Printed by J. Belcher and Son,
High-street, Birmingham.

TO
DR. WRIGHT.

Dear Sir

If you make use of this work in the course of your medical or botanical studies, I must beg you to attend to the following circumstances. Let us open the 1st vol. at p. 394. Each species is distinguished by a numeral. The specific character is followed by references to the authors consulted. In the citations the first numeral in roman figures expresses the number of the volume, fasciculus, section, part, or other primary division of the work, unless preceded by the letter *p.* in which case it expresses the page of the preface or introduction. The first numeral in arabic figures expresses the page of the work, but when the letter *n.* is prefixed it implies the number of the species, which in some authors are distinguished by a regular series of numbers. When *t.* is prefixed to an arabic numeral it denotes the number of the plate, but in the authors whose works contain figures cut in wood, as Brunfelsius, Fuchsius, Tragus, Matthiolus, Camerarius, Dodonaeus, Lobel, Clusius, Dalechamp, the Bauhines, Gerard, and

Parkinson, the arabic numeral refers to the page in which a figure of the plant is found, and when there is only a description it is expressly said that there is no fig.

I have stated what figures are reimpressions and copies of others, that when the reader has turned to one he may save himself the trouble of consulting those which are reimpressions or copies or the original of what he has already examined.

The figures subjoined to botanical observations refer to the numbers of a journal which I have kept ever since I began to investigate plants, my specimens having corresponding numbers affixed to them. The benefit I have experienced from this method induces me to recommend it to all students of natural history, advising them to incorporate all other observations which they may commit to writing into the same series, affixing corresponding numbers to specimens of all kinds, and to plants growing in their gardens numbers stamped on plates of lead by means of steel dies, as practised by florists. To these observations I have an index, which consisting of separate papers arranged in a book, admits of occasional additions without the labour of transcription.

The numbers subjoined to genera indicate from what species the alterations in the generic character were formed, but when such species are not to be found in the work, the name of the species is given.

I generally add where and by whom the plant or specimen was gathered. When the subject of examination is a dried plant I use the word specimen, when nothing is said the plant was examined in a recent state.

On some occasions I have been led to examine into the native place of plants. The result of such enquiries is placed after the references to botanical authors and observations upon structure, and the authorities will be found in remarks subjoined to the citations of different botanical observers.

To distinguish the medical references I have printed the first of the names used by medical authors in italic capitals, as *Belladonna* in p. 395 of Vol. 1st. The references which immediately follow the name in italic capitals are generally to pharmacopoeias, but in the latter part of the work, fearful lest it should swell out to too great a size, I have sometimes inserted botanical references distinguishing them from

the medical references by a hyphen, as in *Sphagnum latifolium*, iv. 585, where all the references following *Sphagnum palustre* and preceding the hyphen are botanical.

The references which follow those to pharmacopoeias are to the writers of *materia medicas* and such practical authors as I have been in the habit of reading or consulting, arranged under each pharmaceutical name in alphabetical order that the name of the author whom the reader may wish to consult may be most expeditiously found. But notwithstanding this division of botanical and medical references it may be proper to advertise the reader that he will find accounts of the virtues of plants in many of the authors cited as botanists such as Dodonaeus, Clusius, Lobel, J. Bauhine, Gerard, Parkinson, Rheede, Rumphius, Ray, Gouan in his *flora*, Krocke, and Loureiro, and that among the medical references he will meet with accurate descriptions in Bergius's *materia medica*.

The numerals prefixed to the genera are repeated in the running title to afford the investigating botanist an easy reference from the synoptic tables to the body of the work.

The terms made use of are generally those of Linnaeus, or formed on his principles, but in the grasses it may be necessary to observe that what Linnaeus calls the calyx I consider as bracteae, and what he terms corolla I regard as the calyx. In describing the calyx I have also substituted the word phyllum for foliolum, confining the use of foliole to the subdivisions of leaves. The compound flowers as they are generally termed, contained in the class Syngenesia I have called anthodia, considering them as collections of flowers analogous to those of Scabiosa and Jasione. And instead of calyx communis and squamae I employ the terms involcurum and bracteae.

I make no apology for these or other deviations from common usage, holding it to be the duty of every writer who publishes, to communicate all he knows on the subject of which he treats. If convinced by others or my own reflexions that such deviations are errors I trust I shall have courage to retrace my steps.

Since I wrote the advertisement prefixed to the 2nd edition of the Botanical arrangement, my opinions respecting trivial names have almost entirely changed. Improvements in nomencla-

ture will keep pace with increasing knowledge, and where a name is susceptible of amendment, every botanist should be as ready to suggest a better as to communicate an improved specific character or description. I do not approve of altering every name which is not good, thinking it better to use the bad one till we discover one which is characteristic. In some genera the difficulty of finding good names is so great, that we must be content with their having names at all. In adopting one of two or more names given to the same plant by contemporary authors we ought always to give a preference to that which is most characteristic.

When the trivial name adopted is not that used by the author from whom the specific character was taken, a hyphen is subjoined to the trivial name, the name of the author of the specific character is added at the end of the specific character, and the name used by the author of the specific character cited at length below. *See* ii. 386. *n.* 1; iii. 133. *n.* 5.. If after the name at the end of the specific character a hyphen is subjoined and a work cited, it implies that the trivial name has been adopted from the last cited author. *See* ii. 386. *n.* 1.

When I have referred a species to a distinct genus and only one species is found in that genus, I have not followed Linnaeus in endeavouring to discover a characteristic name, but have judged it more adviseable to give it a name expressive of its being the only known species, and a name which must inevitably be changed whenever another shall be referred to the same genus. *See* ii. 169.

In the course of this work I have been led to distinguish between a variety and what I have sometimes called a variation. When plants are so much alike that one entertains no doubt of their specific sameness, and yet differ in colour size or mode of growth, I am inclined to call those that assume the form or colour which is least usual a variation. When plants are so little alike that we almost begin to suspect them to be specifically different, and yet on a careful examination are not able to fix on sufficient marks of specific distinction, I call that form which is least usual a variety.

Hoping that you will resume your pen and communicate to the world in a work of your own all that you have observed on the plants and dis-

eases of the West Indies, I remain with much esteem

Dear Sir

Your obliged and sincere friend

JONATHAN STOKES.

Chesterfield 20 May, 1812.

P. S. Mr. Hunters nursery, late Messrs. Brunton and Hunters at Perry Hill between Birmingham and Hales Owen, is now at Soho near Birmingham.

- Ren.* Renalimi specimen historiae plantarum. 4to. 1611.
- repr.* reprinted.
- Retz. obs.* Retzii observationes botanicae. Fasc. 6. fol. 1779.
- Retz. scand.* Retzii flora scandinaviae. ed. ii. 8vo. 1795.
- Rheede.* Rheede hortus malabaricus. Tomi 12. fol. 1678.
- Richt.* Richteri observationes chirurgicae. 12mo. 1770.

XXXVIII . ABBREVIATIONS EXPLAINED.

- River. prax.* Riverii praxis medica. 12mo. 1658.
- Riv. monop.* Rivini ordo plantarum quae sunt flore irregulari monopetalo. Fol. 1690.
- Riv. tetrap.* Rivini ordo plantarum quae sunt flore irregulari tetrapetalo. Fol. 1691.
- Rob. ic.* 319 plates of plants engraved by Robert Bosse and Chastillon, in folio, given by Lewis XIV, XV, and XVI to distinguished botanists.
- Roberts.* Robertsons observations on jail fever. 8vo. 1789.
- Rob.* Robsons british flora. 8vo. 1777.
- Rollo* on diabetes. 8vo. 1798; -ed. 1st 2 vols. 8vo. 1797.
- Rosenst.* Rosenstein on the diseases of children. 8vo. 1776.
- Roth catalect.* Roth catalecta botanica. Tomi 2. 8vo. 1797.
- Roth germ.* Roth flora germanica. Tom. I. II. III pars I. 8vo. 1788, to 1800.
- Rottb gram.* Rottboll descriptiones et icones rariorum plantarum. fol. 1773.
- Rox.* Roxburghs plants of the coast of Coromandel. 2 Vols. fol. 1795.
- Roy.* Royen flora leydensis prodromus. 8vo. 1740.
- Rudb. rel.* Reliquiae Rudbeckianae. fol. 1789.
- Rumph.* Rumphii herbarium amboinense. Tomi 7. fol. 1750.
- Rupp. ab Hall.* Ruppii flora jenensis ab Hallero. 12mo. 1745.
- Rush* medical inquiries. 5 vols. 8vo. 1789.
- Russ. oecon.* Russells oeconomy of nature. 8vo. 1755.
- Russ. sea wat.* Russel on sea water. 12mo. 1760.
- Rutty.* Rutty materia medica. 4to. 1775.
- Sal. R. hort.* Salisbury prodromus stirpium in horto ad Chapel Allerton vigentium. 8vo. 1796.

- Sal. R. ic.* Salisbury icones stirpium rariorum. fol.
1791.
- Sal. R. par.* Paradisus Londinensis. 4to. 1806.
- Sal. W.* Salisburys, W. hortus paddingtonensis. 8vo.
1797.
- Sauv. chefs d'oeuvres de M. de Sauvages.* 2 tomes.
1770.
- Sauv. nos.* Sauvages nosologia. Tomi 2. 4to. 1768.
- Schaeff.* Schaeffer fungorum qui in Bavaria et Palatinatu circa Ratisbonam nascuntur icones. Tomi 4.
4to. 1762.
- Scheuch. J. agrost.* Scheuchzeri agrostographia. 4to.
1719.
- Scheuch. J. Jac. itin.* Scheuchzeri, J. Jac. ΟΥΡΕΣΙΦΟΙΤΗΣ helveticus, sive itinera alpina. Itin. 3.
4to. 1708.
- Schmid.* Schmidel icones plantarum. Tomi 2. fol.
1762. 1776.
- Schoepf.* Schoepf materia medica americana. 8vo.
1787.
- Schreb. gras.* Schreber beschreibung der graser. fol.
1774.
- Schreb. ic.* Schreber icones plantarum. fol. 1766.
- Schreb. lips.* Schreberi spicilegium florae lipsicae.
8vo. 1771; consp. means a catalogue of plants
following p. 148.
- Schrod.* Schroderi pharmacopoeia medico-chymica.
8vo. 1672.
- Scop.* (in the medical references) Scopoli funda-
menta botanica. 8vo. 1786.
- Scop. carn.* Scopoli flora carniolica. ed. 2. Tomi 2.
8vo. 1772.
- Scop. insubr.* Scopoli florae et faunae insubricae
partes 3. fol. 1786.

- Seb.* Sebae thesaurus. Tomi 4. fol. 1734.
- Seg.* Seguier plantae veronenses. Tomi. 3. 8vo. 1745.
- Shaw.* Shaws travels. fol. 1738.
- Sibb.* Sibbald scotia illustrata. fol. 1684.
- Sibth. ox.* Sibthorp, J. flora oxoniensis. 8vo. 1794.
- Sibth. prodr.* Sibthorp, J. florae graecae prodromus. Tom. Ius. 8vo. 1806.
- Sims, James epid.* Sims on epidemic disorders. 8vo. 1776.
- Sloane cat.* Sloane catalogus plantarum quae in Jamaica proveniunt. 12mo. 1696.
- Sloane hist.* Sloanes voyage to the islands Madera Barbados Nieves St. Christophers and Jamaica. 2 Vols. fol. 1707.
- Smell. thes.* Thesaurus medicus, sive disputationum in academia edinensi delectus. Tomi 4. 8vo. 1778.
- Smith brit.* Smith flora britannica. Tomi 3. 8vo. 1800.
- Smith engl.* English botany. 8vo. 1790.
- Smith exot.* Smiths exotic botany. 2 vols. 8vo. 1804.
- Smith ic.* Smith plantarum icones. Fasc. 3. fol. 1789.
- Smith new holl.* Smiths specimen of the botany of New Holland. 4to. 1793.
- Smith pict.* Smith icones pictae plantarum rariorum. Fasc. 3. fol. 1790.
- Smith spicil.* Smith spicilegium botanicum. Fasc. 2. fol. 1791.
- Smith tracts.* Smiths tracts. 8vo. 1798.
- Sole.* Sole menthae britannicae. fol. 1798.
- Sonner. nouv. guin.* Sonnerat voyage a la Nouvelle Guinee. 4to. 1776.

- Zanon. a Mont.* Zanonii rariorum stirpium historia.
fol. 1742.
- Zarda pharmaca vegetabilia juxta pharmacopeam
austriaco provincialem.* 8vo. 1782.
- ? subjoined to any of the botanical references expresses
my doubts whether such plants furnish the article
of medicine or food treated of.
- ?? expresses doubt amounting almost to disbelief.

CHARACTERS OF THE CLASSES AND ORDERS.

I. *Flowers if existing either not found, or so minute as not to be distinguishable without highly magnifying microscopes.*

Class 23. CRYPTOGAMIA. Vol. iv. 581.

Order 1. MONOECIA. Stamina and pistils mostly found on the same plant. *Vol. iv. 581.*

Order 2. DIOECIA. Stamina and pistils found on different plants. *Vol. iv. 582.*

Order 3. GYNOECIA. Plants producing fruit, but no flowers hitherto discovered. *Vol. iv. 582.*

II. *Flowers with stamina on one plant, and flowers with pistils on another.*

Class 22. DIOECIA. Vol. iv. 485.

1. *Male flowers. Stamina united.*

Order 14. SYNGENESIA. Antherae united. *Vol. iv. 495.*

Order 13. MONADELPHIA. Filaments united. *Vol. iv. 495.*

2. *Male flowers. Stamina distinct.*

- Order 1. MONANDRIA. Stamen 1. *Vol. iv.* 485.
Order 2. DIANDRIA. Stamina 2. *Vol. iv.* 486.
Order 3. TRIANDRIA. Stamina 3. *Vol. iv.* 487.
Order 4. TETRANDRIA. Stamina 4. *Vol. iv.* 488.
Order 5. PENTANDRIA. Stamina 5. *Vol. iv.* 489.
Order 6. HEXANDRIA. Stamina 6. *Vol. iv.* 491.
Order 7. OCTANDRIA. Stamina 8. *Vol. iv.* 492.
Order 8. ENNEANDRIA. Stamina 9. *Vol. iv.* 492.
Order 9. DECANDRIA. Stamina 10. *Vol. iv.* 492.
Order 10. DODECANDRIA. Stamina 12 to 19. *Vol. iv.* 493.
Order 11. ICOSANDRIA. Stamina 20 and more, inserted into the inside of the calyx. *Vol. iv.* 494.
Order 12. POLYANDRIA. Stamina 20 and more, inserted into the receptacle. *Vol. iv.* 494.

3. *Female flowers.*

- Order 1. MONOGYNIA. Style or stigma 1.

(1.) *Flowers naked.*

914. TROPHIS. Style 1. *Berry monospermons.*

948. CYCAS, *Style 1. Drupe.*

(2.) *Flowers bracteate.*

901. BROSIMUM. *Style 1. Berry monospermous.*

915. BATIS. *Stigma 1. Berry tetraspermous.*

903. CISSAMPELOS: *Style 1. Drupe monospermous.*

(3.) *Flowers nectariferous.*

905. SALIX. *Style 1. Capsule unilocular.
Seeds pappose.*

(4.) *Germen superior. Flowers incomplete.*

949. TAXUS. *Stigma 1. Drupe surrounded
below by a pulp. Calyx
polyphyllous. Nectarium
very short, surrounding the
base of the germen. Obs.
8956.*

904. CECROPIA. *Stigma 1. Berry monospermous.
Calyx bifid. Style
none. Germen didymous.*

930. BACCAUREA. *Stigma 1, lenticular. Berry
trilocular and quinquelocular.
Calyx pentaphyllous.*

938. POPULUS. *Stigma quadrifid. Capsule
bilocular. Seeds pappose.*

946. STIGMAROTA. *Stigma rotate, sexfid. Berry
unilocular, polyspermous.*

939. *MERCURIALIS.* *Stigma bipartite.* *Capsule dicoccous.* *Calyx tripartite.*

940. *TETRANTHERA.* *Style 1.* *Berry.* *Calyx par-*
titate. *Stigma sublobate.*

952. *Ruscus.* *Style 1.* *Berry trilocular.*
Calyx hexaphyllous. *Nec-*
tarium ovate.

951. *MYRISTICA.* *Style 1.* *Berry monosperm-*
ous. *Seed arillate.* *Calyx*
trifid.

919. *HIPPOPHAE.* *Style 1.* *Berry monosperm-*
ous. *Calyx bifid.* *Germen*
roundish. *Stigma twice as*
long as the calyx.

(5.) *Germen superior.* *Flowers complete.*

913. *PHOENIX.* *Style 1.* *Drupe monosperm-*
ous. *Calyx monophyllous.*

922. *CANARIUM.* *Style 1.* *Drupe monosperm-*
ous. *Calyx diphyllous.*

(6.) *Germen inferior.* *Flowers incomplete.*

947. *TREUIA.* *Capsule tetracoccous.*

909. *OSYRIS.* *Berry monospermous.* *Calyx*
trifid.

916. *VISCUM.* *Berry monospermous.* *Calyx*
tetraphyllous.

931. *TAMUS.* *Berry trilocular.*

Order 2. DIGYNIA. Styles or stigmata 2.

(1.) *Germen superior. Flowers incomplete.**Styles and stigmata 2.*

927. HUMULUS. Seed 1. *Calyx* entire.
926. CANNABIS. Nut bivalve. *Calyx* gaping on one side.
920. MYRICA. Berry monospermous. *Calyx* diphylloous.
923. PICRAMNIA. Berry bilocular and trilocular. *Calyx* tripartite and quinquepartite.
910. STILAGO. Drupe. *Calyx* urceolate.

(2.) *Germen superior. Flowers incomplete. Pistils 2.*

950. EPHEDRA. Seeds 2.

Order 3. TRIGYNIA. Styles or stigmata 3.

(1.) *Flowers incomplete. Germen inferior.*

944. DATISCA. Capsule unilocular.
933. DIOSCOREA. Capsule trilocular.

(2.) *Flowers incomplete. Germen superior.*

912. CATUS. Capsule tricoccous. *Calyx* tripartite.
911. EXCOECARIA. Capsule tricoccous. *Calyx* diphylloous and triphyllous. Stigmata simple.

902. COMMIA. *Capsule tricoccous. Calyx triphyllous. Stigmata thickish.*
945. FLACOURTIA. *Berry unilocular. Calyx pentaphyllous.*
932. SMILAX. *Berry trilocular. Calyx hexaphyllous.*
934. FIBRAUREA. *Berries 3, monospermous.
Petals 6.*
921. PISTACIA. *Drupe. Calyx trifid.*

(3.) *Flowers complete.*

929. CLYTIA. *Capsule trilocular. Calyx pentaphyllous. Petals 5.*
935. BRAUNEA. *Berry tricoccous. Calyx triphyllous. Petals 3.*
942. SCHINUS. *Berry trilocular. Calyx quinquepartite. Petals 5.*
937. LIMACIA. *Drupe. Calyx hexaphyllous.
Petals 6.*
907. JUNIPERUS. *Drupe trispermous. Calyx polyphyllous.*

Order 4. TETRAGYNIA. Styles or stigmata 4.

925. SPINACIA. *Pistil 1. Seed 1.*
918. GONUS. *Pistil 1. Drupes 4.*
917. BRUCEA. *Pistils 4. Nectarium quadrilobate.*

484. SEDUM. *Pistils petals and nectaria 4.*
Obs. 2745 from S. dioicum.

295. HYDNOCARPUS. *Stigmata 4. Berry unilocular.*
Order 4. PENTAGYNIA. Styles or stigmata 5.

(1) *Germen superior. Flowers incomplete.*

924. ANTIDESMA. *Stigmata 5. Berry monospermous.*

(2) *Flowers complete. Germen superior.*

941. CARICA. *Stigmata 5. Berry unilocular.*

488. LYCHNIS. *Styles 5. Capsule unilocular.*
Petals 5, unguiculate. Calyx semiquinquefid. Obs. 4715, from L. dioica.

943. CORIARIA. *Pistils and Capsules 5.*

(3) *Germen inferior. Flowers complete.*

928. FEUILLEA. *Styles 5. Berry trilocular.*

Order 5. HEXAGYNIA. Styles or stigmata 6.

515. STRATIOTES. *Styles 6, bipartite. Berry sexlocular and octolocular.*
Petals 3. Calyx trifid.
Nectaria many.

Order 6. ENNEAGYNIA. Styles or stigmata 9.

908. EMPETRUM. *Berry. Petals 3. Calyx tripartite.*

Order 7. POLYGYNIA. Styles or stigmata many.

900. PANDANUS. *Fruit compound.*

III. *Stamina and pistils on the same plant but not in the same flower.*

Class 21. MONOECIA. Vol. iv. 306.

1. *Male flowers. Stamina united.*

Order 12. SYNGENESIA. Vol. iv. 318.

Order 11. MONADELPHIA. Vol. iv. 315.

492. HERITERA. *Antherae* 5 to 10. *Calyx* quinquefid. *Corolla* none.

703. INGA. *Stamina* many. *Calyx* quinquefid. *Corolla* quinquefid.

2. *Male flowers. Stamina distinct.*

Order 1. MONANDRIA. Stamen 1. Vol. iv. 306.

Order 2. DIANDRIA. *Stamina* 2. Vol. iv. 308.

171. OPHIOXYLUM. *Calyx* quinquefid. *Corolla* quinquefid. *Nectarium* cylindric. *Antherae* inserted into the nectarium.

Order 3. TRIANDRIA. *Stamina* 3. Vol. iv. 308.

52*. SPINIFEX. *Bracteae* 2, uniflorous and biflorous. *Calyx* diphyllous. See Vol. i. 185.

844*. ANDROPOGON. *Bracteae* none. *Calyx* diphyllous. *Petal* 1, linear.

Order 4. TETRANDRIA. *Stamina* 4. Vol. iv. 310.

874. THUIA. *Flowers* bracteate. *Antherae* unilocular.

920. MYRICA. *Flowers* bracteate. *Antherae* bilocular. From M. Gale. Obs. 8954.

78. GALIUM. *Calyx* none. *Corolla* quadridid. Obs. 8970, from G. Crucifera.

Order 5. PENTANDRIA. *Stamina* 5. Vol. iv. 311.

238. CELTIS. *Calyx* quinquepartite and sexfid. *Corolla* none.
182. GOUANIA. *Calyx* quinquefid. *Petals* 5; inserted into the calyx.
- Order 6. HEXANDRIA. Stamina 6. Vol. iv.
312.
341. KERNERA. Flowers naked. *Antherae* sessile.
850. BETULA. *Bracteae* multifid; segments incumbent, the outermost peltate. Obs. 8949, from *B. alba*.
364. VERATRUM. *Calyx* none. *Petals* 6. Rudiment of a pistil.
- Order 7. OCTANDRIA. Stamina 8. Vol. iv.
313.
400. ACER. *Calyx* quinquefid and sexfid. *Petals* 5 and 6. *Nectarium* orbicular. *Stigma*. Obs. 8959, from *A. campestre*.
- Order 8. DECANDRIA. Stamina 10. Vol. iv.
313.
468. TERMINALIA. *Calyx* quinquepartite. *Corolla* none. *Nectaria* 5.
435. FERONIA. *Calyx* quinquepartite. *Petals* 5. Rudiment of a pistil.
400. ACER. *Calyx* quinquefid and sexfid. *Petals* 5 and 6. *Nectarium* orbicular. Rudiment of a pistil. Obs. 8948, from *A. Pseudoplatanus*.

Order 9. DODECANDRIA. Stamina 12 to 19.
Vcl. iv. 314.

Order 10. POLYANDRIA. Vol. iv. 314.

545. ACACIA. *Calyx* quinquedentate. *Corolla* quinquefid.

555. CLUSIA. *Calyx* imbricate. *Petals* 4 to 6.

3. Female flowers.

Order 1. MONOGYNIA. Style or stigma 1.

(1) Flowers naked.

826. ZOSTERA. Style 1. *Capsule* monospermous.

832. ARTOCARPUS. Style 1. *Berry* monospermous.

893. NIPA. *Drupe*. *Stigma* a lateral furrow.

827. ARUM. *Stigma* orbicular. *Berry* polyspermous. Obs. 8967, from *A. maculatum*, but M. Jussieu says monospermous and polyspermous. Mr. Brown proposes to divide the genus into 2.

829. CALADIUM. *Stigma* umbilicate. *Berry* polyspermous. From *L. a Willd.* but Mr. Brown says "monospermous?"

829. CALLA. Style 1. *Berry* polyspermous.

(2) Flowers naked, intermixed with bracteae.

830. PLATANUS. Style 1, permanent. Seed I.

(3) *Flowers bracteate.*

891. *GNETUM.* *Stigma trifid and quadrifid.*
 Drupe.
- (4) *Germen superior. Flowers incomplete.*
890. *TYPHA.* *Style 1. Seed 1. Calyx capillary.*
841. *CAREX.* *Style 1. Seed 1. Calyx ampullaceous.*
859. *AMBROSIA.* *Style 1. Seed 1. Calyx bidentate at the end, with 4 teeth on the outside.*
838. *DORSTENIA.* *Style 1, bifid. Seed 1. Calyx quadridentate, prismatic.*
102. *PARIETARIA.* *Style 1. Seed 1, ovate. Calyx quadrifid. Stigma round, hirsute. Obs. 7484.*
858. *VANIERIA.* *Style 1. Seed 1, lenticular. Calyx quadripartite.*
845. *FICUS.* *Style 1. Seed 1. Calyx quinquepartite.*
839. *ZEA.* *Style 1. Stigma 1. Seed 1. Calyx diphyllous.*
223. *ATRIPLEX.* *Style 1, bipartite. Seed 1, orbicular, compressed. Calyx diphyllous.*
853. *URTICA.* *Stigma 1. Seed 1. Calyx tetraphyllous.*
842. *SCLERIA.* *Style 1. Nut. Calyx diphyllous triphyllous and tetraphyllous.*
844. *TRAGIA.* *Style 1. Capsule tricoccous. Calyx quinquepartite.*

882. OMPHALEA. *Style 1.* *Capsule* tricoccous.
Calyx pentaphylloous.
876. PLUKENETIA. *Style 1.* *Capsule* tetracoc-
 couous. *Petals* 4.
892. HURA. *Style 1.* *Capsule* duodecim-
 locular.
864. SAGUS. *Style 1.* *Berry* monosperm-
 ous. *Calyx* triphyllous.
884. PIPALIA. *Style 1.* *Berry* monosperm-
 ous.
849. TRICARIUM. *Stigma 1.* *Berry* trilocular.
Calyx quadripartite. *Stig-*
ma 1, laciniate.
834. SALISBURIA? *Style* and *Stigma* unknown.
Drupe. *Calyx* quadrifid.
887. HIPPOMANE. *Style 1.* *Drupe.* *Calyx* tri-
 phylloous.
835. SPARGANIUM. *Style 1.* *Drupe* juiceless.
Calyx triphyllous and tetra-
 phylloous.
- (5) *Germen superior.* *Flowers complete.*
862. BACTRIS. *Style 1.* *Corolla* trifid.
Drupe.
865. CARYOTA. *Style 1.* *Corolla* tripartite.
Berry unilocular, disperm-
 ous.
545. ACACIA. *Style 1.* *Legumen.* *Corolla*
 quinquefid. *Calyx* quinque-
 dentate.
840. COIX. *Style 1.* *Petals* 2. *Seed* 1.
Calyx diphyllous.
863. ELATE. *Style 1.* *Petals* 3. *Drupe.*
Calyx tridentate.

555. CLUSIA. *Stigma peltate. Capsule quinquelocular. Calyx imbricate. Petals 4 to 6. Nectarium.*
846. HERNANDIA. *Style 1. Petals 8. Drupe. Calyx entire.*
- (6) *Germen inferior. Flowers incomplete.*
836. CYNOMORIUM. *Style 1. Seed 1. Calyx tetraphyllous.*
869. QUERCUS. *Style trifid. Nut. Calyx sexfid. Obs. 8967.*
870. FAGUS. *Style trifid. Capsule formed from the involucrum, containing 2 and 3 nuts. Calyx hexaphyllous.*
883. STILINGIA. *Style 1. Capsule tricoccous. Corolla infundibuliform.*
884. CYTINUS. *Style 1. Berry octolocular. Corolla campanulate.*
- (7) *Germen inferior. Flowers complete.*
788. TANACETUM. *to*
819. SPHAERANTHUS. *Calyx pappose, quinquedentate and none. Corolla monopetalous, tubular and ligulate. Seed 1. See Vol. iv. 175 to 180.*
895. MOMORDICA. *Style 1. Corolla monopetalous. Capsule trilocular, opening elastically.*
883. SECHIUM. *Style 1. Corolla monopetalous. Berry monospermous.*
898. BRYONIA. *Style 1. Corolla monopetalous. Berry polyspermous, unilocular.*
- c 4.

894. **TRICHOSANTHES.** *Style 1.* *Corolla monopetalous, ciliate. Berry polyspermous, trilocular.*
897. **CUCUMIS.** *Style 1.* *Corolla monopetalous, quinquesid. Berry polyspermous, trilocular.*
896. **CUCURBITA.** *Style 1.* *Corolla monopetalous, quinquepartite. Berry polyspermous, trilocular.*
899. **MURICIA.** *Style 1.* *Corolla pentapetalous. Berry unilocular.*

Order 2. DIGYNIA. Pistils styles or stigmata 2.

(1) *Flowers bracteate.*

851. **ALNUS.** *Pistils 2. Seeds 2, angular.*
850. **BETULA.** *Pistils 2 and 3. Seeds 2 and 3, winged. Bracteae trilobate. Obs. 8949.*
875. **CUPRESSUS.** *Pistils 2. Nuts 2, angular. Bracteae entire. Obs. 8961.*
874. **THUIA.** *Pistils 2. Nuts 2, winged. Bracteae entire.*
873. **PINUS.** *Pistils 2. Nuts 2, winged. Bracteae double.*
831. **MORELLA.** *Styles 2. Drupe. Nut bilocular.*

(2) *Germen superior. Flowers incomplete.*

920. **MYRICA.** *Styles 2. Berry monospermous. Calyx diphylloous. From M. Gale.*
843. **COMPTONIA.** *Styles 2. Nut. Calyx hexaphyllous.*

854. MORUS. Styles 2. Berry monospermous. Calyx tetraphylloous.
857. XANTHIUM. Styles 2. Capsule bilocular, birostrate, formed of the indurated calyx.
833. LIQUIDAMBAR. Pistils 2. Capsules 2, unilocular. Seeds winged.
856. NEPHELIUM. Pistils 2. Drupes 2. Calyx quadridentate.

(3) *Germen superior. Flowers complete.*

889. ALEURITES. Stigmata 2. Berry dicocous. Calyx trifid. Petals and nectaria 5.
861. ZIZANIA. Styles 2. Seed 1. Calyx diphyllous. Petals 2.
867. POTERIUM. Pistils 2. Capsules 2. Calyx quadridentate. Petals 4.

(4) *Germen inferior. Flowers incomplete.*

871. CORYLUS. Styles 2. Nut. Calyx diphyllous.

(5) *Germen inferior. Flowers complete.*

868. JUGLANS. Style bipartite. Drupe. Corolla quadripartite.

Order 3. TRIGYNIA. Pistils styles or stigmata 3.

(1) *Germen superior. Flowers incomplete.*

855. HEVEA. Stigmata 3. Capsule tricocous. Calyx quinquefid.
880. RICINUS. Styles 3, bifid. Capsule trilocular. Calyx tripartite.
860. AMARANTHUS. Styles 3. Capsule circumscinded, monosperminous.

847. *PHYLLANTHUS.* Styles 3, bifid. Capsule tricoccous. Calyx sexpartite. Nectarium with 12 teeth.

886. *SAPIUM.* Styles 3. Capsule tricoccous. Calyx semitrifid.

881. *AGYNEIA.* Styles 3. Capsule tricoccous and multilocular. Calyx hexaphylloous.

877. *CROTON.* Styles 3, bifid trifid and quadrifid. Capsule trilocular. Calyx decaphylloous pentaphylloous and quinquepartite.

852. *BUXUS.* Styles 3. Capsule trilocular, tristrate. Calyx polyphylloous.

(2) *Germen superior.* Flowers complete.

879. *IATROPHIA.* Styles 3, bifid. Capsule trilocular. Calyx pentaphylloous and quinquepartite.

(3) *Germen inferior.* Flowers complete.

866. *BEGONIA.* Styles 3, bifid. Capsule trilocular and bilocular, polyspermous. Calyx diphylloous and none. Petals 5, 6 & 4.

Order 4. *POLYGYNIA.* Pistils styles or stigmata many.

878. *TRIDESMIS.* Styles 15 to 20, in 3 fascicula. Capsule trilocular.

IV. *Stamina and pistils in the same flower. Stamina inserted into the pistil.*

Class 20. *GYNANDRIA.* Vol. iv. 285.

V. *Stamina and pistils in the same flower. Antherae united by their margins, forming a kind of cylinder.*

Class 19. SYNGENESIA. Vol. iv. 102.

Order 1. MONOGAMIA. All the flowers with stamens and a pistil. *Vol. iv. 102. 175.*

Order 2. POLYGAMIA SUPERFLUĀ. Flowers of the disc of the anthodia with stamens and a pistil, those of the circumference of the anthodia with a pistil. *Vol. iv. 175.*

Order 3. POLYGAMIA FRUSTRANEA. Flowers of the disc of the anthodia with stamens and a pistil, those of the circumference neutral with the rudiments of stigmata. *Vol. iv. 178.*

Order 4. POLYGAMIA NECESSARIA. Flowers of the disc of the anthodia with stamens and a pistil, with a clavate stigma, those of the circumference of the anthodia with a pistil with filiform stigmata. *Vol. iv. 179.*

VI. *Stamina and pistils in the same flower. Filaments united.*

Class 16. MONADELPHIA. Filaments united into one body. Vol. iii. 488.

Order 1. TRIANDRIA. Stamens 3. *Vol. iii. 488.*

Order 2. TETRANDRIA. Stamens 4. *Vol. iii. 488.*

Order 3. PENTANDRIA. Stamens 5. *Vol. iii. 488.*

Order 4. HEXANDRIA. Stamens 6. *Vol. iii. 489.*

Order 5. HEPTANDRIA. Stamens 7. *Vol. iii. 489.*

Order 6. OCTANDRIA. Stamens 8. *Vol. iii. 490.*

Order 7. DECANDRIA. Stamens 10. *Vol. iii. 490.*

Order 8. DODECANDRIA. Stamens 12 to 20. *Vol. iii. 492.*

Order 9. POLYANDRIA. Stamina more than 20.
Vol. iii. 492.

Class 17. DIADELPHIA. Filaments united
 into 2 bodies. *Vol.* iv. 1.

Order 1. HEXANDRIA. Stamina 6. *Vol.* iv. 1.

Order 2. DECANDRIA. Stamina 10. *Vol.* iv. 1.

735. ROBINIA. *Calyx* with 5 divisions and
 entire. *Legumen polyspermous.* *Obs.* 8976, from *R. violacea.*

Class 18. POLYADELPHIA. Filaments united
 into more than 2 bodies. *Vol.* iv. 81.

Order 1. DECANDRIA. Stamina 10. *Vol.* iv. 81.

Order 2. DODECANDRIA. Stamina 12 to 19. *Vol.* iv. 81.

Order 3. ICOSANDRIA. Stamina 20 and more, inserted into the inner side of the calyx. *Vol.* iv. 82.

Order 4. POLYANDRIA. Stamina 20 and more. *Vol.* iv. 82.

VII. *Stamina and pistils in the same flower.*
Stamina distinct.

Class 1. MONANDRIA. Stamina 1. *Vol.* i. 1.

Class 2. DIANDRIA. Stamina 2. *Vol.* i. 9.

Order 1. MONOGYNIA. Style or stigma 1. *Vol.* iv. 55.

837. LEMNA. *Style 1.* *Calyx monophylous diphylloous and none.*
Corolla none. *Capsule unilocular.*

Order 2. TRIGYNIA. Styles or stigmata 3.

Class 3. TRIANDRIA. Stamina 3. Vol. i. 85.

Order 1. MONOGYNIA. Style or Stigma 1.

Order 2. DIGYNIA. Styles or stigmata 2.

844*. ANDROPOGON. Styles 2. Bracteae none. Calyx diphylous. Petal 1, linear. Arista between the inner phyllum and the germen. Seed 1.

Class 4. TETRANDRIA. Stamina 4, of the same length. Vol. i. 187.

Order 1. MONOGYNIA. Style or stigma 1.

Order 2. DIGYNIA. Styles or stigmata 2.

Order 3. TETRAGYNIA. Styles or stigmata 4.

Class 14. DIDYNAMIA. Stamina 4, 2 of which longer than the other 2. Vol. iii. 279.

Order 1. GYMNOSPERMIA. Seeds naked. Vol. iii. 279.

Order 2. ANGIOSPERMIA. Seeds in a seedvessel. Vol. iii. 283.

Class 5. PENTANDRIA. Stamina 5. Vol. i. 244.

Order 1. MONOGYNIA. Style or stigma 1. Vol. i. 244.

Order 2. DIGYNIA. Styles or stigmata 2. Vol. i. 257.

Order 3. TRIGYNIA. Styles or stigmata 3. Vol. i. 264.

Order 4. TETRAGYNIA. Styles or stigmata 4. Vol. i. 265.

Order 5. PENTAGYNIA. Styles or stigmata 5. Vol. i. 266.

300*. CORIARIA. Petals 5. Capsules 5, monospermous.

Order 6. POLYGYNIA. Styles or stigmata more than 5. Vol. i. 266.

Class 6. HEXANDRIA. Stamina 6, of the same length. Vol. i. 195.

Order 1. MONOGYNIA. Style or stigma 1. Vol. ii. 195.

96. GLEDITSIA. Calyx quadrifid. Petals 4. Legumen.

Class 1.

MONANDRIA.

Order 1.

MONOGYNIA.

1. *Flowers inferior.*

3. SALICORNIA. *Corolla* none. *Calyx* entire, ventricose.

2. *Flowers superior.*

2. MARANTA. *Calyx* triphyllous. *Corolla* multipartite. *Style* terete, recurvate at the end. *Obs.* 6847.

1. CANNA. *Calyx* triphyllous. *Corolla* multipartite. *Style* linear. *Obs.* 8209.

MONOGYNIA.

1. C A N N A.

Calyx superior, triphyllous. *Corolla* multipartite; segments incumbent; outer limb of 3 segments. *Anthera* sessile, inserted into the corolla. *Style* linear. *Capsule* with 3 cells. *Obs.* 6847. *L.—Roscœ in linn. trans.* viii. 338. *t.* 20. *f.* 1.

1. *CANNA ellipticifolia*. Leaves elliptic, with patent veins. *Obs.* 6847.
- C. indica*. *L. sp.* 1. *Hort. kew.* i. 1.
- Cannacorus*. *Rumph.* v. 177. t. 71. f. 2. Segments of the corolla entire.
- C. indica rubra*. *Beysl. aut. ord.* ii. t. 1. Segments of the corolla entire.
- Arundo indica florida latifolia*, sive *Canna indica*.
Hist. o.x. s. 8. t. 14. f. 1.
(Meeru. *Marcgr. bras.* 4, has paniculate flowers.)
- TOZCUITLAPIL XOCHITL.** *Hernand.* 282.
- ꝝ *rubra*. The whole of the flower reddish. Leaves elliptico-ovate. *Hort. kew.* i. 1.
- C. indica, flore rubro*. *Park. parad.* 376. t. 381. f. 1.
- Katu Bala. *Rheede* xi. 85. t. 43. Two of the segments of the corolla bifid at the end.
- Arundo florida*. *Ger. by Johns.* 39.
- Arundo indica latifolia*. *Bauh. J.* ii. 489. No fig.
- ꝝ *lutea*. Inner petals erect, yellow. The revolute segment of the nectarium with reddish lines. Leaves ovato-elliptic. *Hort. kew.* i. 1.
- C. indica, flore flavo punctato*. *Park. parad.* 376.
- Arundo indica latifolia, flore luteo punctato*. *Bauh. J.* ii. 490. No fig.
- Arundo florida*, having yellow flowers with red spots.
Johns. in Ger. by Johns. 39. No fig.
- ꝝ *coccinea*. Inner petals erect, scarlet. The revolute segment of the nectarium yellow, with reddish lines. Leaves ovato-elliptic. *Hort. kew.* i. 1.
- Calyx* erect, longer than the germen; phylla ovate, incumbent, the outer rather obtuse, the 2 inner acute, the intermediate one the longest, the innermost somewhat longer than the outer and somewhat shorter than the intermediate one. *Corolla supo-*

rior, octopartite and septempartite, with 2 limbs; segments obliquely and obsoletely emarginate at the end; outer limb of three segments; segments lanceolate, straight, erect, canaliculate, nearly equal, inserted at different heights into the inner limb, whitish purplish or yellowish and greenish above, the innermost spotted above with red; inner limb $1\frac{1}{2}$ as long as the outer, of 5 and 4 segments, somewhat bilabiate, the upper lip formed by the 3 or 2 outer segments, and the lower by the 4th segment; the outer segment when present somewhat smaller than the 2 next, scarlet, the 2 next scarlet, nearly equal, patulous, lanceolate, unequal at the base, one margin being lower, the 4th larger, elliptic below, linear above, orange coloured with scarlet spots and a scarlet margin, the 5th similar to the 4th, but smaller, bearing the anthera. *Anthera* in an unexpanded flower appearing as if growing from the margin of the 5th segment, but in the expanded flower appearing like a true stamen, whose filament was wholly consolidated with the petal. *Obs. 2721.*

♂ *patens*. *Hort. kew.* i. 1. Three outer segments of the inner limb of the corolla curvate, scarlet, the 4th revolute, yellow with red spots. *Obs. 6847.*

In Mr. Sitwell's garden.

C. *indica*. *Curt. mag. t. 454.*

Stem $2\frac{1}{2}$ feet long, erect. *Germen* ovali-turbinate, minutely tuberculate. *Calyx* permanent; phylla ovate, erect, incumbent, membranaceous at the margin, the outermost half as long again as the gerumen. *Corolla* superior, deciduous, octopartite; outer limb of 3 segments; segments lanceolate, acute, erect, inserted a little way above the gerumen, yellow below, greenish above, reddish at the margin; inner limb of 5 segments, the 3 outer reddish

scarlet, forming a kind of upper lip, erect and linear below, spatulato-lanceolate and recurvate above; the 4th forming a kind of lower lip, revolute, yellow below, above yellow with short longitudinal red lines; the 5th linear, erect, yellow with short longitudinal red lines, standing midway between the 2 lips. *Stamen* 1. *Filament* growing to the outer margin of the 5th petal. *Anthera* sessile, inserted into the outer margin of the 5th petal, bilocular. *Style* linear, adhering below to the corolla, rather obtuse at the end, yellow below, reddish and shining above. *Pollen* white, adhering to one of the sides of the upper end of the style. *Obs.* 6847.

2. MARANTA.

Calyx superior, triphyllous. *Corolla*, outer limb trifid; inner limb tripartite. *Anthera* sessile, inserted into the margin of the upper segment of the inner limb of the corolla. *Style* simple, recurvate at the end. *Capsule*. *Obs.* 8479, the account of the corolla and anthera from *Swartz. obs. 7. L.—Roscoe in linn. trans. viii. 339. t. 20. f. 2.*

1. MARANTA *malaccensis*. Stem herbaceous, simple. *From authors. L. a Willd. i. 14. Burm. GALANGA malaccensis. Rumph. v. 176. t. 71. f. 1.*
 2. MARANTA *arundinacea*. Stem herbaceous, branched. Leaves ovato-lanceolate, slightly pilose underneath. *L. a Willd. i. 13. L. sp. 2. Hort. kew. i. 3. Swartz. obs. 8. Cultivated in the West Indies.—Salisb. R. allert. 5. Roscoe in linn. trans. viii. 339.*
- Maranta. Browne 112. Cultivated in gardens.—Royen 11.

Canna indica, radice alba alexipharmacæ. *Sloane cat.* 122, cultivated in gardens in the West Indies, and said to be a native of Dominica; *hist. i.* 253. *t. 149. f. 2.* A leaf. Introduced into Jamaica from Barbadoes, and into Barbadoes from Dominica.

Leaves nervose, slightly pilose underneath towards the base; with transverse veins between the ribs, not readily discernible without a microscope. *Calyx* green; *phylla ensiformi-oblong*, erect, longer than the germen. *Corolla* thin, twice as long as the germen. *Stigma* angular. *Capsule* oval, not yet ripe, trivalve, monospermous. *Seed* oblong, nearly as long as the capsule. *Obs. 8209.* Specimen gathered by Dr. Wright in Jamaica.—*Leaves*, the costa underneath at the base pilose. *Obs. 8210.* Specimen gathered in Fothergill's garden.

MARANTA arundinacea. *Wright in med. journ. viii. 269.* *Swartz. obs. 8.* *Clark, James in med. facts vii. 301.* *Lempriere ii. 223, 233.* *Murr. J. i. 388.*

Class 2.

DIANDRIA.

Order 1.

MONOGYNIA.

1. *Flowers inferior, monopetalous, regular.*

7. OLEA. *Corolla quadrifid; segments subovate. Drupe. Nut osseous, unilocular and bilocular, with 1 and 2 seeds. Vahl.*
8. CHIONANTHUS. *Corolla quadrifid; segments linear. Drupe. Nut monospermous. Obs. 8449.*
6. PHILLYREA. *Corolla quadrifid. Drupe. Nut bilocular, of a paper-like texture. Seeds solitary. From Vahl.*
5. LIGUSTRUM. *Corolla quadrifid. Berry bilocular. Seeds solitary. Obs. 3408.*
9. SYRINGA. *Corolla quadrifid, infundibuliform. Capsule bilocular. Seeds solitary. Obs. 1792.*
11. BOERHAVIA. *Corolla quinquedentate, or entire, inserted into the calyx. Seed 1.*
4. JASMINUM. *Corolla with from 5 to 8 divisions. Berry dicoccous and bilocular, or globose with 1 cell. Seeds solitary. Obs. 4277.*

2. *Flowers inferior, monopetalous, irregular. Capsule.*
18. VERBENA. *Corolla quinquefid. Capsule unilocular, very thin.*
13. VERONICA. *Corolla quadrifid; lower segment narrower. Capsule bilocular, quadivalve.*
15. GRATIOLA. *Corolla quadrifid and quinquefid; segments slightly unequal. Calyx pentaphyllous. Stamina 4, 2 mostly without antherae. Capsule bivalve. Obs. 5305.*
16. CARANGA. *Corolla shorter than the calyx; lower lip broader. Calyx diphyllous. Capsule bivalve, polyspermous. From Vahl; and Jussieu.*
14. JUSTICIA. *Corolla bilabiate. Capsule bivalve, opening elastically; dissepiment contrary. Obs. 6872.*
17. PINGUICULA. *Corolla ringent, with a spur. Calyx quinquefid. Capsule unilocular. Obs. 4866.*
3. *Flowers inferior, monopetalous, irregular. Seeds naked, 4.*
19. LYCOPUS. *Corolla quadrifid; upper segment broader, emarginate.*
24. COLLINSONIA. *Corolla unequal; lower lip multifid. Seeds 4, 3 abortive. Obs. 717.*
20. CUNILA. *Corolla ringent; upper lip erect, flat, emarginate. Stamina 4, 2 without antherae. From Vahl.*
21. MONARDA. *Corolla ringent; upper lip linear, entire. Obs. 3084.*

22. ROSMARINUS. *Corolla* ringent; upper lip bifid.
Filaments with a tooth.
23. SALVIA. *Corolla* ringent. *Filaments* fixed
transversely to a pedicle. *Obs.* 5265.
4. *Flowers inferior, tetrapetalous.*
10. FRAXINUS. *Corolla* tetrapetalous or none. *Calyx*
quadripartite or none.
5. *Flowers superior, monopetalous.*
25. KAEMPFERIA. *Calyx* obsolete. *Corolla*, outer limb
tripartite; 2 of the segments of the
inner limb ovate, the third bipartite.
From L.
26. CURCUMA. *Calyx* monophyllous. *Corolla*, up-
per segment of the inner limb with
4 horns. *From Jacq.*
27. ZINGIBER. *Calyx* monophyllous. *Corolla*,
outer limb tripartite; inner limb
bilabiate; upper lip undivided,
extended beyond the insertion of
the antherae; lower lip tripartite.
Capsule. Obs. 3257.
28. COSTUS. *Calyx* monophyllous. *Corolla*, outer
limb tripartite; inner limb bilabi-
ate; upper lip extended beyond the
insertion of the antherae; lower
lip trilobate. *Capsule. From*
Swartz and Roscoe.
29. HEDYCHIUM. *Calyx* monophyllous. *Corolla*, outer
and inner limb tripartite. *Anthe-
rae terminal. From Lamark and*
Roscoe.

30. RENEALMIA. *Calyx* monophyllous. *Corolla*, outer limb tripartite; inner limb bilabiate. *Antherae* adhering to the upper end of the middle segment of the upper lip. *Berry* trilocular in the middle. *Obs.* 7168.

31. GLOBBA. *Calyx* monophyllous. *Corolla* trifid. *Capsule*. *From L.*

6. *Flowers superior, dipetalous.*

12. CIRCAEA. *Calyx* diphylloous.

7. *Flowers naked.*

Fraxinus excelsior. 10.

Order 2.

T R I G Y N I A.

32. PIPER. *Calyx* and *Corolla* none. *Berry* monospermous. *L.*

10. FRAXINUS.

Calyx quadripartite, or none. *Corolla* tetrapetalous, or none. *Stamina* inserted into the receptacle. *Seed* oblong. *Obs. 235. L.*

Flowers in some species hermaphrodite; in *F. excelsior* hermaphrodite in one plant, male in another and female in a third. *Obs. 235.*

Petals in *F. ormus* most clearly distinct, inserted into the receptacle opposite to the sinus of the calyx. Seed in *F. excelsior* not a capsule, but as truly a seed as a hazle nut or caraway seed, consisting of a lanceolate kernel inclosed in a flattened coriaceous coat, extended outwards into a lanceolate wing-like border. The kernel is connected to the coat by an umbilical cord. *F. ormus* and *excelsior* appear to me to belong clearly to one genus, but why Linnæus and Bernard Jussieu have arranged it with Jasminum, Syringa, Ligustrum, &c. in his natural order of *Sepiariae* I do not comprehend, unless from the number of stamens and the external resemblance between the corolla of *Fraxinus Ormus*, & *Chionanthus*. M. Jussieu has followed their example, but suggests its connection with *Acer*, with which it seems to be really allied.

1. FRAXINUS *excelsior*. Folioles serrate. Petals none.

Geoffr. iii. 495. *Herm.* 210. *Lew.* i. 441; *disp. by Rother.* 161. *Linn.* 267. *Mill. Jos.* 203. *Murr.* iii. 535. *Schoepf* 154. *Spielm.* 215. *Vog.* 169. 280. *Fordyce, G. pract.* 156. *Ploucq. bibl.* i. 484. *Swiet.* iv. 258.

F. excelsior. *Coste & Willemet in med. comment.* v. 298. *div. 2 & 3.* *Lind. hot clim.* 314. *Schreger account from in med. comment. dec. II.* viii. 151.

\S *pendula*. Leaves pinnate. Branches pendent. *Hort. kew.* iii. 445 β Near Gamlingay, Cambridgeshire.

Martyn ap. Smith brit. 13 β *Relh. ed. ii.* 5 β

γ *diversifolia*. Leaves simple and teruate. *Obs.* 6460. In Mr. Sneyd's garden.—*Hort. kew.* γ

δ *simplicifolia*. Leaves simple. *Obs.* 8186. In a plantation.

F. excelsior. β *Bot. arrang.* 1151.

ε *rotundifolia*. Leaves pinnate; folioles obovato-elliptic, and elliptic. *Obs.* 5388. Specimen without flowers or fruit, gathered in the Paris garden; compared with a specimen in the herbarium of Sir Joseph Banks, marked in Prof. Jacquin's hand writing, "F. Manna. Sub hoc titulo missa ex Hort. Argent." and with another the only one in flower, marked "Hort." introduced into the herbarium since the death of Solander.

F. rotundifolia. *Mill. Ph. dict.* n. 2. *Solander ap. Hort. kew.* iii. 445, who characterises it as having petals, but in the only specimen in flower in Sir Joseph Banks's herbarium the flowers are without petals. Is this variety liable to vary in this par-

ticular, or are *F. excelsior* and *F. Ornus* both liable to a similar variation in the shape of the folioles?

F. alepensis. *Pluk. alm.* 158. *t.* 182. *f. 4,* a good figure. He refers to the synonyms of Herm. and the Bauhines here quoted, and adds that it was commonly known by the name of the Manna tree, "Mannae arbor vulgo."—*Herm. hort. lugdb.* 261, who says he received the plant from England, from Watts, and that it is smaller and lower than *F. excelsior*, and that the folioles are rounder.

F. rotundiore folio. *Bauh. Casp. pin.* 416. *Bauh. J. i. b.* 177. *Boerh. ii.* 172. *Raii hist.* 1703.

MANNIFERA ARBOR. *Dale* 332.

2. FRAXINUS *Ornus.* Folioles serrate, oblongo-elliptic, acuminate, petiolate. Flowers with petals. *Obs.* 5389. Specimen gathered in Fothergill's garden.—*Hort. kew.* iii. 445. *L. sp.* 1510. *Host.* 548. In Litorale and Istria. *Woodv.* i. 104. *t.* 36. *Gouan. hort.* 521. *Mill. Ph. dict. n.* 3. *Ferber's trav. in Italy* 212. On the road from Rome to Civita Vecchia and about Tolfa, and at the latter place Manna collected, as it is on Monte Genaro, in the Apennines near Tivoli and at Arienza near Naples. In this excursion Ferber was accompanied by Guettard.

F. florifera. *Scop. carn. n.* 1250.

F. paniculata. *Mill. Ph. dict. n.* 4, is probably as Reichard thought a male plant of *F. Ornus*.

F. floribus completis. *L. ups.* 304. *Royen* 396.

F. humilior, sive altera Theophrasti, minore and tenuiore folio. *Boerh. ii.* 172.

Oraus. *Dalech.* 83, *cop. in*

F. tenuiori et minori folio. *Bauh. J. i. a.* 177, may have been intended for it. (J. Bauhine's description belongs probably to some variety of *F. excelsior* with narrow folioles, found on mountains in the neighbourhood of Lyons)

G. vulgaris. *Park. theatr.* 220.

Stem 14 inches long, erect, slightly compressed, the compressed sides convex, the intermediate sides canaliculate. Leaves ovato-lanceolate, opposite, semiamplexicaul, longer than the internodia, serrate above, trinervose, below septemnervose, obscurely dotted. Peduncles filiform, axillary, solitary, only 1 at a joint, with a shoot in the opposite axilla. Bracteae 2, of the same shape as the leaves, shorter than the peduncle, inserted at the base of the calyx below the 2 lateral of the 3 uppermost phylla, obsoletely serrate. Calyx one third shorter than the bracteae; phylla ensiform, unequal, the uppermost the longest, the 2 lowermost just sensibly shorter, the 2 lateral ones just sensibly shorter than the 2 lowermost. Corolla nearly thrice as long as the calyx, just sensibly ascending at the end; tube tawny with purplish brown lines, angular; limb quadripartite, purplish flesh-coloured; segments oblong, the uppermost roundish oblong, slightly emarginate, villose within at the base with capitate villi. Stamina 2 perfect, 2 barren; the 2 perfect ones inserted at the base of the uppermost segment about the middle of the tube, short; the 2 barren ones at the base of the tube below the lowermost segment, half as long as the corolla. Nectarium a glandular yellow ring surrounding the base of the germen. Ger-

men superior, ovate, attenuate, bilocular. *Stigma* ovate, slightly concave, oblique. *Obs.* 8132. July, August.

Native of Italy and Switzerland, and of France and Germany as far north as Paris and Bremen.

Native of the south of Europe.

✉ *viridis.* Leaves green. *Obs.* 7945.

Green Sage. *Mill. Ph. dict. n.* 1. *var.* 1.

Leaves sprinkled with minute white globules, oblongo-lanceolate, ovato-oblong, sometimes ovate, generally unequal at the base, crenulate, blantish, whitish green. Stem whitish green, villose. *Calyx* slightly woolly, with numerous minute globular glands; upper lip semitridid, the middle segment shorter and broader than the other 4; lower lip more deeply divided than the upper; pentagonal, costate; ribs, 3 between the two lowermost angles, 1 between the uppermost angle and each of the lateral angles, and 2 between the lateral angles and the lower angle of each side. *Corolla*, lower lip entire. *Germina* 4, oval-roundish, on a receptacle. *Receptacle* turbinate-subrotund, fleshy, a little prominent on the lower side, with 4 obsolete teeth. *Obs.* 7945.

✉ *rubra.* Leaves reddish. *Obs.* 7946. In a garden.

Red Sage. *Mill. Ph. dict. n.* 1. *var.* 4.

Stems reddish dirty purple, pubescent. Leaves ovate, midrib and veins on the upper surface reddish dirty purple, crenulate, purplish green. *Calyx* bi-

labiate; upper lip semitrifid, the middle segment as short again as the other two, and not so tapering. Corolla purplish blue; lower lip obcordate, dotted towards the base with minute dots of a deeper purple; throat with a whitish purple line running along the middle. Obs. 7946.

γ *absinthites*. (Variation.) Leaves tasting somewhat like Wormwood. Obs. 7947. Specimen from an old herbarium formed in England.

S. minor, aurita & non aurita. *Boerh.* i. 166.
 Stems woody at the base, ascending. Leaves oblongo-lanceolate, rugose, with white sessile globules. Flowers verticillate, generally 6 in a whorl. Peduncles upright, not half so long as the calyx. Calyx very slightly compressed, semiquinquefid, scarcely bilabiate, ribbed; ribs numerous, elevated, slightly villose, the spaces between sprinkled with greenish globules; upper lip semitrifid. Corolla bluish purple, twice as long as the calyx, pubescent without; tube thrice as short as the calyx, slightly compressed, whitish; throat wrinkled, slightly keeled above, depressed underneath, twice as long as the tube, closed

within at the base by a circle of whitish hairs; *upper lip* oblong, straight; *lower lip* nearly twice as long as the upper, marked with 2 oblong club-shaped white blotches irregularly dotted with purple; lateral segments reflected, oblong, with a minute obsolete tooth at the end; middle segment obovate, with 2 blotches of a deeper hue at the base. *Stamina* 4, in 2 pairs, each pair supported by a common filament. *Common filaments* 2, from the lower side of the throat near to where it joins the base of the upper lip, whitish, supporting a cross arm like the top of a crutch; *partial filaments* 2 to each common filament, one bowed upwards, the other downwards, each supporting an anthera. *Antheræ* 4, oblong, of one cell, all containing pollen, in pairs, 2 above 2, the upper larger; the lower smaller and connected laterally to each other. *Pollen* white. *Rudiments* of 2 other stamens at the upper side of the throat, just below the junction of the throat and upper lip. *Filaments* very short, whitish, with an obsolete tooth analogous to the cross arm of the perfect stamena. *Antheræ* generally purple, sometimes white, sometimes containing white pollen, in one instance adhering to one of the lower pair of perfect antheræ. *Germina* 4, roundish, green, on a receptacle. *Receptacle* turbinate-subrotund, fleshy, purplish, gibbous on the lower side, with 4 obsolete teeth. *Style* somewhat shorter than the upper lip. *Stigma* cloven, the upper segment as small again as the lower. *Obs.* 5264.

Zingiberis ficta icon. *Lob. ic. i. 70, repr. in Ger. by Johns. 61, is a fig. of the dried root with leaves added by the artist.*

Leaves lanceolate; slightly pilose underneath towards the base; margin glabrous; ribs and veins longitudinal, without any transverse ones. Obs. 8210.

Specimen gathered in Fothergill's garden, under the name of Cultivated Ginger.—Leaves linear-lanceolate, attenuate, acute, slightly pilose underneath towards the base; ribs and veins longitudinal, without any transverse veins; margin glabrous. Obs. 8211.

Specimen gathered in Fothergill's garden under the name of Wild Ginger.—Scapus 6 inches long, solid, jointed, bracteate. Bracteae of the scapus oblong,

rounded at the end with a very short acumen, nitid on the inner surface, scariose at the margin, vaginant for about one fourth of their length. *Spike* oblong, aromatic. *Bracteae* in pairs; *outer* subrotundo-oval, scariose at the margin, concave, generally containing a clear insipid scentless water; *inner* ovato-oblong, semi-transparent, as long as the unexpanded flowers and just rising above the end of the outer bractea, opposite to the outer bractea. *Flowers* before they are expanded lanceolate, subulate at the end, slightly compressed, generally 2 together in the lower part of the spike, one of which often abortive, and in the upper part of the spike solitary; one of the 2 flowers somewhat smaller, the smaller enveloped in another transparent bractea; when expanded rising to half the length of the bractea above the end of the bracteae, scentless, opening in the evening and begining to wither by morning, one in a spike flowering at a time. *Calyx* transparent, wider than the tube of the corolla, cloven one third of the way on the inner side, the margin with a very shallow sinus on the outer side, and an obsolete angle on the lateral sides. *Corolla*, tube cylindrical, as long as the bracteae, whitish, and towards the end yellowish; *outer limb* palish tawny yellow, bilabiate; segments 3, nearly equal, marked with semi-transparent lines, the uppermost erect, lanceolate, concave, slightly incurvate, the 2 lower horizontal, linear-subulate, the ends from about one third of their length from the point hanging down; *inner limb* bilabiate, whitish tawny yellow and brownish crimson; *upper lip* as long as the outer limb, straight, incumbent on the middle segment of the lower lip, whitish below, the upper end above the antherae dark brownish red, margins embracing the style; *lower lip* tripartite; *middle seg-*

ment oblong-square, retuse, convex, below whitish tawny yellow marked with red, the end and sides deep brownish crimson with yellowish spots; *lateral segments* ovate, erect, brownish crimson with yellowish spots inserted between the segments of the outer limb, four times as small as the middle segment. *Antherae* inserted into the upper lip of the corolla, bilocular, white, separated by the narrow chink in which the style lies; cells bursting longitudinally. *Pollen* white. *Style* white, the end slightly inflected and perforated. *Obs.* 3257.

Browne 113.

Z. sylvestre minus, fructu e caulum summitate ex-eunte. Sloane cat. 61; hist. i. 165. t. 105. f. 1.
(*Alpina racemosa alba*, cannacori foliis. Plum. ic. 11. t. 20, is a different species.)

Leaves lanceolate, glabrous, entire at the margin; veins large and small longitudinal, with transverse veins. Flowers with semi-transparent dots. *Calyx* tubiformi-tubular, twice as long as the germen, semi-trifid, with about 10 ribs; segments patulous, semi-orbicular. *Corolla* nearly thrice as long as the calyx; outer limb tripartite; segments ovali-oblong, incumbent; inner limb bilabiate; lower lip semi-tripartite, middle segment unguiculate, lamina reniform, obsoletely trilobate, more than twice as broad as the segments of the outer limb and somewhat shorter, veined; lateral segments very small, three times shorter than the middle segment, some times recurvate, appearing like 2 hooks; upper lip triangular, shorter than the lateral segments of the lower lip. *Antherae* 2, lanceolate, bilocular, parallel, syngenesious, united laterally but not by the margins of the valves, as long as and opposite to the lower lip. Obs. 5254.

ALPINIA racemosa. Wright in med. journ. viii. 221.

28. COSTUS.

Calyx superior, monophyllous. *Corolla*, outer limb tripartite; inner limb bilabiate; lower lip trilobate. *Antherae* 2, sessile, adhering to the upper lip of the inner limb of the corolla. *Capsule* with 3 cells and 3 valves. From Swartz obs. 3, and Roscoe in linn. trans. viii. 349. t. 20. f. 9. L.

Seems to differ from *Zingiber* merely in the lower lip being slightly trilobate and twice as long as the outer limb.

1. COSTUS *conicus*. Leaves glabrous. Petioles terete. Spike closely imbricate. *From Alpinia spicata.* Jacq. amer. I. t. 1; 8vo 1,

- P. semine nigro. Park. theatr. 1163. No figure.

Somewhat less than α in stalk, leaf, head, and chiefly in the fruit.

58. PANICUM.

Bracteae 2, mostly containing 2 flowers. *Calyx* diphyllous, that of the fertile flower mostly cartilaginous; that of the neutral flower sometimes monophyllous. *Obs. 6557. L.*

When there are 2 flowers the uppermost is mostly neutral, sometimes male as in *P. polygamum*, and *P. hordeaceum*. *Obs. 6559.* Specimen gathered by Broughton in Jamaica.—The neutral and male flowers are of a texture similar to that of the bracteae. To be convinced of the justness of this view of its structure, which was conjectured by Jussieu as early at least as the year 1782, it will be necessary to examine *P. polygamum*, where what Linnaeus calls the third valve and that which in *Bot. arrang. 55*, I have described as a fourth valve, compose the flower which contains the stamens, while the pistil is protected by a cartilaginous calyx. In other species I had before suspected the fourth valve to be the rudiment of a second flower, from observing that its margins were folded back on the side facing the third valve, and not facing the lower flower. In *P. hirtellum*, I have not been able to discover the inner phyllum of the upper flower.

1. **PANICUM indicum.** Panicle cylindric, straight, aristate. *From Mill. Ph. dict. n. 3, and Browne. Panici americani sesquipedalis spica. Clus. hist. ii. 216, cop. in Bauh. J. ii. 441, &*

Panici indiani duae species. *Park. theatr.* 1140; the outer figure, *repr. in*

P. americanum spica longissima. Ger. by Johns.

59. PHLEUM.

Bracteae 2, equal, keeled. Calyx, phylla 2, unequal, membranaceous. Obs. 4406. Bot. arrang. 61. L.

Linnaeus's character of *calyx truncate* is taken from the appearance of the side view of the bracteae when closed, and is merely owing to the bracteae in some species being *obtuse with a mucro* instead of *gradually tapering into a mucro* as in species the most nearly allied to them.

- I. PHLEUM *africanum*. Spike cylindric, compact.
Peduncles triflorous, pilose. *Lour.* i. 61.

60. HOLCUS.

Bracteae 2, cartilaginous, containing 1 flower.
Calyx diphyllous, membranaceous; the outer
phyllum with a twisted arista inserted into the
back. *Obs.* 1498. *L.*

Male flowers interspersed. *Obs.* 1498.

Gramen aquis innatans. *Lob. ic.* i. 12, & *cop. in*

Gramen aquaticum cum longissima panicula. *Bauh. J.* ii. 490. *R. syn.* 412.

Gramen aquaticum, fluitans, multiplici spica. *Tourn. parl.* 273. 457.

Gramen paniculatum aquaticum fluitans. *Vaill. paris.* 92.

Flote Fescue Grass. *Stilingfl.* *t.* 10.

Stem ascending, to 4 feet long, compressed. Leaves ensiform, striate, $2\frac{1}{2}$ tenths of an inch broad, in drying conduplicate; margin obsoletely micro-

copically acuteate. *Panicle* straight, at first filiform and contracted, at length patent; branches in pairs; the longer branch when in flower divaricate, the other adpressed; when in fruit one patent, the other adpressed. *Spikes* lanceolato-linear, greenish, to 1 inch 1 tenth long, compressed. *Bracteae* obtuse, green with whitish shining membranaceous margins, the lower ovato-oblong. *Calyx*, the lower phyllum oblong, green, the end whitish shining and membranaceous, with 7 ribs. *Stamina* fallen off. *Obs.* 6358.

FESTUCA fluitans. *Bryant* 333. *Honck.* n. 467.

Krock. n. 159. *Pearson, R.* i. 85.

Mannæ semina. *Schreb. ap. Linn.* 268.

Mannæ grana. *Berg.* 47.

Manna Schwaden. *Spielm.* 21.

β *spicata.* Flowers in a compound spike. *Obs.* 458.

Near Worcester.

F. fluitans loliacea. *Huds.* 47. *Bot. arrang.* 101.

Gramen fluitans, locustis longis spicam aemulanti-bus. *Dill. ap. R. syn.* 412.

2. *FESTUCA indica.* Panicle contracted, erect. Spikes compressed, mostly aristate, with mostly 6 flowers. *Retz. obs.* iv. 21.

TSIAMA PULLU. *Rheede* xii. 75. t. 45.

64*. BROMUS.

Bracteae 2. *Calyx* diphylloous; with an arista inserted below the end of the outer phyllum. *Petals* 2, ovate, at the base of the germen. *Obs.* 4167.
L.

1. *Bracteae containing several flowers.*

1. **BROMUS secalinus.** Flowers imbricate, the lower shorter than the rachis. Spikes elliptic, with 10 and 11 flowers. Aristae erect. *Obs.* 6368. Specimen gathered in corn fields between Winkburn and Newark, Nottinghamshire. 15 Aug.—*Smith in linn. trans.* iv. 281; *brit.* 125; *engl. t.* 1171. *L. sp.* 112. *Bot. arrang.* 103.

Festuca culmo paniculato, spicis compressis ovatis.

L. lapp. n. 28.

BROMUS secalinus. *Krock. n.* 160.

α *pubescens.* Spikes pubescent. *Obs.* 6369. Specimen gathered by Mr. Ballard in Worcestershire.—*Bot. arrang.* β

Festuca spicis habitioribus, glumis incanis. *Dill. ap. R. syn.* 414. *n.* 8. *par.* 2.

Festuca graminea, glumis hirsutis. *Rudb. reliq.* 14. *t.*

Gramen gros montbelgardenium. *Bauh. J.* ii. 438. *Vaill. paris.* 95.

Gramen spica hirsuta, ad Gramen du gros accedens. *Tourn. paris.* 91.

Leaves hirsute above, pubescent underneath, *Petioles* glabrous. *Peduncle* glabrous. *Pedicles* pubescent. *Bracteae*, the lower with 3 and 5 ribs, the upper with 5 and 7. *Obs.* 6369.

β *glaber.* Spikes glabrous. *Obs.* 6368.—*Bot. arrang.* α

B. secalinus. *Lightf.* 1086.

Festuca avenacea, spicis habitioribus, glumis glabris. *R. syn. ed.* i. 192; *ed.* ii. 261; *ed.* iii. 414.

Gramen murorum Dalechampii. *Tourn. paris.* 90.

Gramen avenaceum segetale majus, gluma turgidiore. *Hist. ox. s.* 8. *t.* 7. *f.* 16.

*Gramen avenaceum, locustis majoribus squamatis,
segetale majus. Hist. ox. iii. 212.*

Aegilops, sive Festuca. Cam. epit. 927.

Stem 30 inches long, glabrous. *Leaves* hirsute above, pubescent underneath. *Petioles* glabrous. *Stipula* erose. *Panicle* 5 inches long. *Peduncles* mostly uniflorous, sometimes biflorous. *Spikes* elliptic, flat, an inch long, with 10 and 11 flowers; flowers patulous, distinct. *Bracteae* nervose, obsoletely scabrous, membranaceous at the margin; the lower ovate, 2 tenths of an inch long, with 3 and 5 ribs; the upper oval, rather acute, with 9 and 6 ribs, one fourth longer than the lower. *Calyx* when in fruit nearly terete, the lower phyllum oval, nervose with 7 ribs, obsoletely scabrous at the margin and on the outside, one fourth longer than the upper bractea, emarginate at the end, the teeth obtuse, connivent; arista straight, erect, about the length of the phyllum, inserted at an eighth of the length of the phyllum below the end; upper phyllum lanceolate, ciliate, just sensibly shorter than the lower. *Seed* oblong, nearly terete, as long as the calyx. *Obs. 6368.*

2. *BROMUS catharticus*. Panicle patent, erect, nearly simple. Spikes elliptico-lanceolate, striate, scabrous. Aristae short, straight. *Vahl. symb. ii. 22.*

*GRAMEN bromoides catharticum, vulgo Guilno.
Feuill. per. 705. t. 1, cited by Vahl.*

65. AVENA.

*Bracteae 2, containing from 2 to several flowers.
Calyx diphyllous, with a geniculate arista from*

the back of the lower phyllum. *Petals 2. Obs. 4992. L.*

In most of the species the arista is twisted, but in *A. uncinata*, and *odorata* it is not. In several species the arista is always or occasionally wanting.

1. Bracteae containing 2 flowers.

1. AVENA *elatior*. Panicle with 2 flowers, the hermaphrodite one without aristae, the male one with aristae. *L. sp. 117. Bot. arrang. 112. Curt. lond. iii. 6. t. 191. Fl. dan. t. 165*, the reduced fig. ill done.

Holcus avenaceus. Scop. carn. n. 1239. Sibth. ox. n. 126. Smith brit. 90. Wiggers.

2. *aqualis*.—Stem equal at the base. *Bot. arrang. 112. L. sp. 117 α*

A. *alba scotica*, semine simplici, pediculo laxo pendente. *Richardson ap. R. syn.* 389.

2. *Bracteae containing 2 and 3 flowers.*

3. AVENA *nuda*. Paniculate. Bracteae with three flowers. Calyces of the lower flowers aristate, glabrous. Receptacle about as long as the bracteae. Obs. 1516. Among oats near Worcester, 28 Sept. —L. a Murr. 122; sp. 118. Bot. arrang. 113. Curt. grass. 44. Hort. kew. i. 113. Hist. ox. iii. 209. n. 4. s. 8. t. 7. row 1. f. 4. Boerh. ii. 161. Lob. adv. 9. No figure; ic. i. 32, repr. in Ger. by Johns. 75, Dod. 502, and cop. with an omission of the aristae, in Park. theatr. 1134. Raii hist. 1254, where he asserts that the calyx adheres more firmly to the seed than in A. sativa; but in Camd. by Gibson 26, he says, the seeds are as it were naturally denuded of the husk.—Bauh. J. ii. 433.

Petioles pilose at the margin, that of the uppermost reaching nearly to the base of the panicle.

Panicle contracted, attenuate. *Flowers* erect, thrice as narrow as those of *A. sativa*. *Bracteae* sometimes with the rudiment of a fourth flower. *Calyces*, the uppermost without an arista. *Receptacle* sometimes longer than the bracteae. *Calyx*, the outer phyllum striate at the base, dotted on each side of the striae, bifid at the end. *Aristae* extended beyond the flowers, somewhat shorter than the bracteae, geniculate, green, scarcely twisted below the geniculation.

Obs. 1516.

AVENA nuda. Bryant 327.

66. ARUNDO.

Bracteae 2, with from 2 to many flowers. *Calyx* diphyllous, pilose at the base. *Obs. 1723. L.*

1. *Bracteae with more than 1 flower.*

1. ARUNDO *Phragmites*. Bracteae with 4 and 5 flowers. The lowermost flower without hairs at the base. *Obs. 1723.* Specimen gathered near Worcester.—*L. suec. n.* 105; *sp. 120. Bot. arrang.* 116. *Smith brit.* 144; *engl. t.* 401. *Pollich n.* 127. *Krock. n.* 185.

91. FAGARA.

Calyx quadrifid. Petals 4. Capsule simple, or didymous. Seeds one in a cell. From Gaertn. L.

1. **FAGARA Pterota.** Leaves pinnate; folioles emarginate. Spikes axillary. *Obs.* 8044. Specimen gathered by Broughton in Jamaica.—*L. sp.* 172; *amoen. v.* 393; *mant.* 331. *Hort. kew.* i. 161.

Pterota subspinosa, foliis minoribus per pinnas marginato-alatas dispositis, spicis geminatis alaribus. *Browne* 146. *t. 5. f. 1.*

Lauro affinis, jasmini folio alato, costa media membranulis utrinque extantibus alata, ligni duritie ferro vix cedens. *Sloane cat.* 137; *hist.* ii. 25. *t. 162,* has acute folioles, agreeing with the characters of *F. acuminata* of Swartz.

Leaves without aculei; folioles obovate, emarginate at the end; margin revolute, entire. *Obs.* 8044.

FAGARA. *Linn.* 56:

2. *FAGARA Piperita.* Folioles crenate, ovate. *From Kaempfer.*—*Hort. kew.* i. 161. *Lour.* i. 101: *L. sp.* 172, *from*

Piper japonicum. *Kaempf. amoen.* t. 893. Folioles acute; 5 pairs with an odd one.

FAGARA Piperita. *Thunb. jap.* 64; *trav.* iii. 62, 150; iv. 89.

3. *FAGARA octandra.* Folioles tomentose. *L. mant.* 40, *from*

Elaphrium tomentosum. *Jacq. amer.* 105. t. 71. f. 1, 2, 3; 8vo edit. 133. He says a glutinous balsam exudes from every part of the tree, but he does not even compare it to the Tacamahaca of the shops.

Tacamahaca americana, rosaceis foliis alata. *Seb.* 49. t. 48. f. 3. Peduncles axillary, distant. Leaves lanuginose; folioles 5.

Therebinthus americana, sorbi aucupariae foliis rachi medio appendicibus alata, arbor americana resinosa, foliis ad rosarium folia accendentibus. *Pluk. phyt.* t. 228. f. 7. Folioles 5.

TACAMAHACA in testa. *Berg.* 72, apparently on the authority of Des Marchais.

4. *FAGARA Elaphrium.* Leaves pinnate, glabrous; folioles oblongo-lanceolate, obtusely dentate. Petioles articulated, winged. Stamina 8. *L. a Willd.* i. 668.

Elaphrium glabrum. *Jacq. amer.* 106. *t. 71. f. 4,*

92. MONETIA.

Calyx quadrifid. *Petals 4.* *Berry bilocular;* cells monospermous. *L. a Willd.—Lherit.*

1. **MONETIA diacantha.** Spines opposite. Leaves pubescent. *L. a Willd.* i. 670, *from*
Amaranthoides indicum verticillatum, *parietariae*

hirsutis foliis, spinosum. *Pluk. alm.* 7. t. 133.
f. 3, &

TSJEROU KARA. *Rheede v.* 73. t. 37.

93. PTELEA.

Petals 4. Calyx inferior, quadripartite. Stigmata 2. Samara roundish, bilocular, monospermous.
Obs. 8380. L. a Willd. i. 670. L.

Flowers sometimes dioecious and sometimes polygamous. *L. a Willd. & L. a Schreb.*

1. *PTELEA trifoliata.* Leaves ternate. *L. sp.* 173.
Hort. kew. i. 162.

P. foliis ternatis. Gron. virg. 20.

Frutex virginianus trifolius, ulmi samaris. *Dill. hort.* 147. t. 122. f. 148.

Samara bilocular; one of the cells containing a seed. *Obs. 8380.* Specimen gathered in Fothergill's garden.

PTELEA trifoliata. *Schoepf* 15.

94. OLDENLANDIA.

Corolla monopetalous, quadrifid. Calyx superior, quadripartite. Capsule bilocular, polyspermous.
From L. gen. & Gaertn. 30.

In *L. a Murr.* 161, *L. a Willd.* i. 674, & *Hort. kew.* i. 163, read corolla monopetala, for corolla tetrapetala, an error which Linnaeus omitted to correct, on detecting the error adopted from *Plum. gon.* t. 36.

If this be, as Schreber in *L. a Schreb.* 820 suggests, the same genus with *Hedyotis*, those species described by Koenig as having 5 petals may retain the name.

1. OLDENLANDIA *depressa*. Stem diffuse. Leaves elliptic, petiolate, glabrous. Peduncles in pairs, axillary. *L. a Willd.* i. 675, from *NELATSJERA*. *Rheede* x. 61. t. 31, who describes it as having 4 petals.

95. SANTALUM.

Calyx superior, quadrifid. *Petals 4*, very small, inserted into the calyx. *Stigma* with 4 lobes. *Berry* with 1 cell and 1 seed. *From Roxb.—L.*

1. SANTALUM *myrtifolium*. S. album. *L. sp.* 497; *a Murr.* 164; *a Reich.* i. 344; *a Willd.* i. 691, where, as also in *L. a Reich.* the observations in *L. mant.* & *a Murr.* are omitted.—*Bauh. Casp. pin.* 392. *Burm. ind.* 87. *Woodv.* iv. 136. t. 264, from a specimen in the herbarium of Sir Jos. Banks.—*Lour.* i. 109. *Tab. ic.* 933, specimen of the wood.

Stems pubescent, brittle, mostly erect, to 2 feet long. Branches short. Leaves triplinervous at the base, upper surface slightly shining and slightly scabrous; young ones pubescent, at length nearly glabrous. Heads orbicular, axillary, sessile, in pairs, on the stem and branches, with frequently a young branch between them. Involucra generally with 7 flowers, tripartite; the lowermost segment lanceolate; the lateral ones deeply trilobate; segments subrotundo-ovate, the 2 lateral ones with 2 subrotundo-ovate appendages rising from the base. Flowers from 3 to 7 in each involucre; the female one solitary, in the center, at the base of the middlemost segment; and the hermaphrodite ones fertile, generally 3 in each of the lateral lobes, the middlemost flower of each set placed at the base of the middlemost lobe, and each of the remaining 2 at the base of the lateral lobes and supported on the sides by the appendages. Calyx greenish, tinged with purplish pink, villose, within lanuginose; that of the female flower ovate, acute, probably quadrifid, being easily separable into 4 triangulari-subulate segments cohering by villi and lanugo; slightly tetra-

gonous, as long as the segment of the involucrum at its base; that of the hermaphrodite flower campanulate, quadrifid, extending a little beyond the involucrum; segments triangulari-ovate, acute, concave. *Stamina* somewhat longer than the calyx. *Filaments* subulate, fleshy, with transverse rugae, bowed in before flowering. *Germen* shining. *Style* as long as the germen, crimson, caducous. *Stigma* crimson; hairs at the base longer and more patent than the rest.

136. IPOMOEA. *Capsule trilocular. Corolla infundibuliform. Stigma capitate.* L.
137. POLEMONIUM. *Capsule trilocular. Corolla, mouth of the tube closed by the base of the stamens. Stigmata 3.* Obs. 7103.
220. NERIUM. *Follicles 2. Corolla with a double limb. Seeds plumose.* Obs. 5913.
221. ECHITES. *Follicles 2. Corolla infundibuliform. Seeds pappose.*
222. PLUMERIA. *Follicles 2. Seeds with a membranaceous border.*
223. TABERNAEMONTANA. *Follicles 2, pulpy. Corolla hypocrateriform. Seeds naked.* L.
219. VINCA. *Follicles 2. Corolla hypocrateriform, Seeds naked.* Obs. 2705.
214. CERBERA. *Drupe monospermous. Nut bilocular, quadrivalve.* From L.
179. BUMELIA. *Drupe monospermous. Corolla quinquesfid; segments*

with a smaller segment on each side. *Nectaria* 5, inserted into the tube of the corolla. *From Swartz.*

175. CORDIA. *Drupe monospermous. Nut quadrilocular. Stigmata 4. Calyx growing to the drupe. Corolla infundibuliform. Obs. 8477.*
176. VARRONIA. *Drupe monospermous. Nut quadrilocular, and unilocular. Stigmata 4. Corolla tubular. Obs. 5582.*
211. RAUVOLFIA. *Drupe dispermous. Nuts bilocular.*
174. BOURERIA. *Drupe tetraspermous, separating into 4 parts. Nuts bilocular.*
168. IGNATIA. *Drupe polyspermous. Corolla infundibuliform; tube very long. Willd.*
173. ERETIA. *Drupe bilocular. Nuts bilocular, 2 in each cell.*
212. PAEDERIA. *Berry dispermous, inflated, brittle. L.*
167. STRYCHNOS. *Berry unilocular, with from 1 to 5 seeds, with a hard rind. Stigma capitate.*
196. LEA. *Berry unilocular, pentaspermous. Corolla quinquefid. Nectarium quinquefid. Stamina inserted into the nectarium,*

178. **SIDEROXYLOM.** *Berry unilocular, pentaspermous. Corolla decemfid, the inner segments connivent.*
195. **DARTUS.** *Berry unilocular, polyspermous, diaphanous. Corolla campanulate. Stigma quinquelobate. From Lour.*
171. **OPHIOXYLUM.** *Berry bilocular, didymous; cells monospermous. Corolla tubiform, quinquefid at the end. Calyx pentaphylloous. Obs. 7866.*
120. **TOURNEFORTIA.** *Berry bilocular, pierced at the end; cells dispermous. Willd.*
166. **CAPSICUM.** *Berry bilocular, juiceless. Corolla rotate. Antherae connivent. Obs. 6485.*
165. **SOLANUM.** *Berry bilocular. Corolla rotate. Antherae mostly coherent, and opening at the end by 2 pores. Obs. 6483.*
164. **PHYSALIS.** *Berry bilocular. Corolla rotate and campanulate. Antherae connivent. Calyx of the fruit inflated. Obs. 6048.*
162. **ATROPA.** *Berry bilocular. Corolla campanulate. Stamina distant, incurvate. L.*
170. **LYCIUM.** *Berry bilocular, polyspermous. Corolla tubular, closed by hairs.*
213. **CARISSA.** *Berry bilocular; cells disper-*

mous and tetraspermous. *Corolla* infundibuliform. Seeds compressed. *From authors.*

169. **CESTRUM.** Berry bilocular, polyspermous. *Corolla* infundibuliform. Seeds roundish. *Obs.* 5459.

163. **NICANDRA.** Berry trilocular, quadrilocular and quinquelocular. *Corolla* campanulate. *Calyx* quinquepartite, with 5 angles projecting backwards. *Obs.* 6047.

197. **ARGYREIA.** Berry quadrilocular, monospermous and dispermous. *Corolla* quinquepartite, pli- cate. *Calyx* pentaphyllous. *From Lour.*

177. **CHRYSOPHYLLUM.** Berry decemlocular. Seeds solitary. *Corolla* quinquefid. *Stigma* quinquecrenate. *Obs.* 5580.

4. Flowers monopetalous, superior. L.

141. **SAMOLUS.** Capsule unilocular, quinquevalve at the end. *Corolla* hypocrateriform. *Stigma* capitate. *L.*

156. **MUSSAENDA.** Capsule bilocular, polyspermous. *Calyx* quinquefid. Seeds in 4 rows.

145. **CINCHONA.** Capsule bilocular, bivalve, polyspermous. *Calyx* quin-

143. PORTLANDIA.

quedentate. *Dissepiment* inserted into the edges of the valves. *Obs.* 2556.

139. PHYTEUMA.

Capsule bilocular, bivalve, pentagonal; *dissepiment* inserted into the sides of the valves. *Calyx* pentaphylalous. *Obs.* 2312.

138. CAMPANULA.

Capsule trilocular, quinquelocular, and sexlocular, perforate. *Corolla* campanulate and rotate. *Stigma* trifid and quinquefid. *Obs.* 6501.

140. LOBELIA.

Capsule bilocular, trilocular, quadrilocular and quinquelocular. *Corolla* cloven longitudinally along the upper side. *Antherae* united into a cylinder. *Obs.* 2963.

144. SCAEVOLA.

Drupe monospermous. *Corolla* irregular, flabelliform, with a longitudinal fissure. *L.*

151. MORINDA.

Berry monospermous. *Stigma* bifid. *Corolla* infundibuliform.

149. PSYCHOTRIA.

Berry dispermous. *Corolla* hypocrateriform. *Stigma* bipartite. *Obs.* 8485.

150. ANTERURA. *Berry* dispermous. *Corolla* rotate. *Antherae* caudate. *Stigma* simple. *From Lour.*
148. VANGUERIA. *Berry* tetraspermous and pentaspermous. *Corolla* hypocrateriform; tube globular; throat hairy. *L. a Willd.*
147. CHIOCOCCA. *Berry* bilocular. *Seeds* solitary. *Corolla* infundibuliform. *Stigma* simple. *Obs. 5479.*
146. COFFEA. *Berry* bilocular. *Seeds* solitary, arillate. *Corolla* hypocrateriform. *Stigma* bipartite. *Obs. 7979.*
215. CANTHIMUM. *Berry* bilocular; cells monospermous. *Corolla* infundibuliform. *Stamina* not projecting.
216. GENIPA. *Berry* bilocular; cells polyspermous. *Corolla* infundibuliform. *Calyx* entire. *From Plum.*
217. GARDENIA. *Berry* unilocular, bilocular, and quadrilocular, polyspermous. *Corolla* infundibuliform and hypocrateriform. *Calyx* with 5 divisions. *From L.*
152. LONICERA. *Berry* bilocular and trilocular, polyspermous. *Corolla* unequal. *Stigma* capitate.
153. TRIOSTRUM. *Berry* trilocular; cells mon-

5. Flowers pentapetalous, inferior. L.
155. ERYTHRALIS. Berry decemlocular. Corolla rotate. Calyx quinquefolia dentate.
201. AEGICERAS. Capsule unilocular, univalve, monospermous, bowed. Calyx quinquesfid. Willd.
189. VIOLA. Capsule unilocular, trivalve. Corolla irregular, calcarate. Calyx pentaphyllous. Antherae coherent. Willd.
190. IMPATIENS. Capsule unilocular, quinquevalve. Corolla irregular, calcarate; petals 5 and 3. Calyx diphyllous. Obs. 5896.
142. NAUCLEA. Capsule bilocular, polyspermous. Corolla infundibuliform.
188. HOVENIA. Capsule trilocular; cells monospermous. Stigmata 3. From L. a Willd.
186. NEUHOFIA. Capsule trilocular, polyspermous. Calyx campanulate; tube permanent; teeth deciduous. From Lour.
185. CELASTRUS. Capsule trilocular; cells with 1, 2, and several seeds. Obs. 5614.
184. SCOPOLIA. Capsule berrylike, quinquelobed.

- cular; cells monospermous.
Stigma capitate. *L. a Willd.*
187. EUONYMUS. *Capsule* pentacoccus and tetracoccus; cells with 1 and 2 seeds. *Obs. 3735.*
188. CEANOTHUS. *Berry* dry, tricoccus; cells monospermous. *Petals* inserted into the calyx. *Obs. 5616.*
189. RHAMNUS. *Capsule* or *berry* with from 2 to 5 seeds. *Calyx* campanulate. *Petals* 5; 4, or none, inserted into the calyx. *Obs. 358.*
190. BOTRYA. *Berry* unilocular, monospermous. *Calyx* campanulate. *Style* none. *Stigma* concave. *From Lour.*
191. VITIS. *Berry* unilocular, with from 1 to 5 seeds. *Style* none. *Germen* quinquelocular and bilocular. *Obs. 6058.*
192. MANGIFERA. *Drupe* monospermous. *Calyx* pentaphylloous. *Stamina* 3 and 4 barren.
193. ZIZYPHUS. *Drupe* monospermous and disperous. *Nut* bilocular. *Calyx* monophylloous.
194. ELAEODENDRUM. *Drupe* monospermous. *Nut* bilocular. *Calyx* pentaphylloous.
195. VALKERIA. *Drupes* 5, monospermous. *Calyx* quinquepartite. *L. a Willd.*

6. *Flowers pentapetalous, superior.* L.

202. **LAGOECIA.** Seed 1. *Petals* with 2 horns.
Calyx with multisid segments.
182. **GOUANIA.** *Capsule* trilocular, cells monospermous. *Petals* inserted into the calyx.
194. **RIBES.** *Berry* polyspermous. *Petals* inserted into the calyx. *Style* bifid. L.
198. **HEDERA.** *Pomum* with from 3 to 5 cells. *Calyx* semisuperior. *Stigma* simple. Obs. 4176.

7. *Flowers incomplete, inferior.* L.

209. **GOMPHRENA.** *Capsule* monospermous, cut round. Obs. 5135.
206. **HERNIARIA.** *Capsule* monospermous, scarcely opening. *Calyx* quinquepartite. *Seed* orbicular, vertical. Obs. 6518.
204. **ILLECEBRUM.** *Capsule* monospermous, quinquevalve. *Calyx* pentaphylloous. Obs. 6513.
205. **POLIUM.** *Capsule* unilocular, polyspermous. *Calyx* decaphyllous. From Lour.
210. **CERATONIA.** *Legumen.* *Calyx* quinquefid. *Stamina* 5 to 7. Obs. 3275.

8. *Flowers incomplete, superior.* L.

154. **CONOCARPUS.** *Capsule* monospermous, not opening. *Calyx* quinquefid.

203. MUZA.

Berry trilocular. *Calyx* diphyllous. *Obs.* 5362. 8569.

Order 2.

D I G Y N I A.

1. Flowers monopetalous, inferior. L.

241. GENTIANA.

Capsule unilocular, bivalve.
Corolla rotate, campanulate,
infundibuliform and hypo-
crateriform. *Calyx* quinque-
partite. *Obs.* 4461.

240. SWERTIA.

Capsule unilocular, bivalve.
Corolla rotate, with nectari-
ferous pores at the base of
the segments. *Calyx* quin-
quepartite.

236. CRESSA.

Capsule unilocular, bivalve.
Corolla hypocrateriform; limb
reflex. *Calyx* pentaphyllous.

231. STAPELIA.

Follicles 2. *Corolla* rotate.
Nectaria stellate. L.

229. CYNANCHUM.

Follicles 2. *Corolla* rotate.
Nectarium cylindric. L.

226. PERIPLOCA.

Follicles 2. *Corolla* rotate.
Nectarium quinquefid; seg-
ments filiform at the end.
Obs. 5561.

228. ASCLEPIAS. *Follicles 2. Corolla rotate. Nectarium infundibuliform. Antherae bilocular. Pollen none. Glands 5, bilobate, filling the antherae. Obs. 3997.*
224. URCEOLOA. *Follicles 2. Seeds immersed in a pulp. Corolla urceolate.*
230. CEROPEGIA. *Follicles 2. Corolla infundibuliform. Nectarium, stamina, and pistil as in Asclepias. From Roxb.*
225. APOCYNUM. *Follicles 2. Corolla campanulate, with 5 triangular appendages at the base on the inner side. Nectaria 5, ovoid, glandular. Obs. 1373.*
227. PERGULARIA. *Follicles 2. Corolla hypocrateriform. Nectaria 5, semi-sagittate. L.*
2. *Flowers pentapetalous, inferior. L.*
239. HEUCHERA. *Capsule bilocular, birostrate. Petals inserted into the calyx. Willd.*
3. *Flowers pentapetalous, superior, dispermous, sessile or subumbellate.*
Calyx in this and section 4, 5 and 6 frequently obsolete.
242. ERYNGIUM. *Seeds covered with scariose squamae. Calyx pentaphylloous. Obs. 4522.*

243. HYDROCOTYLE. *Fruit orbicular. Seeds semi-orbicular, united by their margins. Obs. 7849.*
246. ECHINOPHORA. *Seeds covered by the indurated involucellum. Marginal flowers barren; central flower sessile. From Juss.*
4. *Flowers pentapetalous, superior, dispermous, umbellate, with involucra and involucella.*
244. ASTRANTIA. *Flowers abortive. Involucra coloured; Fruit costate; costae serrate. Obs. 1675.*
260. HERACLEUM. *Flowers radiate, abortive. Fruit compressed, oval, emarginate. Seeds bordered, tricostate in the middle. Obs. 5149.*
267. OENANTHE. *Flowers radiate, those of the radius abortive. Calyx quinquepartite. Seeds crowned, striate. Obs. 4049.*
248. CAUCALIS. *Flowers radiate, abortive. Seeds hispid. Calyx quinquedentate. Obs. 675.*
249. ARTEDIA. *Flowers radiate, abortive. Involucrum pinnate. Fruit with a deeply crenate border.*
247. TORDYLIUM. *Flowers radiate, fertile. Involucrum simple. Fruit orbicular; border elevated, crenate. Obs. 4969.*

259. LASERPITIUM. *Flowers flosculose, abortive.*
Petals emarginate. Seeds with winged angles. Obs. 5038.
255. PEUCEDANUM. *Flowers flosculose, abortive.*
Seeds bordered, sulcate in the middle. Petals entire. Obs. 7725.
250. AMMI. *Flowers flosculose, fertile.*
Involucrum pinnate. Fruit striate. Petals emarginate.
252. CONIUM. *Flowers flosculose, fertile.*
Petals cordate. Seeds gibbose, costato-sulcate; costae crenate. Involucella dimidiate.
251. BUNIUM. *Flowers flosculose, fertile.*
Petals cordate. Involucella setaceous. Fruit ovate.
254. ATHAMANTA. *Flowers flosculose, fertile.*
Petals emarginate. Seeds ovato-oblong. Obs. 4660.
245. BUPLEURUM. *Flowers flosculose, fertile.*
Petals entire. Fruit slightly compressed, striate. Obs. 4657.
263. SIUM. *Flowers flosculose, fertile.*
Petals emarginate. Seeds costate. Obs. 4658.
253. SELINUM. *Flowers flosculose, fertile.*
Petals emarginate. Seeds flat, bordered, with 3 ridges in the middle. Obs. 5033.

266. CUMINUM. *Flowers flosculose, fertile.
Petals emarginate. Seeds tricostate, with 4 alternate hispid ridges. Obs. 7729.*
258. FERULA. *Flowers flosculose, fertile.
Petals entire. Seeds tricos-tate, flat. Obs. 7694.*
256. CRITHMUM. *Flowers flosculose, fertile.
Petals entire. Fruit oval, compressed, striate. From L.*
265. BUBON. *Flowers flosculose, fertile.
Petals lanceolate. Calyx quinquedentate. Fruit ovate, striate. From L.*
257. CACHRYS. *Flowers flosculose, fertile.
Petals entire. Fruit with a corklike rind. From L.*
261. LIGUSTICUM. *Flowers flosculose, fertile.
Petals entire. Seeds sulcate.
Obs. 7688.*
262. ANGELICA. *Flowers flosculose, fertile.
Petals entire. Seeds bordered, convex, with 3 membranaceous angles.*
264. SISON. *Flowers flosculose, fertile.
Petals entire. Seeds costate.
Obs. 6317.*

C. majus vulgare. Chom. 815. Ratty 160.

2. *CYNOGLOSSUM lucidum.* Corolla longer than the stamina, as long as the calyx. Leaves glabrous on the upper surface, scabrous underneath. Bracteae of the peduncles amplexicaul. Obs. 7115. Specimen gathered in the garden of Fothergill.

C. virginicum. L. a Murr. 186; sp. 193.

C. foliis amplexicaulibus ovatis. Gron. virg. 24.

C. foliis amplexicaulibus. Gron. virg. ed. i. 19.

(*C. virginianum* virenti folio, floribus et seminibus minoribus. Hist. ox. iii. 449. s. 11. t. 30. row 2. f. 9, is figured and described as having leaves attenuate at the base.)

Leaves oblongo-lanceolate, acute, sessile, the uppermost semiamplexicaul and amplexicaul; scabrous underneath with white spots composed of minute tubercles, with sometimes a hair proceeding from the center; hairs scattered along the costa. *Calyx*, segments oblong. *Corolla* about as long as the calyx; limb as long again as the tube, quinquefid; segments oblong; appendages one third as long as the limb. *Stamina* inserted into the tube of the corolla one third of the way below the appendages, opposite to the spaces between the appendages. *Seeds* echinate. Obs. 7115.

CYNOGLOSSUM. Schoepf 18.

114. PULMONARIA.

Corolla funnelshaped; throat open. *Calyx* with 5 divisions. Obs. 1319. L.

1. *Calyx as long as the tube of the corolla.* L.

1. PULMONARIA *maculata*. Calyces semiquinquefid, hirsute. Leaves of the barren stems elliptic and cordato-ovate. Obs. 5774. In a garden, when it had been in flower some time.—Obs. 8063. In a garden.

α *lanceifolia*. Leaves lanceolate. Obs. 4655. Specimen gathered in Fothergill's garden.

C. repens, flore minore caeruleo. *Bauh. J.* ii. 806,
stem and branches represented as nutant; *imit. in*
C. hortensis, rapunculi radice. *Hist. ox. s. 5. t. 3.*
f. 32.

Stem rigid like that of *Cichorium Intybus*, erect, from 9 to 30 inches long, pubescent, rough to the touch, rarely branched; branches 3, half as long again as the leaves. *Leaves*, the lower petiolate, the upper sessile, pubescent, rough to the touch. *Racemi* terminal, 4 to 14 inches long, leafy below. *Flowers* remote below, gradually more approximate upwards. *Peduncles* mostly shorter than the calyx, with 1 flower, the lower sometimes with 2 and 3 flowers. *Calyx* quinquepartite, pubescent; phylla ensiform, entire at the margin. *Corolla* obpyramidalis-campanulate, twice and a half as long as the calyx, with lanuginose hairs on the inside. *Germen* obpyramidal; hairs deflex, acute. *Style* scabrous. *Stigmata* 3. *Fruit* cernuous. *Capsule* with apertures at the base. *Obs.* 6890.—*Stems* erect, and bowed, 13 inches long. *Obs.* 6891. Specimen gathered between Ostend and Paris.

CAMPANULA rapunculoides. *Krock. n.* 315.

Rapi sylvestris quartum genus. *Dod. 165.* No figure.

3. *CAMPANULA latifolia*. Leaves serrate, ovate and elliptico-ovate. Peduncles of the fruit cernuous. Germen glabrous. *Obs.* 5872. Between Uttoxeter and Ashbourne.—*L.*—*Bot. arrang.* 218. *Huds.* 96. Near Holywell Flintshire. *Smith engl. bot.* *t. 302;* *brit. 236.* *Fl. dan. t. 782.*

Trachelium majus belgarum, sive *giganteum*. *Ger.* by *Johns.* 448, repr. from

Trachelium majus belgarum. *Clus. hist.* ii. 172, & *cop. in Park. theatr.* 643.

C. maxima foliis latissimis. *Raii syn.* 276.

C. pulchra a Tossano Carolo missa. *Bauh. J.* ii. 276. The hairs on the inside of the corolla too conspicuous.

Calyx superior; phylla 5, minutely serrate. *Corolla* blue. *Obs.* 5872.

Native of Sweden, the north of Germany, the northern parts of Britain, and southwards as far as Flintshire, Staffordshire, Bedfordshire, and Suffolk, on limestone, marle, gravel, and gritstone.

CAMPANULA latifolia. *Gough in bot. arrang.* ed. IV. ii. 239.

Native of Germany and Sweden.
- CAMPANULA Cervicaria.* *Krock.* n. 318.
3. *Capsules obpyramidal. Alternate segments of the calyx reflex.*
6. *CAMPANULA Medium.* Capsules with 5 cells. Stem erect, simple, leafy. Flowers erect. *L.*—*Mill. Ph. dict.* n. 3. *Roth germ.* ii. 258. *Hort. kew.* i. 223. *Krock.* n. 320.

Viola mariana. *Dod.* 163, *repr. in Ger. by Johns.* 448, *and abr. in Park. parad.* 354. *t. 355. f. 3.*

Viola mariana Dodonaei, quibusdam Medium. *Bauh. J. ii.* 804.

Floral leaves, the lowermost thrice as broad as the stem. *Panicle pyramidal.* *Peduncles,* the lowermost 6 times as long as the flowers, with from 4 to 6 oblong bracteae, the uppermost shorter than the flowers, with 2 bracteae. *Corolla campanulate, ventricose at the base, with short hairs along the lines in the middle of the segments, and long hairs on the inside; more than twice as long as the calyx.* *Obs.* 138.

VIOLA mariana. *Dale* 185.

7. **CAMPANULA edulis.** Stem branched, hispid. Leaves ovate, acute, serrate, sessile. *L. a Gmel.* ii. 350.

CAMPANULA edulis. *Forsk.* 44.

4. *Capsules columnar or prismatic.*

8. **CAMPANULA Speculum.** Capsules prismatic. Leaves oblong, subcrenate. Stem much branched. Segments of the calyx linear-lanceolate, and lanceolate, as long or nearly as long as the germin. *Obs. 135. L.—Hort. kew. i. 224. Curt. mag. t. 102.*

Speculum veneris. *Willich obs. 50, in n. 87. Ger. by Johns.* 439, *repr. from*

C. arvensis minima. *Dod.* 168, & cop. in *Avicularia Sylvii quibusdam.* *Bauh. J. ii.* 800, with the addition of a branch in fruit. Flowering branches represented as leafy and with only 1

flower. Hence it possibly might have been intended as Tournefort thinks for *C. hybrida*.

C. arvensis erecta. *Tourn. paris.* 252. *Vaill. paris.* 27, who remarks that it is generally decumbent.

Branches axillary, with 3 and 4 flowers. *Floral leaves oblong*, lanceolate, and lanceolato-linear. *Corolla* in some plants as long as the calyx. *Obs. 135*. Specimen gathered in a garden.—*Corolla* longer than the calyx. *Obs. 5410*. Specimen gathered in a garden by Mr. Hollebear.

CAMPANULA arvensis erecta. *Krock. n.* 324.

9. *CAMPANULA pentagona*. Stem very much branched. Leaves linear, acuminate. *From L.* —*Salisb. W.* 19.

C. Pentagonia. *L. sp.* 239. *Mill. Ph. dict. n.* 11. Lower leaves oblong, obtuse, those towards the ends of the branches narrower and pointed. Has been long in the English gardens.

C. pentagonia, flore amplissimo, thracica. *Boerh.* i. 248.

Speculum veneris flore amplissimo, thracicum. *Raii hist.* 742. Cultivated by Dent from seeds gathered by Covill in Thrace.

CAMPANULA Pentagonia. *Bryant* 59.

139. PHYTEUMA.

Calyx superior, pentaphyllous. *Corolla* rotate, quinquepartite; segments linear. *Stigma* bifid and trifid. *Capsule* bilocular and trilocular. *Obs. 4627. L.*

1. **PHYTEUMA orbiculare.** Head roundish. Leaves crenate and serrate, ovato-oblong, and lanceolate. Bracteae ovato-lanceolate. *Obs.* 4625. Specimen gathered in Surry on chalk.—*L. sp.* 242, who characterises the radical leaves as cordate. Judging from my specimens and Columnas figure, the cordate leaves are to be found only on the stems which are to flower the succeeding year.—*Jacq. austr.* v. t. 437. *Huds.* 97. *Bot. arrang.* 220. *Smith engl. bot. t.* 142; *brit.* 240.

Rapunculus folio oblongo, spica orbiculari. *Tourn. paris.* 527. *Vaill. paris.* 171.

Rapuntium montanum rarius corniculatum. *Col. ecphr. i.* 223. *t. 224, cop. in*

Rapuntium americanum, flore dilute caeruleo. *Boerh.* i. 250.

Rapunculus galeatus virginianus, flore violaceo majore. *Hist. ox. s. 5. t. 5. f. 55.*

Lactescent, acrid when chewed some little time, but not fiery as *L. longiflora*. Stem erect, angular, slightly hairy, leafy to the end, frequently with a purplish red tinge. Leaves lanceolate, slightly pubescent; margin serrato-dentate; teeth whitish at the ends, pointing different ways, irregularly placed, mostly alternate, sometimes several near together. *Racemus* terminating, leafy. *Peduncles* shorter than the calyx. *Bracteae* 2, awl-shaped, opposite, at the base of the calyx. *Calyx* more than half as long as the corolla, exceedingly similar to that of some of the Campanulas; segments sagittate, tapering at the end, reflected at the sides, sparingly dentate, slightly pubescent at the margin. *Petals*, the 2 smaller below separate from each other their whole length, and also from the larger below and above, but agglutinated by their edges to the edges of the larger one, so as to give it the appearance of a tube as Linnaeus has described it. The same structure takes place in all the other species which I have hitherto examined.

Capsule cells 2. *Obs.* 4217.

& pubescens. Specimen in Sir Jos. Banks's herbarium with the title of *C. officinalis* altera e regn. St. Fid. cum flore.

C. officinalis. *Lamb.* cinch. 16. t. 1, the upper panicle in fruit? or the lower?

Leaves, 2, one elliptic the other ovate. Petioles pubescent. Cymé pubescent. Capsule lanceolato-oblong, one third longer than that of α . This and *C. pubescens* I consider as varieties of *C. officinalis* differing only in the size of the fruit, and the greater or less pubescence of the leaves. Specimen above mentioned.

2. *CINCHONA pubescens*. Leaves elliptic, pubescent underneath. Capsules oblong. From Vahl in *kiobenhavn. naturhist. selsk.* i. 17. t. 2, cop. in *Lamb. cinch.* 21. t. 2, from a specimen gathered in Peru, and given to Vahl by M. Jussieu.

WHITE PERUVIAN BARK. Jussieu, Jos. account from in *med. journ.* iv. 306. Mutis, account from in *chir. rev.* vii. 99.

3. *CINCHONA macrocarpa*. Leaves elliptico-oblong, pubescent underneath. Calyx obsoletely dentate. From Vahl in *kiobenhavn. naturhist. selsk.* i. 17. t. 3, cop. in *Lamb. cinch.* 22. t. 3.

C. officinalis. L. nat. ii. 164; a Murr. 213, from specimens sent by Don Mutis, as evident from the description of the leaves and teeth of the calyx, and Vahl assures us that the specimen in the Linnaean herbarium is his *C. macrocarpa*.—L. fil. suppl. 144.

C. cortex peruvianus ruber. Woodv. 555. t. 201, from a drawing in the Linnaean herbarium said to have been sent to Linnaeus from America, but the calyx is represented as quinquefid.

Native of Santa Fe. Specimen in Sir Jos. Banks's herbarium from Don Ortega.

CINCHONA macrocarpa. Vahl translated in *Lamb. cinch.* 13.

2. *Segments of the corollu linear, glabrous. Stamina projecting beyond the tube of the corolla.*
4. CINCHONA *myrtifolia*. Peduncles axillary, uniflorous, solitary. Tube of the corolla somewhat longer than the limb. Obs. 6211. Specimen gathered by Broughton in Jamaica.
- C. caribaea. L. sp. 245; mant. 338, (where misprinted herbacea.)—Hort. kew. i. 228. Jacq. amer. 61. t. 179. f. 95, the fruit; 8vo ed. 78; obs. ii. 27. f. 47, cop. in pict. 35. t. 63, with the fruit.—Vahl in kiobenhavn. naturhist. selsk. i. 20. Gaertn. i. 169. t. 33. f. 4. Lamb. cinch. 24. t. 4, from a specimen in the herbarium of M. de Ponthieu. Fruit represented as costate.
- C. jamaicensis seu caribbeana. Wright in phil. trans. lxvii. 504. t. 10, segments of the corolla represented convex instead of concave.—Encyclop. brit. ix. 124. t. 252.
- (Periclymeno recto accedens arbuscula virginiana siliquosa. Pluk. alm. 288, t. 103, f. 3, has fruit with a permanent style.)
- Leaves lanceolate, glabrous; tufts of hair underneath in the axillae of the lateral veins at their insertion into the costa. Capsule oblong separating into 2 parts, truncate at the end, terete, smooth. Obs. 2556. Specimen gathered by Broughton in Jamaica.
- CINCHONA caribea. Pharm. edin.—Clark, James, account from in ann. med. ii. 176. Lew. ii. 209; disp. by Dunc. 195. Murr. i. 551; J. i. 182. Wright in med. journ. viii. 239.
- Cortex caribaeus. Schumacher, account from in phys. journ. vi. 376; vii. 81.

Caribbean Bark. *Rush* iv. 99.

5. CINCHONA *triflora*. Flowers axillary, 3 together. *From Wright in med. journ.* viii. 240. Found by Mr. Roberts in Jamaica.—*Encyclop. brit.* ix. 124.
6. CINCHONA *floribunda*. Panicle terminal. Segments of the calyx very short. Capsules oblongo-cylindric. Leaves elliptic. Specimens gathered in Dominica by M. de Pontheiu, and with smaller leaves gathered in Jamaica by Drs. Dancer and Swartz in Sir Jos. Banks's herbarium.—*Swartz prodr.* 41; *ind. occident.* i. 375. *Lamb. cinch.* 27. t. 7, from a specimen in Sir Jos. Banks's herbarium, gathered by Mr. Mason in Saint Lucie.—*Vahl in kiobenh. naturhist. selsk.* i. 23. In Hispaniola and Martinico.
- C. *montana*. *Badier in journ. de phys.* xxxiv. 129. t. 1. In Guadaloupe and Martinico.
- C. *floribus paniculatis glabris, laciinis linearibus tubo longioribus, staminibus exsertis, foliis ellipticis glabris*. *Banks in phil. trans.* lxxiv. 453. Found by Mr. Davidso*n* in Saint Lucia.
Capsule slightly costate, glabrous; ribs 10 to 12. Specimens above mentioned.
- CINCHONA *floribunda*. *Encyclop. brit.* ix. 124. *Westring, account from in med. rev.* vi. 172.
- C. *montana*. *Mallet & Badier, account from in encyclop. brit.* ix. 124,

2. COFFEA *racemosa.* Leaves scabrous. Racemi terminal. *Lour.* i. 179.

3. COFFEA *Zanguebariae.* Corolla sexfid. Berries angulato-costate. *Lour.* i. 180.

147. CHIOCOCCA.

Corolla obconico-campanulate. *Calyx* superior, quinquepartite. *Berry* with 2 cells, crowned by the calyx. *Seeds* solitary. *Obs.* 5479. *Swartz obs.* 76. *L.*

1. CHIOCOCCA *racemosa.* Stipulae entire. *Corolla* quinquefid. Panicles axillary. *Obs.* 5479. Specimen gathered by Broughton in Jamaica.—*L. fil. suppl.* 145. *L. sp.* 246; *a Willd.* i. 975. *Swartz. obs.* 76. *Hort. kew.* i. 229,

Periclymenum racemosum, flore flavescente, fructu niveo. *Plum. a Burm.* 211. t. 217. f. 2. *Dill. hort.* 306. t. 228. f. 295.

Jasminum forte, folio myrtino acuminato, aliorum adminiculo se sustentans, flore albicante racemoso. *Sloane cat.* 169; *hist. ii.* 97. t. 188. f. 3.

Leaves elliptico-lanceolate. *Stipulae* intersoliaceous, cuspidate, the uppermost ovate, the lowermost transversely semilanceolate. *Panicles* racemiform, the lower foliaceous, with 1 and 2 leaves, longer than the leaves, branched below, racemose above; branches with 2 and 3 flowers. *Bracteae* subulate. *Pedicles* 3 and 4 times longer than the bracteae. *Germen* oval. *Calyx* partito-quinquedentate, as long as the germen; segments triangulari-ovate. *Corolla* cyathiform, 5 times as long as the calyx, from 2 to 3 tenths of an inch long; segments ovate. *Stamina* reaching nearly to the commissures of the corolla. *Filaments* subulate, united at the base and slightly adhering to the base of the corolla, pubescent above. *Antherae* linear, erect, inserted by the base, whitish, twice as long as the filaments. *Style* somewhat longer than the corolla, filiform below, thickening above, microscopically scabrous and triemarginate at the end. *Obs.* 5479.

CHILOCOCCA sarmen̄tosa, foliis myrtin̄is oppositis, spicis pluribus tenuissimis et terminalibus et ex aliis supremis. *Browne* 164.

148. VANGUERIA.

Calyx quinquedentate. *Corolla*, tube globular;

throat hairy. *Stigma* bilamellate. *Berry* inferior, with 4 and 5 seeds. *L. a Willd.*

1. VANGUERIA edulis. *Vahl. symb.* iii. 36.

149. PSYCHOTRIA.

Calyx superior, and semisuperior, quinquefid. *Corolla* hypocrateriform, quinquefid. *Stigmata* 2. *Berry* dispermous, bilocular and unilocular. *Obs.* 8485, and from *Jacq. Swartz & Brotero*.—*L.*

Cephaëlis. *Swartz. ind. occid.* 435.

Callicocca. *L. a Schreb.* 126, 822.

1. Flowers capitate.

1. PSYCHOTRIA *Ipecacuanha*. Capitula pedunculate, terminal. Bracteae as long as the flowers.

Caprifolium germanicum. *Chom.* 663.
Caprifolium non perfoliatum. *Schrod.* 554.

LYCIUM. Schrod. 725.

2. **LONICERA Caprifolium.** Corolla bilabiate, terminal, verticillate. Leaves deciduous, the uppermost connato-perfoliate. *Hort. kew.* i. 230. *L. sp.* 246. *Pollich n.* 217. *Scop. carn. n.* 242. *Gouan hort.* 101. About Montpelier;—*monsp.* 76. *Roth germ.* i. 102. Near Erford Giesen and Jena.—*Smith brit.* 260. Found by Mr. Butt in a wood near Elsfield near Oxford, and by Mr. Relhan in Chalk-pit close Hinton, and in a coppice in the same parish.—*Jacq. austr.* iv. t. 357; *vind.* 38. *Host.* 113. *Asso n.* 183. *Krock. n.* 328. Naturalised in orchards in Silesia.

L. floribus verticillatis terminalibus sessilibus, foliis summis connato-perfoliatis. *L. ups.* 42. *Kram.* 50. Naturalised.

Periclymenum italicum. *Mill. Ph. dict.* n. 5.

Caprifolium. *Mill. Ph. ic.* 53. t. 79.

Caprifolium italicum. *Lond. gard.* 14. t. 5. *Boerh.* ii. 226. *Dod.* 406, *repr. in*

Periclymenon perfoliatum calidarum regionum. *Lob.* *obs.* 357, &

Periclymenum perfoliatum calidarum regionum officinarum. *Lob. ic.* i. 632, *cop. in*

Periclymenum perfoliatum sive italicum. *Park. theatr.* 1460, & *repr. in*

Periclymenum perfoliatum. *Ger. by Johns.* 891. *Dalech.* 1427. *Magn. monsp.* 201. *Bauh. J.* ii. 104. About Montpelier.—*Raii hist.* 1490; *europ.* 200. In Italy and the south of France.

Periclymenum. *Cam. epit.* 713.

Native of Italy, Carniola, the south of France, the Palatinate and Franconia, and naturalised in

Austria and Silesia. The plants found in Oxfordshire and Cambridgeshire I suspect to have risen from seeds carried by birds.

CAPRIFOLIUM *persfoliatum.* Schrod. 554.

2. *Peduncles with 2 flowers. Berries distinct.*

From L.

3. *LONICERA pubescens.*—Leaves entire at the margin, pubescent. *L.*

L. Xylosteum. *L. suec.* n. 194; sp. 248. *Hort. kew.* i. 232. *Pollich* n. 219. *Roth germ.* i. 102. *Gouan hort.* 101? About Montpelier, but he describes the leaves as serrulate;—*monsp.* 77. *Scop. carn.* n. 244. *Bot. arrang.* 222, note, where it is mentioned as having been said by Wallis in his natural history of Northumberland to have been found under the Roman wall on the western side of Shewing Sheels.—*Lour.* i. 186. *Smith brit.* 1393; *engl.* t. 916. Found by Mr. Borrer in a coppice near Arundel in Sussex. Corolla tinged with red, and of a yellower hue than I have ever observed it, and the whole having more of the habit of *L. Periclymenum* than of *L. pubescens.*

—*Fl. dan.* t. 808.

L. pedunculis bifloris, baccis distinctis, foliis integrerrimis. *Dalib.* 69. *Guett.* ii. 134.

Xylosteum. *Dod.* 407, repr. in ed. ii. 412, &

Periclymenum rectum germanicum. *Ger. by Johns.* 1294.

Innominata. *Plum. a Burm.* 135. *t. 144. f. 2.*

Frutex instar salicis pumilae, foliis salignis. *Marcgr.*
76, outer fig.

Capitula spicato-racemose, the lower pedunculate,
the upper sessile. Racemi terminal and axillary.
Bracteae ovato-lanceolate, acuminate, hirsute at the
margin, at the base of the flowers. Flowers closely
crowded, obconic. Germen inferior, obconic, vil-
lose, monospermous. Calyx cyathiformi-campan-
ulate, the base narrower than the top of the germen,
quinquefid; segments triangular. Petals none. Sta-
mina 5, longer than the calyx. Filaments filiform,
hirsute at the base. Style filiform, shorter than the
calyx, hirsute at the base. *Obs. 8373.*

CONOCARPUS erecta. *Schoepf 23.*

155. ERITHALIS.

Corolla rotate, quinquepartite. Calyx quinquedent-
~~;~~ *superior. Berry decemlocular. From Browne*
& L. but

Jacquin in *amer. 8vo*, 92 describes the berry as
 unilocular, and Swartz *obs. 80*, the corolla as pen-
 tapetalous.

1. *ERITHALIS polygama.* Leaves obovate. Flowers
 axillary, the male cymose, the hermaphrodite soli-
 tary. *Forst. G. austral. n. 101.*

β angustifolia. *Forst. G.*

TIMONIUS. *Rumph.* iii. 216. *t.* 140. Berries smooth. Leaves lanceolate. Corolla infundibuliform; tube thrice as long as the calyx.—Can it belong to this genus?

156. MUSSAENDA.

Corolla infundibuliform. *Stigmata* 2, thickish. *Berry* inferior, oblong. *Seeds* in 4 rows. *L.*

1. **MUSSAENDA villosa.**—Branches and leaves of the branches and panicle villose. *Vahl.*

Pubescent. Stem dichotomous, tough. Leaves elliptico-ovate, acute, at the dichotomies of the branches mostly opposite, above in pairs at each joint on one side of the branch, the lowermost of each pair smaller than the upper, the young ones shining, afterwards dull; veins sparingly pubescent. Flowers pendulous, solitary, between one of the leaves and the dichotomy, or between the 2 leaves and the branch. Peduncles about as long as the flower. Calyx partito-quinquefid; segments triangular, acute. Corolla campanulate, somewhat tubular at the base, purplish brown, semiquinquefid, pubescent on the outside; segments triangular, acute, somewhat recurvate. Stamina as long as the corolla, inserted into the tube. Filaments incurvate at the end, pubescent at the base, glabrous above the flexure. Antherae oval. Pistil at first shorter, at length as long as the corolla. Stigma semiorbicular, green. Obs. 6673.

Native of Europe from Greece and Spain to Norway, but not of Sweden. In Britain it has been found in different places from Rochester to Icolmkill, but I have never met with it excepting near old buildings as castles, halls, and abbies.

169. CESTRUM.

Corolla tubuloso-infundibuliform. Calyx inferior, with 5 teeth. *Stamina shorter than the corolla.* *Germen and Berry with 2 cells.* Obs. 5439, the flower; and the account of the fruit from Juss. 126 & *Lherit. stirp.* 74. L.

1. *Filaments without a tooth at the base.*

1. CESTRUM *vespertinum.* Leaves lanceolato-elliptic. Corolla glabrous. Racemi axillary. Obs. 8381. Specimen gathered by Dr. Wright in Jamaica.—*L. mant.* 206. *Swartz. obs.* 85. *Lherit. stirp.* i. 72. *Hort. kew.* i. 255.

Jasminum laurinis foliis, flore pallide luteo, fructu atro-caeruleo polypyreno venenato. *Sloane cat.* 169; *hist.* ii. 96. *t.* 204. *f.* 2.

(*Ixora alternifolia.* *Jacq. amer.* 16. *t.* 177. *f.* 8, flowers and fruit; 8vo, 19, has a corolla with ensiform distinct segments, and the tube is described as being twice as long as the limb.)

Jasminum aliud arborescens, foliis solani minus. *Plum. cat.* 17; *a Burm.* 150. *t.* 157. *f.* 1, is *Ixora alternifolia* of *Jacq.*

Nandi-ervatam minor. *Rheede* ii. 107. *t.* 55 is probably a *Nerium.*)

Racemi corymbose, nearly sessile, twice and thrice as long as the petioles. *Peduncles* shorter than the petioles, tomentose. *Pedicles* mostly shorter than the calyx. *Corolla* yellowish, semitransparent; tube

tubiform; limb reflex, 5 times shorter than the tube; segments ovate. *Filaments* without teeth, scarcely longer than the antherae. *Obs.* 8381.—*Leaves* not ill scented. *Obs.* 6825. Specimen gathered in the Paris garden.

CESTRUM. Browne 173.

2. *CESTRUM auriculatum.* Leaves elliptic. Corolla pubescent. Peduncles terminal and axillary. *Obs.* 6826. Specimen from Mr. Hunter's nursery.—*Hort. kew.* i. 255.

C. foetidum. Salisb. *R. allert.* 111.

Very similar to *C. vespertinum*. *Stipulae* none. *Peduncles* about as long as the petioles; the lateral ones with 2 flowers, the lowermost flower sessile; the terminal peduncle paniculate with 4 flowers, the uppermost flower but one sessile. *Corolla* pubescent on the outside; tube tubiform; limb erect. *Filaments* without a tooth. *Obs.* 6826.

CESTRUM auriculatum. Lherit. *stirp.* iv. 71. t. 35.

170. LYCIUM.

Corolla tubular, and hypocrateriform; throat closed by threads. *Berry* of 2 cells, with many seeds. *Obs.* 8185. *L.*

1. *LYCIUM barbarum.* Leaves lanceolate and oblong. Branches angular. Tube of the corolla once and a half as long as the calyx. *Obs.* 2879. In the garden at Areley-house, Lower Areley, Worcestershire.—*Hort. kew.* i. 257.

2. *vulgare.* Style as long as the stamens. *Hort. kew.* *a.*

L. barbarum. *L. sp.* 277; *mani.* 341. *Sibth. prodr.* n. 541. *Mill. Ph. dict.* n. 4, but he describes the flowers as small and white.

L. foliis oblongo-lanceolatis sine ordine, ramorum spinis rarioribus. *Trew select.* 33. t. 68, but the corolla deep blue.

Jasminoides aculeatum, *polygoni folio, floribus parvis albidis*. *Shaw trav. ed.* ii. 464. n. 145. t. at p. 465. f. 145, but he describes the branches as tomentose.

Rhamnus secundus monspeliensium. *Lob. adv.* 438, *cop. in Dalech.* 140, *repr. in*.

Rhamnus secundus Dioscoridis monspeliensium. *Lob. ic.* ii. 181, & *cop. in Park. theatr.* 1006.

(*Rhamnus peregrinus*, *rosmarini folio, candidior*. *Pluk. alm.* 317; *mant.* 160; *phyt.* t. 322. f. 2, has distichous leaves.)

Calyx quadridentate and quinquedentate, sometimes cloven on both sides and on one side so as to appear bilabiate. *Corolla* hypocrateriform; tube nearly twice as long as the calyx; limb purple, about the throat whitish with blackish purple lines. *Pistil* just longer than the stamina. *Obs.* 2879.

β *chinense*. Style longer than the stamina. *Hort. kew.* β

L. elongatum. *Salisb. R. allert.* 136.

Kooki. *Kaempf. amoen.* 777.

LYCIUM barbarum. *Lour. i.* 165. *Thunb. jap.* 94.

2. *LYCIUM obliquifolium*. Leaves oblique. Branches flexuous, terete. Tube of the corolla four times as long as the calyx. From *L.* and the account of the corolla from *Michelis figure*.

Leaves elliptic, acute, tomentoso-sericeous and rufous underneath, $1\frac{1}{2}$ to 3 inches long. *Calyx* pentaphylloous; segments roundish, incumbent. *Corolla* campanulato-infundibuliform; tube as long as the calyx; limb quinquepartite; segments oblongo-ovate. *Germen* ovate. *Obs. 8500.* Specimen gathered by Dr. Wright in Jamaica.

CHRYSOPHYLLUM *fructu minori glabro, foliis subtus ferrugineis.* Browne 171.

2. *CHRYSOPHYLLUM argenteum.* Leaves falcate-ovate, tomentose and shining underneath. Jacq. *amer. 53. t. 38. f. 1,* leaves represented as elliptic, falcate at the end, veinless, and drupe as oval, though described as roundish.—H. K. i. 261.

C. Cainito β L. sp. 278.

Cainito folio subtus aureo, fructu olivaeformi. Plum. gen. 10; a Burm. 57. t. 69.

CHRYSOPHYLLUM *argenteum.* Jacq. *amer. 8vo, 67.*

3. *CHRYSOPHYLLUM microcarpum.* Leaves ovate, pubescent underneath. Berries oblong, oblique, with one seed. *From* Swartz. *ind. occid. 482.*

4. **CHRYSOPHYLLUM glabrum.** Leaves glabrous.
From L. sp. 278. Jacq. amer. 53. t. 38. f. 2,
 leaves represented as veinless, elliptic, concave;—
8vo, 68.

CHRYSOPHYLLUM glabrum. *Bryant 189.*

178. SIDEROXYLUM.

Calyx quinquefid. *Corolla* rotate, quinquepartite.
Nectaria 5, inserted into the corolla. *Stigma*
 simple. *Berry* with from 1 to 5 seeds. *From L.*

1. **SIDEROXYLUM lycioides.** Spinose. Leaves de-
 ciduous, lanceolate. *L. sp. 279. Hort. kew. i.*
262.

SIDEROXYLON lycioides. *Schoepf 27.*

179. BUMELIA.

Calyx quinquepartite. *Corolla* quinquefid; seg-
 ments with a smaller segment on each side at the
 base. *Nectaria* 5, at the base of the stamina on
 the inside of the tube of the corolla. *Drupe*
 with 1 seed. *From Swartz. ind. occid. 486. t. 8.*

1. **BUMELIA nigra.** Leaves terminal, oblongo-lan-
 ceolate, glabrous, undulate at the margin. Branches
 limber; smaller branches rodlike, bearing flowers.
Swartz. ind. occid. 487.

ACHRAS fructibus minoribus glabris per ramos
 sparsis, seminibus subrotundis, cicatricula minima
 ovata. *Browne 201.*

2. *BUMELIA retusa*. Leaves cuneato-ovate, retuse, rigid. Peduncles crowded, axillary. *Swartz. ind. occid.* 490.

ACHRAS fructu minori glabro, foliis ovatis, floribus confertis alaribus. *Browne* 201.

3. *BUMELIA salicifolia*. Peduncles fasciculate, axillary. Leaves lanceolate. Segments of the corolla obtuse. *Obs. 8334.* Specimen gathered by Dr. Wright in Jamaica. The account of the corolla from Browne's fig.—*Swartz. ind. occid.* 491. Trunk and fresh branches lactescent. Flowers whitish.

Achras salicifolia. *L. sp.* 470. *Hort. kew.* i. 478.

Arbor salicis folio lato splendente, floribus parvis pallide luteis pentapetalis e ramolorum lateribus confertim exeuntibus. *Sloane cat.* 170; *hist.* ii. 98. *t.* 206. *f.* 2.

Leaves, costa above sometimes from about the middle to the base with ferruginous sericeous hairs.

Peduncles sericeous, ferruginous. *Calyces* not yet expanded, sericeous, ferruginous. *Obs. 8334.*

ACHRAS foliis oblongis nitidis utrinque productis, floribus confertis, fasciculis infra frondes sparsis. *Browne* 201. *t.* 17. *f.* 4. No leaves. No part of the plant lactescent. Berries black.

4. *BUMELIA Mastichodendrum*. Peduncles fasciculate. Leaves lanceolate. Segments of the corolla acute. *From*

Sideroxylon Mastichodendrum. *Jacq. coll.* ii. 253, who describes the flowers as wholly yellow, &

CORNUS foliis laurinis, fructu majore luteo. *Catesb.* ii. 75. *t.* 75. Peduncles, flowers, and drupes yellow.

180. RHAMNUS.

Calyx campanulate. *Petals* 5, 4, or none, inserted into the calyx. *Berry* or *Capsule* with from 2 to 5 seeds. *Obs.* 3349. *L.*

In the generality of the species the style is surrounded by an orbicular fleshy nectarium, into the margin of which the stamens are inserted. The calyx of the fruit is entire, the upper half having fallen off.

1. *Spinose.* *Calyx quadrifid, or trifid.* *Petals and stamens 4.*

1. RHAMNUS *lycioides.* Leaves linear, entire at the margin. *Obs.* 5611. Specimen gathered by M. Broussonett on Montserrat in Spain.—*L. sp.* 279.

Mauz, seu Musa. *Alpin. aegypt. fol.* 32. p. 2. t. 33.

Stamina inserted into the receptacle, the 5 perfect ones at the base of the longer phyllum, the 6th barren one at the base of the shorter phyllum. Obs. 5362. Specimen gathered in the Gottingen garden. I suspect it will prove to be a variation of *M. Bihai* or some other wild plant, which from having been long cultivated by suckers has lost its power of producing perfect seeds.

MUSA. Dale 273.

Musa paradisiaca. Bryant 202. Clark, James in med. facts vii. 305. Forst. G. escul. 28. Pearson, R. i. 64. Wright in med. journ. viii. 272.

Banana. Cook in Hawkesw. iv. 344. Graing. 40. 84.

2. *MUZA sapientum.* Spadix nodding. Abortive flowers deciduous. Spathae oblong, rather obtuse. Fruit elliptic. L. a Willd. iv. 894, from authors; sp. 1477. Hort. kew. iii. 421. Swartz. obs. 582.

Musa simiarum. Rumph. v. 138. t. 61?

Bananiera. Pis. ind. 154.

Bala. Rheedee i. t. 14.

The Banana tree. Hughes 184. t. 16.

Bonano. Ligon 81. t. at p. 82.

Musa caudice maculato, fructu recto rotundo breviore odorato. Sloane cat. 192; hist. ii. 147. Trew select. 4. t. 21. 22. 23. Boerh. ii. 171.

BANANA. Dale 273. Raii hist. 1375.

Musa sapientum. Bryant 204. Pearson, R. i. 64. Wright in med. journ. viii. 272.

3. *MUZA troglodytarum.* Spadix erect. Spathae deciduous. L. sp. 1478; probably from *MUSA uranoscopos.* Rumph. v. 137. t. 61.

4. MUZA *Bihai*. Spadix erect. Spathae permanent.

L. sp. 1477, probably from authors.

Musa spadice erecto, spathis rigidis amplexantibus distiche et alternatim sitis. Browne 364. Corolla as in *M. paradisiaca*. Stamina 5, inserted into the lower part of the petal, with the rudiment of a sixth inserted into the nectarium. Stigma acute. Berry trilocular. Seeds solitary.—Hence I conclude the Wild Plantane-tree of Jamaica to be a species of *Muza* whatever was the plant intended by Linnaeus for *Musa Bihai* of *sp. pl.*

Musa humilior foliis minoribus nigricantibus, fructu minimo erecto. Sloane cat. 193.

Heliconia Bihai. *H. K.* i. 284, may be the plant, but it had not then flowered.—(*L. mant.* 211, if from the specimen whence the generic description at p. 147 was formed, must be a distinct plant.—*Swartz. obs.* 96 cannot be the plant described by Browne though Browne is cited.)

MUSA troglodytarum. Wright in med. journ. viii. 272.

204. ILLECEBRUM.

Calyx pentaphylloous. *Corolla* none. *Stamina* 5, united below, or inserted into the calyx. *Style* 1. *Capsule* with 1 seed, with 5 valves. *Obs.* 6513. *Juss.* 88. *L.*

Those species in which the stamens are inserted into the calyx, as *I. Paronychia* and *capitatum*, seem to be generically distinct, forming the link of connexion between *Illecebrum* and *Herniaria*.

1. ILLECEBRUM *sanguinolentum*. Frutescent, Leaves

opposite. Spikes compound, compact. *L. a*
Murr. 248.

Achyranthes sanguinolenta. *L. sp. 294.*

VERBENA rubra. *Rumph. vii. 60. t. 27. f. 2.*
In Java.

2. *ILLECEBRUM sessile.* Stems creeping, with a tomentose line on opposite sides. Leaves lanceolate, nearly sessile. Heads oblong, glabrous. *L. a Murr. 249; sp. 300; mant. 345. H. K. i. 291.*

Amaranthus humilis, foliis oppositis, flosculis ex alis glomeratis. *Burm. J. zeyl. 17. t. 4. f. 2.*

Coluppa. *Rheede x. 21. t. 9.*

Amaranthoides humile maderaspatanum, capitulis candicantibus, folio molli. *Pluk. alm. 27; phyt. t. 133. f. 1,* has some capitula on peduncles.

Calyx compressed; phylla 5, ovate, incumbent. Filaments united below, triangulari-subulate above, the distinct parts rather longer than the united part. Capsule compressed, obcordate, apparently valvular. Style very short. Seed 1, compressed; one of the lobes acute, the sinus uppermost. *Obs. 6513. Specimen gathered in the Paris garden.*

OLUS SQUILLARUM. *Rumph. vi. 37. t. 15. f. 1.*

205. POLIUM.

Calyx decaphylous. Corolla none. Capsule superior, unilocular, trivalve, polyspermous. *Lour.*

Polia. *Lour.* a name too similar in sound and orthography to *Pohlia* and *Pollia*.

1. POLIUM *arenarium*.

Achyranthes corymbosa. *L.* a *Murr.* 246; *sp.* 296;
a Willd. i. 1196.

Elichryso affinis herba indica polygonoides ramosior,
foliolis caulinum nodos ambientibus, coma paleacea,
flore albo litoris aureis striato. *Pluk. alm.* 134;
phyt. t. 86. *f.* 6.

Amaranthus folio tenuissimo incano mollugini aemula-
lante. *Boccon. mus.* 44. *t.* 39.

(*Paronychia* foliis ad genicula confertis acutis, flori-
bus umbellatis. *Burm. J. seyl.* 184. *t.* 65. *f.* 2,
accords with the figures of *Pluk.* and *Boccone*,
but is described as having a single triquetrous seed.
The calyx is described as pentaphyllous, the co-
rolla pentapetalous, and the petals as roundish and
minute.)

POLIA *arenaria.* *Lour.* i. 204.

206. HERNIARIA.

Calyx quinquepartite. *Corolla* none. *Stamina* in-
serted into the calyx. *Style* very short, or none.
Stigma 1 or 2. *Arillus* with 1 seed. *Obs.* 6518.
L.

2. *HERNIARIA hirsuta.* Stem herbaceous, hirsute; hairs horizontal. *Obs.* 7280. In Mr. Knowlton's garden.—*L.* sp. 317. *Bot. arrang.* 250. *Bauh. J.* iii. 379. *Dill. ap. R. syn.* 161, on the authority of Buddle's herbarium.—*Tourn. paris.* 161. *Vaill. paris.* 101. *Huds.* 109. Colney-Hatch near Barnet.—*Smith brit.* 272; *engl. t.* 1879. *Raii hist.* 214, in Brabant, Germany, the south of France, and Italy.

Herba Turca, H. multigrana serpilli facie. *Lob.* *adv.* 180, *cop. in*

H. vulgaris. *Park. theatr.* 447.

Calyx quinquefido-quinquepartite; segments oblong, unequal. *Stamina* 5, inserted into the calyx at the base of the segments, very short. *Antherae* roundish, buff-coloured. *Germen* superior, ovate, microscopically tuberculate. *Style* very short. *Stigma* simple, scarcely broader than the style. *Obs.* 6516. Specimen gathered in the garden of

Pitcairn.—*Calyx*, no filiform processes between the segments. *Style* very short. *Stigma* simple. *Arillus* semitransparent, oval. *Seed* 1. *Obs.* 6520. Specimen gathered in the Paris garden.—*Root* perennial. *Stem* perennial. *Leaves* oblongo-lanceolate. *Stamina* 3. *Obs.* 7280.—I have never observed the leaves oval.

HERNIARIA hirsuta. *Chom.* 247; *suppl.* 88.

Geoffr. iii. 560.

Herniaria. *Spielm.* 563.

207. ACHYRANTHES.

Calyx pentaphylloous. *Corolla* quinquepartite, minute. *Stamina* inserted into the sinuses of the corolla. *Style* 1. *Capsule* with 1 seed. *Obs.* 6966. 6512. 6511. *Juss.* 88. *L.*

1. **ACHYRANTHES ellipticifolia.** Flowers deflex. Leaves elliptic, hirsutulous. *Obs.* 6512. Specimen gathered by Broughton in Jamaica?

Achiranthes foliis ovatis, floribus spicatis, appendicibus bisetis. *Browne* 180?

Spikes terminal. Flowers solitary. *Bracteae* 3, at the base of each flower. *Calyx*, phylla 5, ovato-lanceolate; ribs indistinct. *Corolla* quinquepartite, segments oblong, ciliate. *Filaments* inserted between the segments of the corolla. *Style* filiform. *Stigma* simple. *Arillus* monospermous. *Obs.* 6512.—*Leaves* rhombo-elliptic, and elliptic, nearly glabrous. *Calyx*, phylla 5, ovato-lanceolate, just sensibly shorter than those of 6512, slightly unequal, the inner gradually shorter; ribs indistinct. *Obs.* 6967. Specimen gathered in the Paris garden.

AURICULA CANIS mas. *Rumph.* vi. 27. t. 12.
f. 1. Spike 1 and 2 feet long.

2. ACHYRANTHES *obovatifolia*. Flowers deflex.
Leaves obovate. *Obs.* 6966. In Mr. Shore's gar-
den raised from seeds from the Calcutta garden.

A. *indica*. *Mill. Ph. dict. n.* 2, who raised it from
seeds received from Malabar.—*Roth catal.* i. 40.

A. *aspera indica*. *L. sp.* 295; *mant.* 344. *Hort.*
kew. i. 286.

A. *aspera*. *L. a Murr.* 246; *a Willd.* i. 1191.

A. *caule erecto*, foliis obverse ovatis undulatis, flori-
bus reflexis. *Mill. Ph. ic.* 8. t. 11. f. 2.

Amaranthus spicatus zeylanicus, foliis obtusis, ama-
rantho siculo Bocconi similis. *Burm. J. zeyl.*
16. t. 5. f. 3.

Stem villose, branched, erect. Branches patent,
straight. Leaves opposite, sometimes in threes, with
a slightly prominent angle at the end, pubescent,
thin, entire at the margin. Petioles very short.
Peduncles villose. Flowers sessile, deciduous.
Bracteae 3, one third shorter than the calyx, mem-
branaceous, rigid, whitish, ending in subulate pink-
coloured spines, the innermost ovato-cuneiform, and
remaining attached to the peduncle, the 2 outer ovate,
the sides readily parting from the costa which is
lengthened out into a spine, attached to and falling
off with the calyx. Calyx always closed; phylla
rigid, green, membranaceous and whitish at the mar-
gin, the outer rather broader. Corolla minute, shorter
than the breadth of the calyx, campanulate, quin-
quepartite, fleshcoloured white; very delicate; seg-
ments oblong, ciliate and pink at the end; ciliae
white. Stamina 5, inserted into the sinuses of the
corolla. Filaments subulate, half as long again as

the segments of the corolla, purplish pink. *Germen* turbinate, greenish. *Style* filiform, erect, pink. *Stigma* roundish. *Obs.* 6966.

CADELARI. *Rheede* x. 155. t. 78.

3. *ACHYRANTHES prostrata*: Stems prostrate, fruticose. Spikes oblong. Flowers 2 together, with a fasciculus of hooked bristles: *L.* sp. 296; *a Willd.* i. 1194:

Cyathula geniculata. *Lour.* i. 124.

Scheru-cadelari. *Rheede* x. 157. t. 79.

(*Verbena indica*. *Bont.* 150, has spikes imbricated upwards.)

AURIS CANINA femina. *Rumph.* vi. 26. t. 11.

4. *ACHYRANTHES lappacea*: Stem fruticose; diffuse. Leaves nearly glabrous, ovate; acute, attenuate at the base. Spike interrupted. The 2 lateral flowers with a compound fasciculus of uncinate hairs on each side. *Obs.* 6511. Specimen gathered in Fothergill's garden.—*L.* a *Willd.* i. 1192; *sp.* 295; *a Murr.* 246. *Hort. kew.* i. 286. *Achiranthes caule geniculato erecto, foliis ovatis oppositis, spicis terminatricibus, appendicibus multisetis*. *Browne* 180.

Centaurium ciliare minus, circeae foliis firmioribus, spicatis floribus. *Pluk. alm.* 93; *phyt.* t. 82. f. 2.

Blitum scandens, fructu lappaceo. *Burm. J. zeyl.* 47. t. 18. f. 1, but stem and peduncle represented as aculate.

Flowers 3 together. *Bracteae ovate, 3 at the base of each fasciculus of flowers*. *Fasciculi of hooks compound, dichotomous and branched, each com-*

posed of from 2 to 4 fasciculi, with a bractea below the division into branches, somewhat analogous to the involucra of *Cynosurus*, and to be considered as a rachis in the dichotomy of which is placed a sessile flower. *Calyx*, phylla 5, slightly woolly on the outside, greenish, with 3 ribs, lanceolate. *Stamina* united below. *Filaments* triangulari-subulate, without any segment between each. *Style* as long as the germen. *Stigma* capitate. *Obs.* 6511.

WELLIA-CODIVELI. *Rheede* x. 117. t. 59.

5. *ACHYRANTHES muricata*. Flowers patulous, remote, ovate. Leaves alternate. Calyces squarrose. Stem fruticose, with patulous branches. *From L. sp.* 295; *mant.* 344; *a Murr.* 246. *Hort. kew.* i. 286.

BLITUM spinosum. *Rumph.* v. 234. t. 83. f. 2.

208. CELOSIA.

Calyx pentaphyllous. *Corolla* semiquinquefid. *Stamina* terminating the alternate segments of the corolla. *Capsule* cut-round, with several seeds. *Obs.* 6507. *Juss.* 88. *L.*

1. *CELOSIA argentea*. Spikes scariose. Leaves linear-lanceolate. Stipulae subfalcate. *From L.* a *Willd.* i. 1197; *sp.* 296, and *Royen*.—*Hort. kew.* i. 287.

Stem 3 feet long, sulcate, below terete, upwards compressed, with lateral branches. Branches about as long as the leaves, shorter than the stem, terete, striate. Leaves ovate, acute. Racemi spikelike, terminal, rosecoloured, staining paper of a rosecolour, that terminating the stem compound, semicircular, compressed, from 1 to 4 inches broad; those terminating the branches oblong, acuminate, terete, the lower shorter than the peduncles, the uppermost nearly sessile. Pedicles very short. Bracteae 3 to each flower, lanceolato-ovate, acute, the lowermost at the base of the pedicle, the 2 lateral ones at the base of the calyx, one third shorter than the calyx; arista one fourth as long as the bracteae. Calyx, phylla lanceolato-oblong, with an acute point, 2 tenths of an inch long, fleshcoloured with a rosecoloured streak.

along the middle. *Stamina* one fourth shorter than the calyx, whitish, united below into a decurrent cup, the alternate teeth extended into subulate filaments. *Pollen* white. *Pistil* a little longer than the calyx. *Capsule* polyspermous. *Seeds* shining, black. *Obs.* 6553.

GARDENIA florida. *Lour.* i. 183.

α *simplex.* Corolla single. *Hort. kew.* i. 293.

β *plena.* Corolla double.—*Hort. kew.* i. 293.

Jasminum foliis lanceolatis oppositis integerrimis, calycibus acutioribus. *Mill. Ph. ic. t.* 180.

Jasminum ramo unifloro pleno, petalis coriaceis. *Ehret. t. 15,* and another unpublished fig. in Mr. Knowlton's library.

Catsjopiri. *Rumph. vii. 26. t. 14. f. 2.*

Leaves opposite, dark green obscurely mottled with pale green. *Stipulae* solitary, intrafoliaceous, vaginant, the lower half becoming a part of the bark. *Flowers* terminal, solitary, nearly sessile. *Germen* obpyramidal, green, with 6 prominent acute angles. *Calyx* superior, cyathiform, sexpartite; segments subulate, compressed below, being extensions of the angles of the germen, trigonous at the end, patulous, somewhat longer than the germen; sinuses with 1 and 2 scariose triangular teeth. *Corolla* buffcoloured white, very double, of a peculiar rich fragrance. *Obs.* 7791.

3. **GARDENIA appendiculata.** Leaves elliptic. Corolla hypocrateriform. Calyx bursting on one side, with appendages. From

G. Thunbergia. *L. fil. suppl.* 162, & *Hort. kew.* i. 294.

LA BERGKIAS. *Sonner. nouv. genin.* 48. t. 17. 18.

2. Spinose. L. a Murr.

4. GARDENIA *esculenta*. Berry unilocular. Corolla rotate. Leaves fasciculate, ovate, pilose. Flowers crowded. *From GENIPA esculenta. Lour. i. 185.*

218. ALLAMANDA.

One of the Contortae. Capsule lentilshaped, unilocular, bivalve, erect, echinate, polyspermous. L.

1. ALLAMANDA *cathartica*. L. *mant.* 214; *fil. suppl.* 165. *Curt. mag. t.* 338. *Hort. kew.* iii. 489.

ALLAMANDA. Linn. 81.

219. VINCA.

Corolla hypocrateriform; segments oblique. Follicles 2, erect. Seeds naked. Obs. 2705. L.

1. VINCA *parviflora*. Flowers pedunculate, in pairs. Leaves lanceolate. *From Retz. obs. ii. 14. Hort. kew. i. 296.*

V. *pusilla*. L. *fil. suppl.* 166.

CUPA-VEELA. Rheedee ix. 61. *t.* 35.

2. VINCA *ellipticifolia*. Flowers on peduncles, solitary. Leaves glabrous, elliptic and oval. Obs. 2705. In a garden.

V. *minor*. L.—*Bot. arrang.* 248, Found by Mr. Woodward near Hampstead and in Earsham wood, —*Jacq. vind.* 34. In mountains behind Grin-

zing.—*Curt. lond.* iii. 16. t. 172. *Host.* 125. In barren mountainous situations.—*Walc.* t. *Asso* n. 213. *Lights.* 147, found by Parsons in Coryton woods.—*Willd. berol.* 84, apparently spontaneous.—*Smith brit.* 270. On a bank near Honingham church Norfolk, and in several lanes in that parish.—*Reh.* n. 171. *Roth. germ.* i. 95. Throughout Germany.—*Sibth. prodr.* n. 569.

Pervinca vulgaris angustifolia. *Tourn. paris.* 218: *Garid.* 358.

Pervinca vulgaris angustifolia, flore caeruleo. *Vaill. paris.* 159. In the forest of Montmorency and in the woods of the Capuchins de Meudon.—*Boerh.* i. 311.

Clematis daphnoides. *Dod.* 401, *repr. in Lob. obs.* 360; *ic. i.* 635, *cop. in*

V. pervinca vulgaris. *Park. theatr.* 381, &

Clematis daphnoides minor flore caeruleo. *Bauh. J.* ii. 130, who observed it in the Euganean mountains, in Lombardy, Switzerland, and Burgundy; & *repr. in*

V. Pervinca minor. *Ger. by Johns.* 894, who does not speak of it as growing wild.—*Raii syn.* 268. In hedges and on ditch banks but rare.

Clematis daphnoides, sive V. pervinca simplex minor. *Park. parad.* 391, t. 395. f. 2. In many woods and orchards by the hedge sides.

V. Pervinca, sive Clematis daphnoides. *Lob. adv.* 282. In Germany, France, and Italy.

Native of Greece, Italy, Spain, France, Switzerland, and Germany, and if of Britain of the more southern counties. It is in general the outcast of gardens. Those who are acquainted with Coryton woods may best judge whether it is a native of Scotland.

VINCA Pervinca. *Berg.* 170. *Dale* 179. *Krock.* n. 365. *Linn.* 81. *Mill.* *Jos.* 451. *Murr.* i. 540. *Quarin animad.* 84. *Rutty* 536. *Spielm.* 396. *Vog.* 140.

Pervinca vulgaris. *Geoffr. suite* i. 365.

Pervinca vulgaris angustifolia: *Chom.* 568; *suppl.* 161.

3. *VINCA ovatifolia*. Flowers on peduncles, solitary. Leaves ciliate, ovate. *Obs.* 5729. Specimens gathered in the hedge of a cottage garden.

V. major. *L. sp.* 304. *Bot. arrang.* 249. *Smith brit.* 270; *engl. t.* 514. *Relh. n.* 172. *Sibth. ox.* 79. Magdalen College walks.—*Curt. lond.* iv. 19. t. 222. *Wale. t.* *Gouan hort.* 119. About Montpelier.—*Host* 125. In Friuli in hedges.

Pervinca major. *Scop. earn. n.* 274. *Lob. adv.* 282. Near Narbonne in Languedoc.

Pervinca vulgaris, latifolia, flore caeruleo: *Vaill. paris.* 159. *Boerh.* i. 311. *Garid. t.* 81, *at p.* 386.

Clematis daphnoides major: *Raii syn.* 268, found by Plot between Wolverton and Yarnton; by Richardson near Colchester; and by James Sherard between Knowlton and Deal, and in a lane between Foots Gray and Roe hill; *hist.* 1091; *europ.* 103. About Montpelier.—*Dod.* 401, *repr. in*

Clematis, sive *Pervinca major*. *Lob. obs.* 360; *ic.* i. 636;

Clematis daphnoides, sive *Pervinca major*. *Ger. by Johns.* 894, & *cop. in*

Clematis daphnoides latifolia, seu *V. pervinca major*. *Park. theatr.* 381.

Clematis daphnoides major flore caeruleo. *Bauh. J.*

ii. 132. In many parts of Spain, and the south of France.

Native of Spain, Friuli, and the south of France, and said to have been found in Kent, Essex, and the isle of Wight.

PERVINCA latifolia. *Geoffr. suite i.* 368.

Pervinca vulgaris latifolia. *Chom.* 568.

Vinca. *Dale* 179.

220. NERIUM.

Corolla infundibuliform, with a double limb; inner limb quinquepartite. *Follicles* 2, erect. *Seeds* plumose. *Obs.* 5913. *L.*

1. **NERIUM Oleander.** Leaves in threes. *Phylla* of the calyx squarrose. Segments of the inner limb of the corolla flat, trifid, *Obs.* 5913. In a garden.—*L. sp.* 305. *Hort. kew.* i. 296. *Mill. J. ill. i. t.* 12.

Leaves lanceolate. *Obs.* 5913.

α *roseum.* Corolla rosecoloured. *Obs.* 5914. Specimen gathered in the garden of Fothergill.—*H. K.*

221. ECHITES.

One of the *Contortae*. *Follicles* 2, long, straight.
Seeds pappose. *Corolla* infundibuliform; throat
bare. *L.*

1. ECHITES *syphilitica*. Leaves ovate, nearly sessile, glabrous, costate. Panicles dichotomous. Flowers in spikes. *L. fil. suppl.* 167.

2. ECHITES *scholaris*. Leaves mostly verticillate, oblong. Follicles filiform, very long. Umbels compound. *L. mant.* 53.

Lignum SCHOLARE. *Rumph.* ii. 246. t. 82.

3. ECHITES *umbellata*. Peduncles umbellate. Leaves ovate, obtuse, mucronate. Stem twining. *L. sp.* 307. *Hort. kew.* i. 298. *Jacq. amer.* 30. t. 22, segments of the corolla represented as incumbent.

Apocynum scandens majus, folio subrotundo. *Sloane cat.* 89; *hist.* i. 207. t. 131. f. 2, described and figured as having a peduncle with a great many flowers.

Apocynum scandens foliis cordatis, flore albo. *Catesb.* i. t. 58.

Periploca alia, floribus amplis circinatis et crispis, radice bryoniae tuberosa. *Plum. a Burm.* t. 216. f. 2.

ECHITES. *Browne* 182,

4. ECHITES *costata*. Peduncles cymose. Leaves elliptico-lanceolate, acuminate. *Forst. G. austral.* n. 123

KAMETTI-VALLI. *Rheede* ix. 23. t. 14.

222. PLUMERIA.

Corolla infundibuliform; segments oblique. Follicles ventricose. Seeds with a membranaceous border.
—L.

1. PLUMERIA *revolutifolia*. Leaves lanceolate, revolute at the margin. Pedicles bracteate. Obs. 8336. Specimen gathered by Dr. Wright in Jamaica.

P. alba, Jacq. amer: 36. t. 174. f. 12, a flower and follicle;—8vo, 46. L. sp. 306; a Murr. 254. Hort. kew. i. 299. Mill. Ph. dict. n. 3.

P. flore niveo, foliis longis angustis et acuminatis. Plum. cat. 20; a Burm. 227. t. 231.

(*Apocynum americanum frutescens*, longissimo folio, flore albo odoratissimo. Commel. hort. ii. 47. t. 24, with leaves not revolute, is rather P. obtusa, which is probably, as J. Burman conjectures, a white variety of P. rubra.)

Leaf lanceolato-oblong, petiolate. *Peduncle* longer than the leaf. *Panicle* terminal, compact, bracteate; primary branches very short; flowers aggregate; pedicles 6 times as long as the bracteae. *Bracteae* quadrato-ovate, shortly acuminate. *Calyx* superior, pentaphyllous, as long as the bracteae, twice as long as the germen, quadrato-ovate, carinate. *Corolla* twice and a half as long as the pedicles; tube slightly ventricose a little above the base, pubescent on the inside above the ventricose part; limb twice as long as the tube; segments oblongo-ovate, oblique. *Stamina* erect, inserted a little above the base of the tube, thrice as short as the tube of the corolla. *Filaments* very short. *Antherae* subulate, thrice as

long as the filaments. *Pistil* very short. *Obs.* 8336.

PLUMERIA alba. *Linn.* 82. *Schoepf* 29.

2. *PLUMERIA rubra*. Leaves ovali-elliptic. Petioles with 2 glands. *Obs.* 8335. Specimen gathered by Dr. Wright in Jamaica.—*L. sp.* 306. *Hort. kew.* i. 298. *Curt. mag.* t. 279.

P. arborescens, ramulis crassis, foliis oblongo-ovatis, petiolis biglandulis, floribus geminatis per spicas terminales. *Browne* 181.

P. flore roseo odoratissimo. *Catesb.* ii. t. 92. *Boerh.* i. 315. *Ehret* t. 11. *Trew. select.* 11. t. 41.

Jasminum indicum. *Merian surin.* 8. t.

The tree Jessamin. *Hughes* 189. t. 17.

Quauhtlepatli. *Hernand.* 67.

(*Nerio affinis barbadensis arbor latifolia*, flore purpureo jasmini odore. *Pluk. phyt.* t. 207. f. 2, is a different plant as he himself suspected.)

NERIUM arboreum, folio maximo obtusiore, flore incarnato. *Sloane cat.* 154; *hist.* ii. 61. t. 185. 186. f. 1.

223. TABERNAEMONTANA.

Follicles 2, horizontal. *Seeds* immersed in a pulp. *Corolla* contorted, infundibuliform. From *L.* and *Obs.* 7806.

1. *TABERNAEMONTANA alternifolia*. Leaves alternate. Stem arborescent. *L. sp.* 308; *mant.* 346.

CURUTU-PALA. *Raii hist.* 1754, from *Rheed* i. 83. t. 46, (misengraved 47.)

2. TABERNAEMONTANA *bovina*. Leaves opposite, lanceolate. Peduncles solitary, multiflorous.
From Lour.

Capsicum silvestre. Rumph. iv. 133. t. 67.

TABERNAEMONTANA *bovina*. Lour. i. 145.

3. TABERNAEMONTANA *bufalina*. Leaves opposite, lanceolate. Peduncles in pairs, uniflorous.
From Lour. i. 145.

END OF VOL. I.
