst, in the road from Romsey to Lymington."

**LYNDHURST WOOD**, east of Mansfield in Nottinghamshire.

**LYNDON**, a village in Rutlandshire, five miles from Stamford, in the great north road.

**LYNDRIDGE**, a village in Kent, between Tunbridge and Rye.

**LYNDSAY** (Sir David.) See **LINDSAY**, vol. xii. p. 742.

**LYNE**, a town of Scotland, in the county of Peebles, at the conflux of the Lyne and the Tweed: three miles west of Peebles.

**LYNE**, or **LYNNE**, a river of Scotland, which runs into the Tweed at Lyne.

**LYNE**, a river of England, which runs into the Trent near Nottingham.

**LYNEMERSTOCK**, a member of the lordship of Woller, Northumberland.

**LYNER**, **LYNER**, or **LI'NER**, a river of England, in the county of Cornwall, which rises about five miles north of Likeard, and runs into the river Tamar a little below Saltash.

**LYNEY**, a township of England, in Gloucestershire, with 783 inhabitants: twenty miles south-west of Gloucester.

**LYNFORD** (Great and Little), villages in Buckinghamshire, near Newport-Pagnel. At the former is a charity-school: the latter was anciently a chapelry, in the parish of Newport.

**LYNHA'VEN BA'Y**, a bay or harbour at the south end of Chesapeake Bay, on the coast of Virginia, between Cape Henry and the mouth of James River. Here de Grasse moored the principal part of the French Fleet, at the blockade of York Town, in the year 1781: Lat. 36. 58. N. lon. 76. 7. W.

**LYN'IEL**, a village in Shropshire, north-west of Wen. **LYNK'HOORN BAY**, a bay on the coast of Virginia, at the bottom of Chesapeake Bay, two or three miles west of Cape Henry. Lat. 76. 56. W. lon. 76. 6. W.

**LYNLEY**,

LYNLEY, a village in Shropshire, north of Bishop's Castle.

LYNN, a river of England, which runs into the Ouse at Lynn Regis.

LYNN, a river of America, in Norfolk county, Upper Canada, which rises in Windham township, and discharges itself into lake Erie, affording a good harbour for batteaux.

LYNN, called SAGUS by the Indians, a maritime post-town of North America, in Essex county, Massachusetts, on a bay about nine miles north-by-east from the town of Boston. The township was incorporated in 1637, and contains 2837 inhabitants, in two parishes. The principal manufacture is that of women's silk and cloth shoes, which are sold for home use, and shipped to the southern states and to the West Indies. Lynn-beach, which is a mile in length, connects the peninsula, called Nahant, with the main land. In the summer season it is a place of great resort from neighbouring towns, and used as a race-ground.

LYNN CANAL, an inlet on the west coast of North America, and upper arm of Cross Sound; extending about sixty miles north from the north extremity of Chatham Sound: so named by Capt. Vancouver, from his native place Lynn in Norfolk. Lat. 58. 12. N. lon. of the entrance to the south 225. 12. E.

LYNN REGIS, or KING'S LYNN, a large respectable sea-port, borough, and market-town, in the county of Norfolk, is situated ten miles from the British ocean, on the eastern bank of the Great Ouse river, which at this place is nearly the breadth of the Thames above London-bridge. Camden was of opinion that Lynn derived its name from the British word *Lhynn*, which means spreading waters; but Spelman affirms that the right name is *Len*, in Saxon "a Farm or Tenure in Fee;" and *Len Episcopi*, as it was formerly called, meant "the Bishop's Farm." It retained the name of *Bishop's Lynn* till the time of Henry VIII. who exchanged the monastery of St. Bennet in the Holme, and other lands, for the revenues of the bishopric, when this town, among the rest, came into his hands, and, with the possessor, changed its name to *Lynn Regis*, or King's Lynn.

Lynn is a rich and populous town, containing 10,253 inhabitants; and is one mile and a quarter long from the south gate to the Block-house, and about half a mile from the river to the east gate, which is the broadest part. It is encompassed on the land-side by a deep ditch and an ancient wall, which was formerly defended by nine bastions, and it might now be made a place of considerable strength. This town is divided by four small rivers, called *fleets*, over which there are fifteen bridges; and at the north end of it there is a platform of twelve cannon, (18-pounders), called St. Anne's Fort.

King John, because it adhered to him against the rebellious barons, made it a free borough; and also presented the corporation with an elegant double-gilt embossed and enamelled silver-cup and cover, weighing seventy-three ounces, which is well preserved, and upon all public occasions and entertainments used, with some uncommon ceremonies, at drinking the health of the king and queen; and whoever goes to visit the mayor drinks out of this cup. He likewise gave them, from his own side, it is said, a large sword with a silver mounting, to be carried before the mayor, who is chosen annually on the 29th of August, and sworn into office on the 29th of September. Henry III. made it a mayor-town, for its serving him against the barons. It has had fifteen royal charters; and is governed by a mayor, high-steward, under-steward, recorder, twelve aldermen, and eighteen common-councilmen; and sends two members. This borough was always attached to the Walpole family, under whose influence it continues at this time. Sir Robert Walpole was member for this place at the time of his famous expulsion, in 1711, for alienating five hundred pounds of the public money; the words of his expulsion being "for breach of trust, and notorious corruption, when secretary at war." And it was resolved,

"that he was, and is, incapable of being elected a member to serve in parliament." The electors of Lynn, however, choose him again; but the house declared the election void. The mayor is the returning-officer; the number of voters about 300. The members are—Lord Walpole, eldest son of the earl of Orford, and sir M. B. Folkes, bart.

The harbour is capable of containing 300 sail of ships. The spring-tides flow nearly eighteen feet perpendicular; and, if at those times there happens to be a strong northerly wind, they come in with such rapidity as to force the ships in the harbour from their moorings, though they lie ten miles distance from the sea. There are no fresh-water springs in this town; but the inhabitants are plentifully supplied with that necessary article from the Gaywood-river, by the water-works near the east gate, called Kettle-mill.

St. Margaret the Virgin being the tutelary saint and patroness of this town, in honour of her, its arms are three dragons' heads, each wounded with a cross; and its public and common seal is the effigies of St. Margaret standing in a triumphant manner, wounding the dragon with a cross, and treading him under foot, with this inscription round it: *Stat Margareta, draco fugit in cruce laeta*. The principal church is of course dedicated to St. Margaret; it was built by Herbert de Losinga, bishop of Norwich, about the year 1100; and then had a lofty lantern in the middle of the cross aisle, and at the west end two towers, in one of which are eight bells; on the other there was a very elegant spire, which, from the foundation, was 258 feet high, and equal to the length of the church and chancel; but this being blown down in the year 1741, and greatly damaging the body of the church, the ruins were entirely taken down, when it was rebuilt with three large aisles, and is now one of the largest parochial churches in England, the breadth of it to the outside of the foundation of the walls being 130 feet.—St. Nicholas's chapel, supposed to have been built between the years 1327 and 1377, in the reign of Edward III. is 200 feet long and 78 broad; it is reckoned one of the fairest and largest of the kind in England, and has a bell-tower of free-stone, and an eight-square spire over it, both which together are 70 feet from the ground. There is a library in it, that was erected by subscription; also another at St. Margaret's.—The chapel of St. James, since the dissolution of the priories, being in part demolished, and the rest become ruinous, was rebuilt in the year 1682, by the liberal benefactions of the mayor, burgessees, and principal inhabitants, and converted into a workhouse for fifty decayed old men, women, and poor children; where good endowment and provision is made for their work, instruction, and maintenance, and for putting the children out to trades. Great additions have been made to this place; and it is now the general workhouse for the whole town. The Exchange, or Custom-house, which was erected in 1683, by sir John Turner, is a neat free-stone building, with two tiers of pilasters, the lower in the Doric, and the upper in the Ionic, order; it occupies the site of an old religious house, which was appropriated to the Trinity-guild. Two markets are held, on Tuesdays and Saturdays, in different places: the Tuesday market-place comprises an area of three acres, surrounded by some good houses; near the centre, on an ascent of four steps, stands a building called the Market-cross, of free-stone, erected in the year 1710; the lower part is encompassed by a peristyle formed by sixteen Ionic columns; the upper part is finished with a cupola, and the whole is seventy feet in height. The Saturday market is kept in a convenient area recently opened near St. Margaret's church-yard. The Guildhall is an ancient structure of stone and flint; it contains a large stone hall, courts for the administration of justice, and three spacious assembly-rooms. By the second charter of king Henry VIII. to this town, in the twenty-ninth year of his reign, two fairs or marts were granted: one to be held on Aug. 27, (since changed to the

the 17th of October,) which is called the cheese-fair, and is kept in Chequer-street; the other on February 14, which is called the mart, and proclaimed for six days, is kept in the Tuesday market-place, and is much resorted to by genteel company from most parts of the country; it generally holds a fortnight.

About half way betwixt the south and east gates stand the remains of an ancient oratory, an odd sort of building, with several vaults and cavities under ground, over which are some dark cells for the priests to take confessions in; and above them is a small chapel in the figure of a cross, arched above, and enriched with carvings; it is dedicated to the Blessed Virgin, and commonly called the Lady's or Red Mount, whither the Romish penitents, in their pilgrimage through this town to the holy wells and monastery of Our Lady at Walsingham, used to resort and perform their devotions. In this town there have been several priories, oratories, and religious houses, which are now demolished, except a hexagon-steeple of the Grey Friars, near the workhouse, still remaining, and serving as a land-mark to vessels entering the harbour. The situation of this town, near the fall of the Ouse into the sea, gives it an opportunity of extending its trade into eight different counties; so that it supplies many considerable cities and towns with heavy goods, not only of our own produce, but such as are imported from abroad. Its trade in wine and coals is such, that from 90,000 to 100,000 chaldrons of coals are brought annually into this port; and the annual importation of wine is more than two thousand pipes. It appeared, by the report made by the commissioners for auditing the public accounts in the year 1784, that the whole annual receipt of the duties at this port were greater than those at any other port in the kingdom, except London, Bristol, Liverpool, and Hull. The trade in corn is extremely large; and in iron, deals, timber, and other kinds of merchandise, very considerable. Its foreign trade is also considerable, especially to Holland, Norway, the Baltic, Spain, and Portugal; and formerly they drove a good trade to France, till it was turned off, by treaties on one hand, and by prohibitions, high duties, &c. on the other, to Spain and Portugal. The king's staithe-yard, or quay, where the greatest part of the imported wines is landed, and put into large vaults, is a handsome square, with brick buildings, in the centre whereof is a statue of king James I. People pass from hence in boats into the fen-country, and over the famous washes into Lincolnshire in boats, which are often lost by venturing out at an improper season, and without guides.

In the year 1643, the parliamentary forces besieged the town; the siege began on the 28th of August, and continued till the 16th of September, when it was surrendered; and, to preserve it from plunder, was obliged to pay to every foot-soldier of the besieging army under the command of the earl of Manchester ten shillings, and to every foot-officer, under the rank of captain, a fortnight's pay, amounting in all to the sum of 3200*l.* after which it was made a garrison-town for the parliament. Preparatory to the restoration of Charles II. it was fortified afresh by sir Horatio Townshend, ancestor to the present marquis Townshend, who was created a baron by king Charles II. for his loyal services, by the style and title of Lord Townshend, of King's Lynn.

Every first Monday in the month, the mayor, aldermen, clergymen, &c. meet to hear and determine all controversies amicably, for preventing law-suits. This was first established anno 1588, and is called the Feast of Reconciliation.—There are more gentry, and consequently more gaiety, in this town than in Yarmouth, or even Norwich; here being such plenty of eatables and drinkables, that Spelman says Ceres and Bacchus seem to have established their magazines here; the east side of the town abounding with corn, sheep, rabbits, hares, &c. the west side with cheese, butter, black-cattle, swans, and the wild-fowl common to marshes, besides the abundance of sea and river-fish; so that he thinks there is no place in Great Bri-

tain, if in Europe, has such a variety in so small a compass of ground.

North Lynn, near King's Lynn, is a little village at the mouth of the Ouse, open to the sea; it had a church called St. Edmond's, long ago entirely swallowed up by the tides.

Old or West Lynn is so called from its situation on the west side of the river over against it, in the district called Marshland, which is a marshy peninsula, opposite to King's Lynn, almost surrounded with the Ouse and other navigable rivers, and an arm of the sea. It seems formerly to have been recovered out of the ocean, from whose inundations it could never be altogether defended; and in sir Henry Spelman's time it suffered two general ones, viz. one from the salt-water, the other from the freshes; by the last of which the inhabitants suffered 42,000*l.* damage. It contains about 30,000 acres, which turn to more profit by grazing than ploughing. It is about 10 miles in the widest place, and has no less than 111 brick bridges. The commonage of it belongs to seven villages that surround it. The air is so unhealthy, that an ague is commonly called the *Marshland bailiff*.

LYNN'FIELD, a township of North America, in Essex county, Massachusetts, north-east of Salem, and fifteen miles from Boston; incorporated in 1782, and containing 468 inhabitants.

LYN'STOCK, a village in Cumberland, on the river Eden, north-east of Carlisle; with a castle.

LYN'THORP, a village in the north riding of Yorkshire, west of Bradworth.

LYN'TON, a village in the east riding of Yorkshire; north of the wolds.—A village in the north riding, on the Ouse; south-east of Boroughbridge.—A village in the west riding. See LINTON.

LYN'TON, a village in Northumberland, north-east of Morpeth.

LYN'TON (West), a village of Cumberland, on the river Leven, west of Brampton.

LYN'WOOD, a village in the New Forest, Hants.

LYNX, *f.* [Latin.] A spotted beast, remarkable for speed and sharp sight. See the article FELIS, vol. vii. p. 299.—He that has an idea of a beast with spots, has but a confused idea of a leopard, it not being thereby sufficiently distinguished from a *lynx*. *Locke*.

What modes of sight betwixt each wide extreme,  
The mole's dim curtain, and the *lynx's* beam. *Pope*.

LY'OE, a small island of Denmark, near the south coast of Fyen. Lat. 55. 3. N. lon. 10. 10. E.

LYC'ENA, a town of Algiers, whither the independent Arabians bring their riches as a place of security, being defended by a warlike tribe, who have withstood the power of the Turks. It is 106 miles south of Constantinia.

LY'OM, a village in Northumberland, north-east of Waller.

LY'ON, a town of North Carolina, on Cape Fear River; four miles south-east of Fayetteville.

LY'ON, a river of Scotland, which rises in Loch Lyon, and runs into the Tay two miles east-north-east of Kenmore.

LY'ON (William), a strolling player, who sometimes used to perform at the theatre in Edinburgh, in which city he died about the year 1748. He was considered as very excellent in the character of Gibby; but the most remarkable quality which he possessed, and which has occasioned us to notice him in this work, was an uncommonly retentive memory, of which the following instance may be given as a proof. When he was one evening over his bottle, in company with some of his brethren of the theatre, he wagered a crown bowl of punch, a liquor of which he was very fond, that next morning at the rehearsal, he would repeat a Daily Advertiser from beginning to end. The player, who considered this boast as words of course only, paid no great regard to them; but, as Lyon was positive, he laid the wager. Next morning at the rehearsal, he put Lyon in mind of his wager, imagining, as he was

drunk the night before, that he certainly must have forgot it, and rallied him on his ridiculous bragging about his memory. Lyon pulled out the paper, desired him to look at it, and be judge himself whether he did or did not win his wager. Notwithstanding the unconnexion between the paragraphs, the variety of advertisements, and the general chaos which goes to the composition of any newspaper, he repeated it from beginning to end, without the least hesitation or mistake: an instance of a strong memory, the parallel of which perhaps cannot be produced in any age or nation.—He is the author of a farce, altered from Vanbrugh, called *The Wrangling Lovers*, or *Like Master like Man*, 1745, printed at Edinburgh.

LY'ONNESS, a name given to a part of the promontory overflowed at the Land's End, Cornwall.

LYONG', a small island in the Eastern Indian Sea, near the east coast of Oby. Lat. 1. 39. S. lon. 128. 14. E.

LY'ONNET (Peter), an ingenious naturalist, and member of several learned societies, was born at Maestricht, and was descended from a very ancient and respectable family of Lorraine. He had scarcely attained his seventh year before he displayed an uncommon strength and agility in all bodily exercises; but he was not less diligent in the improvement of his mind. Being placed at the Latin school, he learned chronology, and exercised himself in Latin, Greek, and French, poetry, as also in Hebrew, logic, and the Cartesian physics. He was particularly fond of the study of languages, whereof he understood no less than nine, living and dead. Having entered the university of Leyden, he studied the Newtonian philosophy, geometry, algebra, &c. but, his father (who was a clergyman) desiring he should attach himself to divinity, he reluctantly abandoned the former studies, as his passion for them was not easily to be overcome. He at the same time applied himself to anatomy, and also to music and drawing. He began afterwards to practise sculpture; and performed several pieces in wood, some of which are preserved, and have been greatly admired by the artists. After this, he betook himself to drawing portraits of his friends from life; wherein, after three or four months practice, he became a great proficient. Having attained the degree of candidate in divinity, he resolved to study law, to which he applied himself with so much zeal, that he was promoted at the end of the first year. Arrived at the Hague, he undertook the study of deciphering; and became secretary of the ciphers, translator of the Latin and French languages, and patent-master, to their High Mightinesses. Meanwhile, having taken a strong liking to the study of insects, he undertook an historical description of such as are found about the Hague, and to that end collected materials for several volumes; and, having invented a method of drawing adapted thereto, he enriched this work with a great number of plates, universally admired by all the connoisseurs who had seen them. In the year 1724, was printed at the Hague, a French translation of a German work, the *Theology of Insects*, by Mr. Lesser. Love of truth engaged Mr. Lyonnet to defer the publication of his above-mentioned description, and to make some observations on that work, to which he has added two most beautiful plates, engraved from his designs. This performance caused his merit to be universally known and admired. The celebrated M. de Reaumur had the above translation reprinted at Paris, not so much on account of the work itself as of Mr. Lyonnet's observations; and bestowed on it, as did also many other authors, the highest encomiums. He afterwards executed drawings of the fresh-water polypus for Mr. Trembley's beautiful work, 1744. The ingenious Wandelaar had engraved the first five plates; when Mr. Lyonnet, who had never witnessed this operation, concerned at the difficulties he experienced in getting the remaining eight finished in the superior style he required, resolved to perform the task himself. He accordingly took a lesson of one hour of Mr. Wandelaar, engraved three or four small plates, and immediately began upon the work himself,

which he performed in such a manner as drew on him the highest degree of praise, both from Mr. Trembley and from many other artists, particularly the celebrated Van Gool; who declared that the performance astonished not only the amateurs, but also the most experienced artists. In 1748, he was chosen member of the Royal Society of London. In 1749, he began (by mere chance) his amazing collection of horns and shells, which, according to the universal testimony of all travellers and amateurs who have visited it, is at present the most beautiful, and certainly one of the most valuable, in Europe. In 1753, he became member of the newly-established Dutch Society of Sciences at Haerlem; and in 1757, after the celebrated M. le Cat, professor in anatomy and surgery, and member of almost all the principal societies in Europe, had seen Mr. Lyonnet's incomparable *Traité Anatomique de la Chemille qui ronge le Bois de Saule*, with the drawings belonging to it, (which work was afterwards published,) he was elected member of the Royal Academy of Sciences of Rome, whereof M. le Cat was perpetual secretary. After the publication of this treatise, he became, in 1760, member of the Royal Academy of Sciences of Berlin; in 1761, of the Imperial Academy of Naturalists; and, in 1762, the Imperial Academy of Sciences at St. Petersburg. In order to enable such as might be desirous of following him in his intricate and most astonishing discoveries respecting the structure of this animal, Mr. Lyonnet published, in the Transactions of the Dutch Society of Sciences at Haerlem, a description and a plate (as he also afterwards did in French at the beginning of his *Traité Anatomique*) of the instrument and tools he had invented for the purpose of dissection, and likewise of the method he used to ascertain the degree of strength of his magnifying glasses. Notwithstanding all this labour, which was considerably increased by the extensive correspondence which he for many years carried on with several learned and respectable personages, he still found means to set apart a large proportion of his time (as he himself mentions it in his preface) for the immediate service of his country; but was not fortunate enough (as appears by his writings) to get any other recompense for his exertions than sorrow and disappointment. During the last fifteen or twenty years of his life, Mr. Lyonnet added to the valuable treasure he had already collected of natural curiosities, a most superb cabinet of paintings, consisting of more than 560 performances; among which are many of the most eminent works of the first Dutch masters. He did this with a view to procure himself some amusement during the latter part of his life, when old age and infirmities must weaken his powers, and set bounds to his activity. He had always indeed accustomed himself to employment, in so much that he has written some pieces of Dutch poetry; and this disposition remained with him till within a fortnight of his death, when he was attacked with an inflammation in the breast, which, though apparently cured, was, in the end, the cause of his dissolution. He died at the Hague in January 1789, aged eighty-three years, leaving behind him a most estimable character.

LYONNOIS'S, *Pagus Lugdunensis*, was, before the revolution, a province of France, bounded on the north by Bourgogne and Maçonnois, on the east by the Saone and the Rhone, on the south by Languedoc, and on the west by Auvergne; being twenty-four leagues from north to south, and sixteen from west to east. This province is watered by the Rhone, the Saone, and the Loire, and is moderately fertile, producing grain, wine, and fruits. It was annexed to the crown of France in 1563; and consisted of three small provinces; viz. Lyonnois Proper, Forez, and Beaujolais. Lyonnois and Beaujolais are now included in the department of the Rhone, and Forez in that of the Loire.

LY'ONS, a city of France, and capital of the department of the Rhône; before the revolution the capital of a province called the *Lyonnois*; situated at the conflux of the Rhône and Saône. Lyons, anciently called *Lugdunum*,

was already a flourishing state, when *Luteſia*, or Paris, could claim but a feeble exiſtence. Auſtulus proclaimed it the metropolis of Celtic Gaul; Claudius was born here, and gave it the name of a Roman city; it was reduced to aſhes in the time of Nero; but was ſoon reſtored, flouriſhed by the liberality of many princes, and became at length the ſecond city of France, thanks to its vaſt commerce, its favourable ſituation, and the induſtry of its inhabitants. It contains a vaſt number of ancient inſcriptions, which were firſt properly explained by M. Millin, *Voyage dans le Midi de la France*, 2 vols. 8vo. Paris, 1806. In the 5th century Lyons was taken by the Burgundians, whoſe king became feudatory to Clovis. The ſons of Clovis afterwards deſtroyed the power of the Burgundians, and rendered themſelves maſters of Lyons. In the diſiſion of the dominions of Louis the Debonnaire, Lyons, with the greateſt part of Burgundy, came to Lothaire. Lyons is the ſecond city of France, in point of ſize and population, but ſuperior to Paris in trade, commerce, and manufactures. They reckon eleven pariſhes, ſix gates, and four fauxbourgs; and it is divided into thirty-five quarters, named *penonages*. It was the ſee of an archbiſhop, who was primate of France, and had formerly great political power over Lyonnois. The cathedral church was a vaſt Gothic building, yet maſtetic in its appearance. The town-houſe is eſteemed one of the moſt beautiful in Europe; other public buildings were, before the revolution, four abbeys, fifty convents, three public ſchools, a college of phyſic, two general hoſpitals, &c. Here were, beſides, an academy of arts and ſciences and belles lettres, a ſociety of agriculture, a veterinary ſchool, a theatre, public library, ſeventy companies of trademen and artiſts, three forts, an arſenal well ſupplied, and arranged with care; magnificent quays, &c. The trade of Lyons is imenſe with Spain, Italy, Swiſſerland, Germany, Holland, England, &c. From Spain they receive wool, ſilk, drugs, piatters, and ingots of gold and ſilver; in return for cloth, linen, ſuſtian, ſaffron, paper, &c. To Italy they ſend cloth, linen, ſilk ſtuſſs, lace, books, mercery, and millinery; and receive in return ſilk, velvet, damask, fatins, taſſaties, and rice. To Swiſſerland they ſend coarſe cloth, hats, ſaffron, wine, oil, ſoap, and mercery; and receive from thence cheeſe, linen, and, in war-time, horſes. The great towns of Germany purchaſe from Lyons, beſides the ſame merchandiſe as the Swiſs, ſtuſſs of gold and ſilver. From Holland Lyons takes more merchandiſe than it ſends in return.

Early in the French revolution, an union was formed between the towns of Lyons, Marſeilles, and Toulon, under the title of "Federal Republicanism," contrary to the general ſenſe of the nation, which was for a republic one and indiviſible. Lyons contained a great number of diſaffected citizens of every claſs, Royaliſts and Girondiſts, and was declared to be in a ſtate of rebellion. After a ſiege of two months, in which the Lyoneſe were computed to have loſt two thouſand men, and great part of the city was reduced to aſhes, it ſurrendered. The chiefs of the rebels had fled, but ſeveral of them were afterwards taken and executed. By a decree of the convention, the walls and public buildings of Lyons were ordered to be deſtroyed, and the name of the city itſelf directed to be changed to that of *Ville Affranchie*, (ſee the article FRANCE, vol. vii. p. 792.) but this decree was afterwards repealed. The ſiege of Lyons may be juſtly termed one of the moſt memorable events of the revolution, whether we conſider it as a political or a military operation; whether with reſpect to the number of forces employed in the attack and defence, and of the lives loſt on both ſides; or whether with reſpect to the conſequences that it produced from the extinction of a party, which, if it did not aim at overturning the republic, would moſt certainly, had Lyons been able to beat off the beſieging army, have ſeparated the ſouth from the north of France, and have eſtabliſhed in it a ſeparate government. What were the real intentions of the Lyoneſe, in caſe of ſucceſs, cannot eaſily be

aſcertained. During the whole courſe of the events which preceded, attended, and followed, the ſiege, they never once in their collective capacity ſo much as hinted at the reſtoration of monarchy, nor made even the moſt diſtant approach to a complaint about the treatment which the king and his family had experienced. On the contrary, the grievances which they ſtated were all of a republican complexion. They proteſted, it is true, againſt all laws or decrees of the convention, paſſed or to be paſſed after a certain period; but it was not the period of the king's condemnation, but that of the imprisonment of the members of the Girondiſt party. This meaſure, they loudly complained, was an attack on the *ſovereignty of the people*; whoſe representatives, being clothed with the exerciſe of that ſovereignty, were and ought to be conſidered as ſacred in their perſons, and amenable only to thoſe from whom they derived their authority. To impriſon perſons ſo circumſtanced, they ſaid, was not only a violation of the reſpect which the convention owed to its conſtituents, but alſo a direct attack on their ſovereignty: every member of the convention being in the eye of the law an *integral* part of the whole; and to proceed to make decrees, during the confinement of a great number of ſuch integral parts, was to exclude the departments which they repreſented from all ſhare in that ſovereignty, which the conſtitution allowed to be fundamentally inherent in them. The Lyoneſe therefore deſired that the representatives ſhould be reſtored to their functions; declaring that, until the latter ſhould have full liberty, as uſual, to take their ſeats and vote and act in the convention, they would not ſubmit to the authority of, nor hold any communication with, that aſſembly. Nothing in favour of royalty could be deduced from all this reaſoning and conduct; except that the impriſoned members, with all the reſt of the Girondiſt party, had voted againſt the *immediate* execution of the king, and for taking the ſenſe of the people, by departments and diſtricts, relative to his fate. On the other hand, it is certain that ſome of the moſt determined royaliſts were employed by the Lyoneſe in the defence of their city, and that they were every where ſupported by ſuch of that deſcription of men as had the means of acting up to their inclination and principles. Whether they thus gave their aſſiſtance, and the others received it, under any declared or implied opinion that they were ſerving one common cauſe, viz. the cauſe of monarchy; or whether the Lyoneſe, on the point of being attacked by the whole force of the convention, were glad to accept of aid from any quarter, while the royaliſts, fighting againſt republicans of any ſide, were ſure that they were fighting againſt enemies whom it was their intereſt to weaken; are queſtions which now perhaps will never be answered. If, however, we may venture to hazard a conjecture, we would ſay it was likely that the people of Lyons were not at bottom very friendly to the revolution; which had, no matter how, been the means of producing a complete ſtagnation of trade in that city, the ſecond in all France in point of ſize and population, and the firſt in point of manufactures; its thouſands of looms were all ſtopped, and the inhabitants were reduced to very great diſtreſs;—circumſtances which could not be ſuppoſed to make them, at leaſt the principal manufacturers, very heartily attached to the new order of things that had made them ſuch ſufferers.

"In the ſiege of Lyons, all Europe was deeply intereſted. While it was able to withſtand its beſiegers, Toulon was ſafe in our hands, Marſeilles could not be kept in awe, the whole ſouth of France would have looked to it as a rallying point, and the northern departments of that vaſt country would have been in the moſt imminent danger of being ſtarved, as the principal ſupplies of corn, which they received from abroad, arrived from Italy in the ports of the Mediterranean; and, ſhould the cities to which theſe ports belong be adverſe to the convention, one of theſe two conſequences muſt have inevitably followed, that the convention muſt have been diſſolved, or  
France.

France split into two separate and hostile states; and either revolution would have given a new turn to the affairs of Europe. From the fate of Lyons nations may learn this salutary lesson—as one of the greatest scourges with which mankind can possibly be afflicted, is a *civil war*; so it is the duty of those who are placed at the helm of the state so to govern, that the people should have no grounds for seeking a redress of grievances in a revolution; and the people should on the other hand be convinced, that there can scarcely exist a grievance, which would not appear trivial when compared to that kind of revolution which changes all the elements of the government of a country, destroys all land-marks, and places the citizens under no other guidance than that of the effervescence of the human passions. May our rulers and our fellow-subjects bear this deeply in their minds; and then we may hope that they will both meet in the wish to effect, *peaceably and coolly*, such a reformation in our constitution, as may bring it as near to perfection in practice as it is in theory; and render it at once the happiness of Englishmen, the pride of reason, and the admiration of all Europe.” *Monthly Rev.* for Feb. 1795.

Of the present state of Lyons (1804), there is an ample account in the *Monthly Magazine* for that year, from which we shall make a few extracts.

Lyons is 110 French leagues (or 306 English miles) from Paris, 36 from Dijon, 44 from Avignon, 70 from Toulon, and 63 from Marseilles. It is in lat. 45. 46. N. lon. 4. 59. E. and is situated at the bottom of a ridge of hills on the confluence of the Saone and Rhone, not very improperly denominated, by Polybius and Livy, an island, of a triangular figure, the base of which is a chain of mountains and highlands tolerably picturesque. The numerous and pompous descriptions of this city, with which the French have augmented the volume of their literature, would make the stranger, who had read them before his arrival there, doubt that he was in Lyons. Its present and former state are, no doubt, very different; yet still enough remains to show what it could have been before the revolution and the destruction made by Collot d'Herbois. True, great numbers of houses have been levelled to the ground, and even almost entire streets at entering the town on the road from Paris; yet these in general were old houses, the natural ruin of which was only a little hastened, and which might add to the magnitude, but most assuredly not to the beauty, of the city. Few public buildings, except the convents, have been totally dilapidated, and still fewer have escaped some kind of mutilation. In general, all churches, chapels, and other public edifices, have been dismantled of their statues, busts, and other ornaments, not only in Lyons, but throughout all France. The inscriptions too are mostly defaced; and in many instances, where the hardness of the stone or the imperfectness of the instruments rendered it difficult to erase totally all the characters, every second letter has been most carefully destroyed. This species of malignity has even been extended to inscriptions which simply announced the date of the foundation or improvement of the building; such was the ignorant and impotent frenzy of these dilapidators. Great efforts, however, have been made to restore this city to its ancient splendour; several houses have been built in the Fauxbourg de Veyse; and two or three very lofty ones in the city, on the banks of the Rhone. On this road the view is animated by the prospect of some country seats, which, although of no great beauty or excellence, are so rare in France, that one must feel pleased with the prospect of any rural retreat, however rude and tasteless it may be. Approaching the town, and along the banks of the Saone, the views become more interesting, and even sublime. On the one hand is the river, with extensive prospects of houses, gardens, trees, &c. scattered over the declivities of its lofty banks; on the other, are huge and awful arching rocks, part of Mont d'Or, which in some places are suspended almost across the road; before you, are distant views of

the town and of one of its suburbs. Entering, you cross the Saone by a very old and strait stone bridge of four arches, very high in the middle, and of very disagreeable passage. There are two other bridges on this river, one of stone and the other of wood, but which are nothing remarkable. Nor is the famous bridge on the Rhone, so celebrated for its length, of any great notoriety in modern times. It has fourteen large circular arches through which the water runs, and four or five more over a marsh, formerly the bed of the river, in which is situated the Fauxbourg de la Guillotiere, on the road to Avignon; a situation extremely unwholesome, and sufficiently adverse to manufactures. The original foundation of this bridge, however, does great honour to the good sense of pope Innocent IV. who, during his long residence at Lyons, sold indulgences to eat meat on Fridays, and with the amount caused this bridge to be erected; and thus at once administered to the health and the accommodation of the public. Near the end of the bridge is the Custom-house, a large plain square building, which has no doubt more of utility than elegance. Adjoining is the large square called La Place de Louis le Grand, formerly Belle-cour. It has been most erroneously called, for its extent and decoration, the most beautiful square in Europe. It is but about 900 feet long, and irregularly 600 broad; its principal and indeed only beauty, is natural, and consists in its commanding a view of the junction of the Rhone and Saone. The surrounding buildings are neither uniform nor elegant; and the statue of Louis XIV. and other decorations are now no more. At the corner of the same square is the General Hospital of Charity. In 1531 there was a great sterility and famine, so that the surrounding peasants embarked in little boats on the Rhone, rather to be drowned than die with hunger. When they arrived at Lyons, the people took compassion on them, and nearly 8000 were humanely received and succoured by voluntary contributions. Shortly after the harvest came, and drew all these unfortunate people to the country; when there remained a sufficient sum to be employed in nourishing the poor of the city, and to furnish them in future with the same succour. For this it was necessary to erect an edifice; and in 1613 the building of this hospital and house of industry was commenced. It contains nine courts, one of which is larger in the middle, and was designed to answer every convenience; but the proportions and divisions are neither pretty nor advantageous. The poor are separated according to their age and sex, and those who are capable of working are occupied in the silk-manufacture, from which the house sometimes draws a considerable product. Its present state, however, is much more honourable to the architect than to the administrators and doctors, whose negligence and ignorance cannot be too severely reprehended. This hospital, whether considered as a public edifice or a civil institution, must still be estimated much inferior to that of Saragossa or Grenada in Spain, or even that of Bourdeaux. Before the revolution, the administrators of this hospital, as well as the Hotel-Dieu, enjoyed the prerogative of adopting infants, and of having the same rights as the true fathers; this is perhaps the only remain of the ancient adoption, which was practised in the earlier ages of the world, by the ceremony of passing the person adopted through his assumed mother's shift. The hospital called Hotel-Dieu is a very ancient building, said to have been erected by Childebert and Ultrogotha his queen, about the year 540; but was greatly altered and repaired, in 1708, by Delamonce. The interior consists of a large infirmary, built on the design of that at Milan, and disposed in the form of a Greek cross, of nearly 560 feet long, in which the patients are placed according to their sex, and the nature of their diseases. The middle of this great cross is covered with a shapeless and disproportionate dome. There are besides, a quarter for the children exposed, another for those adopted, and a spacious airy building on the side of the Rhone for convalescents. The convents

vents of the Cordeliers and Augustines have been every where dilapidated. That of the Cordeliers at present consists of the majestic ruins of a Gothic structure, of a single nave extremely long, with all its chapels and aisles entirely levelled, its doors and windows built up; and, instead of resounding to the deep-toned organ, and the salutations to St. Bonaventure, now re-echoes to the harmony of asses and mules, with which it is frequently well supplied. The chapel of Confalons, which adjoined this church, still remains habitable: its bare and rugged walls, once covered with elegantly-sculptured wood, are now hung with pieces of old tapestry, to qualify it a little for sying mas. Among the ruins are seen some shattered remains of bas-reliefs, admirably executed on wood, the fate of which one must needs regret, though they, like all other French productions, are spoiled by excess of ornaments, which every where, and in all ages, mark the meretricious taste of the French. The paintings that were in this chapel are said to have been the best in France, among which were several by Rubens and other Italian masters, but which made no better bonfire than those of the vilest dauber. The church of St. Peter still remains tolerably perfect, and is esteemed one of the most ancient in Lyons. It is an extremely-rude Gothic building, which forms part of the square des Terreaux, in which is the celebrated Guildhall, or Hotel de Ville. The principal façade fronts the square, is modern, and composed of a confused mixture of Doric and Corinthian pilasters, destitute of all proportion, and producing a risible effect upon an edifice, the body of which is Gothic. The Hotel de Ville has been divested of almost all its statues and inscriptions; yet still enough remains to prove it only a large, vulgar, and tasteless, pile of building, vainly called the first in Europe, after Amsterdam. The extortions of the archbishops in the thirteenth century taught them the necessity of having a town-house; but it was not until 1647 that this structure was commenced. It is a long square fabric, with two wings from each end, extending about 400 feet, and which are terminated in a kind of garden. The principal façade is without any order of architecture, and is bounded by two square pavilions surmounted with a kind of dome of no great beauty. The portal is supported by two Ionic columns of red marble, with bases and capitals in white, which have a most formal and ridiculous effect. Over this portal is a vulgar square tower terminating in a cupola and ball. On entering, a grand vestibule presents itself, ornamented with a great many inscriptions on both sides, most of which are now not legible. From this vestibule is seen the garden, or rather a few scattered and neglected shrubs, which form part of the court between the two wings that extend almost to the borders of the Rhone, but not far enough to enjoy a prospect of it. These great disproportionate wings, which are so dark and sombre, possess neither taste nor utility to render them by any means tolerable. The windows are lost in rudely-massive pediments; and the effect of the whole building is neither the strength of a prison, nor the beauty and elegance of a public edifice. The cathedral church of St. John is a regular Gothic building, mutilated and repaired from time to time, but still retaining an air of awful majesty unknown in most of the other churches. At present, however, its spacious and lugubrious walls only serve the purposes of gallantry; and it is not unfrequently at once the sacred temple of religion, and its dark recesses the theatre of connubial debauchery. The famous clock, which presented a perpetual calendar, civil and ecclesiastic, that marked the century, year, day, hour, and minute, has long been going to decay. The astrolabe still remains. The little chapel of Notre-Dame has been totally dismantled, and the tombs dug up to serve the manufacture of saltpetre; so that the bones of the dead were literally converted into the most powerful instruments of destruction. Such has been the fate of the greater part of the chapels and convents; one is made into a corn-market,

another into a stable, and a third in ruins! Of the library and cabinet only part remains; and so neglected is the library, though a public one, that the librarian will lock it up, and take the key with him to the country for four or five weeks together!

Much has been said of the extensive commerce and riches of Lyons before the revolution; but from its local situation, nearly surrounded by almost inaccessible mountains, and on the banks of a large river, the rapid current of which renders its navigation both very difficult and dangerous, one must doubt the authenticity of many reports of unbounded commerce. True its passage to the Mediterranean is rapid and dangerous enough; but the return is also as slow and difficult, which must impede and considerably diminish its trade. Nor is the passage by land more easy, as the traveller is obliged to pass the lower Alps going to Marfeilles. It must therefore be allowed that nature has fixed a limit to the extent of its commerce, which art will not easily supersede. Its manufactures indeed might be considerable; but their intimate relation with, and dependence on, commerce, subject them to the same laws, and whatever embarrasses the one will obstruct the other. Formerly 30,000 persons were said to have been employed in the silk-manufacture. But, if such a number of people were occupied in one branch, unquestionably necessity, if not genius, would have invented some kind of machinery, some means of abridging or assisting their labour by art. No such thing has yet appeared; their rude implements of industry (for they cannot be called machinery) are still such as were adopted in the most uncultivated age. To the want of machinery may be objected the low price of labour; but in Spain, where manual labour has always been as low as in France, many grand and excellent machines are to be seen in the silk-manufactories. Indeed machinery has never been required, nor its value known, in Lyons; and, whatever may have been the numbers formerly employed in this branch, at present it is certain, that, though still the principal employment of the people, they do not actually exceed 6000. The hosiery-manufacture of Lyons may be reputed to hold the second rank in the list of its fabrications, whether we consider the number of hands it employs, or the sums of money which it brings into France. This manufacture boasts the exclusive employment of materials entirely of national growth. The silks it uses, the frames and utensils it works with, and which are perfectly adapted to their purposes, the individuals to whom it gives occupation, all belong to France, and to French industry. There were at Lyons, in 1789, 2500 looms actually at work; they employed 800 masters, and 4200 journeymen of all denominations, such as smiths, needle-makers, dyers, binders, embroiderers, and others. Every loom yielded, upon an average, yearly 300 pairs of stockings, at seven livres mean price the pair, amounting all together to about 6,000,000 of livres. The half of this fabrication was exported. The conflagrations during the siege destroyed four hundred of these looms. They have since been replaced: and it is computed, that there are now as many as in 1789; but there are only 1800 in actual employment: workmen are wanting; and besides, the foreign consumption is diminished by one-half; and the use of boots, now generally worn, has lessened the home-trade. Industry, however, has opened a new channel: open-work tissues are now wrought in imitation of lace, and which, either plain or embroidered, are made into veils, shawls, and dresses, of which a considerable quantity is exported. This manufacture, as well as every other of the silken branch, claims from government the protection, care, and encouragement, of mulberry-trees, and that it would attend to the necessity of re-placing the great number of those precious trees that were torn up during the storms of the revolution. The French hosiery-manufacture did not begin to flourish till the ministry of Colbert, to whom our national industry is so highly in-

debted.

debted. Under his auspices, the mechanism of arts arrived to great perfection. Time and labour were economized, and French productions acquired a noted superiority over others.

Considerable numbers of the citizens are occupied in cultivating the surrounding high-lands, which are naturally sterile and unproductive. It is universally admitted, that the entire Department of the Rhone, which contains 135 square leagues, is so mountainous, that it does not produce corn sufficient to serve Lyons two months in the year. The price of bread, the staple and almost sole food of the poorer people, is comparatively high. Generally, the land is composed of a very light, gravelly, and sometimes calcareous, loam, which owes most of its fertility to the vapours which arise from the rivers, and deposit their humidity on the adjacent hills. In these mountains are found blue limestone, calcareous spar, schistose mica, lepidolite, gneiss, hornblende, quartz, common sand-stone, and granite. The labour is chiefly performed by the women, the men being too lazy or indolent to work in the fields; leaving it to the female sex to manure, till, and sow, their lands. To effect this, much labour is required; and these poor women are not unfrequently obliged to carry manure upon their backs, where the declivity is so upright that the ascent of asses is impracticable. Here the product in corn is certainly a very poor recompense; vines are somewhat more advantageous; not that the quantity of wine is either great or good, but that they are somewhat easier to cultivate on the face of such declivities. In general the wines are very inferior; are poor, thin, and vapid; the more strong and lively wines of Burgundy and Champagne sell very high. The fruits and vegetables, too are both high-priced, and of very indifferent quality; as much inferior as they are dearer than those of Paris. Of the actual state of agriculture, both here and throughout all France, it may be truly said, that it is all and every-where tilled, but no-where cultivated. The climate of Lyons is cold, notwithstanding its southern situation. On one side are chains of mountains from two to five thousand feet high, on the other the hoary-headed Alps, where refrigerating breezes incessantly spring. At noon, during the summer months, the heat is considerable; but the mornings and evenings are continually fresh, and not unfrequently chilling. In winter the frosts are often long and very intense. Agues and other nervous diseases are common; and the Convent of St. Anthony was formerly an hospital called *Domus contractoria à contractione nervorum*. Various are the statements of the actual population of this city; estimates of the number of its inhabitants have varied, according to the prejudice of the calculator, from 120 to 78,000, all of which were called official returns! The authors of the *Statistique Générale de France* have gratuitously given it 109,500 persons; but, as is usual with those writers, without entering into any details; a later account sets it down at 88,919. *Monthly Mag.* for May 1803, and Dec. 1804.

LYONS, a town of New York, in Ontario county: sixteen miles north of Genesee.

LYONS (Israel), an able mathematician and botanist, was the son of a Polish Jew, who settled at Cambridge in England, where he followed the business of a silversmith, and also taught the Hebrew language; and where the subject of this article was born in the year 1739. When very young he exhibited indications of extraordinary talents and ingenuity, and discovered a strong inclination for learning, particularly for the mathematics; on which account he was much patronized by Dr. Smith, master of Trinity-college. That gentleman offered to send him to school at his own expense; but young Lyons could only be persuaded to avail himself for a few days of that liberal proposal, saying, that, "he could learn more by himself in an hour than in a day with his master." About the year 1755 he began to study botany, to which he occasionally continued his attention till his death. In this science he made considerable progress, being able to re-

member not only the Linnæan names of almost all the English plants, but even the synonyma of the old botanists, which form a strange and barbarous farrago of great bulk. He had also prepared large materials for a *Flora Cantabrigiensis*, describing fully every part of each plant from the specimen, without being obliged to consult, or being liable to be misled by, former authors. In the year 1758, he acquired much celebrity by publishing *A Treatise on Fluxions*, which he dedicated to his early patron Dr. Smith. This was followed, in 1763, by his "*Fasciculus Plantarum circa Cantabrigiam nascentium, quæ post Raium observatæ fuere*," 8vo. Either in this year, or the preceding, on the invitation of Mr. now sir Joseph Banks, bart. and president of the Royal Society, whom he first instructed in botany, he was induced to read a course of lectures in that science at the university of Oxford. These lectures he delivered with great applause, to an audience of at least sixty pupils; but he could not be prevailed upon to make a long absence from Cambridge. For some time Mr. Lyons was employed as one of the calculators of the *Nautical Almanac*; for which service he received an annual salary of 100l. and he was frequently recompensed by other presents from the Board of Longitude, for his own inventions. He had also studied the English history, and could quote whole passages from the monkish writers verbatim. In the year 1773, he was appointed by the Board of Longitude to accompany captain Phipps, afterwards lord Mulgrave, during his voyage towards the north pole, in the capacity of astronomical observer; and he discharged that employment entirely to the satisfaction of his employers. Soon after his return from this expedition, he married and settled in London, where, in about two years, he died of the measles. At the time of his death, Mr. Lyons was engaged in preparing for the press a complete edition of all the works of the learned Dr. Halley; which would have proved a very desirable present to the scientific world. In the sixty-fifth volume of the *Phil. Trans.* for the year 1775, are inserted his *Calculations on Spherical Trigonometry* abridged; and after his death, his name appeared in the title page of *A Geographical Dictionary*, the astronomical parts of which were said to be "taken from the papers of the late Mr. Israel Lyons, of Cambridge, author of several valuable mathematical productions, and astronomer in lord Mulgrave's voyage to the northern hemisphere." We may add, that the astronomical and other mathematical calculations, printed in the account of that voyage, were made by our author. As to "*The Scholar's Instructor*, or Hebrew Grammar, by Israel Lyons;" and another treatise, entitled, "*Observations and Enquiries relating to various Parts of Scripture History*," 1761, they were the productions of our author's father. *Nichols's Anecdotes of Bouyer*.

LYONSIA, *f.* [from the subject of the preceding article.] In botany, a genus of the class pentandria, order monogynia, natural order contortæ, *Linn.* (apocineæ, *Juss. Brown.*) Generic essential characters—Corolla funnel-shaped; its mouth and tube without scales; limb in five deep, recurved, equilateral segments. Stamens prominent; filaments thread-shaped, inserted into the middle of the tube; antheræ arrow-shaped, cohering with the stigma by the middle, their hind lobes void of pollen. Germen of two cells; style one, thread-shaped, dilated at the top; stigma somewhat conical. Scales at the base of the germen combined. Capsule cylindrical, of two cells, its valves like follicles, with a parallel distinct partition, bearing the seeds on each side upon fixed receptacles.

*Lyonia straminea*, the only species, gathered by Mr. Brown at Port Jackson, and in Van Diemen's Land. A climbing shrub, with opposite leaves. Cymes terminal, three-forked. Flowers among the smallest of this tribe: their limbs bearded.

LYPERANTHUS, *f.* [from the Gr. *λυπη*, sadness, and *ανθος*, a flower; because of the very dark-red gloomy hue of the blossoms, which is unusual in this tribe.] In botany, a genus of the class gynandria, order monandria, natural

natural order orchidæ. The generic characters are—Calyx: perianth superior, ringent, of three leaves, the upper one vaulted, the rest flattish. Corolla: petals two, nearly equal, and similar to the flatter calyx-leaves. Nectary shorter, its edges ascending, hood-like, with a taper point, the disk glandular or papillary. Stamina: anther terminal, permanent, its cells close together; masses of pollen two in each cell, powdery. Pistillum: germen inferior; style columnar, linear. Pericarpium: capsule. Seeds: numerous.—*Essential Character.* Calyx ringent; its upper leaf vaulted. Lip shorter, hooded, glandular, with a taper point. Style linear. Anther vertical, permanent.

This is a genus of smooth Orchidæ, growing on the ground; bulbs naked, undivided, terminating the descending caudex, which throws out roots above them; stem bearing a single leaf close to the root, and two bractæ above, besides what accompany each flower; flowers racemose, very dark red, mostly reversed.

*Species.* 1. *Lyperanthus suaveolens*: leaf linear, elongated; petals ascending; disk of the nectary bearing rows of sessile glands; its margin naked. Found near Port Jackson, New South Wales.

2. *Lyperanthus ellipticus*: leaf lanceolate-elliptical; disk of the nectary papillary; its margin naked. Gathered by Mr. G. Caley in the same neighbourhood.

3. *Lyperanthus nigricans*: leaf ovate, somewhat heart-shaped; petals divided, lip fringed; its disk papillary. Found by Mr. Brown near Port Jackson, as well as in the southern part of New Holland. *Prodr. Nov. Holl.* 325.

LYP'IAT, (Upper and Lower), two hamlets in the parish of Stroud, Gloucestershire.

LYPTIN'GEN. See LEIBLINGEN, vol. xii. p. 453.

LYRA, in astronomy, a constellation in the northern hemisphere. The number of its stars, in Ptolemy's catalogue, is ten; in Tycho's eleven; in Hevelius's seventeen; and in the Britannic catalogue twenty-one.

LYRA (Nicholas de), a learned French monk and scripture-commentator, was a native of a small town in the diocese of Evreux in Normandy, from which he took his surname. He was descended from Jewish parents, who taught him the Hebrew language; but, becoming afterwards a convert to Christianity, he embraced the religious life in a monastery at Verneuil, in the year 1291. Having staid some time there, he was sent to Paris, where he applied with the greatest diligence and success to his studies, and was admitted to the degree of doctor. For several years he read lectures on the Holy Scriptures in the great convent of his order in that city, with a degree of learning and taste far superior to the prevailing spirit of his age. His merit raised him to the principal offices in his order; and secured him the regard of the most illustrious characters in France; so that queen Joan, countess of Burgundy, consort of Philip V. called the Long, appointed him one of the executors of her will. He died at Paris, in the year 1340. He was the author of "Postills," or a compendious exposition on the whole Bible, which he commenced in 1293, and finished in the year 1330. In this work he shows a greater acquaintance with the literal sense of Scripture than any preceding commentator had discovered; and has availed himself of his intimate knowledge of the Hebrew, to select the most valuable comments of the most learned rabbis. The first edition of this work was published at Rome, in 1472, in 7 vols. folio, and is now become rare; and it has since undergone various impressions at Basil, Lyons, Doway, Antwerp, and other places; of which the best is that of Antwerp, 1634, in 6 vols. folio. De Lyra was also the author of, 2. Moral Commentaries upon the Scriptures, of which those on the evangelists were published at Venice in 1516 and 1518. 3. A Disputation against the Jews; and other works. *Mist. Hist. Eccl. sæc.* xiv.

LYRATE, *adj.* in botany, a leaf cut into transverse segments, which are generally smaller and more remote downwards, like an ancient lyre. See the BOTANY Plate IV, fig. 50. vol. iii.

LYRE, *f.* [Fr. from *lyra*, Lat.] A harp; a musical instrument to which poetry is, by poetical writers, supposed to be sung.—He never touched his *lyre* in such a truly-chromatic manner as upon that occasion. *Arbutknot.*

My softest verse, my darling lyre,  
Upon Euphelia's toilet lay.

Prior.

The lyre was an instrument so dear to the Greeks, that they have by turns attributed its invention to Mercury, Apollo, Linus, Orpheus, and Amphion; making it the symbol of all excellence in poetry and music. The poets and historians of fabulous times, however, seem most to agree in ascribing the invention to Mercury. And among the accounts of the several writers of antiquity who have mentioned this circumstance, and confined the invention to the Egyptian Mercury, that of Apollodorus (Bibliotheca, lib. ii.) seems the most intelligible and probable. "The Nile," says this writer, "after having overflowed the whole country of Egypt, when it returned within its natural bounds, left on the shore a great number of dead animals of various kinds, and, among the rest, a tortoise, the flesh of which being dried and waisted by the sun, nothing was left within the shell but nerves and cartilages, and these, being braced and contracted by desiccation, were rendered sonorous; Mercury, in walking along the banks of the Nile, happening to strike his foot against the shell of this tortoise, was so pleased with the sound it produced, that it suggested to him the first idea of a lyre, which he afterwards constructed in the form of a tortoise, and strung it with the dried sinews of dead animals." Censorinus, however, (De Die Nat. cap. 22.) attributes to Apollo the first idea of producing sound from a string, which was suggested to him by the twang of his sister Diana's bow. *Ψαλλειν* is strictly to twang a string, and *Ψαλλωσ* the sound which the bow-string produces at the emission of the arrow. Euripides uses it in that sense:

τοῦτων χεῖρι  
Ψαλλεσι νεύρας.

Bacch. v. 782.

Father Montfaucon says it is very difficult to determine in what the lyre, cithara, chelys, psaltery, and harp, differed from each other; as he had examined the representations of six hundred lyres and citharas in ancient sculpture, all which he found without a neck, and the strings open as in the modern harp, played by the fingers. (Antiq. Expl. tom. iii. lib. 5. cap. 3.) But, though ancient and modern authors usually confound these instruments, yet a manifest distinction is made by Arist. Quintil. in the following passage, p. 101. After discussing the characters of wind-instruments, he says, "Among the stringed instruments, you will find the lyre of a character analogous to *masculine*, from the great depth or gravity, and the roughness of its tones; the sambuca of a *feminine* character, weak and delicate, and, from its great acuteness and the smallness of its strings, tending to dissolve and enervate. Of the intermediate instruments, the polypthongum partakes most of the feminine; but the cithara differs not much from the masculine character of the lyre." Here is a scale of stringed instruments; the lyre and sambuca at the extremes; the polypthongum and cithara between; the one next to the sambuca, the other next to the lyre. He afterwards just mentions that there were others between these. Now it is natural to infer, that, as he constantly attributes the manly character to gravity of tone, the cithara was probably the more acute instrument of the two; less loud and rough, and strung with smaller strings. Concerning what difference there might be in the form and structure of the instruments, he is wholly silent. The passage, however, is curious as far as it goes, and decisive. The cithara may, perhaps, have been as different from the lyre, as a single harp from one that is double; and it seems to be clearly pointed out by this multiplicity of names, that the Greeks had two principal species of stringed instruments; one, like our harp, of full compass, that rested on its base; the other more portable, and slung

over

over the shoulder, like our smaller harp or guitar, or like the ancient lyres represented in sculpture.

Tacitus, *Annal.* xvi. 4. among the rules of decorum observed by public performers, to which Nero, he says, strictly submitted, mentions, "That he was not to sit down when tired." It is remarkable that he calls these rules, *Cithara Leges*, "The Laws of the Cithara;" which seems to afford a pretty fair proof of its being of such a size and form as to admit of being played on *standing*. The belly of a theorbo, or arch-lute, is usually made in the shell-form, as if the idea of its origin had never been lost; and the etymology of the word *guitar* seems naturally deducible from *cithara*; it is supposed that the Roman C was hard, like the Greek K; and the Italian word *chitarra* is manifestly derived from *uagor*.

These passages in old authors are a kind of antique drawings, far more satisfactory than those of ancient sculpture; for we have seen the syrinx, which had a regular series of notes ascending or descending, represented with seven pipes, four of one length, and three of another, which of course would furnish no more than two different sounds. The cymbals too, which were to be struck against each other, are placed in the hands of some antique figures in such a manner, that it is impossible to bring them in contact with the necessary degree of force, without amputating, or at least violently bruising, the thumbs of the performer. And it is certain that artists continue to figure instruments in the most simple and convenient form for their designs, long after they had been enlarged, improved, and rendered more complicated. An instance of this in our own country will confirm the assertion. In the reign of George II. a marble statue was erected to Handel, in Vauxhall gardens. The musician is represented playing upon a lyre. Now, if this statue should be preserved from the ravages of time and accident 12 or 1400 years, the antiquaries will naturally conclude that the instrument upon which Handel acquired his reputation was the lyre; though we are at present certain that he never played on, or even saw, a lyre, except in wood or stone.

In one of the ancient paintings at Portici, there is a lyre with a pipe or flute for the cross bar, or bridge at the top. Whether this tube was used as a flute to accompany the lyre, or only a pitch-pipe, we know not; nor, in the course of our enquiries has any similar example of such a junction occurred elsewhere.

Brossard seems to have abridged the history and progress of the lyre chronologically in the most short and clear manner, which Grassineau has spun out to great length by jumping from one century to another, and crowding together all the wild and incoherent stories relative to the lyre, its inventors and performers, that he could find. All that the diligent and generally-accurate Brossard says on the subject is, that the lyre was a stringed instrument, upon which the whole musical system of the ancients has been built. It is pretended that Mercury first invented it by chance, and that it had then only three strings, which consisted of B C D; that Apollo added a fourth, Chorus a fifth, Hyagnis a sixth, and Terpander a seventh. It remained in this state till the time of Pythagoras; or, according to others, Lycaon added to it an eighth string, to render the extremities *consonant*. Timotheus afterwards added a ninth, tenth, and eleventh, string. Others after him increased the number to sixteen, that is, fifteen principals, and one added.

Mr. Barnes, in the prolegomena to his edition of Anacreon, has an enquiry into the antiquity and structure of the lyre; of which he makes Jubal the first inventor. For the several changes this instrument underwent, by the addition of new strings, he observes, that, according to Diodorus, it had originally only three, referring to the three seasons of the year, as the Greeks counted them, viz. spring, summer, and autumn; whence it was called *τρισχορδος*. Afterwards it had seven strings; as appears from Homer, Pindar, H6race, Virgil, &c. Festus Avienus gives the lyre of Orpheus nine strings. David mentions an instru-

ment with ten strings. Timotheus of Miletus added four to the old seven, which made eleven. Josephus in his *Jewish Antiquities*, makes mention of one with twelve strings; to which were afterwards added six others, which made eighteen in all. Anacreon himself says, p. 253, of Mr. Barnes's edition, *canto viginti totis chordis*. As for the modern lyre, or Welch harp, it is sufficiently known.

From the lyre, which all agree to be the first instrument of the stringed kind in Greece, there arose an infinite number of others, different in shape and number of strings; as the psalterium, trigon, sambucus, pectis, magadis, barbiton, testudo, (the two last used promiscuously, by Horace, with the lyre and cithara,) epigonium, simicium, and pandura; which were all struck with the hand, or a plectrum. The different claimants among the Greeks to the same musical discoveries, only prove that music was cultivated in different countries, and that the inhabitants of each country invented and improved their own instruments, some of which happening to resemble those of other parts of Greece, rendered it difficult for historians to avoid attributing the same invention to different persons. Thus the single flute was given to Minerva and to Marsyas; the syrinx or fistula, to Pan and to Cybele; and the lyre or cithara, to Mercury, Apollo, Amphion, Linus, and Orpheus. Indeed, the mere addition of a string or two to an instrument without a neck, was so obvious and easy, that it is scarcely possible not to conceive many people to have done it at the same time. With respect to the form of the ancient lyre, as little agreement is to be found among authors as about the number of strings. Some representations of that instrument in the hands of ancient statues, bas-reliefs, &c. we shall give under the article *MUSIC*, to which the reader is referred for further particulars.

The Abyssinian testudo, or lyre in use at present in the province of Tigr6, says Mr. Bruce, "has sometimes five, sometimes six, but most frequently seven, strings, made of the thongs of raw sheep or goat skins, cut extremely fine, and twisted; they rot soon, are very subject to break in dry weather, and have scarcely any sound in wet. From the idea, however, of this instrument being to accompany and sustain a voice, one would think that it was better mounted formerly. The Abyssinians have a tradition, that the sistrum, lyre, and tambourine, were brought from Egypt into Ethiopia, by Thot, in the very first ages of the world. The flute, kettle-drum, and trumpet, they say, were brought from Palestine, with Menelek, son of their queen of Saba by Solomon, who was their first Jewish king. The lyre in Amharic is called *beg*, the sheep; in Ethiopic it is called *mesinko*; the verb *sinko* signifies to strike strings with the fingers; no plectrum is ever used in Abyssinia; so that *mesinko*, being literally interpreted, will signify the 'stringed instrument played upon with the fingers.' The sides which constitute the frame of the lyre, were anciently composed of the horns of an animal of the goat kind, called *agazen*, about the size of a small cow, and common in the province of Tigr6. I have seen several of these instruments very elegantly made of such horns, which nature seems to have shaped on purpose. Some of the horns of an African species of this animal may be seen in M. Buffon's history of the king of France's cabinet. They are bent, and less regular than the Abyssinian; but after fire-arms became common in the province of Tigr6, and the woods were cut down, this animal being more scarce, the lyre has been made of a light red wood; however, it is always cut into a spiral twisted form, in imitation of the ancient materials of which the lyre was composed. The kingdom of Tigr6, which is the largest and most populous province of Abyssinia, and was during many ages the seat of the court, was the first which received letters, and civil religious government; it extended once to the Red Sea; various reasons and revolutions have obliged the inhabitants to resign their sea-coast to different barbarous nations, Pagan and Mahometan; while they were possessed of it, they say that the Red Sea furnished them with tortoise-shells, of which they made the bellies of their lyres, as the Egyptians

tians did formerly, according to Apollodorus and Lucian; but, having now lost that resource, they have adopted in its place a particular species of gourd, or pumpkin, very hard and thin in the bark, still imitating with the knife the squares, compartments, and figure, of the shell of the tortoise. This lyre is generally from three feet to three feet six inches high; that is, from a line drawn through the point of the horns to the lower part of the base of the sounding-board. It is exceedingly light, and easy of carriage, as an instrument should naturally be in so rugged and mountainous a country. When we consider the parts which compose this lyre, we cannot deny it the earliest antiquity. Man in his first state was a hunter and a fisher, and the oldest instrument was that which partakes most of that state. The lyre, composed of two principal pieces, owes the one to the horns of an animal, the other to the shell of a fish. It is probable, that the lyre continued with the Ethiopians in this rude state as long as they confined themselves to their rainy, steep, and rugged, mountains; and afterwards, when many of them descended along the Nile into Egypt, its portability would recommend it in the extreme heats and weariness of their way. Upon their arrival in Egypt, they took up their habitation in caves, in the sides of mountains, which are inhabited to this day. Even in these circumstances, an instrument larger than the lyre must have been inconvenient and liable to accidents in those caverns; but, when these people increased in numbers and courage, they ventured down into the plain, and built Thebes. Being now at their ease, and, in a fine climate, all nature smiling around them, music and other arts were cultivated and refined, and the imperfect lyre was extended into an instrument of double its compass and volume. The size of the harp could be now no longer an objection; the Nile carried the inhabitants every-where easily, and without effort; and we may naturally suppose, in the fine evenings of that country, that the Nile was the favourite scene upon which this instrument was practised; at least the sphinx and lotus upon its head, seem to hint that it was someway connected with the overflowings of that river."

The Indian lyre, called the *vina* or *been*, is a fretted instrument of the guitar kind. The finger-board is  $21\frac{3}{4}$ ths inches long. A little beyond each end of the finger-board are two large gourds, and beyond these are the pegs and tail-piece which hold the wires. The whole length of the instrument is three feet seven inches. The first gourd is fixed at ten inches from the top, and the second at about two feet  $11\frac{1}{2}$ . The gourds are very large, about fourteen inches diameter, and have a round piece cut out of the bottom, about five inches diameter. The finger-board is about two inches wide. The wires are seven in number; and consist of two steel ones, very close together, in the right side; four brass ones on the finger-board; and one brass one on the left side. The great singularity of this instrument is the height of the frets; that nearest the nut is one inch  $\frac{3}{8}$ , and that at the other extremity about  $\frac{3}{8}$ ths of an inch, and the decrease is pretty gradual. By this means the finger never touches the finger-board itself. The frets are fixed on with wax by the performer himself, which he does entirely by ear; but any little difference is easily corrected by the pressure of the finger. Indeed the performers are fond, on any note that is at all long, of pressing the strings very hard, and letting it return immediately to its natural tension, which produces a sound something like the close shake on the violin; but not with so agreeable an effect; for it appears sometimes to alter the sound half a tone. The frets are nineteen in number. The instrument is held over the left shoulder, the upper gourd resting on that shoulder, and the lower one on the right knee. The frets are stopped with the left-hand; the first and second fingers are principally used; the little finger is sometimes used, the third finger seldom, the hand shifting up and down the finger-board with great rapidity. The fingers of the right hand are used to strike the strings of this hand; the third finger is never

used. The two first fingers strike the wires on the finger-board, and the little finger strikes the two wires. The two first fingers of this hand are defended by a piece of wire put on the tops of them in the manner of a thimble; when the performer plays strong, this causes a very jarring disagreeable sound; whereas, when he plays softly, the tone of the instrument is remarkably pleasing. The style of music on this instrument is in general that of great execution. "I could hardly ever discover any regular air or subject. The music seems to consist of a number of detached passages, some very regular in their ascent and descent; and those that are played softly, are most of them both uncommon and pleasing. The open wires are struck, from time to time, in a manner that, I think, prepares the ear for a change of modulation, to which the uncommonly full and fine tones of these notes greatly contribute; but the ear is, I think, always disappointed; and, if there is ever any transition from the principal key, I am inclined to think it is very short. Were there any other circumstances respecting the Indian music, which led to suppose that it has, at some period, been much superior to the present practice, the style, scale, and antiquity, of this instrument would, I think, greatly confirm the supposition." *Asiatic Researches*, vol. i.

LYRIA, a town of Spain, in Valencia: eighteen miles north-west of Valencia.

LYRIC, *f.* A poet who writes songs to the harp.—The greatest conqueror in this nation, after the manner of the old Grecian lyrics, did not only compose the words of his divine odes, but set them to music himself. *Addison*.

LYRIC, or LYRICAL, *adj.* Pertaining to a harp, or to odes or poetry sung to a harp; singing to a harp.—Somewhat of the purity of English, somewhat of more equal thoughts, somewhat of sweetness in the numbers; in one word, somewhat of a finer turn, and more lyrical verse, is yet wanting. *Dryden*.

The lute neglected, and the lyric muse,  
Love taught my tears in sadder notes to flow,  
And tun'd my heart to elegies of woe.

*Pope.*

LYRIC POETRY, with the ancients, implied verses to be sung to the accompaniment of the lyre. In the supplement to the first edition of the folio Encyclopédie, there is a very long article on the subject, which, written long before the firm adherents to Lulli and Rameau were extinct, is of great length, and seems to flow from a writer who had read, meditated, and felt, with enthusiasm, all the inspirations of the lyric bards of Greece. He has taken a wide range in treating the subject, and considered the union of poetry and music, not only with more enlarged views than any other modern, but perhaps than the ancients themselves. He begins in the following manner: "The lyric poetry of the Grecians was not only sung, but composed to the chords of the lyre. This was at first the characteristic distinction of all that was called lyric poetry by the Romans, and their descendants and imitators in later times. The poet was a musician, he called upon the god of verse, and animated himself with a prelude. He fixed upon the time, the movement, and the musical period; the melody gave birth to the verse; and thence was derived the unity of rhythm, character, and expression, between the music and the poem that was sung. Thus the poetry became naturally subservient to number and cadence; and thus each lyric poet invented not only the proper kind of verse, but also the strophe analogous to the melody which he himself had created, and to which he composed it. In this respect, the lyric poem or ode with the Latins and with modern nations, has been nothing more than a frivolous imitation of the lyric poem of the Greeks: they say, *I sing*, but never do sing; they speak of the chords of the lyre, but have never seen a lyre. No poet, since Horace inclusively, appears to have modelled his odes upon a melody. Horace, adopting by turns the different formulæ of the Greek poets, seems so much to have forgotten that an ode ought to be sung, that he has

often

often suspended the sense at the end of the strophe, where the air ought to repose, to the beginning of the next stanza."

This species of poetry was originally employed in celebrating the praises of gods and heroes; though it was afterwards introduced into feasts and public diversions; it is a mistake to imagine Anacreon, as the Greeks do, the author of it; since it appears from Scripture to have been in use above a thousand years before that poet. Mr. Barne shows how unjust it is to exclude heroic subjects and actions from this sort of verse, lyric poetry being capable of all the elevation and sublimity such subjects require; which he confirms by the examples of Alcæus, Sappho, Anacreon, and Horace. The characteristic of lyric poetry, which distinguishes it from all others, is *dignity and sweetness*. As *gravity* rules in heroic verse; *simplicity*, in pastoral; *tenderness and softness*, in elegy; *sharpness and poignancy*, in satire; *mirth*, in comedy; the *pathetic*, in tragedy; and the *point*, in epigram; so in the lyric, the poet applies himself wholly to soothe the minds of men, by the sweetness and variety of the verse, and the delicacy and elevation of the words and thoughts; the agreeableness of the numbers, and the description of things most pleasing in their own nature.

**LYRICISM**, *f.* A lyric composition.—Which indeed to do they must have our *lyricisms* at their finger-ends. *Gray's Letters*.

**LYRIST**, *f.* A musician who plays upon the harp:

His tender theme the charming *lyrist* chose  
Minerva's anger and the direful woes  
Which voyaging from Troy the victors bore. *Pope*.

**LYRNES'SUS**, in ancient geography, a city of Cilicia, the native country of Briseis, who is called from thence *Lyrnessis*. It was taken and plundered by Achilles and the Greeks, at the time of the Trojan war, and the booty divided among the conquerors. *Homer*.

**LYRO'DI**, *f.* Among the ancients, a kind of musicians who played on the lyre, and sung at the same time. This appellation was also given to such as made it their employment to sing lyric poems composed by others.

**LYS**, or **LIS**, a river of France, which rises near Lyburg, in the department of the Straits of Calais, passes by Aire, St. Venant, Armentieres, Comines, &c. and runs into the Scheldt at Ghent. It gives name to one of the departments.

**LYS** (Department of), one of the departments of France, (if now it may be called so,) formed out of what was called Austrian Flanders; bounded on the north by the German Sea and the department of the Scheldt, on the east by the department of the Scheldt, on the south by the department of Jemappe, and on the west by the department of Jemappe and the sea. Besides Bruges, the capital, the chief towns are Furnes, Ypres, and Courtray.

**LYS** (St.), a town of France, in the department of the Upper Garonne, and chief place of a canton, in the district of Muret: seven miles west of Muret. The place contains 1140, and the canton 5249, inhabitants.

**LYSANDER**, a township of North America, in Onondago county, New York, incorporated in 1794, and comprehending the military towns of Hannibal and Cicero: sixteen miles south-east of Lake Ontario.

**LYSANDER**, an eminent Spartan commander, was the son of Aristoclitus, a descendant of the Heraclidæ, but not of the royal race. He was educated in the severity of the Spartan discipline, by which he was rendered hardy and vigorous in body; and nature had given him an enterprising and ambitious spirit, with talents fitted for command. He was modest in his demeanour, supple and insinuating, ever intent upon his own advancement, and restrained by no sentiments of honour or justice. He was at little pains to conceal his principles; for it is recorded as a saying of his, that "children were to be cheated by toys, and men by oaths." His abilities, however, caused him to rise in the Spartan state, which was now engaged

in the Peloponnesian war against the Athenians, who, notwithstanding many disasters, were still superior at sea. Lyfander was made the naval commander of the Lacedæmonians, B. C. 406; and by his exertions he brought that war to a close by the destruction of Athens, B. C. 404. See the article **GREECE**, vol. viii. p. 890-903. His influence greatly contributed to the abolition of the democratical government in many of the Greek towns of Asia, and the substitution of the aristocratical; in effecting which he scrupled no measures of treacherous policy, as it was a maxim with him, that, "where the lion's skin falls short, it should be lengthened with the fox's." At Miletus, after he had prevented the heads of the popular party from leaving the city by his assurances of safety, he suffered them all to be put to death by their adversaries; and similar tragedies were acted in various other places. As a naval commander he displayed great skill and activity. He pillaged Ægina and Salamis, took Lampacus, and eluded the Athenian fleet which chased him, till they came in presence of each other at Ægos-Potamos in the Thracian Chersonesus. The battle that ensued will always be memorable in history. Lyfander was slain at the siege of Halicartus about B. C. 395. The poverty in which he died was a proof that the hoarding of money was not his passion; yet no man did more than he towards corrupting his countrymen by the love of it. On the whole, though he may rank among the great men of Greece, he does not merit a place among the truly illustrious. *Plutarch*.

**LYSAN'DRIA**, *f.* in antiquity, a Samian festival, celebrated with sacrifices and games in honour of the subject of the preceding article. It was anciently called *heræa*, which name was abolished by a decree of the Samians.

**LYSA'NIAS**, or **LYS'IAS**, [Gr. one that drives away sorrow.] Tetrarch of Abilene; (Luke iii. 1.) This Lyfanius was probably the son or grandson of another Lyfanius, known in history, (Dio, lib. xlix.) and put to death by Mark Antony, who gave part of his kingdom to Cleopatra. Lyfanius, his son or grandson, possessed Abilene when John the Baptist began his mission; for St. Luke places him among the princes who governed Judea, or the country round about it. But either he must have made no great figure in the world, or his government must have been of small extent, since profane historians make no mention of him. Abilene was a small province situated between Libanus and Antilibanus. The capital whereof was Abila. See Joseph. Antiq. lib. xv. cap. 4.

**LYSA'NO**, a town of Prussia, in the palatinate of Culm: fifteen miles south of Culm.

**LY'SBURG**, a town of France, in the department of the Straits of Calais, near the source of the Lys: ten miles south-south-west of Aire.

**LYSE**, a town of Norway: eight miles south-south-west of Bergen.

**LY'SEKIL**, a seaport town of Sweden, in West Gothland: sixteen miles west of Uddevalla.

**LY'SER**, **LY'ZER**, or **LIE'SER**. See **LISER**, vol. xii. p. 786.

**LY'SERUS** (Polycarp), a learned German Lutheran divine, was the son of the minister and superintendent at Wipenden, in the duchy of Wirtemberg, where he was born in the year 1552. When he was but two years old his father died; and his mother afterwards married the famous Luke Ofauder, who took the greatest care of his education. When he was fourteen years of age, he had made such progress in elementary learning under different able masters, that he was judged deserving of being sent for academical education to the university of Tubingen, at the expense of the prince of Wirtemberg. In this seminary he applied very diligently to his studies; and, in the year 1570, was admitted to the degree M. A. with distinguished reputation. In 1573, he was received into the office of the ministry, and appointed pastor of the church of Gellersdorff, in the Austrian territory. Here he was much admired as a preacher; and frequently received applications to preach on particular occasions at Vienna, and

in other parts of Austria. In the year 1576 he went to Tübingen, and took his degree of doctor of divinity; and in the following year, Augustus elector of Saxony was induced by the fame of his pulpit-talents to appoint him a minister of the church of Wittenberg. He had not been long settled in this situation, before he was created a professor of divinity in that university; and was afterwards nominated superintendent of the district, and assessor of the consistory. In the year 1594, he was appointed minister of the court at Dresden. Here he spent the remainder of his life, occupied not only in his literary labours, and his ministerial duties, but in the education of the young princes. He died in 1601, when in the forty-ninth year of his age. He was a very voluminous writer, particularly as a commentator on the Scriptures. He wrote likewise several controversial treatises.

LYSERUS (John), a Lutheran divine of the same family with the preceding, and a native of Saxony. He was a singular character, who, being possessed of the notion that polygamy was a doctrine sanctioned both by reason and Scripture, spent his fortune and his life in endeavours to maintain and propagate it. And yet he was a little, deformed, thin, pale, absent, timid, creature, who, says Bayle, would have found one wife too much for him. Intent on establishing his favourite opinion, and on proving that polygamy is not only permitted but commanded in certain circumstances, he relinquished a considerable employment in his native country, and entered into the suite of a Swedish count, whom he had made a convert to his doctrine. After the death of that patron, he appears to have been one of the chaplains to the army of Christian V. king of Denmark; which post he lost, and was banished from all the dominions of his Danish majesty, on its being discovered that he was the author of the treatise mentioned below. With incredible pains he travelled through Germany, Denmark, Sweden, Holland, England, Italy, and France, examining the libraries for materials to confirm his system, and publishing various treatises in defence of it, under feigned names, but without having the gratification of finding that he gained many converts to his doctrine. At length, reduced to great distress, and disappointed in the hope of bettering his fortune at the court of Versailles by his extraordinary skill in the game of chess, he fell sick and died at a house between that place and Paris, in the year 1684. The most considerable of his publications, and which for a time excited no little attention, was entitled, "Polygamia Triumphatrix; id est, Discursus Politicus de Polygamia; auctore Theophilo Alithæo; cum notis Athanasii Vincentii;" published at Amsterdam in 1682, 4to. This treatise was answered by Brunsmannus, a Danish minister, in a book entitled "Monogamia Vixtrix," 1689, 8vo. In our own time, we have seen a grave divine of the church of England enter the lists in defence of the same cause with Lyserus; but the English champion has gained no greater honour than the German. *Gen. Biog.*

LYSIA, in ancient geography, a town of Asia, in Syria, seated on the river Marlyas, west of the river Orontes, and north-west of the town of Apamea.—A town of Asia Minor, in Caria, placed by Ptolemy in Phrygia Major.—A town of the Peloponnesus, in Arcadia, called also *Lusias*. See LYCIA, p. 810.

LYSIAR'CHA, an ancient kind of magistrate, being the pontiff of Lycia, or superintendent of the sacred games of that province. Strabo observes, that the Lysiar'cha was created in a council consisting of the deputies of twenty-three cities; that is, of all the cities in the province; some of which cities had three voices, others two, and others but one. Cardinal Norris says, that the Lysiar'cha presided in matters of religion; in effect, the Lysiar'cha was nearly the same with the *Asar'cha* and *Syriar'cha*; who, though they were all the heads of the councils, or states of those provinces, yet were they established principally to take care of the games and feasts celebrated in honour of the gods, whose priests they were inaugurated,

at the same time that they were created *Lysiar'cha*, *Syriar'cha*, or *Asar'cha*.

LYSIANTHUS, *f.* in botany. See LISIANTHUS, vol. xii. p. 786.

LYS'IAS, an eminent Greek orator, born at Syracuse about the year 459 B. C. He accompanied his father to Athens while he was very young, and was educated with great care in that city. In process of time he became himself a teacher of rhetoric, and composed orations for others, but does not appear to have been a pleader. He distinguished himself by the eloquence and purity of his orations, of which it is said by Plutarch, he wrote no less than 425, though the number may with more probability be reduced to 230; and of these only 34 remain, which are to be found in the collections of the Greek orators. He died in the 81st year of his age, and in the 378th year B. C. Lysias attained great reputation in his time, which his works afterwards supported; and he is mentioned with applause by Cicero and Quintilian. He seems to have well understood the management of an argument, and to have employed his subtilty with skill. Having once given a pleading to his adversary to read, and desired his opinion of it, "When I perused it for the first time (said the man), I thought it excellent—at the second reading, middling—at the third, bad." "Then, (said Lysias,) it was good; for it was to be heard but once." This orator lived at a somewhat earlier period than Isocrates; and exhibits a model of that manner which the ancients call the "tenuis vel subtilis." He has none of the pomp of Isocrates. He is every where pure and attic in the highest degree; simple and unaffected; but wants force, and is sometimes frigid in his compositions. In the judicious comparison which Dionysius of Halicarnassus makes of the merits of Lysias and Isocrates, he ascribes to Lysias, as the distinguishing character of his manner, a certain grace or elegance arising from simplicity: Προφοικε γαρ η Λυσια λεξις, εχειν το χαριεν η δ'Ισοκράτης; βλεπεται: i. e. The style of Lysias has gracefulness for its nature; that of Isocrates seems to have it. In the art of narration, as distinct, probable, and persuasive, he holds Lysias to be superior to all orators; at the same time he admits, that his composition is more adapted to private litigation than to great subjects. He convinces, but he does not elevate nor animate. The magnificence and splendour of Isocrates are more suited to great occasions. He is more agreeable than Lysias; and in dignity of sentiment far excels him. The best editions of Lysias's Orations is that by Taylor, Lond. 1739, 4to. and Camb. 1740, 8vo. *Blair's Lect.* vol. ii.

LYSIAS, a friend and relation of king Antiochus Epiphanes. That prince, going beyond the Euphrates to collect money, left the regency of Syria to Lysias, with orders to make war upon the Jews, and utterly destroy them; Lysias therefore sent Ptolemy the son of Dorimenes, Nicanor, and Georgias, into Judea with a powerful army. But, Judas Maccabæus having routed it, he came the year following with greater forces; and was again overcome, his army put to flight, and himself obliged to retire to Antioch. The same year Antiochus Epiphanes dying beyond the Euphrates, (see the article JEW, vol. x. p. 716.) Lysias took upon himself the government of the kingdom during the minority of young Antiochus, though the late king had left the regency to Philip, one of his friends who was with him at the time of his death. (1 Macc. vi. 14, 15, &c.) Notwithstanding the king's last will, Lysias kept the government of Syria; continued by his generals the war against the Jews; and came a second time into the land of Judah, as far as Bethsura; but the Jews defeated him, and obliged him to fly. He sent proposals of accommodation to Judas Maccabæus; and peace was concluded, very advantageous to the Jews, A. M. 3411, ante A. D. 163. This peace was of short duration. Lysias returned towards the close of the year, and brought the young king Eupator with him, with the best of his troops. They laid siege to Bethsura, and afterwards to Jerusalem.

The

The city, or rather the temple wherein Judas was shut up, was very much straitened; for, as this was the seventh year, there was a great want of provision. It happened, however, that, just at this time, Philip, who had been left regent of the kingdom by Epiphanes, came into Syria to assume the government. Lysias, upon receiving this intelligence, made propositions of peace to the Jews, which were accepted. Eupator and Lysias entered Jerusalem, honoured the temple, and promised the Jews that they should be permitted to live according to their own laws. But they falsified their word by demolishing the wall which secured the temple from being commanded by the citadel, which was in possession of the Syrians. They afterwards retired in haste to Antioch, where Philip had fortified himself; but they attacked him, took the city, and killed him. The next year Demetrius, son of Seleucus king of Syria, to whom the kingdom of right belonged, being returned from Rome, (where he had remained an hostage ever since the death of the king his father,) came into Syria, and was received at Tripolis, a city of Phœnicia; having collected some troops, he marched direct to Antioch, entered the city, and seized young Eupator and Lysias, and killed them. Such was the end of Lysias, who had governed the kingdom of Syria about five years.

LYSIMACHIA, *f.* [a very ancient generic name, and so called, according to Pliny and Ambrosinus, from *Lysimachus*, a favourite general of Alexander the Great, who was afterwards king of Thrace. The English name of this plant, *Loofstrife*, is evidently taken from *λυσι*: *παχης*, a dissolution of strife, or a peacemaker; but how this title could apply to the king on whom it was bestowed, and who appears to have been of a cruel and ferocious temper, we are at a loss to imagine, unless it were like the ludicrous derivation of *lucus*, a grove, *a non lucendo*, from its darkness.] In botany, a genus of the class pentandria, order monogynia, natural order of rotaceæ, (*lysimachia*, *Juss.*) The generic characters are—Calyx: perianthium five-parted, acute, erect, permanent. Corolla: one-petalled, wheel-shaped; tube none; border five-parted, flat; divisions ovate-oblong. Stamina: filaments five, awl-shaped, opposite to the divisions of the corolla; antheræ acuminate. Pistillum: germ roundish; style filiform, the length of the stamens; stigma obtuse. Pericarpium: capsule globular, mucronate, one-celled, ten-valved (five-valved, *Gartner.*) Seeds: very many, angular; receptacle globular, very large, dotted.—*Essential Character.* Corolla wheel-shaped; capsule globular, mucronate, ten-valved, (five-valved; receptacle free; seeds with a ventral navel opposite to the embryo, *Gartner.*)

*Species.* I. With many-flowered peduncles. 1. *Lysimachia vulgaris*, or common loofstrife: panicled; racemes terminating. Root perennial, creeping. Stem three feet or more in height: when the leaves grow in pairs, obtusely four-cornered; when three together, grooved or angular, angles obtuse: the upper part of the stalk slightly hairy, the lower smooth, branched, and a little thickened at the joints. Flowers in terminating axillary racemes, all together forming a panicle. Peduncles somewhat viscid, thickened at top; corolla yellow. Though the natural number of divisions in this and the calyx be five, yet sometimes they are six. Filaments unequal, shorter than the corolla, viscid, broad, united at the base into a cylinder inclosing the germ. Antheræ incumbent, sub-fagittate. Style elongated as the flowers go off. Seeds numerous, very minute. Scopoli remarks, that the corolla has glands on very short pedicels scattered over it; that the filaments are also glandular, except the tips; that one stamen is longer than the rest, and the contrary; that the antheræ are blunt, and have a red septum; that the germ is glandular, the style thinner at the base, and the stigma not thicker than the style. Native of most parts of Europe, on the banks of streams, and in marshy meadows; flowering from the end of June to September. Miller says it has the English name *loofstrife*, from the quality ascribed to it by the ancients of quieting oxen

when put upon their yokes; so *Lysimachia*, *επω του λυειν την μαχην*, from dissolving strife; it is also called *willow-herb*, from the shape of the leaves; in German it is *gelbe weiderich*, *gemeine lysimachie*, and *esswurzel*; in Dutch, *gemeene weiderick*, *grootte geele weiderick*; in Danish, *fredslor*, *bastart dueurt*, &c. in French, *lysimaque vulgaire*, *corneille*, *chasse-bosse*, and *perce-bosse*.

2. *Lysimachia ephemera*, or willow-leaved loofstrife: racemes terminating; petals obovate, spreading; leaves linear-lanceolate, sessile. Root perennial. Stems several, upright, more than three feet high. Leaves narrow, smooth; and at the base of these come out short side-branches, with smaller leaves of the same shape. The flowers are produced in a long close upright spike, at the top of the stalk; corolla white; stamens longer than the corolla. It is very distinct from the fourth sort by its size, five-valved capsules, and white flowers. D'Affo, taking it to be different from *L. ephemera*, named it *L. Otani*, from Francis Otano, who first detected it in Arragon. The leaves however of our plant are dotted. Native of Spain. Cultivated in 1731, by Mr. Miller. It flowers from July to September.

3. *Lysimachia stricta*, or upright loofstrife: racemes terminating; petals lanceolate, spreading; leaves lanceolate, sessile. Stem erect, four-cornered, smooth. Leaves quite entire, acute, smooth, dotted. Divisions of the calyx lanceolate, smooth, dotted with red; petals three times as long as the calyx, yellow with red stripes and dots, and two dark-red spots; stamens shorter than the corolla. Native of North America, in swampy ground. Introduced in 1781, by Mr. William Curtis, from Mr. Robert Squibb, then at New York. It flowers in July and August. After flowering, it throws out bulbs from the axils, which, falling off in October, produce young plants the ensuing spring.

4. *Lysimachia dubia*, or purple-flowered loofstrife: racemes terminating, petals converging, stamens shorter than the corolla, leaves lanceolate, petioled. This is a plant too tender for the open air of this country. It agrees with the second in habit, structure, and glaucous colour, but the leaves are not dotted. The petals are acuminate, a little longer than the calyx, converging, and deep red; the stamens longer than the corolla, with brown antheræ; and the flowers sessile in a spike. They are however very nearly allied. Native of the Levant. Cultivated in 1759 by Mr. Miller. It flowers in July and August.

5. *Lysimachia thyrsiflora*, or tufted loofstrife: racemes lateral, peduncled. Root perennial, creeping and spreading in the mud, bearded with long fibres. Stems in tufts, porous, jointed, round, smooth, upright, hardly a foot high in general, but sometimes near a foot and a half; not branched, except that the flowers come out on lateral thyrses from the axils, towards the top; which Linnæus mentions as a singular circumstance in an upright plant. Leaves linear-lanceolate, marked with many black dots, sessile or half-embracing the stem, slightly pubescent beneath, acute, quite entire, about three inches long, and more than half an inch broad towards the base, many together at the top of the stem. Flowers in opposite axillary cylindrical thyrses or racemes, on peduncles an inch in length; corolla small, yellow; stamens much longer than the corolla; the number of these, and of segments both in the calyx and corolla, varies from five to eight. Native of many parts of Europe, in bogs, marshes, ponds, ditches, and banks of rivers. In England not common; as near King's Langley, in Hertfordshire; and in Anglesea. In Ireland, along the banks of the river Ballynahinch, above the bridge; found by Mr. John Templeton, of Orange Grove, near Belfast. Mr. Dodsworth and others found it in Yorkshire; but it seems now to be lost there.

II. With one-flowered peduncles. 6. *Lysimachia quadrifolia*, or four-leaved loofstrife: leaves in fours; peduncles in fours, one-flowered. Leaves ovate, acute. Flowers yellow. Native of Virginia.

7. *Lysimachia punctata*, or dotted loofstrife: leaves in fours,

LYSIMACHIA AND LYTTA

1. Wood Loosestrife or yellow Pimpernel. — 2. The Blister Insect.  
3 to 6. other species of Lytta.

fours, subsessile; peduncles in whorls, one-flowered. Stems from a foot and a half to three feet in height, angular, upright, the size of a quill, covered with a soft hoary down, leafy, seldom branched. Flowers small; corolla yellow. Native of Holland, among reeds; Austria, Silesia, Piedmont, Siberia.

8. *Lysimachia ciliata*, or ciliated loofestribe: petioles ciliated, flowers drooping. Stalks many, erect, about two feet high. Leaves oblong, oblique, smooth, veined on their under side, and ending in acute points. Flowers like those of the common sort, but smaller, and hang down. It was first brought from Canada; and is also a native of Virginia. In the Syst. Veget. it is set down as a variety of *L. quadrifolia*; and they are probably the same plant.

9. *Lysimachia linum-stellatum*, or small loofestribe: calyxes exceeding the corolla; stem upright, very much branched. This is a little annual plant, about two inches, or seldom three inches, high, from a slender whitish hair-like root. Leaves short, ending in a very fine point. Flowers small, pale green or herbaceous, stellate. Native of France and Italy; flowering in the spring. Introduced here in 1776, by Monf. Thouin. It flowers in June.

10. *Lysimachia nemorum*, wood loofestribe, or yellow pimpernel: leaves ovate, acute; flowers solitary; stem procumbent. Root perennial, with whitish fibres. Stems several, roundish, grooved on each side alternately, smooth, red, rooting from the lower joints. Leaves glossy on each side, entire, but somewhat waved, yellowish green, dotted with black underneath, the veins a little prominent; eight lines long, six or seven lines wide; petioles short, broadish, grooved above. Peduncles axillary, solitary or in pairs, round, one-flowered, slender, longer than the leaves. Divisions of the calyx awl-shaped, very slender. Corolla yellow, much smaller than the leaves, (five lines in diameter); at bottom more intensely yellow and shining; in the mouth small yellow glands between the filaments, and little pedicelled glands on the edge of the corolla. Filaments smooth, upright, somewhat thicker in the middle. Antheræ tawny, oblong, bent a little downwards. Germ smooth; style somewhat thicker at top. Seeds round and flat. See the annexed Plate, fig 1. When the flowers are expanded, they somewhat resemble in shape those of *Anagallis arvensis*, or common red pimpernel; hence the older botanists considered this as an *Anagallis*. It differs from the next species, to which it bears no small affinity in its general habit, in having the leaves more pointed, the flowers smaller, less bell-shaped, and on much longer peduncles, and the stalks generally redder. Native of many parts of Europe, in moist woods, flowering from May to July; or, according to Mr. Curtis, from June to September. Grows in Charlton-wood; Hanging-wood, near Woolwich; Shooter's-hill wood; between Dartford-road and Leeson-heath; between Mutwell-hill and Highgate; Cane-wood; Scarlet Spring, near Harefield, Herts; Stow and Stokenchurch woods, in Oxfordshire; Pynchley, in Northamptonshire; and near Nottingham.

11. *Lysimachia nummularia*, creeping loofestribe, or moneywort: leaves subcordate, flowers solitary, stem creeping. Root perennial, with simple fibres, striking downwards. Stems numerous, simple, trailing, putting out roots towards the top, and sometimes a branch; a foot or more in length, smooth, jointed, compressed, with four-membranaceous edges. The whole plant is smooth. The peduncles are not always equal to the leaves, but sometimes longer, sometimes shorter. Haller remarks, that the calyx distinguishes this from all the other sorts; and that the filaments coalesce into a hairy circle. Scopoli says, the peduncles are five-angled; and that one or two of the filaments are longer than the style. Pollich remarks, that the peduncles have four angles, and are shorter than the leaves; but often much longer; that the corolla is half an inch in diameter, and that it frequently has small tawny spots on it. Mr. Curtis observes, that this plant, like many others that increase much by the root or stem whilst

they are in flower, seldom produces ripe seeds. Ray however describes the capsule to be round, very small, and filled with seeds so minute as to be scarcely visible. Native of most parts of Europe, in moist meadows, on the sides of ditches, and under hedges in moist situations; flowering in June and July. It is called *nummularia*, says Gerard, of the form of money, whereunto the leaves are like; in English *moneywort*, *herb-twopence*, and *twopenny-grass*. Other languages have borrowed the same circumstances: in German it is *pfennighkraut*, *goldkraut*, *grösses gelbes munzkraut*, &c. in Dutch, *penningkruid*; in Danish, *pengekraud*, *krybende pengeurt*; in Swedish, *penningört*; in French, *lismaque monnoyeré*, *nummulaire*, *herbe aux ecus*, *herbe à cent maux*, *herbe à cent maladies*; these two last names are from *centimorbia* or *centummorbia*, as it was called by some old writers, from its supposed efficacy in curing various diseases. It was also named *serpentaria*, from a notion that serpents, when wounded, apply to this herb for cure. The leaves are substringent and slightly acid; hence Boerhaave recommended them in the hot scurvy and hæmorrhages; but modern practice takes no notice of them. According to Linnæus, it is eaten by kine and sheep, not much relished by goats, and refused by horses. Scopoli recommends an infusion of the plant in oil for destroying weevils.

12. *Lysimachia Japonica*, or Japan loofestribe: leaves subcordate, flowers axillary, peduncles shorter than the leaf. Root annual, fibrous. Stem filiform, decumbent, from flexuose erect at top, villose, simple, a hand in length. Leaves roundish, blunt, entire, very finely villose, spreading, half an inch in diameter; petioles double the length of the leaves. Flowers generally two together. Native of Japan.

*Propagation and Culture.* No. 1, 5, 8, are not often admitted into gardens, because the roots creep so much that they become troublesome; they deserve a place, however, for the beauty of their flowers, in large gardens, especially in moist places, where better things will not thrive. If the roots be taken up in autumn from places where they grow naturally, and planted in a moist soil, they will thrive without farther care. No. 2 is the finest species of this genus, and, as the roots of it do not spread like those of the other, it deserves a place in the pleasure-garden, where it is a very ornamental plant for shady borders. It loves a moist soil and a shady situation, where it will continue long in beauty. It may be propagated by parting the roots in autumn, but by this method it increases slowly, so that the only way to have it in plenty is by sowing the seeds; these should be sown upon an east-aspected border in autumn, soon after they are ripe, then the plants will come up the following spring; but those which are sown in the spring will not grow the same year. When the plants come up, they should be kept clean from weeds; and, if they are too close, some of them may be drawn out and transplanted on a shady border, which will give the remaining plants room to grow till autumn, when they may be transplanted into the borders of the flower-garden where they are designed to flower; after which they will require no other culture but to keep them clean from weeds, and dig the ground between them every spring. No. 3 increases by its bulbs; which it produces instead of seeds, and requires a very moist situation. No. 4 is propagated by seeds, sown on a moderate hot-bed in the spring, often watering the ground to bring up the plants; and, if the season should prove warm; the glasses of the hot-bed should be shaded in the heat of the day. When the plants are up, they should have a large share of fresh air, to prevent their drawing up weak, and should be frequently refreshed with water. When they are fit to remove, plant each in a separate pot, plunging them into a moderate hot-bed to forward their taking new root; after which gradually inure them to bear the open air; into which remove them the beginning of June, and let them remain there till October; when they should be removed into a common frame, where they may be sheltered from

frost in winter, but always enjoy the free air in mild weather. The spring following some of the plants may be shaken out of the pots, and planted in borders; but a few should be put into larger pots, where they may flower and feed. See ANAGALLIS, CAPRARIA, CHIRONIA, CRASSA, DRACOCEPHALUM, EPILOBIUM, JUSSIEUA, LUDWIGIA, LYTHRUM, MIMULUS, OENOTHERA, OLDENLANDIA, PHLOX, RHEXIA, SCUTELLARIA, and VERONICA.

LYSIMA'CHIA, in ancient geography, a town of Thrace, called in the time of Ptolemy *Xamilium*.

LYSIM'ACHUS, king of Thrace, one of the captains of Alexander the Great, rose from a mean condition to the favour of that prince. He is said, however, once to have incurred his displeasure to such a degree, that he was exposed to a fierce lion in his den, when he gave a signal proof of his strength and courage, by strangling the animal. This act, as it may be supposed, procured him pardon and favour. At the partition of the empire of Alexander, B.C. 323, Thrace, the Chersonese, and the adjacent countries to the Euxine Sea, were allotted to Lyfimachus. On taking possession of these territories, he soon had them to defend against Seuthes, a descendant of the ancient Odrysian kings, with whom he fought a dubious battle, but in the result he preserved his dominions. When Antigonus had rendered himself formidable to all the other sharers, Lyfimachus joined in the league against him with Seleucus, Ptolemy, and Cassander. See the article GREECE, vol. viii. 949-954. By a subsequent treaty, Thrace was confirmed to him; and, in imitation of the other captains, he took the title of king. He founded the city of Lyfimachia, B.C. 309, and made it his capital. Having married one of his daughters to Antipater king of Macedon, that prince, when expelled from his throne, took refuge with Lyfimachus; but this unnatural relation put him to death, and imprisoned his own daughter. Being afterwards engaged in a war with Dromichætes, king of the Getæ, he was taken prisoner, but was liberated by his son Agathocles. When Demetrius, upon the throne of Macedon, was preparing to recover all his father's dominions, Lyfimachus joined in a confederacy with Seleucus and Ptolemy, and invaded Macedonia. The ruin of Demetrius was the consequence; and, when that prince had delivered himself up to Seleucus, Lyfimachus was safe enough to offer him a large sum of money to put the unfortunate captive to death, which Seleucus generously refused. Pyrrhus, king of Epirus, having occupied the vacant throne of Macedon, Lyfimachus claimed a share of the kingdom; and while Pyrrhus was engaged in other schemes of ambition, he seized the whole country, B.C. 288, in which he reigned some years unmolested. He had now, in his old age, a flourishing family of fifteen children; but domestic discord poisoned this external prosperity. He had married his eldest son, Agathocles, to Lyfandra, daughter of king Ptolemy; and had himself taken to wife Arfinoe, a daughter of the same king by another queen. Arfinoe infused suspicions into his mind against his son, who was a prince of great hopes, and the favourite of the army and people. Forgetful of his obligations to this son, and of the parental tie, Lyfimachus first imprisoned and then poisoned him. Upon this catastrophe, Lyfandra with her children fled to the court of Seleucus, where they were joined by several malcontents of rank, all of whom urged that king to make war upon the tyrant. Seleucus, who had now no other rival in power than Lyfimachus, lent a willing ear to the proposal, and immediately overran his Asiatic dominions. Lyfimachus assembled a great army, and crossed the Hellespont to oppose him. These two only remaining captains of Alexander, both far advanced in years, met at Curopedion in Phrygia, where an obstinate and bloody engagement ensued, in which Lyfimachus, after exerting himself with the utmost bravery, was killed on the spot, and his army was entirely defeated. He fell, B.C. 282, in the seventy-fourth year of his age, having first lost all his children except two. His body was recognized in the field only by a favourite

dog, who would not leave it. With undoubted courage and abilities, he was characterized by a cruel and ferocious disposition, which rendered him unworthy of his fortune. Seneca, in his treatise on anger, relates, that one Telephorus, a Rhodian, his friend, having fallen under his displeasure, he caused his nose and ears to be cut off, and shut him up in a den, like a wild beast, where he kept him in filth and nakedness till he had almost lost the human form. *Plutarch*.

LYSIM'ACHUS, the fifth son of Ptolemy, a Jew of Jerusalem, who translated the book of Esther out of Hebrew into Greek. His translation was carried from Jerusalem to Alexandria by Dositheus, who called himself a priest of the tribe of Levi, in the fourth year of the reign of Ptolemy Philometor, A.M. 2837, ante A.D. 177.

LYSIM'ACHUS, brother of Menelaus, high priest of the Jews. Menelaus purchased the high-priesthood with a large sum of money, which he promised Antiochus Epiphanes; but he took no care to pay it, and thereupon was cited to appear at Antioch. In his absence he left his brother Lyfimachus at Jerusalem, who, in order to raise the sums for which his brother was indebted, began to pillage the treasury of the temple; (2 Macc. iv. 39, 40.) The people rose, and murdered him, as related under the article JEW, vol. x. p. 794, 5. Lyfimachus is sometimes reckoned among the high priests, because he was vicegerent to his brother Menelaus; but he never himself possessed the high-priesthood. B.C. 170.

LYS'INE, in ancient geography, a town of Asia, in Pamphylia, between Comana and Cormafa, according to Ptolemy.

LYSINE'MA, *f.* [from the Gr. *λυσίς*, a separation, and *μηνα*, a thread or stamen; because the stamens are unconnected with the corolla, proceeding from the receptacle, below the germen; by which character alone the genus is distinguished from *Epacris*, their habit being exactly the same.] In botany, a genus of the class pentandria, order monogynia, natural order epacridææ, *Brown*. The generic characters are—Calyx: perianthium inferior, of many erect, imbricated, coloured, permanent, leaves; the inner ones gradually largest. Corolla: of one petal, salver-shaped; its tube generally splitting into five parts; limb in five smooth beardless segments, obliquely twisted to the right. Nectary of five glands, surrounding the base of the germen. Stamina: filaments five, thread-shaped, equal, inserted into the receptacle; antheræ incumbent, oblong, bursting lengthwise, rising just above the tube. Pistillum: germen superior, roundish, with five furrows; style thread-shaped; stigma obtuse. Pericarpium: capsule of five cells and five valves. Seeds: numerous, minute. Receptacles: five, attached to the central column.—*Essential Character*. Calyx of many imbricated coloured leaves. Corolla salver-shaped; its limb five-cleft, beardless. Stamina inserted into the receptacle, the length of the tube. Capsule of five cells, with many seeds. *Brown Prodr. N. Holl.* p. 552.

*Species*. 1. *Lyfinema pentapetalum*: corolla divided to the bottom; its claws unconnected, longer than the calyx, externally smooth. Found by Brown in the southern part of New Holland.

2. *Lyfinema ciliatum*: corolla divided to the bottom; its claws cohering at the top, externally smooth, the length of the calyx. Native of the same country.

3. *Lyfinema lasianthum*: corolla divided to the bottom; its claws externally woolly, rather longer than the calyx. Gathered by Menzies at King George's Sound, on the south-west coast of New Holland. The stem is shrubby, as in all the rest, its branches very slender, smooth, round, leafy. Leaves scattered, about a quarter of an inch long, elliptic-oblong, narrow, obtuse, entire, smooth. Flowers few, in a terminal simple spike, leaning one way, apparently tawny or bluish-coloured, each near half an inch long.

4. *Lyfinema confpicuum*: tube of the corolla five-cleft above, longer than the calyx; leaves lanceolate-awl-shaped; close-pressed. Found by Brown in the south of New Holland.

5. *Lyfinema*

5. *Lysinema pungens*: tube of the corolla undivided, the length of the calyx; leaves spreading, ovate, sharp-pointed. Native of the country about Port Jackson, New South Wales, from whence specimens were sent in 1791 by Dr. White. The stem is woody, with many straight rigid branches, thickly beset with sessile, rigid, smooth, entire, ribbed, spinous, and taper-pointed, leaves. Flowers white and fragrant, very elegant, in dense, leafy, terminal spikes. Mr. Brown says, that this is an intermediate species, as it were, between *Lysinema* and *Epacris*: it agrees with the latter in its corolla, but has the insertion of the stamens proper to the former. See *EPACRIS*, vol. vi. p. 850.

**LYSIP'PUS**, a celebrated sculptor and statuary of antiquity, was a native of Sicyon, and flourished in the time of Alexander the Great. He was originally a worker in brass; but became an artist through the encouragement of the painter Eumolpus, who advised him, instead of forming himself upon the imitation of any particular master, to copy after nature herself. He worked with extraordinary diligence and facility; so that he is said to have left 1500 performances, all of such excellence, that any one of them singly might have conferred celebrity on the artist. His reputation was so high, that Alexander permitted him alone to make his effigy in cast metal. He executed a series of figures of that prince, beginning from his childhood; and likewise made statues of Hephestion and his other friends; all which were brought to Rome by Metellus after the conquest of Macedonia. Lysippus improved the art of statuary by a better imitation of the hair, and by an attentive study of symmetry, in which he considered how the human figure appeared to the eye, not what were its exact proportions. For this reason he was the first who reduced the size of the head, and thereby made his statues appear taller and more elegant. Among his works, the figure of a man scraping himself with a strigil was particularly admired. It was placed by Marcus Agrippa before his public baths; and being removed by Tiberius into his own chamber, the Roman people were so clamorous in the theatre for its restitution, that the emperor thought it best to comply. A chariot of the sun, at Rhodes, was one of his great works; which, however, was surpassed by a colossus at Tarentum, forty cubits high. He likewise practised in encaustic painting. *Gen. Biog.*

**LY'SIS**, a Pythagorean philosopher who flourished in the fifth century B.C. was a native of Tarentum; and, according to Jamblicus, was instructed by Pythagoras himself, towards the close of his life. This philosopher, having opened a school at Crotona, refused to admit into it Cylon, one of the principal persons for wealth and influence in that city, but of a bad character and disposition. Exasperated at this refusal, Cylon determined on an inhuman revenge; and, having at a concerted time assembled his partisans, set fire to the house of Milo, where about forty Pythagoreans were assembled, who were all burnt, or stoned to death, excepting Lysis and Archippus, who fortunately made their escape. Lysis now retired at first into Achaia, and afterwards to Thebes, where he opened a school, died, and was buried. Lysis is celebrated for having been a most exact and punctual performer of his promises; even on the most trivial occasions. As an instance of this, Jamblicus relates, that, as he was one day about to leave the temple of Juno, where he had been performing his devotions, he met Euryphamus of Syracuse, one of his fellow-disciples, who came thither for the same purpose. The latter requested that he would wait a short time, and he would join him; which Lysis promised to do. After Euryphamus had offered up his prayers, he became so absorbed in meditation, that he quite forgot his friend, and went out at another door. Lysis waited for him during the remaining part of the day, the night following, and part of the next morning, and would have waited much longer, had not Euryphamus, upon entering the school, and perceiving him not present, recollected the meeting on the preceding day. Upon this he immediately returned

to the temple, where he found Lysis; to whom he apologized for his conduct by observing, that God had permitted his forgetfulness, in order that his friend might be furnished with a glorious opportunity of displaying his scrupulous exactness in keeping his word. Lysis composed commentaries on the philosophy of Pythagoras, which have been long lost. Diogenes Laertius testifies, that in his time there were extant some treatises of this philosopher, which commonly passed under the name of Pythagoras. Some attribute to him the "Golden Verses;" while others give them to Philolaus or Empedocles. The arguments by which learned men support their different hypotheses on this point may be seen in Fabricius, who is for ascribing them to the last-mentioned philosopher. There is still extant, under the name of Lysis, a letter addressed to Hipparchus, in which the latter is reproached for having divulged the secrets of the Pythagorean philosophy. It is preserved in various collections, and among others in the *Opuscula Mythologica et Philosophica* of our learned countryman, Dr. Thomas Gale. *Diog. Laert. Jamblic. Vit. Pythag.*

**LYSIS'TRATUS**, a brother of Lysippus. He was the first artist who ever made a statue with wax. *Pliny.*

**LYSKO**, a town of Lithuania, in the palatinate of Troki: twenty-four miles north of Grodno.

**LYSKO**, a town of Lithuania, in the palatinate of Novogrodek: fifty-two miles south-west of Novogrodek.

**LYSOBY'KI**, a town of Austrian Poland: twenty miles north-north-west of Lublin.

**LY'SSA**, *f.* [Greek.] A word used by medical authors to express that species of madness which is peculiar to dogs and wolves, but is communicated by their bite to man and other animals. Hence persons labouring under the dismal effects of such a bite, are called also *lyssodæti*.

**LY'SENDORF**, a town of France, in the department of the Sarre, and chief place of a canton, in the district of Prum. The place contains 117, and the canton 1962, inhabitants.

**LY'STON**, or **LIS'TON**, in Devonshire, is at present nothing more than a considerable village, although formerly a market-town; the market was held on Saturday, and it had four fairs; at present it has only three, viz. February 2, Holy Thursday, and October 28.

**LY'STRA**, a city of Lacaonia, whereof Timothy was a native. Paul and Barnabas, having preached there A. D. 45, and healed a man who had been lame from his birth, were taken for gods; Paul for Mercury, and Barnabas for Jupiter. These apostles had a great deal of difficulty to prevent the people from offering sacrifices to them; but very soon after, certain Jews of Iconium and Antioch in Pisidia coming thither animated the populace against them, who thereupon began to throw stones at Paul and Barnabas, and dragged them out of the city supposing they were dead. *Acts* xiv. 6-19. See **LYCAONIAN LANGUAGE**, p. 807.

**LY'STRA**, a town of the state of Kentucky, on Salt River.

**LY'SWIK**, a town of Sweden, in the province of Wärmeland: thirty-four miles north of Carlstadt.

**LYT'BORROW**, a village in Northamptonshire, between Tewcester and Daventry.

**LYP'CHAM**, a village in Norfolk, between East Dereham and Castle Rising.

**LYTE'RIA**, *f.* [Greek.] The solution of an acute disease.

**LYTE'RIAN**, *adj.* Belonging to the lyteria; discovering the solution of a disease. *Scott.*

**LYTH**, a township of England, in the north riding of Yorkshire, with 1037 inhabitants, of whom 550 are employed in trade and manufactures: three miles north-west of Whitby.

**LY'THE**, a hamlet to Hellington, and adjoining Crothwaite, in Westmoreland. In this hamlet there is a large moss known by the name of Lythe-Moss, where several large trees are frequently dug up. One oak contained 2009 feet of wood. In this chapelry are some very deep

deep pits; the largest of which is said to be unfathomable, but has a subterraneous passage with the Kent-river: the water from these pits runs through Thorpel-bridge.

LY'THE CHAP'EL, a village in Suffex, north-west of Stedham.

LYTHRO'DES, *f.* [from *λυθρον*, Gr. coagulated blood, which is the appearance of fresh-broken specimens of this mineral.] A new genus and species of mineral, discovered by D. L. G. Karsten, at Fridrichsworn in Norway, and described by him in the *Gesellschaft Naturforschender Freunde zu Berlin Magazin*, 1810. The following are its characters—Colour: aurora red, passing into brownish red, and in some specimens through flesh red into yellowish brown and pale brown, here and there with cream, yellow, and greenish, spots. External aspect: massive and disseminated. Lustre: in the principal fracture, resinous and glimmering; in the cross fracture, without lustre. Fracture: passing from uneven to splintery; but the texture concealed foliated with several cleavages, which were only ascertained after having examined a number of specimens. It is opaque, or at most slightly translucent on the edges; pretty easily frangible. Specific gravity, 2.510. Not particularly heavy. According to an analysis of this fossil performed by Dr. John, its constituents are as follows:

Silica	- - - -	44.62	} 100.00.
Alumina	- - - -	37.36	
Lime	- - - -	2.75	
Soda	- - - -	8.00	
Water	- - - -	6.00	
Oxyd of iron	- - - -	1.00	
Loss	- - - -	0.27	

There is no other mineral which possesses the characters and yields the same constituents as this, among which the proportions of soda and water are the most remarkable. Some of the varieties of this mineral, where two of the plates that occasion the concealed foliated fracture are set perpendicularly upon each other, may be mistaken for a species of felspar; but a closer inspection, together with the consideration of its constituents, will undeceive us. When lythrodos exhibits small splendid particles, it contains labrador felspar mixed with it. The other substances occasionally mixed with this mineral are black hornblende, white analeime, and dark brown zircon.

LY'THRUM, *f.* [*λυθρον*, Gr. gore; from the purple colour of the flower.] WILLOW-HERB; in botany, a genus of the class dodecandria, order monogynia, natural order of calycanthemæ, (salicariæ, *Juss.*) The generic characters are—Calyx: perianthium one-leaved, cylindrical, striated; with twelve teeth, alternately smaller. Corolla: petals six, oblong, bluntish, spreading, with the claws inserted into the teeth of the calyx. Stamina: filaments twelve, filiform, the length of the calyx; the upper ones shorter than the lower; antheræ simple, rising. Pistillum: germ oblong; style awl-shaped, the length of the stamens, declined; stigma orbiculate, rising. Pericarpium: capsule oblong, acuminate, straight, two-celled, or one-celled. Seeds: numerous, small.—*Essential Character.* Calyx twelve-toothed: petals six, inserted into the calyx; capsule two-celled, many-seeded.

*Species.* 1. *Lythrum falicaria*, common or purple willow-herb: leaves opposite, cordate-lanceolate; flowers in spikes, twelve-stamened. Root perennial, thick, branched, somewhat woody, widely extended. Stem from two or three to four or six feet high, upright, tinged with red, below smooth and four-cornered, above pubescent and five-cornered; corners sharp, membranaceous, rugged. Leaves sessile, embracing, about three inches long, smooth above, underneath slightly downy. Flowers in clusters, placed at a little distance from each other, in the axils of the leaves, each consisting of about eight flowers, together forming a long leafy spike; corolla red purple. Scopoli remarks that there are eighteen flowers in a whorl, that the calyxes are sessile and ten-cornered, the capsule brown, separable from the calyx, and two-celled or three-celled, the seeds wedge-shaped and rufescent, and that the whole

plant becomes red as it advances in age. Krocker observes, that the calyx is not green, but white, with twelve red streaks, that the petals are waved, and that the stamens vary in number from six to twelve. Native of most parts of Europe, in marshes, and on the banks of rivers, ponds, and ditches, which it ornaments with its beautiful spikes of purple flowers. Thunberg also found it in Japan, and remarks that it is entirely smooth there. It flowers late in the summer; Linnæus says, with *Hypericum perforatum*, or common St. John's wort. It is astringent, and is recommended by De Haen and several other foreign physicians in long-protracted diarrhœas and dysenteries. A decoction or the expressed juice is given from one to three ounces. When dried and powdered, it imbibes a great quantity of water before it loses its glutinosity. It has been used with success in tanning leather. It seems generally to remain untouched by cattle; Schreber however affirms, that they feed on it. In English it is named *purple-spiked willow-herb*, or *loosestrife*, to distinguish it from *Lythymachia*, the common *yellow loosestrife* or willow-herb; and from *Epilobium*, which is also called willow-herb. In German, *braune weiderich*, *rother weiderich*, *purpur weiderich*, *weidenkraut*, *blutkraut*, *blauer fuchschwanz*; in Dutch, *partyke*; in French, *salicairé*, *tismaque rouge*; in Russian, *plakun*.

There are several varieties of this handsome plant. One of these  $\beta$ , is made a distinct species by Mr. Miller. The stalks are upright and branching, three feet high. Leaves cordate-ovate, an inch long, and three quarters of an inch broad, downy, and placed by threes. Flowers in long spikes, disposed in thick whorls, with spaces between each; they are of a fine purple colour. It is *Salicaria purpurea foliis subrotundis*, *Tournef. Inst.* 253. It is a smaller plant than the common, much more downy, and the leaves broader. We are not told of what country it is a native.

$\gamma$ . *L. trifolia*. The common sort often varies with three leaves to a joint; in which case the stem is six-cornered.

$\delta$ . *L. quadrifolia*. It has sometimes even four leaves at a joint. Boccone says, the leaves are softer and longer.

$\epsilon$ . *L. foliis alternis*. Linnæus, in his *Flora Lapponica*, mentions a singular variety, of which he found only a single plant there. The stem a foot high and simple; leaves alternate, cordate-lanceolate, sessile; flowers from each upper axil, solitary, sessile. Miller has two other species, that seem to be only varieties of *L. falicaria*. 1. *Lythrum Lusitanicum*, the *Salicaria Lusitanica*, *angustifloræ folio*, of *Tournef. Inst.* 253. It grows naturally in Spain and Portugal, by the side of waters; but is seldom more than a foot high. Leaves smooth, growing by threes, narrower and shorter than the common sort; flowers in terminating spikes, of a light purple colour, appearing in July. 2. *L. Hispanicum*, the *Salicaria Hispanica hystopifolia*, *flor. oblongis saturate cæruleis*, of *Tournefort*. This is also a native both of Spain and Portugal. The stalks are slender, not more than nine or ten inches long, spreading out on every side; the lower part has oblong-ovate leaves, placed opposite; on the upper part, the leaves are narrower, and alternate. The flowers come out singly from the side of the stalks at each joint; they are larger than those of the common sort, and of a deeper purple colour; they therefore make a fine appearance in July, when they are in beauty.

2. *Lythrum virgatum*, or fine-branched willow-herb: leaves opposite, lanceolate; panicle, virgate; flowers twelve-stamened, in threes. Root perennial, thick. Stems upright, panicled, from a foot to two feet in length; at bottom hard and woody, round, pale brown mixed with green, commonly without leaves; towards the top green, four-cornered, leafy, with rod-like, axillary, upright, long, alternate, branches. Leaves opposite, quite entire, acuminate, an inch and a half long, on very short petioles, or sessile. Flowers in spikes, of the same colour and size as in the preceding, peduncled, in whorls, six in a whorl, the lower ones more remote, all axillary. Linnæus says,

that it varies, though seldom, with alternate leaves. Native of Austria, Silesia, and Siberia. Introduced in 1776, by Jos. Nic. de Jacquin, M.D. It flowers from June to September.

3. *Lythrum fruticosum*, or shrubby willow-herb: leaves opposite, subtomentose underneath; flowers ten-stamened; corolla shorter than the calyx; calyx shorter than the genitals. This is a shrub, with a lacerated bark. Leaves sessile, lanceolate, quite entire. Flowers solitary, peduncled, subterminating. Native of China.

4. *Lythrum verticillatum*, or whorled willow-herb: leaves opposite, tomentose underneath, subpetioled; flowers in whorls, lateral. This rises with a stiff branching stalk a foot and a half high. Leaves oblong. Flowers in whorls, pale purple, appearing in July. Native of Virginia.

5. *Lythrum petiolatum*, or footstalk-leaved willow-herb: leaves opposite, linear, petioled; flowers twelve-stamened. This rises with an upright woolly stalk near two feet high. Flowers axillary, solitary, small, pale purple; appearing in July. Native of Virginia.

6. *Lythrum lineare*, or linear-leaved willow-herb: leaves opposite, linear; flowers opposite, six-stamened. Stalks slender, about a foot high. Flowers white; calyx streaked, cut into six parts at top. It flowers in June; and is a native of Virginia.

7. *Lythrum Parsonia*, or Parsons's willow-herb: leaves opposite, oval; flowers alternate, six-stamened, sessile; stem diffusid. Roots filiform. Stem prostrate or creeping, branched, round, slender, seldom exceeding ten or fourteen inches in length; flowers pale red. Native of Jamaica and Hispaniola; flowering the whole year. Dr. Browne, supposing it to be a new genus, named it *Parsonia*, after Dr. Parsons, who published a treatise on the seeds of vegetables, and many other curious remarks on different parts of natural history. Jussieu keeps it separate from *Lythrum*, under the name which Browne had given it; the calyx being ventricose, and only six-toothed; itamens only six, short so as not to stand out of the corolla; capsule small, membranaceous, covered by the calyx, containing few seeds, fastened to a central receptacle. The flowers are axillary, alternate, and solitary.

8. *Lythrum melanium*: leaves opposite, ovate, flowers alternate, mostly ten-stamened; stem prostrate. This is a weakly plant, with a slender stem a foot high, well supplied with branches towards the top; and having a disagreeable sharp smell, approaching much to that of Guinea henweed, but more subtle, and less perceptible when placed close to the nose; hence the trivial name. The leaves and flowers are much like those of the preceding, as well as the disposition and make of the capsule; but that plant does not branch so much, nor has it any thing of this smell. Native of Jamaica, in the cane-pieces. If *Parsonia* should be separated from *Lythrum*, this will accompany it.

9. *Lythrum cordifolium*, or heart-leaved willow-herb: leaves opposite, subsessile, cordate, acute, rugged; racemes terminating and axillary: flowers ten-stamened. Native of Hispaniola.

10. *Lythrum ciliatum*, or ciliated willow-herb: leaves opposite, petioled, ovate, smooth, ciliated; racemes terminating; flowers mostly pointing one way, ten-stamened. Native of Jamaica.

11. *Lythrum cuphea*, or clammy willow-herb: leaves opposite, petioled, ovate-oblong, somewhat rugged; flowers twelve-stamened. Root fibrous, annual. It has a delicate slender stalk, round, upright, ten inches or a foot in height, pubescent, purple. The whole plant is extremely viscid all over. Leaves quite entire. Flowers lateral, on very short peduncles, solitary, decumbent. It differs from *Lythrum* in having a six-toothed unequal calyx; six (or five) unequal petals; and a one-celled capsule without valves, bursting by the enlargement of the receptacle; hence Jussieu, Gartner, and others, following Browne, have made it a distinct genus under the name of *Cuphea*.

It is a native of Brazil and Jamaica; and flowers in July and August.

12. *Lythrum triflorum*, or three-flowered willow-herb: very smooth; leaves opposite, lanceolate, entire; peduncles axillary, opposite; head three-flowered. Root perennial. Easily distinguished from the rest by its filiform peduncles, terminated by two lanceolate channelled spreading bractes, longer than the flower; and between these three regular flowers, on short pedicels, blue and small. Jussieu doubts whether this, which is the *Nesaea* of Commerçon, really belongs to this genus. According to him, the leaves are opposite; the peduncles opposite, axillary, three-flowered; the calyx ventricose, with from eight to ten teeth; the corolla four or five petalled, with from eight to ten itamens, and the fruit two-celled. Native of America.

13. *Lythrum pemphis*, or globular willow-herb: shrubby; hirsute; leaves opposite, oblong, entire; flowers axillary, peduncled, solitary; capsule cut round horizontally, one-celled. This is a hoary shrub. Leaves approximating, at the tops of the branches. It appears to be of a different genus, on account of its one-celled circumscised fruit; but, if one difference be deemed sufficient to constitute a separate genus, genera will be multiplied too much; and natural genera ought as much as possible to be kept entire. Forster has given it under the name of *pemphis*, from *πυμπίς*, a bubble, which the globular germ represents. According to him, the capsule is one-celled and six-valved, the seeds angular, compressed, fastened to a short three-toothed receptacle at the bottom of the capsule; in other respects the characters agree with those of *Lythrum*; and in his *Flora* he has given it under Linnæus's name. Found by Koenig on the coast of Ceylon, and by Forster in the island of Teautea in the South Sea.

14. *Lythrum racemosum*, or branched willow-herb: diffusid; leaves opposite, petioled, ovate; racemes terminating; flowers, opposite.

15. *Lythrum dipetalum*, or two-petalled willow-herb: hispid-viscid; leaves in threes, or opposite, sessile, ovate; flowers axillary, nodding, two-petalled. Both these were found in South America by Mutis.

16. *Lythrum hyssopifolia*, or hyssop-leaved willow-herb: leaves alternate, linear; flowers six-stamened. Root annual; (Miller says perennial.) Stems prostrate, simple, or branched only near the root, rod-like. Flowers axillary, solitary, subsessile, small, blue; (Ljunæus says purple, white at the base; Miller, light purple.) Scopoli says, the stem is half a foot long; the branches angular; the calyx cylindrical, streaked, smooth, twelve-toothed; the teeth alternately smaller and upright; the capsule four-celled, four-grooved, blunt, inclosed in the calyx, rufescent, cylindrical; the seeds roundish, as many as fifty-six in one cell. The fruiting calyxes are pressed to the scape. Pollich remarks, that, though the flowers are solitary, yet that sometimes there are two together sitting close in the axil of a leaf; that the calyx is six-toothed, and that the teeth are short-pointed, spreading, and red at the tip. Mr. Miller says that the stems are a foot, and Monf. Villars that they are two feet, long. The latter remarks that the leaves are very bitter. Krocker affirms, that the stems are suberect, not properly decumbent, and that they are a foot or more in length, quadrangular, with simple suberect brachiate branches from the base. Leaves glaucous-green, smooth, on very short petioles or sessile, an inch long and two lines wide. Flowers one, or two alternate; petals five or six, rose-coloured. Part of this description is from Hallet. Native of many parts of Europe, as Germany, Swisserland, Austria, France, Italy, England, in wet meadows, watery places, and especially where water stagnates in winter; but it does not seem to be very common any where. With us it is found on Hounslow heath; between Staines and Laleham; on Hinton, Hinton, and Teversham, moors, and at Oakington, in Cambridgeshire; on the Banbury-road from Oxford,

near the first turnpike-gate; Feversham in Kent; in the ditches near the Abbey pond; near the Wheat-sheaf, five miles beyond Huntingdon on the north road; about Wilford in Northamptonshire; flowering in July and August. In English it is called *grafs-poly*, or *small hedge-hyffop*.

17. *Lythrum thymifolia*, or thyme-leaved willow-herb: leaves alternate, linear; flowers four-stamened. Root annual. Very like the preceding, but only half, or one third, of the size. Stems, according to Villars, creeping, five or six inches long, with others smaller springing from their centre, which have several alternate branches. Krocker says the stem is upright, with sometimes a branch or two, but commonly simple. The flowers are much smaller than in the preceding sort. Native of the south of France, Italy, Silesia, &c. in moist meadows and ditches; flowering in August. Krocker suspects that it may be a variety of the preceding.

18. *Lythrum Americanum*, or South American willow-herb: leaves oblong-ovate; below, opposite; above, alternate; flowers, six-stamened. This has a woody root, from which arise two or three slender stalks, upwards of two feet high. Flowers from the upper axils, solitary, small, white, six-petalled; they do not appear till the second year from seed. It was discovered by Dr. Houfloun at La Vera Cruz, in swamps; and was cultivated by Mr. Miller before 1733, but has been since lost.

*Propagation and Culture.* The first, with its varieties, may easily be cultivated by parting the roots in autumn, but should be planted in a moist soil. It is a handsome plant, and deserving of a place in large gardens and plantations. The other hardy foreign sorts, N<sup>o</sup> 2, 4, 5, 6, may be increased in the same manner. When raised from seed, the seeds should be sown in autumn; otherwise they will remain a year in the ground. N<sup>o</sup> 16, 17, being annual, must be raised from seeds; but they are bog-plants, and seldom cultivated in gardens. The rest are too tender to live in the open air. Sow the seeds in pots, and plunge them into an old hot-bed. They will not rise unless they are sown in autumn. Shelter them through the winter, and in spring place them in a fresh hot-bed. Treat them as other tender plants from hot countries.

LYTH'UM, a village in Amounderness, Lancashire; here was formerly a priory.—A village in the east riding of Yorkshire, near North and South Cove.

LYT'TA, *f.* in entomology, a genus of coleopterous insects. Generic characters—Antennæ filiform; feelers four, unequal, the hind ones clavate; thorax roundish; head inflected, gibbous; wing-shells soft, flexile, as long as the abdomen. This genus includes many of the species included by Linnæus under that of *Meloe*, and by others among the *Cantharides*, particularly the famous blister-insect; though indeed many other species of this, and of the other genera, are capable of raising a blister, when reduced to powder and applied to the skin. There are thirty-two species, all of them exotics.

1. *Lytta vesicatorius*, the proper blister-insect, or Spanish fly. This is an insect of great beauty, being entirely of the richest gilded grass green, with black antennæ. Its shape is lengthened, and the abdomen, which is pointed, extends somewhat beyond the wing-sheaths: its usual length is about an inch. It is shown on the preceding Plate, at fig. 2. This celebrated insect, the cantharis of the materia medica, forms, as is well known, the safest and most efficacious epispastic, or blister-plaster, raising, after the space of a few hours, the cuticle, and causing a plentiful ferous discharge from the skin. It is supposed, however, that the *cantharis* of Dioscorides, or that used by the ancients for the same purpose, was a different species, viz. the *Meloe cichorei* of Linnæus, an insect of a black colour, with three transverse yellow bands on the wing-shells. These insects were formerly brought only from Spain, whence they were called Spanish flies; but they are met with in France, Italy, and some parts of Germany, and even of England. In the southern parts of Europe it multiplies exceedingly; some of the provinces of Spain

annually receive a large sum for those they export to the rest of Europe. They are there seen in vast swarms, and alighting upon trees and shrubs, whose leaves they devour. They are said to prefer the ash-leaf to that of any tree in the forest; but, whatever leaves they devour, they are uniformly accompanied with a heavy nauseous smell, like that of mice, and thence their haunts are discovered by those who go in quest of them. In their humid and living state, the odour exhaled from these insects is so corrosive and irritating, that the gathering them is attended with danger; so that the labourers, who imprudently collect them in the heat of the day, and with their hands uncovered, are frequently seized with a violent heat of urine, and voiding of blood. The same accidents befall those who unwarily sleep under the trees they frequent. The female seems to feel the access of amorous desire in a more violent degree than the male: it is she that courts the male; and, in the great act of fecundation, it is she that occupies that place to which in most animals nature directs the other sex. After impregnation, she deposits her eggs in the ground, where they remain till they have undergone the various changes that are to bring them forth winged flies.

The common way of collecting these insects is, to spread cloths under the trees containing them, to shake them down, and then kill them by putting them on a hair sieve and exposing them to the vapour of boiling vinegar, or else (which is the commonest mode) simply to immerse them in vinegar and water. They are then dried thoroughly, either in the sun or in airy chambers, being frequently turned by the hands armed with gloves. They are then well and carefully packed in close wooden barrels lined on the inside with paper. *Cantharides* in this state will keep well for a considerable time, and, if in close vessels, they hardly acquire any smell; but if in open vessels, and in the damp, they putrefy in some degree. They are liable, however, notwithstanding their very corrosive quality, to be attacked by very small worms, which gradually crumble them to powder in every part except the wings. The acrid quality, however, is not very materially injured thereby, and remains for a great length of time, though slowly diminishing in intensity.

When thus collected and dried, these insects become so light, that fifty of them hardly weigh a dram: it is in that state they are grinded down into the well-known powder which constitutes the basis of the common blistering-plaster. M. Rubiquet (*Annales de Chimie*, Dec. 1810) has made a set of experiments, to ascertain whether the vesicating property, for which these insects are so remarkable, resides in the whole of the animal, or belongs to some peculiar substance capable of being separated by chemical menstrua from the rest. After various attempts more or less successful, he discovered the following simple process, by which the vesicating principle may be obtained in a state of perfect purity: Take any quantity of the bruised insects, and boil them in distilled water; strain off the reddish-brown decoction, and digest the residue two or three times more in boiling water, till the last decoction comes off nearly colourless. The insoluble residue affords a green tincture with alcohol, which, being gently evaporated leaves behind a green fluid oil entirely destitute of any vesicating property. The aqueous decoction, being reduced by evaporation to the state of a soft extract, is to be repeatedly digested in boiling alcohol as long as any thing is taken up by this menstruum. The insoluble portion is a black matter soluble in water, and incapable of vesicating. The alcoholic solution is of a yellow colour, and excessively acrid. This latter is to be reduced to a soft state by gentle evaporation; and the yellow residue is to be digested in cold sulphuric ether, in a well-stopped vial, and frequently shaken. In the course of a day or two the ether will have acquired a pale yellow colour, when it is to be poured off from the undissolved portion, and exposed to spontaneous evaporation. By this method there will be deposited a quantity of micaceous-looking scales,

scabs, fouled with a few small drops of a yellowish fluid. This may be removed by subsequent digestion in cold alcohol, and the micaceous crystallized matter alone will remain. This latter is the pure vesicating principle; the smallest visible particle dissolved in a little oil (in which it is readily soluble), and applied to the skin, will in an hour or two raise a perfect blister. These experiments are interesting to the medical practitioner, inasmuch as they offer a method of obtaining this substance in a state in which it is soluble in oil, and may therefore be advantageously employed in stimulating frictions.

As a medicine, the blister-insect has been thought peculiarly to affect the kidneys and urinary passages, proving diuretic; though whether it affects the former it is much doubted, if we can believe the evidence of Dr. C. Smith and Dr. Cullen, notwithstanding Werlhof gives a remarkable instance of the diuretic powers of cantharides; and tells us, he had frequently experienced the same in dropsy and other diseases. He gave a grain of the powder in a dose, and repeated this every four hours; and it was only after the third dose, and after a suppression of urine of many days standing, that it began to yield. Externally they are caustic, and are used for blisters. They produce a more plentiful discharge of serum than any of the vegetable acids. They also destroy fungous flesh. Internally, their efficacy is truly valuable, when skilfully managed. The case where their internal use is most necessary, and most safe, is, when they are wanted to scour the urinary passages, and this is when they are obstructed with sloughs, and such viscidities as are apt to be washed off from the ulcerated parts; this happens mostly in women. In venereal cases, where much filth hath fallen on the genitals, the tincture is very useful. They are recommended in gravel, leprosy, the fluor albus, ulcers in the bladder, uterus, and kidneys. The phlegmatic may take them without much caution; but the hot and bilious require them mixed with proper correctors. Their use in cutaneous disorders has sometimes been successful. In cases of stone in the kidneys, fits of gravel, stone in the bladder, some oedematous cases, and sometimes in pregnant women, their use is not to be admitted. However used, they are apt to produce a strangury, and inflammation of the urinary passages; to prevent which, when blisters are applied, requires the assistance of nitre, oily drinks, soap-pills, &c. Washing the blistered part, when dressed, with warm milk, greatly relieves these symptoms. When imprudently taken into the stomach, they cause great heat, inflammation, bloody urine, a dribbling, heat, and priapism, thirst, and a cadaverous breath, &c. in which cases give nitre, camphor, mucilage of gum arabic, and acids; simple oxymel is of excellent use as an antidote. Sometimes blisters laid to the thighs, or calves of the legs, have produced a gangrene, because a flux of humours is very easily invited to these parts; therefore, should not be applied to them when they are oedematous, but rather to the inside of the arms, wrists, nape of the neck, or head.

Proof spirit, or a mixture of equal parts of water and strong ardent spirit, extracts by digestion, a tincture from cantharides which possesses all the virtues of the insects themselves. When this tincture is distilled, the spirit which comes over has the smell of the cantharides. Strong ardent spirit takes up the caustic part only; whence it follows that the intensity of the tincture may be varied, as well by varying the strength as the quantity of the spirit to a given dose of the insects. The uses and abuses of this tincture have been shortly stated at the word **CANTHARIDES**, vol. iii. p. 740.

2. *Lytta fegetum*: golden; shells green. This is smaller than the preceding; and is found in Barbary, among corn. The antennæ are black; head and thorax sometimes golden, sometimes green with a gloss of gold; body golden; legs dusky.

3. *Lytta nitidula*: green bronzed; shells testaceous; antennæ black. This species has been sometimes de-

scribed as belonging to the English insects; but by Gmelin as inhabiting the Cape only.

4. *Lytta collaris*: black; crown, thorax, and legs, ferruginous; the shells are of an azure colour. This is a large insect, and is found in the southern parts of Russia. The antennæ are ferruginous; edge of the thorax a little black. The male is as small again as the female.

5. *Lytta gigas*: azure; breast ferruginous; it inhabits Guinea. The size of this insect is about the same as that of the *L. vesicatoria*; one sex has the shells striate, but in the other they are smooth.

6. *Lytta Syriaca*: villous, green-blue; thorax rounded and ferruginous. It inhabits the southern parts of Europe, and is shown on the Plate, at fig. 3.

7. *Lytta ruficollis*: glabrous, green-gold; thorax rufous, tapering before. Inhabits the East Indies. See fig. 4.

8. *Lytta testacea*: above testaceous; shells with a large oblong black spot near the tip. The head is testaceous; mouth and antennæ black; thorax punctured and testaceous; shells smooth; body black. Inhabits Tranquebar.

9. *Lytta festiva*: shining brassy-green; shells testaceous with spots of brassy-green. The body is entirely green bronze; spot on the shells varying. Inhabits Siberia.

10. *Lytta marginata*: black; margins of the shells pale cinereous. Above opaque, beneath cinereous. Inhabits the Cape of Good Hope.

11. *Lytta vittata*: shells black, with a yellow margin. By some entomologists this is described as the *Cantharis vittata*. Head yellowish; crown with two black spots; thorax black, with three yellow lines; abdomen and legs black. Inhabits America.

12. *Lytta atrata*: body black, immaculate. About half the size of the *vittata*, and entirely of a deep black. Inhabits Barbary; and is the *Meloe Pennsylvanica* of some writers.

13. *Lytta erythrocephala*: black; head testaceous; thorax and shells with cinereous lines. The head is testaceous, with a black line down the middle; mouth black; thorax channelled; antennæ and feet black. Inhabits several parts of Austria; and is shown at fig. 5.

14. *Lytta oculata*: black, with a yellow callous dot behind the eyes. Body entirely black, immaculate; behind the eyes on each side is a large raised yellow dot. Female apterous, shells abbreviated. Inhabits Guinea.

15. *Lytta dubia*: black; crown fulvous; thorax and shells immaculate. Inhabits Siberia; and is the *Meloe Algericus* of some entomologists. See fig. 6.

16. *Lytta Afra*: black; thorax rufous. This species is found in Africa; and is the *Cantharis Afra* of Olivier.

17. *Lytta hæmorrhoidalis*: blackish blue; end of the abdomen rufous; the antennæ are black; head and thorax villous; body bluish.

18. *Lytta quadrimaculata*: black, glabrous; breast downy; shells yellowish-grey, with two black and almost square spots. A native of the northern parts of Asia; is found among flowers; and it exudes a very pleasant-smelling oil from its legs. This is a circumstance attaching likewise to

19. *Lytta fenestrata*: glabrous, pale, testaceous; thorax depressed; shells grey, tipped with black, and have two squarish hyaline spots. Found also in the Asiatic parts of Siberia, chiefly among flowers.

20. *Lytta clematidis*: black, with a steel-blue gloss; shell pale, testaceous, immaculate. Found on the clematis in Siberia.

21. *Lytta Uralensis*: black, opaque, glabrous. This is often confounded with the *atrata* above described, and is not sufficiently distinct from it. Inhabits Siberia.

22. *Lytta Sibirica*: black, opaque, glabrous; shells edged with white; head red; eyes, mouth, and antennæ, black. Is found on the lotus in divers parts of Siberia.

23. *Lytta lutea*: black, woolly; shells ventricose, sub-compressed, pale yellow with six black dots. Inhabits Siberia.

24. *Lytta ocellata*: black, woolly; legs testaceous; head, thorax, and shells, yellowish, the latter with six ocellate black spots in the middle. Inhabits the Caspian sea, and has been described particularly by Pallas. Like the *quadrinaculatus* and *fenesstrata*, it exudes an agreeable oil from its legs.
25. *Lytta pectinata*: antennæ pectinate; body black; front red. Inhabits Siberia.
26. *Lytta cinnabarina*: black; thorax above, shells, and head on each side, red. Inhabits Carniola.
27. *Lytta rufa*: black; head rufous. Inhabits Carniola.
28. *Lytta subvillosa*: yellowish, subvillous; antennæ tapering. Is found in many parts of France.
29. *Lytta bicolor*: testaceous; shells tipped with black. Inhabits France.
30. *Lytta formicaria*: brown; the fore-part of the elytra, and the thorax, which is elongated, are red. This is found in France and other parts of Europe.
31. *Lytta pubescens*: black; head and thorax pubescent; shells yellow, with a ferruginous spot on each side behind. This insect has been found only in museums by modern naturalists.
32. *Lytta ferruginea*: ferruginous; head and thorax rufous; shells brown, testaceous at the base. Inhabits various parts of Europe.

**LYTTTELTON** (Edward), Lord Lyttelton of Mounslow, keeper of the great seal in the reign of Charles I. was eminent for his probity and his moderation at the commencement of that monarch's disputes with his subjects. Without forfeiting his fidelity to the king, he preserved the esteem of the parliament till 1644, when he was made colonel of a regiment in the king's army at York. He died in 1645; and the title became extinct. Besides several of his speeches which have been printed, he wrote Reports in the Common Pleas and Exchequer, printed at London in 1683, in folio; several arguments and discourses, &c.

**LYTTTELTON** (George), Lord Lyttelton of Frankley, an elegant writer and historian, was the eldest son of Sir Thomas Lyttelton, bart. of Hagley in Worcestershire, where he was born in January 1708-9. He received his school-education at Eton, from which seminary he was removed to Christ-church college in Oxford. At both these places he was distinguished for his proficiency in classical literature; and some of his poems were the fruit of his earliest studies. In his nineteenth year he set out upon a tour to the continent, in which he visited France and Italy, and made some stay at the court of Luneville in Lorraine. His letters to his father during this absence are replete with remarks displaying solid judgment and sound principles; and afford a most pleasing example of filial affection and duty, joined with the unreserved confidence of intimate friendship. While abroad, he wrote a poetical epistle to Dr. Afcough, his Oxford tutor, which is one of the best of his works, and another to Pope, elegantly complimentary of that great poet. His conduct on his travels was highly meritorious, and a contrast to that of the dissipated young men of fortune who too often disgrace their country in the eyes of foreigners. After his return in 1730, he was chosen representative in parliament for the borough of Oakhampton. At this time his father was one of the lords of the admiralty, and of course a supporter of the existing ministry, that of Walpole. The son, warmed with that patriotic ardour and hatred of corruption which scarcely ever fails to inspire the bosom of virtuous and liberal youth, took the contrary part, and distinguished himself among the opposers of administration. In every important debate his name appeared in the minority; and he zealously concurred in every measure adopted by Pulteney, Pitt, and other leaders of that party. In 1735 he published a work entitled Persian Letters, upon the model of the *Lettres Persannes* of Montesquieu. They were the effusions of a juvenile mind, well-disposed, but not yet disciplined to correctness of judgment on the topics dis-

cussed in them. When, near the close of life, he meditated a collection of all his works, he informed Dr. War-ton that he meant to reject this, as containing principles and opinions which he retracted.

Frederic prince of Wales, having quarrelled with the royal court, formed a separate court of his own, in 1737, at which the distinguished members of opposition were cordially received. The character and talents of Lyttelton could not fail of obtaining notice in this circle, and he was appointed the prince's secretary with an advanced salary. It is supposed to have been at his instigation that the prince assumed the patronage of letters; and Mallet and Thomson felt the benefit of his recommendation. Pope, who, though not formally enlisted in party, was inclined to encourage attacks on the minister, bestowed his praise upon Lyttelton among other patriots, and well repaid his former compliment by an animated couplet:

Free as young Lyttelton her cause pursue;  
Still true to virtue, and as warm as true.

In 1741 he married Lucy, the daughter of Hugh Fortescue, esq. a lady for whom he entertained the purest affection, and with whom he lived in perfect conjugal harmony. The expulsion of Walpole from the ministry having at length given admission to the opposition party, Lyttelton, in 1744, was appointed one of the lords of the treasury. As a member of administration he was assiduous in his parliamentary attendance, and a vigorous supporter of the measures in which he partook, but never attained the station of a leader. He spoke with ease and fluency; but his oratory was marked with elegance and good sense, rather than with the fervour of genius.

In early life, Lyttelton had been led to entertain doubts of the truth of revelation; but a serious enquiry into the evidences of the Christian religion produced in his mind a firm conviction of its divine authority, in which he persisted to the end of life, with a zeal tempered by moderation. He gave a public testimony of his attachment to the cause by a "Dissertation on the Conversion of St. Paul," printed in 1747, which is regarded as a masterly performance of the controversial kind. It obtained for him many applauses from the friends of religion; among which, that of his own father, expressed in a most affectionate letter, was doubtless peculiarly grateful. About this time his fortitude and resignation were severely tried by the loss of his beloved wife in childbed. On this occasion he composed a monody, which stands prominent among his poetical works, and displays much natural feeling amidst the more elaborate strains of a poet's imagination; and on her monument he inscribed the following lines:

Made to engage all hearts, and charm all eyes;  
Though meek, magnanimous; though witty, wise;  
Polite, as all her life in courts had been;  
Yet good, as she the world had never seen;  
The noble fire of an exalted mind  
With gentlest female tenderness combin'd.  
Her speech was the melodious voice of love;  
Her song the warbling of the vernal grove.  
Her eloquence was sweeter than her song,  
Soft as her heart, and as her reason strong.  
Her form each beauty of her mind express'd;  
Her mind was Virtue by the Graces dress'd.

In 1749 he married again; but the conduct of his second wife proved so little to his satisfaction, that a separation by mutual consent ensued in a very short time. By the death of his father in 1751, he succeeded to the title and estate. His taste for rural ornament he displayed at Hagley, which he rendered one of the most delightful places in the kingdom. He occupied several posts under government; but at the dissolution of the ministry in 1759 he went out of office, and was, as a reward for his services, raised to the honour of a peerage, under the style and title of Baron Lyttelton of Frankley in the county of Worcester. From this period he chiefly devoted himself to the pursuits

pursuits of literature, and to an extensive correspondence with the pious and learned. In 1760 he published *Dialogues of the Dead*, a work abounding in good sense and found morality, and which was well received by the public. In 1767 and 1771 he gave the world his *History of Henry the Second*, in 3 vols. 4to. a valuable work, which had occupied a great portion of the latter part of his life, and on which he probably placed his chief expectations for future fame. He has given an accurate and comprehensive view of the English constitution, as it existed at the early period of our history with which his book is concerned, and of the changes subsequent to the Norman conquest. The style of the history is good; its sentiments are judicious and liberal, favourable to the best interests of mankind. It has been charged with a bias in favour of the regal against the ecclesiastical authority, but perhaps by those who were not free from an opposite bias. A tendency to prolixity is the chief fault of this history, which has prevented it from becoming popular, though it retains its reputation as a standard work. Its character, with that of the writer, is happily appreciated in the following elegant lines of Hayley:

With purer spirit, free from party strife,  
To soothe his evening hour of honour'd life,  
See candid Lyttelton at length unfold  
The deeds of liberty in days of old!  
Fond of the theme, and narrative with age,  
He winds the lengthen'd tale through many a page;  
But there the beams of patriot-virtue shine;  
There truth and freedom sanctify the line;  
And laurels, due to civil wisdom, shield  
This noble Nettor of th' historic field. *Essay on History.*

Lord Lyttelton's poems preserve a place among the select productions of the British muse, rather on account of the correctness of their versification, the elegance of their diction, and the delicacy of their sentiments, than as exhibiting any uncommon poetical powers. They are perused with pleasure, and contain nothing to offend. His miscellaneous pieces in prose, letters, &c. all display a good

heart, and a well cultivated mind. As a politician, his speeches on the Scotch and mutiny bills, in 1747; on the naturalization of the Jews in 1753; and on the privilege of parliament in 1763; hold him out to public estimation. Among other qualities, he had a remarkable facility of striking out an extemporary compliment, which obtained for him a considerable share of reputation. An instance is recorded: when lord Cobham, in a large company, mentioned his design of putting up a bust of lady Suffolk in his beautiful gardens at Stowe, he turned to his friend Lyttelton, and said, "George, you must furnish me with a motto for it." I will, said he; and instantly produced the couplet;

Her wit and beauty for a court were made,  
But truth and goodness fit her for a shade.

This truly-estimable nobleman died of a lingering disorder, which he bore with pious resignation, in August 1773, in the 64th year of his age. He left one son, who succeeded to his title, and a daughter, married to lord Valentia; both by his first wife. His miscellaneous works were published after his death in 4to. by his nephew, G. E. Ayscough, esq. *Johnson's Engl. Poets.* *Anderfon's British Poets.*

LYTTELTON (Charles), an English prelate, brother of the above, was educated at Eton in grammar-learning, from whence he entered himself at University-college, Oxford, and afterwards studied the law in the Temple and was called the bar. He, however, soon quitted the profession, entered into holy orders, and in 1747 was appointed chaplain to the king. The year following he was made dean of Exeter, and in 1762 promoted to the bishopric of Carlisle. He was several years president of the Society of Antiquaries, and contributed many articles to their Transactions. He died in 1768. For a more particular account of this family, its intermarriages, and armorial bearings, see the article HERALDRY, vol. ix. p. 582, 3. and Plate XXXV.

LYTTON, a village of Yorkshire, in the west riding, near Langterdale Chace.

CORRECTIONS.

P. 459, col. 2, presents a very imperfect account of our favourite beverage, *porter*. The origin of the name is thus related by the ingenious editor of the *Picture of London*. "Before the year 1730, the malt-liquors in general use in London were ale, beer, and two-penny; and it was customary for the drinkers of malt-liquor to call for a pint, or tankard, of half and half, i. e. half ale and half beer, or half ale and half two-penny, or half beer and half two-penny. In course of time it also became the practice to call for a pint or tankard of *three-threads*, meaning a third of ale, beer, and two-penny; and thus the publican had the trouble to go to three casks, and turn three cocks, for a pint of liquor. To avoid this inconvenience and waste, a brewer of the name of *Harwood* conceived the idea of making a liquor, which should partake of the same united flavours of ale, beer, and two-penny; he did so, and succeeded, calling it *entire*, or entire butt, meaning that it was drawn entirely from one cask, or butt; and, as it was a very hearty and nourishing liquor, it was very suitable for porters and other working people; hence it obtained the name of *porter*." At first, the only essential difference in the methods of brewing porter and other kinds of beer, was, that it was brewed from brown malt; and this gave to it both the colour and flavour required. Of late years it has been brewed from mixtures of pale and brown malt, and the colour of the present liquor is much less than was formerly esteemed requisite; but, finding that pale malt yields a much greater portion of saccharine matter than brown, the greatest number of the London brewers have given up the brown malt altogether, using pale and *amber* malt, which is intermediate between the two. From these they procure a liquor of proper strength; and they give it both colour and flavour, by

the addition of colouring matter made from burnt sugar, or by burning the sugar of concentrated wort. All the London porter is professed to be entire butt, as indeed it was at first; but the system is now altered, and it is generally compounded of two kinds, or rather the same liquor in two different stages, the due admixture of which is palatable, though neither is good alone. One is mild, and the other stale, porter; the former is that which has a slightly-bitter flavour, from having been lately brewed; the latter has been kept longer. This mixture the publican adapts to the palates of his several customers, and effects the mixture very readily, by means of a machine containing small pumps worked by handles. In these are four pumps, but only three spouts, because two of the pumps throw out at the same spout: one of these two pumps draws the mild, and the other the stale, porter, from the casks down in the cellar; and the publican, by dexterously changing his hold to the handle of the next pump, works either pump, and draws both kinds of beer at the same spout. An indifferent observer supposes, that since it all comes from one spout, it is entire butt beer, as the publican professes over his door, and which vulgar prejudice has decided to be the only good porter, though the difference is not easily distinguished.

P. 620, about the middle of col. 2. read, *Milford Hall* was formerly the residence of the *Cordell* family; but latterly it came by purchase into the possession of the late sir *Harry Parker*, bart. of the Admiralty-office; who, on Mr. *Nepean* being made secretary, retired, and in general resided on his estate. He died some years since, and was buried at *Melford*; and his estate came into and continues to be in the possession of his son, sir *William Parker*, bart. colonel of the *West Suffolk* militia.

P. 758. for *LUDSWIGSBURG*, read *LUDWIGSBURG*.

## INDEX to the Article LOGIC.

**T**HE Writer of this article, or the Compiler rather, (for he claims no merit but that of giving an abstract of the Works of Kant upon the same subject,) takes credit to himself for having been the first to present the true Kantian Philosophy in a compendious form to an English public, and in an English dress. Since the article was printed, the Work of Mad. de Stael, "de L'Allemagne," has contributed, by the celebrity of the Writer, to make that Philosophy more generally known and respected. It remains for us, in the ensuing volume, article METAPHYSICS, completely to unfold Kant's great design. In the mean time, the following Synoptical Index will tend to make that System of Logic, which must ultimately prevail, more perfectly understood. *Magna est Veritas, et prevalebit.*

- A**BSURDITY, what, 10.  
 Accurate knowledge, what, 9.  
 Aesthetical distinctness, what, 11; depends upon the subjective clearness of the marks of a knowledge, ib.  
 Aesthetical perfections of knowledge four; universality, distinctness, truth, and necessity, 6.  
 Aesthetics, the agreement of knowledge with the laws of sense; differ from Logic, having only empirical principles; can, therefore, never become a science, 3.  
 ANALOGY and INDUCTION, the two modes of the conclusions of judgment, 28; their universality is always conditional, ib.  
 Analytical, the Logic of TRUTH, unfolds all the acts of Reason exercised in thinking, 3.  
 Analytic and synthetic propositions, 23.  
 Appearance, 9.  
 Applied Logic considers the understanding mixed with the other faculties of the mind, 4.  
*A priori* defined, 18; *A posteriori* defined, ib.  
 Aristotle, the father of Logic, 4.  
 Axioms and Acroams, 23.  
 Beautiful, which consists in pure form, is distinct from the agreeable, 6.  
 Begging the Question, 29.  
 BELIEF is a holding for true that is subjectively sufficient, but objectively insufficient; it relates to objects that never can be known, nay, of the probability of which we cannot even form an opinion, 12; the proper objects of Belief are, the Existence of God, the Immortality of the SOUL, and a FUTURE STATE, ib. it affords no conviction, like evidence, that can be communicated and command assent, but rests entirely upon *subjective grounds*, which are quite as satisfactory to the persons holding them, 13.  
 Canon for the use of the Understanding and Reason, is Logic, 3.  
 Categorical Conclusions, the three last figures of, reduced to the first, 27.  
 Categorical Judgments, 22.  
 CERTAINTY is a holding for true that is both objectively and subjectively sufficient; it is empirical if grounded on experience, rational if grounded in reason; the latter is divisible into *mathematical* and *philosophical*, 60.  
 Chief divisions of Logic, 3.  
 Chief requisites of a Definition, 30.  
 Common Sense, its horizon, 7; a touchstone for speculative Reason, 10.  
 Communicated knowledge is properly called discursive, 5.  
 CONCEPTION, the form of all knowledge, 3; arises from INTUITION, 5; produced by Understanding, ibid; is the mark of a thing, 10; is rendered distinct by an analysis of its marks, 12.  
 Conception in general, and the difference between it and Intuition, 19.  
 Conclusion defined, 18; in general, 24.  
 Conclusions of Reason, 26.  
 Conclusions of Understanding, 1.  
 1. SUBALTERNATION, 24.  
 2. OPPOSITION, - - - ib.  
 3. CONVERSION, - - - ib.  
 4. CONTRAPOSITION, 25.  
 Conclusions of Understanding, of Reason, and of Judgment, 24.  
 Conclusion to Logic, 31.  
 Conditions of the Clearness of Knowledge, 2.  
 Consciousness susceptible of degrees, 5; it refers *that* to the mind which belongs to the mind, and *that* to the external thing which is its produce, 17.  
 Contents and Sphere of Conceptions, 19.  
 Contraposition, a Conclusion of Understanding, 25.  
 Conversion, a Conclusion of Understanding, 24.  
 CRITICAL PHILOSOPHY takes Reason for its principle, adopts the *pure truth* contained both in Scepticism and Dogmatism. For its discovery we are indebted to the immortal KANT, 16. It attains the summit of all human culture by constantly criticising its own principles, ib. It has quieted for ever *speculative Reason*, and cleared *practical Reason* from all charge of contradiction and absurdity, ib. It has erected a *perfect SYSTEM OF MORALS* on the basis of pure Practical Reason, ibid.  
 Crusius, his reflections on Logic, 4.  
 Definition, analytical, synthetical, by exposition or construction, 29; by dissection both *a priori* and *a posteriori*, ibid.  
 Definitions and Fundamental Principles, 16.  
 Definition of Judgment in general, 19.  
 Definition of Logic as a Science of Reason both in *matter* and *form*, &c. 3.  
 Determinative and Reflective Judgment, 28.  
 Diagram, of  
 1. Judgments of Understanding, 21.  
 2. Conclusions of Understanding, 24.  
 3. Conclusions of Reason, - - - 25.  
 4. Conclusions of Judgment, - - - 28.  
 Dialectic is the Logic of *Appearance*, and arises from a negligence in the use of the Analytic, 3.  
 Dichotomy and Polyotomy, 31.  
 Difference between Intuition and Conception, 4; between *forming a Distinct Conception* and *rendering a Conception Distinct*, 11.  
 Dilemma defined, 27.  
 Discursive Knowledge, 4.  
 Distinctive Judgments, 22.  
 Distinctness sensible and intellectual, 5.  
 Division of Conclusions of Reason into CATEGORICAL, HYPOTHETICAL, and DISJUNCTIVE, 25; of Method into scientific and popular, systematic and fragmentary, analytic and synthetic, syllogistic and tabular, and acroamatic and erotomatic, 31.  
 Dogmatism is a blind confidence in the powers of Reason, and requires *Critical Philosophy* to correct and enlighten it, 16.  
 Doubt is an opposite ground to the holding for true, which may be either objectively or subjectively considered, 16; *repelled*, but not *removed*, ibid.  
 Duncan's Logic now taught in our Universities, 2.  
 Elements of Knowledge, what, 18.  
 Elements of pure universal Logic, 19.  
 Empirical Certainty is *original* when it is procured by our personal experience: it is *derived* when obtained from that of others, 13.  
 Empirical and Pure Conceptions; the former spring from the senses, the latter originate in understanding, 19.  
 Epi-syllogisms and Pro-syllogisms, 28.  
 Erroneous Judgment, what, 9.  
 Error, how possible, 9; attributable to ourselves, ib. only *partial*, ib. not absolutely unavoidable, 10; how to be avoided, ibid.  
 Essence of a thing, what, 11.  
 Essential Constituents of all Conclusions of Reason, 25.  
 Examples are not marks of a thing, 11.  
 Explanation of the Table of the four figures of Conclusions, 26.  
 Explanatory Judgments, 23.  
 Extent of the Sphere of Conceptions, 19.  
 External Intuition defined, 17.  
 Fallacious Conclusions, 29.  
 Fallshood, when taken for Truth, is Error, 9.  
 Formally-expressed and hidden Conclusions, 28.  
 General result of the three last figures of Categorical Conclusions, 27.  
 General Rules of Conversion, 25; of Contraposition, ibid.  
 Genus and Species, 19.  
 Ground of difference in the four figures of Categorical Conclusions by the different placing of the middle term, 26.  
 Highest Genus and Lowest Species, 19.  
 History of Logic, 3.  
 Horizon of Knowledge determined, Logically, Aesthetically, Practically, 6.  
 Human Mind, its original and fundamental powers, REASON, UNDERSTANDING, and SENSE, 6.  
 Hypothesis, what, 16.  
 Hypothetical Judgments, 22; Conclusions of Reason, 27; Sorites, 28.  
 IDEA defined, 18; a Conception of Reason whose object never can be met with in experience, 19.  
 Ignorance subjective, objective, 7; occasioned by the limits of our understanding, 9.  
 Imagination defined, 17.  
 Immediate and mediate Conclusions, 24.  
 Inaccurate Knowledge, what, 9.  
 Indemonstrable and demonstrable positions, 23.  
 INDUCTION and ANALOGY the two modes of conclusions of Judgment, 28; their universality is always conditional, ib.  
 Internal Intuition defined, 17.  
 Introduction to Logic, 3.  
 Intuition, only to be obtained by placing ourselves within the reach of the object, in order that our senses may be affected by it, 5; Originates in SENSE, ib. external and internal, defined, 17; implies the existence of the external world, 19.  
 Intuitive Knowledge, 4.  
 Judgment defined, 17; must stand under QUANTITY, QUALITY, RELATION, and MODALITY, at the same time, 21; of Apprehension and Experience, 24.  
 Knowledge in general, 4; the process the mind

- mind pursues in forming it, 5; vague or strict, 9; discursive, 10; when it contains an *imperative*, it is practical, 16; defined, 17.
- Lambert's Organon, 4.
- Leap in concluding (*saltus*), 29.
- Leibnitz contributed to bring universal Logic into notice, 4.
- Locke did not treat on Logic, 4.
- Logic, capable of attaining a permanent Form, 2; will greatly facilitate the study of the *Critical Philosophy*, 3; has nothing to do with the *matter* of Knowledge, but only with the *form*, ib. as it only arranges our thoughts, is purely regulative, ib. contains the absolutely-necessary laws of thinking, which are *à priori*, i. e. independent of all experience, ib. is the *groundwork* of all other sciences, ib. is a *Canon* for the use of Understanding and Reason, ib. it is neither a Science of Speculative Reason nor of Common Sense, but is a Science of the laws of thinking in the abstract, 4; entirely separate from Philosophy, which concerns the *matter* of thought, ib.
- Logical Distinctness, what, 11.
- Logical Essence of a thing, what, 11.
- Logical Necessity of Knowledge, 9.
- Logical Origin of Conceptions, 19; Acts of Comparison, Reflection, and Abstraction, ib.
- Logical Perfection of Knowledge, 4.
- Malebranche did not treat on Logic, 4.
- Marks of Knowledge, internal, external, analytic, synthetic, co-ordinate, subordinate, affirmative, negative, 10; important, unimportant, necessary, accidental, primitive, derivative, 11.
- MATHEMATICIAN, it is his business to produce distinct Conceptions, and that of the PHILOSOPHER to render given conceptions distinct, 12.
- Matter and Form of Conceptions, 19; of Judgments, 21; of Disjunctive Judgments, 22; of Conclusions of Reason, 25.
- Means of advancing the logical perfection of Knowledge, 29.
- Meditation, 31.
- Memory defined, 18.
- Method of Pure Universal Logic, 29.
- Mixed Rational Conclusions by Inversion of the Propositions, 26.
- Modality of Judgments, problematical, affirmative, and apodictical, 23.
- Mode of treating Logic, 3.
- Modes of Conclusions of Understanding, 24.
- Modus ponens and Modus tollens, 22.
- Nominal and Real Definitions, 30.
- NOUMENON defined, 17.
- Object, rendered distinct by a *synthesis* of its marks, 12.
- Object and End of Method, 29.
- Object of logical Reflection, is the mere form of Judgment, 21.
- Obscure representation, signifies that we are conscious of the whole but not of the parts, 5.
- Opinion is a holding for true that is neither objectively nor subjectively sufficient, 22; it is not to be met with in knowledge *à priori*, consequently not in the *Mathematics*, nor in *Metaphysics*, nor in *Morals*, but merely in empirical Knowledge, ibid.
- Opposition, a Conclusion of Understanding, 24.
- Panoply, the extension of speculative and historical knowledge without determinate bounds, 8.
- Paralogisms, 29.
- Peculiar character of Disjunctive Judgments, 22.
- Peculiar Difference of Categorical, Hypothetical, and Disjunctive, Conclusions of Reason, 26.
- Peculiar nature of Conclusions of Understanding, 24.
- Pedantry to be avoided, 8.
- Perception defined, 17.
- Persuasion opposed to conviction, 13.
- PHENOMENON defined, 17.
- Philology, a critical knowledge of literature and languages, 8.
- Philosophy, the highest maxim of Reason, and the only science which can procure us complete inward satisfaction; its highest problems are comprised in the following questions:
1. What can I know?
  2. What ought I to do?
  3. What may I hope?
  4. What is man?
- Plato, his observations, 7.
- Polyhistory, historical Knowledge without determinate grounds, 8.
- Polymathy, unlimited speculation, 8.
- Polylogical Ratiocinations, 28.
- Popular mode of treating Logic, 4.
- Popular style, 8.
- Postulates and Problems, 23.
- Practical Conviction is the true moral belief of Reason; and, although it never can be knowledge, it cannot be invalidated by any knowledge whatever, 13.
- Practical importance we can never foresee, but must wait until it is ascertained, 8.
- Practical Knowledge*, the only unconditional end to which it can refer is MORALITY, which is the final end and scope of all our exertions, 16.
- Precision, what, 11.
- Prejudices, what, 13; they arise chiefly from Imitation, Habit, and Inclination, ib.
- Preliminary Judgment, 13; necessary to the use of Understanding, 14.
- Principle of *Contradiction*, of *sufficient reason*, and of excluded third, 9; of Categorical Conclusions of Reason, 26; of Hypothetical Conclusions of Reason, 27; of Disjunctive Conclusions of Reason, ib.
- Principles are immediately-certain Judgments *à priori*, 23.
- Private Horizon of Knowledge, 7.
- Probability implies a majority of *objective* reasons in favour of a thing, 15; it is susceptible of degrees, and is only to be met with in experience, ibid.
- Pro-syllogisms and Epi-syllogisms, 28.
- Proving in a circle, 29; too much and too little, ibid.
- Pure and altered Conversion, 24.
- Pure and mixed Categorical Conclusions of Reason, 26.
- Pure Logic considers the Understanding distinct from the other faculties of the Mind, 4.
- Quantity of Knowledge intensive and extensive, 6.
- Rational Certainty is divisible into MATHEMATICAL and PHILOSOPHICAL; the former is *intuitive*, the latter *discursive*; mathematical certainty is also termed *evidence*, because intuitive knowledge is clearer than discursive, though both include necessity, 13.
- Rational Conclusions in general, 25.
- REASON furnishes us with Ideas, 3; it is an active principle, that ought to take nothing upon credit, 14.
- Reciprocal Conceptions, 19.
- Representation does not amount to Knowledge, 5; is a variety in a Unity, that is, an Effect resulting from the active and passive Faculties of the Mind, 17.
- Right and Wrong, conformable to Duty, contrary to Duty, 12.
- Rules for avoiding Error, 10; for Categorical Conclusions of Reason, 26; for the first figure of Categorical Conclusions, as the only regular one, ib. for forming and proving Definitions, 30.
- Scale of the value of Knowledge, 12.
- Scepticism* consists in the maxim to consider all knowledge as uncertain, and show the impossibility of attaining certainty, 16.
- Scholar, the true, is free from Pedantry, 8.
- Scholastic mode of treating Logic, 4; Perfection, 8.
- Scruple is an opposite ground to the holding for true, and which is only subjectively valid, 16.
- Sensation is the alteration that occurs when our Receptivity is affected, 17.
- SENSE defined, 17; receives the matter of Knowledge, 3; is the power of RECEPTIVITY, 6; its influence upon the Understanding while it is judging, 9.
- Simple and Compound Conclusions, 28.
- Socrates, his ignorance was glorious, 7.
- Sophisms, 29.
- Sorites, or Chain Syllogisms, 28.
- Sources of Knowledge, SENSE and UNDERSTANDING, 5.
- SPACE defined, 17.
- Subalternation, a Conclusion of Understanding, 24.
- Subtlety, a subjective perfection of Knowledge, 9.
- Superior and Inferior Conceptions, 19.
- Table of the *Elements of Knowledge*, or INTUITION, CONCEPTION, and IDEAS, 18; of Judgments, 21.
- Tautological Propositions, 23.
- Theorems, Corollaries, Lemmata, and Scholia, 24.
- Theoretical and Practical Positions, 23.
- Thinking alone does not amount to Knowledge, 5; depends upon Conceptions, Judgments, and Conclusions, 5; to orient one's self in Thinking, 10.
- Thought is, properly speaking, merely the form of Knowledge, 3.
- TIME defined, 17.
- TRUTH the chief perfection of Knowledge, 8; how possible, 9; an objective property of Knowledge, 12.
- UNDERSTANDING forms conceptions of the matter furnished by Sense, 3; it is the power of SPONTANEITY, 6; it suffers itself to be misled in judging by *appearance*, 9; defined, 17.
- Universal Logic impossible prior to the great discoveries of Immanuel Kant, 2.
- Universal material criterion of Truth, none such possible, 8.
- Universal formal criteria of Truth are, the position of contradiction, and the position of sufficient reason, 9.
- Universal Principle of all Rational Conclusions, 25.
- Universal Rules for the Subordination of Conceptions, 19; of Logical Division, 30.
- Use of Conceptions in the abstract and the concrete, 19.
- Use of Logic, 3.
- Weakness of Consciousness, 5.
- Wellington; his defeat of the French at Vittoria considered logically, 5.
- WHAT IS TRUTH? 8.
- Wider and Narrower Conceptions, 19.
- Wolf contributed to bring universal Logic into notice, 4.
