Lord A. Hamilton thought it unnecessary, after the able manner in which his motion had been supported, to trespass further on the time of the house. If, as an honourable gentleman had said, India *must* at all events be governed as it now is, there was an end of his motion, and all of a similar nature: but he thought, if that country must be governed as it now is, the public had much better not have it at all.—A division took place: for the motion, 18; against it, 53.

Scarcely any subject occupied more of the attention of the house of commons, during this session, than the consideration of the report of the committee, appointed in the preceding session, to examine the state of the bullion and currency of the kingdom. Mr. Horner, on the 6th of May, in a committee of the whole house, introduced the subject in an elaborate and very intelligent speech; the general intent of which was to show that the paper-currency of the country had undergone an actual depreciation, and that the only remedy was to provide for the resumption of cash payments at the bank as speedily as possible.—He was replied to by Mr. Rose, who undertook to maintain three points:—that the bank-paper was not depreciated—that it was not in the power of the bank materially to affect the circulation—and that not a guinea more would be seen, even were the bank-restriction taken off to-morrow.—The debate thus commenced was protracted by daily adjournments till the 9th; and was conducted by many of the ablest speakers on both sides of the house. To give any adequate idea of the arguments employed would require the compass of a pamphlet: in general terms it may be observed, that principle was opposed to principle, and fact to fact; and that the very opposite lights, in which the subject was viewed by men of great ability and information, seemed to prove that the theory of this important part of political economy is yet crude and undetermined. When the question was at length put upon the first resolution moved by Mr. Horner, it was rejected by 151 votes against 75. This division decided the fate of all the other resolutions, except the last, the purport of which was to oblige the bank to recommence its cash-payments at the expiration of two years from the present time, instead of six months from the ratification of a definitive peace, as it now stood. A second division took place upon this resolution, which was negatived by 180 against 45.

On May 13th, the house being in a committee on the same subject, Mr. Vanlittart introduced his rival set of resolutions, supported by the ministry. The debates upon them, which were in great measure a recapitulation of those on the topics of the preceding resolutions, continued by adjournment to the 15th; when, after various amendments had been moved and rejected, they all passed. The resolutions thus sanctioned may be regarded as matter of history, and contain many curious particulars: we shall therefore insert them at length.

I. That the right of establishing and regulating the legal money of this kingdom hath at all times been a royal prerogative, vested in the sovereigns thereof, who have from time to time exercised the same as they have seen fit, in changing such legal money, or altering and varying the value, and enforcing or restraining the circulation thereof, by proclamation, or in concurrence with the estates of the realm by act of parliament; and that such legal money cannot lawfully be defaced, melted down, or exported.

II. That the promissory notes of the governor and company of the bank of England are engagements to pay certain sums of money in the legal coin of this kingdom; and that for more than a century past the said governor and company were at all times ready to discharge such promissory notes in legal coin of the realm, until re-

frained from so doing on the 25th of February, 1797, by his majesty's order in council, confirmed by act of parliament.

III. That the promissory notes of the said company have hitherto been, and are at this time held to be, equivalent to the legal coin of the realm, in all pecuniary transactions to which such coin is legally applicable.

IV. That at various periods, as well before as since the said restriction, the exchanges between Great Britain and several other countries have been unfavourable to Great Britain; and that during such periods, the prices of gold and silver bullion, especially of such gold bullion as could be legally exported, have frequently risen above the mint-price; and the coinage of money at the mint has been either wholly suspended, or greatly diminished in amount; and that such circumstances have usually occurred, when expensive naval and military operations have been carried on abroad, and in times of public danger or alarm, or when large importations of grain from foreign parts have taken place.

V. That such unfavourable exchanges, and rise in the price of bullion, occurred to a greater or less degree, during the wars carried on by king William III. and queen Anne, and also during part of the seven-years war, and of the American war; and during the war and scarcity of grain in 1795 and 1796, when the difficulty increased to such a degree, that, on the 25th of February, 1797, the bank of England was refrained from making payments in cash by his majesty's order in council, confirmed and continued to the present time by divers acts of parliament; and the exchanges became afterwards still more unfavourable, and the price of bullion higher, during the scarcity which prevailed for two years previous to the peace of Amiens.

VI. That during the period of seventy-five years, ending with the 1st of January, 1796, and previous to the aforesaid restriction, whereof, with the exception of some small intervals, accounts are before the house, the price of standard gold in bars has been at or under the mint-price thirty-four years and five months, and above the said mint-price thirty-nine years and seven months; and that the price of foreign gold coin has been at or under 3l. 18s. per ounce thirty-one years and two months, and above the said price forty-two years and ten months; and that, during the same period of seventy-five years, the price of standard silver appears to have been at or under the mint-price, three years and two months only.

VII. That the unfavourable state of the exchanges, and the high price of bullion, do not, in any of the instances above referred to, appear to have been produced by the restriction upon cash-payments at the bank of England, or by any excess in the issue of bank-notes; inasmuch as all the said instances, except the last, occurred previously to any restriction on such cash-payments; and because, so far as appears by such information as has been procured, the price of bullion has frequently been highest, and the exchanges most unfavourable, at periods when the issues of bank-notes have been considerably diminished; and to have been afterwards restored to their ordinary rates, although those issues have been increased.

VIII. That, during the latter part and for some time after the close of the American war, during the years 1781, 1782, and 1783, the exchange with Hamburgh fell from 34. 1. to 31. 5. being about 8 per cent. and the price of foreign gold rose from 3l. 17s. 6d. to 4l. 2s. 3d. per ounce, and the price of dollars from 5s. 4½d. per ounce to 5s. 11½d. and that the bank-notes in circulation were reduced, between March 1782, and December 1782, from 9,160,000l. to 5,995,000l. being a diminution of above one-third, and continued (with occasional variations) at such reduced rates until December 1784; and that the exchange with Hamburgh rose to 34. 6. and the price of gold fell to 3l. 17s. 6d. and dollars to 5s. 1½d. per ounce before the 25th of February, 1787, the amount of bank-notes being then increased to 8,688,000l.

IX. That the amount of bank-notes, in February 1787, was 8,688,000*l.* and, in February 1791, 11,699,000*l.* and that during the same period, the sum of 10,704,000*l.* was coined in gold; and that the exchange with Hamburgh rose about 3 per cent.

X. That, between the 25th of February, 1795, and the 25th of February, 1797, the amount of bank-notes was reduced from 13,539,000*l.* to 8,640,000*l.* during which time the exchange with Hamburgh fell from 36 to 35, being about 3 per cent. and the said amount was increased to 11,855,000*l.* exclusive of 1,542,000*l.* in notes of 1*l.* and 2*l.* each, on the 1st of February, 1798, during which time the exchange rose to 38. 2. being about 9 per cent.

XI. That the average price of wheat per quarter in England, in the year 1793, was 50*s.* 3*d.* in 1799, 67*s.* 5*d.* in 1800, 113*s.* 7*d.* in 1801, 118*s.* 3*d.* and in 1802, 67*s.* 5*d.*

Amount of Bank-notes, of 5 <i>l.</i> and upwards.	Under 5 <i>l.</i>	Total.
In 1793 about 11,527,000 <i>l.</i>	1,810,800 <i>l.</i>	13,337,800 <i>l.</i>
In 1799 12,408,500 <i>l.</i>	1,653,800 <i>l.</i>	14,062,300 <i>l.</i>
In 1800 13,421,900 <i>l.</i>	1,831,800 <i>l.</i>	15,253,700 <i>l.</i>
In 1801 13,454,300 <i>l.</i>	2,715,100 <i>l.</i>	16,169,400 <i>l.</i>
In 1802 13,917,900 <i>l.</i>	3,136,400 <i>l.</i>	17,054,300 <i>l.</i>

That the exchange with Hamburgh was, in January 1793, 38*s.* 2*d.* January 1799, 37*s.* 7*d.* January 1800, 32*s.* January 1801, 29*s.* 8*d.* being in the whole a fall of above 22 per cent. In January 1802, 32*s.* 2*d.* and December 1802, 34*s.* being a rise of about 13 per cent.

XII. That, during all the periods above referred to, previous to the commencement of the war with France in 1793, the principal states of Europe preserved their independence, and the trade and correspondence thereof were carried on conformably to the accustomed law of nations; and that, although from the time of the invasion of Holland by the French in 1795, the trade of Great Britain with the continent was in part circumscribed and interrupted, it was carried on freely with several of the most considerable ports, and commercial correspondence was maintained at all times previous to the summer of 1807.

XIII. That, since the month of November 1806, and especially since the summer of 1807, a system of exclusion has been established against the British trade on the continent of Europe, under the influence and terror of the French power, and enforced with a degree of violence and rigour never before attempted; whereby all trade and correspondence between Britain and the continent of Europe has (with some occasional exceptions, chiefly in Sweden, and in certain parts of Spain and Portugal) been hazardous, precarious, and expensive, the trade being loaded with excessive freights to foreign shipping, and other unusual charges; and that the trade of Britain with the United States of America has also been uncertain and interrupted; and that, in addition to these circumstances, which have greatly affected the course of payments between this country and other nations, the naval and military expenditure of the united kingdom in foreign parts has, for three years past, been very great; and the price of grain, owing to a deficiency in the crops, higher than at any time, whereof the accounts appear before parliament, except during the scarcity of 1800 and 1801; and that large quantities thereof have been imported.

XIV. That the amount of currency necessary for carrying on the transactions of the country must bear a proportion to the extent of its trade, and its public revenue and expenditure; and that the annual amount of the exports and imports of Great Britain, on an average of three years, ending 5th January, 1797, was 51,199,141*l.* official value; the average amount of revenue paid into the exchequer, including the profit on the lottery, 19,495,945*l.* and the average amount of the total expenditure of Great Britain, 42,855,111*l.* and that the average amount of bank-notes in circulation (all of which were for 5*l.* or upwards) was about 11,262,000*l.* and that 57,274,617*l.* had been coined in gold during his majesty's reign, of which a large sum was then in circulation.— That the annual amount of the exports and imports of

Great Britain, on an average of three years, ending 5th of January, 1810, was 70,554,719*l.* the average amount of duties paid into the exchequer, 59,960,525*l.* and the average amount of the total expenditure of Great Britain 77,802,674*l.* and that the amount of bank-notes, above 5*l.* on an average of the years 1808 and 1809, was 13,763,000*l.* and of notes under 5*l.* about 4,500,000*l.* and that the amount of gold coin in circulation was greatly diminished.

XV. That the situation of this kingdom, in respect of its political and commercial relations with foreign countries, as above stated, is sufficient, without any change in the internal value of its currency, to account for the unfavourable state of the foreign exchanges, and for the high price of bullion.

XVI. That it is highly important that the restriction on the payments in cash of the bank of England should be removed whenever the political and commercial relations of the country shall render it compatible with the public interest. But,

XVII. That, under the circumstances affecting the political and commercial relations of this kingdom with foreign countries, it would be highly inexpedient and dangerous, now to fix a definite period for the removal of the restriction of cash-payments at the bank of England, prior to the conclusion of a definitive treaty of peace.

In May, the public was surprised with the introduction into parliament of a subject of peculiar delicacy—a proposed alteration in the act of toleration. It may be proper to mention, that for several years past the established clergy had manifested considerable uneasiness at the rapid growth of methodism. The readiness with which licenses for preaching could be obtained, according to the usual interpretation of the toleration-act, had favoured the multiplication of preachers of a kind whose manners and language peculiarly fitted them for acquiring influence over the inferior ranks; and by their means numerous congregations had been formed, to the great diminution of the frequenters of parish-churches. How far the measure now to be mentioned was the result of any clerical consultation is not known; but it is affirmed that the noble mover was warmly encouraged to proceed in his design by letters from persons of eminence in the church.

Lord Sidmouth, a nobleman once at the head of his majesty's councils, on the 9th of May moved in the house of lords for leave to bring in a bill for amending and explaining the acts of William and Mary, and of the 17th of Geo. III. as far as they applied to protestant dissenting ministers. These acts, he said, within the last thirty or forty years had received a novel interpretation. At most of the quarter-sessions where the oaths were taken, and the declarations made, requisite for enabling a person to officiate in a chapel or meeting-house, it was now understood, that any person, however ignorant or profligate, was at liberty to put in his claim to do those acts before the justices, and to demand a certificate which authorised him to preach, and exempted him from the militia, and from many civil burdens to which his fellow-subjects were liable. In some counties, however, the magistrates admitted no person to qualify, unless he showed that he was in holy orders, or pretended holy orders, and the preacher or teacher of a congregation. This he conceived was according to the real meaning of the toleration-act; and it was in this way that the bill he intended to introduce would explain that act. He should propose, that, in order to entitle any person to a qualification as a preacher, he should have the recommendation of at least six reputable householders of the congregation to which he belonged, and that he should actually have a congregation willing to listen to his instructions. With regard to preachers who were not stationary, but itinerant, he would propose that they should be required to bring a testimonial from six householders, stating them to be of sober life and character, together with the belief of such attestors that they were qualified to perform the function of preachers.

When the nature and provisions of this proposed bill became publicly known, an alarm was excited among all those upon whom it was calculated to operate, which produced a more general and zealous association between the several classes of separatists for opposing it, than had perhaps ever been witnessed on a similar occasion. As they could not conceive it to be the real object of the noble mover to add more respectability to the dissenting ministry, they regarded the measure as intended, in effect, to contract the limits of toleration, and subject the licensing of preachers to the control of magistrates; and, although those sects which might be reckoned inferior in rank of life and education would be chiefly affected by the restrictions proposed, yet the others considered it as a matter of common interest to all who dissented from the established church. When, therefore, on the 21st of May, the bill was to be read a second time, such a deluge of petitions was poured in against it, that the mover was left alone in its support. In his speech on the occasion, he began with complaining of the misunderstanding that prevailed respecting the bill, and endeavoured to show that it was intended to effect no real change in the toleration-laws, but merely to give uniformity to the two acts on which the system of toleration was founded. He then went through the several provisions of the bill, and replied to the objections that had been made against them. He asserted his adherence to the principle of the toleration-laws, which, he said, never meant that any person should assume to himself the privilege of a preacher or teacher without some testimonials to his qualification for such an important office.—He was however obliged to yield, and the bill was thrown out.

Soon after this question was put to rest, an interchange of militia between Great Britain and Ireland was proposed.—The purpose of this measure, which has since been extensively carried into effect, is obvious; though, probably from motives of delicacy, it was not touched upon in the debates. By its means a military force will be quartered in Ireland, not influenced by the local interests or prejudices of that country, which will be at hand to assist in the suppression of the disturbances that may arise from the disappointed hopes of the majority of the people respecting their civil or religious privileges. The policy of the measure will not be questioned, provided that of subjecting them to such disappointments be established.

The Irish catholics having agreed upon a petition to be laid before parliament, the same was presented by Mr. Grattan to the house of commons on the 20th of May. On the 31st, that gentleman moved that the petition should be read. This having been done, he rose, and endeavoured to show that there was nothing in the Roman-catholic religion itself which encouraged disaffection; but that the manner in which the catholics had been treated by the government was the cause of their discontents. If, said he, the government should keep any class of its subjects in a state of imperfect privilege, it must occasionally find that class in a state of imperfect allegiance. He assumed as undeniable maxims, that no government has a right to make partial laws; or arbitrary laws, that is, without reason; that no government has a right to establish an inquisition into the thoughts of men, or to punish a man purely on account of his religion. The existing penal laws did not in fact impose any religious creed. An atheist or a deist might take the oath or subscribe the declaration; it was sufficient that he was not a catholic. Did the house then mean to say that an atheist was fitter to make laws than a catholic? No—the catholics had been excluded only on account of a supposed connection with a foreign power; but did such a connection now exist? The government itself had made a league with two catholic sovereigns, and this country more than any other was now exerting itself to support catholic establishments. His inference from these observations was, that the Irish catholics had the same right as any other dissenting sub-

jects to any privileges possessed by any other body of subjects. Many (said Mr. G.) there are who imagine that the Irish catholic is indifferent to the fate of these demands. That, however, is not the question: you have no right to ask them whether they desire, but ask yourselves whether it is justice to grant. The catholics have wisely refrained from stating their grievances in this petition; but what they are excluded from is not a bauble. They are excluded from a seat in this house, from offices in the bank, from the situation of sheriff, from the best places at the bar, from the highest stations in the army, from any participation in the state: they are deprived of their civil liberties, they are galled by tithes, they are oppressed by their landlords; and what remedy do you offer them? Nothing.—Mr. Grattan then noticed the objection drawn from the coronation-oath; and argued that the laws against the catholics were by no means fundamental, but provisional, and capable of repeal as circumstances might occur. He next entered into the consideration of the security that would be derived from the repeal, by uniting the force of the country against the dangers that now threaten it. “I tell you (said he), that, unless you tolerate each other, you must tolerate a conqueror. I know you are a very wise people; but on this one point, the very point of your vitality, you are stupid, stripped by bigotry of every sense; and you must certainly at one stroke be crushed.” He then made an animated reference to the late services of the Irish catholic soldiers in Spain; and concluded a long speech with moving that the petition be referred to a committee of the whole house.

Dr. Duigenan made a speech of great severity against the principles and claims of the catholics. He stated the oath of fidelity to the pope and the church of Rome taken by every catholic bishop and priest; and affirmed that intolerance was an essential part of their religion. He maintained that it was still a doctrine of their belief that oaths taken to heretics were absolutely null and void. He spoke with contempt of the origin of the present petition; and concluded with reading long extracts from the pamphlets and speeches of the catholics, in order to show that they were hostile to the established government of this country.

Mr. Bankes apprehended that the catholics would still be going on with demands; and thought that the present petition was urged on by ambitious men, rather than by the voice of the country.

The Chancellor of the Exchequer, among other remarks, said, that Mr. Grattan's language in speaking of tithes as an oppression, showed the spirit of the motion and of the catholics. Would not this be preliminary to the abolition of tithes, and of the establishment? He loved Christian toleration, not the toleration of philosophy; and thought, that the more great sects were brought to an equality of honours, the nearer they were to a struggle.

The call for the question at length becoming very general, Mr. Grattan rose again to make a few observations on what had fallen from the Chancellor of the Exchequer. After having replied to him in a strain of animated asperity, he concluded; “I have thought proper to say thus much, because I see the right honourable gentleman has assumed a higher tone in bigotry than he has even done in politics; and I must further tell this intolerant minister, that it is not in the declamatory tone of any earthly power to defraud my country of her civil rights, or prevent her from obtaining her religious liberty.”—On the division, there were for the motion, 83; against it, 146.

This subject was introduced in the house of lords on the 18th lord Donoughmore; and, after undergoing a severe discussion, the motion was lost by a majority of 121 against 62.—See LIBERTY OF CONSCIENCE, vol. xii.

Soon after the prince-regent had assumed the power of his high office, the duke of York was restored to the post of commander in chief. The clouds were dispersed, personal and individual follies forgotten, and the excellent state of discipline which the duke had introduced in the army.

army spoke so highly in his favour, that, as it was expected, his royal brother appointed him again to the place which he had spontaneously resigned. It was natural however to expect, that those members in the house of commons who had been most strenuous in bringing charges against him should feel the act of his restoration as an exertion of power conveying an imputation on their conduct on that occasion, as well as a stigma on the house itself. Under this impression, lord Milton, one of the members for Yorkshire, rose on the 6th of June, to submit a motion to the house upon that subject. He observed, that, although the duke had been absolved from the charge of personal corruption and connivance, his royal highness certainly appeared to have been guilty of that criminal negligence, bordering upon connivance, which rendered it impossible for him to continue in office; and there was every reason to believe that the house was then prepared to have come to a resolution which must have led to the resignation of his royal highness; but it was avoided by stating, that, as the duke had resigned, it was unnecessary to proceed any further. This might fairly be understood as an admission, that, if he had not resigned, the house would have found it necessary to adopt some other course of proceeding; and it was upon this ground that he founded the motion which he was about to submit to their consideration. His object was to maintain the dignity of that house, which appeared to him not slightly questioned in the re-appointment of his royal highness. It might be objected, that, though the house did at that period wish for his resignation, it did not intend to exclude him from all chance of return to office, and that the punishment he had already undergone might be considered as fully commensurate to his offence; but, in the first place, deprivation ought not of itself to be considered as a punishment; and, if it were, that did not affect the fact, that his royal highness had been declared by that house unfit for the office in question. Now, if he were unfit for the situation of commander-in-chief in the year 1809, it did not appear how he could be fit for it in 1817. He had voted in the inquiry upon evidence. If nothing had been done to subvert that evidence, with what face did the present ministers come to justify their recommendation of the duke of York to an office the administration of which he had disgraced? Would it be contended that the opinion of that house had not caused his royal highness's resignation? If that had not, he should be glad to know what had; and, if it had caused it, let the ministers state upon what ground they had advised his restoration. He should not enter into the question, whether persons of his exalted rank were the fittest to be selected for offices of such great importance and high responsibility; but he challenged the ministers to say whether they would have recommended a person in all respects circumstanced as the duke of York was, his rank excepted. After various other observations to the same purpose, the noble lord concluded with moving the following resolution: "That, upon a deliberate consideration of the recent circumstances under which his royal highness the duke of York retired from the command of the army in March 1809, it appears to this house, that it has been highly improper and indecorous in the advisers of the prince-regent to have recommended to his royal highness the re-appointment of the duke of York to the office of commander-in-chief."

The Chancellor of the Exchequer began his speech by acknowledging in the fullest manner the responsibility of his majesty's servants for recommending the measure in question. He then stated the circumstances which led to the re-appointment. The gallant officer, he said, who had lately filled the situation of commander-in-chief, after spending near half a century in the service of his country, had contracted an illness which obliged him to apply for liberty to retire from the arduous duties of his office; and there was not the slightest hesitation in his mind and that of his colleagues whom they should recommend for supplying the vacancy. The eminent services rendered to the army

by the duke of York, which were universally acknowledged, left them no choice. But the noble lord argued as if his majesty's ministers could not constitutionally recommend his royal highness to that appointment. Was, however, the resolution of the house on which he laid so much stress meant to be eternal in its operation? The right honourable member then went into an examination of the resolutions; and he contended, that the amendment proposed by Mr. Bathurst, which had been alluded to, was not intended to have had the effect of removing the duke from office. [To this Mr. B. assented.] He denied that the words of the resolution, stating that the duke's resignation rendered further proceedings unnecessary, implied that it was only on that account unnecessary to vote a censure upon him, but merely that it was unnecessary to go farther into the consideration of the minutes of evidence. The house therefore had pledged itself to nothing subsequent; and there was not the most distant idea of lessening its dignity by the advice given to the prince-regent for the nomination of the duke of York as the fittest person to fill the vacancy which had occurred.

It would be of little use to give even a sketch of the arguments used in the remainder of this debate; which, in general, were only recapitulations of those above stated. The supporters of the motion chiefly insisted upon the sense of the house respecting his royal highness's conduct, as implied by the resolution entered on its journals, consequent upon his resignation. They also laboured to show, that there was a mass of undeniable evidence sufficient to establish such instances of misconduct as ought to have precluded his restoration to office. The opposers, on the other hand, dwelt upon the services he had rendered by improving the military discipline, upon the general wish of the army for his re-appointment, upon the severity of the punishment he had undergone, and upon the methods that had been employed to inflame the public mind to his prejudice. Among the latter speakers were some who had originally taken part against him; and who did not hesitate to avow, either that they had formerly been carried away with the current of public opinion, or that they considered the case as it now stood in a different point of view. It is unnecessary here to inquire into the various processes of conviction that might have operated on different minds. That a great change had been wrought in the sentiments of this assembly was apparent on the division; when the votes for the motion were 47, against it 296; majority 249.

On the 24th of June, a conversation (for there was no debate) took place in the house of lords on a topic rather general than political. It related to the doctrine of private assassination, and was introduced in the following manner: Earl Grey rose to call the attention of their lordships to an article which had appeared in a French newspaper, published in London, in which the horrible doctrine of assassination was preached up and recommended in the most direct terms. The article he alluded to purported to be an extract from some English publication; and sorry was he to suppose that there was any Englishman who had a heart to conceive, or a hand to write, such a sentence as that which he referred to. As this paper might have some circulation upon the continent, and might perhaps excite the idea that such infamous doctrines might receive countenance in this country, he felt it necessary that his majesty's government should have an opportunity of expressing their abhorrence of such sentiments; for, were they to circulate in such a shape on the continent without being expressly disclaimed by their lordships and by the government, they might produce effects most injurious to the character, and disastrous to the interests, of the country. The article in question purported to be an extract from a work which recommended an Anti-Corsican Association. Here the noble earl read an extract from it, the substance of which was, "that, however reprehensible might be the general principle of cutting off your enemy by private means, yet it was pos-  
sible.

able to prove, by solid reasons and from weighty example, that in certain cases assassination was justifiable. When a man had been guilty of the most atrocious acts both of individual and national injustice—when he had, in fact, declared himself bound by no law, and utterly beyond its reach—and such was the situation of Bonaparte—before what tribunal could he be brought, and how was vengeance to be inflicted upon him?" The paper then went on, said the noble lord, to enumerate various acts of atrocity ascribed to the ruler of France, such as the murder of the duke d'Enghien, of Pichegru, of captain Wright, Palm, and others; treating the subject in such a way, that no one could understand it but as a direct incitement to assassination. In this view he was most anxious that their lordships and his majesty's government should solemnly and publicly enter their protest against any such doctrines, that it might go abroad to the world, and counteract any false impressions that such doctrines might produce.

Marquis Wellesley observed, that he could truly say, in point of fact, that the paper in question was never seen by him till it was communicated to him by the noble lord opposite. He fully coincided with that noble lord in thinking that such doctrines could not be too strongly reprobated, and that the atrocity of the sentiments could only be equalled by their absurdity. A doctrine more horrid in all respects he could not conceive; and he disavowed it, not only as a minister of the crown, but as a man of common sense. This writer had said, that the ruler of France had placed himself above all law; but he (lord Wellesley) trusted that there still remained a tribunal before which he might be compelled to answer even in this world. The nations of Europe might still call him to account, not by the poniard or the filletto, but (here the marquis seemed to speak prophetically) *by calling forth all their energies, and punishing him in the field for all those acts of perfidious aggression by which his name would ever be rendered odious.* It was lamentable that such a production should have issued from a British press; and he was sorry it had escaped his attention, though for only a few days. He would only add, that there was no way in which government could take an opportunity of reprobating such doctrine that they would not adopt, and if possible bring the author of it to condign punishment.

The duke of Norfolk suggested the propriety of laying the paper on the table; and thought it ought to be burnt by the common hangman. Lord Wellesley objected, that these measures would be giving it greater consequence and circulation; repeated his general agreement with the opinions of the noble earl; and thus the conversation terminated.

The same subject was taken up on the 1st of July, in the house of commons, by Mr. Whitbread, who dwelt at large on the horrid nature and effects of the doctrine of assassination, and the danger of disseminating such doctrines, which might be directed against any potentates whose measures were obnoxious to another country; and he invited the ministers in that house to a disavowal of them.

The Chancellor of the Exchequer declared, that, if such a disavowal was thought necessary, he should most readily make it, though it did not strike him that it was requisite to impress upon the house the conviction that under no possible circumstances could such doctrines be justified. He concluded with declaring the most decided and unqualified disavowal of the horrible doctrines alluded to.

Speculations of individuals, and the publication of their sentiments in newspapers, were they generally brought up to the minister in order to avow or disavow them, would certainly give a great deal of useless trouble to the houses of parliament. However, it was perhaps proper in this case that the English character should be shown in its real worth, in order that private insinuations might not stain, with their noxious breath, the true sense of a whole nation.

The decision of the Berkeley-peerae cause took place

in the house of lords, in a committee of privileges, on the 28th of June. On that day, the lord-chancellor entered at considerable length into the evidence adduced respecting the claims, and concluded by moving a resolution stating, "That the claimant, William Fitzharding Berkeley, had *not* made good his claims to the titles, honours, and dignities, of Earl of Berkeley, Viscount Dursley, &c." This resolution was agreed to *nem. diff.*—By the decision of the committee, the four eldest sons of the late Earl and present Countess of Berkeley are declared illegitimate; and the title devolves upon the fifth son, who is the first born in wedlock, viz. Thomas Morton Fitzharding, now Earl of Berkeley, born Oct. 19, 1796.

Notwithstanding the confident assertions of ministers and their friends, that no depreciation had taken place in bank-notes, the fact of a diminution of their relative value to bullion became at length so glaring that it could no longer be denied, and its effects excited a general alarm. The trade of purchasing guineas for notes at a rate greatly beyond the nominal value of the former was openly carried on, to an extent which threatened the abstraction of all the gold coin in the kingdom; and the difference of a money and a paper price was beginning to take place in commodities. In some parts of Ireland gold had been demanded by landlords from their tenants, instead of bank-notes; and the fact of a similar demand made by a nobleman in England, (lord King,) became a matter of general conversation. The evils which in so many countries had arisen from a depreciated paper-currency seemed to be impending over the British empire, and no remedy was as yet suggested by persons in power. In this emergency, earl Stanhope, a person who, perhaps more than any other individual of his rank, has habitually acted according to his own ideas, and has formed plans for the public, independent of party-considerations, took up the subject, and on June 27th presented to the house of lords a bill of which he had given previous notice. After some introductory observations, relative to the importance and the urgency of the matter, he said, that what he meant to propose was to make it illegal for any body to give more money for guineas, half-guineas, &c. than the value they lawfully bear; and to make it also illegal to take bank of England notes at a value less than they purported to be equal to. He disavowed all private or personal views in the plan he had formed; and concluded with moving the first reading of his bill.

The earl of Liverpool, whilst he did justice to the intentions of the noble mover, was not willing to admit the necessity of his bill, as he thought that the example of the nobleman alluded to, as demanding gold from his tenants, was not likely to be imitated. Although, therefore, he would not oppose the bill in its present stage, he should move for its postponement at the second reading.

On the 2d of July, the order of the day standing for the second reading of the bill, lord Stanhope rose, and expressed his satisfaction at seeing several lords who were not present at the former debate. He then observed, that it had been said that his bill was not necessary, because nobody would follow the example of his noble friend (lord King) in requiring gold from his tenants; but he rather chose to give people the protection of the law than leave them to the understanding or caprice of other men. He then read extracts from several letters he had received; whence it appeared, that the difference between notes and specie was beginning to be acted upon in various parts; and he inferred that the necessity might very speedily arise, and that too when parliament would not be sitting. He gave a caution to the secretary of state not to be too late with the remedy; and concluded with moving the second reading of the bill.

Lord King rose to vindicate himself with respect to the transaction which had been so much alluded to. He had thought it a duty he owed to himself to make a stand now in defence of his property from that constantly progressive depreciation of the currency which proceeded from

from the conduct of the bank of England, and their being protected by the legislature from the necessity of paying their notes in specie. It had been asked, in a manner rather insulting, Had any body ventured to refuse bank-notes in payment? He was the person who did think it advisable in certain cases to refuse bank-notes. The cases in which he had refused them at their nominal value were old contracts, and no other; and, in so doing, he would contend that he had not only acted legally (for of that there was no question), but according to every principle of equity. Could any thing be more equitable than that the payment should be made in currency of the same value as that in which the bargain was made? He had endeavoured to ascertain what that value was, from comparing the price of gold at the time that the contract was made with its present price; and his demand had been, either to be paid in lawful money of the realm, according to the contract, or in Portugal coin of the same weight, or in such a sum in notes as would purchase a quantity of gold equal in weight to that of the legal money covenanted; and he could not see where was the hardship or oppression in this. All productions of the land had risen in price according to the depreciation of the currency; and therefore the tenants on old contracts could not complain of suffering any loss from the demand. To explain the nature of the subject, he would suppose, that what was usually reserved for rent was about a fourth of the produce of the land; and that, for the sake of convenience, this proportion was estimated at a money-price. Was it equitable that the tenant should take advantage of all rises of price, in consequence of depreciation of the currency, upon all the shares he has; and that the landlord should have upon his share neither the rise of price nor the legal money he bargained for? It had been asserted that bank-notes were not depreciated, but that gold had risen in value; but this was not the case; for, if a man had at present any article of real value to exchange against gold, he might procure a greater quantity of gold for it than at any former period; and his lordship instanced in the price of wheat, of which twelve or fourteen quarters would now buy as much gold as eighteen quarters would in the period from 1786 to 1797; so that the farmer had been gaining considerably by the change of times. He declared, that, regardless of the clamour that had been excited against him, he was determined to persevere in what he conceived to be not only legal, but just and equitable.

It now appeared, that, contrary to their declared intention, the ministry were determined to adopt the bill.—The earl of Liverpool said, that, though he had at first thought it would be better to leave the law as it stood, yet, when he attended to the principle of the measure under consideration, and particularly to the principles of those who opposed it, he began to feel that the remedy should be upheld; and concluded with saying, that, considering the consequences which might follow from the example which had been pointed out, it would be unwise to reject the bill.

Earl Stanhope said, that, when he came down to the house, he imagined that ministers would throw out the bill; but the arguments of his noble friends (the opposition) had made converts of them, a task he could not accomplish; he had therefore to return them thanks, right and left. This humorous fallacy occasioned much laughter; and on the division there appeared, for the second reading 36, against it 12.

On the 4th of July, when the order stood for going into a committee on the bill, the marquis of Lansdowne rose to state the necessity of considering more fully the principles on which the bill proceeded. He advanced some further objections against making bank-notes a legal tender; and intimated, that, if the bill were committed, he should at least propose a clause to restrict the bank from issuing a greater number of notes than those in circulation at the time of its passing.

Earl Stanhope said that his noble friend misconceived

his bill if he thought there was any thing in it to make bank-note payments compulsory. There was a difference between the case of offering a man a bank-note, telling him, You shall take it, whether you will or not; and that of one choosing to take it, and at the same time setting his own value upon it. He desired it might be considered, that the public creditor was paid in bank-notes, to whom they were a legal tender; and where was the justice of putting the landlord upon a different footing? He expressed himself with much force respecting the oppression of compelling payments in gold when it was not to be had without great loss, and adduced other instances of this practice. He concluded with saying that he should take no further charge of his bill, but sit in the committee from curiosity. "I am (said he) its father, but I will not undertake to be its nurse."

After some other lords had delivered their sentiments, the house went into a committee on the bill. The earl of Liverpool proposed a clause for taking from landlords the summary mode of distress, if payment should be offered in bank-notes; which was agreed to.

The report of the committee was received on the 5th, when the earl of Liverpool proposed some verbal amendments, which were agreed to. A clause was also added, that the bill should not extend to Ireland; as in that country, previously to the restriction on bank-payments, a difference had existed between money and paper prices.

On the 8th of July the bill passed the house of lords; and on the 9th, was introduced to the house of commons by the Chancellor of the Exchequer, who stated, as the sole reason for its being adopted by the ministry, that the conduct of the noble lord, who had required gold in payment from his tenants, which they had thought not likely to be imitated, was openly defended, and even praised as a patriotic act by many persons of great authority, who claimed for themselves and their friends a monopoly of all the talents and public virtues in the nation. It was therefore become a measure of necessity; for, though he did not mean to question the motives which had induced that noble lord to act as he did, yet he could not conceive of any question which, if extended beyond the sphere of the concerns of the individual, could be attended with more peril to the country at large.—The bill passed on the 19th of July; and, on the 24th, the longest session of any parliament was terminated by a speech from the lord-chancellor.

At the commencement of the year 1811, every British eye was anxiously turned to the capital of Portugal, in the vicinity of which lay two powerful armies, one awaiting every opportunity to attack, the other equally vigilant to defend. The allied army under lord Wellington occupied the strong lines of Torres Vedras, in front of which, at Cartaxo, the commander posted himself with the main body of British. Marshal Massena had his headquarters at Santarem, whilst his troops spread along the Tagus and the Zezere, and his foragers sought subsistence as far as the borders of the Upper Beira.

The two great armies were in very different circumstances with respect to the facility of procuring necessary supplies. Lord Wellington had the capital behind him, with its noble port accessible to all the vessels that the power and wealth of Great Britain could freight; and how burdensome soever the maintenance, not only of the troops, but of a great portion of the population of the country, might be to the finances of England, the commander might rest assured that all his wants would be provided for. Massena, on the other hand, was lying in an already-devastated country, remote from all sources of regular supply, and obliged to the precarious aid of convoys for the transmission of such scanty collections of provision as could be made in the surrounding districts. These difficulties at length compelled the French general, however reluctantly, to abandon his boasted purpose of planting his eagles on the walls of Lisbon, and driving the English into the sea; and, on the night of March the 5th, he quitted his strong

camp at Santarem, leaving behind and destroying some of his heavy artillery and ammunition. The first movements of the French indicated an intention of collecting a force at Thomar; for which reason lord Wellington caused a detachment of marshal Beresford's corps to march in that direction, while he himself put the main army in motion to follow the enemy. The allied army pressed closely upon the retiring French, bringing them to action whenever an opportunity offered, and occasionally killing and taking prisoners a considerable number, though the skill of their commander preserved them from any great disaster. The result of lord Wellington's operations was to save Coimbra and Upper Beira from the enemy's ravages, and oblige them to take the road towards the Spanish frontier, with no other provisions excepting what they acquired by plunder on the spot.—We have read, p. 227, 8. Massena's accusations against lord Wellington on the score of plunder and devastation during his retreat through this very fine country. No one will suppose the French to have been more humane under similar circumstances: "Their conduct, (says lord Wellington,) throughout this retreat, has been marked by a barbarity seldom equalled, and never surpassed. Even in the town of Torres Novas, Thomar, and Pernes, in which the head-quarters of some of the corps had been for four months, and in which the inhabitants had been induced by promises of good treatment to remain, they were plundered, and many of their houses destroyed on the night the enemy withdrew from their position; and they have since burnt every town and village through which they have passed." They facilitated their retreat by abandoning their wounded, and destroying their baggage, and whatever else could encumber their march.

They were successively driven from various strong positions, but retained one upon the Guarda till the close of March, when, upon the advance of the allied main army, they retired, without firing a shot, to Sabugal on the Coa, upon the banks of which river, which flows near and parallel to the Spanish border, they took a new position. Here they were attacked on April 3d, by the allied troops in several divisions, when a sharp action ensued, which terminated in the retreat of the French with a loss of about two hundred killed and three hundred prisoners. They entered Spain on the following day, and continued their retreat across the Agueda. Lord Wellington then made arrangements for the blockade of Almeida; and, active operations in this quarter being for a time suspended, he went to the corps under marshal Beresford in Spanish Estremadura. That general, after the capture of Badajos and Campo Mayor by the French, had advanced upon the enemy with an united force of British and Portuguese, and, on the 26th of March, had routed a French corps with considerable loss, and recovered Campo Mayor. He then threw bridges across the Guadiana, and pushed his advanced posts to the vicinity of Olivença, where the French attacked them on the 7th of April, but were repulsed. He afterwards took a position whence he could invest both Olivença and Badajos, in both which places the enemy had left small garrisons on their retreat from the province. Olivença surrendered at discretion on the 15th; and the marshal met general Wellington at Elvas on the 21st. On the following day they reconnoitred Badajos, the blockade of which was established; and lord Wellington then returned to his army.

During the absence of the general, the enemy had made two unsuccessful attacks upon the British picquets upon the Azava; and had collected a very large force at Ciudad Rodrigo, at which place were Massena's head-quarters. On the 2d of May, the whole French army, consisting of the 2d, 6th, and 8th, corps, with all the cavalry that could be collected in the provinces of Castile and Leon, recrossed the Agueda at Ciudad Rodrigo, and advanced towards the allied army posted between the Coa and the Agueda. The inferiority of the latter in cavalry did not permit lord Wellington to oppose their march, which

they continued the next day towards the river of Duas Casas, along which, and at the sources of the Azava, the allied army was ranged, with their light division at Gallegos and Espeja. This division, with the British cavalry, as the enemy advanced, fell back upon Fuentes d'Honor on the Duas Casas, where three other divisions were posted, while others were guarding the passages of the river, and a corps was left to maintain the blockade of Almeida. On the afternoon of the 3d, the French with a large force attacked the village of Fuentes d'Honor, which was very gallantly defended by some battalions of light infantry. The enemy, by repeated efforts, obtained momentary possession of part of the village, from which they were driven by a charge of the 71st regiment. Other reinforcements were sent by lord Wellington, and the contest, after continuing till night, left the allies in possession of the whole post.—On the morning of the 6th, all the different French corps, with the cavalry, united in a vigorous attempt to cross the Duas Casas, and gain possession of Fuentes d'Honor. After a variety of partial actions and movements, which cannot be made intelligible without a plan, but which seem to have been directed with great judgment by the British general, and executed with equal courage and discipline by his troops, and which in different quarters lasted till evening, the assailants were finally repulsed at all points. During the course of the night of the 7th, they began retiring from the Duas Casas; and on the 8th the whole French army was collected in the woods between Espeja, Gallegos, and Fuentes d'Honor, their superiority in cavalry having protected them from pursuit. They broke up on the following night; and at length crossed the Agueda, leaving Almeida to its fate. The whole loss of the British and their allies on these two days was not much short of 1700 in killed, wounded, and missing, of all descriptions. That of the French, though not known, must have been very considerable; besides a number of prisoners taken from them, they left 400 dead in the village of Fuentes d'Honor, against which their principal efforts were directed.

The garrison of Almeida, commanded by general Brenier, evacuated that place on the night of the 10th, after having blown up a part of the works. They marched in great silence, dexterously winding their way through the several bodies of blockaders, so as not to be perceived till they had nearly reached the bridge over the Agueda. They were, however, pursued as soon as the alarm was given, and incurred a considerable loss; but the remainder were protected by a French division which had not yet quitted the bank of that river. The whole of the French army then continued its retreat towards the river Tormes.

In the mean time, the investment of Badajos by the allied army under marshal Beresford, which had been interrupted by a sudden inundation of the Guadiana, and the consequent destruction of the bridge over that river, was renewed, and the bridge was restored. The preparations for a siege being completed, approaches were made, which produced two sorties from the fort of St. Christoval, attended with considerable loss to the garrison. On the 12th of May, marshal Beresford, being informed that marshal Soult, having quitted Seville, and formed a junction with general Latour-Maubourg, was advancing with the intention of attacking the allied army, and relieving Badajos, suspended his operations against the town, sent his heavy artillery and stores to Elvas, and concentrated his force to withstand the threatened assault. He marched forward to meet the enemy, and took a position near the village of Albuera; and on the morning of the 16th, having been joined by a Spanish force under general Blake, he drew up his troops in two lines parallel to the river of Albuera, on the ridge of ground gradually ascending from it, and covering the roads to Badajos and Valverde. The French did not long delay their attack; in which their principal object seemed to be, to push across the river beyond the right of the allies, and endeavour to turn their

bank,

flank, whilst another attack was directed against the river and bridge of Albuera. The Spanish troops, who were posted on the heights to the right of the line, after a gallant resistance, were driven from their ground, which was occupied by the enemy; and, as this situation enabled them to keep up a raking fire upon the whole position of the allies, it became necessary to attempt its recovery. A vigorous effort for this purpose was made by the division of general Stewart, headed by himself. At the beginning of the action a heavy storm of rain had come on, which, with the smoke from the firing, rendered it impossible to discern any thing distinctly; which circumstance, with the nature of the ground, had greatly favoured the enemy in forming his columns and making his attack. The right brigade of general Stewart's division was bravely charging the enemy with the bayonet, when a body of Polish horse-lancers, coming unperceived, turned their flank, and charged them in the rear. A dreadful carnage ensued, by which some regiments were nearly annihilated; for these ferocious assailants never spare a wounded or fallen foe. One regiment alone escaped the fury of this attack, and kept its ground till the arrival of the third brigade under major-general Houghton, who fell pierced with wounds as he was cheering his men to advance. At length the enemy was forced to abandon the post he had gained, and was driven back with great slaughter across the Albuera. After his main attack was defeated, he relaxed in that of the village, where he had never been able to make any impression; and, the battle having continued without cessation from nine till two, the remainder of the day was spent in cannonading and skirmishing. Soult retired to the ground he had previously occupied; and on the night of the 17th he commenced his retreat towards Seville by the road he had come, leaving Badajos to its own defence, and relinquishing many of his wounded to the care of the victors.

That the action of Albuera was really a victory on the part of the allies, the result rendered undeniable; for the French general was completely foiled in his attempt, and was obliged to quit the purpose he had in view. It was, however, so dearly purchased, that in a sober estimate the day will perhaps rather be reckoned among the disastrous than the triumphant ones; for the loss incurred seems to have exerted a serious influence on subsequent transactions. That of the British alone exceeded 4000 in killed, wounded, and missing—of the latter, however, a great part afterwards found means to rejoin their regiments. The Portuguese loss amounted to about 350; that of the Spaniards is not ascertained, but must have been heavy. It is computed by marshal Beresford that the loss of the French of every kind could scarcely fall short of 9000.

The bravery of the British troops on this memorable occasion drew the warmest encomiums from the commander, and furnished ample matter for the eulogies of the parliamentary orators when thanks were moved in both houses for their services. It was indeed scarcely ever more conspicuous; and the misfortune with which the day commenced only contributed to afford more striking though melancholy examples of firmness and discipline. Thus, the 37th regiment, which particularly suffered from the charge of the Polish lancers, is represented as lying in ranks as they were drawn up, with every wound in the front. The behaviour of the allies also obtained high commendation.

Lord Wellington, who, with his characteristic zeal and activity, had repaired to Elvas immediately after the final retreat of the French from the neighbourhood of Almeida, but was unable to arrive in time for the battle, directed that Badajos should be closely invested upon the right of the Guadiana on the 25th of May, and afterwards renewed the operations of the siege. It had been his lordship's expectation that the reduction of Badajos could be effected before the second week in June, at which time he supposed that the reinforcements for the enemy's southern

army detached from Castile would join marshal Soult. On the 10th, however, he received an intercepted dispatch from Soult to Marmont, announcing the intention of collecting the whole French force in Estremadura; and he had reason to believe that Drouet's corps from Toledo would have joined the southern army by the 10th. Accounts also reached him which left no doubt of the destination of the army of Portugal (as it was called) for the southward. It became therefore absolutely necessary to raise the siege of Badajos, which lord Wellington put in execution, still, however, maintaining a blockade. The advance of the enemy finally determined him to quit the blockade, and to withdraw the allied troops across the Guadiana, which was effected on the 17th, without loss of any kind. On the 20th the French began to appear in the neighbourhood of Badajos, with an army composed of all their force from Castile, except the garrison of Madrid, and all that of Andalusia, with the exception of what was necessary to maintain their position before Cadiz, and the body commanded by Sebastiani in the eastern part of that kingdom. They occupied both banks of the Guadiana, from Badajos to Merida, and made various movements towards the frontiers of Portugal with the intention of cutting off detachments of the allies, but with inconsiderable success. On the 14th of July, the army of Portugal broke up from its position on the Guadiana, and moved towards Truxillo, whence they afterwards marched further northwards. Lord Wellington, who had been strongly posted on the Portuguese border in Alentejo, now moved his army to cantonments in the Lower Beira.

If we now turn our eyes toward Spain, we shall find that Catalonia was the theatre of the most active military operations at the commencement of the present year.

The Spanish cause sustained an afflictive loss by the death of the marquis de la Romana, on Jan. 23d, at Cartaxo, whither he had gone with two divisions of his army to partake the glory and danger of lord Wellington. This illustrious general had distinguished himself on various occasions by the spirited defence of his country against its unprincipled invaders, and had been particularly successful in clearing Estremadura of the enemy. A short time before his death, on hearing of the new movements of the French in that province, he had ordered the troops, with which he had joined the allied army, to march to the frontier. Lord Wellington, in communicating the melancholy intelligence, says, that "in him the Spanish army has lost its brightest ornament; his country their most upright patriot; and the world, the most strenuous defender of the cause in which we are engaged." His remains were temporarily deposited at Lisbon, with distinguished funeral honours. General Castanos succeeded to his command.

On the 10th of March, Gen. Ballasteros surprised Gen. Remon at Palma, dispersed his detachment, and made 500 prisoners. The strong fortress of Figueras in Catalonia was surprised by the Spaniards on the night of April 10th; and the following circumstances are related as attending its capture. Some Catalonian soldiers, whom the French had forced into their service, sent intelligence to colonel Roviras, who was at the head of a body of 1500 Catalonian patriots, that, if he would approach the place at night, they would open one of the sally-ports to his troops. Accordingly, on the night above-mentioned, colonel Roviras with his party entered the citadel of Figueras; and, after putting to death the only sentry who discovered them, so completely surprised the whole garrison in their beds, that not a shot was fired, or the smallest opposition made; and the whole garrison, consisting of 1000 men and 40 officers, were taken prisoners.—The active partisan, Espoz de Mina, obtained a distinguished success on the 25th of May, by his attack, in the province of Alvala in Biscay, upon a strong escort of French infantry and dragoons, who were conducting 1100 Spanish prisoners. All of these were liberated, and a great booty was made by the patriots, with

an inconsiderable loss on their part, while not more than half the French are said to have got back to Vittoria.

On the other hand, marshal Suchet, having succeeded in reducing Tortosa, (see p. 226.) appeared with an army of forty thousand men about the end of April before Tarragona, and began forthwith a course of operations which showed that to preserve the lives of his troops was with him altogether a subordinate consideration. In one of his obstinate efforts to forward his progress by assault, he is said to have lost, in taking the small fort of Olivo, not fewer than 2000 men. This affair occurred on the 29th of May; and two days afterward the Spanish general in chief, withdrawing from the town, ordered marshal Contreras to take the command of the garrison. Nothing could exceed the zeal of the troops and of the inhabitants; a zeal which supplied in a great measure the very deficient fortifications of the place, and required to be frequently restrained, but never stimulated. The defence became more obstinate as the attack advanced; for, being open by sea, it was able to receive succours of every kind by means of the English fleet on the coast. The capture, on June the 16th, of an outwork, gave access to the interior of the lower town. A breaching-battery was immediately transported to the spot by the besiegers; and on the 21st a furious assault was made, by which, after much bloodshed on both sides, the lower town, and its dependencies, were put into the power of the French. Although scarcely any hopes now remained of an effectual resistance, the garrison in the body of the place still held out, and determined to await a final assault. This was given on the afternoon of the 28th, when, a practicable breach being made, the assailants rushed in, and almost immediately carried the town. Suchet, in his former dispatch, had expressed his apprehension of being obliged "to set a terrible example, and intimidate for ever Catalonia and Spain by the destruction of a whole city." He too well verified his menace; and thus he relates the catastrophe: "The fury of the soldiers was increased by the resistance of the garrison, who every moment expected its deliverance, and thought to secure success by a general sortie. The fifth assault, still more vigorous than the preceding, made yesterday in broad day on the fortification, has occasioned a horrible massacre, with but little loss on our side. The terrible example which I foresaw with regret in my last report to your highness, has taken place, and will for a long time be recollected in Spain. Four thousand men have been killed in the city; from 10 to 12,000 men endeavoured to make their escape over the walls into the country: 1000 have been sabred or drowned; nearly 10,000, of whom 500 are officers, have been made prisoners, and are setting off for France; nearly 1000 wounded are in the hospitals of the city, where their lives were respected in the midst of the carnage. Three field-marshal and the governor are among the prisoners: many others among the slain."

When marshal Contreras was brought prisoner to the French camp, Suchet affected to charge him in public with the whole bloodshed consequent on the assault; while, in private, he spared no efforts to detach him from the cause of the Spanish patriots, and enlist him in that of his master. The marshal continuing inflexible, he was carried a close prisoner into France; and, although Bonaparte professed to issue an order to treat him with the attention due to his rank, he was immured in the castle of Bouillon with eleven state-prisoners who had long lost all hope of release, notwithstanding the expiration of their prescribed term of confinement. With one of these, however, he found means to escape, and wandered throughout France, sometimes on foot, sometimes on horseback, during eight months. Part of this period was the time immediately subsequent to the disasters of Bonaparte in Russia. The marshal arrived in England in June 1813; and has since published a Relation of the Siege, from which the above account is partly collected.—Thus fell Tarragona, leaving to the French arms a triumph that perhaps more than compensated all their failures in other quarters. It put the

whole coast of Catalonia in their possession, and enabled them to carry on their designs against the provinces to the southward, without apprehension of any considerable force remaining behind to check their movements.

In the north of Spain, in the mean time, the Guerillas were increasing in numbers, activity, and boldness. General Bonnet had found it expedient to evacuate the Asturias; and a part of his troops withdrew to Leon. On June 19th the French quitted Astorga; and marshal Bessieres marched in that month from Valladolid with all the force he could collect, and bent his course towards Benavente. An alarm given to Valladolid, however, caused him to return to that city. A detail of all the actions which took place in these quarters, and the circumstances and results of which are represented in the most opposite colours by the different parties, would rather embarrass the reader, than afford him a clear conception of the general state of affairs. On the whole, the occupation of the principal towns and districts in these parts appears to have remained nearly the same as at the commencement of the campaign. The Spanish army of Galicia, which had pushed forward to Astorga, was finally compelled to retire to its own province, and rendered unable to act offensively.

General Blak, who, after separating from lord Wellington's army, had made an unsuccessful attempt, on June 30th, to obtain possession of Niebla, embarked his forces for Cadiz, which city he immediately left, and sailed to join the Spanish army under general Freyre, in Granada. This united force, which had taken a position in the beginning of August, near Baza, was attacked by different divisions of the French army under marshal Soult; and in a series of actions on the 9th and 10th was entirely broken up with great loss, and obliged to return to Murcia.

We now return to lord Wellington's army, which, from its cantonments in Beira, had proceeded to march upon the Spanish frontier, between the Coa and the Agueda, and had threatened Ciudad Rodrigo. This movement produced the effect of collecting the enemy's troops from the army of the north, where an attack had been commenced on the Spaniards in Galicia, and also from that which on the frontiers of Navarre had been employed in operations against Mina, together with a great part of the army called of Portugal—all composing a force of not less than 60,000 men. The French appeared in the plain near Ciudad Rodrigo on Sept. 23d, and on the 25th they made a general attack on the posts of the allied army on the heights of Bodon, which, after much sharp skirmishing, terminated in an orderly retreat of the allies to a more favourable position. Another, but inferior, action took place on the 27th at Aldea de Ponte. The result of the whole was, that lord Wellington found it necessary to quit the blockade of Ciudad Rodrigo, which place was of course relieved. The French army, having effected this purpose, withdrew, each part returning to its former quarters. A singular accident happened on Oct. 15th to general Regnaud, the governor of Ciudad Rodrigo. An ambuscade having been placed near the town for the purpose of intercepting the cattle of the garrison, the governor, who had crossed the Agueda with some staff-officers and an escort, was surrounded by the Spanish cavalry, and taken prisoner.

The French army of Portugal was cantoned, in the middle of October, beyond Placentia, in the northern part of Estremadura, having one division at that town, with their advanced posts on the Allagon. A division of the 5th corps, with a considerable body of cavalry under general Girard, having crossed the Guadiana at Merida, and advanced upon Caceres, lord Wellington directed general Hill to move into Estremadura. That officer in consequence broke up from Portalegre on the 23d of October, and marched to Albuquerque; and thence, on the 26th, to Mal Partida. Girard fell back on his approach, and was retreating to Merida, when Hill, having made a forced march, surprised him on the 28th at Arroyo del Molino;

Moliao; by which Girard, after a gallant defence, was finally obliged to take to the mountains, suffering a loss which, in slain and prisoners, amounted to at least 2000 men, a general and colonel of cavalry being among the captives: all the enemy's artillery, baggage, commissariat, and some magazines of corn, also fell into the hands of the victors; and no action during the campaign was attended with more brilliant success.

It was, however, on the side of Valencia that the most important events in the autumnal campaign took place.—Suchet entered that province about the middle of September, and on the 27th took possession of the town of Murviedro, against the fortrefs of which, trenches were opened on the 29th. Three attempts which he made to take it by escalade were repulsed with loss. The siege of this fort of Murviedro, or Saguntum, proved a difficult task, on account of the nature of the ground, and the vigour of the defenders. A breach, supposed practicable, was made on the 18th of October, when a column of the besiegers advanced to the assault, and some of the most adventurous mounted to the top; but they were soon driven down, and their fate determined the rest to retreat after having undergone a considerable loss. As, however, it was evident that the place could not hold out much longer without being succoured, Gen. Blake, being joined by Gen. Mahi, the commander in Murcia, and all the other disposable force in that quarter, advanced on the 24th to the heights of Puch, overlooking the besieging army. He was there attacked on the 25th by Suchet; and, after a well-contested battle, in which the French commander himself asserts that he found he had far different troops to contend with than those of Valencia, was defeated with a loss, according to the French statement, of 6500 men in killed, wounded, and prisoners: of the latter alone more than 4600 are numbered. On the following day the fortrefs of Murviedro capitulated, and a garrison of nearly 2600 remained prisoners of war.

While the French forces on the eastern side of Spain were thus occupied in carrying one important point, according to their usual and successful mode of operation, their antagonists were not wanting in efforts to improve the opportunity in other parts. The enterprising and indefatigable Mina, who had passed the summer in the vicissitudes of good and bad fortune, having received advice that Gen. Duran and the Empecinado were moving from Castile upon Calatayud in Arragon, determined to co-operate with them; and, entering that province from Navarre, he marched to Ayerve with the intention of laying siege to that place. Its danger being known at Saragossa, a body of 1100 infantry and 60 cavalry was sent from thence for its relief. These came to action with Mina; and though, when obliged to retreat, they defended themselves with great resolution, formed into a hollow square, the result was their total destruction; 640 were made prisoners, and the rest put to the sword, three only (according to Mina's relation) making their escape to Saragossa. The Empecinado and Duran, in the mean time, succeeded in obtaining possession of Calatayud on the 4th of October, and making prisoners of the French garrison. They had some other petty successes; but a want of cordial agreement, as it is said, prevented any important results from their irruption into Arragon.

The southern point of Andalusia was the scene of some active service.—To oppose the Spanish general Ballasteros, who was at the head of some troops in the vicinity of San Roque, Gen. Godinot assembled a force of 10,000 men, which obliged Ballasteros to retreat. An application was then made to major-general Cooke, the English commander in Cadiz, to land a British force at Tariffa for the purpose of co-operating with the Spaniards. This request was complied with; and, on the 18th of October, a body of 1000 British infantry, with a detachment of artillery, under the command of Col. Skerret, landed and proceeded to Tariffa. The French army, unable to effect its design against Tariffa, marched back, followed by Bal-

lasteros, who, on the 22d, obtained a considerable advantage over the rear-guard. The French afterwards receiving a reinforcement from Granada, Ballasteros was again forced to retire. The design against Tariffa was then resumed by the French, who had a powerful force in that quarter under Gen. Victor; and by the 20th of December the town was completely invested. Approaches were made, and a breach in the wall was effected before the end of the year. This circumstance was reported by the brave commander, Col. Skerret, on the 30th of December, when an assault was expected. On the evening of the 31st, a strong column was seen rapidly advancing to the breach, and suitable preparations were made to receive the attack. The intrepid resistance of the defenders was crowned with success. In less than an hour, victory declared for them: the boldest of the assailants fell at the foot of the breach, and the mass of the column made a precipitate retreat. A very pleasing instance of humanity succeeded this exertion of valour. The ground between the town and the enemy's battery was strewed with their wounded, who must have perished had they remained there. Colonel Skerret therefore hoisted a flag of truce, in token of permission to carry them off; and this humane act was very feelingly acknowledged by the French commander. From that time the enemy kept up a partial fire, by which the breach was widened, and another assault was expected; when, on the morning of January 5, 1812, the columns of the enemy were descried already at a distance, having left behind them their artillery, ammunition, and stores. A detachment of the garrison was sent out to take possession of them, which rescued from the flames the articles that had been set on fire. A number of dead was found on the place, indicating the great loss which the besiegers must have suffered during the whole period. "Thus we have seen (says Col. Skerret, with allowable exultation) the utmost effort of the French has been frustrated by 1800 British and Spanish troops, with only the defence of a paltry wall; and an army of 10,000 men, conducted by a marshal of France, retreating from them silently in the night, after having been repulsed and defeated, leaving behind all their artillery and stores, collected at a great expense, and by immense exertions."

After the defeat of Blake, and capture of Murviedro, marshal Suchet advanced with his centre to the suburbs of Valencia, and was employed nearly a month in waiting for the arrival of the reinforcements and artillery, and collecting the requisites for a siege. On the 26th of November, an attack was made on the line of Blake's protecting army; and, his cavalry being routed, the infantry took shelter in its intrenched camp. This was afterwards forced; the artillery and baggage were all taken; and the fugitives, being cut off from the road to Murcia, were obliged to throw themselves into the city of Valencia. The victors then attacked and carried a number of small intrenched camps of the Spaniards; and, on the 25th of December, Valencia was invested on all sides. The French trenches were opened in the nights of the 1st and 2d of January, 1812, within seventy or eighty toises of the Spanish works; and in four days the engineers pushed mines within fifty toises of the fosse. Batteries were erected at sixty toises distance; and the effects of these operations caused the Spaniards to abandon their lines, and take possession in the suburbs. On the 5th, a bombardment was begun, and a capitulation was offered to the town by Suchet, which was rejected by Blake. The bombardment was recommenced, and in three days and nights 2700 bombs were thrown into the city, causing many fires and explosions. The engineers by that time had made a lodgment in the suburbs, and had placed mines under two of the principal gates. The horrors of an assault were impending over this populous city; and, in order to avert them, general Blake now consented to a capitulation. By its terms, Valencia was put into the power of the French, with about 18,000 troops of the line made prisoners of war, 374 pieces of artillery, and a great quantity of mi-

linary flores. As a reward for this signal success, the title of duke of Albufera was conferred upon marshal Suchet.

While these things were going on in the peninsula, we find Napoleon contriving to enforce his blockade of the British islands by annexing Hamburg to the French territory; a measure which, political in itself according to the plans and views of the French emperor, was still seen with an eye of jealousy by his northern allies; but, from a want of understanding among themselves, they had not yet strength enough to resist these peremptory decrees; and the free town of Hamburg was formally declared annexed to the French empire.

An event of great probable importance, and highly gratifying to the mind of Napoleon, took place on April the 20th: the empress was safely delivered of a son. For in the young prince has been revived the title, so many centuries dormant, of King of Rome; and displays of public adulation not inferior to those of the ages most sunk in the degradation of political servitude, were made to welcome "the venerable infant," to use an expression of our own Dryden. That this prospect of establishing a dynasty of his direct descendants must be highly gratifying to the ruler of France, cannot be doubted; but a long continuance of a prosperous reign in his own person will be obviously requisite for the peaceable transmission of his power to an hereditary successor.

The exposé of the state of the empire, presented to the legislative body by the minister of the interior on the 29th of June, though doubtless a flattering representation, contains matter of fact well deserving of attention. It commences with a splendid view of the late extensions of the French territory: "Since your last session, the empire has received an addition of sixteen departments, five millions of people, a territory yielding a revenue of one hundred millions (livres), three hundred leagues of coast, with all their maritime means. The mouths of the Rhine, the Meuse, and the Scheldt, were not then French; the circulation of the interior of the empire was circumscribed; the productions of its central departments could not reach the sea without being submitted to the inspection of foreign custom-houses. Those inconveniences have for ever disappeared. The mouths of the Ems, the Weser, and the Elbe, place in our hands all the timber that Germany furnishes. The frontiers of the empire lean on the Baltic; and thus, having a direct communication with the north, it will be easy for us thence to draw masts, hemp, iron, and such other naval stores as we may want. We at this moment unite all that France, Germany, and Italy, produce as materials for the construction of ships." It goes on to touch upon topics, the delicacy of which is a proof how firmly based that authority appeared to be, which ventured thus to agitate them before the nation. After remarking on the advantage afforded by the union of Rome, as removing the interposition between the armies in the north and south of Italy, it proceeds, "This union also brings with it the double advantage, that the popes are no longer sovereign princes, and in the relation of strangers to France. To bring to our recollection all the evils which religion has sustained by the confounding of temporal with spiritual power, we have only to look into history. The popes have invariably sacrificed eternal interests to temporal ones. If it be advantageous to the state and to religion that the pope should not continue to be a temporal prince, it is equally desirable that the bishop of Rome, the head of our religion, should not be a stranger to us, but that he should unite in his heart, with the love of religion, that love for this country which characterises elevated minds. Besides, it is the only means whereby that influence which the pope ought to possess over spiritual concerns can be rendered compatible with the principles of the empire, which cannot suffer any foreign bishop to exercise an authority therein." What follows under the head of religion is not less observable: "Twenty-seven bishoprics having been for a long time vacant, and the pope having refused at two different periods, from

1805 to 1807, and from 1808 up to the present moment, to execute the clauses of the concordat which bind him to institute the bishops nominated by the emperor; this refusal has nullified the concordat—it no longer exists. The emperor has therefore been obliged to convoke all the bishops of the empire, in order that they may deliberate about the means of supplying the vacant sees, and of nominating to those that may become vacant in future, conformably to what was done under Charlemagne, under St. Louis, and in all the ages which preceded the concordat between Francis I. and Leo X. for it is of the essence of the catholic religion not to be able to dispense with the ministry and the mission of bishops. Thus has ceased to exist that famous transaction between Francis I. and Leo X. against which the church, the university, and the supreme courts, so long protested, and which made the publicists and magistrates of that period say, that the king and the pope had mutually ceded what belonged neither to the one nor the other. Henceforward it is to the deliberations of the council of Paris that the fate of episcopacy is attached, which will have so much influence upon religion itself."

As there existed no other limitation to the extension of the territory denominated France, beyond its former confines, than the will of its present ruler, no surprise will be excited by the further annexations of districts in Italy, declared in an imperial decree of August the 5th. By this decree, the territories belonging to the kingdom of Italy situated on the left bank of the Enza (a river flowing between Parma and Modena) were united to France; and its course, from its mouth to its source, declared to be the future boundary between France and Italy; the boundary then proceeding along the Appenines to the present frontier of Tuscany. Other alterations were also announced of the boundaries between the kingdom of Italy and the Illyrian provinces of the French empire.

Further severities with respect to commercial intercourse with England were put in practice in the north of Germany, by an order of the marshal duke of Auerstadt, governor-general of the Hanseatic departments, dated Hamburg, August 6. In pursuance of a decree of the emperor, which enjoins every individual with whom is deposited, in whatever way, any merchandize, capital, or funds in money, appertaining to English commerce, to make declaration of the same to the imperial treasury; it directs that every holder of funds belonging to the enemy do make declaration of the same before the 10th of August in Hamburg, and before the 25th in all other parts of the 3d military division; and announces that every individual who after the above periods shall be found to possess enemy's property undeclared, shall, besides giving it up, be bound to furnish triple security for its value, in order to answer for the penalties incurred.

With a view probably to conciliate the affections of his new subjects in Holland, and to hasten his naval preparations, the French emperor set out from Compeigne on September 19th, on a tour to the coast. He arrived at Boulogne on the 20th; at which place an incident occurred which must have afforded him a mortifying proof of the insufficiency of his boasted armament in that place to cope with even the minor force of the British navy. Captain Carteret, of the Naiad frigate, anchored off that port, writes, that on the morning of the 20th he observed much bustle among the enemy's flotilla, moored along-shore under their batteries, which seemed to indicate that some great affair was in agitation. About noon, Bonaparte, in a barge accompanied by several officers, was seen to proceed along their line to the centre ship, which immediately hoisted the imperial standard at the main, and lowered it at his departure, substituting for it a vice-admiral's flag. By his express orders, as was afterwards learned, seven praams, each carrying twelve long 24-pounders and 120 men, and commanded by rear-admiral Balte, stood out with the flood-tide towards the Naiad, which awaited the attack at anchor, with springs on her cables.

cables. The praams, which had the option of choosing their distance, came up successively within gun-shot, gave their broadsides, and tacked, and continued this mode of engaging, joined afterwards by ten brigs, for upwards of two hours without intermission. The Naiad, which had returned their fire, and had not a single man hurt, then weighed and stood off, partly to repair some small damages, but principally to endeavour to get to windward, that she might be enabled to close with the enemy. After a time she tacked and made all sail towards them; but, it falling calm, the flotilla anchored under the batteries eastward of Boulogne, and the Naiad resumed her former anchorage. On the following morning, the enemy's flotilla of 7 praams and 15 smaller vessels weighed and stood out, apparently to renew their former distant cannonade. The Naiad weighed, and, getting well to windward, joined the armed brigs Rinaldo, Redpole, and Castilian, with the Viper cutter, which had come in the night to her support. They all lay to on the larboard tack, gradually drawing off-shore, in order to entice the enemy farther from the protection of his batteries. At the moment when the French admiral, having reached his utmost distance, tacked in-shore, the English Squadron bore up with the greatest rapidity in the midst of a shower of shot and shells, without returning any till within pistol-shot, when their firing threw the enemy into inextricable confusion. The French admiral's praam was the Naiad's chief object; but he pushed too fast for the batteries, that it was impossible to reach him without too great hazard. The Naiad, however, succeeded in separating one praam which had gallantly attempted to succour her chief, and, running her on-board, after an obstinate resistance obliged her to surrender. She carried 112 men, of whom 60 were soldiers of the line. The remainder of the flotilla was completely defeated, but escaped capture on account of the proximity of the formidable batteries. The loss on the English side was inconsiderable; and the whole affair was only important as a kind of experiment of what might be expected in a more serious encounter of the same nature.

Bonaparte next proceeded to Ostend, and afterwards minutely surveyed the new forts erected on the isle of Cadzand. He made such a kind of review of the Squadron of men-of-war lying at the mouth of the Scheldt as might be expected from a sovereign and a landman; and sailed in his yacht to Flushing, the repairs of which port he inspected. At Antwerp he received the different authorities at nine in the morning; and then visited the fortifications, the arsenal, the docks, and all the works of art and industry, which are described as having renewed, and even surpassed, all the wonders presented by that city in its most flourishing periods. But it was at Amsterdam, "proud of the title of third city of the empire," that the expected presence of the great visitant excited, according to the French accounts, the most enthusiastic emotions; and it is certain that the festive preparations publicly enjoined by the magistrates could not be well exceeded. He arrived there, in company of the empress, on October the 9th, and was received, it is said, with general acclamations, and all the tokens of joy and satisfaction. In the speech of M. Van Scholten, president of the tribunal of the first order, the people of Amsterdam are said to be "Frenchmen more in heart than in consequence of the union;" and to "feel all the honour of forming part of the empire of Charlemagne, restored by a monarch who is superior to him in all respects."

Napoleon returned to Paris on the 11th of November, after a tour which appears to have had no other important objects than such as regarded his Dutch dominions. There is no doubt, however, that he was during this period carrying on active negotiations with the northern powers of Europe, especially with the court of Russia, the effects of which will be mentioned presently. At the conclusion of the year, the waste of the past and the demands of the coming season were manifested by an order for the immediate call of 120,000 conscripts of the year 1812.

The impolitic war in which Russia had for some time past been engaged with Turkey, continued to be a drain upon the finances and population of both countries; doubtless to the secret satisfaction of that ambitious potentate, who, in his distant projects, probably meditated the reduction of one of these empires to a state of subserviency, and the spoliation of the other. For the progress of this war, we must refer to the articles *RUSSIA* and *TURKEY*.

Had the court of Petersburg encountered no other difficulties than those proceeding from a war which it unnecessarily provoked, and which a little moderation on its part might speedily terminate, its deliberations would have been attended with little anxiety; but it was at the same time pressed by that overwhelming weight of unbalanced power which was lying so heavy upon all the other states of the European continent. Napoleon's favourite plan of ruining the finances of England by cutting off her commercial intercourse with the countries of Europe, required an universal agreement among its potentates; and he had succeeded, by intrigue or intimidation, in causing his measures to be adopted, at least in appearance, in every part not actually occupied by the British arms. Russia, however, from the remoteness of its situation, and the degree of unbroken power and independence which it still possessed, exercised a will of its own on the subject, and was occasionally disposed to consult its private interest and convenience, rather than the views of the French emperor. Hence, English goods had never been committed to the flames in that country, as in Denmark and Germany; and British colonial produce was admitted into her ports in neutral bottoms.

The trade with Great Britain had been highly advantageous to the Russians, and many of the nobility derived a great share of their incomes from the sale of products of which this island was the principal market. The state of hostility which existed between the two countries was therefore generally unpopular in Russia, and the derangement of its finances in consequence of the Turkish war rendered the suspension of a lucrative commerce more severely felt. The presence of an English fleet in the Baltic during the summer, though it produced no declared change in the political system of Russia, could not fail of affording some opportunities of relaxing the rigour of commercial exclusion, and of giving umbrage to the French ruler. Other occasions of difference arose between the courts of Peterburgh and Paris. The former is said to have refused the demand of the latter, that Finland should be restored to Sweden; and, in other points, the arbitrary interference of Napoleon in the politics of the north could not but prove galling to the power which knew no equal in that part of Europe. From these causes, the whole year 1811 passed in discussions and negotiations between Russia and France, the aspect of which appeared at times so hostile, that an immediate declaration of war between them was confidently expected by the northern politicians. Such a change was supposed to have taken place in the Russian cabinet with respect to this country, that a quantity of ammunition and warlike stores was sent by our government in four transports, under convoy of a fleet of war, to the port of Revel, with the expectation that they would be received. They were, indeed, greeted on their arrival by the public authorities, as well as by the people, with a hearty welcome; but the Russian government was not prepared to take a step so decidedly hostile to the wishes of France, and the vessels were obliged to return without landing their cargoes. Upon the whole, it could not be questioned that the inclination of the court of Russia, at the close of this year, was more friendly towards England than towards France; but the same dread of the overbearing power of the latter country, which rendered her an object of aversion, also operated to inspire great caution in adopting measures which might afford a pretext for converting her into an open enemy. All confidence, however, was at an end

between the two courts; and a cloud was manifestly gathering which was soon to involve the north in the horrors of blood and devastation.

The humiliated court of Vienna had been principally occupied in the restoration of its impaired finances. The rest of Germany, in part annexed to France, and the remainder in close league with it, or under slavish dependence on the French emperor, contributed little of importance to the political history of the year. If sympathy could be excited for the degradation of a power which had itself risen by usurpation, the condition of Prussia was such as to call forth the emotions both of compassion and indignation. Its trade nearly annihilated, its public offices under the direction of Frenchmen, its finances overburdened to pay the exacted contributions, every political motion an object of suspicion to one of the two great powers by which it was encompassed; it had lost its prosperity and independence without obtaining the compensation of security. Its sovereign, who had been unwillingly accessory to the fall of his country, preserved the affection of his subjects by his readiness to undergo personal privations for the public welfare; but melancholy preyed on his mind, and of all the humbled monarchs he was probably the most deserving of pity. His inclination led him to a family-connection with the Russian emperor; but superior power obliged him to submit to the political interests of France. After much reluctant delay, he was compelled to join the Confederation of the Rhine, and to place a considerable body of his troops under the orders of general Rappe, the French commander on the southern coast of the Baltic.

Of the other northern states, Sweden has been the principal object of political interest, on account of the peculiarities of her situation. Under the nominal rule of a native king, but declining in years and constitution, she was really governed by an adopted successor, a Frenchman, formerly one of Napoleon's officers, and generally supposed to have been elected to the station of crown-prince through his influence. It was therefore natural to expect that Sweden through his means would be wholly devoted to the French interest; and the declaration of war against England, with the exclusion of its commerce, were apparent proofs of this subserviency. But these measures were manifestly unpopular with the Swedish nation; and Bernadotte, the crown-prince, soon began to exhibit symptoms of looking more to the honour and security of a crown which he was destined to wear, than to the gratification of a former master—in short, to be changed from a Frenchman to a Swede. A jealousy on the part of the French of an intercourse between the Swedes and the English appeared early in the year, from a complaint transmitted to Stockholm by the French consul at Gottenburgh, importing that the governor of that town connived at a clandestine communication with the British shipping; and, although upon an inquiry the allegations were declared to be unfounded, it was thought proper to remove the governor. The English fleet under sir J. Saumarez being in the Baltic in the month of June, a negotiation took place between him and the Swedish government respecting some detained ships with colonial produce; and the taking possession of the ships was explained as being merely a measure of retaliation against Prussia, which had detained Swedish ships in her ports. The conduct of the English admiral toward the Swedes was highly satisfactory to that nation, as he not only suffered their coasting vessels to pass unmolested, but even gave them all the protection in his power.

Denmark retained too strong a feeling of indignation against England, and was too apprehensive of the power of France, now become a close neighbour in consequence of the annexation of the northern coast of Germany, to make any change in its political system. Having lost its navy, and suffered a great part of its seamen to enter the French service, its maritime exertions were limited to attacks upon the English trade by privateers and gun-boats, in which it obtained success enough to be a troublesome

adversary. With the view of avoiding occasions of quarrel with Sweden, the Danish court issued a decree early in February, containing several immunities from detention or capture to Swedish ships which had been engaged in communication with England; as it is, however, difficult in all countries to restrain the predatory habits of corsairs, the Swedes had reason during the course of the year to complain of the hostilities practised upon their commerce by the armed vessels of Denmark.

The most considerable enterprise undertaken by the Danes in this year, was their attempt to recover the island of Anholt, which had been captured by the English, and rendered a station whence they were much incommoded. On March the 27th, a Danish flotilla with troops on-board, constituting a force of near 4000 men, arrived off the isle of Anholt, garrisoned by no more than 350, and, effecting a landing without opposition, made an attack upon the English works and batteries. Though their efforts were vigorous and frequently repeated, they were repulsed in every point, with the loss of their commander, and a number of men killed and wounded; and a body of 500, unable to get back to their boats, was obliged to surrender prisoners.

Of much more probable importance to Great Britain than the political state of the remote countries of Europe, is that of the United States of North America, which, though separated from us by a wide ocean, already exert a powerful influence upon our commercial prosperity, and must progressively become of greater weight in our public system in proportion to their advance in wealth and population. The year 1811 passed in a broken intercourse with this people, and in disputes with its government continually tending to widen the breaches made in the amity which ought to subsist between nations so nearly allied in origin, manners, and sentiments.

About the close of the year 1810, discussions took place in the senate of the United States respecting the occupation of West Florida. The opponents of the bill for its annexation maintained that the title by which they claimed it was insufficient, and that the president had not authority to cause it to be forcibly occupied; they also urged that, in the present state of Spain, and of her relations with Great Britain, there would be danger that such a measure might involve them in a war with those powers. The advocates of the measure dwelt upon the justice of the claim, and the obligation of asserting a national right under any circumstances whatsoever. The occupation was, however, carried into effect without resistance.

On the 22d of January, 1811, the president laid before congress copies of a dispatch from Mr. Pinckney, minister-plenipotentiary from the United States to the court of London, relative to his correspondence with the marquis Wellesley on the subject of the orders in council. In his enclosed letter to the marquis, dated Nov. 3, 1810, he refers to a notification he had made of the repeal of the Berlin and Milan decrees by the court of France; and reminds his lordship, that the day was now past on which that repeal was to take effect; and that therefore, according to the repeated pledges of the British government, its relinquishment of the system adopted in consequence of those decrees was indispensable. Mr. Pinckney then informs the American secretary of state, that no steps had been taken, or apparently thought of, towards the revocation of the British orders. On the 1st of March, Mr. Pinckney had his audience of leave from the prince-regent. When this circumstance was mentioned in parliament, as implying that all negotiations were at an end with the United States, the minister attempted to soften the inference by saying that a chargé d'affaires would be left, through whom any new proposals might be transmitted. It is certain, however, that Mr. Pinckney considered his mission as quite concluded. He thus expresses himself in a letter to Mr. Smith, secretary of state:—"I had my audience of leave at Carlton-house yesterday. In the course of the short address which the occasion required, I stated

to the prince-regent the grounds upon which it had become my duty to take my leave, and to commit the business of the legation to a chargé d'affaires; and I concluded by expressing my regret, that my humble efforts in the execution of the instructions of my government, to set to rights the embarrassed and disjointed relations of the two countries, had wholly failed; and that I saw no reason to expect that the great work of their reconciliation was likely to be accomplished through any other agency. The prince's reply was of course general; but I ought to say, that (exclusively of phrases of courtesy) it contained explicit declarations of the most amicable views and feelings towards the United States."

From this time the Americans acted as if the French edicts were revoked, and the English orders in council still enforced; whence the ships of the former power were admitted into its ports, while those of the latter were excluded. The ships under French colours, frequenting the ports of the United States, were almost all privateers, eager to make prize of all vessels to which they could lay the most dubious claim; whence complaints soon arose of their capturing American ships bound to Spain or Portugal, choosing to regard them as enemies' countries. The Americans had likewise much cause of displeasure with the Danes, whose privateers took many of their ships laden with colonial produce for the northern ports of Europe.

Whilst a suspension of amity, or rather an alienation, was thus subsisting between England and the United States, an incident occurred which appeared likely to have involved the two nations in immediate hostility. The American frigate *President*, having fallen in with the British sloop of war *Little Belt*, on the American coast, an action was brought on which terminated in a severe loss of men to the latter vessel. The circumstances in which both parties agree are the following: The ships coming in sight of each other on the forenoon of May 16th, about fourteen or fifteen leagues from Cape Henry, captain Bingham, of the *Little Belt*, gave chase, and soon discovered the other ship to be a man-of-war, which, upon desecring him, bore down towards him. Captain Bingham made all sail southwards, and was followed in chase by commodore Rodgers in the *President*, who evidently gained upon the other. At half past six, captain Bingham, who had discerned the stars in the *President's* broad pendant, brought to, hoisted his colours, had his guns double-shotted, and every preparation made against a surprise. Commodore Rodgers, who affirms that he had not been able to make out what nation the chase was of, took a position to windward of her, and about a quarter past eight got within hail. Now come the variances in the narratives of the two commanders. Captain Bingham thus states the matter: "I hailed, and asked what ship it was. He repeated my question. I again hailed, and asked what ship it was. He again repeated my words, and fired a broadside, which I immediately returned." Commodore Rodgers, on the other hand, says, "I hailed, What ship is that? To this inquiry no answer was given; but I was hailed by her commander, What ship is that? After a pause of fifteen or twenty seconds, I reiterated my first inquiry; and, before I had time to take the trumpet from my mouth, was answered by a shot that went into our mainmast." He goes on to state, that, while he was in the act of giving an order to fire a shot in return, a shot was fired by the second division of his ship, which was instantly answered by three others in quick succession from his antagonist, and soon after by his whole broadside. The action, however brought on, thenceforth became general, and lasted about three quarters of an hour, when, a suspension ensuing, the hailing was repeated, the ships recognized each other, and parted for the night. In the morning the *President* sent a boat on-board the *Little Belt*, with a message lamenting the unfortunate occurrence, and offering every necessary assistance, which captain Bingham declined. His spirit in maintaining a contest with a force so superior (the disparity being 18 guns

to 44) was worthy of his station; but was attended with the loss of 32 men killed and wounded, and great damage to the vessel. The American loss was very trifling. In the official inquiries relative to this encounter, the important fact of the first shot is (as usual in such cases) oppositely sworn to, ship against ship. If, however, the case be judged according to probabilities, the circumstance of the superior force of the American ship, together with an irritation which may be supposed to have dwelt on the mind of the commander relative to the dishonour sustained by the flag of his country in the case of the *Cheapeake*, will leave a presumption that a quarrel was fought on his part.

The English government manifested its desire of terminating the misunderstanding subsisting with the United States, by sending out in the spring Mr. Foster, as envoy-extraordinary and plenipotentiary. On his arrival he entered into the business of his mission; and it appears, from letters between him and Mr. Monroe in November, that the affair of the *Cheapeake* frigate was amicably adjusted by the disavowal and redress offered by our court, and accepted by the president. Mr. Monroe, at the same time, in his correspondence respecting the *President* and *Little Belt*, assures Mr. Foster that commodore Rodgers had no orders from his government to search for, and obtain by force, Americans impressed on-board British armed vessels, but merely to protect the coast and commerce of the United States; and he places his justification on the fact that the *Little Belt* fired first.—With respect to the occupation of West Florida, against which a solemn protest had been made in the name of the prince-regent, Mr. Monroe declares that no satisfaction had been made by Spain for spoliation on the commerce of the United States in 1798-9, nor for denying them the right of deposit at New Orleans; that West Florida is a part of Louisiana, to which they had a fair right by purchase; that no advantage was taken of the situation of Spain, but the seizure was made in consequence of an intention of the inhabitants, neither governed nor protected by Spain, to make themselves independent. He adds, that this measure will be no obstruction to a future discussion of title, when the government of Spain shall be established.

The most important part of the correspondence between the two negotiators related to the orders in council; and it was evident that nothing but their repeal could satisfy the American government, and restore an amicable intercourse between the two countries. Mr. Foster, not having authority to afford the expectation of any compliance in this respect, (as, indeed, our ministry were strenuous supporters of the justice and policy of those orders,) when congress assembled, after a shorter recess than usual, the president delivered to them an address, on the 4th of November, of which the refusal of Great Britain to repeal its orders in council was the leading topic, and was represented as directly tending to hostilities.

The West-India islands, of which the sole possessors are now the English and Spaniards, with the exception of the negro state of Hayti, or St. Domingo, afforded some particulars which must not be passed over.—The most remarkable event was the trial and execution of the Hon. A. W. Hodge, a member of his majesty's council in the island of Tortola, for the murder of one of his own negroes named Prosper.

The prisoner on his trial pleaded Not guilty. The first witness was a free woman of colour, named Paren Georges. She stated that she was in the habit of attending at Mr. Hodge's estate to wash linen; that one day Prosper came to her to borrow six shillings, being the sum that his master required of him, because a mango had fallen from a tree which he (Prosper) was set to watch. He told the witness that he must either find the 6s. or be flogged; that the witness had only 3s. which she gave him, but that it did not appease Mr. Hodge; that Prosper was flogged for upwards of an hour, receiving more than 100 lashes, and threatened by his master, that, if he did

not bring the remaining 3s. on the next day, the flogging should be repeated; that the next day he was tied to a tree, and flogged for such a length of time, with the thong of the whip doubled, that his head fell back, and he could bawl no more. From thence he was carried to the sick-house, and chained to two other negroes; that he remained in this confinement during five days, at the end of which time his companions broke away, and thereby released him; that he was unable to run away; that he went to the negro-houses, and shut himself up; that he was found there dead, in a state of putrefaction, some days afterwards; that crawlers were in his wounds, and not a piece of black flesh was to be seen on the hinder part of his body where he had been flogged.

Stephen M'Keogh, a white man, who had lived as manager on Mr. Hodge's estate, deposed, that he saw the deceased Proper after he had been so severely flogged; that he could put his finger in his side; he saw him some days before his death in a cruel state; he could not go near him for the blue flies. Mr. Hodge had told the witnesses, whilst he was in his employ, that, if the work of the estate was not done, he was satisfied if he heard the whip.

The prisoner's counsel, in their attempt to impeach the veracity of the witnesses, called evidence as to his general character, which disclosed instances of still greater barbarity on the part of Mr. Hodge. Among other examples, Pateen Georges swore that he had occasioned the death of his cook, by pouring boiling water down her throat. The jury brought in a verdict of *Guilty*; but recommended him to mercy. There were six other indictments on similar charges against the prisoner.

To the last moment of his life Mr. Hodge persisted in his innocence of the crime for which he was about to suffer. He acknowledged that he had been a cruel master; that he had repeatedly flogged his negroes; that they had then run away, when, by their own neglect and the consequent exposure of their wounds, the death of some of them had possibly ensued.

The recommendation of the murderer to mercy by the jury, and the necessity of proclaiming martial law in order to enforce his execution, were proofs of the difficulty which will always be experienced in establishing a system of equal justice, where society is composed of classes so radically different in their civil condition as masters and slaves. It was doubtless the conviction of this truth that produced a refusal of the British constitution to the newly-acquired island of Trinidad, on the ground that its white inhabitants were not to be trusted with the power which the formation of juries, and other prerogatives of magistracy, limited to themselves, would give them over the people of colour.

Some papers were printed, by order of the house of commons, consisting of a correspondence relating to punishments inflicted on certain negro-slaves in the island of Nevis, and to a prosecution instituted in consequence, wherein the defendant was acquitted. The circumstances which led to this proceeding are detailed in the following extract of a letter to governor Elliot, dated 7th September: "Your excellency will doubtless be told, that they who have exerted themselves in bringing to punishment the authors of such crimes, have been actuated by a spirit of party. Of that you will be well able to judge, when acquainted with all the circumstances. When I arrived a twelvemonth since in this country, Mr. Cottle, the president, made me an offer of a seat in the council, which I declined on the ground of ill health, and want of sight; nor should I have thought of meddling in public affairs, but for the horrid outrages lately committed in this island, and the open violation of law and justice which have followed them. Mr. Huggins, the author of these evils, when I was here sixteen years ago, was then as distinguished for his cruelty as in the present day, and his conduct held in abhorrence by every good man in the community, and by no one more than by Mr. Cottle, since become his son-in-law, himself deficient neither in under-

standing nor humanity. Mr. John Stanley, late attorney-general for these islands, some years since assured my father, that he was examined before a committee of the house of commons respecting a murder committed by Mr. Huggins, who has not scrupled to acknowledge to a friend that he shot a negro. It was understood at the time, that the body had been thrown into a negro-hut, and burnt with it. An inquest was taken on the body of another negro, who died shortly after a most inhuman flogging; but the overseer, who is still in the island, refused to give any satisfactory evidence to the grand jury who examined him. Two wretched suicides, weary of life, and the sufferings they endured, were taken out of a cistern, with their chains about them. Not whips and chains alone, but iron collars armed with spikes, have been used, and I believe still are, as instruments of punishment by this man. Ignorant and brutal as he is, he has amassed an immense fortune, and still is grasping at the possession of more land and more negroes. His doctrine was, that it was cheaper to buy negroes than to breed them. He has publicly boasted of five attempts against his life by poison; and there are medical men who well know the facts. In the first six months after he took possession of the estate called Pinnings, nine negroes died without any epidemical disease. A wretched old woman came to me a few days ago, to tell me she was compelled to work in the field. She was a favourite house-negro in her former master's family, and had nursed one of his children. Being ordered to throw a mixture of gunpowder and salt water on the mangled bodies of the negroes whipped in the market-place, she refused, and incurred the displeasure of her master; and her intellects have since been evidently disordered. An English groom, who had been witness to many of these shocking scenes, quitted the estate with horror, and returned to England, where his testimony will have some weight, as he bears a very good character. The negro Fanny, who died, had not been accustomed to hard work for many years before Mr. Huggins got possession of the estate; but he put her into the field, and she was one of those ordered to carry out dung by night. She never worked with the hoe again after the whipping; and died of an atrophy. J. W. TOBIN."

In the month of September, there was an insurrection in the island of Martinique, of which the following narrative has been published. On the 17th of September, information was sent to the *procureur du roi* (king's attorney), that an insurrection of the free people of colour and the negroes was to take place on the ensuing evening, when the town of St. Pierre was to be set on fire in several places; and, on the alarm given, the stores containing cutlasses and bill-hooks were to be broken open, and a general massacre to be made of all the white men who should appear in the streets. In case this plan did not meet with all the desired success, they were to storm St. Martin's battery, and turn its guns upon the town. On the disclosure of this plot, measures were immediately taken to prevent its execution. Some of the chiefs were seized, and others left the town. In the evening, people were seen on the heights which overlook St. Pierre; and an inhabitant brought the intelligence that from 70 to 80 of the conspirators, armed with swords, pistols, and other weapons, were assembled at his house, and that the number was fast increasing. The commandant, lieutenant-colonel Mackie, instantly sent a detachment to surround them, at whose approach they fired, and then ran away: they were pursued, but only three or four could be apprehended: on the following morning, however, several of the ringleaders were taken up; and parties from the garrison and militia were sent out to scour the country. On the 21st, the town was alarmed by the attempt of a body of 4 or 500 slaves to enter the town, where they expected to be joined by the domestic slaves; but, by the exertions of the commandant, the negroes were dispersed, and three of their chiefs taken. The head of the conspiracy, a free man of colour named Moliere, privately entered

entered the town by night, and endeavoured to make his escape on-board a small vessel; not succeeding, he blew out his brains. This man was a native of Martinique, and had been some time at St. Domingo, whence he returned with the title of viscount. The whole number of insurgents apprehended was about 130; of whom twenty-six were brought to trial, and of these fifteen were condemned and executed on the 10th of October. The governor of the island, major-general Charles Wale, issued a proclamation on the 15th, relative to this conspiracy, in which he observes, that "the object of this plot is inexplicable; for among the conspirators were some persons who, having the rank of freemen from the effect of colonial beneficence, might be expected to have nothing left to wish for but the prosperity of the country." He goes on to remark, that "these men paved the way for the seduction of the inferior classes, by throwing out opinions that have been repeated upwards of half a century by revolutionary writers;" and he further explains himself by saying, that "some individuals from bad intentions, and others from imprudence, have of late made it their particular business to comment upon the contents of the public papers, to discuss the opinions of journalists, and therefrom to deduce conclusions alarming to that system which has for two hundred years secured the prosperity of this Archipelago."

That a state of society in which a great majority of the people are slaves, and many more are excluded from the rights of citizens, is not one in which free discussion can be safely allowed, is very evident; and the tenure of the West-India islands has been rendered more insecure since the success of the men of colour at St. Domingo in establishing an independent government. For, although that island has since been a prey to the most sanguinary contests, it has presented an image of liberty and equality highly captivating to men groaning under degradation and bondage. To other attractions is now added that of a semblance of European honours and dignities, open to the ambition of the sable race. Christophe, the most powerful of the competitors, whom we mentioned at p. 166, under the title of President of Hayti, caused himself and his wife to be solemnly crowned at Cape François as King and Queen of Hayti, by a titular archbishop, on the 2d of June, 1811; after which he gave a splendid entertainment, at which were present two English captains and all the English and American merchants. His majesty drank the health of *his brother* the king of Great Britain, and wished for his success against the French tyrant. He has created various ranks of nobility, and has issued edicts for the establishment of a royal guard, an order of knighthood, and an ecclesiastical hierarchy. A body of 250 infantry, and a company of light horse, are to take care of the personal safety of his sable majesty, and two companies of light horse are to attend upon the queen and prince royal. The military order of the negro legion of honour is denominated the Order of St. Henry: it consists of the king, the prince royal, 16 grand crosses, and 32 commanders. A fund of 300,000 livres constitutes the endowment of the order, all the members of which must profess the catholic faith. King Henry has also his Royal Gazette. The motto to this publication is a quotation from Voltaire:

Le premier qui fut roi fut un soldat heureux;  
Qui sert bien son pays n'a pas besoin d'aieux.

The transactions in the peninsula of India, during the last and present years, have not been very important.—An event of some consequence to the powers in the northern part of Hindoostan, and which exemplifies the practice of Hindoo policy, was that of the death of the princess of Oudipore, by poison. This lady was the daughter of the rana of Oudipore, whose family being accounted more ancient and honourable than that of any other Hindoo prince, his alliance was sought by the neighbouring rajahs of Jaypore and Joudpore, both of whom as-

pired to the hand of the princess. Their rivalry produced a war, in which Scindia, Holkar, Ameer Khan, and all the other native chieftains in that quarter, have at one time or another taken a part. To terminate this scene of contention, the poor princess was sacrificed, poison being administered to her by her own aunt, with the knowledge of her father. It is said that the scheme was secretly contrived by Ameer Khan, who, finding the rana of Oudipore (now entirely in his power) was too far engaged to the Jaypore rajah to retract, and resolved that his own ally, the rajah of Joudpore, should not be disgraced by the triumph of his rival, suggested this expedient as the only method of settling their opposite pretensions.

In the south of India, a revolution took place which illustrates the *British* mode of interference in the affairs of that part of the world. The misconduct of the new rajah of Travancore, and his ill treatment of some of the branches of the deceased rajah's family, attracted the notice of Col. Munro, the British resident at that court; and, an investigation of his right to the throne being set on foot, it appeared that by the laws of the state his title was invalid, and that the rana Letchma Amah, in her 18th year, was the rightful successor. The interest of the British government made it expedient that the rajah should be dethroned, and a notification was made to him to that effect; but, as he attempted some resistance, he was placed under an escort of the 17th regiment, and marched from Trivanderum to Tellicherry. On the next day, March 17th, the princess Letchma Amah was proclaimed, and invested with the khalut, jewels, and sword of state. She was crowned at an adjacent pagoda by the principal brahmins, the British troops being drawn up on the occasion, to each corps of which she made a donation of 500 rupees: she was also honoured with a royal salute from the fort. On her return to the palace she ascended the throne, where she received the congratulations of Col. Munro, the officers of government, &c. and was presented with some valuable jewels, and other articles, in the name of the British government. An attempt on her life was made by the adherents of the deposed rajah, but was frustrated. This revolution, said to have been "rendered necessary by certain political considerations," was happily free from the guilt of bloodshed. The new female sovereign promoted to places of high trust several brahmins attached to the British interest. All foreigners in her military service were dismissed; various arrangements were made at the suggestion of the British resident; and pains were taken to reconcile the minds of the people to the new order of things. No attempt was made, as was apprehended, to rescue the ex-rajah; and a handsome establishment has been formed for him at Tellicherry.

The province of Vellore was afflicted, in 1810, with a drought and famine, in consequence of which 6000 people perished, together with a great number of cattle.

From Bombay, news was received of the capture by storm, and the restoration to its lawful chieftain, of the fortresses of Chya, a dependency of the rajah of Poorbunder, who had fought and obtained the protection of the East-India company. It had been usurped from him by his son. The English force employed on this occasion consisted of the 47th regiment.

While the events, passing on the continent of India, have been thus limited to a few comparatively minute transactions, its islands have afforded scenes of extraordinary interest.—The most splendid acquisition made by the British arms in the course of the year 1811, was that of the capital of the Dutch settlements in the East-Indies, Batavia, with the rich island in which it is situated. After the reduction of the islands of Amboyna and Banda, with the French isles of Bourbon and Mauritius, (see p. 37.) the governor-general of India, lord Minto, resolved to complete the British dominion in that quarter of the world by the conquest of the island of Java. In the month of March, a body of troops destined for this expedition was encamped at Madras, consisting of his majesty's 14th, 59th,  
and

and 69th, regiments of foot, four squadrons of the 22d dragoons, two squadrons of horse, and a party of foot-artillery. The 78th regiment was to sail from Bengal. The chief command was vested in Sir Samuel Auchmuty, and Gen. Weatherall was nominated second in command. Lord Minto himself determined to accompany the armament, which was appointed to sail in April. It was understood that Gen. Daendels, the governor of Java, was making every possible preparation for a formidable resistance to the expected attack. He had successfully terminated a destructive war against the people of Bantam, who had rebelled (as it was termed) against the Dutch authority; and his government, under the influence of French direction, was conducted with unusual vigour and intelligence.

On the 4th of August, Sir S. Auchmuty effected a landing without opposition at the village of Chillingching, twelve miles to the east of Batavia. As the enemy's chief force, commanded by Gen. Jansens (who had succeeded Gen. Daendels in the government) lay at Cornelis, some distance up the country, it was resolved first to explore the road leading to Batavia; and the troops on the 6th approached the Anjol river, the bridge over which had been broken. A great fire being then perceived in Batavia, it was concluded that the garrison intended to evacuate the city, for which reason Col. Gillespie was sent with a detachment to take possession of the suburbs. On the 8th the burghers applied for protection, and surrendered the city without opposition; and, although large store-houses of public property were consumed in the conflagration, yet some valuable granaries and other stores were preserved. On the 10th, Col. Gillespie moved with his corps to the enemy's cantonment at Weltevrede, which he found abandoned; but a strong position had been taken a little beyond, and two miles in advance of the works at Cornelis, defended by an abatis, and 3000 of the enemy's best troops. This was attacked with the bayonet by the British, and carried, with considerable loss to the defenders. A column that came to their assistance was driven back on the arrival of the British line. There still remained the main body of the enemy, in the works of Cornelis, greatly superior in numbers to the assailants, and strongly intrenched in a favourable position, guarded by redoubts and a numerous artillery. For some days a cannonade was carried on, by which several of the enemy's batteries were silenced; and at the dawn of day, on the 26th, a general assault was made. Col. Gillespie led the attack against an advanced redoubt, which was carried with the greatest rapidity, the victors passing a bridge on the other side along with the fugitives, and at the bayonet's point storming a second redoubt. Col. Gibbs, on the right, carried another redoubt; but an explosion of the magazine of that work destroyed a number of officers and men who were crowded on the rampart. The lines in front of fort Cornelis were then forced, the fort itself taken, and at length the whole enemy's army was killed, taken, or dispersed. The slaughter in the action and pursuit was immense; and near 5000 prisoners, among whom were three general officers, with all the artillery, attested the extent of the victory. Gen. Jansens with difficulty escaped during the engagement, and reached the distance of 30 miles with a few cavalry, the sole relics of an army of 10,000 men. The loss of the conquerors, though considerable, might be regarded as moderate, compared to the obstacles they had to overcome; and never, perhaps, did a more complete success confer honour on the courage and discipline of British troops.

General Jansens, notwithstanding the decisive blow he had received, showed no intention of giving up the contest, but employed himself in collecting what remained of European and native force for the defence of the rest of the island. Sir S. Auchmuty therefore prepared to push his success with vigour, as neither the climate nor the season admitted of delay in the military operations. At the beginning of September, the fort of Cheribon was oc-

cupied by the seamen and marines of three frigates detached for this service. A body of troops was embarked on-board the ships of the fleet under rear-admiral Stopford, which were ordered to proceed to Samarang, where they were joined by Sir S. A. and the admiral. Gen. Jansens, who had retired to that town, upon a summons to surrender the island, professed a determination to persevere in his resistance, on which account preparations were made to attack Samarang; but it was discovered on the 12th that he had evacuated the place, and had occupied a position on the road to Solo, the residence of the emperor of Java. Samarang was therefore taken possession of without opposition; and the admiral sailed with some ships to occupy the harbour of Sourabaya. The general then directed Col. Gibbs, with the few troops that were there assembled, to attack the enemy's position, which was performed on the 16th with success, and on the next day a flag of truce was sent in, and an armistice was agreed upon. After some attempt by Gen. Jansens to procure better terms than were offered, the firm tone assumed by the English general induced him to comply; and the European troops surrendered at discretion. The terms of capitulation, putting the whole island of Java in the possession of Great Britain, were highly advantageous to this country, and at the same time reflected great honour on the British character.—The small adjacent island of Madura, which had been occupied by the French, also submitted at the same time; and thus, to that overgrown power of which Holland now composed an integral part, not a vestige of oriental dominion was left.

On the last day of April, early in the morning, Mohee Oodheen, the second legitimate son of the late Tippoo Sultan, put a period to his existence, in the ground-floor of his own apartments at Russapuglah. He effected his purpose by discharging a fowling-piece, loaded with small shot, into his chest: the shot entered in one compact body between the sixth and seventh rib, on the left side, near the breast-bone, passed in the direction of the heart and left lung, and issued at the upper part of the shoulder-blade on the same side. On examining the premises, the shot was found to have lodged in the adjoining wall, at the height of between five and six feet from the ground. No person was near when the act was perpetrated; but the report of the piece was heard about four in the morning, when the family and attendants instantly rushed into the room. From the direction of the wound, it is conceived that the deceased had planted the butt-end of the piece on the floor; and, pointing the muzzle to his breast, had drawn the trigger with his toe. When discovered, he was lying on his back across a cot, in the agonies of death, with the gun resting on his body. He expired almost immediately. The prince, we understand, since his arrival in Bengal, had distinguished himself above the others by the regularity and correctness of his conduct, and, on that account, had been permitted to enjoy a larger share of liberty. His behaviour, however, it is said, had lately altered; and, immediately before his death, he had privately stationed three horses in a stable on the Chitpure-road; and by other indications betrayed an intention to attempt his escape.

A very extraordinary conspiracy was detected about this time at Bombay. Mr. Osborne, sub-treasurer of the settlement, suspecting the native clerks in the treasury of malversation, gave notice, that on a particular day he would investigate their accounts, and expect to find their balances accurate. The clerks, native Indians, borrowed the necessary sums of the money-changers to make their balances complete while passing examination, and engaged to return the sums so borrowed next day, they having not the least doubt that these sums would be again intrusted to their custody; but Mr. Osborne, on finding the balances accurate, clapped locks upon the whole of the treasure every night, thus in effect keeping it in his own possession. The native clerks, astonished and driven to despair, their ruin being inevitable, formed a conspiracy against the life

of Mr. Osborne. They were betrayed, apprehended, and carried before the superintendent of police, who dismissed them on the ground of want of sufficient evidence; but they were apprehended again, and committed. The grand jury having found a true bill against four of the native clerks, for a conspiracy to take away the life of George Cumming Osborne, esq. sub-treasurer at Bombay, they were put on their trial on the 12th of November, and pleaded Not guilty. Mr. Macklin, counsel for the prosecution, stated, that a conspiracy existed among the servants of the treasury, and their friends in the bazar, to cheat the public; and that a system of peculation of enormous extent was to be supported by murder. Several witnesses, native Indians, were examined, to prove that they had been tampered with by the native clerks in the treasury to procure the death of Mr. Osborne, by conjuration or any other means; and that 1200 rupees was to be the reward of success.

George Cumming Osborne, esq. being examined, said, he is sub-treasurer; he took possession in July 1809. He soon heard of the native officers, now at the bar, having equipages and handsome houses, living in a sumptuous manner much beyond their scanty pay; that the two head throffs had emerged from obscurity to elegant houses, &c. sometimes they had ten lacs, sometimes half a million sterling, in their possession. Witness gave notice of his design to inspect the balances; he found them correct, and ever afterwards kept the keys, contrary to custom.—Other witnesses were examined, showing that false receipts had been given to make an appearance of balances, &c.

The recorder, in his charge on this trial, remarked, that conjuration or incantation failing, as every European believed it would, the dagger and the bowl must be resorted to, to effect murder. That it was remarkable the chief throffs, having only half a guinea a-week, and no other means of emolument, lived in great splendour, had great wealth and credit. To support this, they wished to dispose of Mr. Osborne, that they might again have the keys of the treasury in their power. The recorder declared his thorough conviction of the guilt of the prisoners; and the jury, after retiring a few minutes, pronounced them *guilty*.—At twelve o'clock at night, the recorder pronounced sentence as follows on the three chief criminals: "This court doth order and adjudge, that you be imprisoned for five-years in the prison of Bombay; that you be placed once a-year in the pillory, with labels descriptive of your offence; that, during your imprisonment, you be twice publicly whipped through the bazar; that you be fined 10,000 rupees each, and that you be further imprisoned till you pay the fine. And, in order to extinguish at once those hopes of impunity that appear to have been so audaciously spread on this occasion, the court directs the sheriff, that the first pillory and whipping be inflicted to-morrow morning." The punishment was accordingly inflicted next day, in the presence of 20 or 30,000 spectators.

The allusion in the above sentence of the court to "hopes of impunity," was fully explained on the 23d of November following, upon the trial of C. T. Briscoe, esq. which lasted three days. He was indicted for corruptly and wilfully conspiring, with others, to obstruct and impede the course of justice, by preventing the trial and conviction of the above conspirators to murder Mr. Osborne. The jury found him guilty, but most strongly recommended him to mercy. He was sentenced to be imprisoned in the gaol of Bombay for twelve months.

While we were thus successful in preserving tranquillity in both Indies, and while our land-forces were gathering laurels in the well-fought fields of the peninsula, our navy, finding no adequate antagonist, was reduced to such minor exploits as occasion presented, in which, however, it sufficiently manifested the superiority of its discipline and enterprise.

The first of these gallant actions which occurred in the order of time, was that of a merchant-ship, the Cumberland, Barrett master, from Quebec. This ves-

sel arrived in the Downs on Sunday night the 13th of January, under a jury foremast and bowsprit, having pitched her bowsprit and foremast away in a heavy gale of wind off the banks of Newfoundland. From seven till eight o'clock on that morning, she was attacked by four French lugger-privateers, between Dover and Folkestone, the first of which hailed to know if he wanted a pilot; Capt. B. having suspicion of her, replied in the negative; immediately after, another privateer ordered him to lay back his mainyard, and the whole of them commenced a fire of musketry, and two of them ran alongside and boarded; previous to which captain B. had ordered all the ship's crew into the cabin, they being armed with their boarding-pikes. As soon as about twenty men got on-board, the captain ordered the ship to be fired off from the privateers, leaving the Frenchmen no retreat; and, on the ship being boarded, the privateers ceased firing; then the ship's company rushed forward, and cleared the deck; the greatest part of the boarders being killed, and the remainder jumping overboard. Immediately after, another of the privateers came alongside, and told the captain they would give no quarter. On hearing this, the ship's company cheered them; and they were boarded, and cleared in like manner. This was repeated three times afterwards, with the like success on the part of the ship's crew. Immediately after this, captain Barret discharged three of his carronades, loaded with round and canister shot; the first was seen to carry away the mainmast of one of the privateers, and the second carried away the bowsprit of another, and it was supposed destroyed many of the men, as they were heard to cry out, and the throts were heard to strike the vessel. They then made off, and the Cumberland proceeded for the Downs. Mr. Coward, chief mate of the Cumberland, was wounded in the shoulder; and one man died of his wounds. The loss on the part of the enemy was supposed to be about sixty. Capt. B. killed three himself, one of which he was obliged to put his foot on to extricate his pike. This is supposed to be the most gallant defence made by any merchant-ship during the war; as her crew consisted only of 26 men, and those of the privateers, according to the prisoners' statement, amounted to 270 men. The lords of the admiralty, as a mark of their satisfaction at the gallantry exhibited on this occasion, granted each of the crew of the Cumberland a protection from the impress for the space of three years.

The next bold exploit we shall notice, was the defeat of a combined French and Italian squadron off the Isle of Lissa, on the Dalmatian coast, by an English squadron under the command of Capt. Hoste, acting as commodore. The enemy's force, consisting of five frigates and six smaller armed vessels, sailed from Ancona, with 500 troops on-board, for the purpose of fortifying and garrisoning the Isle of Lissa. They were defeated, on the 13th of March, lying to off the north-point of the island, by the English squadron of four frigates, the Amphion, Active, Cerberus, and Volage. The French commodore, Monf. Dubordieu, a man of distinguished courage, confiding in the superiority of his force, bore down in two divisions under full sail to attack the English, which was formed in one close line to receive him. The action commenced at nine A. M. when the French commodore, falling in his attempt to break the English line, endeavoured to round the van-ship, and thus place the English between two fires; but was so roughly handled in the attempt, that his ship became unmanageable, and went on-shore on the rocks of Lissa. The action was still maintained with great fury, till two more of the enemy's ships struck. The remainder to windward then endeavoured to make off; but, being pursued as well as the crippled state of the English would permit, the sternmost was compelled to surrender. Two of the frigates crowded sail for the port of Lessina, and the small craft dispersed in various directions. The result of this very gallant action, in which the superior skill and steadiness of the English marine was strikingly exemplified, was, that the French commodore's ship,

*La Favorite*, of 44 guns, was burnt, himself being killed in the engagement; the *Corona* of 44, and the *Bellona* of 32, were taken; the *Flora* of 44, after having struck her colours and ceased firing, taking advantage of the impossibility of being occupied during the heat of the action, stole away and escaped, captain Holte in vain afterwards claiming her as a lawful prize. The surviving crew and troops of *La Favorite* were obliged to surrender at Lissa after the action. The loss of the English on this occasion amounted, in officers and seamen, to 50 killed and 150 wounded.

The capture of a whole flotilla on the coast of Calabria, by an English frigate and a sloop, deserves recording, on account of the masterly manner in which it was effected, though the trifling resistance encountered on the occasion gave but little scope for the display of the habitual courage of British seamen.—Capt. Napier, of the *Thames*, in a dispatch, dated July 21st, relates, that, being informed by Capt. Clifford, of the *Cephalus*, of a convoy of twenty-two sail which he had compelled to take shelter in Porto del Infreschi, as they were attempting to proceed round Cape Palinuro for Naples, the two ships made sail for that port, where they arrived at five in that evening. They directly steered in, and anchored; and, having soon silenced a line of gun-boats moored across for the protection of the merchantmen, they landed a body of marines, which gained possession of a tower and 80 men of its garrison, though the adjacent hills were lined with musketeers. The boats at the same time took possession of the whole convoy; all of which were alongside, and the ships under weigh, in less than two hours, without a man killed, and only five wounded. The capture consisted of eleven French gun-boats, one armed felucca, fourteen merchant-vessels, and four rafts of large spars for the Neapolitan navy.

At the latter end of October, a brilliant exploit of the army and navy combined took place on the coast of Naples. Two hundred and fifty soldiers of the 62d regiment, commanded by major Darley, were disembarked from the *Thames* and *Imperieuse* frigates, with fifty marines under lieutenant Pison, in the face of 900 of the enemy posted at Palinura, whom they attacked with fixed bayonets, and drove from their position. They then destroyed the enemy's batteries and cannon, and three gun-boats; captured six more, with twenty merchantmen; and, after staying two days on-shore, re-embarked and returned with their prizes to Melazzo.

The capture and destruction of an entire convoy, in the Adriatic, is related by Capt. Gordon of the *Active*, in a dispatch, dated off Ragofniza, July 27th. He states, that upon anchoring there he detached the boats of his ship, with the small-arm men and marines, under the command of Lieut. Henderson, to attack an enemy's convoy which had run above the island on which the town of Ragofniza stands, and had taken shelter in a creek on the main. As the entrance was narrow, and protected by three gun-boats, the lieutenant landed his armed men to take possession of a hill which appeared to command the creek, leaving orders with the boats to push for the gun-boats the moment a signal should be made from the hill. The attack thus concerted was executed with so much spirit and precision, that the enemy was presently put to flight, leaving a number of killed and wounded; and the whole convoy was seized, of which, eighteen vessels with the gun-boats were brought away, and ten were burnt. They were chiefly laden with grain for the garrison of Ragufa, and were defended on shore by 300 armed men, who, however, were so panic-struck, that the whole loss sustained by the assailants was four men wounded in the boats.

An enterprise in which both courage and stratagem were successfully employed was undertaken by his majesty's ships *Diana*, Capt. Ferris, and *Semiramis*, Capt. Richardson, lying off the mouth of the Gironde. Perceiving four sail of vessels, under convoy of a national brig of war, on the inside of the shoals at the mouth of

that river, Capt. Ferris, disguising the English ships so well that pilots were sent to their assistance on the supposition that they were French, brought them to anchor between the Corduan lighthouse and Royan, on the evening of August 24, and dispatched armed boats to capture or destroy the convoy then lying about four miles distant up the river. At day-light he determined to attack the national brig, and another stationed for the protection of the river, still having kept up the deception so well, that the port-captain, who commanded one of the brigs, came on-board the *Diana* to offer his services, and did not discover his mistake till he was ascending the quarter-deck. Capt. Ferris then laid the outer brig on-board, and succeeded in taking her without loss on either side. She proved to be the late English gun-brig *Teazer*, mounting twelve eighteen-pound carronades, and two long eighteen-pounders, with eighty-five men. In the mean-time the *Semiramis* drove on-shore, and burnt under the guns of the Royan battery, *Le Pluvier*, of sixteen guns and 136 men. The captured merchant-vessels were then brought out; and the business was terminated with complete success.

These were the principal naval actions of the year within the European seas; the capture of single privateers, and small armed vessels, being almost the only other successes recorded in the Gazette. Of the latter, however, that of the famous fast-sailing privateer, *Le Vice-amiral Martin* of eighteen guns and 140 men, from Bayonne, by the frigates *Fortunée* and *Saldanha*, in October, is worth mentioning as an example of a well-conducted chase. Such was the privateer's rate of sailing, and dexterity of management, that the English captains were convinced neither of their ships could have taken her singly.

The Indian sea, off Madagascar, was the scene of a severe action between an English and French squadron in the month of May. Three French frigates, with troops on-board, having appeared off Mauritius on May 7th, and borne away on discovering the capture of that island, it was conjectured, by Capt. Schomberg of the *Astræa*, that they would push for Tamatave. He accordingly sailed thither, accompanied by the *Phœbe* and *Galatée* frigates, and the *Racehorse* sloop; and, the enemy being discovered on the 20th near Foul Point, Madagascar, the signal to chase was made from the *Astræa*. Variable winds and calms rendered it impossible for the English ships to get up together to close action; and, while the *Astræa* was lying almost immovable on the water, the enemy succeeded in rounding the two other frigates, and raking them with considerable effect. Night came on before any thing decisive was effected, but the *Galatée* had suffered so much in her masts, that she could not be brought again to action. In the morning the *Astræa* led towards the enemy, followed by the *Phœbe* and *Racehorse*; and, bringing the commodore's ship to close action, in twenty-five minutes she struck. Another frigate also struck, but afterwards attempted to escape; and was chased without success. One, which had been worked by the *Phœbe* on the preceding night, also got off. The captured ship proved to be *la Renommée* of 44 guns and 470 men, of whom 200 were picked troops. She was reduced to a wreck, with 145 killed and wounded, among the former of whom was the gallant captain.

After this action, the English squadron proceeded to Tamatave, then repossessed by the French, and brought the fort to surrender, with all the vessels in the harbour, among which was the *Nereide* of 44 guns, one of the ships in the preceding engagement, and which had been taken by the French in the preceding year; (see p. 237, 8.)—It was agreed that the garrison, and the crew of the *Nereide*, should be sent to France without being considered as prisoners of war.

The domestic affairs of the city of London were not in general highly interesting during the present year.—The commercial distresses, indicated by lists of bankrupts more numerous than were ever before known, induced among

the middle classes of society a kind of desponding apathy, adapted to damp that political ardour which, in a free country, is continually exciting to action men of disengaged minds. At the same time the uncertain state of his majesty's health, and of the consequent duration of the regency, and the system of government likely to be pursued under it, kept persons in the superior ranks in a state of dubious expectation. With the exception, therefore, of some feeble attempts to awaken the public attention to the cause of parliamentary reform, and some of the usual party-contests in the city of London, scarcely any occasions occurred to set in motion considerable bodies on a political account, in this part of the united kingdom.

At the beginning of January 1811, a very severe frost was felt in the whole of the island. On the 8th, the Thames was so much frozen, that there was only a narrow channel in the centre free from ice. The banks of the river were so set with ice and snow, that people could walk upon it from Battersea-bridge to Hungerford-stairs. The fall of snow had been so great, that the northern roads were almost impassable; the mail-coaches were much impeded in their way to and from London; and many persons in the country perished through the severity of the weather. Yet the cold was by no means so severe, nor of so long duration, as that under which we are smarting at this moment. (March 1814.)

The danger attending the burning of charcoal in confined places is exemplified by the following accident.—A poor woman, who resided at Baywater, was brought to bed; and, not having money sufficient to supply a nurse, a neighbour tendered her services; but the husband declined the offer, saying that he could attend on her himself. The next morning some-acquaintances called to see them, and knocked several times; but, no one answering, the doors were broken open; when the man and his wife were both found dead, and the infant sucking at the breast of the woman. The cause is attributed to their having burnt some charcoal to air the room, which suffocated them.

On the 5th of February, the ceremony of swearing in the Prince of Wales as Regent took place. About twelve o'clock a party of the flank-companies of the grenadiers, with their colours and the band of the 1st regiment, marched into the court-yard of Carlton-house, where the colours were pitched in the centre of the grand entrance. The band struck up "God save the king;" and continued playing that piece, alternately with martial airs, till near five o'clock. At a quarter before two o'clock, the duke of Montrose arrived, being the first of the privy-counsellors who attended; he was followed by all the royal dukes, and a very numerous assemblage of privy-counsellors, who had all arrived by a quarter before three. The whole of the magnificent suite of state-apartments were thrown open, which for taste and splendour surpass any thing of the kind in this country. About half-past two o'clock, the lord-president of the council obtained a private audience of the prince, to prepare his royal highness for the business that was about to be proceeded upon, in the same manner as the proceedings of a council about to be held used to be laid before the king. This being done, the president retired to the state or levee room, where the noble personages assembled were so extremely numerous, that many retired to the anti-room. Soon after three, the approach of the prince to the state-room was announced; and, immediately after, his royal highness entered, escorted by lord Keith, colonels Bloomfield and M'Mahon, and two other attendants. His royal highness was dressed in full regimentals: he took his stand under the throne, when those assembled made their obeisance to him; afterwards the prince went round the room, and spoke to those assembled with his usual condescension. The levee being over, the prince signified his readiness to attend the council, when the procession to the grand saloon, appointed for holding the council, began to move in the following order:

The Great Chamberlain of England (Lord Gwydir), with his wand of office.

The Vice-Chamberlain (Lord John Thynne), with his wand of office.

The Duke of Montrose, Master of the Horse.

The Lord Steward of the Household (Earl of Aylesford), with his wand of office.

The Treasurer of the Household (Earl of Courtown), with his wand of office.

Comptroller of the Household (Lord George Thynne).  
Gold Stick (Lord Heathfield). Silver Stick.

His Royal Highness's Attendants.

The REGENT.

The Royal Dukes.

The Archbishops of Canterbury and York.

The Lord Chancellor.

The Lord President of the Council.

The other Ministers and Privy Counsellors.

On their entrance into the grand saloon, a long table was prepared, covered with crimson velvet, with many silver ink-stands, which originally belonged to queen Anne. The different oaths directed to be taken and signed by the regent were separately laid at the head of the table, written on vellum. His royal highness took his seat at the head of the table, the lord-president on his right, and the lord-chancellor on his left hand: the other privy-counsellors being seated, the lord-president briefly stated the indisposition and incapacity of the king, and the proceedings that had taken place in parliament to appoint a regent; and then read the oaths required by the act for the prince to take, to enable him to fill that high office; and, his royal highness signifying his willingness to take them, the lord-president proceeded to administer the oaths, and the prince signed the different pieces of vellum upon which they were inscribed, in the presence of the privy-counsellors, who signed as witnesses to the prince's signature.—The proceedings upon swearing in the prince-regent being ended, his royal highness retired, and commenced his office by transacting business with the ministers of state.

In the night between the 15th and 16th of this month, his majesty's frigate *Amethyst*, of 36 guns, Capt. Walton, drove from her anchorage in Plymouth Sound, and was wrecked on a reef of rocks near Mount Batten Bay, near the place where the *Pallas* frigate was lost some years before. The greater part of her crew perished, as six boats were discovered wrecks on the shore at day-light. A boat from one of the men of war in the Sound, proceeding to the relief of the crew, was overfet on nearing the ship, and all hands perished, consisting of an officer and sixteen men; two other boats, from outward-bound transports lying in Catwater, also proceeding to the relief of the distressed, were upset, and their crews perished. The *Amethyst* was riding at single anchor, ready to start for the squadron off Brest. The guns that were fired from her, as signals of distress, unfortunately were shotted, which prevented the timely assistance that would otherwise have been rendered.

A very few days after, his majesty's ship *Franchise*, while in the act of wearing, unfortunately ran down the transport brig *John and Jane*, near Falmouth, with 219 of the eleventh regiment on-board, 14 of her crew, 15 women, and 6 children, making in the whole 254 souls; out of which were saved, only ensign Duff and 22 of the troops, Mr. Wilhart master, his mate, and 6 of the crew; making in the whole 31 saved, and 223 drowned. Captain Allen, his officers, and ship's company, exerted themselves to the utmost in preserving as many as possible from the wreck. The *Franchise* could not be going at less than the rate of eight or nine knots, as they were obliged to run a little before the wind to clear another vessel: she struck the brig with her cut-water right on the beam, which stove her to pieces, and she filled instantly; no boats could be used, the sea ran so high.

We cannot refrain from introducing the following remarkable instance of resolution, intrepidity, and prowess, in an Irish gentleman of 70 years of age.—John Purcel, esq. of Highfort, near Charleville, in the county of Cork, had retired to rest at a late hour on the 11th (or 12th) of March, in the same room where he had supped. He conceives he had been two hours in bed, when his attention was engaged by an unusual noise outside his house. The room in which he had supped and slept was inside his parlour; the windows of which latter, after a short interval, were beat in; and scarcely an instant elapsed before he heard several persons, he believes twelve or thirteen, leap into the room in rapid succession. He had but a moment to deliberate; and, although he found himself unprovided with any other weapon except the knife which he recollected lay on the table, he resolved on defence. The bedroom-door was presently thrown in by a violent blow of a sledge-hammer. Mr. P. now put his back close against the wall, immediately contiguous to the door. Although the darkness of the inner room rendered him invisible to those without, yet the moon shining brightly through the windows which had been broken, and through which the party entered, gave him an imperfect view of his assailants; and he discovered two men abreast, approaching him by the door. Mr. Purcel at this moment only hesitated to decide whether a back-hand or a right-forward blow would be most powerful; and, on preferring the former, he plunged his knife far into the breast of the nearest man, who immediately fell back with a horrible scream, and expired. The captain of the party gave orders to fire, and a musket was thereupon presented at Mr. P. and actually lay against his stomach; but as, from its oblique position, Mr. P. saw it could not injure him, he pressed against the barrel, in order to induce a belief that it would prove mortal, and permitted it to be fired. He then gave this ruffian also a terrible wound, with which he retreated. A third fellow, undeterred by these examples, had the temerity to attempt an entrance, but met with the like repulse. The expulsion of the entire gang from the house, it was imagined, was by this effected, with the exception of one powerfully-strong villain; who, more successful than his comrades, forced his way into the bed-chamber, which the ruffian presently notified in the loudest and most exulting tone. During the whole of this most terrific proceeding, Mr. P. had not felt the influence of apprehension until now. He closed, however, on his assailant, and a very fierce struggle ensued. Mr. P. finding that, although he frequently stabbed the fellow in the side, he nevertheless persisted in repeating a demand of Mr. P.'s money, feared that the point of his knife had been turned and blunted; and such, on feeling it, he found to be the case. He was thus bereft of his only weapon; however, in the encounter, he discovered a sword suspended to his opponent, which he now strove to gain, but, during the exertion, the wretched man expired in his arms; and thus Mr. Purcel found that his knife had not failed him until, guided by providential interposition, it had miraculously and faithfully secured his deliverance. The remainder of the party were now contented to depart, carrying off the dead and wounded; and Mr. P. dreading the renewal of the attempt with increased numbers, prudently concealed himself between two heaps of culm in an adjoining yard, from whence he issued in the morning completely coated with blood, and whatever else this clammy matter caused to adhere to his body and limbs. It seems another fellow named Joy, who composed one of the party, died at Newcastle, in the county of Limeric, his wounds not having permitted him to escape farther.

On the 19th of March, a rise of ten per cent. in the current value of the stamped dollars in circulation took place. The increase in the price of silver had become so great, that the dollars or tokens issued by the bank could be sold for more as bullion than they were current at as coin. The directors therefore gave notice, that they would in

future receive in payment all bank dollar-tokens at the rate of 5s. 6d. each, instead of 5s. as heretofore. All such tokens are henceforth to be issued at the same increased rate. The object of this regulation was to prevent this species of currency from being withdrawn from circulation, which was rapidly effecting, in consequence of the disproportion between the real and circulating value of the article.

On the 26th of March came on the election for Chancellor of the University of Cambridge, that high office having become vacant by the death of the duke of Grafton. The candidates were but two: his grace the Duke of Rutland, who was understood to have the support of the prime-minister, and the greater part of the royal family; and his highness the Duke of Gloucester, who stood upon his own merits. The duke of Rutland arrived at Cambridge several days before the election: his illustrious antagonist perhaps better consulted the dignity of the senate and his own by abstaining from a personal canvass; but his friends were energetic in his support. The prince-regent was likewise said to have pledged his services upon this express condition, that his royal relative should decline a canvass. It was understood, by communication from the committee in London, that four hundred and seventy votes had been actually promised to the duke of Gloucester; and, as no one anticipated the presence of a greater number than nine hundred voters, this was deemed a pretty strong assurance of ultimate success. On the contrary, his most noble antagonist was deemed to possess no ordinary strength; the support of the prime-minister, and the conformity of his grace's politics with those of the people in power, were circumstances of great weight; and many who were not swayed by political motives, were biased by fox-hunting ones, to give him their votes; his grace's hounds being, as is supposed, among the best packs in the kingdom. The poll continued until twelve o'clock at night, when, no more votes being tendered, the boxes were closed; in half an hour after, the numbers for each candidate were declared to be as follows:

For the Duke of Gloucester	- - - -	470
The Duke of Rutland	- - - -	356
Majority for the Duke of Gloucester		114

When the result of the contest was announced, the gownsmen in the gallery of the senate-house rose from their seats, and gave three cheers.

The longevity of the chancellors of Cambridge has been remarkable; there having been only three since 1688, a period of 122 years. The duke of Somerset held the office 60 years; the duke of Newcastle, 20; and the duke of Grafton, 42 years. There have been seven chancellors of Oxford during the same period.

The ceremony of the installation took place on the 29th of June.—About half past ten, the side-doors of the senate-house were opened for the admission of the undergraduates, and bachelors of arts, not fellow-commoners, who had been previously furnished with personal tickets; they occupied the gallery, the front rows of which were filled by ladies, introduced by members of the senate, noblemen, and doctors. The front-doors were opened for the admission of members of the senate, &c. and their visitors, into the pit of the senate-house, which was in a very short time crowded, with the exception of those seats which were reserved for the chancellor, vice-chancellor, and their friends. About half past eleven, a deputation, consisting of six doctors (two in each faculty), six non-regents, and six regents, were sent from the senate-house to the chancellor-elect at Trinity-lodge; whence, preceded by a beadle, and attended by the deputation, he came to the senate-house; at the steps of which he was met by Dr. Douglas, vice-chancellor, who walked up the senate house at his highness's left hand, when they ascended the chair of state; his highness standing at the left hand of the chair, and the vice-chancellor on the right.

right. The band of music, immediately upon his highness's entering the senate-house, performed the coronation-anthem. Previously to his highness's entering the senate-house, the proctors had issued a proclamation, forbidding all expression of approbation or disapprobation "in that house." The moment the duke entered, however, he was greeted with thunders of applause from the under-graduates, who were immediately joined in chorus by the masters of arts, &c. The overture being ended, the vice-chancellor read a speech in English, and then presented to his highness the patent of office, which was read aloud by the senior proctor, the Rev. J. Aspland, of Pembroke. He presented also to his highness the book of statutes. After this, the vice-chancellor taking his highness's right hand in his own, the senior proctor administered the oath of office; his highness then was seated by the vice-chancellor in the chair of state; and was thereby installed.

The vice-chancellor's speech first complimented the duke on his military distinction; and afterwards on his strenuous exertions on behalf of the abolition of the slave-trade; and on his regularity, while an under-graduate in the university; besides other general topics. The speech, which was neatly drawn up, was received with great applause. After a pause, the public orator, the Rev. R. Tatham, of St. John's, delivered a Latin oration, his highness the chancellor sitting in his chair; the rest of the company sitting uncovered. The orator having finished, his highness, rising from his seat, and taking off his cap, replied in a very elegant English speech to the vice-chancellor and public orator, the company standing uncovered during the whole time. The speech was delivered with good emphasis and action, without notes; and it is no compliment to the duke to say, that he was the best public orator of the day. His speech was frequently interrupted, and finally followed, by unbounded applause. The installation-ode, written by professor Smyth, and composed by professor Hague, was then performed; in which Mr. Braham and Mrs. Ashe, but particularly the former, acquitted themselves with complete success. The business of the morning concluded by a procession in the usual order to the lodge of Trinity-college. When the head of the procession arrived at Trinity-lodge, they opened to the right and left, and formed a lane, through which the chancellor, accompanied by his friends, passed. His highness was dressed in a blue silk gown, (the Trinity-colour,) adorned with a profusion of rich gold lace; and was covered, during the whole time of his sitting at the ceremony, by a trencher-cap with a gold tassel.

The senate-house, the scene of this grand ceremony, had been fitted up with great ingenuity; and the accommodations were quite as convenient as so large an assembly could have expected. The ladies made a most brilliant show. The royal duke was ushered in and out of the senate-house by the firing of cannon, the ringing of bells, &c. After the installation, the chancellor gave his grand dinner in the Cloisters of Nevill's court, Trinity-college, which were fitted up for the reception of about a thousand persons. Of the entertainment it is but justice to say, that never was one upon so large and liberal a scale conducted with more comfort and regularity. Bands of music were stationed under an elegant marquée in the centre of the grass-plot of the court.—To this account of the proper ceremony of installation, we shall only add, that festivities on the occasion continued till Wednesday the 3d of July, ending with the ascent of Mr. Sadler in a balloon; and that, upon the whole, the university of Cambridge seems to have honoured her chancellor in a manner not less dignified and appropriate than that of her sister Oxford in the installation of lord Grenville. It is somewhat singular, that in both these elections the ministerial candidate proved unsuccessful.

On the 22d of April, between the hours of two and three in the morning, a fire broke out at Goullee's pork-shop, the corner of Half-Moon-street, Bishopsgate-street, which occasioned the loss of eight lives. The moment the

flames burst forth in the lower apartments, the alarm was given from without by some passengers; but such progress had the fire made, that it was too late to save the lives of most of the inhabitants. The family consisted of Mr. Goullee, his wife, three children, the nurse, a maid-servant, and a shop-boy; also a waiter of the London-tavern, and his wife, who were lodgers in the first floor. The two latter only were awakened by the noise; and they had the good fortune to escape to the window of the first floor with their bed, which they threw on the pavement for the purpose of throwing themselves upon it. The wife made a leap, and, falling on the bed, did not receive the slightest injury; her husband, who instantly followed, was not so fortunate; he came in contact with a hook, which tore his leg in a dreadful manner, but from bruises he suffered no material injury. Of the rest of the family nothing was seen, but the populace heard at intervals their cries; and this was but for a short time, for, the floor giving way, the whole of this unfortunate family perished in the burning ruins. The youngest child was only a month old.

On the 18th of May, twelve standards and colours taken from the enemy on different occasions, including the French eagle taken by the 87th regiment at the battle of Barrosa, were carried with military ceremonies; from the Parade in St. James's Park, to Whitehall Chapel, and deposited on each side of the altar. The spectacle, which was one of the finest ever witnessed, was attended by the dukes of York, Cambridge, and Gloucester, sir D. Dundas, generals Hope, Doyle, &c. and the Spanish and Portuguese ministers; besides a number of ladies of distinction.

On the 10th of June, the volunteers of the metropolis, about 20,000 in number, were reviewed on Wimbledon-common by the prince-regent. The troops from the west end of the town began to move towards the ground about six o'clock. Some of them went in the new military cars, which contain each twelve men, and convey troops with great rapidity. Most of the city-corps embarked in large boats, provided for the occasion, at so early an hour as three o'clock; and, taking advantage of the tide, went up the river as far as Putney, whence they marched to their stations. About half-past ten the general line was ordered to be formed. Then was seen one of the finest sights possible: the extent of the heath, the beauty of the day, the fineness of the different regiments, the steadiness of their discipline, the exactness of their manœuvres, the assembled crowds reaching from one end of the common to the other, all made the spectacle such an one as can scarcely be described in adequate terms. The whole of the troops were under the immediate command of the duke of Cambridge, as commander of the home-district. They were drawn up in two lines of at least a mile and an half in extent. The right rested on Wimbledon-green, whence the line was continued the full length of the common to the south-east; and the left touched the road that leads across the common from London to Portsmouth, earl Spencer's park-wall being full in their front. The prince arrived on the ground about twelve, accompanied by the duke of York, who, on reaching the centre of the line, immediately took the command of the field, as commander-in-chief. The review then commenced, and was over about five o'clock. The day was remarkably fine, and the spectators were numerous beyond all former example. It was supposed, that, including the troops, there were at least 200,000 persons on the ground.

A great national calamity having deprived the fashionable and the elevated of the annual celebration at St. James's of their sovereign's birth-day, his royal highness the prince-regent thought it his duty to provide a substitution, greatly exceeding, in brilliancy at least, all former displays of cordial hospitality on the part of the sovereign, and affectionate loyalty on that of his subjects, from the commencement of his reign to the present day. On the evening of the 19th of June this grand entertainment took place, to which there had been previously invited upwards of two thousand of the nobility and gentry of the coun-

try, the foreign ambassadors, the French princes and nobility, and other distinguished foreigners.—The doors of Carlton-house, and the other avenues of admission, were opened at nine o'clock to the company. Those who went in carriages were admitted under the grand portico; those in sedans at a private entrance at the east end of the colonnade. The ministers and household of the regent entered at the west door of the palace, in the inner court-yard. The state-rooms on the principal floor were thrown open for the reception of the company, wherein the furniture was displayed in all its varied magnificence. The company descended the great staircase from the inner hall to the range of apartments on the level of the garden. The whole of this long range, comprehending the library, and the beautiful conservatory at the west end, with the intervening apartments, was allotted to the supper-tables of the prince-regent, the royal dukes, the chief of the nobility, and the most illustrious of the foreign visitors.

It was totally impossible, capacious as the mansion of the prince is, to accommodate such a number of persons in the rooms of the mansion itself. From the central apartment of the lower range, which we have mentioned, on the fourth or garden-front, proceeded a broad and lofty walk, towards the southern wall of the garden, adjoining St. James's Park, which was crossed by three similar walks, from east to west, lengthwise in the garden. All these walks were closed in by walls, and covered by awnings made for the occasion. In each of these cross-walks were placed long supper-tables, and at the end of each walk were communications to circular marquees, in which were tables containing all the necessary refreshments for the company, with space for the numerous servants and assistants in attendance. The great walk from the house southward had in it six tables, leaving those spaces quite open where the other walks crossed it. The intermediate spaces between these were lawns, which communicated to the walks by suitable openings. The interior sides of the walls of all these grand walks were lined with festoons of flowers, yielding the most odoriferous perfumes, and relieved by the verdant and softer beauties that more towering plants and shrubs could bestow. The arched roofs were ornamented in the liveliest manner, and from them were suspended thousands of lights, in all the different forms and fashions by which illumination can be produced. The *coup d'œil* of the whole, especially from the central south entrance to the garden, was inexpressibly delightful, and even magically impressive. The entrance was under an illuminated arch; and the southern end of the walk was filled by an immense mirror, and ornamented at the top and sides with a superb drapery, and with artificial flowers and costly candelabres; particularly the long range of supper-rooms on the garden level, at the head of which the regent sat, at the west end of the conservatory, inspired the highest ideas of regal magnificence. This range, beginning from the east end, comprised the new Gothic rooms, not then entirely finished, but temporarily hung with crimson, and the library beautifully ornamented with marbles. In these apartments there were two rows of tables, elegantly adorned. The centre-room was left open. To the west, the eating-room, &c. and the conservatory, had one long table running through both. The appearance of the conservatory was truly striking and brilliant. The architecture of it is of the most delicate Gothic. The upper end was a kind of circular buffet, surmounted by a medallion, with the initials G. P. R. lined with festoons and antique draperies of pink and silver, and partly filled with mirrors, before which, on ornamented shelves, stood a variety of vases, candlesticks, &c. of the most gorgeous gold plate. Supplied, as indeed all the tables were, with every attainable delicacy and luxury, which wealth and rank could command, or ingenuity could suggest, and embellished by all the art and skill of the confectioner with emblematical devices of every conceivable appropriate description, this table displayed a still more splendid exuberance. In the front of the regent's seat

there was a circular basin of water, with an enriched temple in the centre of it, from whence there was a meandering stream to the bottom of the table, between the guests, bordered with green banks. Three or four fantastic bridges were thrown over it; one of them with a small tower upon it, which gave the little stream a picturesque appearance. It contained also a number of gold and silver fish. The excellence of design and exquisite-ness of workmanship could not be exceeded; it exhibited a grandeur beyond description; while the many and various purposes for which gold and silver materials were used, were equally beautiful and superb in all their minute details. The surprising lustre thrown upon the whole by the brilliancy of the illumination, seemed to realize all that fancy has feigned of the magnificent wonders of oriental creation.

The company, who continued to arrive from nine till half past twelve, were ushered into the state-rooms, and soon filled the house. The hall was crowded with peers and peeresses, and was made the same use of as the apartments of state. Under the grand arched door-way between the halls, was a most elegant scarlet-and-gold drapery, after the antique. The male part of the nobility and gentry were habited in court-suits, many richly embroidered, or in military and naval uniforms. The waving plumage—the elegant variegated dresses—the sparkling diamonds, and, still more, the native beauty and grace of the ladies, gave a sort of enchanting perfection to the whole of this brilliant courtly exhibition. *La vieille cour de Versailles*, with all its proud pretensions, could never have more attractively set forth the elegant fascinations of fashionable life and exalted rank. The upper servants of his royal highness's household wore a rich costume of dark blue, trimmed with very broad gold lace; the others wore their state-liveries. A considerable number of the yeomen of the guard attended in different parts. The assistants out of livery were dressed uniformly, in black suits with white vests. Two of the bands of the guards, in state-uniforms, played various airs throughout the night. Parties of the foot-guards protected all the immediate avenues; and the horse-guards were stationed in Pall Mall, St. James's-street, St. James's-square, Piccadilly, &c.

The prince-regent entered his state-apartments about a quarter past nine, dressed in a scarlet coat, most richly and elegantly ornamented, in a very novel style, with gold lace, and a brilliant star of the order of the garter. The duke of York wore a similar coat; the pattern and ornamental part were said to be like one worn by that great warrior, the duke of Cumberland. His royal highness the prince-regent came into his state-apartments just at the time the French king and princes arrived; he received them most graciously. His royal highness afterwards, during the night, passed from one room to another without any attendants or ceremony, conversing in the most affable manner with his numerous guests. The company found an abundance of amusement in perambulating this celebrated mansion. Dancing commenced about twelve in the grand council-chamber; and about two supper was announced. The ball-room, after supper, was surrounded with a gradation of conversation-seats, for the accommodation of those who chose to be calm spectators of the scene. The duchess of York, princess Sophia of Gloucester, and all the royal dukes, attended this splendid fête. Upon no previous occasion, and at no court in Europe, was ever the experiment made to set down 2000 of the principal nobility and gentry of a kingdom to a regular supper, as was the case at this fête. The largest entertainment, at the most brilliant period of the French monarchy, was that given by the prince of Condé, at Chantilly, to the king of Sweden; when 400 covers were laid. Here covers were laid for 1600 under canvas, and for 400 in the house.

In order to gratify a vast number of persons who had no pretensions to be admitted to the fête, the prince-regent was pleased to order that the rooms and gardens of

Carlton-house, in all their splendour, should be open for public inspection during the space of eight days. On each of those days great numbers were admitted, and departed highly gratified; but, on the 27th, being the day on which the permission was to expire, the crowd, from an early hour in the morning, was immense; and, as the day advanced, the scene excited additional interest. Every precaution had been adopted to facilitate the entrance of the visitors. The horse-guards paraded in front of the house, and were stationed at both ends of Pall Mall, and the various streets leading from it. The pressure to gain admittance was so great, that early in the day several females fainted away; many lost their shoes, and endeavoured to extricate themselves from the crowd; but this was quite impossible. The gates were opened only at certain intervals; and, when this was the case, the torrent was so rapid, that many people were taken off their feet, some with their backs towards the entrance, screaming to get out. The scene at last began to wear a still more serious aspect; when it was deemed expedient that some measure should be resorted to, to prevent farther mischief. Lord Yarmouth and the duke of Gloucester appeared, and announced to the public, that the gates would not be again opened; and that, for the sake of preventing the loss of any lives, they had to express the strongest wish that the persons assembled would cease from endeavouring to gain admittance. This, however, had not the desired effect; as many, who probably were ignorant of what had happened, remained in the anxious hope of being admitted at last. The greatest pressure to obtain admittance took place about half-past two o'clock. About one, the crowd in the inside of Carlton-house had accumulated so much, that it was found necessary to shut the gates. The line of carriages now extended the whole length of Pall Mall, up to the very top of St. James's street; and, as there had been a complete stoppage for above half an hour, hundreds of ladies left their carriages, and hastened on-foot towards the gates of Carlton-house. At this time you might see ladies and gentlemen coming out of the crowd covered with perspiration, and unable any longer to bear the pressure. Those who thus made their retreat in time had to congratulate themselves on their superior prudence. Hitherto all was comparatively well; and the scene rather afforded amusement than excited alarm. But the case was most materially altered when the gate of entrance was next opened. It became exactly like some of those rushes at our theatres, which have sometimes produced such melancholy consequences. Those behind irresistibly pushed on those before; and, of the number of delicate and helpless females who were present, some were thrown down, and trod upon by those behind, without the possibility of being extricated. When at last the crowd got on the inside of Carlton-house gates, four females were found in a state of insensibility, lying on their backs on the ground, with their clothes almost completely torn off. One young lady, elegantly attired, or rather who had been so, presented a shocking spectacle; she had been trodden on until her face was quite black from strangulation, and every part of her body bruised to such a degree, as to leave little hopes of her recovery. An elderly lady had her leg broken, and was carried away in a chair; and two others were also seriously hurt; but, on being bled, were restored to animation. One of them was able to walk home; the other was led by two men. The situation of almost all the ladies who were involved in this terrible rush was truly deplorable. Very few of them could leave Carlton-house until furnished with a fresh supply of clothes. They were to be seen all round the gardens, most of them without shoes or gowns; and many almost completely undressed, and their hair hanging about their shoulders. The crowd on the outside at one time made the horse-guards recede several paces, when the animals became restive to an alarming degree, rearing on their hind legs, and beating down all within their reach with their fore ones; several women were trodden under

foot, and received considerable injury; and five or six men were so overcome, that they fainted, and were carried off.

At the latter end of July arrived at Liverpool, from Sierra Leone, a brig called the Traveller, perhaps the first vessel that ever reached Europe entirely owned and navigated by negroes. This brig is owned and commanded by Paul Cuffee, the son of a negro-slave imported into America. Her mate, and all her crew, are negroes, or the immediate descendants of negroes. Captain Cuffee is about fifty-six years of age; has a wife (a negress), and six children, living at New Bedford, Massachusetts, of which state he is a citizen. When captain Cuffee's father (who had acquired his freedom) died, he left a family almost unprovided for; but he laboured hard to support them. He began trade in a small boat, and, after a while, almost by himself, built a larger vessel, in which he worked some years with assiduity. Having met a person wishing to impart some knowledge of navigation, his ideas were enlarged, and with his prospects he enlarged his efforts to succeed. Happily for him and his family, his mind received religious instruction from the society of friends, and he attached himself to that respectable body, adopted their dress and language, and is now a very respectable member of that community. When Clarkson's History of the Abolition of the Slave Trade fell into his hands, it awakened all the powers of his mind to a consideration of his origin, and the duties he owed to his people. With the view of benefiting the Africans, he made a voyage to Sierra Leone, and with the same object came to England. Capt. Cuffee is of an agreeable countenance, and his physiognomy truly interesting; he is both tall and stout, speaks English well, dresses in the quaker-style, with a large flapped white hat. He came to London, to confer on his favourite topic with the directors of the African Institution; and soon after returned to America with a cargo.

A reward of one hundred pounds having been offered for the discovery of a theft committed on-board the Archduke Charles, recently arrived in the river from Lima, with a quantity of silver bullion, indigo, &c. a publican, who had been accustomed to serve beer in the London Docks, came forward on the 3d of August, and offered to discover his accomplices in the robbery in question, provided he should be admitted king's evidence, and be entitled to the reward. Some doubts being suggested as to his knowledge of the fact, he proposed to take the gentleman, broker to the ship, to the several places where the stolen silver was secreted. He accordingly took him to the coal-hole of the ship, where was concealed a bag of silver weighing 47lb. Under a watch-box in the docks, and amongst some flax, he pointed out further quantities, all of which were to be conveyed out of the docks the first convenient opportunity. Besides these, a quantity was traced to Uther-street, Water-lane, Fleet-street, which had been conveyed from the docks in the inside of porters' knots, without the least suspicion. The publican, having discovered the property to the parties concerned, next directed the Thames-police officers to the thieves, who turned out to be labourers in the London Docks, and a watchman, one of our faithful guardians of the night, besides himself.—They were all secured the same night; and were afterwards brought to trial and convicted, and the greatest part of the property recovered.

A comet, which had been observed for some months previously in France, became visible to the naked eye in England at the beginning of September, and continued to be a splendid and striking object during all the clear weather of the autumn.—The following observations on this comet were made at Gottingen, and published the 20th of September.

“The comet which is now visible on the horizon in the northern part of the heavens, is one of the most remarkable that has ever been observed. None has ever been so long visible; and, consequently, none has ever afforded such certain means of information with respect to its orbit.

Accordingly,

Accordingly, since the 25th of March last, when it was first perceived by M. Flauguergues, at Viviers, in the south of France, its course has been regularly traced; nor shall we lose sight of it till the month of January, 1812. Its train, which occupies a space of 12 degrees, exhibits several curious phenomena. It is not immediately connected with the comet, as if it were an emanation from it; but forms, at a distance from the nucleus, a wide belt, the lower part of which girds, without coming in contact with, it, much in the same manner as the ring of Saturn; and this belt extends itself in two long luminous fascies, one of which is usually rectilinear, while the other, at about the third of its length, shoots forth its rays with a slight curve like the branch of a palm-tree; nevertheless this configuration is subject to change. It has been observed, that the space between the body of the comet and its train is occasionally filled; and of the two fascies, that which is generally rectilinear sometimes arches its rays, while those of the other assume the form of right lines. Finally, rays, or as it were plumes, of ignited matter, have been seen to issue from the lower extremities of the fascies, or flakes, and again unite.

"As to the nucleus, or the comet itself, it has been found impossible, even with the aid of the best telescopes, to make observations on its disk, as on that of a solid body and of determinate circumference. We can only discern a vague circular mass, more luminous than the train, particularly towards the centre; but the verge of which is doubtful, furnishing to the eye no fixed outline of demarcation. This mass is without doubt composed of a very subtle substance, as is probably that of all comets. This hypothesis receives much support from the fact, that one of these stars, of very considerable magnitude, (the first comet in 1770,) passed and re-passed through the very middle of the satellites of Jupiter without occasioning amongst them the slightest disorder. There is every reason to believe, that the nucleus of the present comet is nothing more than a conglomeration of vapours of very little density, so little perhaps as to be transparent. Whether this be the case or not, might be easily ascertained, if those who are in the habit of observing it would watch the moment of its transit athwart the disk of some star, the rays of which would have sufficient power to perforate it, if transparent. Such a body might very possibly be an incipient world, just passed its gaseous state, and which was to derive solidity from the precipitation and condensation of the matter surrounding it. The successive observation of some comets, in which it may be possible to distinguish the different stages of chaos and progressive formation, can alone furnish any knowledge with respect to this point."

The following observations were made by a gentleman at Epping, and dated Oct. 16.—"The comet was in its ascending node on the 11th of July, at a distance of 138,117,270 miles from the sun; its motion retrograde, its orbit passing close (within 39 minutes) to the north pole of the heavens. It was nearest the sun on the 12th of September, and to the earth on the 11th of October, when its distance from the latter body was 113,630,450 miles. On the 22d it will be equidistant from the earth and sun; and, in about three days after, its distance from the earth will begin to increase very rapidly, and therefore we must expect its brilliancy, its apparent size, and length of tail, to diminish in a similar ratio.

October 11, it was 113,630,450 Miles from the Earth.

12, - - -	113,948,225	=====
22, - - -	116,205,900	=====
25, - - -	118,306,540	=====
Nov. 1, - - -	126,616,000	=====
19, - - -	214,730,400	=====

Had this comet made its appearance about five months earlier, the position of the earth would have been such as to have rendered their *minimum* distance from each other much less than at present; and, instead of a tail of 12 degrees, it would have appeared to extend over more than

30 degrees of the heavens; its nearest distance from the earth would have been no more than 44,405,850 miles, and its apparent diameter would have been increased nearly in the inverse ratio of its distance. This comet is certainly much larger than the moon, but it is difficult to measure its diameter, owing to the dense atmosphere that surrounds it; yet, from its distance, and the apparent size of its nucleus, it must be a body of considerable magnitude: its tail is not less than 49,401,900 miles in length."

According to Mr. Starck, an astronomer at Augsburgh, the comet was, October 16, at the distance of 32 millions of geographical miles (15 to a degree) from the earth: this is the nearest approach of these two celestial bodies. The tail of the comet was 800,000 miles in length, and the diameter of the nucleus about 860 miles.—For a complete view of the theories relative to comets, and their tails, see the article ASTRONOMY, vol. ii. p. 400-406.

On the 11th of September, it was discovered, that the several presses in Buckingham-house, which contained her majesty's court and other most valuable dresses, had been opened, and the contents, amounting in value to 2000l. stolen. Her majesty's wardrobe had been kept in St. James's palace previously to the late fire, in Jan. 1809, at which time it was removed to Buckingham-house. It was usual for the female domestic who had the care of the contents of the presses to inspect them once a-year; but, from the king's illness, these "youthful hose well-fav'd" had not been wanted, and, consequently, they were not opened until that day, when it was found the dresses were gone; but the papers which contained them were left, and a baize which covers the whole was carefully placed over the papers, &c. No injury had been done to the locks on the several presses; and no one could have committed the robbery without being well acquainted with the premises. According to the statement of Mr. Hanson, locksmith to the royal family, the locks could have been opened only by a duplicate or a skeleton key; and a duplicate key could not have been made without taking off the lock. In either case, none but a skilful lockman could have opened the locks, as they were of the best kind. So much had been purloined, that, according to the statement of sir William Parsons, half a dozen men could not have carried away the stolen property at once.

In the month of October, a very interesting discovery was made in Cornwall. A regular vein of silver was found just on the Cornish side of the river Tamar. Although small quantities of this precious metal have frequently been got in cross-veins in the mines of Cornwall, yet no regular silver lode had ever before been met with. This vein was found, and traced from the surface; and is now regularly worked as a silver-mine. The ore yields 60 per cent. of metal.

The public tranquillity had been little disturbed, notwithstanding the pressure of the times, during the greatest part of the year; but, before its termination, a series of disorders broke out, which soon put on a serious aspect, and were the prelude of a riotous and mischievous disposition in a large tract of the manufacturing districts. Their commencement was in the neighbourhood of Nottingham, the holders of which town having been obliged, from the decrease of demand for their manufactures, to discharge many of their workmen, much distress necessarily ensued for want of employment. This was enhanced by the new application of a certain wide frame in the weaving of stockings; whereby a considerable saving of manual labour was produced, and a consequent further diminution of hands. On the 10th of November, a number of weavers, assembling near Nottingham, began forcibly to enter houses in which were frames of this kind, and destroy them. On the 11th they appeared before the house of a manufacturer at Bullwell, which was barricaded by the owner, who had also armed his men in its defence. On attempting to break in, the mob was fired at, and one person killed. This roused them to fury; and in increased numbers they renewed their attack, made an entry, (the family having

having escaped to save their lives,) and burnt every thing in the house. This act seemed a signal for more extensive outrages, which spread over the circumjacent towns and villages. Though the obnoxious frames were the chief object of their hostility, they began to declare enmity against millers, corn-dealers, and all whom they supposed instrumental in raising the price of provisions. The magistrates at length found it necessary to call in the aid of the military; but, before any number of them could be collected, much further mischief was done. And, even after a sufficient force was stationed at Nottingham to suppress any open violations of the peace in that vicinity, the destruction of frames still continued, as it could be easily effected by small parties, which finished their business, and dispersed, before notice was given of their assembling. Their proceedings appeared to be directed by a spirit of system that rendered them the more dangerous. The rioters assumed the name of *Luddites*, and acted under the authority of an imaginary *Captain Ludd*; which name seems to have signified, not one individual, but a secret committee of management. The spirit of tumult spread into the neighbouring counties of Derby and Leicester, in the manufacturing parts of which many frames were destroyed during the month of December, though Nottinghamshire still continued the principal scene of mischief; and an advance of pay to the workmen had not the desired effect of restoring order. The disturbances at length became so serious as to excite the attention of government, and were by no means suppressed at the close of the year. The rioters, whose great object seems to have been the demolition of frames detrimental to their usual course of employ, proceeded with a caution and regularity that denoted a systematic plan, and rendered ineffectual the exertions of power to defeat their measures, and bring them to justice.

On the 22d of November, a new-invented vessel, named the *Constellation*, intended to sail against wind and tide, arrived above Blackfriars-bridge, from Bristol. The vessel is about fifty feet in length, with only one mast made of iron, and an upright windlass affixed to it; there are twelve horizontal sails, similar to the shape of window-shutters, which are extended or shortened in an instant; on any occasion, the mast, with all its appendages, is also as quickly struck. It has neither blocks, nor any running rigging, except a fore and aft stay and cable; the guns, which are of curious mechanism, will keep their own elevation.

On the morning of the 27th, the city was thrown into considerable agitation by the report of two explosions, which were heard at an interval of little more than a second, and which were attributed to an earthquake. It was afterwards ascertained that they were occasioned by the powder-mills in the vicinity of Waltham-Abbey taking fire. Seven of the workmen lost their lives; and another was shockingly scorched and bruised. The consternation that prevailed in the neighbourhood was such as language could not describe: the people fled terrified from their habitations, imagining that the explosion was an earthquake. At Stepney a mirror of plate-glass was broken by the shock; at Hackney several panes of glass were forced in; and at Blackwall the windows of a whole street were shattered.

On the 31st, at about twenty minutes before three in the morning, a shock, resembling that of an earthquake, was felt very generally in the towns of Portsmouth, Portsea, and Gosport, and their vicinity. It was instantaneous, and caused such a tremendous motion in many houses, that as many as twenty families were awakened by it, and sprang out of bed to ascertain its cause. To many persons whom it awoke, it appeared as though some heavy body had been moved in the lower part of the house, and shook its whole fabric; to others, it was a sudden motion of the bed, as though caused by the main strength of a person standing near it; the furniture in the rooms cracked, and the handles of drawers moved, as by

an electric shock. It appeared to have lasted near a minute. Similar effects were felt at Ryde in the Isle of Wight, at Arundel, Midhurst, and Petworth; but chiefly along the coast, at Bosham, Siddleham, Selsea, Pagham, Bognor, Havant, Emsworth, &c.

The pen of the historian recoils when it falls to his lot to record bloody deeds, and to ensanguine the pages of his annals with acts of foul murder and unprovoked assassination. Yet he must be faithful to his duty; and, whilst he writes with heartfelt horror, impose silence, if possible, on his offended feelings. We thank most gratefully that Providence who watches over the security of our lives, that we have not oftener to relate such horrid transactions as the following; and grieve at the same time, that the suicide of one of the perpetrators has, for the present, cast a veil of mystery over the cause and particulars of these abominable deeds. But, although the secret proceedings of the infallible tribunal of Eternal Justice are slow, yet they are sure, and will, sooner or later, bring forth the concealed authors of the crime:

*Raro antecedentem scelusum*

*Deferuit pede pana claudo.* Hor. iii. 2.

Yet with sure steps, though lame and slow,  
Vengeance o'ertakes the trembling villain's speed. *Francis.*

Indeed the time which elapses between the commission of the crime and the execution of the criminal, seems often to have been purposely lengthened by Providence, in order to add the unavoidable tortures of a guilty conscience to the chastisement prescribed by the law; in such a way, that death becomes often rather a release than a punishment inflicted upon the wretch.

About twelve o'clock at night, on Saturday the 7th of December, Mr. Marr, mercer, at N<sup>o</sup> 29, Ratchiff-highway, sent out his female servant to buy some oysters for supper, whilst he was shutting up the shop-windows. On her return, in about a quarter of an hour, she rang the bell repeatedly without being let in. This alarmed her; and she communicated her fears to Mr. Parker, the adjoining neighbour, who obtained admission by the back way. On entering the warehouse, he beheld a spectacle which so petrified him with horror, that it was with difficulty he could make known the sad catastrophe which had befallen the whole of this unfortunate family. Mr. Marr was found lying near the window, dead, with his skull broken. His wife, who, it would seem, had come to his relief from below on hearing a scuffle, had been met by the villains at the top of the stairs, where she was found deprived of life; her head was too shockingly mangled for description. The shop-boy, to all appearance, had made more resistance than the rest, or else they had not made so sure of their blow; for the counter, which extends the whole length of the warehouse, was found bespattered with his blood and brains from one end to the other; and the body of the unfortunate youth lay prostrate on the floor, weltering in his gore. Nor did the work of the blood-thirsty villains stop here: even a child in the cradle, only four months old, found, in its infancy, innocence, and incapacity of impeaching them, no protection from their barbarous hands: it was discovered with its throat cut from ear to ear. Such refined cruelty is hardly surpassed in the annals of human depravity. With such silence were these murders committed, that not the least noise was heard by the neighbours during the absence of the servant-girl for the oysters. The watchman on that beat, we understand, had on all occasions shown himself both attentive and faithful to the neighbours; and it was every night his custom to examine Mr. Marr's window-shutters. On this occasion he reports, that a little after twelve o'clock he found some of the window-shutters not fastened, and called to those he heard within to acquaint them with it; and received for answer, "We know it." It was no doubt the murderers who answered, after the accomplishment of their work of death! The repeated ringing of the bell induced them

to suppose they had been discovered, as they made off without taking any of the property; and in their hurry they left behind them the instrument with which they had perpetrated the fatal deeds. It is described as an iron-headed mallet, such as is used by carpenters. It remains a matter of conjecture, whether the villains rushed in at the door while Mr. Marr was shutting up the shop, or got in the back way. At any rate, it seems evident, that their object, in the first instance, was to destroy the whole of the family; and that the servant owed her life entirely to the accident of being out on an errand. Mr. and Mrs. Marr were a young couple, had been married about eighteen months, and were respected by the neighbourhood.

On the 19th of the same month, (while the above murders were fresh in the minds of the neighbours, and while patrols and police-officers were more than usual on the alert,) between eleven and twelve o'clock at night, another scene of sanguinary atrocity was acted near the same place, in Ratcliff-highway, equalling in barbarity the murders of Mr. Marr and family. Three persons, all considerably upwards of fifty years of age, were butchered by some ruffians yet unknown. The following particulars are the substance of what has transpired with respect to this fresh instance of ferocity. Mr. Williamson and his wife kept the King's Arms public-house, in New Gravel-lane; and the inmates of their house consisted of an old woman, who collected pots and waited in the tap-room; a little girl about fourteen years old, their grand-daughter; and a man named John Turner, their lodger. A little before eleven at night, Turner came home; and, after wishing his landlord and landlady a good night, went up stairs to bed. Mr. Williamson was then preparing to shut up his house. Turner, almost immediately after he got into bed, fell into a sound sleep, in which he continued for about half an hour, when he was awakened by a noise below stairs. He listened a few moments, and heard the servant-maid crying out "We are all murdered." He stole down stairs undressed, and cautiously looked through the taproom-door, which had a glass window in it. The first object that he saw, was a man dressed in a drab shaggy bear-skin coat, stooping over the body of Mrs. Williamson, which was lying at the fire-side. He could not see what the man was doing, but he heard the jingling of money, and supposed he was rifling her pockets. His ears were then assailed by the deep sighs of a person in the agonies of death. Terrified beyond description, he ran up stairs to the top of the house, with a view to make his escape. In his fright he could not find the trap-door in the roof; he therefore returned to his own room, threw up the window, and, tying the sheets of his bed together, and fastening them to the bed-posts, he descended safely to the ground, with the assistance of the watchman, who, happening to pass at that instant by the house, received him in his arms. The neighbourhood was then immediately alarmed. It was yet an early hour, not twelve, and several people soon assembled round the house. The door was knocked at, but, no answer being made, was broke open with an iron crow. Upon entering the tap-room, the bodies of Mrs. Williamson and the maid (Bridget Harrington) were found besmeared with blood, with their heads towards the fire-place. The head of the latter was almost severed from her body, and the skull itself fractured in the most frightful manner, the brains protruding. Mrs. Williamson had also her throat cut, and her head very much shattered. Those who entered then went down stairs, and just in the cellar they found the body of Mr. Williamson lying lifeless, with a long iron bar under his body: his throat was dreadfully cut on the right side: the wound appeared to have been made in the front of the neck by some stabbing-instrument, and afterwards enlarged whilst the instrument remained in the first incision. His hands appeared to be dreadfully hacked and cut, one of his thumbs being completely severed from his left hand; his right leg received a compound fracture, the bones of it being to be seen through the stock-

ing. From his general appearance, it was evident that he had made a vigorous resistance. The iron bar, found under his body, was stained with blood; and it appeared to have been wrenched from a window in the cellar. The watchman, accompanied by the others, then went up stairs to ascertain whether any other person had fallen a victim of the assassins; but they found no one except the grand-daughter of Mr. Williamson, who had been in a profound sleep all the time that the murders were committing.

We have to add to this narrative, that the horror and alarm excited throughout the metropolis by this butchery, so soon following that of Mr. Marr's family, were beyond description, every house almost dreading the approach of night, lest it should bring a murderer with it. The discovery of the perpetrators engaged all the activity of the police; and at length one Williams was apprehended upon strong suspicion, which he confirmed by hanging himself in prison. No other discovery was made; but reason was found to conclude that the savages were not more than two or three in number, and that Williams was undoubtedly one of them. In consequence of this idea, it was thought proper to make a public spectacle of this self-convicted, self-executed, culprit. On the 30th of December, therefore, at midnight, the body of this wretch was removed from the house of correction, Cold-Bath-fields, to the watch-house, near Ratcliff-highway; and next morning, at about ten o'clock, he was placed on a platform, erected six feet above a very high cart, drawn by one horse. The platform was composed of rough deals battened together, raised considerably at the head, which elevated the corpse: a board was fixed across the lower end, standing up about six inches, to prevent the body from slipping off. On this platform the body was laid; it had on a clean white shirt, very neatly frilled, quite open at the neck, and without a neckkerchief or hat, but the hair neatly combed, and the face clean washed. The countenance looked healthful and ruddy; but the hands and the lower part of the arms were of a deep purple, nearly black. The arms were quite exposed, the shirt being tacked up to the shoulders: the lower part of the body was covered with a pair of clean blue trowsers, and brown worsted stockings, but no shoes. The feet were towards the horse; on the right leg was fixed the iron Williams had on when he was committed to prison. The fatal mallet was placed upright by the left side of his head, and the ripping-chisel, or crow-bar, about three feet long, on the other side. About ten o'clock the procession, attended by the head constable and headboroughs of the district, and about 300 constables and extra-constables, most of them with drawn cutlasses, began to move, and continued at a very slow pace until they came opposite the house of the unfortunate Marr, in Ratcliff-highway, where they stopped for about a quarter of an hour. By the shaking of the cart the head of Williams had got turned to one side, and looked from the house where the murder was committed; but, before the cart left the place, a person ascended the platform, and placed the face of the corpse directly opposite the scene of atrocity. The procession went down Old Gravel-lane, along Wapping High-street, entered New Gravel-lane by Wapping-wall, and continued slowly to approach the spot where the second murder was perpetrated; on reaching which, it stood for another quarter of an hour, and then proceeded, again entering Ratcliff-highway, and passing along it until it came to Cannon-street, where it turned up; and, on reaching the top, where the New Road crosses, and the Cannon-street road begins, a large hole being prepared, the cart stopped. After a pause of about ten minutes, the body was thrown into its infamous grave, amidst the acclamations of thousands of spectators. The stake which the law requires to be driven through the corpse had been placed, in the procession, under the head of Williams, by way of pillow; and, after he was consigned to the earth, it was handed down from the platform, and was driven through the body by means of the mallet with which the murders

murders had been committed. The grave was then filled with quick-lime, and the spectators very quietly dispersed. During the whole procession all ranks of persons who were present conducted themselves with a solemnity rarely witnessed in the east part of the town; and, until the body was lowering into the earth, hardly a whisper was to be heard in the street. Not a single accident happened, though the crowd was immensely great. Williams is buried close to the turnpike-gate in the Cannon-street road.

The close of the year was unfortunately distinguished by disasters at sea arising from storms, of which the royal navy partook in a full proportion. On the night of Dec. 4th, the Saldanha frigate of 32 guns, the Hon. Capt. Pakenham, was lost off Lough Swilley on the northern coast of Ireland, and every soul on-board perished. One man alone got to land, but in so exhausted a state that he soon expired.

A dreadful gale in the German Ocean, on the 24th of December, was the occasion of a much more serious loss. The Hero, of 74 guns, Capt. Newman, with the Grafshopper sloop, Capt. Fanshawe, which had sailed on the 18th from Wingo Sound, with the Egeria and the Prince William armed ship, and a convoy of 120 sail, encountered tremendous weather after leaving the Sleeve; and, being separated from the rest of the fleet, were in company on the 23d, together with about eighteen of the convoy steering to the south-west. A heavy squall of snow and sleet coming on, the Grafshopper lost sight of the rest, and got upon a sand-bank, whence she shifted into deeper water and anchored. In the night the Hero was perceived firing guns, and burning blue lights; but when day broke she was totally dismasted, on her beam-ends, lying upon the Haak-sand, off the Texel-land, the crew all crowded together on the poop and fore-castle. She hoisted a flag of truce, and fired a gun, and soon after some small vessels were seen plying out of the Texel to her assistance; but the violence of the wind, and a flood-tide, rendered all their

exertions ineffectual; and she went to pieces, not a single person escaping to tell her tale! The Grafshopper, after encountering much danger, was carried into the Texel, and her crew made prisoners to the squadron of Adm. de Winter, who treated them with great humanity. Several ships of the convoy shared the fate of the unfortunate Hero.

The Baltic convoy had previously, in the month of November, undergone some severe storms while yet in and near the Belt, by which several were driven on-shore, and came into the hands of the Danes. The convoy was under the care of admiral Reynolds, on-board the St. George of 98 guns, which suffered so much that she was obliged to cut away all her masts. She finally left the Baltic, with the Defence, of 74 guns, Capt. Atkins, and was proceeding homewards; when, on the morning of the fatal 24th of December, they were both stranded on the western coast of North Jutland. The Defence first took ground, and in half an hour went entirely to pieces, all her crew being drowned with the exception of five seamen and a marine, who got to shore upon pieces of the wreck. The St. George immediately let go her anchor; but, in bringing up, took the ground abaft. It was impossible to assist them from the shore; and all the boats that were hoisted out were driven from the ship, one excepted, in which about twenty men attempted to save themselves; but it upset by the ship's side, and all were drowned. Eleven of the crew only got on-shore on pieces of the wreck; and, when the last of them left the St. George, on the afternoon of the 25th, the admiral, and captain Guion, commander of the ship, were lying dead beside each other on the quarter-deck, as were also more than five hundred of the crew. Only about fifty remained alive, whose cries were heard till it was dark; the ensuing night terminated their sufferings. With these ships were lost nearly 1400 men, who, added to those lost in the Hero and Saldanha, form a greater diminution of British seamen than has occurred in some of the most glorious naval battles.

Comparative Statement of the Population of Great Britain in the Years 1801 and 1811; ordered by the House of Commons to be printed, Jan. 17, 1812.

The above statement for the city of London includes the whole of the 105 parishes within the boundaries. The population of the city has not increased within the last ten years, because its limits are fixed, and a great number of houses are yearly converted into warehouses, &c.

In the estimate for the Surry-district, twelve parishes are included, viz. Christchurch, Lambeth, Newington, Camberwell, Putney, Clapham, Wandsworth, Rotherhithe, Streatham, Battersea, Bermondsey, and Richmond.—The Middlesex parishes are Kensington, Chelsea, Fulham, Hammersmith, Chiswick, Ealing, Edmonton, Tottenham, Enfield, Harrow, Twickenham, Staines, and Uxbridge. This account, therefore, will be observed to take in many places remote from the metropolis. The population of

the latter alone, reckoning the connected buildings called London, may be estimated at 945,068.—By the return of population for Scotland, it appears that Glasgow now contains 108,830 inhabitants, and consequently is, in point of population, the second city in Great Britain. Edinburgh contains 103,143; and is the third; after which come Manchester and Liverpool, the former 98,573, and the latter 98,371.—The figures given above in the column of Increase are not to be fully relied on, because in the year 1801 the returns were very defective, owing to the apprehension of a poll-tax.

According to the tables published in the Almanac of the French Board of Longitude, the population of the French empire amounted at this time to 43,937,144 souls.

Of this number, it is supposed that 28 millions speak the French language, 6,453,000 the Italian, 4,063,000 the Dutch or Flemish, 967,000 the Breton, and 108,000 the Basque.—We have copied this list the rather, because, from the present aspect of things, whether for war or peace, these numbers will probably appear greatly diminished when another census shall be taken.—The population of the states connected with the system of France, including Italy, Switzerland, Spain, the Confederation of the Rhine, &c. was estimated at 38,141,541 souls.

1812. This year will certainly afford to our readers sufficient matter for interest, on account of the variety and importance of its events. Of these, the most prominent in magnitude and interest was undoubtedly the invasion of one great empire by the collected force of the still greater empire, which in its spread had left itself no other adequate antagonist. The conflagration of a capital, the horrid carnage consequent upon well-fought battles between countless hosts, the still more lavish and lamentable waste of lives occasioned by the rigours of winter combining with the distresses of retreat, and the inglorious flight of a leader who scarcely ever before returned without fame and conquest from his daring expeditions, form scenes of tragic grandeur which the drama of human affairs has rarely presented in modern times on the civilized parts of the globe.

In domestic history, the present year is distinguished as that which, by uniting all the powers of the crown in the person of the prince-regent, has made an actual commencement of a new reign, and afforded a sufficient criterion of the spirit in which it is likely to be conducted. It has also put to the test the strength of the different political parties; and, by weighing them all in the balance, has demonstratively proved the existence of a preponderating mass of power which reduces them to comparative insignificance. After all the complaints of the want of "a strong and effective administration," that ministry has been continued which gave rise to these complaints; and no want of strength or efficacy has appeared in carrying through the measures determined upon by the government. The intestine disorders which had pervaded a considerable tract of the manufacturing districts, and which assumed a character of daring and ferocity unprecedented among the lower classes in this country, were at length happily quelled by a firm but lenient exertion of authority; and the record of them may serve to exemplify the dangers attending a population forced by prosperous trade greatly beyond its natural level, whenever the sources of employment are cut off, or maintenance is rendered unusually difficult by the exorbitant price of the necessaries of life. This last cause prevailed during this year to a degree almost beyond all former example; and nothing but a solid and durable peace can be expected to prevent its recurrence.

The session of parliament opened as early as the 7th of January, with the regent's speech delivered by commission. It contained nothing of a very striking nature; and was therefore echoed, as usual, by an address from both houses, which met with but little opposition. In the house of lords it was moved by the earl of Shaftesbury, and seconded by lord Brownlow. The opposite party, of which lords Grenville and Grey were the loudest organs, reprobated the conduct of ministers; the earl of Liverpool defended the address, and it was agreed to *nem. diss.*

The proceedings respecting the speech in the lower house were rendered remarkable by an unusual circumstance. After it had been read by the Speaker, and lord Jocelyn was rising to move the accustomed complimentary address, sir Francis Burdett rose at the same time; and, having first caught the Speaker's eye, it was decided that he was in possession of the house. The baronet then, after a speech of warm and desultory invective against the principles of the war, the defects of the representation, and a variety of other matters of grievance, moved an address to the

prince-regent, intended, he said, "to embrace every point which his own sense of duty to his constituents, and to the country in general, suggested to him as essential." Accordingly, the proposed address was framed in the style of a memorial or remonstrance, laying before his royal highness all the instances of misgovernment and oppression, of infringement of the public liberty, and accumulation of abuses, which, in the opinion of the mover, a series of past years had afforded. After it had been read, lord Cochrane rose to second the motion; and in his speech particularly dwelt upon the misconduct of the war, and the little hope of final success.—Lord Jocelyn then moved the address which he had prepared, by way of amendment to that proposed by the honourable baronet, and was seconded by Mr. Vyle. Of the debate which followed, it is scarcely necessary to record the particulars; since the members in opposition, who agreed with sir Francis Burdett in parts of his statement of public evils, could not concur with him in all points, and thought that many of the topics introduced would have been better reserved for future discussion. They made however, and of course, some objections to the ministerial address, similar to those which were advanced in the house of lords, which were replied to in a similar manner. The house then divided on sir F. Burdett's address, which had only one vote in its favour besides the two tellers, against 238. Lord Jocelyn's amendment was carried without a division.

The near approach of the period in which the regency-act was to expire, rendered necessary a particular and formal inquiry into the state of his majesty's bodily and mental health; and committees were appointed by both houses for the examination of the king's physicians on these points. The medical gentlemen examined were, Drs. Heberden, Baillie, Halford, Monro, Simmons, and John and Darling Willis. They all agreed respecting his majesty's present incapacity of attending public business; and also that his bodily health was either good or little impaired. With respect to the chance of recovery; they concurred in thinking such an event improbable; but, as to the degree of improbability, there was some difference, at least in their language; some representing it as bordering upon hopelessness, others as only a preponderance of improbability. On the whole, however, it was evident that the sum of opinion was such as to exclude any reasonable expectation of a recovery; and that little more was meant by the cautious terms employed, than to avoid a positive declaration that it was absolutely despaired of. The public at large had anticipated the physicians in a similar judgment; and that that judgment was correct, melancholy experience has fully convinced.

On the motion for a supply to his majesty, made in the house of commons on the 9th of January, Mr. Creevey rose; and, after observing that it was the duty of that house to examine the several subjects connected with the revenue before they entered into the consideration of the supply, adverted to an office lately bestowed on the regent's confidential servant, colonel M'Mahon. Twenty-nine years ago it had been stated, in the 10th Report of the Commissioners for Public Accounts, that the office of pay-master of widows' pensions was a perfect sinecure, and ought to be abolished; and in one of the reports of the commissioners of military inquiry, presented to the house four years ago, the same opinion had been confirmed; and it was added, that, on the decease of the then patentee, general Fox, they presumed that the office would be suppressed; yet, in the face of these two reports, the ministers of the crown had advised his royal highness the regent to confer the office on colonel M'Mahon. He concluded with moving an amendment, that the house would to-morrow fortnight resolve itself into a committee of supply, in order to give an opportunity in the interim for the consideration he had suggested.

The Chancellor of the Exchequer corrected the honourable gentleman's supposition, that the place in question was held by patent for life; and asserted that it had been distinctly

distinctly communicated to the colonel, by his royal highness's command, that, considering the circumstances under which the office stood, he was to hold it as subject to any view that the parliament might take of it.—After some other members had given their remarks on subject, the house divided: for Mr. Creevey's amendment, 11; against it, 54.

The same subject was afterwards taken up by Mr. Banks, in a debate on the army estimates; and, a motion being made, the house divided upon it, when the ministers were supported by a majority of 54 to 38. Mr. Banks, however, renewed the attack in a different motion on another day, and in a fuller house; when the arguments against the appointment, with its extreme unpopularity in the nation, outweighed the efforts of government; and a resolution passed for the abolition of colonel M'Mahon's sinecure by 115 votes against 112.

Several resolutions were passed at this period concerning the distilleries; but, as their effect was limited to a certain lapse of time, and made no standing part of the constitutional laws, we shall not enter into them.

The next objects which engrossed the attention of the house of commons, were bills relative to the king's household; but the debates upon them will not be interesting at the present day. The whole arrangement was finally distributed into three bills, viz. the king's-household bill, the household-officers' bill, and the regency-expences bill. At the third reading, January 31, Mr. Bennet proposed a clause for incapacitating such officers as held places in the household from sitting in parliament, which was negatived, and the bill was passed. On its third reading in the house of lords, February the 7th, some observations were made upon it by lord Grenville, but no debate ensued; and the royal assent was soon after given.

The horror impressed by the murders committed in the metropolis at the close of the last year, had occasioned many voluntary associations for improving the nocturnal security of the inhabitants, which in general appeared to be inadequately provided for by the existing regulations of the police; and government at length thought it expedient to take up the matter. On January 18th, Mr. Secretary Ryder rose in the house of commons to move for a committee "to examine into the state of the nightly watch of the metropolis." After adverting to the alarming fact of the late murders, and to the unprecedented multiplication of offences of a less horrid description during the last three or four months, he observed, that in former times each parish provided for its own watch; and it was not till the year 1774 that an act passed, which applied only to fifteen of the most populous parishes, and which appointed directors and trustees under whose controul the watch, patrols, and beaules, were placed. It could be no wonder that this was found insufficient since the vast increase of the metropolis; and many instances might likewise be mentioned in which the provisions of the act were evaded or neglected. If the house should agree to the appointment of the committee, it would be for that to decide whether it were advisable to alter the system entirely, or whether it would be sufficient to enforce the present act. For his own part, he rather inclined to enforcing the present system by adequate provisions, than to establishing a new one. He concluded with making the motion above stated.

Sir Samuel Romilly expressed himself much surprised at the confined terms of the motion. Considering the great alarm that had been excited, he should have thought that a committee appointed on the occasion would have found it necessary to inquire not only into the state of the nightly watch, but into the causes of the alarming increase of felonies and crimes. That such an increase existed was proved by the returns lying upon the table, which he had moved for, and which showed a regular progress of crimes in London and Westminster for some years past. There had been committed to take their trial at the Old Bailey for felonies of various kinds—

In the year 1806	- - - - -	899
1807	- - - - -	1017
1808	- - - - -	1110
1809	- - - - -	1242
1810	- - - - -	1207

It would surely be right to inquire into the causes of this augmentation, of which many might be mentioned; but at present he would only notice a few. The honourable member then adverted to the system of punishment by promiscuous imprisonment, which associated together the most hardened offenders with those convicted of comparatively slight crimes; to the constitution of the police itself, in giving rewards to the officers for the detection of offenders of a certain description, of which the effect was, suffering a growth and multiplication of crimes instead of their prevention; and to the deprivation of morals by the encouragement of lotteries. After dwelling at length upon these topics, he concluded with hoping that the motion of his right honourable friend would be withdrawn, and submitted in a much more comprehensive form.

Mr. W. Smith followed in confirmation of the necessity of such an extension of object as that proposed by the last speaker. The late murders, he said, originated in a set of villains about the town whose existence was not imputable to any deficiency in the nightly watch; and, unless some change could be produced in their disposition, the only effect of a more vigilant watch in the metropolis would be to drive them into the surrounding villages.

Mr. Abercromby moved, as an amendment to the original motion, the addition of the following words; "and also into the state of the police of the metropolis."

Mr. Ryder acquiesced in the amendment of the learned gentleman, provided he would consent to substitute the word "further" for "also," in order that the primary object of the committee might be that which he thought of great practical benefit. (To this alteration Mr. A. consented.) He proceeded to take notice of the accusation brought against the police-officers as being never disposed to detect offenders unless when stimulated by a great reward. This, from the best information, he stated to be unfounded; and he was convinced that greater efforts had never been made to detect offenders than those in the metropolis during the two last months.

Sir S. Romilly reminded the right honourable secretary, that a reward of 700l. had been offered on the late occasions for exciting their activity; a consequence of which had been the apprehension of a great number of persons upon bare suspicion, one of whom was the brother of one of the murdered persons.

Mr. Sheridan began a speech of sarcasm and humour united, by pronouncing the proposition of the right honourable secretary the silliest that could possibly have been made. After supporting this assertion by ridiculing the notion of a grave inquiry into the state of the nightly watch, he digressed to the conduct of the Shadwell magistrates on the late atrocities in that quarter; to the suspicions thrown on foreigners and Irishmen, and the harsh treatment of the latter; to the neglect in suffering Williams to commit suicide, and the unseemly parade of his funeral. He concluded with recommending to the right honourable secretary, that, since he had shown to-night that he had not as yet thought at all on the subject of the police, he would begin to think of it with all possible dispatch. Other members joined in the debate, of which it is unnecessary to relate any further particulars. The question was then put and carried, and the committee was named, in which were the members for London, Westminster, Middlesex, and Surry. On the 24th of March, the committee presented an elaborate report, in which they suggested a variety of regulations and improvements. A bill was framed upon these suggestions; but on the 4th of July, upon the presenting of a petition against it from one of the London parishes, several members expressed their disapprobation of its provisions, on account of the expense, and the new

and extraordinary powers which it would create; and recommended its postponement.

Mr. Whitbread thought the bill ought to be abandoned, as it would produce an additional expense of 74,000*l.* a-year, without adding to our security.—Sir S. Romilly objected to the bill, particularly as the persons who were to be protected by it petitioned against any such protection.—Mr. W. Smith thought the present laws, if well executed, would be sufficient for our security.—Sir F. Burdett said, the bill contained not a word on the subject of the police, which was the matter of inquiry, rather than the nightly watch.

Mr. Brougham thought the wisest course would be, to abandon the bill at once, as it was altogether bad. He objected to legislation on sudden and temporary impulses and passions; he said the bill went to alter the whole system of police in the metropolis, and to give to the police-officers a power of an alarming description. The clause to which he had a particular objection, was that which created a new place for a superintending constable. The present constables were generally respectable housekeepers, who acted gratuitously, and who were entitled, in no small degree, to the protection of government. The present bill threw a suspicion on this meritorious body of men, whilst the committee did not think it their duty to make the least inquiry into the police-boards of the metropolis, which were eight in number, and which might have given them, in his opinion, subject enough for animadversion. To these boards the bill intended to give the appointment of the new officers, as if they had not power and patronage enough already. And of what description of persons was it, he begged the house to consider, that these boards were composed? Of bankrupts, who had turned their backs upon business for a better trade;—of lawyers, who gave up their practice in Westminster-hall;—and of lawyers who did not give up their practice in Westminster-hall, because they had none; of poets in particular—yes, poets—not one of them but had his poet. These boards were infinitely better stocked with poets than even the treasury, where there was but one epic poet. They had all a famous provision of poetry, including translators, &c. Such was the composition of these boards; and it was to them that a new power was to be given by the clause to which he alluded. The duty of the new officer would be, to go round every night, and see if the ordinary constables, the householders, were in proper attendance; that is, a power was to be given to the nominee of some poetical justice of Marlborough-street, Bow-street, or Queen-square, which he was to exercise over a number of respectable parishioners! He protested against the grant of any such power; and once more begged the house to pause before they proceeded to legislate on mere impulse, on the rash and busy principle of making laws from particular occasions.—The petition was then ordered to lie on the table; and the bill seems to have been dropped, for we hear no more of it.

On the 28th of January, Mr. Banks gave notice in the house of commons, that, the bill to prohibit the granting of offices in reversion being to expire on the 5th of February, it was his intention to render it a *permanent measure*; and he therefore moved for leave to bring in a new one for that purpose; which was accordingly given, and the bill was accordingly brought in, and read a first time. On a motion (Feb. 7) for the second reading, Mr. Dundas rose, and said, that he should expect more substantial reasons than any he had yet heard, before he could give his vote for making that permanent which had hitherto been only temporary. He understood it to have originated in a wish of the finance-committee, that those sinecure places might not be granted in reversion which they might think it expedient to abolish; and therefore a suspension of the power of the crown had been asked. Was it too much to desire that this branch of the prerogative of the crown might not be destroyed, at least till the plans of the honourable gentleman who recommended such

a measure were known? He also said, that it would be to no purpose to press the bill here; since it would certainly be thrown out in another place.

Mr. Banks moved that the entry in the journals of March 24, 1807, of the resolution of the house respecting offices in reversion, be read: it was as follows: "Resolved, That no office, place, employment, or salary, in any part of his majesty's dominions, ought hereafter to be granted in reversion." He then said, that the introduction of this bill was not in the least connected with any pending inquiry. He stated its origin and progress; and said, that, although that house, not being able to carry it through as a perpetual measure, had made it a temporary one, they had by no means abandoned their first intention. Why were they to suppose that the other branch of the legislature would continue its opposition, and was incapable of changing its opinion? As the evil proposed to be remedied by this bill was of a perpetual nature, the law ought to be perpetual also. As a measure of economy, he had never held it out as likely to produce a very material effect; but the committee had dwelt upon it as having a tendency to that end. With respect to the prerogative of the crown, it tended rather to increase than diminish it; for, if one right of the crown were taken away, another of more consequence would be substituted to it. The bill was also necessary to remedy a growing evil: many of the places recently granted in reversion were not so formerly; and what was there to prevent such a practice from being extended? Pensions were now granted in reversion; and this abuse could only be put an end to by a reprobation of the principle shown in both houses of parliament.

The Chancellor of the Exchequer treated the bill as of such slight importance, that it was not worth supporting at the hazard of a difference between the two houses of parliament.

Mr. Whitbread remarked, that the only two members who had spoken against the bill were two very principal reversionists; and he made some pointed observations on the Chancellor of the Exchequer's opposition to it.

Several other members spoke, all of them in support of the bill; and Mr. Ponsonby, who concluded, urged the house with the charges of inconsistency, and inattention to the wishes of the public, which their rejection of it would bring upon them.—The house then divided upon the question of the second reading, when the numbers were; ayes, 54; noes, 56; leaving a majority of two against the bill.

On the 10th of March, Mr. Banks moved for leave to bring in a bill to prevent the granting of offices in reversion for a time to be limited. He said that the proposed bill would be exactly the same with that introduced into the house of lords during the last year, and which had passed that house. Leave being accordingly given, he immediately brought in the bill, which was read the first time. The term of limitation which it proposed was two years. No opposition being made to it in its progress, the bill was brought into the house of lords, and ordered for a second reading on March 24.

On that occasion earl Grosvenor said, that he had a strong aversion to temporary measures, and was thoroughly convinced that these grants ought to be entirely abolished. He made a variety of observations to show the importance of such an abolition; and asserted, that, if it had taken place at the beginning of the present reign, several places which now existed would have been abolished altogether, to the saving of many millions to the state. When the bill came to be committed, on the 10th of April, earl Grosvenor again rose; and, after repeating some of his former remarks, moved, as an amendment, that the suspension, instead of being continued till 1814, should be continued to 1840.

The earl of Lauderdale said, he would support the amendment, in order to get rid of the repeated discussions on this subject, which he thought tended to mislead the public,

public, and produce a false supposition that an important saving might be made. He then went on to show that this would not be the case, nor would the bill have any tendency to reduce the influence of the crown; and he asserted that this influence was much less now in the two houses, and had been less since his political career commenced, than at a former period.

Earl Grey was called up by this assertion; and began by observing, that, though he did not attach much importance to the *immediate operation* of the measure, yet he attached a great deal to the *principle*. He would wish to show to the people of this country, suffering under excessive burdens, that parliament was anxious to relieve them; and, when a question of reform was agitated, it was of great importance that it should be carried through. He knew three offices in reversion, producing, he believed, an annual sum of 60,000*l.* which, from being thus held, could not be regulated by parliament, as being looked upon in the light of a freehold; though without that circumstance they would probably have been abolished. The proposed measure, if it did not go so far as he could wish, he approved of, as a kind of pledge of a serious intention in the house to do away those abuses which it was in their power to remove.

The earl of Liverpool said, he did not mean to discuss the principle of the bill, but would confine himself to some observations on the amendment. This, he contended, went to destroy altogether the principle of the bill. The question now was, not whether sinecures and reversions should be abolished, but whether, with reference to certain inquiries pending in the other house, they would for a limited time suspend such appointments till the result of these inquiries was known? The proposition, therefore, contained in the bill, the provisions of which would expire in two years, was reasonable; but it would be a mockery to enact a suspension of twenty-six years more. In conclusion, he said the bill should have his support in the state in which it came from the commons.

After some further debate, the amendment proposed by lord Grosvenor was negatived without a division; and the bill afterwards passed into a law without further discussion.

The disturbances in the town and county of Nottingham having continued during the winter, to the terror of all the peaceable inhabitants, and the destruction of much valuable property, and the practice of frame-breaking having been organized into a regular system, which the exertions of the magistrates, with the aid of military force, were found unable to counteract; Mr. Secretary Ryder, on the 14th of February, introduced to the house of commons two bills for the purpose of adding new legal powers to those already subsisting, for the suppression of disorders now become so serious. He introduced the subject by giving a summary account of all that had hitherto been done by government in the matter, and by stating the causes which rendered the detection and apprehension of offenders so difficult. He then said, that, by an act of the 28th of the king, the breaking of frames was a minor felony, punishable with transportation for fourteen years; but, this having proved completely inefficacious in deterring from the commission of the offence, it was his intention to propose that it should now be made capital. He was by no means a friend to the increase of capital punishments; but the present situation of the scene of those illegal proceedings was exactly such as came within the definition of the best ancient lawyers, when speaking of a state of things which called for severe punishment. This was his first measure. The second was to enable the lord-lieutenant of the county, the sheriff, or five justices, when disturbances existed, to call a meeting, and give immediate public notice that a special meeting would be held for the purpose of obtaining lists of all the male inhabitants of the county above the age of twenty-one, in order to select from them such number of constables as they think necessary, and establish watch and ward throughout the disturbed parts. He might be told that part of this plan was law already; but it was law which had fallen

into disuse. Mr. Ryder concluded by moving, "That leave be given to bring in a bill for the more exemplary punishment of persons destroying or injuring any stocking or lace frames, or other machines or engines used in the frame-work knitted manufactory, or any articles or goods in such frames or machines."

Colonel Eyre, member for Nottinghamshire, seconded the motion, and confirmed the secretary's statements respecting the riots.

Mr. J. Smith, member for Nottingham, suggested, as another cause of the riots, besides the decay of trade, a custom adopted by some manufacturers of paying their workmen in goods charged beyond their value, which he thought deserved inquiring into. He was sorry to say, that he never witnessed so much misery as when he was last at Nottingham. He allowed that the mischief was dreadful, but felt very unwilling that the punishment of death should be resorted to. He bore ample testimony to the zeal and abilities displayed by the right honourable secretary in the whole of this business; and gave great praise to the conduct of the magistrates of Nottingham, who, he said, in their provision for keeping the peace, had gone beyond the measure of the proposed bill. He further observed, that the existing law against frame-breaking extended only to stocking-frames, and not to lace-frames.

Of the other speakers, some recommended a committee of inquiry previously to an enactment which constituted a new capital offence; and thought the case was not of urgency sufficient to demand hasty remedies, especially as the mover had acknowledged that the disturbances had been gradually diminishing, and had now nearly subsided; others declared themselves convinced of the immediate necessity of strong measures. A division upon the motion at length took place, in which it was carried by 49 votes against 11.

Mr. Ryder then moved, "That leave be given to bring in a bill for the more effectual preservation of the peace within the county of Nottingham, and the town and county of the town of Nottingham." Leave was accordingly granted; and the two bills were brought in and read the first time.—The provisions of the first bill were, on the 18th of February, ordered to extend to the neighbouring counties; and, at length, on February 26th, to the whole kingdom. The bills then passed. The operation of both of them was limited to March 1, 1814; but the latter bill, we believe, has never been acted upon: the former has been (Dec. 20, 1813) renewed, (the punishment of death omitted,) and declared a permanent law of the land.

A private matter, which was discussed in the house of commons at the early part of the session, is entitled to notice, on account of its involving a principle of parliamentary law, and because the fact which gave rise to it was of great notoriety in the metropolis; though otherwise it might have been passed over in the public history of the year.—Mr. Benjamin Walsh, a member of parliament, had been guilty of a very gross breach of trust in his business of a stock-broker, for which he had been tried at the Old Bailey, and convicted of felony. He had afterwards obtained the royal pardon for his crime, on the ground that it did not properly amount to felony; but his remaining a member of the house could not but be regarded as derogatory to the dignity of that assembly. On the 25th of February, upon the motion of Mr. Bankes, copies of the papers relative to his trial and conviction were laid before the house; and an order was made for his attendance on the 27th. On that day nothing more was done than taking some steps preliminary to further proceedings. Repeated orders having been made for Mr. Walsh's appearance, with which he did not comply, but stated by letter his desire that the proceedings of the house should not be delayed on that account; Mr. Bankes rose on the 5th of March, and, after setting forth the enormity of the offence of which the member in question had been convicted, and the practice of the house of expelling for notorious crimes, particularly

particularly for pecuniary frauds and breaches of trust, moved, "That Benjamin Walsh, esq. a member of this house, having been tried at the Old Bailey, in January last, for felony, and convicted thereof, and having received a free pardon, by reason of his offence not amounting to felony in the opinion of the judges; but gross fraud and notorious breach of trust having been proved against him on the said trial; is unworthy and unfit to continue a member in this house."

Sir Arthur Piggott, in opposition to the motion, adduced various arguments to prove the incompleteness of the evidence before the house of Walsh's guilt; and to show, that, although he had disgraced himself in the eyes of society, his action was not of a nature of which the house could take cognizance.

Mr. Bathurst replied to his objections, by showing that there was sufficient proof of moral turpitude, for which no circumstances of mitigation had been adduced; that the house was not bound by technical rules; and that every one must feel the gross indecorum of such a person fitting in that place.

Mr. Abercromby thought that the principle might be carried to a dangerous extent; and that it would be very difficult to draw the line, and determine what sort of breach of trust should render a member liable to expulsion, and what not.

The Attorney-General confessed that the subject was attended with a good deal of difficulty. Of the cases of expulsion which had occurred at different times, that of the directors of the Charitable Corporation came the nearest; and, if the house had proceeded upon it, not as a misapplication of the public money, but as an act of gross dishonesty, the act committed by Mr. Walsh was at least equally dishonest.—Several other members spoke on the different sides of the question, which was discussed with much temper and impartiality. The general sense of the house was however clearly for the expulsion of one who had proved himself so unworthy a member; as was manifested by the division, on which Mr. Bankes's motion was carried by 101 against 16, though some very respectable names appeared in the minority.

The gold-coin and bank-note bill, which had excited so much discussion in the last session of parliament, was again introduced to the notice of the house of commons, on March the 17th, by a motion from the Chancellor of the Exchequer, for its continuation, with certain amendments. After a few preliminary observations, he moved, "That leave be granted to bring in a bill to continue and amend an act of the last session of parliament, for making more effectual provision for preventing the current gold coin of the realm from being paid or accepted for a greater value than the current value of such coin; for preventing any note or bill of the governor and company of the Bank of England from being received for any smaller sum than the sum therein specified; and for staying proceeding upon a distress by tender of such notes; and to extend the same to Ireland."

Lord Folkestone rose in this early stage of the business to observe upon the confident manner in which the right honourable gentleman had introduced a motion, the object of which was neither more nor less than that of making bank-notes a legal tender; and he made some observations on the extension of the bill to Ireland, though lord Castlereagh had last year particularly objected to it, because, bargains in the north of that country being made for payments in gold, it would have the effect of defrauding the creditors.

Lord Castlereagh having made some explanation relative to his opinion as referred to by the noble lord; Mr. Tierney spoke with considerable warmth against the proposed measure, as likely to bring on a most dangerous crisis for the country.—The house divided upon the motion, which was carried by 73 against 26; and leave was accordingly given to bring in the bill.

On the motion for the second reading of this bill, March 26, a debate arose, in which several members on both sides partook. The arguments against the measure were chiefly recapitulations of those before employed to show the danger of making, in effect, bank-notes a legal tender, and multiplying paper-credit beyond all limit and limit. With these were joined the injustice of extending the law to Ireland, in some parts of which leases and contracts of long standing existed for the payment of gold, and the depreciation of paper was advanced to 25 per cent. On the other hand it was contended, that greater evils would arise from leaving tenants at the mercy of rapacious landlords. On the whole it was evident, from the views given of the subject, that difficulties pressed upon it on all sides, and that nothing remained but a choice of evils. The ministers, however, were supported by a large majority; the division on the motion giving ayes 61, noes 16; majority 45.

On the 20th of April, upon the bringing up of the report, lord A. Hamilton proposed a clause to confine the dividend of profits to the proprietors of the Bank of England to 10l. per cent. during the operation of the bill; his object being to give the bank an interest in the recommencement of payments in specie: it was negatived without a division.—Mr. Taylor proposed a clause to compel the bank to employ the surplus of profit above 10l. per cent. in the purchase of bullion, which was also negatived; and the same fortune attended Mr. Johnstone's proposed clause to limit the issue of bank-notes.

The Chancellor of the Exchequer proposed the amendment of taking away from the landlord the right of ejectment after a tender of bank-notes in payment of rent by the tenant. This was warmly opposed by Messrs. Horner, Brougham, and others, as depriving the landlord of his only remaining remedy, and making bank-notes, to all intents and purposes, a legal tender. It was defended on the other side, as containing nothing new in principle; and passed without a division. The bill was ordered for a third reading, and met with no further opposition in the house of commons.

On the order for the second reading of this bill in the house of lords, April 28, a discussion took place, in which the arguments against a compulsory paper-currency were recapitulated by the opposers, and were replied to by ministers and their supporters, who contended for the necessity of the proposed measure. No division occurred in its passage through the house; but a strong protest against the third reading, signed by lords Lauderdale and Rosslyn, was entered on the journals.

It is unnecessary to observe more on this bill, than that by its amendments it in effect accomplished that purpose of rendering Bank-of-England notes legal tender, to which the bill of the preceding year had made such an approximation; and that, by disallowing any limitation of that company in the issue of its notes, and unrestricted power of coining silver tokens of less than their nominal value, the whole circulating medium of the country is placed in its hands. If in the present state of things such a measure was the wisest policy, it must be acknowledged that such a state has never before occurred in English history.

Among the parliamentary discussions of this session, one of the most remarkable related to the different attempts under the regency, now freed from its restrictions, to form a new or a strengthened administration. There had been made public in the month of February a letter from the prince-regent to his brother the duke of York, expressing a wish, that at this "new æra" his government might be strengthened by the accession of some of those persons with whom the early habits of his public life had been formed, and desiring that this wish might be communicated to lords Grey and Grenville; and also the letter of reply from those lords, in which they state the impossibility of their uniting with the present administration, on account of differences of opinion concerning the most

important political measures. But these discussions, as the negotiations entirely failed, cannot be considered interesting at the present day.

On the 20th of March, a message was sent to both houses, from the prince-regent, respecting a provision for the princesses, his sisters. It stated, that, pursuant to powers vested in his majesty, the king, by letters patent bearing date the 2d of Feb. 1802, had been pleased to grant to their royal highnesses the princesses Augusta-Sophia, Elizabeth, Mary, Sophia, and Amelia, an annuity of 30,000*l.* to take effect from the demise of his majesty; and his royal highness, being desirous to provide for their establishment by an immediate grant, recommended the subject to the consideration of parliament.

On March the 23d, the message was taken into consideration in the house of commons; when Mr. Creevey, after some observations respecting the falling-off of the consolidated fund, from which the required provision was intended to be paid, and on the late large sum granted to the regent, from which he thought the additional charge might be defrayed, concluded by moving to defer the consideration of the measure.

The Chancellor of the Exchequer, in reply, first showed the groundlessness of the gentleman's apprehensions concerning the consolidated fund; and then entered into some statements to prove that it was a mistake to suppose that there was a large disposable fund in the hands of the prince, since he had taken upon himself the payment of the debts of the princesses of Wales, to the amount of 49,000*l.* and so large a part of his income as 70,000*l.* had been given to a commission under the seal of the duchy of Lancaster, for the liquidation of those debts which had been brought before the house.

Mr. Whitbread concurred in the propriety of postponing the committee, on account of the contradictory statements made by gentlemen on both sides of the house from the very same papers, which proved that a further investigation was necessary. He, for one, had understood that the princesses were to live with the queen, and that it was on this account that the addition of 10,000*l.* had been made to her income; for it was difficult to imagine on what other account it could have been made. With respect to the payment of the princesses of Wales's debts by the prince, he thought it one of the most complete juggles that was ever heard of, for a person to undertake to pay the debts of another to save the expense to the people, when he came to get his own debts paid by that same people.

The motion for the amendment being put, and negatived without a division, the original question was carried; and the Chancellor of the Exchequer then made a statement of the proposed grant. By the acts which had enabled his majesty to grant an annuity to the princesses in cases of his demise, 30,000*l.* was to be divided among the princesses then living; if their number should fall to three, each was to have 10,000*l.* if to two, 20,000*l.* was to be divided between them; and, if only one remained, 12,000*l.* was to be allotted to her. The melancholy circumstance which had taken place in the royal family rendered it necessary that the condition of the princesses should be considered as if the demise of the crown had actually occurred; and, though they might still form a part of the domestic establishment at Windsor, he thought it of importance that they should be enabled to form separate establishments if they chose it. He would therefore propose, that to each of the four princesses there should be granted the sum of 9000*l.* per annum, exclusive of 4000*l.* from the civil list: at the death of one of them, the survivors to have 10,000*l.* each; and the same to continue when there should be two survivors only; the sole survivor of the whole to receive 12,000*l.* He concluded with moving an annuity of 36,000*l.* to be granted to the king for the purpose above-mentioned.

Mr. Tierney did not think the sum stated too much for separate establishments for the princesses; but he did not see why it should be taken for granted that they would desire to cease forming one family as at present, in which

case the sum would be greater than necessary. He thought also that the 36,000*l.* proposed might be saved from the civil list by a fundamental inquiry into its several branches of expenditure. He had another observation to make, which was with respect to the provision for the princesses of Wales, which was comparatively inadequate to her station. She was the wife of the regent, and as much the representative of the queen as the regent was of his majesty. He then alluded to the separation between the high parties in question; and to the Chancellor of the Exchequer's intimate knowledge of the circumstances, as having been her royal highness's counsel and champion in the investigation which had been so much talked of.

This hint seemed to be a signal for the members in opposition to take up the cause of the princesses of Wales, which became the principal topic of the remaining debate. In the course of it, every provocation was given to Mr. Perceval to induce him to open on a subject with which he was supposed to be so well acquainted; but nothing more was obtained from him than the following declaration:—"That neither in his capacity of counsellor to her royal highness, nor in any other character whatever, had he any charge against her royal highness, or the means of bringing forward any charge; and that he never meant to cast the slightest reflection upon her."

The bill was read a third time, and passed, on the 17th of April. It met with no opposition in the house of lords.

On the 27th of February, sir Thomas Turton introduced in the house of commons one of those motions on the state of the nation which are common at the beginning of a session, but have generally no other effect than to give large scope to the members on each side for attack and defence of the measures adopted by government. The honourable baronet in his speech took a very extended view of the state of public affairs, foreign and domestic, both retrospectory and present, from which he inferred much past impolicy in the plans of ministers, and melancholy prospects from persevering in the same system. He concluded by moving, "That this house will resolve itself into a committee of the whole house, to take into consideration the state of the nation." The debate was nothing more than a contest between the ministers and the oppositionists, in which the political points at issue between them were recapitulated; but, although several of the principal speakers took their share in it, there can be no advantage in occupying more of our pages with topics to which so much space has already been devoted. The point chiefly noticed upon these occasions is the division, as that shows the relative strength of the parties at the moment: upon this occasion, there appeared for the motion 136, against it 209, majority 73.

The subject of the orders in council, which constituted so important a part of the negotiations between this country and the United States of America during the last year, appears prominent in the parliamentary discussions of the present year; and, although their importance has unfortunately been diminished by the event—for the Americans decided the question by arms, whilst our senate was debating it—they cannot be passed over in a relation of the principal occurrences in the metropolis of trade.

February 28, the marquis of Lansdowne rose to call the attention of the house of lords to the system of policy which had resulted from those orders, so injurious to the manufacturing and commercial interests of the country, and to the welfare of the state. He specified the particular orders which he meant to consider, to be those issued in November 1807, prohibiting the trade to France and the countries dependent upon her, at the same time insisting on American vessels coming first to our ports and paying a tax there; and also to the order of April 1809, partly revoking the former orders, by opening the trade with the north of Europe. He then took a view of the effects of these orders as to their operation on the enemy; their operation on the neutral; their influence on the commerce and internal resources of this country; and their effects on its maritime policy. Under these heads

he made a number of observations which are incapable of abridgment, as they all referred to particular facts. One striking remark of a general nature we shall however transcribe. "If (said the noble speaker), at the time of the revolution in America, any one could have foreseen that the whole commerce of continental Europe would have fallen under the iron grasp and dominion of France, they would have looked to the establishment of an independent state on the other side of the Atlantic, out of the reach of French power, to become the carrier of our commerce, and purchaser of our manufactures, as the greatest boon that could have been given us. Such an event has occurred as if providentially; yet this great and inestimable advantage has been destroyed by the orders in council." His lordship then adverted to the abuses of the system of licenses, and to the system of simulation and dissimulation by which our commerce was now carried on, and which had thrown discredit on the decisions of our prize-courts: He finally contended, that every plea on which the orders of council had been founded was proved erroneous by the experience of four years; and he concluded by moving "for the appointment of a select committee to take into consideration the present state of the commerce and manufactures of the country, particularly with reference to the effects of the orders in council, and the license-trade."

Earl Bathurst, in reply, went through with great clearness all the particulars which could be adduced in refutation of the arguments of the noble mover, and endeavoured to prove the great advantages which had arisen from the system adopted by government. He also referred to the origin of this system, which he traced to the administration of which the opposition was now composed. He assigned other causes for the late commercial embarrassments; and affirmed that the clouds were now dissipating, and favourable prospects were opening: whence he could not accede to the proposition submitted to the house.—After several other lords had spoken on the subject, the house divided: for the motion 34, proxies 37, total 71; against it 66, proxies 69, total 135; majority 46.

March 3, Mr. Brougham, in the house of commons, made a similar motion for the appointment of a committee upon the orders of council. Of his long and elaborate speech to prove the impolicy and mischievous effects of these orders, and of the arguments used by the other speakers on both sides, it is impossible, in an abstract, to give any adequate idea; even on perusing them at length, the mind is distracted by reasoning opposed to reasoning, and fact to fact. The time, however, was not yet come in which the question could be regarded apart from the consideration of the support it was to receive. The ministers were still resolved to maintain their system; and, of course, the votes under their influence were given against the motion. It was, however, truly stated by the mover, in his reply, that the votes of this night were to determine the point of peace or war with America. The proportion of members in favour of the proposed inquiry was greater in the house of commons than in the house of lords. On the division there appeared, for Mr. Brougham's motion 144, against it 216; majority 72.

The bill which had been carried respecting offices in reversion, though laudable in its principle, was evidently incapable of doing much towards the relief of the national burdens; its author, therefore, Mr. Bankes, with a view of striking a more effectual blow against the waste of public money, rose in the house of commons on March 24, and moved the reading of the three first resolutions of the committee relative to public expenditure in May 1810. Their substance was to recommend the abolition of all offices which have revenue without employment, and the regulation of those which have revenue extremely disproportionate to employment (with the exception of those about the person of his majesty and the royal family), and to reduce all effective offices, the duties of which are discharged by deputy, to the salary and emoluments actually

received for executing the business of those offices. These resolutions being read, the honourable member said, that there was nothing to which the country looked with more pleasure than to the salutary principles of regulation which ought to be applied to sinecure offices. He guarded, however, against the indulgence of too high expectations of relief from the burdens incurred during war from such a measure, or, indeed, of any immediate economical effect of the motion he meant to propose; but, if the principle were once established, it could not fail of a sure though slow effect. After some further observations, he concluded by moving, "That leave be given to bring in a bill for abolishing and regulating sinecures and offices executed by deputy, and for providing other means for recompensing the faithful discharge of high or effective civil offices, and for other economical purposes." Leave was given; and Mr. Bankes, Mr. Wilberforce, and Mr. J. W. Ward, were ordered to prepare the same.

The bill thus framed did not come to a discussion till May 4; when, upon the order of the day for taking into consideration the report of the bill, Mr. W. Dundas rose, and objected to it as violating the articles of union with Scotland. He said, that the people of Scotland had stipulated at the union that their chief offices of state should be preserved; and he asked upon what ground it was that the very first offices of that country, in defiance of solemn treaty and national faith, were to be abolished?—The Lord Advocate of Scotland followed on the same side. He instanced particularly as an infringement of a stipulated right, the abolition of the office of keeper of the great seal of Scotland. The fact being denied by Mr. Bankes, he said the bill abolished the emolument of the office; and what remained of the office after the emolument? He made other objections to the bill; and said that, if it should pass into a law, it would cause the greatest confusion in Scotland, and strike the whole people with immeasurable astonishment.

Mr. Lyttleton made some sarcastic observations on the attachment to emolument avowed by the last speaker; and said that he was fully convinced that the true reason why the influence of the aristocracy was so debased, was, because these places had been continued. He gave his opinion that there was never a fitter time for wresting this power of augmenting influence from the hands of the crown, when it was known that there prevailed in the court a base system of unprincipled favoritism—when it was notorious that the regent was surrounded and hemmed in with minions, *among whom*, if there was a man of note or talent, there certainly was *not one of any character*.

Mr. Courtenay attempted to show that the proposed bill, instead of being a measure of economy, would be one of profuseness, and would tend to increase the improper influence of the crown. He observed, also, that it was contrary to all parliamentary practice to interfere with offices appertaining to the hereditary revenue of the crown, without the consent of the crown previously signified.

Lord A. Hamilton urged, in support of the bill, the dis-appointment which would be felt by the people at large, if, after the expectations held out to them, some measure of the kind were not adopted.—Mr. Balfour took the same ground, and dwelt upon the grievous burdens under which almost all classes were now suffering. He could have wished that every separate office had been put to the vote, and a bill prepared conformably to that decision. It was at least incumbent on those who talked of the necessity of remuneration, to show the reality of the service. He was convinced it would be difficult to point out ten in the whole list that partook of this character. The public money was too often given rather as a consideration for accepting office than for the services performed in it.

The Chancellor of the Exchequer said, that he felt himself bound to state his objections to the bill, both in its details and principle. In considering the former, he mentioned several instances in which its provisions were either inconsistent or unjust. With respect to the principle, his

opinion

opinion still was that it was perfectly wrong and mistaken. It went to say that the crown should not have the power of securing for its service men whom it might judge to be the most capable, if they happened not to be in a situation to resign all other pursuits in order to enter into the public service. He put this case strongly; and not without a personal allusion. He then adverted to the influence of the crown, and appealed to the house whether it was too great; referring to the division upon colonel M'Mahon's appointment.

Mr. Bankes made replies to some of the particular objections which had been advanced; and desired that, when the offices proposed to be abolished, and their responsibility, were spoken of, it should be recollected that they were rather *quasi* offices with *quasi* responsibility, neither of which appeared to him too great to be confined to such men as would usually be appointed deputies. As to the power of the crown, he said it was impossible to look at the immense expenditure of the country, with all the establishments and patronage connected with it, without being convinced that dependence on the crown was extended to all parts to a degree quite unexampled in former times. It was also no light consideration, that some of the greatest commercial and corporate bodies were in the habit of looking up to the ministers of the crown.

Mr. Canning made one of those balanced, indecisive speeches which had lately distinguished his manner of debate; but declared that he should support the bill, because he approved its principle.—That the general sense of the house was decidedly in its favour, was proved by the division, on which the numbers were, for the motion 134, against it 123, majority 11.

The bill was then re-committed, when various amendments were proposed, some of which were carried, and others rejected. The report was then received, and the bill was ordered for a third reading. This took place on June the 15th, when various objections were started against the bill, which, however, was read without a division. Mr. Bankes then moved the additional clause, "Provided always, that nothing in this bill should be prejudicial to the rights and interests of those who are now chief justices;" which was agreed to. Various clauses of amendment were then put, most of which were rejected. A motion for omitting that clause in the bill which limited the pension-list of Ireland to 40,000*l.* a-year produced a division: for the motion 59, against it 60. The bill afterwards passed the house without further opposition.

The bill did not arrive to its second reading in the house of lords till the 3d of July. On that occasion the lord chancellor spoke of its provisions with great contempt, and said that such a bill never met the eye of a lawyer ever since the establishment of law. He pointed out some of its most objectionable parts; and concluded with the motion, that it be read a second time that day three months. Some of the lords in its favour acknowledged that there were imperfections in it; but contended that no argument had been advanced against its principle, and that it might be amended in its future stages. On a division, however, the chancellor's motion was carried by 35 votes against 8; and thus the bill was lost, and, with it, all the hopes of alleviation of the public burdens which it might have raised.

After colonel M'Mahon had been deprived of his place of pay-master of widows' pensions, he was remunerated by the appointment of keeper of the privy purse and private secretary to the prince-regent. This circumstance was noticed in the house of commons on March 23, by the hon. J. W. Ward, who desired to be informed by the Chancellor of the Exchequer what salary was attached to these places, and what were their duties, as he did not know till now that such a situation existed.—Mr. Perceval, in reply, said that he presumed the honourable member was not ignorant that colonel Taylor had held the same offices under the king, and the same salary which he received was continued to colonel M'Mahon; that the

duties were various and important, although the offices would carry with them no official sanction, the home secretary of state being still the organ for receiving and communicating the pleasure of the regent.—Mr. Whitbread then inquired whether, before the nomination of colonel Taylor as private secretary to the king, in consequence of his infirmity of sight, any such place had existed; and also, whether colonel M'Mahon was to be paid out of the same fund that colonel Taylor had been.—The Chancellor of the Exchequer admitted that no private secretary to the king had been appointed before his defect of sight; and, upon being asked by Mr. Ward if he had any objection to name the adviser of the present appointment, he said that he had not the least difficulty in mentioning that it was himself.

On the 14th of April, Mr. C. W. Wynn rose in the house, pursuant to notice, to move for the production of the appointment of colonel M'Mahon to the new office of private secretary to his royal highness the prince-regent. He began with expressing his surprise at the intimation he had received that his motion was to be resisted; for surely the creation of a new office required as much as any thing to be submitted to the consideration of the house of commons. With respect to the appointment of colonel Taylor, he denied that it formed any precedent for the present case, since it was only justified by the obvious necessity of the circumstances, of which nothing similar now existed. He made some remarks on the improper time in which this appointment had been given, when the burdens and distresses of the country were universally felt; and said that it would appear to the public like a determination to create a place in order to compensate colonel M'Mahon for that of which the sense of parliament had deprived him. He concluded by moving, "That there be laid before the house a copy of any instrument by which the right honourable John M'Mahon has been appointed private secretary to the prince-regent in the name and on the behalf of his majesty. Also for a copy of any minute of the board of treasury thereon, directing the payment of the salary attached to the same."

Lord Castlereagh said, that the honourable gentleman had raised this question to a degree of importance which could in no view belong to it. He denied that there was any thing in the appointment which detracted in the slightest degree from the responsibility of the ministers of the crown. The nature of the office was precisely the same as that of any other private secretary in any other office of state, differing only in the rank of the personage under whom it was held; and there was no foundation for representing it as that of a fourth secretary of state. He asked whether it were possible for the sovereign of this country to go on, overwhelmed as he must be by the public documents that were heaped upon him, and scarcely able to disengage his person from the accumulating pile by which he was surrounded? He thought the necessity of the appointment apparent, and that there were no grounds for censuring it: wherefore he should oppose the production of the paper, which was nothing more than a grant of 2000*l.* a-year as a salary.

The Chancellor of the Exchequer repeated that this was no state-office, but simply an appointment to relieve the bodily and manual labour which the prodigious influx of public business attached to the royal functions. To show the expediency of the appointment, he entered into some particulars of the vast mass of business which came before the regent, and which afforded abundant occupation for such an officer to alleviate his labour; and he drew a comparison between the condition of his majesty, enured from early youth to habits of diligence and the routine of government, and that of the prince-regent, who came to the task at a so-much later period of life.

Mr. Ponsonby asked what was to be inferred from the argument of the necessity of the appointment? Why, that it was to be a perpetual, a permanent, office. Every future sovereign might claim the same privilege, if the precedent

precedent were established. He would then beg the house to look a little to the future. We might have a monarch whose debilitated frame would render assistance of that kind dangerous, or one whose love of indolence, and abhorrence of public duty, would equally dispose him to employ it. Would that private secretary have no influence on the government under such circumstances? Was it not likely that the sovereign would sometimes lean upon his opinions and suggestions? It was not in the nature of things but that such an officer must be a powerful instrument in the administration. It became, therefore, the duty of parliament rigidly to inquire into the nature and duties of such a post. Several other gentlemen followed on each side; some supporting the appointment on account of its utility; others persisting to consider it as merely a pretext for obtaining an additional salary for a favourite servant. The house at length divided: for the motion, 100; against it, 176.—Although the ministry were thus victorious in the house, they were doubtless sensible that the idea of a new burden imposed upon the country, under circumstances of such dubious propriety, excited much public discontent. They therefore took the hint of one of their friends, (Mr. Wilberforce,) who, in defending the appointment, had expressed a wish that the salary of the new secretary should have been paid out of the regent's privy purse; and this alteration was afterwards announced by the Chancellor of the Exchequer.

One of the debates in which the influence of the crown in impeding the due limitation of the public expenditure appeared to give the most general offence, was that on the barrack-estimates.—On April 13, Mr. Wharton moved, in the committee of supply, "That a sum not exceeding 554,441l. be granted for the expense of the barrack-department for the current year."—Mr. Freemantle said, he saw many things in those estimates which required a great deal of explanation; and he particularly instanced a barrack for the second regiment of life-guards to be built in what was called the Regent's Park, at the expense of 138,000l. barracks at Liverpool, estimated at 82,000l. at Bristol, at 60,000l. and a new stable at Brighton, at 26,000l.—Mr. Wharton, in explanation, stated that the term of the rented barracks of the life-guards being expired, if they were to be kept in barracks at all, it was necessary that they should be built; and he gave reasons for the construction of the others.

Mr. Huskisson could not be satisfied with this explanation. The expense of the barracks for the life-guards, he said, would be found, on calculation, to come to nearly 450l. for each horse, an enormous sum, amounting, according to the interest usually allowed for money laid out in building, to 40l. a-year for the lodging of each trooper and his horse. At Liverpool he thought such expense was unnecessary, as many warehouses might now be got which would make good temporary barracks. This was a time in which every expense, that could be spared, ought to be so; and he thought the reasons for postponing those buildings were fully as strong now as when he was in the treasury.—The Chancellor of the Exchequer endeavoured to show the necessity of these expenditures; and the debate then took a personal turn, with considerable acrimony, till it was closed by a division on an amendment proposed by Mr. Huskisson, that the grant should be reduced to 400,000l. The numbers were, for the amendment, 40; against it, 88.

The further consideration of the barracks did not take place till May 1, when Mr. Freemantle renewed his opposition to the estimates. The most serious objections, however, were against the proposed barracks in Marybone-park, where 133,500l. was to be expended for the lodging of 450 cavalry; besides which, there were artillery-barracks, magazines, and ordnance-stores, in contemplation. The honourable gentleman then entered into some particulars of the expense, which he showed to be enormous, and far beyond all former estimates; and con-

cluded with moving the substitution of 437,000l. for the barrack estimates, instead of 524,000l.

Several other members spoke against the extravagance of the barrack-system, and the unnecessary multiplication of these erections. One member hinted that the Chancellor of the Exchequer himself lamented this waste of the public money, but that he had not the power of preventing it, and must conform to the wishes in a higher quarter. Another alluded to what was certainly the general opinion, that the barracks at Marybone were intended as ornaments of the Regent's Park. The division sufficiently proved the unpopularity of the plans brought forward, by the comparative smallness of the ministerial majority. The numbers were, for the amendment, 112; against it, 134; majority, 22.—The effect of this public discussion was manifested when the new Chancellor of the Exchequer brought forward his budget. He informed the house that an additional vote of 90,000l. for the barrack-department had been agreed to, but that the treasury had determined to strike off that sum; which diminution proceeded from a resolution to postpone the execution of the projected barracks at Marybone-park, Bristol, and Liverpool.

The subject of the corporal punishments inflicted in the army had at different times been introduced into parliament; and one effect of these discussions had appeared in a clause of the mutiny-act passed in the last year, giving a power to courts-martial to commute the punishment of flogging for that of temporary imprisonment. See p. 246. There were members, however, who thought that the system of punishment adopted in the British army required a further reformation; and on April 15, the honourable Mr. Bennet rose, in the house of commons, according to notice, to make a motion on the subject. After some general observations on the ignominy and cruelty attending the practice which he had in view, he moved, "That there be laid before the house a return of the number of corporal punishments inflicted in the army, in the militia, and in the local militia, during the last seven years, up to January 1812, specifying the offences, where committed, and the number of lashes inflicted respectively."

This motion no doubt was intended as an indirect attempt to lessen the frequency, or entirely abolish the use, of corporal punishment in the army; and to do away the disgraceful business of flogging. No man whose breast harbours a feeling heart can think coolly of the situation of a free-born Englishman suffering under the lash; and would to God that any other means of bringing the soldier to a sense of his duty could be devised. But we must confess that, in the present state of society, (and indeed since society existed among men,) the necessity of punishing the body for the crimes of the mind has been unavoidable. The severity of the pain endured has been apparently measured upon the heinousness of the guilt; but the shame, the disgrace, attending the infliction of the punishment, has been acknowledged by the first law-givers as the most powerful coercive. We grant that the fact of flogging and of being flogged are both beneath a man who feels for honour:—but, when that precious, that irrecoverable, feeling is lost, where is the power of coercion?—Yet about this very time, our brethren of America did entirely abolish flogging in their army, substituting confinement, stoppages of pay, &c. (to which might be added, additional guards, and labour of various kinds.)—The house divided on Mr. Bennet's motion: ayes, 17; noes, 49; majority against it, 32.

We have before remarked, (p. 211.) that the cry for reform is a sort of "cheval de bataille," which the oppositionists generally bring forward whenever a lack of more interesting or more urgent matter is felt in the house. To this war-horse, we have also a "relay," in the cry for catholic emancipation. These two medley-show of sliding glasses move so regularly to and fro in the grand magic lantern of the anti-ministerial party, that no one is at a

loss to foresee when they will be stirred up again; and so regularly does the adverse party put the extinguisher upon the wick of the all-enlightening lamp, that these questions, mighty in their nature, but perhaps dangerous in their effect, become trite, trifling, harmless, and in fact a matter of course, brought down to the insignificance of a common order of the day. However, as the prince-regent had now attained to the full powers of sovereignty, and a great number of petitions on the subject had poured in from the catholics of the different counties in Ireland, supported by those of the protestant inhabitants in various parts, as well as by other bodies; it was thought expedient again to bring the topic to discussion in both houses of parliament.

On the 21st of April, therefore, the earl of Donoughmore, in the house of lords, moved the order of the day for a committee to take into consideration the claims of the catholic body for the removal of the disabilities under which they labour. The order having been read, his lordship rose to speak. He began by adverting to the petitions which had previously been read, and their object—the removal of unjust restrictions—the revival of suspended rights. He anticipated the objection, that the question was one on which their lordships had twice decided during the present session, by observing, that in both those instances it had been complicated with other considerations of a weighty nature. He then took a view of what had been done in Ireland from 1792 with regard to the catholic petitions; and alluded to the unfortunate scruples which had prevented the completion of the work of conciliation. This topic leading him to the supposed opinion of the prince-regent on the subject, he was called to order by lord Kenyon, as making use of unparliamentary language. He, however, vindicated the manner in which he had introduced the regent's name, and lamented the voluntary sacrifice of his royal highness's avowed feelings, to the assumed scruples, and political religion, of his minister. In the remainder of his speech, which chiefly consisted in a spirited amplification of the idea last stated, the following passage was much talked of at the time: "The ministers have drawn, as it were, a magic circle round the throne, into which none are permitted to enter on whom the confidence of the illustrious person has been accustomed to repose. Within its range the artificers of mischief have not ceased to work with too-successful industry. What phantoms have they not conjured up to warp the judgment, to excite the feelings, and appal the firmness, of the royal mind? But, though the evil genius should assume a mitred, nay, more than noble, form, the faint aspect which political bigotry delights to wear, or the lineaments of that softer sex which first beguiled man to his destruction—though to the allurements of Calypso's court were joined the magic and the charms of that matured enchantress—should the spirit of darkness take a human shape, and, issuing forth from the inmost recesses of the gaming-house or brothel, presume to place itself near the royal ear—what though the potent spell should not have worked in vain, and that the boasted recantation of all incumbering prepossessions and inconvenient prejudices had already marked the triumph of its course—though from the royal side they should have torn the chosen friend of his youth and faithful counsellor of his maturer years—though they should have banished from the royal councils talents, integrity, honour, and high-mindedness like his, and should have selected for this illustrious person an associate and an adviser from Change-alley and the stews—though they should thus have filled up to its full measure the disgusting catalogue of their enormities—we must still cling to the foundering vessel, and call to our aid those characteristic British energies by which the ancestors of those whom I have now the honour to address have so often and so nobly saved the sinking state." After a variety of other animated references to the opposition declared against the catholic claims, and the necessity of persevering in the cause, his lordship moved

for the appointment of a committee to take into consideration the laws imposing disabilities on his majesty's subjects professing the catholic religion.

His royal highness the duke of Sussex then rose, and made an elaborate speech in favour of general toleration, which was afterwards published with copious explanatory notes; indicating an uncommon degree of attention to subjects of ecclesiastical history in one of his exalted rank.

In the long debate which ensued, every topic was agitated which had been touched upon in the former discussions of the catholic question; chiefly, however, by those who were friendly to the concessions desired, who took a wider compass of argument than their opponents, who for the most part confined themselves to the dangers which the protestant establishment would incur from such concessions.—The speakers on each side, besides those first mentioned, were, against the motion, lords Redefdale, Liverpool, and the Lord Chancellor; for it, lords Selkirk, Wellesley, Downshire, Byron, Moira, and Grenville. At five in the morning the house divided, when the numbers were, contents present 67, proxies 35; total, 102: non-contents present 103, proxies 71; total, 174: majority against the motion, 72.

In the house of commons, a similar motion was made, on the 23d of April, by Mr. Grattan. The debate to which it gave rise, was continued by adjournment to the second day; and there was no possible light in which the subject could be placed which was not resorted to by the different speakers on each side, though in fact the whole was only a recapitulation of statements and arguments employed in the preceding discussions of the same general topic. The conclusion was, that at the hour of six in the morning a division took place, in which there appeared ayes 215, noes 300, majority against the motion 85.—Thus the catholic cause sustained a third defeat in both houses of parliament; nor did it appear that the accession of the prince-regent to the full authority of the crown had made any difference as to the sentiments and conduct of his ministers on this important occasion.

Notwithstanding the tenacity with which the ministers had maintained the policy of the orders in council, the increasing distresses of the manufacturing parts of the kingdom, and the serious disturbances thence arising, could not fail of exciting some misgivings in their minds, and rendering them desirous of making such relaxations as might tend to open the former channels of commerce. It was doubtless in consequence of these considerations that a declaration in the name of the prince-regent was issued on April 23, purporting, that the regent having declared, that, if at any time the Berlin and Milan decrees should by an authentic act be absolutely repealed, thenceforth the orders in council of the 7th of January 1807, and the 26th of April 1809, should be revoked; and the chargé d'affaires of the United States of America having on the 20th of May last transmitted to this court a copy of a decree of the government of France passed on the 28th of April, by which the decrees of Milan and Berlin are declared to be no longer in force with respect to American vessels; the regent, although he cannot consider the tenor of the said decree as satisfying the conditions of the order of April 23, yet, being disposed to re-establish the usual intercourse between neutral and belligerent nations, is pleased to declare the orders in council of January 7, 1807, and April 26, 1809, revoked as far as concerns American vessels and cargoes. A proviso is, however, added to this concession, that, unless the American government revoke their exclusion of British armed vessels from their harbours while those of France are admitted, and their interdiction of British commerce while that with France is restored, the present order is to be null and of no effect.

Petitions against the orders in council were in the meantime pouring in from the towns most affected by their operation; and at length it was agreed to hear evidence on the subject. Witnesses were summoned from Bir-

mingham, Sheffield, Manchester, &c. and examinations relative to the facts alleged in these petitions went on regularly in both houses, till they were interrupted by an event which we shall shortly have to record, and which probably had a considerable influence upon the final result.

A circumstance having occurred tending to increase the animosity of the Americans against this country, it became about this period a subject of discussion in parliament.—The president of the United States had sent a message to congress, asserting that an authorized agent of the British government, Capt. Henry, had been sent by the governor of the British territories of North America into the adjacent states, in order to foment discontents for the purpose of detaching them from the union. This heavy charge being transmitted in the American newspapers, lord Holland rose in the house of lords, April 28; and, after mentioning the fact of the message, said, that he hoped the noble lord opposite would be able to satisfy the public by a contradiction of the assertion.—The earl of Liverpool had no hesitation in answering, that no person had been employed by this government to foment discontents in the United States, and that no intention existed on the part of government to make any attempt to separate the union. He said that captain Henry was not employed by government at all; and he supposed that sir James Craig could have employed him only to obtain information with a view to the defence of Canada, in case of a war.

Mr. Whitbread introduced the subject in a similar manner in the house of commons, and was similarly answered by lord Castlereagh, who said that government had only heard, in a dispatch from sir James Craig, that an agent had been employed, announcing at the same time that he had been recalled. Mr. W. said that he was not satisfied with this answer; and declared his intention of moving for the production of the governor's correspondence on this subject.

Lord Holland, who had given notice in the house of lords of a similar motion for the production of papers, rose to speak to the point on May 5. He said, the proposition he was about to submit to their lordships had no reference whatever to the line of policy proper to be pursued with respect to the United States, but was grounded on the general relations of all civilized states; he could not therefore understand upon what objections an opposition to his motion (which had been intimated) could be founded. It went to the crimination of no man or set of men; but upon the necessity of vindicating the government of this country from what he trusted was an unfounded charge made against it. This charge was no less than that, while two friendly powers were engaged in negotiation upon certain points of national importance, a member of the British government had employed a secret agent in the territories of the United States, not to procure intelligence, which was a legitimate object, but for the purpose of inducing some of the states of the union to throw off their allegiance, and separate themselves from the rest. This charge originally came from an individual who avowedly betrayed the secrets of his own employers. Lord H. proceeded to show the dishonourableness of such conduct, and the improbability that sir J. Craig would have so employed Henry without instructions from his government, or transmitting to it the communications he had received; and he adverted to the fact, that, when Henry claimed his reward, he presented a memorial to the office of the noble secretary of state referring to sir J. Craig for his conduct, and had in consequence received a letter to general Prevost, the successor of sir J. Craig, recommending him to a valuable office in the country which he governed. Lord H. concluded by moving an address to the prince-regent, "for the production of copies of all the communications made by sir J. Craig to his majesty's secretary of state relative to the employment of Capt. Henry in a secret mission to the United States of America; also of the correspondence between the secretary of state and sir George Prevost on the subject of compensations claimed

by Henry for his services; and also copies of all instructions sent to sir J. Craig from the secretary of state relative to the employment of Henry in the United States."

The earl of Liverpool, in reply, began with repeating his former statement, that the government here had no knowledge of the employment of the person in question until many months after the transaction. It was true that a person named Lavater, going in 1803 from Canada to the United States on his own business, had, of his own accord, opened a correspondence with the governor of Canada for the purpose of conveying information; and his lordship justified this proceeding by a detail of the menacing attitude, with respect to the British American possessions, then assumed by the United States. Sir J. Craig sent Henry thither in February 1809; not for the purpose of exciting discontent, but wholly for obtaining necessary information. With respect to the remuneration of Capt. Henry, as he had a recommendation from sir J. Craig, backed by some very respectable persons in London, and it appeared that he had been really employed in services for which a remuneration had been promised, he (the secretary) had held it his duty to act as was mentioned in the correspondence with sir G. Prevost. It was not afterwards deemed consistent with delicacy to say any thing which might in the least have reflected upon the character of sir J. Craig, who had returned home from his government under a mortal distemper, and had survived but a few months. He could not approve the course adopted by the noble baron; but thought it should be left to government to pursue the proper measures to explain and set forth the subject in its true light. Nor could he approve the conduct of the American executive, which, without demanding explanation, or making any notification to the British minister, had at once laid the papers before congress.

Earl Grey thought the question was one of great importance; and wished that the charge of communicating with subjects of the United States who were desirous of withdrawing themselves from the union, had been authoritatively denied. It had been admitted that the letters spoken of had afterwards been communicated to the secretary of state; but there was no evidence of any disapprobation being expressed by him; the governor was only enjoined to be cautious in the employment of such agents, "for fear of involving the country in a quarrel with America." Under such circumstances, he thought the house was called upon explicitly to condemn the principle; if they did not so, they must for the future be silent with respect to any similar breach of good faith on the part of France, or any other government.

Vicount Sidmouth said he had never known a case so greatly exaggerated. If it were even admitted that sir J. Craig had overstepped the limits of strict political discretion, there still existed no pretence to accuse ministers, who were completely ignorant of the transaction. Sir James, in fact, in a moment of danger, had employed a person, to ascertain the dispositions of the inhabitants of the contiguous districts, who was not directed to excite discontents, but to observe any disposition that he might find favourable to the British cause. His lordship maintained that publishing the whole correspondence would be attended with a serious evil, as it would disclose the names of those Americans who were represented as friendly to the British cause, or inclined to a change in their own government; and he intreated the house not to encroach on the functions of the executive government, but to leave the affair to be settled by mutual explanations between his majesty's ministers and the American government.

After some other lords had spoken on each side of the question, lord Holland rose again to make observations upon some points which had been urged by the lords opposite. He expressed indignation at the conduct of ministers in not attempting any direct defence, but seeking to shelter themselves by throwing all the responsibility upon the memory of sir J. Craig. Upon the whole, he said,

said, a public charge had been made, and it was the duty of government that the refutation should be as public as the imputation; and nothing could clear the honour of the country, unless it were ample and satisfactory. As to the objection that had been urged of the impolicy of such disclosures as the production of the papers would lead to, he wished for none that would unnecessarily affect the interests either of countries or individuals; and he was willing to narrow his motion in any way that would enable him to obtain the specific information he desired.—The house then divided on the motion; contents 27, non-contents 73.

Another attempt to lessen the national expenditure, though of small magnitude in its object, and unsuccessful, deserves notice on account of the doctrine held on the occasion in the house of commons.—On the 7th of May, Mr. Creevey rose to call the attention of the house to the two tellerships of the exchequer held by the marquis of Buckingham and lord Camden. It was his intention to consider this as a mere question of private property between those individuals and the public. The places had been given as rewards for the services of the fathers of these noblemen, and he did not mean to find fault with their distribution; but his objections were, that their emoluments were indefinite in their amount, and disproportioned to the circumstances of the nation. The fees of these offices were of such a nature, that they rose exactly in proportion to the distresses of the country. From the report of the commissioners of public accounts it appeared, that in 1782, when they were granted, which was a time of peace, they did not exceed 2500*l.* per annum; which sum, during the American war, was increased to 7000*l.* In 1808, such had been the public expenditure, that the tellerships had risen to 23,000*l.* per annum each; and there was no doubt that the emoluments must now be considerably more. He could not bring himself to acknowledge the right of these two noblemen to derive such enormous emoluments from the public calamities. He would deny the principle so often contended for in that house, that a grant of an office by the crown was as sacred as any ancient grant of an estate, and could not be touched by parliament. When the crown formerly made grants of lands, or even of taxes, out of its hereditary revenue, it granted its own property; but now, that the whole public expenditure was under the controul of parliament, he conceived that the crown could not make a grant which was not under the same controul. The honourable gentleman then read extracts from the report of the commissioners of public accounts in 1782, which went to the assertion of the right of controul above-mentioned; and he gave instances of the present actual interference of parliament in the fees of the tellers of the exchequer. He concluded by moving certain resolutions, of which the first related to the facts of the grant of the offices of tellers, *performed entirely by deputy*, to the present possessors, and their past and present emoluments; the seventh was in the following terms:—"That it appears to this house, that parliament has at various times asserted and exercised a right of limitation and controul over the fees payable to the tellers, by excepting specific sums of money from the payment of all such fees; and that it is the duty of parliament, in the present unparalleled state of national expenditure and public calamity, to exercise its right still further over the fees now paid out of the public money at the exchequer, so as to confine the profits of the marquis of Buckingham and lord Camden to some fixed and settled sum of money, more conformable in amount to the usual grants of public money for public services, and more suited to the present means and resources of the nation."

After the first resolution had been put and seconded, the Chancellor of the Exchequer said, that, although the first six resolutions might be safely affirmed, yet, as he could not assent to the practical effect intended to be derived from them, he should move the previous question

upon them, and give his decided negative to the seventh. The tellerships of the exchequer were ancient offices, and legally within the gift of the crown. The right of those noblemen to them was a vested right which could not be touched, and he conceived the emoluments to be also vested interests which must be protected. There would be much more danger and mischief from breaking down the barriers of private property in this instance, than in allowing the receipt of the forty or fifty thousand a-year which were now the emoluments of those offices. The conduct of parliament in 1782 in not disturbing those vested interests, while they regulated the emoluments of tellers to be subsequently appointed, was a clear parliamentary recognition of those rights.

Mr. Brand admitted the legality of the grants, and the vested interests in their emoluments of those who held them. If, however, it should be found that parliament had been in the habit of limiting those fees from time to time, then it appeared to him, that they who took those offices took them subject to the controuling power of parliament. He should, therefore, wish to vote for the first six resolutions; and that a committee be then appointed to examine how far parliament had in former times interfered in reducing the salaries of offices for life.

Mr. Whitbread, while he admitted the legal and vested right in the fees of their office, contended that parliament was entitled to regulate and confine these emoluments when they became exorbitant, and beyond any thing that could have been in contemplation when the office was created, or when the present possessors obtained their grants. There could not be a doubt, that, when the house voted additional supplies, they had the power to exempt them from the operation of these fees; and, if the principle of vested right could be interfered with at all, it might to a greater extent.

The six first resolutions of Mr. Creevey were then severally put, and the previous question was carried against each of them. Mr. Brand moved, as an amendment to the seventh, "That a committee be appointed to inquire into the precedents which exist as to the deduction from, or suppression of, any fees payable to the tellers of the exchequer for moneys issued out of the same." The house divided upon this amendment: for it 38, against it 146. The original resolution was then negatived without a division.

It was probably in consequence of this motion, though unsuccessful, that the above noblemen, in a letter dated Nov. 21, expressed their intention of contributing to the public service one-third of the net profits arising from their respective tellerships; and farther, Dec. 11, if the said net profits should in the ensuing year 1813 exceed those of the present year 1812, to contribute the whole of such increase, in addition to the said one-third.—The lords of the treasury, in consequence of their offers, requested them to pay their respective sums into the Bank of England, as voluntary contributions.

The subject of reform of parliament was again taken up in the house of commons at this part of the session. On May 8th, Mr. Brand rose, pursuant to notice, to submit to the house a motion on the present defective state of the representation. He began with some general remarks on the notorious existing corruptions prevalent in the elections of members of parliament, and on the dangers which threatened the constitution from the number of members returned by places now deserted, or which possessed so few inhabitants that it was a mockery to continue to them the elective franchise. He said, that it appeared from facts which he had collected, that 182 individuals returned by nomination, or otherwise, 326 members; that there were above seventy placemen in the house, and above forty persons who were returned by compromise. How could that be called a full and free representation, in which there were 292 persons so brought in that they could not exercise a fair discretion on the subjects which came under their consideration? Having stated some more of the evils attached to the present system, he proceeded to the remedies.

Generally, he said, the leading steps would be, first, granting to copyholders the right to vote; secondly, more fairly to proportion the number of representatives to the population of each place represented. Having opened and enforced his plan by various other observations, he concluded with moving, "That leave be given to bring in a bill to repeal the act 31 Geo. II. c. 14. for further explaining the laws touching the electors of knights of the shire to serve in parliament for that part of Great Britain called England, and to entitle copyholders to vote for knights of the shire." The motion was seconded by the marquis of Tavistock; who declared his intention, should it be carried, of moving the repeal of the septennial act.

In the copious debate which ensued, all the usual topics on both sides respecting reform of parliament were gone over; and every measure which had a tendency to that end was decidedly condemned, not only by the partisans of the actual ministry, but by several of the oppositionists who wanted to get in: it was contended by these speakers, that all change in the mode of representation would be dangerous, ineffectual to cure any of the public evils, and was very little desired by the nation. The friends of reform, on the other hand, dwelt upon the obvious inadequacy of the representation, and the never-failing support given by the house of commons to every minister; a proof of the influence regularly exerted over the majority. The particular merits of the measure proposed were scarcely at all touched upon; and the ground taken by its opposers was that of resistance in the outset to every attempt at alteration. The house at length divided on the motion; ayes 88, noes 215, majority 127.

We are now arrived at a period when the historian recoils from his records, and shinks at the subject he is called upon to transmit to posterity. Of duels, of suicides, of other crimes, he has been forced to take occasional notice in the course of his annals; but the assassination of a prime minister, at his entrance into the sanctuary of the national legislature, on the threshold of the senate, and at the foot of the bench wherefrom his voice had so often claimed and deserved the attention of the venerable assembly, is one of those extraordinary deeds which require the whole of a virtuous century to efface, or make amends for them.—As Mr. Perceval, on the 11th of May, was entering the lobby of the house of commons at a quarter past five o'clock, a person of the name of Bellingham, who had placed himself at the side of the door for that purpose, fired a pistol at him, the ball of which entered his left breast. Mr. Perceval immediately staggered and fell. He was taken up by Mr. W. Smith, and with the assistance of other members was conveyed to the Speaker's apartments; but, before he reached them, all signs of life were gone. The assassin had taken so sure an aim, that the ball passed through his heart at the centre.

As soon as the horror occasioned by this catastrophe had somewhat subsided, a person exclaimed, "Where is the villain who fired?" Bellingham stepped forward, and coolly replied, "I am the unfortunate man." He made no attempt to escape; and, being interrogated as to his motive for the deed, he said, "My name is Bellingham; it is a private injury—I know what I have done—it was a denial of justice on the part of government." He was then searched, and carried to the bar of the house, which had been sitting in committee on the orders in council. The Speaker refusing the chair, general Gascoyne said, "I think I know the villain;" and, on stepping up, called him by his name. The Speaker then proposed that he should be committed to the prison-room, not leading him back through the lobby, lest a rescue should be attempted by accomplices; for the first idea naturally seems to have been, that the murder was perpetrated on a public ground, and in consequence of a conspiracy. All proper precautions being taken, both to prevent injury to others, and that the criminal might not destroy himself, and a committee being appointed to examine and give evidence on the facts, the house adjourned.

In the house of lords, as soon as the rumour of the event arrived, the greatest agitation was manifested. At length, their lordships refusing their seats, the lord chancellor, addressing them, said, that he felt it his duty to apprise their lordships, that he should take care to give orders that none should go out of the doors of that house till their lordships were fully satisfied that they had not the means of doing further mischief. This was understood as a determination that all below the bar should be searched, to see that they had no weapons; but, the alarm of conspiracy having now probably subsided, this resolution was not persisted in. The fact of Mr. Perceval's death, and the adjournment of the commons, being then ascertained, the earl of Radnor moved, "That an humble address be presented to his royal highness the prince-regent, stating, that the house had heard with horror of the attack made upon, and the assassination of, the right honourable Spencer Perceval, one of his majesty's most honourable privy council; and praying that his royal highness would be graciously pleased to direct such steps to be taken as he should deem expedient for the apprehension of the offender or offenders." This motion was agreed to *nem. diff.* and the house adjourned.

The prince-regent sent a correspondent answer to this address; and on the following day a message was received from him by both houses, recommending a provision for the numerous and afflicted family of Mr. Perceval.

Lord Castlereagh opened the business in the house of commons; and paid a very feeling tribute to the virtues and merits of the deceased minister. Amidst his distresses on this occasion, he was, however, happy to mention, that, as far as they had been enabled to investigate the subject, government were of opinion that this was an insulated act, and confined to the individual by whom it was perpetrated. With respect to the extent of the provision, he doubted not that the house would be anxious to protect all who bore the name of his lamented friend from the danger of poverty. In conclusion, he moved an humble address to the prince-regent, expressing their participation in the severe loss sustained by his royal highness and the public, and their abhorrence of the crime committed, and assuring him of their ready compliance with his recommendation.—The address was agreed to *nem. con.* and ordered to be carried up by the whole house.

After the house had delivered its address to the regent on May 13, it was resolved into a committee for considering the provision to be made for Mr. Perceval's family. Lord Castlereagh stated, that the right honourable gentleman, besides a widow, had left twelve children to the protection of the public; and that the property he had been possessed of was so moderate as to afford no possibility of their living in a style suited to their rank. With respect to the nature of the grant, he thought it would be most eligible to vote a substantive sum of money in the first instance for the children, and afterwards an annuity for their mother. The sums which he proposed were 50,000. for the first purpose, and 2000. per annum for the second; and he moved a resolution for the former grant.—Some members regarding this as too little for the services of the father, and mentioning a larger sum, Mr. Wilberforce rose, and, after making a warm eulogy on the character of the deceased, observed, that, however general the sense of his claims on account of private merit might be, yet that his political opinions were known to have had many opponents; and, as it was highly desirable that the vote should be cordial and unanimous, he thought the sum mentioned was a proper medium. The same opinion was held by Mr. Whitbread; and, the first resolution being put, with the addition, by Mr. Bankes, that the sum should be paid without fee or deduction, it passed *nem. con.* The second resolution, for an annuity to Mrs. Perceval of 2000. without fee or deduction, being put by lord Castlereagh, was carried *nem. con.*

This unanimity was disturbed, and the debate unfortunately assumed somewhat of a party-aspect, by Mr. H. Sumner's

Sumner's motion, "That the annuity of 2000l. payable to the Hon. Jane Perceval for her life, shall, after her decease, be paid to such male descendant of the right honourable Spencer Perceval as shall be at that time his heir, for the term of his natural life."—Mr. Whitbread declared his dissent from this proposal; Mr. Wilberforce expressed his apprehension that such a vote would be suspected to have originated from the political opinions of those who had usually supported the deceased minister; lord Castlereagh moved an amendment upon it, which went to set it aside; and other members spoke against it. When, however, the division took place, lord Castlereagh's amendment was rejected by 107 against 67, and Mr. Sumner's motion was carried by 136 against 23.

The report being brought up on the next day, the first and second resolutions were read and agreed to *nem. con.*—Mr. Huskisson then rose, and, after some observations respecting the situation of Mr. Perceval's eldest son, now at the university, who would come out into the world with a slender pittance, proposed that the third resolution should be recommitted, and a grant included in it of 1000l. a-year to the eldest son on his reaching the age of twenty-one, without prejudice to his reversionary right to the sum already voted. A debate then ensued, in which, unanimity being no longer the consideration, the friends of the late minister showed a determination to maintain the ground they had gained, and carry the national bounty to his family as far as the feelings of the house would permit; whilst the members in opposition seemed to think that enough had already been done for justice, and that augmentations would only be an abuse of the public generosity. Regarding the particulars of this discussion as neither pleasant nor instructive, we shall only state its result: this was, that, after the original resolution, and a motion for postponement, had been negatived, Mr. Huskisson's motion was carried.

On the 15th of May, lord Clive rose to move for an address to the prince-regent for a monument to the memory of Mr. Perceval in Westminster-abbey. This was opposed by Mr. Lamb as a clear recognition of his public services, which could not be acquiesced in by those who had disagreed with him in his political measures: Mr. Whitbread, Mr. Wynn, and Lord Milton, spoke to the same effect. Lord Castlereagh, Mr. Canning, Mr. Wilberforce, and others, supported the motion; which was carried on a division by 199 votes against 26.

Bellingham was brought to his trial at the Old Bailey, the court being sitting, on the 15th, when, there being no difficulty in proving the fact, he was, without hesitation, brought in guilty. There was a slight attempt to prove him insane; but, except his persuasion that what he had committed was perfectly justifiable, and an apparent expectation that the act would be so considered on his trial, no other marks of an alienated mind could be adduced. His execution took place on the 18th before Newgate. He prepared for his fate with great composure by the usual religious exercises, and during the whole scene manifested an extraordinary degree of firmness and self-possession. He denied that he had any accomplices in the deed (as indeed there could be no suspicion of this kind), and persisted to the very last in refusing to express any contrition for his crime.

This wretched man is stated to be a native of St. Neot's, in Huntingdonshire, and aged 42 years. He was brought up in a counting-house in London; and some years ago went to Archangel, where he lived with a Russian merchant, in whose employment as clerk he continued three years. Having formed a connexion with a Mr. Borbecker, in the timber-line, he returned to England in order to seek a contract for the supply of timber; and entered into considerable engagements with the merchants of Hull. Ships were in consequence sent out to Archangel to bring home cargoes; but, Mr. Borbecker having meanwhile become a bankrupt, the vessels returned in ballast. Bellingham, who still remained at Hull, was arrested, and

thrown into prison, by the disappointed merchants, for the non-fulfilment of the contract; and, during his confinement, or soon afterwards, he wrote a pamphlet with the intent of ridiculing the merchants of Hull. On the recovery of his liberty he proceeded again to Archangel, where he entered into various speculations, which ended in his involving himself in still more numerous difficulties. He was there very troublesome to the government, sending to them memorial after memorial, on subjects relative to his private concerns; and he, moreover, generally conducted himself with so much passion, that at length he was sent to prison, where he remained a considerable time; claiming, in vain, the protection of the British minister, who, indeed, could render him no assistance. The term of his confinement having expired, Bellingham repaired to England full of complaints against the Russian government. He married in London, but took up his abode at Liverpool. He commenced the business of an insurance-broker, whilst his wife pursued that of a milliner. He continued at intervals to present memorials to the British government on the subject of his claims; but these were concerns with which government had nothing to do. For the last few weeks he had been in attendance about the house of commons; and, a short time previous to this rash act, he addressed to several members of the house a printed statement of his grievances, requesting their interference in his behalf. It is said, that his last application to government on his affairs was made that very morning, when he received a repulsive answer, which is supposed to have confirmed him in his dark and bloody purpose.

The only other parliamentary proceeding immediately consequent upon Mr. Perceval's assassination arose from a circumstance just alluded to. The criminal, in justification of his act, which he always defended as vindictive of the injury he had sustained from the ministers in refusing him compensation for wrongs which he asserted that he had undergone in Russia, particularly complained of the conduct of lord Granville Leveson Gower, then ambassador in that country, and sir Stephen Sharp, the consul-general. His lordship, therefore, on May 20, moved in the house of commons for the production of a letter from himself to the secretary of state for the home department, lord Castlereagh, stating all the circumstances relative to the case of John Bellingham. An address to the prince-regent was agreed to for this purpose, and the letter was read before the house. Of its contents no more needs here to be said, than that it completely exculpated his lordship and sir Stephen with respect to that unhappy man, whose passions appear entirely to have obscured his reason as far as concerned his transactions in Russia.

Whatever might be the general opinion of Mr. Perceval's talents as a statesman, no one denied his ability as a skilful leader in the house of commons. His loss to the existing administration was therefore considered as a stroke which they could not possibly survive; and it immediately set in motion all that mass of political intrigue and speculation which never fails to be called into activity upon a prospect of change in the government. The earl of Liverpool, on whom the post of leader now devolved, attempted to acquire an accession of strength by the association of the marquis Wellesley and Mr. Canning. Upon the failure of this attempt, Mr. Stuart Wortley, on the 21st of May, submitted to the house of commons a motion for an address to the prince-regent, praying his royal highness to take the proper measures for forming an efficient administration. The motion was seconded by lord Milton. Long debates arose; and the conclusion, though successful, was not very gratifying to the opposition-party, as the majority was only 4 votes in a house of 344 members: and, what was extremely mortifying, the address, by a subsequent vote, could be presented by only the mover and seconder; for the motion for having it presented by the whole house, afterwards altered to one for having it carried up by such members as were of the privy-council,

council, was negatived by a majority of 2. The address was presented, therefore, by Mr. Wortley and lord Milton, the next day; and the prince-regent directed negotiations to be opened for effecting the purpose of the address.

Marquis Wellesley was the first person to whom this important and delicate commission was intrusted; but, after a short interval, he tendered to his royal highness his resignation of the authority vested in him. The same powers were next transferred by the regent to lord Moira, who treated with lords Grey and Grenville upon a basis that seemed to remove all difficulties to a final adjustment. The failure of this treaty, in consequence of a difference respecting the household appointments, with the very extraordinary conduct of lord Moira on the occasion, engrossed at that time the whole attention of the public; but these mighty conflicts have long ceased to be interesting; we shall therefore proceed to relate, that, on the 8th of June, the earl of Liverpool stated to the house of lords, that the prince-regent had on that day appointed him first commissioner of the treasury, and authorised him to complete the arrangements for the ministry—and thus a termination was put to all expectations of a change of men or measures, at least to any considerable extent. The majority in parliament, actuated either by an habitual concurrence with established power, or by the conviction that the past contests had been merely for place and emolument, immediately restored their support to the ministers, and no further cry was heard for “a strong and efficient administration.” The principal accessions made to the ministerial list were; lord Sidmouth, as secretary of state for the home-department; the earl of Harrowby, lord president of the council; and Mr. Vanstuart, chancellor of the exchequer.

Whilst this political ferment was agitating the different parties of candidates for ministerial power, the examinations in reference to the effects of the orders in council upon the commercial and manufacturing interests in the kingdom were going on with little interruption in both houses of parliament. A vast mass of evidence being at length collected, Mr. Brougham, on June 16th, brought the matter for final decision before the house of commons. He began his speech with observing, that the question, though of unexampled interest, was one of little intricacy. Its points were few in number, and involved in no obscurity or doubt. At a distance, indeed, there appeared a great mass of details; and the eight or nine hundred folios of evidence, together with the papers and petitions with which the table was covered, might cause the subject to appear vast and complicated; yet he did not doubt in a short time to convince his hearers that there had seldom been one of a public nature brought before that house through which the path was shorter, or led to a more obvious decision. He then took a general survey of the severe distress which was pressing upon so many thousands of our industrious fellow-subjects, proved not only by their petitions, but by the numerous schemes and devices which had been resorted to as a remedy for the evils caused by the suppression of their accustomed sources of employment. He reminded the house of the general outline of the inquiry. Above a hundred witnesses had been examined from more than thirty of the great manufacturing and commercial districts. Among all these there was only one single witness who hesitated in admitting the dreadful amount of the present distresses. Birmingham, Sheffield, the clothing-trade of Yorkshire, and the districts of the cotton-trade, all deeply participated in them. He then adverted to the proofs by which this evidence was met on the other side of the house; and took into consideration the entries in the custom-house books, and the substitutes and new channels of commerce said to compensate for those that were closed. He next touched upon the topic so often resorted to by the defenders of the orders in council, that of the dignity and honour of the nation, and the necessity of asserting our maritime rights; and he

maintained that every right may safely be waived or abandoned for reasons of expediency, to be resumed when those reasons cease. He lastly dwelt upon the great importance of the American market to the goods produced in this country, and the danger of accustoming the Americans to rely on their own resources, and manufactures for themselves. After a long and eloquent harangue on these and other connected subjects, Mr. B. concluded with the following motion: “That an humble address be presented to his royal highness the prince-regent, representing that this house has for some time past been engaged in an inquiry into the present distressed state of the commerce and manufactures of the country, and the effects of the orders in council issued by his majesty in the years 1807 and 1809; assuring his royal highness that this house will at all times support his royal highness to the utmost of its power in maintaining those just maritime rights which have essentially contributed to the prosperity and honour of the realm—but beseeching his royal highness that he would be graciously pleased to recal or suspend the said orders, and adopt such measures as may tend to conciliate neutral powers, without sacrificing the rights and dignity of his majesty’s crown.”

Mr. Rose acknowledged that a very considerable degree of distress did exist among our manufacturers; but would not admit that it was so much owing to the orders in council as the hon. gentleman had represented. He corrected several statements made by him; and showed that the commerce of France had suffered in much greater proportion from the effects of these orders. Our shipping-interest, he asserted, had been benefited by them; and, if they were repealed, the Americans would come in for a large share of our carrying-trade, especially to South America. Upon the whole, he would not deny that our manufacturers were likely to obtain some relief from the repeal; but government was placed between difficulties on both sides, and it was their duty to adopt the measures which would be least detrimental. In his opinion, the preponderance of argument led to the conclusion that the repeal of the orders would be more prejudicial than their continuance. The great body of merchants held the same opinion. Four-fifths of those of Glasgow had petitioned in support of the orders; those of Bristol were unanimous in their favour; and so were a majority of those of Liverpool: there was no petition from London against them, whilst a great number of London merchants had petitioned in their favour.

Mr. Baring, after a warm eulogy on the enlightened view of the subject taken by the honourable mover, said that the house had two questions to decide: 1. Whether these distresses were attributable to the orders in council? 2. Whether any benefits had arisen from them in any other quarter to compensate for these calamities? Mr. B. made a number of particular observations relative to these two points; and concluded with giving it as his conviction, that by our orders in council we lost the most substantial commercial advantages for an object we could never obtain—that of forcing our trade with the continent.

Lord Castlereagh began with lamenting the precipitation of the honourable gentleman in bringing forward this motion, and pressing to a hasty discussion a question than which none more vital ever came before the consideration of parliament. He deprecated any interference on the part of the house in a question in which commercial considerations were mixed with those of maritime right, and, pending a delicate negotiation, dictating to the executive government the course it ought to pursue. After various observations in defence of the policy and justice of the orders in council, and in answer to some of the mover’s statements, the noble lord came to the point, by saying, that Great Britain would consent to suspend her orders in council, provided America would suspend her non-impetration act. The experiment might then be tried of the practicability of restoring things to their ancient sys-

tem. Under these circumstances, he trusted that the house would not consent to the address—and he moved the order of the day.

Mr. Whitbread then begged the noble lord to say precisely what he proposed to do with respect to America.—Lord Castlereagh said, that he meant that a proposition should be made to the American government to suspend immediately our orders in council, on condition that they would suspend their non-importation act.—Mr. Whitbread was of opinion, that, if this proposition were to be sent out to America, and it was expected that the house and country should wait till they received an answer, it was the greatest delusion that ever had been attempted; and he proceeded to express in strong terms the urgency of the distress felt by the manufacturers; and the necessity of giving the intended relief without delay.—Mr. Ponsonby also spoke against the measure proposed, as calculated to create delay.—Lord Castlereagh, in further explanation, said, that it was never meant that there should be any delay in suspending the orders in council; the intention was, that they should be suspended for a definite time, and that this circumstance should be communicated to the American government, for the double purpose of ascertaining whether it would in consequence abrogate its non-importation act, and also that it might apply to France to return to the ancient system of belligerents.

Mr. Brougham, after congratulating the house on the prospect of speedily getting rid of these orders, hoped that the noble lord would withdraw his motion for proceeding to the orders of the day, and explain more distinctly what was the exact intention of government.—The final result was, that Mr. B. and lord Castlereagh severally withdrew their motions, on the understanding that an official instrument on the subject should appear in the next Gazette.

It was a remarkable circumstance in this debate, that Mr. Stephen, the most strenuous defender and promoter of the orders in council, was not present: a certain proof that ministers were already prepared to make the sacrifice which the voice of the country rendered inevitable. On the 23d of June, there appeared in the Gazette a declaration from the prince-regent, absolutely and unequivocally revoking the orders in council as far as they regarded American vessels: with the proviso, that if, after the notification of this revocation by our minister in America, the government of the United States do not revoke their interdictory acts against British commerce, the same, after due notice, shall be null and of no effect.

Mr. Brougham, on this occurrence, declared the full satisfaction of himself and his friends with the frank and manly conduct of government in the mode it had adopted; and both sides of the house seemed happy in the prospect of the amicable intercourse which this proceeding would restore between the two countries. However, it appeared afterwards, that deferring the decision so long had rendered it altogether unimportant; for, before the news of the repeal reached the United States, they were actually at war with Great Britain; their declaration of war being dated June the 18th.

The disturbances consequent upon the numbers of workmen thrown out of employ by the diminished demand for the manufactures of the country, after having been for some time confined to the hosiery-districts, gradually extended to the neighbouring counties, where they assumed a character still more alarming, and engaged the serious attention of government. Their seat was that large and very populous district comprising those parts of Lancashire and the adjacent tracts of Cheshire which are occupied by the cotton-manufacturers, and the clothing-part of the west riding of Yorkshire. The disposition to tumult in this quarter disclosed itself about the end of February, and prevailed with greater or less violence till the middle of summer. During this period a great number of acts of lawless outrage were perpetrated, in the destruction of property, particularly of the machinery and im-

plements used in the manufactures, and in attempts against the lives of persons active in the suppression of riots. In their progress, the rioters appear to have adopted a system of organization highly dangerous to the public peace, and which manifested itself in a degree of military training, accompanied by the seizure and concealment of arms, and the administering of an oath of secrecy and confederacy.

On the 27th of June, the prince-regent sent a message to each house of parliament, informing them, that he had given orders that copies of the information received relative to certain violent and dangerous proceedings carried on in several counties of England should be laid before them, and relying on the wisdom of parliament to take proper measures for the restoration of order and tranquillity.

Viscount Sidmouth, now secretary of state for the home department, rose in the house of lords on the 29th, to move an address to the regent on the occasion, expressing their thanks for the communication, and declaring their resolution to take into consideration the documents laid before them, and to concur in the necessary measures. He said he should afterwards propose to refer the papers to a committee of secrecy, and therefore would not anticipate what might be thought necessary by that committee. He then proposed that a secret committee should be appointed, consisting of eleven lords to be chosen by ballot; which was also agreed to.

In the house of commons, on the same day, lord Castlereagh moved a similar address to the regent, and the appointment of a committee of secrecy of twenty-one members chosen by ballot; both of which motions were carried. The report of the secret committee was laid before the house of commons on July the 8th; it was ordered to be printed, and taken into consideration on the 10th.

On that day, lord Castlereagh rose, and, after various preliminary observations on the extent and causes of the existing disorders, and the insufficiency of the means hitherto employed for their suppression, he proceeded to state the proposed powers to be granted by a bill which he should ask leave to bring in, and the duration of which he would limit to the shortest period at which parliament could be assembled to act as circumstances might require. There were three points to which he thought attention ought particularly to be directed:—1. To make a more effectual provision to keep the rioters from possessing themselves of arms. 2. To guard against the effect of tumultuary meetings. 3. To give more effectual power and more extensive jurisdiction to the magistrates of the disturbed districts.—As to the first, respecting arms, the law at present required that a deposition should be made on oath that arms were deposited in a certain place before search could be made. He would propose the alteration of giving to any magistrate of the disturbed districts the power of searching, and of authorizing his officers by his warrant to search, not only for stolen, but for secreted, arms: and also of calling on the inhabitants to surrender their arms, receipts being given for the same: at the same time he wished to make a provision for suffering those to retain their arms who might have occasion to use them in defence of their property. As to tumultuary meetings, which had lately taken place, not only in the night, but in the day-time, of great numbers of persons, for the purpose of training, at present the magistrates could do no more than read the riot-act, and order them to disperse, and that not till the end of an hour: his proposal therefore was that they should have a power of immediately dispersing a tumultuous body, and to make those who did not disperse when called upon liable to punishment. With regard to the third point, he had to observe, that in many parts there were not magistrates sufficient to enforce the law with due vigour, and on the borders of the disturbed counties offenders might escape to another jurisdiction. He would therefore propose, that, for the time being, the magistrates in the disturbed and adjacent counties should have

have a concurrent jurisdiction. He concluded by moving for a bill "For the preservation of the public peace in the disturbed counties, and to give additional powers to the justices for a limited time for that purpose."

Mr. Whitbread declared that he was by no means satisfied with this proceeding. He called in question many of the assertions of the noble lord, particularly with respect to the existence of an armed force among the rioters, of regular leaders, distinct combinations, and depots of arms. He strongly objected to the proposed measure of searching for arms, and alluded to the horrors which measures of that kind had occasioned in Ireland. He hoped the revocation of the orders in council would cause part of the evil to fall of itself; but said that peace was the only radical remedy for all our grievances.

Mr. Wilberforce said, that, connected as he was with that part of the country which was the seat of these disturbances, he could not, without the most painful feelings, contemplate the necessity for the measures now proposed; it however appeared to him, that these measures did not outgo the necessity of the case; and, even if government had asked for larger powers, not for the purpose of carrying them at once into execution, but of cautiously feeling their way according to the situation of the country, he should not have hesitated to bestow them. As to the source of these disorders, he could not concur in the opinion that they proceeded from an interruption to commerce, or a scarcity of provisions. He was convinced that the disease was of a political nature, arising from certain mischievous publications industriously circulated to alienate the affections of the people from the laws and government of their country.

Several other members spoke on the subject, and the debate at length digressed into a discussion of the severities employed in Ireland at the period of the rebellion. Lord Castlereagh's motion was at length put, and carried without a division; after which he brought in his bill, which was read a first time, and appointed for a second reading.

On July 13, the order of the day being moved for the second reading of the bill, Mr. Whitbread rose to declare that his opinion was not at all altered respecting it, but his objections were still more confirmed. There was no evidence before the house to prove the allegation in the preamble, that assemblies of men were in the habit of forcibly demanding and taking arms. He would repeat, that due exertions had not been made to preserve the peace under the existing laws; in some cases the magistrates had been supine; in others they had acted with violence and a perverted judgment. There was now every appearance of a cessation of the disorder; and, though the member for Yorkshire had ascribed the evil to inflammatory publications, he himself, and others who thought with him, had declared that work and a lower price of provisions were likely to restore tranquillity.

Mr. Brougham adduced a number of facts to prove that the tumults were owing to distress solely, and to show the mischief and irritation which had proceeded from the encouragement given to spies, and the intemperate zeal and prejudice which in some instances had been displayed by the magistrates. These cases, however, were by others said to have been grossly exaggerated; and the general impression was manifestly in favour of the bill. On a division, there appeared, for the second reading 131, against it 16. It was accordingly read and committed.

When the third reading was moved, July 20, the former objections were renewed, particularly with respect to the powers granted of searching for arms; and it was asserted that the necessity of such a measure no longer existed, tranquillity having been restored in the disturbed districts. Mr. Bathurst, however, declared, that on that very morning information had been received at the secretary of state's office, that eight new attempts for seizing arms had been made within these few days. Mr. Tierney then proposed the following amendment to be inserted by way of rider:

"Provided always, that it shall be lawful for his majesty, by and with the advice of his privy council, to declare such districts as are now subject to the operation of this act to be no longer in a state of disturbance; and that this act shall no longer be in force in such districts."—Lord Castlereagh approved of the amendment. A division then took place upon the question of the third reading of the bill; ayes 69, noes 15: the bill was then read and passed.—It passed also in the lords; and its operation was limited to the 25th of March, 1813.

Notwithstanding the repeated failures of the attempts in parliament to procure a concession of the claims of the catholics, the advocates of their cause, probably imputing the opposition in part to circumstances of temporary irritation, resolved not to give up the contest, but to appeal, as it were, from the heat of the moment, to a period of calmness and sobriety. In pursuance of this idea, Mr. Canning, on the 22d of June, rose in the house of commons to make a motion on the subject. He laid down three principles on which, in his opinion, the whole matter rested. 1. He would assume as a general rule, that citizens of the same state, living under the same government, are entitled, *prima facie*, to equal political rights and privileges. 2. That it is at all times desirable to create and maintain the most perfect identity of interest and feeling among all the members of the same community. 3. That, where there exists in any community a great permanent cause of political discontent, which agitates men's minds without having any tendency to subside of itself, it becomes the duty of the supreme power in the state to determine in what mode it may most advantageously be set at rest.—He concluded by moving, "That this house will, early in the next session of parliament, take into its most serious consideration the state of the laws affecting his majesty's Roman-catholic subjects in Great Britain and Ireland; with a view to such a final and conciliatory adjustment, as may be conducive to the peace and strength of the united kingdom; to the stability of the protestant establishment; and to the general satisfaction and concord of all classes of his majesty's subjects."

Lord Castlereagh made a liberal declaration in favour of an inquiry into the catholic claims. That the general feeling of the house was similar was proved on the division, when, after an amendment of general Matthew to take the claims into *immediate* consideration had been negatived, the original motion was carried by the decisive majority of 235 to 106.

In the house of lords, on July 1, the marquis Wellesley, after a strong argumentative speech, made a motion precisely the same with that of Mr. Canning. The previous question was moved upon it by the Lord Chancellor; and a number of lords on each side declared their sentiments upon the subject, in the arguments and observations already so often repeated. The division showed an extraordinary balance of opinion in the members of that house. On the motion for the previous question, the numbers were, contents, present 74, proxies 52, total 126; non-contents, present 74, proxies 51, total 125; majority 1. Ministers, and their usual supporters, were ranged on each side; and of the royal dukes, two voted on one side, and three on the other. Even the bench of bishops was divided, though unequally; for 15 opposed the intended inquiry, and only 3 supported it.—The issue, however, of the motion, certainly appeared to evince an approaching national decision in favour of the catholics. But either this prospect, or the known inclinations of the ministry, now began to animate the zeal of all in England, who, from motives of interest or from religious prepossessions, were foes to all concessions which trench upon the exclusive privileges of the establishment; and the remainder of the year passed in actively promoting petitions against the catholic claims, from both the universities, from different clerical bodies, from counties, towns, and parishes; whilst a variety of publications, addressed to that hatred of popery which has for some generations been a ruling passion among

among the different denominations of protestants in this country, kept up the ferment in the public mind. Both houses were however pledged to a solemn decision of this often-agitated question; and a solemn decision it next year received, we hope a final one.

In the debates concerning lord Sidmouth's motion of last year to make alterations in the act of toleration, it had been stated that different decisions respecting the meaning of certain clauses of that act had been given by the justices at the quarter-sessions of different counties. It was, therefore, a laudable purpose of government to introduce a legal exposition of them which might prevent any future disagreement.—On July 10, lord Castlereagh moved the bringing in of a bill to repeal certain acts, and amend other acts, relating to religious worship and assemblies, and persons teaching or preaching therein. He stated that, in consequence of certain decisions at the quarter-sessions, doubts had arisen as to the question of qualification; and that the object of this bill was to place the dissenters in the situation in which they practically stood previously to such decisions. The bill was brought in and read. At the order of the day for the third reading, July 20, Mr. W. Smith congratulated the house on the unanimity with which it had hitherto passed, as a favourable omen of the increasing liberality of the times. He thought it would remove the practical evils of which the dissenters had to complain, although it did not recognize their great principle, that the civil magistrate had no right to interfere in matters of religious opinion. It removed the arbitrary discretion of magistrates, and required no other oath than that of allegiance. As an act of toleration, it was certainly the most complete which had hitherto been passed in this country. The honourable member concluded by moving a clause "to continue the exemptions now enjoyed by the toleration-act, without requiring a fresh oath."

The Chancellor of the Exchequer concurred with the honourable gentleman in his congratulations, which he was happy to consider as not arising from indifference to religion, since the same parliament had distinguished itself by its bountiful regards to the established church; and he instanced in the grants made to the parochial clergy, and the exemption of the smaller livings from the land-tax. He gave the late Mr. Perceval the credit both of those measures, and of the design of the present bill.—Mr. Smith's clause was then brought up and agreed to; and the bill was read a third time and passed.

The atrocious character of the war between England and France, in which so many years had passed without a cartel for the exchange of prisoners, appears to have induced, among the captives of the latter nation, a state of despair, which subverted all the customary rules of honour, and rendered the parole, given for the purpose of obtaining the indulgence of a lax detention, of no avail for restraining individuals from attempts to escape. The frequency of such attempts, and the ready aid afforded in consequence of bribery, at length excited the attention of government; and, on the 14th of July, lord Castlereagh rose in the house of commons to move a repeal of the existing laws relating to the aid given in effecting the escape of prisoners of war; and substituting a bill, by which the crime, instead of a misdemeanor, should be made a felony, punishable by transportation. He said, that, when it was known that prisoners of the highest rank in the enemy's army had effected their escape by means of an organized system for conveying them out of the country by a succession of persons, so as to elude pursuit, the house would perceive the necessity of providing against the danger. He then made a motion accordingly.—After Mr. Whitbread had expressed his hope that some measure would be adopted for an exchange of prisoners, and lord Castlereagh had assured him that the fault did not rest with this government, leave was given to bring in the bill. No opposition appears to have been made to its provisions; and it passed through the house, and was sent up to the lords,

where the second reading of it was moved by lord Sidmouth on the 23d of July.—His lordship remarked, that, from a list laid upon the table, it appeared, that within the last three years 464 officers on parole in this country had made their escape; whilst—a splendid contrast—there was not a single instance of an officer in our service having broken his parole. He dwelt upon the seriousness of the crime of assisting in these escapes, which an eminent judge had considered as nearly approaching to that of high treason; and he said, that by the proposed bill it was only made a transportable felony, the period of transportation to be determined by the enormity of the offence. No debate ensued; and the bill shortly after passed into a law.

In the month of April, at the time when the French emperor was on the eve of a war with Russia, he thought proper to make overtures for a peace with England, and a correspondence took place between the two governments on the subject, which soon closed without having produced any effect. No notice of this circumstance was taken in parliament till the letters which passed on the occasion had appeared in some foreign papers.—On July 17, lord Holland, in the house of lords, requested to know from lord Liverpool whether ministers were in possession of any further information respecting the overture from France than what had been published in those papers, and whether it was the intention of the executive government to take the subject into their consideration. Lord Liverpool did not hesitate to admit that the correspondence published was substantially correct; and he had no objection to produce the papers if called for. [This was afterwards done.] He was persuaded that there were few in the country who would not agree, that, if the acknowledgment of Joseph Bonaparte as king of Spain were made a necessary preliminary by the French government, no negotiation could be entered upon by this on such a basis. It had therefore been thought requisite to call for an explicit declaration on that head in the first instance. No communication in reply had been received; and there the matter rested.

This long session was terminated on the 30th of July, by the speech of the prince-regent, delivered by commission. His R. H. after his acknowledgments for the zeal and assiduity evinced by both houses of parliament in the display of their public duties, referred with warm approbation to the exertions made in the peninsula, and expressed his confidence that the contest in that quarter would be brought to an issue which would secure the independence of the two nations. He then adverted to the new war kindled in the north of Europe, as an additional proof of the little security that can be derived from submission to the tyranny and usurpation of the French government; and he trusted that they would approve of his affording to the powers that might be united in this contest, every degree of assistance and co-operation consistent with his other engagements, and the interests of the kingdom. He assured them that he viewed with sincere regret the hostile measures which had been adopted by the United States of America, but was willing to hope that the accustomed relations of peace and amity might yet be restored; should his expectations, however, be disappointed, he relied on the support of every class of his majesty's subjects, to enable him to maintain a contest in which the honour of the crown and the best interests of the country must be involved. After the customary thanks to the house of commons for their liberal supplies, and regrets for the additional burthens imposed on the people, his R. H. mentioned the great concern with which he had observed the spirit of insubordination and outrage which had appeared in some parts of the country; and applauded the diligence employed by parliament in investigating its causes, and the wise measures taken for its suppression. He concluded with recommending to them individually the exertion of their powers for the preservation of the public peace, and for promoting a spirit of obedience to the laws, and attachment to the constitution.

As the ministers, at the time of the prorogation of parliament,

liament, appeared to be possessed of all the usual influence of government, and the regent's terminating speech expressed full satisfaction in the measures which had been adopted by that assembly, the nation in general, notwithstanding some preceding rumours, did not seem to expect its speedy dissolution. It was therefore to the general surprise, that, by a proclamation from the prince-regent, dated Sept. 29, a dissolution of writs for a new one returnable on the 24th of November. As no public reason was given for this step, conjecture was left to imagine the most probable. It may be thought, that the pledge given by the house of commons of an early attention to the catholic claims, concurred in by a majority which seemed to augur a prevailing disposition to grant them, suggested to those who were adverse to the measure this means of defeating it; but, whatever were the immediate motives for ministers in advising this measure, it certainly displayed a confidence in their popularity with the nation at large, or, at least, in the powers in their hands for procuring such a return of representatives as would rather increase than diminish their influence.

Though not quite three months elapsed between the rising of the parliament and the meeting of a new one, we must avail ourselves of that short space to relate matters of great importance—of blood and slaughter—fire and frost—for we are now arrived at one of those momentous events, which, planned or permitted by Providence for some useful purposes, for advantages hidden in their causes, but splendid in their effects, are calculated to strike the world with astonishment and awe.—Those events which seem to aim at the very root of empires, and make them totter from their summits to their foundations—those events which seldom happen without leaving behind them a long train of consequential accidents to which the fates of inferior states are mere subordinates. We have to consign, in the annals of history, the wonderful oscillation of an immense army upon an arc of the terrestrial circumference full sixteen thousand miles in extent, from the banks of the Seine to Moscow; and the return of the piteous wrecks of such forces, through the severe chastisement of a vengeful winter; which buried in snow and covered with ice what the flames and the sword had eventually spared.

The French emperor, on his return from his tour in the Low Countries at the latter part of 1811, was evidently meditating a grand stroke, for the purpose of terminating his differences with the court of Petersburg in a manner conformable to that continental system which he had made the base of his policy; and the fate of the peninsula was to be a secondary consideration in his counsels till the other object was obtained.

The first military operation which can be considered as connected with his northern projects, was the occupation of Swedish Pomerania.—In January 1812, a body of French troops, under general Friant, entered that province. The capital, Stralsund, being very weakly fortified, with a small garrison, made no resistance to a colonel who was sent to take possession of it on the 26th, and who required quarters and provision, saying, in answer to a demand of payment for the latter, "It is our custom and orders, that the country in which we are should furnish us with every thing needful." Friant entered on the following day; and, when the Swedish general Peyron informed him that he should resist the occupation of the Isle of Rugen, the French general told him that he was his prisoner; and put seals on the custom-house. The purpose of this unwarrantable seizure of Pomerania was evidently that the French emperor might have a pledge in his hands to influence the conduct of Sweden in the approaching contest. Rugen was occupied by the French; the vessels and packets on the coast were detained for their service; and the French colours were hoisted in place of the Swedish. In February, a fleet arrived off Stralsund with general Engelbrecht on-board, to ascertain the state of the French troops in Pomerania, and bring back those of Sweden; but no com-

munication with the shore was permitted, and all correspondence with the general was declined by the French commander; so that the fleet was obliged to sail back without effecting any thing.

A very curious report to the conservative senate of France, that passive assembly which has no other power but the childish one of nodding assent to the pre-emptory will of the emperor, was made on the 10th of March by the duke of Bassano, alias Maret, minister for foreign affairs. The substance of it was an invective against the maritime policy of England, and an exposition and eulogy of all the measures taken by the emperor for asserting the liberty of the seas, and retaliating her arbitrary measures. In this piece it is explicitly declared, that, "till the British orders of council are rescinded, and the principles of the treaty of Utrecht towards neutrals are again in full vigour, the Berlin and Milan decrees will remain against those powers who allow their flags to be denationalised." These words are fully expressive of the jealousy which the French emperor entertains against the maritime power of England, a jealousy which will never cease to rankle in his heart, as long as he is possessed of any efficient authority, or has 250,000 men at his command.

A report of the minister of war follows, which begins with telling the emperor, that "the greatest part of his majesty's troops have been called out of the territory for the defence of the grand interests which are to ensure the preponderance of the empire, and maintain the Milan and Berlin decrees so fatal to England." This and some other matters contained in the report might be regarded as an indication that the whole strength of the French empire was about to be put forth in some mighty effort.

Early in the spring, the French army, united to that of the confederation of the Rhine, was in march to the frontiers of Poland. At the end of March, the field-equipage of Napoleon had reached Dresden, and marshal Ney had his head-quarters at Weimar. A portion of the troops of Prussia had been placed at his disposal, the monarch of that country having been induced this month to ratify a treaty of alliance with the French emperor, which was declared defensive against all the powers in Europe with which either of the contracting parties has entered or shall enter into war, and reciprocally guaranteeing to each other the integrity of their present territory. That the Prussian king hesitated for some time to which of the great powers he should ally himself, since neither of them was likely to suffer him to remain neuter, is very probable; but the rapid advance of the French soon put an end to his indecision. In the month of April, troops of all the nations under French command were incessantly proceeding towards the Russian border. They crossed the Vistula, to the number of 80,000, about the 20th, and afterwards took possession of Elbing and Konigsberg.

Napoleon left Paris on the 9th of May, accompanied by the empress and the prince of Neufchatel (Berthier), and proceeded to Metz. Some time before his departure he had issued a decree tending to conciliate the American government to France; the tenor of which was, that, in consequence of an act of 2d of March, 1811, by which the congress of the United States enacted exemptions from the provisions of the non-intercourse act, which prohibit the entrance into the American ports to the ships and goods of Great Britain, of its colonies and dependencies—considering the said law as an act of resistance to the arbitrary pretensions of the British orders in council, and a formal refusal to adhere to a system derogatory to the independence of neutral powers; it is decreed, that the decrees of Berlin and Milan are definitively, and from the 1st of November last, considered as never having taken place with regard to American vessels.

The French emperor and empress reached Dresden on the 16th, where they were to meet the emperor and empress of Austria. Before this time, the emperor Alexander, who had left Petersburg on the 21st of April, was at Wilna. In the beginning of May, the head-quarters

of the duke of Abrantes (Junot) were at Glogau in Silesia; and the French and allied troops of which his army consisted, were cantoned on both banks of the Oder. A numerous corps of Prussians was assembling at Breslau under field-marshal count Kalreuth.

Quitting the festivities at Dresden, Napoleon suddenly appeared at Dantzic on the 7th of June, where he took a view of the different points of the coast. At this period, negotiations seem to have been carrying on between the two emperors; and a suspicion generally prevailed that the Russian would be so much overawed by the terrible storm impending over him, that his firmness would give way; whilst it was very certain that Napoleon, in the confidence of power and former success, would not yield a single point in a contest which had seemed to him important enough to justify such vast preparations. It was, however, an advantage to Alexander, that the destructive war between Russia and Turkey was at length terminated by a peace, which set free his veteran troops upon the banks of the Danube. On the other hand, a treaty was now made public, which had been signed in March, between the emperors of France and Austria, and which included a reciprocal guarantee of each other's territories, with the stipulation, if either of them should be attacked or menaced by another power, of sending a succour of 24,000 infantry and 6000 cavalry, with 60 pieces of cannon, at the first requisition. The treaty also guaranteed the integrity of the dominions of the Ottoman Porte in Europe, and recognized the principle of neutral navigation; and the Austrian emperor renewed his engagement to adhere to the prohibitive system against English commerce.

The immediate commencement of hostilities was preceded by the publication at Paris of certain papers, the first of which was a note addressed on April 25th, by the duke of Bassano, minister of foreign relations, to count Romanzow, chancellor of Russia. In this paper, after a statement of the stipulations of the treaty of Tilsit, and the public wrongs imputed to the English cabinet, the writer proceeds to complain of the abandonment by Russia of the principles of that treaty, and of her engagement to make common cause with France. The first cause of complaint is the ukase which opened the ports of Russia to all ships laden with English colonial property, provided they were under a foreign flag. The next is, the opposition made by Russia to the French annexation of the duchy of Oldenburg, rendered *necessary* by the uniting of the Hanseatic towns to France. Instead of amicably treating for an indemnity for the duchy, the Russian cabinet made an affair of state of it, and issued a manifesto against her ally. Russia is then charged with having disclosed the plan of a rupture ready formed; for, while dictating terms of peace to Turkey, she suddenly recalled five divisions of the army of Moldavia, in consequence of which, the army of the duchy of Warsaw was obliged to repass the Vistula, and to fall back upon the Confederation, through the menacing posture of the Russian armies. The paper then states four points on which the emperor of France was desirous that a negotiation should be opened with prince Kurakin, and sketches the terms on which a conciliation might have been effected; and concludes with mentioning the overtures lately made to England, and with saying, that, whatever may be the situation of things when this note shall arrive, peace will still depend upon the determinations of the Russian cabinet.

A note is then given from prince Kurakin, the Russian minister at Paris, to the minister of foreign affairs. The prince states, that he is ordered to declare, that the preservation of Prussia, and her independence from every political engagement directed against Russia, is indispensable to the interests of his imperial majesty. In order to arrive at a real state of peace with France, it is necessary that there should be between her and Russia a neutral country not occupied by the troops of either power. The first basis of a negotiation must therefore be, a complete eva-

cuation of the Prussian states, and of all the strong places of Prussia; a diminution of the garrison of Dantzic; the evacuation of Swedish Pomerania, and a satisfactory arrangement between the crowns of Sweden and France. On these conditions, the emperor of Russia, without deviating from the principle laid down for the commerce of his states, and the admission of neutrals into his ports, will bind himself not to make any change in the prohibitive measures established in Russia against direct trade with England, and will also agree to a system of licenses similar to that in France, provided it be not calculated to augment the deterioration already experienced in the trade of Russia. He will likewise treat on certain modifications in the Russian customs for the advantage of the French trade. Further, he will conclude a treaty of exchange for the duchy of Oldenburg for a suitable equivalent, and will withdraw his protest in support of the rights of his family to that duchy.

Other papers published on this occasion were the correspondence between the duke of Bassano and lord Castlereagh, respecting overtures for peace, which have been already mentioned as a topic of parliamentary discussion; with various letters that passed between the Russian and French ministers. The publication of these pieces by the French government, indicated that it was confident in the goodness of its cause, at least as it would appear in the eyes of its own subjects, to justify the final appeal to arms; accordingly, a bulletin was issued from the grand army on June 22d, shortly stating, that no means were left to effect an understanding between the two courts, and that the emperor had issued orders to march for the purpose of passing the Niemen. Then followed a brief proclamation to his soldiers, conceived in his usual confident and laconic style; and this was his declaration of war. The disposition of the different French armies is thus mentioned in the bulletin: "In the commencement of May, the first corps arrived on the Vistula at Elbing and Marienburg, the second corps at Marienwerder, the third at Thorn, the fourth and sixth at Ploczk, the fifth at Warsaw, the eighth on the right of Warsaw, and the ninth at Pulawy." What was the united amount of all these divisions has not been exactly stated; but it may be affirmed that never, probably, in modern Europe, forces so numerous, and composed of such various people, were led under a single command to the decision of a political contest. It is agreed that the armies of Russia, extensive as that empire is, were greatly outnumbered by the invaders; whence a defensive plan was the only one that could be thought of by the court of Peterburgh at the beginning of the campaign.

The French divisions were all in advance at the beginning of June. On the 11th of that month, the prince of Eckmühl (Davoust) had his quarters at Konigsberg, where he was joined by Napoleon in person; and on the 19th, the French emperor had advanced to Gumbinnen on his march to the Niemen. Three bridges being constructed over that river, part of the army crossed without opposition on the evening of the 23d; and on the 24th Napoleon was at Kowno on the other side. The rest of the army passed on the following days, and pushed forward in divisions, the Russian light troops retreating before them on all sides. Wilna, the capital of Lithuania, at which the emperor Alexander had for some time resided, was given up without a contest; the Russians, on the approach of the French, burning the bridge over the Vilia, and, after setting on fire their large magazines in that city, hastily retreated. On the 28th Napoleon entered Wilna, and the bridge was re-established. The Russians were pursued by the French advanced guard, and some skirmishing took place, but with no material loss on either side. The duke of Reggio (Oudinot) had previously crossed the Vilia, near Kowno, on the 25th, and, advancing up the country, had obliged the prince of Wittgenstein, commandant of the first Russian corps, to evacuate all Samogitia, and the country between Kowno and the sea, and retire upon Wilkomirz.

Wilkomirz. On Oudinot's advance, the Russians still retreated, and set fire to their magazines at Wilkomirz.

The French divisions continued to advance, and the Russians to pursue the plan of gradual retreat. The latter reached the Duna about the 7th of July, without any considerable loss, and began to concentrate on its banks. During these operations, the weather, from extreme heat, changed to cold and storm, which occasioned the loss of several thousand horses to the French army. Riga was now regarded as exposed to imminent danger, and its governor issued a proclamation to encourage the inhabitants to a vigorous resistance. Some British ships of war had entered the harbour to assist in its defence. About this time, treaties of peace and friendship were ratified between the king of Great Britain and the emperor of Russia and the king of Sweden; thus sealing a bond of alliance which entirely changed the political system of the north of Europe.

On the 9th of July, the French advanced posts were on the Duna. Prince Bagrathion, the Russian commander, had been intercepted in his march towards Wilna, and had been obliged to move towards the Dnieper, whilst the French possessed themselves of Novogrodek and Minsk. The great duchy of Lithuania was now considered by them as nearly conquered; and Napoleon published an act, organizing a provisional government in it, with a national guard and a gendarmerie. The emperor of Austria had at this time recalled his ambassador from Peterburgh, and had sent his quota of troops as ally to France, under the command of the prince of Schwartzenberg, who had reached the Russian territory. The main Russian army, which was collected in a strongly-entrenched camp at Drissa on the Duna, evacuated it on the 18th, and moved eastward towards Witepsk, where the emperor Alexander was on the 19th. The king of Naples (Murat) crossed the Duna without opposition on the 20th, and spread his cavalry along the right bank of that river. Various partial actions had occurred during these movements, the circumstances of which are so differently related in the bulletins on each side, that nothing is left certain but the general results. From these it appears, that the Russians still persevered in their plan of retreat, but occasionally checked the temerity of the invaders, who began to experience a greater degree of resistance in proportion to their advance. The Prussians, who composed the chief force of marshal Macdonald, had been advancing through Courland; and a Russian corps at Mittau had been obliged to fight its way to Riga. This city was now thought in such immediate danger of a siege, that its suburbs were burnt down, with a vast destruction of naval and building timber. The Russian army, when it quitted the entrenched camp at Drissa, consisted of five corps d'armée, one of which, under general Wittgenstein, remained to cover Peterburgh, while the other four marched by Polotsk to Witepsk. On July the 25th, two French divisions under general Nansouty, encountered the Russians in front of Ostrovno. On that and the two following days there was much sharp fighting in this quarter, the strength of the Russians being stated in the French bulletin at 60,000 infantry and 15,000 cavalry. The loss on both sides was considerable, but the fruits of victory remained with the French, who took many prisoners and several pieces of cannon. On the evening of the 28th, the Russian army was in full retreat towards Smolensko; and on that day the French entered Witepsk. During these transactions, prince Bagrathion, on his march, was attacked by the prince of Eckmuhl (Davoust) near Mohilow, and an engagement ensued which continued the greatest part of the day. It concluded with the retreat of Bagrathion, unmolested, in the direction of Smolensko, where he joined the grand army. The vicinity of Polotsk was also near this time the scene of severe contest. Marshal Oudinot having crossed the Duna, with the view, it is supposed, of coming round upon Riga, was attacked by count Wittgenstein on the 30th and 31st, who, according to the Russian ac-

counts, gained a complete victory. A French bulletin, however, represents the result of another action, on August 1st, to have reversed this fortune, and left the Russians in the state of entire defeat. The capture by storm of the fortrefs of Dunaburg, on July the 30th, was a proof that, on the whole, success still continued to attend on the French arms.

About the 12th of August, the main body of the French forces, under the king of Naples and the prince of Eckmuhl, marched upon the Dnieper in order to obtain possession of Smolensko, at which city the principal force of the Russians was assembled. On August the 16th, the heights of Smolensko were commanded by the French troops; the place was reconnoitred by Napoleon in person, and the army was arranged in its position. The particular operations which ensued are not intelligible without a plan; but it appears that the attack and defence were both conducted with vigour and resolution. On the night of the 17th, the town was set fire to, and after midnight abandoned, by the Russians, who retired across the river. It was occupied on the 18th by the invaders, who at length succeeded in extinguishing the fire. The contest for this important place is said to have engaged 100,000 men on each side; and the loss of lives could not fail to be considerable, but that of the Russians is, by the French accounts, stated at triple their own. On the 19th the French crossing the Dnieper, made an attack on the Russian rear-guard, the last column of which retreated to the second, which was posted on the heights of Valentina. An action was brought on to force this position, in which a large number of troops on each side was engaged, and the point was obstinately contested; it terminated in an un molested retreat of the Russians. The banks of the Duna, near Polotsk, were the scene of some severe encounters on the 16th and 17th, between Wittgenstein and Oudinot, in which the success seems to have been nearly balanced. Of a number of inferior actions it is not worth while in this sketch to take notice.

At the beginning of the invasion of Russia, it appeared to have been the design of Napoleon to make a push at once for Peterburgh, probably supposing that the imminent danger or capture of this metropolis would terminate the war. But the plan pursued by the Russian commanders to draw the principal force of their antagonists towards the Dnieper, necessarily changed that of the invader, whose object now became the possession of the ancient capital of the empire, Moscow. Its central situation amidst some of the most fertile provinces of Russia, its vast extent, and its ready communication with Poland and the countries of Europe to the west, obviously rendered it a most important station for carrying on a war which was now likely to be protracted at least to another campaign. Smolensko is in the direct road to Moscow, and at a less distance from it than from Wilna; to have occupied that city was therefore a material point gained towards the further progress of the invading army. The advance of the latter, and the retreat of the Russians before them, destroying or carry off their magazines, continued as before; and on the 29th, general Caulincourt entered Viasma, a considerable town on the Moscow road. At this time general Kutuffoff had taken the chief command of the Russian armies.

Hitherto no opposition of consequence had been given to the French in their approach towards the capital; but the time was now come in which an effort was to be made worthy of the prize contended for—The Russians had taken a strong position at the village of Morkwa, between Ghijat and Mojaisk, where they were descried by the French on September the 5th, as they had begun to form a redoubt upon a height. This was immediately attacked by Napoleon's order, and carried. The next day passed in reconnoitring; and at day-break on the 7th, the French made an attack on the whole of the Russian position. They state the Russian forces to have amounted to 120 or 130,000 men, and acknowledge an equal number of their

their own. The battle soon became general, and lasted till night, with a dreadful carnage on both sides. Batteries were taken and retaken, entrenchments carried and recovered, and in the end each party claimed the victory. The French, who named this the *battle of Moskwa*, triumph without reserve; but general Kutusoff says, that the result was, that the enemy, with his superior force, in no part gained an inch of ground, and that he himself remained at night master of the field of battle. The village of *Borodino* gives the Russian appellation to this terrible conflict. Both sides made the usual demonstrations of success by acts of pious gratitude, which are always understood as addressed more to earth than to heaven; and it is left to the test of consequences to determine which was the chief gainer or loser by the event. One result, which certainly was not expected at Petersburg when they were singing *Te Deum*, was, that seven days after, being the 14th, at midnight, the French, after no other contest than some skirmishing with their advanced guard, entered Moscow.

Of the circumstances attending the capture and conflagration of this great city, very different accounts have been given. In the French bulletin which first relates the event, it is said that the governor, Rostopchin, wished to ruin the city when he saw it abandoned by the Russian army—that he armed 3000 malefactors from the prisons, and 6000 satellites; and that the French advanced guard, when arrived at the centre of the city, were received with a fire of musketry from the Kremlin, or citadel—that the king of Naples ordered a battery to be opened, which soon dispersed this rabble; and that, complete anarchy prevailing in the city, some drunken madmen ran through its different quarters, every-where setting fire to them, the governor having previously carried off the firemen and engines. A subsequent bulletin gives the following account: "On the 14th, the Russians set fire to the exchange, the bazar, and the hospital. On the 16th, a violent wind arose; three or four thousand Russians set fire to the city in 500 places at once, by order of the governor. Five-sixths of the houses were built of wood; the fire spread with a prodigious rapidity; it was an ocean of flame. Churches, of which there were 1600, above 1000 palaces, immense magazines, nearly all have fallen a prey to the flames. The Kremlin has been preserved. Above a hundred of the incendiaries have been apprehended and shot; all of them declared that they acted under the orders of Rostopchin, and the director of the police." The horrid circumstance is added, that 30,000 sick and wounded Russians had been burnt; but, it is to be hoped that this is an exaggeration. A subsequent French account from Moscow says, that three hundred incendiaries had been arrested and shot; they were provided with fuses six inches long between two pieces of wood, and also with squibs, which they threw upon the roofs of houses. The fires subsided on the 19th and 20th, but three-fourths of the city had been destroyed. It is afterwards said that only one tenth remained unconsumed.

While the shock occasioned by this terrible catastrophe of one of the most populous cities in Europe was still recent, the friends to the Russian cause were willing to impute the disaster rather to the fire of the assailants, or to the confusion and anarchy prevailing in a captured city, than to a premeditated purpose on the part of the governor or the court; but, when the proofs seemed to accumulate of a commanded agency in spreading the flames, then arguments were not wanting to show that, on such emergencies, sacrifices of this kind, however severe, were not only justifiable, but were the truest patriotism; and that the depriving an inveterate foe of a comfortable abode during the winter in the heart of the country, was a point of such essential consequence, that it could scarcely be gained at too high a price; and the sequel will render probable the justness of this reasoning. It may be added, that nothing could more convincingly prove the fixed determination of the Russian government to enter into no compromise

with the invader, than a resolution rather to destroy the venerable capital of the empire than to bargain for its safety.

The impression made at Petersburg by the fall of Moscow was necessarily that of great alarm, of which the court seems to have participated, even whilst it was endeavouring to tranquillize the people. A supplement to the Petersburg Gazette of October 2, under the title, "For information, by special command," acquaints the public, that measures are adopting in that city for the removal of certain necessary articles; not, however, from any apprehension of danger to the metropolis—and it proceeds to state the circumstances by which its safety is secured—but through timely foresight, to be beforehand with the freezing of the rivers. After some attempts at distinguishing between no present, but possible future, danger, it concludes with expressing a determination, "whatever may be the progress of the enemy, rather to drain the last drop of the cup of misery, than, by a scandalous peace, to subject Russia to a foreign yoke." Another precautionary measure, not only important in itself, but as it included a pledge of inviolable fidelity to, and confidence in, a new ally, was that of sending the whole naval force of Russia to winter in the English ports, where it arrived safe at the latter end of the year.

Napoleon continued at Moscow, and flattering accounts appeared in the French papers of his success in restoring order and procuring plenty in the place; at the same time it is certain that he began to find his situation very uneasy, and severely felt the disappointment resulting from the destruction of so large a portion of the city, and the flight of its inhabitants. An extraordinary and atrocious proof of the acuteness of his feelings on this occasion, appeared in his appointing a military commission at Moscow, on September 24, to try a number of poor wretches who had been apprehended in the act of spreading the flames through the city on the days when the French entered it. Though a principal object of the inquiry was to produce evidence that the conflagration was ordered and directed by the governor, yet these men were capitally condemned for executing commands, to them lawful; and ten of them were put to death with the ordinary forms of justice.

After this mean act of vengeance, Napoleon employed himself as if it were his intention to establish winter-quarters in the ruins of Moscow. If such had not been his plan, it must be regarded as infatuation, or indecision unworthy of his former character, which induced him to postpone the movement of his vast army to a season immediately bordering upon a northern winter. But, whatever might have been his secret purpose, his determination was precipitated by the event of an action on the 18th of October.—General Kutusoff, having received information of the march of a French corps under general Victor, from Smolensko, to reinforce the grand army, resolved to attack the advanced guard, commanded by Murat, and said to consist of 45,000 men, before they could be supported by the main army. The attack succeeded, and left in the hands of the victor a considerable number of prisoners, and thirty-eight pieces of cannon, which the badness of the roads prevented the French from carrying away. The consequence of this victory was, that on the 22d the corps of general Winzingerode entered Moscow, which was evacuated by the French garrison in such haste, that they left the hospitals in the power of the foe. About the same time other successes attended the Russian cause. Count Wittgenstein, after two days' hard fighting with the French under marshal Gouvion St. Cyr, in which he drove the enemy from his entrenchments, and pursued him to Polotzk, carried that place by storm on the 20th of October.

While the French emperor was triumphing amidst the ruins of a hostile capital 1500 miles distant from his own, an attempt was made to subvert his power at home, which, for a time, bore a formidable aspect, and, if not speedily suppressed, might have been the commencement of a new revolution.—Early in the morning of October 23, three

ex-generals, said to have been of the republican party, Mallet, Lahorie, and Gudal, having framed a fictitious senatus consultum, went to the barracks occupied by the first division of the national guards and the dragoons of Paris, and, having read a proclamation, informing them of the pretended death of the emperor on the 7th, ordered these troops, in the name of the regent, to follow them. The troops obeyed, and suffered themselves to be led to different posts, where they relieved the guards. The conspirators then presented themselves at the apartments of the minister of the police and the prefect of the police, whom they arrested, and carried to prison under an escort of 300 men. Another division, in the mean time, was marched to the house of the commandant of Paris, general Hullin, when Mallet informed him that he was no longer commandant; and, on Hullin's hesitating to resign his authority, Mallet shot him in the neck with a pistol. Mallet then proceeded with the design of arresting the chief of the etat-major of Paris; but this person had several officers in his apartment, who, proving too powerful for Mallet, arrested him. They then harangued the troops which had accompanied him; and, having succeeded in convincing them that the emperor was not dead, and that this was a conspiracy, they laid down their arms. The troops cantoned in Versailles and the neighbourhood were then sent for, the barriers were shut, and the conspirators, being, besides the three generals, about twenty officers and sub-officers, were arrested and committed to prison; and in a short time Paris was perfectly tranquil. It is asserted by authority, that not a single citizen of Paris or the departments was suspected of being an accomplice in this affair. A military commission was convoked to try the culprits, which declared the three ex-generals and eleven others "guilty of the crime against the safety of the state," and adjudged them to death, acquitting the rest. The execution took place on October 30, in the plain of Grenelle, in the midst of a numerous concourse of spectators; and thus the conspiracy seems to have been completely extinguished, no relics of it having since been brought to light.

The desertion of Moscow by Napoleon (who quitted it the day after the defeat of Murat) was equally a subject of surprise and speculation at Paris, the public papers of which exhausted their ingenuity in finding excuses and motives for this event. One of them thus concludes its reasonings: "To say that the emperor has left Moscow, is only to say, that this father of the soldiers marches wherever great operations demand his presence. His presence commands victory; it will still watch over the safety of the victorious army." We shall see in the sequel how well this expectation was verified.

The first proof of the great change of situation between the two armies, was the mission of Lauriston to Kutusoff, in order to propose an armistice, and treat of peace. The answer given was, that no negotiation of this kind could be entered upon till the French had repassed the Vistula; and, when Lauriston observed in reply, that they must then retire fighting every inch, since the Russian armies were marching on all sides, Kutusoff rejoined, that, as the French had not been invited to Moscow, they must get back as they could. Murat also is stated to have gone to the advanced posts, and held a conference with general Milardovitch, probably for the purpose of bringing about an armistice, but from which he derived no satisfaction. At this time the Russians had cleared both banks of the Duna, as far as Witepsk, from the invaders; and the province of Volhynia was entirely freed from the enemy.

The French grand army first directed its march upon Kaluga; but, finding obstacles in that quarter, the route was changed towards Mojaik. The Russians pressing upon it, an engagement was brought on at Malo-yaroslavetz, on the 24th, in which, as usual, the French claim a victory; at least, it appears that they checked their pursuers. On November 9, Napoleon arrived with the imperial guard at Smolensko. Of the encounters in

this interval, between the retreating and the pursuing armies, the relations by the two parties are so irreconcilable, that we shall not attempt to form them into a consistent narrative. It is only certain that much loss was sustained by the French which they were not in a condition to repair. The Russian winter, which began on the 7th with deep snow, greatly added to their difficulties and sufferings; and their bulletins acknowledge the loss of many men by cold and fatigue in their night-bivouackings. Two intercepted letters from the viceroy of Italy, Eugene-Napoleon, to the prince of Neufchatel, afford undeniable evidence of the extreme distress to which the retreating French were reduced. In the first, dated November 8, he speaks of an attack on the head, rear, and centre, of his columns, by the enemy, in which two of his cannon were carried off; and, after mentioning his embarrassments, and his critical situation, he says, "I must not conceal from your highness, that, after using every effort in my power, I have yet found it impossible to drag my artillery, and that, in this respect, great sacrifices must be expected." In the second, on the following day, he mentions the incredible efforts he has made for a small advance; and says, "These three last days have cost us two-thirds of the artillery of this corps of the army. Yesterday about four hundred horses died; and to-day perhaps double that number have perished, exclusive of the great number which I have caused to be put on for the military baggage, and for that of individuals. Whole trains of horses have perished in the harness at once. I must not conceal from your highness, that these three days of suffering have so dispirited the soldiers, that I believe them at this moment very little capable of making any effort. Numbers of men are dead of hunger or cold; and others, in despair, have suffered themselves to be taken by the enemy." In this dreadful condition he was again attacked by general Platoff, at the head of his Cossacks, who, in his report to marshal Kutusoff, speaks of three thousand prisoners, and sixty-two pieces of cannon, as the result of his victory.

The pursuit of the retreating army, on its route to Smolensko, still continued; and on the 10th, a body of 2000 men, with 60 officers, being a division of general Augereau's corps, was surrounded by the cavalry of count Orloff Denizoff, and laid down their arms, after a feeble resistance. On the 14th, count Wittgenstein, who had made himself master of Witepsk, was attacked by marshal Victor, in consequence of an order to drive him beyond the Duna. After an obstinate action, which continued the greatest part of the day, the French retired with considerable loss, having failed of their purpose. Several other actions took place, which are represented as being uniformly favourable to the Russians, and were preludes to much more important successes. The French, who, after blowing up the fortifications of Smolensko, were marching upon Krasnoi, a town to the south-west of that city, were overtaken by the advanced troops of marshal Kutusoff's army, which had made prodigious exertions for that purpose; and, on November 16, the corps of marshal Davoust, which had been turned by prince Galitzin, was brought to action. The battle lasted the whole day, Napoleon himself being in the field, which he quitted without waiting for the issue. It terminated in the complete destruction or dispersion of Davoust's army, which, besides a very heavy loss in killed and wounded, had above 9000 men, with two generals and many inferior officers, taken prisoners, and lost 70 pieces of cannon. An additional force was then sent to reinforce general Milardovitch, in order to stop the advance of marshal Ney with the rear-divisions of the French. On the 17th, under cover of a thick fog, Ney's troops got unperceived to the foot of the Russian batteries, and endeavoured to pierce through the lines of their opponents. Their efforts, however, were ineffectual; and, after great carnage from the Russian cannon and musketry, the remainder, in number 12,000, at midnight, laid down their arms, giving up their cannon, baggage,

baggage, and military chest. Ney himself escaped, wounded, by flight across the Dnieper.

In the further retreat to the banks of the Berezyna, various encounters took place, the result of which is, as usual, very differently related by the two parties. The most considerable was one which terminated, on the 28th, in the capture, by general Wittgenstein, of a French division, said to consist of 8800 men. During this time the cold was intensely severe, occasioning dreadful sufferings to the fugitives, and almost annihilating their cavalry. When they arrived at the spot where the roads to Minsk and Wilna divide, they took the route to the latter town, first sending off their wounded, with the baggage. In these movements, Napoleon always marched in the midst of his guards, whom, by care and indulgence, he had preserved in tolerable plight. It is mentioned in the French accounts, that to such a degree was the cavalry of the army dismounted, that it was necessary to collect the officers who had still a horse remaining, in order to form four companies of 150 men each. This sacred squadron, as it is termed, in which generals performed the functions of captains, and colonels of subalterns, never lost sight of the emperor. At length, all danger from the pursuers being past, Napoleon, on December 5, having called together his principal officers, and informed them of the appointment of the king of Naples as his lieutenant-general, set off in a single sledge; passed through Wilna, Warsaw, Dresden, Leipzig, and Mentz; and arrived at Paris on the 18th, at half past eleven at night.

Thus terminated a campaign, which for its importance may vie with any one of modern or ancient times; but, at the same time, a campaign which will for ever stigmatize the ruler of France, and which has been, more than any other, injurious to his political interests and military reputation. Ten times more mad than the son of Philip, when, the torch of destruction blazing in his hand, he was rushing to the conflagration of Persepolis, Napoleon left his capital to invade the unlimited states of the emperor of all the Russias; and, having witnessed the fall of the holy city of Moscow into ashes, he was constrained to flee back to those blissful regions he should never have abandoned, and that in disguise and as a disgraced fugitive: *Quantum mutatus ab illo Heclore!* Wrapped in the cloak of mistrust and fear, drawn clandestinely through a world of snow, on an humble sledge, in countries where he had often before spurred his animated charger to victory; where his word, the glance of his eye, a motion of his hand, had decided the fate of thousands;—Napoleon sneaks back to his usurped kingdom; and, wondrous to tell, still meditates the humiliation of the north. Fatal blindness! insatiable lust of power! The emperor of the French feels at this moment how rash he was, after such a lesson from his northern teachers, to stir up again the just vengeance of past injuries. He had long, as we have observed before, broken with ease, upon his knee, the divided sticks of Mithridates; but, as soon as they were united in a bundle, his strength was found unequal to the deed.

In exploring the ample page of history, it is impossible for the most patient industry, or the most active research, to produce a more impressive and instructive example than that which is afforded by the life of this enterprising adventurer, and hitherto highly-favoured soldier of fortune. Whether we look to his sudden and wonderful elevation to the highest pinnacle of human grandeur, or to the rapid and accumulated disasters that have at length overtaken and nearly overwhelmed him, our imagination is equally bewildered, and the faculties of our minds almost paralysed at the bare contemplation. The absolute despotism so long practised under the corrupt and vicious dynasty of the Bourbons, justly awakened in the enslaved and oppressed people of France one universal burst of indignation, and provoked them to shake off their yoke, and break their chains on the heads of their oppressors. The propitious moment arrived that gave a free vent to this virtuous feeling; and the haughty house

that had so long ruled with a rod of iron, and trampled upon the liberties of the nation, was deprived of the royal sceptre, and driven from the throne, never perhaps to ascend it again. It was at this critical period, and amidst the convulsive throbs of the infant revolution, that Napoleon Bonaparte, the present emperor of the French, stepped forward on the grand theatre of public affairs, and became an active and distinguished partisan in the new order of things. His military genius and dauntless spirit soon acquired him considerable celebrity and rapid promotion; until, by a concatenation of events, as extraordinary in their nature as they have proved almost miraculous in their result, he was ultimately placed upon the throne of France, with the general consent and approbation of the people. Here, when seated at this lofty height, and arrived at the full consummation of his labours, had he but proved a sincere friend to liberty and the sacred rights of nations, never would a character have shone more illustrious in the annals of fame, nor more deservedly have obtained the universal love and veneration of mankind. But, oh! how cruelly and fatally has he disappointed our anxious hopes and wishes! Like the "base Judean," he has thrown "a pearl away richer than all his tribe." Giddy at the unexpected eminence he had attained, and inflated with ambition, in an evil hour he forgot that the foundation of his own greatness was built alone on the destruction of the tyranny and despotism of his predecessors. Instead of becoming the protector of liberty, and the promoter of free discussion, he assumed in his turn the dictatorial power of the revolutionary tyrants whom he had overwhelmed and subdued. The freedom of the press was annihilated at a single blow; and, at the point of the sanguinary bayonet and the roaring cannon's mouth, he projected his schemes of conquest and his hopes of universal dominion! Never since the days of Tiberius, was a more inflexible tyrant seated on a throne! Wherever rage or fury has inspired him, he has been urging his lawless and unbounded career, not with the noble view of destroying abuses and ameliorating the condition of mankind, but for the hideous and impious purpose of conquering and enslaving nations, pursuing his sanguinary and destructive conquests without remorse or forbearance; and floating, as it were at his own arbitrary will and caprice, the vessel of his boundless ambition, on a vast ocean of human blood! Never has there been exhibited upon earth a loftier, a more ruinous, or a more reprehensible spirit of ambition. From this fatal source has arisen an odious system of oppression and persecution, which has not only tarnished all his former glory, but rendered him an object of universal horror and detestation. Like other cruel and insidious tyrants, his chief and steady aim has been to coerce into silence every man who has dared to express his opinions, and to persecute and proscribe even the slightest breath of free inquiry. By these and other equally detestable acts, he succeeded in corrupting and overawing every branch of the legislative, and rendered his whole system of government a complete unmitigated, avowed, ferocious, military despotism. Such has been the deplorable lot of the French people under the auspices of this once-obscure individual, whom, in the excess of their mistaken zeal and confidence, they raised to the highest summit of power, and placed upon the imperial throne! What an immensity of power was accumulated in the hands of this one man, and what an awful lesson does his sudden reverses furnish to surrounding monarchs, and to the world at large! For a long series of time, and during a rapid succession of events, every thing seemed to conspire to raise him above all those monarchs to whom Heaven has intrusted the government of the earth. Had he but known when and where to set bounds to his ambition, and rested content with giving prosperity and security to France, he might have obtained for himself everlasting glory, and dictated terms of peace to the whole world. But, during the period of his prosperous reign, from his first accession to power to the present eventful

moment, he has bestowed not a single thought, he has given not a single day, to the repose or happiness of the world! What miseries was not this man brought on his country! In one solitary campaign, he tarnished all his laurels,—lost all his conquests,—sacrificed his best generals and officers,—annihilated the finest and best-equipped armies that the world ever produced,—excited a general enthusiasm against him, and exposed France herself, who but the other day stood sole ruler and arbitress of the destinies of Europe, to the horrors of invasion and civil warfare. In Holland, Saxony, Westphalia, Bohemia, Bavaria, and in short every place he had conquered, he might have continued to reign in peaceful and undisturbed possession, had he but known how to have respected the sacred rights of humanity, and fought to win the love and confidence of the people! But he permitted his troops to rob and fleece them with impunity, and never once condescended to think of bettering their condition, or inspiring in their bosoms the principles of patriotism. They feared him, and submitted to him, while he possessed the power of coercing them; but, the moment that power became doubtful and in jeopardy, they availed themselves of the favourable opportunity to resent his oppression and shake off his yoke. He provoked their resentment, he drove them to revolt! and hence the stupendous change that has recently taken place in the aspect of European politics.

We apologize for digressing into reflections, when we should have been relating only facts; and turn to the affairs of the peninsula, where also the allied army was gaining ground, and seemed to have won victory to their side.—Lord Wellington, who, in the autumn of 1811, had placed his troops in cantonments across the Agueda to recover from their sickness and fatigues, was in motion at the very commencement of the year. In a dispatch dated from Gallegos, January 9, 1812, he informs the English secretary of state, that he invested Ciudad Rodrigo on the preceding day. He mentions having taken by storm a new redoubt constructed by the French on the hill of St. Francisco, and that he had broke ground within 600 yards of the place. In another dispatch, dated January the 15th, he gives an account of the progress of the siege, which had been facilitated by two successful attacks on posts of the enemy, close to the body of the place; but on the 20th his lordship was enabled to send the welcome intelligence of the capture of that important frontier-town, which had so often been the object of military operations. The fire of the batteries having considerably injured the defences of the place, and made breaches regarded as practicable, lord Wellington determined on a storm, though the approaches had not been brought to the crest of the glacis, and the counterescarp was still entire. The attack was made on the evening of the 19th, in five separate columns. All these attacks succeeded, and in less than an hour the assailants were in possession of and formed upon the ramparts of the place, each column contiguous to the next. The enemy then, who had sustained a severe loss in the conflict, submitted. The loss of the besiegers was also considerable, especially in officers of rank. His lordship bestows the warmest encomiums on all the officers engaged in this service, and the success of such a spirited enterprise redounds equally to the honour of the commander, and those who acted under him. The fruits of victory were a garrison of 1700 men, besides officers, and 153 pieces of ordnance, including the heavy train of the French army, with great quantities of ammunition and stores. The losses of the besiegers from January the 15th to the 19th, amounted to nearly 700 of all descriptions, killed, wounded, and missing.—The sense of the Spanish nation on this success was displayed in a vote of the Cortes, by acclamation, conferring on lord Wellington the rank of a grandee of the first class, with the title of Duke of Ciudad Rodrigo.

Lord Wellington remained some time at Ciudad Rodrigo, in order to repair the fortifications; and then, placing

it under the command of a Spanish governor, he withdrew to Freynada. Badajos was the next object of his arms; and, after making due preparations, he moved from Freynada on the 6th of March, and arrived at Elvas on the 11th. At this time there was none of the enemy's troops in the field in Estremadura, except a part of the 5th corps at Villa-Franca, and a division under general Darican at Serena. On the 15th and 16th his lordship broke up the cantonments of the army, and invested Badajos, on both sides the Guadiana, on the 16th. A sortie was made by the garrison on the 19th, which was repulsed without having effected any thing. At the time of the investment, general sir Thomas Graham crossed the Guadiana with a body of troops, and directed his march towards Llerena; whilst lieutenant-general sir Rowland Hill, who had returned from Miranda, to his cantonments near Albuquerque, marched again to that town. The operations of the siege were carried on without intermission, notwithstanding the unfavourable weather, and the swelling of the Guadiana, which damaged the bridges of communication; and, on the 25th, a fire was opened from twenty-eight pieces of ordnance in six batteries. On the evening of that day, a strong out-work, called la Picurina, was gallantly stormed by a body of five hundred men, who firmly established themselves in it. On March the 31st, a fire was opened from twenty-six pieces of cannon, in the second parallel, which was continued with great effect. A second sortie was driven in with loss. At this time the movements of generals Graham and Hill had obliged the enemy to retire towards Cordova; but intelligence had been received that marshal Soult had broke up from before Cadiz on the 23d and 24th, and marched upon Seville with all the troops that were there, with the exception of 4000. Breaches being made in the bastions of la Trinidad and Santa Maria, lord Wellington determined to attack the place on the night of April the 6th. Simultaneous attacks of different parts of the works were planned; of which, that of the castle of Badajos by escalade, conducted by lieutenant-general Picton, was the first that succeeded, and the third division was established in it at about half past eleven. In the mean time the breaches in the bastions were vigorously assaulted; but, such were the obstacles raised by the enemy upon and behind the breaches, and so obstinate their resistance, that the assailants, after a long contest, and considerable loss, were ordered to retreat. The possession of the castle, however, which was secured by the success of the other divisions, decided the fate of the town, for it commanded all the works both of and in the place; and at day-light general Philippon, the commandant, who had retired to Fort St. Christoval, surrendered, with all the staff, and the whole garrison. These, at the beginning of the siege, had consisted of 5000 men; but about 1200 had been killed and wounded during the operations of the siege, besides those who perished in the assault. The total loss of the besiegers in killed, wounded, and missing, from the investment to the capture, amounted to upwards of 4850, British and Portuguese. This might perhaps be thought a dear purchase; but, besides the glory to the allied arms in gaining this second strong place by storm, the possession of two important fortresses on the frontiers of Portugal was of so much consequence to the security of that kingdom, and to the success of future operations in the peninsula, that, in a military consideration, it justified the payment of a high price.

Soult, who had advanced from Seville into Estremadura as far as Villa-Franca, on hearing of the fall of Badajos, retreated, on the 9th of April, towards the borders of Andalusia. General Graham directed sir Stapleton Cotton to follow his rear with the cavalry; and, coming up with the French cavalry at Villa Garcia, with the brigades of generals le Marchant and Anson, he defeated them on the 11th, with a considerable loss. The French retired on that day from Llerena, and afterwards entirely quitted Estremadura. Lord Wellington, as soon as he was ap-

prised of Soult's retreat, put his army in motion towards Castile.

On April the 24th, lord Wellington was at Alfayates, on the Portuguese border, the enemy having retired upon his advance. They had crossed the Agueda on the 23d, and were then in full retreat towards the Tormes. General Drouet was at that time at Fuente Ovejuna, in Cordova, and marshal Soult at Seville. His lordship, on the day of the above date, dispatched sir Rowland Hill to carry into execution the plan of an attack upon the enemy's posts and establishments at the passage of the Tagus, at Almaraz, in Estremadura, near the border of New Castile. This post afforded the only good military communication below Toledo across the Tagus, and from that river to the Guadiana, all the permanent bridges below that of Arzobispo having been destroyed in the operations of the war, and left unrepaired. The bridge at Almaraz was protected by strong works thrown up by the French on both sides of the river, and was further covered on the southern side by the castle and redoubts of Mirabete, about a league distant, commanding the pass of that name, through which runs the only carriage-road to the bridge, which is that to Madrid. The necessary preparations for this expedition would not permit general Hill to begin his march from Almendralejo till the 12th of May. On the 16th, he formed his force into three columns, the left directed against the castle of Mirabete; the right, against the forts of the bridge; and the centre, to the high road leading to the pass of Mirabete. The approach was so difficult, that it was day-break on the 19th, before the attack could be made. The right column, provided with scaling ladders, moved to the assault of Fort Napoleon, a strong fortress on the left bank of the river. The ardour of the troops broke through all obstacles, and in the midst of a destructive fire they rushed on with fixed bayonets, and drove the garrison through the several intrenchments across the bridge, which, having been cut on the other side, obliged many of the fugitives to leap into the river, where they perished. The panic communicated itself to the garrison of Fort Ragufa, on the right bank, who abandoned their works, and fled in great confusion. The victors then effected the destruction of all the material parts of the forts and works for the defence of the bridge, and made prize of the magazines and eighteen pieces of cannon. The attack upon Mirabete served only as a diversion, inducing the enemy to believe that the attack upon the forts near the bridge would not commence till that was decided. In this spirited exploit, the British lost in killed and wounded fell short of two hundred. General Hill then returned to Almendralejo.

Attention was now chiefly fixed upon the allied army of lord Wellington, which had been for some time advancing upon the French under Marmont. It crossed the Agueda on June 13th, and arrived in front of Salamanca on the 16th. The enemy on its approach retreated across the Tormes, leaving about eight hundred men in some forts constructed upon the ruins of colleges and convents in Salamanca. The allied army entered the city, but lord Wellington found it necessary to break ground against the forts. Marmont at this time was retiring upon the Douro. In Estremadura, major-general Slade's brigade of cavalry had fallen in with two French regiments of dragoons, which they broke; but, pursuing incautiously, they were attacked by the enemy's reserve, and driven back with considerable loss. The forces under marshal Soult and general Drouet had made a junction, and moved forward to Llerena and St. Olalla; upon which, general Hill had called in his detachments, and concentrated his forces at Albuera.

The batteries against the forts of Salamanca began to fire on the 17th. Marmont, on the 20th, made a forward movement in order to communicate with the forts; and on the night of the 21st his troops established a post on the right flank of the allied army. Lord Wellington having directed general Graham to attack this position on

the 22d, the enemy were driven from the ground with considerable loss. They then made a fresh movement, the object of which was to communicate with their garrisons by the left bank of the Tormes, which river they crossed in force on the 24th; but the approach of general Graham on that side the river caused them to retire to their former position. Meantime the siege of the forts did not proceed with the rapidity that lord Wellington had expected. An attempt to storm the principal work on the night of the 23d failed of success, with considerable loss: major-general Bowes was among the slain. On the 27th, the buildings in the largest fort, St. Vincente, being set on fire by the guns of the besiegers, and a breach being made in another fort, the commander of St. Vincente, in order to gain time, expressed a desire to capitulate after a certain number of hours. Lord Wellington, however, perceiving his object, ordered an immediate storm of the two other forts, which succeeded; and the commander of St. Vincente then sent a flag to notify the surrender of that fort, on the terms of the garrison being prisoners of war, which was accepted, though the storm of the place had commenced. These forts were found to be so strongly constructed, that they could not possibly be taken without a regular attack. They cost the allies above four hundred and fifty men killed and wounded. Upon the intelligence of this event, the French army retired. Lord Wellington on the 1st of July broke up his camp, and advanced towards the French, who were marching upon Tordefillas. Sir Stapleton Cotton attacked their rear guard on the 2d, and drove it in to their main body; but the rest of the allied army were too far distant to impede them in their passage of the Douro, after which they took a position on that river, with their centre at Tordefillas. Lord Wellington took post at Rueda. On the 7th the French were reinforced by the junction of general Bonnet, who had advanced from Asturias. They afterwards extended to their right as far as Toro, where they employed themselves in repairing the bridge which they had before demolished. General Hill at this time had left Albuera, and moved towards the enemy, who retired before him towards Cordova. He had reached Llerena on the 9th.

Marmont now turned upon the allies, and assumed the part of an assailant. He sent a considerable body over the Douro at Toro on the 16th, while lord Wellington on that night moved the allied army to their left, with the intention of concentrating on the Guarena, a river that runs into the Douro. The French on the same night recrossed at Toro, and Marmont moved his whole army to Tordefillas, where, on the 17th, he again crossed the Douro, and on the same day assembled his troops at Nava del Rey. Various movements thence succeeded between the two armies; and the French, on the 18th, made an attack on a body stationed at Castrejon under the command of sir Stapleton Cotton, who resisted till the cavalry joined him, and then retreated in excellent order to the main army on the Guarena. The enemy then crossed that river, and indicated an intention of pressing upon the left of the allied army; but it was defeated by a timely attack made by general Alten's brigade of cavalry, supported by a body of infantry. In this affair a French general was taken, with other prisoners. A variety of other movements were made, in which it was the object of Marmont to cut off the allies from their communication with Salamanca and Ciudad Rodrigo, and of lord Wellington to frustrate this purpose. On the 21st the allied army was concentrated on the Tormes, and the enemy had moved towards the same river.

Two armies moving in such a confined space of ground could not be long without coming to a general engagement; and this result was hastened by the intelligence lord Wellington received on the night of the 21st, that general Chauvel had arrived at Pollos on the 20th with the cavalry and horse-artillery of the northern army, to join Marmont, which he would effect within a day or two.

It was now the English commander's object to find a favourable opportunity for an attack; and this he obtained in the afternoon of the 22d, by an extension of the enemy's line to the left, in order to embrace a post on a hill occupied by the right of the allies. Lord Wellington then, strengthening his right, ordered an attack on the enemy's left, which completely succeeded; as did likewise an attack on the front, in which they were driven successively from height to height. The fate of the battle was for a time suspended by the stand made by a French division, which drove back a division of the allied army; but, some troops being brought up in time, success was restored in this quarter. The enemy's right, reinforced by the fugitives from their left, continued to resist till it was dark, when they at length broke and fled, and the discomfiture of the French army was now complete. They were pursued as long as any of them were to be seen together, but the darkness of the night favoured the escape of many. At break of day the pursuit was renewed; and the cavalry crossing the Tormes, the enemy's rear-guard was overtaken, when their cavalry fled, leaving the infantry to its fate. The pursuit was afterwards continued to Penaranda that night; and on the 24th the victors were still pursuing the flying enemy.

Such was the battle of Salamanca, the most considerable and glorious fought under English command during the war in Spain. No estimate could be made of the enemy's loss in the field, which was undoubtedly great. The trophies of victory were returned at eleven pieces of cannon, several ammunition-waggons, two eagles, and six colours; prisoners, one general, three colonels, three lieutenant-colonels, 130 officers of inferior rank, and between 6 and 7000 soldiers; and many more prisoners continued to be brought in on the following days. Marshal Marmont was severely wounded, and four French general-officers were said to have been killed. The loss on the part of the allies was also considerable, amounting in killed, wounded, and missing, British and Portuguese, to about 5200. One general-officer, major-general le Marchant, was killed, and five others were wounded. Of the small share the Spaniards had in this action, fought on their ground, and for their cause, a judgment may be formed from their return of loss, consisting of two killed and four wounded.

It appears that on the 21st Joseph Bonaparte left Madrid with the army of the centre, directing his march upon Alba de Tormes; but, hearing on the 25th of Marmont's defeat, he retreated towards Segovia. Nothing, therefore, could be more timely than lord Wellington's victory, as the delay of a very few days would materially have strengthened the French army. The rear-guard of the fugitives maintained itself in some strength on the left bank of the Douro during the 28th and 29th; but, on the approach of the light divisions and cavalry of the pursuers, it crossed the river, and followed the motions of the main body, abandoning Valladolid, in which they left seventeen pieces of cannon, much ammunition, and their hospital with about 800 sick and wounded. Parties of the allied army entered that city on the 30th, where they were received with enthusiastic joy. The central French army, in the mean time, had arrived at Segovia, with the apparent intention of making a junction with Marmont's on the Upper Douro. To prevent this, lord Wellington moved on August 1st to Cuellar. On the same day Joseph Bonaparte retired from Segovia, and marched through the pass of Guadarama, leaving an advanced guard of cavalry. He destroyed the cannon and ammunition which were in the castle, carried off the church-plate and other valuable property, and levied a contribution on the inhabitants. Advice from general Hill at this time mentioned a brisk action between the allied and French cavalry in the neighbourhood of Ribera, terminating in favour of the former.

Lord Wellington, finding that Marmont's beaten army continued its retreat upon Burgos, in a state not likely to

take the field again for some time, determined either to bring king Joseph to an action, or compel him to quit the capital. He accordingly moved from Cuellar on August 6th, reached Segovia on the 7th, and halted the following day at St. Ildefonso, about two leagues from Segovia, and twenty from Madrid. The advanced cavalry, after passing the Guadarama, moved forwards on the 11th, and driving in the French cavalry, about 2000 in number, established itself at Majalahonda, under brigadier-general d'Urban. The enemy's cavalry returned in the afternoon; when general d'Urban, having formed the Portuguese cavalry, supported by the horse-artillery, ordered a charge upon the leading squadrons of the French. The valour of the Portuguese, however, notwithstanding the exertions of their officers, gave way, and they turned about before they reached the enemy. They fled through the village of Majalahonda to a body of dragoons of the German legion, leaving unprotected some guns, which fell into the hands of their pursuers. The German cavalry bravely made a charge and stopped the French, who, upon the advance of other troops, finally retreated; but considerable loss was incurred in this unfortunate affair. The army moved forwards, and on the 12th two of its divisions entered Madrid, where they were received with extraordinary marks of joy. Joseph had retired with the army of the centre by the Toledo road, leaving a garrison in fort China in the palace of the Retiro. On the evening of 13th the Retiro was invested, and preparation was made for attacking the works on the next morning, when the commandant of la China sent an offer of capitulation. The honours of war were granted him, upon surrendering the whole garrison and all the persons in the fort prisoners, with all its magazines and artillery. The total number of prisoners of all descriptions amounted to 2500. Of brass ordnance 189 pieces were found, with a great quantity of ammunition, stores, provisions, and clothing. Such were the first fruits of the victory of Salamanca.

Astorga, which had been long under siege by the Spaniards, capitulated on August 18th, its garrison, consisting of three battalions, surrendering prisoners of war, upon the condition of being exchanged, as soon as circumstances should permit, for Spanish prisoners. The French general Foy, who marched from Valladolid with a considerable force to raise the blockades of Toro and Zamora, and the siege of Astorga, arrived too late for the latter purpose, though he effected the others.

The desertion of the long-continued blockade of Cadiz by the French, (see p. 193, 223, 4.) was another important consequence of lord Wellington's victory.—This city, the seat of the Spanish legitimate government, had for some years been in a state which rendered its inhabitants prisoners on the land-side, and subjected them to much distress from scarcity and sickness. This was aggravated by the sense of danger from a bombardment, which, though distant, had latterly, by means of improvements in destructive contrivance, become more serious. All the attempts of the Spaniards themselves to break up the blockade had failed; and, even when the enemy had been obliged to withdraw the greatest part of their troops, the strength of the works discouraged any effort to force them. But, at this period, the advance of the allied army to the centre of the kingdom, and the weakened state of the invaders in the east, whence many veteran corps had been recalled to augment the mighty army against Russia, rendered it no longer safe to carry on operations at so many detached points; and concentration of force was now become necessary. On the night of the 24th and morning of the 25th of August, the French abandoned their works opposite to Cadiz and the Isla, except the town of port Santa Maria, where a body of troops remained till the middle of the day, and then withdrew to Cartuga. Before the besiegers departed, they employed themselves in destroying all the forts and batteries in the lines, affording a grand and gratifying spectacle to Cadiz of immense fires and successive explosions. They left behind them

them a very numerous artillery, mostly rendered unserviceable, and a large quantity of stores and powder unconfused, testifying the precipitation with which the retreat was made.

On August the 11th, in the morning, the French evacuated Bilbao, and on the same and the following day it was occupied by Spanish troops. On the 13th, however, a French force of 3000 men, under general Rouget, advanced from Durango to recover the town. They gained possession of its two bridges, but were attacked in their position on the 14th by a force under general Renavales, who compelled them to make a precipitate retreat towards Zornoza. On the 21st the French again advanced towards Bilbao with an additional force, and made a vigorous attempt to re-enter it, which was resisted by generals Mendizabel and Renavales, and terminated in a defeat of the assailants, who hastily retreated with considerable loss to Durango.

Immediately after the evacuation of the lines of Cadiz, the city of Seville was also freed from the invaders. On August 27, a combined force under general La Cruz and colonel Skerret entered Seville, in which were eight French battalions of infantry and two regiments of cavalry; and, after a tumultuary fight in the streets, on the bridge, and in the suburbs, the French were driven out, leaving horses, baggage, and effects, and about two hundred prisoners. The inhabitants were so zealous in their country's cause, that they rushed forward in the midst of a heavy fire to lay planks across the broken bridge for the passage of the allied troops. About the same time the French evacuated the city and castle of Arcos, in Andalusia, and all the line from Guadalete to Ronda, blowing up their fortifications, and destroying cannon and ammunition.

Marshal Massena was now expected from France, to take the command of the army of Portugal (so called by the French); and it became necessary for lord Wellington to attend closely to its motions. He accordingly quitted Madrid on the 1st of September, having previously ordered his troops to be collected at Arevalo. From that place the army moved on the 4th, and on the 6th crossed the Douro. It advanced into Valladolid, the enemy retiring before it on the Pisuerga, which river they crossed.

At this time, Joseph Bonaparte had made a junction with marshal Suchet in Valencia. The latter was posted upon the Xucar, watching the troops under general Maitland, which, after an advance from Alicante, had retreated, and were cantoned in the villages about that city. Marshal Soult was in Granada; he had been followed by Ballasteros, who had been successful in harassing his rear. Cordova and Jaen were cleared of the invaders. General sir Rowland Hill was at Truxillo, whence he was to advance to Oropesa.

Lord Wellington continued following the enemy, who were retiring upon Burgos; and on the 16th he was joined by three divisions of infantry and a small body of cavalry of the Galician army under general Castanos. On the 17th the enemy were driven to the heights close to Burgos, through which city they retired in the night, leaving behind them some stores and a quantity of provision. A considerable garrison was placed in the castle of Burgos, which commands the passage of the river, and retarded the crossing of the allied army till the 19th. The French had also fortified with a horn-work the hill of St. Michael, three hundred yards from the castle, and commanding some of its works. The possession of this hill was a necessary preliminary to an attack on the castle; its outworks were therefore immediately occupied by the allied troops; and, as soon as it was dark, an assault was made on the horn-work, which was carried, but not without considerable loss. A mine which had been laid under the exterior line of the castle exploded on the night of the 29th, and made a breach in the wall, which a party of the assailants immediately attempted to storm; but, the darkness causing the detachment which was meant to support them to miss its way, they were driven off. A second mine, however,

being sprung on October 4th, another breach was made, which was immediately stormed with success, and the allied troops established themselves within the exterior line. The French were still upon the Ebro, and made no effort to disturb the besiegers. The garrison of the castle of Burgos made sorties on the 6th, and the 10th, in which they considerably injured the works of the allies, and occasioned some loss of men; the besiegers, however, effected a breach in the interior line, and lodged some troops close to it. Things continued nearly in the same state till the 18th; when lord Wellington, having received a supply of ammunition, and completed another mine, determined upon storming the breach in the second line as soon as that should explode. The attempt was made with great gallantry; but the fire of the enemy directed to the spot was so powerful, that the assailants were obliged to retire with considerable loss.

The hopes of final success now grew fainter, especially as the French army began to make demonstrations of a serious design to raise the siege. The army of Portugal had been reinforced by fresh troops from France, and by all the disposable part of the army of the north, and was now in formidable strength. On the 13th they had made a reconnoissance of the allied outposts at Monasterio; and on the 18th they had made an attack in force, and gained possession of the heights commanding that town, whence the outpost had been obliged to retire. They afterwards attempted to drive in other outposts, but for the time were repulsed. General Hill now sent intelligence of the enemy's intentions on his side to move towards the Tagus; and it was become necessary for lord Wellington to be near him, that their two armies might not be insulated, and rendered incapable of communication. His lordship therefore found it advisable to take the mortifying step, on the night of the 20th, of breaking up the siege, and moving his whole army back to the Douro. He affirms, that he was never very sanguine in his hopes of success in this siege, though the advantage he should have derived from the possession of the place appeared to justify a trial. He probably depended upon a coup de main, his artillery being apparently inadequate to regular operations. The time lost before Burgos was, however, a serious evil, by allowing the enemy to collect all his force; and was probably decisive of the remainder of the campaign.

The allied troops were withdrawn from Madrid, having first destroyed the fort of la China, and all the stores and guns it contained, which had not been carried away. A body of the enemy entered that capital on November 1.

Sir Rowland Hill, who had retired from the Tagus, and taken post on the Jacama, was directed to quit that position, and march northwards; and in the beginning of November he arrived unmolested on the Adaja. Lord Wellington directed sir Rowland to continue his march upon Alba de Tormes; and on November 6th he himself broke up from his position before Tordesillas, and proceeded for the heights of St. Christoval in front of Salamanca. On the 8th he took his position on those heights; and upon the same day general Hill occupied the town and castle of Alba, posting troops on the Tormes to support them. On the 14th, the enemy having crossed the Tormes in force, lord Wellington broke up from St. Christoval, and moved with an intention to attack them; but, finding them too strongly posted, he withdrew all the troops from the neighbourhood of Alba to the Arapiles, or heights near Salamanca which had been the scene of his victory. Finding, on the 15th, that the enemy were strengthening their positions, and pushing on bodies to interrupt the communications of the allied army with Ciudad Rodrigo, his lordship determined to move upon that place, which he reached on the 19th, followed by a large body of the enemy, which, however, did not press upon his rear. Some loss was sustained from a cannonade in passing a river; and lieutenant-general sir Edward Paget had the misfortune to be taken prisoner, as he was riding alone through a wood. On the 24th of November, the head-quarters of the allies were again

again established at Freneyda on the Portuguese frontier; and the greater part of the enemy's forces had recrossed the Tormes, and were marching towards the Douro.

Such, in its main points, was the peninsular campaign of the year 1812; for the numerous conflicts between the guerilla-parties and the scattered forces of the invaders, besides that they are represented in totally different colours by the several antagonists, had too little influence on the general result to require a particular narrative. It will be seen, that the vigorous efforts made by lord Wellington to penetrate to the centre of Spain, and take advantage of the weakened condition of the French, whose ruler had in this year directed the chief force of his empire to a very distant quarter, formed the great chain of events. They obliged the invaders to withdraw their forces from the southern provinces, to break up the lines of Cadiz, which had so long held the Spanish government in inglorious fetters, to remain merely on the defensive on the eastern coast after the capture of Valencia, and to concentrate all their disposable force against the progress of the conqueror at Salamanca. That they were at last successful, and that the high hopes of the British nation, elevated by repeated triumph, were finally frustrated, only proves that the strength and activity of the French in Spain were greater than had been calculated upon; and, probably, that the exertions of the Spaniards were as much less. The conduct of lord Wellington obtained universal applause and admiration from his countrymen, and was repaid by more honours and rewards than had been bestowed on any British general since the time of Marlborough. In the course of the year were added to his former titles those of Earl and Marquis; and he received from parliament the most substantial proofs of the nation's gratitude.

The public has never been acquainted with the extent of the losses sustained by the allied army in this campaign; but there is no doubt that they must have been very considerable. In particular, its retreat from Burgos to its winter-quarters, pursued by a superior and enterprising foe, though conducted with great military skill, could not fail of being very disastrous. But more than its loss of men, horses, and equipage, is to be lamented the stain incurred by its character on this occasion; a stain impressed by the commander-in-chief himself. Lord Wellington, in an address to his army, has, in the face of his country, and all Europe, reproached it with a want of discipline, "greater," he says, "than any army with which he had ever served, or of which he had ever read." He proceeds: "It must be obvious to every officer, that from the moment the troops commenced their retreat from the neighbourhood of Burgos on the one hand, and from Madrid on the other, the officers lost all command over their men. Irregularities and outrages of all descriptions were committed with impunity; and losses have been sustained which ought never to have occurred." It is to be hoped that his lordship's feelings have given a degree of exaggeration to his expressions; otherwise it is difficult to conceive how such troops can recover the esteem of their countrymen, or deserve the confidence of their allies.

We shall now take a view of the transactions of the Spanish Cortes and government during a period so fertile of important events to the nation.—On the 2d of January the Cortes discussed a project presented for the improvement of the system of government, when the following propositions were approved: That in the present circumstances there shall be appointed twenty counsellors of state, of whom two only shall be ecclesiastics; two only grandees of Spain; and the sixteen others taken from persons who serve, or have served, in diplomatic, military, economic, or magisterial, offices; and who have distinguished themselves by their talents, knowledge, or services: of these, at least six from the provinces beyond the seas. A number of articles were then read and approved respecting the obligations and powers of the regency. The change of the regency soon took place; in which

the duke del Infantado, then resident minister in England, was declared president, and the count of Lavital (O'Donnell) vice-president. The members of the late regency were nominated counsellors of state.

The new regency, on January 23, issued an address to the Spanish nation, urging them in energetic language to make every possible exertion for the safety and independence of the country, and not concealing the imminent dangers with which it was surrounded. The actions of this body corresponded with their words; they were vigorous, prompt, and decisive; a variety of reforms were made, and attention was particularly paid to recruiting and disciplining the regular army, and to the formation of officers fit to be intrusted with command. The regency, in March, directed a circular address to the people of Spanish America, setting forth to them the arduous struggle in which the mother-country was engaged with an implacable foe, and the salutary labours of the Cortes in forming a constitution for the general benefit; and expressing their hope that their American brethren would aid the cause by a voluntary subscription among all ranks and classes, to be deposited in the royal chests, and remitted to Spain. The Cortes, about this time, gave a further proof of the liberality of their sentiments, by a decree to enable all Spanish subjects of Moorish origin, either by the father's or mother's side, to take degrees in the universities, and to enter the religious orders, or the priesthood—privileges of which former bigotry had deprived them.

The 18th of March presented an august and interesting spectacle to the citizens of Cadiz, and to all the Spaniards assembled for the purpose of witnessing the completion of the labours of their representatives. On that day the General and Extraordinary Cortes held a solemn sitting for the purpose of a public signature of the articles of the Constitution. Deputies from all parts of the Spanish monarchy were present, and 184 persons signed two copies of the constitution. A decree which had been approved at a secret sitting was then read, relative to the succession to the crown, the object of which was to guard against its coming into the possession of those who were justly considered as enemies to the national independence. It was to the following effect: "The General and Extraordinary Cortes, considering that the welfare and security of the state are incompatible with the concurrence of circumstances in the persons of the infant Don Francisco de Paula, and the infanta Donna Maria Louisa queen of Etruria, brother and sister of Don Ferdinand VII. have resolved to declare and decree, that Don Francisco de Paula and his descendants, and Donna Maria-Louisa and her descendants, remain excluded from the succession to the crown of the Spains. In consequence, in default of the infant Don Carlos Maria and his legitimate descendants, the infanta Donna Carlotta Joaquina, princess of the Brasils, and her legitimate descendants, shall come to the succession of the crown; and, in default of her heirs, then Donna Maria Isabel, hereditary princess of the two Sicilies, and her legitimate descendants; and in default of these three nearest relatives of Ferdinand VII. and their descendants, then shall succeed the other persons and lines who ought to succeed according to the constitution, in the order and form which it has established. At the same time the Cortes declare and decree excluded from the succession to the crown of the Spains the archduchess of Austria, Donna Maria-Louisa, [empress of France,] daughter of Francis II. emperor of Austria, by his first marriage, as also the descendants of the said archduchess."

A commission was then appointed to carry the Constitution to the regency, which received it with profound respect, and engaged to guarantee its observance in all the Spanish dominions. On March the 20th, all the deputies assembled in the hall of congress to swear to the constitution; which being performed, the Regency entered the hall, and with due solemnity took the oath of office prescribed

scribed in the 173d article of the constitution. The president of the Cortes then addressed the Regency, and was replied to by the president of that body; and the day closed with a solemn proclamation of the constitution, and a grand dinner, at which the British ambassador was a conspicuous guest.

At a sitting of the Cortes in October, senior Castella made a long and well-reasoned discourse concerning the inhumanity and injustice of that regulation in the American colonies called the *mitas*, by which each district is required to contribute a certain number of men for the cultivation of the land, the working of mines, and other task-labour; and, after a full discussion of the subject, the following propositions were put to the vote, and unanimously approved: 1. That the *mitas* should be for ever abolished. 2. That the Indians should be exempted from the personal service they gave the clergy, or any other public functionary whatever; obliging them, nevertheless, to satisfy the parochial rights, in the same manner as the other classes. 3. That the public charges, such as the rebuilding of churches, and making roads, should be equally borne by all the inhabitants indiscriminately. 4. That divisions of lands should be made to the Indians, leaving to the provincial deputies the care of assigning the quotas. 5. That in all the American territories, some of the dignities should necessarily remain with the Indians. The policy as well as justice of thus endeavouring to conciliate this much-injured part of the colonial population to the mother-country, by redressing the cruel wrongs under which it has so long groaned, is evident; and, if it has been a consequence of the civil war kindled in those regions between the native and transatlantic Spaniards, the friends of humanity may be gratified by some compensation for the evils of which the war has been the cause.

In the historical account of the last year, notice was taken of the jealousy prevailing in the Spanish nation of any attempt to place their armies under British command. The great success and high merits of lord Wellington in the campaign of this year overcame, in the general feeling, this repugnance as far as regarded his person; and the Cortes, which had elevated him to the rank of a grandee of Spain, at length gave the strongest proof of their esteem and confidence, by a resolution declaring him Commander-in-chief of the Spanish armies. When, in consequence of this appointment, his lordship sent an order to general Ballasteros, captain-general of Andalusia, and undoubtedly one of the most zealous and active of the Spanish commanders, to move his army, that officer felt his honour so much piqued, and considered it as such a national degradation, that he declined to comply. The regency would not permit such an infraction of the obedience due to the sovereign authority by any person of whatever rank serving under it; and issued a notice acquainting the public with the discharge of Don Fr. Ballasteros from his command in the army, and the appointment, *ad interim*, of Don Joaquim Vives in his stead. At the same time Ballasteros was put under arrest in the midst of his army, which made no resistance; and received an order to depart for Ceuta. To obviate any unfavourable impression on the nation from this measure, the secretary at war, on October 30, read before the Cortes a memorial (which was printed) setting forth the deplorable state of the country when the regency assumed the reins of government, and the additions which had been made to its military force during the present year, with the improvement of its prospects since the capture of Ciudad Rodrigo by lord Wellington. It also mentioned that orders had been sent to the generals in chief of the armies to act in concert with, and in obedience to, the duke of Ciudad Rodrigo.

The kingdom of Portugal, during this year, enjoyed that exemption from hostile devastations which had been secured by the exertions of its great defender, interrupted only by that irruption of the French into the Lower Beira, which was intended as a diversion in favour of Ba-

dajos, then under siege by lord Wellington. Opportunity was therefore given for the operations of agriculture, and the other means of recovery from the severe calamities it had undergone; and it cannot be doubted that the sums of money derived from English subsidies, and the expenditure of the English troops in their passage through Lisbon, materially aided the resources of the country. The assiduity of marshal Beresford and the authority of lord Wellington had placed the military establishment of Portugal upon a very respectable footing; and before the close of 1811 there were numbered of troops of the line and in garrison above 54,000, of militia 58,000, and of the ordenanza, armed partly with pikes, partly with muskets, above 200,000. Of the regulars, a large proportion served with the allied army in Spain, and on various occasions acquired great credit.—On the 13th of February, 1812, the government of Portugal issued a proclamation addressed to the people in general, comparing their past and present state; and, although pointing out the improvement of their condition, yet showing the necessity of precautionary measures against such sudden inroads as might possibly be made by the enemy. Of these, they specify the three following: 1. All persons capable of bearing arms must be exercised in the use of them; and those whose age or sex unfit them for military service, must take measures by anticipation for repairing to places of security in case circumstances shall make it necessary. 2. They must carry off or conceal all money, gold, silver, or jewels, which might tempt the avarice of the enemy. 3. They must carefully conceal, or if necessary destroy, all provisions that cannot be carried off, and remove cattle and carriages, in order to deprive the invader of means of subsistence and advance.—The treaty of amity, navigation, and commerce, between Portugal and Russia, concluded at Peterburgh in 1798, now drawing to a termination, a renewal of it was agreed upon by the two parties, to remain in force till June 1815, with no other alteration than an addition to the duty on Portuguese wines imported into Russia, corresponding to the additional duties since laid upon other wines.

The remainder of the year offers nothing remarkable with respect to this part of the peninsula, which, partly by the exertions of its own troops under British command, had the satisfaction to see its security from the common enemy greatly improved during the operations of this campaign, by the recovery of the strong fortresses of Ciudad Rodrigo and Badajos from the possession of the French, and their retreat from the other parts of its frontier.—Let us, therefore, turn our attention to another quarter of the globe, where we shall find some transactions interesting and honourable to the English character, though not without some mortifying reveries.

From the temper manifested by the president and congress of the United States towards the close of last year, (see p. 261.) it was evident that nothing could prevent a war between that country and Great Britain, but either a change in the system pursued by the latter, or a dread in the former to come to the point of actual hostilities, under the prospect of much suffering from abroad, and much discontent at home. This temper continued to prevail; and, as we have seen at p. 281, 291, American hostility had outstripped English pacification. As commercial grievances constituted a great part of the complaints against Great Britain, it is highly probable, that, if the orders in council had been repealed early enough for intelligence of the event to have reached America before the final decision, the advocates for peace would have acquired so much additional strength as, at least, to have deferred the declaration of hostilities till time had been given for negotiating on the other points in dispute. Indeed, little doubt seemed to be entertained on this side the Atlantic, that the news of the repeal, protracted as it was, would arrive time enough to prevent actual war. But, the first recoil from a resolution full of hazard and mischief having passed, men were brought to regard it as a thing decided,

and to consider what public or private advantage could be made of the new state of affairs. Subsequent events, too, render it highly probable that the American government had anticipated credit from the commencement of the war, especially from the conquest of Canada, which seems to have been regarded as an easy task.

The first act of hostility between the two powers occurred almost immediately after the declaration of war. Commodore Rodgers, of the President frigate, leaving New York with a squadron of ships of war, having received intelligence that a British convoy had sailed about a month before from Jamaica, made course to the southward; and on June 23d fell in with the Belvedere English frigate, Capt. Byron, to which he gave chase. The President alone got near enough for action, and a running fight ensued for three hours, after which the Belvedere kept on her way for Halifax unmolested, having undergone some damage, and had some men killed and wounded. The President also incurred some loss of men, chiefly from the bursting of one of her own guns. Capt. Byron, concluding from this attack that war was declared, captured three American merchant-vessels before he arrived in port; but these were released by admiral Sawyer, commander on the Halifax station; hoping and expecting probably that matters would yet be accommodated.

Parties are the inseparable concomitants of free governments; and the republic of the United States has always had its full share of the dissensions springing from this source. A war so differently affecting the different parts of the union, could not but be received with great diversity of feeling.—At Bolton, on the day of its declaration, all the ships in the port displayed flags half-mast high, the usual token of mourning; and a town-meeting was held in that city, in which a number of resolutions were passed, stigmatizing the war as unnecessary and ruinous, and leading to a connexion with France destructive to American liberty and independence.—Very different were the popular sentiments in the southern states, where swarms of privateers were preparing to reap the expected harvest of prizes among the West-India islands. Of the towns in this interest, Baltimore stood foremost in violence and outrage. A newspaper published there, entitled the Federal Republican, had rendered itself obnoxious by its opposition to the measures of the war-party, and menaces had repeatedly been thrown out against the conductors. On the night of the 27th of July, a mob assembled before the house of the editor, for the purpose of destroying it. In expectation of this attack, he had collected a number of friends with fire-arms to defend it from the inside, among whom were generals Lee and Langan. An affray arose, in which the mob were several times repulsed with loss. At length a party of military were brought to the spot by the mayor and general Stricker, to whom those of the defenders who were left in the house, twenty-six in number, surrendered themselves upon assurance of safety, and were conducted to prison. Next day, at the shameful instigation of a public journal, the mob re-assembled before the gaol, with the intention of taking their revenge; and, having broken open the doors, after some of the prisoners had rushed through and made their escape, they fell upon the rest with clubs, and beat them till scarcely any signs of life remained. General Langan, a man of seventy years of age, and formerly a friend of Washington, was killed on the spot. General Lee, a distinguished partisan in the revolutionary war, had his skull fractured; and many others were severely injured. The militia refused to turn out while this massacre was perpetrating; and the mayor is said to have absented himself. It must be added, that this atrocity was regarded with horror and indignation in all the other parts of the United States.

The campaign against Canada commenced early in July. On the 11th of that month, general Hull, with a body of 2300 men, regulars and militia, crossed the river above Detroit, and marched to Sandwich, in the province of Upper Canada. He there issued a proclamation to the

Canadians in a style expressing great confidence of success; and threatening a *war of extermination* in case of the employment of savages, which appeared to be an object of his peculiar dread. The Indians were, however, already engaged in hostilities; and intelligence was soon after received of the capture of Fort Michilimachinack, July 17, by a combined force of English, Canadians, and savages, the latter of whom were hitherto kept in perfect order.

General Hull's operations were directed against Fort Malden, or Amherstburg; and, after having driven in the militia who opposed him, he arrived with part of his forces at the river Canard, which he thrice attempted to cross, but was foiled with considerable loss. Major-general Brock, in the British service, had in the mean time been active in collecting succours for the relief of Fort Amherstburg; and, on August the 12th, he entered that place with a reinforcement, having met with no obstacle, on account of the superiority of the British naval force on the lakes. The Americans had now become dispirited, and had given up their hopes of taking the fort with their present means. They retreated to their own fort of Detroit, and the British in their turn became assailants. Batteries were constructed opposite to that post, and a party crossed the river, and took a position to the west of it. General Brock now resolved upon an assault though his united force consisted of no more than about 700 men, including militia, and 600 auxiliary Indians. This extremity was, however, prevented by a proposal of capitulation from general Hull: the terms were soon settled, and the important fort of Detroit was surrendered, on August 16, with 2500 men and 33 pieces of ordnance. This was doubtless a severe mortification to the Americans, as it gave a decisive proof of the inferiority of their military prowess or skill to those of the enemy they had provoked, and damped their hopes of the conquest of Canada. That these had been sanguine, may be inferred from the refusal of the president of the United States to continue an armistice which had been temporarily agreed upon between general Prevost, the governor-general of Canada, and general Dearborn, commander-in-chief of the American forces in the northern states. This measure had been proposed by the governor, in the hope that the repeal of the orders in council, of which intelligence had reached America, would have led to an amicable adjustment of the subsisting differences; but the government of the United States, determined, it should seem, to pursue a favourite object, would not consent to a suspension of its operations.

The loss and disgrace incurred by the surrender of Gen. Hull were, however, in some degree balanced to the Americans by their success on the element which had long been the theatre of triumph to their adversaries.—The strength of the navy of the United States consisted in a few frigates of a rate corresponding to the largest British; but in size, weight of metal, and number of men, almost equal to ships of the line of battle. This difference seems not to have been known, or not attended to, in the English navy, the officers of which, with their habitual readiness to meet an enemy, would certainly never decline an encounter where the nominal force was any thing near a parity. In engaging with other enemies, the superiority of British skill and valour had indeed often compensated the difference of force; but the American navy was manned by sailors many of whom were unfortunately British, and many more had been trained in British service.

The fatal consequence of this misapprehension was first experienced by the English frigate *Guerriere*, commanded by captain Dacres, which, on August 19, being in lat. 40. 20. N. and lon. 55. W. was brought to action by the American frigate *Constitution*, captain Hull. The respective force is thus stated: *Guerriere*, rating 38 guns, but mounting 49, her gun-deck 18-pounders, carronades 32; complement 300 men, but only 263 on-board at quarters: *Constitution*, rating 44 guns, but mounting 65, gun-deck 24-pounders, carronades 32-pounders; complement

450 men. The engagement was sharp, but of short duration; for, the *Guerriere* being totally dismasted, and rolling so deep as to render her guns useless, while the enemy was enabled to rake her at pleasure, it became absolutely necessary, in order to prevent a further loss of lives for no purpose, to strike her colours. Of the crew, 15 had been killed, and 63 wounded; and the injury sustained by the ship was so great, that, after the men were all taken out, the captors set her on fire. Not the least imputation fell on the conduct of Capt. Dacres or his ship's company during the action, who yielded only to irresistible superiority of physical strength. It is pleasing to add, that they received the most honourable and humane treatment from the American commander. The triumphant arrival of the *Constitution* at Boston, whence she had been fitted out, doubtless rendered the war less unpopular than it had originally been in that town, and stimulated the spirit of marine enterprise.

The disaster which befel Gen. Hull had disconcerted the plan for the invasion of Canada; but the design was by no means renounced. A considerable force was assembled in the neighbourhood of Niagara, and on October 13, the American general Wadsworth, with 13 or 1400 men, made an attack on the British position of Queenstown, on the Niagara river. On receiving the intelligence, major-general Brock hastened to the spot, and led on a few troops for its defence. He had previously sent orders to brigademajor Evans, who commanded at Fort George, to batter the opposite American fort Niagara, which was done so effectually, that the garrison was forced to abandon it. General Brock was unfortunately killed while cheering on his men; and the position was for a time taken by the enemy. Reinforcements, however, being brought up by major-general Sheaffe, the next in command, the Americans were attacked; and, after a short but sharp conflict, in which they sustained a considerable loss in killed and wounded, general Wadsworth surrendered himself prisoner on the field, with upwards of 900 men and many officers, the troops to which they yielded being about the same number. The loss on the part of the British was small, with the exception of general Brock, in whom his country was deprived of an officer of distinguished courage and ability. Major-general Sheaffe, who succeeded him in the command, was created a baronet by the prince-regent, as soon as the news arrived. See the article *HERALDRY*, vol. ix. Plate XCVI.

The balance of success in the naval war continued to preponderate on the side of the Americans. Besides the numerous captures made by their privateers, actions took place between ships of war which tended to augment their confidence. On the 18th of October, his majesty's armed brig *Frolic*, conveying the homeward-bound trade from the bay of Honduras, while in the act of repairing damages to her masts and sails received in a violent gale on the preceding night, descried a vessel which gave chase to the convoy. She proved to be the United States sloop-of-war *Wasp*, which the *Frolic* gallantly brought to action, though in her crippled state, in order to save her convoy. She soon, however, became so unmanageable, that the *Wasp* was enabled to take a raking position, whilst the *Frolic* could not get a gun to bear. The result was, that, every individual officer being wounded, and not more than twenty of the crew remaining unhurt, the enemy boarded, and made prize of the brig. On the same afternoon, however, his majesty's ship *Poitiers* recaptured the *Frolic*, and took the *Wasp*. The respective force of the two vessels is not mentioned; but Capt. Whinyates of the *Frolic* represents his fire as superior in the beginning, and attributes his misfortune solely to the injury done to his vessel by the storm.

A second action between frigates of the two nations was of much more serious consequence.—The Macedonian frigate, Capt. Carden, being in lat. 29. N. lon. 29. 30. W. on October 25, descried a ship which proved to be a large frigate under American colours. He did not

hesitate to close with her as soon as possible, and the action began at nine A.M. After an hour's firing, on coming to close quarters, he found his antagonist's force so much superior, that he had no chance of success, except from some fortunate accident. He bravely continued the action to two hours and ten minutes; when, the injuries his ship sustained from the enemy's fire having rendered her a perfect wreck, lying like a log upon the water, whilst his opponent was still in good condition, and a heavy loss being incurred in killed and wounded, he submitted, however unwillingly, to surrender rather than make still greater sacrifices. On being taken on-board the enemy's ship, the United States, commodore Decatur, he ceased to wonder at the event of the battle. She was of the scantling of a 74-gun ship, mounted thirty 24-pounders on her main-deck, twenty-two carronades 42-pounders, two 24-pounders on her quarter-deck and fore-castle, and had a complement of 478 picked men. Of captain Carden's crew there were 104 killed and wounded.

On the 4th of November, congress assembled after its adjournment, when a message from the president was communicated to both houses. Its leading topic was the state of the war in which the country was engaged, and a summary of its principal occurrences. In advertent to the failure of the attempts upon Canada, heavy complaints were made of the employment of savage auxiliaries by the British government, and inciting them to hostilities; for which, it was said, no pretext had been given by the example of the American government. The effect, however, was stated to have been that of rousing to arms the citizens on the frontier, of whom an ample force, with the addition of a few regulars, was proceeding towards the Michigan territory. A complaint was then made of a refusal on the part of the governors of Massachusetts and Connecticut to furnish the required detachments of militia towards the defence of the maritime frontier, in consequence of a novel exposition of the provisions of the constitution relative to the militia; and the bad effects of such a want of concurrence was pointed out. With respect to the overtures for an amicable termination of the differences with Great Britain, the president informed congress of the terms on which their chargé d'affaires at London was authorized to agree to an armistice. These were, that the orders in council should be repealed as they affected the United States, without a revival of the blockades violating acknowledged rules; that there should be an immediate discharge of American seamen from British ships, and a stop to impressments from American ships, with an understanding that an exclusion of the seamen of each nation from the ships of the other should be stipulated; and that the armistice should be improved into a final adjustment of all depending controversies. This advance, the president says, was declined by the English, from an avowed repugnance to suspending the practice of impressing during the armistice, and without any intimation that the arrangement proposed respecting seamen would be accepted.—The correspondence between lord Castlereagh and Mr. Russell, and between admiral Warren and Mr. Monroe, respecting an armistice and negotiation, was laid before congress, and afterwards printed in the American papers.

A third British frigate was lost to our navy at the close of the year.—The account from New York states, that "On the 29th of December, about ten leagues from the coast of Brasil, the United-States frigate *Constitution* fell in with and captured his Britannic majesty's frigate *Java*, of 49 guns, and manned with upwards of 400 men. The action continued an hour and fifty-five minutes—in which time the *Java* was made a complete wreck, having her bowsprit and every mast and spar shot out of her. The *Constitution* had 9 killed, and 25 wounded; the *Java*, 60 killed, (our Gazette-account says 22 only,) and 102 wounded. Among the latter was her commander, captain Lambert, a very distinguished officer, mortally.—The *Java* was rated at 38 guns, but mounted 49. She was

just out of dock, and fitted in the completest manner to carry out lieutenant-general Hislop, governor of Bombay, and his staff; captain Marshall, a commander in the British navy; and a number of naval officers, going to join the British ships of war in the East-Indies. Besides these, and having her own complement of officers and men complete, she had upwards of 100 supernumeraries, of petty officers and seamen for the admiral's ship and other vessels on the East-India station. She had also dispatches from the British government for St. Helena, the Cape of Good Hope, and to every British establishment in the East-India and China seas; and had copper on-board for a 74-gun ship, and two floops of war, building at Bombay; and it is presumed many other valuables; all of which were blown up in her on the 31st of December, when she was set on fire.—The Constitution was considerably cut in her spars, rigging, and sails; but the Java was made a perfectly unmanageable wreck. All the officers and seamen taken in the Java were paroled by commodore Bainbridge, and landed on the 3d of January at St. Salvador, Brasil.

In these several defeats sustained by the British navy, no honour was lost, since every thing was done in defence that could be effected by courage and conduct against superior force; but the unusual circumstance of English striking to foreign ships of a similar class, produced as much mortification on one side as triumph on the other; and both beyond the occasion.

At this time also, the West-Indian seas swarmed with privateers which made numerous captures; and, from the shelter they obtained in small islands of difficult access, were not easily discovered or avoided. A meeting of the merchants and others concerned in the coasting trade of Jamaica was held at Kingston on the 25th of September, in which a resolution was passed relative to its unprotected state; and a committee was appointed to wait upon vicemirador Sterling, requesting him to grant all the protection to the coast in his power to afford. He informed them that two cruisers were already stationed on the coasts; and that, upon the arrival of other vessels of war, they should be employed on the same service. It appears, however, that, during the remainder of the year, the defence of the commerce of the West-India islands was very inadequate to the means of annoyance possessed by the enemy.

In other respects, the West-India islands afforded very little interesting matter for the history of this year; but the tranquillity of the inhabitants, and their blissful apathy for political convulsions, was as usual disturbed by the periodical scourge of these parts of the globe, the hurricane, preceded by horror and silence, attended by gloom and devastation, and followed by the desolation of the land where it passes in its destructive career. But, before we proceed to the history of these horrors, we may just observe, that the negro-government of St. Domingo (Hayti) was this year a scene of that disorder and mutation which may always be expected where the strongest sword is the only source of authority. The mimic monarch, Christophe, whom we left last year (p. 263.) enjoying himself in great state, was encountered with superior force by his rival Petion, and, for the time at least, sunk under the contest. Petion is stated to have made the whole of Christophe's cavalry prisoners about the 15th of April. During his absence, however, from Port au Prince, Christophe had suddenly appeared before that place, and gained possession of a strong fort; on which account all the British shipping had been ordered away by captain Vashon. But this success was only temporary; Petion took from him St. Mark's, Cape Nicholas Mole, and Gonaives: Christophe was deserted by his staff-officers, and fled to the mountains; and, in fine, the feat of his power, Cape François, submitted without resistance to his rival. The treasure which Christophe had amassed by the most unjust exactions, to the amount of seven

millions of dollars, fell into the hands of Petion, who issued a proclamation, declaring that this money should be applied in re-establishing the affairs of the island.

The interest of the public had been powerfully excited by accounts received in London from Barbadoes and Nevis, of a preternatural darkness on the first of May; and a fall of volcanic dust, which indicated some great natural convulsion in that part of the world; and reports were actually circulated of the destruction of the islands of Martinico and Guadaloupe. At length, however, the following accounts from St. Vincent's explained the phenomena.

The Souffrier Mountain, the most northerly of the lofty chain running through the centre of this island, and the highest, had for some time past indicated much inquietude; and, from the extraordinary frequency and violence of earthquakes, which are calculated to have exceeded two hundred within the last year, portended some great movement or eruption. The apprehension, however, was not so immediate as to restrain curiosity, or to prevent repeated visits to the crater, which of late had been more numerous than at any former period, even to Sunday the 26th of April, when some gentlemen ascended it, and remained there for some time. Nothing unusual was then remarked, or any external difference observed, except a rather stronger emission of smoke from the interstices of the conical hill at the bottom of the crater. To those that have not visited this romantic and wonderful spot, a slight description of it, as it lately stood, is previously necessary. About 2000 feet from the level of the sea, on the south side of the mountain, and rather more than two-thirds of its height, opens a circular chasm, somewhat exceeding half a mile in diameter, and between 400 and 500 feet in depth; exactly in the centre of this capacious bowl rose a conical hill about 260 or 300 feet in height, and about 200 in diameter, richly covered and variegated with shrubs, brushwood, and vines, above half-way up; and the remainder covered over with virgin sulphur to the top. From the fissures of the cone and interstices of the rocks, a thin white smoke was constantly emitted, occasionally tinged with a slight bluish flame. The precipitous sides of this magnificent amphitheatre were fringed with various evergreens and aromatic shrubs, flowers, and many alpine plants. On the north and south sides of the base of the cone were two pieces of water; one perfectly pure and tasteless, the other strongly impregnated with sulphur and alum. This lonely and beautiful spot was rendered more enchanting by the singularly-melodious notes of a bird, an inhabitant of these upper solitudes, and altogether unknown to the other parts of the island: hence principally called or supposed to be invisible; though it certainly has been seen, and is a species of thrush.

The eruption of the Souffrier Mountain, on Thursday the 30th of April, after the lapse of nearly a century, was preceded on Monday the 27th at noon by a dreadful crash, with a severe concussion of the earth, a tremulous noise in the air, and a vast column of thick black ropery smoke, which, mounting to the sky, showered down sand, with gritty calcined particles of earth and favilla mixed, on all below. At night a very considerable degree of ignition was observed on the lips of the crater. The same awful scene presented itself on Tuesday the 28th; the fall of favilla and calcined pebbles still increasing, and the column from the crater rising perpendicularly to an immense height, with a noise at intervals like the muttering of distant thunder. On Wednesday the 29th, the column shot up with quicker motion, dilating as it rose like a balloon. At length, on Thursday the 30th in the afternoon, the noise became incessant, and resembled the approach of thunder still nearer and nearer, with a vibration that affected the feeling and hearing. The Charaibes settled at Morne Ronde, at the foot of the Souffrier, abandoned their houses, with their live stock, and every thing

thing they possessed, and fled precipitately towards the town. The negroes became confused, forsook their work, looked up to the mountain, and, as it shook, trembled, with the dread of what they could neither understand or describe—the birds fell to the ground, overpowered with showers of dust, unable to keep themselves on the wing—the cattle were starving for want of food, as not a blade of grass or a leaf was now to be found. The sea was much discoloured, but in no wise uncommonly agitated. About four o'clock P. M. the noise became more alarming, and just before sun-set the clouds reflected a bright copper colour, suffused with fire; and at length, about the close of day, the flame burst pyramidically from the crater through the mafs of smoke; the rolling of the thunder became more awful and deafening: flashes of lightning quickly succeeded, attended with loud claps, and a great variety of lightning and electric flashes, some forked zig-zag playing across the perpendicular column from the crater—others shooting upwards from the mouth, like rockets of the most dazzling lustre—others like shells with their trailing fuses lying in different parabolas. About seven in the evening the ebullition of lava broke out on the north-west side: this, immediately after boiling over the orifice, and flowing a short way, was opposed by the activity of a higher point of land, over which it was impelled by the immense tide of liquefied fire that drove it on, forming the figure V in grand illumination. Sometimes, when the ebullition slackened, or was insufficient to urge it over the obstructing hill, it recoiled back, and then again rushed forward, impelled by fresh supplies, and, scaling every obstacle, carried rocks and woods together in its course down the slope of the mountain, until it precipitated itself into a vast ravine. Vast globular bodies of fire were projected from the fiery furnaces, and bursting fell back into it, or over it, on the surrounding bushes, which were instantly set in flames. In about four hours from the time the lava boiled over the crater, it reached the sea. About half-past one in the morning, another stream of lava was seen descending to the eastward towards Rabacca. At this time the first earthquake was felt: this was followed by showers of cinders, that fell with the hissing noise of hail during two hours. At three, a rolling on the roofs of the houses indicated a fall of stones, which soon thickened, and at length descended in a rain of intermingled fire—the miserable negroes, flying from their huts, were knocked down or wounded; and many were killed in the open air. Several houses were set on fire. Had the stones that fell been heavy in proportion to their size, not a living creature could have escaped; but, having undergone a thorough fusion, they were divested of their natural gravity, and fell light, though in some places as large as a man's head. This dreadful rain of stones and fire lasted upwards of an hour, and was again succeeded by cinders from three till six o'clock in the morning. Earthquake followed earthquake almost momentarily, or rather the whole of this part of the island was in a state of continued oscillation;—not agitated by shocks, vertical or horizontal; but undulated like water shaken in a bowl. Darkness was only visible at eight o'clock in the morning: a chaotic gloom enveloped the mountain, and an impenetrable haze hung over the sea, with black sluggish clouds of a sulphureous cast. The whole island was covered with favilla, cinders, scoria, and broken masses of volcanic matter. It was not until the afternoon that the muttering noise of the mountain sunk gradually into a solemn but suspicious silence.

The above is from the St. Vincent's Gazette of the 2d of May. The Gazette of the 18th states, that the mountain had continued to be agitated up to the 7th, when its more violent paroxysms gradually subsided. By this dreadful calamity, the large and extensive rivers of Rabacca and Wallibon were dried up, and in their places was a wide expanse of barren land. The melted minerals which, with irresistible explosion, were dashed into the sea, had formed a promontory which jutted out some distance from

the main land, close to the post at Morne Ronde.—The merchants of Barbadoes, on hearing the calamity, loaded a vessel with provisions for the sufferers at prime cost; and the legislature subsequently voted 6400 dollars to be invested in the purchase of provisions for the same purpose. The British parliament afterwards voted 25,000l.

It is now ascertained, that a new crater has been formed to the north-east of the old one, from which it is only separated by a narrow ridge. This new crater throws out smoke and flames, and on the night of Tuesday the 9th of June made a show of another eruption; but nothing took place beyond an emission of stones and ashes, most of which fell back into the abyss from whence they came. The whole appearance of the mountain is changed, and the ascent, where it had been most difficult, rendered plain and easy, by the filling up of ravines, and swelling of precipices. The conical mount has been destroyed, and an immense lake of boiling water supplies its place; from this lake vast quantities of black sand are perpetually thrown up; and on the south-west side there is a large furnace, which is constantly seen to throw up red-hot stones.—We are farther informed, by a letter dated July 4, that, "on Sunday night, June 30, the Wallibon quarter witnessed a scene of horror and devastation, more terrific and destructive in its effects than even the memorable night of the awful eruption of the Morne Souffrier. Prodigious masses of ignited substances were ejected from the mouth of the Wallibon river; and a vast lake, in a constant state of effervescence, had formed near its source, which continued daily to increase, till it covered about four acres of land. On Sunday night, the diffusion of water, from the fall of heavy rains, became so great, that the frightful reservoir overflowed, and the prodigious flood burst through the barriers of volcanic combustibles with irresistible fury; and such was its destructive impetuosity, that it completely inundated the adjacent valley; and, besides its ravages in bearing down a number of negro-houses, several lost their lives, and others were dreadfully scalded from the river of liquid fire which overwhelmed them. The mountain, too, during the dreadful scene, had a return of one of its terrific fever-fits; its roarings caused a general consternation; and the following night, about eleven o'clock, a most violent concussion of the earth, such as the oldest inhabitants never experienced, was felt all over the island."

It was doubted whether those dreadful showers of dust and ashes, which had covered and destroyed every thing on the ground, would not also prevent a future crop from being raised. The minds of the proprietors of estates in St. Vincent's were happily relieved by a subsequent communication from that island, to the following effect: "At length our alarms about the volcano are beginning to subside; the horrors of it seem past; and perhaps good may come out of evil: for in many of the spots which appeared to suffer most under the late dreadful eruption, and where the cinders, &c. fell in most frightful excess, they already begin to show a most fertilising power, and to be exciting a vegetation of extraordinary force and fecundity!"

The last accounts from St. Vincent's are dated the 2d of August, 1813; by which it appears, that there have been several minor eruptions of Mount Souffrier since the above dreadful visitation. The Rabacca river now flows again from its springs, but not in the old direction; it has poured its unwelcome torrents through Langley Park, making a new bed in its wild and impetuous progress, and destroying vast quantities of sugar, &c. &c.

A hurricane happened in Jamaica on the night of October 12, 1812, which occasioned much damage in various parts, sweeping away out-houses and negro-habitations, unroofing buildings, tearing up trees by the roots, and destroying cane and other plantations. The mischief at sea was not very considerable, the duration of the tempestuous weather being short.

But in South America there occurred a most dreadful calamity.

calamity. The St. Thomas's Gazette, of the 9th of April, gave the following particulars:—"March 26 has been a day of woe and horror to the province of Venezuela. At four P. M. the city of Caraccas stood in all its splendour; a few minutes later, 4500 houses, 19 churches and convents, with all the public buildings, monuments, &c. were crushed to atoms by a sudden shock of an earthquake, which did not last a minute, and buried thousands of the inhabitants in ruins and desolation. That day happened to be Holy Thursday; and at the precise hour every place of worship was crowded to commemorate the commencement of our Saviour's passion by a public procession, which was to proceed through the streets a few minutes afterwards. The number of hapless sufferers was thus augmented to an incredible amount, as every church was levelled with the ground before any person could be aware of danger. The number of sufferers taken out of the churches (two days after this disaster) amounted alone to upwards of 300 corpses. The extent of the number of dead is differently stated, from 4 to 6, and as far as 8,000. Horrible as this catastrophe appears, it would be a matter of some consolation to know that the vicinity of that city offered some support or shelter to the surviving mourners; but the next town and seaport thereto, viz. La Guayra, has in proportion suffered still more, as well as its immediate coast. The following cities and towns also suffered: Cumana, New Barcelona, Valencia, and Magueta, nearly destroyed; Barquisimeto, Santa Rosa, and Candare, totally destroyed; St. Charles and Caramaocte, very much injured; Arilaqua sunk; and the inland town of St. Philip, with a population of 1200 persons, entirely swallowed up."

The occurrences this year in the East Indies were of no great importance.—The strong fortress of Kallinjur in Bundelcund submitted to the British arms, after a resistance which in the first instance was unsuccessful. Colonel Martindell, who commanded the force led against it, ordered an assault on the 2d of February. The troops advanced in three columns to storm a breach which had been made by the artillery; but, on arriving under the walls, they found a perpendicular precipice to be surmounted before it could be reached: ladders were applied, which were thrown down by the garrison; and in the mean time the assailants were exposed to a very destructive fire of cannon and musketry: they at length found it necessary to retreat, with a severe loss of officers and men. The action, however, was not thrown away; for the display of courage and enterprise made such an impression on the commander of the fort, that he soon after surrendered by capitulation.

An expedition fitted out at Batavia, under colonel Gillespie, and captain Sayer of the Leda, against Palambang, was completely successful. On its return, the army was employed against the rajah of Jacgocatra, who had shown symptoms of disaffection. His fortress and town were stormed, and himself taken prisoner, with the whole of his property. Though he had a force of 10,000 men, the loss of the victors was inconsiderable. The Dutch islands of Macassar and Timour were also captured by the same expedition; and the resources of Java were found sufficient, not only for its own security, but for aiding in the general defence of the British empire. The fort of Nowanugar, belonging to the Jam-rajah, submitted to the British arms on February 24, just as the troops brought against it under lieutenant-colonel Lionel Smith were on the point of storming.

A dangerous conspiracy was detected among the native troops at Travancore, the object of which was to massacre their European officers whilst assembled at an entertainment to be given by the British resident at that court. It was disclosed by a confidential spy, and the ringleaders were seized upon; two of whom, native officers, were blown from a cannon in front of the line drawn up to witness their punishment. Several nairs and faquirs, instigators of the mutiny, were afterwards hung.

A fire broke out in the printing-office at the Mission-house, Serampour, on the evening of the 11th of March, which destroyed 2000 reams of English paper, worth 5000l. and founts of type in fourteen languages, besides English. The loss could not be less than 12,000l. and all the literary labours of the missionaries were interrupted at once.

Accounts were received from Persia, that a definitive treaty of alliance between that government and Great Britain had been concluded by sir Gore Ouseley, on terms highly advantageous to this country.

If we come nearer home, we shall find that the attention of the French emperor was, during this year, so much engaged by his continental projects, that the mighty preparations he seemed to be making last year for contending with Great Britain on the ocean, produced no sensible addition to the power and enterprise of his navy, which for the most part lay quiet in port, and offered very few opportunities to the British commanders stationed in the European seas of gratifying that ardour for distinguishing themselves in their country's service by which they are so honourably characterized.

An account arrived at the admiralty, in February 1812, of the capture, on November 19, by the Eagle of 74 guns, captain Rowley, of the French frigate Corcyre, pierced for forty guns, but mounting only twenty-six 18-pounders on the main-deck, and two 6-pounders on the quarter-deck; with a complement of 170 seamen and 130 soldiers; laden with wheat and military stores, and bound from Trieste to Corfu. She had two companions, which escaped during the chase, that began off Fano, and terminated near Brindisi. The action was short, as, indeed, the inequality of force would have rendered a protracted resistance only a fruitless waste of lives. No one was hurt on-board the Eagle.

In the same sea, off Lissa, a very severe action was fought between three English and three French frigates, which did credit to the bravery and conduct of both parties; though success, as usual, remained to the English.—The French squadron having been despatched to the south of Lissa on November 28, the ships Alceste, Active, and Unité, were warped out of the harbour of St. George; and on the morning of the 29th came in sight of the enemy off the island of Augusta. The French commodore formed in line, and for a short time stood towards his antagonists; but, finding the English bearing upon him in close line under full sail, he bore away to the north-west. His rear-ship separating, captain Murray Maxwell, the British commodore, detached the Unité after her; and himself, in the Alceste, commenced action with the other two. On passing the rearmost to get at the commodore, a shot bringing down his main-topmast, he dropt a little astern, on which triumphant shouts of *Vive l'empereur* resounded from the French ships. Captain Gordon, however, in the Active, pushed on, and brought the sternmost to close action; whilst the French commodore, shortening sail, fairly engaged the Alceste. After a warm conflict of two hours and twenty minutes, the French commodore, in the Pauline, thought proper to bear away to the westward, the crippled state of the Alceste not suffering captain Maxwell to pursue. The other ship then struck; and proved to be the Pomone, of 44 guns, and 322 men, commanded by captain Rosamel, whose skill and courage are very honourably recorded by the victor. He had fifty men killed and wounded; his antagonist, the Active, had thirty-two, among whom were captain Gordon, who lost a leg, and his first lieutenant, who had an arm carried away. In the mean time, captain Chamberlayne in the Unité had overtaken his chase, which struck after a trifling resistance; and to his mortification proved to be only a store-ship of 26 guns and 190 men, named La Perianne. The Active was sent with the prizes and prisoners to Malta; and the two others were immediately refitted for service.

A letter from captain Taylor, of the Apollo, dated Feb. 14, mentions, that on the preceding day, on round-

ing Cape Corfe, he fell in with a French frigate-built store-ship and a corvette. On closing with them, the former vessel struck, and proved to be the *Merinos*, commanded by M. Honoré Coardonan, captain of a frigate, and a member of the legion of honour; the ship quite new, of 850 tons, pierced for thirty-six guns, but carrying only twenty 8-pounders, with 126 men. She was bound to Sagona for timber. The *Apollo* suffered no loss, though exposed for four hours to batteries on-shore. The corvette made her escape with the assistance of boats from the shore.

Capt. Talbot of the *Victorious*, senior officer of the upper part of the Adriatic, in company with the *Weazel* sloop, descried, Feb. 21, a large ship with several small ones proceeding from Venice to Pola in Istria. A signal for chase was made, the enemy being in a line of battle, with two gun-boats and a brig a-head of the large ship, and two brigs astern. The *Weazel*, Capt. Andrews, was directed to bring the brigs astern of the commodore to action, in order to induce him to shorten sail, which had the intended effect. At half past four in the afternoon, the *Victorious* commenced action with the line-of-battle ship the *Rivoli* of 74 guns, at the distance of half-pistol shot, neither ship having hitherto fired a gun; and, the water being smooth, every shot told, and the carnage on both sides was dreadful. At five, one of the brigs engaged with the *Weazel* blew up, and that vessel went in chase of the rest; but was recalled by captain Talbot, who thought that, as they were in only seven fathoms water, one or the other of the great ships might get aground, and want assistance. Capt. Andrew, on being recalled, placed his brig on the bow of the *Rivoli*, and raked her with three broadsides. That ship, for nearly two hours, had been rendered perfectly unmanageable, and had been able to keep up only a very slow fire. At nine o'clock she struck, and was taken possession of. She bore the broad pendant of commodore Barre, the French commander-in-chief of the Adriatic, who displayed great skill and valour in the action. He lost 400 killed and wounded, including his captain and most of his officers, out of 862 persons with whom he entered into action. The *Victorious* also sustained a severe loss of men. She had at the commencement only 506 actually on-board, of whom 60 were on the sick-list. Of the French brig engaged with the *Weazel*, which blew up, only three men were saved: the *Weazel* did not lose a single man. Few actions in any year have afforded more convincing proof of the superiority of British seamanship.

A spirited action on a small scale was reported in March by Mr. Harvey, commander of the sloop *Rosario*, off Dieppe. On the 27th of that month, in the morning, he observed an enemy's flotilla, consisting of twelve brigs, and a lugger, standing along-shore; and immediately made sail, with the intention of cutting off the leewardmost. The flotilla formed into a line, and engaged the *Rosario* as she passed; and, when she luffed up to attack the sternmost, they all bore up to support her, and endeavoured to close with the sloop. The commander, not choosing with his small force to run the risk of being boarded, bore away to a brig in the offing, which proved to be the *Griffin*, captain Trollope, and made the signal for an enemy, which was answered. He then immediately hauled his wind, and pursuing the flotilla, which was making all sail for Dieppe, began to harass the rear, and at length dashed into the midst of them, receiving and returning their whole fire. He disabled some, and ran others on-shore, before he was joined by the *Griffin*, which could not come up sooner. Capt. Trollope gallantly contributed his part; and the result was, the capturing three of the enemy, driving two on-shore, and much damaging the others. This flotilla was proceeding from Boulogne to Cherbourg: each brig carried three long brass 24-pounders and an eight-inch brass howitzer, with 50 men; and they were assisted by batteries on-shore, keeping up a constant fire of shot

and shells. The loss on-board the *Rosario* was, however, only five wounded.

The account of a successful attempt to intercept two French frigates and a brig off l'Orient, was communicated in a letter dated May 24th, from captain Hotham, of the Northumberland, to rear-admiral sir H. B. Neale.—The writer states, that, having, according to orders, proceeded off l'Orient with the *Growler* gun-brig in company, the French vessels were descried on the morning of the 22d, crowding all sail to get into the port of l'Orient. The enemy, after some consultation, at length bore up in a close line with every sail set, and made a bold attempt to run between the Northumberland and the shore, under cover of the numerous batteries with which it is there lined. Capt. Hotham bore up, and steered parallel to them at the distance of two cables length, giving them broadsides, which were returned by a very brisk fire from the ships and batteries, highly destructive to the Northumberland's sails and rigging. It was captain Hotham's object to prevent them from passing on the outside of a dry rock; and the French ships, attempting, as the only alternative, to sail between the rock and the shore, all grounded. During the falling tide, the Northumberland was employed in repairing damages; she was then brought to anchor with her broadside bearing upon the enemy's ships, which had all fallen over on their sides next the shore as the tide left them. A continued fire was kept on them for more than an hour; when, their crews having quitted them, their bottoms pierced with shot, and one of them completely in flames, captain Hotham got under sail, leaving the *Growler* to prevent by its fire the return of the men to their vessels. In the evening, the first frigate blew up with a dreadful explosion; and soon after, the second appeared to be on fire: she also blew up during the night; and a third explosion, heard on the next day, was doubtless that of the brig; and thus the work of destruction was completed. Captain Hotham was informed that these vessels were l'Ariane and l'Andromache, of 44 guns and 450 men each; and the Mamaluke brig, of 18 guns and 150 men; and that since January they had been cruising in various parts of the Atlantic, and had destroyed thirty-six vessels of different nations, the most valuable parts of the cargoes of which they had on-board.

On July the 7th, Capt. Stewart, of his majesty's ship *Dictator*, with the *Calypso* armed brig, being off Mardoe, on the coast of Norway, observed the mast-heads of a Danish squadron over the rocks. The *Calypso*, Capt. Weir, led the way through a passage of twelve miles among the rocks, in some places so narrow that there was scarcely room for setting out their studding-sail booms, till at length they came within reach of the enemy, who had been retiring before them under a press of sail. These consisted of the *Nayaden* frigate of 38 guns, but mounting 50, three stout brigs, and twenty-five gun-boats, lying anchored close together in the small creek of Lyngoe. The *Dictator* ran her bow on the land with her broadside to the enemy; and, being seconded by the *Calypso*, their fire was so powerful, that in half an hour the frigate was battered to pieces, and flames were seen bursting from her hatchways; the brigs had struck, and most of the gun-boats were beaten, and some sunk. At three in the afternoon, the *Dictator*, *Calypso*, and prize-brigs, were returning through the passages, when they were assailed by a division of gun-boats so placed behind the rocks, that no gun could be brought to bear on them. In this situation, the prize-brigs ran aground, and it was necessary to abandon them in the state of complete wrecks, humanity forbidding setting them on fire, on account of the many wounded they had on-board. In this bold enterprise, the English squadron suffered a loss of 50 in killed and wounded; that of the Danes was at least 300.

Of minuter successes, one most worthy of notice was communicated by Capt. Josias Rowley, of the *America*, in a letter dated off Languilla, May 10. It states, that the

the America, in company of the *Leviathan* and *Eclair*, having, on the preceding day, fallen in with a convoy of eighteen sail of the enemy deeply laden, which took shelter under the town and batteries of Languillia, on the coast of Genoa, it appeared to him and captain Campbell practicable to destroy them by getting possession of the batteries. For this purpose, the marines of the America and *Leviathan* were landed at day-break on the 10th; and, whilst a party was detached to carry a battery to the eastward, which was effected, the main body, rapidly advancing through a severe fire of grape, carried the battery adjoining the town of Languillia, consisting of four 24 and 18 pounders, though protected by a strong body of the enemy posted in a wood and in several contiguous buildings. The fire of the *Eclair* having in the mean time driven the enemy from the houses on the beach, the boats proceeded to bring out the vessels, which were secured by various contrivances; and, sixteen being towed off, the marines were re-embarked without molestation, though a strong party was advancing from the town of Allasio to reinforce their friends. The loss in the spirited attack on the batteries was much less than might have been expected; but the America's yawl was unfortunately struck by a chance-shot, and ten marines and a seaman were drowned.—Another attempt was made, on June 27th, to carry off a convoy from the towns of Languillia and Allasio, by the *Leviathan*, Capt. Campbell, who had also under his command the *Curaçoa*, *Imperieuse*, and *Eclair*: The marines landed on this occasion were attacked, as soon as formed on the beach, by treble their number; but, rushing on with their bayonets, they drove the enemy from their batteries, killing many, spiked the guns, and destroyed the carriages, and re-embarked with several prisoners. The vessels were, however, so firmly secured, that they could not be brought away; and they were destroyed by the fire from the ships.

The naval success in the Danish sea was in some degree balanced by the loss, on the 13th of August, of his majesty's brig *Attack*, which, being surrounded by fourteen gun-vessels off Forenefs in Jutland, was obliged, after a gallant resistance, to yield to a vast superiority of force. The brig had a smaller crew on-board than that of each of her antagonists; and the commander, Lieut. Simmonds, was most honourably acquitted for the surrender, by a court-martial.

These were the most memorable occurrences respecting the British navy in the European seas during the year 1812; and, if not highly important, they were such as sufficiently evinced that the zeal and activity of our countrymen engaged in this service had suffered no diminution for want of adequate antagonists.

In addition to the naval losses by shipwreck at the close of the last year, that of the *Manilla* frigate of 36 guns, captain Joyce, was reported by admiral Winter, commander of the Dutch *Texel*-fleet, as occurring near the end of January. This ship having struck on the *Haakland* in a dreadful gale on the evening of the 28th, made signals of distress; upon which some fishing-boats were sent out to her relief. These were obliged to return without being able to reach her; but, on the next day, the weather becoming more moderate, they approached her, when the chief pilot risked his life by venturing upon the shallows and *funken* rocks; and, the English having made a raft of empty barrels, he was enabled to bring off thirty-five of them. During the 30th and 31st, all the rest of the crew were brought safe to land, whence they were marched as prisoners to Amsterdam; the whole loss from the wreck appearing to have amounted only to six men. The ship went entirely to pieces. On this occasion, the exertions of the Dutch to preserve the lives of the sufferers were highly meritorious.

About the same time the *Laurel*, captain S. C. Rowley, a fine new frigate, was lost in Quiberon-bay. This ship, with two other frigates, had been ordered to pursue three French frigates which had escaped from the Loire; and,

on the morning of January 31, they weighed anchor, and made sail through the passage *Taigneufe*. It blew hard, and the weather became hazy; when the *Laurel* struck upon a *funken* rock, and had a large hole made in her bottom. She was backed off, and the men continued pumping, till the vessel was reported to be sinking, when the cable was cut, and she was run ashore on a reef of rocks about a mile from the French coast. In this situation, a heavy fire being opened upon her from the enemy's batteries, a flag of truce was hoisted. The firing was, however, continued, till three boats, with about 70 men and four officers, were sent on-shore from the ship, who delivered themselves up as prisoners. The French are then said, with an inhumanity which appears to have been merely gratuitous, to have refused permission for the boats to return for the remainder of the crew, who would have been their prisoners; and they must all have perished, had not captain Somerville, against the remonstrance of his pilot, gallantly worked his ship up among the rocks, brought her to anchor, and taken the men off the wreck, after they had been upon it in a very perilous situation for several hours. The French fired on the boats till they were out of reach.

The Alban cutter, lieutenant Key, was driven, on the 18th of December, from her station on the coast of Holland; and, being forced on-shore at Aldborough in Suffolk, became a complete wreck. Out of a crew of 56 men, only one seaman was saved. The surgeon, Mr. Thompson, came on-shore with some life in him, but died immediately after. There were also three women and two children on-board; of whom one woman, the servant of Mrs. Key, was saved. The cutter had been cruising, or was going to cruise, on the coast of Holland. Owing, it is supposed, to the ignorance of the pilot, she had struck on a sand-bank, when they were obliged to throw the guns overboard, and cut away their mast; after which they drifted at the mercy of most tremendous weather for three days, when they were driven, on Friday morning, at eight o'clock, on the beach in front of the town of Aldborough. The surf was so high, that no boat could be put off; but, the beach being steep, the vessel was thrown up very high, and the tide retreating, the people of the town were soon able to reach the vessel. Though all the crew seemed to be safe at eight, by nine there were only three remaining alive—a young man, a woman (servant to the captain's wife), and the surgeon. The crew consisted of 56, Mrs. Key, wife of lieutenant Key, who commanded the vessel, and two children. The great loss of lives seems to have been occasioned by the state of intoxication of the men, some of whom were found drowned in the vessel. As the cutter did not go to pieces, it is difficult otherwise to account for such a melancholy catastrophe.

On the 20th of February, 1812, Ebenezer Aldred, (or All-dread,) a dissenting minister, from the High Peak in Derbyshire, appeared in a boat upon the Thames, dressed in a white linen robe, with his long hair flowing over his shoulders, and announced that the seven vials, mentioned in the book of Revelation, were to be poured out upon the city of London.—This prophecy, however, does not seem to be fulfilled, as the domestic affairs we have to relate are not of a very calamitous nature, at least not more so than usual. The vials of wrath appear to have been rather poured out upon France, or at least upon Frenchmen, as our history of the campaign in Russia has fully shown.

Our print-sellers' windows generally attract the curiosity of the moving populace, but chiefly on account of the curious caricatures which they exhibit; a department of the art of drawing, in which no nation can pretend in any degree to a competition with the London artist. No foreign nation ever attained the curious knack of turning the most serious objects into ridicule; and, whenever they attempt it, their productions are in general so overcharged—*caricature*—that they excite disgust instead of laughter. Among the few

few successful ones exhibited at Paris, the following was much noticed about this time.—The emperor Napoleon is represented as sitting at a table in the imperial nursery, with a cup of coffee before him, into which he is squeezing, with all his might, the crimson juice of a beet-root. The young and hopeful king of Rome is seated by his daddy, and is seen sucking most voraciously one of the legs of the bifid root; whilst the nurse, who is steadfastly observing the royal brat, is made to say, “Suck, dear, suck; your father says it is sugar.” We doubt not but the ingenuity of the French may extract a few pounds of sweets out of an acre of beet-root; but it will always be a poor substitute for the produce of the cane. This, however, was one of his plans for ruining English commerce.

On the 6th of March came on, in the court of King’s Bench, the remarkable trial of Daniel Isaac Eaton, a bookseller, for blasphemy.—It was on an information, filed *ex officio* by the Attorney-general against the defendant for the publication of a blasphemous and profane libel on the holy scriptures, being the Third Part of Thomas Paine’s *Age of Reason*. After the pleadings had been opened by Mr. Abbott, the Attorney-general mentioned the motives which had induced him to file the information, and characterised the publication in question in terms of the greatest abhorrence. The libel, he said, asserted that the holy scriptures were, from beginning to end, a fable and an imposture; that the apostles were liars and deceivers. The author denied the miracles, the resurrection, the ascension, of Jesus Christ; nay, his very existence as the Son of God; and even as a man on earth. He asserts his whole history to be nearly fabulous, and places it on a level with the legends of the heathen mythology; concluding with taking upon himself to describe infidelity in these words, “He that believes in the story of Christ is an infidel to God.” The attorney-general then enlarged on the mischiefs that must result from disseminating such doctrines, which struck at the foundation of all that was sacred in Christian societies, and all the sanctions of legal proceedings. He showed that blasphemy had always been considered by the law of the land as one of the highest of misdemeanors, and adduced various cases of decisions to this purpose. He then noticed the plea which might be brought for the defendant, that he was only the publisher of the libel; and said that, whoever was the author, it would be proved that the defendant was well acquainted with its contents, and had been at the pains of importing it from America, and had assured the purchasers that they might rely upon its being the genuine publication of Thomas Paine. After he had concluded his speech, the passages were read which were charged in the information.

The defendant then began to read his defence, which contained a history of his life and opinions; and also digressed to such free strictures on the books of scripture and their authors, that he was several times interrupted by lord Ellenborough. At length his lordship said, that, upon mature deliberation, he thought the public would be better served by letting him read every line he had written. When the defendant had finished his paper, he personally addressed the jury, stating that the work had been six or seven years in circulation in America, without being prosecuted; and mentioning the hardships he himself had undergone from six former prosecutions.

Lord Ellenborough made a short address to the jury, in which he said that the defence from the beginning to the end had been a tissue of opprobrious reviling of the books of the Old and New Testament. He confirmed the law laid down by the attorney-general; and said, that though it was competent for America, or any other independent state, to administer their laws as they pleased, yet in this country the Christian religion was strongly fenced about by the laws of the land. He should leave it to the jury, as Christian men, sworn upon the Gospel of Christ, to say whether the present was not an atrocious libel on the Christian religion.

VOL. XIII. No. 908.

The jury immediately found the defendant guilty; and, on the 30th of April, the attorney-general prayed the judgment of the court against Eaton, who was brought up in custody. The defendant put in the affidavits of five respectable persons, stating that they had been acquainted with him several years, during which he had conducted himself as a peaceable moral man, who never in conversation attempted to enforce his own particular opinions, either in politics or religion. He also put in an affidavit by himself, stating that he published the libel without any evil intention or design to disturb the peace, or affect the dishonour of God, as charged; and mentioning that the pamphlet in question contained many passages in which the perfections of the Deity were deduced, and praise was given to the morality of the gospel—together with other allegations tending to excite the mercy of the court.

Mr. Prince Smith then addressed the court at considerable length in mitigation of punishment. He said he did not deny the existence or propriety of the law upon which the information was filed; but all human laws were founded upon circumstances, and changed with the lapse of time, and the character and manners of a people. He then proceeded to show how the rigour of ancient intolerance had been gradually softened; and that in the last century great latitude had been allowed to the discussion of religious doctrines. He contended for the right of this free discussion; and adverted to the advantage which had accrued to the Christian religion by the attacks upon it, as having given rise to so many excellent defences. He said *it would have been better to have answered the pamphlet in question than to have prosecuted it; since the latter proceeding might be thought to imply a necessity for using the strong arm of the law in its refutation.* He understood that the attorney-general had claimed some merit for lenity, in not prosecuting the defendant upon the statute of William III. If he had done so, their lordships would have had no discretion in apportioning the punishment; but, on the common-law prosecution, they were open to every argument of humanity and philosophy. The information charged, that this libel was published against the king’s crown and dignity; but that infidelity did not militate against these was proved by the many millions in the East who were not Christians, and yet were such material additions to the crown and dignity of the king of England. If deists were tolerated and formed into a sect, would any injury ensue to those morals of which the court was guardian? Many who had written with as much audacity, but more artifice, had gone unpunished—this he instanced in Hume, Gibbon, &c. He also adverted to a new translation of Lucretius, advertised with the name of the attorney-general as a subscriber.

The Attorney-general made a brief reply, in which he observed that there was nothing in the pamphlet which was not drawn from the very dregs of infidelity, and which had not been answered again and again; and that, where one person might be injured by the literary works alluded to, five hundred would be by one of this kind. It rested with the court to determine the defendant’s crime and punishment as the libel regarded the peace of the country; and, if there were no authorities on the subject, reason and principle must decide that this was an offence against that peace which it had a direct tendency to disturb.

The defendant was then ordered to be remanded to custody; and, on the 8th of May, his sentence was pronounced by Mr. Justice Grose, which was, “imprisonment in Newgate for eighteen months, and to stand in the pillory during the first of those months.”

On the 18th of March died, aged 76, Mr. John Horne Tooke, a distinguished political and literary character for a long series of years. On the 25th of May died Mr. Malone, the celebrated commentator on Shakespeare.—For particulars of the lives of these distinguished persons, see MALONE and TOOKE.

On the 26th of March, Mr. Henry Hafe, chief cashier

of the bank, presented an account of the total amount of the notes brought for payment, and refused, from being forged, for the eleven years from 1st January 1801, to 31st December 1811.—The nominal value was 101,661*l.* including the forged notes supposed to have been fabricated on the continent.

In the month of April, a German adventurer, who had assumed the name of Baron Geramb, and who had for a year or two past made a very conspicuous figure in the metropolis, was ordered out of the country, under the alien-act. This singular person ushered himself into public notice in London, by publishing a most inflated and ridiculous letter, which he dedicated to earl Moira; wherein he described himself as an Hungarian baron, who had headed a corps of volunteers in the cause of Austria against Bonaparte; and stated, that after the peace he went to Spain, to give the benefit of his courage and profound military experience to the oppressed patriots of the peninsula. He accompanied this production with every other mode of obtaining notoriety, such as filling print-shop windows with three or four different engravings of his person, in various costumes, which a few fools bought: a star, a death's head and cross-bones, and other terrific emblems, adorned the person of the baron. Nobody who had walked the public-streets for some time past but must have known this redoubtable nobleman. Wherever notoriety could be acquired, there was the baron Geramb. At the funeral of the lamented duke of Albuquerque, he exhibited himself in all the parade of grief, in a jet-black uniform. Where money alone could not gain admittance, the magnificent exterior of this seeming magnate of Hungary was sure of procuring an introduction. At the opera, at the theatres, and the park, his furred mantle and resplendent stars were seldom missed. When that wonderful master of the histrionic art, Mr. Coates, played, or rather attempted to play, Lothario, at the Haymarket, the Hungarian baron sat with indescribable dignity in the stage-box, and appeared the patron of the absurdities of the night, consoling the white-plumed Lothario with his nods, and bows, and cheers, for all the coarse and severe, but justly-merited, raillery which was unsparingly dealt out to him from the pit and galleries. But the baron was formed to embellish a court as well as to dignify a play-house. He was frequent in his inquiries after the health of the British sovereign at St. James's; and appeared with more than usual splendour at the celebrated fête of the prince-regent at Carlton-house. The fascinations of that scene of courtly festivity and princely elegance became the subject of the baron's pen; and he accordingly published a letter to Sophie, describing, in the most romantic language, all the splendid objects of the night, and the feelings with which his chivalrous mind was impressed. What the baron had been doing to get himself sent out of the country we cannot exactly say. It is said that he alleges he had proposed to engage 24,000 Croat troops in the service of England, a proposal which he pretends to have considered as favourably received by our ministers abroad, because they (Mr. Bathurst, general Oakes, and Mr. Henry Wellesley, to whom he appeals) did not hesitate granting him passports to enable him to come to England to submit his plan; and for this service his charges were—Journey from London to Cadiz, 250*l.* establishment in London, twenty-two months, at two hundred pound per month, 4400*l.*—return to Hungary, 700*l.*—total, 5350*l.* The baron, it seems, while the police-officers were besieging his castle, told them he had two hundred pounds of gunpowder in his house, and, if they persevered, he would blow up himself and that together; but, finding them not intimidated, he surrendered. The baron, it is reported, had uncommon success in certain gaming-houses. He is said to be a German Jew, who, having married the widow of an Hungarian baron, assumed the title.

The following month brought a stranger to our shores who may well console us for the loss of baron Geramb.

—This was a child under eight years of age, who, without any previous knowledge of the common rules of arithmetic, or even of the use and power of the numerals, and without having given any particular attention to the subject, possesses (as if by intuition) the singular faculty of solving a great variety of arithmetical questions by the mere operation of the mind, and without the usual assistance of any visible symbol or contrivance. His name is Zerah Colburn; he was born at Cabot, a town lying at the head of Onion-river, in Vermont, in the United States of America, on the 1st of September, 1804. About the month of August 1810, although at that time not six years of age, he first began to show those wonderful powers of calculation which have since so much attracted the attention and excited the astonishment of every person who has witnessed his extraordinary abilities. The discovery was made by accident. His father, who had not given him any other instruction than such as was to be obtained at a small school established in that unfrequented and remote part of the country, (and which did not include either writing or ciphering,) was much surprised one day to hear him repeating the products of several numbers. Struck with amazement at the circumstance, he proposed a variety of arithmetical questions to him, all of which the child solved with remarkable facility and correctness. The news of this infant prodigy soon circulated through the neighbourhood; and many persons came from distant parts to witness so singular a circumstance. The father, encouraged by the unanimous opinion of all who came to see him, was induced to undertake, with this child, the tour of the United States. They were every-where received with the most flattering expressions; and, in the several towns which they visited, various plans were suggested to educate and bring up the child, free from expense to his family. Yielding, however, to the advice of his friends, and urged by the most respectable and powerful recommendations, as well as by a view to his son's more complete education, the father brought the boy to this country, where they arrived on the 12th of May; and the inhabitants of this metropolis had for about three months an opportunity of seeing and examining this wonderful phenomenon, and of verifying the reports that had been circulated respecting him.

Many persons of the first eminence for their knowledge in mathematics, and well known for their philosophical inquiries, made a point of seeing and conversing with him; and all were struck with astonishment at his extraordinary powers. It is correctly true, as stated of him, that "he will not only determine, with the greatest facility and dispatch, the exact number of minutes or seconds in any given period of time; but will also solve any other question of a similar kind. He will tell the exact product arising from the multiplication of any number, consisting of two, three, or four, figures, by any other number consisting of the like number of figures; or, any number, consisting of six or seven places of figures, being proposed, he will determine, with equal expedition and ease, all the factors of which it is composed. This singular faculty consequently extends, not only to the raising of powers, but also to the extraction of the square and cube roots of the number proposed; and likewise to the means of determining whether it be a prime number (a number incapable of division by any other number); for which case there does not exist, at present, any general rule amongst mathematicians." All these, and a variety of other questions connected therewith, are answered by this child with such promptness and accuracy (and in the midst of his juvenile pursuits) as to astonish every person who has visited him.

At a meeting of his friends which was held for the purpose of concerting the best methods of promoting the views of the father, this child undertook, and completely succeeded in, raising the number 8 progressively up to the sixteenth power; and, in naming the last result, viz. 281,474,976,710,656, he was right in every figure. He was.

was then tried as to other numbers, consisting of one figure; all of which he raised (by actual multiplication, and not by memory) as high as the tenth power, with so much facility and dispatch, that the person appointed to take down the results was obliged to enjoin him not to be so rapid! With respect to numbers consisting of two figures, he would raise some of them to the sixth, seventh, and eighth power: but not always with equal facility; for the larger the products became, the more difficult he found it to proceed. He was asked the square root of 106,929; and, before the number could be written down, he immediately answered 327. He was then required to name the cube root of 268,336,125; and with equal facility and promptness he replied, 645. Various other questions of a similar nature, respecting the roots and powers of very high numbers, were proposed by several of the gentlemen present; to all of which he answered in a similar manner. One of the party requested him to name the factors which produced the number 247,483, which he immediately did by mentioning the two numbers 941 and 263; which indeed are the only two numbers that will produce it. Another of them proposed 171,395; and he named the following factors as the only ones that would produce it, viz.  $5 \times 34279$ ,  $7 \times 24485$ ,  $59 \times 2905$ ,  $83 \times 2065$ ,  $35 \times 4897$ ,  $295 \times 581$ , and  $413 \times 415$ . He was then asked to give the factors of 36,083; but he immediately replied that it had none; which, in fact, was the case, as 36,083 is a prime number. Other numbers were indiscriminately proposed to him; and he always succeeded in giving the correct factors, except in the case of prime numbers, which he discovered almost as soon as proposed. One of the gentlemen asked him how many minutes there were in forty-eight years; and, before the question could be written down, he replied, 25,228,800; and instantly added, that the number of seconds in the same period was 1,513,728,000. Various questions of the like kind were put to him; and to all of them he answered with nearly equal facility and promptitude, so as to astonish every one present, and to excite a desire that so extraordinary a faculty should (if possible) be rendered more extensive and useful.

It was the wish of the gentlemen present to obtain a knowledge of the method by which the child was enabled to answer, with so much facility and correctness, the questions thus put to him; but to all their inquiries upon this subject (and he was closely examined upon this point) he was unable to give them any information. He positively declared (and every observation that was made seemed to justify the assertion), that he did not know how the answers came into his mind. In the act of multiplying two numbers together, and in the raising of powers, it was evident (not only from the motion of his lips, but also from some singular facts which will be hereafter mentioned), that some operation was going forward in his mind; yet that operation could not (from the readiness with which the answers were furnished) be at all allied to the usual mode of proceeding with such subjects; and, moreover, he is entirely ignorant of the common rules of arithmetic, and cannot perform, upon paper, a simple sum in multiplication or division. But, in the extraction of roots, and in mentioning the factors of high numbers, it does not appear that any operation can take place, since he will give the answer immediately, or in a very few seconds, where it would require, according to the ordinary method of solution, a very difficult and laborious calculation; and, moreover, the knowledge of a prime number cannot be obtained by any known rule. It has been already observed, that it was evident, from some singular facts, that the child operated by certain rules known only to himself. This discovery was made in one or two instances, when he had been closely pressed upon that point. In one case he was asked to tell the square of 4395; he at first hesitated, fearful that he should not be able to answer it correctly; but, when he applied himself to it, he said it was 19,316,025. On being questioned as to the cause of his hesitation, he

replied that he did not like to multiply four figures by four figures; but, said he, "I found out another way; I multiplied 293 by 293, and then multiplied this product twice by the number 15, which produced the same result." On another occasion, his highness the duke of Gloucester asked him the product of 21,734 multiplied by 543; he immediately replied, 11,801,562; but, upon some remark being made on the subject, the child said that he had, in his own mind, multiplied 65,202 by 181. Now, although, in the first instance, it must be evident to every mathematician that  $4395$  is equal to  $293 \times 15$ , and consequently that  $(4395)^2 = (293)^2 \times (15)^2$ ; and further, that, in the second case, 543 is equal to  $181 \times 3$ , and consequently that  $21734 \times (181 \times 3) = (21734 \times 3) \times 181$ ; yet, it is not the less remarkable, that this combination should be immediately perceived by the child; and we cannot the less admire his ingenuity in thus seizing instantly the easiest method of solving the question proposed to him.

It must be evident, from what has here been stated, that the singular faculty which this child possesses is not altogether dependent upon his memory. In the multiplication of numbers, and in the raising of powers, he is doubtless considerably assisted by that remarkable quality of the mind; and in this respect he might be considered as bearing some resemblance (if the difference of age did not prevent the justness of the comparison) to the celebrated Jedediah Buxton, and other persons of similar note. But, in the extraction of the roots of numbers, and in determining their factors (if any), it is clear, to all those who have witnessed the astonishing quickness and accuracy of this child, that the memory has little or nothing to do with the process. And in this particular point consists the remarkable difference between the present and all former instances of an apparently similar kind. It has been recorded as an astonishing effort of memory, that the celebrated Euler could remember the first six powers of every number under 100. This, probably, must be taken with some restrictions; but, if true to the fullest extent, it is not more astonishing than the efforts of this child; with this additional circumstance in favour of the latter, that he is capable of verifying, in a very few seconds, every figure which he may have occasion for. It is not intended to draw a comparison between the humble, though astonishing, efforts of this infant prodigy and the gigantic powers of that illustrious character to whom a reference has just been made; yet we may be permitted to hope and expect that those wonderful talents, which are so conspicuous at this early age, may, by a suitable education, be considerably improved and extended; and that some new light will eventually be thrown upon those subjects, for the elucidation of which his mind appears to be peculiarly formed by nature; since he enters into the world with all those powers and faculties which are not even attainable by the most eminent at a more advanced period of life. Every mathematician must be aware of the important advantages which have sometimes been derived from the most simple and trifling circumstances; the full effect of which has not always been evident at first sight. To mention one singular instance of this kind: the very simple improvement of expressing the powers and roots of quantities by means of indices, introduced a new and general arithmetic of exponents; and this algorithm of powers led the way to the invention of logarithms, by means of which, all arithmetical computations are so much facilitated and abridged. Perhaps this child possesses a knowledge of some more important properties connected with this subject; and, although he is incapable at present of giving any satisfactory account of the state of his mind, or of communicating to others the knowledge which it is so evident he does possess, yet there is every reason to believe that, when his mind is more cultivated, and his ideas more expanded, he will be able not only to divulge the mode by which he at present operates, but

also point out some new sources of information on this interesting subject. Upon this expectation, a number of gentlemen have taken young Zerah under their patronage, and have formed themselves into a committee for the purpose of superintending his education. A gentleman of science, well known for his mathematical abilities, has consented to take the child under his immediate tuition; and the committee have therefore withdrawn him, for the present, from public exhibition, in order that he may fully devote himself to his studies.

Some years ago, a plan was formed, and a company established, for the purpose of cutting a subterraneous passage or tunnel through Highgate-hill, in a direction from Holloway, to the right of the late great road. The design was partly executed, when, on Monday the 13th of April, between four and five in the morning, the superincumbent earth gave way, and choked up the passage. The labour of several months was thus in a few moments converted into a heap of ruins. Some of the workmen, who were coming to resume their daily labour, describe the noise that preceded it like that of distant thunder. It was the crown-arch, near Hornsey-lane, that first gave way; and the lane, in consequence, fell some feet deep, and instantly became impassable. The houses in the vicinity felt the fall like the shock of an earthquake. The number of persons whom the fineness of the weather attracted on the preceding Sunday, to inspect the works, was not less than 800.—The plan of a tunnel was then abandoned, and the proprietors determined to cut an open road through the hill, at very nearly the level of the tunnel, and to connect the cross road to Hornsey, &c. by means of a grand bridge over the valley. This vast design is now (1814) completed; the road has been for several months in a perfect state, for the passage of the numerous vehicles which enter the metropolis in this direction. The height of the work is 60 feet, so that a perpendicular ascent of that height is saved in a distance of about 800 yards. In addition to the cut through the hill, another company have completed a new and most beautiful road from Holloway to Kentish Town, so as to make the archway serve as an entrance to the east and the west ends of London. The archway alone has cost 100,000*l*.

On the 30th of April, the queen held a drawing-room at St. James's Palace. It being the first which her majesty had held since the king's birth-day in 1810, and there having been no court for the ladies during a lapse of nearly two years, great preparations were made by the higher ranks for their appearance on this occasion. The public splendour of the court was likewise considerably increased, on this revival of it, by the invitations of the prince-regent, which were issued to the number of four hundred, to a magnificent entertainment given in the evening at Carlton-house, by his royal highness, to her majesty, the princesses, and the nobility and gentry. The palace of St. James's and the vicinity bore rather the appearance of the celebration of a birth-day than the holding of a drawing-room in the usual manner. Parties of the life-guards were stationed in the morning at all the avenues, and in the front of the palace, who, with the assistance of the police, preserved great regularity and order in the passing of the carriages and sedans to and from the palace. At noon, Bond-street, St. James's-street, and Pall-mall, were all in a bustle, thronged with superb carriages and elegant equipages, and the windows filled with spectators. All the arrangements resembled those for birth-days; and numbers of tickets were issued from the lord-chamberlain's office, for spectators in the anti-rooms, guard-chamber, &c. Her majesty, with the princesses Augusta and Mary, left the queen's house about one o'clock, and alighted at the duke of Cumberland's apartments at St. James's, where her majesty and the princesses dressed, the royal jewels having been previously brought thither from the bank. After partaking of some refreshments in the duke's apartments, they proceeded with a numerous train of at-

tendants through the gallery and the ball-room, and entered the grand council-chamber, where her majesty received the company, and the numerous persons who had the honour of being presented.—The prince-regent went from Carlton-house to St. James's palace; and appeared in full state for the first time since the establishment of the regency. The procession of his royal highness consisted of three carriages, drawn by two horses each; within them, his aides-de-camp, pages of honour, &c. The servants wore their state-liveries, and new state-hats, adorned with blue feathers. Then followed the state-coach of his royal highness, drawn by six bays in superb red-morocco harness, decorated with red ribands. On the sides of the carriage walked four helpers. The coachman and four footmen wore black velvet caps, like those of his majesty's servants. The prince-regent was in military uniform: he was accompanied by the duke of Montrose (master of the horse), and lord John Murray (lord in waiting). The procession was escorted by a party of the life-guards; and arrived at St. James's at half-past three. Earl Cholmondeley (lord steward), the earl of Macclesfield, and other officers of state, waited at the bottom of the grand staircase for the prince-regent; and conducted his royal highness to the grand council-chamber, where he paid his respects to his royal mother: he remained in the drawing-room half an hour. Their royal highnesses the princesses of Wales, the duchesses of York, the dukes of York, Clarence, Kent, Cumberland, Cambridge, and Sussex, their highnesses the duke of Gloucester, and the princess Sophia of Gloucester, and his serene highness the duke of Brunswick, were also present.

On the 20th of May, a lamentable accident happened in a coal-mine at Orrell, near Liverpool. The workmen had been warned not to approach a certain part with fire or light; notwithstanding which, one of them entered it with a lighted candle; when a tremendous explosion took place, by which all in that part of the mine, consisting of nine men and one woman, lost their lives.—But on the 25th of the same month, one of the most terrible accidents on record, in the history of collieries, took place at Felling, near Gateshead, Durham, in the mine belonging to C. J. Brandling, esq. which was the admiration of the district for the excellence of its ventilation and arrangements. Nearly the whole of the workmen were below, the second set having gone down before the first came up; when a double blast of hydrogen gas took place, and set the mine on fire, forcing up such a volume of smoke as darkened the air to a considerable distance, and scattered an immense quantity of small coal from the upper shaft. In this calamity no fewer than 93 men and boys perished.

At Southray, a village three miles from Bardney, in Lincolnshire, three boys were killed by lightning on the 28th of May. They were tending geese, in company with another, named Charles Blakey, who escaped in a most providential manner. When the storm approached, they retired to a hovel, and sat down on the ground; Blakey having two companions on one side, and one on the other. After some time, he jumped up in a fright, saying, "Come, boys, let us go home; we shall all be killed in this place." His companions did not speak; and he ran home, where he informed his mother, he thought his companions were all killed by the lightning, as they did not speak or stir. Several of the neighbours went to the place immediately, and there found them all lying dead: the lightning seemed to have fallen on their heads, and run down their bodies, burning their necks, shoulders, and breasts, in a dreadful manner, and causing large brown sores. Two of their shirts were burned, but their outward garments were not damaged.

From the abstract of a return of the number of non-resident and resident incumbents in England and Wales, presented to the house of commons and ordered to be printed on the 28th of May, it appears, that the number of  
Incumbents

Incumbents in England and Wales, is	- - -	10261
Of which are resident	- - -	4421
Non-resident from exemption	- - -	2671
Non-resident by licences	- - -	2114
Non-residents not included in licences or exemptions	- - -	1017
Miscellaneous cafes of non-residents	- - -	38
Total non-residents	- - -	5840

Which shows that, of the whole number of incumbents; the number of non-residents exceeds the number of residents by 1419

On the 1st of June, there was a grand installation of Knights of the Bath; for a full account of which ceremony, see vol. xi. p. 891, 2.

No sale of books ever engrossed a larger share of public attention than the extensive and valuable library of the late John duke of Roxburgh. The catalogue was judiciously compiled by Messrs. G. and W. Nicol, and the books were sold by Mr. Robert Evans of Pall Mall, who for that especial purpose commenced book-auctioneer. The library was sold at his grace's late residence in St. James's square; and so numerous and valuable were the lots, that the sale lasted forty-five days, commencing on the 18th of May, and closing on the 8th of July. The total produce of the library (which it is believed did not cost its late noble owner more than 5000l.) was about 23,341l. The following are among the most remarkable articles dispersed at this sale; with the prices they brought:

The Festival; printed by Caxton. 105l. Bought by lord Spencer.

The Prouffyttable Boke for Mane's Soul, called the Chastyng of Godde's Chyldren; printed by Caxton. 140l. Lord Spencer.

Lyf of Saint Katherin of Senis; printed by Caxton. 95l. Mr. Clarke.

Sessions' Papers and Trials at the Old Bailey, from 1690 to 1803. 2 vols. in folio, and 80 vols. in 4to. 378l. Mr. Reed.

A Translation of Cicero on Old Age; printed by Caxton. 115l. Mr. Nornaville.

The Boke of Scynt Albons; printed at St. Albans, 1486. imperfect. 147l. Mr. Triphook.

The Mirroure of the World; printed by Caxton, in 1480. 351l. 15s. Mr. Nornaville.

The Kalindayr of the Shyppers, folio; printed at Paris, 1503. 180l. Mr. Nornaville.

Callimachi Hymni. Florence, 1472. 4to. 63l. Mr. Payne.

A Discourse of English Poetrie, by W. Webbe, 1586. 4to. 64l. Mr. Triphook.

Paradise of Daintie Devises, 4to. 1580. 55l. 13s. Mr. Rice.

A Collection of Old Ballads, in 3 vols. folio. 477l. 13s. Mr. Harding.

Guy Earl of Warwick, a metrical Romance; printed by Copeland, 4to. 43l. 1s. Mr. Heber.

Love's Martyr, or Rosalin's Complaint; by Chester, 4to. 1601. 24l. 3s. Mr. Dubois.

Gower's Confessio Amantis; printed by Caxton, 1493. folio. 336l. Mr. Payne.

Chaucer's Canterbury Tales, a manuscript on vellum; folio. 357l.

The Passetyme of Pleasure, by Stephen Hawys; printed by Wynkyn de Worde, 1517. 81l. Rev. Mr. Dibdin.

The Exemple of Vertu, by Stephen Hawys; W. de Worde, 1530. 60l. Mr. Rice.

The Complaynt of a Lover's Life, 4to. printed by Wynkyn de Worde. 58l. Mr. Nornaville.

The Castell of Pleasure, 4to. by W. de Worde. 64l. Rev. Mr. Dibdin.

Watson's Translation of Brant's Ship of Fools, 4to. 64l. Mr. Nornaville.

Churchyard's Works, 2 vols. 4to. 96l. Mr. Triphook.

Le Mystere de la Vengeance de Notre Seigneur J. Christ, 2 vols. folio, MS. 493l. 10s. Mr. Payne.

Shakespeare's Plays, folio, 1623. 100l. Mr. Nornaville.

A Collection of 627 Prints of Theatrical Scenes and Portraits of Performers; 3 vols. folio. 102l. 18s.

The Nice Wanton, a Comedy, 4to. 1560. 20l. 9s. 6d. Mr. Nicol.

Marlow and Nash's Tragedy of Dido, 1594. 17l. 17s. Mr. Heber.

Morlini Novellæ, 4to. Neapolis, 1520. 48l. Mr. Triphook.

Recueil des Romans des Chevaliers de la Table Ronde, 3 vols. folio, an ancient manuscript. 78l. 15s. Mr. Triphook.

Le Romant de Fier à Bras le Geant, folio, Genev. 1478. 38l. 17s. Mr. Triphook.

Recueil des Histoires de Troyes, par Raoul Le Fevre, folio. 116l. 11s. Lord Spencer.

*Il Decamerone di Boccaccio, folio; first edition, printed at Venice by Valdarfer, 1471. 2260l. being the largest sum ever given for a single volume. Marquis of Blandford.*

The Boke of the Fayt of Armes, and of Chyvalrye; printed by Caxton. 336l. Mr. Nornaville.

The Veray trew History of the Valiant Knight Jafon. 94l. 10s. Mr. Ridgway.

*The Recuyell of the Histories of Troye, by Raoul Le Fevre. Caxton, 1471. 1060l. 10s. Duke of Devonshire.*

The moost pytefull History of the Noble Appolyn, Kyng of Thyre, 4to. 110l. Mr. Nornaville.

History of Blanchardyn and the Princes Eglantyne; printed by Caxton. 215l. 5s. Lord Spencer.

Delphin Classics, 67 vols. 504l. Duke of Norfolk.

Painter's Palace of Pleasure, 1575, 4to. 2 vols. 45l. Rev. Mr. Dibdin.

Hearne's Collection of Ballads, 12mo. 12l. 12s. Rev. Mr. Dibdin.

Voyage de Breydenbach, fol. 1488. 84l. Lord Berners's Froissart, by Pinfon, 1525. 63l.

Boece's Croniklis of Scotland, by Bellenden, folio. 1474. 65l.

The Complaynt of Scotland, 12mo. original edition, wanting the title. 31l. 10s.

Dugdale's Monasticon, 3 vols. 67l. 4s.

The fame in English, with Steevens's Continuation, 3 vols. 49l.

The two articles which are printed in Italics, and which brought such unexampled prices, were sold on Wednesday the 17th of June; and on that day a party of noblemen and gentlemen, distinguished for their attachment to rare and curious books, and many of them for the fine collections in their own possession, dined together at the St. Alban's tavern, St. Alban's street, under the denomination of the ROXBURGH CLUB. Lord Spencer was in the chair, supported by lord Gower, sir Mark M. Sykes, bart. sir Egerton Brydges, and Mr. Roger Wilbraham. The Rev. Mr. Dibdin took the bottom of the table, flanked by Messrs. R. Heber, Bolland, Utterton, and other distinguished bibliomaniacs. Messrs. Dent, Freeling, and Lang, formed the connecting chain between such respectable upper and lower circles. The duke of Devonshire, lord Blandford, and lord Morpeth, were voted into the club, to complete the number of 31.—Some will be apt to despise the club and its pursuits, as tending to put an imaginary value upon old rubbish which has no real intrinsic worth; but for our parts we cannot but admire that generous emulation, which exalts the national character, and makes the fruits of intellectual industry the noble contest of the rich.

In the renewed turnpike-acts passed this session, a new clause was introduced, enacting—that, if any person or persons shall ride upon any causeway or foot-path, or shall drive any horse, cattle, swine, cart, or carriage, thereon, or shall wilfully cause any damage whatever to be done, he or they shall, for every such offence, be liable to a fine of 20s. half to go to the informer, and the other half to be applied to the purposes of the act; and the collector of the tolls for the time being must affix on a board, in legible characters, his christian and surname over his door, under a penalty of 10l.

On Sunday the 26th of June, a melancholy accident occurred

occurred on the river Thames.—Eleven persons, all married men, engaged a sailing-boat of the wherry-kind. The wind, which had been very high, becoming more moderate, they made fast the main-sail to the side of the boat; soon after which, a sudden gust of wind upset the wherry, and six of the unfortunate men were drowned. Another account states that nine lost their lives. Most of them have left large families.

An official return of the prisoners of war in Great Britain, laid before the house of commons about this time, states the number of French prisoners at 52,649, Danish 1868; grand total 54,517. And, as a proof of the good treatment of prisoners of war in this country, the following comparative statement of those sick and in health will be the best answer to the calumnies of the *Moniteur*:

	<i>Thursday, August 20.</i>	In health.	Sick.
On-board the prison-ships in Hamoaze	-	6100	61
In Dartmoor depot	-	7500	74

This small proportion of sick is scarcely the common average of persons not confined as prisoners of war. At Dartmoor depot, 500 prisoners, such as labourers, carpenters, smiths, &c. are allowed to work from sun-rise to sun-set; they are paid 4d. and 6d. per day, according to their abilities, and have each their daily rations of provisions, viz. a pound and a half of bread, half a pound of boiled beef, half a pound of cabbage, and a proportion of soup and small beer. They wear a tin plate in their caps, with the title of the trade they are employed in; and return every evening to the depot to be mustered.

Another of those atrocious outrages against human nature, which have recently stained the annals of this country, occurred on the 22d of July, at Barnes. The count and countess d'Antraignes, (French noblesse,) who resided on Barnes Terrace, had ordered their carriage, to go to London, at a quarter before nine o'clock. When going through the hall Lawrence, an Italian footman, who was desired by a female servant to open the coach-door, came in from the terrace, passed his lady, and fired a pistol at the count, which slightly grazed his hair. The monster, Lawrence, then exclaimed, "Not killed!" rushed up stairs, and immediately defended with a pistol in one hand, and a dagger in the other. The latter he plunged in the breast of the count, who walked out of the door, and made a few steps on the terrace, during which time Lawrence stabbed the countess in the right breast. She staggered a few steps, then fell down at the threshold of the door, cried out, "'Tis Lawrence! 'tis Lawrence!" and then expired. The assassin then rushed up stairs to the count's bed-room, and discharged a pistol into his own mouth, which killed him immediately. The count had followed him; and, when the servants entered, Lawrence was lying dead on the floor, and the count upon his bed speechless: he died in about a quarter of an hour. The coroner's inquest sat on the bodies on the 23d. The verdict was, That Lawrence had murdered the count and countess, and had afterwards committed suicide, *being in his senses*.—What was Lawrence's motive for these horrible murders, is not even conjectured. He does not appear to have had the least thought of escaping. There is no account of any quarrel between his master and him. All the servants agree that he was very sober. He could not have been influenced by political motives, since his revenge was directed equally against the countess. He had been in the family only three months. Besides his house on Barnes Terrace, count d'Antraignes had a town-estabishment in Queen-Anne-street West. He was 56, and the countess 52, years of age. The count had eminently distinguished himself in the troubles which have convulsed Europe for the last two-and-twenty years. In 1789, he was actively engaged in favour of the revolution; but, during the tyranny of Robespierre, he emigrated to Germany, and was employed in the service of Russia in 1797. In 1806, he was sent to England with credentials from the emperor of Russia, who had granted him a pension. He received here letters of denization; and was

often employed by our government. The countess was the once-celebrated Mad. St. Huberti, an actress of the Theatre François; and had amassed a very large fortune by her professional talents. They left one child, a son, who is studying the law at Manchester.

The poisoning some race-horses at Newmarket, in the year 1809 and 1811, had struck the racing and gambling world with consternation. More exertions were made, and greater rewards offered, for discovering the offenders, and prosecuting them to conviction, than had ever been held out for the detection of the most cruel murderers of human beings. At length an accomplice was induced to come forward; and, at the Cambridge assizes, one Dawson was arraigned on an indictment with numerous counts, viz. for poisoning a horse belonging to Mr. Adams of Royston, and a blood-mare belonging to Mr. Northey, at Newmarket, in 1809; and also for poisoning a horse belonging to sir Frank Standish, and another belonging to lord Foley, in 1811, at the same place. He was tried and convicted on the first case only.

The principal witness was Cecil Bishop, an accomplice with Dawson, and had furnished him with corrosive sublimate to sicken horses; on the prisoner complaining that the stuff was not strong enough, he prepared him a solution of arsenic. Witness described this as not offensive in smell; the prisoner having informed him that the horses had thrown up their heads, and refused to drink of the water into which the corrosive sublimate had been infused. The prisoner still complained the stuff was not strong enough; and, on being informed that if it was made strong it would kill the horses, he replied, he did not mind that; the Newmarket frequenters were rogues; and, if he, meaning witness, had a fortune to lose, they would plunder him of it. The prisoner afterwards informed witness he used the stuff, which was then strong enough, as it had killed a hackney and two brood-mares.

Mrs. Tillbrook, a housekeeper at Newmarket, where the prisoner lodged, proved having found a bottle of liquid concealed under Dawson's bed, previous to the horses having been poisoned; and that Dawson was out late on the Saturday and Sunday evenings previous to that event, which took place on the Monday. After Dawson had left the house, she found the bottle, which she identified as having contained the said liquid, and which a chemist proved to have contained poison. Witness also proved that Dawson had cautioned her that he had poison in the house for some dogs, lest any one should have the curiosity to taste it. Other witnesses proved a chain of circumstances which left no doubt of the prisoner's guilt.

Mr. King, for the prisoner, took a legal objection, that no criminal offence had been committed, and that the subject was a matter of trespass. He contended, that the indictment must fall, as it was necessary to prove that the prisoner had malice against the owner of the horse, to impoverish him, and not against the animal. He also contended that the object of the prisoner was to injure, and not to kill. The objections, however, were over-ruled without reply, and the prisoner was convicted.—The judge pronounced sentence of death on the prisoner, and informed him, in strong language, he could not expect mercy to be extended to him.—He was hanged.

At York assizes, Elizabeth Woodger and Susannah Lyall were charged with the wilful murder of a new-born male infant. The following is a sketch of this extraordinary case:—On the 12th of March, the wife of G. Needham, of Blackburn, near Rotherham, was delivered of two children, a girl and a boy. The former was perfectly formed; but in the boy there was a deficiency in the superior part of the head, the brain not being protected by any bony matter, but merely covered by a membrane. Woodger, a midwife, conceiving that it was not likely to live, formed the design of putting a period to its existence, which was accomplished by drowning it in an earthen vessel. It was then buried, but was taken up again on the 17th of

March, for the purpose of the coroner's inquest. The surgeon who examined the body stated, that the child was perfectly formed; except his head, which was deficient in the superior part an inch and a half: any pressure upon it must have produced dangerous consequences; and he did not think it possible that the child could have survived more than a few hours. The prisoners used no concealment; and it was clear that they acted under mistaken apprehensions as to the law, and thought they were justified in what they did. Several ladies gave them a most excellent character for humanity. The evidence having been gone through, his lordship, in his address to the jury, said, "I think this prosecution may be of great use to the public, in removing an erroneous opinion, that the law allows the right of deliberately taking away the life of a human being under any circumstances whatever. It is therefore highly necessary that the contrary should be known." The jury found the prisoners guilty, but recommended them to mercy, on account of the mistaken notion under which they acted. His lordship said he should not pass sentence upon the prisoners, but should write by that night's post to the secretary of state, to make a representation of the case to the prince-regent.—They were pardoned.

Another new comet was discovered on the 20th of July by M. Pons, at Marseilles, and on the 1st of August following by M. Bouvard at Paris. According to the calculations of these astronomers, it passed its perihelion on the 15th of September, at 32' 27" past one in the morning, when its distance from the sun, taking that of the earth at unity, was 0.77835. In a very clear night, and in the absence of the moon, it was just visible to the naked eye. The following remarks upon it are extracted from a paper read to the French Institute on the 31st of August:—"The motion of the comet is direct: in addition to its slow motion, it affords a remarkable uniformity in longitude and latitude—and these two circumstances have rendered the calculations more difficult of execution. It approaches the earth very slowly. There are some days when we know its place in the heavens, and when the absence of the moon admits of our observing it, on which it may be seen with the naked eye: its tail is nearly two degrees long. It may appear striking to those who shall be able to choose a convenient time and place for observing it; but, whatever may be the favourable circumstances under which it presents itself to our vision in France, it is far from being so luminous as the comet of last year. But this is of little consequence to astronomers, who do not found their observations upon the fugitive characters which attend these phenomena. The comet in question was at first seen and calculated upon without a tail, and might have disappeared in that state without causing the least regret among astronomers. If they now pursue its progress until it disappears, it will only be to perfect its elements, and to ascertain if their series of observations furnishes any index on the subject of its revolution. At present

The longitude of its ascending node is	253° 18' 50"
That of the perihelion on the orbit	- - 91 58 30
Its inclination on the ecliptic	- - - 74 20 30

The ceremony of depositing in Whitehall-chapel the eagles and colours heroically wrested from the French in Spain, took place on the 30th of September. Soon after nine in the morning, the first regiment of guards, who were to do the duty of the day, formed on the parade facing the Horse-guards, with their right resting on the wall of the Treasury. On their left the second regiment formed, with side-arms only, their left terminating near the great gun. The third regiment, also, with side-arms only, formed with the Admiralty-garden in their rear. On their left were stationed, with fixed bayonets, thirty rank and file of grenadiers of the first regiment, thirty of the second, and thirty of the third, and nine serjeants, who were to carry the eagles and colours. The line was continued to the Horse-guards; and consisted of the horse

and foot artillery stationed in the metropolis, with the several recruiting-parties belonging to the cavalry and infantry. In the rear of the first line, facing the Horse-guards, were formed the two regiments of life-guards, with their full bands, their left extending to the wall of Carlton-house. About half-past nine, general sir Harry Burrard arrived, and assumed the command, when the bands belonging to the three regiments, in their full dress, took their stations, each in the centre of its regiment. Soon after ten o'clock, the duchess of York arrived; her majesty and the princesses, in two carriages, soon followed, and were received by the troops with presented arms, the different bands playing "God save the king." They then took their station in the levee-room of the Horse-guards, which commands a view of the parade. The prince-regent, on a white charger, came from Carlton-house at half-past ten, accompanied by the duke of York on foot, the duke of Kent, colonels Bloomfield, Congreve, and Torrens, and several other officers, on horseback. His royal highness, on reaching the parade, was received with the usual honours, and took his station in front. The prince-regent then proceeded to the right of the line, accompanied by his royal brothers, their aides-de-camp, &c. and passed down the whole, the duke of York on foot at his right hand, and again resumed his station. The usual ceremony of the parade commenced; the bands belonging to the second and third regiments proceeding to troop the colours. This being gone through, the subdivisions of grenadiers stationed on the left of the line were ordered to wheel on the right, and, preceded by the band of the first regiment, marched round the square, and halted facing the Tilt-yard. At this instant the bands of the horse and foot regiments began playing; and the eagles, five in number, were brought out and given to the serjeants, who marched in the rear of the first subdivision. Three standards, and one regimental colour, were next brought, and given to the remaining serjeants, who marched in the rear of the second subdivision. The band of the first regiment began the Grenadiers March, and they proceeded round the square. On reaching the station of the prince-regent and the royal family, the eagles and colours were lowered amid the acclamations of thousands of spectators. The three subdivisions then halted, and advanced their arms, and in ordinary time paraded round. On reaching the colours of the first regiment, the whole of the trophies were lowered to the ground. They again passed the royal family, the eagles and colours being dropped, and marched through the Horse-guards to Whitehall-chapel. The remainder of the infantry were ordered to wheel on their left backwards, and, in open order, passed the prince-regent to the chapel, with the exception of the guard for the day: the life-guards followed in the same manner, and occupied their original ground. The prince-regent, dukes of York and Kent, &c. proceeded to Whitehall to hear divine service. The concourse of people assembled on the occasion was immense; and the spectacle altogether was of the most gratifying description. It was impossible to view, without feelings of exultation, those trophies which bore witness to the prowess of British soldiers, and which were won from no despicable enemy, but from troops whose military reputation stands so high in Europe. The eagles were five in number. Two of them, taken at the battle of Salamanca, were very much mutilated; two others, taken at Madrid, were in a more perfect state; and the fifth, we understand, was found in the channel of a stream near Ciudad Rodrigo, into which it was thrown when the rear of Massena's army was closely pressed by the British cavalry, on its retreat from Portugal. There were also four standards: but they were in such a tattered state, that there was not a device or letter legible. The garrison-flag of Badajoz was like a sieve, and great part of it quite red with human blood.

Drury-Lane Theatre opened on Saturday the 10th of October, with Hamlet, to an immense audience. The public

public expectation had been so much excited, that the doors were crowded at an early hour; and the difficulty of entrance was excessive. When at length the crowd had slowly laboured their way into the hall, they found other difficulties; and the passages to the doors for receiving money were scenes of nearly as much struggle and danger as the street. No serious accident, however, occurred.—The Address with which the theatre opened was attended with a very remarkable circumstance. The committee, while the house was building, had advertised to request the communication of poetical addresses from all quarters; from these, one was to be selected, and the rest returned to the writers by means of a private mark, so that the names of the unsuccessful candidates might not be known unless they chose it. Out of a hundred and twelve pieces which had been sent, not one was thought fit for the purpose; and, a very short time before the opening of the house, the committee sent to lord Byron, to request him to favour them with an address. His lordship complied; and with that address the house opened. This circumstance created a great sensation among the disappointed candidates; and one of them, Busby by name, insisted upon reciting his composition in the theatre, which occasioned a vast deal of noisy mirth. As many others of the competitors were public writers in newspapers, magazines, &c. it may be supposed that the decision of the theatrical committee would be very much impugned, and that lord Byron's composition would be decried as much as possible. This has been the case; but, for our own parts, we think his lordship's lines have great merit, are well suited to the occasion, and will stand the test of time. We shall therefore present them to the reader.

In one dread night our city saw, and sigh'd,  
Bow'd to the dust, the drama's tower of pride;  
In one short hour beheld the blazing fane,  
Apollo sink, and Shakespeare cease to reign.

Ye who beheld, O fight admir'd and mourn'd,  
Whose radiance mock'd the ruin it adorn'd!  
Through clouds of fire the maily fragments riven,  
Like Israel's pillar, chase the night from heav'n;  
Saw the long column of revolving flames  
Shake its red shadow o'er the startled Thames;  
While thousands throng'd around the burning dome,  
Shrunk back, appall'd, and trembled for their home;  
As glar'd the volum'd blaze, and ghastly shone  
The skies, with lightnings awful as their own;  
Till blackening ashes and the lonely wall  
Usurp'd the Muse's realm, and mark'd her fall;—  
Say—shall this new nor less aspiring pile,  
Rear'd, where once rose the mightiest in our isle,  
Know the same favour which the former knew;  
A shrine for Shakespeare—worthy him and *you*?

Yes, it shall be—the magic of that name  
Defies the scythe of time, the torch of flame,  
On the same spot still consecrates the scene,  
And bids the drama *be* where she hath *been*:—  
This fabric's birth attests the potent spell;  
Indulge our honest pride, and say, *How well!*  
As soars this fane to emulate the last,  
Oh! might we draw our omens from the past.  
Some hour propitious to our prayers, may boast  
Names such as hallow still the dome we lost.  
On Drury first your Siddons' thrilling art  
O'erwhelm'd the gentlest, storm'd the sternest, heart.  
On Drury, Garrick's latest laurels grew;  
Here your last tears retiring Roscius drew,  
Sigh'd his last thanks, and wept his last adieu.  
But still for living wit the wreaths may bloom  
That only *waste* their odours o'er the tomb.  
Such Drury claim'd, and claims,—nor you refuse  
One tribute to revive his slumbering muse;  
With garlands deck your own Menander's head;  
Nor hoard your honours idly for the dead!

Dear are the days which made our annals bright,  
Ere Garrick fled, or Brinsley ceas'd to write.  
Heirs to their labours, like all high-born heirs,  
Vain of *our* ancestry as they of theirs;  
While thus Remembrance borrows Banquo's glass,  
To claim the sceptred shadows as they pass,  
And we the mirror hold, where imag'd shine  
Immortal names-embazon'd on our line;  
Pause—ere their feebl' offsprings you condemn,  
Reflect how hard the task to rival them.

Friends of the stage—to whom both players and plays  
Must sue alike for pardon or for praise;  
Whose judging voice and eye alone direct  
The boundless power to cherish or-reject;—  
If e'er frivolity has led to fame,  
And make us blush that you forbore to blame;  
If e'er the sinking stage could condescend  
To soothe the sickly taste it dare not mend;—  
All past reproach may present scenes refuse,  
And censure, wisely loud, be justly mute!  
Oh! since your fiat stamps the drama's laws,  
Forbear to mock us with misplac'd applause:  
So pride shall doubly nerve the actor's powers,  
And reason's voice be echo'd back by ours!  
This greeting o'er,—the ancient rule obey'd,  
The drama's homage by her herald paid,  
Receive *our* welcome too—whose every tone  
Springs from our hearts, and fain would win your own.  
The curtain rises—may our stage unfold  
Scenes not unworthy Drury's days of old!  
Britons our judges, Nature for our guide,  
Still may *we* please, long—long may *you* preside.

The new parliament met on Tuesday the 24th of November. Here it may not be amiss to present a statement of the number and duration of parliaments within the reign of his present majesty.

Met.	Dissoived.	Existed.
		y. m. d.
19 May 1761	11 March 1768	6 9 22
10 May 1768	30 Sept. 1774	6 4 21

22 June 1807	29 Sept. 1812	5 3 7
24 Nov. 1812		

The rest of the week was employed in the house of commons in swearing-in members and in choosing a Speaker: to this office the Rt. Hon. Charles Abbott was unanimously re-elected.

His royal highness the prince-regent was pleased to open this new parliament in person. This was accordingly done, in great state, on Monday the 30th; and, eight years having elapsed since a speech had been delivered from the throne, great interest was made for tickets of admission to the house of peers. The princesses Augusta, Elizabeth, and Mary, came to town from Windsor; and, with the princess Charlotte of Wales, were conducted to the house by the duke of Cumberland. At one o'clock the prince-regent went from Carlton-house to St. James's, where he was received by the lord-chamberlain and the officers of the household. His royal highness was dressed in regimentals; and was conducted to the levee-room, where he remained till the state-carriages were announced to be in readiness; when his royal highness and his attendants entered the carriages, of which there were four. In the first carriage were the equerries and page of honour; in the second, the earl of Macclesfield, captain of the yeomen of the guard, the grooms in waiting,

waiting, and the gentlemen-ushers; in the third, the earl of Harrington, gold stick in waiting; and, in the fourth, the prince-regent, attended by the duke of Montrose, master of the horse, and earl Poulett, the lord in waiting. The carriages were preceded by a numerous body of the royal horse-guards, who were followed by four marshalsmen, sixteen footmen in state-liveries, and a party of the yeomen of the guard. The procession arrived at the house of peers at two o'clock; and the prince-regent, being robed, ascended the throne, and delivered the speech. His royal highness's robes were held up by general Keppel and Mr. Cavendish Bradshaw. On returning from the house, the prince wore a blue great coat trimmed with gold lace, gold frogs, fringe, &c. It being the first time the cream-coloured horses had worked in harness, a groom was appointed to attend each of them, and they were ordered to be very particular in taking the angle from Cleveland-row into the Stable-yard; unfortunately they took too great a sweep; and, the off hind-wheel of the coach coming in contact with the post at the corner of the foot-path leading to the marquis of Stafford's house, the shock tore up three of the curb-stones, broke a sway-bar, and threw the state-coachman off the box; he fell between the wheel-horses, but received no other injury than cutting his lip; he did not lose his reins, and was on the box again instantly. This accident detained the procession for some time. Notwithstanding the wetness of the day, the streets, houses, and public buildings, were filled with spectators. A military band was placed at St. James's palace, and another at the house of peers; and the cannon in St. James's park fired a salute when his royal highness descended from the throne. The park and streets through which the procession passed were kept clear by two regiments of dragoons.

The speech from the throne was very long; and his royal highness delivered it with great propriety and dignity.—After touching upon his majesty's lamented indisposition, and the diminished hopes of his recovery, his royal highness adverted to the successes in the peninsula under the conduct of lord Wellington, and their final good effects, notwithstanding his retreat from Burgos, and the evacuation of Madrid. He then mentioned the restoration of peace and friendship with the courts of Petersburg and Stockholm, and spoke in terms of eulogy of the resistance made by Russia to the arms of their invaders, auguring a happy termination of the contest. He informed parliament of a supplementary treaty entered into with his Sicilian majesty, and hinted at the new measures concerted with the government of that island, for an active co-operation in the common cause. With respect to the declaration of war by the United States of America, he observed, that it was made under circumstances which might have afforded a reasonable expectation that the amicable relations between the two countries would not be long interrupted; but that the conduct and pretensions of that government had hitherto prevented any arrangement for that purpose. He took notice of the defeat of the attempts against Canada; and said that his efforts were still directed to the restoration of peace; but that, until this object could be attained without sacrificing the maritime rights of Great Britain, he should rely on their support for a vigorous prosecution of the war. The conclusion of the speech recommended an early consideration of a provision for the effectual government of the Indian provinces, in consequence of the approaching expiration of the charter of the East-India Company. It adverted also to the success of the means employed for suppressing the spirit of outrage and insubordination which had appeared in some parts of the country; and expressed a hope that atrocities so repugnant to the British character would never recur; and ended with the usual declaration of confidence in the wisdom of parliament, and the loyalty of the people.

The accustomed complimentary address was moved in both houses, and passed as of course.

Thanks to lord Wellington, and a grant to him of 100,000*l.* to be laid out in land, were the subjects which next engaged both houses of parliament; but, as they exercised the oratory rather than the argumentative powers of the different speakers—since there was scarcely any other contention than which party should most highly extol the merits of that illustrious general—it is unnecessary in this place to record any particulars. The votes on both questions passed unanimously.

A second reading of the renewed gold-coin bill being the order of the day in the house of commons on December the 8th, Mr. Creevey rose to state his objections to the bill. He said that, when the bullion-committee sat upwards of two years ago, gold was at 4*l.* 10*s.* an-ounce, but was at present 5*l.* 5*s.* so that the depreciation of paper was 35 per cent. The obligation to take paper at its nominal value was therefore an enormous violation of property, by which all classes were losers, except the bank.—One of the most material circumstances which occurred, was a question put by Mr. Ponsoby to the Chancellor of the Exchequer, what price he gave for bills to remit abroad? which for some time he declined to answer; but at length he said, 67 pence per milrea.—In answer to a complaint of an excessive issue of paper-currency by the bank, Mr. Manning stated that the amount yesterday was 22½ millions, whereas in July and August 1810 it was near 25 millions.—The general opinion in the house seemed to be, that the measure, however objectionable in its principles, was at this time necessary; and, on a division, the second reading was carried by 129 against 19.

On bringing up the report, December 11, Mr. Whitbread, in order, he said, to bring the matter to a test, moved the rescinding the third resolution of May last, (see p. 248.) which stated the opinion of the Chancellor of the Exchequer, "that, in all cases wherein coin might be used for legal purposes, the promissory notes of the bank of England, and guineas, were, in public estimation, considered equivalent, and were generally so accepted." Upon this motion the house divided: Nays, 63; ayes, 26; majority against it, 37.

Mr. Huskisson then rose, and said, that he had been informed that government had sent a great number of bank-notes to Canada for the payment of our troops and other establishments in that province; and that, being estimated according to their real value, they were sold there at a discount of 30 per cent. From the necessity of the case, he had approved of that part of the bill which virtually made bank-notes a legal tender; but he could see no use in that part which made it criminal to sell gold-coin at more than the legal value. A few low and ignorant people had been convicted upon it; while millions of guineas had been exported, notwithstanding all the vigilance of government. He was not alarmed at the idea of a gold-price and a paper-price, which had prevailed in Ireland, and now subsisted in Portugal, where the effect was, that their gold-coin was still in circulation, while ours had all disappeared. Instances were given by other members of the actual existence of two prices in this country; and several of the former arguments on the subject were recapitulated. The report was, however, agreed to. The debate was resumed on the motion for the third reading of the bill, December 14; but the reading was carried on a division, by 80 against 15.—In the house of lords, the bill underwent but little discussion; and it passed into a law before the recess.

On the 17th of December, a message was sent to both houses from the prince-regent, recommending the granting a relief to the suffering subjects of his majesty's good and great ally, the emperor of Russia. It was ordered to be taken into consideration in both houses on the following day.

In the house of lords, on the 18th, the earl of Liverpool rose to move an address pledging the house to concur in the object of the message. He made an introductory speech, in which he stated that the invasion of Russia had

had been attempted with 360,000 men, including 60,000 cavalry—no nation had ever made such exertions or sacrifices as Russia—a population of 200,000 souls had voluntarily devoted their habitations to the flames, sooner than they should afford a shelter to the invaders. Besides Moscow, no fewer than 100 villages were left and consumed on the advance of the enemy, and their inmates retired for shelter and security to the woods and forests. Russia had been invaded because she refused to accede to the continental system; and a deadly blow was intended to be struck, through her, against Great Britain.

Lord Holland said, that he found himself placed in a very painful situation by the considerations on which this motion was urged; for, whilst he must doubt whether this was a wise or politic grant, he felt, that, when once proposed, it might be unwise and unsafe to reject it. He then stated some reasons why he thought that it would have little efficacy in producing the intended relief; yet he would not oppose it, principally because he would not have it imagined that any member of that house could be insensible to the merits or the sufferings of the Russians. He further hoped, that the proposal might be regarded as evidence of a complete co-operation and concert between the two governments, not merely for carrying on the war, but as to its objects, and the grounds on which a general peace might be established.—The address was then unanimously agreed to.

In the house of commons, the house having resolved itself into a committee of supply, the Chancellor of the Exchequer, after some preliminary statements of his motives and views, moved, "that a sum not exceeding 200,000*l.* should be granted to his majesty, to be applied towards the relief of the sufferers in Russia."

Mr. Ponsonby said, he should vote for the grant, but not for the reasons assigned by the last speaker. It would not afford either speedy or effectual relief to the sufferers; but he looked upon it in the light of a gift to the emperor of Russia, and as a mark of gratitude for the extraordinary efforts made by that country in resisting the power of France, and opposing the continental system which was attempted to be forced upon it.

Mr. Whitbread said, that, after fully exercising his judgment upon the question, he could not suffer the vote to pass unanimously. He thought the proposed grant would prove ineffectual; and that it was inconsistent with the sentiments which the house was bound to entertain for the distresses of their own countrymen. The sum was too paltry to be of any real use; and it was the duty of the Russian government to protect its own people, and to alleviate their wretchedness, occasioned by an act unparalleled in the history of the world—the conflagration of Moscow. The sum appeared to be in reality a contribution to carry on the war, and no other than a paltry and contemptible subsidy.

Lord Castlereagh strongly disclaimed the appellation given to the grant by the last speaker; and said, that, by the vote now proposed, we were subsidizing the sensibilities and generous feelings of all the world.

Sir Francis Burdett could not consent to give away money, which, whilst it could not be effectual to relieve the calamities of Russia, would add to the burdens already so severely felt by the community at home. He thought it was hard that the people of this country should be called upon to support the wretched of all nations; and yet, when relief was requested for our starving manufacturers, the answer was, that, in times like this, economy must be attended to; and it was impossible for the house to grant relief to an extent that would be of any avail.

Mr. Wilberforce did not doubt that the sum asked for would be of material benefit to the Russians, as similar grants had been in other cases. It would show at least the sympathetic feelings of the house for the distresses of the Russian people; and he could not conceive why nations should not be generous, as well as individuals.—The resolution was then agreed to.

It should be recorded, that, in addition to the parliamentary aid granted to Russia, considerable private subscriptions were entered into for the relief of the sufferers in that country.

Nothing farther of importance occurred in either house before their adjournment for the Christmas recess. This adjournment took place on the 22d of December, and extended to the 2d of February.

1813.—The events of the last and present year will display a glow of returning splendour from the political atmosphere, too long obscured by night and storm and tempest. At length the exulting nations may encourage the cheering hopes, that they are no longer to bow under the iron rod of the oppressor; no longer to see desolation spread over their fields, their paternal inheritance the prey of the spoiler, their children made to pass through the fire of the modern Moloch. We have to congratulate our countrymen upon a succession of victories the most important, the most splendid, the most glorious, that are found to adorn the page of history. Armies beyond all example numerous and powerful, who meditated the destruction of empires, and the consolidation of one unbounded rule of despotism, have been levelled with the dust, with no monumental record to mark the spot where they perished! Let us be animated with the noble conviction, that in the depression of a tyranny the most barbarous, the most ambitious, the most insatiable, that ever was exercised, the valour, the perseverance, the patriotism, of Britons, have, by the acknowledgment of all the world, largely and effectually contributed. Once more the auspicious wings of favouring winds waft our deeply-laden barks to every quarter of the universe. Hope is revived, industry quickened, commerce in activity; and literature indulges the most pleasing and consolatory speculations. One act of justice we owe to ourselves: in the deepest gloom, spread by the melancholy aspect of events, the British nation has never given way to despondency. From a similar principle in this great and awful reverse of events, we impose a restraint upon our emotions of exultation: it is enough that we have seen the tyrant fallen, incapable, at length, of again loosening the sacred bonds which united nations together in the amicable interchange of good offices. The further events we leave to him whose goodness has brought about the present; but, with the most delightful complacency of expectation, we may now hope to listen to the sounds of the lute of peace; and, under the sweeter influence of its inspiring melody, the disciples of the muses may each, under the sacred shade of his own vine, cultivate, without danger of molestation, his favourite pursuit. Such are our wishes, and such the flattering prospect of the present period!

On the 9th of January, the London Gazette contained the prince regent's Declaration upon the situation of England towards America, with relation to the causes of the war which had unfortunately broken out between the two countries. His royal highness most solemnly declares, (and we can easily believe it,) that no desire of conquest, or other ordinary motive of aggression, can be imputed to Great Britain. Then he contemplates the conduct of this government towards the United States of America; and shows that a spirit of amity, forbearance, and conciliation, has ever characterized her transactions. His royal highness next enters into the speculations of the ruler of the French, in issuing his decrees of Berlin and Milan, and expatiates at large, and with much clearness, upon the rights of this country, and the pretensions of the United States, in a long but interesting official piece, which ends by declaring, "that, disappointed in his just expectation, the prince-regent will still pursue the policy which the British government has so long and invariably maintained, in repelling injustice, and in supporting the general rights of nations; and, under the favour of Providence, relying on the justice of his cause and the tried loyalty and firmness of the British nation, his royal highness confidently

looks

looks forward to a successful issue to the contest in which he has thus been compelled most reluctantly to engage."

This Declaration was of course laid before both houses of parliament; and, on the 18th of February, lord Bathurst, in the upper house, moved an address upon the subject. Referring to the declaration of war by America, he said he believed it was precipitated by the expectation of intercepting our homeward-bound fleet from the West Indies; for commodore Rodgers sailed immediately upon the eve of that declaration. While the British government showed a disposition to restore seamen who were proved to be natives of America, the United-States government constantly refused to restore British seamen who had deserted. This was a proof that the American government was hostile to this country. They likewise claimed a right of cancelling the allegiance of subjects of other states. He alluded to their practice of granting letters of naturalization. For this purpose all that was requisite was, for two persons stating themselves to be citizens of the United States, and vouching before a magistrate for a third to be a citizen, and, having resided five years there, obtained him a certificate of citizenship. These proofs might be fabricated, and no contrary interest existed in the courts to investigate them. It was impossible, therefore, we could give up the right of impressment, upon which our maritime greatness depended. His lordship concluded by moving an address to the prince-regent, approving of the rejection of the proposition from America; lamenting the necessity of the war, but acknowledging its justice; and expressing a determination to support his royal highness in carrying on the war with vigour.

The marquis of Lansdowne was glad he could concur in the address; but regretted, that, owing to the disposition of our naval force, such triumphs had been afforded to the Americans. War, once commenced, ought to be vigorously prosecuted, that it might be sooner terminated.—Lord Melville said, whenever the detail was entered into, it was capable of proof, that, at the time of the breaking out of the war, the force on the American station was amply sufficient for all the purposes required of it.—The earl of Liverpool adverted to the numerous escapes of the enemy's fleet during the better part of lord Nelson's career, to show that it might so happen without attaching blame to the admiralty.

Lord Holland would not concur in the address, because it was so worded as to imply, that the American government had peremptorily insisted on our surrender of the right of impressing seamen; and to this he could not agree on the face of the evidence.

Lord Erskine disapproved of the address, and could not consider the war as the consequence of the question of the right of impressing. It originated in the former irritations between this country and America, previous to the orders in council; and, until these were removed, there could be no conciliation. It had been said that this war, if the Americans persisted in their claims, must be eternal. If so, our prospects were disheartening; for America was a growing country; and in a lengthened contest, all the advantages were on her side, and against this country.—We believe that few Englishmen would be of lord Erskine's opinion, as to the ulterior issue of a contest between America and England; for surely the resources and power of this country are not of such a nature as soon to be exhausted and destroyed by the trans-atlantic pretence to authority on the bosom of the seas.

The same subject was warmly agitated in the commons on the same day.—Lord Castlereagh concluded a long speech by stating, that the seamen in our service, who claimed their discharge as natives of America, were in 1811, 3500; and in 1812, 3100—instead of 15 or 20,000, as stated by the American government. He considered the latter as anxious to enter into the war with this country, in order to assist the cause of France. He moved the following address: "That, while we deeply lament the failure of the endeavours of his royal highness to preserve

the relations of peace and amity between this country and America, we highly approve of the resistance opposed to the unjustifiable pretensions of the government of the United States; being satisfied that those pretensions were not admissible, without surrendering some of the most ancient, important, and undoubted, rights of the British empire. That, impressed with these sentiments, and fully convinced of the justice of his royal highness's cause, his royal highness may rely on our zealous and cordial support, and our affording every means necessary for prosecuting the war with vigour, and for bringing it to a safe and honourable termination."

Mr. Ponsonby warmly approved the conduct of ministers in resisting the demands of America; and declared, that, while they showed a due spirit of conciliation, he would give them his support.

Mr. A. Baring said, that an earlier repeal of the orders in council would have prevented war; but that there was a strong party in that country inimical to England, and which industriously inflamed the public opinion. He thought we had not shown a spirit of conciliation; and that, if there were no more than six hundred American seamen in the British service, America had a right to demand redress.

Mr. Foster attributed the war to the disposition shown by America to revive forgotten causes of dispute. As long as Washington presided over their councils, America was true to her own interests; but, when he descended into the grave, and the influence of his policy had subsided, a new system and new measures were adopted.

Mr. Whitbread declared, that he considered America to have been ill-treated by both belligerents; and, after a protracted series of aggravated insults, had declared against us, but not for France. He considered the frauds and perjuries of the practice of granting certificates only to be equalled by the perjuries and horrors of the license-system.—Mr. Canning, in an able speech, supported the address, but regretted the manner in which the war had been conducted.—The address was carried unanimously in both houses.

It was not unreasonable to expect, that at this moment the claims of the head of the house of Bourbon to the usurped throne of France would be publicly renewed. Willing to disclose to the inhabitants of the French empire his real dispositions, and the conduct he intends to follow, when Providence shall replace him upon the throne of his ancestors, the titular sovereign, Louis XVIII. published the following proclamation, dated Hartwell, Feb. 1, 1813.

"The moment is at length arrived, when Divine Providence appears ready to break in pieces the instrument of its wrath. The usurper of the throne of St. Louis, the devastator of Europe, experiences reverses in his turn. Shall they have no other effect but that of aggravating the calamities of France; and will she not dare to overturn an odious power, no longer protected by the illusions of victory? What prejudices or what fears can now prevent her from throwing herself into the arms of her king; and from recognizing, in the establishment of his legitimate authority, the only pledge of union, peace, and happiness, which his promises have so often guaranteed to his oppressed subjects? Being neither able nor inclined to obtain, but by their efforts, that throne which his rights and their affection can alone confirm, what wishes should be adverse to those which he has invariably entertained? what doubt can be started with regard to his paternal intentions? The king has said in his preceding declarations, and he reiterates the assurance, that the administrative and judicial bodies shall be maintained in the plenitude of their powers; that he will preserve their places to those who at present hold them, and who shall take the oath of fidelity to him; that the tribunals, depositaries of the laws, shall prohibit all persecutions bearing relation to those unhappy times of which his return will have for ever sealed the oblivion; that, in fine, the Code polluted

polluted by the name of Napoleon, but which, for the most part, contains only the ancient ordinances and customs of the realm, shall remain in force, with the exception of enactments contrary to the doctrines of religion, which, as well as the liberty of the people, has long been subjected to the caprice of the tyrant. The senate, in which are seated some men so justly distinguished for their talents, and whom so many services may render illustrious in the eyes of France and of posterity—that corps, whose utility and importance can never be duly appreciated till after the restoration—can it fail to perceive the glorious destiny which summons it to become the first instrument of that great benefaction which will prove the most solid as well as the most honourable guarantee of its existence and its prerogatives? On the subject of property, the king, who has already announced his intention to employ the most proper means for conciliating the interests of all, perceives, in the numerous settlements which have taken place between the old and the new land-holders, the means of rendering those cares almost superfluous. He engages, however, to interdict all proceedings by the tribunals, contrary to such settlements; to encourage voluntary arrangements; and, on the part of himself and his family, to set the example of all those sacrifices which may contribute to the repose of France, and the sincere union of all Frenchmen. The king has guaranteed to the army the maintenance of the ranks, employments, pay, and appointments, which it at present enjoys. He promises also to the generals, officers, and soldiers, who shall signalise themselves in support of his cause, rewards more substantial, distinctions more honourable, than any they can receive from an usurper—always ready to disown, or even to dread, their services. The king binds himself anew to abolish that pernicious conscription, which destroys the happiness of families and the hope of the country. Such always have been, such still are, the intentions of the king. His re-establishment on the throne of his ancestors will be for France the happy transition from the calamities of a war which tyranny perpetuates, to the blessings of a solid peace, for which foreign powers can never find any security but in the word of the legitimate sovereign.

LOUIS.”

This proclamation did not appear to have any effect at the time; but at the present moment it will be read with interest. When mentioned in the British parliament, it was declared not to be a measure concerted with or encouraged by the government of this country. The time was not yet come, for us openly to espouse the cause of the Bourbons.

Sir Francis Burdett, on the 23d of February, after exposing several encroachments made upon the constitution in consequence of the unfortunate indisposition under which his majesty is suffering, moved for leave to bring in a bill to provide against any interruption of the exercise of the royal authority, in the event of the death of the prince-regent in his father's life-time. He was desirous it should be understood, that he intended the presumptive heir to the throne, the princess Charlotte of Wales, should in such case exercise the royal authority. This would prevent both ministers and parliament from rendering the royal authority subservient to their will.—The motion, after a short debate, was negatived by 238 to 73.

It is with painful feelings that we find ourselves called upon, by our duty of annalists, to record transactions which had better been buried in oblivion than to appear before the public; but as, at the times now under our consideration, they caused a great deal of interest and concern in the nation at large, and especially in the metropolis, we cannot refuse presenting the principal features of the facts to our readers.

So far back as the year 1796, the prince of Wales thought proper to send the following letter to his illustrious consort.—It is dated Windsor Castle, April 30.

“Madam; As lord Cholmondeley informs me that you wish I would define in writing,\* the terms upon which

we are to live, I shall endeavour to explain myself upon that head with as much clearness and as much propriety as the nature of the subject will admit. Our inclinations are not in our power; nor should either of us be held answerable to the other, because *Nature has not made us suitable to each other*. Tranquil and comfortable society is, however, in our power.—Let our intercourse, therefore, be restricted to that; and I will distinctly subscribe to the condition which you required through lady Cholmondeley,† that, even in the event of any accident happening to my daughter, which I trust Providence will in its mercy avert, I shall not infringe the terms of the restriction, by proposing at any period a connection of a more particular nature. I shall now finally close this disagreeable correspondence, trusting that, as we have completely explained ourselves to each other, the rest of our lives will be passed in uninterrupted tranquillity.—With great truth and sincerity, your's,

GEORGE P.”

\* The substance of this letter had been previously conveyed in a message through lady Cholmondeley to her royal highness; but it was thought by her royal highness to be infinitely too important to rest merely upon a verbal communication, and therefore she desired that his royal highness's pleasure upon it should be communicated to her in writing.

† Upon the receipt of the message alluded to, her royal highness, though she had nothing to do but to submit to the arrangement which his royal highness should determine upon, desired it might be understood, that she should insist that any such arrangement, if once made, should be considered as final; and that his royal highness should not retain the right, from time to time, at his pleasure, or under any circumstances, to alter it.

The answer to the foregoing letter conveys the most afflicting demonstration of the fact, that differences and disgusts had arisen between the royal pair very soon after their nuptials.

“The avowal of your conversation with lord Cholmondeley neither surprises nor offends me: it merely confirmed what you have *tacitly insinuated for this twelvemonth*. But, after this, it would be a want of delicacy, or rather an unworthy meanness in me, were I to complain of those conditions which you impose upon yourself.—I should have returned no answer to your letter, if it had not been conceived in terms to make it doubtful whether this arrangement proceeds from you or from me; and you are aware that *the credit of it belongs to you alone*.—The letter which you announce to me as the last, obliges me to communicate to the king, as to my sovereign and my father, both your avowal and my answer. You will find enclosed the copy of my letter to the king. [Not published.] I apprise you of it, that I may not incur the slightest reproach of duplicity from you. As I have at this moment no protector but his majesty, I refer myself solely to him upon this subject; and, if my conduct meets his approbation, I shall be, in some degree at least, consoled. I retain every sentiment of gratitude for the situation in which I find myself, as princess of Wales; enabled by your means to indulge in the free exercise of a virtue dear to my heart—I mean charity.—It will be my duty likewise to act upon another motive—that of giving an example of patience and resignation under every trial.—Do me the justice to believe that I shall never cease to pray for your happiness, and to be your much-devoted

CAROLINE.”

Her royal highness therefore lived in retirement at Blackheath. In the year 1802, in “the exercise of that virtue so dear to her heart, charity,” she took into her house an infant, the son of a poor woman, and brought it up with great care and tenderness. Her enemies insinuated that the child was her own; and, in 1806, certain written declarations were laid before the prince of Wales, who referred them to his majesty; and his majesty was pleased to order a commission, consisting of lord-chancellor Erskine, and the lords Grenville, Spencer, and Ellenborough,

borough, to inquire into the truth of these declarations, and to examine evidence. These noble lords made a Report on the 14th of July, 1806, from which we must make a few extracts. "We first examined on oath the principal informants, sir John Douglas and Charlotte his wife; who both positively swore, the former to his having observed the fact of the pregnancy of her royal highness, and the latter to all the important particulars contained in her former declaration, and above referred to. Their examinations are circumstantial and positive. The most material of these allegations being thus far supported by the oath of the parties from whom they had proceeded, we then felt it to be our duty to follow up the inquiry by the examination of such other persons as we judged best able to afford us information as to the facts in question. We thought it beyond all doubt, that in the course of inquiry many particulars must be learnt, which would be necessarily conclusive on the truth or falsehood of these declarations; so many persons must have been witnesses to the appearance of an actual existing pregnancy; so many circumstances must have been attendant upon a real delivery; and difficulties so numerous and insurmountable must have been involved in any attempt to account for the infant in question as the child of another woman, if it had been in fact the child of the princess, that we entertained a full and confident expectation of arriving at complete proof, either in the affirmative or negative, on this part of the subject.—This expectation was not disappointed. We are happy to declare our perfect conviction, that there is *no foundation whatever* for believing that the child now with the princess of Wales is the child of her royal highness, or that she was delivered of any child in the year 1802; nor has any thing appeared to us which would warrant the belief that she was pregnant in that year, or at any other period within the compass of our inquiries. The identity of the child now with the princess, its parents, age, the place and date of its birth, the time and circumstance of its being first taken under her royal highness's protection, are all established by such a concurrence both of positive and circumstantial evidence, as can in our judgment leave no question on this part of the subject. That child was, beyond all doubt, born in Brownlow-street hospital, on the 11th day of July, 1802, of the body of Sophia Austin; and was first brought to the princess's house in the November following.

"We do not, however, feel ourselves at liberty, much as we should wish it, to close our Report here. Besides the allegations of the pregnancy and delivery of the princess, those declarations contain other particulars respecting the conduct of her royal highness, such as must, especially considering her exalted rank and station, necessarily give occasion to very unfavourable interpretations. From the various depositions and proofs annexed to this Report, particularly from the examination of Robert Bidgood, William Cole, Frances Lloyd, and Mrs. Lisle, your majesty will perceive that several strong circumstances of this description have been positively sworn to by witnesses, who cannot, in our judgment, be suspected of any unfavourable bias, and whose veracity, in this respect, we have seen no ground to question. On the precise bearing and effect of the facts thus appearing, we conceive it to be our duty to report—that, as on the one hand the facts of pregnancy and delivery are to our minds satisfactorily disproved, so on the other hand we think the circumstances to which we now refer, particularly those stated to have passed between her royal highness and captain Manby, must be credited until they shall receive some decisive contradiction; and, if true, are justly entitled to the most serious consideration."

As this Report left some little stain, on the score of levity, upon the character of the princess, her royal highness addressed a letter to his majesty, commenting on the evidence, and indeed "protesting against the legality of the commission, and all proceedings under it." In January 1807, his majesty (with the advice of his cabinet-

council) was pleased to send a Message to the princess, stating, that "it is no longer necessary for him to decline receiving the princess into his royal presence. The king sees with great satisfaction the agreement of his confidential servants, in the decided opinion expressed by the four lords, upon the falsehood of the accusations of pregnancy and delivery brought forward against the princess by lady Douglas. On the other matters produced in the course of the inquiry, the king is advised, that none of the facts or allegations stated in the preliminary examinations, carried on in the absence of the parties interested, are to be considered as legally or conclusively established. But in those examinations, and even in the answer drawn in the name of the princess by her legal advisers, there have appeared circumstances of conduct on the part of the princess, which his majesty could never regard but with serious concern. The elevated rank which the princess holds in this country, and the relation in which she stands to his majesty and the royal family, must always deeply involve both the interests of the state, and the personal feelings of his majesty, in the propriety and correctness of her conduct; and his majesty cannot, therefore, forbear to express, in the conclusion of the business, his desire and expectation, that such a conduct may in future be observed by the princess, as may fully justify those marks of paternal regard and affection which the king always wishes to show to every part of the royal family. His majesty has directed that this Message should be transmitted to the princess of Wales by his lord-chancellor; and that copies of the proceedings which have taken place on this subject should also be communicated to his dearly beloved son, the prince of Wales."

A minute of council followed on the 22d of April, 1807, which was most consolatory to the princess. "After the most deliberate consideration of the evidence which has been brought before the commissioners, and of the previous examinations, as well as of the answer and observations which have been submitted to your majesty upon them, they feel it necessary to declare their decided concurrence in the clear and unanimous opinion of the commissioners, confirmed by that of all your majesty's late confidential servants, that the two main charges alleged against her royal highness the princess of Wales, of pregnancy and delivery, are completely disproved; and they further submit to your majesty their unanimous opinion, that *all the other particulars of conduct*, brought in accusation against her royal highness, to which the character of criminality can be ascribed, are either satisfactorily contradicted, or rest upon evidence of such a nature, and which was given under such circumstances, as render it, in the judgment of your majesty's confidential servants, *undeserving of credit*. Your majesty's confidential servants, therefore, concurring in that part of the opinion of your late servants, as stated in their minute of the 25th of January, that there is no longer any necessity for your majesty being advised to decline receiving the princess into your royal presence, humbly submit to your majesty, that it is essentially necessary, in justice to her royal highness, and for the honour and interests of your majesty's illustrious family, that her royal highness the princess of Wales should be admitted, with as little delay as possible, into your majesty's royal presence; and that she should be received, in a manner due to her rank and station, in your majesty's court and family."

The princess was now received at court; it was hoped that every thing was forgotten and forgiven; and some good people indulged themselves with the fond expectation of seeing the prince and princess of Wales united in supporting the true dignity and character of the court.—Vain hopes! The same wicked spies and informers were at work; and, in the year 1812, when the king's disorder was become hopeless, by which the princess had lost her best friend, the former accusations against her royal highness began to be repeated with aggravations; and fresh insinuations were propagated as to levity of conduct. The

consequence was, that his royal highness the prince-regent thought fit to restrict his daughter the princess Charlotte in the frequency of her visits to her mother, and also to refer certain documents which he had received to the investigation of some of the privy council. Her royal highness now thought fit to appeal to the British parliament for the final clearing of her character. She sent a letter to the Speaker of each house, with a request that it might be read immediately to the assembled members. The Speaker of the house of lords, lord-chancellor Eldon, never took the least notice of it; but, in the house of commons, on the 2d of March, 1813, Mr. Abbott said, that in the afternoon of yesterday he had received a paper, which purported to be a letter from the princess of Wales: it not having any signature, and being delivered to one of the door-keepers, he had thought it his duty, previously to laying it before the house, to authenticate it. Having so done, he would, with their permission, read the letters.

“Montague House, Blackheath, March 2.

“The princess of Wales, by her own desire, as well as by the advice of her counsel, did yesterday transmit to Mr. Speaker a letter, which she was anxious should have been read without delay to the house of commons; and the princess requests that the said letter may be read this very day to the house of commons. The princess of Wales incloses Mr. Speaker a duplicate of the letter alluded to.”

“Montague House, Blackheath, March 1.

“The princess of Wales informs Mr. Speaker, that she has received from the lord viscount Sidmouth, a copy of a report made to his royal highness the prince-regent, by a certain number of the members of his majesty’s privy council, to whom it appears that his royal highness had been advised to refer the consideration of documents and other evidence respecting her character and conduct. The report is of such a nature, that her royal highness feels persuaded no person can read it without considering it as conveying aspersions upon her; and, although their vagueness renders it impossible to discover precisely what is meant, or even what she has been charged with, yet, as the princess feels conscious of no offence whatever, she thinks it due to herself, to the illustrious houses with which she is connected by blood and by marriage, and to the people among whom she holds so distinguished a rank, not to acquiesce for a moment under any imputations affecting her honour. The princess of Wales has not been permitted to know upon what evidence the members of the privy council proceeded, still less to be heard in her defence. She knew only by common rumour of the inquiries which they have been carrying on, until the result of those inquiries was communicated to her; and she has no means now of knowing whether the members acted as a body to whom she can appeal for redress, at least for a hearing, or only in their individual capacities, as persons selected to make a report upon her conduct. The princess is therefore compelled to throw herself upon the wisdom and justice of parliament, and to desire that the fullest investigation may be instituted of her whole conduct during the period of her residence in this country. The princess fears no scrutiny, however strict, provided she may be tried by impartial judges known to the constitution, and in the fair and open manner which the law of the land prescribes. Her only desire is, that she may either be treated as innocent, or proved to be guilty. The princess of Wales desires Mr. Speaker to communicate this letter to the house of commons.”

Mr. Cochrane Johnstone gave notice of a motion upon the subject of this letter. It came on upon the 5th of March; when, in direct opposition to the wishes of his majesty’s ministers, Mr. Lygon moved the exclusion of strangers.—Mr. Cochrane Johnstone, then, after declaring that he should not wound the feelings of any branch of the royal family, and stating that he had no authority for his motion from the princess of Wales, proceeded to notice the commission granted by the king, in 1806, to ex-

amine into certain allegations that had been preferred against the princess of Wales; and read the whole of the Report made by the commissioners in 1806. He next proceeded to state, that the paper he should now read was a document which, he was ready to prove at the bar of the house, was dictated by lord Eldon, Mr. Perceval, and sir Thomas Plomer, though signed by the princess of Wales: it was a letter to the king, on the 9th of October, 1806, as a protest against the report of commissioners just detailed. The hon. member observed, that he fully concurred in the sentiments it expressed upon the subject of the commission; and he insisted that the charge against the princess before that tribunal, by sir John and lady Douglas, was nothing short of treason; that, if the commissioners had power to acquit her royal highness of the crime charged, they had equally the power to convict her. What was the state of that country in which such a thing was even possible? Besides, he inquired, what became of sir John and lady Douglas? If he were rightly informed, they still persisted in the same story; if all they maintained were so notoriously false, why were they not prosecuted? The hon. member went on to remark, that he understood no proceedings of the late privy council, except the Report, had been transmitted to the princess of Wales. This was the case in 1806; but he submitted that copies of all those examinations should be given to her. The hon. member then concluded by moving, first, a very long resolution, containing nearly the whole of the report of the commissioners in 1806, with his own reasoning upon the illegality of such a commission; and terminating with expressing the expediency of a new and different trial of, or inquiry into, the same subject: the second motion was for a variety of papers connected with this subject, from 1806 to the present time.

Lord Castlereagh defended the commissioners of 1806, and insisted that their appointment was agreeable to historical precedent. He did not think the house of commons a proper place either to try the princess of Wales for treason, or to sit in judgment upon the levity of her manners. The birth of the child had been traced, and proved; its mother was Anne Aulfin. The commissioners had acquitted the princess, as had his majesty’s then ministers, upon oath, not only of actual criminality, but of imputed levity; and likewise a subsequent administration. A prosecution had been recommended by the first cabinet against sir John and lady Douglas, which had not been instituted; not that there was any doubt of punishment being brought down upon their degraded heads, but to avoid bringing such subjects before the public.

Mr. Whitbread conceived that the noble lord had not furnished all the information that was necessary regarding the late letter. He conceived the princess unhappily and unfortunately situated. He then adverted to her defence in 1806, which had been conducted by Mr. Perceval, lord Eldon, and sir T. Plomer; the papers they had drawn up, arraigning the commission, and the evidence of the witnesses. The noble lords (Eldon and Castlereagh) doubted the legality of the commission, as appeared by the cabinet-minute of 1807, though that commission pronounced a verdict of acquittal; and yet they refer the privy council, which lately met, to the evidence taken before it—thus trying the princess a second time, not for her conduct in 1807, 1808, and 1809, or any subsequent year, but in 1806. Mr. Perceval, to his dying day, always publicly proclaimed the innocence of the princess; but, as for her other surviving friends, they were mute. Mr. Whitbread concluded an animated speech amidst shouts of applause; and moved an amendment, for the production of the late report of the privy council.

Lord Castlereagh said, that it was not for the house to judge of the merits of the parties, under the long separation that had existed. No punishment had been inflicted on the princess by the restraints that were placed on the intercourse between her royal highness and the princess Charlotte. When the princess Charlotte went to Wind-

for, the prince altered the arrangement under which the princess had been accustomed to see her, from once a-week to once a-fortnight, that less interruption of her studies might happen by frequent journeys to London; and it was not intended to require the alteration to continue longer than during the princess's residence at Windsor. This was the whole of what was magnified into a great infliction of punishment and inference of guilt, by the princess.

Mr. Brand thought the country exposed to difficulty and danger in regard to the succession. It was not enough to say that the regent had the sole prerogative of educating his daughter: statements had been handed about, in which it was said, the princess was accused by suborned witnesses; and to suffer the matter to rest here was a denial of justice to the princess.

Mr. Wortley, as a man of honour and a gentleman, felt warmly, and expressed himself warmly. On this occasion he used the expressions which we have quoted in our article LIBERTY of the PRESS, vol. xii. p. 605. and which therefore we need not repeat. He concluded by saying, that no man was more attached to the house of Brunswick than himself; but, if he had a sister in the same situation, he should say she was exceedingly ill-treated.

Mr. W. Smith fully participated in this sentiment; if his sister had been treated as the princess had been, he should feel extremely sore.

The Attorney-general (sir T. Plomer) said, that he gave his professional advice to the princess in 1806. He would not disclose its purport; but he would say that he never discovered any just foundation for the charges against her.

Mr. Whitbread said that the noble lord and his colleagues had not dared to answer the defiance of the princess. They could inquire into her conduct—nay, search her very heart—and they had declared her guiltless. So completely did she now appear acquitted of all possible imputation of blame, even by the persons from whom the aspersions were by the world supposed in the last report to have been thrown upon her, that it was in his mind unnecessary to press the matter to a division. Her innocence was acknowledged entire—complete. To such restrictions as the prince-regent, in his capacity of father to the princess Charlotte, or by the advice of his ministers, might think proper to impose upon her intercourse with her daughter, she must submit; it was her lot. But she had the satisfaction of knowing, that her reputation henceforward was, by the confession of all, without imputation or reproach.

Mr. Canning complimented the last member on his candour. The innocence of the princess had been established by repeated acquittals, and the declaration of lord Castlereagh. There was no necessity for any further proceedings. As a father, his royal highness had a right to controul his own family; and, as a sovereign, to educate the heir to the throne.

Here the matter ended, as the resolution and amendment were not pressed to a division. Addresses were presented to the princess, from the city of London, and from a great number of other places, congratulating her H. R. on the full and entire clearing of her character and fame.—Sir John Douglas is since dead; lady D. lives, in no very enviable state.

The business of the lord high chancellor of England having so much increased, chiefly in consequence of the vast number of bankrupt-cases, and of appeals from the law-courts to the supreme and final decision of the house of lords;—it was thought necessary to introduce a bill for the purpose of appointing a vice-chancellor, to assist his lordship in the court of chancery.—Lord Castlereagh, in moving the second reading of this bill, on the 11th of February, dwelt upon the necessity of such an appointment; and stated, that it had received the approbation of the law-lords. The salary to be granted to the vice-chancellor would be 4000l.—one half of which it was proposed to

take from the fund formed by the profits accruing to the court of chancery, and the other half from the interest upon unclaimed property in that court, of which, after paying the masters in chancery (each 200l. a-year) and other officers, 9000l. a-year remained unappropriated.

Messrs. Stephen, Weatherall, Best, and the Solicitor General, spoke in support of the bill; which was warmly opposed by Messrs. Banks, Macdonald, Smith, Courtenay, Canning, Taylor, Ponsonby, and sir S. Romilly. The principal arguments urged were—That the arrear of business in the house of lords had been accumulating eleven years, without any attempt having been made to discharge it—that the adoption of a process to compel the members of that house to attend to hear appeals, would be a more effectual mode of lightening it than what was proposed by the present bill, which merely suggested as a remedy to relieve another person in another court—that these appeals might be heard in the absence of the lord-chancellor, for which purpose a temporary speaker of the house of lords might be appointed—that the creation of a vice-chancellor would multiply the number of appeals, so that the time of the chancellor would ultimately be consumed in re-hearings and appeals from his deputy and the master of the rolls—that it would be a temptation for ministers to make a person chancellor, not the first lawyer of his day, unlike the great men who had of late filled the office, but the first politician, the ablest debater, of his day—and that it would be in fact introducing a new, perhaps an unconstitutional, judicial officer into our judicature.—Mr. Bankes's amendment, that the bill be considered this day six months, was negatived by 201 to 122.

On the 15th of February, on the question for going into a committee on the bill, Mr. Leach observed, that there could be no possible reason for creating a new and permanent office for a temporary object; and proceeded to show the necessity of preventing the creation of an office at once so expensive and so useless.—Sir Samuel Romilly spoke to the same purpose. After several able speeches for and against the measure, the bill passed through the committee.

On the 22d of the same month, the debate was resumed.—Mr. Taylor said, that the whole of the lord-chancellor's emoluments did not amount to more than from 18 to 20,000l. a-year. The fees from bankrupts were about 5000l. a-year, and he had seen them exaggerated to 17,000l.

Mr. Canning suggested, that, as the evil was temporary, it was but fitting that the remedy should also be of a limited nature.—Sir S. Romilly, Messrs. Ponsonby and Gordon, spoke shortly against the bill; as did Messrs. Stephen, Bragge, Bathurst, and Abercromby, in its favour. The amendments were then agreed to.

On the third reading, Mr. M. A. Taylor, after urging various objections against the creation of a vice-chancellor, moved for the appointment of a committee, to consider the propriety of relieving the lord-chancellor from the cognizance of bankrupt-cases.—Mr. Leach said, that these cases did not occupy more than thirty-six days in a year; and it would not be right to go to the expense of a separate establishment for this purpose.—After some discussion, the motion was negatived without a division. The bill was read the third time after a division, when the numbers were 127 to 89.—Mr. Canning's clause, that the office should last but seven years, was negatived by 145 to 114.

The royal assent was given to this bill on the 23d of March; and on the 5th of May, being the first day of term, the vice-chancellor made his first formal appearance in the court, accompanied by the chancellor and the master of the rolls. He merely took his seat for a few minutes on the right hand of the chancellor, on the side of the court next the bench-door, the master of the rolls being on the left of the chancellor.

On the 3d of February, several petitions were presented to the house of lords, from both laity and clergy, against the catholic claims.—The bishop of Norwich lamented the activity

activity of the clergy in raising the cry of "No Popery." He deeply regretted that uncharitable and illiberal sentiments of that nature should disgrace most of the petitions presented to parliament.

In the house of commons, on a petition against the catholic claims being presented from the county of Anglesea, sir Henry Parnell stated, that the signatures to this petition had been obtained under an erroneous impression. The person who proposed the petition at the meeting, had enforced its necessity on the allegations contained in a book which he read to the meeting. This book pretended to be the Third Part of the Statement of the Penal Laws of the Catholics; but, so far from being published by the catholic board as alleged, it was written and industriously circulated by their enemies.—Mr. Whitbread; with a warmth befitting his good intentions, said, that the arguments of the opponents of the catholics were founded in falsehood, and that their support was obtained by forgery.—And Mr. Canning stated, that this fabrication had to his own knowledge occasioned many friends to the claims of the Roman-catholics to change their sentiments.—The petition was laid upon the table.

The question came regularly before the house on the 25th of February; when Mr. Elliott, after moving the resolution of last session, for taking into consideration the Roman-catholic claims, presented a petition from the Roman-catholics of England.

Mr. Grattan, in a speech distinguished for its eloquence, urged the justice and policy of admitting the catholics to a participation of the same rights and privileges as protestants, upon proper securities being given for the maintenance of the constitution in church and state. He read the oath of the 33d of the king, by which people of that persuasion abjure the doctrine that it is lawful to injure or kill a heretic; that the pope can absolve a subject from his allegiance, or that he has even any temporal power in these realms; and concluded by moving that the house do now form itself into a committee on the claims.

Mr. Tomline considered the catholics of the present day as persecuting as their ancestors. It was unwise to grant the claims of a few, and expose the safety of many. We wanted none but protestants in our senate, or to command our fleets and armies. The Roman-catholics of Ireland were the authors of the rebellion in that country.

Sir H. Heron affirmed that those great men, Pitt, Fox, Burke, and Windham, were in favour of the Roman-catholics. He reprehended the unworthy means taken by the clergy to excite the prejudices of the people. There were even certain dignitaries, some of them with mitres on their heads, and some of them with mitres in their heads, who certainly had done more than became their situation. A learned prelate had even misrepresented the opinions of Mr. Fox on this subject, in order to excite groundless fears.

Mr. Bankes professed his opinion to be changed since last session; perhaps his judgment had been perverted by the extraordinary abilities of Mr. Canning; but he thought that the concessions would be attended with danger. What was to become of the test and corporation acts? and would the catholics agree to the *veto*? They had met conciliation by fresh demands, and a domineering and threatening tone. Besides, the people of England were evidently against any farther concessions, contrary to the opinion that prevailed last session.

The debate was lengthened out till half past two in the morning, and then adjourned till the 1st of March; on which day, sir John Newport, Messrs. W. Pole and Whitbread, sir T. Acland, hon. F. Robinson, and lord Palmerstone, spoke at some length in favour of the motion; which was opposed by Messrs. Peele, Ryder, H. Davies, H. Lascelles, and sir T. Sutton.

Mr. Whitbread recommended that concessions should be made to the catholics, without taunting them by fixing impossible conditions, such as renouncing their creed. In regard to the city-petition with its 6000 signatures,

presented by sir W. Curtis, he observed, that the infant and its nurse were both of a large growth.

Mr. W. Pole said, that matters could not continue in their present state in Ireland. They must sooner or later re-enact the old disabling laws—raise a rebellion—or agree to conciliate the catholics, which he recommended. The debate was then adjourned till next day; when

Sir W. Scott urged, in strong terms, the danger of concession, since the catholics had refused the proper securities; and the protestants, especially the clergy, had petitioned against it. He was followed on the same side by Messrs. M. Sutton and Rose.

Lord Castlereagh recommended going into the committee, though he thought he saw insurmountable difficulties to the accomplishment of the proposed object.—The sense of the house being against farther adjournment, a division took place, when there appeared:—for going into a committee, to consider of relief to the catholics, 264; against it, 224; majority in favour of the motion, 40.

The house accordingly went into the committee on the 9th of March; when Mr. Grattan, after a very long speech, concluded by moving the following resolution:—"That the house would take measures for restoring to the catholics the privileges of the constitution; subject, however, to certain exceptions, and under such regulations as might be deemed necessary to support the protestant establishment in church and state." He added, that, if this were agreed to, he should then move for leave to bring in a bill; but he was not desirous of precipitating the measure. He thought that time ought to be given for the spirits to cool—that they should not legislate without consulting the feelings of the people; and that in the mean time they should repose upon the good sense of both countries, and not take any step that should deprive the cause of the benefit of that good sense.

The Speaker said, he was willing that the range of catholic privileges should be extended in such a way, that all objects of honour, distinct from political power, should be opened to them. He would lay open to them all military situations, even the staff-appointments, with the exception, however, of the highest situation in the profession, that of commander-in-chief in England, Scotland, and Ireland. He would likewise admit the catholics to all the honours of the bar—protect the soldier in the exercise of his religion in this country—and protect mass-houses in the same manner as other places of worship. But, as long as the Roman-catholics acknowledged the foreign influence of the pope, he could not content to arm them with political power.

We must beg leave to observe here, that to require the Roman-catholics to give up their submission to the pope in *spiritual affairs*, would be the same as desiring them to subvert the whole system of their religion; the doubt is, how far the spiritual influence of the bishop of Rome upon the consciences of individuals may affect them as to the impartial exercise of political power.—Several very able speeches were made both for and against the motion; and at length, after a loud and peremptory cry of *Question!* a division took place; when Mr. Grattan's resolution was carried by 186 against 119.

On the 30th of April, Mr. Grattan brought in his bill. It allowed Roman-catholics to sit in either house of parliament on taking an oath therein specified, instead of the oath of supremacy, and against transubstantiation: it also allowed them to be members of any corporation; and to be officers of the king's household, with certain exceptions.—The bill was read a first time, and ordered to be printed. Mr. Grattan then moved a call of the house for the second reading on the 11th of May, which was agreed to.

On that day, sir J. C. Hippisley rose to urge the necessity of delay, and to require further security; and, after stating that 30,000l. had been collected by the Jesuits to build a college near Dublin, moved for a committee of inquiry, with instructions to obtain returns from the colonies, and information from foreign countries, respecting

the guards upon catholics and against the power of the pope.

Mr. Grattan observed, that the effect of agreeing to this motion would be to put off the question for an indefinite period. They were to wait until this select committee should have examined all the laws made since the reformation and before it,—until they had examined all our colonial institutions, and all the laws of every country in Europe! Nor was this all: the committee were expected to read all the books of controversy which had been written, and to make a report on all those points. The motion, then, was for appointing a committee charged with such a task, that they could not be expected to present a report for many years; and could it be supposed that any person who wished for the success of the catholic cause would be satisfied with such a delay?—After various pertinent remarks, Mr. G. gave an account of the bill already brought in upon this important subject. The catholic bill consisted of four parts. The first was to allow the catholics seats in parliament; the second, to give them the right of voting at elections; the third, to give them corporate rights; and the fourth, to allow them to hold civil and military offices. The bill amounted to the principle of incorporating the catholics with the rest of the community. There were many penalties now existing in the books, but which were never enforced; and it would, of course, be desirable that they should no longer exist even in the books. The main object of the bill, however, was a communication of rights and privileges to the catholics, under such restrictions as should be considered sufficient securities for the protestant church. Having stated that the present bill gave emancipation to the catholic, he had next to state the securities it gave to the protestant. Those securities were to be found principally in the exceptions which were contained in the bill, and in the alteration of the oath. The offices which the catholics were excluded from by this bill, were the offices of lord-chancellor, and lord-lieutenant of Ireland. The first was considered, in a great degree, an ecclesiastical office, from the patronage it possessed in the church; and, as to the lord-lieutenant, as he is the representative of the king, who must be a protestant, it was thought right that he also should be a protestant. The second exception related to the right of holding advowsons, or presenting to livings. By the next exception, they would be excluded from any places in the ecclesiastical courts, or any courts of appeal and review on ecclesiastical matters. Next followed an exclusion from all situations in ecclesiastical schools and colleges. There was also an exclusion of foreigners and non-residents from the high situations of the catholic priesthood. Lastly, there followed the oath which was recommended instead of that now taken. This oath abjured the regicidal power attributed to the pope, as also that of deposing kings. It abjured all temporal power of the pope in these realms, as also the opinion of the pope's infallibility. It abjured the doctrine imputed to the catholics, "that no faith was to be kept with heretics." It also swore the catholics to support the protestant succession, and the present state of property; to discover all plots or treasons that should come to their knowledge; not to exercise the power they might possess in the state to overthrow or to disturb the protestant church; and the clergy were also to swear, that, in the election of persons to be recommended to the apostolic functions, they would never choose any person whose loyalty and good conduct were not known to them. They were also to swear, that they would have no communication with the see of Rome on any matters that were not purely ecclesiastical. Some gentlemen might be surprised at the committee having framed an oath so long and so particular. They, however, thought that it was necessary that the oath should increase instead of diminishing the securities now existing. They had therefore added to the present oath the obligation of disclosing treason, and of not recommending any clergyman whose loyalty was not well known. They had also extended the application of

the oath. The former oath was only required to be taken on the acceptance of some office: the present oath, however, was proposed to be extended generally to the clergy as well as the laity. To the securities so provided, the right hon. gentleman (Mr. Canning) had added some clauses which would give all the effect of domestic nomination, without giving too great a power of interference to the crown. He conceived that the bill, with such clauses, would amount to emancipation for the catholics, and security to the protestants.

Mr. Ryder said, that he should vote for going into the committee, *because* it would produce delay; and he did not feel himself at all ready to agree with the bill. If ever there was a bill demanding the serious attention of the house, and in the deliberation upon which they should avoid the slightest appearance of hurry, it was the present; a measure which had excited the fears of so many persons, and against the adoption of which the table was loaded with petitions!

Mr. B. Bathurst supported the motion, which lord Castlereagh opposed; and after a reply from sir J. C. Hippisley, the house divided, and the motion was lost by 235 against 187; majority, 48.

The second reading was moved on the 13th; when Dr. Duigenan declared, with vehemence, that the bill would restore the Roman-catholic religion, and establish the supremacy of the pope. He argued, at great length, that concession to the catholics would destroy the protestant ascendancy in Ireland, would give them 100 votes in parliament, which they would employ to overturn the establishments of church and state. He declared that whatever oaths the catholics took would not be considered binding, if the pope or the clergy chose to absolve them. To admit them to political power, was the height of impudence; it was injurious to the protestant succession, and *acknowledging that the Stuart family had been unjustly deprived of the crown.*

Sir F. Flood commented with much severity on the speech of the doctor. He complained of the slanders and falsehoods uttered against the catholics, whom he wished half the English would go to Ireland to see. The speech of sir J. C. Hippisley on a former night, he characterised as the "most multifarious, complicated, circuitous, oration," he had ever heard.

Lord Castlereagh thought other securities should be provided besides the oath, which, he admitted, was comprehensive and satisfactory. The catholics, by being admitted into parliament, would legislate for our church; and they ought to prove their conciliatory spirit, by granting the protestants some security in the appointment of the bishops. He thought the crown ought to have a voice in the rejection of a priest who might be disloyal. He disapproved of the commissioners under the present bill, as they were to act without the influence of the crown, save their nomination. It tended to establish a new estate in the country highly dangerous, and to transfer from a foreign power, to a power within ourselves, a right of interference seriously detrimental to the catholic body, to itself, and to the constitution. The noble lord concluded by declaring, that he wished the house to go into a committee on the bill.

Mr. Wilberforce complained that the noble lord had not stated his ideas distinctly; he would place the framers of the bill in a very painful situation, unless he would state in the house, or in private, what his views were.

Mr. Canning declared, that he was willing to meet and confer with the noble lord, and adopt his views, should they appear most conducive to produce that effect which they both wished.

The house then divided, when Dr. Duigenan's amendment, for deferring the second reading for three months, was negatived, by 245 to 202. The bill was then read a second time, and committed for the 19th; on which day, Mr. Grattan gave in his clauses to the chairman, without any observations.

Mr. Plunkett said, that, as it would not be in his power to be present on the day fixed for the discussion of this important question, he hoped the house would indulge him with a very few words, that he might give his opinion upon it now. He had read the clauses prepared by the right hon. gentleman with the greatest attention, and he most cordially agreed with the whole of them. They appeared to him to embrace the most perfect security to the protestants; and, whilst they respected the principles of the catholics, were calculated to meet and soften the prejudices of every kind.

Lord Castlereagh expressed his satisfaction that the honourable and learned gentleman had made this declaration. He also expressed his approbation of the clauses of the right hon. gentleman, (Mr. Canning;) and said the bill *should have his cordial assistance.*

The report was received, and ordered to be taken into farther consideration on Monday, the 24th.—On that day it received that solemn decision which we alluded to in p. 292, 3. and which we had in some degree anticipated under the article LIBERTY OF CONSCIENCE, in the preceding volume, (p. 591-601.) while the bill was before the house.

On the 24th of May, therefore, the house being in a committee on the bill, and having appointed a chairman, Mr. Abbott (the speaker) immediately rose, and spoke to the following effect. He said, that the honourable gentleman, with whom this bill originated, had declared that conciliatory arrangements were the only object which he had in view; that he wished not any measure of this sort to be carried without the consent of protestants as well as catholics; but what prospect, he (Mr. Abbott) would ask, was there of any such concord? The leaders of the Roman-catholic party exclaimed against the bill, as inadequate and confined in its provisions; while Dr. Troy, the titular archbishop of Dublin, and Dr. Milner, the vicar-apostolic for the Midland District, had declared that, in regard to the appointment of their bishops, it was more exceptionable than the Veto itself; and one of them had declared that, rather than consent to such provisions, it would be the duty of the catholic clergy to lay down their lives on a scaffold. All our legislators and statesmen had agreed that the civil authority should be vested in those who conformed to the religion of the state; while, at the same time, the measure of the danger to be avoided was to be the measure of the extent of that exclusion. Such was the frame of the government as established at the revolution: it gave the most ample religious toleration to protestant dissenters of every description; it even relaxed the laws against them, on account of their tried loyalty and exemplary conduct. The religious doctrines of the catholics, on the contrary, contained in them something hostile to the civil constitution of the country. He agreed with Mr. Burke, that it was just to exclude the catholics from offices of state, though not from those of the army and navy, considering the former as belonging to the sovereignty of the country. But he would never consent to lay open to them the two houses of parliament, where some one of their body, of splendid talents, but perverted ambition, might become a leader of a party, and, joining with some other faction, might form a combination of force extremely dangerous to the constitution of the country. Were parliament thrown open to the catholics, there would be little chance of the present representatives for Ireland sitting in that house. He should likewise object to their appointment to judicial offices. In administering the rights of the protestant church, they could never give that satisfaction which was so desirable and essential. It was not the object of the framers of the bill to secure ample toleration to the catholic; or why was not the right of the catholic soldier to exercise his own religious worship secured by law, and their places of worship protected? The real object of the bill was, to give the catholics *political ascendancy.* If the barriers were once broken down, it would be too late to think of repairing the breach, when

the full flood of innovation had burst in upon us. He did not undervalue the oaths contained in the bill; but the catholics lived in too great a darkness and subjugation to their priests for much reliance to be placed upon them. Their clergy was daily increasing in this island; Jesuits, Benedictines, and Dominicans. It was well known that the two last orders were devoted to the pope, whose verbal commands were implicitly obeyed; while they, in their turn, expected the same obedience from the people. It was this very principle which made Locke as a philosopher, lord Somers as a statesman, and William III. as a sovereign, declare the catholic ecclesiastical polity incompatible with the safety of the state. We had seen it blaze forth lately in Spain; and surely it would not be a blaze concomitant of the British constitution. The main clause, however, which he should oppose, was that which went *to admit catholics into parliament:* he should move that it be struck out.

Mr. Whitbread said, that the right hon. gentleman so rarely delivered his opinion on public questions, that it must necessarily have great influence on the committee: he regretted, however, that when, some six years ago, a bill was brought in to open the army to the catholics, the house had not been favoured with his sentiments. He concluded an argumentative speech in favour of the bill.

Messrs. Ponsonby, Grattan, and lord Castlereagh, replied at great length to the arguments of the Speaker; and concluded by declaring, that, as the clause admitting the catholics to parliament was substantially the essence of the bill, if the former were rejected, the latter would be stripped of all those qualities from which the salutary effects of conciliating the catholic body were expected to flow.

The question was then clamorously called for, when the Speaker's amendment was carried by 251 to 247.—Mr. Ponsonby then moved, that the report be received this day three months; which being put and carried, the bill was altogether lost.

It was not without reason that Mr. Abbott had declared in his speech, that, had the above bill been approved and passed, it would have failed of conciliating Ireland, or being received as a boon by the catholics.—At a general meeting of the Roman-catholic prelates of Ireland, held May 27, 1813, the most reverend Richard O'Reilly, D.D. president; it was resolved unanimously, "That, having seriously examined the copy of the bill now in progress through parliament, purporting to provide for the removal of the civil and military disqualifications under which his majesty's Roman-catholic subjects labour, we feel ourselves bound to declare, that the ecclesiastical clauses or securities therein contained are utterly incompatible with the discipline of the Roman-catholic church, and with the free exercise of our religion; and that, without incurring the heavy guilt of schism, we cannot accede to such regulations; nor can we dissemble our dismay and consternation at the consequences which such regulations, if enforced, must necessarily produce." And, at a sitting of the catholic board at Dublin, on the 23d of October, notice was given of a motion, that a communication be had with Mr. Grattan, and a bill put into his hands, which will enable him definitely to say what form of emancipation would content the catholics of Ireland. But lord Donoughmore and Mr. Grattan have both since declined having any communication with the board upon the form or substance of any emancipation-bill.—We hope therefore to hear no more upon the subject.

The last measure of importance which we shall notice during the proceedings of this session, is the renewal of the East-India Company's charter, which was to expire in March 1814.—On the 12th of February, 1813, the earl of Hardwicke presented a petition from the officers employed in the naval service of the company; representing the hardships of their situation, should the charter not be renewed.—On the 19th of the same month, a petition was presented from the Society in Scotland for propagating

Christian Knowledge, soliciting, that, in the event of the renewal of the said charter, a clause should be reserved, permitting the society to send missionaries to propagate the gospel in that country.

On a petition from the city of London being presented to the house of lords (Mar. 16) in favour of the renewal, lord Grenville declared that he approved the views of ministers in throwing the trade open, and would support them.—The earl of Liverpool said the resolutions would be submitted to the other house in a few days by lord Castlereagh.

Accordingly, on the 22d of March, the house of commons having resolved itself into a committee on India-affairs, and to consider the petition for the renewal of the company's charter; lord Castlereagh, after acknowledging the very great ability of the company's civil servants, both in this country and in India, and discussing the various propositions, as he read them, for the future regulation of the company's affairs, concluded by submitting a series of resolutions, of which the following is the substance.

That it is expedient that all the privileges, authorities, and immunities, granted to the United Company of Merchants trading to the East Indies, by virtue of any act or acts of parliament now in force, and all rules, regulations, and clauses, affecting the same, shall continue and be in force for a future term of twenty years; except as far as the same may hereinafter be modified and repealed.

That the existing restraints respecting the commercial intercourse with China shall be continued, and that the exclusive trade in tea shall be preserved to the said company, during the period aforesaid.

That, subject to the provisions contained in the preceding resolution, it shall be lawful for any of his majesty's subjects to export any goods, wares, or merchandise, which can now or may hereafter be legally exported, *from any port in the united kingdom* to any port within the limits of the charter of the said company, as herein-after provided; and that all ships navigated according to law, proceeding from any port within the limits of the company's charter, and being provided with regular manifests from the last port of clearance, shall respectively be permitted to import any goods, wares, or merchandise, the product and manufacture of any countries within the said limits, *into any ports in the united kingdom* which may be provided with warehouses, together with wet docks or basins, or such other securities as shall, in the judgment of the commissioners of the treasury in Great Britain and Ireland respectively, be fit and proper for the deposit and safe custody of all such goods, wares, and merchandise, as well as for the collection of all duties payable thereon, and shall have been so declared by the orders of his majesty in council in Great Britain, or by the order of the lord-lieutenant in council in Ireland. Provided always, that copies of all such orders in council shall be laid before both houses of parliament in the session next ensuing.

Provided also, That no ship or vessel of less than 350 tons, registered measurement, shall be permitted to clear out from any port in the united kingdom, for any port or place within the limits aforesaid, or be admitted to entry in any port of the united kingdom from any place within those limits.

That no ship or vessel shall proceed to any place within the limits of the company's charter, without a license to be granted for that purpose; and that no ship or vessel clearing out from any port within the united kingdom, shall proceed to any port or place within the limits of the company's charter, and under the government of the said company, except to one of their principal settlements of Fort William, Fort St. George, Bombay, and Prince of Wales's Island; and that every ship so proceeding shall be furnished with a license for that purpose from the court of directors.

That nothing herein contained shall be construed to prevent any ship or vessel from proceeding to any place

upon the continent of Asia, between the river Indus and the nearest point to Prince of Wales's Island, and not one of the principal settlements under the special authority of the commissioners for the affairs of India; but that all applications for licenses to proceed to any such place shall be made to the court of directors, who, unless they shall have thought fit to grant the same, shall, within fourteen days from the date thereof, transmit the same to the board of commissioners for the affairs of India, with any representation which the said court may think proper to make upon the subject of such application; and that the said court, if directed so to do by the commissioners for India, shall issue their license or licenses accordingly.

That no ship or vessel clearing out from any port within the united kingdom, shall proceed to any port or place within the limits of the charter of the said company, and not being upon the continent of Asia, between the River Indus and the nearest point to Prince of Wales's Island, without a license from the commissioners for the affairs of India; and that the said commissioners shall from time to time make known the rules and regulations under which such licenses shall be granted; and that, in any case of such license being granted otherwise than under such rules and regulations, the special circumstances under which such license shall have been granted shall be recorded in the books of the office of the said commissioners;

That no ship shall be permitted to clear out from any port of the united kingdom for India, unless attested lists in duplicate shall have been delivered to the principal officer of the customs at the port of clearance, specifying the number and description of all persons embarked on-board of the said ship, and all arms laden therein; and that all persons proceeding upon such ships, shall, upon their arrival in India, be subject to all the existing regulations of the local governments, and to all other rules and regulations that may hereafter be established, with regard to the European subjects of his majesty resident in India.

That, upon any application made to the court of directors, by or on behalf of any person desirous of proceeding to India, the court of directors (unless they shall think fit to grant a license for that purpose) shall transmit every such application, within the term of one month from the delivery thereof, to the commissioners for the affairs of India; who, if they shall see no objection thereto, may, and they are hereby authorized to, direct, that such person or persons should, at the special charge of him or them, be permitted to proceed to India; and that any such person or persons, so desiring to proceed, shall be furnished with a certificate by the court of directors, according to such form as shall be prescribed by the said commissioners, signifying that such person or persons have so proceeded with the cognizance and under the sanction of the said court of directors; and that all such certificates shall be considered by the governments in India as entitling such persons, while they shall properly conduct themselves, to countenance and protection in their several pursuits; subject to all such provisions and restrictions as now are in force, or may hereafter be judged necessary, with regard to persons residing in India; provided always, that the said court shall be at liberty to offer such representations to the said commissioners, respecting persons so applying for permission to reside in India, as they may at any time think proper.

That no such ship, which shall have proceeded as aforesaid, shall be admitted to entry in any port of the united kingdom, without a regular manifest, duly certified, according to such regulations as may hereafter be enacted.

That no article manufactured of silk, hair, or cotton-wool, or any mixture thereof, shall be entered or taken out of any warehouse, except for exportation, unless the same shall have been brought into the port of London, and deposited in the warehouses of the said united company; and that all such articles shall by them be exposed to public sale by auction, in order to ascertain the duties payable thereupon;

thereupon; and in all other ports, as well as the port of London, such articles, when entered and taken out for exportation, shall be charged according to their value, under the regulations legally applicable in other cases to duties payable *ad valorem*.

That, on the return of every ship from India, lists of her crew, specifying the number and description of all persons embarked on-board the said ship, and all arms laden therein, shall be delivered to an officer of the customs at the first port at which she shall arrive, and shall be by him transmitted to the court of directors, according to and subject to such provisions as may be made with a view to the discovery of any British subject who may have gone to or remained in India contrary to law.—Provision was also to be made for the support and return of the lascars brought to Europe in private vessels.—There were also regulations as to the order of the application of the revenues of the company: 1. To the payment of the troops and support of the forts. 2. To liquidate debts on bills of exchange. 3. Other debts except bond-debts. 4. To pay a dividend of ten per cent. and a contingent half per cent. 5. To liquidate the bond-debts until they amount only to 3,000,000*l*. 6. The surplus profit to be divided in the ratio of 5-6ths to government and 1-6th to the company, with a provision for repaying the capital stock.—Regulations respecting the employment of India shipping.—Provision to enable the company to grant pensions and gratuities.—Provision for the appointment of different presidencies, and to render necessary the approbation of the crown.—Appointment of a bishop and three archdeacons, to be paid by the company.

Messrs. R. Thornton, Grant, and Gordon, spoke against the noble lord's propositions, as the height of injustice to the company.—Mr. Tierney thought it would be necessary to examine evidence at the bar; which was agreed to.

Warren Hastings, esq. was the first witness called on the part of the company; this was on the 30th of March. A chair was placed for the witness near the bar.—Mr. Hastings was examined both as to the probable effects of an unrestrained intercourse of Europeans with the natives of India, and as to the probability of extending the trade to that country. In his opinion, the unrestrained intercourse of Europeans with the natives would be ruinous to the company's interests, and to the peace of the country. The natives were naturally timid, but might be provoked to all the ferocities of insurrection, as it was not unlikely that, in such a case, the superiority which they now allow to Englishmen might then be converted to the purposes of tyranny and oppression over them. Any cause that would give them such provocation as to make them dissatisfied, would naturally tend to encourage the neighbouring natives to an invasion of our empire there. As to the trade, the mass of the people in India had no wants which could not be supplied at their own doors, and had no means of purchasing luxuries. The wealthier class of the Hindoos were also simple in their habits, and not accustomed to spend much of their superfluous wealth in the purchase of European luxuries. The habits of the nation had been nearly stationary from the time we first came into the country.—Mr. Hastings, after having finished his evidence, addressed the committee. He said, that, twenty years ago, he had written a letter to the company, and he then pointed out the dangers from an irruption of European adventurers. Being questioned as to the propriety of a church-establishment, he said it was a point of great difficulty and delicacy; much would depend on the temper and demeanour of the persons raised to the sacred office; but he could not help saying, that he wished some other time had been chosen for this experiment, as a surmise had gone abroad, that there was an intention of forcing our religion on the natives; an opinion which might tend to the greatest mischief, especially if propagated among the native infantry, who were the great defence of the empire.—Being asked, what he thought of missionaries being sent over to convert the natives of India

from their religion, by telling them Mahomet was an impostor, &c. and what would be the effect? he said, he thought any attempt to change the religion of the country by declaring Mahomet to be an impostor, might cause a religious war. There had been instances of Mahometan enthusiasts being very ferocious; and, in such a case, there was no knowing what might be the consequence. In answer to a question respecting the danger of admitting a great number of Europeans to resort to India, he thought there would be danger.

On the following day, Mr. Cowper was examined. He had been thirty years in India; and generally agreed in opinion with Mr. Hastings on the policy to be continued in India.—Lord Teignmouth, however, who was also examined, was of opinion that the attempt to convert the natives would not be attended with danger.

Colonel Sir John Malcolm was examined on the 5th of April. He said, that he had been in the military service of the company since the year 1783; and conceived that unrestrained intercourse would be mischievous and ruinous. He thought that, from the quietness of the Mahometans and Hindoos, they were satisfied with the British government. He did not think that, by throwing open the trade to India, the use of British manufactures would be much increased. He added, (April 7,) that the native population of Calcutta was about 500,000; and Bombay was not inferior to Calcutta. The Persians had no prejudices against the importation of European articles, except brandy and wine, which were forbidden; and the nobles were very fond of our fire-arms, if they could obtain them for nothing. Woollens had been imported into India. In regard to increasing the knowledge of the natives of India, it would certainly *add to the comforts* of their own situation; but, with respect to the *political interests* of the company, he thought it would be best to keep them as nearly as possible in their present state. The superior states of India had great means of rebellion in their power, and were not dependent on the British government. No doubt, the inhabitants would purchase British manufactures, if they were more wealthy. They could never rival us in the woollen manufacture, as they had no wool among them. He had observed that Europeans were fond of resorting to India, and the lower classes in particular, who, when once arrived there, showed no inclination to leave it again. Any great increase of Europeans in India would tend to lessen the respect in which the natives held the British character and government.

Gen. Kidd, Messrs. Young, Vanderheyden, Prendergast, and Halliburton, were examined on the day following. Their testimony was similar to that of preceding witnesses; that unrestrained intercourse would be dangerous; and that the consumption of British manufactures in India was not likely to be increased. Gen. Kidd, to show how strong the religious prejudices of the natives were, said, that two young dragoon-officers, having gone out to shoot, happened to pass by one of the Hindoo temples, where they saw several monkeys. Thinking them fair game, they began to fire upon them; but the consequence was, that they were so violently attacked by the priests of the temple (the monkeys being deemed holy) as to be obliged to throw themselves into the Ganges, with a view of swimming across; in which attempt both of them were unfortunately drowned.

Col. Monroe was examined on the 12th. He had been thirty-two years in India, and was particularly acquainted with the Malabar and Coromandel coasts. He was convinced that the natives were much attached to their own manners and religion, and that the permission to English traders to reside in the interior of India would be attended with mischievous consequences to the company. He thought the new-comers, from not knowing the customs of the country, would be liable to commit acts of violence against the prejudices of the natives, and would thereby create great discontents; which, though not amounting to insurrections, would certainly have the effect

fect of lessening the high character of the British in India; which, in his opinion, is the main pillar of our government there.

On the 18th of May, Mr. Wilberforce, in presenting a petition from the committee of the Baptist Missionary-Society, praying that no obstructions might be interposed to their endeavours to convert the Hindoos, took the opportunity of correcting a mistake which had gone abroad, respecting their intentions. It had been erroneously stated, that it was their object to propagate their own peculiar tenets, instead of the general faith of Christianity. This was a great misapprehension of their designs. No persons had, under the same disadvantages, rendered such essential service to the work in which they were engaged. Dr. Carey had made such incredible progress in the knowledge of the native languages of India, that he had been placed at the head of the college at Calcutta by lord Wellesley; and lord Minto had borne ample testimony to his merit, by saying, that his acquaintance with the tongues of Hindoostan exceeded that of sir W. Jones. He then passed an high eulogium on the members of the society, who had expended all their earnings on the great work which they had undertaken.—The petition was ordered to lie on the table.

On the 31st of May, the first resolution, which proposed the renewal of the company's charter for twenty years, was discussed. The principal speakers in its favour were Messrs. Grant, sen. and jun. (the very eloquent speech of the latter made a great impression), Bruce, Ponsby, Robinson, Gen. Gascoyne, and sir J. Newport. Messrs. Marryatt and Canning opposed its being renewed for so long a period. It was finally carried without a division.

The second resolution, for continuing the monopoly of the China-trade to the company, was discussed on the 1st of June. Messrs. Marryatt, Protheroe, G. Phillips, and Ponsby, strongly opposed it, as being founded on suppositions injurious to the character of the British traders, by imputing to them misconduct, imbecility, and incapacity. It was stated, but controverted by Messrs. Grant, that the China-trade being thrown open would cause a saving of one million and a half sterling annually, by the reduction in the price of tea. This resolution was carried without a division. The 3d resolution being complex, and containing thirteen articles, they were separately discussed, and afterwards agreed to.

The resolution respecting the extension of the India-trade to the outports was supported by Mr. Rickards, who stated that, since the adoption of the zemindary-system, the estates had been transferred from the landed proprietors to government, in payment of the arrears of taxes; and that the peasantry were oppressed by the impositions of an army of tax-gatherers. He conceived the trade capable of being greatly extended. Mr. R's speech was received by loud cheering.

Mr. Tierney spoke with great warmth against the proposed extension, as pregnant with danger; and was followed by the Messrs. Grant. The debate was then postponed till the 16th; when Mr. Baring proposed an amendment, that the shipments from India should be confined to the port of London alone.—This occasioned a lively discussion.

Mr. Canning contended, that, without a freedom of importing from India, the liberty of exporting would be of no advantage to the outports, and impose an intolerable fetter upon trade: this the company was fully aware of, and their object was to make the merchants renounce it at the expiration of four years. He likewise recommended that the resident-governors of India should not have the power of imposing arbitrary duties on the private merchants—they had recently imposed a duty of 8 per cent. upon all cotton exported by private merchants, while they themselves paid no duty whatever.—Viscount Castlereagh said, he would introduce a clause to prevent this abuse.—Mr. Baring's amendment was then negatived

by 131 to 43; and the original resolution for throwing open the trade to and from India to the outports was carried.

The other resolutions were successively carried, and sent up to the house of lords; where the earl of Buckinghamshire, on the 21st of June, explained the nature of them. No possible injury, he observed, could arise to the East-India company from the proposed extension of the trade, as it appeared that the trade of the Americans with India amounted, in 1806-7, to not less than 2,500,000*l.* which exceeded by 500,000*l.* the private trade by the merchants. By the proposed extension, our own merchants would be enabled to occupy the greater portion of this traffic. It was proposed to renew the company's charter for twenty years; but this did not preclude such alterations, during that period, as experience might suggest. It was not proposed to deprive the company of the exclusive trade to China, because it was not supposed that they would be able to meet the demands upon them unless they enjoyed the tea-trade. There were other reasons: it was not supposed the country would be so regularly supplied, or at so cheap a rate, as by the company. It was not intended to interfere with the government of India. To prevent the evils which might arise from an indiscriminate intercourse with the company's possessions in India, licenses and certificates were directed, without which individuals could not go there. A superintending church-establishment would be highly necessary, as there were 143,000 persons in India belonging to the church of England. If the company rejected the proposition made to them, he was confident that the appointments might be placed under that species of management as not to injure the principles of the constitution by increasing the influence of the crown.

The marquis of Lansdown said, that the resolutions were so complex, and involved such conflicting interests, as to require the utmost deliberation. After remarking on the leading resolutions, he declared that his radical objection to the plan was, that it appeared to be a system of compromise, which, while it retained the monopoly of the East-India company where it was most valuable, affected to hold out to the country the advantages of free trade. He feared that this promise was a fallacious one; and that, in a country governed by an arbitrary sovereign, and that arbitrary sovereign itself a trader, monopoly must either overturn the free trade, or that, in the struggle between both, the whole system might be endangered. Feeling that the future state of India would constitute either the shame or glory of the government and the legislature—the imperishable monument of their wisdom, or the melancholy memorial of their folly and precipitation—he should move, as an amendment, that the report be received this day three months.

Lord Grenville blamed the indecent hurry in which it was proposed to pass these resolutions. He did not attend the committee, because it was impossible to recollect the oral evidence; and sufficient time had not been afforded to look over the printed examinations; in short, there did not appear to be a single noble lord in that house who was at present sufficiently informed to discuss that momentous subject. He had understood that the territorial revenue of the company was raised by a most iniquitous and oppressive land-tax; he had, however, been able to obtain no information from the opposite bench on this and other topics; he should, if the motion for delay was negatived, withdraw himself from a decision to which he was not competent.—After a few words from the earls of Roslyn, Clancarty, and Liverpool, the amendment was negatived by 49 to 14.

The bill, as formed upon these resolutions, finally passed in the house of lords on the 20th of July; and received the royal assent, by commission, on the 21st.

On the 22d, soon after two o'clock, the prince-regent came in state to the house, for the purpose of proroguing the parliament with a speech from the throne. The ar-

rival of the prince in the royal chamber, adjoining the house of lords, was announced by a salute of twenty-one guns. The side-benches of the house were previously occupied by ladies of the first distinction. The Russian, Spanish, and Portuguese, ambassadors, were on the right of the throne; and a considerable number of peers and judges were also assembled in their robes. The prince then entered, and took his seat on the throne, having the great ministers of state on each side of him, with their different emblems of office. The prince was in military uniform.—The usher of the black rod then proceeded to summon the attendance of the house of commons, the members of which, with the Speaker at their head, soon after appeared at the bar; when the Speaker, rather unexpectedly, addressed the Prince Regent as follows:

“May it please your Royal Highness; We, his majesty’s most dutiful and loyal subjects, the commons of Great Britain and Ireland, in parliament assembled, have closed the supplies for the service of the present year; and, reflecting upon the various transactions which have come before us, we look back with satisfaction upon those which concern our domestic policy; entertaining also a confident hope in the prosperous issue of those great events which must regulate the settlement of our foreign relations.—Under the pressure of great burdens at home, and the still continuing necessity for great exertions, a plan has been devised and executed, which, by a judicious and skilful arrangement of our finances, will for a considerable period postpone or greatly mitigate the demands for new taxation, and at the same time *materially accelerate* the final extinction of the national debt.—Our reviving commerce also looks forward to those new fields of enterprise which are opening in the East; and, after long and laborious discussions, we presume to hope, that (in conformity with the injunctions delivered to us by your royal highness at the commencement of the present session) such prudent and adequate arrangements have been made for the future government of the British possessions in India, as will combine the greatest advantages of commerce and revenue, and provide also for the lasting prosperity and happiness of that vast and populous portion of the British empire.—But, sir, these are not the only subjects to which our attention has been called: other momentous changes have been proposed for our consideration. Adhering, however, to those laws by which the throne, the parliament, and the government, of this country, are made fundamentally protestant, we have not consented to allow, that those who acknowledge a foreign jurisdiction should be authorized to administer the powers and jurisdictions of this realm;—willing as we are, nevertheless, and willing as, I trust, we ever shall be, to allow the largest scope to religious toleration. With respect to the established church, following the munificent example of the last parliament, we have continued the same annual grant for improving the value of its smaller benefices; and we have at the same time endeavoured to provide more effectually for the general discharge of those sacred duties of a church-establishment, which, by forming the moral and religious character of a brave and intelligent people, have, under the blessing of God, laid the deep foundations of British greatness.—Sir, by your royal highness’s commands, we have also turned our views to the state of our foreign relations. In the north, we rejoice to see, by the treaties laid before us, that a strong barrier is erected against the inordinate ambition of France; and we presume to hope, that the time may now be arriving which shall set bounds to her remorseless spirit of conquest.—In our contest with America, it must always be remembered, that we have not been the aggressors. Slow to take up arms against those who should have been naturally our friends by the original ties of kindred, a common language, and (as might have been hoped) by a joint zeal in the cause of national liberty, we must, nevertheless, put forth our whole strength, and maintain with our ancient superiority

upon the ocean those maritime rights which we have resolved never to surrender.—But, sir, whatever doubts may cloud the rest of our views and hopes, it is to the peninsula that we look with sentiments of unquestionable delight and triumph; there the world has seen two gallant and independent nations rescued from the mortal grasp of fraud and tyranny by British councils and British valour; and, within the space of five short years from the dawn of our successes at Roleia and Vimiera, the same illustrious commander has received the tribute of our admiration and gratitude for the brilliant passage of the Douro—the hard-fought battle of Talavera—the day of Buçaco—the deliverance of Portugal—the mural crowns won at Ciudad Rodrigo and Badajoz—the splendid victory of Salamanca—and the decisive overthrow of the armies of France in their total rout at Vittoria; deeds which have made all Europe ring with his renown, and have covered the British name with a blaze of unrivalled glory.—Sir, that the cause of this country, and of the world, may not, at such a crisis, suffer from any want of zeal on our part to strengthen the hands of his majesty’s government, we have finished our supplies with a large and liberal aid, to enable your royal highness to take all such measures as the emergencies of public affairs may require, for disappointing or defeating the enterprises and designs of the enemy.—The bill which I have to present to your royal highness for this purpose, is entitled An Act for enabling his Majesty to raise the Sum of Five Millions for the Service of Great Britain, and for applying the Sum of 200,000*l.* for the Service of Ireland;—to which bill his majesty’s faithful commons, with all humility, intreat his majesty’s royal assent.”

The royal assent was given in the usual form to this bill; and also to another, for the regulation of penitentiary-houses.—The prince-regent then delivered his speech from the throne; after which the lord-chancellor declared the parliament to be prorogued.

The circumstance of the Speaker addressing the regent in a speech embracing so many topics, was thought very extraordinary at the time; and that must be our apology for inserting it, while we omit that of the regent. It was certainly almost unexampled; and very opposite opinions have been formed as to the prudence or the propriety of it. It was by some thought indecorous to anticipate the chief points of the regent’s speech; more so to contradict or differ from any of them, if indeed that can be called contradiction which is uttered first. In respect to Mr. Vansittart’s measure of taking some money from the sinking fund, the regent is made cautiously to say, “By the regulations you have adopted for the redemption of the national debt, you have established a system which *will not retard* its ultimate liquidation, whilst at the same time it provides for the vigorous prosecution of the war with the least practicable addition to the public burthens.” This indeed is quite as much as can possibly be affirmed: but we have seen that Mr. Abbott asserts, that this measure will “*materially accelerate* the final extinction of the national debt!”—For these and other reasons, but principally on account of the opinion expressed on the catholic question, notice was given by lord Morpeth, in the house of commons, of a motion upon the subject, which stands for this day, April 22, 1814.

We shall again avail ourselves of the recess of parliament to detail the events of the campaign.—If we anticipate, for a while, the transactions which have taken place during the course of this year, though we consider them at a distance, and as if still among the eventual possibilities of this sublunary world, we must fairly confess that they shake our very soul with astonishment. The northern empires, that had been awed by the dreadful visitation of the French eagles, and had suffered so materially from their rapacity, now saw them turn their destructive wings back again towards the west, seek for refuge in their native aires on the other side of the Rhine, and lie there dormant

dormant for security.—The olive of peace was fast sprouting in Europe, the greatest part of which loudly hailed the dawn of freedom, and the whole of the world was rejoicing at the pleasing and long-expected prospect of tranquillity. The work of blood seemed to have ceased for centuries to come, and the Russian and Prussian phalanxes had already hung up their spears and shields, and fought for repose under the laurels they had so dearly bought.—But these appearances were fallacious; the contest was still to be renewed. And now—though we still bear on the tablets of our memory the days of old, the battles of Marathon, the retreat of the ten thousand, and the Thermopyles—though we still hear the shock of armies at Cannæ, and in all parts of Italy—though fresh are still in our minds the victories of Charles XII. the tremendous conflicts under Louis XIV. and the never-to-be-forgotten achievements of the second Frederic—yet all these military wonders shrink into mere stage-fencing and boys-fights when compared with the convulsions which this year has witnessed. The number of men under arms, the high rank and ability of their leaders, the havoc which was the effect of their furious encounters, will be to posterity, as well as to the present generation, an object of surprise, of regret, and, we hope, a warning against ambitious pretensions, the end of which is the wanton destruction of our fellow-creatures.

After Bonaparte had quitted his army at the close of the preceding year, (see p. 299.) its retreat from the Beresina to the Niemen, and from the Niemen to the Vistula, was one continued scene of dismay, rout, and confusion. The Cofacs hovered continually in crowds on their rear, and were able, not indeed absolutely to stop their retreat, but to render it uniformly disastrous, and to cut off every thing which for a moment separated itself from the main body. Meantime the wings of the Russian army followed close on the flanks; and, by continually threatening to interpose between them and France, rendered it impossible to pause for a moment at any single point. Bonaparte had directed, that a stand, if possible, should be made for a few days at Wilna, the grand depot of the army, and filled with supplies of every kind. Could this have been effected, the troops would have breathed from their fatigues, and their order and efficiency would have been in some measure re-established. But scarcely had they, by a succession of prodigious marches through tracts nearly impassable, succeeded in reaching that important place, when they found themselves already almost surrounded by the Russian columns; and it was necessary to hurry on with the utmost celerity. The victorious Russians took possession of Wilna, in which they found 20,000 prisoners, a great proportion of whom were wounded, seven generals, with vast quantities of provisions, arms, and equipments, of every description. Without pausing, however, they continued their pursuit. One column, under Wittgenstein, went down the Niemen to cross at Tilsit; while another under Platoff pursued along the direct route through Kowno. The French had entrenched themselves strongly at this place; and they hoped, by defending the passage of the Niemen, to have obtained a short respite. Platoff, however, hesitated not a moment. He threw himself upon the frozen Niemen, and the whole body of his Cofacs were soon on the opposite bank. No choice was left to the enemy, but to fly or surrender. They hastily crossed the river in two columns; but were not able to avoid the attack of the Cofacs, who cut off considerable numbers. The pursuit was then continued, as before, with the daily capture of prisoners, cannon, baggage, and ammunition. The same scene continued uninterrupted till the two armies arrived on the Vistula.

According to official accounts published by the Russian government, the number of prisoners taken, from the battle of Borodino to the 26th of December, amounted to 170,000 men, of whom 1298 were officers and 41 generals. To this was added 1131 pieces of cannon. Europe

flood aghast at this estimate. Never, in her bloodiest wars, had she witnessed or heard of such a destruction. And indeed the immense armies which the great monarchs of Persia used to muster in order to enslave the Greek republics, never suffered such a loss. The account could not have obtained belief, had not that prodigious host been seen passing through into the Russian territory, and had not the wrecks of it been seen returning. This spectacle, with the diminished power of resistance which subsequent events exhibited, convinced the world, that what might otherwise have seemed a mere political artifice, was real and official truth.

After such disasters, after such losses, could it be expected that Napoleon could ever raise an army sufficiently strong to return and dare again the powers of the north? His genius however did not forsake him; nor did the resources of France appear to be exhausted. An army sprang at his command; and he soon headed his collected forces and those of his allies on the eastern side of the Rhine.—On the 14th of February, 1813, he appeared with great pomp at the fittings of the legislative body, and pronounced the following speech, which, as the sentiments it breathes relate directly to the events which took place afterwards, we shall present to our readers:

“Gentlemen Deputies from the Departments to the Legislative Body; The war again lighted in the north of Europe offered a favourable opportunity to the projects of the English upon the peninsula. They have made great efforts. All their hopes have been deceived. Their army was wrecked before the citadel of Burgos, and obliged, after having suffered great losses, to evacuate the Spanish territory.—I myself entered Russia. The French arms were constantly victorious in the fields of Ostrowno, Polotik, Mohilow, Smolensk, Moscow, Malairaslovitz. The Russian armies could not stand before our arms. *Moscow fell into our power.* Whilst the barriers of Russia were forced, and the impotency of her arms acknowledged, a swarm of Tartars turned their parricidal hands against the finest provinces of that vast empire which they had been called to defend. They, in a few weeks, notwithstanding the tears and despair of the unfortunate Muscovites, burned more than 4000 of their finest villages, more than 50 of their finest towns; thus gratifying their ancient hatred under the pretext of retarding our march, by surrounding us with a desert.—*We triumphed over all these obstacles.* Even the fire of Moscow, by which, in four days, they annihilated the fruits of the labours and cares of four generations, changed in no respect the prosperous state of my affairs. But the excessive and premature rigour of the winter brought down a heavy calamity upon my army. *In a few nights I saw every thing change.* I experienced great losses. They would have broken my heart, if, under such circumstances, I could have been accessible to any other sentiments than those of the interest, the glory, and the future prosperity, of my people. On seeing the evils which pressed upon us, the joy of England was great—her hopes had no bounds—she offered our finest provinces as the reward of treason—she made, as the conditions of peace, the dismemberment of this vast empire; it was, under other terms, to proclaim *perpetual war.* The energy of my people under these great circumstances; their attachment to the integrity of the empire; the love which they have shown me; have dissipated all these chimeras, and brought back our enemies to a more just consideration of things. The misfortunes produced by the rigour of hoar frosts, have made apparent, in all their extent, the grandeur and the solidity of this empire, founded upon the efforts and the love of fifty millions of citizens, and upon the territorial resources of one of the finest countries in the world. The agents of England propagate, among all our neighbours, the spirit of revolt against sovereigns; England wishes to see the whole continent become a prey to civil war and all the furies of anarchy; but Providence has designed her herself to be the first victim of anarchy and civil war. I have signed with the  
pope

pope a concordat, which terminates all the differences that unfortunately had arisen in the church. The French dynasty reigns, and will reign, in Spain. I am satisfied with all my allies. I will abandon none of them. I will maintain the integrity of their states. *The Russians shall return into their frightful climate.*—I desire peace; it is necessary to the world. Four years after the rupture which followed the treaty of Amiens, I proposed it in a solemn manner. I will never make but an honourable peace, and one conformable to the interests and grandeur of my empire. My policy is not mysterious; I have stated all the sacrifices I could make.—So long as this maritime war shall last, my people must hold themselves ready to make all kinds of sacrifices, because a had peace would make us lose every thing—even hope—and all would be compromised—even the prosperity of our descendants.—America has had recourse to arms, to make the sovereignty of her flag respected. The wishes of the world accompany her in this glorious contest. If she terminate it by obliging the enemies of the continent to acknowledge the principle that the flag covers the merchandise and crew, and that neutrals ought not to be subject to blockades upon paper, the whole conformable to the stipulations of the treaty of Utrecht, America will have credit from all nations: posterity will say, that the old world had lost its rights, and that the new one re-conquered them.—My minister of the interior will explain to you in the exposé of the situation of the empire, the prosperous state of agriculture, manufactures, and of our interior commerce, as well as the still-constant increase of our population. In no age have agriculture and manufactures been carried to a higher degree of prosperity in France.—I want great resources to meet the expenses which circumstances demand; but, by means of the different measures which my minister of finances will propose to you, I shall *not impose any new burthen on my people.*”

One of the principal cares which Bonaparte took before again leaving the French territory was to provide against any shock from the possible event of his death, by a formal legislative provision for a regency, in the empress-mother, during the minority of the king of Rome; and, to make this arrangement as imposing as possible, the empress and her son were to be crowned by the pope. To obtain this last influence, he had an interview with the detained pontiff at Fontainebleau, and a *concordat* was mutually signed, which arranged all the differences between the pope and emperor, and obtained for the Gallic church the sanction of the successor of St. Peter.

If we turn our attention towards Russia, we shall find that the emperor was not remiss in preparing himself to visit the French with the same calamities they had inflicted upon his people; and to that purpose he issued two proclamations through the organ of prince Koutousoff-Smolensko: both are spirited, and breathe revenge against the tyrant of France; and are full of assurances that the intention of the emperor is not to make conquests, but most certainly to effect, in a solid and lasting manner, the deliverance and enfranchisement of Germany. He says: “At the moment of my ordering the armies under my command to pass the Prussian frontier, the emperor, my master, directs me to declare, that this step is to be considered in no other light than as the inevitable consequence of the military operations. Faithful to the principles which have actuated his conduct at all times, his imperial majesty is guided by no view of conquest. The sentiments of moderation which have ever characterized his policy are still the same, after the decisive successes with which Divine Providence has blessed his legitimate efforts. Peace and independence shall be their result. These his majesty offers, together with his assistance, to every people, who, being at present obliged to oppose him, shall abandon the cause of Napoleon, in order to follow that of their real interest. I invite them to take advantage of the fortunate opening which the Russian armies have produced, and to unite themselves with them in the pursuit of an

enemy whose precipitate flight has discovered his loss of power. *It is to Prussia in particular that this invitation is addressed.* It is the intention of his imperial majesty to put an end to the calamities by which he is oppressed, to demonstrate to her king the friendship which he preserves for him, and to restore to the monarchy of Frederic its éclat and its extent. He hopes that his Prussian majesty, animated by sentiments which this frank declaration ought to produce, will, under such circumstances, take that part alone which the wishes of his people and the interests of his states demand. Under this conviction, the emperor, my master, has sent me the most positive orders to avoid every thing that could betray a spirit of hostility between the two powers; and to endeavour, within the Prussian provinces, to soften, as far as a state of war will permit, the evils which, for a short time, must result from their occupation.”

The other, which seems more directly to issue from the emperor himself, runs as follows: “When the emperor of all the Russias was compelled, by a war of aggression, to take arms for the defence of his states, his imperial majesty, from the accuracy of his combinations, was enabled to form an estimate of the important results which that war might produce with respect to the independence of Europe. The most heroic constancy, the greatest sacrifices, have led to a series of triumphs; and when the commander-in-chief, prince Koutousoff-Smolensko, led his victorious troops beyond the Niemen, the same principles still continued to animate the sovereign. At no period has Russia been accustomed to practise that art (too much resorted to in modern wars,) of exaggerating by false statements the success of her arms. But, with whatever modesty her details might now be penned, they would appear incredible. Ocular witnesses are necessary to prove the facts to France, to Germany, and to Italy, before the slow progress of truth will fill those countries with mourning and consternation. Indeed it is difficult to conceive that, in a campaign of only four months duration, 130,000 prisoners should have been taken from the enemy, besides 900 pieces of cannon, 49 stand of colours, and all the wagon-train and baggage of the army. A list of the names of all the generals taken is hereunto annexed: it will be easy to form an estimate from that list of the number of superior and subaltern officers taken. It is sufficient to say, that out of 300,000 men (exclusive of Austrians), who penetrated into the heart of Russia, not 30,000 of them, even if they should be favoured by fortune, will ever revisit their country. The manner in which the emperor Napoleon repassed the Russian frontiers can assuredly be no longer a secret to Europe. So much glory, and so many advantages, cannot, however, change the personal dispositions of his majesty the emperor of all the Russias: The grand principles of the independence of Europe have always formed the basis of his policy; for that policy is fixed in his heart. It is beneath his character to permit any endeavours to be made to induce the *people* to resist the oppression and to throw off the yoke which has weighed them down for twenty years. It is their *governments* whose eyes ought to be opened by the actual situation of France. Ages may elapse before an opportunity equally favourable again presents itself; and it would be an abuse of the goodness of Providence not to take advantage of this crisis to re-construct the great work of the equilibrium of Europe, and thereby to insure public tranquillity and individual happiness.” Here follows the list of generals taken, amounting to 43.

Besides these bold expressions of his intentions and plans, the emperor Alexander issued the following address to his troops before he left Wilna:—“Soldiers! Your valour and perseverance have been rewarded by a renown which will never die. Among posterity your names and deeds will pass from mouth to mouth, from your sons to your grand-children and great-grand-children, to the latest posterity.—Praise be to the Most High! The hand of the Lord is with us, and will not forsake us. *Already there remains not a single*

a single enemy on the face of our country. You have reached the borders of the empire over their dead bodies and bones. It still remains for you to go forward over the same; not to make conquests, or to carry the war into the countries of our neighbours, but to obtain a wished-for and solid peace. You go to procure rest for yourselves, and freedom and independence for them. May they become our friends!"

The occupation of Warfaw, Pillau, Thorn, Liebau, Posen, Berlin, and Dresden, by the Russians, quickly followed; and the evacuation of Hamburg and Bremen, by the French, was a consequence of the movements of the Russian army. The spirit of patriotism was not long in bursting out in the states of Baden, Wirtemberg, and Bavaria; and the peasantry of Hanover took arms, and rose *en masse* against their oppressors. A body of Cossacs had been pushed as far as Wittenberg on the Elbe, about half way between Magdeburg and Dresden, as early as the 25th of February; in consequence the king of Saxony fled to Plauen, about 120 miles from his capital, having dispatched his family about seventy miles further, to Bayreuth. In a proclamation, dated Dresden, February 26, the king of Saxony states the necessity, under existing circumstances, of his quitting his metropolis; relying on the assistance of his great ally, and the fidelity of his subjects, for soon returning again.

At this time, Bonaparte in his exposé declares, that fresh troops were going to the Oder "to set bounds to the system of Russian invasion." It is to be observed, that the Oder was now the acknowledged bound of the French hopes of defence; and the entrenched camp at Runersdorf was declared to be the point of assemblage for a new grand army. Meanwhile Dantzic, Warfaw, Thorn, and indeed all the fortresses beyond the Oder, were left to their fate. The former was closely invested, and all communications cut off by the cordon which Platoff had drawn round it; and St. Cyr had in vain attempted to re-open the communication.

From Ligne, where the head-quarters of the Russians were on the 19th of January, they had been moved by the 26th nearly 120 miles to Wittenberg, by which means they had got into the rear of the Austrian position at Pultouk. In the mean time the Austrians were gradually retiring before general Miloradovitch; Regnier retired to Posen, to take the place of Davoust, who had marched to Stettin, on the side of Dantzic. On the 7th of February, major-general count Woronzow continued his march to Posen with his detachment; whilst admiral Tchichagoff's corps invested the fortresses of Thorn on all sides. Everywhere the inhabitants of towns and villages were receiving the victorious Russian troops with joy, and as deliverers. Prince Schwartzberg's corps was, by their motions, forced to retreat; and, on the 8th of February, general Miloradovitch entered the city of Warfaw. On the 6th of the same month, general count von Sierres arrived, with about 6000 men, and a proportionable quantity of artillery, in the village of Old Pillau, within two thousand paces of the fortresses. The general soon sent a summons for the surrender of the citadel, and the Nehrung fort, to the commandant of the French garrison. A convention was the consequence, and the French troops quitted the town and fortresses of Pillau on the 8th of February. The garrison consisted of about 1200 men; and the number of their sick left behind amounted to 400.

We must remember that, at the latter end of January, the king of Prussia had retired to Breslaw, and called upon his subjects to arm in support of their king and country. This patriotic call was heard through Prussia, it resounded in all parts of the kingdom, it was echoed by every heart; men and women, young and old, manifested the warmest enthusiasm; and all who were able to bear arms presented themselves for enrolment as volunteers. Mortified and enraged at this, the commander of the French armies, Beauharnois, who had sought refuge in Berlin, forbade the recruiting enjoined by the royal Prussian decree.

The Russians meanwhile were advancing victoriously through Poland. The Austrians concluded an unlimited truce, in virtue of which they withdrew into Galicia; and the Saxons under Regnier profited by this circumstance to retire behind the Austrians towards their own country.—On the evening of the 13th of February, general Winzingerode came up with and engaged general Regnier at Kabitsch. In this affair, two Saxon standards, seven pieces of cannon, the Saxon general Nostitz, three colonels, thirty-six officers, and 2000 privates, were the trophies of the day.

In this state of things, the king of Prussia offered himself as a mediator between the chief belligerents. On the 15th of February, he proposed a truce, on condition that the Russian troops should retire behind the Vistula, and the French troops behind the Elbe, leaving Prussia and all its fortresses free from foreign occupation. Though exceedingly favourable to the beaten army, they were fully rejected by Bonaparte; whilst, on the other side, the emperor Alexander testified sentiments of such liberality towards the Prussian monarchy and nation, as laid the basis of the union which has since produced such happy consequences. On the 22d of the same month, the emperor of Russia and the king of Prussia consented mutually to a treaty of peace and alliance, offensive and defensive; and an active combined system of military operations was arranged.

On the night of the 3d of March, the French quitted Berlin; Tchernicheff, the Russian general, arrived in that city at five o'clock in the morning, and on the 11th, count Witgenstein made his public entry into the same capital. On the 18th following, baron Tettenborn entered Hamburg amidst the acclamations of the citizens. In consequence of this happy event, the ancient government was restored. The king of Prussia now placed Lieut.-gen. d'York and his corps d'armée under the direction of count Witgenstein. The latter immediately issued the order of the day to the royal Prussian corps under the command of Gen. d'York.

The 5th of March witnessed the solemn entry of the emperor Alexander into Breslaw, having been met, at six miles distance, by the king and royal family of Prussia, and the nobles from every part in the country. A word has sometimes proved of greater effect than speeches, proclamations, and even force of arms. When it is said *à propos*, and when it is likely to be fully understood and deeply felt—a word will operate a revolution. "Ye were Germans," said count Witgenstein, in one of his addresses to the Prussians; "but you have been forced to become Frenchmen."—This reproach flashed like lightning into the mind and heart of every one. Throughout Germany the cutting sarcasm produced its effect; patriotism and revenge superseded all other considerations, and the greatest sacrifices were made suddenly and cheerfully on the altar of the country.

General Witgenstein having made his dispositions on the left bank of the Elbe, the three flying corps, the first under the command of general Dornberg, the second under Tchernicheff, and the third under Tettenborn, were to pass the Elbe between Hamburg and Magdeburg. This being effected, the generals were informed that Morand, with a corps of upwards of 3000 infantry, 11 cannon, and 300 cavalry, was pressing forward to Luneberg, to punish the inhabitants who had dared to take up arms. But the arrival of the generals defeated the intention of the French; and they entered the town twelve hours after the enemy had occupied it. After a brave and obstinate resistance, the French, seeing no possibility of escape, laid down their arms at all points. Morand, commander of the corps and general of division, was severely wounded and taken prisoner. In the whole, the Russians took 100 officers, and 2200 privates.

The garrison of Thorn surrendered to the Russians on the 16th of April. It consisted of 400 Poles, 3500 Bavarians and 90 Frenchmen, besides 200 pieces of cannon.

Nearly the whole of the Bavarians and Poles afterwards enlisted under the victorious standard.

Meantime Bonaparte, whose prudence in defeat was often as great as his moderation in victory, vigorously exerted himself to repair the incalculable losses he had sustained. The disposable army which he now secured for his future schemes, amounted to 400,000 men to be employed on the Elbe, 200,000 for services in Spain, and 200,000 partly on the Rhine, partly in Holland, the Low Countries, and in Italy. It is wonderful to observe how much the zeal, activity, and perseverance, of this man achieved in a few weeks. He really astonished the whole of Germany, nay, all Europe, with the wonders he performed in so short a space of time. It certainly shows what great talents and energy of mind he has received from his Creator, and how guilty he has been in using those gifts for the destruction of his fellow-creatures; but his ambition was above his good qualities, and made him the scourge of Europe.

We must consider now the different French corps marching towards Jena, for the commencement of the campaign. The plan of operations being fully determined on, Bonaparte quitted Paris, and arrived at Mentz on the 20th of April; on the 25th at Erfurth; and on the 29th he moved his head-quarters to Naumburg. His proceedings, however, were marked with the greatest degree of caution. The gallant veteran, prince Koutousoff-Smolensko, was left ill on the march at Buntzlaw, where he died; and the letter addressed to his widow by the benignant and feeling heart of the emperor of Russia is one of the best proofs of the warmth of his affections and the purity of his mind. General Wittgenstein was appointed to the chief command of the Russian army.

The movements of Bonaparte announced his immediate intention to act on the offensive; and therefore the combined Russian and Prussian armies united between Leipzig and Altenburg, a central and advantageous position. They endeavoured, it seems, to be beforehand with him in occupying the plains of Lutzen, a spot which is celebrated by the fall of Gustavus Adolphus, and to which perhaps they had directed their choice on that very account, in imitation of Bonaparte himself, who, in his knowledge of human nature, always endeavoured to take advantage of every thing in the shape of an omen against his enemy. He prevented them, however, and seized the favourable ground himself; and here the battle began on the 2d of May. The accounts are various. That given by the French is by far the most favourable, being dated from the field of battle, and laying claim to a decided victory. The report published at Berlin, on the contrary, by the military government, is dated from Pegau, a village about fifteen miles distant from the field of battle, the day after the action; and only asserts that a most sanguinary conflict had taken place, in which the allies had occasionally had the advantage, and which only ceased when night rendered it impossible to fight any longer; that both armies remained on the field, and the French made some attacks the next morning, which were repelled by cannonading, but followed by a retrograde movement on the part of the allies; who, in order to take rest and refreshment, retired to Borna and Rochlitz, whence they expected to break up immediately to resume offensive operations. The loss of the Russian and Prussian troops is acknowledged "very great; not overrated at 8 or 10,000 men in killed and wounded." The prince of Hesse-Homburg was amongst the former; and generals Blucher, Scharnhoff, and Hunerbein, on the side of the Prussians, and generals Karowinzen and Alexief, on that of the Russians, with an unusual number of officers, are among the latter. The loss of the French is considered double or treble their own; but only 1000 prisoners, with 10 pieces of cannon, and 23 powder-waggons, had been taken during the action; and in an affair at Halle, from whence the French had been dislodged; "the animosity in the fight being too great to give much quarter."

We shall now consider the Russian account, which, though it only appeared in the Hamburg Correspondent, seems entitled, from the manner in which it is written, and the details which it presents, not only of movements, but of the intentions that gave them birth, to be considered an official document. It was published under the unassuming title of "Particular Statement of the Battle at Gros-Gorchen, on the 2d of May;" and states, that the arrival of Napoleon, and the junction of his army with that of the viceroy at Naumburg, as well as their passing the Saale in force, being known at general Wittgenstein's head-quarters, he resolved to anticipate him, and by a bold attack "to obstruct him in his dispositions, and to restrain his offensive operations." The emperor Alexander and the king of Prussia repaired to the army, to animate their troops by their presence; and on the 1st of May a reconnoissance made by general Winzingerode, brought on "a very severe engagement," which confirmed the intelligence of the main force of the enemy being in the vicinity of Weissenfels and Lutzen. The allies then resolved "to fall on such part of his force as was, on his side, considered to be his best troops; in order, after such a stroke, to give larger space for the operations of the flying corps, over whom the enemy had latterly acquired a superiority." The intentions of the allies, in attacking Napoleon, are therefore clearly given. They were, "to obstruct his dispositions," reduce him to the defensive, and enable the Russian and Prussian flying corps to harass him on a greater variety of points." How far they were realized, necessarily gives us the measure of their success, or of their failure. The Russian account then describes the action as most obstinately contested. Some of the villages in which the French received the attack, were several times taken and re-taken; and for several hours both parties fought at the distance of only one hundred paces, with alternate advantage. At last, about seven o'clock in the evening, the French brought a new corps on the right of the allies, and the Russian reserve was advanced to sustain the shock. "The most desperate engagement was now continued till night came on, and put an end to the battle." Both armies, it would appear, according to the report, slept on the field; the allies still occupying the villages which they had stormed, and the French in possession of Leipzig, which they had taken during the action. The rest is involved in obscurity. The allies, we are told, manœuvred in consequence of the enemy being at Leipzig; but afterwards learnt that he had quitted it, (which does not seem to have been the case,) as well as Halle; that he had lost 15,000 killed and wounded, and that many of his cannon were dismounted, and a number of his powder-waggons blown up—then, that their light detachments were again at liberty to harass him, and to prosecute the advantage gained; that they consequently kept the field of battle; and that the victory was theirs, and their intended purpose accomplished. "The enemy was to be attacked the following morning, the 3d of May;" but no reason is given why that attack was not made, or why the allies retreated, instead of prosecuting the advantage gained, especially as the corps of Miloradovitch is stated to have arrived at the close of the action, and 50,000 of their best troops not to have been engaged. The French papers supply this chasm; and inform us, that Napoleon, after some trifling actions with the rear of the allies, entered Dresden on the 8th at noon.

It is acknowledged by every one, that, in the battle of Lutzen, Bonaparte had the greatest number of men; the allies were superior in cavalry; in artillery both sides were equal. The advantages of a doubtful contest must be judged of by the consequences that ensue. Thus Bonaparte took and kept possession of Leipzig, and gained possession of Dresden, the king of Saxony as yet proving faithful.—On the 3d of May, Napoleon addressed the following proclamation to his army: "Soldiers! I am satisfied with you. You have fulfilled my expectations. You have supplied every thing by your good will, and by your va-

lour.

four. On the memorable 2d of May, you defeated and routed the Russian and Prussian army, commanded by the emperor Alexander and the king of Prussia. You have added new lustre to the glory of my eagles. You have displayed all that the French blood is capable of. The battle of Lutzen will be placed above those of Austerlitz, Jena, Friedland, and the Moskwa. In the last campaign, the enemy found no refuge against our arms, but by following the ferocious course of his barbarous ancestors. Armies of Tartars laid waste his fields—his cities—sacred Moscow itself. They are now arrived in our regions, preceded by all the bad subjects and deserters of Germany, France, and Italy, for the purpose of preaching up revolt, anarchy, civil war, and murder. They became the apostles of every crime. They wished to light up a moral conflagration between the Vistula and the Rhine, in order, according to the usage of despotic governments, to place deserts between us and them. Madmen! They little know the attachment of Germany to their sovereigns—their wisdom, their orderly disposition, and their good sense. They little know the power and bravery of the French. In a single battle, you have counteracted all those parricidal plots. *We will drive back these Tartars into their frightful regions, which they ought never to have left.* There let them remain, amidst their frozen deserts—the abodes of slavery, of barbarism, and of corruption, where man is debased to an equality with the brute. You have deserved well of civilized Europe. Soldiers—Italy, France, Germany, return you thanks. From our Imperial Camp of Lutzen, May 3, 1813. NAPOLEON.”

The empress queen and regent sent to each bishop the following letter:—“M. Bishop of ———; The victory gained on the field of Lutzen, by his majesty the emperor and king, our very dear husband and sovereign, can only be considered as a special act of divine protection. We desire, that on receiving this letter you cause *Te Deum* to be sung, and return thanks to the God of hosts, and that you will thereto add such prayers as you shall judge most suitable for drawing down the Divine Protection on our arms, and especially for the preservation of the sacred person of the emperor and king, our very dear husband and sovereign. May God preserve him from all danger! His safety is as necessary to the happiness of the empire as to the welfare of Europe, and to religion, which he has raised up, and which he is called to re-establish. He is the most sincere and faithful protector of it. This letter having no other object, we pray God to have you in his holy keeping. Given at our Imperial Palace at St. Cloud, this 11th May, 1813. MARIA LOUISA.”

Bonaparte made his entry into Dresden on the 8th of May.—The king of Saxony, while the arms of the allies continued to prosper, had shown some disposition to espouse their cause. Instead of remaining in Franconia, he had repaired to Prague, where he might be ready to act according to circumstances. But, seeing Napoleon again master of Saxony, and the star of his fortune again on the ascendant, he determined upon adhering to that alliance. He repaired therefore to Dresden as soon as he understood that the French had entered that capital. Suspicious as his late conduct had been, it was no time to show any consciousness of it; and Napoleon received him with the most complete outward cordiality. Orders were instantly sent to the Saxons shut up in Torgau to rejoin the French standard; and the mandate was immediately obeyed. Bonaparte thus obtained at once a considerable accession to his force, and the means of passing the Elbe without difficulty, under cover of the fortrefs of Torgau. The allies, finding it vain to attempt defending the passage of the Elbe, determined upon falling back to a strong position behind it. They had now to determine as to their line of retreat. They fixed it not upon Berlin, to cover that capital, but in the remotest possible direction from it; through Lusatia, close to the Bohemian frontier. An advantageous position was chosen near Bautzen, in the intention, should that be forced, of falling back upon

Silesia. At the same time, lest mere flying corps of the enemy should penetrate to Berlin, that capital was covered by general Bulow, with a corps, partly of regulars, and partly of the newly-raised *landwehr* and militia. Bonaparte, arrived at Dresden, was not long before he pushed detachments across the Elbe. He sent them in different directions, with the view of deceiving the enemy as to the real point of attack. While several corps stationed themselves in front of Bautzen, that of Ney moved upon Hörsferwerda; and Victor, Sebastiani, and Bertrand, marched still farther north in the direction of Berlin. Suddenly, however, all these corps changed their line of march, and moved towards Bautzen as a common centre. This was according to his usual system, in order to turn his collected force against that point where the main strength of the enemy lay. Accordingly, he so far succeeded, that Bulow, with the corps which covered Berlin, was completely thrown out, and did not co-operate in the battles which immediately followed, and which lasted from the 19th to the 22d of May. The battle of Bautzen occupied two of these days, the 20th and 21st.

The greater part of the allied army was placed in a very advantageous position. The left rested on the mountains which separate Lusatia from Bohemia; the right on some commanding heights near Kreckwitz; while the centre occupied ground favourable to the action of cavalry, in which the allies were superior. But, beyond the left, there was an extent of flat and woody country, intersected with roads, leading to the territory in the rear of the allies. Here the corps of general Barclay de Tolly manœuvred, not forming properly part of the line, but merely guarding against attempts on the flank and rear of the army. Bonaparte made his first demonstration against the left of the allies, posted among the mountains, which were favourable to the action of his infantry. The contest was continued for some time with warmth, but without his being able to make any impression. It soon appeared, however, that this was merely a feint to cover his main object, which was to act against the right of the position. General Barclay de Tolly, who, as just mentioned, held the open ground to the extreme right, was attacked by an overwhelming force, and driven in upon the main body. Bonaparte thus became master of the tract which that general had occupied, and which was full of passages leading to the rear of the allied army; and he lost not a moment in availing himself of so important an advantage. Generals Blucher and d'York made a desperate attack upon the flank of the French advancing corps; and succeeded, for some time, in arresting its progress. But it soon appeared that the odds were here immense; and, as all the other parts of the line were also pressed by superior numbers, there was no possibility of drawing from them any aid. There were thus no means of preventing their left from advancing upon the rear of the allies, and cutting them off from the roads leading to Silesia and the Bober. It was determined therefore to retreat upon Hachkirch; a movement which was effected without loss of any attempt at molestation.

The battle of Bautzen was one of the most desperate and sanguinary, even of that dreadful succession which Europe has witnessed. The French stated their loss at 11 or 12,000 men; a greater number than they had admitted, even at Borodino. Bonaparte says, “he could take no colours, because the allies always carry them off the field of battle! and he only took nineteen cannon, because he wished to spare his cavalry.” These reasons, so curious, and at the same time so unusual in a French account of a battle, evidently show that the victory in itself was of little value. It is remarkable also, that he does not estimate the loss of the allies, or state his having taken any prisoners, except wounded. The number of the wounded of the allied force is said in a vague manner to be about 18,000 men, of whom 10,000 were prisoners. The rest, he admits, had been carried off by the allied army in carriages. It is clear, therefore, that he was unable to pursue,

sue, and that the allies retreated at leisure and in good order.—On the 22d an affair took place at Reitzenbach, in which the allies were defeated.

There was a sort of theatrical display of Bonaparte's sensibility on the occasion of this tremendous waste of human blood, perhaps intended to divert the attention of the French public from his sanguinary ambition. Among those who were mortally wounded, was Duroc, the son of a scrivener, and for many years a fervile attendant on Bonaparte, who, in return, had created him duke of Friuli. To this person, in his last moments, Bonaparte paid a consolatory visit; and the poor dying wretch is described as carrying his adulation and fervility to the very borders of the grave. The scene, however, was too much for the tender nerves of Bonaparte; and he, who could behold unmoved the wanton destruction of so many thousands of his fellow-creatures, for no other object but to gratify his lust of power, is overcome by his feelings, and retires to his tent to indulge the luxury of grief alone.—Our readers shall have it in the language of the *Moniteur*. “As soon as the posts were placed, and the army had taken its bivouagues, the emperor went to see the duke of Friuli. He found him perfectly master of himself, and showing the greatest *sang-froid*. The duke offered his hand to the emperor, who pressed it to his lips.—‘My whole life,’ said he to him, ‘has been consecrated to your service; nor do I regret its loss, but for the use it still might have been of to you!’—‘Duroc!’ replied the emperor, ‘there is a life to come; it is there you are going to wait for me, and where we shall one day meet again!’—‘Yes, sire! but that will not be yet these thirty years, when you will have triumphed over your enemies, and realized all the hopes of our country.—I have lived an honest man—I have nothing to reproach myself with—I leave a daughter behind me—Your majesty will fill the place of a father to her!’—The emperor, grasping the right hand of the great marshal, remained for a quarter of an hour with his head declined on his right hand in deep silence. The marshal was the first who broke this silence: ‘Ah! sire,’ cried he, ‘go away; this sight gives you pain!’ The emperor, supporting himself on the duke of Dalmatia and the grand master of the horse, quitted the duke of Friuli, without being able to say any more than these words: ‘Farewell then, my friend!’ His majesty returned to his tent, nor would he receive any person the whole of that night.”

Bonaparte, in a decree dated from the field of battle, at Wurtzchen, the 22d of May, directed a monument to be erected upon mount Cenis. On the front of the monument, looking towards Paris, are to be inscribed the names of all the cantons or departments on this side the Alps. Upon the front, looking towards Milan, to be engraved the names of all the cantons or departments beyond the Alps, and of the kingdom of Italy. On the most conspicuous part of the monument the following inscription is to be engraved: “The emperor Napoleon, upon the field of battle of Wurtzchen, ordered the erection of this monument, as a proof of his gratitude to his people of France and Italy; and to transmit to the most distant posterity the remembrance of that celebrated epoch, when, in three months, 1,200,000 men ran to arms, to insure the integrity of the empire and of his allies.”

The battles of Bautzen and Wurtzchen, immediately followed by the abandonment of the capital and one half of Silesia, led to an armistice between the belligerents. It was most favourable to the French, whom it left in possession of all the country they had occupied; compelled the detached Prussian and Russian corps that acted in their rear and intercepted their convoys to recross the Elbe; and stipulated, that all the fortresses which they still held on the Lower Oder, the Vistula, and in the duchy of Warsaw, and which had been long blockaded, should be re-visited every five days by the allies, and a league of territory evacuated round each of them. In most campaigns, an armistice extends only to the two armies between which it was concluded; while distant and inde-

pendent corps are left free to act as their respective situations allowed: the present suspension of hostilities, on the contrary, was general; and the Swedes had no sooner reached the scene of action, than all their force was paralyzed without a blow, at a time, too, when, uniting with the Prussian division, which under Bulow had had a severe engagement with Oudinot at Hoyeswerda, and with the troops under Tettenborn and Woronzow on the Elbe, they might have formed an accumulation of force in the rear of the enemy sufficient to seriously impede his further advance, if not to compel him to retreat. Besides, two new fortresses were ordered to be immediately erected on the banks of the Elbe between Magdeburg and Hamburg, the latter city to be turned into a *place d'armes*, and the communication with Harburg secured by fortifications on the islands. The armistice, which was signed on the 4th of June, was to last to the 20th of July, six days notice being given of the renewal of hostilities; and Breslau, with a tongue of territory extending from Bohemia to the Oder, was to remain neutral between the two armies.

Napoleon removed his head-quarters to Dresden, from whence he might equally attend to the negotiations for peace and his preparations for renewed hostilities. He encamped his different corps at a short distance from each other along the line of demarcation, and fully provisioned Glogau. The emperor of Austria had quitted his capital for Prague, it was supposed to preside over the congress, which it was agreed should be held there for concluding a general peace.

This short campaign had been fought with peculiar military address. Prussia lay to the right of the allies, and the left of the French. Napoleon therefore constantly presented great strength on his left, and made a point of turning the right of the allies. He turned their right at Lutzen upon Altenburgh and Dresden. His main force crossed the Elbe on his left, at Torgau, bearing on the right of the allies. Again, at Bautzen, half his army, by that circuit, was enabled to attack the right flank of the allies, and to bear irresistibly on that wing. Hence the allies, in retreating across Silesia, were continually turned on their right, so that they were compelled finally to direct their course into the southern corner of Silesia, a mere *cul de sac*, leaving the road to Breslau, &c. open to the French, who, on the 1st of June, occupied that city. Thus was the emperor of Russia cut off from all direct communication with Prussia, and the king of Prussia from all direct connection with Prussia, from the 26th of May till the 4th of June, when the armistice was settled.

The north of Germany had been distinguished by occurrences of no inconsiderable interest, which we can now relate, without breaking the thread of the narration. To understand them, however, reference must be made to a transaction which took place at a period long anterior. In the month of August, 1812, the emperor Alexander and the crown-prince of Sweden met at Abo in Finland; and, after considerable discussion, concluded a treaty of alliance and co-operation. The leading articles, besides promises of mutual assistance, were those by which Sweden confirmed to Russia the possession of Finland, (which she had violently seized upon in 1808, the year after her protest against our seizing upon the Danish fleet,) on condition of procuring for her an accession of territory in another quarter. This was to be effected by requiring from Denmark the cession of Norway, for which that power was to be indemnified by countries hereafter to be conquered for her in the north of Germany. Should Denmark, as might be expected, refuse, Bernadotte was to be aided in accomplishing the conquest of Norway by 35,000 Russian troops; and this operation was to be effected prior to any co-operation from him in the continental war.

No consideration of the signal services lately rendered by the emperor Alexander to the common cause of Europe, can make us refrain from expressing our decided disapprobation of this treaty. There was no principle of the law of nations by which it could be justified. Both powers might perhaps

perhaps muster a few slight complaints against Denmark; but open war alone could have afforded ground for so violent a measure; and, by making the promise of an indemnity, they virtually gave up the claims founded on such allegations. As to the indemnity itself, Denmark was certainly very hardly treated, in being required to give up an ancient and integral part of her kingdom, for countries which, contrary to all visible human appearance, were to be conquered for her at some future period. To render the measure at all just, her consent was necessary, which however the terms of the treaty showed not to be expected. Even had it been obtained, this system of transferring subjects from hand to hand, by exchange, like herds of cattle, however conformable to the French system of *arrondissement*, is by no means sanctioned by the soundest views of political morality. Upon the basis of the above treaty, another was concluded with Sweden by the British cabinet. In this convention it was stipulated, that, in consideration of Bernadotte employing 30,000 men to cooperate with the Russian armies on the continent, he should receive from Britain a monthly subsidy of 100,000l. sterling. He was to receive also, in perpetuity, the possession of the island of Guadaloupe, which had been conquered from France by the British naval force. In fine, the arrangement with regard to Norway was guaranteed, and aid promised for carrying it into effect, provided that Denmark should refuse to join her arms to those of the allies.

We entreat our readers to forget, if it should have come to their knowledge, that, after our seizure of the Danish fleet in 1807, the emperor of Russia published a Declaration, on the 31st of October in that year, wherein he protests against "an act of violence of which history, so fertile in examples, does not furnish a single parallel;" and "engages that there shall be no re-establishment of concord between Russia and England, till satisfaction shall have been given to Denmark." For, should our readers recollect this, with what feelings must they now peruse a treaty between Russia and England, "in the Name of the most holy and indivisible Trinity;" the effect of which was to be the farther dismemberment of this much-injured power!

It is doubtful, however, if this iniquitous treaty will ever be fulfilled; for, even when Denmark was persuaded or forced to yield, it appears that general count d'Essen, who was appointed to take possession of that new acquisition, apprised the Swedish government, that prince Christian-Frederic, the former chief-governor, so far from obeying the reiterated orders of the court of Denmark, had declared himself *Regent of Norway*. The following particulars have also transpired:—He had received, on his departure for Norway, secret orders to preserve, by every possible means, this kingdom, until the general peace, in case Denmark should be forced to cede it. This order not having been positively revoked in the first letter of the king of Denmark, to the prince, dated the 17th of January, 1814, the latter proceeded to Drontheim, to excite the spirit of the inhabitants of that province. Seeing his measures approved by them, he gave orders for assembling the troops, and for augmenting the number by a conscription. At the same time several persons of distinction were invited to assemble at Eidewall. There the prince opened the conference by a speech, in which he dwelt on the necessity of maintaining union at the moment of ferment which had occurred, it being announced that the inhabitants of the north of Norway would descend from their mountains to exterminate every Norwegian who should submit to a foreign dominion; and the ferment not being less which had manifested itself in the southern part of the kingdom. Thus, not only the commandant of Fredericshall refused to surrender the citadel of that place to the Swedes, but the anniversary of the birth of the king of Denmark (Jan. 27, 1814.) was celebrated at Christiania by a repast, at which all the civil and military functionaries assisted. To give more eclat to

this ceremony, the bust of the king was placed in the hall, over which waved the Danish flag. After drinking, for the last time, the health of Frederic VI. this flag was removed, amidst a discharge of cannon, and that of Norway substituted. They then drank the health of prince Christian, under the title of Olof IV. *King of Norway*.

To return from this digression.—When these treaties between Sweden, Russia, and England, were first concluded, Denmark was in a state of amicable relation with France; and, so long as that power remained predominant in the north of Germany, it could not be expected that she would endanger her continental possessions by engaging in hostilities against it. But, when the triumphant arms of Russia poured down upon Holstein and the Elbe, her sentiments underwent a change. The yoke of France had pressed heavy upon her, as upon other states; and her people eagerly sought to be delivered from those fetters by which their industry had been chained. The great powers now perceived the error which they had committed, in conciliating Sweden at the expense of another power whose alliance might have been nearly as useful. Some diplomatic communications accordingly took place, from which Denmark certainly understood, that the relinquishment of Norway was no longer to be required from her. She accordingly agreed to unite with the allies, so far at least as to assist in the defence of the Hanse Towns; and, about the middle of May, a messenger was suddenly sent to Davoust, from Altona, to inform him that the Danes took Hamburg under their protection, and, if he persisted in attacking it, would fight in its defence. Their gun-boats immediately posted themselves before the city, and their troops entered its walls, and erected a battery of ten pieces of cannon opposite the Elbe. This conduct on the part of Denmark created universal astonishment. Some ascribed it to a secret understanding with the French, according to which the Danes were to obtain possession of the city, only to disarm its inhabitants, and restore it to the enemy when he should desire it; as their occupying it would leave the force under Davoust at liberty to act on other points still more important, at that crisis, than the Hanse Towns. Others fancied that Denmark had agreed to an arrangement proposed by the allies, to take the Hanseatic States as part of a compensation for the cession of Norway to Sweden.—But we need not wonder that others were at a loss to account for this step, since the Danes themselves were deceived. An explanation, however, soon took place, from which it appeared, that Sweden had not desisted wholly from her demands, but had merely refrained them to the bishopric of Drontheim, the most northerly of the Norwegian provinces. We trust that there was not, according to the French allegations, an intentional deception; Denmark, without doubt, was actually deceived. On finding that this new demand was to be persisted in, she determined to renew her alliance with France. She conceived, that this requisition, though diminished in extent, was the same in principle; and that no alternative was left to her, except this unfortunate one, which she adopted with evident reluctance.

The city of Hamburg was occupied, on the 30th of May, by 5000 Danes, who were followed in the evening of the same day by 1500 French. The city was taken possession of by the French general Bruyere, in the name of Bonaparte, as belonging to the French empire. General Tattenborn and his troops left it the day before; the Swedes had previously quitted it. The French general, however, did not enter Hamburg, as it was supposed he would, clothed in all the terrors of martial law, destroying the property of the inhabitants, and sacrificing their lives to his fury. It does not appear that he even called upon them to deliver up their arms. Instead of giving up muskets and bayonets, bullets and gunpowder, Davoust, *ex virtute officii*, issued a *criminal information* against all those who possessed, either for their own private use or for general dissemination, any libels, books, pamphlets, portraits, pictures,

pictures, caricatures, poems, verses, &c. which had been published since the 24th of February, when the allies became possessed of the city. He did not appear to consider the place, as these papers describe it, "a well-stored hive of war," filled with a citizen-soldiery, and having on its ramparts upwards of 200 pieces of cannon: but, with that hatred of the liberty of the press, which characterized Napoleon, and which, of course, his satellites imitated, he contemplated Hamburg as an immense dépôt of inflammatory and seditious publications; inflammatory, because they were calculated to excite a spirit of resistance throughout Germany; and seditious, because, having that effect, they tended to destroy the power of his master. A proclamation of Davoust's, published soon after, imposed an extraordinary contribution of 48 millions of francs on the citizens of Hamburg, as a punishment for their conduct during the absence of the French from that city. The proclamation is dated the 7th of June, and the first instalment on the contribution was to be paid on the 12th. The whole was divided into six instalments, the last of which was to be paid on the 12th of July. The first three instalments were to be paid in money; but for the three last bills would be accepted, payable at Paris at three months date. The proclamation particularly directs the contribution to be levied on those persons who had subscribed to the patriotic levies, or otherwise distinguished themselves against the French since the 24th of February.

The re-capture of Hamburg was mentioned in the French papers in very exulting terms; and it was sarcastically observed, that the duke of Cambridge (meaning Cumberland) and the duke of Brunswick arrived in time to give éclat to the success of the French. Hamburg was ordered to be made a strong place; and another fortress to be constructed at the mouth of the Havel, in order to complete the defence of the Elbe.—It was stated also, that all the Danish troops in Holstein had been placed by the king of Denmark under the orders of Davoust; and that prince Christian had proceeded to Norway, where he would place himself at the head of an army, and enter Sweden.

A most sanguinary decree was issued at Hamburg on the 24th of July, by marshal Davoust, under the title of "An Amnesty for the Acts of Rebellion, Insurrection, and Desertion, committed up to that date in the Thirty-second Military Division." From this are excepted certain persons by name, of whom the act contains a list; also all persons guilty of acts of violence, attacks, and individual murders, plunders, thefts, and other excesses, even although originating in the insurrection; and all those who have absented themselves, and shall not return before the 5th of August—all which persons, thus excepted, are declared enemies of the state, and banished for ever, and their property confiscated.—Now, the second class of offences, though it affects to relate to private crimes, is so vaguely described, that there is scarcely an act of violence or insurrection which may not be brought within it; and, as for the third, the time allowed for return was so short, that the parties, if at any considerable distance, could not avail themselves of it: as, for instance, those Hamburgers who may have sought refuge in England could not by possibility take the benefit of the act, for it was not known here until two days after its expiration. It was, therefore, an insult to common sense, and a mockery of mercy, to call this an Act of Amnesty. It was, in fact, a cruel measure of proscription—an outlawry against all the loyal and patriotic people of Hamburg, and an expedient to raise money by the confiscation of their property. The most compulsory means were also resorted to for extending and strengthening the fortifications; neither age nor sex was spared; neither rank nor character was respected; nor was it permitted to the weak and feeble to avail themselves of wealth to procure a substitute.—In this cruel and oppressive decree, fathers, mothers, and guardians, were rendered responsible in penalties for the acts of their children and wards, though wholly out of their power:

for the want of males, women were dragged to work at the fortifications, at the rate of three women for two men, and twenty boys were made to supply the place of ten men.

The deputies who had been sent to intercede with Bonaparte, to reduce the demand made for military purposes on this oppressed city, were wholly unsuccessful. They were told by Napoleon, that their *disloyalty* during the absence of the French troops entitled them neither to favour nor compassion.

Count Hogendorp, governor of Hamburg, issued, on the 18th of August, an infamous order, in which it was declared, that, as the place must be considered in a state of siege, more than four persons stopping to speak together in the street were to be deemed an unlawful mob; and, if they did not disperse instantly, were to be taken up and shot. Circulators of disquieting intelligence were to be tried by a military commission. No citizen, in case of a dispute with a soldier, was to revenge his own wrongs; and, in case of violence, when the latter was on duty, was to be shot. The decree contains a still more atrocious and unmanly denunciation against the female sex; which, however, is of too indelicate a nature for our pages.

There was little prospect that the armistice would lead to peace. Each party was making great efforts to increase its strength, and to be in a condition to act with vigour and effect on the first notification of a renewal of hostilities. Russia, besides augmenting her forces at head-quarters, was raising an army of reserve, and establishing magazines on her western frontier; Prussia continued to raise troops, and organize her population; England sent troops, artillery, and stores, to the Baltic; the crown-prince of Sweden, subsidized by England, began to invite the Germans to swell the legions forming under his protection; and France, in addition to the assistance she derived from her tributaries and vassals, had recourse to another extraordinary method to increase her levies: the national guards and the guards of honour (the former, like our militia regiments, raised for limited service, and the latter for mere local parade) were excited to make an offer to join the French armies; and this soon became general throughout the empire.

The armistice, and the negotiations at Prague for peace, had been entered into more peculiarly under the mediation of the emperor of Austria, the ally and the father-in-law of Bonaparte. Yet these negotiations lingered only about twenty days beyond the time appointed; for, on the 10th of August, the end of the armistice was declared; and, on the same day, another event, which gave an entire new turn to the affairs of Germany, took place. The long suspense in which Europe had been kept relating to the future line of conduct which Austria would adopt was put an end to; and the declaration of this important power for the cause of the allies inclined the balance at once in their favour. On the 13th in the morning, the whole of the Austrian army, which had been long kept in the best order and discipline, was put in motion: head-quarters were removed to Prague, to which place the emperor of Russia, the king of Prussia, and lord Cathcart, were gone. And thus the victories of Lutzen, of Bautzen, and of Wurtzchen, eventually led, not to a peace advantageous and honourable to Napoleon's power and name, but to hostilities on a larger scale; a scale embracing all Europe. They acquired him no fresh supporter, but added to the list of his enemies a power bound to him closely by the ties of blood, and yet compelled, by his unrelenting ambition, to rend them asunder; a power curtailed indeed in territory, and weakened in population, by the disasters of former wars, but entering into the present with renovated means, and a spirit that added to their efficiency.—The following is the estimated force of the allies at this time:

Austrian army in Bohemia	150,000
Russian and Prussian army in Silesia	200,000
Army of the North of Germany, consisting chiefly of Swedes and Prussians	127,000
	<hr/> 477,000

The denouncement of the armistice was officially notified by a letter from the Russian general in chief Barclay de Tolly, to the prince of Neufchatel; and that hostilities would commence on the 17th of August, on the part of the Russian, Prussian, and Swedish, armies.

The crown-prince of Sweden, having received formal intimation of the ending of the armistice, and of the attendant Austrian declaration of war against France, put his army in full motion, and concentrated not less than 90,000 men between Berlin and Spandau. He had previously addressed to the combined army under his orders, the following proclamation:—"Soldiers! Called by the confidence of my king, and of the sovereigns his allies, to lead you in the career which is about to open, I rely for the success of our arms on the Divine Protection, the justice of our cause, and on your valour and perseverance. Had it not been for the extraordinary concurrence of events which have given to the last twelve years a dreadful celebrity, you would not have been assembled on the soil of Germany; but your sovereigns have felt that Europe is a great family, and that none of the states of which it is composed can remain indifferent to the evils imposed upon any one of its members by a conquering power. They are also convinced that when such a power threatens to attack and subjugate every other, there ought to exist only one will among those nations that are determined to escape from shame and slavery. From that moment you were called from the banks of the Wolga and the Don, from the shores of Britain, and the mountains of the North, to unite with the German warriors who defend the cause of Europe. This then is the moment when rivalry, national prejudices, and antipathies, ought to disappear before the grand object of the independence of nations. The emperor Napoleon cannot live in peace with Europe, unless Europe be his slave. His presumption carried 400,000 brave men seven hundred miles from their country: misfortunes, against which he did not deign to provide, fell upon their heads, and 300,000 Frenchmen perished on the territory of a great empire, the sovereign of which had made every effort to preserve peace with France. It was to be expected that this terrible disaster, the effect of Divine Vengeance, would have inclined the emperor of France to a less murderous system; and that, instructed at last by the example of the North and of Spain, he would have renounced the idea of subjugating the continent, and have consented to let the world be at peace. But this hope has been disappointed, and that peace which all governments had desired, and which every government proposed, has been rejected by the emperor Napoleon.—Soldiers! it is to arms then we must have recourse, to conquer repose and independence. The same sentiment which guided the French in 1792, and which prompted them to assemble and to combat the armies which entered their territory, ought to animate your valour against those who, after having invaded the land which gave you birth, still hold in chains your brethren, your wives, and your children.—Soldiers! what a noble prospect is presented to you! the liberty of Europe, the re-establishment of its equilibrium, the end of that convulsive state which has had twenty years' duration; finally, the peace of the world, will be the result of your efforts. Render yourselves worthy, by your union, your discipline, and your courage, of the high destiny which awaits you. From my head-quarters at Oranienburg, Aug. 15, 1813.

CHARLES JEAN."

The following order of the day was issued by the prince of Schwartzberg on the 17th of August, setting forth the grounds on which Austria had been induced to go to war:—"The great day is arrived! Brave warriors! our country relies on you. Hitherto, every time that she has called upon you, you have justified her confidence. All the endeavours of our emperor to restore the long-wanted peace to Europe, and to fix the peace and welfare of the empire, which is inseparable from the peace and welfare of our neighbours, on a solid basis, were in vain.

Neither constant patience, nor pacific representations, nor the confidential reliance of the other belligerent powers in the emperor's councils and measures; in short, nothing could bring the minds of the French government to moderation and reason. On that day on which Austria loudly declared herself for the cause of justice and order, she likewise took on herself to combat for the greatest of all blessings. We do not singly undertake this combat. We stand in the same rank with all that Europe has to oppose of greatness and activity against the powerful opponent of her peace and liberty. Austria, Russia, Prussia, Sweden, England, Spain, all join their united endeavours for the same end; for a well-founded and durable peace, a reasonable distribution of strength among the different states, and the independence of every single power. It is not against France, but against the domineering power of France out of her own borders, that this great alliance has raised itself. What may be performed by the resolution and constancy of nations, has been proved to us by Spain and Russia; what may be performed by the united force of so many powerful states, will be shown in the year 1813!—In such a holy war, we must, more than ever, preserve those virtues by which our armies have rendered themselves conspicuous in so many former wars. Unconditional willingness to sacrifice every thing for our monarch and native country—great equanimity in good or unfavourable times—determination and constancy in the field of battle—moderation and forbearance towards the weak—these qualities must always be found in us. Brothers in arms! I have lived in your ranks all those years which I have devoted to my country's service. I know, I honour, in you, the brave men who conquered a glorious peace, and those who are following their footsteps. I rely on you! I am chosen from amongst you by our monarch; and his gracious favour has placed me at your head. His confidence, jointly with yours, are my strength. In what manner every individual is to be useful to the whole, will be fixed by the sphere of action allotted to him; but, in every appointment—in every situation—in every decisive moment—always to do his duty, and to the utmost of his power—such is the determination which must make us all equal, and elevate us all to the same glorious point. The emperor will remain with us, for he has confided the utmost to us—the honour of the nation—the protection of our native country—and the security and welfare of posterity.—Be thankful, warriors, that you are going into battle before God, who will not forsake the just cause, under the eye of a paternal and feeling monarch, under the eyes of your grateful fellow-citizens, and in the sight of all Europe, which expects from you great deeds, and great happiness, after long sufferings. Remember, you must conquer, that you may justify this expectation. Combat as it becomes Austria's warriors to do, and you will conquer. CHARLES, Pr. of Schwartzberg."

The armistice, as we have said, ceased on the 17th of August. On the 18th, Davoust attacked, with French and Danish troops, the entrenchments which covered Lauenburgh, and carried them with the bayonet. The allied force stationed there was computed at 1300 infantry and some cavalry. The French estimated their own loss at 100 men wounded; and that of their opponents they, of course, represented as more considerable. However, as things began from his time to go against the French, it is not from the bulletins of Napoleon that we are to collect the history of the second part of the campaign. Bernadotte, the crown-prince of Sweden, now in battle-array against his friend and patron, began to issue bulletins precisely in the same style.

The third of these bulletins notices the defection, on the 15th of August, of one of Bonaparte's generals, who thus set an early example of leaving this man to his falling fortunes. His name is Jomini, by birth a Swiss; and no less an officer than the chief of marshal Ney's staff. He had served under general Moreau, and was deemed one of the best engineers the French had. He passed through general Blücher's army, on his way to the Russian head-quarters.

The

The fourth and fifth bulletins state, that Napoleon having concentrated, on the 21st of August, an army of 80,000 men in the environs of Bayreuth, under the command of Oudinot, to make an attempt on Berlin, they advanced by way of Trebbin on the day following, attacked the Prussian general Thumen with a superior force, and obliged him to evacuate the post. The next morning the French attempted to follow up their success; and the corps of general Bertrand debouched upon the Prussian corps of Tauenzin at Blankenfelde, but was repulsed. The 7th French corps, however, succeeded in taking the village of Groß Beren; and Oudinot advanced upon Abrensdorff. An attempt to drive the French from Groß Beren brought on a severe action; and in the course of the day, they having menaced the village of Ruhlisdorff, the crown-prince sent a force to take them in flank. The result of these operations is said to have been 26 cannon, 30 chests, much baggage, and 1500 prisoners taken, and many killed and wounded.

From the sixth and seventh bulletins we learn, that the crown-prince was following up his successes against Oudinot's army. Girard, who had a command under Oudinot, was defeated on the 27th, between Lubnitz and Belzig, by Czernicheff and Hirschfeld, with the loss of 3500 prisoners, eight pieces of cannon, several waggons of ammunition, and all the baggage. Girard was killed. The French retreated to Luckau, which city surrendered the next day, with nine pieces of cannon, 1000 prisoners, and a considerable quantity of ammunition and stores. The French continued their retreat towards the Elbe, pursued by Winzingerode with 8000 cavalry. The whole of the French loss in this quarter, from the opening of the campaign, is estimated at upwards of 12,000 men.

The eleventh bulletin, dated Jüterbock, Sept. 8. gives an account of the battle of Dennevitze.—While Bernadotte, with the Russian and Swedish corps under his command, was moving on the 4th upon Rosla, in order to pass the Elbe there, and march upon Leipzig, intelligence was received that the French army, coming from Wittenberg, was pushing forward on Zahne, with the view to stop his farther operations by a movement against Bodin. As the French had succeeded on the 5th, notwithstanding the resistance opposed by the Prussian army posted between Zahne and Jüterbock, in penetrating as far as Jüterbock, Bernadotte, early on the 6th, hastened with seventy battalions of Swedish and Russian infantry, 10,000 cavalry, and 150 field-pieces, to assist the Prussian army, which, consisting of about 40,000 men, had held out, without yielding, against the repeated attacks of the French, 70,000 strong, under the command of the prince of Moskwa. At sight of these fresh troops, the French fled, pursued on all sides by the cavalry and light-infantry, and retreated towards Torgau and Dresden. From 16 to 18,000 prisoners, more than 60 pieces of cannon, and 400 ammunition-waggons, were the fruits of this victory and the subsequent actions.

The twelfth bulletin gives a minute and clear account of the military operations of the northern army. The intention of the crown-prince of Sweden to cross the Elbe after the defeat of the French corps under Oudinot, was dictated by a knowledge that the allied armies were prepared to advance from Bohemia; while Bonaparte had, for the second time, quitted Dresden to fly to the assistance of Macdonald in Silesia; but the movements of the combined army obliged him to return to Dresden. After the victory obtained at Dennevitze, the French were pursued by Dahme to Torgau, where, at the *tête de pont*, 800 prisoners were taken. To prevent the allied troops crossing the Elster, the French had broken down the bridges. The total loss of the French in the battle and retreat is now boldly said to be 20,000 men, including 10,000 prisoners, 80 pieces of cannon, and 400 ammunition-waggons.

Bonaparte's communications were now, not in the form of "bulletins," but of "intelligence from the army," for the information of his empress. As long as his allies re-

mained faithful to him, he sustained no very material reverses, but rather the contrary. In one action, however, near Culm, his general Vandamme was defeated with great loss, and supposed to be killed, but was taken prisoner, and is now at Moscow, unless he has been sent, as threatened, into Siberia. Bonaparte's head-quarters were at Dresden; and he summed up the history of the first few days of the campaign in the following terms: "On the 21st of August, the Russian, Prussian, and Austrian, army, commanded by the emperor Alexander and the king of Prussia, entered Saxony; and on the 22d marched against Dresden, with from 180 to 200,000 men, having an immense *materiale*, and full of hope, not only of driving us from the right bank of the Elbe, but even of marching upon the Rhine, and nourishing the war between the Elbe and the Rhine. In five days it has seen its hopes confounded; 30,000 prisoners, 10,000 wounded fallen into our power, which makes the number amount to 40,000; 20,000 killed or wounded, and as many sick in consequence of fatigue and the want of provisions, (it has been five or six days without bread,) have weakened it nearly 80,000 men. It does not now amount to 100,000 men under arms; it has lost more than 100 pieces of cannon, entire parks; 1500 ammunition and artillery waggons, which were blown up or fell into our hands; more than 3000 baggage-waggons, which it has burnt, or we have taken; there were 40 colours or standards. Among the prisoners there are 4000 Russians. The ardour of the French army, and the courage of the infantry, fixed every one's attention. The first cannon fired from the batteries of the imperial guards, on the day of the 27th, mortally wounded general Moreau, who had returned from America to enter the Russian service."

With such exaggerated statements on both sides, the reader is at a loss which to believe: he will probably believe neither; and there had been as yet no action of so decisive a nature as to speak for itself. We shall therefore take this opportunity to say a few words upon the fate of general Moreau.—We have seen, under the article FRANCE, vol. vii. p. 859, 60. that Moreau, in the year 1804, was implicated in a plot to murder Bonaparte and restore the Bourbons, and that his sentence of death was changed into a permission to transport himself to America. He had remained there ever since, very comfortably situated at Morrisville, below the fall of the Delaware. At the beginning of the year 1812, a Russian messenger, an officer, was deputed to invite him into the Russian service; but found the greatest difficulty in moving him from his retirement, though he was authorised to offer him any terms. In fact, he presented him with a *carte blanche* from Alexander. For sixteen months did this gentleman remain in America with peremptory orders to accomplish the object of his mission. At length the fatal moment arrived: Moreau, although he had often been heard to declare, that he never would lead foreign troops into France, determined to lend his aid to the allied powers; and left his abode of quiet and security. On the 2d of August, 1813, he landed at Stralsund, where he was received by the crown-prince of Sweden, and passed two days in concerting the plan of the campaign. On the 16th of August he arrived at Prague, and the next morning was visited by the emperor Alexander, who, on the 18th, introduced him to the emperor of Austria and the king of Prussia. At this moment he was the first man in Europe, consulted and closeted daily with these sovereigns, and nothing seemed too high for his ambition; but it was said to be his intention, if he had lived to succeed against Napoleon, to retire again into private life. On the 25th and following days, he accompanied the emperor Alexander and the king of Prussia in reconnoitring and directing the attacks on Dresden; and his zeal led him much to expose himself. On the 27th, towards noon, he was communicating some observations to Alexander, when a ball from one of the French batteries, which was aiming to dismount a Russian battery behind which they were, shattered to pieces the right knee

knee of Moreau, and, passing through his horse, carried away the calf of his other leg. Alexander burst into tears, and hastened to succour and console him; and Moreau exclaimed to his aid-de-camp, "I am lost, my dear Rapatel! but it is delightful to die in so good a cause, and in the presence of so great a prince." He was conveyed from the spot on a litter, to a house in the vicinity, where the emperor's surgeon amputated both his legs, an operation to which he submitted with heroic fortitude. On the retreat of the army, he was removed to Passendorf, thence to Dippoldswalden, and afterwards to Duks, near Toplitz. Here every assistance that wealth, power, and friendship, could command, was afforded him, but in vain; for, on the morning of the 2d of September, he quietly breathed his last, being only the day month after he had landed so triumphantly, and with such flattering hopes, at Stralsund. The emperor directed his body to be embalmed, and conveyed for interment to Peterburgh; and then, with generous feeling, caused the following letter to be addressed to madame Moreau, at London.—"MADAM, When the dreadful misfortune, which befel general Moreau, clove at my side, deprived me of the talents and experience of that great man, I indulged the hope that, by care, we might still be able to preserve him to his family and my friendship. Providence has ordered it otherwise. He died as he lived, in the full vigour of a strong and steady mind. There is but one remedy for the great miseries of life, that of seeing them participated. In Russia, madam, you will find these sentiments every where; and, if it suit you to fix your residence there, I will do all in my power to embellish the existence of a personage of whom I make it my sacred duty to be the consoler and the support. I intreat you, madam, to rely upon it irrevocably, never to let me be in ignorance of any circumstance in which I can be of any use to you, and to write directly to me always. To prevent your wishes will be a pleasure to me. The friendship I vowed to your husband exists beyond the grave; and I have no other means of showing it, at least in part, towards him, than by doing every thing in my power to ensure the welfare of his family. In these sad and cruel circumstances, accept, madam, these marks of friendship, and the assurance of all my sentiments. ALEXANDER."—Madame Moreau continues to reside in London, where she is greatly respected, and received into the best company.—Rapatel, Moreau's favourite aide-de-camp, was killed at Fere Champenoise, on the 25th of March, 1814.

We cannot avoid adding the following reflections from an extremely well-written work, just published, called *Historical Sketches of Politics and Public Men for the Year 1813*.—"The presence of Moreau in the allied army had excited an universal enthusiasm throughout Europe; and a fate so tragic and untimely produced equal sympathy and regret. We were not certainly exempted from the influence of these feelings. Yet, on weighing the conduct of this great man in the balance of moral rectitude, we have not been able to form a very decided opinion. Unjust expulsion from political community, may seem to break the ties by which an individual was united to it, and to absolve him from further allegiance. When this injustice is exercised by a state against one to whom it has been indebted for much of its glory and greatness, the trial becomes the more severe. Yet the general sense of mankind seems to pronounce, that there is something indelible in the relations which subsist between man and the country which gave him birth; that no wrong, no suffering, can ever efface them. Moreau professed indeed, and was sanctioned by the declarations of the allies, to make war, not against France, but against the usurper who ruled it. Had the object been to change the government, to restore either a free constitution or the ancient monarchy, Moreau would have had a fair ground to proceed upon. But the allies [at this time] disclaimed any such intention; they professed no other object, but to re-esta-

lish against France the ancient balance of power, and to level her then overwhelming preponderance in the system of Europe. The conduct of Moreau, therefore, could scarcely find a patriotic base to rest upon; it could be defended only upon the broadest principles of universal philanthropy. These, however, from their vague and flexible nature, ought to be viewed with extreme suspicion; above all, when they point to some object which would afford gratification to private ambition or resentment. There is one circumstance which, if not explained, appears to involve a shade of suspicion. He came only to bask in the sunshine of the allies' fortune. So long as the cause of Europe languished, he had taken no part in it. We find him not in Spain, where the most just of causes was to be defended; nor even in Russia, when that country was invaded, and in danger of being overrun. He came not, till a succession of victories, and the formation of a grand confederacy, had rendered the triumph of the allied cause almost secure. All this may admit of explanation; but some such explanation seems necessary in order to show, why his philanthropy did not operate till the moment when its exertion was least necessary and least meritorious. Whatever opinion we may form upon this subject, there cannot be the slightest doubt, that the allied sovereigns were justified, by all law and all practice, in using the acknowledged talents of this great commander, for the promotion of their own just cause. We must only express our dissent from the opinion almost universal at the time, which supposed, that the success of that cause rested mainly upon Moreau; and that Bonaparte could only be opposed by commanders trained in the same school. Such an idea is totally inconsistent, not only with subsequent events which could not be then taken into the account, but also with the occurrences of the preceding campaign. Bonaparte had been humbled, and the finest army he ever possessed had been annihilated, without the smallest aid of this description. There was no reason to suppose, that similar successes, with similar means, might not continue to crown their arms. The only operation at which Moreau assisted, and which, if it was not planned by him, received at least his sanction, was the attack upon Dresden; which does not appear to throw any particular lustre on those with whom it originated"—and which indeed entirely failed.

During Bonaparte's stay at Dresden, the allies harassed his soldiers by incessant advances and retreats from all sides. At length, on the 7th of October, he quitted that city, and proceeded, not, as heretofore, to the right bank of the Elbe, but to the side of Leipzig, where the theatre of war was now to be transferred. That city had suddenly become the centre of very important military movements. The number of troops there was so considerable, that part of them were obliged to be lodged in churches. The crown-prince of Sweden crossed the Elbe, to be in uninterrupted communication with general Blücher. The head-quarters of the former were on the 7th at Zebitz, and on the 9th at Zorbig; those of the latter were at the same time at Eulenberg. Their movements, it will be observed, were simultaneous; and they were marching by different roads upon Leipzig, with 130,000 men and 600 pieces of cannon. About the same time the Bohemian army made a flank-movement by its left; and it was calculated that it would be advanced as far as Chemnitz on the 3d. Bonaparte seems to have hesitated for some days in determining against which of the two menacing forces he should direct his personal efforts; but he at last proceeded for Leipzig.

A report from marshal Ney, dated Torgau, Sept. 7, acknowledges a defeat by the crown-prince at Dennewitz. He attributes the defeat partly to the 4th corps, which, instead of turning Jüterboch, attacked it—and to the seventh corps, which was some time in coming up, and two divisions of which behaved badly when the battle was nearly won. The 7th corps was composed of Saxons, and was under the orders of general Regnier, whom Mr.

Thornton mentions in his dispatch as having exposed himself to so much danger. Ney acknowledges a loss of 8000 men, killed, wounded, and prisoners, and 12 pieces of cannon.

The army of Gen. Nugent had taken the strong point of Pola Capo d'Istria, and Monte Maggiore, with fifty pieces of cannon, and a great quantity of ammunition. General Nugent was in communication with the English squadron off Fiume, from which he received arms and ammunition for equipping the Istrians, who had cheerfully flocked to the Austrian standard. General Thielman, on the 18th September, attacked Merseburg, which surrendered after a sharp resistance. The Russian colonel Orloff particularly distinguished himself. More than 2000 prisoners were taken in and about the town.

A very gallant enterprise was executed by the Austrian major Schlutberg, who, having received orders to take Friburg, placed part of his corps in ambush on the 17th of September, and, appearing unexpectedly before the town the next morning, stormed the Eberdorff gate; while other detachments of his troops, which had taken circuitous roads, advanced against the Mersner and Dona gates: that of Eberdorff being forced open, after an obstinate resistance, the garrison, consisting of general Bruno, 20 staff and superior officers, 400 mounted hussars, and 220 infantry, were made prisoners. The Austrian loss was one killed and three wounded. At the beginning of October, as we are told, the allies had also taken Pegau. Both Friburg and Pegau are near Leipzig. On the 14th of October, Bremen was taken by a Russian force under general Tettenborn.

Bonaparte's vassal allies now began to desert his standard. The king of Bavaria, on whom he placed his greatest reliance, made terms with Austria. A treaty of alliance and concert, between Austria and Bavaria, was signed by prince Reuss and general Wrede, on the 8th of October. General Wrede, with 35,000 Bavarian troops, was immediately to co-operate with those of Austria, and was to have 25,000 Austrians under his command. Even the Saxons had begun to abandon the cause. A rumour of a Saxon battalion having come over to the crown-prince, we find confirmed by a bulletin of his highness of Sept. 26. This battalion was the first of the king's regiment; it entered Warletz with fixed bayonets and drums beating.

These defeats and defections were preparatory to the grand defeat, accomplished by the grand defection which appears to have sealed the fate of Napoleon;—for now bursts upon us the most important transaction of the whole year, which, in its causes, in itself, and in its effects, can be compared with no event belonging to the (late) war, or to the history of ancient and modern times. The conflict was awful, and bloody; and, if half a million of people were engaged in the tremendous strife, many millions were looking up to this battle as either to break or to fasten their chains. The shock made the whole of Germany totter on its basis, and was echoed from the remotest parts of Russia to the farthest verge of our islands. The issue of this unparalleled contention drove the French across the Rhine, and sent the allies after them, to the very heart of the empire—to Paris! But its more immediate effects were the *dissolution of the Confederation of the Rhine*, which had placed all the German powers within the grasp of Napoleon, as tools for his ambitious purposes; the *overthrow of the continental system*, which had for so many years cramped the trade of the greatest part of Europe, and had affected most essentially the commerce of our metropolis; and, finally, the solving the long-agitated problem whether Bonaparte's will were to sway the rest of the globe. An exact relation of this extraordinary turn of affairs cannot fail of being interesting to every English reader, as it has re-opened several of our usual places of resort for the disposal of English merchandise. In this relation we shall avail ourselves of the "Narrative of remarkable Events in and near Leipzig, Oct. 1813," published for the benefit of the sufferers by those remarkable and terrible events.

It was not till the arrival of marshal Marmont with his

troops in the neighbourhood of Leipzig that the probability of an engagement taking place there was entertained. This was at the beginning of October. These guests brought with them every species of misery and distress, which daily increased in proportion as those hosts of destroyers kept gradually swelling into a large army. Ever since the battle of Lutzen, Leipzig had been one of the principal resources of the grand French army; and they showed it no mercy. Numberless hospitals transformed it into one great infirmary; many thousands of troops, quartered in the habitations of the citizens, one prodigious *corps de garde*; and requisitions of meat, bread, rice, brandy, and other articles, one vast poor-house, where the indigent inhabitants were in danger of starving. But for this well-stored magazine, the great French army had long since been obliged to abandon the Elbe. No wonder then that this point should have been guarded with the utmost care.

The appearance of the French troops, and the terror they brought with them, were like a prologue to the sanguinary tragedy which Providence had ordained or permitted to be performed on that spot; whilst on the other side the dramatis personæ, the well-combined and mighty armies of the allies, were approaching Leipzig. Napoleon had quitted Dresden, forced out by the want of all means of subsistence. No one could guess where he was directing his thunder; perhaps he was at first himself undetermined. Many who were qualified to form a judgment respecting military operations, were of opinion that he would make a push with his whole force upon Berlin and the Oder. They supposed that those parts were not sufficiently covered, and considered the fortresses on the Elbe as his *point d'appui* in the rear. This opinion, however, seemed to lose much of its probability, when other French corps under Ney, Regnier, Bertrand, and Marmont, continued to arrive, and were afterwards joined by that of Augereau. We had received authentic information (says the writer of the Narrative) that prince Schwartzberg had already advanced to Altenburg with the grand combined army of Austria, Russia, and Prussia; and also that the crown-prince of Sweden had his head-quarters at Zörbig. Upon the whole, however, our intelligence was unsatisfactory. For several days (that is to say, from the 10th) it was reported that the emperor of the French would certainly remove his head-quarters hither; that he had taken the road to Wurzen, and was coming by way of Düben. This account was confirmed by several detachments of the French guard. It is universally known that this general preferably chose those days on which he founded his claim to glory, in order to distinguish them by new achievements. His proximity to Leipzig, and the approaching 14th of October, the anniversary of the battles of Ulm and of Jena, strengthened the anticipation of some important event in that neighbourhood. The light troops of the allies, that were taken for the advanced guard of the crown-prince of Sweden, were distinctly to be seen from the steeples of the city, on the north side of it, towards Breitenfeld and Linden-thal. Daily skirmishes ensued, and wounded French were hourly brought in. The bustle in the city increased; the king of Naples had arrived, and fixed his head-quarters at Konnewitz. Innumerable generals and staff-officers filled all the houses. Not a moment's rest was to be had; all were in bivouac. They seemed wholly ignorant of the motions of the allies; for the same troops who went out at one gate often returned before night at another; so that there was an incessant marching in and out at all the four principal avenues of the city. These movements of cavalry, infantry, and carriages, ceased not a moment even during the night. It was very rarely that a troop of cavalry, sent out upon patrol or picket duty, returned without having lost several men and horses, who were invariably, according to their report, kidnapped by the Cossacs. But, in truth, all the troops with whom the French had any encounters were called by them Cossacs; for the Cossacs were indisputably the troops of whom the French were most

most afraid; with them, therefore, all the light cavalry who came upon them unawares were sure to be *Cofacs*.

The preparations that were making now evidently denoted the approach of some important event. The French corps had already ranged themselves in a vast semicircle, extending from north to east, and thence to south-west. The country towards Merseburg and Weissenfels seemed to be merely observed. For this purpose the eminences beyond the village of Lindenau were occupied. Here the access to the city is the most difficult, a causeway only leading to it in this direction. The country on the right and left consists of swampy meadows and wood-land, everywhere intersected by ditches and muddy streams.

It was not easy to judge of the force of Napoleon in this quarter; yet the following may lead to a tolerably correct estimate. One division of Marmont's corps consisted at the utmost of 4,000, so that the whole might amount to 12,000 men; and it was one of those which, in comparison of others, had sustained the least loss. Even that of Augereau, which was incontestably the most complete, as it had just come out of cantonments, was computed at scarcely 15,000 men. If, then, we take 10,000 for the average, the total amount of the French armies collected near Leipzig, as the wrecks only of several were then remaining, can scarcely have reached 170,000, even including the guards. Such a force, however, commanded by so many generals who had heretofore been acknowledged the ablest in Europe, together with more than 600 pieces of artillery, was still fully sufficient to make itself respected, and even feared, by an enemy of double its number. One single species of troops alone was below mediocrity—the cavalry, both in regard to the horses and the men, the former from weakness and want of sustenance, and the latter from ignorance of their business. With the force of the allies we are unacquainted, but at all events they must have been more numerous.

The 14th of October at length dawned. It had been preceded by several rainy days; but this was merely lowering. The cannon thundered at intervals towards Liebertwolkwitz. In the forenoon, wounded French, chiefly cavalry, kept coming in singly. With whom they had been engaged they knew not—*Cofacs* of course. "We looked forward with certainty to a general engagement. It became every hour more dangerous for the inquisitive to venture out or in at the gates. There was no end to the marching of horse and foot, and the rolling of carriages; at every ten paces you met in all directions with *corps de garde*, by whom every non-military person without distinction was ordered back, sometimes with fair words, and at others with rudeness. Several couriers had been sent forward to announce the speedy arrival of the king of Saxony and Napoleon. The Hero of the Age, as he has been styled, actually came about noon; not, as we anticipated, by the Dresden road, but by that from Berlin. He passed hastily through the city, and out at the farthest Grimma gate, attended by some battalions and squadrons of his guards. A camp-chair and a table were brought in all haste, and a great watch-fire kindled in the open-field, *not far from the gallews*. The guards bivouacked on the right and left. The emperor took possession of the head-quarters prepared for him, which were far from magnificent, being surrounded only by the relics of the stalks and leaves of the cabbages consumed by his soldiers, and other matters still more offensive. The table was instantly covered with maps, over which the emperor pored most attentively for a considerable time. Of what was passing around him he seemed not to take the smallest notice. The spectators, of whom (says the writer we are quoting) I was one, crowded pretty close. A long train of carriages from the Wurtzen road, the cracking of the whips of the postillions, together with a great number of horse-soldiers and tall grenadiers, announced the arrival of another distinguished personage, and called the attention of the by-standers that way. It was the king of Saxony, with his guards and retinue. He alighted,

and a kind salutation ensued between him and Napoleon. The king soon afterwards mounted a horse, and proceeded into the city. Napoleon meanwhile remained where he was. He sometimes rose from his seat, went up to the watch-fire, held his hands over it, rubbed them, and then placed them behind him, whilst with his foot he pushed the wood, consisting of dry boards and rafters from the nearest houses, into the flame, to make it burn more fiercely. At the same time he very frequently took snuff, of which he seemed to have but a small quantity left in his gold box. At last he scraped together what was left with his finger, and poured it out upon his hand. When all was gone, he opened the box several times and snelt to it, without applying to any of the marshals and generals around him to relieve his want. As the discharges of artillery towards Probstheide grew more and more general and alarming, and the wounded kept returning in continually-increasing numbers, I was rather surprised that the commander should, on this occasion, contrary to his usual custom, quietly remain so far from the field of battle, which was near ten miles distant, apparently without giving himself the least concern about the event."

Meanwhile, within and without the town, all was bustle and confusion. The thunder of artillery rent the air; the suburbs were inundated with soldiers; the gates of the town were hardly wide enough to receive the wounded, and to let out carriages, and trains of cannon. The sound of drums incessantly announced the arrival of fresh regiments; and about midnight the din of war subsided for a few hours. The bivouacs spread in the neighbourhood, with their scattered lights, and the flames arising from burning farms and villages were reverberated by the cloudy skies. The spectacle was horribly solemn.—The next day passed quietly, if any repose can exist between the eagerness of hope and the chill of fear.

The 16th of October was the day fixed upon by prince Schwartzberg for a general attack on all the French positions around Leipzig. On the north side, their line extended from that city through Delitzsch and Bitterfeld to the Mulda. Bernadotte occupied the left of the opposite army, reaching from Wettin to Zarlug: but general Blucher, being on the right, with his head-quarters pushed to Groß Kugel, was nearest to Leipzig; and it was therefore determined, that on his side the grand effort should be made. Accordingly, having made his dispositions, he attacked in the morning the three French corps which were there posted, under the command of Ney. The French made the most desperate resistance; several of the villages in dispute were five or six times taken and retaken; but at length they were driven from all their positions, and forced to retire behind the Partha, which immediately covered Leipzig. They lost in this battle forty pieces of cannon, with 12,000 wounded and prisoners. General Blucher's loss is estimated at 6 or 7000 killed and wounded. On the same day, a simultaneous attack was made on the other side by the grand army in the neighbourhood of Wachau and Liebert Wolkowitz. The Russians began by storming two fortified buildings, which covered the front of their enemy's centre. But soon after, Bonaparte collected the whole mass of his cavalry, which, headed by Murat, succeeded in breaking the centre of the allies. The moment was critical; total defeat might have been the consequence. But six regiments of Austrian cuirassiers swept forward, gallantly withstood the efforts of the French, and succeeded in checking their progress. The French had gained some ground; but, upon the whole, this desperate and sanguinary action made no material change in the relative position and strength of the two armies.

On the 17th, (Sunday,) the allies made a pause, with the view of bringing up further reinforcements. General Benningen had, on the advance of prince Schwartzberg, been left to observe Dresden with a large army. When, however, Bonaparte had quitted that capital, and had left it merely defended by St. Cyr, with a garrison of

16,000 men, so great a force was no longer necessary for the purposes of observation; and any active operations against Dresden could be delayed with perfect safety, till the main battle was decided. Benningsen was therefore directed to leave merely a detachment before Dresden, and with all his remaining force to push forward as expeditiously as possible to join the grand army. It is more difficult to account for the inactivity in which Bonaparte remained during this important day. Aware, as he might have been, of the advantages which the allies were deriving from the delay, policy surely dictated, that he should either have attacked before their reinforcements could arrive, or that he should seize the opportunity of effecting his retreat with less molestation. It was contrary to his usual system and character thus to linger, and allow the allies to choose their own moment for attack. Some minor changes however were made in the disposition of the French army. The whole was drawn closer around Leipzig. To the north it was withdrawn behind the river Partha, which afforded an advantageous defensive line. On the south it retired from Liebert Wolkowitz and Wachar, where the battle of the 16th had been fought, into the interior line of Konnewitz, Proflistheyda, and Steteritz. He succeeded also on this day in making an opening through the allied line along the Saale in the direction of Weissenfels. Thus he at once secured to himself a retreat, and cut off the communication, unless by signals, between the two opposite armies.

The 18th of October at length appeared. It was a day equal in importance to many a century; and, the fewer history can produce that deserve to be classed along with it, the more memorable it will remain. All that preceded it had merely opened the way; and there were yet almost inaccessible cliffs to climb before the continent could flatter itself with the hope of full deliverance. The leaders of the allies had already shown the ablest French generals, in several grand engagements, that they possessed sufficient means and talents to dissolve the charm of their invincibility. They were now about to enter the lists with the hero whom a thousand panegyrists, during a period of near twenty years, had extolled above the greatest generals of ancient and modern times; whose enemies had to boast of but one victory over him at most—a victory which he himself did not admit, as he ascribed the total destruction of his army in Russia to physical causes alone. It was the conqueror of Marengo, Austerlitz, Friedland, Ratisbon, Wagram, and Mojaisk. Fresh laurels entwined his brow at Lutzen, Bautzen, and Dresden. Here at Leipzig the allies attempted to wrest them from him who grasped so firmly. It was easy to foresee that with unshaken resolution he would risk all, in order, as on former occasions, to gain all, and to put an end to the campaign with a single blow. He seemed to contemplate nothing less than the utter annihilation of the allies, as all the bridges far and near were broken down to cut off their retreat. Whether the situation in which he had placed himself was such as to justify these hopes, we must leave to the decision of those who are better qualified to judge. His confidence in victory must, however, have been very strong, as he had made such inadequate preparations for his own retreat.

The action commenced in the centre of the French army beyond Probstheide, with the storming of the villages in its front, which were several times taken and recovered; and were reduced to heaps of rubbish. That the work of slaughter might be completed on this day, it had been begun with the first dawn of morning. So early as nine o'clock all the immense lines from Taucha to Konnewitz were engaged. From Löfzig, a village situated beyond Konnewitz, a hollow, about two thousand paces in length, runs from north-west to south-east. It is bordered with a narrow skirt of wood, consisting of alders, limes, and oaks, and forms an angle with the village. Beyond this line were advanced several French batteries, the incessant movements of which, as well as every single shot,

might be clearly distinguished at Leipzig with glasses. The French artillery formed an open triangle; for the road which runs straight from Leipzig, behind Konnewitz through Dehlis and Löfzig, of course from north to south, was also lined by French batteries. The houses of those villages had served them for a *point d'appui* in the rear, and were most of them dreadfully shattered by the balls of the Austrians. The artillery of the latter seems to have had a great advantage in regard to the ground. The French cannon brought into the line from Konnewitz to Dehlis and Löfzig stood in a hollow—those of the Austrians on eminences. These last had moreover the advantage of enfilading the two angles formed by the batteries of the French. That this had actually been the case, was evident from the numbers of French cannoniers and horses lying dead in rows in the line of the above-mentioned villages, where they had been swept down by the guns of their opponents. On the eminences where the hostile cannon were planted the number of dead was much smaller; and these were not artillery-men, but infantry, who were engaged in covering those batteries. This pass must nevertheless have been obstinately defended, as it was not taken the whole day. The fire of musketry grew more and more brisk—a proof that the combatants were already in close action. The French tirailleurs could not be driven out of the woods, on which their right wing was supported. All the villages lying beyond Konnewitz, on the road to Bornä, as far as Markleberg, were on fire. The main attack was made by Bernadotte. Being at the head of the Partha river, where the passage was least difficult, he was in the most advantageous position for approaching Leipzig. Blücher therefore, to enable him to act with greater effect, reinforced him with 30,000 men from his own army. The passage was effected almost without resistance, and 3000 prisoners were taken at Taucha. The French fell back towards Leipzig, covering their retreat by the villages of Sonnerfeld, Parmisdorf, and Schonfeldt. From these however they were finally driven. The success at this point was greatly promoted by an unexpected event. The seventh corps of the French, under general Regnier, was in the left wing, and posted towards Taucha. It was principally composed of Saxons. They had just come into action; and the allies had already brought up a great number of guns against them. To the no small astonishment and consternation of their leader, they suddenly shouldered their arms, marched forward in close files with their artillery, and went over to the enemy. Several French battalions, misled by this movement, joined them, and were immediately disarmed and made prisoners by the allies. The French cuirassiers, suspecting the design of the Saxons, followed, apparently with the intention of falling upon them. The Saxons faced about, and compelled them, by a smart fire of musketry, to return. A volley of small arms was discharged after them, but with no more effect—it did them no injury. Their horse-artillery turned about, and soon dismounted that of the French. They were greeted with a joyful *hurrah* by the Cossacs, who cordially shook hands with their new comrades. The Saxons desired to be immediately led back to the attack of the French. The generals of the allies refused, on very good grounds, to comply with their desire: they were marched a league into the rear of the field of battle, and there bivouacked: but their artillery was invited to take part in the engagement, and did great execution. This defection decided the fate of the day, and of Bonaparte.—The allied armies, bearing in from different points, now carried every thing before them. Towards evening they had formed their junction with the army of the north; and thus the united forces of all the allied powers were established almost immediately beneath the walls of Leipzig.

Bonaparte felt at length, and too late, that no means remained to him of farther resistance. A great part of his army had perished in the preceding battles; and the preponderance of the enemy, already considerable,

had been greatly augmented. Of those who remained in his ranks a great proportion were enemies, more formidable from not having yet openly declared themselves. All his outposts and fortified lines were gone; and no prospect remained, but that the victorious encircling armies would storm him in this last retreat, and all his troops be destroyed or captured. He no longer therefore delayed retiring by the avenue which still remained open. The evening had scarcely closed, when the whole army began to defile by the road leading to Weissenfels. The passage, narrowed as it was at present, was attended with much impediment. Five or six rivers here running parallel and close to one another, and requiring bridges over each, formed a long and narrow defile, through which an encumbered army could march only slowly and with difficulty. Day broke, and only part of the troops was on the other side. Bonaparte then caused the magistrates of Leipzig to send a deputation, requesting that hostilities might be suspended for the purpose of arranging a capitulation. The object of this demand was evident; he merely wished to retreat unmolested, and extricate his army from their present embarrassment. It was determined that such a respite should by no means be granted. The emperor Alexander received the messenger in person; and, in presence of the army, announced to him this resolution. The allied forces were then led on to the attack; after a short resistance, the city was carried; and, about eleven o'clock, the emperor of Russia, the king of Prussia, and the crown-prince of Sweden, arriving from different quarters, met in the great square of Leipzig, amid the triumphal acclamations of the army and people. Bonaparte had quitted the city about two hours before, leaving a large party of his army. To them the disaster was greatly increased, when the confederate forces, on entering the city, were joined by all the remaining Saxon and other German troops. The French, now attacked and fired upon on every side, no longer knew where to turn; the narrow bridge was soon choked by crowds of fugitives trampling upon each other. The passage was stopped; prisoners were taken by thousands; and of the few who endeavoured to save themselves by swimming, most perished in the waters. The whole rear-guard of the French army, including some of its most distinguished commanders, and 100 pieces of cannon, fell into the hands of the confederates. Among the prisoners were Regnier, Brune, Vallery, Bertrand, and Lauriston. Macdonald with difficulty gained by swimming the opposite bank; but prince Poniatowky, in endeavouring to do the same, sunk, and was drowned. This unfortunate prince (Joseph Poniatowky) was nephew to Stanislaus-Augustus, the last king of Poland; and no doubt had been cajoled into a subservience to the views of Bonaparte by the flattering prospect of the restoration of his country to its former rank among the nations of Europe. The circumstances attending his death, as related by his aid-de-camp, are as follow: When the French army began to retreat, the prince was charged by Napoleon with the defence of that part of the suburbs of Leipzig which lies nearest to the Borna-road; for this service he had only 2000 Polish infantry assigned him. Perceiving the French columns on his left flank, in full retreat, and the bridge completely choked up with their artillery and carriages, so that there was no possibility of getting over it, he drew his sabre, and, turning to the officers who were about him, "Gentlemen," said he, "it is better to fall with honour." With these words he rushed, at the head of a few Polish cuirassiers and the officers surrounding him, upon the advancing columns of the allies. He had been previously wounded on the 14th and 16th; and on this occasion also received a musket-ball in his left arm. He nevertheless pushed forward; but found the suburbs full of the allied troops, who hastened up to take him prisoner. He cut his way through them, received another wound through his cross, threw himself into the Pleisse, and with the assistance of his officers reached the opposite bank in safety, leaving

his horse behind in the river. Though much exhausted, he mounted another, and proceeded to the Elster, which was already lined by Saxon and Prussian riflemen. Seeing them coming upon him on all sides, he plunged into the river, and instantly sunk, together with his horse. Several officers, who threw themselves in after him, were likewise drowned; and others were taken on the bank or in the water. The body of the prince was found on the fifth day (Oct. 24), and taken out of the water by a fisherman. He was dressed in his gala uniform, the epaulets of which were studded with diamonds: his fingers were covered with rings set with brilliants; and his pockets contained snuff-boxes of great value, and other trinkets. Many of those articles were eagerly purchased by the Polish officers who were made prisoners, evidently for the purpose of being transmitted to his family: so that the whole produced the fisherman a very considerable sum.

Ill-fated Poniatowki! through all his illustrious course, ever most unfortunate when his cause was purest; happy only in closing it when there was no alternative but dishonour, and when life must have been miserable alike in victory or in defeat! Devoted from his earliest years to his country; seeking her enemies in every field; astonish- ing the veteran companions of Pulawski and Zarembo by his romantic valour; the delight of the young and the gay, whom he outshone in court and camp; the likeness of a king for dignity of presence, of an ancient cavalier for his high-bred gallantry; zealous in friendship, to which he would sacrifice all but honour and love; an enthusiast for liberty; but unmindful that there were other tyrants beside Frederic and Catharine—how melancholy to find him beguiled by the deceitful promises of one who never spoke of freedom but with the design to enslave. What a lesson to princes, when they view the very flower of their subjects, the men best fitted to adorn and fortify their thrones, driven into exile, and submitting to those they should have fought against, after proving, to the conviction of the coldest heart, that wealth, honours, life itself, were indifferent to them without liberty! Suffice it to say, that he fell as he had lived, in the display of prodigious courage, and overwhelmed with affliction. He was buried with the military honours due to his rank; and a solemn dirge was performed for him, with a splendid ceremonial in the metropolitan church of Warsaw, though now occupied by the Russians. In fact the common license of abuse has been spared by all parties upon this occasion; and not a word has ever been whispered by the allies against *this* coadjutor of Bonaparte—a plain indication, that, confident as they were, and well might be, in their cause against France, they felt what a weak part it had towards Poland.

The king of Saxony, with all his court, ranked among the prisoners. It was far too late now for this monarch to obtain any merit by joining the cause of the allies; and as, contrary to his consent and authority, the whole of his troops already ranged under their standard, there was no service which he could render them. It was judged proper to inflict some chastisement for that injury which, on a former occasion, the common cause had sustained from him;—and he was sent, under a guard, to the castle of Eysenach.

Such was the termination of this great and dreadful succession of combats; to which the annals of Europe, enlanguined as they are, had never yet produced a parallel. Never had the work of destruction proceeded on so vast and terrible a scale; nor had any field been so deluged with the best blood of her sons. Famine and pestilence, which follow in the train of war, were there, and did their part in the work of death. In viewing this dreadful scene, the philanthropic mind could however console itself by reflecting, that thus only could the injured cause of mankind be avenged; and that, through this bloody portal, peace and freedom were to revisit the earth. This was indeed a splendid and immortal triumph; it was one, which, according to all human appearance, afforded

the earnest of a truly golden era, an era of peace and abundance, which should repair the long ravages of war, and in which the principles of improvement, which, after beginning to unfold themselves, had been crushed beneath the tempest, would spring up and flourish anew. Never perhaps, in the annals of history, had so just a cause been crowned with so signal a triumph.

The retreat of Bonaparte was of such a nature as might be expected, with so powerful an army behind, and clouds of light troops far advanced before him. A daily loss of artillery, baggage, and prisoners, marked his course from the Saale to the Maine. On approaching the last-mentioned river, a new obstacle presented itself.—We have noticed the defection of Bavaria. That power seemed anxious, by the most extraordinary efforts, to efface the recollection of all that it had done against the liberties of Germany. General Wrede instantly set out, and, marching with almost unprecedented rapidity, arrived on the Maine before the French army. After possessing himself of Wurtzburg, he proceeded, and took a position in advance of Hanau, by which it was necessary that the French army should pass. Bonaparte was now certainly in very imminent danger of total destruction. Had Blucher followed by the same route which he had taken, this issue could scarcely have been averted. But the Prussian general, by an unfortunate though very natural calculation, had supposed that, as the Bavarian army was on the Maine, Bonaparte would not retire by that route, but would cross the Rhine at Coblenz, upon which place he directed his march. Bonaparte therefore, on approaching Hanau, could turn his whole remaining military force, amounting to 70 or 80,000 men, against the Bavarian army, which did not exceed 30,000. Wrede however, with the most gallant determination, resolved to stand the unequal contest; and for two days this army maintained it gloriously, with severe loss indeed, but without any decisive defeat. Wrede himself received a wound, which threatened to prove mortal, but from which he fortunately recovered. Meanwhile, it was impossible, with forces so inferior, to avoid being pushed so far aside, as that Bonaparte might be able to proceed on the road to Frankfort. He did not stop in that city, but continued his march; on the 7th of November crossed the Rhine with his whole army; and on the 9th reached St. Cloud in safety.

It is pleasing to reflect, that that power which had been the most degraded, insulted, and scorned, by Bonaparte, had the greatest share in inflicting this punishment and disgrace upon him. The Prussians more than redeemed the reproach, and revenged the defeat, of Jena. As for their veteran commander, Blucher, his character was not to be redeemed—it had never suffered reproach. He remained faithful amidst the faithless; and preferred fighting over the degradation of his country in a distant land, to the enjoyment of rank and honours as the instrument of French ambition. He has had his revenge upon the enemies of his country. No officer contributed so much to the present happy posture of the affairs of the allies. Like Gen. Kutusoff, he has given the extreme of old age to the labours and dangers of the field; and, like him, he has lived to see the complete deliverance of his country, and the destruction of its enemies.

On the 13th of November, at noon, Napoleon, being on his throne, received the senate; when count Lacedepede, the president, spoke in these terms: "Sire; The thoughts of the senate have constantly accompanied your majesty in the midst of the memorable events of this campaign; it has shuddered at the dangers which your majesty ran. The efforts of the enemies of France have in vain been seconded by the defection of the allies, by treasons unexampled, by extraordinary events, and by fatal accidents. Your majesty has surmounted them all—you have sought for peace. Before the resumption of hostilities, your majesty offered the assembling of a congress, to which all the powers, even the most insignificant ones, should be called, to conciliate all differences, and lay

down the basis of a peace, honourable to all nations. Your enemies, sire, opposed the assembling of this congress. It is upon them that the whole blame of the war must fall. Your majesty, who knows better than any person the wants and the sentiments of your subjects, knows that we desire peace. However, all the nations on the continent have a still greater occasion for it than we; and if, notwithstanding the wish and the interest of 150,000,000 of souls, our enemies, refusing to treat, should wish, by imposing conditions, to prescribe to us a sort of capitulation, these fallacious hopes would be rendered abortive! Frenchmen will show, by their devotion and by their sacrifices, that no nation has ever better understood its duties towards the country, honour, and the sovereign."

His majesty replied, "Senators, I accept the sentiments which you express towards me. All Europe was with us a year ago; all Europe is now against us; it is because the opinion of the world is regulated by France or by England. We should, therefore, have every thing to dread, but for the energy and the power of the nation. Posterity will say, that, if great and critical circumstances presented themselves, they were not superior to France and me."

The allies continued to advance. At Frankfort, on Dec. 1, they published, jointly, the following Declaration, which was greatly admired for its moderation: "The French government has ordered a new levy of 300,000 conscripts. The motives of the senatus consultum to that effect contain an appeal to the allied powers. They therefore find themselves called upon to promulgate anew, in the face of the world, the views which guide them in the present war; the principles which form the basis of their conduct, their wishes, and their determinations. The allied powers do not make war upon France, but against that preponderance, haughtily announced,—against that preponderance which, to the misfortune of Europe and of France, the emperor Napoleon has too long exercised beyond the limits of his empire. Victory has conducted the allied armies to the banks of the Rhine. The first use which their imperial and royal majesties have made of victory, has been to offer peace to his majesty the emperor of the French. An attitude strengthened by the accession of all the sovereigns and princes of Germany, has had no influence on the conditions of that peace. These conditions are founded on the independence of the French empire, as well as on the independence of other states of Europe. The views of the powers are just in their object, generous and liberal in their application, giving security to all, honourable to each. The allied sovereigns desire that France may be great, powerful, and happy; because the French power, in a state of greatness and strength, is one of the foundations of the social edifice of Europe. They wish that France may be happy—that French commerce may revive—that the arts, those blessings of peace, may again flourish; because a great people can only be tranquil in proportion as it is happy. The powers confirm to the French empire an extent of territory which France under her kings never knew; because a valiant nation does not fall from its rank, by having in its turn experienced reverses in an obstinate and sanguinary contest, in which it has fought with its accustomed bravery. But the allied powers also wish to be free, tranquil, and happy, themselves. They desire a state of peace which, by a wise partition of strength, by a just equilibrium, may henceforward preserve their people from the numberless calamities which have overwhelmed Europe for the last twenty years. The allied powers will not lay down their arms, until they have attained this great and beneficial result, this noble object of their efforts. They will not lay down their arms, until the political state of Europe be re-established anew—until immovable principles have resumed their rights over vain pretensions—until the sanctity of treaties shall have at last secured a real peace to Europe."

On the 19th, Bonaparte repaired in state to the legislative body; where he made the following speech: "Senators, Counsellors of State, Deputies from the Departments of the Legislative Body; Splendid victories have raised the glory of the French arms during this campaign; defections without parallel have rendered these victories useless; all has turned against us. France itself would be in danger, but for the union and energy of the French. In these weighty circumstances, it was my first thought to call you around me. My heart has need of the presence and of the affection of my subjects. I have never been seduced by prosperity; adversity would always find me superior to its attacks. I have several times given peace to nations, when they had lost every thing. From a part of my conquests, I have raised thrones for kings who have forsaken me. I had conceived and executed great designs for the prosperity and the happiness of the world! A monarch and a father, I feel that peace adds to the security of thrones and to that of families. *Negotiations have been entered into with the allied powers: I have adhered to the preliminary basis which they have presented; I had then the hope that, before the opening of this session, the congress of Manheim would be assembled; but new delays, which are not to be ascribed to France, have deferred this moment which the wishes of the world eagerly call for. On my side, there is no obstacle to the re-establishment of peace. I know and partake all the sentiments of the French; I say of the French, because there is not one of them who would desire peace at the price of honour. It is with regret that I ask of this generous people new sacrifices; but they are commanded by its noblest and dearest interests. It was necessary to recruit my armies by numerous levies; nations cannot treat with security, except by displaying their whole strength; and an increase of taxes becomes indispensable. What my minister of the finances will propose to you, is conformable to the system of finance which I have established. We shall meet every demand without a loan, which consumes the future; and without paper-money, which is the greatest enemy of social order. You are the natural organs of this throne; it is for you to give an example of energy which may recommend our generation to the generations to come. Let them not say of us, 'They have sacrificed the best interests of their country; they have acknowledged the laws which England has in vain sought, during four centuries, to impose on France!' My people cannot fear that the policy of their emperor will ever betray the national glory. On my side I feel the confidence that the French will be constantly worthy of themselves and of me."*

We must leave the allies for the present at Frankfort; and proceed to notice, as one of the first effects of the battle of Leipzig, that Reinhard, the landman of Swisserland, in a proclamation, dated Zurich, Nov. 20, declared the neutrality of the cantons. He announced his intention to transmit to the belligerent powers a notification of this event—of his intention to maintain the present constitution—to guard the territory against violation, and to cause this neutrality to be respected, if necessary, by force of arms. The diet of Swisserland voted the landman 40,000 men, to enforce the decree of neutrality.

Another and most important effect of this state of affairs was the liberation of Holland.—The first rising of the Dutch was on the 15th of November. They had understood that the allies were advancing upon Utrecht; and rose accordingly, on the instant, with the old cry of *Orange Boven*, or "Up with Orange." A provisional government was immediately established at the Hague by the armed citizens; and the French, with little or no resentment on the part of the people, began to evacuate most of the principal places on the 17th; and, on the 19th, two deputies were dispatched to this country in order to call over the prince of Orange, and request our assistance for completely driving out their oppressors. His serene highness accordingly, after transacting a variety of busi-

ness, in the afternoon of the 26th set off to his countrymen. Accompanied by lord Clancarty, the British minister, he embarked at Deal on-board the Warrior, captain lord Torrington; and landed at Scheveling on the 30th. His serene highness was received on his landing by an immense concourse of people, with acclamations of the greatest joy, and every possible mark of affection and respect; and proceeded immediately for the Hague, having, upon his landing, issued the following proclamation. "Dear Countrymen! After nineteen years of absence and suffering, I have received with heartfelt joy your unanimous invitation to come among you. I am now arrived; and, I trust, under Divine Providence, that I shall be the means of restoring you to your ancient independence and prosperity. This is my sole object, and I have the satisfaction to assure you, that it is equally the object of the allied powers. It is in particular the wish of the prince-regent of the united kingdom of Great Britain and Ireland, and of his government. Of this you will be convinced, by the unanimous assistance which that powerful country is immediately going to give you; and which, I trust, will lay the foundation of those old and intimate ties of friendship and alliance which so long made the happiness of both states. I am come, disposed and determined to forgive and forget every thing that has passed. We have all but one common object; which is, to heal the wounds of our native country, and to restore it to its rank and splendour among nations. The revival of trade and commerce will, I trust, be the immediate consequence of my return. All party-spirit must be for ever banished from amongst us. No effort shall be wanting on my part, and on that of my family, to assert and secure your independence, and to promote your happiness and welfare. My eldest son, who, under the immortal Wellington, has proved himself not unworthy of the fame of his ancestors, is on his way to join me. Unite, therefore, dear countrymen, with heart and soul, with me; and our common country will flourish again, as in the days of old; and we shall transmit unimpaired to our posterity the blessings which we have received from our ancestors. Given under my seal and signature, Dec. 1, 1813.

WILLIAM FREDERIC, Pr. of Orange."

We have next to state, that a supplementary revolution has been effected in Holland, absolutely changing the character of the old government, from a republic to a monarchy, and conferring sovereign power on the Prince of Orange, by the style and title of "WILLIAM THE FIRST, SOVEREIGN PRINCE OF THE NETHERLANDS." On the 1st of December, his serene highness made his solemn entry into Amsterdam, amidst the general and enthusiastic joy of the inhabitants, who every-where saluted him by his new appellation; and the same day a proclamation was issued by the general commissaries of the national government in that city, declaring the political arrangement which had been adopted in conformity to the general wish of the Netherlanders. Next day, a sensible and affectionate address was issued by the prince of Orange; in which his serene highness disavows all inclination on his own part to have assumed any other title than that of Stadtholder, so long and so honourably borne by his ancestors; but declaring, that in this respect he submits his will to that of his countrymen.

The sovereign prince has issued a decree, annulling all the duties on customs, and restrictions on trade, in the Dutch ports, imposed by the French, and recurring to the former laws of Holland, with reference particularly to the renewed amicable relations with this country. The commandant of the Brill was taken prisoner, and conveyed in irons to the Hague, with three tons of gold, about 300,000 guilders, of which he had robbed the inhabitants. Gogel, the French minister of finance in Holland, was also taken, and conveyed to the Hague; and a considerable sum of money, exceeding that found on the commandant of the Brill, was taken from him.

The town of Woerden was taken from the French on  
the

the 23d of November, by a party of 250 national guards, who marched from the Hague; but who were next day surpris'd by a superior force from Utrecht, and the town re-taken by storm. The massacre and pillage which took place in consequence almost exceeds belief. The houses were broken open, and plundered of jewels, money, plate, linen, and clothing; what could not be carried away, such as china, glass, feather-beds, and furniture, was thrown into the streets and destroyed. Twenty-four inhabitants were barbarously murdered, and fifty others severely wounded. The blood of the most virtuous husbands and fathers, of the best mothers, of grey-haired elders, of tender infants, stained the walls of their peaceful habitations, and streamed out of the houses along the streets. The ministers of religion, who fled to the altar, were not spared. Men upwards of eighty years of age, and infants in their mothers' arms, were shot or slain by the sword. A woman in child-bed, and who would have been delivered of twins, was shot through the body whilst lying in bed, and the bedstead set on fire. No tears of the poor creatures begging for mercy, no cries of kneeling children, could soften the hearts of these miscreants. On the night of the 27th, they departed with their plunder.

With the exception of Flushing and Bergen-op-Zoom, the whole of Holland was free from French force before the end of the year. Breda was carried in a great measure by a *ruse de guerre*: 300 Cossacs appearing before the town, and giving out that they formed the advanced-guard of an army of 10,000 men, which was approaching, the garrison, 1800 in number, thought of nothing but escaping; for, while 1200 marched off in all haste, 600 were surrounded in the town by the Cossacs, and, without attempting resistance, gave themselves up to half their number.

If we now turn our attention to the peninsula, we shall there see the French eagles flying apace before the English lions, and seeking their safety in the fortresses of the Pyrenees; we shall there witness the successes of our armies under their brave commander advancing towards France, and at length reaching it.

From the period of the retreat of the allied troops into Portugal at the close of 1812, (see p. 303, 4.) to the commencement of the ensuing summer, the armies opposed to each other had remained in a state of almost total inaction. The French were not in a condition to act offensively; and, while the war in the north continued, had nothing more in view than to maintain the ground which they still occupied. But, on the part of the allies, this interval was spent in vigorous preparations for an active and decisive campaign. After the battle of Salamanca, reinforcements had been sent to lord Wellington, to the amount of upwards of twenty thousand men; which, though they did not arrive in time to follow up that success, or to avert the final disasters of the campaign, were now in readiness to take the field. Discipline had been restored by strict regulations, enforced during a long period of repose. The troops at present disposable might be estimated at 80,000 British and Portuguese, with 40 or 50,000 Spanish regulars; while, as they advanced, a numerous guerilla-force might be expected to co-operate. To these were to be added, on the other side of the peninsula, an amount of 50 or 60,000 men, chiefly Spaniards indeed, but a great proportion of these trained under British officers.

The allied forces were spread at this time over a very extensive line. Lord Wellington, with the main body of British and Portuguese, occupied wide cantonments along the northern frontier of Portugal. General Hill, with a part of the army, and with the Spanish force under Murillo, was posted in Estremadura. The second and third Spanish armies, commanded by the duke del Parque and general Elio, were stationed, the one in La Mancha, and the other on the frontier of Murcia and Valencia. The force newly levied in Andalusia, which was called the army of reserve, had set out from Seville under the command of general

Henry O'Donnel, who, from his exploits in Catalonia, had received the title of Conde de Abisbal. To these different Spanish armies there is finally to be added the army of Galicia, which was stationed on the frontier of that province. The chief command in this and the other northern provinces, had been conferred upon Castanos. It was at the particular recommendation and wish of lord Wellington, that he had received this appointment. He was not a man of very brilliant parts, but extremely upright, zealous, and patriotic; as well as attached to the English nation in so peculiar a degree, that to give him the command might be considered almost the same as giving it to lord Wellington. The whole force of the north of Spain, which, besides the regular troops, comprehended numerous bands of hardy guerillas, might therefore be considered as completely under the controul of the British commander.

The positions of the allies formed thus a very wide semicircle round those which the French occupied in the centre of Spain. Upon this circumstance perhaps the latter founded their hopes of a successful resistance; conceiving, that, by the rapid movement of their concentrated forces, they might baffle attacks made from such a variety of different quarters. The plan of the campaign, however, which lord Wellington had formed, was much more profound and judicious. General Hill indeed first threatened Madrid; but, as soon as the season for action arrived, he turned to the left, marched through the Puerto de Banos, and joined the main army which was assembled in the neighbourhood of Ciudad Rodrigo. At the same time, Abisbal was proceeding through Estremadura; and the whole force of the allied armies directed its march northwards upon the line of the Douro. That river, the largest in Spain, had in the preceding campaign proved an important barrier; and the French, who possessed along its northern bank a series of fortified positions, doubtless hoped for a considerable time at least to dispute the passage. Lord Wellington however, by a very able arrangement, completely provided against this obstacle. While the right wing of the army advanced through Salamanca along the country south of the Douro, the left, under sir Thomas Graham, crossed at Torre del Moncarvo, within the Portuguese frontier, and pursued their march along the northern bank. This manœuvre turned all the posts which had been established along that line. The successive dispositions now made baffled at once all the provisions made by the French for arresting the victorious progress of the allies. Their detachments on both sides of the Douro retreated precipitately; and lord Wellington advanced without any obstacle, besides those which nature presented.

On the 24th of May, lord Wellington broke up from Ciudad Rodrigo; and arrived on the 28th at Salamanca, near which place a small detachment of the French rear-guard, which had not retreated with sufficient promptitude, was cut off. On the 31st, the left wing, under general Graham, crossed the Esia, and, passing through Zamora, arrived on the 2d of June at Toro. It had now formed a junction with the Galician army, which composed its extreme left. During the 3d, his lordship halted at Toro, in order that the rear, which had been detained by the difficulties of crossing the Esia, might have time to close in. On the same day, the right wing, which had proceeded along the opposite bank, crossed the Douro by the bridge of Toro; and on the 4th, the whole army marched upon Valladolid.

The French force on the Douro being thus insufficient to stop the rapid advance of the allies, that at Madrid was placed in a very critical situation. By remaining there, it would soon be cut off from the other armies, and from the high road leading to the French frontier. The determination was therefore formed, to abandon the capital without a struggle. On the 27th of May, all the troops which were there and on the Tagus began their retreat, and on the 3d of June crossed the Douro. Although, however, all the French armies were thus united, they did

not attempt to defend Valladolid or the passage of the Pisuerga; but continued their retreat without intermission till they arrived at Burgos. In front of that place, all those corps which were called the "Armies of the Centre of Portugal and of the North" were assembled; and, as it formed the key of the north of Spain, and the last strong hold on this side of the Ebro, it seemed that here, if any where, a great stand was to be made. If, however, they had any intention of receiving the allied army in this position, it was soon relinquished. In the course of the following night they withdrew their whole force through the town of Burgos, having first destroyed the works of the castle as completely as the short interval allowed; and, on the following day, all their troops were in full retreat towards the Ebro. Lord Wellington did not pursue along the main road, where the enemy would have been prepared to dispute the passage of the river, and where his progress would have been obstructed by the strong fortresses and defiles of Pancorbo; but caused the whole army to make a movement on its left, by less-frequented roads, with the view of passing the Ebro near its source. The enemy, to whom this manoeuvre seems to have been unexpected, had made no provision for guarding these passages: Lord Wellington therefore crossed without opposition at St. Martin Rocamunde and Puente Arenas. He had now not only overcome the barrier of the Ebro, but was in a condition to threaten the rear of the enemy, and his communications with France.

The British general then directed his march upon Vittoria, which the French had made their central dépôt in the frontier provinces. To oppose his progress, they hastily collected at Ficas and Espejo such troops as were in the neighbourhood, or could be thrown across from Pancorbo. These advanced to meet the allies; but, though for the moment superior in number, they were quickly repulsed. On the 19th, he arrived at Subijana on the Bayas, when he was only twelve or fifteen miles distant from Vittoria. The enemy had remained at Pancorbo, and seemed determined to maintain themselves, if possible, in that strong position. Seeing however the allied army on the point of establishing itself on their rear, they broke up from thence on the night of the 18th, and hastened to take up a position in front of Vittoria, which they effected on the 19th. The French were commanded by Joseph Bonaparte in person, marshal Jourdan being his major-general.

Lord Wellington spent the 20th in collecting his divisions, which had been somewhat scattered by the rugged and difficult country through which they had hastily marched; and also in reconnoitring the position of the enemy, with the view to an attack on the following day. The whole front of the French army was covered by the river Jadera, which flowed in an irregular line from north-east to south-west, in front of Vittoria. The right wing occupied that city and its neighbourhood, and defended the passages over the river immediately leading to it. The centre and left extended downwards along the Zadora, terminating at a range of heights near the village of La Puebla. Upon these observations was founded the plan of attack for the following day.

The first operation of Lord Wellington was to occupy, by means of Murillo's Spanish division, the heights of La Puebla, on which the enemy's left rested. In permitting this to be effected with little resistance, they seem to have committed a capital error, of which they immediately became sensible; and they made vigorous efforts, and poured detachment after detachment, in order to regain possession of them. Lord Wellington, however, supported the troops posted there in such a manner, that they were still able to maintain their ground. Meantime, under cover of the possession of these heights, General Hill crossed the Zadora, and was immediately followed by three other divisions higher up. These troops, composing the main force of the army, and nearly all the cavalry and artillery, made dispositions for attacking both flanks of the enemy's cen-

tre. The French were not prepared for this attack; they had weakened their centre, for the purpose of making their fruitless attack against the heights on the left; and seeing that, when thus hard pressed, their efforts to maintain this position would be unavailing, they abandoned it, and the whole of their centre and left retreated upon Vittoria. Meanwhile general Graham, with the British left, was carrying on those operations which were to render victory decisive. The enemy had here a considerable force in advance of the Zadora, and occupying several strongly-fortified villages, by which the high roads to Bilboa and Bayonne were defended. General Graham, whose force consisted chiefly of Portuguese troops supported by the Spaniards under Longa and Giron, succeeded in expelling the enemy from all these positions, and driving him across the Zadora. The bridges, however, being strongly guarded, he was himself unable to gain the other side, until it had been cleared by the victorious right and centre. The left then crossed also, and joined in the pursuit. In consequence of general Graham's success, the French were cut off from the high road into France, the most advantageous, and that by which all their arrangements for retreating had been made. They were forced to retire by the more difficult and circuitous route of Pamplona, upon which they had made no provision of fortified positions to cover this movement. They had thus no means of making a stand at any one point for a length of time sufficient to enable them to carry away their artillery and equipments. Near Vittoria, therefore, the whole fell into the hands of the pursuers. Never was an army so completely stripped. Baggage, artillery, ammunition, camp-equipage, all was taken; even vast quantities of treasure were thrown down the rocks, and collected by the pursuing troops. The allied army, in this most legitimate plunder, found some solid reward for the glorious toils through which they had passed. Of 153 pieces of cannon, the enemy carried with him one gun and one howitzer only. They passed by Pamplona, but without stopping at that fortress, and pursued their retreat over the Pyrenees into France.

Lord Wellington, with the main body, followed the French force which was retreating by the route of Pamplona; and on the 27th that place was invested. So little had the enemy foreseen the rapid sweep by which the allied army was to be carried to the crest of the Pyrenees, that this almost-impregnable fortress, and grand key of the peninsula, was left with provisions for only a very few months. Considering its strength, and the great loss that must have been incurred in reducing it by force, it appeared more advisable to employ a blockade, which, from its unprepared state, could not be protracted to a very long duration. After a short interval, the charge of maintaining this blockade was committed to the army of reserve of Andalusia, commanded by the conde de Abisbal. The conde had previously reduced the fortress of Pancorbo, which then interrupted the communication of the allies along the high road between Burgos and Vittoria. The castle being of great strength, he compelled it to surrender by cutting off the supply of water; and the garrison, amounting to 700 men, became prisoners of war.

General Clausel, on the day of the battle, was with two divisions at Logrono, a considerable town upon the Ebro. The result of the action cut him off from the main body; yet he still lingered till the 25th, in hopes perhaps of finding an opportunity to make his way through. He then set out, and proceeded with such expedition, that he reached Tudela before the allies, and had then the route open before him to Saragossa. He was followed by Mina, with numerous detachments of Spanish light troops. Clausel did not attempt to make a stand at Saragossa; but, leaving a detachment under general Paris, passed by a circuitous route through Iaca across the Pyrenees, to rejoin the main body. Paris, on the approach of Mina, retreated in the same manner, leaving merely a garrison in the castle, which was soon compelled to surrender. Thus was recovered, almost without a struggle, this important city; so renowned

nowned for its immortal defence, which had cost two sieges and three armies to France.

While these events took place on the right of the army, general Graham, with the left wing, composed chiefly of Portuguese and Spaniards, advanced on the high road from Vittoria to Bayonne. The French now evacuated all their stations in Biscay, except Santona and St. Sebastian; and, uniting their garrisons to the division of the army of the north, which was at Bilboa, they assembled a force somewhat more considerable than had at first been supposed. They made a pretty brisk stand in disputing the frontier-positions. Their first effort was at the junction of the road from Pamplona with that from Bayonne; they posted themselves on a hill commanding these two roads, and seemed determined to maintain it. A vigorous attack, however, by Lieut.-col. Williams, quickly dislodged them; and they then retreated into Tolosa, a town slightly fortified; and, by barricading the gates, and occupying convents and large buildings in the vicinity, they succeeded in rendering it a strong position. It was necessary to bring forward a nine-pounder, in order to burst open one of the gates. The allies entered; but it was already dark, and the troops of all the different nations were confusedly mixed, and could scarcely be distinguished. The perplexity thus occasioned enabled the French to escape with smaller loss than they must otherwise have incurred. The enemy now made their last stand on the Bidassoa, which forms here the boundary between Spain and France. They were driven across it by a brigade of the army of Galicia under the command of general Castanos; and they burnt the bridge over the river. Port Passages, a harbour of considerable importance at the mouth of the Bidassoa, was then taken by Longa, and its garrison of 150 men made prisoners. A Spanish division then invested St. Sebastian's.

From this brilliant career of the allies in the north of Spain, we must now turn to the operations which took place on the eastern coast of the peninsula. In Catalonia and Valencia the French still maintained a very large force, and were in possession of numerous fortresses, some of which ranked with the strongest in Europe. The importance of this military force was greatly increased by the distinguished ability of Suchet, under whose command it was placed. This commander now occupied a position in front of Valencia, at St. Felipe, on the line of the Xucar. The allies, on the other hand, had collected a very considerable force in and near Alicant. Several British and native regiments had been withdrawn from Sicily; a large force, drawn from the population of the neighbouring provinces, had been organized in the Balearic islands under British officers, and was now commanded by generals Roche and Whittingham. These could act in combination with the second Spanish army under general Elio, which was drawn up along the frontiers of Murcia.

About the middle of April, the Anglo-Spanish army under sir John Murray came out of Alicant, and advanced to Castellá. General Elio at the same time took post at Yesla and Villena. It appears, however, that these different corps had not been in a state of sufficiently close combination. Suchet saw the advantage which might be derived from the oversight. Collecting his whole disposable force, he on the 11th of April attacked the corps of general Elio unsupported by the rest of the allies; drove it with some loss from Yesla, and, having invested the castle of Villena, compelled it, with its garrison of 1000 men, to surrender next-day at discretion.

Having thus succeeded as to the Spanish army, Suchet proceeded to the attack of the British positions. On the 12th at noon he assailed the advanced posts at Biar, under Col. Adam. The resistance was vigorous, and was maintained against a superior force for five hours; and Col. Adam at length fell back upon the main body only in compliance with the orders of Gen. Murray. Suchet proceeded on the following day, to attack the main position at Castellá. It was one of considerable strength. The right of the allied army was defended, along the

whole front, by a deep ravine, while on the left, where the ravine terminated, it occupied a pretty extensive range of hills. Suchet began by threatening the right with a strong body of cavalry: the allied force, however, remained secure in its strong position, and declined an encounter upon this ground. Suchet then, with all his columns united, made a desperate attack against the range of hills upon which the left was posted. The allied force, consisting of Col. Adam and Gen. Whittingham's divisions, repulsed the onset in the most gallant manner; the enemy were completely driven back, and forced to commence a hasty retreat. As his superiority in cavalry gave him great advantages for proceeding in the direct line, general Murray commenced a flank movement by Alcov, in hopes of reaching first the entrenched camp at St. Felipe. It is stated however that, the French having reached Alcov only a quarter of an hour before the allies, this plan was frustrated. Sir John Murray then returned to his position. In this action Suchet for the first time experienced the valour of British troops; and, in contending with them, was for the first time defeated by his wonted invincibility. The allied army, however, did not make any attempt to follow up its success. The advance from Alicant indeed appears to have been made, less with the view of pushing forward in that direction, than of seconding the grand operation in the north of Spain, and of preventing Suchet from detaching any of his force in that direction.

About the same time, however, that lord Wellington began to move from Salamanca, sir John Murray, under his direction, undertook a new plan of operations. On the 28th of May, he embarked at Alicant the whole force under his command, and sailed, on the 31st, for the coast of Catalonia. At the same time the duke del Parque, with the third Spanish army, united himself with general Elio, for the purpose of pressing upon Valencia and the army of Suchet. The combined force landed on the 3d of June at Salon Point, and immediately invested Tarragona. At the same time a detachment was sent against the fort of St. Felipe, which commanded the principal road leading from Tortosa. This service was successfully accomplished by the exertions of Col. Prevost, and Capt. Adam of the Invincible. Meantime sir John Murray continued for eight or ten days the siege of Tarragona; but the place still held out, and there appeared no prospect of reducing it till after an interval of the same duration. Intelligence was then received, that general Mathieu had set out from Barcelona with 9 or 10,000 men, and had, on the evening of the 11th, passed through Villa Franca on his way to Vendrello, only twenty miles distant from Tarragona. It was also learned, that Suchet, with nearly the same force, had passed through Valencia, and was evidently on his way to operate a junction with Mathieu, and attack the allied army. On considering these circumstances, sir John Murray conceived it impossible to accomplish his object, and determined to re-embark his troops without delay. So urgent did the danger appear to him, that a considerable proportion of the cannon was left in the trenches, lest, by the delay of a day, the change of weather or the arrival of the enemy should render the re-embarkation impossible.

No sufficient light has yet been afforded to enable us decidedly to form a judgment on a transaction so humiliating to the British arms. A court-martial was expected, but none has hitherto been held; and it would rather seem, that sir John's friends are availing themselves of the oblivion into which more interesting subsequent events have thrown this expedition, to avert all enquiry into the conduct of it. In considering the expedition more particularly, it seems scarcely possible to avoid the suspicion of some error, either in the conception or execution of it. From the moment that the British landed so great a force at Tarragona, it became obvious to the plainest capacity, that, both from Valencia and from Barcelona, all the French disposable troops would be instantly drawn towards

wards that point. What amount they could thus assemble, might, with any tolerable information, have been easily ascertained. If then that amount was such, that the British force could not even think of facing it, this expedition was from the beginning quite hopeless. At the same time we entertain doubts, whether the disparity was so very extreme as sir John Murray seems to have apprehended. A great part of his troops were indeed Spanish; but they were disciplined and commanded by British officers, and had shown repeatedly that they were capable of successfully maintaining a contest with those of the enemy. The two armies, besides, which were to be united against him, came from opposite and distant quarters; and the British were in possession of all the high roads by which they could communicate. An active commander might have seized the opportunity of striking a blow before the junction; and certainly the difficulties were such as must have interposed a considerable delay before it could be effected. With regard, above all, to the leaving of the cannon in the trenches, it surely behoved a commander to pause, before he exposed the British arms to so signal a dishonour. No enemy was at hand; and the only danger was, lest the weather, at present favourable, should change, and become unfit for embarkation. Of this point, admiral Hallowell was the natural judge; and his opinion it appears was decidedly for remaining. He even engaged, provided sir John would merely delay his departure till night, that he would bring off every cannon. But the general, "having taken his part," immediately put it in execution; a resolution in which, with the information possessed by us, we can see no symptoms of any thing but the most frightful panic.

General Murray was succeeded in the command by lord William Bentinck; who conveyed the troops back to Alicante. While Suchet marched towards Tarragona, the Spanish generals, the duke del Parque, Elio, and Villacampa, advanced from different points upon Valencia. Suchet, on hearing of the re-embarkation of general Murray, immediately hurried back, in hopes of striking a blow against some one of these corps; but they all succeeded in making their retreat without serious loss.

We shall now return to the operations of the grand army.—The two fortresses of Pamplona and St. Sebastian, forming the keys of the principal entrance into Spain, were invested, as we noticed, at the same time; and their fall might be considered as in a great measure closing the peninsula against French invasion. Pamplona, being imperfectly supplied with provisions, was subjected to a blockade, which, in the course of a few months, must, if not relieved, infallibly reduce it. St. Sebastian was better prepared; and its maritime position rendered it almost impossible to prevent succours and supplies from being continually introduced. As it possessed no strength therefore which precluded the hope of speedily reducing it by force, that mode of siege appeared most adviseable. Sir Thomas Graham, who conducted it, began his operations against the convent of San Bartolomeo, which the French had occupied in great strength, and had converted into a formidable outwork. A battery was established on the 14th of August; yet, after it had played for two days, the defences appeared still so strong, that a new one was begun; but, this not being ready on the morning of the 17th, general Graham determined, on that day, no longer to delay the assault. The valour of the British and Portuguese troops surmounted every obstacle; the place was stormed; the enemy driven down the hill on which it is situated, and forced, after burning the village of St. Martin, to withdraw precipitately into the town of St. Sebastian. The allies suffered some loss by a too-eager pursuit. The trenches were now immediately opened against the body of the place; and there appeared a very fair prospect of its being compelled to a speedy surrender.

Lord Wellington had established his head-quarters at Lesaca, a small distance from St. Sebastian's. The two roads leading to Pamplona were meanwhile covered by di-

visions of the British army; one under general Hill in the Puerta de Maya, the other under general Byng, on the extreme right, at Roncesvalles. On the 24th of July, Soult (who had now been sent back from Germany to take the chief command in Spain) attacked in great force the position occupied by general Hill, who, though driven from it at first by superior numbers, had recovered the most essential point of it, and would soon have regained the whole; but in the mean time an attack on a much greater scale, with between 30 and 40,000 men, was made upon general Byng's position at Roncesvalles; and, though reinforced by another division under sir Lowry Cole, the British force was at length overpowered, and compelled to give way. They took post at Zerbiri; and general Hill, whose rear was now threatened, fell back upon Iruiria.

These corps had thus lost their direct communication with the force under lord Wellington, and were left alone to defend the blockade of Pamplona against the overwhelming force with which the enemy were pouring in to relieve it. Two British divisions, with a small part of the Spanish force covering the blockade, took a position immediately in front of the place. On the 27th, Soult arrived in sight of the walls of Pamplona, and immediately began operations for its relief. Not having yet brought up all his troops, he contented himself with attacking a hill, which formed an important part of the British position. A Spanish and Portuguese regiment however, with the 40th British, defended it against all his efforts. On the 28th, another British division arrived; and the enemy, also reinforced, began a contest of the most furious and sanguinary description. His main efforts were directed against the fourth division under general Picton; but they were every-where frustrated, unless at one point, where, a Portuguese battalion having been overpowered, the enemy were enabled to establish themselves on our line. By the united efforts of the neighbouring regiments, however, they were driven from the heights with immense loss, and were unable to make any farther efforts on this side. In the course of the 28th, generals Hill and Dalhousie arrived with their divisions, and placed themselves in line with the rest of the British force. On the 29th and 30th, these two great armies continued to view each other, neither daring to attack the formidable heights on which its antagonist was posted. But, in the course of these days, the enemy silently withdrew a considerable body of troops from the front, where the former actions had taken place, and conveyed it to their right, with a view of attacking the British left under sir Rowland Hill; trusting to the natural strength of the original position, that the troops remaining would still be able to maintain it. On the 30th accordingly, general Hill was attacked, and obliged to fall back from the range of hills which he occupied to the one immediately behind. But, lord Wellington seeing the point weakened, instantly seized the opportunity: he detached lord Dalhousie and general Picton to drive the enemy from the formidable heights on which their right and left rested; which being effected, the centre advanced to join in the attack. These operations were crowned with the most brilliant success, and the enemy were quickly driven from one of the strongest positions which it was possible for troops to occupy. The French were now in full retreat towards their own frontier. In order to cover this operation, they placed a strong rear-guard in the pass of Donna Maria, from which however they were driven by lord Dalhousie. This retreat now resembled a flight. Many prisoners were brought in, and a large convoy, with luggage, taken at the town of Elizondo. They endeavoured however to make a new stand at the Puerto de Echalar, immediately within the Spanish frontier. But two of their divisions were quickly driven from these heights by a single British division; and the respective armies were replaced in the same position as before they had begun their formidable attack. The loss on both sides was great, perhaps nearly equal; for in  
neither

neither was there any rout, or any detachments entirely cut off. It is estimated, on the part of the allies, in killed and wounded, at 7000.

Meantime, the assault of St. Sebastian's, to avert which had been the main object of Soult's daring enterprise, did not lead immediately to the expected result. A breach having been effected, and the approach of the enemy rendering it expedient to lose no time, the assault took place on the morning of the 25th of August. Every thing was done which could be expected from the gallantry of British troops; and part of the column even forced its way into the town; but defences had been raised, which poured upon its flanks such a torrent of grape and musketry, as soon convinced general Graham, that to persevere longer would be a vain sacrifice of troops which deserved a better fate. Immediate retreat was ordered. In this attack, the royals, who advanced to the attack 400 strong, lost nearly 300 in killed and wounded. The breach having thus proved impracticable, all the operations of the siege were to begin anew. The repulse of the French army, however, had left the assailants at full liberty to carry them on. The first object was to cut off the communication which the besieged carried on by sea with the coast of France. Sir George Collier, with a party of marines, stormed the island of Santa Clara, which lies at the mouth of the harbour, and took the garrison prisoners. Meantime new breaching-batteries were raised, and carried forward with such vigour, that on the 31st of August it was determined to make a new assault. The result of this however appeared in the first instance still more unpromising than the former. The enemy had employed the long interval allowed them in preparing defences of every possible and conceivable kind; and the breach which, at a distance, had appeared very ample, proved to be of such a nature, that it would admit the men only in single files. All the works and buildings in its vicinity were filled with troops, who, covered by intrenchments and traverses, could pour the most destructive fire on the assailants. Matters seemed quite desperate, till the genius of the commander suggested a resource. This was, to direct the guns to be fired over the heads of his own troops against those works of the enemy from which so destructive a fire issued. With such ability and precision was this delicate action conducted, that the balls passed within a very few feet of the British troops, without doing them any injury. A powerful effect was soon produced; and, after a succession of vigorous efforts, the storming party was at length established within the town. Defences had been prepared in the streets and houses; but these were soon swept away by British impetuosity, and in an hour more the garrison were driven out of the town, and forced, after a severe loss, to take refuge in the castle. On the 9th of September, the castle surrendered, and the whole of this important bulwark of Spain was transferred to its rightful possessors.

On the 31st of October, Pamplona surrendered, after a blockade of four months. The garrison became prisoners of war, and all the artillery and stores were given up.

Nothing now detained lord Wellington from pushing his victorious career into France; and the French, who had so lately aimed at the entire subjugation of the peninsula, fought only to defend the approaches to their own territory. They formed two successive lines of defence; the one along the river Nivelle, the other immediately in front of Bayonne. These, ever since the battle of Vittoria, they had been diligently employed in fortifying; and, till they were driven from them, the British could not advance into the interior of the kingdom. The better to provide for its defence, a decree had been recently passed, by which a new levy of thirty thousand conscripts was to be drawn from the provinces immediately bordering on the Pyrenees; and the reinforcements thence derived were beginning to arrive. Lord Wellington's advance was delayed for a few days by the heavy rains and consequent state of the roads; but on the 10th of

November the whole army was brought forward, and enabled to commence its attack upon the French entrenched position along the Nivelle. Their right was on the Spanish side of the river, in front of St. Jean de Luz; while the centre and left extended along the opposite side, and occupied the villages and mountains situated upon its bank. The right had been fortified so strongly, that an attack in front was judged impracticable; but it could be turned, if the centre were made to give way. Against the centre therefore the main attack was directed. It was conducted by three British and one Spanish division, under generals Cole, St. Cyr, Colville, and Giron; and, after a desperate resistance, the enemy were driven from all the strong and fortified positions which they there occupied. At the same time generals Clinton and Hamilton drove them from those which they occupied on the left. All the heights on the Nivelle being thus carried, and the enemy's centre driven back, lord Wellington immediately directed troops to advance upon the rear of their right; but, before this movement could be completely followed out, night intervened. The enemy took advantage of the darkness to quit their impregnable position, and retire upon Bidart, leaving the whole of the ground which they had occupied in possession of the allied army. As the action of this day consisted wholly in the storming of entrenched positions, and lasted from day-light till dark, the loss was necessarily considerable. It consisted of 2500 British and Portuguese killed and wounded; besides Spaniards, of whose loss no regular account has been given.

The enemy now retired into his last line of defence, which was formed by the entrenched camp in front of Bayonne. The left occupied the peninsula formed by the confluence of the Adour and the Nive, from whence it communicated with the army of Catalonia. The right and centre extended from the left bank of the Nive to the Adour below Bayonne; and the front was here defended by an impassable morass. Lord Wellington, on surveying a position thus defended by nature and art, judged it impregnable against any direct attack. The only means by which the enemy could be driven from it was, by a movement to the right, to threaten his rear and his communication with France. Operations were again delayed by the condition of the roads; but on the 8th of December, generals Hill and Beresford were directed to cross the Nive with two divisions. The passage was effected almost without opposition; the enemy lost their communication with St. Jean Pied de Port, and were driven towards Bayonne. A detachment, which endeavoured to maintain the town of Ville Franche, was expelled by the eighth Portuguese regiment; and general Hill placed his right upon the Adour. Soult could not be insensible, that, unless some vigorous measures were taken to arrest this movement, his position would soon be no longer tenable. Not only would he lose his communication with France, but the navigation of the Adour, by which his supplies were transmitted, would be in the hands of his enemy. He determined instantly upon the most vigorous operations. His project was, with his whole force, to attack that part of the allied army which had not passed the Nive, and thus induce them to recall their advanced divisions. With this view he concentrated his troops, leaving merely a sufficient number to defend the works opposite to general Hill; and on the morning of the 10th made a most desperate attack upon the British left under general Hope. He was repulsed with loss; and, after the action, two German regiments came over to the allies. New attacks took place in the afternoon of the following day, and the morning of the 12th; always with the same result. The enemy were uniformly repulsed; and general Hill continued to extend his line from the Nive to the Adour. Soult, having failed in this point of attack, resolved now to direct his efforts against that wing of the allied army which had actually crossed the Nive. With this view, he passed a large force through Bayonne to the other side of that river, and on

the morning of the 13th made a desperate attack on the British right under general Hill. Lord Wellington, foreseeing this attempt, had sent two divisions, and part of a third, to reinforce that portion of the army; but, before their arrival, the contest was decided: general Hill alone had defeated the enemy, and driven him back upon Bayonne. The British army being now completely established upon the Adour, Soult found it no longer advisable to maintain his position in front of Bayonne. He left his entrenched camp therefore, marched up the river towards Dax, and established himself on the small river Gave, which falls into the Adour.

Lord Wellington had thus attained the object proposed by these operations. France was entered—and that territory, which for twenty years had never been trodden by hostile foot, now saw a mighty invading army established within its frontier.

The regency of Spain, we are told, now carried into execution the unanimous vote of the congress, which had ordered a grant of land to be conferred on the marquis of Wellington, as a solid and enduring monument of the gratitude of their nation. Three royal estates were accordingly submitted to the British field-marshal for his choice; and, with that disinterestedness and taste which are known to temper the splendour of his military fame, he gave the preference to that which was lowest in actual value, but which came recommended to his fancy by the beauty of its situation and the amenities of its scenery. It is situated on the river Xenil, in the kingdom of Granada; and its annual produce is estimated at 30,000 dollars.

We shall conclude the history of this campaign with the following character of our British general from the first volume of "Historical Sketches;" a work from which it would be injustice to transcribe too freely, but still greater injustice to do so without giving testimony to the general excellence of the work, and particularly to the author's masterly delineation of character.—"In this age of war, Wellington, next to Bonaparte, makes the greatest figure on the theatre of the world. Lord Wellington had earned great glory previously to his Spanish campaigns. He was known then as a bold and enterprising leader, a character somewhat rare among British generals, who have commonly been brave in action, but timid in counsel. This course was ill suited to the matchless bravery of the troops which they commanded; it tended to keep down the military fame of Britain much below its natural standard. Lord Wellington knew the valour of his troops, and gave it scope; a series of splendid victories was the consequence. Yet, when circumstances prescribed a cautious and protracted warfare, he established a new fame, eclipsing that which he had formerly acquired. Faction had raised up violent and inveterate adversaries, who undervalued all his great actions. He lived to silence these murmurs; to extort panegyrics from his bitterest enemies; and to receive from an united people the tribute of admiration. Of this extraordinary character, the basis appears to us to be a perfectly-sound judgment, combined with indefatigable application, and a perfect knowledge of all the means and resources of war. Promptitude and presence of mind, in the highest degree, place all these qualifications constantly at command. His dispatches also exhibit habits of accurate and laborious calculation, which render him prepared for any emergency, and make it almost impossible that he should be taken by surprise. These certainly form qualities sufficient to constitute a commander of the first order. We shall, perhaps, appear bold in saying, that, beyond these, we do not discern any remarkable degree of what may properly be called military genius. We see the able and judicious application of all the established resources of war; but not the discovery of new combinations; not any splendid display of intellect and invention. If we are called to illustrate this observation by contrast, we can instance none more striking than that of his great rival, [now no longer so.] In almost all

his grand operations, there is something unexpected, amazing, which confounds all calculation, which no common mind could have predicted. We allude, particularly, to the envelopment and capture of the army of Mack, the passage of the Danube at Entzendorf, and to almost every step of his first Italian campaign. But among the many battles which lord Wellington has gained, we scarcely recollect one in which victory was achieved by any grand manœuvre or stroke of genius. Salamanca itself may hereafter appear to be only a doubtful exception. He commits not himself without a fair prospect of success; he gives scope to the energies of British troops; this is sufficient. Perhaps, indeed, from this very circumstance, he may form a safer commander for us than one addicted to these new and daring manœuvres. The circumstances considered under which Britain wages war on the continent, with an army which could not easily be replaced, and with a hard struggle against superior numbers, it is, perhaps, eligible to keep within secure and established limits. These bold strokes are like commercial experiments, always liable, more or less, to failure, and great consequent loss. Lord Wellington is well known to the British public, not only by his sword, but by his pen; his dispatches forming the only authentic channel by which the operations of the British army are transmitted. They do not make the smallest aim or pretension to literary merit; indeed they rather, in this respect, exhibit a marked deficiency. Yet we confess they please us by that absence of all ostentation, that close adherence to plain and practical business, which breathes so strongly in them. They contain nothing superfluous; no rhetorical ornament; no rhodomontade; the plain fact is simply related, as if by an indifferent spectator. This style reminds us considerably of that of Cæsar, though it has not attained to the classic elegance of that celebrated writer and warrior. Both, for example, agree in often using one word repeatedly in the same sentence, disregarding the inelegance thereby caused; and this, which would be a grievous fault in a writer by profession, appears rather a grace in the narrative of a man of business, who has great affairs to relate."

After having dwelt so long on the vicissitudes of the great European war, our readers, we presume, will be satisfied with a very slight outline of what occurred on the other side of the Atlantic.

The American government seems, notwithstanding its failures by land, to have persisted in its purpose of invading Canada. General Dearborn, on the 16th of November, 1812, broke up his camp from Plattsburg, and marched to Champlain, on the Canada-line, the nearest point to Montreal. On the night of the 19th, a detachment of cavalry with 1000 infantry, falling in with a body of travellers and Indians, got into confusion, fired upon one another, and then dispersed. Upon the whole, this grand army, which intended to winter at Montreal, returned to the place it set out from without accomplishing a single object.

At the beginning of the year 1813, the Americans made extraordinary efforts to retrieve the disasters of the former campaign; and they were soon able to re-assemble an army which greatly outnumbered the British. A large force collected from the back settlements again approached Detroit, in the hope of wiping off the dishonour which had been sustained there in the last campaign. (See p. 304.) Colonel Proctor, who commanded the British, judged it inexpedient to delay till the whole of the enemy's troops could be brought forward. On the 22d of January, he attacked the advanced-guard under general Winchester, amounting to upwards of 1000 men, which was posted at French-town, on the river Raisin. The Americans, though they found in the houses and inclosures of the village an advantageous defensive position, were yet unable to withstand the impetuosity of British valour. They were not only defeated, but entirely cut off. All who were not killed and wounded in the action were taken prisoners;

and in this number was general Wincheſter himſelf. This brilliant exploit placed the Detroit frontier, for the preſent, in a ſtate of ſecurity.

Meantime, the Americans maintained alſo a force upon the branch of the St. Lawrence, which connects the lakes Ontario and Erie; and a large detachment poſted at Ogdenſburgh availed itſelf of the frozen ſtate of the river, to make incuſions on the oppoſite bank. In order to put a ſtop to theſe inroads, ſir George Prevot directed major Macdonnell, of the Glengary ſcibles, to diſlodge them from that poſt. His inſtructions were executed in the moſt gallant and ſucceſsful manner: Macdonnell croſſed the St. Lawrence on the 22d of February, and carried, at the point of the bayonet, the fort of Ogdenſburgh in a few minutes. The Americans fled with great precipitation, leaving, according to their own account; 6 killed and 40 wounded. They alſo left behind them 750 ſtand of arms, 13 pieces of cannon, and an immense quantity of ammunition and proviſions. The Britiſh retired after demolishing the works and burning ſome veſſels: their force conſiſted of 600 regulars, and ſome Indian allies. This action was diſtinguiſhed by the heroic valour of Capt. Jenkins, who, after having an arm ſhot off, continued ſtill to run forward and cheer his men to the attack; and, even when he had received another ſevere wound, did not deſiſt, till exhaustion and loſs of blood rendered him unable to move. The Americans, after this check, did not repeat their inroads.

As the ſeaſon advanced, however, forces accumulated from the different ſtates, and their numbers again became decidedly ſuperior. General Dearborn, in the end of April, ſet ſail on lake Ontario with 5000 men; and, evading the vigilance of the Britiſh flotilla, landed them in the vicinity of York, near the head of the lake, and the place of the greateſt importance in that part of Canada. General ſir R. H. Sheaffe, bart. who had not quite 1000, was compelled, after a gallant reſiſtance, to evacuate the place; and the Americans thus at laſt obtained a firm footing on the north bank of the St. Lawrence. About the ſame time, general Vincent was obliged, by a ſtill greater ſuperiority of force, to abandon fort St. George, which formed the main point of defence on the Niagara frontier. To theſe diſaſters was added the failure of an attempt made by Col. Baynes to obtain poſſeſſion of Sackett's Harbour. The detachment was landed, and the enemy were driven with loſs into their blockhouſes and batteries; but theſe were found ſo ſtrong, that it would have been an uſeleſs waſte of men to attempt ſtorming them. The Britiſh force therefore re-embarked. But, the enemy having advanced beyond Forty-Mile Creek to attack general Vincent, who was poſted at Burlington, the latter came upon them by ſurpriſe, on the night of the 5th of June, and forced them to retire with precipitation. The Indians, and the Squadron under ſir James Yeo, then operating on their rear, they were compelled to fall back upon Niagara, and had to maintain in their retreat a ſeries of unſucceſsful actions, in which they loſt a great part of their army, with almoſt all their artillery and baggage. The Britiſh force advanced, and held them nearly in a ſtate of blockade. Landings were effected at Sodus, at the Genefſee-river, and at Platiſburg; the ſtores and proviſions at theſe places were deſtroyed or carried off.

A change of fortune however immediately followed. It began with the army on the Detroit frontier, which till now had been uniformly victorious. Colonel Proctor, having been almoſt compelled by the ſolicitations of the Indians and of ill-diſciplined militia, to make an attempt on the fort of Sanduſky, was repulſed with loſs. The troops were diſheartened by this unwonted reverse; and the American general, Hariſon, preſſing on at the head of 10,000 men, forced them to retreat in confuſion. The country being unfavourable to this movement, he overtook, ſurrounded, and made priſoners of, nearly the whole; the general, with a few attendants, only eſcaping. This diſaſter was followed by another, ſtill more unexpected

and mortifying. Whatever might be the ſuperiority of the Americans on land, it ſeemed reaſonable to expect that on another element Britain would always maintain the predominance. On Lake Erie however the caſe was reversed. This unpropitious circumſtance is ſaid to have been occaſioned by a delay in the tranſmiſſion of a diſpatch from ſir G. Prevot to admiral Warren, demanding a reinforcement of ſhipping. However this may be, nine American veſſels were on the 10th September met only by ſix Britiſh: the unequal conteſt was gallantly maintained; and the Lawrence, the American commander's veſſel, at one time ſtruck; but the Britiſh were not able to take poſſeſſion of her. Relieved by the other ſhips, ſhe again came into action; and the reſult was, that the Britiſh Squadron, after being reduced to a ſtate of almoſt complete wreck, fell entirely into the hands of the enemy. This ſucceſs gave to the Americans the complete command of Lake Erie; combined with the defeat of Col. Proctor, it rendered them maſters of Upper Canada. They already conſidered all Canada as their own; and once more announced their intention of taking Montreal as their winter-quarters.

The preparations, by which theſe magnificent boaſts were to be ſupported, appeared not altogether inadequate to their fulfilment. Three armies, each amounting to nearly ten thouſand men, marched from different points upon Lower Canada about the end of October. While general Hariſon proceeded along Lake Erie, general Wilkinſon embarked his diſiſion upon Lake Ontario, and general Hampton marched direct to Montreal. Theſe troops however were formidable only in number, and poſſeſſed no qualities that could enable them to ſtand the ſhock of troops under Britiſh diſcipline. Hampton's whole corps was arreſted for a day by 300 Canadian militia; and, additional forces coming up, he immediately fell back, and evacuated the province. Wilkinſon ſucceeded in effecting a landing near Kingſton: but Lieut.-col. Morriſon, who was ſtationed at that place with a ſmall detachment, immediately followed him; and an action took place near Cryſtler's Farm, twenty miles above Cornwall. The American army, ſix times ſuperior in number, was totally defeated with the loſs of 1000 men. It then precipitately croſſed the St. Lawrence, and, abandoning its boats, retreated acroſs a difficult country to Platiſburg. The diſaſter did not ſtop here. On the 25th December, a Britiſh and Indian force having ſurpriſed Fort Niagara, deſtroyed or made priſoners of the whole gariſon. They then croſſed, attacked general Hull, who had collected about 2000 men on the other ſide, and put him totally to the rout.

Thus, amid partial reverses, the campaign by land was on the whole glorious and fortunate for Britain.—At ſea too, ſhe regained that ascendancy which naturally belonged to her. Yet the firſt naval event we have to relate is moſt unfortunate.—The Peacock, her brave captain, and her crew, with the exception of a few, ſunk and perished together, whiſt the Britiſh colours waved unfur-rendered over their heads. Such heroism cannot fail to awaken the glow of admiration; ſuch a loſs, to draw the tear of ſympathy and patriotiſm. The following are the particulars: The Peacock of eighteen 18-pounders, Capt. Peake, ſunk, after a moſt gallant action of forty-five minutes, off Demarara, with the American ſloop of war Hornet, of twenty 32-pounders. The Peacock had, before the action cloſed, eight feet water in her hold; and, notwithſtanding every endeavour to pump out the water, ſhe filled ſuddenly, and went down in a moment. Notwithſtanding the humane exertions of the Hornet's people, they could only ſave a quarter-maſter and a few men.

The victory we are now to detail was attended with circumſtances peculiarly gratifying. Captain Broke, of the Shannon frigate, with another ſmall veſſel attending him, had been cruizing for ſome time near the harbour of Boſton, where the Cheſapeake frigate then lay. The latter, though much ſuperior, particularly in men, did not venture to come out. Captain Broke, however, was

anxious to make a trial of valour. On the 1st of June he dismissed the vessel which accompanied him, and, with the Shannon alone, drew up before the harbour of Boston, in a posture of defiance. The Chesapeake accepted the challenge; she came out to decide, as it were, by single combat, this contest between the two nations in maritime prowess. The coast was entirely lined by the inhabitants, who could observe with ease all the vicissitudes of a combat so interesting. The issue remained not long in suspense. The two vessels came almost immediately in contact, and captain Broke, observing that the enemy at this critical moment flinched from their guns, gave immediate orders for boarding. In less than ten minutes the whole of the British crew were on the decks of the Chesapeake. In two minutes more the enemy, after a desperate but disorderly resistance, were driven from every post, and the Americans from the shore beheld the British colours flying over the vessel, which had just left their harbour in full assurance of victory.

Mr. Croker, secretary to the admiralty, in the course of a debate in the house of commons on the 8th of July, passed a warm eulogy on Capt. Broke for his disinterestedness (we understand that he serves without pay), activity, skill, and bravery. He described the action as "in every respect unexampled. It was not—and he knew it was a bold assertion—to be equalled by any engagement which graced our naval annals. Capt. Broke was wounded. This, indeed, was not extraordinary; but the place on which he received his wounds inspired an interest that would be deeply felt; he was wounded on the deck of the enemy's ship.—The Chesapeake had made every possible preparation for the engagement. She came out of harbour in full sail. No other ship was in sight. The contest was to be singly and fairly decided,—if a contest could be called fair where the superiority in numbers, in weight of metal, in dimensions, were all on one side. The Chesapeake's company consisted of 440 picked men; and she was larger than the Shannon by 150 tons. She had on-board 49 guns. The Shannon was manned with 110 hands less than the Chesapeake; and from her class, being a 38-gun frigate, she probably had, although he could not speak with absolute certainty, 44 or 46 guns. Not a shot was fired until they were nearly side and side. The firing was great and rapid; the exchange of broadsides was uninterrupted; but nothing could resist the tremendous attack made by the Shannon. The firing was marked with precision, energy, and a spirit of unabated; as to triumph over all difficulties. The enemy's main chains were locked in the fore-chains of the Shannon. The order for boarding was given by Capt. Broke. Not an instant was lost in carrying the order into execution. The boarders rushed at one and the same moment from every deck—from every part of the Shannon, into the enemy's ship. The Chesapeake was carried, and was in our possession in the course of three minutes. The topmen of the Shannon attacked the topmen of the Chesapeake, and stormed the main top. He was warranted in saying, that the victory was accomplished in less than fifteen minutes, of which only three minutes were occupied in boarding, when 310 British seamen had to contend with 440 of the enemy. Capt. Broke was cut down by a sabre-blow, on the fore-castle of the Chesapeake. During the tremendous firing which was kept up, and the boarding, not a rope of consequence, not a netting, was hurt; and after the victory the two ships sailed away, to use the expression of Capt. Broke, *in the most beautiful order, as if they had only been exchanging a salute!*" Capt. Broke is the eldest son of the late Philip Bowes Broke, of Broke-hall, Naeton, Suffolk, esq. we understand that he has a private estate of about 6000l. per annum; to which the prince regent was now pleased to add the honour of a baronetage. See the article HERALDRY, Plate XCVI.—As to his family, see farther Gent. Mag. 1813. Sept. and Supplement.

A court of common-council, on the 13th of July, voted the freedom of the city of London, and a sword, to Capt.

Broke. And we cannot avoid noticing a happy allusion to the action we have been describing at the recent illuminations, (April 11-13, 1814.) the transparent inscription was, "The Brooke that empties the Chesapeake into the Shannon."

The arrival of admiral Warren at Bermuda had now established the naval superiority of Great Britain in those seas; and a Squadron of light vessels was sent up the Chesapeake, the grand inlet of the North-American states. These made successful descents at various havens along its coast, and upon the rivers at its head. Wherever the British landed, they took possession of the vessels and all public property, without doing any farther injury to the inhabitants. An attempt upon Craney-island did not succeed; but Kent and Swan islands were taken and fortified; and establishments were thus formed at the very head of the Bay. Upon the whole, considerable injury was done to the enemy by these operations, and great alarm excited; but no vital point was reached, nor any of the grand objects of the war materially promoted. Indeed, this desultory and coasting warfare, though a favourite with the British public, is never likely to lead to any important result. Its successes are superficial and passing; while, though the suffering and alarm inflicted may tend in some measure to dispose the minds of the people to peace, this effect must be counteracted in an equal degree by the irritation which it excites.

In this state of things, however, an overture was made, whether spontaneously or secretly invited, by the ambassador of the emperor of Russia, to open a treaty under the mediation of that sovereign. The proposition was received with alacrity by the Americans; and, even before the consent of England had been notified, two envoys were sent to the Russian court, who, in conjunction with the ambassador already resident there, might carry on the proposed negotiation. The British cabinet was placed by this proposal in a very delicate situation. Nothing could be more plausible than this offer to negotiate under the auspices of a monarch who was united to England by the bonds of the strictest alliance. To reject such an offer might even endanger the amity subsisting between the two courts, and which it was so desirable to preserve. On the other hand, the advantages to America, and the dangers to England, from thus conducting the treaty, were alike obvious. In all the questions of neutral privilege, which formed the main ground of discussion, Russia had a common interest with America; she had formerly made war almost upon the same ground. It could not be doubted, therefore, that she would support, with all her influence, the claims of that power. If the rejection of her mediation were likely to give offence, that of the propositions which she might afterwards support and sanction, would probably have consequences still more serious. It was therefore, perhaps, on the whole, wise in the British cabinet to decline, on the most decent possible pretences, this circuitous mode; and to propose opening a direct communication with the American government.

On the 6th of January, 1814, Mr. Madison laid before congress the answer of lord Castlereagh, dated Nov. 4, 1813, to the proposition for a negotiation under the mediation of Russia; in substance declining the mediation, but professing a readiness to treat directly with the United States either in London, or, if that should be objected to, at Gottenburgh. The president also laid before congress the reply he had ordered Mr. Monroe to make, selecting Gottenburgh as the place of negotiation: he has appointed Mr. Clay, speaker of the house of representatives, and Mr. Ruffel of Rhode Island, commissioners, jointly with Messrs. Bayard and Adams, (Mr. Gallatin has since been added,) to conduct the negotiations; and they arrived at Gottenburgh on the 11th of April. But there does not appear to be any armistice in the mean time.

"The question now arises," says the author of Historical Sketches, "whether, in conducting this treaty, any advantage ought to be taken of the prospect which has opened

opened of soon having America alone to contend with? whether the opportunity ought to be embraced, of inflicting chastisement for her conduct, in declaring war against a power which was fighting for the independence of the rest of the world, and even for her own? In our opinion, though justice might sanction such a course, prudence would dissuade from it. Because a very small force has been found adequate to the purpose of defensive warfare, it does not follow, that a much greater one would carry on offensive operations with success. The territory of the United States, extensive, thinly inhabited, and separated from our's by impracticable deserts, affords no fair subject for conquest. The ascendancy so easily maintained at present is plainly owing to this circumstance, that the American armies, though superior in number, possess neither discipline nor experience in war. But these are deficiencies which a protracted contest would infallibly remove; and that which, at present, costs scarcely an effort, might then become a hard and equal warfare. We incline therefore clearly to think, that Great Britain ought in this instance to show an example of moderation; and that, while she does not desist from former, she should forbear to bring forward any additional, claims."

We must now retrace our steps, to speak of a few of the domestic events of this year.

Our hard-working men of the city, the coal-heavers, the draymen, and other labourers, who want sustenance in the midst of their exertions, to compensate the loss of the vital dew forced out of their limbs and oozing on their foreheads; even the henpecked husband who sits hours and hours upon the hard and comfortable's bench of a tap-room because he has a scold at home; all grumbled at the advance of porter to sixpence per pot, which took place in the November preceding, but fell to 5½d at Christmas following.—The distillers, ready enough to follow the example of the brewers, gave notice that after the disposal of their present stock they should raise the price of that popular and so freely-drunk nectar, the GIN. Two causes of dissatisfaction which at first made Mr. Bull prick up his ears, but with which, as with other impositions, he had the good humour (and why not say, the good sense?) to reconcile himself.—Some members of the house of commons, headed by Mr. Whitbread, should enter into a serious enquiry upon the matter of these popular drinks; and consider whether it might not be prudent to establish an *affisa cerevisiæ*? Bread is affised here; meat is tariffed in France; why should not liquors be subjected to the same regulations?—On the other hand, many are for doing-away even the affise upon bread; but upon this we do not presume to give an opinion, as so much might be urged on both sides.

The coals imported into the port of London during the year 1812, amounted to 1,071,361½ chaldrons. Here our astonishment is not only excited by the tremendous consumption of the metropolis; but also raised to the highest degree when we consider what an immense quantity of this useful mineral is treasured in the bosom of the earth, and how many of our fellow-creatures are obliged to deprive themselves of the light and heat of the sun in order to furnish us with this necessary of life.

The following is an account of the net revenue of the Post-office, from the 5th of April 1793, to the 5th of January 1813.

	£	s.	d.	Bro't up	£	s.	d.

Car. up £6,483,888 6 10 Total £18,291,847 1 7

The total charge of the public debt in the year ending January 5, 1813, was 34,288,564l.—The sums paid into the exchequer in the same year, on account of the permanent taxes, was 37,597,035l. The same for the war-taxes was 21,181,082l. Total, 58,778,117l.—At the same period the total amount of the public debt was 812,013,135l. and of the unredeemed debt 575,211,393l.

Gold was at this time at 5l. 12s. per ounce; a guinea, in relation to bank-notes, being worth 1l. 8s. 9½d. or a bank-note, in relation to gold, being 13s. 11d. Silver was 7s. 6d. per oz. so that 20 shillings, in relation to bank-notes, was worth 1l. 9s. and a bank-note, in relation to silver, 13s. 9½d.—By a list given in a pamphlet written by lord Lauderdale it appears, that there were at least 114 different kinds of local silver tokens in circulation in various parts of England and Wales, few of which were worth above 13s. to the pound, and many not worth 10s.

The following table of the moneys raised for the public service in various periods, from James II. in 1688, to the year 1813, is taken from official documents.

In the reign of James II. the revenue was	£	s.	d.
William III.	-	-	3,900,000
Anne	-	-	5,700,000

1813	-	-	113,303,529

At the beginning of the year, a plan was laid at Stuttgart, to kill the king of Wirtemberg. The official account does not enter into particulars, but the following is what is said:—The king was hunting; and, being in a small building which served to conceal his majesty for the purpose of firing upon the game which might pass before it, was suddenly annoyed by the odour of burnt tinder. They examined and searched, but could not discover whence the smell proceeded. The king went out; and a more minute investigation took place under the building. At last powder and inflammable materials were discovered. Shortly after, the building blew up.

Feb. 14, a curious case (Elliott v. Vorley and others) came on in the sheriff's court. It was an inquiry to assess damages for arresting a dead body. The following are the particulars, as stated by Mr. Reynolds, counsel for the plaintiff. The deceased, John Elliott, was indebted to one of the defendants, Baker, a bricklayer, resident in Hoxton, and to another of the defendants, Heafman, a carpenter, a small sum, for work done. On the 3d of October, 1811, John Elliott died; and on the Monday following, Oct. 7, Vorley and Bormer, two officers, (likewise defendants in this case,) came, accompanied by Baker, Heafman, and a journeyman, to the house where Elliott lay dead. In the passage they were met by the plaintiff, John Atkins Elliott, the son of the deceased. Bormer said he wanted Mr. Elliott, and was told by his son that his father was dead. Vorley said, he had a warrant to arrest the deceased at the suit of Heafman and Baker; and enquired of the son where the body lay. The son pointed out the room; but said the door was locked, and that his mother, who had gone

gone out, had got the key; but he expected her every minute. After waiting about five minutes, Bormer went to the door, kicked it violently, and broke it open: he then entered the room where the body lay in a coffin, the lid being over it. Shortly after, a person, unknown to the plaintiff, entered the house, and inquired of the officers whether they had identified the body; being answered in the negative, they all went into the room where the corpse lay; and, Bormer having pulled the lid of the coffin on one side, they all inspected it; and, the officers having inquired of Baker and Heafman, if that was the person they wanted, they said Yes. Heafman, or the man in possession, then lighted two candles: one they placed at the back-door, and the other at the room-door where the deceased lay. They then flung the front door of the house wide open, and Baker, Heafman, and various other persons, came in and out of the house continually during the whole night—making a great noise, sitting on the stairs, and drinking and regaling themselves until five or six in the morning.—The next day, Tuesday, the man in possession demanded the key of the room where the body lay from the plaintiff's daughter, which she gave him; but on the Wednesday she applied to Baker for it again, for the purpose of cleaning out the room, previous to the interment of the deceased, which was to have taken place in the afternoon of that day. After much hesitation, he returned it to her. The room was then cleaned out, and every thing prepared for the funeral. About four o'clock the undertaker and his man came, for the purpose of removing the body to the place of burial (Shoreditch-church); when Vorley, Borman, Heafman, and Baker, entered the house; the two latter bringing with them a shell, which they took into the room where the deceased lay in his coffin. Vorley and Borman then called the son on one side, and told him he had better pay the debt, and prevent his father's corpse from being taken away by Baker and Heafman. He told them it was out of his power to do it. On that, Baker and Heafman, with another person, took the body out of the coffin, naked, and, having literally crammed it into the shell, they put it into a cart before the house, where they suffered it to remain for upwards of half an hour, which drew together an immense crowd of persons, many of whom threw mud against the house, and behaved in the most riotous manner. They then conveyed the body to Heafman's house, where it was put into his cellar. The body was kept in the cellar until the 11th of October, when Heafman, with the assistance of four men, conveyed it to a burial-vault in Bethnal Green, and there left it.—The above facts were clearly made out by the evidence of J. A. Elliott the son, and Charlotte Bishop the daughter, of the deceased. The defendants called no witnesses; and the jury, after retiring for a few minutes, returned—Damages 200*l.* The result of the above trial, we hope, will set the vulgar opinion at rest, "that a creditor may arrest the dead body of his debtor;" and we hope it will be the last disgraceful scene of a similar kind ever exhibited in this country.

.At the interment of the duchess-dowager of Brunswick on the 7th of April, (see p. 158.) an important discovery was made. It had been long suspected that the remains of king Charles I. were deposited at Windsor. Indeed, Wood in his *Athenæ*, and Mr. Herbert in his *Memoir*, both state the supposition. The prince-regent being at Windsor, he was, of course, consulted about the mode of exploring these royal remains, which he directed to be done in his presence. Sir Henry Halford attended his R. H. to the vault; when, the leaden coffin being unfolded, a body appeared, covered over with a cased cloth; on carefully stripping the head and face, the countenance of the unfortunate Charles immediately appeared, in features apparently perfect as when he lived; the left eye, at the first exposure, was open and full, but the admission of air caused it immediately to disappear. The severed head had been carefully adjusted to the shoulders; and the most perfect resemblance to the portraits was remarked in the oval

shape of the head, the pointed beard, &c. On lifting up the head, the fissure made by the axe was clearly discovered by sir H. Halford; and the flesh, though somewhat darkened, was found to be in a tolerably perfect state. In the same vault was also found a decayed leaden coffin, containing the remains of Henry the Eighth, which consisted of nothing more than the skull, with some hair on the chin, and the principal limb-bones.

We have mentioned that addresses were presented to the prince of Wales from almost every town in the kingdom, upon the issue of the delicate investigation.—It will be proper to notice the proceedings of the city of London upon this occasion.

On Saturday the 3d of April, in consequence of a vote of the *common hall* on Friday, the city-remembrancer waited on the prince of Wales at Montague House, and delivered the following note: "The lord-mayor, aldermen, and livery, of the city of London, in common hall assembled, having yesterday voted an address to her royal highness the prince of Wales, and ordered the sheriffs, attended by the remembrancer, to wait on her royal highness, to know when she would receive the same; the remembrancer now attends, to know her royal highness's pleasure in respect to the time when the sheriffs may wait on her for this purpose."

To this note her royal highness in a few minutes delivered the following answer in writing, in person: "Impressed with the deepest sense of gratitude for the unexpected honour the lord-mayor and the noble city of London intend to confer upon me, by presenting an Address of congratulation on the happy annihilation of a conspiracy against my honour and life; I feel myself unable to do justice to my feelings, in expressing my grateful acknowledgments for the sincere interest the lord-mayor and the city of London have evinced for my welfare and happiness. The melancholy event of the duchess of Brunswick's, my mother's, demise, involves me at this moment in the deepest affliction. I shall not fail, however, to send on Monday next an answer to the lord-mayor and sheriffs, to express more fully my sentiments on the honour intended to be conferred upon me."

On Tuesday the 6th, the sheriffs waited on the prince of Wales, and received the following answer: "When the remembrancer waited upon me unexpectedly on Saturday last, to give me the first intimation of the high honour conferred upon me by the citizens of London in common hall assembled, the answer which I made will have conveyed some expression of my feelings on an occasion so interesting, important, and gratifying, to me. I am sure I shall not be misunderstood, when I say, that my affliction from the recent loss of my beloved mother, and the peculiar circumstances of my situation in other respects, may render it difficult for me to give a due reception to the lord-mayor, aldermen, recorder, sheriffs, and the deputation of the livery of London. I also feel dissident of giving them the trouble of a public attendance upon me. I shall be at my apartments in Kensington Palace on Monday next, at two o'clock, for the purpose of receiving the address."

The address was presented on the 12th at Kensington Palace. The procession consisted of the two city-marshal on horseback; the state-carriage, in which was the lord-mayor and his attendants; aldermen Combe, Wood, Goodbehere, and Heygate; sheriff Blades, sheriff Hoy and his chaplain; the city-remembrancer, the chamberlain, the comptroller, the solicitor, the town-clerk, and about 150 of the livery in their gowns. On their arrival, her royal highness entered from a back anti-room into the grand dining-room, and took her station at the upper end of the room, with her back to a small marble slab, before a large looking-glass. Ladies Charlotte Lindsey, Charlotte Campbell, and Anne Hamilton, her ladies in waiting, stood on her right hand, and Mr. St. Leger, her vice-chamberlain, on her left. The town-clerk, in the absence of the recorder, approached the prince, and read the following

Address: "May it please your royal highness; We, his majesty's loyal subjects, the lord-mayor, aldermen, and livery, of the city of London, in common hall assembled, bearing in mind those sentiments of profound veneration and ardent affection with which we hailed the arrival of your royal highness in this country, humbly beseech your royal highness to receive our assurances, that in the hearts of the citizens of London those sentiments have never experienced diminution or change. Deeply interested in every event connected with the stability of the throne of this kingdom, under the sway of the house of Brunswick; tenderly alive to every circumstance affecting the personal welfare of every branch of that illustrious house; we have felt indignation and abhorrence inexpressible, upon the disclosure of that foul and detestable conspiracy, which, by perjured and suborned traducers, has been carried on against your royal highness's honour and life. The veneration for the laws; the moderation, the forbearance, the frankness, the magnanimity, which your royal highness has so eminently displayed under circumstances so trying, and during a persecution of so long a duration; these, while they demand an expression of our unbounded applause, cannot fail to excite in us a confident hope, that, under the sway of your illustrious and beloved daughter, our children will enjoy all the benefits of so bright an example. And we humbly beg permission most unfeignedly to assure your royal highness, that, as well for the sake of our country as from a sense of justice and of duty, we shall always feel, and be ready to give proof of, the most anxious solicitude for your royal highness's health, prosperity, and happiness."

To which her royal highness returned the following most gracious answer: "I thank you for your loyal and affectionate address.—It is to me the greatest consolation to learn, that, during so many years of unmerited persecution, notwithstanding the active and persevering dissemination of the most deliberate calumnies against me, the kind and favourable sentiments with which they did me the honour to approach me, on my arrival in this country, have undergone neither diminution nor change in the hearts of the citizens of London. The sense of indignation and abhorrence you express against the foul and detestable conspiracy, which, by perjured and suborned traducers, has been carried on against my life and honour, is worthy of you, and most gratifying to me. It must be duly appreciated by every branch of that illustrious house with which I am so closely connected by blood and marriage, the personal welfare of every one of whom must have been affected by the success of such atrocious machinations. The consciousness of my innocence has supported me through my long, severe, and unmerited, trials; your approbation of my conduct under them, is a reward for all my sufferings.—I shall not lose any opportunity I may be permitted to enjoy, of encouraging the talents and virtues of my dear daughter, the princess Charlotte; and I shall impress upon her mind my full sense of the obligation conferred upon me by the spontaneous act of your justice and generosity. She will therein clearly perceive this value of that free constitution, which, in the natural course of events, it will be her high destiny to preside over, and her sacred duty to maintain, which allows no one to sink under oppression; and she will ever be bound to the city of London, in ties proportioned to the strength of that filial attachment I have had the happiness uniformly to experience from her.—Be assured that the cordial and convincing proof you have thus given of your solicitude for my prosperity and happiness, will be cherished in grateful remembrance by me, to the latest moment of my life; and the distinguished proceeding adopted by the first city in this great empire will be considered by posterity as a proud memorial of my vindicated honour."

The address of the corporation of London was presented to the princess of Wales at Kensington Palace on the 28th. The lord-mayor, recorder, chamberlain, aldermen, sheriffs, and common council, assembled, and left Guildhall about twelve o'clock; and the procession arrived at Ken-

sington Palace about two. The address was read by Mr. Recorder; and her R. H. returned the following answer: "I receive with the greatest satisfaction the congratulations of the city of London. No branch of the house of Brunswick can ever forget to whose exertions chiefly is owing the throne of these realms; and I have now peculiar reason to know the value of the constitution which those exertions purchased, because I have found it a sure protection when I had no other defence. The extraordinary situation in which I was placed compelled me to come forward in behalf of my honour and my life. I have been rewarded, not only by the universal acknowledgment of my innocence, but by testimonies of affection from a loyal and high-spirited people; which I shall gratefully remember as long as I live. At the present moment, I am rather disposed to dwell upon this pleasing circumstance than upon any recollection of a less agreeable kind. The trials, however, which I have undergone, will, I am confident, produce one good effect: they will confirm in my daughter's mind that attachment to the constitution which she already cherished, and impress her more and more with the conviction, that no station can be secure except in a free country; it is both the interest and the most sacred duty of an English monarch to watch over the liberties of the people."—The princess delivered her answer with great dignity and feeling. The lord-mayor, recorder, and aldermen, were received graciously, and kissed hands. Her R. H. when the corporation had quitted the palace, went to the window, and showed herself to the people assembled on the grass-plot.

To the addresses which have also been presented from Westminster, Middlesex, Southwark, Bristol, Monmouthshire, and many other parts of the kingdom, the answers of the princess have been marked with strict propriety, much good sense, and great moderation. This is particularly observable in the reply to the Westminster-address, which spoke of the "cold-blooded apathy of a corrupt majority of the house of commons on receiving her appeal."—After thanking the addressers, her R. H. concludes by saying, "Permit me to add, that there can be no doubt, that the refusal of parliament to entertain the question originated only in a conviction that my innocence stood above all suspicion, and in apprehension that parliamentary interference might delay the restoration to my daughter's society, so universally desired."

On Sunday the 4th of April, about five o'clock in the morning, that stately building which reared its proud roof to the clouds from the centre of Skinner-street, and appeared from Blackfriars' bridge like the Parthenon on the Acropolis of Athens, or the temple of Jove on the Tarpeian rock at Rome; the Commercial Hall, which was, in the city-lottery, the 25,000l. prize, was discovered to be on fire in the fifth story. The flames spread with so much rapidity, that in two hours the building was entirely consumed, the hinder wall falling into the ruins, and a part of the outer into the street. No lives were lost.

The duke of Cumberland, accompanied by captain Portier, his equerry, left town on the 28th for Yarmouth, where he embarked for Prussia. His royal highness had ordered his stud of horses and his cellar of wines to be disposed of. Sixteen of his horses were sold for 1303 guineas. The changes which have taken place on the continent have enabled his R. H. to settle himself at Hanover, where he will probably remain, as he is not expected to return to England. See p. 247. It is said that he is to marry the divorced princess of Salm-Salm, a relative of the king of Prussia.

It may not be amiss to notice here, as supplementary to our article KNIGHTHOOD, vol. xi. p. 327. that the king of Prussia issued from Breslau, under date of March 17, an order for instituting a distinction for merit, to be called the Order of the Iron Cross, as signification of the constancy which has been displayed in the great contest for liberty and independence. The order is to consist of two classes, with one grand cross. Both classes are to bear the same black cross of cast-iron set in silver; the fore side

without inscription, on the reverse the initial letters F. W. with three oak-leaves, and below the date of the year, 1813. Both crosses are to be worn at the button-hole, suspended by a black ribbon, with a white edge, if the distinction is obtained in an action with the enemy; but, if on another account, with a black edge. Commanding officers can only obtain the grand cross for gaining a decisive battle, by which the enemy has been driven from his position; the taking of a fortress; or the successful defence of some important place. The soldier who obtains the iron cross of the first class, receives immediately the gratifications annexed to it, but which afterwards cannot be increased.

About this time the citizens of London were highly delighted with a sight of one of the terrible Cossacs of whom they had heard so much.—On the 18th of April, the Russian officer, captain Bock, and the Don Cossac, who arrived in this country a few days before, came to the Mansion-house shortly after one o'clock. They were greeted with loud and repeated acclamations, and conducted by the city-marshal to the anti-chamber, where the lord-mayor, attended by several of the aldermen, received them. A very handsome cold collation was prepared, of which captain Bock and the Cossac partook. Mr. Grant kindly undertook to be the interpreter between his lordship and the veteran warrior. His lordship assured the Cossac, that, as chief magistrate of the city of London, he was proud and happy to offer his hand to so distinguished a soldier, although he was not decorated with title and rank. The answer of the Cossac was short, but emphatic; he thanked the lord-mayor, and was ready to die for the good of his sovereign and his country. His lordship then took the veteran by the hand, and a hearty shake took place on both sides. Captain Bock was in full uniform; and a jewel, the reward of his valour in the battle of Borodino, was pendent from his neck. The name of the Cossac is Alexander Wittschendst; he is in his 54th year, and had been allowed to retire on a pension, the reward of his courage and good conduct. When he heard of the invasion of his country by the French, he quitted his retirement, and voluntarily enrolled himself and his two sons in defence of native independence. He was dressed in the Cossac costume, with a large pistol stuck on his left side in a belt, a musket slung behind him, and a pike upwards of ten feet long, shod with sharp iron. At half past one the lord-mayor and attendants, with the Don Cossac and captain Bock, proceeded to the Royal Exchange.—The rush into 'Change was irresistible, and a very narrow lane was formed with great difficulty, through which they proceeded up to Lloyd's, and placed themselves in the gallery on the west side, where the Cossac could be distinctly seen from every part. The huzzas were cordial and repeated. Silence being at length obtained, the lord-mayor said that he was desirous by the noble warrior, and the Don Cossac, to return their best acknowledgments for the gratifying reception he had experienced. He then proposed a salute of three times three to the gallant visitors; and, his lordship giving the word, it was complied with by acclamations as cheerful and loud as ever were heard in that place. His lordship added, that the Cossac had with the instrument in his hand killed thirty-nine of the enemy. A universal burst of acclamation succeeded, and the visitors withdrew.—The following is a description of the person of the Don Cossac: His stature is about six feet; his make robust and manly; his carriage and demeanor very easy, and even graceful; his motions and gestures being entirely free from that angular stiffness which civilized etiquette has attached to the soldier. His features and countenance, though rough and military, are at the same time expressive of exceeding good nature and honesty. His beard is long and bushy, adding much to the power of his eyes, which, though light in colour, beam forth with much fire. His hair, less grey than his beard, flowing unconfined, is combed back over his neck about the length of six inches; on the forehead, it is cut short and straight. His dress consists

of a blue jacket and loose trowsers of coarse cloth, with shoes very broad and round at the toes, as if to allow free action to the feet, on which he stands remarkably straight and firm. His hand is remarkably broad in its spread, though his fingers are not long; and he manages his arms, consisting of a pistol, a musket, a sabre, and a long pike, with wonderful address and ease, carrying them without the least appearance of being encumbered by their weight, or inconvenienced by the length of the musket or pike. He was exhibited on the following Sunday in Hyde Park, on a white charger lent him by the lord-mayor.

We have now to record another dreadful murder, similar in its general character—in its mystery, its remorseless determination, and the apparent acknowledgment of the perpetrator by means of an attempt at suicide—to those of the Marrs and Williamsons.—Mr. and Mrs. Bonar were an aged and respectable couple, residing at a mansion called Camden Place, in the village of Chislehurst, where they had lived about eight or nine years. On Sunday night, May 30, Mr. Bonar retired to rest at his usual hour of twelve, and was followed at two by his wife, who was in the habit of going to bed later. There appears to have been no noise during the whole of the night; but, when the servants were rising in the morning, they scented a strange and bad smell towards the bed-chamber, and on going into the room found their master on the floor, dead and weltering in his blood, and their mistress in bed in the same shocking condition, dying. Mr. Astley Cooper was sent for, and came with all possible dispatch, but it was too late; and, after remaining insensible for some hours, and only uttering the exclamation "O dear!" Mrs. Bonar expired at eleven minutes past one. The following observations of an eye-witness are taken from an excellent account in the Times newspaper: "We never witnessed such a scene of horror as the bed-room presented. Almost the first object which met the eye on entering, was the dead body of Mr. Bonar, with the head and hands steeped in blood: the skull was literally broken into fragments, in two or three places; and there was a dreadful laceration across the nose, as if effected by the edge of a poker. His hands were mangled in several places, apparently by the same instrument: there was also a severe wound on the right knee. From the numerous wounds on the body of Mr. Bonar, from the swollen state of his mouth, and the convulsive adhesion of his hands and knees, it is clear that he had struggled with all his force against his horrid murderer. The most shocking circumstance connected with this spectacle was the appearance of the night-cap, which lay a few paces from his head, drenched in blood, with a lock of grey hair sticking to it, which seemed to have been struck from the skull by the violence of the blow of the poker. The pillow of his bed lay at his feet completely dyed in blood. The manly athletic person of Mr. Bonar—for, though advanced in life, he seems to have been a powerful man—gave an increase of horror to this afflicting sight. The view of Mrs. Bonar, though equally distressing, excited more pity than terror; though her head had been fractured in a dreadful manner, yet there was a calm softness in her countenance, more resembling a healthy sleep than a violent death: it might have been supposed that her life had parted from her without one painful effort. The linen and pillow of the bed in which she lay were covered with blood, as was also the bed of Mr. Bonar. They slept in small separate beds, but placed so close together that there was scarcely room for a person to pass between them. The interval of floor between the beds was almost a stream of blood. No slight additional horror arose from the contrast of the spacious handsome apartment in which this scene of death was exhibited. The most heart-moving spectacle yet remained. About seven o'clock in the evening, Mr. Bonar, jun. arrived from Feverham, where he was on duty as colonel of the Kent local militia. In spite of the efforts of Mr. Angerstein, jun. and some other gentlemen, he rushed up stairs, exclaiming, "Let me see my father: indeed I must see him."

It was impossible to detain him: he burst into the bed-chamber, and immediately locked the door after him. Apprehensions were entertained for his safety, and the door was broken open, when he was seen kneeling with clasped hands over the body of his father. His friends bore him away, and hurried him, tottering and fainting, into an adjoining chamber."

No cause could be discovered for the perpetration of this inhuman act; but, from the subsequent conduct of one Philip Nicholson, footman to the deceased, who was the only male servant that slept in the house, suspicion was attached to him. He had shown himself very officious about the bodies, with a strange mixture of eagerness and affected coolness; and was the first to disturb the state of the room, carrying the bloody linen away into his own, and rolling it up with his own sheets. Some other circumstances also appeared to fix imputation upon him; particularly his riding to town for a surgeon, and not returning home at night. A warrant being accordingly granted for his apprehension, Forester the officer, after a diligent search on Monday, found him drinking with an acquaintance at the door of the Three Nuns in Whitechapel. He was secured, not without a scuffle, and conveyed to the Giltspur-street Compter, where he was questioned by Mr. Astley Cooper and some other gentlemen, but to no purpose; nor was an examination before the lord-mayor of any greater avail. He is described, indeed, as having been in a state of intoxication approaching to insanity. On Tuesday he was again brought up to the Mansion-house, and was then in a condition to speak. He said that on the night of the murder he had gone to bed at twelve o'clock, and knew nothing of what happened till eight the next morning. With regard to his conduct when he first left the house, he admitted that he left Chislehurst a little before eight, and refreshed himself and the horse three times on the road, himself with three glasses of rum, and the horse with three pints of porter; notwithstanding which delays, Mr. Astley Cooper was enabled to ascertain, in addition to his own acknowledgment, that he performed the whole of his journey in about forty minutes. - He first went to that gentleman to inform him respecting his mistress; then in quest of one Dale, who had been discharged from Mr. Bonar's service, and whom, on finding him at the Red-Lion public-house near Bedlam, he told of the murder, adding, "and you are suspected of it;" and lastly to the office in Bow-street, where he gave information, and also mentioned his having seen Dale;—after which, instead of returning home, he went to Whitechapel, and was found making merry with his friends, when he was taken into custody. The examination, for the present, being sufficient, he was sent to Chislehurst, in custody, to attend before the coroner's jury, who assembled there at six o'clock in the evening; and, about one in the morning, while the coroner was reading over the depositions, an alarm was given that Nicholson had cut his throat. The officers who had him in custody had suffered him to enter a water-closet, and he there made a tremendous gash in his throat with a razor which he had found means to conceal. Fortunately, a surgeon was at hand; and the wound, being closed up, was found not to be mortal. A verdict of Wilful murder was found against him; and he was committed to safe custody, under the care of an eminent surgeon; but was kept pinioned down in a strait waistcoat, lest he should again attempt his life. While he lay in this state, namely, on Tuesday the 8th of June, he voluntarily requested Mr. Bramston, the catholic priest, who had been with him a short time, to bring young Mr. Bonar to him immediately. Mr. Bonar went to him, when Nicholson burst into tears, and entreating his forgiveness, expressed his wish to make a full confession. Mr. Wells, the magistrate, was sent for; and in the presence of the magistrate, and other gentlemen, Nicholson made, and afterwards signed, a deposition, acknowledging himself to be the murderer. The following are the particulars: That on Sunday night, after the groom left him,

he fell asleep upon a form in the servants' hall, the room where he was accustomed to lie; that he awoke at three o'clock by dropping from the form; he jumped up, and was instantly seized with an idea, which he could not resist, that he would murder his master and mistress. He was at this time half undressed; he threw off his waistcoat, and pulled a sheet from his bed, which he wrapped round him: he then snatched a poker from the grate of the servants' hall, and rushed up stairs to his master's room. He made directly to his mistress's bed, and struck her two blows on the head; she neither spoke nor moved. He then went round to his master's bed, and struck him once across the face: Mr. Bonar was roused; and, from the confusion produced by the stunning violence of the blow, imagined that Mrs. Bonar was then coming to bed, and spoke to that effect. When he immediately repeated the blow, Mr. Bonar sprang out of bed, and grappled with him for fifteen minutes, and at one time was nearly getting the better of him; but, being exhausted by loss of blood, he was at length overpowered: Nicholson then left him groaning on the floor. He went down stairs, stripped, and washed himself all over with a sponge at the sink in the butler's pantry. He next went and opened the windows of the drawing-room, that it might be supposed some person had entered the house that way; he then took his shirt and stockings, which were covered with blood, (the sheet he had left in his master's room,) went out at the front door, and concealed his bloody linen in a bush, covering it with leaves: the bush was opposite the door, and not many yards from it. He then returned without shutting the outer door, and went into the servants' hall: he opened his window-shutters and went to bed; (it was not yet four o'clock:) he did not sleep, though he appeared to be asleep when King came for the purpose of waking him at half-past six o'clock. He stated, in the most solemn manner, that no person whatever was concerned with him in this horrid deed; and to a question put to him, whether he had any associate, answered, "How could he, when he never in his life, before the moment of his jumping up from the form, entertained the thought of murder." He can assign no motive for what he did: he had no enmity or ill-will of any kind against Mr. or Mrs. Bonar.

Nicholson was tried at Maidstone on the 20th of August. It is not at all necessary to enter into the evidence, after such a plain and full confession, which was read over to, and confirmed by, him on the trial. He was of course convicted; and suffered on the 23d, at Pendennis-heath, about a mile and a half from Maidstone. He died very penitent.

The following inscription has been placed on the monument erected to the memory of Mr. and Mrs. Bonar, at Chislehurst:

Sacred to the Memory of  
THOMAS BONAR, of Camden Place, in this Parish, Esq.  
Aged Seventy; and of  
ANNE (Daughter of Andrew Thomson, of Rotherhampton, Esq.) his Wife,  
Aged Fifty-nine;

Murdered in their bed-chamber by a domestic servant! on the 31st of May, 1813. Let not this melancholy proof of the insufficiency of virtues even such as theirs (so great, so winning, and so mild!) to shield them at the midnight hour against atrocities so monstrous, induce the belief, that virtue is not the care of Providence below; rather let it be remembered, that surely none could have been better prepared for an event so awful! That from them not only were averted the many sufferings attendant on a dissolution in the common course of nature; but that, full of honour and of years, loaded with the blessings and the veneration of all who knew them, and each unconscious of the other's fate, they only slept to wake in Heaven! Nor be it omitted here to record their constant prayer, their fervent wish, (so frequently expressed, and so mysteriously fulfilled,) that they might leave this world together!

together! Horrible indeed to the survivors has been the mode of its accomplishment; still may they be allowed to think that it was permitted, in mercy, to those whom they deplore, and perhaps as a signal reward for such virtues as have been rarely seen united.

On the 26th of July, the body of Edward Clifford, a poor Irishman, was found murdered, in a pool of water, belonging to a brick-field, near Wellington-square, Gray's-inn-lane. It appeared that the deceased had lately come from Ireland, and, in company with his wife, went to the lodgings of a man named Leary, where, after having drunk freely, Leary, the deceased, and his wife, went out together. They called at a public-house in Field-lane, where they had more drink, and then proceeded up Holborn-hill, desiring the wife to go home, and that they would be there immediately. The deceased not returning home the whole night, his wife, on Monday morning, went to Leary's lodgings to enquire after her husband, when Leary's wife would give no information of him. Leary was therefore accused of the murder.

Mary Clifford, who called herself wife to the deceased, stated, that, to the best of her knowledge, her husband had, on the day preceding the murder, one 5l. note, seven 1l. notes, two guineas in gold, and 16s. in silver. Leary, the prisoner, she said, knew of her husband's having this money; and she accounted for his knowledge in the following way: "Leary asked me on the Sunday morning, in the presence of my husband, whether he or I had the money in keeping; and I told him, what there was of it, it was with my husband; my husband was angry at my telling he had money about him, and said, Did I want to get him murdered? Leary told me, on Sunday night, that my husband intended to leave London the next morning at two o'clock; which made me watch him very close all day. When I parted with my husband for the last time, Leary was with him; my husband was very drunk, but Leary was sober." The deceased's hat and a shoemaker's hammer were then produced. The hat was sworn to by Mrs. Clifford; also by the person of whom it was purchased. Two of the police-officers of Hatton-garden swore, that they found the hammer now produced in the prisoner's room, covered over with coals. The hammer, of which one end is round and the other flat, and about two inches wide, was compared with the cut in the hat, and the flat end exactly corresponded.—Leary was committed for farther examination; and proceedings were adjourned for a-week, in order to collect more information.

In the mean time, great sympathy was excited in favour of Mrs. Clifford as she called herself, who had five children with her, and was ready to lie in, and did lie in before the final examination took place. Subscriptions were raised for her; and some ladies hired comfortable apartments for her and her children, where it was intended she should lie in. This, however, was prevented by Leary's accusing her of the murder, though he confessed that he was present, and might have prevented it. She was therefore committed to Cold-bath-fields prison; and the persons who had collected money for her, were requested to retain it for the present. It soon after appeared, that she was not Clifford's wife; but that her husband was living, and his name was Burke; and that she had agreed, upon a very short acquaintance, to come over to England with Clifford. She had said, that her first husband had been dead six years, and that she was married to Clifford by a priest in her own house. It appeared also, that on the Monday morning, after the body was found, this woman gave a man of the name of Lawrence, who kept a chandler's shop in the same street, six pounds to keep for her; yet she had deposed that all their money was in her husband's keeping. None of the deceased's money was found upon Leary, nor ever traced to have been in his possession.

Mrs. Burke was treated with great tenderness in the prison; and she had a very fine child in her arms, of which she had been delivered there, when the final examination

took place, which was on the 8th of September. At this time came forward one Thomas McCarthy, who formerly kept the Hare-and-Hounds alehouse in St. Giles's, a man with whom the prisoner was very intimate, and swore, that, when talking to him in the lock-up house of Hatton-garden police-office, he intimated a wish that he could procure persons to prove an *alibi*, by swearing that he was at his own home on the Sunday evening of the murder, at eleven o'clock, as that would save his life. Leary alone was, upon this, fully committed to be tried for the murder. His trial came on at the Old Bailey on the 17th of September. He protested his innocence, and produced a good character; but the evidence of McCarthy was fatal to him. The jury brought him in guilty; after which the recorder proceeded to pass the sentence of the law, that he be executed on Monday, and his body anatomised. The prisoner, who had displayed the utmost firmness during the whole of the trial, was now visibly affected; the tears started into his eyes, his colour fled, and his whole frame betrayed much agitation. He shook his hand with an expression of bitterness and reproof at McCarthy, who stood below the dock, as if to express that his testimony had been the chief cause of his condemnation. Before, however, he was removed, he stretched out his hand to him in token of forgiveness; but McCarthy refused it.

The trial of this most unfortunate man was however not yet over; it was fated to last till the last moment of his existence. About six o'clock on the Sunday evening, colonel O'Kelly, an Irish gentleman, who had taken a very active part in the investigation of this murder, arrived at the prison, in hopes that Leary would make a confession. The Rev. Mr. Devereux, a catholic priest, the undersheriff, and Mr. Newman, accompanied colonel O'Kelly; and the following conversation took place.

*Colonel.* Now, Leary, since all is over, as you have been found guilty of this dreadful charge, and have only a few hours to live, persisting in your innocence can avail you nothing; tell therefore the truth, as you are shortly to appear before your Almighty Judge. You must feel what a dreadful thing it must be to die with a lie in your mouth.

*Leary.* Colonel, I now know that my persisting in my innocence will not clear me; you never believed my story; but I call on my God, before whom I am shortly to appear, that what I have already stated is true; I was present, but I did not commit the murder; it was Mrs. Clifford murdered him, and Slattery was waiting for her near the pond at half-past ten o'clock: the clock was striking ten when we were passing Gray's-inn-gate, in Gray's-inn-lane.

*Col.* If what you say be true, why not take her into custody, or inform against her?

*L.* I did not like to get myself into trouble; and, besides, I took compassion on her and her five children.

*Col.* Well, if what you say be true, how can you reconcile it with your conversation with McCarthy in the strong room at Hatton-garden?

*L.* As I expect for mercy, not one single sentence of what McCarthy charges me with passed my lips.

*Col.* Well, Leary, I am sorry to find you persevere in a story that not one person will give credit to; and if I said, when I left this, that you persisted in your innocence, not one person would believe me. I shall leave you now, as the Rev. Mr. Devereux here waits to be alone with you; for God's sake, consider your state; your time is short; your pardon from an offended God you cannot expect, unless publicly you acquit the innocent. Make your peace; I shall see you again in the morning, when your last hour will be very near; you will before then receive the sacrament. You will behold a vast multitude assembled to witness your awful exit, and impatient to hear of your candid confession.

*L.* I shall be glad to see you, colonel; but remember, I tell you I acknowledge my guilt; *I was present, and might have prevented it; but I did not commit the murder.*

Here colonel O'Kelly, the under-sheriff, and Mr. Newman, took their leave, and the prisoner passed a considerable time with Mr. Devereux.—On Monday morning the platform was erected as early as five o'clock, with the railing round it. At six the circle was formed by the constables, and the crowd began to assemble from all quarters of the town; the day was remarkably fine, and every window, and all the tops of the houses that had any view of the gallows, were covered with spectators. The Rev. Mr. Devereux arrived about six o'clock, and was admitted to the unfortunate prisoner, whom he found walking about his cell with hurried steps, clenched hands, and his eyes turned up to heaven. Mr. Devereux heard his confession, administered the sacrament to him, and remained with him in secret prayer until half-past seven. Colonel O'Kelly, Mr. Newman, and the under-sheriff, arrived about seven, and waited in the yard for half an hour, when the prisoner was brought forward. He seemed to look to his fate with firmness and resignation. He kept his colour as usual, but the tears stood full in his eyes. He was pinioned, and both his wrists tied close. Whilst in this state, colonel O'Kelly again addressed him in the following manner: "Now the fatal hour is arrived, and I understand you have received the sacrament, as you have but this one moment allowed you to satisfy justice and the public, by making a candid declaration, and acquitting the innocent, take advantage of it, by signing this confession, which I have just drawn up on this small bit of paper. Read it over attentively: you will perceive I have left a blank, and your own conscience will tell you what to do with it." The following is an exact copy of the paper which O'Kelly handed to him:—"I, James Leary, having received the sacrament, and being now on the brink of eternity, do hereby most solemnly declare, that I did commit the murder of Clifford."

Leary (after reading it over) said, "Colonel, I see you do not credit me; but, as I expect for mercy, what I now declare is true. Give me your pencil." The colonel gave him a pencil; and, although both his wrists were tied, in the presence of all he interlined the words *although I was present*. In the blank space he wrote *not*, and also signed the paper; which then stood thus:—"I, James Leary, having received the sacrament, and being now on the brink of eternity, do hereby most solemnly declare, that, *although I was present*, I did NOT commit the murder of Clifford."  
JAMES LEARY."

Leary was then led forward to the place of execution; and, as he was mounting the ladder, O'Kelly, who still strove to rouse him to a confession, for the last time addressed him thus:—"Leary, look round; what an awful sight presents itself to you!—in ten minutes more you will be before your Judge; and, if you have committed an error in this paper, it is not yet too late to correct it."

Leary, (turning his eyes towards heaven.) I call on my great God, in whose presence I am shortly to appear, to witness, that every sentence of that confession is true.

Colonel. One word more, Leary. Do you mean to say that it was Mrs. Clifford who committed the murder?

Leary. I would wish not to be pressed more on that question; I have made my confession, and I hope also my peace with God.

Mr. Devereux beckoned to O'Kelly to press him no farther; and, in about seven minutes more, he was launched into eternity. The other criminal who was executed with him had continued uninterruptedly in prayer with the ordinary; he was penitent, tranquil, and resigned; and his sufferings appeared to be over almost as soon as he was let drop; but Leary, who had been thus kept in agitation to the last moment, was observed to be a full quarter of an hour in convulsive agony.

On the day after Leary received sentence, he wrote a very long letter to his mother, in which he most solemnly declared his innocence of the murder, but that unfortunately and unexpectedly he chanced to be present. In this letter he most earnestly requests that his mother will

go amongst all his friends and acquaintance, and let them see this letter, in which he says he calls on God to witness his innocence; and that, before she reads that he will be no more. His blessing to his children, &c.—He also, after his first interview (on Sunday evening) with colonel O'Kelly, had an appeal to the public drawn up by the Rev. Mr. Devereux, to be delivered to Mr. Sheriff Hoy after his execution. Mr. D. however, had persuaded him to suppress it, and actually tore it to pieces in his presence; but the pieces were collected by one of the turnkeys, and pasted upon paper. Never did man protest his innocence so repeatedly and so solemnly: we shall therefore present this document to the public, with an apology for having dwelt so long upon this most mysterious and dreadful case.—"Honoured Sir; Before this paper can meet the eye of the public, to whom I entreat it may be communicated, I shall be arraigned before the tribunal of the Eternal; confronted, perhaps, with him for whose murder I shall have undergone the dreadful sentence of the law. With all the solemnity of one under circumstances so appalling to human nature, I attest the Great Arbiter of my Destiny, who will, I am persuaded, if I make him party to a falsehood, plunge me into eternal perdition: I attest the spirit of the murdered Clifford, who must, if I embroil my hands in his blood, cry out for vengeance on my guilty soul: I attest heaven and earth to witness—that *I did not contribute, either by word or by deed, to the perpetration of the crime for which I am going to suffer*. I acknowledge, however, the justice of my punishment; because I ought, as I had it in my power, to have prevented its perpetration. For this, and for every other offence of which I stand culpable in the sight of the Almighty, I am most heartily sorry, and most earnestly implore pardon of him, of my country, and of my fellow-citizens. I throw myself upon the mercy of my crucified Redeemer; and, through his merits alone, humbly, but firmly, hope for the remission of my manifold transgressions. I have, with the most undoubting confidence in his all-merciful goodness, endeavoured to prepare for the awful moment which is to usher me into his immediate presence. I, in imitation of his divine example, most cordially forgive my prosecutors, and die in sentiments of the most perfect charity with all mankind. *Newgate, Sept. 20, 1813.*"

The settlements at Port Jackson, &c. in New South Wales, were at this time in a satisfactory state of improvement. The Sydney Gazette, from January to July, afford a view of the state of the different settlements, which, notwithstanding the scarcity of specie, and some other local inconveniences, that were likely to be remedied by the prudent regulations of governor Macquarrie, were advancing fast to prosperity and comparative opulence. The great object of the merchants and inhabitants was to establish an export-trade with this country; and for this purpose to obtain leave to ship their surplus grain (which was rotting in the barns), salt pork and beef, for his majesty's navy, and wool, said to be little inferior to that of Spain, in return for the customary importations, instead of making remittances in money, which drained the settlement of specie, and impoverished the colonists. Another object was, to obtain permission to distil spirits in the colony, which would greatly benefit the cultivator, and retain the money generally paid for spirits obtained from America, the East Indies, and other places. Memorials on these topics had been presented to governor Macquarrie, signed by the principal inhabitants of the different settlements, and transmitted for the consideration of his majesty's ministers.

On the 5th of July, the first stone of a new prison was laid, in Whitecross-street, nearly opposite Cripplegate church. This prison, when completed, is to be appropriated solely to the confinement of London and Middlesex debtors, instead of Newgate and the Compters, to which such unhappy persons have hitherto been consigned. This is one of the beneficial results of the Letter addressed by Sir Richard Phillips (sheriff in 1807-8) to the Livery of London,

don, and of the report of a committee of the corporation, formed for the purpose of investigating the contents of that Letter. The space gained in Newgate is to be devoted to persons committed for trial, instead of mixing them as heretofore with the convicted, or sending them to the correctional prison in Cold-Bath Fields. Workshops are also to be provided; in which the debtors may pursue their ordinary occupations.

It should have been mentioned among the parliamentary proceedings, that, on the 1st of July, upon the motion of Mr. Whitbread, 8000*l.* was unanimously voted for the purchase of the law-books, enriched by valuable notes, and 300 manuscripts, of Mr. Francis Hargrave, king's counsel; to be deposited in the library of Lincoln's Inn, for the public use.

On the 6th of July died Granville Sharp, esq. youngest son of the late Dr. Thomas Sharp, archdeacon of Northumberland, and only surviving grandson of the late Dr. John Sharp, archbishop of York. This venerable philanthropist retained the vigour both of his mind and body till within a short period previous to his dissolution, and, without any other symptoms than those of natural decay, terminated, in the 79th year of his age, a life actively and almost uninterruptedly devoted to the best interests of liberty, humanity, and religion. We hope to do justice to this excellent character in the proper place.

On the 13th of July, the court of common council voted thanks to lord Wellington, his officers and army, for their skill and gallantry at Vittoria; resolved that the bust of his lordship be placed in the council-chamber; and voted the freedom of the city, in gold boxes of 100 guineas value, to sir T. Graham and sir Rowland Hill.

On the 20th of the same month, a grand festival, in honour of the battle of Vittoria, was celebrated at Vauxhall. Soon after five, nearly 1200 people were assembled in the gardens. The dinner was in the range of covered buildings, with the addition of a temporary saloon. The rotunda was filled by a raised semicircular table, which was appropriated to the royal family, foreign ambassadors, ministers, &c. At the head was placed a seat for the duke of York, as chairman; and behind was ranged on raised shelves, covered with crimson cloth, a vast quantity of massive gold and silver plate belonging to the regent; furnished by a bust of the marquis of Wellington. At the back of the duke's chair, and a little before the plate, were stationed two trumpeters, and a grenadier holding the standard of the 100th regiment of French horse, taken at Vittoria; the bâton of marshal Jourdan was disposed among the plate, and beneath lord Wellington's bust. Besides this semicircular table, on the platform was a smaller square table, appropriated to the lord-mayor, aldermen of the city, and their immediate friends. In the saloon were three long tables; beyond that, in a temporary building erected among the trees, the trunks of which served to support the roof, appropriately composed of the ensigns of Great Britain, Spain, and Portugal, were accommodations for nearly 900 persons. The dukes of York, Clarence, Kent, Saxe, Cambridge, and Gloucester, took their seats at the table about a quarter past five. The dinner was plain, and cold, excepting turtle-soup. The conclusion was announced by a flourish of trumpets, and *Non nobis, Domine*. The toasts were announced from the head of the table by a flourish of trumpets; and then, with the spirit of the antique time of royal feasting, were returned from the foot by another flourish. About nine the ladies began to arrive, and were received by lord Yarmouth. The gardens, as the night came, gradually brightened, until they exhibited a blaze of splendour. The fireworks, under the direction of Col. Congreve, were let off at eleven, one, and two, o'clock. The duchess of York, who had remained two hours in her carriage on the outside of the gardens on account of the throng, entered about twelve. No adequate provision was made for the ladies, who were obliged to scramble for refreshments at the buffets; and the hardiest were but ill-served. Such, however, were the allurements

of the fête, that 10 and even 15 guineas were in vain offered for a dinner-ticket. Many who had secured tickets for admission, returned without a sight of it. The obstructions to getting in and retiring, after twelve o'clock, became almost insuperable; and such a scene of confusion scarcely ever existed. Servants being banished from the entrance, and there being no constables to direct the coachmen how to set down and take up, gentlemen were obliged to come out and endeavour to call their own carriages; to which, if by any hazard they found them, they were yet unable to conduct their company, for they were universally refused admittance into the gardens again. Thus parties were separated—carriages rendered useless—persons of all ranks exposed—and many, who had vehicles of their own waiting, were obliged to hire hackney-coaches at any price. Families who had intended to quit the gardens at one o'clock, if by any chance they reached their carriages, were forced, after waiting three or four hours, to quit them again, and find their way home on-foot—their carriages followed at six, seven, and even eight, o'clock in the morning. Scores, after proceeding as near as they could to the gardens, finding their patience exhausted, got out, and, overcome by fatigue, trudged home on-foot without seeing the show. Many ladies walked from the Asylum, after being as long stationary there as female patience would admit, and struggled through the crowd, unprotected, to the gardens. The whole was confusion worse confounded. The battle of Vittoria itself, which the fête was meant to celebrate, was peace, order, and harmony, when compared to the modern Babel, which extended from Charing-cross to Southville on the Wandsworth road.

Such was the Vauxhall festival—brilliantly lighted, badly arranged, and ending in confusion. Its most remarkable feature, in a negative point of view, was the absence of the prince-regent, who is known to take such delight in these matters, and who in the first instance was given out as one of the intended guests. It was afterwards discovered, it seems, that *Etiquette* was against the presence of the "sovereign" at a subscription-dinner; but as the prince-regent is not the sovereign—as he had been at other public dinners—and as it is quite clear, generally speaking, that he could make the law for himself in this instance, and accept what invitation he pleased—another reason was to be sought for; and at length it was discovered that *Etiquette* was a personage not to be trifled with, and that she actually made her own appearance at the fête, instead of his royal highness, in the likeness of a lady dressed in white satin with a head-dress of green and diamonds. This lady, however, was not accommodated with a seat; *the royal box was otherwise occupied*; and, after walking round, first with the duke of Gloucester, and afterwards with her brother the duke of Brunswick, she departed without resting.

On the 27th of July, his royal highness the prince-regent held a chapter of the most noble order of the Garter at Carlton-house, when his imperial majesty the emperor of all the Russias was elected a member of the order. In consequence of this election, a mission was prepared to carry to his imperial majesty, at his head-quarters, the insignia of this most noble order. The present Garter, sir Isaac Heard, forgetting his advanced age (83), and desirous of performing his duty, was preparing to set off across the seas for the continent, when, by a most gracious mark of kindness, his royal highness the prince-regent had it signified to him by the intermediation of the chancellor of the order, that his wish was, that Garter should not expose so far, and at so critical a moment, the precious remains of a life a great portion of which had been spent in the service of the order. In consequence of this honourable solicitude from the prince, acting as sovereign of the order in behalf of the king, sir Isaac Heard deputed Francis Townsend, esq. Windsor Herald, to perform the duties of Garter in his absence. The mission, composed of deputy-garter, sir Thomas Tyrwhitt, knight, Black Rod; George Frederic Bettz, esq. secretary of the legation;

George

George Stevenfon, esq. Falcon Herald; Arthur Wilton, esq. acting as register to the mission, and James Puluan, esq. secretary to sir Thomas Tyrwhitt, accompanied by several other gentlemen; left London on the 8th of August, whence they proceeded to Yarmouth, where they embarked on-board the *Cydnus* for Gottenburgh. The ceremony was performed on the 27th at Toplitz, the headquarters of the emperor, who received the mission with his usual affability, and ordered presents to be distributed among the members of the legation. The next day the emperor gave a grand dinner to the plenipotentiaries, and to the English ministers resident at the headquarters of the allied sovereigns; the members of their respective embassies; several Russian and English persons of distinction; and the gentlemen who had attended the mission. Upon this occasion his imperial majesty appeared in the ensigns of the order.

The friends of religious enthusiasm, who most likely are sorry that the age of miracles performed by sacred relics is irrevocably past, will certainly be glad to hear that, at the sale of the effects of the late Mr. Huntington, the self-anointed prophet, and sinner saved, which took place at Pentonville on the 1st of October, an old arm-chair, not worth having, and in glaring want of repair, fetched the enormous price of sixty guineas; as if the blessing of inspiration were still fluttering about it, or as if it were impressed with the gift of prophecy, like Elijah's mantle. Several other articles were knocked down at equally high prices, particularly the prophet's spectacles, and his snuff-box—so anxious were the admirers of this curious character to preserve some memorial of his past existence; and so true is the saying of the poet; *Stulto semper adest mirator stultior ipso*.—We do not pretend to infer from the above, that Mr. Huntington was either a fool or a conjuror; but only to point out a certain degree of extravagance and folly which lurks behind the distorted mask of hyperbolized religion.

William Hunt was born in the weald of Kent about the year 1743. Being in a very low station, and having a bastard sworn to him, he decamped, and lengthened his name to Huntington. At Mortlake in Surry he married; and soon after went to live at Ewell in the same county. He had been first an errand-boy, then a day-labourer, afterwards a cobbler, and at Ewell he first became a preacher. Wretchedly poor he continued for a long time; but Providence assisted him occasionally, by laying in his way—at one time a large eel not quite dead, at another time a partridge not quite dead, at another time a pair of breeches.—Persecution at length drove him to Thames Ditton, where he was first compelled to embark in the servile-laborious occupation of coal-heaving. This appears to have been that precise portion of his existence during which he felt most disgust, and to which he never reverts without some expression of indignant grief. Notwithstanding the great advantage he subsequently reaped from the mere circumstance of his having been once a coal-heaver, by judiciously intimating to the world that “coal-heaving was hard work, and that coal-heavers required better food than compliments;” and notwithstanding the spiritual manifestations he there experienced, during an illness at once gracious as trying; yet, because the people of the place, contemning him on account of his employment, which ignorant men too naturally would, rejected his ministry, he appears to have considered Thames Ditton as deserving only of anathemas, and consigns its inhabitants to illimitable reprobation. Yet had Ditton not been so unkind to him: “Some few years before I was married,” says Mr. H. “all my personal effects used to be carried in my hand, or on my shoulders, in one or two large handkerchiefs; and after marriage, for some few years, I used to carry all the goods that we had gotten, on my shoulders, in a sack: but, when we moved from Thames Ditton to London, we loaded two large carts with furniture and other necessaries; besides a post-chaise, well filled with children and cats.”

The cause of his going to London must be related in his own words: “After preaching at Woking, one evening,” says he, “I told my dame that I would lie alone that night, &c. Accordingly I went into another bed, and fell into a very sound sleep: when I dreamed, and behold! in my dream I thought I heard the Lord call to me with a very shrill voice, saying.—*Son of man! son of man! prophecy; son of man, prophecy!* I answered, *Lord what shall I prophesy?* The voice came again, saying, *Prophecy upon the thick boughs.* I immediately awoke; and felt a comfortable power on my heart, and thought the voice seemed fresh in my ears. I got up immediately and traced my Bible, to see if I could find those words there; thinking that, if I could, I should conclude the dream to be from God. I soon found the words, (Ezekiel xvii. 23. xxxi. 3.) and perceived the thick boughs to be *men*.” London, of course, was the place to find *men* in abundance, though certainly not *boughs*. To London therefore he came; where he preached first at Margaret-street chapel, near Cavendish-square. He soon longed to have a chapel of his own, though he felt almost hopeless at seeing this wish brought about by one so mean and poor as himself. “However,” he observes, “God sent a person, unknown to me, to look at a certain spot, who afterwards took me to look at it; but I trembled at the very thought of such an undertaking. Then God stirred up a wife man to offer to build the chapel, and to manage the work without fee or reward: God drew the pattern on his imagination, while he was hearing me preach a sermon. I then took the ground; this person executed the plan; and the chapel sprung up like a mushroom.” Providence-Chapel was thus speedily erected: this chapel was in Little Titchfield-street, Oxford market; it was opened in 1788; but was afterwards destroyed by fire. Its successor, likewise named, was built in the years 1810-11; and is situated in Gray's-Inn-lane. Both chapels owed their existence to the liberality of Mr. Huntington's congregation; but he refused to officiate in this last chapel till it was made his own personal freehold; and so great was the devotion of his followers, that they resigned their shares in his favour. He did not, however, live long after this instance of worldly wisdom.

When he had attained great popularity, he began to find himself so much at his ease in the pulpit, that he could, in imitation of other low preachers and low actors, indulge in such sprightly digressions as—“Take care of your pockets!” “Wake that snoring sinner!” “Silence that noisy nunsull!” “Turn out that drunken dog!” &c. &c. Nothing could exceed the dictatorial dogmatism of this famous preacher. Believe him, none but him, and that was enough. If he aimed thus to pin the faith of those who heard him, he would say over and over, “As sure as I am born 'tis;” or “I know this, I am sure of it;” or “I believe the plain English of it (some difficult text) to be,” &c. Adding, by way of fixing his point, “Now you can't help it;” or “so it is;” or “it must be so in spite of you;” with a most significant shake of his head, with a sort of beldam hauteur, and all the dignity of defiance. He would sometimes observe, softening his deportment, “I don't know whether I make *you* understand these things; but *I* understand them well!” His epitaph, penned by himself, will fully exemplify his spirit of decision. He was quite as fanciful in his applications of sacred Scripture as ever was commentator in his supposed illustrations of it; and he derived much of his success from this trait. He put his own sense on all he quoted, and gave it as such. Sadly would he ramble. So much did he stray from his text, that you at times lost all sight of it; and such was the multiplicity of his heads, so did he run to and fro, that any one of his sermons might make three. It should also be observed, that, in his pulpit-prayers, he was never used to intercede for the king or his land.—His writings and his sermons contained frequent mention of the presents that had been made him. His Bank of Faith proved a bank of gold! When he wrote so much of what came to him as gifts,

was it not done to rouse more to give? The man who says he lives by gifts, will, as he gets friends, find gifts by which he may live. His works amount to twenty vols. 8vo.

A few years before his end, Mr. Huntington married a second wife, the reputedly-affluent widow of the late Sir James Saunderson, and daughter of the patriotic alderman Skinner. Lady Saunderson is understood to have first repaired to Providence Chapel with the view of ridiculing that preacher of whom she afterwards became the wife. She survives Mr. Huntington; who, by his first marriage, had thirteen children, though many of them died before him. Although not so rich as he was thought, he had for some years kept his carriage. "I had told the whole company that rose up against me," says Mr. Huntington, speaking of the congregational commotions which were excited by his opposition to the writings of Paine, "and told them publicly in the chapel, that, so far from their being able to pull me down, they must not wonder to see me in my coach when old age came on; nor was the hand of God withdrawn till this came to pass." He was seldom mistaken in such predictions as related to himself. When some of his family were assisting him in pulling off his coat, after the last sermon that he preached, he told them—that he knew his work was almost done. He supped the evening before his death, saying, when he had finished, that it was the last supper he should eat; and that he was ready to meet his God and Saviour! He died the next day, at Tunbridge Wells, where he had gone for the benefit of his health. Diabetes was found the immediate cause of his dissolution. His remains were interred at Lewes; and a stone, at the head of his grave, displayed the following epitaph, composed by himself some time before: "Here lies the Coal-heaver; who departed this life July 1, 1813, in the 70th year of his age; beloved of his God, but abhorred of men. The omniscient Judge, at the Grand Assize, shall ratify and confirm this, to the confusion of many thousands; for England and its Metropolis shall know, that there hath been a Prophet among them! W. H. S. S."—We have been informed, but we cannot say with what truth, that the stone has been removed, by order of the heads of the parish of Lewes.

Huntington has constituted an era in the modern church, notwithstanding his peculiarities and eccentricities; a circumstance that would alone render his decease an event not destitute of importance. While, together with the names of Whitfield and Wesley, however, the name of Huntington seems likely to be commemorated in future times, still, unlike both of those preachers, he, having established no germinating bodies, has died without making any religious provision for the continuance of that congregation whose founder he indisputably was. He declared, that his "doctrine and reputation should stand and fall together; that it never should be—the Coal-heaver and Co." *Dedication to the Bank of Faith.*

We shall not have a better opportunity than the present to resume the history of Joanna Southcott, whom we left, at p. 149. victorious over the devil. Her Third Book of Wonders, just published, is in manner like the former, as described at p. 147. but in matter more blasphemous. The Spirit says to her, "This year, in the sixty-fifth year of thy age, thou shalt have a Son, by the power of the Most High, which if they (the Jews) receive as their Prophet, Priest, and King, then I will restore them to their own land, and cast out the heathens for their sakes, as I cast out them when they cast out me, by rejecting me as their Saviour, Prince, and King, for which I said I was born, but not at that time to establish my kingdom. But how is the Lord God to dwell amongst them, if I do not create a Son, by the same power I came amongst them? And, to prove my power, that it is of God, and not of men, it must be made known unto all men whomsoever that read this book of thine, that no man hath been in thy presence, or put a foot in the room where I have confined thee, since the time I ordered thy confinement,

which time was October 11, 1813. And thou must let it be known to the world, that thou canst say with Agur; *There be three things which are too wonderful for me, yea, four which I know not. The way of an eagle in the air; the way of a serpent upon a rock; the way of a ship in the midst of the sea; and the way of a man with a maid.* Prov. xxx. 18, 19."

Then Joanna speaks in her own person: "This I can take my solemn oath to, that I never had knowledge of man in my life. So that, if the words of the Spirit are fulfilled in me, this year, to have a Son, it is by the power of the Lord, and not of man; and this sign is set, to prove the truth of the Gospel, or to prove that the Gospel is not true. For, if the visitation of the Lord to me now does not produce a Son this year, then Jesus Christ was not the Son of God, born in the manner spoken by the Virgin Mary; but, if I have a Son this year, then in like manner our Saviour was born."

Now the Spirit speaks: "Let them look to their prophets, then they will see that they prophesied of me two ways; to come as a sufferer, and to come as a conqueror. And now I tell them, it is not all the power in the world, nor all the nations upon earth, shall ever establish the Jews upon the throne of Jerusalem, to be a peaceable and happy nation, if they will not receive the Son, that I have told thee shall be born this year, to be the King over them. Therefore, let them not look to the great men amongst them, or to their rabbies, their priests, or their rulers, to think that their King shall come from them, when their great men amongst them sought my life, and the meanness of my birth was then despised. But let them look to the marvellous manner the way I have placed the sign before them; let them look to thy age, and the manner I have confined thee from any man coming into thy presence; and, to prevent men's saying a man might come in woman's apparel, I have also forbidden all thy female friends to come into thy presence likewise. Therefore I have ordered it in such manner as it is impossible for deceit to be practised." Third Book of Wonders, p. 4, 6, 9.

Some of our readers may perhaps blame us for making these extracts, the subject and expressions being too solemn to be treated with levity. We should certainly think it not an undue stretch of power, if a magistrate were to interfere, and order this mad foolish woman into confinement in Bedlam, or *Bethlehem*, as being of all places the most proper for this second incarnation; where she might be secluded from the visits of Mr. Tozer and every other comforter, till the grand manifestation takes place, which, according to the common course of nature, cannot be farther distant than the month of July or August next.

On the 27th of October, the friends of the uninstructed poor witnessed a most interesting ceremony, in laying the first stone of a building for the education of 1000 children, in the Whitechapel-road, by the duke of Cambridge, who honoured the institution set on foot by the Whitechapel Society for the Education of the Poor with his presence. His R. H. was attended in the procession by the bishop of London, the lord-mayor, Mr. Sheriff Marsh, Rev. Archdeacon Cambridge, Rev. Archdeacon Pott, Rev. Thos. Hughes, D.D. canon residentiary of St. Paul's; Jesse Russell, esq. treasurer of the society; David Pike Watts, esq. and a numerous assemblage of the clergy, and friends of the society; together with the committee of management of the school, and the children under their patronage (at present educating in a temporary school-room), the children of the Whitechapel and Gower's-walk free-schools, &c. and the regiment of Whitechapel volunteers escorted the whole. Some gold and silver coins, of the present reign, and latest mintage, having been deposited in the stone, under a plate, with an appropriate inscription, which was publicly read by the secretary, his R. H. in the presence of several thousand spectators, went through the usual ceremony of spreading the cement and laying the first stone, and another stone was fastened down upon the whole.

The Rev. Daniel Mathias, the rector of the parish of St. Mary, Whitechapel, after reciting with great feeling a prayer prepared for the occasion, addressed his R. H. with infinite energy and pathos, as follows: "May it please your royal highness; I am deputed by the committee of management for the Whitechapel Society, on behalf of them, of all the subscribers, and of the parish at large, to convey to your royal highness their profound sense of the obligation, and their grateful acknowledgments for the signal honour which you have been graciously pleased this day to confer upon them. Great as the honour is, and no men can estimate it higher than they do, yet they presume to think that the occasion is as great: an occasion not unworthy the presence, support, and countenance, even of a prince of your illustrious birth, and more illustrious virtues. We are engaged in a work which concerns all, and is intended to benefit all:—high and low; rich and poor; the private individual and the public weal; the prince who governs, and the subject who obeys. By means of this institution, we endeavour to draw closer that chain of union which connects the several ranks of society, and fitly joins together all the members of every well-constituted state, and, by purifying and refining some of its links, to give strength and durability to the whole. Your royal highness has been pleased to lend a helping hand to this our undertaking. May this building, so designed, long remain a monument of your kind condescension and noble co-operation; and of our wisdom, patriotism, and humanity! It was the pious wish of our beloved sovereign, your honoured father, that the poorest of his subjects might be able to read the Bible. This wish, so becoming the dignity of so great a monarch, so worthy the care of the father of his people, so agreeable to the piety of the best of Christians, it is our earnest endeavour to accomplish. We hope to teach the children of the poor, not only to read, but to understand, the Bible! If we can but infuse into their minds the pure precepts of the Gospel, they will be good Christians; and, if good Christians, they will be good subjects; they will all their lives through cherish and maintain those principles which placed your illustrious family upon the throne of these realms. Our hopes of success are most sanguine; and our endeavours will be increased, when we see among us the virtuous son of a most virtuous sire, so zealously active to carry into effect the best wishes of so good a father, and so patriotic a king! Accept, sir, our most cordial thanks."

His R. H. was graciously pleased to reply as follows: "Reverend Sir; I request that you will offer my grateful thanks to the committee of this institution, and state to them that I feel great satisfaction in being present and assisting on this occasion. That I most heartily concur with them in the important undertaking, which does infinite honour to their parish. I trust that their example may be imitated, not only in the metropolis, but throughout the country in general."

The ceremony concluded with a benediction pronounced by the bishop of London; after which the company repaired to the City-of-London Tavern to dinner, where Mr. Sheriff Marsh presided, and where the bishop of London, Mr. Alderman Atkins, William Mellish, esq. sir Wm. Blizard, &c. honoured the society with their presence. The bishop of London, in returning thanks on his health being drunk, took occasion to observe, that this institution had his unqualified approbation; that the best means of bettering the condition of the poor was through the medium of religious and moral instruction; and that he hailed the establishment of this school as the planting of a tree whose branches he hoped to see spread over all the island.

On Monday the 8th of November, the Right Hon. Geo. Scholey, lord-mayor of London, attended by sixteen senior members of the livery of distillers, and accompanied by several of the aldermen, the two sheriffs, the recorder, chamberlain, town-clerk, law-officers, &c. proceeded with the usual formalities from the Mansion-house to Guild-

hall; and were followed by Mr. Alderman Domville, lord-mayor elect, supported by sixteen members of the company of stationers. When the several parties were arranged on the hustings at Guildhall, the oaths of allegiance and supremacy were solemnly administered by the town-clerk, kneeling, to the lord-mayor elect; who being then invested with the insignia of office, Mr. Scholey resigned to him the civic chair; after which, the chamberlain, Mr. Clark, advancing three several times from the front of the hustings to the chair of state, and each time making three several obeisances, delivered up to the new chief-magistrate the insignia of his office with the city-purse and seal; all which were separately restored into the hands of the chamberlain, who retreated, bowing as before, walking backward, and whose graceful demeanour on this occasion was much admired. The sword-bearer, Mr. Cotterell, then in like manner delivered up the city-sword; which the lord-mayor replaced in the hands of one who has borne it twenty-seven years, who also retired bowing in due form. The aldermen, city-officers, and members of the livery-companies, then severally paid their respects to the new lord-mayor, agreeably to ancient custom, by *shaking hands* and *wishing joy*.

This custom of *shaking hands*, and *wishing joy*, is very ancient in the city ceremonial. It is particularly practised, in the livery-companies, when a young man takes up his freedom; and at the chamberlain's office the speeches made to the greatest personages uniformly begin with *I give you joy*. It is remarkable also, that on the continent the fraternities of crafts and livery-companies are generally distinguished, like freemasons, by a peculiar way of shaking hands which is called the secret or mystery of the trade, *le secret du métier*.

On the 13th of November, the lord-mayor, aldermen, sheriffs, recorder, common-council, and other officers of the city of London, waited on the prince-regent at Carlton house, with an address to congratulate his R. H. on the prospect of the deliverance of Europe from a most disgraceful yoke; on the re-establishment of the house of Orange in Holland; on the return of Hanover to the allegiance of its legitimate sovereign; on the successes of marquis Wellington; &c. to which the prince-regent returned a most gracious answer.

These glorious events were to be celebrated also in the true English manner; namely, by eating and drinking.—To commemorate the revolution in Holland, a banquet was provided on the 14th of December, at the City-of-London tavern, at which the viands were no less gratifying to the animal appetite than the moral sensibility excited was to the liberal mind. The duke of Clarence, in the chair, was supported by the dukes of York and Kent, the hereditary prince of Orange; the earls of Harrowby, Westmoreland, Buckinghamshire, Liverpool, Bathurst, and Dartmouth; viscounts Sidmouth and Castlereagh; lords Reay and Athlone; right hon. N. Vansturt; G. Rose; sir W. Scott; F. Robinson, lord provost of Edinburgh; J. H. Addington; greffier Fagel; their excellencies count de Funchal, baron Wessenberg, baron Jacobi Kleist, count de Palmella; and M. de Lorentz; under secretaries of state, W. Hamilton and W. Becket; Dutch legation, J. Fagel, count Stirum, M. de Lelefeld, and W. Ragay, Rev. Dr. Werninck, &c. Among the vocal performers who contributed to the amusement of the company, were Braham, Taylor, and Bellamy; and a glee of peculiar interest was sung, composed for the occasion. The usual toasts were given in compliment to the royal family; and in addition—The Emancipation of Holland—The Sovereign Prince of the Netherlands—The Hereditary Prince—The Duke of York and the Army—The Duke of Clarence and the Navy, &c.—His serene highness, in returning thanks for the honour conferred upon him, and for the sentiments expressed of his illustrious father, in delicate terms adverted to the pride he felt at having received a British education, and his instruction in the art of war from the gallant commander of the allies in the peninsula.—The duke of Clarence maintained the spirit

of the convivial meeting, by frequent appropriate addresses to the company; and the utmost harmony prevailed during the whole entertainment. Among the decorations were an illumination, with the words *Soli Deo gloria*; and on the right of the chairman were displayed the British, and on the left the Dutch, colours.

In the early part of the same day, the hereditary prince of Orange paid a visit to the princess Charlotte at Warwick-house, to which he was introduced by the prince-regent in person. On the preceding Sunday, the hereditary prince had dined with the regent; and the princess Charlotte was of the party. On Wednesday, the 15th, at two o'clock, the hereditary prince left his father's house in Harley-street, to proceed on his way to Holland: he arrived at Colchester the same evening about ten o'clock, and immediately proceeded to Harwich, where he embarked on-board the Meteor bomb, for Holland. It is understood that this illustrious person is to be the consort of our charming princess, and that the union will take place, in July next, in London, where the prince has just arrived, and where we hope the parties will continue to reside.

A disaster almost equally calamitous with that which happened about eighteen months before, again occurred at Felling colliery, (see p. 316.) About two o'clock on Dec. 24, the foul air took fire; and nine men, thirteen boys, and twelve horses, fell victims, and eight men were severely scorched. The deceased have left eight widows and eighteen fatherless children.—At Jarro colliery, a large stone fell on two pit-men, and crushed them to death: both left families.—Dec. 28, in a pit belonging to Mr. Burdon, of Hartford, a man named Nicholson, upon whom a large stone fell while ascending the pit, had his head cleft in two, and died instantly; while another, in the same loop, had his thigh dreadfully lacerated, but kept his hold both of the rope and the dead man till they reached the top. Two men at the bottom of the pit were also injured.

The parliament met on the 4th of November. The address in answer to the speech from the throne was moved in the upper house by the earl of Digby, and seconded by the earl of Clare. Much was said by marquis Wellesley in favour of the address, which he approved without restriction. The duke of Sussex extolled the spirit shown by our army. Lord Grenville expressed his entire concurrence in both the speech and the address; he thanked God he had been permitted to live to see this period of success, and hoped it would be followed by unceasing exertions to cement the grand confederacy against France. Lord Liverpool observed, that the Portuguese were the first who resisted French tyranny; the period had now arrived when large and liberal efforts should be made, in order to secure a permanent and general peace; and he used these remarkable words; that "he would ask no concession of the enemy to obtain peace, which, were he in his situation, he would not be willing to make." The address was agreed to *nem. con.*

The debate upon the address was as favourably treated in the lower house.

On the 8th of November, another vote of thanks was moved by earl Bathurst to the marquis (now duke) of Wellington, which was unanimously agreed to; and separate thanks were voted to sir Thomas Graham (now lord Lyndoch) and sir Rowland (now lord) Hill, as well as to the officers and soldiers of the army.

On the 11th of the same month, lord Castlereagh brought forward his plan for augmenting the disposable force of the country. It is a singular fact, that, just as if the nation and its government were as yet in their infancy, every session during the war has introduced a new system of military defence; till at length our truly-constitutional guard of citizen-soldiers, or militia, seems entirely lost, together with the only new system that ever deserved applause, namely, the enlisting of soldiers for a limited time only.—Lord Castlereagh's plan, this year, was two-fold; first, to induce militia-men to transfer their services from

England to any part of Europe; and secondly, to give additional encouragement for volunteering into the line. Those who make a transfer of their services as militia-men, to receive a bounty of eight guineas, and retain their privileges as in the militia; their officers to receive half-pay when the regiment is disembodied. The militia-man volunteering into the line, if his services are limited to five years, to receive twelve guineas; if he volunteers his services for life, sixteen: officers as high as captains (inclusive) may volunteer with the privates, in the proportion of one captain, one lieutenant, and one ensign, to every hundred men. On entering the army, the officers will at first receive half-pay, and, after one campaign on foreign service, rank as officers of the army with permanent rank, or, if they choose, still continue in the militia. His lordship concluded by stating, that the recruiting by beat of drum gave annually 10,000 men; that his plan would give 20,000 the present year, to which adding 7000, the arrears of former years, there would be an additional disposable force of 27,000 men; and, in the next year, the operation of this plan would give 40,000 men, including 25,000 the average waste; or from 10,000 to 15,000 troops annually. He said he should never lose sight of continuing the militia on its present system, though he entertained sanguine hopes that the men might be replaced without having recourse to the ballot, which was deemed a hardship. His lordship concluded by obtaining leave to bring in "a bill, to enable his majesty to accept of the services of a portion of the militia for the more vigorous prosecution of the war."

On the third reading of this bill, on the 18th, sir William Curtis moved a clause by way of rider, "to save the rights and privileges of the city of London;" which was agreed to. The bill received the royal assent on the 23d of November.

On the same day, lord Castlereagh introduced bills enabling the crown to accept the services of the local militia out of their counties, (in place of the regular militia,) for six weeks at one time; to allow the militias of England and Ireland to interchange with less limitation; to grant pensions to surgeons and non-commissioned officers; &c. &c. These bills passed through both houses, and received the royal assent on the 10th of December.

On the 17th of November, Mr. B. Bathurst obtained leave to bring in a bill to suspend for a limited time the proceedings on actions for recovery of penalties under the act of the 43d of the king, commonly called the *non-residence act*. The grounds of this measure were the following: Mr. Wright, who had been the registrar (or secretary) in the bishoprics of London, Norwich, and Ely, had instituted prosecutions against the clergy in the above dioceses, for penalties, for non-residence, to the amount, if recovered, of 80,000l. In the situations which that individual held, he had not only acquired the means of knowing what had been done, and what had been omitted to be done, by the clergy of those dioceses, but he had possessed the power of preventing, if he chose it, the appearance of those documents which might be a defence against the prosecutions that he had since instituted: for, in the ordinary course of episcopal business, the particular notifications of the clergy were entrusted to this very individual himself!—The transactions of every diocese were so extensive, that it was impossible for the bishop personally to go through them; and it was not at all improbable that many of the letters of notification, for the non-delivery of which the actions had been brought, had been put into the hands of this identical registrar, or secretary, and might by him be suppressed or not, at pleasure. In fact, he had received many letters from highly-respectable individuals, in which they assured him that they had applied, first by letter, and then by word of mouth, to this Mr. Wright, and that they had been assured their licenses would be made out in consequence. In some cases, he had been out of the way, and no satisfactory answer could be obtained; until at length, for some reason into which he would not then

enter, this person was removed from his situation on the accession to the see of London of the present bishop. He had subsequently been removed from his office in the other episcopacies; and had since openly avowed that, "having done with the bishops, he would attack the clergy." The greater proportion of these actions (he said) were founded on the mere omission of the returns.—As to the real state of residence and non-residence, and whether the clergy deserve to be attacked or not, see the list at p. 316, 17.

Lord Castlereagh, on the same day, spoke at full length upon the engagements his majesty had entered into with foreign powers in the course of the year; and observed, that it would be useful that such a statement should be made, in order that foreign powers might themselves see the extent of the exertions made by this country; for it had fallen to the lot of government to refuse many applications for assistance, which it was impossible for it to give. A considerable aid had been afforded to the armies of Spain and Portugal, independently of the subsidies furnished to those governments. In the field, it had been found that the public service could not be allowed to stand still; to prevent which, they had been in many instances supplied from our commissariat. The direct aid to Spain was two millions as a subsidy; and quantities of military stores, which had been left by parliament to the discretion of the government, had been given on a principle of liberality. The actual provision; therefore, made by parliament, was two millions for Spain and Portugal; for Sicily 400,000*l.* and for Sweden one million. The house would feel the extent of the support which we had offered to the cause of the world, when he stated, besides the waste of our own army, we had furnished half a million of stand of arms to Spain and Portugal, and 400,000 stand of arms to various parts of the continent. He admitted that the efforts made by this country, in support of the allies, were some of the greatest that this country had ever made. The subsidy, and the credit granted by this country to Russia, would amount to not less than five millions. The general ground on which the government had thought it right to stretch the sum to five millions, was, because the salvation of Europe, at the time of signing the treaty, seemed to depend mainly on the exertions of Russia and Prussia. Every delicacy had been shown by the emperor of Russia to this country and to the allies; and he acceded to the armistice from a wish to satisfy Austria whether the French ruler seriously wished for a peace or not; but, at the same time, he was training his reserves, and by the 17th of August he had the full amount of his stipulated force in the field. The exertions of Prussia, in point of numbers, had been of a lower character. But it was pleasing to see, that that country, which was supposed to have been the most depressed and plundered by the enemy, had now shown the greatness of its mind, and had made the most extraordinary exertions. Besides its garrisons, Prussia had brought into the field 200,000 men; and this exertion had been mainly owing to that great man, Gen. Schaloft, who fell in the battle of Lutzen. He hoped that, in consequence of these exertions made for peace, the house would not think ministers had acted imprudently. Having given this general view as to the negotiation with Sweden, Russia, and Prussia, he now wished to state what had been the transactions of his majesty's ministers with the court of Austria. Much as Austria had at stake in the present struggle, he was satisfied that that power would never have joined the combination, but from the conviction that France was indisposed towards a pacific settlement of Europe. There was not sufficient information before the house to justify him in going into any details of Austria's efforts towards a pacification; but he was desirous to say something, in order to correct an apparent misconception of the member for Bedford. That gentleman had said, that whatever conditions had in a former stage been proposed to France, should now be adopted. Such a supposition put the government into a dilemma, into which they ought not to be thrust; as it implied, either that our

proposals were then not of a nature to be accepted, or that now, in consequence of successes, our demands would be still more exalted. In point of fact, *no plan had been offered*: Austria never went farther than an attempt to mediate, which was met by France by a variety of evasions, which left Austria no alternative, except at once to take arms, or to state the grounds on which she was disposed to mediate. These grounds did not pledge the continental allies or this country: they were merely a basis, scarcely affecting the interests of the other countries, by which Austria wished to ascertain whether her attempts at peace would be hopeless. The reply of France at once showed that all these endeavours were fruitless. The battle of Leipzig, if followed up with discretion and ability, would, he trusted, produce such results as would show, that ministers had not forgotten their duty. He had the satisfaction to say, that the language now adopted was the very same which they had used in a time of comparative depression. The sum to be advanced to Austria was one million, and 100,000 stand of arms, with military stores. It appeared, then, that the subsidies amounted to the sum of 10,000,000*l.* four of which were devoted to the peninsula, the rest to the continental system. It was now necessary for him to say, that he must call upon the house to vote a provision on account, and to enable his majesty's ministers to make good their engagements. He should move, therefore, first, that a provision of three millions should be voted to his majesty on account; and secondly, that leave be given to bring in a bill to recognize the engagements of two millions and a half, already entered into in the subsidiary treaties. His lordship then moved the first resolution.

Mr. Canning, in a brilliant speech, contrasted the past and present state of the war, with the military glory acquired by our troops in the peninsula; and gave his cordial assent to the motion. He characterized the arrogance, tyranny, and unbounded ambition, of Bonaparte, in the most appropriate terms; and deprecated the sickly sensibility which induced many to blame the advance of lord Wellington into France. For his part, he rejoiced at the establishment of the British, Spanish, and Portuguese, forces in the enemy's country.

Sir Gilbert Heathcote objected to the grant of such vast subsidies to foreign powers, at a time when the annual taxes bore so heavy on the community.

Mr. Whitbread said, that unless some broad and definite outline of the demands of the allies, and of the concessions of Bonaparte, were previously laid down and firmly adhered to, we should soon hear of some of our allies making a separate peace. The great course of events held out to us a most important lesson. If we did not take warning from it, but attempted blindly to push our advantages too far, he feared that we should only raise the same irresistible power in France, which, in 1793, had repelled the combined attacks of Europe.—The resolutions were then passed.

On the 19th of November, the sum of 3059*l.* was voted for the repairs of St. Margaret's church.

An official account was laid before the house of commons, and ordered to be printed, which states the amount of the net produce of the permanent taxes in Great Britain, for the year ending the 25th of October, 1812, at 38,743,428*l.* 16*s.* 8*d.* and for the year ending the 15th of October, 1813, at 37,833,366*l.* 12*s.* 1*d.* being a deficiency of about 900,000*l.* The same account states the total amount of the net produce of the war-taxes, for the year ending the 25th of January, 1812, at 21,822,532*l.* 14*s.* 10*d.* and for the year ending the 25th of October, 1813, at 22,740,568*l.* 4*s.* 0*d.* being an increase of about the amount of the deficiency in the permanent taxes. Thus the net produce of the whole of the taxes in Great Britain, for the year ending the 25th of October, 1813, exceeded sixty millions.

The abolition of the slave-trade, that hydra which the herculean labours of our senate thought to have entirely destroyed,

destroyed, still shows one of her heads in the Portuguese and Spanish islands.—Lord Holland, in the house of lords, Dec. 6. recommended that in any treaty with Holland a stipulation should be introduced for the abolition of that traffic. The house seemed to concur in opinion with his lordship; and we trust, that at the present moment, when such an intimate union is about to take place between the two nations, this material point will not be forgotten: indeed, from what passed in the house of commons on the 3d of May following, we may be pretty well assured it will not.

On the 7th of December, Mr. Eden moved, in the house of commons, for some papers respecting the state of Newgate. He said, that the grand jury of the city of London had reported, that in the women's ward, where there were accommodations for not more than 60 females, 120 were now confined; in the debtors' ward, where only 100 ought to be, they found not less than 340, most of whom were destitute of clothes and bedding, and without adequate shelter from the rain. Even the hospital and infirmary were crammed with 120 women, being 20 above the proper number. The dimensions of the principal room for the women, according to the statement of Mr. Newman, was 70 feet in length, and 16 in breadth; in this only twenty women were originally placed, so as to have each three feet six inches in length. Now that number was trebled, and every female prisoner had no more space allowed to her than one foot three inches; they had even less, as many were compelled to keep their children with them, for want of a home to send them to. The hon. gentleman remarked, in conclusion, that the persons thus confined were convicts sentenced to transportation, but waiting the means of conveyance; and prisoners committed on suspicion of crimes, waiting for trial. The hardened were mingled with those who had but just committed a first offence, and who, if they had brought a single seed of virtue into that horrid den, would soon have it choaked in the company of the most abandoned.

Sir James Shaw said, that the over-fullness of Newgate was occasioned by the failure of the late insolvent-debtors' act. The number confined amounted to 350, which rendered it impossible to separate the unfortunate from the depraved. The city of London intended to remove all debtors from Newgate, and a building was erecting for that purpose, which would contain 500 debtors. No objection, however, was made to the production of the papers; and the motion was agreed to.

On the 10th, the Chancellor of the Exchequer, in reply to some observations of Mr. Grenfell respecting the depreciated state of our copper-currency, said, that it was intended to produce a general reformation of the copper-currency, by calling in the Tower-halfpence, suppressing the private tokens, and ordering an issue of improved value.—This conversation caused an alarm in the city, in the expectation that the old halfpence would be immediately cried down. A meeting of tradesmen was convened at some tavern; and they (illegally) determined to accept of none but the new copper coin; and the consequence has been, that good old Tower-halfpence are now become of no value. The subject was therefore again mentioned in the house on the 14th, when the Chancellor of the Exchequer said, that, "in consequence of the misapprehension that prevailed among tradesmen in the metropolis, and their having refused, to a certain degree, the copper-currency of the realm, he thought it proper to state, that it was illegal to refuse the Tower-halfpence, which, on the issuing of the new coin, would be received at the Mint at their full current-value. He trusted this declaration would remove all needless alarm."—The explanation, however, came too late: only a few shops in the metropolis will take the good old halfpence; and the magistrates decline to receive informations against those who refuse them.

As proposals to negotiate for a general peace had been offered by the allies to Bonaparte, and as he had accepted the basis of those proposals, (see p. 350, 1.) it was now thought proper that the parliament should be adjourned for a long period, in order to release lord Castlereagh from his attendance here, and dismiss him to the continent, as if he were the only man capable of managing our affairs at home and abroad. On the 20th of December, therefore, both houses adjourned to the 1st of March; and subsequently, for the same reason, to the 21st.

On the 27th of December, lord Castlereagh took leave of his royal highness the prince-regent. His lordship, accompanied by his lady, two secretaries, and four messengers, besides servants, set off the next day for Harwich, whence they sailed on the 30th for Holland. After arriving at the Hague on the 5th of January, lord Castlereagh, leaving his lady behind, continued his journey by land to Frankfort, where he arrived on the 15th; to Basle, on the 18th; and thence to Chatillon-sur-Seine, where the congress was opened on the 5th of February. All hearts went with his lordship in the wish that he might forward the work of peace; though none could anticipate the mode in which it was to be so happily effected.

That this nation, as well as others, had need of peace, may be seen from the following list of the number of bankruptcies, since the re-commencement of the war, in England and Wales only.

In 1803	-	-	-	-	-	-	-	-	912
In 1804	-	-	-	-	-	-	-	-	842
In 1805	-	-	-	-	-	-	-	-	792
In 1806	-	-	-	-	-	-	-	-	908

Bankruptcies since the commencement of the war 13,695

Six thousand more might probably be added for Scotland and Ireland; and five times that total for failures equally mischievous to the parties, but settled by a composition: the whole forming a total of 108,000 traders, ruined within the last ten years. When also we consider the dependants, relatives, and connections, of 108,000 of the most active traders in the empire, can we doubt how grateful the return of peace must be to the majority of the people?

It appears by an official report lately published by the commissioners for managing the sinking fund, that they had purchased, on the 21st of Dec. 258,409,466l. 15s. 6d. of capital stock, which bore an annual interest of 7,833,088l. and that, as the public debt of the country on the 5th of January, 1786, when the sinking fund was first established, was but 238,231,248l. 5s. 2½d. more than the whole debt which then existed has now been liquidated, by above twenty millions.—It appears also by another official document, that the outstanding exchequer-bills, or unfunded debt, amounted on the 5th of January, 1814, to 47,156,800l. of which three millions are held by the Bank of England, without interest, and three millions at three per cent. interest, to be paid six months after peace.—The income of the consolidated fund for the quarter ending on the 5th Jan. 1814, amounts to 11,352,000l. exceeding that of the corresponding quarter of the year 1813, by 1,014,000l. The charge upon the consolidated fund is about 12,000,000l. being an excess of about 279,000l. compared with that of the 5th of January, 1813. The deficiency, it thus appears, is not more than 647,000l. whereas in the year 1813 it amounted to 1,383,000l. The war-taxes, after deducting 614,000l. carried to the consolidated fund to defray the charges of different loans, have produced about 3,829,000l.

yielding a surplus of 1,001,000*l.* over the receipts of the corresponding quarter of 1813. The property-taxes have produced near 200,000*l.* more. The customs have fallen off to the amount of 355,000*l.* but, on the other hand, the excise has experienced an increase of near 700,000.

1814.—The last year concluded, and this year began, with such a fog as had been known in the memory of few. The density of the atmosphere during the day, and the heavy fog at night, during a whole week, in London and many miles round, were very remarkable, and occasioned several accidents. On Monday evening, the 27th, his royal highness the prince-regent left town, intending to proceed to Hatfield, on his way to Belvoir Castle, to stand godfather to the duke of Rutland's infant son and heir; the fog, however, was so dense in the metropolis, and for several miles round, that he was obliged to return. Lord Lowther was in one carriage with the prince, and Gen. Turner in a second: they had not got further than about a mile from Tottenham-court-road, when an outrider was thrown off into a ditch. The same night, the mails and other coaches were delayed unusually long, and proceeded on their way with great difficulty and danger. Many coaches were overturned; the York mail twice, near Ware, notwithstanding the guard and passengers walked to keep it in the road. The Maidenhead coach, on its return from town, missed the road, and was also overturned. The daughter of Mr. Griffiths, a publican in Deptford, fell into the Surry canal, and was drowned. On Tuesday night, Dec. 28, a watchman in the parish of Marybone fell down an area, and was found dead the next morning; and on Thursday night, the 30th, a serjeant of the West Kent militia garrisoned in the Tower, fell into the river, and was drowned. There had been no instance of such a fog as now pervaded the metropolis, extending many miles round, since the earthquake at Lisbon, 1755, when this country was visited by a fog which had not been equalled for a century before, lasting eight days. On Saturday afternoon, Jan. 1, between two and four, the obscurity was greater than it had been during the daytime since the commencement, and the evening was equally bad with any that had preceded. On Sunday, however, the fog disappeared, in consequence of a change of the wind; and a frost then set in, almost as unexampled in its duration and severity as the fog had been for its density.

The frost, which set in on Monday the 3d of January, continued with great intensity till Wednesday the 26th, when a partial thaw commenced, which however did not continue longer than the Saturday following, when its progress was arrested by a sharp frost which set in on that night. The thaw had sent such a quantity of ice down the river as completely to choke up the Thames between Blackfriars and London bridges, and the renewed frost so united the vast masses as to render it immovable by the tide. On Monday the 31st several adventurous persons of light weight crossed the river; and their example was followed by a multitude of boys, many of whom, from the rottenness of the connecting ice, particularly near Blackfriars' Bridge, did not escape without an unwelcome immersion. After that period, the ice between the two bridges presented the novel scene of thousands of persons moving on it in all directions. Midway between the two bridges, and nearly opposite Queenhithe, above thirty booths were erected, for the sale of porter, spirits, gingerbread, &c. Skittles were played by several parties, and the drinking-tents filled by females and their companions, dancing reels, while others sat round large fires, drinking rum, grog, and other spirits. Several tradesmen also attended, selling books, toys, and trinkets, of every description. Several printers, having brought their presses, pulled off various impressions, which they sold for a trifle. Among the paths for the convenience of perambulation, the principal was dignified with the appellation of the City Road; and an inscription stated, "Ground to be let on a building-lease; enquire of Mr. Frost." The booths extended

down to London Bridge, under the centre-arches of which numerous spectators were to be seen. The watermen and coal-heavers did not fail to benefit by this curiosity, as the progress of the visitors was much facilitated by their simple inventions at the different stairs and elsewhere, and they were at much trouble to beat footways in different directions. On Thursday, Feb. 3, a sheep was roasted, or rather burnt, over a charcoal fire, in a large iron pan. The admission to the booth where this culinary skill was displayed, was 6*d.* a-head. The ice, from its roughness and inequalities, having been in many places covered several feet with snow, was totally unfit for skating or sliding.—The tide, from the obstruction at London-Bridge, did not ebb for some days more than half the usual marks. On Thursday the 3d, a plumber, named Davis, attempting to cross near Blackfriars' Bridge with some lead in his hand, sunk between two masses of ice, and rose no more.—On the 5th, a thaw again took place; and Kingston-bridge, which had been built upwards of 300 years, gave way by the consequent pressure of the ice. Between high and low pier it sunk near three feet, which rendered it impassable for carriages.—In the night, or rather morning, an accident happened on the Thames, which threatened serious consequences. A booth, which had been erected opposite Brookes's Wharf, for the accommodation of the curious, was left in the care of two men. At two o'clock on Sunday morning, the 6th, the tide began to flow at London Bridge with great rapidity, assisted by the thaw, and the booth was hurried along, with the quickness of lightning, towards Blackfriars' Bridge. There were nine men in the booth; and in their alarm at the violence of their progress they neglected the fire and candles, which, communicating with the covering, set it instantly in a flame. They succeeded in getting into a lighter which had been broken from its moorings; but immediately afterwards it was dashed to pieces against the arches of Blackfriars' Bridge. The poor fellows, nearly exhausted, at length got hold of the balustrades, and so escaped.—The frost set in again on the 11th, and continued till the morning of the 28th, when a thaw again commenced, and continued till the 2d of March; after which the frost again set in sharply, and on the 10th the snow again fell copiously, and continued so to do till the 13th. The frost continued till the 19th of March, when the wind shifted suddenly from north-east to south-east; and on the 20th the temperature was ten degrees warmer.

So long a continuance of very cold weather has seldom been experienced in our climate; but greater degrees of cold have been known often. The average height of the thermometer for Jan. and Feb. 1814 was 17°. On the 31st of January, 1768, Fahrenheit's thermometer at Glasgow was 2 degrees below 0; or 34° below the freezing point; on the 24th of January 1795, the thermometer is noticed in Rees's Cyclopædia to have fallen 6° below 0, but in what part of Great Britain, or what situation, is not stated. In London, during this winter (1814), the thermometer does not appear to have been so low as 0; on the 9th of January it was but 3° above 0, and on the 15th, 4°, in a southern exposed aspect, fifteen feet from the ground: the average height about 17°. There was not much piercing wind; but the great quantity of snow was the means of consolidating the masses of ice on the Thames.

The snow accumulated in the midland counties, particularly on the borders of Northamptonshire and Warwickshire, to a height altogether unprecedented. In the neighbourhood of Dunchurch, (a small village on the road to Birmingham through Coventry,) and for a few miles round that place, in all directions, the drifts exceeded the height of four-and-twenty feet.—At Newcastle the frost was so intense, that Fahrenheit's thermometer, on the town-moor, was 14 degrees below the freezing point; and in a garden at Ravenworth it was at 18. At York it was 23 degrees below the freezing point. The River Tyne was long frozen both above and below the bridge. It will be a memorable circumstance, that so large and rapid a river should

have been frozen to the thickness of 20 inches; and the Antiquarian Society of Newcastle have recorded the event on vellum. Gambols were exhibited in every form on the ice.

In Ireland, so completely was the intercourse between Dublin and the interior suspended, that on the 17th of January no fewer than 1500 country mails were due in the Irish capital; and, in consequence of the mails not being able to travel, not less than ten tons weight of newspapers were accumulated at the post-office in Dublin.—Many persons perished with cold in various parts of the united kingdom.

A letter from St. John's, Newfoundland, of the 3d of March, says; "No inhabitant remembers so mild a winter as we have had here. The harbour has not been frozen over; nor has there been the least impediment to ships entering or leaving the island, further than what is usually experienced from contrary winds."

The severity of the weather in Europe did not hinder the progress of a campaign the most important in its unexpected results that Europe has ever witnessed.

The allied armies began to cross the Rhine on the 21st of December; previous to which, the following proclamation of that date was issued from the head-quarters at Lorrach.—"People of France; Victory has conducted the allied armies to your frontier. They are about to pass it. We do not make war upon France; but we repel far from us the yoke which your government wished to impose upon our respective countries, which have the same rights to independence as yours. Magistrates, landholders, cultivators, remain at your homes. The maintenance of public order, respect for private property, the most severe discipline, shall characterize the progress and the stay of the allied armies. They are not animated by the spirit of vengeance; they wish not to retaliate upon France the numberless calamities with which France, for the last twenty years, overwhelmed her neighbours, and the most distant countries. Other principles and other views than those which led your armies among us, preside over the councils of the allied monarchs. Their glory will consist in having put the speediest period to the misfortunes of Europe. The only conquest which is the object of their ambition is that of peace; but, at the same time, a peace which shall secure to their own people, to France, and to Europe, a state of real repose. We had hoped to find it before touching the soil of France. We come hither in quest of it.

—SCHWARTZENBERG."

Twenty thousand men immediately entered Switzerland at Lauffenberg, a column of 5000 between Rheinfeldt and Balle, where they threw a bridge over the Rhine; 20,000 crossed the bridge at Balle; thus invading France through Switzerland, whose neutrality (see p. 351) was, of course, disregarded. The allies entered Switzerland as friends; and the Swiss soldiers retired to their homes without attempting resistance; doubtless, happy in having been thus relieved from the French yoke. The Swiss cantons indeed immediately made pacific arrangements with the allies; who pledged themselves to replace that country in the same state of integrity and independence as before the French revolution.

Other armies passed the Rhine at Dusseldorf and Coblenz. The whole force amounted to at least 300,000 men; and their route was through Franche Comté and Lorraine, the most vulnerable part of France. The emperor of Russia, with the last of his reserves, crossed the Rhine at Basle on the 13th of January, the anniversary of his crossing the Niemen (the extreme boundary of his empire) in pursuit of the French, who had presumed to invade him. On this occasion, all means were taken (in the Bonaparte-style) to impress on the minds of the enthusiastic Russians, that the two events were interwoven together by the hand of Providence itself.

The first severe affair which occurred in the advance of the allies, was one between the Bavarians under Gen. Wrede, and the French under Victor, near St. Drey; in

the commencement of which the French had some advantage; but, on the arrival of a Bavarian brigade, under Gen. Roy, the French were defeated with loss, and obliged to retreat towards Luneville. Thus the whole extensive plain, from the frontiers of Lorraine, Champagne, and Burgundy, to Paris, was laid open to the allies; who were allowed by the French themselves to possess an immense superiority of cavalry, and whose light troops are represented as "clouds of armed men."

On Thursday, Dec. 30, Napoleon, being seated on the throne, received the senate in a body; when count Lacedepede, the president, presented the following Address:—"Sire; The enemy has invaded our territory; he designs to penetrate to the centre of our provinces. The French, united in sentiment and interest, under a chief like you, will not suffer their energy to be cast down. Empires, like individuals, have their days of mourning and of prosperity; it is in great exigencies that great nations show themselves. No, the enemy shall not tear afunder this beautiful and noble France, which for these fourteen centuries has maintained itself with glory through such diversities of fortune, and which, for the interest of the neighbouring nations themselves, ought always to throw a considerable weight into the balance of Europe. We have for pledge your heroic firmness and the national honour. We will fight for our dear country between the tombs of our fathers, and the cradles of our infants. Sire, obtain peace by a last effort, worthy of yourself and of the French; and let your hand, so often victorious, let fall your arms, after having signed the repose of the world. This, sire, is the wish of France, the wish of the senate—this is the wish and want of the human race."

Napoleon replied—"I am sensible to the sentiments which you express towards me. You have seen, by the documents which I have caused to be laid before you, what I do for the sake of peace. I will make without regret the sacrifices implied by the preliminary basis which the enemy has proposed, and which I have accepted; my life has but one object, the happiness of the French. Meantime, Bearn, Alsace, Franche Comté, Brabant, are invaded. The cries of this part of my family rend my heart; I call the French to succour the French: I call the French of Paris, of Bretagne, of Normandy, of Champagne, and of the other departments, to the succour of their brethren. Shall we forsake them in their distress? Peace and the deliverance of our territory ought to be our rallying cry—at the sight of all this nation in arms, the enemy will fly, or will sign peace on the basis which he has himself proposed. *The question is now no more to recover the conquests we have made.*"

In this extremity, the French ruler was forsaken by almost his last ally, the king of Denmark; for at length that prince was induced to join the allies. (See p. 341.) On or about the 14th of January, three treaties were signed, viz. one between this country and Denmark, one between Denmark and Sweden, and a third with the three powers in conjunction. The following are the terms:—"All conquests to be restored, except Heligoland. Prisoners of war on both sides to be released. Denmark to join the allies with 10,000 men, if England will give a subsidy of 400,000l. Pomerania to be ceded by Sweden to Denmark, in lieu of Norway. Stralsund still to continue a depot for English produce. Denmark to do all in her power to abolish the slave-trade. England to mediate between Denmark and the other allies."

On the 25th of January, at seven in the morning, Bonaparte left Paris, *to which he was never to return!* He had been preceded, on the 20th, by Berthier; and on the 24th he a second time confided the regency, during his absence, to the empress Maria-Louisa; on which occasion she took the oath before him and in a council of princes, grand dignitaries, cabinet-ministers, and ministers of state. On the 23d, the officers of the national guard of Paris, in number 800, were presented to the emperor, in the saloon of marshals; on which occasion the follow-

ing

ing scene is described to have taken place:—"When his majesty passed on his way to mafs, he was faluted with unanimous shouts of *Vive l'Empereur*. On his return they were reiterated with new force. The officers, divided into legions, formed a vast circle, in the midft of which the emperor placed himfelf. Then appeared a fcene the moft affecting, the moft fublime. The emperor, addreffing himfelf to the officers of the national guard, told them, that a part of the French territory was invaded; that he was going to place himfelf at the head of his army; and that he hoped, with the affiftance of God, and the valour of his troops, to repulfe the enemy beyond the frontiers. At this moment his majesty's looks were tenderly fixed upon the empress and the king of Rome, whom his august mother carried in her arms; and his majesty added, *with a tremulous voice*, that he confided his wife and his fon to the love of his faithful city of Paris; that he gave it the higheft mark of his efteem, in leaving under its protection the objects of his deareft affections; that *he hoped his capital would not be polluted by the prefence of the enemy*; that however, if, in the midft of the grand manœuvres which were preparing, fome hordes of light troops dared to infult its barriers, he was fure that its brave inhabitants would not forget that their fovereign had confided its defence to them."—At that infant, it is added, "a thoufand voices refounded, a thoufand arms were raifed to fwear to defend the precious truft confided to a faithful people."

The national bank of France encountered difficulties amounting nearly to a ftoppage of payment.—It appears that, on the 18th of January, the directors afsembled in a general committee, to deliberate on the fituation in which the commerce of Paris now is; and in the report publifhed of their proceedings, it is affirmed, that they had in ready money fomewhat more than fourteen millions of francs, (about 600,000l.) but that "the eagernels which the holders of notes fhewed to come and require payment of them, would exhauft in a few days all the cash in the bank." They obferved, that the greateft part of their money was in gold; that gold was at a confiderable premium; and that this circumftance would naturally render the draining of the bank the more rapid, as the gold would infallibly difappear from circulation. Under thefe circumftances they refolved not to pay more than 500,000 francs (about 20,000l.) per day; and, in order to make the reftriction more effectual, the prefect of police had announced, by order of Bonaparte, "that no one could apply to the bank of France to change bank-notes, unlefs he were the bearer of a number which fhall have been delivered to him by the mayor of his quarter."

An engagement was fought on the 1ft of February, which lord Burgherth calls the battle of La Rothiere; the French, that of Brienne. The troops immediately engaged, on both fides, amounted to 70 or 80,000 men. The whole of the allied corps were placed, as a particular mark of confidence, under the command of marfhal Blucher; and Bonaparte commanded the French in perfon. The engagement commenced at twelve o'clock. Both armies occupied extended pofitions. The moft obftinate refiftance was experienced at the village of La Rothiere, where Bonaparte led on the young guards in an attack, and had a horfe fhot under him. At twelve at night victory crowned the valour of the allied troops, and the fkilful combinations and movements of their commanders. The French, defeated at all points, retreated in two columns upon Lefmont, Leflicourt, and Ronay: their lofs, which could not be afcertained, was fuppofed to be immense. Thirty-fix pieces of cannon, and four thoufand prifoners, were taken by the allies. The prince royal of Wirtemberg and general Wrede purfued the French; and general Guilay took Lefmont by affault.

The refult of the victory of La Rothiere was the immediate advance of the allied armies, which however were foon to receive a check. The following is an abftract of the official accounts.—Gen. d'Yorck attacked Chalons

on the 5th of February, which furrendered by capitulation, marfhal Macdonald retiring over the Marne in the direktion of Meaux; he had with him the corps of Sebafiani and Arrighi, befides his own. On the 6th, marfhal Blucher's head-quarters were at Sandron. On the 8th they were moved from Vertus to Etoges; Gen. Sacken being then at Montmirail, Gen. d'Yorck at Chateau Thierry, and Gen. Kleift at Chalons; the whole advancing upon the army of Macdonald, who was retiring, with 100 pieces of artillery. On the evening of the 8th, Blucher's head-quarters were again removed to Vertus, on the report of a Ruffian regiment having been attacked at Baye. The advanced pofts of d'Yorck from Dormant, and of Sacken from Montmirail, now reached as far as Chateau Thierry, and la Ferte fous Joare.—In the afternoon of the 10th, the Ruffian corps of Alfsuffe, being at Champaubert, was attacked by a very fuperior force of the French from Sezanne; and, after an obftinate refiftance, was compelled to retire, with confiderable lofs.

On the 11th, marfhal Blucher's head-quarters were at Bergeres. On that day the corps of Sacken and d'Yorck marched upon Montmirail againft the enemy. A fevere engagement enfued for feveral hours, both armies remaining in their pofitions. Gen. Sacken loft four guns. The hotteft part of the action was in the village of Marchais, which was taken and re-taken three times. The French were 30,000 ftrong, under Bonaparte. On the 12th, Sacken was at Chateau Thierry, and d'Yorck at Biffert; Marmont, with the fixth corps, at Etoges. On the fame day, marfhal Blucher, with the corps of Kleift and Kafsiewitz, were in pofition at Bergeres.

On the 13th, Blucher's head-quarters were at Champaubert. He had advanced from Bergeres to attack marfhal Marmont at Etoges, who had about 9 or 10,000 men. The French gradually retired, and feveral brisk attacks were made upon their rear, particularly by the Cofacs. The purfuit continued from Etoges to beyond Champaubert. The French bivouacked in front of Fromentieres. In the mean time Bonaparte marched upon Chateau Thierry, from whence generals d'Yorck and Sacken had retired behind the Marne. On the 14th, Marmont retired from Fromentieres to Janvillieres, where he was joined by Bonaparte, who had made a forced march in the night from Chateau Thierry, with the whole of his guards and a large body of cavalry. A very fevere action now took place. Marfhal Blucher's force being very inferior in numbers, and particularly in cavalry, his infantry was formed into fquares, and he determined on a retreat. The French made the moft defperate attacks of cavalry upon thefe fquares, but were received with fuch undaunted firmnefs, that not one of them was broken. After a very fevere and unequal conteft, carried on during a retreat of nearly four leagues, marfhal Blucher obferved a large corps of cavalry pofted on the chaulée in his rear near Etoges. He refolved to force his way through this obftacle, and, by opening a heavy fire of artillery and mufketry upon this cavalry, pofted in a folid mafs on the chaulée, he fucceeded in his object. Upon reaching Etoges towards night, he was affailed by a body of infantry, which had penetrated through by-roads upon his flanks and rear; but generals Kleift and Kafsiewitz forced their way through this obftacle alfo, and placed their corps for the night in the pofition of Bergeres. Gen. Blucher's whole lofs on thefe days is eftimated at 3500 men killed, wounded, and prifoners; that of the French is ftated to have been very great, as they were expofed to a tremendous fire of artillery, in which Blucher was fuperior. Blucher fubfequently retired to Chalons, where he was joined on the 16th by Sacken and d'Yorck. Part of Gen. Winzingerode's corps had carried Soiffons by affault, taking two generals and about 3000 men. Gen. Winzingerode was himfelf at Rheims. Counts Langeron and St. Priefft were rapidly advancing to join marfhal Blucher, whofe whole army was to unite at Chalons, to refume the offensive.

The town of Sens was taken by affault on the 11th, by  
the

the prince-royal of Wirtemberg, who immediately marched on Bray by Pont-sur-Yonne. On the 9th, count Hardegg attacked the rear of the French at Romilly and St. Hilaire; and, joined by Wittgenstein, he again attacked them near St. Aubin and Marnay, and drove them upon Nogent, part of which was occupied by count Hardegg on the 10th. Wittgenstein having advanced towards Pont-sur-Seine, general Wrede towards Bray, the French abandoned the left of the Seine, and destroyed the bridges, which were re-established by the allies; and Gen. Wrede advanced towards Provins. Gen. Wittgenstein crossing at Pont-sur-Seine, generals Bianchi and Guilay were at the same time marching on Montereau; and measures were taken to place the grand army on the left of the Seine, with the right at Mery and the left at Montereau, with the corps of generals Wrede and Wittgenstein, and of the prince-royal of Wirtemberg, at Provins and Ville-neuve.—On the 16th, dispositions were made (on receiving intelligence that Blucher had repulsed the corps opposed to him, and was advancing beyond Etoges) to remove the head-quarters to Bray, and the corps of Wrede and Wittgenstein by Nangis towards Melun; that of Gen. Bianchi pressing upon Fontainebleau.—Mr. Robinson (who brought the dispatches) was officially acquainted, on his road, at Troyes, that, on the 17th, Fontainebleau had been taken by counts Hardegg and Thurn, and general Platoff; that the enemy lost some guns and prisoners, and that the allied advanced posts were again pushed on towards Paris.

On the 18th Bonaparte attacked, with a large corps of cavalry, at Nangis, the advanced guard of count Wittgenstein's corps, under count Pahlen, and drove it back with considerable loss both of men and artillery. Prince Schwartzberg then withdrew his army behind the Seine. On the 19th the French made three desperate attacks upon the corps of the prince-royal of Wirtemberg, posted at Montereau, and occupying the bridge at that place. They were repulsed with loss: the prince of Wirtemberg took some cannon: late, however, in the evening the attack was renewed, and the French succeeded in obtaining possession of the bridge, and passed over a considerable part of the army.

In the mean time, a treaty had been concluded between Bonaparte and Ferdinand VII. king of Spain. The bearer of it to the Spanish government was the duke of San Carlos. He arrived at Madrid on the 4th of Jan. with a letter from Ferdinand, dated from Valence in France; in which, after announcing his own good health, and that of his uncle and brother, he expressed the satisfaction he felt with the sacrifices of the nation for his person, and its exertions in his behalf. He is farther made to praise the persevering spirit of the English, and the admirable conduct of lord Wellington, together with that of the Spanish generals and the allies. The treaty is dated Valence, Dec. 11, 1813; and is comprised in 15 articles. The places occupied by the French are to be restored in their present state. Ferdinand engages to maintain the integrity of Spain in all her possessions, particularly in those of Port Mahon and Ceuta. A military convention is to be concluded, whereby the English and French troops are to evacuate the peninsula at the same time. Napoleon and Ferdinand agree to maintain the maritime rights of Europe, such as they are said to have been settled by the treaty of Utrecht, and to have existed in 1792. All the Spaniards attached to Joseph are to be restored to their country. The garrison of Pamplona, together with the prisoners at Cadix, Corunna, &c. placed in the hands of the English, to be restored. Ferdinand to pay his father and mother 30 millions of rials annually; and, at the death of the father, two millions of francs to be continued to the mother.

The following extract from the Conciso, Spanish paper, shows that the Spaniards were not duped by the artifice thus laid to entrap them: "There is not a good Spaniard who does not desire the return of the unfortunate Ferdinand; but he wishes it for the good of his country, and

not to expose it to greater evils than those it has already suffered. Ferdinand must return in the way in which Spaniards wish it, and not as Bonaparte means it. He must come to make us happy, and not to be the cause (though the innocent one) of new calamities. Happy will be the day on which Ferdinand, restored to his loyal subjects, may be thus addressed: Here is your throne, preserved by the loyalty of your subjects; here is your crown, ransomed by the blood of Spaniards; here is your sceptre, which Spanish constancy replaces in your hands; here is your royal robe, tinged with the blood of thousands of victims who have fallen that you might preserve it. Never forget that to the Spanish people you owe every thing! Never forget that you are come to be the chief of a nation, the monarch of subjects, who have abolished the vestiges of despotism."

The Cortes came, on the 2d of February, to a final determination, respecting the mode of receiving Ferdinand VII. By a decree, consisting of 14 articles, it is resolved, that Ferdinand, on entering the territories of Spain, must immediately swear to observe the provisions of the new constitution. He is to be accompanied by no foreign force, by no renegade Spaniards, by no foreigners of any description, either in the capacity of domestics, or any other.

It was on this occasion noticed, with great concern, that two parties are gradually forming in Spain; one the advocates of a despotic monarchy, the other the admirers of the new constitution. Reyna, the deputy for Seville, declared at this sitting of the Cortes, "that, when Ferdinand VII. was born, with him was born the right of ruling Spain despotically; and that, when he should return, the constitution would be null and void." The deputies and the people in the galleries were so indignant, that Reyna was driven from his place, and a process instituted against him.

Ferdinand has however now reached his father's kingdom under better auspices. He arrived at Valencia in Spain on the 16th of April, and is probably before this time at Madrid.

The present was thought a favourable opportunity for endeavouring to ascertain how the minds of the French people were affected towards the Bourbons. The experiment was attended with the happiest result. The count d'Artois, brother to the king, left Basle on the 19th of February, and advanced into Franche Comté. He immediately published the following proclamation:—"We, Charles Philip of France, Son of France, Monsieur, Count d'Artois, Brother to the King, and Lieutenant-general of the Kingdom; to all Frenchmen, greeting, Frenchmen! The day of your redemption is arrived; the brother of your king is in the midst of you—he comes to rear again the ancient banner of the lilies in the heart of France, and to announce to you the return of happiness and peace, and the restoration of law and public liberty under a protecting government. No conqueror, no war, no confiscation, no consolidated taxes; any longer! At the voice of your sovereign, your father, may your misfortunes be wiped off by hope, your errors by forgiveness, and your dissensions by the union to be effected, for which he is your security. He burns with desire to fulfil the promises he has made to you, which he this day solemnly renews; and by his love and benevolence to render happy the moment, which, bringing him back to his subjects, restores him to his children. *Vive le roi!*"

The count was received in all the French towns and villages with acclamations, and with cries of *Vive le roi Louis XVIII. Vivent les Bourbons*. On arriving at Vesoul, the population of the town, about 5000 souls, came out to meet him.

But it was at Bourdeaux that the first official and important manifestation of this happy change took place.—In consequence of the defeat of Soult by lord Wellington at Orthes on the 27th of February, general Beresford was ordered to push forward to attack Bourdeaux; but he

there met with a reception as gratifying as it was unexpected. As soon as his approach, at the head of the allied troops, was known at Bourdeaux, Mr. Lynch, the mayor, advanced on the way to meet him, attended by the constituted authorities, the principal inhabitants, and an immense multitude, in carriages, on horseback, and on foot. In his capacity of mayor, he was decorated with the insignia of Bonaparte's government; but, on his drawing near to marshal Beresford, he tore them and trampled them under foot. The white cockade was instantly substituted for them. This conduct was greeted with universal acclamation, and the mayor immediately addressed marshal Beresford in a prepared speech. He then, at the head of the procession, conducted the marshal into the city. This was on the 12th of March. On the day following, his royal highness the duke of Angoulême, son of the count d'Artois, and married to the daughter of Louis XVI. approached the city of Bourdeaux. He was met at two leagues' distance by a troop of 200 young men of the first families in the neighbourhood, mounted on horseback, and adorned with white cockades and sashes. Bourdeaux, it is to be observed, is the second city in France for wealth, size, and numbers; and has a population of 112,800 souls.

*Murat*, Bonaparte's brother-in-law, and his king of Naples, like other rats, now thought fit to forsake a falling house, in hopes of preserving his kingship. A proclamation, issued by him on the 17th of February, states his having joined the allies; that he had given up the three islands opposite Naples, and his whole fleet, for which he was to receive sufficient compensation; and that he was going to take possession of the south of Italy, as far as the right bank of the Po. Immediately after this proclamation, the Neapolitan troops took possession of Rome in the name of the allies. The treaty of peace between the allied powers and Murat of Naples was ratified in that city on the 30th. The most important article is, that the naval and military force of Naples is to be commanded by British officers. Murat, soon after he joined the allies, set at liberty all the priests who were imprisoned in Rome for having refused to take the oath of allegiance to Bonaparte.

After the defeats which two columns of the allied army had suffered up to the 19th of February, their advanced posts, which had occupied Fontainebleau, fell back to Troyes, to which city they were followed, on the 23d of February, by Napoleon. A general battle was expected; but they evacuated Troyes, and retreated beyond Bar-sur-Aube, even to Chaumont. Blucher, in the mean time, endeavoured to join Schwartzberg at Troyes; but, not arriving in time, he was again attacked by Napoleon on the 28th of February, driven across the Aube, and followed to Sezanne, Meaux, and Soissons, across the Aisne to Laon, a strong position, in which he was joined by 40,000 men under Winzengerode and Bulow from Flanders.

In Laon Blucher was attacked, on the 9th of March, by the whole army of Napoleon, who continued the attack through the 10th. On the 9th, the French were repulsed with the loss of 45 pieces of cannon, with tumbrils, baggage, and many prisoners. The city of Laon is situated on an elevated plateau, with deep shelving banks, which command an extensive plain around; the town covers the greater part of the plateau; the remainder is crowned by an old castle, and by several windmills built on high terrace-walls. General Bulow's army occupied this position; the remainder of Blucher's army was posted on the plain below, to the right and left of the town, fronting towards Soissons; and the cavalry was in reserve in the rear. Before day-light in the morning the French made their attack; and, under cover of a thick fog, which concealed all their movements, obtained possession of the villages of Semilly and Ardon, close under the town, and which may be regarded as its suburbs. The musketry reached the walls of the town, and continued

without intermission until about eleven o'clock, when the fog began to disperse. The French were then driven from Semilly; and Blucher, the moment he could observe any thing of the enemy's position, ordered the cavalry from the rear to advance, and turn his left flank. General count Woronzoff, who was on the right of the field-marshal's position, advanced at the same time with his infantry, pushed forward two battalions of yagers, which drove in the enemy's posts, sustained a charge of cavalry, and maintained themselves in an attitude to keep the left of the enemy in check until the cavalry could advance. Blucher, at the same time, directed the advance of a part of general Bulow's corps against the village of Ardon, from which the French, after sustaining a fire for about half an hour, were compelled to retreat. Whilst the cavalry was taking a circuit round from the rear, and at about two o'clock in the afternoon, the enemy was observed to be advancing a column of sixteen battalions of infantry, with cavalry and artillery, along the *chaussée* from Rheims. General d'Yorck was directed to oppose him, and general baron Sacken ordered to general d'Yorck's support. It was here the battle became most general and decisive. The French opened a formidable battery of at least 40 or 50 pieces of artillery, and advanced with a confidence from which they must have arrogated to themselves every success. They formed a column of attack, and were moving forward with a *pas de charge* to the village of Althies, when prince William of Prussia, who was advancing to the village at the same time, met them half-way, and overthrew them. They then began a retreat, which soon became a flight. Eight pieces of artillery, with horses and every thing belonging to them, were immediately taken, and successively twenty-two pieces more. They were pursued as far as Corbeny, losing baggage, prisoners, &c. in the way; and the pursuit continued during the whole of the night.

On the right, no particular advantages were gained beyond the expulsion of the French from the villages they had gained possession of in the morning. General count Woronzoff, towards the close of the day, again attacked with the greatest vigour; but he had large masses opposed to him, and the ground presented difficulties against the active co-operation of his cavalry.

The attack continued during the whole of the next day. The plain below the city of Laon is interspersed with villages and small woods, which became the scene of very warm and obstinate contests. A wood near the village of Clacy, on the right of the position, was taken and retaken four or five different times, and remained finally in possession of the allied troops. The infantry of general Winzengerode's corps; under the command of general count Woronzoff, were the troops engaged there; in the centre and left of the position the French maintained themselves; and, at about half an hour before sunset, threw forward a body of skirmishers, supported by two battalions of infantry (the rest of their army remaining in reserve), and attacked the village of Semilly close under the walls of the town; but a battalion of Prussians threw itself in the road, and, supported by the fire of the troops on each flank, compelled them to retire in disorder, and with loss, towards Chavignon, on the road to Soissons.

While these affairs were passing before Laon, St. Priest, another Russian general, captured Rheims; and Schwartzberg, to whom the road to Paris apparently lay open, took a lateral route towards Chalons, crossing the Aube at Arcis, Pont, and Nogent, and bearing with his left upon Paris. Napoleon, on his return to Soissons, marched to the relief of Rheims, which he recaptured on the 11th, taking, according to his bulletin, 5000 prisoners and 22 pieces of cannon, and dispersing St. Priest's corps. The next French papers announced the subsequent occupation of Chalons, after some advantages; and, on Napoleon's moving towards the Aube, the allies recrossed that river, and retreated again towards Bar-sur-Aube and Chaumont.

Thus it is evident that Bonaparte had need of all his generalship, and all his activity, to repel alternately the different armies that were advancing against him in different directions. His old comrade Bernadotte, however, who might have turned the scale suddenly against him, remained quiet at Liege, displeas'd, as it is said, that he was not permitted to send a plenipotentiary to Chatillon, where the congress for negotiating peace had been sitting ever since the 5th of February.

On the 18th of March the conferences were broken off, as we were informed by a letter from lord Castlereagh, dated Bar-sur-Aube, on the 22d; and a few days after, the allies published the following Declaration:

"The allied powers owe it to themselves, to their people, and to France, as soon as the negotiations at Chatillon are broken off, publicly to declare the reason which induced them to enter into negotiations with the French government, as well as the causes of the breaking off of the negotiations.

"Military events, to which history can produce no parallel, overthrew in the month of October last the ill-constructed edifice, known under the name of the French Empire—an edifice erected on the ruins of states lately independent and happy; augmented by conquests from ancient monarchies, and held together at the expense of the blood, of the fortune, of the welfare, of a whole generation. The allied sovereigns, led by conquest to the Rhine, thought it their duty to proclaim to Europe anew, their principles, their wishes, and their object. Far from every wish of domination or conquest—animated solely by the desire to see Europe restored to a just balance of the different powers—resolved not to lay down their arms till they had obtained the noble object of their efforts—they made known the irrevocableness of their resolution by a public act, and they did not hesitate to declare themselves to the enemy's government in a manner conformable to their unalterable determination. The French government made use of the frank declarations of the allied powers to express inclinations to peace. It certainly had need of the appearance of this inclination, in order to justify, in the eyes of its people, the new exertions which it did not cease to require. Every thing, however, convinced the allied cabinets that it merely endeavoured to take advantage of the appearance of a negotiation, in order to prejudice public opinion in its favour; but that the peace of Europe was very far from its thoughts. The powers, penetrating its secret views, resolved to go and conquer, in France itself, the long-desired peace. Numerous armies crossed the Rhine; scarcely were they past the frontiers, when the French minister for foreign affairs appeared at the outposts. All the proceedings of the French government had henceforth no other object than to mislead opinion, to blind the French people, and to throw on the allies the odium of all the miseries attendant on an invasion.

"The course of events had given the allies a proof of the full power of the European league; the principles which, since their first union for the common good, had animated the councils of the allied sovereigns, were fully developed; nothing more hindered them from unfolding the conditions of the re-construction of the common edifice; these conditions must be such as were no hindrance to peace after so many conquests. The only power calculated to throw into the scale indemnifications for France, England, spoke frankly respecting the sacrifices which it was ready to make for a general peace. The allied sovereigns were permitted to hope that the experience of late events would have had some influence on a conqueror exposed to the observation of a great nation, which was for the first time witness in the capital itself to the miseries he had brought on France. This experience might have demonstrated that the support of thrones is principally dependent on moderation and probity. The allied powers, however, convinced that the trial which they made ought not to endanger the military operations, saw

that these operations must be continued during the negotiations. The experience of the past and afflicting revolutions showed them the necessity of this step. Their plenipotentiaries met those of the French government.

"Meantime the victorious armies approached the gates of the capital. The government took every measure to prevent its falling into an enemy's hands. The plenipotentiary of France received orders to propose an armistice, upon conditions which were conformable to those which the allies themselves judged necessary for the restoration of general peace. He offered the immediate surrender of the fortresses in the countries which France was to give up—all on condition of a suspension of military operations.

"The allied courts, convinced by twenty years experience that in negotiations with the French cabinet it was necessary carefully to distinguish the apparent from the real intention, proposed, instead of this, immediately to sign preliminaries of peace. This measure would have had for France all the advantages of an armistice, without exposing the allies to the danger of a suspension of arms. Some partial advantages, however, accompanied the first motions of an army collected under the walls of Paris, composed of the flower of the present generation, the last hope of the nation, and the remainder of a million of warriors, who, either fallen on the field of battle or left on the way from Lisbon to Moscow, have been sacrificed, for interests with which France had no concern. Immediately the negotiations at Chatillon assumed another appearance; the French plenipotentiary remained without instructions, and was away instead of answering the representations of the allied courts. They commissioned their plenipotentiaries to give in the *projet* of a preliminary treaty, containing all the grounds which they deemed necessary for the restoration of a balance of power, and which a few days before had been presented by the French government itself, at a moment, doubtless, when it conceived its existence in danger. It contained the groundwork for the re-establishment of Europe. France, restored to the frontiers, which under the government of its kings had ensured to it ages of glory and prosperity, was to have, with the rest of Europe, the blessings of liberty, national independence, and peace. It depended absolutely on its government, to end by a single word the sufferings of the nation—to restore to it, with peace, its colonies, its trade, and the renewal of its industry. What did it want more? The allies had offered, with a spirit of pacification, to discuss its wishes upon the subject of mutual convenience, which should extend the frontiers of France beyond what they were before the wars of the revolution.

"Fourteen days elapsed without any answer's being returned by the French government. The plenipotentiaries of the allies insisted on the fixing of a day for the acceptance or rejection of the conditions of peace. They left the French plenipotentiary the liberty to present a *contre-projet*, on condition that this *contre-projet* should agree in spirit and in its general contents with the conditions proposed by the allied courts. The 10th of March was fixed by the mutual consent of both parties. This term being arrived, the French plenipotentiary produced nothing but pieces, the discussion of which, far from advancing the proposed object, could only have caused fruitless negotiation. A delay of a few days was granted at the desire of the French plenipotentiary. On the 15th of March he at last delivered a *contre-projet*, which left no doubt that the sufferings of France had not changed the views of its government. The French government, receding from what it had itself proposed, demanded, in a new *projet*, that nations which were quite foreign to France, which by a domination of many ages could not be amalgamated with the French nation, should now remain a part of it; that France should retain frontiers inconsistent with the fundamental principles of equilibrium, and out of all proportion with the other great powers of Europe; that it should remain master of the same positions and points of aggression, by means of which its government, to the misfortune

fortune of Europe and that of France, had effected the fall of so many thrones, and caused so many revolutions; that members of the family reigning in France should be placed on foreign thrones; the French government, in short, that government which for so many years has sought to rule no less by discord than by force of arms, was to remain the arbiter of the external concerns of the powers of Europe.

"By continuing the negotiations under such circumstances, the allies would have neglected what they owe to themselves—they would from that moment have deviated from the glorious goal they had before them—their efforts would have been turned against their people. By signing a treaty upon the principles of the French project, they would have placed their arms in the hands of the common enemy; they would have betrayed the expectation of nations, and the confidence of their allies.

"It is in a moment so decisive for the welfare of the world that the allied sovereigns renew the solemn engagement, not to lay down their arms till they shall have attained the great object of their union. France has to blame its government alone for its sufferings. Peace alone can heal the wound which a spirit of universal domination, unexampled in history, has produced. **THIS PEACE SHALL BE THE PEACE OF EUROPE**—no other can be accepted. It is at length time that princes should watch over the welfare of the people without foreign influence; that nations should respect their mutual independence; that social institutions should be protected from daily revolutions, property respected, and trade free. All Europe has absolutely the same wish to make France participate in the blessings of peace—France, whose dismemberment the allied powers neither can nor will permit. The confidence in their promises may be found in the principles for which they contend. But whence shall the sovereigns infer that France will take part in the principles that must fix the happiness of the world, so long as they see that the same ambition which has brought so many misfortunes on Europe, is still the sole spring that actuates the government? that, while the French blood is shed in torrents, the general interest is always sacrificed to private? whence under such circumstances should be the guarantee for the future, if such a desolating system found no check in the general will of the nation? Then is the peace of Europe insured, and nothing shall in future be able to disturb it."

Napoleon never put forth any declaration in answer to this, in order to throw the odium of breaking off the negotiations upon his enemies; and, as the papers relating to the proceedings at Chatillon are not, and probably will not be, laid before the British parliament, we cannot pretend to say upon what particular points the French emperor was so unreasonable as they say he was. It is probable that he hoped, from his usual good fortune, to recover himself by some lucky stroke; and expected that at any rate his father-in-law would not abandon him.

On the 19th of March, immediately after the rupture of the negotiations, the French army moved upon Arcis, behind which the corps commanded by Gen. Wrede was posted. The allies under the prince Schwartzberg, viz. the 3d, 4th, and 6th, corps, under the prince-royal of Wirtemberg, and the 5th under Wrede, with the whole reserve, were concentrated on the Aube, near Pougy and Arcis, and a general attack was made by the allies on the 20th, in which the French were defeated at all points, with great loss, and Arcis was retaken. At this juncture, Napoleon formed the desperate and extraordinary plan of passing between the armies of the allies, and of striking at their communications with the Rhine, intending at the same time to liberate the garrison of Metz. For this purpose he moved by Chalons on Vitry and St. Dizier, his head-quarters being on the 22d at Obcombe, between the two latter places. Vitry was held by a small Prussian garrison, which refused to surrender. The extent and nature of this project was fully ascertained on the 23d. A movement was immediately resolved upon Vitry, to secure

that place, and to endeavour to cut off the corps of marshal Macdonald, said to be on the left bank of the Marne, between Chalons and Vitry, to operate a junction with the troops under general Winzingerode, which had moved upon Chalons, and to unite both armies.

The emperor of Russia and the king of Prussia left Troyes the 20th, and had their quarters at Pougy. The emperor of Austria moved his quarters on the 19th to Bar-sur-Seine, with all the cabinet-ministers, and came on the 21st to Bar-sur-Aube. On the evening of the 23d, the army broke up from Pougy; and, having marched by Ramerne and Dompierre, assembled at day-break near Sommepeuis; but the corps of marshal Macdonald had crossed the Marne the preceding day, before it could be intercepted. —On the 24th, the junction with Gen. Winzingerode was effected at Vitry and Chalons; and the Silesian army came within reach of co-operating with the grand army. On the 25th, Gen. Winzingerode, with his own and several other corps of cavalry, being left to observe the enemy, the united allied force began its movement by rapid and continued marches on Paris.

The corps of marshals Mortier and Marmont were found at Vetry and Soumefous, and were driven back with loss, and pursued in the direction of Paris. On the 25th, the emperor of Russia, the king of Prussia, and prince Schwartzberg, were at Ferre Champenoise, and on the 26th at Treffaux. Field-marshal Blucher was at Etoges on the 26th, and continued to march on Meaux by Montmirail. In the course of that week not less than 100 cannon and 9000 prisoners were taken, with several general officers. At the affair near Ferre Champenoise, colonel Rapatel, late aide-de-camp to general Moreau, was killed, while exhorting the French to surrender; and colonel Neil Campbell, who had been with the advanced Russian corps in all the affairs since his return from the siege of Dantzic, was severely wounded, having been run through the body by a Cosak, who mistook him for an enemy.

On the 27th, the head-quarters of the allies were at Coulomiers, and the Silesian army reached Meaux. On the 28th, head-quarters at Quincy. Bridges were prepared at Meaux and Triport. The Silesian army advanced to Claye, in front of which village a severe action took place, in which the French were repulsed. On the 29th, the emperor of Russia, the king of Prussia, and prince Schwartzberg, crossed the Marne at Meaux; and the French, being still in possession of the woods near Ville Parisis and Bondi, were attacked and driven beyond Bondi towards Pantin; the head-quarters were established at the former of those places. Field-marshal Blucher the same day marched in two columns to the right, pointing upon Montmartre through Mory, Draucey, and St. Denis.

It appears that, during the night of the 29th, the corps of marshals Mortier and Marmont entered Paris. The garrison, which previously was assembled in it, was composed of a part of general Gerard's corps, under general Compans, and a force of about 8000 regular troops and 30,000 national guards, under general Huin, the governor of the town. This force, under the command of Joseph Bonaparte, took up a position, the right on the height of Belleville occupying that town, the centre on the canal de l'Ourque, the left towards Neuilly. This position was strong, from the intersected nature of the ground on its right. The heights of Montmartre commanded the plain in rear of the canal of l'Ourque, and added strength to the position of the French.

The disposition of attack for the 30th was, the prince-royal of Wirtemberg, forming the left, marching upon Vincennes; general Reissky upon Belleville; the guards and reserves upon the great chaussée leading from Bondi to Paris. Marshal Blucher was to march upon the chaussées from Soissons, and attack Montmartre. All the attacks succeeded: Gen. Reissky possessed himself of the heights of Belleville; the troops under his orders particularly distinguished themselves in the different attacks made by them. The village of Pantin was carried at the point

of the bayonet; the heights above Belleville were carried in the most gallant manner by the Prussian guards; these corps captured 43 pieces of cannon, and took a great number of prisoners.

Nearly at the time these successes had been obtained, marshal Blücher commenced his attack upon Montmartre. The regiment of Prussian black hussars made a most brilliant charge upon a column of the enemy, and took twenty cannon. At the moment of these decisive advantages, a flag of truce was sent from marshal Marmont, intimating a desire to receive any propositions that it might have been intended to make to him, by a flag of truce which had previously been refused admittance. An armistice was also proposed by him for two hours; to obtain which, he consented to abandon every position he occupied without the barriers of Paris. Prince Schwartzberg agreed to these terms. Count Nesselrode on the part of the emperor of Russia, and count Paar from prince Schwartzberg, were sent into the town to demand its surrender.

It was agreed, that marshals Marmont and Mortier should evacuate Paris, with their corps, on the 31st of March, at seven in the morning;—that all the magazines, &c. should be left in their proper state;—that all the national guards should be kept on foot at Paris, or disarmed, as it might be arranged; that the wounded left at Paris should be prisoners; and that the city should be recommended to the generosity of the allies.

It appears from the French papers, that on the night of the 28th Bonaparte came *incog.* and travelled post, to the very gates of Paris; where he had a secret interview with a general from the city, and endeavoured to concert means for forming an army out of the wrecks of the different corps which had been beaten and dispersed in various directions. At dawn of day he returned post-haste to his army.

Meantime the eyes of most people were turned upon the empress. Many proposals were made to this princess to leave Paris, and to throw herself upon the protection of the allies; but she rejected them all, and declared at last, that she desired to be spared all persuasion to this and similar steps, as she was firmly resolved to share the fate of her husband, whatever it might be. She abided by this resolution; and, because Napoleon wished that she should not leave the city except in case of the utmost necessity, she remained there as long as possible; and it is therefore not true that she left the city by Napoleon's order. As the allies approached nearer, every hour the disorder and confusion increased. The real adherents of Napoleon showed more and more that they knew not what to do. Their councils and orders, partly contradictory, partly impracticable, only increased the confusion. As the coming of the allies was wished or feared, various reports for or against the probability of it were spread. A crowd of people assembled on the Place Vendôme, and were preparing to pull down Napoleon's statue, when they were deterred by another swarm, who asserted they had heard that the emperor would enter the city in the evening as conqueror. On the 28th of March a disinterested spectator might foresee what would happen. Already white cockades were distributed, and the adherents of Napoleon diminished more and more. Those, however, who either out of inclination or interest still adhered to him, ardently wished that the empress might not leave Paris, as they hoped to obtain, by her means, a reconciliation with the emperor of Austria, and through him with all the rest of the allies; but the majority, who were already gained for Louis XVIII. endeavoured to obviate this resource. To this end they mixed among the crowd of people, whom they strove to convince that any mediation in which the empress might succeed would prolong Napoleon's sway, and with that the misery of France. The people flocked to the palace of the empress, and uttered threats if she did not withdraw. This princess had now no choice, and she left Paris (not on the 28th of March,

Vol. XIII. No. 913.

as was said by some, but) on the 30th, not twenty-four hours before the allies entered it.

In the course of the 29th and 30th, the battles which decided the fate of France and of Europe were fought. Bonaparte had moved his army from Troyes by Sens, towards Fontainebleau. He arrived at Fromont on the 30th; and would have been in Paris, had it not been in possession of the allies. On hearing what had occurred, he retired to Corbeil; and from thence collected his army in the neighbourhood of Fontainebleau, which could not amount to more than forty or fifty thousand men. There it was expected he would make a desperate stand; and accordingly a large part of the allied army was detached to observe his motions.

On the morning of the 31st, the emperor Alexander, with the king of Prussia, and prince Schwartzberg as representative of the emperor of Austria, marched into Paris. They were received by all ranks of the population with the warmest acclamations. The windows of the best houses were filled by well-dressed persons waving white handkerchiefs and clapping their hands; the populace, intermixed with many of a superior class, were in the streets pressing forward to see the emperor, and to endeavour to touch his horse. The general cry was, "Vive l'Empereur Alexandre; Vive notre Libérateur; Vive le Roi de Prusse." Very many persons appeared with white cockades, and there was a considerable cry of "Vive Louis XVIII. Vivent les Bourbons;" which gradually increased.

The enemies became the saviours of the city. The three chiefs, before they entered any house, remained in a square, to see their troops file off before them, to make discipline be observed, and prevent all disorders. At one o'clock, these great military and civil cares were fulfilled. The chiefs of the three armies entered the house of Talleyrand prince of Benevento. The emperor of Russia went to lodge in the house of Talleyrand; the king of Prussia in that of M. Beauharnois; prince Schwartzberg at general Sebastiani's.—At three in the afternoon, the emperor of Russia published the following Declaration: "The armies of the allied powers have occupied the capital of France. The allied sovereigns receive favourably the wish of the French nation. They declare, that, if the conditions of peace ought to contain stronger guarantees when the question was to bind down the ambition of Bonaparte, they may be more favourable, when, by a return to a wise government, France herself offers the assurance of this repose. The sovereigns proclaim in consequence, that they will no more treat with Napoleon Bonaparte, nor with any of his family; that they respect the integrity of ancient France, as it existed under its legitimate kings; they may even do more, because they profess it as a principle, that, for the happiness of Europe, France must be great and strong. That they will recognise and guarantee the constitution which France shall adopt. They therefore invite the senate to name immediately a provisional government, which may provide for the wants of the administration, and prepare a constitution which shall suit the French people. The intentions which I have just expressed are common to all the allied powers.

ALEXANDER."

The conduct of the allied princes on this occasion was really noble. Their own policy, it is true, required what they have done; and perhaps a natural sense of the greatness and power of the nation whose metropolis they were entering helped to confirm it; but it is seldom that princes, who have been exasperated by an enemy's conduct, can restrain their passions in the hour of conquest; and the calm and reasonable proceedings of the Russian and Prussian sovereigns, in securing the peace and property of the city after so many temptations and examples to the contrary, do infinite honour to their characters, and cast back upon the head of their enemy all the mortifications he had endeavoured to heap upon the one, and had actually heaped upon the other. Any punishment that could have been inflicted on him, without

5 B.

wantonly

wantonly destroying others, might have been put in effect; but to visit the helpless of all ages, sexes, and conditions, with fresh wretchedness and bloodshed, after all they have suffered from the revolution, and from the faults of their despotic masters, legitimate and illegitimate, was a work of barbarous supererogation, from which, we see, even soldiers shrunk in the hour of victory, and of which, let us hope, the advisers in this country are now well ashamed. The example will not be lost on future occasions. History will remember the just princes, who knew how to separate a bad master, though he had bitterly offended them, from the people who had had the misfortune to be under a succession of bad masters; and the new authorities in Paris, when addressing the two sovereigns, may tell them, in the words of the poet of chivalry, that they have conferred a favour, not only on the Parisians, but on every city and country in the civilized world:

Dico, salvando voi questa cittade,  
V' obbligate non solo i Parigini,  
Ma d'ogni intorno tutte le contrade.

The subsequent conduct of these monarchs has admirably kept pace with the outset; and it will be recorded as not among the least singular events of our extraordinary times, that, under the auspices of two northern despots, then present with their victorious armies, the authorities of the most brilliant state in the south of Europe were allowed and even encouraged to set up their own form of government, and to make it as free and liberal as they chose.

Accordingly, the next day, April 1, at half after three, the senate met by an extraordinary convocation, under the presidency of Talleyrand, when the latter addressed them in a speech in which he designated the people as "forsaken;" and, after proposals from several members, it was decreed that a Provisional Government should be formed, consisting of five persons, with Talleyrand himself at their head. An address also was recommended to be made to the people; and it was to be laid down as principles in this address, that the Senate and Legislative Body should be integral parts of the intended Constitution—that the army, as well as the retired officers and soldiers, should retain their ranks, honours, and pensions—that the public debt should be inviolable, that the sale of the national domains should be irrevocably maintained, that no Frenchman should be made answerable for the public opinions which he might have expressed, and that the liberties of worship, of conscience, and of the press, should be proclaimed; the latter to be subject to the laws. The sitting adjourned for some hours only, and was resumed at nine in the evening, when the signatures were put to the proces verbal of the day. They present us with a number of well-known names, which will raise curious emotions and recollections: among them are Garat, Gregoire, Roger Ducos, Schimmelpenninck, and Volney.

On the succeeding day, the 2d of April, another meeting took place at nine in the evening, when the deposition of Bonaparte, together with the forfeiture of all right to the crown by his family, was announced to the members of the Provisional Government in a letter from the president. The same day appeared an Address to the French Armies, speaking with great bitterness of the calamities which they had suffered through the ambition of Bonaparte, and calling upon them to join the new order of things. The *Moniteur* was at the same time declared to be the only official journal.

The next thing we have to notice is an address made by the emperor Alexander to the senate, who waited upon him the same evening, and to whom, in consequence, he said, of the resolutions they had taken that day, he granted the restoration of all the French prisoners in Russia, amounting, it is supposed, to nearly 200,000 men. This is another of those steps, in which policy and well-tempered feeling equally coincide, and which were greater blows to Napoleon than all the severe hostilities they could

have put in practice. The emperor repeated the sentiments that were put forth by the declaration at Frankfurt; saying, that he made war, not upon the French, but upon a man who had wantonly aggressed him; and that it was "wise and just to give France strong and liberal institutions, conformable to the present state of knowledge." His majesty is resolved to surprise as well as please us every way—both as a Russian and as an absolute monarch. He deserves to be the king of a free people.

The following decree was issued by the Provisional Government on the 2d of April.—1. That all the emblems, ciphers, and arms, which have characterized the government of Bonaparte, shall be suppressed and effaced, wherever they exist. 2. That this suppression shall be executed exclusively by persons delegated by the authority of the police, or the municipality, without the zeal of individuals assisting in it, or preventing it. 3. That no address, proclamation, public journal, or private writing, shall contain injurious expressions against the government overthrown, the cause of the country being too noble to adopt such means!

On the 3d of April, prince Schwartzberg wrote a letter to marshal Marmont, duke of Ragusa, inviting him to accede to the decree by which Napoleon Bonaparte is declared to have forfeited the throne, and to pass with his troops under the new government. M. Marmont, in his reply to the prince, expresses his willingness to contribute to the interests of France, which have ever been his first wish, but requires as a guarantee—"That all troops quitting the standard of Napoleon Bonaparte shall have leave to pass freely into Normandy; and that, if the events of the war shall place Bonaparte a prisoner in the hands of the allies, the prince shall guarantee his life and safety, and that he shall be sent to a country chosen by the allied powers and the French government."—In reply to this letter, prince Schwartzberg accedes to the demand of a guarantee, promises life and safety to Napoleon Bonaparte, and compliments the marshal upon the generosity of his character. Marshal Marmont then passed with his corps of 12,000 men within the lines of the allies.—Thus did this general, by his prudent and noble conduct, mainly contribute, not only to the preservation of Paris, but to the safety of Napoleon himself.

The Provisional Government lost no time in completing its work. On the 6th of April, the Conservative Senate, deliberating upon the Plan of Constitution presented to it by the Provisional Government in execution of the Act of the Senate of the 1st, after having heard the Report of a Special Commission of Seven Members, decreed the following CHARTER OF CONSTITUTION; which, whether it shall hereafter become, as intended, the fundamental law of France, or not, we think very worthy to remain on record, and shall therefore present it to our readers.

Article 1. The French government is monarchical, and hereditary from male to male, in order of primogeniture.

2. The French people call freely to the throne of France, Louis Stanislaus Xavier de France, brother of the last king, and after him the other members of the house of Bourbon, in the usual order.

3. The ancient nobility resume their titles; the new preserve their's hereditarily. The legion of honour is maintained with its prerogatives; the king shall fix the decoration.

4. The executive power belongs to the king.

5. The king, the senate, and the legislative body, concur in the making of laws. Plans of laws may be equally proposed in the senate and in the legislative body; those relating to contributions can only be proposed in the legislative body. The king can invite equally the two bodies to occupy themselves upon objects which he deems proper. The sanction of the king is necessary for the completion of a law.

6. There are 150 senators at least, and 200 at most. Their dignity is immoveable, and hereditary from male

to male, in the order of primogeniture. They are named by the king. The present senators, with the exception of those who should renounce the quality of French citizens, are maintained, and form part of this number. The actual endowments of the senate and the senatorships belong to them; the revenues are divided equally between them, and pass to their successors; in case of the death of a senator without direct male posterity, his portion returns to the public treasure. The senators who shall be named in future cannot partake of this endowment.

7. The princes of the royal family, and the princes of the blood, are by right members of the senate. The functions of a senator cannot be exercised until the person has attained the age of twenty-one years.

8. The senate decides the cases in which the discussion of objects before them shall be public or secret.

9. Each department shall send to the legislative body the same number of deputies it has already sent thither. The deputies who sit in the legislative body at the period of the last adjournment shall continue to sit till they are replaced. All preserve their pay. In future they shall be chosen immediately by the electoral bodies, which are preserved, with the exception of the changes that may be made by a law in their organization. The duration of the functions of the deputies to the legislative body is fixed at five years. The new election shall take place for the session of 1816.

10. The legislative body shall assemble of right each year on the 1st of October. The king may convoke it extraordinarily; he may adjourn it; he may also dissolve it; but in the latter case another legislative body must be formed, in three months at the latest, by the electoral colleges.

11. The legislative body has the right of discussion. The sittings are public, unless in cases where it chuses to form itself into a general committee.

12. The senate, legislative body, electoral colleges, and assemblies of cantons, elect their president from among themselves.

13. No member of the senate, or legislative body, can be arrested without a previous authority from the body to which he belongs. The trial of a member of the senate or legislative body belongs exclusively to the senate.

14. The ministers may be members either of the senate or legislative body.

15. Equality of proportion in the taxes is of right; no tax can be imposed or received unless it has been freely consented to by the legislative body and the senate. The land-tax can only be established for a year. The budget of the following year, and the accounts of the preceding year, are presented annually to the legislative body and the senate, at the opening of the sitting of the legislative body.

16. The law shall fix the mode and amount of the recruiting of the army.

17. The independence of the judicial power is guaranteed. No one can be removed from his natural judges. The institution of juries is preserved, as well as the publicity of trial in criminal matters. The penalty of confiscation of goods is abolished. The king has the right of pardoning.

18. The courts and ordinary tribunals existing at present are preserved; their number cannot be diminished or increased, but in virtue of a law. The judges are for life and irremovable, except the justices of the peace and the judges of commerce. The commissions and extraordinary tribunals are suppressed, and cannot be re-established.

19. The court of cassation, the courts of appeal, and the tribunals of the first instance, propose to the king three candidates for each place of judge, vacant in their body. The king chooses one of the three. The king names the first presidents and the public ministry of the courts and the tribunals.

20. The military on service, the officers and soldiers on

half-pay, the widows and pensioned officers, preserve their ranks, honours, and pensions.

21. The person of the king is sacred and inviolable. All the acts of the government are signed by a minister. The ministers are responsible for all which those acts contain, violations of the laws, public and private liberty, and the rights of citizens.

22. The freedom of worship and conscience is guaranteed. The ministers of worship are treated and protected alike.

23. The liberty of the press is entire, with the exception of the legal repression of offences which may result from the abuse of that liberty. The senatorial commissions of the liberty of the press and individual liberty are preserved.

24. The public debt is guaranteed. The sales of the national domains are irrevocably maintained.

25. No Frenchman can be prosecuted for opinions or votes which he has given.

26. Every person has the right to address individual petitions to every constituted authority.

27. All Frenchmen are equally admissible to all civil and military employments.

28. All the laws existing at present remain in vigour until they be legally repealed. The code of civil laws shall be entitled, Civil Code of the French.

29. The present constitution shall be submitted to the acceptance of the French people, in the form which shall be regulated. Louis Stanislaus Xavier shall be proclaimed King of the French, as soon as he shall have signed and sworn, by an act stating, "I accept the Constitution; I swear to observe it, and cause it to be observed." This oath shall be repeated in the solemnity, when he shall receive the oath of fidelity of the French. (Signed)

TALLEYRAND, Prince of Benevento, President;  
and 67 Members of the Senate.

On the two or three succeeding days, the provisional authorities appear to have been occupied in making the constitution public, and in receiving letters of adherence from the members of the late government. Among the earliest of the names sent in, is that of cardinal Maury, one of the noisiest of Bonaparte's flatterers, and, in short, a gross man of the world, who for his tergiversations, and his efforts to keep well under all changes, deserves to be called the French Vicar of Bray. His eminence however does not appear in the present instance to have had the vicar's good fortune, and has since been recommended not to officiate. He was preparing to officiate in *pontificalibus* on Easter-day. The pulpit was already prepared, and the episcopal throne decorated: but, the chapter having taken from *his eminence* the administration of the church, he was deceived in his expectation; and the preparations that had been made served for M. La Roue, the arch-priest, who performed mass.

While these important transactions were going forward, Bonaparte remained at Fontainebleau.—We have seen that the allies entered Paris on the morning of the 31st of March.—In the evening of the same day, Caulincourt duke of Vicenza came from Bonaparte to the emperor of Russia, offering to accede to the terms of peace which the allies had offered at Chatillon. The emperor gave no other answer, than that the time was past for treating with Bonaparte as sovereign of France.

On the first of April, in the morning, Bonaparte reviewed the troops, which he seemed to consider as his own; the marshals and generals, who had learned from the papers the resolutions of the senate and the provisional government, conversed together on the subject loud enough to be heard by Napoleon; but he appeared to pay no attention to what they said, and the review passed quietly. When it was over, marshal Ney, as had been settled, entered the palace with him, and followed him into his cabinet, where he asked him if he was informed of the great revolution that had taken place at Paris. He replied, with all the composure he could assume, that he knew nothing of

it; though he was doubtless well informed of the whole. The marshal then gave him the Paris papers, which he seemed to read with attention; but he was only seeking to gain time to form an answer. Meantime came marshal Lefebvre, who, addressing his late emperor in a feeling tone, said, "You are undone! you would not listen to the counsels of your servants; and now the senate has declared that you have forfeited the throne." These words made such an impression on him, that he burst into a flood of tears.

It was not, however, till the 4th, two days after the decree of exclusion, that Napoleon dispatched Ney, Caulincourt, and Macdonald, to Paris, offering to abdicate in favour of his son. He seems to have carried his blindness the length of a thorough persuasion that this offer must be accepted; for on the 5th, in the morning, he notified publicly to his army, on the parade, that such was the proposal which he had made to the allies. In the early part of the morning, several of the generals sent to the duke of Bassano, who was mostly alone with the emperor, to dissuade him from appearing on the parade. But he would not refrain from it. About half past eleven he formed a plan, which he made the duke of Bassano write and sign, to repair with 20,000 men, that he had still with him, to Italy, and join the prince Eugene-Napoleon. He repeated several times, "If I choose to go there, I am certain that all Italy will declare for me." On the parade he looked horribly pale and thoughtful, and his convulsive motions showed his internal struggles; he did not stop above eight or ten minutes. When he got into the palace, he sent for Oudinot duke of Reggio, and asked him if the troops would follow him? "No, sir," answered the duke; "you have abdicated." "Yes, but upon certain conditions." "The soldiers," refused the duke, "don't comprehend the difference; they think you have no more any right to command them." "Well then," said Napoleon, "this is no more to be thought of; let us wait for the accounts from Paris."—The marshals returned in the night between twelve and one. Ney entered first. "Well, have you succeeded?" exclaimed the emperor. "Revolutions do not turn back," answered Ney; "this has begun its course; it was too late. To-morrow the senate will recognize the Bourbons."—"Where shall I be able to live with my family?"—"Where your majesty shall please, and, for example, in the Isle of Elba, with a revenue of six millions." "Six millions! that is a great deal for a soldier, as I am. I see very well I must submit. Salute all my companions in arms."—Here Napoleon ceased speaking; and Ney retired to rest; but again entered his master's chamber soon after daylight, and obtained from him the following unconditional abdication:

*"The Allied Powers having proclaimed that the Emperor Napoleon was the only obstacle to the re-establishment of the Peace of Europe; the Emperor Napoleon, faithful to his Oath, declares, that he renounces for Himself and his Heirs the Thrones of France and Italy; and that there is no personal sacrifice, even that of life, which he is not ready to make to the interest of France.*

*Done at the Palace of Fontainebleau,  
the — April, 1814."*

It is not possible to describe in adequate terms the triumphant joy which was testified by all classes, when this unlooked-for intelligence was officially announced in London. The satisfaction was rendered complete upon finding that this was a revolution without bloodshed; and that the people of France were permitted, by their humane, generous, and disinterested, conquerors, to choose a governor, and to frame a constitution, for themselves.

Napoleon's act of abdication was published in the London Gazette Extraordinary on Easter-eve, the 9th of April; and thus the usual civic fête on the following Monday was rendered uncommonly joyous by the memorable events which had recently occurred.—About eleven in the morning, a considerable number of the aldermen of London, the sheriffs, chamberlain, recorder, town-clerk, remembrancer, comptroller, &c. assembled at the Mansion-house,

to accompany the lord-mayor to Christchurch, Newgate-street. The procession was led by the city-marshal and other proper officers, who were followed by the bluecoat-boys (about 700 in number), with their masters and beads; the lord-mayor and the two sheriffs, in their state-carriages; the recorder and aldermen in their carriages,—the horses decorated with white ribbon; and several private carriages with the ladies and friends of the aldermen. Before the sermon, which was preached by the bishop of Ely, an anthem for the occasion was sung by the boys; and after the sermon an account of the progress of the different hospitals was read. The company then returned to the Mansion-house, where they retired to the Chinese parlour and other splendid apartments, till the dinner-hour. The Egyptian-hall was illuminated in a style of great splendour. At half-past six, dinner being announced, the lady-mayor's was conducted to her seat by the duke of Suffex, who sat on her left hand; the duke of Devonshire on the lord-mayor's right; and the foreign ambassadors, ministers, and ladies of distinction, on each side. Besides the great table, there were four long ones; all laid out in the most superb style. The entertainment, consisting of every delicacy of the season in profusion, was served up with much regularity, and was equal, if not superior, to former occasions. The sideboard at the bottom of the hall was graced by a stupendous baron of beef, a present from Mr. Sheriff Magnay. It weighed twenty-six stone; and was part of a Highland ox, sent to the sheriff by his friend James Gibson, esq. on whose estate, at Ingliston, near Edinburgh, it had been fed.

Dinner being ended, the lord-mayor, after a very impressive introduction to the health of our venerable sovereign, and a high complimentary address on proposing the health of the prince-regent, passed a just eulogium on the illustrious prince who had honoured the city and himself personally with his presence at their feast on that day. His royal highness (he said) was no less distinguished for his indefatigable exertions in advancing the cause of national education, than in promoting every useful and humane institution for the relief of the industrious poor. He therefore proposed the health of "The Duke of Suffex;" which was drunk with the warmest and most heartfelt applause. The duke returned thanks in an eloquent address—in which he made a beautiful eulogium on the liberal character of the city of London, which was ever the first to stand forward in the relief of suffering humanity. No man, he observed, could contemplate the issue of the struggle in which Europe had been so long engaged, without feelings of gratitude to the Disposer of all human events; and he trusted that the example of the horrors with which the French people had been so long afflicted, and with which their despot had been allowed to scourge all surrounding nations, would make a deep impression on the minds of all; and on those the most, upon whose conduct the happiness of others must depend. In the course of this fatal period of anarchy and persecution, there had been two distinct and memorable stages—the one, that of unbridled licentiousness, arising from popular fury—the other, that of intolerable oppression under military despotism. He trusted that these would produce an awful warning to the royal family now recalled—so as that, by steering the middle course of a lenient government on the basis of a free constitution, they would maintain with a just authority the peace, security, and happiness, of their people. The duke, after other appropriate observations, concluded with a high compliment personally to the lord-mayor, whom he was happy to attend as an old acquaintance, and whose virtues in private life did honour to him in his high public station.

The lord-mayor, previous to giving the healths of the allied sovereigns, stated, that his mind was so overcome with the succession of events that had taken place within the last few days, that he was fearful he should not be able to give correctly what he meant to say; but he was sure that he should find, in the enthusiasm which filled every

every breath in the hall, as well as his own, an indulgence for his want of ability to do justice to the merits of the high and illustrious characters to whom he was desirous to draw their attention, as well as to his own feelings on the occasion. "In proposing the health of the illustrious sovereign who has appeared most prominent in the wonderful scenes that have passed on the continent within the short space of the last fortnight," said his lordship, "I cannot but wish to offer a few words, expressive of my admiration of a monarch at once so great and so good. His moderation in success, his magnanimity of conduct in circumstances so trying to the vanity of ordinary minds, are without a parallel in history, and probably will ever remain so. But, as I am confident that every sentiment of admiration which I could utter, in praise of so exalted a character, would only be the echo of those sentiments which every individual at present must feel, I shall not longer delay the gratification which all must be impatiently expecting; and give as a toast, "The Emperor Alexander;" which was received with loud and universal bursts of heartfelt acclamation.

The lord-mayor, after an heroic song, in parts, appropriate to the toast, said, "I am highly gratified in having the honour to propose the health of another illustrious sovereign; to whose unshaken adherence to the grand alliance, though placed by family-connexions in a situation of the greatest delicacy, yet to whose preference of the public good and the common cause, over every other motive and feeling, we owe, in a very eminent degree, the liberation of the continent from the tyranny of military despotism—"The Emperor of Austria." This toast was also received with peculiar marks of enthusiasm, and followed by a song in parts.

The lord-mayor then said, "I have now the honour to give the health of another illustrious sovereign, to whose energetic and wonderful military exertions the allied princes and states are in an extraordinary degree indebted for their ultimate success—the sovereign of the immortal Blucher—the king who in his own personal feelings has suffered most in the general misfortunes of the continent; who, besides sharing in the calamities of his country, had to attribute to the insults of the oppressor the severest of all domestic afflictions—"His Majesty the King of Prussia." Repeated bursts of applause resounded through the echoing hall.

His lordship afterwards introduced a tribute to the house of Bourbon, in words to the following effect: "I have now the honour to propose a toast which is new to a public company in this country, but which will not be received with less enthusiasm on that account. I congratulate Europe and the world on the repose and happiness which (we may now indulge the hope) will result from the overthrow of military despotism in France, and the establishment of a limited monarchy, founded, like our own, in a declaration of the people's rights to civil and religious liberty; and I rejoice that the monarchy is restored to the ancient dynasty, because I feel confident, not only that it will give permanence to an honourable peace, but that the present and future princes of that illustrious house will seek their glory in the happiness of their subjects.—"His Majesty Louis XVIII." This was also received by the company with the most lively acclamations.

The duke of Sussex, in a neat address, gave the health of the lord-mayor; who, with equal modesty and dignity, returned thanks; and afterwards gave severally the following toasts:—"The Crown Prince of Sweden—The Marquis of Wellington—His gallant Army—General Blucher—The City of London," &c. &c. all which were most warmly received; and the duke of Sussex concluded the festivity of the table with the constitutional sentiment which he sincerely feels; "The Respectability of the Crown, the Durability of the Constitution, and the Prosperity of the People."

At half-past nine the ladies withdrew to their coffee. The lord-mayor kept up the conviviality with the highest

spirit for an hour, when they all joined the ladies in the ball-room, which was superbly illuminated. At ten, the lady-mayorefs (Miss Domville) entered the ball-room, followed by about one hundred ladies, whose dresses were only surpassed by the beauty of the fair wearers. When seated in her chair of state, the fair visitors arranged themselves on the surrounding benches, and tea was served on massy silver waiters. At half-past ten, Miss E. Domville (sister to the lady-mayorefs) and his excellency the count de la Gardie opened the ball; and dancing was kept up till a late hour.

Illuminations to celebrate these great events commenced in the evening in the metropolis, and were continued on the two following with increased splendour.—Carlton-house was particularly conspicuous. The colonnade was wreathed with continued festooning of flame-coloured lamps. On the architrave blazed in large characters the names of RUSSIA, AUSTRIA, PRUSSIA, and ENGLAND. In the centre was the motto, *Vivent les Bourbons*; and, within a pediment in the centre, the arms of France in a transparency.

The War Office was covered with lamps, forming the name of Louis XVIII. "Moscow burnt—Paris spared."

The statue of king Charles at Charing-cross was covered with laurel. Northumberland House had the whole of the top parapet in a blaze of flambeaux; the lion on the top had his head crowned with laurel, and several bunches of laurel were distributed to ornament the parapet; every window from top to bottom along the front was illuminated, having a candle in each pane.

Marquis Wellesley's house, at Hyde-Park-corner, was lighted up with magnificence. Arches of lamps covered the entrances. Festoons were drawn along the summit of the porch; an illuminated temple, with the arms of the king of France, formed the centre.

Pulteney Hotel had "Thank God" in strong light on the front of the balcony.

The decorations of the Spanish Ambassador's Hotel were costly; large ranges of lamps ran along the outlines of the architecture, and every form of star and wreath glittered above. In the centre was the name of FERDINAND; and underneath, "Good old Times."

Mr. Hunter, Upper Berkeley-street, Portman-square, a transparency, G. P. R. surmounted with the crown; the plume and fleur-de-lis on each side: in the centre, ALEXANDER under a wreath of laurel encircled with olive, and the motto, "May the Rose and the Lily be for ever united;" underneath, LOUIS XVIII. In the windows on each side, the names of WELLINGTON and BLUCHER.

Mr. Bullock, Tenterden-street, Hanover-square, had an illuminated figure of Peace descending on the World, displayed from the roof of his house, facing Oxford-street, during the two last nights, which excited much public curiosity. The figure was upwards of 20 feet high: the globe, over which the figure seems to hover, 9 feet diameter; the whole elevated more than 100 feet above the level of the street. The figure was shown by lights concealed behind the parapet, and thrown upon the object by reflectors; the globe illuminated by lamps within. We conceive this to be a new mode of producing a curious and splendid effect, and well calculated for public occasions of this nature; besides that it has the advantage of appearing as well by day as night.

Lord Liverpool had a small decoration on the entrance to Fife-house. An arch of thick splendour enclosed the motto, "Reward of Perseverance;" on the capitals of the side-pillars were a lion sitting under the shadow of the British crown, and the lilies under that of France.

Spencer-house was magnificently decorated along its entire front, and bore the inscription—

Europa Instaurata,      G.P.R.      Auspice Britannicæ,  
Tyrannide Subversa,      Vindice Libertatis.

Mr. Ackermann's, in the Strand, exhibited a transparency of the dethroned Emperor attacked by Death, who

places his foot on his breast, and holds in one hand an hour-glass almost expended, and in the other a spear. The fallen ruler supplicates Death to arrest his fatal purpose: beneath him are broken eagles, torn flags, &c. and in his hand he grasps the shattered remains of a sword. On the walls of Paris are seen Cossacs and other Russians, Prussians, Austrians, &c. who are raising the standard of the Bourbons.

Cockney punning was not forgotten in some of the designs. In a large transparency representing Napoleon tumbling from the Mount of Republicanism into the arms of a demon, there was the inscription, "To Hell-Bay."

Covent-Garden Theatre.—On a tablet was the word PEACE, formed of transparent lamps, laid on a gold ground, surmounted by a regal crown of great splendour; covering one of the windows there was a hay-rake and fork crossways, also formed of small lamps; and on the window on the other side the crown, the figure of a scythe and sickle crossways, as emblematical of returning peace and plenty.

Drury-Lane Theatre had two branches of laurel, over which the word PEACE, in letters of nearly four feet long, formed of many chains of amber-coloured lamps, laid on a silver ground, which had a very fine effect; this was surmounted by a crown of large dimensions, appearing to be formed of various precious stones, which covered a considerable part of the front of the building.

The Bank was marked out in the architecture of its arches and architraves by illuminated lamps; and the arches were filled up by oval stars. On the top of the façade appeared the words "Europe delivered!" in the centre was a rich crown, supported by stars, and at the bottom was inscribed "Our brave Allies."

The East-India-house covered its pillars with lamps, as usual, and illuminated its centre with the name WEL-LINGTON at the top; underneath, ALLIES, PEACE, COM-MERCE, in deep-yellow lamps; below, the letters G. P. R. and the prince's feathers encircled by laurel.

Rowland Hill's Chapel, in Blackfriars-road, had a large scroll, headed with the words, "The Tyrant is fallen;" and the following quotations from sacred writ:—"And the pride of thine heart hath deceived thee, thou that dwellest in the clefts of the rock, whose habitation is high, that saith in his heart, Who shall bring me down to the ground? Though thou exalt thyself as the eagle, and though thou set thy nest among the clouds, thence will I bring thee down, saith the Lord." "Therefore, O ye judges, be just; learn righteousness, ye princes of the earth."—Underneath was a representation of the emblems of peace, the lion sitting down with the lamb, the implements of agriculture, the view of a village-church, and the sea in the back ground, covered with commerce; the whole denoting the repose to which the world may now look forward.

At Southgate, the effigy of Bonaparte, dressed in his military uniform, and decorated with all his imperial insignia (furnished by Sir Wm. Curtis), was hung up, and in the evening burnt. The baronet added to the joy of the villagers by a donation of beef and ale.

On Wednesday night, at twelve o'clock, the gates of Carlton-house were thrown open, and six hogheads of strong ale were trundled into the street, to wet the throats of many who were hoarse with making huzzas, &c. &c. In a moment the head of each cask was staved; and, for want of a better substitute, the mob filled their hats. The screaming of the women, the huzzaing of the men, the firing of guns and pistols, rent the skies. Drums, trumpets, horns, hand-bells, marrowbones and cleavers, added to the glorious confusion.

The following curious robbery took place on Thursday morning: Two or three men, having the appearance of lamp-lighters, came with ladders and hampers, and took down all the lamps which were used in illuminating the fronts of some houses in Holborn, which they carried away, leaving behind them the frames on which they hung. No suspicion being entertained of their stealing them, they

were suffered to take them away without being asked a single question, or any particular notice taken of their persons. At twelve o'clock, when the real owners came to take down their lamps, they discovered that they were eased of that trouble.

A foreign guest, not a little gratified at our rejoicings, was her imperial highness the countess Romanoff, duchess of Oldenburg, and sister to the emperor of Russia, who had arrived in London on the 31st of March, the very day that her august brother entered Paris. She had landed at Sheerness on the day preceding, in company with his R. H. the duke of Clarence. She is a very elegant and accomplished lady, speaking English well. The prince-regent sent his carriage and beautiful bay horses to bring her imperial highness into London, which she entered in state, followed by a party of light horse, and proceeded to the Pulteney Grand Hotel. The duke of Clarence and colonel Bloomfield handed her from her carriage; and the regent sent his congratulations. She was accompanied by the princess Volochowsky, madame Aladensky, countess Lieven, and prince Gagarin. Her highness has experienced great attention from the royal family; and has visited almost every object of curiosity in the metropolis, displaying, by judicious inquiries and remarks, a well-informed mind and a correct taste. She has also been on a tour through the west of England.

The object of this lady in visiting our island is said to be the restoration of her health, which has been much shattered by the death of the duke her husband. The cause of that event was the duke's constant attendance upon sick and wounded prisoners, which brought on a malignant fever; and during the last four days of his life his imperial consort would suffer nobody to come near him but herself. The immediate consequence of her loss was a succession of fainting-fits, to which she is still subject; and these were followed by a settled melancholy, which, by the advice of her physicians, and chiefly by the tenderness and anxiety of her brother the Russian emperor, she has been induced to relieve by change of scene and climate, and the amusements of society. The duchess has two sons, but has brought only one of them with her, who is still an infant: the other is left under the protection of the emperor Alexander, who intends, it is said, to bring him over among us himself. Her highness resides at the Pulteney Hotel in Piccadilly, and has a suite of thirty-nine domestics, of whom only four are English. None of the male servants speak either French or English; and, as a mark of Russian tenaciousness, we are informed by the Morning Post (who is our authority indeed for all these particulars), that two of them who guard the entrance to her sitting-room "refused to admit the duke of Clarence without a special order from their mistress." Her highness's fortune is about 200,000 rubles per annum. The duchess is about twenty-six years of age, and has been a widow fourteen months. She constantly wears black, with three ostrich-feathers of the same colour affixed to a simple head-dress. We trust that our fair visitor will find what she has come to seek. The plan, which has been advised for her recovery, is the best which she could adopt; and, though there are finer climates than England for such kind of indispositions, there is no country where she may meet with society calculated so much to relieve her, or with so many varieties of men and objects worthy to be seen.

Monsieur, the brother of Louis, made his public entry into Paris on the 12th of April.—At mid-day, the members of the provisional government, and the commissaries of the several ministerial departments, preceded and followed by the municipal body, and numerous detachments of the national guard of Paris, repaired to the barrier de Bondi, to meet his Royal Highness Monsieur, Brother of the King, and Lieutenant-general of the Kingdom. A little before one o'clock his R. H. appeared on the outside of the barrier, surrounded by several grand officers and officers of his household, and a group of marshals of France, who had gone before to meet him. Monsieur, and all the persons

sons who surrounded him, were on horseback. His R. H. was dressed in the uniform of the national-guard.—At this moment the members of the provisional government, preceded by the masters of the ceremonies; advanced; and Talleyrand prince of Benevento, in the name of the provisional government, addressed the prince in these terms:—“Monseigneur; the happiness which we feel, on this day of regeneration, is beyond expression, if Monsieur receives with that celestial goodness which distinguishes his august house, the homage of our religious tenderness, and of our respectful devotion.”

The following is nearly the answer of Monsieur, as far it could be collected:—“Gentlemen, Members of the Provisional Government; I thank you for all you have done for our country. I experience an emotion which deprives me of the power of expressing all that I feel. No more divisions—Peace; and France. I see it once more, and nothing is changed, except that there is one Frenchman more amongst you.”

The cries of *Vive le Roi! Vive Monsieur! Vivent les Bourbons!* resounded on all sides. His R. H. having entered within the barrier, the baron de Chabrol, prefect of the department of the Seine, presented to his R. H. the municipal body of Paris.—The cavalcade then advanced to the metropolitan church. New cries of *Vive le Roi! Vive Monsieur!* resounded every where as he passed. It was nearly three hours before the cavalcade reached the church of Notre Dame.—The church, which could not be very magnificently prepared for the occasion in the short space of scarcely twenty-four hours, presented an appearance much superior to all possible decorations. In the sanctuary were assembled the cardinals, archbishops, and bishops, that were at Paris, and the clergy of the metropolis and its environs; in the choir and in the upper part of the nave several of the principal bodies of the state, and a considerable number of generals and officers, both French and foreigners. The nave, passages, and aisles, were filled with an immense crowd of spectators, waiting for the prince with the most lively emotion, whom some were eager to recognize, and others to see for the first time. At last his arrival was announced by long-continued acclamations. The canons, in their robes, waited for his R. H. at the great gate of the church. He was received under the canopy; and his first movement was to throw himself on his knees to return thanks to God. The abbé Lemire, in the name of the chapter of the cathedral, pronounced a speech; to which the prince made an answer full of grace and goodness. On the passage of his R. H. into the nave and into the choir, the cries of *Vive le Roi! Vive Monsieur!* were repeated with an ardour that the sanctity of the place could not restrain.—Monsieur was conducted by the baron de Cramayel, performing the office of master of the ceremonies, to the chair and desk which were reserved for him under a canopy in the middle of the choir. His R. H. took his place there, surrounded by his officers and almoners. Behind the chair of Monsieur were chairs on which were placed the members of the provisional government. Around the prince, on his right and left, were Gen. Dessolles, commandant of the national guards of the department of the Seine, the marshals of France, and the commissaries for the ministerial department; in front of the chair of his R. H. were the masters of the ceremonies with their assistants. The enthusiasm with which all the French were animated was rapidly communicated to the Russian, Austrian, Prussian, English, Spanish, and Portuguese, officers, stationed in the choir of the cathedral. Many shed tears of joy. It appeared as if the whole of Europe, represented by a selection of French and foreign warriors, swore at that moment peace, the blessing of which is about to heal the deep wounds of France. The canons having taken their stations in the sanctuary, the *Te Deum* was performed at the grand orchestra. It was followed by *Domine salvum fac regem*, which all hearts repeated.

The ceremony being over, his R. H. was conducted

back under the canopy, amid acclamations still louder, if possible, than those which were heard at his arrival. He again mounted his horse; and the cavalcade that had gone to meet him at the barrier conducted him to the palace of the Thuilleries, amidst the transports and effusions of a people abandoning themselves to the most lively enthusiasm. At the moment of the prince's entering the palace, the white flag was hoisted over the pavilion of the centre, amid the acclamations of the innumerable crowd who covered the gardens of the Thuilleries. Being conducted to his apartments by his attendants, he gave several audiences; at the conclusion of which the cavalcade retired, carrying away those lively impressions, the memory of which will never be effaced. When his R. H. had re-entered his apartments, one of his suite said to him, “Your royal highness must be much fatigued.”—“How,” replied the prince, “can I be fatigued on such a day as this!”

In the evening the greater part of the public edifices, and a great number of private houses, were spontaneously illuminated, and decorated with ingenious emblems. At the Theatre Français, in the evening, was represented the piece called the Hunting Party of Henry IV. which had not been performed for twenty years before. The allusions which it presented to the existing state of affairs were eagerly seized, and cheered with indescribable enthusiasm. The national air of *Vive Henry Quatre* was joined in by the audience with exclamations of *Vive le Roi! Vive Monsieur!* and, in the scene where the health of the good Henry is drunk, the spectators, amid the loudest acclamations, made the performers follow it up by giving the healths of the king and his brother, and of the emperor Alexander and the allied sovereigns.

On the 14th, Monsieur received the senate and the legislative body.—The senate was presented by Talleyrand, who said; “Monseigneur, The senate presents to your R. H. the homage of its respectful devotion. It has proposed the return of your august house to the throne of France. Too well instructed by the present and the past, it desires, with the nation, to confirm for ever the royal authority upon a just division of powers and upon public liberty, the only guarantees of the happiness and interest of all. The senate, persuaded that the principles of the new constitution are in your heart, conveys to you, by the decree which I have the honour to present to you, the title of *Lieutenant-General of the Kingdom*, until the arrival of your august brother. Our respectful confidence cannot better honour the ancient loyalty which was transmitted to you by your ancestors.—For myself, Monseigneur, permit me to congratulate myself upon being the interpreter to your R. H. of the senate, which has done me the honour to choose me for its organ. The senate, which knows my attachment to its members, has wished to afford me one sweet and happy moment more. The sweetest indeed are those in which one approaches your royal highness to renew to you the testimony of one's respect and love.”

His royal highness immediately replied; “Gentlemen, I have taken cognizance of the Constitutional Charter which recalls to the throne of France the king my august brother. I have not received from him the power to accept the Constitution; but I know his sentiments and principles, and I do not fear being disavowed when I assure you, in his name, that he will admit the bases of it.” Here his R. H. recapitulated the heads of the new constitution, and then added—“I thank you, in the name of the king my brother, for the part which you have had in the restoration of our legitimate sovereign, and for having thereby secured the happiness of France, for which the king and all his family are ready to sacrifice their blood. There can in future be among us but one sentiment; the past is no longer to be recollected. We must henceforth form only a nation of brothers. During the period in which power shall be placed in my hands, a period which I hope will be very short, I shall exert all my endeavours to promote the public good.”

Monsieur, as Lieutenant-General of the Kingdom, appointed the following persons to be members of the Provisional Council of State:—Talleyrand prince of Benevento; Mancey duke of Corneghiano, marshal of France; Oudinot duke of Reggio, ditto; the duke of Dalberg; the count de Jancourt, senator; Gen. count Beurnonville, senator; l'abbé de Montesquieu; Gen. Desfolles. Baron Vitrioles, provisional secretary of state, and secretary to the council.

On the 15th, the emperor of Austria entered Paris, and was received, among others, by Bernadotte, the crown-prince of Sweden, who of course had preceded him, and whose previous visit to Monsieur had been formally returned. What strange feelings must there be among these princes, new and old!

On the succeeding day, the emperor of Austria had an interview with his daughter, the ex-empress of France, at Petit Trianon, the favourite residence of the other unfortunate Austrian princess, who preceded her on the French throne.—When his majesty visited the palace of the legislative-body, his attention was caught by a full-length portrait of Maria-Louisa, executed by one of the first-rate painters. "I should request to carry with me this excellent picture," said his majesty, "if it did not belong to so respectable a body as the legislative body." "Sire," answered the officers who conducted the monarch, "the princess who is here represented has merited in so many respects the gratitude and veneration of the French, that the legislative body could not part with her image." "I shall feel a pleasure," rejoined his majesty, "in reporting to my daughter this mark of attachment."

In respect to the terms upon which the ex-emperor Napoleon gives up his dignity, the following is copied from the Vienna Court Gazette:

"PARIS, April 13.—In virtue of a Convention between the Ministers of the Allied Courts and the Envoys of Napoleon, furnished with powers, to which the Provisional Government accedes, the *ci-devant* Emperor renounces formally all kind of pretension to the Crowns of France and Italy; and shall enjoy, in exchange, during his life, the Isle of Elba, where a pension shall be paid to him and the members of his family. The Duchies of Parma, Placentia, and Guastalla, shall, at the approaching peace, be ceded in full property to the Empress Maria-Louisa, who shall transmit them to her son, to whom the title of Prince of Parma and Placentia is granted from this time."

Here is one of those antithetical freaks of fortune, in which Voltaire would have delighted.—A gentleman is born in a place in Italy, and goes to be an emperor over France; the son is born a king in France, and he goes to reign over a principality in Italy. Now the late emperor and empress will thus become neighbours; and it might not be easy to show, that the renewal of their intercourse would be unlikely, or that any thing was intended by their separation in the first instance but to save the princess the first sight of her husband's mortification. It is difficult however to speculate upon either side of the question.—It is observable in this convention, that Maria-Louisa is styled "the Empress;" and that, although Bonaparte is not styled the Emperor, he is called the "late Emperor" and "Napoleon." The report therefore is a probable one, which says that he is to retain the title of Emperor by courtesy; and, if so, his brothers, we suppose, are to be called Kings, or at least Princes, for their pretensions to both these titles have been acknowledged by all the allied powers but England; and England, it seems, is not a party to this convention, though the term "allied powers" is used without reserve, the exception not being mentioned in the extract from the Vienna Court Gazette, published in the Paris papers; neither is the date of the treaty given. It is not a little singular, that this article, taken from the Vienna Court Gazette of the 22d, is dated from Paris the 15th, although the Paris papers had not published a word of this treaty, except in the shape in which it is here given.

Owing to some unfortunate delays in sending off couriers to the different parts of France, Spain, and Italy, not less than ten thousand lives have been lost in the various seats of war.—Thus a battle took place, near Toulouse, on the 10th of April, which cost the allies only, 4650 men killed and wounded; an affair before Bayonne, on the 14th, which cost them 1000 more; and in a series of operations, from the 13th to the 17th, before Genoa, (which at length capitulated,) a loss was sustained on our side, in killed and wounded, soldiers and sailors, to the number of 224.

On Wednesday the 20th of April, Louis XVIII. king of France, made his public entry into London.—Soon after four o'clock in the morning, the royal carriages and horses intended to form the procession, left London for Stanmore, there to meet the king. The prince-regent left Cariton-house in his travelling carriage, for Stanmore, at half-past twelve, attended by the duke of Montrose and viscount Melbourne. His R. H. was drawn by four beautiful bays, driven by postillions in white jackets, white hats, and white cockades in them; with three outriders in the royal liveries and white cockades. The grand duchess of Oldenburg sent invitations to the queen; princesses Elizabeth, Mary, Charlotte of Wales, and Sophia of Gloucester, to come to Pulteney Hotel to see the royal procession; which they all accepted, except her majesty. The prince-regent arrived at the Abercorn-arms inn, at Stanmore, about two o'clock, whence the procession was to proceed in state. The town of Stanmore exhibited a most novel sight: there was hardly a house but exhibited the French colour—some actually displayed sheets and pillow-cases. The principal part of the gentry of that part of the country went on horseback a mile out of the town to accompany Louis into Stanmore; and, when the king had got within a short distance of the town, the populace, who had become extremely numerous, took the horses from his carriage, and drew him into the town. On the arrival of the carriage at the Abercorn-arms, the king was so infirm that he was lifted out of the carriage by his servants; the prince-regent was at the door of the inn in readiness to receive his majesty. The king was dressed in the uniform of a marshal of France. The prince-regent was dressed in a field-marshal's uniform, with his Russian and English orders. The procession began to move in the following order, at twenty minutes past three o'clock:

One Hundred Gentlemen on horseback.

Horse Trumpeters, in their splendid gold-lace dress.

A numerous party of the Royal Horse Guards.

Six Royal Carriages, the Servants with White Cockades.

An Outrider to each Carriage.

A party of the Royal Horse Guards.

*First Carriage.*—The great Officers of the French Crown, the Dukes of Avrai and Grammont, Captains of his Majesty's Guards: Count Blacas, Grand Master of the Wardrobe; Chevalier de Riviere, his Majesty's First Equerry.

*2d Carriage.*—The KING of FRANCE, the PRINCE-REGENT, the DUCHESS of ANGOULEME, the PRINCE of CONDE'.

*3d Carriage.*—The Duke of Bourbon.

*4th Carriage.*—The Duchesse of Angouleme's Ladies of Honour.

*5th Carriage.*—Equerries of his Majesty.

*6th Carriage.*—Other Officers of the Royal Household.

An officer of the royal horse-guards rode at each window, and a numerous party of horse closed the procession.—They proceeded at a slow trot till they came to Kilburn, when they commenced a walking pace, and a groom to each horse was added.—On the entrance of the procession into Hyde Park, and as it passed through it, the motion of the crowd in the wide part of the park became like a torrent. The procession arrived at Hyde-park-corner at half-past five o'clock, and proceeded along Piccadilly at a slow pace, amidst the shouts of the populace. A little before six, the cavalcade arrived at Grillon's Hotel, Albemarle-street. As the carriage with the cream-coloured horses

horses approached, in which were his majesty Louis XVIII. and his royal highness the prince-regent, the people unanimously huzzaed, the ladies from the windows waved their handkerchiefs. His majesty had hold of the prince's arm, who conducted him to the principal parlour; on his arrival there he found himself much overcome with fatigue; an arm-chair was brought, in which his majesty seated himself, the duke of York on his left, the prince-regent and the duchess d'Angoulême on his right, the prince de Condé and the duke de Bourbon facing him, with all his suite surrounding him. The marquis of Hertford and the earl of Cholmondeley were behind the chair; the Austrian, Spanish, Russian, and Portuguese, ambassadors, with all the ministers, were present. About 150 of the French noblesse were also assembled at the hotel, to greet the arrival of their sovereign, and an interesting scene took place. His majesty addressed the prince-regent, expressing his gratitude for the favours conferred upon him; stating, that he had been indebted to his R. H. for an asylum; and had now to express his obligations to his R. H. for his support of the house of Bourbon. It was impossible for him to find language to convey in adequate terms the sense of gratitude he felt, or the delight which he now experienced.—The prince-regent, in reply, assured his majesty, that *no obligation was personally due to himself for the events which had occurred*, and in which he felt the highest gratification.—His majesty again expressed his gratitude; and, taking off the cordon and star of the order of the Holy Ghost, which he wore, he personally placed the star upon the breast of the prince-regent; and, with the assistance of the prince de Condé and the duke de Bourbon, invested his R. H. with the cordon.—On his R. H. taking his leave, he saluted his majesty several times, as did his majesty him.

On the following day, a Chapter of the Order of the Garter was held at Carlton-house. Every thing being prepared, the prince-regent took his seat in a superb state-chair, at the head of a table. The knights then bowed to his R. H. and took their seats; and, dispensing with the usual form of election, they unanimously declared his Most Christian Majesty, Louis XVIII. King of France, duly elected a member. The two senior knights, the dukes of York and Kent, (instead of the two junior knights, as usual,) retired to introduce the king from the prince's closet. Their royal highnesses presented the king to the prince, when his majesty knelt on a crimson cushion, and the prince waved the sword of state, and conferred the honour of knighthood on his majesty, and afterwards placed the garter of the order on the king's left knee, &c. &c.—The king and the English royal family then retired to the prince-regent's closet; where the king was pleased to take off the insignia of the order of the Holy Ghost from his person, and invest the duke of York with it. The royal assembly afterwards dined with the prince-regent.

Louis remained at Grillon's Hotel during the whole of Friday the 22d, for the purpose of receiving all the French emigrants who were desirous of being introduced to him previous to his departure for France.

On Saturday morning, at eight o'clock, his majesty set off for Dover. A great crowd of eager spectators had assembled to see him depart. The dukes of Kent and Suffex had paid their respects to him early; and the duchess of Angoulême soon after arrived, and appeared nearly overcome with her feelings.—His majesty, on entering his carriage, was greeted with acclamations by the multitude. He was accompanied by three noblemen, escorted by a party of light horse, and followed by the prince of Condé and the duke de Bourbon. The duke of Suffex also accompanied him some way out of town. As soon as the royal carriage entered Kent, it was met by lord Camden, the lord lieutenant of the county, and a party of volunteer-cavalry, who escorted his majesty to Dover, which he reached about six o'clock. The prince-regent (who had set off from London two hours before his majesty) was there to receive him; and accompanied him on-board the

Jason frigate to dinner. The road from London to Dover was one continued scene of gaiety. Every hamlet, village, and town, poured forth its population to witness the royal progress. Gravesend, Dartmouth, Chatham, and Canterbury, with their white cockades, bands of music, yeomanry, volunteers, &c. &c. had quite a holiday aspect; and the French monarch was every-where met with smiles and congratulations. In the evening, the king and the prince-regent left the Jason, and returned to Dover to sleep. The town was brilliantly illuminated. Next day, (Sunday,) his majesty went on-board the Royal Sovereign yacht, accompanied by the regent, &c. &c. A little before one, his R. H. took his leave of the French monarch, and returned to the shore, when a royal salute was fired. The yacht was close to the quay. The king of France did not appear upon deck; but the duke de Bourbon, and the other French nobility present, took off their hats on the regent leaving the ship. The tide then serving, the Royal Sovereign got under weigh, and passed the pier-head under a royal salute from all the batteries. Here the scene was most interesting; the prince-regent had taken his station on the farthest point of the pier, and cheered the vessel as she passed, in which he was accompanied by an immense concourse of spectators of all classes. It would be difficult to describe the feelings to which such a scene gave birth. Its novelty, its importance, the various circumstances attending the principal personages engaged in it, all contributed to render it interesting and impressive in the highest degree; tears and acclamations were mixed, and all appeared affected. On the yacht reaching the roads, she was received by a royal salute from the ships of war there stationed; among which was the Jason, the flag-ship of the duke of Clarence. She then ran over for Calais with a fine breeze, and was only between three and four hours on her passage. Such a day as this was never witnessed at Dover by any person now living; and it is supposed only to have been equalled on the day Charles II. landed from Holland.

Louis XVIII. when he reached Calais, was conveyed by means of a platform into an open calèche, or carriage, with four seats, into which he was followed by the duchess of Angoulême, the prince of Condé, and the duke de Bourbon. The horses were soon taken off, and the carriage was dragged by the populace to the door of the principal church. The streets through which it passed were crowded with white flags, and the windows filled with well-dressed women waving white handkerchiefs; the air resounded with cries of *Vive Louis XVIII! Vivent les Bourbons!* At the door of the church his majesty was received by the principal clergy, who conducted him under a canopy to a seat of state in the middle of the choir, where the king and the duchess of Angoulême fell on their knees, and appeared to pray with the most fervent devotion, while the *Te Deum*, and *Domine salvum fac Regem*, were sung. They then returned to the calèche, and were drawn as before to the Hotel de Tillac, formerly Dessein's, where the king and his party dined in public, and after dinner received the compliments of those who wished to be presented to him. We are told, that, when the king arrived at the inn at Calais, he ordered money to be given to the populace who drew his carriage; but they unanimously refused it, and said they only wished to testify their affection for him.

The next day, the tide not serving at an early hour for landing the king's carriages, his majesty determined to spend that day at Calais also, and again dined in public, giving orders that all the English who wished it should be admitted. He set off from Calais on Tuesday at noon, escorted by a body of French lancers on horseback, and another corps of French cavalry; and slept that night at Boulogne-sur-Mer. On Wednesday his majesty left that place for Abbeville, where he passed the night. On Thursday he went from Abbeville to Amiens, there he slept; and on Friday the 29th, about six in the evening, he reached Compiègne, where the kings of France have a palace, and where he rested two days.

The marshals of France entered the chateau de Compiègne in the suite of the king, to present the homage of their most profound respect to his majesty. The king having been pleased to receive them, they were introduced. Berthier prince of Neufchatel said to his majesty;—"Sire, After twenty-five years of uncertainty and tumult, the French people have again entrusted the care of their happiness to that dynasty which eight ages of glory have consecrated in the history of the world, as the most ancient that ever existed. As warriors and citizens, the marshals of France have been led by all the impulses of their soul to second this movement of the national wish. Absolute confidence in the future, admiration for greatness under misfortune, all, even to former recollections, concur to excite in our warriors, always the support of the splendours of the French armies, those transports which your majesty has observed on your passage. Already, sire, the accounts of their gratitude have preceded you. How is it possible to paint the emotion with which they were penetrated on hearing with what touching interest your majesty, forgetting your own misfortunes, seemed only to be occupied with those of the French prisoners? 'It is of little importance,' you said to the magnanimous Alexander, 'under what banners these 150,000 prisoners have served; they are unfortunate; I see amongst them only my children.' At these memorable words, which each soldier repeated to his comrade, what Frenchman could fail to perceive the blood of the great Henry, who nourished Paris whilst he besieged it? Like him his illustrious descendant comes to unite all Frenchmen in one family. Your armies, sire, of which the marshals are to-day the organ, consider themselves happy in being called by their devotion and fidelity to second such generous efforts."

The king replied with a most affecting kindness, that he saw with pleasure the marshals of France, and that he relied on the sentiments of fidelity and attachment which they expressed in the name of the French armies. His majesty then rose from his seat, though suffering under the gout; and, at the moment when his grand officers were approaching to assist him, his majesty, seizing the arms of the two marshals, who were the nearest him, said with an overflowing heart; "It is on you, marshals, I wish always to support myself; approach and surround me. You have always been good Frenchmen. I hope France will no longer have need of your swords. If ever, which God forbid, we are forced to draw them, afflicted as I am with the gout, I will march with you."—The marshals replied; "Sire, Be pleased to consider us as the pillars of your majesty's throne. It is our wish to be its firmest support."

The king withdrew. The marshals were afterwards presented to the duchess d'Angouleme, and to the prince of Condé and the duke of Bourbon. The king moreover honoured the marshals with an invitation to dinner; and at the commencement of the repast his majesty said, "Messieurs les Marechaux, I send you some wine; I wish to drink with you to the French armies." A sentiment of respect restrained the marshals, who, in their enthusiasm, wished to reply by drinking the health of the king; but, by a spontaneous feeling, their hearts made them silent.

Monsieur and the duke de Berri arrived from Paris early in the morning of the 30th, to pay their respects to the king. They returned in the evening to prepare for his majesty's reception.

As the king's grand entry into Paris was fixed for Tuesday the 3d of May, it was thought fit that his majesty should remove, on the preceding day, to St. Ouen, which is only four miles north of that gay metropolis. And now, having heard so much of the army, and so little of the constitution, we shall take the opportunity of recording Louis's Declaration upon the latter subject.—"Louis, by the Grace of God, King of France and Navarre, to all to whom these presents shall come, greeting. Recalled by the love of our people to the throne of our fathers, enlightened by the misfortunes of the nation which we are destined to govern, our first thought is to invoke that mutual confi-

dence so necessary to our repose and their happiness. After having read with attention the plan of the Constitution proposed by the senate, in the sitting of the 10th of April last, we have recognized that the bases were good, but that a great number of articles, bearing the marks of the precipitation with which they have been drawn up, cannot, in their present form, become fundamental laws of the state. Resolved to adopt a liberal constitution, we wish that it should be wisely combined; and, *not being able to accept one which it is indispensably necessary to correct*, we convoke for the 31st of May of the present year the senate and legislative body, engaging to lay before them the result of our labours with a commission chosen from those two bodies, and to give that constitution the following guarantees:—The representative government shall be maintained such as it exists at present, divided into two bodies; viz. the senate, and a house composed of deputies of departments.—The taxes shall be freely imposed.—Public and private liberty insured.—The liberty of the press respected, with the precautions necessary to the public tranquillity.—The freedom of worship guaranteed.—Property shall be sacred and inviolable. The sale of national domains shall remain irrevocable.—The ministers, responsible, may be prosecuted by one of the legislative houses, and tried by the other.—The judges are irremovable, and the judicial power independent.—The public debt shall be guaranteed.—Pensions, ranks, military honours, preserved, as well as the ancient and new nobility. The legion of honour, the decoration of which we will determine, shall be maintained.—Every Frenchman shall be admitted to civil and military employments.—Lastly, no individual shall be disturbed for his opinions and votes. Done at St. Ouen, May 2, 1814. LOUIS."

Thus we see the trial by jury is not to form any part of the ensuing French law; and, if other parts of that excellent and sound Constitution of the 6th of April should be abrogated by the forthcoming one of the 31st of May, the reader will perhaps have a melancholy recollection of the words of Reyna in the Cortes, p. 377. as applying to all European governments but our own.

At length the grand day arrived. On Tuesday the 3d of May, Louis XVIII. made his entry into Paris, attended by the members of the household and of government, the marshals of France, the court-attendants, by Monsieur on horseback, and by a long file of carriages. In the carriage with the king was the duchess of Angouleme, the prince of Condé, and the duke of Bourbon. This grand procession was preceded by cavalry of the national guards and of the line, and closed with detachments of the national guards and gendarmerie. The prefects of the Seine and of the police were stationed at the barrier. The prefect of the Seine addressed his majesty, and presented to him the keys of the city. His majesty replied, "I am at last in my good city of Paris: I experience a lively emotion from the proofs of affection which are at this moment given me. Nothing could be more agreeable to my heart than to see erected the statue of him, the recollection of whom, among all my noble ancestors, is the most dear to me. I touch the keys, and restore them to you; they could not be in better hands, nor entrusted to magistrates more worthy of guarding them."

The procession proceeded to the cathedral. The *Domine salvum fac Regem et Te Deum* were performed. The procession then continued to the palace of the Thuilleries. Acclamations of *Vive le Roi! Vivent les Bourbons!* were unceasingly heard from an immense concourse of spectators, who preceded, attended, and followed, the procession. The enthusiasm was wrought up to an intense pitch when it reached the spot on which is raised the statue of Henry IV. The conservatory assembled around it, played the air sacred to the memory of that monarch, the people and the soldiers repeating it in chorus. The weather was delightful, and the sky unclouded during the whole day. In the vast interior of Paris, and adjacent towns, all business was suspended. From the dawn of day, garlands of lilies, tapestry with ingenious inscriptions, floated from the windows.

dows. The cannon fired, and the bells rung. The triumphal arch of the Porte St. Denis was ornamented with the arms of France, and a crown of flowers surmounted by the spotless standard decked with lilies. In passing under the arch, the king seemed agitated, while the countenance of the daughter of Louis XVI. wore an expression of soft melancholy. In the cathedral, the senate, legislative body, university, and judicial courts, mixed with the military and clergy. When the king reached the Pont Neuf, Mad. Blanchard ascended in a balloon to the sound of cannon: several white pigeons were let fly from it, and, like the dove from the ark, seemed to take their flight to the provinces, to announce that the storms of France were over.—The duchess of Angouleme was received by 144 ladies, twelve from each department. The king and royal family appeared at the windows, and embraced Monsieur amidst the acclamations of the people. At night there was a general illumination. Fire-works were let off on Port Louis XVI. The musicians of the conservatory played several airs under the windows of the Thuilleries. At half-past ten, the king appeared again at the windows, placed his hand upon his heart, and saluted the assembled thousands with affection. Swiss guards mounted guard at the Thuilleries, as in old times.

The allied sovereigns, with a most noble delicacy, were desirous of enjoying the beauty of the spectacle; without taking from Louis XVIII. a particle of the homage which on that day so wholly related to the king of France and the house of Bourbon. The emperors of Austria and Russia placed themselves at windows to see the procession pass. They had carefully concealed every decoration that might be the means of their being recognized; but they could not escape the regards of a grateful people. They were observed to applaud the public felicity, and their voices mingled with the acclamations of the Parisians.

During this memorable day the most perfect order prevailed in Paris, and no accident disturbed the public tranquillity.

On the day following, there was a grand review of the Russian and Prussian guard, and of all the allied troops at Paris. At four in the afternoon, the emperors of Russia and Austria and the king of Prussia arrived, attended by a numerous and brilliant staff, by the Quay of the Thuilleries, and entered the court of the chateau by the first wicket of the Louvre. The sovereigns proceeded to the palace of his majesty Louis XVIII. At half-past four, a carpet of red velvet was placed on the balcony at one of the windows of the Pavilion of Flora, amidst shouts of "Vive le Roi!" Louis appeared in the uniform of a marshal of France, in the midst of the allied sovereigns. Near his majesty were the duchess d'Angouleme, Monsieur, and the duc de Berri. Immediately afterwards, the troops defiled under the windows of the Pavilion of Flora; they were commanded by his imperial highness the grand duke Constantine. The infantry marched in echelon three deep, twenty-five men in front. Their march lasted about three hours; they proceeded towards the Place Louis Quinze, in order to return to their respective cantonments. They made a very fine appearance.

The duke of Wellington was also at Paris. He attended publicly at the review, where he was placed between lord Castlereagh and the hon. Wellesley Pole; and in the evening was present at a grand ball given by sir Charles Stewart. Nothing could exceed the enthusiasm with which his grace was received. The emperors of Russia and Austria, the kings of Prussia and France, were present, and about seven hundred persons of the first distinction. Marshals Blucher and Platoff laid hold of his arms, and walked with him for some time. They and every other general besides exclaimed, "Here is the first captain of the age; here is the man that set the whole machine in motion." All the French marshals pressed about him with marks of the highest admiration and respect. What a triumph for the duke!—What a tribute to Great Britain!

On the day that Louis emerged from his retreat, and

entered London on his way to France, namely, on the memorable 20th of April, did Napoleon, the late emperor of France, set out from Fontainebleau on his journey to the island of Elba.

What a contrast strikes one in looking at the fate of these two personages. The one, after an exile of twenty years, issuing from absolute obscurity to the possession of a throne—the other, after a career of conquest for nearly the same space of time, dropping from the loftiest throne in the world to exile and obscurity in his turn! If Louis be the man he is described, here is patience rewarded and impatience punished in as finished a manner as the lovers of story-conclusions can desire. And the reader may carry the contrast farther, if he pleases, especially if his philosophy stands in need of a little present example. Louis's exile appeared at one time to be quite hopeless of change; yet here we see, that, after a lapse of many years, the change has come about. Napoleon's dynasty, on the other hand, seemed at one time—at the period of his Austrian marriage for instance, or the birth of his son and heir—to be quite secure from change—himself, at the very least, to be secure from it;—yet here his dynasty is overthrown, and himself with it. Again, if Louis has had more than ordinary adversity, it has clearly given him a greater relish for the enjoyment of prosperity; nay, perhaps it has even helped him to regain his prosperity; for, had he previously acquired the turbulent reputation of his predecessor, the French would most likely have had nothing farther to do with him. On the other hand, Napoleon's singular prosperity must as clearly have given him a double distaste for adversity; and not only so, but it has helped to bring him into adversity by inciting him to push his fortunes too far. In short, Louis comes from his books out into the world, and may there practise to advantage the lessons they have taught him;—Napoleon goes from the world to his books, and will there have to unlearn every thing in which the world has misled him.

The following are the circumstances, if at this critical moment we may trust the Paris papers on such a subject, which attended his departure. He spoke thus to the officers and soldiers: "I bid you farewell. For these twenty years that we have been together, I have been satisfied with you. I have always found you on the road to glory. All the powers of Europe have taken up arms against me: part of my generals have betrayed their duty, and France herself has betrayed her's. With you and the brave men who remained faithful to me, I have preferred France from civil war. Be faithful to the new king whom France has chosen, and forsake not your dear country, which has been too long unfortunate. Lament not my fate: I shall be happy when I know you are so. I could have been satisfied to die: nothing would have been more easy for me; but I wish still to pursue the road to glory. I will write the history of our achievements. I cannot embrace you all: but I will embrace your general. Come, general." (*He embraces him.*)—"Bring me the eagle; let me embrace that too. Ah! dear eagle, may the kisses which I give thee resound in the ears of posterity.—Farewell, my lads! Farewell, my heroes! Come around me once more!" The staff then formed a circle round him.—Bonaparte afterwards got into his carriage; and at this moment, unable to repress his emotion, he shed some tears.

Bonaparte quitted Fontainebleau in a carriage and six, with about twenty-five horsemen behind him. The Russian, Austrian, French, English, and Prussian, officers, were in six chariots; and were followed by about twenty carriages, with the baggage and domestics of Bonaparte. He passed through Montargis on the 22d: baggage and led horses, with piquets of cavalry, had passed through in the morning. The foot-guards in the barracks were under arms: they respected the fall of Bonaparte by keeping silence, and giving no sign either of approbation or disapprobation. Bonaparte passed through the ranks of these brave troops, and entered the town, affecting a calm air, and saluting to the right and left the persons who

were.

were at the windows, and were curious to see him. Many people charge him with a boastful assumption of insensibility. The truth is, that Gen. Bertrand, who was in the carriage, appeared more affected than he.—Bonaparte slept at the castle of Briare. He passed through Lyons in the night of the 24th; through Avignon and Aix on the 25th; and arrived at Frejus on the 27th; where he embarked, on the 28th, on-board of the English frigate *Undaunted*, Capt. Usher. The badness of the roads, it is said, prevented his going on to St. Tropez; but it is a singular coincidence that he should embark, on his exile to Elba, at the same place where he landed on his return from Egypt. When passing through Lyons, we are told that he was anxious to procure the best collection of pamphlets, posting-bills, acts of adhesion, &c. relative to the manifestation of public joy for his dethronement.

The inhabitants of Lyons, and of several other places, accompanied him with cries of *Vive le roi!* and more than once the populace forced him to repeat those words himself. At Avignon, a plan had been laid to assassinate him. As almost every particular relating to this extraordinary man will be perused with curiosity, we shall copy the account from a Paris newspaper.—“On Monday the 25th, at four in the morning, arrived here the English commissioner who preceded Bonaparte. The officer on guard asked him if the escort accompanying him was strong, and in a state to prevent every sort of unpleasant movement. The commissioner appeared deeply affected at the apprehensions which were manifested; and called upon the guard to protect, to the utmost of its power, the passage of Napoleon, whose life and safety were under the protection of the august allies. At last, at six o'clock, the carriage of Bonaparte arrived; but, in consequence of the notice which had been given, the escort stopped at the opposite extremity of the city to that by which it would naturally pass. The post-horses were taken there; and the same officer who had spoken to the English commissioner, repaired to the spot with his troop; he found the carriage surrounded, and the multitude about to give themselves up to excesses: men and women demanded their children, their relations, who had fallen victims to the ambition of Bonaparte, and complained of all the vexations they had endured. Already a man had taken hold of the handle of the carriage-door; a valet of Napoleon, seated on the coach-box, was about to draw his sword to defend his master. The officer said to him, “Do not stir;” and, in speaking thus, he pushed away the man who had taken hold of the door. Bonaparte, hastily letting down the windows of the carriage, thrice called out to his domestic to remain quiet, and made a sign of acknowledgment to the officer. In the midst of these movements, the people had recognized Bonaparte, and seemed to be only the more roused. At length the officer succeeded, with some difficulty, by the help of the soldiers, in clearing the streets, and opening a passage; and he ordered the postillions to set off at full gallop. Bonaparte had only time to call out, “I am much obliged to you.” General Bertrand was in the left corner of the carriage: he did not move or speak a single word during the whole transaction. The foreign generals who accompanied Bonaparte were going to alight to join the soldiers, and to defend, if necessary, the charge entrusted to them; but they were persuaded not to leave their carriages; and the respect felt for their characters was one of the causes which protected Bonaparte. It was also remarked, that the officer who defended Bonaparte had been always a zealous advocate for the Bourbons; but the cause of these princes is the cause of justice and of honour; nothing ought to fully it.”

Such are the accounts in the Paris papers; yet we own that we receive them with some degree of hesitation, because they differ extremely from the report of persons of credit who are continually arriving in this country from Paris. Sir Thomas Lavie, who is just returned from France, after a captivity of seven years, says, that he was

a spectator of the passage of Napoleon through one of the towns on his way to the coast; and that, to his astonishment, many of the inhabitants saluted him in the most gracious manner, and that the air rung with the old cry of *Vive l'Empereur!* “I have seldom been more surprised (he adds) than at the apparent state of the public mind in the metropolis of France. Mixed with considerable coldness and indifference, is seen a lurking admiration of the military glory of Bonaparte. This I do not believe to be the general feeling; but it is certainly that of a considerable number of persons. What is, perhaps, worthy of notice, is, that the common people still call Bonaparte *l'empereur* in speaking of him. Several satirical publications against the late ruler of France have been suppressed by the police.”

The Russian, Prussian, Austrian, and English, commissioners, and Capt. Usher, of the *Undaunted* frigate, who was appointed to convey Bonaparte to Elba, dined with him on the 27th. On the introduction of Capt. Usher, he said, that, though formerly our enemy, he was now as sincerely our friend; and that we were a great nation. On Capt. Usher observing, that he feared he could but ill accommodate him, Bonaparte said, a British man-of-war was a palace. At dinner the subject was chiefly naval affairs, of which he appeared a perfect master. On some surprise being expressed, how he could make himself so perfect a master of the minutiae of the navy, when he had directed so many other affairs of high importance, he bowed, and felt the compliment; but said, that in three years his plans would have been complete—that he was about to build 20 sail of the line on the Elbe, and would have had 200 sail of the line well manned, for that his naval conscription fully answered his expectations. On its being observed by Capt. Usher, that his naval conscripts did not create much alarm, he seemed surprised; adding, that our ministers well knew the Toulon fleet was manned with them. He said, that his principal object in annexing Holland to France, was for the purpose of making good sailors by exercising them on the Zuyderzee; and, turning round toward the Russian commissioner, said, that he had constructed a three-decker, then called the *Austerlitz*. On being asked what he thought of our expedition to Holland? he said, rather turning to the Austrian commissioner, “I wrote from Vienna before the expedition failed, desiring them to be prepared for it.” The conversation in general was highly interesting. Bonaparte looked remarkably well, and talked with all his accustomed authority. A French frigate was sent to wait upon him; but he preferred going in the English frigate. Lieutenant Hastings was sent with a French and Austrian commissioner to take possession of the Island of Elba in his name. Princess Borghese intended to follow him to Elba. On taking leave of his guards, he made a most affecting speech to them; which had a great effect on both officers and men, who shed tears.—He arrived at Elba on the 4th of May, (the day after Louis entered Paris;) and took possession of the island amidst the acclamations of the inhabitants. He landed at Porto Ferrajo, when he hoisted on the walls and tower of the city, a white flag bordered with red, and bearing three bees on a blue ground.

Many persons, both in England and France, are extremely offended that Napoleon (or *Nicholas*, for some would now persuade him out of his Christian name) should still continue to live. Some think that he should have put himself at the head of his troops, no matter how few, have rushed into battle against any odds, and so sacrificed their lives and his own with all convenient speed. Thus Gen. Augereau, in his address to his army, says: “Soldiers! You are relieved from your oaths, by the nation, in whom the sovereignty resides. You are also, if it were necessary, by the abdication even of a man who, after having immolated thousands of victims to his cruel ambition, *did not dare to die as a soldier.*” Others again think he should have fallen upon his own sword, or have directed somebody

somebody to kill him. If we may believe the Paris papers, this was the wife opinion of his favourite mamaluke Roustan. This personage, it seems, being of a very lofty mind, as is the custom with valets, and of a very delicate sense of honour, as is the characteristic of mamalukes, entered his master's chamber at Fontainebleau, after carefully sharpening a sword, and addressed him in the following terms:

*Mam.* Sir, after what has happened, of course you will not choose to live. I have brought you my sword. Will you use it yourself, or shall I pass it through your body? I am ready to obey your commands.

*Napol.* It does not appear to me that either of these alternatives is necessary.

*Mam.* (with astonishment.) Neither! What! can you endure life after such a reverse? Then pray dispatch me with the same weapon, or dismiss me from your service; for I will not live under such disgrace.—So saying, the mamaluke, without waiting either to be dispatched or dismissed, haughtily leaves the room.

We have been induced to say a word or two more upon this point by the publication of an Ode to Napoleon, attributed to lord Byron, and bearing indeed evident marks of his strong way of putting things. In this poem, among other stanzas alluding to the subject, are the following:

'Tis done—but yesterday a king,  
And arm'd with kings to strive—  
And now thou art a nameless thing;  
So subject—yet alive!  
Is this the man of thousand thrones,  
Who strew'd our earth with hostile bones?  
And can he thus survive?  
Since he, miscall'd the Morning Star,  
Nor man, nor fiend, hath fall'n so far.  
And earth has spilt her blood for him,  
Who thus can hoard his own!  
And monarchs bow'd the trembling limb,  
And thank'd him for a throne!  
Fair Freedom! We may hold thee dear,  
When thus thy mightiest foes their fear  
In humblest guise have shown!  
Oh! ne'er may tyrant leave behind  
A brighter name to lure mankind!  
Thine evil deeds are writ in gore  
Nor written thus in vain—  
Thy triumphs tell of fame no more,  
Or deepen every stain—  
If thou hadst died as honour dies,  
Some new Napoleon might arise,  
To shame the world again—  
But who would soar the solar height,  
To set in such a starless night?

The conclusion of this last stanza is poetically put, and so are several of the conclusions of others. But what is to be understood by dying "as honour dies?" Is it in battle, or on the scaffold, or by his own hand? For many an honourable man has died in battle, many a one on the scaffold, and many a one (mistakenly, as modern wisdom has thought) by his own hand. But honour has also made its exit very quietly on occasion; and by which of these deaths was Napoleon to perform what he promised, and prove that "adversity was not too much for him?" There is the point. As to those who pretend to think that Napoleon would have done better in any kind of death, so that he had died somehow, we have no hesitation in attributing it either to sheer ignorance of human nature and its trials, or to their usual mode of prejudging a question where it suits them. Had Napoleon died in battle, we have no doubt that these very men would have accused him of taking an opportunity to slip out of his difficulties; and in like manner, had he died on the scaffold, they would have exulted over him as a criminal, who could not escape;—had he died by his own hand, they would

have cried out, "See there the man who was not to be overcome by adversity!"

We do not argue that his merely continuing to live under the weight of those feelings with which all agree to load him, will prove him a great man. It remains to be discovered how he lives, and with what fort of temper and views. But his not putting himself to death in the first instance, makes him something better in our minds than a mere Catiline or Maximinus; and if he leads a reasonable life in his exile, and does what little he can to make those about him comfortable, in recompense of all the misery his soldiership has inflicted, we shall say, not that he was a great man when he was emperor, but that he gave some symptoms at last that he *might have been*.

Elba lies just off the coast of Tuscany, between Piombino and the northernmost point of Corsica; and has been celebrated from time immemorial for its mines of iron, which are still worked. The loadstone, with which it abounds is said to have an effect in varying the compass at sea to the distance of four leagues; and, though some travellers have denied or doubted this circumstance, others have stated that the needle has certainly been of no use at the distance of one league. The Greeks, on account of its forges, called the island Aithalia, or the footy; and it is praised for its metals by Virgil and Rutilius under the name of *Iwa*. It is supposed to be about eighty miles in circumference, has two spacious harbours, and contains a population of between twelve and thirteen thousand souls, who are characterized, in a report made to the consular government, as "mild and industrious." The climate is superior to that of the continent; and, though the soil is shallow and mountainous, and there is but one little river in the whole island, which does not run more than a mile from its source, yet an abundance of springs at once help its fertility and increase its beauty; and it has plenty of wood and flowering shrubs, and produces exquisite fruit-trees—vines, citrons, and oranges. There are also two lucrative fisheries on the coast. As a proof of the industrious character of the inhabitants, and of their readiness to avail themselves of any fresh advantages that may accrue to the island, it may be mentioned that Mr. Swinburne, who visited it in the course of a tour about forty years back, and who has given the best account of it we have seen, describes the little river above-mentioned as turning no less than seventeen mills, and as being kept in a very neat condition, with orange and other fruit-trees along the banks. Out of the productions of this island, Bonaparte may build himself a house of marble, may roof it with slate, and run an iron railing about his park; he may have garden-grounds of fruit and flowers, the orange, myrtle, and arbutus, and supply his table with fish, vegetables, wine, and a desert. Here too, on a tower upon a rock, he may have the prospect—on one side, of his birth-place, the island of Corsica—on the other, he may view the estates of his brother-in-law, the prince of Piombino; to the south-east he may carry his eye over a range of continent, till he may fancy that Rome itself is still obedient to his nod—and to the north-west he may waft his fond regrets towards Parma and Placentia, the domains of his wife and son, in the neighbourhood of the plains of Marengo!

Never perhaps did there exist an individual, who exercised so mighty and terrible an influence on the fate of civilized mankind, as the very extraordinary person of whom we are now to take our leave.—If there are subjects which it is difficult to render interesting, because they are unknown and little attended to, the difficulty here, from a cause directly opposite, is not less serious. This subject has been handled so constantly in every company and in every newspaper, so debased by the ignoble mouths through which it has passed, as to render it scarcely possible to say any thing which every one is not long ago tired of hearing. Yet, after all, the language hitherto held has been mingled with such a torrent of national and party zeal, that the wise man may perhaps find reason to adopt a strain

somewhat different from that in which the generality of persons are accustomed to indulge.

Bred to arms, and having founded all his greatness upon military fame, it is as a commander that this personage first merits to be considered. In this character it seems universally allowed, that he must rank at least as the equal of the greatest names in history. We have been informed, and partly believe, that in the mere tactical part of the service, he did not very peculiarly excel, and was even surpassed by some others of the French generals. But in all that regards the policy of war; in choosing the most vital points of attack; in directing his concentrated force against the separated bodies of the enemy; in following up every success with overwhelming rapidity; in these operations, he does appear to have almost created a new era in the military art. There was in his movements a boldness and depth of genius, which confounded all calculation, and eluded the penetration even of the most sagacious enemy. His first campaign in Italy is still perhaps his master-piece, and the one of which the success was achieved with the most inadequate means. It forms a complete school of military policy; and, were it narrated with intelligence, which it has never yet been, would afford instruction, beyond perhaps any other, in the higher parts of the art of war. It is remarkable, that though, in his military character, there was extreme boldness, and enterprise bordering on desperation, yet there was little heroism. It was the daring of genius, rather than of valour. Success, more than glory, was the aim. We speak not this in absolute condemnation: a prudent attention to personal safety, in him who directs the movements of a great army, may fairly be considered as commendable; and the achievements of chivalrous valour are often very little conducive to the greatness of states. We only observe that this circumstance tends to cool the admiration and personal interest, which enterprises of such stupendous magnitude are naturally calculated to excite.

In regard to the moral qualities of this favourite of fortune, we do not mean to join in that indiscriminate invective which this nation delights to indulge; yet it seems difficult to discover any theme whatever of praise. There seems no virtue, even of private life, which he habitually practised; and it were not surely rash to affirm, that there exists scarcely a crime which, to gratify his ruling passion, he would hesitate to commit. Having granted thus far, we do not know whether he is loaded with much wanton guilt, or delinquencies committed out of pure malignity. The Syrian atrocities, if not utterly discredited, seem at least greatly involved in doubt. But his domestic administration affords no room for panegyric. He erected his own despotic power upon the entire subversion of the rights of his people: he did not hesitate, in the pursuit of chimerical projects, to impose upon them hardships and privations of a description almost unprecedented. Yet his guilt has not been of the same dye with that of the Marats and Robespierres, the horror of mankind, who deformed the early ages of the French revolution. *His government has not been a government of blood.* Finding the nation indeed bent to the yoke, he was exempted from the motive, or necessity, which urged those sanguinary monsters to such deeds. There may be room for the suspicion, that, had similar circumstances prompted to the same dreadful precautions, he would not have refrained. Yet it were going too far, upon such a presumption, to account him guilty of crimes which he never committed. Upon the whole, he appears to exhibit very nearly the general character of a conqueror and usurper, to whom nothing, almost, that opposes his ambitious projects, has ever been sacred. There was not perhaps, from the general laws of human nature, reason to hope that any one of a different character would have risen, through such convulsions, to the station of first consul, consul for life, and afterwards emperor of France, king of Italy, &c. In these imposing stations it must nevertheless be allowed that he played a brilliant part; gained more great victories than are re-

corded in the previous annals of mankind; over-ran more countries than Alexander, Cæsar, or Charlemagne; made and unmade kings and princes like the manager of a theatre; and acquired a name, which among heroes will for ever hold a primary station in the pantheon of history. Yet he trampled on the liberties of his country, and destroyed liberty wherever he found it.

Such a man might have been acceptable to the radical enemies of freedom; but he could have no fraternity with the systematic and unchangeable friends of public liberty. The grandeur of his achievements gave colour for a time to his usurpation of power; but his cold manners, and his camp-like domination, lessened his popularity among his subjects; while successive wars, excited partly by relentless and jealous foes, and partly by his own unbending character and ambitious policy, served to oppress France with conscriptions and imposts, and to render his government at first irksome, and finally intolerable. France was however indebted to him for the promulgation of an admirable Code of Laws, which Louis is pleased to say is "*polluted by the name of Napoleon;*" (see p. 323, 4.) for a system of Religious Liberty; and for the introduction of that bulwark of justice, Trial by Jury. She was also gratified by his patronage of the arts and sciences, by his galleries of painting, sculpture, and engraving, by his magnificent buildings, his roads, his institutions, and his public works; though she was at the same time oppressed by a refined and inquisitorial system of espionage, and insulted by restrictions on the press, which, by leaving the people in ignorance of the grounds of his policy, made them indifferent to the public interest, and disavowed of necessity the governed from their governor.

We fear to extend our strictures on his administration, because it is a master-vice of mankind to insult a fallen foe; and an inveterate habit to show what might have been performed better, after errors have been measured by events. We cannot determine what might have been his conduct or his fate, if the war with England had not afforded pretexts for augmenting his armies, and taking strong measures against his domestic enemies, as connected with his foreign ones; if he had not, during the whole period of his government, had to resist the intrigues of the partisans of the exiled family, and to support with the usual jealousy an usurped power; and if his plans of domestic improvement had not been thwarted by the expense of foreign wars. We shall however always regret that he did not take for his model a man whose own eclipses that of any imperial despot of ancient or modern times; we mean the illustrious Washington. Had he used his power to protect and regulate, instead of destroying, liberty, he would have been greater than Washington, because his sphere of action was more important. Had he permitted the freedom of speech in his senate and legislature, and the liberty of publishing truth on all subjects of public interest, he would not have converted discontent into treason, or have had to learn the sentiments of his capital from the Russians. Had he permitted the independent opinions of a free senate and legislature to influence his councils, he would never have seen Europe in arms against him, because the amalgamation of opinions would have generated a system of moderation, and he would then have been too strong in the affections of his people to have been assailed with any chance of success. In brief, had his government been founded on any popular principle, had his people been allowed to share his glory, had he not made himself every thing, and treated forty millions of human beings as though they lived only to contribute to the splendour of their emperor and his family, he might have enjoyed his unexampled renown, at the head of the French empire, till removed by the decay of nature. But he was not cast in the mould of Washington; he was what a military education, unbridled passions, and indulgent fortune, had made him; and yet, with all these things against him, nothing could pull him down at last but the unexampled unanimity of so many different powers. How

many coalitions had he destroyed, because they did not coalesce!—Had the allies acted together in 1793-4, when they were the enemies of France, as they did in 1813-14, when they declared themselves her friends, where would France have been? As it was, however, Burke declared that it was vanished from the map—he could not see it! But lord Liverpool declares in the house of lords, (May 11, 1814.) that, when our Wellington first entered his career against Bonaparte, “we had seen almost the whole of Europe subverted, and reduced to a blank; and scarcely any country remaining upon which the eye could rest, *except France!* By whose potent and magical operation was it, then, that (upon our own confession) the word *France* was almost synonymous with that of *Europe?*—by his, most assuredly, over whom we may write, if we now suppose him politically dead, and entombed at Elba, “Here rests a man brought low by the treachery of his friends and the unanimity of his enemies.”

We read in the Gazette de France, that it is the intention of Bernadotte to renounce the *succession* to the Swedish crown in favour of the son of Gustavus IV. We have no doubt but the duke of Sudermania will relinquish, at the same time, the *possession* of the crown to the rightful owner; and that Gustavus will be a king again. With this monarch may Louis shake hands with the most unreversed pleasure, and without any vexatious recollections; for never was a more inflexible enemy to the usurper of the French crown than he; he lost his own in fruitless attempts—mad attempts they were called—to oppose him: (see p. 198.) He will now, it is hoped, meet with his reward.

A Convention, something in the nature of a preliminary treaty of peace, was signed at Paris on the 23d of April, by lord Castlereagh and Talleyrand prince of Benevento. The following is the substance of it: All hostilities to cease. The allied powers shall cause the French territory to be evacuated by the 1st of June, 1814, such as it was on the 1st of Jan. 1792; and the French to evacuate all *without* those limits by the same date. All prisoners to be immediately restored on both sides, without exchange or ransom.

A decree of Monsieur, dated the 21st of April, published in the Moniteur of the 11th of May, directs the reduction of the French navy, on the signature of preliminaries, to 13 ships of the line, 21 frigates, 27 cutters, 15 brigs, and some smaller vessels.

We are every day in expectation of seeing our metropolis graced with the presence of the emperors of Russia and Austria, and the king of Prussia, accompanied by the brave generals to whom the cause of Europe is so much indebted—Blucher, Schwartzberg, Platoff, &c.—And it is said to be determined that the congress, for the negotiation of a general peace, shall be held in London, and the treaty to be entitled the Treaty of London, in consideration of the part which Great Britain has acted, and the succour, as well as example, she has given to all the belligerent allies. The following is the outline: Great Britain retains the Cape of Good Hope, Malta, the Mauritius, and Tobago; but cedes all the other French and Dutch colonies to those powers respectively, except Guadaloupe, which is secured to Sweden. Russia retains the Grand-Duchy of Warsaw; as Austria does Venice and its dependencies, together with Mantua and Peschiera. The kingdom of Saxony is to be divided between Austria and Prussia. Murat is to retain Naples; and king Ferdinand Sicily, with an indemnity in Italy for his Neapolitan possessions. The Scheldt is to be open; and the ships at Antwerp to be divided between the French and the Dutch.

His royal highness the prince-regent has thought fit to make a most commendable exception to the rule which it is said the sovereign had prescribed to himself; and we take credit to ourselves for having in some sort foreseen that such an exception might occur. See the article HERALDRY, vol. ix. p. 415. 2d edit.—On the 3d of May, the marquis of Wellington was created Marquis Douro, and

Duke of Wellington in the county of Somerset; and, on the 10th, a message was delivered to each house of parliament, stating, that “the prince-regent, desirous of further manifesting his sense of those great and eminent services which have exalted the renown of the British arms, established the safety and independence of Portugal and Spain, and contributed largely to the present tranquillity of Europe, recommends it to his parliament to enable him to grant such an annuity to Field-marshal the Duke of Wellington, and the heirs of his body succeeding to the title of Duke of Wellington, as may tend to support the dignity conferred upon him, and at the same time be a lasting memorial of his royal highness’s feelings and of the gratitude and munificence of the nation.”

The message was taken into consideration the next day in the house of lords; and the address in answer to and concurring with it was carried *nem. diff.*—The duke of Norfolk said, that he felt more proud of having a person like the duke of Wellington standing in the same rank with himself, than if he claimed that rank only from hereditary descent. It added more dignity and grace to the peerage.

In the house of commons, on the 12th, it was agreed to vote to his grace, to be annexed to the dukedom, an annuity of 13,000l. per annum, charged on the consolidated fund; but with a provision authorising the lords of the treasury to advance a sum not exceeding 400,000l. to be invested in land to be annexed to the dukedom. Upon purchases to that amount being completed, the annuity is to be cancelled, or parts of it in proportion to the amount laid out in land. This 13,000l. a-year, in addition to 4000l. a-year and 100,000l. in money granted before, will make the whole parliamentary allowance bestowed upon the duke of Wellington about 22,000l. per annum.

On the same day, (May 3.) the prince-regent was also pleased, in the name and on the behalf of his majesty, to grant the dignity of a Baron of the United Kingdom of Great Britain and Ireland to the following military officers, companions in arms with the duke of Wellington, and the heirs male of their bodies lawfully begotten, viz. Lieutenant-general the Hon. Sir John Hope, K. B. by the name, style, and title, of Baron Niddry, of Niddry, in the county of Linlithgow. Lieutenant-general Sir Thomas Graham, K. B. by the title of Baron Lynedock, of Balgowan, in the county of Perth. Lieutenant-general Sir Stapleton Cotton, Bart. K. B. by the title of Baron Combermere, in the county palatine of Chester. Lieutenant-general Sir Rowland Hill, K. B. by the title of Baron Hill, of Almaraz, and of Hawkestone, in the county of Salop. And Lieutenant-general Sir William Carr Beresford, K. B. by the title of Baron Beresford of Albuerca, and of Dungarvon in the county of Waterford.—Three of the above noblemen, lords Lynedock, Hill, and Beresford, are to have pensions of 2000l. per ann. each; and lord Liverpool stated, that, with respect to the two other distinguished officers serving under the duke of Wellington, who had been so justly honoured by the prince-regent in being raised to the peerage, they were in circumstances to decline any provision being made for them by parliament. He had, therefore, with respect to them, only to hope that they might long enjoy the honours which had been so deservedly conferred upon them. For the armorial bearings of the lords Niddry, Lynedock, and Hill, see the article HERALDRY, vol. ix. Plate C.

That the services of the navy might not pass unrewarded, the Gazette of May the 14th announced, that the dignity of a Viscount of the United Kingdom had been granted to Admiral Lord Keith, by the name, style, and title, of Viscount Keith. And also that the dignity of a Baron of the United Kingdom had been conferred on Vice-Admiral Sir E. Pellew, by the name, style, and title, of Baron Exmouth, of Canontaign, in the County of Devon. Admiral Cornwallis has been created a Vice-Admiral in the room of Viscount Bridport, deceased; and Admiral Young, a Rear-Admiral.

We are happy to add, that it is intended, when the peace is entirely settled, farther to reward those who have so nobly laboured to secure it, by an addition of one-third to the half-pay of retiring officers in the army and navy. And we are informed, that the workmen in the dock-yards are not to be suddenly reduced in number: the diminution by deaths and superannuation, together with discharges for idleness and other bad behaviour, are to be relied on for bringing the yards to a peace-establishment.

To conclude.—The great events we have been narrating, have come to pass under the guidance of a ministry of no shining talents. Indeed so much the contrary, that we have seen the parliament prorogued for three whole months in the middle of a session, (p. 373.) and on its re-assembling appearing to avoid every important discussion, every thing beyond mere routine-business—on account of the absence of one man, a man who was looked upon by his colleagues, in 1809, as totally unfit for office! See p. 212.—Another remarkable circumstance in the present aspect of the political world, seems to be the extinction of all the great political luminaries of the last age, without the appearance of any equal lights to succeed them. Pitt is no more. That proud integrity, which extorted panegyrics even from his enemies; those views of foreign policy, which were generally sound, though sometimes misapplied through a too sanguine calculation; that knowledge of finance and political economy, which has not been paralleled by any modern statesman;—these can no longer sway the public councils; nor could they now be seconded by the strong sense, the force of character, and indefatigable application, of the first lord Melville. No longer, on the other hand, does the same torrent of eloquence flow from the opposition-benches, as when Fox, and Burke, and Sheridan, were in their prime; when the forcible argument of the one, the impetuous declamation of the other, and the brilliant wit of the third, were displayed in full array, on the theatre of the British parliament. Of all these, Sheridan alone remains, and remains the mere shadow of his former self.—The absence of this constellation of talent has certainly dimmed the lustre of the British senate, and rendered its character less imposing in the eyes of Europe. Yet has it not, perhaps, on the whole, produced an unfavourable effect upon the public mind. It has broken those chains of mental submission, by which the inhabitants of this country were formerly enthralled. The anathema laid on all who dissented, even in a trifling degree, from the opinions of Pitt or of Fox, is in a great measure removed. Men do not consider themselves as under a necessity so absolute, of becoming bound to either of the contending parties; and, when they do attach themselves, they still reserve some liberty of judgment upon individual questions.—The present ministers are not men of shining abilities; but they are plain practical men, diligently doing what they apply themselves to; and, we really believe, sincerely seeking, to their best judgment, the public welfare. They have availed themselves of prosperous circumstances with vigour and promptitude, without being betrayed by them into extravagant and romantic projects.

#### GENERAL SURVEY OF BUILDINGS, STREETS, AND ANTIQUITIES.

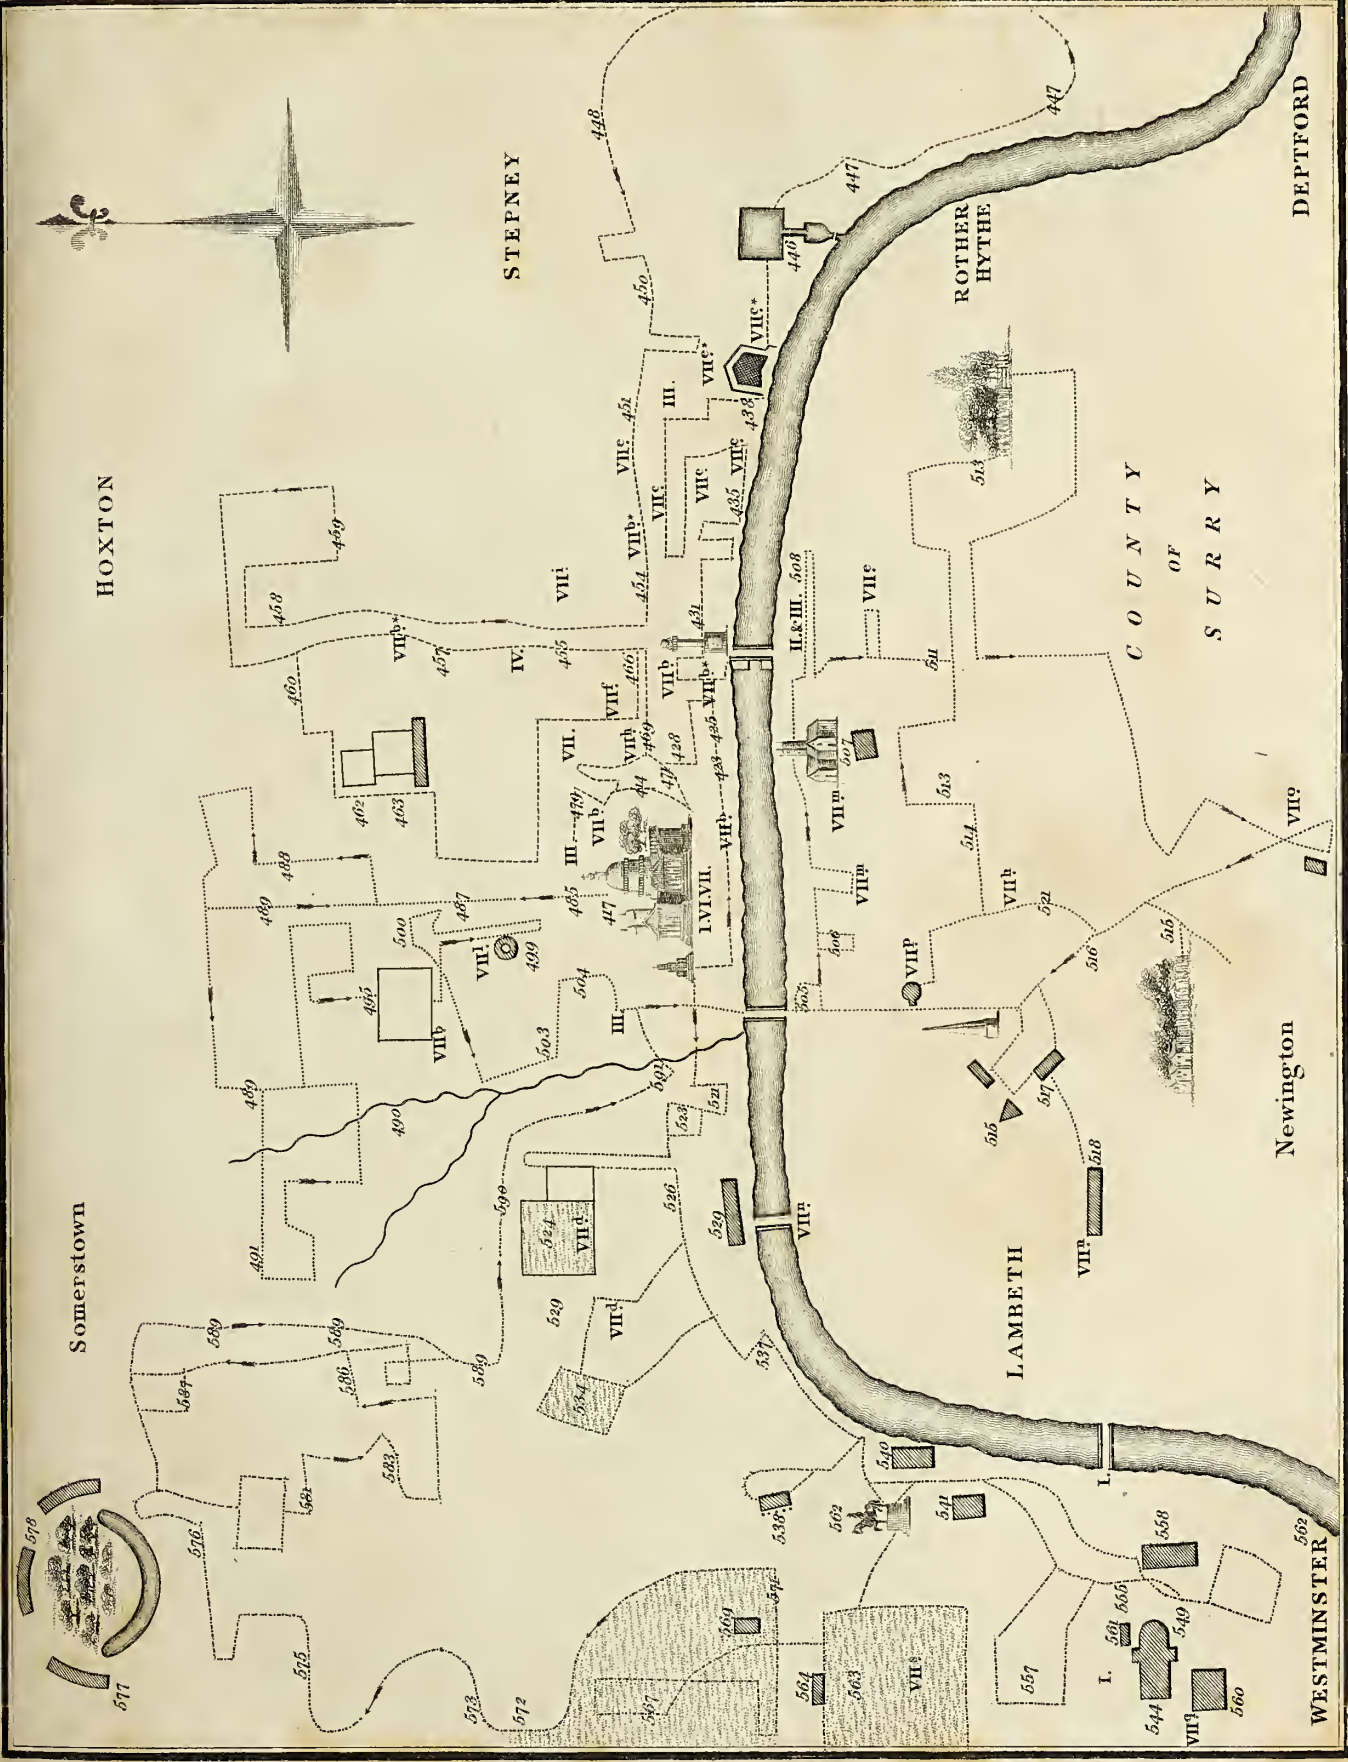

The wings of time move with a much swifter flight than the pen of the historian. Unable to keep pace with the rapid succession of events, the chronicler wonders at being left so far behind, and to find himself describing the past when he had thought to arrest and fix the present. Teeming with important circumstances, every day brings forth new matter; and the writer hardly knows where to stop. This is the case with all works of the nature of our publication; and we must therefore conform with the general usage and custom laid down by our predecessors in this department of useful literature. Having brought the annals of British history, mediately or immediately connected with the history of the metropolis, down to the

present happy moment of peace, we intend now to draw the attention of our readers to a SURVEY of this noble capital of the united empire. And here we find ourselves again surrounded with nearly the same, and as many, difficulties as we were in our situation of historiographers; for the same wasting power which piles rapidly days upon days, years upon years, exercises its influence with equal tyranny and velocity upon the works of man: so that, when the perambulator who passes before a monument, and notes it down, passes again the next day, he finds it no more: *Transivi, et ecce non erat*; "I went by, and it was gone." This is the reason why descriptions of ancient buildings, no longer in existence or mouldering out of shape, are become so interesting, so precious. They arrest the ravages of the great leveller of all, and give a sort of *immortality to mortal things*. Under what obligation are we not to the draughtsmen, painters, and engravers, of the 15th and 16th centuries, when the arts began to awake from their slumbers, for their attention and care in fixing on wood or copper the true likeness, the *vera effigies*, of men, edifices, and other cadent and deciduous subjects, which would have been lost to memory for ever! These considerations have actuated us to give in our written and engraved descriptions, objects which are even now existing, as well as those which time has devoured, and exist only in the collections of antiquaries, who, like the fleeting objects of their lucubrations, have long vanished from the society of men. Lifting with one hand the thick veil of darkness thrown by the lapse of years over many interesting parts of this ancient city, we must withstand with the other the rapacity of the great destroyer, and contrive to present to our readers, both that which once was, and that which now is, worthy of being known and remembered. The chef-d'œuvres of architecture, of sculpture, of painting, all the works of man, as they have a beginning, so must they have an end; and what to-day delights the eye with grandeur, beauty, elegance, may tomorrow disappear in volumes of flame, or by any other physical cause. It is therefore necessary to describe even those objects that are cotemporary with us, and may strike our sight every day; since, when they shall have been expunged from the book of realities, they will retain still a sort of imaginary existence in our columns and on the copper plates destined to illustrate their contents. There posterity will seek for them; there only they will find them, and bless our memory for the trouble we have taken.

St. PAUL'S.—The metropolitan church of St. Paul being nearly the central point of the whole of our survey, namely, London, Westminster, and the Borough, we have chosen it also as the centre of our perambulations in and about these three component parts of the capital of the united kingdom. Hence we shall start in search of objects worthy of notice, making our observations as we proceed; following, as most useful guides, those writers who have preceded us in the same career, taking their word when we have no better authority, but always scrupulous and fearful in admitting ungrounded opinions. To St. Paul's we shall return by different windings, proud of making discoveries, if, after the last and keenest of gleaners, Pennant, discoveries are to be made; and bold enough to think for ourselves, and to set our predecessors and leaders right whenever we find them deluded or mistaken. When the subjects of our description cannot be placed before our eyes, we will faithfully quote our authorities; but, when and where ever we can procure ocular certainty, we must be allowed to indulge our own sense and judgment.

Although it matters little whether on the spot, upon which this magnificent basilica now stands, there was ever a temple dedicated to Diana, or to any other heathen deity, or no temple at all; yet there is always a great deal of pleasure felt by a true antiquary in finding the truth behind the curtain which time has drawn between us and the monuments of past ages. At the diffusion of the evangelical light, and when the follies of paganism began to be exploded, the nearly-general custom of the Christians—

Thomas et al. Burg. St. Blomby.

*Plan of the Survey.*

Published by G. Jones, Ave-Maria-Lane, Nov. 9, 1844.

was to purify the spots polluted by idolatrous practices, and there, by a sort of lasting atonement, to erect a temple to the true God. The spot upon which St. Paul's stands; being nearly the highest point of the hill, it is probable that it had been originally adorned with the *fanum* of some of the numerous divinities with which polytheism had peopled the world. The hills of Italy, the mountains of Greece, the cliffs of the numerous islands which stud the bosom of the Ægean sea, were distinguished by white marble edifices consecrated to the gods; and Apollo and Diana had nearly every-where a facellum upon the top of any considerable eminence. This usage among the idolaters was of great antiquity; and the Old Testament contains frequent denunciations against the religious ceremonies performed on the *high places*. The former existence of a house called *Diana's Chambers* in the neighbourhood of St. Paul's, about where Paul's Chain and Godliman-street now stand, may have given rise to, if it was not the result of, the often-mentioned opinions that the Romans had erected, in the forest-wilds of the ground rising from the Thames, a temple to the divine huntress. Yet Stow, who was naturally apt to catch at any report of that kind, is perfectly silent upon it; but sir William Dugdale, in his most valuable History of St. Paul's, gives us the following statements, which the contrary but negative opinion of sir Christopher Wren and his contemporaries cannot controvert. "In the time of bishop Mellitus, Ethelbert king of Kent (who, by the preaching of Augustine, was the first of our Saxon kings that received the Christian faith) erected here a church, dedicating it to St. Paul, the apostle and doctor of the Gentiles. That in the place where he so built it, had been a temple of Diana the goddess, is probable enough from those instances which the learned Camden giveth; viz. the structure near at hand called Diana's Chambers, and the multitude of ox-heads digged up when the east part thereof was rebuilt; *sc. temp.* Ed. I. which were then thought to be relics of the Gentiles sacrifices. Whereunto I shall add what I find in an ancient writer, viz. After that the Christian religion, which in the days of king Lucius had been first planted in this nation, was, through that great persecution of Dioclesian the emperor, almost utterly rooted out, idols were set up in those churches wherein God had been served: *Immolat Diana Londonia, thurificat Apollini suburbana Thorneia, &c.* "London sacrifices to Diana, and Thorney (now called Westminster) offers incense to Apollo." Hist. MS. de fundat. abb. Westm. in Bibl. Cotton. It appears therefore that this second church was built by king Ethelbert, or rather by Sebert, a petty prince ruling in these parts, in the year 603 or 4. At the instance of St. Augustine, who had purified "the idolatrous temple of Canterbury, where Ethelbert and his nobles did offer sacrifices to the devil," Mellitus was appointed first bishop of London. The munificence of Ethelred appeared in his endowing this church with lands, among which is the manor of Tillingham in Essex. In 675, Erkenwald, the fourth bishop from Mellitus, and a man whose virtues seem not to have wanted the power of working miracles to entitle him to the veneration of his flock, bestowed great sums of money upon that edifice, and augmented its revenues with his own estate; (see p. 56.) He was canonized, and his body translated to a glorious shrine which was placed at the east end of the church behind the altar. Pennant, with his usual keenness of observation, says: "He was most deservedly canonized; for the very litter in which he was carried in his last illness continued many centuries to cure fevers by the touch; and the very chips, carried to the sick, restored them to health."

To so great a degree of esteem had this cathedral already arrived in 1075, that a national council of all the bishops, abbots, and other ecclesiastical persons, was held there by order of William the Conqueror. In 1087 this church was destroyed by fire, as well as a great part of the city. Mauricius was bishop at that time; and, being a man of enterprise and perseverance, he began the construction of

another cathedral, which, in the decree of Providence, was doomed also to suffer by the flames many times, and finally to perish in them in 1666. Stow represents it as a "worke that men of that time judged would never have been finished, it was to them so wonderful for length and breadth; and also the same was builded upon arches (or vaults) of stone for defence of fire; which was a manner of worke before that time unknown to the people of this nation; and then brought in by the French; and the stone was fetcht from Caen in Normandy." This is a curious assertion. We should suppose that the quarries of England known at that time were so distant, that the conveying of the stones by water from the nearly-opposite shore of the channel proved less difficult, and consequently less expensive, than to have them hewed from the bosom of this island; considering also that, at the time, Normandy was an appendage to England and the property of its monarch.

The choir, which by help of repairs stood to the very day when the whole pile was reduced to ashes, was uncommonly beautiful; the architecture of it uniting loftiness and elegance, solidity and grace. It was perfected in 1240; and soon after was most solemnly dedicated. The ceremony was performed by Edmund archbishop of Canterbury, and six bishops, ministering with him as his assistants; and honoured by the presence of king Henry III. and of Otto, the pope's legate. This solemnity, which must have been very striking, and attended with great pomp, was performed under the episcopacy of Roger surnamed Niger; and the expense was paid, as well as the whole cost of the building, by money and subsidies obtained for "indulgencies granted to all those as, being truly sorry for their sins and confessed, should afford their help towards this pious work." Thus the economical clergy borrowed out of the treasury in heaven, in order to erect upon earth places of worship in honour of the Most High. In 1312, the cross which was at the top of the steeple was made anew with a pomel well gilt, and filled up with "the relics of divers saints, by Gilbert de Segrave, then bishop of London, with much solemnity and procession; to the intent that God Almighty, by the glorious merits of the saints whose relics were therein contained, would vouchsafe to preserve this said steeple from all danger of tempest." But the wickedness of the people below soon outweighed the sanctity above; for, notwithstanding the powerful and cautious charm, the same steeple was destroyed by lightning on the 1st of Feb. 1444. The measurement taken before that time (1322) gives the following result: Length of the church, 690 feet; breadth, 130; height of the whole body of the church, 150, the roof from the floor in the nave, 102; choir, 88 feet; the space of ground upon which it stood, was estimated at three acres and a half, one rood and a half, and six perches. The height of the tower and spire, all together, from the ground was reckoned at 520 feet; and the ball, which from below did not appear much larger than a hazel-nut, would contain within it ten bushels of corn. The length of the cross was fifteen feet. This measurement, written in Latin on a tablet, hung on the north part of the choir. Such was this wonderful building, erected at a period which our pride stigmatizes with the concomitant idea of ignorance and barbarity.

Having considered this metropolitan church in general and outside, we must enter it, and introduce our readers to the principal objects which attracted the respect and admiration of all those who visited it. Had sir William Dugdale foreseen that in his life-time this famous basilica should have been entirely destroyed, his description of it would have been much more extensive; though we can gather from his very-interesting performance on the subject, aided by the fine *burin* of Hollar, many parts which the reader will peruse with great interest and pleasure.

The nave was supported by clustered pillars and round arches, the style preserved by the Normans, after the conquered Saxons. The galleries and windows of the transepts were also finished with rounded arches. To sir Wm. Dugdale also we owe our acquaintance with the tombs;

but we are not to expect in this church the number, or the elegance, of those of Westminster. "St. Peter, the porter of heaven," says Pennant, "had far the preference to the tutelary saint of this cathedral. Few crowned heads crowded here: except those of Saxon race, none were found within these walls."

Among several other curiosities which Dugdale mentions as having been seen is, a "fine picture of St. Paul, richly painted, and placed in a beautiful tabernacle of wood on the right hand of the high altar." It had been placed there under the reign of Richard II. in 1398; and we are told that the price of the workmanship was 12l. 16s. an enormous sum at that time; but we regret that Dugdale did not impart to us in what manner it was executed, whether in oil or in distemper, the learned being not yet satisfied with the idea that oil-painting was not existing at that time. The tabernacle mentioned above was nothing more, we suppose, than a well-carved and decorated box with two folding doors, as they are often seen in churches on the continent, and particularly in Flanders. These boxes were not open but upon certain occasions, and were intended to keep the pictures from dust, smoke, or any accident which might deface their beauty by impairing the brightness of their colours; and such was the respect paid to the work inside, that the ablest painters did not disdain to adorn the outside with some excellent specimens of their skill in the art. The high altar must have been in the same style, and uncommonly beautiful. "This," says Dugdale, after a manuscript in the possession of Ashmole, "as appeareth by the indented covenants between Ralph de Baldock bishop of London and one Richard Pickerell, a citizen, had a beautiful tablet made and fitted to set thereon; anno 1309, 3 Ed. II. variously adorned with many precious stones and enamel'd work; as also with divers images of metal; which tablet stood betwixt two columns, within a frame of wood to cover it, richly set out with curious pictures; the charge thereof amounted to 200 marks," about 120l. of our present money. The offerings made at this altar were of immense value. On the day of the conversion of the tutelary saint, the charities were prodigious, first to the souls, when an indulgence of forty days pardon was given, *verè penitentibus, contritis et confessis*; and, by order of Henry III. fifteen hundred tapers were placed in the church, and fifteen thousand poor people fed in the church-yard. But the most singular offering was that of a fat doe in winter, and a buck in summer, made at the high altar, on the day of the commemoration of the saint, by sir William de Bunde and his family, and then to be distributed among the canons resident. This was in lieu of twenty-two acres of land in Essex, which did belong to the canons of this church. Till queen Elizabeth's days, the doe or buck was received solemnly, at the steps of the high altar, by the dean and chapter, attired in their sacred vestments, and crowned with garlands of roses. "They sent the body of the buck to baking; and had the head, fixed on a pole, borne before the crosse in the procession, until they issued out of the west doore, where the keeper that brought it blowed the death of the buck; and then the horners, that were about the cite, presently answered him in like manner; for which paines they had each man, of the deane and chapter, four pence in money, and their dinner; and the keeper that brought it was allowed, during his abode there, for his service, meate, drinke, and lodging, and five shillings in money at his going away, together with a loafe of breade having the picture of St. Paul upon it." Warton's Hist. of Poetry, vol. ii. p. 390.

"In the body of the church," says Dugdale, "stood the glorious image of the Blessed Virgin, fixed to the pillar at the foot of sir John de Beauchamp's tomb," (viz. the second pillar on the south side from the steeple westwards.) In the year 1365, a grant was made to the dean and chapter, by John Barnett, bishop of Bath and Wells, of one water-mill, several acres of arable land, meadow, pasture, and of wood, amounting in all to ninety-eight, and 43s.

of yearly rent, laying in Rastoke, co. Essex, for the perpetual maintenance of a lamp burning every night before this image. It was stipulated besides in the grant, that every day after mattins those present should go out of the choir, and, placing themselves before the image, sing an "Anthem of Our Lady, *scil. Nesciens Mater.*" This religious custom was kept up to the time of the reformation. The donations offered to this image, being very numerous and valuable, were the perquisites of the dean and canons, as well as the money which the devotion and charity of the faithful used to drop into an iron box placed at the foot of the image. We are not told what materials that image was made of; but it appears that mass was performed on an altar below it.

In the eastern part of the church, called the New Work, was the Chapel of Our Lady, as we find it in nearly all ancient churches; and there was also an image of the Virgin, in honour of whom the good people were invited, by the promise of forty days indulgence, to repeat a few *Paters* and *Aves*, and to give books, vestments, tapers, and any other ornaments, to the church. A taper was constantly burning before the great cross which was in the body of the church: this was maintained by two acres of land situated in Sandon, co. Herts, given by Ralph de Clatford. Towards the great north door, a crucifix was erected, to which frequent donations were made.

But the principal object of devotion was the famous shrine of St. Erkenwald, the venerable bishop, whom we have mentioned at pages 56 and 397. He was stated to be the son of Offa king of the East Saxons; and had been converted to the faith in Christ by Mellitus, first bishop of London, in 642. Before he was promoted to the dignity of a bishop, he erected two very handsome monasteries, at his own expence, and out of his own patrimony: one in Surry, on the banks of the river Thames, at a place called then *Cerotesfeya*, now Chertsey, where he presided over his monks, giving them the best examples of abnegation and piety; and the other in Essex, at *Berchingum*, now Barking, for Edelburga his sister, whom he placed at the head of the nuns there. He was consecrated a bishop by Theodorus archbishop of Canterbury, in the year 675; converted, and baptized with his own hands, Sebba king of the East-Saxons, who, leaving the pomp and vanities of this world, soon consecrated his life to the practice of virtue, and was buried in this cathedral under a marble vault, which existed in the time of Dugdale, from whom we derive our best information; and shared with all the other monuments the fate of the church in 1666.

St. Erkenwald, or Erconwald, as the name is sometimes spelt, sat eleven years on the see, and appeared to have been most deservedly beloved and revered by his flock. It would be ridiculous to report here many of the numerous miracles he is said to have performed. The easy belief yielded to many incredible relations found most likely its origin in the blind respect which they bore, in spiritual matters, to a man whose morality, humanity, and private and public liberality, had won their utmost gratitude. Man is too prone, indeed, to invent and believe wonderful things of the object of his veneration and his love; and, from the rustic clown who hangs to the lips and believes in the dreams of the girl of his heart, up to the superstitious Christians who thought they were cured by the mere touch of St. Erkenwald's litter, we can trace the same principle nearly every-where. We read in a Latin extract of his life, written in a most florid style of elegance, the following passage: *Quadam verò die, verbi Dei pabula, commisso sibi gregi, ministratum dum duarum rotarum ferretur vehiculo infirmitate præpediente vel senio, contigit ut altera rotarum semitis difficultate axem relinqueret, et ibidem, sociâ relicta, remaneret. Cumque diu rota reliqua solum officii sui cursum continuaret; ignorabant enim qui aderant, subito currus ex altera parte vacuus sustentamine cernitur, cujus tamen cursus usque novo inò insolito, mirabiliter perficitur.* "Riding one day in a two-wheel carriage, as he was going to distribute the spiritual food of his instruction to the flock intrusted to his

his care, it chanced that one of the wheels came off on account of the roughness of the road, and was left behind; whilst the other performed its part after the loss of its companion as if it had been present; and indeed so well, that no one missed the wheel till the old and infirm prelate arrived at the end of his journey." Erkenwald died at Barking, not without having, previous to his leaving this world, convoked his disciples in his cell, and given them proper instruction; "but, when he expired," says the historian, "the whole of the apartment was filled suddenly with an odour of the most delightful fragrance, as if the house had been all at once immersed in an ocean of the sweetest perfumes." As soon as the news of his death was known, the monks of Chertsey halted at Barking, where they were met by the canons of St. Paul's; and a warm contention began between the nuns and the monks, and between them and the canons; both sides claiming possession of the relics of so great a saint; but, the people of London having added strength to their clergy, the body was taken up, and followed by the monks and the nuns in tears along the road. But soon a singular accident took place. A storm of rain and wind arose, and raged with such fury, that the procession could hardly move on; and a fresh obstacle appeared in the way, when they arrived at the banks of the *Hyla*, or river Lee; for, the deluged hill of the neighbourhood having poured down torrents of water, the stream had overflowed its bed, and no bridge or boat was at hand to facilitate their going over. Then the dispute between the nuns and monks, and the canons, began afresh. "See, see," said these, "what injury you wish to do us, in taking away this sacred corpse: God himself has declared against you, and sent this tempest to stop the perpetration of your crime. You came-like rapacious wolves to deprive us of our father's body;" and so forth. The canons, to these insults, answered with pertinaciousness, and indeed placed themselves in an attitude to defend the booty, had the other party attempted a rescue. In fact they were on the point of coming to blows; *tantane animis calescibus iræ*; when, in the midst of this scandalous tumult, a monk, less quarrelsome and more wise than the rest, ascended an eminence, and, having obtained silence, spoke nearly as follows: "You are actuated by a most laudable zeal; and no doubt your eagerness to possess the remains of your friend and father, of your monitor and founder, cannot but be acceptable to the Almighty; but, by insults and outrage, you defile the purity of your intention. If you, so unchristianly, abuse each other, how can you expect that God will let you know his predetermination upon this affair? God is all charity: be therefore peaceable and kind to one another; fall on your knees, and deprecate the just vengeance of the Lord: soon he will let you know his will." These words were listened to with attention and reverence. The clergy began the Litany and the singing of Psalms; the whole congregation prostrated themselves on the ground, shedding abundance of tears and offering prayers to God.—We might suppose, in these incredulous times, that this altercation, and the harangue, gave time to the waters to flow away, or re-enter their usual bed, and for boats and ferries to be procured—but, no—all at once, whilst the people were at prayers, the waters of the Lee respectfully divided themselves; and, the canons lifting up the bier with great reverence and returning unanimity, the congregation crossed the dry bed of the retired stream, and walked to Stratford. There they halted, and rested themselves under the foliage of the trees and amidst the flowers which rendered at that moment the spot so pleasant. The storm had ceased—the clouds, having discharged their burthens, were slowly retiring to the verge of the horizon, and the sun began to bestow again its light and warmth. But now another prodigy astonished the multitude—the wax-tapers, which were carried around the bier, and had been blown out by the wind of the storm, were miraculously lighted again without any mortal help. The astonishment having subsided, the funeral pomp proceeded to

London; and was met on the road by the people of the city, impatient to see and receive the venerable remains of their beloved bishop. *Admissi, risum teneatis?* "Do not laugh," says Horace; and indeed we need not laugh at blind credulity in dark ages, when we find hundreds of our cotemporaries in this very metropolis who firmly believe that, this year, a fresh incarnation of the Son of the Almighty will happen, that the Messiah will be born again of a woman, and that the virgin whose sacred womb is to be the tabernacle of the omnipotent is *Joanna Southcott*, spinster, and in the sixty-fifth year of her age. See p. 369. Tolerant to a degree in matters of religion, provided that religious matters do not disturb that harmony which ought to exist between short-lived mortals, all born of a woman, all destined to the grave, we have inserted the above to show at different periods the manners and belief of our ancestors. The true history of a nation, or of a people, is not merely the history of their kings, their warriors, and magistrates, but a faithful picture of their habits both corporal and mental, *mores hominum*, the attention to, and study of, which rendered the hero of the *Odyssæy* the wisest man of his age.

St. Erkenwald was at first buried in the body of the church; but in the year 1143, (13 Steph.) on the 18th of the kalends of December, corresponding to our 14th of November, "the bones of this famous bishop and confessor were translated to a shrine" erected for the purpose, and which stood on the east side of the wall above the high altar. "Of this glorious shrine," says Dugdale, "as also of the iron grate which inclosed it, extending to five foot ten inches in height, having locks, keys, closures, and openings, and was also tinned over, I have in its proper place exhibited a true representation, from the very original draught made for a direction to the smith that wrought it; which grate, weighing 343lb. at the rate of 4d. a-pound, amounted to 64l. 2s. and, that it might be kept in this beautiful condition, Thomas de Evere, dean of this cathedral, anno 1407, by his testament bequeathed roof for the building of houses in Knight-riders-street, to the end that the revenue of them should be employed upon the reparation thereof, and maintenance of lights burning about it on the two feast days of St. Erkenwald; as also for support of a chaplain celebrating for the fraternity of that blessed confessor."

As many and splendid miracles were believed to have been wrought at this shrine, the oblations were consequently rich and numerous. A canon of the church, in 1319, gave to it, by his testament, "all his gold rings and jewels of what sort soever;" and, in 1592, "Richard de Preston, a citizen and grocer of London, gave to this shrine his best sapphire-stone, there to remain for curing of infirmities in the eyes, appointing that proclamation should be made of its virtues." (Loc. cit.) John king of France, during his detention in England as a prisoner, visiting this cathedral, and having heard mass at the high altar, came to the shrine, and made an oblation of twelve nobles. Many other gifts were added to these in the course of time. In 1400, the esquire to the abbess of Barking made a present to it of a silver girdle; at which time it was much repaired, if not made anew. The shrine served as an altar-piece to a small tomb-like altar, surrounded with a rail as mentioned above, the spikes of which ended in elegant fleure-de-llys. The shrine was divided into five compartments, separated from each other by a pilaster adorned with a pinnacle richly wrought. The three middle openings were in the form of windows, each having two mullions; and the great pediment arose majestically with the splendid ornaments of seven pinnacles, with their finials and crockets. We are led to suppose, by the form of this monument, that some of the bones of the saint were seen through these windows, between the mullions; as we have remarked in several shrines of that description which the all-melting and burning zeal of the French revolution sent unmercifully to the crucible. It is remarkable that most of these shrines were in the shape of churches,

churches, with buttresses, pinnacles, spires, &c. and generally made of silver gilt, which the French call *vermeil*. We have strong reason to believe that some of them, preceding the æra of elegance in Gothic architecture, were rather prototypes than imitations of religious piles. St. Dunstan in England, and St. Eloy in France, were celebrated shrine-makers; and have respectively retained to this day the privilege of patronising in both countries the companies of *aurifabri*, "orfevres," or goldsmiths.

The shrine of Roger Niger, bishop of London in the thirteenth century, was also in high repute; a visit to it was frequently enjoined in the indulgences given for the rebuilding of this church.—Henry Lacie, the great earl of Lincoln, an eminent commander under Edward I. particularly in the Welsh wars, was buried in that part of the church of his own building, called the New Work. He died at his house in town, called Lincoln's Inn. He was armed in mail; his body covered with a short gown; his legs crossed, for he had either the merit of visiting the Holy Land, or (which would entitle him to a right to that attitude) made a vow to perform that expiatory pilgrimage.

Sir John Beauchamp, constable of Dover castle, warden of the cinque ports, knight of the garter, the son of sir Guy Beauchamp, earl of Warwick, had his tomb there also; upon which occasion Stow has the following observations: "This deceased nobleman (by ignorant people) has been erroneously mis-termed and said to be Humphrey the good duke of Gloucester, who lyeth honourably buried at St. Alban's in Hertfordshire, twenty miles from London. In idle and frivolous opinion of whom, some men (of late times) have made a solemn meeting at his tombe upon St. Andrewes day on the morning (before Christmasse), and concluded on a breakfast or dinner, as assuring themselves to be servants, and to hold diversity of offices, under the good duke Humphrey. Likewise on May-day, tankard-bearers, watermen, and some others of like quality besides, would use to come to the same tombe early in the morning, and (according as the other) have delivered serviceable presentations at the same monument, by strewing herbes and sprinkling faire water on it, as in the duty of servants and according to their degrees or charges in office; but, as Master Stowe [this is taken from the edition in 1633 long after Stow's death] has discreetly advised such as are so merrily disposed, or simply profess themselves to serve duke Humphrey in Pauls, if punishment of losing their dinner daily there bee not sufficient for them, they should be sent to St. Alban's, to answer there for their disobedience and long absence from their so-highly well-deserving lord and master, because in their merry disposition they please to call him so." This may lead to the explanation of the old proverb about duke Humphrey's dinner.

That accomplished knight, the ill-fated sir Simon de Burleigh, lay here in complete armour, under a most elegant gothic arch. He is said to have been the first person beheaded on Tower-hill. See the article ENGLAND, vol. vi. p. 603.—Here was deposited, in 1468, (severed from her husband the great John Talbot, who was interred at Whitchurch in Shropshire,) Margaret countess of Shrewsbury. A monument was designed by the friendship of one John Wenlok, at the expense of a hundred pounds; but, from some unknown cause, the inscription only was executed.

William earl of Pembroke, an active character in the reigns of Henry VIII. Mary, Edward VI. and Elizabeth, with his first countess Anne, (sister to Catharine Parr, queen to Henry VIII.) dying at Baynard Castle in 1551, was interred here with vast solemnity. The portraits of Anne and her lord, in painted glass, are still extant in the chapel at Wilton. The earl followed her in 1569. They lay beneath a magnificent canopy divided into two arches; at their head, kneeling, was their daughter Anne lady Talbot; at their feet, in the same attitude, their sons Henry earl of Pembroke, and sir Edward Herbert, of Pool, i. e. Powis Castle, ancestor of the earls of Powis.

That great and honest man, sir Nicholas Bacon, lay here

recumbent; and, notwithstanding he was a gownsmán, was singularly clad in complete armour; beneath him were his two wives, in gowns and short ruffs.—Sir Philip Sydney, the delight of the age, the most heroic and virtuous character of his time, had no more than a board with a most wretched inscription of eight verses, to record a fame which nothing can injure. His remains were brought here on January 16, 1586, with the utmost magnificence. There was a general mourning for him; and it was accounted indecent, for many months, for any gentleman to appear at court, or in the city, in gay apparel. The partiality of an individual may mistake the qualities of a friend; but the testimony of a whole nation puts his merits beyond dispute.—The memory of the great Walsingham also rests on his own deserts. He died so poor, that his friends were obliged to deposit his remains by stealth into their grave, lest they should be arrested, from a mistaken notion of right. See p. 360. "By accident was left, in an old book of legends which I purchased," says Pennant, "an ancient manuscript list of statesmen in the reign of Elizabeth, consigned by the writer to the pains of hell, for their zeal against the catholics. The 1st, *Leicester, all in fire*, died 1588; 2d, *Walsingham, the secretarie, also in fire and flames*; he died Ap. 6, 1590. No wonder, since he could contrive to get the pope's pocket picked, when his holiness was asleep, of the keys of a cabinet, by which he made himself master of an original letter of the first importance, which proved the saving of our island from the machinations of its enemies."

The monument of doctor Donne, the wit of his time, was of a curious design; the corpse was represented standing in a niche, and wrapped in a shroud gathered about his head; with his feet resting on an urn. Not long before his death, he dressed himself in that funebrial habit, placed his feet on an urn fixed on a board exactly of his own height, and, shutting his eyes, like a departed person, was drawn in that attitude by a skilful painter. This gloomy piece he kept in his room till the day of his death, on March 31, 1631; after which it served as a pattern for his tomb. See vol. vi. p. 21.

It may not be improper, here, to take notice of the celebration of divine service, the obsequies, anniversaries, and chantries, particularly belonging to this cathedral. As to the first, Richard Clifford, bishop of London, in 1414, with the consent of the dean and chapter, ordained, that from thenceforward it should be altered from the old form, and made conformable to the church of Salisbury, and other cathedrals within this kingdom. The performance of obsequies for great persons deceased was, however, retained as a peculiar privilege of this cathedral, from whence great profits arose. "Indeed, the state and order observed on these occasions," says Dugdale, "was little inferior to that used at the funerals of those great personages; the church and choir being hung with black, and escutcheons of their arms; their horses set up in wonderful magnificence, adorned with rich banner-rolls, &c. and environed with barriers; having chief mourners and assistants, accompanied by several bishops and abbots, in their proper habits; the ambassadors of foreign princes, many of our nobility, the knights of the garter, the lord-mayor, and the several companies of London, who all attended with great devotion at these ceremonies." This author adds a list of emperors, empresses, and kings whose obsequies were performed in this cathedral.

As to anniversaries, those of the conversion and commemoration of St. Paul, the consecration of the church, and the canonization of St. Erkenwald, were the principal. The anniversaries of the consecration and canonization, were celebrated at the public expense; but, there were other anniversaries, of a private nature, provided for by particular endowments, as that of sir John Pounteney, knt. who had been four times lord-mayor of London, and assigned annual salaries to all who bore office about the church, together with an allowance of 6s. 8d. to the lord-mayor, 5s. to the recorder, 6s. 8d. to the two sheriffs, 3s. 4d. to the common crier, 6s. 8d. to the lord-mayor's

mayor's serjeants, and 6s. 8d. to the master of the college of St. Laurence Pountney, provided they were present at his anniversary; but, if any were absent, that share was to be distributed to the poor. There were many other anniversaries of the same kind.

The chantries were founded by men of condition, for the maintenance of one or two priests, to celebrate divine service daily, for the release of their souls, the souls of their dearest friends and relations, and of all the faithful deceased, from purgatory; but these were, in a short time, increased to such a degree, and the endowments were so slender, that, so early as the reign of Richard II. bishop Braybroke caused forty-four of them to be united into one solemn service.

We shall not enter into the detail of all the chantries which were founded in this cathedral, nor of all the monuments which once adorned it; but we cannot pass without mention the beautiful monument of John of Gaunt, son of Edward the third duke of Lancaster and of Constantia his wife, which stood on the north side of the high altar, between two columns of the chancel. It seems to have been highly ornamented; his spear, his target, and crest, with a cap of maintenance, hung on the front of it, as may be seen in the engraving in Dugdale's History of St. Paul's.—The tomb of Thomas Kempe was also very fine, and adorned with angels, and shields of the arms of the see of London and his own.—That of dean Colet, the founder of the school, was remarkable for a bust of this learned clergyman, and for a skeleton in stone lying upon his tomb. It was often the wish of religious people to have this exposure of mortality as an appendage to their places of sepulture, in order to warn the living of the shortness of their days, and of the state to which death will reduce them, in spite of health, strength, riches, honours, and dignities; and several churches in England, as well as on the continent, exhibit this mournful and silent monitor; hence the ignorant formed the wrong yet common supposition, that the persons thus represented had been starved to death. The arms of the company of mercers was over the niche containing the bust of the dean; and the whole presented a noble appearance. The engraving from which we make our description was a present of the said worshipful company to the work of sir W. Dugdale, left the monument of so meritorious a divine should perish with the cathedral; which at that time (1656) was in a very ruinous state.

To mention all the monuments in stone and marble, and the flat tomb-stones adorned with beautiful brass effigies, of revered relatives and other personages, would be a task ill-suited to our purpose; we therefore return to the historical part of the pile.

We find upon record, that in 1561 (3 Eliz.) the steeple was struck again and brought down (as supposed) by lightning which set it on fire about three yards from the top; and that, about thirty years after, an old plumber on his death-bed confessed that this accident did not originate, as was generally believed, from the fire of heaven; but from his own neglect, he having left a pan full of coals, and other fuel, in the steeple, when he went to dinner. In the space of four hours, the steeple and upper roof of the church and aisles were totally destroyed. Owing to the liberality of the queen, who gave a thousand marks in gold, and also a warrant for a thousand loads of timber felled out of her own woods and forests; and to the generosity of the bishop of London, who gave 861. 6s. 8d. of the dean and chapter, and of the citizens of the metropolis, besides other voluntary contributions, the whole amounting to 67021. 13s. 4d. before the month of April, 1565, all the roofs of timber were perfectly finished and covered with lead; but the steeple, though several models of excellent design were proposed, was not rebuilt. Several donations were also made under the reign of James I. and Charles I. towards the repair of the church; and in 1632 an order was signed to Inigo Jones, esq. surveyor of his majesty's works, to cause

inclosures and scaffolding to be set in hand, with direction to begin the repair at the south-east end, and to bring it along by the south to the west end; and soon after William Laud, then bishop of London, laid the first stone. It was not long after that the portico was erected, from the design, and under the direction, of Inigo Jones, who, having particularly studied the Grecian and Palladian architecture, conceived the heterogeneous idea of prefacing a Gothic building with columns and pillars of the purest Corinthian order. We are told that the portico was intended to be an ambulatory for such as by walking in the church disturbed the service performed in the choir.

A column erected at the expense of Edward Barkham, mayor of London in 1622, near the tomb of William the Norman, bishop of London under the reigns of Edward the confessor and William the conqueror, presented the following lines:

Walkers, whosoe'er you be,  
If it prove you chance to see,  
Upon a solemn scarlet day,  
The city senate pass this way,  
Their grateful memory for to show  
Which they the reverend ashes owe,  
Of bishop Norman here intum'd  
By whom this city has assum'd  
Great privileges; those obtain'd  
By him when conqueror William reign'd:  
This being by Barkham's thankfull minde renew'd,  
Call it the monument of gratitude.

The *walkers*, to whom the lines are addressed, were a most scandalous set of politicians, news-mongers, and all sorts of idle people in general, the *Otiosa Londinia*, who used to resort to the church, as a public piazza, to walk in hot or wet weather; a custom which obtained during the reign of James I. and Charles I. and which led to, and was followed by, depredations and profanations under the protectorate. We find in the *Microcosmographie*, 1628, the following droll description of it: "It is the land's epitome; or you may call it the lesser ile of Great Brittain. It is more than this, the whole world's map, which you may here discern in it's perfect'st motion, justling and turning. It is a heap of stones and men, with a vast confusion of languages; and, were the steeple not sanctified, nothing liker Babel. The noise in it is like that of bees, a strange humming or buzze, mixt of walking, tongues, and feet. It is a kind of still roare, or loud whisper. It is the great exchange of all discourse, and no business whatsoever but is here stirring and afoot. It is the synod of all pates politicke, joynted and laid together in the most serious posture; and they are not halfe so buise at the parliament. It is the anticke of tailes to tailes, and backes to backes; and, for vizards, you need goe no further than faces. It is the market of young lecturers, whom you may cheape here at all rates and sizes. It is the generall mint of all famous lies, which are here, like the legends of popery, first coyn'd and stamp't in the church. All inventions are empty'd here, and not few pockets. The best signe of a temple in it is, that it is the theeves sanctuary, which robbe more safely in the croud then a wildernesse, whilst every searcher is a bush to hide them. It is the other expence of the day, after playes, tavernes, and a bawdy-house, and men have still some oathes left to sweare here. It is the eares' brothell, and satisfies their lust and ych. The visitants are all men, without exceptions; but the principall inhabitants and possessors are stale knights, and captaines out of service; men of long rapiers and breeches, which after all turne merchants here, and trafficke for newes. Some make it a preface to their dinner, and travell for a stomacke; but thriftier men make it their ordinarie, and boord here verie cheape. Of all such places it is least haunted with hobgoblins; for, if a ghost would walke, move he could not."

Again; in a curious little volume of the time of Charles I. entitled "London and the Countrey carbonadoed,"

doed," is the following description of *S. Pauls Church*. "Oh domus antiqua, a fit object for pity, for charity; further reported of than knowne: it is a compleat body, for it hath the three dimensions of longitude, latitude, and profundity, and-as an excellent over-plus famous for height. It was a maine poynt of wisdome to ground her upon *Faith*, for thee is the more likely to stand sure: the great crosse in the middle certainly hath bin, and is yet, ominous to this churches reparation. S. Paul called the church the pillar of truth; and surely, had they not bene found, they had fallen before this time. The head of this church hath been twice troubled with a burning fever, [alluding to the steeple having been twice burnt;] and so the city, to keep it from a third danger, let it stand without a head. I can but admire the charity of former times, to build such famous temples, when as these ages cannot find repaire to them; but then the world was all church, and now the church is all world: then charity went before, and exceeded preaching; now there is much preaching, nay more than ever, yet lesse charity: our forefathers advanced the church, and kept their land; these times loose their lands, and yet decay the churches. I honour antiquity so much the more, because it so much loved the church. There is more reason to suspect the precise puritaines devoyd of charity, than the simple ignorant fraught with good workes. I thinke truly in this one point, the ends of their actions were for good, and what they aimed at was God's glory and their owne happines. They builded temples; but our degenerating age can say, Come let us take them into our hands and possess them. Amongst many others, this cannot be sayd to be the rarest, though the greatest. Puritaines are blown out of the church with the loud voice of the organs; their zealous spirits cannot endure the musicke, nor the multitude of the surplices, because they are relikes (they say) of Rome's superstition. Here is that famous place for sermons, not by this sect frequented, because of the title *the Crosse*. The middle ile is much frequented at noone with a company of *Hungarians*, not walking so much for recreation as neede; (and, if any of these meete with a yonker that hath his pockets well lined with silver, they will relate to him the meaning of Tycho Brahe, or the North Star; and never leave flattering him in his own words, and sticke as close to him as a bur upon a travailer's cloake; and never leave till he and they have saluted the Greene Dragon, or the Swanne behind the shambles—where I leave them.) Well, there is some hope of restoring this church to its former glory; the great summes of money bequeathed, are some probabilities; and the charity of some good men already, in cloathing and repaying the inside, is a great encouragement; and there is a speech that the houses that are about it must be pulled down, for Pauls church is old enough to stand alone. Here are prayers often, but sinister suspicion doubts more formal than zealous; they should not be worldly, because al church-men; there are none dumbe, for they can speake loud enough. I leave it and them, wishing all might be amended."

It seems that, in those times, little or no religious respect was paid to the basilica; for butchers' boys, porters of all sorts, and any body who wished to shorten their way, used to cross the church most indecorously; and the custom went so far, that the clergy thought that the best remedy would be to turn it to the profit of the poor. The following quatrain was therefore engraved upon a small iron-box near the northern entrance:

All those that shall enter within the church dore  
With burthen or basket must give to the poore:  
And, if there be any aske what they must pay  
To this bar, 'tis a penny ere they passe away.

In fact, the evil had long grown so glaring and so scandalous, that an act of common-council, which had passed in the beginning of the reign of Philip and Mary, stated, that of late years "the inhabitants of London, and other people repairing to Paul's church, have (and yet doe)

commonly use and accustome themselves very unseemly and unreyerently (the more the pity) to make their common carriage of great vessels full of ale and beere, great baskets full of bread, fish, flesh, and fruit, and such other things, fardels of stufte and other grosse ware of things, thorow the cathedral church of St. Paul's; and some in leading moyles (mules), hores, and other beasts, thorow the same unreyerently, to the great dishonour and displeasure of Almighty God, and the great grieffe also and offence of all good people." In consequence of which it was ordained, "that no person, either free or forraigne, of what estate or condition soever, doe at any time from henceforth carry or convey, or cause to be carried or conveyed, thorow the said cathedrall, any manner of great vessel, or basket, with bread, ale, beere, fish, flesh, &c. upon paine of forfeiture or losing, for every such his or their first offence, 3s. 4d. for the second, 6s. 8d. for the third, 10s. and, for every offence after the third time, to forfeit eight shillings, and to suffer two days and two nights imprisonment without baile or mainprife." It appears, by the nature of this ordinance, as if some difficulty was expected in putting the law into execution, as the possible repetition of offences is so minutely specified. But indecencies did not end here; for near one of the church-gates was the following caution in Latin: *Hicce locus facer est; hic nulli mingere fas est.*

This house is holy: here unlawful 'tis  
For any one against the walls to \*\*\*\*!

To several of the munificent contributions offered to the church in order that it might stand the undermining hands of time for many years, we must add the particular attention of sir Paul Pindar, knt. sometime ambassador for king James at Constantinople, who expended nineteen thousand pounds in the repairs of St. Paul's. He built the beautiful screen which separated the nave and transept from the choir; and indeed it was justly admired as a piece of excellent workmanship. On each side of the entrance-door, which was wide, lofty, and groined inside in an elegant manner, were four divisions ending in pinnacles, with as many statues of the Saxon kings, with foles and canopies most masterly wrought. The whole had a very solemn appearance, and drew much of its majesty from a large *parvis* of twelve stone steps leading from the chequered pavement of the nave up to the door of the choir—as faithfully represented in Dugdale's History of St. Paul's.

Sir Paul Pindar had brought over with him from the Levant a diamond valued at 30,000l. The king, James I. wished to buy it on credit; this the sensible merchant, one of the wise men of the east, most politely declined; but used to *trust* his majesty with it on gala-days. Charles I. however, could not rest till he got possession of this precious trifle, and bought it. James had appointed sir Paul farmer of the customs; and the citizen frequently supplied the monarch's wants. He did the same under the troublesome reign of his successor. Besides what we have mentioned before as spent for the repairing and embellishing St. Paul's, his charities were great; but our astonishment at his expenditure will cease when we consider that, in 1639, he was esteemed worth 236,000l. exclusive of bad debts. He was ruined by his connections with his unfortunate king; and it is reported that he suffered imprisonment for debt. It is said, that Charles owed him, and the rest of the old commissioners of the customs, 300,000l. for the security of which, in 1649, they offered the parliament 100,000l. but the proposal was rejected. He died August 22, 1650, aged 84. He left his affairs in such a perplexed state, that his executor, William Toomes, unable to bear the disappointment, destroyed himself, and underwent the ignominy of the now almost-obsolete verdict of *Felo de se*.

The house where sir Paul lived is now standing in Bishopsgate-street, a little below the church, on the same side of the way. It is remarkable for its antiquated look, by the

J. D. M. Quin del.

J. Chapman sc.

*South-view of the Chapter house of old St. Paul's.*

London Published Sept 1<sup>o</sup> 3 1846 by G. Jones.

the bow of the windows and their usual form. It is now a public house, having for its sign a head of the original owner. Sir Paul was early distinguished by that frequent cause of promotion, and indispensable accomplishment for a perfect gentleman at that time, a knowledge of languages, part of which he had acquired before, and part he had added during, his travels. He seems to have been prompted to lavish so much of his fortune upon the metropolitan church, from the circumstance of his having received at his baptism the name under which the cathedral had been dedicated.

In 1639, the total of the contributions remaining in the chamber of London, for the repairs of this venerable pile, amounted to 17,138l. 13s. 4½d. and, in 1643, to 101,330l. 4s. 8d. But the troubles and dissensions which soon broke out were the cause that no more than about the third part of that sum was laid out for the intended purpose. The long parliament having abolished bishops, deans, and chapters, the cathedral remained in a ruinous state; and all the crosses within and about London and Westminster were pulled down by order of the same authority. Thus this beautiful pile lay for many years, in the most lamentable condition. In the time of Cromwell's protectorate, it was made a horse-quarter for soldiers; the stately portico with Corinthian pillars (see Plate VI.) was converted into shops for seamstresses, cobblers, toymen and women, and other trades; the space from the ground being divided by a floor, to erect which the columns were considerably mangled and defaced. But shortly after the restoration of king Charles II. 1662, the fabric was cleansed, and made fit again for divine service.

But the church, thus repaired and beautified, was not long to remain. On the 3d of September, 1666, the great fire of London laid the whole in ashes. It is curious enough, that the famous author of French prophecies, Michael Nostradamus, has the following stanza, in his work printed at Lyons in 1556:

Le sang du juste à Londres fera faulte,  
Brûlés par foudres, de vingt trois les six.  
La Dame antique cherra de place haute;  
De mesme secte plusieurs feront occis.

Which has given to many lovers of such riddles to understand, that "it was a judgment of God Almighty upon this great city, for its rebellious actings against the late king Charles the martyr, and tamely permitting his open and shameful murder before the gates of his own royal palace."—However, it will always be with us an unravellable matter of surprise, that, when the people of London saw the rapid progress which the fire was making from the east towards the west, notwithstanding the fierceness of the flames curling over edifices, and hurried along by the eastern blast, they never thought of pulling down, or had not courage enough to fell at once, a thick mass of houses between the raging element and that venerable pile; it seems as if, panic-struck, the Londoners fled away, and remained at a distance, the tranquil though distressed spectators of the awful event.

The first thing designed, after this deplorable conflagration, was to fit some part of the church thus ruined for a choir, where divine service might be performed, until the repair of the whole, or a new fabric, could be accomplished. The west end, that seemed to have suffered least from the fury of the devouring flames, was selected, as it was supposed that it might with the least expense be made useful for that purpose; but, after several experiments upon the strength of the remaining walls and pillars, the plan was found impracticable. It was therefore resolved that the relics of the old building should be cleared away, and a new church built in the same place.

The crypt under the church had not suffered so materially from the rage of the fire. It was in length 165 feet, upon a breadth of 77 feet, within the walls, which were of a great thickness, measuring about eight feet within, and five without, the pillars attached to them. It formed a

parallelogram, and was supported by three ranks of massy pillars united in a cluster of four large and four smaller shafts, with foci, bases, and plain capitals; the ogee-branches and groins setting off in a grand style. It was a parish-church dedicated to St. Faith the Virgin, and called *Ecclesia Sanctæ Fidis in cryptis*, or in the *crypts*, according to the vulgar expression. It contained four chantries, which had been most lavishly endowed; besides two *guilds*, or fraternities; one in honour of St. Anne; the other in honour of Jesus. Several tombs were seen in the crypt; and in the church of St. Faith was the following quaint inscription; but upon whose monument we are not able exactly to ascertain. Stow seems to indicate that they were engraven on the tomb of William Lambe:

As I was, so are ye;  
As I am, ye shall be.  
That I had, that I gave;  
That I gave, that I have.  
Thus I end all my cost;  
That I left, that I lost.

The Chapter-house, standing on the south side of the body of the church, guarded by a strong wall, was begun anno 1332; the place where it stood at the destruction having been formerly a garden for the use of the dean and chapter. It was a most elegant structure; which consideration has induced us to present our subscribers with a view of its south aspect, with part of the cloister surrounding it, and the passage from the south transept into it. This cloister and passage were surmounted with a second story. See Plate VII.

Referring to the engraving, and considering the appearance of the eight shafts rising above the roof in the same direction with the three pinnacles upon the respective buttresses, and cut short, like the stalks of some plants, it seems as though the building was not finished, and as if the original plan and design were that the whole of this miniature yet beautiful fabric should have been surmounted by a steeple surrounded most elegantly by eight high-finished pinnacles, shooting from the fluted stems remaining at the time of its destruction. Nowhere perhaps more plainly than in this beautiful specimen of workmanship does it appear, that the whole principle of Gothic, or Norman, or as some will properly call it original English, architecture, is founded upon a close imitation of that strong and luxuriant vegetation which exists perhaps no-where in a greater perfection than in this fertile island. A few words will make this assertion plain to the dullest understanding. The bold roofs and lofty arches of our ancient cathedrals are copied from the green arbours of conventual walks; where, as we have often observed them in several church-yards, in the Charter-house garden, and other places, the high branches of towering elms or lime-trees meet at top, and vault over our heads. Their bold limbs, stretching in parabolic curves, gave an idea of ribs and groins. On the outside, and upon buttresses and pediments, the finely-wrought and elegant pinnacles represent the sprouts shooting from the *axilla* of leguminous herbage; the clusters and fascies of small columns, and their ogees, are found in the channelled and fluted stalks: the twisted and well-wrapped blossoms of some of the worts swell in the crockets; and the quaterfoils and cinquefoils, two favourite shapes in Gothic architecture, have their origin in the flowers that spangle the kitchen-garden. The spear-like endings of railings and cornices were borrowed from the leaf of spinnach, and the ivy and vine yielded their pliant and fantastic foliage to bind the head of slender columns united in clusters, or girdle the waist of Gothic capitals.

Every body knows that the monks were, in this country as well as on the continent, the architects of their own churches; and that most of the beautiful piles which are still the admiration of the world, were conceived and planned by their sacerdotal skill, and rose from under their cenobitic hands. The meditating religious, pensively walking

walking in the silent solitude of the garden which he cultivated, and to which he looked down as his support, could not help admiring the beautiful works of nature, luxuriating under his eyes in the conformation of vegetables, and applied them to the decoration of an art which had become the object of his serious attention and interesting study; whilst the stately trees, sheltering the garden from the northern blast and scorching south, had already furnished him with the plan of the whole construction. Indeed, if we consider attentively the shape, conformation, attitude, and habits, of several subjects of the vegetable kingdom; the apium or parsley, the different sorts of beet, the curling pease, the entrapping leaves of the poppy, the indented lettuces, and others; we cannot deny that the nearer the ornaments of Gothic architecture approach the fantastical drift of the growth of these plants, the sharpness of their edges, and the meandrous eccentricities of their combinations, the nearer the art approaches the purity of its original perfection.

At the east end of the church-yard, was the clochier, or bell-tower, containing four very great bells, called "Jesus Bells," as they belonged to Jesus-chapel, situated under the church, as mentioned above. On the top of the wooden spire erected above the belfrey was the image of St. Paul, all standing, till sir Miles Partridge, knight, temp. Hen. VIII. having won them from the king at one cast of the dice, for one hundred pounds, pulled them down; which sir Miles, afterwards (temp. Ed. VI.) suffered death on Tower-hill for matters relating to the duke of Somerset.

St. Paul's was encompassed with a wall, about the year 1109, which extended from the north-east corner of Ave-Maria-lane, eastward along Paternoster-row, to the north end of the Old Change, in Cheapside; whence it ran southward to Carter-lane, and, passing on the north-side of it to Creed-lane, turned up to Ludgate-street. To this wall there were six gates, the principal of which was situated near the end of Creed-lane in Ludgate-street. The second was at St. Paul's-alley, in Paternoster-row; the third at Canon-alley; the fourth, called the Little Gate, was situated at the entrance into Cheapside; the fifth, called St. Austin's, led to Watling-street; and the sixth fronted the fourth gate of the church, near Paul's Chain.

Godrick, abbot of Peterborough, had set the example of erecting crosses in church-yards, to put passengers in mind of praying for the souls of all the faithful interred there; and this custom, if not anterior to his time, 870, has been constantly followed in all Roman-catholic countries to this day.—In St. Paul's church-yard, a pulpit-cross was erected long before the reign of Richard II. by whose order it was repaired. From thence sermons were preached to the people; and under it the citizens of London used to converse, and hold the assembly called the folkmote. The last sermon preached at this place was before James I. who came in great state on horseback from Whitehall, on Midlent Sunday, 1620; he was received at Temple Bar by the lord-mayor and aldermen, who presented him with a purse of gold. At St. Paul's he was received by the clergy in their richest vestments. Divine service was performed, attended with organs, cornets, and sackbuts; after which his majesty went to a prepared place, and heard a sermon at the Cross, preached by John King, bishop of London. The object of the sermon was the reparation of the cathedral. The king and the principal persons retired from the Cross to the bishop's palace, to consult on the matter; and, after a magnificent banquet, the court returned to Whitehall.

From all parts of the church-yard and adjacent places the beautiful dial was seen. It was adorned with the figure "of an angel pointing to the hour, both night and day." From this expression we are led to suppose that the whole of the circumference upon which the hours were painted was in circular motion, in lieu of the hand as we have it now; for it is not easy to understand how the angel could be put in motion, and go round from one hour to the other. This sort of contrivance is now common, and

particularly in French time-pieces, where the hour-plate is in motion, and brings the hour to the index of a figure pointing at it.

Dugdale tells us, that there was "a chapel standing on the north side of the church-yard, in that very place where a stationer's house and shop, viz. the sign of the Rose," was situated in his time; and under it a vault wherein the bones taken out of ancient graves were decently piled together.—The most ancient grant upon record, in favour of this chapel of the dead, was in the beginning of the reign of Edward I. by the lady Dionysia de Montchenise, "who in her pure widowhood gave one quarter of good wheat to be paid yearly out of the manour of Aneſtie in Surry, for the support thereof, as also of the priests there celebrating divine service." If there be no mistake in the manuscript out of which this has been extracted by Dugdale, surely the priests of that æra must have lived much more scantily than they have done since, or the price of wheat must have been much higher in comparison with all other necessaries of life; but, if in reality the pittance granted was small, the example was great, and was soon followed by several rich inhabitants of the metropolis. In 1276, Henry de Edelmeton, a citizen of London, bequeathed six marks yearly to a chaplain, and twenty shillings annually for the maintenance of a lamp; the *perennis flamma* of which used to increase rather than dispel the gloom of the funeral chapel. This, and all it contained, could not escape the rapacity of the duke of Somerset, who dilapidated so many ancient buildings to get materials for his palace, since called *Somerset House*, in the Strand.—The bones, being deprived of their peaceful retreat in the vault underneath the chapel, were conveyed into Finsbury fields. They amounted to more than a thousand cart-loads, and were again deposited in the earth. From this great quantity of bones, and the soil thrown over them, rose a hill high and large enough to serve as a basis to three windmills, which had since been built there, and were in constant motion, over the bones of the dead, to supply food for the living. The destruction of the chapel happened in 1549.

Near the north door of the cathedral was another chapel, founded by Walter Sheryngton, clerk, chancellor of the duchy of Lancaster under Henry VI. He was one of the canons resident at the church; and, by an inventory of his wealth, it appears that he had in ready money at his death no less than the sum of 323l. 18s. 4d. which was kept in an iron chest in the vestry of the cathedral. He had also two standing cups of gold, with covers; the one weighing 33 ounces and one serylyng, the other nearly the same, of troy weight. He knew, however, how to make a good use of his money; for, on the west quadrature of the cloister surrounding Pardon-church-haugh, he began, and his successors perfected, a very curious library, containing many excellent books, all, of course, manuscripts, and several upon vellum most curiously illuminated; the catalogue of which existed in 1688, and was seen in the Hattonian library by Dugdale.

The *Pardon-church-haugh*, or *yard*, contiguous to the bishop's palace, and eastward of it, on the north side of St. Paul's, was a cemetery of great antiquity; for there stood a chapel founded by Gilbert Becket, portreeve of London in king Stephen's time, and father to the famous archbishop of Canterbury of that name, where he lay buried. This chapel was rebuilt in the reign of Henry V. by Thomas Moore, dean of St. Paul's, who also encompassed it with a cloister, on the walls of which was painted the Dance of Death; a common subject on the walls of cloisters, or religious places. This piece represented a long train of different orders of men, dancing into eternity, each having Death for his partner. A painting of the same kind, in the cloister of the Holy Innocents at Paris, gave birth to a poem, consisting of the speeches of the different personages, and the answers of Death, which was originally written in the German language by Machaber, whence the painting itself acquired the appellation

tion of the Machabray, or Machabre. From a French version of this poem, our old poet, Lydgate, made an English translation, of which each speech was given to its corresponding figure in the picture. Dugdale has preserved the stanzas belonging to each couple of partners in this church-yard dance; and we think our readers, who may not have his *Monasticon* at hand, will not be displeas'd with a few quotations from them.

"The Daunce of Machabree, wherein is lively expressed and shewed the state of manne, and how he is called at certayne tymes by Death, and when he thinketh least thereon.—Made by Don John Lydgate, monke of St. Edmunds Bury.

The Prologue.

O ye folkes hard-hearted as a stone,  
Which to the world have all your advertence,  
Like as it should ever lasten in one;  
Where is your wit, where is your providence?  
To see a forme the fodayne violence  
Of cruel Death, that be so wise and sage,  
Which slayeth, alas! by stroke or pestilence,  
Both young and old, of low and high peerage:

Death spareth not, low ne high degree,  
Popes, kings, ne worthy emperours:  
When they shine most in felicity,  
He can abate the softness of her flowers,  
Her bright sun clippen with his shours,  
Make them plunge from her fees lowe.  
Mauger the might of all these conquerours,  
Fortune has them from her whole ythrow."

&c. &c. &c.

Death speaks first to the Pope, who answers; then to the Emperor, then to the King, the Patriarch, and nearly to all possible descriptions of men, down to the lowest rank. The lines to the Minstrel are as follows:

"O thou minstrel, that can so note and pipe  
Unto folke for to dowe pleasaunce,  
By the right hand I shall anon thee gripe,  
With these other to gone upon my daunce.  
There is no scape, nother avoydance  
On no side to contune my sentence;  
For in my musicke, my craft, and accordance,  
Each maister is shewen his sentence.

The Minstrel maketh answer:

This new daunce is to me so straunge,  
Wonder divers and passingly contrary,  
The dreadful footing doth so often change,  
And the measures so oft sith vary,  
Which unto me is now nothing necessary,  
If it were so that I might asert.  
But many a man, if I shall nought tary,  
Oft daunseth, but nothing of hert."

We shall not extend our quotations farther, these being sufficient to give an idea of the style of our ancient poet Don John Lydgate. The other stanzas are exactly in the same mode, and many of them contain very severe sarcasms pointed at the folly of man who busies himself about all that is uncertain, thoughtless of that which is certain—Death, with whom he must sooner or later dance away from this temporary stage into eternity. It is a very common thing for the cloisters of convents upon the continent to be decorated with paintings calculated to remind the beholders of their latter end, placed at the four corners of the building. They generally represent the *quatre fins de l'homme*—Death, Judgment, Hell, and Paradise; four grand subjects which afforded the artists of the fourteenth, fifteenth, and sixteenth, centuries, ample scope to display their talents and indulge their fancy. We understand that a print, and the French distichs, from the cloister of the Innocents at Paris, is in one of the libraries at Oxford, and well worth the attention of the antiquary. It appears that from that, or rather from the one in the cloister we are now speaking of, the famous Holbein painted

WOL. XIII. No. 915.

his large performance on the subject at Basle in Switzerland, his native town.

Farther to the west, and adjoining to the south wall of the church, not far from the Chapter-house, was the parish-church of St. Gregory. Over it was one of the towers which ornamented the western front. It was called the Lollards Tower, and was the bishop's prison for the heterodox, in which was committed many a midnight murder. That of Richard Hunn, in 1514, was one most foul; he was hanged there by the contrivance of the chancellor of the diocese, one Horsey; was scandalously accused of suicide, and his corpse ignominiously buried. The murder came out; the coroner's inquest sat on the ashes, and brought in a verdict of Wilful murder against Horsey and his accomplices. The bishop, Fitzjames, defended them. The king interfered, and ordered the murderers to make restitution to the children of the deceased, to the amount of fifteen hundred pounds. Yet the perpetrators of this villany escaped with a pardon, notwithstanding the king, in his order, speaks to them as having committed, what himself styles "the cruel murder." Fox's *Martyrs*, vol. ii.

The last person confined here was Peter Burchet, of the Temple, who, in 1573, desperately wounded the celebrated seaman sir Richard Hawkins, in the open street, whom he had mistaken for sir Christopher Hatton. He was committed to this prison, and afterwards removed to the Tower; where he murdered one of his keepers. He was at length tried, convicted, had his right hand struck off, and was then hanged. He was found to be a violent enthusiast, who thought it lawful to kill such as opposed the truth of the gospel.—The church of St. Gregory shared the fate of the noble pile to which it was annexed. The ground on which it stood was then laid into St. Paul's church-yard; and the parish has since been united to that of Mary Magdalen, Old Fish-street.

The re-edification of the church of St. Paul was hailed with gratitude and enthusiasm by the inhabitants of the metropolis and of the surrounding country, to which the noble dome offers from all points a most pleasing aspect, and, as it is jocosely said, "a land-mark" for all those who approach the metropolis.—Having given already an ample description of this majestic structure under the article ARCHITECTURE, vol. ii. p. 120-122. we shall merely add here what has not been, or could not be, inserted in that article.

As we seldom think of the fleeting progress of time, there are very few (comparatively) of the inhabitants of London who have seen the interior of St. Paul's cathedral with that attention which it deserves. They postpone satisfying their curiosity from day to day, and descend into the grave without having seen what they had every day at hand. Not so with foreigners and the inhabitants of the country: the appearance of the basilica at a distance, powerfully excites their desire of visiting it; and they feel at their arrival an irresistible impulse to enter its majestic portal. It is certainly a pity that the access to the interior should be bought for a few pence: much has been said, and perhaps too severely said, on that account; but objections of the strongest cast arise, and militate against opening the doors, promiscuously to every one without distinction. One of these objections is, that the monuments inside might soon suffer the same shameful and sacrilegious mutilations as the statues in the area before the church. The charges, however, are moderate; and the following is a sketch of the different curiosities which are exhibited in the interior of this noble fabric.

On entering the south door, there is a pair of stairs within a small door on the right hand, leading to the cupola; and the stranger by paying two-pence may gratify his curiosity with a prospect from the iron gallery at the foot of the lantern, which in a clear day affords a fine view of the river, of the whole metropolis, and all the adjacent country, interspersed with pleasant villages. The ascent to this gallery is by five hundred and thirty-four steps;

two hundred and sixty of which are so easy that a child may ascend them without difficulty; but those above are unpleasant, and in some places very dark; the little light that is afforded, is, however, sufficient to show amazing proofs of the wonderful contrivances of the architect. But, as the first gallery, surrounded by a stone ballustrade, and therefore called the stone gallery, affords a very fine prospect, many are satisfied, and unwilling to undergo the fatigue of mounting higher. In the ascent to the iron gallery, may be seen the cone of brick-work that supports the lantern with its ball and cross; the outer dome being turned on the outside, and the inner on the inside, of the cone. The timber-work, which at once supports the outer dome and the cone, is also worthy of inspection.

The visitor, on his descent, is invited to see the whispering-gallery, which will likewise cost two-pence; he here beholds to advantage the beautiful pavement of the church, and has the most interesting view of the fine paintings in the cupola, which are now going to decay. Here sounds are magnified to an astonishing degree; the least whisper is heard round the whole circumference; the voice of a person speaking softly against the wall on the other side seems as if he stood close to your ear, though the semicircular distance is no less than 140 feet; and the shutting of the door resounds through the place like thunder, or as if the whole fabric were falling. To this gallery there is an easy ascent for persons of distinction, by a most beautiful flight of stairs. The principle upon which this gallery is built appears at first very complicated; but, when we consider that sound, like light, produces always an angle of reflexion equal to that of incidence, we shall more easily comprehend the mysterious effect which has caused our astonishment. See also the article *ACOUSTICS*, vol. i. p. 89.

The stranger is next invited to see the library, the books of which are neither numerous nor valuable; but the floor, which is formed of 2376 small pieces of oak, is artfully inlaid, without either nails or pegs, and is not only neat in the workmanship, but beautiful in appearance; and the wainscoting and book-cases are not inelegant. The principal things pointed out to the visitor, are several beautifully-carved stone-pillars, some Latin manuscripts written by the monks eight hundred years ago, and an illuminated manuscript, containing rules for the government of a convent, written in old English about five hundred years ago; these, and some other manuscripts, are in very fine preservation. Over the fire-place is a portrait of Dr. Compton, the prelate that filled the see during the whole time of building the cathedral, who fitted up the library at his own expence, and gave it to the church.

The next curiosity is the fine model sir Christopher first caused to be made for building the new cathedral. It was not taken from St. Peter's, at Rome, as is pretended; but was sir Christopher's own invention, and the model on which he set the highest value; and it is greatly to be lamented that this design was not executed; the superiority of which becomes evident, on a comparison of the model with the building. It is of one story only, and, in every respect, much more simple than the cathedral; while, at the same time, it possesses all that elegance which results from the happiest union of simplicity and variety. Here is also the model of an altar-piece, which sir Christopher intended for this cathedral, had his plan been followed.

You are next shown the great bell in the south tower, which weighs 11,470 lbs. On this bell the hammer of the great clock strikes the hour; and on a smaller bell are struck the quarters. The great bell is never tolled, except on the death of one of the royal family, the bishop of London, or the dean of St. Paul's; and, when tolled, it is the clapper, and not the bell, which is moved. The clock-work is also very deserving of attention, both for its magnitude and the accuracy of the workmanship. The length of the pendulum is fourteen feet, and the weight at the extremity one cwt.—From this part a survey of the surrounding streets offers a very interesting spectacle.—The geometrical stair-case, as it is called, was a curiosity at

that day; and to some people, unacquainted with the principles of statics upon which it is constructed, it appears dangerous; the steps being formed of large stones, which seem to hang together without support. The visitor may not be aware, that the weight of the part of each stone concealed in the wall, and aided by an unseen corbel, is nearly double of that of the part projecting from it. This sort of construction is at present not uncommon.

The ascent to the ball is attended with some difficulty, and is encountered by few; yet, both the ball, and the passage to it, well deserve the labour. The internal diameter of the ball is six feet two inches; and it will contain eight persons.

The cathedral church of St. Paul is deservedly esteemed the second in Europe, not for magnitude only, but for beauty and grandeur. St. Peter's, at Rome, is undoubtedly the first; but, at the same time, it is generally acknowledged, by all travellers of taste, that the outside, and particularly the front, of St. Paul's, is superior to that of St. Peter's. The two towers at the west end, though faulty in some respects, are yet elegant, and the portico finely marks the principal entrance. The loggia, crowned with a pediment, with its alto relievo and statues, make, in the whole, a fine shape; whereas St. Peter's is a straight line, without any break. The dome is extremely magnificent; and, by rising higher than that at Rome, is seen to more advantage, on a near approach. The inside, though noble, falls short of St. Peter's. The discontinuing the architrave of the great entablature over the arches, in the middle of the aisle, is a fault which architects can never forgive. Notwithstanding, without a critical examination, it appears very striking, especially on entering the north or south door. The side-aisles, though small, are very elegant. If, upon the whole, St. Paul's does not equal St. Peter's, there is much to be said in defence both of it and the architect, who was not permitted to decorate it as he intended, through a want of taste in the managers, who seemed to have forgotten that it was intended for a national ornament. St. Peter's has all the advantages of painting and sculpture by the greatest masters, and is enriched with a variety of the finest marbles; no cost having been spared to make it exceed every thing of its kind. The great geometrical knowledge of the architect can never be sufficiently admired; but this can be come at only by a thorough inspection of the several parts.

It has been often remarked, and not without emotions of gratitude, that the architect of the metropolitan church should have, and yet has not, a monument in the bosom of this great proof of the transcendency of his mind, and of his unequalled skill in the art. This laudable wish would, however, defeat and set to nought the sublime idea which terminates the epitaph of this great man simply and modestly affixed to a pillar in a corner of the crypt. But Mr. Pennant very judiciously observes, "It is to be lamented that this beautiful thought should be flung away in the most darksome nook of the whole fabric;" where indeed it loses all the beauty of its possible application. "May we venture to suggest to the venerable chapter the propriety with which the inscription might be placed beneath the centre of the magnificent dome, on some elegant cenotaph, directing the eye to the intended object." We rejoice to find this liberal suggestion at length attended to by the present worthy dean and chapter, and the welcome hint, partly taken up in a manner which, as far as it has brought the excellent epitaph out of the shades into light, certainly does credit to the promoters and executors of the design. The inscription runs thus:

Subtus conditur,  
Hujus Ecclesiæ et Urbis Conditor,  
CHRISTOPHERUS WREN,  
Qui vixit annos ultra nonaginta,  
Non sibi, sed bono publico.  
Lector, si Monumentum requiris,  
CIRCUMSPICE.

Obiit 25. Feb. ann. MDCCXXIII. Æt. XCI.

Which

Which may be translated in the following words: "Beneath is buried the Builder of this Church and of the City, CHRISTOPHER WREN, who lived above ninety years, not for himself, but for the public good. Reader, if thou seekest for his monument, LOOK AROUND."

The sublimity of the thought which terminates the epitaph is too obvious to need expatiating upon; we are only surpris'd that the high-minded author should have amused himself with the trifling conceit and alliteration between the words "Conditur" and "Conditor;" a *jeu de mots* unworthy not only of the rest of the inscription, but still more so of its author, if it be, as Pennant asserts, the original conception of sir Christopher Wren's own son. The epitaph has been, within these few years, placed at the entrance into the choir, under the organ-loft. The letters are raised in brass gilt, on a large slab of white marble; and the whole is, of course, conspicuous; but perhaps more so from the novelty of placing such an inscription there, than from any other cause. Indeed, we must beg leave to say that it does not agree with the hint Mr. Pennant had given twenty years before on the subject. In the first place, the word "circumspice," which reminds us of the famous spondaic line of Virgil, (*Æn.* book xi.) where the preterit *circumspexit* expresses so well the slow and wondering look which Sinon casts around upon the Trojans who encircle him;—certainly this word supposes the reader to stand in the middle, or near the centre, of the edifice, and looking about; whereas the entrance into the choir is one of the most confined spots in the whole plan of the building, and chiefly one from which it is impossible to look around. Secondly, we do not recollect ever to have seen a funeral inscription over the door of a choir in any Gothic or Grecian edifice. Pennant intimates that a cenotaph might be placed under the dome; we should object most strenuously to this, unless he means nothing more than a flat stone level with the floor, as we are fully convinced that a raised monument would take much from the beautiful uniformity of the area. But we have an unexceptionable instance of an inscription round the inside of the lower part of a dome. No traveller of learning and of taste, who visits the famous basilica of St. Peter at Rome, ever fails to observe with how much grandeur, magnificence, and propriety, the well-applied quotation of the words of Christ, alluding to the formation of the spiritual and material church, runs round the lowest interior belt of the vast cupola. It is as follows: TU ES PETRUS, ET SUPER HANC PETRAM EDIFICABO ECCLESIAM MEAM. Which text cannot be translated otherwise than by the following words, in which the original Asiatic allusion entirely vanishes: "Thou art Peter, (the word in Hebrew means a *stone*;) and upon this rock (of stone) will I build my church." Now, if the sublime epitaph of sir Christopher Wren had been inscribed in this manner within the interior compass of the dome, between the whispering-gallery and the lowest plinth, in large brass letters, or under the cupola, on the ground, in a circular line around the open brass plate in the form of a rose, the reader then would have been not only invited, but literally forced, to "look around," and thereby to survey, as if unconscious, the more-than-mausolean grandeur of the monument which this great architect raised to his own and most deserving memory.

Perhaps a monument in honour of sir James Thornhill would not be unwelcome in this edifice. His paintings in chiaroscuro, within the cupola, were not without merit; but, we are sorry to say, are now considerably falling off from what they may have been a century ago. Some parts are even scaling off; and, if not properly restored, and soon, will vanish entirely from the distant eye of the beholder. We need not repeat here the well-known anecdote of his starting from the painting to the verge of the scaffold, to see the effect of a bold touch, and of his being in the immediate danger of falling from a tremendous height, when a friend, with a lucky presence of mind, threw a pencil or brush against the spot the painter was

looking at, and thus saved the artist's life by bringing him forward to a safer place.

It is reported that the contract he had made with the trustees, or rather with the dean and chapter, to paint the dome, was found, in the advancement of the work, to be inadequate to his expenses. He therefore applied for an increase of the promised reward; but found his employers deaf to his entreaties. However, he went on cheerfully, finished his performance, and then applied again. He received the same negative answer.—What could he do? An immense scaffold, a forest of timber, had been erected for the perfecting of the work; and upon such a system of geometry, combined with the plain carpenter's work, that it would have been a hard and unprofitable task for those who were strangers to it, to take it down piece by piece, to avoid the danger of being buried under the whole erection. Sir James left it standing. Application was made to him to have it removed: he now became deaf in his turn. They applied again; at last he required, for taking it down, such a price as might cover his expenses, and bring a proper reward for his art; observing, that in his bill he had charged for erecting a scaffold to paint the dome, but not for taking it down again. The parties were made conscious that the artist had been ill-treated; and the affair was amicably settled.—We cannot leave this subject without expressing most earnestly our wish, which is common with that of all those who look up to the paintings of the cupola, that they may either be repaired, or the subjects entirely repainted, preserving, out of respect for the original designer, the outlines of his compositions. But then we would advise to give up the idea of chiaroscuro. The dome is rather indifferently lighted: therefore, the more glowing the colours might be, and the more glaring the ornaments might blaze in burnished gold, the greater would be the effect.—Let our young and aspiring artists try specimens of that sort of painting; let them study the ceiling of the banqueting-house at Whitehall, and bring down upon their pallet the celestial flame which Rubens has lighted there; and they will soon find in the heads of the church a liberal patronage for their art. We are not in want of good artists; but they lack the opportunity of being properly employed.

Several years ago it was in contemplation to fill up the large squares which appear so naked between the pillars, and some other places originally intended for the reception of the works of the pencil; but, owing to an oversight apparently of little consequence in itself, the plan was frustrated.—The history of the transaction, with which we have been favoured by a person who was intimate with the parties at that time, and which is far from being generally known, is as follows.—Dr. Newton, bishop of Bristol and dean of St. Paul's, celebrated for his deservedly-esteemed Explanation of the Prophecies, had one day at dinner with him, Mr. (afterwards sir Joshua) Reynolds, and Mr. West, who was now entering his pictorial career with great éclat, (for he had already painted the death of general Wolfe, and several other subjects through which his reputation was rising and increasing.) In the conversation between them, the subject happened to be the church of St. Paul's; and they all regretted that the original plan of decoration, laid down by sir Christopher Wren, and brought before the public in a print then lately published, had been so long neglected, or that the execution of it had been suspended by certain puritanical principles which had been afloat among some of the heads of the clergy. The dean, most liberal in his manner of thinking, suggested, that the places left by the architect to be filled up with paintings, might now, without much opposition, receive their intended decorations. Mr. Reynolds directly offered to paint a Nativity, for one of the recesses; and Mr. West as promptly volunteered another subject for the opposite side: the design was, if we are not mistaken, the Dispensation of the Law to Moses—thus embracing at once the two principal epochs of the Old and New Testament. The dean, highly pleased at these

generous

generous offers from the two artists, took upon himself to obtain the consent of the trustees and guardians of the metropolitan church. He waited upon his majesty first, and received a most gracious assent. The archbishop of Canterbury had no objection to the plan; the lord-mayor was happy to find that the church would become properly adorned inside; and the chapter's consent was of course easily secured by that of the dean himself—but, unfortunately, the bishop of London, who had been privately informed of the business, was consulted last—and from this solecism in etiquette, the whole plan was entirely marred and fell to the ground—for the venerable prelate, pretexting some qualms of conscience, and the fear of introducing *popery*, as he called it, into the church of England, pronounced at once his potent and irrevocable *veto*: thus, by a slight error in formality, this beautiful pile remained deprived of the works of the chromatic art.—Meanwhile, Dr. Wilson, rector of St. Margaret, Westminster, had been putting up the famous and really-beautiful stained-glass window, which is still the greatest ornament of that church, and which he had bought in Flanders. Being acquainted with Mr. West, he deplored with him the failure of Dr. Newton's exertions about the pictorial decorations of St. Paul; and proposed to the artist the idea of placing a picture over the altar of St. Stephen, Walbrook, of which he was rector at the same time. The painter caught warmly at the proposition, and volunteered a painting to adorn this beautiful edifice: and thus to the disappointment at St. Paul's we owe the decoration at St. Stephen's, of which we shall speak in the proper place.

Since the publication of our article ARCHITECTURE, several monuments have been erected in the metropolitan church, in honour of some of our countrymen who fell in defending their country's rights, and who have contributed, by their exploits, to encircle, with unfading laurels, the brows of Britannia, and to produce (we hope a lasting) peace.—Much had sir Christopher Wren to contend against the prejudices existing at the time he built this noble pile, even to obtain that the twelve Apostles and four Evangelists might have their statues on the surrounding attic, as fit ornaments for the cathedral; and it was supposed at one time that the existing opinions would have prevailed against his plan, had he not strenuously protested against any farther deviation from it; and, indeed, had he been overpowered by the iconoclastic party, the church would have stood deprived of those appropriate appendages, the absence of which would have stamped it for ever as incomplete and unfinished. We happily live in milder days, and tolerance seems even to outdo, in one sense, what intolerance had performed in another. But, leaving these transitory observations, let us take a survey of the three statues and nine monuments which add considerable dignity to the naked walls of the interior of the metropolitan basilica.

The first statue, placed in remembrance of Mr. Howard, was introduced by proper feelings of humanity and gratitude towards this benevolent character, whose philanthropy prompted him to descend into the darkness of dungeons, to dare the dankness and unwholesomeness of places of confinement, in order to restore light and air, those two free gifts of heaven, to the wretches who had lost their liberty. For the life of this martyr to humanity, see vol. x. p. 433.—His statue, the work of the late Mr. Bacon, is, like all the rest, in white marble, and does great honour to the artist. Howard is represented standing, holding a key in his right hand, and one of his feet treading upon the irons which are usually seen on the hands and feet of prisoners. The basso relievo, on the front of the pedestal, is expressively allusive to his deeds of mercy; and the whole presents a majestic appearance. But if foreigners, if indeed our countrymen, should ask why he is dressed like a Roman general, will the hackneyed answer, that our modern costume is too scanty, too meagre, too frivolous, to give a proper scope to the sculptor's art, satisfy the enquirers? since in some of the other mo-

numents they will find glorious examples glaringly proving to the contrary.

The next, and in the opposite corner, is the statue of Dr. Johnson, a man who deserved well of his country as a profound philologist, and whose writings breathe uninterruptedly the mild spirit of morality, religion, and kindness to others. Here again it will be difficult to vindicate the whim of the sculptor, who has represented him like Euclid laboriously resolving one of his famous propositions, or, like Archytas, scratching his head, in sad disappointment, at the non-solution of some intricate problem. The sculptor was the same Mr. Bacon.—It should be recorded, to the credit of the dean and chapter of the cathedral, that, on application being made to them for permission to erect the first of these statues, they consented without requiring any fee for its admission; making it, however, a condition, that no monument should be erected, unless the design was first approved by a committee appointed by the Royal Academy; in order to prevent the introduction of any which might be discordant with the building, or incompatible with general propriety.

The third statue is that of sir William Jones, so deservedly celebrated for his deep researches into the laws and literature of the Hindoos. (See vol. xii. p. 250.) But his costume is as whimsical as that of the two preceding. He is invested with a curiously-ornamented sort of belt (and why a belt?) on the wrong side. The medallion on the pedestal is mysteriously connected with the Hindoo theology; and, as well as the statue above, executed in a manner to enhance the merit due to the chisel of Bacon.

The other corner is still vacant, and waits for the statue of some of our worthies.

In the left recess of the lobby leading to the entrance into the choir, rises most majestically the monument voted and erected to the marquis Cornwallis. It has been conceived by a great mind, and not less masterly executed. The noble marquis stands on a high pedestal, in a grave and commanding attitude, and his characteristic benevolence still lives in his features. He is habited in the robe and with the collar of a knight of the garter, thrown over a military uniform. Here we find elegance united with classicality; the dress of our own and of former times, supported by great taste in the folding and disposing of the drapery. Here no anacronism hurts the delicate eye of the beholder; and the whole shows that the adoption of the Grecian or Roman dress is less owing to the uncountness or frivolity of the modern costume than to the deficiency of taste and invention in the artist. The French sculptors in the middle of the last century, following blindly—*O imitatores, stultum pecus!*—certain absurd precedents, had exhibited the naked anatomy of the Nestor of their literature, Voltaire; a wonderful piece of art, but more fit for an academy of drawing, to teach the state of wrinkled skin, decayed muscles, and prominent bones, than to adorn an apartment in the Louvre—and indeed the whole was foolish with a vengeance, for it was carved out of a block of black marble.—The statue of Buffon, the historian of nature, was also naked, and often offended the sight of the company ascending the stairs of the museum at the Botanical garden. We believe that both these good pieces of sculpture have been removed to the Grande Gallerie, to keep company with other French worthies. But the taste of the people was soon disgusted; the rage for the *nud* began to wane; and we remember to have seen La Fontaine the fabulist, Moliere the dramatist, Lamoignon the lawyer, &c. &c. in the Cour du Louvre leading to the Exhibition of Pictures, and executed, by order, in the modern garb, with much more elegance than any of the nudities exposed before.—But to return, and we do return with pleasure, to the work of Mr. Rossi, the beautiful and well-conceived monument of lord Cornwallis. Before the pedestal, bearing a well-written inscription, stands, looking up with true feelings of regret at the loss of a protector and friend, an allegorical figure, with all the simplicity of natural grandeur, representing the Hindoo

Shoo nation. On the right sits Britannia in the awful majesty of grief; and, on the left, a nearly-colossal figure of a Gentoo chief holds in his hands some of his household gods, and sits musing under the man, who, when living, protected his religion and rights. The *tout ensemble* bears a striking appearance, and is one of the best and most classical of the works of sculpture lately admitted into the cathedral. Above is a small alto-relievo memorial of captain Richard Cooke, who fell in the battle of Trafalgar; and by its proportionable size, adding to the grandeur of the work beneath, fills up the whole of that side in a most ornamental and elegant manner.—The opposite recess or *quadro* contains the monument of captain George Duff, who fell in the same memorable action.

We now take the reader by the hand, and lead him to the western recess under the windows of the southern transept, where we place him before the glorious fall of the victorious Abercrombie, who won his glory and lost his life in the plains of Egypt, after having conquered and taken away the sacred standard of the invincible legion of Bonaparte. The likeness, we know, is excellent; the soldier, holding the chieftain as he faints, is correctly drawn; the dead French warrior still grasping the lost standard under the fore feet of the prancing horse, adds fulness and pathos to the group; but the colossal sphinx on each side has too great an appearance of stiffness and unlocality. Had the monument been erected in a square, or on one of the piers of our new bridges, they would certainly have been better situated than in the house of God, in a christian church, where equestrian statues are seldom, and should still seldom be, seen. However, it is a fine group; and does great credit to the artist, Mr. Westmacott.

Were we not afraid of being prolix, (but who should fear to expatiate too long upon the monuments of men who died for their country, the only means we have of perpetuating their past existence to the eyes and gratitude of posterity?) we might say a great deal more upon these works of art; yet the nature of our publication whispers to us that we must not indulge ourselves too long. We therefore proceed to the monument in honour of lord Howe. The first of June will long be a glorious epocha in the naval history of England: and this fortunate event is well recorded in the monument before our eyes. Upon a pedestal, and before the hull of a ship, sits Britannia in her Pallas-like dress, with, as usual, her helmet on her head, and a spear in her hand: before her, on the fogle, stands the noble figure of lord Howe, in a modern dress, and not less elegantly costumed on that account. We cannot exactly bring our mind to the likeness, as he does not look so advanced in age as he was at the moment of his death, being then seventy-four years old; or even at the moment of his splendid and decisive victory, at the battle of Ushant, which the figure of Fame, attended with that of Victory, records upon the pedestal behind him. These two female figures are elegant in shape, pleasing in attitude, and add a considerable degree of interest to the whole group; which does honour to the inventive faculties and manual skill of Mr. Flaxman, the sculptor of this monument, which stands opposite to that of sir Ralph Abercrombie, and makes a noble and counterbalancing companion to it.

The next to which we would lead the reader, is that of captain Bugefs. It is simple, consisting of two figures only; the hero, and Victory, who is in the act of presenting him with a sword. The pedestal is fully and classically adorned with bas-reliefs alluding to naval achievements; and the inscription is penned with elegance and truth. This monument is the work of Mr. Banks, and does him credit: but we think, with much submission, that the Antinous-like figure of the captain is too naked for an English protestant church.—This slight incongruity sinks before a greater one in the opposite monument, erected in honour of captain Faulknor, who is represented dying in the arms of Neptune, whilst Victory places a wreath of laurel on his

head. The same delicacy which opposed the external exhibition of the statues of the twelve apostles and four evangelists, as we remarked above, would have been shocked at the idea of admitting internally one of the first of the heathen gods, making the most prominent figure in the group. We are not without our objections to the figure of Victory, which we find nearly every-where; but yet, although she had also her temples among the pagans, she was not classed among the real, or supposed really-existing, inmates of Olympus; we therefore accept her as a being merely allegorical, like Prudence, Temperance, Justice, Strength, and other virtues, who have long received their tickets of admission into sacred painting and sculpture; and, with them, have passed unrepulsed into our churches. However, the anatomical part is such as we should have expected from the knowledge of Mr. Rossi; and we are truly pleased at the fine contrasts in lines and attitudes, which give so majestic an appearance, and throw so great a pathos upon the whole. The undaunted bravery of the naval chief is well expressed in the unsophisticated inscription upon the pedestal.—These two were erected in the year 1804.

The figure of Sensibility, which makes a prominent feature in the monument voted to the bravery of major-gen. Dundas, seems as if hewed out of alabaster; and indeed the delicacy of her visage, and the sweet expression of her mild countenance, so harmoniously contrasted by that of Victory on one side and the beautiful infant on her right, deserve our unrestricted praise. The whole composition is feelingly conceived; yet, the memorial of the hero being expressed merely by a bust insulated upon its pedestal, does not exactly tally with a certain desire for a greater uniformity in the group. The principal object to be represented should never become in any degree subordinate. The chief has here done justice to the design; and if the mind, in the eagerness of its enraptured thoughts, has failed in a single particular, the hand has created beauties enough to compensate the fault. It is the work of Bacon.

Thus far, in our critical survey of these monuments, we have had to perform the pleasing task of praising, except in a very few instances, where, if we have animadverted upon defects, it was merely in order to warn others against similar incorrectness. But, standing before the monument of captain Westcot, we are really and painfully obliged to avert our eyes, lest the severity of our remarks should appear ill-natured or invidious.—Two figures compose the group—the hero, and (the inseparable) Victory. The hero falls in the arms of the winged female; and the female, as if overcome, is in the act of falling also; a composition which is the more unfortunate, by standing in comparison with those which we have just noticed. We cannot reconcile our sight to this unnecessary *decadence*; and we sincerely wish that the apparently-falling group should *really* fall, and another be placed instead of it.—We therefore turn round, and stand for a few minutes before the well-conceived cœnotaph erected to the memory of captains Riou and Mofs. The sarcophagus (before which two angels, or genii, as the visitor is at liberty to call them, hold two medallions of the departed warriors) is in an elevated situation, and classically shaped. The whole is of a rich and truly sepulchral taste; and would not have disgraced the monuments on the Via Appia, or the main road to Agrigentum. This is placed under the east window of the northern transept, and does honour to Mr. Rossi, the author of it.—The opposite recess is vacant; but, when it is filled up by a monument, and when a fourth statue is placed opposite to that of sir William Jones, the whole of this part of the noble transept will be complete, with the exception of a few quadri at top, which seem to long for some basso-relievos to rid them of their nakedness. Several other places in the nave and round the choir are open for monuments; and, when the sword shall be beat into a plough-share, according to the elegant expression of the prophet, when Peace shall revisit the earth, we hope to see those places

consecrated to the tranquil manes of our worthies in the milder efforts of literature and of the fine arts.

We ought not to quit the inside of the cathedral, without mentioning the manner in which the stalls are disposed in the choir, for the dignitaries and prebendaries.—On the south side of the choir, the first stall at the west end is that of the Dean. This dignified title is now in the possession of the bishop of Lincoln, whose house or deanery is in Dean's court, on the south side of St. Paul's churchyard. The entrance to the court is under an archway, the front of which is ornamented in an elegant style with entablatures and festoons, and a noble balcony supported by well-adorned corbels. The dean is waited upon, and conducted, by a vergers from his house to the church at a quarter before ten, and a quarter after three.—Opposite the stall of the dean on the north side is that of the Archdeacon of London.—The second stall on the south side is that of the Archdeacon of Essex; and opposite is that of the Præcentor.—The next on each side are without superscription.—The third belongs to the Treasurer, that on the other side to the Chancellor of the church.—The names of the following stalls on each side are very singular, and were obtained upon particular occasions, which it would be too long to enumerate. The fifth is called *Finsbury*, opposite to *Tottenhall*; the seventh *Holbourn*, opposing *S. Pancratius*; the fourteenth *Oxgate*, opposed to *Consumpta per mare*.—The nineteenth stall on the south side is the seat of the Bishop; and, opposite, that of the Lord-mayor.—The twenty-third stall belongs to the Archdeacon of Colchester; and opposite is that of the Archdeacon of Middlesex.—The number of stalls is thirty-one on each side; and most of them have a superscription, that is, the first words of a Psalm in Latin; as, *Benedictus Dominus Deus—Beatus vir qui non abiit*—which the prebendary “is in duty bound to repeat daily in private, to the glory of God, and for more fully answering the intent of the founders and benefactors hereunto.” *New View of London, 1708.*—The bishop's throne is adorned with two columns, finely carved, of the Corinthian order, and various other embellishments: his seat is surmounted by a niche; and above, among doves and palm-branches, two cherubs support a mitre. The lord-mayor's stall has also its ornaments: they consist of flowers and bunches of leaves; and in the centre two boys sustain the city-mace.—The happy intertexture of lime-tree with waincot, give to the whole of the work a rich and elegant appearance.

Having now surveyed the inside of St. Paul's, and referred the reader to our general description of the building in the article ARCHITECTURE, we make our exit at the west door, and descend a majestic flight of steps into a large area, well-paved, and surrounded by a railing of iron more solid than elegant; because, being by contract repainted at certain periods, it is done so lavishly with three thick coats of colour, that the natural size of the spindles goes on increasing at such a rate that they bid fair to touch each other in the course of half a century. From this place the eye is naturally directed towards Ludgate-street and hill; but unfortunately the view is distorted by a twist which all the ingenuity of sir Christopher Wren could never avoid. He was bound to place the fabric according to the cardinal points of the compass, and to lay the altar-part of the church towards the east, in conformity with all, or nearly all, Christian edifices. Indeed an attempt had been made to open a street directly in a line to the west front through the buildings directly opposite; and Crescent-place, in Bridge-street, was begun as a sort of invitation to the perfecting of that plan; for it is exactly in the direction; and, were it not for the great quantity of useful ground which must be sacrificed in that case to the alteration, and the difficulty, nay the impossibility, of carrying the intended street much farther in a straight line without meeting the river, it certainly would be a most desirable improvement, since it would display the unrivalled beauty of the majestic portal of the British metropolitan church,

The part which is on the north and south side of the edifice eastwards from the north and south porticos is used as a cemetery for the parishes of St. Gregory and St. Faith; and an old tree on the north-east corner, that has long stood the severity of the stormy winds, which generally rage around the lofty heights of the noble pile, waves still as an ornament to the place, and brings to the thinking mind the melancholy recollection of the numbers of mortals who now sleep in cold clay under its annually-verdant boughs. Single and alone, it stands as an undecieving mark for the neighbours to come sooner or later to rest from their toils under its shade; and, by its nodding in the air as they pass by, seems to beckon their bodies to the place of repose, while its head, towering in the skies, points out where their better part will speed its flight after death.—Fond of immortality, and cherishing the idea of surviving himself, man has always been ready to surround his sepulchre with perennial plants and evergreen trees, as if, when the body has crumbled into dust, the soul might steal itself away from the unutterable joys of heaven, to visit the lonely place where its remains, its *inanes exuvie*, lie neglected or unknown, and feel an increase of happiness at finding them situated in what, during its sublunary life, was called an agreeable and pleasing spot. Thus, and consequently to this opinion, let it be ever so erroneous or at least doubtful, the box and yew trees, with the cypress, have obtained the honour of shading, with their never-fading foliage, the mansions of the dead—and thus many of our fellow-creatures did, and now-a-days still do, select, while alive, a *pretty place* to lay their cold and unfeeling bones.

But let us cease this mournful strain, and consider attentively, *if worth our while*, the monument which has been erected there to queen Anne, under whose reign St. Paul's was perfected; and which to the passengers appears to stand most awkwardly, as it does not seem, at first sight, to be in a central direction with the portico of the church.—We shall not stain our pages with the insertion of a trivial epigram alluding to the situation of the statue; but shall rather most seriously notice the apparent want of respect and attention in those to whom the care of such a monument properly belongs, in permitting that the foolish frolic of a drunken sailor (as it is reported) should have doomed the poor image to be *neglected* for ever. A nose, or even the whole of the head, nay, all that is there, might be easily made better, and more creditable to the guardians and trustees of the church, with half the money bestowed upon civic dinners or fetes.—This monument of national gratitude to the queen has little more than national gratitude to recommend it; for, although it has been praised by many writers, it cannot bear the near inspection of an eye well exercised in the survey of works of art.—We read in several authors, who have idly copied each other, that this piece of statuary is executed in white marble. We write with the object nearly under our eyes; we have examined it minutely, and we find that the whole is of stone, without any pretension to appear like marble. The statue of the queen is awkward, bending ungracefully forward; and the body appears as if cased most uncomfortably in a stone sheath. The pedestal has no bas-reliefs nor ornaments; and is of an indecipherable form, unless we may be understood in calling it a sort of parallelogram with swelling sides. Britannia, holding a spear in her right hand, is sitting directly below the right foot of the statue; and her left supports a shield with the arms of England, impaling Scotland, and quartering France and Ireland. On the other side sits France in a robe embroidered with fleurs-de-lis, holding a mural crown in her left hand; the other, which is now no more, was, if we judge from the situation of the arm, in the attitude of holding a flag or staff, the greater part of which has disappeared. Ireland, who retains the wrecks of her broken harp; and America, with a mutilated lizard at her feet, one of which treads upon a sculptured head, (the meaning of which we have not been able to unravel;) are placed at

at the eastern front of the pedestal. These four figures have shared the misfortune of the statue above; for, except France, (whose nose has been only bruised and grazed by the stony storm that seems to pelt incessantly at those poor damsels, and the remains of which are seen on the steps, mingled with broken arms, hands, and fingers,) they are all noseless. Some authors have declared these figures to be the work of Mr. Hill, who made the colossal statues of the apostles; while Pennant asserts that this monument "rose from the chisel of Francis Bird; as did the Conversion of St. Paul in the pediment, and the bas-reliefs under the portico." As the workmanship or design is not calculated to reflect much honour on the artist, we shall leave the question *sub judice*, undecided; not, however, without intreating the trustees and guardians of this majestic basilica to order that this monument may be repaired, and an end put at last to its unseemly and scandalous appearance.

On the north side of the church-yard is a handsome edifice belonging to the cathedral, and called the Chapter-house. In this building the convocation of the province of Canterbury formerly sat to consult about ecclesiastical affairs, and to form canons for the government of the church. But, although the upper and lower house are still called together by the king's writ at every session of parliament, yet they are always prorogued as soon as they have chosen prolocutors, and before they can have time to proceed to any kind of business. It is not generally known, that, on the day after the opening of a new parliament, the clergy of St. Paul's, the vicar-general, and proctors, being convoked in the choir, the service is then read entirely in Latin, and a Latin oration pronounced from the pulpit. This custom must have been very strictly enjoined by some deeds, and probably under pain of forfeiting great estates; so that the bishop, dean, and chapter, have not yet been able to rid themselves of this glaring remain of the popish liturgy.

On the west side of this house is Paul's alley, leading to Paternoster-row, and well known on account of the Chapter coffee-house, which has long been, and is still, a place of resort for literary men, and principally clergymen. All newspapers of note, and weekly as well as monthly publications, are kept there in great order, and brought in files as soon as they are called for; so that this house is visited as much perhaps on account of the food which it brings to the mind as for that which it offers to the body. The late excellent Dr. Buchan, author of *Domestic Medicine*, was a constant visitor here for the last twenty years of his life. So regular was he in his attendance, that by some he was called a *resident*, by others a *fixture*. To the short and imperfect account of this worthy character in vol. iii. p. 481. (and which, moreover, has appeared only in the later editions of that volume,) we shall add a few particulars.—Dr. Buchan, at an early period of life, had a turn for medical studies, and, even while a boy at the grammar-school, was accustomed to act in the capacities of surgeon and physician to the whole village. He repaired, however, to the university of Edinburgh, with a view to the study of divinity. But his theological pursuits were soon interrupted by a predilection for the mathematics, which proved more congenial to his mind. In this branch of science he soon acquired such proficiency as to be frequently employed as a private tutor to some of his fellow-students who were less precocious than himself. He was thus at once enabled and induced to continue at the university during a period of nine years. This long residence naturally led to an intimacy with many of the students of medicine, who constitute the majority of those who frequent that celebrated seat of learning. He at the same time obtained considerable proficiency in botany, which delightful department of science continued to furnish a source of amusement for many years of his life. Dr. Buchan at length dedicated himself wholly to medicine; and enjoyed a familiar intercourse with all the celebrated professors of physic, particu-

larly the late Dr. Gregory, whose liberal opinions concerning medical knowledge probably had considerable influence on his own future views and conduct. In consequence of the invitation of a fellow-student, who had settled in Yorkshire, the doctor joined him for some time in the practice of his art. A new incident tended not a little to extend his fame and improvement. On a vacancy for a physician to the Foundling Hospital, then established and supported by parliament, at Ackworth, he declared himself a candidate, and was elected, after a public competition or trial of skill with ten professional men. While here, he laid the foundation of that knowledge of the diseases of children, which afterwards formed the subject of his inaugural dissertation, when he returned to Edinburgh to take a degree as doctor of physic. The title was, *De Infantum vita conservanda*; it was much approved by the professors at that time, and now constitutes the substance of the first, and, as he used himself to think, the best, chapter of that popular work, *Domestic Medicine*. On his return to the capital of Scotland, for the purpose alluded to above, he courted the eldest daughter of Mr. Peter; on his union with whom he received a competent portion, and, in addition, formed some very respectable connections, the lady in question being related, by means of her mother, to the family of Dundas, of which the present lord Dundas is the representative. He soon afterwards returned to resume the duties of his station at Ackworth, where his eldest son, now in London, practising as a physician, was born. The doctor remained there until the institution itself was annihilated. Parliament withdrew the sixty thousand pounds annually voted for its support, in consequence of which the whole fabric tumbled to pieces. On this, our young physician returned to Edinburgh, where he practised for several years with success, and occupied his hours of leisure in composing the "*Domestic Medicine*; or, a Treatise on the Cure and Prevention of Diseases by Regimen and Simple Medicines." This was first published in 1770, and dedicated to sir John Pringle, then president of the Royal Society, with whom he was in some measure connected by his wife's family.—The very general diffusion, as well as great celebrity, of this work, having rendered the doctor's name exceedingly popular, he determined to try his fortune on the wider theatre of London. His success was at first very flattering; and, could he have withstood the allurements of company, which his convivial talents always enlivened, and considered the healing art merely as a lucrative profession, he might undoubtedly have amassed a large fortune. But he too frequently preferred the society of an agreeable friend at the Chapter to the calls of business, the importunities of patients, and the pursuit of wealth. He however exerted himself at times; and a little before the memorable revolution in France he repaired to Dunkirk, where he restored a rich merchant to health, after his case had been relinquished as hopeless by all the French physicians. His *magnum opus*, the *Domestic Medicine*, has experienced a sale far exceeding that of any other medical work ever published in this island. It has gone through no less than twenty-one editions, many of which consisted of six and seven thousand copies each; and still enjoys as extensive a circulation as ever. In addition to this, it has been frequently republished in America, and has been repeatedly imitated, copied, and pirated, in various ways, as well as under different forms, both in Ireland and in this country. It is translated into every language of Europe, and even into the Russian. The reputation of the author appears to have been still greater on the continent than in his native country. From the late empress of Russia, the munificent rewarder of every species of merit, he received a large medallion, of pure gold, with a complimentary letter, written at her imperial majesty's express command by the chancellor d'Osterman. He also received many other complimentary letters, some of them accompanied with liberal presents, both from individuals and societies in several of the West-India Islands, expres-

five of their sense of the many and great advantages derived from his work. The leading trait of the doctor's character was benevolence and good-will to men of every description, if we except the apothecaries. That class of people he considered as degrading the science of medicine, by converting it into a sordid calling, and too often preventing any good that could be expected from it, by loading the stomach of the patient with drugs, without having previously formed any just idea of the nature of the disease. This benevolent temper, which could never resist the call, or even the appearance, of distress, greatly injured the doctor's pecuniary circumstances; although it is now ascertained, that, even in his latter years, he was in the annual receipt of considerably more money than any person imagined. Dr. Buchan possessed a pleasing exterior, a fine countenance, great suavity of manners, and an astonishing fund of amusing anecdotes, which he told in such a manner as to delight his associates. Both the figure and face of the author of the Domestic Medicine must be allowed to have been not only peculiarly interesting, but to have also displayed all the characteristics of masculine beauty. In form he exceeded the common standard; his features were animated with a vivid glow of health; he possessed the eagle's eye, and even the eagle's beak, if a fine aquiline nose may be so denominated; while his person, tall, athletic, and well-proportioned, exhibited an union of strength and symmetry. When age had "silvered o'er his head," it acquired a new dignity, still mingled, however, with grace, and resembled those highly-wrought performances which we sometimes find copied from nature, and transferred to canvas, by the pencils of the old masters. He also enjoyed that grand desideratum, an excellent constitution; and never experienced any serious illness until within a year of his death, when his health began at first to decline, but gradually, and without precipitation. It has been already mentioned, that the doctor, at an early period of his life, exhibited a marked predilection for mathematics. To this it may be added, that he also had a great taste, while at Edinburgh, for astronomy; and employed many hours of his life in attaining a precise knowledge of the laws which regulate the planetary system. With these he joined a pursuit, which, although it may grace, yet but seldom accompanies, graver studies. This was a taste for poetry, cultivated assiduously, and with success, at his leisure moments, until the latest period of his life. Even to his last hour, he lighted up incense at the shrine of the muses; for Dr. Buchan, like Cornaro, the able Venetian—an author who also wrote on health—employed his pen, and was in full possession of all his faculties, when almost an octogenarian. The disorder which proved fatal, at length assumed an alarming appearance, and indicated symptoms of water in the chest. He never once complained, or showed any apprehensions of death, of whose approach he was, however, perfectly sensible, and even frequently spoke of the event without emotion. He was abroad on the very day previous to his death, which occurred on the 25th of February, 1805, at nine o'clock in the evening, in an attempt to reach his bed from the sofa, where he had just been reclining, and talking in his usual placid manner. Even the last scene of his life was peculiarly felicitous, having expired without any previous confinement, in the full possession of all his faculties, without any considerable degree of pain, and almost without a groan. Thus died Dr. Buchan, in the 76th year of his age.—The life of this physician will constitute an epoch in the history of medicine. Since the first appearance of the Domestic Medicine, pharmacy has in a great measure been rescued from the jargon of a barbarous technology, and the regular-bred and meritorious practitioner distinguished from the vile retailer of spurious compounds. The science itself has also been laid open, simplified, and diffused; so that the most useful of all arts, by constituting a branch of general education, will become at once better known and more respected.—The offspring of Dr. Buchan consisted of three children, two of whom survive him.—His

remains were interred, on Wednesday the 6th of March, 1805, in the cloisters of Westminster Abbey, next to those of the celebrated Dr. Jebb.

On the east side of St. Paul's-church-yard, stands St. Paul's School, founded by Dr. John Colet, the dean, whose monument was in the ancient church. See p. 401 of this article; and, for particulars of the doctor's life, see vol. iv. p. 770, 1.—This school was founded in the year 1509; and the rules for the government of it must have been the study of a considerable portion of time. Fortunately, Erasmus had afforded us a minute description, which Dr. Knight has translated from the Latin for his excellent history of the foundation; and from which we shall select the needful particulars. "Upon the death of his father, when by right of inheritance he was possessed of a good sum of money, lest the keeping of it should corrupt his mind, and turn it too much toward the world, he laid out a great part of it in building a new school in the church-yard of St Paul's, dedicated to the child Jesus; a magnificent fabric, to which he added two dwelling-houses for the two several masters, and to them he allotted ample salaries, that they might teach a certain number of boys free, and for the sake of charity. He divided the school into four apartments; the first, viz. the porch and entrance, is for catechumens, or the children to be instructed in the principles of religion, where no child is to be admitted but what can read and write. The second apartment is for the lower boys, to be taught by the second master or usher. The third for the upper forms, under the head master; which two parts of the school are divided by a curtain, to be drawn at pleasure. Over the master's chair is an image of the child Jesus, of admirable work, in the gesture of teaching, whom all the boys, going and coming, salute with a short hymn. And there is a representation of God the Father, saying *Hear ye him*; these words being written at my suggestion. The fourth or last apartment is a little chapel for divine service. The school has no corners or hiding-places, nothing like a cell or closet. The boys have their distinct forms or benches one above another. Every form holds sixteen; and he that is head or captain of each form has a little kind of desk, by way of pre-eminence. They are not to admit all boys of course, but to choose them in according to their parts and capacities."

The wife and sagacious founder left the perpetual care and oversight of the estate, and the government of the school—not to the clergy, not to the bishops, not to the chapter, nor to any great minister at court; but amongst the married laymen of the company of mercers, men of probity and reputation. And, when he was asked the reason of so committing this trust, he answered to this effect: "That there was no absolute certainty in human affairs; but, for his part, he found less corruption in such a body of citizens than in any other order or degree of mankind."

The dean's statutes for the government of the school are prefaced by an ardent wish that children should be taught regularity of conduct, and a knowledge of literature. That he might perform his part, he resolved to found the school of St. Paul, for one hundred and fifty-three children to be taught "free in the same."

The office of high master requiring great abilities in its possessor, he very justly defines what are the qualifications necessary: "A man hoole in body, honest and vertuous," learned in pure Latin and Greek, a man either single or married; a priest "with no benefice with cure," or any impediment which might prevent or divert his attention from the duties of his situation. His lodgings were to consist of the whole story over the hall and chambers, and a "littel middle chamber in the howse-roofe," now yclept a garret, and a gallery, with "all the fellere bynethè the hall, the kytchin, and buterye." He received his furniture, and his wages were a mark per week, with a gown annually of four nobles value. When ill of an incurable disease, or far advanced in age, he was to be dismissed with a pension of 10l. but, if he resigned voluntarily, twelve months'

months' notice was required. If the master had a life of convalescence in illness, his salary was continued, and the sur-master officiated for him, for which he had a reasonable compensation from the high master. The dean bestowed his house at Stepney on the office. The attainments of the sur-master are required by the dean to be equal to those of the high master, and he vests his appointment in that officer. The surveyors attended at the school when the master presented his assistant to them, and they charged him to execute his duty faithfully on pain of dismissal. He lodged in the Old Change, and his salary was 6s. 8d. per week, with a gown like the high master's. He was to dine with him if convenient. And, when decay and age rendered the sur-master unfit for the office, the worthy dean recommended him to the charity of the company of the mercers. His notice of resignation was six months only. If both masters were ill of any contagious disorder, the founder orders the school to be shut, and the salaries of each continued; neither of them is permitted by the statutes to enjoy "lecture or professorships." A poor child was to keep the school clean, and sweep it on Saturdays, "and also the leads;" and the mercers to repair it. The chaplain was to be an honest virtuous priest, appointed by the mercers. "He shall also learne, or yf he be learned helpe to teache in the school." The dean requires that the chaplain should have no preferment or other occupation; that he teach the children their catechism, and instruct them in the articles of the faith, and commandments, in English. He was to hold his office only during good behaviour, and to have but one vacation in the year, and that not without permission from the surveyors; to be clear of all diseases when chosen; but to enjoy his salary of 8l. during illness. His gown was valued at 1l. 6s. 8d. and he lodged either with the master or in "the Old Chayn." This priest said mass every day in the chapel, and prayed "for the children to prosper in good life and in good literature, to the honour of God and our Lord Christ Jesu." And, at "his masse, when the bell in the scole shall knyll to sacringe, then all the children in their seats shall, with lift-upp handes, pray in the time of sacringe. After the sacringe, when the bell knylleth agayne, they shall sitt downe agayne to their boke learninge."

The dean permits the children admitted to be of any nation; and mentions that they must previously read, write, and be capable of repeating their catechisms. The high master is permitted to receive 153 (alluding to the number of fish taken by St. Peter, John xxi. 11.) with the trifling sum of four-pence admission-money, which he orders to be given to the poor scholar who swept the school. Each child finds his own candles of wax; for those of tallow are expressly forbidden.

He directs that one scholar shall preside on every form, and that the teaching commence at seven in the morning, continue till eleven; re-commence at one, and terminate for the day at five, "with prayers in the morninge, none, and at eveninge." He allows neither eating or drinking in the school, cock-fighting, "rydinge about of victorie," and no holydays, or "remedyes," (play-days,) under a penalty of 40s. from the high master, unless commanded by the king, the archbishop, or bishop, at the school *in person*. The scholars were to attend at St. Paul's on Childermas-day to hear the boy-bishop's sermon; when at high mass every member of the institution was to offer one penny to the said boy-bishop. The boy-bishop was one of the choristers of a cathedral, chosen by the rest to officiate from St. Nicholas-day to the evening of Innocents'-day, in the habit of a bishop; and, if he died in the interval, was buried in that habit. During their processions, the boys were to repeat seven psalms, and the Litany, in a devout manner, "and not singe out." If a person, having a son at this school, was so indiscreet as to permit him to attend any other, expulsion, without a possibility of re-admission, ensued.

VOL. XIII. No. 916.

The dean was rather at a loss what he should appoint to be taught; but he determined that the Greek and Latin languages should be pure, and neither of them read from those authors whose works were not classical, eloquent, and polished. He perceived the abuses which had rendered the latter almost unintelligible, and expresses his indignation against the innovators very bitterly. Christian authors are recommended in preference to the heathen; and for the Latin rudiments his own *Accidens*, then *Institutum Christiani Hominis*, which that "learned Erasmus made at my requeste," with the *Copia* of Erasmus; Laſtantius, Prudentius, and Proba; and Sedulius, Juvenius, and Baptista Mantuanus. He gives the direction of the institution to the mercers, and charges them to appoint eleven persons annually, free of the company, as "surveyors of the scole." These men are to receive the rents of the endowments, and transact all affairs relating to them and the school. The dean then bestows 20s. per annum on the renter, and a gown of 13s. 4d. value; and commands the surveyors to pay the different salaries in the school quarterly. When the annual accounts were audited, he allowed "a littell dinner ordeyned by the surveyors, not exceedinge the pryce of fower nobles," three days before or after Candlemas. The "master-warden" of the mercers to have a noble if present, and the other wardens 5s. each. The surveyors 2l. per annum, and the same sum if they rode to visit the lands. The leases of the lands were not to exceed five years. Finally, dean Colet solemnly charges the company of mercers to guard and promote the interests of the foundation for ever, to the utmost of their ability, as they fear the just vengeance of God for neglecting them; and to make such other regulations for the governance of the school as time and circumstances may render necessary, with the advice and assistance of "good lettered and learned men."

Dr. Roberts, says Malcolm, has been so good as to inform me, that the captain of the school leaves it at Easter with an exhibition, which is not confined to any particular college, amounting to 40l. per annum for four years, and 50l. for three succeeding years. This is tenable with any collegiate preferment except a fellowship. There are twenty-seven exhibitions belonging to this valuable seminary. The lands and tenements given by the munificent founder for support of the school were of the annual amount of 118l. 4s. 7d. The manors were in Buckinghamshire, those of Benrich and Vach in Barton. According to Dr. Knight, the dean estimated the annual expenses of the school at 79l. 8s. 4d. and the annual overplus at 38l. 16s. 3d.

The ancient school was burnt down in 1666. It was rebuilt in 1670 by the mercers' company, under the particular direction of Robert Ware, warden of the school. It is a very handsome, though singular, edifice. The middle building, in which is the school, is of stone; it is much lower than the ends, and has only one series of windows, which are large, and raised to a considerable height from the ground. The centre is adorned with rustic, and on the top is a handsome pediment, in which are the founder's arms placed in a shield; upon the apex stands a figure, representing Learning. Under this pediment are two square windows, and on each side are two circular windows, crowned with busts, and the spaces between them are handsomely ornamented in relief. Upon a level with the foot of the pediment runs, on either side, a handsome balustrade, on each of which is placed a large bust, with a radiant crown between two flaming vases. In the front of the building are written these words: SCHOLA CATECHIZATIONIS PUERORUM IN CHRISTI OPP: MAXIMI FIDE ET BONIS LITERIS. The buildings at each end are of brick, ornamented with stone. They are lofty and narrow, consisting of three stories, each story of three windows; the central windows are arched, and those on each side rectangular. A fourth central window is continued above the cornice, supported with scrolls; and over that a balustrade.

Upon the whole, St. Paul's School is certainly a good building, and would be an excellent contrast to the cathedral, if the street between them had been a hundred feet wide instead of thirty or forty. The north wing, consisting of large and elegant apartments, are occupied by Dr. Roberts, who has been head-master near fifty years; the south, equally commodious, are those of Mr. Wood, the fur-master or principal usher. Mr. Edwards, whose office supercedes that of the ancient chaplain, resides in the Old Change, east of the school-room, which contains at the south end an elevated chair carved with some taste, with dean Colet's arms, and the mercers' company's crest inclosed in a wreath of flowers. An old bust of the worthy dean has been recently copied by the late Mr. Bacon in statuary-marble, and the attitude improved, which is placed above the high-master's seat. This admirable artist has given the features all that animation and expression which belonged to his chisel beyond any of his contemporaries. Dr. Roberts has inscribed over his throne, *Intendat animum studiis et rebus honestis*. On the left side of the chair is a white marble bust of the late high master, Mr. Thicknesse, quite in the style of an ancient Roman, which was placed there by a voluntary contribution of his grateful scholars. The motto at the entrance-door is, *Doce, discere, aut discede*; "Teach, learn, or depart." A mild imitation of what we read in the school-room at Winchester: *Aut discere aut discede; manet fors altera, cædi*; "Learn or depart; or else your lot is to be flogged."

It is most probably in allusion to this important trust which Colet had placed in the worshipful company of mercers, that the front of their hall in Cheapside is so elegantly ornamented with the statue of Charity and several other figures, emblematical of education, with children holding wreaths of flowers, &c. &c.

We are now to speak of that most ancient school which was founded, probably not less than seven hundred years ago, for the young singers, or choir-boys, belonging to St. Paul's. It is an almost-universal error to suppose that these boys receive their education in St. Paul's school, or, more properly speaking, in dean Colet's school; and this natural supposition, arising from the dean's foundation being so near the eastern end of the metropolitan church, has hitherto tended, in a great degree, to prevent any enquiry into this interesting subject.—We are able to assure our readers, that the singing-boys, or choristers, are so far from enjoying the privilege of an education in the present grammar-school, or even of having any right to it, that, by the regulations of Colet's school, they cannot be admitted, we are told, even as a favour; and for this reason, that liberal provision has been made for the classical education of the cathedral-boys. Upon this hangs such a cloud of doubts since the reign of Elizabeth, that whoever will not make a laborious and special search into ancient grants and deeds, nor choose to wade through the thick dust of mouldering MSS. in the muniment-house of the church, (if indeed admission can be obtained,) must be content with a very inadequate knowledge of the matter. Our intention is to trace out the distinct features of each of those schools, and to show that, although Colet seems to have leant towards the prospect of connecting both, by enjoining to the boys of his foundation (as we have noticed above) to make an annual offering to the *Episcopus puerorum*, or boy's-bishop, at St. Paul's, who, by a well-known old and odd practice, used for a limited time to act as a monitor to the choristers; yet both schools are distinct from each other. The alleged fact was, we suppose, a mere condescension, in order that Colet's boys and those of the cathedral might meet in their amusements on the appointed day of frolic and rejoicing.—If the reader will refer to the *fête des fous* in France, and to other strange nonsense anciently practised in this as well as other countries, he will find that our suggestion is most probably right. (See Strutt's Sports and Pastimes, p. 253.)—We shall now state what historians impart to us about the

school founded specially for the choir-boys belonging to the cathedral of St. Paul.

It must be previously observed, that, anterior to the reformation under Henry VIII. no chapel or chantry was instituted to have masses and obits performed in it, without the annexing of one or two boys, in order to make the responses at the altar, and sing the versicles after the anthems. This constant and laudable custom has been, in catholic countries, the origin of several foundations which are still existing. The boys were placed under a master, whose duty was to teach them singing and grammar-learning, and to take great care that their conduct should be irreproachable. Indeed, in those (now commonly called superstitious) times, it would have shocked the feelings of devout persons, to find ministering at the altar, boys of bad morals, and who might occasionally be called out to sing unbecoming songs at playhouses and concerts. They were placed next to the priest at the performance of the awful mysteries of the Eucharist, and were occasionally allowed to handle the holy vessels used in the sacrament of the Lord's supper. Considering this in the point of view in which it was seen at that time, we must think it very natural that endowments should have been provided for the salary, care, and instruction, of those boys, who were generally selected out of poor families, but who were thus expected ultimately to become worthy of being admitted into holy orders. These were the very seeds that stocked the seminaries; and from these humble beginnings arose, in time, the whole glory of the universal Christian church.

If we concentrate our ideas on this point, we shall find, that the once-celebrated grammar-school attached to St. Paul's cathedral, was designed "especially" for the education of "the boys belonging to that church;" and that it has been co-eval with, if not previous to, the final establishment of the choir. A priest could not say mass without somebody to give the responses and to minister near him; and boys were generally selected for that purpose.—In fact, and independently of all arguments of congruity and probability, the antiquity of the school erected for the boys of St. Paul's has been acknowledged by the earliest writers.—Fitzstephen, who calls himself *Stephanides*, in his Latin description of London, partly given in some of the editions of Stow's Survey, mentions three schools of this description; that of St. Paul's, of Trinity-church, and of St. Martin. A master, of course, was appointed to superintend the education of the boys; and the first, whose name appears on record, held the important trust in the reign of Henry I. about the year 1120, (nearly four hundred years before the foundation of dean Colet's school.) At this time the school seems to have been supported by the bishop and the dean, from the general funds of the church, without any special endowment. Richard de Belmeis, then bishop of London, who, though very active and liberal himself, seems to have done nothing (*nihil facere visus*) when compared with his predecessor and successor, conscious of the necessity of the establishment, granted to Hugh the school-master, and to his successors in that employment, a residence adjoining the cathedral; and at the same time the custody of the library was given in perpetuity to the masters of the school; an additional proof of the sedulous care which was taken to place good, trusty, and learned, men at the head of the choir-boys. The succeeding master was Henry, also a canon of the cathedral, to whom the same generous patron made over the tithes of Ealing and Madeley, and added an estate at Fulham to the mastership of the school. We find also that in the reign of Richard I. Richard Nigel, bishop of London, gave unto this school all the tithes arising in his demesnes at Fulham and Orsett; and in the two following reigns the mastership was enriched with new donations. Such was the respectability of the Magister Scholarum, that about this period the title was merged in that of Chancellor; under this new appellation,

lation, both the duties and emoluments of the office were enlarged; and the tithes of the parish of Ealing were confirmed to it by Ralph de Baldock in 1308.

We find in Dugdale's History of the cathedral, that the habitation for the school-master was at the corner of the bell-tower, or clocher, as stated in Richard de Belmeis's grant concerning that school, the original of which is in the muniment-room. Dugdale adds to this, "which doubtless is the place where the school-master of Paul's school (he means Colet's) dwelleth at this day," (1658.) This circumstance has also contributed to confuse our historians in their account of what is commonly called St. Paul's school. There is little doubt but the site of the original school, and of the clocher to which it was an appendage, is now occupied by St. Paul's school, that is, dean Colet's foundation—since which, the choristers do not seem to have been so properly attended to, as to their education, both moral and religious, as might be wished.

We have mentioned that the school for these choir-boys was endowed as early as the reign of Henry I. and its revenues were considerably augmented in the reigns of Richard I. Henry III. and Edw. II. These endowments cannot have become less valuable, but much more so. This school-property remained untouched through all the persecutions of the church. It was spared by Henry VIII. nor did the reformation make any material alteration in the situation of the choristers; and in Cromwell's time, when all other cathedral-property was seized by the usurping powers, a particular exception was made (Ordinance of the Parliament, Oct. 9, 1646.) in favour of all revenues assigned to the purposes of education; and the office of almoner was also spared by the ordinances of the same parliament which abolished every other dignity and office in cathedral-churches.—It is to be added, that the liberal provision made for them was not bounded by their utility in the choir, as separate estates were bequeathed for their maintenance after they had lost their treble voices.

The school, thus amply endowed, is frequently mentioned with honour in our ancient annals; and seems to have been particularly celebrated during the 16th century. In the reign of Elizabeth, it appears that this and probably most other schools of similar foundation were kept within the church; and in the middle of the next century every cathedral still supported its grammar-school, according to ancient usage. Since the reign of Charles II. it is difficult to continue the history of this school. If the heads of the cathedral would allow access to the records in the muniment-room, we might determine on what occasion the scholars were separated from the master, and what are at present the recoverable rights of the school under the guardianship of the chancellor. If they refuse, it can only be done, we suppose, by application to the lord-chancellor, to order those records to be produced; and this is at present a subject of legal enquiry. From a pamphlet respecting this ancient school, not published for sale, we hope to be excused for extracting some of the preceding and following particulars.

The case seems to be this.—To the repeated augmentations granted to the Magister Scholarum, we may ascribe the declension of the school. That the ancient and original revenues of the foundation were amply sufficient for its maintenance may be inferred from the high rank of those who have held the situation of master. But, when this office was still more richly endowed, the incumbent became a personage too important to fulfil the duties of it himself: these were afterwards performed by a deputy, and at length not performed at all—and the responsible situation of Magister Scholarum became a sinecure under the name of Chancellor.

According, however, to numerous ancient statutes, strengthened by very long usage, the choristers of St. Paul's seem to be entitled to their board and education both musical and classical. To their morals also a scrupulous

attention is repeatedly enjoined; and their protection is committed to no fewer than eight persons, holding offices in the cathedral charged with that duty. Indeed the boys belonging to this church have had extraordinary and minute attention paid to their interests and to their morals. The precentor and succentor are responsible for their musical attainments: The music-master is charged to watch over the moral conduct of his pupils. There are two *cardinals* (an office known in no other protestant church) to superintend their conduct and that of their masters; to attend to their behaviour during divine service; to instruct them in their religious duties; and to report their progress to the chapter. The almoner is bound by the statutes to have a resident clergyman in the almonry to instruct the choristers in literature, or to send them to St. Paul's School (not Colet's) to be instructed by the cathedral-school-master; and so scrupulously is he required to guard the innocence of these youths, thus dedicated to the service of the church, that the statute enjoins him to place them under a careful conductor in their walks, and even in going to school. *Liber Statutorum*, MS. Harl. 4080. *Malcolm's Lond. Rediv.* vol. iii.—The superintendence of their classical education is consigned to the chancellor of the cathedral. It is his duty to keep the school-house in repair, and to appoint a virtuous and learned man as their grammar-master.—"The chancellor of this church, in old records called Magister Scholarum, is scribe or secretary of the church and chapter. In St. Paul's school, *not that long after founded by dean Colet*, but that school which in old time did belong to this cathedral church, he is to appoint a fit master, whom he is to present to the dean and chapter; and is to keep in repair the school-house at his own charge." *Newcourt's Repertorium*, 1708.—"The master of the grammar-school is to be an honest man, and well learned. He is to teach the boys, especially those of the church, grammar and good manners; and he is to be to them, not only a master of grammar, but of virtue also." *Ibid.*—This charge is now totally neglected by the chancellor; by whom no master is appointed, no school-house provided. Yet the chancellorship retains the house and lands in Fulham, the rectories of Boreham and Ealing, several tenements in St. Paul's church-yard, and two pensions from Fulham and Orsett. *Bacon's Liber Regis*; and for farther particulars, see N<sup>o</sup> 302 and 1019 of the Lansdowne MSS. and, in the additional MSS. at the British Museum, vol. 5068, 5081, 5097, and 5099.—In the reign of Henry VIII. the chancellor paid in to the chamberlain or treasurer of the cathedral one-third of his annual receipts—it may be presumed for the expenses of the school.

Till the year 1800, the singing-boys were boarded, and partly educated, from the funds of this richly-endowed cathedral. From 1800 to 1813, they received a small annual salary in lieu of board and education. At the beginning of the year 1813, Mr. Sale resigned the offices of music-master and almoner, and Mr. Hawes succeeded; since which time the four senior boys are boarded, at the expense of the chapter, in the house of that gentleman. What farther may be done remains to be seen, as no decree has been (June 9, 1814.) pronounced by the higher powers. The idea of a boarding-establishment, grammar-master, writing-master, &c. may naturally startle the parties on account of the expenses, which must be paid from funds long appropriated to other purposes. But we take the liberty to suggest, that a house belonging to the estates of the cathedral, and by all means near the cathedral itself, might be appointed for the music-master and almoner, with such an addition to his salary as might enable him to board the remainder of the boys. In that case, there would be less objection to their attending concerts, as the music-master would commonly be with them in the way of his profession, and as it would tend greatly to their improvement. And, though we have mentioned that these boys are indirectly excluded from dean Colet's school, yet there is little doubt but an

amicable arrangement might be made for their admission and classical education there.

The right of the abbey-choristers to their education at Westminster-school was nearly extinct; but has lately been recovered for them by the exertions of their music-master, supported by one of the members of the choir. We do not mean to notice this as a case in point. Dean Colet's school is a private foundation; and the dean had a right to make what exceptions and exclusions he thought proper; or to leave such discretionary power, *clearly and fully expressed*, to the mercers' company. We have only indulged a hope, that a friendly arrangement might be made.—And we now take leave of the subject by observing, that the present enquiry may probably lead to a more general investigation into the rights of the choir-boys in every cathedral in the kingdom; and particularly in that of Winchester, in which city there is (as at Westminster) a royal grammar-school, in which the young choristers have a right to their education, commons, &c. in lieu of which, they are allowed a very few shillings per week for their maintenance, as was the case at St. Paul's; besides their education at a common day-school. That these boys are under the *authority* of the head-master of Winchester-college is evident from this—that, if in his walks he finds any of them doing any mischief, or behaving improperly, he will inquire their names, and send an order to their school-master to flog them; and, in certain cases, the late Dr. Warton has been known to require the culprit himself to bring him a note from the said school-master, testifying that execution had been performed!

We now return to our survey of St. Paul's church-yard.—The ground of this church-yard, though at first sight it appears level when you consider it from the top of Ludgate-street, is very far from being so; for the last step of the south portico is about ten or twelve feet higher than the same on the north side; which difference is owing to the slope of the hill upon which the church is built. *Panier-alley*, a passage from Paternoster-row to Newgate-street, is said to be the highest point of the hill; and, having consulted one of our antiquaries on the subject, he most readily sent us, with a sketch, the following interesting remarks, which we shall lay before our readers in his own words.

“After the fire of London, as it is called by way of eminence, had laid waste the greatest part of the city, it was natural for every one to measure the spot where the destroyed property formerly stood, in order to rebuild the houses and churches according to the deeds and leases; but more especially when the re-edification of the metropolitan church came under serious consideration. It was the intention, and a very wise and proper one, of Sir Christopher Wren, to place the beautiful edifice he had conceived and designed on the highest ground on the hill between the valleys of Fleet-ditch and Walbrook, but still as near as possible to the spot where the Gothic fabric which the fire had devoured formerly stood. In consequence of this, several measurements were made from the level of the Thames at low water; and the result was, that in a little passage from Pater-noster-row to Newgate-street, they found the highest point of the arc described by the hill. It is probable also, that, from this circumstance, some persons, wishing to preserve the information they had accidentally obtained, caused a stone to be cut, and the statement to be engraved upon it; and, in order to attract the attention of passengers in this narrow lane, they annexed to it a sort of bas-relief, representing a boy upon a basket, which had probably been placed somewhere as a sign in allusion to the name of the alley. This hypothesis acquires strength from the consideration of the following points. 1. The alley was called *Panier-alley* in the time of Stow, (that is, about 1598,) who mentions it in his Survey, and says that it had received this denomination from a “signe.” Had the present little monument existed then, he would no doubt have mentioned it. 2. The inscribed stone and the boy and panier above ap-

pear nearly coeval. 3. The panier and the boy have no allusion to the height of a spot of ground. Hence it follows, that the bas-relief and the stone under it had no connection with each other before the year 1688; and that the bas-relief was not made antecedently, but consequently, to the adopted name of the alley. Now, if we consider the figure of the boy and the basket, as they are, (not as they have been represented in the engraving annexed to Pennant's London, where only one hand of the boy appears, the other being concealed by the left leg,) we shall find, that the whole has nothing to do with a sepulchral device, as this celebrated author most unwarrantedly supposes; for, upon a near and strict inspection, we perceive that the boy holds some grapes or other fruit in his fingers. This particularly induces us to conclude, that the panier he sits upon is a fruit-basket; an idea which the man who afterwards sculptured the inscription-stone to support it seems to have entertained, since he has ornamented the sides with fruit and leaves. Before Blackfriars-bridge was built, the Surry gardeners used most probably to bring the produce of their labours, as they do to this day, in small barges to the stairs between the wharfs opposite to St. Paul's—Paul's-wharf, Puddle-wharf, &c. and then, in their way to Newgate-market, to pass through, and rest themselves in, that short passage—the avenue by Ave-maria-lane being crowded by those who landed at the bottom of Ludgate-hill, in Fleet-ditch. Probably also, there was in this passage a public house, at the door of which they laid down their fruit-paniers, leaving their boys to watch them while they were drinking within. This number of baskets with boys sitting upon them gave a name to the alley, occasion to the sign mentioned by Stow, and rise to the bas-relief now in existence. This is the most probable origin we can suggest; and we must adhere to it till we are furnished by some keener antiquaries with a better explanation. However, some might suppose that the next house had been for many years, as it is now, occupied by a baker; and this idea was brought to our mind at the moment we took the sketch (which appears on Plate VII *b.*) for a baker's basket full of bread was standing by the side of this little interesting piece of antiquity, which has been so often besmeared with coarse paint, that the merit of the workmanship is hardly perceivable. We now conclude, that this sculpture was likely to represent, in allusion to the boys' sitting on their fruit-baskets, at the door of the wine-vaults, a little Bacchus squeezing grapes in his hands. We should not have been so prolix on this subject, had we not thought it material with regard to the highest spot of the city-ground. The sketch for the plate was made on the 24th of January, 1814. The steps represented in Pennant's London have disappeared; and, if the ground has been raised and buried them, we must naturally conclude that the spot is still higher than when the inscription was made. It has been conjectured also, that the boy was picking a thorn from his foot! A mere inspection of the figure, or of our engraving which is correct, will contradict this.”

The general appearance of the church-yard is elegant, rich, and grand; and the access to it is noble and easy from Watling-street and Cheapside on the east, but rather steep from the south and west by Paul's Chain and Ludgate-hill. Besides these openings, there are several others: Dean's-court from Great Carter-lane, and two narrow passages from Little Carter-lane; and London-house-yard, Canon-alley, and Paul's-alley, from Pater-noster-row. These last admit no carriages: they are like veins, the others like arteries, serving for the communication of the rest of the body with the heart of the city. Except such as take Newgate-street in their way, all those who from the great extent of habitations on the west are attracted to the focus of business, the Bank, the Royal Exchange, the Corn-market, the East-India House, and all the Docks, must cross the church-yard in their way to their respective offices or places where the grand mover, interest, calls them

them irresistibly from all parts of Westminster, and even ten miles further back in various directions. This great oscillation, like that of the tide, takes place twice a-day, morning and evening; and it is curious to see the same faces at nine and at four, at eight and at seven, hurrying along, and pacing every day at the same time, the northern and southern pavement of the church-yard. The stationary shopman on Ludgate-hill or Fleet-street, while dangling at his shop-door in expectation of a customer, not unlike the immovable rocks in the sea, witnesses the passing currents and heaving surges of the multitude; and perhaps sighs for a walk, whilst some of the passengers are longing for a share of his sedentary life.—There are also two other sets of beings oscillating in the same manner through the church-yard; the beggars and the cyrians. Actuated by the same motive as the others we have mentioned, namely, interest, they however keep a slower pace, conscious that they shall get more by loitering along than by hastening away.

Besides these moving scenes, on both sides of the yard, we have also some fixed ones. The old blind Israelite selling spectacles and shoe-strings, the young one offering his red and blue slippers, and the street-warblers generally well attended at dusk, when pickpockets and sharpers look out of their hiding-places to seek for prey. As for the first whom we have mentioned, the blind old man, who has sat every day ever since the year 1764, that is for the space of half a century, near the steps of the Chapter-house, with his snug Welsh wig, his well-set box of trinkets on his knee, and attended by his faithful wife, we missed him for some time during the late frost; and, as he was one of the fixtures of that part of the church-yard, it occasioned the writer of this, anticipating his final departure, to make him the subject of a parody, in a London church-yard, of Gray's admired Elegy in a Country church-yard.

Haply some wonted passenger will say:

“ Oft have we seen him sitting on his stool;  
Brushing, with hasty hand, the dust away  
From shoe-strings black and many a ivory tool.

There near the shade of yonder nodding tree,  
That shoots its old fantastic boughs so high;  
His well-cramm'd box he would set on his knee,  
And gently call on those that hobbled nigh;

Hard by yon steps, which high-bred church-men tread,  
Muttering his wayward fancies to his guide;  
Now scratching bare his Welsh wig to a thread;  
Or groping for his old stick at his side.

One morn we miss'd him at the 'custom'd spot,  
Along the yard and near his fav'rite railing;  
Another came—and there we found him not  
Nor at the steps, nor walking up the paling.

The next we ask'd where was the blind man gone  
Who sold neat trinkets and fair ribbons by?  
Ah! no one knew where was poor blind man—none,  
But who would give his answer with a sigh.

We ought here to notice the improvement lately made at the north-east of the church-yard, where the patent medicine shop has gently retired, on being rebuilt, a few feet, and now rises with much elegance to face Cheapside at the south entrance of Paternoster-row, as a very smart toyshop does at the north entrance.

At the south-west corner of St. Paul's church-yard, and to the left of Dean's Court, is St. Paul's College, curiously situated between a wine-merchant's of most extensive business, and an ale-house well-known by the name of Tobit's Dog; one of the houses of that description which keeps open late in the night, and where hackney coachmen who ply opposite, and the Paphian damsels who pace up and down the adjoining hill, generally repair for, as they call it, a *finish*, consisting of the rear-glass, to conclude the tipping of the evening.—The college, which one would expect to be some large building, is nothing but a small

court, containing two or three houses, appropriated to the minor canons of the cathedral, who, in the 18th of Richard II. obtained letters patent, constituting them a body politic, by the name of the College of the Twelve Petty Canons of St. Paul's Church.

Facing this college, on the spot of ground now called London-house-yard, formerly stood the bishop of London's palace, a very large and magnificent house, which was destroyed by the fire of London. In this palace king Edward V. was lodged, when brought to London to take possession of the crown.

London-house-yard has a narrow entrance into Paternoster-row, nearly opposite Newgate-market, and a passage which runs behind the houses extending to the public house called the Goose and Gridiron. See p. 111. A stand for the stages to Fulham, Hammersmith, Turnham-green, &c. is opposite: and the music-shop at the corner reminds us of a celebrated satirical effusion of Peter Pindar concerning Mr. Thomson, who so long inhabited the house. The range of houses on the north makes an elegant show; among and them we remark several trunk makers, besides the one at the east corner, never forgotten at sea in the jolly sailor's toast. To these we may add two or three respectable booksellers, and Carrington Bowles's famous print-shop, never in want of outside customers.—The south side, the only thoroughfare for carriages, exhibits also a rich appearance, by two or three glass and china shops, and several upholsterers; and never appears to more advantage than on lord-mayor's day, when the pageantry, though much inferior to the pageants of old, which we have had occasion to mention in the course of this article, fills up the whole of the space in its way to Guildhall.

Ere we begin our perambulations from the centre of the city to the farthest verge of this extensive metropolis, we shall indulge in a lounge about the streets surrounding St. Paul's; and take the first opening on the south side, called Paul's Chain, which leads down to the Thames. The first subject upon which we rest is the Chambers of Diana, which, as Stowe describes it, was a vaulted structure. “Upon Paul's Warfe Hill,” says he, “within a great gate, and belonging to that gate next to Doctors' Commons, are many faire tenements, which, in their leaves from the dean and chapter, goe by the name and title of *Camera Diane*, so denominated from a spacious building that in the time of Henry II. stood where they now are standing. In this *Camera* (Chamber) or arch'd and vaulted structure (full of intricate wayes and windings), this Henry II. (as some time he did at Woodstoke) did keepe, or was supposed to have kept, that jewel of his heart, fair Rosamond; she whom there he called *Rosamundi*, and here by the name of *Diana*; and from thence had this house that title. To this day are remains and some evident testifications of tedious turnings and windings; and also of a passage under ground from this house to Castle Baynard, which was no doubt the king's way from thence to his *Camera Diane*, or the chamber of his brightest *Diana*.”—We do not apprehend that any visible remains of this passage do exist now; it was most probably filled up at the re-construction of the houses upon St. Benet's Hill after the great fire.

Just by this was, and remains still, as far as the name goes, Paul's Baker's Court, anciently Paul's Bake-house, where the bread for the church of St. Paul's was baked. It is now a small but neat quadrangle, the principal building of which is used for the registry of the admiralty.—Opposite was Paul's Brew-house, which soon gave way to the Powle's Head Tavern. A memento of this we find in the name of the tavern at the entrance of Dean's Court; the Paul's Head, and now the Queen's Head, tavern and coffee-house; a place frequented by gentlemen of great respectability, from the church, from the commons, and all the neighbourhood of St. Paul's.

Coming down the hill, which, though not long, has obtained three names—*Paul's Chain*, from a chain placed there

there in order to keep off the populace when any show or pageantry took place in the church-yard—*Godliman-street*, a satisfactory etymology of which we were not able to find out—and *St. Bennet's Hill*, so named from the church at the bottom;—we find on the right the place called generally Doctors' Commons; and, indeed, nearly the whole of this mass of houses, from *St. Andrew's Hill* to *Old Fish-street*, and from *Carter-lane* down to *Thames-street*, goes by that name.

Doctors' Commons is a college for such as study and practise the civil-law; and here causes in civil and ecclesiastical cases are tried under the bishop of London and the archbishop of Canterbury. The addition of *commons* is taken from the manner in which the civilians live here, communing together, as practised in other colleges. The front of this college, which is an old brick building, is in *Great Knight-riders-street*; and it consists of two square courts, chiefly inhabited by doctors of the civil-law. Here are tried all causes by the court of admiralty and the court of delegates. Here are offices where wills are registered and deposited, and licenses for marriages, &c. are granted, and a court of faculties and dispensations. The causes, whereof the civil and ecclesiastical law take cognizance, are these: blasphemy, apostasy, heresy, schism, ordinations, institutions of clerks to benefices, celebration of divine service, matrimony, divorces, bastardy, tythes, oblations, mortuaries, reparation of churches, probates of wills, administrations, simony, incest, fornication, adultery, pensions, procurations, commutation of penance, right of pews, and other such-like, reducible to these heads.

There are many courts belonging to the civil and ecclesiastical law; the most particular of which are these:

1. The Court of Arches; as to the etymology and business of which, see *ARCHES*, vol. ii. p. 59. Yet some etymologists will have it, that the denomination has nothing to do with the arches on which *Bow-church* was built; but that it originated from an abbreviation of *Archiepiscopi Curia*, *Arche's Curia*. This may be very ingenious, and we really think it is; but the other etymon has been so closely fastened on the mind of the doctors, that we ought not to press our readers in favour of this.

2. The Prerogative Court; as to which, see the article *COURTS*, vol. v. p. 300.

3. The Court of Faculties. See *FACULTY*, vol. vii. p. 154.

4. The Court of Admiralty; as to the jurisdiction and practice of which, see vol. i. p. 119. This court was in former times kept in *Southwark*. It is now held in the hall of Doctors' Commons, where the other civil courts are kept; except in the trial of pirates, and crimes committed at sea; on which causes the Admiralty-court sits at the sessions-house in the *Old Bailey*.

5. The Court of Delegates. See *COURTS*, vol. v. p. 301.

The practisers in these courts are of two sorts; viz. advocates and proctors.—The advocates are such as have taken the degree of doctor of the civil law, and are retained as counsellors, or pleaders. These must, first, upon their petition to the archbishop, obtain his fiat; and then they are admitted, by the judge, to practise. The manner of their admission is solemn. Two senior advocates, in their scarlet robes, with their mace carried before them, conduct the doctor up the court with three reverences, and present him with a short Latin speech, together with the archbishop's rescript; and then, having taken the oaths, the judge admits him, and assigns him a place or a seat in the court, which he is always to keep when he pleads. Both the judge and advocates, if of *Oxford*, wear, in court, scarlet robes, and hoods lined with taffaty; but, if of *Cambridge*, white mincever, and round black velvet caps.—The proctors, or procurators, exhibit their proxies for their clients; and make themselves parties for them, and draw and give pleas or libels and allegations in their behalf; produce witnesses, prepare causes

for sentence, and attend the advocates with the proceedings. These are also admitted by the archbishop's fiat, and introduced by two senior proctors. They wear black robes and hoods lined with fur.—The terms for the pleading and ending of causes in the civil courts are but little different from the term-times of the common law. The order, as to the time of sitting of the several courts, is as follows: The court of arches, having the pre-eminence, sits first in the morning; the court of admiralty sits in the afternoon, on the same day; and the prerogative-court sits also in the afternoon.

In this college is a library, well stocked with books of all sorts, especially in civil law and history; for which they are greatly indebted to *James Gibbon*, esq. who gave a great number of the books, and to the benefactions given by every bishop at his consecration, to purchase books for this library. This learned body was originally situated in *Paternoster-row*; but, that situation being found very inconvenient, *Dr. Henry Harvey*, dean of the arches, purchased and provided a large house in *Knightriders-street*, which, at that time, was an old stone building, belonging to, and let out by, the canons of *St. Paul's*. The present college was built upon the ruins of that house, which was burnt down in the great conflagration of this city, in 1666; on which occasion, the business of the institution was transferred to, and carried on at, *Exeter-change*, in the *Strand*, till the new college was finished in a more convenient and elegant manner.—The doctors in their gowns lined with fur, holding forth at these pleadings in the *Strand*, little thought that their benches would be eventually filled up by more furry and more noisy beings, the congregation under *Mr. Pidcock's* once, and now under *Mr. Polito's*, administration.

Into these different courts there is an opening in *Great Knightriders-street*, with an iron railed gate; and another on *Bennet's Hill*, with several steps. Besides the courts, there are also several handsome houses generally occupied by the doctors: but the Prerogative-office, separated from them, is in *Great Knightriders-street*, at the bottom of a long passage.—The rooms where the original wills are deposited, after a fair copy of them is made, are strongly built in stone, and intended to resist any accident by fire.

On the opposite side, going down the hill, stands the *Heralds' Office*, or *College of Arms*. The old building, where this office was kept, was destroyed by the fire in 1666; and, by the act for rebuilding the city, the present edifice was to have been begun within three years afterwards. The estimate of the expense for building it amounted to five thousand pounds; but the corporation, not being able to discharge that sum, petitioned his majesty for a commission to receive the subscriptions of the nobility and gentry. This petition was referred to the commissioners for executing the office of earl-marshal; and, upon their report, was granted on the 6th of December, 1672. But the commission, directing the money collected to be paid to such persons, and laid out in such a manner, as the earl-marshal should appoint, so disgusted the officers, that it caused a coolness in them to promote the subscription; in consequence of which, though they had reason to hope for large contributions, little more than five hundred pounds were raised. What sums were farther necessary, were made up out of the general fees and profits of the office, or by the contribution of particular members. The north-west corner of this building was erected at the sole charge of *Mr. William Dugdale*; and *Mr. Henry St. George*, *Clarenceux*, gave the profits of some visitations made by deputies appointed by him for that purpose, amounting to five hundred and thirty pounds. The houses on the east side and south-east corner were erected upon a building lease, agreeable to the original plan; by which means the whole was made one uniform quadrangular building, as it now appears. It is a very handsome and well-designed edifice. The college being finished in the month of November, 1683, the rooms were divided amongst the officers according to their degrees, by mutual agreement, which

was afterwards confirmed by the earl-marshal; and these apartments have been ever since annexed to the respective offices. The insides of the apartments were finished at different times by the officers to whom they belonged.—The inside front of this building is ornamented with rustic, on which are placed four Ionic pilasters that support an angular pediment. The sides, which are conformable to this, have arched pediments, which are also supported by Ionic pilasters. Within is a large room for keeping the Court of Honour; as also a library, with houses and apartments for the king's heralds and pursuivants.

This corporation consists of thirteen members, viz. three kings of arms; six heralds of arms; and four pursuivants of arms. They are nominated by the earl-marshal of England, as ministers subordinate to him in the execution of their offices, and hold their places by patent. Their meetings are termed *chapters*, which they hold once a month, or oftener if necessary, wherein all matters are determined by a majority of voices of the kings and heralds, each king having two voices. These officers, besides the apartments annexed to their respective offices, have also a public hall, in which the earl-marshal occasionally held courts of chivalry. See COURT OF CHIVALRY, vol. v. p. 298.—Their library contains a large and valuable collection of original records of the pedigrees and arms of families, funeral certificates of the nobility and gentry, public ceremonials, and other branches of heraldry and antiquities. See farther HERALDS' COLLEGE and HERALDRY, vol. ix. and KNIGHTHOOD, vol. xi.

Opposite to the Herald's College is a small court containing several houses, over the entrance of which is a bold alto-relievo representing St. George slaying the Dragon. It appears by the date, that this little monument of gratitude towards some of the kings of arms and heralds, who probably had contributed to the building of these houses, was erected soon after the fire of London. We have given a representation of this on Plate VII *b*. Time has grazed it with his scythe; but has not so defaced it as to divest it entirely of its characteristic spirit. Being on the narrowest spot of the hill, it has been very little noticed, and is consequently very little known; so that our bringing it into notice serves nearly the same purpose as if we had raised it from under ground. We were not able, after close enquiries, to find out the names the initials of which are placed at the top: they might have been those of the publican and his wife who kept a public-house near the place, under the name of the George, and which was probably superseded by the sign of the Ship, now there.

At the bottom of the hill, and the south-west corner, on the north side of Thames-street, stands the parish-church of St. Bennet, Paul's Wharf; so called from its dedication to St. Benedict, and its vicinity to the wharf. It is of very ancient foundation, and appears in the register of Diceto, dean of St. Paul's, under the year 1181. The old church being destroyed by the fire in 1666, the present one was erected in its stead, from a design of sir Christopher Wren. It is a very neat brick structure, ornamented with stone; and the body is well proportioned. The tower, which is also of brick, with rustic-work in stone, at the corners, is surmounted by a dome, from whence rise a turret and a small spire. It is a rectory, the patronage of which appears to have been always in the dean and chapter of St. Paul's.—The old church, as described by Stow, contained several neat monuments, and particularly those of Dr. Shadwell; physician; sir Gilbert Dethicke, garter principal king of arms; David Smyth, embroiderer to queen Elizabeth. Another embroiderer to the same queen was buried there, John Parr, who died 1607, aged 72. Perhaps in memory of his benefactions to the church has the public house in Little Knight-riding-street been kept to this day under the name of Parr's Head; though the name is more apt to remind one of the famous old Parr.—In the present church, we have observed the tomb, among others, of John Charles Brooke, York

herald, F.S.A. who was unfortunately crushed to death at the little theatre in the Haymarket on the 3d of February, 1794. See p. 125, 6. The Latin epitaph, written by one of his brother heralds, is elegant and classical.

After the fire, the parish of St. Peter, Paul's Wharf, the church of which was not rebuilt, was annexed to this parish. This is also a rectory, in the gift of the dean and chapter of St. Paul's, and of equal antiquity with St. Bennet's, being found in the same register; but was anciently denominated St. Peter's Parva, from the smallness of its dimensions. Part of this parish is in Castle-Baynard ward, and part in that of Queenhithe.

Lower down, and close upon the bank of the Thames, was once the castle called by the name of its founder, Baynard, a soldier of fortune, it is said, who came over with William the Conqueror. He received many marks of favour, and obtained from him the barony of Little Dunmow; which, being forfeited to the crown, in the year 1111, by the felonious practices of William Baynard, was given by Henry I. to Gilbert earl of Clare, and his heirs, together with the honours of Baynard's Castle. From him it descended in the female line to Robert Fitzwalter, who was castellan and banner-bearer of London, in the year 1213; about which time there arose a great contention between king John and his barons, on account of Matilda, called The Fair, a daughter of the said Robert Fitzwalter, whom the king unlawfully loved, but could not obtain; for which, and other causes of the like sort, a war ensued throughout the realm. The barons, being received into London, did great damage to the king; but in the end the king was successful, and not only banished Fitzwalter, among others, out of the kingdom, but likewise caused Baynard's Castle, and two other houses belonging to him, to be demolished. King John being in France in the year 1214, with a great army, a truce was made between the two kings for five years. There being a river or arm of the sea between the two armies, a knight among the English called out to those on the other side to challenge any one among them to come and take a just or two with him: whereupon, without any delay, Robert Fitzwalter, who was on the French side, ferried over, and got on horseback, without any one to help him, and showed himself ready to face this challenger; and at the first course struck him so violently with his great spear, that both man and horse fell to the ground; and, when his spear was broken, he went back again to the king of France. King John, seeing this, cried out, "By God's tooth (his usual oath), he were a king indeed who had such a knight." The friends of Robert, hearing these words, kneeled down, and said, "O king, he is your knight; it is Robert Fitzwalter." Whereupon he was sent for the next day, and restored to the king's favour; after which a peace was concluded, and Fitzwalter was restored to his estates, and had permission to repair his castle of Baynard.

This Robert died, and was buried at Dunmow, in the year 1234; and was succeeded by his son Walter. After his decease, the barony of Baynard was in the wardship of king Henry, during the minority of another Robert Fitzwalter, who, in the year 1303, laid claim to his rights before John Blount or Blouden, the then mayor, in the following terms. "The said Robert and his heirs ought to be, and are, chief bannerers of London, in fee, for the castellary which he and his ancestors had, by Castle Baynard in the said city. In time of war, the said Robert and his heirs ought to serve the city in manner as followeth: that is, The said Robert ought to come, he being the twentieth man of arms, on horseback, covered with cloth or armour, unto the great west door of St. Paul's, with his banner displayed before him of his arms. And, when he is so come to the said door, mounted and apparelled as before is said, the mayor, with his aldermen and sheriffs, armed in their arms, shall come out of the said church of St. Paul unto the said door, with a banner in his hand, all on foot; which banner shall be Gules,

the

the image of St. Paul, gold; the face, hands, feet, and sword, of silver. And, as soon as the said Robert shall see the mayor, aldermen, and sheriffs, come on foot out of the church, armed with such a banner; he shall alight from his horse and salute the mayor, and say to him, *Sir mayor, I am come to do my service which I owe to the city.*

And the mayor and aldermen shall answer, *We give to you, as to our banneret of fee in this city, the banner of this city, to bear and govern the honour of this city to your power.*

And the said Robert and his heirs shall receive the banner in his hands; and go on foot out of the gate, with the banner in his hands; and the mayor, aldermen, and sheriffs, shall follow to the door, and shall bring an horse to the said Robert, worth twenty pounds, which horse shall be saddled with a saddle of the arms of the said Robert, and shall be covered with findals of the said arms. Also they shall present to him twenty pounds sterling, and deliver it to the chamberlain of the said Robert, for his expenses that day. Then the said Robert shall mount upon the horse which the mayor presented to him, with the banner in his hand; and, as soon as he is up, he shall say to the mayor, that he must cause a marshal to be chosen for the host, one of the city; which being done, the said Robert shall command the mayor and burgeses of the city to warn the commons to assemble, and all go under the banner of St. Paul; and the said Robert shall bear it himself to Aldgate, and there the said Robert and mayor shall deliver the said banner of St. Paul to whom they think proper. And, if they are to go out of the city, then the said Robert ought to choose two out of every ward, the most sage persons, to look to the keeping of the city after they are gone out. And this counsel shall be taken in the priory of the Trinity, near Aldgate. And before every town or castle which the host of London shall besiege, if the siege continue a whole year, the said Robert shall have, for every siege, of the commonalty of London, one hundred shillings, and no more. These be the rights that the said Robert hath in time of war.

“Rights belonging to Robert Fitzwalter, and to his heirs, in the city of London, in the time of peace, are these: that is to say, The said Robert Fitzwalter had a foke or ward, in the city, where was a wall of the canonry of St. Paul, which led down by a brewhouse of St. Paul to the Thames, and so to the side of the mill, which was in the water, coming down from Fleet-bridge, and went by London-wall, betwixt the Friars-preachers and Ludgate, and so returned by the house of the said friars to the wall of the canonry of St. Paul; that is, all the parish of St. Andrew, which was in the gift of his ancestors, by the said feigniority; and so the said Robert had, appendant unto the said foke, all the things underwritten: That he ought to have a fokeman, and to place what fokeman he will, so he be of the fokemanry, or the same ward; and if any of the fokemanry be impleaded, in the Guildhall, of any thing that toucheth not the body of the mayor that for the time is, or that toucheth the body of no sheriff, it is lawful for the fokeman of the fokemanry of the said Robert Fitzwalter to demand a court of the said Robert; and the mayor, and his citizens of London, ought to grant him to have a court; and in his court he ought to bring his judgments, as it is assented and agreed upon in the Guildhall that shall be given him. If any, therefore, be taken in his fokemanry, he ought to have his stocks and imprisonment in his foken; and he shall be brought from thence to the Guildhall, before the mayor, and there they shall provide him his judgment that ought to be given of him; but his judgment shall not be published till he come into the court of the said Robert, and in his liberty. And the judgment shall be such, that, if he have deserved death by treason, he be tied to a post in the Thames, at a good wharf, where boats are fastened, two ebbings and two flowings of the water. And, if he be condemned for a common thief, he ought to be led to the elms, and there suffer his judgment, as other thieves. And so the said Robert, and his heirs,

hath honour, that he holdeth a great franchise within the city, that the mayor of the city, and citizens, are bound to do him right; that is to say, that, when the mayor will hold a great council, he ought to call the said Robert, and his heirs, to be with him in council of the city; and the said Robert ought to be sworn to be of council with the city, against all people, saving the king and his heirs. And, when the said Robert cometh to the hustings of the Guildhall of the city, the mayor, or his lieutenant, ought to rise against him, and set him down near unto him; and, so long as he is in the Guildhall, all the judgments ought to be given by his mouth, according to the record of the recorders of the said Guildhall; and so many waives as come so long as he is there, he ought give them to the bailiffs of the town, or to whom he will, by the council of the mayor of the city.”

The old castle was destroyed by fire in 1428; after which it was rebuilt by Humphrey duke of Gloucester. At his decease, Henry VI. gave it to Richard duke of York, who resided here, with his armed followers, to the number of four hundred, during the important convention of the great men of the nation, in 1453, the forerunner of the civil wars between the houses of York and Lancaster. This was also the residence of Richard III. when he took upon him the title of king. It was afterwards beautified, and made more commodious, by Henry VII. who frequently lodged here; and the privy-council met here, on the 19th of July, 1553, for the purpose of proclaiming queen Mary; at which time it was the property and residence of William Herbert, earl of Pembroke. There are several prints existing at this time, of this famous place; but they give so inadequate an idea of the castle, and represent it so much like a prison, that we did not think a copy of them, as we could not find any thing original, would be acceptable to our readers. The site is now occupied by wharfs; and no remains of the old fabric, we understand, are to be found. In fact the whole ground has been turned up so many times, and so little notice has been taken of the old castle by our modern analysts, that it is not to be wondered at if this ancient, and, as it was styled, magnificent building, the scene of so many eventful transactions, is now erased from the memory of man, and exists only in the name which it gave to the ward.—The castle of Montfitchet, and another castle, built by Edward II. which, from being afterwards appropriated for the reception and residence of the pope's legates, was called Legates Inn; and also Beaumont's Inn, afterwards Huntingdon-house, a very noble palace, built in Thames-street, opposite St. Peter's Hill, in the 30th of Edward IV. the city mansion of the family of Scroop, on the west side of Paul's Wharf; Berkeley's inn, or palace, in Addle-street; and the stately palace belonging to the priors of Okeburn, in Wiltshire, which stood in Castle-lane, with many others of less note, in this neighbourhood; have all shared the same fate.

The ascent from Thames-street to Doctors' Commons is cut into such a number of narrow streets close and parallel to each other, and indeed farther on, nearly to Fish-street Hill and London Bridge, that on the map they look like the teeth of a comb. On the east of Bennet's Hill we have St. Peter's Hill, so called from a church once existing there, but destroyed with others in 1666; and the parish of which was, as we mentioned above, united to St. Bennet's. This hill is steep, and yet of an easier ascent than St. Bennet's; but, having no direct opening or outlet in St. Paul's-church-yard, is less annoyed by the passage of carts from Thames-street. It is nearly opposite to *Sermon-lane*, probably so called as a near way to the *Pulpit-crofs*; near which, and parallel to it, is *Do-little-alley*; which seems to have been so called in allusion to its narrowness, admitting of no trade or of very few passengers. However, the oddity of the name, and some improper allusions having been made on account of it, caused the inhabitants of the ward to change it into *Knight-rider's-couit*.

The alms-houses on Peter's Hill, and contiguous to the Heralds' College, were founded by David Smith, embroiderer, for six poor widows; each to have twenty shillings per annum. Before the fire of London, there stood on the east side of these houses an ancient building belonging to the abbot of St. Mary at York, there to abide when he repaired to London. The corner houses at the top of the hill were called Peter's Key, most probably from some public house with the sign of the Key of St. Peter, as we find in several places under the denomination of Cross Keys.

From Paul's Wharf westward, Thames-street extends to Puddle Wharf, so called from its situation, being a small creek or dock where barges usually repair in order to be laden with dung, dirt, and other materials of no great value. At low water it is indeed a puddle, exhaling the most disagreeable smell, which the inhabitants in the neighbourhood pretend to be very wholesome. It is at the bottom of St. Andrew's Hill, and receives all the mud of the Commons, running down there in torrents whenever a smart shower cleanses the streets above. Last winter, immense loads of ice and congealed snow were conveyed there, and formed a heap as high as the top of the neighbouring houses, and which will not soon be melted.—About this place was anciently the leystow of which Stow or his editor speaks in the following words:—"At a common-council, August 7, the third and fourth of Philip and Mary, it was agreed, at the request of the earl of Pembroke, that the cities leystow adjoining to his lordship's house, and being noysome to the same, should be removed, upon condition that he should give the city, towards the making of a new leystow in another place, 2000 foot of hard stone to make the vault and warfe thereof, or else forty markes in ready money to buy the same stone withall." This leystow, or laystall, was a place not unlike the present Puddle-dock, where dirt and mud and all descriptions of filth and nastiness united, before their mixing with the water of the river—Cloacinæ Londinenses—the common sewer.

St. Andrew's Hill is very steep. On ascending it, we find on the right several steps leading to Wardrobe Terrace, as it has been lately called, a sort of court surrounding the church, and leading to Knightrider-street; and on the north, Wardrobe Place, a square neatly encompassed with private houses and planted with trees. The entrance is in Great Carter-lane.—Annexed to the church is a small cemetery planted tastefully with shrubs. It is a rectory of very ancient foundation, originally denominated St. Andrew juxta Baynard Castle, from its vicinity to that palace; but, the office of the king's wardrobe being removed to a house in Carter-lane, built by sir John de Beauchamp, son to Guy de Beauchamp, earl of Warwick, (see p. 400.) and afterwards sold to king Edward III. the site of which is now occupied by Wardrobe-court, the distinctive appellation of this church was changed to that of St. Andrew Wardrobe.

It is very probable that this church was founded about the same time as Baynard Castle, and perhaps by the same nobleman: for the advowson was anciently in the noble family of Fitzwalter, from whom it passed through many hands, until the year 1663, when it came to the crown, in which it still remains. But the parish of St. Anne, Blackfriars, being annexed to it after the fire; the right of presentation is alternately in the crown and the parishioners of St. Anne. The present structure was erected on the ruins of the old one, in the year 1670: It is a handsome building of brick, ornamented with stone, and supported by twelve pillars of the Tuscan order, in allusion to the twelve apostles, to one of whom it is dedicated. The body is enlightened by two rows of windows; but the tower has neither turret, pinnacle, nor spire. The roof is adorned with fretwork of flowers, fruits, &c. The pews are very neat, and the walls well-wainscoted, with two handsome galleries, a carved pulpit, a venerated found-

ing-board, and a very complete altar-piece. It is seventy-five feet in length, fifty-nine in breadth, and thirty-eight in height, to the roof; and the altitude of the tower is eighty-six feet.

This church is generally well attended, as the preachers endeavour to imitate the late celebrated Mr. Romaine, who, having had the skill of amalgamating the methodical with the orthodox dogmas, and thereby constituting a middle *nuance* between both, drew to his pulpit an immense audience.—To this excellent man, a monument as plain and modest as himself, as neat and elegant as his eloquence, yet, though in marble, less durable than the impression he made upon his followers, and which will be handed down to posterity, has been erected by the contributions of his disciples and admirers, at the *dextrum cornu altaris*, the right horn or corner of the altar. It consists in a pyramidal slab of white, upon a basis and back of black, marble, with a bas-relief very beautifully executed, representing Religious Zeal preaching before the altar of the spotless Lamb, and under the protection of Christ who is seen above. This is accompanied with a simple and appropriate inscription. The whole is surmounted by a small bust of this celebrated divine, the likeness of which is strikingly true.

If from this church we walk eastward through Great and Little Knightrider-streets, which took their appellation from the passing of knights going from Tower Royal to the tournaments and jousts in Smithfield, we shall enter Old Fish-street, so called from a fish-market anciently held there, as it is now at Billingsgate; and on the right we meet with the church of St. Gregory and St. Mary Magdalen mentioned above. This was a vicarage, in the tenure of the canons of St. Paul's, in the year 1181; but, for some ages past, it has been a rectory, in the gift of the dean and chapter of St. Paul's. The old edifice was destroyed by the fire of London; and the present structure was erected in the year 1685. It is small, but well-proportioned, built with stone, and lighted by a single series of arched windows, each ornamented with a cherub and scrolls, supporting a cornice which runs round the building; these windows are so high from the ground, that the doors open completely under them. The tower is divided into two stages, in the upper of which is a large window on each side. From the top of the tower the work diminishes, in the manner of high steps, on each side; and on the top of these is a turret, with a very short spire, on which is placed a vase, with flames.

Opposite to the site of St. Gregory's church (see p. 405.) is Lambeth or Lambart hill, running down to Thames-street, and parallel with *Labour-in-vain-hill*; the name of this narrow lane may be owing to the steepness of it, as if it were in vain to endeavour to climb up. Some pretend that it arose from the sign at a barber's shop, which exhibited the curious device of a monkey lathering a negro's face with soap. Both conceits are so nearly connected with each other, that they may have jointly contributed to the denomination of the hill; but it has been lately called *Old Fish-street-hill*.—At the corner stands the parish-church of St. Nicholas Coleabbey, which was dedicated to St. Nicholas, bishop of Myra in Africa, a common patron to mariners, as it is related that he miraculously saved the crew of a ship sinking in a storm; in allusion to which, he is generally painted with two or three children playing in a tub full of water. But the reason of the additional epithet is not known; some conjecturing it to be a corruption of Golden-abbey, and others, that it is derived from Cold-abbey, or Coldbey, from its cold or bleak situation. It is known that there was a church in the same place before the year 1377, when, according to Stow, the steeple and south aisle, which were not so old as the rest of the church, were rebuilt; but, the last structure being consumed in the great conflagration in 1666, the present church was built in its place, and the parish of St. Nicholas Olave united to it.

This edifice consists of a plain body, built of stone, well lighted by a single range of windows. It is sixty-three feet long, and forty-three feet broad; thirty-six feet high to the roof, and one hundred and thirty-five to the top of the spire. The tower is plain, but strengthened with rustic at the corners; and the spire, which is the frustum of a pyramid, and covered with lead, has a gallery, and many openings. This was the first church built and completed after the fire. The advowson of this rectory was anciently in the dean and chapter of St. Martin's le Grand; but, upon the grant of that collegiate church to the abbot and canons of Westminster, the patronage devolved to that convent, in whom it continued till the dissolution of their monastery; when, coming to the crown, it remained therein till queen Elizabeth, in the year 1560, granted the patronage thereof to Thomas Reeve and George Evelyn, and their heirs, in soccage; who conveying it to others, it came at last to the family of the Hackers, one whereof was colonel Francis Hacker, commander of the guard that conducted king Charles I. to and from his trial, and, at last, to the scaffold; for which, after the restoration, he was executed as a traitor; when the advowson reverted to the crown, in whom it still continues.

On the side of Lambeth-hill was a handsome building called Blacksmiths' Hall; but this has lately been pulled down, and the business of the company is transacted at Cutlers' Hall.

Pursuing our deambulations from the main point through Old Fish-street, we soon meet Bread-street and Bread-street Hill. It appears, that in the reign of Edward I. an order was issued, by which the bakers were obliged to come to certain open markets to sell their bread, and not expose it in shops as they do now; and this place was one of them. The intention of this regulation was, that, by a natural competition, (natural we say, because it is in the nature of man to outdo his neighbours if he can, which in more elegant words is called the *vis æmulative*, or emulation,) it might be expected that this first of the necessaries of life should be yielded to the public at the lowest rate possible. The same expectation has left the meat-market open to this day in the same manner; but has been disappointed, like many other well-meant and benevolent intentions of our ancestors.

Bread-street is a well-built open street, on the east side of which, at the corner of Watling-street, is the parish-church of Allhallows, Bread-street. This church received its name from being dedicated to all the saints, and its situation. It is a rectory of very ancient foundation; the patronage of which was originally in the prior and canons of Christ-church in Canterbury, who remained patrons of it till the year 1365, when it was conveyed to the archbishop of Canterbury and his successors, in whom it still continues, and is one of the peculiars belonging to that see in the city of London. To this we may add a curious anecdote mentioned by Stow:—"In the three-and-twentieth yeere of Henry VIII. two priests of this church fell at variance, and the one drew blood of the other; wherefore the same church was suspended (*interdictum*), and no service sung or said therein for the space of one moneth after. The priests were committed to prison; and, the fifteenth of October, being enjoined penance, went before a generall procession, bare-headed, bare-footed, and bare-legged, before the children with beads and bookes in their hands, from Paul's, through Cheap, Cornhill, &c." Stow does not carry the ceremony to the end; but we may very naturally suppose that the procession returned to Allhallows, where our two priests were egregiously flogged, whilst the choir were singing, as usual on like occasions, the long-long psalm *Miserere mei*, beating time quick or slow, according to the heinousness of the crime.—The steeple of this church was struck by lightning on the 5th of September, 1559. Being afterwards totally destroyed by the fire of London in 1666, the present edifice was erected in 1684, at the expense of the public; and serves not only for the accommodation of the inhabitants of its

own parish, but likewise for those of St. John the Evangelist, which is annexed to it by act of parliament. This church consists of a plain body, of the Tuscan order, seventy-two feet in length, thirty-five in breadth, and thirty in height to the roof; with a square tower eighty-six feet high, divided into four stages with arches near the top. The inside is handsomely wainscoted and peded, the pulpit finely carved, the founding-board veneered, a neat gallery at the west end, and a spacious altar-piece well adorned and beautified.—Just by this church was Salters' Hall, with six alms-houses "for poore decayed brethren of that company." The hall was burnt in 1539; rebuilt, burnt again in 1666; and then rebuilt in Swithin's lane.

The parish-church of St. John the Evangelist stood at the north-east corner of Friday-street, in Watling-street; but, being burnt in the fire of London, was not rebuilt. It is a rectory, founded about the same time as Allhallows, and was also in the gift of the priory of Christ-church, Canterbury, till it was conveyed with that church to the archbishops of Canterbury, who still retain it. The site of the old church is now a burial-place for the parishioners; and, though the parish consists of no more than twenty-three houses, it has a separate vestry, and two churchwardens.

On the same side of Bread-street, south of Basing-lane, stands the parish-church of St. Mildred, Bread-street; so called from its situation, and its dedication to St. Mildred, niece to Penda king of the Mercians, who, having devoted herself to a religious life, retired to a convent in France, from whence she returned, accompanied by seventy virgins, and founded a monastery in the Isle of Thanet, of which she died abbess, in the year 676.—This legendary story seems to have been borrowed from the embarking of St. Ursula with 11,000 virgins in her train—a fact, we suppose, not unlikely in those *virgin* ages; but which in our corrupted times would excite as much curiosity as astonishment. We wonder that no English historical painter has ever, in imitation of Claude Lorraine, exercised his skill in representing the embarkation of St. Mildred with her numerous followers, with angels, instead of nereids, smoothing the waves, and laying the storm, to soften their passage to the *Insula Sanctorum*, or Island of Saints, as this was anciently, and perhaps not undeservedly, called.

It is a rectory, founded about the year 1300, by lord Trenchant, of St. Alhan's; but it had neither vestry-room nor church-yard till 1428, when sir John Chadworth, or Shadworth, by his will, gave a vestry-room and church-yard to the parishioners, and a parsonage-house to the rector. The old church was burnt down in 1666; and the present building was erected in 1683. It consists of a spacious body, lighted by one large window on each of the four sides, with a circular roof. The length of the church is sixty-two feet, its breadth thirty-six, the height of the side-walls forty, and to the centre of the roof fifty-two. At the south-east corner is a light tower, divided into four stages; whence rises a spire, the altitude of which is a hundred and forty feet. The front of it is built of free-stone, but the other parts of brick: the roof is covered with lead, and the floor paved with Purbeck-stone. Within is a neat wainscot gallery; and the pulpit is enriched; the altar-piece is handsomely adorned, and the communion-table stands upon a foot-piece of black and white marble. The advowson of this church was anciently in the prior and convent of St. Mary Overy's, in Southwark, by whom it was granted, in the year 1533, to John Oliver, and others, for a term of years; at the expiration of which it came to sir Nicholas Crisp, in whose family, or assigns, it still continues.

When the present edifice was built, it was made parochial for this parish and that of St. Margaret Moses; the church of which stood at the south-west corner of Little Friday-street, opposite to Distaff-lane; and was thus named from being dedicated to St. Margaret, and from one Moses, or Moyses, who had formerly rebuilt it; but, suffering by

the fire in 1666, it was not again rebuilt. It is a rectory, and was numbered among the most ancient foundations in the city; for, in the year 1105, it was given by Robert Fitzwalter to the priory of St. Faith, at Housham, or Horsham, in the county of Norfolk; which gift being confirmed to them by a bull of pope Alexander III. in the year 1163, it was possessed by the prior and canons, till the suppression of their convent by Edward III. as an alien-priory, when this church fell to the crown, in which the patronage has continued to this day. One part of the site of this church was sold to the city, by virtue of an act of parliament, for the purpose of widening the street between Friday-street and Bread-street; and the money arising from the sale was applied towards paving and beautifying the church of St. Mildred; the other part was reserved for a burial-place for the parish of St. Margaret.

On the north side of Distaff-lane is Cordwainers' Hall; a handsome convenient building, consisting of several rooms, the principal of which contains portraits of king William and queen Mary. A new stone front has been lately added to this building; over the centre-window of which is a medallion, representing a country girl spinning with a distaff, in allusion to the name of the lane; and at the top is a carving of the company's arms.—It is a subject of regret to all admirers of simplicity united with elegance, to find this neat building buried in so narrow a lane; for indeed it is painful to direct the sight so as to discover what the medallion represents; and, by looking to such a perpendicular height, the head becomes giddy, and the spectator begins to imagine that the carved spindle he painfully looks up to is really whirling and twirling about.

The next object worthy of our attention is Gerard's Hall, in Basing-lane. Here stood anciently the mansion of sir John Gisors, mayor of London, and constable of the Tower in 1311. In the turbulent time of Edward II. he was charged with several harsh and unjust proceedings; and, being summoned to appear before the king's justices to answer to the accusation, he and other principal citizens fled, and put themselves under the protection of the rebellious barons. His house was built upon arched vaults, and had arched gates made of stone brought from Caen. In the lofty roofed hall, says Stow, stood a large fir-pole, 39½ feet high and fifteen inches in circumference, with a ladder to ascend to the top of it. It was feigned to have been the staff of Gerardus, a mighty giant; but proved to be no more than a may-pole, which, according to ancient custom, used to be decked and placed annually before the door. From this fable the house long bore the name of Gerard's Hall; but it was properly changed to that of Gisors. It remained in the family till the year 1386, when it was alienated by Thomas Gisors. The house was divided into several parts; and in the time of Stow was a common hoferie, or inn. At present nothing remains but the vault, supported by pillars, which serves as cellars to the houses built on the site of the old mansion. The premises are still occupied by waggoners and stage-coaches, with a sort of tavern, or chop-house, annexed to it. At the gate, which seems old, still remains fixed in the door-post a gigantic figure of a man, wrapped in a mantle, with a staff in his hand; undoubtedly alluding to the story mentioned above. It has a singular appearance, and seems to date of a period cloie following that of the great conflagration.

Basing-lane, being contiguous to the Old Bread-market place, was in the time of Richard II. called Bake-house and Baking-house-lane, or Baking-lane, on account of the number of ovens heated there to supply the stalls in the market; from which arose the corruption into Basing-lane.

Following Watling-street eastward, we may take in Bow-lane, and visit St. Mary Aldermary. This church, which is a rectory, owes its name to its dedication to the Virgin Mary; and the additional epithet of Aldermary, to *Elder*, or *Elder, Mary*, from being the oldest church in this

city dedicated to the holy virgin. It is one of the peculiarities belonging to the archbishop of Canterbury, and was founded before the conquest, under the Saxon kings. In the year 1510, sir Henry Keble, lord-mayor of London, bequeathed a thousand pounds towards rebuilding this church; in 1626, William Rodoway gave, towards the building of the steeple, then greatly decayed, the sum of three thousand pounds; and Richard Pierston, about the same year, gave two hundred marks towards the same work; with condition that this steeple, thus to be built, should follow its ancient pattern, and go forward, and be finished, according to the foundation of it laid before by sir Henry Keble; which, within three years after, was so finished, that, notwithstanding the body of the church was burnt in the fire of 1666, the steeple remained firm and good. That part of it which was consumed was afterwards rebuilt in its present form by the munificence of Henry Rogers, esq. as appears by a Latin inscription over the west door of the church. This Gothic edifice is very spacious, it being a hundred feet in length and sixty-three in breadth; the height of the roof is forty-five feet, and that of the steeple a hundred and thirty-five. The body is lighted by a single series of large Gothic windows. The wall has well-contrived buttresses and battlements; these buttresses run up pilaster-fashion, in two stages, not projecting in the old manner from the body of the building. The tower, which is full of ornament, consists of five stages, each of which, except the lowest, has one window; and the pinnacles, which are properly so many turrets, are continued at each corner down to the ground, divided into stages like the body of the tower, and cabled with small pillars bound round it, with a kind of arched work, and subdivisions between. After the fire of London, the parish of St. Thomas the Apostle was annexed to this church; which being in the dean and chapter of St. Paul's, the archbishop of Canterbury and the dean of St. Paul's present alternately to the united livings.

Coming down Bow-lane, we re-enter our former walk. In Great Trinity-lane, so called from Trinity-church, which stood in Knight-riders-street, and which was so very old in 1572, that contributions were asked from the inhabitants to repair it. Having been destroyed in the general conflagration, it was not rebuilt; and, the parish being annexed to that of St. Michael Queenhithe, some German merchants purchased the site of it, in order to erect a church for the celebration of divine service according to the Lutheran confession; since which time, this has been their place of public worship.

Not far in Little Trinity-lane is Painter-stainers' Hall. These artists formed themselves into a fraternity as early as the reign of Edward III. and also erected themselves into a company; but were not incorporated. They styled themselves *Painter-stainers*, because their chief work was staining or painting glass, illuminating missals, painting portative or other altars, and now and then a portrait; witness that of Richard II. and those of the great John Talbot and his wife, preserved at Castle Ashby. In the year 1575, they found that plasterers, and all sorts of unskilful persons, intermeddled in their business, and brought their art into disrepute by the badness and slightness of their work. They determined (like the surgeons in later days) to keep their mystery pure from all pretenders. They were incorporated in 1576; had their master, warden, and common seal: George Gower was queen Elizabeth's favourite painter; but, as we do not find his name in Mr. Walpole's Anecdotes, we suspect his art was confined to the humbler part. This corporation extended only to such artists as practised within the city. As art is unconfined, numbers arose in different parts, and settled in Westminster, the seat of the court. They for a long time remained totally unconnected even with each other. About the year 1576, they solicited and received the royal patronage, and were incorporated under the title of Master, Wardens, and Commonalty, of Painter-stainers. The majority are independent of any other body corporate; but

several among them are regular freemen of the city under the ancient company. Numbers of paintings are preserved here; many of them probably by the members of the society. The portraits of Charles II. and his queen, by Houseman; architecture of the Corinthian order, by Trevit; the Fire of London, by Waggoner; &c. &c. On the ceiling is an allegorical painting, the work of Fuller. The silver cup and cover, given to this society by the great Camden, who was son of a painter in the Old Bailey, is preserved here, and annually produced on St. Luke's day, the old master drinking out of it to the new one, then elected. The entrance is well decorated, and is an ornament to the lane.

Lower down in Thames-street, directly opposite to Queenhithe, is situated the parish-church of St. Michael Queenhithe; so called from its dedication to St. Michael the archangel, and its situation near that hithe. It was formerly called St. Michael de Cornhithe, all the corn brought to London from the western parts of the country being landed here. The earliest authentic mention of this church is in the year 1404, when Stephen Spilman, who had served the offices of alderman, sheriff, and chamberlain, died, and left part of his goods to found a chantry here. The old church being destroyed by the fire of London, the present structure was erected in its stead. It consists of a well-proportioned body, lighted by two series of windows; the first a range of tall arched ones, and over them another range of large port-hole windows, above which are cherubs' heads, and underneath festoons that adorn the lower part, and fall between the tops of the under series. The tower is plain, but well-proportioned, and is terminated by a spire crowned with a vane in the form of a ship. The length of this church is seventy-one feet, its breadth forty, and its height to the roof, which is flat and covered with tiles, thirty-nine; the altitude of the tower and spire, a hundred and thirty-five feet. The patronage of this church is in the dean and chapter of St. Paul's, but it is subject to the archdeacon. On its being rebuilt, the parish of Trinity the Leas was annexed to it; and, the patronage of the latter being in the dean and chapter of Canterbury, they and the dean and chapter of St. Paul's present alternately to the united living.

We now descend into Queenhithe, which gives name to the ward. It is a place of great antiquity, the original name of which was Edred's hithe; and it possibly existed in the time of the Saxons. This was one of the places for large boats, and even ships, to discharge their lading; for there was a draw-bridge in one part of London-bridge, (see Plate II.) which was pulled up, occasionally, to admit the passage of large vessels; express care being taken to land corn, fish, and provisions, in different places, for the convenience of the inhabitants; and other *hithes* were appointed for the landing of different merchandize, in order that business might be carried on with regularity. When this hithe fell into the hands of king Stephen, he bestowed it on William de Ypres, who, in his piety, again gave it to the convent of the Holy Trinity within Aldgate. It again fell to the crown in the time of Henry III. and then acquired its present name, being called *Ripa Reginae*, the Queen's Wharf. That monarch compelled the ships of the Cinque Ports to bring their corn here, and to no other place. It probably was part of her majesty's pin-money, by the attention paid to her interest in the affair.—"When I visited this dock," says Mr. Pennant, "I saw a melancholy proof of the injury trade may sustain by the ruinous state of Blackfriars-bridge, the result of the bad materials of which part of it has been unhappily composed. A large stone had fallen out of its place. A vast barge deeply laden, I think, with corn and malt, struck on this sunk rock, and foundered. It was weighed up, and brought into this place to discharge its damaged cargo."

The church of St. Nicholas Olave stood on the west side of Bread-street-hill, where the church-yard now is. It is a rectory of very ancient foundation, as is evident from Gilbert Foliot, bishop of London, having given it to the

dean and chapter of St. Paul's about the year 1172, in whom it still continues. The additional epithet is supposed to be derived from Olave, or Olaus, king of Norway. The parish is annexed to St. Nicholas Coleabbey.

Thames-street runs through the heart of this ward, and contains, on the south side, several lanes that lead down to Wood-wharf, Broken-wharf, Brooker's-wharf, Brookes's-wharf, Queenhithe, and other places, on the Thames-side; on which account this division is greatly thronged with carts employed in carrying goods and merchandize.—Near Broken-wharf, to facilitate the passage of loaded vehicles, the corporation of London, ever alive and liberal to the comfort of the inhabitants of the city, caused this part of the street to be widened in the year 1807; and a stone has been put up with an inscription to record the useful improvement. Hence, and from other inscriptions of the same kind, arose the joke, when some of our rich and high-fed citizens appear with the majesty of corpulence, to apply to them the words of the inscription, "Widened at the expense of the corporation."

In this street, opposite Broken-wharf, is situated the parish-church of St. Mary Somerset, so called from its dedication to the Virgin Mary and its situation; the word Somerset being supposed only a corruption of *Somers-hithe*, from some small port, or hithe, so called from the owner of it being of the name of Somers. It appears, by ancient records, that a church was situated on this spot before the year 1335. The old church, however, sharing the common fate of 1666, the present structure was soon after erected in its stead. The body of this edifice is lighted by a range of lofty arched windows, and the wall is terminated by a balustrade. The tower is square, well-proportioned, and rises to a considerable height; it is crowned at each corner with a handsome vase, supported on a pedestal, with a neat turret between, in the form of an obelisk, and crowned with a ball. It is eighty-three feet in length, thirty-six in breadth, and thirty in height to the roof; and the altitude of the tower is a hundred and twenty feet. The patronage of this church is in lay hands; and, being united to St. Mary Mounthaw, which is in the gift of the bishop of Hereford, they present alternately to the living.

The church of St. Mary Mounthaw, which was destroyed by the fire of London, and not rebuilt, was situated on the east side of Fish-street-hill; and the spot on which it stood is now used as a burial-place for the parishioners. This church was also dedicated to the Virgin Mary, and obtained its additional epithet from having been formerly a chapel belonging to the city-mansion of the Montaltos, *de Monte Alto*, or Monthauts, of the county of Norfolk. This mansion, with the chapel, was purchased by Ralph de Maydenstone, bishop of Hereford, about the year 1234, who settled both on his successors in that see, whereby they became possessors of the house, which they used for their city-residence, and of the patronage of the chapel, which they have retained ever since. It is not now known when, or by what means, this chapel became converted into a parish-church.

At the south-east corner of Garlic hill, we find the parish-church of St. James, Garlic-hill. This church is so called from its dedication to the above saint, and its vicinity to a garlic-market, which was anciently held in the neighbourhood, and called Garlic-hithe, from being a wharf on the bank of the river. It is a rectory, the patronage of which appears to have been in the abbot and convent of Westminster, till the suppression of their monastery; when, coming to the crown, queen Mary, in the year 1553, granted the same to the bishop of London and his successors, in whom it still remains. The earliest mention of this church is, that it was rebuilt by Richard de Rothing, sheriff in 1326. The old church being destroyed by the fire of London, the present edifice was begun ten years after, and thoroughly completed in 1682. It is built of stone, seventy-five feet long, forty-five feet broad, and forty feet high to the roof; the altitude of the steeple is ninety-eight feet.

The

The tower is divided into three stages; in the lowest of which is a very elegant door with coupled columns of the Corinthian order; in the second is a large window, over which is another of a circular form not opened; in the third story is a window larger than the former; and the cornice above this supports a range of open-work in the place of battlements, on a balustrade. Above this is the turret, which is composed of four stages, and decorated with columns, scrolls, and ornaments. From the body of the church projects a very handsome dial; on the top of which is a statue of St. James, to whom the church is dedicated.

A little to the east, on the south side of Thames-street, is Vintners' Hall. The gate is decorated with an iron railing, and two posts of stone surmounted with a stone group of three tuns, and on the upper one the jolly god of wine and mirth. The building is of brick bound with stone; and the quadrangle has a good appearance. The front facing the street exhibits the taste of the time it was built. The hall is exceedingly handsome; and behind it is a spacious garden considering the spot where it lies, and a narrow passage to the bank of the Thames. In the hall is a curious old sun-dial in painted glass, with this appropriate motto, *Dum spectas fugio*; "Whilst you look, I flee." The meaning is obvious; and points out the necessity of making the best use we can of Time, and not to trifle with his fleeting daughters, the Hours, but to turn them to advantage. Here is also a good picture of St. Martin, on a white horse, dividing his cloak with our Saviour, who appeared to him, in the year 337, in the character of a beggar:

Hic Christo chlamydem Martinus dimidiavit;  
Ut faciamus idem nobis exemplificavit.

There is, besides, a statue of that saint in the same room; and another picture of him above stairs. "Why this saint was selected as patron of the company (says Mr. Pennant) I know not, except it was imagined that, actuated by good wine, he had been inspired with good thoughts; which, according to the argument of James Howel, producing good works, brought a man to heaven. And, to show the moral in a contrary effect, here is a picture of Lot and his incestuous daughters, exemplifying the danger of the abuse of the best things."

Here Mr. Pennant indulges his jocular fancy; but the fact is, (though this well-read and intelligent author was not acquainted with it,) that the wine in France is never fit to be tasted, sold, or drunk, till about Martinmas, the eleventh of November. At that period all the wine-makers from Champagne and Burgundy bring their goods to market; and St. Martin's fair is held in most of the departments of France as regularly as fairs for horses and cattle are held in England. All lands, the produce of which is wine, pay their rent on that day—and it is a day of rejoicing and mirth in all places contiguous to the *vignobles*. St. Martin's day, and quaffing freely of the new wine, were synonymous: and no wonder if the vintners of this country, whose trade began from that day, chose St. Martin for the tutelary patron of the company, and set up his image in their hall. The vineyards in France, however, as we are informed, are placed under the holy protection of St. Vincent, a deacon who suffered martyrdom under the emperor Decius; but we apprehend that this was for no other reason than the alliteration of the first syllable of his name with the Latin word *vinum*, or the French *vin*.

Whilst we were reading the distich above quoted, we could not help calling to mind a curious legendary story, which ends also with a Latin couplet. It is said that Martin, after having given up the profession of a soldier, and been elected bishop of Tours, at that time when bishops kept neither carriages, horses, or servants, he had occasion to go on foot to Rome, in order to consult the pope upon some most important ecclesiastical matter. As he walked gently along the road, he met—the Devil, who

most politely accosted him, and ventured to tempt his pride, by observing how fatiguing and indecorous it was for the mitred traveller to perform so long a journey on foot. The saint knew the devil's drift, and commanded him to become a beast of burthen, a *jumentum*; which he did instantly. The saint knew well how to manage a horse, and jumped upon the devil's shoulders, who at first trotted cheerfully along; but it seems that the devil, any more than man, is not long of the same mind; for Satan soon slackened his pace. The bishop had neither whip nor spur; but he had a better and more powerful stimulus at hand: he made the sign of the cross; and then the devil galloped away; but soon again the father of sin returned to idleness and obstinacy, and again Martin hurried him along with repeated signs of the cross—till at last the tired reprobate, stung by those crossings so hateful to him, uttered the following distich:

Signa te, signa; temerè me tangis et angis;  
Roma tibi subito motibus ibit amor.

The singularity of which consists in each line reading backwards as well as in the common way—for *angis*, the last word of the first line, being read backwards, makes *signa*, the first word, and so on.—Of these curious literary trifles we intend to produce several instances under the word PALINDROMUS.

From Vintners' Hall we ascend Queen-street; and, returning to our eastward walk, we find at the corner of Cloak-lane, St. Thomas's church-yard, still planted with elm-trees, but offering no memento of the dead: two streets under the name of this apostle of the Gentiles are just by; and here we must observe, that, on the same side, and not far from the Swedish Lutheran chapel, stands the *first* Roman-catholic chapel that ever was permitted in the city after the reformation. It was opened a few years ago at the expence of several worthy families; and is a large room, plainly but decently fitted for the purpose: it was once a dissenters' meeting, then an auction-room, and now a consecrated place for the performance of the Roman-catholic liturgy. Two priests are attached to the service of the chapel; and it is generally crowded. Thus, by degrees, the blessing of toleration spreads itself around, and drops every-where the seeds of "peace and good-will towards men, for the glory of God in the highest."

Farther eastward is the street called Tower Royal, from an ancient building of the same name.—"This tower," says Stow, "and great place, was so called of pertaining to the kings of this realme; but by whom the same first was builded, or of what antiquity continued, I have not read, more than that in the reign of king Edward I. second, fourth, and seventh, yeeres, it was the tenement of Simon Beawmes; also that in the 36th of Edward III. the same was called the Royall in the parish of St. Michael de Pater-notter; and that, in the three-and-fortieth of his reign, he gave it, by the name of his *Inne* called the *Royall*, in the citie of London, in value twenty pounds by yeere, unto his Colledge of St. Stephen at Westminster. Notwithstanding, in the reign of Richard II. it was called the Queen's Wardrobe, as appeareth by this that followeth: *King Richard, having in Smithfield overcome and dispersed the rebels, hee, his lords, and all his company, entered the city of London with great joy, and went to the lady princeffe his mother, who was then lodged in the Tower Royall, called the Queen's Wardrobe, where she had remained three dayes and two nights, right sore abashed: but, when she saw the king her sonne, she was greatly rejoiced, and said; Hal sonne, what great sorrow have I suffered for you this day! The king answered and said; Certainly, madam, I know it well; but now rejoice and thanke God, for I have this day recovered mine heritage and the realme of England, which I had neere-hand lost.*"

And here the same Richard II. lodged in 1386, when his royal guest Leon III. king of Armenia, or, as Holinshed calls him, *Lyon king of Armony*, who had been expelled his kingdom by the Turks, took refuge in England. Richard treated this unfortunate prince with the

utmost munificence, loaded him with gifts, and settled on him a thousand pounds a-year for life. After two months stay, he returned into France, where he also met with a reception suitable to his rank; and, dying at Paris in 1393, was interred in the Celestins, where his tomb was to be seen previous to the French revolution.

College Hill contains still some antiquities.—Two large gates on the east side, both ornamented at top with flowers and masks in basso-relievo, and both with a circular window encircled with a garland. The first opens into the yard occupied by packers; the second into a small court surrounded with houses.—Next to these is Mercers' School; and lower down the well-known alms-houses founded by sir Richard Whittington, called God's House. A narrow passage leads to them; and at the entrance is a small stone gate, with a door which shuts every night. The gate is surmounted by a stone with a console on each side; and on it an inscription which is hardly legible, and should be cleaned. The fourth side of the court is bounded by the walls of St. Michael's church; which, as our female Cicerone, (April 16, 1814.) one of the inhabitants of the college, informed us, goes by so many names, that she could not exactly tell by which it should be called. The church, however, is a rectory, the patronage of which appears to have been in the prior and canons of Canterbury as early as the year 1285, when Hugh de. Derby was collated thereto. The church was rebuilt, and, by licence from Henry IV. in the year 1410, made a College of the Holy Spirit and St. Mary, by sir Richard Whittington, three times mayor, for a master, four fellows, clerks, choristers, &c. contiguous to which were alms-houses, for the accommodation of thirteen persons, one of whom to be chief, with the appellation of tutor. To encourage so laudable an undertaking, the lord-mayor and commonalty of London, in the year 1411, granted a spot of ground whereon to erect the intended college and hospital. But, sir Richard dying before the accomplishment of the work, it was soon after finished by his executors; who made laws for the good government thereof, by which, the master of the college (besides the accustomed rights and profits of the church) was to have an annual salary of ten marks; the chaplains eleven marks each; the first clerk eight marks; the second seven and a half; the choristers, each five marks a-year; the tutor of the alms-houses sixteen-pence a-week; and each of the brethren, fourteen-pence. This foundation was subsequently re-confirmed by parliament in the third and tenth years of the reign of Henry VI. and was afterwards suppressed by the statute of Edward VI. The alms-house, on its original foundation, still remains, and is supported by the Mercers' Company; and in their possession still remain the original ordinances of this charity, a very curious specimen of the style and manner of that remote age; but which is too long for us to copy.

Sir Richard, however, did not confine himself to acts of piety in his public benevolence; but proved himself a friend to learning, by building a library in Grey Friars, and by a liberal endowment to Christ's Hospital. Bartholomew's Hospital also owed much of its prosperity to his liberality; and Guildhall was greatly beautified and improved under his management, and at his individual expense. He also expended a considerable sum in building Newgate as it stood previous to the fire of London. So that here is most ample evidence of his princely beneficence, not in the institution of a single charitable establishment, but in the foundation, enlargement, or support, of many.

But the extensive charity and numerous acts of benevolence of this worthy citizen, could not secure an undisturbed repose to his ashes; for, as he was thrice mayor, so was he thrice buried. In the reign of Edward VI. the incumbent of the parish, a wicked and rapacious priest, imagining that Whittington's beautiful monument was a repository of something more valuable than his terrestrial remains, caused it to be broken open; but, being disappointed of his expected prey, robbed the body of its leaden covering, and re-committed it to the tomb. In the fol-

lowing reign the body was again disinterred, and inclosed in lead, and for the third time deposited in its sepulchre, where it remained unmolested till the great fire of London involved its resting-place in the common ruin. But Stow has preserved the epitaph, which, according to the taste of the time, is full of puns and rhimes in the true Leonine style. (See vol. xii. p. 463.) It begins thus:

Ut fragrans nardus famâ fuit iste Ricardus  
Albificans Villam, qui justè rexerat illam.  
Flos Mercatorum, fundator Presbiterorum;  
Sic et egenorum testis sit certus eorum, &c.

The words *Albificans Villam*, "whitening the city," allude to his name *Whittington*.

The old church was destroyed by the fire in 1666; after which the present structure was erected in its stead, and made parochial for this and the adjoining parish of St. Martin Vintry, the church of which was not rebuilt. It is a plain substantial stone building, lighted by a single series of large arched windows, placed so high that the doors open under them. The tower is divided into three stages, and is surmounted at top with carved open-work, instead of a balustrade: from hence rises a light and elegant turret, adorned with Ionic columns, which ends in a regular diminution, and supports the vane.

The south-west corner of the church is that of *Elbow-lane*, well denominated on account of its crooked shape. At the end of St. Thomas the Apostle, is *Cloak-lane*, at the north-east corner of which is an ancient church-yard, well railed, and planted with a few shrubs and one or two elm-trees. Sand-walks and grass-plots decorate this long-abandoned mansion of the dead; and nearly in the centre remains a handsome tomb in stone, elevated about three feet and a half from the ground, of an elegant form, and with an inscription which is nearly obliterated. At the sight of several flower-pots disposed in rows upon the flat slab of the tomb, we could not help indulging in the melancholy fancy of the owner, who, perhaps, tends them with care, and places them there to show, by a sad contrast, that every spring calls his roses and auriculas out of the ground; but that it is not so with man, who, once laid in his parent dust, never rises again. An old gardener, treading the pease he had just sown, assured us that sometimes a burial took place in this cemetery, which belongs to the parishes of St. Stephen Walbrook and St. John the Baptist: but we saw no appearance of any such thing.

*Dowgate-hill* received its name from an ancient gate, in the original wall that ran along the north side of the Thames, which was called the *Dwr*, or Water-gate, and was situated on the spot where the Roman *trajectus*, or ferry, passed. It became a noted wharf, and was called the Port of Dowgate. In the time of Henry III. and Edward III. customs were to be paid by ships resting there, in the same manner as if they rode at Queenhithe.

Crossing Dowgate Hill, we reach Cannon-street; but, ascending a little towards the north, we enter Walbrook, whilst concealed under our feet the old Nayad of the river *Wells* speeds her course to the Thames; this river, more properly called *brook*, originates on the north of Moorfields, and probably from the heights of Islington, following the vale which separates St. Paul's Hill from Tower Hill. It passed, anciently, through London Wall, between Bishopsgate and Moorgate, and ran through the city; for a long time it was quite exposed, and had over it several bridges, which were maintained by the priors of certain religious houses, and others. Between two and three centuries ago it was vaulted over with brick; the top paved, and formed into a street; and, for a long time past, known only by name. It is mentioned in a charter of the Conqueror to the College of St. Martin le Grand; and its course is most accurately marked by Stow, who tells us that barges were rowed up to Bucklersbury from the Thames by the entrance of the tide into this brook.

We are too near the church of St. Stephen not to take a survey of it in our way. It is dedicated to the proto-martyr of that name. It appears from ancient records, that

that a church dedicated to the same patron was situated near this spot, but on the opposite side of the stream, prior to the year 1135, when it was given to the monastery of St. John in Colchester, by Eudo, sewer to Henry I. How long the patronage was possessed by this fraternity, or for what consideration they parted with it, does not appear; but in 1428 it belonged to John duke of Bedford; in which year, Robert Chichely, mayor, gave a plot of ground on the east side of the water-course, two hundred and eight feet and a half in length, and sixty-six in breadth, to the parish of St. Stephen, to build a new church thereon, and for a church-yard; and in the following year he laid the first stone of the building, for himself, and the second for William Stondon, a former mayor, deceased, who left money for the purchase of the ground, and towards the charge of the building; the remainder being supplied by Chichely. Robert Whittington, draper, afterwards made a knight of the bath, purchased the advowson of this rectory from the duke of Bedford in 1432. From him it passed into the family of Lee, two of whom of the name of Richard, supposed to be father and son, the former being a knight and the latter an esquire, served the office of mayor in 1460 and 1469. The last of these presented to it in 1474; after which he gave it to the Grocers' Company, in whom it still remains.

The old church being destroyed by the fire of London, the present edifice was erected in its stead, by sir Christopher Wren; and is considered by many to be the masterpiece of that great architect: it is even asserted that Italy cannot produce any modern structure equal to this in taste, proportion, elegance, and beauty. It is a noble building of stone; but its external beauties are hid from the sight by the adjacent buildings, except the steeple, which is square to a considerable height, and is then surrounded with a balustrade, within which rises a very light and elegant tower in two stages; the first adorned with Corinthian, and the second with Composite, columns; and covered with a dome, from which rises a vane. The principal beauties of this church are, however, within; where the dome, which is spacious and noble, is finely proportioned to the church, and divided into small compartments elegantly decorated, and crowned with a lantern; the roof, which is also divided into compartments, is supported by very noble Corinthian columns, raised on their pedestals. It has three aisles, and a cross-aisle; is seventy-five feet long, thirty-six feet broad, thirty-four feet high to the roof, and fifty-eight feet to the lantern. On the sides under the lower roof are circular windows, but those which enlighten the upper roof are small arched ones. The altar-piece is the work of the best historical painter that England can boast of, (though the artist was born in America;) and has long received the deserved tribute of admiration from all who have seen it. The subject is the taking up of the body of St. Stephen after he had been stoned to death. (See Acts viii. 2.) The body of the young deacon is beautifully drawn and coloured; and the groups which surround it are composed, placed, and executed, in a masterly style. This is one of the first paintings which, since the iconoclastic fury that raged at several periods of times after the reformation, have found their way to the altars of our churches. At p. 407, 8, we have related the circumstance which occasioned this church to be decorated with an altar-piece. When the subject was agreed upon, Dr. Wilson asked Mr. West how much such a performance would cost; and most readily engaged to pay 700l. in part of which he immediately gave a draft for 150l. Dr. Wilson died soon after; and, no order having been found among his papers to pay the remaining sum, Mr. West, as we understand, never received any thing more for this excellent painting.

After the fire of London, the new church of St. Stephen was made the parochial church of this parish and that of St. Bennet Sherehog, in Cheap ward, the church of which was not rebuilt.

Adjoining to the church-yard of St. Stephen, is Wall-

brook-house, the old mansion of the family of Pollexfen; which, sharing the common fate of the general conflagration in 1666, was rebuilt in the following year by sir Henry Pollexfen, chief justice of the Court of Common Pleas in the reign of Charles II. It is built on lofty brick arches, of exquisite workmanship and great antiquity; and may be reasonably supposed to stand on the site of some religious house formerly dedicated to St. Stephen. It is an elegant brick building, of the Corinthian order, with double windows. Nothing of the ancient grandeur of the house remains in the inside but the mouldings and a beautiful carved stair-case.

Although we are near the Mansion-house, we shall leave the description of it for another part of our perambulations, and follow again the straight line to the east, by entering Cannon-street. To give an idea of the busy look of the greatest part of this street would be nearly impossible—for it is a most frequented thoroughfare from the warehouses in Thames-street, and a sort of by-way to avoid the greater bustle of it.

The first object which attracts the sight is St. Swithin's church, at the corner of the lane to which it gives its denomination. By ancient records it appears that there was a church on that spot in the year 1331; and it seems that, even long before this time, St. Swithin, bishop of Winchester, and chancellor to king Egbert, who died in the 9th century, had a church there dedicated to his name. The old structure was destroyed by the fire of London, and the present edifice erected in its stead.—The old church, which had been rebuilt in 1420, contained several curious epitaphs, among which we remark that of sir John Hart, some time lord-mayor of London, and a benefactor to the church; and that of Bartholomew Barnes, citizen-mercer, placed on a pillar in the middle aisle.—They are both in Latin, and of a style well known at the beginning of the seventeenth century.

Against the present fabric, in the centre of the south wall, is placed the famous and really-mysterious London Stone, which resisted, though not without being somewhat impaired, the great conflagration, and was carefully dug out of the rubbish. We have examined it very closely; and find it to be of the nature of granite, or original quartz: it yields fire when smartly struck with the steel, and is of a close and compact internal texture. This stone, which has been carefully preserved for many ages, is of great antiquity, as appears from its being mentioned by the same name so early as in the time of Ethelstan king of the West Saxons. It formerly stood nearer the channel opposite the same place; and, being fixed upright in the ground, was so well fastened with bars of iron, that it was perfectly secure from receiving any damage by carriages. Its age cannot be traced; but, from the most reasonable conjecture, it is supposed to be of Roman origin; for, as the ancient Roman colony extended from the river Thames no higher than Cheapside, and Watling-street was the principal street, or Prætorian way; it has been supposed, with great probability, that this stone was the centre from whence they measured the distances to their several stations throughout England, more especially as these distances coincide very exactly. Some of our forefathers were of opinion, that it was set up in signification of the city's devotion towards Christ, and of his care and protection of the city, under the type of a stone, on which it was founded, and, by his favour, so long preserved. This is the idea which prevails in these lines of Fabian, in praise of London:

It is so sure a stone that that is upon sette,  
For, though some have it thrette  
With manafes-grym and grette,  
Yet hurte had it none:  
Chryste is the very stone  
That the cite is set upon,  
Which from al hys foone  
Hath ever preserved yt.

Another conjecture is; that, as this street was anciently the

the principal one in the city, as Cheapside is at present, London-stone might have been the place where public proclamations and notices were given to the citizens. This conjecture has, indeed, some argument to support it; for, in the year 1450, when Jack Cade, the Kentish rebel, came through Southwark into London, he marched to this stone, where was a great concourse of people, among whom was the lord-mayor. On this stone Jack Cade struck his sword, and said, "Now is Mortimer lord of this city." It is also said, that this stone was set up for the tendering and making of payments by debtors to their creditors, at their appointed days, till, in after-times, they were usually made at the font in St. Paul's church, or the Royal Exchange. These, however, are but conjectures; nor can we say more, than that it is very singular, so much care should have been taken to preserve the stone, and so little to preserve the history of its origin. But it is with this sort of palladium as with others of the same kind and of the remotest antiquity—Veneration knelt before it; and, had she found what it really was, Veneration would have disappeared, and, the charm of mystery being once broken and unbound, the simple thing would have proved what it merely was in reality, an unknown stone, like many which unrevered and unnoticed lie at the foot of the hill, from which they originally rolled, either at some convulsion of nature in the place, or according to the system of gravitation which in a rotative motion sends heavy bodies to the circumference. Some centuries hence, perhaps, when the dark veil of ignorance revisits this island, as it probably may, Superstition will take hold of this subject, and make much more of it than has been done before, grounding her respect upon the very notice which we have taken of it. In this manner have thousands of prodigies been hauded to posterity; and, like fame, gathered strength as they went on: *Vires acquirit eundo*. Livy would never have employed his pen in recording the talking of cows, the sweating of marble statues, and other portentous nonsense, had not his cotemporaries been so plainly persuaded of the truth of these reputed facts, that his passing them unnoticed would have brought his annals into downright discredit.—A survey of London without some dissertation upon London-stone would share the same fate, and be stamped with the same anathema which the historian of Padua would have incurred had he not sacrificed blindly to the taste of his countrymen.

In Swithin's-lane, behind the church, is Salters' Hall, a plain brick building, part of which is let to a congregation of Presbyterians. In this hall are portraits of several kings of England, and a remarkable fine one of the great architect sir Christopher Wren, as large as life.

We are here, and indeed on the whole declivity of the hill from St. Paul's to the Tower, as if in a forest of towers and spires, so numerous are the churches all around. It is hardly possible to guess why our ancestors were so fond of building religious edifices; for, in fact, London, three centuries ago, was not half so big as it is now, and yet the number of places of worship was much greater, if we except the small dissenting meeting-houses, which rise like mushrooms in all parts within and without the city.

We have hardly lost sight of St. Swithin when we come to St. Mary Abchurch; so called from its dedication to the Virgin Mary; the additional epithet of Ab, or Upchurch, being given to it. It appears that a church, dedicated to St. Mary, has stood upon this spot from very early times; and we find, that, in the year 1448, the patronage of it was in the prior and canons of St. Mary Overy; but, coming to the crown in the reign of queen Elizabeth, her majesty granted the perpetual advowson to Corpus Christi College, in Cambridge, in whom it still remains. The old church was destroyed by the fire of London, soon after which the present building was erected. It is built of brick, strengthened with rustic quoins of stone at the corners, with three windows on each side; the middle window rising higher, and taking up the space above, while the others, which are smaller, have round

windows over them: the window and door cases are also of stone. The tower is square, the corners of which are strengthened in the same manner as the body; and in the centre of each square is a window, ornamented like the rest. From the tower rises a dome, on the summit of which stands a plain spire, supported by a lantern-base. The altar-piece, which is very curiously carved, is deserving of notice. The length of the church is sixty-three feet, its breadth sixty feet, the height of the roof fifty-one feet, and that of the steeple one hundred and forty feet.

After the fire, the parish of St. Lawrence Pountney was annexed to this parish, the church of the former not being rebuilt. The old church was situated on the west side of Lawrence-Pountney-lane, and took the addition of Pountney from its great benefactor, sir John Pountney, lord-mayor in the years 1312, 1330, 1331, and 1333, who founded a College of Jesus and Corpus Christi, for a master, warden, thirteen priests, and four choristers; which was confirmed by Edward III. in the year 1346. The patronage of this church and college was in its own chaplains, until the dissolution of the college, when it came to the crown; and was granted, by queen Elizabeth, to Edward Dorening and Roger Rant, to be held of her and her successors, as an appendage of the manor of East Greenwich, paying a fee-farm rent of 4l. 6s. 9d. a-year to the crown, and 10l. annually to a stipendiary priest, serving cure there. Soon after this, the parishioners purchased the grant for 140l. by which means they obtained the advowson, which has continued in them ever since. The site of the old church is now used as a cemetery for the inhabitants of this parish.

Descending a little towards the Thames, we find, in Suffolk-lane, Merchant-Tailors' School, founded by that respectable company in the year 1651, for the education of boys. It was anciently kept in a house which belonged to the duke of Buckingham, and was called the Manor of the Rose; but, that edifice being destroyed by the fire in 1666, the present structure was erected upon the same spot. The school is a long and spacious building, supported on the east by stone pillars, forming a handsome cloister, within which are apartments for the three ushers. Adjoining to this is a library, supported also by stone pillars, and well furnished with classical and other books, for the use of the school; and on the south of the library is the chapel. Contiguous to these is a large house appropriated to the use of the head master. The school consists of eight forms, in which near three hundred boys have their education; a hundred of whom, according to the constitutions of the foundation, are taught gratis; a hundred more at 5s. and fifty at 2s. 6d. per quarter. The head master receives from the company a salary of 10l. 6s. per annum, and 30s. for water; besides the quarterage from the scholars, which renders his salary very considerable. The first usher has 30l. per annum, and the two others 25l. and all of them have proper apartments. Several of the scholars are annually sent to St. John's College, Oxford, which was founded by sir Thomas White chiefly for their use, since they have forty-six fellowships in it.

Nearly opposite Suffolk-lane stands the parochial church of Allhallows the Great. This church, which is dedicated to All Saints, was originally called Allhallows ad Fœnum in the Ropery, from its vicinity to a hay-wharf, and its situation among rope-makers; and Allhallows the More, (or Greater,) to distinguish it from another church, which stood a little to the east of it, and was called Allhallows the Less; but, being both destroyed by the fire in 1666, the latter was not rebuilt, and the two parishes were united. The church of Allhallows the Great was founded by the noble family of the Despencers, who presented to it in the year 1361; from whom it passed to the earl of Warwick and Salisbury, and at last to the crown. In 1546, Henry VIII. gave this church to Thomas archbishop of Canterbury, in whose successors it has continued

nued to the present time. It is a rectory, and one of the thirteen peculiars, in London, belonging to the see of Canterbury.—The present edifice was finished in 1683. It was planned by Sir Christopher Wren, but not executed with the same accuracy that was designed. It is eighty-seven feet long, sixty feet broad, and thirty-three feet high, to the roof, built of stone, strong and solid. The walls are plain and massy, the ornaments few and simple, and the windows very large. The tower is plain, square, and divided into five stages, terminating square and plain, without spire, turret, or pinnacle. The cornice is supported by scrolls; and over these rises a balustrade, of solid construction, suitable to the rest of the building.

Allhallows the Less, which was also called Allhallows on the Cellars, because it stood over vaults let out for cellars, was also a rectory, the advowson of which was in the bishop of Winchester, until the college of St. Lawrence Pounteney was founded, when Sir John Pounteney purchased it, and rebuilt the church, which he appropriated to his college; by which means it became a donative, or curacy. At the general suppression of religious houses by Henry VIII. this church came to the crown; and, in the year 1577, Queen Elizabeth granted it to William Verle for a term of twenty-one years. Her successor James I. in the second year of his reign, sold it to Richard Blake; and others, and their heirs or assigns, in free soccage, for ever; since which time it has remained in private hands.

Two houses below the church has been lately built a small but neat watch-house, between a public house and the parochial cemetery. It consists of two compartments divided by three pilasters with flat stones at top, and under each a small bas-relief of a lion's head; a little lower is a neat ornamental frieze of roses in squares, and below the inscriptions. A water-tablet in the Gothic style over a sort of pointed window marks the door on one side as well as on the other; but a blank wall, which might have been made in imitation of a door, spoils the effect of the whole. It is an odd compound of divers orders of architecture; and yet it has a pleasing appearance when shaded by the church-yard trees waving majestically over this little funum-like edifice. We have therefore copied it on the annexed Plate of Fragments, fig. 1.—The inscriptions are as follows: "Dowgate-Ward Watch-house, erected 1807."—"George Scholey, esq. alderman. James Saunders, esq. deputy."

At a short distance from Allhallows church is the Steel-yard, the wharf originally allotted to the Hanseatic merchants, for landing and storing up their goods; and so called from a large Roman balance, or *steel-yard*, used, as in many other places, to weigh bales and other unwieldy loads of merchandise. This was the great repository of the wheat and other grain, the cables, masts, tar, hemp, flax, linen cloth, wax, steel, and other merchandise, imported by the Easterlings; and on this spot stood the *Guldhalla Teutonorum*, or Guildhall of the Germans. They called it *Staple-hoff*, or House of General Trade; and the importance of their commerce was such as to procure them great privileges; among others, the being free from all subsidies to the king, and also of having an alderman of London to be their judge in case of disputes. But, as the inestimable advantages of commerce became better understood, the impolicy of suffering foreigners to command our markets was too striking to be overlooked; and, on the one hand, the privileges enjoyed by these people were gradually abridged, while, on the other, every facility was given to the formation of commercial societies of natives, by which means the profits of their trade were, in time, diverted into English hands; and, consequently, Englishmen became the holders of the provisions and naval stores which had compelled our dependence upon them. At length, in 1597, their house was finally shut up, and its inhabitants expelled the kingdom. The Steel-yard is now the great repository of the imported bar-iron, which supplies our metropolis with that necessary article; and the yards and warehouses are filled with immense quantities of it.

VOL. XIII. No. 917.

Nearly at the western extremity of the ward, in a lane, formerly called Friars'-lane, but now Joiners'-hall-buildings, is the hall of the Joiners' Company. This building is remarkable for a magnificent skreen at the entrance into the hall-room, having demi-savages, and a variety of other enrichments, curiously carved in waincoat. The great parlour is beautifully pannelled with cedar.

On the east of the Steel-yard, on the bank of the river, stood Watermans' Hall; but this was removed to the west side of St. Mary Hill in 1786. It is a neat building, partly of stone, and partly of brick. The principal entrance, which is at the south end, is through a rustic basement story, above which rise four pilasters, of the Ionic order, supporting a plain triangular pediment. Over the door are the arms of the company.

Several halls belonging to city-companies have been erected in this part of the city since the great-fire, most probably on account of their being near the Mansion-house and the Guildhall. Two of these are nearly opposite to each other in Elbow-lane. The first (in Little Elbow-lane) is a neat building, used as a hall by the Dyers' Company. Their hall, which was formerly situated near Old Swan-lane, in Thames-street, being destroyed by the conflagration in 1666, and a number of warehouses erected in its place, the company have converted this house into a hall to transact their affairs in. Over the arched doorway, which is shut by an iron gate, is a *perron*, or double flight of steps, of great height considering the narrowness of the street; and over the main entrance at top are the arms of the company well carved in stone. Several houses in this neighbourhood have preserved, since the rebuilding of that part of the town, very curious pediments, and round pent-houses with bold and often elegant carvings in wood.—There are two very curious ones in Lawrence Pounteney-hill, one of which is dated 1707.—Nearly opposite to Dyers' Hall (but in Great Elbow-lane) is the hall belonging to the Innholders' Company: it has a well-decorated front; with the arms of the company carved, we suppose, in wood, painted and gilt.

On Dowgate-hill is Skinners' Hall, a very handsome edifice, built with bricks of different colours: the hall-room is elegantly waincoated with oak, and the great parlour pannelled with cedar. The entrance to this building is through an arched doorway, in a modern stone-fronted building, in which are the offices for the clerk and other persons belonging to the company. In the beginning of the last century, the East-India Company had the use of this hall, for which they paid 300l. per annum.

At a small distance from this hall, but further to the north, stands Tallow-chandlers' Hall, a very handsome and spacious building, adorned with friezes, formed with columns and arches of the Tuscan order.

Opposite to Skinners' Hall is Chequer-yard, which runs into Bush-lane. It is principally occupied with warehouses and stables; and at the north-east angle is Plumbers' Hall, a small but convenient building.

There is a small but neat recess in Bush-lane called Scott's Yard, of which we must take a transitory notice, on account of a piece of tessellated pavement, and the remains of a large hall, discovered there at the depth of twenty feet, when the ground was opened for the rebuilding of houses after the dreadful havoc in 1666. The former was believed to have been the pavement of the Roman governors' palace, and the hall a Prætorium, or court of justice, supposed to have been destroyed in the great conflagration made by Queen Boadicea. These buildings seem to have been situated close to the river, and near the *trajectus*, or ferry; for without the south wall were four holes in the ground, full of charred wood, which might be the remains of the piles that had been placed there for the support of the city-wall.

We now return to our deambulation by Old Swan-alley, which derived its name from a public house just by the stairs where boats and wherries use to ply; in order to reach Cannon-street, in our way to the Tower, and enter Candel-

wick ward.—This name brings with it a mean idea. One is prone to think that the narrowness of the streets and lanes in this part of the city, forcing the inhabitants to use artificial light at mid-day, might have stamped this division with its odd name. But, recurring to ancient records, we find that, by a singular effect of the desire which tradesmen feel of emulating each other, or because “man is a gregarious animal,” the place was originally and entirely inhabited by tallow-chandlers, then vulgarly called *candle-wrights*, or makers of tallow and wax candles. Indeed, when we consider the quantity of wax and tallow tapers burnt in churches, chapels, and chantries, and the number of these chantries, chapels, and churches, in the city, we need not wonder if a whole ward was entirely devoted to the manufacturing of this sort of merchandise.

At the corner of St. Martin's lane there is the sign of a cannon upon its carriage, in remembrance of what originally gave name to the street, which ends at Clement's lane. Great Eastcheap begins at that point, and extends to Fish-street-hill. It took its name from a market kept there, to serve the east part of the city; which market was removed to Leadenhall-square; and, by the early account we have of Eastcheap-market, and its vicinity to the ferry, or Roman trajectus, over the Thames, we have great reason to suppose this to be the first, or one of the first, markets in London, even of a Roman date. In this state it continued for many ages, especially for victuals; as may be collected from the song called London Lickpenny, made by Lydgate the poet, in the reign of king Henry V. who, in the person of a countryman, coming to London, and walking through the city, says, “In Westcheap I was called on to buy fine lawn, Paris thread, cotton, umbel, and other linen clothes, and such like; (but not a word of silks.) In Cornhill, to buy old apparel and household stuff. In Candlewright-street, the drapers proffered me cheap cloth. In Eastcheap, the cooks cried, hot ribs of beef roasted, pies well baked, and other victuals. There was clattering of pots, harp, pipe, and sawtrie; yea by cock, nay by cock, for other greater oaths were spared. Some sang of Jenkin and Julian, &c. all which melody liked the passenger; but he wanted money to abide by it, and therefore gat him into a Gravefend barge, and home into Kent.”

Here stood the Boar's-head Tavern, immortalized by Shakespeare as the scene of the frolicsome exploits of sir John Falstaff and the prince of Wales, afterwards Henry V. But the mirth of these celebrated guests was not always confined within due limits; nor was the heir apparent the only one of the blood-royal who indulged in such excesses. His brothers John and Thomas, being here at supper, on St. John's eve, in the year 1410, raised such a riot in the street, between two and three o'clock in the morning, that the mayor and sheriffs were called up to quell it. This the princes took as an insult to their dignity. The magistrates were summoned before the king by the celebrated chief justice, Gascoyne; but they stood on their defence, and were honourably dismissed, it being proved that they had done no more than their duty, for the maintenance of the peace.

The boar's head is still stuck up, on the south side of Eastcheap, between the first and second floor, and on the division of two houses (both kept at present by perfumers) which have been built on the site of this famed tavern. The head of the boar is masterly carved, and seems as if of an older date than the inscription above it; (see Plate VII. b.) Having been painted in a sort of bottle-green or bronze colour, it appears at some distance as if made of brass and inlaid in the stone. The figure which we give of it is perfectly correct, the sketch having been taken on the spot, except that the ornaments round the slab of stone on which is the boar's head are now gone. We have been told that this piece of sculpture was after the fire of London placed over the chimney-piece of one of the principal rooms of the public house or tavern rebuilt on the premises of the ancient one; and that it is but re-

cently that it has been hoisted up again. This very stone might have been found among the *rudera*, the ruins of the conflagration, and preserved to this moment; the name and date having been added by those who fixed it up again. But the reader, aware that this is a mere conjecture, will be at liberty to form an opinion for himself.

Opposite, on the north side, is another stone bas-relief, set in the wall, and nearly facing the boar's head. It is the bold and animated figure of a Mermaid, with her usually-disevelled hair about her shoulders, and holding in her right hand something resembling a bundle of flax or a distaff. Was there any public house or tavern under the sign of the Mermaid in Great Eastcheap? or was this carved piece of work dug out of the rubbish after the fire, and placed there without meaning? did a comb-maker, or a fish-monger, live under it?—We have mentioned above, after Stow, that this street was once famous for revels and good eating. Perhaps, while the boar's head was beckoning and inviting the hungry passenger to feed upon flesh, the mermaid, on the other side, was calling them to the dainties of the ocean and of the river. However, the workmanship ought to be taken notice of, for the animation and spirit breathed by the artist into the figure of the female monster. We could not find any date that might have led us to guess when, where, and why, this was originally put up: but it is worth noting down, as it may, at some future day, become a sort of clue to direct the search of keener antiquaries towards some interesting facts belonging to the history of the metropolis. Many and many times we have passed in Great Eastcheap, and yet the boar's head never attracted our notice, till the etching in Pennant's London roused our curiosity, and directed our steps to the spot. But what a change this famous place has undergone!—The cries of victuallers are heard no more: the fumes of their viands do not now fill the air; and no jolly knight repairs there to quaff his sack, as in the days of Falstaff. Eastcheap is now occupied by a few plodding tradesmen; and is nothing but a sort of fag-end, less busy, less alive, less wide, than Cannon-street. Pennant mentions not the mermaid, but takes notice of “a swan cut in stone:” surely he could not have mistaken the *Nereid* for the *Bird of Leda*. However, the swan has hopped off, as is usual to the tribe; but the faithful sea-dame remains with us.

Crooked-lane, so well named on account of its turnings, is remarkable for the great number of shops devoted to fowling and angling, cages of all sorts, mouse and rat traps of all forms, and all works in which white or yellow wire is employed. Probably, as it is the nearest way to London-bridge, those who intend to go and enjoy the above-mentioned diversions of angling and bird-catching, taking St. Michael and Crooked-lane in their way, attracted there the vendors of the commodities and implements necessary for the rural sports.

The church of St. Michael stands on the east side of that lane, a little before the turning off into Crooked-lane. This church is of ancient foundation, John de Borham appearing to have been rector thereof in the year 1304; at which time it was a very ordinary small building, and stood amidst laystalls and slaughter-grounds used by the butchers of Eastcheap-market. But, in 1366, John Loveken, or Loufken, four times lord-mayor of London, obtained a grant of the ground where the laystalls were, and built a handsome and capacious church thereon. This church received considerable additions from sir William Walworth, lord-mayor in the year 1374, and formerly servant to Loveken. He likewise founded a college for a master and nine priests; settled his own new-built house, adjoining to the church, for a habitation of the said master and chaplains or priests for ever, and was buried in the north chapel by the choir. This church, however, being entirely destroyed by the great conflagration in 1666, the present edifice rose in its stead. It is a plain structure built with stone, and lighted by a series of large arched windows. The tower, which is at the west end, is carried square to a considerable height; and

and the uppermost window in the centre of each face is ornamented with a head, and handsome festoons; from hence, instead of a balustrade, is a range of open-work of the Gothic kind, with vases at the corners. From within this part the tower rises circular, diminishing in three stages, with an open buttress rising from each corner of the square tower to the top of the first stage: from this buttress rises a large scroll, which extends to the top of the second, and a smaller to the top of the third, stage, above which rises a short round spire of a peculiar kind, swelling out at the bottom, and then rounding off to a small height, where it is terminated by a gilt ball and vane. The length of this church is seventy-eight feet, its breadth forty-six, height to the roof thirty-two, and to the top of the pinnacle one hundred feet. The patronage was anciently in the prior and convent of Canterbury, in whom it continued till the year 1408; since which time, it has been in the archbishop, and is one of the thirteen peculiars in the city, belonging to that see.

In Clement's-lane, at the western extremity of Eastcheap, stands the parish-church of St. Clement, Eastcheap. This church was dedicated to St. Clement, disciple of St. Peter the Apostle, who was ordained bishop of Rome in the year 93; and it received the addition of Eastcheap from its situation, and to distinguish it from other churches dedicated to the same saint. The date of its foundation is lost; but William de Southlee appears to have been rector of it prior to the year 1309; and, before the suppression of religious houses, it was in the gift of the abbot and convent of St. Peter's, Westminster. But, in the first year of her reign, queen Mary gave the advowson thereof to the bishop of London, whose successors have continued patrons of it from that time to the present. The old church was burnt down in 1666, and the present building was erected in 1686. It is a neat, though plain, structure, of the Composite order, having a square tower, finished with a balustrade round the top. The length of this church is sixty-four feet, its breadth forty, height of the roof thirty-four, of the tower eighty-eight feet. It is a rectory, and the living was considerably augmented by the parish of St. Martin Orgar being annexed to it.

The church of St. Martin Orgar stood on the east side of St. Martin's lane, near Cannon-street, and was so denominated from its dedication to St. Martin, and from Ordgarus, who was supposed to be the founder of it. It was also a rectory, the patronage of which was granted by Ordgarus, with the consent of his wife and sons, to the dean and chapter of St. Paul's, about the year 1181, in whom it still remains; and, since the union of this parish to that of St. Clement, they present alternately with the bishop of London. The remains of this church being found capable of repair, after the fire in 1666, a body of French protestants, in communion with the church of England, obtained a lease of the tower and ruinous nave, from the minister and churchwardens, which being confirmed by parliament, they repaired it, and converted it into a place of worship for their own use.

Nearly facing the east opening of Crooked-lane, on the east side of Fish-street-hill, and before a neat square called Monument-yard, (well-known many years for the great fame of a dealer for whose tea people use to apply from all parts of the town, for goodness united with cheapness,) stands that noble fluted column of the Doric order called emphatically *The Monument*, erected to commemorate an event which never would have been forgotten, and to perpetuate a falsehood which never was believed; for, since it has raised its cloud-capt and gilt head into the skies, it has been pretty well ascertained that Pope, who describes it as "a tall lying bully," was right. Sir Christopher Wren, the architect, had proposed the statue of the king, Charles II. as a proper object on the top; but his design was rejected, and a small chaffing-dish, or inelegant fire-jar, bristling with iron spikes to prevent the fowls of the air from perching upon it, which looks at a distance like a full-grown artichoke, was substituted for it. The whole is

built of the best Portland stone. The height is 202 feet, the exact distance from the spot where the fire began; the diameter of the shaft is fifteen feet, the circumference consequently forty-five; and the pedestal is forty feet in height. Over the capital is a balcony with iron-rails, from which in a clear day the spectator may enjoy a charming prospect.

If we consider this piece of workmanship divested of prejudice, and with impartiality, we must confess that it is worthy the genius of the great man who conceived it.—The west side of the pedestal is adorned with curious emblems, by the masterly hand of Mr. Cibber, father of the poet-laureat, denoting the destruction and restoration of the city, in which the eleven principal figures are done in alto, and the rest in-basso, relievo. The first female figure represents the City of London, sitting among the ruins, in a languishing posture, with her head dejected, hair dishevelled, and her hand carelessly lying on her sword. Behind is Time, gradually raising her up: at her side a woman, representing Providence, gently touching her with one hand, and, with a winged sceptre in the other, directing her to regard the goddesses in the clouds, one with a cornucopia, denoting plenty, the other with a palm-branch, the emblem of peace. At her feet a beehive, showing that by industry and application the greatest misfortunes are to be overcome. Behind Time are citizens exulting at his endeavours to restore her; and beneath, in the midst of the ruins, is a dragon, who, as supporter of the city-arms, with his paw endeavours to preserve the same. Still farther at the north end is a view of the city in flames; the inhabitants in consternation, with their arms extended upwards, as crying out for succour. Opposite the City, on an elevated pavement, stands the king, in a Roman habit, with a laurel on his head, and a truncheon in his hand; and, approaching her, commands three of his attendants to descend to her relief; the first represents the Sciences, with a winged head, and a circle of naked boys dancing around, holding Nature by the hand, with her numerous breasts ready to give assistance to all; the second is Architecture, with a plan in one hand, and a square and pair of compasses in the other; and the third is Liberty, waving a hat in the air, showing her joy at the pleasing prospect of the city's speedy recovery. Behind the king stands his brother, the duke of York, with a garland in one hand to crown the rising city, and a sword in the other for her defence. The two figures behind are Justice and Fortitude; the former with a coronet, and the latter with a reined lion: and under the royal pavement, in a vault, lies Envy, gnawing a heart, and incessantly emitting pestiferous fumes from her envenomed mouth. In the upper part of the plinth the re-construction of the city is represented by builders and labourers at work upon houses.

On the other three façades of the plinth are Latin inscriptions. That on the north side is thus rendered. "In the year of Christ 1666, September 2, eastward from hence, at the distance of two hundred and two feet (the height of this column), a terrible fire broke out about midnight; which, driven on by a high wind, not only wasted the adjacent parts, but also very remote places, with incredible noise and fury. It consumed eighty-nine churches, the city-gates, Guildhall, many public structures, hospitals, schools, libraries, a vast number of stately edifices, thirteen thousand dwelling-houses, and four hundred streets. Of the twenty-six wards it utterly destroyed fifteen, and left eight others shattered and half-burnt. The ruins of the city were four hundred and thirty-six acres, from the Tower by the Thames side to the Temple church; and from the north-east along the wall to Holborn-bridge. To the estates and fortunes of the citizens it was merciful, but to their lives very favourable, that it might in all things resemble the last conflagration of the world. The destruction was sudden; for, in a small space of time, the city was seen most flourishing, and reduced to nothing. Three days after, when, in the opinion of all, this fatal fire had baffled all human counsels and endeavours, it

stopped, as it were by a command from heaven, and was on every side extinguished."

The inscription on the south side is translated thus: "Charles the Second, son of Charles the Martyr, King of Great Britain, France, and Ireland, Defender of the Faith, a most gracious prince, commiserating the deplorable state of things, whilst the ruins were yet smoking, provided for the comfort of his citizens, and ornament of his city, remitted their taxes, and referred the petitions of the magistrates and inhabitants to parliament; who immediately passed an act, that public works should be restored to greater beauty with public money, to be raised by an impost on coals; that churches, and the cathedral of St. Paul, should be rebuilt from their foundations with all magnificence; that the bridges, gates, and prisons, should be new made, and sewers cleaned; the streets made straight and regular; such as were steep, levelled, and those too narrow to be made wider; and that the markets and shambles should be removed to separate places. They also enacted, that every house should be built with party-walls, and all in front raised of equal height, and those walls all of squared stone or brick; and that no man should delay building beyond the space of seven years. Moreover, care was taken, by law, to prevent all suits about their bounds. Also, anniversary prayers were enjoined; and, to perpetuate the memory hereof to posterity, they caused this column to be erected. The work was carried on with diligence, and London is restored, but whether with greater speed or beauty, may be made a question. In three years' time, the world saw that finished, which was supposed to be the business of an age."

Thus far, we do not find a word of accusation against any set of men, against any party, and *all this is in Latin*; but around the pedestal, and along the fascia, creeps, like a snake, the following ungrounded accusation *in plain English*.—"This pillar was set up in perpetual remembrance of the most dreadful burning of this protestant city, begun and carried on by the treachery and malice of the popish faction, in the beginning of September, in the year of our Lord 1666, in order to the carrying on their horrid plot for extirpating the protestant religion, and old English liberty, and introducing popery and slavery." This inscription was expunged in the time of James II. but restored in the next reign.—We hope to see it erased once more, never to appear again.

This pillar was near seven years in building, an astonishing slowness, for which we are unable to account.—The cornice of the pedestal is adorned with the king's arms, the sword, mace, cap of maintenance, &c. enriched with trophies; and at each angle are winged dragons, the supporters of the city-arms. These fabulous animals are carved in stone, and truly deserve an unfeigned tribute of admiration. They are really executed, as to anatomy, as if nature had produced such beings; and they are so spiritedly put in attitude, that they appear as if copied after the life.

Upon the whole, this monument is, undoubtedly, the noblest modern column in the world; and, in some respects, may vie with the most celebrated ones of antiquity. In height, it greatly exceeds the pillars of the emperors Trajan and Antoninus, the stately remains of Roman grandeur, as well as that of Theodosius at Constantinople; for the largest of the Roman columns, which was that of Antoninus, was only 172½ feet in height, and twelve feet three inches in diameter, English measure.

Two objects will force us to deviate a few yards from our direct walk.—The church of St. Magnus, at the foot of London Bridge, is so called from its dedication to St. Magnus, who suffered martyrdom in the city of Cesarea, under the emperor Aurelian, for his steadfast adherence to the Christian religion. It is a rectory, the patronage of which was anciently in the abbots and convents of Westminster and Bermondsey, who presented alternately, till the general suppression of monasteries, when it fell to the crown.

In 1553, queen Mary, by letters patent, granted it to the bishop of London and his successors, in whom it still remains. The date of the foundation of this church cannot be traced; but the chapel of St. Thomas the Martyr, built upon the bridge by Peter of Colechurch, before 1209, was in this parish. See Plate II.

The old church was destroyed by the fire in 1666; and, when rebuilt, was made the parochial church, for this parish and that of St. Margaret, New Fish-street, which is annexed to it by an act of parliament; but part of the ground on which the old church stood was laid into the street for widening the passage. The body of the present structure was erected in the year 1676, but the steeple was not added till several years after. It is a spacious and massy stone building, plain, but well ornamented. The angles have rustic quoins, and the body is lighted by tall arched windows, over each of which is a cornice supported by scrolls, and between these is a cherub over the centre of each window. At the west end, on each side the door, rise coupled pilasters from a plain course, which support a pediment. The door on the north side is also placed under a pediment, but without the decorations of the other. The roof is hid by a kind of attic course, from which the tower rises square and plain; and from this the dial, which is richly ornamented, projects over the street. The course above this is adorned at the corners with coupled pilasters of the Ionic order, supporting an open work in the place of a balustrade, with large urns at the corners. From within this open-work rises the lantern, which has also Ionic pilasters, and arched windows in all the intercommunications. The dome rests upon these pilasters; and on its crown is placed a piece of open-work like that which surrounds the base of the lantern; on which is raised the turret that supports the vane. In this church is a peal of ten bells. The bottom of the tower offers a sort of postern for foot-passengers, (see p. 103.) whence the dial of the clock projects, and is thus rendered very useful to the great number of people who cross the bridge.

The second object which is worthy our attention is a large handsome building on the side of the river, opposite to St. Mary Overy, across the water. This large fabric is Fishmongers' Hall, and presents a fine appearance from the bridge. It has been erected since the destruction of the old hall by the great fire; and commands in return a beautiful view of the bridge and of the water. The front entrance to this hall is from Thames-street, by a passage that leads into a large square court, paved with flat stones, and encompassed by the great hall, the court-room for the assistants, and other grand apartments, with galleries. These are of a handsome construction; and are supported by Ionic columns with an arcade. The back front, or that next the Thames, has a grand double flight of stone steps, which lead to the first apartments from the wharf. The door is adorned with Ionic columns, and these support an open pediment, in which is a shield with the arms of the company. The windows are ornamented with stone cases, and the quoins of the building are wrought with a handsome rustic. In the great hall is a wooden statue of sir William Walworth, armed with his dagger; and also another of St. Peter: the former belonged to this company; and the latter is, with great propriety, adopted as its patron-saint. In the court-room are several pictures of the various species of sea and river fishes; and the arms of the benefactors to the company are emblazoned in painted glass in the different windows. Under the great hall are vaults let to wine-sellers; one of them is called *the Shades*, a place well known for many years to tradesmen in the neighbourhood, who repair there on an evening and enjoy themselves with draught-wine, which is sold by measure, not by bottle, and is generally much admired by men of taste in that line. The place enjoys the double advantage of being snug and warm in long winter-evenings; and cool in summer, when the fresh water breeze wafts over the perfumes of the Kentish meadows and Surrey hills.

The noise made by the wheels, as if reluctantly yielding to the impulse of the foaming waves, in the machines called the *water-works*, has assailed our ears, and claimed our attention. It is known that they supply the greatest part of the city with the wholesome stream of father Thames; and curious, that the invention originated in the mind of a foreigner, a Dutchman, named Morrice, who projected them first in the year 1532. See p. 33.—It has been often remarked, perhaps with some appearance of correctness, that generally we improve by our perseverance the works which the liveliness of foreign imaginations has conceived, but which their want of perseverance has left in the first stage towards perfection.—Mr. Serocold, in the beginning of the last century, made a new step towards improvement; and since that time Mr. Hadley has rendered them far superior to what they were at first.—The principle of motion is nearly the same as that at the famous machine of Marly; with this difference, that here the axle of the great wheel puts three engines in the double action of pressing and aspirating, whilst at Marly one only is moved by each wheel; which must necessarily make the work more complicated there than it is here. These works are placed before the first five arches on the north side of the bridge, and force the water into a reservoir a hundred-and-twenty feet in height. The quantity raised in the course of the day exceeds forty-six thousand hogheads; and it is conveyed through the different parts of the city by means of wooden pipes.—When curiosity applies to see the machine, a fee to the men belonging to the works introduces you, and gains you every explanation.

Taking leave of these, we return by Pudding-lane, the unfortunate spot where the great conflagration began, and extended to Pye-corner, near Smithfield; which coincidence, as accidental as it is curious, very probably gave rise to the idea that the "sin of gluttony" had been the cause of this dreadful visitation upon one of the finest cities of the world—but with as little ground of likelihood as that assigned on the monument. See p. 432.—"This lane was called anciently," says Stow, "Clother-lane, or Red-Rose-lane, of such a signe there; it is now commonly called *Pudding-lane*, because, the butchers of Eastcheape having their scalding-house for hogs there, their puddings, with other filth of beasts, are voided downe that way in their dung-boats on the Thames."—What a contrast with the old and fragrant name of Red-Rose-lane! Now all these have disappeared, and the smell of oranges in turn perfumes the whole of the neighbourhood.

Coming up this lane, we find on our right, near the top, the parish-church of St. George, Botolph-lane.—It is an ancient rectory, Robert de Haliwell having been rector in the year 1321; and was originally in the gift of the abbot and convent of St. Saviour's, Bermondsey, at whose dissolution it came to the crown. The old church was burnt down in 1666; soon after which the present edifice was erected. It is a neat small building of stone, lighted with a single series of tall windows; the steeple consists of a plain tower, ornamented with vases at the four corners. In length it is fifty-four feet, in breadth thirty-six feet, and its height, to the roof, is thirty-six feet; that of the steeple is eighty-four feet.

After the fire, the parish of St. Botolph, Billingsgate, was added to St. George's. The church stood in Thames-street, opposite to Botolph-lane, which was named from it. It was also a rectory, the advowson of which was anciently in lay hands; but, in 1194, was claimed by the dean and chapter of St. Paul's under a deed of gift from one Odgarus, his sons, and the mother of Dionysia Bocometer, who, with her husband, John, also claimed it. The dean and chapter, however, prevailed, and it continued in their gift till the church was annexed to that of St. George; since which time, the crown and the chapter present alternately. The church-yard is preserved in Love-lane.

At the top of Love-lane, in Little Eastcheap, where we

resume our easterly deambulation, is a square building, part of which is supported by wooden pillars, and forms a sort of piazza. It is called the Weigh-house; the original intent of which was, to prevent frauds in the weight of merchandise brought from beyond sea. It was under the government of a master and four master-porters, with labouring porters under them, who used to have carts and horses to fetch the merchants' goods to the beam, and to carry them back; but little has been done in this office of late years, as a compulsive power is wanting to oblige merchants to have their goods weighed.

This house was erected on the very ground where the church, cemetery, and parsonage, of St. Andrew Hubbard stood before the fire. The parish has been united to that of St. Mary at Hill; which is so called from its situation on the highest point of the arched sweep which rises at Walbrook-vale, now Dowgate-hill. The date of the foundation of this church is equally uncertain with that of most of the churches in this city: the first circumstances met with concerning it, are, that Rose de Wrytel founded a chantry in the church of St. Mary at Hill in the year 1330; and that Richard de Hackney presented Nigellus Dalleye to this living in the year 1337. Stow, on the authority of Fabian, who was living at the time, relates a singular occurrence at the rebuilding of this church. He says, "In the year 1497, in the month of Aprill, as labourers digged for the foundation of a wall, within the church of St. Marie-hill, neare unto Billingsgate, they found a coffin of rotten timber, and therein the corps of a woman, whole of skinne, and of bones, undiscovered, and the joynts of her arms plyable without breaking the skynne, upon whose sepulchre this was engraven: Here lieth the bodies of Richard Hackney, fishmonger, and Alice his wife; the which Richard was sheriffe in the fifteenth of Edward II. (1323.) Her bodie was kept above grounde three or four dayes without noysfance; but then it waxed unfavorie, and so was againe buried." Though this church was considerably injured by the fire in 1666, it did not require rebuilding, and was therefore repaired; after which the parish of St. Andrew Hubbard, the church of which was totally burnt, was united to it. It is a well-proportioned Gothic structure of stone, consisting of a plain body lighted by large windows, with a cupola in the middle, and a square tower, crowned with a handsome turret, at the end. The dimensions are, length ninety-six feet, breadth sixty; altitude, to the ceiling twenty-six feet, to the centre of the cupola thirty-eight, to the top of the turret ninety-six feet. It is a rectory the advowson of which appears to have been always in lay hands; and, in 1638, was purchased by the parishioners, in whom it has ever since remained; but, since the parish of St. Andrew Hubbard has been united to it, the duke of Northumberland, who is patron of that parish, presents in turn. Annually, on the Sunday after Midsummer-day, according to ancient custom, the fraternity of Fellowship-porters, of the city of London, repair to this church in the morning, where, during the reading of the Psalms, they reverently approach the altar, two and two, on the rails of which are placed two basons; and into these they put their respective offerings. They are generally followed by the congregation; and the money offered is distributed among the aged, poor, and infirm, members of that fraternity.

The parish of St. Andrew Hubbard was a rectory, formerly called St. Andrew juxta Eastcheap, and was founded before 1389; in which year the earl of Pembroke presented Robert Clayton to the rectory, in the room of Walter Palmer, deceased. On the death of the earl of Pembroke without issue, the patronage devolved to the earls of Shrewsbury, in whose family it continued till 1460, when John earl of Shrewsbury was killed at the battle of Northampton; and it came to Edward IV. After this, it had divers patrons, till Algernon earl of Northumberland presented Thomas Parker, who was burnt out in 1666. After the fire, the ground on which this church stood, with the church-yard, in Little Eastcheap, between Bo-

tolph-lane and Love-lane, and also the site of the parsonage house, were sold to the city of London, for public uses; some of the purchase-money was paid to the parish of St. Mary at Hill, towards the repairs of that church, and the remainder was appropriated to making a provision for the rector and his successors, in lieu of the parsonage-house.

At the south-east angle of Rood-lane, stands the parochial church of St. Margaret Pattens.—We find that, anciently, churches dedicated to the saint in vogue received a sort of sur-name, or nick-name: but this is rather a curious denomination. St. Margaret *Pattens* is so styled, we are told, on account of this neighbourhood being anciently occupied by patten-makers. But whether pattens were used at that time is a question; for it is a remark made by every-body who has travelled in France, that pattens are not commonly worn there as they are here: yet it is natural to suppose, that, had they been in common use here when the English were masters of part of that kingdom, and when the communication between the two countries was, consequently, much more free than it has ever been since, they would have been used by the Parisian females, and more particularly as the towns of France had no foot-pavement. This being the case, we shall take the liberty of suggesting to our readers a more probable explanation or derivation of this word. We find in Stow, that, while the old church was taking down and building anew, the oblations made at the *rood*, or cross, which was in the church-yard, were employed towards the expenses of rebuilding the church. Now it was customary here (and it is so now in Roman-catholic countries) to place small dishes, called *pattens*, to receive the alms and offerings of the faithful. It is therefore easy to suppose that the church, being rebuilt out of the money dropt into these pattens, was distinguished from others of the same name by that appellation. The word *patten* is still used for the silver round dish which covers the chalice in Roman-catholic chapels and churches.—This lane, however, was afterwards called *Rood-lane*, on account of a rood, or cross, set up in the church-yard of St. Margaret, when the church was pulled down to be rebuilt. This cross, or rood, was blessed in a particular manner, and privileged by the pope with many indulgences, for the pardon of the sins of those who came to pray before it, and to make their offerings towards the rebuilding of St. Margaret's church. But the church being finished in the year 1538, soon after the reformation; some people unknown assembled, without noise, in the night of the 22d of May in that year, who broke the rood to pieces, and demolished the tabernacle in which it was erected.

The original foundation of this church was in, or before, the year 1324; for the first rector upon record is Hamo de Chyrch, presented by lady Margaret Nevil on the 14th of June in that year; and the patronage thereof remained in the family of the Nevils till the year 1392, when it came to Robert Rikeden, of Essex, and Margaret his wife; who, in 1408, conveyed it, by agreement, to Richard Whittington and other citizens of London, together with the advowson of St. Peter Cornhill, and the manor of Leadenhall, &c. which agreement the said Whittington and others confirmed, in 1411, to the mayor and commonalty of London; in whom the right of presentation has ever since remained.—The old church was destroyed in 1666, after which the present one was immediately erected, and the parish of St. Gabriel Fenchurch was united to it. It is built part of stone, and part of brick, and consists of a plain body, sixty-six feet in length, fifty-two broad, and thirty-two in height. The windows are arched, with port-hole windows over them. Above the front door is a large Doric window, with a cherub's head, and a large festoon over it; and above these is a pediment, which stretches from the steeple to the end of the church. The tower rises square to a considerable height, and is terminated by four plain pinnacles, crowned with balls, and

a balustrade, within which rises a very solid spire, terminated by a ball and vane.

The parish of St. Gabriel Fenchurch, which was annexed to this parish after the fire of London, is in Langbourn-ward. It was also a rectory, founded before the year 1321, when John Paynell appears to have been rector; and was dedicated to the angel Gabriel. The patronage of this rectory was in the prior and convent of the Holy Trinity, within Aldgate, until the suppression of their priory, when it devolved to the crown, in whom it still remains.

After having surveyed so many churches, which, indeed, in this part of the city, are the only objects worthy of notice, we may meet with a curious contrast if we come down to Billingsgate.—We read in ancient authors, that the market-women of Athens spoke the Attic dialect with so much purity, or, however, had so good an ear, that they could presently distinguish a foreigner from a native. We do not contend that the Billingsgate dialect is the most correct of all places in London; but we must confess that the style of the people there is of a peculiar kind, and much resembling, in its tropes and figures of vulgar rhetoric, that of the *Macquerelles* and *Poissardes* of Paris. Many persons, not dealers, think that, by going there early in the morning, they may buy fish much cheaper than at the fishmongers' stalls in town; but they often find that they pay as much there as they would any-where else, and perhaps receive a complimentary harangue into the bargain.

For the history of this only fish-market, see p. 57 and 94. To which we have just to add, that the salmon which arrives from Berwick and other parts of our northern fishery is packed in boxes with ice. This practice has considerably prevailed of late, not only for salmon, but for all sorts of fish, which the fishmongers have the skill to keep fresh by the same means for many days, and even weeks, though epicures and men of refined taste soon find the difference. Every fishmonger of any repute at this time has his ice-house for his fish, as well as the pastry-cook for his venison, the confectioneer for his creams, and the nobleman for his wine.—As to the etymology of the word Billingsgate, we have nothing very plausible to offer. It has been said, that the port was contrived and built by *Belinus*, king of Britain, long before the Christian era; and the word being spelt *Belinsgate* as late as the end of the sixteenth century seems to countenance the hypothesis.

From Billingsgate, finding our way, as well as we can on the narrow pavement of Thames-street, and squeezing ourselves between posts and walls to avoid the dangerous contact of an immense number of carts, often entangled together, and going to and fro loaded with all sorts of merchandise, we ascend the hill which leads us to St. Dunstan's in the East, so called in contradistinction to the church in Fleet-street, dedicated to the same archbishop of Canterbury. The edifice rises on the brow of the hill with an elegant tower, and a church-yard adorned with trees, the common repair of sparrows and rooks, whose garrulous tribes awaken the neighbours in the morning, and tease them with their evening chatterings: thus it has a rural appearance, and reminds us of the country in one of the busiest spots of the town. The church, we are told, suffered greatly by the fire in 1666. It was repaired shortly after; though the steeple was not erected till about 1678. It is built in the style called modern Gothic, eighty-seven feet in length, sixty-three in breadth, and thirty-three in height to the roof; the steeple, which is constructed in the same style as the body of the church, is a hundred and twenty-five feet high. The tower is light, supported by outworks at the angles, and divided into three stages, terminating at the corners by four handsome pinnacles, in the midst of which rises the spire, on the crowns of four pointed arches; a bold attempt in architecture, and one proof, among many, of the great geometrical skill of sir Christopher Wren, who planned and built this elegant tower. The patronage of this rectory was anciently in the prior and canons of Canterbury, who,

LONDON.

*The Custom House, burnt down, Feb. 12, 1814.*

*Commercial Hall, Mincing-lane, now used as a Custom House.*

in the year 1365, granted the same to Simon Islip, their archbishop, and his successors, in whom it still remains. It is one of the thirteen peculiars in this city, belonging to the archi-episcopal see of Canterbury.

On the north side of this church is the Coal-meters' office, in which are entered all ships that arrive in the port of London with coals. There are fifteen principal meters belonging to this office, who appoint a sufficient number of persons to measure the coals, to prevent impositions, which would otherwise happen, both in respect of the duty, and the measure to buyers. These principal meters have each four deputies, or labouring meters, who must be approved by the lord-mayor and aldermen, as upon them the care of weighing and measuring coals principally depends; their business being to attend each ship, to top the vats, and to return an account of the coals measured to the coal-office, in order to ascertain and collect the duties; for which they receive one penny per chaldron for all coals measured, and two pence per ton for all that are weighed. Both the principal and under meters take an oath, on their admission into office, to give just measure, without partiality or favour; to buy no coals, except for their own use, nor to sell any, while in that office; and not to take more for their trouble than was anciently allowed. See the article COAL, vol. iv. p. 712.

Farther to the east, is Harp-lane; on the east side of which is Bakers' Hall, a plain neat edifice, on the site of the dwelling-house of John Chichley, esq. formerly chamberlain of London. The room called the hall is beautiful, and pretty large, adorned with a fine wainscot screen, having four columns and two pilasters, with entablatures of the Corinthian order. At the opposite end are pictures of St. Clement, the patron of this company, and of Justice, between which are their arms, very large, and finely painted.

We have now to record another of those dreadful havocks which the element of fire has caused in London at different periods of time. Whilst our eyes were lifted up to survey, and our pen ready to describe, the CUSTOM-HOUSE, Providence bade it to disappear from the surface of the earth. The immense body of water that flows by it was of no avail to assuage or extinguish the devouring conflagration; and the river Thames recoiled hissing from the burning volumes of flame curling over its useless waves. Instead of telling our readers, as we intended, what the Custom-house is, we can only mention what it was—of so short a duration are the strongest works of man, whose life is shorter still! The edifice presented a noble appearance from the water, when seen through the forest of masts and chequered riggings of the vessels which cover nearly the whole surface of the noble river from one bank to the other, leaving but a narrow channel for the departure and arrival of ships, and the numerous wherries, crafts, and boats, circulating about to load and unload them, and rowing up and down the stream. It was built of brick and stone, and calculated to stand for ages. So strong were the walls, so deep the foundations!—Alas! one night destroyed the whole. It had underneath and on each side large warehouses for the reception of goods on the public account; and that side of the Thames is lined with wharfs, quays, and cranes, for landing them.

It was a hundred and eighty-nine feet in length; the centre twenty-seven feet deep, and the wings considerably more. The centre stood back from the river; the wings approaching much nearer to it; and the building was judiciously and handsomely decorated: under the wings was a colonnade of the Tuscan order, and the upper story was ornamented with Ionic columns and pediments. It consisted of two floors, in the uppermost of which was a spacious room, fifteen feet high, almost the whole length of the building: this room was called the Long Room, and there sat the commissioners of the customs, with their officers and clerks. The inner part was well disposed, and sufficiently lighted; and the entrances were so well contrived, as to answer all the purposes of convenience for the trans-

action of such extensive business. Of this building, therefore, we have preserved a correct view on Plate VIIc.

The government of the Custom-house is under the care of nine commissioners, who are intrusted with the whole management of all his majesty's customs in all the ports of England; and also the oversight of all the officers belonging to them. Each of these commissioners has a salary of a thousand pounds per annum, and both they, and several of the principal officers under them, hold their places by patent from the king. The other officers are appointed by warrant from the lords of the treasury.—It appears that, in ancient times, the business of the Custom-house was transacted in a more irregular manner at Billingsgate; but, in the year 1559, an act being passed, that goods should be no-where landed but in such places as were appointed by the commissioners of the revenue, this was the spot fixed upon for the entries in the port of London, and here a custom-house was ordered to be erected. It was, however, destroyed by the fire of London in 1666; and was rebuilt, with additions, two years after, by Charles II. in a much more magnificent and commodious manner, at the expense of ten thousand pounds; but, that being also destroyed in the same manner, in 1718, the late structure was erected in its stead. Thus the Custom-house has been three times the prey of the flames; in 1666, in 1718, and in 1814.

The fire happened on Saturday, February the 12th. It broke out at a quarter past six o'clock in the morning, and is understood to have originated from a fire-flue of one of the offices of business, adjoining a closet attached to the house-keeper's apartments, on the two-pair of stairs. From the time of the morning at which it began, and from the instant burst of flame from the back part of the building, there can be little doubt of the fire having been lumbering in a latent state throughout the principal part of the previous evening. The porter of the house was the first person who discovered it. He was going up stairs for a key to admit him, as usual, to a part of the house that communicated with the offices; and when on the second floor he heard a crackling of fire, and saw a flame breaking from the ceiling; he instantly rushed into the room, which was that in which colonel Kelly slept, whom he found standing by the bed-feet, the curtains in a blaze, and the flame pouring from the above-mentioned closet. By this time the whole room was on fire; and a Mr. Drinkald had given the alarm from the quay, towards which the windows of this room looked. The porter proceeded to call up the servants and the family; the colonel ran to a room adjoining his own, which was fronting the street; he was saved by a ladder with the greatest difficulty, and shockingly burnt in the face and hands. The account he gave is, that he was awakened by a smoke which filled his room, and almost in a state of suffocation he arose and opened his closet, for the purpose of getting at his dressing-gown, that he might hasten to alarm the family; but, immediately upon opening this closet, a volume of flame burst forth—the curtains of the bed and the windows caught fire, and thus encompassed with the blaze he was found by the porter. It appears that in this closet there was formerly a fire-place, which, for a long time, had been boarded up, the flue of which was connected with another in an office below. The colonel, at the moment, was carried to Mr. Lingham's, in Beer-lane; and the injuries he received, added to a severe asthmatic complaint which he caught in the retreat under sir John Moore, and which was much increased by the Walcheren fever, occasioned his death on the 23d of the same month.

The Miss Kellys most narrowly escaped, with only the covering of blankets; and captain Hinton Kelly made his way through the fire with his sisters, in the same unprovided state. The captain had but the day before returned from Brighton, where he had been for the recovery of his health, which had suffered greatly in consequence of long service in the West Indies. Most of the servants had previously fled to the top of the house, from which they

they were taken down by ladders. It is to be deplored, that two orphan sisters, whom Miss Kelly had brought up in her service, perished in the flames. Miss Kelly, by her shrieks, endeavoured to awaken them; for it was impossible for her to reach the chamber in which they slept.

The fire, according to the report of the firemen, would have been got under very soon; but, the explosion of some gunpowder having struck terror into the men who worked the engines, they fled, and left the flames for some time to range uncontrolled. This powder was for the use of the volunteer corps, and did not, it is now said, amount to a larger quantity than two barrels; but the assertion that there were many more barrels, threw an instant panic on all around, and throughout the neighbourhood. Certain however it is, that, had not this explosion taken place, the fire would not have spread. As it is, there is great consolation in knowing that many of the important papers of office were recovered; and several chests of valuables, with the principal records, were saved.

It is a remarkable circumstance, that the parents of the poor girls, whose lives fell a sacrifice to the devouring flames, both met a melancholy and premature end. The father, who was a labourer at the London Docks, was drowned in the canal; the mother then went to live servant to Miss Kelly at the Custom-house; and one night, about five years since, she went into the cellar, to get some tow to stuff a chair, when the watchman, hearing some dismal groans, alarmed the family, who, on going down, perceived the clothes of the poor woman in a blaze, and herself so dreadfully burnt as to cause her death the next day. Miss Kelly then took the eldest girl under her protection, sent her to school, and, about three weeks before, having completed her 14th year, put her on her establishment as assistant to the house-maid, and sent for the youngest sister from the workhouse, with intent to provide for her in a similar manner—but the ways of Providence are inscrutable to short-sighted man, and the late melancholy catastrophe has frustrated her charitable intentions.

An old clerk made many efforts, in the course of the day, to force his way through the ruins, to the place where he usually officiated. He was sure that some of his papers, from the care he had taken in their deposit, would be found safe, could he only get to the spot. On Sunday, with some workmen, he succeeded in getting through the ruins from the side next the river. The pick-axe at last struck on an iron chest—the rubbish was cleared away, the key introduced, and out came *four hundred guineas*, which the clerk carried off in his hat.

The Custom-house which was thus destroyed had already been condemned, and a contract made for erecting a new one. This contract was undertaken by Mr. Miles, a very respectable architect; and is in a state of forwardness. The first stone was laid in October last. The fatal illness which occasioned Mr. M.'s death, prevented his attending that ceremony; he died on the 5th of February; and, during the time his remains were consigned to *dust* in the family-vault in St. Helen's church, on the 12th, the entire range of building comprising the old Custom-house and warehouses was reduced to *ashes*, the ruins forming as it were a funeral pile to his manes.

From the site of the new Custom-house, which will occupy the greatest part of the quays opposite to Hart-lane on the east, and St. Dunstan's Hill on the west, we reascend the hill by Beer-lane, pass by Beckford-court, so named from the celebrated lord-mayor of London, and reach Tower-street, where we find the noble church of Allhallows Barking, on the west side, next to Barking-alley, leading to Tower-hill, and in Seething-lane. This part, this eastern verge of the city, is interesting and pleasant; and, had we not set our limits as close as the nature of our work bade us, we might long expatiate in this district, immediately under the Tower guns, and in their reach. We suppose this part to have been originally much awed by the presence of these neighbouring spitfires, and in constant fear of being called to order. The

church of Allhallows was distinguished by the name or epithet of *Barking*, on account of its having been in old times a vicarage in the gift of the abbess of Barking, in the convent of that place in Essex. See p. 398 of this volume.—After the dissolution of religious houses, Henry VIII. gave the advowson to the archbishop of Canterbury, in whose successors it still remains. So ancient was this church, that a chapel in it was, as records attest, founded by Richard I. This is one of the few churches which, being eastward of the spot where the fire in 1666 began, escaped its levelling fury. It is of considerable extent, being a hundred and eighty feet long, sixty-seven broad, and thirty-five high. The steeple is a plain tower, with a well-proportioned turret, the altitude of which, all together, is about eighty feet. Round the church is a battlement; and the body of it is well lighted by two rows of Gothic windows.—We take this opportunity to observe upon the general height of ancient church steeples and towers, that nearly all these elegant appendages of churches, which were originally, as they are partly now, devoted to the belfry, and calculated to call the parishioners to their respective duties, were rather low, as they seldom exceeded a hundred feet in height. From this circumstance we draw this natural conclusion, that the roofs of the houses were at those times much lower than they have been since. The reason is obvious; the greater the population, the higher the houses; and, if all the buildings of Salisbury were as high as the late Commercial Hall in Skinner-street, the noble and elegant spire of that cathedral would look like a pigny.

At the north-west corner of Seething-lane is Hart-street, in which is situated the parish-church called St. Olave, Hart-street; so denominated from its dedication to Olave, or Olaus, king of Norway, who took part with the English against the Danes in defence of the Christian religion; for which, and the punishment he suffered on account of this religion, he had the honour of being canonized. This church also escaped the fire of London, since which time it has had several repairs and additions; particularly a new portico, which is formed of Corinthian pilasters, with an arched pediment. The church is built of brick and stone, and the body of it forms an exact square of fifty-four feet in length and breadth; the height of the roof is thirty feet, and that of the steeple sixty. The windows are large and Gothic; and every thing exceedingly plain, except the portico. The tower consists of a single story above the roof, and is also very plain; but it is crowned with a well-proportioned turret.

We were directed to search in Hart-street for the remains of the supposed residence of the celebrated Whittington; but it is now either choaked up by warehouses and modern buildings, or entirely destroyed. We could find no trace of it; and must borrow our description from those who have seen it. "In the old leases, it is described by the name of Whittington's Palace; and the appearance of it, especially externally, leaves no doubt of the fact. It forms three sides of a square; but the original appearance of the lower part of it is much altered. Under the windows of the first story, are the arms of the twelve companies of London, carved in basso relievo; the one on the right is, however, concealed by a cistern. The principal room has the remains of grandeur: it is twenty-five feet long, fifteen broad, and ten high; the ceiling is elegantly carved in fancied compartments; the wainscot, which is also carved, is carried up to the height of six feet; above it is a continuation of Saxon arches, in basso relievo; between each arch is a human figure." *Lambert*.—This building escaped the inquiring eye of Stow; neither is it mentioned by Maitland; and, were we to set-up a conjecture, we might give our readers an idea that this supposed palace of the worthy mayor was, when it was lately taken notice of, exactly what it happened originally to be, some sort of warehouses. However, it must be observed, that the architectural taste did not improve in this country so rapidly as it did in Italy, or even in France; and that,

while palaces were building at Rome for every petty nobleman, our noblemen and rich citizens contented themselves with a snug house with a garden *en pente* to the Thames, or many small-paned glass windows looking towards the busy street.

Not far from us, in *Mark-lane*, we have the Corn Exchange, or market.—This lane was anciently the site of a free mart, or market; and is now enlivened by the presence of this place of resort for all who have any interest in the corn-trade. The street is well built, and chiefly inhabited by merchants of opulence. The Corn Exchange itself is a great ornament; and, though small, and having nothing to boast to the eyes of those who have seen the Corn Market at Paris, yet it is neat and elegant, and well adapted to the business it is intended for. Next to the street is an ascent of three steps to a range of eight lofty Doric columns, those at the corners being coupled; between them are iron rails, and three iron gates. These columns, and two others in the inside, support a plain building two stories high, containing two coffee-houses, to which there are ascents by two flights of stone steps, underneath the edifice. Within the iron gates is a small square, paved with broad stones: this is surrounded by a colonnade, composed of six columns on each side, and four at the ends. Above the entablature is a handsome balustrade, surrounding the whole square, with an elegant vase placed over each column. Round the colonnade is a broad space covered in, with windows in the roof, for the use of the corn-factors, who have each a desk, on which the samples of corn are shown. We cannot help animadverting, however, upon the useless show of cramped architectural display on a spot where room was more wanted than ornament, and upon the disproportionate height of the columns in front: the whole has the look of a small Grecian theatre; and, though it pleases the eye, does not satisfy the mind.—The market-days are Monday, Wednesday, and Friday.

Just by, parallel to this lane, and on the west, is *Mincing-lane*, anciently *Mincheon-lane*; the etymology of which we must leave to others, as we have not been able to substantiate our conjectures upon it. It is handsomely built, and well inhabited. On the east side, near the north end, stands Clothworkers' Hall, a neat brick-building, with fluted columns of the same, having Corinthian capitals of stone. The hall is a lofty room, adorned with wainscot to the ceiling, which is of curious fret-work. The screen at the south end is of oak, with four pilasters, their entablatures and compass pediment of the Corinthian order, enriched with the arms of the company and palm-branches. The west end is adorned with the figures of king James and king Charles I. as large as life, in their robes and regalia, richly carved, all gilt and highly finished. At this end of the hall is a spacious window of stained glass, on which are the king's arms, as also those of sir John Robinson, bart. his majesty's lieutenant of the Tower of London, lord-mayor of the city in the year 1663, and president of the Artillery Company.

On the same side of the way is an elegant pile of building, called the London Commercial Sale-rooms. The intention of this undertaking was to collect in one establishment all the conveniences necessary for the public and private sales of merchandise, and principally colonial produce. The building is divided into two principal parts. The front consists of an entirely-new edifice, the first stone of which was laid by the lord-mayor, on the 1st of June, 1811. It is sixty-four feet six inches long, and thirty-eight feet eight inches broad, with a stone front ornamented with six columns of the Ionic order, adopted with little variation from the Temple of Minerva Polias at Priene, as given in the *Ionian Antiquities*. These columns are supported on pedestals, which rest on the cornice of an inferior order, composed, not of columns, but of piers, forming the ground-story of the building. The spaces between the pedestals are filled up with balustrades, and above the windows are five reliefs, executed in artificial stone by Bubb; the middle compartment represents the City of London,

VOL. XIII. No. 918.

the four others, Navigation, Commerce, Agriculture, and the Fine Arts. The whole of the ground-floor was intended for a magnificent coffee-room, at one end of which, between two scagliola columns, appear the stairs leading to the upper floors. The second building, behind the one already described, formerly consisted of three houses, which are now thrown into one; the lower floors are divided into a number of small rooms for counting-houses; the upper into five rooms, the largest sixty feet long, and communicating by a gallery with the rooms of the front building. Particular attention has been paid to the lights in these rooms; as, by a succession of skylights sloping to the north, the perfect light of day is admitted, and the sun excluded. The space between these buildings, and that behind the latter, on the ground-floor, are occupied by a number of rooms lighted in the same way. The buildings and alterations were designed by Mr. Joseph Woods, and executed under his direction.

The recent conflagration of the Custom-house has occasioned great alterations in the present use of this edifice, as the opportunities it afforded for transacting public business determined the commissioners to take the principal part of the buildings for that purpose, till the new Custom-house is finished. We have therefore given a view of it, in conjunction with the old Custom-house, on Plate VII c. and the bas-relief in the centre, representing the City of London and her attributes, is shown on a larger scale on Plate VII b\*. fig. 2.

Passing through a narrow court, we return to Hart-street, which has been lately considerably improved by new buildings, and chiefly by the round corner which widens the opening considerably. This new mode of blunting, by a round sweep, the ancient sharp elbow of a street, deserves our peculiar notice, and is worthy of the highest praise. This circular shape is now very generally adopted; and its convenience is no-where more evident than in this region of narrow and crowded streets.

*Hart street*, the name of which originates most probably from one of those numerous public-houses which adopted the badge of Richard II. (see p. 112.) opens into Crutched Friars, so called from a convent of those religious denominated *Frates Sanctæ Crucis*, the Brothers of the Holy Cross. We suppose these friars to have been originally under the rule of St. Anthony; and, though we differ here from our precursors, we will in a few words explain our reasons. The monks of the establishments made by the great hermit of the Thebaïd in Egypt, used to wear, in remembrance of their old and infirm founder, the figure of a *crutch* upon their garment; (see the article KNIGHTHOOD, vol. xi. p. 788.) from whence they were called most likely *Crutched Friars*. This crutch nearly resembling the letter T, the friars who wore it were called in France *Théatins*; and, indeed, a quay on the bank of the Seine has preserved that name since the destruction of religious houses. Ever fond of puns, the Parisians used to say that "these friars took their tea (T) before breakfast," alluding to the *crutch* shaped like a T upon their dress. It is not generally known that the Greek cross is in the shape of a T.

The convent erected in this neighbourhood, was founded in the year 1298, by Ralph Hosier and William Sabernes, who became friars in it. We are told that they wore a red cross on their garment, which must have been mistaken for the *crutch*. A prior of this house, not so observant as he should have been of the rules of continence prescribed by the order, was caught in the apartment of a courtesan by some of the visitors appointed by the vicar-general Cromwell, (the worthy predecessors, we suppose, of the worthier members and serrets of the worshipful Society for the Suppression of Vice.) The busy and scandalized visitors, however, disposed to listen a little to the whispers of enticing mammon, pocketed a bribe of thirty pounds, a great sum for hush-money at that time; but even this was not sufficient to quiet the consciences of these worthy visitors. They took the money, as we said—but still reported

ported the transaction to their employer; and, the matter being blown, the convent was dissolved; and Henry VIII. granted the house to sir Thomas Wyatt, who built a handsome mansion on the site.—The friars' hall was converted into a glass-house, the first manufacture of that article in England; which, on the 4th of September, 1575, was destroyed by fire. By a curious coincidence, if our hypothesis upon the T is right, on the site of this ancient religious house now stands a most magnificent warehouse for tea, belonging to the East-India Company; it is a regular oblong square of two hundred and fifty feet, by a hundred and sixty; inclosing a court of a hundred and fifty feet, by sixty, entered by a noble arched gateway, surmounted and adorned with the arms of the company, supported by two lions.—In the same street is another tea-warehouse belonging to the same company, which was formerly the site of the Navy-office, a building of no beauty; in which the comptroller of the navy used to reside, and all business respecting the payment of seamen's wages, and many other naval matters, were transacted; but this office is now removed to Somerset-house.—Speaking of the tea-warehouse, Mr. Pennant says, "I am told that the searachers, who have frequent occasion to thrust their arms deep into the chests, often feel numbnesses and paralytic affections."—If such an idea were to be spread abroad and get credit, surely the company would suffer much; for, if the paralyzing property of the green leaf is so great as to benumb the muscular limb of an athletic porter, what must be its effect upon the tender and easily-vibrating fibres of a delicate lady, when she sips its infusion at least twice a-day? If any such accident ever happened, it must have been owing to the air fixed and confined in the boxes, and not to the harmless leaves.

Ere we pay our visit to the Tower of London, which, though not in the city, seems to belong to it as a badge does to a collar, we must rove a few steps, and enter Port-foken-ward, which takes its name from being entirely without the ancient walls of the city; the word *Portfoken* signifying, in the old Saxon dialect, "a liberty or franchise at the gate." It has something chivalrous in itself, and pleases the mind of the fond antiquary by the recollection of a fraternity, or company, of thirteen knights, who received their ground from a grant signed by king Edgar, in reward of their distinguished valour; from this circumstance it was called *Knighten Guild*.—In the year 1115, the descendants of these knights surrendered all the lands and soke belonging to this guild, to the priory of the Holy Trinity within Aldgate; from which time the prior of that convent was admitted as one of the aldermen of London to govern the land and soke, who, according to the custom of the city, sat in the court, and accompanied the mayor and aldermen in public processions, clothed in scarlet or such other livery as they used, until the year 1531, when the priory was surrendered to king Henry VIII. who gave it to sir Thomas Audley, lord-chancellor, by whom the church was pulled down. Since this dissolution, the ward of Portfoken has been governed by a temporal person, elected by the citizens, as the aldermen of the other wards are. The ancient bounds of the knighten guild extended further to the south and east than those of the present ward, and included all East Smithfield, St. Catherine's, with the mills founded in king Stephen's days, and the outward stone wall and new ditch of the Tower, which were made in the time of Richard I. by William Longchamp, bishop of Ely; but part of these were afterwards forcibly withheld by the constables of the Tower.

The *Minories*, so called from a convent of nuns of the order of St. Clare, who setting themselves at the bottom of the list of nuns, called themselves *Minorefs*, (leaving behind, however, the humblest of all, the *minims*, or lowest,) is now a large open street.—The convent of these minoresses was founded by Blanch queen of Navarre, wife of Edmund earl of Lancaster, in 1293.

The view at the bottom of the *Minories* meets the venerable old Tower and its battlements; and the shops and

buildings on each side have a more than neat, indeed an elegant, appearance. The trade of this neighbourhood is enlivened by the frequent calls of our honest tars, who, ever ready to part with their rhino, do not always find a dealer so honest as themselves; and, partaking the character of the birds who follow them in their marine excursions, are easily *gulled* by landmen.

The west side of the street has been entirely rebuilt with very large and uniform houses; and several new streets have been made leading to Crutched-friars. On this side, also, are America-square, the Crescent, and the Circus, inhabited principally by eminent merchants. On the east side of the *Minories*, is a passage leading to the place called the Little *Minories*, in which is situated the parish-church of the Trinity in the *Minories*. This church stands on part of the site of the convent mentioned above, which on its suppression in 1593 was taken down; a number of small houses being built in its stead, and a small church for the use of the inhabitants, which was dedicated to the Holy Trinity, from whence it derives its present appellation. This church, which was rebuilt in 1706, is of brick, with a flat roof, covered with plain tiles, and has two aisles. There is no steeple to this church; but it has a handsome turret, at the west end. It is the burial place of the family of the Legges, earls of Dartmouth; to one of whose ancestors, a house called the King's, built on the site of the suppressed monastery, was granted by Charles II. The curate of this parish, for it is neither rectory nor vicarage, holds the same by an instrument of donation under the great seal of England. The income is very small, being only twenty-five pounds per annum, collected from the inhabitants, besides surplice-fees. The parish, being the close of the monastery, is a particular liberty, and exempt from the jurisdiction of the city, although part of the ward of Portfoken.

As we stand at the end of the *Minories*, and on the eastern shoulder of Little Tower Hill, we cannot view this old and curious mansion, the Tower, without feeling our minds crowded with historical events of the most important and too-often melancholy import, whilst our hearts vibrate with sensations of pity and horror, of dread and compassion. At once a palace and a prison, the seat of majesty in ancient times, and the dungeon of crime; having on one side the Traitors' Gate, on the other the platform which has so often resounded with the blows of the vengeful axe—this building will arrest our consideration for a few hours, and we must introduce our readers into the bosom of this solemn fabric. By the simple and mere aspect of the whole as it presents itself to the eye, by the irregularity of the parts of which it is composed, it is easy to conceive, that, except the centre square tower, all the rest was added at different times, according to what occasion required or necessity ordained.

We shall present to our readers a short historical account of this fortress, and of what it contains; leaving others, however, to describe the menagerie, which has so long existed there, and been so often supplied by foreign princes whose dominions are infested with wild beasts, and who send them here as presents to the king, and objects of curiosity to his people. But to royal palaces why should such collections be annexed? Why should Versailles also have its menagerie as well as the Tower of London? Why should the ferocious howlings of enslaved beasts, the chattering of caged monkeys, and the screaming of hungry eagles and vultures, disturb the peaceful mansions of majesty, or add a horrid supplement of wretchedness to the prisoners enclosed in the adjoining walls? Yet how common has this appendage been in various times!—Our interesting chronicler, Stow, speaks as follows: "Henry the first builded the manour of Woodstoke, with a parke, which he walled about with stone, seven miles in compasse, destroying for the same divers villages, churches, and chapels; and this was the first parke in England. The words of the records are the following: *He appointed therein (beside great store of deere) divers strange beasts to be kept and nourished, such*

*London: Published as the Act directs Dec. 24. 1814 by G. Jones.*

as were brought to him from far countries—as lions, leopards, tinxes, porpentines, and such others; for, such was his estimation among outlandish princes, that few would willingly offend him. More I read," continues Stow, "that in the year 1235 Frederick the emperor sent to Henry the third three leopards, in token of his regall shield of armes, wherein three leopards were pictured: (foreigners to this moment called the lions in the arms of England "Les leopards d'Angleterre"—"Gli pardi d'Inghilterra:") since which time, those lions and others have been kept in a part of the bulwarke, now called the *Lion Tower*, and their keeper there lodged. King Edward the second, in the twelfth year of his reign, commanded the sheriffes of London to pay the keeper of the king's leopards in the Tower of London 6d. a-day, for the sustenance of the leopards, and three halpence a-day for dyet of the said keeper, out of the fecfarm of the citie." A curious proportion between the daily allowance to the keeper and his wards. We must leave to others, and particularly to the Cicerone of the place, the pleasure of describing *Hector*, *Helena*, *Miss Suhey*, *Miss Fanny Howe*, &c. &c. and the other noble inmates of this part of the Tower.

Julius Cæsar has long enjoyed the honour of having laid the foundation of this fortress; but, we are convinced, without sufficient authority. Ever ready, however, to respect tradition when, instead of contradicting written records, it seems to supply the want of them, we cannot help thinking that, even at the time of William the Conqueror, there must have remained among the people a confused idea, that Cæsar, during his sojourn at London, if he ever came there, (see p. 54.) had built some fort of defence, or *vallum*, on the site. On the authority of Edmund of Hadenham's Register-book of the Acts of the Bishops of Rochester, Stow says, that William the Conqueror built the White Tower about the year 1078, appointing Gundulph bishop of Rochester, the most celebrated architect of that period, to superintend the work. In 1092, this building sustained great damage from a violent tempest of wind; but it was afterwards repaired by William Rufus, who added another castellated tower, on the south side, between it and the river. The Tower was first enclosed about the year 1190, by William Longchamp, bishop of Ely, who, under pretence of guarding against the designs of John, the king's brother, surrounded it with embattled walls, and a broad deep ditch, communicating with the river Thames.

Hitherto, the Tower was considered as a fortress for the defence of the city; but Matthew Paris says, that, "in the year 1239, Henry III. fortified the Tower to another end; wherefore the citizens, fearing lest that was done to their detriment, complained; and the king answered, that he had not done it to their hurt; but, saith he, *I will from henceforth do as my brother doth, in building and fortifying castles, who beareth the name to be wiser than I am.*"

The building of the Lions' Tower is by Pennant attributed to Edward IV. but erroneously. According to Strype, that king "fortified the Tower, and enclosed a piece of ground, taken out of the Tower-hill, *west from the Lion Tower, now called the Bulwark:*" whence it is evident, that it must have been built before his time. Probably Henry I. was the founder of it; since he introduced the menagerie, which had formerly been kept at Woodstock; as we mentioned above.

Richard III. made some additions to the Tower, and Henry VIII. repaired the White Tower, which was rebuilt in 1638; after the restoration, it was thoroughly repaired, and a great number of additional buildings made to it; in 1663, the ditch was cleaned a second time, (see p. 74.) all the wharfing about it was rebuilt of brick and stone, and sluices made for admitting and retaining the Thames-water, as occasion might require.—The present contents of the Tower, within the walls, are twelve acres and five rods.

From the other side of the river, and from the river it-

self, the Tower makes an interesting appearance. It stands on the north side of the Thames, from which it is separated by a convenient wharf, and narrow ditch, over which is a drawbridge for the more easy receiving or sending out ammunition and naval or military stores. On this wharf is a long and beautiful platform, whereon stand sixty-one pieces of cannon, mounted on very handsome carriages, and which are only fired on days of state, or public rejoicings. Within the walls, on a line with this wharf, is a platform seventy yards long, called the Ladies' Line, because much frequented as a promenade by ladies in the summer. It is shaded within by a row of lofty trees; and, without, commands a delightful prospect of the shipping in the river. The ascent to this line is by stone steps; and, being once upon it, a person may walk almost round the walls of the Tower; in the course of which there are three batteries. The first of these is called the Devil's Battery; where is also a platform, on which are mounted seven pieces of cannon, though on the battery itself are only five. The second is called the Stone Battery, and is defended by eight pieces of cannon: and the last is called the Wooden Battery, mounted with six pieces of cannon, all nine pounders.

The Tower-wharf is enclosed at each end by gates, which are opened every morning, for the convenience of a free intercourse between the respective inhabitants of the Tower, the city, and its suburbs. Under this wharf is a water-gate, through the Tower wall, commonly called Traitors' Gate; because it was customary, in former times, to convey traitors, and other state-prisoners, to and from the Tower, by water, through this gate; but, at this time, such persons are publicly admitted at the main entrance. Over the water-gate is a regular building, terminated at each end by a round tower, on which are embrasures for cannon. In this building are an infirmary, a mill, and the water-works that supply the Tower with water.

The principal entrance into the Tower is by three gates to the west. The first of these opens to a court, on the right hand of which is the Lions' tower, mentioned before. The second gate opens to a stone bridge built over the ditch; at the inner end of which is the third gate, much stronger than the two former, having a portcullis to let down upon occasion, and being guarded not only by soldiers, but by the warders of the Tower. Within this gate, on the right hand, is the drawbridge for foot-passengers to and from the Tower-wharf.

A place of such importance as the Tower was anciently, and is still in some degree, required a man of the greatest trust and confidence to be the keeper of it. This high officer is called the Constable of the Tower; and even now enjoys high honours and privileges. He is always selected from among the most trusty and distinguished of the nobility; his post being, at coronations and all other state-ceremonies, of the utmost consideration, having the crown and all the regalia in his custody. The office is now mostly performed by deputy, except upon very particular occasions.—The present constable is lord Moira, now residing in India as governor-general; the same post had been held by lord Cornwallis, a former governor-general.

The constable has under him a lieutenant and deputy- lieutenant, usually called *governor*, whose offices are also of great consequence; a tower-major, gentleman-porter, gentleman-gaoler, a master and four quarter gunners, and forty warders, whose uniform is like the king's yeomen of the guard.

At the end of the New Armory, at the north-west corner of Northumberland Walk, is situated the church of St. Peter *ad Vincula*, or in Bonds; a very proper device for the dedication of a church in a place of confinement! The miracle of St. Peter's being set free from his bonds and fetters is related in the Acts v. 19. and the religious prisoners could not but feel a lively comfort under the protection of a patron who like them had been incarcerated,

cerated, and like whom they might eventually recover their liberty. Religion is seldom sincere without a spark of enthusiasm, and then it becomes sublime. This church was rebuilt by king Edward III. It is a plain Gothic building, sixty-six feet in length, fifty-four in breadth, and twenty-four feet high from the floor to the roof. The walls, which have Gothic windows, are strengthened at the corners with rustic, and crowned with a plain blocking course. The tower is plain, and is covered with a turret. The living is a rectory, in the gift of the king. The rector, as minister of the Tower garrison, which is a parish within itself, is paid by his majesty; and the living is exempt from archi-episcopal jurisdiction. This church is remarkable for being the burial-place of the following royal and noble personages, who were executed either in the Tower, or on the Hill.—Fisher bishop of Rochester, who was beheaded on Tower-hill, the 22d of June, 1535.—George Bullen, lord Rochford, beheaded on the 17th of May, 1536.—Anna Bullen, beheaded on the 19th of May, in the same year.—Cromwell earl of Essex, beheaded in the year 1540.—Catharine Howard, beheaded February 13, 1541.—Thomas Seymour, baron Sudley, and lord high admiral, beheaded in 1549, by a warrant from his own brother, the protector Somerset, who, in less than three years, was executed on the same scaffold.—Dudley duke of Northumberland, beheaded on the 22d of August, 1553.—Devereux earl of Essex, the favourite of queen Elizabeth, beheaded February the 25th, 1602.—James duke of Monmouth, natural son of Charles II. beheaded on the 15th of July, 1685, for asserting his right to the crown, against James II.—The earl of Kilmarnock, and lord Balmerino, beheaded August 18, 1746, for being concerned in the rebellion in Scotland; and Simon Frazer, lord Lovat, convicted of the same crime, and executed in the following year. See the article ENGLAND, vol. vi. p. 720.

We must observe, that, though this church is said to have been founded by Edward III. it must only have been rebuilt by that king; since Strype has preserved an order from Henry III. dated in 1241, for repairing and beautifying the chancels of St. Mary and St. Peter, in the church of St. Peter, within the bailiffwick of the Tower; from which it appears, that the ancient church was much larger, and more elegant, than the present one. It was adorned with a figure of St. Mary, which, in the above-mentioned order, is called *Mariolam cum suo Tabernaculo*, the Little Mary in her Shrine; and also with images of St. Peter, St. Nicholas, and St. Catharine; all of which are ordered to be new painted, and “refreshed with good colours.” Here were also stalls for the king and queen, who sometimes repaired to the Tower, to perform their devotions.

The White Tower is a large square irregular building, situated almost in the centre, no one side answering to another: nor are any of its watch-towers, of which there are four on the top, built alike; one of these towers is now converted into an observatory, and indeed seems well adapted to that use. The building itself consists of three very lofty stories, under which are spacious and commodious vaults, chiefly filled with salt-petre. It is covered at top with flat leads, from whence there is an extensive and noble prospect of the shipping in the Thames, and the opposite shore well inhabited, full of business, and extending over Tooley-street, Bermondsey, Rotherhithe, Deptford, and the adjacent country.

In the first story are two spacious rooms, one of which is a small armory for the sea-service, having various sorts of arms, very curiously displayed. In the other room are a great number of closets and presses, all filled with warlike tools and instruments of destruction. Over these are two other floors, one filled principally with arms; the other with arms and pioneers' tools; such as chevaux de frize, pick-axes, spades, and shovels. In the upper story is kept match, sheep-skins, tanned hides, &c. In this tower are likewise kept models of the new-invented engines of destruction, that have from time to time been

presented to the government; but which have very properly been condemned to the obscurity of the Tower, never to be used, but only to be shown as evidence of the ingenuity of man to torment and destroy. On the top is a large cistern, or reservoir, for supplying the whole garrison with water, in case of need: it is seven feet deep, nine in breadth, and about sixty in length, and is filled from the Thames, by means of an engine very ingeniously contrived.

Within this tower is a very ancient chapel, dedicated to St. John; which was for the private use of our kings and queens, when they resided in the Tower. It is of an oblong form, rounded at the east end; on each side are five short round pillars, with large square capitals, carved in different forms on their faces, and with a cross on each. At the east end are two pillars of the same form as the others. Above is a gallery, with windows and rounded arches, looking into the chapel, and said to have been appropriated to the females. The columns pass down to the ground-floor, through a lower room, which is used as a magazine for gunpowder. The chapel forms part of the record-office, and is filled with papers. Strype has also preserved an order of Henry III. for painting and beautifying this chapel. It runs thus: *Depingi faciatis patibulum et trabem ultra altare ejusdem capel. bene et bonis coloribus; et fieri faciatis et depingi duas imagines pulchras, ubi melius et decentius fieri possint in eadem capell. unam de sancto Edwardo tenente annulum, et donante et tendente Scto. Johan. Evangelista, &c.*—In English thus: “Order that the cross and the traverse behind the altar of the said chapel be painted well, and with good colours; and, besides, two handsome images in the most proper situation within the chapel; one representing St. Edward receiving the ring from St. John the Evangelist, &c.”

The office of Keeper of the Records is opposite the platform already described. It is adorned with a fine carved stone door-case at the entrance, and finely wainscoted within. All the rolls, from king John to the beginning of the reign of Richard III. are deposited in fifty-six wainscot presses, in this office; those since that time are kept at the Rolls Chapel, in Chancery-lane. The rolls and records kept in the Tower, contain the ancient tenures of all the lands in England, with a survey of the manors; the originals of all laws and statutes; the rights of England to the dominion of the British seas; leagues and treaties with foreign princes; the achievements of England in foreign wars; ancient grants of our kings to their subjects; the forms of submission of the Scottish kings; writs and proceedings of the courts of common law and equity; the settlement of Ireland, as to law and dominion; privileges and immunities granted to cities and corporations, during the period before mentioned; with many other important records; all regularly disposed by the diligence of sir William Dugdale, and others under his direction, and properly referred to, in near a thousand folio indexes. The price of searching here is half a guinea; for which a person may peruse any one subject a-year. In the months of December, January, and February, this office is open only six, but all the rest of the year eight, hours in a-day. Samuel Lysons, esq. is the present keeper.

To the north of the White Tower is the grand storehouse, which is a noble building, and extends two hundred and forty-five feet in length, and sixty in breadth. It was begun by James II. who built it to the first floor; but William III. erected that magnificent room, called the New, or Small, Armory; in which, when finished, he and his queen, Mary, dined in great form, having all the warrant-workmen and labourers to attend them, dressed in new aprons and white gloves. This noble structure is of brick and stone; and on the north side is a stately door-case, adorned with four columns, an entablature, and triangular pediment, of the Doric order. Under the pediment are the king's arms, with enrichments of ornamental trophy-work, by our celebrated artist Gibbons.

On entering the great gate of the Tower, a warder is in readiness to attend visitors to those parts of the fortress which are permitted to be shown; the first of which is called the Spanish Armory (situated to the south of the White Tower), from the spoils of the Spanish Armada being deposited here, to perpetuate the memory of the signal victory obtained by the English over the whole naval power of Spain, in the reign of queen Elizabeth. See the article ENGLAND, vol. vi. p. 658, 9.

The articles consist of different kinds of arms in use at that time, which it is not necessary to enumerate. But in the same room are preserved some other very curious articles; the principal of which are these: 1. A small train of ten pieces of brass cannon, neatly mounted on proper carriages; which were a present from the foundery of London to king Charles I. when a child, to practise the art of gunnery. 2. Some Danish and Saxon clubs; weapons which each of those people are said to have used in their conquest of England; and are, perhaps, curiosities of the greatest antiquity of any in the Tower. 3. King Henry the VIIIth's walking-staff, which has three match-lock pistols in it, with coverings to keep the charges dry. With this staff, it is said, the king sometimes walked round the city, to see that the constables did their duty; and, one night, as he was walking near the bridge-foot, the constable stopped him, to know what he did with such an unlucky weapon at that time of the night; upon which the king struck him; but, the constable calling the watchmen to his assistance, his majesty was carried to the Poultry Compter, where he lay till morning, without either fire or candle. When the keeper was informed of the rank of his prisoner, he dispatched a messenger to the constable, who came trembling with fear, expecting nothing less than death; instead of which, the king applauded his resolution in honestly doing his duty, and made him a handsome present; at the same time he settled upon St. Magnus parish an annual grant of twenty-three pounds and a mark; and made provision for furnishing thirty chaldron of coals, and a large allowance of bread, annually, for ever, toward the comfortable relief of his fellow-prisoners, and their successors. 4. A large wooden cannon, called *Policy*, because, as we are informed, when Henry VIII. besieged Boulogne, the roads being impassable for heavy cannon, he caused a number of these wooden ones to be made, and mounted on proper batteries before the town, as if real cannon; which so terrified the French commandant, that, when he beheld a formidable train, as he thought, just ready to play, he gave up the town without firing a shot.—At the upper end of this room, under a canopy, is an elegant group of figures, representing queen Elizabeth alighting from her horse, to review her fleet at Tilbury. The figure of the queen is strikingly majestic: it is attired in the armour she is said to have worn upon that occasion, with a white silk petticoat, curiously ornamented with pearls, &c. Her robe, or upper garment, is of rich crimson satin, laced and fringed with gold. The horse is a noble animal, of a cream-colour; his bridle ornamented with gilt metal, and the saddle covered with crimson velvet, laced and fringed with gold. At the head of the horse stands a page, holding the bridle with his left hand, and in his right is the queen's helmet, decorated with a plume of white feathers. His dress is of snuff-coloured silk lined with blue, and a blue silk sash fringed with gold, according to the fashion of the time. The attitude of this figure is remarkably fine.

From the Spanish Armory the visitor is conducted to the Horse Armory, where the following things are presented to his notice: 1. The figures of the horse and foot, on the left hand, supposed to be drawn up in military order, to attend on the kings on the other side of the room. These figures, which are as large as life, are very fresh, and have a noble appearance. 2. A large tilting-lance of Charles Brandon, duke of Suffolk, general to king Henry VIII. This nobleman excelled at the then-fashionable diversion of tilting; and, engaging the king, who was

likewise passionately fond of that royal exercise, gave him such a shock with his spear as had nearly cost him his life. 3. A complete suit of tilting-armour, such as the kings, nobility, and gentry at arms, used to exercise in on horseback; at which diversion Henry II. king of France was killed, by a shiver of a spear striking him in the eye. 4. A complete suit of armour, made for king Henry VIII. when he was but eighteen years of age. It is at least six feet high, and the joints in the hands, arms, thighs, knees, and feet, play like the joints of a rattle-snake, and are moved with all the facility imaginable. The method of learning the exercise of tilting, was upon wooden horses set on castors, which, by the sway of the body, could be moved every way; so that, by frequent practice, the rider could shift, parry, strike, unhorse, and recover, with surprising alertness. Several of the horses in this armory have been used for this purpose; but the castors have been some years taken off. 5. A very small suit of armour, made for king Charles II. when prince of Wales, and about seven or eight years of age, with a piece of armour for his horse's head; the whole most curiously wrought, and inlaid with silver. 6. The armour of lord Courcy, who, as the warders say, was grand champion of Ireland; and, as a proof, show you the very sword he took from the champion of France; for which valiant action he, and all his successors, have the honour to wear their hats in the king's presence; which privilege is at this time enjoyed by lord Kinsale, as head of that ancient and noble family, who is always presented to the king, on his first appearance at court, with his hat on. 7. A number of real coats of mail, called brigandine jackets. They consist of small bits of steel, quilted one over another so as to resist the point of a sword; and yet are so flexible, that the body may be bent in them any way, the same as in common clothing. 8. An Indian suit of armour, sent as a present to Charles II. from the Great Mogul. It is made of iron quills, about two inches long, finely japanned, and ranged in rows, one row slipping over another very artificially. They are bound together, with silk twist, very strong, and are used in that country as a defence against darts and arrows. 9. The armour of the great John of Gaunt, duke of Lancaster, who was the son, father, and uncle, of a king, but was never king himself. The armour is seven feet high, and the sword and lance are of a most enormous size. 10. A droll figure of William Somers, jester to Henry VIII. The description given of this figure by the warder, is calculated more for the amusement of the spectator than the entertainment of the reader. 11. To the left of this figure stands the line of kings; but, by beginning at this end of it, the order of chronology is reversed. You therefore begin with his late majesty, George II. in a complete suit of armour, richly gilt, sitting with a sword in his hand, on a white horse richly caparisoned, with a fine Turkey bridle, gilt, with globes, crescents, and stars, velvet furniture laced with gold, gold fringe, and gold trappings. The other kings, quite back to William the Conqueror, are likewise on horseback and in armour.

In an inclosure, at the end of this room, is a perfect model of that most admirable machine, the idea of which was brought from Italy, by sir Thomas Loombe, and first erected at Derby, at his own expence, for making organzine, or thrown silk. This ingenious gentleman, as we are told, made two attempts, at the hazard of his life, for the completing of this machine, which, by means of a friar, he at length effected; and, having obtained the sanction of an act of parliament, in the year 1742, by which 1400l. were granted to his majesty, to be paid to him as a reward for his eminent service, in discovering and introducing the said machine, he finally completed it, and brought it into use. The following is a brief description of it. It contains 26,586 wheels, and 97,746 movements; which work 93,726 yards of silk thread every time the water-wheel goes round, which is thrice in one minute. One water-wheel gives motion to the rest of the wheels

and movements, of which any one may be stopped separately. One fire-engine conveys warm air to every individual part of the machine, and one regulator governs the whole work.

The depôt for the royal train of artillery is on the ground-floor of the grand store-house; very few pieces of ordnance, however, remain there at present, except such as have been long preserved, and shown as curiosities; every thing else kept here has been in such a continual state of fluctuation, during a long period of war, that a description of them is impossible. In addition to the articles which are stationary, this extensive store-room is filled with new brass cannon, and other implements of war, such as sponges, rammers, ladles, artillery harness, &c. which are deposited here till called for. The room itself is three hundred and eighty feet in length, fifty wide, and twenty-two high. In it are twenty pillars for supporting the small armory above, hung round with standards, colours, &c. taken from the enemy.

The Small Armory, above, is three hundred and forty-five feet in length, and contains a wilderness of arms, so ingeniously disposed in racks, in the middle, and all around the walls, that arms for upwards of a hundred thousand men, all kept bright, and fit for immediate service, are seen at one view.—The only piece of ordnance in this room is a very curious small cannon; a two-pounder, taken by the French at Malta, in June 1798, which, with the eight flags hanging from the ceiling, were sent to the Directory on-board *La Sensible* frigate; but that vessel was taken by the Sea-horse, Capt. Foote. This cannon is made of a mixed metal, resembling gold. On it is the head of the Grand Master of Malta, supported by two genii, in bas-relief; it is also ornamented with eagles, &c. all of excellent workmanship. The carriage is also very curious: on it are the carved figures of two furies, whose features are strongly expressive of rage and despair. One arm of each of them, being entwined together, grasps a large snake; and in the other each holds a torch. From their heads issue clusters of small snakes; but these are broken off from one. The centres of the wheels represent the face of the sun, and the spokes its rays. The whole is executed in a very masterly manner. Four of the Maltese colours hang over the entrance into the room; and the other four in the corners.

Of the curious and ornamental disposition of the arms, no adequate idea can be formed by description; but, to assist the spectator to retain the remembrance of what he sees, we shall give a few particulars. The walls, on each side, are adorned with eight pilasters of pikes, sixteen feet long, with capitals of pistols, of the Corinthian order. On the left of the entrance are two curious pyramids, composed of pistols, standing upon crowns, globes, sceptres, &c. finely carved, and placed upon a pedestal five feet high. The inter-columns compose a kind of wilderness of arms, round which you walk. Here you find pistols and bayonets placed in the form of half-moons and fans; with the imitation of a target in the centre, made up of the blades of bayonets. Brass blunderbusses for sea-service, with capitals of pistols over them. Old-fashioned bayonets, formed in such a manner as to represent the waves of the sea. Bayonets, and sword-bayonets, in the shape of half-moons and fans, and set in scollops-hells, finely carved. The rising sun, irradiated with rays of pistols set in a chequered frame of marine hangers of a peculiar make, having brass handles, and the form of a dog's head on their pommels. Four beautiful twisted pillars, made with pistols up to the top, which is about twenty feet high, and placed at right angles, with the form of a falling star on the ceiling, exactly in the centre. The representation of a pair of large folding gates, of antique form, made of soldiers' halberts. Horsemen's carbines, blunderbusses, and pistols, hanging very artificially in furbelows and slouches. A Medusa's head, within three regular ellipses of pistols, with snakes represented stinging her. At the east end are two suits of armour, one made

for Henry V. the other for Henry VI. over each of which is a semicircle of pistols: between these is represented the figure of an organ, the large pipes composed of brass blunderbusses, and the small of pistols: on one side of this figure is the representation of a fiery serpent, the head and tail of carved work, and the body of pistols, winding round in the form of a snake; and on the other a hydra, or seven-headed monster, whose heads are very artificially combined by links of pistols.—Here is also the sword of Justice (having a sharp point), the sword of Mercy (having a blunt point), carried before the pretender, when proclaimed in Scotland, in 1715.

In the centre of this room, on the north-side, opens the grand stair-case door, for the admission of the royal family, or any of the nobility, whose curiosity may lead them to view the armory; opposite to which, on the south side, opens another door into the balcony, that affords a fine prospect of the parade, the governor's house, the surveyor-general's, store-keeper's, and the other general-officers' houses in the Tower.—The arms in this room were originally disposed by Mr. Harris, who contrived to place them in this beautiful order, both here and in the guard-chamber of Hampton-court. He was a common gunsmith; but, after he had performed this work, he was allowed a pension from the crown as a reward for his ingenuity.

The Jewel-office is the next place which is visited. When the rich articles deposited in this office are shown, the spectators are locked into that half of the room assigned for them, where they sit down close to a grate, like that of a nunnery: on the other side of which, the person who shows the jewels displays them separately, by candle-light. These precautions have been taken since the reign of Charles II. when that desperado, Blood, made a bold attempt to carry off the crown, and other ensigns of royalty.

The regalia shown in this office, are, 1. The imperial crown, with which it is said all the kings of England have been crowned since the time of Edward the Confessor. This, however, is contradicted by fact; for the regalia of St. Edward was kept in the arched room, in the cloisters of Westminster Abbey, till the grand rebellion, when, in 1642, Harry Martin, by order of the parliament, broke open the iron chest in which it was deposited, took it from thence, and sold it, together with the robes, sword, and sceptre, of St. Edward. After the restoration, king Charles II. had one made like it, which is shown at present. It is of gold, enriched with diamonds, rubies, emeralds, sapphires, and pearls. The cap within is of purple velvet, lined with white taffety, turned up with three rows of ermine. 2. The golden orb, or globe, put into the king's right hand before he is crowned, and borne in his left, with the sceptre in his right, upon his return into Westminster-hall, after he is crowned. It is about six inches in diameter, edged with pearl, and enriched with precious stones. On the top is an amethyst, near an inch and a half in height, set upon a rich cross of gold, adorned with diamonds, pearls, and precious stones. The whole height of the ball and cup is eleven inches. 3. The golden sceptre, with its cross, set upon a large amethyst of great value, garnished round with table-diamonds. The handle of the sceptre is plain, but the pommel is set round with rubies, emeralds, and small diamonds. The top rises into a fleur-de-lis, of six leaves, all enriched with precious stones; from whence issues a mound, or ball, made of the amethyst already mentioned. 4. The sceptre with the dove, the emblem of peace, perched on the top of a small Jerusalem cross, finely ornamented with table-diamonds, and jewels of great value. This emblem was first used by Edward the Confessor, as appears by his seal. It is also marked on the seals of Henry I. Stephen and Henry II. but omitted by Richard I. Richard II. assumed it again on his seal; and it was also used by Edward IV. and Richard III. 5. St. Edward's staff, in length four feet seven inches and a half, and three inches and three quarters in circumference, all of beaten gold, which

which is carried before the king at his coronation. 6. A large silver fountain, presented to king Charles II. by the town of Plymouth, very curiously wrought. 7. A noble silver font, double gilt with gold, and elegantly wrought, which is used at the christenings of the royal family. 8. The *curtana*, or sword of mercy, the blade thirty-two inches long, and near two broad, is without a point, and is borne naked before the king at his coronation, between the two swords of justice, spiritual and temporal. 9. A gold salt-cellar of state, in form like the square White Tower, and exquisitely wrought. It is used only at the king's table, on the day of the coronation. 11. The crown of state, that his majesty wears in parliament; in which is a large emerald, seven inches round; the finest pearl ever seen, and a ruby of prodigious value. 12. The prince of Wales's crown. These two crowns, when his majesty goes to the parliament-house, are carried by the keeper of the jewel-office, attended by the warders, privately, in a hackney-coach, to Whitehall; there they are delivered to the officers appointed to receive them, who, with some yeomen of the guard, carry them to the robing-rooms, where his majesty and the prince robe themselves. The king wears his crown on his head as he sits upon the throne; but that of the prince of Wales is placed before him, to show that he is not yet come to it. As soon as the king is disrobed, the two crowns are re-conducted to the Tower, by the same persons that brought them. Lastly, the ampulla, or eagle of gold, finely engraved, which holds the holy oil the kings and queens of England are anointed with, and the golden spoon that the bishop pours the oil into. These are two pieces of great antiquity. The golden eagle, including the pedestal, is about nine inches high, and the wings expanded about seven inches; the whole weight about ten ounces. The head of the eagle screws off about the middle of the neck, which is made hollow for holding the oil; and, when the king is anointed by the bishop, the oil is poured into the spoon out of the bird's mouth.—Besides these commonly shown, there are, in the jewel-office, all the crown-jewels worn by the princes and princesses at the coronations; and also a vast variety of curious old plate.

These ensigns of royalty, as already mentioned, had nearly been stolen in the reign of king Charles II. the particulars whereof are worthy recital; as it is, perhaps, the most singular enterprise that ever was undertaken. The projector of this theft was colonel Blood, a gentleman of Ireland, who, having spent his substance in following the fortune of king Charles II. while in adversity, thought himself hardly used by being neglected when that prince was restored to his throne; and therefore, after having engaged in several very desperate, though unsuccessful, plots, thought of a scheme to make himself amends, by seizing the crown, globe, sceptre, and dove, and carrying them all off together. To effect this, he contrived, under the guise of a clergyman, to make acquaintance with Mr. Talbot Edwards, the keeper of the jewel-office, insinuating himself into his favour and confidence. After various visits, he at length, with the assistance of some associates, seized on the old man, whom he had requested to show the jewels to his friends, gagged him, and, on his resisting, struck him on the head with a mallet, and gave him several stabs. Edwards thought it prudent to counterfeit death. Blood put the crown under his parson's gown; another put the globe in his breeches; a third, not being able to conceal the sceptre by reason of its length, broke off the rich ruby, and put it in his pocket. As soon as they were gone, Edwards forced out the gag, and gave the alarm; they were instantly pursued, and three of them soon taken. Blood struggled hard for his prize, saying, when it was wrested from him, "It was a gallant attempt, though unsuccessful; it was for a crown." The curiosity of the king was excited to see a man engaged in so many important villainies; and from that moment the artful Blood dated his security: he told the king so many plausible tales; such indifference he showed for his own life, such

anxiety for that of his majesty, (for he insinuated that his comrades would certainly revenge his death, even on his sacred person,) that in a short time he obtained his pardon. It was necessary to apply to the duke of Ormond for permission, the ruffian having made an attempt on his grace's life not long before. The duke nobly answered, "If his majesty could forgive him stealing the crown, he might easily forgive the attempt upon his life; and, if such was his majesty's pleasure, that was a sufficient reason for him, and his lordship (the earl of Arlington, who brought the message) might spare the rest." Blood was not only pardoned, but received into favour, had a pension of 500*l.* a-year, and was perpetually seen at court, enjoying the smiles of majesty, and even successfully employing his interest as a most respectable patron. But all good men looked on him with horror, and considered him as a Sicarius to a profligate set of men, to overawe any who had integrity enough to resist the measures of a most profligate court. This miscreant died peacefully in his bed, August 29th, 1680, fearlessly, and without any signs of penitence. The innocent Talbot Edwards, so far from receiving the grateful reward of his fidelity and sufferings, got with great difficulty a pension of 200*l.* a-year; and his son, who was active in taking Blood, 100*l.* more; but the order for the pensions was so long delayed, and the expenses attending the cure of the good old man's wounds so great, that he was forced to sell his order for a hundred pounds ready money, and his son his for fifty*l.*

The business of coining the money of the realm had been carried on principally within the Tower, from the time of William the Conqueror until the year 1211. In that year a very elegant mint was completed on the eastern side of Tower-hill, in which the coinage is now performed with a simplicity, dispatch, and accuracy, that can scarcely be conceived by any who have not been witnesses of the several operations.—This beautiful building was erected after a design of Mr. Smirke, jun. and is intended for all those purposes of coinage which have usually been carried on in the Tower of London, and at Birmingham. As the building happened to be finished just at the time when, owing to the high price of gold, all specie had disappeared, and also at the time that the new custom-house was planned, it was wittily observed, by some member in the house of commons, that we had a new mint when we had no money, and a new custom-house when we had no trade. The New Mint is erected on the site of the Old Victualling-office, to the east of the Tower; and is an extensive building, containing all the machinery and conveniences for coining, and also houses for the residence of the principal officers. It is composed of a long front of stone, consisting of a ground-floor, with two stories above; the whole surmounted by a handsome balustrade. The wings are ornamented with pilasters, and in the centre are several demi-columns, over which is a pediment, decorated with the arms of England. The porch is covered with a gallery, balustrades, &c. all of the Doric order.

The coining of metallic money was originally performed by the hammer; and afterwards by what was called the screw-press, or mill and screw. These operations have been described under the word COIN, vol. iv. p. 753.

Almost all the money now coined in this kingdom is from bullion received from the Bank of England; from which it is sent to the master of the mint's assay-office: here it is received into what is called the *strong-hold*, and there kept till its fineness is ascertained, in order that its true value may be computed. This being ascertained, the parties concerned are desired to attend at the office of receipt and delivery, to witness its weight, and to be informed of its fineness, and, consequently, of its value; the standard weight of the bullion being determined by the calculation of the respective offices. A mint-bill is now made out, and given to the owner of the bullion, by which he knows the exact value of his deposit. The next thing is to deliver the bullion to the melting-house, which is furnished with a variety of apparatus, adapted, not only

to the melting of the gold and silver, but to lifting in and out the pots containing the precious metals, with safety, ease, and expedition. The silver is melted in pots of cast-iron, but the gold is melted in smaller pots manufactured from black-lead, or carburet of iron. The silver is run into plates ten inches long, seven wide, and about five-eighths of an inch thick; the gold plates are ten inches in length, four in breadth, and three eighths of an inch in thickness. While the metal is pouring into the moulds, there are three portions taken, from the top, the middle, and bottom, of each pot, and carried to the king's assay-office, there to be examined by the master of that office, and not permitted to pass into work until the fineness of the metal is accurately determined. The furnaces used are air-furnaces; and the fuel is coke. In the process of melting there will necessarily be waste; every thing, therefore, that can possibly contain any portion of the precious metals, such as the sweepings of the melting-house, &c. are collected and carried to another apartment, in which are erected two grinding and two triturating mills, where the sweep is worked up, and the fine metals in part recovered, in the manner practised by refiners and goldsmiths. The sweep, thus brought together, is ground into a powder, and passed through a fine sieve, by which the larger grains of metal are obtained. The sweep is then put, in small portions, into a wooden bowl with two iron handles, and carefully washed; the lighter particles, being absorbed by the water, are collected in a large tub; the heavy or metallic ones are found deposited at the bottom of the bowl. By these means the most considerable of the particles of gold and silver are obtained. The powdered sweepings, however, which have been collected after the washing process, still contain portions of metal; to obtain these, the sweep, in certain portions, is put into a mill containing generally about a hundred-weight of mercury, the remainder of the mill being filled with water. This is commonly called the *tritulating-mill*; and each charge is agitated about four hours with an iron instrument, having four arms placed horizontally, in the shape of a cross, and fixed to the centre of the mill; and, for the better agitation of the sweep and mercury, the motion of this mill can be reversed at pleasure.

From the melting-house, the plates above described, provided they are found by the assay-master to be of the exact degree of fineness, are carried to the rolling-mill. They are first hot-rolled, that is, made red-hot in a furnace adapted to the purpose, and then passed through a pair of cast-iron rollers. In the room in which this operation is performed there are four pair of rollers, which (as they require an immense power) are put in motion by a steam-engine of a power equal to that of thirty horses. The rollers are placed very near the furnaces; and the metal, being brought to what is called a blood-red heat, is taken out by a man with a pair of smith's tongs, and immediately returned by another man, and again passed through while hot two or three times, by which it is greatly extended; after this, it is annealed. This process is called the *breaking-down rolling*; and, when finished, the plates of silver are about  $\frac{3}{16}$ ths of an inch thick. They are then cut into slips by a pair of circular shears attached to the shafts by which the rollers are worked; after which they are finished in what are called the *adjusting-rollers*, which are also made of cast-iron, and very finely polished. In this process the slips are rolled cold; and, when a piece cut from the middle of each is found of the proper standard weight, they are carried to another apartment, called the *cutting-out room*, containing twelve machines worked by a steam-engine of the power of sixteen horses. With these machines the blank pieces are cut out from the strips or laminæ just mentioned with great ease and velocity. The only manual labour required, is that performed by a boy nine or ten years old at each machine; he quickly learns the art of presenting the laminæ to the cutters, which instantly cut out the blank pieces of metal; these so struck fall through a hole that conducts to a box placed below to re-

ceive them. Each machine will cut 60 pieces in a minute, of course twelve will produce 720 in a minute, or 43,200 in an hour. Formerly these machines were worked by hand by a man or boy at each cutter, but no manual labour can operate so accurately and well as the power obtained by the steam-engine. The instruments with which the blanks are cut (called a bed and punch) are made of steel, of the exact diameter of the piece of money required. From this apartment the blanks are carried to the *adjusting-room*, where every piece is most accurately weighed, the gold twice at least, and the silver once; those pieces that are found too heavy are reduced by the file called a *float*; and those that are found too light, which occasionally occurs, are remelted. The blanks, now properly adjusted, are carried to the *milling-room*. But the process of milling is a secret by the very constitution of the mint. This has always been the case since the time of Peter Blondeau, who introduced the milling in 1662, as appears from an extract from Mr. Folkes, in his Tables of English Silver Coins, in which he observes, and the observation holds good even now, though at the distance of sixty-nine years; that "it may be noted, that this practice of keeping secret the manner of edging the money is still observed in our mint, all those who are entrusted with it being sworn not to discover it; notwithstanding, the manner in which the same operation is performed in several foreign mints is there publicly shown." The blanks, when milled, are annealed or softened, in order that they may be fitted to receive the impression.

The next operations are pickling and cleaning. The process of pickling is to throw the pieces of gold, thus annealed, into a strong solution of super-sulphat of alumine, those of silver into a solution of the super-sulphat of potash. When the pieces are properly blanched, they are taken into another room to be dried and cleaned; which operation is performed by agitation in sieves, containing saw-dust, over a gentle heat. They are now taken to what is properly called the *coining-room*. In this apartment there are eight coining-presses, worked by a ten-horse power steam-engine; the apartment also is, in the winter months, heated with steam, so as to be kept to an uniform temperature. The machines are worked with the most perfect accuracy, and with such rapidity, that each will produce about 60 in a minute; and on the average, allowing for the necessary delays in working, forty pieces of money, that is 320 guineas, &c. will pass through the eight machines in a minute, or about 19,200 in an hour. These machines require also one boy of ten or twelve years of age to each, who, by supplying the machine with the planchets, runs no risk of injury to his fingers, as the machine contains in itself a self-feeder or layer-on; the business of the boy being only to fill the layer-on, through a tube, with the blanks. From this tube, the machine places the blanks upon the dye; and, when struck, displaces one piece and replaces another; and so on, as long as the steam-engine is kept at work.—The coin thus completed is carried to the mint-office, where the king's assayer attends, and where the process called *pixing* takes place, to ascertain the weight and fineness of the moneys before delivery. The pix is a box in which a small proportion or sample of the coins struck at the mint is reserved, in order to be assayed and compared with a check-piece or standard kept in the exchequer for the purpose. This operation, which is called *pixing*, or the trial of the pix, is performed with great exactness, in the presence of the privy-council, the officers of the mint, and a jury of the goldsmiths' company; and there is no instance upon record of the coins thus tried being found to vary from the full standard.

The officers of the mint are, 1. The warden, who is the chief, and is to receive the bullion, and oversee all the other officers. This officer has under him a deputy and two clerks. 2. The master-worker, with three clerks; he receives the bullion from the warden, causes it to be melted, and delivered to the moneyers; and takes it from them again when coined. 3. The comptroller, with a deputy and clerk,

clerk, who is to see that the money be made to the just assise, and to oversee the officers. 4. The assay-master, who weighs the silver and gold, and sees whether it be standard. This officer, called the king's assay-master, has under him a clerk. 5. The master's assay-master, and the probationer assayer. 6. The surveyor of the melting, who is to see the silver cast out, and that it be not altered after it is delivered to the melter, i. e. after the assay-master has made a trial of it. 7. The clerk of the irons, who is to see that the irons be clean, and fit to work with. These two offices are united in one person, who has a deputy and clerk. 8. The chief engraver, who engraves the dyes and stamps for the coinage of money; there is also an assistant engraver, and a probationer engraver; with a smith, assistant to the engravers. 9. The melters, who melt the bullion before it comes to coining. 10. The blanchers, who anneal, or boil and cleanse, the money. 11. The porter and office-keeper, who keep the gate, &c. 12. The provost to the company of moneyers, acting as an engineer, who provides for all the moneyers, and oversees them. And, lastly, the company of moneyers, some of whom bear the money, some forge it, some stamp or coin it, and some round and mill it. In this office there are also the weigher and teller; receiver; king's clerk, and clerk of the paper; surveyor of the money-presses; solicitor and assistant; warden's deputy, master's deputy, comptroller's deputy, and subordinate clerks.

Before the Norman conquest, the kings of this nation established their mints in different monasteries, from a presumption, it is supposed, that in such sanctified places the coinage would be secured from fraud and corruption. In time, however, we find mints set up in almost all the principal towns of England; and in some of the largest there were different mints. Thus the state of the coin was perpetually fluctuating, owing to the removal, or discontinuance, of the old mints, or the establishment of new ones, according to the caprice, or, sometimes, the cupidity, of the reigning prince; for there is no doubt that this privilege was frequently granted, in consideration of an advance of money, or in recompense for services. This promiscuous coinage of money was attended with so many inconveniencies, that, in the early part of her reign, queen Elizabeth endeavoured to remedy them, by establishing one mint only, in the Tower of London, for the use of the whole kingdom; and thus it has remained ever since, except in the latter part of Charles the First's reign, who was reduced to the necessity of coining money wherever he was quartered; and in the beginning of that of William III. who found the coin in such a state of debasement, that he called it all in, and re-coined it; and, in order to accomplish this with greater facility, erected mints in some of the distant parts of the kingdom, such as Exeter, Bristol, York, and Winchester.

On the opposite side of Tower-hill, near the great western entrance, a new Excise-office has lately been erected. It is merely assistant to the other in Broad-street; and chiefly for the export, or drawback, business.

Without the Tower are certain districts called the Tower Liberties, the government of which is under the same jurisdiction as the Tower itself, and for the administration of which a court is held, by prescription, on Great Tower-hill, by a steward appointed by the constable of the Tower. These liberties include both Tower-hills, part of East Smithfield, Rosemary-lane, Wellclose-square, and the Little Minories; and all the streets, lanes, and alleys, in Spitalfields, built on the old Artillery-ground, which formerly belonged to the Tower.

Great and Little Tower-hill are two irregular open spaces, without the ditch, on the west and north sides of the Tower, and are separated from each other by Postern-row; which is so called from the Postern-gate, formerly standing there. See p. 106.

The northernmost part of Great Tower-hill has been called Trinity-square, from the new Trinity-house, erected on the north side of it. It is a handsome stone-fronted

building, consisting of a main body and two wings; the latter of which project a little. The basement story is of massy rustic-work, and in the centre is the entrance, which, as well as all the windows in this story, is arched. On this rises the principal story, of the Ionic order, supporting a plain entablature, on which rests a sloping roof. In the centre of the main body are the arms of the corporation, and, on each side, a circular medallion, containing the profiles of their present majesties. Above the windows, in the two wings, are square medallions, in which are groups of genii, exhibiting different nautical instruments, with representations of the four principal light-houses on the coast. This building is seen to great advantage, by being placed on a rising ground, and having an extensive area in front. The court-room contains portraits of the king and queen; James II. lord Sandwich; lord Howe, and Mr. Pitt; and in the secretary's office is a beautiful model of the Royal William man-of-war.

The military jurisdiction of the constable of the Tower extends greatly beyond the liberties of that fortress, and includes a considerable part of the county of Middlesex, under the denomination of the Tower Hamlets; the names of which are as follow:

Hackney.	Ratcliff.
Norton-Falgate.	Shadwell.
Shoreditch.	Limehouse.
Spitalfields.	Poplar.
Whitechapel.	Blackwall.
Trinity-Minories.	Bromley.
East Smithfield.	Bow.
Tower Extra and Intra.	Old Ford.
St. Catharine's.	Mile-End.
Wapping.	Bethnal-Green.

These twenty-one hamlets are severed from the county of Middlesex, so far as relates to the raising of the militia, by an act of parliament passed in the fourteenth year of the reign of Charles II. and are obliged to raise two regiments of themselves, to be the standing militia of the Tower; and, for this purpose, the constable of the Tower is lord-lieutenant of the district.

Leaving the Tower, we proceed towards the London Docks, and visit in our way the few remarkable objects which are thinly scattered in this busy part of the great eastern suburb of the metropolis.—The church of St. Catharine stands almost concealed from the view by the surrounding buildings, on the east side of a small open place, called St. Catharine's Square. It belonged, originally, to an hospital, founded, in 1148, by Matilda, consort to king Stephen. The old foundation was dissolved, and re-founded, in 1273, by queen Eleanor, relict of Henry III. Philippa, consort to Edward III. was a great benefactress to this hospital, as was Henry VI. who not only confirmed all the former grants, and made several additional ones, but gave an ample charter to it. It was exempt from the jurisdiction of the bishop of London, till its suppression by Henry VIII. soon after which, Edward VI. annexed it to that diocese; leaving the patronage, however, in the hands of the queens of England, according to the disposition of its re-founders. The church, which is a very handsome Gothic building, is collegiate, and has a master, whose situation is a valuable sinecure, and three brethren, who have forty pounds each; three sisters, who have twenty pounds; and ten beads-women, who have eight pounds per annum each; and six poor schoolars. This church was repaired and enlarged in 1621; and, in 1629, the outside of it was rough-cast, at the expense of sir Julius Cæsar; about which time the clock-tower was added, at the charge of the parishioners. In the choir are several handsome stalls, ornamented with Gothic carved work, resembling those in cathedrals, under one of which is a very good carving of the head of queen Philippa, and another of her husband; and the east-window is very elegant. The pulpit is a great curiosity; on its eight sides are represented the ancient building, and different gates of the hospital. The length of the

church is sixty-nine feet, and its breadth sixty feet; the length of the choir is sixty-three feet, and the breadth thirty-two; and the height of the roof is forty-nine feet. The organ is a remarkably-good one.—There are many ancient monuments in this church, the most curious of which is that of John Holland, duke of Exeter and earl of Huntingdon, and his two wives, on the north side of the choir, under a stately arch; his effigy is placed on the table, in a recumbent posture, and those of his wives on his left hand; with coronets on all their heads. The duke was a great benefactor to the hospital, in which he founded a chauntry; and he bequeathed to the high altar in the church, “a cuppe of byroll, garnished with gold, perles, and precious stones, to be put in the sacrament,” and a number of other valuable effects. Raymond Lully, the famous Hermetic philosopher, wrote his *Testamentum Novissimum* in this hospital.

On the fourth side of the Thames, shaded by an immense forest of masts rising from the innumerable crowd of vessels of all nations, loading and unloading, from this universal mart, all the riches and commodities of both the hemispheres of the globe, winds the well-known street of Wapping, frequented and inhabited by seamen of all descriptions. It has an appearance peculiar to itself, and which cannot be matched any-where.—To the north of this street stands the parish-church of St. John, Wapping; so called from its dedication to St. John the Baptist, and its situation. The old church was erected, in 1617, as a chapel of ease to St. Mary's, Whitechapel; but, by the great increase of buildings, the hamlet of Wapping was, in 1694, constituted a distinct parish. The present edifice was erected in the year 1790. It is built of brick, strengthened with rustic quoins of stone, and enlightened by two series of windows. The principal entrance, to which there is an ascent by a double flight of steps, is at the west end; above it rises a square tower, in two stages, crowned with a bell-shaped cupola, from which rises the vane. This church is a rectory, the patronage of which is in the principal and scholars of King's-hall and Brazen-nose college, Oxford. Adjoining to the church is a charity-school for fifty boys and forty girls, founded in 1704, and rebuilt by voluntary contribution in 1765.

The ground on which this parish stands, was anciently within the flux of the Thames; but when, or by whom, it was first embanked, is not known, though it is supposed to have happened about the year 1544. By frequent inundations of the Thames, its banks in these parts were at times much injured; particularly in the year 1365, when great breaches were made in various parts of it, which were scarcely repaired when another happened in 1571, which was attended with still worse consequences. The commissioners of the sewers, after viewing the destruction made, were of opinion, that the most effectual way to secure the bank of the river, in those parts, would be to erect buildings thereon. Accordingly, the ground was taken for that purpose, and the first foundations of houses were laid on the spot where Wapping is now situated.

At the elbow which the bank of the river makes towards the south, is the place called *Execution Dock*, where all pirates, and others condemned at the admiralty-sessions for offences committed on the high seas, are executed on a gibbet, at low-watermark.

On the west is the entrance into the *LONDON DOCKS*.—When it is considered that the port of London commands about three-fifths of the commerce of the whole kingdom, that it has frequently riding within it from 1300 to 1400 sail of vessels at a time, and in the course of the year about 14,000; that from the year 1700 to 1792 its imports had increased from 4,785,538l. to 12,072,674l. and its exports from 5,387,787l. to 14,742,516l. it appears surprising that proper accommodations for its commerce should have been so long wanting. The legal quays, which were only 1464 feet long, having remained the same as at the time of the fire of London, were, with the aid of the sufferance-wharfs, totally inadequate to the increase of its commerce. The inconveniencies arising from

the crowded state of the Thames at all times, but particularly at those periods when ships arrive in large fleets, were long felt and complained of by all the principal merchants; and, from reference to the reports of committees, and other publications on the improvement of the port of London, it appears that different plans had been frequently suggested to extend the convenience of the legal quays both above and below London-bridge. It was not, however, till the year 1793, that a plan was first projected for making wet docks for the port of London, in Wapping, the Isle of Dogs, and at Rotherhithe; the preference was intended to have been given, in the first instance, to Wapping, from its vicinity to the city, the seat of business, and to the custom-house; one end of the spot fixed upon being within a quarter of a mile of the Tower of London, and the eastern extremity of it about one mile. The plan of docks meeting with approbation and encouragement, they were circulated generally to all the great leading interests in and out of parliament, and to all the principal persons connected with the commercial interest.

In 1794, a general meeting of merchants was convened, to consider the great inconveniencies of the port of London, arising from the crowded state of the river, and the confined extent of the legal quays; when a committee was appointed to consider of the best mode of relief, who took into consideration all the plans which had been suggested; and at length they approved of the plan for making wet docks in Wapping, with wharfs and warehouses on their borders, as the most effectual means of remedying the evils of the port. In consequence of this determination, Mr. Daniel Alexander, an ingenious architect and surveyor, who had been making great alterations at Rochester-bridge, and who was conversant with operations connected with the tide, was directed to make a survey, and prepare plans and estimates for forming docks at Wapping, with the addition of a cut or canal leading to them, from that part of Blackwall where the present East-India docks have been made, and along a line where the West-India docks have been since formed. The plans and estimates were laid before a general meeting of merchants on the 22d of December, 1795, when they were unanimously approved, and a subscription of 300,000l. was filled in a few hours, for carrying the same into execution. A committee was appointed to make application to parliament, who presented a petition in January 1796, which was referred to a select committee of the house of commons, who were directed “to enquire into the best mode of providing sufficient accommodation for the increased trade and shipping of the port of London.” The application of the merchants experienced great opposition both from the corporation of the city of London and from private interests; and a great variety of plans and projects were brought forward for the extension of the legal quays above and below the bridge, and the improvement of the river, with or without docks. This caused much delay; but the necessity of providing some additional accommodation for the increasing multitude of ships which filled the river became every day more evident; and, upon a comparison of the various plans for making docks in different situations, it was generally admitted, that wet docks might be formed in various situations at a much less expense than on the spot fixed upon for the London docks at Wapping; but that the situation of the latter, from its vicinity to the seat of commerce, would much more than counterbalance the additional expense of their formation. Through the great exertions and perseverance of William Vaughan, esq. assisted by other highly-respectable mercantile characters, the various obstacles to the plan of the London Docks were successively overcome; and, in August 1798, the subscribers gave notice, that in the ensuing session of parliament they meant to renew their application for forming docks at Wapping, and in December following they petitioned for leave to bring in a bill for this purpose. A few days after a petition was presented by the corporation of London, with a view to similar objects, and by making a navigable canal or passage across the Isle of Dogs from

from Blackwall to Limehouse, purchasing the mooring-chains in the river, which were mostly private property, and appointing harbour-masters to regulate the navigating and mooring of vessels in the port; they also proposed to make wet docks in some part of the Isle of Dogs for the reception and discharge of West-India shipping. The latter part of the plan had however been taken up by a number of West-India merchants and planters, who had formed themselves into a company distinct from the subscribers to the London Docks, for the purpose of forming docks for the reception of the West-India trade only, either alone or in conjunction with the other improvements projected by the corporation. The general conviction of the necessity of some measure of this kind was not sufficient to produce a union of interests in favour of either of the proposed plans. At length the committee of the house of commons made a report, recommending the formation of wet docks as the only remedy for the evils of the port; and that they should be made both at Wapping and the Isle of Dogs; but that the latter should be adopted first.

The corporation of London and the West-India merchants forming a junction, the act for making the West-India docks passed in 1799; in 1800, an act was passed for forming the docks at Wapping; and, in 1803, for making docks at Blackwall for the East-India trade. These several undertakings, all arising out of the original project of the London Docks, have been since carried into execution, to the great convenience of the commerce of the port of London, and the permanent benefit of the subscribers, by whom the large sums necessary for accomplishing them were advanced.

The act for forming the London Dock Company was the second in point of time; but it meets us first in our eastern progress. This act passed on the 20th of June, 1800. The capital stock of the company was originally 1,200,000*l.* and they were authorised to borrow, at interest, the further sum of 300,000*l.* but, a still larger capital being found necessary for completing the undertaking, they applied to parliament, in 1804, for leave to augment their capital stock by 500,000*l.* and, having since obtained another act for the liberty of raising a further sum of 500,000*l.* the total capital stock the company are now authorised to raise is 2,200,000*l.* The dividends to be paid thereon to the subscribers, are limited to 10 per cent. per annum. The management is vested in twenty-four directors, elected annually, of whom the lord-mayor is one. The original plan of these docks (with the canal, which had been abandoned) was submitted by the directors to the consideration of four civil engineers of the first eminence and respectability, viz. Messrs. Robert Mylne, John Rennie, Joseph Huddart, and William Chapman; and underwent some alterations by them. The dock and basin, as settled by them, were then executed under the direction of Mr. Rennie; and the warehouses and wall by Mr. Alexander. The dock, basin, and warehouses, are of brick and stone, are well designed, in a chaste and grand style, and happily executed, producing a noble effect. The principal dock is 1260 feet long, and 690 feet broad, containing twenty acres, and the other basin three acres; and the whole capable of containing about two hundred and thirty ships of 300 tons burthen and upwards. In the act, a power was preserved to make a second dock and basin to the eastward, with an entrance at Shadwell, containing an area of fourteen acres. The stacks of warehouses are furnished with party and cross sub-divisionary walls through the roofs, as a protection against fire. On the east side is the tobacco-warehouse, planned to contain 24,000 hogheads of tobacco; and spacious arched vaults underneath for wine. The whole building stands upon an area of near five acres, covering more ground, under one roof, than any public building or undertaking, except the pyramids of Egypt. Its roof is light, airy, and simple, and adds greatly to the beauty and boldness of the design, and stands unrivalled in architectural buildings of its kind. The company was re-

quired to complete the docks within seven years, which was afterwards extended to twelve years. On the 24th of January, 1805, they gave notice, by advertisement, that the basin at Bell-dock, and the dock communicating therewith, and also part of the warehouses, vaults, and quays, were ready for the reception of ships and landing their cargoes; in consequence of which, the dock was opened for public use in the following week. All ships laden with wine, spirits, tobacco, and rice, must unload in these docks for the term of twenty-one years; with all other vessels the use of the docks is optional, excepting those from the East and West Indies. The ships discharge their cargoes under the company's cranes, by their own crews. In these docks, cooking and residence on-board are allowed, but no lights are permitted after certain hours. The whole is surrounded by a wall, the gates of which are shut at stated hours. There is a neat swivel cast-iron bridge over the entrance-lock at Wapping. An excellent double steam-engine was erected, while the docks were making, to carry off the water; it is not now worked. The rise of the tide at the entrance-lock of the basin, is four feet lower than the dock itself.

Pursuing our way through Wapping, amidst the sounding blows of the hammer against the sides of ships under repair, we indulge in the recollection of the famous simile in the poem of Apollonius of Rhodes, where, describing the fight between Amycus and Pollux, he says:

———— The woods re-echo to the blows.  
Such is reverberated from the cliffs,  
A constant din, when on the shelving shore  
Of some deep-curved bay, or fedy creek,  
The busy shipwrights, in the bulging planks  
Drive and beat on the diamond-headed nails  
With sounding hammers.

Amidst the noise and bustle of sailors of all nations, and the screaming of parrots hanging at the windows of sea-faring men, we arrive at the WEST-INDIA DOCKS, which, by a most bold and well-executed plan, communicate from Blackwall to Limehouse Reach; separating entirely the Isle of Dogs from the large fields known under the name of Poplar.

The act for establishing this company was passed on the 12th of July, 1799. Their original capital was 500,000*l.* which they were empowered to increase to 600,000*l.* This capital was, however, found insufficient for completing the undertaking; and in 1802 the company were authorised to add 200,000*l.* to it, making their capital 300,000*l.* which has been since increased to 1,200,000*l.* The dividends to be paid thereon to the subscribers, are not to exceed 10 per cent. per annum, to which rate they have already attained. The concerns of the company are under the management of twenty-one directors, eight of whom are chosen by the corporation of London, four of them being aldermen, and four common-council men. The works were begun on the 2d of February, 1800; and the first ship entered the homeward-bound dock on the 27th of August, 1802. For the dimensions of these docks, and some other particulars, see ISLE OF DOGS, vol. xi. p. 408. —The use of these docks is limited to the West-India trade for twenty-one years. The company take the ships under their sole direction, of unloading and management, from the moment they enter the docks, discharging the same by their own servants; the crews are dismissed; and neither cooking nor residence allowed on-board any of the vessels while they remain in the homeward-bound docks, the gates of which are shut every evening at stated hours. A military guard is stationed without the docks day and night. The distance from the standard in Cornhill to the nearest dock-gates is rather more than three miles, and to the further extremity of the dock-wall about half a mile more; a considerable expense of cartage is unavoidably incurred, by the ships discharging at this distance; but there is an excellent road both to these docks and to the East-India Docks. The docks and warehouses are hand-

some

soms and spacious, forming a noble and interesting object, which must impress every one with an idea of the vast magnitude of the branch of commerce to which they are appropriated. The warehouses on the north and west sides are ten in number, with partition-walls up to, but not through, the roof; and are capable of containing 8000 hogheads of sugar each; on the south side are extensive warehouses for rum. The docks were planned and executed by William Jessop, esq. civil engineer, and the warehouses by Mr. Gwylt, surveyor and architect.

To the north-east of these are the EAST-INDIA DOCKS. The act for establishing this company passed on the 27th of July, 1803. Their original capital was 200,000*l.* divided into shares of 100*l.* each; and they were authorised to increase the capital to 300,000*l.* if it should be found necessary. In 1806 they were empowered to add 100,000*l.* more to their capital, making in the whole 400,000*l.* The dividends to be paid to the subscribers are, as in the two preceding companies, limited to 10 per cent. The concern is under the management of thirteen directors, who must be holders of at least twenty shares of the company's stock, and four of them must be directors of the East-India company. The first stone of these docks was laid in March 1805, and the first ship entered them in August 1806. The dimensions of the dock for unloading inwards are 1410 feet in length, and 560 feet in width, containing about 18½ acres; the dock for loading outwards, which was a part of Mr. Perry's dock, is 780 feet in length, and 520 feet in width, containing 9½ acres. The extent of the entrance-basoon, which connects them with the river, is 2½ acres; the length of the entrance-lock 210 feet, the width of the gates 48 feet in the clear, and the depth of water at ordinary spring-tides 24 feet. These docks are appropriated solely to the reception of East-India shipping, and the company undertake to deliver the whole of the cargoes. No cooking, fire, or residence on-board, are permitted in these docks, the gates of which are shut every afternoon at four o'clock. The distance from the East-India warehouses being about four miles, the goods are conveyed thither in caravans of a particular construction, by an excellent road, towards the formation of which 10,000*l.* was contributed by the company.

*Perry's Dock* at Blackwall, and *Greenland Dock* on the opposite side of the river, were private property, having been formed by enterprising individuals, long before any public accommodation of this kind existed in the port of London. The first now forms one of the East-India Docks; and *Greenland-Dock*, hitherto appropriated to the purposes of the whale-fishery, has likewise been purchased by a company. The Surrey Canal Company have a dock at the entrance of their canal for small vessels, and have raised a considerable capital.

It affords a striking proof of the wealth and prosperity of the city of London to find, that, in the course of about ten years, there has been expended a capital of between four and five millions in these great undertakings for providing accommodation and security to its shipping and commerce. By means of the Docks, also, a considerable space of distance, of time, and much labour, are spared, by shortening the way to the centre of business, the city, from which the imported goods are sent to all parts of the united kingdom for home-consumption, or afterwards again exported to all parts of the globe.

Leaving these stupendous works, and returning westward towards the centre of our observations, we pass by the spot where, since the fire of London in 1666, this disastrous element has made the most dreadful havoc. We mean the conflagration at Ratcliffe. (See p. 126.) The church, which belongs to this hamlet, is called St. George's in the East, to distinguish it from many others; and was built between the years 1715 and 1729. It is a massy structure, erected in a very particular taste. The floor is raised a considerable height above the level of the ground; and the principal door, which is in the west front of the tower, has an ascent to it by a double flight of steps, cut with a sweep,

and defended by a low wall of the same form. But the greatest singularity in this building is, there are four turrets over the body of the church, and one on the tower; the latter of which is in the form of a fortification, with a staff on the top, for an occasional flag. This church is a rectory, the patronage of which, like that of Stepney, is in the principal and scholars of King's-hall and Brazen-nose college, Oxford.

The only remarkable building in this parish, except the church, is Raine's hospital; which is a very handsome edifice, situated in Fowden-fields. It was erected by Mr. Henry Raine, brewer, in the year 1737, who endowed it, by a deed of gift, with a perpetual annuity of 240*l.* per annum, and added the sum of four thousand pounds, in South-sea annuities, to be laid out in a purchase. The children of this hospital, which contains forty-eight girls, are taken out of a parish-school almost contiguous to it, erected in the year 1719 by the same gentleman, at the expense of about two thousand pounds, who also endowed it with a perpetual annuity. These children are supported with all the necessaries of life, and are taught to read, write, sew, and do household work, in order to qualify them for service; to which they are put, after having been three years on the foundation. He also directed the sum of one hundred pounds to be given, every May-day and Christmas, as a marriage-portion to one of these girls, to be chosen by lot out of six.

Nicholas Gibson's school for sixty boys, erected in 1537, is a standing monument of the liberality and good sense of our ancestors; and, with others, must contribute to vindicate them from the ungrateful accusation of wishing to keep down the veil of ignorance upon the eyes of the rising generation. He was sheriff of London: and added to this little seminary fourteen almshouses for as many widows; seven from Stepney-parish, and seven of the members of the Coopers' company.

At a little distance, and on the south of Ratcliffe Highway, is the parish of St. Paul, Shadwell, which was anciently a hamlet belonging to Stepney; but, being greatly increased in the number of its inhabitants, Thomas Neale, esq. erected a church, in the year 1656, for their accommodation; and, in 1669, this district was, by act of parliament, constituted a distinct parish from that of Stepney. The church, which is but a mean edifice, built with brick, is eighty-seven feet long, and sixty-three broad; the height, to the roof, is twenty-eight feet, and that of the steeple sixty. The body has a few windows, with rustic arches, and some very mean ones in the roof. At the corners of the building are balls, placed on a kind of small pedestals. The tower is carried up without ornament, and is terminated with balls at the corners, in the same manner as the body of the church, and is crowned with a plain low turret. It is a rectory, the advowson of which is in the Dean and Chapter of St. Paul's, as ground-landlords of the whole parish.

This parish is one of the Tower-hamlets. It received the name of *Shadwell* from a spring, or well, which at this time lies buried under a pillar, near the south-west corner of the church, within the church-yard. The south part of the parish, denominated Lower Shadwell, being anciently part of Wapping-marsh, was within the course of the river Thames, till it was embanked. The streets in this parish, called Old and New Gravel-lanes, were so denominated from their being anciently ways for carts, laden with gravel, from the neighbouring fields, to pass to the Thames, where it was used in ballasting ships, before ballast was taken out of the said river.

In the north-east part of this parish, in a place now called Sun tavern-fields, a Roman cemetery was discovered, about the year 1615, wherein were found two coffins; one whereof, being of stone, contained the bones of a man; and the other of lead, beautifully embellished with scollop-shells, contained those of a woman, at whose head and feet were placed two urns, of the height of three feet each; and at the sides, divers beautiful red earthen bottles, with a number of lachrymatories, of hexagonal and octagonal form; and

and on each side of the inhumed bones were deposited two ivory sceptres, of the length of eighteen inches each; and upon the breast the figure of a small Cupid, curiously wrought, as were likewise two pieces of jet, resembling nails, of the length of two inches. The person here interred, according to the opinion of that judicious antiquary, sir Richard Cotton, who made the discovery, must have been the consort of some prince, or Roman prætor, by the decorations of the coffin, and things therein contained. At the same time were likewise discovered a great number of urns, with Roman coins, which, on one side, had this inscription, *Imp. Papienus Maximus, P. F.*

We come now into Wellclose-square, which has sometimes been called Marine-square, from the number of sea-officers who generally reside in it. It is a very neat square, though of no great extent. The principal ornament in it is the Danish church, erected in the year 1746, which is situated in the centre, in the midst of a church-yard, well planted with trees, and surrounded by a handsome wall, adorned at equal distances with iron rails. The church is a commodious and elegant structure; and, though the architect appears to have understood ornaments, he has not been too lavish in the use of them. The edifice consists of a tall and handsome body, with a tower and turret. The body is divided, by the projection of the middle part, into a fore-front in the centre, and two small fronts. Over the principal entrance is a group of figures, representing Charity, and, on each side, in niches, are figures of Faith and Hope. At the west end is the tower, and at the east it swells into the sweep of a circle. The corners of the building are faced with rustic; the windows, which are large and well-proportioned, are cased with stone, with a cherub's head at the top of the arch; and the roof is concealed by a blocking course. The tower has a considerable diminution in the upper stage, which has on each side a pediment, and is covered by a dome, from which rises an elegant turret, supported by Composite columns.

On a line with this square, but farther to the east, is another, called Prince's Square; which is neat, and also chiefly inhabited by the families of gentlemen belonging to the sea. The principal ornament of this square, is the church and church-yard belonging to the Swedes. The front of this building is carried up flat, with niches and ornaments; and on the summit is a pediment. The body is divided into a central part, projecting forwarder than the rest, and two sides. The central part has two tall windows, terminated by a pediment, in the midst of which is an oval window; but in the sides there is only a compartment below, with a circular window above. The corners of the building are wrought in a bold plain rustic. The tower rises square from the roof, and at the corners are placed urns with flames; from thence rises a turret, in the lantern form, with flaming urns at the corners; the turret is covered with a dome, crowned with a ball, supporting the vane, in the form of a rampant lion.

On the west of these squares is East Smithfield, which in the reign of Henry III. was an open field, and where for fifteen days, from Whitfun-eve to the first Sunday after Trinity, an annual fair was held in virtue of a royal grant. It is now covered with lanes, alleys, and courts. Stow has preserved a very curious record concerning this place, proving that it was from time immemorial within the liberty of the city of London; and that in this field tilts and tournaments were held with great solemnity in the reign of Canute the Dane.

Between East Smithfield and Tower-hill once stood a religious foundation, called by the several names of the New Abbey, the Abbey of Graces, and Eastminster. This house was founded by king Edward III. but was suppressed at the general dissolution of religious places in the reign of king Henry VIII. and on the site of it was erected the Victualling-office; but the commissioners having lately removed to Somerset-place, this building has now made room for the New Mint. See p. 443.

If we happen to pass the end of this street, which is

called *Rosemary-lane*, but more commonly *Rag Fair*, a name which seems to have entirely superseded in smell as well as in denomination the sweet plant by which it was anciently called, we shall have occasion to inspect one of the most curious scenes—ragged Jews selling rags. The articles of commerce by no means belie the name. There is no expressing the poverty of the goods (says Mr. Pennant), nor yet their cheapness: "A distinguished merchant, engaged with a purchaser, observing me to look on him with great attention, called out to me, as his customer was going off with his bargain, to observe that man; For, says he, I have actually clothed him for fourteen pence." It certainly requires a very considerable share of speculative calculation to apprehend how this merchant could have a profit, as well as the street-walking Israelite who bought these articles from a servant, who perhaps had also a profit in the business.—A large building on the north side of this street, opening at both ends, with two counters, is called the Clothes Exchange.

In Well-street, near the east end of Rosemary-lane, is the Royalty Theatre, built by subscription in the year 1786, with a view to the representation of plays; but, the proprietors not having had the precaution to secure a legal power for that purpose, the scheme failed, and only one performance of that description was given. After this, the theatre was closed for a short time, and re-opened with a license, obtained under the act of parliament for authorizing the magistrates to grant permission for the exhibition of interludes, pantomimes, and other species of irregular drama. Since that time, it has been in the occupation of various adventurers, but with very indifferent success, until lately, that Mr. Astley, jun. has opened it, in the winter season, upon a plan similar to his summer theatre. It is an extensive brick building, without any external decoration: the interior is, however, very commodiously and neatly fitted up.

On the north are Goodman's Fields. Stow, in his simple manner, tells, that in his time one *Trolop*, and afterward *Goodman*, were the farmers there; and that the "fields were a farme belonging to the said nunrie; at the which farme I my selfe (says he), in my youth, have fetched manye a halfe-penny-worth of milk; and never had lesse than three ale pints for a halfe-penny in the summer, nor lesse than one ale quart for a halfe-penny in the winter, alwaies hot from the kine."—The theatre in Goodman's Fields will always be remembered as the stage where Garrick first showed those powers, which, for such a number of years, astonished and charmed the public. One Odel founded the playhouse in this square, in 1728. As sir John Hawkins expresses it, "a halo of brothels" soon incircled that, as it does all theatres; and drove away the industrious inhabitants. This theatre was rebuilt, in an expensive manner, by Henry Giffard, in 1737; but was suppressed by the act for the licensing of places of dramatical entertainment. Yet it was supported a few years by an evasion; during which time, Mr. Garrick entered himself of the company. See the article GARRICK, vol. viii. p. 259.

In our second visit to the Isle of Dogs, coming back through *Poplar*, a marsh anciently so called from a considerable grove of trees of that name over shadowing the whole place, we pass through *LIMEHOUSE*, (see vol. xii. p. 722.) and, winding along *Salmon-lane*, we come to the considerable hamlet of *Stepney*. The church is dedicated to St. Dunstan. It was originally one of the largest parishes in England, as will be evident from the following parishes having been all taken out of it, viz. St. Mary, Whitechapel; St. Mary-le-Bow, Stratford; Christchurch, Spitalfields; St. Matthew, Bethnal-green; St. Anne, Limehouse; St. George, Ratcliff-highway; and St. John, Wapping. Though all these parishes have been separated from it, it still remains one of the largest within the bills of mortality; and contains the hamlets of Mile-End Old and New Town, Ratcliff, and Poplar.

It is not recorded at what period the present church was

erected; however, there was a church here so long ago as the time of the Saxons, when it was called the church of All Saints; and we read of the manor of Stepney under the reign of William the Conqueror, by the name of *Stipenhade*, or *Stiben's heath*; it does not appear when the church again changed its name, by being dedicated to St. Dunstan; but, if we consider the word *Stiben* or *Stipen* as a corruption of *Stephen* or *Stephanus*, we may conjecture, and with great plausibility, that this church passed from under the patronage of All Saints to that of a single saint, Stephen; and from him to that of one who perhaps was no saint at all, though called St. Dunstan.

From this place we deambulate through several agreeable walks, among which Stepney Green is not the least interesting; and, entering Mile End at Assembly-row, and opposite nearly to the Trinity and Bancroft's alms-houses, we direct our way back to the west.—The alms-houses of the Trinity company were founded in the year 1695 by the corporation, on a piece of ground given to them for that purpose by Capt. Henry Mudd, who was an elder brother. They are twenty-eight in number, and devoted to the residence of decayed commanders of ships, or mates or pilots, and their wives or widows, whose pensions are 18l. per annum, and a chaldron and a half of coals. In the centre of the quadrangle is the statue of Capt. Saunders, who died in 1721, having bequeathed 100l. and the reversion of an estate in Lincolnshire of 147l. per annum to these alms-houses; this reversion fell in about the year 1746, when this statue was erected. On the north side of the square is a very neat chapel, in the windows of which are some coats of arms in stained glass, which were removed from the old hall of the Trinity House at Deptford, when it was taken down in 1787, and were set up in this chapel in 1793.

A little beyond this, stands a handsome building, called Bancroft's alms-houses, in which the founder has blended the objects of providing a comfortable retirement for old age, and the instruction of young boys.—Francis Bancroft was the grandson of archbishop Bancroft; his circumstances becoming much reduced, he was engaged for many years as one of the lord-mayor's officers, during which time he acquired a fortune of 28,000l. in real and personal estate, which he bequeathed by his will, dated March 18, 1727, to the Company of Drapers, in trust, for the purchase of a piece of ground for erecting and endowing an alms-house, with convenient apartments for twenty-four alms-men, poor old members of that company, a chapel, and school-room for a hundred boys, with two dwelling-houses for the masters of the school. He directed for each alms-man 8l. with half a chaldron of coals, and a gown of baize every third year; and the school-boys to be clothed, and taught to read, write, and cast accounts, for which the masters were to receive salaries of 30l. each, in addition to their dwelling-house; he also bequeathed 20l. yearly for coals and candles, for the use of the masters and schools, besides books, paper, pens, and ink; 5l. for a dinner to the committee of the court of assistants of the Drapers' Company at their annual visitation; 3l. 10s. for two half-yearly sermons to be preached at the parish churches of St. Helen Bishopsgate, and St. Michael Cornhill, or elsewhere, in commemoration of the founder, out of which the minister to have 20s. the reader 10s. and the clerk and sexton 2s. 6d. each; at which the alms-men are to be present, and the boys also, who are to be catechised by the reader; and, when placed as apprentices, 4l. to be given with each of them; but, if they are only put to service, they are to receive 50s. for clothing. In the year 1735, the company, pursuant to their trust, erected a school at Mile End. The whole building occupies three sides of a spacious quadrangle; on the east and west sides are the habitations of the pensioners; in the centre of the north side is the chapel, which has a handsome stone portico, supported by pillars of the Ionic order; the school and the dwelling-house of the master adjoin the chapel. The company have taken such

care of the estate as to be enabled to increase their annual pensions to the alms-men from 8l. to 18l. each. Bancroft lies buried at the church of Great St. Helen's, Bishopsgate-street, in a vault, over which he erected a monument in his life-time. His body is embowelled and embalmed, and laid in a kind of chest, with a lid that lifts up and down, but not fastened; and his face is covered with a square glass, fixed in the lid.

Let us remark, with lively feelings of gratitude, how careful our ancestors were in selecting places of a salubrious and pleasing retirement for old age. Most of those houses of refuge for the decrepid and the feeble were surrounded with groves of trees; and brooks of clear water used to run across the gardens, cultivated by the aged hands of the peaceful inhabitants. But the increase of trade in the metropolis, and a contagious rage for building, have surrounded those tranquil abodes with stacks of smoky chimneys, covered the brooks with busy streets, and transformed the gardens into noisy warehouses; so that, although they were distant from London, London has built itself up to them; and, in spite of their shabby titles, Duck-lane, Dog-lane, Red-Cow-lane, &c. found plenty of inhabitants.

On our left, and nearly opposite to these charitable establishments, we meet another called the London Hospital. It is a plain neat building in brick, well adapted for the benevolent purpose to which it is devoted—the reception of sick and lame indigent persons, especially manufacturers or seamen in the merchant-service. This extensive charity is supported by voluntary contribution, and has accommodation for nearly 300 persons. At its institution, the patients were received into a large house in Prescot-street; but, that being too small for the purpose, this spacious edifice was erected in a situation which, by its airiness is conducive to the restoration of health and strength.

Looking towards the south-west, our eyes dart through Whitechapel nearly as far as the pump at the end of Aldgate, through clouds of dust raised by the carts, waggons, stages, gigs, &c. which crowd the street. On the left-hand side is a long range of butchers' shops; many of these are carcase-butchers, and not retailers: others kill meat in a peculiar manner for the Jews.—The great quantity of calves brought from Essex and other eastern counties, has probably given rise to the following anecdote: An apprentice-boy being with his master in Epping forest, employed in the cruel amusement of bird-neiting, were disturbed by the appearance of a couple of stout robbers. These fellows, (the robbers we mean,) finding their prey of little value, left them, and walked off. As soon as they were out of sight, the master says, "Jack, how did I look when they came up? I was not frightened, was I?" "No, master," said the lad, "you looked like a lion."—"A lion!" replied the praise-tickled cobbler with astonishment; "and how do you know a lion? have you ever seen one?"—"Aye, master, I have seen many cart-loads of them in Whitechapel."—Hence the joke of calling a calf a *Whitechapel lion*.

The opposite side of the way abounds with inns for travellers; and has not any other appearance but what it is, one of the suburbs of a great town. The church from which it derives its name is St. Mary Matfellow, a chapel of ease to St. Dunstan's parish, Stepney. The etymon of the appellation *Matfellow* is not easy to ascertain. Some are of opinion that it arises from a *felon* having been put to death by the women of Whitechapel for having murdered his benefactress—he was a native of Brittany. Others pretend that it means in Hebrew the fame as *puerpera* in Latin, "a woman lately delivered of a child."—The altar-piece in this church, designed to libel the dean of Peterborough, has been noticed under the article KENNEL, vol. xi. p. 667. The picture has since been replaced; but the offensive likenesses is expunged.

In this parish some of our nobility had formerly their villas, for the sake of country air. Here Cromwell earl of Essex, the short-lived minister of Henry VIII. had a house;

*The East-India House, in Leadenhall Street.*

*North Front of Guy's Hospital.*

*J. Poff. Sculp.*

house; and the famous Gondamor retired here, when disengaged from his bubble, James I.

We now proceed to the very spot where the old gate, the eastern entrance to the city, called *Aldgate*, originally stood; (see p. 103 of this volume, and Plate III.) At the junction of Leadenhall-street and Fenchurch-street, stands a stone pump, the water of which is reckoned most salubrious; and behind is a remarkable fruit-shop, one of the best in the eastern part of the town; it is generally well-stocked with pine-apples, grapes, and other dainties, which our good citizens love to indulge in, though at no small cost.

On our left in Leadenhall-street, we find the spot where a hardware-man, priding himself in his love for slovenliness, was known by the name of *Dirty Dick*; yet, strange to tell! people were found, and in no small quantity, who would not grudge a compliment of a few shillings, by buying some article they did not want, in order to be admitted into his filthy sanctuary, the abode of spiders and cobwebs, crickets, cockroaches, mice and rats, and the peaceful empire of undisturbed dust. To dust *Dirty Dick* is gone; yet we are told, that, for several years after death had brushed him off, the tenants of the house kept a part of these dirty premises still uncleaned, and used to show it for money: at any rate, we know that the upper rows of panes in the shop-windows were kept dirty and unattended to attract customers, till very lately. When foreigners read this passage of our survey, they must draw this conclusion—that the English are so naturally fond of cleanliness, that any thing particularly dirty appears to them a phenomenon.

Beneath a house, at the south-east corner of this street, are the remains of the parochial chapel of St. Michael, which will serve to show to what a prodigious height this part of the city has been raised; for the shafts of the pillars are buried at least sixteen feet in the ground, which, with ten feet for the present internal altitude, warrants the conclusion, that the street-pavement is, at this time, twenty-six feet higher than the level must have been when the chapel was founded. The two aisles remain, the pillars and arches of which are in fine preservation, and the keys of the arches are sculptured with well-executed masks; the walls are of square pieces of chalk, in the manner of Rochester castle, and exhibit as skilful masonry as any building in this age of refinement. The length of the chapel, from north to south, contrary to the common mode of building sacred edifices, is forty-eight feet; and, from east to west, its breadth is sixteen feet.

Stow records another proof of the increased height of this neighbourhood. He says, "Betwixt this, Belzeter's (Billiter) lane, and Lime-street, was (of later time) a frame of three fair houses, set up in the year 1590, in place where before was a large garden-plot, inclosed, from the high-street, with a brick-wall; which wall being taken down, and the ground digged deep for cellarage, there was found, right-under the said brick-wall, another wall of stone, with a gate, arched of stone, and gates of timber, to be closed in the midst, towards the street. The timber of the gates was consumed; but the hinges of yron still remained on their staples, on both the sides. Moreover, in that wall were square windows, with bars of yron, on either side the gate; this wall was underground, about two fathoms deepe, as I then esteemed it; and seemeth to bee the ruins of some house burned in the reign of king Stephen, when the fire began in the house of one Alewarde, near London-stone, and consumed east to Aldgate; whereby it appeareth how greatly the ground of this citie hath been in that place rayed."

On the right, and at the south-east corner of St. Mary Axe, stands the parish-church of St. Andrew the Apostle, better known by the name of St. Andrew Undershaft. It obtained the latter appellation from a high May-pole, or shaft, which was set up, annually, on May-day, in the middle of the street, opposite the south door of the church, and was higher than the church-steeple. After

the insurrection of the apprentices, on Evil May-day, in the year 1517, (see p. 73.) the shaft was hung upon a range of hooks, under the pent-houses of a long row of neighbouring buildings, where it remained until the third of Edward VI. when a fanatic, called sir Stephen, curate of St. Catharine Creechurch, preaching at St. Paul's Cross, declaimed against it, as being made an idol, by naming the church *under that shaft*; which so inflamed his equally-fanatic auditory, that, in the afternoon of the same day, it was, with great labour, lowered from the hooks, and sawed in pieces; each man taking for his share the portion which had lain over his door.

The church was originally founded in 1362; but it had become so ruinous, that the present one was begun to be built about the year 1502, and for the most part finished at the charge of William Fitz-Williams, who was sheriff in 1507; the north side, however, was erected by Stephen Jenyns, lord-mayor in 1508; whose arms are carved above all the pillars on that side. It was not completed until 1532. This church escaped the flames in 1666. It is a plain Gothic structure, with a square tower, terminated by battlements, with pinnacles at the corners; within which rises a turret, that contains six bells. The length of the church is ninety-six feet; its breadth fifty-four, and its height, to the roof, forty-two; the altitude of the square tower is seventy-four feet, and that of the turret seventeen. It is a rectory, in the patronage of the bishop of London. The window over the altar contains the portraits of Edward VI. Elizabeth, James I. and Charles I. and II. and is a fine specimen of the art of painting on glass in the seventeenth century.

In this church was interred the faithful and able historiographer of the city, to whom in this article we have been so much indebted—John Stow. He died on the 5th of April, 1605, and, to the shame of his time, in great poverty. His monument is still in being; he is represented sitting with a table before him, on which is an open book, with many others lying beside him. The figure has a reverend aspect, with a short white beard, the crown of the head bald, and short hair above the ears; it is of terra-cotta, or burnt earth, painted; a common practice in those days, though now considered a new invention.

The street, at the corner of which this church stands, took its name from another which stood very near, on the north side also of the street, and was dedicated to the Virgin Mary, with the addition of "at the Axe," for distinction, and from a sign which hung opposite the east end of it. In 1565, this parish was united to that of St. Andrew; the church transformed into a warehouse, and at last entirely pulled down.

On our left rises in pompous majesty the portico of the East-India House. The whole of the building has an appearance suited to the purpose, and befitting the dignity of the rulers and proprietors of a large portion of Hindoostan. It was greatly enlarged and newly fronted in the year 1799. It occupies the site of the house and gardens formerly belonging to the earls of Craven, of whom the company rented it prior to 1726, when the old East-India-house was built. The principal entrance, from Leadenhall-street, is through a portico, consisting of six fluted columns of the Ionic order, supporting a frieze decorated with antique ornaments, surmounted by a pediment, in the tympanum of which is an elegant group of emblematical figures. The principal figure in this group, represents his majesty, leaning on his sword, which is in his left hand, and extending the shield of protection, with his right arm, over Britannia, who is embracing Liberty. On one side Mercury, attended by Navigation, and followed by tritons and sea-horses, emblematical of Commerce, introduces Asia to Britannia, at whose feet she pours out her rich productions. On the other side is Order, accompanied by Religion and Justice. Behind these appears the city-berge, and other emblems of London, near which are Integrity

and Industry. The western angle is filled by the Thames, and the eastern by the Ganges; indicative of their respective positions. On the apex of this pediment is a pedestal, on which is Britannia seated by her lion, and holding in her left hand a spear with a cap of liberty upon it. Above one extremity of the portico is Europe, seated on a horse; and, above the other, Asia, on a camel.

Such is the design of this grand entrance, which is certainly one of the principal ornaments of the city; but which is not without faults. Every one is astonished at the glaring impropriety of putting the buckler of protection in the king's right hand, and the sword in his left; a mistake, which, a century or two hence, may cause the beholders to suppose, and the antiquaries of that time gravely to decide, that George III. was left-handed. It is impossible to guess where such a mistake originated, or to justify its having been allowed to remain. However, when the spectator grows too angry at the blunder, he may turn his back, and then he will find all right if he looks at the reflection of the bas-relief in the shop-window opposite to the building. We must not cavil at the introduction of *Integrity*, just by *Industry*, in this complicated group of figures; for it is meet she should be there, if nowhere else.

Under the portico is the door of the hall, from which a long passage leads to a court, surrounded by offices for different purposes. In it are two of Tippoo's long tiger-guns, the muzzles of which are moulded to represent the extended jaws of that ferocious animal; the workmanship of these pieces is worthy of admiration.

The court-room is on the right of the entrance; it is very elegantly fitted up, and well lighted by two rows of windows on the left-hand side. The chimney-piece is of fine white marble, the cornice of which is supported by two caryatides of statuary marble, on pilasters of veined marble. Above this is an emblematical design, in fine white marble, representing Britannia seated on a globe, under a rock, by the sea-side, with a trident in her left hand, and her right arm on a shield, bearing the union cross. Behind her are two boys; one leaning on a cornucopia, the other playing with its contents. Before her are three female figures: The first, representing India, offers her a casket of jewels, from which a string of diamonds is hanging down; next is Asia, holding a censer in one hand, and the bridle of a camel in the other; the third figure represents Africa, decorated with the spoils of an elephant, and one hand resting on the head of a lion. On the shore is the god of the Thames, holding a rudder in his right hand, and a cornucopia in his left. Above all are the company's arms, tastefully decorated. In this room are elegant paintings of Fort St. George, Bombay, Fort William, Tellicherry, the Cape of Good Hope, and St. Helena. There are many other good paintings in the different rooms, particularly two portraits of marquis Cornwallis and governor Hastings, in the room for the committee of correspondence, both bequeathed to the company by William Larkin, esq. In the upper story of the building is a room fitted up as a library, in which a collection of books in all the oriental languages is forming. It is already rich in specimens of Hindoostanee, Persian, and Chinese, manuscripts and printed works, and contains a complete set of the materials for printing a book in the Chinese language; consisting not only of the blocks with which each page is printed, but also of the tools for cutting them; the ink, press, &c. Here is also a museum of natural curiosities, and several specimens of antiquities, particularly the Roman pavement, lately found before the house in Leadenhall-street.—One of the principal and richest curiosities of this museum is the head of a tiger, the natural size, in massive gold. The eyes are made out of a singular precious stone, and the teeth are of the finest crystal; the tongue is moveable. This belonged to the unfortunate and ill-advised Tipoo; and used to stand in one of his most favourite apartments. It is said that, when any order was issued from his hand, the paper was placed

in the tiger's mouth as a letter-box for his slaves to take it and carry it to its address. We cannot say here, *Materia superabat opus*, ("The beauty of the workmanship surpassed the value of the materials;") for the head is coarsely and unmeaningly executed.—A singular piece of mechanism is also shown in this room. It is the representation in wood of a tiger devouring an European; a pleasing subject for the despot of Mysore's speculations; but what adds to the barbarous horror of the group, is a sort of organ concealed in the body of the animal, which, when set to play, imitates, by melancholy starts and dreadful intervals, the screams of the man and the roaring of the beast.—The colours taken at Seringapatam are also deposited here; and a great number of curious Hindoo idols deserve the attention of the visitor.

The first object worthy of our attention on the west of Lime-street, which gives a name to the ward, is Leaden-Hall, now converted into a market. It was originally a manor-house, belonging to sir Hugh Neville, in the year 1309; and was purchased by the munificent Whittington in 1408, who afterwards presented it to the city. In 1419, sir Simon Eyre erected a public granary here, built with stone, in its present form. He also built a chapel within the square, which he intended to apply to the uses of a foundation for a warden, six secular priests, six clerks, and two choristers; and also for three school-masters; and he left three thousand marks to the Drapers' Company to fulfil his intent, which was never executed; but, in 1466, there was a fraternity of sixty priests here, founded by William Rouse, and two others, some of whom celebrated divine service to the market-people daily. But this house was used for many other purposes; anciently it was the city arsenal, and, from its strength, it was considered as the chief fortress within the city, in case of popular tumults. Stow says, that in his youth, the common beam for weighing wool and other wares was in a part of the north quadrant, on the east side of the north gate; on the west side of the gate were scales to weigh meal. The other three sides were reserved, for the most part, to the making and resting of the pageants showed at Midsummer, in the watch. The remnant of the sides and quadrants were employed for the stowage of wool-sacks, but not closed up. The lofts above were partly used by painters in working for the decking of pageants and other devices; and the residue was let to merchants and to woolwinders and packers, to wind and pack their wool therein.

In its present state it is used as a market for provisions and various other articles; and is supposed to be the greatest in London for the sale of country-killed meat, and the only skin and leather-market within the bills of mortality. The whole consists of three courts or yards; the first of which is that at the north-east corner of Gracechurch, opening into Leadenhall-street. It contains a great number of stalls or standings for butchers; and, as there is but little meat sold here except beef, it is distinguished by the name of the Beef-market. On Tuesdays this yard is a market for leather; on Thursdays the waggons from Colchester and other parts come with baize, &c. and also the fellmongers with their wool; on Fridays it is a market for raw-hides; and on Saturdays, for beef.—The second market-yard is called the Green-yard, as being once a green plot of ground; afterwards it was the city's store-yard for materials for building and the like, but now a market for veal, mutton, lamb, &c. This yard has in it a hundred and forty stalls, all covered over, and of the size of those in the beef-market. In the middle of this green-yard-market, is a row of shops, with rooms over them, for fish-mongers; and also on the south side and west end are houses and shops for fish-mongers. Towards the east end of this yard is erected a market-house, standing upon columns, with vaults underneath, and rooms above, with a bell-tower and a clock; and under it are butchers' stalls. The tenements round about this yard, are, for the most part inhabited by cooks, victuallers, and such-like; and in the passages, leading out of the streets into this market,

are fish-mongers, poulterers, cheefemongers, and such-like traders.—The third market, belonging to Leadenhall, is called the Herb-market, because only herbs, roots, fruit, &c. are sold there. The west, east, and north, sides, have walks round them, covered over for shelter, and standing upon columns; in which walks there are twenty-eight stalls for gardeners, with cellars under them. Being rebuilt in the year 1730, it is now called, New Market, or Nash's Rents, and has shops in it chiefly for butchers; a passage into Lime-street, and another into Gracechurch-street; so that the whole is very extensive. There is, also, in this yard, one range of stalls, covered over, for such as sell tripe, trotters, cats'-meat, &c. And, on the south side, the tenements are taken up by victuallers, poulterers, cheefemongers, butchers, and such like. Beyond this are likewise some shops, built in the year 1730, in that part called the Old Bacon-market, which are chiefly occupied by poulterers, and such as deal in bacon. The appearance of this market at night, and most especially on a Saturday, has something uncommon in itself; it reminds the traveller of the Asiatic marts, of the bazars of Bassora and Cairo; barring the costume of the dealers, which has not that fantastic variety and elegance which the eastern markets generally display, though probably the costume of our market-people would appear not less curious to a Turk.

Fenchurch-street runs nearly parallel with Leadenhall-street, with which it communicates on one side, and with Tower-street on the other, by several streets and lanes, which are well inhabited. On the south side, we find Philpot-lane, Rood-lane, Mincing-lane, and Mark-lane, already described. On the north are Lime-street, Cullum-street, and Billiter-lane.—Near the north end of Mark-lane is the parish-church of Allhallows Staining. This church is believed to be of Saxon origin, because of the additional epithet of *Stane*, now corruptly called Staining; which our antiquaries are of opinion was given to it, on account of being built with stone, to distinguish it from some of the other churches in this city, of the same name, that were built of wood. The first authentic mention of it is in the year 1329, when Edward Camel was the incumbent. It was anciently a rectory, under the patronage of the De Walthams, and others, till about 1369, when Simon bishop of London, upon the petition of the abbot and convent of Grace, near the Tower, appropriated it to them and their successors, with power to convert the profits to their own use, and to supply the cure with either a monk or a secular priest, removable at their pleasure. This curacy devolving, with the abbey, to the crown, it was sold, on the 7th of October, 1607, by king James, to George Bingley, and others, to be held of the crown, in soccage; and, coming afterwards to lady Slany, was by her bequeathed to the company of Grocers, who have since held the advowson. This church escaped the fire in 1666; but it was in so ruinous a state, that the body of it fell down three years after; and the whole was rebuilt, at the expense of the parishioners, as it now appears. It is a very plain edifice, lighted with Gothic windows; but the front, which is of free-stone, is of the Tuscan order. It has a square tower, crowned with a small turret. The length of the church is seventy-eight feet, its breadth thirty-two, and its height twenty-four; the altitude of the tower is seventy feet.

In this parish, on the north side of Fenchurch-street, but backwards from the street, at the upper end of Culver-court, is the hall belonging to the Hudson's Bay Company. It is a very elegant brick building, adorned with pilasters, architraves, &c. In this hall is a vast pair of horns of the moose-deer, weighing fifty-six pounds; and, in another room, the picture of an elk, killed in the presence of Charles XI. of Sweden, which weighed twelve hundred and twenty-nine pounds. See COMPANY, vol. iv. p. 883.

In Lime-street, where several creditable merchants and bankers have their mansions, the chief building is Pewterers' Hall, a good and convenient edifice, well suited

for the purpose to which it is destined. In the court-room is a portrait of sir William Smallwood, who was master of the company in the reign of Henry VII. and gave them the hall, with a garden, and six tenements adjoining.

Near the south-west corner of Lime-street, behind the houses in Fenchurch-street, stands the parish-church of St. Dionis Backchurch. It owes its name to being dedicated to St. Dionis, Dionysius, or Denis, an Athenian areopagite, or judge, who, being converted to Christianity, and afterwards made bishop of Athens, travelled into France, where he suffered martyrdom, by being beheaded; and has been since adopted as the patron saint of the French nation. It was on a hill near Paris, now called *Montmartre*, that this saint lost his head; and it was reported in the legends of those times, that he picked it up from the ground, carried it in his hands, walked deliberately down the hill, and proceeded as far as the spot where the convent of St. Denis was afterwards erected; and that then, life forsaking at once both body and head, the holy martyr fell down. The *cri de guerre* of the French nation is *Mont joye St. Denis*, that is "Much joy and our patron St. Denis." The epithet Backchurch was added, from its situation behind a row of houses, to distinguish it from the church of St. Gabriel, which, before the fire in 1666, stood in the middle of Fenchurch-street; wherefore those churches were anciently known by no other appellation but those of Fore and Back church. The oldest authentic mention of this church is in the year 1288, when Reginald de Standon was rector of it. It is one of the thirteen peculiars in the city, belonging to the archbishop of Canterbury. The patronage was formerly in the prior and canons of that church; but, at the dissolution of the priory, it was conferred upon the dean and chapter. The old edifice was destroyed in 1666, and the present structure was erected in 1674, except the steeple, which was not added until ten years after. It is a plain stone building, of the Ionic order, with a tower and turret; in which are ten bells, and a set of chimes. The length of the church is sixty-six feet, its breadth fifty-nine, and the height of the roof thirty-four feet; that of the tower and turret is ninety feet.

At the south-west corner of Fenchurch-street stands the church of St. Bennet Gracechurch, or Grasschurch; so called from its vicinity to the Grass-market, which was anciently held before its west door. It is a rectory, the patronage of which appears to have been in the dean and chapter of St. Paul's ever since the year 1190. The old church was destroyed by the fire of London; since which it has been rebuilt, and made the parochial church for this parish and that of St. Leonard Eastcheap. It is built principally of stone; and is a regular, convenient, and neat, edifice, sixty feet in length, thirty in breadth, and thirty-two in height; the altitude of the spire is a hundred and forty-nine feet. It has a handsome balustrade at the top, and a very high spire, of the obelisk kind, the base of which is supported by four porticoes. The inside is wainscoted, and handsomely pewed; the pulpit well veneered, carved, and adorned with cherubs, &c. Here is also a curious font of fine carved work.

The church of St. Leonard Eastcheap, was burnt down in 1666, and never rebuilt. It was dedicated to Leonard, a French saint, and bishop of Limoges; and was sometime named St. Leonard Milk-church, from William Melker, the builder thereof. The patronage of this rectory, which was anciently in the prior and convent of Canterbury, is at present in the dean and chapter of that see; who, since its union with St. Bennet Grasschurch, present alternately with the dean and chapter of St. Paul's. The site of it is now only a burial-place for the inhabitants of this parish. It is one of the thirteen peculiars belonging to the archbishop of Canterbury.—Between Fish-street-hill and Pudding-lane, is the church-yard of the parish of St. Leonard; containing a few tombs and several trees. It is an airy opening.

Gracechurch-street has nothing remarkable in itself except the busy arrivals and settings-off of stages to the southern villages, annexed nearly, by rows of houses, to the city of London.—In White-Hart-court, consisting of neat buildings, mostly inhabited by Quakers, is a very handsome meeting-house, one of the chief of those belonging to that sect in the metropolis. White-Hart-court opens also into Lombard-street.

Turning back to the corner of Leadenhall-street and the opening into Bishopsgate-street, the sight may dart at once to nearly the distance of a mile, through one of the noblest and largest streets in this part of the metropolis.—The southern part of Bishopsgate-street, with Houndsditch, and Leadenhall-street, make a perfect triangle, the area of which is intersected by many streets and courts. In this area are particularly confined the Jews and their places of worship.

The entrance into Duke's Place, from Leadenhall-street, is by a narrow short lane, the corner of St. Catharine Cree. The gates still remaining, and which we are told are soon to be pulled down, appeared to us to merit preservation: we have therefore caused a drawing to be made, which is engraved on Plate VII<sup>b</sup>\*, fig. 3.—Here stood the Priory of the Holy Trinity, founded by queen Maud, wife to king Henry I. in the year 1108, for canons regular of the order of St. Augustine, with great endowments; among which the said king granted the port of Aldgate, and the soken thereunto belonging, &c. And, in order to establish this foundation, the four parishes of St. Mary Magdalen, St. Michael, St. Catharine, and the Blessed Trinity, were united in the one parish of “the Priory of the Holy Trinity, called Christchurch;” the prior of which was always an alderman of London, and of the ward of Port-foken; who sometimes officiated in person, and sometimes appointed a temporal deputy. The priory was built on a piece of ground upwards of three hundred feet long, in the parish of St. Catharine, towards Aldgate, near the parochial chapel of St. Michael. This priory was said to have been the richest in England, and was, probably for that reason, selected to be the first that was dissolved by Henry VIII. in the year 1531; who gave it to sir Thomas Audley, speaker of the house of commons. Sir Thomas demolished the priory, and converted it into a large mansion, where he resided after he became lord-chancellor. The only daughter of sir Thomas being married to the duke of Norfolk, this estate descended to the duke, and was from that time known by the name of the *Duke's Place*, which it has retained to this day. But, the duke of Norfolk losing his head on Tower-hill, this mansion descended to Thomas Howard, earl of Suffolk, eldest son to the said duke by Audley's daughter; who, by indenture of bargain and sale, dated 21 July, 34 Eliz. sold the same to the mayor, commonalty, and citizens, of London, to have and to hold, to them and their successors.

A short time before the priory of the Holy Trinity was dissolved, the inhabitants within its boundaries, who had been deprived of their parish-churches to make way for that religious foundation, petitioned and obtained leave, under certain conditions and restrictions, to build a chapel in the church-yard of the said priory, for their own convenience, which, escaping the fate of the religious houses at the dissolution of the priory, became the only place, after the conventual church was pulled down, for the inhabitants within that district to repair to for divine service. This, however, creating some dislike among the inhabitants of Duke's Place, they were desirous of raising a proper parish-church for themselves, on the ground within their own precinct; to effect which, they applied to the archbishop of Canterbury for his assistance; who, having obtained the king's warrant under the broad seal, for proceeding in their pious intention, prevailed with the lord-mayor, aldermen, and common-council, to build them a church with the stones of the conventual church, which then remained on the premises. This was accordingly done; and the church was consecrated and dedicated to St. James, on the second of January, 1622. It is

now known by the name of St. James, Duke's Place; and, although the parish is in the ward of Aldgate, yet it is a precinct within itself, under a minister, two constables, two headboroughs, and fifteen jurymen. The lord-mayor is entitled to hold a court leet and baron, and the city-officers can arrest for debt, and execute warrants within it; but artificers and traders are permitted to open shops and exercise their arts here, without being free of the city. The Jews settled here, principally, in the time of Oliver Cromwell.—The church, having escaped the fire in 1666, still retains its original form. The body, which was rebuilt in 1727, is well lighted; and the tower, composed of four stages, is terminated by a very singular kind of turret, in the form of a canopy. It is a curacy, the patronage of which being in the lord-mayor and commonalty of London, the parish claims a right of exemption from the bishop of London's jurisdiction in matters ecclesiastical.

A little to the north of St. James's church, in Duke's Place, is a Jews' synagogue, which has been lately so enlarged as almost to join the church. Besides this, there are three other synagogues in this ward: one near the north end of Bury-street, by London Wall; another at the end of Church-row; and a third, in a building which was formerly Bricklayers' Hall, situated behind the houses that are nearly opposite to St. Catharine Cree-church.

This church received its name from being dedicated to St. Catharine, an Egyptian virgin, and is distinguished from other churches of the same name, by the addition of *Cree*, or Christ, from its situation in the cemetery of the conventual church of the Holy Trinity, which was originally called Christ-church, as mentioned before. The present structure was erected in 1630, and the dial-post and clock in 1662. It is built of stone, in a mixed style. It has rounded battlements on the top, and a square tower, with battlements of the same kind. This tower is crowned with a square turret, over which is a dome, and from its summit rises the weathercock. The length of the church is ninety feet; the breadth fifty-one; the altitude of the roof, which is square, supported by pilasters and columns of the Composite order, is thirty-seven feet; and that of the steeple is seventy-five feet. At the west end of this church, adjoining to the steeple, stands a pillar of the old church, as it was erected. This pillar, from the base to the chapter, upon which the arch was turned, being eighteen feet high, and but three to be seen above ground, shows the height to which the floor of the new church has been raised above that of the old. This church is a curacy; and the parishioners have the privilege of choosing their own minister, who must be licensed by the bishop of London.

In the triangle above alluded to, we also find Crosby-square, so called from sir John Crosby, knt. who built a large house here in 1466. This house was the city-residence of Richard duke of Gloucester, while the measures which eventually secured him the crown were concerting. Part of this house still remains, on the north side of the entrance into the square, which is chiefly built on the garden-ground that belonged to the house. The part, improperly called Richard III's Chapel, is still very entire. It is a beautiful Gothic building, with a bow-window at one end; the roof, which is of timber, elegantly carved, is very worthy of admiration. This building is now the residence of a packer.

At a short distance north of this square, in a handsome open place, called, from the church, Great St. Helen's, stands the parish-church of St. Helen, so denominated from its dedication to Helena, the mother of Constantine the Great. The patronage of it appears to have been anciently in lay hands; for, in the reign of Henry II. one Ranulph, with his son Robert, granted it to the dean and chapter of St. Paul's, by whom it was, some time after, granted to William Fitzwilliam, who, in 1212, founded the priory of St. Helen, and conferred the advowson of the church on the priores and nuns, to whom it continued till the suppression of their convent, in 1539, when it came to the

the crown. In the year 1551, Edward VI. granted the advowson to Nicholas Ridley, bishop of London, and his successors; which grant was confirmed by queen Mary, in 1553; but it appears to have reverted to the crown afterwards; for, in 1568, queen Elizabeth granted it, by lease, to Cæsar Aldermarie and Thomas Colcel, in trust for the parishioners, for a term of twenty-one years; which lease being expired, she sold it to Michael and Edward Stanhope, to be held by them, their heirs and assigns, in fockage. It has, however, been since re-granted to the dean and chapter of St. Paul's. This church, which escaped the fire of London, in 1666, is a Gothic structure of the lighter kind, consisting of a plain body, with large windows. The length, a hundred and eleven feet; breadth, fifty; height thirty-eight; that of the tower, which was not built till 1669, is sixty-eight feet. It is adorned with rustic work at the corners, and crowned with a turret and dome, wherein are two bells.

On the left-hand side of the entrance into Great St. Helen's, are a set of alms-houses, founded by sir Andrew Judd, *knt.* as appears by a tablet in front of the building; though some of the historians of London assert, that he was only the executor of lady Hollis, the relict of sir William Hollis, lord-mayor in the year 1531, by whom the money for this foundation was devised. They are for the reception of six poor men or women; and the Skinners' Company are trustees of the charity, which has been so much increased by the contributions of other benefactors, that the houses have been rebuilt, and the pensions of the poor inhabitants, at first only 7d. per week, increased.

Immediately adjoining to Great St. Helen's, is Little St. Helen's, on the site of the priory mentioned before; the remains of which were to be seen, till lately, in Leatherfellers' Hall, now pulled down to make way for a handsome range of new building, called St. Helen's Place. This company purchased the priory of queen Elizabeth, and, with part of the materials, built the largest and most elegant hall at that time in London. Their business is now carried on in a house at the east end of the place, built by them at the same period, of which the upper panes of the windows, on the first floor, are formed of painted glass, said to have been taken from the priory. This house may be considered as a perfect specimen of the architecture of queen Elizabeth's reign. All that is now left of the priory, is in the cellars under the two old houses on the right hand of St. Helen's Place.

Near the corner of Little St. Helen's, in Bishopsgate-street, stands the church of St. Ethelburga, so called from its dedication to the first Christian princess of the Saxon race, the daughter of Ethelbert king of Kent, who embraced the Christian religion, and became the patron of Austin, the English apostle. The earliest account of this church, on record, is in 1366, when Robert Kilwardeby was rector. The advowson was in the priores and nuns of St. Helen till the suppression of their convent, in the year 1539; when, coming to the crown, it was some time after granted by queen Elizabeth to the bishop of London and his successors, who have ever since collated and inducted to the same; and in ecclesiastical matters it is subject to the archdeacon.—This church is very ancient, having escaped the fire of London. The body is irregular, and in the Gothic style, with very large windows; and the steeple is a tall spire, supported on a square tower. The length of this church is fifty-four feet, its breadth twenty-five, and its altitude thirty-one; and that of the spire is about ninety feet.

Adjoining to this church is a very handsome building, occupied by the Marine Society; a most excellent charity, begun in 1756, by a voluntary association of Jonas Hanway, the justices Fielding and Welch, and several merchants and others, for clothing and fitting out such orphan, friendless, and destitute, boys, as were willing to engage in the service of the navy. This scheme was prosecuted with such zèal, that many thousands have, through its means, been rescued from an abandoned course of life,

and rendered serviceable to their king and country. The society was incorporated on the 24th of June, 1772; and, whether we consider it as a prominent feature of well-regulated police, or as a nursery for seamen, its advantages will be strikingly evident, and entitle it to the warmest support of the benevolent. In addition to their first plan, the society have a vessel fitted for the reception of 100 boys, which lies between Deptford and Greenwich, and is provided with proper officers to instruct them in nautical and moral duties.

Though irregularly built, Bishopsgate-street, which is spacious and long, presents a great number of modern houses contrasted by some old ones which escaped the fire of London.—At the south end is a noble house, called the London Tavern, where accommodations of the most elegant kind are supplied for companies of any number, from one to many hundred. Here the solitary epicure may enjoy by himself his delightful piece of prime turbot, potted char and lampreys, his *friloin*, or whatever his taste leads him to call for—and parties are accommodated with private rooms, where they consume in friendly mirth the result of a bet, or celebrate a birth-day. Here city-feasts call their numerous convives; and patriotic dinners stimulate one of the best propensities of the British heart, public beneficence. The business of this establishment has proved so great and so profitable for many years, that a rival house has lately risen nearly opposite, and is called the City of London Tavern, to distinguish it from the other. Both these taverns are furnished in a style of elegance adapted only to the metropolis of so wealthy a nation.

The church at the corner of Threadneedle-street and Bishopsgate-street, is called St. Martin Outwich, from being dedicated to Martin bishop of Tours, in France, about the year 376, is of great antiquity. It derives its additional name of Outwich from the family of Oteswich. Stow names four of them, who were buried here, viz. Martin, Nicholas, William, and John, who were proprietors of it. In the year 1325, John de Warren, earl of Surrey, presented to this living; but, he dying without issue, and leaving his estates to the crown, the advowson was purchased, in 1387, by the above family; who, in the sixth year of the reign of Henry II. gave it, with four messuages, seventeen thops, and the appurtenances, in the said parish, to the master and wardens of the Taylors and Linen-armourers, and to their successors, to be employed for the perpetual help and relief of the poor brethren and sisters of the said company; by virtue of which grant, the company of Merchant-Taylors have ever since enjoyed the right of patronage to this church. The old church, which was built in 1540, was one of the few that escaped the fire of London; but the ravages of time, assisted by the injuries it sustained from a fire in Bishopsgate-street in 1765, had affected it so much, that it was taken down in 1795, and the present structure erected in its stead; this afforded an opportunity for enlarging the entrance into Threadneedle-street, by taking off the angle which before projected into that street. It is a plain neat building of brick, except the east end, which is of stone; above which rises a low circular tower, surmounted by a dome. It is a rectory. Over the altar is a sort of embraiture in which the ascension of our Lord is represented. It is a curious work in fresco; and was done by the late Mr. Rigaud, R. A.

One of the principal objects which next attracts the sight is the church commonly called Bishopsgate-church. It is a few steps beyond the place where the old gate stood, and therefore was out of the precincts of the city, according to the ancient limits marked by the walls. It is dedicated to St. Botolph, an Anglo-Saxon saint who lived and died in the seventh century. The ancient fabric, the original foundation of which is effectually shrouded in the mist of antiquity, it may, from the vestiges of remote ages that have been at different periods discovered beneath or near its walls, be fairly conjectured rose upon the ruins of a Roman temple. It was built in the Saxon style of architecture.

chitecture. It had a massive tower at its western end; and, as appeared from its plan, which had not been materially altered until it was taken down in the year 1726, an altar-window at its eastern.—The patron of this, and several other churches in the metropolis whose appellations are similar, was St. Botolph, also designated the Briton. He was born in Cornwall; and, as tradition states, became very famous for working miracles about the time of Lucius in this island, the first Christian king. Zealous in the propagation of the Gospel, he it is said travelled with some missionaries into Lincolnshire, where he made many converts, and founded a monastery at Icanhoe in the Holland-division of that county, and within the boundaries of Boston. In this monastery he resided until his death, and was buried in the church of his establishment. The fame of St. Botolph was so great, and the miracles that were performed even by his tomb or relics so numerous, that the town of Boston, which probably increased around his church, was for centuries after his death called *Botolph's Town*.

The present church was finished in 1729. It is massy and spacious; and has a good effect from the street. The body is built with brick, and well lighted; and the roof hid by a handsome balustrade. The steeple, though heavy, maintains an air of magnificence. In the centre of the front is a large plain arched window, decorated at a distance with pilasters of the Doric order: over this window is a festoon, and above that an angular pediment; on each side is a door, crowned with windows, and over these are others of the port-hole kind; above which rises a square tower, crowned with a dome, whose base is circular, and surrounded by a balustrade in the same form; by the side of which, on the corners of the tower, are placed urns with flames. From this part rises a series of coupled Corinthian pillars, supporting other urns like the former, and over them rises the orgive dome, crowned with a very large vase, with flames. The roof within side is arched, except over the galleries; and two rows of Corinthian columns support both the galleries and arch, which extends over the body of the church, and is neatly adorned with fret-work.

Soon after the restoration, statues of the unfortunate Charles I. began to crowd the exterior of the public buildings of the metropolis; while pictures symbolizing his person, his virtues, and his sufferings, adorned their interior. Among these, the allegorical representation in the church of St. Botolph, which still remains, is in its display of graphic excellence perhaps one of the most important. This curious piece adorns the wall of the stairs that lead to the north gallery of the edifice; and, although (which is singular) there is no trace in the minutes of the vestry, or the registers of the parish, which can lead to a discovery how it came there, yet it was particularly described in *The New View of London*, 1703; and seems, except in one instance, to have been passed by unregarded ever since; yet it merits attention, if we consider the low state of the chromatic art, in England, at the period of the restoration. We are indebted to a late number of the *European Magazine* for reminding us of its existence, and for the following general description of it. The principal object is the portrait of the king; of course, the strongest light beams on him; the other lights, which are many, and which would, were they not, as the painters say, scumbled down, be termed catching, are so managed as to harmonize with the general effect of the picture: The countenance of his majesty is composed; he appears "More in sorrow than in anger." He is kneeling before an altar covered with crimson, and embroidered. On it is an open volume inscribed, *In verbo tuo spes mea*; "My hope is in thy word." The mantle of this royal figure is of blue velvet. His right hand is spread on his breast: in his left he holds a crown. On an entwined label is written *Aspiram ad levem*. Below the cushion on which he kneels lies the crown of England: behind which, on a label, are these words; *Splendidam ad gravem*; from his right foot

proceeds another inscribed *Mundi calco*. The back ground of this picture on the right hand is illumined with a brilliant ray, which, streaming towards the monarch, displays his countenance, and, in its course, the pedestals of two broken columns; while in this aerial space, whence it emanates, is a celestial crown, inscribed *Beatam coronam*. On two other rays, darting in the same direction, are inscribed *Calum speculo* and *Clarius e tenebris*. In the distance on the left side the king is again represented, seated on the deck of a ship of war, apparently of the largest size: this vessel, abandoned by its crew, seems to be left to the mercy of the winds and the waves, and the unhappy monarch to "Bide the pelting of the pitiless storm." This allegory is a correct allusion to the ship-money, which, although in the Dutch war it enabled our navy to triumph in the Narrow Seas, was looked upon as a most odious measure. On the clouds are labelled *Immota triumphans*, and *Nescit naufragium virtus*. At the bottom, on the left, is inscribed, *Carolus I. Ων εν τῷ ἀξίως ο κόσμος*; "Of whom the world was not worthy." Heb. xi. 38 On the right, *Ecce spectaculum dignum ad quod respiciat, Deus operi suo intentus, vir fortis cum malâ fortunâ compositus*. Sen. de Provid.—This picture is in a great degree self-explanatory; it was, like many others, a commemorative tribute, and pointed to circumstances too recent to be misunderstood; it raised the character of the royal sufferer, and soothed the minds of his friends in their devotional hours; for in the ancient church it was placed in a most conspicuous situation, namely, at the altar. When the church was taken down in the year 1726, the picture was carefully preserved, and in the new edifice was put where we now see it.

On the south side of the church is a small cemetery, and a passage leading to Moorfields. At a small distance from the north side is a very narrow place called Alderman's Walk; nearly adjoining to which are a street and several courts, known by the general name of Old Bethlem. On this spot formerly stood a priory, founded in the year 1246, by Simon Fitzmary, sheriff of London, for the support of a community of brothers and sisters, and dedicated to St. Mary of Bethlehem.

On the same side of the street, and on the south of the church, are several considerable inns for stages and waggon— the Bull, the Green Dragon, the Four Swans, &c. —Of these, the Green Dragon, which seems to be a house of great and extensive business, still retains many vestiges of its antiquity; but the most correct idea of the interior of an ancient inn, will accrue from a contemplation of the yard and galleries of the Four Swans; an inn the traffic of which appears to be very considerable, and which is in its construction, like other buildings of the same nature and date, in a small degree theatrical, and consequently of the form that at certain periods, especially before actors fixed themselves in tennis-courts, was deemed the most convenient for the exhibition of dramatic pieces.

Proceeding northwards on the same side as the church, our attention will be arrested by an old house with a bow-window in the first floor, and bearing evidently the character of the architectural style belonging to the reigns of Henry VIII. Edward VI. Mary, and Elizabeth. It is supposed to have been originally the house of sir Paul Pindar; and the publican who occupies it had for a long time the head of the worthy citizen for his sign, but now the name only remains. See p. 402.

Nearly opposite to the church is Devonshire-square, on the spot where formerly was a magnificent structure erected by Jasper Fisher, one of the six clerks in chancery, whose fortune not being answerable to his house, it was called in derision, Fisher's Folly. It afterwards belonged to the earls of Oxford, and lastly to the duchess of Devonshire; whose name is still preserved in that of the street and square built on the spot. Tassel Close is at a small distance; this place was let to the cross-bow-makers, who used to practise a game called shooting at the *popinjay*— which was nothing but the likeness of a bird, made very coarsely.

coarsely in wood, with wings expanded, and set at the top of a pole. This innocent game is common on the continent. Prizes are set to the several limbs of the bird—a silver goblet perhaps for the head, a silver spoon for each wing, and a tea-spoon for the tail; but, when the whole is knocked down at once by the fortunate bolt of the skilful archer, all the prizes fall to his lot; otherwise the victor is the man who hits the last bit or splinter of the bird, and is honoured with the title of *King*, which he wears for the whole year, enjoying at the same time some particular privileges, as that of felling so many casks of wine without paying duty, and walking in an honourable place in processions. On the decline of archery, these warlike exercises fell gradually into disuse, and were retained in some few places merely as amusing sports and an unoffending way of killing time.—At that period this clove was surrounded by a brick wall, and served as an artillery-ground, where the gunners of the Tower used weekly to practise the art of gunnery. The last prior of St. Mary Spital granted this artillery-ground for thrice ninety-nine years, for the exercise of great and small artillery; and hence this ground became subject to the Tower. The Artillery-company received a charter from king Henry VIII. which was afterwards confirmed by queen Elizabeth; and, in 1622, an armory was erected in it, containing five hundred sets of arms. The company, at length, grew so numerous, that this ground was too small for them; and, when they removed to the present artillery-ground, this spot was distinguished by the name of the Old Artillery-ground. It is now converted into streets and lanes; but the name is still retained in Artillery-street.

Contiguous to this field, on the north, where Duke and Steward streets are situated, stood the priory and hospital of St. Mary Spital, which was founded in the year 1107, by Walter Brune and his wife Rosa, for canons regular. At the time of its surrender to Henry VIII. in 1539, it was valued at 478l. per annum, and contained a hundred and eighty beds for the accommodation of poor objects, who were carefully provided with all the necessaries of life.

In April 1559, queen Elizabeth visited St. Mary Spital in great state; possibly to hear a sermon given from the cross. She was attended by a thousand men in harness, with shirts of mail, corselets, and morice-pikes, carried through London; to the court, with drums and trumpets sounding, and two morice-dancers, and in a cart *two white bears*.

To this hospital also the lord-mayor, aldermen, and sheriffs, repaired annually in their formalities, attended by the governors and children of Christ's Hospital, and accompanied by many persons of distinction, to hear the sermons that were preached on Monday, Tuesday, and Wednesday, in Easter-week. These sermons, which were always on the subject of the resurrection of our Saviour, were delivered by some of the most eminent of the city divines, from a pulpit-cross, situated in the church-yard, like that at St. Paul's; opposite to which was a handsome house for the reception of the mayor and his company. This custom was kept up till the year 1642; but in the grand rebellion the pulpit was broken down by the fanatics, and the preaching discontinued. It was, however, so far revived at the restoration, that the Spital-sermons have been since preached at St. Bride's in Fleet-street.

Between the church-yard of St. Botolph, and the southeast corner of Moorfields, was a long street, with several smaller ones contiguous, called Petty France, from having been first inhabited by people of that nation. On this spot now stand the elegant streets called New Broad-street and Broad-street Buildings, the residence of merchants of the first respectability.

Pursuing our way to Shoreditch, we find a regular decrease of height and elegance in the houses, so that, a little north of the turnpike, the street assumes a country look.—At the corner of a small, narrow, street on the left hand, is an old wooden statue, supposed to have re-

presented Jane Shore; but now so mutilated, that it may be almost a question whether it was meant for her or her royal lover. The appearance of the breasts alone seems to decide the point; for the plume of feathers and laurel-leaves still distinguishable in the helmet or cap, seem to appertain rather to a man, though women used sometimes to wear them in the same guise. The head-dress much resembles that of Joan of Arc in plaster by Gois the younger. See *Historic Gallery of Portraits and Paintings*, vol. ii.—That the reader may judge for himself, we have given a representation of this fragment on Plate VII b\*. fig. 4.

The melancholy story of Jane Shore's punishment is reported by Holinshed in the following *naïve* manner: "In her penance, she went in countenance and passe so demure, so womanlie, that, albeit she were out of all araie save her kirtle onlie, yet went she so faire and lovelie, namelie, while the wondering of the people cast a comelie rud in hir cheeks, (of whiche she before had most misse,) that hir great shame wan hir much praise among those that were more amorous of hir bodie than curious of hir soule. And manie good folkes that hated hir living, (and glad were to see sin corrected,) yet pitied they more hir penance than rejoiced therein, when they considered that the Protector procured it more of a corrupt intent than anie virtuous affection."—Rowe has clothed this part of her sad story in the following poetical dress; but it is far from depreciating the moving simplicity of the old historian:

Submissive, sad, and lowly, was her look;  
A burning taper in her hand she bore,  
And on her shoulders, carelessly confus'd  
With loose neglect, her lovely tresses hung;  
Upon her cheek a faintish flush was spread;  
Feeble she seem'd, and forely smit with pain,  
While, barefoot as she trod the flinty pavement,  
Her footsteps all along were mark'd with blood.  
Yet silent still she pass'd, and unrepining;  
Her streaming eyes bent ever on the earth,  
Except when, in some bitter pang of sorrow,  
To Heav'n she seem'd in fervent zeal to raise,  
And beg that mercy man deny'd her here.

The poet has adopted the story of her being denied all sustenance, and of her perishing with hunger; but that was not fact. She lived to an advanced age, but in great distress and poverty; deserted even by those to whom she had, during prosperity, done the most essential services. She dragged a wretched life to the time of Sir Thomas More, who introduces her story into his life of Edward V. The beauty of her person is spoken of in high terms; "Proper she was, and faire, (says Holinshed;) nothing in hir bodie that you would have changed; but you would have wished hir somewhat higher. Thus saie they that knew hir in hir youth. Now is she old, leane, withered, and dried up; nothing left but rived skin and hard bone; and yet, being even such, who so well advise her visage might gesse and devise which parts how filled would make it a faire face."—In a supposed original picture of this lady in the provost's lodgings, in King's College, Cambridge, her hair is raised in short curls high above her neck, and mixed with chains of jewels set in a lozenge form; her neck and body, as far beneath her arms, are naked; the first has two strings of pearls hanging loose round it: over her shoulders is a rich chain of jewels set in circles; and pendant from the middle, which hangs down her breast, is a rich lozenge of jewels, and to each link is affixed one or more pearls. In her countenance is no appearance of charms; she must have attracted the hearts of her lovers by her intellectual beauties.

Our chief reason, however, for mentioning this weak and unfortunate woman was in order to contradict the popular error of Shoreditch being named after her husband; as it appears certain, that it originated from the lord of the manor, Sir John de Sordich, a person deeply

skilled in the laws, and much trusted by Edward III. and who was sent by him, in 1343, (more than a hundred and twenty years before Jane Shore was heard of,) to pope Clement VI. with remonstrance with this holiness against his claim of presenting with English livings, and filling them with foreigners, who never resided on their cures, and drained the kingdom of its wealth. This, it may be easily supposed, the pope took much amiss; inasmuch that Sir John thought it best to make a speedy retreat. It appears likewise that this knight was a very valiant man, and served the king with his sword as well as his tongue.

Long after, Shoreditch acquired much fame from another great man, Barlo, an inhabitant of this place, and a citizen; who acquired such honour as an archer, by his success in a shooting-match at Windsor, before Henry VIII. that the king named him on the spot *Duke of Shoreditch*. For a long series of years after this, the captain of the London archers retained the title. On the 17th of September, 1583, the *Duke* (at the expense of the city) had a magnificent trial of skill; he sent a summons to all his officers, and chief nobility, with all their train of archery, in and about London, to be ready to accompany him to Smithfield. In obedience, appeared the Marquis of Barlo, and the Marquis of Clerkenwell, with hunters who wound their horns; the Marquises of Islington, Hogsdon, Pankridge, and Shacklewell, who marched with all their train fantastically habited. Nearly a thousand had gold chains; and all were gorgeously attired. The sum of archers were three thousand; their guards, with bills, four thousand; besides pages and henchmen. And the duke sallied out to meet them from Merchant-Tailors' Hall, to exhibit such a sight as was never seen before, nor ever will again; unless a combination of the modern societies of archers should treat the capital with the revival of this ancient and worthy pageantry.

The church off St. Leonard, Shoreditch, is at our left, where the road branches off eastward to Hackney. This church has an ascent by a double flight of plain steps, which lead to a portico of the angular kind, supported by four Doric columns, and bearing an angular pediment. The body of the edifice is plain, but well lighted; and the steeple light, elegant, and lofty. The tower at a proper height has a series of Ionic columns; and on their entablature are scrolls which support as many Corinthian columns on pedestals; and above is a dome, from whose crown rises a series of columns of the Composite order, on the entablature of which rests the spire, standing upon four balls, which give it an additional air of lightness; and on the top is a ball and vane. In the lowest stage of the tower is a dial, the view of which is so much intercepted by the apex of the pediment over the portico, that a person standing in front of the church can only distinguish the upper part of it; which gave occasion to the following pasquinade, which was affixed to the west front, soon after the building was completed:

To look askew upon a church, by some is deem'd a crime;  
But all must do't at Shoreditch-church, all who would  
know the time;

The figures on the dial-plate, 4, 5, 6, 7, 8,  
Being hid behind the pediment, if you look at it straight.  
The brains sure of the architect must in confusion been,  
When he five figures of the twelve prevented being seen."

To the east of this church is Bethnal Green, which is particularly inhabited by silk weavers, the descendants of the French refugees at the revocation of the edict of Nantes. It was one of the hamlets belonging to the mother church of Stibunhithe, now Stepney; and was separated by act of parliament, in the thirteenth year of his late majesty. The church, which is dedicated to St. Matthew, was erected in the year 1740. It is a neat commodious edifice, of red brick, coped and quoined with freestone. At the west-end is a low square tower, built of the same materials, and with a large vase of stone at each corner. It is a rectory, in the gift of the principal and scholars of King's-hall and Brazen-nose-college, Oxford.

The old mansion, at the south-east corner of the Green, now called Bethnal-green House, and traditionally reported to have been the residence of the celebrated Blind Beggar, was built in the reign of queen Elizabeth, by a citizen of London named Kirby, and is called, in the writings belonging to it, Kirby Castle. It has long been appropriated to the reception of insane persons.

The old Roman way, from London, led through the hamlet; and being joined, at a short distance the north-east of it, by the military way from the west, they passed on together, to the trajectus, or ferry, of the River Lea, at Old Ford.

Spitalfields was also originally a hamlet belonging to the parish of St. Dunstan, Stepney; but, from the great increase of inhabitants, it was in the year 1723 made a distinct parish; and the church is one of the fifty ordered to be built by act of parliament. This building is situated on the south side of Church-street; it was begun in 1723, and finished in 1729; and, from being dedicated to our Saviour, is called Christ-church, Middlesex. It is a very handsome edifice, built of stone, with a very high steeple, in which is a fine ring of bells. The body of the church is solid and well-proportioned: it is a hundred and eleven feet in length, and eighty-seven in breadth; the height of the roof is forty-one feet, and that of the steeple two hundred and thirty-four. It is ornamented with a Doric portico, to which there is a handsome ascent by a flight of steps; and upon these the Doric order arises, supported on pedestals. The tower, over these, rises with arched windows and niches, and, on its diminishing for the steeple, is supported by the heads of the under corners, which form a kind of buttresses; from this part rises the base of the spire, with an arcade; its corners are, in the same manner, supported with a kind of pyramidal buttresses, ending in a point; and the spire, in which are three series of square windows, crowned with pediments, is terminated by a vase and vane. This church is made a rectory, but is not to be held *in commendam*; and the patronage, like that of its mother-church, is in the principal and scholars of King's-hall and Brazen-nose-college, Oxford.—At the west end of the church is a neat brick building, in which are two charity-schools; the one for boys, the other for girls, erected in 1782, and supported by voluntary contributions.

At a very short distance is Spitalfields market, for the sale of all sorts of provisions, particularly vegetables; but it certainly is not the cleanest-looking market in the world.

In Brick-lane, we find the sign of "the Turkish Slave," a sad memento of the following fact.—The Inspector, privateer, with a crew of 183 people, sailed from the Downs in October 1745, on a cruise. When they had got as far as the Straits of Gibraltar, the ship sprung a leak, which their utmost endeavours were insufficient to keep under; and, as they found that the ship would inevitably sink, they determined, for the preservation of their lives, to run her aground in Tangier Bay; and, as the emperor of Morocco was at that time under a treaty of peace with Great Britain, they had every reason to expect friendly treatment from the Moors; but they soon found the difference; for they were stripped of every rag they had about them, and those who made the least resistance were inhumanly murdered, or driven back into the sea; those who were fortunate enough to escape with their lives were seized as slaves. Ninety-six of the ship's company had perished. The Phoenix frigate arriving soon after from Gibraltar with the British consul, the survivors were in hopes, through his interference, to get liberated; but all his endeavours proving abortive, they contrived, with him and the captain of the Phoenix, a plan of escape, by separating into three distinct parties; one of which, consisting of twenty-seven men, was so fortunate as to reach the ship; but the other two were intercepted, and forced into a dismal dungeon, where they remained three days without food; and, after a succession of cruelties and toils possible only for barbarians to invent, and being marched from place to place

place under a broiling sun, without shoes or clothing, for the space of four years, they were at length ransomed for a sum of 439*l.* including presents to the emperor, by the liberality of the king, George II. and arrived at Portsmouth in May 1749, only twenty-five persons in all, the rest having died, through disease and cruelties, in Fez. On their return, they had a benefit at Covent-garden theatre, and likewise one at Sadler's Wells. The house in Brick-lane was taken by one of the survivors, (Peter Le-beau;) but the sign is merely analogous.

This part of the town, which is not one of the most *polite*, may however boast of having given birth to a man whose abilities in the art of singing have long delighted, and we hope will long continue to delight, the most *polite* classes—Braham was born of Jewish parents in Rose-lane, or thereabouts, in Spitalfields.—Here was anciently a Roman burying-place, of which many curious particulars are mentioned by Stow; and Camden gives a brief account of another, discovered in Goodman's fields. Among the antiquities found in Spitalfields, was a great ossuary made of glass, encompassed with five parallel circles, and containing a gallon and a half; it had a handle, a very short neck, and wide mouth of a white metal. This was presented to sir Christopher Wren, who lodged it in the museum of the Royal Society. These cemeteries will in some cases determine the ancient Roman precincts of the city; it being a wife and express law of the XII Tables, *that no one should be buried within the walls.*

In the neighbourhood of Kingsland-road and Hoxton, are many alms-houses, erected at different periods, standing proofs of the humane and liberal inclinations of our ancestors.—A description, in architectural and correct style, of an ancient mansion at Hoxton, will give an idea of the manner of erecting gentlemen's houses in the beginning of the seventeenth century, and may be applied to others which we shall have occasion to mention—it was the residence of sir George Whitmore, mayor of London, 1631; and was surveyed in May 1814. The northern portions of the building appear to have been erected in the style of Elizabeth's reign; by some internal embellishments, a fitting-up was gone through in Charles I's reign; in the south front the features take the mode above hinted; as an example of alterations undertaken soon after 1683, a time in which Hoxton itself began to increase in buildings. South front, (general plan of the mansion upon a square,) or principal entrance: five divisions, made by double doric pilasters: three stories, in basement, parlour, and chief floor. The pilasters stand on plain pedestals; detached pieces of architrave rise on each capital, supporting plain double scroll blocks, breaking into the general line of cornice. In the centre division, flight of steps to the door of entrance, (door modernised,) windows for each story. On the general cornice, an amazing high dripping eaves-roof, with two stories of dormer-windows, standing regularly over the windows below: clusters of chimneys in breaks. The walls are brick, plinths and capitals stone, cornice wood. The hall has been of late partitioned into a passage, central and adjoining rooms; the grand staircase remains in part, which in the divisions of its fence has a succession of guideron-work, with festoons of fruit and flowers; windows and doors with the plain architrave devoid of mouldings; but the chimney-pieces are modernized. One of the ceilings elaborate stucco, of compartments, in square, oblong, and octangular, forms, the dividing bands full of minute and delicate foliages. The south front appears copied from the wings of the grand front of the Chateau de Rincy, in France.

South of Shoreditch-church is the small liberty, or manor, of Norton Falgate, which belonged to the cathedral of St. Paul as early as the conquest. This district being extra-parochial, the inhabitants maintain their own poor, and marry and bury where they please; but they generally make use of a chapel, built by sir George Wheeler, prebendary of Durham, for his tenants in Spitalfields. In

this liberty there are also a small workhouse, a girl's school, and a free school for boys.

In Holywell-lane, in the parish of St. Leonard, anciently stood the priory of St. John Baptist, of Benedictine nuns, founded by Robert, the son of Gelranni, prebendary of Haliwell, and confirmed by a charter of Richard I. in the year 1189. This priory, after many reparations, was re-edified by sir Thomas Lovel, in the reign of Henry VII. who, after having given considerable benefactions to the same, was interred here, in a chapel erected at his own expense; and, in commemoration of so great a benefactor, the following lines were painted on most of the windows:

All the nunes in Holy-well,  
Pray for the soul of sir Thomas Lovel.

At the general suppression of religious houses, this monastery was surrendered to Henry VIII. in the year 1539; at which time its revenues amounted to 347*l.* 1*s.* 3*d.* per annum. The ruins of this priory, which are still to be seen in King-John's-court, have been conceived by some to be the remains of king John's palace; though it does not appear that a royal mansion was ever situated in this neighbourhood.

The prebend of Haliwell, and Finsbury, took its first name from a spring, or well, which was so famed for miraculous virtues as to be dignified with the epithet of *holy*. After the reformation, these qualities vanished; and the holy-well, being neglected, was choaked up with rubbish, and, in the calamitous year 1665, the spot became a cemetery for the victims to the plague; whose bodies being heaped together, and covered with earth, gave rise to a mound, called Holywell Mount, which was levelled about the year 1777, and the site covered with streets; in one of which is a dissenting meeting-house, and a burial-ground.

We must not quit this parish without noticing, that the brewing of porter commenced in it, according to the following lines of Gutteridge, a native of Shoreditch:

Harwood, my townsman, he invented first,  
Porter, to rival wine, and quench the thirst:  
Porter, which spreads its fame half the world o'er,  
Whose reputation rises more and more.  
As long as porter shall preserve its fame,  
Let all with gratitude our parish name.

We should not conclude from this, that beer was not drunk before that time in London; the meaning obviously is, that Gutteridge added strength to the common liquors made out of hops and malt; the name of Porter seems to originate from its being a favourite drink with porters and men of hard labour, who find in it an inexhaustible supply of vigour and comfort; some coal-heavers are known to drink daily more than ten quarts of that heavy potation.

On the west of Shoreditch, we find, in our return towards the city, the parish of St. Luke, Middlesex, the church of which owes its rise to the increase of buildings in the parish of St. Giles, Cripplegate; for, notwithstanding there being a chapel of ease, and several meeting-houses, the parish-church could not contain half the inhabitants who were desirous of assembling there to attend divine worship. The commissioners for erecting the fifty new churches, taking this into consideration, purchased a piece of ground in this parish, and erected one of those churches upon it; after which, the inhabitants, applying to parliament, had the Middlesex-liberty of St. Giles's appointed for the parish; and, by the same act, 3500*l.* was granted to be laid out in fee-simple for the support of a rector; besides the profits of which, the church-wardens were to pay him annually 120*l.* to be raised by burial-fees. The church was finished in 1732, and was consecrated the next year on St. Luke's day, when the name of that saint was given as its patron. Though the building is convenient and well lighted with two rows of windows, it is a very singular structure. In the centre of the west front is the entrance, adorned with coupled Doric pilasters; and to

this door is an ascent by a straight flight of steps. Over the entrance is a round window, and on each side a small tower covered with a dome, and ornamented with two windows in front, one of the usual form, and another over it, answering to that over the door. The tower is carried up square, and behind it the roof of the church forms to the west a kind of pediment, broken by the rise of the tower, to which it joins on each side. The uppermost stage of the tower diminishes very considerably; and this, which is the base of an obelisk, supports on each side a dial. From hence rises, as a steeple, a fluted obelisk, which reaches to a great height, diminishing slowly, and being of a considerable thickness towards the top, where the upper edges are sloped off, and the whole is terminated by a ball and vane. We must confess that we cannot admire the architecture of this steeple, which, at a distance seems to be the point, or apex, of some civic or military monument, as it recedes greatly from the common style of ecclesiastical buildings. But it may be observed, in extenuation of the fault, if there be any, that, so many churches having been ordered to rise from their ashes in a given time, all plans, forms, and shapes, appeared to have been nearly exhausted; and the architect, appalled with the fear of being ranked with the common herd of imitators, was obliged to wing his fancy athwart the trodden paths to the regions of possibilities, oddities, and whimsies.

Not far from this, at the end of Old-street, rises in simple but awful majesty the solid building devoted to those unfortunate beings who suffer under mental derangement. St. Luke's Hospital was first established by voluntary contributions in the year 1751, for the reception of lunatics; and was intended not only in aid of, but as an improvement upon, Bethlem Hospital, which, at the time of this institution, was incapable of receiving and providing for the relief of all the unhappy objects for whom application was made. With this view, a house was erected on the north side of Moorfields, and called *St. Luke's Hospital*, from the name of the parish; but the utility of the institution was so evident, and benefactors increased with such rapidity, that the governors soon determined to extend its benefits to a much larger number of patients; and for that purpose purchased the piece of ground on which the present edifice (the foundation stone of which was laid the 20th of July, 1782) was erected, at an expense of forty thousand pounds. The north and south fronts of this building, which are of brick, ornamented with stone, are exactly the same. The centre and ends project a little, and are higher than the intermediate parts. The former is crowned with a triangular pediment, under which is inscribed in large letters, "Saint Luke's Hospital for Lunatics." The two latter are surmounted with an attic balustrade, which conceals the roof. The whole building is divided into three stories; and the spaces between the centre and ends are formed into long galleries; the female patients occupying the western galleries; and the male the eastern. Between the hospital and the street is a broad space, separated from the street by a wall, in the centre of which is the entrance, leading to the door by a flight of steps under a roof supported by Tuscan columns. The simple grandeur of the exterior of this building, the length of which is four hundred and ninety-three feet, produces an effect upon the mind, which is only superseded by a knowledge of the propriety, decency, and regularity, which reigns within, notwithstanding the unhappy state of its inhabitants. Behind the house are two large gardens, one for the men, the other for the women; where such of the patients as can be permitted with safety are allowed to walk and take the air. Those in a more dangerous state, who are obliged to be confined with strait waistcoats, have, with very few exceptions, the range of the galleries, in which there are fires, so protected by iron bars, reaching from the floor to the breast of the chimney, that no accident can possibly occur; and, in those cells where the most dangerous and hopeless patients are confined, every thing

which can contribute to alleviate their miserable state is attended to.

To the north of Old-street Road is a spring, formerly much celebrated, which now forms an excellent cold-bath, and is called St. Agnes-le-Clair, from the pureness of the water. Near this spot stands Aske's Hospital, more commonly called the Haberdashers' Alms-houses. Robert Aske, esq. left thirty thousand pounds towards building and endowing this spacious asylum for the aged and the young who are destitute of support. He restricted its benefits to twenty poor members of the Haberdashers' Company; and an equal number of boys, descended from parents belonging to the same body. The old men are comfortably supplied with every thing necessary; and the children are educated suitably to their condition of life. The building extends a great length, and has a piazza in front, supported by Tuscan pillars, which forms a covered walk. In the centre is a chapel, ornamented with a statue of the founder.

Another object of generosity, and a most worthy one, is the poor woman blessed with the hope of becoming a mother, but to whom Providence has not allowed, or worldly circumstances denied, the means of procuring the comforts necessary for the birth of a child. The London Lying-in-Hospital is at a short distance from the above-described place. The internal management is well regulated; and the exterior appearance of the edifice, though simple, is entitled to praise.

We pass by another hospital, or work-house, which is exclusively devoted to the poor French protestant refugees and their descendants residing in Great Britain.—It was erected in 1717, and was calculated to receive two hundred and twenty poor men and women; one hundred and forty-six of whom are on the foundation, and the other seventy-four are paid for, by their friends, at the rate of nine pounds per annum each; all of whom are plentifully supplied with all the necessaries of life, from the revenues of the hospital. This charity also extends to lunatics, for whose accommodation a large infirmary is provided. There are a chaplain, physician, surgeon, and other proper officers, belonging to this foundation.

Can we avoid lifting up our hands and eyes, but most particularly our hearts, in sincere gratitude to heaven, when we find ourselves surrounded by so many charitable establishments—most of them supported by voluntary subscriptions, a sort of fund which proves as solid as if these hospitals and alms-houses had been endowed with large properties in money or the most improving estates.

Opposite to the French Hospital, and behind St. Luke's and the London Lying-in Hospitals, is an elegant pleasure bath called *Peerless's Pool*. On the spot where this bath is situated was formerly a dangerous pond, which, from the number of persons drowned in it, had obtained the name of *Perilous Pool*. To prevent these accidents, the principal part of it was filled up; but, in the year 1743, one Mr. Kemp, an ingenious projector, converted it to the purposes it is now used, and altered its name from *Perilous* to *Peerless's Pool*. This pleasure-bath is esteemed the completest of a public nature of any in the kingdom. It is a hundred and seventy feet long, and above a hundred feet broad, having a smooth gravel bottom, five feet deep in the middle, four feet at the sides, and but three feet at one end. The descent to it is by several flights of steps, conveniently disposed round it, adjoining to which are boxes and arbours for dressing and undressing, some of them open, and others enclosed. On the south side is a neat arcade, under which is a looking-glass over a marble slab, and a small collection of books for the entertainment of the subscribers. The ground, about the pleasure-bath, is agreeably laid out, and well planted with trees. Here is also a cold bath, generally allowed to be the largest in England; it being forty feet long, and twenty feet broad, with flights of steps and dressing-rooms at each end. Besides these, there is also

a very

handsomely disposed against the walls. On each side of the principal building, at some distance backward, is a small edifice, used by the company on particular occasions. There are three entrances to this ground, by handsome iron gates; the principal of which is on the south side from Chiswell-street.

The present Artillery-ground, together with the land on the north side of it, as far as Old-street, was anciently denominated Bonhill or Bunhill Fields, part whereof was, by the mayor and citizens of London, in the year 1665, set apart and consecrated as a common cemetery, for the interment of such bodies as could not be admitted into their parochial grounds. However, it not being made use of for the purpose intended, Dr. Tindal took a lease of it, and converted it into a burial-ground for the use of the dissenters. It contains a prodigious multitude of grave-stones with inscriptions, besides a great number of raised monuments, with vaults underneath, belonging to particular families.

The west side of Finsbury-square, and the street between Moorfields and the City-Road, were begun in 1777; a considerable time elapsed before the remaining part could be carried into execution. At length, in 1789, the north side was let upon building leases, at 5s. 3d. per foot; the east side was let in 1790, and the south side in 1791. So unwilling were builders to speculate in this concern, that the whole ground-rent of the square amounts but to 125l. per annum. But it was not long before the corporation found the advantage of forming a respectable neighbourhood on this estate, fit for the residence of the wealthy. Even before the square was completed, liberal offers were made for pieces of ground in its vicinity; and nearly the whole of it is now covered with handsome streets, the present ground-rents of which amount to upwards of 7000l. per annum. The original design was to have a piece of water in the centre of the square, which might be a reservoir to the New River; but, from an apprehension that it would be a receptacle for filth, it was changed into a garden.

To the north of Finsbury-square is a large and handsome meeting-house, belonging to a congregation of dissenters, called the Foundery, from having been erected by the famous John Wesley on the site of a place of that description; and at a small distance from it is another meeting-house, called the Tabernacle, erected in 1753 by the not-lefs-famous George Whitfield. This place of worship is in a most flourishing state; for the congregation is uncommonly numerous, the pulpit resounds with the unctuous and pathetic language of true and genuine dissenting popularity, and nearly the whole neighbourhood forms a religious family. Rival to Rowland's Hill's chapel, the Tabernacle can boast of thousands of visitors on a Sunday evening; while the sacred orators and the harmonious singers of both may smile at the loneliness of our established churches.

The Temple of the Muses, or, in plain English, the bookseller's shop, close to Finsbury-square, is worthy of notice, not only on account the curious Life and Confessions of Mr. Lackington, with which he has favoured the world himself, but also for the quantity and variety of books collected there, and the particular order in which they are set within the circumference of a sort of tower, which, from a circular counter below, rises to the lantern at the top of the building, which is in itself an ornament to the place.—Mr. L. professes himself to be the son of a poor journeyman shoemaker at Wellington, in Somersetshire, to which profession he was himself educated; and it was all the education that he received. After working at his trade in various places, and being sometimes a follower of old John Wesley, and other methodistical teachers, which first gave him a taste for reading, he at length resolved to try his fortune in London. Accordingly, he removed to the metropolis, with a pious wife of the same complexion; but poverty still followed his steps; until, by the death of his grandfather, he gained a legacy of ten pounds, nearly the half of which was absorbed in the expenses of

a journey to receive it. On this capital, he hired a little shop and parlour, and commenced master-shoemaker and seller of old books; until, finding the latter half of his trade succeed the best, he converted his stock of leather into literature, and thus became a regular bookseller. This was in 1775; and his success in business must have been very rapid, for in 1791, when he published his Life, he already computed his profits at 4000l. per annum, so that he rode in his own chariot, had two town-houses, and a country-seat at Merton in Surrey! When we consider the narrow views and ideas with which an ordinary mechanic sets out, great allowances may be made for his exultation, when, after struggling through distresses, he finds himself elevated to a new rank in life. In this instance, the rank attained was that of a substantial bookseller; it was therefore in the line of his profession to proclaim his opulence, and to exhibit the portrait of so extraordinary a personage in the front of his book. Nor is this all, for in a motto above, he even triumphs over an old proverb, by inscribing *Sator ultra crepidam, feliciter ausus*. Beneath, under his name, is added—"Who a few years since began business with only five pounds; now sells one hundred thousand volumes annually." Whatever degree of vanity may be discovered in thus publishing a volume wholly written about himself and his own affairs, Mr. L. is a fly egotist, and takes industrious opportunities to point out his shop as the *only* market in London for cheap books; and attributes his great trade to his low profits.—Mr. Lackington of whom we have been speaking, has retired from business; the present head of the firm is his nephew.

Bending our way southwards to the old walls of London, we meet the place called Moorfields, the appearance of which is now very different from what it was anciently, and indeed not longer than fifteen years since, when trees of large growth were forming quincunxes, and offering a pleasant walk for the neighbours. But now it is shorn of its glory; and we understand that it is destined to bear some new buildings surrounding a square. The north and east sides are at present curiously studded with brokers and upholsterers' shops, with their usual out-door display of all sorts of goods. Broker-row in Moorfields has long been famous; and a great quantity of customers come from all parts within and without the bills of mortality to furnish their apartments out of this plentiful repository of ready-made rubbish. The south side is bounded by the well-known establishment called *Bethlehem*, corrupted into *Bedlam*. It was a noble structure, five hundred and forty feet in length, and forty feet in breadth. The middle and ends, which projected a little, were adorned with Corinthian pilasters, entablatures, foliage, &c. and, rising above the rest of the building, had each a flat roof, with a handsome balustrade of stone, in the centre of which was a handsome turret. In the middle was a clock and three dials, and on the top was a gilt ball and vane. The whole was built of brick and stone, and inclosed by a handsome wall, formed of the same materials, six hundred and eighty feet long. In the centre of this wall, which went in with a grand semicircular sweep, was a large pair of fine iron gates, supported by stone piers, on the top of which were two statues, in a reclining posture; one representing Raving, and the other Melancholy, Madness. These figures are finely expressed, and were executed by Mr. Cibber, who carved the emblematical figures on the Monument.—Pope, addressing Cibber the poet-laureat, son of this celebrated artist, called these two pieces of foundery *his brazen brothers*; and they have long been admired. A Westminster scholar composed the following hexastich expressive of the opposite character of the two figures and of the skill of the artist:

*Bethlemii ad portam se tollit dupla columna*  
 Εἰκοσι τῶν ἔκτος ἐνταδε χαλκῶς ἔχει;  
*Hic calvum ad dextram trisri caput ore reclinat;*  
*Vix illum ad lavam ferrca vincla tenent.*  
*Dissimilis furor est statuis: sed utrumque laborem*  
*Et gentum artificis monstrat uterque furor.*

Which

Which may be rendered thus :

Here, on each side, a lofty pillar stands

And statues mis'ry within doors reveal ;

This shakes the chains that bind his struggling hands ;

That feeds the grief he wishes to conceal.

Various their madnes ; yet, each in his guise

The artift's sense and skill proclaims to wond'ring eyes. Z.

The wall enclosed a range of gardens ; in the east division of which, separated by the entrance into the hospital, those of the lunatics, who were well enough to be suffered to go about, were allowed to enjoy the benefit of the fresh air. The expence of erecting this edifice amounted to 17,000*l.* The inside of the building chiefly consisted of two galleries, one over the other, a hundred and ninety-three yards long, thirteen feet high, and sixteen broad, exclusive of the cells. The galleries were divided by iron gates, in order to separate the men from the women. At the entrance between these two gates, on the right hand, was a handsome apartment for the steward, or manager ; and on the left was a spacious room, in which the committee sat to receive and discharge patients. Below-stairs were the kitchen and all necessary offices ; and at the south-east corner a bath. The accommodations were calculated for about 200 patients.—One wing of this building has been pulled down ; and the whole will be entirely levelled with the ground as soon as that most noble fabric which is rising in St. George's Fields shall be completed, and ready to receive the patients. Of that fabric we shall speak when we perambulate on the Surry side of the Thames. In the mean time we have thought it not amiss to leave upon record a few particulars of an edifice which cannot again be surveyed.

From Moorfields we return to our walk through *Broad-street* ; the name of which is derived from its being before the fire of London one of the widest within the walls of the city. It gives name to the ward. The principal object of attention is a handsome plain building of four stories in height, with an entrance through the middle of it, into a large yard, in which is another building of brick, nearly the size of the principal one. This is the EXCISE OFFICE, where immense duties are paid ; a gulph which in 1787, according to Pennant, had absorbed the sum of 5,331,114*l.* 6*s.* 10½*d.* and, in 1812, 27,492,539*l.* 0*s.* 6¾*d.* an increase the most astonishing, in that it took place during a lapse of time when the dawn of peace never appeared but for a few months in the course of more than 17 years. This is the principal office of excise in his majesty's dominions, and the business of it is conducted by nine commissioners, under whom are a great number of officers, both within and without the house. These receive the duties on beer, ale, and spirituous liquors ; on tea, coffee, and chocolate ; on malt, hops, soap, starch, candles, paper, parchment, and other exciseable commodities : for the surveying and collecting of which duties, a great number of out-door officers are employed in different districts or divisions, throughout the kingdom, to prevent frauds and losses. Before these commissioners all cases of seizure for frauds committed in the several branches of the revenue under their direction, are tried ; and from their determination there is no appeal except to the commissioners of appeal, who are part of themselves, for a re-hearing.

Where this building now stands—where busy hands receive from reluctant ones a premium upon their purchases or the result of their industry, which however is no more than a fair compensation for the security and other comforts which we all enjoy under a solid and well-supported government—where now the sound of money or the magic value of silent paper calls the attention of so many clerks—ten peaceful alms-houses once contained the poor, who, in their grateful orisons, might thank Providence for the benevolent disposition of sir Thomas Gresham, who founded them in 1575.

On the west side of *Broad-street* is the parish-church of

St. Peter-le-Poor. This church is of very ancient foundation, as appears from a register of it so far back as the year 1181. It was dedicated to St. Peter the Apostle, and is distinguished from other churches of that name by the additional epithet of *Le Poor*, which Stow conjectures was given to it from the ancient state of the parish, though, in his time, there were many fair houses in it, possessed by rich merchants and others. The old church projected a considerable distance beyond the line of the houses, and was a great obstruction to the passage of the street ; in consequence of which, an act of parliament was passed, in 1788, for taking it down and rebuilding it further back, taking in the site of a court behind. This desirable object was completed in 1791, at an expence of upwards of four thousand pounds, of which the city of London subscribed four hundred ; the remainder was raised by annuities in the parish. The west end of this new church is elegantly simple ; the door is in the centre, between doubled Ionic columns ; the ends of the front are adorned with pilasters of the same order, between which and the columns is a blank window on each side. Above the door is a moulded pediment, with a plain tympanum ; over which rises a square tower, in two stories ; the first plain, for the clock and bells, the second ornamented with double Corinthian pilasters at the corners, on each of which stands a handsome vase. The whole is surmounted with an elegant bell-shaped dome, terminated by a weathercock. It is a rectory, the advowson of which appears to have been always in the dean and chapter of St. Paul's.

The hermits of the order of St. Augustine, by corruption or abbreviation *Austyn*, who was bishop of Hippo in Africa, had a convent built for them by Humphry Bohun, earl of Hereford and Essex, a little to the west of this church. Edward VI. in the fourth year of his reign, granted all the church, except the choir and steeple, to a congregation of Germans, and other strangers, who fled here for the sake of religion, and ordered it to be called *The Temple of the Lord Jesus*. Several successive princes have confirmed it to the Dutch, by whom it is still used as a place of worship. It is a large and spacious Gothic edifice, supported by two rows of stone pillars. At the east end are several steps, leading to a large platform, on which is placed a long table, with seats against the wall, and forms round, for the use of persons receiving the holy communion ; the windows, on one side, have the words *Jesus' Temple* painted on them, in several places. At the west end is a library, that contains several valuable manuscripts ; among which are the letters of Calvin, Peter Martyr, and other foreign reformers. This place of worship, which is now called "*the Dutch Church in Austyn Friars*," is served by two ministers, who preach twice every Sunday, and once in the week. They administer the sacrament on the last Sunday in every month ; and exchange churches every first Sunday in the month with the *Walloon congregation*, for the administration of the Eucharist ; their own church in *Threadneedle-street* being too small. The ministers have good salaries, and the church provides a sufficient subsistence for their widows.

Part of the house, gardens, and cloisters, belonging to this priory, were granted to sir William Paulet, lord-treasurer to Henry VIII. who erected a stately edifice on the site, which afterwards devolved to his son, the marquis of Winchester, with the choir and steeple of the conventual church : he disposed of the pavement thereof, with all the magnificent sepulchral monuments of the nobility, for the pitiful sum of one hundred pounds ; he also stripped the roof of the lead, and converted the building into a stable. The remains of the mansion-house are still to be seen in the old *Pay-office*, at the corner of *Winchester-street*, now converted into dwelling and counting-houses for merchants. —*Winchester-street* was built on the ground of the gardens, and contains several houses worthy of the notice of the antiquary, particularly that in the south-west angle, which is supposed to be the one alluded to by *Strype*,

when he says, "Here was a great messuage, called the Spanish ambassador's house, of late inhabited by sir James Houblon, knight and alderman of London."

At the upper end of Pinner's-court, in Winchester-street, stands Pinner's or Pinmakers' Hall, a very antique building, principally used as a dissenting meeting-house. This was also a part of the Augustine priory, which was converted into a glass-house before it became the property of the Pinner's company.

Broad-street, which is inhabited by several merchants, or who at least have their counting-houses there, as being near the centre of trade and business, leads us to the eastern end of Threadneedle-street, and to several of the most interesting buildings in the city, a focus of lofty and elegant edifices, not more important to the sight by their exterior aspect, than they are momentous relatively to the business which is daily transacted there.—We mean the Royal Exchange, the Bank, the Stock Exchange, and the Mansion House; with the appendages of the Post-office, several lottery and fire offices, and a number of churches, the spires and towers of which seem to bristle above the roofs of the whole neighbourhood. There is not, perhaps, in any metropolis through the whole range of European cities, a spot so interesting as the one we have just alighted upon. We were hurried there on the wings of curiosity; and we left many interesting objects behind, which we may refuse, as a sort of rest, when we have passed, in admiration, through the bustle of the three or four places we have just enumerated.

The BANK. The aspect of this building is noble, and adapted to the purpose of giving an adequate idea, if possible, of the important and extensive business which is incessantly doing within its walls. The architecture is light on the south side; and the improvements on the northern part of the edifice, being more lofty, and upon a larger scale, add a considerable degree of majesty to the whole. This might be properly called the Temple of Plutus, the Palace of Mammon. And, if we consider the *sepulchral* ornaments crowning the more modern parts, may we not style it the "tomb" where gold and silver are buried, and sleep under ground whilst their *paper-ghosts* and *filmy simulacra* flutter about in the shape of bank-notes? This is the place wherefrom and whereto the immense and immeasurable wealth of the united kingdom—nay, of all the world—circulates; on the Herculean strength of credit, in light paper as well as in solid tokens, through the mercantile universe. The building fills a space inclosed by the four streets, Bartholomew-lane, Lothbury, Prince's-street, and Bank Buildings. The principal front is composed of a centre and two wings. The former is eighty feet in length, of the Ionic order, and raised on a rustic base: the wings are each ornamented with a colonnade of Corinthian pillars, which, though in itself beautiful, is considered as too insignificant for the structure with which it is connected. Through this front are three entrances, one larger than the other two, into a handsome square court, on the northern side of which is the Great Hall, a noble apartment, seventy-nine feet in length, and forty broad. Here was erected a fine marble statue, in honour of the founder, William the Third, with a Latin inscription, of which the following is a translation:

For restoring Efficacy to the Laws,  
Authority to the Courts of Justice, Dignity to the Parliament,  
To all his Subjects their Religion and Liberties,  
And confirming these to posterity,  
By the succession of the illustrious House of Hanover  
to the British Throne:  
To the best of princes, WILLIAM THE THIRD,  
Founder of the Bank,  
This Corporation, from a sense of gratitude,  
Has erected this statue, and dedicated it to his memory,  
in the Year of our Lord 1734.

Behind this court, new buildings of great extent have been erected: The back of the Bank is a huge wall,

strangely ornamented at top, and forming, by its heavy aspect, a contrast of strength and security with the puny elegance of the front. The gateway, however, through which the carriages that bring gold and silver enter, is handsome. A back and front view of the building is given in Plate VII.

A stranger to the business transacted at the Bank, when entering the premises for the first time, appears bewildered and at a loss to know where he is. The bustle, which is constantly kept up in the rotunda, among the buyers and sellers of stock, and those who are equally busy in transferring, presents a curious scene; it is truly interesting to see the throng, all eagerly occupied with their own affairs, and expressing their anxiety by their countenances. This apartment is crowned with a noble dome, admitting the light through an elegant cupola, supported by twelve female figures, representing the months of the year. Within the cupola is a dial, that shows the direction of the wind.

On each side of the entrance into the Bank from Bartholomew-lane, are large commodious offices; and on the door of each, the names of the funds managed in it. The apartments are heated by stoves, some of them designed with great taste. Beneath this extensive edifice are strong vaults, where the cash and bullion are deposited. In digging for the foundations, the workmen found oyster-shells so far beneath the surface as to strengthen the tradition recorded by Stowe, that the Thames once flowed as far as Bucklersbury. Such are the changes on the surface of our earth, as well as in the circumstances of those who dwell upon it. The increase of the national wealth may be estimated by the augmentation of the capital of the Bank: in 1694, when Mr. Paterfon first projected the plan, it was limited to £200,000. (see the article BANK, vol. ii. p. 672.) at present it amounts to 11,550,000. The affairs of the proprietors are managed by a governor, deputy-governor, and twenty-four directors.

Near the Bank is the Stock Exchange, which, as a building, has nothing remarkable, but is the place where not only real stock is transferred from one owner to another, by brokers, whose sole occupation it is to do this business for their principals; but also where immense nominal sums are bought and sold upon speculation. This is a most curious (our pen was ready to write *nefarious*) sort of gambling, which has wrought in a few hours sometimes the fortune, often the ruin, of individuals. This nominal game is played in the following manner: A man, who sometimes possesses not a farthing in the stocks, directs his broker to buy, for instance 100,000. for the 30th of next month, or any other fixed and agreed time at a certain price: if, by some unexpected event, stocks rise in value during that time, the difference arising in the price constitutes his profit; but, if they fall, then he loses, and thus falls with them, if he cannot pay his *differences*, as it is called, to a deserved degree of ignominy which is seldom obliterated. Those people who cannot pay their differences upon the *settling-day*, are humbly styled, *lame ducks waddling out of the alley*.—It is curious to see a landscape and one or two other paintings hanging on high in this room, where all eyes fixed down upon paper, and ready to split a shilling into ten thousand fractions, never rise to look at any thing but what can bring the most profitable interest. The painting, however, is not worth looking at; and the reason why it is there is so trifling that it deserves not to be noticed.

Cornhill, though a short street, is wide and well built; displaying two rows of fine shops. On each side of it are numerous courts, lanes, and alleys, that, notwithstanding their closeness, are, from their vicinity to the main seat of business, occupied by most respectable inhabitants in the commercial line of life. They abound also with counting-houses and coffee-houses, for the accommodation of persons who reside at a distance, and require only a temporary accommodation in this neighbourhood of mercantile activity.

The

*Back and Front View of the Bank of England.*

The most noble ornament of Cornhill is the **ROYAL EXCHANGE**. The *Bourse*, as it is called in foreign countries, or meeting-place for merchants, was anciently situated in Lombard-street; but the inconvenience of this place had occasioned frequent complaints among the merchants. At length, sir Thomas Gresham, in the years 1566 and 1567, erected a spacious and magnificent edifice for this purpose, in Cornhill; which was no sooner finished, than queen Elizabeth honoured it with the title of the Royal Exchange. See **GRESHAM**, vol. ix. p. 19. and the articles there referred to.—This stately fabric being consumed in the fire of 1666, the foundation of the present magnificent edifice was laid in year 1667, and it was completed in 1669. But, the site of the Old Royal Exchange not being capacious enough to receive the intended new fabric, the city and the Mercers' Company, the trustees under Gresham's will, purchased a piece of ground for enlarging it, at the expense of seven thousand two hundred and seventeen pounds eleven shillings, which, added to fifty-eight thousand nine hundred and sixty-two pounds, the charge of building, makes the whole expense of the Royal Exchange amount to sixty-five thousand nine hundred and seventy-nine pounds, eleven shillings.

The ground plot of this building is two hundred and three feet in length, and one hundred and seventy-one feet broad. The area in the middle contains sixty-one square perches, and is surrounded with a substantial and regular stone building, wrought in rustic, with a spacious piazza round it. In the centre of the principal fronts, which are north and south, are grand entrances into the area, under lofty and noble arches. The south front in Cornhill is the principal: on each side of the entrance are Corinthian columns, supporting a compass-pediment; and in the inter-columniation on each side, in the front next the street, is a niche, with the figures of Charles I. and Charles II. in Roman habits, well executed. Over the aperture, on the cornice between the two pediments, are the king's arms in relievo. On each side of this entrance is a range of windows between demi-columns and pilasters of the Composite order; above which the building is decorated with a balustrade. From the centre, in this front, rises a lanthorn and turret a hundred and seventy-eight feet high, on the top of which is a fanè in the form of a grass-hopper, that insect being the crest of sir Thomas Gresham's arms: this fanè is made of polished brass, and is esteemed a very curious piece of workmanship. The north front in Threadneedle-street is adorned with pilasters of the Composite order, but has neither columns nor statues on the outside; and, instead of the two compass-pediments, has a triangular one.

The inner court, as hath been already observed, is surrounded with a wide piazza, serving to shelter the merchants, who meet there, from the inclemency of the weather. Over the arches of this quadrangular piazza is an entablature standing round, and a compass-pediment in the middle of the cornice of each of the four sides. On the north side, under the pediment, are the king's arms; on the south, the city-arms; on the east, Gresham's arms; and on the west, the Mercers' arms; with their respective enrichments. There are twenty-four niches in the intercolumns, in twenty of which are the statues of the kings and queens of England, in their royal robes, and with regalia, except three, which are in Roman habits. On the south side are the statues of Edward I. Edward III. Henry V. and Henry VI. On the west side, Edward IV. Edward V. with the crown hanging over his head; Henry VII. and Henry VIII. On the north side, Edward VI. Mary, Elizabeth, James I. Charles I. Charles II. and James II. On the east side, William and Mary in one niche, queen Anne, George I. George II. and his present majesty George III. Under the piazzas, within the area, are twenty-eight niches, all vacant except that in which sir Thomas Gresham's statue is placed in the north-west angle; and that in the south-west, where the statue of sir John Barnard was placed in his life-time by his fellow-

citizens, to express their sense of his merit as a merchant, a magistrate, and a faithful representative of the city of London. In the centre of the area is erected, on a marble pedestal, about eight feet high, another statue of Charles II. in a Roman habit, executed by Gibbon, and encompassed with iron rails. On the south side of the pedestal, under an imperial crown, a sceptre, palm-branches, and other decorations, is a flattering inscription in Latin. On the west side of the pedestal, is cut in relievo, a Cupid resting his hand on a shield, containing the arms of France and England quartered, and holding in his left a rose. On the north side are the arms of Ireland on a shield, supported by a Cupid. On the east side are the arms of Scotland, with a Cupid holding a thistle. And, on the base of the pedestal, on the south, is the following inscription: "This statue was repaired and beautified by the Company of Merchant-Adventurers of England anno 1730; John Hanbury, Esq. governor."—In this area, and under the surrounding piazza, the merchants, and other persons engaged in mercantile connexions, meet every day to transact business, between the hours of twelve and three o'clock; and, for mutual convenience, those engaged in the same branches of trade assemble in distinct parts, or, as they are called, *The Walks*.

Under the north and south fronts are spacious stair-cases, which lead to a gallery that extends round the four sides of the building, and in which were formerly about two hundred shops, occupied by milliners, haberdashers, &c. but those shops have been long deserted; and the galleries are now occupied by the Royal Exchange Assurance Office, the Lord Mayor's Court Office, the Merchants' Seamen's Office, Lloyd's Subscription Coffee-houses, the rooms appropriated for the Gresham Lectures, and a number of counting-houses for merchants and underwriters. The shops in the lower part of the building are mostly used as counting-houses by stock-brokers. Under the whole are vaults, kept by the East-India company, as magazines for pepper. In the turret is a good clock, which goes with chimes at the hours of three, six, nine, and twelve; it has four dials, and is so regulated as to become a standard of time to all the mercantile parts of the town.

A little to the south-west of the Royal Exchange is the **MANSION HOUSE**, a building of considerable magnificence; though, from its confined and low situation, it has an appearance of heaviness, which on an elevated spot, in an area proportionate to its magnitude, it would be free from. It is substantially built of Portland-stone; and has a portico of six lofty columns of the Corinthian order in the front, the pilasters under the pediment, and on each side, being of the same order. The basement-story is very massy, and built in rustic. In the centre of this story is the entrance to the kitchen, cellars, and other offices; and on each side rises a flight of steps, of very considerable extent, leading up to the portico, in the middle of which is the door that opens to the apartments and offices where business is transacted. The stone balustrade of the stairs is continued along the front of the portico; and the columns, which are wrought in the proportions of Palladio, support a large angular pediment, adorned with a very noble piece of sculpture, representing the dignity and opulence of the city of London; finely designed, and well executed by Mr. Taylor. The principal figure represents the genius of the city, in the dress of the goddess Cybele, clothed with the imperial robe, alluding to her being the capital of this kingdom, with a crown of turrets on her head; holding the pratorian wand in her right hand, and leaning with her left on the city-arms. She is placed between two pillars, or columns, to express the stability of her condition; and on her right hand stands a naked boy, with the fasces and axe in one hand, and the sword, with the cap of liberty upon it, in the other; to show, that authority and justice are the true supports of liberty, and that, while the former are exerted with vigour, the latter will continue in a state of youth. At her feet lies a figure, representing Faction, as it were in agony, with snakes

twining round his head; intimating, that the exact government of this city, not only preserves herself, but retorts just punishment on such as envy her happy condition. In the group farther to the right, the chief figure represents an ancient river-god, his head crowned with flags and rushes, his beard long, a rudder in his right hand, and his left arm leaning on an urn, which pours forth a copious stream; the swan at his feet, shows this to be the Thames; the ship behind, and the anchor and cable below, him, very emphatically express the mighty tribute of riches paid by the commerce of this river to the city to which it belongs. On the left hand there appears the figure of a beautiful woman, in an humble posture, presenting an ornament of pearls with one hand, and pouring out a mixed variety of riches from a cornucopia, or horn of plenty, with the other; signifying the abundance which flows from the union of domestic industry and foreign trade. Behind her is a stork, and two naked boys, playing with each other, and holding the neck of the stork; to signify that piety, brotherly love, and mutual affection, produce and secure that vast stock of wealth, of various kinds, which appears near them in bales, bags, and hog-heads. So that every thing in this piece is not barely beautiful and ornamental, but, at the same time, instructively expressive of the happy condition of that great city, for the residence of whose chief magistrate this noble building was erected. Beneath this portico are two series of windows, which extend along the whole front; and above these is an attic story with square windows, crowned with a balustrade.—The building is much deeper than it is wide; it has an area in the middle, and at the farthest end is an Egyptian hall, which is the length of the front, very lofty, and designed for public entertainments. Near the ends at each side is a window of extraordinary height, placed between coupled Corinthian pilasters, and extending to the top of the attic story. The inside apartments and offices are exceedingly noble, and elegantly furnished. On the west side of the building is a commodious door for the admittance of private company; and on the east side is the entrance to the justice-room, where the lord-mayor in person sits every day.

The greatest inconvenience which attends this edifice arises from its being so crowded with houses, especially on the sides, that the rooms are dark; and even in the front there is not a sufficient area to enlighten the building. Notwithstanding this imperfection, it is certainly a very noble structure, and well calculated for the discharge of that business, and the dignity of that magistrate, for whom it was erected. The whole expense of building the mansion-house (including the sum of three thousand nine hundred pounds, paid for purchasing houses to be pulled down) amounted to 42,638*l.* 1*s.* 8*d.*

Stocks Market, on the site of which the mansion-house was erected, was built in the year 1282, by Henry Wallis, the mayor, on a void space to the north of St. Mary Woolchurch, where formerly had stood a pair of stocks for the punishment of offenders; and the rents of the houses were appropriated to the maintenance of London-bridge. In the year 1322, it was ordained that none should sell fish or flesh out of this and the other markets, upon pain of forfeiting the articles exposed to sale for the first offence, and of losing their freedom for the second. In this market stood the famous equestrian statue, set up in honour of Charles II. by sir Robert Vyner, lord-mayor in 1675. His lordship, in his haste to exhibit this testimony of his loyalty, found a statue of John Sobieski, king of Poland, trampling on a Turk, ready cast at a founder's; and, disregarding the incongruity of the costume, he christened the Pole by the name of Charles II. and the prostrate Turk by that of Oliver Cromwell; and thus new named it arose on this spot, in honour of his sovereign.—Encouraged and inspired by an example so authoritative, the landlord of the George and Dragon alehouse presently caused his sign to undergo a similar transformation: St.

George had his helmet altered into a wig, and the dragon beneath was metamorphosed into a prostrate Oliver Cromwell!

The view from the bottom of the Poultry, a little below St. Mildred's church, is perhaps not to be matched by any in the world. It has a most elegant and even magnificent appearance.—You have on your right the lofty building of the Mansion-house. Towards the south-east, the opening into Lombard-street, over which you catch a glimpse at several towers and spires. Then before you, and full east, you find Cornhill, displaying the front of the Royal Exchange and several other handsome buildings, crowned also with the sight of many towers and steeples. To your left, drawing toward the north-east, is a large opening, presenting a side-view of the Bank, and of the elegant and lofty edifices built opposite to, and as an ornament for, it. In the back ground rises the Tower of St. Bartholomew's church, with whimsical arches on the top, which, though they do not belong properly to any sort of pure or correct order, have a singular effect when seen at a proper distance. See Plate VII*f.* where this tower is seen in the distant back ground of the lower part of the engraving.

This church stands at the south-west corner of Bartholomew-lane, and is of very ancient date.—The old church was burnt in 1666, after which the present building was erected. It consists of a very irregular body, with a tower crowned with arches, supported by columns of the Corinthian order. The living, at the time of the reformation, being in the gift of the abbey of St. Mary of Grace, it fell, with the dissolution of that religious house, to the crown, and so has continued to the present time.

Very near this, and a little on the south-east in Threadneedle-street, we find the parish-church of St. Bennet Fink.—It is so called from its dedication to St. Benedict, an Italian saint, and founder of the order of Benedictine monks; and it received the additional name of Fink, from one Robert Fink, who rebuilt it. It is of ancient foundation; and, though at present only a curacy, yet was originally a rectory, John de Branketree being rector thereof before the year 1323. The patronage of this church, which was formerly in the family of the Nevils, falling to the crown, Edward IV. gave it to the dean and chapter of Windsor; and, the impropriation being in the said dean and chapter, it is supplied by one of the canons, who is licensed by the bishop of London. The old church being destroyed by fire in 1666, the present building was erected in 1673. The body is of an elliptical form, lighted by large arched windows, which reach to the roof. This is encompassed with a balustrade, and crowned with a lantern; a dome rises upon the whole extent of the tower, and on its top is a turret. The church-yard was given to the parishioners as a free burial-place, without any expense.

Returning along Threadneedle-street, we find near the south-west corner, on the east of Broad-street, the Walloon or French Protestant church on our left. It is nearly opposite to Finch-lane, which we suppose to have been originally Fink-lane, in unison and according to the church just mentioned. It stands upon the site of a chapel annexed to the hospital of St. Anthony. Divine service is performed here, in the French tongue, after the manner of the church of England. The old building being entirely destroyed by the fire of London, the present church was erected at the sole expense of the French protestants. It is a small but neat place of worship, with a convenient vestry at the south-east corner.

The hospital of St. Anthony was a cell to the priory of St. Anthony of Vienna, and the building was originally a synagogue, which was granted by Henry III. in the year 1231, to the monks of this fraternity. About the year 1338, they erected a free-school, on a piece of garden-ground, that was given to them, on the north-side of the hospital, which, in a short time flourished so much, as to

rival St. Paul's school; and, as an encouragement to this foundation, Henry VI. granted divers lands, in the county of Southampton, towards the maintenance of five of their scholars at the university of Oxford; each of whom was to be allowed ten pence per week. At the general suppression of the monasteries, by Henry VIII. the revenues of this hospital were valued at 5*l.* 6*s.* 8*d.* per annum. Edward VI. granted it to the dean and canons of Windsor, and their successors, for ever. In the beginning of Elizabeth's reign, the foreign protestants having but one place of worship in the city, viz. the church in Austin Friars, the French, by the assistance of Grindal bishop of London, obtained a lease of the chapel, which they have occupied ever since.

The South-Sea-house stands at the north-east extremity of Threadneedle-street, (which, according to Stow, was originally called Three-needles-street, on account, most likely of its being near Pinmakers' Hall.) This house was erected upon a large extent of ground, running backward as far as Old Broad-street, facing the church of St. Peter-le-Poor. The back front was originally the Excise-office, and then the South-Sea company's office; and it is now distinguished by the name of the Old South-Sea-house. It is a substantial and handsome building of brick, ornamented with Portland stone. The front, in Threadneedle-street, is very beautiful. The entrance is a gateway, leading into a court, with a piazza formed of Doric pillars. The walls are remarkably solid, and the interior is very commodious: one room, in particular, is peculiarly lofty, spacious, and elegant.

Cornhill, the top part of Gracechurch-street, and Lombard-street, form nearly an equilateral triangle, in which we find the church of St. Michael, which is a rectory. The patronage of it appears to have been anciently in the abbot and convent of Evesham, erroneously called Coveham, who, in the year 1133, granted the same to Sparling, a priest, with all the lands thereunto belonging, except those held by Orgar le Proud, at the rent of two shillings a-year; in consideration of which grant, the said Sparling covenanted and agreed, not only to pay annually to the abbot and canons the sum of thirteen shillings and four pence, but likewise to supply the house of the said abbot (when in London) with fire, water, and salt. Some time afterwards, the rectory reverted to the convent, and they continued patrons of it until the year 1503, when, by a deed, bearing date Dec. 3, they conveyed the advowson to the Drapers' Company, in consideration of a perpetual annuity of 5*l.* 6*s.* 8*d.* in addition to an ancient pension of six shillings and eight pence annually paid to the abbot and canons out of the said church; since which time, the patronage has continued in the Drapers. The old church being destroyed by the fire of London, in 1666, the present Gothic structure arose in its stead; the body of which is seventy feet long, sixty broad, thirty-five in height, and one hundred and thirty feet to the top of the tower. The lower part of the tower occupies the centre of the church; and, on each side, there is a regular extent of building. The principal door opens in the lower stage of the tower, which rises with angulated corners from the ground, forming a kind of base, terminated at the height of the body of the church. The second stage, which is plain and lofty, has two tall windows, one over the other, properly shaped for the style of the building; this is terminated with a truly Gothic cornice. The third stage is exactly in the form of the two others; only they are plain, and this is covered with ornaments; the angulated corners are fluted, and terminated by cherubs' heads, under a cornice; the plain face, between, has four windows, in two series. Above the cornice, over the uppermost of these windows, runs a battlement, on the plain faces of the tower, and from the corners are carried up four beautiful fluted turrets, cased, a part of their height, with Doric turrets; these terminate in pinnacle-heads, from within which rises a spire at each corner, crowned with a vane. The tower contains an excellent ring of bells. Here is a

lecture every Sunday morning, and on every holiday, founded by John Rayney, esq. who left houses in Gracechurch-street to the company of Drapers, charged with the payment of forty pounds per annum, for the support thereof.

Almost opposite to this church, in Cornhill, stood, anciently, the king's weigh-house, or beam, for weighing foreign merchandise; to which belonged a number of porters, and also a cart and four horses for conveying goods to and from the weigh-house.

Near the south-east corner of Cornhill, stands the church of St. Peter, Cornhill, which, if the following inscription, engraved on a tablet of brass, and hanging in the church, near the baptismal font, can be relied on, is by far the most ancient of the Christian churches in Britain. It must, however, be observed, that, independently of the general disbelief of the existence of a king named Lucius, the only authorities for which are Geoffrey of Monmouth and Joceline of Furnes, the style appears to be much too modern, and is probably a fabrication about the time of Henry VI. "Be hit known to all men, that the yeerys of our Lord God, an. CLXXIX. Lucius, the fyrst Christen king of this lond, then cally'd Brytayne, fowndyd the fyrst church in London; that is to sey, the church of Sent Peter upon Cornhyl; and he foundyd ther an archbishop's see, and made that church the metropolitan and cheef church of this kingdom, and so endury'd the space of CCCC yeerys, and more, unto the comyng of Sent Austen, an apotyl of Englonde; the which was sent into the lond by Sent Gregory, the doctour of the church, in the tyme of king Ethelbert; and then was the archbishops see and pol removed from the aforefaid church of St. Peters upon Cornhyll, unto Derebernaum, that now ys calyd Canterbury, and ther yt remedyth to this dey. And Millet Monk, which came into this lond wyth Sent Austen, was made the fyrst bishop of London, and hys see was made in Powll's church. And this Lucius, kyng, was the fyrst foundyr of Peter's church upon Cornhyl; and he reigned king, in thys lond, after Brut. MCCXLV. yeerys. And the yeerys of our Lord God a CXXIV. Lucius was crownyd kyng; and the yeers of hys reygne, LXXVII yeerys; and he was beryd, aftyr sum cronekil (chronicle) at London, and after sum cronekil he was beryd at Gloucester, at that plase wher the order of Sent Francys standyth."

Whatever credit may be given to the antiquity of this church, from the above inscription, it is certain that the church, known in ancient records by the name of St. Peter *super* Cornhill, that is, upon, or at the top of, Cornhill, is of very ancient foundation. The earliest authentic account, however, we find of this church, is, that William Kingston, before the year 1298, gave to it his tenement in Grafs-street called the Horse-mill; and that there anciently belonged to the church a public library, well furnished with books; which being privately disposed of, the building was converted into a school for the education of youth. This church is a rectory, the patronage of which appears to have been in a family of the Nevils; for the lady Alice, relict of sir Hugh Nevil, in the year 1362, made a feoffment thereof to Richard earl of Arundel and Surrey; and, passing afterwards through various hands, it was, in the year 1411, conveyed, by Richard Whittington and others, to the lord-mayor and commonalty of London; in whom the right of advowson still remains. The old edifice was totally destroyed by the fire in 1666; soon after which the present structure was erected. It is a very substantial building, eighty feet long, forty-seven broad, forty high to the roof, and one hundred and forty to the top of the steeple. The body is plain, with a single series of windows. The tower is also plain, with one window in each stage; and the dome, which supports the spire, is of the lantern kind. The spire is crowned with a ball, on which is a vane, in the form of a key, alluding to the key of St. Peter.

Lombard-street was so called, says Stow, "of the *Lombards* and other merchants, strangers of divers nations, assembling there twice every day, of what originall or continuance

fluence I have not read, more than that Edward the Second, in the twelfth of his reign, confirmed a messuage sometime belonging to Robert Turke, abutting on Lombard-street towards the south, and towards Cornhill on the north, for the merchants of Florence, which proveth that street to have had the name of Lombard-street before the reign of Edward the Second. The meeting of which merchants and others there, continued until the 22d of December in the year 1568, on which day the said merchants began to make their meetings at the Bourse, a place then new builded for that purpose, in the ward of Cornhill, and was since by her majestie queen Elizabeth named the Royall Exchange."—As to the etymology of *Lombards*, or *Longobards* as they were called formerly, we may fairly suppose that it was a sort of nickname given to the traders from the Levant, who made their appearance early in the Adriatic Sea, and probably at a time when beards happened to be out of fashion in Italy; for it is well known that in Europe this natural ornament of the chin has been subject to the whims of the bearers, and appeared or disappeared, changed its shape, its colour, its length, according to the dictates of fashion, (see the article BEARD, vol. ii. p. 827.) whilst in Asia it has been constantly worn as a badge of virility, the absence of which stigmatises the subject with the opprobrium of natural or accidental effeminacy. Therefore we take *Longobards*, contracted into *Lombards*, to have been a corruption of *longo barbati*, "long-bearded merchants." See p. 41 & 112 of this volume.

In Lombard-street we find the parish-church of Allhallows. It is a rectory, and one of the archbishop of Canterbury's peculiars. The advowson appears to have been anciently in lay hands; for Brithmer, a citizen of London, with the approbation of Stigand the archbishop, and Godric the dean, gave it, with a messuage adjoining, to the church of Canterbury in the year 1053; by virtue of which donation, the right of patronage still remains in the dean and chapter of the metropolitan church. This was the last rebuilt of the churches destroyed by the fire in 1666, not being finished until 1694. It is a neat well-proportioned building. The body is enlightened by a single series of large windows; and the tower, which is square, is terminated by a plain battlement. The length of the church is eighty-four feet, its breadth fifty-two, its height thirty, and that of the tower eighty-five.

A little to the west of this church, between George-yard and Birchin-lane, stands that of St. Edmund the king. This church received its name from being dedicated to Edmund, the Saxon king, who was murdered by the Danes in the year 870; and, though the origin of its foundation cannot be fixed with any degree of certainty, yet, from several circumstances, it is reasonable to suppose, that it was originally built during the time of the Saxon heptarchy. The old church was destroyed by the fire of London, after which the present structure was erected on its ruins. The situation of this building differs from most other churches in London; for, instead of east and west, it stands full north and south; by which the altar is placed at the north end of the church. It is sixty-nine feet long, thirty-nine broad, and thirty-two high to the roof, which is flat. At the south end is a square tower, from which projects a dial over the street; and upon the tower is a short spire, with its base fixed on a broad lantern. This church is a rectory, the patronage of which is now in the archbishop of Canterbury. In the year 1175, there was a dispute between the dean and chapter of St. Paul's, and the prior and canons of the Trinity convent, within Aldgate, concerning the patronage; which was determined, by Gilbert bishop of London, in favour of the latter. The parish is united with that of St. Nicholas Acons, the church of which, before the fire of London, stood on the west side of Nicholas-lane, and was a rectory in the gift of the crown.

Farther west, on opposite sides of the street, are the Phoenix Fire-office, and the Pelican Life-Insurance-office; both handsome modern buildings, particularly the last.—

The figures over the entrance of the Pelican merit commendation, being of no common cast: the design and execution do honour to Mr. Devaere, the sculptor. The middle figure, holding a kind of *vesillum* with the Pelican in one hand, and wreaths of roses and laurels in the other, alludes, with the two female figures on the right of the middle statue, to the improving of marriage-settlements; and the three other figures point out the advantages of life-insurance. The whole has an excellent effect.

Nearly opposite to this is the Post-office, a spacious brick building which is more remarkable for its extent and utility than for its elegance. It stands behind the houses, in Lombard-street, from which there is a passage, under an arched gateway, leading into a small paved court; there are also passages into Abchurch-lane and Sherbourne-lane. It was originally the residence of sir Robert Vyner, lord mayor in 1675, who built it on the site of a much-frequented tavern which was burnt in the great fire; a great part of it was rebuilt, with considerable improvements, in 1804; but at present there is an intention to erect a new one, upon a very grand scale, on the north-east side of Newgate-street.

The original establishment of the post-office in England is buried in obscurity. It is certain, that a species of post, though of what nature cannot be ascertained, was in existence as early as the reign of Edward III. The earliest mention of a chief post-master for England is in Camden's Annals, under the date of 1531; but what his office was, or how it was managed, does not appear clearly; and, probably, from the limited state of the correspondence of the country, it was of trifling consequence. James I. erected the first post-office for the conveyance of letters to and from foreign parts, which he placed under the controul of one Matthew de Queffer, or de l'Equester. This office was afterwards claimed by lord Stanhope; but, in 1632; was confirmed and continued to William Frizel and Thomas Witherings by king Charles I. It would appear, that, previous to this time, private persons were accustomed to convey letters to and from foreign parts; but now all such interference with the postmaster's office was expressly prohibited; and, in 1635, all private inland posts were forbidden. But the importance of this branch of the public revenue does not seem to have been much attended to by the government before the time of Cromwell; the posts being confined to a few of the principal roads. The outline of the more regular and extensive plan, which was afterwards adopted, originated with Mr. Edmund Prideaux, attorney-general to the commonwealth, who was appointed postmaster by an ordinance of both houses of parliament; in the execution of which office, he first established a *weekly* conveyance of letters into all parts of the nation. In 1653, this revenue was farmed for ten thousand pounds; and, after deducting the charges of postmasters, &c. produced a benefit of seven thousand pounds per annum to the public. At this period, the common-council of London endeavoured to set up a post-office, in opposition to Prideaux's; but they were checked by a resolution of the house of commons, declaring the office of postmaster to be in the sole power and disposal of the parliament. In 1656, a new and regular general post-office was erected by the authority of the protector and his parliament, upon nearly the same plan as has been continued ever since; and by an act of parliament, passed soon after the restoration in 1660, the wise regulations of 1656 were re-established, with some improvements, which continued, with very little alteration, until the year 1784, when a mode of conveying the mails, upon a plan suggested by Mr. John Palmer, of Bath, was carried into execution. Before the adoption of this plan, letters were conveyed in carts, or by boys on horseback, without protection from robbers, and liable to delays. Mr. Palmer's proposal was, to contract with the owners of the diligences and stage-coaches, which were established to every town of note in the kingdom, to carry the mails, with guards for their protection. This they were induced to do at a

very low rate, from the additional recommendation to passengers their carriages would thereby acquire, in point of security, regularity, and dispatch; and, notwithstanding the strong opposition to the measure in its outset, experience has shown, that this combination of interests has been alike beneficial to the revenue, the correspondent, the passenger, and the coach-malter.

Here is also the principal office of the Two-penny (originally the Penny) Post, for the speedy conveyance of letters and small parcels, not exceeding four ounces in weight, within the metropolis, and a distance of ten miles round it. Letters delivered out of town are charged threepence. See p. 92.—The present establishment of the post-office consists of two postmasters-general, a secretary, surveyor, comptroller-general, and a great number of clerks and assistants. There are fifty receiving-houses for general-post letters, and upwards of one hundred and fifty for twopenny-post letters, in different parts of the metropolis.

Adjoining to the post-office stands the parish-church of St. Mary Woolnoth. *Not* is corrupted from *neath*, signifying "near." The Woolstaple was the place for weighing wool, and stood in the church-yard of St. Mary Woolchurch Haw, to the east of Stocks Market. This church is of some antiquity, as appears from John de Norton being rector thereof in the year 1355; and, from various circumstances, it is supposed that a Roman temple, perhaps the Temple of Concord, stood originally on this spot; for, in digging the foundation for the present edifice, which is one of the fifty new churches appointed by parliament to be erected within the bills of mortality, in the year 1719, there were found a considerable number of tusks and bones of boars and goats, with several medals and pieces of metal, some tessellated work, part of an aqueduct, and a great variety of Roman earthen vessels, both for sacred and profane uses; and at the bottom was found a well, full of dirt, which being removed, a fine spring of salubrious water arose, wherein was fixed a pump. The old church was not entirely destroyed by the fire of London; the steeple escaped the flames, and the walls were repaired. But these, in length of time, falling greatly to decay, it was thought necessary to pull down the whole; in consequence of which, it was rebuilt of stone, in the year 1719. It is a very handsome structure; but the ornaments are concealed by the neighbouring buildings; and the front, which is bold and majestic, is so obscured, that it cannot be seen to advantage, nor can the tower be properly viewed, but from the tops of the opposite houses. On the north side, which fronts Lombard-street, instead of windows, there are three very large and lofty niches, adorned with Ionic columns, and surrounded with a bold rustic; and over these is a large cornice, upon which is placed a balustrade. The entrance is at the west end, by a lofty rustic arch, over which rises a broad shallow tower, ornamented with six composite columns in the front, and two on the sides; upon this are raised two small towers in front crowned with balustrades; from one end of which rises a flag-staff, with a vane. It is not easy to describe this entrance; for there is a sort of porch, or portico, before the main door, accessible only by the sides, with steps, the front arch being shut by an iron railing. It is a pity that such an immense work of curious architecture should be so concealed; the lane at the spot before the church being hardly ten feet broad. Under the church are immense vaults, a sort of crypt, part of which is already filled with coffins piled one above another like goods in a warehouse. When a division of this catacomb is quite full, a wall is raised, and the remains of mortality are there confined to moulder away in silence and unseen. The funeral service is performed in this vault, the coffin being placed upon tressels; and, when the ceremony is over, it is hoisted up upon the others, there to remain till the column or pile of mortality is complete, and then another enclosure is made. We cannot help observing that there is something indecorous in this manner of treating the last remains of human existence; and that it would be

much better to have the coffins placed in dark cells, instead of being exposed to light in these rooms, which have windows upon the lane.—This church is a rectory, the patronage of which was anciently in the priors and convent of St. Helen's in Bishopsgate-street, till, at the dissolution, it fell to the crown; when Henry VIII. granted it to sir Martin Bowes, in whose family the patronage has ever since continued. The living of this church was greatly improved by the parish of St. Mary Woolchurch Haw being annexed to it, the patronage of which is in the crown; and, from the time St. Mary Woolnoth was erected, it has been the parochial church for both parishes.

Returning towards St. Paul's, we now enter Cheap-ward; which took its name from the Saxon, *chepe*, a *market*, or *sale*, on account of a market having been anciently there. When Stocks Market was the principal in the city, the east end of Cheapside was inhabited by poulterers, from whence it received the appellation of the *Poultry*, which it still retains. Almost opposite to that market, on the course of the Wall-brook, anciently stood a slaughter-house for the killing of beasts and scalding of swine: whence it was called the *scalding-house*; but this, with all the other slaughter-houses in the city, being put down by act of parliament, the site of it was occupied by a range of buildings which retained the name of Scalding-alley for many years. It is now called St. Mildred's Court, on the west side of which is situated the parish-church of St. Mildred, Poultry.

Stow, in his curious style, pretends that the name of this, as well as of other saints, was not given out of superstition, but merely for distinction-sake; "for so was the custom of the kingdom (and yet is), in building these things for the service of God, that the founders call them by the name of some apostle, saint, martyr, or confessor, as best liked their own conceit at the present time, to distinguish them from others."—In this we do not agree with the ingenious historian. We must state fairly, that what is called now superstition, was mere religious motive, according to the belief in full force before the reformation. The church, that is, the edifice itself, and the parishioners, were placed under the invocation and special guard and protection of the saint whose name it bore; and it was piously supposed, that the preservation of that church, and the prayers offered in it, were entrusted to the said patron, who would intercede at the throne of the Almighty for the welfare of his wards. What, after this, the imagination of devout and pious people may have wrought, may be called superstition; but such was the true origin of the dedication of churches.—The same chronicler says: "Who this *Mildred* was, whether she was the eldest daughter of *Merwaldus* king of the West-Mercians, as some think, or that she was daughter of Ethelbert king of Kent, one of the founders of Paul's church, I find no record to specify; neither is it much material; but it is probable that she was some holy and devout maide, which the people of that age held to be a saint afterwards in heaven."—This church is a rectory; and appears to be of ancient foundation, for John de Asswel was collated to it in the year 1325; and in the 18th of Edward III. we find it with the chapel of Corpus Christi and St. Mary de Coneyhope annexed, which chapel stood at the end of Coneyhope-lane, or the rabbit-market, now called Grocers' Alley; but, being suppressed by Henry VIII. on account of a fraternity founded therein, it was purchased by one Thomas Hobson, a haberdasher, who turned the chapel into a warehouse. The old church, which had been rebuilt in 1450, was burnt down in 1666, after which the present structure was erected, and the parish of St. Mary Colechurch united to it. It is a plain substantial stone building, enlightened by a series of large windows, and strengthened with rustic at the corners. The tower is crowned with a plain course, without pinnacles, turrets, or any other ornament. The clock, which used to project nearly half-way over the street, has been placed against the wall, and no longer impedes or obstructs the interesting view which we have described above. The length of the fabric is sixty-six feet, the breadth forty-two,

the height of the roof thirty-six feet, and that of the tower seventy-five feet. Within it is well paved, has a handsome pulpit, an organ-loft, and a gallery. The attendance at this church is not very numerous, since most of the parishioners pass their Sundays out of town; and we are told that the clergyman sometimes reads the service to the sexton, the pew-opener, the organist and his man, without any other congregation.

St. Mary Colechurch stood at the south-west corner of the Old Jewry. The distinctive appellation of *Cole* originated from no saint, but from the name of the architect. It is reported that Thomas Becket, archbishop of Canterbury in 1162, was baptized in that church; it was a curacy in the gift of the company of mercers; it was destroyed by the fire with all the others in the neighbourhood, and never rebuilt.

Between this spot and St. Mildred's, is a gloomy opening, through which the eye is led to iron grates and other ominous objects. Here is the *Poultry Compter*, so called, it is said, as well as the prison in Giltspur-street, on account of the people confined there being obliged to *account* for the cause of their commitment before they are discharged. But this is an erroneous idea: the name originates from these having been at the beginning nothing else but common lock-up houses, where debtors, previous to their being fully committed, were detained in order to give them time to see their creditors, and settle the matter of *account* with them. The poorer sort of prisoners in these compters receive some assistance from the sheriffs, who generally go round the respective markets of the city twice a-year, to gather contributions for their support; and there are several benefactions, made by charitable persons, for the relief of those who may happen to be detained for want of being able to discharge the prison-fees.

A little to the west of the Poultry Compter is Grocers' Alley; at the upper or north end of which is Grocers' Hall, situated on a spot of ground purchased by the Grocers' Company, in the year 1411, of Robert Fitz-Walter, for three hundred and twenty marks. It is well designed and executed for the purposes of a common-hall; stately, ornamental, and so capacious, that, for many years, it served for the uses of the Bank of England, which was kept in this hall till there was an office built on purpose in Threadneedle-street. This hall contains a portrait and statue of sir John Cutler, who is said to have built the parlour and dining-room over it. The ancient stone and brick building, at the north-west corner of the garden, inhabited by the beadle of the company, is very probably part of the ancient city-mansion of the noble family of Fitz-Walter, and, consequently, the oldest building within the city-walls.

From Grocers' Alley there is a passage, called Dovecourt, which leads westward into the Old Jewry. This street was originally called The Jewry, from being the residence of the Jews in this city, prior to their banishment by Edward I. but when, on their re-admission into England, they settled near Aldgate, in a place called, from them and their then poverty, Poor Jewry-lane, this, their ancient place of abode, received the appellation of the Old Jewry.

A little farther west, is Mercers' Hall and Chapel.—This building is situated on the spot once occupied by an hospital dedicated to St. Thomas of Acors, or Acons, founded, for a master and brethren of the Augustine order, by Thomas Fitz-Theobald de Heili, and his wife Agnes, sister to Thomas-a-Becket, in the reign of Henry II. On the dissolution of religious houses, in the reign of Henry VIII. this hospital was purchased by the Mercers' Company, who had the gift of the mastership, and was opened by them, immediately, under the name of Mercers' Chapel. They were both destroyed by the fire of London; soon after which the present structure was erected.

It is with great satisfaction that we see this elegant front, which can now boast of some antiquity, thoroughly repaired and beautified at the expense of the worshipful

company to which it belongs. The front next Cheapside is very handsome, and has been designed and executed with care. The principal gate is an arch, at the key-stone of which are the arms of the Mercers' Company, being the head of a woman issuing out of clouds. In the corner are two genii, or winged boys, holding a drapery; and the posts on each side are curiously carved. Above this is a sort of cornice, or architrave, supporting a balcony, with an iron railing elegantly wrought. An arched window in the centre is accompanied by two figures, Faith and Hope, and two pilasters of the Ionic order, supporting also an architrave or cornice with a circular broken pediment, in the centre of which is the third theological virtue, Charity, represented by the figure of a woman with three children, in allusion, most probably, to the eleemosynary trusts of which this company are the patrons, particularly that of Dr. Colet's school, now called St. Paul's school. See p. 412. On each side of the niche, in which the figure of Charity is placed, there are two circular windows surrounded with wreaths. All the accounts of this curious frontispiece hitherto published being very erroneous, we can assure our readers, that the present was written after a sketch carefully taken on the spot.—The inner court is adorned with piazzas formed of columns of the Doric order. The hall-room and great parlour are wainscoted with oak, and ornamented with Ionic pilasters; and the ceiling is beautifully decorated with fret-work. The chapel is neatly wainscoted, and paved with black and white marble. The entrance into this hall, from Ironmonger-lane, is decorated with rustic stone pillars, supporting an arch, on the key-stone of which are the company's arms. The door is pannelled, and the upper compartment, on each side, is also filled with the arms carved in wood.

Farther north, on the same side of Ironmonger-lane, formerly stood the parish-church of St. Martin, Ironmonger-lane, which received its name from being dedicated to one Martin, an Hungarian, who, for strenuously opposing the rising heresy of Arius, was deemed worthy of being canonized.—This church, being destroyed by the fire of London, was not rebuilt; and the parish was annexed to that of St. Olave Jewry.

On the south side of the street runs downwards to the vale of Wallbrook, a short street called Bucklersbury; at the opening of which, at the boundary of Cheapside and the Poultry, formerly stood the great conduit, which was first erected for the reception of water conveyed hither from Paddington by leaden-pipes under ground.—The street received its name from one Buckle, lord of the manor, who resided, and kept his court, in a spacious stone building, called the Old Barge, from such a sign being in front of it. The site of his mansion is now occupied by Barge-yard; to which place, according to tradition, boats and barges came from the Thames, up the Wall-brook, when its navigation was open. Opposite to Barge-yard, on the north side of Bucklersbury, was a royal mansion, denominated Sernes or Sewete's Tower. In 1344, king Edward III. constituted this his exchange, or market-place, for bullion; and, in 1358, he granted it, with all its appurtenances, to the dean and canons of the collegiate church of St. Stephen at Westminster.

Advancing towards the centre of our perambulations, through Cheapside, we find on our right King-street; at the northern extremity of which is GUILDHALL. This building merits attention on many accounts. It is the hall in which all the affairs belonging to the corporation of London are transacted. From its size, it is well adapted for assembling the livery, for the election of members of parliament, the lord-mayor, sheriffs, and other city-officers; and in this hall the corporation give public entertainments to our kings and other great personages.

The original Guildhall stood in the street called Aldermanbury from their meeting there, and is supposed to have been built by Edward the Confessor; it being known by that name in the year 1189. Stow remembered its

LONDON.

*Engraving published as the Act Direct, July 27, 1814, by G. Jones.*

ruins, and says, that in his days it was used as a carpenter's yard. The present building was begun in the year 1411, and completed in about ten years; towards defraying the expense of which, contributions were made by most of the city companies, and several sums were received from private benefactors. This old hall was greatly damaged by the fire of London, but was soon after repaired and beautified, at the expense of two thousand five hundred pounds.

The entrance into this building is by a large gate, under a Gothic arch. Over this rises the new front, erected in the year 1789; which consists of four fluted pilasters, between which are Gothic windows. In the space above the great door, there are two series of windows, above which is the city motto, *DOMINE DIRIGE NOS*; and the top of the building is crowned with the city-arms and supporters.—We ought to observe here, that these fabulous animals, well-known in the works of ancient poets, were supposed to be the tutelary genii of fresh-water-springs in the bosom of dark forests and enchanted rocks; but they were also the guardians of the golden apples of the Hesperides, of the golden fleece of Colchis, and in several parts of the world set as trustees to the carbuncles and other precious stones hidden at the bottom of wells and fountains. They have long been supporters to the arms of the city, as if to guard the wealth which commerce brings here from all parts of the world.—In the side compartments are four ranges of windows; and the top is terminated by reversed arches. The pilasters are higher than the other parts of the front, and are crowned with turrets, in two stages; the two centre ones are decorated with the mace, and the other two with the city sword. See the annexed engraving.—The hall is one hundred and fifty-three feet long, forty-eight broad, and fifty-five high. The roof is flat, and divided into pannels; and the sides are adorned with demi-pillars.

On the north side of the hall, nearly opposite to the entrance, is a flight of steps, leading to the respective courts and offices. On each side the steps is a small inclosure, used occasionally as offices for clerks to write in. Beneath each of these is a prison, called Little Ease, from the ceiling being so low that a confined person cannot stand upright; this is a place of punishment for disobedient apprentices, who may be committed there, at the discretion of the chamberlain. Over the steps is a balcony, supported by twelve iron pillars, in the form of palm-trees. In the front of the balcony is a clock, on the frame of which are carved the four cardinal virtues, with the figure of time on the top, and a cock on each side of him. But the most singular ornaments of this balcony are two gigantic images, which stand one on each side of it. These enormous figures are in the Roman warlike dress, and have laurel crowns on their heads. The one on the right leans on a small shield, on which is emblazoned a black eagle on a field or; and bears a long weapon, the lang-bard of the Germans, used in guarding the halls of the great in ancient times; from which the French *hallebarde*, as well as our *halbert*, took its origin. Its shape still exists in the weapon borne by the king's guards, called beef-eaters, or *butchers*. The weapon, and the arms on the shield, denote this to be intended to represent a Saxon. The other, which represents an ancient Briton, has a sword by his side, and a bow and quiver on his back. In his right hand, he holds a long pole, with a ball stuck full of spikes suspended from its top; a weapon which had been in use among our ancestors. The origin and signification of these colossal figures has given rise to many ingenious conjectures, the most reasonable of which appears to be that which considers them as types of municipal power; such statues being found in the halls of judgment in many parts of Germany, where they are called *Weichbilds*, and are set up as symbolic of the privileges of the town, and protectors of its freedom and laws; *wich* signifying a town, and *bild* a secure or privileged place. The Roman costume in which they are

bited is not easily accounted for; perhaps it was adopted by the sculptor, to show that London was a city adorned and enlarged by the Romans, and a Roman colony.—The inside gate is admired as a specimen of the purest Roman architecture; and its ogee-branches are carved with a boldness not to be surpassed.

Round the hall are fourteen demi-pillars, of the clustered Gothic kind, on the capitals of which are the royal arms, the arms of London, and those of the twelve principal city-companies. In the intercolumniations, and at the west end of the hall, are portraits of the judges who so particularly distinguished themselves in determining the differences between landlords and tenants after the fire of London, without the expense of law-suits. To these was afterwards added that of lord Camden, who, when chief justice of the court of common-pleas, obtained this mark of esteem from the city by his decision against the legality of general warrants. At the east end of the hall is the court of hustings, above which are the city arms, and portraits of their present majesties, kings George II. and I. and William III. and queens Caroline, Anne, and Mary; in the order here described, beginning at the centre.

Close to the hustings, on the north side of the hall, is the monument erected to the memory of the late earl of Chatham; which consists of a grand group of complete statues in alto relievo, designed to convey the idea of the national prosperity under the auspices of that celebrated statesman. To this end, lord Chatham is represented as the pilot of the state, resting on a rudder, with his right arm supporting Commerce, who sits by his side, attended by the four quarters of the globe, in the act of pouring the contents of a capacious cornucopia into the lap of Britannia, who is seated upon her lion. Before lord Chatham stands a female figure, representing the City of London, crowned with turrets; her right hand resting upon a shield with the city-arms thereon, and her left arm extended towards Commerce; her whole attitude seeming to bespeak that protection which the position of his arm shows him already inclined to afford her. Various emblems are introduced with great propriety in different parts of the work; such as a mariner's compass and a top-mast in the hands of Commerce, and at her feet a sail furled to the yard and an anchor. Below London is a bee-hive, symbolical of industry; and behind her shield are the insignia of the city.

On the other side of the steps is the monument erected to the memory of lord Nelson, according to a vote of the corporation, and at the expense of the city. See p. 133.

At the west end of the hall is the Sheriffs' Court; above which is a white marble statue of alderman Beckford, who died in the year 1770, during his second mayoralty. He is represented as large as life, dressed in his robes, and standing in the attitude he appeared when he made a reply to the king on his majesty's answer to the city-remonstrance, May 23, 1770. The likeness is so strong, and the attitude in which he stands so natural on such an occasion, that little more than sound is wanting to realize the representation. On each side of him is a figure sitting in a languishing posture: that on the right hand represents the City of London; and that on the left, Commerce. The head of Commerce is adorned with a crown; her right arm, which holds a cornucopia, almost empty, rests on a mariner's compass, and her left arm supports an anchor. The City of London is distinguished by resting her right arm, which supports her head, on an escutcheon containing the city-arms; in her left hand is the city-sword inverted; on her head is the cap of maintenance; and by her lies the city-mace. Beneath the statue is a large tablet of black polished marble, on which are written the words spoken by Mr. Beckford to the king on the memorable occasion alluded to. For a correct copy of this address, see the article BECKFORD, vol. ii. p. 243.

Opposite to the monument of the great lord Chatham, as—

it has been long fashionable to call him, rises with elegance and majesty that of his son the Right Honourable William Pitt, prime minister of this country for a long lapse of years; and whose system of politics, much blamed in his life-time, seems yet, by having been persevered in, to have ultimately brought about the extraordinary and fortunate changes which we have lately witnessed, and at which the whole continent seems to revive and rejoice. Mr. Pitt is represented in the costume of Chancellor of the Exchequer, and in the attitude of speaking. He stands upon a rock apparently emerging from the ocean, and intended to represent, allusively, the island of Great Britain. On his right we perceive a handsome figure of Apollo, the god who in mythological lore presides over the high sciences, and shines upon common minds with all the genuine warmth of his transcendent rays. The anatomical part of the figure is, we think, faultless; and, by throwing a mantle upon the inferior parts of the god, the artist has happily alluded to that purity of manners and chastity of conduct, which, besides his other good qualities, distinguished Mr. Pitt during the whole course of his life, a praise fully bestowed upon him by all his most strenuous political opponents, for enemies he had none. The god of eloquence is most appropriately placed on the other side, with his distinguishing attributes. Mercury, according to the fable, united to the faculty of elocution the profound knowledge of traffic; and, in both points of view, he is properly placed on the monument of one of the most profound *financiers* England ever produced. Though rather heavy, the figure has some of the *gusto* of the antique, and stands well there; were it not for its reminding us how much, whilst trade was flourishing, the private purses of individuals were pressed and squeezed by this favourite of the son of Maia.—Thus far, we have a good pyramidal group: but our Phidias wanted height: and he had nearly fulfilled his scheme, when, by a sudden but not very original stroke of genius, he eked out Britannia on a sea-horse, and placed them forward, nearly in the same way as Neptune is on the monument of Nelson. This figure is however well set, full of animation, and ready to hurl the thunderbolt against the enemies of Great Britain; and, indeed, the naval victories which have entwined the laurel with the civic oak of Pitt's administration will never be recollected without being connected with the remembrance of the name which his admirers have bestowed on him, "the Pilot who weathered the storm." Riding the submissive waves which the rules, Britannia seems to bear in her features the grand character of the whole nation: *Parcere subjectis et debellare superbis*; "To spare the vanquish'd, and subdue the proud."—This monument (like Nelson's) is spoiled by the long Cornelius-Nepos-like history of the man above, in a sort of would-be epitaph, which is as far from the concise nicety of the lapidary-style as Pamela is from a song of Anacreon Moore, or a page of biography from Piron's epitaph. Mr. Canning is the writer; and it would do him great honour any-where else.—The bare name of the man would have been enough for those who knew the history of these times; and the inscription is not the hundredth part of what those who did not know him ought to be told.—The sculptor's name is written on one side of the monument; and we think he will be gratified by our remarks, which, though somewhat exhilarated with the wholesome acid of well-motived severity, will still show that we have not been without feelings of approbation, and even of admiration, when we stood for the first time before his performance.

A place remains vacant, facing the monument of lord Nelson. Now that peace has stilled the din of war, that the sword is sheathed, and the prow of the navy is safely anchored at the shore; we may expect some great civic character to fill up the vacuum—some mighty lord-mayor, who may stem the torrent of encroachment on the ancient rights of the city; or some devoted patriot, who will, by galling speeches, teasing addresses, and other city-rockets, force the reluctant minister to put an end to the fiend called the in-

come tax.—We have noticed, however, that a statue was placed in the Royal Exchange to a living worthy, sir John Barnard; now, should such an idea again enter the minds of our patriotic citizens, it would not long be a question to whose honour a statue should be placed opposite to NELSON—we doubt not but every voice would cry out WELLINGTON!

We now face about, and ascend the steps. We presently come to the chamberlain's office, which lies to the right. In this place apprentices are bound, enrolled, and made free of the city. Here complaints between masters and their apprentices are heard and determined by the chamberlain in person; and in an inner room are preserved the duplicates of the diplomas presented by the city to those who have deserved the freedom of the first city in the world. They are most of them beautifully written by the famous calligrapher of our age, Mr. Tomkins, of Sermon-lane; and decorated by the ingenious fancy and elegant pencil of the late Mr. Sharpe, and of his son Mr. T. Sharpe, of Bennet's hill, herald-painters. They are the best specimen of this sort of enluminures; and, for beauty of colouring, nicety of touch, and versatility of invention, cannot be exceeded. The chamberlain's office is also decorated with proof prints of Hogarth's Idle and Industrious Apprentices, and some other engravings.

Fronting the steps is the lord-mayor's court, in which the petty sessions for the city, and the sittings of the court of King's Bench, are held. This room is adorned with paintings of the four cardinal virtues. On the left hand is the court of Common Pleas, over the entrance into which is a painting of the Relief of Gibraltar by Lord Howe. The court of Exchequer sits up stairs. The different apartments in this part of the hall are used occasionally by the commissioners of bankrupts. At the back of the hall is a very elegant room for the lord-mayor, aldermen, and common-council, to hold their courts in. In this chamber is a capital collection of paintings, presented to the city of London by the late alderman Boydell, among which are Mr. Copley's celebrated picture of the Siege of Gibraltar, the Death of Lord Chatham, and several allegorical paintings by the late academician Mr. Rigaud and others.

When we think of lord-mayor's day and the great doings going on there on the 9th of November, we naturally seek for the kitchen, the most essential requisite of festivity. We find it adjoining to the north-west part of the hall. It was erected by sir John Shaw, who, for the first time, gave the mayor's feast here in the year 1500; these had been formerly given at Grocers' Hall. But certainly not since that time, nor perhaps since the days of Edward III. of chivalrous and glorious memory, has this hall ever witnessed such an entertainment as was given by the corporation to the imperial and royal visitors who graced the city with their presence on the 18th of last month, (June 1814.) Since those victorious times, whether we consider the dignity of the guests, or the extraordinary circumstances which caused and attended their presence in this metropolis, the hall never resounded with more welcome shouts of heart-felt rejoicing, or blazed with a greater and more merited glory.—Long will the city boast of the honour she received from, as well as of the splendid testimonies of respectful admiration she has shown to, the monarchs and other princes, entertained at the lord-mayor's board. The hands of these illustrious foreigners were not reeking with human blood; neither came they, like the kings of Scotland and France, as prisoners in this country; but, after having wiped with the olive-branch at Paris the unavoidable spots which the general foe had forced upon them, they of their own choice alighted here, like angels of peace after having performed the orders of the Almighty. They were met by the first magistrate of the first city in the world, as the Father of the Faithful was received by the monarch of Peace, the king of Salem—but, instead of the spoils of conquered nations carried in triumph before them, they

they were preceded by the palm of perseverance, the laurel of victory, and the long-wished-for dawn of a solid peace glowing over their crowns. Oh! that the paternal heart of our venerable and beloved monarch George III. could have felt, and his eyes surveyed, the glorious scene! then the enjoyment would have been complete, and the cup of pleasure filled up to the brim. But Providence had ordained that a melancholy drawback should be laid upon the sum of our present happiness, to impress us with the awful thought that no sublunary pleasure is without an alloy of pain.

At p. 395. we expressed our expectation of a visit from the whole of the royal personages who were then at Paris, witnessing the completion of their glorious work by the restoration of the family of the Bourbons in the person of Louis XVIII. The emperor of Austria, however, thought fit to return to his own dominions; but, on the afternoon of Monday, the 6th of June, the emperor Alexander, and Frederic-William king of Prussia, landed at Dover, having been conveyed thither from Boulogne in the Impregnable man-of-war, commanded by the duke of Clarence, as admiral of the fleet. Having slept that night at Dover, the imperial and royal strangers entered London, in a private manner, on the afternoon of the 7th; the emperor lodging at the Pulteney Hotel, Piccadilly, previously occupied by his sister the duchess of Oldenburgh; (see p. 386.) and the king of Prussia, in apartments prepared for him in the Stable-yard, St. James's. On the following morning, the 8th, the emperor visited Kensington Gardens, Westminster Abbey and Hall, the British Museum, &c. and in the afternoon was presented, as was the king of Prussia, to her majesty, in full court, at the queen's palace, and splendidly entertained by the regent. On Thursday the 9th, the party visited St. Paul's, and the London Docks. In the afternoon, the emperor and the king were declared elected knights of the Garter, at Carlton-house; and the absent emperor of Austria was likewise declared elected a companion of the same order. On Friday the 10th, both sovereigns, with their suite, proceeded, by way of Richmond and Hampton Court, to Ascot races, and afterwards dined with her majesty at Frogmore. On Saturday the 11th, Alexander paid a visit to the Bank; and, in the afternoon, gave audience to lords Erskine, Grenville, Grey, Holland, and other distinguished statesmen: after which, both he and Frederic-William received addresses of congratulation from the lord-mayor and the whole corporation of London. In the evening, both parties appeared at the opera-house. On Sunday the 11th, the king of Prussia, with his family and suite, attended divine service in Westminster-abbey; as did Alexander at the chapel of his ambassador in Welbeck-street. Both sovereigns afterwards rode for a considerable time in Hyde Park, amidst at least 150,000 people. Monday the 18th was set apart for an excursion down the river to visit the dock-yard and arsenal at Woolwich, Greenwich, &c. Tuesday the 14th and Wednesday the 15th, were employed in an excursion to Oxford, Blenheim, Stowe, &c. On Thursday the 16th, the sovereigns were present in St. Paul's, at the annual assembly of 8000 charity-children of the metropolis; and, in the evening, they visited Drury-lane Theatre. On Friday the 17th, they were entertained with great magnificence by the city-merchants at Merchant-Tailors' hall; and the following day, Saturday the 18th, was fixed for the grand city-entertainment which is the occasion of this digression.

The prince-regent, to give a proper effect to the entertainment of the corporation of London, determined on going in state, with the full splendour of his court, precisely in the manner of the first visit of a king to the city after his coronation. Official orders were accordingly issued to all the attendants to be in readiness at St. James's palace, to attend his royal highness. At three o'clock his R. H. went in a private carriage from Carlton-house to St. James's, and entered by the garden from St. James's Park by the temporary entrance to the little drawing-room

VOL. XIII. No. 920.

from the king's levee-room, where he was received, by his state page. His R. H. was dressed in full military uniform, wearing the English, Russian, Prussian, and French, orders. At four o'clock, the king of Prussia having arrived at the palace from Clarence-house, the royal procession began to move through the state-rooms in the same grand order as when the sovereign goes in state to the chapel-royal on Easter Sunday, except the serjeants at arms.

The line of streets from Carlton-house to Guildhall was thronged at an early hour. The shops, the windows, and roofs of the houses, were filled with spectators. Single seats were engaged at from five shillings to a guinea per head; and windows in particular situations, were disposed of so high as from twenty to thirty guineas each.

About three o'clock the streets east of Temple Bar were lined on both sides with nearly 3000 troops—regulars, militia, and volunteers, aided by detachments of cavalry. Soon after four, the cavalcade departed from Carlton-house in the following order:

The Seventh Hussars.

Seven of the Prince Regent's Carriages, in which were the Officers of his Household and Foreign Officers of distinction.

The State Carriages of the Prince of Orange, Dukes of Cambridge, Kent, and Gloucester, each drawn by six horses. These illustrious individuals were accompanied by several of the Foreign Princes.

The State Carriage of the Duke of York, who was accompanied by two Princes of Prussia.

Speaker of the House of Commons in his State Carriage. Between each of these Carriages were sections of the Oxford Blues.

Then came the Carriages of his Majesty's Ministers, including those of the Earl of Liverpool, Lord Sidmouth, Lord Melville, Earl Bathurst, Duke of Montrose, Mr. Vansittart, &c. &c. These were followed by two troops of the Horse Guards, in new uniforms.

Guards.

Carriage and Six Black Horses, occupied by the Regent's Officers of State.

Six or seven Royal Carriages, with the Suite of the King of Prussia, Foreign Noblemen, Officers, &c.

A Detachment of Hussar Cavalry. Officers of the Yeomen.

One Hundred Yeomen of the Guard, in their Ancient Costume, with Halberts on the left shoulder.

Officers of the Herald's College.

Kings of Arms.

Heralds in their Tabards.

The PRINCE REGENT, in the State Carriage, drawn by eight beautiful cream-coloured horses, with scarlet-ribbons, &c.

The King of Prussia sat on the right of the Prince.

Guards.

A vast number of other carriages containing Foreigners of Distinction, the Marquis of Wellesley, Lord and Lady Castlereagh, Prince de Wagram (Blucher), Count Plاتف, Lords Hill, Beresford, Combermere, and a long suite of persons of distinction.

A strong detachment of the Greys closed this cavalcade.

A little before five, the Prince was followed by the Emperor in the following order:

Horse Guards.

The Prince Regent's State Chariot and six white Hanoverian horses, decorated with blue ribbands.—The EMPEROR OF RUSSIA, dressed in scarlet and gold, occupied the same, with his Illustrious Sister the Grand Duchess of Oldenburgh.—His Majesty was cheered in the loudest manner by the spectators, which he returned by bowing uncovered.

Guards.

A Royal Carriage with two Russian Princesses, and many private carriages.—The 9th Regiment of Cavalry, and the Scotch Greys, brought up the rear.

6 E

The

The Lord Mayor, Sheriffs, Aldermen, and City Officers, had previously arrived at Temple Bar in their state-carriages. On the approach of the procession, they mounted horses, which were decorated for the occasion with crimson ribbons. The first part of the cavalcade having advanced, the carriage of the Prince Regent drew up, when the Lord Mayor, Aldermen, and Sheriffs, advanced, and, after offering the keys of the city, they took the lead of his Royal Highness's carriage in the following order:

Sheriff's Officers, City Marshal, and Lord Mayor's Footmen.  
Band of the London Militia, playing God save the King.  
Sixteen Aldermen in their robes, bare-headed.  
The Town Crier, bearing the City Mace; and the Sword Bearer.

**THE LORD MAYOR**, bare-headed, carrying the Sword of State. He was dressed in a rich velvet robe; and was followed immediately by the carriage of the Prince Regent.

In this order the procession proceeded to Guildhall, cheered as they went by the spectators in the houses and streets.

Upon approaching Guildhall, the first object of notice was a temporary passage which had been erected from the principal seat of the hall, half-way across Guildhall-yard. This passage was lined with green cloth, and the flooring covered with matting; it was illumined by a profusion of lamps, and led to the porch of the hall, which was also lined with green cloth, and converted into a temporary arbour, in which was displayed the most costly flowering shrubs and evergreens arranged upon shelves and ornamented with moss. This arbour extended into the hall; and, being illumined with variegated lamps, had the most enchanting effect. Thus conducted into the hall, a scene of dazzling splendour burst upon the sight.

The manner in which Guildhall was fitted up for the occasion does infinite honour to the science of Mr. Dance. Let no gibe or reflection be hereafter thrown on city-taste; for this entertainment presented a model of the most perfect research, and such as no palace at the west end of the town, and no city in the universe, could equal in magnificence, chastity, and taste. The grand Gothic hall, with its two superbly-painted windows, suggested to the classical mind of the architect the appropriate decorations of the interior; and within the short space of eight days he produced what may truly be denominated a magical effect. The simplicity of the design, the magnitude of the parts, and above all the harmony of the colour, diffused a lustre over the whole upon which the eye reposed with the most satisfied delight, and with which the most cultivated eye was the most delighted. Here was no frippery, no patches, no broken nor disjointed parts; but the combination had an unity, a character of strength, a breadth and tone, the most attractive. Mr. Dance had, by an external erection, contrived to illumine the painted windows, so as to throw into the hall the rich and warm influence of the immense body of light with which all the Gothic divisions of the two windows were articulated, and which, striking on the brilliant circle of ladies in the galleries beneath, spread a glow on their faces, whilst their head-dresses sparkled with diamonds, producing an effect which no painter from Titian to the present day, and which no art, could possibly equal. The animation and brilliancy of the scene was unequalled by any thing we ever saw in any country; and lord Wellesley said it surpassed whatever he had seen of eastern magnificence.

The walls were covered with bright crimson cloth; but the two monuments of the earl of Chatham and Mr. Pitt, were, with great judgment, left uncovered. Magnificent chandeliers of cut glass (there not being time to prepare them in the antique form) were suspended from the roof; and there was a blaze of gold and silver candelabras, with wax lights on all the tables.

Arched galleries about nine feet in depth, were erected on the north and south sides, and west end, of the hall, at about fourteen feet from the floor; they were supported

by a series of arches, all ornamented with rich and tasteful draperies of crimson cloth. These galleries, which were reserved solely for the accommodation of the ladies, were subdivided into different compartments allotted to the several wards; so that the ladies of each district were placed together. The old clock and gallery, which stood in front of those celebrated images Gog and Magog, were removed, and in their room a gallery for musicians erected, which was in a more elevated situation than the other galleries; while at those ends of the galleries nearest the west end of the hall were formed small boxes for the vocal performers—Messrs. Bellamy, Taylor, Goss, Vaughan, Leete, &c.

From these objects the eye was naturally turned to the place apportioned to the allied sovereigns; and here a scene of brilliancy and magnificence was exhibited which excited the strongest feelings of astonishment and admiration. On a platform at the east end, elevated about two feet from the other part of the floor, was placed a canopy of matchless elegance, sufficiently capacious to cover the three chairs of the Prince Regent, the Emperor of Russia, and the King of Prussia. The top of this canopy was formed by a dome, covered with crimson velvet, and intersected with golden ropes; the summit of this dome was surmounted with a crown of gold, and the base formed of a cornice, carved and gilt in a style of great richness and taste. From this hung festoons and drapery of crimson velvet, trimmed with broad gold lace. The chairs destined for the three sovereigns were all alike; the seats were covered with velvet, and the backs and feet gilt in the most costly manner. On each side of these chairs were placed other chairs, fronting the hall, of which a full view was thus afforded. The table placed on this platform was calculated to accommodate twenty-five persons, all of whom were of royal blood. The decorations of this table were brilliant and appropriate. They consisted of a series of triumphal arches, bearing small banners, on which were painted the Russian, Prussian, and Austrian, eagles, the British standard, and a variety of devices applicable to the circumstances which led to the feast;—an immense profusion of plate, gold and silver, and every other requisite which was necessary to complete the whole in a princely grandeur. The platform itself was ascended by three steps, and was covered with a Turkey carpet. The remaining part of the hall was occupied by tables, which extended from the platform to the west end of the hall, an extensive division having been left open so as to form an avenue from the entrance to the steps leading to the Court of King's Bench. These tables were three in number, and were, like the prince's table, ornamented with great splendour—triumphal pillars and arches succeeding each other to the end. At the tables next the platform were placed the distinguished visitors who had been invited to the feast, while at those situated at the other end of the hall sat the principal members of the corporation. The common council were placed in the recesses which were formed by the arches supporting the galleries; and, although separated from the main tables, the arrangement for their entertainment were in unison with the magnificence displayed in every other part of the hall.

The royal personages began to arrive about five o'clock. They were severally announced as they entered; and were conducted through the hall with shouts of welcome and with appropriate music: our own princes of the blood royal with the national air of "God save the king;" the illustrious warriors with the air of "See the conquering hero comes." Of the sovereigns, the King of Prussia and his sons came first, the Prince Regent next, and last the Emperor, with the Archduchess under his arm. The other illustrious persons, princes, ambassadors, marshals, ministers, peers, judges, &c. &c. continued to arrive in quick succession; and were all received with the most cordial shouts of applause. They passed on to the Common-council and King's-Bench chambers, which were richly

fitted up as drawing-rooms for the occasion. The prince-regent and the two sovereigns, with their illustrious attendants, were conducted to the upper end of the Council-chamber, where state chairs, on a platform, were placed. The lady-mayorefs received the archduchefs and the ladies, as they entered the room. When the Prince Regent was seated, the Lord Mayor, having laid aside his velvet robes, and dressed in his embroidered robes, advanced with the Aldermen and Recorder, and made their obeisance. Then Mr. Recorder, in a short and eloquent address, begged leave to express to his R. H. the gratitude with which they welcomed him and the illustrious sovereigns, his visitors, into their hall; to felicitate themselves, in common with all his loyal subjects, on the glorious events which had procured them the high honour of this visit, an event which the energies and zeal of his affectionate citizens and subjects, co-operating with the wisdom and vigour of his counsels, and the spirit and valour of his allies, had so gloriously brought about, by forcing back peace to Europe. He trusted, that his R. H. and his illustrious visitors would accept of their humble endeavours to entertain them, with indulgence for any defect which might appear, and which, not the want of anxiety or of will, but the want of time or ability alone, might account for. His royal highness was pleased to make a gracious reply; and then, addressing himself to the lord-mayor, he said, "It has been always the custom, when the sovereign paid a visit to his faithful city of London, to confer a mark of favour on its chief magistrate. At no period could this be more properly done than on an occasion so advantageous to the country as the present; when the return of peace, so long desired, and which was the sole object of all our efforts, had been so gloriously achieved by the valour of his majesty's arms, in conjunction with that of his illustrious allies; nor could it be conferred on a person more truly worthy of it, by every public and private virtue, than his lordship; and he had great satisfaction in conferring a signal mark of the royal favour upon him." His R. H. then conferred on the lord-mayor the honour of a baronetcy, who kissed his hand. It was afterwards understood, that his R. H. had also signified to Mr. Recorder, that he should, at no distant time, confer the same honour on him, for his long and faithful services, as the first law-officer of the city.

At seven o'clock dinner was announced to be served, and the royal and illustrious company passed from the drawing-rooms into the hall, in procession, to the sound of music, the bands playing, "O the roast beef of Old England." The city-officers, the aldermen, the lord-mayor carrying the city-sword, preceded the prince-regent, who, with the emperor and archduchefs, the king of Prussia and princes of his family, followed by all the illustrious guests, walked round the centre tables, turning, as they entered the hall, to the right, and proceeding round the tables of the common council to the tables in the east. The royal princes then ascended the steps leading to the elevated platform, on which the royal table was placed; and they seated themselves in the following order:

Under the Canopy,  
THE PRINCE REGENT.

On his right.

The Emperor.  
Duke of York.  
Prince Henry of Prussia.  
Duke of Cambridge.  
Duke of Orleans.  
Duke of Saxe-Weimar.  
Prince Augustus of Prussia.  
Prince — of Prussia.  
Duke of Oldenburgh.  
Count de Meerfeldt.  
Prince of Hardenberg.  
Conde de F. Nunez,  
Duke of Montelliano. }

On his left.

King of Prussia.  
Duchefs of Oldenburgh.  
Hereditary Prince of Wirtemberg.  
Countefs of Lieven.  
Duke of Kent.  
Prince of Bavaria.  
Prince Mettermich.  
Prince de Cobourg.  
Duke of Gloucester.  
Prince William of Prussia.  
Prince of Orange.  
Princess Volchoufski.

This table was a semi-circle, and was most sumptuous in its display of gold plate. Its richness indeed was unparalleled—all the companies had sent in their most costly vessels, which filled every part of the hall, to the amount in value of 200,000. at least; but the most magnificent ornaments in candelabras, epergnes, turreens, ewers, cups, dishes, glaciers, &c. all in gold, were selected for this table, and by the body of wax-light produced a striking effect. The table being semi-circular, all the royal party had a full view of the company in the hall. The lord-mayor sir William Domville, took his stand behind the chair of his R. H. and continued there for some time, till desired to take his seat, when he retired to the right hand of the centre table, which had been appointed for him and the aldermen. The lady-mayorefs sat at the left hand of it, opposite to the lord-mayor; and at the same table lady Liverpool and lady Castlereagh were placed, the latter having the archbishop of Canterbury on her left hand. There were in all three tables reserved for the illustrious guests and aldermen; but they sat down promiscuously. At the left hand table sat, on one side, Mr. Speaker, Count Lieven, Prince Marshal Blücher, Sir Charles Stewart (now Lord Stewart), Count Platoff, &c. On the opposite side, the Earl of Liverpool, Lord Erskine, Marquis of Hertford, Duke of Montrose, &c. The Duke of Sussex sent an apology for his non-attendance on account of indisposition; and the Duke of Clarence was also absent.

The dinner was as sumptuous as expense or skill could make it. *Non nobis* was finely sung by a vocal band under the direction of Mr. Taylor, the company all standing. The lord-mayor gave a toast, "The King," which was drunk with reverential silence, not even the usual anthem was sung; after which he gave "The Prince Regent," which was drunk with three times three. The toasts then given in succession were, "The Queen—The Emperor of all the Russias—The King of Prussia—The Emperor of Austria—The King of Spain—The Archduchefs of Oldenburgh—The Sovereign Prince of the Netherlands;" all which were received with shouts of applause, and drunk with three times three. There was no music, however, at first, out of deference to the feelings of the archduchefs; but her serene highness at length privately requested that the company might not be deprived, on her account, of their usual national songs; and accordingly, after her health was drunk, the song of "God save the king" was sung with rapturous applause: after which the vocal performers sung the glee of "To Arms," altered to suit the occasion.

After the toast, given by the prince, of "The Heroes by Sea and Land, who have nobly fought for their Country," the vocal band sang "Rule Britannia;" when they came to the stanza of "Bless'd isle with matchless beauty crown'd," the *coup d'œil* of beauty that surrounded the hall struck, as by electricity, every heart in the room, and a burst of acclamation was the consequence, which the prince happily seized, and proposed a toast, "The Lady Mayorefs and the Ladies in the Hall," which was drunk with enthusiasm. The Prince Regent gave also, "The Illustrious Foreign Heroes who had contributed so much to the Glories of the War;" this produced a torrent of applause, and the heroes Blücher, Platoff, &c. rose and bowed their thanks to the company. "The City of London, and prosperity to its Trade, The Army and Navy," &c. were also drunk. "Hail Star of Brunswick," was also sung with fine effect. At half past ten, the royal party, followed by the distinguished guests, withdrew to take coffee; after which they proceeded to their carriages; but it was three in the morning before the hall was entirely cleared.

The procession returned from the city in the same order as it went; the marshal's men and all the attendants, except the coachmen and postillions, with flambeaux in their hands, which gave it a novel and brilliant appearance.

On Sunday the 19th, the illustrious party dined at Oatlands, with the duke of York and the duchefs, who is sister to the king of Prussia. The forenoon of Monday

was employed in viewing 10,000 troops, drawn up in Hyde Park to fire a *feu-de-joie*, in honour of the peace, which was proclaimed with the usual formalities in the afternoon. The evening was set apart for a most superb entertainment and ball, provided by the members of White's Club, in Burlington-house and gardens, at a cost of nearly 40,000*l.* Tuesday was employed in taking leave of the royal family, and in other preparations for departure. On Wednesday morning the 22d, both sovereigns left town (the emperor previously viewing the Tower of London) for Portsmouth, where they were entertained with a grand naval review. Thence they proceeded along the coast to Dover, where they embarked on their return to the continent.

We now return to Guildhall.—For several days after the superb entertainment, a vast concourse of people repaired thither to view the beautiful ornaments before they were removed; and at length, when they were nearly taken down, the arrival of the duke of Wellington occasioned them to be hastily restored, in consequence of his grace having accepted an invitation from the corporation to dine there on the 9th of the present month (July.) On that day, the duke was entertained by the corporation of London, in a style of magnificence and splendour equal in every respect to the luxurious display which was made on the occasion we have just noticed. There was, as before, a covered entrance from the centre of Guildhall-yard to the hall, which was lined with green cloth, and lighted with variegated lamps and silver sconces. The canopy erected over the three seats of the monarchs on the late occasion remained, but was moved nearer to the wall; and the three chairs on which the Prince Regent, the Emperor, and King, sat, were raised on a platform, and remained empty the whole evening. At the back of the throne was placed one glass, containing nearly sixty square feet of British manufacture, which had a most beautiful effect, by affording the appearance of two halls most splendidly fitted up; the glass being of that extent as to take in very nearly the whole hall at one view.

The corporation of London upon this occasion took the opportunity of inviting every person to the entertainment who had been in any way noticed in the votes of parliament for their services, either by sea or land, as well as those they had themselves noticed in votes of thanks, and given the freedom and swords, boxes, or other rewards; in addition to which were the relations and those that were connected with the duke of Wellington, his staff, and many others both naval and military, who, although they had not been noticed by name, had yet deserved well of their country for the services they had performed. The votes of parliament and the proceedings of the court of common-council were gone through from the year 1792 to the present time; and the names were severally selected for the purpose.

Prior to the dinner, at about five o'clock, the duke was presented with the freedom of the city in a gold box, and with the splendid sword which had been voted to him. On delivering the former, Mr. Chamberlain administered the oaths to his grace, and then addressed him, reciting the different occasions on which his gallant achievements had attracted the notice of the city of London, and had produced those indications of public gratitude, in the meetings of the corporation and the livery, of which he had been informed during the progress of his glorious career.—The duke, having bowed to the lord-mayor and the chamberlain, expressed his high sense of the honour conferred upon him by the city; and attributed the success of all his enterprises to the ability with which he was supported by his brother-officers, and to the valour and discipline of his majesty's forces, and those of the allies. On receiving the sword, he raised his voice and spoke with particular energy; declaring his readiness to employ it in the service of his sovereign and his country, should it unfortunately happen that the general wish of the nations of Europe for a per-

manent peace should be disappointed, and that he should be again called upon to assist in the public cause.—The duke then took off his own sword, gave it to one of his aids-du-camp, and replaced it by the city-sword. This ceremony was performed in the council-chamber, in the raised part of the room which is devoted during the sitting of the court to the lord-mayor and aldermen. All the seats were previously removed, and the apartment was elegantly decorated. At the further extremity there was raised on a pedestal the head of his grace in white marble; and the artist had happily succeeded in the resemblance; but, on account of a small imperfection in the material, we understand another bust is to be substituted.

The dukes of York, Kent, Suffex, Gloucester, Norfolk, Beaufort, and cabinet-ministers, being assembled, they next proceeded to the Great Hall in the following order:

The City Marshals.

The Officers of the Lord-mayor's Household.

Several Members of the Committee, with wands.

Officers of Guildhall according to seniority (juniors first).

Six Members of Committee, with wands.

The Sheriffs.

The Aldermen, two and two (juniors first).

The LORD MAYOR, preceded by the Sword and Mace.

The DUKE of YORK, with the DUKE of WELLINGTON on his Right Hand.

The Royal Dukes.

The Relations of the Duke of Wellington.

The Cabinet Ministers.

The Ambassadors and Foreign Ministers.

Nobility, Admirals, and General Officers—the Duke of Norfolk first.

Other Officers and Gentry.

The Members of the Common Council.

The whole procession, instead of turning to the left at the bottom of the steps leading into the great hall directly to the hustings, where the chief tables were placed, went entirely round the hall, by which means the numerous ladies who were assembled in the galleries had an opportunity of being gratified with a sight of those heroes who have so nobly supported the glory of their country both by sea and land. The band in the upper galleries played, during the procession, "See the conquering hero comes." The duke of Clarence was absent from indisposition, and the duke of Cambridge from being under the necessity of leaving town. The only cabinet-minister absent was lord Sidmouth, from indisposition. The dinner was served up in the first style, and was a most complete civic feast, consisting of turtle, venison, and every other delicacy of the season. The raised platform for the principal tables had been rendered more commodious, and a greater number of persons were accommodated upon it. The Lord-mayor sat in the centre chair, with the Duke of Wellington on his right hand; and the remaining chairs were filled by the Royal Dukes, Foreign Princes and Ambassadors, the Ministers of State, and a long list of naval and military characters of distinction. The top of the canopy was ornamented with a ducal coronet, surmounted with a dome, and on the front of the dome was a splendid sword and a marshal's baton, exquisitely ornamented. The remaining decorations of the hall in point of plate, lustres, galleries, &c. were similar to those exhibited on the former occasion. There were two military bands—and some of the most celebrated glee-fingers added continually to the general conviviality of the evening. The galleries, which were not removed, were devoted as well to gentlemen as to ladies; and the number of persons present was greater than at the former feast. Every thing was however conducted with admirable regularity, and nothing occurred to mar the harmony of the scene. Among the other viands under which the table groaned, was an excellent baron of beef; and, opposite this good old sample of English fare, stood a blue-and-white china jug, which held twenty-three gallons of brown stout,

flout, of the contents of which most of the distinguished guests partook.

After dinner *Non nobis* was sung, and the toasts were given (with an appropriate glee or song between each) by sound of trumpet, there being two trumpeters placed at the top of the hall, near the throne, who were answered by two at the bottom.

The lord-mayor, in proposing the toast of Field-marshal the Duke of Wellington, addressed him nearly in the following words: "The highly-gratifying visit of his royal highness the prince regent to this festive hall, accompanied by mighty sovereigns and renowned warriors of foreign nations, is still fresh in our recollection. Many, perhaps all of us, regretted that the British hero was not seen amidst the laurelled conquerors upon that memorable occasion. The regret was natural, but perhaps unseasonable, for who can doubt but the invincible commander of our own brave armies deserved a civic triumph to himself? It would be ingratitude not to celebrate distinctly the splendid victories achieved by our own illustrious general, which accelerated the restoration of peace; victories not bestowed by the capricious favour of fortune, but won by a noble perseverance, through adverse circumstances, and by hard-contested struggles with rival generals of consummate skill, and veteran troops of acknowledged valour; and, though every tribute of praise is due to the native bravery of our own soldiers, of what avail would it have proved if it had not been directed and raised even to enthusiasm by the military genius, the personal valour, and the indefatigable vigilance, of their great commander. His grace will allow me, in the name of my fellow-citizens, to assure him, it is not in his presence that we praise him most; and that, in the entertainment given to him this day, they do not pretend to do more than testify their gratitude for services rendered to his country, which, in their estimation, not any honour from the crown, nor any applause from the people, can more than adequately reward."—His grace, in reply, totally disclaimed any peculiar merit attaching to himself; but attributed it, under Divine Providence, to the perseverance of the nation, the wisdom of his majesty's councils, the care and attention of his royal highness the commander-in-chief, and the brave co-operating exertions of his fellows in arms, so many of whom he felt highly gratified in seeing surrounding him upon this occasion; and above all, he said, he had the honour of commanding an army of Englishmen, who lost not an atom of the spirit of their country, and behaved as Englishmen should do.

The lord-mayor, in proposing the toast of his Majesty's Ministers, took the opportunity of saying—"On this occasion it will be almost superfluous to compliment them in words: the presence of the duke of Wellington is itself a panegyric on their conduct; they wisely appreciated his character, and boldly trusted the best military energies of the nation to his uncontrouled direction. By this and similar measures they have steadily assisted the great common cause; and amidst the unexampled success which has attended their ministry, they have the candour to disclaim as presumptuous the attributing to any man, or set of men, the auspicious termination of the late arduous contest. Such liberality of sentiment and conduct at once advances their own merit, and benefits their country, by promoting a spirit of conciliation through all ranks and parties in the state; and I must request his majesty's ministers to accept our grateful thanks for the glorious, and we trust permanent, peace, which this country has lately obtained, and which we attribute in an eminent degree to their ability in negotiation, as well as to their energy in conducting the war."—The earl of Liverpool, in the name of his majesty's ministers, made a most eloquent reply, in which he paid the highest compliments to the duke of Wellington, whose successes had far outstripped all human expectation. His lordship said his majesty's ministers had to be grateful for the confidence which had been placed in them; and attributed the glo-

rious results of the late arduous contest to the steady perseverance of the nation, amongst whom none stood more conspicuous than the citizens of London.

Towards the close of the evening a temporary staircase was opened from the galleries into the body of the hall, by which the ladies descended, and passed round the whole of the tables on the hustings, and every one had the honour of shaking hands with the immortal hero and the royal dukes, and some of the younger ones were saluted by his grace. Near seven hundred ladies were in the galleries, most superbly dressed, and amongst them we noticed the females of the lord-chancellor's family, lady Ellenborough and her daughters, the lady of the speaker of the house of commons, lady Elizabeth Whitbread, and many other ladies of rank and fashion. The appearance of the ladies afforded one of the most splendid and gratifying sights that could be imagined.

The duke has been named ambassador extraordinary and plenipotentiary to the court of Louis XVIII. and will set off for Paris directly after the rising of parliament.

On the east side of Guildhall-yard, between Guildhall and Blackwell-hall, is Guildhall Chapel, which was a college or chapel dedicated to Mary Magdalen and All Saints, and commonly called London College. This college was founded, according to Stow, about the year 1299, by Peter Forneloe, Adam Francis, and Henry Frowike, for a custos and four chaplains. This college being old and ruinous, Henry VI. upon application to him by the mayor and citizens of London, granted them a license to rebuild and enlarge it; and the chaplains, &c. belonging to it were increased, by the founding of divers chantries, to a custos, seven chaplains, three clerks, four choristers, and seven alms-people. The mayor and chamberlain were the patrons of this foundation, and the bishop of London the ordinary; and, in 1542, bishop Bonner made statutes for its better government. This college was suppressed by Henry VIII. and, in the year 1551, Edward VI. granted it to the mayor and commonalty of London, for the sum of 456l. 13s. 4d. to be held in foggage of the manor of East Greenwich; since which time it has been called Guildhall Chapel. This edifice, which is perfectly in the Gothic taste, was defaced, but not burnt down, by the fire in 1666, and has been since repaired. In three niches are stone figures of king Edward VI. queen Elizabeth, and king Charles I. treading on a globe. The windows are spacious; there is a gallery at the west end; the walls are hung with tapestry; there is a wainscot covering over the aldermen's seats, and a particular seat for the lord-mayor, adorned with cartouches; a handsome wainscot pulpit and desk, and a neat altar-piece, inclosed with rails and banisters. Divine service used to be performed here, before the lord-mayor and aldermen, weekly, as well as on particular occasions; but this practice has been discontinued for some years; and the Court of Requests is now held here.—Considering the importance of this place all together, we have presented our readers with an engraving representing the Front of Guildhall, with Guildhall Yard and Chapel, after a drawing made on purpose.

At the south-west corner of Guildhall-yard, is the parish-church of St. Lawrence Jewry, which runs westward on the north side of Cateaton-street. It is dedicated to Lawrence, a Spanish saint, born at Huesca, in the kingdom of Arragon; who, after having undergone the most grievous tortures, in the persecution under the emperor Valerian, was cruelly broiled alive upon a gridiron, with a slow fire, till he died, for his strict adherence to Christianity; and the additional epithet of *Jewry*, from its situation among the Jews, was conferred upon it, to distinguish it from the church of St. Lawrence Pountney, now demolished. This church, which was anciently a rectory, being given, by Hugo de Wickenbroke, to Baliol college, in Oxford, anno 1294, the rectory ceased; wherefore Richard bishop of London converted it into a vicarage; the patronage of which still continues in the master and scholars of that college. The

old church being destroyed by the fire in 1666, it was rebuilt, at the expense of the parishioners, assisted by a very liberal benefaction from sir John Langham; and the parish of St. Mary Magdalen, Milk-street, was annexed to it. The present structure is eighty-one feet long, sixty-eight broad, forty high to the roof, and the altitude of the steeple is a hundred and thirty feet. The body is lighted by two series of windows; the lower ones large and uniform, and the upper small. At the east end is a pediment, with niches, supported by Corinthian columns. The lower, which is lofty, is terminated by a balustrade, with plain pinnacles; and within this balustrade rises a kind of lantern, which supports the base of the spire. A copper gridiron of 1 cwt. was put on the top of the steeple for a vane, Aug. 13, 1732.

In this neighbourhood were, before the fire of London, two parish-churches, viz. that of St. Mary Magdalen, Milk-street, belonging to Cripplegate ward; and that of Allhallows, Honey-lane, in this ward.—Honey-lane market now occupies the site of these two religious edifices, and is famous for the choice quality of the provisions brought to it. "There is nothing," as we often say proverbially, "like getting a good name;" and that has been long the case with this market, which, being in the high-feeding centre of the city, used to serve the lord-mayor and aldermen with all sorts of dainties; but, since the fashion of keeping country boxes a little way out of town, or handsome houses in town, but at the other and fashionable end of it, this market has lost a considerable part of its customers, and consequently of its fame. It is the smallest market in the city, being only a hundred and ninety-three feet from east to west, and ninety-seven from north to south. In the centre is a square market-house, standing on pillars, with rooms over it, and a bell-tower in the middle. Here are also stalls for butchers, fruiterers, &c. and the passages into the market are inhabited by poulterers, and other dealers in provisions.

St. Pancras, Soper-lane, stood on the north side of Pancras-lane, and took its name from its dedication to St. Pancras, a young Phrygian nobleman, who for his adherence to the Christian faith, suffered martyrdom at Rome, under the emperor Dioclesian; and from its vicinity to Soper-lane, now Queen-street. It is a rectory, the patronage of which was in the prior and canons of Canterbury, till they granted the advowson to Simon, the archbishop, in the year 1365: since which time, it has remained in the archbishops of that see.

On the same side of Pancras-lane, a little further to the east, stood the parish-church of St. Bennet Sherehog, which is said to derive its name from one Benedict Shorne, a fishmonger, who rebuilt it. It was originally dedicated to St. Olyth, a queen and martyr; but the ambition of the disciple of St. Peter was superior to his gallantry; he therefore ousted the female saint, and procured the tutelage of the church, by the name of St. Bennet, or Benedict, though his canonization is doubtful. The additional epithet is a corruption of his surname, which was gradually changed to Shrog, Shorehog, and at length, to Sherehog. After the fire in 1666, this parish was united to that of St. Stephen Wallbrook. It is a rectory, the patronage of which was in the prior and convent of St. Mary Overy's, in Southwark, till their dissolution, when it came to the crown; in which it still continues.

The church of St. Olave stands on the west side of the Old Jewry. It is a very ancient foundation, and was originally called St. Olave Upwell, probably from a well under the east end, where, at this time, and for many years past, has stood a pump for the use of the public; but this name afterwards gave way to that of Jewry, owing to the great number of Jews that took up their residence in this neighbourhood. This parish was a rectory, in the gift of the dean and chapter of St. Paul's, till about the year 1181; when it was transferred by them, with the chapel of St. Stephen, Coleman-street, to the prior and convent of Butley in Suffolk, and became a vicarage. At the suppression

of that convent, the impropriation was seized by the crown, in whom it has continued to the present time. When the old church was burned down, in 1666, the parish of St. Martin, Ironmonger-lane, was annexed to it; the patronage of which is also in the crown. The present structure was erected soon after the fire of London; and is built partly of brick, and partly of stone. It is seventy-eight feet long, twenty-four broad, thirty-six high to the roof, and eighty-eight to the top of the tower and pinnacles. The door is of the doric order, well proportioned, and covered with an arched pediment. The tower is very plain; on the upper part rises a cornice, supported by scrolls; and upon this a plain attic course. On the pillars, at the corners, are placed the pinnacles upon balls; and each pinnacle is terminated at the top by a ball. The body of the church is well lighted, the floor paved with Purbeck, and the walls wainscoted. The pulpit is enriched with carvings of cherubims; the floor of the altar, on which the communion-table stands, is paved with black and white marble, and in the front of the altar are the king's arms.

At the lower end of this church, over the gallery, are three curious pieces of painting, viz. 1. Queen Elizabeth, lying on a fine couch, with her regalia, under an arched canopy, on which are placed her arms. 2. King Charles I. a good likeness, and the performance not unlike the work of the great painters in the 17th century. 3. The figure of Time, with wings displayed, a scythe in his right hand, and an hour-glass in his left; at his foot is a child asleep, and under him a skeleton eight feet long. This allegory is easily understood; but at what period of time it was painted, and the name of the painter, we could not learn.—These paintings are disposed in the following manner: the allegory in the centre, the portrait of Charles on the south side of it, and the canopy of Elizabeth on the north. The walls of this church present several other moments of the dead. On one side, before the pulpit, is a group of arms upon round shields tastefully raised upon iron branches; and the centre of the church is loaded with the heavy mass of an immense cast-iron stove, more useful than ornamental. The font, placed on the north side, is of marble; small, but well cut, and adorned with cherubs' heads; the cover is of wood, and curiously carved.

It was in this parish, in the house of Robert Large, mayor of London in 1439, that William Caxton, the celebrated printer, served his apprenticeship as a mercer. His master, in the following year, left him thirty-four marks, as a testimonial of his fidelity.

At the north-west corner of the street is a public house, above which we remarked a head of Minerva placed in a round, niche, but for what reason no body could inform us. Regarding it as a curiosity, we have given a representation of it on Plate VIIb\*, at fig. 5.—A little below, also in the brick wall, we find a small but neat carving of the Cordwainers' arms.

The first Jewish synagogue erected in London stood near the north-east corner of the Old Jewry. It was destroyed in the year 1262, at which time seven hundred Jews were murdered, and their goods spoiled, by the citizens of London. The site thereof was given by queen Eleanor to the friars called De Penitentia Jesu, or De Sacca, an order of begging friars (56 Henry III.) so called from their being clothed in sackcloth. In process of time, it was converted to a private house, wherein several mayors resided, and kept their mayoralty. In the days of Stow it was a tavern, and had for its sign the Windmill. After various alterations, the place is now partly covered with a good private dwelling-house in front, and backward with a handsome capacious meeting-house of the presbyterian denomination; and with two alms-houses in Windmill-court, for nine poor widows of armourers and braziers, founded by Mr. Tindal, and endowed with six shillings per quarter, and nine bushels of coals annually; and with twenty shillings per quarter to those widows who are unable to work.—Near this spot

*Sculpture over the Gate of the Cemetery at St. Stephens, Coleman St.*

*Curious Font at St. Margarets Lottbury.*

*Published by G. Jones, Ave Maria Lane, March 4. 1825.*

was anciently a large stone building, called the Prince's Wardrobe; but for what use erected, or by whom, is now forgotten.

Stepping a little further to the north, we enter Coleman-street, which is spacious and broad, and inhabited by reputable merchants; but offers not any thing to the observation of the antiquary, except Armourers' Hall, an old plain brick building; and the parochial church of St. Stephen, so called from its dedication to the proto-martyr. It is of great antiquity, and was originally a chapel belonging to the dean and chapter of St. Paul's, who, between the years 1171 and 1181, granted the church of St. Olave Jewry, with this chapel as an appendage to it, to the prior and abbot of Butley in Suffolk. This chapel was made parochial in the year 1456; but continued under the patronage of the prior and canons of Butley till the suppression of that convent, when it came to the crown. However, in the year 1577, queen Elizabeth granted the patronage, together with the church and rectory, to Thomas Paskins, and others; and, in 1590, to William Daniel, serjeant at law, and other parishioners; which rectory improper, and right of advowson, have been held by the parish, in fee-farm of the crown, ever since. The old church sharing the common fate in the dreadful fire of London, the present structure was erected about four years after. It is a neat and solid building, principally of stone, strengthened with rustick at the corners, and lighted by one series of large windows, with a handsome cornice; it has a very extensive roof, without a single pillar to support it. The steeple is a square tower, crowned with a lantern, which has four faces, and encloses a bell to call the parishioners to prayers. The front is adorned with a cornice, two pine-apples, and the figure of a cock, handsomely carved. The length of this church, is seventy-five feet, its breadth thirty-five, height of the roof twenty-four, of the tower sixty-five. On the north side is the church-yard; and on the south is a large pavement, that covers a burial-vault, the whole length of the church. To this pavement there is an ascent by several steps, through a gate, over which is cut, in stone, a representation of the general resurrection; a curious piece of workmanship; and, although it bears no date, seems to have been executed in the fifteenth century. Christ, holding a flag in his right hand, appears in the centre upon the clouds which divide earth from heaven; and a quantity of naked bodies, intended to represent the awakened nations, endeavour to rise, and to be admitted in the company of the saints. Some are partly concealed under rocks, but striving to get out; unless by those places of confinement are meant the prisons of hell. This bas-relief has been so often covered with paint, that it is impossible to judge fairly of the merit due to the chisel; but the whole design tastes of the incorrectness of the times when it was executed.—At our visit, we found the church beautifully adorned with nosegays, each candlestick bearing one, whether because it was the day of Pentecost, or Whitsunday, corresponding with the Jewish feast of tabernacles, or on account of the restoration of king Charles II. which this year coincided, we did not learn; but the church added to a neat and elegant appearance a most delightful perfume. We observed several monuments, whose style proves their erection to have been at the end of the 17th or beginning of the 18th century; and two old paintings of Moses and Aaron, one of each side of the altar. The font is in a small recess contrived in the wall on the south side, and fenced by an iron wicket.

The north end of Coleman-street opens into that called London Wall, near the fourth end of Old Bedlam; and its south entrance is in Cateaton-street, the etymology of which must be curious, but which we have not been able to bring into a satisfactory shape. To the east is Lothbury, which has been lately much improved and decorated by the north front of the bank, a grand specimen of English skill in modern architecture: it appears heavy when compared to the south front, but has a majestic

mien, suitable to the repository of the wealth, or rather the credit, of a great nation. The corners, adorned with loggie and columns, do honour to the architect, Mr. Soane; and the north-east corner of Princes-street being made to correspond renders this part very interesting and worthy attention.—Speaking of Lothbury, Stow says: "This street is possessed, for the most part, by founders, who call candlesticks, chaffing-dishes, spice-mortars, and such-like copper or latten wares, and do afterwards turn them with the foot, and not with the wheel, to make them smooth and bright, which turning and scratting, as some do term it, making a loathsome noise to the by-passers, that have not been used to the like, it is therefore by them disdainfully called Lothbury."—With all the respect we bear for our favourite historian, we cannot help feeling a little reluctance at coinciding with him in this etymology; although the neighbourhood of Armourers' hall seems strongly to countenance it.

The parish-church of St. Margaret, Lothbury, is a rectory, the foundation of which is of great antiquity, as appears from John de Halingfield, who was presented to it, by the abbess and convent of Barking in Essex, on the 16th of August, in the year 1303. The patronage continued in that convent till the general suppression of religious houses, when it fell to the crown, in whom it has continued to the present time. The original church being greatly decayed by time, a new one was built in the year 1440; but, that being destroyed by the general conflagration, the present edifice was erected in its stead, and completely finished in the year 1690. It is a plain neat building, and is situated on the ancient water-course of Wall-brook. It is sixty-six feet long; fifty-four broad, thirty-six in height to the roof, and a hundred and forty to the top of the steeple. The body is well-lighted by a row of lofty windows, over which the wall is terminated by a balustrade; and the principal door is ornamented with Corinthian columns, which support an angular pediment. The tower has large windows in the uppermost stage, and is terminated a little above by a plain cornice, upon which is raised a small dome, that supports a slender spire. The inside is wainscoted, the floor neatly paved, and the altar-piece handsomely ornamented. The font for baptism is extremely beautiful, being carved with a representation of the Garden of Eden and the Fall of Man, the Salvation of Noah and his Family in the Ark; the Baptism of Jesus by John Baptist, and Philip baptizing the Eunuch. The cover is ornamented with the figure of St. Margaret, and with those of Faith, Hope, and Charity.

The ornamenting of the sacred piscina, where our original stain is supposed to be washed away in the waters of baptism, has been from remote times an object of attention for the sculptor; and the workmanship of this font has so many curious and interesting parts, that it is a very favourable specimen of performances of this kind. The compartments have been chosen with great knowledge and taste, as every one of them alludes to the sacred mystery performed on the margin of the holy pool. Were we to enter into a dissertation upon the ancient, and even pagan, custom of baptizing, bathing, or performing ablutions, still in practice at this moment with the Mahometans, the Hindoos, as well as with all Christian sects; we should be led to draw a conclusion from no later time than the deluge itself; for it seems that originally superstition hinted this ceremony as a preservative against the vindictive waters of the flood. We find remnants of the same idea, in the Eleusian mysteries, in the procession of Adonis at Alexandria; and the first volume of the Memoirs of the Academy of Inscriptions and Belles Lettres, will satisfy the most curious inquirer on the subject.

A few steps to the west from this church, is Founders' Court, so called from its neighbourhood to Founders' Hall, which is a plain but convenient building, not only serving the purposes of the company it belongs to, but is also used as a place of worship by a presbyterian congregation.

At the corner of Throgmorton-street and Bartholomew-  
Lane

lane is a new building called the *Auction Mart*. The front is handsome; and the inside adorned with a curious double staircase, leading to the apartments above the hall, but so very slender and steep, that ladies have often expressed their dread of falling, when they were really actuated by the modest fear of showing their garters. The apartments on the different floors are let to brokers, underwriters, auctioneers, and other *salamanders* living in the heat of speculation and trade. A coffee-house annexed to it, and elegantly built, adds considerable comfort to the mart; and to the frequenters of the sales.

Returning by Cateaton-street, we find Basinghall-street, in the ward of Bassishaw.—This street derives its name from the mansion-house of the family of the Basings, several of whom served the chief offices in the city in the 13th and 14th centuries. It was originally called Basing's *haw*, or hall; but, descending to Mr. Thomas Bakewell, it changed its name to Bakewell's hall. It afterwards fell to the crown, and, in the year 1397, was sold by Richard II. with its gardens and appurtenances, to the mayor and commonalty of London, for fifty pounds; since which, it has been corruptedly called *Blackwell-hall*, and used as a weekly market for woollen cloths. The old hall had become so ruinous, that in 1638 it was pulled down, and rebuilt, at an expense of two thousand five hundred pounds; the principal part of which was defrayed by Richard May, of the Merchant-Tailors' company. This building being destroyed by the fire in 1666, the present structure was erected in 1672. It is a square building, with two courts in the middle, surrounded with warehouses; and has two spacious entrances for carriages; one from Basinghall-street, and the other from Guildhall-yard, where is the principal front, and a door-case, adorned with two columns of the Doric order, with their entablature, and a pediment, in which are the king's arms, and a little lower the city arms, enriched with cupids, &c. There is also an entrance to it from Cateaton-street. Within these buildings are different apartments, or warehouses, called the Devonshire, the Gloucestershire, the Worcestershire, the Kentish, the Medley, the Spanish, and the Blanket halls; in which each piece of cloth pays a penny for pitching, and a halfpenny per week for resting. The profits are applied towards the support of Christ's Hospital; the governors of which have the sole management of the warehouses. This market may be said to be the greatest woollen-cloth market in the world; and therefore it has always been the particular care of the city of London to keep it under the best regulations; for, so early as the 21st of Richard II. it was ordained, that no manner of person should sell any woollen cloths, except they were first brought, harboured, and discharged, at the common market of Blackwell-hall, upon pain of forfeiture thereof. And that ordinance was confirmed by an act of common-council, held on the 1st of August, 3 Henry VIII. with this addition, that no manner of person, being a freeman of this city, suffer any manner of person whatsoever, be he free or foreign, to buy or sell any manner of woollen cloths, harboured or lodged, contrary to the said ordinance, within his shop, chamber, or other place within his house; unless the said cloths were first brought to Blackwell-hall, and there bought and sold, under the penalty of six shillings and eightpence for every broad cloth, three shillings and fourpence for every kersey, and twenty pence for every Bridgewater and other pieces of cloth: double for a second offence, and disfranchisement for a third.

On the west side of Basinghall-street is Coopers' Hall; a stately well-built edifice of brick. The hall is a handsome room, wainscoted to the height of fourteen feet, and paved with marble. Of late years this hall has been used for the drawing of the lottery, which, for many years preceding had been drawn at Guildhall.

This small ward contains only one church, called St. Michael Bassishaw. It is a rectory, and was originally founded about the year 1140; at which time it was in the gift of the prior and canons of St. Bartholomew, Smithfield. In the 15th century it fell to the dean and chap-

ter of St. Paul's, who, from that time, have continued patrons thereof. The old church, which was very beautiful, was entirely destroyed by the fire of London; and the present structure was completed in 1679. The walls are of brick, strengthened with rustic-work at the corners; and the body is well lighted by a single series of large windows. At the east end, where the top is terminated by an arch, the light is given by three windows; one of them upright, the other two circular. The steeple consists of a stone tower, crowned with a turret, from which rises a kind of spire. The length of this church is seventy feet, the breadth fifty, the height of the roof forty-two, and that of the tower seventy-five.

The other public buildings in this ward, are, three of the companies' halls; viz. On the east side of Basinghall-street, Masons' Hall, a small but very convenient stone building, in Masons' Alley. Weavers' Hall, which is a handsome building, neatly adorned in the inside with hangings, fret-work, and a skreen of the Ionic order. Girdlers' Hall; a handsome and convenient building, finished in 1681, well wainscoted within, and with a skreen of the Composite order.

On the west is the place or street called Aldermanbury, already noticed as having contained the first *bury*, or hall, where the aldermen used to meet.—On the west side of this street, between Love-lane and Adde-street, stands the parish-church of St. Mary, Aldermanbury, which is of ancient foundation. The patronage was formerly in the dean and chapter of St. Paul's, who, in the year 1331, with the consent of Stephen bishop of London, appropriated it to the adjoining hospital of Elsing Spital; but with a proviso, that the dean and chapter should have the patronage of both, and that, upon the appointment of a custos to this church and hospital, he was to swear fealty to the dean and chapter, and to pay them an ancient pension of a mark a-year, due from this church, and six shillings and eight pence yearly, for the hospital, as granted by the founder, William de Elsing, in testimony of its subjection to the church of St. Paul. It was also agreed that the custos should find a priest to serve the cure, who was to be approved by the dean and chapter. Hence it appears, that this church was at that time a curacy, as it still continues; but, after the dissolution of the hospital, the patronage was granted to the parishioners, who have ever since presented to it. The old church being destroyed by the dreadful fire in 1666, the present structure was finished ten years after. It is built of stone, and very plain; the body is well lighted, and the corners are wrought with rustic. It is seventy-two feet long, and forty-five broad; the roof is thirty-eight feet high, and the steeple about ninety. It has a plain solid tower, constructed in the same manner as the body, the angles in the upper stage being strengthened with rustic; the cornice is supported by scrolls, and above it is a plain attic course. In this rises a turret, with a square base that supports the dial. This turret is arched; but the corners are massy, and its roof is terminated in a point, on which is placed the vane. Over the altar is a very old picture representing the Lord's Supper, which at first sight appears to have been painted by some artist of the school of Titian.

To our readers, and particularly to that class which is fond of the marvellous in matters of antiquity, we must present the following quotation from Stow.—In the cloister adjoining the church of St. Mary Aldermanbury “is hanged and fastened a shank-bone of a man (as is said), very great, and larger by three inches and a half than that which hangeth in St. Lawrence church in the Jurie— for it is in length 23 inches and a half of assise; but not so hard and steely, like as the other; for the same is light, and somewhat pory and spongy. This bone is said to be found amongst the bones of men removed from the charnel-house of Paul's, or rather from the cloister of Paul's church; of both which reports, I doubt.”—However, the curious-historian adds, “true it is that this bone, from whence

whence soever it came, being of a man, as the forms sheweth, must needs be monstrous, and more than after the proportion of five shanke bones of any man now living amongst us."—These last words of Stow are obscure; for certainly he cannot mean that this bone was longer than five common shank-bones; but most likely that the proportion of the height of a man to his shank is as five to one. A man five feet and a half high measures thirteen inches on his shank; and, following the same proportion, the bone above mentioned must have belonged to an individual eleven feet high.

On the south side of this church stood a conduit, erected by sir William Eastfield, in 1438, for supplying the neighbouring inhabitants with water from Tyburn; which, being destroyed by the fire in 1666, was soon afterwards rebuilt; but, when the plentiful supply of water by other means rendered these buildings useless, this, with those in Cheapside and without Cripplegate, were pulled down in 1730; and the stones employed in repairing the gate upon London-bridge. It was proposed in the common-council to erect a statue of king William in the room of the conduit in Cheapside; but negatived by 77 against 25. "We have been lately delivered from one nuisance," said Mr. Birch; "and now they want to annoy us with another." Free Briton and Gent. Mag. Nov. 1731.

The access to Aldermanbury from Cheapside is principally through Milk-street, a very narrow passage, till you reach the intersection of Lad-lane and Cateaton-street. At the corner of Lad-lane is the famous inn called the Swan with two Necks, the usual resort of mails and stages from and to great part of the kingdom. But we cannot help remarking how awkward and dangerous is the entrance into the yard; and we really wonder at the dexterity of our four-in-hand virtuosi and knights of the whip, who, by twittings and windings, thread the gates of the inn with as much apparent facility as a young seamstress does her needle.—On the east side of Milk-street, near the bottom, we remarked a curious head carved in stone, and fixed in the brick wall, between the first and second floor of a house. It appears to have been an old sign of some public house; and, by the wreath of flowers and dishevelled hair, we suppose it to be the head of king Lear; but the reader may judge for himself by inspecting our Plate VII<sup>b</sup>. fig. 6.

In Aldermanbury, on the east side, opens Fountain-court, which, besides the Baptist-head coffee-house, a place of great business, presents on the east side a very neat building, with a double flight of steps and iron railings: the top is ornamented with a pediment and architrave of the Doric order, and in the centre of the tympanum are two serpents entwined within a wreath, elegantly carved, probably in allusion to the original purpose of the edifice, though at present only a canvas-warehouse. This court has an opening leading to St. Lawrence Jewry, in Guildhall-yard.

Lower down on the same side of the street, is another court called Three-Nun-court, leading to St. Michael's in Basinghall-street. From this spot, crossing London Wall and Fore-street, we proceed northwards towards Tenter-street, well known, like other parts of this neighbourhood, for its livery-stables; and in a place called "Ropemakers-alley," and "The Ruins," but now well built and respectably inhabited, we find the only Roman-catholic chapel which escaped destruction or confiscation at the time of the reformation. This was owing to its having the appearance of a private house. It was however burnt down during the riots of 1780, (see p. 116.) but was soon rebuilt, and is now a large and commodious place of worship. The entrance has still the appearance of a private house. The subject of the present altar-piece is the Baptism of Christ; it is an indifferent imitation of a famous painting of Tintoretto; the one which preceded this about ten years ago represented Christ curing the Sick of the Palsy; and had much more merit. On the right side of the altar is a painting of St. Paul, and one on the left

of St. Peter; both larger than life. The congregation attending this chapel is very numerous; and the service is performed with as much pomp and solemnity as their circumstances will allow.—It is remarkable that the south side of the street, opposite to the chapel, is in the city, whilst the chapel itself is *in pomario*, out of it. We must also observe, that rope-makers generally take their walks under the northern walls of fortified towns, or in the dry ditches below them, most likely on account of the shade which is necessary for their purpose; the rays of the sun would dry up the moisture of the tow or bark too soon, and consequently put an end to its required flexibility.

In Little Moorfields we remarked an old public house, the front of which is curiously decorated with flowers; but these have been so often white-washed, that they retain little of their former elegance. On one side remains a tall isolated stalk, with a large flower at top, which had most probably a companion on the other side; but this has disappeared. The sign of the house is the King's Arms; and seems to date from the reign of James or Charles I.

At the north-west corner of Aldermanbury and London Wall stands the parish-church of St. Alphage, so called from its dedication to St. Alphege, or Elphage, a noble Anglo-Saxon saint, bishop of Winchester, and afterwards archbishop of Canterbury, who was put to death by the Danes, at Greenwich, on the 17th of April, 1014. The first church in London dedicated to this saint stood adjoining to the city-wall, near the east side of Cripplegate. But, being demolished at the suppression of religious houses by Henry VIII. and the site thereof turned into a carpenter's yard, the south aisle of the church of St. Mary Elling Spital was converted into the parish-church. The advowson of this church, which is a rectory, was anciently in the dean and canons of St. Martin's-le-Grand, in whom it continued till Henry VII. annexed it to St. Peter's, Westminster, when the abbot and convent became the patrons of it; but, that convent being dissolved, queen Mary, in the year 1553, granted the patronage thereof to Edmund bishop of London, and his successors, in whom it still remains. This church escaped the fire of London; but became so ruinous, that it was rebuilt in 1770. It is a very small but neat edifice, of brick and stone, and well lighted. It has neither tower or any other ornament on the top; but the doors of entrance, one of which is on the south side of London Wall, and two others at the north end of Aldermanbury, are very neatly ornamented; and each front is crowned with a pediment. On the sides of the front, next London Wall, are handsome stone pillars; and in the centre of the front, in Aldermanbury, is a spacious arched window, with a small port-hole window on each side, and a neat balustrade beneath it. Part of the old church remains at the north-west corner of the present one. The body of the church is entirely concealed by houses; the east front is in a sort of recess, which prevents passengers from taking notice of it; and the opening on the south side of London Wall looks like the entrance to a private house.

Adjoining the west end of this church, stands Sion College; (see the article COLLEGE, vol. iv. p. 776.) We are told that in the year 1632, the governors and clergy agreed upon having a common seal, on which was the figure of the Good Samaritan, with this inscription, *Vade et fac similiter*; "Go and do likewise." It may be asked, What has the Good Samaritan to do with the clergy of London, or indeed with any clergy? The parable is rather a sort of reproach to the ministers of the altar; and, unless the motto were a kind of humane injunction to them, which we could not approve as being needless; or a sarcasm, which we should reprove as unmerited; we cannot find the sense of it. We must therefore recur to very old times for a solution of the difficulty. The foundation of William Elsing, in 1329, was intended for the relief of a hundred blind men: the Good Samaritan would have been a very proper device for an hospital of this kind. We conclude therefore

therefore that the London clergy adopted this seal as having belonged to the ancient hospital, or at least as having a very natural and scriptural allusion to that establishment. We have known several instances wherein colleges established upon the site and out of the revenues of hospitals have kept most respectfully the seal, and even the name, of the former establishment.—The library was repaired, at the expense of the college, in the year 1800; and a neat and classical inscription, in order to record it, is engraved on a stone on the west side of the gateway. It runs thus: *Hæc Bibliotheca fronte cum tecto vetustate pene collapsis sumptibus Collegii inflaurata est. A.D. MDCCC. Joh. Moore LL.D. prædide.*

The alms-houses are built under the library on the west side of the square, ten within the college for the men, and ten without it for the women. In dividing the men's houses from those of the women, the wife and religious founder was following the ancient custom; which, notwithstanding all that romancers and poets sing or say, was constantly to separate the two sexes, in their benevolent establishments; lest busy malignity and prying calumny should give out for truth what might only have an appearance of possibility. The same attention was bestowed in all religious foundations; and we no-where find, but in the works of calumniators, that our ancestors were ever so wicked or so foolish as to suffer monks and nuns to share the same habitation. When sacrilegious fornication was committed, the guilt was not particularly invited by opportunity, but the fences of the nunnery must have clandestinely yielded to an unlawful claim or specious pretence for admittance. Four of these alms-people are nominated by the city of Bristol, where Dr. White was born; eight by the Merchant-Taylors' Company; six by the parish of St. Dunstan, where he was minister forty-nine years; and two by St. Gregory's parish, where he had lived about twenty years.

Westward from Sion College, and beyond Philip-lane, is Curriers' court, at the upper end of which is a neat convenient hall belonging to the company of Curriers, whose arms are over the entrance of the court.

Passing through Cripplegate Buildings, the place where the old gate (see p. 105.) anciently stood, we again enter Fore-street, so called because it was *before* the wall; and on our left we find the church St. Giles, Cripplegate, which has been lately repaired, as appears by an inscription placed on the side of the watch-house, intimating that the watch and quest house, with the large building between the two doors of the church, were erected in 1811. This church is so called from being dedicated to a saint of that name, born at Athens, who was abbot of Nismes, in France. It was founded about the year 1090, by Alfune, the first master of St. Bartholomew's Hospital. The old church was destroyed by fire in the year 1545; after which the present structure was erected, and is one of the few that fortunately escaped the dreadful conflagration in 1666. It may very properly be numbered amongst the best of our Gothic buildings. It is a hundred and fourteen feet in length, sixty-three in breadth, thirty-two high to the roof, and a hundred and twenty-two to the top of the turret. The body of the church is well lighted by two rows of windows, which are truly of the gothic order, and the spaces between have buttresses for the support of the wall. The tower is well proportioned; the corners of it are supported by a kind of buttress-work, and at each corner is a small turret. The principal turret, in the centre, is light and open; it is strengthened by buttresses, and crowned with a dome, from whence rises the vane. Over the south-east door of the church is a beautiful figure of Time, with a scythe in one hand, and an hour-glass in the other. The patronage of this church was originally in private hands, till it descended to one Alemund, a priest, who granted the same (after his death, and that of Hugh, his only son) to the dean and chapter of St. Paul's, whereby they became not only ordinaries of the parish, but likewise patrons of the vicarage, from that time to the present. There are several endowments

belonging to this church, for the performance of divine service, at different times in the year, particularly six sermons to be preached in Lent, and a gift-sermon on All-Saints' day; when the donations, left by several benefactors to be given on that day, are distributed to the poor, at the discretion of the vicar and churchwardens.

The site of this parish was anciently a fen, or moor; and the houses or gardens thereupon were accounted a village without the wall of London, called *Mora*; which, in process of time, increased greatly in number of buildings, and was constituted a prebend of St. Paul's cathedral, of that appellation. And now this village is totally covered by London; and the prebendary of *Mora*, or "Mora without the Wall of London," has the ninth stall on the right side of the choir in St. Paul's cathedral; of which, it is said, Nigellus Medicus was the first prebendary. Part of the old wall of the city remains on the south and east sides of the church-yard, particularly one of the bastions, which is close against the back part of Barbers' Hall. This church has received the remains of several eminent writers, among whom may be named Speed, the celebrated English historian and topographer; Fox, the martyrologist; Glover, an indefatigable antiquarian; and the immortal Milton, who was buried in the chancel, and whose remains were lately discovered in making some alterations in that part of the church.

At the south-east angle of Aldermanbury-postern, is a very handsome meeting-house, built of brick; and there is another, equally handsome, at the corner of Coleman-street.

Leaving the northern part of Fore-street for another walk, we return to St. Paul's by Wood-street, which opens a little to the west of Philip-lane and Curriers' Hall. The communication to this street is multifarious, which makes it more busy, more alive. On the west we pass Hart-street and Fell-street; on the right we have Addle-street, which by a gentle winding, leads to the north side of St. Mary Aldermanbury. Silver-street on the right, and Goldsmiths-street on the same side, denote that wealth did always harbour in this neighbourhood; and indeed in ancient times this part of the city (though very respectable indeed in our time) was, as to local property in silver, gold, and jewels, the most important spot in the metropolis. At the entrance of the street last-mentioned, at the east corner of the first house, is a good carving of the company's arms, set in the brick-wall. See Plate VIII.—Then we have the curiously-named Huggin-lane, formerly *Hugon-lane*, on our left; and, nearly opposite, Lad-lane, corrupted, says Stow, from *Ladle-lane*. But, having found here, in spite of etymologists, *Lad-lane*, on one side, and *Maiden-lane* on the other, no wonder if we meet with *Love-lane*, and *Little Love-lane*, and *Huggin-lane*, all conspiring to impress us with the idea that Wood-street was once a favourite walk of the impures, or a place particularly consigned to them, according to some of those severe laws by which our ancestors thought proper to bereave unmarried women guilty of fornication of the right of being buried in consecrated ground, and had therefore assigned a proper place for their unclean remains to rest and rot till the day of judgment, when a milder Judge must decide between weakness and wickedness. See Matth. viii. 10, 11. ix. 13. John viii. 11.

On the east side of this street is the church of St. Alban, Wood-street. It is a rectory; but its origin is involved in obscurity. It is supposed to have been founded by Alfred, when he restored the city, in 886, after it had been ravaged by the Danes. Others, however, imagine, from the church being built of the same materials as a square tower remaining at the north corner of Love-lane so late as the year 1632, and which was believed to have been part of king Athelstan's palace, that its foundation is to be attributed to that monarch. Whichever of these opinions be true, the original building remained till 1634, when it was taken down, and a new church erected on the same spot; which was destroyed thirty-two years after by the fire of London. The present church was built upon the same model as the former; and is sixty-six feet in length, fifty-nine in breadth,

and thirty-three in height to the roof. It is a Gothic structure, with a plain body and large windows; and the wall is crowned with a square battlement. It has a handsome tower, ninety-six feet in height, divided into four stages supported by gothic pilasters, each crowned with its own cornice. In the lower stage, one window occupies the middle of the space, both in front and on the sides, the bars forming a double series of gothic arches; the pilasters are carried up straight at the sides, the remainder of the space being left plain. The second stage is lighted by port-hole windows; and the other two stages have long gothic windows. The summit of the tower is edged with battlement-work, plain and clove, and its verge is crowned with handsome pinnacles, one at each corner and one in the middle of each face. The patronage of this church was originally in the abbot and convent of St. Alban's, in Hertfordshire, from whom it passed into the hands of the master, brethren, and sisters, of the hospital of St. James, at Westminster. How long they possessed it does not appear; but Henry VI. granted it to the provost and fellows of Eton college, which was founded by him; and it has remained in them ever since.

When this church was re-erected after the fire of London, the parish of St. Olave, Silver-street, the church of which was also burnt, was annexed to it. The parish of St. Olave, Silver-street, is a rectory, the church whereof stood at the south-west corner of Silver-street. It was a small church, the patronage of which was always in the dean and chapter of St. Paul's, who, since the fire, have presented alternately with the provost and fellows of Eton college. The site of the church is now a burying-place for the parishioners.

Farther south, on the west of Wood-street, stands the parish church of St. Michael, Wood-street. This church is of some antiquity, as appears by John de Eppewell being rector thereof in the year 1328. The old church being destroyed by the fire of London in 1666, the present structure was finished a few years after, and the parish of St. Mary Staining annexed to it. The east end of this building is ornamented with four Ionic columns, raised upon a continued pedestal, with arches between, and supporting a handsome pediment, in the middle of which is a circular window. Between the columns are three upright arched windows that fill the whole space. The rest of the body is plain; and the windows are so high, that the doors open under them. The tower consists of three plain stages, with large windows, from the uppermost of which rises a small square course, the foundation of the base of the turret. The base is cut away from the breadth of the tower, gradually to the diameter of the turret, which is plain but handsome; and from its top rises a ball that supports the vane. It is sixty-three feet long, forty-two broad, thirty-one high, to the roof, and the altitude of the tower is ninety feet. The patronage of this rectory was anciently in the abbot and convent of St. Alban's, in whom it continued till the suppression of their monastery, when, coming to the crown, it was sold, with the appurtenances, by Henry VIII. in the year 1544, to William Barwell, who, in the year 1588, conveyed the same to John Marsh and others, in trust for the parish, in which it still continues.

On the west side of Wood-street is Maiden-lane; on the south side of which is Wax-chandlers' Hall, a handsome modern brick building, well fitted up for the use of the company. Over the centre window, on the north side, are the arms of the company; and, over the two end windows, a bee-hive, carved in stone.

Addle-street, which is on the east side of Wood-street, is supposed to have taken its name from the Saxon word *adel*, "noble," on account of its vicinity to Athelstan or Adelstan Palace, just noticed; but we can hardly assent to this etymology, as we have Noble-street itself not far off. We are therefore inclined to refer to the original sense of the word—"vain, empty," an allusion perhaps to the wealth which the other streets contained.

Halls are plentiful hereabouts.—At the corner of Staining-lane stands Haberdashers' Hall, a very handsome and ancient brick building, spacious and lofty, and paved with marble and Purbeck stone. At the west end a screen beautifully ornamented with Corinthian pilasters deserves the attention of the curious.—Not far from this is Plasterers' Hall; and on the west side of the street is the hall belonging to the company of Parish Clerks, with the arms neatly carved and painted over the door.

On the north side of Silver-street, directly opposite the cemetery of St. Olave's parish, is Monkwell-street, which took its name from being the residence of the monks of St. James's hermitage, and from a well belonging to them.—On the west side of this street, near the centre, is Barbers' Hall. This building was designed by that great architect Inigo Jones; and, though of a simple construction, is very elegant, and considered as one of his master-pieces. The grand entrance from Monkwell-street is enriched with the company's arms, large fruit, and other decorations. The court-room has a fret-work ceiling, and is adorned with several beautiful paintings, particularly a very handsome piece, by Hans Holbein, of king Henry VIII. uniting the barbers and surgeons into one company; it contains portraits of eighteen of the most eminent members of the company at that time. The theatre belonging to the hall, at the time these companies were united, contained some chirological curiosities; but, since the barbers and surgeons have been made separate bodies, the latter have taken those curiosities away, and the theatre has ever since been shut up and deserted.

Nearly opposite to this hall are the alms-houses, founded in the year 1575, by sir Ambrose Nicholas, knight, lord-mayor and father, for twelve widows of members of that company—an excellent institution, which, however, is but one among a great number of establishments of that humane and benevolent kind.

Lamb's Chapel, in a court of that name at the north corner of Monkwell-street, was founded as early as the time of king Edward I. when it was dedicated to St. James, and distinguished by the name of St. James's Chapel, or the Hermitage on the Wall, from its being situated so near to London Wall. This hermitage belonged to the abbot and convent of Gerondon, in Leicestershire, who kept two Cistercian monks of their own order in this place. At the general dissolution of religious houses, it was granted by Henry VIII. to William Lamb, a gentleman of his chapel, and afterwards a clothworker of this city; who bequeathed it, with his house and appurtenances, to the value of thirty pounds per annum, to the Clothworkers' Company, for paying a minister to read divine service in this chapel, on Sundays, Wednesdays, and Fridays, and to relieve a certain number of poor people at different times throughout the year. The company of Clothworkers have four sermons preached to them annually, in this chapel, on four principal festivals in the year, viz. the Annunciation of the Blessed Virgin, the feast of St. John Baptist, of St. Michael the Archangel, and of St. Thomas the Apostle. On these days, they relieve twelve poor men, and as many women, with one shilling each, in money; and, at Michaelmas, they give to each of them a gown, a shift, and a pair of shoes. Hence this chapel has acquired the appellation of Lamb's Chapel.

Opposite to Lamb's-chapel-court is a small street, called Hart-street, on the north side of which is a charitable foundation, by Mr. Robert Rogers, leather-feller and merchant-adventurer, for six ancient couple, who have each two rooms, and receive four pounds per annum in money.

In Wood-street are three very considerable inns for stages and waggons—the Castle, the Bell, and Cross Keys. At the west corner of Wood-street and Cheapside, there remain four old houses, particularly remarkable for being much lower than the others on the same side, and for several ornaments in stone, among which we remark two curious old masks over the windows in the centre. Be-

hind these houses is a small church-yard, but without any tombs or grave-stones: it is separated from the street by an iron railing; and a couple of lime-trees wave in melancholy silence over the long-forgotten ashes of some of our ancestors. It belonged anciently to the parish-church of St. Peter, which stood where these four houses now are, and was a rectory, the patronage of which was anciently in the abbot and convent of St. Alban's; in whom it continued till the suppression of their monastery, when Henry VIII. granted it to the earl of Southampton: it is now in the gift of private persons. The church, being destroyed by the fire in 1666, was not rebuilt; and the parish was united to that of St. Matthew, Friday-street. In the year 1401, a license was granted to the inhabitants of this parish, to erect a shed or shop, before their church in Cheapside, for which they were to pay, annually, to the chamber of London, the sum of thirty shillings and four pence; but, this ground-rent proving too high, it was reduced to thirteen shillings and four pence. On the site of this building, which was called the Long Shop, the four shops above mentioned were afterwards erected with rooms over them.

From this part of Cheapside, which appears of a noble breadth, and great extent, we may form an idea of our metropolis, and of its business which, alive every-where, is particularly remarkable in this large artery, leading to the heart of the city. We have also a good view of that handsome church, St. Mary-le-Bow, one of the best conceptions of sir Christopher Wren. It is a magnificent pile, and one of the greatest ornaments of the neighbourhood. The steeple claims peculiar admiration for its lightness, elegance, and proportions; being built of Portland stone, of several stages, adorned with columns, and of the height of two hundred and twenty-five feet. The last object at top is the vane, in the shape of a dragon, chosen as a compliment to the city, to whose arms this fabulous being is the well-known supporter.

If we leave this church on the east, we find, in our return to St. Paul's, Friday-street, at the north end of which stands the parish-church of St. Matthew the evangelist. The patronage of this church, which is a rectory, was in the abbot and convent of Westminster, till their suppression; when, the conventual church being converted into a cathedral, Henry VIII. conferred it upon the bishop. But, the new bishopric being dissolved soon after, Edward VI. in the year 1551, granted the advowson of this church to the bishop of London and his successors, in whom it still continues. The old church was destroyed by the fire of London, and the present structure erected upon its ruins. It is a plain stone building, with one series of large arched windows; and at the east end is the steeple, which consists of a square brick tower, wholly devoid of ornament. The length of this church is sixty feet, its breadth thirty-three, the height of the roof thirty-one, and that of the tower seventy-four feet.

Old Change, the next street to this westward, is a slight momento of the King's Exchange, or office for receiving bullion in exchange for coin, once standing there. This was farmed to the citizens of London, who received the old coining-irons, and delivered new ones to all the mints in England. The street is dark, being highly built and narrow. The eastern part of Colet's school occupies the west side of it; the east side consists of respectable warehouses. It crosses Watling-street at right angles, and goes with a gentle slope and serpentine winding down to Old Fish-street.

At the intersection of Watling-street with Old Change, stands the parish-church of St. Austin, called, in old records, *Ecclesia Sancti Augustini ad Portam*, because it stood fast by the gate leading out of St. Paul's-church-yard into Watling-street. It is a rectory, the patronage of which appears to have been always in the dean and chapter of St. Paul's; for it is mentioned in their books in the year 1181, when Ralph de Diceto was dean. The old church was destroyed by the fire of London, on the ruins of which

the present edifice was erected. It is a substantial structure, built with stone, and well pewed and wainscoted within: the pulpit is finely embellished; the altar-piece is spacious and beautiful, with a very handsome pediment in the front, supported by pillars in imitation of porphyry; and on the top of the pediment are the king's arms. The length of this church is fifty-one feet, the breadth forty-five, the height of the roof thirty, of the steeple a hundred and forty-five.

After the fire of London, this church was made parochial for the parish of St. Austin and that of St. Faith, which was united to it.—The church of St. Faith was originally a distinct building from St. Paul's, at the east end of it; but was demolished between the years 1251 and 1256, to make way for the enlargement of that cathedral; and, in lieu of it, a place of worship was given to the parishioners in *cryptis* (corruptly the *crowds*), or western part of the vault, under the choir of the cathedral, which, being dedicated to St. Faith, acquired the appellation of *Ecclesia Sancta Fidei in Cryptis*. Here the inhabitants continued to perform their religious duties until the year 1551, when the Chapel of Jesus, at the east end of the vault, was suppressed; which being much larger, and better lighted, they were permitted to remove into that, and continued to occupy it until the cathedral was destroyed by the fire in 1666; after which, this parish being united to St. Austin's, the parishioners were no longer in want of a church. It is a rectory, and one of the peculiars belonging to the dean and chapter of St. Paul's, where they are both patrons and ordinaries. Part of the church-yard belonging to St. Faith's parish was taken to enlarge the street at the east end of St. Paul's church-yard; the remainder lies within the inclosure, and serves for a burying-place for the parishioners of St. Faith.

On the other side of Cheapside, and westward from Wood-street, Sadlers' Hall has its opening, with an elegant front and the arms of the company boldly and expressively carved over the gate. On the same side opens Gutter-lane—"so called of Guthurun, sometime owner thereof; the inhabitants of this lane (of old time) were gold-beaters, as does appear by records in the exchequer. For the Easterling money was appointed to be made of fine silver, such as men made into *foyle* ('feuille,' leaf;) and was commonly called *silver of Guthurun's-lane*."—Hence arose the word *sterling*, used to denote pure and genuine money, and in general every thing of undoubted value.

A little farther in the same direction is Foster-lane; on the east side of which stands the parochial church of St. Vedast, alias Foster. This church, which is a rectory, is so denominated from being dedicated to St. Vedast, bishop of Arras. Stowe calls St. *Foster* a corruption perhaps of the name as pronounced at Arras and other places, St. *Vaast*—the letter V being often changed into an F in transition from one tongue to another.—The first mention made of this church, is, that Walter de London was presented thereto in the year 1308. The patronage of this church was anciently in, and continued with, the prior and convent of Canterbury, till the year 1352, when it was transferred to the archbishop. It is one of the thirteen peculiars in this city belonging to the archiepiscopal see. Though this church was not entirely destroyed by the dreadful conflagration in 1666, yet it received very considerable damage; and was afterwards repaired, for the most part, upon the old walls. The steeple stood till the year 1694, when it was found in such a weak condition, that the parishioners had it taken down and rebuilt, at their own charge, entirely of stone. It is sixty-nine feet long, fifty-one feet broad, and thirty-six feet high, to the roof, and is well lighted by a range of windows, placed so high, that the doors open under them. The tower of this church is one of sir Christopher Wren's happiest efforts.

To this parish was annexed, after the fire of London, the churchless parish of St. Michael le Querne, anciently called *Sanctus Michael ad Bladum*, in French *St. Michel au Bled*,

or "St. Michael at the Corn," which has been corrupted into *Querne*. But the word *Cornu*, in French *Corne*, in Spanish *Querno*, might afford a few hours of discussion to etymologists—for it *might* have been originally called St. Michael *ad Cornu*, at the corner, or *horn*, of the street, as well as at *Bladum*; for surely, when the church was built, no arable lands were inclosed within the wall of the city; and yet on the other hand, as the revenue of this church might have been paid in kind, *in blado*, or corn, the church *might* have taken its distinctive appellation from that circumstance.—We beg to observe, by the bye, that the Latin word *Bladum*, and French *Bled*, arise undoubtedly from the much-older word *blade*, which was anciently used to describe grass, or sward, from which the shape of a sword took its name. Did we not hold ourselves already excused for giving the reader some respite from more serious and uniform matter, we might here claim indulgence on the plea of the Greek axiom: "Pour down knowledge as you like, and catch the shower who can." Some other antiquaries have found that near this church was a corn-market, reaching westward to the shambles, from which situation it was sometimes called *St. Michael de Macello*; so that this discussion might still be extended, were we still inclined to trespass on the reader's patience.

The church of St. Michael le Querne stood at the west end of Cheap-side, fronting the street; but, not being rebuilt, its site was laid into the street, in pursuance of the act for re-building the city. The earliest account we find of it is in the year 1181, when it appears to have been only a chapel, and so it continued many years after. It was not made a rectory, till possessed by Thomas Newton, who was buried in the choir in the year 1461.

At the east end of this church stood the Old Cross, in Westcheap, which was taken down in the year 1320, to make way for the enlarging of the church, and for the erection of a little conduit, at the north-east gate of St. Paul's church-yard: which appears to have been the place where Walter Stapleton, bishop of Exeter, was decolated by the populace, in 1326. The Great Cross was one of the crosses erected by Edward I. in token of his affection for his deceased queen Eleanor, at every place where her body rested in its way to interment, in the year 1290. It had originally the statue of the queen; but, falling to decay, was rebuilt in 1442, by John Hatherley, mayor of the city, and several of the citizens, when it was ornamented with images of the Resurrection, the Virgin, Edward the Confessor, and some others. After the Reformation, these images gave great offence, and were frequently mutilated; for which reason, the goddess Diana was substituted for the virgin Mary. At length, in 1643, the puritanic bigotry of the parliament occasioned a resolution for taking down all crosses, and demolishing all popish paintings; and the destruction of this cross being committed to sir Robert Harlow, he went on the service with true zeal, attended by a troop of horse, and two companies of foot, and executed his orders most effectually.

At the north-east corner of Foster-lane stands the hall belonging to the company of Goldsmiths. This spacious building supplies the place of one which was originally erected by Drew Berentin about the year 1407, but was destroyed by the fire of London. It is an irregular structure, built with brick, and the corners wrought in rustic of stone. The door is large, arched, and decorated with Doric columns, which support a pediment of the arched kind, but open for a shield, in which are the arms of the company. The hall-room is spacious, and both that and the other rooms are all well lighted. In the court-room is a fine portrait of sir Hugh Myddelton, with the words *Fontes Fodinae* on the picture, to signify his double attention to his mines and the New River. Here are also some other good paintings, particularly a portrait of sir Martin Bowes, lord-mayor in 1545, in the costume of his office. The date on the picture is 1566.

On the west side of Foster-lane stood the parochial

church of St. Leonard, Foster-lane, which was founded about the year 1236, by William Kirkham, dean of St. Martin's le Grand, in the court-yard of the collegiate church, for the use of the inhabitants of the sanctuary. It derived its name from its dedication to a French saint, and its situation was added, to distinguish it from another church, dedicated to the same saint, in Eastcheap. It is a rectory; the patronage was anciently in the dean and canons of St. Martin's le Grand; in whom it continued till that deanery was annexed to the abbey of Westminster; the dean and chapter of which still possess it; but, the church being destroyed by the fire of London, and the parish united to that of Christ-church, Newgate-street, they present alternately with the governors of St. Bartholomew's hospital.

The church of St. Mary Staining, or Stone-church, before the fire of London, stood on the north side of Oat-lane. The reason why it received the additional epithet of Staining, is very uncertain; some imagining it to be derived from the Painter Stainers, who might probably live near it, while others suppose the reason to be that already assigned at p. 453. This church not being rebuilt after the fire, the parish was united to that of St. Michael, Wood-street; but, in consideration of the small endowment of this parish, it was provided, by the act which united them, that the patrons of St. Michael's should present twice in three times. The advowson of this rectory was anciently in the priores and convent of Clerkenwell, in whom it continued till their suppression by Henry VIII. when it came to the crown, in whom it still remains. The site of this church is now used as a burial-place for the parishioners, who hold a general vestry, and have two churchwardens and four overseers, though there are only forty-seven houses in the parish.

Near the north end of Noble-street stands a convenient hall, originally built by the company of Scriveners; who, being reduced to low circumstances, sold it to the company of Coachmakers, to whom it still belongs.

The end of Cheap-side presents three openings to the view.—An oblique one on the left of the beholder into St. Paul's church-yard; with an "*échappée de vue*," a glimpse of the church, through the branchings of the old tree mentioned at page 410. The next opening is in Pater-noster-row, the seat of disposable learning, which flies hence to the other parts of the united kingdom; a place which once was chiefly inhabited, as we hinted at p. 52, by Pater-noster-makers; but which now exhibits every kind and species of literature, sacred and profane, from the Bible itself down to the blasphemies of Daniel Isaac Eaton and Joanna Southcott. The other opening is the great thoroughfare from the north-east part of the town; we mean Newgate-street, which took its name from the gate formerly standing at the west end of it. See p. 105, 6.

Again arrived at the centre of our perambulations, St. Paul's, we shall take a second flight, which will be northwards through St. Martin's le Grand, the first opening on our right in Newgate Street.—St. Martin le Grand is a distinct liberty, subject to the dean and chapter of Westminster. It was originally a college, founded in the year 700, by Wythred king of Kent; but was rebuilt and endowed, about the year 1056, by a noble Saxon named Ingelric, and his brother Edward, for a dean and secular canons, or priests, and was dedicated to St. Martin: the epithet *le Grand* was afterwards added on account of the great and extraordinary privileges, particularly the dangerous one of sanctuary, granted to it by different monarchs. William the Conqueror confirmed the endowment of this house, and the possession of the lands given by the founders, to which he added all the moor-land without Cripplegate; and freed it and its canons from all disturbance and exaction of any bishops, archdeacons, or their ministers, and from all regal services. He likewise granted them sac and soc, toll and team, and a long etcetera of Saxon liberties, in the fullest manner that any

church in England possessed them. His charter, which bears date in 1068, and is sanctioned by John and Peter, the pope's legates, concludes thus: "If any person whatsoever shall presume to alter any thing hereby granted, let him be punished with Judas the traitor." It is astonishing what care, and what sort of means, our ancestors took to secure their grants to posterity. We have seen deeds at the end of which the mightiest imprecations were thundered against infractors or prevaricators: their heads were to be boiled in coppers full of brimstone, their bowels made into ruffs for the devil's neck, and so forth; thus binding, by fears of punishments beyond the grave, the faith of men on this side of it.—The charter was confirmed by Henry III. who granted the dean of the monastery and church more ample privileges. And it was again confirmed by Edward II. with an additional privilege, that no inhabitant within this jurisdiction should be sued out of their own court, except before the king, or his chief justice. By the charter of Edward III. it was ordained, that all inquisitions, to be taken by the justices, and other the ministers of the men of the city of London, should be taken at Great St. Martin's, in London, and not elsewhere: except inquisitions to be taken in circuits of the Tower of London, and for the gaol-delivery of Newgate. But Henry VIII. in the year 1519, revoked that charter, and removed the sessions of the peace from St. Martin's to Guildhall.

King Henry VI. confirmed the foregoing charters; but he established certain articles concerning its sanctuary, in cases of debt, felony, and treason; by which it appears, that St. Martin's was, at that time, a sanctuary for great disorders, and a shelter for the loosest sort of people; and that every excess of vice and irreligion, fraud, oppression, and breach of the laws, was exercised within its liberty. To so great a height of licentiousness was this sanctuary grown, that, in the reign of Henry VII. the sheriffs of London venturing to take from thence, by violence, a person who had been guilty of murder, the abbot of Westminster exhibited a bill to the king against them; upon which the cause was heard in the Star-chamber, and the sheriff severely fined.

This place was occasionally the residence of the kings of England; as appears from a writ of Edward I. being dated here on the 20th of October, in the first year of his reign. And, in the same reign, the king's court appears to have been held here; for, in 1293, a cause was removed from the Court of Hustings, to be tried before Gilbert de Thornville, and others, at St. Martin's the Great, in London; and the custos and sheriffs were commanded to bring the record, and process, and all things pertaining to it, before them. The deans were also among the greatest men in the nation; for, in the reign of Edward III. William Mulse, who held that office, was chief chamberlain of the exchequer, and receiver and keeper of the king's treasure and jewels; and, in the preceding reign, Petrus de Sabaudia was promoted to the archiepiscopal see of Lyons, in France.

The church of St. Martin's le Grand was anciently in the donation of the king; as appears by Edward I. having, in the 8th year of his reign, granted the deanery to Galsfridus de Newband. In the Bishop of London's Register of Old Wills, it is called a *parish*; and a curfew-bell was rung here, as at Bow-church, &c. to give the citizens warning of the time of night, and to keep within doors.

This college was surrendered to king Edward VI. in the year 1548; and, in the same year, the college church was pulled down, and many tenements erected on its site, which were immediately taken at high rents, by non-freemen, in consequence of being exempt from the jurisdiction of the city. In the year 1585, a great number of foreign tradesmen and artificers planted themselves on this spot; among whom were John James and Anthony Emerick, subjects of Philip king of Spain, who were said to have been the first silk-throwers in London, and to have brought that trade into England.

St. Martin's le Grand leads from the north-east end of Newgate-street, formerly called Blowbladder-street, from being a place where bladders were sold, (on account of the shambles being near at hand,) to the spot where Alders-gate stood; but the liberty extends only as far as Angel-street and Bell-square, near St. Anne's lane; the remainder being in the freedom of the city. This part of the street, with the courts and alleys adjoining, is considered as part of the liberty of Westminster; and the inhabitants are governed, and vote accordingly, and carry on their trades, without being free of the city of London. It has also a court of record within itself, subject to the dean and chapter of Westminster, held every Wednesday, for the trial of all personal actions, of what nature soever. In this court, the leading process is a *capias* against the body, or an attachment against the goods; so that a man's goods may be seized in his own house, upon the first process, if he himself be not taken. We understand that the whole of this liberty is in the parish of St. Paul's, Covent-garden.

This little street, though called le Grand, may be considered as a narrow neck to the large body of Aldersgate-street. Here are several alleys and passages, which have nothing remarkable in themselves, but they are useful in shortening the way to the adjacent streets. One of those communicates under ground, to Bagnio-court, Newgate-street.

On the west side of Aldersgate-street, the first opening is a street called *Bull-and-Mouth*, by corruption of the words *Boulogne Mouth*, or *Harbour*, the sign of an inn standing in it, and which was either kept by some person from Boulogne, or on account of its immediate correspondence with France through Boulogne.—There is still on the south side a very large and noted inn for stages and wagons, under the same title; but its daily interest seems to point towards the western counties in general, and especially towards Plymouth and Exeter.—Opposite to Dean's-court on the east, we find Angel-street, with an inn of that name.

Farther on is a place well known by the name of Little Britain, or *Bretagne-street*, so called from the mansion of the duke of Bretagne, which stood near Aldersgate-church, but has been many years destroyed. This street was also the residence of several of our own nobility; the earl of Peterborough's house stood at the corner, where the south part of Bartholomew's Hospital now stands; and the whole east side of the street was occupied by a stately mansion, belonging to lord Montague; the name of which is still preserved in Montague-court.

This street forms an angle at about half its length, and opposite the bend some old houses are pulling down to improve the approach to Christ's Hospital. This part of Little Britain then communicates with Smithfield through Duke-street and St. Bartholomew's Hospital.—On the south corner of Little Britain, stands the parish-church of St. Botolph, Aldersgate. This church received its name from being dedicated to St. Botolph, a Saxon monk, and its vicinity to the gate. It was anciently a rectory, the patronage of which was in the dean and canons of St. Martin's le Grand; but it continued unappropriated until the year 1399, when Richard II. by his letters patent, dated May the 21st, at Pembroke, gave license to Thomas Stanley, dean of St. Martin's le Grand, to appropriate the income, at that time not exceeding five marks per annum, to his collegiate church, for the celebration of a perpetual anniversary for his deceased consort Anne, upon the day of her death, during his life; but, after his demise, the anniversary to be solemnized upon his obit *for ever*. In consequence of this license, the church of St. Botolph was appropriated to that of St. Martin's le Grand, by a commission from the bishop of London to his official, the dean and canons being bound to provide a sufficient maintenance for a chaplain to serve the cure; since which time it has continued a donative or curacy. When Henry VII. in the year 1493, annexed

the collegiate church of St. Martin's le Grand to the convent of St. Peter, Westminster, this church also became subject to that abbey; but at the suppression of monasteries was granted, by Henry VIII. to his new bishop of Westminster. That bishopric, however, being dissolved on the accession of queen Mary, and the abbot and monks restored to their convent, this church reverted to its old masters; and when the monks were finally expelled, and the convent converted into a collegiate church, by authority of parliament, in the reign of queen Elizabeth, she granted the curacy to the dean and chapter, who still retain it; it is, however, subject to the bishop and archdeacon of London, to whom it pays procuration. The antiquity of this church may be collected from the parish-records; from which it appears, that a house, anciently given to the parishioners, was, in the year 1319, demised by them, upon lease, to Richard Rothing. It escaped the fire of London in 1666; but became so ruinous, that it has been since rebuilt. It is a plain brick edifice, with a wooden tower crowned with an open turret. There is one large arched window, at the east end; but the light is principally derived from sky-lights in the roof.

On the same side of the street, a little farther to the north, stood a palace, that was the residence of the marquis of Dorchester, and afterwards that of lord Petre, of whom it was purchased, after the restoration, for the city-mansion of the bishop of London; from which time it was known by the name of London House. It was a large commodious brick building, and had a neat chapel belonging to it; but, being at length deserted by the prelates, it was let out into several tenements and warehouses. This ancient edifice was destroyed by fire, since which new buildings have been erected in its stead; the principal of which is that occupied by Mr. Seddon, and still called London House.

A little to the south of London House, formerly stood the fine mansion of the earls of Westmoreland; but this, being also deserted by its noble possessors, was let out in tenements, and to mechanical uses, and at length became so decayed, that, about forty years ago, it was entirely taken down; the site is now occupied by Westmoreland-buildings, and the adjacent houses. To the north of London House is the old building, formerly the Half-moon Tavern, celebrated as the place of resort of the most noted wits of the sixteenth century. It is at present let in separate tenements; but the old front, ornamented with foliage and grotesque figures, has suffered very little alteration.

On the east side of the street, nearly opposite to these buildings, is Shaftesbury house, or, as it is sometimes called, Thanet-house. This edifice, which is by the masterly hand of Inigo Jones, is built with brick, and ornamented with stone in a very elegant taste. The front is adorned with Ionic pilasters, from the volutes of which hang garlands of foliage. These pilasters are doubled on each side of the centre window, over which is an arched pediment, opened for the reception of a shield. The door is arched, and from each side of it springs an elegant scroll, for the support of a balcony. This structure had been let out for mechanical uses, and was going fast to decay, when, in the year 1750, the London Lying-in Hospital was instituted: the promoters of that charity, having hired this house, repaired it thoroughly, and preserved it, for a time, from the fate of its opposite neighbours. The increase of that institution having rendered a larger building necessary, they quitted Shaftesbury-house in 1771, and were succeeded by the General Dispensary, which still occupies the back part of it. The front is divided into tenements, and let to respectable shopkeepers.

Falcon-square at the east side, and the famous inn called the Castle and Falcon, are the only remarkable objects at this point; but, if the perambulator, when at the corner of Angel-street, will turn round, he will have, through the narrow entrance of St. Martin's le Grand, and above the houses of Newgate-street, a curious and most interesting view of the dome of St. Paul's, that seems as if rising

in majesty above his head. The circumstance of the body of the church being screened by a vast mass of edifices from the eye of the spectator, allows the imagination, at the sight of the noble cupola, to fancy a still greater monument of architecture than the cathedral even is in reality.

On the north side of St. Anne's-lane is the parish-church of that name, on account of its having been dedicated to the mother of the virgin Mary—and the circumstance of its being distinguished from others of the same dedication by the addition of "in the willows," is an indubitable proof that its origin is anterior to this part of the city being regularly built, and when it still retained, in its bosom and among the houses, rope-walks and willows, their usual ornaments. In the time of Stow the willows were gone, but several tall ash-trees were growing in the church-yard.—The old church contained several curious epitaphs, most of which Stow has preserved in his Survey, and which, by their conceits, show the style of ancient times. On a table of stone, in the north aisle of the chancel, was the following curious distich:

Quos anguis tristi diro cum vulnere stravit,  
Hos sanguis Christi mirotum munere lavit.

reading thus:

Quos anguis tristi diro cum vulnere stravit,  
Hos sanguis Christi mirotum munere lavit.

In English, "Those, whom Satan felled with a cruel wound, the blood of Christ, by an admirable gift, has healed."—This curious sort of inscription was often seen about ancient churches; and there is one near the cathedral of Winchester which runs thus:

Sacrificis illachoro.  
Serva fit ift f oro.

united it makes:

Sacra fit illa choro;  
Serva fit ista foro.

Meaning that one way leads to church, the other to market.

The foundation of this church (St. Anne in the Willows) cannot be traced; but it appears to be of some antiquity, by John de Chimerby being collated thereto on the 5th of July, 1322. It is a rectory, the patronage of which was in the dean and canons of St. Martin's le Grand, until that church, with its appurtenances, was annexed to the abbey of Westminster; by virtue of which, the abbot and convent, and after them the bishop of Westminster, became the patrons; but on the suppression of the bishopric of Westminster, queen Mary granted the advowson to the bishop of London, and his successors; in whom it still remains. The old church shared the common fate in the great fire of 1666; soon after which, the present one was erected in its stead, and the parish of St. John Zachary united to it. It is a very plain edifice, lighted by a few large windows, cased with rustic. The tower is square, consisting of two stages above the roof, and crowned with a wooden turret. The body of the church is fifty-three feet square; the altitude of the roof, which is supported by four handsome Corinthian pillars, is thirty-five feet, and that of the tower and turret eighty-four feet.

The parish of St. John Zachary, is also a rectory, the church of which stood at the north-west corner of Maiden-lane. The patronage of this church appears to have continued in the dean and chapter of St. Paul's, from its foundation; for it was rated to pay an annual sum to the canons of St. Paul's as early as the year 1181, at which time it was denominated St. John Baptist. The site of it is now a cemetery for the use of the parishioners. Part of the walls of the old church is still remaining in the church-yard, and foundations of the adjacent buildings.

Here Aldersgate-street widens considerably, and assumes a good appearance; but we are sorry to say that the houses in general do not correspond, by their size or elegance, to the wide display of this great egress towards the northern counties. The Doric entrance of the *Albion*, however, must be distinguished to the credit of the architect who conceived and executed the portico; it favours most classically

sically of the taste of ancient times, when Grecian orders were employed to decorate the fanes of the gods, the palaces of emperors, public edifices, and the private abodes of the rich. The Albion is a very respectable tavern for the accommodation of clubs, parties, &c.

Barbican, on the left, calls our attention. Its name rouses ideas of ancient fortifications, and connects topography with history by an interesting alliance. The etymology of the name is still enveloped in obscurity: Stow derives it from *Burgh-Kenning*, a sort of watch-tower, or vedette; *specula* from which, through loop-holes, the besieged could see, without being seen, the approach of the enemy. Some have thought fit to derive *Barbican* from two Latin words, *Barba* and *cana*, "grey-beard," a ludicrous appellation, which might have originated from the hoary visages of the old watchmen appearing through the loop-holes. For the security of Cripplegate, this Barbican stood as an advanced post. We ought to remark here, that these barbicans were considered of such importance, that the custody of them was always intrusted to some person of consequence in the state. This tower, being granted by Edward III. to the earl of Suffolk, became his city residence. It afterwards descended to lord Willoughby de Parham, and acquired the name of Willoughby-house. Adjoining to the Barbican, on the east, was another stately edifice, called the Garter-house, which was erected by sir Thomas Wriothesley, Garter king of arms, uncle to the first earl of Southampton. On the top of this building was a chapel, called by the name of *Sanctissime Trinitatis in alto*. The site is now occupied by Garter-place. But the present Garter claims no sort of right to this place.

At a short distance to the north-west is Bridgewater-square, a small neat quadrangle of plain but handsome houses, with a grass-plot and gravel-walk surrounded with iron-rails. This square is built on the site of the house and gardens belonging to the earls of Bridgewater.

From the east end of Barbican runs Beech-lane, which Strype conjectures was named from Nicholas de la Beech, lieutenant of the Tower of London, dismissed from that office in the 13th of Edward III. In this street, a part of the stately mansion-house of the abbot of Ramsey in Huntingdonshire is still remaining, the rooms whereof are very spacious and lofty; and, judging by the dimensions of the kitchen, it must have been built for the use of a numerous family. In the time of Charles II. this was the residence of prince Rupert. It afterwards came into the possession of sir Drew Drewrie, and obtained the name of Drewrie-house. It is now let out in tenements. At the north-east end of Beech-lane is a set of alms-houses, built in the year 1540, pursuant to the will of lady Anne Askew, widow of sir Christopher Askew, lord-mayor of London in the year 1533, for eight poor widows of the Drapers' company, with an allowance of three pounds per annum, and half a chaldron of coals; which endowment was left in trust to the company of Drapers. On the south side of Beech-lane is Glovers' Court, in which stands Glovers' Hall, a very old building, which has been some time deserted by the company, who now transact their business at the George-and-Vulture Tavern, Lombard-street.

At the east end of Barbican we enter Redcross-street, which, if we follow it to the south, will bring us back to Cripplegate-church.—This street is well built; and on the east side, near the middle, is a library, founded by Daniel Williams, D. D. a Presbyterian minister, for the use of the dissenting ministers of the Presbyterian, Independent, and Baptist, persuasions. This gentleman, in 1711, bequeathed his valuable collection of books and manuscripts, for this purpose, with a handsome salary for a librarian and a housekeeper; and, in pursuance of his will, a neat building was erected in Redcross-street, with a genteel apartment for the librarian, &c. and a room, capable of containing forty thousand volumes. In this library is a register, in which dissenters may record the births of their children. This foundation, which has been greatly aug-

mented since its first institution, is under the direction of twenty-three trustees, viz. fourteen ministers and nine laymen, who must be all Presbyterians, under whom there is a secretary and a steward. Here are likewise some curiosities; as, an Egyptian mummy, and a glass basin which held the water wherewith queen Elizabeth was baptized. This last is kept in a bag, whereon is fixed a paper, that explains how the basin came into the possession of the managers of the library. This and Whitecross-street derived their names from a red and white cross, which stood in Beech-lane.

Eastward we find the celebrated Grub-street; but it retains no sign of its having been once the residence of wit and learning, of Apollo and his court. It afterwards became noted as the residence of needy and inferior writers; so that, if a production is mean and illiberal, it is almost proverbial to say it comes out of Grub-street. (See *Gent. Mag.* vol. i.) The different artificers employed in archery, such as bowyers, bowstring-makers, &c. inhabited in old times Grub-street, the last street, in this part of the town, in being about the time of Aggas's Map of London; all beyond, as far as Bishopsgate Without, were gardens, fields, or morafs. Grub-street, however, had been very long built, as its existence, by the same name, is identified in charters as far back as the year of Edward II. —In Hanover-square, on the east side of this street, is the house formerly occupied by general Monk, who was created duke of Albemarle for his services in restoring Charles II.—Farther to the north is Sun-alley, which forms the boundary of the city on this side.

Proceeding westward, the next street is Whitecross-street, which is of considerable length. In this street was an hospital of St. Giles, founded in the reign of Edward I. but, being a cell to a French priory, it was suppressed, among other foreign foundations, by Henry V. who soon afterwards re-founded it for a domestic fraternity of St. Giles, and reserved the appointment of a custos to himself and his successors. This street, with Grub-street, Golden-lane, and Chiswell-street, in Cripplegate parish, remained unpaved until the 35th of Henry VIII. when they were become almost impassable; in consequence of which an act of parliament was passed for paving them. According to Penant, a certain row of houses on this spot had been used as a nursery for the children of Henry VIII. The building was afterwards converted into a play-house; and was rebuilt in 1599 by Alleyn the player, founder of Dulwich-college. It was called the Fortune Theatre, and had a figure of the goddess in front. "The present structure in Golden-lane," says Howes's Chron. "having in front the figures of Hope and Charity, appears to have been built about the year 1621, the old one having shared the common fate of theatres, in being destroyed by fire." Golden-lane Brewery was built on this site in 1805.

If we turn back to Whitecross-street, we shall have to notice the progress of a large edifice now building there, and intended to be a city and county prison for debtors only. The walls and their buttresses are in the new style; that is, instead of having the wall straight and perpendicular and the buttresses sloping, these are perfectly vertical and the gentle slope is put upon the walls. The top of the buttresses is adorned with a pediment in stone; and the whole, according to the plan, will have a great and imposing appearance.—This prison, which is built for the purpose of distinguishing the confinement of debtors from that of criminals in the crowded prisons of Newgate and the Compters, had its origin in the observations published by sir Richard Phillips in his Letter to the Livery of London, which were ably supported by a committee of the corporation of London, appointed to report on them. The first stone was laid by Mr. Alderman Wood in July 1813; and the part intended for city debtors is finished. It is to be regretted that the high price of ground has too much limited the areas for exercise; and that there is at present no entrance from Redcross-street for the city-side, which is kept distinct from the country-side,

side, the only entrance being a common and remote one from Whitecross-street. The accommodations will however far exceed those hitherto possessed by this unhappy class of persons, while the site, being a little more than a quarter of a mile from St. Paul's, does not remove the incarcerated from the vortex of humanity, and the attention of their friends. The architect is Mr. Montague, the city-surveyor; and the building and ground will cost not less than 80,000l.

On the north side of the town-ditch, and at the west end of St. Giles's church-yard, was a pond of water, fed by a considerable spring; but, the former being filled up, the latter was arched over, about the year 1440, at the expense of sir Richard Whittington, and preserved by the name of Crowder's Well, which still remains, and is worthy the attention of the curious antiquary. Crowder's-Well-alley, which took its name from the well, is now converted into a handsome modern-built street, called Well-street.

From the south end of Redcross-street runs Jewin-street, of old time called the Jews' Garden, as being the only place appointed them, in England, for the interment of their dead, before the year 1177, when, after long suit to the king and parliament at Oxford, they were permitted to have a place assigned to them in every quarter where they dwelt. This piece of ground was retained by the Jews till the time of their total banishment from England; after which it was converted into garden-plats and summer-houses. This place, with the appurtenances, was anciently called Leyreflowe, which Edward I. granted to William de Monte Forte, dean of St. Paul's, London; "being a place (as it is expressed in a record) without Cripple-gate, and the suburbs of London, called Leyreflowe, and which was the burying-place of the Jews of London;" which was valued at forty shillings per annum.

Aldergate-street, which we have left for some time, and to which we now return, changes its name, a little beyond the eastern walls of the Charterhouse gardens, into Goswell-street. This large thoroughfare meets the City Road at its approach to Islington, and not far from the Angel inn.—This part is exceedingly interesting on several accounts. The great opening towards the north, which, though every day more and more blocked up by new buildings, still affords a wide prospect into the adjoining country. The elegant private houses lately erected about this spot; the windings, and successive disappearings and reappearings, of the New River; the busy aspect of the road, which, were it planted with trees on each side, would surpass the Parisian *Boulevards* in beauty—all contribute to give the entrance into Goswell-street an airy, lively, and delightful, appearance. The slope of Islington hill towards the west has a pleasing resemblance to an Italian landscape—the knoll covered with lowing cattle, the flat-roofed houses at a distance, the still pleasant vale where Bagnigge Wells, now shorn of its honours, displayed its verdure on the winding bank of the purling brook; all these increase the beauty of the scenery, and would furnish subjects for the pencil of a Rosa di Tivoli, or a Berchem. ISLINGTON has been fully described at vol. xi. p. 437.

In Goswell-street-road, we omitted to notice the Quakers' Workhouse or School.—The house was erected about the year 1786, on a large square of ground belonging to the Brewers' Company, which is held by the institution for 50l. at a rent of 16l. a-year for the first ninety years, and the remainder subject to an increase of 34l. a year. It is used as a meeting, which is held monthly on a Friday morning, and for the purpose of a charity-school. Apartments are provided in a neat house facing it for twelve men and twelve women, being poor and of the Society of Friends. The number of boys and girls is not limited. Six different meetings in London, together with some legacies and voluntary contributions, support the charity, and provide rewards for those females who preserve the places obtained for them, which are 30s. for the first, and

40s. for the second and third years; if they behave with propriety, they are allowed 40l. as a marriage-portion, and the boys 20l. The institution gives 10l. and the meeting who sends the boy 15l. as apprentice-fees. The house, meeting, school, apartments, and stairs, are as white and clean as brushes and industry can make them. The ceilings are remarkably high, and the windows large; consequently the rooms are perfectly dry and well aired; the outside has the appearance of a villa, surrounded as it is by pleasure-grounds, gardens, and trees.

The Dyers' alms-houses, on the south side of the City Road, were erected in the year 1776, for sixteen decayed members, with their wives or widows; the building consists of three sides of a quadrangle, containing eight houses of two rooms each, which, with the cellaring, are appropriated to the sixteen alms-folks; they receive an annual pension and coals. The company have also another alms-house, for ten decayed members, in St. John-street, near Brick-lane, Spitalfields; so that twenty-six persons or families are thus maintained with comfortable lodging.

We now return towards the city, through St. John Street and Clerkenwell. St. John Street, at the north end, has not so good an appearance as might be expected for the northern entrance into a great city; and perhaps, at a future time, a triumphal arch, in commemoration of some great event, will decorate the opening in this street.

Clerkenwell derives its name from a spring of pure and most-salubrious water filtered from the dews and showers of heaven through the grassy hills and clay-fastened grounds of Pentonville and Islington. The parish-clerks of the city of London used to meet there annually in order to exhibit dramatic representations, commonly called *mysteries*, because the subjects were taken from the scriptures. To these, several allusions have been made by ancient authors, and particularly by Shakespeare, but the point of which is now too obscure to be easily understood.—The water of this well was suffered to run waste for many years; but at length the parishioners caused it to be walled in, and a pump erected upon it for the use of the neighbouring inhabitants, on the front of which is an inscription, relating its history. It stands in Ray-street, nearly opposite to Mutton-hill.

The parish-church of St. James, Clerkenwell, is situated on the north side of Clerkenwell-green. On the spot where this church stands, was anciently a priory, founded by Jordan Briset, a wealthy baron, who, about the year 1100, gave to his chaplain fourteen acres of land, in a field adjoining to Clerks', or Clerken, well, whereon he built a monastery, which was no sooner erected, and dedicated to the honour of God and the Assumption of the Virgin Mary, than he placed therein a certain number of black nuns of the order of St. Benedict, in whom, and their successors, it continued till it was suppressed by Henry VIII. in the year 1539. Some time after the dissolution of the convent, the ground came to the inheritance of sir William Cavendish, who, being created duke of Newcastle, built a large brick mansion on the north-west side of the church, which for many years was called Newcastle House; but this has been long deserted, and the site of it is now occupied by modern buildings. The church belonging to the old priory not only served the nuns, but also the neighbouring inhabitants as a place of worship, and was made parochial on the dissolution of the nunnery, when it appears to have been dedicated to St. James the Less; whereas in the old records it is styled *Ecclesia Beatae Mariae de Fonte Clericorum*. In 1623, the steeple of the church being greatly decayed, a part of it fell down, whereupon the parish contracted to rebuild it. The new work was raised upon the old foundation; but, before it was entirely finished, it fell down, and destroyed a part of the church; both of which were, however, soon after rebuilt. The old church was a very heavy structure, partly Gothic, which was the original form, and partly Tuscan. It was taken down in the year 1788, and the old materials sold for eight hundred and twenty-five pounds; after

which the present edifice was, in pursuance of an act of parliament obtained for that purpose, erected in its stead. It is a lofty brick building, strengthened at the corners with rustic quoins of stone, and lighted by two series of windows. The tower is of stone, and erected upon the west end of the church, which is faced with stone, in order to give it a corresponding appearance: the two first stages above the roof are square, and contain the bells; above these are two open octangular towers, with pilasters of the Doric order at each corner, and from the uppermost rises a ball and vane. It is a curacy, in the gift of the parishioners at large.

The old priory-clofe still retains the name of Clerkenwell Clofe; on the left-side of it is a lofty brick-house, remarkable for being the reputed dwelling of Oliver Cromwell, and one of the places where meetings were held for the purpose of consulting on the measures which terminated in the dethronement and death of Charles I. The fact of Cromwell's residence here is however not clearly ascertained, and in all probability will ever remain in doubt; since the parish-books of that period are, by some unaccountable accident, lost; although those prior to it, as well as those which succeeded it, are preserved.

A little to the south-east of Clerkenwell Priory, where St. John's Square is now situated, stood the priory or hospital of St. John of Jerusalem. What a change! now private and not inelegant houses occupy the place of cloisters, cells, and chapels; and carriages thunder on the pavement which has taken the place of the brass-inlaid tomb-stones of cross-legged knights and monks on the floor of silent and awful cloisters! For the history of the Knights of St. John of Jerusalem, see our article **KNIGHTHOOD**, vol. xi.

This house was founded by Jordan Briset and Muriel his wife, who purchased of the prioress and nuns of Clerkenwell ten acres of land, on which he erected the said hospital about the year 1110; but the church belonging to it was not dedicated to St. John till the year 1185. This foundation became the chief seat of the Knights Hospitalers in England. See p. 106. All that remains of it now is the old gate of the priory, still called St. John's Gate; the ornaments of which we at first depaired of rendering interesting or intelligible to the reader. By subsequent exertions, however, some remains have been saved from oblivion. See Plate VII. where fig. 1, 2, 3, represent the key-stones of the gate at the meeting of the groins.—The lamb and flag resting on the book of judgment, as mentioned in the Revelations, alluded to St. John. The cross was the arms of the priory, the same as that of St. George, and of London without the dagger. The other arms, a chevron between three roundels, with the cross in chief, are those of Thomas Docwra, prior in 1502-23, who built the gate. These are still extant, but nearly obliterated by the nibbling fingers of time and the merciless brush of workmen, who have painted them red, blue, or green, as their fancies prompted them, and who, like picture-cleaners, destroy the beauties they wish to bring out. Fig. 4. represents a small doorway leading to the top of the gate and the towers; the sweep of the arch is elegant, and has on each side the arms as above, which are also on each side of the southern front of the gate. Fig. 5. represents a door lately discovered under the great gate, in making apartments for the watch-house. It was carved in oak, and appeared as perfect as when first made. The great gate, which has the appearance of a stone building, is only casd with stone, the interior being composed of hard red brick.—St.-John's-lane continues from the gate southwards to the end of Cow Cross. In a parlour of a public house called the Baptist's Head, a curious old chimney-piece is still existing; see fig. 6. It is a frieze ornamented with fruit and flowers; in the centre are the arms of the owner, and at each end probably his crests. The arms are impaled. The side belonging to the gentleman is quarterly: first and fourth a chevron between three bugle-horns for Duncan; second and third

a bend for Radcliffe. The impalement for the wife, is a bend indented for Radcliffe, with a crescent for difference. The crest on the right is a stag statant; on the left, a talbot's head erased and collared.—This curious piece of workmanship is in the parlour of the house; and, had it not been for the rage of white-washing, would still exhibit proofs of a skilful chisel. The frieze is supported by two pilasters in the same style; and above there is a panneling of a curious kind, of which we give a specimen at fig. 7. It seems as if anciently the house had been wainscoted all over with this sort of ornament, a large piece of which serves now as a partition in a passage from the bar to the yard.—This lane has still a solitary and religious appearance, on account of the gate which terminates it, and still seems to be the *sacrum limen*, the awful entrance to those venerable and religious abodes where piety and silence ought to have dwelt, but where the vices opposite to them (not without other causes) brought on the ruin and dissolution of houses, the original purpose and intention of which had been so laudable. Under the gateway we find, on the left the watch-house, and on the other a wine-vault.

Turning the corner of Cow Cross, we are led to *Turnmill-street*, so called from the various mills which were put in motion by the river Wells; which used to pass through it. The river *Wells* had its name from the numerous wells in the neighbourhood, whose springs at length formed the river; it still runs under ground, and disembogues itself into the Thames on the west side of Blackfriars-bridge by Chatham Place. It is not even now a very inconsiderable stream; and, at low water, it is seen rushing down and finding its way through the pebbles and sands on the bank to the Thames. But, according to Stow, it was once so large a river, that it used to be navigable.—“In a faire book of parliament-records,” says he, “it appeareth, that, a parliament being holden at Carlisle in the year 1307, Henry Lacy earl of Lincoln complained, that whereas in times past the course of water running at London under Oldborne-bridge and Fleet-bridge into the Thames, had bene of such bredth and depth that ten or twelve ships were wont to come to the foresaid bridge of Fleet, and some of them unto Oldborne-bridge; now the same course, by filth of the tanners and others, was fore decayed; also by raising of wharves; but especially by a diversion of the water made by them of the New Temple for their milles standing without Baynard's Castle in the first years of king John, &c. so as the said ships could not enter as they were wont, and as they ought. Wherefore he desired that the mayor of London, with the sheriffes and other discreet aldermen, might be appointed to view the said course of the said water; and that, by the oathes of good men, all the foresaid hindrances might be removed, and it to be made as it was wont of old.” Roger le Barbacon, constable of the Tower, and the lord-mayor and sheriffs, were appointed, with others; and the river was cleaned, the mills and other hindrances removed; but they could not sink the bed to its former depth; upon which the river lost its title to the name, and was called simply *Turnmill* or *Tremill-brooke*, down to Oldborne-bridge, and hence, on account of its rushing on faster upon the declivity towards the Thames, it assumed the name of *Fleet*. It was cleaned several times, and great expenses bestowed upon it; till at last it was entirely built over, as we mentioned above. We may remark, however, that before the left bank of the vale, in the bosom of which the brook halted its course, was covered with houses, the slope was intersected with penfolds where sheep and cattle were kept against market-day.

At the north end of Turnmill-street, and west of Clerkenwell, we find the Sessions-house for the county of Middlesex. The former sessions-house was situated in St. John Street, at the opening of St. Peter's lane; where an inscription on a neat stone tablet is put up in the wall, and begins with these words—“Opposite this place Hicks's Hall formerly stood, &c. &c.” This hall was so denomi-

6

*Fragments of Architecture, N<sup>o</sup> 3.*

nated from its founder, sir Baptist Hicks, by whom it was erected in the year 1611, and given for the perpetual use of the magistrates of the county. This building having become very ruinous, and being also extremely inconvenient, an act of parliament was obtained, in the year 1779, for erecting a new one; and a convenient spot of ground having been purchased on Clerkenwell-green, the first stone of the present edifice was laid on the 20th of August in that year, and it was opened for business in 1782. The east and principal front of it, towards Clerkenwell-green, is composed of four three-quarter columns, and two pilasters, of the Ionic order, supported by a rustic basement. The county-arms are placed in the tympanum of the pediment. Under the entablature are two medallions, which represent Justice and Mercy. In the former, Justice holds the scales and sword; and, in the latter, Mercy grasps the blunted sword, and the sceptre surmounted with the British crown, on which, as emblematic of the mildness of the British laws, rests a dove, with an olive-branch in her mouth. In the centre, between Justice and Mercy, is his majesty's profile, in a medallion, decorated with festoons of laurel and oak-leaves, the emblems of strength and valour. At each extremity are the Roman fasces and sword, the insignia of authority and punishment. The extent of this building is a hundred and ten feet from east to west, and seventy-eight from north to south. The hall is thirty-four feet square, and terminates at the top in a circular dome lighted by six circular windows, each four feet eleven inches in diameter. This dome is pannelled in stucco, and the spandrels under it are decorated with shields and oak-leaves. The sides of the hall are finished with pilasters of the Composite order, crowned with an entablature, the frieze of which is ornamented with foliage, and the caduceus of Mercury and the Roman fasces in medallions. From the hall, a double flight of steps leads up to the court, which is in the semicircular form of a Roman amphitheatre, thirty-four feet by thirty, and twenty-six feet high, with spacious galleries on the sides, for the auditors. The rooms on each side of the entrance are appropriated to the meetings of the magistrates. In one of them is the original portrait of sir B. Hicks, which was brought from the old sessions-house, with the arms and ornaments which decorated the chimney of the dining-room there; and in the other is a good copy of the picture.

The idea of a court of justice is commonly associated with that of a prison; and brings us to notice three places of confinement which stand in this parish. Two of them, adjoining to each other, have lately been repaired and enlarged. The one is a prison of ease to Newgate, for the county of Middlesex, called the New Prison; and the other, a house of correction for disorderly persons, called Clerkenwell Bridewell, which was built in the year 1615, for the punishment and employment of rogues and vagabonds belonging to the county, who had formerly been taken into Bridewell in the city, but were now refused, both because the place was unable to contain and employ them, and because it was thought an infringement of the privileges of the citizens, who, however, contributed five hundred pounds towards the erection of this New Bridewell, the whole expense of which amounted to two thousand five hundred pounds.

At some distance from these prisons is a place called Cold-Bath Fields, which consists of several small streets that surround a square, in the centre of which is a low old building, with a garden and a cold bath; the latter of which gave name to the place. The site and appearance of these baths are really picturesque, being surrounded with trees and houses, clad with ivy, jessamine, passifloras, and other creeping plants, which give a country air to the square.

Cold-Bath-Fields Prison, the house of correction for the county of Middlesex, which has long been stamped with the name of the "New Bastille," is on the north side of the square. This prison was erected in pursuance of an act

of parliament passed in the twenty-sixth year of the reign of his present majesty, "for enabling the justices of the peace for the county of Middlesex to raise money for building a house of correction within the said county." But it is also used as a penitentiary-house. The spot on which this edifice is erected having been a swamp on the declivity of a hill, it was found necessary to lay the foundation so deep, and to pile it so securely, that it is supposed there are as many bricks laid under ground as appear in sight. The building, with few deviations from uniformity, is laid out and divided into separate and distinct cells, or *single apartments*, as well on the ground-floor as on the upper stories, each cell being eight feet three inches long, and six feet three inches wide. To each cell are two apertures or windows for light and ventilation, each two feet six inches wide by two feet high; the one over the door, the other at the height of seven feet from the floor in the opposite direction: these apertures are closed or opened by means of wooden shutters, acting at the will of the person confined. The cells on the ground-floor are built on arches, and are raised twenty-one inches from the pavement of the yards; those of the upper floors rest on the arches of those below; and, as the use of combustible matter is by this means excluded, they are all fire-proof. The whole number of solitary cells is two hundred and eighteen; sixteen of these, which have no other light but from the apertures over the doors, are used for the occasional confinement of refractory prisoners. In addition to these, in each of six of the yards belonging to the building, there are two apartments containing the space of two single cells, and intended for lodging two prisoners. Some larger apartments are formed, by throwing together the space of several cells; these are used for various purposes connected with the institution, such as an infirmary, work-rooms for the male convicts, a spinning room for the female convicts, day-rooms with fire-places, used by the prisoners in winter; (the solitary cells of course have no fire-places;) a laundry, store-rooms, &c. There are eight large yards, to which the prisoners of different classes have occasional access, where they can be sheltered from the weather by pent-houses, which extend the whole length of them; there are also eight other airing grounds, to which the offenders of the least criminality have free access. Water is brought into all these yards by pipes, for the use of the prisoners, either to drink or to wash themselves, which they are obliged to do every morning before they receive their breakfasts, and again in the evening before being locked up. Communicating with the centre gallery there is a building of three stories, with two rooms in each story. Three of these are let to such prisoners as choose to pay ten shillings and sixpence per week for their hire; the other three are occupied by the servants of the house, or as store-rooms. At the entrance of the prison is a committee-room, and over it two lodging-rooms occupied by servants belonging to the prison; and in the centre of the building is a neat and airy chapel, sufficiently spacious to contain the whole number of prisoners which can be accommodated in the cells. The keeper's house is a distinct building on the east side of the entrance, and is an addition to the original plan, as are also several commodious shops, suited to the various trades and manufactures in which the prisoners are occasionally employed; particularly for carpenters, turners, sawyers, tailors, and shoemakers, with an extensive stage for drying oakum. The whole of this building is surrounded with a high brick wall, strengthened on the outside with stone buttresses.

To return to our walk; we may take a round through Saffron-hill and Chick-lane towards Smithfield; but it will not be of much interest either to us or to our readers, unless just to remark the manner in which the ground has been tormented there by some ancient convulsion of the earth. The channel in which the little brook winds its way along is even now easily traced in the hollow shape
