Contest No. 3.—At 8 o'clock A. M., on completion of previous shoots; single trap shoot; Pierce Diamond badge, Class A, or first class of ties.—First prize: The badge, to be held by the winner each year in trust, and to be accounted for to the State Association, who will draw the name of the winner. Second prize: Entrance fee, \$10. Class B, or 2d class of ties.—Prize: \$100 gold. Class C, or third class of ties.—Prize: \$50 gold. Class D, or fourth class of ties.—Prize: One case Curtis & Harvey's powder, E. H. Madison, Brooklyn.

Contest No. 4 (on conclusion previous shoot).—Ten double rices; class shoot; entrance fee, \$5. First prize: Bronze piece, "An American Hunter on Horseback shooting a Bison," the Le Roy Smith and Lead Manufacturing Company, New York, \$30; second prize: Schilling gun, Wm. Read & Sons, Boston Mass; case donated by Schuyler & Dunne, New York, \$125; third prize: Elahostre baby carriage, also two children's "Tally-Ho!" sulkeys, C. W. F. Darr, New York, \$100; fourth prize: Suit of clothes, J. Barnum & Son, New York, \$50; fifth prize: \$25 gold.

FOURTH DAY—THURSDAY, JUNE 23.

Contest No. 5.—At 8 o'clock A. M., on completion of previous shoots; class shoot; seven single birds; entrance fee, \$5. Class A, or first class of ties.—First prize: gold watch, Tatham & Brown, N. Y., \$250; second prize: \$100 gold. Class B, or second class of ties.—First prize: \$100 gold. Class C, or third class of ties.—First prize: Three barrel Baker gun, L. O. Smith, Syracuse, N. Y., \$250; second prize: Pair Indian plumes, Welch & O'Neil, New York, \$50. Class D, or third class of ties.—First prize: Colt gun, Hodgkins & Smith, New York, \$100; second prize: \$50 gold. Class E, or fourth class of ties.—First prize: \$10 gold; second prize: \$5 gold.

Contest No. 6.—At 12 noon, on completion of previous shoots; no class shooting; entrance fee, \$5. Sportsmen's Association Cup, donated by James W. Wadsworth, Geneseo, N. Y., \$500; second prize: Garden City Club trophy, Garden City Gun Club, Hempstead, L. I., \$150; third prize: \$20 gold; fourth prize: \$10 gold. Class A, or first class of ties.—First prize: Three barrel Baker gun, Curtis & Harvey's powder, W. Stitt, New York, agent.

FLY-CASTING.

For programme of the fly-casting, Thursday, June 23, see last issue of this paper.

FIFTH DAY—FRIDAY, JUNE 24.

Contest No. 7.—At 8 A. M., on completion of previous shoots; class shoot; ten single birds; entrance fee, \$5. Class A, or first class of ties.—First prize: Hammerless breech-loading shot gun, W. W. Greener, Birmingham, England, through Henry C. Squires, American agent, New York, \$325; second prize: "Gauge Birds of America," Charles Scribner's Sons, \$50. Class B, or second class of ties.—First prize: Case of cigars and cigarettes, Stratton & Storn, New York, \$100; second prize, violin bow and box, Dr. J. C. Connor, Brooklyn, \$50; third prize: \$20 gold. Class C, or third class of ties.—First prize: Remington gun, New York, \$100; second prize: Remington gun, New York, \$100; third prize: Remington gun, New York, \$100; fourth prize: Remington gun, New York, \$100; fifth prize: Remington gun, New York, \$100; sixth prize: Remington gun, New York, \$100; seventh prize: Remington gun, New York, \$100; eighth prize: Remington gun, New York, \$100; ninth prize: Remington gun, New York, \$100; tenth prize: Remington gun, New York, \$100.

SIXTH DAY—SATURDAY, JUNE 18, 9 A. M.

Contest No. 8.—Not class shooting. First prize: Dean Richmond trophy. Second prize: The Star Strapp Cup, Theodore B. Starr, New York, \$150; third prize: \$50 gold.

Contest No. 9.—At the conclusion of the Dean Richmond Trophy contest, Saturday, June 25, 1881, five single rices, open to writers employed on the newspaper press and representatives of prominent publishers, were shot for the purpose of raising a fund for "Around the World with General Grant," donated by the author, John Russell Young, \$25; second prize: Miscellaneous page, John E. Long, Brooklyn, E. D., \$25; third prize: Morocco writing desk, Sears & Co., New York, \$20; fourth prize: One hundred cigars, F. W. Merrens & Son, New York, \$10.

Real Average.

For best average in contests 1, 3, 4 and 7, the FOREST AND STREAM are presenting the gold medal, Forest and Stream Publishing Company, New York, \$100.

Best Conscience Score.

For best conscience score of birds killed without mist during the first week of the Convention, the following clubs are the winners of the following clubs, viz: "Morroe County," "Danville Sportsmen's Club," "Andover Club, Rochester," "Rochester Gun Club," and clubs of the Long Island Sportsmen's Association. Oil painting, \$100; second prize: \$50 gold. Class D, or fourth class of ties.—First prize: \$100 gold. Class E, or fifth class of ties.—First prize: \$100 gold. Class F, or sixth class of ties.—First prize: \$100 gold. Class G, or seventh class of ties.—First prize: \$100 gold. Class H, or eighth class of ties.—First prize: \$100 gold. Class I, or ninth class of ties.—First prize: \$100 gold. Class J, or tenth class of ties.—First prize: \$100 gold.

RIFLE SHOOTING.

Thursday, June 22, at 12 noon. Contest No. 1.—Individual; ten shots; distance, 100 yards; off-hand; entrance, \$15. First prize: One Remington, No. 7, \$100; second prize: \$50 gold. Class B, or second class of ties.—First prize: \$100 gold. Class C, or third class of ties.—First prize: \$100 gold. Class D, or fourth class of ties.—First prize: \$100 gold. Class E, or fifth class of ties.—First prize: \$100 gold. Class F, or sixth class of ties.—First prize: \$100 gold. Class G, or seventh class of ties.—First prize: \$100 gold. Class H, or eighth class of ties.—First prize: \$100 gold. Class I, or ninth class of ties.—First prize: \$100 gold. Class J, or tenth class of ties.—First prize: \$100 gold.

PISTOL SHOOTING.

Friday, June 24, at 12 noon.—Ten shots at the wall; distance, 15 yards; 47½ measure; entrance, \$2. First prize: One fancy revolver, Smith's, \$50; second prize: \$25 gold. Class B, or second class of ties.—First prize: \$25 gold. Class C, or third class of ties.—First prize: \$25 gold. Class D, or fourth class of ties.—First prize: \$25 gold. Class E, or fifth class of ties.—First prize: \$25 gold. Class F, or sixth class of ties.—First prize: \$25 gold. Class G, or seventh class of ties.—First prize: \$25 gold. Class H, or eighth class of ties.—First prize: \$25 gold. Class I, or ninth class of ties.—First prize: \$25 gold. Class J, or tenth class of ties.—First prize: \$25 gold.

White Mills, Pa., \$3, fifth prize: One loading board of same character and value as the last above prize, \$3; sixth prize: \$2, gold.

The illustrated programme of the week will be ready for delivery before the convention, and will contain an authenticated history of the New York and Long Island sportsmen's associations, and Game, with verified scores, prepared by Abel Crook, Esq., President of the association. Also a history of the Long Island Sportsmen's Association, prepared by E. N. Cook, Esq., the Corresponding Secretary of the association, and a list of the members of the Coney Island, prepared by R. S. Conant, Esq., of Harper Bros., from statistics furnished by Judge A. G. Crocney, of New Utrecht, and other appropriate matter.

On conclusion of the preceding contests, the State Tournament will stand adjourned, and the following contests will take place, in which any member in good standing of any organized Club within the United States of America may participate.

Contest No. 10.—At 9 o'clock A. M., on conclusion of previous shoots; entrance fee, \$5. Class A, or first class of ties.—First prize: W. C. Scott gun, \$150; second prize: Suit of clothes; Treadwell, Jarman & Sible, New York, \$50. Class B, or 2d class of ties.—First prize: Sterling silver dinner set, 36 pieces, F. & H. Leuermann, New York, \$350; second prize: Leather trunk, Thomas & Sons, New York, \$35. Class C, or 3d class of ties.—First prize: Case of tea, Robert Wells, \$50; second prize: Three hundred cigars, F. W. Merrens & Sons, New York, \$30. Class D, or 4th class of ties.—First prize: \$100 gold. Class E, or 5th class of ties.—First prize: \$100 gold. Class F, or 6th class of ties.—First prize: \$100 gold. Class G, or 7th class of ties.—First prize: \$100 gold. Class H, or 8th class of ties.—First prize: \$100 gold. Class I, or 9th class of ties.—First prize: \$100 gold. Class J, or 10th class of ties.—First prize: \$100 gold.

MONDAY, JUNE 27, 1881.

Contest No. 11.—On conclusion of previous shoot; five double rices; class shoot; entrance fee, \$5. Class A, or 1st class of ties.—First prize: Bronze piece, representing an English woodcock rising from the marsh, McCoy and LeBrie, New York, \$100; second prize: One case specialties, donated by Pond's Extract Co., New York, \$100; third prize: \$50 gold. Class B, or 2d class of ties.—First prize: Henry Richards gun, manufactured by W. & G. Scott & Sons, John P. Moore's Sons, New York, \$50; second prize: English corduroy hunting suit, Edwin S. Harris, New York, \$35. Class C, or 3d class of ties.—First prize: \$100 gold. Class D, or 4th class of ties.—First prize: \$100 gold. Class E, or 5th class of ties.—First prize: \$100 gold. Class F, or 6th class of ties.—First prize: \$100 gold. Class G, or 7th class of ties.—First prize: \$100 gold. Class H, or 8th class of ties.—First prize: \$100 gold. Class I, or 9th class of ties.—First prize: \$100 gold. Class J, or 10th class of ties.—First prize: \$100 gold.

TUESDAY, JUNE 28.

Contest No. 12.—At 10 A. M. on conclusion of previous shoots. Fifteen single birds and ten double rices. Entrance \$25. Class A, or first class of ties.—First prize: \$100 gold. Class B, or second class of ties.—First prize: \$100 gold. Class C, or third class of ties.—First prize: \$100 gold. Class D, or fourth class of ties.—First prize: \$100 gold. Class E, or fifth class of ties.—First prize: \$100 gold. Class F, or sixth class of ties.—First prize: \$100 gold. Class G, or seventh class of ties.—First prize: \$100 gold. Class H, or eighth class of ties.—First prize: \$100 gold. Class I, or ninth class of ties.—First prize: \$100 gold. Class J, or tenth class of ties.—First prize: \$100 gold.

WEDNESDAY, JUNE 29.

Contest No. 13.—At 10 o'clock A. M.; class shoot; five traps; Dutchman traps; entrance fee, \$5. Class A, or 1st class of ties.—First prize: One Charles Mortimer gun, John W. Hatfield, New York, \$75; second prize: Sole leather gun trunk and traveling trunk combined, Cronch and Fitzgerald, New York, \$25; third prize: Split barrel, imported by Robert G. & J. Moore's, New York, \$20; fourth prize: One split bamboo bass rod, B. F. Nichols & Co., Boston, Mass., \$20.

Special Contest.—Flying clay pigeons and trap. On Friday, June 24, if time will permit. If contest cannot be held on that day, it will take place on completion of the later-mentioned contests. Conditions.—Each contestant to shoot at ten (10) single clay pigeons and five (5) double rices. Rules of New York State Association to govern, so far as applicable. Entrance, three dollars (\$3). The pigeons and traps to be furnished by the manufacturer, 100 Broadway, Cincinnati, Ohio. Class shooting.—First prize: \$10, gold; second prize: One Ligowski trap and 1,000 clay pigeons. Both above prizes are donated by the manufacturers.

EXTERMINATION OF WOODCHUCKS.—In one of my March numbers I noticed an article from "G. F. W.," stating that he had used the pond turtle successfully in the extermination of woodchuck. His mode of operation was as follows: To secure the turtle by tying a string to one of his legs and dropping a few drops of turpentine under his tail; he would then scramble into the hole and the woodchuck would be commencing out. I would like to state that I have carefully tried this plan, and find it to be a most successful one. In various species of turtles, and I find the receipt will not work, for two reasons. In the first place the turpentine has not the desired effect, and secondly, the turtle will not enter the woodchuck hole, and cannot be forced to do so. I have grave doubts that "G. F. W." was ever successful, and would like to hear further from him.—W. B. L.

A TIP FOR TWO TO WOODCOCK SHOOTERS.—Avoid if possible the country "gin mill," with its gang of loafers, bad liquor and swarms of flies. When there is yet time locate in some clean and wholesome farmhouse, where good food, quiet, and a good night's rest will make up for supposed business. Dress in a flannel shirt with a rolling collar, it being some kind of protection against the mosquitoes, and wear a light linen shooting coat without sleeves. For pantaloons stout flannel is the best. Light but strong laced ankle shoes, with low, flat heel, and broad soles for the feet, and for the head a straw hat with crown high enough to stow away several leaves of cabbage, or a small flat sponge, which keep wet. And remember that for keeping birds free from taint, there is nothing equal to a wicker fly reel, which is light and easily kept out of the way on the back by a couple of straps.

In Oregon, the other day, a farmer scattered poison about the holes of the ground squirrels, which are a great pest there. The next morning he found a number of dead squirrels. The second morning he found a dead crow that had eaten one of the poisoned squirrels. The next morning he found a dead skunk that had eaten the crow that had eaten the squirrel that had eaten the poison.

OREGON.—A well-informed correspondent of the Portland (Oregon) Rural Press, informs that a good game law is imperatively demanded for that State. "The slaughter of deer and birds is carried on unbridled through the months of May, June and July, and in a few years the people will complain of the scarcity of game where once the woods and prairies were teeming with them." On one day a boy was hunting, and boasted of shooting a hen grouse as he was sitting on a nest of eggs."

FOXES RELIEVING EACH OTHER.—I could verify the statement made in a recent issue of your paper, stating that the red foxes when pursued by hounds will relieve each other, as I have often known them to do so. And hereabouts, where the hunting is for sport entirely, and the fox rarely killed, I

think the foxes enjoy the sport quite as much as the others engaged in it.—T. S. (West Chester, Pa.)

SHOOTING PUMPKINS.—Mr. C. O. Smith, of Tuscarora: "My father taught me to shoot on the run, long years ago when we were living in Chenang county, and when I was but a little boy. We would go out on a side hill, and my father would roll a pumpkin down it. While it was under way I fired, and practised so constantly and patiently that I got so I could hit the vegetable every time. I did this so I could learn to shoot a deer on the run, and it gave me excellent practice and skill."

TENNESSEE.—Savannah, May 11.—Squirrels have been unusually plentiful this spring, and large numbers have been shot. A couple of men came in this afternoon with twenty-six. In about three weeks black mulberries will be ripe, and at that time young squirrels will be fully grown, and can be easily found in the early morning and late afternoons feeding in the mulberry trees. A good many fine robbers have been shot in the bottoms near here this spring.—WILL.

POISONING QUAIL.—A California paper says that quail are very abundant in Santa Barbara county. In some places the farmers are compelled to poison them in order to protect their growing crops. Five acres of Lima beans were wholly destroyed by these birds on one farm.

TEXAS.—Dallas, May 20.—Prairie-chickens, pheasants, grouse and other small birds promise to be plentiful. Many hundreds of deer have been killed this season only for their hides. Such work should be stopped.—RENO.

LONG ISLAND SPORTSMEN'S ASSOCIATION.—A special meeting will be held at the Royal Arcanum rooms, Friday evening, June 3, at 8 o'clock, sharp.

It is impossible to remain long sick or out of health where Pop Bitters are used.

Camp Fire Glimpsings.

By the way, that reminds me—

CAN anything equal the solemn grandeur of a forest at night? Can anything approach the feeling of respect and awe that steals over the weary sportsman as he wrings his neck about at the foot of their airy and to sleep in the wilderness, while the pine trees murmur a lullaby?

Well do I remember the first time I slept alone in the trackless forest. The solemn stillness of the scene and the sense of utter isolation from the rest of mankind impressed me deeply, and I was sad. When I awoke, also, I had a feeling of vague unrest. This I can explain. It was due partly to the general feeling of stiffness which pervaded my frame, and partly to the demonstrations of a company of ants that had crawled down the back of my neck and started a canker. But now I am never sad in the forest. I have become accustomed to the feeling of loneliness, and the appropriation of my person by various forms of animal life has no novelty for me. A man can acustom himself to almost anything.

I had a friend who, when he awoke one morning and found his rattlesnake curled about his neck, was so frightened that he crawled down the back of my neck and started a canker. But now I am never sad in the forest. I have become accustomed to the feeling of loneliness, and the appropriation of my person by various forms of animal life has no novelty for me. A man can acustom himself to almost anything. I had a friend who, when he awoke one morning and found his rattlesnake curled about his neck, was so frightened that he crawled down the back of my neck and started a canker. But now I am never sad in the forest. I have become accustomed to the feeling of loneliness, and the appropriation of my person by various forms of animal life has no novelty for me. A man can acustom himself to almost anything.

"Silent night, peaceful night" SM.

The tales of great slaughter on turkeys, recently narrated in FOREST AND STREAM by "Splasher" and "J. H. J.," bring back to my memory the circumstances of a noteworthy single shot I made long ago. It is about fifteen years since I and another boy, W. W., both flowing over with love for shooting, took a periodical tramp to Iroquois Bay to hunt ducks. I say "hunt," for we seldom shot more than one a day, but enjoyed rowing up on the floes and blazing at them with our light single barrels. On the ever-memorable day of my great shot we had pulled our punt for miles without shooting anything and were about to start for home, when on rounding a point, we came on a youth of about our own age, who was also armed with a single barrel and six ducks and went off with an old musket of enormous calibre, the barrel about four feet long and heavy in proportion. His luck had been too better than ours, notwithstanding his superior equipment, for although there was a good many ducks in the bay they would not come into his decoys and his great gun had not spoken with any effect during the day. This we learned after he had returned to his father's place, and I was in luck with a profusion of wildfowl that would not look well in print. We soon struck a bargain that promised ill to the ducks. The stranger and I were to get in the blind while my friend W. (who has since, poor boy, served the great mystery) was to take one of the boats and drive a flock of red heads that were a short distance out in the bay. The owner of the big gun said the bird was a Canada goose, No. 1. We were also to get a pair of red heads and a pair of Canada geese contained three drabs of powder and an ounce of No. 6. My friend W. did his part of the work well and in half an hour seven or eight fine red heads were within thirty yards of the blind and huddled together. At the word there was one report and all but one of the ducks lay flopping on the water, while one flew away, evidently hit hard. The boy with the big gun jumped up and shouted, "I shot them all!" As we were to divide, I did not dispute him, but while

we were trying to push off his boat to pick up the birds they one by one recovered strength enough to fly away and left...

were four fine high-mouth bass which weighed about three or four pounds. My rod stood the test like a charm, and bent...

River it is much less abundant than the Quinnet salmon, and its flesh is less firm and paler. It reaches a weight of 5 to 8 pounds...

Sea and River Fishing.

FISH IN SEASON IN JUNE.

- BROOK TROUT, Salvelinus fontinalis. Rainbow Trout, Salmo trutta. Yellow Perch, Perca flavescens. Striped Bass, Morone saxatilis. White Bass, Alosa chrysochloris. Rock Bass, Ambloplites. (Two species.)

THE SALMONIDÆ OF THE PACIFIC COAST.

FROM advance sheets of "Proceedings of United States National Museum" we take the following list of the salmon family of our western coast.

We have given some account of the revision of this interesting family by Prof. Jordan and Mr. Gilbert before, but it was merely a list of species and their synonyms...

FAMILY SALMONIDÆ.

- 52. Salvelinus macrurus, J. & G. Dolly Varden Trout; Bull Trout; Salmon Trout. (Salmo spectabilis, Grd.; Salmo campbelli, Suckley; Salmo lordi, Gunther; Salmo tudes, Cope; Salmo callarius, Pallas; Salmo bairstii, Suckley.)

FISHING ABOUT NEW YORK.—We are prepared to direct anglers to fishing resorts easily accessible from this city.

Thouga cheviot's top be frosty still, He's green below the knee, See thou your plaid an' tak' your gad An' gang awa' wi' me.

HINTS FROM AN OLD ANGLER.

KEEP your flies from moths in tight vessels (wide-mouth glass bottles, small preserve jars, etc.) except when on your vacation angling.

Before going into the woods provide yourselves with cotton gaiters with elastic wristbands, to which add light silesia or light twilled cotton gaiters, with elastic bands. Let the gaiters reach above and outside of the coat sleeve, to half-way to elbow.

Take a supply of guide rings and strips of metal, with plenty of thread. You may break your fly rod and have to extemporize one from a young cedar or wild cherry.

The use of cotton gloves has a further use than above-mentioned. You can hold a fish without it slipping through your fingers, and they will prevent your hands getting sunburnt.

FISH IN MINNESOTA.

NOW that the season has opened, let me claim a corner and relate to the interested readers of the Forest and Stream a tale also harrowing of death among the finny beauties that it will make you all feel like coming and joining in the battle.

Yesterday morning myself and partner started out to try our hand on the bass and walleyes, and six o'clock saw us with our minnows, rods and all, headed across the lake for the fishing grounds.

From Mount Shasta to San Luis Rey River, in streams of the Coast Range and west of the Sierra Nevada. Less common north and California, and seldom seen in salt water.

- 54. Salmo gairdneri, Richardson.—Steel-head; Hard-head; Black Salmon. (Salmo trutta, Suckley.)

Found in the mouths of the large rivers from the Columbia northward, and occasionally in the Sacramento. It appears with the salmon and is usually thought to be migratory, but is probably not so, or migratory to a small degree.

- 55. Salmo purpuratus, Pallas.—Oregon Brook Trout; Salmon Trout; Lako Trout. (Salmo clarki, Rich.)

Very abundant in all waters north of Mount Shasta and through the Great Basin and Rocky Mountain region; occasional southward to Santa Cruz. Found in abundance in salt water in Puget Sound and about the mouth of the Columbia.

- 56. Oncorhynchus kisutch (Walb.), J. & G.—Coho Salmon of Frazer's River; Silver Salmon; Kisutch; Bielaya Ryba. Skewitz.

Sacramento River to Puget Sound and northward; very abundant in summer and fall. It is rarely taken in the Columbia in the spring, but great numbers run up the river in the fall.

- 57. Oncorhynchus chouicha (Walb.), J. & G.—Quinnet Salmon; King Salmon; Chouicha; Chinook Salmon; Spring Salmon; Columbia River Salmon; Sacramento Salmon; Winter Salmon; White Salmon. Sawkwey.

From Ventura River northward to Behring's Straits, ascending Sacramento, Rogue's, Humboldt, Columbia, and Kamschatka, Japan and Northern China; in fall ascending these and probably all other rivers in greater or less abundance; the young taken in Monterey Bay, Puget Sound, etc., in summer, is considerable numbers.

- 58. Oncorhynchus nerka (Walbaum) Gill, & Jordan.—Blue-back; Sukkeye; Redfish; Kascal; Frazer's River Salmon; Krasnaya Ryba.

San Francisco to Behring's Straits; very abundant in the fall when it runs in all streams, but not to a great distance. Not seen by us anywhere in the spring. It reaches a weight of 12 to 20 pounds.

The following table gives some of the specific characters of the species of Oncorhynchus. The figures given are the averages of variation, so far as known:

Table with columns: Name, Number of gill-rays, Number of anal rays, Number of pectoral scales, Number of scales in longitudinal series, Number of branchiostegals, Average weight in pounds, Markings.

61. Hypomesus pretiosus (Girard), Gill.—Surf Smelt. From Monterey to Alaska; very abundant north of San Francisco, and often seen in the San Francisco markets.

62. Thaleichthys pacificus (Richardson), Grd.—Eulachon; Hoolikin; Candefish; Greasefish; Smelt. From Oregon northward, ascending the rivers in spring in enormous numbers, but not for a great distance.

63. Osmerus thaleichthys, Ayres.—Smelt. From Monterey northward; rather common, but not in such great numbers as the surf smelt and the eulachon.

64. Osmerus eburneus, Lockington.—Smelt. Everywhere found with the preceding, and scarcely less common.

THE COOKING OF THE CARP.

MRS. AMELIA LEWIS, editor of that useful paper, Food and Health, says: There are various ways of cooking the carp in an appetizing manner. We shall mention them here: 1. To plain broil it. 2. To stew it in gravy. 3. To bake it when stuffed.

(in, or some kind of a few slices of bacon. Place this in oven or cover over on top. When done, make a brown gravy with the fat in the pan, and pour over the fish, or eat dry, if you prefer.

Beetroot salad or potato salad can well be eaten with it. Also, mashed or fried potatoes, and various vegetables, green peas or beans.

The flesh of the carp represents among fishes the tastiness of the fowl among poultry, or the pig among the meat of the domesticated animal. It is savory, aromatic, and also nourishing to a degree, and carp will become a very valuable fish food.

TROUTING WITH AN AUTOMATIC REEL.—SYRACUSE, N. Y.—I wonder if many of your readers have already taken their rods and made as delightful trips as I enjoyed last week. It makes one mourn when he starts toward a trout stream in Central New York, to think that there are now so few of them left, where the beautiful fish are not so badgered and persecuted that little attraction is left for the sportsman. But I know of one little brook, fed by numerous springs, that I waded in the cool shades of an old wood, or tumbled over shallows and under fallen trees, making innumerable favorite haunts for the wary fish that, not many years ago, fairly swarmed in them. That is down in the southern portion of Cortland county. Of course, the little stream is much visited, but I have never failed of a respectable catch from its pure waters; and this year, from the marvelous backwardness of the spring, I found it had been less fished than usual at this season. So much the better for me, and I passed two days with friends beside its banks in the enjoyment that is known only to the angler and the lover of Nature's peaceful scenes.

By the way, I made at that time my first trial of the new automatic reel, invented and made in this city by Messrs. Loomis and Plumb. Have you tried it yet? I think I have seen it advertised in your columns. From my limited experience with the new device, I can say nothing but good of it. You understand, doubtless, that the entire work of reeling in the line is accomplished by a spring, and one who has not used the reel can hardly imagine the facility of holding his rod, freeing the reel of the brake, while an exciting contest goes on between the fish and the spring. The least slack line is impossible, and, indeed, all crank drudgery, if I may so term it, is done away with, while the embossed spring remains. I hope to hear from you an editorial expression on this topic.

Do you and your readers know that here in Central New York the work of protecting fish and game is more actively prosecuted, perhaps, than anywhere else in the country? So vigorously have the game estates prosecuted unlawful fishers, that a wholesome fear of heavy penalties exists, which must work for good. A few nets have been found on our little Onondaga Lake, where those peculiar whitefish breed that are so much coveted, while a general warfare has opened on Oneida Lake, and several arrests have been made. In this connection the Onondaga County Sportsmen's Club has done excellent work.

Good-bye for three weeks, when I hope to write you from the best bass fishing grounds in the country.—WALTON.

TROUT AND BLACK BASS.—It is not entirely safe nowadays to recommend to sportsmen any near-by fishing as offering any great inducements in the way of trout fishing, so diligently has not only the rod, but the bass uses of pot-fishermen been applied to lessening the resources of streams and lakes. But it is safe to say that a day's travel will not take the angler to better sport than the best of the sport may be enjoyed than that still offered by the streams of Ulster, Sullivan and Delaware counties, N. Y., and Pike county, Pa. Milford, Stockwater and Hawley, in the latter county, are centres from which start brooks that still yield good returns to the fly. The Sawkill, Vandemark, Raymondville, Dryden and Adams brooks, near the former place; the Schoharie, Taylor's and the Schoharie, near the latter, and the Elk, Elkwater, and a number of streams, easily named in Hawley, are all good ones. First-class accommodations in the way of stopping places, guides, &c., are amply provided. Monticello, Calicoa, Fallsbury and Morston, in Sullivan county, and Ellenville, in Ulster county, are likewise well surrounded by trout streams.

Black bass fishing with spears on June 1. The Delaware River is now acknowledged to be the favorite bass-fishing water within easy reach of New York. Six-pounds were taken at Milford, Port Jervis, Pond Middy, Shohola, Lackawaxen and Narrowsburg last season. It is estimated that over 15,000 bass were captured with the hook and line between Milford and Narrowsburg during the summer of 1880—a distance of forty miles. Besides the river, there are over thirty lakes with good fishing, some of them being stocked places, stocked with bass, which are daily resorts of lovers of black bass fishing. Noramby, the farthest distant of the places named, is 122 miles from New York; Milford and Port Jervis are 88; Shohola, 107; Lackawaxen, 110, all reached by convenient trains on the Erie Railway only.

A GAME PROTECTOR SPEAKS.—ITHACA, N. Y.—The conspiracies which seem to be formed in nearly all sections of the State in violation and in defiance of the fish protecting law have, I trust, been at last—if not broken up—at least thwarted in their illegal aims in most localities.

The result of my investigations last fall and winter, in which I succeeded in bringing several of the schemes to light, I was in hopes would be of such practical aid in the fisheries of Cayuga Lake. Recent developments, however, show that the rascals are still at work, and also that fish piracy is not confined to the lower slums of the community with which the authorities have heretofore had so much trouble. Respectable, in other respects law-abiding, citizens are found to carry on the illicit business. At one head of a fishing stream, on the shore of the above-named two fykes, the property of Harvey Barker. A seine belonging to ex-Game Constable Van Droof was raised in the same locality. In response to an appeal of some parties at the foot of the same lake, I went there and after considerable vigilance discovered twenty-seven fykes and one gill-net scattered around in the various fisheries which I immediately took possession of and confiscated. The plans of these outlaw-hunters to be deep-bait and almost defy detection. So general do they appear, that the co-operation of officers and citizens alike is necessary to break them up. Their retreats are at last discovered, and their practices unearthed, and by proper vigilance on the part of the local officials, I trust that the mislaid trade may be extinguished, and the offenders punished as they deserve.

D. B. NORRIS, State Game Constable.

TROUTING IN ULSTER AND DELAWARE COUNTIES.—New York, May 23.—JULIUS returned with Mr. A. Whitney, of Brooklyn, from Ulster and Delaware counties, on our annual hunting expedition. We fished every day for two weeks, and had it not been for the Rev. James Beecher, a genial, kind-hearted gentleman whom Mr. Whitney was well acquainted with, we would have come home completely disgusted. Beecher's Lake was the only place where we could catch any number. Mr. Whitney and myself caught 234, and only stopped because we had enough. Mill Brook, I am afraid, will be a failure this year; water was very low last fall. The mink and a few net fishermen took all there was left in the large pools. And the winter, we must remember, was very hard, the water freezing to the bottom. Fish, I am told, were frozen in. The break-up of ice came, and a great number of trout were killed by being dashed against rocks and stones before they thawed out. They put in thirty thousand trout in streams at Shandaken and Big Indian last Saturday. The people in this locality are waking up to the fact that it is necessary to keep fish in streams or city folks will not come their way and leave the mighty dollar.

We fished Fartough Lake, a lovely spot, four miles from Grant Mills, and owned by Mr. Ward De Silva, whom we stopped with, and caught only a few, but were satisfied that it is a good place, and when trout take a notion, I know one can get all he wants. Go to Arkville on Ulster and Delaware R. R., and private conveyance 15 miles to Mr. De Silva.—H. C. WEST.

TROUT IN WASHINGTON TERRITORY.—Spokane Falls, W. T., May 8.—Trout-fishing has begun. I am accustomed to one-quarter and one-half pound speckled beauties, the privilege of taking them varying from one to eight pounds seems immense. Cour d'Alene and Pen d'Oreille lakes and the Spokane River are full of fish, which take the fly at this season very readily. I landed one weighing six and one-quarter pounds to-day and several weighing from one and a half to three and a half pounds. I will write you shortly about the country and the manner and way of getting to it.—J. H. R.

SWALLOWS AND BATS TAKE THE FLY.—Rochester, N. Y.—In your last issue you tell how J. H. Harris, of this city, was fishing for trout on Annie's preserve, Caledonia Creek, and although the fish did not take the fly well, he had the novel experience of catching three swallows with his hook. The mistake the small artificial fly for their natural food. The late Sam. Drake, of this city, one evening had his fly taken by a bat, and to his astonished comrade explained that it was probably a cherubim.—ROCHESTER.

WRISTLE FOR FLY-CASTING.—Providence, R. I.—In an article on "Quacks and Anglers," you ridicule "Galvanic Wristle." I would say, however, that any one who will try it will find that a good silk classic wristle, 2 1/2 inches wide, such as can be ordered of any druggist, will prove an excellent support to the wrist, and I for one could not cast but a short time without mine, which I never fail to take when going for a trip. Let fellow-anglers try and report success.—"PHI."

THE CRAFT FOR TROLLING.—Oceanic, N. J., May 24.—The fishing season may be said to have opened. I have taken, this morning, six fine bass striped, the first of their season—average 2 lbs. I have fished on the waters of the North Shrewsbury for twenty-five years, and I have never had a boat that pleased me so much as my 32 ft. 60 lbs. Rushton canoe. I recommend this canoe to all fishermen, more especially trotters like myself.—G. H. W.

A BIG STOCKED BASS.—New Rochelle, N. Y.—On the 24th of May Mr. Walter J. Davis caught with a hook and line, using a squid for bait, a striped bass four feet two inches long and weighing fifty-eight pounds! It was taken in New Rochelle harbor, Long Island Sound, in about twelve feet of water near the village dock.—H. W. M.

ADIRONDACK TROUTING.—MORA, May 24.—Trout-fishing is still splendid. Many have been up to the ponds and streams and caught big strings of trout. One man caught thirty pounds alone at the outlet of Meacham Lake, last week. The boys continue to shoot the cranes nesting in the swamp below here. There are hundreds of them.—A. C.

GRAND LAKE STREAM SALMON.—A correspondent, G. A. B., writes, under date of May 14, that the salmon fishing (Hovort), at Grand Lake Stream is first rate; fish, large and plenty.

—Anglers going from Boston to the Maine trout country have a choice of routes, among them that of the Eastern Railroad, which carries one through an excursion rates, which are noted in our advertising columns. Send to the agent for an excursion list.

Ne matter what your feeling or attainment is, Top Bitters will do you good. Prove it.

—The beaver is one of those animals whose instinct and intelligence have been most discussed among naturalists. Currier, it is well known, used to demonstrate by a series of experiments the manner in which the animal was so artificially suckled, that the admirable industry and intelligence and precision of certain laws of nature evinced by the works of leavers spring from a blind mechanical force—pure instinct, unrelieved by the higher faculty. Currier fed his young prisoner with branches of willow, of which it ate all the bark, cutting up the peeled stems into pieces, piling them up in a corner of the box as building material. He then provided it with red pebbles and red branches; they were all used by the beaver in the manner peculiar to his species. "This," argues Currier, "was blind instinct; no good could result from the trouble which it gave itself, for it needed no house." Buffon's argument, that solitary though free beavers do not know how to construct dams, is refuted by Currier's young prisoner, who constructed and built his dams and dykes.

There are numerous instances of the beaver's activity that appear incompatible with the argument that only blind instinct moves the little workers. To watch two beavers at work gnawing down a big tree—I have seen them on several occasions at work on cottonwoods not infrequently two and two and a-half feet in diameter—each worker kept up strictly to his side, the incision being made with perfect, one might say mathematical accuracy, to bring the tree in its final plunge to the very spot they want it, at least a foot or two on the upper side of it, where the danger from the swift current is greatest, is a sight which will probably convince even the most unbelieving. An experiment made on several different occasions by me tells its own tale.

Coming in the course of my rambles upon quite fresh beaver work, say a moderately big cottonwood tree five or six inches in diameter, standing on a slope, and already cut through by them, I would have been very glad to see, if possible, break it down, so that it fell up the slope in a direction opposite to that which the beaver evidently intended. Visiting the spot the next day, or two days afterward, the tree was invariably lugged round, with the top downhill or afterward the little creek, the foundation work probably of a new dam. London Field.

FROM advance sheets of a future report of the Report of Commissioners of Fish and Fisheries of the United States, we make the following extracts from "A report on the history and present condition of the fisheries of Cape Ann, Mass., together with notes on the natural history and artificial propagation of the species," by H. E. Earle:

Fish Culture.

THE CODFISH.

FROM advance sheets of a future report of the Report of Commissioners of Fish and Fisheries of the United States, we make the following extracts from "A report on the history and present condition of the fisheries of Cape Ann, Mass., together with notes on the natural history and artificial propagation of the species," by H. E. Earle:

The recent inquiry into the decrease of the food-fishes of the coast called to the attention of the United States Commission of Fish and Fisheries, under the direction of the commissioner, Prof. Spencer F. Baird, has led to the establishment of temporary stations at different points along the coast, where special attention has been given to the study of the more important species for the purpose of gathering definite information of their relative numbers past and present, their geographical distribution and their habits. Of late the commercial importance of what might be styled the northern fisheries, and the complicated questions that are continually arising between our own government and our northern neighbor regarding them, has led Professor Baird to give particular attention to this subject, with a view to becoming more thoroughly acquainted with the habits and movements of these species, but also the methods employed in their capture and the extent and money-value of the fisheries.

"With this end in view, he selected Gloucester, Mass., as the most suitable location for the study of the cod-fish, which he arrived at his assistants early in July, and at once began the investigation of the subject."

"The late James W. Milner, deputy commissioner, arrived early in July to take charge of the experiments, and Mr. Frank N. Clark, a professional fisherman, was selected to accompany him, and came soon after to personally superintend the work in the hatching-room. Mr. Milner remained long enough to see the preliminary apparatus and machinery placed in position and the first eggs laid, when he was obliged to return to Washington on account of his serious sickness. A little later Mr. Clark was called away to look after the interest of the Commission in another State, and Capt. H. C. Chester superintended the work in the hatchery during the remainder of the season."

"A 4-inch pipe was laid from the hatching-room to a point in the harbor at the end of the wharf, and sunk below low-water mark. The outer end of the pipe was fastened to the piling of the wharf, and the inner end, in a box, to the masonry of the pier at the annual life of the harbor. The inner end communicated with two 300-gallon tanks, placed in an elevated position in the center of the room, to be used as reservoirs for the salt water. These reservoirs were connected with the supply pipes that extended along the walls of the building, at a height of 12 feet, by vertical faucets at short intervals, from which the water was supplied to the eggs by means of rubber tubing. In one end of the room was placed a large wooden stand, upon which the pump that brought the water from the harbor to the reservoir in a constant stream, the quantity being regulated by the outflow."

"It was of course unknown what hatching apparatus could be made to use as no eggs of the cod had ever been artificially hatched, and indeed it was not till after the completion of these in charge to which of the three classes, sinking, floating, or adhesive, the eggs of the cod belonged. Cones similar to those used in hatching (figured in the report of the Commissioner of Fish and Fisheries for 1875, and also in the report of 1876) as likely to give the best results, put up along the sides of the hatching-room, and connected with the faucets by the rubber tubing."

"After recording the failure of the cones, and of Mr. Milner's inverted cone with a twisted tile at the apex to give the water a spiral motion as it ascended, while the outflow was in the form of a circle surrounding, and just above the inflow, in a line with the sides of the cone, through the masonry of the eggs dragging the screens. Of Clark's hatching-box, the Ferguson bucket, and the bucket of Mr. Earle's design, through the sediment and mud in the water, he says—

"Captain Chester was at this time devising an apparatus which should not give a certain change to the water, but also partially keep the sediment from the eggs. This apparatus is known as the Chester bucket. It consists of a tin cylinder 18 inches in diameter, and 24 inches high, with four rectangular openings, each 2 1/2 inches wide, extending from near the bottom to within 2 inches of the top. These and the bottom of the cylinder are covered with wire-cloth to prevent the eggs from escaping; and the dirt from entering the water. The apparatus was not, however, so simple as it should not give a certain change to the water, but also partially keep the sediment from the eggs. This apparatus is known as the Chester bucket. It consists of a tin cylinder 18 inches in diameter, and 24 inches high, with four rectangular openings, each 2 1/2 inches wide, extending from near the bottom to within 2 inches of the top. These and the bottom of the cylinder are covered with wire-cloth to prevent the eggs from escaping; and the dirt from entering the water. The apparatus was not, however, so simple as it should not give a certain change to the water, but also partially keep the sediment from the eggs. This apparatus is known as the Chester bucket. It consists of a tin cylinder 18 inches in diameter, and 24 inches high, with four rectangular openings, each 2 1/2 inches wide, extending from near the bottom to within 2 inches of the top. These and the bottom of the cylinder are covered with wire-cloth to prevent the eggs from escaping; and the dirt from entering the water. The apparatus was not, however, so simple as it should not give a certain change to the water, but also partially keep the sediment from the eggs. This apparatus is known as the Chester bucket. It consists of a tin cylinder 18 inches in diameter, and 24 inches high, with four rectangular openings, each 2 1/2 inches wide, extending from near the bottom to within 2 inches of the top. These and the bottom of the cylinder are covered with wire-cloth to prevent the eggs from escaping; and the dirt from entering the water. The apparatus was not, however, so simple as it should not give a certain change to the water, but also partially keep the sediment from the eggs. This apparatus is known as the Chester bucket. It consists of a tin cylinder 18 inches in diameter, and 24 inches high, with four rectangular openings, each 2 1/2 inches wide, extending from near the bottom to within 2 inches of the top. These and the bottom of the cylinder are covered with wire-cloth to prevent the eggs from escaping; and the dirt from entering the water. The apparatus was not, however, so simple as it should not give a certain change to the water, but also partially keep the sediment from the eggs. This apparatus is known as the Chester bucket. It consists of a tin cylinder 18 inches in diameter, and 24 inches high, with four rectangular openings, each 2 1/2 inches wide, extending from near the bottom to within 2 inches of the top. Rifle and Trap Shooting.

RANGE AND GALLERY.

Boston, May 23.—Better weather conditions never presented themselves to fifteen than to-day, but only a small number took advantage of the opportunity...

Table with 2 columns: Name and Score. Includes A C Adams, O M Jewell, J S Bennett, etc.

Handicap Match (Creechwood target). J S Bennett, 45; J F Fellows, 45; J W Johnson, 45; J C Adams, 45.

MAMMOTH RIFLE GALLERY.—The past week at this famous resort for rifle men has been one of unusual success...

AMATEUR RIFLE CLUB.—The matches for June are as follows: June 8.—Extra Long Range match; 45 shots; 1000 yards.

AMATEUR PISTOL MATCH. S W Fattar, 65; J H Williams, 65; S W Fattar, 65; J H Williams, 65.

BUCKFLOUT, Ct., May 27.—The regular shoot of the Bridgeport Rifle Club to-day had fair weather most of the time...

RECORD BADGE. T shots.—D N Conner, 35; S H Hubbard, 35; S N Nichols, 35; D N Conner, 35; S H Hubbard, 35.

MILWAUKEE TEAM. 800 yds. 900 yds. 1,000 yds. Total. J C Wells, 73; J N Johnston, 73; J T Drake, 73.

CHICAGO TEAM. 800 yds. 900 yds. 1,000 yds. Total. E R Hubbard, 71; M F Truett, 71; J A Shaffer, 71.

AT A MEETING HELD AT THE Kirby House in the evening there was a large attendance. The following clubs were represented: Geo. H. Thomas, Chicago; Minneapolis Club; Orion, Racine; Sheboygan Club, Lake View, Wis. 1, and the Milwaukee Club, E. M. Skinner, of the Minneapolis club, presided, and Col. Lou. H. Drury, of the Chicago club, acted as secretary.

NEW ORLEANS, La., May 22.—Owing to the competitive drill of the last three days and presence of some of the visiting military in town, the attendance at the shoot of the section No. 2, was not so large as made. The following are the scores: 800 yds. 900 yds. Total. Gschwind, 47; Spindler, 47.

THE TRAP. THE BRASKA TOURNAMENT. THE SHOOTING TOURNAMENT HELD AT LINCOLN, NEBRASKA, UNDER THE management of the Lincoln Sportsman's Club, May 11, 18, 19, and 20, was well attended, although the weather was cold, raw and rainy during the first two days.

yards; fifteen shots at each; any rifle; teams using all military rifles to receive an allowance of ten points at each distance.

AMATEUR RIFLE CLUB.—The matches for June are as follows: June 8.—Extra Long Range match; 45 shots; 1000 yards.

NEW YORK RIFLE GALLERY.—For the week ending May 23.—At 80 yds. Creedmoor target reduced to the distance; 3 scores, possible 150.

THE SHARPS RIFLE AND ASSOCIATION, of Camden, has issued its program of matches for the season as follows: The first match, June 4.—Shorts match for military rifles; open to all comers; distance, 200 yards; position, standing; 10 shots; weapon, any rifle, without cleaning.

MILWAUKEE, Wis., May 24.—The rifle contest between the Milwaukee and Chicago, of Chicago, and Minneapolis clubs of the Chicago Club, was an exciting and spirited affair.

Table with 2 columns: Name and Score. Includes J C Wells, J N Johnston, J T Drake, etc.

Table with 2 columns: Name and Score. Includes D N Heibel, C Y Skinner, C Y Maudlin, etc.

Table with 2 columns: Name and Score. Includes E R Hubbard, M F Truett, J A Shaffer, etc.

Table with 2 columns: Name and Score. Includes Knight, Henry, Doolittle, Pierce, Howe, McCall, Malby, W W Wilkias, etc.

Table with 2 columns: Name and Score. Includes Henry, Charlton, Sechlund, Hausman, etc.

TO SHOOT ON THE grounds of the New Orleans Gun Club there was a bait shooting match, handicap from 18 to 65 yards rise, to double rifles, three prizes being offered.

THE SHOOTING TOURNAMENT HELD AT LINCOLN, NEBRASKA, UNDER THE management of the Lincoln Sportsman's Club, May 11, 18, 19, and 20, was well attended, although the weather was cold, raw and rainy during the first two days.

Table with 2 columns: Name and Score. Includes Brucker, Arbutnot, Farnie, etc.

CONTEST NO. 2, 10 balls at 10 yards, resulted as follows: Babcock, 10; Fry, 10; Schellenberger, 10; Sprigg, 10; Petty, 10; Dunham, 10; Barney, 10; Still, 10; Henton, 10; Budd, 10; Hentz, 10; Robertson, 10; Arbutnot, 10; Hathaway, 10; Felizer, 10; Sulzfeld, 10; Bracey, 10; Collins, 10; Hoyer, 10; Woods, 10; Hester, 10; Browning, 10; McIrvine, 10; Pect, 10; Shelton, 10; Irwin, 10.

SECOND DAY.—The rain of the night before had not greatly interfered with the sport. The match was for the prize silver cup, won by single birds, at 21 yards rise. This cup was won last year by the Lincoln Club. It was won to-day by the Omaha Sportsman's Club.

Table with 2 columns: Name and Score. Includes Omaha Sportsman's Club, Hughes, Lincoln Sportsman's Club, McBride, J E Baum, etc.

Table with 2 columns: Name and Score. Includes Nebraska County Sportsman's Club, Browning, Kauffman, Syracuse Sibley Gun Club, Bray, Barney, etc.

Table with 2 columns: Name and Score. Includes Leader, Bracey, Woods, J M., etc.

Table with 2 columns: Name and Score. Includes Johnson, Jones, McCartney, Babcock, Sheltonberger, Woods, Petty, Hathaway, S B., etc.

Table with 2 columns: Name and Score. Includes Hestling, Mills, Matthews, Francis, Carpenter, Bray, Hentz, Collins, Barney, Robertson, Tucker, etc.

Table with 2 columns: Name and Score. Includes First prize was divided among Petty, Page and Hallett; second, S. A. Tucker; third, S. M. Schellenberger; fourth, Geo. Jones. The fifth was won by the following result: First money divided among Petty, Irwin, Jones and S. B. Hathaway; second, Tucker; third, Hentz, Hestling and Hasting; fourth, Dunham.

Table with 2 columns: Name and Score. Includes Team shooting; 10 glass balls, 18 yards; McBride, Shelton, Summers, Den, etc.

guide book of Lake George with maps, will be forwarded to those desiring it.

Mr. Marvin (Piscator), Hillview P. O., Lake George, N. Y., will erect a bath in the canoe camp, and will serve meals at all such camps. He will furnish spar for bedding at a reasonable price. Canoeists are requested to bring their tents and blankets.

Upon arriving at the canoe camps, canoeists will please report to Mr. Charles A. Cressy, Supr. of Camps, who will assign them their camping grounds.

REGATTA COMMITTEE. (FRANK STAIN, CHARLES F. GARDNER, NATHANIEL H. BISHOP.

Persons desiring to invite themselves to the American Canoe Association can obtain a copy of the constitution, by-laws and instructions to applicants by addressing the secretary. Non-bit canoeists can become members. When crews are used for the purpose of starting money, or for racing for purses, their owners will be considered professionals, and are ineligible to membership in the American Canoe Association. The initiation fee and first annual dues (\$10) should be sent in registered letters. The first number of the "Canoe Pilot" will be issued in December of the present year. The first annual registration book, with a list of members, canoes, etc., will be published in the course of a few weeks. Applicants for membership will expedite the issue of this work by sending in their membership fees at an early day. More than one hundred members have been enrolled in the Association within the last eight months.

NATHANIEL H. BISHOP, Secretary of A. C. A., Lake George, Warren Co., New York.

CANOEING IN NEW YORK.

It is strange why New York has not taken the lead in canoeing. Considering population, wealth and unsurpassed facilities of every kind, the present condition of this health-giving, clean and interesting sport, the New York Yacht Club, has hardly furnished as much encouragement, nor has it succeeded in propagating a love for the pastime, which would have volunteered to its own strength and reputation. While the West, and especially the West, has been advancing with rapid strides, New York to-day can hardly muster a score of active canoeists, who really swing the blades and are not content with simply being in the boat. The New York C. C. has no more commodious quarters, is free from debt and should be far more popular than any other club in the State. The New York C. C. has no more commodious quarters, is free from debt and should be far more popular than any other club in the State. The New York C. C. has no more commodious quarters, is free from debt and should be far more popular than any other club in the State. The New York C. C. has no more commodious quarters, is free from debt and should be far more popular than any other club in the State.

YACHTING NEWS.

The Southern Yacht Club offers \$1,500 for a single Northern racing yacht will sail.

QUESTION OF TYPE.—The type of yacht most prominent is so much the result of measurement by length that we are glad to see the clubs giving small boats making a move to follow the lead of the large clubs in either abandoning such a faulty rule or else settling limits to its ill effects by prohibiting more than a certain area of sail. We do not unreservedly approve of such limitation as the best way out of the difficulty, as we would prefer to see the root of the evil—measurement by length—dealt with rather than one of its natural effects. Still, as a step in the right direction, the limitation set to sail by the Pennsylvania Y. C. is deserving of approval. Of still importance is this limitation deemed that the club has incorporated this feature in its charter, as follows:

"This certifies that we, the undersigned, citizens of Philadelphia, desiring to associate ourselves for social and recreative purposes, do hereby constitute and organize ourselves as the Southern Yacht Club of Philadelphia."

"First.—The name of the club shall be known as the Pennsylvania Yacht Club of Philadelphia. "Second.—The principal business of this club is to encourage the building of yachts termed fourth-class tick-ups, and to limit the sails to a size that can be safely carried by the same, thereby going away with over-cargo, which has been the chief object of Delaware river yachting. Yachts not to measure more than 18 feet 2 inches in length, 4 feet 6 inches beam and 15 inches in depth amidships. Sails shall not measure more than 4 feet 6 inches around the bolt rope before being stamped, and shall be allowed to stretch no more than 18 inches hereafter, making 56 feet of bolt rope.

"Third.—The principal rooms and place of business of this club shall be in the city of Philadelphia and the State of Pennsylvania.

"Fourth.—The principal rooms and place of business of this club shall be in the city of Philadelphia and the State of Pennsylvania.

"Fifth.—The number of trustees to manage the business of the club shall be five, and their places of residence in the city of Philadelphia, Penn.

"Signed—Oscar Y. Korn, George Hardman, Charles Meyner, Herman Bassett, George Foster, Jesse Vaneghten, Walter Gilbert, Knox S. Leeds, Frank Shaw, William Hardman, Jr., Harvey T. Weber, Frank Kisselback, Leslie Wood.

A RETURN to the "Forest and Stream" showing that the proposed America Cup Match, which everything is plain sailing with, took the right tack from the outset is instructive. When the challenge was first mooted in these columns weeks ahead of counterparts, almost all objections were raised, culminating finally in a piece of grotesque shoddyism published in a contemporary which turned its paragon nose at the keeno of a joint stock racing machine of such a wretched little kind as the New York Y. C. offered the opportunity to challenge the New York Y. C. without any further ado. It was even proposed to ignore the matter entirely; but two very good reasons were suggested to put about and since a very different time is now on record. This, we believe, was effected through the journal, the only one free enough from local prejudice to demand a more judicious representation of the matter. A deal of trust, article them, and from which the New York Y. C. could not escape under any pretences without relinquishing their claims as the national champions, and which, by the continually-growing fleet of cutters, in spite of their state out of "our smooth waters" of the world, is not a negligible thing is that the very few accessions to the cutter fleet are in the order of gentlemen who have owned the slightest light drafts in America. The testimony of one and all, however, is against their boats for anything but harbor sailing, and they ought to know, for they have had all the chances for observation necessary among both cutters and sloops, and in spite of their natural predilection being in favor of the sloop, have given their natural predilection to the sloop, and have been able to agree with a honest eye with a cutter that cutters of fair beam are the most satisfactory.

A FLEET OF CUTTERS.—Contemporaries still living in sailing-vian ideas must be thoroughly "nonplussed" by the continually-growing fleet of cutters, in spite of their state out of "our smooth waters" of the world, is not a negligible thing is that the very few accessions to the cutter fleet are in the order of gentlemen who have owned the slightest light drafts in America. The testimony of one and all, however, is against their boats for anything but harbor sailing, and they ought to know, for they have had all the chances for observation necessary among both cutters and sloops, and in spite of their natural predilection being in favor of the sloop, have given their natural predilection to the sloop, and have been able to agree with a honest eye with a cutter that cutters of fair beam are the most satisfactory.

MEASUREMENT ABROAD.—Many English yacht clubs are adopting Mr. Kemp's proposed rule (length square multiplied by beam and divided by twelve) based on their own responsibility. The Yacht Racing Association has also raised another matter, at which it is likely some definite decision will be set with the new rule to go into force. The Evolution is opening the eyes even of the dulciss, and Little Watson & Co. are beginning to think a change deserving of a little more critical examination on their part, as the present rule simply threatens to wipe out their profession of yacht designing, no talent beyond addition being needed to build one yacht longer than another.

LIVADIA.—A paper read before the Institution of Naval Architects, London, at their last meeting, establishes the fact that the Imperial Russian yacht Livadia is a success economically and otherwise. It comes the St. Petersburg correspondent of the London Times, and says it is no such thing. The damage attributed to striking wreckage was really due to a critical examination on their part, as the present rule simply threatens to wipe out their profession of yacht designing, no talent beyond addition being needed to build one yacht longer than another.

A SUCCESS.—So far as an opportunity has been afforded for judging, the yawl rig on the Caprice is pronounced a decided success. We even hear that she is faster than as a sloop, but whether or no, that she is extremely handy, the mizen taking care of its fit and no one noticing, in actual practice, any complication of gear. Those who have sailed in her are delighted with the change, and we already hear of many contemplating the adoption of the rig. Let the snug schoolers down East sail in the yawl if they want a fast, handy rig for racing or for cruising. The world is moving.

YACHT BOOKS.—We have received a little volume, entitled "Euryclides Abot" by the author of "One More Unfinished." The story is an account of a cruise in a sloop from Montreal to Lake Champlain. It is well written and, if without stirring incident or technical detail, will give to interested readers not only a good yarn, but also the public benefit of their experiences as well. We are also in receipt of Lord's Yacht Register for 1881, which will be reviewed at greater length. Readers are in the meantime referred to the advertising columns.

FAST BOATS.—Mr. Thos. Clapham, of Roslyn, L. I., recently sent two yachts of his own model Sloop. We hear that in the regular St. Louis spring regatta, May 25, they both did remarkably well, the Zingua beating everything and the Julie coming in a good third. These boats are 24 1/2 ft. long, 10 ft. beam and 3 ft. deep and have long, iron bows and sharp cuttings at the stern. The mizzen mast of the Zingua has her oars in hand for other boats of the same kind, including one from England.

INTRA-STATE REGATTA.—The enterprising yachtsmen of New Orleans have gone so far as to offer \$1,500 for a single Northern yacht can be induced to sail on Lake Pontchartrain, and they further offer to make a special match for \$1,000 a side on a subsequent day with the stranger. But we fear to no purpose, the "open boat" interests in New York are next to dead.

CHICAGO'S FLEET.—Chicago is gradually acquiring a very respectable fleet of yachts. When once the ever lasting good hold in the West the sport will grow with lightning rapidity. Chicago now owns the large schooners, Alder, Viking and the Countess of Dunfermline, and a number of cutters. These, with the first start of the season, ought to be productive of some international racing.

MARLBHEAD REGATTA.—The open regatta off Marblehead June is promised to draw a large number of entries. From the circuit before us we judge the arrangements to be of the best and the management in the hands of competent yachtsmen. Entries should be sent to Wm. Bridger, Marblehead, or to Frank H. Brown, 23 Doan's St., Boston, who will furnish information also.

BOAT SALE.—Attention is called to the advertising columns where yachts and canoes are frequently offered for sale or wanted.

Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

W. S.—For names of reliable guides in the Adirondacks write to Charles Greenough, 45 Nassau St., New York, of whom see notice in last issue, p. 350. You can arrange so that members of the party can leave at any time. Map of the Adirondacks \$1.

E. S., Southampton, Pa.—I have a bet that brook trout have been taken in the waters of Pennsylvania which have weighed over 20 pounds. Am I correct? Ans. Yes. They have been taken those that weight almost what we do not know what the weight of the largest trout ever taken in Pennsylvania waters was. Perhaps some of our readers will give the weights.

Hotels and Resorts for Sportsmen.

Black Bass and Maskalonge

THE CELEBRATED FISHING GROUNDS OF THE THOUSAND ISLANDS.

St. Lawrence Hotel and the Rathbun House, CAPE VINCENT, N. Y.

(Terminus of H. W. & O. H. R.)

Both under one management. The Rathbun House has been enlarged to double its former capacity, and both houses refitted and furnished throughout. They are located in the immediate vicinity of the very BEST FISHING GROUNDS OF THE ST. LAWRENCE RIVER.

Competent oarsmen with first-class boats at reasonable prices can always be obtained. Malaria, mosquitoes and hay fever are unknown at this point. The terms for board at either of the hotels are from \$7 to \$14 per week, according to location of boat.

See FOREST AND STREAM of July 1, 1880, "Bass and Maskalonge Fishing," for description of the attractions, and send for circular containing full particulars.

H. L. FOX, CAPE VINCENT, N. Y.

ADIRONACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Fougue House, that city, and on the train for Ausable Forks Tuesday, Thursday and Sunday mornings to arrange for conveyances and seats in coach for the lakes. My codes being new and of my own making, they conform to the latest pattern. I am not only able to offer more comforts and conveniences than other hotels, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing. "THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The FISHING season begins May 1 and ends Sept. 1. The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and creeks of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as well for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at OGDEN'S.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' guide a handsomely illustrated book of 100 pages, 5c. Time Cards, Folders and further literature, address

A. B. LEET, Gen'l Pass'g Agent, Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

Also tourists tickets to all Sporting and Pleas- ure Resorts in Maine and the Province.

Tickets for sale at all principal Ticket offices and at DEPT. HAYMARKET BLDG., BOSTON. Send for list excursions.

D. J. FLANDERS, Gen. Pass. and Ticket Agent.

TO SPORTSMEN!

The Pennsylvania R. R. Co.,

Respectfully invite attention to the SUPERIOR FACILITIES

afforded by their lines for reaching most of the FISHING PARADISES of the Middle States. Their lines being CONTINUOUS FROM ALL IMPORTANT PORTS, avoid the difficulties and dangers of re-shipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF Pennsylvania Railroad Company also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the rates of 100 cents for all the principal cities to KANE, RENOVIA, BEDFORD, GRESSON, HALSTON, MINNEQUA, and other well-known centers for Trout Fishing, Wing Shooting, and Still Hunting.

Also, for TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER MIN AND BASS.

L. P. FARMER, Gen'l Pass. Agent. FRANK THOMSON, Gen'l Manager.

Chesapeake & Ohio R'y.

THE ROUTE OF THE SPORTSMAN AND ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA.

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their borders of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, muskrat, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist, through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The complete and "unobscured" Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "TOBACCO GARDENS" of

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

CONWAY H. HOWARD, G. P. & T. A., Richmond, Va.

Old Dominion Line.

THE STEAMERS of this Line reach some of the finest waterway and upland shooting sections in the country. Connections direct for Chinotopsee, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Curdis and the numerous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday.

Money and Thursday at 8 P. M. Full information given at office, 17 Green Street, New York.

Bromfield House, Boston.

EUROPEAN PLAN. MESSENGER, Proprietor.

TIM POND TRIP FISHING.

The bearing camps at this resort will be in readiness for sportsmen May 20. The abundance and quality of trout, the improvements in camps and the facilities for reaching this pond and the beauty of lake and mountain scenery makes this one of the best resorts in the North.

The proprietor, Kennedy Smith, will give his personal attention to the wants of his guests. The railroads will sell tickets for round trip to Smith's farm in Eastis, and back over teams will be ready to haul passengers and baggage from farm to camp at reasonable rates. Board and use of boat one dollar per day. Address KENNEDY SMITH, Eastis, Maine.

SUMMER RESORT.

ON SHINNECOCK BAY, LONG ISLAND

Having added largely to my house I am prepared to take two or three boats in the summer. Surf and still water bathing, also good snipe shooting. Good boats and gear's ready at all times. Plenty of sea food cooked in best manner.

ORVIS'S RODS, REELS AND FLIES. Send for catalogue to O. F. ORVIS, Manchester, Vt.

Hornbeam Rods A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON above.

THREAD-WOUND, LONG-RANGE SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and other shot-guns. Made to open just short of 50, to 70, to 90 yards, giving nice pattern and great penetration. 10 and 12 gauge. Send for circular. 20 Sent, Post-paid, for \$1. E. H. SCHLEBER & CO., Rochester, N. Y.

SPORTSMEN'S DEPOT.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, June 9.

FROM our valued correspondent, Gen. E. W. R'ce, of Arizona we learn that it is miners and a soken of Catalina, in that Territory, have combined to suppress the vandalism of the tramps and vagabonds, and with these outlaws they put the scoundrels who show the sitting quail and the pregnant doe. A committee of the club is announced through the press that they mean to protect their property, and they also demand a vigorous enforcement of the game laws. It is evidence of a healthy public sentiment when game law-breakers are classed where they belong—with tramps and vandals. By this movement, which we make much pleasure in recording, the people of Catalina, Arizona, have shown themselves to have a higher appreciation of decency in respect to the capture of breeding game than can be claimed by many sympathetic communities of the older States. On this eastern side of the Rocky Mountains the citizens of Catalina might without difficulty find numerous benighted regions in which is ample room for home uisionary effort.

THE HUNTING CARS of the Pullman Palace Car Company have become so popular that the demand for them far exceeds the supply. Last season the applications for these cars were more numerous than ever before, and we presume that for the coming fall the effort to secure them will be equally great. We understand that the Davy Crockett and Izank Walton have been thoroughly overhauled and renovated since last season, so that they will now be more comfortable than ever.

DIRECT COMMUNICATION between all the standard dealers in sportsmen's goods and purchasers of the same goods is established by means of our advertising columns. The pages devoted to this kind of information are well worth careful reading; everything that the sportsman needs can be obtained by communicating with the firms there represented.

THE ROBIN'S ISLAND CLUB.

THE little island, which has acquired prominence as the scene of the Eastern Field Trials, has just passed into the possession of a club of twenty New York gentlemen, which is styled the Robin's Island Club. The officers of the club are: President, Wm. R. Kendall; Vice-President, Dr. J. Floet Speir; Secretary and Treasurer, Alram. B. Baylis, Jr. It is proposed to keep the preserve well stocked and cared for.

The new club have acquired a most desirable piece of property. Robin's Island, of which a map was published in our issue of December 2, 1880, divides Great Peconic Bay from the little Peconic Bay and lies in the middle of the entrance to the northward. The island lies nearly north by west and south by east and is a mile and three-quarters long, but a large portion of this length is due to the narrow sand spits which extend to the northward and southward from the main body of the island. It is of moderate height and grassy, being destitute of trees, but stunted scrub oak thickets cover the crowns of the hills that rise from the centre of the island and extend to the southward. From the water the island shows steep faces from ten to forty feet high on all sides save to the northward. The soil is sandy as a general thing, but there are several clay pits toward the northwestern shore. The extent is said to be about 530 acres, seventy-five of which are under cultivation. The vegetation is rank, and the rolling hills to the north remind one of those near Reedy Pond on Montauk Point. Salt water grass and bay-berry bushes, with a deal of nasty briars, form the principal cover and make it a hard place for youngsters to run, indeed, a strong hasty dog finds his work cut out for him to make any kind of speed. But there is a large portion of the island to the westward where dogs can be speeded on the rolling hills and where they can be seen at all times.

It was generally understood that the Eastern Field Trials Club were intending to purchase the island for their annual trials. The change of ownership will not, however, we presume, interfere with the successful running of the trials. On this point Dr. Speir writes to us: "Being myself the originator of the club I have kept constantly before the members the interests of the 'Eastern Field Trials,' and I think I can safely say that every courtesy will be extended to them. Anything I can do to advance the interests of the Field Trials I shall do with the greatest pleasure."

A CANOE VOYAGE OF GEOGRAPHICAL STUDY AND SCIENTIFIC RESEARCH.

TWO gentlemen, members of the American Canoe Association and of the Lake George Canoe Club, will start from Lake George at the close of the August meeting, for a canoe voyage of some twelve thousand miles. They will go down Lake George to old Fort Ticonderoga, through the neck of Lake Champlain to Whitehall, thence through the Champlain Canal to Troy, following the Erie Canal to Buffalo, thence Lake Erie to city of Erie, and thence via canal to Allegheny River to Pittsburgh. From the latter city they will follow the Ohio river to its junction with the Mississippi at Cairo. They will go down the big river as far as Point Breze or Turnbull's Island, then take Atchafalaya Bayou will follow into bay of same name on Gulf of Mexico.

Up to this point the trip has been simply a passage. Now the genuine work will commence. The coast of this part of the Gulf is comparatively unknown. Cote Blanche Bay, Vermillion Bay, the Mermentau River and lake of same name will receive some attention. Caecassien Lake and River visited, they will paddle to Sabine Pass, through the pass to Sabine Lake. The Sabine River will be explored as far as time will allow, and then away for Galveston, Texas. The bays and water-courses here are so well known, that nothing but a passing glance will be given them. Below Galveston comes West Bay, San Luis Pass, and then some forty miles of open coast. A short passage will take them into Matagorda Bay, when they will have a clear inland route to Point Isabel at the mouth of the Rio Grande River. From the latter point there will be an uninterrupted opportunity to study, not from books, but from nature herself. The route from this out bounds in interest to the student—rare birds, unknown plants, beautiful shells, specimens of coral, many-colored flowers, and a thousand and one things to see, admire

and study. Following along the coast to Gulf of Camp che, and around to Uxmal River—ascending this river about fifty miles will bring them near to the famous Uxmal ruins, which were probably built before the Pyramids were built—and Cape Catoche, past the Island of Cozumel and into the Bay of Honduras. Visiting the principal of the Bay Islands, they will now go on again, around Cape Cameron, past Segovia River, through that wonderful collection of coral reefs and keys that belt the Mosquito Coast. San Juan de Nicaragua is passed, and Chagres is looked over; Caragena and Point Gallinas are passed, and then comes a perfect network of islands, coral reefs, etc., etc., as far as the Island of Trinidad. Here the voyagers will bid farewell to the continent for awhile, and follow up the chain of the Caribbean Islands as far as Havana, Cuba, when they will strike off across the Gulf Stream to the Florida reefs, and home by the Atlantic coast, expecting to reach their starting point some time in August, 1882. The entire voyage will be made in a double canoe, 16 feet long, 32 inches beam, 14 inches deep. There is no standpoint from which to observe nature so favorable as the cockpit of a canoe, and these gentlemen are disposed to test this fact to the utmost. While on the trip they will be entirely dependent on their own exertions, and the voyage from start to finish will be made by canoe alone. There will be, probably, a large and enthusiastic gathering of canoeists to wish them bon voyage at the start, and a larger one to welcome them home in 1883.

NO LIFE IN METEORITES.

AN account is now going the rounds of the daily papers to the effect that traces of organic life have been found in meteorites, and that hence the other members of the solar system are inhabited by living beings. The following extract from the London *Telegraph* gives the substance of the supposed discovery, and we quote it as follows:—

Two interesting problems, which have long perplexed the scientific world, appear to have been at last definitely solved by the eminent geologist, Dr. Hahn. These questions are, first, whether or not celestial bodies, other than the earth, belonging to our solar system, are inhabited by animate beings; and, secondly, whether the meteoric stones from time to time cast upon the surface of this globe emanate from incandescent comets or from volcanic planets. That they at no time formed a part of the earth itself has been conclusively demonstrated. Dr. Hahn has recently completed a series of investigations upon some of the huge meteoric stones that fell from the skies in Hungary during the summer of 1866. Thin laminae of these mysterious bodies, subjected to examination under a powerful microscope, have been found to contain coralline and spongy formations, and to reveal unmistakable traces of the lower forms of vegetation. All the organisms, animal and vegetable, discovered by Dr. Hahn in the delicate stone shavings he has thus dealt with indicate the condition of their parent world to be one of what is technically termed "primary formation." But the presence of water in that world is proved by the fact that the tiny petrified creatures revealed by the magic of the lens, one and all, belong to the so-called aqueous classes of animals. They could not, therefore, have possibly existed in comets, at least if the assumption be correct that these are in a state of active combustion.

This supposed discovery, about which such a pother has been raised, is no discovery at all, and the work of Dr. Hahn merely shows how utterly he has misconceived the character of the material which he has studied. The plates of his volume are beautiful, but they only serve to illustrate the mineralogical nature of the material. What he has supposed to represent coralline and spongy organisms are in fact only concretionary forms which the common minerals of meteorites often take. These forms are well understood by mineralogists, have long since been described and are to be seen in nearly all the stony meteorites.

While we know that there are other worlds than ours, and while it is possible that they may support life in some form or other, there is, we believe, as yet no evidence whatever that this is the case.

Somewhat on the same level with this meteorite story is the one recently published by a San Francisco paper with regard to the enormous magnifying power of a large telescope in California. It was said that when the telescope was directed toward the planet Mars, the whole topography of one face of that orb could be distinctly seen. Rivers, seas, lakes and forests were plainly distinguishable, even cultivated fields were known by their shape and color, rectangular ob-

jects were supposed to be buildings, and certain small moving bodies were undoubtedly the inhabitants of the distant planet engaged in the pursuit of their daily avocations. All of which was good.

THE AMERICAN ASSOCIATION MEETING.

THE thirtieth meeting of the American Association for the Advancement of Science will be held at Cincinnati, Ohio, commencing at 10 o'clock A. M. on Wednesday, August 17. Great efforts are being made by the Local Committee to insure the success of the meeting and, from present appearances, it seems probable that this will be one of the largest and most important scientific meetings ever held in the West. The general programme for the week has not yet been announced, but is in process of preparation and, when completed, will, after having been approved by the Standing Committee, be made public.

The headquarters of the Association will be at the Music Hall, where members are requested to register as soon as possible after their arrival. The hotel headquarters will be at the Grand Hotel, on Fourth street. The offices of the Local Committee and of the Permanent Secretary will be at the Music Hall, where also the general meetings and those of the sections, sub-sections and committees will be held. The special arrangements made and to be made with hotels, railroads, etc., will be announced later.

At the Boston meeting several changes in the Constitution were proposed, which will come up for action at Cincinnati, the object of the changes being the reorganization of the sections, and also to extend the scope of the association. Should these changes be adopted the association will embrace eight sections of equal standing, each presided over by a vice-president, and having its own secretary and sectional committee. The following is the division proposed and upon which final action will be taken at Cincinnati:

Sec. A.—Physics. Sec. B.—Astronomy and Pure Mathematics. Sec. C.—Chemistry, including its applications to Agriculture and the Arts. Sec. D.—Mechanical Science. Sec. E.—Geology and Geography. Sec. F.—Biology. Sec. G.—Anthropology. Sec. H.—Economic Science and Statistics. Also I.—A Permanent Subsection of Microscopy, which shall elect its own officers and be responsible directly to the Standing Committee.

Several excursions will be arranged for by the local committee, and will be announced on their circular. Special excursions will be arranged for the Anthropological Section to "Fort Ancient," Madisonville, and other places of interest.

All communications relating to the local arrangements for the meeting should be made to the local Secretaries at Cincinnati, while all matters relating to membership and to the presentation of papers will be attended to by the permanent Secretary.

The following is a list of the officers of the Cincinnati meeting:

President—G. J. Brush, of New Haven, Conn.
Vice-President, Section A.—A. M. Mayer, of Hoboken, N. J.

Vice-President, Section B.—Dr. Engelmann was elected but has resigned, as he is in Europe.]

Chairman of Permanent Subsection of Chemistry—William Ripley Nichols, of Boston, Mass.

Chairman of Permanent Subsection of Microscopy—A. B. Hervey, of Taunton, Mass.

Chairman of Permanent Subsection of Anthropology—Garrick Mallory, of Washington, D. C.

Chairman of Permanent Subsection of Entomology—John G. Morris, of Baltimore, Md.

Permanent Secretary—F. W. Putnam, of Cambridge, Mass.

General Secretary—C. V. Riley, of Washington, D. C.

Secretary of Section A—John Trowbridge, of Cambridge, Mass.

Secretary of Section B—William Saunders, of London, Ontario.

Secretary of Permanent Subsection of Chemistry—H. W. Wiley, of Lafayette, Ind.

Secretary of Permanent Subsection of Microscopy—S. P. Sharpley, of Boston, Mass.

Secretary of Permanent Subsection of Anthropology—J. G. Henderson, of Winchester, Ill.

Secretary of Permanent Subsection of Entomology—B. Pickman Mann, of Cambridge, Mass.

Treasurer—William S. Vaux, of Philadelphia, Pa.

THE JUNE MEETING of the Coney Island Jockey Club promises to be a very interesting one, and the list of events for the nine days racing offers unusual attractions. All the prominent stables are well represented in the list of entries published, and there is every indication that the June meeting of 1891 will be a memorable one in the annals of racing at Coney Island. One of the most interesting of all the races to be run at Coney Island this year is that for the Great Long Island Stakes, four mile heats, to be run at the last day of the fall meeting of the club. It is a sweepstakes for all ages, \$250 each starter, with \$5,000 added; \$3,500 to the first, \$1,000 to the second, and \$500 to the third. To this is added the Woodlawn Vase, to become the property of the subscriber winning the race two years in succession. Entries to close September 1.

CONEY ISLAND.

THE delegates from the different Sportsmen's clubs will be welcomed to Coney Island by a poem of greeting, entitled "Field Sports," written by Mr. Wm. E. MacMasters, of the Albany Argus, and the Philadelphia Press.

Papers on topics within the scope of the State Association have been promised; and it is proposed that these shall be read and discussed at the evening sessions of the convention. A paper by Gaston Pay has the suggestive title, "What Shall We Do About It?"

In response to some inquiries received concerning the feature of the week's programme, the FOREST AND STREAM suggests that the amount of time devoted to such matters will depend wholly upon the choice of the members assembled. We know that the President of the Association has secured the promise of a number of essays, which will serve as the groundwork of conference if anybody wants to confer.

Those members of the New York Association for the Protection of Fish and Game who resented the suggestion in these columns a year ago that that body was at present misnamed, will have an ample opportunity at Coney Island to make good the Association's claim to being a "game and fish protective organization." It is to be hoped that the public may be set right on this point. We shall see what we shall see.

Whatever may be done, if anything, beyond the pigeon-shooting and other contests, the Coney Island meeting of the New York sportsmen will be a memorable one. The whole entertainment will be on a scale never attempted before, and a most beautiful souvenir of the event has been prepared by the indefatigable executive of the society, Mr. Abel Crook, in the shape of an illustrated hand book. This will be a volume, of the current monthly magazine size, of one hundred and fifty pages, and handsomely illustrated. The engraved antique title-page is a real work of art, and the frontispiece—well, that is art, too, in its way, being none other than the famous "Shot 'Em on de Wing," which is loaned for the occasion by the Harpers. The contents of the book will comprise an elaborate history of the State Association, which has been prepared by Mr. Crook, together with the records of the prize winners in previous years; a history of the Long Island Association; an illustrated sketch of Coney Island, past and present; the programme of the meeting; the well-known Punch cartoon, "They Will Fly Into It Sometimes," and the cards of the prize donors. Taken altogether the book will reflect credit upon the Long Island clubs and upon those who have been most concerned in its preparation.

The prizes, which are to be contested for, are now on exhibition in the show-windows of the Brooklyn Furniture Company, Nos. 551-565 Fulton street, Brooklyn. The window was arranged under the supervision of Mr. C. W. Wingert, of the prize committee, and the tasteful manner in which it was done reflects great credit on that gentleman. The display surpasses anything of the kind ever seen before, and guns, fishing-rods, silver cups, gold watches, medals, etc., are there in profusion. The prizes on exhibition, Tuesday night, were those secured by the clubs of the western district, although the Washington Gun Club have obtained a number of prizes that have not yet been delivered. The street in the vicinity of the window was thronged with people, all trying to get a glimpse at the gorgeous display, and it is well worth a day's journey to see the exhibition. For the benefit of the delegates coming to the convention, excursion trains will be run on the Erie and New York Central railroads.

THE NEW YORK FISH COMMISSION.—The Governor has signed the appropriation bill giving the Commission \$15,000. He vetoed the bill last year, and it was feared that he would do so again. The press of the State has generally urged the necessity of the appropriation. There was great chagrin of losing the results of the labor of former years at the State hatchery and of making a break in the series of hatchings of shad and other fish. Governor Cornell is a close economist, but he has probably learned that it is not economy to withhold the appropriation from the Fish Commission. The Commissioners have agreed to expend one-third of this year's appropriation on the fisheries of Long Island, which have been sadly neglected. The salt water fisheries have never received the slightest attention from the Commission, and they are worth more than all the rest of the fisheries of the State. It is a matter for rejoicing that our economical Governor has had his eyes opened to what are the true interests of the people in this important matter of food supply.

UNSUCCESSFUL SHIPMENT OF CAMP EGGS.—In our last we recorded the arrival of Mr. Geo. Eckhardt, Jr., from Germany, for the purpose of studying American fish culture. Mr. Eckhardt attempted to bring over 100,000 eggs of the leather carp to Prof. Baird. They were packed in the refrigerator boxes which Mr. Mather successfully sent white-fish eggs to Germany in last fall, but on opening them in Washington they were all dead and covered with fungus. Dr. Hessel is of the opinion that they cannot stand a temperature as low as the refrigerator gives. We incline to this opinion also, as the eggs of summer spawning fish do not seem to bear what those of the winter spawners will thrive under.

GUN GROUNDS NEAR NEW YORK.—The Jersey City Heights Gun Club have leased a tract of land, of which they

propose to make commodious club grounds. The location is within twenty minutes of the New York Post Office, and as the Club propose to arrange for the accommodation of outside individuals and clubs the new grounds will prove a very decided acquisition to the gunners of this city. It will be just the place to run out to try a new gun, to test one's skill with the glass balls, and to repair for an afternoon's target shooting. The grounds will be opened within a short time, when further particulars will be given in these columns.

METALLIC CARTRIDGES.—We are informed by Messrs. Hartley and Graham, of this city, that Judge Lowell, of the United States Circuit Court, has rendered a decision in the case of the Union Metallic Cartridge Company, of Bridgeport, against the State of New Jersey Cartridge Company, of Lowell, Gen. B. F. Butler, President, on the Allen Healer Patent, sustaining the patent on every point. This suit was commenced in 1874 and covers one of the most important principles in the manufacture of metallic ammunition. It is used by the principal cartridge manufacturers in this country and Europe, and by most of the Governments.

THE bill known as the Armstrong Bill having passed at Albany, and been signed by the Governor, is now a part of the game law of this state. We publish its most important provisions to-day, and will supplement them with the remainder next week. Whatever merits or defects this new law may be thought to have, one thing about it, at least, gives satisfaction; that is the conspicuous absence of anything like the "refrigerator amendments" which the marketmen of this city attempted to foist upon us.

FISHERIES EXHIBITION FOR SCOTLAND.—The English Exhibition at Norwich has been a grand success, and it is now proposed to hold one at Edinburgh, in April, 1893. This is one of the most important points in Great Britain to hold such an exhibition. The Scotch herding fisheries are of the greatest value, and the whole fishing interest of Scotland centres in Edinburgh.

THE members of the Michigan Sportsmen's Association are rejoicing over the adoption of the game bill which they prepared, and for the passage of which they have been working. The new law is, therefore, the result of their concerted, systematic and persistent effort.

THE PRIZES in the coming New York State shoot aggregate \$12,000. In solid worth they have never equaled by those of any other shooting in this country. Coney Island may some day become the Monaco of America.

THE PLAN of the Middlesex, Conn., Game Association, as detailed in our issue of May 26, is recommended to the attention of sportsmen who are about to organize game protective associations.

THE name of *Scribner's Monthly* is to be changed to *The Century*. The magazine has over a hundred thousand paying readers now; with its new name may it have another hundred thousand.

SOME further particulars of the Gaston Club are given in our game column.

GOLDEN OPINIONS.

WE give a very few—say one in ten thousand—of the opinions, more or less approving, eulogistic and encouraging, which come in the FOREST AND STREAM'S mail, from all the four quarters of this Yankee nation, and some also from Queen Victoria's Dominion across the line. However gratifying it might be to our personal vanity to publish all the flattering letters we receive, such a task would involve too great a tax upon our space, and we must, therefore, content ourselves with the following. We are assured that the regular weekly issue of this journal is its own best vouchery. If we may believe the kind words of old and new friends it is now universally conceded that in the successive volumes of the FOREST AND STREAM is contained the best sportsmen's literature ever furnished by any publication in the world. Read what is said of the paper:

BETTER THAN EVER BEFORE.

The title page and index of Vol. XV. came as bright as a dollar, and fully as valuable. I have every number of the FOREST AND STREAM and the HORN AND GUN in all their changes ever published, and prize them highly, but would consider them comparatively valueless without the index. I think FOREST AND STREAM better to day than ever before.—E. S. HOLMES (Grand Rapids, Mich.)

MARKED SUCCESS—STEADY IMPROVEMENT.

I have introduced the FOREST AND STREAM in many localities throughout the United States and the Canadian Dominion, with the object of assisting by my note (or might) the establishment of a sportsman's paper of higher (one than previously published on this continent, and hope that its financial success has proved commensurate with the marked success and steady improvement in other respects.—EUGENE SMITH (Portland, Me.)

A SINGLE DEPARTMENT WORTH THE PRICE.

I have been a constant reader for the past four years, and esteem your journal very highly. The original articles in Natural History are alone worth many times the price to all true sportsmen who hunt, forest and stream for instruction and recreation rather than to "kill, burn and destroy."—J. T. C. (Victoria, Ont.)

BETTER EVERY YEAR.

I have taken the FOREST AND STREAM for some time; I have become very much attached to it, and think it grows better every year.—D. S. (Lebanon, N. H.)

ADVERTISERS HEAR FROM IT.

We are receiving very flattering results from our advertisement in your paper, in fact we should have written you before but for the great number of answers we have had to write in regard to the books.—HUNT & Co. (Chicago, Ill., U. S.)

BEING MANIFEST SERVICE.

THE FOREST AND STREAM is doing magnificent service for sportsmen and the public generally. It is conspicuous in defence of prac-

The Sportsman's Tourist.

NOTES OF AN ANGLER IN THE NORTH.

By FAIRCHILD, JR.—PART SECOND.

FOREST BIRDS.

THE silence and solitude of the great northern forests is rarely broken by the blithesome song or presence of birds, yet in the trackless wilds of the far interior I have made the acquaintance of several rare and interesting species by habits of close observation. They are an unobtrusive family, as their predilection for the deep forests attests, and not much inclined to court the society of man, though there is one noteworthy exception to this rule, as I shall presently show. So full are they of the immensity and grandeur of these sombre old woods, that it has imparted to them a sober, quiet thoughtfulness, a joyous peal of light-hearted melody being rarely heard—not that they are gloomy or morose, but only earnest, intense, finding life something more precious than an idle hobby to be spent in frivolity. They no doubt also feel a quiet thankfulness in their escape from the manifold dangers that encompass their less thoughtful brothers of the field from the predatory attacks of hawks, crows, reptiles and man. The latter, by the way, ceases to be a foe of the small feathered race as soon as he is beyond the pale of civilization; in the former rarely extend their journeyings beyond it.

There is a little red-colored bird that has a call that sounds precisely like the kind of an axe in a log. The imitation is so exact that I have several times diverged from my course to find out who was encamped near by, to be suddenly recalled to a knowledge of the chopper by hearing the sound repeated in another direction as my shy little feathered friend flew off at my approach. There is still another little inhabitant of the woods, not in wooded regions, however, with old bushmen, as its presence and short, querulous whistle is said by them to be followed by a storm. It defies the severest cold of the long Arctic winter. It is called the red-bellied nuthatch (*Sitta canadensis*).

The snowy owl—the great northern hunter as it is aptly named—the barred owl and the cinereous owl are today only stragglers into the depths of the forests, adventurous hunters of the woods, not in wooded regions, however, with old bushmen, as its presence and short, querulous whistle is said by them to be followed by a storm. It defies the severest cold of the long Arctic winter. It is called the red-bellied nuthatch (*Sitta canadensis*).

At rare intervals I have had my camp intruded upon by one or the other of these owls, who, having satisfied its traveler's curiosity, uttered its blood-curdling, sleep-destroying cry, would betake itself again into the quiet shades of night.

Twice in mid-winter I have seen a pair of ravens circling high in air over the frozen sea. At times, uttering their hoarse croaks, they appeared the embodiment of loneliness. What could have tempted them from the sea-coast to the far interior I know not.

The woodpecker family is about the most fully represented one throughout the forest region, the most conspicuous, both for its size and rich markings, being *P. picatus*. It is by no means common, though widely distributed. The woodpeckers play an important part in nature's economy. By their perforations in the trunks of dead trees they hasten their decay and fall. Four species winter in Canada, but during the prevalence of severe cold they entirely disappear; a slight thaw, and they are again actively at work. I have been led to think from this that they might hibernate for short periods.

The exception to the shyness of the forest birds to which I previously alluded is the Canada jay, alias whiskey jake, a noisy bird, etc. I saw a pair of the blue jay, but unlike its congenitor, its plumage is of a dull, leaden color, and its song a soft continuous warble. I have never camped in the wilderness winter or summer that I have not had a visit from a pair of these singular birds. Fearless of man, they would take up their quarters on the nearest twig to the fire and watch their opportunity to steal whatever was left unwatched a moment. Holding their end up we remained, and the water in the tub, asked him what it was in most of our habits thrown to the ground and otherwise eat up such queer sober antics as to constantly excite my risibles. It is said to breed in midwinter, but if such is the case the male must relieve the female upon the nest, as the germ in the eggs would perish upon the least exposure to the intense cold. I am rather incredulous about this, as I am about the stories that are told concerning its ability to capture fish in the water like a kingfisher.

The aquatic and voraciously represented family throughout the lake region where they breed, and in the early fall the angler, while fishing, obtains many a chance to bag a few ducks to add to his bill of fare.

THE RED SQUIRREL.

If there is a scateness and sobriety on the part of the forest birds, the levity and volubility of this little denizen of the coniferous forests enlivens the general gloom. Summer and winter alike the red squirrel, as it was in most of our habits thrown to the ground and otherwise eat up such queer sober antics as to constantly excite my risibles. It is said to breed in midwinter, but if such is the case the male must relieve the female upon the nest, as the germ in the eggs would perish upon the least exposure to the intense cold. I am rather incredulous about this, as I am about the stories that are told concerning its ability to capture fish in the water like a kingfisher.

The little chatterbox is given to migrating occasionally, and if in the course of its journeyings it comes to a lake or a river it takes to the water unhesitatingly and appears as much at home in it as its first cousin the muskrat. In the coniferous woods the red squirrel lays by no provision for the winter, but depends upon the cones to furnish it with a sufficiency to carry it through the long months of snow and ice,

COMMENTS DE BOIS.

To such lamentable admits were the Canadian noblesse reduced, about the middle of the seventeenth century, by their improvidence and the frequent depredations of the marauding savages, that their younger children went half-naked, while their wives and daughters were compelled to work in the fields. The sons of these mendicant seigneurs, with more energy, perhaps, than their sires, but with the same disinclination for honest labor in the fields, bandied together in small parties and struck out into the wilderness to trade with the Indians for heavier skins or to trap them on their own account. I have a suspicion that a too close ecclesiastical supervision, and frequent penance for the freaks of young blood, may have hastened their departure, but upon this point the records are silent. In vain did the Governor proclaim their proceedings illegal and threaten outlawry against them; equally vain the threats of excommunication hundreded after them by the Jesuit fathers and the Recollets; the taste of the freedom and license of the camp-fire was far more potent, and defections from the ranks of the younger men in the colony still continued until it was estimated that over eight hundred of them were engaged in the "hefurious" pursuit of the beaver. Animated by a spirit of adventure, they penetrated the great unknown wilderness from the shores of the St. Lawrence to the Hudson's Bay. Many of them contracted alliances with the dusky natives of the forest, and secured considerable influence with the councils of the tribes from which they took their squaws, and in time became almost as savage.

Once a year it was their custom to repair to one of the French towns. Francis Parkman thus describes the return of a party of these francis from their roivings.

"Montreal was their harboring place, and they conducted themselves much like the crew of a man-of-war paid off after a long cruise. As long as their beaver skins lasted they set no bound to their license. The new comers were bedizened with a strange mixture of French and Indian finery, while some of them, with instincts more thoroughly savage, stalked about the streets as naked as a Potawatamie or Sioux. Drinking and gambling filled the day and night. When at last sober, they sought absolution from the priests and once more disappeared within the shades of the forest."

After the conquest of Canada the Hudson's Bay Company's serious hunters, and the *Conzeux de Bois* at once found their allotted place in their service. Of late years the Company has dispensed with the services of many of these forest rangers, who have returned to the villages of their birth, and marrying, have settled down on a bush farm upon the edge of that wilderness they love so well. The domestic ties are not sufficiently strong to wean them from their first love. Old Jean Le Blanc is a good example of his race. When the frosts of autumn have frozen the mountains with a thousand rattling lugs Jean becomes meazy and restless. At all hours of the day he may be observed at the corner of his little log house, that commands a view of the forests, blowing thick clouds of smoke from his short, black pipe, and taking observations. Some fine morning he is seen entering the edge of the bush, old flintlock under his arm, snowshoes slung over his shoulders, together with his small pack of traps and other necessities. What becomes of him and how one knows, but early in spring he reappears, swilling strongly of smoke and drawing behind him a very tellingly laden traineau, the proceeds of his winter work, the skins of the caribou and moose that have fallen before old flintlock; and the pelts of beavers, minks and martins in his traps.

Jean is a good trapper, a poor shooter; he is full of the lore of the bush, but ignorant of everything else; superstitious as the Indians among whom he has so long dwelt, and as full of curiosity, but considers himself a good shot, and as full as light-hearted as a scowboy, he is envious of no man.

TO BE CONTINUED.

THE LAND OF THE SIOUX.

THE first day of October, Dr. C— and myself embarked a first and N. W. train bound for the far Northwest. As we glided along over the smooth steel rails and begun to realize that the noise and smoke of the great city of Chicago was rapidly fading from our view, what a mountainous sense of relief stole over us, for had we not a month before us, a month we could devote to buffalo, deer, antelope, geese, ducks and—rvt! We almost felt that a score of years had fallen from our heads, and that we were "boys again." I often wonder if only those fortunate individuals imbued with a great love for nature's solitudes and handiwork ever enjoy this delicious feeling, if not, they miss one of the keenest and most refreshing pleasures of life.

We had in view the game fields contiguous to the N. P. R. Like all lovers of the rod and gun we were desirous of finding a sportsman's paradise, and where we were more likely to find it than in "the land of the Sioux?" We made brief stops at St. Paul and Minneapolis, but long enough to meet several gentlemen fond of lake pursuits, among whom was the ever-gentle Charles Hailcock. Mr. Footner, the obliging superintendent of the N. P. Ex. Co., we found anxious to do all in his power to assist us, and as he is very expert with the implements used by sportsmen he knows how to do it. We can say for the whole management of the N. P. that they are generous and obliging to the sporting fraternity, in strong contrast to some Eastern railroad officials I could mention. After leaving St. Paul our first stop was at Perham, about the centre of the "park region" of Minnesota, so called from its fanciful resemblance to a city park. A few miles west of this country several hundreds of miles in length on the south, reaching into Northern Iowa, and northward far toward Manitoba. It consists of a high, undulating prairie, diversified by thousands of lakes of clear and limpid water, frequently so near to each other as to hardly admit of a roadway between them. Scattering oaks dot the surface of the land, with here and there a beautiful grove. The ground is covered with luxuriant grass, except in a few places, where it is very dry. It is not perhaps needless to say that these lakes are stocked with apparently inexhaustible quantities of black bass, muskellunge, pike, pickerel and the various smaller fishes indigenous to this latitude. Otter Tail Lake, one of the largest, contains, in addition, whitefish. In many of these lakes wild rice is found in abundance. Otter Tail county is said to contain over nine hundred lakes, most of them nameless.

Here we luxuriated on the most delicate and gamiest of fish, and the plumpest of millards and teal. The sharp-tailed grouse are also quite common. Deer are occasionally found, but wild we cannot say that we found it the paradise of which we had so fondly dreamed, for "there is no rose without its thorn." We found a very sharp thorn in our guide; he knew too much. His superabundant knowledge

tical things and ideas, and its fidelity is as conspicuous as its wisdom. It is the sporting life—not sporting in the sense of a gambler, and that every family can read with profit, for it is as by edited, clean, interesting and educating. It is one of the best of natural history teachers to be found. Every one of its several departments is complete in every respect, and each is edited by a gentleman who has made it his job a life-study.—*Spectator*, N. Y., *Journal*, May 18, 1881.

A FINE-CLASS JOURNAL. The card of Forest and Stream in our advertising columns should attract the most intelligent sportsmen. It was voted for 1881 a first-class journal devoted specially to the subjects connected with the sports of the "rod and gun." We have read it for years, and can speak of its merits understandingly.—*Germanian Telegraph*, Jan. 13, 1884.

THE BEST PATRONAGE OF BEST SPORTSMEN. The FOREST AND STREAM is a journal worthy of and demanding the liberal patronage of the highest and truest type of American sportsmanship.—H. B. ROSE, late Secretary Michigan Sportsmen's Association.

IT IS THE PAPER. I have now taken the FOREST AND STREAM seven years. Every week I look forward with pleasure to the day on which the mail shall bring me my paper. Although passionately fond of hunting, yet I get very little time to indulge in this sport, and as the next best thing I like to do is to read the FOREST AND STREAM, I have endeavored to keep myself posted on sporting matters. I regard the FOREST AND STREAM as the paper for American sportsmen. W. M. D. (North Canaan, Mass.).

NO PAPER CAN TAKE ITS PLACE. There is no paper published which can take the place of the FOREST AND STREAM in the estimation of gentlemen who have the time and talent to enjoy the sport of the field, the forest and the stream. Besides the matters pertaining directly to these sports, there is a vast fund of information available to all gentlemen, whether addicted to out-of-door recreations or obliged to pass their lives in sedentary occupations. Time spent in reading this paper is well spent, and no one who reads and reflects will fail to be profited thereby.—*Day City, Mich., Tribune*, March 4, 1881.

LABORS OF BEESWAX TO ABS. I am going to lead you to the ADVERTISING IN FOREST AND STREAM. I often get a letter with the card cut out, showing it to be an old paper, perhaps a year or more old, so I know that it pays to keep it until all the time in season and out. I have received 385 letters from all parts of the world, and I thought me twenty-five in a bunch.—J. H. RUSHTON, Canton, N. Y.

HAD TO HIRE AN EXTRA CLERK. I had had to hire a clerk who was kept busy with answering letters received through my advertisement in FOREST AND STREAM.—HENRY PETERHANS, Greenpoint, N. Y.

A REASONABLE PREFERENCE. The FOREST AND STREAM is a very large and honorable body of subscribers, I should judge from the result of a little advertisement which I inserted in that paper at so trifling a cost a short time since. That this is certainly no more than it deserves in proportion to the amount of advertising matter contained in its pages.—G. T. C., Buffalo, N. Y.

WAS COME TO THE FRONT. It comes as a welcome visitor to our table, and every time has something in it both instructive and entertaining. Since Fred. Master's change of the "fishing columns" it has come to the front.—W. D. T., Chicago, Ill.

ITS INTELLECTUAL HEALTHFUL. Although only twenty woodcock seasons have passed over my head I take an ardent interest in field sports. I am indebted to your instructive and well-doing paper for the greater part of the instruction I feel for nearly every day. If any young man look your valuable paper instead of whiling away their time on some worthless publication they would be wiser and better in the end.—B. A. M. (Austin, Minn.).

THE FACTS OF SPORTSMANSHIP SETTLEMENT. I appreciate the fact that you have in your paper every week focus the sportsmanlike sentiment of the country, and in turn radiate the same out to the ends of our land. You are doing a good work in a manly way. *Macle's Tribune*. I read every paper through, advertisements and all, and I like the whole thing, even to the tint of the cover.—J. W. Garland, N. Y.

KEENLY ADVERTISING TALENT. My advertisement in the FOREST AND STREAM was well placed. I received correspondences from Maine to Texas.—J. J. (Haverhill, Mass.).

GIVES PROMINENCE TO REAL SPORT. Please renew my subscription for the year. I find little time to shoot, but make up in part each lack of a good time in the field by reading your paper, which I am happy to see gives increasing prominence to matters of real sport with rod and gun.—L.

BEHOLD HOW GREAT A PLEASURE A LITTLE PAPER BRINGS. I should like to express my appreciation of the fact that you have in your paper every week focus the sportsmanlike sentiment of the country, and in turn radiate the same out to the ends of our land. You are doing a good work in a manly way. *Macle's Tribune*. I read every paper through, advertisements and all, and I like the whole thing, even to the tint of the cover.—J. W. Garland, N. Y.

GAME IN KENTUCKY.

MILL SPRINGS, Ky., May 25. GAME came through the winter apparently as little reduced, numerically, as after a season so remarkable for its mildness. It is in great measure to the fact that there was almost no shooting by sportsmen as a polar temperature nipped the early hunter in the midst of his preparations. Turkeys, partridges and especially squirrels are abundant. Quail are by no means annual tenants of the mountain small farms, but this spring there is scarcely a grain patch without its pair. Red foxes are multiplying alarmingly since the repeal of the scalp law, and the advent of their offspring into poultry yards keeps many good games in a state of nervous solicitude about their derling ducklings and goslings. The hares are unfortunately too wily for Reynard, or have become infected with the emigration mania and sought prosperity in localities convenient to pea and cabbage crops, upon which their regular forays are becoming a nuisance, exasperating gardeners of even Jibbik fortune. Hawks are very numerous, are sagaciously bold of mail either one has fallen asleep on guard or the shotgun has been returned to its corner, when the hullab among the old quincus and chickens informs you that another Methodist titbit has been unfeelingly snatched away in the "bloom of youth."

Attracted to the door a few mornings since by the "racket" of crows, martens and bluebirds, I discovered that they were harassing a huge hawk, and as I was in my rifle, rushed to the aid of the victim. The hawk's enemies roared him as he flew over the yard I gave him a salute which he acknowledged by dropping almost at my feet a full grown squirrel, which bore only the marks of his talons. It proved a savory addition to a dish of broiled beefsteak at dinner.

KENTUCKIAN.

seemed to be as conspicuous as his dislike for hard work. How many of us have fallen into the hands of his counterpart! So when the great October snow storm struck us, eighteen miles from the nearest railroad station, we were obliged to depend on our own resources to extricate ourselves. It took us a week to do it.

To lovers of the rod and gun this region offers many attractions. The canoeist, or parties with light boats, can traverse this entire system of lakes finding royal sport, with picturesque and ever-varying scenery.

The altitude averages about two thousand feet above the sea, its climate healthy and invigorating. A few pioneer settlers are found here and there.

Our next halting-place was at Fargo, the thriving young metropolis of the valley of the Red river of the North. This busy little city is already the centre of a large trade. It lies in the eastern edge of Dakota, and furnishes supplies for the westward growing interests so rapidly developing in Northern Dakota. But our interests lie with the buffalo, deer and antelope of the vast plains beyond, we take the train for the far West.

After leaving Fargo, the lakes and watercourses begin to show a strong solution of alkali. Geese and ducks by thousands could be seen rising from them, as the noise of the train startled them from their feeding grounds. (Geese seem to delight in the shallow waters.) We were soon engaged in feeding in the shallow alkali lakes among the mountains of Wyoming and Montana, even as early as the month of August.

After a few days spent in the vicinity of Crystal Springs, which seem to be the headquarters of the Northern Pacific for wild geese, we went on to Bismark. This place, at present, is on the border of a vast, limitless plain stretch out unhabited and almost unknown to the white man. Within a few months it was not healthy for a white man to show himself out of sight of the railroad line. Much of this territory seems to be identical in character with the rich lands of Eastern Dakota. About two hundred miles west of Bismark we reach the bad lands. Here the scenic changes of vegetation almost cease. The little Missouri flows through this a northern watercourse, and in the thousands of miles in thousands, gracefully bounding away from the approaching locomotive. Here, too, is the last resort of the buffalo, and following them like a Nemesis are the white and copper-colored butchers who, unless soon restrained, will exterminate them. Cannot and will not Congress, hereafter it is too late, take means to put a stop to this reckless carnage, or limit this animal extermination to the white man?

Doubtless another season will see hundreds of sportsmen taking advantage of the completion of the N. P. to the Yellowstone to take a trip to that wonderful game resort. The head waters of the numerous streams that contribute to the formation of the Yellowstone still abound in a great variety of large game. In the autumn of 1878, in a somewhat extensive trip over this region, I saw herds of elk still quite plenty in the valleys and on the mountain sides. Antelope were rarely out of sight. Grizzly, cinnamon and black bears were frequently met with—mountain lion and mountain sheep occasionally. This region seems now to be the last great game preserve of the continent. The streams are full of trout, and it is in reality a sportsman's paradise. But our month had expired. We had no time left to visit the farther Yellowstone, so we have gone back to business, and must defer this pleasant trip till another season.

Chicago, January 7, 1891. H. L. STORV.

CATCHING WILD HORSES IN TEXAS.

SOME TIME since as we were returning from a hunting expedition on the plains of Texas toward evening, we came upon a wagon trail, and as we were by no means certain of our locality we concluded to follow it.

Going but a short distance we came to a ranch, and riding up we found the owner at home, and to our surprise an acquaintance, a Mr. Woods, whom we had met in Fort Griffin a few weeks before.

He gave us a hearty welcome, and as there was plenty of room outside the house if not in, we accepted his invitation and went into camp near his wood pile, that being about all the accommodation we wanted.

Staking out our ponies, and making a rousing fire, supper was soon ready, and as we had a good one, I invited Mr. Woods to join us. We had a cup of coffee with us, and a rubber blanket—shaken out, our plates wiped off with a piece of flour sack, the frying-pan turned upside-down to keep the dogs from eating the grease out of it, and a large armful of wood thrown on the fire—for there was nothing mean about my man in making a fire when he did not have to cut or carry the wood—we were ready for a chat.

Our host filled his pipe and after a few puffs proceeded to give us an account of his capturing a herd of wild horses a short time before. As I was interested in it, I thought some of the readers of FOREST AND STREAM might like to hear of it.

Mr. Woods had noticed several times during the winter a small herd of horses, feeding not far from the ranch, and determined to try and capture them.

From his account it was plain that it would seem that they always fed on a certain range, and that if driven they will go to the extreme end of it, then make a circuit and return to about the place they started from.

In the early spring, when the grass is short and consequently the ponies are poor and weak, is the time selected, as during the summer it would be almost impossible to ride them down.

This preparatory necessary being the building of a strong corral, he selected a place in a thick grove, on a trail leading to a water-hole; here he built his corral, leaving an opening where the trail entered, which he closed with a strong gate. The entrance he made V shaped, running out for forty yards on either side of the trail a strong fence of brush and stakes. Concealing all as much as possible he was ready to begin the drive.

This preparatory took three days, with the help of two men.

They then selected four of their best horses. Packing a few days' rations and a little corn on one of them, they started out in search of the herd.

They sighted them about noon, five or six miles from the corral. Calling Mr. Woods mounted the best horse. Putting a few quarts of corn into one of his saddle pockets with a few days' rations of bread in the other, and filling his canteen with water, he was ready for a long ride.

He directed his men to camp where they were, and have their horses saddled by daylight ready to relieve him, as he expected to pass about that time.

The herd had all this time been quietly feeding about a mile off.

As Mr. Woods rode toward them they started off on a run, keeping after them, they ran a mile or two, then came to a walk and allowed Mr. Woods to ride within a mile of them, when they again started off on a run, he keeping after them as before, never allowing them to get out of his sight.

They kept on a run all the afternoon until toward evening, when they came to a walk, seeming to think it was no use trying to get away from the strange horse that was always following them. He did not press, always keeping about a quarter of a mile behind, but giving them no time to stop and feed, feeding his own horse a little corn as he went along out of his saddle pocket.

Toward night the herd went to water, but Mr. Woods gave them no time to drink much, although allowing his own horse to drink all he wished.

That night was clear, with a moon, so there was no trouble in keeping them clear.

By this time the herd seemed very much inclined to stop, and would allow Mr. Woods to ride within a few hundred yards before they would move on. He kept after them until toward morning, when it became cloudy and dark, so that he lost sight of them; he therefore stopped, unsaddled and fed his horse, ate some supper, and, wrapping himself in his blanket, went soon sleeping, thinking there was no danger.

When he awoke the sun was shining brightly, and on looking around he saw the herd feeding only a short distance away.

Stalling his horse, he was soon after them. They started off on a brisk gallop, but Woods kept up, and they soon got tired and came to walk.

They kept them in this way, always keeping within a few hundred yards of them, and giving them no time to feed, but feeding his horse with a little corn as he rode along.

Toward noon they were approaching the place where his men should be to relieve him, they having made a turn in the night, and were now on their way back toward where they had first started from.

The Woods kept a sharp look-out but could see no one, so he kept on all day.

By night he could ride within a few yards, and they had not indulged in a run for some time; he was very tired but kept on, still hoping his men would come to his relief, but no help appeared, and toward morning his horse gave out and he had to give up the chase.

Making the saddle and bridle for him, and turned his horse back to the ranch, was no danger of his going away, as his last ration, rolled himself in his blanket and went to sleep.

He woke at daylight, and looking around for his horse found he had gone off. He was certainly in rather a bad fix; but determined not to lose all his labor, he threw his blanket on a bush to mark the place where he had left his saddle; he started after the herd, but as they were being driven only a short distance off, and as he came up started off on a run, but only kept it up for a short distance, then came back to a walk, so that there was no trouble in keeping up with them.

About eight o'clock Woods saw his men coming toward him with a horse; they had been out looking for him during the night, but seeing nothing of him went back to camp.

In the morning they found his horse near camp, so knew he could not be far off, and started with a fresh one to find him.

Mr. Woods thought that the ponies were so nearly exhausted that he could now pen them. Sending a man out on each side of the herd and bringing up the rear himself, they drove them slowly toward the corral, which was only five or six miles off.

They worked them slowly toward the trail which led to the corral, and when they struck it they started off in a canter, making for the water; the men kept after them and they trotted along, following the trail between the wings, without seeming to notice them, right into the pen. Mr. Woods kept close behind, and closed the gate after them.

He had the herd now safe, and after a short time more of safety for them, they were taken away to be sold to the world. They then tossed them, and hobbling securely turned them out to feed.

Toward night they were driven to the ranch, and they found they had fifteen good ponies besides two mules; the mules were branded U. S., and had evidently been abandoned by some government expedition on the plains; they were the wildest and hardest to handle of any of the ponies broken to ride, that is, broken in a Texas sense. Some were very fine, and he sold most of them for a good price. The mules he broke for himself, and they turned out a very poor pair.

WINOUS POINT CLUB.

IN nine cases out of ten, a long anticipated and impatiently expected week over decoys and behind blinds turns out like a precocious child with a big head; wonders are predicted of it, but alas! it too frequently shrivels up and dies of a broken heart. During the last week of the season, wind and wind not favorable often wreck our fairest visions; and after three or four hours behind the best blind, with all his good nature frozen out, one readily realizes that weather and wind have much to do with successful duck-shooting, amply confirming poor Joe Long's oft-repeated advice, "Who are wise and would make the biggest bags must freely consult Old Prob and the moon." During the last week of the season, wind and wind not favorable often wreck our fairest visions; and after three or four hours behind the best blind, with all his good nature frozen out, one readily realizes that weather and wind have much to do with successful duck-shooting, amply confirming poor Joe Long's oft-repeated advice, "Who are wise and would make the biggest bags must freely consult Old Prob and the moon."

With this experience and advice we started on receipt of a letter from "El-Liv-Ves" (the man who never smiles), which Finegan triumphantly showed us, with the sententious remark, "That's the stuff," and were soon gliding along the Lake Shore Railway from Buffalo toward Sandusky.

The Bay of Sandusky has an extent of over 30,000 acres of marsh, which furnishes feeding ground in the fall and spring for millions of ducks and geese. Wild celery grows in the greatest abundance, and here the canvas-backs flock in great numbers. Twenty-six years ago a few old sportsmen of Cleveland, appreciating the immense advantages of such a locality, purchased and otherwise obtained control of over 5,000 acres of marsh and meadow, and the Winous Point, or "Crest of the Bay," was founded. It was at first a most shabby place. From this nucleus has grown the elegant and comfortable buildings of the Winous Point Club, limited to thirty members, now owning and leasing over 18,000 acres of the finest duck, snipe and quail ground in the West, and valued at over \$100,000.

Barring the incident of a smash on the Lake Shore North-

tingham, that lost the lives of the engineer and fireman and destroyed \$25,000 worth of railroad property, we arrived at Cleveland in due course, spending the night in the hospitable home of one of its oldest citizens. We took the early train on the following morning, and with the addition of an early old Nimrod to our party, we arrived at Port Clinton at ten o'clock.

The kindly phiz of George met us at the depot, and after seeing our impediments stored for a sled transfer over the mud roads to the Club House, Finegan, Gore and the writer started by the new route for the Point. How many times since have I thought of how we were then, and how we are now, and rested on with the plaintive inquiry, "How long, oh, how long?" and how straight Gore guided us through mud, slush and water, to the high, warm, comfortable lounging room of the Winous, and its old fashioned fireplace filled with four logs, I'll not now narrate. Suffice it to say we reached there at last, and were amply repaid for the weary trip by one of George's best dinners.

The club has two large substantial buildings containing some thirty sleeping rooms, with the necessary addition for kitchen, dining-room, laundry, etc. Adjoining the house is the tank house and boat house, in the former of which are the necessary counters and benches for loading, cleaning, etc., with tanks or lockers for each member, and in the latter over 40 row boats of various kinds, including the Kenyon, Osborn, Barrett, Racine and others. There is also an array of decoys, from the little blue hill to the big goose, all ready for their deceptive occupation. Along the south front of the house is a wide veranda flanked by a beautiful lawn, with a 40 ft. flagstaff, at the topmost of which flies the club flag, always signalling occupancy of the house. It is very seldom that the flag is not fluttering in the breeze.

On the west side of the house, a hanging room, is a black walnut and glass case of ample dimensions, containing a large number of beautifully set up specimens of water fowl, all killed by members of the club—ducks, teal, geese, swans, brant, quail, woodcock, snipe, eagles and hawks. A particularly beautiful specimen, a swan killed by Mr. Cross, is much admired. On the south side of the room is the library and a rack for guns. The club has a superintendent, the omnipotent and indomitable George, and four keepers, who patrol the grounds during the season, and woe to the luckless duckerbeak who is caught poaching. What George would do with such a one is best told by the Earl of Dunraven's game-keeper on being questioned in court as to his disposition of any one caught red handed: "Plat ud I du?"

Such sport and its accessories may well be called a sportsman's paradise, and so we found it.

After a good old-fashioned game of whist and a well-spread supper and night cap we retired early with visions of ducks unnumberable.

Breakfasting early, Finegan, Bob and the writer set out for our blinds at ten o'clock. The club blinds were started on the north-west all day, and the birds were akin to lightning bolts in their flight, scarcely noticing our decoys; still our bag of canvasbacks, teal, wigwags and redheads was fair, and we returned well satisfied.

It is no exaggeration to say that from almost any point on the bay could have been seen thousands of mallards, wigwags and canvasbacks, and the club blinds were a splendid sight to our eyes were blessed and our fingers tingled by the sight of a ring of old honkers.

The register of birds kept each season by the club members for many years shows an enormous number killed. Butterballs and coots are not counted. To the credit of the club be it said that mallard shooting is prohibited in the spot.

Unfortunately for the writer a telegram ruddy dispelled his hopes of a week's vacation, and he was reluctantly compelled to bid good bye to Winous Point and its hospitalities in the midst of his enjoyment. Another season an your correspondent may be enabled to discourse more eloquently of the varied attractions of the "Winous." EN GARDE.

Natural History.

THE FISH MORTALITY IN THE GULF OF MEXICO.

THE following report into the causes of the recent terrible mortality among the fishes of the Florida coast has been made by Mr. Ernest Ingersoll to Professor Baird and will appear in the proceedings of the United States National Museum. Owing to the impossibility of procuring samples of the supposed poisoned water for analysis no definite conclusion has been reached as to the cause of the destruction of the fishes of the Gulf has been reached. The report is as follows:

Pursuant to your verbal suggestion, I made it an object, during my recent cruise down the western coast of Florida in the service of the Superintendent of the Census, to inquire into the so-called "poisoned water" which was supposed to have caused the remarkable mortality among the sea-fishes that occurred in the autumn of 1880. I am sorry to be able to but must excuse on the plea that I was too late to see any actual destruction, since the cause had wholly disappeared previous to my arrival there, and also from the fact that I was unable to carry out my intention of going to Key West, where most of the fishermen live who suffered injury, and who could perhaps have furnished additional information. It appears that this misfortune is not a new experience in the eastern part of the Gulf of Mexico. One of the oldest residents on the Florida coast, Mr. Benjamin Curry, of Manatee, told me, what others confirmed, that as far back as 1844 a wide-spread destruction of all sorts of salt-water animal life occurred, apparently due to causes precisely similar to those which produced the latter noted destruction. It is reported that the fishes suffered all along the southern shore, and have done so at intervals since to a less degree, until in 1878 an excessive fatality spread among them, which was wider in the extent of its damaging effects and probably more destructive in point of number of victims than the later visitation of 1880. Even the cooler half of 1879 was not exempt from some appearance of the plague.

It is regretted that no information of this deadly infestation in the sea during 1878, Mr. John Brady, Jr., an intelligent captain, told me that the time of year was January, and that the "poisoned water," to which universal belief credits the death of the fishes, could easily be distinguished from the clear blue of the pure surrounding element. This discolored water appeared in long patches or "streaks," sometimes 100 yards wide, drifting lengthwise with the flow

of the tide. The earliest indication of it was the floating up of vast quantities of dead sponges—chiefly "loggerheads." All those seen by Mr. Brady were less than forty miles north of Key West, in what is known as "the Bay," or, as my friends call it, "the sea," as they are all blowing (i. e., south-ward or eastward) of the Florida Reefs; but it was soon discovered that all the hitherto profitable sponging grounds lying off the coast as far north nearly as Cedar Keys, and particularly off the Anclotes, had been ruined. These grounds are only now beginning to show signs of reproductive-ness in sponges. At the same time, many portions of this area—for example, Sarasota Bay—seem not to have been affected so much at least to cause the death of swimming fishes to any great extent. In the case of the sponges, only a few of other species than the loggerhead would be seen floating; but when they were looked into, all were found dead, though still clinging to the bottom. When a sponge dies naturally it gradually becomes white at its base, through the loss of its sarcoel matter, but all these were observed to have turned black. The abandonment of these sponging grounds from the Reefs to Cedar Keys, during the three or four years following this attack, entails a loss, which it is hard to estimate, because partially compensated in the increased price of the article in the market due to its consequent scarcity, and because at all times the product there is an uncertain quantity; but I hazard the opinion that \$100,000 would not repair the damage to this business interest alone. Had it not been for the fortunate discovery just at that time of the sponge-tracks off Rock Island, northward of the Suwanee River, almost a famine in this article would have ensued.

Concerning the attack of 1880 I am able to say more. It began suddenly, and immediately followed the terrible hurricane which is known as the "August gale," the fish and all other ocean life suddenly dying in herds all along the southern (eastern) shore of Tampa Bay, on Egmont Key, at its mouth, which was the most northern point, and thence southward as far as Snake River, in Whitewater Bay, on the coast. Thence the hurricane was found in the currents that set southward through the Bahia de Passaro, through the Northwest Passage beyond Key West, and even out in the neighborhood of the far isolated Tortugas.

Everywhere throughout this whole extent of coast, except in the mouths of the rivers and in the shallow bayous, all the forms of sea-life died as though stricken with a plague fatal alike to all, and were drifted upon the beaches in long windrows so dense that near human habitations men were obliged to be carried to the shore by the water. In some places (I haul them away by wagon-loads to be prepared for manure, as was done in some cases. Not only were swimming fishes destroyed, but sponges, crabs (I saw upon the beaches thousands of horseshoe-crabs laden with their chains of undischarged eggs), and great numbers of mollusks. The oysters at the mouth of Manatee River and in Tampa were spoiled (in imagination if not in fact), and the excellent clams of Sarasota Bay became waste, as well as of a repulsive green hue at their edges. A graphic account has been given me in a letter received from Mr. Charles Moore, Jr., keeper of the lighthouse on Egmont Key, at the entrance of Tampa Bay, the original of which I transmit herewith. This point witnessed the height of the calamity, and as Mr. Moore was present during the whole season, his account of facts is valuable.

By Mr. Moore's letter, February 20, 1881.

"Sir: As I promised to give you all the information about the fish dying at this station, I will do so to the best of my ability. The first dead fish we saw was on Sunday, October 17, as the tide came in. There were thousands of small fish floating on the water, most of them quite dead. I saw only one kind the first day; they were small fish, four or five inches long; the Key West snappers called them "brim." They were new fish to me. The next day other kinds were seen all along the shore; the pompano was about the next to give in, and by the 25th October nearly all kinds of fish that inhabit these waters were dying, except the ray family. I don't remember of ever seeing any stinger or whipper ray, or the devil fish, as we call the largest ones of the ray family.

From the 25th of October to the 10th of November was the worst time; during that time the stench was so bad that it was not possible to go to the beach. The next day I went to Manatee, and the assistant keeper and myself staid ourselves up in our rooms and kept burning tar, coffee, sulphur, rags, etc., night and day in order to stand it. It was warm, damp, and calm weather. They continued to die for about six weeks; they kept getting less every day. I counted seventy sharks within 80 yards, all small; I never saw a shark over four feet long dead. The cow-fish and eels were about the last to give in. I think the cause of the fish dying was caused by the fresh water, as there were immense quantities of fresh water coming down the bay, and the water here was nearly fresh on the surface, while the water underneath was perfectly salt. Now, if the fresh water could have passed off into the Gulf without being disturbed by winds, it would have naturally spread out thinner and thinner as it would have rolled on toward the Gulf Stream, and once it got there, then there would have been no trouble. But on the 7th of October we had a heavy gale from the southwest, and it continued to blow from the south and west until the 11th of October, and a very heavy sea running at the mouth of the bay, and it churned the fresh and salt water all up together, and the strong southerly winds set this mixed water back and kept it here for several days.

I noticed, a few days before the fish commenced to die, a peculiar smell on the water, something like the smell of brim-water, and the color of the water was a dirty green, mixed with small sediment. I noticed the fish while they were dying, when they first came in shoal water; they would not enrage, dart around in every direction, but in a short time would give up and float ashore. On examining them I found their gills all glued together with a slimy substance and of a whitish color, and in a short time the gills would turn green and black, and the color of the water was a dirty green, mixed with small sediment. I noticed the fish while they were dying, when they first came in shoal water; they would not enrage, dart around in every direction, but in a short time would give up and float ashore. On examining them I found their gills all glued together with a slimy substance and of a whitish color, and in a short time the gills would turn green and black, and the color of the water was a dirty green, mixed with small sediment. I noticed the fish while they were dying, when they first came in shoal water; they would not enrage, dart around in every direction, but in a short time would give up and float ashore. On examining them I found their gills all glued together with a slimy substance and of a whitish color, and in a short time the gills would turn green and black, and the color of the water was a dirty green, mixed with small sediment.

"My address is: Bradenton, Manatee County, Florida."
"Very respectfully,
"Keeper of Egmont Light-House."

Along this region of the Florida coast are several establishments or "factories" devoted to the catching and salting of fish, chiefly the mullet and its roe, and to the making of su-

perphosphates. All of these were obliged to suspend operations, and their winter's work has been ruined, or at least all the profits are gone. One gentleman told me of a single definite loss he had thus suffered of \$800.

To this part of the coast, also, comes a large fleet of smacks and "smackees" every winter to catch fish for the Key West and Havana markets, principally the latter. These smacks were found that, as before, the brownish, discolored water, "filthy and glutinous" (as one described it), which seemed the cause of the mischief, lay in streaks drifting with the tide. The small fishes that swam into one of these patches (which had a vertical thickness apparently coextensive with the depth of the sea at that place) seemed unable to get out before they were stifled, and died as though by suffocation. Even the large carnivorous swimmers, like the sharks and porpoises, were found to die, though frequently they would often strength to turn back and flounder out. In the pure element, between the deadly streaks, fish were as abundant as ever at the distance from the coast where the smacks operated, and their wells were often filled with prompsness; but it was found that it was impossible, even by going straight out to the Tortugas, to run the gauntlet of the poisoned water between there and the Cape Sable, since if once it was encountered, the fish, though they would swim minutes sufficient to bring about the death of every fish of the cargo. I have a few notes, culled from the Key West journals, which show that a loss of nearly \$10,000 resulted from only four or five such misfortunes. The consequence was that for some weeks the fishing throughout all that part of the Gulf had to be wholly abandoned, involving the idleness of a large number of vessels and their crews.

Seeking an explanation of the phenomenon, I everywhere asked what was the local theory to account for the matter, and was almost always told with confidence that it was due to an overflow of the swamps and the pouring into the Gulf of bodies of fresh water poisoned by a decoction of noxious 'acids,' etc., leached from the roots which had been soaking for years in the pen-up floods—a theory which I fail to find supported by such facts as I have been able to learn.

Those who are conversant with the history of this explanation, point out that the winter of 1877-78 was an unusually wet year, and that this last fall saw more rain falling in South Florida than ever before in the recollection of the people there. This is probably true, and it may be, as asserted, that the years heretofore when the fish have died have been those noted for their excessive rainfall, but I have not compared meteorological records. It is no doubt true also that if a semi-fishy mud, or muck, saturated with the tannin derived from decomposing roots and stems of palm trees, oak, sumch, etc., which do abound in the Everglades, be found and it emitly unhealthy. But further than this the hypothesis will not hold. It requires us to believe that the overflow of a small surface of swamp-land shall so tincture the wide area of the Gulf as to destroy its healthfulness during several weeks, while the tides are ceaselessly swinging back and forth as they are, and continuously replace the water of every part with new and sound elements of palm trees. This is preposterous. Moreover, provided it was true of the Manatee River (as is claimed), or of the Caloosahatchee further south, why should it not be equally true of the Atlantic coast, where there is the same or greater drainage, yet no such trouble known; or of the Withlacoochee, Suwanee and a dozen other streams draining swamps like the Okefenokee, in whose mouths the excess of water is noxious as those that are further south, yet whose discharging streams do no harm to the fishes? Moreover, in the Manatee River itself no fish were killed over the free range of the tides, though daily breasting the swamp overflow.

Some, discarding any theory of the decoction of poison from plants as an explanation, will tell you that the excess of rain-water discharged by the rivers so freshened the surf as to cause the death of all shore swimming fishes. This, as near as I can make it out, is Mr. Moore's explanation of the mortality at Egmont Key.

In a few confined spots, where fishes could not escape at will, this might now and then cause a death, but it is notorious that the fishes of the Gulf coast make little or no distinction between salt and fresh water. Alligators swim to the ocean just as readily, and the best sheephead caught are those of the Gulf. The cause of the stream is always sweet, and the water is never so fresh as to do us any harm. The head of the bayous, or until the river-channels get too shallow for them to swim further, a little fresh water, or a good deal, more or less, would receive no atention whatever from a Florida fish. The Mississippi has been deluging the Gulf with a well-nigh Amazonian volume of water, fresh not only, but thick and nasty, yet no one supposes the fishes off the latter are obliged to accept of its murky flood unless they choose, or, if they do, that they suffer by it, except to the palate of the eel.

But a more cogent argument, from facts perhaps overlooked heretofore, exists against any theory which seeks to explain the destruction of marine life inside the Florida reefs by any landward agency. This is that it was in all cases the dwellers on the bottom that perished first, while the surface-leaders were the last to be affected, and, as a rule, escaped altogether. (Until 1880, I was told, the mullets were ever known to be killed.) It was the death of sponges, conchs, sea-anemones, crawling horseshoe-crabs, of toad-fish, cow-fish, skates, and the like, which keep close down on the bottom, that first apprised the fishermen of the presence of their dreaded and mysterious enemy. Next came the bodies of red-fish, groupers, pompanos, and other deep swimmers, and last of all the mullets, which are shallow water, and float on the surface, having a lesser density. If it exerted a noxious influence it would be the surface-life that would first succumb, the bottom-life longest escape. But quite the reverse has been the case, and this, with other appearances, leads to the conclusion that the "poison" springs from the bottom of the sea, or is formed in its waters.

The only way to account for this, by supposing that eruptions of volcanic gases may have taken place through the bottom of the sea along a line stretching from Tampa Bay to the Tortugas, and through the western half of the Florida Keys. Inquiring as well as I could whether there had been any evidences of plutonic action in that region within a few years, I heard a tradition that about the holidays of 1877-78 an earthquake shock had been felt on the west coast. "I have had no opportunity to verify this," but it is a well-known fact that just previous to the hurricane of last year, so well remembered by all the people of Florida West, as a time of almost unparalleled destruction of shipping and height of tidal waves, a shock of earthquake was felt throughout the whole southwestern end of the peninsula. It did considerable damage in the city of Key West, and was so alarming at Tampa that several persons ran in flight from their

houses. Immediately after it began the sudden destruction of fish I have described.

Whether the physical shock of such an occurrence, touching the fish and creepers on the bottom, would do them harm, or whether the subsequent patches of "poisoned water" owed their discoloration and undoubted deleterious properties to being saturated with sulphureous or carbonic acid gases derived from volcanic emanations, I cannot presume to decide. But if the last supposition had been proved true, or shall be at some future time, would it not be a rational and sufficient explanation of the death of the fishes, sponges and their kin, whenever they came in contact with the discolored water alluded to?

Analysis of the suspected water would have done more to solve the question, probably, than anything else could do, and it is a matter of regret that I could not obtain a few specimens of it for that purpose. After the end of September, however, the evil diminished, and by Christmas all of the harmful water had disappeared from the Gulf.

Regretting that I could not have done more to get at the truth of the matter, in essaying which I was offered every aid by the citizens of Florida, but continually impeded by bad weather and other untoward circumstances, I beg to avail myself of this little that I have learned, and I have the honor to be,

Very respectfully yours,
ERNEST INGERHOLL.
PROFESSOR SPENCER F. BAIRD,
United States Commissioner of Fish and Fisheries, Washington, D. C.

SPRING NOTES FROM NOVA SCOTIA.

As it may prove interesting to some of your readers to compare dates concerning the leaving and flowing of trees and plants, arrival of migratory birds, etc., I have much pleasure in forwarding the following "notes," which, if acceptable, can be supplemented by others.

Willow (*Salix*). Of this genus we have several species, but, unfortunately, owing to the difficulty of identifying them, I am unable to give more than a general account. The latter begin to blossom here in an early season, and yield itself to moderately dry ground as well as moist. Its silky catkins appear generally about April 20, but in early seasons, like that of 1876, I have known them to put out as early as March 18. The catkins of the different species of willow are called "pusses" by the children of this province. In England I well recollect when a child we used to call them "goose-goose," which denoting its downy coating as somewhat like the animals in question. They generally leaf about the last week in May.

Alder (*Alnus incana*, DC.). Catkins generally appear about the first week in May, but I have observed them (1876) as early as April 14. This year (1881) I noticed them first on May 1. This shrub—or tree as it might be called in some parts of the province, especially in the Stewiacke Valley, Colchester County—attains a height of fifteen or twenty feet, and six inches in diameter of trunk, is extremely common everywhere in moist situations. It usually puts forth leaves about the second week in May. The wood is very brittle, and in clayey land no shrub is more easily grubbed up than the alder. The downy woodpecker (*Picus pubescens*) loves to inspect the lower parts of the alder trunks, where from the many holes pierced in the bark it evidently finds the larvae of some insect suited to its taste. From this peculiarity no doubt the unscientific countryman calls it "sap-sucker."

Sweet Fern (*Comptonia asplenifolia*, Ait.). Bears catkins about the last of April. It is an extremely common shrub on the rich sandy loam of Kings County, and is generally supposed to denote good soil. It leafs the last week in May.

Wild Gooseberry (*Ribes*). I am not quite certain as to the species, but I take it to be *synodonta*. It is very regular in leafing, generally the first week in May. The fruit is ripe about the second week in July.

Red Maple (*Acer rubrum*, L.). Usually flowers about May 10, and sheds them a week or ten days later. In full leaf about May 30.

Aspen (*Populus tremuloides*, Mich.). In flower last week of April, and leafs about May 20. It is called by the countrymen "the maple-tree," and is held in high esteem for wharf logs, and for all purposes in salt water, as it is not attacked by the *Teredo* or other marine worms.

Balsam Poplar (*P. balsamifera*, L.). Leafs about the last week in May and flowers about same time, giving out its characteristic strong perfume, which is carried by the wind for some distance. It is called here "Balm of Gilead."

Dandelion (*Taraxacum dens-leonis*, Desf.). The flowering time of this well-known plant varies much. The earliest date I have recorded (1865) was on May 2, and the latest about the middle of that month.

Common Frog (*Rana fontinalis*). The earliest croak of this species I have registered was (1865) on April 6, and the first spaw observed that season was April 10. We usually hear the first croak almost invariably on a wet or damp evening, about the middle of April. This season (1881) I heard the first croak on the 14th of April, and saw abundance of spaw in ponds on May 1. I have observed the tadpoles in ponds (1867) as early as April 10.

Common Snake (*Coluber vertebralis*). Usually appears about the second week in May, but sometimes earlier, according to the season.

Green Snake (*C. ventralis*). Generally appears about the same time as the Common Snake. It is called here "the green snake" (*Tardus migratorius*). Several stay with us all winter, but the migratory flocks arrive about the end of the first week in March. It usually commences to sing about the first week of April, and the first song is almost invariably heard in the evening. The first song I have recorded was on May 26, 1862.

Song Sparrow (*S. melodia*). Generally makes its first appearance about the middle of March and treats us to the first bird song of the season.

Black Fly (*Simulium molestum*). This terrible plague to all anglers appears about the second week in May. They do not seem to attack the plain flesh of the hands or face, but always make for the roots of the hair of the head. I first observed this habit while lying on a woolly carriage rug, which they appeared to alight on eagerly and searched at the roots of the hair for flesh, but when they came to where my hands lay upon the rug they usually departed. Cows may be seen in pastures near the forest literally covered with these creatures trying to force their way down to the roots of the hair.

Fern Lodge, Waterville, Nova Scotia, May 30.
FROM SING SING, N. Y. May 29—Editor Forest and Stream.
May 5—Saw first Baltimore oriole (*Icterus baltimore*).

May 7—Saw bob link (*Hollongia urbinarum*).
 May 11—Found red-shouldered hawk's (*Buteo lineatus*) nest containing one egg, large embryo; also, phoebe's (*Sayornis phoebe*) nest, two fresh eggs, and golden-winged woodpecker's (*Colaptes auratus*) nest containing five fresh eggs.
 May 15—Found clipping sparrow's (*Spizella socialis*) nest, egg.
 May 16—Faw ruby-throated humming bird (*Trochilus colubris*).
 May 20—Found blue bird's (*Sialia sialis*) nest, one egg; also, yellow billed cuckoo's (*Coccyzus americanus*) nest, three eggs; large robin's and yellow-breasted chat's (*Icteria virens*) nest, four fresh eggs.
 May 21—Found yellow warbler's (*Dendroica aestiva*) nest containing three eggs.
 May 22—Found two nests of yellow-breasted chat, each containing four fresh eggs, and wood thrush's (*Mniotilta muscadivora*) nest, four fresh eggs; also cat bird's (*Parus carolinensis*) nest, four fresh eggs, and house wren's (*Troglodytes aedon*) nest, three fresh eggs; also, blue bird's nest, one egg. Same day, found blue bird's nest with large young ones and saw young blue birds that could fly.
 May 25—Saw pair white-eyed vireos (*Vireo noveboracensis*) building nest. Saw pair least flycatchers (*Empidonax minimus*) building nest. P. D.

A MOTHER'S COURAGE.—This would be a good season of the year for those gentlemen who delight in treading ruffed grouse to take their curs in the woods to practice the art of getting the birds into the trees, in order that their worthy masters may get resting shots. At least I would wish them so to do if they might be fortunate enough to meet with as determined a mother bird as I did this morning. The curs might learn a lesson. If I judge to go some distance in the mountains to look for a fox and a mink, I will take two terriers—a fox and a Dandie Diamond—both well known for their pugnacious qualities. After finding the fox den, and unceremoniously with the help of the dogs, I turned homeward, and came suddenly upon a hen ruffed grouse, with at least twenty chicks. The dogs were at heel, but at once rushed on the bird, who sounded the danger for the young. I called the male bird. I have seen a game hen defend herself against a larger dog. I have seen one particular game hen on one occasion kill a Norway rat of good size, that attempted to take an egg or chick, but for my fury and determination I never saw anything to equal the efforts of this female ruffed grouse. Never for the space of a moment of thought did she cease from a most determined assault until the dogs beat a retreat to heel. The male bird was scarcely less determined, but the dogs were not the same kind "do or die" bravery shown as with the mother bird.

This may be very common, but I record it as my first experience of the kind, and I know very well that no cur, however good at getting birds into the tree in the shooting season, could have withstood the attack of this morning, which adventure led me now to write this article, wondering how honorable a gentleman reason within themselves to justify their honorableness (?) way of bagging ruffed grouse.—BARKSWORTH.
 May 30, 1881.

STRANGER CRABS OF MAURITIUS.—The following interesting account of some peculiar crabs appears in a recent issue of *Nature*: Two crabs of most extraordinary habits are described. Both belong to the family *Procydidae*. The embryos of this family have their feet claws armed with large teeth. Latreille, who first named them, has found one particular crab marked that a gummy substance was always to be found at the ends of the claws of this species, and Dana described the animal as always having something spongy in its hands. Dr. Moberg has discovered the remarkable fact that these things held in the two claws of the crab are in reality living sea-anemones. These sea-anemones are attached to the immovable joint of each claw, while the teeth of the movable joint of the claw are kept buried deep into the flesh of the sea-anemone, and thus hold them fast, although each anemone can easily be pulled away from its position with the forceps in specimens preserved in spirits. The mouth of the sea-anemone is always turned away from the crab. The same curious combination exists in the case of another species of the same family but of a different genus, *Media tessellata*, which also inhabits Mauritius, and in the claws of this crab, with its pair of Actinias, named by Moberg *Actinia prehensilis*, with fully expanded tentacles, held out in each hand. Moberg gives the following account of the matter: "I collected about fifty male and female specimens of *Media tessellata*, all of these held in each claw an *Actinia* prehendens. The recurved books of the inner margin of the claw joints of the crab are particularly well adapted to hold the Actinias fast. I never succeeded in drawing the Actinias out of the claws without injuring them. If I left the fragments of them when pulled out lying in the vessel in which the Media was, the crab collected them again into its clutch in a short time. If cut the Actinias in pieces with the scissors, I found them all again in the claws of the crab after a few hours. It is very probable that the Actinias all the crab in catching its prey by means of its three claws, and having it elevated in its other hand, gain by being carried from place to place by the crab, and thus brought into contact with more animals which can serve as food to them, than they would if stationary. This is a very interesting case of commensalism."

HOW A PARTRIDGE LEAVES HER NEST.—Rockland, Me., May 30.—On the 13th of this month I received a line from a friend in the country, saying, if I would ride out, he would show me a partridge nest with nine eggs in it. The next day myself and another friend rode out with the crab, who guided us—three men and two dogs—to the nest. We went carefully as we neared the nest, and got within about twenty feet, when she went off like a shot into the air, flying high and far. After admiring the nest and eggs a moment, we left, not forgetting to pronounce our blessing upon it as we walked away.
 A friend informed me that he had found another, with twelve eggs in it, and, pointing to a house a mile and a half away, said the boys there would show us the nest. So, wishing to see all there were, and also to give the thing a fair trial, we went to the house and found the boys (three of them) at work in the field. We gave them a dime apiece to show us the nest. This time our forces were somewhat augmented, and consisted of two men, three boys and two dogs, and we approached with a little more awe than the first, being going very carefully. We saw the hen on the nest plainly for a half minute, and then she glided off and ran—not feigning lameness, but sneaked off—as if as there was not much underbrush she was in sight for three rods. I have heard of another, and I intend to visit it to-morrow. If I do I will report.—JAMES WRIGHT.

IS IT A HYBRID?—Natchez, Miss., May 26.—*Editor Forest and Stream.* I have just seen what to me was quite a curiosity. It is a cross between an ordinary dunghill cock and a guinea-fowl. The mongrel is now about two years old, is somewhat larger than an ordinary chicken, has a long neck and neck of the chicken (minus the comb and gills), and the plumage of a guinea-fowl. It has the graceful and easy carriage of the guinea, with the chuck or cackle of either or both at will. The guinea-hen, after receiving the attentions of the cock, and the usual season of incubation, hatched six of these little curiosities, but they succeeded in rearing only two. I please to show you a specimen, but I have no similar case. Where could a curiosity of this kind be sold, and what price do you think could be obtained?—S. M. D.

We have never known of a case quite similar to the one here reported, and if there is no mistake in the matter it is a very interesting one. We have no idea of the value of such a specimen.

A CURIOUSLY MARKED BUFFALO.—Croyton, Missouri River.—*Editor Forest and Stream.* This winter the Indian trader, Jos. Kipp, bought a buffalo robe so peculiarly marked that I think it deserves notice in your columns. All the "old-timers" men who have lived among the buffalo all their lives, say they never saw anything so remarkable as this. The animal, a large cow, was killed in the vicinity of the Black Butte by a Blackfoot medicine man, and it was only by offering several rifles, blankets, etc., etc., that Mr. Kipp could induce him to part with the robe. The long, shaggy hair on the head and part way on the back is pure white, and a perfectly white border a foot deep extends along the edge away behind the fore-shoulders. The tail is also white. Yellow hair, which is very common, was never heard of, but never in the history of Montana Indian trading has anything been seen like this. As I said before, the white is a pure white and perfectly regular in place and outline. It would be worth \$200 to any museum, which is Mr. Kipp's valuation of it.—APRIL 27.

SHILL TRAY CEMETERY.—LYNN, Mass., May 27.—Three weeks ago-to-day while out a few miles west of the city for the purpose of giving my hound a new after being chained up all the week, I was standing on a large boulder looking down through the thick second growth of pine and hard wood, trying to make out what the hound was baying so fiercely about. I espied, lying on the topmost branches of a small pine, what appeared to be a snake of some species. It was seven feet long, and I was so near that I was taking sun-sight. I called my two chums to the spot we decided to interview his snakeship. Whereupon I immediately slung him with a charge of No. 10 shot, which brought him to his senses and the ground at the same instant. At least this is my conclusion, as "a wise head keeps a still tongue," and he did not even enlighten us as to how he attained his elevated position, or what his purpose was when there, or on receiving my challenge shot and dropped. On closer inspection it proved to be a black snake, and by actual measurement 43 inches in length. HORACE L. MAYO.

THE AMERICAN JOURNAL OF GEOLOGY.—The April number of this excellent magazine contained a number of articles of great value. Among these were: "Less directly in touch with the ground in a review of the geology of the United States," a Monograph on the Obolomites, by Geo. Bird Grinnell; Elements in Orographic Displacement, by W. J. McGee; The Basin of the Gulf of Mexico, by J. E. Hilgard; Geology of Florida, with a map, by A. E. Smith; Channel Filling in Upper Devonian Shales, by H. S. Williams; New Order of Extinct Jurassic Reptiles (*Caduria*), Discovery of a Fossil Bird in the Jurassic of Wyoming, and Note on American Pterodactyls—the last three by Professor O. C. Marsh.

WILL HAWK EAT CROW?—Philadelphia, Pa.—A sporting friend of mine in Delaware, who saw the item in *Forest and Stream* relating to that question, told me, a few weeks ago, that during our severe winter he saw a strange "miss" out in the field on the snow, and went out to investigate. He said that when he got there in a heavy snow storm, he saw a black thing and held it in his beak and looked at him, then dropped it and flew off. On going up he found the hawk had been feasting on a starved crow.—DIDYMUS.

OSTRICH EGGS OMBLET.—The female African ostrich at the Philadelphia Zoo, has begun to lay. One huge egg was sent to Uncle John Krieger to blow. Being freshly laid, he saved the contents, and has been reporting on ostrich eggs omelet-to-day, and pronounces "good, not a bit strong."—HOMO.

Game Bag and Gun.

HABITS OF DEER AND HOW TO HUNT THEM.

PAINSBURY, Walden's Ridge, Tenn., March 2.
I HAVE killed the winter deer, and I have it in this State, such as deer, bears, etc.; also have hunted some what in the West. For twenty years or more I have hunted deer in the Cumberland mountains, and I think I can give you some information as to the different ways of hunting and the habits of deer.

In this part of the State we hunt deer in the Cumberland mountains and its spurs. Walden's Ridge is one of the Cumberland spurs. It circulates many miles in length and from twelve to twenty miles in width, only partially settled, leave a vast extent of wilderness, where are found a great many deer and a few black bears. There are many deep gorges and rough places that afford secret hiding-places for deer and bears to raise their young. The country is well watered and well timbered, and affords an abundance of mast for the deer to feed upon. In many places it is almost level for several miles. Thickets of undergrowth, covered with grapevines, are often found. So it will be impossible for the deer to become extinct in this country from still hunting or bounding.

The mode of bounding or driving deer here is as follows: Deer have certain runs, generally upon the dividing ridges and through the swags of ridges. Standers are placed on these runs and the driver takes the deer from one to a dozen or more, and generally drives against the wind, which is the way deer, especially old bucks, always run.

The deer hunter that understands his business, in taking a stand to wait for the driver to drive out the deer, always takes his position against a tree, fronting the way he expects the deer to come. In standing for deer you should never get behind anything, for the deer is almost certain to see you move,

and then he will change his direction. Driving does not run deer out of the country. You may drive in certain localities one day and run deer several miles away from their range, and in three or four days you will find the same deer back in the same locality.

Still hunting is another mode, and that is to walk about slowly through the woods and watch for deer. The best time for still hunting is in running time, in the months of October and November, after the does are with fawn and are running and hiding from the bucks. When you see a doe running, follow the woods, go and take your position in shooting distance of where she has passed, and keep a sharp lookout the way she came, and often, in a very few minutes, you will see a buck coming, tracking her. Let him come up near enough for you to get a fair shot, beat or whistle at him and he will stop. If you are a marksman, then you will have venison. On some runs I have known three large bucks to be killed in less than two hours. Still hunting in the months of October and November is the most successful way of hunting. Sometimes that the good rifle shots are the most successful still hunting. Shotgun will do for driving, but rifles are the best to use in still hunting.

Slow-tracking deer with a dog is another very successful way of hunting. The dog, from a small puppy, must be trained. A half-hound is generally preferred. A cross of a hound and a pointer or English dog is also good. The dog should scent and the bulldog or cur the speed and bravery to take hold when he comes in contact with a crippled deer. The dog is trained to follow the track by scent in a slow walk, and you follow the dog ten or twenty feet behind, and keep a sharp lookout for the deer. When the dog has a strong scent of the deer you can discern it by the precaution he uses, and when he sees that he stops and sniffs for a short time, and at the end of the track he does not back run, but waits for you to see what you want done. If you have crippled the deer, his lim on, and if it be badly crippled he will catch it and kill it, and you wait on the track where he started from when you heard him, and he will return and take you to the dead deer. This is the most successful way of hunting, and if by it you can find out more about the habits of the deer than from any other mode of hunting, it is the best.

Deer food on moss, such as chestnuts, hinknapines, acorns, moss, twigs, buds, etc., but not much if any grass.

I have seen a great many deer dressed, but I have never, in this climate, seen a spear of grass in their food. They like peas, corn and other kinds of grain. In the winter they sometimes eat wheat and oats in their green state, but I do not think they feed on it in this climate ever eat grass. Game deer will eat anything.

After running time, deer, especially old bucks, go to the rough woods and stay until they shed their horns, which is in the months of February and March. Then they come out on highlands and into the flat woods. Young deer and does are not so particular. They roam about all seasons.

The does have their fawn in the month of June, in thick underbrush near water.

The bucks, after their horns come out and are full grown, begin to harden them the first of July. They mark their beds upon the high hillsides, lie with their bodies in the shade and with their heads exposed to the sun. They feed at night when the moon shines, but when the nights are dark they feed early and late in the daytime.

Deer do not enter any day between the hours of twelve and two o'clock. Between those hours they feed a little and then return to their bed-grounds. In the month of August the bucks begin to rub their horns. They generally rub on a soft-barked bush, such as a small pine, and by first frost, which comes from the 10th to the 20th of October, their horns are hard and they begin to run.

The great deer men who live on the mountains, do not market, in particular, but for the meat.

The people here would not favor a law prohibiting the bounding of deer. We have a game law in this State, but it is not strictly enforced, as it should be.

In this section of country we have quite a variety of game, such as turkeys, pheasants, quail, rabbits, squirrels, coons, gray foxes, wild cats, and many other species. The Roanoke, Chatanooga is our nearest city of any importance; fifteen miles from the hunting grounds mentioned. The mountains are well watered, both soft and mineral waters, and are very healthful. The soil is good for fruits and vegetables. It would be a good sheep country, but very little attention is paid to sheep raising. A great many cattle are grazed upon these mountains, and some make it very profitable.

THE WOODS?

THE GASTON CLUB.

SOUTH GASTON, N. C.

Editor Forest and Stream.
 In reply to the many inquiries from Maine to Texas, in consequence of your publication of my proposition to establish a hunting and sporting club at Gaston, I think it best to give through your paper more particularly the advantages which the locality offers.

The hotel is a very conveniently arranged house, and contains some twenty-three rooms, all with fireplaces. The ground floor is divided into two large and spacious rooms, one of which can be used for cooking purposes. The second story is composed of bedrooms. The third story has a very large ballroom, with several fireplaces in it, and is so arranged with folding-doors as to make, when not used as such, three or four bedrooms. The hotel is on the north bank of the Roanoke, and immediately adjoining the extensive low lands of the great flood of the Roanoke, which are, for many miles, on the south side of the Roanoke is the South Gaston resort, bath and express office. The town of North Gaston is a place of the past, and exists now only in memory.

In reply to the special inquiries of a gentleman from Pennsylvania I will state scintiam; First—Gaston is on the north bank of the Roanoke. Second—The Roanoke is not navigable above Walden and below Clarksville, Va., for any great distance. Third—The ballroom has a large room, one of water at Gaston some three miles long and half a mile wide, with but little current—not more than that of the Hudson or Susquehanna. Third and fourth—With the exception of the Roanoke bottom lands the adjacent country is hilly and well adapted to the usual S. northern products. The Roanoke bottom lands are extremely productive, and are generally well watered and have a capacity for crops, one of which is 10,000 acres in one body can be purchased for agricultural purposes and as a game preserve. Sixth—The winters are generally mild and subject only to the variations of a temperate climate. From the 10th of October to the 10th of August immediately following no part of the United States is more healthy. During the months of August and September we have occasional malarial diseases, which, by-the-by, rarely require the attention of a physician. We

THE FLY-CASTING TOURNAMENT.

In our next issue we will publish the rules which will govern the fly casting the 23d of this month at the Tournament at New York State Sportsman's Association at Coney Island. We will also print the record of all previous castings, with the distance cast by each competitor, and would request any person having information on this subject to correspond with us. Mr. Abel Crook, the President of the Association, has gathered much information in addition to the prize list published, which he will furnish us.

A prize has been offered by Mr. W. B. Hopson, of the Sea Wagon, of a gold mounted split bass, one salmon rod, made by H. L. Knicker, 10 feet in length and weighing 27 ounces, worth \$75. It is to be given to the person making the longest cast in any class in single hand fly casting, and will be given in addition to any other prize won. This is the only case in which a contestant may be permitted to receive two prizes in this tournament of fly-casting. The interest in it is increasing, and general satisfaction is expressed at the number of prizes and their arrangement, and a good number of entries are promised.

The bass cast in this style, is attracting attention, and being the first time that it has been held. Now we will see what distances can be cast in this style, and have something besides fabulous stories of enormous casts. If you can cast, bend down your rod and try your skill in this most beautiful of arts.

BASS THAT REFUSE THE FLY.

WILKS, TEXAS.

I AM NOT satisfied yet. I did think that when I got my new "stranahat canvas boat," and my new fly rods, and my bait natural and artificial, boys of deer-tail and the like, that I would completely "blay and eat" a villainous lake, but "nary time," and now is the "winter of my discontent." I am bothered. I can stand disappointment as well as any man, when it is necessary, or only occasional, but when it comes so frequently, I get weary. I believe the fish in the South have been so accustomed to our "big" and "big" minnow baits, that it is impossible to ever school them to any "gentle or delicate," at least until the present generation of fishes have passed into the frying-pan, and a new school reared up.

Last week my friend Thompson and I got our sporting wagon ready, hitched in the ponies, filled the vehicle full of everything on earth that a camper-out could wish for, took big flies and little flies, red and white painted rods, all kinds of tackle and a minnow seine. We took along everything. We camped two nights at "Crystal Creek," 16 miles from town. I tried the flies first. I was crazy to witness a bass rise to a fly. I prevailed on Thompson to take some sun-perch with crickets, so as to be certain of a meal for dinner. I stole away to a splendid pool, some sixty feet long and 20 wide, with a faller log across the middle. I crept up behind a bush and looked in. The water was clear and there was a lining bottom. I carefully rigged up my new fly rod with a light silk line. I then selected a royal coachman for a leader and a La Belle for the dropp (I believe that is the word). I then drew off about three feet more of the line (than the length of a rod). All ready, I made my cast—my first cast with an artificial fly—my maiden cast, you understand. I trembled for safety, not for my own, but for the delicate rod. I trembled because I expected something fearful was about to turn back on me. I was a bundle under emotional excitement. The two flies settled beautifully on the water, causing but little splash or ripple. I waited the result until the waves began to subside, when I saw two fine bass rising to the flies. One was a two year old and the other three. They were beauties, however, and as they ascended slowly toward the flies with their bodies curved or bowed in a menacing manner, I expected to see them rise to the flies, disappear in their jaws, and be gone. But they did not take them. They came up to within three inches of the flies and took a good look, turned their tails and swam slowly and sensibly away, and leaving the world to darkness (disappointment) and to me. And left me to understand that I was the biggest fool of the three. I cast to them again but to no use. Couldn't fool them. Then I cast near the log, when a fine bass swam immediately before the flies, and within three or four inches of them, then turned and swam away. I then cast beyond the log, and drew the flies along toward me, when I saw a fine 2-pounder slowly following the flies. I merely kept the flies in motion to prevent their discovering the fraud, but this one like the rest turned with bad disgust and swam slowly away. I then cast toward another part of the pool, when a fine one arose and did just as the others had done. I quit that pool and went to another, and my efforts met with like results. So I just wound up my tackle and went to camp, and all the time lamenting that I ever read a word about fly-fishing for bass. I went there and got Thompson, and we drew the minnow seine and took a few minnows. I went to the same pool and tried with the minnow with little or no better success, although they took the minnow better than the fly. We then went to some splendid lakes some five miles below, said to be the best in the country for bass. We entered the canvas boat, and I need not say how satisfied I am. I tried different baits, but my strike did not give me the rod and reel and took my long cast or reed pole. I had a deer-tail bob and tried that. I had several splendid strikes, and all large bass from two to four pounds, but from some cause I failed to hook them, only taking three in all. Some I found the deer-tail bob to pass any fly that I had to provoke a strike. The flies would raise them, but that was all, and the bass would not take them. We took some minnows from the river with seine, but the bass would not take them—the hobbing the most effective lure we had, nor did they go for that much. The only cause is that I can attribute it to this apathy on the part of the fish, one is that the moon is just on the full and the nights are light all night, rendering the fish sluggish and dull all the next day, as I have mentioned in some former papers. Or, that the fish are in their spawning season, and decline food in consequence. Something wrong, that's all. I would like if my handsome friend Dr. Heushall would rise and explain.

I shall not say much, however, until I get a hold on the Doctor's "Book of the Bass." He has shown me how to make the bass rise to the fly, but he is not shown me how to make him take hold of it. Did you ever think of that? Or that the fish are in their spawning season, and decline food in consequence. Something wrong, that's all. I would like if my handsome friend Dr. Heushall would rise and explain.

I shall not say much, however, until I get a hold on the Doctor's "Book of the Bass." He has shown me how to make the bass rise to the fly, but he is not shown me how to make him take hold of it. Did you ever think of that? Or that the fish are in their spawning season, and decline food in consequence. Something wrong, that's all. I would like if my handsome friend Dr. Heushall would rise and explain.

others kept them moving, but nothing that I could do would induce them to seize the fly.

The weather was all one could ask. The water was in prime condition, and nothing else could I attribute their not biting except the "wrong time of the moon."

I have not quite despaired, however; I shall try them again and out. The worst I hate in the whole matter is about my big expectations. The more one expects the greater the fall, when disappointment does come. I don't like to be snubbed by country lads and fogies. My only source now is in the Doctor's "Book of the Bass." I am going off by myself and take it all in *veritas et liberitas*. Probably he will tell me how to compel the bass to take my fly after I have got him within three inches of it; and if he does I am going to make another break for them; but until then, I shall lie on my oars and wait the inflowing tide. C. L. J.

BASS FISHING IN KENTUCKY.

MILL SPRINGS, KY., May 25.

WINTER persisted in lolling so long in the lap of spring that angling without overshoes, great coat and yarn mitts was for force put off till last of April, and but little sport has been indulged in, as the few spring-like days were but preliminary to a skip toward a far different temperature of such unprecedented torridity that the average angler concluded it the overture to the grand Cascades as per Brother Shipton's programme for '81. "Was thought that that could have certainly 'set the sun afire.'" Busiwhackers are seeing all the streams in an absolute disregard of the fish law as if no such existed. One fellow, while seining at night, was snaked bitten, and there was some hopes that the venom would be fatal, but through the arrangement of a timely change of cars, including ferrisage at Sixty, but a weekly outlook for a complimentary obituary in the country paper is yet unrewarded. Better luck to the snake next time.

During the short enjoyable spell "Uncle Joe" Taylor, a native pioneer, seventy-three years of age, came over to go fishing with me, "just to see me catch 'em with a reel," he said.

Uncle Joe never misses a fall deer and turkey hunt, and living near a river has always set great store by his trout lines. Having never seen a reel in use, he wanted proof of the extravagant praises he had heard of that style of fishing, and I joyce to report that our trip has resulted in the old man's equipping himself with an approved angler's outfit and cheerfully transferring his trots to Aunt Mat for clothes. As transporting minnows over eight miles of mountain trails was a task beyond our capabilities, we had a one-pound black bass into a landing net, which I may gratify some brother to learn I at we put our minnows into a gallon jug two-thirds full of fresh spring water—balanced with a stone in a meal sack, as we hadn't enough to demand two jugs—and on arrival, at noon, found every minnow alive.

Fishing below a mill-dam in the swift water, pike-perch and black bass were taken rapidly, and when Uncle Joe had the pleasure of putting a brick-iron through the under-gut of an eight and one-quarter pound pike-perch which a slasher led into the landing net with a six ounce, eight feet Japanese rod and No. 2 Meek reel, his reconstruction was complete, for the ecstasies of rod and reel angling were established.

As soon as practicable I shall accompany Uncle Joe to his favorite fishing resorts, and hope there will be some in our catch that deserve to go on record. By the way, the old sportsman is responsible for the following, which I believe as if I had seen it:

On one of his trotting excursions, while amusing himself by tossing clips and pebbles on the water to see the black bass dart for them, a water-snake glided into the water and was immediately tackled by a big fish which heroically endeavored to dine off snake, but finally gave it up, the snake wriggling into hiding badly worsted by the protracted struggle. KENTUCKY.

TROUTING IN CANADA.

TROUTING IN CANADA.—Trout fishing has so far been unusually good here in the Eastern Township this season. Hoppen has yielded up some trout-ponds, and yet retains his biggest. In company with the veteran snow shaver, Mr. W. L. Malby, the writer recently visited Lake Nick and Coons pond, where we basketed some fine *Salmo fontinalis* and for a change went to Browne Lake and killed a quantity (all we could carry) of pike and small-mouth black bass. One of the bass kicked the beam at 4 1/2 lbs. I have just returned from a trip to Big and Little Avy lakes, and there we had good sport in Big and Little Avy lakes, and Little Leach pond. The largest of our trout taken there weighed 1 lb. and 16 oz. If these lakes were properly protected they would afford fine sport for the trout fisher. A French Kanook has built a steam saw mill on the shore of Big Avy and is depositing his sawdust in the lake. This, with sweeping the spawning beds with nets, will soon clean out the trout. Where are the Vermont Fish Wardens? Eastern Townships, Canada.

BASS AND TROUT IN CONNECTICUT.

BASS AND TROUT IN CONNECTICUT.—Putnam, Conn., May 30.—The first black bass this season were taken by A. M. Wood, of Dayville, an expert with the fly. He took about a dozen a few days since at Alexander's Lake, a fine sheet of water some four miles long in his place. When the proper time arrives, and bass are off the spawn beds, there are a few old salters here in Putnam who drive up to Webster Pond, which lies just over our line in Massachusetts, and they have such a taking way with the bass, that the fishermen up there look sad when they see the quantities of fish taken to Connecticut. But there is no end to bass fishing in Webster Pond; it is literally alive with them. This county used to be the best in this State for trout-fishing, but now there are few very few to be had. There are so many fishermen that the streams are kept pretty full of fish. Something must be done toward restocking our streams, and more attention must be paid to the laws, or our trout-fishing will soon play out.—E. T. W.

PENNSYLVANIA TROUT.

PENNSYLVANIA TROUT.—In your issue of June 2, I notice an item asking for information in regard to trout weighing over two pounds caught in Pennsylvania waters. Last year Mr. Ben H. Milford, of Montrose, caught in Carr's Lake, near Conowingo, a brook trout weighing 3 lbs. 7 oz. This spring, His Honor J. B. McCollum, of Montrose, caught a trout which weighed 7 lb. 8 oz., in the above-named lake. In the same lake Mr. W. W. McCain, of this place, caught a trout weighing 2 lb. 6 oz. The same gentleman caught a brook trout in Bowman's creek, Wyoming county, two years ago, weighing 2 lbs. 4 oz. I have just returned from Bowman's creek, where I spent a few days angling in that well-known stream. My host, Mr. Wm. Culver, told us that he

caught a trout, last year, weighing 3 lbs. 1 oz. If this does not settle the point, your Smithport correspondent can address any of his party's names and get the facts at first hand. Cook, Susquehanna Co., Pa. J. W. G.

TENNESSEE, SAVANNAH, May 30.—The new fish law seems already to be exerting a salutary influence in this vicinity. The net fishermen have suspended operations, and persons living near the head waters of the creeks, report that the stoppage and gigging, formerly so largely practiced, has been stopped altogether since the publication of the law. Public sentiment seems to be largely in sympathy with the law, and I hope that after awhile something may be done toward protecting the game. There is a law in force in some of the counties, but does not apply to the whole State.—W. H. L.

A CALIFORNIA RESORT.

A CALIFORNIA RESORT.—Soda Springs, Si-kiyou county, Cal., May 23.—Your correspondent, "B. W." will find this the place he is looking for. It is twelve miles from the foot of Mount Shasta, twenty miles from Mt. Hood River; on the drainage of the Sacramento River. Good trout fishing is within rifle shot of the house. Horses and mules always on hand, with full outfit for camping. Plenty of trout, there being five lakes within three miles of the hotel. No better salmon fishing in any of the waters of Canada than here during the months of July and August.—G. C.

NEWTON FISHERIES EXHIBITION.

NEWTON FISHERIES EXHIBITION.—Messrs. S. Alcock & Co. of the Standard Works, Boston, have been awarded a gold medal and a special diploma by the jurors at this exhibition for sea and river fish hooks, swivels, etc., and for improvements and new styles of the same. This is the only gold medal for sea and river fish hooks awarded at this exhibition.—London Chronicle.

SHAD IN THE DELAWARE.

SHAD IN THE DELAWARE.—Piled-Up, May 30.—The shad setting season on the Delaware River below Philadelphia is nearly over. The market boats made it last trip. A native crewed to Philadelphia, since the opening of the season, 23,000 shad. The freight and commission on the shad amounted to \$15,000. Very little is left for the fishermen—scarcely wages. The shad fisheries further up the river will probably cease operations the present week.—Homo.

HINTS FROM ANGLERS.

HINTS FROM ANGLERS.—I read in your issue of June 2, "Hints from an Old Angler." He recommends cotton gloves. Silk is far preferable, especially if the butt is, as it should be, wound at the grasp, for a fly rod. Then he omits the small bottle with ground glass stopper for spirits of ammonia, a perfect antidote to the poison of the black flies, punkies and mosquito bites.—H.

INFORMATION WANTED.

INFORMATION WANTED.—Brooklyn, N. Y.—Will G. H. W., of Oceanic, N. J., please inform a fellow fisherman, who is about to spend his vacation at Hed Bank, in what parts of the Shrewsbury River good bass and weak fishing can be obtained? Also, if the latter part of this month will be late enough, and oblige. J. L. C.?

RALPH'S, LYON MOUNTAIN, N. Y.

RALPH'S, LYON MOUNTAIN, N. Y.—Salmon-fishing has been good for the past three weeks, and now speckled trout are taking both fly and bait, and a full basket is the rule. Several parties from New York and Albany are here now, all charmed with the place.

Hop rollers have more patience than Job, curing thousands of patients daily.

Fish Culture.

THE FIRST AMERICAN FISHCULTURIST.

I AM very much surprised that the wording of my statement in the Epoch paper should be unsatisfactory to Dr. Garlick. It was my intention to credit him with the introduction of fish-culture into the United States, and in having the paragraph in question before my eyes, I am of the opinion that I have not done it justice so that it gives to Dr. Garlick the honor which he so well deserves. I feel much grieved that Dr. Garlick has not appreciated my intentions in the matter. If he will refer to my remarks at the close of the discussion in the Epoch, he will find that the names of Dom Pinchon are discussed, and to which allusion is made in the paragraph upon Epoch XX, he will see that I place Dr. Bachman's shadowy claim upon a par with the equally shadowy one of Dom Pinchon, a title by application at least. Garlick, "the father of fish culture," is compared with Dr. Garlick, who, in my opinion, should be styled "the father of fish-culture in America." I shall be pleased to hear of any publications of Dr. Garlick prior to 1857. I should be glad to see such, and, as the members of the Fish-culture Association will remember, read this part of my paper very slowly, please to call out criticism and censure. Before the final publication of the paper of "Epochs of the History of Fish Culture" I shall be glad to make such changes as shall make it just to all. I can assure you that criticism will be very welcome. At the same time, as a historian I cannot pass by the fact that Dr. Bachman has put forth certain claims—claims which since the recent successful experiments in transporting fish eggs in a partially dried state can now be proved to be known with as much reason as if they were a twelve-month ago. G. BROWN GOODE.

REPORT OF THE CALIFORNIA COMMISSION.

The report shows much good work on the part of the Commission. Mr. Horace D. Dunn reports on the state of the salmon fisheries, their laws and violations by canners and others, as well as on the views of the canners regarding the laws. Of the sand they say they are not so common as was reported in last year's report. Greater numbers are now taken than before. In 1872 and 73 they were scarcer than ever on account of the destruction of spawning beds in previous years by mining operations. Since then, thanks to artificial culture, they have increased. The catch in the Sacramento for the last five years is: 1874, 1,508,781 lbs.; 1875, 1,616,423 lbs.; 1876, 4,439,563 lbs.; 1877, 6,520,763 lbs.; 1878, 4,932,260 lbs.; 1879, 10,877,400 lbs. This shows a steady gain year by year, and is a most gratifying fact, especially in view of the fact made up for the next season. This falling off is only apparent on paper, the cause being a strike among the fishermen and no fishing in consequence for three weeks.

The report shows much good work on the part of the Commission. Mr. Horace D. Dunn reports on the state of the salmon fisheries, their laws and violations by canners and others, as well as on the views of the canners regarding the laws. Of the sand they say they are not so common as was reported in last year's report. Greater numbers are now taken than before. This falling off is only apparent on paper, the cause being a strike among the fishermen and no fishing in consequence for three weeks.

many people pinch the throat with the idea of inducing the dog to swallow. This act is dangerous, as it often makes the patient crawl, and with the throat in the throat, sometimes choke from drawing it into the windpipe. All that is necessary, in most cases, is a little patience to keep the dog's head elevated, and he will soon swallow. In very obstinate cases the end of the nose may be pinched, which soon compels the dog to perform the act of deglutition.

To give a pill or bolus the upper part of the muzzle should be grasped and the lips pressed between the teeth. This forces the mouth open, and it remains so, because the dog is afraid of biting himself. The head should then be elevated, and the pill or bolus dropped into the back of the mouth. The mouth must then be immediately closed and held until the dog has swallowed.—*Live Stock Journal.*

ARE THERE TWO CHAMPION ELCHOS?—(Clement, N. H., June 3, 1881.)—*Editor Forest and Stream:* Permit me to correct a few errors—the result of my poor English. The paragraph which appear in my brief note, published in your issue of June 2, is not out of hand. It should have read, "For all and sundry of tongue or pen, the saddest are these: 'It might have been'—and of course, instead of 'and' it should have been 'or'." I was indeed of that vote. I also asked him where Highland Lass was owned, and he said, "I am confident, 'Washington.' I will furthermore say in this note that Mr. Osborn's personal explanation secured all right, and I sincerely hope now through his friend in New York to say no more, but more really to the dog, and his breeding, from what I have imported, and when, where and how he gained his celebrity. I had believed that I owned the only champion Irish setter Elcho in the world, and the dog recognized such the fact, and he was willing to be given. To be sure there is an Elcho II, imported, but not by Col. Reeves, of Maryland, and so he can't be the one; and there is an Elcho III, but his being bred in this country shuns him out. Both these are celebrated dogs, and had some of champion Elcho, and a son of his, a puppy named in Washington called Elcho IV, and there is a champion Elcho. But about this other celebrated Elcho I am sure there are many besides the writer who would like to hear.

Editor Forest and Stream: I see by your last issue that Dr. Jarvis, the owner of Elcho, has published the explanation which appear by me in your previous issue as to the pedigree of a red Irish pup advertised for sale by me in your valuable paper. Dr. Jarvis now makes the assertion that the word *Observed* was twisted into the word *Champion* by me, and more really to the dog, and his breeding, from what I have imported, and when, where and how he gained his celebrity. I had believed that I owned the only champion Irish setter Elcho in the world, and the dog recognized such the fact, and he was willing to be given. To be sure there is an Elcho II, imported, but not by Col. Reeves, of Maryland, and so he can't be the one; and there is an Elcho III, but his being bred in this country shuns him out. Both these are celebrated dogs, and had some of champion Elcho, and a son of his, a puppy named in Washington called Elcho IV, and there is a champion Elcho. But about this other celebrated Elcho I am sure there are many besides the writer who would like to hear.

At the last New York show a gentleman came to me—a stranger—and asked me if champion Elcho had ever served a bitch called Highland Lass, that same one, I don't remember who had tried to sell him out of my hands. I asked him where he had seen her, and where Highland Lass was owned, and he said, "I am confident Washington." I told him no such bitch had visited Elcho, and he left.

Now, the truth of the matter is this: Being at the dog show on Thursday the week before last, I met Mr. Jarvis (Clement) and his wife, and he kindly endeavored to find Dr. Jarvis for me, but was unable to do so. Later, as I was leaving the hall to take the train for New Haven, I heard a man say to some one, "Here is Jarvis, now." Turning, I saw three gentlemen talking together, and I stepped up to them and asked them if they had seen Elcho. They told me that it was I. Then I asked him if Elcho had served Highland Lass, he said that he had not. I thanked him and went out.

The pup had been advertised before I saw Dr. Jarvis, and I did not know that he had tried to sell me a pup or that I was intended to sell the pup. As soon as I arrived home I looked for the letter I sent you last week, and read the same as I expected, that the pup was out of Lass by Elcho. I intended to sit the matter to the bottom at once, but was so busy that I remained so far from my work. When I was able to return to business I was so busy that I forgot the whole circumstance until I was reminded of it by having my attention called to the first communication from Dr. Jarvis in the *FOREST AND STREAM*, to which I took pains to answer as far as possible. I have now written you the truth of the matter, and I will send you the names of the owners of Elcho and Highland Lass, imported by Col. Reeves, as soon as I can get them from the gentleman who presented the puppy to me, and then Dr. Jarvis will put me in the possession of the pup. I will not say myself, I shall take no further notice of the affair, as I consider that I have done all that I can to rectify any mistake which may have occurred through my advertisement, but through no intentional error on my part.—*Live Stock Journal.*

ELCHO NOT DEFEATED.—(Clement, N. H., June 6, 1881.)—*Editor Forest and Stream:* Permit me, through your columns, to inform the American correspondent of the *English Stock Keeper* that he got things a little mixed in his report of the New York show of 1881 in regard to Irish setters. If he will think again he will find that there is no Elcho II, and that Elcho I was not in champion class, and was not beaten at the show; that he only competed for best Irish stock dog prize, which he won; also was one of the winning Irish kennel; that he had not only the honor of being sire of the winning puppies, but that the winner in champion dog class was a son of his; that the winner of second prize in open dog class was a son of his; that the winner of the only *A. C.* in same class was a son of his; that the winner of second prize in open bitch class was a daughter of his; that the winner of the only *A. C.* in latter class was a daughter of his; and that the winner of the prize in the *A. C.* was also one of the brace winners of the special cup offered for "best brace of Irish setters in open classes regardless of sex." That is how the New York show of 1881 was won by Elcho and his dogs, and I hope you were concerned, and I trust that the *English Stock Keeper* will correct its correspondent's statements after knowing the facts as above stated.—*Mossy Clear.*

BRUSH II AND BLACKIE II.—*Editor Forest and Stream:* In your issue of May 12 there appeared an article signed "Dido," wherein he seeks to cast a slur on our late importation of Brush II and Blackie II. In this article he says that he has written in reference to Brush and Ellen being the best brace of black spaniels in England, in his remarks thereon, is only a little dot thrown in the eyes of some who, perhaps, may be influenced in favor of his own importation. He says that he has written that "Blackie II" was nearly a year, and good little bitch though she was, it is many a long day since she might have been considered the best in England. She won a great number of prizes in her younger days, and had retired from the show arena some years ago, and indeed, was actually killed on account of her great age. Now we ask what does this statement mean but a disposition to do injustice to one of the very best black cocker bitches in England?—one that had gained seventy-eight first prizes on the show bench, and was one of the best when she died, which happened only a few months ago. Does "Dido" attempt to show that there has been a better one? Again he says: "Neither has Brush been considered the best dog in England since Kaffir and Zulu came out last June, and said that they were the best." This is a very proceeding on his part, as "his (Brush's) day was past."

Now, the truth is, Mr. Easton writes us, that neither Kaffir nor any of Mr. Jacob's dogs ever did beat Brush during all the time he owned him. The last time he exhibited Brush was at the Crystal

Palace show last June, and Mr. Jacob's string was there, and among them Kaffir and Zulu; and they all came behind Brush, he taking first prize. This does not look as though he was not considered the best dog in England since Kaffir and Zulu came out. Mr. Easton furthermore adds that he "was offered a long price for Brush and sold him, since which he has been exhibited in bad condition and wretched form, and has been beaten solely on account of his owner's intention of preparing him for a sheep competition. Brush has won over seventy prizes, and was selected from all his competitors by 'Stonehenge' as the correct and perfect type of a dog to illustrate his chapter on Spaniels in his book of 'The Dogs of the British Islands.' No man will have the audacity to deny that 'Stonehenge' is not our greatest living authority on the standard of dogs in our best shows, and his standard is considered by all sportsmen as the very embodiment of perfection in this direction.

"Dido" further says, "Beau and Blackie are not champion." We claim they are. In the same breath he says he "no desire to detract from the merits of Mr. Cummings' importations, as they are both of very choice blood, Brush especially." Benedict has more of Brush's and Ellen's blood in his veins than Beau's, and Benedict belongs to "Dido." We know all about Kaffir's dam being the Wolf (sire of Brush). "Dido" is as unfair to others as he is over fair to himself, when the truth is, the color of poor Kaffir is denied him, which "Dido" so much boasts of and which he has given to a Sussex spaniel. Kaffir owes his honors largely to the Wolf (black) cocker, while Blackie is a liver colored Sussex spaniel and a prize winner in that class, and one of the last old English afforded of the breed, notwithstanding he is dead, and not of old age either.—G. B. CHAMBERS & SONS.

[We trust our esteemed correspondent, who has assumed the name of the illustrations Queen, will not drive us to commit heretofore by continuing a correspondence which has too much of the color of advertisement, and is decidedly out of place in these particular columns.]

ANOTHER LAVERACK IN AMERICA.—In our issue of April 27 we published a list of the pure Laverack setters in America, at the same time stating that we would be glad to publish the data concerning those not included in said list. Unfortunately, the list was printed without the signatures of our learned editor, and several omissions occurred which have since been corrected. We are now rejoined, upon turning over the files of February, 1880, that there is still another to be added to the list, the property of the Monticello Council Club, on February 14, last, in the name, Mr. W. H. Chester, brought over two little dishes of Mr. Goodspeed, Don Juan, from the celebrated kennels of Mr. H. F. Grant, Bank House, Newport, Isle of Wight, England. These bitches were Blue Queen and Blue Princess, by Tam o' Shanter (Black-Ram) out of a Belton (Blue-Prince-Cock), whelped August 1879, color white and black. Blue Princess has died since, but Blue Queen is still living, and has been described by Mr. Dow as bearing a striking likeness to Countess.

SILPS.—Mr. J. R. Whitman, Chicago, Ill., has just received from England a cocker spaniel puppy five months old, liver and white, and he has also ordered from Shidmore an Irish water spaniel bitch as good as can be found. We are prevented from answering several communications this week on account of the patent lithographical signatures at the bottom of the letters. We also from time to time other letters from which the address, place and name are omitted. These, of course, are never answered. The measurements of Mr. A. H. Moore's first prize winners will appear at an early date. Those sent us stray in the mails.—It is said that three dogs went mad in Oceanville, T. I., on the 27th inst., and were shot by the police. It is further said that many of the licensed dog-catchers in this city depend for their living more upon the valuable dogs which they seize and sell without taking to the pound than upon the fees for dogs seized under the ordinance, and there was no gratuity at the awards. The measurements of the superb bitch Norway as seen as she gets in shape; she has just become the mother of fourteen puppies.—Mr. Edward Olin, of New Orleans, has kindly sent us a photograph of an Indian dog, which he has seen and shot at the awards. Boston. He has been made that those who win first prize in the All-gold stakes in the coming field trials in Louisiana.

WITH THE BUILD-GOBS.—The Bulldog Club of London, England, held their Seventh Grand Show of bulldogs at Aldridge, London, on the 12th and 13th of May. Seventy-nine dogs were entered, and the quality was of the highest. The general arrangements were excellent, and there was no grumbling at the awards. In the champion class for the club's gold medal only two entries appeared in the catalogue, viz., Monarch and Sunshiner, and the honor went to Monarch. He is a grand big brindle dog, owned by Mr. D. S. Oliver, and was bred by Mr. J. W. Harris, well known as an enthusiastic lover of the breed. To be eligible for the champion class a dog must have gained three first prizes under club rules. During the two days these dogs were the centre of attraction, and for my part I thought the sight of them well repaid me for my voyage across the sea. It is noticed that while was the prevailing color, but I saw some very handsome dark brindles. Such a collection of short noses, long tails and underwing jaws could not be seen elsewhere, and bulldogs being of a quiet nature, there was a total absence of the usual barking and howling so distinct-

RED IRISH SETTER MEG.

The property of Mr. Benj. F. Clark, Manchester, N. H. Bred by Dr. Wm. Jarvis, Claremont, N. H.; born April 20, 1870; is by Elcho out of Rose, winner of 1st prize in Puppy class at New York show in 1880 and 2d prize in Open class New York show, 1881. She was trained by Mr. Samuel Settoon, Oheayville, R. I., and is thoroughly broken on grouse, quail and woodcock.

to visitors to ordinary dog shows. The dogs were fed upon Spratt's biscuits. After the show a sale by auction was held, and many of the dogs were bought in at high figures. I purchased the dog Hero, winner of second at Brussels last year, and got him safely to Quebec, after a rough passage. Bull dog stock appears "booming" in England, if the prices asked and paid is anything to judge by. I saw old Sam to Shercliff, the dam, I believe, of your Boston Honey Boy. It was in poor condition, and only succeeded in getting second in her class.

St. Leonard, Prov. of Quebec, June 2. HEMLOCK.

A MEMBER OF "THE LIFE SAVING COIRPS"—New York, May 31, 1881.—An incident occurred at the Westminster Kennel Club's grounds at Babylon, L. I., last Thursday, an account whereof I think worthy of insertion in your columns. My little Shye terrier bitch, Wasp, is a great swimmer and frequently follows the Superintendent about as he rows over the lake adjoining the Club grounds. She did so on Thursday last, accompanied by Mr. F. O. De Luce's spaniel, Sankey. After swimming some time, Wasp gave a little cry as if in fear and sank to the bottom, probably having been taken with a cramp. Sankey heard the yelp, and turned toward where she had disappeared and swam over the spot several times whining incessantly. Presently he dived, came up again, and found his comrade. This was repeated six or seven times until finally he found her at the bottom and brought her up, swam with her to the shore, and had drawn her quite out of the water before the Superintendent reached him. He seemed delighted with his success, rushing about and uttering joyful yelps. Wasp was nearly drowned, and it required active measures, rolling, rubbing, etc., to restore her.

I think Sankey's intelligence and persistence wonderful. The story I give as I had it from John Reed, the Superintendent of the R. C., who was an eye witness of the performance. The water was, I believe, between five and six feet in depth.

MEMBER W. K. CLUB.

BINGO.—The *Star* tells this story of a New York engine-house dog: "For six years he had held a responsible position in the Fire Department. It was his habit to lie directly in front of the engine in the engine-house, and when an alarm sounded he dashed out in front of the horse and ran around in a circle, barking furiously. Every fireman in lower New York knew what that meant, and the street was cleared in an incredibly short time. Then Bingo ran ahead of the engine and cleared the way for blocks in advance until the fire was reached, when he lay down quietly till all was over. Then he trotted home with the air of a dog that had done his duty. One day he had been running ahead with the engine, but discovered that the tender was behind time. He ran back and found it blocked at the Point. He barked and whined, and when clearing the tracks away that he volubly allowed his sense of the exigency to overcome his respect for the person of a nervous gentleman, in his zeal biting the man's hand, who thereupon went to Justice Murray and secured an order to have the dog killed. Bingo was martyred in the East River, and his stuffed form now holds a place of honor in the engine-house of company No. 32, in John street."

SINGULAR BREAK OF A SHEEPDOG.—A correspondent writes to *Land and Water*:—"One of Sir George Wombell's Yorkshire tenants reports a remarkable occurrence from the locality of Newburgh Park. A sheepdog belonging to this person a short while ago presented her owner with five puppies. Shortly after the puppies were discovered the mother was seen acting in a mysterious manner in the vicinity of an old oak tree in the neighborhood. On this occasion she was reported an examination of the tree, which was a hollow one, was made. Inside the trunk were found a vixen fox and five cubs. The vixen were left in the lair, but next morning, on the place again being examined, all the lot had disappeared, and shortly afterward one of the cubs was found apparently quiet at home with the puppies of the kennel. Whether the sheepdog had carried off the cub to her own offspring with the intention of appropriating the rest of the vixen's progeny in the dam's absence, and whether the vixen, finding one of her cubs snatched, sought after quarters or not, is a matter for the curious to settle."

A LIE ABOUT A DOG.—A shepherd dog on the farm of Thomas Hain, at Scheyville Hill, has been creating a furore in that neighborhood during the entire past winter. He has been seen repeatedly drag a large piece of bark up a steep hill back of the farm-house, where a thief once had formed, then deliberately sent him on it and slide to the bottom of the hill. Many people have witnessed this strange freak of the dog, and after consulting down the hill several times the dog would carry the bark sled to a place of safety until he needed it again.— *stolen from a California Exchange.*

THE GLODIN DISINFECTANT.—This compound has long had an enviable reputation as being one of the best deodorizers and disinfectants known. It is now known as the "Glochin" disinfectant. We have heard that Mr. James H. H. H., the proprietor of the articles for this country, has recently organized a joint stock company for its manufacture. The Glochin is strongly recommended by the leading medical authorities of this city and of the country, and will no doubt have a large sale.

176

What is hope? A smiling rainbow
Children follow through the wet;
'Tis not here—still yonder, yonder—
Never within reach of feet.

What is life? A thawing ice-berd
On a sea with sunny shore;
Gay we sail, it melts beneath us;
We are sunk and seen no more.

—Chicago Tribune.

AT SCARBORO, ME.

Will be rented by the month or summer. Boating, bathing, shooting and fishing.

Address EVERETT SMITH,
Portland, Me.

Chronic Looseness of the Bowels results from imperfect digestion, and this again from stomachic irregularities and interruptions. Remove the cause, and of course Nature, unless overborne by drastics, will resume her work, reinforcing the bowels, and making them in their turn act properly.

Tarrant's S Uzer Aperient is just the thing for this work. Its mission is to cleanse the colic. It never fails!

SOLD BY ALL DRUGGISTS.

Hotels and Resorts for Sportsmen

Black Bass and Mascalongo

THE CELEBRATED FISHING GROUNDS OF THE THOUSAND ISLANDS.

St. Lawrence Hotel and the Rathbun House, CAPE VINCENT, N. Y.

Both under one management. The Rathbun House has been enlarged to double its former capacity, and both houses refitted and refurbished throughout.

BEST FISHING GROUNDS OF THE ST. LAWRENCE RIVER.

Competent oarsmen with first-class boats at reasonable prices can always be obtained.

H. L. FOX, CAPE VINCENT, N. Y.

RALPH'S Upper Chateaugay Lake, NEW YORK.

(ADIROCK MOUNTAINS.)

This popular resort is rapidly filling up with seekers after

H ALTH AND PLEASURE

THE MAGNIFICENT SCENERY, BRACING ATMOSPHERE, EXCELLENT TROUT-FISHING,

combined with ease of access and first-class hotel accommodations, make this place especially desirable.

The Albany, N. Y. Express of April 23 says, editorially:

"Life to the Adirondacks is very pleasantly written up in Harper's Magazine by Col. Marc Cook, whose article will undoubtedly induce many to seek the North Woods in search of sport and health."

"One of the most beautiful sheets of water in the Adirondack Chateaugay Lake. The mountain scenery around it is incomparable, the water deep and clear, and forest and water are not hatched and fished out. There is good shooting back from the lake, white speckled and salmon trout abound in its waters.

For further information see accurate description given in advertising columns of FOREST AND STREAM of April 25.

SPECIAL INCLEMENTS TO WINTER BOARDERS.

Address M. D. RALPH, LYON MOUNTAIN, CLINTON CO., N. Y.

ADIROCKS.

LVIOUS TUTTLE, Gen. Pass. Agr. Boston, May 12, 1881.

"THE FISHING LINE"

TAKE THE Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries.

AMONG SUMMER, RALPH AND GAME RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

THE TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The Sportsman can readily send trophies of his skill to his friends or club by mail, as fee for packing fish can be had at nearly all points.

THE BASS WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing.

Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS will be sold AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

If in our aim to make sportsmen feel "at home" on this route. For Tourists a full illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEEF, Gen'l Pass'r Agent, Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

EXCURSION TICKETS VIA BOSTON AND MAINE RAILROAD.

Table listing excursion routes and prices: Boston to Andover and return \$9.00, South Arm (Rohadun Lakes) and return 12.00, etc.

Also tourist tickets to all Sporting and Pleasure Resorts in Maine and the Provinces.

Tickets for sale at all principal ticket offices and at 290 WASHINGTON STREET, BOSTON. DEPOT, BAYMARKET SQ., Boston. Send for list of excursions.

GUNPOWDER! Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! Dupont's Gunpowder Mills, established in 1802, have maintained their great reputation for seventy-eight years.

- Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 10 canisters.
- Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine). Burns slowly, strong and very clean; great penetration with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loading. Packed in 10 and 50 canisters and 64 and 128 kegs.
- Dupont's Choice Bore.—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass ball and pigeon shooting. Made of two sizes, No. 1 and No. 2, No. 1 being the coarsest. Packed in 64 kegs and 10 canisters.
- Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 10 canisters and 64 kegs.
- Dupont's Rifle Fg.—"Sea Shooting."—FFg. and FFFg. The Ffg. for long-range rifle shooting, the FFFg. for general use, burning strong and moist. Packed in 50, 10 and 50 canisters, 64, 128 and 256 kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mortar, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S Fg. or FFFg. for long-range rifle shooting.

ANSWERS TO CORRESPONDENTS. 397

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, June 16.

WORMS IN FISHES.—We would call the attention of anglers to the article on this subject from Mr. Frederick W. True, of the Smithsonian Institution. Mr. True is a rising young student, who has taken up the little-known subject of intestinal and other parasitic worms. We have always claimed that the worms in fishes were harmless and have offered to eat any fish containing them or to pick out the worms and eat them alone to prove our belief in their innocent nature when taken into the stomach of a warm-blooded creature. It is pleasant to find that Mr. True coincides with this view of it, because some rash newspaper correspondents have tried to get up a scare on "trichine in shad" and other sensational questions. Just as the mites in cheese have a flavor undistinguishable from the cheese itself and are harmless in the human stomach, so, Mr. True informs us, are the worms in fish. They have not reached the proper place for development and are destroyed by digestion. It is of course a matter of taste with a person whether they will eat a fish inhabited by these tenants or not, but if they do there is no danger. Some people are a little nervous about such things and cannot take a cherry on trust, but must open and examine it. This is merely disgust at worms in general, without fear of becoming a "host" to them, and it is gratifying to be assured that the parasites of fishes are as harmless as the worms in cherries. For ourselves, we eat cherries in full faith that there are no worms in them and if there are we never see them and the taste must be like that of the cherries. We do not care to have our pleasure marred by the doubt that our cherries are not inhabited, and so we regard a ripe, plump cherry as Caesar's wife was held to be, above suspicion. Mr. True is certainly worthy to be enrolled among the noble band composing the Ichthyophagous Club, who will thank him for the hint that the Italians eat the "macaroni worms" from fishes. At the next dinner of the club perhaps "macaroni worms, a la True," may adorn the bill of fare.

THE STATE TOURNAMENT.

THE preparations for the tournament at Coney Island have been completed, and the Long Island clubs will be ready next Monday to welcome the delegates from other parts of the State.

Badges for the delegates and visiting clubs have been provided, each one being numbered and the name of the person receiving it to be registered. They admit to all the privileges of the grounds and are not transferable. None but members of the State Association will receive them. They will be distributed at the headquarters of the Long Island Association, Hotel Brighton, Coney Island, at noon on Monday the 20th, by Mr. T. C. Chamberlain, Chairman of the badge committee. Members must apply for them in person.

Members who have not provided themselves with hotel accommodations are requested to send their baggage to the Long Island Sportsman's Association, Hotel Brighton, and to be present at noon on the 20th to select their hotel. Price at Hotel Brighton will be two dollars per night for rooms without meals; or four dollars per day including board. Lower terms can be obtained at other hotels, and there will be plenty of room for all.

On Monday noon a special chowder will be served in the dining room of the Hotel Brighton to members of the Association who can obtain tickets without charge upon application to Judge Henry S. Lott, chairman of the reception committee, at the Association headquarters. The grounds will be open for inspection on Monday and the prizes will remain on exhibition at the rooms of the Brooklyn Furniture Company, 663 Fulton street, Brooklyn. The committee will accompany those wishing to view the grounds and prizes during the afternoon. The convention will assemble in the east dining hall at Hotel Brighton at 8 P. M. The balcony will be reserved for ladies and their attendants. Admission to the convention hall and to the balcony will be by ticket which can be obtained at headquarters. Attached to the ticket will be a coupon to be retained for admission to the dining room where the collation will be spread and tickets will be issued to the ladies as well. The collation will be largely composed of sea-food, and seats will be furnished to all who may attend. These details are intended to insure the comfort of visitors and ladies who may accompany them, and to insure freedom from intrusion and from outside interference.

The ground committee have arranged the traps so that the inside columns of the grand stand will form the eighty-yard rear boundary, and the outside fence of the track will form the one hundred-yard boundary for double birds. The pond for fly-casting will be about 100 feet square. Entries can be made at headquarters or with Fred Mather on the grounds. The rifle contest will be placed near the fly-casting at a distance of over a quarter of a mile from the trap score. Platforms are prepared at the traps so that the shooters may stand either on the planks or on the turf, as they choose. Comfortable moveable settees have been provided for the shooters with a canopy to protect them from the sun. During the tournament the tent committee of the Long Island Sportsman's Association, Harry Miller, 451 Flatbush ave., Brooklyn, chairman, will provide a substantial lunch for those members who may not wish to leave the grounds during the day, without charge. Mr. Bogeman, proprietor of the grounds, will provide an old-fashioned clam bake daily, and the Long Island Association will also provide a cook in order that no man shall hunger.

The bulletin, or illustrated programme, published by the Long Island Association, will be ready for delivery at noon on the 20th. Each delegate will be given two copies and each donor of a prize will receive one copy. The remainder will be sold at a price sufficient to cover cost of publication. This has been considered necessary by the extensive scale on which it has been gotten up as it will be a most elegant souvenir of the tournament. It will be a book of 172 pages on fine sixty-pound tinted paper and beautifully illustrated. It is from the press of William C. Martin, 111 John street, New York, and is under the direct supervision of Mr. Abel Crook, the President of the Association, and Mr. S. S. Croant.

Delegates are requested to present their credentials at headquarters at noon in order to avoid delay at the opening of

the convention, and to allow more time for enjoyment of the elaborate musical and literary programme in the evening.

THE ORDER OF TROUT HOGS.

A PENNSYLVANIA subscriber, who by the way bears the honored name of Cotton, sends the FOREST AND STREAM this clipping from the Bradford, Pa., Era, and asks what is to be said of the exploit chronicled:

HAUL OF 4,000 TROUT.

To Gene Ford and Charley Eastman must be awarded the honor of Bradford's Champion trout fishers thus far this season. During an angling sojourn of less than two days along the green banks of the unpolluted streams at Cross Forks, Potter county, they caught four thousand of the prettiest specimens of the toothsome trout family. To remove that doubt, which mankind is so prone to attach to fish stories, the successful fishermen arrived in the city yesterday, in open daylight, with the full number of trout mentioned. The fish were fresh, fat and as tempting as the red lips of a maiden. The trout will be served at Henderson's Public Square restaurant.

Well, there is not much to be said in such a case of pure and unadulterated hogghishness as this. If the Era report be true, Messrs. Ford and Eastman deserve an exalted position in the ranks of the trout hogs. They have earned their shoulder-straps. We have no personal acquaintance with these Bradford fish scoopers, nor any desire ever to go fishing with them; but we take great pleasure in siding them to make known to the universe their claims as "champions" of Bradford and of the whole country, for that matter—for let us hope that no one will be found anywhere else so shameless as to claim to have outdone this 4,000 trout haul. And while we are about it—provided no other claimant turns up—we propose a medal for the Bradford champions.

The editor of the Era, by the way, calls it "angling." Does he not know the distinction between fishing with a rod and line, and shoveling them out with scoops? And he says the streams were "unpolluted." Does he not know that sawdust and coal tar and lime and strychnine are not more polluting and destructive than this outrageously hogghish plundering he records?

Some of the fish commission reports contain drawings of the insects and other creatures which prey upon and destroy trout. Would it not be a most excellent plan for the Pennsylvania Commissioners to send a photographer to Bradford, and in their next report give us the portraits of these two "champion trout fishers?"

But perhaps the item is only an invention of some of the Era staff. If so, we do injustice to the parties mentioned; and as we would fain injure no one we invite Messrs. Gene Ford and Charley Eastman, of Bradford, Pa., to tell us how many trout they did catch, how long they were catching them and what style of tackle they employed.

It looks now very much as if they would come in for a medal. Can some one suggest a suitable design?

MIGRATORY QUAIL RETURN.—Last week we published a note of the return of migratory quail to one of their breeding places in Quebec, and we have received from Mr. C. B. Hazelton the pleasing intelligence that the birds put out at Winterton, Me., have also been seen there this spring, several of them having been observed on the 23d of May.

Mr. BERGH has been talking to a World reporter about the coming pigeon-shooting tournament at Coney Island. How he talks and what his talk amounts to may be seen from the World extracts which we give elsewhere. Mr. Bergh's language needs no comment.

THE headquarters of the New Jersey Game and Fish Protective Society are at Plainfield. The organization is active, alert and prosperous. It is receiving accessions of non-resident members. A further notice of its mode of working will appear in our next number.

THE FOREST AND STREAM of June 30 will contain a supplement of four pages giving the full scores of the pigeon shooting at Coney Island.

It's a jolly company of *bon vivants* that will gather when that 'possum is served.

sailed by the "Queen of the Lakes" again, and so finish entirely our camp life. The proprietor of the Central Lake House was our carman. I must not forget the kindness of Mrs. Smith at the hotel nor cordially her hospitality was extended to us.

Of this journey down the lakes in our boat how can I write graphically enough! The morning was a perfect one; cool, bright and alive with the song of birds. I sat in the stern where a little nest had been made of fragrant hay while John and the guide occupied the bow. My nest grew by degrees into a bower; tall, nodding bulrushes waved round it, and water-cresses, besides a mass of lovely ferns and flowers as we drifted along, sea let, cardinal flowers, queenly pond lilies and sturdy blue flags.

There was at one turn the daintiest picture—a water color—a veritable *tableau vivant* at one point. In a spot where the rapids were shallower and the stream narrow and shaded with fine old trees we met a party of four boys from seven to fourteen taking their boat up stream. The three larger were in the water pushing, a shirt their only garment, while the fourth limbs gesticulated white and wet. They seemed quite shame-faced at meeting us in such guise, but they looked so handsome and bright, and the sturdy little fellows in the boat so well and happy that one might pray "God keep them young and innocent!"

That night we camped at Cedar Creek where the water is the deepest, most intense blue, and where pretty little speckled trout float and leap and play, now jumping clear out of the water for the bait, then nibbling off the hook or dancing round it. They are the most exquisite creatures I ever saw in the animal kingdom. One never knows how to handle them or catch them. In some other life they must have been inveterate flirt, and have had changed their dress, for their beauty and nature still remain. I slept on a couch of cedar branches, a most delightful spring mattress, believe me, and our guide swung the hammock under the trees. The next morning the two men went off a second time to get the "spotted beauties" and he beheld as the tramp was too hard. The first fishing had been rewarded by fifteen I think it was, and right dainty food they were, too, broiled at our crackling camp fire, but this morning they could not get one, so capricious were they. I climbed down the bluff to the water's edge, and found some delicate mosses, tiny ferns and graceful water weeds while they were away.

On our next day's sail (or row, rather), we saw flocks of ducks, snipe and pigeons, but had not time to do much havoc among them as we needs must catch the "Queen" on her down trip.

And now we were in civilization again; well-kept farms and orchards, fields with busy laborers and mills going up on the banks of the flowing water, while neat and trim homes waited here and there for tired men, and little children played round the door-step looking for father. And we, too, were going home; going with brightened eyes and reddened cheeks with renewed health and strength, with bright hopes and aims for the morrow.

Of the more practical part of our camping, the exact distances we traveled, the number, size and weight of our fish, the hooks, lines and poles we used, all the minute detail that men delight in I have left John to tell; he says I have left it all out.

This year John goes camping without me. He says Baby No. 1 with her eyes on Cedar Creek line, would be good for nothing up there, but for a good-sized picker—Baby No. 2 is the idea!

POOR LITTLE PENN.

BY ANNE G. HALE.

LYNNE GRANGER has made the children a present of a Skye terrier—one that Paul imported—the neigst, handsomest, sauciest, *cutest*, little pup you can imagine; and Bud and Posie are crazy over him."

So wrote Pedagogues one day last March, and every letter since has contained allusions to "the ugly, lovely darling," who had become the household pet. Greatly to my annoyance has been this praise of "the nasty little handle of rascals" as somebody styles a Skye terrier, for my best affections for a long time have been set on Tramp—Tramp, the dignified, sedge pointer, who made his most polite bow to the Forest and Stream last summer, in a card of thanks to the editor for the relief afforded his lame paw by a lotion prescribed by said editor.

His tiny, snappy snout of canine sagacity, bounding so suddenly, so impulsively into face, protruding so innocently, so severely. I never saw the interloper, but having heard a great deal about his familiarities with Tramp and Philip Sheridan—the portly and gentlemanly house-ent—who both received his advances with the most contemptuous silence for several weeks, I have been ready to say with rough Bob Jakin: "I wouldn't own such a dog, I wouldn't," and have left my thoughts rest with prison soldier old Tramp.

Not that I can call him handsome, or remarkably attractive in any way. He is not demonstrative, either—seldom shows much feeling in voice or action. Nor yet is he eager to assert his claims to praise, or even to attention. He knows his place and has the good sense to keep it; knows how and when to speak, and when to hold his tongue also. In fact, he behaves himself like a worthy, though a very common-place citizen, and deserves, and doubtless receives, in ways best comprehended by his dogship, the thanks of the entire community thereof. He certainly has proved himself an industrious, faithful and affectionate servant in his journeyings to and from Florida, the land of his nativity, with his young master. Besides this, has attended him unwearyingly in many perplexing, yet most enjoyable, expeditions across the everglades of the South, along the sands or over the marshes of our eastern coast, and through the intricacies of our most comprehensible woods, in the pursuit of game.

Still, though loyal to Tramp, I must confess I had had some curiosity to see the frolicsome and flighty little Skye. I pitied him somewhat, truth to tell, because of his cumbersome name, Pennsylvania, which had to be docked to Penn to suit the manikin's curtailed proportions; and, picturing him to myself as boning about under the burden of that weighty appellation, led me to think more leniently of his impertinence.

Yet, imperfectly he had none, in the eyes of Bud and Posie, who hugged and kissed and petted him under an inch of his life, after his most mischievous pranks, even; and pampered him with all the dainties they could coax or cajole from Maggie, the cook, or surreptitiously obtain from the table or the pantry, or spare from their own tin-bits.

And I did come near to seeing him once, when, tying a blue ribbon about his neck, "making him look like a

beauty," Posie thought, he was promised a journey in the cars with them to visit me. But he behaved so naughtily at the very start that, like all bad boys, he was punished by being left at home. And now I shall never see him, never know what I have lost by not seeing him, Posie thinks.

Last Monday came a letter from Pedagogus: "You will be sorry to hear that our dear little Penn is dead. He had a bad habit of flying out at horses passing by, barking furiously, and getting in front of their feet. He was killed instantly, run over by a carriage yesterday morning—probably struck first by the horses' hoofs and then crushed by the wheels. He made but one yelp, and it was all over. He certainly had been very good, and I am glad his death was instantaneous; it would have been much worse to have had him bruised and mangled and dying a lingering death. The children are heart-broken. It is their first grief, and they can't get over it. Poor Bud moans him continually. We buried him by the hedge, between two apple-trees, and the children have decorated his grave with flowers and a little flag."

The little grave between the apple-trees will always keep a tender spot for "ugly, handsome" Penn in the memories of Posie and Bud; and from that will spring into fragrant blossoming kindness and gentleness toward all living creatures; out of this first grief will grow sweet sympathies, pitying words and loving deeds for the suffering, the unfortunate, the despaired. And when I recall to mind their affection for miserable little Penn, their ridiculous petting of the undesirable little beast, I bang my head with shame, and sharpen to the utmost all computations of conscience as a penance for the scorn with which I have regarded that "sauciest, cunningest little pup."

Yes, I ought to do penance in some way, because of my inconsistency, for previous to hearing about Penn I had accepted Dinah Morris' views, and often quoted her words (from Adam Bede): "I've a strange feeling about the poor dumb beasts, as if they wanted to speak and it was a trouble to let them be silent; and I can't help feeling sorry for the dogs always, though perhaps there's no need. But they may well have more in them than they know how to make us understand, for we can't say half what we feel with all our words."

I have just read for the fifth time an almost forgotten letter of poor Bud, who mourns so deeply now his wretched pet. The tiny sheet, covered with big, sprawling, childish characters which he had taken such pains to form neatly, telling me of his little heart-ache and his anxiety for a few simple gifts, and then—with anxiety that set his words away and hurried his sentences—saying: "Did you know that Penny, poor, dear Penny, had the mange? If you do not know what that is I will tell you. It is when dogs scratch themselves and are sore. So one afternoon papa went down to Mr. Marsh's store and bought two boxes of ointment to rub on him, and now he's almost well."

So short little Penn is gone, and to be able to remember that he was almost well, because of what they once contained, when the sharp hoofs and cruel wheels put a stop to his frolicsome life, and hustled forever the merry clamor of his shrill voice.

DEER HUNTING IN CANADA.

"UP, Prezey, up!" were the first sounds I heard as I disengaged myself from the coaxing arms of sleep. We had, the previous evening, reached our camping ground in the fastnesses of the Madawaska district, and, after having raised our cotton habitation, carried the boats to Poison Lake, hauled the stove and made things comfortable, we had retired to an early couch, wishing that the morrow would prove auspicious as to the weather and lucky in its results.

We were in number four. Our man, Friday, whose French name had on our tongues assumed the sound of Prezey, was the object of the ejaculation which opens this article. Gerald, the spokesman, was the life, soul, and in a great measure (especially at meal times) the body of the camp. A surveyor by profession, endowed with fine features, great agility and strength, and withal a most pleasing temperament, he had spent the greater part of his life in the wild woods of the Province, and had acquired while using his theodolite a thorough knowledge of the bush and its inhabitants. His brother John was No. 3. Though somewhat younger in years, he had all the good qualities which are admired in a camp-fellow—genial, good-humored, with a strong appreciation of the comic of the ridiculous, and a ready inclination to make himself useful in any and every way. He was a "light" pack. No. 4 was my humble servant, a limb of the law who believed in hurrying away annually toward the end of October, from office and courts, to enjoy the free breezes and the invigorating exercise of the chase.

Prezey's response was a growl indicative of an inclination to question the authority of *Monsieur Jar* (for Prezey related our bad pronunciation with a will), but the persuasive powers of a well-thatched gun-cover added greatly to the clarity of his obedience. After wrestling for a while with an obstinate pair of frozen boots, he set himself to the task of starting the fire with the aid of green lichen, disinclining to use the dry splinters we had so zealously collected the previous evening for that purpose. His ill success made us all amiable, and we were up in a trice favoring Prezey with emphatic comments upon his stupidity as we went to work, and after enjoying the ice-friended creek hard by, were ready for the morning meal which the joint efforts of the whole community prepared.

The day was scarcely yet at hand, but the lowering clouds on the hill-tops that surrounded our cozy tenting ground gave promise of snow which was soon coming down quietly upon the dried leaves and wide-spreading branches.

The dogs had been lightly fed, and Jack started off with them to do a six-mile run four miles from camp to look for tracks and get a start on the deer.

Gerald held to the shore of the lake to take his chances in an Abenaki canoe which no one could be tempted to sit in but himself. The cook remained in camp while I sauntered off to a point which the experience of other years had taught me to be a well-frequented runway. Ere long the dogs give forth the joyful tongue—the first notes have an inquisitive pitch. Now, Paddy, the stand-by of eight seasons, is heard and deep, with Wallace and Hector answer back in eager, fitful strains.

The sounds seem to come from every point of the compass as the freshening breeze winds through the sinuosities of the gullies, growing louder and weaker, and then bursting suddenly on the almost startled ear within three hundred yards. A rush is heard, and the white flag, which the eye has looked for all along, appears among the trees. How beautifully the

agile doe takes each leap, with ears thrown back, listening to the dreadful tongue of the hounds, but hurrying not as one might expect. Suddenly a puff of smoke issues from among the branches, and a tremendous streaker strikes the edge of the hills and is prolonged through the valley and the awestricken deer, galvanized by the shock, falls, crouches down, and with useless eye, inquires into the cause of the commotion.

A false move betrays me; I can insert a second cartridge, I rise the white flag, and off darts the target through the thicket of the brush, and before the rifle can be raised the fact of making every further hope to die within me. I should not have missed, but I did.

In nine cases out of ten, if you see the deer coming toward you in the woods, you will obtain a smiding shot by whistling or shouting *bah*. The animal will stand in its tracks until it finds out the source of this new danger.

A large amount of calculation and coolness is required in shooting at a flying deer. I have almost invariably discovered that shots delivered otherwise than when the animal is in the point of making its spring are useless, they either drop behind or under the object.

I felt somewhat crestfallen, for somehow I have the reputation of being a good marksman, but my chances for the morning were gone as the three dogs had, by some strange fatality, taken up the same trail. However, I remained at my post lest fortune should tempt the doe back on her tracks, and made up my mind that the second shot of the season would prove more telling than the first.

A fine report from the lake tells me Gerald is in luck, and my experience of his accuracy of aim leaves me no doubt of the result.

Much has been written against hound hunting, and more ink will be wasted on the subject before the close of the chapter is reached. Some maintain that the music of the dogs frightens the deer from the neighborhood, but my experience and that of many to whom I have spoken on the subject is in favor of the otherwise. The deer seem to know when the dogs are on their own particular trail, and do not apparently heed the tongue of a whole pack which may be rushing upon another of their own kind, and most deer, especially old stagers, take a delight in circling round, stopping to listen to the music of the hounds, and then scampering off toward their point of departure, again to repeat the same antics after a dash of a few hundred yards.

The deer seem to be in the camp when Gerald returned with news of his success in the otherwise. The deer seem to be the property of my turning cook and giving my gun to Prezey, whose visage is adorned with two swivel eyes, and who looks fixedly at you if you chance to be beside him, while he swings the axe over his head preparatory to sinking it into the tree he is chopping.

The snow fell quietly and dreamily at intervals during the day, so that when on the second morning we had got through the pantomime of breakfast it was proposed to devote the day to still-hunting.

Still-hunting is not a favorite sport of mine; it smells of the barn-yard; it looks too much like killing in cold blood, which, according to every authority legal, is murder. And yet I have indulged in it, and, thanks to the power of leaching by imitation, which the Darwinian theory teaches me I came by honestly from a remote ancestor, I have acquired some knowledge of the ways and means of this branch of sport.

And first let me assure the novice he had better avoid leather in his apparel; leggings should be eschewed. The noise they make is too much for the equanimity of any deer of ordinary circumspection. The soft deer-skin or the short-legged beef-skin (Canadian moose-skin is the easiest and best covering for the feet, and if the trousers are fastened round the ankles, the flapping of their lower extremities will be avoided).

The still-hunter must be a man of patient mould. His mind must be satisfied that no crouching or reclining form has escaped his eye as it sweeps the wood after every step. His attention must be, above all, bestowed on the upturned roots of fallen trees, lest beneath or behind them should rest the object of his researches; and while watching to the right and left he should not neglect the country ahead. In the case of deer are passed by than are almost walked over before they are seen.

If you wish to follow up a trail do not choose one that follows the direction of the wind. Remember that a deer's nose is his very best friend, his ears the next, and his eyes the least trustworthy. Take notice whether the animal browsed on the beech-tops on its way, and whether the hoofs were lazily dragged along the ground. In the rutting season the hoofs are apt to raise their feet after him. You can generally count upon seeing your quarry soon if you notice these signs; but as you hope for success do not walk upon the trail. Sweep round it in curves having an arc of 200 or 300 yards, according to the thickness of the wood, alternating to the right and to the left in a very zig-zag line. Should you proceed in a straight line upon the trail you will certainly be seen before your eye meets its point of attraction.

The advantage of making the curves is that it enables you to fix the position of the quarry soon if he can be made aware of your presence. If when your half-circle is completed you find the trail, you know the prey is still ahead; if you find it not, you then are sure the animal lies somewhere between you and where you left his track 200 or 300 yards behind. And now you must strain your eye and ear, and watch your footsteps, lest one false move will send you on a fruitless work, and allow the king to escape the intended snare. Let no bush, no clump of grass, no upturned root, no lying log, no heap of brush large enough to conceal a few feet of succulent venison go unscrutinized.

You will generally find that when the deer is about to lie down it will sweep around in a half-circle on its track immediately before doing so. If the trail does not swerve to the left, you may in almost every case make up your mind that you are still 300 yards behind the object of your inquiry.

A startled deer always takes time to dung after springing to its feet, and this gives you the best opportunity you may expect of placing your shot in position. In the thick woods of the Madawaska a second shot is not to be expected. Sending rifle-balls through intervening branches after a fleeing buck seems to be a very unwise transaction as an investment in U. S. bonds which have twenty years to mature.

If your eye takes in any spot likely to hold your game, approach it stealthily, but do not be neglectful of other points in the compass; use your neck as does the heron in the long grass, and if there are two or more of your party hunting in the same locality fix the direction of your companions in your mind's eye before the time comes for the beh-

attitudes is to crawl on the wet ground through tangled weeds and shrubs until I reached a hiding place on the border of its feeding range, and there patiently and silently watch for its coming. This I have done over and over again for days together before getting sight of the bird."

We have ourselves seen the woodcock stand in a listening attitude with his bill touching the ground, but we have always believed that the sensitive bill was held to the earth in order that the bird might perceive, whether by the sense of touch or hearing we are in doubt, the movements of the worms that might be moving just below the surface. It may be that love is the motive which actuates the woodcock in performing this curious action, but we are inclined to think that it is something much more prosaic—namely, hunger.

BIRDS AND ANTS.—Perth Amboy, N. J., May 21.—I noticed yesterday quite a number of black ants, with long wings, emerging from a crack in the floor of my south porch. Procuring some hot water I destroyed several hundred in a few moments, but soon found that it was a waste of time as well as of water, for the insects continued to pour out in such prodigious quantities as to defy all attempts to reduce them. And so the living stream kept on, until the air was full of them too, for as fast as the sun's rays warmed them they would take to flight and drift away on the gentle breeze. And here came in the fun. My house is surrounded by shade and fruit trees in which I have encouraged birds to build, and many are the English sparrows whose quarrelsome interference with my wrens and bluebirds has cost them their lives, for my little Stevens' pocket rifle, 22, is ever ready for instant use. So these foreign pests have learned to give me a wide berth, and the early morning is enlivened with the notes of robins, bluebirds, wrens and orioles (Baltimore and orchard), kingbirds, yellow-throats, peewee flycatchers, yellow-wrens and cal-birds, while barn and chimney have their occupants, and even the voice of the meadow-lark and quail may be heard occasionally from adjoining fields.

Well, as may be imagined, it did not take the birds long to spy the winged ant, and such a frolic as they had! In less than five minutes nearly every bird on the place was chasing them, and it was indeed a pretty sight to see them darting and wheeling in the air, every second lessening the numbers of their prey. Oh, they had a rollicking time! I could see the glint of their eyes and hear the snapping of their bills, so closely and fearlessly did they circle round my head. And as I watched them I called to mind the words of the Psalmist—"So they did eat and were well filled; for fle gave them their own desire."—J. L. KLEARY.

WE will serve that 'possum hot.

Game Bag and Gun.

OUR DETROIT LETTER.

AFTER my long and pleasant sojourn in the roaring metropolis whence FOREST AND STREAM is distributed all over the mighty nation I find myself once more in a position to acquaint your readers with those current happenings in which they naturally take the keenest interest. I have on occasion recollect my history of a fortnight's deer slaying (last November) in the North Woods of Michigan by Gilman, Rogers, Long et al under the guidance of those trained foresters, Joseph Kurtz (Black Joe) and Albert Beaver, who is better known to sportsmen as "Buck," the pioneers of Turtle Lake, since christened Roger's Lake in compliment to Detroit's enthusiastic and sportsmanlike police superintendent. His gentlemanly like nothing better than an occasional camping respite from the exasperating demands of theft-catching, and it is a pleasant honor that his name and fame should be immortally associated with one of the most enchanting regions in our Western wilds. I dropped in at a favorite place of resort for Detroit sportsmen to-night, and stumbled upon those identical frontiersmen of Roger's Lake. They told me they had come down to civilization to learn by observation how the west was done, and to gather food for mental chewing against the time when they will return to their guns and traps, and deer and bear, and fragrant hemlock boughs. The summer flies drove them out, but they look like a pair of cast iron men with their splendid muscular development, lack of superfluous flesh, and clear healthy skins that look as if their owner's coat did not so much as imagine the significance of a day's sickness. When I look at such men I long for the life of the woodsman. I covet his powers of digestion, I admire his panther-like activity, and glory in his true manliness. His untrammelled life is the thing that makes the man. Let us all take to the backwoods and be just such men. What should we care about tare and tret, fuss and fret, and all the other enfeebling conditions that make up the sum of average life in the busy mart? I am rebellious under them, and it would require but little urging for me to eat, loose and live the remainder of my life out in buckskin leggings and a woolen shirt. Hurrah for the woods!

Joe brought down with him a handsome and playful cub, the history of whose capture forms an interesting narrative as illustrating the way its captor and men like him live. He told me the story in his own modest way, and so I give it to FOREST AND STREAM as nearly in his own language as I can recall it. "One night about six weeks ago," he said, "I thought I deserted lumber camp in the woods near Roger's Lake. I kinder thought there was bear around, and so I made up my mind to watch. I knocked a bit of the chinkin' out from between a couple of logs of the cabin, locked the door, and took a peepin' position. I sat there night onto four hours without a sign of showin' up, but hime-by a big shee bear showed up smellin' round for the scraps left by the lumbermen. I had a Winchester express rifle with explosive bullets and I let drive. The first hit was fair, but before she would give I had to send three other bullets after the first, and I let you she was pretty much torn to pieces. I dragged the carcass into the cabin, and lay down near it, with my clothes on, to sleep. It must have been about two hours after that when I felt something soft-like crawlin' over me, and when I was square woke up I see it was a cub. The little cuss had missed his mother, and as I had forgot all about fastenin' the door he had nosed it open and come right in without stoppin' to knock. I just quietly tint him up and got an eye out for the other one. I knew he couldn't be very far off, and sure enough he came waddling along in a little while, and I took him in, too. This one you see here I thought D'd fetch down to the boys, and I've turned him over to Mr. Gilman to do what he likes with him. The old bear weighed about 400 pounds, and was a Michigan Sportsman's Association and its exceptionally good work have been very influen-

tial factors in procuring important game legislation during the session of the Legislature which ended to-day. The game bill passed in pretty good shape, under it the woodcock season opens August 1, duck, September 1, and quail November 1.

The only criticism of the law I have heard is in relation to deer, some hunters having expressed a modest regret that the killing season was not held off at least a fortnight later. However, it is now pretty nearly perfect, and the State Sportsmen's Association is entitled to congratulations.

Fishing at the Flats is booming now, and some lively stories are floating around. The best work is got on bass, musclogge and pike.

AMATEUR.

THE OLD GOOSE-BLIND.

FOR many a year on the edge of the bay
The old goose-blind had stood,
Where the marksman had watched like a bird of prey
To slaugter the innocent brood.
And now the sides had been freshly lined
With salt water bushes and boughs of pine;
And the fowler within the stand reclined,
Eyebing the wash of the ocean's brine.
A crystal stream by the structure's side
Trickled out to the ocean's brink;
And here the fowl, at ebbing tide,
Would come to sand and drink.
To gabble and tell of each other's sins,
And how on tar Spitzbergen's shore
Miss Goosey had had eight pair of twins
When she never expected but four.
Around her axis old Terra may roll,
But only those silly creatures
Can enjoy the gossip and news of the Pole
In all its novel features.
And much they resemble the tender sex,
Who clatter together in noisy groups
Of dresses and jewelry, frolics and checks,
Engagements, births, pertinences and soups.
And now you may see by the sportsman's eye
That the tide is fast receding,
And with anxious gaze he watches the sky
As with a face that is almost pleading.
The hidden rocks are beginning to bare;
The breakers cease their dreary moan;
The winter gull lifts fans the air;
The fowler is there on the shore alone.

All is peace; not a sound or cry
Is heard at the lonely sear,
When suddenly in the seaward sky
A moving speck is seen.
Like the glidor of a humming reed,
That, porting from the parent stem,
On through the cloudy air doth speed,
The tiny atom appears to skid.
It seems to approach the masthead shore.
See, the fowler prepares his piece,
For what was naught but a speck hereto
Is a flock of flying geese.
On past the bird's lonely light,
And following the deep channel's bed,
In single file, with waving flight,
Toward the blind at last they head.

Great Nature! dost thou not control
The flight of birds aquatic?
Is there a loadstone at the Pole
To guide the bird's course erratic?
Beh! Agla's mountain stands and there still,
Whose dense attraction draws them nigh?
Has each a magnet in its bill,
That northward they seem bound to fly?
Oh! Geese, thou vile, ill-omened bird,
Whose shrill, unearthly howl
Withon the sleeping Romans heard,
Thou dark, historic fowl,
Though bitter gall to Gaul thy cry,
Avenge France now cries thee, bah
Thy screw pretudes her famous pie,
Delicious *pale de foie gras*.

But now each silver-crowned breast
Slaks down upon the tide;
While the bolder ganders leave the rest
Regulated to the streamlet's side.
"Hark! who?" they call each their charge in trust;
"The *law* is free; come one and all!
No excuse law you need distrust."
They go to sup at the gander's call.

The fowler exultant with gleaming eye
Takes his sure, unerring aim.
Ye gods! what a roar and what a sky!
What a belching mass of flame!
The blind disappears like the one-horse shay;
The geese in flight beat the smoky air;
The water reels back from the shores of the bay—
But naught can be seen of the marksman there.

From the house old Joe is heard to bawl,
"Boys, get out the cart and boat,
I loaded that gun; he has killed them all.
You'll have a smart lot to tote."
They now each blind or fowler there,
But under the shade of the ypress trees
They discovered a gory look of hair
And a piece of one of his shattered knees,
And now old Joe wanders round the shore
With a wild and vacant stare,
And he looks where the blind had stood before,
And he pines above in the air.
He mutters aloud in a woe and way,
"To think that a quart of double B's
Should have sprinkled the poor lad over the bay
And all we could find was one of his knees."

A SPECIAL meeting of the Long Island Sportsmen's Association will be held Friday evening in the Royal Aramum Rooms, Music Hall, Flatbush avenue and Fulton street, for the purpose of distributing the association badges and completing the arrangements for the convention.

Hotbird Shooting Suits. Diphogrove & McLellan, Valparaiso, Ind.

THE NEW YORK GAME LAW.

CONTINUED FROM PAGE 370.

Sec. 11. Section twenty-three of said act, as amended by section one of chapter 531 of the laws of 1880, is hereby further amended so as to read as follows:

Sec. 23. No person shall kill or catch, or attempt to kill or catch, or have in possession after the same has been killed or caught, any fish, except minnows, in the waters of Lake Ontario, the American side thereof, for the distance of three miles from the mouth of Niagara River, or in Onondaga, Oneida, Seneca, Cayuga or Cross lakes, or in any of their outlets or tributaries, or in the American waters of the Niagara River above Niagara Falls, or in the Mohawk River or any of its tributaries in the counties of Oneida and Herkimer, in any way or manner, or by any device whatever, except with that of hook and line [and any person catching or killing any fish, except minnows in any of the above-named waters shall be liable to a penalty of one hundred dollars for each and every offense]. No person shall kill or catch, or attempt to kill or catch, any fish except minnows, bullheads, eels, suckers and catfish, in any other of the fresh waters, or in any of the canals of this State, or in the American waters of the St. Lawrence River, in any way or manner, or by any device whatever, except that of angling by hook or line, or only in the following waters, to-wit: in the waters of Lake Ontario below the dam at Troy, Black Lake in the county of St. Lawrence, St. Regis River, Grass River and Rackett River below the line of the Ogdensburg and Lake Champlain Railroad, and in Lake Ontario, except Great Sodus Bay, Port Bay, East Bay in the county of Wayne, Henderson Harbor or Henderson Bay in the county of Jefferson; and also except in Lake Champlain, during the month of October and the first fifteen days in November; and also except in the waters of the Walkill River within the county of Ulster, wherein it shall be lawful for any person or persons of one and the same family or household to possess and fish for suckers and eels in the waters of said river during the months of March and April and October and November, with a single fyke, the meshes of which shall not be less than one inch; and also except all that part of the waters of Lake Ontario, together with its bays or inlets lying and being in the county of Jefferson, and in that part of Oswego County lying between its Jefferson County line and the westerly line of the town of Mexico, and within one-half mile of the outlet or mouth of Salmon River, saving and excepting the shoals adjacent to Henderson Bay on the lake side from the main shore to and including Snake Island, except during the months of November and December, which waters are hereby released from the operation of the provisions of sections twenty-three and twenty-six of this act, hereby amended. No person shall [knowingly] sell or purchase, or have in [his or her] possession, any fish killed, caught or taken from any such waters contrary to the provisions of this section. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for each and every such offense, and for each fish so caught, killed, or sold in possession. And all nets, seines, traps, air or other devices forbidden by this section are hereby declared contraband, and any person finding the same in any place where they are forbidden is hereby authorized to destroy such contraband articles, and no action for damages shall lie against him for such destruction.

Sec. 12. Section twenty-five of said act is hereby amended so as to read as follows:

Sec. 25. No person, association, company or corporation shall throw or deposit, or permit to be thrown and deposited, any dye-stuff, coal-tar, refuse from gas houses [saw dust] lime, or other deleterious substance, or cause the same to run or flow into or upon any of the rivers, lakes, ponds, streams [or any of the bays or inlets adjoining the Atlantic ocean], within the limits of this State. Any person who shall violate this section, or any member of such company, association or corporation, who shall authorize and direct any such violation, shall be guilty of a misdemeanor, and, in addition thereto, shall be liable to a penalty of fifty dollars for each offense. But this section shall not apply to streams of flowing or tide-water which constitute the motive power of the machinery of manufacturing establishments, where is absolutely necessary for the manufacturing purposes carried on in such establishments to run the refuse matter and material thereof into such stream.

Sec. 13. Section thirty-one of said act is hereby amended so as to read as follows:

Sec. 31. A State bounty of thirty dollars for a grown wolf, fifteen dollars for a pup wolf [and] twenty dollars for a panther, and fifty cents for any hawk except a night-hawk, shall be paid to any person or persons who shall kill any of said animals or birds within the boundaries of this State. The person or persons obtaining said bounty shall prove the death of the animal or bird so killed by him or them, by producing satisfactory affidavits, and the skull and skin of said animal, or the head and claws of said bird before the supervisor and one of the justices of the peace of the town within the boundaries of which the said animal or bird was killed. Whereupon said supervisor and justice of the peace, in the presence of each other, shall burn and destroy the said skull and brand the said skin of said animal, so that it may be hereafter identified, and shall burn and destroy the said head and claws of said bird, and issue to the person or persons claiming and entitled to the same, an order on the treasurer of the county to which said town belongs, stating the kind of animal or bird killed, the date of killing the same, and the amount of the bounty to be paid in virtue of the within section of this act, and the county treasurers of this State are hereby authorized and directed to pay all orders issued as aforesaid; and all orders issued in the manner aforesaid and paid by the treasurer of any county in this State shall be a charge of said county against the State, the amount of which charge on delivery of proper vouchers, the comptroller is hereby authorized and directed to allow in the settlement of taxes due from said county to the State.

Sec. 14. Section thirty-three of said act is hereby amended so as to read as follows:

Sec. 33. All penalties imposed by this act may be recovered, with costs of suit, by any person in his own name, or by any society in its name, upon such society giving security for costs, before any justice of the peace in the county where the offence was committed, or in an adjoining county, when the amount does not exceed the jurisdiction of such justice, or when such suit shall be brought in the city of New York, before any justice of the district court, or of the marine court of said city; and such penalties may be recovered in the like manner in any court of record in this State; but on recovery by the plaintiff in such case for a less

sum than fifty dollars, the plaintiff shall only be entitled to costs to an amount equal to the amount of such recovery; and it shall be the duty of any district attorney in this State, and he is hereby required to prosecute, or to commence action in the name of the people of this State, for the recovery of the penalties allowed hereby, upon receiving proper information; and in all actions brought by such district attorney, one-half of the penalty recovered shall belong to the persons giving information on which the action is brought, and the other half shall be paid to the treasurer of the county in which such action is brought. All judgments recovered in pursuance of the provisions of this act, with the interest thereon, may be collected, and the payment thereof enforced by execution and sale, or by imprisonment, or by imprisonment on execution under this act shall be held or admitted to the liberties of the jail; and any person imprisoned upon any such execution shall be so imprisoned for a period of not less than five days, and at the rate of one day for every dollar or fractional part thereof of such judgment, and interest when the same exceeds five dollars; and such imprisonment shall not be satisfaction of such judgment; but no person shall be more than once imprisoned upon any such judgment or execution, and two or more penalties may be included in the same action.

Sec. 15. Section thirty-five of said act is hereby amended so as to read as follows:

Sec. 35. Courts of special sessions in towns and villages and the several courts in cities, situated in the county in which the offence was committed, or in any adjoining county having jurisdiction to try other misdemeanors in their own county, shall have jurisdiction to try offenders in all cases occurring under this act, in the same manner as in other cases where they now have jurisdiction, and to render and enforce judgment accordingly. All fines recovered by the provisions of this act shall be paid over by the court receiving the same, and the satisfaction of the county wherein the offence was committed, or in any adjoining county in the county of New York, and in the county of New York to the chamberlain in the city of New York, within ten days after their receipt by such court, and such moneys shall be kept by such treasurer or chamberlain as a separate fund to be applied to the enforcement of the provisions of this act in the same manner as the board of supervisors of the several counties, except in the city and county of New York, and in the city and county the board of aldermen may direct, either for the employment of special detectives or the payment of rewards for the detection and arrest of offenders, and each of the boards of supervisors of this State shall have power to raise by tax, in the same manner as other taxes are raised for county purposes, such sum not exceeding one thousand dollars in any year, as they shall deem proper to further the enforcement of the provisions of this act, and to require the duty of every sheriff, under-sheriff, deputy-sheriff, officer of police or policeman, and of every constable, and every game constable, and every bay constable, and every game and fish protector, to arrest, wherever found within this State, without warrant or process, any person whom they shall find violating any of the provisions of this act, and immediately bring such offender before the court in any adjoining county lying in the county in which the offence was committed, or in any adjoining county having jurisdiction of the offence, for examination and for trial. Any justice of the peace, police justice or recorder, residing in the county in which the offence was committed, or in any adjoining county, shall have jurisdiction to organize and hold a court of special sessions for the examination and trial of offenders under this act in the same manner as the courts of special sessions, and to render judgment accordingly. Any officer or magistrate who shall neglect or refuse diligently to enforce the provisions of this act, upon proper information and complaint, shall be deemed guilty of a misdemeanor, and shall be punished by fine or imprisonment, or by both such fine and imprisonment in the discretion of the court.

Sec. 36. Sections thirty-four and thirty-six of said act are hereby repealed. Sec. 17. This act shall take effect immediately.

“SLAUGHTER OF THE INNOCENTS.”

IN his “Lonesome Lake Papers,” written for the *Journal of Commerce*, William C. Prime discourses at length on the subject of killing animals for food, sport and other purposes. His general views may be obtained from the following extracts:

There is a mass of accumulated correspondence on the cabin table. Among the letters are two or three, of a class not at all uncommon, from very good and very gentle persons who share the opinions of the majority of the hunters and fishing are cruel sports, and tend to the cultivation of brutal dispositions. One letter incloses a newspaper article of considerable length in which the writer uses very strong language about the evil natures and evil hearts of those who go about shooting deer and birds, and other beautiful living objects in nature.

What extent of such over-brutes may reach, how far they may subject them to slavery, compel their labor, kill them for food, clothing and other uses, it is unnecessary to consider here. The question fairly arises on those words “other uses.” For food and clothing we agree that brutes are properly killed. So, too, I have never heard the killing of whales and other fish for oil condemned by any one. The newspaper writer referred to above, strongly and judiciously writes in a beautiful and elegant manner, of the uses of the innocent birds have been slaughtered. But the love of beautiful things is one of the purest and noblest characteristics of the human soul, and it may well be asked whether brute life is not rightly subjected to the cultivation and enjoyment of this high characteristic in man. It is not a question of the feathers in ladies' hats, but of innumerable uses in the arts in which animal life is destroyed to produce useful objects. The refined and cultured man, who is a hunter, is the killing of animals for oil wherewith to light up God's darkness any more justifiable than killing them for aesthetic purposes? In short, the infinite difference between the life which is of man and that life which is of the beast or the bush, makes its exceeding difficulty to show why the picking of a rose or a violet is any less offence than the killing of a bird for a brilliant wing.

The materialist who holds that the inorganic plant on the same plane. From his point of view he should extend his sympathies to the flowers.

But we will leave the question of subjection of brute life to our love of the beautiful and confine our attention to killing food animals to be used as food. This is the employment of the mass of hunters and anglers, and the fact that they do

this for pleasure, that they find enjoyment in it, leads to the condemnation of some sensitive people.

By the law of common sense, the law of the natural world, the law of our physical structure, and the revealed law of God, each bird, animal and fish that is created are properly used for food. They must be killed. Killing is a part of the process of making them food. Killing them is, therefore, not cruel. It is duty—one's duty. Now it is absurd to say that such a duty ought to be painful, and one which is to be shunned. On the contrary it is plain that if it be duty to provide animal food for one's self and one's family, then it may equally be pleasure to gather and reap and get and kill animals for that purpose. A possible argument can show that one ought to regard providing animal food as a sad and solemn necessity, a terrible affliction, which should be delegated to a special class of men, separate from their fellows, men of blood, working out a curse. For if the provision of animal food is a painful duty, in which the provider sins if he works joyously as his work; if the killer of beasts for food ought to be a mournful man and regard his duty as a constant pain, then the making of men to eat animal food is a curse instead of a blessing from God. Nay, the eating it should be with sorrowful contrition, for the killing is our own agent, and we should all share the curse and the sadness with the purveyor of our tables. All dinners should be funeral feasts, and all salads made of bitter herbs.

But it is plain enough that the hunter has right to be as happy as the plowman and the apple farmer. Both work in God's appointed way for the good of mankind. It is equally plain that every man may rightly be happy in killing animals for the food of himself and his family or others. If the point were the cruelty and wrong of the wanton killing of animals, not to be used for man's proper purposes, killing for the mere enjoyment of the killing, there would be no discussion. I would not limit this kind, however, in the writings now under discussion.

All sportsmen condemn killing game or fish which cannot be used for food, except in those cases where we kill fish which prey on others. I never knew a true sportsman who did not regard the final destination of his game for food as an absolute essential to his enjoyment of the sport. We will not stop to discuss the killing of vegetables which are the food of birds and fish, which are enemies of the food animals. One writer describes all hunting as “slaughter of the innocents,” and says it cannot be countenanced as “an element of culture.” Its object cannot be to sharpen the finer feelings and deaden the brutal ones. There is no poetry in destroying the animated poetry of Nature. These are somewhat rash sentences; and it will perhaps surprise him to hear me say that I do not think the recreation of the sportsman literature of all ages and countries, churchmen and laymen, have held directly contrary views as to the effects of these sports on the moral character. They are accounted by us so elevating and refining in their influences that we think every father who can do so will do well to encourage his sons in the love of hunting and fishing. Eliminate the sentimental idea that the killing of a creature for food is wicked, and you at once see why hunting has been esteemed a healthy, manly man-making occupation in all ages since Nimrod was a mighty hunter before the Lord. No idle, dreamy stroller through “Nature's poetry” derives from the sight of beasts and birds and trees and streams such permanent lessons as the hunter or angler who is at home with nature, pursuing his objects in it. This part of the subject is much too long for me to discuss, and I may be distinguished with a long list of great teachers of truth in pulpits and books, who have recorded their obligations to field sports for the most valuable lessons of their lives. And it is proper to add that this notion—that brutality and cruelty of disposition are characteristics of anglers and hunters and increase with their practice of these employments—is of course absurd. The testimony of all ages is to the direct reverse and angling is proverbially known as the gentlest of sports. The quite prevalent idea that the life and labor of a butcher brutalized him, but that fancy has long since been abandoned. There are butchers and butchers, as there are lawyers and lawyers. The cruel and brutal are found in all stations and employments, as are the gentle and refined.

The sentimentalism to which allusion has been made previous to this consists in the idea that the will of God has established and which are parts of His wonderful beneficence in providing this world for man. The question often asked, “Why was this insect or that plant created?” would be answered easily if we saw through the vast system which He has ordained for man's good. We can see part of it. The life of one being is sustained by the death of another. This is the grand law of natural succession of life. How can you live for the bird, unless you are to think of these insects, or for birds, or for fish, which in turn are food for man. Man cannot live on grass or green food alone, and deer, rabbits, cows, sheep, cat, snake, fish and man eat the flesh. The decaying vegetable, the oozing sap of the tree is the food of the insect, the insect is the food of the small fish, the small fish is the food of the pike or the trout, or the bass, and finally man is fed. The great truth, that the view of sentimentalism. You admire the superb oriole, singing in the sunshine, and do not know that he loves the brains of smaller birds and feeds on them when he can. The thrush, miscalled a robin, wakes you with his morning song, and you forget to think that he has already destroyed hundreds of animals in feeding himself and his young. It is not to lower you to the level of the bird, but to make you think of these facts, but that you may bear in mind that they too are to serve a purpose in the way of nature, and kill their food so that they become food to sustain other animal life, whether of plant or bird, or reptile, beast or man. Always at the summit of this grand system of life from death stands man, and God has placed him at the summit because he alone has a soul, and the soul is immortal. Everybody, whether of bird or beast, or insect, or man, is to form food in its death, and nourish trees and plants or birds and winged insects, to serve the purposes of successive generations of mankind. Only the soul is free from this law, coming from God and going hence to Him. Only the dead dust of humanity is to be gathered again, wherewith ever scattered, by the Giver of Life, and revived in immortal being.

BURSTING SHELLS.—Sault Centre, Minn.—What is the cause of shells (paper) bursting in a No. 12 gun in very cold weather? I am stumped, and don't know what is the cause. The same shells, best quality Winchester make, do not burst in warm weather, as I have repeatedly shot five and six loads out of them before they gave out. They were loaded with #3 dry powder, 1 1/2 grains of lead and every time they “rippled” open at the top to the edge of the flange.

Please answer in correspondents' column and oblige.—AMATEUR.

If our correspondent really were an amateur—as he is not—we should suggest that his shells did not fit the gun. The cold weather has nothing to do with it. There must have been some irregularity in the loading, or in the size of the shells.

MR. BERGH ON PIGEONS AND SNAKES.

From the *New York World*, June 12.

“I have indeed heard of the intended insult to our civilization of the nineteenth century,” said Mr. Henry Bergh when he was asked what he intended to do with regard to the association tournament of the New York Sportsmen's Association, which is to be held on Coney Island next month. “I hear the association is making great preparations, and is to have 25,000 pigeons ready for the slaughter. Just think of it. These poor creatures, which are emblems of our holy religion—for the pigeon and the dove are identical—are to be flung into the sea, and while dazed by the change from a cramped trap are to be fired by unscrupulous marksmen. But I can do nothing for my constituents—the dumb animals. I tried in 1874 to introduce a bill, a clause in which would have given our society the power to stop a pigeon-shoot. But it was told that the bill could not become a law. Senator Wegstaff was particularly active as the champion of the slaughterers. I have tried again and again to introduce similar bills, but the pigeon-masters got up and put me off, and passed an act legalizing this sport. This act said that if I incorporated a society, they may conduct such an inhuman exhibition, provided that such birds as are mutilated shall be killed as soon as possible. In other words, brutes who are useless to put in a trap because they have no wings may bang away at pigeons, and when the birds have been so torn and mangled as to be of no further use their necks may be wrung. I am told that young ladies attend these exhibitions, and I am sure that they will be very glad to see for my life see how they can do such a thing. I rejoiced when we were able to turn back those Spanish bull-fighters, but I blush to see that the pigeon, which has as much right to humane treatment as the bull, is denied its rights. I'll tell you the secret of the whole thing. All these club-men vote, and the men at Albany know this, and the blood of countless pigeons is to stain the halls of our State capitol. I am a gun-maker and powder-maker and lead man and other persons who profit by paudring to this low form of so-called recreation. Yes,” said Mr. Bergh, sadly, “I cannot do anything but to go to Coney Island next month to see that pigeons half-killed are put out of their misery. I suppose those fellows will offer me a front seat and one of their horrid cigars. They will be in the hall, and I will be in the hall, and I will be in a pen-pictures that will make New York shudder to its very marrow. I only wish that I could induce every man and every woman in New York city to see that show. Then such a grand chorus of protest would go up to Albany that the Empire State would follow the example of little Rhode, as Connecticut and New Hampshire have done, and make a law to stay the hands of the sportsmen. Think of the millions of pigeons with lanterns to make them fly straight or bring off a piece of their flesh and rubbing cayenne pepper on the raw part to make them fly quickly. One thing more. You know I am not a politician, or at best only a sort of a satellite in the Republican party, but I cannot help recalling that everything this society has secured in the way of legislation we owe to the Democrats. I am sure that if I had a paper from his desk, it is a unique sample of a blot on the civilization of our age. Allow me to read it: ‘The men engaged in the hat factory of Sparrow, Venino & Co., Coney Valley, have caught three snakes, which they intend to fight on the Fourth of July. One of the reptiles is a copperhead, another a flat-headed adder and the third a black snake. They are to be kept in a pen and the public invited to watch them admitting air. In order to make them savage from hunger their captors give them nothing to eat. The men in the shop are making up pools on the fight, and to keep informed of the condition of their favorites they inspect them every week. The plan is to allow the snakes on the morning of the Fourth to escape from the hat box into a large iron tank which is used for soaking hats.’”

“Did you ever hear the like?” said Mr. Bergh, saying down the slip. “Hew, Mr. Secretary, write at once to the officers of the Essex County Society in New Jersey and put them on their guard that they may stop the perpetration of this great sin. I blush for these workmen. I will ask the New Jersey Society to see that these snakes are fed, and if there is a fight to be made, I will be present at the persons present at it. We do not stop such brutal exhibitions because they debase the men, but because they injure the animals. I have just received a letter from Copenhagen saying that on the 15th of last month the King of Denmark in person, assisted by the Grand Duke Vladimir, who is a brother of the Princess of Wales, presented the medal to those selected by the Danish Society for the Prevention of Cruelty to Animals. The medals were given to men who had saved animals from hunting buildings; and this fact shows that persons of quality in Europe are alive to the importance of encouraging love for dumb animals.”

MR. CROOK ON MR. BERGH.

From the *Brooklyn Eagle*, June 13.

Mr. Abel Crook, in the presence of several of the members of the Long Island Sportsmen's Association, yesterday authorized an *Eagle* reporter to say; in regard to the above, that if Mr. Henry Bergh came to Coney Island and attempted to interfere with the pigeon shooting of the State tournament, he would be arrested by the officers who would be there under control of the State Association, and would be taken before one of the three justices of the peace on Coney Island, and, if necessary, would be locked up.

MR. BERGH ON MR. CROOK.

From the *Brooklyn Eagle*, June 14.

Mr. Bergh replies that if Mr. Crook thinks of opposing or violating the laws of the State in relation to cruelty to animals, and by preventing the society he represents from performing its duties, he labors under a mistake. Mr. Bergh will attend the pigeon-shoot, but if the law is violated in the least he will arrest the offenders, and to do this he can call upon the local police if necessary.

ASIATIC BIRDS FOR CALIFORNIA.—Portland, Or., May 24.—The ship *Oakworth*, from Shanghai, arrived at this port about two weeks ago with seventy-five mongolian pheasants consigned to Eastman & Co. of San Francisco. The birds were from California. They came in good condition and were forwarded by steamer. The pheasants and grouse that were

turned out in Gen. Green's place are doing well. Some of them have been seen ten miles from where they were turned out. I have not heard from the sand grouse shot to the coast.—FRANSEL.

We shall watch this experiment with much interest, and trust that our correspondent will keep us informed.

The 'possum will be served cold.

HOUNDING VS. STILL-HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. There is no necessity of calling attention to the value of the data we are collecting and setting forth here. The views are those of experienced, well-informed observers. The particular points of the inquiry are as follows:

- 1st. What is the character of the country referred to?
- 2d. What is the prevailing method of hunting deer?
- 3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
- 4th. Describe in like manner still hunting and its effects.
- 5th. What class of men kill the most deer? market hunters or parties of sportsmen?—residents or non-residents?
- 6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
- 7th. Would they approve of a law permitting hounding, but prohibiting the killing of deer until the animal has been run into the water? Would such a law be practicable?
- 8th. What is the open season for deer?
- 9th. What are the winter habits of deer, so far as you have personally observed them.

PERRIN, Ontario.

I had determined to keep out of this controversy, but I cannot do so. In brief, I would say that there is no doubt whatever that the number of deer killed by still-hunters is largely in excess of those killed by hounding, and that the outcry raised in some localities against using hounds is the necessary clamor of the poacher and the dog-in-the-manger settler; in a word, of that class who hunt deer not for sport but for profit.

In the northern section of this county, Lanark, the deer are plentiful, and the settlers, through their local member, have managed to get an act passed restricting the use of hounds to six weeks in the season, which provision the habitants most manfully assist in carrying out by shooting every hound they can slay pick off. Yet these people have about as much regard for the season as their ill-bred curs which, when running at large, are continually watering deer, in season and out of season.

This class like to be able at all times and seasons to step to the neighboring wood and pot a deer for the next day's dinner, but object to the hound, probably on the ground that the deer are more on the alert when accustomed to be chased by dogs, and so they cannot pick them off as they would a cow, large in a pasture field.

As far as driving them away permanently from their haunts, my experience coincides with that of others, that this is not the case. I am in the habit of hunting in a small section of woods not far from here where there are very few deer, and although the laugh may go against me, I may say that I have found at the end of the season more deer in that particular woods than there were at the beginning. And I have recognized many more than once as one of those driven out by dogs. In fact, when I have driven a deer across the lake one day he has been seen to return the next; and again, other deer, when hunted on the far side of the lake, have at once returned to their former haunts.

The facts are on the side of using hounds for sport, and rare sport it is. I have seen nothing controverting the facts as appearing in your column; why, then, should people who can occasionally find time to enjoy a few weeks' hunt be debared because others, forsooth, desire to monopolize the game and line their pockets? I notice that one writer has the coolness to assert that it is quite right for a settler to shoot a deer out of season simply because he is a settler and wishes to obtain an easily-earned dinner.

To conclude, though I regret exceedingly that I cannot say all that I would like to say on this subject, since it is an undoubted fact that less deer are killed by hounding than by other methods, why should not the former method of hunting be sustained? From my experience I have noticed that those who are opposed to hounding are those who, not being able to kill enough with dogs to pay, resort to the more readily method of still-hunting. RIFLE.

BIRMINGHAM CLUB RULES.

April, 1881.

- 1. The Referee's decision shall be final.
- 2. The gun must not be held to the shoulder until the shooter has called "Pull."
- 3. A mis-fire is no shot, provided the shooter has a cap or tube on the gun, and it is cocked and loaded, or, in the case of a breech-loader, that the cartridge does not explode.
- 4. If the shooter's gun miss fire with the first barrel and he use the second and miss, the bird is to be scored lost.
- 5. If the mis-fire occurs with the second barrel, the shooter having failed to call with his first, he may claim another bird; but he must call off the first bird, and a full charge of powder, or in case of a breech-loader, with a blank cartridge, before firing the second. And he must not pull both triggers at the same time.
- 6. The shooter in a match or sweepstakes shall be at his shooting mark at the expiration of two minutes from the last shot, unless in the case of an accident, when the Referee shall decide what time shall be allowed to remedy the accident.
- 7. The shooter shall not be allowed to change shooting mark until after his gun is discharged. If, in the opinion of the Referee, the shooter is balked by any antagonist or looker-on, or by the trapper, whether by accident or otherwise, he may be allowed another bird.
- 8. The shooter, when he is at his mark ready to shoot, shall give the caution "Are you ready?" to the puller, and then call "Pull." Should the trap be pulled without the word being given, the shooter may take the bird or not; but if he fires, the bird must be scored as taken.
- 9. If, on the trap being pulled, the bird does not rise, it is at the option of the shooter to take it or not; if not, he must declare it by saying "No bird," but should he fire after declaring, it is not to be scored.
- 10. Each bird must be recovered within the boundary, if required by any party interested, or it must be scored lost.
- 11. If a bird that has been shot at perches or settles on the top of a fence, or on any part of the buildings higher than the fence, it is to be scored a lost bird.
- 12. If a bird once out of the ground should return and fall dead within the boundary, it must be scored a lost bird.
- 13. If the shooter advances to the mark and orders the trap to be pulled, and does not shoot at the bird, or his gun is not prop-

erly loaded, or does not go off, owing to his own negligence, that bird is to be scored lost.

14. Should a bird that has been shot at lie flying away, and a bystander fires and brings the bird down within the boundary, the Referee may, if satisfied the bird would not have fallen by the gun of the shooter, order it to be scored a lost bird; or, if satisfied that the bird would have fallen, may order it to be scored a dead bird; or, if in doubt on the subject, he may order the shooter to shoot at another bird.

15. A bird shot on the ground with the first barrel is "No bird," but it may be shot on the ground with the second barrel, if it has been fired at with the first barrel while on the wing; but if the shooter misses with the first and discharges his second barrel, it is to be accounted a lost bird, in case of a breech-loader, and a full charge of powder, or in case of a breech-loader, with a blank cartridge, before firing the second. And he must not pull both triggers at the same time.

16. A bird shot on the ground with the first barrel is "No bird," but it may be shot on the ground with the second barrel, if it has been fired at with the first barrel while on the wing; but if the shooter misses with the first and discharges his second barrel, it is to be accounted a lost bird, in case of a breech-loader, and a full charge of powder, or in case of a breech-loader, with a blank cartridge, before firing the second. And he must not pull both triggers at the same time.

17. In Single Shooting, if more than one bird is liberated, the shooter may call "No bird," and claim another shot; but if he shoots he must abide by the consequences.

18. The shooter must not leave the shooting mark under any pretence to follow up any bird that will not rise, nor may he return to his mark after he has once quitted it to fire his second barrel.

19. In matches or in sweepstakes, when shot is limited, any shooter found to have in his gun more shot than is allowed is to be at once disqualified.

20. Any shooter is compelled to unload his gun on being challenged; but if the charge is found not to exceed the allowance, the challenger shall pay forthwith £1 to the shooter.

21. None but members can shoot except on the occasion of private matches.

22. No wire cartridges or concentrators allowed, or other substance to be mixed with the shot.

23. In all handicaps, sweepstakes or matches, the standard bore of the gun is No. 12. Members shooting with less to go in at the rate of half a yard for every bore less than 12 down to 16-bore. Eleven-bore guns to stand back half a yard from the handicaps.

24. The value of the members' shot is the value of ten sovereigns, including his own stake, goes back two yards; under that, sun one yard, provided there be over two shooters. Members saving or dividing in an advertised event will be handicapped accordingly.

25. Should any member shoot at a distance greater than that at which he is handicapped, it shall be scored no bird.

26. That for the future the charge of powder is limited to four drams. Chilled shot and "sawdust" powder may be used. The weight of guns not to exceed 7 lb. 8 oz. Size of shot restricted to Nos. 6, 7, 8 and 9, and not limited to 1 1/2 oz.

27. All muzzle-loaders shall be loaded with shot from the chnb bowls.

28. If any bird escapes through any opening in the paling, it shall be a "No bird," but if it is shot in the paling, it could not have down over the paling, but in no instance shall it be scored a dead bird.

29. From the 1st of May the advertised events shall begin at three o'clock, unless otherwise notified, and no shooter will be admitted after the end of the second round in any advertised event.

30. No scouting allowed on the Club premises, and no pigeon to be shot at in the shooting ground, except by the shooter standing at his mark. Any contravention of this rule will be fined £1.

31. In double shooting, when more than two traps are pulled, the shooter may call "No birds," and claim two more; but if he shoots he must abide by the consequences.

32. If, on the trap being pulled, the bird does not rise, it is at the option of the shooter to take it or not; if not, he must declare by saying "No birds."

33. If, on the trap being pulled, one bird does not rise, he cannot demand another; but if he may wait and take the bird when he flies.

34. A bird shot on the ground, if the other bird is missed, is a lost bird; but if the other bird is killed, the shooter may demand another two birds.

35. If the shooter's gun misses fire with the first barrel, he may demand another two birds; but if he fires his second barrel, he must abide by the consequences. If the mis-fire occurs with the second barrel, the shooter having failed to call with the first, he may demand another bird, but may only use one barrel; if he missed with his first barrel, rule 5 in single shooting will apply.

A bird falling dead on the scoring box is to be counted for the shooter.

THE (LONDON) GUN CLUB RULES.

April, 1881.

- 1. The gun must not be carried to the shoulder until the shooter has called "Pull."
- 2. A mis-fire is no shot under any circumstances.
- 3. If the gun be fired with the first barrel and miss, the second and miss, the bird is to be scored lost.
- 4. If the shooter miss fire with the first barrel and use the second and miss, the bird is to be scored lost.
- 5. If a person pull the trap without notice from the shooter, he has the option to take the bird or not.
- 6. If, on the trap being pulled, the bird does not rise, it is at the option of the shooter to take it or not; but if not, he must declare it by saying "No bird." If the bird rises at once, he must shoot at it.
- 7. SINGLE SHOOTING.—If more than one bird is liberated, the shooter may say "No bird," and claim another shot; but if he shoots he must abide by the result.
- 8. DOUBLE SHOOTING.—If more than two traps be pulled, the shooter may say "No birds," and claim two more; but if he shoots he must abide by the result.
- 9. A bird to be scored good must be gathered by the dog or man without the aid of a ladder or any other instrument.
- 10. A bird not gathered in the ground to be scored lost.
- 11. If a bird shot on the ground, perches or settles on the top of the fence, or on any of the buildings higher than the fence, it is to be scored a lost bird.
- 12. If a bird perches or settles on the top of the fence, or on anything on the ground higher than the fence, and then falls dead on the ground, it is a lost bird.
- 13. If a bird once out of the ground should return and fall dead within the boundary, it must be scored a lost bird.
- 14. Should a bird that has been shot at lie flying away, and a bystander fire and brings the bird down within the boundary, the Referee may, if satisfied the bird would not have fallen by the gun of the shooter, order it to be a lost bird; or, if satisfied that the bird would have fallen, may order it to be scored a dead bird; or, if in doubt on the subject, he may order the shooter to shoot at another bird.
- 15. A bird shot on the ground with the first barrel is "No bird," but it may be shot on the ground with the second barrel, if it has been fired at with the first barrel while on the wing; and a full charge of powder, or in case of a breech-loader, with a blank cartridge, before firing the second. And he must not pull both triggers at the same time.
- 16. A bird shot on the ground with the first barrel is no bird; if a bird be shot at on the ground with the first barrel and it escape, it is a lost bird.
- 17. The shooter must not be bound at any time to gather his bird, or deputize some person so to do when called upon by his opponent; but in so doing he must not be assisted by any other person, or use any description of implement. Should the shooter be in any way assisted by his opponent, or by any of the party shooting, or dog, he cannot claim another bird with the result of the Referee.
- 18. The shooter cannot leave the shooting mark under any pretence to follow up any bird that will not rise, but is walking away from the trap after it is pulled; and having once left the mark after shooting at the bird, cannot return to shoot at it again under any circumstances.
- 19. In matches or in sweepstakes, any shooter found to have in his gun any more shot than is allowed, to be at once disqualified.
- 20. Any shooter is compelled to unload his gun on being chal-

lenged; but if the charge is found not to exceed the allowance, the challenger shall pay £1 to the shooter, which must be paid before he shoots again.

21. A shooter may at any time object to the use of a spring trap, either in a match or sweepstakes.

22. None but members can shoot, except on the occasion of the open handicaps.

23. That breech-loaders be not loaded until the shooter is at the mark; and on leaving his mark, should a cartridge not have been discharged, it is to be removed.

24. No wire cartridges allowed, nor is any bone dust or other substance to be mixed with the shot.

25. Should any shooter shoot at a distance nearer than that at which he is handicapped, the bird if killed is "No bird," if missed a "lost bird."

26. That 1 1/2 oz. of shot be the maximum charge for all occasions, except private matches.

27. That all muzzle-loaders be loaded with shot from the club bowls, and that 1s. per day will be charged each shooter for shot.

28. In handicap sweepstakes, winners of under £10 go back one yard; £10 and up to £20, two yards; £20 and over, three yards.

29. In shooting in a sweepstakes of three birds, five birds or six, shooters can only enter and commence to shoot up to end of first round, after that number of birds up to the end of the second round.

30. Distance of new members, 27 yards.

31. Thirty-one yards being the maximum distance, should any one win at that distance all remain as they were in such sweep.

32. In large sweepstakes, if the money does not amount to £100, it shall be divided into two prizes.

33. After the first three sweepstakes of the value of £5 and upwards have been shot on any day, members joining in the sweepstakes to go back one yard beyond their regular handicap distance.

34. Winners dividing £9 or less in a handicap do not incur any distance penalty.

35. In even-distance shooting, should a winner win at or above his handicap distance, he is to be penalized for such win in the handicap.

36. During shooting hours, or whilst any sweep or match shall be in progress, or be desired by any member, no shooting at birds thrown in, or other irregular practice with guns, shall be permitted on the ground.

37. Should two members agree to save stakes, and one of these divide with a third person, the member so dividing shall pay the full stake to the member who does not win or divide.

38. In case of any division of stakes in advertised events, the amount of division to be declared to the Referee, and the members dividing shall be penalized to the amount they receive. This rule not to apply to the saving of stakes.

39. The size of chilled or ordinary shot is restricted to Nos. 5, 6, 7 and 8.

40. No member allowed to shoot in any sweepstakes or handicap until he shall have paid the amount of his entry to the scorer.

41. No round shall commence in any sweepstakes previous to the advertised event of the day after the "clock."

42. The handicap distances shall range between 21 and 31 yards.

43. The weight of guns is limited to eight pounds, and the charge of powder to four drams.

44. No guns above 11-bore allowed.

The following rules will be strictly enforced: Posing a gun at any one, £1. Firing a loaded gun without permission, except at the mark, £1.

VIKSBURG, Miss., June 6.—Weather delightfully cool and breezy for the season. Squirrels more numerous here than for many years. Three gentlemen from this place killed 45 in about a half day. I was out one day last week and killed only 4 and a woodchuck. The wind was too high. The average number killed in a day after the "clock" is 10. Two much rain and very successful fishing. The Grange outlook is fair, and the prospects for a good crop of grains is excellent, as many old birds were left over last season.—GUYTON.

ALLEGHENY SPORTSMEN'S ASSOCIATION—Pittsburg, June 10.—At the annual meeting of the Allegheny Sportsmen's Association last night the following gentlemen were elected to fill the offices for the year: S. H. Thompson, President; D. M. Martin, Vice-President; Wm. A. McCloskey, Treasurer; C. R. Henricks, Secretary. Board of Directors—C. G. Donnell, I. R. Staylor, Edward Gregg, C. B. Lovatt, C. H. Voigt, M. D.—Jesp'y, I. R. STAYTON, Reporter.

Holabird shooting suits. Uphreove & McLellan, Valparaiso, Ind. That 'possum is now being frosted.

NOTES FROM PHILADELPHIA.

SEVERAL pairs of woodcock on their arrival in this section this spring looks up their quarters along Cobbs Creek, the driveway of the Delaware and Chesapeake R.R., which runs directly through Mt. Moriah Cemetery. The eastern portion of this burial ground is occupied by graves, while the western portion is woodland, through which, at its lower end, runs the creek I have mentioned. The spot is an admirable breeding place for woodcock.

I have learned from residents of that neighborhood that young birds, already quite large, have been seen. One would suppose that the sanctity of the breeding grounds chosen by these woodcock would protect them from dog and gun; but it is not so; last year it was not, and it will not be this; and it will be found that notwithstanding the Cemetery Association forbids trespass of this kind, the birds will all be killed off before the season is open. Why do we have summerspotted at all? A pair of birds have bred in Eastwick's woods, Philadelphia, but ere this doubtless, both young and old have been shot by Philadelphia sportsmen.

It is not generally known, certainly not exceeding perhaps by the residents of Chambersburg and surrounding country, that Conococheague Creek, running through the above mentioned town, is literally alive with bass. The creek is not a wide one, but varies its depth in its course—now a deep pool, then a stretch of still water, and then a rapid swift—to the Potomac River. Parties who have just returned from the stretch of water before the heavy rains took place, which has made it very muddy, bass were freely taking the minnow, notwithstanding the season was chilly and unpleasant. There is a deal of roanancing in reference to the bass with us, be it *Salmoides* or *Nipricans*, taking it fly. I'll wager seven out of eight are taken with either minnow or crawfish. I am well aware the bass of the northeastern lakes will rise, trouble, and fly to the fly, but it is a different fish. Our bass I take it do not pretend to be anything but identical with the bass of the Potomac River and Western lakes, and has a larger mouth. Won't Mr. Mather rise to explain? The one thing I do want to say is our bass do not take the fly as those of St. Lawrence and Lake George do, and to me are different. There is a difference between a fish coming lazily to the surface and sucking in a fly, and that bold rush for his prey the genuine fly taker makes. Our fish, red fus and minnows,

will do the first, the black bass of our rivers will not do the latter.—Hoxo.

[We think that your bass are all small mouth, *M. saxatilis*, while it is probable that both species inhabit the Potomac. In some waters black bass do not take the fly well, but why not seem to be known at present.]

Sea and River Fishing.

FISH IN SEASON IN JUNE.

Table with columns for FRESH WATER and SALT WATER, listing various fish species like Brook Trout, Rainbow Trout, Dolly Varden, etc.

Table with columns for FRESH WATER and SALT WATER, listing various fish species like Striped Bass, Rock Bass, etc.

Few fish bite more eagerly than gudgeons, and this, perhaps, is the reason why so many persons may be seen patiently sitting in punts from morning to night on the river Thames employed in catching these fresh water smelts. There appears indeed to be a fascination in gudgeon fishing which it is not easy to account for, and the wonder is increased when we see three or four persons in a punt lightly jorking a rod every instant, and watching a float as it glides down the stream before them, the sun sometimes scorching them, and at others the rain wetting them through.

WORMS IN FISHES.

BY FREDERICK W. TRUE.

WHEN the philosopher first affirmed that man is a microcosm it did not perhaps occur to his mind that he is a "little world" in a literal as well as in a metaphysical sense, and that he shares this peculiarity with the lower animals. It is indeed a strange fact that every creature which creeps the earth, flies through the air, or swims the sea, is a living, moving world in which animals are born, mature, grow old and die—and plants unfold their leaves and shed their ripened fruits.

All animals which are infested by parasites perhaps no group is more seriously afflicted than the fishes. From time to time the ichthyophagian portion of our community is thrown into a panic because in some locality a favorite fish is found teeming with worms which look exceedingly like the dreaded trichinae, and seem to threaten with dire consequences the persons who should be rash enough to partake of the delicate viand. The matter is at once reported to the papers as something quite new, and specimens are sent to the doctor of science for his opinion. Now, if the doctor is wise he answers that all fishes are afflicted by such worms to a greater or less extent. The species of one large group, the *Nematodes*, or round worms, he will say do resemble the trichinae, but only as the garter-snake resembles the copperhead. They are small, round worms, some of which creep the earth, others are transparent. Another group, which he will continue, are known as *Cestodes*, or tape-worms, and resemble the ordinary tape-worms, which at times are so annoying to man. They are very numerous and varied in kind and in details of form and proportion. He will also allude to two other groups of parasitic worms, which, however, are of less interest to the sportsman because they are commonly too small to be noticed with any one kind, these are the *Zygodonts*, or flukes, and the *Acanthocephalis*, or thorn-heads. In conclusion, the doctor will assure his anxious readers that they need have no alarm in regard to the worms they have discovered; that they will do no harm, and that in fact in Italy there are certain kinds taken from sea-fishes which the epicures call "macaroni worms," and which they consider a great delicacy.

It may be food for meditation to some angler as he sits watching his trembling float, that he is about to bring the world to an end for a whole race of creatures when he draws out of its native waters the gleaming fish which is nibbling so cautiously. The salmon, in addition to a host of inferior animals, harbors at various times no less than sixteen different kinds of parasitic worms, or at least so many sorts have been discovered, and undoubtedly many others remain unknown. Four species are tape worms, and four round worms; the rest belong to the other groups mentioned. The yellow perch has been a favorite hunting ground for the helminthologist, and he has already brought to light twenty-three species. The pike (*Esox lucius*) carries about with him at least twenty kinds. The parasites of our trout have escaped attention to a great degree, and it is credited with only one kind, but these are four other worms. But one species is known to infest our shad, namely, the round worm, *Agononema capsularia*. Dying, although the German minnow (*Alosa vulgaris*), a close relative, carries at least seven. It must not begethared from these facts that our fishes are more favored than those of other parts of the globe, but only that the parasites have been less carefully studied.

It was the shad worm (*Agononema capsularia*) which caused some excitement among the fishermen in a certain part of New Jersey a few years ago, where it was found in great numbers. All anxiety was removed, however, by Dr. Leidy, of Philadelphia, the only American helminthologist whose observations have been at all extensive, who pointed out the harmless character of the animal, and recommended European sailing for a host of five tape worms and three or four other worms. But one species is known to infest our shad, namely, the round worm, *Agononema capsularia*. Dying, although the German minnow (*Alosa vulgaris*), a close relative, carries at least seven. It must not begethared from these facts that our fishes are more favored than those of other parts of the globe, but only that the parasites have been less carefully studied.

I have in my possession, but yet undescribed, a tape worm which infests the herring of the great lakes. It is not content to live in the intestines of the fish, but at certain seasons in its development must needs bore into the flesh, producing ugly marks and quite injuring the fish for sale, much to the disgust of the fishermen. It would appear from this that these worms are interesting not only zoologically but economically. In this and some other cases it is a matter of dollars and cents.

It seems that all our game fishes are more or less thickly settled, if I may use such an expression, but the census has been not yet carefully taken. Anglers and sportsmen generally would greatly aid in advancing the study of American helminthology if they would preserve in spirits and send to the Smithsonian Institution any specimens of parasitic worms which they find in the game fishes and other animals which their skill for rod or gun brings into their hands. The writer would be pleased to receive and to give information regarding any specimens sent.

Smithsonian Institution, June 8, 1881.

RECORDS OF FLY-CASTING TOURNAMENTS.

THE following records have been furnished us by Mr. Abel Crook, president of the New York State Sportsmen's Association, from the official records of their yearly tournaments.

We give it as it stands, although it is far from being complete in detail. The omission of the distance cast in many cases, the absence of statements regarding the cast whether it was actually cast or made up in an allowance for shortness of rod, and the absence of all data regarding the force and direction of the wind. In some cases the length of the rod is given, and in the record for 1871 it will be noticed that the second prize went to a shorter cast than the third one. Here is the record, it being for single handed casting in all cases except where "salmon fly-casting" is stated.

Table of fly-casting records for 1866, 1867, 1868, 1869, 1870, 1871, 1872, 1873, 1874, 1875, 1876, 1877, 1878, 1879, 1880, 1881.

PRAGMATIC FLY-TYING.—A new edition of a useful work ("The Practical Fly-fisher, more particularly for grayling or trout. With ten plates, colored by hand, representing 120 flies, natural and artificial. By the late John Jackson, of Tansfield Mill, Bradford shire, London. John Clark, 19 Husky place, Camden road, N. W. 1850) has just reached us. It is a thoroughly practical work and wastes no space in theorizing. The plates are elegant. The fact of its having been republished long after the author's death proves it of value. Collectors have paid as high as 21 shillings for a copy of the second edition. The present one is published at 7s. 6d. It gives plain directions how to fly in general,

and then states the materials for imitating natural flies, while the opposite page is a colored picture of both the natural fly and the imitation, so it should appear. It is not a complete angling treatise, but accomplishes what it claims to do, i. e., to give directions how to make and use many flies, especially those designed for grayling fishing.

THE FLY-CASTING TOURNAMENT.

THE following are the rules of the N. Y. Sportsman's Association:

FLY-CASTING. No rod shall be allowed over eleven feet six inches nor less than nine feet six inches in length, and it shall be used with a single hand.

A practicable line and reel shall be attached to the rod. Three flies—one stretcher and two droppers—must be used and a casting-line, or leader, of single gut, of not less than eight feet in length.

No attached weight of any kind on the line or fly shall be permitted. Allowance of distance shall be made according to the length of each rod of five feet for every foot of length and at that rate for each part of a foot.

Each contestant shall be allowed five minutes for style, delicacy and accuracy, and five more for length of reach; and in case of accident, such as parting or fouling of the fly or line, the referee may allow additional time, in his discretion. No cast shall be valid unless the line be retrieved.

The contest shall be for distance, accuracy, delicacy and general style combined, and the distance, if practicable, shall be measured along the water. The casting shall be done with one hand across, against and with the wind.

The distance of the casting shall be measured from the stretcher fly to the tip of the rod. SALMON FLY-CASTING. The foregoing rules shall govern, except that the contest is to be with double-handed rods, which shall not be over twenty feet in length; the casting line or leader shall not be less than ten feet in length. Allowance for distance shall be made for length, but not for weight, and no more than one fly shall be above.

BASS CASTING. Above rule (salmon fly-casting) shall apply, except that weight, as nearly equal as possible to the ordinary bait, shall be attached to the line, which shall be used by all the contestants. Lines and their arrangement are unrestricted.

NEW YORK, June 10.

To whom it may concern: The Long Island Sportsman's Association, under whose auspices the State tournaments are to be held at Stony Island in the week beginning June 20, having placed the entire matter of fly-casting in my hands, I will say: There will be three judges and a referee. The fly-casting will take place in the grounds selected, on Thursday, the 23rd inst., and entries can be made on that day at the office or a few minutes before the casting, at the pond. The programme in full can be found in FOREST AND STREAM of May 26, as well as in the publication of the association.

I have made application to have certain rules changed, as follows: Believing that if a man cannot cast as far with a nine-foot rod as he can with a longer one he had better provide one that he can do the best with, I have recommended that allowance for distance be abolished and only the actual cast considered. That, as heretofore all prizes have been awarded for distance alone, and some for style, delicacy and length, I will set apart certain prizes to go to the ones whom the judges shall decide are best in these qualities and have a special casting for competition for them. Also, that the distance be measured from the advanced toe of the caster and not from the tip of his rod.

Also to abolish the allowance in salmon casting. In bass casting the adopted rules are not explicit. A limit in the preparation of the fly is allowed a rod of twenty feet in length. This does not seem to be in accord with the practice of bass fishers either at Cattyhook or elsewhere. I have recommended that rods shall not exceed nine feet nor be less than seven feet in length, and that the attached weight shall be one ounce. On the latter subject there has been a difference of opinion which does not seem to be easily compromised. Cattyhook and Putnam Island both have been mistaken in which take about one-quarter of an eight-ounce fish, also the tails of lobsters of different sizes. Those who have advocated a four-ounce weight claim that lobster tails, shell and all, are mainly used and that the 103-inch lobster law prohibits small-ones. The majority of bass casters with whom I have consulted claim that one ounce of lead, with its smaller surface for landing, is more difficult to land to an ordinary bait, and so that weight has been fixed upon.

These things have not been definitely decided upon, but are now under consideration by the committee; and in conclusion I will say that I have no interest in any change suggested except for the general good of fly-casting and to elevate it from a mere side-show at the State tournaments to a place beside the other sports as one of the best, most graceful and beautiful of arts.

FRED MATTHEW.

ANGLING NOTES AND QUERIES.

IS there any record of bluefish (*Pomatomus saltatrix*) which is caught in the Gulf of Mexico? When in Florida last year with Dr. Ferber, of New York, he told me that he caught one on the west coast of that State in January, 1880, north of Charlotte Harbor.

I think many of your contributors could give to your paper much useful and interesting information if they would enumerate the names of the food fishes of their respective localities. In that manner a knowledge of their respective distribution may be obtained by those interested in the subject. I have in mind a fish that I have caught in Canada and in Florida, and I would like to know where it occurs in other portions of our country. This fish, of the family of percidae, is called by Prof. Cope *Pomoxys annularis*. It is probably closely related to the bream and the sunfish, both of which it much resembles, though it is in the wood of all over the body. I have seen a large fish that I have seen of this species weigh one and three-quarter pounds. In Canada they call it shiner. Along the south shore of the St. Lawrence River they call it moonfish. In Florida they call it speckled perch. I saw some in the New York Aquarium, which were labeled "Strawberry bass, Virginia." In the Canada lakes they are usually caught in the wood of all water from twelve to sixteen feet deep, a favorite place for them is also under rafts of logs. They bite best on

cloudy days or after sundown in the evening. They are frequently caught in winter through holes in the ice. There is a chain of lakes connected by drowned lands and canals with locks, making navigation practicable between Ottawa City and Kingston, the route being about forty miles north of the St. Lawrence River. The whole is called the Rideau Canal, and the largest body of water Rideau Lake, twenty miles long and from one to five miles wide, with an altitude of 175 feet above Lake Ontario. This work was constructed about forty years ago, prior to which time the shiners were not found in the lakes, though now they are very abundant in them.

In Florida I have caught these fish in the lake called Payne's Prairie, near Gainesville, and in Lake Mulholland, in Orange County, but I have not seen them in the streams on the gulf coast of that State.

My much esteemed friend, the late Prof. Milner, once told me that he did not think the small mouth black bass existed in any of the waters on the Atlantic coast south of the James River in Virginia. Cannot some of your readers give information on that question?

I believe sheepshead fish are not found in fresh water in the Northern States, on the west coast of Florida they appear to be equally abundant in fresh and salt water. In the small rivers there these fish are so plentiful that they do not find a sufficient quantity of their natural food, such as mollusks and crustaceans, so they accommodate themselves to their circumstances and eat grass, which grows in great profusion there, covering nearly all the bottom in some streams, except in the swiftly running channels. What they eat is thorough moss-like species of confers, which grows upon the broad leaves of the grass. I have examined many stomachs of these fish without finding anything in them except this grass. I sent some of this grass to Dr. Leidy, who examined it with his microscope. He told me that it was covered with myriads of diatoms.

About the middle of March these fish are heavy with spawn, after which time I could not find any in the freshwater rivers, except small fish too young to spawn.

JOSEPH WILCOX.

ANGLING AT MONSON, MAINE.

I DESIRE to call the attention of the sporting and angling fraternity to some of the many attractions which this place offers as a centre for trout and land-locked salmon fishing, game, etc. Monson is situated five miles from the Bangor and Piscataquis Railroad, and fourteen miles from Greenville, at the foot of Moosehead Lake, and eight miles from the head of Sebec Lake.

Hebron Lake is the first object that attracts the sportsman's attention - it is only a few yards from the hotel (Chapin House) in Monson village - a picturesque little village which nestles at the foot of this lake, and which is famous for its roofing slate industry. It is about three and a half miles in length and one mile in width, surrounded by beautiful hills and fine scenery, with Russell Mountain in the distance. Spotted and lake trout are very abundant. Anglers here this spring caught hundreds of them from this lake. They average 2 lbs. in weight, many from 2 1/2 lbs. to 5 lbs.

The next most important resort in this vicinity is Lake Onaway sometimes called by the settlers Ship Pond and Greenwood Lake. The latter is eight miles long, the former five miles from here. Lake Onaway is its original Indian name, and there is a pretty legend about the capture of an Indian maiden connected with it. From the Chapin House the tourist rides in a carriage to a Mr. Holt's, in Ellitonsville township a distance of eight miles. The scenery is charming and delightful all along this drive. When arriving at Mr. Holt's he is but a few rods from Greenwood Lake, a beautiful sheet of water several miles in area. It crosses this in row boats, walks three quarters of a mile, and then reaches Lake Onaway which is about five miles long and two miles wide. The lofty peaks of Bore Stone Barren and Benson Mountains rear their heads above, and it is surrounded by rugged hills, mountains and dense forests. Here the sportsman can with fly or bait secure an abundance of handsome, spotted and lake trout of different varieties, land-locked salmon, smelts, yellow perch, etc. If he is willing to walk a distance of one or two-four miles to the fishing parties. Those who will be well rewarded by a visit to the two Benson ponds where spotted trout fishing is unequalled.

Besides these are also some thirty other ponds ranging from ten to two hundred acres in area within a radius of ten miles of this village. The accommodations are ample, as the Chapin House, kept by A. D. Sherman, is one of the best country hotels in Maine. Boats, guides and teams are furnished at the Benson Hotel, and for all fishing parties. Those desiring to visit this place will do well to correspond with E. R. Haynes, A. D. Sherman, J. F. Sprague, Frank Holt or W. S. Knight, Monson, Me., who will furnish all necessary information.

Among the prominent sportsmen who are visiting here at the present (June 9) are L. Hubbard, of Cambridge, Mass., author of "Hubbard's Guide to Moosehead Lake"; J. C. Whiting, of the Boston Journal; E. P. Rowell, one of the editors of the Lowell, Mass., Courier; H. A. Hildreth, and G. S. Cushing, of Lowell, and G. A. Mathews, of Andover. The latter is arranging to supply several of the smaller ponds here with German carp. Messrs. John F. Sprague, Edwin R. Haynes, G. A. Mathews, E. T. Rowell and others obtained a charter from the Legislature of Maine last winter for the Piscataquis Fish and Game Protective Society. The object of this association is to assist in the propagation of fish in the many lakes and ponds in this region, and also to aid in the enforcement of the fish and game laws now in force in Maine.

The forests here also abound with grouse and the ponds with duck. Other game of almost every kind is to be found in these woods. PISCATAQUIS.

BLACK BASSETT - Newark, N. J., is a pleasant place to live in, and is convenient for people who do business in New York. One of its newspapers, the Sunday Call, says: "The common domestic cockroach is good bait for many kinds of fresh water fish, black bass especially, and no bait can be more easily procured. They will collect under a damp rag in quantities in almost any house in the city."

We give the item for the benefit of bass fishers, who no doubt can arrange with some friend in Newark for a supply. If they have no friend there write to the editor of the Call, who will doubtless be most careful and conscientious and alacrity. By the way, what are cockroaches?

Do you eat a possum hot or cold?

SOUTH FORK FISHING ASSOCIATION.

THE subjoined account of a Pittsburg, Pa., enterprise is taken from the *Post* of that city. Mr. W. A. McIntosh, vice-president of the association, is also a member of the Pennsylvania State Field Trials Association, and of the Allegheny Sportsmen's Association, and is enthusiastic and accomplished in all matters pertaining to the sports of the field:

About two years ago the South Fork Fishing Association, which was made up of forty or fifty Pittsburg gentlemen, came into life. The association purchased from the Pennsylvania railroad the old reservoir of the canal, nine miles above Johnstown on the South Fork of the Conemaugh. This reservoir was built some thirty or thirty six years ago, and cost between \$300,000 and \$500,000. With the reservoir the association bought about fifteen hundred acres of land. The reservoir was then converted into a lake. The reservoir originally supplied all the water for the portion of the canal between it and Pittsburg, and of course it was of larger dimensions. The lake is four miles long and three quarters of a mile wide, which is no inconsiderable sheet of water. The lake is formed by the South Fork of the Conemaugh and four other streams which are smaller. The dam is a magnificent piece of work and is three hundred feet thick at the base. After the reservoir had been bought from the State by the railroad company it was abandoned, and persons in the neighborhood destroyed about two hundred feet of the dam in order to get the stone for building purposes. This breach was repaired by the association at a cost of \$15,000.

The dam has been finished for some time, and the water is sixty feet deep at the breast of it. The object of the association was to have the lake as a fishing resort and in connection with it a club house. Last week the association did some fishing on a grand scale. An arrangement was entered into some time ago with parties at Sandusky, by which they were to supply the association with live black bass. Accordingly about one thousand bass were caught in the lake panned out, and were kept in special reservoirs. The fish in weight were from a pound and a half to three pounds. On Tuesday last a car was sent to bring the fish to the lake. This car was arranged by Mr. W. A. McIntosh, who is Vice-President of the association. The car was fitted out with tanks to hold the fish, and the water was aerated by a very ingenious air-pump, invented for the purpose by Mr. McIntosh. Messrs. McIntosh and W. C. Taylor accompanied the car and supervised the transfer.

On Wednesday night seven hundred fish were placed in the car. The water in the lake from which they were taken was at 73 deg., and by a plentiful use of ice the temperature was reduced to 45 deg. and kept at that point. The car was hurried through to South Fork station on the P. R. R., and reached there on Thursday morning. The station is two miles from the lake, and the fish had to be placed in casks, which were covered with an ingenious head, placed by Mr. McIntosh, and which prevented the water from splashing out, and at the same time admitted air. The casks were carried on wagons to the lake and the fish were liberated. Only thirty-five fish died in transit. This is the largest transfer of grown live fish ever made in this country. It is probable that the ride on the wagons killed the greater part of the fish which were lost.

The association is now building a fine club-house, which will soon be completed, and the place will then be one of the most delightful in the mountains. The lake is now in charge of a watchman, whose duty it is prevent depreations, and thus far he has been quite successful.

THE SARANAC REGION.—Adirondacks, June 1.—Well, I am here again as usual, and find many old friends to greet me. This time came in via Keeseville. The road to Miller, formerly Martin's, is very good. A great change at the old-time hostility on the Lower Saranac, many improvements being made, which will make it the Saranoga of the Saranacs, if not of the Adirondacks. I find registered here the Masons of New York; Bentley, of Rochester; Shaw, of Hartford; Dr. Gammon, of New York. Proceeding through the lake to Bartlett's Sportsmen's House, and Dr. Romeyn and family, of Keeseville, N. Y.; Messrs. Weston, of Boston; Winters, of New York; Col. T. Hoyt, of New York; St. Louis, and Mr. Soms, of New York; Vice-President Wheeler and party, and others. There is only one Bartlett's in the Adirondacks. The house looks uninviting, but its comforts are appreciated by all who are its guests. At Coville's the VanWoerts, of New York, are stopping, and at the Prospect House on the Upper Lake, and Dr. Trudo and family; Mr. Penfold and sister, Mr. Meyer and daughter, of New York, and Mr. and Mrs. Malone, also Mr. Alford and party, of New York. Troutling in this section is not what it was in former days, owing to the inattention paid to the game laws; and to secure good troutling and continuance of the sporting community the waters must be stocked. During the past winter, however, owing to the vigilance of Mr. Liberty, the game detective, the amount of trout taken through the ice was much less than in former years, but the decrease of trout is very marked and demands stringent laws to protect what is left, or we bid an everlasting farewell to the sport of trolling and fly fishing throughout this region. And is it not a burning shame that it should be thus? From parties visiting the Hitching pond region, I can catch excellent troutling still exists there, and also at Robbins on Little Tupper. The houses here are all well kept. Durby, at the Prospect, knows well how to please his many guests. Many are expected at all points throughout this region. You will hear again from me while I wander around. L. MCN.

THE MEGANTIC DISTRICT.—June 7.—I am having fine sport among the trout here on the waters in the vicinity of Megantic Mountain. A few days ago I paddled up quite near to a large bull moose that was in the water, feeding on lily pads. After gazing at me for some minutes he suddenly walked out of the water back into the woods. I met on the trail to-day your Maine correspondent "Penobscot," who has increased greatly the pleasure of my trip here. "Penobscot" is a genial gentleman, and alive to all legitimate sport with the rod and gun except hounding deer. "None of that for him." Still hunting is his delight. Weather the past two nights very cold. Yesterday at 1 P. M. I enjoyed the luxury of a June snow-squall on the highest peak of Megantic Mountain. So far I can learn I am the first white man who has set foot on the highest peak of this mountain. The magnificent view of mountain, lake and forest that I had there amply repaid me for my trouble in making the ascent. In descending we took the advantage of a long slide that starts within half a mile of the top and extends to the base and had a smooth though steep pathway down.—SPANSTRAD.

Fish Culture.

AN IMPROVED SHAD HATCHER.

WE have received the following drawing and description from Mr. Frank N. Clark, of the U. S. Fish Commission. It is in practical use now in the shad work at Havre de Grace, Md. This is the second improvement which Mr. Clark has put upon the conical hatchers, one of which, the gate, received the diploma at the Berlin Exhibition.

The cut represents the hatching jar in vertical section, with the feed tube (T) of glass, which is encircled at R by a ring of rubber, so as to make a water tight joint when forced down into the funnel shaped opening at the lower end of the jar. The water is fed into the jar through the tube by means of a rubber hose;

the force of the current is arrested and broken by a heavy, non-corrosible hollow metal cup or cone (C), which rests on the inside of the jar on three short feet of equal height. The current from the tube impinges on the under side of the hollow cone, and is deflected downwards, to escape upward into the space above. At three points between the feet upon which the cone rests the force of the current is regulated by the supply cock, and as the water escapes from under the edge of the hollow cone the entire mass of eggs is kept in the gentlest possible condition of motion, being thrown gently outward and upward all round, except at the points where the feet of the cone break the current. The only detachable portions of the apparatus are the cone and the tube, shown separately at the right. The cone, of Britannia or black tin, is sufficiently heavy to remain in position by its own weight. The water which is to escape passes out of the jar through the spout (S), which is closed with a wire-cloth gate or slide when desirable, at the top, which is part of a japanned tin rim that is cemented to the top of the jar, and runs on the rim or flange of glass just below it. The jar is ten inches in diameter and two feet high from the point where the cone rests, and will hold 500,000 eggs of the shad.

THE GOURAMI.

IN view of the proposed introduction of the gourami into our more southern waters, the following article by Col. Nicolas Pike, which he has kindly permitted us to publish in advance of his book on the fauna of India and the fishes of the Indian Ocean, will be read with interest. The cut to which Col. Pike refers is not yet finished, and we substitute two cuts of the fish, drawn by Prof. Gill.

The gourami, a native of China, was introduced into Mauritius in 1761 by Messrs. de Surville, Youanne and Magay, of the French Navy. They most probably brought it from Java, where it was seen and much admired by Comersson, who found it kept in large earthen vessels by the Dutch colonists, and was much pleased to find it in the fauna of France on his arrival in 1776. From the Isle of France some couples were taken to Bourbon, where they existed and thrived for many years in some ponds at St. Suzanne, but, to the great disappointment of those who possessed them, it was found they did not breed.

The cause of this was not discovered till about twenty years after their introduction. It was then ascertained that the lowness of the temperature in the high localities in which they had been placed was the cause of their sterility, and on removing them to spots on the level of the sea they began to breed freely.

The gourami is a remarkable looking fish, and the young differ widely from the adults. In the former state the muzzle is attenuated and produced, with a concave forehead, and the sides show eight vertical bands, and in its second year the gourami begins to assume its distinctive garb. The stripes gradually disappear. The white, tinged with lilac, which formed the ground color of its body, changes to a bronze tint, with golden reflections on the sides and brow on the back and the head is tinged with pink. The colors of the male are lighter and brighter than those of the female, and he is also distinguished by a hump on the forehead as well as on the symphysis of the jaw. The shape of the grommets and set high and forward, the nostrils crescent shaped. The proportions of the gourami in length and breadth are as five to two.

It is a thick, solid fish, and possessed of great strength, and unless a net be held a foot or two above the water, it will leap over it to a distance of several feet outside. When caught and laid on the ground it will leap to a height of three or four feet, and unless promptly secured it will better itself to pieces, as it is most tenacious of life.

Few fishes are more accommodating as to food than the gourami; frogs, shrimp, insects, leaves, fruit, grain, roots or bread, all are acceptable, and even the leaves of the sord *Arum colocaeta* (large leaved plant) are eaten with avidity. Nor is it more difficult with respect to habitation. The rapid stream or stagnant pool appears to please equally well, provided food be abundant.

YOUNG GOURAMI AND OLD GOURAMI.

The thing most harmful to the gourami is cold, of which they show their abhorrence by burying themselves in the mud or fishing shelter amongst weeds during the cold season. An intrepid captain, who had on board a quantity of these fish destined for Australia, found that when the thermometer reached 66 degrees Fahrenheit they all died. This must have been caused by some sudden transition of temperature, for they thrive and breed freely in the Mauritius where the mercury often descends to 50 deg.

They love to bask in the sun, and always choose a spot for their nests to which its beams have full access. These nests are formed by the joint labor of the male and female, and consist of a mass of aquatic plants or any fibrous substance they find in the water, matted together so as to form a tissue of considerable tenacity, further strengthened by the web to which the ova are attached. These are deposited in the nest, which is fastened to any suitable body, and always close to the surface of the water. They are formed by a pair of large fish as big as a man's hand, or somewhat oval form, and employs the fish about a week to make it. As soon as the spawn is deposited, both male and female mount guard over the nest, and will attack any fish that approaches, and such is the violence of their onset that even large eels are fain to fly from them.

The spawning time is in March and October, and the eggs are hatched about a fortnight after deposition. The fry are of a violet tint when they emerge from the eggs, and the first day of the larva is then much longer than their bodies. This does not grow with the fish, so that the larger the fish the shorter in proportion is the filament. The fry remain about the nest for eight or ten days, during which time they appear to be under the protection of the parents, after this they swim off in schools.

Two fish are particularly injurious to the propagation of the gourami—the golden carp and a little fish called in Bourton, *Prisophilus*, and in Mauritius, *Maria Jones*. They are very fond of the spawn, and I suppose from their small size escape the notice of the guardians of the nest.

Notwithstanding the variety of tastes, the flesh of the gourami is universally esteemed. It is of a light straw color, firm, and easy of digestion. The fish of a rocky river is much better tasted than that of a muddy pond, but they nowhere attain so fine a flavor as at the embouchures of rivers where there is a mixture of salt water with the fresh.

The sketch is from an old gourami weighing about eight or ten pounds, caught at Riche Mair, where I had a fine day's sport with my friend, M. Ange Renard. Even at this size the scorpions are almost effaced at the border of the prooperculum, which are very sharp in individuals about half the growth.

This fish appears to be blessed with longevity, as many fresh water fish are. I have been told of one big fellow known to have lived in one basin for thirty years, that was perfectly tame and would come to a hand, and would let out of the hand. He was evidently lord of the place, for although there were a number of others of all sizes they dared not approach to take the bread thrown in till he was too busy eating to notice them. The next scorpion that presumed to take the first piece was summarily chastised.

A small barrel, with the ends knocked out, was fixed in the basin, and the water was clear enough to watch the operations of the fish. When the eggs had hatched, the young began to busy himself with the female, catching the dead leaves as they fell in, straws, or anything else that suited his purpose, and carry them into the barrel till there was quite an accumulation of debris. When the female entered to lay her eggs he jealously guarded his absence, and they had a hard time all round whenever there was an incense to the family, pending, the female helping also to chase intruders till the young were hatched. The old fellow was very ugly, and covered with bosses and excrescences. He came to a bad end, for during the inundation of February, 1859, he, with all his mates, was washed out of the basin by the waves of mud that poured into it, and all were found dead next day.

Knowing that the public gardens at Pamplonnes were stocked with gourami, carp, eels, etc., I made application to Sir Henry Bockly, the governor, for permission to sweep my nets there at a proper season for procuring specimens. In 1873, when about leaving the island, I conceived the idea of introducing the valuable gourami to the United States. I procured a number of young gourami—I handled the fish myself, as I had had many years experience in transporting fish—and I took them in safety to Port Louis, about nine miles. It was then a temperature of about 60 deg. Fahrenheit. I did not lose a fish, all placed them in my tanks prepared for them, and they soon became accustomed

to their new quarters. I was careful in noticing the temperature of the water two or three times a day, as when it is too low they become sluggish and will not feed. It had been my intention to arrive in New York in summer, but business connected with the consulate detained me till autumn, and, after going on board, the temperature lowered so rapidly it was impossible to keep them alive, and one by one they died off.

The introduction of the gourami into the waters of the United States would be a great addition to our ichthyological treasures. They may, with great care, be brought to the southern shores of California from China. Perhaps when well acclimated they might be degreed to be introduced into higher latitudes than those now assigned to it.

I made some experiments with hatching the eggs, but though they were taken apparently alive and in good condition from the nest, I failed in every instance save with the greatest care. I did this at the request of the late honored Prof. Agassiz, to whom everything connected with fish in Mauritius was of such deep interest, and to whom I am indebted for most valuable letters appreciating the services I was able to render him in ichthyology in that island.

Weakness and sickness changed to health and strength with Hop Bitters, always.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of Ontario Pennsylvania Field Trials. First Annual Derby. I. K. Stagton, Secretary, Pittsburgh, Pa.

October 4, 5, 6 and 7, at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

October 14, at New York City. Close of cities Eastern Field Trials. Trials commence on Thanksgiving Day. J. G. O'Connell, Secretary, P. O. Box 274, New York City.

November 29, at Louisiana State Field Trials, Edward Odell, Secretary, New Orleans, La.

November —, at Grand Junction, Tenn., National American Kennel Club's Field Trials. J. M. Dew, Secretary, Columbia, Tenn.

SNIPES SHOOTING WITH JOHN DAVIDSON.

THE first day of the merry month of May was pleasant, the air bracing and the reports of good snipe-shooting stimulated our hunting propensities to try the cunning of our hand upon the multitude of birds that were said to be feeding in the marshes of Monroe. We left our home on a bright and beautiful afternoon, and taking the Detroit train, were soon at our destination. On every side, beneath the little hills and nestling along the edges of the Iron River we saw peering forth from their long winter hiding places the wild fowls showing the grounds here and there with their variegated tints and filling the atmosphere with their grateful and beauty. The violet tints, the cowslip and the daisy bluish out in all their sparkling gariture and fragrance. On the prairies, through the oak openings and in the deep woods the early green grasses in every direction and tells us that genial spring, with its smiles and flowers, is fairly before us.

Alighting from the car, we are suddenly gripped by the hand, and are made thrice welcome by the smile of good will and kindly feeling that animates the face of our wiliam friend and host, Davidson. Getting all our traps stowed away in the comfortable and roomy hunting-wagon, our seats occupied and the ponies rested and anxious for a start, John and I indulge in a mutual and hearty hand-shake, and we are off for his farm home, about two miles from the city. The road is level, the ponies spirited, the minutes speed rapidly, and in a jiffy we are welcomed by his kind and hospitable wife and daughters.

In the morning we arose early and landed the glorious car as it slowly rose in the east, scattering its mellow light over hill and house top, till the whole earth seemed filled with his genial glow and the kindling azure and the mountain's brow, illumined with fluid gold, belated gladness at his near approach.

Mr. Davidson has recently purchased a beautiful farm of forty acres, and has created a home whose architectural design is in quiet harmony with the features of the surrounding scenery. His kennels, unlike the solitary ones of his previous place, scattered here and there over a wide expanse of territory, are now built neatly and tastily in the rear of the house, and are divided into compartments having especial reference to the scientific and proper culture of man's noblest companion and friend. Every-thing around the kennels, the care and attention that is given to the branch of business; and no one can feel greater pride and take

more interest in all that pertains to the kennel than Mr. Davidson. We pass from kennel to kennel and see all his magnificent specimens of the English field setter, and our eyes light upon four beautiful white and black ticked female scions of the famous Roy Roy strain. Adjoining these are some handsome deer-hounds, prize winner Afton. His four kennels contain more fine specimens of the genus dog than I ever saw gathered together under one owner before. I suggested that I would like to see them put out into the field, and two Roy hitches, less than two years old, were first sent off, and they showed sprightly and fine work, keen noses and perfect scent, obedience to the hand and whistle and general grand work as ever was seen. Two others were then dispatched, and their work was so beautiful that I almost adopted the one, but a tri-riango so gracefully shown that I hardly knew to which pair I would award the prize if a competitive trial was intended. Thus we went through his kennel, despatching the noble animals and watching their movements, till I almost adopted the conviction that the education of dogs for field work was really a grand and beautiful art, and few men hold a higher rank in such kind of instruction than Mr. Davidson.

Breakfast over, our attention was given to preparations for the day's sport, and taking our seats behind that same pair of ponies we were soon carried to the place where our day's shooting was to commence. Putting the two dogs, "Johnnie Paa" and "Type" down, off they started at a snishing gait, ranging and clearing into the field, and two Roy hitches, less than two years old, were first sent off, and they showed sprightly and fine work, keen noses and perfect scent, obedience to the hand and whistle and general grand work as ever was seen. Two others were then dispatched, and their work was so beautiful that I almost adopted the one, but a tri-riango so gracefully shown that I hardly knew to which pair I would award the prize if a competitive trial was intended. Thus we went through his kennel, despatching the noble animals and watching their movements, till I almost adopted the conviction that the education of dogs for field work was really a grand and beautiful art, and few men hold a higher rank in such kind of instruction than Mr. Davidson.

We reached home about 5 o'clock in the afternoon, bagging fifteen as pretty snipe as ever passed human palate. After a little rest John called me again to see his dogs exercise, and the first shot was made by Afton and Pannin, followed by Roy Roy and Doll. This was the team first started in the morning, and I think they are his favorites; surely they were mine. Off they scampered, and in less than a minute they were "lost to small snipe gave us a long bag, for this season. The dogs were both scarce and wild, and considerable difficulty was experienced in getting near enough to make our shooting sure. We next concluded, after taking a little rest for refreshments, to make our way homeward by a circuitous route, and for one hour back along the margin of a small stream that afforded good feeding-ground for a peripatetic fowls. The journey was long to me, and I was getting somewhat tired after the fatiguing walk of the forenoon, up to my knees at times in mud and water. Still I jogged on, and succeeded in getting about three o'clock when I was again peripatetic fowls. The journey was long to me, and I was getting somewhat tired after the fatiguing walk of the forenoon, up to my knees at times in mud and water. Still I jogged on, and succeeded in getting about three o'clock when I was again peripatetic fowls.

We spent the evening together, talking over the prospects of State field trials, where the sportsmen of different States could now meet together annually, and discuss the merits of each State. This would create a new interest and bring in many who now know no more of field trials than what they read in the sporting journals. I am sure if this was advocated by some of our leading sportsmen, it would be taken up there, and it would be a grand trial in our own State which would be the initiative of a more satisfactory and pleasing trial for our dogs than the great National Derby from which so many of our younger sportsmen are shut out. Now let us hear what you have to say on this subject. I have a field in all, where we can all attend and enjoy the pleasures and profitable relaxation that follow these really captivating field sports. We have an abundance of birds, any number of sportsmen, and the land is open to all who wish to try their hand. I have been the initiative? Let us have a committee appointed, but one which will represent all classes of our citizens, and let the good work go on.

PET DOGS AND HOW TO TEACH THEM.

I HAVE often wondered, when seeing what trouble and care ladies take over their pet dogs, and the admiration they always express for a dog which is clever at tricks, that they do not sometimes try to teach their favorites to acquire the accomplishments they admire, and go beyond the "begging" and walking on two legs, which men have been accustomed to regard as tricks, which have been trained by professionals, but yet very few think of undertaking their education themselves. Surely it must afford much more pleasure to any one to watch the intelligent actions of his animal, who has been taught to do things which he would not do at a high price after his *natura*, intelligence has been so cultivated.

One of the chief reasons for this, I have no doubt, is that people are too indolent to undertake what they suppose would be wearying to do. I think there are also those who have quite a different opinion, but who labor under the common mistake that it is a very difficult thing to do, and that it requires a special master mind to teach them to do dogs. This I hold to be an entirely erroneous idea, and an decided opinion that it would be to teach the right way to work, and perseveres, will succeed. As to its being a wearisome task, I have always found it the very opposite, and highly interesting and amusing, as I am sure it would be to any lover and admirer of his canine race. In the belief, then, that there are so many who would like to amuse themselves by training their own dogs to perform, but who do not know exactly how to set about it, I shall now do my best to instruct them by my own experience.

There are, undoubtedly, some kinds of dogs which are more ready to learn and of quicker intelligence than others, such as poodles and Dandie Dinmonts; but I have seen performing dogs of almost every kind, and it is possible to teach any dog of ordinary intelligence, if he be taken in time. That is one of the great essentials in all kinds of education, from the grounding of the young classical scholar or the initiation of the juvenile sportsman, to the training of the man who is to be taught to be a linguist; in all cases of the latter he should be taken in hand when between six months and a year old if possible. There is still one greater essential which is of more importance than all others, and which is of the least to be neglected, and that is the temper and temper comparatively nothing can be done with a young dog, and

I always made it a strict rule, when I began, that if I lost my temper over trying to teach any one trick, that particular one was to be given up as a punishment for myself.

Hardly ever strike your dog during his lessons, and, especially, never with the hand, which ought to be looked upon as containing rewards, and not covered away from him.

I will now point out some of the easiest and yet most amusing tricks which may be taught, and a few hints on the method of doing so, and commence with the easiest tricks of all, which may be of use to some, though many people get as far as the first two or three.

SITTING UP OR BEGGING.

Sitting or begging is soon taught. Take the dog up, and sit him down in a corner of the room, so that he has his back supported by the angles of the walls, supporting him in front with the hand, saying, constantly, "Beg, beg."

WALKING ON THE HIND LEGS.

Walking on the hind legs of a dog is accomplished by walking him round the room with his fore-paws resting upon your hand, a piece of biscuit being held above him with the other hand, saying, at the same time, "Walk, walk."

Shutting the door is taught by placing the fore-paws of the dog, who must be standing on his hind legs, against it. Then, by pushing him forward, cause him to shut the door, saying, "Shut, shut."

SHOOTING DEAD.

Shooting dead.—Make him sit up, push him gently over on his side, stretch him out on the floor, and hold him down, saying, "Dead, dead."

GOING INTO THE CORNER.

Going into the corner.—Place the dog in a corner of the room on his hind legs, with his nose in the angle of the walls, repeating "Corner," and make him stay there until released by word. After a little practice he will be disposed to go, or he will require assistance to do the same.

SCHEMES FOR A DOG'S RESCUE.

INTEREST in the east-ward dog, now living on Taylor's Island, in front view of the railway Suspension Bridge, manifests itself in numbers.

After the animal has been left without food for two or three days, and much of the time spring is attached to it, and containing a piece of meat, it will be disposed to go, or he will require assistance to do the same.

Some person at Halditch, South Carolina, wants the following scheme:

"Take a small line, make a slipy loop on it, cast it so as to lay the loop flat on the rocks, watch closely the movements of the dog, and put a foot in the loop, draw quickly so as to fasten the foot or leg in the loop."

"A friend of the dog" writes from the Shaker Settlement, N. Y., the following:

"Take a large, deep basket, in the bottom of which put a piece of meat, lower the basket by a rope fastened to the rim of the basket, to the neck of the dog. The dog will naturally get in the basket for the meat. Then commence hoisting the basket, and in all probability the dog will then remain quiet and not attempt to jump out, and be rescued."

"A disciple of Walton," who is believed to be Ishmael Waldron, suggests the following novel scheme:

"It is a mistake to suppose that fish only can be caught with a hook. Take a large bass hook, bait it with fresh beef, let it down with a strong line, and when the dog grabs the beef let two men with the shore end run for the railroad track, and they will land the dog on the track."

A humane person suggests the following:

"Take a five pound can of dynamite, insert an electrical wire, put over the can a tube just large enough for the dog to crawl in; in addition of live pieces meat, when the dog crawls into the tube pull the wire to the tail of the dog, and he will be blown up."

A sporting man is the author of the following:

"The dog, I understand, is a bull dog which is always a fighting dog, and his late solitary life has undoubtedly rendered his nerve. Attach a rope to the tail of another fighting dog and let him down to Taylor's Island, when they are clenching in deadly strife pull up on the rope. A bull dog never lets go so long as he is face to face with his adversary, as he would be in this case, so the reacting dog will be pulled up by the tail of the other dog."

The following simple plan published in the Daily Gazette:

"Take a bar and bore some holes in the top and put a rope in; place some straw in the bar and carefully let it over the cliff down to the island. Let it stay there for a few days, and you will find the dog will be drawn up for you to use for food."

The above is taken from the Suspension Bridge Journal. An account of the dog was published in the Forest and Stream of May 15.

THE NORFOLK SPANIEL.

[Reprinted from Vere Shaw's "Book of the Dog," finished by the Forest and Stream by the author, through the courtesy of Cassell, Peto, Galpin & Co., publishers, No. 159 Broadway, New York.]

THE last variety of the Springer family which we shall treat of is the Norfolk spaniel, which is a breed highly prized if met with pure, though there are, comparatively speaking, very few dogs of the variety which come under this category, as it has been very much crossed with other breeds of spaniels.

The Norfolk spaniel does not hunt much; on the contrary, he is disposed to throw his tongue when quailing; but unite hunters have occasionally been known, though their appearance is very uncommon.

Yonatt in his work gives his opinion regarding the origin of the Norfolk spaniel, which may be taken for what it is worth by admirers of the breed, as he appears to have devoted not a very small portion of his time to the consideration of the spaniel family.

From a cross with the carrier hare and the carrier was produced, which was cultivated by the late Duke of Norfolk, and these he called the Norfolk spaniel. It is larger than the common Springer, and stouter. It often forms a strong individual attachment, and is unsuspicious and pines away when separated from its master.

The above is the only theory which we can discover of the origin of the Norfolk spaniel, which may be taken for what it is worth by admirers of the breed, as he appears to have devoted not a very small portion of his time to the consideration of the spaniel family.

The Norfolk spaniel is a breed of spaniel which has been used to discriminate since the blacks began to appear in numbers. However, in the present day black and tan is by no means recognized as the correct color for a Norfolk spaniel.

The Norfolk spaniel would be of no mean assistance to the sportsman in pursuit of water-fowl, for he will take water readily, and retrieves well—throughout the year, and is also a very handy dog, and will face the thickest covers punctually, and may therefore be taken as a valuable dog, whose breeding should be encouraged by sportsmen of all denominations.

In appearance the Norfolk spaniel is inclined to be lighter on the legs than other spaniels, and is more lightly constructed than the latter's, and he is, in short, finer all over. Although longer in his leg than these breeds he is much lighter in bone, and has been rather aptly described as a thick-skinned English setter.

The height of a Norfolk spaniel is about thirty inches, and he is a frequent crosser which have been made between this breed and the Cumber and the Sussex, a great difference of height is perceptible in so-called perfectly pure-bred Norfolk.

The height of a Norfolk spaniel is about thirty inches, and he is a frequent crosser which have been made between this breed and the Cumber and the Sussex, a great difference of height is perceptible in so-called perfectly pure-bred Norfolk.

STANDARD OF POINTS FOR JUDGING NORFOLK SPANIELS.

Table with 2 columns: Part and Points. Head 5, Ears and eyes 5, Body and feet 10, Legs and chest 5, Loins 5, Color and markings 5, General appearance 10.

PHILADELPHIA BENCH SHOW.—Mr. G. W. Smith, Secretary of the Mount Airy Kennel Club and Game Protection Association of Philadelphia, informs us that a meeting of the organization held at their club-room on June 6th a committee was appointed for the purpose of arranging for a bench show in the city of Brotherly Love during October next.

THE NEW YORK CITY DOG ORDINANCE.—The city ordinance regulating the ways and wanderings of the canine family of this metropolis was introduced by Alderman Morris, and adopted by the Common Council, in the latter part of the spring of 1877, and went into force in the summer following.

The subjoined table shows the number of dog licenses issued, the amount paid to the city and the number of dogs drowned from 1877 to 1880:

Table with 3 columns: Year, Permits granted, Amount received, Dogs drowned. Totals: 25,865 permits, \$42,641 received, 38,864 dogs.

From May 1 of this year to July 1, 3,175 permits for keeping dogs have been granted. For every dog captured and impounded the dogcatcher gets thirty cents from the city.

From the above figures it will be seen that but few dogs of the variety are ever captured, and that the dogcatchers are very busy when many are captured, the dog catchers know a trick worth two of that.

KENNEL MANAGEMENT.

156 C. G. Pittsburgh, Pa.—My coon dog, eight years old, had a bad cough all winter; runs occasionally at the nose. It seems to come from his throat; it also makes him hard of hearing. Aus. The warm weather will probably cure him, if you take good care of him and feed him properly.

157 W. B. New York City.—Low diet with no meat; an occasional purge and plenty of exercise will soon reduce your bitch's fat and improve her health. Probably you were mistaken about her having been with pup.

NEW MARKET, Md., June 8, 1881.—Editor Forest and Stream: In a late issue of FOREST AND STREAM you give us of the benches Ratter, Major and Dyle, and of Dyle you say "his weight is 20 lbs. and his spread of ears 16 1/2 inches. Have you not made a mistake in these measurements? I have several times seen this dog belonging to Messrs. Bond and Halditch, and I feel sure that his weight is nearer 30 lbs. than 20, and his spread of ears does not exceed 14 1/2 inches.

I have several times seen this dog belonging to Messrs. Bond and Halditch, and I feel sure that his weight is nearer 30 lbs. than 20, and his spread of ears does not exceed 14 1/2 inches. I hardly think these gentlemen could have given these measurements, as they know they are not correct, and I have a typographic error in the copy of the article. [The measurements and weight of Dyle were sent us by Gen. Frank A. Bond, and we presume they are correct.—Ed.]

KENNEL NOTES.

"Breeder and owners of dogs are invited to send memoranda of names, breeds, colors, sales, etc., for insertion in this column. For the publication of such notices, no charge will be made, in each case the notice be made up in accordance with our form, that the name of both owner and dog be written plainly, or printed, and that the strain to which the animal belongs be distinctly stated."

NAVES CLAIMED.

Gypsy Queen.—Mr. Schuyler Waldron, Brooklyn, N. Y., claims the name of Gypsy Queen for red Irish setter bitch whelped May 14, 1880, by Dan out of Mand, the property of Mr. Horace Sibby, Seneca Falls, N. Y.

Princess Lou.—Mr. E. Langdon Wilks, Gal, Ontario, claims the name of Princess Lou for blue black, white and black setter dog whelped October 19, 1880, by Imported Prince of Orange out of Mr. Davidson's dog.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for red Irish setter dog puppy, whelped April 5, 1881, by Echo II. out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter bitch puppy whelped April 5, 1881, by Echo II. out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

Princess.—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Princess for Irish setter dog puppy whelped November 13, 1880, by Cato out of Nell.

rance; any rifle and position within the rules. Two entries allowed, but only the highest score to count. Winners to be determined by aggregate of best two scores of two out of the three competitors. Twenty-four cash prizes; as follows:

	100 yards.	200 yards.	300 yards.	Total.
D H Wicks	34	29	29	92
A E Lewis	31	25	27	83
F J Wigham	31	27	25	83
F J Meagher	28	24	17	69
F J Hancock	28	21	18	65

WATERGOLF.—Mass., June 10.—The Middlesex Club, of Cambridge, which has been one of the best clubs of the State, met to-day at the grounds at Waterford for its regular shoot. A rotary trap was sprung for ten balls, and, notwithstanding the wind played with the little blue spunkies like toys, Mr. C. Cove broke ten straight, Mr. W. F. Wheeler for twenty, Mr. J. S. Sawyer for nine also, and Messrs. Taylor and Good for eight each. Mr. W. C. Stork broke six and W. B. Taylor four. The shooting was capital for the day, and shows what the club can do in good weather conditions.

BOSTON, Mass., June 11.—The conditions to-day at Walnut Hill were adverse to good scores in the early part of the day. A heavy fog which nearly obscured the targets and a rain which washed the targets, spoiling the bulleye, was poor encouragement for gentlemen to purchase tickets in the several matches with the prospect of making even a fair score. The wind was northeast, uneven and capricious, and the light breeze after 1 o'clock the fog dispersed, the light became elegant and the wind toned down to that degree that it could be controlled by the marksmen at 300 yards. The first trials were on a quoit number of riflemen and spectators, among whom was Mr. C. H. Brown, an American resident in Peru, who took great interest in the shooting, and faced the bullets for three consecutive bulleyes from the shoulder with a Maynard rifle. The conditions at this time had become perfect for large scores, and when James Jewell and J. C. Bradford stepped to the firing point all looked for large results, which were achieved and recorded. Each of the gentlemen opened with bulleyes, the two former inside the four-inch ring. Adams kept in the bull for seven shots, and closed for a total on the target for 123, beating his big score of a week ago by one point, and tying the best scores of Jackson and Jewell. In the handicap match Mr. J. B. Fallow carried off the honors of the day on the Creedmoor target with a brilliant score. After 1 o'clock the fog dispersed, Mr. Baird followed for 46 and Fry for 45.

Sharpshooters' Match (Massachusetts Target).

J R Scott	32	34	42	42	42	42	42	42	42

Rifle Range, 100 feet; pistol range, 60 feet.

GARDNER, N. J., June 11.—The Stockton Rifle Range Association had two matches to-day. The first was a short-range military match, which was non-commensated officers and privates of the National Guard of Pennsylvania and New Jersey, 100 yards, 25 calibre; 100 yards, 100 calibre; 45 rd. No. 50 calibre; 2 points allowance for 50 calibre; 10 points without cleaning.

A J Middleton	41	41	41	41	41	41	41	41	41
B W Cloud	40	40	40	40	40	40	40	40	40
T F Hise	40	40	40	40	40	40	40	40	40

G W Couston won the competition for the champion marksmanship badge of 1881, making 19 at 300 yards and 17 at 500 yards; total, 36 out of possible 50.

NEW ORLEANS, June 5.—The contest for the J. M. G. Parker prize concluded after several months' struggle. It was won by D. G. Gardner. Below are the scores made at the range of the Louisiana Rifle Club:

	300 yards.	500 yards.
Gardner	44	44
Adams	42	42
Sambolin	42	42
Moss	42	42
Wheeler	42	42

And another contest may soon be looked for, as a prominent friend of the Orleans artillery proposes to put up another valuable prize.

There were two matches shot to-day on the grounds of the New Orleans Gun Club. The first was a hat match, double base, 22 yard rifle, with 9 entries. Levee won the first prize, making 17 out of 20; De Buys took the second prize by a score of 15; the third prize went to Chaudet on a score of 14, and B straight on a tie shoot-off. The next event was a pigeon match, 7 birds, 25 yard rifle, with 9 entries. Levee won the first prize, which killed all his birds; Chasin and DaPorte divided second money, each killing six birds; Chaudet took third money on a shoot-off.

GARDNER, Mass., June 10, 1881.—The following scores were made at the last shoot at Hackmatack range by members of the Gardner Rifle Club, 200 yards, off hand, using single ring and Creedmoor target combined:

I. N. Dodge	55	45	90	46	101
C. R. Pratt	44	50	43	50	187
F. E. Elsworth	45	45	45	45	180
E. J. Newton	45	45	45	45	180
H. M. Austin	44	44	44	44	176

A. Matthews	43	43	43	43	172
C. Merritt	43	43	43	43	172
R. E. Knowlton	42	42	42	42	168
C. G. Goodale	41	41	41	41	164
S. S. Willard	41	41	41	41	164
H. Mason	40	40	40	40	160
C. Shway	40	40	40	40	160

BROOKLYN, N. Y., June 8.—The Washington Gun Club opened its second season at Ridgewood Park on this afternoon in a regular contest for a double barrel gun, valued at \$100, which the members have the honor to present to the club. The contest was for the best average during the year. There are three other prizes of lesser value to be shot for monthly. The weather looked rather dubious for the sport, but notwithstanding there was a fair attendance of spectators to the club turned out strong. Each of the competitors shot at seven birds, New York State rifle, handicap rise, one barrel. The shooting was as usual, and the club has done since its organization, and should they keep it up there is a fair chance of the club presenting to some of the principal prizes in the Coney Island tournament. The following is the score:

Yards.	25.	31.	37.	43.	49.	55.	61.	67.	73.	79.	85.	91.	97.	103.	109.	115.	121.	127.	133.	139.	145.	151.	157.	163.	169.	175.	181.	187.	193.	199.	205.	211.	217.	223.	229.	235.	241.	247.	253.	259.	265.	271.	277.	283.	289.	295.	301.	307.	313.	319.	325.	331.	337.	343.	349.	355.	361.	367.	373.	379.	385.	391.	397.	403.	409.	415.	421.	427.	433.	439.	445.	451.	457.	463.	469.	475.	481.	487.	493.	499.	505.	511.	517.	523.	529.	535.	541.	547.	553.	559.	565.	571.	577.	583.	589.	595.	601.	607.	613.	619.	625.	631.	637.	643.	649.	655.	661.	667.	673.	679.	685.	691.	697.	703.	709.	715.	721.	727.	733.	739.	745.	751.	757.	763.	769.	775.	781.	787.	793.	799.	805.	811.	817.	823.	829.	835.	841.	847.	853.	859.	865.	871.	877.	883.	889.	895.	901.	907.	913.	919.	925.	931.	937.	943.	949.	955.	961.	967.	973.	979.	985.	991.	997.	1003.	1009.	1015.	1021.	1027.	1033.	1039.	1045.	1051.	1057.	1063.	1069.	1075.	1081.	1087.	1093.	1099.	1105.	1111.	1117.	1123.	1129.	1135.	1141.	1147.	1153.	1159.	1165.	1171.	1177.	1183.	1189.	1195.	1201.	1207.	1213.	1219.	1225.	1231.	1237.	1243.	1249.	1255.	1261.	1267.	1273.	1279.	1285.	1291.	1297.	1303.	1309.	1315.	1321.	1327.	1333.	1339.	1345.	1351.	1357.	1363.	1369.	1375.	1381.	1387.	1393.	1399.	1405.	1411.	1417.	1423.	1429.	1435.	1441.	1447.	1453.	1459.	1465.	1471.	1477.	1483.	1489.	1495.	1501.	1507.	1513.	1519.	1525.	1531.	1537.	1543.	1549.	1555.	1561.	1567.	1573.	1579.	1585.	1591.	1597.	1603.	1609.	1615.	1621.	1627.	1633.	1639.	1645.	1651.	1657.	1663.	1669.	1675.	1681.	1687.	1693.	1699.	1705.	1711.	1717.	1723.	1729.	1735.	1741.	1747.	1753.	1759.	1765.	1771.	1777.	1783.	1789.	1795.	1801.	1807.	1813.	1819.	1825.	1831.	1837.	1843.	1849.	1855.	1861.	1867.	1873.	1879.	1885.	1891.	1897.	1903.	1909.	1915.	1921.	1927.	1933.	1939.	1945.	1951.	1957.	1963.	1969.	1975.	1981.	1987.	1993.	1999.	2005.	2011.	2017.	2023.	2029.	2035.	2041.	2047.	2053.	2059.	2065.	2071.	2077.	2083.	2089.	2095.	2101.	2107.	2113.	2119.	2125.	2131.	2137.	2143.	2149.	2155.	2161.	2167.	2173.	2179.	2185.	2191.	2197.	2203.	2209.	2215.	2221.	2227.	2233.	2239.	2245.	2251.	2257.	2263.	2269.	2275.	2281.	2287.	2293.	2299.	2305.	2311.	2317.	2323.	2329.	2335.	2341.	2347.	2353.	2359.	2365.	2371.	2377.	2383.	2389.	2395.	2401.	2407.	2413.	2419.	2425.	2431.	2437.	2443.	2449.	2455.	2461.	2467.	2473.	2479.	2485.	2491.	2497.	2503.	2509.	2515.	2521.	2527.	2533.	2539.	2545.	2551.	2557.	2563.	2569.	2575.	2581.	2587.	2593.	2599.	2605.	2611.	2617.	2623.	2629.	2635.	2641.	2647.	2653.	2659.	2665.	2671.	2677.	2683.	2689.	2695.	2701.	2707.	2713.	2719.	2725.	2731.	2737.	2743.	2749.	2755.	2761.	2767.	2773.	2779.	2785.	2791.	2797.	2803.	2809.	2815.	2821.	2827.	2833.	2839.	2845.	2851.	2857.	2863.	2869.	2875.	2881.	2887.	2893.	2899.	2905.	2911.	2917.	2923.	2929.	2935.	2941.	2947.	2953.	2959.	2965.	2971.	2977.	2983.	2989.	2995.	3001.	3007.	3013.	3019.	3025.	3031.	3037.	3043.	3049.	3055.	3061.	3067.	3073.	3079.	3085.	3091.	3097.	3103.	3109.	3115.	3121.	3127.	3133.	3139.	3145.	3151.	3157.	3163.	3169.	3175.	3181.	3187.	3193.	3199.	3205.	3211.	3217.	3223.	3229.	3235.	3241.	3247.	3253.	3259.	3265.	3271.	3277.	3283.	3289.	3295.	3301.	3307.	3313.	3319.	3325.	3331.	3337.	3343.	3349.	3355.	3361.	3367.	3373.	3379.	3385.	3391.	3397.	3403.	3409.	3415.	3421.	3427.	3433.	3439.	3445.	3451.	3457.	3463.	3469.	3475.	3481.	3487.	3493.	3499.	3505.	3511.	3517.	3523.	3529.	3535.	3541.	3547.	3553.	3559.	3565.	3571.	3577.	3583.	3589.	3595.	3601.	3607.	3613.	3619.	3625.	3631.	3637.	3643.	3649.	3655.	3661.	3667.	3673.	3679.	3685.	3691.	3697.	3703.	3709.	3715.	3721.	3727.	3733.	3739.	3745.	3751.	3757.	3763.	3769.	3775.	3781.	3787.	3793.	3799.	3805.	3811.	3817.	3823.	3829.	3835.	3841.	3847.	3853.	3859.	3865.	3871.	3877.	3883.	3889.	3895.	3901.	3907.	3913.	3919.	3925.	3931.	3937.	3943.	3949.	3955.	3961.	3967.	3973.	3979.	3985.	3991.	3997.	4003.	4009.	4015.	4021.	4027.	4033.	4039.	4045.	4051.	4057.	4063.	4069.	4075.	4081.	4087.	4093.	4099.	4105.	4111.	4117.	4123.	4129.	4135.	4141.

80, and the subsequent match for July 2. The Silence is 27 ft. 11 in. long, was built in 1850 by Lenox, South Brooklyn. She is, therefore, comparatively a new boat, without a long record. In model she is much like the Susie S., though a few inches deeper. In model she is smart boat, but owes much of her reputation to the manner in which she has been sailed by Capt. Smith. The race with the Southern she has been sailed by Capt. Smith. The race with the Southern she has been sailed by Capt. Smith. The race with the Southern she has been sailed by Capt. Smith.

BIG CUTTERS—Boston is to have an 80 ft. cutter, and a correspondent thinks the honor of owning the first big one of the kind will likely belong to the East unless the contemplated hundred tonners in New York are put in hand soon. It is no longer a mystery why there should be a "cutter craze" as the old school puts it. Yachtsmen are becoming sailors, and sailors are becoming more than oven-tanned, unmanageable, over-rigged, expastible toys. It is moderate form, keels and outside ballast, double-head sail, low leg and hunched top-masts, flush decks and non-of-war smartness they want, and they find this all in the cutter of fair beam; hence the "craze" introduced by FOREST AND STREAM is bearing fruit in able, safe and honest ships all over the coast, and contingencies will in due time swing around in tow. They are up in the wind even now.

LAKE GEORGE MEET.—It will be a big fleet of canoes at the meet on Lake George in August. Already the freight agent at Glen's Falls has received more of thirty canoes on their way by rail to the Lake. If canoeists will continue to "pool their issues" in the same generous manner they did last year, the August meeting will give such promise as to be the best of the kind ever held in the State. The number of paddlers will be the result. Canoeing ought to be the most popular sport in America, for we have creeks, rivers, lakes, ponds and canals all over the country for boat work, and improved systems of communication by water offering thousands of miles of the picturesque, civilized and wild, to those on cruising bent.

CLEVELAND YACHTING ASSOCIATION.—Editor Forest and Stream: The annual regatta open to all yachts of the chain of lakes will be sailed Monday, July 4. In the first class there will be two prizes and a flag; in second class, three prizes and a flag; in third, three prizes and a flag. The first class yachts will sail for the Gardner Challenge Cup, now held by the Cygnet, of Buffalo. In the second class, a cup will be offered, which shall become the private property of the yacht winning it in three regattas. Entries should be sent to the club rooms, 345 Superior street, Cleveland.—KIAKSA.

GOOD.—Chalk a big, very big mark, for the Dorchester Y. C. In their recent matches, June 18, the start will be simultaneous. No tally will count from the gun, and it will be the business of the yachts to get across the line as smartly as they know how, all their "thuses" being counted from gun fire. Abolishing the ten minute

period of grace is something we have all along insisted upon, and so to the purchaser Y. C. belongs the credit of inaugurating this new reform.

THE CHIEF FLEET.—Of the three new cutters added to the Boston fleet, the South Boston *Impulse* says: "Mr. Cabot's new cutter, sister boat to Mr. Burgess' cutter *Moya*, is out of the house at Lawley's, and rapidly approaching completion. Mr. Forde's cutter *Mavis* is in the dock receiving her spars and rigging; she is not much smaller than the other cutters, and if the *Moya* is to be taken as a criterion, although odd looking, they will prove fast and able sea boats, and reflect credit on the builders and designer."

PORTLAND YACHT CLUB.—Of the eleven schooners in the club, every one is a keel. Of the fifteen sloops, nine are keels. The club has besides one cutter, two cats and one catamaran. Keels are evidently carrying the day everywhere outside of New York harbor and about Long Island Sound. Wherever yachts have the chance to develop, unhindered by purely local topography, the keel is driving out the board, facts which correspond with the teachings of these columns.

BRENDA.—This schooner, E. Y. C., has had a 15 in keel added, through which the centerboard will drop. The work was done by Harrington, of Bath, Me.

Nothing purifies and enriches the blood and destroys all poisons in the system like Hop Bitters.

Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

J. W. B., Plutson, Pa.—You can probably get the birds of Miles Johnson.

M. L. A., Yonkers.—Your rifle will be improved by the reduction of the pull and by substitution of the combination sight.

H. M., Hennepeu Co., Minn.—Your rifle can be altered. For cost write to the manufacturers. See their address in our advertising columns.

CRACKERS.—This paper ceased to publish records of the game or cricket last autumn. Address Mr. C. A. Kiple, editor *American Cricketer*, Phila., and he will send you a sample copy of his paper.

W. H. H.—There was no bench show for dogs held in this city in 1879. The first show was held in 1877 under the auspices of the Westminster Kennel Club. No imported English setter dogs named Ben and Daisy won at that show.

W. F., Wells-Ville, N. Y.—See extract from Greener's new book in our issue of June 2 for oil for your rifle. Do you want the skins tanned with hair on or not? For game law see last issue of this paper and the current number.

H. W. M., Cincinnati.—It is safe to shoot buckshot in your gun chamber them carefully. If your gun is a choke-bore you must chamber them in the choke, which you can do by driving a wad down from the muzzle and chambering on that to determine the correct number.

A. B. A., Orono, Maine.—Will you kindly inform me what provision the New York dog law makes for the sporting dogstog gentlemen who wish to stop a few days in the city when passing through it? Also, what provision is made in the Boston dog law? Ans. The laws of New York and Boston make no provision to cover your case; only the dogs that are found running at large are seized. If you carefully keep your dogs housed and have them on chain while passing through the cities named you will have no trouble whatever.

P. F., Rossmont, Dundrum, Dublin, Ireland.—Following are some of the references which you request. *Ptilinopus porphyrio* is reported as having been captured in North America by Nuttall in Manual of the Ornithology of the United States and Canada, Vol. II, p. 121; by Cassin, in Bull. Cassin and Lawrence, Birds of N. A. (Ninth Volume), Plate II, B. Exploration and Survey, p. 73; by Lawrence in Annals of the Entomological Society, Vol. I, p. 229; by Brewster in American Naturalist, Vol. I, p. 230; and by Brewster in Bulletin Nutt. Orn. Club, Vol. I, p. 19, April, 1876; by Wheaton in *Dallas* Naturalist Ornithological Club, Vol. II, p. 83, July, 1877.

H. F. S., Brooklyn.—The English *Lice Stock Journal*, the English *Stock Keeper* and the *Poultry World*, published by Stoddard in Hartford, Conn., will be the best papers for your uncle in Germany. For cost write to the publishers. If you would like to have a page to answer your dog questions exhaustively, 4. Go into one of the pistol galleries and examine the weapons there. Then select the pedigree of the dog, but have seen some very high testimonials as to the dogs sold by the dealer.

E. E. M., Charenton, Va.—1. My fox terrier bitch, three years old, and her pupper, one year old, every four or five days refuse food, but eat a good deal of grass and then pass blood and thick white-looking mucus. They are both in good order and are otherwise healthy. Their food is corn bread and table scraps. Lately I have mixed sulphur with their bread, but it did not seem to do them much good. Some weeks back I treated them for worms, so I do not put it down to that. I can young mucking birds be reared by hand. What is the best food for them? Ans. 1. The grass is good for them and they should have free access to it. Do not press food upon them; wait until they are hungry for it. Give a couple of small doses of castor oil and they will probably come out all right. 2. Yes; feed them on feathers prepared mucking bird food, which is for sale by dealers.

No health with inactive liver and urinary organs without Hop Bitters.

NOTICE!

Advertisements received later than Tuesday cannot be inserted until the following week's issue.

Rates promptly furnished on application.

No one should travel without a bottle of Tarrant's Seltzer Aperient. Changes of temperature, irregularity of rest and eating, and exposure to drafts, are great and active agents in deranging the secretions of the body. A dose of this aperient will prevent the evils resulting from such causes, and save many inconveniences and dangers.

FISHERMEN. RANGELEY, RICHARDSON

Moosehead Lakes. EXCURSION TICKETS

ARE NOW ON SALE AT COMPANY'S TICKET OFFICE,

306 Washington Street, Next Door to Old South Church, and at Depot on Causeway Street, Boston.

Table with 2 columns: Destination and Price. Includes Phillips, Rangeley, Middle Dam, Upper Dam, Mt. Kisco, Andover, Dead River, Ensis, Kennebec, and Forks of the Kennebec.

TRAINS LEAVE BOSTON.

For all points in Rangeley & Kennebec Region At 7:30 A. M. (After June 27, 8:30 A. M.)

FOR MOOSEHEAD, 7 P. M. Excursion Lists will be ready about June 1. LUCIUS TUTTLE, Gen. Pass. Agr. Boston, May 12, 1881.

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, it equaled, in the abundance and great variety of fish contained in these waters.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. The TROUT season begins May 1 and ends Sept. 1. The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and creeks of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all the resorts.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at our resorts. It is our aim to make sportsmen feel "at home" on this route. For Tourists' guide a handsomely illustrated book of 160 pages sent free. True Cards, Folders and further information, address

A. B. LEET, Gen'l Pass' Agent, Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

EXCURSION TICKETS VIA BOSTON AND MAINE RAILROAD.

Includes South Arm (Richardson Lakes), Middle Dam, Upper Dam, Mountain View House of Rangeley, Outlet and return (Indian Hook), via Farrington, Indian Hook and return, Rangeley Lake and return, Phillips, Indian Hook and return, via Andover Bemis Stream and return, Moosehead Lake and return (Mt. Kisco House), Forks of the Kennebec and return, Dead River and return, Kennebec, St. Andrews, N. B. and return, Pleasure Resorts in Maine and the Province.

Also tourists' tickets to all Sporting and Pleasure Resorts for sale at all principal ticket offices and 250 WASHINGTON STREET, DEPOT, HAYMARKET Bldg., BOSTON.

Send for list of excursions. D. J. FLANDERS, Gen. Pass. and Ticket Agent.

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS THROUGHOUT the season, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel track enable SPORTSMEN TO BE TRANSPORTED without failure or injury.

THE LINES OF Pennsylvania Railroad Company also reach the best localities for

GUNNING AND FISHING

In Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the OFFICE of the Company in all the principal cities at KANE, HENNOVA, BEDFORD, GREENSBORO, EASTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and SHOT AND GUNTING.

Also, HAWK, HAWK AND QUAIL, and points on the NEW JERSEY COAST renowned for SEA WATER SPORTS AFTER SUN AND WEATHER. L. P. FARMER, Gen'l Pass. Agent. FRANK THOMPSON, Gen'l Manager.

Chesapeake & Ohio R'y.

THE ROUTE OF THE SPORTSMAN AND ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist, through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsula Extension in the summer of 1881 affords THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL," and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

CONWAY B. HOWARD, G. P. & T. A., Richmond, Va.

Old Dominion Line.

THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Pamlico River, Pamlico River, Currituck, Florida and the mountainous country of Tuesday, Thursday, and Saturday. Lewis, Del. Monday and Thursday at 8 P. M. Full information given at office, 191 Greenwald Street, New York.

Bromfield House, Boston.

EUROPEAN PL. MESSENGER, Proprietor.

TIM POND TROUT FISHING.

The boarding camps at this resort will be in readiness for sportsmen May 20. The abundance and quality of the trout, the numerous fine camps and boats, the facilities for reaching this pond and the beauty of lake and mountain scenery make this one of the most desirable resorts in Northern Maine. The proprietor, Kennedy Smith, will give his personal attention to the wants of his guests. The railroads will sell tickets for round trip to South's farm in Eustis, and buck boat teams will be ready to haul passengers and baggage from farm to camp at season of trout. Boatmen will charge no dollar per day. Address KENNEDY SMITH, Eustis, Maine.

SUMMER RESORT.

ON SHINNECOCK BAY, LONG ISLAND

Having added largely to my house I am prepared to take two or three families for the summer. Surf and still water bathing, also good snipe shooting, good boats and guides ready at all times. Plenty of sea food in best manner. References - J. B. Shepperd, 801 Broadway, New York. Wm. Dutcher, 30 Broadway, New York. Address Wm. N. Lane, Good Ground, Long Island

Fishing Tackle.

MANN'S

Trotting Spoons.

Sixty varieties manufactured, suitable for Trotting for all kinds of fish that will take an artificial bait, and adapted for any lake or river in the United States.

Our Perfect Revolving Spoon is undoubtedly the best general spoon for taking fish ever offered to the public.

Three sizes made—No. 20 for bass, pike, pickerel, or any fish under five pounds; No. 21 for large fish, and the best spoon ever made for salmon trout, No. 22 excellent for deep water fishing. Beware of imitations. None genuine except JOHN H. MANN'S name stamped on every spoon.

Sold wholesale and retail by the principal dealers in Fishing Tackle.

Our Bethabara Fly and Bass Rods and Split Bamboo Fly Rods received the first premiums at the Centennial, Franklin Institute and Penna. State Fairs.

A specialty of the celebrated Bethabara Wood or Fish Rods and Archery Bow. Stronger than split bamboo and as tough and elastic as steel.

For mountings of all descriptions on hand and order. Price list of wood and rod mountings free. Our catalogue now illustrated catalogue of Fishing Tackle sent, post-paid, on receipt of ten cent stamp.

ORVIS' RODS, REELS AND FLIES.

Send for catalogue to C. F. ORVIS, Manchester, Vt.

Hornbeam Rods A SPECIALTY. W. HUNTINGTON, WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breaking and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of its own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON, above.

THREAD-WOUND, LONG-RANGE SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 50, 70 and 90 yards, giving close pattern and great penetration. 20 and 25 gauge. Send for circular.

GUNPOWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (course) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (course) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/2 and 12 1/2 kegs.

Dupont's Choice Bore.—Specially adapted for "Choke Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6 1/2 kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1 lb. canisters and 6 1/2 kegs.

Dupont's Rifle Fg.—See Shooting, FFFg, and FFFg. The Fg. for long-range rifle shooting, the FFFg, and FFFg, for general use, burning strong and moist. Packed in 1 lb. and 5 lb. canisters, 6 1/2 and 20 1/2 kegs. Fg. coarse, FFFg, fine.

Dupont's Sporting, Mining, Snapping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S Fg. or FFFg. for long-range rifle shooting.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (course). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 5 (course). In 1 lb. canisters and 4 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (course). In 1 and 5 lb. canisters and 4 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFg FFFg, and "Sea Shooting" Fg in kegs of 1/2, 1 1/2, and 3 1/2 lbs. and cans of 5 lbs. FFFg is also packed in 1 and 4 lb. canisters. Burns strong and soxal. The FFFg and FFFg are favorite brands of ordinary sporting and the "Sea Shooting" Fg is the standard Rifle Powder of the country.

OUR FISHES.

(Read by Fred Mather before the New York State Association for the Protection of Fish and Game.)

AFTER all that has been said on the necessity of increasing and preserving our fishes, in the past ten years, it would seem as though there was little left to say upon these subjects. There would be no need of saying more now if all that has been written had been acted upon, but the facts are that the people at large have very indefinite ideas upon the subject beyond the increasing scarcity of fish which, rightly or wrongly, they usually attribute to the sewage of cities or the increase of steamboats, which they think sears them away from their haunts. The latter cause I do not believe in. The Hudson River, at New York City, is continually pounded by steamboat paddles night and day in every direction, and one of the most timid of fish, the shad, pass up in great numbers. Ordinary house sewage is not bad for fish, neither is decaying animal matter, and where sewage contains no coal-tar, or other product of petroleum, lime, dye-stuff or chemical refuse, it is not injurious to aquatic life.

The causes of decrease must be looked for in our increasing population which demands more food, and the consequent increase of the number and efficiency of means of capture; the destruction of the food on which fishes live, by various means; the pollution of their spawning grounds and other causes consequent on the interference of man in the domain of nature. Our trout streams are made impassable by dams, their gravelly spawning beds are covered with sawdust, and our salt water bays are over-fished. The remedy for these things is propagation and protection, which should go hand in hand. The New York Fish Commission propagates but does not, and perhaps can not, protect, and the people at

large do not see the necessity of protection. A few sportsmen's clubs protect, as far as it is in their power to do, but the public look with indifference on it as mere selfishness on their part, when in reality it is a measure of public good; as much so as if the wheat crop could be increased, and on this ground the sportsmen must present the case to the people and to the Legislature if they would arouse a sentiment in behalf of protection. Appeal to them for fish protection as a measure of political economy, which it really is, and when there are plenty of fishes for food we can enjoy the wetting of our lines. Some rivers in Great Britain are good salmon streams in the midst of a swarming population, and this is maintained by protection alone, for their attempts at fish culture are on the most limited scale. Some may say that the laws which accomplish this are oppressive and that they deny to the poor man his rights of free fishing. To this I would answer, that in our centres of population, free fishing means no fishing. There is such a thing as too much freedom. We see this when we find boys of twelve to sixteen years of age roaming the fields with guns killing every robin, yellow bird and other thing that lives. We see it when we find bands of poachers armed to resist the officers of the law, who are protecting the fish in their spawning season. The splendid work of the New York Fish Commission should be supplemented by protection of the fish during spawning time, and by facilities to enable them to surmount dams which interfere with their ascent to the upper waters where the insect life furnishes food for their young. We are suffering from the inheritance of ideas which were formed when our country was new, and the forests and streams contained what was thought an inexhaustible supply of food. Then no restrictions were necessary upon the rifle and the net. Nature provided an abundance. Now the demand for food has nearly exhausted the supply from our forests, and sadly diminished the products of our streams. Art has stepped in to supply the latter, and amid the doubts and jeers of the fishermen the Connecticut River was stocked with salmon, after being barren of that fish for nearly fifty years. The planting was kept up for several seasons, and last year many salmon were taken. Connecticut River salmon were quoted regularly in New York market and sold at the high price of one dollar per pound. The fish culturists rejoiced. This year one salmon was caught, only one; the last of his race—the Uncas of the *salmons*. The greed of gain had captured the tribe and left but one fish to tell the tale. They were taken while obeying the instinct to perpetuate their species and died in attempting to reach their spawning beds. The fish-culturists have ceased in their labors of re-establishing the salmon in the Connecticut, but their labors have not been in vain. They have proved that steamboats and sewage have not destroyed the salmon-bearing qualities of the river and that is a triumph. The people did not protect the first crop and the seed was lost.

The Hudson has never been a salmon river. It is not too far South for salmon for they have lived in the Delaware. Its faults are mechanical entirely. Given a practical fishway at Caboes, Glen's Falls and at other obstructions, protect the fish, and the Fish Commission can make the Hudson a salmon stream. The few "stray" salmon taken in the river since a few straggling lots have been deposited in the upper waters prove that the temperature is not too high nor the sewers too foul for them. But the Fish Commission see the hopelessness of stocking the Hudson with salmon at present. In the future when our people are educated up to the standard of united action on all points, of common interest this may be done.

I have only hinted at the poacher. He is thoroughly imbued with the principles of freedom. He believes that all fur, fin and feather should be free as the air we breathe, and he lives up to his belief. The rights of the community he does not consider, but loudly declaims of his individual rights and of the "monopoly" of certain waters set apart for private uses. This man needs educating. He needs to learn that the one who forestalls the opening of the trout season by a single day is a thief, who is stealing from the common fund of the people of the State as much as one who puts his hand into the State treasury. Those not directly interested in this question look too leniently on the misdoings of the poacher who is in fact a felon, and should be so severely dealt with that he would learn to recognize the fact that a theft from

the public is as great as a theft from an individual. One obstacle in the way of his education to this point is that many honorable and respectable men in every community look upon poaching as a venial sin. I claim that it is theft, and that the man who takes trout or venison out of season, except to supply his necessities when beyond civilization, is a thief.

Lately, while gathering the statistics of the fisheries of Long Island for the fishery census under direction of Profs. Baird and Goode, I have had opportunities to get the views of men on Long Island which has the unenviable name of the "home of the poacher," on this question. Said a very respectable oysterman to me in reply to a question, "No sir; we do not consider the stealing of oysters from a private bed as criminal an act as taking potatoes from a field. It is true as you say, both are planted, and to rob one is taking the results of a man's time, capital and labor, but somehow our people don't seem to look at it so. They don't consider that a man has the same right to property covered by water that he has to land, and while a man would be forever disgraced if convicted of stealing potatoes he would be regarded as sufficiently punished if fined ten dollars for taking oysters from a private bed. He would not be looked on exactly as a thief." This answer in my opinion needs no comment.

Gentlemen of the New York Sportsmen's Association! You have a broad field before you for good work which will not only elevate the people among whom it is accomplished, but will elevate and ennoble yourselves. You can help to educate the people that sportsmanship is not to merely to shoot a gun or throw a fly well, but that it includes the first principles of gentility, the regard for the rights of others, without which no man can be either a gentleman or a sportsman.

AN IMPOTANT TEST CASE.

THE RIGHT TO FISH IN MAINE WATERS.

A LAW-SUIT, important to the sportsmen's fraternity, is now pending in the Supreme Judicial Court in Piscataquis County, Me. It was to have been argued before the full bench at the low term of the Eastern District for Maine, the third Tuesday of the present month. Of the result we are not yet informed.

The history of the case is this: Among the most attractive little ponds within six miles of Monson village is one known as "Grindstone Pond," which for many years has abounded with very fine spotted trout, weighing from one to two pounds. Some two years ago a Mr. Wm. E. Barrows, a gentleman of wealth and affluence, residing in the distant State of Connecticut, purchased all the land around and inclosing this sheet of water. The pond contains more than ten acres, and it is a natural pond. The land was a part of the public domain of the commonwealth of Massachusetts prior to A. D., 1647, and all of the land around this pond is in common, with no fences or inclosure of any kind.

Mr. Barrows about one year ago posted notices forbidding any persons fishing on "Grindstone." Several parties persisted in so doing, and among them was a young man named John M. McDermott, who fished there after the forbidding of Barrows during the summer of 1880. Barrows commenced an action of trespass, and the case of *Barrows vs. McDermott* is the one referred to above, and is very interesting to lawyers as well as important to the public generally for if this pond can be closed up and monopolized then there are thousands of others in northern and eastern Maine which may be shut up in the same manner.

The Supreme Court of Mass. have decided in several instances that a natural pond of more than ten acres is free to the public for fishing and fowling, by virtue of the Colony ordinance of 1641 and the amendment to said ordinance of 1647. The Supreme Court of Maine has held that the ordinance of 1641 is the common law of Maine, and the counsel for McDermott claim that if this is so it follows that the amendment is also the common law of this State. By the amendment of 1647, large and important rights were conferred upon the people, for by it was granted the right of passage over all lands lying in common adjacent to natural ponds of more than ten acres, providing they did not pass over any man's corn-field or meadow.

These are the questions involved in the case:

1. Are natural ponds of more than ten acres free to the public for fishing and fowling?

2. If so, are the public allowed free passage on foot over adjoining lands where no annual crops are growing?

As this is the first time that these identical questions have arisen in the Courts of Maine, the decision of the Court will be watched with much interest.

The counsel for plaintiff are Hon. A. G. Lebrock, Esq., and W. E. Parsons, Esq., of Foxcroft. The counsel for defendant are J. F. Sprague, Esq., of Monson, and H. Hudson, Esq., of Gullford.

We submit the agreed statement of the case:

STATE OF MAINE, Piscataquis, Ss. Supreme Judicial Court,)
February Term, A. D. 1881.)
WILLIAM C. BARROWS vs. JOHN McDERMOTT.

Agreed statement of which the above action is to be marked Law. Action, Trespass *quare clausum*. The writ dated August 27th, A. D. 1880, and entered Sept. Term, 1880, contains sufficient counts, alleging the trespass to have been committed in the summer of 1880. Pies, not gully. Writ need not be copied. Either party may use one copy of declaration. The plaintiff had in his enclosure, described in the writ, in Township No. 5, Range 8, in said County of Piscataquis, called "Howard," a natural pond of about twenty acres in area, known as Girandstone Pond. All of said pond was within the close of plaintiff; and the land around said pond was wild and unacquainted with the exception of about two acres upon the shore and adjacent to said pond, which had been cleared and cultivated. No crops were raised, or hay cut, upon said cleared and cultivated portion of said close during the year 1880. The plaintiff, in order to protect and forward the propagation of fish in said pond, had forbidden the public from entering said close, or fishing in the waters of said pond, by posting in said cleared portion of said close and elsewhere around and on the shore of said pond conspicuous notices in clear letters painted upon boards, forbidding all persons from entering said close or fishing in the waters of said pond; and said notices were so posted when defendant entered said close, as alleged in the writ. Defendant, in committing the acts constituting the alleged trespass, passed over and through the cleared portion of said close, to wit, two acre lot, and caught and carried away fishes from said pond without permission or license from the plaintiff, as alleged in the writ. The public had for many years, to wit, thirty-five years, prior to the forbidding of fish, and the posting of said notices as aforesaid, had access to said pond for the purpose of fishing. None of said land was enclosed by fences of any kind.

It is agreed that the damages, if this action is maintainable, are the sum of one dollar. The Law Court are to render such judgment, by nonsuit or default, as the rights of the parties shall demand. The locus in usi of the alleged trespass was a part of the public domain of the Commonwealth of Massachusetts, prior to A. D. 1647.

THE LITTLE HELLBENDER'S APPEAL

IN common with the press of New York, the FOREST AND STREAM has received from Mr. Henry Bergh an illustrated circular setting forth the cruelty of pigeon shooting, and calling upon American citizens to rise up in their seats and abolish the practice.

The only trouble with Mr. Bergh is that he does not go far enough. Why does he put in a plea for the pigeon and remain silent upon the late unholy holocaust of hellbenders by the greedy lethtophagist? What is sauce for the goose is sauce for the gander; and what is good from a Bergh point of view for the pigeon must be good also for the hellbender. The language of Mr. Bergh's ultra-humanitarian plea for the birds will apply equally well and with as much reason to the unholy object of the lethtophagist's perverted appetite. We quote:

"Now, let us imagine for a moment that this unoffending little being (the hellbender) is suddenly endowed with speech. Might not its language (to the lethtophagist) be somewhat like the following:

"I am wholly in your power; you will not pretend that I have ever harmed you, or that there exists any natural or legitimate reason for my destruction. The sphere in which I moved was assigned to me by the same Allwise Being who made you, and so bountifully endowed you with wealth, reason and all the material possessions of this world. I was betrayed into captivity while seeking to provide nourishment for my little family of hell-benders now dead of starvation.

"You are about to involuntarily upon the blood-stained altar of inglorious, gluttonous rivalry, and what will you gain by the crumpling of my delicate limbs and ruptured arteries, that a senseless turnip would not afford you? If, however, this little body, so cunningly and so mysteriously contrived by its Creator, be necessary to your reasonable benefit—if the brief existence which it inherits be required for any purpose which religion and human policy condemn not—take it, it is yours; but of fead not its Author, nor insult the cultivated spirit of your generation, by a deed which your own consciences, on reflection, will characterize, but which I refrain from doing."

"Thus might the unoffending little hellbender address the lethtophagist, and what answer could he make? None, absolutely none; nor could the combined intellect and learning of the world overturn the argument of the tiny pleader awaiting his irresistible fate."

If this appeal does not have the hoped-for effect upon the cruel lethtophagist Mr. Bergh might interfere with the annual dinners of that society on the ground that they are in direct violation of the gambling laws, or the divorce law, for that matter. To tell the honest truth, we confess that this point seems to us a little weak, but doubtless Mr. Bergh can make the District Attorney see it.

If Mr. Bergh is still unsuccessful in his humane endeavor to preserve the unoffending hellbender, we advise him to write to all the daily papers, and call all the members of the lethtophagous Club dog-fighters, cock-fighters, Spanish bull-fighters, prize-fighters, burglars, highway robbers and sawdust swindlers. If in the same letter he can say something about policy playing and piracy on the high seas he will

have an argument fully as logical as that which he has caused to be printed in reference to the pigeon shooting tournament now in progress at Coney Island. And we venture to say it would have as much effect.

KILLING THE SPARROWS.—Some of the towns of Georgia which are coping with the English sparrow plague are seriously contemplating the possible good results of a wholesale slaughter with powder and shot and poison. The birds have increased so rapidly in the Philadelphia Zoological Garden Grounds that they are now trapped to the number of twenty or thirty per day and fed to the snakes. This snaring has not diminished their numbers perceptibly, but by perseverance and an increase of snakes we see no reason why our Philadelphia friends cannot solve the sparrow problem. A note in our natural history columns on this subject gives evidence that the birds are in some European cities as great a nuisance as they are here. By the way, are any of our readers familiar with the poem written by Bryant upon the introduction of the birds to this city?

CARP CULTURE.—In all parts of the country people are making carp ponds, some of them on a large scale. No doubt this fish will be plentiful in our markets in a few years, and prove a great blessing in those places where good fish are now not to be had. In the markets of our seaboard, where a wealth of sea fish are to be had, they will never take a high rank, nor perhaps on the great lakes, but in the interior they are destined to rival the pork barrel as a source of food supply. Mr. Harris, in Tennessee, and Mr. A. O. Wright, in Georgia, have both constructed ponds on a liberal scale for the culture of this fish.

THE GROWING taste for sports in America is shown by a glance through our columns this spring and a comparison with former years. In all directions the desire is manifest to give the body its due and to cease the daily grind and toil for a period of rest, change and diversion. The "Fixtures" appertaining to the various departments, of which we make a specialty, are year by year stretching into long lists, the best index to the future. America is destined in time to take the lead in all sports, as it has done in so many things already.

FRESH AIR FOR THE CHILDREN.—The Children's Aid Society, of this city, are doing a most commendable work in securing for the poor children an opportunity to enjoy sea-bathing, fresh air and a bit of free out-door life. The society depends for support upon the voluntary contributions of its friends, among whom should be numbered many of our readers. The particulars of the society's work may be obtained from Mr. C. L. Bruce, the Secretary, No. 19 Last Fourth street.

AMONG the passengers who sailed from this port to Europe last Saturday was Prof. H. B. Roney, of East Saginaw, Michigan, who will spend several months abroad. The present Secretary of the Michigan Sportsmen's Association is Mr. Wm. B. Merdion, East Saginaw, Mich., to whom all communications regarding the Society should be addressed.

HOME AGAIN.—Mr. Thos. Manning has recently returned from Colorado for a short respite from his hard labors in connection with his mining enterprises, which he has carried through to success. He will remain in the city for a month or so to recruit, his headquarters being at the well-known yacht agency, 53 Beaver street.

Governor CORNELL'S VETO.—Just as we go to press we learn by telegram that Gov. Cornell has vetoed the game bill published by us a fortnight ago. This will be a disappointment to those who were counting on July shooting.

COONEY ISLAND.—The weather has been perfect at Coney Island, and the tournament, as we go to press, is progressing smoothly. The scores of the shooting will be given in our next issue.

DEFERRED.—We are obliged to defer a number of communications until next week. We beg the indulgence of correspondents whose communications should have appeared with this issue.

A SUMMER TRIP TO NEWFOUNDLAND has many attractions, which are admirably set forth in the sketch sent by a St. John's correspondent, and published in our sportsman tourist columns.

Southern Illinois is to have a sportsmen's association. A meeting to organize such a society will be held at the office of Dr. J. J. Jennelle, Du Quoin, July 4.

The rabbits are out early in the morning in Central Park; and the rats are out at all times of the day stealing the food of the swans in the lake.

THE FOREST AND STREAM of June 30 will contain a supplement of four pages giving the full scores of the pigeon shooting at Coney Island.

That "Possum will be served July 7th. It will be put on the table hot; and enough will be left over for any one who prefers it cold.

The Sportsman's Tourist.

FISHING AND SHOOTING IN NEWFOUNDLAND.

BY D. W. FROWE.

I PROPOSE in this paper to say a few words about fly-fishing, caribou hunting and grouse shooting in Newfoundland, but first let me endeavor to dislodge the minds of those who think that the island is only remarkable for dogs and fogs and fish, that its climate is damp and disagreeable, and that it is a hopeless, barren and uninteresting country. These ideas about the colony are wholly incorrect; the fogs on the banks do not prevail on the land, the winters are milder than those of Canada and, although the spring is sometimes late and cold, owing to the prevalence of polar ice, the climate from June until October is one of the finest in the world. As seen from the deck of an Atlantic steamer the Newfoundland coast certainly does present a most bleak and forbidding aspect. The country, however, must not be judged from its rude exterior.

Within its stern and rock-bound shores, lie noble bays, deep land-locked fjords, clothed to the water's edge with greenery; the deeply indented coast line affords every variety of magnificent vistas, grand ocean-washed headlands, beetling cliffs and deep gorges with precipitous sides, leading into long, plaiced reaches surrounded by the forest primeval. Everywhere there is an abundance of water, lake scenery in every variety of clear, polished streams, foaming waterfalls; in short every form of wild, natural beauty that the combination of wood and fell and water can produce.

The island has an infinite variety of fruit and berry bearing shrubs, beautiful mosses, ferns and wild flowers. There is not so great a diversity of forest trees as on the continent. Neither walnut, elm nor oak are found within the colony. Their places, however, are well supplied by the several kinds of birch, pine, juniper, poplar, alder, willow and maple, which are exceedingly abundant. Besides her inexhaustible fisheries, that vast harvest of the seas, which English, French and Americans help to gather in every year, Newfoundland promises to be one of the greatest copper-producing countries in the world.

But without further enlarging on the wealth of timber, or the resources of the island, let us turn to the sportsman, for Halifax lies a perfect refuge from the sweltering clime of the heated term in New York, a paradise for the sportsman, a sanatorium for the used-up, and an almost virgin field of exploration for the artist, the naturalist and the geologist. For the dweller in pent-up cities it is worth while making the voyage, if it were only to see the fair, fresh complexioned fisher folk and the stalwart sealers brimful of misty health and redolent of seal-fat.

No where is an American made more welcome than in St. John's. We have had most pleasant and intimate relations with the States from the old colonial days. We do not forget how much we owe to the enterprising capitalists of the great Republic. A New York company has just paid a million dollars for some of the United States' copper mines, and a syndicate is going to build its own railway, which will run through the interior (a vast, natural deer-park), and terminate in the copper region at the northeast of the colony. Cyrus W. Field gave us telegraphic communication with the world, and when the railway is built we shall owe the two great civilizers of our times to Americans. We have no insular prejudices against any of the United States, and we have never seen a Yankee ever against American dollars. The sportsman with his rod and gun will be heartily welcomed, and the capitalist with his enterprise and his cash will be received with open arms.

A visit to the colony may now be made with much more convenience than formerly. The Allan steamers from Baltimore and Halifax touch at St. John's every fortnight, both going and returning to Liverpool. There is also direct communication in the summer between New York and Newfoundland by the Crownley line; the sea passage from Halifax to St. John's takes about forty hours. The best time for fishing is from the middle of June to about the middle of August; the best sea-trout fishing is between the end of July and the early part of August, ranging sometimes as late as the 15th or 20th of the month. The shooting season legally commences on the 1st of August, and continues for the most part until the 1st of September and October, sometimes November. Caribou shooting extends from September to the first of March. The fresh water game fish are salmon, brook trout and salt water trout, the latter being very abundant, and affording the finest sport. The principal game birds are willow grouse, ptarmigan, snipe, plover, curlew, ducks and geese. The sportsman who cares for killing and not merely for the sport, will find abundance on the coast. Of large game there is only one kind of deer, the caribou or reindeer; two bears, Arctic and American hare; of fur-bearing animals the principal are black bears, wolves, foxes, martens, beaver, otters, etc.

Although Newfoundland is larger than Ireland, its population is only 180,000. The great peninsula called Avalon contains more than half the whole population. The remainder are scattered in small settlements over the entire extent of the indented coast line. On the southwestern coast and in the interior are many large plains called by the natives "barrens." These barrens are so many great unreserved grouse moors. Into nearly every inlet on the coast flows either a river or a brook. All these water courses and the innumerable lakes abound with fish. The paucity of population naturally produces an abundance of fish and game, even on the indented coast line. On the southwestern coast and in the interior are many large plains called by the natives "barrens." These barrens are so many great unreserved grouse moors. Into nearly every inlet on the coast flows either a river or a brook. All these water courses and the innumerable lakes abound with fish. arrest a man for debt; Neither will the leane stinging or sucking out the blood of such singularly wild like a flea or by trying him to hit. Most of us should labour, in which time of loitering, those flies will so brand such idle persons in their faces that they may be known from others as Turkes do their slaus."

I regret to say that good old Master Whitbourne lied like an epiaph; these insects bite alike the idle and the diligent, and spare neither Monarchists nor Republican in their voracity. Various more or less abominable preparations will modify their attack, but not that I know will wholly do away with the annoyance. For the angler who minds the bite of a tiny insect, while his sporting soul is set on fire by the whirl of his reel and the dash of a magnificent fish, these lines were not penned; my prongs are for the hearts of those who, like the prince of anglers, have a deep and fervent love for the gentle craft who think with Walton "that God never did make a more calm, quiet, innocent recreation than angling, a life so pleasant and so happy as the life of a well-ordered angler."

Both salmon and sea trout are very abundant in Newfoundland and on the Labrador coasts. They are caught principally by means of nets set along the shore or at the mouths of the estuaries. So great is the quantity taken, even in the vicinity of St. John's, that in June plenty of magnificent salmon may be bought for five cents a pound. The first catch of fish are splendid specimens, ranging from one to twenty and sometimes thirty pounds. After the first run is over the fish are small, not more than three or four pounds. Strangely enough the large fish rarely take the fly. Small salmon or grise from three to five pounds are often killed with the rod, but rarely a ten-pounder. I believe the same thing occurs both in Oregon and in British Columbia. Many reasons are given for this unaccountable freak of nature, but none, I think, that are wholly satisfactory. It has been attributed to the abundance of frequent use of the rivers by nets, while others consider our fish water has been polluted to take the fly. Whatever be the cause, there can be no doubt that the splendid salmon rivers of Newfoundland and Labrador have been shamefully neglected, and that if proper care and attention were bestowed upon them they would become the finest streams for sport in the world. This is the opinion of all experienced English sportsmen who have visited the colony.

Sea trout are caught with an excellence the best angling in Newfoundland. The finest sport is obtained from about the middle of July to the 15th or 20th of August. The trout come down the rivers in the spring, and remain about the mouths of the estuaries until July, when they commence to ascend the streams. Their time for this annual migration is uncertain and depends upon the movements of their favorite food, a small fish called capelin (*Mallotus villosus*). When fresh run from the sea the salt-water trout are in grand condition and afford splendid sport. After August they are invariably to be found in the deep pools on the rivers. I can well remember one special day's fishing on the southwest coast. The party who were with me toiled along the banks of the river until they reached a large deep pool, with a shelving granite rock on one side and a steep bank with overhanging woods on the opposite shore. Believing in my own experience, I had whipped every likely place as I went along; and when the coast was far behind I had reached the pool. As soon, however, as I came in sight of the pool to which my friends had gone direct, I saw a sight to be long remembered—four rods bent double and four individuals in a frantic state of excitement; three had hooked large sea-trout, whilst the fourth was fast to a splendid salmon. Presently there was a gleam as from a molten bar of silver as the noble fish, a twelve-pounder, made a frantic leap; and as he came back he was followed by a smaller trout, the angler, deep in the water, nuddy trying to follow his prey; a report like a pistol-shot, and then the disgusted fisherman holding on to a broken rod and the fragment of a snapped line. My companions' idea of fishing seemed to be that the trout were to be hauled ashore by main strength, but after two more tips were broken and two more lines carried away they began to display a little more skill and patience. The coast was each of us fishing the trout, and aware that they could have held an ordinary fish, and that the trout or salmon that had caused all this wreckage were veritable whales. Naturally I was excited by the scene I have described, and hurried up to mingle in the fray. Just as my flies touched the water two splendid fish rose, and I struck both. My rod had seen good service, and my gear was good; so, after about ten minutes' play and some fifty rods, I managed to land both fish, (three-pounders) and to haul them over the rock. After fitting out my companions with fresh flies and repairing damages, we set to work and had grand sport. In less than two hours we had landed upward of one hundred fine sea-trout, some weighing four pounds, two five pounds, and none under one pound and a half. Thirty-three fish out of my own catch scaled one hundred weight. A day's sport like this is a red-letter day in a fisherman's calendar, and a remembrance of it "a joy forever." There are hundreds of rivers in the colony where just as good fishing can be obtained. Within one or two days' journey by land from St. John's, both in St. Mary's and Placentia bays, capital sea-trout fishing can be had, and whether the angler hits the right time. Every Newfoundland is a fisherman, but as a rule the codfishers despise fly-fishing; they prefer catching these big sea-trout with a pole bit for the most of us (fall anglers), a strong line, a big hook, and a cork float. It is a best to hit, with a herculean jerk the fish is sent flopping on the bank. It is a rough and ready method, but I have often seen these huge polers kill big fish when the scientific fly-fisherman could catch nothing.

Three of Her Majesty's ships of war annually visit Newfoundland for the purpose of protecting the fishery and looking after the many vexed questions arising out of the French and American fisheries in the bay. The presence of the ships and officers has been sportsmen, and profane people say that amongst the important state documents which the senior officer annually brings with him from the Admiralty are to be found lists of all the best places for fly-fishing in the colony, but however that may be, the officers, who are Justices of the Peace for the colony, undoubtedly do a good deal of fishing. One of them, a capital sportsman, writing under the signature of "the Angler" in the London *Field*, gives an amusing account of his naval worship trying a case whilst fishing, plaintiff and defendant shouting their grievances to the sporting Justice from opposite banks. "Mariner's" views on the subject of fly-fishing in Newfoundland will be found to correspond pretty much with my own.

Space will not permit me to say more than a few words to those meeker souls to whom lake-fishing is an unmitigated delight. Fresh water trout are simply innumerable, countless

dozens may easily be caught every where in the colony, varying in size from a few ounces to some pounds. In the sportsman who delights in sea fishing there is cod galore. The more adventurous spirits may indulge in a small Arctic expedition and go to the seal fishery in one of the many fine sealing steamers that leave St. John's and other ports on the 10th of March. Several of these vessels this year killed in less than a month over 20,000 seals.

Sometimes very curious fish are caught around the Newfoundland coast. Of late, some very large devil-fish have been killed, but nothing in modern times comes up to the "queer fish" described by Whitbourne. In the year 1610 in the morning early, as I was standing by the water side in the harbour of St. John's, I saw a strange creature which I espied very swiftly to come swimming towards me, looking cheerfully as it had been a woman by the face, eyes, nose, mouth, chin, ears, neck and forehead; it seemed to be so beautiful and in those parts so well proportioned, having round about the neck all kinds of remarkable things, down to the neck, but certainly it was not a fish, for it was coming swiftly towards me I stepped back, which when this strange creature saw it presently thereupon dived a little under water and did swim towards the place where before I landed, whereby I beheld the shoulders and back down to the middle to be as square, white and smooth as the back of a man, and from the middle to the hinder part poynting in proportion like a broad hooked arrow. When it was proportioned in the fore part of the neck and shoulders I know not. This I suppose was a mare made—now because divers have written much of mare maides I have presumed to relate what is most certain of such a strange creature that was seen at New-found-land; whether it were a mare maide or no I know not, I leave for others to judge." The ingenuity with which this ancient mariner constrains a Newfoundland syren out of a common seal is worthy of Barnum.

I have stated that the deer is the most natural deer park. One solitary settler alone inhabits this vast wilderness—the telegrapher at Sandy Pond. This is the main cause of the great abundance of deer in Newfoundland. In the spring they migrate from the southern and southwestern parts of the coast to the northeast, and return again to their old quarters in the fall. Good shooting is to be had in September by going into the interior. A party of hunters with good Muc-Mac firearms, and a good walker, should be sure of fine sport wherever they came in the right season, and were not too much pressed for time. September is the best month for deer-stalking in the North; by November the deer have returned to their winter quarters in the Southwest. For the September deer shooting take canoe up one of the many rivers that lead into the inland lakes, fix your camp in some convenient spot and hunt around it. It is very rough, hard work, and no one but a keen sportsman and a good walker should attempt it. At least three weeks would be required on an expedition of this kind. Good coastal steamers now ply north and south, and the hunting-grounds may be reached either from the northeast by Hall's Bay, or from the southwest by the Humber River; the latter is the easier route into the interior, but it involves a somewhat longer sea voyage. The naval officer who writes under the *nom de plume* of "Mariner" in the *London Field*, has had good sport for the past two years on the Grand Pond grounds, getting there by way of the Humber.

Whilst it is an indubitable fact that there are thousands of deer in the interior, the vast wild country over which these countless herds roam, and their shy nature will always make stalking a somewhat precarious sport. This very difficulty is probably an added charm in the eyes of many sportsmen. Winter shooting (tracking the deer on the snow) is a far more methodical and less hazardous mode of shooting. I fancy I hear some well got up and gairred son of Albion pronounce it, "Ah, beastly lutechery," quite American, "doocid peat-hunting, ah!" Now, why following a wild animal by his footmarks on the snow should be viewed in this way, whilst stalking the same animal by his tracks on the marshes or the barrens is considered noble sport, is quite a puzzle to me. A thing, I am sure, that no colonial fellow can understand. For the winter shooting the sportsman may visit St. John's at any time that suits his convenience. From Christmas up to the beginning of February let him take the coastal steamer to some point on the southwest coast, where he will obtain either native or Indian guides. On the 17th of March sail a friend of mine in company with some Indians killed eleven deer in one day near Bay de Nord or Leming Bay, as they say our herds in which an informant considers there must have been one thousand deer. In nearly all the great winter hunting grounds the settlers have rude huts for shelter called in Newfoundland "hills." In Bay du Nord one sportsman uses dogs and sledges, but even without these luxurious appliances the walking is much better in the interior than it is in the autumn; the cold is never very intense, and there is a dead certainty of getting a shot at a caribou. To the lovers of big game grouse shooting will be considered very tame and humble sport, but to my own mind good grouse or snipe shooting over well-trained dogs is the finest amusement in the world.

Of all the joys that sporting yields,
Give me to hunt the noble fields,
Quite a boyish wish.

This sang Somerville two hundred years ago of partridge shooting in England. Pretty shooting certainly if you know a Duke who has good manners, but tame and unexciting sport when compared to grouse shooting over the wild, windswept barrens of Newfoundland. Here as far as the eye can reach are level plains alternating with undulating hills. There may be no "bonny, blooming heather," but there is a wealth of profusion of ferns and wild plants fit concomitant for this truly indigenous wild sport of the West. With good dogs and straight shooting powder bags of ten and fifteen brace may be made in a day, and in killing that number of birds the sportsman will have enjoyed genuine, good, manly sport.

All I ask of my readers is to come and judge for themselves about the sporting capabilities of this unknown island of Newfoundland. The trip is short and inexpensive, the country is the origin field of exhilaration for sportsman, artist and naturalist, and for all there is health and lusty vigor in this new playground of North America.

GEORGE IS WELL—Gouverneur, N. Y., June 15.—In FOREST AND STREAM, of May 26, "X" (CAUTION, N. Y.), reporting some of the exploits of the favorite guide George Muir, stated that "George" was out of health this season, in which he was in error. "George" was sick a short time early in the spring, but is fully recovered, and saw the woods; he had just returned from a successful trip in the woods.

Natural History.

THE ANTLERS OF DEER.

THE theory that the spike buck is a new species developed on account of the greater utility of the spike as a weapon of offence has been pretty thoroughly disposed of, and is not likely to be resuscitated at once. A valued correspondent has brought to our notice a letter written by him some years ago to the *Ceruus* town *Opus* which contains much valuable information in regard to the horns of a deer that he reproduces here. After stating the novel theory that the spike horned deer is a new species the writer says:

Now, to any one who knows anything at all about the nature and habits of deer, this new fangled species will be only laughable. The transmission business would sound plausible enough, if it were not for the fact that the horn is not a permanent peculiarity, either in time or form. The deer's horns are not completed until he runs the velvet off in September, and he loses them again in January; while as to form there is no rule and any amount of variety. The spike buck is an eighteen months old deer; born in the spring, his horns begin to grow the next spring and are hard spikes in the fall. If he is not strong enough and active enough, he will not whip off the old veteran bucks and the next year he adds a prong on his new horns and becomes a "forker." The popular idea of suitable food, the conditions as to undisturbed solitude and plenty of food, the true idea is that the deer adds a prong to the main beam each year, and that the deer with four prongs on a beam is five years old—in his fifth year.

I have said "the true rule," but true under certain conditions, and my experience running through the last twenty years puts it about this: The normal growth of a deer's horns, where the deer lived undisturbed by either man or wild animals, and had plenty of suitable food, would be represented by a spike at a year old, that is in the second year; a forked horn at two years, and a prong added each year—the deer being called three-year old, four-year old, etc., or three-pronged buck, etc. After the deer had passed the meridian of his life, however, his horns would be irregular as to size and the number of prongs, so that his horns would no more determine his age. In reality we find this rule working, but with considerable exceptions. The causes of these disturbances to the deer are subject from both man and deer, and frequent changes in location of haunts and character of food and water, and the horn when young being very soft, and brush and trees plenty in the deer country, very few deer manage to carry their horns from spring to fall without more or less harm coming to them. So that out of a hundred pair of deer-horns from deer killed in the same season and locality, not more than twenty per cent. would be tolerably even, and not more than half those could be called perfectly so. I killed this fall a buck whose saddle weighed fifty-five pounds, and took from his head as perfectly even a pair of horns as I ever saw, weighing four and a half pounds, with five points on a beam; but this deer was killed in a country where the chances were a hundred to one against his having been disturbed during the season by anything unless a panther. There are no wolves there. I killed the same region a year or two ago, a buck whose horns cut above the joint and with no saddle weighed forty pounds, while his horns were two spikes, one of which made a feeble attempt to fork. A deer killed a day or two after, not, he, had four points on a beam on its horns, while the saddle, with the legs cut below the joint, only weighed forty-two pounds. I killed a deer in 1874, whose horns had fewer prongs and were not even half the size of the first one I mentioned as killed this year, and yet he was a "forker." I have seen thousands of pairs of deer horns from deer killed in all parts of the country, and yet have rarely seen two pair exactly alike. I have seen one born straight, the other curved: one with no prong, the other with several; a head of horns with a third horn growing between the two regular ones. I have a pair hanging on my wall at home, with twenty-six points on the two beams together.

I have also a pair of horns which, if I did not think too highly of the natural sagacity of the deer to suppose that he would so far fly in the face of Providence and the experience of the world for the last few thousand years as to walk in the Darwin runways seeking pasture, I might judge the buck who were then to have adopted on the natural selection principle. The buck lived in a dense windfall, surrounded by a desperate country of thick spruce, laurel and cedar. His horns were large and well shaped, set of horns being troublesome there, this deer crossed his horns in front, an inch, so that they would part the bush instead of catching in it. This deer, by reason of his living in the windfall, the natives knew as "Hurricane buck."

The most curious head of horns I have ever seen came from the head of a deer killed by a friend of mine two years ago. These horns are very thick in diameter of beam, but the beams, instead of curving, stand straight up like candlesticks a foot or more high, and then the top spread out with a number of points starting from the same base, something like a man resting his elbows on a table and holding his forearms erect with his hands and fingers half spread out. The argument against the transmission and survival of the fittest business, it that there are always in any one year more deer over the spike buck age than under it, so that if each deer transmitted his own peculiarities to his descendants there would be more deer with large heads than small ones.

But what the spike buck transmits is not the peculiarity of having straight horns, but the faculty, among others, of shedding his horns every year and growing a new pair, of which the size and shape depends on a variety of circumstances. If the spike horn is making its appearance as a new variety in the Adirondacks, it is simply because the deer are not so much so recklessly in the country in summer and market hunters in winter that the average life of the deer has been reduced to such a low point that no buck, as a rule, has a chance to get beyond the spike age.

BAINBRIDGE, Ga., June 7.

ENTIRE FOREST AND STREAM:

In your issue of the 2d inst., the question is asked: "What is a spiked buck?" Well, Mr. E. A. Bonnett to the contrary notwithstanding, it is a young *Ceruus virginianus*, not a new species as he claims. Both naturalists and old hunters know when this species abound, by actual observation, that spiked buck is but the young of the *Ceruus virginianus*. Catch one and raise it, as many of us have done when this variety exists, and all doubts will be at once dis-

pelled on this question. The first year the spike appears, the second year two, the third three, and then a full head of horns follow.

O. G. GRILEY.

THE SWIMMING POWERS OF SERPENTS.

RATTLESNAKES in Florida often cross extensive waters. In May last while fishing in the Halifax River, Eastern Florida, which is a sound or bay of salt water from one to two miles wide I saw a rattlesnake swimming from the mainland to the peninsula. My companion, who had lost many dogs by snake bites, and was their enemy in consequence, pulled up the anchor to go and kill the snake. It swam strongly and swiftly, but as it saw that we should intercept it, it turned at bay, came toward us, and as we approached it threw itself into a coil to strike. It was, however, easily killed by a blow of our oar, and it measured about five feet in length with a diameter of four inches—small for the Florida species—which often grow to be seven or eight feet long.

A few days after, fishing in the same river, we saw a racer, or whip snake, crossing the river. It was pursued and it turned to fight although without poisonous fangs. It was about eight or nine feet long, and as thick as a man's arm. It swam boldly and well, with the head raised a foot above the surface. Being a harmless or rather useful serpent which kills many rattlesnakes and moccasins we allowed it to go unmolested on its way.

The rattlesnake is often found on this peninsula between the river and the ocean as well as on the mangrove islands in the river. Their food seems to be small animals, such as squirrels, rabbits and rats, the latter of which are abundant, also such birds as they can capture. S. C. C.

THE LOON.

GRANT NORTHERN DIVER.

WINGED creature of moose, bear, caribou, Creatures of sylvan nature's fangs induce, With primitive and uncouth forms induced, And cries and voices heard to soil the wood. Such screams and wails as articulate nature knew, When man in caves still harkens to the mew. Lone lakes revere the loon, and he is heard, In their deeps the hunter's eye, Then loonish him from afar with clamorous cry, As of derisive hum, and of the breeze, Where falls the shadow of the desert pine On covers of wild-water meres, from oar to way With swan-like strokes and in his dwelling, Startling with screams unearthly twilight grey.

Deepening the wilderness of the forest old, Which, hushed and sad, seems brood on the days, When batmanths, crusting, tooned its brachy naeze, And beaus and men were of a larger mold, In immemorial years of that far past, Oh, rapturous bird, thy kindred screamed and dived, And with the loonoo and reindeer have survived, Where primitive woods their mystic shadows cast, In a still vigorous progeny, which soon The hunter's rifle will exterminate, Soe live buldges and the plover's stave, Still sitting in the light of sun and moon, As fast as vanishes the forest green, Will creatures of its shade must meet their doom. —B. W. BALL, in Boston Herald.

SHARON HILL, Delaware County, Pa., June 9, 1881. Editor Forest and Stream:

While the loon subject is receiving attention in your columns, I would like to mention of my own observations in reference to this bird. I have frequently noticed them in the lakes in the interior of Canada, but I never saw more than two young loons accompanying the same parents, and I naturally conclude that they lay only two eggs. The young loons frequently sit upon the back of the parent while swimming. I have often pursued the young loons in a boat with the view of capturing one, but never succeeded, as they are expert divers, even when quite small. On such occasions sometimes the old loon would rush toward me, elevating its body out of the water and flapping its wings frantically, apparently endeavoring to inspire terror by its actions. I have never seen a loon on shore, and I do not think they go on land, except to their nest, which is said to be only a few inches from the water. It is not uncommon to see several loons (old and young) swimming together. When approached they all dive and separate from each other. Loons are quite abundant in the Gulf of Mexico in winter on the west coast of Florida, but I have never seen them in fresh water in that State. They are sometimes found napping on the water in the same. A friend of mine lately sailed close to one while asleep and shot it. I shot two loons on the west coast of Florida lately. They each weighed six pounds. JOSEPH W. WILCOX.

THE PHILADELPHIA ZOO.

LAST week the Philadelphia Zoological Society purchased from a captain of a sailing vessel flying between that port and South America eight especially fine specimens of the boa constrictor, those formerly at the Garden having succumbed to the rigor of the past winter. The new boas average about eight feet in length, are in good condition, and immediately began feeding on being put into their new quarters.

The pair of large Florida alligators which were lately sent to the society died very soon after their arrival. At first it was thought the change of climate caused their death, but dissection showed that one of them had a number of hook-stones in his head, and in the other a large bullet was found.

"Henry," the large hahoon which is chained a short distance from the monkey house, has had given him a female companion of his race, and the two appear to be on the best of terms. "Henry" is ever ready to throw back the sticks and stones with which the small boys pelt him. So expert is he in retaliating with these missiles and with so much power does he cast a stone that his keeper has dug up all the stones that were in the ground within Henry's reach, to prevent him from doing injury to the visitors.

English sparrows have increased so rapidly in the Philadelphia Zoological Garden that they are being caught and utilized as food for the snakes. Twenty or thirty are daily snared, and yet the flock seems to be as large as ever.

The wild fowl in the Garden wintered well and are in possession of their old quarters in the lake.

The upper Delaware and Schuylkill rivers are still muddy, so clouded as to render it impossible to fish for bass with any

success. We hear of but few lakon. Some of our anglers have done well with the perch in Timber, Raccoon and Oldmans creeks. I am still hearing of more woodcock having bred within the city and just beyond the city limits. Homo.

THE VIENNESE SPARROWS.—In a Paris exchange, the American Register, we find this bird which might probably be noted upon in some of our American cities: "It would seem as though the Viennese sparrows were more numerous and more noisy than their kindred in other cities, nay, in any other city in the civilized world. At all events the Viennese City Council has appointed a regular appointed hunter, who, by virtue of his office, is to see to it that the sparrows in the city park stop their incessant noise, no longer shall the few trees therein, and leave the singing-birds in peace, which are too modest to cope with their troublesome neighbors, and in order to best and practically accomplish this mission, to reduce their number by powder and shot. Lest the sparrows practice deceit at sight of the official executioner, or of singing-birds take flight at the unprovoked detonations of the numerous instrument the functionary in question has been provided with an argument not less brings down from forty to fifty marauders per diem, which, tastefully strung, he sends to the competent municipal father as a token of his properly attending to his duty. If the sparrows do not quickly perceive that they are anything but welcome guests in the Austrian capital they must be thick-headed indeed."

SOUTH KENNE, N. H., June 14.—Editor Forest and Stream: In your issue of June 2, Mergus, of Pocomasset, Mass., speaks of loons laying white eggs. I think Mergus is mistaken, for I know the nesting places of both species, and have in my possession an egg taken from the nest of the larger one, and it is light brown or gray with dark spots. I have taken their eggs for several years and have never found but two.—MART.

Our correspondent, Mergus, only reported what was told him, and not his own observations. The egg of *Colymbus torquatus* is brownish drab in color, with dark spots. Its color in fact is something like that of the woodcock's eggs, but the shade is darker throughout. The egg of the sandhill crane also resembles in color that of the loon.

WHAT IS IT?—Pine River, Wis.—A gentleman friend has caught what he calls a "Samson fox," a red fox with short wool like a lamb. Is it a separate species or a "freak of nature?"—MALLARD.

Game Bag and Gun.

THE NEW JERSEY SOCIETY.

PLAINFIELD, N. J., June 11.

THE prospect of July woodcock shooting in this vicinity is fair. Numbers of birds are reported as having been seen, and the recent wet spell will undoubtedly keep them with us longer than as might be expected. But few quail are heard whistling in this vicinity while rabbits are plenty. A fair number of grouse are reported as being seen on the sides of the adjacent hills.

It is the intention of members of the game societies in this section to rigidly enforce the game laws regarding woodcock shooting as they do other existing game and fish laws, also the non-resident law of this State, which provides that no person or persons non-residents of this State shall kill, destroy, hunt or trap any game whatever, at any time, in this State without first complying with the by-laws of the game societies organized or to be organized under the laws of this State, under a penalty of \$50 for each offense. Members of societies for protection of game and fish are empowered to make arrests of persons violating the same. The New Jersey Game and Fish Protection Society, whose headquarters are at Plainfield, N. J., W. L. Force, secretary, are banking many members of "non-residents" from New York and Philadelphia who see the wisdom and justice of such a law. By the payment of their annual dues of \$2, which money goes toward stocking sections with game and prosecution of violators of the game laws, they find when the time set by law arrives for shooting and fishing that their money has been well invested. Since the organization of this society in 1879, "pothunting" has rapidly decreased in this section, and I trust the time is not far distant when I can say it is entirely eradicated, and every miserable "pothunter" brought to grief.

The above society have established an agency at No. 2 Cortlandt street, with Mr. Fred Volkman an honorable Vice President of the same, who is authorized to receive names of new "non-resident" members, and grant them a certificate of membership. Also an agency with Mr. J. F. A. Lexteur, at Philadelphia, cor. Seventh and Pine streets. Fox.

THE STATE SPORTSMEN'S CONVENTION.

THE twenty-third annual convention of the New York State Association for the Protection of Fish and Game was convened on Monday, June 20. During the morning large parties of delegates arrived from the northern and central parts of the State, and at two o'clock the convention opened and lasted to those present. From ten until eight o'clock in the evening the time was passed by the delegates in sight seeing. At eight o'clock the delegates and their friends all assembled in the spacious east dining-room of the Hotel Brighton, the members being welcomed to the hospitalities of Long Island by Mr. George A. Chappell, the President of the Long Island Sportsmen's Association. After this came an excellent instrumental music by Coker's Quartette, and then followed the

ADDRESS OF PRESIDENT ABEL GROOK GENTLEMEN, Members of the New York State Association for the Protection of Fish and Game: On behalf of the Long Island Sportsmen's Association, and in the name of all our fellow sportsmen and citizens of this section of the State, I congratulate you upon your re-assembling, and heartily bid you welcome.

Two years ago thirteen representatives of the clubs of Long Island participated, for the first time, in your Convention at Rochester. The consideration shown them is green in their memory. Strangers in a strange land, they found friends, and returned to relate to willing listeners the story

of their adventures, and to advocate the propriety of an attempt to induce you to visit their home by the sea.

Encouraged by the sympathy of our local clubs, the Long Island Sportsmen's Association was organized, and in harmony and an honest wish to entertain the members of the State Association, 55 delegates from this locality in Convention assembled at Seneca Falls last year, extended to you a cordial invitation to hold the Convention of 1891 at this place. The unanimity with which you responded was alike pleasing to them and gratifying to their club associates.

Appropriately they were permitted, at the muzzle of the gun, if not at the point of the bayonet, to bring with them for safe keeping the three State prizes. Prized indeed were they, but overshadowed by the greater prize of your goodwill and confidence, as evidenced by the manner in which you met them.

They have faithfully endeavored to make your advent among them pleasant to you and notable in the annals of your meetings. Energetic committees have labored day and night. Many varied and valuable prizes have been provided to reward your skill in the proposed friendly competitions with the rod and gun. Thousands of dollars have been expended in the many detail arrangements for your comfort and pleasure, and the result is within your control. You have congregated from the various cities, villages and hamlets of our great "Empire State," and present an imposing spectacle to those who are watching your deliberations.

After an existence of twenty-three years, the purposes and accomplishments of this Association are scarcely known outside of the western and central portions of the State. Why should these beautiful trophies be presented? What has this organization accomplished? In what work is it engaged? What achievements await its future? Is it beneficial or injurious to its members and to the public? Is its existence a subject of congratulation or regret? These are pertinent questions which are repeated upon every side, and should ever be borne in mind until a conclusion is reached by the members of the Association.

In 1859, at Geneva, under the style of "The Sportsmen's Club of the State of New York," it sprang into existence, and through its fostering care the first reasonably consistent Game Law of the year 1860, was enacted and enforced. In 1865, at Niagara Falls, its ranks having been increased by the addition of other organizations, it adopted a Constitution and By-Laws of the general government of the aggregation of clubs under the new name of "The New York State Sportsmen's Association." Still later, in 1873, at Batavia, it adopted its present style of "The New York State Association for the Protection of Fish and Game." The original title of "Club" was suggestive of the social character of its deliberations. The present name indicates its purposes without robbing it of those elements which bind man to man in the strongest ties of friendship and brotherly love. To cultivate the latter, contests are arranged, and friendly emulation encouraged, and skill with the rod and gun rewarded.

The pastimes naturally attract more attention than the business portion of the meetings, and tend to excite unwarrantable criticisms.

To this Association belongs the credit of initiating bench shows of dogs in this country. They were held at Oswego in 1874, and at Watertown, in 1875.

By the assiduous efforts of Seth Green and his co-workers and members, fishculture has been proved to be practicable and profitable, and many of our waters which had become depleted of their finny denizens have been re-stocked and furnish sport and livelihood to many.

The reckless and lawless destruction of forests of the North and of Adirondacks, with the concurrent effect upon the canals and rivers, has been stayed, and the territory, with its variety of game animals, birds and fish, largely guarded and protected through the efforts of influential members of this organization.

In number of clubs and of members: in wealth, in influence, the Association stands without a peer and can and should afford to be proud.

The protection and preservation of fish and game involves two methods of procedure. In the first place, suitable game laws are required, to restrict and regulate the destruction in order that the game may be afforded an opportunity for natural reproduction.

In the second place, artificial propagation, or re-stocking shows of dogs in this country. They were held at Oswego in 1874, and at Watertown, in 1875.

brand, was then sung by the glee club of that gun club assisted by the Fountain Glee Club, and received with marked favor by the assembled sportsmen, who indeed from the first had manifested a generous tendency to applaud everything that was offered for their entertainment. Encores were the order of the evening.

Mr. Wm. E. MacMasters, of the Albany *Argosy* and the Philadelphia Press read the following poem which he had written for the occasion:

FIELD SPORTS.

A Poem of Creating,
BY WILLIAM E. MAC MASTERS.

I.
Hail, brother sportsmen, of the Empire State,
I give you greeting in my humble lay;
More noble in art, or sterner more truly great,
Never saw I the heroes of our painless day.

II.
From Erie's shore to Coney's Island's strand,
From the old "North Woods" to the "Southern Tier,"
Here where the Atlantic waves our native land,
Again our contests signalize the year.

III.
In battle war matched sports in hand,
With eye undimmed, nor spirit as staunch as steel;
You'll find your honors from a comrade's hand,
In emulation which only sportsmen feel.

IV.
Like the bold champion of Admetus's pride,
Where every plain sheds lustre on the scene;
Here all her thousand our contests decide,
New York gives welcome to all clubs I weed.

V.
Here then on wings potent we will try,
Nor hope our Muse to amuse you with her lay;
Yet clip not our pinions ere the birds do fly,
Since ammunition is not scarce in this day.
Then pass the rubber cup with joyful cheer,
And cry a sportsman heroes of the year;
For birds poise, and the wind whistles and sings,
Do flutter kiss in their loveliest on the wing.

VI.
From scenes like these of gay and mimic strife,
We turn exultant to the sterner life:—
Where they sing to the sun, and the moon,
And merry and sad, with resounding horn,
And rouse the drooping dogs to eager ear,
And the well-trained pack with cautious pace,
Point well the course with an unerring trace,
While field and forest resound with flying war,
Till vale and forest repeat the loud refrain
While the warm sunset draws on the deep mouthed train.

VII.
Hurrah for the parties
And sports of the field,
Where grouse in full cover
Lie closely on the hill,
Where mountains and forest
So deep tangled give,
Interfere with our dogs,
Or warty the deer,
Where the tall odden acres
Like oases are spread,
And the birds are still waiting
Our deluge of lead!
"He'll" "What a game!"
That sound to the ears
Of full-blooded pointers,
Whose inland it chases:—
They dash on like darters,
Till the warm scent,
Uprising leads to the woods,
Where now more lie at—
Staunch as old veterans
To lead "points" they stand,
Each "backing" the other
And waiting command!
Now swif on the wings they rise,
From stable they rise,
The quick blood is mounting,
How cheerfully they strike,
Escape? It is hopeless,
Our scattering lead,
Is thundering for them!
And the dogs "mark" them, dead!

VIII.
When summer's o'er and autumn mild succeeds,
And quail and partridge on the heather feeds;
Before his lordly master the hunt begins,
And beat the cover carefully and slow.

IX.
When the days shorten and the nights grow chill,
And softer light doth rest on vale and hill,
The sportsman then with his hunting ground
For lakes and streams where water-fowl abound,
Where heavy geese scream up against the sky,
And swift-winged teal, and snipe, and widgeon fly,
Where skies are darkened by mallard in their flight,
And the rice fields are garrisoned at night.

X.
Now comes the sport which gives such mainly zest,
Wild fowl shoot on the wing, and test
To measure speed and distance, and to bring
A teal at sixty yards upon the wing—
Or lead a winged teal to the net,
On some safe log, convenient to your will;
Requires a master in the sportsman's art,
Whose every nerve obeys his head and heart.

XI.
Hunting in all phases, the field or flood,
Makes men more hardy, more humane and good;
Gives health and pleasure, sets the spirit free,
Teaches love of law, and respect to the deer;
And more than this, it teaches love of law,
Which will not kill to feed a greedy man,
How the looks brighten of the sportsman's arch,
For quail or partridge messenger in march,
With what contempt true sportsmen shun the spot,
Whereon they throw their spears and arrows,
Poor worthless d—, his head beneath a price,
Else Counts might ask if "Pott"-'ers hunted twice.

XII.
Gladly would I sing when our hunt is o'er,
The pleasure which still in the field or store;
The smoking victory of our simple fare,
Appetites keen as is the morning air;
A hospitable cheer, and merry name,
Each guest a brother where'er he came.

XIII.
A corollary greeting, then, brothers of a race
Whose deeds are sung in many a loving chase—
Heroes whose lives by their hands are made mine,
Are wreathed with chaplets—human, yet divine,
May scenes like these their annual pleasures bring,
And birds more proud of their merits sing,
While here with new fields and contests at bay,
I give you welcome in my humble lay.

The roll called showed that the clubs, represented by accredited delegates, were: Phoenix Sportsmen's Club, Seneca Falls; Phoenix Gun Club, Brooklyu; Spencer Sportsmen's Club, Lyons; Adirondack Sportsmen's Club, Adams; Long Island Shooting Club, Brooklyu; Fountain Gun Club, Brooklyu; Jefferson Sportsmen's Club, Watertown; Audubon Club, Rochester; Brooklyu Gun Club, Brooklyu; Monroe County Sportsmen's Club, Rochester; Genesee

Sportsmen's Club, Irondequoit; Niagara Falls Shooting Club, Niagara Falls; Corning Sportsmen's Club, Corning; Wayne County Sportsmen's Club, Lyde; Rochester Gun Club, Rochester; Danville Sportsmen's Association, Danville; Seneca Falls Gun Club, Seneca Falls; Long Island Shooting Club, Brooklyu; Le Roy Sportsmen's Club, Le Roy; Deer Richmond Club, Batavia; South Green Rod and Gun Club, Danville; Forrester Club, Buffalo; Queen City Club, Buffalo; Washington Gun Club, Buffalo; Central City Sportsmen's Club, Syracuse; Central Gun Club, Troy; Onondaga County Sportsmen's Club, Syracuse; Onondaga County Fishing Club, Syracuse; Seneca Gun Club, Seneca Falls; Nonparrel Sportsmen's Club, Rochester; Lewis County Sportsmen's Club, Lowville; Garden City Gun Club, Henipstead; Livingston Sportsmen's Association, Genesee; Anduhon Club, Buffalo; Falcon Gun Club, New York; East Buffalo Shooting Club, East Buffalo.

After a tenor solo, "The Standard Watch," by Mr. Fred. Harvey, of the Fountain Glee Club, and the rendering of a song, "Toasi," by that club, the follow ng new clubs were admitted to membership in the State Association: Ganu and Fish Protective Association, of Richmond County, Staten Island; Coney Island Rod and Gun Club, Brooklyu; Prospect Gun Club, Brooklyu; Eastchester Gun Club, of Westchester; First German Gun Club, New York City.

The essay prepared by Gaston Pay was then read by Mr. F. K. Castner, of the Nonparrel Sporting Club. It is printed in another column. At the conclusion of this reading and after the singing of "The Loyal 8," by the Washington Glee Club and a tenor solo, "Dixie's Thou But Know," by Mr. Fred. Harvey, it was voted, because of the lateness of the hour, to suspend all the remainder of the programme except the necessary business. For the next convention the three places named were Niagara Falls, Danville and Lyons. Horace Salsby, of Seneca Falls, and Dr. E. L. Sargent, of Watertown, were appointed tellers of the election and, on informal ballot, the following result was obtained: Niagara Falls, eighty-four; Danville, seventy-nine, and Lyons nineteen, which were withdrawn. On the formal ballot the vote was announced: Niagara Falls, eighty-eight and Danville eighty-seven. The convention will therefore assemble at Niagara Falls the coming year. The meeting then adjourned to a sumptuous collation, when the scintillations of wit, brilliant repartee and jovial merrymaking were prolonged to a late hour, even for Conny Island.

The adjourned meeting of the association was held at the Hotel Brighton, Tuesday evening, Mr. John B. Sage, in the chair. The report of the Treasurer, Mr. W. J. Babcock, was read and showed a balance of \$215 86 in the treasury. The election of officers for the ensuing year resulted as follows: President, Mr. Sheldon T. Murray, of the Niagara Falls Shooting Club; First Vice-President, Mr. Robert Robinson, of the Long Island Shooting Club; Second Vice-President, Captain W. L. B. Steers, of the Coney Island Rod and Gun Club; Recording Secretary, Mr. John B. Sage, of the Forrester Club, Buffalo; Corresponding Secretary, Mr. William Pool, of the Niagara Falls Shooting Club, and Treasurer, Mr. W. J. Babcock, of the Monroe County Sportsmen's Association, of Rochester. The Southern Ulster County Club was admitted to membership of the association.

The retiring President, Mr. Abel Crook, and the various committees of the present convention were tendered a vote of thanks for the able manner in which they had conducted their duties. A motion was made that the number of birds to be shot at in the coming matches should be reduced to seven, but it was decided to leave it to the judgment of the officers of the Long Island Sportsmen's Association.

Mr. M. A. Stearns, of Rochester, gave notice that at the proper time he would lay a resolution before the Standing Committee to the effect that any man who should challenge a man for unfair loading, without proper evidence, should be well punished for the offense.

A resolution was offered to the effect that as Mr. Bergh was endeavoring to get a bill passed to prohibit trap shooting in this State, the members of the different clubs request their members of the Legislature to oppose any such bill, but before any action was taken the meeting adjourned to meet Thursday evening to discuss the game laws. The Driving Park is easy of access from Hotel Brighton, and handsomely decorated for the occasion. Prominent among the well equipped tents are the Long Island Sportsmen's Association large three-pole tent, fully eighty feet long; Phoenix Gun Club of Seneca Falls; the Monroe County Club and Rochester Gun Club, both of Rochester; the Audubon Club of Buffalo, the Spencer Club of Lyons, the Dean Richmond Club of Batavia, the Onondaga County Club of Syracuse, Seneca Gun Club of Seneca Falls, East Buffalo Shooting Club and the Forrester Club of Buffalo.

Unfortunately a sad scene occurred on Tuesday evening in the destruction by fire of the tent of the Monroe County and Rochester Gun Clubs, containing several valuable guns with their equipments as well as the stores and supplies belonging to the members. This is the first accident of the kind that has ever occurred in the history of the organization. The official list of scores will be published in the next issue of the FOREST AND STREAM.

NEW YORK GAME LAW.

AS soon as it was announced that the Governor had signed amendments to the game law we telegraphed and wrote to Albany a copy of the same. In response we received from a prominent member of the Assembly the bill already published. A telegram just at hand now informs us that the bill signed by Governor Cornell was one referring to fish only, and that he refuses to sign the one which we published upon the strength of the representations made to us by the members of the Assembly referred to.

The law respecting game will therefore remain the same that was in force last year.

We regret exceedingly that we and our readers should have been mis-informed.

A BARGAIN IN RIFLES.—We call special attention to the card of Messrs. William Read & Sons, of Boston, Mass. They offer a real bargain in rifles, and purchasers should avail themselves of the opportunity to secure a good arm at a low figure. The firm are thoroughly reliable and their representations are to be accepted as square.

See adv. of large sale of Archery Goods at Auction on Friday, June 24.

THE GAME BIRDS OF LONG ISLAND.

(Delivered before the New York State Association of Sportsmen at their Twenty-third Annual Convention, Coney Island, N. Y., June 20, 1891.)

THE occasion that has called us together, is one of momentous interest not only to us individually, but to the people at large. Our main object and primary aim is to examine into, and recommend the best measure for the preservation of the game of our island, that of late years has been so ruthlessly destroyed; and if some adequate check is not put upon this wanton and reckless destruction, the time is not far distant when many species of game will be exterminated. Our efforts to protect our game birds from extermination by securing the enactment of proper, concise and stringent laws to that end, will ensue more than one purpose; not only will it protect our game from needless destruction, and allow their decimated ranks to recuperate by natural causes, so that the true sportsman may in the near future be enabled to find in plenty what he now so often seeks in vain, but it will do far more practical good in its benefits to the agriculturist, and the protector of his crops, than it will do against the heartless and wanton destruction of the smaller birds, so many of which, living more or less upon insect life, keep in check the ravages of these silent and voracious pests.

All tribes of animal life were created to subsist upon some other, thus to keep in check their otherwise too rapid increase; this is seen even from the highest form of animal to the lowest form of insect life. No insect so minute but some other tribe of insects are their foes, and subsist upon them, another tribe on them, and on so forth. Were it not for this wise provision of nature, the earth would be over-run with insect life. It is here that the usefulness and necessity of birds are most apparent. It is well known to all who have made the subject a study, how much the agriculturist is indebted to the feathered tribe for the good they subserv by keeping in check the ravages of insects. Why, a single pair of insectivorous birds no larger than a common sparrow, will destroy more obnoxious insects in a day than any man. Have you ever stood and watched our little nuthatch, titmouse or creeper, hopping from twig to twig, prying into every crevice, with its sharp and pointed bill picking out even the minutest egg of insect life, examining every leaf and twig and seizing its insect prey with amazing dexterity; restless, ever on the move, doing a better day's work for the farmer than any of the most ablest man he hires; and yet these little benefactors to man are nearly all shot down by any ignorant lad who is enabled to gain the use of a rusty gun. I would not so deprecate the name as to call him a sportsman, this merciless destroyer, who kills at random everything that is clothed with feathers, killing perhaps in one day's shooting the authors of more substantial good to the country at large; more good in many places, than he himself ever confers upon his country, society or himself.

As an illustration of the inestimable value of birds in destroying insect life, a better perhaps could not be offered than that of the introduced European sparrow. Most of you will doubtless remember, before the introduction of these birds, that the maple trees in our streets were infested by a measure worm, the larvæ of a delicate white moth—the *Ennomus subsignaria*; these worms were so exceedingly numerous and annoying that no one could pass under any trees on which they were wont to hang, without being stung in the flesh, or attaching themselves to some part of the clothing, besides this they stripped these beautiful trees of every vestige of verdure, in many cases destroying them; yet as soon as the noisy and pigeonicous house sparrow was introduced, so rapidly were they exterminated that now not a single one can be found on any of our shade trees.

It is true that many birds are very destructive to the agricultural interests, these are chiefly confined to the gregarious or sedentary birds, though a few omnivorous ones do their share of destruction. Foremost of those most destructive is the well-known boblink—*Dolichopus virginicus*; the rice or reed bird of the Southern States. In the North they commit considerable havoc in the cornfields, and in the South the spring wheat and barley, and later the rice fields suffer immeasurably by this depredator.

Another great enemy to our cornfields is the red-winged blackbird—*Agelaius phoeniceus*. So well known is his character that in many districts he is called the corn or maize thief. But whilst a few species are enemies to the farmer, by far the larger portion are his friends.

It is chiefly to the insectivorous birds that we must look for protection from the depredations of insects, and by reason of the incalculable blessing they are to the agriculturist, and the rich and varied melody nature has endowed so many of these species with, they well deserve the most careful care. A number of the species belonging to the following families or genera should ever be wautonly destroyed:

None of the Sialia or bluebirds, none of the Sylviidae or warblers, a large family of strictly insectivorous birds; none of the Paridae or Titmice, or the Certhiidae or creepers; none of the Vireos or greenlets, or the Sittidae or nuthatch; none of the Tyrannidae or fly-catchers, or the Progotyidae, wrens; none of the Picidae or woodpeckers; none of the Caprimulgidae night hawks, and none of the Hirundinidae or swallows.

All the species belonging to these groups are highly beneficial to man, and include the main body of our strictly insectivorous birds.

Quite a number of families of omnivorous birds are equally worthy of our protection, in recompense for the good they conserve in keeping in check insects, and without their aid into consideration their melody. The chief are to be found in families: Merulidae—Thrushes; Icterine—Hairy-nests and Tanagers.

Now, by well-defined protective laws such, as your Association desire to have enacted, you would not only restore the decimated game, but also be the means of protecting our useful birds from wanton destruction. From a long residence in your fair, and intimate acquaintance with the western section of our island, I am fully aware how not only our game has been thinned out, but also our small birds. The time was, when it was the boast of the Long Islander that his favored Island was frequented by a larger number of species of the feathered tribe than any locality in our wide domain; for, independent of the large number of species, either resident here or always to be found during some part of the year, its position being so favorable, and its climate visited by many species whose southern home was the Gulf of States or the Atlantic sea-board; besides this, species belonging to the inhospitable regions of the far North often found their way to our more congenial shores; these circumstances always rendered the Fauna of Long Island, particularly favored as to birds. But how is it now? Large tracts

hitherto melodious with the song of birds are now comparatively silent. Every half-grown boy who can either buy, beg, borrow or steal a gun, new or old, bright or rusty, musket or fowling-piece, rushes out to the fields, woods or shore, and pops away at the consequence, driving away what he fails to kill. Such marauders should be summarily dealt with, through the agency of stringent laws, and no one individual, or body of men, are and should be more interested in the faithful carrying out of those protective laws than the real sportsmen of the country.

Nor is all the wanton destruction of birds to be hid at the door of the youth of our cities; for it is a well-known fact that there are many persons of the consequence, driving a practice during the breeding season of robbing the nests of our Grallatorial or Wading Birds, for the pittance they receive from the sale of the eggs thus gathered. By this wanton destruction the Clapper Rail or Mud-Hen—*Rallus crepitans*, has particularly suffered; cases are known where a single egg hunter has taken 100 doz. eggs of this bird in a single day; this, though true, is an unusual number, and occurred where the birds were very numerous.

The robbing of birds' nests prevails to a great extent right in our midst, in our own beautiful Park, within whose precincts we would think the feathered tribe would be secure; the practice of robbing the birds of their eggs is alarmingly on the increase, despite the printed rules and regulations posted on every hand. Were a few examples made of these depredators, no doubt it would exert a salutary influence in deterring others from committing like offense.

But a few years ago how different were our woods and fields to what they are now. How well do I remember when the western end of our Island, during the vernal season, was musical with countless songsters, and our coast in the proper season prolific with Snipe, Fern, Ducks and other water-fowl.

When the shrill cry of the beautiful Blue Jay—*Cyanus cristatus*, could be heard in every wood. When our well known friend the Quail—*Ortyx virginianus*, was everywhere abundant, and his familiar "bob-white" could be heard on every head. When the spotted breasted Wood Thrush—*Turdus muscivorus*, uttered his brief but sweetly melancholy note in every deep wood. When the ventricose, the Yellow-breasted Chat—*Icteria virens*, was one of our commonest, and the gay and the Scarlet Tanager—*Picromisoma rubra*, in his bright plumage, flitted through the green trees, and the sprightly and red-plumaged Seto-plungia ruticilla, with his orange and black plumage, darted from twig to twig in search of his favorite food. When not even a catbird or alder bush, even in our suburban districts, was the refuge and hiding place of such tiny choristers as the Yellow Throat and Summer Yellow Warblers—*Sylvania flavicollis* and *estiva*. We could no longer find where the Black-bellied Plover—*Charadrius arcticus*, was not seen, or their loud whistling note not heard. Now, I would ask how many fields of this character might be gone over in vain for them? During the season now passed, I have walked miles through woods and fields, sometimes without seeing or hearing even the commonest Finch.

Of the Rarioral Birds, comprising the true Game Birds, our Island has but a scanty number, one of the first family, that of *P. vonida*, but two species are natives of the United States, the Melegris galloway or Wild Turkey, and the Melegris Mexicanus or Mexican Wild Turkey, neither of which are found on the Island.

Of family Tetraonidae—Partridges and Grouse, but two species are known on the Island; these are the Pinnated Grouse—*Tetrao capillo*, commonly known as the South Sea, and *Ortyx virginianus*—the Quail, our old friend Bob White.

The Pinnated Grouse or Heath-hen has from time immemorial been peculiarly associated with the vast barren plains of Long Island, extending a length of over 40 miles, and a width of 6 or 7; in other words, embracing the section of the Island from Hempstead to Shinnecock Bay; and although laws have been in existence from an early date with the object of protection to this bird in particular, still such laws have been so openly violated or evaded, that their complete extinction from our fauna, must soon surely be realized, if more energetic measures are not instituted and carried out to protect them. The first law passed by the State Legislature to protect these birds, was that introduced by Mr. Cornelius J. Bogert, a Member of Assembly from the City of New York, in 1841.

That statute declares among other things, that "the person who shall kill any Heath-hen within the counties of Suffolk and Queens, between the 1st day of April and the 5th day of October, shall, for every such offense, forfeit and pay the sum of two dollars and a half, to be recovered, with costs of suit, by any person who shall prosecute for the same, before any Justice of the Peace, in either of the counties aforesaid, or half to be paid to the plaintiff, and the other half to the owners of the poor; and if any Heath-hen, so killed, shall be found in the possession of any person, he shall be deemed guilty of the offence, and suffer the penalty. But it is provided, that no defendant shall be convicted, unless the action shall be brought within three months after the violation of the law."

The Quail or Partridge—*Ortyx virginianus*, was at one period quite common throughout the Island; its well known and familiar call of Bob White is universally known, but the persecution they have suffered has so thinned them out, that in many districts its cheery voice is but seldom heard, but not content with striving to exterminate them by the gun, it has become a common practice to take them alive in traps, made of sticks or laths and a common figure-four trigger; to show how they have been destroyed, and how their present range has been restricted, I can well remember the time when I have repeatedly found their nests where the site of the present Prospect Park is, and it is needless to say how many fields or woods you would necessarily have to pass over now, in order to find one.

In Family Columbidae—Pigeons, we have two species found on the Island, and both well known, the European Rock Dove, or Passenger Pigeon, and the Ecotopis—carolinensis, the Carolina Pigeon or Turtle Dove. Of the Passenger Pigeon we may say, but a few stragglers comparatively are seen on our island, when we take into consideration the vast numbers that every year congregate in our Western States. So, too, with the Turtle Dove, their singular mournful note seldom falls upon our ear, and except at the period of migration are seldom seen in larger numbers than three or four together.

One of the main causes of the death of game on the Island is the wholesale slaughter carried out by those people on the shore, who make a living by acting as guides to our sportsmen, and let out batteries and decoys through whose use large quantities of water-fowl are annually destroyed. No shore in the whole Union is naturally richer in (in-

terioral and Natorial Birds than the bays and inlets of our favored Island, and on account of its proximity to our large cities, no locality has suffered greater from the abuses we complain of than this.

With a view to more fully illustrate our subject, it will not be out of place to briefly review the Water Birds that are to be found upon the shores of our island, some of which are, however, now but occasionally seen.

It is in the Order Gallatorial, or Waders, that the sportsman finds a large part of his favorite Game, for in these are included the Herons, Egrets, Bitterns, Rails, Snipe, Woodcock, Sandpipers, Gadwall, Curlews and Plovers.

In the first Family, Ardeidae—Herons, we find our well known Green Heron or Green Bittern—*Ardea virescens*, known by every gunner by an unutterable name.

The *Ardea Herodias*—Great Heron and Egret—Great White Heron, are rare on our coast. The *Nycticorax nycticorax*—the Night Heron, or Quail Bird—is occasionally found.

The last in this Family is the *Botaurus Inianus*—the American Bittern, called by some the Indian Hen and by others the Kuckadoo.

The next Family is the Rallidae—Ralls. In genus *Rallus* we have the *Rallus virginianus*, or Virginia Rail; the *Rallus crepitans*, or clapper rail, and the *Crex carolinus*, or Sora Rail. The flesh of the latter is peculiarly delicious and furnishes the gunner excellent sport in attempting to follow this noble-footed bird.

The family Scolopacidae embraces the Sandpipers and Snipe. In this family is the best known and most sought after of all the Game Birds of our Island, the American Woodcock—*Scolopax minor*.

The most numerous, perhaps, of all the family is the *Scolopax Orison*, or Red-breasted Snipe; its flesh is held in high esteem, is a favorite with the sportsman and great numbers are annually killed. The *Scolopax Wilsonii*, commonly called the English Snipe, is also much sought after. The Great Marbled Godwit—*Limosa fedos*—known to the many sportsmen as the straight-billed Curlew and the Red Curlew, is not as numerous as the Short-billed Curlew, its favorite associate.

Of the Sandpipers the following are found on our shores: The *Tringa sandipes*—the Semipalmated Sandpiper or Willet; the *Tringa littoralis*—*Tringa minutilla*, the Red-backed Sandpiper—*Tringa alpina*; and the Ash-colored Sandpiper—*Tringa canutus*. Of the Plovers, the Ringed or Piping Plover—*Charadrius melodus*—and the Killdeer—*Charadrius vociferans*—are perhaps the best known. The other species are Golden Plover—*Charadrius virginianus*; Wilson's Plover—*Wilsonia*; and the Sandpiper—*Callidris arenaria*. Our review of the Long Island Gallatorial closes with the Long-billed Curlew—*Numenius longirostris*, and the Short-billed—*Numenius borealis*—both well known to our gunners. Space will not permit to mention all our Gallatorial, but the foregoing includes the greater portion.

The last Order, called Natorales, or Swimming Birds, we must confine our remarks to the most conspicuous family—that of the Anasidae, embracing the Geese and Ducks.

In the first sub-family, the Anserine, is the well known Canada or Wild Goose—*Anser canadensis*; the Snow Goose—*Anser hyperboreus*, is rare on the Island. The last is the Brant—*Bernida brenta*.

The next sub-family are the Anatine or River Ducks; we have species belonging to three genera, *Mareca*—*Widgeon*; *Dendrocygna*—*Trogon*, and *Anas*—*Typical River Ducks*. The *Anas boschas*—the American Widgeon, better known as the Baldpate, is one of our well-known Ducks whose flesh is highly esteemed.

The *Dendrocygna sponsa*—*Summer or Wood Duck*, the most beautiful of all our water birds, is now rare on our coast.

The *Shoveller*—*Anas platyrhynchos*, is held in high esteem for the table.

The *Dusky Duck*—*Boschas olivacea*, more commonly known as the Black Duck, is one of our common Ducks, but its flesh is much inferior to the Mallard, Canvas Back and others.

The *Blue-winged Teal*—*Boschas discors*, are highly esteemed as an article of food; these birds are easily taken in hollow traps with the common device, a figure four.

The *Green-winged Teal*—*Boschas palustris*, a common and well-known species, whose flesh is excellent.

The *Mallard*—*Boschas major*, ranks next to the Canvas-back and Red-head for the excellency of its flesh and food.

The *Pintail Duck*—*Dadila cana*, or as it is sometimes called the Sprig-tail, this bird is highly esteemed by epicures. The *Gadwall*—*Chaulioides strepera*, closes our river Ducks. We now come to the Fuliginifera, or Scaup Ducks, comprising five genera, as follows: *Oxyechus*, or Eider Duck; *Idemia*, or Scoter; *Fuligula*, or Pochard, Clangula or Golden Eyes and *Harelda* or Long Tails.

The *Eider Duck*—*Somateria mollissima*, is noted for the softness, elasticity and warmth of their down, in that respect excelling all other Ducks; their flesh however is inferior.

The *King Duck*—*Somateria spectabilis*, is now quite rare. The *Scoter Duck*—*Oxyechus*, little esteemed.

The *Yellow Duck*—*Oidemia fuscus*, of similar habits to the Scoter, and on account of associating with it often mistaken for it by some sportsmen.

The *Black or Surf Duck*—*Oidemia perspicillata*; the flesh of this species is coarse and strong.

The *Scamp Duck* or *Blue-bill*—*Fuligula marilla*, and the *Pied Duck*—*Fuligula laboradora*, are both considered poor as articles of food.

The *Red-winged Duck*—*Fuligula ferina*, is second only to the Canvas-back in its excellency as food.

The *Ruddy Duck*—*Fuligula rubra*, and *Tufted Duck*—*Fuligula ultramarina*, are both rare on the Island.

The *Butter-bellied Duck*—*Clangula albe-lata*, better known as the *Butter-box* or *Butter-bill*, though often fat and plump, is not held in as high esteem as many other species.

The *Harlequin Duck*—*Clangula harlequinica*, commonly known as the *Lord*, is in plumage the most striking and remarkable of all; the grotesqueness and oddity of its markings suggested its name. Its flesh is considered excellent. It is one of our rarest species.

The *Harlequin Gull*—*Clangula vulgaris*, is inferior for the table.

The *Long-tailed Duck*—*Clangula longirostris*, better known as the *Old Duck* or *South Southerly*, is common, but little esteemed for the table.

The last of the Anatidae are the *Merganina*—*Mergansers*, all four species of which belong to the *Fama* of Long Island. The time was when the *Hooded Merganser*—*Mergus cucullatus*, with his beautiful black and white crest, forming when erected the segment of a circle, and its congener, the *Red-breasted Merganser*—*Mergus serrator*, with its long pen-

“WHAT ARE YOU GOING TO DO ABOUT IT?”

(Delivered before the New York State Association of Sportsmen at their Twenty-third Annual Convention, Coney Island, N. Y., June 20, 1881.)

THE following incident will serve to illustrate and introduce the subject matter of this paper.

A sportsman whom I will designate by the letter X, is the owner of a large tract of land which he uses as a preserve for Game. To this end he has stocked it with a quantity of quail, rabbits, etc. For the protection of the first he has constructed places of shelter, where in severe weather they seek refuge and are fed liberally with grain. A man of means, he has appeared no expense to attain successful results, and he is prepared to watch and protect his game, and in the season is rewarded with ample sport for himself and his friends. It is unnecessary to add that he is by no means a popular personage in the neighborhood. His trials and tribulations are many; but he is firm in his purpose to thoroughly test the possibility of enforcing on his own land, laws which he has formed, and are fed liberally with grain in the country at large. His property is posted with notices, forbidding trespassers, and while he is aware that his losses by poaching are enormous he is encouraged to continue the experiment.

His experience is a varied one, and he is constantly confronted with troublesome characters, who look with scorn upon his efforts to do as he wishes with his own.

A couple of years since, on a certain day in September he was startled by the rapid discharge of guns, at no great distance from his residence.

He sallied out, and, hurrying in the direction of the firing, he soon came up with an individual who assisted by two superbly broken pointers was flushing and killing the half-grown quail.

He discovered the gunner to be a stout, thick-set person, with heavy black mustaches, and his garments were of the latest sporting fashion, and he carried a gun of the most expensive and modern build.

“What do you mean,” says X—, “by killing birds out of season, and on my land?”

“All right, boss,” says the fellow, “there’s nothin’ mean about me.”

“How many birds have you killed?” says X—.

The gunner, no wise disconcerted, thrust his hands into his pockets, and one after another drew out twenty partly grown quail.

“You have killed just one hundred dollars worth,” says X—.

“All right, boss,” says the gunner, whereupon he produced a Russian leather wallet, and, abstracting five twenty dollar bills, he handed them to X—.

“I have no right to take your money,” says the talker, “you must settle this with the Court.”

“Now see here, boss,” says the fellow, “I’m a plumber by trade, I am, and when other gentlemen kin be out a shootin’, I’ve got to be at work a fixin’ their plumbin’;” and says he, “I like a day’s shootin’ as well as the next man, and I expect to pay.”

At the mention of the word plumbing, X—’s hair fairly stood on end. The owner of much city property, his life had been made utterly wretched by his encounters with the members of that profitable branch of trade. The confession of the gunner quite demoralized him, so he pondered for a moment and then said to the fellow, “Come with me.”

In company they returned to X—’s residence. He led the plumber to a room, and there produced some brandy, of which his prisoner swallowed a bumper.

“Now my friend,” says X—, pointing out of the window, “do you see that road? Well, it leads directly to the railroad station. You start as quickly as you can, and don’t you stop until you reach it. Do as I tell you, and I will not proceed against you. I have met men of your trade before.”

“All right, boss,” says the fellow, “you’ve treated me like a gentleman, and I kin do anything for you in my line, here’s my card. It bore the following legend.”

Y—Z— & CO.
PLUMBING IN ALL ITS BRANCHES.
Owners of the Patent Reversible and Anti-corrosive Tr. p.
CHARGES MODERATE.

With us, where we have few men of leisure, those who are fond of sport must indulge their fancy when it shall not interfere with their business pursuits.

We see this exemplified in the case of the sporting plumber. The open season is to him one when the exigencies of trade demand that he shall prey upon his fellow men. As expense is no object compared to the pleasures of a day’s shooting, he does it at the risk of coming in conflict with the law. The chance of a good catch, and the possibility of a fine, if an encounter does not disturb his serenity. The combination of sport and business is not a happy one, and our necessity of combining the two goes very far toward increasing the difficulties of an exact enforcement of the game laws. Moreover, men whose moments of recreation are few, and whose shooting days must be limited in number, are the cause of the demoralization of the professional gunners when they employ. To secure the greatest number of birds in the shortest space of time, they urge those men to acts which they know to be utterly destructive and ruinous.

In other countries there is an *esprit du corps* among sportsmen, entirely wanting with us, and which it is possible can never be established.

Not long since a reporter of one of the morning papers, visited the little hamlet near which I reside, to inquire into

the causes of the rapid disappearance of wild fowl from the bay in our front. To assist him in his investigations I collected at my house the professional gunners of the neighborhood. These men, though daily violators of the game laws, had no hesitation in acknowledging the fact, and in giving their reasons for so doing.

All were agreed that if the laws for the protection of game could be enforced it would result in vast benefit to themselves but so long as one violated the game with impunity, the others should not refrain from so doing. Moreover, it was understood that one could not be induced to bear witness against the other. All asserted that their necessities forced them to yield to the solicitations of the sportsmen who employed them, in the use of devices and unfair advantages which were ruinous and fatal. Moreover, they were frank to confess that among those who urged them to violations of the game laws in the matter of wild fowl, were many who confessed themselves to be members of sportsmen's associations. Indeed, the latter must be exceptionally conscientious who can resist the allurements of ducking ducks and wild geese, and abstain from shooting at fowl from a boat while under-way.

The reporter, at the conclusion of his interview with these gunners, came to the conclusion that to enforce the game laws it would be necessary to suspend the writ of *habeas corpus* and put the country under martial law, and even under martial law the game laws are rigidly enforced and effectively sustained. Our minor judicial officers being objective, their sympathies are in harmony with the prevailing popular sentiments of their particular districts; with them it is merely a question of securing the greatest number of votes.

What shall be thought of a justice of the peace who encourages lads to snare quail which he is a purchaser for the market. He is certainly not the man to punish violators of the game laws. Yet just such functionaries hold sway in many localities. Other ineffectual ends of the office cannot distinguish one bird in another. I have in my possession a legal paper prepared by one of these officials, who speaks of a gun as "sle," that weapon having in his eyes no other attribute than as an expression of his opinion of the qualities of the gentler sex.

As to game constables, they are but another spoke in the wheel. So far as the protection of which they are created is concerned, they are utterly worthless. These professional gunners and habitual violators of the game laws. They certainly do not propose to complicate their domestic affairs for the sake of a form of animal life which in their opinion has nothing in common with their own sensitive and superior natures.

It is my fortune to be so situated as to have peculiar facilities for observing the effects of the non-enforcement of the laws enacted for the protection of wild fowl. From the windows of my residence I may, with a glass, sweep an extended line of seidge. By this means, and from a constant practical experience as a sportsman, I am enabled to watch the rapid decline of the shooting privileges in the bay in my front. This body of water, situated on the east end of Long Island, was once the haunt of scumey's inexhaustible supplies of wild fowl. In the winter of 1870-71, the number of birds returning in each recurring season. To-day it is not worth the necessary exertion to secure a few birds. Now and again from being constantly on the ground a comparatively good day's sport may be secured; but the visitor from the city whose time is limited has but small chance of enjoying the same.

Had an intelligent system been inaugurated to preserve and protect the fowl on this great body of water, for generations to come it might have afforded a source of enjoyment and pleasure. Instead of this the most destructive devices have been used. The geese and ducks are fire lighted and dusked, and no sooner do a few birds settle on the water than a boat pursues them. It is a popular fallacy that cat-pot stakes and fishing boats keep the birds from off their feeding grounds. This is a mistake, for they soon learn to disregard all which does not inflict injury upon them. The abundance of this locality may be entirely attributed to the night attacks made upon them. Ordinary shooting over days from meadow points would have had no appreciable effect in diminishing their numbers. In addition, the killing of migrating wild fowl in the spring of the year is a potent factor in their coming annihilation. Could they be allowed to remain undisturbed during the season of the year, they would return to us in the autumn in vastly augmented numbers, and with less fear of the decoy.

The question may be asked—Why not make an effort to enforce the game laws on these waters? It cannot be done except by the establishment of patrol boats manned by men strangers to the locality, well paid and earnest in their efforts. If such a system could be devised and put under the care of efficient persons it is possible that the warden and fatal destruction of wild fowl might be checked and they in turn return to us with their former profusion. Unless some thing of this nature be done, and that quickly, the once-thriving waters of Long Island will be entirely deserted by their feathered inhabitants.

To protect the upland birds a system of patrol by non-political officers would resore to the sportsmen of New York one of the finest shooting grounds of the world. There is land enough and to spare—no end of shelter and food. All that is required is an intelligent system of protection for the birds. Such a system may be done, and that quickly, the once-thriving waters of Long Island will be entirely deserted by their feathered inhabitants.

The question for sportsmen to consider is, "What are you going to do about it?"

GASTON FAX.

SOUTH AMINGTON, Mass., has a first class sportsman's club of forty members, and not counting. We have just joined the Massachusetts State Game Ball Association, and are going to work and do what we can to protect the game birds in our vicinity, as they need looking after badly.—C. F. C.

MOSQUITOES.—I am a veteran squirrel hunter, but as yet I have never been able to conquer the myriads of mosquitoes that infest the woods, and hunt you while you hunt the squir-

rel. Will someone be kind enough to give a good receipt in the FOREST AND STREAM that will cause the pests to keep their distance?—W. C.

MR. CROOK TO MR. BERGH.

The following letter has been published: New York, June 16, 1881.

Henry Bergh, Esq.:

MY DEAR SIR: My attention has been called to certain squibs in some of the daily papers to the effect that, as the President of the Society for the Prevention of Cruelty to Animals, you had asserted your intention to break up the tournament of the New York State Association for the Protection of Fish and Game, to be held at Coney Island, commencing next Tuesday, and that I, a President of the last named organization, had returned the compliment by threatening to cause your arrest. I desire explicitly to deny that any such action has ever been contemplated upon my part. Had we the advantage of personal acquaintance with each other, such an unfortunate rumor could not have found its way into print. The association which I represent is largely composed of the most influential citizens of this State, embracing many who have honorably held seats in the State and National Legislatures and in the executive chair, and who including the representative business men of the several cities, towns and hamlets in this State, and also those who have been foremost in concerted efforts not only to protect but to propagate and cultivate fish and game. That such gentlemen should be classed with the cock-fighter and dog-fighter is neither just nor creditable to the person invoking such charge.

Nothing will afford me or the association which I represent greater pleasure than to assist your society in preventing anything which shall bear the resemblance of cruelty. The suggestion accorded to you to the effect that birds were to be drugged or mutilated could only originate in ignorance of the character, customs and purposes of the State organization. I assure you that due courtesy will be shown you and all others who may attend the tournament, and that nothing shall occur in any wise warranting any unfavorable criticism of our proceedings, and that the members of the association will pay you the most ready assistance in the humane work in which you are engaged. Respectfully, etc.,

ABEL CROOK.

WESTERN PENNSYLVANIA.

PITTSBURG, Pa., June 14.

THE FOREST AND STREAM comes to us this week fresh with news and interest from the river and ocean. It seems as though your paper improves with every issue. The growth and late est in sporting matters in this city furnishes a good illustration of the value and influence of a good sportsman's paper. Only a few years ago, a group of half a dozen enthusiastic sportsmen met and organized the first sportsmen's association in Western Pennsylvania, selecting Robert Dalzell, Esq., as President. I refer to the "Sportsmen's Association of Western Pennsylvania." At the time the organization was formed the directors rented a small back room on Fourth avenue, second floor, and placed on file the FOREST AND STREAM. The meetings at first were not well attended except for the purpose of reading your paper. For several years it seemed as though the success of the enterprise was doubtful; but the interest awakened by news from all parts of the country so increased the interest that the number of members was doubled and trebled and quadrupled, till larger rooms were necessary, and the association removed to No. 39 Fifth avenue. Here the association still doubled and quadrupled in membership until still larger rooms were necessary, and the association secured a long lease on the building they now occupy, No. 75 Fifth avenue, where they have fitted up apartments at a cost of over \$11,000, and the membership now includes nearly 300 of the best names in this city.

A few years since the organization of this association, the Allegheny Sportsmen's Association was organized, and it now has a membership of over one hundred. The interest awakened by these two associations occasioned the organization of smaller associations in nearly all the counties throughout the western part of this State, and finally to the organization of the Pennsylvania "State Association," an association composed of representatives from all the regularly organized associations in the State. Through the influence of the State Association, such legislation has been secured as protects all game and song birds, as well as game and game fishes, and this protection has become so complete that it is now decidedly healthy for any one in the State to kill game or take fish out of season.

The high character of the gentlemen enrolled as members in this association have entirely changed the term "sporting man" into "sportsman," and has made shooting a recreation and pastime for professional men and over-worked business men. With this change came a demand for finer weapons than were previously used, and this demand became so great that, in May, 1878, the firm of J. Palmer O'Neil & Co. was organized, and became at once importers of fine guns and fine goods in every variety. This firm is now agent in the United States for the Westley Richards' hammerless guns.

The spring contest of the Allegheny Association was duly reported in your columns. The contest of the Western Pennsylvania Association was postponed on account of scarcity of birds. The contest will, however, take place on Thursday, June 21, at Bridgeville, about eleven miles from this city.

REPORTER.

INFORMATION WANTED.—I desire to learn of some point in the Adirondacks, within say thirty miles of rail connections, St. Regis region preferred, where good hotel or private family accommodations can be obtained for invalid ladies, not sick ones, at prices from \$7 to \$10 per week each. Three in party and length of stay from three months to a year. Address F. E. H., Oswego, N. Y.

DEFERRED.—We are obliged to defer a number of communications until next week. We beg the indulgence of correspondents whose communications should have appeared with this issue.

See notice elsewhere of New York game law.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

Table with 2 columns: FRESH WATER and SALT WATER. Lists various fish species such as Brook Trout, Striped Bass, and Weakfish.

Fishermen never lose the love for the employment. And it is notably true that the men who fish for a living love their work quite as much as those who fish for pleasure love their sport. Find an old fisherman if you can, in any sea-shore town, who does not enjoy his fishing. There are days, without doubt, when he does not care to go out, when he would rather than spend his time with something of pay as he bats his book for another. Could you gather the words that he has in many years hung on the sea winds, you would have a history of his life and adventures, mingled with very much of his most thinking, for he tells much to the sea and to the fish that he would never whisper in human ears. Thus the habit of going a-fishing always modifies the character.—W. C. PRIME.

GAME FISHES IN WEST VIRGINIA.

THE moment the Afrite in Arabian fable had revealed to the fisherman the lake of white, red, blue and yellow fishes, the secret was locked up in his selfish bosom until he had enriched himself. But times have changed, and men have grown more generous since then. Now, when a fisherman discovers a good place to fish and his cup of joy is brimful and bubbling over, a mysterious something woe him entirely away from self and compels him to share the knowledge with lovers of the sport all over the country.

A good geni reminds me that a word in season is like "apples of gold in pictures of silver," and then intimates that the fishing grounds of Greenbrier County, West Virginia, deserve more than the ordinary notice of the FOREST AND STREAM. I shall only speak of the southeastern or mountain district of our State, and leave the fishing grounds of other sections to the guardianship of other writers. Greenbrier County can boast of one of the most popular summer resorts in America, with plenty of game fish almost at its doors, and will be hailed as a well-spring of happiness by those who come to West Virginia for recreation.

Arway out here, in the very heart of the blue Alleghenies, the angler finds an abundance of black bass and mountain trout, and our waters afford as much amusement as any lake or river that ripples beneath the influence of these columns. Those of my readers, if I have any who love

To cast the line and draw the prey From the clear ripples where they play.

may spend the season at the Greenbrier White Sulphur Springs and devote as they choose to this most delightful of all the pastimes. One peep into this elysium of the angler and the tourist is fascinated forever, and a bird's-eye view of the United States will explain why this is so. The peaks of the Allegheny and Roeky Mountain ranges resemble the tents of two opposing armies pitched on either side of a mighty plain, and West Virginia lies in the very midst of the eastern encampment. Of course we have the peaks, but this is founded on a high and noble mountain, a feast of beauty and song, and a limitless display of infinite wisdom to satisfy the cravings of the mind and soul of any man.

Twenty-five miles west of the Springs the "Clear Creeks" sparkle and dance in the valleys of the Sewells like wavy threads of burnished silver, and the local fame of these two little streams is justly deserved. Their crystal depths are clink full of the finest silver-finned minnows and mad minnows, a feast of beauty and song, and a limitless display of infinite wisdom to satisfy the cravings of the mind and soul of any man.

About six years ago Major J. W. Harris, of our State Fish Commission, made a successful "plant" of black bass at different points in Greenbrier River, and the increase has been astonishingly rapid ever since. Not one out of a thousand has been captured with the ordinary hook and line. Hardly a dozen persons out here have taken even the introductory in the science of surface-fishing, and the art of throwing a fly down the throat of a wily bass the first clip and the fish thirty feet away at the bottom of the river is a little more of mystery than the masses can unravel and properly reel in.

The Greenbrier is only six miles from the Springs and, as the angler wades or floats around when the "delicious" fly has its trembling life of snow above the water, dreamily," his "leg is benumbed in by rugged hills and lofty mountains, forming in Nature's gallery a picture of the tenderest beauty and widest sublimity. No wonder the heart thumps hard and fast against the ribs! The river is found to have a rocky bottom and plenty of shoals, with a width of from twenty-five to 300 yards and a depth of from two inches to thirty feet. A more natural habitat for black bass does not exist in America, and any point along the river from its source in Pocahontas County to its mouth in Summers County, is a good place to fish. At present we enumerate the fish by scores of thousands, but in a little while millions will feel

right at home in the limpid waters of this little mountain stream.

I would like to give the reader a faint conception of one of our trips, for many of my happiest hours are spent in fishing for bass. The facts shall be given as a warp, but the woof of fancy must be interwoven by the reader.

A party of us take an early start for "Caldwell's Dam," five miles from Lewisburg, and enjoy all the pleasures incident to a day's recreation on the water. Hiding up the bank to the dam we often startle a whopper" as he noses around the edge for a brief moment, and then retreats, and a frothy froth tell of "sickness at home," as he pines for deep water like a miniature tug-boat under a full head of steam. Sometimes we stop on the way and whip the still water under the overhanging bushes and trees. The cast made, "flap!" echoes from the centre of a circle of wavelets, and we sink away from the tempting pool, minus a fly. The "rise" was too heavy for the single leader. At the same our bridles are willingly placed in the hands of a friendly oak that bends down and seems to plead for the privilege of holding the animals beneath its welcome shade. The day is well chosen. Not a ripple breaks the surface of the eddy, "the falling leaf forgoes to float" and the bubbles creep by as lazily as the boy in the corn-field that was overtaken and strangled to death by the tendrils of the pumpkin vines. Occasionally a water bug is seen on the sky about the water as they fly across the summer sky. Years ago "Ichabod" was written upon the utility of the dam, and today its ruins form a semi-circular causeway or stepping-stones across the stream. Up the river from the boat-landing, glittering like a snow-bank in the sunlight, a splendid rifle whirrs and dangles and dances at the foot of the mountain, just in front is a long, smooth stretch of deep water and a beautiful cascade for the eye and the ear. What angler could keep the thrills of joy from chasing each other up his back and creeping through his hair as he realizes that scores of living jewels are eagerly awaiting a place in his crown of piscatorial glory?

Having decided to troll while pulling for the rifle, the boat is untied and, with a spoon-hook or trolling minnow curving over the surface many yards behind, the boat slowly drifts up the glassy waters. I do not happen to fall within the orbit of Shakespeare's man who has no music in his soul, and drinking deeply at the fount of Nature, I catch the inspiration of the birds and bees and hum to the dip of the oars—

O what music, as we listen
To the hum of the broken waters glisten
As they dash against the shore!

Mossy boulders rising ponder
With a beard of snowy foam,
Where the maddest waters thunder
Over the river monarch's throne.

Where the silver eddy steeps,
Just beside the roaring drou,
Mark you jeweled bays leading
From the little in sp. drive now.

"Hold on!" The oars drop, and the light silk line slips off the rod like greased lightning. The ball has been opened by striking a five-pound bass, and the fun has commenced in earnest. He is well hooked, and takes to the bottom, but presently jumps three feet into the air and shakes himself all over. Round and round, up and down, and in and out he runs, and finally wearies of the sport and surrenders at discretion. My, O! but he does look pretty out there, presenting a broadside, and the bright spoon glistening in his mouth. A few more huzzes and he is reeled close up. Not having a landing net, I catch the live near his nose, lift him out of the water, and gently pillow his head in the boat at my feet. Yes, he does seem a little bit astonished. A fish that has been sleeping for weeks of ages in the heart of a geologic lead could exhibit more signs of animation than our funny friend displays for half a minute or more. The language of his silence seems to be, "Well, here we are! but I little dreamed that snapping up that thing would place me in such a pickle as I catch the live near his nose. If a word of comment is lavished upon the poor little fellow by my companions. Before reaching our destination, however, several more of the "beauties" cease to wriggle about in their palaces of running water, and are placed beside the first trophy in the canoe.

The rifle is ginned at last, and I prepare to whip it from head to foot. These acquainted with fly-fishing know how easily experienced anglers in the waters of a good rifle boat, settle and waltz around over the rocky bottom, and how, too, that right in the middle of each of the whirls a beautiful little foam-flower gathers. The pulse quickens and the arm tingles as the red heckles buzz by the ear, and one of them drops exactly in the centre of the foam-sport. Days of Aladdin! The flower disappears in a twinkling, for the magic touch of the fly has metamorphosed it into a lusty six-pounder, and he "minks way for liberty" with all the patriotism of his nature. And so the sport goes on, until we weary of it and start for home. The catch is a trifle heavier than "the burden of a dream," and is equal to a band of music in drawing the people of Lewisburg to the doors and windows. And how their mouths do water! Yet we don't wonder at that, for those who have enjoyed the catch of the big black bass properly secured, will indeed "dream of delight."

But ere the pen must be laid aside, a fisherman never knows when to stop talking on his favorite hobby, but I shall place the final period at the end of the next sentence. Reader, whatever else may be forgotten, remember the fishing-tackle when starting for the mountains of West Virginia this summer.

Lewisburg, June 6, 1891.

TROUT IN THE RANGELY'S—Phillips, Me.—The trout fishing at the Rangely lakes exceeds any previous year. Horse loads of boxes of trout, packed in ice, come out daily en route for Portland, Boston, New York and other places. Hanson Davis, 24 Canal street, Boston, has just returned and left for Boston, this 5th day of June, with a nice box of trout. His party numbered in all thirteen gentlemen from Boston and vicinity, except Wm. H. Cole, Esq., who came from Baltimore, Md. The most of the party were at the lakes less than one week, though Mr. Davis was there from May 18 till June 4. The party took in all nearly 1,000 trout, two of which weighed, when caught, 6 lbs each, two 5 lbs each, and out of one lot of eighty, ten weighed 40 lbs, or 4 lbs each on the average. The whole catch of the party was estimated to weigh upward of 800 lbs, salmon and brook trout. Axel Dearborn, president of the Broadway National Bank, Boston, went home this morning with upward of 100 lbs of trout. The Major was a party by himself, and only spent one week at

the lakes, but caught a goodly number of large trout. The above are only a small portion of what have been taken this spring. Capt. William Lewis and two sons from New Bedford, Mass., last week caught one hundred trout from the lake weighing 100 lbs, the largest of which tipped the scale at over 63 lbs. They were there only thirty-six hours. Mr. A. J. Hevey, at Bench Hill on the stage road to the lakes, caught a year old bear last week. They are so plenty that Mr. Hevey is obliged to fold his sheep every night.—S. F.

WANTED—SOME ANGLE WORMS.

WE are permitted to publish the following letter to the Fish Commissioner of Iowa. We suggest the importation of angle worms, or, better yet, of teachers to teach the boys to use artificial flies, and that to snare a trout is murder in the first degree:

Hon. B. F. SHAW—MANCHESTER, IOWA, March 21, 1891.
I have been fishing the Spring Branch trout stream. Before the thaw commenced the water was as clear as crystal, and the boys were snaring them. Isn't it astonishing that trout can be snared. One boy snared one of five lying on their spawning bed, above the bridge at the milk factory. It was the smallest one and weighed three pounds and four ounces. It could not turn in a wash boiler. About four of the 1879 trout have been snared. There are no worms. Consequently we who cannot snare don't get any. A boy living on the stream sent me one of the '79 fish snared by him, weighing one and one-half pounds and thirteen inches long.

I am satisfied that the "close season" must be extended. All of the fish caught were full of spawn. They said the '77 fish contained a cupful of ripe eggs. These trout don't spawn in the spring. The law makes November, December and January the "close season." As they spawn up to April—most of them in the month of March—it must be changed to November, December, January, February and March. This will save them. It is too bad to have them killed on their spawning beds.

Trout of '77 and '79 are all on the riffles, and from the "bluffs" to the upper spring. I believe there are about 100 of the '79 and 600 of the '77 trout. Of course I did not see all these trout, but I saw the wake of thousands when they were leaving their beds and going for cover. The boy that I have employed to watch them says that on a clear morning he would see from twenty to thirty on one riffle of the trout of '80. They hatched about April, 1880. This hatching will be about the first of May, which will make the stream full of fish. The water rises in the spring and minnows. The water rises is a great protection to them and the stream is full of moss. If I get any of the trout of '77 I will preserve one for you. Have you tried Prof. Wickesheimer's preserving fluid? It leaves the fish with all its colors.

I am perfectly satisfied that 10,000 of the fish of March last that were put in a spring stream at the headwaters of the river are growing. The stream is just as fine as Spring Branch. I will try and ascertain by the first day of May, and if we find that there are trout we will endeavor to put in ten thousand more. The spawning trout at Spring Branch from all appearances will not be disturbed for a month, as the water will be muddy. Truly yours, S. G. VANANDA.

THE FLY-CASTING TOURNAMENT.

THE fly-casting at the New York State Sportsmen's Convention will be called as this paper goes into the mail. At a meeting held at Hotel Brighton, Coney Island, on the 20th inst., at which Mr. Fred Matler, the Director of the Fly-Casting Tournament, Mr. James Geddes, the referee, and Mr. Edwin Moses, one of the judges, were present. The following points were decided upon: The rule allowing distance for short rods will be adhered to. The bass casting will be done with a one-ounce weight instead of bait, all to cast with the same weight. The judges will consider style of delivery of the flies on the water, and accuracy, as well as distance, and for this purpose the following scale of 100 points has been adopted:

Distance across the wind.....30
Distance with the wind.....30
Style of delivery of flies.....25
Accuracy.....15

In single-handed fly-casting class C will be called first in order to give amateurs winning in this class a chance to enter in the other classes. The extra prize of a salmon rod, given for extreme distance with a single-handed rod, will be cast for last of all. Those who have cast in the other classes can enter for this contest free of charge. Other members wishing to cast for it will pay the usual entrance fee. The rule for this contest will be that any rod of twelve feet or under may be used, but there shall be no allowance for distance given for short rods.

STONE LUGGERS.

SYRACUSE, N. Y.
DURING a recent visit to the Thousand Islands of the St. Lawrence, I observed what I had never seen before, and something unfamiliar to most anglers. On the south shore of beautiful Round Island two mounds were discovered by a friend of mine situated ten feet from the water line and in about three feet depth of water. They were built of pebbles to the form of a pyramid. One must have comprised a bushel or more of stones, the other was not so large. By patient watching the fact was discovered that these mounds were made by chubs, which could be seen carrying the pebbles in their mouths from near the water-line to the hillocks. They worked incessantly and perseveringly, seemingly unconscious of the presence of spectators. If driven away by dropping a stone upon them they would quickly return and resume operations, always in exactly the same place, going over the same line to the same place to find the small stone.

I have heard it said that bass build such mounds, but for what purpose there seems to be a diversity of opinion. I have never seen anything of the kind before, nor have I found an angler who ever heard of chub becoming mound builders; so the discovery was naturally very interesting to me, and I felt I was feeling confident that if you will add to the letter some remarks of your own, a great many of your readers will thank you for them. Why and for what purpose was so much labor expended by the fish, and what fish are prone to such occupation?
D. H. B.
The name "chub" is so extensively applied in America that

it is not at all descriptive. We restrict it entirely to the "fall fish," *Scmotillus corporalis* and *S. bullari*, while in Virginia the name is even applied to the black bass. As the English chub is a cyprinoid fish, and we have fifty species which are more or less like it, it gives great latitude to the use of the name. Some of these fishes carry stones in their mouths probably to cover their eggs. One, the *Ecoglossum masillina*, of Rafinesque, is given the common name of "a stone toter" by Jordan, but it is impossible to say to which genus your fish belongs. We wish we had a specimen.

TROUTING AT TIM POND, MEISTIS, MAINE.—Mr. Jared Goodrich, of Plainville, Conn., with his friend Seymour, two weeks since, started on "round trip tickets" for the above and other trout localities. They went via Boston, Portland, Lewiston, Farmington and Kingfield. Mr. Goodrich's hotel was burned May 10th, also the stables, with Dan Clark and Son's new stage coach. A large new hotel has been opened, of which Mr. G. speaks very highly. Dan Clark & Son, with usual enterprise, have on still another new coach with excellent horses, sure to make time. At Kennedy Smith's cabins they found a party from Lewiston, one from Boston and another from Wakefield. There the cabins and boats were all in fine order, trout were in great abundance—in the creek—and a new cook placed them with various viands on the table in a style to tempt more fastidious appetites than those sharpened by exhilarating sport and pure bracing air. Mr. Goodrich reports there has not been a large amount of rain there this season, and that the mountain streams are not full, nor enough water in the Carrehasset River to "run the logs" with ease. The nights were good, and white frost three mornings silvered the shores of the forest-draped lakelet. Some of the guests took trips down Tim Pond Stream to feast on the beauties of its foaming cascades and lure the nimble trout from their dark pool homes. Another company went to Beaver Pond, and from there on into greater depths of the dark and vast wilderness of lakes ago inhabited by the speckled charmer, than we who are sportsmen, and here they were dwelt unknown, save by a few lumbermen visiting these secluded regions in winter in pursuit of their vocation. And now Smith prepares the way for the chosen ones to cast their silken lines upon those virgin waters. I envy them their great privilege. But more of this anon. Mr. G. and friend turned their faces homeward and arrived at Providence, R. I., on the 21st inst. They are ten years younger than when they started, having had the best trouting trip yet in their lives, though somewhat venerable in years. They were allowed on their tickets to return via Flagstaff, Lexington, North New Portland and North Anson, when they came to the Somerset R. R. They speak of the scenery by both routes as grand beyond description, from Kingfield to Eustis, and from Eustis to the farms to North New Portland, at which place they found good hotel. They speak of hearing partridges drumming all about the cabins, and think they wintered unusually well. Mr. Editor, may you and I be there to see. In my list, when speaking of flies, I should have named the "Moosehead" as made from a description I gave to Wm. Mills & Sons. It is one of the best for Tim Pond and the Dead River region.—J. W. T.

PROF. CREVY—SYRACUSE, N. Y.—I am in favor of fair play. I am in favor of giving credit to the party to whom it properly and rightly belongs. I have just read the letter of "Walton" in this week's FOREST AND STREAM (June 2), and he therein makes a great mistake of a very glaring misstatement. He is correct in saying that the fishing in Onondaga Lake and Seneca Lake has been paid for by anglers to know that there are more glass-eyed pikie, yellow pikie and black bass now in the lake than for any year during the last fifteen years. But he gives the credit of all this to the Onondaga County Sportsman's Club. It does not belong to them. They have done very little if anything toward keeping the nets and seines out of the lake and river. I do not know that they have ever had a man to patrol and watch the lake waters, contributed toward the expense, or spent a dollar for that purpose.

The credit all belongs to the Onondaga County Fishing Club, which every spring and fall for the last four years has had four or five men in its employ for the purpose of protecting the fish in the lake and river from poaching by seines or other nets. These men have been paid by the anglers. All of the dues received from anglers to the hundred members have been devoted to that purpose. During the last four years they have captured and destroyed a great many nets of various kinds, have successfully prosecuted nearly one hundred poachers, and have struck terror among the law breakers. And they propose to go right on with the good work, but do not want their thunder stolen now by a big-shooting club.

I have read and now possess a nearly complete file of FOREST AND STREAM, and know that you favor the right—"I GO A FISHING."
TROUT IN THE ADIRONDAKS—Moira, Franklin Co., N. Y., June 8.—Parties who have returned from the 16-mile level say they never saw the trout fishing better than it has been in the lake during the past two weeks. They state that all who came there had no trouble in catching all they wanted. They caught many large trout, several weighing a pound and a pound and one-half. Two of them caught 26 good sized ones at the landing at the foot of the level one evening in less than an hour's time. The trout fishing this spring is uncommonly good in many of the parts of the lake. And the men saw many deer about the lake, often two and three together, feeding along the banks of the stream in the daytime. One man, who was in a boat alone fishing in River Pond, a small pond formed by an outlet from the river, saw a large buck near the centre feeding on lily pads. Although he hid no gun, and nothing but a paddle and fishing rod, the man gave chase. The water in the pond is very shallow, and the man saw the buck's head and neck above the water, but would sink into the mud nearly all over, and could not get along very fast, so that he came very near overtaking him. But when both were near the shore, and the man gaining fast, the water suddenly became so shallow that he could not propel his boat any farther, and the buck, by hard scrambling, managed to work his way out of the mud to the shore. When he struck back the man saw the head of the man's boat and saw him backing out of the mud with his boat. At that same time the man went to the outlet of the pond and caught two trout that weighed by the scales 3 lb. 2 oz, and many smaller from 1 to 1 lb. in weight. This happened last week.—A. C.

SHAD IN THE DELAWARE.—The shad-fishing at Gloucester, N. J., a few miles below Philadelphia, on the Delaware

scruity after sundown as will prevent the judges from distinguishing the boats as they go round the stakes, otherwise they will be declared off and be run again next day, or at such time as the judges may determine.

11. All regattas of this club shall be triangular, distance fifteen (15) miles. Judges shall not start yachts in a regatta unless there is at least a steady breeze blowing. In case a race is postponed for want of wind, or if the "gale" it shall be deferred from that time, as the judges may determine.

12. In the case of a regatta shall allow one another six seconds per measurement for every mile sailed in a straight line. The distance to be completed by the judges. Boats of the second class shall allow one another five minutes per mile. Boats of the third class shall allow one another six seconds per mile. Boats of the fourth class shall allow one another five minutes per mile. Boats of the fifth class shall allow one another six seconds per mile. Boats desiring to enter a regatta must first obtain the consent of the judges, who shall give an allowance of five minutes to those who belong shall only receive time for the distance actually sailed.

13. Boats shall be measured as follows: Take the extreme length from the stem to the outside of stern-post, at the water-line. This note of measurement applies to regular hulls only.

14. No catamaran or double hull boat shall be allowed to enter a regatta, any round bottom boat belonging to this club in any regatta given by or under the auspices of this club.

15. In all Corinthian races boats must be sailed by members of the club, and amateur crews.

16. No side or dagger shall be used by any yacht sailing under the rules of this club.

17. There shall be an annual regatta for the club challenge cup, to be sailed by Corinthians, to take place on the last Tuesday in June between all yachts belonging to this club.

18. In the absence of the cup shall hold it until within two weeks of the next annual regatta, after which it shall revert to the secretary of the club.

19. The holder of the cup shall have the privilege of substituting any boat other than the one that won the cup originally, provided said boat be bona fide his own property.

20. Any member winning the cup for three successive years shall retain the cup until the next regatta, after which it shall revert to the secretary of the club.

21. In the challenge cup race time allowance will be 1 1/2 minutes per mile.

22. On the fourth Tuesday of May in each year and the Thursday succeeding there shall be given races, to be sailed under the rules and regulations of this club, for such prizes or prizes as the club may provide, open to all yachts.

23. On the fourth Tuesday in May, 1881, and 1882 classes. Thursday succeeding and all classes.

24. On the Thursday succeeding the dates hereinbefore mentioned the second class shall be sailed by Corinthians, for such prizes as the club may provide.

25. There shall be a regatta on the second Thursday in August, for a purse of \$250 to the first boat and \$100 to the second, and \$50 to the third, and a purse of \$50 to the first boat and \$25 to the second, and \$12 1/2 to the third, and a purse of \$10 to the first boat and \$5 to the second, and \$2 1/2 to the third, and a purse of \$5 to the first boat and \$2 1/2 to the second, and \$1 1/2 to the third, and a purse of \$2 1/2 to the first boat and \$1 1/2 to the second, and \$3/4 to the third, and a purse of \$1 1/2 to the first boat and \$3/4 to the second, and \$3/8 to the third, and a purse of \$3/4 to the first boat and \$3/8 to the second, and \$3/16 to the third, and a purse of \$3/8 to the first boat and \$3/16 to the second, and \$3/32 to the third, and a purse of \$3/16 to the first boat and \$3/32 to the second, and \$3/64 to the third, and a purse of \$3/32 to the first boat and \$3/64 to the second, and \$3/128 to the third, and a purse of \$3/64 to the first boat and \$3/128 to the second, and \$3/256 to the third, and a purse of \$3/128 to the first boat and \$3/256 to the second, and \$3/512 to the third, and a purse of \$3/256 to the first boat and \$3/512 to the second, and \$3/1024 to the third, and a purse of \$3/512 to the first boat and \$3/1024 to the second, and \$3/2048 to the third, and a purse of \$3/1024 to the first boat and \$3/2048 to the second, and \$3/4096 to the third, and a purse of \$3/2048 to the first boat and \$3/4096 to the second, and \$3/8192 to the third, and a purse of \$3/4096 to the first boat and \$3/8192 to the second, and \$3/16384 to the third, and a purse of \$3/8192 to the first boat and \$3/16384 to the second, and \$3/32768 to the third, and a purse of \$3/16384 to the first boat and \$3/32768 to the second, and \$3/65536 to the third, and a purse of \$3/32768 to the first boat and \$3/65536 to the second, and \$3/131072 to the third, and a purse of \$3/65536 to the first boat and \$3/131072 to the second, and \$3/262144 to the third, and a purse of \$3/131072 to the first boat and \$3/262144 to the second, and \$3/524288 to the third, and a purse of \$3/262144 to the first boat and \$3/524288 to the second, and \$3/1048576 to the third, and a purse of \$3/524288 to the first boat and \$3/1048576 to the second, and \$3/2097152 to the third, and a purse of \$3/1048576 to the first boat and \$3/2097152 to the second, and \$3/4194304 to the third, and a purse of \$3/2097152 to the first boat and \$3/4194304 to the second, and \$3/8388608 to the third, and a purse of \$3/4194304 to the first boat and \$3/8388608 to the second, and \$3/16777216 to the third, and a purse of \$3/8388608 to the first boat and \$3/16777216 to the second, and \$3/33554432 to the third, and a purse of \$3/16777216 to the first boat and \$3/33554432 to the second, and \$3/67108864 to the third, and a purse of \$3/33554432 to the first boat and \$3/67108864 to the second, and \$3/134217728 to the third, and a purse of \$3/67108864 to the first boat and \$3/134217728 to the second, and \$3/268435456 to the third, and a purse of \$3/134217728 to the first boat and \$3/268435456 to the second, and \$3/536870912 to the third, and a purse of \$3/268435456 to the first boat and \$3/536870912 to the second, and \$3/1073741824 to the third, and a purse of \$3/536870912 to the first boat and \$3/1073741824 to the second, and \$3/2147483648 to the third, and a purse of \$3/1073741824 to the first boat and \$3/2147483648 to the second, and \$3/4294967296 to the third, and a purse of \$3/2147483648 to the first boat and \$3/4294967296 to the second, and \$3/8589934592 to the third, and a purse of \$3/4294967296 to the first boat and \$3/8589934592 to the second, and \$3/17179869184 to the third, and a purse of \$3/8589934592 to the first boat and \$3/17179869184 to the second, and \$3/34359738368 to the third, and a purse of \$3/17179869184 to the first boat and will sail the third race for the cup, and compete for the sailing prize above offered at the same time. As a team, an entrance fee of \$1 will be charged to each canoe competing for this cup. This race is open to all canoists. Entrance fees payable to C. Boyer Van Wyck, 27 West Twenty-third street, Secretary of the Club. By order of the Regatta Committee: C. Boyer Van Wyck, C. K. Munroe, W. P. Stephens, C. P. Oudin and L. F. Doremieux.

FOR FRANCE.—Mr. Caplan has his yard so full of work that he has been obliged to refuse the challenge to race from abroad. He has now in hand a Nonpareil racing boat for a gentleman in Boulogne, France. She is 19 1/2 ft. long, 4 ft. beam. Deeked fore and aft and supplied with four launch. The deck is laid of 3/4 in. strips fancy woods; coamings, trimmings, plank-sheer, rail, etc., in black walnut. Copper fastening and riveted work throughout. He is also building another 23 ft. launch, or launching in Yacht and waters. She is to be a very rigged—a very sensible idea. A third boat is in hand 4 ft. long, 12 ft. beam, with accommodations for six and to be schooner rigged. The energy and success of Mr. Caplan in building up a flourishing business in one or two short years against much opposition and making his name known all over civilization will be acknowledged, even by those who do not as yet look with favor upon the style of boat he has brought out as a specialty.

YACHTING IN BUFFALO.—Editor Forest and Stream: The famous cup regatta, now holding the Gardner Cup won at Cleveland last year, has just received challenge to sail again for some time July 4 under the conditions the cup is held. She leaves here last of June and is likely to meet the pick of the lake fleet at Cleveland. Our Common Council has already and will set you an example on the Atlantic seaboard in appropriating \$200 for the club races July 4 at this port. How is that for a Common Council? We are proud of our City Fathers now. Trunk, Crow, Alvin, Curlew, Kilde, Mermad, Petrel, Ficting and Clara may be looked for at the line of and we will give our ordinary coasting and townspeople such a sight like will start a fresh boom in the noble sport.

ROYAL CANADIAN YACHT CLUB.—A steam yacht has been put on the route between the club house on an island and the shore. The cost of the privilege and success of Mr. Chapman in building up a passage by the steamer and \$3 for annual rates. The house is a handsome structure, facing Toronto, and was designed by Messrs. Frank Darling and Curry. It contains a dining room 20x30 ft., and a reception room 20x20 ft. on the ground floor, and on the second story a billiard room, smoking room and committee room. The building is surrounded by a balcony, and has a tower on the southeast corner. Baths, lockers, dressing rooms, besides a lawn tennis and croquet ground is being laid out, and trees planted.

YACHTING IN FRANCE.—According to a return which has been prepared by a committee of French yachtsmen, it appears that there are now 105 steam yachts, 1,073 sailing schooners, and 8,192 picasore boats, with a total burden of 24,108 tons and an approximate value of \$7,000,000 on the registers. The number of persons employed in them, exclusive of the owners, is 18,821, while the number of members belonging to the different sailing clubs is 11,476. These clubs give nearly \$100,000 in prizes, and spend about \$700,000 in repairs.

NEW BEDFORD YACHT CLUB.—The club book for 1891 has been issued and is an excellent index of the present strength of this enterprising organization. The fleet numbers 15 schooners, 32 sloops, 5 cutters and 6 canoes. Most of these are of moderate tonnage, ranging from 25 to 65 ft., forming an excellent school for amateurs. The list includes 80 regular and 3 honorary members. So fast has the fleet of cutters grown that special provisions have been made in the sailing rules for their classification.

BIG CUTLER.—Boston will after all not lead off with the first large cutter, as work is to be commenced at once on a ship 60 ft. waterline and 70 ft. over all for Com. W. A. N. Stewart, S. Y. C. She will be built by Piegrass, of Greenpoint, and if successful will be the fore-runner of a class of the same sort, for we know of several gentlemen awaiting results before going and doing likewise. The good cause is gaining strength.

YAWLS IN SAN FRANCISCO.—The yawl Emerald astonished everybody on the Napa trip. She was known to be fast as a sloop, but was supposed to be slow as a yawl. She got to Napa close to 110 miles, and within a few yards of the Clara, beating all the others. On the sail home from Mare Island she sailed up to the foot with the Anissa and Nellie, beating all the sloops and schooners. The other Emerald is a fast one yet.

SAGITTA.—This handsome sloop is for sale; inquiry of Mr. Alonzo Smith, yacht builder, at Esplanade, will elicit details. We thought the Sagitta will sell "like hot cakes" now that Hildegarde's brilliant victory has brought out Mr. Smith's name so prominently as a builder. We should like to see Sagitta fall into the hands of a racing owner. She is the best looking of the many good ships launched at Islip.

COLUMBIA YACHT CLUB.—Annual regatta has been postponed on account of the unfavorable weather for classification, measurement, etc. First "yoon" regatta will be sailed July 12 as announced in our fixtures. Mr. C. A. Winter has been elected Vice-Commodore in place of G. K. Hunt, resigned. A marine railway for yachts under 50 ft. is to be built upon the club grounds.

SOUTHERN YACHT CLUB.—Has issued a neat club book for the current year, containing their constitution, by-laws, and the new sailing rules, also the list of yachts. Next issue, we hope, will also contain a list of yachts, with dimensions, builders, etc., thereby making the publication more valuable as a book of reference. A chart of local racing courses would also be a useful supplement.

SEAWANHAKA YACHT CLUB.—The club book for this year shows a gratifying exhibit and a marked increase in yachts and members. There are now in the fleet 14 schooners, 6 steamers, 26 cabin sloops, 3 cutters, and 15 "open boats," a total of 74 yachts and 177 members. With the new club house thrown open this spring, large additions may soon be expected.

NEW YORK YACHT CLUB.—The club book for 1891 is a very neat publication, containing the names and burges of no less than 43 schooners, 30 sloops, 4 cutters and 27 steamers; total, 106 vessels, all over 15 tons. The membership has increased very fast, there being 41 names on the list, of which 32 are those of honorary members and 24 those of life members.

MARIQUITA.—This keel sloop has been bought from Boston by Mr. P. W. Dunham, who will by the Atlantic Y. C. burgee. She is 37 ft. on deck, 41 ft. on water line, 15 ft. beam, 4 1/2 ft. deep, and draws 5 1/2 ft.; was built in 1866 by Jackson & Mathews, of Greenport, but since then thoroughly overhauled.

KNICKERBOCKER CANOE CLUB.—Will take steam July 2 to Esopus Island, 85 miles up the Hudson, there launch and cruise home by canoe. All canoists are invited. A meeting to arrange details is called for June 26, 8 p. m., at the club-house, foot of Eighty-sixth street, North River.

MURIEL AND REGINA.—We hear that the 12-ton cutter Muriel has been bought by Mr. E. D. Morgan, Jr., and the Regina by Mr. Chas. Stillman, pending the construction of a new cutter of some eight tons.

SYLVIE.—This schooner, well known as one of Steer's handsome models, has been sold by Mr. Thos. Nye, Jr., of New Bedford, to Mr. N. W. Whitten, of Boston. If the sybil were again rigged she would make capital racing with the biggest sloops in spite of her age.

DEFEIRED.—A vast amount of material and correspondence must be delayed until the racing season stacks up. Also reviews and notices of books, pamphlets, etc. The "yoon" has taxed our space beyond its stretching capacity.

PROMISE.—This fast steam yacht has been sold by Allen Thorneycroft to Mrs. J. H. Johnson, of New York City, for sailing.

CLEVELAND CANOE CLUB.—Will sail a race July 4 and be present at the Jake George meet in August.

We know that there is nothing on earth equal to Top Ritters as a family medicine.

Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

W. J. N., Tiffin, O.—For metallic cartridges see our advertising columns.

CONSTANT READER.—When you send your name your queries will be answered.

J. S. C., Hbch Bridge.—No special license is required to shoot game on Long Island.

J. H., Peru, Ill.—When you sign your name to your communication it will be answered, not before.

J. B. H., Philadelphia.—See articles on gun-shy birds published in FOREST AND STREAM, February 5, 1890, and April 8, 1891.

C. P. C., South Abington.—We have not yet examined the powder, and so cannot say whether or not it has the dangerous properties of the other.

M. N., Hoboken.—You will find much of the information about California in Mr. Van Dyke's "Blue, Red and Gun in California." We can send it to you. Price \$1.50.

J. C., New Orleans.—The cat of the fish called "mad jumper," which you send, is an African fish known as *Pterophtibus boerhaavei*, which seldom grows over six inches in length. Little or nothing is known of its breeding habits.

J. P. G., Kansas City, Mo.—Our club wishes to get for the club room a work on game birds, a stewards, and something nice, strongly bound and with good illustrations. Can you recommend one to us? As there is no such work as you ask for. A copy of Audubon's Birds of America comes nearest to it, but would be very expensive.

F. H. W., Kimira, N. Y.—What is the proper dog to train for retrieving ducks? Water or cocker spaniel? I wish a dog that I can train for retrieving from the river and lakes near this place. Where can I get a water spaniel for above purpose? Ans. The dog you want is an Irish water spaniel. There are several breeders of this valuable strain in this country. Watch our kennel advertising columns, and "Kennel Notes" column for the information you want.

J. M., Boston.—The undersigned is one of a party of four that annually visit the trout streams and lakes in Maine and New Hampshire. It has been suggested to us that Labrador would afford us better opportunity for our sport. Can you put us on the way of locating ourselves about the country; the route and probable expenses, etc., and where to go for August and September fishing? Ans. No such name is known of Labrador. Prof. Henry Wood, of Winslow, N. S., has written a book on Labrador, but we have not seen it. Write to Mr. W. F. Whitchee, Commissioner of Fisheries, Ottawa, P. C. From Quebec you can probably take steamer of the Quebec and Chit Ports Line to some point about Falmouise, and from there will have to go in a *chaloupe* or fishing smack. We will be glad to hear the results of your trip, and would advise you to go before September as the season sets in early there.

Cop. Easton, Md.—A sweepstakes match was shot. It and I killed all their birds. R. came next, and G. B. S. and others next. It and T. claimed first and second money and R. third. A dispute then arose by H. claiming that H. and T. were only entitled to first, T. to second and G. B. S. and others to third; but H. was overruled, and H. and T. shot off for first money, T. winning. It then took second money and H. third, R. still protesting. Was B. right or wrong? Ans. In "class" shooting, the highest score takes first, or ties on highest score shoot off for first; second highest score takes second, or ties on second highest score shoot off for second; third takes third, etc. If you were shooting "class" shooting, then H. and T. should divide or shoot off for first. R. should take second, and the others shoot off for third. If you were shooting for the highest individual score with the division was correct. This point should have been agreed upon before shooting the match.

NOTICE!

Advertisements received later than Tuesday cannot be inserted until the following week's issue. Rates promptly furnished on application.

Sportsmen's Goods.

5 Consecutive Shots, 50 feet, off-hand.

WILD HARRY, the Indian 'cout, says that with a Stevens Rifle or Pistol, at 50 feet, off-hand, he can knock the spots out of a playing card in this way all day long. He is obliged to use these arms to do the great feat performed daily in Harrow's Circus and elsewhere. Ringing a bell every time through a quarter-inch hole, cutting the ashes from a cigar held in another person's mouth, piercing a dime held between another's fingers, and numerous other difficult and wonderful shots. The only objection to these arms is that they shoot so well, are so handy to take apart and carry about in a trunk or bag, that everybody wants them, and the makers have had to enlarge the factory, and work nights to supply the demand, and even in the dull season cannot get much stock away. Send for illustrated price list to

CHAS. FOLSOM, 106 Chambers St., N. Y. Dealer in Fire-Arms, Ammunition, and all Articles connected with the same, and sole agent for J. STEVENS & CO'S

Breech Loading ARMS. SINGLE GUNS: Plato, \$12.50; Twist, \$15.00; Laminated, \$17. RIFLES: .37 cal., \$21.00; .20 lb., \$22; .25 in., \$24. .32, .35 or .44 21. HUNTERS' PET RIFLES: .32, .38, .45 or .44 cal., \$3 1/2. In. \$18; 2 1/2 lb. \$19; 3 1/2 lb. \$21. POCKET RIFLES: .22 or .25 cal., 10 lb., \$12.25; 12 lb., \$13.25; 15 lb., \$15; 16 lb., \$16.50. GALLERY PISTOLS: Light, \$20; heavy, \$22.

New York, May 19, 1880. I avail of this occasion to inform you that the little pocket rifle that I bought from you six months ago is a perfect gem. On my last trip I had occasion to use it in the woods, and out of 100 shots I killed 87 birds, the largest size being a wild pigeon at a distance ranging from 100 to 300 feet. For accuracy and perfection I consider Stevens rifle unrivalled. Hoping this statement will give you pleasure, I remain, dear sir, Yours, very respectfully, J. A. P. BONALDE.

Black Bass and Maskalonge

THE CELEBRATED FISHING GROUNDS OF THE THOUSAND ISLANDS.

St. Lawrence Hotel and the Rathbun House, CAPE VINCENT, N. Y.

[Terminus of R. W. & O. R. R.]

Both under one management. The Rathbun House has been enlarged to double its former capacity, and both houses rebuilt and returned throughout. They are located in the immediate vicinity of the very BEST FISHING GROUNDS OF THE ST. LAWRENCE RIVER.

Competent oarsmen with first-class boats at reasonable prices are always available. Malaria, mosquitoes and hay fever are unknown at this point. The terms for board at either of the hotels are from \$7 to \$14 per week, according to location of room.

See FOREST AND STREAM of July 1, 1880, a Bass and Maskalonge fishing ground. A list of the attractions, and send for circular containing full particulars.

H. L. FOX, CAPE VINCENT, N. Y.

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER RESORTS AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained therein.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

THE TROUT season begins May 1st and ends Sept. 1st. THE GRAYLING Season opens June 1st and ends Nov. 1st.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many streams and lakes of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish is available at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods is grand and very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely improved in the fall season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk. It is our aim to make sportsmen feel "at home" on this route. For Tourists and Fishermen, we have 120 boats of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'g Agent, Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

EXCURSION TICKETS VIA BOSTON AND MAINE RAILROAD.

Hornbeam Rods A SPECIALTY.

W. H. HUNTINGTON,
WILTON, CONN.
Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have. These are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 60 to 80 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

GUNPOWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 10 (fine) unequal in strength, quiteness and cleanliness; adapted for glass-ball and pigeon shooting. Pecked in 1 lb. canisters.
Dupont's Eagle Ducking.—Nos. 1 (coarse) to 8 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. cart tere containing 134 lb. kegs.
Dupont's Choke Bore.—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist, does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 5 lb. kegs and 1 lb. canisters.
Dupont's Eagle Rifle.—A quick, strong and clean powder. Very fine grain, for pistol shooting. Packed in 1 lb. canisters and 5 lb. kegs.
Dupont's Rifle.—Nos. 1 to 8. "Sea Shooting," FFG, and FFG. The FFG for long-range rifle shooting, the FFG and FFG for general use, burning strong and moist. Packed in 1 lb. and 5 lb. canisters, 6 1/2, 12, and 25 lb. kegs. Fg. coarse, FFG, fine.

Dupont's Sporting, Mining, Snapper and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle Cartridges, Muzzle, Cannon, Morart, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by: F. L. KNEELAND, 57 Beaver St., N. Y. N. B.—Use none but DUPONT'S Fg. or FFG. for long-range rifle shooting.

This Cut is an exact representation of this Rod, which
CANNOT BE EQUALLED FOR THE MONEY.

It has Solid Reel Plate, Nickel Plated, Patented Perules, allowing the wood to be used the full size, thus preventing rot breaking where wood and ferrule join. But wound with cane and silk, giving it that desirable appearance and the feeling of the high-priced rods. The first two joints are made from Best Selected Second Growth Ash, Stained and Polish'd. The tips from the Lance wood, polish'd. The Rod is Well Ringed Throughout. Length, ten and one-half feet; weight, from nine to ten ounces. This is the best-made, best-finished Rod for the money in the United States and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning. PRICES.—With one Trout Tip, in Case, \$4.00. With one Trout Tip and one Bass Tip, \$4.75. With two Trout Tips and one Bass Tip, \$5.75.

GENERAL AGENT FOR CARP'S STANDARD GLASS-BALL TRAP. GREENE'S AND BONE-HILL'S GUNS A SPECIALTY. SEND FOR CATALOGUE.

Ammunition, Etc.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound each.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 5, 12 1/2 and 25 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Fg. Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents, in every prominent city, or wholesale at our office.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be directed to the Forest and Stream Publishing Company.

SUBSCRIPTIONS.
Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Address: **Forest and Stream Publishing Co.,**
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, June 30.

THAT POSSUM will be served in every style July 7, 1881.

THE FLY CASTING TOURNAMENT.

FLY-CASTERS say that the late tournament was the largest and most successful of any ever held. Why it is that this beautiful art has no votaries outside the New York State Association for the Protection of Fish and Game we do not know, but if a tournament was ever under other patronage, either in this country or any other, we never heard of it. It is to be hoped that other associations may introduce it, and also that the New York Society will carry out the new features introduced at this last one. One of the most important of these was the perfect record of the wind kept by Mr. A. B. Crane, of the United States Signal Corps. The day was cloudy and the wind so light that the judges did not consider it necessary for the contestants to cast both with and against it. The tournament was honored by the presence of many ladies, and the following gentlemen were noticed among the spectators, many of whom remained all day: Hon. R. B. Roosevelt, Mr. Chas. H. Raymond, Mr. H. C. Washburne, Mr. H. L. Leonard, Mr. Wm. Mitchell and a host of others. The pond was 54 feet long by 63 feet wide, and in making long casts the contestants were placed back from ten to twenty feet in the salmon and sixty feet in the bass casting from the edge of the pond. Platforms six feet square were laid on the ground for them to stand upon, so that all should stand in the same place, and a line with numbered buoys at every five feet was stretched across the

water. This line had been soaked the night before in order that it should not shrink after measurement, and the floats were correctly placed before casting. All was in order, and the only thing which conspired against it was the wind, which was too weak to bring out a contestant's points in casting with and against it.

Mr. Harry Pritchard was the "dark horse," a man whose friends claimed much for him, but who had no public record. It was feared that Mr. Pritchard would enter the amateur class and walk through to the champion's. He disdained to do this, and although the amateur prizes were as good, if not better, than in the Champion classes, and he could not be barred from it, he showed no disposition to enter there. His first entry was in the salmon casting, where he showed that he was an adept; and when we consider the fact that he not only never cast in such a contest, nor ever saw one, and hardly knew what was expected of him, he did well. He was drawn to cast first, and cast as in ordinary fishing, and afterward said that he never saw as much muscle put upon a rod as Mr. Wood did, and that he would have hesitated to put such a strain upon a rod. Of the casting of the Wood brothers little is to be said. Reuben, the elder, is the heavier man of the two, but the wiry build of Ira caused several to think that he might give his brother a close contest if—he wanted to. Mr. Pritchard was very nervous and ill at ease. He cast in his trial casts in a manner new to all present, and termed an "underhand" cast by some and a "water cast" by others. In this the line was not retrieved, but by drawing it in a few feet and then sending it out again without leaving the water, it rolled over and over with a snake-like motion, and the fly was sent further and further. According to the rules this style could not be allowed, as the regulations expressly say that a cast shall not be valid unless the line be retrieved, and in retrieving he lost many flies. Mr. Reuben Wood won much applause by his skill and grace, and did not lose a fly.

The bass casting was in "Cuttyhunk style," with a one-ounce sinker. The casters of heavy baits at Cuttyhunk and Pasque Island were not represented. The score given in another column gives the result. This style of casting is new to the Association, as it is only practiced in salt water. It is quite an art and should be continued. The heavy-weight men say that if they had been represented there would have been some extraordinary long distances scored. Mr. Endicott, who took the third prize, was commended for his accurate casting.

When the amateurs in Class C were called to the score no one seemed able to predict the winner. The casting as a whole was good, and those who expected to find half or more of the new men to be duifers were disappointed. Mr. Hier, the winner of the first prize, was challenged several times for lost flies. He had little advantage by being coached by Reuben Wood, for "Uncle Rub" seemed impartial in this matter and gave many of the amateurs advice. Mr. Hier's cast of 67 ft. 6 in. was beyond that of any of the others with their allowance added. Once he cast 73 ft., but having no fly the cast was lost. The next in length was H. Iberton and Plumb who cast 64, the former with a longer rod, and yet, when style and accuracy were taken into account, one of these men fell to the fifth and the other to the seventh place. Mr. Endicott was, in our opinion, the neatest caster in this class, and on his style and accuracy took second prize over three men who cast greater distances. Mr. Hier had worked hard to prepare himself for this contest by continual practice, as shown by the condition of his hands, which were skinned and calloused by the rod, and his labor was well rewarded.

In the next contest, Class B, where only 1st-prize winners to previous contests were barred, Mr. Pritchard entered and took the first. He was still nervous and continually forgot to retrieve his line and had to be cautioned. Mr. Arrow-smith, who took second, had a record. He took second prize at Le Roy in 1867 in a free-for-all, when there were only two entries and no score report was given. He has not cast in public since, but he evidently knows how to do it. Mr. Endicott again showed his graceful style and let Mr. H. Iberton, who beat him on distance but was behind in delicacy.

The Champion class was looked for anxiously as Mr. Pritchard would again meet the veterans. He was still nervous, and it was also noticed that Ira Wood was getting shaky. The latter gentleman had eaten nothing since early morning

and it was now six p. m. He had assisted every one who had a tangled line, coached the amateurs indiscriminately to encourage them all, lifted the platforms and made himself useful at every opportunity. This and his continual smoking caused him to shake. Reuben Wood took the first, Mr. Pritchard second, Ira Wood third and Mr. Dennison fourth. Mr. Pritchard's casting, for delicacy, was admired by many. He cast fully sixty feet and his flies fell before the line touched the water. The others, in all the classes, when casting for delicacy cast a side cast, so that the line fell lightly but before the flies. We incline toward Mr. Pritchard's style in delicate casting, and hope that future judges will decide on this question. Mr. Pritchard's style was a new one and the judges followed precedent. He wanted to instruct them, but of course it is not admissible for a contestant to instruct judges in any point. They could not at this late stage take a new view of any points.

In the sweepstakes Reuben Wood led off and actually cast seventy-five feet with a ten-foot rod. This brought an explanation from the veteran, Mr. Roosevelt, who pronounced it the most wonderful casting he had ever seen. He took the first and only prize. Mr. Pritchard cast as far once, with a longer rod, but did not or could not retrieve his line. Ira Wood essayed to cast, but a trial convinced him that he "had gone to pieces." Thus ended the largest and most successful fly-casting tournament ever held in any land. The arrangements and the judging gave general satisfaction, and the judges agreed so well on comparing their notes that the referee was not called on to decide a single point. The latter gentleman was prompt to investigate a challenge of loss of fly or other cause, and won approval by his promptitude.

THE NIHILIST MARKSMEN.

WE depart from our rule of not noticing anonymous communications to give space in this number for a remarkable letter, setting forth what seems to be a use of our American rifle ranges certainly not intended when they were projected. The plan seems to be to do some king-killing at long range; and, with the weapons which may be procured in this market, an experienced shot would find but little difficulty in picking off an individual at a distance of fully 500 yards. At present, on the ranges, it is no novelty to have marksmen at the mid-range lodge do dozen consecutive bullets within the carton circle of 11 inches diameter. This, too, with light rifles and with the comparatively heavy 3 lb. pull. Lighter trigger pull, heavier rifle, and a rest to shoot from would all increase the chances of hitting nearer the mark.

Bombs thrown by hand and the use of a pistol from the midst of a crowd are very crude and unreliable plans, while by selecting a site commanding a view of a point where the victim is to pass it would be comparatively easy for the conspirators to carry out their murderous plan with sure deliberation, while the distance from which the shot would come would enable the assassins to readily escape.

Five hundred yards mean a distance of over six of our ordinary street blocks, and if one of these sharpshooters, who our mysterious correspondent hints are practicing on our American ranges, could secure a position overlooking a point where the Czar or other victim was to hold a review, then the "taking off" would be comparatively easy with the telescopic sights and other aids in fire shooting. There is no better school of marksmanship in the world than all corners match on one of our ranges. All sorts of notions in shooting are there tried, and either accepted or condemned as the results warrant. No suspicion is aroused by practice of any sort, and by scattering their force of marksmen, as seems to be the case with these conspirators, a vast amount of information on windage, elevations, the sorts and effects of various charges and the operations of the several makes of arms may be gathered.

What is to be done to checkmate their devilish designs we cannot say. It may be that it is after all merely a mare's nest story started by our correspondent without proper authentication or upon partially heard remarks. That our correspondent preserves a strict personal seclusion is not surprising, since the fate of an eaves-dropping informer is not apt to be a very pleasant one. We can only aid in thwarting the designs of these rascals, premising that they have the plan

laid down, by giving such facts as have fallen in our way full publicity, leaving it to others to take the preventive or precautionary step.

THE FATHER OF AMERICAN FISH-CULTURE.

CONCERNING the claims of Dr. Garlick and Prof. Ackley vs. the Rev. Dr. Bachman, upon which so much has been said in our columns, we can now say that we have received a copy of "Proceedings of the Cleveland Academy of Natural Science, 1845 to 1859; Published by a Gentleman of Cleveland, 1874." In this (pages 86 to 91) we find a paper "On the Artificial Reproduction of Fishes, by Dr. Theodorus Garlick, M. D." Read before the Academy Feb. 14, 1854. In this paper he relates the determination of Prof. Ackley and himself to make the experiment of breeding fishes after reading the work of Remy and Gehin, in France, and of their selection of the brook trout for their first experiment. On the 21st of November, 1853, he captured a pair from those in the pond where they had been placed and took the eggs by hand and artificially impregnated and hatched them. Further on (pages 118 to 123) we find as follows: "At a meeting held at Cleveland, O., Nov. 28, 1856, Dr. Garlick in the chair, the Doctor exhibited eggs of brook trout under the microscope. At a meeting held Dec. 5, 1856, he showed views of the anatomical structure of *Salmo fontinalis* from fish spawned Nov. 4 Again, Dec. 12, 1856, he resumed the examination of the young of the trout and specimens only twelve hours old were placed under the microscope and the circulation of the blood shown, together with the peculiar cellular structure of the yolk sac, etc.

This bulletin fully establishes Dr. Garlick's claim to have hatched trout in 1853, and it has been sent to Prof. Goode. Personally we never doubted the Doctor's assertion that he did artificially impregnate and hatch trout in this year, but we were glad to get the published proceedings of the Academy which contains the record and fully substantiates all his statements in this matter.

THE STATE TOURNAMENT is still in progress, as we go to press. The meeting has been one of the largest of the kind ever held in this country. As it is not yet concluded we reserve our comments upon it until next week. The tournament has attracted much attention from the daily press of this city, and the tone of criticism upon the meeting has been of a character which we venture to say was not anticipated by the attending clubs. The details of each day's work, including the whole of the State Shoot proper, are given elsewhere. The scores of the other matches will follow in our next edition.

THROUGH the courtesy of the editors of the *Christian Union* we are permitted to reproduce from the columns of that journal the plans of the camp cottages which have been built this year at Lake George Park. These cottages are comfortable and inexpensive, and in many ways much more adapted for out-of-town summer life than are the more primitive tent or the more pretentious hotel. We should like to see this plan tried elsewhere, as Dr. Eggleston suggests. There are numerous fine sites for such a summer cottage "camp" or village near this city. Is it not practicable to form such a select joint stock company among those whose employment keeps them in New York during the summer, but who would gladly repair daily to a summer settlement somewhere near the city on the Hudson? Now that the *Christian Union* has taken the initiative, we hope it may carry out some such project.

By the addition of four extra pages this week we are enabled to give the full scores of the Coney Island tournament without encroaching at all upon the other departments.

The Sportsman Tourist.

A MODEL CAMP.

LOVELIEST of the lakes that break the expanse of that forest known to Adirondack sportsmen as the South Woods, is Massawepic. At least so think the two fishermen, who, on this morning of early August, are floating lazily upon its surface. The sky is clear, the sun bright, and the lake-trout are lurking in the cooling depths below, far from the temptation of worm or fly. The sportsmen are reclining in the boat and looking at the wild scenery around them. They follow the varying outline of the lake, here sweeping far inland in a beautiful bay, there making out in a bold promontory, with here a sandy beach and there a rocky point. They see the densely-wooded ridges rising abruptly from the shore. They see the hills beyond, Blue Mountain towering high above the rest, and the outline of more distant peaks in the background of the picture. And as they look they see something which leads them to take their paddles and send the canoe swiftly toward the shore. It is not a deer or bear—no denizen of the forest has hastened their departure; but if you have ever lived in the backwoods many weeks you, too, have reeled up your eye when you have seen about noon the smoke of the camp fire curling above the trees. The canoe is directed toward a spot where the underbrush is cleared away and there is a path leading from the landing up to a high bank which overlooks the lake. Seen from a distance, there is only a little opening where a few of the tall spruces and hemlocks have been cut away; but a near view discloses a white tent among the tree-trunks, a sheltered table of bark already spread, or rather loaded, for the drying, blankets arising, wet boots smoking, camp-kits strewn in all directions, huge logs piled near the fire—in fact, a model

camp. Not one of those aristocratic camps that the sportsman sometimes finds near the Saranac or St. Regis, glorifying in a log hut, adorned with innumerable split bamboo rods and whole batteries of guns, where the chief occupation is target-shooting and the ground is strewn with cartridges; not that, indeed, but a genuine camp *rusticus*, boasting of nothing but plenty of venison and trout. The old relic of a guide with a full white beard and sunburnt face is "Wren."

That other person with a leathery complexion who is doing nothing in particular was a white man once, and might be still if the long accumulated mass of dirt and tar oil was removed from his face. But there are mosquitoes in the woods. Yes, such is the fact, and the Professor is bound to tell you that the dirty man is the Professor—the Professor, I say, when he made the discovery declared that he wouldn't be bothered by such pesky little unworthy-to-be-noticed insects, and he has kept his word, for the mosquito doesn't exist in the whole Adirondack region that has got a bill long enough to reach through the coat of tar-oil on the Professor's face, and that's saying a good deal, for the insects grow pretty large there. But a few words more about the Professor. He is the originator, pusher and go-ahead of the party which I am now introducing. His chief occupation while in the woods is putting on tar-oil. When he isn't doing that, he stuffs—stuffs in all senses of the word. In fact, he is a success as a stuffer. He stuffs at meal times, but if he never stuffs anything but himself, I should not mention it. His hobby, however, is stuffing birds and animals, and not only those, but fishes too, and snakes, frogs, worms, any living thing that is visible to the naked eye. If Wren kills a bull-frog for bait he wants to stuff that. There is a rumor, and Wren says it is so, that last summer when the Professor lived at the house of a farmer down in a clearing at the Barquette, he indulged himself in stuffing everything he could shoot, and he stuffed the turkeys, the cranes, hedgehogs, etc., when one day a new baby was added to the farmer's large family, and little five-year-old Bobbie, after watching the baby brother for some time, looked up in his mother's face and said, "Muzzer, don't let Professor stuff baby."

But to return to our campers. Wren hears the voice of the hungry stuffer in the woods, and carries the pun of smoking venison from the fire to the Professor. The Professor proceeds to wot an immense dirk which he carries in his belt. In a few moments the four are smiling around the little bark table, savory with venison, trout, and griddle cakes. A morning's exercise in bracing mountain air gives one a relish for the plainest food, but with what an appetite the sportsman sits down to his repast of game, he only knows who has himself shot, and he has hunted in the woods, and remote fastnesses of the wilderness. Wren is naturally very talkative, but seldom says a word during the more important occupation of eating. The meal over, however, his face broadens, his eyes twinkle, and he suddenly bursts into a spasm of laughter.

"That's only to help digestion a little," he said, when questioned as to the cause of the merriment. "But when I looked at yer Lignourney I kinder thought ye'd like to sleep in the tent to-night."

At this all explode except the boy addressed, who essays a snub, but with poor success, for his face is so diversified by mosquitoes bites that it resembles an elevated map of the Alps. While the others are recovering themselves I will introduce him. He is tall, thin fellow of eighteen, in corduroy pants and white tanned shirt, who has a rifle. He would tell a backwoodsman at first sight that this was his first trip into the woods. The young guide at his side is Hank. But perhaps by this time you are asking the cause of the fun. I will tell you, or rather let the Professor; for it is one of his standard stories. Excuse him if he seems to talk a little like a guide. "I don't mean as guides talk in books, but as they talk in the woods. He said that he had been with a few backwoods phrases now and then. Many of them are men of some education—Adirondack guides I am speaking of—and they never deliver long discourses in broken English at critical moments. It is the height of the Professor's ambition when in the woods to look and act a guide, and whenever their party meets another Lignourney always asks the stranger to pretend to talk him for one, while he gets a word or two delighted. With this introduction to his story I will let him begin.

You see that boy Lig had determined before coming into the woods to have a hut, the rest of the party might sleep in a tent, but he wouldn't. He would live the life of a true hunter, roaming the woods by day, and resting at night upon fragrant boughs of balsam and hemlock with no better bed than the bark of a fallen tree. He had a few more of these things, and urged the comfort of a tent, and related our experiences. We were met with a copy of Murray and the settler. "Murray didn't sleep in a tent." Look here, he says, "Throwing some huge logs on the fire, and wrapping our blankets around us we—" Never mind young one, you shall have a hut if you would quote any more Murray, and so Wren and I cut a spud and peeled several noble spruces, while out of the broad sheets of bark Hank constructed one of those picturesque three-curved little lunting shanties open to the south. The ground within was covered with boughs, and in front we built our camp-fire.

Night came—our first night in the woods. The shades fell upon the hills around us and over the blue waters of the lake. The camp fire, dimly burning, alone broke the gloom. It was a hot, sultry July night, and the most of our work we lay down early, the guides in the tent, Lignourney and I in that never-to-be-forgotten slanty. Fainter and fainter burned the camp fire. Darkness deepened around us. Rest came. Rest for the creatures of the wilderness. Rest for the two guides slumbering heavily in the tent. But "tired unware's sweet resorer" never visited that slanty. The fire went out, the night grew darker, and the most of our camp of us collected. He charged like the Old Guard at Waterloo and the result was even more bloody. I owe my life to the tar-oil. I pulled my blanket tightly over my head, leaving only the tip of my nose exposed. I was then quite comfortable. But poor Lig: he was plunged and kicked convulsively, and ever and anon through his struggles there came a despairing moan, so mournful, but yet so comical, that I finally shook with laughter. "Ouz, shut up! It may be fun for you, but I'll be hanged if it is for me."

I was silent out of pity and he didn't speak again. Morning came at last and with it reinforcements for the enemy. But as soon as it was light we crawled out from the heaps of slain mosquitoes and kindled a fire. I felt a strange sensation in my nose as if it were enlarged somewhat. I put my hand to my face, and sure enough, there it was, a mass of swollen flesh. My nose came in contact with a mass of swollen flesh. Yes, it must be so. Here was the end of my nose—way out here.

I called Lig's attention to it and the unfeeling fellow went into hysterics. The more considerate Wren tied up the injured member in a rag; but, my friends, to this day my nose has never regained its original beauty! However, the hut became our storehouse, and ours was a full model camp, for the tent stood upon the high point above the lake-side and the cool breezes blew mosquito, black fly and midge far from the couches of our rest.

AN ELK HUNT BY MOONLIGHT.

WHILE hunting among the Rockies in the vicinity of Chief Mounain, several summers ago, I came upon a little glade one day which held in its centre a miniature pond. Around its shores the elk had trod the grass with their sharp hoofs until very little verdure remained. Two wet worn trails led off up the mountain, and all the signs indicated that this was an every-day—or night—watering-place for these animals. At the time I found it the sun was nearly set and I had to hurry in order to reach camp before dark. So taking a hasty survey of the place, with many a wistful glance at the track of some mouster elk, I hastily descended the canyon and reached camp none too soon, as the gathering darkness was accompanied by a violent thunder storm, which "turned loose" just as I entered the lodge.

I commenced with a low muttering of thunder and occasional vivid flashes of lightning, which illuminated the far-away precipices and lofty peaks with startling distinctness. For several years of a distant ledge and the fibrous roots of a stunted pine were revealed by an unusually bright flash. Shortly the thunder became louder and nearer and seemed to batter and crash up against the rocky cliffs in successive charges, as if Nature had brought out all her artillery to rend the very mountains. I became half-blind—great pearl-like balls of ice—much like the nucleus of a snowflake—were being hurled about with chilling effect, several lines subduing the few eucubers which fitfully flickered in the fire-place.

Perhaps nothing so lowers a man's estimate of his power and importance as a thunder-storm. Then, as crash after crash sounds over his head and the lightning seems to play about his very feet, he realizes his littleness—his utter insignificance. I felt much as a mighty commander of elements realizes that he is of no more consequence than a leaf blown about by the fitful winds.

The storm quickly passed over and finally died away in the distance. With a long-drawn breath of relief and a murmured "Thank God," I started to build up the fire. As I did so Pe-nuk-wi-up and his family emerged from under sundry heaps of bedding and robes, which were piled promiscuously about the feet of the lodge. They looked so ridiculous as they crawled forth that I couldn't help but smile and finally burst out in a loud ha, ha, ha!

"Do not laugh, my friend," said the chief, solemnly, "do not laugh. The thunder and lightning are great chiefs. Do not laugh—they might come back and kill us."

It is a wary party of Sioux that suddenly come upon us. I do not think I am much of a coward, but I was very much frightened. They sat huddled about the fire and in trembling tones recounted the disasters they had known to be caused by the dread elements.

To change the subject, I told the chief about the lakelet had discovered.

"Ah, I know the place well," he said. "When a young man kills many elk there. The same time he has only the night to drink, and when the night was day (moonlight) we used to go there to kill them. We would hide in the bushes by the trails. We would hide so good that even the hikers could not see us. We sat among the bushes and the leaves hid us from all animals. Far off we could hear the elk coming down the trail. They would often stop to bite off a mouthful of grass leaves; then they would come a little nearer and stop to rest with their elk." I used to talk to myself, "I see you, but you can't see me. Come closer, I want to see if your heart is good." Then they would come nearer and the chief elk would stop right in front of me. Then my arm was strong. I drew the arrow back, took a careful aim and shot right where the moon shone bright on his side. Buzz! the arrow went right into his heart and he fell. I saw the shot first and then saw my arrow lay on the ground before me and I kept shooting till the band ran away."

"It is moonlight now, Pe-nuk-wi-up," said I; "let's go up there to-morrow night?"

"Ah, I am not a young man any more," he replied. "The winters sit on my head and make a heavy load to carry. My legs are getting more and more feeble."

"But it isn't far," I said.

"Well," he answered, "I will go with you, but we will have to travel slowly; there are many rocks to go over, and I cannot jump them like the sheep."

The next afternoon, after two or three hours of slow walking and climbing, we arrived at the lit lakelet. I noticed with satisfaction that quite a number of elk had visited the place during the night. In several places where I had walked about in the mud the day before I found that they had obliterated nearly all traces of my footprints. It was yet an hour or more till dark, and to pass away the time we sat down on a fallen log to smoke and chat. From our elevated position we had a splendid view of the country to the East. About eighty miles distant the three lonely buttes of the snow-capped hills stood out clearly. Beyond a few miles still further eastward the blue outlines of the Bear's Paw mountains loomed up against the sky. Southeast, far beyond the Missouri, I recognized several of the Moccasin and Snowy mountains, over which I had clambered in pursuit of mountain sheep.

As the sun gradually sank in the West, we ate our lunch of hot bull-berries, bread and fat. The latter was a bull-berrie (called by the Blackfeet, *Mis-sin-ah-ah*) forms one of their principal articles of diet, and is gathered in huge quantities by the squaws, who cut off the bushes and beat them over blankets with sticks. In color and taste this berry resembles our red currant, and is, perhaps, a trifle more tart in flavor.

"Appe-un-ny," said Pe-nuk-wi-up, suddenly, "did you ever hear about the Old Man and the bull-berries?"

"No!"

"Then I will tell you the story. Once the Old Man was walking by the river, when he thought he saw some nice large berries in the water, and taking off his clothes jumped in after them. When he got in the water, however, he could not find the berries, and climbing out on the bank was about to put his clothes on, when he saw a bear by the side of the stream. He saw the berries, and once more jumped in after them. This operation he repeated a number of times, until he finally became enraged, and tearing up his robe bound some

stones to his feet with the strips, determined to jump far enough and deep enough to get the herries. But he was too strong, and jumped way out where the water was black and deep. Down, down he went, and nearly drowned. He finally succeeded though in breaking the strips which held the stones to his legs, and, tired and half-strangled, climbed out on the bank to rest. As he lay there he happened to look up at the overhead saw gait bunches of berries growing on the bushes, and immediately perceived how he had been fooled by the reflection of them in the water. Picking up a club he threw it at them, saying, "There, I will make thorns grow on you, and after this any one who wants to gather you will have to knock you off with clubs."

In my wandering about the mountains and prairies I miss one old friend of Eastern days—the boat. How many nights have I lain awake in the depths of some Eastern forest and listened to its wailing, low-drawn cry arise from the lake, and, echoing from hill to hill, finally die away in the distance. But, hark! No more dreaming. I heard something surely! Yes, I hear it again, the tread of some heavy animal coming down Pe-nuk-wi-un's trail. A bright flash from the elk's gun, a report, followed by a moment's silence. Then another flash, another report, and another yell overheard. I recognized it. Pe-nuk-wi-un had wounded a grizzly! Perhaps, there were more with it! Perhaps—but I wanted no longer. I heard something coming through the bushes toward me, and turning, fled with all speed down the mountain. As I crossed the glade I saw the chief emerge from his hiding-place, in spite of his weight and years running like a deer. He was soon beside me, and asked me what I saw on the mountain. Over rocks and logs, jumping deep holes, we kept on, never stopping till we reached the prairie. Exhausted and faint, we sank down upon the grass and tried to regain our breath.

"What was it?" I asked. "A bear," gasped the chief. "Did you kill it?" "I don't know," he replied. "I saw its eyes in the bushes and thought it was an elk. I fired, it yelled, and I ran away as quick as I could." No more hunting that night. So we quietly wended our way back to camp and to bed, but it was long before we fell asleep. Never in my life had I received such a scare. That terrifying yell still echoed in my ears and my heart beat faster every time I thought of it.

Well, of course by breakfast time the whole camp had heard of our exploit, and many were the questions asked and tales recounted about the bear. Accompanied by six or eight young men we went back to the lakelet. Arriving there we deployed and slowly advanced to the shore. Step by step we advanced to the thicket where Pe-nuk-wi-un had seen the bear. Not a sound was heard. "I guess it's dead," said one. "I don't believe he killed it," said another. "Look," said another, and running a little distance held up a dead lynx to view. "Hi-hi-hi—they all shouted. "Look at Pe-nuk-wi-un's and Ap-po-cun-ny's heads as they see the lynx which yelled. Step the big bear there has chased them down the mountain. There was no doubt about it. To Pe-nuk-wi-un's distorted vision the lynx had seemed an elk and a bear, and my ears had willingly deceived me as to the cry. Carefully strapped to a pole, the animal was triumphantly borne into camp and received with shouts of derision by the people.

Poor Pe-nuk-wi-un! He never heard the end of the elk hunt. Many a time since have I heard the Indians, speaking of the lynx, and the camp at Pe-nuk-wi-un. AP-PE-ON-NY. Fort Benton, M. T., April 25, 1881.

TWO WEEKS WITH THE BASS AND PICKEREL.

AT INTERMEDIATE LAKE, ANTRIM CO., MICHIGAN.

BY KINGFISHER.

DEAR D.—We went a fishin' up to Northern Michigan in July last, as agreed upon in May, with many regrets that you could not join us as expected; and I will say to you—and you can apply it to yourself as a scourge—that you missed two weeks of as glorious sport as ever fell to the lot of "ye honest angler." We concluded not to fill your place with an unknown quantity, so the party consisted only two of the old "Kingfishers," W. (he scribe) and the writer. An editor friend from Hamilton, Ohio, Mr. B., a half-fledged "angler," and a mighty good fellow, made up the party—no large, but two of us at least, chock full of love for the game fish. We started camp on the 15th of May, near to Manicoula, a station forty miles south of Potosi, Mo., on the G. R. and I. R. C., at which point we were to take wagon for Intermediate Lake, our objective point. By correspondence, everything was arranged and ready for us; wagon chartered, camp-boy hired, and two boats cugged of Postmaster Cutler, of Lake Shore P. O. (at lower end of lake), who was to meet us with the boats at Bellaire, the new town seat of Antrim County. We left Cincinnati at 7:15 This day morning, July 15th, and arrived at Manicoula next morning at 6:04, the other two having left the night before, in order to see the upper end of the road by daylight, and have things ready for an early start on my arrival. We left the station shortly after 7 A. M., the scribe and editor in the back, while the camp-boy and I went with the baggage on, or rather with another wagon. That back is a duds and a snare for the unwary. It was simply an old lumber wagon, without a cover, with two spring seats hung on to the bed, and was drawn by a pair of ponies a size and a half larger than Jack rabbits. It is a mail back, and if the mail pouch happens to contain two letters more than usual the passengers have to walk and help to push up the sand hills. It makes two trips a week to Bellaire and up the country as far as Central Lake P. O., at the head of Intermediate Lake. It leaves Manicoula on Tuesday and Friday.

The road to Bellaire, as a wagon road, is frightfully jolty,

full of roots, and highly unsatisfactory as a highway generally, but we found the walking to be fair to middlin' and several little cold streams on the way furnished us much comfort on that hot July day. After being on the R. R. a day and night, I was well nigh fagged out and needed rest; I loaded the wagon all the way down except about twelve miles. Bellaire is twelve and a half miles from Manicoula; no great effort to figure up the distance was made, and walking on an average July day is not strictly a pastime for a person whose waist-band measures in the near vicinity of fifty inches, "of which the writer is one." The new oaty seat is located on Intermediate Lake about midway between Grand Bay, and Intermediate lakes above. The river is a rather shallow, winding, narrow stream, in places scarcely five yards wide, is perhaps four miles long, and connects the two lakes. The site of the town—a huge square backed out of the heavy woods—was still covered with the fallen trees lying as felled by the choppers, while a fire that had recently swept through them mad—as cheerless and desolate-looking a place as could well be imagined. Six months before it was a first class howling wilderness, but at the time we crept wearily up its one imaginary street at the lower end of the city, we beheld Bellaire had fifteen neat wooden houses and a saw-mill, that insatiable creature that whose appetite will only be appeased—and at no distant day—when it has devoured the last vestige of the noble forests of Northern Michigan and dried up its streams it will not be water enough in them to swim a water b.c.e. We found the people clever and industrious, and full of hope and plans for the future. It is really a pretty location for a small town, and we believe Bellaire has a future ahead of it. We arrived about noon and found the lake had preceded us only a few minutes. Of course Cutler was not there to meet us as promised, and we spent nearly an hour looking around the place; looked at the river, a mere thread through the woods, bought some lumber at the mill to make a fish box, camp table, etc., made a good many ill-natured remarks about Cutler, and finally, when our patience was worn out waiting for him, concluded to go up the river as far as the lake at least, to hunt a camp for the night. The first landing we saw was a scarp in the morning. We were told "G. G. G. G. G. G." was only about eighty rods up the river, from which point our P. M. walked twice a week to swap nails, and for this we started, the wagon following with the traps. Luckily we met the subject of our remarks a short distance out of town with two of his sons, one of them carrying a well-flattened mail pouch. The introduction was brief—"I suppose this is Mr. Cutler?" The river was here, and here your fishing party is. Shake. Where are your boats?" "Up the river at the landing, about eighty rods." (We found eighty rods to be the only appreciable distance in this neck of woods.) Then we went for that landing again.

At the head of wagon navigation a trail led down to the water and that landing, which was a spot at the water's edge devoid enough of overhanging "brush," as the camp boy expressed it, to allow us a seat to get to the bank. At this point is the head of the rapids, eighty rods long, and the river, through the rapids, is shallow, in places barely deep enough to float a light skiff, and runs like a mill race, which feature no doubt had something to do with the P. M. preferring to walk from the landing down and back. The rapids were, flat-bottomed boats were to transport us and our luggage, the river and windings are numerous and "sarpentine," and its currents deceptive. My boat was loaded too much by the head, unavoidable on account of the size of the boxes containing our effects and the narrowness of the craft all of the rowlocks. It steered wild, and objected decidedly to keep the middle or any part of the stream, and about every ten yards it would take a notion to shove its nose into the bank on either side, or wander off under some overhanging bush or tree, and with the intention of brushing the operator at the oars off into the water. Rowing a boat up that river, loaded as mine was, is calculated to develop muscle and latent profanity, and it requires a fair amount of the former to overcome the current, and a judicious use of the latter, in at least five different dialects, to keep the boat in the stream. By a vigorous use of both I at last started a quiet kink in the river and beheld the lake only a few yards ahead. My boat was resting, but that contrary to the starboard oar buried her bows in an oozy bar, and I straightened up, mopped the sweat out of my eyes and made a few remarks about Cutler, his boat, Intermediate river and the country at large. As I gazed out on the beautiful sheet of water before me I thought of old man Columbus and his feelings on first sighting land on his memorable voyage, and concluding that I was not Columbus, I had a figurative and fraternal shake with the lamented mariner.

From the head of the rapids up the banks of the stream are a tangle of swamps. Spruce and cedars overhang and sweep the water in many places, and old dead trunks, bristling with countless jagged limbs and bayonet-like spikes, giving to some of them the appearance of enormous "devil's damning" bushes, reach out over and into and under the water from every corner of the bottom. Most of these are however, bent out away and run up to make a channel through which to run saw-logs to the lower lakes, and it is an easy matter to make a trip through the river in a small boat down stream. In sight, to the right of us, and in a line up and down the lake, were three islands, the second one of which, about a mile distant, the Cutler boys favored as a camping place, and we accordingly struck out for it against a strong breeze and a chopping sea. The pill to the island proved more satisfactory than the boat, than that up the river, as it had more room in which to spread itself and indulge its frolicsome and erratic disposition. It was a good sea boat, however, and behaved very properly after relieving it of its bow load. Passing the first island, we dropped in behind the middle one (which we afterward named Middle Bass) out of the wind and pulled a omd to the east side, where we had a comfortable landing. This island is probably six or seven hundred feet long and less than half as wide, is flat and low, not more than two feet above the surface of the lake at any point, ground rather spongy, well covered with a plentiful growth of trees, grass and underbrush, and contains two and one-eighth acres.

Last spring, during the prevalence of the long, heavy rains, it was two feet under water. It lies nearly in the

middle of the lake, which is here about a mile wide, and is owned by Mr. Frank Lewis, of the Lewis House, at the head of Torch Lake. As there was no spring nor firewood on it, we pulled across the lake to Cutler's Landing in search of a better camp. Here we found nothing in sight but an almost impassable swamp and a half drowned streak through it to the hard land a quarter of a mile back, so we returned to the island and concluded it was a very fine place for a camp, which it proved to be on a better acquaintance.

Unloading the boats, we went back after the rest of the party to find the boys out of patience at our long stay, and worrying lest some mishap had befallen us.

I loaded my boat this time on an even keel, the editor in the stern and some other freight in the bow, and the trip was made with less outlay of first class and fewer general remarks than was required by the first one.

The other two boats would only carry the remaining baggage, which moved the scribe, our Johnny and to her Cutler to make a circuit around the swamp and come out to the water nearly opposite the island, where they waited till we unloaded and brought them over. The sun was dipping into the tree tops in the west before we were ready to make camp, but there were so many willing hands it did not take long to unpack, put up two tents and start a fire and the snoring of our neighbors took the departure for home, leaving us to fight mosquitoes and arrange the camp for the night's much needed rest. With gun blankets, an extra tent, the kitchen fly, buffalo robe, quilts and blankets, we made a comfortable bed, over which we adjusted a mosquito har made and provided for this especial trip, and then we reared and smoked and laid out the morrow's work. The "sneakers" were numerous and annoying at first, but after we got better acquainted we did not mind them so much. They seemed to take a special liking to the editor. His feet and hands were usually covered with lumps the size of soap beans. On the water, while fishing, they did not trouble us.

Next morning early we started Johnny across to Cutler's for milk, butter, eggs, bread, potatoes, etc., which were all ready for us as per agreement. We had brought with us pilot bread, bacon, sugar, tea and coffee, canned meats, Pickering's "fish" and other delicacies, but we had fresh fish, but the camp was not in order first. The boy was kept busy most of the day getting over from the mainland a supply of dry cedar for firewood, and a lot of clean rye straw from Cutler's with which we made a luxurious bed in each tent. With the lumber we made a table, fixed up the kitchen, stretched a fly over it, and by the middle of the afternoon the camp was pronounced in running order.

The water went a-fishin' down the lake in the "pocket" near the outlet. We found we could get no minnows with a seine as there was not a spot along the shores or over the river clear enough of bull-rushes, lily pads or bushes to draw out of. We caught a few dozen small sunfish with hook and line which proved to be fair bait, but we went back to camp disappointed with four or five small bass and a couple of pickerel. Enough, however, to change smells in the frying pan.

Next morning we tried the sunfish again; cut off the dorsal fin as we used them, and had fair sport, but the results were far from what we had been led to expect. I took one large mouthed bass during the forenoon, of four and one-quarter pounds, which was a fair symptom of better things in store for us had we only good bait.

When I struck the old "dow" and he left the water three feet above his size a streak of electricity ran up the line, and down the rod into the remotest parts of the "old frame," and ball, backache and recollections of Intermediate River all vanished on the instant, and I was a boy again.

Back on the island for lunch, some one said "frogs." Why had we not thought of them before? We got the Cutler boys to catch us fifty for a starter, and from that time on we had rare sport.

Speckled frogs and green were plenty and of assorted sizes, and large or small, they were a toothsome morsel for both bass and pickerel.

Our Johnny was not much of a cook, but he could surround a frog with neatness and dispatch, and next to his voracity and staying qualities at the table, catching frogs proved ed to be his best "holt," so the question of bait was happily settled.

During the night commenced to rain—was raining when we got up, and it came down steadily all day except during an interval of an hour or more in the afternoon. This kept the scribe and editor in camp most of the day. They, however, ventured out when it stopped raining, and went down to the pocket where they took a few very fine bass and pickerel, and fished back to camp in time to escape the rain when it commenced to come down again. But the spirit moved me most powerfully that particular morning to go a-fishin', and as we were always before we had a fair chance to hold a lover of the spot back when the yearling was in the will thin him to go I slipped into a rubber coat, put a dozen frogs into a minnow bucket, took the smaller boat, and crossing over to the east shore, fished quietly up the lake a couple of miles to study the water, and learn, if possible, the feeding grounds of the fish.

The shores of the lake, and more notably the lower portion being as large as the head of bull-rushes growing from the bottom, and extending out into the water. This kept the scribe and editor in camp most of the day. They, however, ventured out when it stopped raining, and went down to the pocket where they took a few very fine bass and pickerel, and fished back to camp in time to escape the rain when it commenced to come down again. But the spirit moved me most powerfully that particular morning to go a-fishin', and as we were always before we had a fair chance to hold a lover of the spot back when the yearling was in the will thin him to go I slipped into a rubber coat, put a dozen frogs into a minnow bucket, took the smaller boat, and crossing over to the east shore, fished quietly up the lake a couple of miles to study the water, and learn, if possible, the feeding grounds of the fish.

Some of these minnows grow to great size. One I pulled up measured sixteen feet and four inches in length, the lower end being as large as the head of a trout. In many places state along the outside of this belt, pickerel weed and other kinds of aquatic plants and grasses reach up from the bottom at depths of from six to eighteen feet, some of them coming to the surface, and in this water forest ye honest angler will sometimes allow a bass of much strategy to entangle himself, which is liable to chafe his line and his temper, and open the way to his wrath. And I'd kick under this circumstance that you forget not your trout by working such a worm, and by an over-zealous "yawl" send your tackle a-sunder to the great hilarity of your my friend at the business end of the line, whose name is *M. palustris* or *M. sadumetiae* as the case may be.

Along this belt of rushes and lily-pads, from the very edge to fifty and seventy-five feet out into the lake, is found the best of the fishing.

We did not strike a half dozen fish a hundred feet away from the rushes, but later in the season they hunt the deeper water, and Frank Lewis says that in October hundreds of bass may be found packed in the deep pools of the little rivers connecting the lakes. Here, under the shadow of the broad leaf of the lily, old "longface," always hungry, poises

ESCAMBIA RIVER, WEST FLORIDA.

SO much has been written of East Florida, its scenery, its climate, its sporting facilities of all kinds and its manifold attractions, that it seems almost treason to assert that West Florida is far its superior in all things. Yet such is the honest opinion of this writer, after a tolerably fair exploration of East Florida, and a full and entire knowledge of the western half of the State.

Twenty years ago, the writer, then in the flush of early manhood, was accompanied by a dear friend, of the medical profession, first saw the Escambia River. A sable gentleman whom we had picked up in Montgomery, Ala., and who had, or professed to have, all the virtues and none of the vices of his race, was our man Friday for the trip.

Not even Dumas himself, most fertile of French liars, could have held the nocturnal lunnary to this accomplished raconteur of imaginary adventure. Born free in the West Indies, he spoke a language compounded of all the languages under the sun, at least all that I know. He would commence a sentence in pure French, interlard it with Spanish, and end with sailor English.

He had been a soldier under the grey-eyed man of destiny, Walker, and had charged among the immortal six hundred on that immortal day. Had he known history I doubt not that he would have fought and drunk with Saurwurm, dined with Napoleon east of Austerlitz, and supped with Wellington after Waterloo. My companion, Dr. W., named him "Black Hawk," on the spot, less from his resemblance to that bird of prey than an undepicted feeling in his mind that by some species of metempsychosis the spirit of that renowned warrior now dwelt in the body of the ex-West Indian.

He united the most undeviating honesty with a surprising capacity for all spirituous fluids, but, when most drunk, he never forgot his place, or presumed upon the familiarity of gentlemen. To sun up all, he knew how to broil fish, he could make *Café a la Française*, and to make a most exquisite omelette. I never saw a liar that was honest, but I do believe that he was an exception to the rule. Why should there not be exceptions? Every liar is a thief. Granted. Reverse the proposition and we have, "Every thief is a liar." Yet have I seen him in the garb of gentlemen. He deliberately, I am told, once presumed upon the familiarity of a gentleman of his wounded honor. Ah! my masters! *Vive la h-bogue!* *Vive le mechant!* The Escambia River rises in Alabama, and after pretending that it intends to empty itself into the Chattahoochee, makes a bold rush for the Gulf of Mexico, into which it empties after much winding and tribulations.

In the lower part of its course, every little creek which empties into it makes a lake, sometimes ten or fifteen miles long and of a half-mile wide. These lakes are the choicest home of trout (*M. salmoides*), bream, red perch, waimouth, sun perch and croppies.

They are hold bivouacs, and, being generally uneducated fish, the merest tyro can take them.

Well, behold if you then, on a bright summer morning in August, as we stand upon the porch of a low, rambling log-house, to be our host for the next six weeks, the inmates of this house are an old man, a very patriarch in looks, and, however, can beat us both with a rifle; his wife, two stalwart sons and the two pretty, blushing young girls to be found anywhere in West Florida. A long row of houses, very similar to the one in which we stand, stretches off toward the river. This is the negro quarter. There is a standing feud, I am sorry to say, between those who live nearest the river and those who live most remote. Dark-inked men pass between dark, old patriarchs about "dem set lines."

It is openly charged that there are vile darkeys, so lost to all sense of shame that they visit at the midnight gloaming the lines that are set for the toothsome blue cat by the dwellers on the hill. *Per contra*, there is a legend that a hill negro, visiting his line set by a bank negro, for the purpose of reprisal, ran his thumb into the mouth of a muskrat, can be found looking out of the hook, and the fish being the bait thereof, bit so hard and held so fast that he was fain to cry for help. And the bank negro took a base advantage of him, and did strap him from his head into his heels; all of which we learn at the proper time from one of the family.

Ghostly talk is whispered around, both among the bank and the hill dwellers, concerning a cat of huge size which is popularly supposed to be a witch. Whoever that may be, they tell of her death how Uncle Daniel, having baited his hook one night with a small bird, saw the line swaying to and fro in a most furious manner. Hauling it in, he saw the old fiend in *propria persona*, in the shape of an old cat, the veteran old cat of the Escambia, "Twenty-five foot long, sah!" "Wid asser eyes!" "Wid double de wideness!" "Wid de eyes all oder cat on de yid!" An' he say, "Dawn! I come ar-rer you!" An' I flew, I'did! Flew! I done more'n dat, I flew!"

As we sit around the breakfast table we hear this negro folklore and many other curious things. As we walk down to the river we notice that the morning has suddenly become gray and my determination to fish for bream is changed to a desire to throw the festive fly for trout and jack. The doctor sticks to the bald bream, for he loves the hold rush and the hard fight of the early-striped bream; while I, slave of the rod, feel that no angling is more than the name, unless the fish is killed at least thirty yards from the angler.

Leaving the doctor to his own devices, I put my rod to together and, with the "Black Hawk" as my boatman, I turn into an arm of the river, and with a nondescript fly, the like of which would alarm any Northern angler, I commence casting. I may here remark that the most killing fly is one made from the feathers of the red bird, with the shank of the black swan, with white in the channel and the head made of black cloth. I never saw a white fly with red wings and a black head, and fully three inches long, but trout and jack have, or they would not rise at it so freely, and all the time looking with scorn and ill-concealed contempt upon artistically made flies.

Round and round we go, and not a single rise to reward our labor. Do you see you can see that party hangs in the water, and under which he is many perch of many kinds? The fly is deftly thrown beyond the bush, and drawn, with skimming hops toward the angler. Ha! A monarch Jack! He flashes from under the bush, like a tiger of the waters, and with a head-on leap, not swirl, he seizes the huge fly, and is again under the bush before you can say the traditional "Jack Robinson." Everything is perfectly still, for the monster does not yet know that he is mine. A slight tap of the foot tells the angler, and with a lightning flash he leaves his lair, and for a straight fifty yards never stops.

You check him in his headlong career, and with wide open mouth, showing all his formidable array of teeth, he jumps his full length of thirty inches high in the air. Now he shoves along in regular lines, beautifully geometric, and now he spins himself in small circles, sawed and full of fire, and game to the last. The Black Hawk stands with wide open mouth, forgetful of his paddle, while he tries to pull him into the boat, which, after much objection and some threats, he succeeds in doing. It is he, less savage still, for he has bitten the Black Hawk to the bone, who, to have revenge, incontinently hits him over the head with his paddle, and so ends that Jack's caper.

About a hundred yards from this hattie ground, spreading far and wide, is a patch of "bonnets," now spreading their broad leaves to their fullest extent, and looking with their dark green invitingly cool and attractive. The fly falls lightly as a flake of snow near a large bonnet, and with a lazy swirl out comes the master of that domicile, and, taking the fly as if he had been waiting for it all day, he feels the sudden stab of the steel, and with race-horse speed he dashes for the centre of the patch of bonnets. Now you take a boatman! And this one proves himself equal to the occasion. For almost as swift as the fish himself he is in the open space, and while the angler holds the trout taut he dries him!

Step by step the sullen foe is driven out into the open water, and then you have a fair hand-to-hand fight with a ten-pound trout. With half the trouble that the monstrous Jack has given us he yields to fate, and lies in the bottom of the boat, while the "Black Hawk" eyes him with a lurking suspicion in his mind that he, too, can bite!

On we go, and by the time that we return to the good Doctor I have caught enough fish for all the family, both white and black.

Such is the record of one day's fishing the lakes of West Florida. Some after this one were perhaps better, others worse; but on the whole the angling was all that any one could ask.

I have not left myself room to tell many moving mishaps that befell the "Black Hawk," unluckiest of negroes. Nor shall I dwell upon the toothsome red turkeys that fell to my gun, and the two deer that were killed, one with No. 4 shot.

If any of your readers should wish to visit that region they can find a warm welcome and a paradise of small game. Go to Montgomery, Ala., and take the Pensacola R. R., and get off at the first station in Escambia County. They are welcome to use my name as an introduction. I am known to everybody, or I was "befoh de wah." The climate is the same as East Alabama. No flies and no mosquitoes. No ice and no snow.

ST. CLAIR.

THE SARANAC LAKE REGION.

THE FABLE OF THE FROGS.

THE season has fairly opened at the Saranac lakes, and, as yet, an Spartan flock to the forest like doves to their windows. Our woods yet abound with game, and our lakes and streams are alive with fish. This is the season they are waiting to be caught, and enthusiastic anglers wish naturally to find the best way to reach the Adirondacks.

Many, after one trip to the wilderness, especially if they have good sport and a pleasant time, write articles for the papers and periodicals, describing the route they have taken as the shortest, and the best, and the most comfortable, and the extent of the Adirondacks. There are many ways of entering this region, but the experience of thirty years in all parts of the Adirondack wilderness should give me some knowledge of its ways and byways, and to my mind the Lower Saranac combines more advantages than any other place as a starting point for sportsmen or tourists. And this is getting to be better understood, as many parties are proving this season by counting this way and being met here by their guides from St. Regis, Long Lake, Blue Mountain Lake and Saranac Lakes.

This place is easiest of access to both sportsman and guide. Each hotel-keeper thinks he keeps the hotel of the wilderness. They make me think of the East and West Ponds, each inhabited by frogs and separated from the other by a hill. One fine morning one frog from each pond started on a voyage of discovery, each to see how his neighbor's pond compared with his own. When they reached the summit they fell into conversation, and each accepted an invitation to look into their neighbor's pond. So each one rose on his hind legs and with his foot on the other's shoulder looked for the pond. But as we know a frog's eyes are on the top of his head, each one looked into his own pond when he thought he was looking into his neighbor's. So they were both satisfied and retired their way. When they reached home they were met by their friends and asked how their neighbor's pond compared with their own. They both gave the same answer: "I would not give an acre of this water for their whole pond."

Thus the landlords of the Adirondacks feel each of his own locality.

In leaving Lake Champlain at Westport, Port Kent or Plattsburg you reach Mr. B. Miller's at Lower Saranac Lake from one to two hours sooner than you can any of the other Saranac lakes. The thorough renovation of Mr. Miller's, the Saranac Lake House, is about complete from cellar to garret. Guests who have visited this house and been satisfied will now be delighted with the improvements.

I write this for the benefit and information of uninitiated tourists, not for any pecuniary consideration. Mr. Miller is not the man to run a summer's board bill for a literary puff. Parties are misled in many ways. Some *en route* for Saranac lakes have been carried to St. Regis by stage-drivers, who are supposed to be their influence for the man who pays them best. But Charlie Greene, the new proprietor of the stage route between this place and Ausable Forks, can be depended on to carry travelers to their chosen destination without fear or favor. He has the best set of stage horses that have ever been on the route, and having bought on Mr. Harper, of Keeseville, prepared to carry passengers with speed and comfort, and flatters himself he will give satisfaction to the public. SARANAC LAKE GUIDE.

It has come to be quite the fashion for railroads to prepare handsomely printed and profusely illustrated handbooks setting forth the attractions of the country through which they pass. We have from time to time noted such books as they came to our desk. Elsewhere will be found reference to some new ones.

Natural History.

THE UBIQUITOUS SKUNK.

HIS BITE.

SPEAKING of woodchucks reminds a Western correspondent of some of his observations of skunks. The connection we fail to see, but here is what he says:

Have been very much interested in reading notes from correspondents and read some very curious stories, do not think they could all "produce papers" for some of the tales. "Rio," in the last number (June 2), thinks a woodchuck up a tree a singular sight. I never saw one in such a position in York State, but ten years ago in Kansas I shot several, perhaps six or eight in all, out of various sized trees. I had the good fortune to see one do the climbing. I think he was used to it. He evidently understood his business. Two years ago I was out after rabbits one morning after a heavy fall of snow, and found a skunk lying dead at the end of a hollow log, and the tracks of a fox that had killed him. There could be no mistake as it had snowed until 2 o'clock A. M., and there was no other tracks about, and not a flake of snow on the skunk; besides, I could see where the fox had slid on his side in the snow, just as a dog will do after a similar experience. Is this a common occurrence? Once in Kansas I shot a skunk at least ten feet from the ground among some basswood sprouts that grew up from an old stump, but I think he was the only climbing skunk in that country so I guess that ended the race of climbers.

F. U. R.

Circleville, O., June 22.—Editor Forest and Stream: I inclose with this note a slip which I have had printed in several papers, and desire that you give it to the public through the columns of the FOREST AND STREAM. I desire to possess all the facts I can obtain upon the subject of skunk bites, with a view of refuting or sustaining a theory which has recently been brought into prominence in the profession, hoping you will oblige me by giving it space. Having recently had my attention called to a disease designated rabies mephitica, or hydrophobia, from the bite of the common skunk (*Mephitis mephitis*), I have thought through the kindness of this paper to put to the farmers, trappers and other interested parties four questions, in the hope that some information of value may be brought out which will throw light upon a subject surrounded at the present time with a paucity of fact. Before giving the questions it may be best to state, in a general but concise way, the end to which these interrogatories are made. A few years ago forty-one cases were reported in detail of persons bitten by skunks forty of whom died within ten days or a year with symptoms resembling closely hydrophobia from the bite of the wild dog. The bites were nearly all inflicted at night, upon the hand, nose or ear, while the persons were sleeping upon the ground in camp. Several cases were also reported of dogs being bitten, the bite proving fatal in each instance. The gentleman who collated the above-mentioned cases asserts as his belief, and endeavors to prove the same, that the bite of the skunk always produces a peculiar form of rabies, which is invariably fatal if left to run its course; that the disease is produced by the inoculation of a special hydrophobic virus generated by the skunk, and, finally, that the first cause of the dread malady (hydrophobia) originates with the skunk and the allied genera. If any one to whose notice this article comes can answer in the affirmative any of the following questions, that person will do me a favor by writing the facts on a postal card, and sending it to my address.

1. Have you ever known a person to be bitten by a skunk, and if so, what was the result of the bite?
2. Have you ever known a dog to be bitten by a skunk, and if so, what was the result of the bite?
3. Do skunks ordinarily show a disposition to bite?
4. Have you ever seen a skunk that had lost the power of seeing or expelling the odorous fluid which constitutes its battery?

HOWARD JOHNSON, M. D.

Our files contain much discussion of this question. An epitome will be given for Dr. Jones next week.

TREE-CLIMBING WOODCHUCKS.

ASHFIELD, MASS.

A "Rio" doubts the existence of more than one climbing woodchuck, I would state that twenty odd years ago, being troubled with constant raids on my crops, I bought a good "chuck" dog. He killed and scared away the most of them the first year; and three of his victims he breed. The first two were in low leaning trees, but the third one was about two-thirds grown, and "Spot" got between him and his hole and made a rush for him. "Chuckles" scrambled the best he knew, but "Spot" soon placed a fearfully short distance between his nose and the varmint's caudal appendage, when "chuck," evidently fearing an entrapment, made a dash at a small ash tree and clawed his way up, never ceasing to climb until he had placed a good twenty feet between himself and "Spot," when he crawled awkwardly into a small crotch. As he appeared painfully ill at ease in his elevated position, I drew my revolver and fired, which assisted him to a quiet position on mother earth. The despoilment of a nice bean field near by had rendered me somewhat in earnest on the "chuck" question.

By the way, your turtle story reminds me of a little yarn spun for the beguilement of a party of hunters (including the writer) by an old mossback out in Southern Indiana. The boys had been telling a few fish, turtle and snake stories, to which I listened very attentively. When they had all finished, old "mossy" gave a hitch or two and unlimbered. "Wall, boys, I never have doubted any sort of hunter's story since my leetle 'trickle' scrape down on the bottoms." "The boys all looked inquiringly and he proceeded. "I was a pokin' round down that one day last year, when I come across the durndest old-lookin' 'turkle' I ever seen. Why, the moss was an inch thick on his back, and the old cuss couldn't have showed his tail. I tented a side to measure the depth of the moss when I saw letters. So I scraped it all off and there in big letters was writ 'B. C.' followed by the figures '567.' Wall, I stud up kinder faint-like, and tuk my hand off on him to sorter rub my old head, when he fetched a flop to git away and slid down the bank a bit and turned clean over, when, 'I'll be 'dogoned,' that wadd'nt print in the biggest 'hand' I ever see in my life, and it was 'B. C. 567.' 'Adnan, and down a little furdur, nigh his right hind leg (in the same

with the same weight, which was one ounce. The following were the prizes:

1st Prize—One split bamboo striped bass rod with steel pivot, rubber and German silver reel, filled with twenty-one thread linen line; rod silver-mounted and in fine case. Donated by J. P. Marsters, 55 Court street, Brooklyn. Value, \$75.

2d Prize—Automatic reel, with hard rubber discs, gold metal and appropriately inscribed and decorated. Donated by John Williams, Syracuse. Value, \$50.

3d Prize—Five dollars gold (\$5).

4th Prize—One year's subscription to FOREST AND STREAM, by Fred Mather, \$4.

The entries were: Frank Endicott, Richmond Co. Game and Fish Protective Association. Rod, 7 ft. 2 in.

John Williamson, Coney Island Rod and Gun Club. Rod, 8 ft. 11 in.

W. L. B. Stears, Coney Island Rod and Gun Club. Rod 8 ft. 11 in.

After some discussion it was decided to allow distance for length of rod in this class as in the others. The score was:

Table with 4 columns: Actual cast, Allowance, Cast as it'd be, and points. Lists winners like John Williamson and Capt. Stears.

Mr. Endicott was awarded the fourth prize for the accuracy with which he cast, in addition to the third given him for distance.

TROUT OR BLACK TRASS FLY CASTING. In these three classes in this division it was decided to call class 2, in order to give the amateurs a chance to enter in the other contests from which winners of certain prizes were barred. Promptly at 3 p. m. entries were called for.

CLASS A—AMATEUR. Open to all who never won a prize at any contest at this or a previous convention of this association.

1st Prize—One Leonard split bamboo "Catskill" fly rod, 6d mounted, with Mills & Sons' best rubber click reel, filled with their "standard" enameled water proof fly line. Donated by William Mills & Son, 7 Warren street, New York. Value, \$40.

2d Prize—One trunk rod, with reel and line complete; rod silver-mounted and in fine case. Donated by J. Marsters, 55 Court street, Brooklyn, N. Y., \$25.

3d Prize—One "Henshall" black bass rod, with extra second joint and three tips. Donated by S. W. Goodridge, Grafton, Vt. Value, \$15.

4th Prize—One elegantly-bound copy of Dore's "Ancient Mariner." Donated by Harper Brothers, Franklin Square, New York. Value, \$10.

5th Prize—One expensively-bound copy of "Pastoral Days" (W. H. Gibson). Donated by Harper Brothers. Value, 10.

6th Prize—One oil painting—"Quail Seeking Refuge from Stress of Weather." Donated by Henry W. Abbott, 11 Commonwealth avenue, Boston, Mass. Value, —.

7th Prize—One hundred cigars. Donated by F. W. Mercton & Son, 175 South street, New York. Value, \$10.

8th Prize—Five dollars gold (\$5).

9th Prize—One year's subscription to FOREST AND STREAM, donated by the Forest and Stream Publishing Co., through Fred Mather. Value, \$4.

The following were the entries and order of casting: W. Holberton, N. Y. City Association for Protection of Fish and Game. Rod, 11 ft. 7 in.

A. Bryson, Fomatin Gun Club, Brooklyn. Rod, 11 ft. 2 in.

M. E. Elmendorf, Coney Island Rod and Gun Club. Rod, 11 ft. 3 1/2 in.

Frank Endicott, Richmond County Association for Protection of Fish and Game. Rod, 10 ft. 11 in.

S. Hier, Onondaga Fishing Club, Syracuse. Rod, 10 ft. 10 in.

J. A. Nichols, Onondaga Fish Club. Rod, 10 ft. 6 in.

The score was:

Table with 5 columns: Cast, Allowance, Total, Wind, Miles Pressure. Lists winners like W. Holberton and C. A. Bryson.

The judge's took no note of the wind. The following is their scale of points.

1st Prize—G. S. Hier..... 60 25 15 100

2d Prize—E. Endicott..... 53 25 15 93

3d Prize—C. A. Bryson..... 39 25 15 79

4th Prize—M. E. Elmendorf..... 50 12 16 77

5th Prize—W. Holberton..... 55 6 15 76

6th Prize—J. A. Nichols..... 30 9 15 74

7th Prize—S. B. Plumb..... 55 12 6 73

CLASS B.

Open to all members except those who have won a first prize at this or a previous convention in a casting contest.

1st Prize—"Two rods (trout and bass), all lancewood and gold mountings; each rod consisting of one butt, two second joints, different weights, and three tips, with extra bamboo tip case. All in handsome black walnut case, lined with velvet and bound with bands of silver. Specially made for this occasion and donated by Fred D. Divine, 76 State street, Utica. Value, \$75.

2d Prize—One split bamboo fly rod with click-reel, and one Holberton's full length fly book with improved Hvide clips and Russia leather cover. Donated by Conroy, Bisset & Malleson, 65 Fulton street, New York. Value, \$40.

3d Prize—One pair Mackintosh wading pants and one Hallock hunting coat. Donated by Goodyear's Manufacturing Company, 483, 490 and 492 Broadway, New York. Value, \$40.

4th Prize—One dollar's gold (\$5).

5th Prize—One year's subscription to FOREST AND STREAM, donated by the Forest and Stream Publishing Company through Fred Mather, \$4.

The entries were: F. Arrowsmith, Monroe County Club, Rochester. Rod, 11 ft. 6 in.

H. P. Richard, Washington Gun Club, Brooklyn. Rod, 11 ft. 6 in.

E. Endicott, Richmond County Protective Association. Rod, 10 ft. 11 in.

W. Holberton, N. Y. City Protective Association. Rod, 11 ft. 6 in.

P. B. Dennison, Onondaga Sportsman's Club. Rod, 10 ft. 10 in.

The score stood:

Table with 5 columns: Cast, Allowance, Total, Miles, Wind Pressure. Lists winners like T. Arrowsmith and H. P. Richard.

The casting was with the wind, which was so light that the judges did not order them to cast against it. The points made were:

1st Prize—H. P. Richard..... 60 25 15 100

2d Prize—T. Arrowsmith..... 55 25 15 95

3d Prize—E. Endicott..... 52 25 15 92

4th Prize—W. Holberton..... 53 20 15 88

5th Prize—P. B. Dennison..... 54 15 15 84

CLASS A—CHAMPION. Open to all members of the Association. 1st Prize—Fishing tackle, to be selected by the winner, of the value of \$50. Donated by Charles F. Imbrie, of Ahley and Imbrie, 48 Maiden Lane, New York, \$50.

Second Prize—One green-head fly rod with click, reel and water-proof line. D. nated by J. B. Crook & Co., 50 Fulton street, New York. Value \$35.

3d Prize—One split bamboo fly rod, german silver-mounted, cane wound butt, two tips with bamboo tip case, rubber click reel and fly line. Donated by W. M. Cornwall, 18 Warren street, New York. Value, \$25.

4th Prize—Five dollars gold, \$5.

5th Prize—One year's subscription to FOREST AND STREAM, donated by the FOREST AND STREAM Publishing Company, through Fred Mather, \$4.

The entries were: H. Wood, Syracuse. Rod, 10 ft. 1 in.

R. Wood, Syracuse. Rod, 10 ft. 1 in.

H. Pritchard, Brooklyn. Rod, 11 ft. 3 in.

T. Arrowsmith, Rochester. Rod, 11 ft. 6 in.

The score was:

Table with 5 columns: Cast, Allowance, Total, Miles, Wind Pressure. Lists winners like Ira Wood and R. Wood.

As before, the wind was so light that the cast was made with it, the judges not taking it worth while to cast against it, hence the 30 points allowed for and against the wind were consolidated and the points scored were:

1st Prize, R. Wood..... 60 25 15 100

2d Prize, H. Pritchard..... 55 25 15 95

3d Prize, J. Arrowsmith..... 54 10 15 79

4th Prize, I. Wood..... 54 10 6 70

SWEEPSTAKES. Free to all who have cast in any of the foregoing contests without paying out of the money.

1st Prize—A large Onondaga split bamboo salmon rod, 16 feet long, weighing 27 ounces. Donated by W. H. Hopson, of New Haven, Conn.; value, \$75.

Messrs. H. Pritchard, Reuben and Ira Wood and Frank Endicott entered for this contest. Mr. Endicott withdrew, and after making a few casts Ira Wood gave it up. The contest then remained between Reuben Wood and Harry Pritchard.

The wind had died to almost a dead calm, and an anemometer registering only from two-fifths of a mile to one mile and two-tenths per hour. The rules were: Any practicable single-handed trout rod under twelve feet in length and no allowance for distance, style and accuracy not to count, but the prize to go to the longest cast. Reuben Wood won in 75 feet to Mr. Pritchard's 74. The latter gentleman got out 75 feet, but did not retrieve his line and hence the cast was not allowed.

We, the undersigned, acknowledge the above to be the official score. (Signed) LEWIS MOSS, EUGENE G. BLACKFORD, JUDGES. CHARLES F. MURPHY, JAMES GEDDES, REFEREE. FRED MATHER, DIRECTOR OF FLY-CASTING.

Of the rods used, it may be well to say that Mr. Pritchard used a green-head rod of his own make, as did Mr. Bryan. The others used split-bamboo, mainly from Nichols, Bos on.

Mr. Nichols was on hand with the stock and offered a special choice—an offer that some who came without rods valued themselves off. The local press reports must have read in some respect to have called out the following letter:

NEW YORK, June 25, 1881. Editor Forest and Stream: Through some misunderstanding the press has not reported the fact that my salmon rod (with which I took first prize at the tournament) was one of "Abbey & Imbrie's Best." It is the best rod I ever handled, and I think that my friend Imbrie should have the credit due him. R. Wood.

THE FLY-CASTING—NEW YORK, July 22.—As a witness of the late fly-casting tournament I wish to add a few notes with its judges not its manager, but with the New York Association. Mr. Mather promised to lift it out of the rut from a mere side-show to one of the principal features, and he succeeded as far as lay in his power. But look at the prizes! Nothing worth over \$75. Then look at the pigeon-shooters getting prizes worth thousands! Compare the two arts and see which is the more of an art. Which is the more scientific, the nearer and more gentlemanly? Now let the new manager, Nicholas, improve on this, and we will see an interest awakened that little prizes of fishing-rods can never awake.—FLY-CASTER.

OTGOSCOPE ANGLING ASSOCIATION.—The officers elected at the annual meeting, June 1, 1881, were: A. D. Lockwood, President, Providence, R. I.; James A. Williamson, Secretary and Treasurer, 119 Liberty street, New York City; Weston Lewis, Vice-President, 55 Sumner street, Boston. Trustees: A. D. Lockwood, George P. Rowell, Francis H. Leggett, Adon Smith, Frank H. Lovell, James Williamson, Charles W. Brierley, Weston Lewis, William P. Frye, I. N. Packard, Superintendent, P. O., Indian Rock, Maine. By the laws of Maine, the fishing season for

land-locked salmon and trout commences May 1, and closes September 30; excepting that the South Bog Stream, the Rangley Stream, from Howard's Dam at the outlet to the Kennebecago Stream, the Cuspsic Stream, above the lower falls, and the Bemis Stream, are closed after June 30, and the Kennebecago Stream is closed September 1.

THE CARP AS AN ANGLER'S FISH.

As nothing is known of carp angling in America, we take pleasure in quoting a chapter on this subject from "The Practical Fisherman," a book just published in England by Mr. J. Harrington Keene, a well-known angler, naturalist and dicalturist. He says:

It being an exceedingly wary fish, the capture of a large carp may be fitly ranked among the notabilia of fishing. Nevertheless, carp are sometimes curiously voracious when of small and medium size. Thus, in the heat of a dead still summer day, I have succeeded in taking nine dozen of these fish, varying from 1 lb. to 2 lb. Such takes are, however, I confess, exceptional, and it is curious to note that they only occur in the case of small or comparatively small carp, which, presumably, have not lived long enough to mature the wisdom of which they constitutionally possess the germs.

I have known in my experience some curious vagaries in the taking, etc., of lats by large carp, and still stranger behavior when hooked. Of the former I may mention a sudden fit of voracity which prompted a six-pounder to take no less than three potatoes and hooks belonging to three different anglers, myself included. We, of course, held the customary dispute as to whom the fish belonged, but I claimed it on the strength of my bait and hook being the deepest down in the gullet. I have read of a similar instance somewhere, and can quite believe it to be true. I have on several occasions taken small carp with the minnow when fishing for perch. When a large carp is hooked it has some very curious ideas as to behavior. On several occasions I have had the line severed by the sharp spine in the back fin, and once I landed a fish properly hooked, but who in I unsuccessful endeavors to get the gut across the aforesaid spine, had wound the line round and round its body so inextricably as to allow of its being landed at all first. Fortunately, the tackle was stronger than usual.

The tackle I use is of the finest description. The gut is usually a part of a fine fly-cast, in length about 4ft. or 5ft. The float—for it is ordinarily better to use a float—in a light quill. On the lower part of the gut, at about a foot or so from the hook, I attach a couple of large split shots. The float is so adjusted that while one of the shots lies on the bottom, the other just deflects it from its horizontal position on the surface. The bait is a well-sorted cockroach or red worm, and is impaled on a medium-sized hook. Of course the fish will lie on the bottom. The rod should now be sustained in position by means of the spike or a noched stick, and the angler, if possible, should retire beyond it and watch. As soon as he sees the float assume an upright position the rod should be taken cautiously, and as soon as the fish has taken it away, say a few inches in a decided manner. It is time to strike, say its firmness and direction. The first pull is necessary, and the fish must be controlled with great firmness and discretion, lest a "smash up" result. I have never known this kind of tackle to fail if used judiciously. The line and rod should be fine and light.

The baits, as might have been supposed by the variety of food in which *Cyprinus carpio* indulges, are many, and require discrimination in their general ordering, as, indeed, they do for all fishes. More especially, however, is it necessary to quote the worms from their variety, and to scour the gentles, if the latter be used. The first-named baits are much the best, in my opinion, for general carp fishing; and although it is certain that failure of sport must sometimes occur, yet I can safely say that when fishing in carp ponds I have never failed to get a fair day's sport by judicious baiting and careful fishing.

In order to give the reader some idea of the nature of carp and to be allowed to tell a narrative of my own experience in the capture of a 9 lb. fish. It is well known among anglers that some enormous carp are to be found in Virginia Water, Windsor great park, and I have seen them on calm, bright summer mornings basking at the surface with just the back fin above water, rather resembling logs of wood than fish. I had for a long time coveted one of these beauties, and for hours over a pipe had pondered the ways and means, till, to quote a motto, my "head was turned and I was rained in." I had got tackle, the twist lines, suitable rods galore, but a problem still eluded solution, and that problem was how to get the bait to them. It must be borne in mind that their basking water was usually quite two hundred yards either way from land. Of course the punt was at my service, but the difficulty was approaching within fishing distance. Immediately one got nearer than about thirty yards they were not seen. After much consideration, however, I decided to try once again with different tactics. Behold me, therefore, reader, on the morrow, just as the "eyelids of the morning" were opening, equipped with a Wells four-joint trout rod, a fine twist line, a spring reel and five three-yard gut cast, to which was attached a single No. 6 hook, wending my way toward the lake. This reached, I was soon within fifty yards of the levitations, slowly putting the water beneath my feet, and as I advanced, and as I was about to weigh in to thirty feet of water, I sat down quietly to arrange the tackle. A breeze was softly rippling the water, and my idea was to float the light tackle to the wily fish, and trust to my skill in hooking and playing one at that great distance. My bait was a fresh green pica, which I now extracted from its pod and impaled on the hook so as to almost completely hide the slank, but leaving the point just thrust.

Taking a large chestnut I had happened to take in the punt, I stepped the gut through its centre, so that it would form a sort of kite or sail for my bait. Raising, then, the rod aloft, and rapidly letting the line run from the reel, I had the satisfaction of watching the gradual approach of my bait to the as yet unresponsive carp. Slowly and gently it went through the air for twenty yards, and then softly dropped on the water, to lie borne on a stream precisely to where the huge fish lay. At last the show was worked and returned by my line, the bait and lead remained stationary—some few seconds fraught with terrible suspense. All on a sudden down went the lead, the line tightened, and a terrific rush told that a *Cyprinus carpio* had found his match. Now came the Greek-to-Greek combat. Right and left in turn, now down to the bottom, now quite at the surface, was the fight prolonged; but, as far as Master Carp was concerned, it was a mere waste of time. He was not to be taken by a bait, but once before experienced—he was landed, scaling 9 1/2 lbs. He was probably one of the smallest of those black

fish I had seen. I have simply given this episode as illustrative of the difficulties one has to overcome sometimes in carp fishing. Of course, when carp are near spawning, and shortly after, when they are close together and jostling each other with affectionate demonstration, it is a matter of little difficulty to catch them, but given the exigencies of the example I cite, and the carp indeed proves him self a "wit."

It has been the usual custom of writers on angling to connect the carp and tench under one category. Why, I know not. The same mistake is made in regard to roach and dace, but of this I shall have to speak in another chapter. There are certainly some points of similarity physiologically between carp and tench, such as power of endurance of heat and cold, but to the angler proper they are as different in habits as chalk is from cheese, to use a homely metaphor. Carp ever bite best during the early hours of morning, and tench are generally best "on" toward evening. Carp can be taken best during the early summer months. I have known good tench biting freely on a dull January day with the wind due east. I have, however, never caught carp under such circumstances.

In giving general directions to such anglers as are not experienced in carp fishing, let me impress one or two indisputable truths on them for their guidance. Fish with the light and tackle necessary in regard to roach and dace, long-shanked hook; cover the shank of the hook when baiting; let the bait rest on the bottom; let the fish have the bait while you count five; give plenty of time to kill the fish; your hook will never tear out of the gristly mouth; put no shots near the hook; and finally, when a fish is hooked, keep perfectly cool and deliberate.

The most usual bait for general fishing is the lob worm or the red worm; next to these I like a bluebottle fly. Of this bait Mr. Blakey says: "No matter how small your hook, it must be put across the body just under the wings." For large carp, as I have indicated, the green pea, cherry, green corn or new potatoes may be used with success. It is necessary to use a small tri-angle hook for the latter bait, putting it on by means of baiting the hook with the hook completely unhooked. Give the worm or pea time to pouch, and then to pass it beyond the teeth in the throat before referred to.

It is highly necessary sometimes to ground bait the spot you intend to fish. The following preparation has been recommended, but I imagine that most experienced anglers will readily perceive that it errs from extreme elaboration: Take a quantity of well cooked yeast, a handful of oatmeal, and a little honey, bruise them in a mortar, and mix with a thin paste of water with new milk and a few grains of assafoetida. Crush down in a mortar a quantity of worms, gentles, slugs and some lumps of the most tallowy cheese you can find, thicken the water better with this compound, and then roll it up into little balls; these balls must be thrown into a compost of tall greaves and grass steeped in bullock's blood, and the entire mess must be placed some hours before fishing. This is Blakey's preparation. There are no less than twelve ingredients, besides trouble of procuring and compounding, and after all has been faithfully done one may go out, as I did on one occasion, after mixing up this unspeakable mess—and tell it not in Gath—catch nothing.

The best and simplest ground bait I know of is pearl barley or even boiled rice, using boiled pearl barley or a red gum for the heavy mess, and using for the light mess, distinctly after a thunderstorm is a good time to fish; and let it not be forgotten that the early bird ever gets the pick of the worms, or, as in this case, fishes.

In conclusion of these remarks on carp I may be allowed to jot down a few recorded weights of these fish. I have myself seen them of 18 lb., but according to Donovan they attain a prodigious weight many times as many. One was taken in Dantz which weighed 85 lb. Prussia they frequently weigh 40 lb., and in the Volga they are 6 ft. long. One caught near Frankfort-on-the-Oder was 9 ft. long and 5 ft. in circumference, weighing 70 lb. Lake Zug, in Switzerland, produces carp of 90 lb.; and in the Dniester some had been taken of which knife handles are made with the scales. Carp do not arrive at this prodigious size until they are of a very advanced age." I should think so.

THE AUTOMATIC REEL ON GREENWOOD LAKE.

NEWARK, N. J.

I HAD all my traps packed for a trip into the North Woods, when my announcement to me of his inability to go. He had a case in court which he must win, as he could not get it postponed. Not liking to go alone, I decided to spend a week at Greenwood Lake, and make the Adirondack trip later in the season. I drove up with my old friend and angling companion, Grant J. Wheeler, of Montclair. It was a lovely drive, though we took a somewhat roundabout course. Stopping at De Gray's at the Lake Side House, we had time to select our rooms, get ourselves settled and still to have a few hours' fishing before supper. Mr. Wheeler had taken no tackle, but was to use mine, as I had two rods with me. The rod I was using was of split bamboo, weight just six ounces. The butt was nineteen years old, the middle joint and tip new, Charley Murphy made it, and no more need be said. I had just received the new automatic reel, which I tried on trout but not on bass. I think the reel is of grand success. All the great improvements are in its action. It was impossible for a fish to get slack line. In a measure it revolutionizes the mode of angling. But after a week's trial on heavy fish I think that it is just splendid.

A number of gentlemen anglers saw the reel at work, and all expressed approval. I am not interested in any manner in this reel, except that I had all the improvements in angling implements with pleasure. All the great improvements are the work of the last forty years. The split bamboo rod, the many excellent trolling spoons, the patent enameled waterproof silk line, the Mackintosh wading suits and many others so familiar to the fisherman, and so necessary to his comfort, are of recent invention.

Being unlawful to take black bass in New Jersey before July 1, we were compelled to do our bass fishing above the State line. But we could troll for pickered as much as we pleased. The week proved very stormy; two days I could not fish, as it blowed hard enough to blow a boat out of water. When we could stay on the water we found no trouble in taking plenty of fish. We were fortunate in secur-

ing the services of James M. Cofair, who was very attentive to our wants, and knows the fishing-ground thoroughly. Jimmy has a raft and shanty, with sleeping accommodations for four persons. Jimmy was a very strict and must engage them some time ahead, as he is in much demand. I only took a few bass with flies, but a gang of hooks with large, live minnow was too much for them to resist. I took fifty-two in one day to my rod alone, and all good fish, the largest three and a half pounds, the small at a pound and a half.

I know of no really good fishing so handy to New York and easy of access as Greenwood Lake. The bass run large as the Adirondack or Canada bass. Any good fisherman should get at least thirty bass a day. When the law has been in Jersey expires the catch will doubtless be much larger.

There are many hotels on the lake, some stylish and expensive, others plain and cheap. The Lake Side House is beautifully located, and convenient to the fishing grounds, just at the State line, and opposite to the last station of the train.

There is a movement on foot to commemorate Frank Forester by creating the Warwick Woodlands into a park. This will be a good move, and make the lake very popular. Should this be carried out, a host of Western sportsmen would make a pilgrimage to the park to see the spot made famous by Herbert's writings.

size of fish, they can surely find it at Tim Pond. They can find besides a good clean camp, good fare, and what, I think, is equally dear to the true sportsman, the most magnificent scenery of lake and mountain and the sense of communion with Nature in her wilds and forest woods. And if the experience is like mine, they will find the proprietor of the camp, Mr. Kennedy Smith, and his stalwart son, ready to do everything in their power to make their stay pleasant and successful.

SPLIT BASS BOO.

CURING FISH.

MANY anglers when on long trips in the woods wish to preserve their catch, or when at the seaside and have a lot of fish which are worth taking home with to cure them, but lacking experience often fail. We give the following from Mr. Edmund Ryan, Chief Inspector of Pickled Fish and Oil for the County of Halifax, N. S., to the *Olivianist*: In the first place, when dressing mackerel, dress them as fresh as possible, and in some cases, when you have to take a large quantity out of your seines, put on a large cover. They select a good splitter and see that the fish are split to the tail.

2d. You must have plenty of water in your wash-tubs, and always give your mackerel two waters, and, if time three; and in no case throw mackerel twice in the same water. Every time you dip the mackerel out of your wash-tub empty the water out of the tubs and half fill them again with clean water. Be careful not to throw your mackerel in the tubs until water is put in them. After washing and soaking them until they become clean and white, dip them out on your store floor and then salt them. Don't let them lie in bulk after being washed.

3d. When salting don't be sparing of the salt. Sometimes the fish remain longer in casks than we think from the time of salting, and the scarce salt the fish will sour in them. It is just as necessary for fishermen to dress their fish clean and good as it is for the butcher to have his meat properly cured.

4th. You must have your mackerel, if you expect a market for them, well split and clean. When you go to pack them for market be careful and have good barrels. It is too bad to empty the water out of the barrel, not looking to the quality. I regret to see some anglers who are so careless, as well as the fishermen, follow that custom also, and when remonstrated with they have told the fishermen to fill the barrels and send them and they will make them tight. But I can say that there are barrels, with fish put in them, that can't be made tight, and while such barrels are so old and thought we were bad fish, more especially fat herring and mackerel; when fat fish are put in such barrels they are sure to become misty. I trust the deputy under my department will see that mackerel will in all cases be packed in mackerel barrels; poor herring and alewives in herring barrels; fat split herring in medium size barrels; all poor fish to be packed with coarse salt, and all fat fish with fine salt; and lastly, every layer of fish in the barrel must be salted with good, clean salt, and be careful to put on a sufficient quantity.

ARE THEY YOUNG BLUEFISH?—Corpus Christi, Texas, June 17.—Last week I visited Corpus Pass on outlet from Corpus Christi Bay to the Gulf of Mexico, and took part in hauls (scum) for pom-pom. We were not very successful with the fish sought for. The water being very clear they all jumped out on the net except one, but we caught large blue fish. I have known many of these young fish under the name of "green mackerel," although I was satisfied it was a misnomer. One of the party who claims to know says they are the young of the bluefish, and I would not be surprised if he were correct, for although I have opened many hundred of these fish from time to time I never found any roe or eggs in one. They are a slim, fork-tailed fish of from six to ten inches long, and are not much different from the young of the one inch thick, large mouth white flit with teeth, and bite anything within reach when caught. They eat shrimp and young mullet, and seem to go in large schools. They are dark green or blue on the top of the back shading to white underneath. They are covered with small scales, and die soon when taken from the water. They are found here only in spring and in summer, but not in the winter in this country, and I have never seen one less than six inches long, which is their size when they first appear, nor over ten inches, which size they have attained by the latter part of the warm season. They make an excellent fish to fry for pan fish. They rarely come into the inner bays where the water is more or less sweetened and muddied by the fresh water from the rivers. I have known of these "green mackerel" but I am satisfied with their name. I never saw a bluefish unless these are the young of that species, and as I have heard that this question of where bluefish breed has been a vexed one I thought it possible that I had found out a clew for the wise ones to work on.—BEXAL.

BLACK BASS LAKE IN MASSACHUSETTS.—Wolfelet, Mass.—Four years ago one of our ponds—the Great pond in Wolfelet—was stocked with black bass. The fish were bought by one of the selectmen, he says in August, but others say in June, consequently it has led to argument on the subject. What is the duty of the selectmen of a town in connection with black bass? Can they give a permit to any inhabitant to fish, and if so, what are the conditions of such a permit, and in connection with them whether they give a permit or not? Can you refer me to the law on that subject, if there is any? The commissioners recommended the fishing of the pond in four years, and I think the matter is left with the selectmen.—G. W. H.

You had better consult your fish commissioners. We have not the laws on the subject of ponds in your State which are leased or controlled by the selectmen.

Mr. T. W. Bissett, of the well-known firm of Conroy, Bissett and Malleson, sailed last Saturday for England to complete arrangements for the sale of their hexagonal split bamboo trout and salmon rods, reels, lines, etc. This firm have met with great success on the other side, and their goods are much sought after by the leading anglers there and have given great satisfaction.

MISNOTES.—Pittsburg, Todd County, June 21.—Yesterday morning, in one hour and fifteen minutes, I caught fifteen large fish, principally bass and wall-eyed pike. As yet, owing, perhaps, to the frequent rains and consequent muddy water, bass do not rise well to the fly.—J. F. LOCKE.

HOY BITTERS is a preventive and cure for Anger; it is your own fault if you have it.

SALMON IN CANADA.

WE invite communications on the subject of the run of salmon in Canadian rivers. They will be valuable as showing the dates of arrival of the runs this year as compared to last, when they were not only scarce but late. The following letters, which we print by permission of Prof. Baird, are important and it will be noticed that the second one qualifies the first in regard to the numbers of the fish:

MATAPEDIA, June 13, 1881.—The run of fish has been the largest ever known, and began about the 10th of June; slacked off and has started again. All the fish in Movatt's freezer up to the 16th. average twenty-six and a half pounds, and a lot of 150 or thereabouts put in yesterday average twenty-seven pounds. We have taken twenty-five here, and they run larger than usual and are fresh and perfect, not like those last year. On the Great Campedaid a three rods killed fifty-two, all as good as ever, and about the 10th of June.

STANLEY, OFF GASPÉ BAY, Chateaux, June 22.—Mr. Movatt must have misunderstood me, for I find, though the run of fish is very large in size, it is small in numbers all along this bay, and the netmen tell me it is going to be a bad season and probably the most of the fish will run late, as they did last year, late in August after their nets are up. I am sorry I misunderstood Movatt.

RESTAURANT SALMON, just as we go to press we are shown a fine salmon, taken by Mr. Gilbert E. Jones of the Restigouche Salmon Club. It is three feet eight and a quarter inches in length and weighs 35 lbs. Mr. Jones reports the season as opening good, but the extra amount of logs running in the river interferes with fishing. We will give his score next week.

TIM POND TROUT FISHING.

LAST season as I unjotted my faithful bamboo at Middle Dam I said to the "Deacon," "There are too many people here; with what a steamboat profaning the once peaceful waters of the lake, guide-boats and excursion trolleys, they're getting too thick for comfort, and I quite agree with Steve Morse that this fishing 'needs a rest.' Next year we must, like David Boone, move on," and I guess we had better try Tim Pond that you have been talking so much about."

So this year I reopposeded with the "Deacon," a veteran, who has been casting his flies on Rangleys waters for thirty-five years, and found that he had made up a party for the headwaters of the Kennebec. But as I wanted to try Tim Pond, and being further moved and incited there by an article in *Forest and Stream*, I went on to the pond, and next morning at eight o'clock we were rolling along the banks of the beautiful Carybasset River for Entis.

And right here I will stop to eulcorate a bit that J. W. T. said as to the road, and the scenery which includes the Carybasset River—not Conyabasset as your types made it in the article referred.

We arrived at Smith's Farm at 3 P. M., as hungry as sharks after our ride through the mountains. Found Mr. Smith waiting to receive us, and after a dinner of country style (at which broiled chicken did not figure as I had wagged that it would) we started for the pond over the roughest "carry," with one exception, that I ever saw. That one is the twenty-six miles from Booneville, N. Y., into the camp on First Lake. We found good tight cabins with the fragrant burnt-bark-bough roof, and the owners an eloquent of our private mosquito nets slept the sleep of the just.

We stayed a week in camp, and fished every day but Sunday, and while I cannot go so far in my praise of the fishing as J. W. T., yet I will say that the fishing is good.

The size is disappointing to one who has spent several seasons in the Adirondacks and the Rangley region. Our largest was one and one-half pounds, and we caught several weighing from three-quarters to one pound. But I must say that I never caught trout that gave so much sport or fought so hard, for their size, in my life. Several times when a three-quarters of a pound fish was hooked the other three rods would suspend work to see the sport. Twice I was splashed from head to foot by trout that took my flies near the boat. And we had as much sport as we wanted several weighing from half a pound to one pound.

We noticed two distinct varieties in the pond. One was the regular Rangley trout, broad, square tail, dark belly and bronzed sides, and the other with the tall more forked, milk-white belly and more silvery sides, more like the Adirondack trout. Of the two I think the latter showed the most game, though they are smaller in size.

With a cold northeast blowing the day we came out, we were glad to put on heavy boots, and thought within ourselves, "How splendidly that chest of fish will keep this cold day." And it did.

Finally, if any of your readers want good fly fishing and plenty of it, and are not too extravagant in their ideas as to

Game Bag and Gun.

The Woodcock Season in New York State opens August 1.

GRAY PLOVER SHOOTING.

ABOUT the middle of April, along with the sheen of the poplar leaves reversed by the breeze, your Northern New Yorker is delighted with a scene of vastly greater importance to him—he sees the glint of the gray plover's wing as that wary game bird, returning from the far South, slants downward for a few days' rest in the marshes of our lakes and river bottoms. Soon as ever the welcome sign appears our watchful knight of the trigger steals gleefully into his armory, and with secret zest uncases his beloved breech or muzzle loader, and prepares for the carnage of the morrow. No word he speaks to man, woman or child, save one tried and trusty companion, without whom the coming sport would lose half its charm; and even him he conjures to assume a Sphinx-like stolidity of countenance for the hours that intervene between day and day, lest even in his sleep the precious secret should betray itself and a hungry crowd of fowlers anticipate them at the marsh.

The gray plover peaks to man, woman or child, save one tried and trusty companion, without whom the coming sport would lose half its charm; and even him he conjures to assume a Sphinx-like stolidity of countenance for the hours that intervene between day and day, lest even in his sleep the precious secret should betray itself and a hungry crowd of fowlers anticipate them at the marsh.

It is done—we have left the limits of the town behind and no suspicious eye has followed us in our howling flight. Thanks to the cloud of dust, our prayer seems answered by the goddess. As we approach and pass the residence of the last enthusiastic lover of the gun upon our route we ply the wily wren and the quail with the more appropriate and comfortable can of soda which have been tucked away under the seat. This done, we disinter our guns, distribute our stock of ammunition about our persons, and set forth in high expectation of sport. It is not yet too late for the birds to be feeding around the soft edges of the pools, and accordingly we direct our steps first to a well-known cove, about half a mile long, where the waters of the river ply transient and lose themselves among the rushes never to return to the mother stream. There is an infirm old dug-out drawn up among the reeds, and instructing C—to remain on this side of the cove while I cross over and beat the opposite shore, I launch upon my precarious passage, and, by dint of anxious and expert balancing, while I ply the slimy paddle, the voyage is made in safety.

Now we start abreast and move stealthily up the cove. The gray plover is wild and suspicious, but at least in this section, that the use of a dog, either to flush or stand upon them, is impracticable. The mere vicinity of the sportsman is almost sure to put them up, but if he should suspect that any are lying concealed within range, he has only to imitate their mournful whistle to bring them swooping in swift circles around him.

Mark! we have disturbed the more dreamy heron standing knee-deep among the reeds, and with a splash and a harsh, defiant cry, away he soars, his long legs trailing behind him. 'The temptation is too great, and my friend C— brings his little muzzle-loading Greener to his cheek, and in an instant the great mass of feathers collapse, and, all drooping and shapeliness, the heron drops among the rushes, stone dead.

At the sound of the report a flock of gray plover rose about a hundred yards away, and were gliding and winging the North Pole preparatory to hiding us good-bye forever, when some laggard launched out of the reeds, at the same time favoring us with a couple of notes from his pensive pipe. It was enough. My fume of irritation, somewhat rusty, instantly caught the familiar old strain and answered back with quivering quavers. Round whirled the laggard, and after him the wren, and, more gleefully, the wren, like a red-hot iron, basket in our faces. We held until they were within twenty yards of us, and in the very act of swooping away again, when bang! went C—'s remaining barrel, and bang, bang! both of mine. Quick as possible I slipped in two more shells and gave the bewildered birds a parting volley as they winged away in a huddle. Three of them fell, and marking them down as near as I could, I reloaded and went in search of my game. Meanwhile C— was spilling powder and shot down his sleeves, ramming away frantically, sweating, qualifying and agonizing generally.

"Pick up the first batch," I called to him, "before you forget where they lie." Some indistinct reply came back through a ramrod and two percussion-caps held in his teeth and lips, and a couple of minutes' fumbling of powder into nipples and a frantic grumbling attended me upon my way. I entered the most fortunate of the gray plover, and returning, congratulated my friend upon our good success.

He had just completed the operation of loading, and was returning his various flasks and boxes to their appropriate pockets. We searched for the other four birds, which we saw he had fallen to our first shot. But money in a wren, and need of reeds is precariously short, and we were fain to be content with fiding two of the four. "Now," said I, "C—, if you had had a breech-loader, you would not only have marked down and recovered your birds, as I did, but you would have shot twice as many as you did." But the sturdy advocate of the muzzle-loader was not thus to be overcome.

"Hold on!" he called. "You shot a wren, and a wren, did you not?" I asked. "Well," he continued, "supposing I hadn't shot at the heron, and had had two charges to begin with, as you did, I brought down two with the choke-bore as it was, and if I couldn't have dropped three with the cylinder, had it been loaded, I would have eaten my head." "Then what were you grumbling about?" I asked, somewhat mollified. "Because I shot the heron," he answered, "and so gave you a charge of lead. Wait till the next flock goes up." And I must confess that the superior skill of my friend carried his point. The plover were abundant,

and although our bags were very usefully equal, when we returned to our team for huelcon C was a brace or two ahead. Of course, I concluded that the difference lay in the menu and in the gun, but he got on all right, and he undoubtedly maintained the contrary. Finally, however, we agreed to refer the dispute to the editor of the FOREST AND STREAM, and if he, out of his inextinguishable knowledge of sporting matters, unqualifiedly pronounced the breech-loader superior in general to the muzzle-loader, C signified his willingness to assent, in theory, but not in practice.

During the afternoon the birds grew more wary, and it was not until the evening that we were really good shooting. Then the birds returned to their feeding grounds, and for a short while we found our hands full. As our pockets increased in weight our desire for slaughter decreased correspondingly, and we left off firing promiscuously into flocks, and choosing single birds dropped them with far more genuine and truly sportsmanlike satisfaction than before. The pigeon flight of the plover seldom occurred, and although we were by no means scattered feathers in every shot, yet we were quite satisfied with bagging the majority of birds singled out. At last it grew dusk, and Dolly neighed impatiently through the gathering fog. It was time to close our long day of sport, and not unwillingly we turned our faces homeward, and sniffed, in anticipation, the savory respect which we had directed solely be ready against our remonstrance. Brightly gray plover lay huddled beneath the seat, and the fury of the gods was satisfied. PAUL PARSON.

DIFFERENT MODES OF SHOOTING.

HAVING often read in your columns articles concerning "floating batteries," "shot-boxes," "pot-hunters," etc. I would like to give some examples that have come under my observation showing how difficult it is to draw a line between the right and wrong in different localities.

Many of your correspondents condemn a sink box without saying why they do so. They condemn a pot-hunter, when very likely the do not hunt for demands all his energy to keep it hidden. To make of our shot-boxes, and the idea of a floating battery is associated with hunting the fowl on their feeding grounds. With us if this were done to any extent it would drive them away, but on the other hand if we decoy them to blinds or shoot them from points on the shore or beaches that they cross it does not cause them to leave. At the best our shooting season is short and uncertain. We may have an open water, and some fowl will stay through the winter; the water, if the wind is north of Bang, and, likely to the lake districts as well. Our brothers at the South are more fortunate, they have more and better fowl than we in the East. Then, too, their shooting season lasts longer, and as the birds are residents for a while and not liable to migrate unless for food, they can hunt there differently.

In the fall and winter of 1876 I spent some time at Chesapeake City, which is situated on a branch of Elk River at the head of Chesapeake Bay. While there I became acquainted with several gentlemen who were successful sportsmen. One of them showed me his sink box, decoys and all their belongings. Some of his decoys though home-made would do credit to a manufacturer. He described the mode of using them on the Susquehanna River, and I think the same system holds good for the other rivers. His sink box was a rough hold him lying at full length, and, as near as I can remember, was about six feet long, two and a half wide and about fourteen inches deep. It had wings at the sides and ends, these were made with a board frame and canvas covering, and when not in use could be folded over the box saving room. The inner edge of these wings formed a flat washboard around the box, and the wings, when folded, were an inch and a half wide; one edge of these could be raised up so as to keep out the swash that came over the wings. As everything was as flat as a floor I was quite surprised when told what seas they would stand. Decoys are set all around the box and on the wings; my friend had some cast iron ones for this purpose. When hunting in this way it is necessary to use a landing net, and sink boxes are laid out on the west side of Elk Neck, Md. These are noted feeding grounds for canvasback and redheads; and I don't know that any other method of hunting would be successful.

Once while hunting on the James River the writer had to build a battery in order to get near enough to shoot. We were hunting in the mouth of Gray's creek, opposite James-town island. The water was shallow, and the banks were high and steep, and as we had no sinkbox we could not get near them. We built a brush hedge around our boat and set decoys off from that, then waited for event, which soon came in the shape of teal, ducks, canvasbacks and pintails. When I tripped up a stray canvasback I felt no qualms of conscience because I shot him from a battery. Some time ago I read in one of our hunting magazines how some gentlemen sunk a lake in the edge of a slough in the open prairie, and with a few reeds made a blind that effectually concealed them where there was no natural shelter. Blinds of some kind must be used, and the style varies with the locality. It is ridiculous to think of hunting without anything to conceal the hunter. What hunt would there be if one was in plain sight of his game? What success would attend such a hunt? None, in any part of the world.

Batteries in the feeding grounds at the North tend to drive off the birds; at the South, where they are residents for a season, it is different. Our Southern brethren have men among them who kill more fowl by setting them in a "raft," and using one of those great guns that shoot twelve drams of powder and a quarter of a pound of shot, than any of the shooters our way who use a water gun, or a "wild gun." To give an idea of the size of a man once, and saw him fire one of these embryo cannon at a flock of geese; after the deafening report had ceased reverberating from the banks and hills, we asked him what was in the gun. "Twelve drams of powder and eighty buckshot," said he. "I may also add that none of his shot reached the geese. When in Washington, D. C., I saw a man who used a "wild gun," and he could only shoot at a bird in water, and as he used a pound of shot at a charge, he only fired at flocks. If he was not a "pot-hunter" there are none in this country. This, with night hunting, should be stopped. Night hunting is ruinous; the fowl leave forever if it is followed up long.

"Pot-hunter" is sometimes an unjust appellation. The FOREST AND STREAM for May 5 tells of a party of three who killed upward of a thousand canvasbacks, wrens, and blue jays, and so gave the name of "pot-hunter" to the whole party. Gave them to their friends, no doubt, and escaped the derisive title of pot-hunter. Poorer men would have

made friends with manum, perhaps, and would have been detected accordingly.

Any way that game can be taken may be hunting; fortunately all the game hunting are not legitimate. It would be better for the public if all trapping and snaring was stopped. Yet no one could wonder at the opposition it would meet from the rural districts.

In my native town, twenty years ago, quail were not much hunted; now, when the season opens, the fields swarm with hunters. The countryman with his old fashioned gun and squall, and with the time were set down to two weeks, gun and thoroughbred pointers and setters. The countryman scours the fields at daybreak in order to break up the covets first; from then till dusk a perfect fusillade is kept up. The birds grow poor from that day, and I have found them miles away in the woods, where they had been driven by the pointer and breech-loader. This is continued for two months; and if the time were set down to two weeks, I think they would be such a turnout as to exterminate them. City men often buy a tract of land and forbid all trespassing on it; they, however, do not scruple to tramp through the countryman's dooryard or garden. Oftimes they leave down bars and fences; finally he posts his land; then there is trouble till wreny smooths it over.

Perhaps no kind of hunting is so destructive as that pursued in the far North by the deer hunters. They go in boats to places where fowl breed in thousands, and reap a harvest of eggs that would produce a legion of wild fowl. The method told me by a man who had been on such expeditions was to go to some island where nests were plenty, and smash all the eggs that could be found, and next morning all would be fresh. Then began the harvest. Most of this is done out of the limits of the United States, but I think it exceeds in evil any mode of hunting I ever heard of.

THE GAME LAW VETO.

To the Assembly: Assembly Bill No. 601, entitled "An act to further amend chapter 634 of the Laws of 1879, entitled 'An act for the preservation of game and fish,' and to amend chapter 634, as amended by chapter 631 of the Laws of 1880," is herewith returned without approval. The Constitution provides that excessive bail shall not be required nor excessive fines imposed, nor shall cruel and unusual punishment be inflicted, nor shall witnesses be unreasonably detained. Manifestly, the object of this provision is to guard and protect the weak and unfortunate from oppression, and to prevent the Legislature in the exercise of its peculiar prerogative as upon the magistrature or subordination a officer who is charged with the duty of enforcing the statutes. In the progress of legislation with reference to the protection of game and fish there has been a constant tendency to antagonize this beneficent provision of the Constitution. From year to year petitions have been made more and more numerous, and the Legislature has on largely increased in variety and number. Each successive Legislature has amended the laws on the subject, so that it has become next to impossible for the people to understand what is permitted or forbidden. Instead of just and stable laws that would command respect and obedience, we have confusion and uncertainty, with risk of offending on the part of those who are so well intentioned, and the Legislature has on many occasions amended the laws, and in this regard must be deemed obnoxious to the constitutional restriction referred to. For in-tance, the penalty for shooting a wild fowl from any stean or sail vessel, as prescribed by the existing law, is \$10, while this bill increases it to \$50. This change cannot be justified as reasonable or in any degree consistent with the clause in the constitution which is amended, and in amendment of this third section, this bill provides that "no person imprisoned in extension under this act shall be hailed or admitted to the liberties of the jail." No sane person will attempt to deny that this provision is a harsh and extraordinary, nor will it be claimed that it is in any sense necessary for a proper and efficient execution of the law.

The amendment proposed to the thirty-fifth section provides that "Courts of Special Sessions in towns and villages, and the several courts in cities, situated in the county in which the offense was committed, or in any adjoining county having jurisdiction to try misdemeanors in their own county, shall have jurisdiction to try offenders in all cases occurring under this act. It shall be the duty of every Sheriff, Under Sheriff, Deputy Sheriff, or constable, to receive and detain in custody any person who shall find violating any of the provisions of this Act and immediately to bring such offender before any magistrate residing in the county in which the offense is committed, or in any adjoining county, for examination and trial." Thus, the jurisdiction of the most inferior courts is extended over several counties, and officers are authorized to convey offenders wherever they please within the limits of any adjoining county. Comment is hardly necessary to illustrate the imprudence and inconsistency of such a proposition. When an offense is committed against the person or property, either in the nature of a misdemeanor or a felony, it is the duty of the officer making the arrest to take the offender before the nearest magistrate for examination and trial. Thus, he may have the crime committed, whether it be murder, burglary or robbery, the offender must be taken before the nearest magistrate, while if the offense be simply catching a fish or shooting a bird out of season, the offender may be taken before any magistrate in perhaps any one of a half dozen counties for examination or trial. The case in this respect is one of pleasure and prejudice on the part of the officer making the arrest. In these provisions is also antagonistic to the Constitution of the United States, which guarantees to every person charged with crime "the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law." The only application of this guarantee that seems reasonably consistent with it, in these provisions is also antagonistic to the Constitution of the United States, which guarantees to every person charged with crime "the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law." The only application of this guarantee that seems reasonably consistent with it, in these provisions is also antagonistic to the Constitution of the United States, which guarantees to every person charged with crime "the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law." The only application of this guarantee that seems reasonably consistent with it, in these provisions is also antagonistic to the Constitution of the United States, which guarantees to every person charged with crime "the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law." The only application of this guarantee that seems reasonably consistent with it, in these provisions is also antagonistic to the Constitution of the United States, which guarantees to every person charged with crime "the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law." The only application of this guarantee that seems reasonably consistent with it, in these provisions is also antagonistic to the Constitution of the United States, which guarantees to every person charged with crime "the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law." The only application of this guarantee that seems reasonably consistent with it, in these provisions is also antagonistic to the Constitution of the United States, which guarantees to

stocking all the streams of the State with the finest of fish. Dr. J. T. Irving has been appointed to take charge of the stocking of the Little Miami, Col. David B. Corwin, the Big Miami, and two sections whose names I cannot recall as present the Scioto. There have been a number of complaints by the defective game laws of Ohio which we hope to have remedied next winter when the Legislature meets. For instance, the Fish Commission sets aside \$1,000 for stocking the streams of Ohio with fish, and at the same time the Legislature passed an act giving permission to shoot and spear fish, and to some for mullets. Now what are mullets? They are a species of fish, not a trout, and not a horse. When seeing for mullets, a person is liable to seine a few black bass. Is he going to pick out the bass and throw them back into the stream and keep the mullets? Not much."

"When will your new club house be completed, Colonel?" "We expect to occupy it about the first of November, and a finer club house there will not be in the city. The success of our club is that no gambling or drinking is allowed, and we have the good wishes of the ladies, for they know that when their husbands are at the Cuyler Club they are in good company."

"Your club house will be built entirely by private subscription, won't it?"

"Yes, my members of the club, and I wish you would discontinue the fact, for when we issued our circulars asking for subscriptions from members of the club the impression got abroad that we were calling upon the public for subscriptions, which was not the case by any means."

SUMMER GUIDE BOOKS.

THE B AND O. SUMMER RESORT BOOK.

The Baltimore and Ohio Railroad Co. publish a novel little handbook directing the public to the choice points for scenery, health and sport reached by their lines. There is an index at the end of the book, which is a guarantee that the rest of the book is complete. We always take to a book of this kind which has an index. Of Deer Park and Oakland, the book says:

The devotees of the rod and gun will find in the Alleghenies much food for both hook and shot, as, for the one, there is trout and like fish which most abound in mountain streams, and for the other wild turkey, deer, grouse, etc. The terms at Deer Park and Oakland are \$3 per day; \$15 to \$18 per week, and \$60 to \$75 per month. Address letters relative to accommodations to J. P. Dulsehart, Supt. B. & O. hotels, Deer Park, Md. Leaving New York in the evening Deer Park is reached the next morning, and Oakland ten minutes later. From the West, 1 arriving Chicago late in the afternoon, Oakland and Deer Park are reached the next day for dinner without change of cars. Leaving St. Louis on the famous Daisy express in the morning, and Cincinnati in the evening, Oakland and Deer Park are reached the next morning, or, leaving St. Louis in the evening and Cincinnati in the morning, Oakland and Deer Park are reached that evening. The train leaving New York for Philadelphia in the evening arrives at Deer Park and Oakland for breakfast next morning. The train leaving New York late at night arrives at these resorts next day for dinner.

For the guide book send your name to the Baltimore and Ohio Railroad Co., Baltimore, Md.

THE PENNSYLVANIA RAILROAD NOTES.

The passenger department of the Pennsylvania Railroad publishes a large handbook detailing almost one thousand excursion routes. The book is handsomely embellished with numerous pictures of famous places, and is accompanied with an useful map. Now, here is a bit of advice. The Pennsylvania Railroad Company offers to send this book free upon application; we advise you, gentle reader, to put your name down for one, whether you propose to go anywhere or not. For tourists the book is invaluable; for stay-at-homes it will be entertaining.

OUR DETROIT LETTER.

SENATOR Thomas W. Palmer is practicing his Detroit Society for the Prevention of Cruelty to Animals, although nominally he is only President of that organization. Michigan has no game laws, and Senator Palmer and his associates are having an interesting life. The latter announces his intention to prevent the shooting of pigeons; and the shooters say, in effect, "prevent us, if you can." A gentleman who is neither a sportsman nor an advocate of the Prevention etc. business, was heard dilating on the subject the other day. His idea is that, "it is strange that a society of Mr. Palmer's well-known benevolence should extend energy in such a cause. It is, of course, to be regretted that pigeons should be killed. Indeed one could desire that the economy of nature be so reversed that life should never be destroyed; but unfortunately that isn't the way things are arranged. The universal law of nature, which is more cruel in her methods than any art man has invented, is to kill and be killed. The pigeon is no exception in this respect, and I believe Mr. Palmer's endeavors may save from the marksman's shot-gun many of the very means he is bent on to die a more miserable death by starvation or overcrossing in the northern woods, where millions of them perish from such causes annually. If they are to be killed at all, now could the work be done more mercifully than when it is by death from rife or by a useful art as marksmanship?" Such is in brief, the ingenious and apparently serious argument of the person whose ideas are enclosed within quotation marks.

Now, Senator Palmer says it isn't so much the actual shooting of pigeons that he objects to as it is the manner in which they are shot. He has often seen them, he declares, crippled and fluttering off to die in helpless misery. This may possibly be interpreted as a "wiper" at our noble Michigan sportsman. I should not be surprised if Mr. Palmer's endeavors will all the time quietly bring about a comforting chuckle at the fellows who have persuaded themselves that pigeons enjoy the distinction of being shot at by them. One other point—and I think it a good one—made by Mr. Palmer is that the manner in which pigeons are transported for sale and use is barbarous. With his extravagant notion that the shooting them is demoralizing to the young I have no sympathy. Whether or not the shooting of the here shall be compelled to resort to glass balls is just now the question which is agitating their members. They try to look serene and unconcerned about it, but there must be some significance in the repeated postponements of the match for the State Championship next year.

ARE THERE Nihilists? ON OUR RANGES?

NEW YORK, June 28.

Editor Forest and Stream:

Since with the intention that I may possibly be doing a service, I wish to give you a conversation which I heard the other day in coming to the city on a train down the Hudson River road. The parties were two men, both of them apparently foreigners. At first glance I took them to be Germans, but now think that one of them at least was a Russian born. They were conversing of rifle shooting, and as I have myself been a frequenter of the ranges about New York I put some attention to what they said. They talked of a law-willing learner. They spoke of different makes of rifles, and their powers of carrying with accuracy for various distances. They discussed bolt bullets and spherical ones, and one of them detailed some experiments he had been making with explosive and reversing bullets from long-range weapons, and the destructive power he had found them to possess when fired from a long range. He spoke of wood powder and its peculiarity of giving out little snocks of unburned powder for a certain charge. Then one of the two told of the progress which a number of individuals were making as marksmen. The names were mentioned, but these seemed to be short nick-names. They were apparently in various parts of the country, and my travelling companion was speaking of correcting the list he had with him.

All the talk I have heard about so tempted me to turn and open a conversation with the strangers on a topic where I was thoroughly at home. I did not do so, however, and the two men went on talking, and dropping in the German tongue one narrated to the other a lot which gave point to their former talk in small bores and charges. So far as I could judge they had in view the assassination of the present Emperor of Russia. They had heard about a German snore fired from a long distance up to 200 to 500 yards or more. The advantages of the plan seemed to be its surety, since from a known distance and with the most approved outfit, including strong glasses or lenses, which he spoke of, and firing from a rest, he declared that it would be possible to hit a single button on the coat at that distance, and he expressed the hope that some of the men would be able to gain that proficiency. They also heard about a rifle with a plan which have escaped me now; but with a telescope rifle one fitted somewhat similarly, they hoped to be able to plant one of their explosive bullets in the body of a man at a distance which would screen them from observation, and so enable them to carry out their scheme to a sure fatality. The whole plot was talked about in a low tone of voice and with great freedom, and I was expected to be fatigued and rest when talking in German by the fact that there were no German-looking persons in the car. He spoke in terms of great admiration of American arms and said he had glad they had come here, and said that thus far they had no trouble in getting whatever they wished, and he said also that they had arranged for having their guns sent home. I was, as you may well have guessed, very much amused at the murdering talk I had heard and while I was wondering what I might do to meet the train at Spuyten Duyvil, and seemed to wait for a train later to the west side of the city.

I do not wish to become involved in any way. I can give no more definite information than the above, and can only repeat my conclusion reached that the men had made a thorough study of rifle-practice here with the plan of applying it to this regional assassination on our ranges. I. V.

WISCONSIN NOTES.—At its last session the Legislature of Wisconsin passed a law providing for the payment of a bounty of six dollars on each wolf killed, three dollars on each fox, cat or lynx killed, and two dollars on each fox killed. The law has now been in operation about two months, and during that time the secretary has audited claims to the amount of \$5,517. Most of the money has been obtained by persons in the southern part of the State, and when the wolf-killers in the northern part (where wolves are plenty) commence to get their work in the fall, on the treasury will certainly be very encouraging to sheep-raisers. As the seasonal days wear away, and the 15th of August draws near, bearing with it prospects of a splendid shooting season, our lovers of the dog and gun seem to grow feverish. The gun rests uneasily in its case, and needs renewal and inspection, and turning over; the pointers and setters receive more attention and are fed in the draft, on these excuses for a rest, which for the open season promises to be the finest that has ever been known for years, and we never have very bad ones. Plenty of chickens wintered over, and the weather during the hatching season was perfect.

Last Friday Mr. W. H. Skinner was in town and some of our rifle-shooters—amateurs—met and they and Mr. Skinner shot, resulting in the defeat of Mr. Skinner, much to the credit of Mr. E. A. Benjamin, the winner. Sixty-five balls each were thrown from a Bogardus trap and, with a rifle, E. A. Benjamin broke 46; W. H. Skinner, 45. Then five balls each were thrown, of which E. A. Benjamin broke 5 and W. H. Skinner 4. Also 35 balls were thrown by hand, of which number W. H. Skinner broke 31 and E. A. Benjamin 30. Mo.

ORIO GAME PROSPECTS.—Wauson, O., June 25.—A bounty is paid in this State for hawks. A person presenting a dead hawk to the township clerk when killed, is entitled to a certificate from said officer to the fact. On presentation of this certificate to the County Commissioners they are compelled to order the payment to said person the sum of 50 cents for each hawk killed, named in the certificate, out of the dog-tax fund. Sportsmen are endeavoring to earn an extra dollar while out and thus help preserve the game, and at the same time kill two birds with one stone. The quail prospects are better with us than I have known them for years. We will have excellent shooting this fall. Squirrels are very plenty, and we expect splendid woodcock shooting. I hear of large numbers.—H.

WHITESTONE GUN CLUB.—WHITESTONE, L. I., June 24.—On Monday, June 24, we organized the "Whitestone Gun Club," commencing with a membership of twenty. An association is much needed here to see that the game laws are respected, and we propose to have them rigidly enforced, thereby doing away with all poaching and pot-hunting. We hold our inaugural match on July 4, prox. The following officers were elected: President, H. W. Watson; Vice-President, James Watson; Secretary, A. C. Witherding; Treasurer, H. Simonds.—A. C. WILBERING, Sec.

Booneville, June 18.—I have opened a sportsman's resort on Third Lake, Fulton Chain, and expect "Nessmucks" to

be there about July 1, on a visit of several weeks, to paddle his tiny canoe on his favorite Third Lake. Trout-fishing witfully is now good; they are in fine condition and very gaudy. The prospect for deer-hunting is good when the time comes. I have seen several in my ramble lately, and William Dart, one of our reliable guides, when out with a sportsman last week, fishing on North Branch, Moose River, saw five deer in one day's trip. They have been unmolested, so far, in that region, and are very tame—can row right close to them.—Yours truly, ROBT. PARRIE.

NEW JERSEY WOODCOCK SEASON.—The first open season for woodcock shooting in New Jersey opens July 1 and extends to August 1. The months of August and September are a close season. The second open season extends from Sept. 30 to Dec. 15.

Holabird Shooting Suits. Uphergrove & McEllan, Valparaiso, Ind.

Fish Culture.

POACHERS.

BY JAMES ANNIN, JR.

[A paper read before the American Fishcultural Association.]

I SHALL endeavor to give a list of some of the most destructive frequenters of the trout pond and stream which have come under my observation, and also some of the remedies used.

First, I have the kingfisher. His notes are heard from early spring until cold weather in late fall, and sometimes he will appear during the winter, like some sportsmen I have seen who stand it until the season opened in the spring, but they must just go and take a look at the stream where, during the summer past, they have spent their sport.

This bird is never satisfied, from daylight until dusk he is on the look-out, and ever ready to plunge in after any fish which may be exposed.

I honestly think that a kingfisher, unmolested during his stay on or near the stream, will take up many trout as the average sportsman. Some say, "Why don't you shoot them?" Well, cold lead is very good when you get the time and chance to send it after them, but you can't be on the look-out all the time, and I think the best way to get the full amount of harm's way is to trap him. For that purpose I have used small, round steel traps, the kind without the shank or tail piece, fastening them on the end of a pole, say ten or fifteen feet long, and then putting them up along the stream near enough to good fishing, so that when the bird may trap it a splendid point to make observations from. When the trap is set and in position the little plate or drop is a little the highest part of the trap, and as he slips up and drops on it, he is almost always caught by both ends of the trap. It is always ready, it costs nothing to keep it running besides the first cost of the trap. Occasionally you will have a visit from some of our other birds. I have taken large fish hawks, owls, etc., and never but one robin.

Next come the ducks, wild and domestic. The latter are very destructive not only to the fish but to the fish food of the stream. They are almost always at work feeding during the day, and are not easily driven away.

The best plan is to have no ducks yourself, and if your neighbors have them and they come on your premises, offer to buy them, or to have them sold if they have more and they will only fly to the place where I have seen a tame catch duck and swallow a trout six inches long.

But few species of wild duck trouble fish men, but during the winter I was annoyed with a flock of what I called saw-bills or sheldracks. Most of the streams throughout the State were frozen, and they came to our Caledonia Spring Creek, as that never freezes. I had a hard time with them for about two weeks trying to keep them off. It occasionally I could get a shot they would only fly to the other end of the stream, and would soon be back. (The stream is only about one mile long.) They would go over the large spawning beds where you could see from one hundred to a thousand fish, and after they had been over if you would not stop you would find them all over the stream, and would come again or twice it was the third day before they began to show up again.

I found that shooting did not work, so I made some scarecrows out of old barrels and set them up on my banks as the stream goes. That did very well for a day or two, but they soon saw through the fraud, and were as bad as ever. I then thought I would try something that would move, as I saw that a boat on the stream, or a person in motion, would start the ducks, and they would see it, even if it was a long way off. So I made some small red flannel bags, and put them by the side of the scarecrows, and that did the business, and I had no more trouble with the sheldracks.

Next I have the muskrat, and the muskrat-owl. I have but little to say about them as they have given me but little trouble or damage that I know of. What first made me suspect that they were up to some mischief was that I found them in my steel traps that set for muskrat, and I had the setting traps for these set in generally places where I found the surface of the water from one or four inches, and when I found the eyes in them I could not make out what they were after in the water, but I soon found that it was the fish-food in the stream, such as the fresh-water lobster, crabs, mud crabs, etc. So I set it out a duck enemy to the fish, they indirectly do much harm, as I said under the head of Poachers No. 1. I have taken them during the night in the traps placed for kingfishers.

Then come the heron, the "blue heron," and what a wicked fellow, dealing death to everything in the fish line that he once strikes with that long, heavy and sharp bill of his. Most of his poisoning is carried on after dark and early mornings. During the day he is very careful in the morning, and does not enter the marshes, but after dark he will come into any of your shallow ponds, coming to within a rod or two of your house, and as the fish move around (he standing in the water perfectly motionless), he will strike and catch the fish, and he will strike and catch him his him. From what I have seen myself and heard from others I think the bird capable of getting outside of from one to two dozen, three dozen trout on one night.

During the night he will enter a large trout stream, and often heard within a short distance of a great flowing and disturbance in the water. The next morning I have often gone to the spot as near as possible, and found the marks of the heron's feet on the mud near the more shallow water, he will get away from one-half to one pound in weight, dead, with a hole in his back or side into which you could put your finger, and sometimes going through the fish. I suppose the fish found in this shape were a trout, and he will strike and catch the fish, and he will strike and catch him, but only to die from the effects of the wound.

If you see their marks or think herons are visiting your ponds or stream at once get out your steel traps, and at the spot mentioned, set a trap near the more shallow water, he will get away from one-half to one pound in weight, dead, with a hole in his back or side into which you could put your finger, and sometimes going through the fish. I suppose the fish found in this shape were a trout, and he will strike and catch the fish, and he will strike and catch him, but only to die from the effects of the wound.

If you see their marks or think herons are visiting your ponds or stream at once get out your steel traps, and at the spot mentioned, set a trap near the more shallow water, he will get away from one-half to one pound in weight, dead, with a hole in his back or side into which you could put your finger, and sometimes going through the fish. I suppose the fish found in this shape were a trout, and he will strike and catch the fish, and he will strike and catch him, but only to die from the effects of the wound.

Then I have the muskrat. In his poaching he is after much the

Miscellaneous

Now is the Time to Order TENTS, AWNINGS & FLAGS.

Tents of all kinds for Sportsmen, Naturalists and photographers, also for Camp Meetings. Fancy Tents for families made to order.

BOUDRENS PATENT COMBINATION Jack, Dash and Fishing LAMP.

For NIGHT HUNTING Deer and other animals, SPEARING Fish, Indispensable on any Boating, Yachting or Camping Trip.

CAUTION. DR. SCOTT'S ELECTRIC HAIR BRUSH. A MARVELLOUS SUCCESS!! NOW RECOMMENDED BY OUR BEST PHYSICIANS.

An attempt has been made to put so-called "Electric Magnetics" upon the market, but the Post-Office authorities at Washington have prohibited the copying of a fraud. The writers caution the Public to be careful that "Dr. Scott's" name is on the box and is printed on the brush. Care is not wire, but a pure bristle brush. Which has won its way to Royal favor in England, been cordially indorsed by the Princess of Wales, and written upon by the Rt. Hon. W. E. Gladstone, is now brought to the notice of the American public. It cures by natural means, will always do good, never harm, and is extremely lasting for many years. It should be used daily in place of the ordinary Hair Brush. The Brush Handle is made of a new woodless composition, resembling ebony; a combination of substances PRODUCING A PERMANENT ELECTRO-MAGNETIC CURRENT WHICH ACTS IMMEDIATELY UPON THE HAIR GLANDS AND FOLLICLES. This power can always be tested by a silver compass which accompanies each Brush.

IT IS WARRANTED TO Cure Nervous Headache in 5 Minutes!! Cure Bilious Headache in 5 Minutes!! Cure Neuralgia in 5 Minutes!! Prevent Falling Hair and Baldness!! Cure Dandruff and Diseases of the Scalp!! Promptly Arrests Premature Greyness!! Makes the Hair grow Long and Glossy!! Immediately Soothes the Wary Brain!! Money returned if not as represented!!

It rarely fails to produce a rapid growth of hair on bald heads, where the glands and follicles are not totally destroyed. Proprietors: The Pall Mall Electric Association of London, New York Branch: 842 Broadway. [From the Mayor of Saratoga.] "I cheerfully testify to the merits of Dr. Scott's Electric Hair Brush. It cures my headaches within a few minutes. I am so pleased with it I purchased another for my wife. It is an excellent Hair Brush, well worth the price, aside from the curative value." JAS. B. CLARKE.

"I would Not take \$1,000 for my Brush. Its effect is marvelous." PLINY F. SMITH, 215 Fulton Street, N. Y. Mr. Smith is a gentleman well known in this City as a Law Publisher, and also as a Director in several Public Institutions of New York. Head Office "Domestic" Sewing Machines Co., New York. De. Geo. A. Scott.-Dear Sir: Permit me to add the testimony of my wife to that of the many others who have been benefited by the use of your Electric Brush. She has for years been a sufferer from Neuritis in an acute form, but since I obtained for her one of your Brushes, she has experienced entire relief. Please accept her sincere thanks. HENRY BARTLETT. Over 7,000 similar Testimonials can be seen at our office.

ASK FOR DR. SCOTT'S BRUSH. TAKE NO OTHER. See that name is on the box. Mention this Paper. A BEAUTIFUL BRUSH, FOR YEARS. We will send it on trial, postpaid, on receipt of \$2.00, which will be returned if not as represented. Include 10 cents extra and we guarantee safe delivery into your hands; or will send by express, C. O. D. at your expense, with privilege of opening and examining. This express with it I purchased another for my wife. It is an excellent Hair Brush, well worth the price, aside from the curative value. MONEY RETURNED IF NOT AS REPRESENTED. As soon as you receive the Brush, if not well satisfied with your bargain, write us and we will return the money. What can be fairer? The Proprietors of this Publication know Dr. Scott to be respectable and trustworthy, a Brush has been placed in the hands of Mayor Cooper and Postmaster James of New York, as a guarantee of good faith. Remittances should be made payable to GEO. A. SCOTT, 842 Broadway, New York. They can be made in Checks, Drafts, Post Office Orders, Currency, or Stamps. LIBERAL DISCOUNT TO THE TRADE. Agents Wanted in every Town. Send for a Circular of our Dr. Scott's Electric Hair Brush.

Hotels and Routes for Sportsmen

Black Bass and Maskalonge

THE CELEBRATED FISHING GROUNDS OF THE

THOUSAND ISLANDS.

St. Lawrence Hotel and the Rathbun House,

CAPE VINCENT, N. Y.

(Terminus of R. W. & O. R. R.)

Both under one management. The Rathbun House has been enlarged to double its former capacity, and both houses refit and refurnished throughout. They are located in the immediate vicinity of the very

BEST FISHING GROUNDS OF THE ST. LAWRENCE RIVER.

Competent crews with first-class boats at reasonable prices can always be obtained. Malara, mosquitos and jay loaves are unknown at this point. The terms for board and ticket of the hotels are from \$1 to \$14 per week, according to location of room. See FOREST AND STREAM of July 1, 1880, "Bass and Maskalonge Fishing," for description of the attractions, and send for circular containing full particulars.

H. L. FOX, CAPE VINCENT, N. Y.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER RESORTS AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and bays of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS will be sold at LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' guide a handsome illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent, Grand Rapids, Mich.

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the SUPERIOR FACILITIES

afforded by their lines for reaching most of the TRIPPING PARKS and RACE COURSES in the Middle States. These lines run from PHILADELPHIA FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of fresh water, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, PENNY, A. B. D. FORD, CHESSON, RALEIGH, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also to

TUCKERTON, BICO PAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORTS ATRE FLIN AND REEFER. L. P. FARMER, Gen'l Pass. Agent. FRANK THOMSON, Gen'l Manager. 1041-42

Chesapeake & Ohio R'y.

Hornbeam Rods A SPECIALTY.

W. HUNTINGTON, WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rod—secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, stay in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

GUN POWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DUPONT'S GUN POWDER, since established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

Dupont's Diamond Grain.—Nos. 1 (course) to
5 (fine) unequalled in strength, quickness and
cleanliness, adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.
Dupont's Orange Ducking.—Nos. 1 (course)
to 5 (fine); burns slowly, strong and very clean
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. cartons and 6 1/2 and 12 1/2 lb. kegs.
Dupont's Choke Bore.—Specially adapted for
"choke bore" guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrel; gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 7 and No. 5.
No. 1 being the coarsest. Packed in 6 1/2 lb. kegs and
1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. canisters and 6 1/2 lb. kegs.
Dupont's Rifle 4, 5, 6, 8, and Shooting—
FFG and FFG. The Fg. for long-range rifle shoot-
ing, the FFG and FFG. for general use, burning
strong and moist. Packed in 5 lb., 1 lb. and 5 lb.
canisters, 6 1/2, 12 1/2 and 25 lb. kegs. Fg. coarse, FFG
fine.

Dupont's Sporting, Mining, Surprising and Blasting
Powders of all sizes and descriptions. Special
Grades for Export. Also Rifle, Cartridge, musket,
cannon, mortar, Mammoth, Hexagonal, Cubical
and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
grain or proof.

Agencies in all the cities and principal towns
throughout the United States. Represented by
F. L. KNEELAND, 87 Beaver St., N. Y.

Ammunition, Etc.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square can-
isters of one pound each.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6 1/2 lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting it
ranks any other brand and it is equally serviceable
for muzzles or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG and "Sea Shooting" Fg. In kegs of
25, 12 1/2 and 6 1/2 lbs. and cans of 1 lb. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strongly and
moist. The FFG and FFG are favorite brands for
ordinary sporting and the "Sea Shooting" Fg. is the
standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON AND MUSKET POW-
DER; also, SPECIAL GRADES FOR EXPORT OF
ANY REQUIRED GRAIN OR PROOF MANU-
FACTURED TO ORDER.

The above can be had of dealers, or of the Com-
pany's Agents, in every prominent city, or whole-
sale at our office.

ANSWERS TO CORRESPONDENTS.....	

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be directed to the Forest and Stream Publishing Company.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsvendors throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng; and by Etn. Terquem, 15 Boulevard, St. Martin, Paris, France.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, July 7.

'POSSEM STORIES are now in order.

Do not forget that the same rules of health hold good in the camp as at home; and in particular that a full allowance of refreshing sleep is necessary to repair the waste of tissue during the working hours. The good results, which would otherwise follow a week in the field, are too often prevented by a neglect of the ordinary hygienic principles of correct living. Sound sleep and plenty of it. Remember that, and arrange the programme of your trip so that the hours for sleep may not be curtailed nor broken.

THERE is great deal of anti-monopoly talk nowadays, and it is not to be wondered at that the formation of large game clubs and the occupation of immense tracts of desirable shooting land should be looked upon with alarm by some of those who are thus shut off from former privileges. A correspondent in this issue suggests that such clubs are akin to monopolies. There is abundant argument on the other side of the case; and the club members can doubtless give good reasons for their course. But is not the hint a fair one that some days might be set apart for the benefit of opposed parties who may not be club members?

DEATH TRAPS.

ONCE more the community is startled by a frightful "accident" in which a number of precious lives are sacrificed to the clumsy ignorance which has so long characterized the modelling of small yachts in America. It is safe to say that the "accident" to the Mohawk some years ago was a most serious set-back to the development of the sport in our waters, and now we are called upon to chronicle a second edition thereof in the capsizing of a cabin sloop in the Sound under even more aggravated conditions and far more flagrant in the display of stupidity. So thoroughly incapable and willfully perverse does our style of modelling seem in the light of these frightful and ever-recurring horrors that we lose patience and fail to find words strong enough to paint in contempt and ridicule the pig-headed humbuggery which seeks safety in beam instead of in low weights. It is, in our mind, an open question whether the builders of such despicable man-traps as the sloop in question and her entire class of light-draft, flat-floored caricatures are not open to the charge of deliberate manslaughter, and most of their skippers or owners amenable to the laws for the grossest recklessness and downright imbecility. That people entirely unacquainted with such matters and unable to tell one boat from another should become innocent victims to their temerity in going sailing in death traps is, perhaps, natural enough, however unfortunate. Everybody cannot be expected to know the dangers besetting a type of boat radically faulty in conception, the treachery of the thing being hidden beneath paint and varnish. But it may well be questioned whether the originators of the death trap cannot be legally held accountable for the havoc they create. Brought up from youth to the profession of building and modelling, there can be no possible excuse in mitigation of their responsibility for execrable work which *capitula under bare poles!* When a doctor, in performing a surgical operation, evinces a lack of professional skill he is sent to jail, and the family of the patient have a just cause of action for damages. Where a yacht builder sells to his customer, a green hand perhaps, a thing that cannot stand up in a squall without a rag on her, where is the difference? The victims of his gross ignorance count up by the hundreds every season, and it cannot be long before the law must be invoked for the protection of the public. Unfortunately the builder is not always solely responsible for the traps he launches, which are heralded in the lay papers as "models of strength and beauty" by verdant pens totally in the dark about the real state of things, deceived into praises by cabin tinsel, superficial neatness and decoration, when a decided stand against the multiplication of death traps would save many a new aspirant for innocent and beneficial recreation from an untimely grave in the deep.

We protest in the interests of the general public and the sport of yachting against the construction of the miserable sailing machines having nothing but beam to depend upon, neither body nor low weights, sparred far beyond reason in the pursuit of an oft refuted "theory" that a flat floor and light draft are necessary to speed. It has been shown in practice over and over again that a good, wholesome boat, a safe one at that, is the equal of the machine in point of speed and her superior in every other quality. Although late years have seen a marked modification of sentiment in their favor, we are still hampered with a class of old fogies unwilling to learn from experience, and criminally averse to anything having the color of a change from the ancient, insipid and thoroughly useless "ro!" with which their minds have been poisoned while in the shops as apprentices taking aboard all the transparent hallucinations of men absolutely ignorant of the first elements of mechanics, and utterly at a loss for a rational system upon which to build for their customers in a way combining speed with safety. In the narrowness of their minds and illiberality of their spirit there can be but one way to accomplish what they seek, and that is a slavish submission to the antediluvian lore passed along from man to man, padded, colored by the imagination, almost wholly devoid of truth, and a laughing stock to persons conversant even in a moderate degree with the common lever of statics and the rudiments of dynamics. Even the little boy whittling out a clip hangs lead to the keel, and sees his plaything safely bound over the ripples of a mill pond, now nearly plumb holding her way through calms, then struck down by

a squall without consequence or damage, always coming back to a normal position, and reaching the opposite side in safety—blow high, blow low, rain or shine. That same small boy displays in his crude efforts a more thorough appreciation of the forces at work and the mechanics necessary to meet them in the fight than his sage, white-haired sire, who builds wide and flat "to make her stand up," or to accommodate that peculiar class of so-called yachtsmen whose disgust is aroused lest they can berth a 50-ft. ship on a mud flat with a few inches of water, and for the attainment of which they are prepared to sacrifice without murmur the very first essential—safety—a good design and a valuable boat should possess. The future of yachting on small tonnage would be hopeless indeed and a grand sport confined to the wealthy few were the light not already breaking.

In the East outside weights and keels have become general, and in New York the drowning—year in, year out—of most estimable citizens cannot fail to bring about the cure. Put some more brains into yacht modelling, or else let us have Government inspection to insist upon sound proportions and a full outfit for all emergencies, or the great million will never be got to look upon yachting as anything else than a tight-rope performance, and making one's final will must become a step as peltic as it now is necessary before going off for an hour's sail when the sky is not clear and "probabilities" guaranteed from Washington. That we have not yet been able to solve the problem of building safe and fast as well is a disgrace to those responsible for the present fleet. Surely there have been opportunities enough, for many an owner would prefer to put his money into something which shall be safe first and fast next. Yet he goes to the builder in whom he puts his trust and the latter, forsooth, to make the boat safe, gives a "little more beam and a little less depth," and leaves it to FOREST AND STREAM to recount the disaster and trace the drowned when the machine first strikes a combination of adverse circumstances, ignominiously turning the beam wrong side up. Now, in the name of common sense, why must we in New York continue in such evil ways? Have not deep boats like Elephant, Vixen, Fanita, Intrepid and others of New York; Hesper, America, Lillie, Gad and a host of keel sloops in the East shown themselves fast, smart and uncapsizable? Was not Peerless, schooner, improved by outside lead? Has Agnes not done well this season with ballast below the garbards? Does Crusader lag for a similar reason? If the whole matter of keel and low weights were still in the realms of experiment only, well might the builders be excused from risking their reputation and little all in something likely to be a failure. But there is no longer any experiment about it. Practice has shown that keels and outside weights, with the necessary concomitant of brains, can hold their own for all-round work with the old-fashioned theories of light draft and beam. Some of the most sorry failures of the season are boats, small and large, built on the silly brained "skimming over the water" delusion one is so apt to meet with as the stock in trade of many a yacht-builder's "faith." If some builders refuse to take the initiative, we trust the large public reading our columns will place their orders with those who have sufficient intelligence to keep abreast of the small boy's toy, and who are able and willing to learn. Shake off the dusty shlep lore for once, look facts in the face, and have courage to back your opinions against the hearsay diatribe which holds such powerful sway over those whose business it ought to be to lead and not to tow behind. To solve the question between light draft traps and honest yachts, no better plan can be proposed than a close examination of the model yachts sailed by their professional masters on the lakes of the parks. Ask them if they would have a wide dish with a board or a well-proportioned hull with keel and lead, depth and moderation in beam. Their answer, whatever it may be, will have been obtained through a vast deal of experience, and we stake our reputation that they will bear us out in the assertion that speed and safety are attainable in a yacht with just the same ease we now produce capsizing traps, which are not always fast at that. As for a sportsman who, to keep his boat on a flat, will deliberately choose a machine to save himself half an hour's journey in reaching the craft, he is past salvation, and in his case the verdict some day may be: Served him right; he is beyond the pale of com-

miseration. There is one thing more which concerns the owners rather than the builders. You may try to sail in smooth water and fair weather as much as you please—sometimes an unlooked for combination of adverse circumstances may arise. If you are afloat in a trap set to it that provisions are made for quitting a sinking ship. Have life preservers within reach on deck, have them easily adjusted by yokels fresh from green swards ashore. Have a practical plan of a raft in your mind, to be improvised in haste from gratings on the cockpit floor, with grip lines rove around the framing. Have a csn of water, brandy and provisions lashed thereto. See that the thing cannot jam at a critical moment, and lash what oars, buckets or wreckage you have to the raft, in such a way as not to "slosh" around when afloat. Finally, use a modicum of common sense when yachting just as you would ashore. Do not rely on the sailing master as your sole salvation, and bear in mind that "forewarned is forearmed." Strip heavy boots and clothing in nasty looking weather, and give full directions before the storm is upon you. Batten down hatches and doors, and stand by to trim ship as required. When overboard, tread water as though you were walking on land, keep your mouth shut, don't swallow water or waste precious breath in useless cries. Don't attempt to ston the tide or sea, but save your strength to some purpose. You are not going to drown simply because you are wet, but have the chance of picking up something to help keep you afloat. With a bucket, an oar, a stool, you are safe for twenty-four hours or more, and stand a good chance of being picked up or getting safely ashore. But if you have kept your wits about you in the first place, safety will have been assured by means of a life belt previously attached. Looking drowning in the face is an accompanying requisite of our present vicious and ignorant style of modelling, and preparations for such a contingency should form part of every yacht's outfit.

Had a title of the foregoing been observed by the unfortunate aboard the sloop yacht *Sophia*, capsized in the Sound June 28, the lives of all would have been saved. Simple and natural enough as these directions seem not one of the sloop's crew, from skipper down, had sense or composure enough to follow even the readiest of all, other than to go in out of the rain and then open the cabin doors again, letting the flood down below. The "accident" illustrates most forcibly the immediate danger of deep cockpits, but these are passing away in yachts of latest build, and flush decks, with nothing more than "blind" or "false" cockpits bid fair to become the rule. A few dollars would have put a bulkhead under the forward and after thwarts of the yawl-boat and she would not have sunk from beneath those clinging to the bottom. But in the utter neglect of every precaution, in her meagre, shabby outfit, in her dangerous model, top-heavy spars and a very full inventory for the gratification of the stomach, the luckless sloop was no different from the great majority of so-called yachts of her sort. Built in ignorance, light draft for deep waters, carrying four tons of iron high up, when six down low would not have been out of proportion in a well-balanced production, no wonder she rolled over to a squall, filled and sank, and for want of outfit; no wonder five precious lives have been sacrificed and a noble sport, which can be made as safe as any other, receives another black eye, from which it will take years to recover.

We believe *FOREST AND STREAM* has done more than all other journals put together in effecting reforms, and can trace the increasing demand for safe, honest boats to our efforts in these columns to cover the machines with the contempt they deserve, and we hope soon to see a healthier appreciation of the qualities of various types of boats. Public opinion is already ranging on our side.

If disasters, fraught with terrible consequences, can hasten the turn of the tide and quench the craze for beauty, light drafts, the victims of the sloop in question will not have lost their lives in vain, poor consolation as this may be to friends and relatives so suddenly bereft of those they loved. There was nothing extraordinary or exceptional about this disaster; the only wonder is that more of the sort do not occur. A sloop hired for the occasion, thoroughly seaworthy, staunch and fast, of course, sets sail for a short cruise up the Sound in charge of an experienced and thoroughly competent "captain," of course—one of the kind who has never seen a day at sea, but has graduated about Gowanus Bay from the hearsay school. The yacht was well and completely fitted, of course—that is to say, in the estimation of sand-bag critics, who think a mast, perhaps a bowsprit, and enough gear to hoist sail all that any sensible, "practical" man would have on a yacht. The merry party consists of the usual muster of clerks and brokers bound on a holiday, this time supplemented, unfortunately, by a most estimable young lady, persuaded into the trap by the rest, who knew as little about a boat as she did, though one was "brought up on all his life among yachts and boats," but in the moment of trial was found as little prepared to devise means of safety as a novice. After drifting about June 28, beyond the Middleground light, in a calm, with a threatening sky, tho' "captain" taunted by the passengers for not making more sail, the squall finally burst with fearful fury. Sail had been furled in time, "everything secured and all preparations made," as the survivors report, no doubt referring to stowing the dishes out of harm's way, for nothing else was accomplished. The sloop, under bare poles, is literally overpowered by the gale, "lifted bodily into the air," and thrown on her beam ends. The seas rush in, and the miserable thing incontinently sinks. The yawl follows

suit, and hardly a thing is to be found adrift. After a short struggle five are drowned; two luckily get an ice-box within their reach and are rescued by a passing schooner, revived, and bring home the sad news. That is all; a plain enough affair, likely to happen again unless the advice and warnings we have given are heeded.

Capsized under bare poles! What a comment upon yacht modelling in America! Are there any obtuse enough not to see the moral of this disaster, and, with it, as powerful evidence, how long before the old school will relinquish, or be compelled by law to relinquish, the unsupported myths, the wildest and most illogical cant, they still cling to as "practical" teachings, when they only lead to dismal, abject failures, stamping them incompetent to the verge of criminality?

THE FLYING CLAY PIGEON.

THE latest device intended to afford a substitute for live pigeons at the trap is the "flying clay pigeon," invented by Mr. George Ligowsky, of Cincinnati, Ohio.

The target, or "bird," as it is called, is a light convex disk of clay, much resembling in shape a saucer with the rim turned over and in toward the centre.

A trap has been made to throw this target at any desired vertical angle, and the flight much resembles that of a quail or a pinnated grouse; in fact, it is the nearest artificial approach to the natural flight of a bird that we have ever seen. The disks are very brittle, and when struck by shot are not liable to leave any room for dispute. In flight they skim along horizontally, or at such an angle as may be desired, and settle gently down to the ground like a bird and without breaking.

This flight so nearly resembles the actual motions of birds in the field that the "clay pigeons" afford excellent practice for wing shooting, at the same time possessing in a less degree than other substitutes for game the disadvantages attending trap shooting. An expert "clay pigeon" shot is well advanced toward being an expert wingshot in the field; and it takes a good degree of skill to make a fair score with the clay target, as some of those who tried it at Coney Island last week discovered. Mr. Ligowsky's "birds" were more difficult shooting than many of the live pigeons which were thrown up from the traps to a certain point in the air and hung there for a second, before falling, as they did fall whether hit or not.

It is yet too early to fully and unqualifiedly indorse the "flying clay pigeon" as a satisfactory substitute for live birds, but it appears to be such, and we commend all sportsmen to test its merits and decide for themselves. The address of the manufacturers will be found in our advertising columns. A trap is now on exhibition at this office.

THE ST. LOUIS ASSOCIATION.—The St. Louis, Mo., Fish and Game Protective Association has an active membership of 135. The first annual report of the society is now before us. It shows that work has been done and results accomplished. Four prosecutions have been instituted against illegal netters; three convictions were secured and fines imposed. Two convictions were also had of parties violating the game law. The society has secured one very sensible and effective aid in their work, that is the co-operation of the express companies, who have been induced by the society to prevent the shipping of game killed out of season. But by far the most encouraging sign of the St. Louis Association's good influence is the growing recognition of their work and aims by the public. The people are finding out that there is such a society and that its members are in earnest; and such knowledge goes a great way. The Secretary of the association, Mr. H. C. West, care St. Louis Cotton Exchange, invites any information of game law violations. The President of the society is Hon. John D. Johnson, in whose hands, we need not add, the work will go on.

CARRY IT OUT.—While the late meeting of the New York State Association for the Protection of Fish and Game was barren of result—save the pigeon shooting and fly-casting—it may yet prove a turning point in the history of the society if one of the resolutions there made be carried out. We refer to the proposal to call a meeting of delegates from the several counties of the State to transact the business which legitimately belong to a game protective association. It is sincerely to be hoped that this matter may be agitated by the clubs, and such a convocation called together. An association representing the entire State would have great influence at Albany, and the annual wrangling over the game laws might be stopped if that society took the matter into its hands. The proposed convention is a most excellent project. Carry it through.

WILD CELERY.—Can any one inform us as to the cultivation of wild celery? Has it ever been transplanted or sown in waters to serve as food for wild fowl? Who can supply the seed, and at what price? When should it be sown? This information is sought by several correspondents.

AN INVASION OF WEAKFISH.—The fish known as weakfish, squetague, snuit, salt-water trout, etc. (*Cynoscion regalis*), have been unusually plenty for the past ten days. Three menhaden steamers hauled their purse seines around some 20,000 pounds of them and threw them on New York market in such quantities that they could not be sold for a

cent a pound. Such are the poor accommodations of New York for distributing an unusual catch of fish that many of these went back to the oil factories. The fish are plentier than in many years and are taken up the Hudson as far as Yonkers with hook and line, a most remarkable circumstance. And this fish was thought to be gradually decreasing. We know but little yet of the laws which govern the increase or decrease of fishes in a state of nature.

MANHATTAN BEACH still holds the leading place among Coney Island resorts. Its varied attractions, the bathing, the music, the Tuesday and Thursday fairy-land illuminations, the Saturday evening pyrotechnic exhibitions, and the Marine Railway excursions, afford abundant entertainment and amusement for the thousands who seek the beach daily. Manhattan Beach is easy of access via the boats from Whitehall street to Bay Ridge, or by way of Greenpoint. There is a solidity about the Manhattan establishment which argues well for its future.

WITH JULY comes to us the June number of the new aspirant for public patronage, *The American Gentleman's Magazine*, which appears to be in all respects, save in the name, an after issue of *Brentano's Monthly*. The periodical is conducted by Mr. Marius Lazare, the well-known bicyclist, and is devoted to sports of the day.

SOME of our esteemed daily contemporaries affect to condemn dog fights; but they take good care to give all the particulars of each affair of the kind. The rule is to assume high moral ground, but give the news. A very good rule—but what is news?

WHAT has come over the *Market Index and Journal*? Its comments on the Coney Island tournament are not in keeping with its former role of "special organ."

THE 'POSSUM IS SERVED.

ONE day last month there came, in our Southwestern mail, this letter:

TUCSON, ARIZONA, May 5, 1881.

Editor *Forest and Stream*:

A controversy has arisen in this remote locality on account of the inclosed engraving in *Harper's Weekly* of April 30, 1881.

A Kentuckian contended that no well-bred negro would cook an opossum in a cooking stove, and a Virginian asserted that opossums were always to be eaten cold, whereupon the dining table was left to the arbitration of Senator Norwood, of Georgia, who happened to be sojourn among us, and who decided that an opossum should be eaten cold.

The Kentuckian appeals from the opinion of the Senator to *FOREST AND STREAM*, and alleges for exception that the opossum is essentially a winter dish, and as a winter dish should not be eaten cold, but hot like spare-ribs, sausages, baked meat cakes, etc.

It is well known to all hunters of the opossum that he must be frosted three nights upon a clap-board roof before he can be properly cooked, and that the accompaniment must be sweet potatoes. No other essent will answer. No wine or beer of any kind is proper with a baked opossum. Nothing but genuine Bourbon whisky is strong enough to assist the digestion of 'possum fat.

The enigma of *Harper's* is an atrocity, equal to the decision of the Senator from Georgia in favor of cold 'possum. An African cooking an opossum on a cast-iron cooking stove—this would raise an old Virginian or Kentuckian 'possum hunter from his grave.

If you will kindly take the trouble to have a formal decision entered in your columns whether an opossum should be eaten hot or cold, you will oblige many readers, and very respectfully, your obedient servant,

CHARLES D. POSTON (from Kentucky).

Now, while the *FOREST AND STREAM* claims to know a great deal about the subjects which arc properly within its field, it confesses that this Tucson appeal was a poser; and the editor cheerfully owned up, on this particular point, to that "inexperience," of which the Ditmar people have been tooting since their preposterous powder pretensions were exploded. He was the more willing to do so, since from very early times the art of preparing this game for the table has been recognized as the accomplishment of a gifted or fortunate few. As the Latin poet has it, *Non omnia possunt omnes*—we cannot all cook 'possums.

But next to knowing a thing yourself is knowing where to find out from some one else who does know it. The *FOREST AND STREAM* has the happy advantage of being in a position to supplement its own knowledge with the information and experience of others; there are few culinary mysteries from an Isthmopolitan stew to an Alaska gurry-garoo which it cannot fathom.

We besought our Tucson friend to allay the excitement in Arizona, to calm Kentucky, and to restrain the States of Georgia and Virginia from any rash action—and we would find out how to cook a 'possum and all about it. We have received, in response to correspondence on the subject, a number of happily written letters, which we print to-day, and our acknowledgement to the writers for their aid in bringing to a satisfactory conclusion so momentous an inquiry. Supported by the advice of such trusted counsellors we have now no hesitation in "entering a final decision" that 'possums should be served—but read the testimony before hearing the judgment.

The first comes from a Virginia judge—his pseudonym is familiar—who after the delightful manner of Virginia judges first delivers a sententious opinion, and then tells a story for the edification of the court-room:

Editor Forest and Stream:

In response to the 'possum pounder propounded by you, "how to cook and how to eat him," I have to say that I never was a possum hunter; but having all my life been in the South, where the darkey abounds, and his insupportable companion, the 'possum, is to be found in great numbers, I have seen that classic bird cooked and eaten many, many times. Before entering into the more minute details, let me say, that the man who calls a 'possum, opossum, displays his ignorance of the whole subject in the start, and his views are not entitled to much weight.

Now, as to cooking him. The first thing to be done is, what some lady in her recipe book on cooking rabbits prescribes, viz: to catch him. This will be no difficult matter, I fancy, with a "yaller" dog, and a carcass, a persimmon tree, or a chicken roost near by. After being secured he is penned up in box, barrel, or coop for a week or two days, and fed as a pig, duck or turkey is usually fed before being slaughtered, in order, as the darkeys say, to "drive all de wilness and de varmint tase out-en-in."

This somewhat difficult, if not impossible, point being achieved, he is then killed and dressed like a pig, hung out to freeze thoroughly for several nights, and when ready to be cooked is stuffed with stale bread crumbs seasoned with any pungent herb that can be had, or with onion according to the taste of the consumer. But, talking about the connection with 'possum is simple sacrilege, and the idea of securing a 'possum is simply absurd. Such a proposition would shock the moral and gastronomic sensibilities of the most callous darkey in the South. There is but one way to cook a 'possum, and that is to roast him, just as you do a turkey or pig. A cooking stove is a good place to do it, but the old-fashioned "spit," and the plantation big iron oven is just as good, and more frequently used, than anything else, because the darkey can't luxuriate in a cooking stove.

Now, as to how to eat him. This is a matter of taste altogether, in the sense that the old woman who "kissed the cow" may be said to have exercised this faculty.

I have seen people eat hot 'possum, but I never saw the same man do it twice. The man whose stomach can stand hot 'possum, even with Bourbon whisky to help him through, and relish it, has a way of being pleased that ought to render him more than amply satisfied. Did you ever eat the bones? Well! when you do that you will want some hot 'possum—not before!

Of course everybody has heard the story of the darkey who visited a friend late at night, and finding Joshua fast asleep, Ginger commenced prowling around the cabin in the uncertain light of an expiring chunk, in search of something to eat. Suddenly he came upon the remnants of a cold 'possum in the cupboard. Ginger fell to work upon it, and after completely demolishing it, he placed the bones on the hearth, and greased the slumbering Joshua's fingers, a touch and gave thoroughly with the fat, and left. About dawn Josh woke up, and bethought him of his dainty 'possum. Upon going to the press he discovered that it was gone. He soon saw his hands greasy and found his mouth in the same fix, and concluded that he must have eaten the 'possum himself while asleep. But still a feeling of uncertainty remained as to whether he had done so, and placing his hand on his stomach he soliloquized thus:

"Here de bones and de grease on my hands and face, and nobody's here but me, so I *must* er eat him; but one thing is sartin, dat dar 'possum do set lighter on my stomach and gibs me de least satisfaction ob any 'possum I eber eat."

Perhaps Joshua had been in the habit of eating his 'possum asleep. But still a feeling of uncertainty remained as to whether he had done so, and placing his hand on his stomach he soliloquized thus:

Next comes a racy sketch from Arkansas. Its author is by profession a lawyer, by occupation a planter; and being the grandson of Col. Davy Crockett—a relationship, he explains, purely accidental on his part—he is by nature and education a lover of the rod and gun. He owns and shoots with the rifle which was presented to Col. Crockett by the citizens of Philadelphia in 1834; and we know not how many hundred deer and lesser game have fallen before it. We have the promise of other stories from his pen—but now to the 'possum hunt:

SHOOKETT'S BLUFF, ARKANSAS, JUNE, 1881.

Editor Forest and Stream:

Ab, me, how the name of 'possum carries me back to the days of my boyhood. I forget the gable foot, resting upon a pillow as I write. I forget the "sandy silvered" locks and snow-white beard which the cool prairie breeze is caressing, as fancy leads me back—away back—through the "shadlow and sheen" of two score years to the happy, care-free days of my boyhood. But still a feeling of uncertainty remained as to whether he had done so, and placing his hand on his stomach he soliloquized thus:

It is a cold winter evening and I am helping the negroes to feed the stock, when "Ike" says "Mars Bob, we're gwine 'possum huntin' to-night; s'pose you ask your Ma couldn't you go long wid 'em?"

I went over to my family gather around the hearth before the blazing hickory fire, my mother with her sewing, my father with a book; the candles arc "sunfied," (no lamps in those days) and just as they are settling down for their evening's occupation I hear a horn blow. The sound gives me courage to say, "Mother, the 'boys' are going 'possum hunting to-night; please let me go wi' 'em."

"No," she says, "I can't let you go, and you might get hurt." I try to argue the question, but she grows more firm in her refusal, when another "hook-horn-tooo-to" rouses my father, who, his heart stirred, perhaps, by some memory of his own boyhood, says, "Let him go, Mother; old Ben and the boys will take care of 'em."

I am soon ready, and when I reach the big gates, where the darkeys await me I am greeted with a deafening chorus of yells, harks, howls, horns and "Whoop! here comes Mars Robert!"

A brief discussion ensues as to the route we had best take, some suggesting the creek bottom "whar dere's lots ob grapes;" others contending for "de ole 'Green field" whar de 'simmons' is jest breakin' de trees down." "Uncle Ben" cuts the matter short by shouldering his ax and leading off in the direction of the creek bottom.

Reaching the woods we stop a while, as Uncle Ben says, "I can't see no sign of 'em, but we soon hear them patterin' about in the dead leaves in search of 'possum or trail. Meantime the young "niggers" are loudly discussing the merits of their respective dogs, when old Ben, who is standing in a patch of moonlight a little ahead, whirs 'round and

yells, "Here, you young uns, stop dat fuss! How de debil is gwine to hear de dogs? Ike, if I hear you moan agin, I'll strike your head in a snuk hole and let you dar—you hear me?" That settles us.

A few minutes pass in silent expectancy, and the stillness is broken by a low whimper from one of the dogs.

"Dat's Remus," whispers Ike, "I know his tongue; 'possum or polecat shore!"

Now, there's a quick, sharp yelp in the direction of which all the dogs break with a rush; and the whole pack dash off in full cry. I strike my head in a snuk hole of perhaps one hundred yards; and then suddenly at my side, I hear a yelp.

"Have they lost it?" I ask—and for answer the dogs open again with a "standing bark."

"Dar, dey's tread!" and away we go, helter skelter, now tripped by a trailing vine, anon falling headlong over a rotten log, bruising shins, scratching faces, tearing clothes, whooping and yelling we reach the dogs, which, contrived by our presence and yells, become frantic with excitement.

The 'possum enters the sacifice in the top of a small oak sapling, up which a grape-vine has climbed. Old Ben shakes the tree and jerks the vine, but no 'possum falls.

"Here, you, Silas, you climb up de saplin' and I pull him out, and ain't you dead let him trap 'mong de dogs!"

Silas, aided by a boost from Uncle Ben, shins up the sapling and in a moment sings out, "Whoop, I got him, but his tail is done rapped round 'dis him so tight dat I can't loose him. Hello! Look out! Dar he comes!" and the 'possum comes tumbling down into the very jaws of the eager dogs, and the whole pack pile right on him; but Ben, with a few hearty "licks" with the ax helve and vigorous kicks with his No. 11 brogans now makes an opening through which he reaches down and, grasping the 'possum by the tail, lifts it high above his head to keep the dogs from regaining possession of it.

The dogs are kicked and cuffed into something like quiet, Silas slides down the sapling, the 'possum which all the time has been "playing dead," is dropped into a sack; a young darkey throws it across his shoulder; Ben picks up his ax; and after taking a look at the "seven stars, to see what time it is," away we go in search of more game.

About midnight, with three or four more 'possoms, we turn our faces homeward, old Ben trudging along in front, and singing:

"The soutree has a bushy tail
Stumpy grows de head;
De ole 'possum tail an' rapped all round
De ole 'possum tail an' rapped all round."

The dogs seem to know that their hunt is over; and with drooping heads slouch along at heel. Now and then a young dog sees a rabbit ploughing in the moonlight and with a yelp or two dashes after it but soon returns. The youngsters—white and black—now that the excitement is over, grow sleepy and silent as we drag our tired feet along; and are glad enough when the "big house" and the "nigger cabins" are sighted in the moonlight.

Old Ben catches the 'possum on the frozen ground; but the 'possoms make no effort to escape—they are still "possumin'" dead. There is but one correct mode of killing a "possum" and that's the "Ole Furginy" style. So Ben gets a light rail, places a 'possum on its belly-n the ground, lays the rail across its neck close to the head, makes a young darkey stand on each end of it, then taking position in front of the 'possum catches him by the tail, puts his left foot on the rail, and with the point of his knife cuts his neck. A long-bladed knife is plunged into the "sacking place" and pushed home to the heart and it is then hung up to bleed.

Next morning a tub is half-filled with hot water (not too hot) into which is dropped the 'possum and held by the tail, until the hair will slip; then taken out, laid upon a plank or board, and the hair or wool pulled off with the fingers. It is quickly done and the skin is as soft, smooth and white as a baby's.

In those days we knew nothing of cooking stoves—they had not been introduced in the South; and so the 'possum was let to freeze two or three nights, and then placed in a five-gallon kettle of water, into which was thrown two pods of red pepper. After boiling one hour in the pepper water, that was poured out and the kettle refilled with plain water. After boiling in this for one hour it was taken out, placed in a large oven, sweet potatoes cut in half and around it, black pepper, salt and a pinch or two of sage sprinkled over it, a pint of water poured in, the lid put on; and with a slow fire baked until done. Eat all you can at dinner while it is warm, and if by chance there be a remainder over, eat it cold for supper, and swear by Diana, the chaste, that hot or cold there is nothing more toothsome than "baked 'possum."—Bon II. C.

Does the 'possum "play dead?" Or is his simulation of death, like that of the humming bird, the effect of fright, and something over which he has no control? We believe that there is good authority for this theory. At any rate, a 'possum in this helpless condition, whether cunningly shamming dead or not, is a more desirable beast to meddle with than a wide-awake one up a tree, as the following story from the ever-entertaining pen of St. Clair goes to prove:

LAWTONVILLE, GA., JUNE, 1881.

Editor Forest and Stream:

Many long years ago, when this writer was a gay and festive lad, delighting in all kinds of sport by land and water, it was once his good fortune to witness the actual cooking of a 'possum. He had often eaten them, cooked to a turn and richly broun in all their glory; but it was reserved for one golden night for him to know how they are cooked.

Mrs. Glass says: "First catch your hare," then, in a Sairy Gairdner "nigger" I had already caught him. Wishing to avoid the path of this estimable lady, I'll tell how our 'possum was caught, and then tell the manner of cooking.

"Hole back dar, you little niggers, an' doan ru' so fas' arter dat 'possum," was the warning cry of Uncle Leven, the best cow hunter in Kentucky, one still, frosty, moonlight night, as "Ole Bose" was heard barking furiously about a mile away. The powers that ruled in the big house had granted me leave to go on a 'possum hunt, and I, too, with a mob of little darkeys, Uncle Leven pending at our heels, flow rather than ran to the spot where Bose was giving long-tongued evidence that he had a 'possum tread. Up in a scrubby hickory covered with a thick matting of grape-vines we could see glistening in the moonlight the white fur of an enormous opossum. He had been feeding on grapes, of which these animals are very fond.

Jake, the negro, had already commenced climbing the tree to shake the animal down, when he was stopped by the authoritative voice of Uncle Leven: "Doan shake dat 'possum, Bose 'll bruise um; here, take dis bag and put um in."

Dubiously did Jake venture up to the old patriarch 'pos-

sum, whose low growling convinced him that he meant mischief. Getting above the animal, he let the bag down on his foot until the head of his game was parallel with the bag. He was rewarded with a sudden bite through his low linen pants, deep into the flesh. Loud applause from the pit, intermingled with yells from the principal actor. Presently down came Jake, headforemost, with the 'possum still clinging to him, and in an instant Ole Bose, in his eagerness to get at his game, fastened his teeth in the seat of Jake's tow linen pants.

Uncle Leven now took part in the fray, and seizing the game in his arms, soon had him bagged. Jake examined his wounds, anteriorly and posteriorly, and was consoled by being promised an extra share of the 'possum next night.

A merry party were we—five "niggers" all my own age and myself—who had gathered at Uncle Leven's cabin the next night after the hunt to eat 'possum. With the solemn importance of a Druid priest about to perform some mysterious rite, Uncle Leven first laid the 'possum tenderly in a large oven. He then covered him with cold water. Around him, and over him, and about him he packed sweet potatoes until no; another one could be put into that oven. He then put fire under the oven until all the water was boiled out, then putting fire on the lid he went forth to bake him. For two mortal hours, indeed, what time all the little darkeys slept, and his writer was only kept awake by the folk lore of Uncle Leven, did the 'possum cook.

At length the important announcement was made that the supper was done. What a fragrant smell rose up to the rafters of the old cabin, and how brown and glorious lay the "boss" 'possum of "Ole Kantuck!" Eat him? Ah! What good eating a baked 'possum is no one can know who has never tasted one. So large and fat that Bose came in for his share. *Then I gave satfs.*

His share has been prepared sweet potatoes then use Irish.

Baked 'possum is superb; in any other way he is not so good, for there is an abundance of oil in his composition.

Hoping that I have made the approved Southern method of cooking 'possum—when caught—perfectly clear to the minds of the innumerable readers of FOREST AND STREAM, whom I greet right fraternally, I am, as ever,

ST. CLAIR,
"KENTUCKIAN" WRITES FEELINGLY.
MILL SPRINGS, KY., JUNE, 1881.

Editor Forest and Stream:

While quizzing a class of medical students a facetious professor called on a member for the proper process of preparation of chicken broth, which was promptly detailed, when the professor, with mock gravity, inquired, "Would it not be expedient, Mr. Smith, to first procure a chicken?"

Presuming the 'possum procured; dress it as you would a pig. We discard the head.

After it is dressed "Aunt Dinah" thinks an opossum unfit for the cook-stove till it has lain out on the smoke-house or porch roof at least one frosty night. When the animal has been removed, wash the 'possum as other fresh meats are treated. Any cook knows the time that fresh meats should "talk salt" before they are cooked.

When ready to cook wash thoroughly; place in a vessel; cover with cold water; throw in a small pod of red pepper; boil vigorously, say an hour; pour off the liquor; cover with fresh boiling water, and boil till tender, when it is ready for the bake-pan. Sprinkle with flour and black pepper, pour into the pan enough of the liquor from which it has just been removed with which to baste it frequently.

When sufficiently browned serve hot, but not floating in gravy, as is too often the manner of bringing on the table a roast which would defy the digestive superiorities of a Digger Indian's stomach, and severely tax the assimilative apparatus of an ostrich. Garnish with relishes to tickle tastes.

Sweet potatoes are an almost indispensable Southern accompaniment. Fared and sliced they are basted and baked with 'possum.

In ante-bellum times a fresh oyster was but a heard-of luxury to us boys for whom the mail carrier's horn sounded but thrice a week, but 'possum, pig friars and burgo were as appetizing winter night-meat propogators as the choicest inventions of the most versatile l'ethyopagnos.

The distinctive effluvia peculiar to many popular meats preserved in cooking is by no means the relish that is a woodcock's trail, and in preparing a 'possum for the table the principal desideratum of an experienced cook is to dispense with the 'possum odor and superfluous fat.

Did you never eat of a well served 'possum? If not come out this fall and, *Deo volente*, you'll confess that there's an unfillable hiatus in your gastronomic enjoyments from so late an introduction to a Southern delicacy. The 'possum is not the six performers of the circus, and has an especial weakness for that fruit, and the location of all the bearing trees are known to the 'possum hunter, be assured.

My wife is skilled in cooking game after our approved styles, and except served by her teacher and self I rarely eat of 'possum that wasn't murdered in the pot, and would disgust a semi-civilized stomach.

Kentuckians generally are plain cooks and a little given to relishes. I never saw olive oil on a farmer's table, unless there for effect, not for use.

A fat 'possum is almost deliquescent, and served floating in its gravy could be digested by a lard oil manufacturer only with aid of a handful of gravel.

KENTUCKIAN.
SENATOR GARLAND IS "ON THE FENCE."

LITTLE ROCK, ARKANSAS, JUNE, 1881.

Editor Forest and Stream:

Your of 9th instant relative to the cooking and eating of a 'possum is received, and the subject has been as fully considered by me as its gravity and importance require, bearing in mind that the thermometer is at 98 degrees in the shade and still "a coming."

I am not much on the cooking of a 'possum, or any other animal as for that; but the bent of my mind is that if you would boil the 'possum in salt and red-pepper water until he is quite tender, and then brown him well in an old-fashioned oven, or skillet, wherein around his body a goodly number of potatoes are baked and browned, you would have a dish untrival and more than ordinary, and a person who could not relish it, whether he took the 'possum hot or cold, would have no celestial fire in his soul, nor music either.

Whether the 'possum should be eaten hot or cold is a question that has bothered me for many years, and even now I am not prepared to say directly how it is. Rather than miss entirely, I would try to eat him in either way I could find him, and really I am of opinion that he is better hot or cold, according to the state he is in when I last partake of him.

I was once chosen by two professed artists in painting miniatures to settle the question which I preferred. I approached

the discharge of this duty with all possible misgiving as to my ability to decide, and with all necessary preparation, and I found every time, in discussing the various points involved in this wonderful accomplishment, that the last time I ever tasted the best to me; and I was not able to determine till I would take one from the other man; and the trial went on from one to another julep for some time—till I had taken some—well, I can't tell now how many; and from some unaccountable reason, I never made up my mind, and no decision was ever rendered, but I performed much work on that occasion.

But in "the ease at bar," I would say about this; after the animal is cooked as above indicated, I would eat freely of him at dinner, hot; and if any of him should be left, I would take that at supper, cold. But if this should be supposed to be overdoing the thing rather freely, and I was "foreed to an election," I would take him hot for dinner and "rest my case here," hoping to have pleasant dreams of him during the night's slumbers as a substitute, to some extent, for not having him cold at supper.

I do not know that I have given you any light on this delicate question, but you have my views as succinctly as I can render them, as it is difficult for me to restrain my thoughts and words on a subject so suggestive.

Very truly yours, A. H. GARLAND.

FROM THE COMMITTEE ON FOREIGN AFFAIRS, WASHINGTON, D. C., June, 1891.

Editor Forest and Stream:
Your letter to Hon. S. S. Cox is received. The party addressed is now in the Netherlands, far from the land of Bourbon and opossum. Were he here, no doubt you would receive a satisfactory answer.

In an interview with a South Carolina (family) cook, I learn that the 'possum is considered most edible when served cold, though it is a matter of taste greatly. It is a very fat quadruped, and the meat consequently delicate and rich. It is usually cooked in what is called a "kitchen" over a wooden fire. The writer knows nothing from experience, but in a strict sense, the ten colored persons acquainted with the habits of the 'possum seem to hold the belief that "possum is de best hot," while three hold to the opinion "it am de most eatable when cold."

The fluids to go with this lively bird can best be determined by the epicurean, though in the States of Kentucky and North Carolina Bourbon is doubtless the only concomitant, *et cetera*, for Democratic 'possums. For 'possums of the opposite political complexion "Apple Sassa" is considered indispensable.

In view of this discussion I would suggest that you address either Hon. Z. B. Vance, of North Carolina (U. S. Senator) or Hon. Alex. H. Stevens, of Georgia, at his home, (Crawfordville, Ga.).

Trusting that you may find a proper solution to this question of "mixed fact and fard," believe me, Respectfully yours, I. W. SPOFFORD.

GREEK-LETTER SOCIETY MYSTERY, SAVANNAH, Tenn., June, 1891.

Editor Forest and Stream:
Cook an opossum on a cast-iron stove and "at him cold!" I should smile. Just him such a thing to the sabbie *de cuisine* in my Southern kitchen and see how the idea will be received. Among the many escapades of my college days—or rather nights—there are few that have a stronger hold upon my memory than the 'possum suppers partaken of in some musty dormitory at an hour when all studious and well conducted young men are supposed to have ceased to consume the midnight oil, and to be slumbering soundly, ready to awaken at the first stroke of the morning bell.

There are few among those who have attended Southern colleges that have not attended these mysterious suppers, held usually under the auspices of some Greek-letter society, where the initiated, dodging the prying eyes of over-inquisitive tutors, assembled to pay their respects to the spread, in which the dish of hot 'possum and potatoes, cooked and served by some sabbie hang-on of the college, occupied the chief place.

The manner of cooking the opossum generally practiced is: After having kept the "varmint" in close captivity, and having it properly fed for a fortnight or more, to kill it, and after carefully dressing it expose it for several nights to the frosty air; then it is customary to parboil it in water containing a little sage, and then roast in an old-fashioned oven surrounded with "apple sassa." The opossums are like reasoning save salt and pepper, with a dash of lemon. Of fat he has enough, and to spare. Another way is to suspend the animal on a string in front of the fire, the twisting and untwisting of the string giving it a rotary motion, and while roasting to baste with vinegar, pepper and butter.

If opossums grew to be several times larger than they do now, probably the right thing would be to put away and eat cold, but until some marked improvement is produced in this respect of size it will hardly be convenient to make the experiment. So far as I know, the opossum has always been eaten hot, indeed the cold to the table given by our sabbie purveyor used to be, "Here's your 'possum and taters all hot."

As to the beverage with which to wash down the repast I can't say, but I have seen many a "hangin' offence" in all lovers of 'possums are correspondingly haters of snakes, and I believe that all are also agreed that for snake bites old Bourbon whisky is the "sovereignest thing on earth."—WILL.

THE EXTREME PENALTY IN MISSISSIPPI, CORINTH, Miss., June, 1891.

Editor Forest and Stream:
DEAR SIR—In reply to your letter asking for information in regard to the proper way in which the rat tailed marsupial, yelet the 'possum, should be cooked, I beg leave to state that it has always been considered a "hangin' offence" down South to cook the 'possum any other way than to bake him, with no other accompaniment except yam potatoes, and to eat him red hot.

A little "Mountain Dew," or "Old Bourbon," is considered an admirable corrective after a too free indulgence in "possum and taters."
Yours truly, GUYTON.

EMINENT NASHVILLE AUTHORITIES, NASHVILLE, June, 1891.

Editor Forest and Stream:
As the flesh of this animal is exceedingly strong in flavor, it is all the better for being allowed to freeze two or three days before preparing it for he table—even then to remove the remaining rankness, it should be parboiled in water, properly seasoned with red pepper pods and salt. There are persons who eat the dish while hot, though *connoisseurs*

agree that it is better cold. The following receipts for preparing the opossum are from colored persons, who are admitted to be the most expert in the business. William Hobbs says:

"First boil the opossum in water with an abundance of red pepper pods and salt, until the meat is tender. While this process is going on steam a number of sweet potatoes and slice them; cover the opossum with them and then bake brown."

Jinks Mullin's receipt is, to parboil the opossum after it has been frozen thoroughly in water containing red pepper pods and salt, then to boil him with sweet potatoes and red pepper, thickening the gravy which melts from the opossum with a little flour. Jinks also favors barbecuing them. This process is the same as followed with pigs or mutton, only the opossum requires to be cooked longer and constantly basted with a sauce made of red pepper, salt and vinegar.

Junie Moore says that in Giles County the colored people soak the opossum in strong salt and water for two days, then parboil it for a half-hour in the water, changing this for another water in which red pepper and salt are in quantities; when tender, sprinkle with black pepper and flour, place a number of steam potatoes in the pan and bake until brown and crisp.

To clean the hair of the opossum the negroes roll it in hot hickory shells, claiming that this mode destroys a portion of the wild flavor, though resembling as in the cleaning of pigs is most often resorted to. Many are prejudiced against eating the meat, though those who are not claim it is a great delicacy. Thousands of them are brought to the market and eagerly taken principally by the colored people who would rather have it than ten times its weight in quail, wild turkey or venison. J. D. H.

THE ANTI-BELLUM STILL, MARIETTA, Georgia, June, 1891.

Editor Forest and Stream:
I have taken the opinion of two old and experienced men on the question of cooking the opossum. They were both large planters before the war, owning many slaves; one a rice planter on the coast, the other a cotton planter in the interior. Both are familiar with negroes and their ways. They both say the 'possum should be roasted, preferably in the open air, and should be eaten hot.

I also asked the question of an experienced colored cook. His way is to parboil the animal, so as to remove the strong flavor; and then either bake or roast it. In either case, it should be eaten hot.

It is too rich a dish for most white stomachs, but suits the negroes like mutton and pork. His liver is almost diseased. Very truly yours, S. C. CLARKE.

TEXANS ARE OMINOUS, CORPUS CHRISTI, Texas, June, 1891.

Editor Forest and Stream:
If the weather be cold enough the "possum," after being cleaned, is hung out of doors for two or three days. He is seasoned like the pig, and the difference lies in the manner of setting his hair off, which is done with cold instead of boiling water. Soak the 'possum in cold water and cover him for about a minute with hot ashes and coals. After this he will shed as easily as an old last year's cockle-burr bush. Dress him just as you would a roaster and lay him out until morning.

If the weather is warm (for the opossum is in season all times of the year), he is cooked the day after being caught. To do this properly take a big Dutch oven, eurl the animal in it, fill all the chinks with peeled yams, then cover the whole with a layer of yams. Dig a hole in the ground deep enough so that the top of the oven, when set in it, will be about four inches below the surrounding earth. Fill this hole with live coals. Let the coals stay in the hole about an hour, replenishing as the fire wanes; then, if necessary, turn the hole and set in the Dutch oven "wid de 'possum and de taters;" pour in the oven about half a pint of water; put on the lid and see that it fits well; put some ashes on top of the oven and heap on the coals; over the hole lay some sticks close together, over these some leaves or grass and cover the whole with the loose earth which came out when the oven went in. Cover up the fire well; he no hix; and then sit down and talk about 'possum and 'coon" hunts for the next two hours at least.

Don't season this game with anything but salt. If you know what is good eat "de 'possum" when he is hot; but if you happen to be offered some cold don't say no. Any man who eats all the steaming hot "possum and tatur" he wants and does not suffer from a large attack of dyspepsia never never tries to eat his stomach.

There never was a bad 'possum. Some are fatter than others and more tender and juicy; but they are all good. I have seen the opossum baked in a stove and roasted on a spit, and have tried him broiled, boiled and fried, and have found him always good, except when he was better or best. The trouble is that he is very rich and he tastes very good and one always eats too much, but never learns by experience to eat less next time. Some people make fools of themselves over a 'possum, but I don't; I get sick and am sorry I ate so much—until next time.

"And last of all the woman came also!" Bless her dear, motherly old soul! We listened to her words of wisdom long years and years ago; and we have a great deal of respect for her yet. Mother Goose is sound on the 'possum question. Take off your hats while we wish you to what she writes. The letter came down the other night with the stick of a sky-rocket.

THE MOON, July 4, 1891.

My Dear Forest and Stream:
There is no sense in your trying to enter any formal decision on that 'possum case. It is purely a question of taste; and tastes differ.

Some like it hot,
Some like it cold,
Some like it in the pot
Nine days old.

Jack Spratt could not eat it at all; his wife passed her plate for more every time. The Man in the Moon went down too soon for him, but his tongue eating it cold.

Have you seen the comet? Yours as ever, MOTHER GOOSE.

From a careful and unbiased consideration of the testimony thus far adduced, taking into account the eminence of the gastronomic authorities who have so kindly contributed to the discussion, and having an eye also to the mercury—this is July 6th—we are inclined to the opinion that between 'possum hot and 'possum cold the preference is most decidedly for

The Sportsman's Tourist.

THE SHOOTING OF THE WOODCOCK.

BY PAUL EASTON.

CRYSTAL and still was the air of the bright autumn hour. All round the pool were suspended the pencils of rushes, Writing no more with the breeze on the blue skirt above them. Pivoting as still as the pen of a pondering poet I drooped the tired lites, and sighed in the face of the sun-god, Yielded, like languorous maids, to the kiss of their lover, Laughing and strong, with his rank, ruddy band streaming over them; Yielded and sighed, till the forest was bathed in their fragrant, And the frail flowers of the glen in the sweetness were swooning.

Hark! In you ope is the breeze from its slumber awaking, Stirring the leaves, as it bids up its beautiful tresses, Rising to thrum through the woods like a rose-girdled maiden;

From the thick cover peered the glorious face of a pointer. Silent his step, and unearthiness floated about his beauty. Straightway he parted the leaves and came forth in his beauty, Wizard of woodlands, foreknowing their deep-maiden secrets; Scarce was he free from the edge of the thicket, ere followed, Slowly, a sportsman with picturesque trappings upon him. Neat were his garments of russet, and fringed and romanced. Woodcock and snipe from the net of his game-bag protruded. Even as flew the last twig from the hand of the sportsman, Lined the quivering pointer his forehead, and sank low. Bent like a rod "Then arose, at his masters quick bidding, Ake for a bird which would slip like a shaft from a bow-string! Straight to the Fowler's brown face the brown barrels ascended; Loud rang the stillness, and smoke drifted up through the forest. Checked was the woodcock's swift flight, and he fell lag and drooping, Till with a splash in the rushes—the prize of the sportsman!

TWO WEEKS WITH THE BASS AND PICKEREL.

AT INTERMEDIATE LAKE, ANTIEM CO., MICHIGAN.

BY KINGFISHER.

ACCORDING to all the best received and well-worn signs as honored and cherished by the craft, the next morning promised a fine day for sport. The rain had eased falling, the clouds were drifting in just the right direction, and everything looked fresh and bright. A light breeze ruffled the lake, just enough to make the waters laugh, and we left the inland eager to try conclusions with anything that had fins.

We fished over about the same water I had prospected the day before, the Seribe and Jiu (the Editor's camp name) in our boat, and I in the smaller one, alone. The Seribe had brought with him a new hornhead (ironwood) 11oz. rod, and he decided this would be a good day to test its temper and capabilities. During the forenoon he took with it a 5 1/2 lb. small-mouthed bass, the largest one he had ever taken in a twenty-five-years' experience as a bass fisher, and, as a consequence, he was the most intensely pleased disciple of the lamented Izaak in all Michigan. He just swelled up with pride and importance till his clothes wouldn't fit him, and it was positively unsafe for him to ture around in the little boat or try to stand up in the canoe. Jiu had to do all the rowing, and then, after giving a furtive glance at that bass, and pinching himself at intervals to see if there was any of him left.

The crucial test of the rod took place, however, later in the day, on a bass of perhaps a pound less in weight, but a vigorous, powerful fellow and a fish of much suddenness. He had played him till well in hand, and with ten yards of line he had him up to the reel, when the fish took a sudden fancy to go under the boat. At this critical juncture the Old Nick got into the reel, and it refused to budge an inch, or any part of an inch, either way. Here was a fix. It was all done so quickly that he did not have time to lead the line around the stern of the boat, and as he could not turn around, not having recovered from the effects of the fish, he was standing up in hand, and he was serious; and the fish was all this time in plain sight on the opposite side of the boat, tugging the rod into something the shape of the letter U. Then, the breeze setting in my direction, I could make out at forty rods away that the Seribe was desperately in earnest and making vehement remarks about that reel.

At last he shouted, "Swing her round to the left—quick!" Jim yanked her left, and the fish stood up in hand, and he yelled, "Great fish, they say! they say facing each other, and he yelled, "Great fish, they say! Jim, to the right—to the right!" or that infernal fish will burst the rod into splinters."

The boat was finally brought around to suit him and the fish fought into submission and brought to the landing net, the reel still firmly locked.

And then he ventured to his feet and gave a mighty yell till the water drenched him two miles up and down the lake and scaped into sudden flight a sleepy bald eagle that sat perched on the top branch of a dead cedar back in the swamp.

It is not probable that a rod would be called on twice in five years' fishing to stand the strain that this one did, and barely possible that one in a hundred would come out of the test as well.

Ironwood as a material for bass rods at once stepped to the front. I took the cap off the reel, but did not discover the difficulty at the time, and it cut up the same line on two or three other "reely" trying occasions. Afterward it was found that a little wedge shaped metal eliek was too long and would stick fast between certain cogs of the smaller wheel, preventing the spool from turning either way. A few strokes of the file would double end.

A smart rain set in late in the afternoon which drove us into camp, lumpy and hungry, with two strings of bass and long-faces that were just good for the eye to linger on. This catch filled our live box so full that the next morning two-thirds of them were dead from overcrowding. After this we tied the larger ones separately to stakes driven into the water, but only the more hardy of them would live more than four or five days. The mortality among them we attributed, whether rightly or not, to the change from the cooler depths of the lake to the much warmer surface water and the confinement. However, we kept a bountiful supply of fresh live ones on hand, which were free to catch of our neighbors as would take the trouble to come after a back-

land. One of them, living about three miles back from the swamps, came paddling over in an old boat from the main land one day with a peck of new potatoes, which he wanted to "swoop for a mess o' fish." He said he would have brought a half-bushel, only it was so hot, and it was too far to tote 'em. New potatoes were just what we were longing for, and he was made happy with a load of fish much heavier to "tote" than his potatoes.

A pair of bald eagles, which were bringing up a young family over in the swamp, would, contrary to our preconceived notions of the high toned independence of the bird, frequently swoop down and carry off to the nest a dead "foater" that it would had blown away from the island; so very few of the fish were to actual waste. And when we ate fish—boiled, broiled, baked, fried and roasted, we felt so lazily; and toward the last Jim's face got so long we dubbed him "Old Pickler."

That night it cleared up, and we had fine weather the rest of our stay, with the exception of a foggy morning or two and an occasional puff of wind that made the lake a little rough for comfortable fishing.

We had agreed to devote at least one day to a trip to Central Lake, at the head of Intermediate, distant about seven miles from camp. As the next morning was bright and pleasant, we took the largest boat, a minnow bucket, half a dozen different patterns of spoons and trollers, a single-piece Japanese cane rod each, and started, leaving Johnny to look after camp and add to our stock of frogs and firewood. The fishing part of the trip going up was a failure, as we rolled nearly the whole way with two or three spinners out without getting a strike; but the lovely day and the scenery of the upper lake more than compensated for the poor fishing.

Above Long Point the lake widens out to perhaps a mile and three-fourths to two miles, and the shores present a holder and more rugged appearance, having a background of quite pretentious and thickly wooded hills. Along the east shore three or four clearings notched into the woods mark the openings, and on the west a narrow and another clearing break the charm of utter wildness that would greet the eye of the lover of primitive nature.

We missed the swamp belt as we proceeded, but the change was a pleasing one, and we neglected our trolling to admire something new and beautiful as each bay and headland came into view.

A turn around a point brought us in sight of Central Lake, and Jim's joy, as it was, turned at the oars. The heat of the day and the hard work had made him feel himself, and on account of his lack of skill in handling a boat caused noisy rivulets of perspiration to trickle down his burning countenance; and when the Scribe proposed that the writer take the oars and that "we go into port with some style about it," the smile that reached clear back to Jim's ears endorsed the proposition plainer than speech. As we changed places he offered to wager that in the last straightaway mile he would rowed over more water than he had of us had since leaving camp, in order, as he claimed, to give us a near view of both shores of the lake. "A broad view of a short distance," muttered the Scribe, as we gathered headway.

Pulling around to the landing, we stepped ashore and were right in the town. The village numbers ten or twelve wooden houses, and is pleasantly located right at the head of Intermediate Lake. It boasts of a general store, at which you can obtain almost anything in the way of dry goods, boots and shoes, groceries, drugs, or a stick of strychnine. You can be supplied with a chunk of salt pork, a can of Boston laked beans, or a troller for bass or muscalonge; a yard of calico, a cane fish pole, or a dose of physic. In the store is also the post office. The place flourishes a small hotel, capable of accommodating twelve or fifteen guests, presided over by mine host, W. W. Smith, who sets a fair table at reasonable rates, catches bait for his guests, who may wish to wet a line, keeps a dozen or more boats for hire to anglers and tourists at prices that will not cause the hair to turn prematurely gray, and knows where and how to fish. It may be said of him "he is a landlord of many parts." The store is kept by Messrs. Wadsworth and Thurston. We found Mr. Thurston to be a clever, intelligent gentleman, well posted in regard to the country and its resources, and able to give us valuable hints in regard to its development. While resting, we spent a very agreeable hour listening to his description of the upper lakes and streams, which created such a desire on our part to pay them a visit that we have resolved to build our camp fire somewhere up there next year. Mr. Wadsworth is an old settler. He has lived there for years; has surveyed over a large portion of that section of country, is said to be authority on distances and localities, and has been a resident of the State for nearly a score of years, and has hunted and fished its forests, streams and lakes, and knows them like an open book. He loves his rod and gun, and is, therefore, of course a gentleman.

Intermediate is connected with Cedar Lake above, by a narrow, shallow little river, quarter of a mile long, overlying with trees and bushes, which in places reach out over the water to the serious inconvenience of the oarsman, who has neglected his aquatic education. This was the case with our Editor, and it was not without material aid rendered him by us, in the shape of yelling, "Pull on your left! Pull on your right! Ha—d on your ri—pull—there he goes into that tree-top," etc., that he was enabled to make headway against the current and rest on his oars in the quiet water of Cedar Lake at the head of the river, whither we were bound in quest of a bucket of minnows. Smith had pointed us to his boat to show us where to fish and how to catch them, kindly furnishing minnow tackle and "wums"—the latter a scarce commodity in all that north country.

Cedar Lake is a very small and beautiful little sheet of water, affording, Smith said, fair bass and pickeral fishing, which we did not stop to verify, but turned our attention to the minnows. After fishing nearly an hour in all the good places pointed out by the minnow man, and having secured two dozen small shiners, the minnow and barred perch, being so numerous and ravenous that they "barred" the others out.

Before starting, Smith said we could "ketch a hundred around the head of the river in no time;" but after yanking out two or three dozen perch and sunfish, he "guessed the minnies had gone some'ers else," and casting his eyes skyward—the sky was cloudless—he added, with a weather-wise shake of the head, "The 'd d'it' 'd'it' 'd'it' 'd'it' for minnies," and we pulled back to the village to wait for dinner.

To while away the time Thurston advised a visit to Mound Spring, and pointing across the river, said we would find it over there in the woods about eighty rods. Crossing the

stout wooden bridge spanning the mouth of the little river near the store door, we took our way up a hot, sandy road in search of the trail leading to it, and on asking at a house by the roadside, a very small nidge of a boy volunteered to show us the way. The Scribe gave him a nickel, which the very small M. of a B. humbly showed far from into a wonderful and apparently fathomless pocket, and started ahead with a broad grin on his freckled, intelligent face that convinced us that the Scribe had made another friend. Going through a small patch of sickly-looking corn and robust bushes before reaching the woods we frequently lost sight of our guide behind a corn hill or thistle stalk, but by scattering out we managed to catch a view of him at intervals till he dodged into the brush and disappeared from sight. At the point at which we lost sight of him we struck into a dim path and were soon at the spring.

We found the spring just where we did not expect to find it—on high, level ground, right in the thick woods, and perhaps fifty feet or more above the level of the lake. The Mound, from the apex of which the water boils and bubbles up, is eight or nine feet higher than the surrounding ground, and evidently owes its formation to the action of the water, the earth and gravel being raised and building up through countless years into this shape. The whole structure is miry and shabby, but by the aid of a few "chunks" and a strip of board thoughtfully placed by former visitors, we climbed to the top and drank a tin cup of the clear, cold, iron-flavored water bubbling up in the little basin in the centre, and felt amply paid for our eighty rods' tramp. The water, forming a tiny rivulet, flows away through the woods and is lost in the river coming into the two lakes.

Altogether it is a curious and interesting look on the face of nature, and is well worth the walk from the village to see. Our little guide had vanished in the bush, but as we passed the house going back, we saw his bright face peering timidly around a corner at us, from under a well frayed straw hat, and no doubt wondering how many sunfish hooks he could buy with that nickel.

Central is a good base to reach out from either by or down the lakes for sport. From the outlet of Intermediate Lake around to the head of St. Clair Lake is called Intermediate Lake on the guide maps of that section, but from the outlet mentioned to the mouth of the little stream flowing into the head of the first small lake of the chain there are eleven distinct lakes all connected by little narrow winding streams of from a few rods in length to four miles. Two of these are the Central and Six-Mile, are of goodly size, and all of them will gladden the heart of any troller of the rod who has a weakness for bass and pickeral fishing.

The general shape of this waterway from Long Point on Intermediate to Six Mile Lake is that of a fan, suggesting at least of sport, the foot of Six-Mile representing the point, and St. Clair Lake the head of the bowl.

A very pleasant trip may be made by a party of two or three by loading a boat on a wagon in the early morning at Central, crossing the country eastward by a fair road to Echo Lake, about six miles, and from there coming back by water through Scott, Six-Mile, St. Clair, Bowers', White's, Si-sions, Hanley's and Cedar lakes to Central, over 30 miles, all in a long summer day, provided they do not stop too long on the way to fish.

From Echo Lake the variety-loving angler may haul his boat across country six miles to Jordan River, one of the best trout and grayling rivers in the State, where he may paddle down into the south arm of Pine Lake, on down to Charlevoix and back up Pine Lake to the mouth of Boyne River, another excellent trout stream. Six miles from the mouth of Boyne, by a good road, is Boyne Falls, on the G. R. and I. R. R. A dollar pays the fare between these two points in a good stage—no Mancelona hack—that connects with daily steamer for Charlevoix, the South Arm and Jordan River. Another pleasant trip for a party of not more than a dozen is to charter the little steam yacht *Walwataysee*—whatever under the canopy that may mean—owned by Wadsworth and Thurston, leave Central Lake in the morning, steam to the head of Six-Mile, which is as high as the boat can ascend, and back to Central in time for supper. This will be a trip strictly for the scenery, as there will be no time to wet a line.

Or, to do it the lake to the mouth of the little stream opposite Long Point, fish the water along there for half a mile, and go on down into the pocket and around the islands, and you may be sure of good sport among the bass and long-faces.

From Central you can make the trip in small boats down through Intermediate, Grass, Clam, the lower end of Torch, Round and Elk lakes to Elk Rapids, the outlet of the Six Lake River. Another pleasant trip for a party of not more than a dozen is to charter the little steam yacht *Walwataysee*—whatever under the canopy that may mean—owned by Wadsworth and Thurston, leave Central Lake in the morning, steam to the head of Six-Mile, which is as high as the boat can ascend, and back to Central in time for supper. This will be a trip strictly for the scenery, as there will be no time to wet a line.

From Central across to Russell's landing on Torch Lake is four miles by a good road, and four miles across the lake is the Lewis House. At either place you can take a daily steamer and reach Elk Rapids, going through nearly the whole length of Torch Lake, which is a beautiful sheet of water 18 miles long and four miles wide, and clear as crystal.

Going down, you pass the mouth of Clam River to the left, which is the outflow of Clam, Grass and the lakes above. At this point is a fair "hostelry," kept by Mrs. Lucy Thayer, where you may also procure boats in which to go a fishin'.

To the left, after leaving Clam River, you pass Spencer Creek, flowing into Torch Lake from the East, and on into Torch River, two small streams, each Rapid River. Both excellent trout streams, the latter, perhaps, the best for large trout in Michigan.

At Elk Rapids, after a transfer of a few rods, another steamer takes you to Traverse City, the terminus of the branch road, twenty-six miles from Walton Junction on the G. R. & I. R. R.

This is a much better route by which to reach Intermediate Lake than the one we went in by, and we intend going it that way next season. By this route there are only four miles of wading, and it saves the laborious and back-breaking trip up Intermediate River and the twelve and a half miles back-ride (?), not to mention the amount of plain and ornamental "cussin'" necessary to reach Lewis Island from the head of the rapids.

Another way to go in is by way of Torch Lake and the Lewis House, near the head of the lake.

A steamer takes you from Traverse City to Torch Lake, where a narrow strip of land separates the lake from the bay, crossing which you run into Frank Lewis and his house—famed as a resort for hay fever victims. Frank, besides knowing how to keep a hotel, is one of the best "inveiglers of trout and grayling in them parts," and, knowing the

streams and lakes of that section like a book, can tell you where to drop your fly and be reasonably certain of a rise.

From his place, Traverse City, Charlevoix, Petosky and the Island of Mackinac may be reached by a daily line of steamers.

TO BE CONTINUED

GRASS RIVER.

IT was evident that the trout would no longer bite in Massa-wee, so the Professor had readily agreed to Hank's proposal to make a fishing trip to Grass River, and the sun on this August morning caught its first glimpse of them as they lay way across the lake, rowing to ward the outlet. Massa-wee outlet is a very narrow shallow, sloughy brook which loses itself in an interminable mass of alder bushes. Wren says that sometimes it flows into the lake and sometimes out of it. It cannot float an ordinary canoe boat, but it is no ordinary boat which is being pushed along it to-day, and whose history Wren tells as they work their way down. Some time ago there dwelt near the South Woods settlements an old Indian named Leo. Once these woods were the home of others of his race, but for reasons that quite flowed by the wigwams of his fathers. But at last he alone was left to hunt the forests and fish the streams that had been theirs. Every spring, when the snows had melted from the hills and the ice passed from the waters, a canoe came down the river from the North Woods, running the rapids as the Hurons ran theirs of old, and Leo had a visit from the Indian Capt. Peter. A few days the two hunted and fished together, and then Capt. Peter went up the river and back again to guide in the North Woods. But one spring Leo watched for the old guide in vain, for the Huron had run his last rapids and the waters of the Raquette had borne him for the last time. Soon Leo too was gathered to his fathers, and left his bark canoe, named Capt. Peter for his Indian friend, to an old trapper; the old trapper gave it to a guide; the guide sold it to our Professor; and it is the very same timeless, ugly craft that he is pulling along it to-day through the alders, in constant fear of driving some hidden snag through its bottom. He fought it without seeing it. It was enough for him that it was a bark canoe; but when he first viewed his purchase he was overcome. "Oh, shades of the red man! Can it be that the Huron whom I have oft pictured in my mind, skimming these wild mountain lakes, ever floated about in such a tub as this? Very true, but I agree that, like its master, it had much more tar about it than poetry.

Four miles of alder bushes over, they had reached Grass River. The course lay up the stream, and it was hard paddling. Grass River is here about five feet wide. Innumerable creeks and inlets, bringing much more like rivers than the stream itself, constantly led them astray. Two miles had not exhilarating excitement which the fishermen felt when his light rod doubles in playing a two or three-pounder. But if there were any sport in landing the spotted trout as fast as you can throw your fly, that sport was the Professor's on that August afternoon. Only an alder pole and a few flies—a split bamboo would have been useless here among the bushes—but when I how they did rise, and take hold too. The Professor cast his fly upon the surface of a dark pool. A flash of golden light from the pool below, a strike, and a quivering half-pounder lay in the bottom of the canoe. Then he took another from the same spot, then still more, until thirty-eight had been taken from that one spring-hole.

"Hullo! what's that?"
"Hullo! yourself."
"A man, Wren; look at him; square in the middle of the brook."
It was a man, sure enough, and he was wading across the stream. The water was about up to his waist and the tails of a blue swallow-tail coat which he wore were streaming out behind him upon its surface. His beard was long and shaggy, his figure lank and emaciated. Over his shoulder were a gun and fish pole, and from the latter hung a string of trout.

"I say, old fellow, what are you going across there for?"

"To get to the other side, you darned fool, what d'yer s'p'."

"It's ole Wheeler," said Wren; "he's a crazy hermit. He's not just across there. We'll visit him some day."

It was quite dark when our two fishermen reached their camp. They soon had a blazing fire, and by its light cooked their supper. Never had fish seemed so delicious to the Professor. Often since that night, when he has sat down at a hotel table to a dish that the bill of fare called "trout," he has recalled that supper in the backwoods—the bright light of the camp-fire breaking the gloom of the forest around and flickering upon the faces of the two weary fishermen; their table, the mossy covering of the ground beneath their feet; their repeat, the fresh, rich trout; their drink, the water from a clear, cold spring.

And when through the branches above they could see the stars appearing, one by one, they lay down with their feet to the west and made bark for the morning. Consulting themselves to him whose care is for the least of his children, they were lulled by the moaning of the hemlock to their rest.

"Wake up, Professor! Wake up!"

The Professor put forth his head from the blanket, and looked out. Hawk was standing in the rain outside.

"What's the matter?"

"Bear!"

The Professor made a frantic grab for the rifle.

"Don't be scared; he's over Blue Mountain by this time."

He pointed to the ground as he spoke. The Professor looked, but saw only a small trout lying there. Nothing remarkable that, but just beyond he saw another, then more. Then it flashed across him. He turned to where they had left the pack basket with three hundred trout, all cleaned and salted.

"Don't tell me a bear could carry that off. Wren, you've hidden it, or old Wheeler's stolen it!"

"He's stuck his hind in it an' he can't get it out, Professor. He crossed the brook down yonder and the basket dragged in the mud. He's scattered the fish all along. He'll have to travel mighty slow, an' I'll have to can follow him."

above came the golden rain of harmony. Next in earliness with his pean of song is the blackbird. At this time, the merry month of May, he begins soon after two, and then the thrush, then the robin, and soon, very soon, others join in, and all Nature is in tune. The sparrows are nearly if not quite the last.

Brenchley, Kent, June 4

GRAY BEARD.

TREE-CLIMBING WOODCHUCKS.

LOUISE GHOYE, Lewis County, N. Y., July 1.

In your issue of June 1 (p. 346) "Rio" narrates the treeing of a woodchuck (*Arythya monax*) by a dog, and queries if any of your readers have observed a like phenomenon. Affirmative testimony appears in FOREST AND STREAM of June 30 (p. 437), and from no less a keen-eyed observer than our "Ruffed Grouse." "Bonasa" tells us that his dog treed three woodchucks, two of which took refuge in "low, leaning trees," while the third, hard-pressed, scrambled up a small ash.

Now, having been brought up, so to speak, among woodchucks, having smoked them out of hollow trees, poked them out of hollow logs, worried them out of stone walls; having stealthily hunted them in deep forest and open meadow, first with the bow and arrow, and later with the rifle; having trapped them from the first sprig thaw till their disappearance in autumn; having broiled their tender young in the East, and roasted them (till "ground hog," of the Rocky Mountains) in the West; having kept both young and old alive in captivity for months at a time, or, in other words, having hunted, trapped and dined upon woodchucks from my earliest boyhood, I trust I may be permitted to add my testimony on this subject to that of "Rio" and "Bonasa."

Woodchucks, when un molested, particularly during their youthful days, often climb up ten or twelve feet in shrubby and young trees that abound in low branches, and not infrequently scramble up the trunks of large trees which have partially fallen or slant sufficiently to insure them against falling.

Occasionally, especially when hard-pressed by a fast-approaching enemy, they ascend large, erect trees whose lowest branches are some distance from the ground. But, in order to do this, they must take advantage of the impetus of a rush, for they cannot start slowly upon the trunk of an upright tree and climb more than a few feet without falling. Neither can they stop and go up again before reaching a branch or other resting-place.

I once chased one up a large butternut tree in an open meadow, and he was so terrified at my savage mien that he halted not till the uppermost branches bent low with his weight. He then began to show much consternation as to how he should get down "when" (if a granite cobble may be substituted for a "chunk of old, red sandstone," and a grassy meadow for "the floor," in the language of Bret Hart):

"A chunk of old, red sandstone took him in the abdomen, and he smelted a kind of sickly snuff, and curled up on the floor, and the subsequent proceedings interested him no more."

C. HART MERIAM, M. D.

Johnstown, Penn.—Editor Forest and Stream: It has been my good, or bad, fortune to kill quite a number of these animals, and I can assure "Rio" that upon more than a few occasions I have seen the woodchuck take to a tree, though not so freely or with as much grace as a duck to water. I have seen them ascend both small and large trees, when assailed by a dog, and on one occasion "treed" one at night while hunting "coons."—C. L. C.

CANANDAIGUA, N. Y.

I frightened a "chuck which climbed a cherry tree in the lawn, in preference to going forty feet further where there was a good cover in a dense hedge. It climbed about twelve feet and crouched in the fork of the tree. It did not see me, and had about five minutes to hide before I came to it.—R. H. D.

GUINEA HEN HYBRIDS.—I noticed in last number of your valuable paper a correspondent writing about a cross between the guinea and dunghill cock asks if it is a common occurrence. I have seen it frequently, and it is almost certain to occur where one has guinea hens among his chickens without a guinea cock. I have a friend who had on exhibition at the Aberdeen, Miss., Fair last fall, a pair of these hybrids that were very beautiful. These were a cross between a very fine game cock and a guinea hen. He said they would lay as many eggs or more than a guinea hen, but had no disposition to sit at all. He had frequently tried to hatch their eggs under chicken hens, but had always failed, and did not believe they would hatch. This pair were red and white, speckled with white predominating, and had the head of the guinea without comb or gills. They made a noise of their own. It was neither like the guinea or chicken, but a kind of cross between the two; and, strange to say, they were larger than either the game cock or guinea hen. I saw on exhibition at same fair at same time a cross between a pea fowl and guinea hen that was the most beautiful bird I ever saw. This bird was the color of the guinea fowl, but had the shape and carriage of the pea fowl, but was not quite so large.—K.

WARREN, MASS. June 10.—I have just read the article in your paper of June 9, 1891, from Natchez, Miss., dated May 26, and signed "S. M. D." Early in the month of April of the present year I had occasion to visit Mitchell's Station on the Virginia Midland R. R. in Culpeper County, Va. Here I saw in the possession of Mr. Taylor, an old sportsman familiarly called "Judge" by his associates, a bird almost as large as a female turkey, but with plumage pretty much that of the guinea hen, the only difference as far as I could tell could judge being that the feathers were barred instead of spotted as the guinea's are. The plumage of the back and neck was dark gray or black with white bars, while that of the breast was barred with dirty brown (I send you one of the feathers I had from the breast. I had several others from various parts of the body, but regret to say I have lost them). It also had a peculiar crest very much like that of the pheasant, which it erected when excited. It seemed to be very fierce, but not at all wild or frightened. Its history as told me by Mr. Taylor was this: Some time, in March, I think, a man brought the bird to his store, and wanted to sell it saying that it fought his chickens, and that his wife had determined to get rid of it. He said that he had one guinea hen and no cock. That at the usual season for the guinea to incubate she disappeared, and the cock came to the store, and he did not know where he was followed by the curious hybrid which is the subject of this letter. The bird grew very rapidly, finally far surpassed

its mother in size. I think the bird was hatched during the summer of 1890. When I saw Mr. Taylor he spoke of sending it to the Smithsonian Institution, but I do not know whether he did so or not. His theory was that the bird was a hybrid between the guinea and the pheasant, but then comes the question if its size. Could it have been a cross between the guinea and the turkey? If so whence the crest.—OBSERVER.

It would be difficult to conjecture from the information at hand what the percentage of the bird is.

SKATES AS TREE CLIMBERS.—It is very common in this section to see black snakes and chicken snakes in trees. I never saw a rattlesnake climb. I noticed to-day hanging in a large post oak, fifty feet from the ground, the "shed" of a large black snake, and presume his snakeship makes his home in the tree. The tree was topped many years ago, and where the body was cut off in topping would make him a cozy berth.—K.

The tree-climbing habits of the black snake are well known. The point of inquiry was about the rattlesnake.

ANOTHER DEDDING WOODPECKER.—There is a golden-winged woodpecker that has about, every pleasant morning for the last month, here in Nashua, N. H., given us a serenade on the tin roof of the cupola of my neighbor's barn. Perhaps he is trying to call a mate, but he appears to enjoy the racket he creates and whacks away like a boy with a toy drum.—WEBB.

MIGRATORY QUAIL.—Mr. M. P. McKoon, of Franklin, N. Y., reports the return of the migratory quail put out in that vicinity last season.

CALIFORNIA QUAIL BREEDING IN CONFINEMENT.—We had last Saturday a pleasant call from Mr. W. S. Kittle, of California, who informed us of a most interesting experiment with California valley quail now being made in New Jersey. Four of these birds were sent to Mr. Phillips, of Lawrenceville, N. J., some months ago, and the female of each pair is by 10 ft., and Mr. Phillips visits them only once in two or three days, leaving them undisturbed as much as possible. We shall watch the farther progress of this experiment with interest.

Holabird Shooting Suits. Uphregrave & McLeisen, Vaiparato, Ind.

Game Bag and Gun.

No WOODCOCK SHOOTING on Long Island permitted before August 1.

ARE THEY MONOPOLIES?

LARGE GAME CLUBS CRITICIZED.

NEW YORK, June 24.

Editor Forest and Stream: It is quite probable that we disagree on the question of sporting monopoly, and you, being the autocrat of this break-fastable, may, in that case, refuse to have the dish served up; but I would like very much to know whether you, or any of your correspondents, have good and sufficient reasons for supporting your ground.

This, as a free country, has always been the admiration of people who have suffered from autocratic rule in Europe; but how long will it remain so? In England a man may rent a farm, but he does not dare to touch a hair or feather of the game around him. All luxuries are for the rich and favored few. Under that system a thousand must suffer and forego all pleasures in order that one man may revel in them. I believe in sensible game laws and in their strict enforcement, and I believe in a man's prohibiting shooting and fishing on his farm if he chooses to, but I deny that a few men, simply because fortune has given them the means, have the moral right to buy up thousands of acres and monopolize the sport to the exclusion of hundreds of others who are equally fond of it, but have not the means to buy the privilege. I do not adopt the standard of Calvert, who makes the chivalrous Bayard the only perfect gentleman of the world, but I do say that a man is not a gentleman who exercises only for himself.

As a sample item for a free country, take the club at Sandusky. A few men have purchased nearly every foot of ducking ground in that region, and that they may enjoy a few days' sport all others are denied the privilege of shooting a bird at any time. The club, as one of the members told me, "is a close corporation, and they are rigidly restricted as to inviting their friends." If the main plank on which that club stands is not pure selfishness, what is it?

If they would adopt the system of giving the privilege of a day's shooting occasionally to outsiders, keeping out all market shooters, they would not appear so glaringly obnoxious to the charge of selfishness. My wonder is, as it now stands, that the people tamely submit to it.

Some years ago I was invited by some members of the St. Louis Hunting Club to go with them on a snipe-shooting expedition about sixty miles up the river to a prairie marsh, where the birds were so plenty that if they had kept quiet it would have been almost impossible to walk without treading on them; and this ground is also now owned by a club, though the region is wild and unsettled.

As wealth increases every acre of good shooting ground will be cut off from "the people," and where will be our boasted freedom?

One of our great financiers—an ex-Secretary of the Treasury—emphatically predicts that, in the not far future, this country will see a terrible revolution, the result of the tendency to concentration and monopoly; and he may be right, for we profess to be a free people, and will not tamely submit to oppression. DRYMUS.

N. B.—Argument from the opposing counsel is now in order.

The following letter was sent in to the last meeting of the State Association, but too late, we understand, for any action to be taken upon it:

NEW YORK, June 23.

TO THE NEW YORK STATE ASSOCIATION FOR THE PROTECTION OF FISH AND GAME:

Gentlemen—You are convened to consider the game laws of the State and their enforcement. Having at heart the protection of game, I respectfully suggest for your consideration the employment of a regularly accredited and paid

game detective to watch the markets of New York city. The demand for such an officer is imperative at this very moment. Since you gathered at Coney Island I have been informed on what I consider good authority that woodcock are sold in the New York market, also high holders. Thus, right in the face of the New York State Association, the market men and restaurant purveyors have defied the law by engaging in the illicit traffic in game. I respectfully submit that such a state of affairs imperatively demands your earnest attention. The city markets are the outlets for the work of the poacher, snarer and game thief. By checking off this sale of game you will remove one chief incentive to the illegal capture of birds. How can this be done? By employing a shrewd detective, and by retaining counsel.

Detective work must be done—who shall do it? The members of the association are all business men; the claims of their business will not permit of their undertaking this detective work. Some one must be employed. Who can do it? The association can provide the needed funds, either by appropriating a certain amount or, if need must, be, by private subscriptions.

As proof of the sincerity of my belief in the efficacy of such a detective system, in the name of my friends I will pledge the sum of one hundred dollars toward such a fund, provided the association contribute a proportionate amount.

I would suggest that the sum, when collected, be placed in the hands of a committee of three, namely, the president of the Brooklyn Gun Club, the editor of the FOREST AND STREAM and Mr. Charles E. Whitehead, who, for several years, was secretary of your association, and who is a gentleman well fitted by his extensive experience to aid in this work, this committee to report to you at your next session.

Respectfully, G. W. WYLER, Member of the Brooklyn Gun Club.

KILLING THE DEER IN THE ADIRONDAKS.

HOW CAN IT BE STOPPED?

NEAR THE ADIRONDAKS, July 1, 1891.

Editor Forest and Stream: The slaughter of deer in the northwest part of that portion of the Adirondacks known as St. Regis district has been during the two months just past exceedingly great; and it is still going on.

During the above mentioned time there have been all of twenty-five deer killed on the middle branch of the St. Regis, and at ponds in that vicinity; and also a large number were killed on the east branch, the exact number I cannot state, but certainly thirty in all. In hunting deer at night there are not so many wounded which get away as there are killed outright, of which one-half, at least, will eventually die of their wounds. Then in floating—or night hunting—two-thirds, at least, of the deer killed are does.

I base these statements on information received from parties who have been up and hunted by floating this season, and are readily tired of it. They are all reliable persons. Besides, I have always been a saint in former years myself; and I claim to know something about night hunting deer.

There were, in all probability, as many as five young fawn destroyed with the does—either by being unborn at the time that the does were shot, or by starving to death afterward. Counting all together, the number of deer destroyed would amount to sixty in one section of the Adirondacks before the 31st of July.

What I needed here is a State game protector. I was much surprised when I first saw the list of those appointed by the Governor, that none were appointed for northern New York. These three counties—Clinton, Franklin and St. Lawrence—are cut off from the rest of the State by the great Adirondack or Northern Wilderness, into which a large portion of the southern part of each extends. They have within their borders about one-half the numerous lakes, ponds and rivers, with the thousands of small streams which the wilderness contains, thereby including a large portion of the best hunting and fishing localities to be found within the State. The game protectors of Hamilton and Essex Counties, in order to reach the hunting localities here, would either have to tramp forty or fifty miles or more through the wilderness, or go around a distance many times farther. Besides, those two counties are very remote in extent, and the largest portion of them is a wilderness having hunting and fishing localities scattered as they are in the State; and it would require all their time to attend to them. But I believe there were protectors appointed in other parts of the State where their services were not needed nearly so much as here.

I have conversed with a large party of those residing in that vicinity and elsewhere who practice early floating, and have not only one who does it in the wrong way, but one who says that if the killing of deer out of season could be stopped entirely, nothing would suit them better. But they say that if they wait until the season opens in August the deer will become so wild by being hunted so much throughout the month of July by the hundreds of so-called sportsmen that come to here at that time from all parts of the country, that it is impossible to get a shot when the season opens in August by floating; and that being the only way many of them ever hunt deer, they are bound to get ahead of them who come from abroad, and so they commence to hunt early in the season—as they have done in years past; and will so continue, until something is done to put a stop to the whole business of killing deer out of season. What they say in regard to those who come from abroad is true in a majority of the cases. During the month of July there are hundreds of such parties of so-called sportsmen who come to the Adirondack region who kill deer whenever they can get a chance. Your able correspondent, "B. A. M.," in his article that was published in a late issue of the FOREST AND STREAM, very well describes a party of the kind who were camped near him on Bay Pond while he was in that neighborhood on a fishing trip. I have come across many such parties while I was trapping in various parts of the wilderness.

I don't wish to be understood as claiming that those who practice bounding deer do not violate the game laws as well those who hunt them by floating, or by any other method; for I know many among them that would if they had as fair opportunity to do so and not get caught at it; and some do run the risk. But what prevents hunting more than anything else in this vicinity, at least out of season, is that a good deer-hunting dog are not any too plentiful about here; and as any person has a right to shoot a dog when following a deer out of season—and there are those about here who would do it if their owners were not near—the owners are for this reason careful about letting their dogs run deer during the close season, the dogs being too valuable to lose. I was camped on the sixteen-mile level nearly the whole of last summer, and knew of but one case of bounding deer

before August 15. And then no deer was killed. Neither was it stated in a former article, as single one killed there during the month of May. I would have considered the hunting by floating. But the natives got the start, and killed or scared them off in May and June.

I wish to say to your correspondent "Wollat," that whatever "music" there was about the Level during July was not made by dogs, as he hints, I presume, in his article that was published in a late number of the **FOREST AND STREAM**. And I will also say that the observations he makes in regard to my former letter to the **FOREST AND STREAM** in relation to deer killing on the Level.

ADRIAN ONDAEK.

A NEW MICHIGAN CLUB HOUSE.

DETROIT, Mich., June 1881.

There has just been organized here another amateurs sportsmen's club, which, in point of "tone," is likely to "carry off the cake." At the very least the Lake St. Clair and the North Channel had better look to their social laurels, for the new candidate comes along a-blooming. It is called the Detroit Hunting and Fishing Club, and is composed of five or six members and one honorary member, the latter being the Rt. Rev. Samuel S. Harris, Bishop of the Episcopal Diocese of Michigan. The active members are Captain Stephen B. Grummond, a wealthy vessel owner, whose name is familiar in every port round the Lakes; Derrington Jarves, the head of a large manufacturing establishment in this city; John H. Bissell, a prominent member of the Detroit Bar, a former Governor of the State, and son of the present Episcopal Bishop of Vermont; S. H. Ives, yachtsman, hunter, angler and jeweler on a large scale; Geo. H. Parker, who has grown rich, though still a young man, in Ex-Post Master General Jewell's line; E. W. Reynolds, old salt water veteran and skipper of the Yacht *Sigmar Max*; Henry T. Phillips, the widely known dealer in game; John Bekman, pork packer; J. W. Winchester, tobacco and cigar dealer; James Battle, Chief Engineer of the Detroit Fire Department. The executive officers of the club are as follows: President, S. B. Grummond; Vice-President, Derrington Jarves; Secretary and Treasurer, John H. Bissell; Directors, S. H. Ives, John Bekman, Geo. H. Parker, E. W. Reynolds and H. T. Phillips.

Now, as to the grounds and other essentials of the club. It shows the social and financial tip-toedness of the members, but neither money nor blue blood would furnish sport unless there were in the world some spot where it was to be had. First, then, the new club have leased a part of Fighting Island, which contains in all upwards of 1,000 acres. This island is nine miles from Detroit down the river; and the club house faces the Canadian Channel. The main building is 15x20 feet, and 12x16 feet, is of brick, and the north wing of the same size is set apart for the accommodation exclusively of ladies. There is a good dock in ten feet of water, two fine fish ponds are conveniently at hand, and the island is magnificently wooded—in fact, a kind of pickniekers' paradise. The marsh belonging by lease to the club is about seven miles long by three quarters of a mile wide, and is the equal in point of desirability to the renowned Port Moultrie marsh in South Carolina. Then, if you prefer it, oh, country-loving editor of **FOREST AND STREAM!** you may gather more than your fill of ripe and luscious berries of divers kinds. When you want novelty, if you chance to be a club visitor, you can mount to the observatory, which surmounts the club house, and gain an unobstructed view of the river and contiguous territory from Detroit to the mouth of the river, and as far as Ecorse, Michigan, and the head of Grosse Ile on the lake in every foot of the club's possessions is obtained.

The only wonder I have in this connection is that the securing this most desirable spot for club uses should have been left till Anno Domini 1881. The present club is organized under the State law and by next year nearly every member will have built a summer residence, to which they may retire from the heated term with the certainty of enjoying life in a perfect and rational manner, escaping the insolent and idiotic demands of fashion and serenely defying Society with its Gorgon eyes and supercilious snarl. The club have plenty of host parlor, ample out-housing, and, in fine, everything that anybody wants. Long life to the Detroit Hunting and Fishing Club.

BLAOK BASS.

HOUNDING VS. STILL-HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. There is no necessity of calling attention to the value of the data we are collecting and setting forth here. The views are those of experienced, well-informed observers. The particular points of the inquiry are as follows:

- 1st. What is the prevailing of the country referred to?
- 2d. What is the character of the hunting deer?
- 3d. Describe the country, and the manner in which it is referred to, and its effects on the deer?
- 4th. Describe in the manner still hunting and its effects.
- 5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
- 6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
- 7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer, or that has been run into the water? Would they be practicable?
- 8th. What is the open season for deer?
- 9th. What are the winter habits of deer, so far as you have personally observed them.

THE MUSKOGA COUNTRY.

There are many readers of the **FOREST AND STREAM** who have a fair knowledge of the Muskoga country either from fishing or hunting excursions. This rugged north land extends from the outlet of Lake Simcoe on the south to the shores of Lake Nipissing on the north, and from the shores of the Georgian Bay on the west to the banks of the Ottawa on the east. It is a country dotted with thousands of lakes and drained with majestic rivers, rolling hills of hardwood, oak and sheltered rocks, and a few hills with pine and balsam, lonely and thickly timbered spruce and cedar swamps—just the country for moose and deer. And so it is. There are very few sportsmen in Ontario that have not spent a good time in the Muskoga country deer hunting, and many a jolly American cousin from across the border has gone home with a well stocked game bag, and a diary full of camp-fire yarns to distribute around the family.

Now, in a country where there are so numerous there are several modes of hunting and killing them, such as

hounding into lakes and killing them in the water, still-hounding, jack-hunting, and lastly, pot-hunting. The resident hunter is the most successful. He turns out in the months of February and March, armed with his hunting axe, snow shoes and a cur, he proceeds to where the deer are yarded for the winter. He starts his cur out on the crust, and so scatters the deer out of their runways into the deep snow, and then the work of slaughter begins indiscriminately. Fawn, does and lordly bucks succumb to the ruthless hand of a brutal and merciless creature claiming to be a man.

There is a great deal of hounding in this country during the open season. I do not think that more than one deer is killed out of every three that is watered.

Then there is the jack-hunting, which is carried on by the Indians, principally during the months of August and July. Very few of the settlers in this region are experts at jack-hunting.

And now for the still-hunter that hunts for the market. When the first flurry of snow covers the ground he is out, and kills, before the season closes, as high as one hundred a deer.

We have a game law in Ontario. It is a force and a dead letter in many parts, and until the local legislature appoint game keepers and pay them salaries for prosecuting offenders, deer will be slaughtered by pot-hunters in all parts of the district out of season. No matter how much we may differ in opinion as to running with hounds or still-hunting let us unite in condemning and crushing out still-hunting and the slaughtering of deer in winter.—D. F. M.

PARRY SOUND.

THE ALLEGHENY MOUNTAINS.

I have hunted deer every fall for eight years in the Allegheny Mountains and ridges adjoining. A greater part of the time was spent in Somerset counties. There is a law prohibiting the running of deer with dogs in Somerset. The first year I hunted deer were plenty, but the second year parties from Unifontown came in with dogs and got several deer and run the rest all out of that part of the county. Nor have the deer returned since. Occasionally you will see the signs of deer, but they do not stay long. I have shot deer within one mile of Confluence, on the R. & O. R. R., but they began to be scarce and the result was that last winter there were but two or three deer within five miles of where I hunted, and they were finally driven away. These are facts that cannot be got over, as parties who live there would tell you the same.—R. T. C. S.

PENNSYLVANIA AND MICHIGAN.

In the spring of 1837 I located at Olean, Catawagus County, N. Y., and there commenced my first experience in hunting deer. I had never seen a live wild deer, nor had I any experience in hunting with hounds or dogs—such were used in those days—and commenced still-hunting deer for sport. At that time dogs were seldom used for driving deer, yet I think the first deer I shot (a splendid buck) was driven into the Olean Creek by a hound. I remained at Olean and in that vicinity for twenty years, and during that time killed quite a number of deer. I have never killed more than two in a day, six in a week and eleven in one season's hunting, going from home in the morning and returning in the evening.

In the spring of 1857 I removed to Venango County, Penn., and took up my residence on the Tionesta Creek, twelve miles from the village of Tionesta and remained there about twelve years engaged in the manufacture of lumber. Now I began hunting deer with hounds and did so during the winter months. The country was very favorable for hunting, the hills being high on either side of the stream. About once a week during the fall we would have some person start for the hills with the dogs, while others took stations on the bank of the creek and waited for the music, which seldom failed to begin soon after the dogs were let loose. To get a deer was then the rule; to fall, the exception. One morning we got two fine bucks. About twenty or thirty minutes was sufficient to bring a huck to water if the morning was cold and the ground frozen. We never used dogs when there was snow.

In 1869 I removed to Palo, Mich., and have hunted nearly every season since. Our party is from four to six persons; time from three to five weeks, and the deer killed from five to sixteen, and no dogs used.

Secondly, the country was very favorable for hunting, and Tionesta are so similar that one description will do for both. Generally hilly and heavily timbered with hemlock and pine. In some sections there are hardwood, maple and beech, with some chestnut. Where the pine has been cut there is a great growth of blackberry briars, and on the Tionesta there are large patches of laurel. Here the country is very level, and in many places very favorable for hunting, and found extensive deer swamps that are a nuisance to the still-hunter. Montcalm County is heavily timbered except where the pine has been removed, and there the brush and briars are a good cover for deer during the summer and fall. Lake County has extensive plains with oak grubs and jack pines. Some parts are well-timbered, plenty of lakes, with some very respectable hills.

Thirdly, there are two or three methods of hunting in Michigan, but which is the more prevalent is a question that I am not prepared to answer. Those persons who are known as "gentlemen sportsmen" usually hunt with dogs, and there are others who are real sportsmen who prefer to still hunt. As to those who are called "pot or market hunters" I have no knowledge.

Fourthly, those who hound deer usually locate their camp near some lake and provide boats for capturing deer when chased into the water. In putting out the dogs it is best to have but one dog after the same deer, if the dog is all right. You can have two races each day unless the deer leads off to some lake far away. Whether hounding deer drives them out of the country is an open question on which hunters differ widely. Our Michigan sportsmen claim that it does drive deer out, and thus protects them from the merciless "pot and market hunters."

Fifthly, still-hunting is generally practiced where there is snow so that the deer may be tracked, and when the snow is right for the purpose perhaps this is the most successful. I have found deer hunted in this way, after being followed all day come back on the same ground where I had started them in the morning.

Sixthly, it depends on the skill of the hunter if each pursue the same method. Other things being equal those using hounds will kill the most. Residents would have the advantage of knowing the country and the roadways, which is quite essential to successful hunting.

Seventhly, I think a majority of the resident sportsmen would approve of a law prohibiting hounding, and residents would assist in its enforcement.

Eighthly, such a law would be no protection to deer as far as it relates to hounding. If such a law could be enforced

during the summer season when many deer are shot in the water by floating for their nights it would be a benefit.

Ninthly, it depends on the amount of snow and the coldness of the weather and their habits in very cold weather and deep snows they gather in the cedar swamps in droves, and live principally on ground hemlock. They frequently keep around the lumber camps, and feed upon the moss and twigs from the fallen timber. In November I have found deer on the plains in large numbers, and feeding on the roots of a certain kind of grass found there. As soon as the weather gets cold they leave the plains for the hills.

STILL HUNTER.

THE ADIRONDACKS AGAIN.

Of all the regions, it has been my pleasure to hunt deer in the Adirondacks, in my estimation, should be last to have this discussion centered upon, nevertheless the majority of the letters appearing in **FOREST AND STREAM** as yet, concern that region. Now, why do I say this section should be the last? Simply this: It is impossible, except in a very modified degree, to still-hunt at all in the Adirondacks. Still-hunting, as I understand it, does not include "floating" or "crust slaughter," but silently approaching an animal on land, whether it be deer or bear it makes little difference, unless it is a grizzly, and then you want to get out of the way.

I distinctly believe that of all the vast multitude of deer that are slaughtered every season (that is, in the Adirondacks) not ten are killed by genuine still-hunting, it being next to an impossibility to penetrate far into the wilderness, without a guide going ahead and cutting the way. I would say here that not one gn'de out of twenty can guide a sportsman through the woods on foot, as they know only the water courses. To me it is preposterous to hour the huc and cry rattle by some article of the terrible harvest of the Adirondack with deer. The most glorious parts of a deer hunt to me is the roar of the pack, the fluttering heart, the trembling nerves, and wild anticipations and hopes that the on-coming deer may be one of those "old bucks" we hear so much about, and see so little of. To me, the pressing of the trigger, and slaughter is secondary. "floating" and "crust slaughter" are the only means of success, and in order to break in young hounds are all the means of the sad decrease in the ranks of the deer in the Adirondacks.

B. A. M.

OSKONAGA VALLEY, N. Y.—May 14.—The prospect for woodcock is very promising. There have been no rains to drown out the young long bills, and by this time they are able to ascend the hills, and I was getting most anxious and litchens my setter pup came to a point. On examination it turned out to be a woodcock setting—four eggs just hatching. The ruffed grouse wintered well, and are now hatching. I never knew so many grouse in our locality before. But very few snipe killed this spring. While on the Indian lands a few weeks ago I flushed a grouse with the primaries pure white, something I have never before seen.—Doc.

BIG GAME UP A TREE—Fairland, Ind., June 27.—A dispatch from Seymour, Ind., in the *Indianapolis Sentinel* a few days since announced the shooting of one of its citizens out of a mulberry tree by a gunner of that neighborhood who mistook him for a squirrel. It was large game, but he succeeded in bringing him to his at the first shot with an ounce of squirrel shot. At this time of the year when the berries are ripe a mulberry tree is a favorite resort for squirrels. Well, we have another proof that the fools who carry guns are not all dead yet. We have the promise of good woodcock shooting when the season opens.

SHELLS BURSTING IN COLD WEATHER.—LONG PRAIRIE, Minn.—"Amateur," of Sauk Centre, wishes to know why his paper shells burst in cold weather. The loading has nothing to do with it, as the same kind of load will not split them in warm weather. I have had the same kind of trouble, and find that in cold weather a fire is kept in the house, and the shells become dry and hard and slightly smaller, and when put to the strain of a charge of powder will burst before they expand to fill the chamber. The damp weather in summer is inclined to swell paper shells, so in winter they shulk. If "Amateur" will dampen his shells a very little, they will not burst.

A.

TENNESSEE—Nashville, June 28.—Dove-shooting will be commenced now in a few days. Already large numbers of young ones have been shot in the wheat fields just harvested. John Nicholson bagged twenty one afternoon and reports them more plentiful than ever he saw before. Squirrels are also unusually abundant and afford excellent sport to crack their nuts. Col. Joseph Woodfolk amuses himself shooting bull bats with a small Winchester. Jim Palmer and Hermann Burkholz have organized a grand dove hunt, to come off next month. They propose going in a covered wagon and follow up the game from field to field, camping out and having a good time generally.—J. D. H.

A NEW ALBANY CLUB—Albany, N. Y., June 23.—At a meeting of Albany sportsmen last week (Tuesday) it was determined to try a new mode of hunting deer. The following officers were elected: President, Chas. E. Thorne; Vice-President, Clarence B. Thornton; Secretary, Geo. R. Peck; Treasurer, Chas. A. Bannister; Executive Committee, John B. Harlow, Chas. W. Tuttle, Harvey N. Howland. Practice shoots are frequent and regular, the interest is lively and the future bright. The club has an excellent list of names for members and it hopes before long to have quarters of its own under a membership in the State Association. Long life to it!

—G. R. P.

PENNSYLVANIA—Many woodcock have been in Monroe County, Penn. In the neighborhood of Kresgville, about ten miles from Weissport, on the Lehigh, Penn., I hear this morning, they have banded in quantities. At Kresgville no one shoots at all, save the Dutchman, with his smooth-bore rifle; consequently the birds will be unharmed until autumn unless a city sportsman gets there.—Homo.

NEW HAMPSHIRE—Nashua.—Think that we may have more grouse this fall than for many years past, as the woods are full of young birds. We have no summer shooting, so the birds will have a chance for their lives until they are strong enough to take care of themselves. The season has been favorable for woodcock and they are reported to be plenty.—WEBB.

MAINE RESORTS—New Sharon, Maine.—I saw in the issue of May 26 that T. and J. wanted to go fishing here in Maine.

I think I could put them on the right track for a good time with fishing and gunning, if they would write to me and let me know what they expect and at what time they would like to come.—E. C. H. SMITH.

NASHUA, N. H.—Died, June 14, Chas. E. Laton, a member of the League, a keen sportsman and a genial gentleman, honest and true. A host of friends mourn his early death.—WERN.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.

Salmon, <i>Salmo salar</i> .	<i>Stizobdellium americanum</i> , S.
Brook Trout, <i>Salvelinus fontinalis</i> .	Yellow Perch, <i>Perca flavescens</i> .
Rainbow Trout, <i>Salmo trutta</i> .	Striped Bass, <i>Morone saxatilis</i> .
Dolly Varden Trout, <i>Salvelinus malinche</i> .	White Bass, <i>Roccus tenebrosus</i> .
Grayling, <i>Thymallus tricolor</i> and <i>T. montanus</i> .	Rock Bass, <i>Ambloplites</i> . (Two species).
Black Bass, <i>Micropterus salmoides</i> and <i>M. paludis</i> .	War-mountain, <i>Chloroxybryllus guttatus</i> .
Masacouton, <i>Loach nubilosus</i> .	Crayfish, <i>Pomacea nigromaculata</i> .
Pickering, <i>Sciaenops ocellatus</i> .	Bachelor, <i>Pomoxys annularis</i> .
Pike of Pickering, <i>Esox lucius</i> .	Chub, <i>Serrinus corporalis</i> .
Pike-perch (waxy-eyed pike)	Shad, <i>Alosa sapidissima</i> .

SALT WATER.

Sea Bass, <i>Centropristis atrarurus</i> .	Weakfish or Squeteague, <i>Cynoscion regalis</i> .
Striped Bass of Rockfish, <i>Roccus tenebrosus</i> .	La Fayette or Spot, <i>Leiostomus xanthurus</i> .
White Perch, <i>Morone americana</i> .	Channel Bass, Spot or Redfish, <i>Sciaenops ocellatus</i> .
Bluefish or Taylor, <i>Pomatomus saltatrix</i> .	Sheepshead, <i>Ariocharus protobothris</i> .
Scup or Forge, <i>Stenotomus argenteus</i> .	Kingfish or Barb, <i>Micropogonias undulatus</i> .
Pollock, <i>Pollachius cornutus</i> .	
Tautog or Blackfish, <i>Tautoga onitis</i> .	

FLY-FISHING, by far the most elegant and interesting branch of the art of angling, ought not to be regarded exclusively as a sort of imitation. It no doubt depends on deception, which usually proceeds on the pretence of one thing being actually subsisted in the likeness of another; but Bacon's distinctive definitions of simulation and dissimulation place the subject in a truer light. As simulation consists in the adoption of affectation of what is not, while dissimulation consists in the careful concealment of what really is—the one being a positive, the other rather a negative act—so the great object of the fly-fisher is to dissimulate in such a manner as to prevent his expected prey from detecting the artificial nature of his lure, without troubling himself by a vain effort to simulate or assume, with his fly, the appearance of any individual or specific form of insect life. There is, in truth, little or no connection between the art of angling and the science of entomology; and therefore the success of the angler, in by far the greater proportion of cases, does not depend on the resemblance which subsists between his artificial fly and the natural insect.—JAMES WILSON.

'SCONSET COTTAGE LIFE.

MR. A. Judd Northrup, whose "Camps and Tramps in the Adirondacks" was so well received a year ago, has written a little book with the above title, narrating the pleasures of a summer spent in a cottage on Nantucket Island. What 'Sconset is we will let Mr. Northrup tell:

"At least half of these fishermen's homes are occupied as 'cottages' by the summer visitors, and by the fishermen during the fishing seasons, spring and autumn, and most of them are vacant in the winter when there is 'nothing to live for' in Sconset. The owners of the cottages are mainly residents of the 'town'—as Nantucket village is invariably designated. After the first days of September have sent the children home to the schools, and the fathers and mothers back to their homes on the continent, and the summer birds have flown, the Nantucketer who has quietly spent his town season in Sconset, with his family to enjoy his own vacation and take his ease in his own house. He will tell you that the summer visitors make a great mistake in going away so early, and that the months of September and October are the most delightful of the year. This accords fully with the experience of my own family who remained there through the month of September. After the 'August Storm' the temperature is equable and agreeable for several weeks. Sconset is a delightful retreat in 'Sconset. The 'town' itself is in the quiet and peaceful enjoyment of a serene old age, its mighty deeds all gone into history, its whale fisheries a glory of the past, its population living on what it has done in olden times and upon its growing reputation as the most delicious summer resort any where on the coast.

"So it happens that here and there among the fishermen's humble homes a more modern and ambitious house lifts its two-storied front, tempting Providence and the storms. So, also, it comes about that along the one broad street, and up the slight ascent on the road to Nantucket, the rich men of the Island, old sea-captains and merchants, build more pretentious cottages for their summer enjoyment. Later, as 'foreigners' found out the secret of 'Sconset,' there sprang up the two hotels, the Atlantic House and the Ocean View House, which are still modern and comfortable.

"Also, a little south of the old village, along the bluff named Sunset Heights, is springing up a still larger growth of cottages, half a dozen or so, built and owned by the residents of several different States. These command the finest views and are delightful residences. We shall hear more of Sunset Heights before ten years shall pass—a new 'Sconset' of wide and desirable fame. The bluff north of the village is well suited a similar growth and promises to be a fit companion wing to Sunset Heights.

"But there is quite little original 'Sconset' yet, with the diminutive, be-shingled, low-roofed fishermen's houses of days long gone by; and it is this that makes the charm of this sea-side resort unlike anything and everything else along the Atlantic coast. The 'modern improvements' are yet and long will be externals—the heart will always be 'Old' Sconset.

"There is no railroad to 'Sconset. By and by there will be. Now no sound more fearful breaks the spell of the ocean's solemn moan than the blast of Captain Baxter's tin-horn announcing his arrival with the mail, or, when he sets forth to town, telling all 'Sconset to hurry up with their letters and errands, for he is off in five minutes,—five minutes exactly by that big silver watch which, he says, General Grant gave him.

"Indeed, but for the summer visitor, big and little, Sleepy Hollow never was half so quiet as 'Sconset. As to noise and

hustle, it is Sunday all the while. There isn't a pavement to rattle a hoof or wheel upon,—the velvet turf makes no sound under your foot. Possibly Sunday is a busier day than all the rest of the week, for on Sunday there is the little school-house, a Quaker meeting or a Unitarian service, or, in one of the hotels religious exercises are conducted by some clerical visitor according to his own creed. Of course, when one is hungry for religious instruction and someone takes what he can get, whether it is cut and carved or dished after his own particular fashion or not."

But we must not quote the whole book, though tempted to do so. The charms of the island are set forth in a most fascinating manner, and we commend the book to those who, having never tried a summer by the seaside, are minded to avail themselves of the author's goodness of soul in pointing out the attractions of 'Sconset. By the way, Mr. Northrup has set an excellent example; for, having first found out and tested these resting places, he seems to be determined to spread his knowledge for the benefit of the people.

We forgot the sport at Nantucket. It is bluefishing of course, with cod, toad, and sharks for those who want them. Perch are to be had in the interior waters of the island, but who would want perch when bigger fish are to be had? The book may be had of the author, Syracuse, N. Y., or of Baker, Pratt & Co., 19 Bond street, New York; price, 50 cents.

THAT MEDAL.

Editor Forest and Stream:

My clerk has just brought me the current number of Forest and Stream, and the first thing that caught my eye was "The Order of Trout Hogs." A hurried reading convinced me that the metal scheme was a good one, and I offer in-

In "hog" signa vivas.

closed samples for your inspection and approval. It is hardly possible that the Bradford gentlemen may take the prize, but I would merely throw in as a suggestion that you await further developments, for who knows what possibilities may lie in "Buck County" or the Adirondacks? D. LIVINGSTON.

"JOSEPHINE," THE EMPRESS OF THE CATSKILLS.

SOME New York boys have been trout-fishing at Phenixia, in the Catskill Mountains, and one of them, Fred Hoy, son of Mr. John Hoy, of the Adams Express Company, has distinguished himself by catching a much bigger fish than anybody dreamed was to be found in the whole Catskill Mountain range. The story of how they carried the big fish from the brook to the hotel is thus truly told in a letter to the Commercial Advertiser, of this city. It is something unique in the literature of trouting.

"Kerr and Fred, have done well in the meadow, as their baskets show. As the saw-mill is but a stone's throw below them, and as they have 160 trout among them in three hours' fishing, they conclude to take the road and stop the sport. Fred, boy like, lingers behind, casting his line idly into the stream. The others have gained the main road and are anxiously inquiring about the invalid's condition, when a roar, a yell, breaks the stillness. In one minute the trio are rushing back, the invalid leading and shouting, 'The boy is surely drowned!' They reach the stream and there is Fred, with his red boat double and his line straining as though it would break every minute. His hat is off, the sweat rolls down his cheeks and he is yelling with all his main. The doctor rushes for the end of the rod and just as it breaks he grabs the line. The leader is strong and holds. The doctor, with the invalid's assistance, unbooks his mate landing net from the back of his coat and they land a monster. How their hearts beat as he lies on the ground panting and flapping. One great thought enters the four heads together—'Keep him alive!' The invalid and Kerr make a joint break for the mill. Up to the road they scramble, now one, now the other ahead. They take the rails over into the road like steplechers. Now they have gained the straight stretch to the mill. Kerr, alas, fat and puffy, spills, while the invalid rushes on; he secures a big nail somewhere, somehow, he can hardly tell afterwards, and rushes back. Kerr, up and fresh, he meets half-way back, and to him he resigns the pail. Kerr plunges on and down the bank with hated breath to the fish.

"Meanwhile, the doctor's old time fish lure has not deserted him. He had thrown his trout from his basket to the ground, put the big fish alive in his basket, closed the lid firmly, and held it down in the running water waiting for the others. The fish is soon put in the pail in water, a wooden cover with holes for air is made, and the proud quartette are homeward bound. The doctor sits in front and holds the pail carefully by the handle off the wagon floor. The horses walk every step of the seven miles, and often do they stop on the way to give the big trout fresh water in the pail. At one dead spot Kerr lifts the pail cover and looks in at the fish. She is on her back with outstretched gills. Kerr cannot speak; he points into the pail and groans. One spring lands the doctor and Fred on the ground. They dash with the pail to the brook. Fresh water is hastily put in, the fish revives, and the four—in fact, with the trout, the five—breathe again.

"Just as they near the hotel they gather laurel blossoms, which grow profusely about, and deck the carriage and pile them around Fred. Till he is deep in a sea of blossoms. They cheer and shout, and the hotel guests turn out at the noise, and wonder at the 'bonquet carriage.' The invalid's family are alarmed for his safety. Out the four jump, and rush for the fountain in front of the Tremper House. A big

wash tub filled with water is secured—the trout is dumped in. Hurrah! he swims! The people all look and wonder. The shouts have reached the village, and the crowd thickens. The big fish measures fifteen inches, and is fat and heavy. Her spots are the handsomest ever seen, and the victor and the party are idolized. They put her in the fountain and name her 'Josephine'—for is she not a creature of her kind? To-day she still swims and jumps, and is the admiration of the country all round about. She is the biggest brook trout caught in the Catskill Mountains in ten years. The four go like champions to supper, and the poor invalid eats fifteen trout, drinks two bottles of St. Louis lager, and his devoted family are up all night rubbing his stomach alternately, and in the morning they say his lungs have been weak all night.—J. S. H."

IN THE HEART OF THE ALLEGANIES.

MR. H. W. FULLETT, formerly of the Erie Railroad, and now Passenger Agent of the Chesapeake & Ohio Railway Company, writes from Richmond, Va., under date of June 27:

I think the accounts of the ground shooting and fishing grounds along the Chesapeake & Ohio Railway had a good deal to do with my accepting this place, and taking up a residence in Virginia. I have met a few of our Richmond sportsmen, and the regal reports that I have so often heard of their good qualities have been more than fulfilled. I brought my Red Irish Ben with me, and anticipate many a good day's sport on quail this fall, and on trying to get a day or two to casting flies upon the Virginia mountain trout. I enclose the following article, which does not lessen my desire, I assure you. It is taken from the Staunton Spectator:

"The trouting party that left Staunton some twelve days ago for the headwaters of the Elk, consisting of Col. W. L. Bumgardner, Dr. Carter Berkeley, J. B. Scherer, C. L. Cooke, Capt. Jas. Bumgardner, Jr., John M. Carroll and Capt. T. S. Doyle have been returning in detachments. This was probably done for the wise purpose of not exhausting the provisions along the route of their return, as might have been the case had they all returned together. However, on last Friday, on the 12:45 train, the first detachment of the 'Elkers' came into town with small baskets of trout and large accouters of the fishing in the Heart of the Alleghenies.

On Saturday, at 12 o'clock m., the baggage came in the wagon by the Parkersburg Pike, under charge of the colored troops of the Elk Detachment. And now, truly, the tales of trout grew marvelous, and all Staunton was wild to see evidences of the grand catch, which, however, were not forthcoming. But, at an early hour on Monday morning, the remaining detachment of this famous corps de trout arrived in the last wagon, and not only confirmed the reports previously brought in, but produced the evidence in the shape of a basket filled with nearly thirty beauties, not one under a foot long."

"They reported the weather in the mountains bad, snakes numerous, trout and venison plentiful. The principal field of their sport was Deer Creek and Elk River, with its tributaries in the county of Pocahontas, West Virginia, and 120 miles west of Staunton.

"They all seem greatly pleased with their trip, which certainly must be an enjoyable one, notwithstanding the hard work, and sometimes discomforts, which inevitably attend any such undertaking. But the sport out-balanced all draw-backs, and they return home, the discomforts forgotten, and their memories filled with the many pleasant incidents of the trip. One of these, which we have heard, grew out of the luxurious desire of one of the party to enjoy the civilized luxury of an air-pillow. He may have carried the pillow, but there was no provision when it came near frightening his bed-fellow out of his wits. He was peacefully reposing, dreaming of the comforts of home, etc., when suddenly there was a hiss of, what in those wilds could be nothing but a 'venomous sarpent,' right in his ear.

"Partially aroused, he again heard the hateful hiss, and this time there was no mistaking it. With a frightened bound, and a still more frightened cry, he cleared the tent, and insisted that snakes were in his bed. Upon careful and cautious investigation it was discovered that the fearful sound had proceeded from the air-pillow of his bed-mate, which had sprung a leak.

"The catch of the party was 628 trout, the largest of which was 14½ inches in length. The last detachment stopped at Old Millboro' Springs of Staunton, on Friday, and the trout were in their trim. To hear them talk one would think there are no brown biscuits, elegant coffee or 'done-to-a-turn' breakfasts a way from that fine old watering place."

OUR PHILADELPHIA LETTER.

SHEPSTEAD fishing has begun at Atlantic City and in the bays as far north as Barnegat, N. J., and last week we learn the fish were biting fairly well. At the latter place, notwithstanding it is rather early for their coming, bluefish appeared in the inlet, and we are informed that they were quite plentiful for a day or two at Baruegat. But the fish were small, running about one to two pounds in weight. We shall hardly expect to hear of good weakfish fishing before the first week in July on our New Jersey coast. It is seldom that they take the bait readily until the 5th to the 10th. Now that net fishing in some of the bays has been prohibited by law, Tuckerton and Barnegat bays last year offered grand sport to the angler, and we may expect excellent fishing there the coming summer. Shredder and soft crab bait will be scarce and high, as the past intense winter destroyed great numbers of hard crabs.

In the Schuylkill River, at Conshohocken and upward, a black bass were taken last week of some size. At Conshohocken one of three pounds and a half was caught by a resident of that place. So far as we can learn the minnow was the lure. Jumping abruptly from fin to feather, I must chronicle the slaughter of woodcock by a market shooter on the 18th of June, within the city limits. I am informed by a gentleman who heard the shots and saw the bird; and notwithstanding they were well able to fly, still the law was violated, and will be so long as summer shooting is allowed at all. I am not able to give the name of the villain who participated in this sport, but shall endeavor to obtain permission to publish it. The brood was one of those of which I wrote a short time since, hatched in close proximity to Cobb's Creek, Philadelphia. HOMO.

How to FIT OLD-FASHIONED REELS.—These old-fashioned reels, with a bolt that goes through the pole and a nut on the

end, make an excellent reel for taking up the line fast, but the great trouble with them is that the line will run off and get caught somewhere. So in trying to devise a plan to obviate that trouble, I hit upon the simple one of taking a piece of rather stiff, strong wire, and running it through the reel, bend it in the form of a loop over the reel; then when the bolt has been put through the pole, place the small ring at the end of the wire, over the bolt, and screw the nut down tight on it; that makes the wire lay close to the pole and brings the large loop of the wire through which the line is to run directly over the reel, but of course it should not quite touch it, and it is thus secured firmly. Now, when used, the line is bound to run on the reel, and if by chance slack line gets off, it can be prevented from getting in between the pole and the reel, by pulling the wire of some kind in the pole at each side of the reel, close to, but not quite touching it. Thus, you see, when the wire attachment is used in connection with the reel, it makes a cheap and very good one.—T. A. LESTER.

TO DRIVE AWAY MOSQUITOES.

NEPESQUIT RIVER, Bathurst, N. B.—I notice in your issue of June 23d, which was forwarded to me here, some one desires to know what will prevent mosquitoes biting. Now I have in my camping experience of many years tried a dozen prescriptions, finding none of them sure until I came across the following:

- 3 oz. Sweet oil,
- 1 oz. Carbolic acid.

This will surely prevent black flies, mosquitoes, and moose flies from troubling you every time. Let it be thoroughly applied upon hands, face, and all exposed parts (carefully avoiding the eyes) once every half hour, when the flies are troublesome, or for the first two or three days, until the skin is filled with it, and after this its application will be necessary only occasionally. Another receipt, equally as efficacious, is: 6 parts turpentine oil,

- 1 part Crocus,
- 1 part Pennyroyal.

Either of these are agreeable to use, and in no way injurious to the skin. We have both of these in our camp with us, and all flies keep a safe distance.

I have with me here upon my salmon preserve Messrs. Henry and E. F. Adams, who are now in the city, and in the fair sport, yet nothing like this part of the magnificent Salmon River formerly afforded, for the simple reason that the Government does not properly guard it. Yet we hope to take the necessary steps soon to give it the most complete protection, all it needs to make it one of the best in the Dominion.

LYERS W. ADAMS.

TENNESSEE—Nashville, June 23.—From all sections of the State come notices of associations being formed to enforce the protection laws, also of the perceptible increase in the quantity of fish at present in the different streams. Large creels are of common occurrence even in the Cumberland, and the fish in many instances are unusually large. There is a perfect rage on the part of the farmers for fish ponds, and I hear of them being built everywhere. Carp, and game fish have both their patrons, and the private propagation will, therefore, be abundant in the two varieties. Col. Geo. F. Akers and a party of five or six intend making an extended visit to "Sycamore," here bass and black perch are said to be found in great numbers and of a size before unknown. C. Hillman, F. Furman, Edgar Jones, Ed. Hicks, and the Mr. Thompson, composing the Wisconsin Angling Club, returned this week from their annual excursion to the Wisconsin lakes.—J. D. H.

SALMON IN CANADA.—RATHFRONCH, July 1st.—But few trout or salmon are to be taken here now, although the first week the fishermen put in their nets the catch of salmon was very large. Those taken in the Bay Chaleur would average, so I am informed by those who claim to know, twenty-six pounds each. The system that our Canadian Government is pursuing in leasing our salmon rivers to a few individuals is wrong, and smacks too much of the old feudal system when privileges were sold to a few. By doing away with the present system of leasing these rivers and making them open waters to all sportsmen, charging one dollar a day to each rod, the Government would increase its revenues derived from this source twenty per cent. or over, saying nothing of the benefits that this country would be sure to receive from the great influx of sportsmen that this would bring here. You will hear more of this later.

STANSTEAD.

PENNSYLVANIA TROUTING.—I was unable to go up into Muncie as I had hoped, and I had to content myself with near spots where the fishing was not sufficiently good to be an object. I spent ten days in the neighborhood of Water Gap, Averbille and Cauden, Monroe County, Pa., but only fished two days out of this time. More beautiful streams for trout than there are in these places I have never seen, but they had been all much fished early in the season, and this coupled with the fact they were very high rapid from the incessant rains of the previous week made the sport poor.—H. O.

MORE THAN HE COULD DIGEST.—The Hartford, Conn., Times tells the following: "R. L. Hungerford, of the firm of Williams & Hungerford, while fishing yesterday afternoon caught a very large bull-frog, which was evidently suffering from indigestion. Mr. Hungerford cut the frog open to ascertain the cause and was surprised to find in its stomach a mud turtle nearly two inches long, alive and kicking. He brought the turtle home and to-day it was quite lively in the aquarium in the drug store of the firm."

THE RODS USED AT THE TOURNAMENT.—New York, July 2.—I notice in your report of the Fly-Casting Tournament that, with the exception of Mr. Pritchard and Mr. Bryan, the Nichols split bamboo were the rods used. Please add that Mr. Endicott used a split bamboo of his own make, and I one of Conroy's hexagonal split bamboo rods—a rod I have used over two years, and during which time it has caught very many black bass and trout.—W. HOLBERTON.

FARRAR'S RANSELEY AND MOOSEHEAD guide books are very useful compilations of practical information for visitors to these renowned sporting regions. If you are going there do not fail to procure these books of Mr. Farrar. See the advert ement elsewhere.

ELK RAPIDS, Mich., is so much of a fishing place that the

local paper, the *Traverse Bay Progress*, chronicles the catch in a whole column of items. Bass, perch and trout are the fish, and the anglers come from all parts of the country to enjoy the sport.

WATER-PROOF FERULES.—A new ferule is advertised in our columns as being water-proof, and therefore it is claimed that the rods on which it is used are more durable in consequence. We therefore call attention to the advertisement of William Mills & Son in our issue of to-day, in which great lasting qualities are said to be inherent in rods which use this style of ferule.

THE KNEEL OF THE GRAYLING.—We read in *Owag*, of Detroit, that "Grayling are being caught in immense numbers in Northern Michigan, and quantities arrive in Detroit daily. They are delicious eating, and are considered by many better than brook trout.

IRONWOOD FOR RODS.—Hornbeam, or ironwood, is tough, and our correspondent "Kingfisher" tells in another column how he tried a rod of this wood most severely on Intermediate Lake, Michigan.

CALIFORNIA TROUTING.—Allen Springs, Lake County, is said to be an excellent trouting centre. There are good hotel accommodations there.

GOOD GRROUND.—The fishing at Good Ground, Long Island, is said to be good just now. Big Bouders, bluefish and striped bass are the fish to be caught there. Lane's house opened last Saturday.

CUTTCHUNK.—Bass running 44 to 74 lbs.; two taken June 11; water cold; fish not running full yet. More anon.—EZEKIEL.

HALF A LOAF IS BETTER THAN NO LOAF—as the boy said when he got half a day off to go fishing.

Fish Culture.

REPORT OF THE NEW HAMPSHIRE COMMISSION.

THE New Hampshire Fish Commission report sent to the June session of the Legislature, 1881, records another successful year, although the unprecedented drought of the past summer seriously interfered with the return of the salmon to the headwaters of the Merrimack river. Large numbers of salmon entered the river in June, and by the 15th of July the Commission had captured nineteen, weighing from ten to eighteen pounds each, at the hatching house at Plymouth. After that date the water was so low that no more were taken until Oct. 2, when two more were captured.

In referring to the "anomalies in the run of salmon, and all other migratory fish, for which science is yet entirely unable to account," the report cites some well-known facts, but advances no theory. It quotes the report of the State hatching house at Plymouth, N. H., to E. A. Brackett, Commissioner of Inland Fisheries for the Commonwealth of Massachusetts. In this Mr. Powers gives the following as the number of eggs from nine different salmon: Oct. 29, one fish, 10,000 eggs; Oct. 24, three fish, 19,000; Oct. 26, two fish, 13,000; Oct. 31, two fish, 12,000; Nov. 2, one fish, 6,000; total from nine fish, 68,000 eggs. The report of the Superintendent of the Lawrence Fishway, which follows, we give in our review of the report of the Massachusetts Commission.

The salting (*Salmo salvelinus*), 50,000 eggs of which were sent by the Deutsche Fischerer Verein to Prof. Baird and by him to the New Hampshire Commission, were received with a loss of only 5,000 eggs from Germany, and were hatched. After correspondence with Prof. Baird on the subject of the tastes and habits of these strangers, it was decided to plant them in Newfound Lake, which, from its depth and clear cold water seemed to be the most proper place, as a freedom from predatory fishes. Prof. G. Brown Good's paper on this fish, prepared for FOREST AND STREAM, is given at length, and covers the ground of their relationships and habits.

One creek, 100,000 eggs were taken, and half sent to Massachusetts and the remainder hatched here to be delivered at the hatchery to those applying for them for public waters. Of the "Winnepesaukee whitefish," or "shad-waters" (*Prosopium quadricornis*), 300,000 eggs were taken and evenly divided with Massachusetts. The Commissioners truly remark that in all plantings the larger the plant is the more likely it is to be successful. Landlocked salmon have been soon jumping for their lakes where they have existed before their introduction. They have been taken in Winnepesaukee in great number, and of the Merrimack and Connecticut rivers are now full of them.

The "Growth of Carp in America," by Mr. Fred Slather, as given before the Central Fish Culturists' Society, is given in full, and an extract from the report of the Massachusetts Fish Commission on the carp, in which Dr. Rudolph Hessel is quoted, is given. The fishway at Amoskeag Falls was unsatisfactory, and the right for its "breakets" was bought and will be introduced into the waters of the State. One has been built at Fairville by the Coteocook Manufacturing Company, and a similar one at Hillsborough Bridge.

The paper on "Breeding California Salmon in Fresh Water," by N. W. Fairbank, read before the Central Fish Culturists' Society, is given in full, and then come reports on the game, which we will review in another column at a future time. The report as a whole is very creditable, and shows that New Hampshire has a live fish and game Commission.

REPORT OF THE NEBRASKA COMMISSION.

THE second annual report of the Fish Commissioners of Nebraska, for the year 1880, calls attention to the fact that Mr. N. E. Fairbank has bred the quinnat salmon in the fresh waters of the State Lakes. The introduction of this fish has already been related how a gentleman from Weston, Iowa, caught two of these fish in one of the branches of the Nishanabotone River, below the town of Red Oak, Iowa, in the fall of 1879, one of which weighed eight and the other five pounds. The fish were taken and were planted in Nebraska in 1880, and the Commissioners prophesy their return in four years thereafter.

Their appropriation was not large enough to afford any means for trial of the landlocked salmon, which they had wanted to try in these lakes. One hundred and thirty-five German carp were received from Prof. Baird, and they have been retained for breeders instead of distributing them. The appropriation given to the Commissioners to work with a small number of the quinnat salmon was not large enough to permit them to do so. Much of their hatching was done by Messrs. Morgan and Decker, at South Bend, at a nominal price.

In letters to the Board, Mr. J. C. McBride, Pres. Nebraska Sportmen's Association, writes that salmon have been seen in the streams, and that a good-sized cod was for sale in the market at Lincoln recently which no doubt came from the coast. In view of the theory that eels could not live in the Platt River, Mr. Mason writes that the fry of the salmon placed in a pond some months before are

there still and now, Dec. 26th, weigh one-half pound. Other writers bear similar testimony.

THE CONNECTICUT SHELL-FISH COMMISSION.—As we have announced, the Fish Commission of Connecticut has a distinct department of shell-fisheries. The waters are being surveyed and leased for oyster culture, etc. Their office is Room 10, Insurance Building, New Haven. The following is a list of the members of the state board of shell-fish commissioners held a session to-day, July 2d, and voted to assess ten cents an acre on all grants of oyster lands, for the expense of surveying and making maps. Bills amounting to \$10,000 were approved. The bill was instructed to prepare deeds for the allotment of a number of applicants who have complied with the requirements of the law.

The board go to Darien on Wednesday, the 6th, for the purpose of visiting the oyster grounds of the state of New York.

THE SHAD WATCHING on the Potomac by the U. S. Fish Commission has been a grand success. We have been favored by a gentleman who is in a position to know about the work, although not engaged in it, that Col. McDonald has probably hatched more shad there this season with the ovals and their steam machinery than has been hatched at all other places put together. The "Fish Hawk" has been at Havre de Grace, Md., and has turned out 16,000,000. Our informant had not the list of plantings, but heard that Mr. Frank Clark was gone with a shipment for the Kansas Commissioners, to be placed in some of the waters of that State.

LONG ISLAND NOTES.—Mr. Thomas Clapham, of Roslyn, has hatched, for Mr. Blackford of the New York Fish Commission, 2,500 rainbow trout, which he will place in some of the streams. He has also hatched between four and five thousand Maine salmon, and is also hatching about 100,000 shad, and 100,000 bluefish. Head, as well as 1,500 quinnat salmon within the past few years.

REPORT OF THE PENNSYLVANIA FISH COMMISSION.—We have received the report of this Commission for 1879 and '80. It is so important from a natural history point of view, that we defer its notice for a week or two. It contains "the fishes of Pennsylvania" by Prof. C. S. Felt, with many figures, and is a valuable addition to our ichthyological literature.

The Kennel.

FIXTURES.

- September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. L. K. Staylor, Secretary, Pittsburgh, Pa.
- September 13 and 14, at Pittsburgh, Pa. Collie Trials, held under the auspices of the Pennsylvania State Agricultural Society. Entries close September 8. Elbridge McConkey, Secretary, Harrisburg, Pa. Entries for the New York State Field Trials close September 15. Entries commence on Thanksgiving Day. Jacob Fentz, Secretary, P. O. Box 41, New York City.
- September 25 and 26, at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.
- November 26, Louisiana State Field Trials. Entries close November 15. Entries commence on Thanksgiving Day.
- November 27, at Grand Junction, Tenn. National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

MY FIRST CHICKEN SHOOTING.

I WAS sitting in my office one afternoon in August, looking over the last number of my *FOREST AND STREAM*, when I heard some one drive up and yell, "Oh! Doc," and on going to the door I saw Sam, as he is familiarly called by his friends, sitting in a high, square, boxed wagon, holding with one hand a rather stumpy span of ponies, and with the other a very rusty salter. Now the said editor had fully made up his mind to get out of that wagon and interview my red Irish Leo, that was slowly marbling back and forth in front of the door with his "ceat" tails" dragging on the ground, and he had just got up to the door, when I saw him standing on them just once. A sharp "Down, charge," accompanied by a suggestive motion of the hand toward a stick lying near, brought him out of his belittled attitude at the same time that he stepped forward and laid his hands on the seat. I saw him putting his foot on him to hold him there. Turning to me he said, "Doc, does your finger arm any? If it does you had better load your own and traps into this wagon, and if your car will be better than this, you can ride with me. I will take you to the woods, and we will let the chickens back in the morning. To-morrow is the opening of the season, and there are dead loads of them around my place, and not a gun has been fired among them yet, so you want to try that dog of yours, when Sam, who had stepped out of the wagon, said, "Go, of course I will go." "Well, hurry up, and don't be all day dotting your eye."

A few moments sufficed to pack my hunting suit, cartridge, dog, bag whip, etc., etc., in a "valise" which Sam, with my help, carried to the seat. At sight of the gun, both dogs were nearly frantic with delight, and forgot all about their previous pugnacity. After stowing them away in the back part of the wagon I got in myself, and as I went I saw that the fine red dog had been shot at by the old blonded chest. I saw a thorough-going farmer, a keen sportsman, he was not exactly the sort of man to encourage shooting out of season, and poachers and pot-hunters gave him a wide berth, but to the friends of all legitimate sportsmen, he was a gem. "Go on, go on," he said, "hurry up, and don't be all day dotting your eye."

After supper we had a general overhauling of all our traps. Every empty shell was loaded, the guns inspected to see that everything was in order. We were up before nine o'clock, and had breakfast out of the way by sunrise, when Sam, who had stepped outside, said, "Oh, Doc, just look here!" On going to the door, he pointed toward a wheat field about three hundred yards from the house, and there was a covey of about twenty chickens that had called over, in the act of alighting in the stubble.

"Well, Doc, if the dogs have had their breakfast, let's start!" "The dogs have been fed," remarked his wife, "and hadn't you better take Will along with you and send him back with the first bird you get, so we can get our dinner and go to bed, and that the first bird and the second bird, and the third bird, and the fourth bird, and the fifth bird, and the sixth bird, and the seventh bird, and the eighth bird, and the ninth bird, and the tenth bird, and the eleventh bird, and the twelfth bird, and the thirteenth bird, and the fourteenth bird, and the fifteenth bird, and the sixteenth bird, and the seventeenth bird, and the eighteenth bird, and the JACOB PENNY, Secretary, P. O. Box 314, New York City. Special press to follow others according to their value.

SIMPSON'S NEW FISHING-TACKLE CASE.

A want long felt for by Sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his spoons, hooks and Lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its perfection.

Size—Box: Length 12, width 7 1/2, depth 4 1/2; inches; trays (4): Length 7 1/2, width 4, depth 1 to 1 1/2; inches; top tray: Length 13 1/2, width 7, depth 1 1/2; inches. Three part trays each small tray, eight in large tray, 10 compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-hook, and each case packed in a neat box and sent on receipt of \$4.00. To clubs taking 6 at one time, \$24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS. R. SIMPSON, 96 Fulton Street, New York.

A. J. FAIRBANK, Jar at a Platin, Mass

LEONARD'S Split Bamboo Rods, WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875). This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1878). This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

THE GREAT SINGLE BREECH-LOADER.

FOREMAN & WADSWORTH'S NEW BREECH-LOADER has so completely distanced all the others that it stands alone. There is no second. It is the only single gun worth having. As described in the above cut it is not complete, with rebounding lock, pistol grip, lever fore-end, nickel-plated frame, and is beautifully finished throughout. The barrels are either steel or twist. When steel they are bored out of a solid bar of steel, differing in this respect from all others, which are merely old musket barrels refinished. When twist they are the best imported barrels and of very high Greeney's James', or even Gault's. Hitherto we have been far behind our orders, but having greatly increased the production we can fill orders immediately. The cost of these guns is a mere trifle. We are sole agents at New York for Colt's Club Guns, and also for Enos James & Co., Birmingham. We offer a small job lot of the celebrated Webley Guns of all sorts at about half price.

GRUBS! RODS, REELS AND FLIES. Send for catalogue to C. F. ORVIS, Manchester, Vt.

Hornbeam Rods A SPECIALTY. W. HUNTINGTON, WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever purpose he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 50, 70 and 100 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular. 20 Cent. Post-pa-a, for \$1. B. H. SWEEBER & CO., Rochester, N. Y.

GUN POWDER! Dupon's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPON'S GUNPOWDER MILLS, established in 1829, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupon's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. cans.

Dupon's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetrator, with a clove pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. cans (Nos. 1 and 2), and 1 1/2 lb. 3-1/2 lb. 4-1/2 lb.

Dupon's Cloke Bore.—Specially adapted for "Cloke Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 6 1/2 lb. Kegs and 1 lb. cans.

Dupon's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. cans and 4 1/2 lb. 8-1/2 lb.

Dupon's Rifle & "Sea Shooting"—Fig. and P.F.F.G.—The Fig. for long-range rifle shooting, the P.F.F.G. for general use, burning strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb. cans, 3/4, 1 1/2 and 2 1/2 lb. kegs. Fig. coarse, P.F.F.G. fine.

Dupon's Sporting, Mining, Snapper and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mosaic, Mammoth, Hexagonal, Cubical and Pellet powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by P. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPON'S Fig. or P.F.F.G. for long-range rifle shooting.

ANSWERS TO CORRESPONDENTS. 481

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be directed to the Forest and Stream Publishing Company.

Subscriptions.
Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by Ed. Torquett, 15 Boulevard, St. Martin, Paris, France.

Address: **Forest and Stream Publishing Co.,**
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, July 14.

IS ANY READER OF THE FOREST AND STREAM familiar with the poem written by Bryant on the introduction of the English sparrow into New York?

THE INITIAL LETTER from "Yo," which we publish this week, gives promise that the series written by him from the Northwest will be a valuable one. Our correspondent's proposed trip will take him into a country of which little is known and the many objects of interest met with there will afford abundant material for his letters.

A FINE GUN is the handsomest present one can give a friend who has shooting proclivities. It is a source of pleasure and—if he knows how to use it—of pride. If your friend inclines to the gentler pursuit, a well-made rod will remind him of your regard for him, and when playing it he will be in a frame of mind to appreciate your gift.

BOOK OF THE BLACK BASS—Dr. J. A. Henshell writes us that his "Book of the Black Bass" is in the printer's hands, and will be issued, certainly and promptly, during this present month. The delay has been caused by the author's having recast and rewritten the first chapter of the "Scientific History of the Black Bass," adding sixty additional pages, and making the book contain altogether 490 pages.

NEWFOUNDLAND DOGS FOR LIFE-SAVING STATIONS.

IT certainly is remarkable that, after having so many illustrations of the great intelligence and usefulness of the Newfoundland, he has not long before this been systematically employed at all of the life-saving stations along our coasts. It is true that from time to time we hear of some wandering wail or some poor shipwrecked animal taking up his abode with the surfmen employed by the service; but although the dogs have in every case at once earned for themselves their allowance of junk and hard-tack, yet their stay among the sand hills, with the lifeboats, mortars and other life-saving apparatus as their companions, has been brought about by the hand of fate, and not by any wise provision of the Government.

Many months have passed since we first suggested in the FOREST AND STREAM that the Newfoundland could thus be utilized, and recommended adding a dog of this breed to the crew at each station. We wrote at the time:

Unquestionably the Newfoundland is one of the greatest favorites outside the setter and the pointer. From early youth his excellent and steady qualities are impressed upon his mind. No child's book or early primer is without his picture, and the variety of occupations in which he figures is incalculable. On one page we see him enforcing a strictly moral lesson by dragging the pifering school-boy from off the apple tree, while over the leaf his courage is displayed in rescuing a young miss from a duck-pond grave. We grow up to recognize in him all the amiable, generous and domestic characteristics of a fine disposition, combined with a courage and fearlessness that is sure to win man's heart. Therefore, we take it, that a race of powerful dogs of this breed could be very profitably employed at our life-saving stations, and that at times their sagacity, watchfulness and fearlessness would prove of great advantage. How often it is that a shipwrecked crew almost gain the shore and are drowned in the very face of a shelving beach. These dogs could be trained to patrol the beach and give a warning, after the manner that the St. Bernards are trained for the service of the Hospice; while the tutoring to save a drowning person could be easily effected by means of lay-figures similar to those used some time since at the water trials in England. Thus in a short time the honest Newfoundland would have gained for himself quite as romantic and weird a history as his stately brother way up upon the Alps.

Since the time at which the above was written we have been looking into the matter, and have had some correspondence with those stationed on the coast. From the first the idea has been received by the surfmen as a happy thought. Thus encouraged, we called upon Capt. James H. Merryman, U. S. Inspector of Life-Saving Stations, and found that his views coincided with our own on the subject. The Captain spoke in the most enthusiastic manner of the introduction into the service of a hardy race of dogs, and trusted that the Government would at some near day devote an appropriation for an experiment in which all humanity is deeply interested. Of course a most moderate outlay is all that is required, as the initiative trial should be confined to one of the districts of the service. Should it prove a success, then it would be an easy matter to raise a breed of powerful Newfoundlands and locate them at every life-saving station in the service.

As the first step in the United States toward an organized effort for assisting the shipwrecked was the establishment, early in the present century, of the Humane Society of Massachusetts, we would be pleased to hear from it and like societies on this important subject, and will give what help we can.

THE NEWFOUNDLAND.

Before giving in detail the uses to which this noble animal can be put we shall give a brief description of the dog, selecting the delineation given him in the "The Sportsman's Cabinet," as the most just and correct we have ever read. The graceful writer, although dealing with the dog in the early part of the century, can with safety be quoted, for what he says of him is true of the pure dog at the present day:

The Newfoundland dog in a state of purity, unaccounted by the blood of any inferior race, is one of the most majestic and awfully attractive of all the canine variety, although at first sight he appears terrific from the seeming immensity of his magnitude, the placid serenity of his countenance as instantly dispels the agitating vibrations of fear by fondly affording early proof, that ferocity is not the predominant or distinguishing trait of his disposition. With those to whom he is barely known (but particularly where he is attached or familiarized) every look seems not more impressively

intended to entreat attention than to solicit an early exchange of mutual services. Naturally disposed to action he is always eager to be employed, and is never more delighted than when such little offices are assigned to him as are not beyond his power or ability to execute. Emulative by nature no one passion has sluggishly dormant, but all are equally alive to the emergency of the occasion. He seems, by an inexplicable impulse, to be the friend of every individual without displaying the least tendency to animosity with any part of the creation. Offense he is scarcely ever known to offer, but insult he never receives with impunity. Docile beyond conception, and affectionate beyond description, the Newfoundland dog is easily taught almost everything within the power of the human mind to imitate of which his own strength and frame are capable. Equally sagacious as energetic, he patiently perseveres in whatever he undertakes, and never relinquishes the attempt so long as there remains the most distant hope or possibility of success. Adapted by his powers, and the pliability of his temper to the use of man, he never shrinks from whatever task may be enjoined, but undertakes it with an ardor proportional to the difficulty of the execution. Eventually oscillations in the province of being employed, he forcibly displays his pride in being permitted to carry in his mouth (for miles) the basket, bundle or stick of his employer; to take from him either of which would be found a palpable breach with a peculiarly attentive attachment to the human species, and such an instantaneous sense of impending danger, that the inactive mind, lulled to an apathy, becomes immediately roused to action in the contemplation. Previous to a confirmation of which, it may be strictly consistent to observe, that being habitually inclined to industrious employment, they are equally serviceable to the soldiers of the coasts from whence they are brought, as are to us the galloways and ponies of our own country.

INSTANCES OF THE INTELLIGENCE OF THE NEWFOUNDLAND.

It would indeed be an endless task to recapitulate the many wonderful stories of the intelligence of this dog, but we shall give two well authenticated instances of his sagacity. The first is selected from Mr. Berwick's History of Quadrupeds; and the second came under our own observation:

Mr. Berwick writes, "During a severe storm in the winter of 1789 a ship belonging to Newcastle was lost near Yarmouth, and a Newfoundland dog alone escaped to shore bringing in his mouth the pocket-book of the captain. He landed amid a number of people, several of whom in vain endeavored to take it from him. The sagacious animal as if sensible of the importance of the charge (which, in all probability, was delivered to him by his perishing master), at length leaped bravely against the breast of a man, who had attracted his notice among the crowd, and delivered the book to him. The dog immediately returned to the place where he had landed, and continued to watch with great attention for everything that came from the wreck seizing them, and endeavoring to bring them to land."

The second instance is even more remarkable, for it demonstrates that the dog has the faculty of calculating time with the greatest accuracy. A friend of the writer, who lived on the Passaic River, owned for many years a superb specimen of the black Newfoundland type. It was the habit of the dog to bathe in the river, during almost all the months of the year, but especially during the heated term. He would then take his dip whenever oppressed by the heat, and when the tide was out would scramble into the covered boat house which was directly in front of his owner's residence, and lie on the wet planking of the floor where it was cool until driven out by the rising of the water. He would then lazily float around to the steps near the dock, and, after shaking the water from his coat, would sedately march off to his kennel which was situated in some thick shrubbery directly behind his master's house, and from where all view of the river was completely shut out. After many years, this noble old fellow became so decrepit that it was with great difficulty he could raise himself on his feet and totter down to the river. In fact, it would take him at least half an hour to traverse the lawn he had once so joyously bounded across in a few seconds. But so well did the dog calculate the falling of the water, and make the time allowance each day for the end of the ebb, that he would never attempt to leave his kennel until he knew that the boat house flooring was bare. He pursued these tactics into a ripe old age, until he one day was found to have followed Mr. Barker's example, "and to have gone out with the tide."

Of the many reasons why the Newfoundland should be utilized at the life saving stations the principal are these:

The service requires that the surfmen shall at certain hours of the day and night patrol the beach, and that their beat shall extend to each side of their station (except where inlets intervene), just half way. As the stations on the Jersey and Long Island coasts are about six miles apart, of course, three miles is the extreme limit of the beat, which is the meeting point of the patrolmen from the two stations. The Service has inaugurated a system of exchange checks, to prevent the patrolmen from shirking their duty; for the temptation to stay warmly housed during the wild weather on the coast is great. It is no child's play to turn out in a December night and face the fury of a northeaster for three miles under the most exposed conditions. And little does any one know, who has not lived on the coast, the hardships the Life Service men have to undergo, if they adhere strictly to the discipline of the Service. For the most part the men appointed for the crews are seamen or those who make their living on the waters of the coast. They are hardy and tough, and no strangers to physical pain, with nerve to face the highest running surf, yet children, many of them, when darkness sets in, and having the very utmost dread of loneliness. Many of these men are full of superstition and silly beliefs, that no mortal man can argue out of them. Living a sedentary life, and listening to the traditional tales of ghosts, sights, and lights upon the shores, there are some that even if they adhere to the strict rules of discipline, are in the very act, so incapacitated by extraneous circumstances for the work at hand, as to be absolutely unfit to be the guardians of the sands. We know whereof we speak, for we have for many months lived near these men, at different sections of the coast. What companion for such men can surpass the noble, courageous dog that knows no fear and is ever on the alert? Should the patrolman be stricken down, he will have by him a friend that will never desert him, who will sound the alarm and call for aid, should his own powerful frame be inadequate to the task to save his master. No human being can compete with the dog in sensing danger from afar; and when the dog discovers its presence, he has a thousand and one ways of giving a timely warning. With eyes that can peer into the very clouds and see objects long before their approach makes them visible to the human eye (for who is it that has used the Newfoundland for a retriever that has not been told by him that fowl were moving long before his own eyes could discern the floating thread—the string of geese?), in foggy weather, when the signal flags and lights may fail, and when the booming of the surf will drown the sound of the signal gun. What messenger can be dispatched to give the alarm and secure aid with as fleet a foot to run the sands and span the water breaks in the beach as the Newfoundland? Then, should the eponivette mortar fail to send its line—for in high winds and in the hands of even the most practical persons it is no sure thing that the line will reach the wreck—the dog can at times be sent off. We have seen many a dog face and clear the surf where no boat hauled by an ordinary crew could live.

It was in the latter part of the last century that the first line ever brought to the shore from a wreck was carried by a Newfoundland. The vessel was one of the many that stranded on the Goodwin sands, on the coast of Kent, in England.

In this country a dog was known to render great service at the wreck of the Huron, in 1877, on the coast of North Carolina. He belonged to a farmer that resided several miles inland, but when the news spread that a vessel was in the breakers, the dog was along with the first that collected on the beach to render the perishing passengers and crew assistance. Since then he has deserted his old home and lives at Station 4. He now accompanies the night patrol leaving that station, and on meeting the patrol from Station 5, joins him, passes the day at the last named station, and returns to Station 4 on the following night. The dog is said to be a great favorite, and more than earns his living by dragging to the beach all the passing drift stuff, besides being useful in a hundred ways.

Should care be taken in training the dogs from their puppyhood, the most reliable coast patrol can be established, and it would not seem unlikely that he might often aid in assisting the revenue officers in scouting out much that was contraband. While being only a sad sea-dog in one sense of the word, he will not have the temptations of Jamaica spirits and seven-up to keep him indoors.

TESTS FOR WATER DOGS.

In England, although the Newfoundland has been for many years greatly admired and his many grand qualities known, it was not until our friend, Mr. Hugh Dalziel, was instrumental in inaugurating water trials in 1876 that the public were shown in a practical way to what extent the dog could be utilized. We have recently received from Mr. Dalziel a copy of his admirable book, "British Dogs," and we cannot do better than quote what that distinguished authority has to say on the subject, but in justice to ourselves, we must say that we conceived the idea of attaching the Newfoundland to our life-saving stations long before we saw the matter agitated in other quarters. Mr. Dalziel writes as follows:

As a water dog the Newfoundland has no equal; he delights in it, will almost live in it, and his high courage and great swimming powers enable him to face and do service in such a sea as I believe no other land animal can successfully encounter.

Knowing and admiring the wonderful faculty he possesses suggested to me, when viewing the sea from the site of Portsmouth Dog Show in 1875, the advisability of instituting water trials as a

means of keeping up and developing this wonderful and useful natural power; that his great abilities as a life-saver might be made the best of for the benefit of man; for it cannot be denied that without such aids public or private shows may do serious harm, giving, as they properly do, prominence to the finest developed animal. But if prize winners, however grand in appearance, are uneducated, their instincts and natural powers undeveloped and indeed checked, are continuously bred from, we shall soon have lost sterling qualities, and get in return mere good looks.

But the two things—fine physical development, with high cultivation of those instincts and natural powers—are not incompatible, and should, I think, be simultaneously encouraged by dog-show promoters, just as the Kennel Club does for pointers and setters by their field trials.

Chiefly at my instigation, water trials of Newfoundlands took place at Malstone Show, May 1876, and were repeated at Portsmouth later in the same year, and, although neither could be pronounced as a brilliant success, they were each of them in many respects interesting, and provided that with more experience and well carried out such competitive trials might become more than interesting—highly useful.

I would be the last to advocate again reducing this or any breed to a beast of burden, but I cannot but think and here repeat what I have so often written, that the Newfoundland's extraordinary natural power as a water dog, his wonderful sagacity and intense desire to retrieve should be systematically developed and utilized, and I can see no reason why one or more trained dogs should not be attached to every life-boat station, and at every popular bathing resort around our coasts.

I must here render praise to Mr. C. Marshall for the excellent rules he drew up for the conduct of the first water-trial of dogs. As a basis for others who may wish to institute similar competitions I append the tests adopted at Malstone:

First.—Courage displayed in jumping into the water from a height to recover an object. The courage of a man is the most suitable thing.

Second.—The quickness displayed in bringing the object ashore.

Third.—Intelligence and speed in bringing a boat to shore. The best must, of course, be swift, and the pointer have a piece of white wood attached to keep it afloat, mark its position, and facilitate the dog's work.

Fourth.—To carry a rope from shore to a boat with a stranger, not the master in it.

Fifth.—Swimming races, to show speed and power against stream or tide.

Sixth.—Diving. A common flag basket, with a stone in the bottom of it to sink it, answers well, as it is white enough to be seen and soft enough to the dog's mouth.

With a brief outline of the life-saving service we close an article which we trust may assist in bringing the Newfoundland as a useful animal into notice.

LIFE-SAVING SERVICE.

There are regular organizations or societies for the preservation of life from shipwrecked vessels in Great Britain, France, Germany and Russia, supported by voluntary contributions, but under the patronage of their respective governments. A few years since a humane society was instituted and is now admirably conducted in China. The first appropriation made by Congress of the United States was of \$5,000 in 1847, and in the next year \$10,000 more was appropriated for providing rockets, coronades and surf-boats, and shortly after the authority of Congress was given for the regular organization of the Life-Saving Service. In 1871 a liberal appropriation of \$200,000 was granted for increasing the number of stations.

A reference to the official register of the Service shows that there are twelve districts which are divided up as follows: District No. 1.—Coasts of Maine and New Hampshire; 7 stations; 6 in Maine and 1 in New Hampshire. District No. 2.—Coasts of Massachusetts, 15 stations. District No. 3.—Coasts of Rhode Island and Long Island, 38 stations; 6 in Rhode Island and 32 in Long Island. District No. 4.—41 stations. District No. 5.—Coasts of Delaware, Maryland and Virginia (Cape Henlopen to Cape Charles), 11 stations; 3 in Delaware; 1 in Maryland and 7 in Eastern Virginia. District No. 6.—Coasts of Virginia and North Carolina (Cape Henry to Cape Fear), 25 stations; 5 in Virginia and 20 in North Carolina. District No. 7.—Eastern coast of Florida, 5 stations. District No. 8.—Coast of Texas, 6 stations. District No. 9.—Coasts of Lake Ontario and Erie, 9 stations. District No. 10.—Coasts of Lake Huron and Superior, 13 stations. District No. 11.—Coast of Lake Michigan, 13 stations. District No. 12.—Pacific coast, 19 stations; making in all 196 stations, but of this number some forty have not been built.

The Service is under the general supervision of an inspector, designated from the list of captains in the Revenue Marine Service by the Secretary of the Treasury. At each station six experienced surfmen are employed under the charge of a competent person known as a keeper. From September 1 to May 1 the beaches are patrolled day and night, and the discovery of a wreck is made known by means of a system of signals (flags by day and colored lights by night). Each station house is provided with boats, and a complete set of life-saving apparatus. We, however, believe that if the Newfoundland is added to the list, a season will not pass without due proof of his usefulness being given.

We respectfully submit the foregoing to all those who have the lives of their fellow creatures at heart.

HARPER'S PERIODICALS.—In the artistic excellence of its illustrations, the worth of its contents and the magnitude of its circulation, Harper's is first of all the popular monthly magazines. The names of the other periodicals of this house have long ago become household words. The *Basar* for the ladies, the *Young People* for the little ones and

the *Weekly* for everybody have achieved a decided success in their respective fields. Americans are confessedly ahead of other nations in the excellence of their illustrated periodicals, and the Harpers somehow manage to keep ahead of other Americans.

THAT LAW ON EATING SALMON.

WE hear on all American rivers, which are now nearly or wholly salmonless, that a law once forbade employers from forcing their apprentices or servants to eat salmon oftener than once or twice a week, as the case may be. This is told as a joke, but was probably intended to preserve those useful persons from gout. A man who can eat salmon twice a week for six months earns, and deserves, either gout or indigestion, and cruel employers were thus prevented from using salmon as a means of punishment for refractory servants. Yet we have no doubt that the law was often violated, and can imagine that irate employers even used the incline known as a sausage stuffer in order to wreak vengeance on their helpless victims. It is as easy to picture the floated employer with the dreaded "stuffer" down the throat of an apprentice, who is on his knees to save his gouty feet, as it is to believe in the passage of this law on all these rivers.

It is quite possible that it originated somewhere, for Bishop Pontopidan mentions some such thing as protecting the serving men of Norway in the 12th century; Johnson speaks of a similar law in Holland; while in English literature it is often referred to. We read in the *Memoirs of Thomas Berwick*:

From about the year 1760 to 1767, when a boy, I was frequently sent by my parents to purchase a salmon from the fishers of the "strive" at Ellingham Ford. At that time I never paid more, and often less, than 13d. per pound (mostly a heavy, gressed weight, about which they were not exact). Before, or perhaps about, this time there had always been an article inserted in every indenture in Newcastle that the apprentice was not to be obliged to eat salmon above twice a week, and the like bargain was made upon hiring ordinary servants.

Kane does not mention it as occurring among the Eskimos, nor do Dall nor Elliott report finding it among the Alaskans, although we fully expected that the researches of Capt. Beardslee would unearth it among the Stwashes.

It is a matter for congratulation to us that these old laws which so interfere with the liberty of the individual have passed away; and we can now have the most perfect liberty in respect to salmon. We shall avail ourselves of this in future and introduce the salmon punishment into this office, and all printers, compositors, proof-readers, and others making errors in this article will be compelled to eat salmon twice a week, no matter if it costs a dollar and a half a pound.

MR. BERGH'S ANTI-PIGION SHOOTING BILL.—Just as we go to press we learn that the Senate has passed the bill prepared by Mr. Henry Bergh prohibiting the trap-shooting of pigeons. The bill awaits Gov. Cornell's signature before becoming a law. Its provisions are:

SECTION 1. Any person who shall keep or use any live pigeon, fowl, or other bird or animal for the purpose of a target, or to be shot at, either for amusement or as a test of skill in marksmanship, and any person who shall shoot at any pigeon, fowl, or other bird or animal, as aforesaid, or be a party to any such shooting of any pigeon, fowl, or other bird or animal; and any person who shall rent any building, shed, room, yard, field, or other premises, or shall suffer or permit the use of any building, shed, room, yard, field, or other premises for the purpose of shooting any pigeon, fowl, or other bird or animal as aforesaid, shall be guilty of a misdemeanor.

SEC. 2. Nothing herein contained shall apply to the shooting of any wild game in its wild state.

The bill is a direct and not wholly unexpected result of the Coney Island pigeon killing transaction of the New York State Association for the Protection of Fish and Game. Had the sport of pigeon shooting been confined to individual clubs of gentlemen testing their skill at the traps, it is doubtful if the matter would ever have received, as it would not have merited, public attention. But when a society, which organized ostensibly for the protection of game, treats the public to such a spectacle as that at Coney Island, neglects the matters with which it should be concerned and devotes 20,000 pigeons brought from their native ground to its wholesale slaughter, its members can hardly look for any other public sentiment than exactly that feeling which has been aroused. An afternoon shot at a few pigeons, and a ten days' shoot at unlimited numbers of helpless birds—many of them squabs, unable to fly, and others too exhausted to do so—are regarded by the public as two very different things.

THE TRAVIS COUNTY ASSOCIATION.—We have received a copy of the constitution of the Travis County Game and Fish Protective Association, of Austin, Texas. There has long been manifest the necessity of some such concerted action as the Association contemplates; and we trust that the members may not be discouraged by the obstacles which an apathetic public sentiment places in their way. The society will make it a special object of their work to secure the best practical protection of game and fish; and will also labor to promote fish culture, to which end they will devote their funds. The list of charter members includes some names which are well known beyond the State, and we respect for the gentlemen thus organized the support of the right-thinking part of their community.

THE HOPED-FOR WASHINGTON BULLETIN.—Bullet out.

BYE-WAYS OF THE NORTHWEST.

FIRST PAPER.

IT is a long time since any letters from my pen have appeared in the FOREST AND STREAM. For quite two years I have been silent, and my name has no doubt passed from the memory of your readers. But I would not have you think that because I have not written to you I have lost one particle of my enthusiasm for that portion of our continent about which, in the past, I have discoursed so fully in your columns. Last summer I was unable to get away from New York for any extended trip, but this year I intend to spend three months in a region a little out of the beaten track of tourists, and I shall report my doings as fully as possible for the benefit of the readers of FOREST AND STREAM.

My proposed excursion has for its objective point Southern Alaska, and is to take in by the way Oregon, Washington Territory and British Columbia. It will include, I hope, a trip over the western lines of the Northern Pacific Railway as far as completed; that is to say, as far as the Spokane River and perhaps beyond to Lake Pond d'Oreille. The region passed through by this line, although so little known to residents of the East, is for a considerable portion of the distance well settled and is a splendid farming district. Oregon and Washington horses, cattle and wheat have long since made their reputation in this Western country, and it is a reputation that will increase rather than diminish.

Of what we shall see in British Columbia and Alaska I can now say but little. It will be my aim to avoid, so far as possible, the settled portions of these countries, and to see those untouched by the finger of civilization. Whatever may come under my observation shall be faithfully recorded in your columns for the benefit of those who may care in the future to follow in my footsteps.

But little need be said of the journey from New York to Chicago. It is always the same—dull and monotonous beyond description. From Chicago westward there is more variety, and the apparent prosperity of the country attracts one's attention. The Chicago and Northwestern Railroad is the shortest line to Omaha, and in my many trips to the Missouri River is the one that I have almost always traveled over. Nothing could be more comfortable than the Pullman sleeping and dining cars with which this road is equipped, and to it one need never fear missing his connections. The amount of traffic on the O. & N. W. this year is surprising, and I was told that the officers of the road were hard pushed to get passenger cars enough to accommodate the purchasers of tickets over this line. At Omaha, which is reached early in the morning, three or four hours are spent, but there is little here to interest the traveler. At the offices of the Union Pacific Railroad, however, are a number of interesting objects gathered from the widely-separated localities reached by the lines which this corporation controls. Gold-bearing quartz from Idaho is shown side by side with the dull silver and lead ores of southern Colorado, and huge antlers from the northern Rocky Mountains are flanked by specimens of grain grown on the banks of the Missouri River.

More and more astonishing each year appears to me the growth of this Western country, and its development is going on with a constantly increasing rapidity. Each year sees the extension of railways into what has hitherto been an unbroken wilderness, and with the railways, *pari passu*, the country thus invaded yields up its treasures, whether mineral, vegetable or animal, in an abundance which astonishes even the most sanguine. The Union Pacific Railroad is now engaged in the construction of a number of lines which are to pierce the mountains in various directions and open up new fields for the tireless energy of the pioneers of business on the frontier. A line which is to furnish them with a waterway to the Pacific, passing through Utah, Idaho and Oregon, has been surveyed and is now in process of construction. This road will start from Granger and will follow the valley of the Snake River for some distance, reaching the Columbia River near the Dalles. The Utah Northern Road is now completed to Dillon, so that the traveler is brought by rail to within one hundred miles of the far-famed Geyser Basins of the Yellowstone National Park.

The Northern Pacific Railroad, too, now being so rapidly pushed toward completion from both ends, is opening up an entirely new section of country, and will furnish an outlet for the vast amounts of precious metals, grain and stock to be produced by the territory through which it passes. The mines of Idaho and Montana, though not so well known as those of Colorado, are said by experts to be not less rich, and a large proportion of their products will seek an outlet over the lines of this corporation. The great valleys of the Madison, Jefferson and Gallatin rivers will send forth millions of bushels of wheat to be added to the millions already grown on the great flats of the Red River bottom; and the rolling plains of Dakota and Montana, on which a few buffalo still linger, will furnish luxuriant grazing for thousands upon thousands of sheep, cattle and horses.

One cannot pass over any of these great highways of travel over the plains without thinking of the hardships and sufferings of those who in the early days performed the same journey under such different circumstances. The miles that now slip by one so easily were then passed over slowly and laboriously. The distance now traversed in a day was then with difficulty accomplished in a month. Dust, fatigue,

cold, heat, hunger, thirst, sickness, danger from hostile Indians are now either unknown, or have sunk to mere annoyances where once they were real hardships, too often real perils. The story of each emigrant train was full of pathos, but, happily for our sympathies, the history of the sufferings of those thousands of patient men, women and children will never be written.

Now we rush out of Omaha at noon upon the fertile valley of the Platte, and just after dark strike the eastern border of the great grazing region of Nebraska. The cattle men of a part of the State are said to have suffered somewhat severely during the past winter, both from the intensity of the cold and from the great snowfall. I was told that on the Loups and on the Fishara the loss of stock had in some herds been as much as seventy per cent, while one poor fellow who in the fall had 160 head of cattle, found in the spring but four.

In some sections the cattle were unable to get at the grass owing to the unprecedented fall of snow and the length of time it lay upon the ground; in others all the water froze solid and the animals died of thirst. Of course, when weakened by the lack of food and drink they were unable to withstand the severe cold, and many thousands must have perished. In Wyoming, along the line of road, the loss was severe. On one little hill, not far from Rock Creek, I counted sixty carcasses, and the number of dead cattle to be seen on the prairie is far in excess of anything that I have ever seen in previous years.

We stopped for a day at Como, Wyoming, at the hospitable ranch of our good friend Mr. Reed, with whom in bygone years I have had many a delightful hunt. A jaunt over the prairies back of Como Bluff was interesting and altogether delightful. We visited the quarry from which have been taken so many bones of the tiny Jurassic mammals, that are a standing puzzle to the paleontologist, and then climbed the bluff and drove out over the prairie which lies between Como and Foote Creek, a tributary of the Medicine Bow River. Antelope were very plenty here and the does were just bringing forth their young—pretty little gray creatures, with very little white upon them at first and with enormously long, stilt-like legs, on which they balance themselves rather awkwardly. Their hair is crimped—almost curly in fact—and they stand at first with all four feet close together. From birth, however, they can run, and that fast, but they are not strong enough to go very far, and may be easily captured. When caught they readily learn to drink milk and are reared without difficulty. As per's they are very interesting, but become so tame as often to be troublesome and annoying. We were lucky enough to capture a couple of these kids, which were added to the two that Mr. Reed already had at the rancho. One of the two that we caught was seen with his mother, who ran off, while the kid hid among the grass. After some little search the small animal was seen crouched flat on the ground and partially hidden by a protecting sage bush. Its large brown eyes were watching every movement of the searchers, and as soon as they whereabouts was discovered all but one of the party withdrew to a little distance, stepping about, however, and talking to attract the animal's attention. While it was watching them very earnestly the remaining man crept up behind and seized it. It cried and struggled hard for a little while, but soon became quiet, and at night drank and submitted to be handled as readily as those which had been caught two weeks before.

While at Como Mr. Reed told me of an experiment that he had recently completed which bears directly upon a question that has been discussed in the columns of FOREST AND STREAM. It has often been asked if the antelope shed their horns annually, as is generally believed by those most familiar with the history of this animal, what becomes of the shed horns, which are not seen on the prairie in any very great numbers. In order to ascertain the length of time that a pair of horns would last when constantly exposed to the weather, Mr. Reed experimented with a pair under the following circumstances: In the early spring of 1879 he killed a buck antelope back of Como Bluff and near a large white rock, which formed a conspicuous feature of the landscape, and could thus be easily found. He split the skull lengthwise and placed one-half on each side of the rock. Visiting the spot in the spring of 1880, he found the points of the horns still hard, though somewhat bleached by the weather; but at the base each horn was much split and showed that it was rapidly going to pieces. In May of the present year he again went to the place and found that all that was left of the horns was a little pile of splinters, looking more like a few black hairs than anything else, and so inconspicuous that they would not have been noticed except by one who was searching for them and who knew just where to look. From this experiment we may conclude that under ordinary circumstances the horns of the antelope do not retain their form more than two years, and it is probable that in the case of shed horns the progress of decay is still more rapid, since the shed sheath is exposed to the disintegrating influence of the atmosphere as well from within as from without.

Our stay at Como was most pleasant and I found it all too short. It was delightful to stroll along the borders of the lakes, to watch the flight of the ducks over the marsh, to feel the cool, invigorating breezes that blow fresh from the snow-capped summits of Elk Mountains, and to recall the many, many pleasant incidents of our stay at this charming spot three years ago. But, as in all pleasant things, the end came;

and with a hearty hand-clasp to Mr. Reed, a promise to stop if possible on our return and a sigh that we must now part, we boarded the cars and were whistled away Westward.
Salt Lake, Utah. Yo.

[Special correspondence of Forest and Stream.]

THE WOODMONT ROD AND GUN CLUB.

WASHINGTON, July 6, 1881.

THE members of the Woodmont Rod and Gun Club, of Washington, D. C., celebrated, with appropriate ceremonies, the opening of their new Club House on the 4th Inst. The club owns some 3,000 acres of land in Washington county, Maryland—only four miles from Berkeley Spring, and fronting a mile on "Dam No. 6"—the finest point for black bass fishing on the Potomac River. The land, with the exception of one hundred acres in cultivation, is covered with a dense growth of timbers, which is now filled with all kinds of game. Deer are numerous, and wild turkeys in the greatest abundance. Pheasants and woodcock abound everywhere, and the whole tract is fast becoming the very paradiso of sportsmen.

A little over one year ago the club erected a fine hunting lodge near the centre of the tract, but there being in the Association more fishermen than hunters, it was determined to erect another Club House, on one of the high bluffs overlooking the broad Potomac, skirted as it is by the Chesapeake and Ohio Canal on the one side, and the Baltimore and Ohio Railroad on the other. This house was completed and occupied for the first time on the 4th instant. Most of the members of the club (limited by the constitution to twenty-five) were present, with a large number of distinguished guests. The following is a correct list of the present membership, viz.: A. H. Evans, President; General R. C. Dray, Vice-President; Thos. Russell, Treasurer; J. B. Church, Secretary; Com. Earl English, Com. R. D. Evans, Major Marcus Bailey, I. M. Tinker, Major Frank Taylor, B. E. I. Eils, W. C. McIntyre, Dr. Wm. Lee, George P. Wood, F. B. McGuire, S. H. Kaufman, Col. Wm. C. Good, Thos. L. Hume, Dr. F. A. Ashford, Levi Woodbury, Paymaster Albert Bacon, R. I. Bright, Dr. Baxter, Senator McPherson, Com. Henry Picking and Mr. Geo. P. Rowell, of New York.

As the company arrived at noon in a special car from Washington, a salute of 21 guns was fired from a howitzer, which made the mountains echo and re-echo for many miles around. The whole party proceeded to the new building, from the tall flag-staff of which was flying the Stars and Stripes. The building stands some two or three hundred feet above a level of the canal, and commands an extensive and magnificent view for miles up and down the river. The dining-hall and club-room are large, fine rooms, beautifully finished and furnished with chandeliers of exquisite patterns. There are ten fine chambers, all handsomely furnished; a "locker-room," with twenty-five lockers; linen-room, store-room, wine-room, halls, stairways, etc. The kitchen and superintendent's quarters are built detached from the club-house, but connected by a covered way. Around three sides of the building there is a twelve-foot covered gallery. Walker, an eminent builder of this city, was the contractor, and the building is a monument to his skill.

At five o'clock dinner was announced, and soon the whole party, with the keenest possible appetites, was seated. The president of the club, in an appropriate speech, greeted the guests with a cordial welcome. The dinner was all that could be desired. The menu, which was printed on heavy white satin, was as follows:

- WOODMONT ROD AND GUN CLUB, July 4, 1881.
Roast Beef, Corned Beef, Baked Ham, Roast Lamb.
Mashed Potatoes, Baked Onions, Peas, Raw Tomatoes, Cold Slaw, Lettuce, Shrimps, Fruits, Nuts, Coffee, Cigars.

The wines were fine and in the greatest abundance, and the whole occasion one of the most enjoyable we have ever known.

The company remained over to breakfast and dinner yesterday, and left again on a special car last evening for this city, where we arrived at 10 P. M., all charmed with our trip to the happy hunting grounds of the Woodmont Club.

SENEX.

THE ANNUAL TOURNAMENT of the National Archery Association is now in progress at Prospect Park, Brooklyn. The meeting is a brilliant one, some eighteen clubs being represented. The sport will continue through to-day.

THE LATEST DELICIOUS provided by some of the New York marketmen are sold by their customers as "prairie-hen eggs." From an examination of one of these eggs submitted to our inspection we believe it to be the egg of the clapper rail. Whether all of them are rail eggs we do not know. This may, or may not, be less of an atrocity than if the lying pretenses of these unscrupulous dealers were true; but it is an atrocity all the same.

IF YOU KNOW OF A GOOD RESORT FOR CAMPING AND SHOOTING when the season opens, report it.

COLD 'POSSUM.

THROUGH the courtesy of the Messrs. Harper and Brothers we to-day supplement our unique 'Possum collation of last week with a cold cut—and most authorities agree that cold 'possum is not to be sneezed at. The accompanying illustration appeared in Harper's Weekly of April 20th, 1881; and it is the one which, as the *casus belli*, I have given rise to such a lively dispute in our columns respecting 'possum hot and 'possum cold.

Now, Mr. Howden's painting, of which this is a drawing, may have been a sketch from life, or it may have been purely an artist's dream; but as either, we submit, the testimony of experts thus far adduced in the FOREST AND STREAM goes to show that there was no occasion for our Arizona friends to criticise the picture. Most of the eminent authorities whose letters were published last week agreed that this rat-tailed delicacy should be broiled before being roasted; and it is evident that stage of the cooking process which Mr. Howden has chosen to depict.

Of the "left over" communications which were received too late for insertion last week, the first describes the 'possum

COOKED IN A CLAY SHELL.

POTSMAN, July 11, 1881.

Some thirty years ago I had business calling me to the plantation of a wealthy farmer, twenty miles south of Petersburg, Va. I went out shooting one or three times, and one day we secured a very large fat 'possum. This I gave to Uncle Jim, who with Aunt Cloi, promised the darkey a roast. Early in the evening I repaired to the scene of the roasting, where a roaring fire had been kindled. The 'possum was roasted, as we do a pig, and the hair all cleaned off nicely; and the animal was carefully drawn and stuffed with lard and crackers. Some clay had been prepared and the 'possum, being wrapped in clean white muslin, was covered all over with about an inch of clay, placed in the coals of the fire and covered up with live coals, and the fire replenished. In about an hour it was pronounced done. When the shell of the clay was cracked open and the 'possum taken out the aroma of the cooked meat was delicious. The house cook selected a good roast which was sent to the house, but was returned with thanks and with a bucket of ginger tea (ginger, molasses and water). The 'possum was now served with roasted potatoes, corn bread and ginger tea; and I then thought it delicious. After the feast Uncle Jim got out his fiddle and with a peculiar instrument called a "jaw bone" the good time wound up with a plantation d. acc.—G. F. W.

FRED MATHER HAS TRIED IT.

The editor of FOREST AND STREAM evidently has more 'possum on the brain than he has had on his stomach; and great was my surprise when he entered my den and asked if I had ever eaten of the individual whose hang-up swell name is *Didelphys virginiana*, but who, in his playful mood, allows foreigners to speak of him as "the Virginia Opposum," with plenty of capital letters, and who, to his friends, must especially his woolly-headed and long-beaked "country-folks," invariably a 'possum. Answering in the affirmative, I was further asked as to an order to write something about it, over my own signature. "But," I protested, "a 'possum is not in the Class Pisces; it's a confounded rat-tailed marsupial mammal, a blasted old platygrade that is of interest to embryologists and deereys, and I don't know much about them; and besides it is not my custom to append my name to what I have to say in FOREST AND STREAM, as the paper has an impersonal character; and—" But he was gone and had not heard half of it. The order was to relate what I knew—that certainly was not a formidable undertaking. So here goes: During the late war I found myself, in the year 1863, promoted from the first Sergeant in Battery I, 7th N. Y., Heavy Artillery, to be a 2d Lieut. in Battery C, of the same Regiment, then stationed at Fort Mifflin, Pennsylvania, some forty miles outside of Gettysburg, D. C., on the Harpers' Ferry road. With a few other young officers I engaged board in the family of the drum major. Now the drum corps of that large regiment numbered twenty-four boys, as full of devilry as boys from fourteen to seventeen years can be when away from the restraints of home, and we held the chicken that failed to roost at night when the 7th N. Y. was "on coonin'." One morning in November while sitting reading a work of humor called "U. S. Army Regulations, to which are appended the Articles of War," the smallest drummer in the corps, named Cook, who was under many obligations to me for certain banjo lessons, asked: "Lieutenant, did you see that 'possum in the box over at the sutler's?" Laying down the book in the midst of a side-splitting article on making returns of ordnance stores, a nod in the affirmative was given.

"They say they are awful good to eat, Lieutenant."
"Who says so?"
"The old colored woman who cooks for your mess."
"Is it w the print and, looking solemn at the young imp, said: "Cook, you are thinking of steaming that 'possum for your mess. It is wrong; the sutler paid a quarter for it and refused to sell it to me for a staff of bread because he said he wanted to send it home to New York. Now, don't you steal it and cut its head off, skin it, and give it to our cook, because if you do, and I find it out, I will buy a dozen cigars and make you smoke yourself sick."
The next day "Aunt Martha," the cook, told me that she had "a nice fat 'possum, but she would freeze him free nights, den bite him for a staff of bread an' hynns and roasts him." She didn't reckon member whar dey catch him, she only know dey dogs got him."

And so a 'possum was got somehow. I don't positively know that young Cook stole the 'possum, but if he d not, it was a singular coincidence that the sutler lost one on the self-same day. "Aunt Mar h" followed her programme to the letter; she froze it three nights—the nasal number—then she roasted it, and stuffed it with bread, chopped onions, sage and perhaps other things, and baked it whole, the head cut off. On the 10th, and a rank, greasy mess it was, although the 'possum-eaters present called it good. It was a melting like 'o'n, bear meat and hog all rolled into one; and as I dislike all grease, I said it might do for those who liked it, but that as for me, a venison, woodcock and prairie chicken were good enough for me, and I didn't aspire to be epic re-enon-h-in' re-h' 'possum.

When we rose for the table the pile of chicken bones by my plate exceeded those of the 'possum, and as we adjourned to the sutler's to open a basket of wine on the strength of

the animal whose hilit it is to be born before his time, we passed through the drummer's quarters where young Cook sat on the edge of his bunk with his jaw, jing:

Ky-arr-e dat 'possum,
Ky-arr-e dat 'possum,
Ky-arr-e dat 'possum,
Ky-arr-e hila to de heart.

FRED MATHER.

We regret that the limitations of cold type preclude a delineation of the break-down with which this innocent-appearing, but susceptible couplet is usually accompanied.

From gastronomy to philology is but a step. Our researches into the culinary lore of the opossum have led us to a discovery—the etymological and philological importance of which our modesty will not allow us to estimate. Every one is familiar with the fact that the Ballaroke tribe of Southwestern Australia derived their name from *Balarock*, a diminutive species of opossum upon which the people of the tribe in former times principally subsisted.

Now in conformity with the harsh customs of that Antipodean land, the manly Ballarokes were prohibited from matrimonial alliances with the fair daughters of the Gwerin-jokes, Knejeuneus and Yungarees. This, of course, led to frequent pow-wows, broils and bloody clubbattles, and when the Ballarokes were worsted in the fray, as was usually the case, their enemies had them captured, keeping time, time, time to the untimely and derisive rhyme:

Yos sinagoo mitr e,
Yos noh' hieud ler,
Nig' kerok' onuh ooh,
Selt' ood of lar.

Now, strange as it may seem, this war song of the Australian savages has been discovered to be current among the Negroes of the South, who, however, like the buffaloes, emerged from the chrysalis, it takes on a more beautiful form, as related by our well-known correspondent, "Chasseur":

WARRENTON, Va., July, 1881.

Editor Forest and Stream: Down on the old Virginia lowlands where I came from, which is the true home of the 'possum, I have hunted and eaten this rat's stepfather a hundred times, and love it better than any dish that I ever set before a king.

The process is simple: Cut his throat; leave him in the front me or two night, then get the hair off by dipping him in hot water with a handful of ashes thrown in; parboil him; then smother in onions, sweet potatoes and a pod of red pepper.

Do we ever eat him cold? Well I never saw a piece of cold 'possum in my life, and the reason is simple: there never was, never is and never shall be enough of hot 'possum "to go round." First, the white folks had their "sheer," then the old mammy "got the uncle, who was master of ceremony, took nearly all the balance, while a score or so of little darkeys watched—grinning with impatience—for the spare bits and bones that the patriarch w'd give them. I never saw even the dish go unlicked—much less half put away to get cold. Cook him in a stove? Not much; not as long as

'Possum up gum tree,
'Coon in de hole;
Nigger ketch um both an'
Selt' for a dollar.

CHASSEUR.

But a truce to levity! Is "playing 'possum" an act of cunning on the part of the animal, or is the condition of seeming insensibility involuntary and of the nature of hypnosis? Mr. George Ronnues contributed to *Adams* some years ago a paper which gives one view of the question and which we reproduce here.

"Sir George Gray: "Travels in Northwest and Western Australia," vol. ii, pp. 225, 230.
"Dittmar: "Progress of Dynamiting Explosives Among the Savage Races," vol. xxi, pp. 291 et seq.

HYPNOTISM.

BY GEORGE ROMANES.

The phenomena of "hypnotism," "mesmerism," or "neuro-biology," have of late years excited so much popular interest—and in a popular perception—that their investigation by a competent man of science will appeal to the sympathies of a wider public than the purely scientific. My object, therefore, in writing the present article is to give a brief review of a monograph on this subject, which has just been published by the well-known physiologist, W. Preyer, of Jena.

In order to eliminate all possible effects of the imagination, Preyer performed his experiments only upon animals, and he begins his paper with an historical sketch of previous investigations of a similarly restricted nature. First we have the "Experimentum mirabile" of the Jesuit Althausius Kircher, published by him in the year 1646. This consists in taking a common fowl, binding its feet together and placing it on a d. or. As soon as it has ceased to walk, a straight line of chalk is drawn from the point of its bill along the floor. If the legs are now untied the fowl makes no endeavor to escape, but remains as it were transfixed and refuses to move even when urged to do so. Preyer observes in passing that the chalk line constitutes no essential part of the conditions, inasmuch as a fowl may be equally well thrown into a state of hypnotism by simply holding the animal for a short time upon the ground so as forcibly to prevent struggling.

After Kircher, no one seems to have investigated the phenomena of hypnotism, or, as Preyer calls it, kataplexy, till the years 1873-78, when some articles on the subject were published by Czermak. The most striking of his experiments were those which he conducted on invertebrate animals—crabs, for instance, being made to lie on their backs motionless, or even to stand upright upon their heads. Czermak endeavored to account for the facts which he described by supposing that in some way or other the act of fixing the eyes upon a certain object, or of gazing into space, caused the animal to become sleepily and stupefied. So vague an explanation could scarcely in any case be

*When we fix our eyes upon a certain object, and then alter their adjustment for some more distant point, so that the eyes endeavor, as it were, to look through the object, there is no doubt that after a time a somewhat sleepy feeling may be produced. Some persons, I find, can perform this action more easily than others, and it may be even performed by a single individual. At least, I have observed that when the action is performed by persons who can do it well the pupils dilate prodigiously,

entitled to rank as a physiological hypothesis, and Preyer showed, in 1873, that the act of gazing had nothing to do with inducing the state of kataplexy, inasmuch as animals fell into it as easily the same state when their optic nerves were divided, or their eyes covered with a hood—provided that their heads were at the same time held in some unnatural position. Preyer's explanation of a theory of this nature, which, as first published, was that the state of fear into which the animal is thrown by being held in some unusual attitude serves to inhibit the power of volition and so of spontaneity—the animal, therefore, when released remaining statue-like in the position in which it was placed. In order to sustain this theory, Preyer pointed to other cases in which the condition of kataplexy—consequently a stupor, the motionless horror which some animals exhibit in the presence of great danger, the fascination of birds by snakes, etc.

The theory as thus stated was very justly criticised by Heubl, who, in 1876, published a paper denouncing his own researches on the subject, and seeking to identify the state of hypnosis with that of ordinary sleep. The effect of this criticism was to make Preyer state his theory with more clearness, and, as we now have it (1878), it seems to be as follows: Any "sudden, strong, unexpected and unusual stimulation of centripetal nerves" produces an emotion of fear, which in turn produces some inhibitory effect on the will, and eventually a state of stupor. It may, I think, still be questioned whether this theory is of very much value, for even granting that "sudden, strong, unexpected" is a phrase which it certainly need not be when the subject of the experiment is a human being—we are not acquainted with any other facts which would lead us to connect the subsequent state of motionless stupor with the preceding state of active fear! But, passing on to the facts, we soon find that an important exception must be taken to the above statement, inasmuch as kataplexy, which hypnosis occurs, for various experiments proved that "sudden, strong, unexpected and unusual stimulation" of any of those "centripetal nerves" which minister to the special senses, so far from inducing a state of hypnosis, instantly aroused an animal which had previously been thrown into that state. So that, in point of fact, as we are afterwards told, we may more correctly state the conditions which produce kataplexy in animals, by saying that "sudden, strong, unexpected and unusual stimulation" of the nerves of tactile sensation." But here I may observe that, so far as the experiments go, there is nothing to prove that special stimulation of even the cutaneous nerves is necessary (indeed, thermal and chemical stimulation of the skin was specifically tried and produced no results); and therefore it seems to me, the possibility is not excluded that the special stimulus in question may really have reference only to the "muscular sense."

At any rate, all these experiments go to prove that kataplexy can only be produced in animals either by suspending them in the air, or by forcibly holding them in some unusual position. Most animals recover their normal state after a few minutes, but frogs which are suspended in the air will not recover till they die. It happens, however, that some kataplexic while they are being swung from wharves to ships, as shown by the fact that they remain passive so long as they are suspended in the air, but again begin to struggle so soon as their feet touch the deck.

Preyer has succeeded in inducing kataplexy various species of toads, newts, frogs, ducks, poultry, peafowl, parrots, guinea-pigs, cats, guinea-pigs, etc.; but has uniformly failed in the case of many other animals. On the whole he concludes that while among sundry species of reptiles; batrachians, birds, rodents and mammals, the phenomena of kataplexy may be more or less easily produced, such is not the case with fish and the more intelligent mammals. Nevertheless, in another part of his memoir he attributes to a state of partial kataplexy the period of motionlessness which is observed in children (or they unexpectedly fall and before they begin to cry. He also states, on the authority of Dr. Genzner, that a squalling child (not a young baby) may often be quieted by laying it upon its stomach or by gently pressing its face with the hand, care being taken in neither case to interfere with the breath.

Our author further maintains that the so-called "shaming instinct" of certain species of animals is altogether in the presence of danger is probably to be attributed to kataplexy. But here, I think, it is difficult to agree with him. That the action in question is not a properly so-called intelligent one no competent person at the present day is likely to dispute; but, for my own part, I cannot see any evidence to show that it is not of the nature of an insincere action, which has been developed in some animals that they should remain motionless, and thus be comparatively inconspicuous in the presence of danger, those individuals which endeavored to escape would be destroyed, while those which ceased to move would survive. Natural selection would, therefore, soon fix the artifice of "shaming dead" as an inherited instinct. To this view Preyer objects that, if we accept it, the origin of the instinct is difficult to explain; while, on the supposition of the action not being instinctive, but purely kataplexic, there is no difficulty to surmount. But to this it may be answered that there is no more difficulty in explaining the origin of the instinct to remain passive in the presence of danger than

and this even when the eyes are fixed upon a bright light, such as the naked flame of a moderator lamp. As the action is completely under the control of the will, it is thus able to observe the only specific of the inhibition by the will of a reflex which under all other circumstances is beyond the control of the will—the pupils dilating or contracting instantly at word of command, and quite irrespective of the stimulus supplied by light.

Indeed, every other experiment which is detailed further on in this connection is a very old authority, viz. that of a man whose power of causing serpents to appear like rods he supposes to have been probably due to the saccharine Icarite having known something about the phenomena of kataplexy. But considering the number, variety, and general character of the will one is thus able to observe, it would seem to be performed, it would surely be desirable to repeat the one in question before accepting the result as a fact of modern physiology.

"DAT 'POSSUM SMELL POWERFUL GOOD."

FROM THE PAINTING BY T. HOVENDEN, IN THE NATIONAL ACADEMY OF DESIGN—COURTESY OF MESSRS. HARPER & BROTHERS.

there is in explaining the origin of any other instinct— that of running away from danger included. Moreover, one of the animals to which Preyer refers, viz., the *Armadillo villosus*, not only remains motionless when alarmed, but rolls itself up into a ball—an action which certainly cannot be explained on the hypothesis of kataplexy. The most, therefore, that can be said for this hypothesis is, that possibly in its first initiation the instinct may have been assisted by the occurrence of kataplexy.

The time during which the kataplectic stupor lasts varies in different species of animals, and also in different individuals of the same species. The maximum duration observed in the case of rabbits was twelve minutes; but fowls and Guinea-pigs continue stupefied for a somewhat longer time. By watching carefully for the first indications of recovery, and by preventing the voluntary movements in which these indications consist, animals may be kept in a state of kataplexy for an indefinite time. Warm-blooded animals do not suffer from such prolonged experiments, but the latter are fatal to frogs. In mammals the most characteristic features of the kataplectic state, besides that of unconscious stupor, are violent tremblings of the extremities, blinking of the eyes, movements of the jaw and pupils, irregularity of the pulse and breathing, pallor of ears in rabbits, occurrence of spasms and convulsions. In recovery the abnormal state passes off suddenly, and the animal bright and brisk as before, and thus, as in so many other respects, the state of kataplexy differs from that of ordinary sleep.

One other point of interest must be noted. Preyer finds that it is impossible to produce the state of kataplexy in any animal that is "newly-born." In the case of guinea-pigs susceptibility to be thrown into this state only begins to show itself during the first week after birth, and then gradually increases through life. The explanation of this fact is explained by the hypothesis that the volitional centres or the centres which are supposed to be affected by kataplexy— require some time after birth to be brought into functional relation with the lower centres.

On the whole, then, it will be seen the facts relating to the hypnosis of animals are much more definite than the theories by which it is sought to explain them; and although we may be prepared to regret that Preyer, that these facts in some way depend on certain unusual stimuli acting in some peculiar manner on some inhibitory centre or centres, we must feel that this statement of the case brings us only to the threshold of an explanation.

The Sportsman Tourist.

TWO WEEKS WITH THE BASS AND PICKEREL.

AT INTERMEDIATE LAKE, ANTIUM CO., MICHIGAN.

BY KINGSFISHER—PART III.

THE sun was well past the noon mark when we headed for camp, with a gentle breeze in our favor.

For two miles or more we tried the "shiners," but as we did not get a run we were glad we had not wasted more time in fishing them.

When opposite Johnson's the wind freshened and was soon blowing half a gale down the lake, curling the waves in and out in the middle to a height of three or four feet and covering the surface of the water with a fleecy foam of white caps.

We kept near the east shore where the water was a little smoother, that in case our boat should broach-to and "pop" we could easily wade or swim ashore and save our tackle. We, however, managed to get a few bass, and one pickerel, and went forging and wallowing ahead at a rate that sometimes nearly buried her bows under water. Our Editor, who is a little timid on rough water—albeit he never did take kindly to it—shut his teeth hard together, and, grasping the sides of the boat with a firm grip, sat stiff as a telegraph pole, all the while keeping his weather eye out for "rollers" that every moment threatened to come in on our stern.

A couple of miles above camp we shot around a point into a little cove sheltered from the wind into quiet water, where we could light a pipe and look out with a feeling of relief from our haven at the foam-capped waves tumbling and roaring out in mid-lake. The Editor so far forgot the squall as to look on a small green frog, one of three or four propped from Brown's bank, and in ten minutes was mixed up in a spasmodic difficulty with a five-pound longface right there in the rushes. He was a game and cunning rascal, working his way around inshore, and then dashing under the boat where we lay in four feet of water. A fit of absent-mindedness on Jim's part came near losing him his fish, as he forgot to let the line run from the reel, and in a flash the tip of the rod followed the fish under the boat. For a time we thought the line or rod would certainly snap, as Jim still refused to surrender his grip on the reel handle; but by the aid of the force of the tackle and a liberal outlay of main strength solely on his part, longface was finally worked back from under the boat, when the Scribe jerked the gaff in his jaw and deftly knocked him on the head.

We lay under the lee of the little headland for over an hour, waiting for the blow to go down, the Scribe meantime taking a couple of large-mouthed bass and Jim another pickerel. I tried the shiners again, but could not stir a fin.

By day for shiners! The wind and sea went down as the afternoon wore on, and starting for the shore around 'till opposite the island, when, as the shadows began to creep out on the water from the west, we crossed over to camp and into quiet water. Johnny had seen us coming when away up the lake, and had a fire started and supper well under way when we arrived. We broiled a pair of bass, and when the Scribe had brewed a pot of coffee that would carry a quart to the "Old Crow," we sat down to supper with appetites well sharpened by the pure air and the fourteen miles' work at the oars.

It is astonishing how an appetite will develop and hang around one when camped out in the woods, and the quantity of groceries and provisions, fish and game hid away seems to be limited only by the capacity of a party for storage.

Our Johnny was always hungry and ready to tackle a square meal on the spot, and after watching him manipulate his knife and fork for three-quarters of an hour without missing a stroke, we concluded he was hollow from "eud to eud." But he was a growing youth, modest and cautious, and never ate more than he could hold. From a force of habit rather than for warmth we lingered around the fire till it went out, talking over the incidents of the day's trip and planning a day's trouting up Cedar River.

We awoke late next morning and stepped out of the tent into a fog so dense it could almost be felt. Everything outside a radius of ten yards was completely hidden in a white fog of mist, and the only signs or sounds of life were a few bird notes drifting from the top of the tent. The measured snore of the camp boy in the next tent. Over near the water, in some low bushes, a dozen or more swamp blackbirds were making the air vocal with a morning roar, and a half dozen of our little brown friends that came around the table every day for the crumbs thrown to them were twittering and peeping from a low tree near the kitchen. It was a beautiful, but, if breakfast would soon be over, while overhanging the water, and a small colony of restless, inquisitive blue-jays fitted and hopped and peered furiously at us through the mist and the dripping foliage, scolding and jeering at us and calling us a score of unpronounceable names in the jay language for being so late astir.

The tents and fly were wet and shrunken till the guys were taut as drum-cord's; each branch and twig was covered with a thin film of moisture, and a touch of a bush brought down a shower of glittering drops like a rain. The air was cold and raw, and Jim and I proceeded to construct a roasting fire, over which we hung the coffee-pot, while our hollow youth sonorously and peacefully snored.

About eight o'clock the warm rays of the sun lifted the fog, giving us a glimpse of the opposite shore, and in half an hour more we were on our way to the lake in search of the "bull bass." I used up the forenoon fishing along the west shore two miles or more above camp; total result, one little bass a trifle longer than the frog I baited with. I dropped him back into the lake with a piece of good advice to grow up with—emulate our camp boy, and never tackle anything to eat that he couldn't get away with.

When we drifted back to the island about 1 P. M. for lunch, I told my carefully prepared story about the little bass to the boys, and was greeted by the scoffers with what smacked of undue levity for so small a fish (story). They were jubilant over a fine string of lake bass, and three or four pickerel in the bottom of the boat had evidently found the fishing editor when they called. But I had my mouth full in the afternoon. I fished the east side above the mouth of the little stream, and on comparing notes at camp in the evening, I scored one over the boys with a single fathead black bass that stopped the scale at six pounds eight ounces—a glorious game fish that tried the temper of my little rod a dozen times till my heart was in my throat, and gave up the fight only when rednecked to the last feeble "wiggle" of his broad tail.

The handling of that bass in thirty or forty feet of clear water—no rocks or snags for him to whip around and break away—approached as near to pure delight as is usually vouchsafed a follower of the guttie lizard in a lifetime, and I was in a very serene frame of mind over it the rest of the evening. Eight other bass from three to four and a half pounds each, and three longfaces made up an afternoon's sport not soon to be forgotten. The boys had taken more fish than I, but none the peer of old "mosk" back at the head of my string.

Sitting around the fire in the cool night air, between puffs of smoke, the incidents of the day were related and battles with fierce pickerel and cunning bass fought over again, which lost nothing in the retelling. There, off the little round island above the camp, Jim had a masterful fight with a four-pound fish, the largest one he had ever taken, and which he vowed over a night chum he would eat, and the whole crew, with exception of "Some hope for him yet" muttered the Scribe. A little further up the Scribe took five heavy bass in working over a hundred yards of water.

Off "pickerel point" the writer struck a mighty longface, and after an evenly balanced fight of half an hour, the line flew back and fell with the remains of a badly-frayed fly, and the fish was left as a reminder of the meanness of pickerel in general.

The Scribe changed his crossed legs, shoved a fresh shell in his pipe and remarked that "it was natural and proper, as fish stories go, for one to always lose his biggest fish; he had frequently done so himself, but as to the 'enormousness' of my pickerel, he had only my unsupported word, and he would have to put it down as another one on my old score of 'appeters'; and so on till the fire went down and the pipes out.

The scene was so quiet and restful that we sat around the dying embers till the candle burned low in the old bayonet candle-stick in the tent, the deep silence of the night being only broken by the splash of a fish or muskrat off shore, and the occasional wail, lonely cry of a loon far up the lake. The soft beams of the early moon spread a silver sheen over the placid waters, but out on the east shore, and crept in hazy lines through the misty shadows in the foliage overhead. "Camp talk" lagged, and stopped, and each sat buried in his own thoughts till the spell was broken when the candle burned down into its socket in the old bayonet and dropped through, warning us that it was time to be in bed and in dreamland.

Next day the boys fished below, in the pocket, while I went up the lake above, as usual, and had a quiet, dreamy day to myself. Floating or pinning for an hour along the margin of the rushes and lily-pads in the blue haze, feasting the eye on the scarcely ruffled lake and the green shores, the angler may dream away the hours, all too short, of a long summer day and wish the hard realities of life were fewer, and their angles a trifle less angular. If the fish are a little "off feed," he may set his rod, lie back in his boat, and draw comfort from the happy thought of him for an angler, pure and simple, is, in the eternal fitness of things, a lover of Nature, and sees beauty and harmony in all her creatures and belongings. From a pleasant reverie he is suddenly aroused by the clack chatter of a kingfisher as he winds up his reel, with the sharp click, and slips slowly away from his perch on a dead branch overhanging the water. Balancing himself on a projecting limb a few yards further away, he resumes his solitary watch for the snail-fish, but he never gets discouraged. "Better luck next time," is a bit of philosophy drilled into him from the time he first peeps from his shell. Verily, the lines of the kingfisher are not always cast in pleasant places.

The silent man in the boat may follow up with his eye, yonder two little V shaped waters to their point of divergence and catch a glimpse of the brown head of a "musquish"

with a mussel in his mouth, as he disappears behind a branch of spruce dipping into the water, and if he keeps quiet a minute, he will see him crawl out on you gnarled root at the edge of the water and open his prize. Yonder, dressed in his summer suit of dark brown, skulks a mink along the shore, his mouth no doubt watering for the mess of frogs he appears to be in search of.

The muskrat finished his mussel and slid into the water in quest of another, and I was on the point of taking the oars, when out from the bulrushes a few yards ahead of the boat emerged a beautiful summer duck, and swimming closely after I counted nine little baby ducks not larger than waltzing, and looking like little balls of mottled brown fur.

They had apparently not been hatched, but a stroke of the oars alarmed them, and at a low "quack" from the mother, they huddled closely together and paddled vigorously up the lake, she following between them and the boat, directing and encouraging them from time to time by a motherly "quack-quack!" A few more strokes placed her between them and the rushes, when a word from the mother headed them out into the lake, and I watched them bobbing up and down on the tiny waves till they disappeared, mother and little ones, behind a long point on the opposite shore. It is not likely that the mother raised her whole brood, as, no doubt, one or more of them found their way into the hungry bowels of a sneaking pickerel, or fell victims to some prowling mink or "sly old coon." I saw them a day or two afterward, some distance away, but they slipped thru the rushes and hid before I could get near enough to count them.

The whimper of a little stream flowing into the lake to the left was a welcome sound, as I was hot and thirsty, and cramped from sitting so long in the boat, and guided by the sound of the rippling water—for the mouth of the stream was completely hidden from view—I forced the boat half its length through a dense growth of overhanging bushes, and arriving at the mouth of the stream, I stepped on a footing on the shore. Inside the wall of bushes, as far as the eye could penetrate the shadows, the low, spongy ground was strewn here and there with fallen tree trunks, dead, moldering and moss-covered. The woods were damp and chilly, and, coming in from the bright lake, they looked dark and gloomy, the thick branches overhead allowing never a ray of sunlight to gladden the face of the little tinkling brook that flowed with its sparkling current through the bushes. The water, when it splashed and spluttered over a cedar log into a little pool, cold, and clear as crystal, I dipped up and drank a tin cup of the water and felt refreshed, but the gloom and dead stillness of the scene so oppressed me that I pushed the boat out from under the bushes, glad when I was once more back on the laughing lake and into the warmth of the welcome sunshine. It took an hour and an exciting fight with a forty-pound bass to warm my blood and get it back into healthy circulation again.

I fished, and floated, and idled away the afternoon, now and then adding a bass or longface to the string on either side of the boat till, ere I was aware of it, the sun was below the trees, and soft wavy lines of mist began to creep along the shore, and assume strange, fantastic shapes as they whirled and twisted their way through the bushes. The shadows on the lake, from out the deepening shadows, came the prolonged, plaintive cry of a loon, the embodiment of utter loneliness; and from a huge nest of dry sticks in the top of a dead cedar back in the swamp, a half-mile below, the shrill cries of the young eagles clamoring for their supper warned me that night was falling and it was time to turn the bow of my boat seaward.

As I swung around in the gathering gloom, the stillness was further broken by the profound bass *too-oo-oo* of a great owl away back in the hills, which was directly answered by the mellow tenor of another across the lake. Back again from the hills came the response of another, different in tone, and far up the lake still another took up the strain. For a moment or more the conversation has kept up by the muskrat and the two owls, and I, as a bystander, probably seeking the rendezvous agreed upon during their talk, were plans for a night foray on the neighboring hen roosts would be matured, and each robber assigned to his particular territory.

Passing close by Long Point, I was misled nearly off the seat, and each individual hair straightened in a combined effort to catch the fish that had just slipped from the net, and, scowling under the very bows of the boat—for an instant my heart stood still, and each hair felt as if it was an electric needle thrust into the scalp, but by the time the cry was half uttered I knew it was a loon, although I could not see it in the shadows and increasing darkness.

Once sure that the cry proceeded from nothing more than a loon, the hair went down and the heart resumed its wonted functions, but the sudden shock drove the "owl quartette" out of mind and brought me to a realizing sense of my whereabouts.

The gleam of the camp fire a mile down the lake meant supper and rest for my cramped legs, and lifting the two heavy strings of fish into the boat to save the drag, a long, steady stroke soon brought me abreast of the island. "Boat anchor," she called, and I, from the camp, cast the anchor. "The loon fisherman," brought the boys to the landing with a lighted lantern, to see my fish and help put them away. They had been in camp since before sundown, and had eaten supper, satisfied that "Old Hickory" would turn up all right in due season.

A cup of hot coffee and a beautiful supper took the kinks out of my legs and added a cheerful glow to the fire that softened the shadows in the surrounding bushes, and put new life into the monotonous *creak-creak* of a solitary pickerel that had taken up quarters in the commissary tent.

The frequent and fragmentary remarks of the Editor to the "sneakers" were soon lost in the recital of the adventures of the day. The boys had spent a most enjoyable day below, and had brought in a fine string of fish, but, as usual, had no time to show them from the camp, as the muskrat was on the island; a lovely bass of such extraordinary size that he declared my 100-pounder might have easily hidden under one of his pectoral fins. Jim here chipped in with a batch of elaborately prepared testimony to sustain the Scribe, and I was silenced and overwhelmed, and gave up the unequal contest.

As for myself, I had passed a pleasant, happy day, fishing, idling, and dreaming; a day that leaves pleasant memories to come after a day with Nature in one of her best moods, listening to her many voices and quaint sermons, and I felt that I was better for it all.

Of a truth, the subtle influences, the wonders and mysteries of the woods and the waters are beyond our ken.

TO BE OBTAINED.

IF YOU KNOW OF A GOOD REPORT FOR CAMPS AND SHOOTING when the season opens, resort to it for the benefit of others.

Natural History.

SKUNKS AND HYDROPHOBIA.

FOR SUMMER READING by a copy of Van Dyke's "Rife, Rod and Gun in California," price \$1.50, postpaid. For sale at this office.

LOUGER GROVE, Lewis Co., N. Y., July 2. NEVER since the Reverend Horace C. Hovey, M. A., took it upon himself to uttoly the civilized world (through the medium of the American Journal of Science and Arts for May 1874, pp. 477-53) of the terrible consequences attending the contact of our common skunk (Mephitis mephitis) the columns of your valuable paper, together with those of various other publications, have been much of the time pregnant with more or less extended remarks upon the subject.

The Rev. Mr. Hovey announced that the bite of the skunk is usually fatal and produces in the human subject a peculiar kind of hydrophobia, which he named Rabies mephitica. To the New York Medical Record for March 13, 1876, Dr. John S. Janeway, U. S. A., proves that the disease is no thing more nor less than ordinary hydrophobia as derived from the dog, cat, or other rabid animal.

Dr. Elliott Coues deems the subject of sufficient importance to reproduce both articles (Rev. Hovey's and Dr. Janeway's), but unfortunately without comment, in this most admirable and valuable monograph of our "Fur-bearing Animals" (pp. 223-35).

Dr. Janeway states that the disease "is evidently epidemic, no cases of it having been reported previous to 1870 in this region," which is unquestionably true.

Now it strikes me that there is a good deal of first-class "poppycock" in the Rev. Mr. Hovey's article and in most of the contributions that have appeared since.

Let us take a rational view of the case, and glance, for a moment, at the history of an average outbreak of hydrophobia. Here is a rabid dog. Before succumbing to the disease, or to the hand of man, he has probably bitten at least one or two children, or other human beings, and others, and so on, till the community becomes aroused; and scarcely enough of these animals are left to propagate their kind.

Now, suppose a "mad dog" should, in his wild delirium, chance to run across and bite a skunk, and in a region where skunks happened to abound, would not the natural result be that this skunk would bite others and so communicate the disease to them, and others still, and so on till most of the skunks of that neighborhood were killed? During a certain stage of the disease, should any of these hydrophobic skunks, by any accident, fall in with a man sleeping on the ground, that man would certainly be very liable to be bitten, and if bitten to die of this terrible malady. Exactly such a state of things, apparently, came to the notice of Mr. Hovey, who published the facts in the American Journal of Science and Arts, as above stated. But instead of confining his remarks to a simple, truthful narration of facts, he indulges in the widest speculations and empty theories concerning the fatal nature of skunk bites in the abstract.

To suggest, as does the Rev. Hovey, that the bite of a healthy skunk as followed by hydrophobia is, to speak mildly, the height of irrational nonsense. Equally insane is his idea that skunks, in the normal state, are aggressive animals and habitually bite those persons whom they find sleeping upon the ground. Indeed nothing could be more contrary to the known habits and disposition of those beautiful and useful little animals.

As to the effect of skunk bites in general I will only state my experience. Twelve or fifteen years ago, when hunting and trapping skunks, I was twice bitten by adult animals and never suffered therefrom more than from equally severe bites from any of our common mammals. About the same time, Dr. C. L. Biggs was also bitten, but nevertheless he still kept on practicing medicine in Hartford and City. Last summer I was again bitten by a skunk—this time by a half-grown one that I had alive for several months—and have as yet experienced no evil consequences from the bite. Our dogs have many times been bitten by skunks and were never seriously injured thereby.

These remarks are called forth at this time by a card of inquiry published by Dr. Howard Jones in your last issue (July 1, 1881). In the same issue the reviewer (signature "F. U. R.") expresses surprise at finding the reviewer of a skunk that had been killed by a fox. Now it is a well-known fact that foxes and great-horned owls are the common enemies of skunks, and devour them annually in large numbers. I once had two tame skunks killed in one night by a tame fox.

C. HART MERRIAM, M. D.

THE STROKE OF THE RATLESNAKE.

THE fact that poisonous serpents strike with the fangs, which are only found in the upper jaw, into the objects of their attack instead of biting them is not generally known by the student of the snake's structure and habits. The lower jaw is used in seizing food only, and plays no part in defence. The curved fangs are strongly thrown forward in the segment of a circle of which the portion of the animal resting on the ground is the centre. The force of this stroke is given with all the power of the muscular system of an exceedingly muscular organization; its force is realized only by those who have felt it. We once placed a foot on the head of a small prairie rattlesnake in Kansas and a friend took hold of its tail and cut its head off with his pocket knife. The body was no sooner released from the head than, with a quickness only equalled by the traditional "flash," it struck his hand with the stump hard enough to bruise it so as to be useless for a week or more.

This has been called to mind by the following letter to Prof. Baird from Mr. Stone, of the United States Fish Commission, in charge of the Bismarck and the Pacific Coast. He writes from Baird, Cal., June 23:

"One of my young men had a narrow escape from a terrible death last week. He was walking down the trout pond ditch (ditch), when he was suddenly struck by a rattlesnake on the side of the leg, about half way between the hip and the knee. Fortunately, he had on long rubber boots, fitting rather loosely. The snake's fangs pierced the rubber entirely through, and one of them tore a slit half an inch long in the boot, so that the fangs did not reach the flesh, and the man escaped unhurt. The snake lung a moment by his fangs, and the man had to slink him off. He says the blow was so hard that he thought some one had struck him with a rock. The man was Mr. Loren Green, who works at the trout ponds. It was such an extraordinary escape that I thought you would perhaps like to have me write you about it.

LIVINGSTON STONE, JR.

TWO TAMED COOTS.

BARDSTOWN, Ky., July 3, 1881.

LAST fall I recorded in FOREST AND STREAM, p. 307, Vol. XV., the capture of two coots (Fulica americana), and seeing in your last issue (No. 23) the letter of G. R. Hardenberg in regard to two captive sora rals, it suggested to me that a few facts about my pair might prove interesting.

They occupied the whole of the winter and the summer months, subsisting almost entirely upon corn-bread, and became so tame that when the person who fed them entered the room they would run eagerly to him, and one of them would feed in a large cage, which was placed in the yard. There they remained perfectly contented in their confined quarters for about a week, when the door was carelessly left open and they escaped. They made no attempt to fly or run off, and wandered around the yard feeding all day, and at night returned of their own accord to the cage.

Ever since then they have had unlimited freedom and are as tame as chickens, coming when called and being on the best terms with all of the other domestic animals, except a riotous Chesapeake Bay puppy and a pair of quarrelsome Pekin ducks. The former, with youthful precipitation, supposed that the birds were legitimate objects of pursuit and retrieved one of them in five seconds shortly after they were liberated, and came very near killing. Since then I judge the puppy has been made to understand better and never molest them now; but they still eye her with suspicion and always give her a wide berth, while they are utterly indifferent to the near presence of the other dogs. Every day they have two or three difficulties with the ducks over the pan of water in which they bathe, the ducks generally, but not always, giving the bird the best of it, in which case the coots march off to a spring branch about 300 yards distant, where they perform their abominations undisturbed and then return.

They have thus far evinced no desire to breed, hence I infer that they are both of the same sex, whether male or female I cannot tell.

C. W. BROWN.

GREAT CAROLINA WREN.—I have the pleasure of recording the capture of a pair of great Carolina wrens (Troglodytes ludovicianus), on June 11, 1881, at Greenville, Hudson county, New Jersey, within four miles of the City of New York. While collecting that day in an old woods in which was considerable undergrowth, I noticed what was to me a new bird in the woods—small, clear, and sweet. For the purpose of becoming better acquainted with the stranger, I turned my footsteps toward him but found a small between us. To find a bridge I had to make a detour of some distance, but during all the time I had the same loud, clear voice to guide me to the little rocky glade in which I had the pleasure of meeting my first "great Carolina wren."

Carefully approaching the first I saw the little brown scapular in the small sapling. He appeared to me to glide and alighting on the trunk of a small tree, began to inspect it after the manner of the brown creeper (Certhia familiaris). Wishing to have "a bird in the hand" I shot, but only wounded, and while killing it, it uttered a few cries which brought the female near us, when she also was secured. The ova in the female were about the size of dust shot. It is closed to see any prospect for a viable summer brood yet, but were only secured for a winter summer home.

WM. DREIZEL, New York City.

TREE-CLIMBING SNAKES.—Bingham's Corners, N. Y.—Mr. Mortou Butler, being out in the woods hunting near by a tree in which a neighbor of his had fanned a swarm of bees early in the spring, thought he would take a look at it. On approaching the tree, which was a large oak, and seeing that it closed to see any prospect for a viable summer brood, he observed something on a large branch, some thirty or forty feet from the ground, that had life, but it did not look much like bees. Waiting a few moments, he saw it move quite distinctly, and he took deliberate aim at the branch and fired, when down came a monster black snake, ten feet in length, crippled by the shot. It was quickly dispatched with a club. Whether the snake climbed the oak direct, or went up a small sapling thence to the branches of the oak, is a matter of conjecture.

It is well known that black snakes are extremely expert at climbing trees.

CHIMNEY SWALLOWS.—STANLEY, N. J., July 4.—The other day while out collecting birds, I noticed some chimney swallows flying through a decayed elm tree. Very little while one of them would strike a branch as though they were gathering material for their nests. As I have never seen them light on the ground or on a tree, I think they gather the twigs which compose the nest while flying. This habit may be known to many but I have never read or heard of it. I secured a nest in a chimney. It was built in the following manner: A small platform of twigs stuck together with a glutinous substance, was built out from the chimney. Around the edge of the platform the twigs were built so as to form a small hollow. In this there were four white eggs. The nest was very strongly attached to the chimney with the same substance that held the twigs together. This material resembled glue. The young birds far to be very good this season. I have seen a brood of thirteen young warblers. Quail are whistling in the fields, and rabbits are very abundant.

HARRY DE B. PAGE.

[The "glue used in the construction of the chimney swallows' nest is secreted in glands, situated one on each side of the bird's head, and exuded with the saliva.—Ed.]

AN OLD AMERICAN ROBIN.—For eight years my albino robin has annually returned to its young in a nest just under the eaves of the piazza attached to the residence of Dr. James L. Tyson, Penlyn, Montgomery County. It is believed that for several years it hatched its eggs in the same nest, but this season it set out another position and raised a brood of four. It is not often that a robin has an opportunity to locate for so long a period in the same position, as it is hunted quite as much in the South, where it usually remains in winter, as it is in the North, and it is probable that at this season it has long escaped the gun, as its white feathers make it a more conspicuous object than the less attractive plumage of its companions. In Germantown and the surrounding country, robins are quite as numerous this season as they usually are, and at evening and in the early morning their melodious song is heard on all sides.—Germantown Telegraph.

When the brain is wearied, the nerves unstrung, the muscles weak, use Hop Bitters.

Game Bag and Gun.

NEW YORK OPEN SEASONS.

Quack.—From Nov. 1 to Jan. 1. No shooting in Montgomery, Schoharie, Warren and Albany counties. 1881. Woodcock.—Sept. 1 to Jan. 1. The Oneida and Herkimer counties, Sept. 1 to Jan. 1. Wild Duck, Wild Goose (brant).—Sept. 1 to May 1. In Long Island waters, Oct. 1 to May 1. Ruffed Grouse (partridge).—Sept. 1 to Jan. 1. Partridge (quail) (chickadee).—Oct. 1 to Jan. 1. Robin, Meadow Lark (Sparrow).—Oct. 1 to Jan. 1. Rabbit (hare).—Nov. 1 to Feb. 1. Stag, Wild Deer. 1. Hunting with dogs, Aug. 15 to Nov. 1; with all at times in St. Lawrence county. Moose.—Killing prohibited at all times.

THE QUEER CUSTOMS OF DARE.

THE SHOR DWELLERS OF NORTH CAROLINA.

WE have a letter from Dare county, North Carolina, which will show you just into type. Meanwhile here are some pen-pictures of the Dare folks and their ways from a letter in the Raleigh, N. C., News. Many of the readers of the FOREST AND STREAM will recognize the truthfulness of the sketch:

The people of this region are of an amphibious nature, and live so much on and in the water that most of them, I am sure, are web-footed. They live mainly on fish, clams, oysters, crabs, terrapins and wild fowl. When they leave home they go in a boat, and whether they go to court or go courting, or to trade, or to mill, or to a funeral, they always go by sail. Their corn mills are run by sails, and some of them pump their water with windmills. They don't go up stairs, but "go aloft," and when they go to bed they "turn in" when they are ill they are "under the weather," and when in robust health they say they are "bung up and blue free." They speak of a trim built sweetheart as "clipper hull." If she is a little stout they say she is "broad in the beam," or she is "wide across the transom." Many of them have ships' cabin doors in their houses that slide on grooves, and to their buildings they give a coating of tar instead of painting them. The "old woman" blows a conch shell when dinner is ready, and they measure time by "bells." Their houses are not made of lumber, but of mud and sticks. They chew black pig-tail tobacco, and drink a wild tea called "yeopon." They manure their land with sea grass, and bury their yam potatoes in the sand hills. When they want the doctor they hang a red flag against a hill side as a signal of distress. If he don't come, because the "wind ain't fair," they take a dram of whisky and copra, soak their (web) feet in sea water, "turn in" and trust to luck. If they die they will be buried on the top of a sandridge, and when they see several sail boats on the water in procession, with a flag at half-mast, you are looking at a funeral.

They ornament their houses with whales' ribs and jaws, sharks' teeth, swordfish snouts, devilfish skins, sawfish swords (six feet long), miniature shops, camphor wood chests, Honduras gourds, spy-glasses, South American lantanas, war clubs from the Mozambique Islands, Turkish pipes, West India sticils, sandal-wood boxes, Chinese chessmen, Japanese faces, Madagascan idols, Australian boomerangs, and other strange, outlandish things, instead of having in their parlor a few Boston chromos, a family tree, a certificate of membership in some lodge, a photograph or poetry album, bound volume of Godley's Bird Book, bust of Henry Ward Beecher, or some other great and good man, like Christian people have where "I was raised." Outside of their houses and about the yard you will find ships' blocks, dead-eyes, anchors, chain cables, ships' launch heads and names on gilded screws, ten foot iron shells, iron hoops, chain grabs, oyster lugs, screws, etc. blue fish tackling, duck batteries, stool-geese by the woods, deuce ducks, imitation brant and pans for fire-lighting game; live decoy geese will honk at you, if you are a stranger, and tame swans will take a nip out of the fleshy part of your leg in a playful way, while a pet fawn is chewing your handkerchief.

Their hogs are raised on clams, mussels, o'fall of fish and garbage, and their cattle warf on the shoals for rales, where the water covers their backs, to feed on sea grass, and if they are carried up-country and fed on corn and fodder they will not live. Every man is captain of some kind of a boat, and "she" is always better than any other boat in some way. "She is hard to beat in a gale of wind," or "before the wind" or "beating to windward," or "with the wind on the beam," or "she can sail closer to the wind," or "will carry sail longer," or is "stronger," or "drier," or "bigger," or "she is a big little boat," or "drains the least water," or "she's less ballast," or "she is the newest," or "has the best timbers," or "steers the best," or "she is a lucky boat," or "stands up better," or "needs less sail than any other boat," or "she is best for fishing," etc. Perhaps "she comes about better than any other boat." She is bound to have something about her better than any other boat. One "captain" will claim that "she" has the best set of sails in Dare, and another that "she rows castest." The other day I hired a "captain" to put me in the sloop "Wave," out in the Sound. His "coonal" was a very old, patched up concern—the worst I had ever seen. She leaked like a basket, and he had to keep the building good busy to keep her from filling. I was curious to know what claims he could put in for his craft, so he drifted slowly over the sound, with all sails set, and before a fair wind he informed me that she "was not overly fast, but 'twant' every one could beat her," but "she was the best one man boat in Dare," and could "hear about sail herself." The crew of a "coonal" usually consists of a man at the helm (the "captain") and boy before the mast. We reached the "Wave" and left the "one man boat" and went aboard with my traps, and the "captain" called out to "come to the hoist," and with his part to the hoist, "Here we go," and he said when the boat was after him, he started for Nags' Head pier. But a law struck him just as he swung clear, his sail jibed, and knocked him overboard, and the next moment "she" was "sailing herself," and her captain was towing behind, with a tight grip on the main sheet. I called to the crew of the "Wave" to go to his assistance, but they laughed and said, "Uncle Billy was all right," and sure enough he presently pulled himself up to the "boat," clucked in, shook himself, waved his hand and went off drifting to windward.

The "Wave" is what is called a "whellbarrow." She has a wheel at the stern as big as a mountain mill wheel, and she is built for going in shallow water. In Currituck Sound and Kitty Hawk Bay the grass that the wild fowl feed on is so thick that a propeller cannot be used on account of its clogging the wheel. The "Wave" only draws about eighteen

inches of water and is well adapted for the business she is engaged in.

As we got abreast of the Narrows near Van Slyck's, abreast of Rattlesnake Island (a famous place for canvas backs in the season), a heavy fog came down and the captain of the "Wave" found great difficulty in keeping in the channel. He had to take soundings with a pole. Presently we grounded bark and fas. The engineer "went back on ter," but she did not move. All hands aid the cook tried pushing with poles without result, and the deck hand said he "reckoned we were that ill the tide riz."

As we got abreast of the Narrows near Van Slyck's, abreast of Rattlesnake Island (a famous place for canvas backs in the season), a heavy fog came down and the captain of the "Wave" found great difficulty in keeping in the channel. He had to take soundings with a pole. Presently we grounded bark and fas. The engineer "went back on ter," but she did not move. All hands aid the cook tried pushing with poles without result, and the deck hand said he "reckoned we were that ill the tide riz."

Nature has provided for these people that they don't find it necessary to do much for themselves, and many of them are disposed to take life easy. I have noticed that their hands and feet are smaller than those of Western people, who follow the plow and earn their bread by the sweat of their brow.

One r.ason I had for coming down here was to gratify my fondness for fish. We catch a few brook trout in the mountain streams, but I have not time and shy, and by the way, there are plenty of time and cat eave and are expert anglers can see a "mess." But here the waters are full of fish and the names alone of all the various kinds that are caught with the greatest ease would fill a column of your paper.

If you know of a good resort for camping and shooting when the season opens, report it for the benefit of others.

HOW TO TEST GUNS.

HINTS ON PATTERNS AND PENETRATION TRIALS.

Editor Forest and Stream:

Every few weeks in the different sporting papers appears an account of some person's gun trial, either of a number of guns by different makers, or else a test of some particular way of leading with various kinds of powder and shot.

Now, nearly all of these are conducted without any method, or even a kind of method, and the results are mostly of the kind that would lead to a false conclusion. For instance, some one borrows a dozen guns from his friends, loads them all with the same charge regardless of weight or calibre, and then thinks the gun that shoots the most shot in a given space, or through more sheets of paper than the others, is the best.

There is scarcely anything liable to be more false than this, and the most diametrically opposite results may be produced by after-ward loading each gun according to its calibre and amount of choke; then taking the percentage of shot in the pattern, and that of the penetration by the load of powder used in the cartridge, and we can at once distinguish accurately the respective shooting qualities of each gun.

As an aid to those who wish to make private tests of their guns, I will give a few hints in order to let them do it properly.

The pattern is the most important thing, and when the guns are tested in the open air a sheet of paper four feet square at forty yards should receive the charge, and a thirty inch selected circle marked out on it after every shot. A stationary y circle marked on the paper before it is shot at, is only good for trials held in a long shed or building, where no wind and draughts of air can deflect the loads from striking exactly in the ring.

As a suitable instance of how necessary the selected circle is in open air trials, was shown in one superintended by a Western newspaper about a year and a half ago. A strong breeze blew directly across the firing point, and the pattern in the stationary ring was most irregular, sometimes, with the same load, only one-third as much shot would be found in the target as at other times, and the penetration also suffered from the poor pattern, as they were outside pellets of the charge and had not as much velocity as the more central ones. The whole results of this long, tedious trial were so miserably uncertain from the lack of a suitable building, or from not using selected circles, that it has proved almost nothing to those who wished most to have it.

One of the quickest ways to find a pattern is to cover the surface of the paper (or sheet of charge) with thirty inch rings, and then to mark where the charge strikes on it a ring will always be found in the centre.

For the penetration a rack of insulated card-board is the best; the pieces should be cut six or eight inches square and separated at least one inch apart. Paper pads and iron discs registering the force struck by a spring scale, give very unequal results; the pads because the first pellets of the charge are sometimes struck and driven so far by those coming in the rear, and the iron plates on account of their giving higher results when a great number of shot strike, than the superior force of a few. If very thin cards or even paper substituted for card-board, the test of the penetration can be made as delicate as any one desires.

The rest in the open air can be taken on a bag of hay or between the knees of the shooter. The best mid-range striking position, but indoors there is nothing better than the vice and machine rest as used by the London Field in its test, with a scale attached to determine the recoil of the guns. Two or three sighting shots should be taken with this before the gun begins to score, so that all the loads will strike fairly in the target.

When the different makes of guns are tested, the depth of choke, the size of the bore, the length of barrels and weight of each gun should be absolutely the same if any definite result is desired.

There have already been in this country a couple of trials for guns of various makers, but they were so very imperfect in nearly all their details that I think it is nearly time to have a good reliable test by some disinterested and competent parties. It would settle the question as to who makes the best guns here and in the last few years, since so many good guns have been invented and come out, the makers as well as sportsmen would be anxious to have it. The idea was proposed before in another paper, but as the article disapproving of it was shown to contain nothing but false theories, by no means an authority than the English gunsmith Mr. E. C. Green, no more attention should be paid to it than the idea of trying Dittmar's explosive with good black powder by the same persons, and which seems to have fallen through since your issue of it.

Philadelphia, July 2, 1881.

LEAVEN IN SOUTH CAROLINA.

GRANVILLE, S. C., June 13.

ALTHOUGH last winter was so severe for this latitude that even the oldest inhabitants could not remember, etc., yet in the face of it the most honorable Robert White came in for a full share of public patronage and braved as well the inclemency of the weather. The number of shooting days allotted to us were not as many as heretofore, being only eighty per cent. usually, but one fine day in the last, from the 15th of October to the 15th of April, not including Sundays. The bright and glorious winter days come and go, morning after morning the sun comes peeping over the hills and takes his course full of smiles all day. Seldom does he allow the clouds to weep; and if they do and you happen to be caught, there is fun in it. Build a "ligature" fire if you get drenched, take out your gun and be happy. Keep on shooting if you wish, with plenty of bruises against the shooter in good form. Let it rain, he will not notice it, that is, if you have a gun that you load at one end and the charge goes out the other. This little joke is not original, consequently I claim no credit for it. It came about in this way: I was trying to persuade a man of Noah, who owned "the best gun in the county," to bring the original piece of ordinance that formed the armament of the Army, a breach-loader. I had two samples. He examined first one then the other, opened and shut them and made diligent inquiries. At last, after many shakes of the head and remarks not calculated to reflect credit on breech mechanism, he concluded he would not have a gun that loaded at both ends. He evidently was afraid of centrifugal forces and an explosion near the chamber. I said this is a breech gun at last. He is the most self-satisfied chap I have ever known in the mysteries of pattern and penetration, and talks in a pedantic way to his neighbors of the relative power of the choke and the chandler; so it's one more convert and a game protector as well. Step by step we are putting a stop to quail trapping and coyote annoying. I put the FOREST AND STREAM in the hands of all who wish to read, and bring away with the gun the most complete pattern book in the State, a price of five, for he is the very worst trader. He takes whole covens and wrings the necks of the innocents. Where he traps for a while "the sun of noon looks down and sets not out," and many a fry and brile "the old ooman and child have."

Peter Jones (colored) lives two miles from here. I found traps on Peter's place. He—the felt sure the child's nose was his s'cent traps. Peter is a better shot than I am. I have seen him through at entirely different parts of the place, and his respect for the South Carolina game laws has increased. One more convert and one more soul saved happy, as the Magic Oil was said.

I should like to say something about dogs of this vicinity, but time and want of space forbid. We will try again.

DIJK SWIVELLER.

If you know of a good place to camp and fish, or to board and fish this summer, report it for the benefit of others.

CALIFORNIA GOOSE SHOOTING.

IN reply to a correspondent's query, transmitted through the FOREST AND STREAM, Mr. N. E. White, of the Sacramento, Cal., Bee, recently wrote the following letter, which we have permission to print here. It is dated at Sacramento, May 20, 1881, and is as follows:

"I am afraid that I cannot give you any new light on the subject of goose hunting, for the reason that it has been for many years only an incidental feature of sport out here. Duck hunters often bag such geese as happen to come their way and send them to market; but I know of no one making a specialty of goose shooting.

"Some years ago, when I was in my teens and living on a 'ranch' in one of the coast counties, I used to take some interest in what I would call 'stalking' the 'critches.' Our favorite method then was to crawl through the ditches, which ran at frequent points around and through the grain fields, and hug the sides of the ditches, and wait for the geese. Occasionally we would get a gentle old horse, or ox, and creep up on the 'off' side to the big flocks of the fowls and at the right moment let go the contents of two barrels, or of a big 'Yaeger' among them.

"This is, in reality, the most successful way of hunting wild geese. Hunters used to employ big six and eight inch shot, and by holding their guns and aiming usually slaughter them, and they and upward have been laid low on the ditches. On the great wild in ranches in the Sacramento Valley the myriads of wild geese do great damage to the young grain in the late fall and farmers employ men by the month to shoot them—or shoot at them. I don't know that they try to bag many of them, however, but simply to frighten them off, which is a thing of the past out here, although there is an unlimited field for all that like to follow it.

"Game of all kinds will be plentiful here next season notwithstanding the persistent violation of the law. Our dove season commences July 1 and will afford good sport until the quail and duck season opens, Sept. 15. The open season for wild deer also begins July 1, and in the whole State is regular slaughter for their hides in the far-off counties. The law 'prohibits' it, but the work goes on all the same. Our mountain lakes and streams are full of trout, but the best fishing is some weeks off yet. N. E. WILTZ."

If you know of a good resort for camping and shooting when the season opens, report it for the benefit of others.

ARKANSAS GAME.

Owl's Cove, Ark.

THE game prospects in this "neck of the woods" are good. Deer are frequently seen in the deep forest, but by a sort of common consent no one shoots them this time of year.

Turkeys have partially raised large broods. They are frequently seen near the fields. They are considered big enough to pick here in September; they are then of the size of a Brahma fowl, full feathered and strong on the wing, but not "educated" like the old ones. These will be fully ripe in November, and better sport than they afford there is hard to imagine.

The Virginia partridge, colon. Bob White, did not suffer much last winter. The breeding stock is abundant, and the woods and fields are alive with them. There is probably no part of the United States so well supplied. Along the Little Rock and Fort Smith Railways, right in the town, birds are plenty, and more so, of course, a little out of the line of travel. I was down in Jackson County a few days ago, along White and Black rivers, and there learned that the supply was large. A gentleman from the North had been there training dogs and, taking advantage of the want of a game law, had slaughtered some birds in April and May. Some of the citizens had mildly remonstrated with him to little effect. A little more of that might possibly induce our unmusical legislators to pass a game law.

The flights of aquatic birds—ducks, geese and swan—can not be foretold. The food supply for them will be fair and other conditions favorable. Whether they will come in large or small numbers will depend upon the weather and the "inducements" held out by other localities. We have had three rather unfavorable seasons in succession. Even in a bad season, however, we have what in most sections of the country would be called very good sport.

I have heard of but very little bear sign; they may come in and may not. The woods are alive and have been alive with game.

The prospects for all sorts of game are unusually good in all that region about Panther Bluff and Postum Walk. In Greasy Valley quail and turkeys are in full supply. There is no part of the State where I am acquainted where good and even fine sport may not be confidently looked for during the approaching season. Y. L.

A NOVEL MODE OF KILLING WOLVES—Mojomonia, Wis.

A few weeks ago the Secretary of State at Madison received a certificate entitling a fellow in the southern part of the State to a reward of \$120 for killing 21 wolves. The idea occurring to the Secretary that that was a pretty good haul for one man to make, he sent one of his clerks to investigate the matter. He went to the chairman of the town board and found that a certificate had been issued to the man in question entitling him to the pay for 3 wolf scalps; he then went to the chairman of the county board and found the same to be the case, and that the chairman addressed the letter containing the certificate to the Secretary of State and handed it to the applicant to drop in the post office. Then the wolf was let out of the bag. The brave slayer of *Canis occidentalis* had converted the 2 into 20 and \$12 into \$120. This is certainly very encouraging to steep-raisers.—A. W.

WOODHOOK IN NEW YORK RESTAURANTS—NEW YORK July 9, 1881.—If you know of a good place to camp and fish, or to board and fish this summer, report it for the benefit of others.

It is unlawful, but in the absence of any machinery to detect violations of the game laws and to punish offenders, we see no way of remedying the matter. This sale of game out of season by the marketmen of New York has been fully ventilated in our columns during the past year; and we had indulged the delusive hope that some act regarding the provision of a remedy might have been taken by the Association which met at Cove Island the other day. There is plenty of room for energetic action, but a society which truly intends to do anything of the kind would take hold of it.

SHUNKOOK BAY—Good Ground, Long Island.—Bay snipe shooting promises to be unusually good this season; the birds commenced to fly July 4, and have kept it up right along. Tuesday Wm. Lane, Jr., brought in a nice bag of dowds and yellow-legs; some jacks have also been seen. The kind of sport to be expected is an uncertainty, but this early date leads me to believe that we shall have a good season; besides, large quantities went north this spring, and, owing to bad water, were not much shot.—WILLIAM N. LANE.

If you know of a good resort for camping and shooting when the season opens, report it for the benefit of others.

THE STATE ASSOCIATION PROGRAMME.—The following copies of the handsome book recently published by the Long Island Sportsmen's Association for the use of the members of the New York State Association for the Protection of Fish and Game, at their annual convention in June last, are now offered for sale at 25 cents each. It is quite a complete history of the Association for the past 23 years. Orders may be sent to this office.

MINNESOTA CHICKEN SHOOTING.—A Chicago correspondent tells us that Capt. B. C. Cowles, noted as the proprietor of the Railway Eating House, at Baraboo, Wis., opened, on July 1, a new hotel at Tracy, Minn. This point is in the midst of the Minnesota chicken shooting grounds, and Capt. Cowles will be glad to see and take care of all chicken shooters who make Tracy their headquarters.

TO DRIVE AWAY MOSQUITOES—Oakfield, Wis., July 2.—To prevent mosquitoes from biting I have used oil of tar and other mixtures, but find carbolic acid, mixed with lard or any heavy oil, to be the best preventive. Try it and be convinced.—H. H. HONON.

FOR SUMMER READING buy a copy of Van Dyke's "Rifle, Rod and Gun in California," price \$1.00, postpaid. For sale at this office. Retailing Shooting Sticks. Upgrades to be sent. The kind of articles we are anxious for something to prevent this issue of mosquitoes, black flies, etc. Quotations, advertised in this issue by John B. Wood, is claimed to be a sure preventive.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.

Salmon, Salmon salar. Brook Trout, Salvelinus fontinalis. Hallow Trout, Salmo trutta. Dolly Varden Trout, Salvelinus malinensis. Grayling, Thymallus tricolor and Thymallus thymallus. Black Bass, Micropterus salmoides and M. paludis. Massalonge, Esox nobilior. Pickering, Esox reticulatus. Pike or Pickerel, Esox lucius. Pike-perch (wal-eye) (pike)

SALT WATER.

Sea Bass, Centropomus virgatus. Striped Bass, Morone saxatilis. White Perch, Morone americana. Bluefish or Taylor, Acantholatris saltatrix. Scup or Pomte, Stenotomus argenteus. Pollock, Polachius carolinarius. Trout or Blackfish, Tautoga onitis.

"This reported by Pliny, but perhaps 'tis but a Plinysm, that there is a fish called Lucerna, whose tongue doth shine like a torch. If it be a fable let the tongue of a minister be the moral of that fable. Now, such a luminating tongue was that of one Pierson..."

MR. PRICHARD ON THE FLY CASTING TOURNAMENT.

New York, July 11.

I will avail myself of the privilege you kindly extend to me of correcting any incorrect statement published in the editorial account of the fly casting of the 23d.

In the first place, on the salmon casting, you state that I "lost several flies." This is incorrect. I lost but one, and that I did not replace because there was but one minute left of the five which were allowed me. Now sir, would you like to know why some of the contestants were allowed fifteen minutes instead of five. I should like to know why some of the contestants were allowed to leave the platform, and walk forward to the edge of the pond and then back; enabling them to get their lines straight out before casting. Again, I think the judges should have examined each of the contestants' leaders as soon as he had made his casting. I do not understand how my opponents were enabled to throw their flies into the grass behind them, and then forward, yet never losing a fly, nor did their hooks ever once foul in the water. This matter very much surprised me indeed. I also object to your saying of my trout casting, that I "failed to, or could not retrieve." It is true I failed to, because I was not aware that I was required to retrieve—not because I could not. Before that you saw me cast further than any of my opponents, and yet I had no disappointment; in fact, that part of it seemed to me so unimportant that I gave it no thought, until I was told that the rules required that it should be retrieved.

I am tried that these remarks will not be attributed to a carpentering spirit. In making them I am actuated by the same feeling which I know you entertain yourself—a desire that on future occasions the most accurate Justice may be done to everybody. I give myself little credit for my own performance on the day. The consciousness of veteran competitors around me, and it being my first attempt in such a contest gave me something like what you would call stage-fright, a feeling not calculated to command success on any occasion. But for next year let us hope that there will be improvement all around.

Mr. Prichard's candid letter shows that he thinks that some favoritism was shown in the matter of the allowance of time allowed to the contestants. This, and some other points, plainly point out what Mr. Prichard will readily allow to be true, that he came to the contest wholly unprepared in point of knowledge of the rules of such contests. The men who appear to have been allowed fifteen minutes, instead of five, claimed time under the rule which says: "Each contestant shall be allowed five minutes for style, delicacy and accuracy in casting, and five minutes more for length of cast; and in case of accident, such as paring or fouling of the fly or line, the referee may allow an equal time in his discretion." This would have been allowed Mr. Prichard as readily as the others if it had been asked for time to replace his fly, no matter if it had taken ten minutes to do it. In regard to their walking to the edge of the pond to get out a line before beginning to cast, we do not know why it was done and do not see anything gained by it, but if it had been objected to, the objection would have been entertained.

Concerning our remark that Mr. Prichard "failed to or could not retrieve," we can only say that he was cautioned several times on this subject, and the impression, as expressed by many, was that he could not. We gave him the benefit of the doubt. "No cast shall be valid unless the line be retrieved," says the rule. This may have been to prevent a cast being counted when the wind was with the cast or so strong as to help him out with more line than he can properly handle, and it seems to be a good one. Mr. Prichard's views on his first attempt to cast in public, where he made a most creditable attempt to wrest the championship from the veterans, and we repeat what we said before, that in future he will make them look to their laurels, which have been worn quite easily for some years.

That the late contest had many imperfections no one knows better than ourselves, but it was so much better and more perfect than any we have had before that all acknowledge it to be a long stride in advance toward a perfect system, at least all who are familiar with the history of the fly-casting. And now a word on rules. Much was said before the tournament about some needed changes in them, but at the last moment it was decided not to attempt it; but on the principle that the best thing to do with an obnoxious law is to fully enforce it, we concluded to make the five foot allowance for rods, hoping that its injustice would be so apparent that it would be repeated at the meeting. It

was announced that a meeting would be held on the evening after the tournament, when these things would be considered. We attended, and none of the fly-casters were there. The shooting men were discussing their affairs, and would probably have passed any amendments to the fly-casting rules which we offered, but as we knew that there were persons who held opposite opinions on the rules we declined to take advantage of their absence to amend them to our way of thinking, and so the meeting of fly-casters came to naught.

IF YOU KNOW OF A GOOD PLACE to camp and fish, or to board and fish this summer, report it for the benefit of others.

TIM POND.

Editor Forest and Stream: I have just received the following letter from my friend, a reverend D. D. I think it has great value to your readers. The flies complained of are first of August. Mr. Smith writes that on a recent trip to the Seven Ponds he saw seven deer within short rifle range. TIM POND, Me., July 5, 1881.

Friend T.: In writing to the loved ones at home I have sent one or two messengers to you; but though I read, having just returned from catching twenty-five nice trout with the fly, I will redeem my promise.

First, then, all you have said as to the abundance of the trout and the sport of taking them with the fly I have more than verified in my own experience. Two, and sometimes three of us, have been able to supply the camp with our fishing morning and evening, and only once have we been out before breakfast. We had aundance to-day for twelve persons, six of them men. Mr. Smith has at one time cut the last two miles to the Seven Ponds. He expects to have it ready this week, and hopes to have a camp up also, when he will be ready for his friends. When this is done, from what I hear from all the woodsmen around here, it will be the grandest place to each trout in the United States. They are larger in this pond, but I doubt if they will afford better sport. The most I should fear would be the abundance of the fish, and as to a regiment of ants when caught, as you know no true sportsman would catch more than the wants of the camp require.

This, too, must be a grand place for game in September and October. In traveling around was a abundance of ruffed grouse, hear hears at night making a noise (one was caught in a trap a few days since), and this evening, while fishing, a magnificent large luck came to the edge of the pond and stood to look at us in the boat, not more than two hundred yards away. I am a great friend of game laws, but if I had had a good rifle in my hands it would have been a severe strain on sound principles.

I am very much pleased with Mr. Smith and his son Edgar. They are as obliging as they possibly can be, and think nothing of any trouble which will add to the convenience or pleasure of their guests. His camp are a real luxury in the woods, and not only protect you from the cold and rain, but are fitted up to shield you from mosquitoes and flies—a necessity in June and to the middle of July. The cooking thus far has been all any reasonable man could ask, as also the variety of food for the table. But my daily diet is trout, either broiled or fried in pork, and of these I never tire; and for dessert I am satisfied with maple sugar and nice biscuits. Now, you have my opinion, or rather experience, of and at Tim Pond. It has been an unalloyed pleasure, with three exceptions—the absence from my family, the want of old and congenial companions, and last, but not the least, the plagues of the forest, black flies and mosquitoes. These last will compel me to make shorter stay than I purposed. It is impossible to write or study for them, and I will have to go where I can. Now get your looks on to bar out the rascals, and come here and enjoy yourself on a rational man, for all hands are waiting to welcome you.

IF YOU KNOW OF A GOOD PLACE to camp and fish, or to board and fish this summer, report it for the benefit of others.

THE FISHERY CENSUS.

THE Census Bulletin No. 170, dated at the Department of the Interior, Census Office, May 24, 1881, being a communication from Prof. G. Brown Good, Special Agent in charge of Fishery Division, to Hon. Francis A. Walker, Superintendent of the Census, is the first of a series of preliminary reports upon the fishery industries of the United States. It embodies a report upon the statistics of the Pacific States and Territories, consisting of four tables in which are presented the statistics of California, Oregon, Washington and Alaska.

Table 1 shows the number of men engaged in the above States and Territories in the fisheries. It includes the fishermen proper, and the shoremans and factory hands, or all who live directly from the fisheries. These are:

Cod fisheries, 263; fur seal, 110; general fisheries, 5 650; marine salt industry, 140; oyster, 75; salmon, 8,400; seal, 24; sloop, 1,744; whale, 114; total 16,745.

Of the above are the principal tonalities: Esquimaux, Aleuts and Indians, 7,910; and about 4,000 Chinese.

Table 2 shows the number of boats employed to be 5,547, and their value to be \$404,095; vessels, 53, value, \$17,450. Value of buildings and apparatus of manerries, \$900,000. Making a total of capital invested, \$2,748,836.

Table 3 shows the number of salmon fishries and canneries of the Pacific coast, showing the amount of capital invested in the fisheries and first products of the same and of canneries; capital invested in canneries, product of the canneries, number of factory hands, with totals of capital, persons employed and value of product for the entire industry.

Table 4 shows the quantities and values of the products of the sea bordering Pacific States and Territories.

IF YOU KNOW OF A GOOD PLACE to camp and fish, or to board and fish this summer, report it for the benefit of others.

A WEST VIRGINIA CAMP—Pittsburg, Pa., July, 1881—Editor Forest and Stream: A party of four wish to start from Pittsburg this summer, and camp somewhere within

150 miles of that place where we can combine bass and trout fishing with shooting of any kind (rifle or shotgun). What we want is good sport.—S. P. S.

Go to Cumberland, thence to Keyser; thence stage to Pittsburg. Stop at Cunningham's Hotel; and there you will find information of exact localities. The whole country thereabouts is a fine one for fishing and shooting, the latter now out of season. You can find all the fish you want within five miles of Pittsburg. Board can be obtained at the farm-houses. If you want to camp out you must take your tent from Pittsburg. Report to the FOREST AND STREAM for benefit of others.

HOW TO TAKE LAND-LOCKED SALMON.

SALISBURY, Vt., June 19.

I AM informed by the people who live near this beautiful lake that some years ago there were a quantity of land-locked salmon put into the lake and that none have ever, as yet, been caught. There are quantities of perch found dead, having been bitten in the back, and the oldest inhabitant is of the opinion they are bitten by the salmon. Can you give me any information on this matter and what you would make use of for bait? It may be that the other fish in the lake have destroyed them, but it will be no harm to prospect for them.

LAWSON B. BELL.

If there are salmon in the lake we should think that some one would see them rising at flies occasionally. If they won't take flies, try a live minnow trolled in deep water near the bottom by leading the line.

IF YOU KNOW OF A GOOD PLACE to camp and fish, or to board and fish this summer, report it for the benefit of others.

FISHING ON THE NEW JERSEY COAST AND IN PENNSYLVANIA RIVERS—Philadelphia, July 9.—During the past week the fishing along the Jersey coast has not been at all good. I wrote you week before of the fairly good prospects reported to me, but I am informed by fishermen returning from Cape May, Towusend's Inlet, Bectsey's Point, Atlantic City and Tuckerton Bay that the catches are scarcely worth mentioning. All reports are of the same tenor. Outside the bay and inlets the fish seem to be in numbers and are large when taken. Bluefish are plentiful outside, and are being taken from boats able to go to where they are. At Betterton, the celebrated perch fishing ground at the mouth of the Passaic River, the fish have not put in their appearance. Opposite Grove Point they are now out, but the run is expected daily. They are a little late this year. I, the Schuylkill River fishermen are taking some bass. The Susquehanna is full of them, and a great many large ones are being taken there at all points.—HOMO.

SALMON IN CANADA.—Mr. George Dawson, of the Albany Journal, has just returned from a two week's trip to the Marguerite, a tributary of the Saguenay. He reports the fishing as of the poorest description, and, although he had a pleasant trip and a most enjoyable time otherwise and came back much refreshed, he got but few fish. But for the villainous assault on the President by the murderer Guiteau and the critical position of Gen. Canfield, Mr. Dawson might have remained longer. He tells us that up to the 6th of July not twenty salmon entered the river, according to the observations of the men who watch closely below for the coming of the fish. Some fish which would have gone up were stopped by the nets at the mouth of the Saguenay. It had been promised that the nets should be removed as soon as two hundred fish had been taken; and while Mr. Dawson does not know the exact number captured when he left the river, he doubts that these figures had been reached.

The fish seen and those taken were large, but their numbers in the Marguerite, as well as in the other tributaries of the Saguenay, were small. No other parties have made any catches in this district this year, and Mr. Dawson thinks salmon fishing on the Saguenay is a thing of the past.

LARGE BROOK TROUT—Rockland, Mass., June 24.—There was quite a little breeze of excitement created in our town by the arrival home on Saturday, June 18, of E. P. Wheeler and W. F. Burrell, two amateur fishermen, from the lakes of Maine, bringing with them a good string of trout. The latter gentleman had one which weighed six and three-fourth pounds. It was a speckled brook trout caught in Lower Kichardson Lake, in the narrows three miles above the middle dam. The fish was caught with an angle worm, and had tried minnows and flies and the trout would not rise.

The night before in the same spot a trout was caught weighing six and one-half pounds. I would like to inquire of some brother sportsman how large a speckled brook trout has been known to weigh here? ROCKLAND.

HOW TO RIG OLD-FASHIONED REELS.—In the article published, July 7, on how to rig the old-fashioned worm reels, there was a mistake made in saying that the wire run through the rod. It should have said, bend the strong wire in about the form of the letter Z, with the large loop at the end, and the small loop at the other end. Then, when adjusted to the reel, say the reel is on the under side and the nut on the top side, the wire will be close against the left side of the reel, and it will be held in place as firm as if the wire did run through the rod; and further, it will not be in the way of the band when you grasp the rod ahead of the reel; and still better because, when the nut is removed to release the reel, the wire will fall off also. Please correct and oblige.

F. A. L.

MAINE FISHING NOTES.—The Belfast Republican Journal says: "A salmon weighing twenty pounds has recently been caught in the Androscoggin, and the hope is an ordained that this river may soon be stocked with them again.... A salmon weighing nineteen pounds was caught in the East Machias River last week. Fish have been plentiful in this river, due, the Union thinks, to the enforcement of the fish laws.... The Home Farm in answer to numerous inquiries says that Mr. Henry O. Stanley, of Dixfield, is the only legal Fish Commissioner. Mr. E. M. Stillwell occupies the position of Acting Commissioner, receiving his authority from being assigned to duty by Mr. Stanley.... A sturgeon which weighed 150 pounds when dressed was caught in the Kennebec at Richmond recently."

Fish Culture.

FISHES WHICH CAN LIVE IN BOTH SALT AND FRESH WATER.

BY FRED MATHER.

[Read before the American Fishcultural Association.]

IN RESPECT to the medium which fish habitually fish in I divide them into three classes, namely, fresh water fishes, and a third class which can live in either fresh or salt water indifferently. There is no name for this class, that I can learn, and if there is no objection, I will propose to call them Amphibious fishes, from the Greek amphibios, both or over, besides, and Oikos to inhabit. This class includes many fishes, besides the anadromous fishes which leave the sea and seek the rivers to spawn, and the catadromous fishes which leave the fresh to spawn in salt or brackish water, and the eel class.

Foremost among the fishes which seem to have, as far as breathing and procuring food are concerned, in either salt or fresh water are most members of the salmon family. I say most members because there are some which do not seem to have been observed in salt water, but as I think it highly probable that all members of this family, which as at present constituted includes the salmons, trouts, smelts, and the carps, or "wildsalms," "lake-herrings," graylings, ciscoes, etc., are descended from a common ancestor and have been differentiated by physical causes, there would seem reason to suppose that the graylings and other trout-like members of the salmon family, which fishes may not be able to increase their species without passing from fresh water as its density is probably too great for the gills of the embryo, even if it did not destroy it before its gills were formed. In some specimens which were five years ago with young which were six months old it was found that they had passed from fresh water they showed signs of stuntedness at first, then of a desire to keep their noses out into the air and to jump out of the tank, and when they became exhausted and began to die in half an hour after they were taken from the water, they were found to be six months old could not have lived in sea-water provided the change had not been sudden. In a state of nature there are no such sudden changes and young fish making their first voyage from the upper waters of the river, they may continue several months in the journey, dropping down gradually and hardly noticing the increasing density from day to day to which they have become accustomed.

The list of fishes which live in either salt or fresh water as given by the late Prof. Milner is as follows:

- Salmon.....Salmu salor
Sea-trout.....S. immaculatus
Brook-trout.....S. fontinalis
Whitefish.....Coregonus sp.
Smelt.....Osmerus mordax
Four-spined stickleback.....Apeltes quadricornis
American sole, or hog choker.....Achirus lineatus
Tom-cod.....Microgadus loquax
Striped bass or rockfish.....Morone americana
White perch.....Morone americana
Silver gar, or bill fish.....Belone longirostris
Shad.....Alosa sapidissima
New England shad.....A. pseudoharengus
Tulor (shad).....A. pseudoharengus
Hickory shad, or toothed herring.....Dorosoma cepedianum
Eel.....Anguilla bilineata
Sharp-nosed shiner.....Ameletus septentrionalis
Short-nosed sturgeon.....Acipenser brevirostris
Lamprey.....Petromyzon americanus

Of these nineteen fishes Prof. Milner says: "Eight of the fishes named are believed to enter the rivers solely for the purpose of spawning. The genus Pomolobus has been divided by Prof. Goode, since Mr. Milner wrote, into two species, it would therefore add another.

- Tea-spined stickleback.....Pygostolus occidentalis
Flounder.....Pleuronectes americanus
Killy, blue or New York killy.....Cyprinostomus sp.
Anchovy or spearing.....Engraulis mordax
Sawfish.....Pristis antipodorum
The flounder I have taken in Currituck Sound, which is fresh water now, but was salt twenty years ago. It was in winter and in the spring season, a species of fish was found in the interior of Eastern Africa and the sawfish is said to exist in the Niagara and in Laguna de Bay, near Manila. The others I have taken in fresh water or experimented with in aquaria. I also hear that the Eel (Anguilla) taken in the brackish and even salt waters of Maryland, but diligent inquiry among the fishermen of the Chesapeake Bay, and Long Island, where the little "mud pike" (E. americanus) or E. fasciatus is found in great numbers, failed to learn of its going into salt water, although found in the salt bags where fresh water runs in at low tide, and it is said that it has been taken changed from fresh to salt water. Frogs die soon, and, as they breathe by means of lungs, it follows that it is entirely from osmosis, or absorption by the skin, and probably our catfishes (Silurus) would not be able to live in salt water. The same is true of marine species (Zetrichthys marinus and Arripis miltberti) on our coast.

I am informed by Professor G. Brown Goode that sting rays (Trygon centrurus) are found in Lake Huron, on the headwaters of the St. John's River, in Florida, while the following species are often found in the river in pure fresh water above Jacksonville:

- Sheepshead.....Archosargus probatocephalus
Salor's choice.....Lagodon rhomboides
The flounder or New York fluke.....Pleuronectes vetulus
Triple tail.....Pleuronectes americanus
Whiting.....Merluccius alburnus
Yellow fish.....Bairdiella chameleon
Tom-cod.....Microgadus loquax
Silver moon-fish.....Ymer setipinnis

It is interesting to note that some of these fishes enter fresh water in winter, and it immediately raises the question why they do so in Florida? Possibly it is only in the winter time, as the large striped bass (rockfish) run up the Hudson at the same season; probably an instinct connected with hibernation, as is certainly the case with the salmon. It would be interesting to know out of all this class of fishes, for which I have proposed the name Amphibious, how many would breed in their new home; for while a salmon or a shad might exist years in salt water, it would be surprised to learn that their eggs would hatch in the water of the ocean. According to Eschschmuer, species of the pike-perch, Stenothidium; the muller's chub, Collets gobio; the link or eel pout, Liza velutaria, and a species of dace, which was found in the brackish waters of the Baltic Archipelago. In the Chaplin sea Eclairhead found a species of Cyprinus; the pike, Esox lucius; the common river perch, Perca flavescens; the loach, Colinus fossilis, and a silverside, etc. Of mammals, birds, reptiles, muskoxen, moles and snakes have been taken to occur in this paper beyond its limits. It does not appear that it is due to any toxic action that some fresh water fishes die in salt water, but rather a difference in the density of the fluids, and a variety of other causes, and the great pressure to which salt-marine divers are subjected. The

reverse would occur in salt water fishes when introduced into fresh water. They would then resemble ourselves on mountain tops, and the blood pressure from the nose and ears, and the "balloon sickness" is felt. A French naturalist, M. Paul Bert, has examined the causes of death in fishes and reptiles when changed from fresh to salt water, and is of the opinion that they have died of the same cause, namely, of osmosis, but is simply a phenomenon of osmosis, or of the formation of fluids through the membranes; or, in other words, absorption of a heavier fluid in a membrane already filled with a lighter one. It is claimed, loses one-third of its water, when plunged into sea-water, and the blood globules are seen to leave the vessels and distribute themselves under the skin. If an animal is taken to whose skin is not so absorbed, the same results appear in its bronchial system. When a water vessel is introduced into fresh water endosmosis takes place, which is about the same thing under a reversed condition the body of the fish containing a denser fluid than its new medium. If the slime film removed from a fish's dead body, the water absorbed when the change of water is made. This is illustrated by the eel, which on leave these sudden changes if injured, but if a portion of its protective mucous coating be removed, its skin becomes absorbent of the surrounding medium and it dies. The eel, which occurs at the home everywhere, puzzled M. Bert in a curious manner, but in the end confirmed his theory. He had already experimented with them in changing fresh water into salt water, and found that they died of the same cause. To determine whether the same experiments, he directed his assistant to introduce the eel into salt water. To his great surprise the eel died after being three or four hours in salt water, and a long search failed to show why it died, but they were able to detect them there, and died when his assistant did so. Finally he found that the eel's skin was so slippery his assistant had used a cloth in handling them and rubbed off their slime, while M. Bert used his wet hands to which very little adhered. Osmosis had occurred in the wet and dried portions, and the eel died. The water taken from sea fish into fresh water produced analogous results. The gills were the seat of alterations, the same as those noted in the fresh water, and he observed that the life of sea fish could be prolonged after it was changed by adding salt, which also tended to confirm his views.

The shad, which passes so much of its life in the sea, cannot live there when first hatched. The experiments conducted by Prof. Milner, in 1874, were on the way to Germany with young shad, and showed that the newly hatched fish soon died under a gradual addition of sea water. My shad started to death on the tenth day, and they died on the thirteenth. I was not able to get in our ignorance, to feed the fry, it was hoped that they would be trained to endure sea water and find food in it as they do in river water when we transport them inland.

The shad, as far as the salt water, the Watkinson, N. Y., Times said, in June, 1878: "In the bay at Dexter they are having a great run of small fish at the present time. The species is now down there, and they are called shad and 'herring.' They are not to be taken with such great quantities that they are almost valueless. They are sold for manure, and the fish proved to be one of the species of alewife and not young shad, as some of the fishermen supposed, as proved by the following letter from Dr. Bean written to me shortly after in reply to one which I sent the account:

SMITHSONIAN INSTITUTION, Washington.
MR. FRED MATHER.—Your letter and article on supposed shad in Lake Ontario particularly attracted my attention. The Institution has received specimens of the so-called shad from the Cayuga and Seneca lakes, New York. These fishes were not shad, but alewives, Pomolobus pseudoharengus. The individuals from Lake Ontario were spent females and could not be distinguished from the specimens from Vermont. The specimens from the Cayuga and Seneca Lake specimens were young females and males. The ova of the females were quite immature. Those alewife drift from the coast alewife only in size. I have compared the last specimen with a large one from the coast, and find no other difference.
Yours truly,
TABLETTON H. DEAN.

It is evident that the alewife is not appreciated at its full value among the people residing near its new home. It is a fish of great value, coming in enormous schools, and when they come to lose it is a great loss to the fisherman. It is a fish of great value, and is not a fine fish in the epicurean sense, but like the farmer's pork barrel, it is a good resource to draw upon when the butcher fails to get through the snow drifts.

There are many good fishes which can safely be transplanted from one body of water to another, and it has been to show that it can be done with certain species if done properly. Among the most valuable of these are the smelt, the striped bass, the tom-cod and the alewife. The smelt is already established in Vermont and New York, and the alewife is now in New York. Vermont Fish Commissioners say that smelt have been established in every lake into which they have been placed and heard from, and it is a curious fact that the people have not found out a truly excellent fish that they eat, the table, its insignificant size seems to be the only protection from its being taken. The alewife has taken them for bait. This use of smelt would cause smelt-fishers to raise their eyebrows and examine the man who did such a thing in their presence; but the rural angler will get over that in a higher value. The report truly says of the smelt: "When they come to be established wherever there is a fit lodgment for them, that event alone will fully pay for all the expenses incurred since the formation of the Commission."

In New York it has been established so long that the majority of men runneth not to the contrary, and in the Adirondacks the guides call it "frostfish," and salt it down. It is found in some of the Fulton chain of lakes and not in others, a very interesting account of which may be found in the "Fishes of the Adirondacks" during the coming month (April), from the pen of Mr. E. H. Wilson. They are locally known as frostfish in that region. Mr. Wilson says: "Some time ago I observed in your columns an inquiry relative to the alewife and its habits in the Adirondacks. The so-called frostfish is found in several lakes of the Fulton chain, in the 'John Brown's Tract.' Most visitors to that region have annually wondered at the sight of the old wooden weirs or 'picket' traps, which are laid in the lakes in the autumn, and which are broken those lakes in October, or about the period of the advent of winter, whence the peatier title—at least the time they are taken and salted down in considerable numbers by the guides for home use, and occasionally sent to the city for the guides. The fish is a regular size, and is found in the 'Fourth and Eighth' lakes of the Fulton chain, and also Racquette Lake, all deep waters. They seem to stick to the deeper lakes, except in the spawning season, and are a favorite delicacy for the salmon trout, as they are frequently caught in the same manner. They are taken by trolling and are a favorite delicacy, on opening, almost invariably contained the remains of frostfish. Early in 1862 a party of us camped at the head of Fourth Lake and set traps for salmon trout. The suckers had been accustomed to run, and the trout were taken in the traps. The fish were taken for a net, which we set out in the lake, of the mouth of the inlet. On hauling it the next morning we found the 'net' produced comprised suckers and (tell it not for we let them go), speckled trout, with many other species. The trout were taken, and we were found that the 'lakes' lost best at the latter. The guides claim to prefer the fresh frostfish as an article of diet to any trout that swims. They run remarkably uniform in weight, size and color, and are young and tender. They are taken in the lake, with bright white scales, and flesh of firm texture and light color. They have a long nose, and are evidently a bottom fish. The guides say that the young, when hatched, immediately head for deep water, and respire only to spawn when fully grown."

"There is a physical oddity in the topographical distribution of

BLUESKIN IN BUZZARD'S BAY.—Boston, Mass., July 6.—Thanks for your information. I have been to Mattapoisett and fished for bluefish yesterday, with ciskin. The fish seem to keep almost entirely above Bird Island light. We had baffling winds getting there, but had about an hour on the grounds, and caught six, weighing from 3 to 8 pounds. These we caught off the Great Hill House, Marlon, about a mile out. We lost a number more. Several boats were cruising about, and we hailed one party who had only taken three. I think if we had time we could have caught a good number. We will go down again later, and spend more time. If persons go to fish in Buzzard's Bay from Mattapoisett and intend to stop at the Mattapoisett House, they would do well to make their terms beforehand.—W. R. G.

SALMON IN MAINE.—The Belfast Republican Journal says: "The close season for salmon in this State begins on the 15th of July. The season has not been a successful one in this vicinity, the catch not being half that of last year. The theory recently established is that the fish return to our rivers every second year. Two years ago the fish were very plentiful and ran small; the larger quantity caught were from ten to twelve pound fish. This year the same school should have been here, and it is done so. This rather conflicts with the above theory. Again, the fish appear very different, running very large. Mr. Collins, of this city, who buys largely, says the fish this season rarely go below eighteen pounds, the average weight being much greater. Salmon have this year frequented streams where their presence has not been known for years. Verona and Lincolnville have been the best fishing grounds this season."

STRIPED BASS IN THE POTOMAC.—The largest of the season is recorded by Major J. H. King, in the Germantown Telegraph, as follows: Mr. Shaffer, a well-known angler of Washington, D. C., on Saturday the 18th inst., captured in the Potomac, at Little Falls, three miles west of this city, a magnificent striped rockfish which carried the beam down to 15 1/2 pounds, and measured thirty-six inches—or three feet—in length. This noble specimen was an exhibition at the old and noted fisherman's resort, Johnnie Hancock's Old Curiosity Shop Restaurant, 1,234 Penn. ave. Mr. H. is known as the "boss fisherman of the Potomac," and has on exhibition a large and interesting collection of curiosities.

SALMON IN CANADA.—In our issue of June 30 we referred to a large salmon taken by Mr. Gilbert E. Jones, of New York, a member of the Kesigouche Salmon Club. The following is his story for five days. The fish were all taken with the "Silver Poplar" fly except one which was captured with the Silver Doctor:
June 18, 3 fish; 19 1/2, 22 1/2, 22 1/2 = 64 lbs.
June 23, 3 fish; 27, 20, 18 = 71 lbs.
June 23, 3 fish; 23, 23, 28 = 86 lbs.
June 24, 1 fish; 29, — = 29 lbs.
June 25, 1 fish; 20, — = 20 lbs.
Total, 11 fish, weighing 270 lbs., averaging 24 1/2 lbs. each.

THE STONE LOGGER.—In our issue of June 23 we printed a letter from our correspondent, D. H. B., of Syracuse, N. Y., on the subject of a fish which builds mounds in the St. Lawrence River. Since that we have received a specimen of the fish from Mr. Geo. L. Davis, Vice-President of the Round Island Park Association at Clayton. It seems that the fish build its quite common at the same angling place among the Thousand Islands. The fish is preserved in fluid, and will be diagnosed at an early day and the result given.

THE U. S. FISH COMMISSION.—The Commission will pursue their summer investigations at Wood's Hole, Mass. The Fish Hawk is now on the way there to pursue the deep sea dredging and the Lobster on its way. Wood's Hole is one of the best points on the north Atlantic coast for collecting specimens, it being the northern limit of the southern, and the southern limit of the northern marine fauna. The Commission have made it headquarters before, and now return to it. Prof. Baird and staff have just arrived there. Prof. Goode will be detained in Washington by his work on the fishery census all summer.

SALMON IN NEW HAMPSHIRE.—We are having like the Canadians, not a large run of salmon up the Merrimack, but a run of very large salmon. One was brought down the river Saturday which had been killed by some accident, and was found in one of the canals here, which measured thirty-eight inches long. Mr. Powers has taken several very large ones at Plymouth, and placed them in the storage pond.—S. W.

LUMINOUS FLOATS.—A Mr. Archer has patented a luminous float in England. It is painted with a luminous paint which shines like phosphorus after dark. The top of the float is a glass tube filled with the paint and the angler at dusk strikes a match and holds it near the tube, which is then rendered luminous for some time.

A NEW EDITION of "Fly-fishing in Maine Lakes, or Camp Life in the Wilderness," by Charles W. Stevens, has been published by A. Williams & Co., Boston. We noticed the book some weeks ago. The present edition has a plate of colored flies as a frontispiece, and an appendix of five pages.

A BIG NEW YORK TROUT.—PULASKI, N. Y., July 1.—A trout weighing three and three-quarter pounds was taken with a fly yesterday by Dr. Henry W. Caldwell, from the north part of Salmon River.

SPEAKING OF "PLAYING POSTUM," this story, told by Uncle Jerry Greening, of Pike County, Penn., to a correspondent of the Philadelphia Times, is in order: "They 'n' eute critters, too. Once I shot at one close by an' down he come. I put 'n' in 'n' game bag an' went on, when binobby I shot off 't'other barrel of 'n' gun, when I'll be darn if the bird o'dn't jest fly out of 'n' game bag an' make off for th' woods ez nice ez ye please. Ye see he ledn't be teched by a shot, but knowin' I would shoot 't'other barrel o' 'n' gun sit 'im an' probly get 'im, he jest played 'postum an' waited till I'd emptied 'n' gun an' then off he started lickety-split, an' I hope 't' be chased up by bars of, jest ez I were a lookin' at th' bird when he skipped 't'other barrel of 'n' gun, when I'll be darn if the bird o'dn't jest fly out of 'n' game bag an' make off for th' woods ez nice ez ye please. Ye see he ledn't be teched by a shot, but knowin' I would shoot 't'other barrel o' 'n' gun sit 'im an' probly get 'im, he jest played 'postum an' waited till I'd emptied 'n' gun an' then off he started lickety-split, an' I hope 't' be chased up by bars of, jest ez I were a lookin' at th' bird when he skipped 't'other barrel of 'n' gun, when I'll be darn if the bird o'dn't jest fly out of 'n' game bag an' make off for th' woods ez nice ez ye please. Ye see he ledn't be teched by a shot, but knowin' I would shoot 't'other barrel o' 'n' gun sit 'im an' probly get 'im, he jest played 'postum an' waited till I'd emptied 'n' gun an' then off he started lickety-split, an' I hope 't' be chased up by bars of, jest ez I were a lookin' at th' bird when he skipped 't'other barrel of 'n' gun, when I'll be darn if the bird o'dn't jest fly out of 'n' game bag an' make off for th' woods ez nice ez ye please."

F. J. N. Poughkeepsie, N. Y.—There is no provision in the New York laws respecting...

G. E. T.—New York.—The gun has a good name, and yours were well. 2. For rail use 2 lbs. powder, 4 oz. No. 12 shot.

READER.—Your description is insufficient to identify the dog. 2. For care of him see recent articles in our kennel column.

F. W. Ware, Lake Ia.—The bird of which you send head and legs is the yellow-necked blackbird, quite common in the West on the prairie and mountains.

A. C. Cogwell.—We have written you at the post office given and the letter has been returned to us. Yes. We would like an account of your Newport trip.

W. H. D., Indianapolis, Ind.—We would suggest that you get Mayhew, or Hill on diseases of the dog. We can furnish either. The first named is 15 cents and the second \$2.50.

S. R. S., Plainfield, N. J.—There is no shooting in Maine during the month of July. 2. To keep your gun from rusting use mixture of one-half best neatfish oil and one-half pure paraffin.

A. E. R., Eaton, N. Y.—It is against the law to shoot swallows and other insectivorous birds in some states unless they are hand-captured according to their laws, but it is optional with each club.

P. H., Grady, Conn.—The following gentlemen held the boats at Natick, 1879: Dr. J. Howard Willets, of Port Elizabeth, N. J.; Mr. William G. Lyon, of Winstow, N. J.; and Mr. Josiah Hibberd of Philadelphia.

HORNOK.—Loon Lake is one of the headwaters of the west branch of the Saranac River. Reached by way of Peaton's, or by train road from Natick. Contains trout, and deer used to be found in the vicinity.

J. G. S., Oregon.—To shoot blackst in choke-bore gun must chamber the shot on a wad at the point of most constriction. If this is properly done, and the right load thus determined, there will be no trouble.

JOHN H.—The only mastiff bitch we know of named Tash is owned by Mr. M. Hatfield, 433 Fifth Avenue. No bitch of that name was exhibited at Philadelphia in 1878, and consequently she did not win a prize there. We have been informed.

SENSELESS.—The "Camp Cottages," described in our issue of July 3, are the original design of the Lake George Park Association. 2. The cottages made to order and ready to be put up, which you have seen advertised in our columns, are constructed by Mr.

A. B. C., 56th St., New York City.—Write to your address and letter will reply. For your residence was closed. Address Mr. Harry Hyslop, de E. Broadway, Louisville, Ky. Secretary Rose Tree Hunt, care of John H. Riser, Second and Walnut streets, Philadelphia, and A. B. C. of New York City.

G. C. West Elizabeth, Pa.—You give us no data to found an opinion upon. We should know the highest summer temperature and the amount of flow. If your pond will not get warmer than 70 degrees in summer, you are not getting the best of the water. If you are getting the best of any of our trout breeders and for the latter to Prof. S. F. Baird, Washington, D. C.

W. H. D., Allston, Mass.—As a rule dogs do not have teeth at birth. When about one month old, temporary teeth appear. In the course of a short time the temporary teeth give way. The coming of the permanent teeth commences at the age of four months. In the case of the dog, the permanent teeth are usually fully in place at sixteen months of age. The milk teeth are complete. Perhaps up to about a year old there is not much difference in telling the age of the dog by the teeth. The milk teeth on the gum will give you all the latest information regarding firearms. We can furnish both books.

GUN POWDER! Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder: Dupont's Diamond Grain, Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness, adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters. Dupont's Eagle Ducking, Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration. With a close pattern, adapted for glass-ball, pigeon, duck and other shooting, with its muzzles or breech loaders. Packed in 1 lb. and 5 lb. cans. Tests only, adding 1 lb. kegs. Dupont's Choice Fire, especially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of L. S. 2 1/2, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 6 1/2 lb. kegs and 1 lb. canisters. Dupont's Eagle Rifle, A quick, strong and clean powder. Very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6 1/2 lb. kegs. Dupont's Rifle No. 2, "A Shooting," FFG and FFG. The FFG for long-range rifle shooting, the FFG and FFG for general use, burning strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb. canisters, 6 1/2, 12, and 50 lb. kegs. FFG, coarse, FFG, fine. Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also L. H. Cartridge, Musket, Cannon, Mortar, Mammot, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof. Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S FFG or FFG for long-range rifle shooting.

Oriental Powder Mills, BOSTON, MASS.

Western Sporting, Wild Fowl Shooting, Falcon Ducking, SPORTING POWDER. ALSO ALL GRADES OF Blasting Powder.

Agencies at all Principal Points in the West.

Thursday, July 21.

THE BERLIN FISHERY EXHIBITION.

WE have received Part II. of the Official Report of the International Fishery Exhibition at Berlin, 1880—"The Sea Fisheries, by Dr. M. Lindemann," from the press of Paul Parey, Berlin. It is an octavo of 244 pages, printed on heavy paper in clear type and illustrated. As a specimen of typography it is elegant. The illustrations are good, but some glaring errors in either the drawing or the naming are apparent. Fig. 117, labelled "a schooner smack from Mainz," is evidently an oyster boat, such as is used in the vicinity of Boston. Fig. 128, a diagram of a purse-net boat, has a large unknown to purse-netters. The artist has mistaken an umbrella anchor for an implement to hoist the bag of a purse-net. The accompanying quite comical in Fig. 134, where a perspective view of the working of the net by means of this umbrella anchor is given, with the men in position, heaving away on the lines, whose attachment to the net exists only in the imagination of the artist. In other respects the report on the sea fisheries of the different countries, as far as we can judge, is a very good one. It includes the exhibits of boats and nets, together with oyster dredging and some appliances for curing fish, but does not cover the whole ground of the immense exhibit of sea-fishing implements exhibited at Berlin, where every form of knife, tool, harpoon, clothing, rig of boat, implements for curing fish and the thousands of things pertaining to the sea fisheries were exhibited. The factual report was so complete that we confess to a feeling of disappointment in this. The different reports will be uniform and are for sale by the publisher named and will be a handsome souvenir of the exhibition.

ONE PHASE OF THE WASHINGTON ASSAULT.

THE divinity that doth hedge about a king, according to the great dramatist, seems to be playing an important part in recent Washington occurrences. The would-be assassin of President Garfield was not, according to all accounts, troubled by any "Back-fever." He kept a wonderfully cool head and steady aim when he fired at short range into a vital part. The chances were overwhelmingly in favor of the shooter accomplishing his murderous end, yet our President lives on, a contradiction to the opinions of men who declared he had received a death-wound, and affording a text for the discussions which have been going on for the past fortnight on the arms of various sorts.

The talk upon the subject of pistols and their effectiveness has brought out some very curious assertions from men in a position to know whereof they were talking, and their talk seemed to show conclusively that they had not improved their opportunities. The weapon used, as most of our readers are doubtless aware, was a five-chambered, self-cocking "British Bull Dog." It has a nominal calibre of .44, though that seems to be the measurement of the chamber and not of the barrel. It was of course not known as a military weapon, but belonged to that large class of noisy, dangerous pieces of mechanism which are turned out in such vast quantities each year for, if we may so term it, "amateur" consumption, to be sold to those who have either no experience with firearms or only a still more dangerous smattering of knowledge on the subject. The advantages of this particular arm in the eyes of the wretch who used it was its large calibre, and when fired off, the amount of racket kicked up by it. Its disadvantages, which he entirely overlooked, was that it was badly arranged for a secure grip; that its short barrel of 2½ inches did not suffice for the consumption of all the twenty grains of powder used, and that in so short a space the rifling was practically inoperative, making the weapon really a smooth bore, and that the slight initial velocity secured gave the bullet very small penetrating power.

Listening to the many remarks made by military men about the national capital on this subject, we were surprised by the curious conclusions drawn from simple data. When it was announced that a .44-calibre pistol had been used, the insufficient conclusion was at once reached and the wrong opinion expressed by men holding responsible positions in the regular army, that it was the most dangerous one that could have been chosen. Gen. Sherman was very much impressed by the noise which the shots made, and argued from that fact alone that it was a very destructive mechanism. It did indeed create a great hubbub, his discharge being louder than that of a long-range rifle burning up to 110 grains of powder, but in this case the comparatively silent piece sends a bullet with an initial velocity of 1,700 feet per second, while 700 feet is the calculated velocity in the other case.

Another official, holding one of the most influential offices in the War Department, got the crochets into his head that there was a point at some distance from the muzzle where the bullet had a greater velocity than it had on leaving the weapon—in other words, he disregarded the well-known fact that from the moment of starting on its journey every influence brought to bear on the flying bullet is of a retarding nature, and that there is no reservoir of force anywhere about the bullet to be expended while it is en route, and yet this officer was reckless enough to say that he regarded it as fortunate that the victim was close to his assailant, since "if he had been standing at that point of greatest velocity, the destructive effect would have been more marked."

It was not until a systematic examination of the question was made by a civilian that any accurate knowledge was shed on the subject. Mr. A. A. Ade, of the Columbia Rifle Association, with the fund of information he possesses as one of the foremost riflemen of the country, expressed opinions only as they were based on experience, and very soon determined that the choice of weapon made by the assassin was about as poor as could have been made, since the low initial velocity of the ball made it an easy matter for clothing and tissue to check its course and turn it from its way inward. Mr. Ade's experiments brought prominently forward a fault common to many classes of firearms, and especially in such rule-of-thumb constructions as pistols, that

no attempt is made to establish any sort of relation between the burning capacity of the pistol and the amount of powder in the cartridge, and this again in relation to the weight of lead used. The British bull-dog, according to the outcome of civilian examinations made upon it and in direct contradiction to official off-hand verdicts upon it, seems better adapted for barking than biting, and that it should be dear to those who believe in the Chinese tom-tom style of warfare, where noise is an important element in determining a battle. The point of real interest to the public, outside of the main issue of the shooting, is that we have in high positions under our War Department men whose knowledge of firearms is so meagre that such opinions as those mentioned above should ever have been uttered.

ABATE THE PISTOL NUISANCE.

THE fatal toy pistol did its deadly work as usual last Fourth of July. The reports of fingers blown off, cases of lockjaw and deaths are not all in yet, but the number of victims will count up many scores, and the record is sufficiently bad as it is.

One way to abate the plague would be for our legislators to stop their antics at Albany, and pass a law prohibiting the manufacture and sale of such toys. Another wise move would be to indict the manufacturers for manslaughter and send them to prison. And while about it, the legislators of this State and of other States ought to pass a law prohibiting the sale to, or possession by, a minor, of any kind of pistol, save under clearly defined conditions. No law of this kind is necessary so far as our reputable gun dealers are concerned, for they already exercise due discretion in selling pistols to boys. There are altogether too many bulging hip-pockets on our streets. The murderous arms borne by crazy Giteaux and city gutter thugs are evidences of something radically wrong in the brains or hearts of these fellows, and the sooner society snuffs out the fire from their eyes by removing the pistol from their pockets the sooner will our daily papers cease to be filled with accounts of these fatal accidents and murderous assaults.

There are laws now on the statute books relating to the carrying of concealed weapons, but it usually happens that a man is never punished for violating these laws until after he has put his infernal machine into use. Our police manage to capture the pistol only after it has been discharged and flung away. Three out of every five gamins in the street have some kind of a crazy old firearm concealed upon their persons; and there are shops in Chatham street which make a specialty of supplying the tools. Some means ought to be devised to check this pistol nuisance. When the Albany legislators get through discussing skunk protocol and pecking through key-holes, let us hope they will take up the toy pistol and the revolver.

TROUT FOR THE FISHERY CENSUS.—Prof. G. Brown Goode wrote to Mr. E. G. Blackford for a good specimen of a trout from which to make an original drawing to illustrate the census report. Mr. Blackford asked the South Side Club for some. We happened to be in Fulton Market when they arrived. There were three, all males, weighing one pound fourteen and a half ounces, one pound and eleven ounces, and two pounds and one ounce, respectively. They were quite high colored, but as an old male trout is not graceful, and has hard lines about his head, which is long, we did not admire them much. Mr. Blackford will send for some females and let Prof. Goode take his choice.

ENCOURAGING MEN TO BREAK THE LAW.—The "official organ of the Market Protective Association," of this city, and late "official organ" of a sportsmen's association, shamelessly incites its patrons to violate the laws relating to trapped birds when, in giving directions for shipping to market wild turkeys, wild ducks, prairie chickens, woodcock and quail, it says:

"The freight on trapped birds is no more than on others, and those shot or otherwise mutilated not only bring a low price, but are apt to spoil, and by their more rapid decomposition cause the others to smell badly, thus injuring those who are packed with more than the value of the mutilated birds. If they must be sent, they should be put in separate packages. Which is to say, that the marketmen want trapped birds in

preference to those which are shot. Now what becomes of all the high moral ground assumed when they were trying to spring the "refrigerator amendment" on us? We do not know how much of an "official organ" of anything this market journal may be, but if its attitude on the trapped bird business, as indicated in the paragraph quoted, is the stand taken by the marketmen in general, we may well understand the necessity of a "protective association." Trapped birds—and out of season at that—are to be had at the markets, and game bird eggs for that matter. Will this market journal tell us how game birds' eggs should be packed for shipping to market?

WIMBLEDON.—During the present week the annual meeting upon Wimbledon Common continues, and to-day the Elcho Shield will be again contested for. The weather has been very hot, but the shooting has been up to a good standard and there is no suggestion yet of any crooked marking, such as created such a scandal last year. Mr. Hyde is still in England and is making himself prominent at the meeting. The Canadian visitors were well received and were well satisfied with their preliminary practice. By next week's issue we shall be able to give more detailed accounts of the shooting.

THE ROBBER'S ISLAND CLUB members propose to build summer residences on the island. Gravel has been sowed for the quail, of which there promises to be a good supply for the field trials.

The *Traveler* is a weekly paper published by C. A. O'Rourke, at the office of the N. Y. City Press Association, 115 Nassau street. The paper is not very old, but it is an assured success, as it was from the first issue. It is an indispensable guide for all who go by rail or sea.

CLAY PIGEON PRIZES.—As will be seen in our advertising columns, the manufacturers of the clay pigeon will award a number of prizes for excellence in shooting at their new substitutes for live pigeons. The conditions, rules, etc., will be published in our next issue.

To PROVIDE against losses attendant upon accident and physical injury is the act of a wise man; and we know of no better method of doing this than by taking out a policy with the Travelers Life and Accident Insurance Company. We are familiar with the history and character of the company, and can endorse it in the most unqualified terms.

The Sportsman Tourist.

TWO WEEKS WITH THE BASS AND PICKEREL.

AT INTERMEDIATE LAKE, ANTRIM CO., MICHIGAN.

BY KINGFISHER—CONCLUDED.

OUR excursion for trout up Cedar River had been laid out for the next day, and accordingly we were astir long before the young eagles across the lake said a word about approaching daylight. The Scribe felt indisposed, or had a premonition of what was to come, and said "he believed he would stay in camp and look after an accumulation of bile"—laziness, Jim called it—"that was a pestifer' of him."

Jim and I had, however, made up our minds to have trout for supper, and taking the small boat and our tackle went to the foot of the lake and down Intermediate River a mile or more till we struck an old log road, used only in winter, leading through the swamp, another mile or more to the main road on the "had land." This we followed till we came to the "witless" tree at the intersection of the township lines, where Cutler's instructions said, "Go due south 80 rods, and you will find Cedar River." A farmer who happened along put us on the right track, and as it was just a mile to the river, and when we reached the stream we were satisfied he had a higher regard for the truth, or a better knowledge of distances than our friend Cutler.

Striking into the township road, which was a mere trail, a half mile brought us to the brow of a high hill, and down this the devil's path led us through a heavy wood to the edge of the swamp, through which flowed the river we were in search of. Across the swamp, perhaps a quarter of a mile wide, a corduroy had been constructed, and two rude bridges of logs and poles scarcely two feet above the water, spanned the stream, which was here in two branches and separated by a strip of swamp a few yards wide. The stream itself, what we could see of it, was beautifully clear and cold, and after our tramp through the hot woods a copious draught of its icy water refreshed us wonderfully. Between the two bridges we "camped" and prepared for the sport.

We had been told it would be useless to try to use fine tackle, as the "fresh" was so thick we would be sure to break our rods getting through it along the stream, and fly-casting was utterly out of the question except in a very few spots where there were no fish.

We had, therefore, taken with us a couple of light game poles, nine or ten feet long, and tied to each of them the same length, ho-ks, and a good chunk of lead to hold the bait "level" in the rapid water, and a dozen or more muskels (cl. ms., the natives call them) for bait. Muskels are easily procured in the shallow water along the shores around the islands, and in shallow places in the rivers. Plant your boat over them, and with a switch four or five feet long, slip them to that point, you may get a dozen in as many minutes without getting wet. They lie partly buried in the sand with the shell usually open an eighth to a quarter of an inch, and into this opening poke your sharp need stick and they at once close it with a grip so firm that you may pull them from the sand and gravel when half buried, and lift them into the boat.

The buff colored, tough strip next the thin edges of the shell (the "foot" of the mussel) makes famous trout bait,

and bass and pickerel take it with good relish when nothing better offers.

Jim was so eager to take his first trout that he baited his hook and wormed his way through the bushes three or four rods below and began to fish, while I dashed cutting up the bank. He said he had heard so much about the delights of trout fishing that he wanted to get at it right away! and astonished the first "smarty" of a trout that went for his claim, by the easy and graceful manner in which he would he yanked from his native element. He had read up on "speckled beauties," and the thrills of ecstasy that chase each other through one's frame while playing one of the forward s. b's, and he wanted to go back home and tell his friends that he had been thralled that "kotolin" trout was no great shakes after all. Five minutes after he disappeared in the bushes and I heard a heavy splash in the water below, but thinking he had stepped on a rotten log which had broken and fallen into the stream, I paid no further attention to it.

A few minutes later the bushes parted and a discouraged, shiftless looking object stepped out on the corduroy dripping with water and listlessly dragging a fish pole after it. It was the frame of Jim, collapsed and shrunken. His pallid face, from which all color had fled, looked ghastly, and with chattering teeth and a sickly grin that tried hard to reach from one side of his full grown countenance to the other, he jerked out, "first trout—to get; thrills, and chills—pleas'ly 'enuf" and he heard so much about the delights of trout fishing that he wanted to get at it right away! and astonished the first "smarty" of a trout that went for his claim, by the easy and graceful manner in which he would he yanked from his native element. He had read up on "speckled beauties," and the thrills of ecstasy that chase each other through one's frame while playing one of the forward s. b's, and he wanted to go back home and tell his friends that he had been thralled that "kotolin" trout was no great shakes after all. Five minutes after he disappeared in the bushes and I heard a heavy splash in the water below, but thinking he had stepped on a rotten log which had broken and fallen into the stream, I paid no further attention to it.

While he unglued his pockets of soaked matches, smoking tobacco, plug ditto, box of fishhooks, pipe, knife, cigars, etc., and spread them on a split log in the road to dry, I leaned up against the shattered stump of an old cedar and—"treated." A few minutes in the broiling sun took the chill out of him and stopped the shudder of his teeth sufficiently for him to tell how the same about a dozen or more of the looking pool forty or fifty yards below the road, which, judging from what he had read about trout streams, ought to be a good place for fish.

The stream was about fifteen feet wide and four or five feet deep, and directly across it at the deepest part of the moss-covered trunk of an old cedar, the greater part of it under water, lay a log about the size of a broom handle. I saw a flash dart from under it, and a smart tag at his line told him that he had a "bite." Thrill number one (with the ecstasy). A fierce jerk wound line, hook and sniker around a branch eight feet overhead that hung over the middle of the stream, without the trout. All efforts to loosen it (from the bank) were fruitless, and the only way he saw to reach it was from the log above the pool. Slipping cautiously out on the log, one foot of limb (about six inches in diameter that projected from the trunk straight up the stream, and pulling the branch down with the line in one hand, reached for the hook with the other. He was a few inches short, and taking another short step out on the limb, he stretched for it again, and just as he touched the branch the bark on the limb slipped, and he went backward his full length into the icy water. Thrill number two (ceasing left).

He did not stop to examine the formation of the bottom, but coming to the surface with a snort, reached for his hat, which had floated off, clambered up on the log and backed to the bank, still hanging out to his pole. He said the first sensation he felt when he struck the water was that it was hoiling hot, and the next that all the blood in him had rushed to his heart and frozen there in a moment. He was a few minutes before he could get his bearings, and he came skulking through the brush back to the road with his carrying capacity taxed to the utmost limit, with wrath and suppressed profanity, which broke loose in full volume as he waded up in the sun. This little show spoiled the fishing in that pool, and it was the best looking piece of water we found during the day. Stripping off his pants and woolen overshirt, we wrung them out and spread them on the log, clean logs and poles forming the road, Jim meantime seeking the shade of a friendly bush to ponder on the uncertain tenure of rotten bark on a moss-covered cedar limb, and group together the different "thrills" he had experienced in his first half hour's trout fishing.

I took my way up stream to try my luck, leaving him to his solitary watch on his fast drying raiment and his reflections.

After floundering through an almost impenetrable tangle of brush and fallen trees for three-quarters of an hour, occasionally finding a place where I could get to the water, I returned to the road with a trout of half a pound to find Jim getting into his nearly dry clothes, and ready to again try the temperature of Cedar River, if it got in his way. "No went into the water," he said, "I was in the water at Saunatum on the way, Jim stopping a moment to shake his clenched hand at his hook dangling from the branch over the water. Every step of our way was impeded by bushes and branches sweeping the ground, through which we pushed and struggled, dragging our rods after us. Trees and brush, bushes and trees, upright trees, leaning trees, fallen trees, crossed and tangled, barred our way, and our logs here and there, covered with moss, green and rotting, helped to fill up the measure of our discomfort. Overhead the thick branches kept out the sun's rays, except at rare openings along the stream. Once in a while we would find an opening to the water and poke our rods through it over the stream to try for a rise between the logs and limbs and fallen trees that covered the water like a tangled spider's web, in places a tangled mass, over, and under, and partly over, and partly under, of every color and direction. Frequently, as we forced our weary way along the low banks, we would step on a patch of soft green moss and plunge a foot or two into the ley water, where the current had eaten under the bank, leaving only the treacherous carpet of moss as a lure for the feet of the unwary angler, and it was at such little mishaps that Jim's wonderful command of language—not in the books—came into play every time he fell. "Dreadful! Dreadful! Dreadful!" he would be called back in the rear to let the water run out of his boot, and as he rubbed his off eye where a spruce branch had swished into it as I passed ahead, a few fragments caught my ear, such as "Delights of trout fishing—glorious sport—fell in the stream—broiled in the sun—both signs pedicled—boots full of ice-water—one eye knocked out with a 'fresh'—back bro—" Here a heavy log, or a rotten tree trunk, or the drift of his trousers as I tripped over a root and measured my length in a nice bed of soft, black mud.

After fishing every available spot of water for half-a-mile without a nibble, we were convinced that Jim had polluted the water to such an extent when he fell in that all the trout that were not paralyzed had taken refuge in their deepest and most remote hiding places. We sat down on a log to rest, and Jim swore a highly polluting oath, and wouldn't do a step further for all the trout that could find breathing-

room in Lake Michigan, and, striking the "bit of his rod a foot into the sock at his feet, clinched it with, "There, thank you! Steeze there till some other lunatic comes along and pulls you out! Let's go to camp."

Avoiding the windings of the stream, we worked our way through the woods to the foot of the first island that is a few yards from the bridge over the south branch. "Disliking to go back to camp and face the Scribe without a mess of trout, I prevailed on Jim to wait and rest while I went up the stream to where I took the half-pounder.

The character of the swamp above the road was much the same as below, if anything a trifle worse. At very few places could I see more than three or four feet of water on account of the overhanging limbs and bushes, but I caught a fish in the south branch for an eighth of a mile, I took eight beautifully marked fish of nearly the same size as the first one, and lost twice as many more for want of room to handle them. I. Some of them I lifted a foot or two from the water, only to see them shake clear of the hook and fall back in the stream. One hungry fellow took the bait six times, and was twice lifted a foot or more out of the water. The sixth time, the hook buried itself over the barb, and by sliding the rod back of me through the bushes I got hold of the line and dragged him out on the bank. In fact this mode of landing them was the rule and not the exception.

I am aware it was an unsportsmanlike way of taking a trout, and a fly-fisher looking on would have smiled at the procedure, but had the boat been on four feet of water, I would probably have done as I did, or gone back to camp troutless. The fish were not at all shy; on the contrary, some of them would take the bait four and five times while I stood in plain sight. To fish this stream—at least where we fished it—a short, stiff rod and a stout line and hook are necessary with which to yank them out from between the logs and from under rotten logs, and to get my line to whip about most of the next day, I must have had a stout line and hook, and at these places, he had, excellent sport might be had with both bait and fly, but he carelessly failed to apprise me of this fact till the day before I was ready to break camp. Score one for brother Johnson.

I am satisfied that the stream is full of trout, but whoever should find it so, he had better be ready in his mind that it is not going to a picnic, but to a day's hard, laborious work. A lusty shout from below and a glance at the sun through a rift in the foliage warned me it was time to quit if we were to make camp before dark. Back to the road once more, I found Jim enjoying a quiet smoke—his tobacco and matches having thoroughly dried in the hot sun—and impatient to get started, going back to the boat and hooking my shoes to the bank, and walking a mile to the weary tramp, but first a sight of the little river gladdened our eyes and put new life into our tired legs. A vigorous use of the oars took us to camp at sundown, and a few minutes later our trout were crowding out the smell of bass and pickerel from two sputtering, sizzling frying-pans over the fire. So ended the Editor's first day after trout.

The next morning, at the lake with my old friends, the bass and longfaces, with whom I had many sharp and frequent differences. The boys spent the forenoon in studying over and preparing for a contemplated trip down the lakes to Traverse City, back up the bay to Charlevoix, up Pine Lake to the mouth of the Boyne, stage to Boyne Falls, and from there to Petoskey by rail. In the afternoon they went to a sail and a boat, and had a picnic on the island, and with the middle and top joints of a bass rod, and four or five feet of a light line, had some rare sport with the sunfish. Around the islands and along the shores of these lakes near and among the rushes are countless thousands of these game little fellows, from an inch to seven and eight inches in length, and they lie eagerly at anything in the shape of bait. They are clean, bright, and when the wind blows the pond, taking them, which is the prime consideration, they diffuse a very "comfortful odor" from a well regulated frying-pan.

After supper the question of breaking camp was taken up and disposed of. I had my choice of breaking up, sending the traps with the camp boy to the R. R. to be shipped home, and join them on their trip, or stay, fish out my remaining time, and then go home. I had no objection as I had come just a purpose to fish. Breakfast over next morning, the boys packed a small gipsack with a box of cigars and a paper collar, and waited for one of the Cutler boys to come over with his boat and take them to Central Lake, whence they were to cross over to Russell's and wait for the steamer for Elk Rapids. While they waited I went up the lake and fished till I came along a long bank, and when the boys packed the paper collar, I dismissed them to Long Point, and I saw them no more till we met at home.

When they were really gone, having my man Friday ready to hand in the person of "Johnnie," I felt a little Crucosish, but that night about 10 o'clock a party of four young fellows arrived from Chicago for a week's fishing, and knocked all my sentiment and solitude into the lake, and I drifted gladly back into the old, pleasant relations with the fish, the eagles, the loons, the kingfishers and the muskrats.

Next day I took, with eight others, the largest small-mouthed black bass that we got out the trip, but was unable to get his weight, as the Scribe had locked the scale in his trunk and taken the key with him. He was three inches longer and an inch deeper in front of the dorsal than the one that weighed 6 1/2 lbs., and I firmly believed he would have weighed 10 or 11 lbs. "Right on!" I said.

Somewhat, it is nearly always the case that when one lands his biggest fish there is no scale at hand to get his weight, and it is also a well-known fact that the fish is sure to benefit by it in the matter of avoidpoups, but herein is one of the chief comforts of the honest angler, for besides gratifying a natural propensity to tell a fish story, it affords a characteristic advantage in not taking a mean advantage of anything, not even a fish, to make it appear smaller than it really is.

I gave him, with a dozen others, to three neighbor boys—shavers of ten to fourteen years who had fallen into the praiseworthy habit of picking a tin full of ripe, red raspberries every afternoon, and bringing them over to us in the evening, and I am certain the friendly relations existing between us were not in the least disturbed by not knowing the exact weight of that fish.

The last four days of my stay I tried a new bait, suggested by using a trout fin, and the result was most astonishing. It was simply the half of the caudal fin of a 3 or 4 lb. pickerel. Select a bright-colored fin, leaving enough flesh and skin on to afford a firm hold for the hook, and troll with it in the water. The bait does not sink, but floats on the surface of the water like a spoon, but dodges from side to side in a crazy, erratic sort of way, and if there is a longface in

sight he makes a dash for it without waiting to ask, "What have we here?" It is the most killing luro for pickerel I ever need, and I verily believe that had I been allowed I could have taken a hundred of them in a day's fishing. I have seen a large bass with these pieces of fin, but it seems to be one particular strain of long-faces have been looking after, for I these many years.

After taking eight or ten fish with the half of a fin, it becomes worn and split by their teeth till it is useless. Select another one which has the stripes of rusty black, dull red and orange well defined, and repeat till you are worn out handling them.

Of the two kinds of bass in this lake, the large and the small-mouthed, they are identified with the *Micropterus paludis* and *M. salmoides*, described by G. Gill. They are game to the last gasp, especially the small-mouthed ones, and I had more keen sport and high enjoyment handling a dozen of the largest ones, than with all the pickerel I took, although it is rare fun to wear out and gaff a ton or twelve pound longface. There may be better sport than black bass fishing, but the writer seeks it not, neither the small-mouthed nor the large-mouthed. Contentment arises and goes forth with the bass fisher. The angler and his dog go with him through the day; and it abideth with him even unto the falling of the shadows of the evening, and unto the closing of the day. True game, noble and glorious is the black bass; the peer of all his fellows of the waters, and as the craft begins to appreciate his qualities, he takes a step to the front each year as the future game fish of the North and West. No many years, till he will fill his tail in the face of the last *Salmo fontinalis* of these regions, unless a law is passed and enforced, to punish the murderers of innocent fingerlings, and to better protect the forests that give life to the streams.

Friday morning and time to break camp came all too soon, and I prepared to leave the little green island and go back to the smoke, and dirt and din of the "Paris of America" with many genuine regrets. The Cutler boys came over early in the day to help me up, and by ten o'clock the sun had dried the dew out of the mud and fly and everything was ready to put aboard the boats.

This time, we used two boats and made but one trip, by lashing the boats together about three feet apart with some loose boards, and loading the bulkier boxes on top as a deck load, leaving room at each side to handle an oar.

One of the Cutler boys had engaged to take us to Manelonon. He had promised a better way of getting out from the lake than to go by Detroit, and believing they could not do a worse way, I swallowed the bait eagerly and wished afterward I hadn't. Our point of debarkation—the only place for a goodly distance along the east shore where a wagon could get to the water—was near the mouth of our little stream at a "landing" where a corduroy road had been made through the swamp from the hard land to the lake side. The Cutler was waiting for us with a new wagon and a yoke of sleek, powerful young steers—a team that did not promise much speed, but they proved sure and reliable in mucky places and wearisome, knee-deep sand hills that we found on the way. I am sure a pair of ordinary horses would have stuck in some quagmire or left us hard and fast on a sand hill somewhere on that infernal road, and I was thankful before the end was reached that we had the patient, plodding mules, and a careful driver to handle them, in the person of the little Cutler. When the wagon was loaded, with head uncovered, I made a profound bow to the little lake, said good-bye to Pap Cutler, who stayed behind to care for the boats, and bade adieu to the "laughing waters of Intermidiata."

We stopped a few minutes at Cutler's house—which, with his outbuildings, make up the town of Lake Shore, post office and all—to get an axe and a log chain, to be used in case we should have to cut away a fallen tree from across the road or meet with a mishap in the line. The beautiful, good, naturally Mother Cutler filled the writer up with cool, fresh buttermilk, for which he confesses a special weakness, and at 12 m. Willard said, "Come, boys," to his pets, and we were fairly in for a drive, or rather tramp, of fifteen miles over a road that would develop profanity in a wooden Indian.

It is not enough to say that road that there may be a few more in Michigan, or somewhere, that are as good. We walked nearly all the way, because we could not stay on the wagon without being tied on.

Five miles from the station we crossed Cedar River, stopping awhile to rest the tired cattle and our nearly played-out legs. Here we cooled the red-hot inner man and boy with copious draughts from the limpid stream, and went on our way, tired with the vigor and cold water. About three miles further on we stopped at a farm house to get a drink from a well 163 feet deep, and, judging from the extreme coldness of the water, it must have had direct underground communication with the deepest and coldest pool of Cedar River.

From here into town the road was better, and we managed to stay on the wagon, greatly to the relief of our weary legs and the tired disgust of Willard's "boy."

An hour before sundown we drove up to the depot, thankful that it was all over, and after checking the baggage and billing the camp furniture through as freight, I dropped in on Charley Persons, of the Manelonon House, to scour up and see how many of his 32 calibre biscuits it would take, flanked by a 2x4 beefsteak, to fill a good sized area of crying emptiness, somewhere in the region below the diaphragm. In twenty minutes after the call to supper I had a waiter girl distracted and the general Persons ready to make an assignment. Appetites? Well, yes! Northern Michigan is full of 'em.

When the biscuits gave out the waiter-girl folded up her exhausted frame into a chair, and Persons and I adjourned outside to laugh at the antics of a young bear cub chained to a stake in the yard.

The train soon came along at 11:05, and half an hour after I was carried up into my seat, and as I awoke and framing I was back on the sparkling lake with the bass and longfaces, and the lous and kingfishers.

Before reeling up this "hundred yard, hard twisted tale of many kinds," I wish to say a word about the G. R. & I. R. R. and its management, as affecting sportsmen.

First, there is no region in the country as easy of access as by this road that will afford the trout and bass fisher better or more abundant sport. The "Six Lakes" chain is literally filled with bass and pickerel, and several of the streams being as good as the best of trout and bass, fair sprinkling of that "silvery beauty of the gorgeous dorsal," the American grayling.

The region around Petoskey is perhaps as good, but there are too many people there during the season. Everybody—

his uncles and his aunts and his aunt's sisters—goes there, till "the woods are full of 'em." They camp out, and they stay at the hotels, and they overrun the country, and they fish, and they don't fish—mostly don't. If you want solitude—and what true lover of the rod and reel does not?—If you want to have a private talk with Nature, you had best being interrupted or jostled by a crowd, go to the Six Lakes; if you don't, go to Petoskey and fish Crooked, Trout and Mullet lakes, and on through to Cheboygan.

Deer and ruffed grouse (local, "partridge,") are very plenty in the region where we were, and later in the season the lakes are covered with thousands of wild geese and ducks, but as all game and wild fowl are out of season in July except woodcock, they received no attention from us. A hawk may be found almost any day along Cedar River, but we had not lost any bears that we knew of, and besides, somehow, we did not care much about bear meat.

But to come back to the railroad. The management carries dogs, guns and fishing tackle, with a liberal allowance of traps, free, and one can always get a civil and respectful answer to a question from the officers and men, from conductor down to the humblest "sweet polisher."

The lower end of the line, from Port Wayne to Richmond, is under the able management of that clear-headed, sterling old Quaker, Wm. Parry, well and familiarly known in Eastern Indiana railroad circles as "Uncle Billy," and the angler who may have occasion to "run" the end of the "fishing-line" held by him, may be assured that his lines will be cast in pleasant places and his comfort looked after by a crew of careful and obliging train men. The road from Richmond to Cincinnati is controlled by the C. H. & D. R. R. Co., and is under the eye of that clever gentleman, Mr. Lew Williams, general manager, to whom the writer is indebted for many courtesies.

A word about the expense. We were out from Cincinnati seventeen days, and our expenses, each, including \$19.75 for round trip ticket, were \$42 and a few cents. This included transportation from Maconona to the lake and back, boat hire and camp boy, and we lived well and had everything needed for a well conducted camp.

I got home on Saturday night, and Monday morning felt like a new man, resumed to prose of life with new vigor and clear head, having enjoyed a trip that will never be forgotten. And now, old friend, my lines are reeled up, reels cleaned, oiled and put away, rods unjointed, furnished up and in their cases, and the Editor, the Scribe and the writer are counting the weeks till the time comes when we (with yourself) may again wet our lines in the "placid waters of glorious Intermidiata Lake."

NOTES OF AN ANGLER IN THE NORTH.

By FAIRHOLD, JR.—PART FOURTH.

NATURE'S SUPPLY STORE.

IN the Northern Wilderness Nature has abundantly provided man with the requisites for a moderate luxury. It is no longer necessary that man should be a miserably placed in the heart of the wilderness and deprived of everything but his clothes, a flint and steel and a knife, and to shift for himself, he would in a very short time make himself exceedingly comfortable, leading a regular Crusoe existence in fact, and in time would make his way to the settlements richer in worldly goods than when he started.

From thirst he cannot suffer, as water, pure and undefiled as the dew of heaven, is everywhere abundant, but to allay the cravings of hunger he must speedily devise means. Every little balsam swamp he knows abounds with hares and partridges, and without losing any time he sets to work to effect their capture. With the aid of his knife and the abundance of dead brush, he constructs a low fence extending several acres across this swamp. At intervals he has left small openings. He next gathers some of the long, tough, pliant roots of the spruce, and fastens them into slip-nooses, which he sets at the openings he has left in his fence. His next care is to provide himself with shelter. Yonder boloo or yellow birches yield their outer bark readily, and from it a small lean-to is formed, and a fragrant and soft couch is made from the balsam branches. A short search about the camp discovers some Indian tea growing. This makes a very agreeable substitute for the tea of commerce. How is the water to be heated for tea? exclaims the reader. Nothing easier: the birch bark from which the woodman has constructed his lean-to can be fastened into vessels that will hold water, and stones heated and dropped into the water bring the latter to boiling point in incredibly short time. Undismayed by his position and certain of a good breakfast in the morning, our woodman goes supperless to bed. Sure enough, a visit to the snares in the morning discloses several hares and partridges suspended in mid-air.

After a hearty meal is partaken of, our friend sets himself to fashion a line from the intestines of one of the hares, and then to make himself a rude hook from a tough splinter of birch wood. As primitive as are these appliances, and with no bait but a piece of partridge meat, he succeeds in landing several dozen small trout from the brawling stream near by that literally teems with fish. Well provisioned now he packs his provisions in a spruce bark canoe, and, laying his course for the straits, he is in one large boat for some ten or twelve feet from the ground. He then makes a frame of cedar poles that will exactly fit the bark, and the two are lashed firmly together with the spruce roots. Some gum and resin are next hunted up and applied to the seams at the ends to render the canoe water tight. While by no means as servicable as a birch canoe the spruce canoe with ease proves an excellent makeshift. We shall now leave our woodman, conscious that the remainder of his journey will be uneventful.

THE OASISIAN OREER.

A most important individual is the priest, or curé, as he is called, in a French Canadian parish. In his one person is represented not only the spiritual authority, but the temporal as well. His sway is absolute, but as it is usually tempered with much *bon homie* and paternal regard for his flock, they render a cheerful obedience and look up to him with a feeling of reverential fondness. He is seldom a man of much erudition or a great student; but the multifarious duties of his respective offices absorb his time and attention. He is fond of sociality, good over his pipe of an evening he does not object to a quiet game of cards and a glass of toddy with even a heretic. He is hospitable to a degree, the word stranger or sportsman is an open sesame to his heart and house. From the pulpit, of a Sunday, he breathes fierce anathemas against the *Protestants*, but this is a duty his Church forces upon him; he himself is incapable of being unkind. In all the social gatherings in the parish, the curé is the main attraction. He is always ready to tell a better story, and a song from the curé is always received with tumultuous applause. Does the fun slacken, M'sieur le Curé comes to the rescue, and with and jollity again resound. He is as much in demand at the bedside of the sick as the physician, and performs this duty with unflinching cheerfulness. At all hours, in all seasons, in all kinds of weather I have met him on the road on his errand of sick visiting. He is a constant and an ardent disciple of Walton, or has a "madness for the sports of the field."

I recall with much pleasure the many pleasant hours I spent in the congenial companionship of one of these worthy men during a long winter I passed in a little back settlement. He was passionately fond of shooting, but singularly unsuccessful, yet his good nature ever came to his rescue, and his ill-luck was happily soothed. I never knew him to kill anything, out day after day he would accompany me on my tramps after hares and partridges, and my good fortune appeared to give him complete satisfaction. One day I heard the report of the curé's gun. "Good!" I mentally ejaculated, "the curé has at last killed something." It was not long ere I heard his reverence coming. "Well, old fellow, what luck?" "Luck," exclaimed the curé, "just my luck. Fired at a partridge and Tin certain killed him, and here are a handful of feathers I knocked out, but I could not find the bird." I laughed at his exhibition of chagrin, and thought no more about the matter until along in the afternoon, when bending back over the ground I suddenly caught sight of a partridge's tail just sticking out of the snow. In a moment I knew this was the curé's partridge. Bang went my gun in the air, and I then picked up the partridge and waited the curé's coming. But I quite overlooked the fact that the bird was long since a dead one. I called out, "Hallo! partridge. Do let me take it a moment." When it's frozen already, isn't it?" explained his reverence. "How cold it must be to day." With the soberest face I could command I begged his acceptance of the bird, and for several days I kept him in ignorance of the joke I played upon him.

Brother angler, when you visit a Canadian parish inquire your way to the curé's, and, my word for it, your subsequent paths will be those of joy.

WORTHY SPORTSMEN.

There is something irresistibly attractive about forest life, and I can recall a number of men of means and social position who have abandoned all the pleasures that both might have given, and sojourned for years in the bush, living in the most primitive manner, devoting themselves to the chase and exploration. Captain D—, well known in Quebec, threw up his commission in the British army, and took to the bush to live like a man of the woods, and in the end, but once having tasted the sweets of a bush life he became a slave to the passion for hunting and exploring, and it was on one of these expeditions that he met an untimely end, dying in the bush, from whence his remains were dragged out on a toboggan by his faithful Indian guide. The old settlers still tell strange tales of two Englishmen who, for many years, made their home in the bush, far removed from all civilization and companionship, appearing only in the settlements at intervals for supplies and letters from home. They were both men of wealth, but ardent lovers of the sports that Canada's fastness offered. Other instances are not wanting to show that there is a large leaven of the primitive man inherent in the English race.

The Canadian, however, is pre-eminently an ardent lover of bush life. His leisure from the duties of his profession or business he spends in the woods, and he does so with no equal. Part of his schooling was to learn to handle a bow and arrow. He is an adept in bush lore, and wields an axe like a professional chopper. He is hardy to a degree, a capital hunter and fair shot, and a general fellow to boot.

VACATION RESORTS.

PORT JEFFERSON, LONG ISLAND.

In answer to your inquiry in this week's paper I take the liberty of sending you a slight description of one of the many beautiful summer resorts situated near New York where one can go and spend a vacation at a small expense. Being an old reader of the FOREST AND STREAM I take pleasure in informing your many readers that there is no summer resort more pleasant and picturesque than the growing and popular village of Port Jefferson, Suffolk County, Long Island, with its many lovely shady groves situated near the water's edge, and very convenient for camping parties.

Fish, oysters and clams are in abundance in the beautiful bay which the village surrounds. Good board can be had at five dollars per week in many private families near the water. Reliable sail and row boats are to be let on very reasonable terms. Sailboats large enough to carry twenty-five persons can be hired for \$2 per day or \$9 per week. Blue-fishing is usually very good during July, August and September, and there is no better sport on Long Island for week-end shooting than around Port Jefferson. I killed thirty-three evenings just before dusk, and a friend of mine bagged twenty-seven one morning before breakfast, and did not go two miles from his house and was home before nine o'clock.

There is no place within one hundred miles of New York more convenient for persons residing in New York, Brooklyn or Jersey City than this beautiful summer resort. It can be reached by the Port Jefferson, Westchester Valley R. R. from Long Island City or Flatbush avenue, Brooklyn, by the New York and New Haven R. R. to Bridgeport, and cross the sound in the steamer Brookhaven, which makes two trips each way every day and, crossing in this way, a fine view of Long Island Sound and the surrounding counties can be had.

CRICKED LAKE, MICHIGAN.

PORT WAYNE, JULY 16.

Replying to several notices in your issue of July 14, in regard to a good place to camp and fish I can cheerfully rec-

ommod Crooked Lake, Mich., as just the spot for a sportsman, and a delightful place to camp or board. The bass and pickerel fishing is first-class, in fact, for lake fishing cannot be excelled. Passing through a narrow channel from Crooked Lake into Pickerel Lake brings you to a beautiful sheet of water and the pickerel and bass fishing. In rowing to the fishing grounds one passes over many places, where, in ten minutes' time, can be caught with hook and line all the minnows one can use for bait.

The air on and about these lakes is wonderfully cool and bracing, the scenery is beautiful. The angler is never troubled with mosquitoes; in fact, a fisherman's paradise.

Crooked Lake is six miles from Petoskey, the northern terminus of the Grand Rapids and Indiana R. R. Rates low, accommodations first-class.

I have fished in these waters once or twice every year for the past eight years, and always with big success. Shall be pleased to furnish any information desired. G. S. F.

MORE LIGHT ON THE 'POSSUM PUZZLE.

DOSE INTO POETRY.

DELAWARE, Ohio, July, 1881.

Editor Forest and Stream:

Thinking I might possibly be able to throw some light on the vexed question of "How to cook dat 'possum," I interviewed my ancient colored friend, Uncle Dan, with the following result. His views, I think, settle the question at once and forever. Age and experience have spoken, and he is, indeed, by hypercritical and hard to please who does not accept this colored Nestor's dictum. Listen, then, while

UNCLE DAN'S SPEAKS.

"Iz I ebber cooked a 'possum?"
 "Ya! ya! ya! you's shoutin', now!"
 "Want'er know the way to boss 'im?"
 "Sho! any footin'g tell yo' honey?"
 "Pobblayn a'—wa't's dat, boy?"
 "Wa't I think de bestest way?"
 "Cooney in e'—all right, soney,
 Cho to gracious—gittin' day!"
 "Nebber see a 'possum cookin'?"
 "Lawd! Mass hat y', wa's yo' baww?"
 "Spees yo' what you'd been a lookin',
 Wen ole Gabiel blows her's hawn."
 "Members when I—wa't yo' sayin'?"
 "Wa't to know the ras-y-see?"
 "Drat dem dogs—how dey's a bayin'!"
 "Yo' Jim yo', luff dat wiskey bet!"
 "Tell yo' wa't—dey ain't most nuffin
 Better den wa' 'possum an'!"
 "Yo' Nancy, wa't yo' doin', cuttin'?"
 "Dat pore little, in'st'ant lam!"
 "Yes, I's gwine to tell yo', shorely;
 Doan't yo' hurry de ole man."
 "He's a feadin' radder porely;
 Mus'tn't fluster Uncle Dan."
 "Bestest way I know to cook 'im,
 Iz, to ketch yo' 'possum rist."
 "Mwo dem low wite trash dem' hook 'im,
 Caze dey'll not it, sho, or bat!"
 "Den you—hole on da, Mass Harry!
 Tell you in free minutes mo',
 Den you—"Hah! got time to tarry?"
 "Yo'ze in a pow'tin' hurry, sho!"
 "Well, massa, if yo' mus't be goin',
 Hopes I'll see yo', morrer night;
 Den I'll tell yo', so'ze yo' will know 'im,
 How to cook dat 'possum right!"

H. P. U.

A MINNESOTA LAWYER'S EXPERIENCE.

ST. PAUL, MINN., July 15.

Editor Forest and Stream:

An old subscriber and an attentive reader of your excellent paper, I have become much interested in the 'possum question now being so ably debated by your Southern correspondents, and if it may be permitted to a resident of this Northern region to intervene in the discussion of a matter which pertains so peculiarly to more favored climes, and which already shows a decidedly rising temperature, I crave permission to give you my views on the Northwest upon the subject, and to cast a feeble ray of "Northern light" upon the argument.

Let it not be inferred at this point that I desire to be "set down as one who loves his 'possum cold," or who, upon the other hand, fires his intellect and heats his argument with 'possum hot. I fight under neither banner. In a word, I simply wish to give you my sad experience in attempting to prepare, cook and eat a 'possum.

During the winter of 1879-80, while being shayed, my particular barber, who had, after the manner of his craft, discussed almost every subject, took a fresh grip, and broke out: "You is very fond of huntin', Mr. —." "Why, yes, Matt," I replied; "you know I am." "Ever hunt down South, sah?" "No, I never was down South though I should like to fill this time with winter there." "Dat de place fer huntin', sah," said Matt. "An' de 'possum! Shortly you don't know wa't's good, sah, twel you've done eat 'possum."

I had plenty of time, and I liked to start Matt, and seeing that he need not slight encouragement, I said, "Tell me all about the 'possoms, Matt." And he did. Details would be wearisome, and I will give you in concise language as he descanted on the 'possum, winding up by saying that he had seen some for sale at a game market on Jackson street; that they had been sent up from the South, and had been "froze just right."

It was too much for me. The picture he drew of the brown, juicy, delicious dish that could be evolved from "dat 'possum" captivated my Northern appetite, already starved by a Minnesota winter temperature, and I listened to the voice of the tempter—and fell. I sent the porter for one of "dem 'possoms." He brought him to the shop, arousing the wildest enthusiasm in the entire corps of tonsorial artists, and after receiving full and minute instructions as to its preparation and cooking, I carried home my prize.

Here my misfortunes began. The little animal so worshipped in the barber shop, and become an object of attraction and disgust. Aided and abetted by my wife (usually docile and obedient) the entire family, including the

servants, broke out into open revolt. "The ugly little rat,"—so did they revile the royal 'possum—"should not be cooked in *that* house, nor touched nor allowed to remain. I had better get my friend Matt or take it to him, or perhaps invite him to dinner. Indeed the latter course was much preferable, but that beast, ight 'take it away." In vain I begged and pleaded, in vain explained, quoted the FINEST AND BEST MAN, and expatiated on the 'possum's dainty diet of persimmons. All to no avail. The royal 'possum was fled away, and on the kitchen table lay the 'possum, and seeing to grin sarcastically at me as I ruefully contemplated him.

However, I was resolved, and, silencing all opposition, I announced that I would prepare and cook the 'possum myself, and then, then, when he lay upon the dish done to a turn, browned to a golden color, basted in a delicious aroma, such as never before had been breathed by those Northern blue noses, then would I be both revenged and rewarded. So after supper I caused a large kettle of water to be boiled, to which I added a quantity of hard-wood ashes making a strong lye, and plunged the 'possum in. Now Matt had said that this was the way to take the hair off, and that would come off at once. It did not, but the skin commenced coming off at once. He, I thought, determined to conquer, I put on a pair of light shooting gloves—black skin—and at I went, scraping that 'possum.

Oh! the memories of that contest, both hands full of lye and hair, my heart full of rage and disappointment, the air nearly blue with well-adjecives. I could not smoke for I could not bring my hands near my face to touch pipe or cigar, and oh! how I trembled, my hands did stick to the pipe, done about midnight, and if the 'possum was not parboiled, my hands were, and the smell of the lye made me sick. I then cleaned the brute, cut off its head, feet and tail, when it looked like a little pig, and quite presentable. The next day I bribed the cook into agreeing to bake it, following my directions, which I gave according to Matt.

On the next evening, broiled and seated at the table, surrounded by an admiring—though doubtful—family, whom my determination and faith had almost converted to the enthusiastic belief that I had in the 'possum for which I so impatiently waited. Now was my hour of triumph, now was my faith about to be rewarded. I expressed some contemptuous pity for narrow prejudices, some approbation for those great minds who know and recognize a good thing, even before they see it; and then, raising my napkin, I dived into the 'possum. He came. I recognized Matt's description; there was the plump, golden brown body, there the rich gray trickling down the juicy sides on the brown slices of potatoes. I cut off a slice; the rich aroma rushed out. It seemed a little strange; rather strong, so to speak, but I would not yield. With a smile (a trifle mechanical) I cut off a piece and put it in my mouth. Why, oh why! did my little mind wander back to the night before last, why did I see the kitchen, the table, the lye, the half-scraped, parboiled thing I had worked on so hard? Why did memory and my nausea rise up together and my heart and stomach fall me?

About eleven o'clock that night (after a cup of strong tea and a slice of dry toast) I ventured on a mild cigar, and explained to my wife that, while one should always investigate, the study of natural history should not be carried too far.

I have heard of an "aunt Scotch wife," too fond of mountain dew, who, overcome by her pointions, sat down upon a rock by the seaside at low water, and then fell asleep. As the tide rose she was gradually covered, until at last the waves lapped upon and splashed her face and lips. She was found in this dangerous predicament, and mourning in maudlin tones: "Na, na, nae ane ither drap, ither lic or canld."

And such is my position on the "'possum" question. MARK NORTH.

ANOTHER 'POSSUM TALE.

LEWIS ROBB, our barber, six feet in height, one hundred and seventy-five pounds, is passionately fond of hunting shy Reynard. To enjoy this fascinating pastime Lewis will mount anything in the shape of horse, dog, etc.

Not many moons ago Lewis determined to try the chase. After seeking in vain to obtain a horse he hired a little active mule from a colored brother. Mounted, his long legs almost touched the ground, as the little mule cantered along with him to the merry green woods. Lewis was in high spirits. The moon, at her full, shone in resplendent glory. His well-trained dogs ran freely joyously over the prospect of a race after the dangerous prey. He had mounted on his ears, out a few playful antics with the long-eared hounds that now and then sniffed at his heels, and nimbly hid away over the long, long wire grass.

Soon they are upon the hunting ground. The old veteran of the pack takes a sniff of the ground, and announces by a deep-mouthed bay that he scents the prey. Join in his cry the opening pack, and away they speed, making the welkin ring with music sweeter to the hunter's ear than that of his mistress. Lewis, thanks to the activity of his mule, keeps well up, expecting every moment to rouse shy Reynard from his hiding-place. A half-mile is left behind! Suddenly the dogs fiercely bay something in a log. Lewis rides up to find a large opossum seated in the forks of the fallen tree, growling defiance to his foes. Enraged by the presence of their master, the dogs seize and drag the prey to Lewis. The animal of "baked 'possum and later" flouted the high Lewis' brain so vividly that he dismounted and rescued the 'possum from the hounds. Knowing the cunning creature's art of feigning death he determined to break his neck; so, planting a foot on his neck and seizing the tail, he pulled with might and main. Satisfied that the brute was dead, he tied him on his back, and proceeded on his way. He had not gone far before his little mule stopped short, and seemed to reflect for a moment. Then, as though stricken with "St. Vit's" dance, he commenced capering wildly madly and vigorously over the wire grass. "Whoa! whoa! mule! whoa!" yells Lewis, "who-o-oh!" But he don't whoa, but fans the air rapidly with his hind legs, and Lewis shoots out of the saddle, over the top of the log, and spins round in a circle with his head, "his boots are something by a wanton whale."

Mule sheds the saddle by slipping through the girth, runs a short distance, stops, turns around, and snorts vigorously. Lewis, rising, rubbing his bruises, catches the mule, looks around for his saddle, and lo! the opossum is running away with it. The cause of his disaster was apparent. Tired of his peculiar confinement, and rousing from his feigned death, the 'possum, in his effort to get around corners, tickling the mule's flanks with sharp claws, which perform-

ance resulted in the collision between Lewis and our planet. Catching up with the mule, Lewis turned him loose to wander at his will. And never, hardly ever, will he ever believe a dead 'possum. O. G. G.

Bainbridge, Ga.

From the August Scribner's just at hand we take these "Aphorisms from the Quarters":

"Dat's de way to find a man dat kin git mo' tention arter he's his dead da' de Claws 'possum."
 "Dart's right sharp good schoolin' in de tail of a 'possum: nebber let a good thing long as da' a chance left."
 "A good 'possum dog may tell a lie by accident, but you can't prob'ly get on him de free's holler."
 "De 'coon puts up de best fight, but de 'possum is heap de smarter an' is got de bes' education."

Natural History

SOME OF THE BATS OF WESTCHESTER CO., N. Y.

BATS, through superstition and prejudice, have long been looked upon in anything but a favorable light. Their satanic wings and noiseless flight, their reputation of hopelessly entangling heads of hair, and worst of all as carriers of *Chines vesicularis*, may be among the causes which place them in disfavor. But to the unprejudiced mind the class of mammals are more interesting than the little bird-like eyes, long erect ears, and dog-like faces, enlivened by the sight of their small, needle-like teeth, and spiteful, grating squawk when they are disturbed or imposed upon? To us they are beautiful, regardless of their somewhat clumsy body, their seemingly unproportioned limbs, and the questionable report that they are introducers of the bad bug. The entrance of this class of creatures into the world, we think, better referred to other sources than the little bat, yet the bats which we have examined may have been unusually fortunate in not having these pests upon them.

Bats may become a nuisance by their numbers, as in the case cited by Dr. Harrison Allen, in his Monograph (p. 17 of introduction), where nearly twelve thousand had to be killed before a certain few waters were saved, on account of odor, noise, etc.

Interesting as the bats are, they are the most difficult to observe, on account of their nocturnal and secluded habits. This accounts for so little being known regarding their history, period of gestation, and the manner of taking care of their young.

We first see the bats after emerging from their winter quarters, late in March or early in April, depending a good deal on the weather. In some early springs a few may be seen by the first of March, but this is exceptional. They do not go into winter quarters until the November storms cut off their supply of food; occasionally they may be seen in mid-winter after a few days of warm weather, just at sunset or soon after. Bats may be easily secured from their hibernation by some of the following means: A cage for admission, entered the old silver mine situated a short distance south of this village. This mine was worked just before or soon after the Revolutionary war; which, is uncertain. Quite a number of bats were found there, and the boys, knowing our weakness for them, tried to catch some; but as soon as they advanced near the bats with their torches, they were driven away by a strong wind.

While feeding bats go singly, in pairs or flocks. We remember one evening in the early part of last fall, just before a thunder storm, seeing a hundred or more feeding over a field to the lee of a cinnp of woods. The flock was composed mostly of little brown bats and red bats. The field being comparatively small, it was a lively scene.

We have noticed the following species:

Atalapha (Asiurina) noveboracensis. (Erxleben) Coles—Red bat. New York bat.

This, one of the most common bats, may be seen any evening in summer, just after the sun has set, being the first of the bats to make their appearance. Even at times they may be seen on the shady side of some wood, half an hour or more before sunset. We have seen them flying in the early winter of the time, but this is unusual. During the day they may often be seen suspended from limbs of trees in the foliage, seeking crevices and holes less frequently than the other bats. Their flight resembles somewhat that of the larger moths more than the narrow-winged bat. We have made the mistake in the darkness and shot a *cecropium* moth, thinking it to be a bat of this species. We have seen them fly in the month of June. Prof. J. G. Wilder (*Sci. Mo., No. 42, p. 65*) states that two specimens which he examined each contained three fetuses. *Atalapha (Asiurina) cinerea*. (Beauvois) Coles. Hoary bat.

This rare bat we have never seen, although it doubtless occurs. Mr. J. A. Allen considers it the rarest species in Massachusetts. (*Mammalia, Mass., p. 205*.)

Vesperugo (Vesperugo) fuscus. (Beauvois) Carolina Brown Bat.

This bat is third in frequency; some years more common than others. They are the last to make their appearance in the evening. In fact when it gets so dark that objects are blended in one uncertain mass, and the bat hunter finds he is unable to shoot with any precision, the Carolina bats make their appearance in great numbers. They are not so apt to be engaged in catching insects. We have to make a snap shot, as they dodge in and out from behind the dark tree tops, and are left in doubt as to the result until in the gloom we may perchance see our little black and tan, seemingly as interested in the results as we are, pointing the dead animal. This species is particularly fond of fields well surrounded by trees. There are few or no trees in our dark woods, and the bats are not so numerous. We have seen them ago while "sugaring" for nuts; we have seen them as late as one o'clock A. M.

Vesperugo (Vesperugo) georgianus. (Cuvier) Georgian Bat.

We have no record of this bat, it probably occurs. Mr. J. A. Allen gives it as "not excessively rare" in Massachusetts. (*Idem, p. 205*.)

Vesperugo (Vesperugo) scottianus. (Le Conte) Silver Black Bat. Silver Haired Bat.

We have never seen but two specimens of this bat, one male shot June 15, 1881, the other a female killed June 24, 1881. In flying they resemble the Carolina bat, but unlike them they leave their hiding places early in the evening. Both the male and female were first spotted by Prof. J. G. Wilder's findings. The female contained two young, well-developed, and probably would have been delivered in a few days. The

are when one has lived in a crowd and been obliged to respect the commands of society. The evening smokes on vesper-rides, the yards of adventure that are spun, the sweet, cool sleep and the helms demands for breakfast are not the least of these dear delights.

Come up and take a week with me, somebody—anybody who never knew what such vacations mean. For an hour or two in the evening the chief occupation of the crowd is mosquito fighting, but that is only a kind of contrasting preparative for the solid comforts which in general are at the command of all the happy crowd at the Flats.

GAME AT THE WEST.

MONROE, Mich., July 12.

It is gratifying to learn by articles from the West and the Northwest, as the close season for game progresses, that the prospects for grouse shooting are excellent. Ducks are also reported to have bred exceedingly well, while the number of quail seen around the roads and whistling on the fences show that they also have passed the severe winter far better than was anticipated.

Here also in Michigan our prospects for ruffed grouse (the king of all our game birds) have not been better for years, and our quail season may be better than ever, compared with their absence in spring to have been sent by the same hand as they were to the Israelites of old. Those, however, might have been of a different variety and sent for a different purpose, as I learn that some of these are meant for the education of canine luminaries expected to capture a part of the prizes at the Eastern Field Trials next November.

The unexpected appearance of so many birds where so few were expected is considered a favorable omen in their favor. That their wings may be fully realized, and also that the field editor of the FOREST AND STREAM may be there to give us a fair and impartial account of the running in the sportsman's newspaper of America is the wish of JOHN DAVIDSON.

MINNESOTA NOTES.—Sauk Centre, Minn., July 16.—I have just returned from a plover shoot and dare not give you a record, for the score was so fearful poor I am ashamed. The birds are very wild, and require a hard hitting to bring them bag. I had enough to say I had been "out," but if I had but my empty shells counted I fear the odds would have been largely in my favor. Their wings may be better than ever. Long Prairie, Minn., for his advice about these shells. I will put it in practice next winter and report to FOREST AND STREAM. Ducks are seen nearly every evening flying from one lake to another. There is splendid fishing in Fairy Lake about four miles from where I live. Pike, bass, etc., are in fine order, and take almost any kind of bait greedily.—DELL.

WISCONSIN DUCK SHOOTING.—Wauchula County, Wis.—The wild rice crop in this section promises to be immensely large. The marshes around Lake Poygan and along tributary streams as well as those along the Fox River both above and below Berlin are all bearing largely, and prospects for ducks are good. Young mallards are said to be unusually plenty on the Poygan marshes. Our close season expires August 15.—BADGER.

THE WILD RICE CROP.—Mr. Charles Gilechrist writes from Port Hope, Ont., under date of July 14: "The rice is all above the water, and it will be a very good crop. I will have about 400 bushels this fall; will send advertisement when ready. My son took the sweepings of the floor of my drying house. He got about a peck of rice. It had been lying for nearly three months, and as dry as a bone. We sowed it in a lake in a place about twenty feet square. It is all above water, and will be quite a crop. It was in November last he sowed it."

HOW THE COCKNEY GOT AHEAD OF THE 'SQUIRE.—There was a Cockney, as they call them London chaps. Well then, this 'ere Cockney was staying in the next village—the folks there call it a town because it's a bit bigger than our'n—and the 'Squire, living as he did half way between the two places, only about a mile apart, and being a hospitable, kind-hearted man, took notice of this 'ere Cockney, and asked him to dinner, and so on. A decent sort of fellow he was, by his own account—and talk! Well, he could talk, for certain! He could do this and that, and 'other; and made us all feel we was nobodies, and knowed nothing, and could do nothing.—Shoot! Why, nothing with fur or feathers could live, if it got up before his gun. At last the 'Squire got on his mettle, and challenged him to go out with him on the 1st, and made an agreement with him for £5 a side who should make the heaviest bag, and a decent sort of the 'other was to carry. Well, there was a goodish party of us started, but only the 'Squire and Mr. Cockney was to shoot; so about 8 o'clock in the morning off we all went, and the 'Squire good-naturedly gave the Cockney first chance. Bang! bang! one barrel after 'other he went, but nothing dropped. Then the 'Squire pulled trigger, and fetched down a bird with each barrel, for he was a fairish shot. The Cockney made some excuse for missing, but there we could soon see he could do nothing, while the 'Squire hardly missed a shot; and at the bargain was that what one shot the other should carry, Mr. Cockney toward lunch-time was very glad to be eased of his load. He made a good fight of it, however, and made up for his bad shooting by his talking. But by 4 o'clock he had as much as he could well carry, and as the 'Squire always, like the sportsman he was, made it a rule not to shoot after this hour, we started for home. The poor cockney, with a bag of birds, and the 'Squire's bag; and I can tell you it was pretty heavy, and he looked regular done up, for it was a hotish day. Well, we had got pretty high home, and were going through the little paddock close to the 'Squire's house, and one bad asked the Cockney if he could hit a hayrick or a barn, and such like chaff was going on, when we came across a goodish-size calf was seen capering round the paddock, and all at once came and stood stock-still with a few yards of the Cockney between us and just going off for another square, when Mr. Cockney turned sharp round and let fly both barrels one after 'other, bang! bang! and shot the calf as dead as a hammer, and says to the 'Squire: "Now, dang it, carry that." Larf! Larf! a massy on us, how we did larf to be sure, and the 'Squire most of all, though he lost the wager; for you see, the 'Squire was that which of the two made the heaviest bag was to be the winner, and good as the 'Squire's was, the calf outweighed his'n. But there, he managed to get it up, but could hardly stagger under it for larfing. So you see, sir, the Cockney made up for his bragging by his 'cutness. It was a smart trick, wasn't it, sir? And I always larfs when I think on it.—Chambers' Journal.

SHINEHOOK BAY.—Good Ground, L. I., July 13.—Bay snipe continue to fly regularly, not by fits and starts, but a steady flight. Parties making good bags every day. Not many jacks yet, but we are looking for a flight now every day. Ducks stop on the marshes to feed more than usual this season, owing to the grass having died out last season, during high tides, making better feeding grounds on the marshes.—WILLIAM N. LANE.

MAJOR MAX, according to the San Francisco Chronicle, listened patiently while his wife told of Alaskan bear killing. "Quiet your fears, my dear," said the Major when his wife had finished. "That is the way they killed the bear when that story was first published, but in the last twenty years an improvement has been made, which I will tell you about, if you will kindly give me just a drop more of coffee, with cold milk, this time. The way the thing is done now is as follows: When Captain Berry, of the Rodgers, wants a polar bear for dinner, he gives a midshipman a copper bed-spring and a chunk of salt pork. The midshipman compresses the spring perfectly flat, wraps the pork around it tight, and holds it so until it freezes solid. Then the frozen pork, stuck with the bed-spring, is thrown on the nearest iceberg, when it is promptly swallowed by a polar bear. When the heat of the bear's stomach thaws out the pork it releases the spring, which flies out, and the bear soon dies from a pain in his side."

"Major," said Mrs. Max, with much warmth, "I don't believe that story is true."

"No, my dear, and you won't, until, in a few years, you see it in some fashion paper, and then you will swear by it."

A NEBRASKA HUNT.—North Platte, Neb., July 11.—Buffalo Bill (Cody) and a party of friends start to-day for a grand hunt up the Dismal. They anticipate a good time.—P. H. M.

TENNESSEE.—Nashville, July 11.—I saw a perfectly white owl a few days ago. It was taken in Wilson County, and was a rare specimen. Mr. T. J. Hogan, of this county (Davidson) killed a hawk on his farm last week which measured fifty inches from tip to tip. The great heat has put a stop to fox-hunting for the present, though they are reported abundant everywhere.—J. D. H.

AN ENGLISH SPARROW-PLAGERED FARMER asks the German-town Telegraph if he has the right to shoot these birds. The editor replies: "We should say that he can shoot any bird or wild animal which comes upon and destroys his property; but he must show that it does so. It is a natural right."

CREEDMOOR.—Creedmoor had his postponed 4th of July everybody's match on Saturday last. The postponement from the day after the attempt on President Garfield's life did not injure the prospects of the day. Many ladies accompanied the riflemen who went to the range by the early trains. Although the sun shone brightly, the heat was tempered by a strong breeze. While the marksmen took their places the firing points the ladies formed sets for lawn tennis and croquet, and some of the more spirited misses arranged a match with the bow and arrow. Many children roamed over the spacious veranda of the club-house, and baseball and football amused the larger boys. The number of visitors increased with the arrival of the afternoon trains, among the passengers being Gen. Wingate, Col. Scott and Secretary Donaldson, of the Board of Directors; Col. H. G. Hitchcock, United States Army, and Major Sporkley, United States Army, of Fort Leavenworth. The sky became overcast soon after midday, improving the light for shooting, but a "puffy" wind blowing from left to right across the line of fire caused many of the shots to go "wide." The principal rifle contest was open to all comers, and enlisted 487 entries. It was at 200 yards, five shots, military rifles, State model. In order to accommodate visitors who were not provided with military guns, rifles were loaned free of charge. The principal prizes were a silver cup of Tiffany's workmanship, valued at \$50, a copy of Webster's Dictionary and several historical works, three marble and bronze mantel clocks, telescopes, sets of lawn-tennis, croquet, and archery, rifles, revolvers, oil paintings, etc. The scores of the prize winners were as follows, the highest attainable number being 25 points:

- A. D. Pena, 23; J. S. Sheppard, 22; General G. W. Wingate, 22; G. J. Seabury, 22; W. F. Higgins, 22; Major C. Shortley, 22; Captain E. S. Brown, 22; J. J. Dixon, 22; W. M. Summers, 22; J. L. Paulding, 22; D. Miller, 22; G. S. Harrington, 22; Frederick Alder, 22; T. J. Dolan, 22; Captain J. L. Price, 22; A. J. Howe, 21; I. Oehl, 21; E. Bennett, 21; G. D. Gilliland, 21; W. V. Overbaugh, 21; Dr. M. M. Mahony, 21; J. W. Todd, 21; J. C. Mallory, 21; J. McNevin, 21; W. R. Foster, 21; G. L. Madison, 21; A. B. Van Housen, 21; Thomas Lloyd, 21; H. B. Thompson, 21; J. Myers, 21; C. E. Lewis, 21; N. D. Ward, 21; H. Holges, 20; C. Donobue, 20; G. W. Munson, 20; S. F. Glover, 20; M. Dorobue, 20; C. E. Overbaugh, 20; F. A. Wells, 20; F. D. Davids, 20; M. Sullivan, 20; J. G. Koop, 20; P. J. Donaldson, 20; H. T. Lockwood, 20; John Klein, 20; O. H. Decumbus, 20; John Horan, 20; F. Seward, 20; J. J. Simmons, 20; Colonel G. D. Scott, 20; T. Harty, 20.

There were numerous "ties," some of which had to be decided by lot. Mr. A. D. Pena, the winner of the first prize, is a resident of California, and is at present visiting Mr. Daniel Edwards, of the Seventh Regiment. His last effort at rifle-shooting was about four years ago.

We have examined one of the E. Wesson rifles advertised by William Reed & Sons, of Boston, and can cheerfully say that it is the genuine article and worth the price asked. See Adv.

NEW HAMPSHIRE FOREST TREES are of large variety. A writer in the Manchester Mirror says that New Hampshire was originally an entire forest, and the mountainous region was once covered with a heavy and thick growth of oak, maple, beech, walnut, hemlock, fir, white pine and other trees, while the plains and valleys were crowded with elm, cherry, ash, poplar, hornbeam, birch and other woods. If the pine there were several varieties, and the white pine was perhaps the noblest tree in the country; its stem rose sometimes to the height of two hundred feet, and was perfectly straight, while its top was crowned with a beautiful tuft of green, presenting a tree that often exceeded six feet in diameter—a size double that of the famous tree on the Baker farm. The pitch-pine was also of great size and height. The tree at 778 on Mt. Marston, a little west of the Dunstable, was cut a white pine, straight and single, which was seven feet eight inches in diameter at the butt end, and which furnished a log nearly 140 feet long.

Sea and River Fishing.

FISH IN SEASON IN JULY.

Table with 2 columns: FRESH WATER and SALT WATER. Lists various fish species such as Salmon, Trout, Bass, etc.

Sea Bass, Centropomus atrarius, Striped Bass or Rockfish, Roqueta, White Perch, Merluccius americanus, Bluefish or Taylor, Pomatomus saltatrix, Scup or Porgie, Stenopus argyrops, Pollock, Polatachus carolinensis, Taotog or Blackfish, Taotog ovata.

Let no angler, whether in the bloom of early youth, the power of matured manhood, or with the grey locks of hoar antiquity above his wrinkled brow, ever induce within himself, or express to others, the belief that at all times and places he is perpetually catching enormous trouts in vast numbers, because we happen to know that this is not the case. We don't insist upon any one weighing every fish he captures, but we request that no one, after jerking out a few parr, will maintain next morning, or even that very night, that he has had a most tollsome but very glorious day, and has killed five dozen and four of the finest trout the human eye ever gazed upon. All men are liars!—and several anglers—in proportion to the exact import of which depends much on the mode of construction.—JAMES WILSON IN ROD AND GUN.

THE ANGLER'S CONFESSION.

Editor Forest and Stream: I herewith send you a clipping containing a poem which may interest the readers of Forest and Stream. It was composed for the 'Isak Walton' High-Jinks' of the Gloucester Club of this city. The author is Daniel O'Connell, a nephew (so he believes) of the great Agitator, T. D. D.

I've angled in many waters, On bright summer days, By many a murmuring brook, In many a tangled way; And the voice of the brook has never Lost its music and charm for me, As it rippled and rursed over To its grave in the mighty sea.

These were the days the angler, In the flush of lance-and-juist, Told all his simple story, 'Told nothing but the truth. I fished the sunset over the mill-dam Hour after hour in vain; I've not a trout in my basket, To-morrow I'll try it again.

But now, alas! this bosom I've plucked and I'm afraid I've learned to lie like others, In the angling meadows of the year. A hundred in half a day— Two pounders and strong—such monsters! Each took me an hour to catch.

I've learned to lie like others— I've gone to the river and found A small boy fishing alone; 'Twas prone on the pleasant ground, I've him, and slumbering, did but find 'Call me when he had caught just enough to fill my basket, And thus my fish were bought.

Then over my nice clean stockings I've plucked and I'm afraid I've learned to lie like others, In the angling meadows of the year. With a weary look in my eye, Then revelled for days succeeding In one long luxurious lie.

How I fell from the massive boulder, How I swam the river brook, How in one pot four and twenty Speckled beauties I took, Men made of me of the angling, But I'm not so despicable, The pipe, the esthetic pleasure, That dwells in the angling lies.—D. O' C.

DISGUSTED PODGERS WANTS A FISHING PLACE.

HAVING just finished the perusal of the last number of FOREST AND STREAM, wherein I have read of wondrous fish being taken by skillful anglers, I lay down the paper about eight o'clock at their usual hour and the comparison with my own dry had success in coastwise fishing, and I am compelled by a sense of utter wretchedness to tell you of the fish I have not caught. The FOREST AND STREAM is so replete with big fish stories and of the big ones taken that it will be novel at least to hear from a fisherman that has caught nothing save sundry ducklings from the sudden shower. With a mind oppressed with a sense of the absolute necessity of going somewhere to fish, and with a vivid recollection of the old-time fishing on the coast, which a protracted residence on the Pacific side had not obliterated, I started out to fish on the Eastern Shore. Taking Boston as the objective point, I essayed to make a start from thence on a cruise Eastward. The first effort to charter a craft suitable to the occasion was met with demands about equal per week with the cost of the craft. Somebody said go to Gloucester; lots of boats there—cheap. So to Gloucester I went, only to find that as I journeyed East prices advanced. About the only boat to be had down this way is the inevitable "dory," a craft that has its beginning at Boston and its ending the Lord only knows where, judging from the fact that the further East I go the more dory. The dory has its qualities, both good and bad, in rough water it is safe—a splendid sea-bird—and it is the most expediting craft man ever undertook to handle. Being buoyancy itself and having no hold upon the water, it cuts up fearfully and has a malicious habit of turning around and looking you in the face. It is a good boat for its original

purpose undoubtedly—pulling on calm waters or on the fishing banks with two men and two pairs of oars—but woe to the single hand in a squall. Finding a sea-going yacht unattainable, I concluded to come to anchor at a little watering-place near Gloucester and, chartering a dory, I here dived west and west, have got from the fishermen the bearings of ledges and rock-reefs. I have fished from Dan to Bersheba from sunrise till every eye. Miles and miles have I rowed in this same dory—and used a cod, nary a pollock, nary a fish, except the miserable "cunner," which are dignified hereabouts by the name of perch. My hands are like leather, my nose would make a respectable boson and my face the color of an old saddle. I have been out in thunder-balls, fog, wet, been blow'n miles to sea, been picked up by fishing skiffs from the water, requested to go to a fisherman hath ceased to be the virtue wrongfully attributed to it. I have loafed around the wharves of Gloucester in the all-pervading atmosphere of salt codfish has penetrated my very bones.

Has't ever been to Gloucester? Don't go! Every man, woman and child you meet has a codfish in his, her or its hand. It is the business of the place and its aristocracy are the true codfish type of men and women. They are always low and snells—oh! They charge you ten cents for landing at the few pairs of steps the wharves boast and there's no fishing between it and Boston. The shores are set with one continuous line of lobster pots, traps, seines, trawls and contrivances to take everything that swims.

I am settled with the dory man, packed my kit and shall shake the sea-ward from this rocky shore and depart—whether? Tell me where to go to fish—or rather, catch something. I am not particular—inland or elsewhere.

To come from the Pacific coast, where I have caught the lordly salmon (excuse the customary scientific name) until my arms ached and the strap of my trout basket has almost cut to the bone with the weight (am I following in the footsteps of your venerable presidents, and bragging a little?) to come to this benighted shore, to land from a whole day out on the water with a few miserable "cunner" and have my dory man, by way of encouragement, say, "Got a nice lot of 'em (his time, ain't ye?)" I want to go home. I want to strike out for the Sierra's rushing streams; Lake Tahoe, with its ten-pennies; the roaring McCloud, with its speckled (I shan't say "beauties") three-pound Dolly Vardens; the foaming Truckee, with its rainbow-bellied fly-snappers; the heads waters of the Sacramento, with its trout and river trout, or even the bay and harbor of San Francisco, with its tomcods, smelt and young salmon—and I would go if I could. A friend invited me (John Paul, of the *Tribune*—you know him) to go to the Adirondacks; but, oh! those cursed black flies and skeeters. Shall I go to the St. Lawrence, Ranges, or to Moosehead lakes?

Who wants a chum for a trip?—one who knows what a fish is, who has lived under canvas, not days, but months and years; who can handle a boat or an axe and who won't stay in camp and drink all the whisky—is not afraid to do his share of work and will pay his *pro rata* of expenses?

Don't say go to Long Island's sea-girt shore—I've been there, and had no luck. The twain had just struck out and the bluefish had not struck in, and three days' expense there equalled the price of a West Indian fawn. I go where I catch every fish I catch, if any, don't cost ten dollars a pound. The unsophisticated countryman seems to think, whenever he encounters a man with a gun or fishing rod, that Mr. Vanderbilt or Jay Gould is out for recreation and goes for him. The firm of "Gauge & Swindle" is men to keep all the hotels, own all the horse-wagons and boats.

Is shooting and fishing at all that it should be so punished? It reminds me of a conversation I overheard on the wharf at San Francisco one day: "Hello, Bill, what yer doin'?" "Nothin' much—jest set up the bobstay on that ere sloop." "What are yer goin' to ebarge?" "About two dollars, I reckon." "Two dollars (contemptuously); charge 'em ten." "If they will keep yachts let 'em pay for it, d—n 'em." "That idea of that work is East as sure as you are born."

Speaking of yachts, I saw the regatta of the Boston Yacht Club on the 4th and that was a failure also—no wind. All the blowing down this way seems to be on shore.

PONDICHA.

AMERICAN FISHERMEN.

INTERESTING FACTS CONCERNING THEM.

Professor G. Brown Good, of the United States Fish Commission, has issued a report in charge of fishery statistics, read an interesting paper on "The Fishermen of the United States," before the Anthropological Society of Washington. Professor Go de said: Every man engaged in the fisheries has at least one other man who is dependent to a considerable extent upon the labors of the first for support. To the class of shoremen belong (1) the capitalists who furnish supplies and apparatus for the use of the active fishermen; (2) the shopkeepers from whom they purchase provisions and clothing, and (3) the skilled laborers who manufacture for them articles of apparel, shelter and the apparatus of the trade. In addition to the professional fishermen, there is a large class of men who have been called "semi-professional" fishermen—men who derive from the fisheries less than a half of their entire income. Taking into account all these persons who are directly employed in the fisheries for a larger or smaller portion of the year, they are dependent upon fishermen in a commercial way for support, and the members of their families who are actually dependent upon their labors, it cannot be far out of the way to estimate the total number of persons dependent on the fisheries at from 830,000 to 1,000,000.

The total value of the product to the producers of the fisheries of the United States was, in 1870, \$20,000,000, and estimated, but it will doubtless prove to be somewhere between forty and fifty millions of dollars. Of the thirty-one States and Territories whose citizens are engaged in the fishery industry, seventeen have more than a thousand professional fishermen. The most important of these States is, of course, Massachusetts, with from eighteen to twenty-five thousand men. Second stands Maine, with about twelve thousand, unless, indeed, the ten thousand fishermen of Virginia and the fifty thousand of Maryland are allowed to swell the totals for those States. Maine, however, stands second so far as the fisheries proper are concerned. Third comes New York with about 5,000 men, then New Jersey with 4,000 men, North Carolina with 3,000, Oregon with its border of salmon fishermen, 2,500 in number. Florida with 2,100, Connecticut and Massachusetts with 2,000, Michigan with 1,781, Wisconsin with 1,800, Georgia with 1,400, Ohio with 1,046, Delaware, Rhode Island and South Carolina each with about 1,000; New Hampshire, Alabama, Louisiana and Texas with about 400 each and Mississippi with only 60.

The majority of our fishermen are native-born citizens of the United States, although in certain localities there are extensive communities of foreigners. Most numerous of these are the natives of the British provinces, of whom there are at least 4,000 employed in the fisheries of New England. There are probably not less than 2,000 Portuguese, chiefly natives of the Azores and of the Cape De Verd Islands. Most of the Portuguese have brought their families with them, and have built up extensive communities in the towns whence they sail upon their fishing voyages. There are also about 1,000 Scandinavians, 1,000 or more of Irish and English birth, a considerable number of French, Italians, Austrians, Minorcaans, Slavs, Greeks, Spaniards and Germans. In the whaling fleet may be found Lacars, Malays and a large number of Kanakas, or natives of the various South Sea Islands. In the whale fishery of Southern New England a considerable number of men of partial Indian descent may be found, and in the fisheries of the great lakes—especially those of Lake Superior and the vicinity of Mackinac—Indians and Indian half-breeds are employed.

The salmon and other fisheries of Puget Sound are prosecuted chiefly by the aid of Indian fishermen. In Alaska, where the population depends almost entirely upon the fisheries for a livelihood, the same is the case with a large number of fishermen, and upon a very low estimate one-fourth of the inhabitants of Alaska should be considered as fishermen. Few of them catch fish for the use of others than their own immediate dependents. Only one Chinaman has as yet enrolled himself among the fishermen of the Atlantic coast, but in California and Oregon there are about 4,000 of these men, all of whom, excepting the few who are employed by foreign hands in the salmon canneries of the Sacramento and Columbia basins. The 800 who have the right to be classed among the actual fishermen live for the most part in California and the product of their industry is to a very great extent exported to China, although they supply the local demands of their countrymen resident on the Pacific coast.

The negro element in the fishing population is somewhat extensive. We do not know the exact number, but many of these men are included among the native born Americans returned by the census reporters. The shad fisheries of the South are prosecuted chiefly by the use of negro muscle, and probably not less than four or five thousand of these men are employed during the shad and herring season in setting and hauling the seines. The only locality where negroes participate largely in the fishing industry is on the coast of the Pacific coast, a lone fisherman, who sits on the wharf at New Tacoma, Washington Territory, and fishes to supply the local market.

The number of foreign fishermen in the United States, excluding 5,000 negroes and 8,000 Indians and Esquimaux, who are considered to be native born citizens, probably does not exceed ten to twelve per cent of the total number, as indicated by the figures which have already been given. Considerably more than one-half of the fishing population of the United States belongs to the Atlantic coast north of the apex of Delaware; of this number at least four-fifths are of English descent. They are by far the most interesting of our fishermen, since to their number belong the 20,000 or more men who may properly be designated the "salmon fishermen" of the Atlantic coast, and the crews of the trading and transporting vessels of the sea-going fishing fleet which ought to be the chief pride of the American marine, and which is of such importance to our country as a training-school for mariners and as a medium through which one of the most valuable food resources of the Continent is made available.

Professor Good referred to the mental and physical traits of the New England fishermen, and to their intelligence and their readiness to adopt improved methods, their intelligence and public spirit. He spoke also of the education of the young fishermen, and the injury to good seamanship resulting from the custom of deferring the shipment of boys who formerly entered the business at the age of ten or twelve, but who now remain on shore until they are fifteen or sixteen and have had their preliminary sea-life dull and uninteresting. Reference was made to the habits of the fishermen, the strict observance of the Sabbath to be met with among large classes of them, and the entire absence of violent spirits on the fishing vessels. The character of their favorite books and newspapers, their amusements, their dialect and their superstitions were discussed. The chief diseases were not so much the dyspepsia and rheumatism. They are as a rule good and healthy men, and are as a rule as large as the average of the population of the same age. The financial profits vary from \$1,000 to \$100 a year for each man, though sometimes a year's work results solely in an embarrassing burden of debts.

FISHING IN TENNESSEE.

SEVERAL parties have been out fishing lately and had fair luck, though the present season is generally too hot for any success. At Clark's Fork, of this city, is still in the main anglers of East Tennessee, enjoying his angling tour. The "Major" is one of the most scientific and unflinching disciples of "Sir Isaac" in this section, and, when he makes a raid on the finny beauties, he never returns without his game. General Ira P. Jones is another of our noted fishermen, and a more genial and cultivated gentleman would be hard to find. At Clark's Fork, of this city, is still in the main anglers of East Tennessee, enjoying his angling tour. There is almost as much pleasure in listening to some of his fish stories as to catch them yourself, for in the former case you are sure to catch some big ones. Charley Hillman ranks in excellence with the above named, but Charley is a sly fellow; no one ever hears of his going fishing, but coming back, thus he has all the fun to himself. The gallant chief of our Fish Brigade, Captain W. Stockell, has seen the day when no one would have dreamed of catching a fish. He has not yet concluded his absence from the city, though such is his fondness for the sport he will now and then wet his tackle in the Cumberland down by the wharf, and when he does, his negro aide-de-camp always brings back a string of jack, drum, or

cat. Colonel R. M. Edwards (late Greenback candidate for Governor) is an angler of the old school. He needs but little tackle and a hot stream. He says:

"If any of you fellows would come out into my country (East Tennessee) with all them darn'd jinted poles and little brass winders, the folks would laugh you out of countenance. What we want is a good bamboo, twenty foot of line, and a strong hook, and when a trout gets away with that, it's 'wink be's got a right to do."

On their return from the lakes, the "Wagoner" Club brought back some fish, but with an unbecoming liberality, ate them among themselves; so we of the "Can't-Get-A-Way Club" must wait until our friend "Maybury," of the Grand Rapids road, comes this way, as he is quite capable of bringing us a mess if he only thinks of it.—J. H. D.
Nashville, July 11.

BASS AT ALEXANDRIA BAY.

WESTMINSTER PARK HOTEL, }
Alexandria Bay, N. Y., July 18.

WE are having great sport up here. To-day, Mr. H. R. Clark and I took over fifty black bass weighing from 13 to 25 lbs. We returned to the natural nursery nearly thirty that would go from one half to one pound. We kept away from the perch and rock bass as much as possible, but were bothered by them a good deal. Nearly all of the largest bass were taken by casting small minnows; still, as we used fly rods, there was some music even with the minnow-fishing. The favorite fly was my Saint Patrick, which I christened last fall in honor of old Mike Morrison.

The bass are just getting into "schools," and no doubt there will be some great catches the latter part of this week and all of next week. The size of the bass this year is not up to the average, or perhaps I should say the average is good enough, though there are not as many four or five-pounders as usual. I have not met any conscientious man, who carries a balance with him, and says that he has caught a five-pound bass this season. Of course, Gem scales, two for a quarter, "weigh as you please," don't count as scales at all.

The steam launches are all engaged. The newest one, The Flower, has been leased by our good friend, Chas. G. Emery (Goodwin & Co.), who knows two things besides how to make "Old Judge" cigarettes. The two things are, how to catch black bass and how to entertain his friends.

CHAS. F. IMBRIE.

GROWTH OF CARP.—Mr. J. R. Rains recently showed a carp to Mr. E. G. Blackford, of the New York Fish Commission, which weighed four pounds and was one of ten which had been received from the United States Fish Commission on the 15th of September, 1871. The fish was transplanted there were less than two inches long. Mr. Rains' pond, near White Plains, Westchester County, is some seventy feet long, thirty-five in width, and its extreme depth is eight feet. It has been in use as an ice pond. It is well surrounded by vegetation. The carp have never been fed. When examined for the roe, this was found in a fairly mature condition, though the fish could not have spawned before a month. It was caught on the Fourth of July with a worm-baited hook, and afforded considerable sport.

A TARPON CAUGHT WITH ROD AND REEL.—We recently published an article on the tarpon, or tarpon, *Megalops CHRISOLDES*, of the Gulf, in which it was claimed that the fish was too powerful to be taken with the rod. A few days ago Mr. Albert Ferguson, of Jacksonville, Fla., called and exhibited some of the enormous seas which characterize this fish, and informed us that it was taken by Mr. Benjamin Jones, while in Florida, with a rod and reel. The rod was a Conroy bass rod and a 30-yard, 12-thread line. The fish was six feet four inches in length and weighed 171 pounds. He was one hour and three-quarters before he could bring him to the boat, after which he tried too large to take him into the boat, and was towed ashore.

THE ICHTHYOPHAGUS CLUB should make a note of the fact that the Boston *Commercial Bulletin* says that the eponies, both the queen and common ones, are not only desirable for their beautiful shells, but make excellent soup. I have, when I could get very little else, managed to worry down a stew of eponies, but while the flavor is good enough the texture of the flesh is not unlike rubber. It's precious too powerful to chew. The worst is that, in order to get the meat one has to spoil the shell by sawing the small end to dislodge the ball, which hangs on there tenaciously, though even then, if not too badly broken, the shell remains of some use. Tremendous trumpet tones can be produced from it by a skilled performer, and it is the universal dinner-bell of Honduras.

ANOTHER RAILROAD BOOK.—We have received the beautiful "Traveler's and Tourist's Guide," published from the New York office of the Central Rail road of New Jersey, 110 Liberty street. The well-known Toms River, Forked River and Barnegat resorts for sportsmen are reached by its road and the book contains the fullest information of routes, distances, fares, hotels and everything else that the traveler wants to know. It may be had free on application by letter to H. P. Baldwin, General Passenger Agent. Address as above.

THE FORTUNE BAY CLAIMS.—Gloucester, Mass., July 10.—The amount paid by the Commissioner of the State Department yesterday, as reimbursement for Fortune Bay losses, in 1870, was between \$25,000 and \$31,000. Claims were presented by twenty-two Gloucester vessels.

There was a young lady of Gloucester,
Whose parents thought they had fostered;
But she came back one day
To their awful discomfiture,
So they called her a wicked impressionist.—Puck.

There was a young lady from Gloucester,
Who claimed after a hot-balled roaster;
But he roasted so high
In a tree near the sky
That she called to her brother to broaster.

Specimen copies of this paper will be sent free upon application. We will esteem it a favor if our readers will call attention of their friends to the merits of the FOREST AND STREAM.

Fish Culture.

OUR EDIBLE FISHES.

BY BARNET PHILLIPS.

[Read before the American Fishcultural Association.]

LAST YEAR, one of our most useful and practical members, Mr. G. S. Lamphere, presented to the notice of this meeting carefully prepared statistics relating to the total pounds of each kind of fish recorded in the wholesale markets of this city. These tables, the result of a great deal of careful investigation, were perhaps the first of the kind ever brought to your notice. I need not suggest to you all the deductions which arise from these figures. I may cite, however, the following: It is only by such exact figures as we can arrive at by positive determination, in regard to the abundance or a scarcity of any particular fish, that its abundance or scarcity may be general or local. New York city, with capacities many, demands an incalculable quantity. I use the word "incalculable" perhaps in a poetic sense, for it is more or less impossible to count the fish. To be less vague let us say that our markets draw to themselves an enormous quantity of fish. If fish, then, be scarce in our locality, this want of fish is supplied necessarily from another quarter. This area of productive water is then by means of a certain trade yielding a certain quantity of fish. Say that our scarce of Sandy Hook—the demand for cod brings in fish from Gloucester, from Maine, Cape striped bass. It may not be found at one season in the North River, but it can be had in the Delaware or from the Chesapeake. It is, then, the gross quantity of fish received in New York which tells us absolutely whether a fish is generally scarce or plenty. Now, with such tables as have been made by Mr. Lamphere, to be supplemented later by other compilations which the United States Fish Commission will shortly be ready to issue, we will get to the great bottom fact in regard to fish, whether caught on our coast or in our inland waters or taken. If we do get these figures as accurately as human investigations can make them, we can then, by a very accurate, may present themselves to our special care as worthy of culture.

It would be very presumptuous on my part, not having the advantage of the assistance of many of our distinguished followers, to venture a positive judgment on this subject. I may, however, be very certain that the fish which are scarce in our locality were in former years. Professor Baird informs us on the best authority—and I may say that no one is so careful and accurate than our most distinguished followers—the United States Fish Commission, that the fish which are scarce in our locality were in former years. Professor Baird informs us on the best authority—and I may say that no one is so careful and accurate than our most distinguished followers—the United States Fish Commission, that the fish which are scarce in our locality were in former years. Professor Baird informs us on the best authority—and I may say that no one is so careful and accurate than our most distinguished followers—the United States Fish Commission, that the fish which are scarce in our locality were in former years.

Now, as to that great staple fish which forms the bulk of our fish food, cod, perhaps its absence in certain localities will be found to be quite positive, though such want of fish in one area may be due to the fact that it is believed to arise mainly from the dumping of their city refuse.

It is a singular fact that when a fish or reptile is found by the average man and that species is new to him, he immediately assumes two things. First, that it is new and strange to all the creatures of the earth in the menageries; and second, that it is a cross between some two fish or reptiles which he does know. His first supposition is wrong nine times in ten, or even more, and his second one is never right. It may be possible, as we believe it is also probable, that some of the cyprinoid fishes, the little soft finned inhabitants of the creeks of which fifty species are called "minnows" in the vernacular, do actually hybridize. They are a very tall animal and in a narrow stream, and as they are closely allied in structure it is possible that the mill of one species often has and fertilizes the eggs of others. But in larger waters it is not so readily happen. Animals must be closely allied to be able to interbreed, and you might pour the mill of a perch, or any other fish, into the mill of a different species, and the soft-finned fish, by the gallon, without effect. The seed falls on barren ground, or barren to that kind of seed. Nor do the percid fish interbreed, partly because they spawn at different times, and partly because they have different places to deposit their spawn. Possibly the perch and black bass might be crossed by man, but it does not happen in nature for the reasons given above.

lers very greatly increased, not only by the introduction of new fishes, which stupid prejudice now turns away from, but of the actual propagation of more fish.

REPORT OF THE PENNSYLVANIA COMMISSION.

THE Fish Commission of Pennsylvania has given us a most valuable report for the years 1879-80. Especially valuable is its appendix containing descriptions of the fishes of the State, with numerous plates, under the direction of Prof. E. D. Cope, of the Philadelphia Academy of Sciences.

The report opens with an account of an examination of models of fishways for the purpose of adopting one and we are surprised to find that the McDaniel way was not among them. An advertisement in the report gives the details brought out by two competitors whose plans however good they may be are unknown to fishonitrists at large. The bid of Mr. David Mitchell was the lowest and was accepted; the plan was by C. E. Whitney and the report says: "It is simply an opening in the dam one hundred and twenty-five feet wide at the face of the dam—the dam itself turning two L's up stream and converging to within forty feet of each other, and being parallel at that width for about forty feet. At the inlet, however, the water is elevated by a platform to the depth of five feet, which platform extends down stream about forty feet, where its level is about four feet above the smooth, rocky bottom of the river. This plan was chosen because it came nearest to the form of a break in the dam, and breaks appear to have been the most successful fishways known up to this time."

The number of fisheries in full operation below the Columbia on the Susquehanna during the season of 1880 was as follows: From Columbia to Turkey Hill (first five miles), forty-eight; from Turkey Hill to Port Deposit (next five miles), forty and 100 scoop-nets in the same distance. From State Line to Havre de Grace, nineteen miles, 100. From Port Deposit to Chesapeake Bay 250. Total 498. The catch of shad within the first five miles, in the month of May, numbered, in 1879, 324,600; and in 1880, 47,000.

The State has two hatching houses, one in the east at Marietta, Lancaster County, in charge of John P. Crevching, and a western one at Cory, in care of Seth Weeks, both of which have an excellent water supply. The report gives the two seasons of planting in the rivers, which is not very encouraging, although many have been taken in the Delaware. The whitefish of Lake Erie, while of great value, has not been propagated on account of the great distance which lies between it and the State. *Pomoxis annularis*, many have been planted. This is the "straw-bone" of New York, and the late Prof. Kirtland called it "the fish for the million." We have long wondered at the neglect of this fish, but the report gives the reasons. The Pennsylvania Commissioners on their good taste in introducing it into their waters. The shad have decreased in the rivers on account of insurmountable dams, although they are found below in Maryland in great numbers. No shad has been hatched since 1875, but last year they planted 680,000. The rainbow trout, *Salmo irideus* (it has been introduced and are growing, and many brook trout have been hatched and distributed.

An appendix gives a list of the fishing streams of the State, arranged in the order of their mouths, with the season of planting, where it heads and empties, its length, width and depth, its temperature, as "cold, very cold, temperate," etc., the names of its edible fish, its pollution by sawdust or tanneries, and general remarks on each.

The ichthyological portion of the work is a valuable addition to the literature of our Pennsylvania fishes, and being done by Prof. Cope gives it the stamp of authority. We only wish he had given us some colored plates of the fishes, of which many of them are excellent. His figure of a minnow, salmon, is very bad; so is the rainbow trout. The lake trout (*Salma gairdneri*), taken from De Kay, has teeth like an sili-gator, but the elms of the horrible is attained in the end of a grayling, after Klippart. The fish has a regular outline, and a very small dorsal fin, a wild, savage look, instead of the "gentle golden-eyed grayling," and, worst of all, great hard scales rise up on the dorsal fin! The hard, ungraceful lines spoken of in earlier articles are drawn by Klippart.

We do not like the illustration of the black bass, but it refers to his figure of the whitefish, opposite page 104, the pike-perch, p. 120, the black bass and *S. canadensis* on next page for confirmation of what we say. Next to Genio C. Scott's and Frank Porter's drawings of fishes they are the worst we ever saw; and as Mr. Klippart was an ichthyologist and the two others were not, we are not disposed to receive his caricatures as representations of our fishes, some of whom are very handsome.

In the text Prof. Cope gives us short descriptions of the monardella, the rainbow trout, and the black bass, and a very good arrangement to include the *Teleostei* of previous authors and a considerable part of the *Ganoidi* of Agassiz and others in the sub-class *Actinopteri*, giving his reasons for so doing. Two indices, one of popular and the other of scientific names, add value to the list.

The enterprise of the Commission in thus giving a list, with description and plates of the fishes of their State, makes this report one of especial value to many besides those merely interested in fish culture.

CROSS-BRED FISH.

It is a singular fact that when a fish or reptile is found by the average man and that species is new to him, he immediately assumes two things. First, that it is new and strange to all the creatures of the earth in the menageries; and second, that it is a cross between some two fish or reptiles which he does know. His first supposition is wrong nine times in ten, or even more, and his second one is never right. It may be possible, as we believe it is also probable, that some of the cyprinoid fishes, the little soft finned inhabitants of the creeks of which fifty species are called "minnows" in the vernacular, do actually hybridize. They are a very tall animal and in a narrow stream, and as they are closely allied in structure it is possible that the mill of one species often has and fertilizes the eggs of others. But in larger waters it is not so readily happen. Animals must be closely allied to be able to interbreed, and you might pour the mill of a perch, or any other fish, into the mill of a different species, and the soft-finned fish, by the gallon, without effect. The seed falls on barren ground, or barren to that kind of seed. Nor do the percid fish interbreed, partly because they spawn at different times, and partly because they have different places to deposit their spawn. Possibly the perch and black bass might be crossed by man, but it does not happen in nature for the reasons given above.

Rumor says that many years ago a New Hampshire Governor put a mackerel into Lake Wampisaukee. A fish has appeared there which is supposed to be a cross between that and some of the natives. It is a very fine fish, and is called the "Wobblin' M." It is a very handsome fish, of a bluish white appearance, the body is divided with minute diamonds by parallel black lines running at acute angles. For eating it is very delicate.

Being sceptical on natural crosses, and wishing to know what it might mean, we induced the Hon. John W. Allen, of the New Hampshire Fish Commission, and received the following reply:

Mr. Powers and I have both concluded that the "Wobblin' M." referred to above, was either a Schoodic salmon, or a young California salmon.

We put Schoodic salmon in Merry Meeting Pond, in New Durham in the autumn of 1867, and they were taken in the fall of 1868, in Wolfborough, in 1879.

Both of these waters are feeders of Wampisaukee, and we expected and intended that these fish should work down into the latter, and my impression is that the fish referred to is either the one or the other.

Many large salmon have been seen here the past week, and although we have been killed along over the falls here, and, owing to very low water, we think many have gone up, and will be heard from at Plymouth soon.

Mr. Powers has taken one of 22 pounds at the hatchery. SAM'L WEBBER.

REARING WHITEFISH IN CONFINEMENT.—Northville, Mich., July 11.—I have at this time a lot of fingerlings of last spring's hatching that have attained lengths varying from two and one-quarter to three and one-quarter inches and are otherwise well developed—in fact, are perfect whitefish in miniature. As they are remaining from about two dozen that were placed in a tank at the time of the first raising of the sea, and fed since then on fine particles of liver and kidney. Those who know by experience how difficult it is to raise these fish on any substitution for their natural food, will say at once that the percentage brought forward, even to their present size, is quite high, and that their growth has been very rapid. My assistant, Mr. S. Down, who has fed them from the first, says he has taken no special pains other than to diffuse the food into the water frequently and in liberal quantities, allowing the subsiding particles from the bottom of the tank, thus keeping the water sweet and clear. The fish now eat very freely, and we confidently expect to raise them to maturity. With a larger tank and a greater water supply it is quite probable that fifty per cent. can be raised in this way.—FRANK N. CARY.

FISH POISONS.—Wiegert says that trout weighing five to twenty grammes die in a few minutes in water containing 0.005 grammes chlorine per litre, and even 0.0025 grammes, which is nearly the limit of the amount of chlorine that can be detected by chemical means, is undoubtedly fatal to small fish. Soda [50 and 100 parts per million] is not much injurious to fish, but 1 part in 1,000, having no injurious influence. These observations are of importance in considering the relations of certain manufacturing interests and fish culture.

CARP, AND HOW TO GET THEM.—The prospect for a large supply of young carp this fall is at present good. The fish have spawned freely in the National ponds at Washington, and if no serious happens there will be much information of young. Those wishing fry of two to three inches long this fall had better apply now. Write to Prof. S. E. Baird, Washington, D. C., for blanks, or obtain them from this office. The blanks are to be filled out and sent to the Secretary of Congress from your district asking him to endorse the application and send it to Prof. Baird.

The application will then be filed, and at the proper time notice will be given you as to what further action to take. As far as possible, the blanks will be sent to some central point for distribution, and the applicant will be notified when, where, and to whom to apply. Those, however, who prefer to go or send a messenger to Washington for the fish can do so, or they can be sent by express at the expense of the applicant in a suitable vessel furnished either by him or supplied by the Government.

CARP IN TENNESSEE.—From several sources have come most favorable accounts of the carp distributed from this State within the last two years, but the most gratifying results were related to me yesterday by the Judge of our County Court, J. C. Ferris. He said:

"I have just had a talk with Frank Green about his pond, situated on the White's Creek Turnpike, and from him I learn that the twenty pairs of carp deposited in it by him two years ago have grown to the great weight of from three to three and a half pounds each, that they have spawned, and that the young are now being fry; which are now strong enough to swim about, and when they come out of the water they are very fat. It is a very good thing that the carp are doing so well, and that the water is so pure. At this rate in two years more there will be a sufficiency of fish in this pond to supply the whole country, besides an ample supply for Mr. Green's family."

The one in the Asylum Pond have also grown a great deal, and spawned this year for the first time. A gentleman from Robertson County describes his success in carp culture as far beyond his most sanguine expectations.—H. NASHVILLE, TENN., JULY 11.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trial. First Annual Derby. I. K. Stayton, Secretary, Pittsburgh, Pa.

September 18 and 19, at Pittsburgh, Pa. Collie Trials, held under the patronage of the Pennsylvania Kennel Club. Entries close September 8. Eldridge McCook, Secretary, Harrisburg, Pa.

October 1, at New York City. Close of entries Eastern Field Trials. Announcements on Thanksgiving Day. Jacob Foss, Secretary, P. O. Box 274, New York City.

October 4, 5, 6 and 7, at St. Louis, Mo. St. Louis Kennel Club Third Annual Show. Entries close September 25. Entries close November 1. Edward Odell, Secretary, New Orleans, La.

November 2, at New York City. Close of entries American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

THE LEONBERG DOGS.

HEAR THE OTHER SIDE.

Editor Forest and Stream:—St. John's, Newfoundland, July 8.

I have observed in your issue of June 2, certain deprecatory statements in reference to the Leonberg dog. In FOREST AND STREAM for March 17, I have from your issue your correspondents appeared, in which the writer indulged in similar remarks, and in disparaging character regarding this breed of dogs. As a reply to those writers I beg to submit the following account of the Leonberg dog, as I have long known it. The Leonberg is the largest and most powerful dog originally bred in Germany. In 1853, a gentleman of Aachen (Aix-la-Chapelle) wrote to me: 'I have received a kind of dog from you which I have been wanting for years but could never meet with. Two years ago I traveled to Italy, and crossed purposely over the St. Bernard Mount to procure a dog thence, but found upon inspection that the actual record race did no longer exist there, but were replaced by a common short-haired animal. The same I found to be the case at the convent of Mount Sion, where the Leonberg is the largest dog I obtained a Newfoundland dog from the Zoologica Garden at Berlin, which did not answer my expectations either in how low I am suited, and you may rest assured that proper care and attention will be given to the dog.' The Rev. Dolquies, Prior

of the same convent, writes to me: 'I have received a kind of dog from you which I have been wanting for years but could never meet with. Two years ago I traveled to Italy, and crossed purposely over the St. Bernard Mount to procure a dog thence, but found upon inspection that the actual record race did no longer exist there, but were replaced by a common short-haired animal. The same I found to be the case at the convent of Mount Sion, where the Leonberg is the largest dog I obtained a Newfoundland dog from the Zoologica Garden at Berlin, which did not answer my expectations either in how low I am suited, and you may rest assured that proper care and attention will be given to the dog.' The Rev. Dolquies, Prior

First, by each yacht on joining or leaving the squadron, which will be received by the Flagship only.

When the Commodore or senior officer in command joins or leaves the squadron, when each yacht will return his gun.

Attention is called to Chapter XVII of By-Laws, and it is requested that Captains visiting clubs in uniform, also that at called meetings of Captains on the Flagship they only will attend.

It is expected that all orders will be implicitly obeyed, that signals will be promptly acknowledged, and that especially in getting under way in squadron, no yacht will start before gun fire.

Special attention is called to the fact that the club to be completed for during the cruise, and the compliance should be acknowledged by a full entry of yachts for these races.

Commodore L. F. Johnson, of the "Cruiser" will be beyond his usual limits. He thinks a sail around Cape Cod and through the waters of Massachusetts Bay would add novelty and interest to the cruise.

In order to repay suitably the long due debt of hospitality to the Eastern Club, the Commodore earnestly requests that there shall be a full cruise at the end of the season, and that the Commodore will be glad to consider for extensive preparations, Captains should, without delay, notify the Commodore at Club House, No. 29 East 42d Street, of their intentions.

ROBERT CENTER, Fleet Captain.

We are glad to find the pop-gun nuisance strictly limited and the childish spectacle of promiscuous gun-firing abolished in the harbor, at least as long as Commodore Walker and his efficient Fleet Captain are in command.

ALBANY YACHT CLUB.

Editor Forest and Stream: Allow me to give you some idea what the yachtsmen are about in the Adirondack region above your great city.

The Albany Y. C. has been very active in the harbor, and has been very successful in its efforts to improve the harbor and to make it more convenient for the yachtmen.

The club has been very successful in its efforts to improve the harbor and to make it more convenient for the yachtmen.

A. C. A. LAKE GEORGE REGATTA.

Editor Forest and Stream: OAK BANK, Stanton Gareloch, N. B., July 3. Through the kindness of the Secretary of this association I have had the pleasure of being able to hand to various competing friends copies of the Circular announcing the details of the annual regatta of the A. C. A.

Each race of this great regatta with the admirable way in which all the arrangements and rules of your Association have been carried out and cannot but admit the pluck of our countrymen in assembling so far and near to hold three days' regatta on what is a most romantically situated lake.

Each race is furnished with a water-proof cushion about 5 ft. long and 18 in. wide, which is placed in the well of the canoe. It is lashed with an oval and stuffed with hair.

Our correspondent from across the sea has caught the many aspects of the thing, but there is the lesson of former experience on our side. One must not come from a quarter where after a paddle of hunting and a gun, but not the most important thing to be done is to save this and labor and to stretch his limbs to their full extent.

BEVERLY YACHT CLUB.—The new club work for the current year has been issued. It shows this club to be one of the best in the country devoted to the interests of legitimate yachts of small tonnage.

ATLANTIC YACHT CLUB.—According to the orders issued the last evening of Whitestone, July 16, for Black Rock, the yachts arrived in the evening, and the Yacht Club was in full force.

THE RIGHT SPIRIT.—The well-known building firm of George Lawley & Son, of Boston, evidently does not propose to be caught asleep in the reform movement.

SCUB RACE.—The scuba race held at the regatta of the New Rochelle Yacht Club, on July 16, was a most interesting and successful one.

THE NELLIE O'CONNOR.—In the match between these two scuba races, the Nelly O'Connor was victorious, and the result was a most interesting one.

HONEST OLD TIMES.—It speaks well for the build of many of the older yachts to find among the vessels following have retained the old-fashioned rig.

AN OLD YACHTSMAN'S GONE.—In the death of Mr. Thos. Broadwood, a very fine yachtsman, we have lost a most valuable member of the club.

SEA WANKA YACHT CLUB.—Editor Forest and Stream: It has been decided to sail the Corinthian race for open boats and catamarans.

CHUISING EAST.—There are some more who are doing the right sort of thing. Steamer Yosemite, Wm. Eldon, arrived at Quebec July 15.

NEW BEDFORD YACHT CLUB.—In the match for second-class scuba races, the Bedford club was victorious, and the result was a most interesting one.

ATLANTA.—Captain Outburt expects to finish planking this new ship this week and will proceed finishing her at once.

YACHTING NEWS.

DORCHESTER YACHT CLUB.—The race open to cat boats was held July 16 of the club house, Harrison square. No distinction was made between keels and boards.

Table with columns: Name and Owner, Length, Actual, Corrected, Time.

RECORD CLASS.—Table with columns: Name, Length, Actual, Corrected, Time.

COLLIMATA YACHT CLUB.—The open regatta was sailed July 12 and 13, and was a most interesting and successful one.

Table with columns: Name, Owner, Length, Cor. Time.

RUNNING AMU CUP.—An esteemed contemporary, trying very hard to get a run, has got a run, and has got a run.

SEA ANCHORS.

WE have received several communications in regard to sea anchors and their practical value. From our own experience we can testify in their favor.

The Chinese junks all carry a sea anchor made like a nunnetta of wicker work to which they ride out the heaviest gales.

WHAT IS A KNOT?

Editor Forest and Stream: Will you please inform me what is the number of feet in a nautical mile? This question has been asked me several times.

When so many authorities disagree we hardly care to decide. We were brought up in the belief that a knot or nautical mile is one-eighth of a degree of longitude.

THE ATLANTA

THROUGH the kindness of Captain Outburt we have received some fine large photographs, showing the yachts in his yard at Bellville, among them being the new Atlanta in frame.

WHO IS THIS?

THE London Shipping Gazette reports the arrival of the cutter Swift, ten tons, at Cowes, Isle of Wight, from Dunbar, Scotland.

LYNN YACHT REGATTA.—The races postponed from July 4 were sailed July 16, fresh entries being received. Wind fresh from southwest; course, 7 miles; prizes, \$25 and \$10; judges, G. W. Haines, E. C. Southwick and R. W. Howell. The Magic, E. G. Neal, 30 ft. 6 in., won in 54m. 34s., beating Jennie, Venus, Pearl, and Edith in the order named.

HONEST BOAT.—Mr. George W. Eaton, of this city, has bought the kool sloop Vision, and will sail her from Stonington during the season. Vision is 25 ft. on deck, 23 ft. on the line, 95 ft. beam, and 4 ft. draft. Built in East Boston in 1874.

LILLIE'S CRUISE.—The sloop Lillie, which left Boston last Saturday evening on an Eastern cruise, arrived at Portland Sunday forenoon, left for Peck's Island Tuesday morning, and at last accounts was at West Hattuck, beflagged.

DEATH-THREATS.—Last Sunday the sloop Killee S., with eight hands on board, struck a moderate puff of Governor's Island, and immediately rolled over, spilling her crew, who were rescued by boats from Whitehall.

POSTPONED.—Editor Forest and Stream: In view of the President's condition, the Yacht Y. C. has decided to postpone the regular regatta to September 9, in order to secure as large a list of entries as possible.—C.

CRUISING WEST.—The fine little schooner Adrienne, Rear Commodore Jacob Pafl, will visit the Sound ports and New York shortly, and proceed up the Hudson to the bridges at Troy.

A YAWL CRUISING.—The Ionian, yawl-rigged this year, is at Castine, Maine, with the artists John R. Johnston and J. L. Watson on a sketching tour.

DEFERRED.—A number of book reviews are again deferred for want of space.

Stomach, bad breath, indigestion and headache easily cured by Hop Bitters.

Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

J. F. B., Pittsburg, Pa.—There is no law against the trap shooting of pigeons in your State.

J. Q., Newark, N. J.—You can procure the vaccine at either Merceur's or Garrigue's apothecary shops in Broad street, your city.

J. A. C., Jefferson, Ohio.—The dog will become worthless if permitted to run at large, and if he is not kept in a small enclosure, or, if that is impossible to do, he must be kept on the chain and exercised by a proper person morning and evening. Castrate the dog and you will ruin him forever for wild purposes.

W. W., Philadelphia.—The Irish setter dog, Rufus H., was whelped August 15, 1879, and was bred by A. Burgess. He was by Rufus (4231 English Kennel C. S. B.) out of Friend (14 Nat. Am. K. C. N. B.), Lefth's Flash-Kavanaugh's Stella. The late M. Von Cullin, Delaware City, Del., exhibited Rufus H. at the Centennial Bench Show.

H. L. Z., New York City.—Vert Shaw's "Illustrated Book of the Dog" is a most excellent compilation. It treats of the various breeds of dogs now in existence. The serial will be completed in thirty parts; twenty-three numbers have already been issued. Price 40 cents per number. We can furnish the whole or any special number. Parts Nos. 11 and 111, treat of the mastiff.

Saco, Maine.—The progeny of the cross between setters and pointers are called droppers. They often prove handy and useful dogs, displaying the excellencies of both parents; but, although individual specimens turn out all that their owners wish, the cross is not a desirable one, resulting in the first generation in produce of the most varied types, nor can it be continued with advantages or any certainty.

A. A. M., Oswego, N. Y.—What is the best breed of dogs for birds of all kinds, and one that will retrieve from land or water? Ans. For game birds, such as grouse, quail, woodcock and English snipe, either the setter or pointer. For ducks, geese and other water birds an Irish water spaniel. If you only care for one dog, and intend to make him do retrieving from the water at all seasons in the year, the setter will be the most useful, but no field dog should be permitted to do much water work.

Florida.—Can you give me the names of some of the good hotels in Jacksonville, St. Augustine, etc., or put me in the way of communication with them so as to arrange for prices for board during coming winter? Would October be good time to go by steamer? Ans. Hotels in Jacksonville are Windsor, Duval, Turner House, and others. In St. Augustine there are the St. Augustine, Florida, Magnolia and Sunnyside. Send for copy of Jacksonville Union which will give names of hotels. October is a good month to go.

J. R. V., Rome, Ga.—In glass ball match the shooting was from three Card rotary traps, screened, and when the person at the score commanded "pull" the ball from some cause was very slow in appearing, and the shooters declared it "no ball" when it did appear after a pause of several seconds; but the referee decided that the plea of unfair pulling could not be considered, as the shooter having been commanded to pull, must wait in readiness and take the ball when it does appear. Ans. The referee was right, unless a manifest intentional delay could be proved against the puller. It is a bad practice with some clubs to handicap guns according to their bore.

R. H. R., Jamestown, N. Y.—Six men, A, B, C, D, E, F, tie on a prize in a handicap match. The prize was put up to run six weeks, making six whirlings, and each man making a house in own case. In the first prize, the winners at the close of shooting to be permitted to buy out or shoot off ties as they may wish. A buy out is and a first prize, but the losers wish to shoot off ties. Shall a shooter one strike against each of the other owners shooting one, and get the two parties he bought out to shoot his other two strings for him, or

shall he shoot a string for each one of his interests against each of the other owners shooting one string? Or shall A shoot one string for his one-half interest against the other three parties' own each? Ans. A having bought ties of B and F, has the privilege of shooting them off against C, D and E, unless he detects the latter on his own tie; but he is not compelled to shoot them off unless he wishes to do so. To make this plain, put it in another way: Suppose that in shooting off ties A detects first C, then D, and then E. It remains for him to shoot with B and F, but instead of shooting off he buys them out. It is plain that he need not in that case again shoot with the others whom he has already detected. On the other hand, supposing C, D or E to have detected A, the former could not claim the prize until B and F had been detected too, and A having bought these ties has the right to shoot them off.

W. E. F., Norwalk, O.—Respecting deer the Michigan game law (Sec. 3) provides: "That no person or persons shall pursue or hunt or kill any deer, save only in the Upper Peninsula, from the 15th day of August to the 15th day of November, and in the Lower Peninsula from the 15th day of October to the 1st day of December, inclusive, in each year, or kill at any time any deer when it is in its red coat, or any deer when it is in its spotted coat, or has it in his possession or the skin of such deer or fawn in the red or spotted coat; and the having in possession of the skin of such deer or fawn shall be prima facie evidence of such killing. No person shall at any time kill or capture any deer in the waters of any of the streams, ponds or lakes within the jurisdiction of this State, or kill or capture any deer by means of any pit, pit-fall or trap. No person shall kill or destroy, by any means whatever, or attempt to take or destroy, any wild turkey any time except in the months of October, November and December of each year, or any wild turkey or snipe between the first day of January next following, or any partridge or ruffed grouse, or any woodcock, teal duck, mallard duck, or gray duck, save only on the first day of September in each year to the first day of January next following, or any wild water fowl or snipe between the first day of May and the first day of September of each year. The taking, carrying or sending, by any means whatever, into or through any county of this State, any of the game or animals which have been killed or captured contrary to the provisions of this section, or the birds of such animals, shall be illegal, and is declared to be an offense against the provisions of this act, in any county in or through which such game or animals have been taken, killed or captured, and may be punished as provided in Sec. 6 of the act hereby amended." The non-transportation law provides: "Sec. 1. That no person or corporation or company shall at any time, kill or expose for sale, transport or have in his possession, any deer, ruffed grouse, colin or other plumed grouse nor wild turkey, or any part of the carcass of any of such animals, for any use except for any purpose except for consumption as food within this State. Sec. 2. No person, corporation or company shall kill or expose for sale, or have in possession, or transport or have in his possession, any deer, ruffed grouse, colin or other plumed grouse nor wild turkey, or any part of the carcass of the same, with the intention of sending or transporting, or having the same sent or transported beyond the limits of this State. Sec. 3. Any person violating any of the provisions of this act shall be deemed guilty of a misdemeanor, and shall likewise be liable to a penalty of fifty dollars for each offense, and shall on conviction thereof be committed to the common jail of the county until such penalty is paid, provided such imprisonment shall not exceed thirty days."

TARRANT'S SELZER APERIENT.
A tough, coated tongue is a sure sign of a deranged stomach. It is Nature's thermometer, showing how the system is working. In all such cases resort should be had to once to Tarrant's Selzer Aperient.
It will soothe the tongue, by removing from the system the cause of the disturbance; it cures, as by a charm, all who use it.
SOLD BY ALL DRUGGISTS.

SIMPSON'S NEW FISHING-TACKLE CASE.

A want long felt for by Sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen to a fisher is to have his spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as is so arranged that the most careless fisherman can keep his tackle in shape. They are made of the best material and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its merits.

Size—Box: Length 12, width 7 1/2, depth 4 1/2 inches; trays (4): Length 1 1/2, width 4, depth 1 to 1 1/2 inches; top tray: Length 1 1/2, width 7, depth 1 1/2 inches. Three part founes each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, etc., in look, and each case packed in a neat box and sent on receipt of \$4.50. To clubs taking 6 at one time, \$24.00. Send for catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS.

CAMP LIFE IN THE WILDERNESS.—second edition now ready. This story describes the trip of a party of Boston gentlemen to the Richardson and Taylor lakes. It treats of "Camp Life," indoors and out, in an amusing, instructive and interesting way. 224 pages, 12 illustrations. Price 25 cents. By mail, postpaid, 30 cents. CHARLES A. J. FARHAM, Jamaica Plain, Mass.

LEONARD'S Split Bamboo Rods, WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CLIP IN FERRULE (PATENTED OCTOBER 26, 1875). This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's. No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1878). This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made. No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

THE GREAT SINGLE BREECH-LOADER.

FOREHAND & WADSWORTH'S NEW BREECH-LOADER has so completely distanced all the others that it stands alone. There is no second. It is the only single gun worth having. As described in the above cut it is now complete, with rebounding lock, pistol grip, lever fore-end, nickel-plated frame, and is beautifully finished throughout. The barrels are either steel or twist. When steel they are bored out of a solid bar of steel, directing in this respect from all others, which are merely old musket barrels refinished. When twist they are the best imported barrels and of very high quality, James', or even Colts'. Hilberro we have been far behind our orders, but having greatly increased the production we can fill orders for a few more small jobs of the celebrated Wadsworth Guns of all sorts at about half price.

We offer a small JOB lot of the celebrated Wadsworth Guns of all sorts at about half price. P. O. BOX 4,309. H. & D. FOLSOM, 30 Warren St., New York.

The Kennel.

GUNPOWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DUPONT'S CREEDMOOR MIXTURE established in 1852,
has maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse)
to 5 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse)
to 5 (fine); burns slowly, strong and very clean
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.

Dupont's Choice Fire.—Specially adapted
for "choice bore" Guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 7 and No. 5,
No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and
1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol-shooting.
Packed in 1 lb. canisters and 5 lb. kegs.

Dupont's Rifle Fg.—"Sea-Shooting."—
FFg. and FFfg. The Fg. for long-range rifle-shoot-
ing; the FFg. and FFfg. for general use, burning
strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb.
canisters, 6 1/2 and 12 1/2 lb. kegs. Fg. coarse, FFfg.
fine.

CRUTTENDEN FLY ROD.

This Cut is an exact representation of this Rod, which
CANNOT BE EQUALLED FOR THE MONEY.

It has Solid Reel Plate, Nickel Plated, Patented Ferrules, allowing the wood to be used the full size,
thus preventing rod breaking where wood and ferrules join. But wound with cane and silk, giving it that
desirable Appearance and the Feeling of the high-priced rods. The first two joints are made from Best
selected second growth Ash, Stained and Polished. The uppermost the Laneswood, polished. The Rod is
Well Ringed throughout. Length, ten and one-half feet; weight, from nine to ten ounces. This is the
best-made, best-finished Rod for the money in the United States and will guarantee it every way. If by
accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning
Rod to be repaired. With short tip it makes an excellent Brass Rod.

PRICES.—With one Trout Tip, in Case, \$4.00. With one Trout Tip and one Bass Tip, \$4.75. With
two Trout Tips and one Bass Tip, \$5.75

Gunpowder**

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square canis-
ters one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6 1/2 lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot-guns.

Hazard's "Puck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field forest or water shooting. It
fills any other brand and it is equally serviceable
for muzzle or breech loaders.

Hazard's "Kentucky Rifle."
FFFG, FFg and "Sea Shooting" FG in kegs of
25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
sweet. The FFg and FFg are favorite brands for
ordinary sporting and the "Sea Shooting" FG is the
standard Rifle Powder of the country.

ANSWERS TO CORRESPONDENTS..... 521

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondents name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 448 Strand, W. C. London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, July 28.

Specimen copies of this paper will be sent free upon application. We will esteem it a favor if our readers will call the attention of their friends to the merits of the FOREST AND STREAM.

THE TABLE OF OPEN SEASONS in our game bag and gun columns will be found a useful index to the opening days for shooting.

LARCENY OF ANIMALS is the subject of a very interesting paper which we copy from a legal contemporary supplementing it with other articles on kindred subjects which have been printed since.

AL FRESCO'S INVITATION to try the channel bass fishing in Florida is not so strange as it may at first appear. In the first place the fishing is good, we know that. And in the second place the sea coast of Florida is a much more enjoyable summering land than are the sizzling cities of this latitude. There is almost always a sea breeze, and that, with the afternoon showers, insures comfort.

WESTERN SHOOTING.—We are informed that the prospects for prairie chicken, duck, goose and brant shooting were never so fine as they are this year through Central Minnesota and Eastern Dakota, and especially along the line of the Chicago and Northwestern Railroad in that territory. Some of the best shooting grounds in the United States are reached direct by this line.

A SEA-FISHING PARTY.

A MOST enjoyable trip, which brought health and fish in equal proportions, was recently made in the schooner "Van Name," Capt. Cubberty, by a party of gentlemen from New York, consisting of Mr. John Poord, editor of the *Times*; Messrs. Jules Turcas, Walter E. Colton, Max Wessendonck, Carl Scheffer, Mr. Ingalls, Barnet Phillips, Secretary of the American Fishcultural Association, Dr. Prout, and Mr. E. G. Blackford. The latter gentleman was landed at Moutauk Point, and the party went on to Cape Cod.

They caught sharks at Nantucket, Mr. Phillips taking a large one, which fastened its teeth in the pedestal of his trousers and carried away so much that was necessary to a respectable appearance that the loan of an ulster was received with thanks. Returning they interviewed the cod at Block Island, where Mr. Colton, an experienced Adirondack and Maine angler, captured, with a 16-ounce rod and reel, several large cod, among which was a nine-pounder, drawn from fourteen fathoms of water. This was said to be sport, and the excited party stood around Mr. Colton offering odds that he never could land that fish with such tackle. The fight was undoubtedly terrific, for the cod is gamy when opportunity offers to show his powers of resistance, but science prevailed over brute force, and the little rod, bent like an ox-bow, did its work and brought the monster to gaff after a hard fight.

The party stopped at Wood's Holl to interview the United States Fish Commission, but the work had not fairly begun and few besides, Professor Baird were there. An artist accompanied the party, and it is said that "Harper's Magazine" will soon contain a full account of the trip, with illustrations.

TO THOSE WISHING EGGS OF CALIFORNIA SALMON.

THE season for eggs of the quinnat salmon approaches. The eggs taken next month and in September reach the Atlantic States from the 1st to the 15th of October, and those wishing eggs should apply now. This is important, as Prof. Baird is desirous of knowing how many eggs of this fish will be required by the different State Commissions and fishculturists generally, in order that he may give instructions to Mr. Stone, at the McCleod River fishery, in regard to the number of eggs to be taken. All applications for the same should therefore be made at once, stating the number desired, as it is the custom of the Fish Commission to take only the number requisite to fill the orders received, and a certain number to be hatched and turned into the river.

The eggs are collected and packed at the expense of the U. S. Fish Commission. The express charges on them, however, must be borne by the recipients. To those who have had no experience with these eggs we will say that this charge varies with the quantity sent East each year, the Commission getting the advantage of full car rates, when they have full cars, and dividing this pro-rata among the consignees. Every effort is made to deliver the eggs in perfect condition, and the chances are largely in favor of success, but the Commission does not hold itself responsible for any injury from unexpected detention or from any other cause.

Orders should be for at least 50,000, as this makes as small a package as it seems desirable to put up, and we would impress upon our readers who desire eggs this fall the necessity of immediate application.

A HINT TO SIR HENRY HALFORD.

A STUDY of the scores made at the recent Elcho Shield competition ought certainly to encourage our British friends to make another trial for the Palma and so secure for themselves the championship title at long-range team shooting. In 1876, it will be remembered, when the trophy was first shot for, five teams competed in a two days' contest. On the first day the Scotch team led with a score of 1,886, or an average of 198½ per man. On the second day the American team led with 1,549, or 193½ average. At that time Ireland had the best score on the Elcho shield record—1,509, or an average of 189. In 1877 Ireland improved her record by making 1,563, or 196, and this was the best Wim-

bledon record. When, in 1877, Sir Henry Halford brought over his picked team, and under our clearer skies rolled up the scores of 1,629 and 1,613 for the two days respectively, showing averages of 203½ and 201½, or a general average per man for the match of 202½, the figures of the Americans for those two days ran up to 1,655 and 1,679, or to the remarkable general average of 208½. Since that time, however, the Elcho Shield figures have shown the effect of careful drill and practice on the part of the riflemen all over the kingdom. Last year 1,638 was the winning score, and during the past week the English team ran its score up to 1,642, or an average score of 205½. Now, given the pick of the three teams, worked into a compact working squad of marksmen, under such an enthusiastic captain as Sir Henry Halford, and given too the advantages of shooting over an American range, where the targets are not cut off by the misty curtains of an English atmosphere, it would seem only fair to assume that an improvement could be shown which would force the American riflemen to some magnificent shooting in order to hold the trophy. If, we say, in 1877, the best Wimbledon record stood at 196, and a picked team could come to America and show more than 6 points better, with the Wimbledon record now standing at 205 and over, an improvement of much less than 6 points per man would leave the exceptional American record safely behind.

AN ENTHUSIASTIC FISHCULTURIST.

IT MUST be a source of delight to Dr. Garlick to see the yearly growth of fishculture in these days. When he began it, in 1833, it was looked upon merely as a curious experiment by the public at large, and only a few thoughtful men saw any future for it. The Doctor and his partner, Prof. Aekley, were successful and bred trout, but it was a long time before others took it up; and this indifference to a subject which seemed of vital importance to these gentlemen was undoubtedly a great annoyance to them.

Dr. Garlick is now in his seventy-sixth year, and has been an invalid for several years past, suffering as only those who have passed through the agonies of paralysis of the pneumogastric nerve have suffered. Yet on his bed he reads with avidity all that relates to his favorite theme; and with a mind unimpaired as yet by age and suffering he follows each improvement and invention with the ardor of a young man. Carp culture attracted his attention, and he had a small pond made and stocked with this fish. In getting an additional supply four were killed, and he ate them. He writes us as follows:

BEDFORD, O., July 21.

Editor Forest and Stream:

Night before last my dear old friend, Judge Potter, came here and brought me sixty-one mirror carp. Four of them had died from apoplexy on the way, but that did not spoil them for eating, and yesterday morning I ate two whole carp for my breakfast—what you never have done. You may think it very strange when I tell you that I never in my life felt a greater interest in fishculture than I do to-day. I cannot while life lasts bring myself to the condition of doing nothing although some people seem happiest when they have nothing to do.

T. GARLICK.

BASSING IN GREENWOOD LAKE.

IN another column a correspondent gives his experience with the bass in this lake. We were there three weeks later and our experience was somewhat different. We reached there at noon and took three bass. Two of them would weigh half a pound each, and the other weighed a pound. We took two of them by still fishing with the "Dobson" or helgramite, and one by skittering with a live frog. The boatman promised great fishing on the morrow when we would go down the lake.

In the morning both the landlord and the boatman ridiculed the size of our creel, and declared it would not hold half our prospective catch. We relaxed our features at the prospect and started. Three of us, two editors and the boatman, fished from 7 A. M. till 5 P. M., with a result of twenty-one bass, all small mouth, none of which would exceed a pound in weight. The boatman said "we should have been here last week." Alas! that last week story is familiar to us. We have suffered from the voracity of last week's fish, and the veracity of guides for years. We never did go fishing "last week," it unfortunately being an ever present "now"

when we are on the water. And now our correspondent shows that we should have visited Greenwood Lake three weeks ago. We did not, hence these tears. If any one should ask why our correspondent claims that the lake needs restocking when it contains so many bass and such fine ones as he caught, we can only mournfully shake our brain case and say that we don't know.

We found the charges moderate, except for boats. We paid two dollars a day for a light twelve-foot row-boat, but we could not but admire the plan of counting out seventy-five dollars, and charging two cents each for them, and then selling the remainder after the day's fishing to another party on the morrow. We used twelve of them, which cost us \$1.50, or twelve and a half cents each instead of two. How many persons had paid for our dohos before we bought them we probably will never know, but if we did not have a comfortable income from our editorial labors we would probably go into the dohoson business as the surest road to fortune.

There may be times when the bassing is better at the lake than on the occasion of our visit, but the facts are given of a day and a half's fishing by three men whose catch was larger than that of any party on the lake during that time. We believe that brook trout would live in the cool springs of this lake, and hope that it will be tried.

A HANDSOME TROPHY.—We have received an artotype of the gold medal of the St. Louis Gun Club, which is offered by that club for annual competition by the members of the Missouri State Sportsmen's Association. The design is handsome and the execution all that could be desired. The medal is valued at \$500, and its winner will take it under the following conditions: "This medal is to be shot for under the following conditions: The winner is to put it up for competition at each annual tournament of the Missouri State Association, at \$7.50 entrance, not including birds, to be shot for at 10 sing's e, birds, 26 yards rise, under St. Louis Gun Club rules. The entrance money is to go to the holder of the medal each year. The owner will be required to give satisfactory bond in the sum of \$500 to the St. Louis Gun Club, for the safe custody and production of it at the next following annual tournament."

NUMEROUS TIMELY COMMUNICATIONS were deferred. Our columns are rich in practical letters pointing out camping and sporting resorts. We trust that others of our readers who may have knowledge of such localities will favor us with brief and specific information respecting them.

BRYANT'S POEM ON THE ENGLISH SPARROW, was written at the time of the introduction of that bird into New York. We shall publish it next week.

The Sportsman Tourist.

CANOEING ON CANADIAN WATERS.

MUSKALONGE FISHING IN SPARROW LAKE.

A GAME FISH is a silly bird. The wily trout rushes clear out of water in his intense eagerness to capture the so-called "fly," a feathery cheat formed in the resemblance of nothing under the sun and not even attempting to conceal the hook to which it is wound. The fierce muskallonge savagely snaps at the glittering "spoon," a revolving fraud, alluring the too curious fish, though not at attempting to counterfeits anything whatever, nor to cover gangs of hooks dangling ominously behind. Those much despised fish, the bullhead and the sucker, are at least far more sensible. They require for a bait something which shall have at least the appearance of being good to eat.

Thus our thoughts after the excitement of catching my first large muskallonge had somewhat abated. We had pitched our tent on a fine promontory at Sparrow Lake late Friday evening, had gathered the hemlock boughs which serve us "beds of Asphodel," had warmed ourselves by the glowing camp-fire, and enjoyed the delicious repose of the campfire when disturbed by any of the wretched, creeping, crawling, wiggling, humming, buzzing, biting, stinging, things which sometimes give variety to life and activity to sleep.

A good part of Saturday we spent in escaping the fury of thunderstorms, and had only got fish enough for the actual necessities of our sharpened appetites. Two fine bass, which had struck at my brother George's spoon, had suffered themselves to be drawn only near enough to get a good look at the canoe, and then, with a toss of the head and a flap of the tail, had taken their departure without the formality of saying "Good-bye." Naturally we had been desirous of at least one handsome fish, large enough to be stuffed and baked for a Sunday dinner, and to furnish us also with food for conversation as well as to make good the reputation of this lake for the size and class of its fish. Yet, undeniably, the weather was unpropitious; and as the sun was setting we were still sadly trotting, fondly cherishing the last hopes of a delightful week which we had been anxious to end in triumph. For the last time we trod across a little bay, and as we were touching the edges of the weeds the signal had been given to commence winding in our lines. Suddenly I felt a fierce strike, and then a jerking and hauling at the line as though the old Ben Serpent himself were at the end. After having felt the hooks set in his mouth I hauled him as prudently as possible, that I might not lose this long-looked-for treasure. George had at once drawn in his line, that there might be no possibility of the two becoming entangled, and the guide held the canoe with his paddle partly edwise to the fish that the line might be more perfectly free. After the first jerk, when the fish has found himself all safely hooked, he will generally consent to be drawn up until he sees the boat, and then, realizing his danger, he makes new and bolder dashes for life and liberty. But this one had no notion of succumbing so tamely. He rushed to the top of the water and threw himself out, and shook himself like a

black bass, displaying to us his magnificent proportions, though at a distance of nearly a hundred feet. Then, finding this effort fruitless, he became quicker and I gradually worked him up within sight of the boat, and then he was off like a shot, taking out half the line I had drawn in. Again I brought him up toward the canoe, and again and again he was off. The next time he rose and shook himself to shake the hooks out of his mouth, but unsuccessfully. Finally he adopted a new manoeuvre, snuffing himself to be drawn in till near the canoe he darted under it, and then, coming to the surface on the other side, he shook himself again, striking his tail with all his force against the side of the canoe, and the dashing off again—a difficult, dangerous situation, the line being under the centre of the canoe, and he having thus every advantage which a hooked fish can obtain. Fortunately for the purpose, the line led him out into the water, and his strength was well nigh exhausted and he came to the side of the canoe passive.

This is a critical juncture. More fish are lost in landing than at any other time, their added weight as they come out of the water, and sudden jerks and struggles, frequently setting them free, especially if not judiciously handled. For so large a fish a landing net is worse than useless. To land him in over the edge of the boat, the hooks alone would be in the highest degree dangerous. Three methods remain:

1st. To gaff him with a great hook set on a stout pole, which makes a terrible gash in his side and seems like butchery, besides not being always sure.

2d. The one ordinarily in use by the Indians, to hit him a quick, sharp stroke between the eyes with a short stick brought for that purpose, and then lift him with the hands, while thus stunned, into the boat. But the stroke with the stick is liable to loosen the hooks unless well set in his mouth, and then the fish is gone.

The third method is often the safer plan with a large fish. As with one hand leveling the line you draw the fish close to the side of the boat, pass the other along his back to see that he will remain quiet, and so hold him with the hands, and forefinger to his eyes, where the projecting bones give you firm hold, if you grasp him tightly, and thus with both hands you neatly and quickly draw him over the side and into safe quarters before he has time and consciousness to struggle. For his struggles when in the boat you must be prepared, though it is not advisable to do as one Doctor recently did on this lake with his first twelve-pounder—got one hooked in that manner, and then let him run until the hands gave way under the sharp teeth, and require two weeks' surgery. As the beautiful fish, finally exhausted, came alongside, our guide, of course, wanted to knock him on the head, but warning him off and nerving myself for any struggle he might make on being subjected to the approved operation of lifting into the canoe, in a twinkling I had him safely landed. The flopping and floundering of the fish afterwards, was astonishing in length, lift, fin, weight, color, scales, small and closely set; flesh, white, firm and delicate; color, pearly, and feeling not slimy like the pickerel, which in some respects he so much resembles. His head, sunned on the rocks and dried by our camp fire, shows opened jaws through which I can easily pass my clenched fist without touching one of his shark-like teeth.

Moreover, a great advantage of catching a fish just at evening is that you have a chance to catch him over again two or three times, with variations, during the night.

DOWN THE SEVERN.

When our days allowed for fishing were completed, we struck our tent again with a feeling which would have been of sadness had we not known the drift down the Severn to be so pleasant and interesting. Between Sparrow Lake and the mill at the mouth of the river there is not a single settler's cabin, and in the lumbermen's shanties it is still too early to expect any signs of life, unless possibly a man or two sent on as advance guard to patch up holes in the rough roof and see that the rooms are in order. The distance, expressed in Indian language, is as follows: Sit at a seven o'clock, get the canoe, get the drift, sit at a seven o'clock, paddle hard. Heavy canoe take good deal longer.

The river, contracted frequently at the rapids to not over four rods in width, is generally from a quarter to half-a-mile in width, and frequently expands into broader bays, and once into a large and handsome lake, several miles in length. It must be a difficult and aggravating river for lumbering purposes. The bruiser and the cutter, the log skimmer and the other give evidence of the character of the falls and rocks over which they have to come, while the frequent floating capstans at wide places in the river indicate the points where the current cannot be depended upon to float the logs, and where the lumbermen must, with infinite labor, raft and haul them down to a stronger current. Across the mouths of the deeper bays booms are stretched to restrain the logs in the tendency. The wayward children, to wander from the prescribed channel.

Along the few shallow spots and low shores grows the wild rice, the favorite feeding grounds of wild duck, but the prevailing characteristic of the river scenery is rock—primitive trap, with only occasionally a streak of quartz or a granite boulder. The timber is generally heavy, except where the rapids decrease it, and great satisfaction to us to learn from the Canadian Agricultural Commissioners that the rocks are not growing. The travels of these gentlemen through this section of country listening to the reports of the farmers as to what they could do, has created the greatest interest along their route, but to our inquiring minds not the least valuable of their conclusions is this—that the rocks in the Muskoqua country are *not growing*.

SETTLER'S BREAD.

There is one point to which I fear the attention of these gentlemen was not directed—the quality of the bread made within their jurisdiction. At one point, which shall be nameless here, we wanted some fresh bread, and found no difficulty in getting, at settler's houses, three successive loaves, each of which seemed sourer than the other. At several places they claimed that the wheat was extra for the loaf because, forsooth, it was fully that much *heavier* than the bread we would get anywhere else. The loaf from the third place caused us to give up in despair. It was made up with saleratus and water, had not seen much time lost in kneading, was sour and bitter at night, and in the morning we found our Indian considering the propriety of chopping it with the axe. I used to pity the settlers' wives, now I pity the settlers themselves.

Early the second day, at the marshy outlet of a small stream, we saw

A FAMILY OF DEER FEEDING.

The two fawns were sauntering knee deep in the water at the edge of the river, nibbling among the grass and lily pads, and playfully moving about and tossing their heads. They were

grown to good size, but paid no sort of attention to us, though they evidently saw us as we dropped down toward them. The doe was standing back four or five rods, her head only showing above the rushes, keeping watch and ward over her young. We had quickly gotten out of her sight, beyond a point of rock, and were able to keep behind it till about twenty rods off them, and the wind which, of course, had always been against us, and was so still, for once seemed to blow a dead calm, thus enabling us to keep to the side toward the vigilant mother. But the instant the rock could no longer shelter us from her eye, she gave a number of quick sniffs and snorts to alarm her children, but they only looked up inquiringly and hardly ceased their play among the lilies. Then she snorted again and again in wildest anxiety, and with great energy danced about, making to and fro, and making every effort to enable us to keep to the side of the vigilant mother. But the instant the rock could no longer shelter us from her eye, she gave a number of quick sniffs and snorts to alarm her children, but they only looked up inquiringly and hardly ceased their play among the lilies. Then she snorted again and again in wildest anxiety, and with great energy danced about, making to and fro, and making every effort to enable us to keep to the side of the vigilant mother. But the instant the rock could no longer shelter us from her eye, she gave a number of quick sniffs and snorts to alarm her children, but they only looked up inquiringly and hardly ceased their play among the lilies. Then she snorted again and again in wildest anxiety, and with great energy danced about, making to and fro, and making every effort to enable us to keep to the side of the vigilant mother. Then she snorted again and again in wildest anxiety, and with great energy danced about, making to and fro, and making every effort to enable us to keep to the side of the vigilant mother. But the instant the rock

so black with tar oil that his own wife would not have recognized it that hold tunder her darling Professor. Such were his defenses against cold and the mosquitoes. But the most wonderful of this equipments remain to be described—the rifle that shot and the jack that showed it where to shoot. The rifle, a Ballard, principally remarkable for its intricate sight, which Wren designated new-fangled and treacherous. But the jack—O Muse, inspire me that I may picture it! A little dark lantern with bullocks' ears as glass—indeed, it was of this material; a very scientific chimney to carry off the smoke, but incapable of shedding light; a noiseless slide which went with a string, and a multitude of straps whereby to attach the whole to the bearer in a way warranted not to make the head ache.

Hank swung lightly into his seat, and the companions on the shore waved a *bon voyage*. The paddle sped silently to and fro, and the canoe glided round the point. The mist was already rising from the river. No chance for a daylight shot, and the Professor began to light up and buckle on the jack.

"We'll try the mouth of Dead Creek," said Hank; and try it they did most unsuccessfully. Up and down the creek, and round and round the broad bay, where its cool waters mingle with the Raquette went the canoe, guided by the indefatigable paddler in the stern.

Hank passed away and not a sound of a deer. Not once had they heard the familiar splash I splash among the lily-pads. The Professor's legs were cramped and painful, his back was lame, his head ached and that part of his body which sustained his weight had been padded with soft blankets in vain. Those who have never sat perfectly still four or five hours curled up in the bow of a canoe know little of the agony of a long night-hunt. The sweat boxes of our prisons are painful, but the torture is not to be compared to that which an antidromic splash puts his man through on a single hunt. The guides themselves seem to be capable of remaining erect in one position all night. They evidently glory in it. But the Professor didn't. He always started with the intention of sitting as immovably as Hank. A few hours invariably destroyed his ambition. It had all departed on this particular occasion. He ached in every muscle. At last, in the agony of despair, he laid his rifle carefully over his knees, placed the palms of both hands on the boat and lifted himself noiselessly into the air. But, alas! one foot slipped against the boat with a whack, and a warning "Hush!" from Hank followed. Half an hour passed. Bang! from the Professor, who was endeavoring to relieve his cramped legs. "Hush!" from Hank. Fifteen minutes more. A smothered groan from the Professor. "Hush!" from the stern again. Ten minutes. Whack! whack! both feet this time.

"You're tired?"

"Not very!"—in a heroic tone.

"Shall we go back?"

"Not without a deer, Hank!"—with the air of a martyr.

"Then I'll tell you what, Professor, we'll get nothing here to-night. Suppose we run the rapids and try the still water below. There ain't been a camp there this season."

"I am ready."

As the rapids sent them out into the stream, and the canoe sped toward the rapids whose roar they had heard all the evening. They were soon reached, the jack was uncapped, and its light fell in a path upon the water, and just disclosed the outline of the forest. The sky was overcast and the night intensely dark. The thickets of balsams and spruce on the shore seemed to be dancing and flickering with a witchy black foliage. For a moment the guide held the canoe motionless, as if searching for the right opening among the rocks which rose ahead. The two hunters sat there silent, alone. No sound but the rushing of the rapids before them. No human beings for many miles around, but the two sleeping in the camp far behind. Both were aware of the danger of their undertaking. Both were nervous by that excitement which is half of pleasure, half of fear. A moment only they rest. Then, swerving a little to one side, down they go. In an instant they are in the rapids; rocks rising all around them; the swiftly rushing water of the river, lashing itself into foam, whirling in eddies, and dashing over sunken rocks. The canoe is somewhat checked in its headlong course by the strong arm of him who holds the paddle. Accustomed to its use from boyhood, he now has the art of it almost still. Straining his eyes forward where the light of the jack shows the way, he studies the eddies and rocks intently; then by swift turns of the paddle, he lets the boat safely down. The canoe, as if conscious of the need, obeys the slightest motion of her master. Safely she swings by the rocks. Gracefully she takes the leaps. Down, down they go. The spray is dashed into their faces. The light falls in very rays upon the black rocks and sparkles on the white foam of the rapids. Now they reach the little fall at the bottom. For an instant the canoe quivers on the crest, then takes the leap. How the nerves of the hunters tingle as they seem poised almost in mid air.

The boat falls gracefully into the foam, tips a little, takes in a little water, and then darts out into the still pool. Lok's Island Rapids are passed in safety!

"Well run in shore and empty out this water," said Hank.

The Professor was silent for some moments. As they neared the shore, however, he waxed eloquent over their exploit:

"It was immense. A grand experience, and all over with nothing worse than—"

"Thump!" That sentence was never finished.

The boat was on a rock. The Professor sprang to his feet in alarm in spite of Hank's frantic calls to sit still. The latter sprang overboard the moment the boat tipped, and stood a little above his knees in water. But the Professor, with wild movements of legs and arms, rolled clumsily in, head first, and began a fierce struggle to reach the boat again, interspersing the contortions of his body with splutters for help.

"Hank—Hank—help—down—help!"

"Stand up. You're on bottoming now. You're all right," cried Hank, as he assisted the exhausted Professor to gain his footing.

"Thank you. There—I can touch—I have cramp," gasped the wet man, as though he was still under water. And he was almost, for the water was streaming from his coat, running from arms and hands, dripping from his chin, his nose, his ears, from every hair. The bear hat was floating slowly around the jack still hanging on, but under water, and considerably put out. Hank fished up the rifle.

"It's pretty damp," said he. "I guess we won't hunt any more to-night."

A good fire was started, and the Professor, wrapped in Hank's coat, was soon steaming away like an apple pudding beside it.

"With a fire," said Hank. "A man never catches cold in the woods, no matter how wet he is."

It was two o'clock when they two stretched themselves beside the fire to sleep. It was six when the rain woke them. The fire was still smouldering. The Professor had evidently felt damp during the night, for he had lain alone, and several large holes were burned in his blanket. Hank declares that he muttered something about being warm in his sleep.

It was nearly eight o'clock when they arrived in sight of camp, tired, wet, hungry and cold. The rain was pouring in torrents. "Hank," said the Professor, as they rounded the point, "don't say anything about it to the boys."

MIDSUMMER DREAMS.

HALF-WAY up the dark blue mountain side
A dell lies nestled, deep 'neath the trees,
Where through the long, long days the summer breeze
Rustles its way to their couch's side
To sleep in dreamy soft-long blissness.

Gray clouds sweep downward, casting on the hills
Their melting shadows. Through the distant hill
Across the valley, hazy, there drift
Their snow-white scarfs, hung out above the hills
With all the grace of some wild Syrian's caress.

And drifting, drifting still, so light and slow,
They float from peak to hill-side, as the notes
Of far away, faint cadences from the throats
Of Ocean's songsters flutter, soft and low,
To some sad dreamer by its mighty tide.

Strange shapes and shadows cast they on the moss—
From ruined walls to fan-of-village spire,
Etched by a Master-Hand that never tires;
Dragons, haunting an old castle foss,
And giants grim, with maidens side by side.

All there that dim antiquity hath told,
And more. A knight with lance and dazzling shield,
His eyes a-dance, sweeps 'erneath o'er the field,
Fresh from his fortress, as in legend old,
Wild yonder face, so still, so fair, so cold.

Oh! visions of what rite in thy train!
Oh, for another look! Was that a trace
Of recognition in that fatal face,
Child and merciless as Winter rain?

Or is it all a dream—a hideous dream?

I know her! Hush! Oh, whisper—whisper soft,
Or she may hear and turn again those eyes—
Circe's eyes—and yet—a Paradise!

And yet again I come, and after, oft,
Have seen the wild rush of my mountain stream

Untrivalled in its madness! Ah, its gone!
It must have been a fancy. Memory plays
Strange freaks to us I fear, in later days.
Forget it, please, and look not so forlorn.
I'm often nervous now, at just the green

Of night. Come, let us walk to greet
The sunset; 'mongst forget and visions driven;
And watch unconsciously the darkness down
In lowest valleys slow rising up to meet,
The sun's last smile with half-reluctant feet.

JOHN FREDRICK TRUE.

SPORTING ATTRACTIONS OF NEW BERNE, N. C.

NEW BERNE, N. C., July 16.

YOUR invitation, extended in the last issue of your valuable paper, has decided me to do at once what I have long contemplated, but procrastinated doing—viz., giving your readers some information as to the advantages and attractiveness of Beaufort as a good place for camping, fishing and shooting. One of your correspondents last winter asked for the range of the thermometer at Beaufort and I intended giving the information asked for at that time but for above failing of mine.

Beaufort, as can be seen by reference to the map, is situated at the head of old Topsail Inlet, immediately fronting the ocean, one and a half miles from inlet and four miles from the outer bar. Although the weather has been extremely hot for past two weeks all over the country the highest point reached by the thermometer at Beaufort has been 87 deg. F. Almost continual breeze from the ocean is delightful and refreshing and no more comfortable place can be found, as far as climate goes, summer and winter, than at Beaufort. A homelike and comfortable boarding-house is kept by Miss Sarah Davis. Ask any commercial traveler from New York or Baltimore the best place to stop for rest and pleasure in Eastern North Carolina, and he will answer without hesitation, Miss Sarah Davis' at Beaufort. Her terms for board are \$1.50 per day; \$3 per week, or \$25 per month.

Now for the sport: Fishing and shooting are first class. Trolling for bluefish and Spanish mackerel is good from 1st of June to middle of October, but is best during August and September. A sail of ten minutes from Miss Davis' wharf will bring one to the fishing ground, and it is no unusual thing for a boat to take 300 or 400 lites in a day's fishing. As large a quantity as 700 have been taken by one boat in one day. From one to four pounds in weight. My wife and I caught nearly 300 one afternoon last September in about two hours' fishing, and could have taken many more, but we stopped from being tired of pulling them. No more exciting or exhilarating sport can be had than trolling for these fish in Beaufort inlet. I have taken twenty-eight Spanish mackerel in one trip, and we often get them weighing from 6 to 10 lbs. each. In the fall of 1874 I caught a mackerel, or *Cora*, as I suppose it should be called, with trolling squid, which weighed 24 lbs., and measured three feet in length. This was the gauciest and strongest fish I ever saw taken with a hook. The favorite boat for trolling is the sharpie, as they are easily worked in the strong tides and breakers, and will tack quickly among the fish, which are usually in schools. They are so light draft that they can go across the shoals of the inlet, where the fish are usually feeding. Besides bluefish and mackerel fishing in Beaufort inlet, and many varieties of small fish can be taken by still-fishing.

The shooting at Beaufort during the fall season is all that the sportsman could wish. Large quantities of birds, such as curlew, willet, snipe and other species, abound on the shoals and marshes near Beaufort, and a few miles in the interior

fine quail shooting can be found, and the woods are full of gray squirrels.

On the banks separating the ocean and Sound are large quantities of deer, also thousands of rabbits. I expect to be at Beaufort during the remainder of the summer and fall months, and hope to meet many of your readers at Miss Davis', and shall be pleased to give any one such further information as may be wanted.

G. N. I.

FROM MOOSEHEAD LAKE TO THE MAIN ST. JOHN.

JOHN.

IN THREE PARTS—PART I.

THERE is no wilderness excursion out of doors—looked at from every point of view—more charming than the one above indicated; none, I opine, so little beset with trials and tribulations, long and fatiguing "carries," the *beta noir* of every sportsman, are scarcely frequent enough on this trip to give it proper zest. From the foot of Moosehead Lake to Grand Falls on the St. John, this route embraces about two hundred and sixty-one miles, and the aggregate of all its carries can be numbered in miles on the thumb and fingers of one hand.

For the greater part of the way, at the proper season, you have good water and a safe channel to an experienced canoe-man. The best time to make the trip, so far as water is concerned, is shortly after the spring rains are over and before the water falls off too much, otherwise more or less dragging will be necessitated, although it can be made at any season without very great hardship.

Taking Portland as a starting point, your route skirts along the southern border of Maine till you gradually lose sight of the coast, and, working your way toward the interior, you reach Bangor, some sixty miles inland. Still clinging to the railroad as long as it holds out, you bend your way northerly, each moment plunging deeper and deeper into the heart of this great State, till villages disappear and scattered houses only remind you that you are still within the borders of civilization. Now patches of wood and green meadows alternate with occasional long stretches of forest, till finally you reach Blanchard, seventy-five miles northerly from Bangor, where you bid adieu to railroads and clamber aboard a spring-wagon, which takes you over a rough and hilly road twelve miles to Greenville, at the foot of Moosehead Lake. This quiet village numbers some four hundred souls, who devote themselves to farming, logging, fishing, hunting and guiding.

Twenty miles up the lake is Mt. Kineo, on a point of land which stretches its way out into the lake. No village is here, but only a commodious hotel, with a few scattered log huts which guides inhabit during the spring season. During the summer, however, Moosehead has become quite a resort of those who seek sport in the line of trout fishing, and this rural retreat is alive with pleasure seekers of all ages, from the venerable guide to the romping school-boy; but the latter spot is usually their haunt of rest—fit to go farther north to linger or penetrate the deeper wilderness. There are several small steamers and quite a navy of smaller boats on the lake, and one makes daily trips from Greenville to Kineo, and two or three times a week to the head of the lake, about eighteen miles from Kineo. This gives variety to Kineo guests, most of whom during the season find their way up the lake, and perhaps get off the steamer long enough to take a meal at Savage's Hotel, a small house a few rods from the wharf.

Leaving Moosehead, a portage of about two miles takes you to the right bank of the West Branch of the Penobscot, where river navigation begins, and now forms the principal part of your journey.

Twenty miles easterly takes you to Chesunook Lake, which you strike near the north end. Now you abruptly turn to the east, your canoe due north, and until you reach the main St. John your course is northerly. At Chesunook, as it is familiarly called, is a small settlement of some half-dozen log houses where comfortable quarters and a fair table may always be found. Between here and Chamberlain Farm, eighteen miles, not a solitary hut is to be seen, but at the farm one will find most inviting quarters, somewhat rude, but neat, with a table very satisfying to a hungry stomach. The farm is twenty miles above, and numbers largely in acres of some of the finest land in the State. Here the farm you plunge still deeper into the wood, and for the next fifty miles nothing but the howling wilderness greets you on every side, save it be a desolate, tenantless hut of bark or logs, rudely constructed and long since abandoned, and which never was more than a temporary abode of loggers or sportsmen. Progressing, you come to Depot Farm at the lower end of Long Lake on the west side of the river. Here I have my log hut with two tenants, a man and a dog—and a small dog.

Years ago Depot Farm was headquarters for the loggers, and was then a rendezvous of much activity and note. A large house afforded accommodation for thirty to fifty men. The forest about was denuded of its trees, and many broad acres were subdued, and grass, grain, corn and potatoes yielded a bountiful supply. But after the loggers had done their work and gone, the broad fields went to waste, the house was accidentally burned, and nothing was left but a large barn, which still marks the site of former thrif. Following in the wake of the downfall came John Harvey, who squatted here with his wife, but he was drowned two years ago. Since then he has led a hermit's life, with no company but his dog, being no human being for months at a time.

Now we have another stretch of about twenty-nine miles before we again see a human face but our own. This takes us to within three miles of the mouth of the Alleghash, which unites with the St. John. Now we have reached civilization, if indeed a few scattered log houses with from three to seven persons deep at the door, mostly children, proves it. From the mouth of the Alleghash down the St. John huts thicken, hovels rise up, log houses appear, and then farm houses and pretty villages dot the landscape, and green fields, broad pastures and inviting table-lands gladden the eye on every hand.

The dense wilderness proper on this charming route is mostly comprised between the first intersection of the West Branch and the mouth of the Alleghash, a distance of about 132 miles, while the whole distance from the foot of Moosehead to Grand Falls, N. B., is about 201 miles. Practically, however, the entire trip is a wilderness trip. Scattered farm houses and pretty villages may afford you shelter and food, but there is the time of the day when you are scarcely to be thought of till you reach Fort Kent on the St. John, a fifty-nine miles from Grand Falls, while not a respectable physcian is to be found till you reach Grand Falls, if you except a country practitioner at Fort Kent.

When you arrive at St. John, at the mouth of the Allegheny, you turn your face eastward and follow the northern boundary of Maine, until you reach Grand Falls. From St. John—it will be noted by consulting the map—divides Maine from Canada, and the reader can readily trace the course we took by reference to a large map of Maine. The best small map on a large scale for this purpose is that contained in Hubbard's Summer Vacations at Moosehead, but that leaves you near the foot of Square Lake, so the writer here was obliged to produce one of his own drafting to make his observations intelligible. I am informed, however, that one is being prepared by the aid of guides at Moosehead, and others familiar with this route, which will soon be published.

I have now given a summary of the trip we took, and if the reader will bear with me I will give it more in detail. For several years the writer had contemplated this inviting excursion through the heart of Maine, but other trips had been given the preference, and not till this spring was it accomplished.

Our party consisted of ten—five sportsmen and five guides (and, by the way, it ought not to be attempted without one guide to each man, as in quick water it is both easier and safer). Geo. H. Wilcox, F. S. Stevenson, W. R. Mackay, N. A. Roberts and the writer constituted the sportsmen, while Captain Samuel Cole, John P. Hildreth, Ned. Leiney, Alf. Ronoco and Joe. Munroe were our guides. Capt. Cole and Hildreth are two of the best guides at Moosehead, thorough, intelligent, experienced boatmen, sober, honest, industrious and faithful. There is no water they are not familiar with, and none so rough they cannot run it if any one can. The "set of water," "undertows" and actions of currents are to them familiar plumbings.

Ned and Alfred also, are both skillful canoeemen, understand thoroughly the set of water, and are faithful guides, but they lack discipline. They are willing and energetic workers, without a lazy bone in their bodies, and will do all you in reas a ask of them; both are French. Ned, by the way, is one of the best cooks I ever met in the wilderness, as his light and puffy biscuits attested at nearly every meal we took in the woods. At chowder he is hard to beat. Joe, also French, is a fair boatman, but is too generous to sneeze without a guide. He allows his guides to do most of the work, and yet he never complained. His eating qualities, too, I must not pass without remark. He was always first at the table and the last to leave it, until it grew a wonder how so small a body could contain so much. He never complained of the cooking, but at night and left everything that came within his reach.

Our party left Boston at 7 P. M. May 22, by the Eastern Railroad. We procured comfortable berths in the sleeper and at 5:45 A. M. reached Bangor without event. A free coach took us to the Penobscot Exchange, about a mile and a half, where we got a comfortable breakfast for fifty cents.

At 7:30 the train left on the B. & P. R. for Blanchard, seventy-five miles distant, and the present terminus of the railroad, thus allowing an hour and three-quarters for breakfast.

On board was a noisy gang of loggers partially crazed with bad whisky. One cut up a "dido," when the plucky little brakenan appeared before the scene, and, quicker than I can write it, he jerked him from his seat and shot him into the luggage car. At this another made faces when he returned, but he, planning himself before him, with his arms folded, cowed him into silence. The act was heroic in the face of the sea-sick ruffians and only some dozen passengers; hence I note it, as every passenger chimed approval. Without other event we reached Blanchard at 11:40 A. M., where we got a comfortable dinner for forty cents. No village is here, but only a few scattered houses. About 12:15 we resumed our journey by stage over a rough and hilly road, reaching Greenville, twelve miles distant, at 3:50 P. M. Soft vespers whisper to us from over the lake. Stretching forty miles to the northward Moosehead is before us in its matchless beauty, dotted here and there with solitary islands, with sufficient soil to maintain a respectable growth of trees and lesser verdure. In its translucent waters both lake and spotted trout are very abundant, and sadly indifferent must that sportsman he who cannot raise a many-fingered brook trout. Greenville are two of the best hotels in the State, and the former stands upon a little eminence overlooking the lake and presents the more desirable location, while its landlord is a thorough sportsman, very social, and attends thoroughly to the welfare of his guests. Terms, \$2 per day; less by the week. The Lake House, a few rods below, sets a good table and affords satisfaction to its guests, but the writer, always having his eye on the dinner and no reason to regret it, hence our party went there on this occasion.

At Greenville we met our guides. I grasped the honest palm of Capt. Cole, our chief, the leader of his craft and the owner of thirty boats, and it was not long before we were all busy making ready for the voyage. We chartered his big sailboat, the Challenge, secured a pilot, and Mr. B. B. Bowers as skipper and one of the best patched our birches, and ere night all we are sailing order. A good supper, followed by a cheerful fire on the hearth, set our tongues a-wagging, and we spun our yarns over our pipes in the cheerful glow of the evening firelight.

On the morning, May 24, we were up bright and early, and soon after breakfast we hoisted sail and headed up the lake. Two of our canoes were in the lead, and three were dragged behind. It was a beautiful day, and the wind soon fell off to a dead calm, and at noon we had only made

LIDGE ISLAND.

two and one-half miles up the lake, where we disembarked, and Orlando got up a right good chowder. About two o'clock a light breeze sprang up and we set out again, but it was puff all the afternoon, and it was not till six P. M. that we reached

WILSON'S OUTLET.

twelve miles from Greenville. While the cook was getting supper we took our canoes and paddled down to the dam for trout. A large hump of logs choked up the harbor, through which a narrow passage only was left. The water was very high and came through the partly open sluices with a mighty rush. Into the rushing current we cast our flies, and after half an hour's fishing we were away some dozen fine trout. The largest was taken by Stevenson on a fly and weighed 2 1/2 lbs. Returning to our boat, we made a hearty supper of fried trout, hot biscuit with maple syrup, etc., and, after a jolly smoke around the camp fire, we retired ourselves up in our blankets and dropped off to sleep in the ship's cabin.

On the following morning, 25th, we awoke to find a stiff

breeze blowing and a choppy sea. Soon after breakfast we were under way, but a stiff head wind checked our progress, and it was not until noon that we reached

SPENCER'S NARROWS.

at the head of Spencer Bay, on the east shore. In and about the bay is some of the best fishing on the lake. We made camp under the lee and indulged in another of those fine chowders of O's getting up. In the afternoon we took our birches and fished about the shores and in the narrows, and altogether made a good catch of fish. Toward night we made for the mouth of

LOOKY BROOK.

on the west shore of Spencer Bay, about two miles north from the narrows. Here is a comfortable log camp built by our chief, Capt. Sam, capable of accommodating five or six persons. After supper we whiled away the eve at a social game of "anetou pitch," not forgetting our birch woods, to the music of the night wind, which blew sharply without and whisked through the crevices of our camp. As we had booked for all the spare rooms in the "Lucky Hotel," our guides sought accommodations in the boat's cabin at the hour of retiring, and thus ended our second day at sea.

The next morning we got under way right after breakfast, and before noon had recrossed the lake and moved our boat at the

WEST OUTLET.

seventeen miles up lake. At times fishing is very fine here, but we met with little success, and after dinner we again hoisted sail and made for

MOOSE RIVER.

on the west shore, twenty-two miles up the lake and nearly opposite Mt. Kinco, where we hoped to find good fishing, as it is favorite ground; but we found the river choked with logs and no fishing, so we again hoisted the main sheet, set our jib and steered for

MT. KINCO.

nearby the east from Moose River and half way up the lake. Our guides (except Captain Coles) took two birches and paddled up to Baker Brook; we reached Kinco House towards night, and tied up there till morning. We found a gang of joiners busy about new premises, putting on an addition to the new hotel, and things somewhat confused, but we got along comfortably and received courteous attention.

The following morning we visited the storehouse, added somewhat to our stores of edibles, and at 8 A. M. were joined by our guides, and, bidding adieu to our host, headed for

DUCK COVE.

on the east shore twelve miles north of Kinco. A good breeze took us to this famous bay, and in about two hours, and we moved our craft to the main land and went ashore. While skipper was preparing dinner we took our birches and went after trout; we visited the mouth of a small brook which empties into the east end of the cove and made a fine catch of brook trout, the largest weighing 2 1/2 pounds, being taken by the writer. After dinner we again crossed the lake and made

HILDRETH'S CAMP.

near the mouth of William's Stream, on the west shore, and about thirteen miles north of Kinco. Hildreth's Camp, named after our guide, is the neatest and most comfortable camp that ever fell to the lot of the writer. John built it, "for his himself back said it." It is cozy, tucked up with banks, has too good stores, a large window and is perfectly light. We'll go home with us, and we'll go home with us, and we'll go home with us. We spent a very pleasant night here, and left it with regret in the morning.

It was May 28 when we bade adieu to Johnny's camp. Previous thereto we held a council of war, and decided to leave four of our birches at Moosehead, and take a bateau down river. So we sailed up to N. E. Carry, where we found one and succeeded in hiring it. It was a fine one, and made for N. W. Canoe some five or eight miles distant.

Here civilization fairly ends, and Nature is supreme. Not many linger here, even for a short stay, for there is nothing to tempt one to delay. No scenery, no fishing, no charming walks are here; no bays with sandy beaches, no pebbles, no shells, no—nothing. Into the dreary, forbidding wilderness, with his giant and weird trunks, travelers look at a glance, and say, "Let's go home." Two of the true sportsmen, however, are whispering pines and hemlocks and fragrant balsams. Under their lowering shadows abide the moose and the caribou, and leap the startled deer at the crack of the sportsman's rifle. In the waters beyond, tracking their sinuous ways beneath the overhanging branches, leaping boldly from ledge to rock, and plunging madly down their rocky beds, are the ways to the true sportsman. But take thought. If you go hence, you must rough it. For the next two hundred or more miles there are no hotels or conveyances, not even a public highway. No doctors nor surgeons in case of sickness or accident, and, after the first forty miles are passed, not a loaf of bread to be had for love or money. You must go provided for, or trust to your ribs and rod. The writer says from my text. I would indicate to the reader the route. Take a map of the State of Maine and you can readily trace it. Leaving Moosehead, a portage of two miles and twenty rods takes you to the

WEST BRANCH OF THE PENOBSCOT.

Upon the south bank (the river flows easterly) is a comfortable house kept by Joe Morris, where travelers will always find welcome. From Savage's across to Morris is a good road, and both Savage and Morris always have teams in readiness to take parties across with boats and luggage. We reached the Northwest Carry about noon and lunched, to save time. We saw our bateau safely tied to the wagon, our two birches securely loaded and smaller freight packed away in the remaining space, heartily grasped the hand of Orlando, our skipper, bade him a sorrowful good-bye and set out on foot for the river beyond.

At first there was met a Mr. Spencer, a river driver just in from a drive with a brand new bateau, which our hearts did covet, and ere we had unshipped the one hired we struck a bargain for its purchase at \$37.50, sent the other back and quickly the new one was laden with our own cargo. Two of our guides, Ned and Joe, manned the birches, with two of our party for passengers and the writer across to Morris; while the rest of us took passage aboard the bateau with the remainder of the luggage. Capt. Sam took the stern and acted as steersman, while John served as bowman.

About 4 P. M. we waived adieu to Morris' farm, lit our pipes and, throwing ourselves lazily upon our backs, with the soft side of a sachet for a pillow, glided merrily with the current to the measured strokes of our oars. Perhaps, as our boat was quietly gliding their way down the busy current, a description of a bateau may not be amiss.

These crafts are of various sizes, but usually about thirty feet long by five to six feet breadth of beam and about three feet deep, sharp at both ends, the sides flare and the bottom is flat. They are used principally upon the rivers for driving logs, are strongly built and good sea boats on lake or river, will carry from eight to twenty men and stand hard knocks. They are usually manned by four men, steersman and bowman in log-driving and afford a safe retreat for the logger who finds a "jam" going out, and looks to some safe place to spring to. Believing it would afford us ease in shifting from a confined position in a birch, we determined upon trying the experiment. To those unfamiliar with a birch let me remark, that although one of the most enjoyable of crafts, as it is at some times a very tame and slow motion, and being alone. One must keep it trim or he is sure to get spilled.

LOBSTER BROOK.

empties into West Branch from the south. We reached this point in about forty-five minutes, and pitched our tent for the night for the first time. At times fishing is good here, but we met with little success, and so did not stop for supper, which consisted principally of canned baked beans, and which, by the way, are among the best things to take to the woods. The night was raw and chilly, and our blankets and heavy slippers were brought into requisition and proved very desirable.

May 9.—The following morning we resumed our journey. An hour-and-a-half's sail brought us to

MOOSEHORN.

six miles, which empties into the river on the south bank. Two miles further down and we came to

RAGMUFF.

on the north bank. After leaving Moosehorn you encounter a long stretch of deadwater, which continues much of the way till you reach

ROCKY RIPS.

five miles below Ragmuff. Here you encounter the first quick water on your route. The pitch is some twenty rods long, and plunges rapidly down a rocky declivity, foaming and seething amid scattered holdlers and sharp ledges which thrust their ugly noses above the quickening current. To a skillful boatman, however, the passage is perfectly safe, as there is plenty of water in the wide channels, any of which can be run without difficulty. Scurvily were we with in the boiling rapids ere we were out again. Like an arrow from the bow you shoot the Rips, tingling with excitement, and recover your breath in calmer waters below. You are now within a mile of

PINE STREAM FALLS.

somewhat shorter in name than that of navigation usually, as being more thickly studded with sharp rocks, having a narrow bed and a sharper pitch of water. In low water the current plunges with a maddening rush through narrow channels, and we be it to the boat that misses one and goes upon the rocks.

On the present occasion, however, the water in "Snooek Lake, three miles below, was very high and set back as far as the falls, hence not a rock was visible, and nothing but a swift current at this point indicated the location of the falls. Upon the north bank of the river at the falls is a big ledge, above which we tied up for dinner.

Being out of fresh fish, some of the party rigged up their rods and cast these and bait from the ledge with great success, and a short while afterwards we had made of a very superior quality of spotted trout, with meat like a salmon which, fried brown in Indian meal, we found exceedingly palatable.

After dinner we again packed up, ran the falls and in less than an hour

CHERNOGONOK LAKE.

gladdened our vision. A heavy wind was blowing from the east, so we did not visit the settlement which lies about a half a mile due south on the west shore, nor the farm on the opposite shore. We turned our bateau due north with one of the canoes, while Sam and John took the other and went to the farm for a few stores.

About 4 P. M. we reached the north end or head of the lake, and found our way up Chocomaoc River about three-quarters of a mile to

CHOCOMAOC FALLS.

where we pitched our tent for the night. We found trout quite plenty, and took a fine mess for supper, averaging from 1 1/2 to 2 lbs. each.

An incident transpired while we were sitting upon the bank of the stream which seems worthy of note. The black flies were quite plenty, and somewhat annoying, and as we were engaged in brushing them away, a small bird, with red and gold feathers, alighted upon the shoulder of one of our party, and picked off the flies as fast as he could swallow them, showing not the least alarm as we moved about. After a few moments he would fly away, and again return, alighting this time upon some one else. This he did many times, until he had lighted upon every member of the party. He would run up and down our legs, arms and bodies, and thrust his little bill down our necks after flies. We noticed he could not shut his bill, as he kept it open all this while, so we caught him and examined it, but nothing seemed broken or out of place. We let him go again, and he returned several times after that, till finally he flew away and returned no more. None of us saw or saw anything like this no more. None of us saw or saw anything like this no more. None of us saw or saw anything like this no more.

GEORGE A. FAY.

A MINNESOTA RESORT.

DETROIT, MICH., July 22, 1891.

For the benefit of those seeking a place in which to hunt and fish I will state that we are changing the world to produce fisher facilities that exceed ours. To each all the fish one can carry is but an hour's work. Pike, black, rock and Oswego bass, pickerel, and snn-fish prevail. Hunting in the fall is immense. We have hundreds of small lakes and rice-beds within the radius of two or three miles. On the prairies and in the stubble in the fall geese and ducks swarm. Splendid places for camping and for all the sports of the world. I would be pleased to give all directions to parties wishing to learn further of this country, situated in North-western Minnesota, on the Northern Pacific Railroad. H. P. HAMILTON.

Why Should I Not?—Chicago, July 2, 1891.—It is only justice to you that we should say that our advertisement in your paper pays us better than any medium we have yet tried.—Yours, very truly, THOS. KANE & Co.

CAMP "JIM WHITE."

SAVANNAH, Tenn., July 15, 1881.

THE Klaw Hammer Angling Association has just returned from its annual fishing and camping excursion. The club was better fixed than ever before, and "Camp Jim White," so named from one of the most energetic and assiduous of our members, will always be remembered as a model of comfort and convenience.

The bass did not bite well on account of the hot weather and low water. The writer captured the biggest one caught, estimated variously according to the temperament of the different anglers, at from 2 1/2 to 4 lb.

Although the weather was hot, and the fish off their feet, the party enjoyed themselves greatly. Plenty of fish and game were captured to supply the table, and our sab e chef de cuisine excelled himself in catering to our appetites. Our bill of fare included bass, perch, cat-fish, squirrels, soft-shell turtle and frogs, to say nothing of fresh butter, comb-honey, new-laid eggs and spring chickens, drawn from the farmers around. Altogether the affair was a success, and except that the misfortune, detailed above, which saddened our home-coming, nothing occurred to detract from the pleasure of the trip. We hope at some early date to be able to chronicle the doings of the club at greater length.

WILL.

A THIRTY-POUND RANGELEY TROUT.

A correspondent of the Boston Journal recalls the story of the big Kennebec fish:

"Resting upon hooks at Camp Kennebec is a very curious fishing rod, and that rod has a history. The rod is a stout maple tree, nearly as thick as one's wrist, and 15 or 20 feet long. The reel is a heavy wooden wheel as large as a dining plate, and the line is a stout bevelwood, with a hook of iron to correspond. The reel is as big as a man's hat. Some years ago a novice, but would-be sportsman, stopped here, by invitation from the members of the association, and in the evening he told some fish stories designed to enlighten the members then in camp. He told of large trout caught with 8-ounce rods, and considerably embellished his powers as a sportsman. One of the members hit upon the idea of playing off a joke upon him. This novice was on his way to Kennebec Lake for a day or two of fishing, and a member offered to wager that on the day after the return of the novice he could land a bigger fish, and that, too, with a more wonderful rod and line than the novice had ever seen, or would be able to catch. The bet was quickly taken, the novice departed for the mountain lake, and preparations for catching the big fish began. The member making the wager sent to Portland for the largest fresh fish to be obtained, and it came, an immense specimen of codfish, weighing over 30 pounds, in a very nice state of preservation."

"That night the novice returned from the upper lake, and it was arranged that the fishing tournament should take place next morning. The above-mentioned rod and reel had been constructed beforehand. Early in the morning the novice, however took his position in a canoe on the stream in front of the camp. The novel rod lay in the bottom of the canoe, with the 30-pound fish hooked to the line over the side in the water, so that neither would be noticed. The member went quietly to work casting his flies with another rod, while his guide kept the canoe in place. Soon the novice came down from the camp, clad in a spring suit, and balancing his 8-ounce rod deftly in hand, with a cast of handsome flies at the end. He seemed considerably chagrined that his antagonist should have attempted to steal a march on him by getting ahead in the morning; but he soon took a position by the side of his guide in another canoe, a few rods from his rival. All the campers, the most of whom were in the secret, came down upon the shore to witness the contest. Both parties made a few casts, and each landed a few small trout. Soon the novice hooked a fair-sized fish, and he lost him by bad handling of his rod. All at once, at a given splash from his guide, the waging member dropped his rod and seized the maple-tree with the bed-cord, and drew up the fish so that the novice could see him, but quickly let him go again as though alive. The novice was nonplussed. He laid down his rod, sat down in his canoe, and gazed in blank astonishment while the huge dead fish was slowly hauled up. He did not come to the shore until he had been badly sold till the laughter of the members on shore and the sight of the ungainly tackle brought him to his wits. He acknowledged the wager won without weighing the fish, and has never since allowed himself to bet against older heads."

PICKING THE 'POSSUM'S BONES.

PORTSMOUTH, Va., July 19.

Editor Forest and Stream:

I have been reading the various opinions advanced in your journal relative to the sportive 'possum and the question whether he should be eaten hot or cold. Now, I suppose you think it is quite a waste of ink to say anything more upon the subject after you have summed up the evidence and given your opinion. But did you never play the ace upon the odd trick and have some one cry out "Miss deal?" You see, in such a case the whole business is in doubt again. But your numerous readers need not be alarmed. For I have concluded at last to settle, once for all, the vexed question whether the 'possum should be eaten hot or cold. Of course I could have done this long ago and saved your readers much time and your paper much valuable space, but it is so gratifying to hear a question argued pro and con, listen to and admire the ingenuity and learning displayed on either side, feeling all the while that you are holding a reserve that can end the battle at any moment.

Did you ever play the game of poker (just to pass the time) and have the party raising the ante five, ten, twenty, etc., while you were quietly sitting behind four aces? Again, were you ever in court when it was of great importance to have a certain witness present, and every one, from the judge down, wondering at his absence, and after all kinds of conjectures and surmises you calmly arise and tell them the man who has been absent is dead? How proud you feel as the eyes of the multitude are turned upon you and you are happy to be able to impart such vast and important information! But the pleasure of holding four aces, or reporting deaths in important cases is seldom vouch-

safed to man. But it seems my turn has at last come to give valuable information to your readers, and of course, receive thanks therefor, for I can certainly settle the 'possum question.

Last November I was in Camden County, N. C., having a right royal time shooting partridges. During the hunt I fell in with a native who kindly offered to show me where the birds were as thick (to use his words) as hair on a dog's back; and he knew his business, for I never found birds more plentiful. My companion, who, by the way, though a great 'possum hunter, had never before seen a setter range a field or stand a bird, became very much interested in the hunt, and was long in his praise, especially of my doubles. In fact he forgot all about his dinner, and followed me around until nearly night, when I wound up on a covey in his orchard. I then, upon his pressing invitation, went in to dinner, although I was not hungry, having, before meeting him, done full justice to my lunch, but I soon found he had appetite enough for us both. He sat down to a fine roasted 'possum, bordered with yam potatoes, and after striking a 2.40 pat (oh yes, I know this isn't much in these days of Mand S. and Brass, but it will do, especially when you keep it up as he did for nearly an hour without break or skip) he finally weakened, and at last rested the handles of his knife and fork at angles of 90 deg. with the plane of the table, and looking across at

"HIS KNIFE AND FORK AT ANGLES OF 90 DEGREES."

his mother, with eyes beaming with intense satisfaction, and speaking slowly, feelingly and with great emphasis, he said, "Mammy, 'possum is mighty good, but 'possum, fat and taters—Great Shakes!"

Now, as this 'possum was cooked at the regular dinner hour, 12 m., and was eaten after sun-down, of course it was cold.

P.S.—If the native had dined at his regular hour he might have eaten his 'possum with the same gusto. In fact I think he would have done so, and in that case of course the 'possum would have been hot.

Natural History.

DO GARTER SNAKES EAT FISH?

IN your issue of July 21 I noticed a query as to whether black and garter snakes habitually or occasionally eat fish. Of the habits of the black snake in this particular I know nothing, but am able to make some positive assertions about garter snakes. In the first place the congregation of garter snakes about pools and streams stocked with small fish is too habitual to be entirely devoid of significance. Wherever small fish abound, even on the borders of large lakes, there you may look for garter snakes with full assurance of success.

I have frequently found them watching with eager eyes the movements of their finny prey; have seen them dart upon, seize and swallow minnows, and finally have dissected minnows in various stages of digestion from their stomachs, and this in a number of widely separated localities, where, too, there was an abundance of other kinds of food, as insects, loads, etc. My observations lead me to believe that small fry constitute a very important, and, in places, the chief part of the bill of fare of the garter snake, including in the term all the many species in the United States.

In conclusion, I may add that I fully believe that black snakes are also fish eaters, though possibly not to the same extent. They, too, frequent water habitually, and it is reasonable to suppose not alone for the sake of the frogs and toads found there.

Washington, D. C.

H. W. HENSHAW.

HABITAT OF THE BEAVER.

WASHINGTON, D. C., July 25.

Editor Forest and Stream:

Your correspondents discuss the range of the beaver, and have extended it to Texas.

I have seen on the Lower Colorado of the West in the low grounds between Fort Yuma and the head of the Gulf of California many signs of the beaver, and was informed that they were abundant.

I saw some skins, but was told that in that warm climate, north latitude 32 deg., 83 days of the fur was not very good.

The last time I hunted north of Fort D. A. Russell, in November, 1873, I saw many beaver dams apparently well-stocked on headwaters of Horse Creek at the eastern base of the Black Hills.

M. C. MEIGS.

We hope that the above note from General Meigs may call out memoranda of the observations of others.

NIGHT-HAWK, WHIP-POR-WILL, CURLEW AND COYOTE—Plymouth Lake, Indian Reservation, Nevada.—Will you inform me: First, are the night-hawk and the whip-poor-will one and the same bird or a different species? Second, can you give me some description of the curlew and the section of the country most common in? Third, do coyotes live in holes in the ground? Is it natural? You will decide a camp-fire dispute, and greatly oblige—D. W.

1. The night-hawk, *Chordeiles virginianus*, and the whip-poor-will, *Antrostomus vociferans*, are of different genera, and of course different species, in the family *Caprimulgidae*, or "igoo suckers." The family also includes the "cockwill's" widow, *A. carolinensis*. 2. The curlews belong in the family *Scopelidae*, with the snipes. The bill is longer than the head and curved downward. The tarsus (bare part of leg) is scaled only in front. The long-billed curlew or side-bill, *Numenius longirostris*, is a large bird measuring about twenty-four inches from the tip of the bill along the back to the end of the tail feathers. Its bill is from five to nine inches long, reddish gray, variegated. The jack-owl, *N. ludovicianus*, is lighter in color and smaller. They are common in most parts of the United States where not exterminated. 3. Coyotes often burrow, and the females usually bring forth their young under ground. They are mainly nocturnal.

A TREE-CLIMBING SNAKE—OONOMOWOC, Wis.—I don't like the subject. I would rather have 'possum in mine, but we all have to take something we don't like at times. Three years ago last April I was in Mobile, Ala., and was invited by friends to spend a few days with them at Point Clear where they were building and repairing their summer cottages. We took passage on the good little steamer Annie, and arrived there Saturday night. The next day we were inspecting the grounds, and, in our walks about the place, a large magnolia tree loaded with blossoms attracted our attention. The tree stood behind a fence, and about six feet from the top of the fence was a crotch in the tree. How to get some of the blossoms was the question, as we were none of us much on the climb. Just then our cook came along and says, "I can get you some blossoms," and starts to climb, standing on the top of the fence he puts his hand into the crotch to raise himself when, with a yell an I bound, down he comes followed by a snake at least three feet long, which had been lying coiled in the crotch, and dropped the other side of the fence, disappearing in the brush before we could kill him. We all swore it was a rattlesnake for we heard him rattle (but it might have been the nigger's teeth). How did the snake get there? I don't know. I didn't put it there, and I don't swear the same thing. If that snake wasn't a climber it made that nigger climb—and at a rattling, lively pace, too.—I. C. H.

BLACKSNAKES CLIMB TREES.—Stirling, Loudoun County, Va.—Several years ago, while fishing on the Potomac, I killed a large blacksnake which had climbed a large tree to rob a bird's nest. I was roused by a horrible screeching and angry chattering on the part of a choir of fifteen or twenty birds of different species. I stopped casting, and upon examination, discovered the blacksnake, nearly five feet long, upon a tree near a nest about ten feet from the ground, and surrounded by an infuriated mob of small birds, which were fluttering and pecking, and cursing almost, by his snakeship's head. The tree was almost flat, though rough, on the side where the snake was, and he was in the shape of several copies of the letter S joined together. Evidently incapable of rapid movement, the tree sloping toward his tail, and upon examination of his belly were raised, I think, so as to help him cling, and this, together with his winding position, kept him from falling.—T. W.

AN ANTELOPE'S REMARKABLE WOUND.—It is not a very remarkable thing for a man to carry in his flesh an ounce ball and still get along reasonably well in the world, after the bullet settles down to something like a quiet life; but the idea of an animal of either human or brute kind, carrying for years a knife imbedded from the neck almost to the heart, is something extraordinary. The following letter shows how an antelope may get wounded and live to get fat: "Dos Cabezas, July 7, 1881—Editor Bulletin: I send by to-day's express a knife taken from an antelope killed yesterday near this place by a Mexican. The knife extended on the left side of the neck, just below the shoulder, passing about half an inch from the heart, the point sticking into a rib, holding it in place. It was entirely covered by the skin. The wood part of the handle fell in pieces as the knife was being taken out, showing that it had been confined for some time. The antelope was very fat, as I had some for breakfast this morning.—Respectfully, B. Corey." The knife, including the blade proper and the handle to which the wooden covering was fastened, is six and a half inches long, and weighs a half-pound. Evidently the knife must have been in the flesh for years, as the wood had decayed and the skin of the animal had entirely covered the butt of the weapon. It is conjectured that the knife was thrown at the antelope, and the animal in brushing it against the ground or timber pushed it further into the body. The Academy of Sciences will be asked to give a theory of the wound.—San Francisco Bulletin.

A WOODCOCK IN RESERVOIR SQUARE.—Two New York city correspondents send us this very interesting note of a woodcock observed in one of the city parks:

On crossing Reservoir square, Forty-second street and Sixth avenue, about noon, July 1, a woodcock, *Philobela minor*, was observed feeding with the sparrows. Upon approaching it seemed quite tame, but would not allow us to get very near it. After picking around for some it flew into some bushes and disappeared, and we were unable to find it afterward.—E. W. L. and S. W. A.

Some months ago our readers will remember we chronicled the capture of a woodcock in a house in Brooklyn, the bird having flown in through a window.

SNAKES FOR THE SMITHSONIAN.—The New Haven Palladium says: "We arrived on board the schooner Thomas Terrell, which reached this port a few days ago, a number of snakes consigned to the Smithsonian Institution at Washington. They were very closely packed in large stone jars, which were sealed and covered and consequently were not exposed to view. The jars were quite heavy and were directed to Prof. Baird, of the Institution. There were also directed to the same address and from the same party a number of painted drawings of primitive Indian weapons—stone hatchets, axes, etc. These articles were sent by M. Gesude, of Guadalupe. They will be forwarded to Washington without delay."

NOTES ON THE STARFISHES OF MAINE.

BY F. A. MANSELL.

[Presented at the Annual Meeting of the Maine State College Scientific Society, April 20, 1891.]

IN this paper it is proposed to present a few notes on some of the starfishes found on the shores and in the waters of the Gulf of Maine, with brief remarks on distribution in space and time. Geographically the marine animals of this State are more nearly sub-Arctic than sub-tropical in character. Being to the north and west of the Gulf Stream, the amount of heat derived from that source is relatively small, and the effect on the fauna correspondingly slight. This is due in part to the cold Arctic current which flows southwestward along the coast of the States, inside of the gulf stream, and reduces the annual temperature of the Gulf of Maine to equal that of the North and Baltic seas in a latitude fifteen degrees higher.

Parsee Cod separates the species to the north from those to the south sufficiently to give distinctive faunal characteristics to the two regions. Of asteroids or starfishes there are about twenty-three north of Cape Cod, and four south, all of the latter number being also common to the northern fauna. Parlow remarks Cape Cod as the dividing line of the seaweeds, writing that none of the characteristic algae of the north, with a solitary exception, are found south of Cape Cod.

The echinoderms, to which the asteroids belong, is characterized in the Arctic by several distinctive genera, and there are about twenty-five species, in temperate zones by a greater number of species and a more profuse ornamentation of the covering, together with higher complexity of structure and function. Of the less than three hundred sea urchins in the living world the larger number are tropic and sub-tropic species.

In geologic time protozoans were first created, and then followed the radiate animals, including the starfish. The starfish was prefigured by the flexible starlike rays of the eysid, an earlier and lower radiate which existed at the beginning of the lower silurian. The starfish may be considered as a specialized animal after the type of the pre-appearing crinoid, which had a greater range in structure. The asterid as appeared in the lower silurian, increased to the close of the paleozoic, and has been common in the fossiliferous continued to present time. The radiates, as the mesozoic, and have since the silurian, have increased in numbers and development to the present, though some early groups have lost their pre-eminence. It is remarkable that while a few paleozoic genera of shells exist in present time, none of the genera of the early echinoderms now exist, although the latter is structurally the lower sub-kingdom. In Maine the starfishes have been reported from the Champlain clays of the State.

Zoologically, as has been indicated, the starfish is a radiate animal, being placed as the class asteridea of the sub-kingdom echinodermata, and considered in structure above the crinoids and serpent stars and the lower of the sea urchins and sea cucumbers. The most common of the asteridea is aster, a star, and the word means star-shaped, in the form of a star. The central part or disk of the star-shaped animal is not distinct from the arms or rays, but merges into them. Usually the rays constitute the bulk of the animal, as in the common "five-finger," but there are cases where the disk assumes greater and the rays lesser proportions, as in *Ctenodiscus*.

The flexible covering consists of small plates of carbonate of lime united by a membrane, while in the sea urchin the plates unite to form a rigid case. On the under side of each ray is a groove running from the center toward the tips. Through the plates in the center of the groove extend the fleshy tentacles which enable the starfish to walk. These can be shortened or lengthened as occasion requires, and the under disks with their tentacles, may be applied to any object or other object, hold fast while the animal draws itself along. The mouth is at the center below, the viscera extending into the rays. Eye specks are at the tips of the arms. Over the surface of the thick, calcareous skin are many little spines, and water tubes which pass inward in the spaces between these spinules. The largest spines are beneath, bordering the grooves.

The dental apparatus is simple, especially when compared with the beautiful and complex arrangement of the sea urchin. This arrangement is needed in the latter animal whose food is largely vegetable matter, chiefly sea weeds, while the starfish, subsisting principally on animal food, which is of easier solubility, needs no complex grinding organ. Their food is largely muscle and other shell fish. On securing a mussel shell they raise the large foot, easily depositing it, and hold it with its tentacles, then draw it toward the shell, turn out the folds of an enormous stomach, surrounds the unucky captive and consumes the soft parts. Then the stomach is packed away, the tentacles relax their hold, the rays assume their normal position and the empty mussel lies on the sea bottom.

The locomotion of the starfish appears easy of accomplishment than in the sea urchin, due to the flexibility of the rays of the former. Without tentacles the sea urchin would be wholly incapable of movement, and it may be doubted if the starfish would be much better off, unless by progressive development it should in time be able to use its rays more effectively than at present.

The only class of animals with which starfishes are likely to be confounded are the serpent stars. The latter have a star-shaped mouth, jointed, thus softening, forking, no inferior grooves, no terminal eye specks, the viscera does not pass into the rays, the disk is distinct, and the animal is more shy and difficult to find than are the starfishes. By observing these distinctions no confusion can ensue. Starfishes are found from between the tide marks to a depth of over one hundred fathoms, on the coast of Maine. The common *Asterias*, and more rarely, a few other species, may be found in the pools, or over the sandy and rocky bottoms of harbors, or clinging to piles.

The growth and development of the starfish is in some respects like that of other radiates. The eggs of radiates as well as of mollusks produce, after segmentation and development of the embryo, free-swimming young. The little planula propels its way through or upon the surface of the water by means of three pairs of cilia. The young starfish commences its development in this planula on the water tubes, finally absorbs the planula, and grows into the perfect young and thence into the adult state. The egg of *Cribrella sanguinolenta* develops a pear-shaped embryo which on seeping is oblong, and has a basal constriction. The constriction deepens, forming a three-lobed pedicel. The disk becomes pentagonal, with five double rows of vesicles. The rays form

in the pentagon, the pedicel is absorbed, and the animal takes its final form. Starfishes together with crabs, mollusks, etc., form in part the food of the cod and other marine animals.

The relation of starfishes to man is by no means an unimportant one. As remarked above, they furnish food in some degree to animals useful to the human family. On the other hand they destroy beds of mussels, clams and oysters. As a whole they appear, economically considered, more injurious than beneficial, and are to be regarded, in that nature, forming one of the most beautiful and instructive of the lower classes of the animal world, they may certainly be considered of value to man, and their absence would be his loss.

In 1873 the United States Fish Commission obtained in the Gulf of Maine about fifteen hundred species of marine animals. Of about one-half this number determined at the time, there were thirty-four species of echinoderms including thirteen starfishes. The others were ten sea cucumbers, three sea urchins and eight serpent stars. The starfishes are the most numerous class of the sub-kingdom, as seen in the Gulf of Maine. A single haul of the dredge secured over a hundred species of animals, including twelve echinoderms of which five were asteroids. This was a haul from the bottom of about thirty fathoms, six miles east of Seguin Island. Dredging the surface of the sea securing a variety of asteroids, for the littoral or shore species are few in number. The shore species in Western Penobscot Bay are *Asterias vulgaris*, and rarely *Cribrella sanguinolenta*. But few species of asteroids occur much inside of the outer islands of this bay. The *Solaster*, common off Eagle Island, does not occur at Camden, nor do the other species, except the two above mentioned, occur in this bay. Following are given brief notes on a part of the Maine starfishes, which will include some further account of their distribution.

Asterias vulgaris, Stimpson, is our most common species, and is known in common with the next species as the common starfish, five-finger, or five-fingered Jack. It is reddish in color, varying from pink to purple, and hence is known as the red starfish. It occurs from Connecticut to Labrador and possibly Greenland. Abundant everywhere in Maine, down to a depth of forty fathoms. South of Cape Cod it is not so common, being replaced by the next species. It is worthy of note that its range in fathoms increases to the northward and decreases to the southward. It prefers rocky or sandy shallow bottoms to those that are muddy, flourishing best in the clear water of the former.

It is usually found in company with the sea urchin on our coast. It evidently does not object to the light as it is common on shallow, rocky bottoms. Whole beds of mussels are destroyed by this and the next species, and the two, but more especially the next, commit great havoc among the oyster beds of Rhode Island and Connecticut. The two are of very similar form, and as far as appearance are known.

Starfishes are best preserved in alcohol, though with proper care they may be dried quickly in the shade, or if boiled and taken out when hot instead of allowing to soak in the cooling water, they will keep well. In alcohol the red starfish becomes nearly white. A dried specimen from Eagle Island is 175 mm. in diameter, disk diameter 40 mm., greatest breadth 27 mm., and the rays are 100 mm. long. It is common, but very commonly a young ray has been injured, and there is a "survival of the fittest," or strongest, so that three and four rayed animals are common. The undeveloped rays may usually be seen on examination. If rays are cut off or destroyed new ones will grow.

This species has two-paired pedicellariae, instead of three-paired as in the next. (In references to our sea urchin as compared with the starfish, the common Maine species, *Strongylocentrotus drobachianus*, A. Agassiz, is to be understood.) The convex madreporic body is light colored, its surface in radiating lines. Each ray bears four rows of tentacles in the groove beneath. The spines are not fluted. The longest spines, below, are about 2 mm. in length. The groove means that in which the tentacles, extend into the radiating zones, and do not bear spines as in the sea urchin. There are urous, muscular and digestive systems, though the latter has not the division into oesophagus and intestine. The nervous system sends filaments to the eye specks and other parts. The water-vessel system, commencing with the madreporic filter, carries water to the little sacs which form the inner end of the tentacles. By contracting the sacs water is forced into the tentacles which are thus extended to some desired object. The description here given of the organs and their uses is applicable in general to most of the following species:

Asterias Forbesii, Verrill, the Green Starfish, is a more Southern form, extending from Massachusetts Bay to Northern Florida and the northern shores of the Gulf of Mexico. It is rarely found in the waters of our coast as far as the Gulf of twenty-five or thirty miles northeast of Portland. This place has a special zoological interest, for it contains Southern species of marine animals that are found nowhere else in the State, and which belong to Southern New England and lower latitudes. Among these is the round clam, *Yenus mercenaria*, not found elsewhere in Maine. This starfish abounds on the stony bottoms of bays and sounds, and, though not common, is found in the waters of our coast as far as the Gulf of twenty-five or thirty miles northeast of Portland. The color of this starfish is dark or brownish green, with the madreporic body a bright yellow. A dried straw-colored specimen from South Norwalk, Conn., measures in diameter 160 mm.; diameter of disk 35 mm.; greatest breadth of ray, 37 mm. The spines appear slightly larger and stouter than in the red starfish. Brownish bundles of water tubes are found plainly situated in the upper surface. Around the base of each spine is a row of minute calcareous points—the pedicellariae.

Solaster endeca, Forbes, is common in the Gulf of Maine and sometimes in Massachusetts Bay, though a more northern species. The young of this and the next species have been taken on a muddy bottom, in 50 or 60 fathoms, west of Seal Island, near Cape Cod. Also both species from the littoral zone near Esopus, down to forty or more fathoms. Of nine specimens of this species which came up on lobster cages at Eagle Island three had nine rays, four had ten, one had eleven, and one had twelve, ten appearing to be the normal number. A specimen is 160 mm. in diameter, 65 mm. in diameter of disk, 15 mm. in greatest breadth of ray. The disk is relatively larger than in *Asterias*, and has five tapering rays and more serpentine. The color of the dried

specimen is dull pink, and the grooves below are closed for nearly the whole length by the spines. The largest spines are next the mouth, on the tips between the grooves. Those next in size border the grooves, and the rays are in clusters of about ten or twelve on the under surface, while above the small spinules appear to be in close groups of perhaps a dozen points. This arrangement of spines is similar in *Cribrella*.

Cribrella papposus, M. and T., is common, and usually found with the last. The colors of both species are somewhat variable. This also includes the rays. The spines resemble somewhat those in species of *Asterias*. The color is red and purple, often arranged in concentric lines, and spotted with clusters of bright water tubes.

Cribrella sanguinolenta, Lutken, occur from Connecticut to the Arctic Ocean, on the northern coasts of Europe south to Great Britain and France. Very common in the Gulf of Maine, from low water to 100 fathoms. Not so common south of Cape Cod. This is a small and beautiful species. It has five round, tapering rays. The spinules are in minute clusters. The grooves are very narrow, and there are but two rows of tentacles to each groove, instead of four, as in *Asterias*. The color is variable—cream, orange, purple, rose, vermillion, etc. One of the vermillion, when dried, faded to a brownish brown. This specimen measures 53 mm. in diameter, 14 mm. in diameter of disk, 7 mm. in greatest breadth of ray.

Another point of difference from *Asterias* and most other starfishes is that it has no free swimming young, the egg being held by the suckers about the mouth of the parent until they become little starfishes. The development of this species, as previously described, varies from the usual order of development of radiates, in that the embryos develop on stony or stony bottoms. The *Cribrella* was described as early as 1776, by Muller, and has had no less than nine different names. The rays like those of *Solaster endeca*, are not crowded one against the other as in the two species of *Asterias* described.

Lepasterias complata, Verrill, has been found off New Jersey, in 32 fathoms, on the Bay of Vineyard in 20 to 25 fathoms, and off of Casco Bay in 30 to 35 fathoms.

Stephanasterias abuta, Verrill, occurs in the vicinity of Grand Menan, and has been taken east of Seguin Island in 33 fathoms.

Menodiscus crispatus, D. and K., occurs among other places in Massachusetts Bay, though its proper habitat is farther to the north, in the head of the tongue northwest of Stollwagen's Bank brought up muddy rays. Specimens of this species. It is the common pentagonal starfish of muddy bottoms, and a deep water species. The tentacles have no sucking disks but are printed. The diameter of one is 55 mm., diameter of disk 27 mm., greatest breadth of ray 15 mm.

Astrogonium phrygianum was found over a hard, gravelly bottom, in 50 to 60 fathoms, in company with *Asterias*, *Cribrella*, etc. It is a gorgeous, brilliant red starfish, as great as 300 mm. in diameter. It has been taken in the Gulf of Maine, in the above depth of water, on Cashner's Ledge.

CROSSING ANTHROPOID APES.—There appears to be good evidence of crosses between the gorilla and the chimpanzee. A fact of great importance to naturalists who are given rather freely to announcing the discovery of new species of this group of animals.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR YEAR ENDING 30th JULY, 1891.—One black fox, *Felis erminea*, from Canada, presented by Mr. John S. Kennedy; two red foxes, *Vulpes vulpes*, presented by Mr. Samuel Norton, Coeur; two prairie dogs, *Cynomys ludovicianus*, presented by Mr. Charles H. Smith; one yellow-billed curlew, *Numenius*, presented by Mr. Chas. H. Hall; one yellow-billed cuckoo, *Coccyz*, presented by Mrs. Eda Staples, of Erie Ave.; six young night herons, *Nycticorax nycticorax*, presented by Miss M. M. Prime, of a Island; one red and yellow macaw, *Aratinga chloroptera*, presented by Miss Marjorie Serrano; one bullfinch *Parus carolinensis*, presented by Capt. A. Grand, S. S. Above; one fallow deer, *Cervus maculosa*, bred in the Menagerie.—W. A. CORLIAN, Director.

BOILS, Pimples, Freckles, Rough Skin, eruptions, impure blood, Hot Bitters cure.

Game Bag and Gun.

IGNORANCE IN HIGH QUARTERS.

CHELSEA, Mass., July 25.

Editor Forest and Stream:

Your article in last week's issue on the pistol used by the assassin Giteau, and the general lack of information in regard to firearms by persons presumed to be well-informed, calls to mind what I noticed some time ago under the head of "Rays" in the "American Cyclopaedia" vol. xiv., p. 354, which I think will be of interest to long-range rifleman, and for the convenience of those who may not have the book at hand will briefly quote:

"It is claimed for the Russian rifle described above (Gorloff M. B. L.) that an expert will place every bullet within a space three feet by one and one-half feet broad at 1,000 yards distance."

The writer of the article quoted was, I believe, an eminent general in our late civil war, and is now or lately was superintendent of a large establishment manufacturing fire-arms.

He does not vouch for that part of his article which I have quoted, but I am surprised that he should introduce any statement of others in a work of this kind unless he believed it himself, and presume he did or it would not have been given a place in his article.

I will further refer to the detection of the small bore that the rifle added to has a calibre of .42, a powder charge of 77 grains and a bullet weight of 380 grains.

There must be economy of gunpowder and lead to say nothing of saving in wear and tear on the gun and man that must commend itself to riflemen generally, especially new boys.

If the above quotation had emanated from a civilian I should not have given it a second thought, but as it was from one who ought to be an authority I consider it too good to keep.—W. G.

ILLINOIS SQUIRREL SHOOTING.—Charleston, Coles County, Ill., May 30.—On 28d inst. Charles Shriver haggled ten squirrels in a half a day, two and a half miles east of here, on the Embarras River. He reports squirrels more numerous than they have been for several years and very fat. He had bagged eight squirrels on 29th. He is an excellent squirrel hunter, and reports the same as Mr. Shriver.—A SQUIRREL HUNTER.

FOREST AND STREAM GAME TABLE

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table. Except the Minnesota planated grouse season, which closes Oct. 1, none of the seasons named close before Nov. 1, 1881:

Table with columns: States, Deer, Woodcock, Quail, Pinnace Grouse, Prairie Grouse, Wild-Goose, Wild-Turkey. Rows list various states and their respective hunting seasons.

Antelope—Col., Sept. 1; Idaho, Aug. 1; Neb., Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 1. Buffalo—Col., Sept. 1; Idaho, Aug. 1; Neb., Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 1. Caribou—Me., Oct. 1; N. H., Sept. 1. Moose—Me., Oct. 1; N. H., Sept. 1. Deer—Ariz., Aug. 1; Cal., July 1; Colo., Oct. 1; Kan., Aug. 1; Miss., Sept. 1; Mo., Aug. 1; N. D., Oct. 1; S. C., Oct. 1. Elk—Colo., Sept. 1; Idaho, Aug. 1; Minn., Nov. 1; Neb., Oct. 1; N. Mex., Aug. 1; N. Mex., Sept. 1; Or., July 1; Utah, Aug. 1; Wyo., Aug. 1.

LARCENY OF ANIMALS.

[From the Albany Law Journal, June 4, 1881.]

IN Rex v. Mann, Supreme Court of the Hawaiian Islands, April, 1881, the defendant had been convicted of stealing turkeys. Two questions arose: whether the turkeys in question were the property of the State, and whether larceny was committed and whether ownership had been proved. The court, Judd, J., said: "The essential facts are as follows: On the mountain range of this island, back of Waiata, called the Waiata mountains are numbers of turkeys. These birds were brought to this country so long ago that there is no remembrance existing as to the exact time when or by whom they were imported. These birds are now in a wild state, afraid of man, breeding in the unbroken parts of the mountain and in such country, and have been hunted down and caught by devices, precisely as if they were fera natura. They are not penned or fed, marked by the land-owner, nor does he exercise any actual control over them, except as he may be able to catch them and reduce them to his possession. It is well known that the domestic turkey is descended from the wild turkey, first found in America, modified by breeding and the care of man, and his perhaps accounts for the tendency to revert to the wild state which is so strongly manifested in them. These turkeys, although 'wild,' are not, properly speaking, 'wild animals.' Where the phrase 'wild animals' is used, the word 'wild' is used as a generic term to indicate that they are of a species not usually domesticated, and does not refer to their comparative docility or familiarity with men. We consider that these turkeys are not, properly speaking, fera natura, though partaking of their habits. The land on which the defendant is alleged to have taken the turkeys in question is the land of 'Mokulua,' in Waiata, the property of the prosecuting witness, Caspar Silva, who claims the ownership of the turkeys by virtue of their being on his land and of value to him. Now to say that these turkeys are A.'s solely because they are on A.'s land, would lead to the absurdity that they would become B.'s when they went on to B.'s land. Suppose, for example, at night A. goes into the woods on his own land and ensnares part of a flock of the so-called 'wild turkeys,' and the rest of the flock, being disturbed, crosses over the boundary to the land of B., and the next night A. ensnares them on B.'s land. On the theory advanced, that the place of capture determines the ownership, the latter taking would be larceny. In the case before us, if the owner of the land where the alleged taking of the turkeys took place was able to trace them, as the undisputed descendants of birds owned by him, or his grantors, he would show title to them. So far from this being the evidence in this case, it is more than probable that these turkeys are not the descendants of a parent stock introduced on this land by one person, but that these birds have received accessions at different times from the tame turkeys of many different individuals. In the absence, therefore, of proof of ownership of these turkeys by the prosecuting witness, aside from the fact that they are on his land, and it being proved that they cannot be distinguished from any other turkeys on contiguous lands, they are not the subjects of larceny." Conviction reversed, and prisoner discharged.

This is in harmony with State v. Mary Turner, 60 N. C. 618. Mary was indicted for stealing "one turkey of the value of five cents." Thus it seems that turkeys are cheap in North Carolina. The report does not disclose the date of the offense, but we infer that it was shortly before Thanksgiving. Mary having been convicted, a motion in arrest of judgment was made upon the ground "that the indictment was insufficient, for that it failed to state that the turkey stolen was a tame turkey. That the turkey was a native fowl of America, the number of which are found in every part of the State, wild and unclaimed, and that the indictment should have negatived the presumption that the turkey in question was wild and unclaimed." The motion was sustained, but this was reversed by the Supreme Court. The court said: "His honor was mistaken in this case, in supposing that our domestic turkey is a creature of fera natura. All the authorities cited by his honor are cases of creatures of fera natura, and we take the care to be clear that where a creature is not for stealing, which a defendant is indicted, is fera natura, it will not be sufficient to allege that the property was of the goods and chattels of one A. B., the owner; in such case the indictment must further allege that the creature was dead, tamed, confined or reclaimed. 2 Russ. on Crimes, 152. But surely this cannot be the case, when the defendant is indicted for stealing one of our domesticated turkeys. In 2 Bish. Crim. Law, § 87, 787, speaking of animals, fera natura, and of which larceny may be committed when reclaimed, the author says, 'domestic animals and fowls, such as horses, oxen, sheep, hens, peafowls, turkeys and the like, which being tame in their nature, are the subject of larceny on precisely the same grounds as other personal property.'"

The following animals have been held "wild," deer, rabbits, hares, conies, fish, rooks, crows, pigeons, martens, bats. Wheat, Crim. L., § 893. Warren v. State, 8 Cr. 404, 108. In re, "As his principle applies, by common law, to monkeys, bears, foxes, etc., it will evidently apply to 'coons.'"

But such animals as are reclaimed and confined, and may serve for food or use, are subject of larceny. Thus, young pheasants hatched and reared by a hen. R. v. Shickle, L. R., 1 C. C. 155. Marked swans, even on a public river. Elton v. Cole, 10 Cr. 424. Cheafed, 6 Cox's C. C. 367. In this case Lord Campbell said: "The pigeons were the subject of larceny, although they had the opportunity of getting out and enjoying themselves." This is probably because of the animus revertendi in the birds.

In Swan v. Saunders, Q. B. Div., 44 L. T. (N. S.) 434, it was held that freshly imported parrots were not 'domestic animals' within the statute of penalty to animals. The court said: "I do not say that a parrot might not become a domesticated animal, when thoroughly tamed and accustomed to the society of human beings, but these were young unacclimated birds freshly imported into England. They are clearly different from fowls and other poultry, and the evidence goes to prove that they were not tamed and domesticated."

In regard to fish it is not so clear. All the books agree that fish are caught in a tank or otherwise, so that they may be taken at the pleasure of him who has thus appropriated them, then they are the subject of larceny. "Fish confined in a net or tank are sufficiently secured; but how, in a pond, is a question of doubt, which seems to admit of different answers as the circumstances of particular cases differ." 2 Bish. Crim. L., § 87, 787. In Rex v. Corrie, 14 W. R. 43, the court said: "Oysters have not the power of locomotion any more than inanimate things, and when property has once been acquired in them no reason is perceived why they should not be governed by the rules of law applicable to inanimate things." "They have been reclaimed, and are as entirely within his possession and control as his swans or his water fowl that may float habitually in the bay." Rex v. Caswell & Johnson, 58 Me. 104, oysters were held to be fish.

Oysters planted and staked out where they do not naturally grow come within this rule. State v. Taylor, 3 Dutch. 117. They seem, however, barely to come within the description of animals. In the last case the court said: "The principle, as applied to animals fera natura, is not questioned. But oysters, though usually included in that description of animals, do not come within the reason or operation of that rule, for that they are not fera natura, but inasmuch as they are obviously more newly assimilated to tame animals than to wild ones, and perhaps more nearly to inanimate objects than to animals of either description. The indictment could not aver that the oysters were dead, for that they would be of no value; nor that they were reclaimed or tamed, for in this sense they were never wild, and were not capable of domestication; nor that they were confined, for that would be absurd." Rex v. Caswell & Johnson, 58 Me. 104, the court said: "Oysters have not the power of locomotion any more than inanimate things, and when property has once been acquired in them no reason is perceived why they should not be governed by the rules of law applicable to inanimate things." "They have been reclaimed, and are as entirely within his possession and control as his swans or his water fowl that may float habitually in the bay." Rex v. Caswell & Johnson, 58 Me. 104, oysters were held to be fish. At common law the rule of property in reclaimed wild animals excluded many which were called "base," principally because they are not fit for food. But in this country the rule seems to be more flexible. Thus, in State v. House, 65 N. C. 744; S. C. 6 Am. Rep. 744, a conviction of larceny of an otter from a trap was sustained. The court said: "All the distinctions as to animals fera natura, which are to their government or best interest, which we find in the English books, will not hold good in this country. The English system of game laws seems to have been established more for princely diversion than for use or profit, and is not at all suited to the wants of our enterprising trappers. We take the true criterion to be the value of the animal, whether for the food of man, for its fur, or otherwise. We know that the otter is an animal very valuable to the fur trade in America, and even in some parts of North Carolina. If we are bound absolutely by the English authorities, without regard to their adaptation to this country, we should be obliged

to hold that most of the animals, so valuable for their fur, are not the subject of larceny, on account of the baseness of their nature, while at the same time we should be obliged to hold that hawks and falcons, when reclaimed, are the subject of larceny in respect of their generous nature and courage."

Dogs are generally held not the subject of larceny, being "base." State v. Holder, 8 N. C. 527; S. C., 31 Am. Rep. 517; State v. Lyman, 26 Ohio 181, 400; S. C., 20 Am. Rep. 727; Ward v. State, 48 Ala. 161; S. C., 17 Am. Rpp. 31. But otherwise, when they are taxed. People v. Maloney, 1 Park. 593; Mayor v. Meigs, 1 Me. 53; S. C., 29 Am. Rep. 578; Ex-parte Cooper, 3 Tex. Ct. App. 489; S. C., 30 Am. Rep. 152; Harrington v. Miles, 11 Kans. 480; S. C., 15 Am. Rep. 355.

It has always been held that any dead animal, whose carcass is fit for food, or use, is subject of larceny; but the query arises whether a dead and stuffed dog is subject of larceny in those States where a live dog is not. Probably the expense of the stuffing would bring it within the rule. So a dead dog may be better than a live lion.

From the Albany Law Journal, June 15, 1881.

In connection with our recent article on Larceny of Animals should be read a case decided in the Birmingham Circuit Court of Alabama, and reported in the Birmingham Law Times of May 28. The title of the case is not given. The question was of property in carrier pigeons under training. The Court thus stated the case: "The plaintiff, who is a dealer in pigeons of this description, was training the bird, and it was for this purpose that on the day in question he had taken it from his home at Aston to Castle Bromwich, a distance of between five and six miles, and there trained it, in the expectation that when he returned with it they would go back to his home at Aston. In returning, as was believed, to its home, and while flying in that direction over land which the defendant occupied at Castle Bromwich, the defendant shot at and killed the pigeon. The questions for consideration are: First, whether the plaintiff can be said to have a property in the pigeon, which was admittedly tame and reclaimed; and if so, then, secondly, whether by the act of taking the pigeon away from his home for the purpose of training, and there releasing it, the plaintiff lost his property in the bird and thereby his right to bring this action to recover damages for the killing of it by the defendant. Whether, in fact, by releasing it in the manner stated he abandoned the property he otherwise would have had in it while in his possession; in short, whether the pigeon, in consequence of plaintiff's action, lost his character of a tame pigeon and became fera natura. After referring to and consulting with Devereux Saunders, Esq., C. J., 490; Reg. v. Cox, 10 Cox's C. C. 23; Reg. v. Thistle, L. R., 1 C. C. 153; Child v. Greenhill, Cr. Cas. 533; Reg. v. Brooks, 4 C. & P. 131; Reg. v. Cheaf, 21 L. J. 43; M. C. Taylor v. Newman, 4 B. & S. 89, the court thus concluded: "There appears to be a connection between the soil and animals fera natura, so far as the ownership in both is concerned. In an ordinary case, if the owner of a reclaimed pigeon chooses to take it from its home, and to let it loose, so that it does not remain, having no further care or thought about it, or if the bird escapes, and betakes itself to its natural liberty, this would, I think, amount to an abandonment of the previous reclamation, and it would again become fera natura; but I cannot think that what the plaintiff has done in this case, the taking away of the bird and releasing him for the purpose of training, teaching it its lesson in short, can amount to an abandonment of his property in the pigeon. This temporary release from the plaintiff's custody for the purpose indicated could never be intended by the plaintiff to be an abandonment of the valuable property he possessed in the pigeon. The plaintiff was merely following the ordinary method of teaching the bird so as to cause it to become more useful and of greater value. After the best consideration I can give to the matter, I have arrived at the conclusion that, with the English law, which is followed by the Roman law in this respect, allows individuals to possess in pigeon is a special possessory property, a right to have them protected while on the owner's property or under his control. No case that I have found goes so far as to say that the owner of pigeons can have an absolute property in them at all times and in all places. Devereux Saunders, if correct, decides there can be no such absolute property. If I thought that the plaintiff by his act had lost the possession of the pigeon, his property in the pigeon, in my opinion, would have been gone, and I should have been obliged to decide that this action could not have been maintained; but in the present case, for the reasons already stated, I think the reclaimed character of the pigeon ought not to be considered as abandoned, but that it continued notwithstanding the act of the plaintiff, and that being so held, for the reasons stated, the plaintiff is entitled to recover. I have not arrived at this decision without much hesitation and some doubt." "In ancient times the question was by no means of the importance it has in recent times become. A vast amount of capital, indeed, is now invested in these birds; a very extensive traffic in them is carried on both at home and abroad. It is much to be desired that this important question, on which so much property is concerned, should not remain doubtful, but should be decided by the high court." The Law Times thinks "a somewhat dangerous principle is admitted" here.

From the Albany Law Journal, June 25, 1881.

The Vermont statute permits any one to kill a dog, "running at large off the premises of the owner or keeper, without a collar with the owner's name on it." In Wright v. Clark, 50 Vt. 130; S. C., 28 Am. Rep. 496, a fox hound kept for the chase, and chained when not in pursuit of game, was chasing a fox with his owner and one Stone, and while at some distance from his owner, but near and in full view of Stone, was killed by defendant in shooting at the fox. It was held that the shooting was wrongful, although, as claimed by the defendant, accidental, and that the defendant was liable for the value of the dog. The court thus remarks in praise of dogs: "The dog is the most tractable of animals, and yields most readily to restraint other than physical. The voice and look of his master are often more potent to restrain him than cord or chain. He is often trained so that at his master's command he will remain by and guard his property for a whole day in the absence of his master, or go out of sight, miles away, and guard his flock and herds. Dogs are peculiarly susceptible of training and restraint in certain directions. The trained hound, when pursuing the fox or deer with or at his master's bidding, is no more 'strolling without restraint,' or 'wandering, roving, or rambling at

will, than a boy willing to go on a errand at his master's command. Either, when out of sight and hearing of the master, have it in their power to 'stroll without restraint, or rove at will; but neither do so, so long as they continuously and vigorously pursue the thing commanded. Hence the fact that the dog when shot was out of sight and hearing of his master, is not determinative of whether he was 'running at large.' If the animal's testimony gained credit, when shot the dog was in hot pursuit of the fox in obedience to the command of the plaintiff, with all his instincts urging him thereto, as each bound brought him nearer and nearer the coveted prize. We do not think such a dog, thus running, is, within the meaning of the statute, running at large."

THE ANTI-PORON SHOOTING BILL.—At a special meeting of the Onondaga Co. Sportsmen's Club, held in this city last evening, it was unanimously resolved to petition the Governor and remonstrate against the bill of Mr. Bergh, now before the Executive, becoming a law by his signature. Mr. William E. McMaster, representing the sportsmen of New York city, was requested to draft the following letter expressive of the sentiments of the sportsmen of Onondaga, which will be presented to the Governor at once:

"The Bergh bill now before you is an usurpation of our chartered rights as sportsmen. The sixty sportsmen's clubs of this State, embracing thousands of our most excellent citizens, whose characters place them above the suspicion of any cruelty to animals, are the natural and most zealous defenders of our game laws. This Bergh bill seeks to overthrow the legislative laws which govern our clubs and our annual State Association contests of skill. Therefore, we pray you to protect our associations, formed for the humane and real purpose of protection to animals, fish and game, against any and all fanatical sentiments or measures which seek to interfere with our authorized rights or destroy our usefulness as defenders of our game laws."

Mr. McMaster, who has the matter in charge, with ex-President Abel Cook, of New York, and Mr. Murray, of Niagara, President of the New York State Association, with others equally prominent, are concerting measures to put the matter in its proper light before the Governor, and they have no doubt that they will be able to show him that they are the true protectors of game, and that this bill is a direct blow to the true sportsmen organization, which, without these contests of skill, could hardly exist.—*Syracuse Herald.*

MINNESOTA PRAIRIE CHICKEN SHOOTING.—Mankato, Minn.—There was the usual migration of prairie chickens south last fall; still, very large numbers stopped with us all winter, notwithstanding its unusual rigor, length and great depth of snow, which we all attribute to its early advent and the many cornfields which remained unharvested. All the livelong winter, as we took strolls out among the prairie farmers, it was a noticeable fact, as well as a most pleasing sight, to observe the large flocks of chickens gathering their provant from the pendant ears of corn in almost every unharvested field, waddling through the snow up to their waists. Tough birds, these fully developed chickens, but when only two-thirds grown how lovingly they go down to the exasperated heart with plenty of newly-made butter and snowflake "laters. Oh, oh! for the prairie farmer, when by the use of law it is not a sin to take the field with dog and gun in law-abiding Minnesota; albeit we have many sinners here on the sly.—F. B. H.

An Austin, Minn., correspondent says: "You can report prairie chickens in this section more abundant than for many years past, which seems strange after so severe a winter, but I will vouch for the statement."

ILLINOIS QUAIL.—The Lebanon, Ill., *Journal* says that quail are plentiful in the surrounding fields, and adds: "It is a well-known fact to observing agriculturalists that the quail is of incalculable benefit in destroying many varieties of ravaging insects. On this account we should expect that, instead of exterminating them during the winter by means of traps, the farmers would insure protection when most needed. We learn this spring has been an increase in this vicinity of these birds over last year, and, with favorable weather and no shooting out of season, we hope when the cool breezes of autumn invite the honest sportsman to the field for a day's recreation that his expectations may be realized."

WANTS TO GO DUCK SHOOTING.—New York, July 9.—Having read from time to time about the nice duck shooting that some of your correspondents have written about in the FOREST AND STREAM, I would like to enjoy some of it, and as I have never been West I have come to you to aid me with whatever information you can give me on the subject. I would like you to refer me to, or get some of your readers or correspondents to do so, some one who is a duck shooter—one who has all the appurtenances of a professional—where I can get some good duck shooting out of a boat among the wild rice fields in some of the streams this side, if possible, or near Chicago. I would like to be in a comfortable house or cabin, do the work, so long as I can be near the grounds. My vacation is limited to two weeks, and I can take it either in September or October.—J. W. B.

THE KITTY HAWK BAY SPORTSMEN'S CLUB have secured 240,000 acres of land in North Carolina, with 170 miles of water front, to be used for hunting and fishing purposes. The twenty-five charter members are: John H. Reed, Day, The Dominick, Thomas J. Harbour, Norman Peck, W. G. Dominick, C. R. Purdy, R. V. R. Schuyler, of Schuylcr & Duane; J. T. Harper, W. H. De Forest, Jr., E. Everett Pray, B. F. Hunting, Henry Sampson, George Bird Grinnell, G. E. Elliot, A. N. Beadleston, E. W. Corlies, J. A. Hewitt, Charles T. Barney, Charles P. Frame, Frederick W. Leggett, John B. Lawrence, Jr., R. H. Robertson, G. G. Munger, Emile Doder and E. Pope Sampson.

CHASING BEARS.—Messrs. C. Behlow, G. M. Robinson, M. W. Stackpole, F. Urban, Charles Dredel and J. A. Ruver, of San Francisco, Cal., have recently returned from a bear hunt in Mendocino County, where they hunted with Mr. T. E. Rawle's pack of bear-boys. These dogs, like those of Mr. Bancr, are black and tan, and some of them spotted. The party had a most enjoyable time of it, and finally brought a 300-pounder down from an oak tree, and afterward a sheep-killing rascal fell before their rifles. Besides the bears the party killed a dozen fox bucks, from a spike up to a seven-year.

NARRAGANSETT SHOOTING PROSPECTS.—Onalua, July, 1881.—The prospects for prairie chickens in this State are very fair. The lateest of last spring retarded breeding, and young chickens are smaller than usually at this time in July—23d. I hear favorable reports of broods, especially south of the Platte River. The season opens August 15. Quails had a hard winter and will be comparatively scarce in certain localities.—Don Wittre.

A SALE OF 500 RIFLES is what Messrs. W. Read and Sons report to us as the result of their Western rifle advertisement in the FOREST AND STREAM. Moral: If you have a good thing tell people about it in a good paper, and there will be no difficulty in disposing of it. Scores of advertisers here had the same experience with this paper; and still there is room for more.

SPORT FOR NEW ORLEANS SPORTSMEN.—New Orleans, July 18.—There is pretty good shooting now with "summer ducks." They are very fat and of excellent flavor, feeding in rice fields. There will be plenty of quail (or partridges, as we call them,) all along the Jackson Railroad, a rolling, piney-wood country.—S.

DETROIT COUNTY—WOODCOCK SHOOTING.—The local law in Dutchess County, New York, prohibits woodcock shooting during the month of August.

THE WOOD DECOYS are an excellent pattern of wooden decoys. They are well made and have been used for years with growing favor.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.
Salmon, *Salmo salar*,
Brook Trout, *Salvelinus fontinalis*,
Rainbow Trout, *Salmo trutta*,
White Perch, Trout, *Salvelinus malina*,
Grayling, *Thymallus triolor* and *Th. montanus*,
Black Bass, *Micropterus salmoides* and *M. paludis*,
Mud-puppy, *Amblystoma opacum*,
Pickereel, *Esox reticulatus*,
Pike or Pickerel, *Esox lucius*,
Fishes-perch (walk-eyes) (pike)

SALT WATER.

Strip Bass, *Centropristis striata*,
Sea Bass or Rock Bass, *Zocea tinca*,
White Perch, *Morone americana*,
Bluntnose, *Paralichthys obtusa*,
Scup or Turbot, *Stenotomus argenteus*,
Pompano, *Polydactylus complanatus*,
Tautog or Blackfish, *Axolriga ciliata*.

When once you have hooked your fish the best way to handle it is to be prepared, after becoming accustomed to handle it, wherever and wherever it is. For the purpose of the rod it is really not this that it is the home end of the line, stiffened and made springy, so that you can guide it and manage it, cast and draw it, keep a gentle pressure with it on the hook so that the fish shall not rid himself of it, and finally lift him to the landing net. Let the young angler always remember that his rod is only a part of the line. The control which a properly constructed rod gives to the angler over his line and over a large fish on its way to the net is really not this that the American anglers are accustomed to cast from thirty to sixty to 100 feet from the end of the rod. I have seen an angler, under favorable circumstances, cast from a seven-ounce Norris rod a straight cast of ninety-four feet from the end of the rod, or, including the rod, a hundred and five feet of line from the hand, and repeat the cast again and again without varying the drop of the tail fly more than three feet. This is a tremendous cast, and few will be able to get out much over seventy feet.—W. C. PHILLIPS.

CHANNEL BASS FISHING.

IN the last issue of the FOREST AND STREAM I find the following: "If you know of a good place to camp and fish this summer, report it for the benefit of others."

In reply I can "report" regarding a good place in Florida to "fish," and where fishermen can enjoy unequalled sport—I refer to the capture of channel bass, *Scolopagus ocellatus*. Near the mouth of the St. John's River, twenty-five miles below Jacksonville, will be found two hamlets known as Mayport and Pilot Town. At Pilot Town fair accommodations can be obtained at \$2 per week. At Mayport, Barron's furnishes a good bed and fair table at \$1 per day, or \$8 to \$10 per week.

Visitors will not suffer from the heat unless the wind happens to blow from the southwest, which is an infrequent occurrence. When it is calm, which is seldom, mosquitoes and other annoyances are troublesome. The wind is usually from the northeast, and the climate is enjoyable. Surf or still bathing can be utilized at any and at all times. Sickness need not be dreaded by visitors.

A sportsman can leave New York by express train and reach Jacksonville in about forty-four hours. By taking the Savannah steamer on Saturday from New York we will reach Savannah in the morning. The only boat which leaves from Savannah to Jacksonville is the City, and the fisherman could take one of the Mallory steamers on Friday, and reach Jacksonville about the next Wednesday, stopping at Port Royal and Brunswick. Reaching this city, steamer is taken for Mayport at 4 p. m., and the dock is reached at 5 p. m.—fare fifty cents. A boat and boatman can be hired at \$2.50 per day, but if the pilot wishes to paddle his own canoe, he can hire a boat for \$1.00 per day. The boat is taken and transported the boat on steamer's deck to Mayport—freight for boat, fifty cents.

The principal points for fishing are the Surf on Pelican Island, two miles from Mayport, Shell Branch three-quarters of a mile east of same, and Mile Point one mile west. Time for fishing, the last hour of the ebb, slack water and first hour of the flood. But an occasional fish can be caught at other times. By referring to the almanac the fisherman could so arrange his visit as to secure the morning and evening tides, and escape midday fishing. The best time for fishing is from August 15 to September 15. In the surf on Pelican Island the fish range from twenty to thirty pounds,

and at Shell Bank and Mile Point from twenty to sixty pounds. The fish are good looking, and fight equal to striped bass. To a Cuttyhunk man I am convinced the channel bass fishing in Florida would prove more than gratifying.

To illustrate what can be done, I will give a few figures. My friend Gen. Ledwith has fished for years at Mayport, and his average catch has been ten fish. Two years since, in company with Augustino Gonzailez, they caught thirty-one bass in two hours, averaging thirty pounds. An elderly fisherman and friend, Daniel Smith, who has fished each summer for years at Mayport, says that in 1878, in company with Gen. Ledwith, in two hours 29 bass were caught, weighing 900 lbs. Mr. Smith gives his average at 8 fish. On Sept. 10, 1879, Mr. Gill and your correspondent, "Al Fresco," caught a basket of hard-backs (crabs). At "day-break" on the 11th they left the hotel, rowed one mile, anchored and captured bass until fingers failed. We rowed back to the hotel and arranged our catch on the dock; washed and dressed, and were ready for breakfast at 8 a. m. After breakfast we examined the result of the morning's catch, and ascertained that G. had caught 7 and "Al Fresco" 11—average weight, 40 lbs. Your readers may say that this was unusual luck; but such was not the case. With a stout cotton line of seventy-two threads, and serviceable hooks, the fisherman who can capture a bass should be so fortunate as to hook one, he would capture a second. I have a hook made by Job Johnson, of Brooklyn; shank 6 inches long; width of hook from point to shank, 1 1/2 inches. Owing to the rapidity of tide, a sinker weighing from 14 to 20 ozs. is a necessity. Some of your artistic fishermen will call this mode of fishing "slaughter and unprofessional." I admit that mild imprecation, but I am of the opinion that the Cuttyhunkers would find fault with our method, as well as the "barbarous sport." Those who wish to engage in rod and reel fishing can find ample opportunity.

In addition to channel bass, tarpon ranging from 80 to 150 lbs. are hooked almost daily; and owing to the shortness of the lines and the tender mouths of the fish, they either part the line or tear out. The tarpon is the most active and the easiest of any fish, and if a hook should be so fortunate as to hook one, he would capture a second. I have a hook made by Job Johnson, of Brooklyn; shank 6 inches long; width of hook from point to shank, 1 1/2 inches. Owing to the rapidity of tide, a sinker weighing from 14 to 20 ozs. is a necessity. Some of your artistic fishermen will call this mode of fishing "slaughter and unprofessional." I admit that mild imprecation, but I am of the opinion that the Cuttyhunkers would find fault with our method, as well as the "barbarous sport." Those who wish to engage in rod and reel fishing can find ample opportunity.

When bass cease biting, the ardent fisherman can proceed to one of the channels bounding Pelican Island, and can capture sharks until hands and shoulders cry *peoczi*. At many points near Mayport excellent sheep-heading, sea trout and whiting fishing can be obtained, but our fishermen seldom engage in the capture of such small fry.

The expense attending a fishing trip to Florida would be moderate. Excursion ticket from New York to Jacksonville, say \$40; fare to Mayport and return, \$1; two weeks' board, \$16; boat per day, without boatman, \$1, or \$12; for bait, \$2; or a total of \$71 for a pleasant voyage on a palatial steamer and fishing weeks' fishing. The fare to the Eastern coast is little exceeded, 21 days, at an expense of about \$3.40 per day. If any of your readers should conclude to test our bass fishing, and call on me, I will endeavor to smooth the way for them.

JACKSONVILLE, Fla., July 19.

TROUT NOTES FROM VIRGINIA.

"FISHED OUT" is the cry that meets the angler upon almost every stream that flows down the eastern slope of the Blue Ridge. The verdict of "fished out," however, as all of us know who are in the habit of resorting to the mountains for their sport—in the month of a native more frequently than not—requires considerable qualification, and should be taken always with a good allowance of salt. From the Blue Ridge to the Shenandoah, the same tale, with many truth, perhaps, is told of the few trout-holding streams that have at one time been good.

On the Piedmont slopes, as far as I can learn from my own experience and that of friends, embracing all the best trout streams in that section, the supply of trout is fully up to the average; but that they are scarce and dry in every year is a question. All the big runs are caught, and there is another and certainly a more just cry of the riverside inhabitant. I caught two or three good baskets in May as to numbers, but the size was little to boast of. That "oldest inhabitant" has had, indeed, a great time in this part of the world since last summer—the driest fall, the earliest, coldest and longest winter on record, and the most unfortunate spring and summer for farmers, gardeners, anglers, and everybody in general that has ever been known. Little streams and springs are dry that have never before been known to fail. No rain, but a very occasional and almost useless thunder shower, has fallen since the winter broke up in the district from which I write, which for a mountain country, it will I think be admitted, is carrying the thing to a sensible degree. It is an ill providence, however, that the dry fit is not a frivolous remark to say that a very plentiful supply of birds may be a partial consolation to some people for a most appalling failure in the crops.

A party of friends from the Old World dropped in about the middle of May and demanded to be taken instantly to those famous trout streams that I had been "blowing" about so. They were all novices in the gentle art, and I knew the result had a novice would pass after a day or two's staggering about in the precipitous, bushy and overfished streams that flowed toward East Virginia. I had had a notice of their coming, and had inserted a query in FOREST AND STREAM as to the best fishing in the two Virginias, but found them a fortnight before their time at my house on my return from one of the fishing trips above mentioned. It was too late for them to come to the Shenandoah, and they were not. Neither I nor my angling friends knew anything about the western country, and I was a trifle staggered with only two days in which to choose a route. I might relate how my agitated slumbers were broken by the vision of the famous Indian princess pointing westward with outstretched arm, and how the name of Pocahontas flashed instantly across my thoughts; but that it is an ill providence, however, that the dry fit is not a frivolous remark to say that a very plentiful supply of birds may be a partial consolation to some people for a most appalling failure in the crops.

However that may be our forces were marshalled without delay, a carriage, a baggage wagon, with tents, etc., and

and three servants, a formidable assortment of rods, flies, and landing nets, and very many of the good things of this life. On to Pooehontas! was the word.

I shall not enlarge much at this time upon our trip. It was a glorious one, though, in every respect. As for fishing, it is almost ceased to be sport. For my own part for the first time in my life I was satiated in a few hours. One of our party, a youth who had fished occasionally in a Scottish burn, killed 120 trout on Elk in one day, many of them being over a pound in weight and from 12 to 14 inches long—splendid silver fellows. I took 65 in the first four hours, killing in one pool four fish in two consecutive casts, aggregating 21 pounds. We were in camp four days, and if there had been any way of sending off our fish we might have easily killed two or three times the number we did. As it was we put at least half we caught back into the water, and still had more than seven hungry beings could eat, and the best of trout, too—as pink and firm as salmon. The Englishmen were delighted, not only with the sport, but with the scenery, the climate, and the kindness and civility they met with everywhere on the route; a pleasing contrast to the business and extortion of the average hotel-keepers and travel-mongers in general along the beaten tracks of Europe.

Seventy miles from a railroad is a long way in these days, and fishing in such seclusion should be good. The constant disappearance under ground of these lime-stone rivers only to come up again as cold and fresh as spring water after their subterranean course, is thought the real secret of their trout-holding capacities. It is strange to find in these old States such a perfect wilderness as runs through a great part of the counties of Nicholas, Webster, Randolph and Pocahontas; unpeopled, without roads, and almost if not quite untouched by the axe. The entire extent of forest-covered mountains west of the Forks of Elk seems entirely given over to deer, bear and panther. Excellent and good-hearted people, too, are the small graziers that for the most part occupy the settled portions of the county, they themselves with quaint vandalism, spreading a ruinous waste. Some of the trouble was caused there by gentleness from some of the Eastern estates salting up in barrels great numbers of trout and carrying them part of the way home, when they were found to be all spoiled. That is the kind of thing that is apt to make the mountaineer ugly. He has certain prejudices which I think may be called reasonable. He rather enjoys strangers coming for sport—but despise his stream for the purpose (as it is any rate to him) on feeling low country folks or city men—once go into the shipping business, even to friends, on a large scale, and you destroy those feelings of harmony which otherwise would exist, and pave the way for future difficulties such as the owners of streams, it must always be remembered, have a right to raise. Keeping on the soft side of the mountaineer is an art that it is necessary for the Southern trout fisherman to acquire, or the trout fisherman that visits Southern streams. It comes partly from experience and partly is dependent on innate gentlemanly feeling. It is no use objecting or ridiculing the prejudices of people who live far removed from the world. As they owe the fishing, and are becoming each year more perfectly alive to the fact, it is as well to knock under to them, as they are not by any means exacting.

I remember the mountaineer of the South (the very lowest class) swallows, and is the best people of their kind for a stronger sportsman, if he treats them properly, to be thrown among that could be found anywhere in the world.

The constant work upon the Richmond and Alleghany R. R. has doubtless caused many thousands of bass and other fish in James River to fall victims before the negro's hook and line. Great numbers of bass have been driven from the mountains through which the new railroad runs, and have been hovering round in the near neighborhood even of towns and villages. I do not think the partridges were much damaged by the severity of last winter, in spite of your last winter correspondent's assertion that the Piedmont counties were almost denuded. I think there are, if anything, more than usual, the breeding season having been specially favorable.

Squirrels are unusually plentiful. I have also seen great numbers of young hares. RINDWOOD.

BASSING IN GREENWOOD LAKE.

New York, July 23, 1881.

On June 20 my friend Lloyd and self took our passage for Greenwood Lake, with rods and gun. On Friday morning, July 1, at 3 A. M. we were out; in a few moments we struck an "Owego" of 3 1/2 lbs. We returned for breakfast at 7:30, and had ten minutes for breakfast. We then drove down breakfast was finished, and cast with live bait and took 13 black and Owegos, going up to 4 lbs.—not under 2 lbs. A storm came down the lake; we made all snug and trolled; took 23. Boat half full of water; blowing a gale; and such sport as we never before experienced. Jim Ryerson, our boatman, was pulled apart.

We made our harbor, took on board a good supply of cold trout and turned in for the night. We had one of our own half miles up the railroad to learn if we might get at some woodcock in Manning. We did get at them; took 17 to the ice house. We went again on the lake and worked the remainder of the day, and put 18 bass in the "well." Sunday, the fish did not rise well. We tried all our arts on them, and only took 13. We think they felt as we did, awful gloomy, because of the sad news from Washington.

By the way, why don't the Committee on Game of New York and New Jersey restock Greenwood? It needs it sadly. Croton Lake should also be stocked with the gamy bass.—J. F. LYNCH.

A PLEASANT FISHING RESORT.

KINGSTON, Ont.

A FEW days since business called a friend and the writer out to the little village of Battersden, which is situated on Loborough Lake, about 16 miles from Kingston. This beautiful sheet of water is of very respectable proportions, being 21 miles in length and from one-half to three wide, and is one of the prettiest of our numerous inland lakes. Scores of islands of all shapes and sizes dot its surface, giving it a beautiful appearance.

After putting up at the Granite House (which, by the way, is built upon a huge granite rock) the proprietor, Mr. Vanlinsine, very kindly invited us out for a row. Not having our tackle with us we borrowed a troll, and started out. A short pull of less than one-quarter of a mile up a small stream, which serves as the outlet of the lake, and we entered the lake proper. The view that met our gaze was

beautiful in the extreme. In every direction gorgeous islands loomed up; in the distance the opposite shores appeared blinly and irregular. Throwing out the troll we were soon convinced that its reputation for good fishing was no libel. The black bass are abundant and of good size; five pounds are not infrequently caught. Some very large pike are taken also; large-mouthed bass are also plenty.

Our time being limited we were reluctantly compelled to wind up and start for home. Mr. Vanlinsine keeps a very nice, clean little hotel, where the sportsman will find good country accommodations. His charges are very moderate, being only \$1 per day. Boats can be had right at the door; and we can row and punt on the best fishing grounds will accommodate the lover of the rod at a very low figure. A stage runs to and from Kingston daily, charging the passenger the modest sum of 50 cents for the round trip. Mr. V. is attentive and jolly, and will make the sportsman's stay pleasant and comfortable. Altogether a few days could be spent on Loborough Lake very pleasantly. Any further information will be cheerfully furnished by Mr. V. or the writer. A. C.

NEW YORKERS AT THE DOUTY PONDS.

MOXSON, Me., July 18.

Messrs. Broadhead, Carter and others from the city of New York, making a party of six gentlemen, have been for a few weeks past camping between the two Douty ponds in this town, and on Friday, the 15th inst., Major C. J. House and myself accepted an invitation to visit them.

These ponds are about three and a half miles from this village. We drive with a team to the farm-house of "Uncle" John Douty, on the top of "Douty Hill," which is the highest eminence in this town, and from thence we walk a distance of half a mile to the first pond, which is in the midst of a dense forest, and is a beautiful sheet of water, covering an area of about thirty acres. After crossing that we are about one-eighth of a mile from the other pond, which is also surrounded by woods, and larger in size than the first one.

The camp is by the side of Cold Brook, which runs from a large spring of excellent water and empties into the farther pond. It is one of the most delightful spots for a sportsman's camp that I ever saw—good water within a few feet of their door, an abundance of fire-wood, close at hand, etc.

The only fish in these ponds is a beautiful spotted trout, resembling the common brook trout in outward appearance, with red meat. We fished in the farther pond with eagle worm for bait, and secured a list of flies with which I have recently caught ninety-nine Rocky Mountain trout (*Salmo pleuricticus* or *S. sibiricus*). As soon each day as I have caught all the trout I could use I stopped, though many more could have been taken, as they are very abundant here, but I do not care to imitate the practices of the "Great American Trout Hogs," so well written about in recent numbers of the FOREST AND STREAM. Here is the list of flies:

The prospect for grouse shooting when the season opens is splendid in this vicinity. Those who enjoy this sport will do well to try the great forests a few miles to the north of this place. More anon. PISCATOR.

TROUT FLIES FOR COLORADO.

PAGOSA SPRINGS, Col., July, 1881.

I HAVE noticed in your columns but few remarks on the best flies for game fish. I think that much profit and pleasure might be derived by anglers giving their experience and interchanging their ideas as to flies, etc. So, to start the ball a-rolling, I hereby send a list of flies with which I have recently caught ninety-nine Rocky Mountain trout (*Salmo pleuricticus* or *S. sibiricus*). As soon each day as I have caught all the trout I could use I stopped, though many more could have been taken, as they are very abundant here, but I do not care to imitate the practices of the "Great American Trout Hogs," so well written about in recent numbers of the FOREST AND STREAM. Here is the list of flies:

Table with 2 columns: Fly Used, No. of Trout Caught. Includes entries like White coachman (46), Black fly (23), Black huckle (15), Brown (14), Red (1), Total (99).

Two flies were used: About two-thirds of the trout were caught on the stretcher and one-third on the dropper fly.

The Rocky Mountain trout here did not seem to care for red flies. The gray professor, a fly celebrated for these same trout in Wyoming Territory and with which I have had good sport there eight years ago, does not seem to be a good fly on this river. I have never been able to get a rise at the fascinator, a fly well spoken of for the Eastern brook trout (*Salmo fontinalis*).

The white coachman is *par excellence* the fly for this river, in all weathers and at all times. The fishing was done in the Upper San Juan River, Colorado. The Rocky Mountain trout is not as handsome a fish as the brook trout, as it has black spots instead of the red and golden spots of *Salmo fontinalis*. They seem to love more the deep pools than the brook trout. They are a very gamy fish, afford splendid sport, and are very common on the lake. I can inform you of the best fly for taking the striped bass (*Morone lineatus*) in the fresh water at the South, in such rivers as the White and Ouachita of Arkansas? They are generally caught with a minnow, but with the fly they ought to give even better sport than the black bass. How far up the Mississippi do they run? I have seen fine ones taken from the Ouachita, but not as large as the striped bass when taken in the salt water of the Atlantic coast. Do they return to the Gulf each year? PEROIDÆ.

THE RED MAN AS A DIPLOMAT.

THAT our red brother, ichthyologically considered, is not a sardine, is a fact known so thoroughly by ethnologists as to be unworthy of argument to prove. Ichthyologists also know that he cannot be classed with the *catostomi*, or, in other words, is no sucker. The C. & C. Railroad probably are aware of these facts as thoroughly as the highest zoological authority. The Nevada *Enterprise* tells the following: "The Indians of the Walker Lake. Decorations for very happy given their victory over Mr. Yerington and the Carson and Colorado Railroad. It appears that when the railroad company treated for the right of way through the reservation the Indians agreed to receive in full pay \$700 and the right to ship free over the road forever any fish or other produce which they might wish to bring to market between Hawthorne and the Mound House.

"Walker Lake is swarming with live trout, but the Indians did not find the trade very profitable when the item of transportation began to be figured on. The catch, therefore, was limited by the slim facilities for finding a market before the fish spoiled. On the new road reaches Walker Lake the Indians will be the bosses of the fish market of the State. The Indians say that if Mr. Yerington had known how many fish they could catch in a day he would never have entered into such a contract. The Indians laid their wires for this thing long ago, and when Mr. Yerington visited Walker Lake they put up a job on him. They invited him to spend the day fishing, which he did, and they gave him a bait which fish absolutely do not take. The Indians had a few of these several of the blacks also fished with him, some of them using no bait at all. The result of the day's toil was a small whitefish and a half-pound trout. The savages pretended that the day's sport had been very fine, and got up a big dance in honor of the catch, remarking that the fishing had never been so good for years. In an unguarded moment he signed the fish contract, and now they say they will be able to keep the Carson and Colorado cars loaded down with fish all summer long, but not wishing to be too hard on the road, will allow it to carry pay freight and passengers during the winter months."

CARP AND BASS IN VIRGINIA.—Shirling, Loudoun County, Va., July 23.—About three weeks ago I was invited to Mr. Arthur Chichester's to see his carp pond drawn. He had received from Washington 52 carp in January, '81, and the water having, by accident, been cut off from his pond, he thought the fish were all dead; but, upon drawing off the water, he saved 47 carp, and put them in a temporary dam to refresh the pond. Five fish were lost by jumping out of the pond. I helped to transfer them, and they weighed from 3 lb. to 13 lbs.—in my opinion nearly all over a pound—I am sure. When he put them in his pond they measured about a finger's length.

I took two weeks ago at this place, on Goose Creek, about 12 lbs. of black bass with the fly and spoon, with rod and reel. Since I have been here three bass have jumped in our boat and been secured, one a *tro-pinnier*.—T. W.

"HALIBUT" FRAYS.—"A recent visit to Port Huron," says a writer in the Chicago *Tribune*, "let us into the secret of cheap 'halibut.' The river there teems with sturgeon and these are caught in great numbers and confused into a large pen by the river-side. Once a week is 'slaughter day,' when thousands upon thousands of these mummified fish are driven in and cut up. A friend gained his admittance on one of these slaughter days and it was a sight to see. The fish are hung up to smoke in long rooms, like the hogs at market. They are then dried, cut up and shipped abroad as first-class halibut. A dealer told me that fully nine-tenths of the meat sold in our inland markets is simply smoked sturgeon. Car-load after car-load is weekly shipped away."

MAINE NOTES.—The *Fairfield Journal* says that two fishermen caught about twenty-four pounds of black bass in East Pond the other day. Nine of the bass weighed fourteen pounds. These fish were placed in the pond six years ago and are now caught in large numbers.... A fine salmon was taken in a weir at Vinalhaven July 2—the first ever taken there.

HORSEBACK RIDING IN DENVER has become a craze. The *Tribune* of that city asserts that "one can with a reasonable degree of certainty say that nine out of ten of the men who have lived here for six months know how to sit a horse. St. Louis or New Orleans in their palmest days never furnished the equestrian spectacle that may be seen any fine evening in Denver, and it is an indubitable fact that the Queen City of the Plains is entitled to first place as the most improved horseback riding city in the United States." The approved step is the single-foot gait. "You see, this single-foot is altogether a cultivated gait. You have to break the horse to it. It is a peculiar step and a distinct one, having none of the characteristics of either a trot or a lope. Each foot moves without any influence from the other three—much as a man would move if he were to get down on his hands and feet and crawl."

MOSQUITO PREVENTIVE.—Mixture of sweet oil, one part; tar, two parts.

Fish Culture.

QUEER HABIT OF THE RAINBOW TROUT.

THE newly imported trout from California, *Salmo irideus*, seems to be addicted to singular habits in Minnesota, according to the letters written to Professor Baird, which we give below. They have been sent to us for publication in the hope to stimulate those who have these fish in ponds or streams to watch them and see if this habit is common to them. We will be glad to receive communications on this subject, and hope that those having facilities for observation will watch them during the coming water, and report. The letters say:—

ST. PAUL, Minn., June 15.

Hon. S. F. Baird, U. S. Comm. Fish and Fisheries, Washington, D. C.: DEAR SIR: I wish to inform you of a very queer and unaccountable habit, blank, but to state it is our intention to keep our California trout for breeders, since we were not fortunate enough to get any living eggs this year. Those hatched from eggs we hope to receive from you hereafter will be desirable as soon as they are advanced enough. Our superintendent, Watkins, has also written you about these trout, telling of their hiding and hibernating for three months. I should like to know if the same behavior has been noticed elsewhere, and anything you may tell me of their habits will be very appreciated. Respectfully, R. O. SWEETZ (Chairman Minn. Fish Com.)

WILLOWBOOR HATCHERY, Near St. Paul, Minn., June 15. Spencer F. Baird, U. S. Fish Commissioner, Washington, D. C.

DEAR SIR: Yours of the 7th inst. is received. In reply I would say that none of the California trout have been distributed. We only had 2,000 eggs, and we now have 1,900 yearling trout. The Commissioners thought best to keep them for breeders as it was uncertain about their getting more eggs. We received 5,000 eggs this spring, but these were not a good egg among them when they were received on the 7th day of Jan. viz., the eggs of the California trout disappeared and we could not find one of them in the ponds for several days. I could discover no place for them to get out. After about one week I was examining the ponds in the night and found that the trout had been taken out near the water. I could see the fish coming out of the mud or sand in the bottom, and did not trouble myself any more about them. About the middle of March they all made their appearance again, and are all in nice condition.—Respectfully, S. S. WATKINS (Supt.).

Chas. A. Stone, T. W. Deyer, Thos. H. Smallman, George Macbeth, Laclan Macdonald, Wm. Lind, Bailey Harrison, Tinsbury, and Richard Gibson, Winton. On motion the Executive Committee were empowered to make arrangements with Mr. Chas. Lincoln to officiate as superintendent of the show. A subscription and a committee to assist in the management of the show were also appointed. The gentlemen present toward the support of the movement. It is intended to offer at least \$500 in prizes, and some of the best game stock in America will be represented, arrangements having already been made for the exhibition of a fine pair of pointers on exhibition. Everything points to the best bench show ever held in the Dominion.—*Toronto Mail.*

FRANKLIN, PENN., DOG SHOW.

THIS bench show of dogs will be held at Franklin, Penn., on Wednesday, Thursday and Friday, September 21, 22 and 23, under the auspices of the Franklin Sportsmen's Club and Game Protective Society. It will be given in a building on the grounds of the Venango County Agricultural Society at the same time as their second annual fair. The management of the show will be in the hands of the following named gentlemen: Mr. C. D. Elford, president; Mr. Alex. Vincent, secretary and treasurer; Messrs. R. G. Lamberton, J. G. Alexander, Charles Bowman, Jas. J. Hindman and W. A. May, and the Board of Appeals will consist of Hon. R. B. Taylor, R. H. DeWitt, J. W. Hill, Hon. J. C. Connor, Hon. W. Lee, Hon. C. W. Gibblin and Dr. I. St. Clair. Mr. Thos. D. Adams has been appointed superintendent, his address being P. O. box 61, Franklin, Pa., and the following gentlemen have consented to act as judges: Mr. J. W. Hill, Hon. J. C. Connor, Hon. W. Northon, J. P. for pointers and setters; Mr. Charles P. Duncan, Old City, Pa., for sporting classes other than pointers and setters; Mr. Harry Peirson, Meadville, Pa., for non-sporting classes; Mr. John H. DeWitt, Wrentham, Pa., and Mr. Emil Usher, Wrentham, Pa., for Fox Terriers; W. E. Eckhart, Wrentham, Pa., Mr. S. R. St. Clair, Alto, Ill., and Mr. S. M. Lupton, Hannsville, Pa., for collie trials. Referee, Mr. S. S. De Arman, Franklin, Pa. The printed premium list contains the rules and regulations under which the show will be held. A fox chase is to be given each day at 3 o'clock, p. m., in the forty-acre enclosure. A sheep drive is to come off at 10 a. m. on the second day. Some trick dogs are to perform on the third day. The express companies charge for the dogs \$1.00. The entrance fee, but not return them free. The premium list contains forty-five entries. First and second prizes will vary from \$6 to \$1, but diplomas are expected to heal the sores of all third best animals. One hundred dollars has been offered for a special award to the best dog or pair of children in the show. The prizes for collie trials and premiums have been donated, the prizes ranging from a Remington breech-loading rifle down to a dog collar and chain and Hall's Sportsman's Gazette. All the variety of sporting dogs will have a chance to shine. The best of their kind will not be left alone in his glory. A handsome silver cup, valued at \$10, will be donated to the ugliest dog or bitch on exhibition, and the show promises to be well managed, lacking not of variety, which is said to be the spice of life.

NEBRASKA FIELD TRIALS—1881.—The second field trials for pointers and setters will be held at Norfolk, Nebraska, commencing August 28, 1881, and continuing four days on practical grounds.

The first races will be by puppies under twelve months old, pointers and setters native and imported. Entrance fee, \$5.00. First prize, fifty per cent.; second, thirty per cent.; third, twenty per cent. of net proceeds.

The second races will be limited to pointers and setters of any age owned in Nebraska. Entrance fee and prizes same as above. Entrance fee and prizes same as above.

The races will be conducted under the National American Kennel Club Rules.

For a full address, J. P. McCartney, Secretary, Neligh, Neb., or E. B. E. Kennedy, Omaha. Entries will be received up to the time of drawing for places.

LOUISIANA STATE FIELD TRIALS—NEW ORLEANS, July 23.

From present indications there will be a large number of entries, and our first attempt at field trials will surely be a success. The matter of judges has not been yet decided upon; but thorough sportsmen will be secured, and the work will be just and honest divisions. The prospect for game, deer, turkey and quail, was never better and the exceeding dry weather is very favorable for "Bob White." Northern sportsmen can, in Louisiana, find in the space of a mile, deer, chicken, quail and snipe shooting, and to get them one or two days more than likely to transmit his services required. Along Morgan's Louisiana and Texas R. R. line shooting is to be had, and in any of the country houses there is ample accommodations. I should be glad to locate border sportsmen in the game sections—should any wish to visit Louisiana.

EDWARD OWELL.

MANAGEMENT AND REARING.

[From Vero Sharp's Book of the Dog.]

A GREAT deal of a breeder's success depends upon the state of a health in which the stud dog is when he begets offspring; for a dog whose health is more than likely to transmit his defects to his puppies, who are in consequence more difficult to rear, and of less value when they attain maturity. Considerable attention should therefore be paid to the comfort of a dog who is in the habit of receiving a large number of stud whips. He should, if possible, be well exercised morning and evening, either by a country walk, or a run round his owner's yard; and his diet must be wholesome and liberal. A plunge in cold water materially assists in keeping a dog in a vigorous condition, and in warm weather may be taken daily. It should be borne in mind, too, that it is always well to have your stud dogs look clean and tidy, both at all times and in the kennels. Much depends upon the first impressions formed by the owner of a bitch who contemplates breeding from him, and many a dog is passed over who otherwise had been in better fettle, might have been resorted to. Care should be taken not to overtax the energies of a young sire by allowing him to receive too many stud visits; the result of excesses in this way being both likely to diminish his own vitality, and failure at the second. Fifteen or twenty bitches a year are quite enough for a dog not in his prime, and about twice the number for a dog in the full vigor of his strength. As a rule, dogs under eighteen months old are likely to do themselves and their services much good, if bred from; and swilling one's self of the services of a very old dog is always risky. It is extremely hard to state an age at which a dog can be said to be "old"; some retain their vigor up to their youth up to ten years and more, while others get decrepit and broken down at the age of five. It is, therefore, of the greatest importance to exercise the greatest care and attention to the age at which a stud dog ceases to be of use; but breeders should see the dog for themselves, if they do not know him, and judge from his appearance and condition, whether he is likely to suit their wishes.

A sire should be looked upon with suspicion if his services are in too great request, and the number of the receptives unlimited, as in a very reasonable time the stud dog's vitality and vigor will be exhausted and his experiences are practically unrestricted. A very old dog, unless mated to a young and vigorous bitch, is more than likely to fail to beget stock at all; and if he succeeds in doing so, the puppies are very frequently of bad constitution and delicate in their earlier days. It is often the case that the services of a stud dog, who is dog are most eagerly sought after by breeders, and the merits of his father entirely overlooked; and this is certainly a fact which must puzzle all practical men when they reflect upon it. A sire of good pedigree, and of a high class of blood, and of a high class of himself, is better worth practicing at a low fee than his successful

son who has yet to prove himself the success at the stud which he is on the bench or in the field; especially as in the latter instance the sum charged for his services is sure to be a considerable one. Many of our champion dogs have turned out complete failures from a breeder's point of view, and the blunder-prone owners and brothers have been the victims of a far too common error, with only half the chances of success. A golden rule in dog-breeding is, for the owner to satisfy himself that his bitch really does well to dog he has selected for her. In many instances we know that dogs have been played upon owners who have sent their bitches to dogs at a distance; and we have ourselves been applied to for the services of a dog, standing at a low fee, by an owner of a stud dog, for a bitch sent up to the latter. Unfortunately, in ignorance of the fact that the bitch was not his own, he discovered what had occurred, and that the bitch, the name of whose owner we never ascertained, had been sent up to this gentleman's dog, and was not one of his own. The difference between the fees of the two dogs were three guineas; and as it was impossible for us to prove that the owner was not informed of what took place we were unable to take steps in the matter, and our acquaintance still walks the streets an honest man. If the distance is too far to accompany the bitch or send one's man, it is a very good plan to get a friend in the neighborhood to stand dog's kennel to accompany her when she visits him, especially in dealing with strangers. Of course, in the case of owners whose characters are above suspicion, these precautions are unnecessary; but it is always a good plan to have a proper receipt from the owner to know that the bitch's visit has been witnessed by her owner or his nominee, especially if the should fail to be in. In event of the latter being the case, the usual practice is that the same bitch may visit the dog a second time gratuitously, or another of the same owner, if he will give up his share of the stud dog's exercise on the part of the proprietor of the stud dog, for instance have occurred when puppies have been born dead, and he has been told there was no result from the union of the parents. Owners of stud dogs should, therefore, be very careful to keep owners of bitches which have visited them with formal certificates of service; such documents are particularly useful in event of disputed pedigrees.

THE BROOD Bitch.

Young bitches often exhibit symptoms of an inclination to breed at the age of eight or nine months, but it is undesirable to place them at the stud until they have reached the age of at least eighteen months. The remarks we made above about the advisability of resorting to the services of too young a sire, apply with even greater force to the brood bitch, the litter being usually small. Stunted and puny puppies are almost sure to be produced from a young mother; and the injury they are likely to do her constitution is incalculable. It must be borne in mind that for weeks before the time of her confinement she requires abundant food and nourishment, and after the shock of labor is gone through there is a further strain upon her until they are weaned.

The first symptom afforded by a bitch that she is likely to be soon ready for breeding purposes, is a desire on her part to romp and play with any dog, and to be particularly fond of the more vigorously exercised spirits, but it is always well to keep a close eye upon her as soon as any undue levity is observed in her conduct. It is almost desirable to see every endeavor to keep the stud away from her, but this may be done by simple means, if when the matter is placed beyond doubt all former precautions should be doubled if possible. It will be remembered that a bitch is not only a great risk of dogs getting into the place where the litter is conducted, but that the same dog may be induced to come from her kennel, and some bitches have performed almost incredible feats in their endeavors to do so.

She should, if at a distance, be sent off to the kennels where the dog she is standing a day or two after the earlier symptoms appear, so as to be in time to breed with the most vigorous and conservative male that she can be securely confined in a box or basket from which escape is impossible. The transit of dogs has been more fully explained in our issue of the 11th inst., but it is worth repeating, and indeed here; but all breeders should be impressed with the absolute necessity of exercising the greatest vigilance when they have bitches by them under such circumstances. For at least a week after the litter is born, the most careful precautions for protecting her must not be relaxed, or all her owner's hopes may be marred by her forming a connection with a stranger.

The influence of a previous sire on a subsequent litter of puppies is a subject of the keenest discussion and interest among breeders, and most interestingly correspondents have taken place in the columns of the *Live Stock Journal* relating thereto. Some of the statements which have appeared from time to time in that journal upon this subject, and which have been substantiated by the results of the most careful and exhaustive experiments, have varied varieties of live stock is assured, are invested with a peculiar importance. But having carefully read and considered the matter, we and ourselves driven back on the supposition that although such statements are true, and that the influence of a previous sire means the matter-of-course events some of the correspondents of the *Live Stock Journal* consider them, and in more than one instance we have failed to satisfy ourselves that the influences implied have regulated the course of events. In making this statement we attribute to the writer the greatest credit, and in doing so, we think they have too often forgotten the influence which surrounding objects exercise over the mind of a pregnant female. This opinion is shared by many breeders of live stock, and it is a curious fact that a colored dog, when mated with his premises and fences tarred, with the express object of assisting Nature in keeping the color of his stock as deep as possible. It is, however, quite impossible for us to go at length into the matter, and we must refer to the *Live Stock Journal* for the details, as many breeders firmly believe, from personal experience, that such a thing as past influence is possible, especially in the case of mated bitches, due vigilance should be exercised in the thorough isolation of bitches when in season, or more than a temporary evil and disappointment may occur.

NOTES FROM OUR FOREIGN EXCHANGES.—"Senex," in the *Live Stock Journal*, says:

I have just had the pleasure of shaking hands with the Rev. J. Cumming Macdonald on his return to old England from South America. He has been in the States for some time, and it is good to hear that he has been entirely cured of his attack of bronchitis, as it is a great relief of this affection the journey was undertaken. During his trip Mr. Macdonald crossed the Pampas on wild horses. Then he went to the Andes on mules to Santiago, which journey occupied eight days, and he returned by the same route to the coast. From there he traveled to Valparaiso, and along the coast as far as Lima, visiting numerous battle-fields on the way. At Lima Mr. Macdonald was laid low with an attack of malaria fever, from which he has now entirely recovered. He looks as well as ever, and his friends would like to see him yet. When sufficiently convalescent Mr. Macdonald turned his eyes homeward, and came by way of the Isthmus of Panama, calling at Jamaica and St. Thomas en route, and he was met by a steamer, which he sailed on the day which has been restored at a cost of £10,000, to be opened on Sunday next, and hence his anxiety to get back.

I hear that three young black-and-tan Dachsunds of the royal Wurttemberg breed have just left Miss Bull's kennel in Kensington for New York U. S. A., having been purchased by a gentleman of that city. Their registered names are Graf, Gretel II., and Ludwig, and are descendants of the well-known old dog Dessauer. Mr. George S. Sedgwick, who was recently in England and has now returned to New York, has been purchased by a gentleman of St. Bernard puppy, bred by H. R. H. the Duke of Edinburgh. The puppy, which was presented to Mr. Sedgwick by Lord Dunmore, is by Hercules, out of Abyss, by Actor, granddam by Champion for New York U. S. A., having been purchased by a gentleman of that city. Their registered names are Graf, Gretel II., and Ludwig, and are descendants of the well-known old dog Dessauer. Mr. George S. Sedgwick, who was recently in England and has now returned to New York, has been purchased by a gentleman of St. Bernard puppy, bred by H. R. H. the Duke of Edinburgh. The puppy, which was presented to Mr. Sedgwick by Lord Dunmore, is by Hercules, out of Abyss, by Actor, granddam by Champion for New York U. S. A., having been purchased by a gentleman of that city. the Curzon Hall, on Monday, Tuesday, Wednesday, and Thursday, November 28, 29, 30, and December 1, 1881, being on the same days as the Birmingham Agricultural Exhibition. The entries close November 1.

"JACK," THE RAILWAY DOG.—The *Illustrated Sporting and Dramatic News* gives a portrait of Jack, whom they introduced to public notice some time since, and who has since grown famous. The last piece of information received about Jack is that a lady has presented him with a silver-mounted collar, with which he seems much pleased. On it is inscribed "To Jack, the Railway Dog, from Mrs. J. P. Knight, Brockley." On the day Jack sat for his portrait he left Lewes by the first train for Brighton, and then found that he had business in Portsmouth, whither he traveled. Leaving that town by the 1.30 p. m. train, which arrives at Fort Junction at 2.25, he proceeded to Littlehampton. He and the guard then determined to take a run in the town, and Mr. White, the photographer, of 52 High street, had invited Jack to stop and have his photograph taken. Jack found that he had no engagement before 5.5, when he wanted to leave for Hove, and we give an engraving of the result of his visit to Mr. White. Jack's headquarters are at Lewes, but he does not always go home, and frequently passes his nights in the wastepaper basket of a London bookbinder.

THE DOG'S AFFECTION.—We know ourselves to be such lamentably imperfect characters that we long for an affection altogether ignorant of our faults. Heaven has accorded this to us in the universal canine attachment. Women love in us their own exalted ideal, and to live up to the ideal standard is sometimes rather more than we are altogether able to manage; children in their teens find out how clumsy and ignorant we are, and do not quite unreservedly respect us; but our dogs adore us without a suspicion of our shortcomings.—*Philip Gilbert Hamerton.*

STILLBORN.—Mr. Charles E. Scott, of Shenectady, N. Y., writes us that his Gordon setter bitch, Daisy, and Mr. G. S. Thompson's Scott, without doubt the most famous brace of setters in existence. We have sent Mr. Scott a couple of our measurement blanks and will publish the result if the owners see fit to send the measurements to us. Dr. J. S. Niven, of London, Ont., has sent us an artotype of his Irish setter, Nora (Straw-Nora) from a painting by Mr. J. Tracy, of St. Louis, Mo. The picture is said to be as life-like as are all those from the brush of that accomplished artist.

KENNEL NOTES.

Breeders and owners of dogs are invited to send memoranda of names, breeds, birth, whelps, etc., for insertion in each issue of *Forest and Stream*, but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.

NAMES CLAIMED.

American Dan.—Mr. Jos. H. Dew, Montreal Kennel Club, Columbia, Tenn., claims the name of American Dan for white, black and tan setter dog puppy, whelped April 2, 1881, by Lincoln out of Daisy Dean.

Old Walk.—Mr. Jos. H. Dew, Montreal Kennel Club, Columbia, Tenn., claims the name of Old Walk for white and orange setter dog puppy, whelped April 1, 1881, by Lincoln out of Daisy Dean.

Claret.—Mr. Geo. B. Walker, Chicago, Ill., claims the name of Claret for black and tan setter dog puppy, whelped June 25, 1881, by imported Max out of Bannie.

Peter Bitch.—Mr. D. W. C. Parker, Springfield, Mass., claims the name of Peter Bitch for black pointer dog bred by Mr. A. Strong, Meriden, Conn., by his Champion Peter out of his Mat.

Oren.—Mr. J. R. McKimber, Brooklyn, N. Y., claims the name of Oren for red setter bitch dog puppy, whelped April 1, 1881, by Jack out of Mr. Cleaver's Nell.

Nora of Nora's Dog.—Mr. J. R. McKimber, Brooklyn, N. Y., claims the name of Nora of Nora's Dog for red setter bitch, fourteen months old, by Sam out of Mr. Fred. Freudenreich's Nell.

BREDS.

Prague II.—Peter Black.—Mr. A. Bouchillon's pointer bitch Psyche II. to Mr. D. W. C. Parker's (Springfield, Mass.) Peter Black.

Scott-Walker.—Mr. E. S. Bird's all liver cocker bitch Scott (Sulphur) to Mr. A. McDonald's (Rockland, Me.) black cocker dog Wildfire.

Monty-Kennel.—The Silver Lake Kennels (River Edge, Bergen Co., N. J.) have bred white setter bitch Nell (Bramble) from a painting of Floss by T. O'More to Mr. E. P. Gaultier's Jersey City, N. J., all red setter setter, Pat-Biddy, Pat, by imported Pat-Biddy, Biddy, by Daisy Dean-Lincoln.—The Montview Kennel Club's Daisy Dean to Lincoln.

White-Block.—Mr. Carl Pickett's (Pittsburgh, Pa.) white, orange and tan setter bitch White-Block to Mr. J. M. Hunter's (Rock J. Garrison, Queen's) July 10, 1881.

Belle II.—Mr. F. H. London, Rock Hill, S. C., has bred his Gordon setter bitch Belle II. to Mr. J. M. Hunter's (Rock J. Garrison) all red setter Taylor's King, v h o of last New York show.

SALES.

Bob II.—Black Dog Whelp.—Dr. J. S. Niven, London, Ont., has sold to Mr. J. M. Kinglehart, Petrolia, Ont., a cocker spaniel dog puppy, whelped May 28, 1881, by Bob III. out of Black Jess.

Bob III.—Black Dog Whelp.—Dr. J. S. Niven, London, Ont., has sold to Mr. George Medeth, of Baffin place, two cocker spaniel dog puppies, whelped May 28, 1881, by Bob III. out of Black Jess.

Bob IV.—Black Dog Whelp.—Dr. J. S. Niven, London, Ont., has sold to Mr. Charles Lincoln, Detroit, Mich., a cocker spaniel dog puppy, whelped May 28, 1881, by Bob III. out of Black Jess.

Bob V.—Black Dog Whelp.—Dr. J. S. Niven, London, Ont., has sold to Mr. Wm. S. Niven, of London, Ont., a cocker spaniel dog puppy, whelped May 28, 1881, by Bob III. out of Black Jess.

Lawry.—Mr. A. R. Heyward, Rock Hill, S. C., has sold to Mr. W. H. Pierce, of New York, a black and tan setter dog puppy, whelped July 8, 1880, by Blossom out of Moll III.

Lawry.—Mr. A. R. Heyward, Rock Hill, S. C., has sold to Mr. W. H. Pierce, of New York, a black and tan setter dog puppy, whelped July 8, 1880, by Blossom out of Moll III.

Don-Nelly whelps.—Mr. J. Ois Fellows has sold to Mr. F. E. Penston, Auauhin, Ill., two solid black cockers, by Don out of Nelly.

WHIZERS.

Rose.—Mr. C. Du Bois Wacker, of Babylon, L. I., Rose (Kanger-Rose) whelped July 11, eleven puppies, five dogs and six bitches, by Champion Berkley.

John.—Mr. J. Ois Fellows's spaniel bitch Sara Bernhard whelped July 1st, five puppies, three dogs and two bitches, by cocker spaniel dog Brig (first and special N. Y. 1881).

John.—Mr. J. Ois Fellows's spaniel bitch Sara Bernhard whelped July 1st, five puppies, three dogs and two bitches, by cocker spaniel dog Brig (first and special N. Y. 1881).

John.—The Lacine Kennel Club's black, white and tan English setter bitch Mico (New York, 1879) whelped July 12, nine pups, five dogs and four bitches, by black and tan setter dog by Mr. J. Ois Fellows's spaniel bitch Sara Bernhard whelped July 1st, five puppies, three dogs and two bitches, by cocker spaniel dog Brig (first and special N. Y. 1881).

John.—The Lacine Kennel Club's black spaniel bitch Madcap (Montreal, at Toronto, 1880) whelped July 10, five puppies, three dogs and two bitches, by black and tan setter dog by Mr. J. Ois Fellows's spaniel bitch Sara Bernhard whelped July 1st, five puppies, three dogs and two bitches, by cocker spaniel dog Brig (first and special N. Y. 1881).

John.—Dr. J. S. Niven's (London, Ont.) Gordon setter Moll III. has whelped six puppies by Blossom.

Worth.—Dr. A. S. Niven's Irish terrier Nora has whelped six puppies, some of which are very fine.

Charlotte Queen.—Mr. L. W. Perdue's (Charlotte, N. C.) setter bitch Charlotte Queen, by Soom (Duch-Kirby) out of Anne (Lewes) (Lewes), whelped last, three black, white and tan dog puppies by Bergandi's Hain.

Puss.—Mr. J. P. Mathis's New York City bull terrier bitch Puss whelped July 24, four puppies, by owner's Pegasus (New York, 1881).

DEATHS.

Albion.—Dr. A. S. Niven, London, Ont., lost by an accident his Irish terrier bitch Alice.

Black Currier whelps.—Mr. J. O'Leary has lost five puppies, all of which's litter by Brog.

White-Breasted whelps.—Mr. C. De Bois Wagstaff, Bateman, L. I., has had the bad luck to lose by distemper the brace of puppies, dog and bitch by Grouse Bred out of Blanche, purchased of Mr. W. Talmán at the late New York sale.

KENNEL MANAGEMENT.

170. C. M. S., Dunbarton, N. H.—Dogs claws should be removed when the animal is very young. Their excision then being easily accomplished with a sharp pair of scissors, first dividing the skin and the dew claw being drawn to one side before it is detached, in order that the skin may afterward cover the wound. We cannot advise you to attempt the removal of dew claws on old dogs.

171. C. G. H., Montreal, Canada.—From your description your terrier is afflicted with mange. We suggest the following treatment: Mix together four ounces of sublimed sulphur, two ounces of castor oil and one ounce of olive oil. Dress dog all over with this every day for six days. Wash off with carbolic soap on seventh day, next day repeat dressing as before for three days. Take care the dressing is rubbed into the skin. Give two-and-a-half doses of Fowler's solution of arsenic twice a day; gradually increase dose to four drops. Be sure to give the solution in water. It must be continued for some time to be beneficial. Avoid feeding meat.

172. JOHN BELL.—In our issue of July 14, we stated that the mastiff bitch Lela was owned by Mr. Rathburn, of this city. We should have remarked that she was recently presented by Mr. Rathburn to Messrs. L. C. and H. I. Myers, also of this city.

173. H. T. W., Woodstown, N. J.—Your dog has the mange, but as you fail to state his breed or age we are obliged to answer in a general way. Rub him with the following mixture twice a day, and see that it is worked into the skin: Powdered bear-bone of potash, one ounce; powdered white vitriol, one-quarter ounce; one-half ounce of castor oil. Wash with carbolic soap with the Fowler's solution of arsenic twice a day in food. Avoid feeding meat.

Ague, biliousness, striae, jaundice and rheumatism, Hop Bitters removes easily.

Hill and Trap Shooting.

RANGE AND GALLERY.

THE WIMBLEDON MEETING.

WIMBLEDON, July 23.

The shooting on the old common opened on the 11th and we have had a pretty hot time of it ever since. On the day before the opening, the majority of the marksmen were already in camp, a slight shower of rain being the only weather incident from a fire at which some Scotch riflemen were cooking. An order was accordingly issued that hereafter no small camp fires were to be kindled beyond the first stage closed on the 14th, and that no smoking was to be done. The Scotchmen were very in consequence, and have been swearing in obnoxious Gaelic which they cannot toast their own inexpensive bacon nor have the national hot toddy at night.

There are few American shooters here, Frank Hyde being about the only one. Particular attention has been paid to the Canadian riflemen, who have come on in very good form. The Duke of Cambridge and Sir John Macdonald have both been present and were received with full honors. The team is considered the best ever sent from the Dominion. They had several prize winners in the Alexander match, and had two men of the sixty, who are to make the final competition for the Queen's medal—Sergeant Mitchell with ninety and Sergeant Walker with eighty-nine. This is the first time for four years that the Canadians have won a place on the sixty. Twenty-eight men were selected, out of whom eight were chosen to compete with the Canadian club for the Kelsope cup, and the other twenty were selected for the Queen's medal. The latter were divided into three teams, each of eight men, and sent a number of the shooters to the hospital, the firing was fine. The highest scores were made by two of the contestants who were of the possible 105. When the shooting had the second day the English team felt that the lead had probably that one of the Canadian team, Sergeant Walker, would carry off the gold medal and £250 presented by Her Majesty. He was among six others who had an aggregate of fifty-six over the first ranges, 800 and 900 yards, that being the highest on the register. He rather fell off at 1,000 yards. Though his chances of success were brilliant at the first two or three shots he finished with seventy-five, the second shot being the only one that he missed. The lead, eleven less than the winner, who made three points more than was ever known in the history of the competition and twelve more than was made last year. The name of the winner is Private Cook. He belongs to the 1st Regiment of Devon Volants.

His score was eighty-six with a Martini rifle at 800, 900 and 1,000 yards.

On the afternoon of the 19th, the Kelsope Cup was contested for by the Canadian and Mother Country teams. The score was 200 for the Canadian and 191 for the Mother Country. The latter have had a pretty bad time of it, being under oppressive, making shooting difficult. During the night, however, there was a slight fall of rain, followed by more at an early hour in the morning. This had the effect of lowering the temperature considerably and making the camp deliciously cool. There was

A VARIABLE WIND,

which made steady shooting rather trying. Otherwise the conditions were very favorable. The competition began shortly before three o'clock, at 200 yards, at which distance the British succeeded in making 285 and Canadians 227, giving an advantage of eight to the British. At 500 yards, the British made 205, and the Canadians 200, leaving the British with thirteen to the good. On beginning the 800 yards the English team thought the match was in their own hands, for this was their favorite distance. The general opinion, too, seemed to favor this aspect of things. The Canadians felt justified in their confidence. When the first four had finished, the Canadian squad made up the thirteen they were behind, and put themselves sixteen ahead of their antagonists. The shooting of the next four members of the team showed some wild firing, but resulted in the Canadians finishing with twenty of a lead. The result was rocky with much spitting. The English, through Major Walker, the English team, congratulated Colonel Gibson, of the Canadians, on the success of his team.

The Kelsope Cup is a challenge cup, valued at £110 sterling, presented by the late Rajah of Kolapore, India, for a marksmanship contest between teams of eight men from England, India and the

Colonies. In addition to the cup, the sum of £50 is also given to the winners by the National Rifle Association of Great Britain, so that there is something substantial accompanying the honor.

The rifle score stood:

Grand total 559

The Albert prize, which is considered the best of the individual small-bore long range shooting, was again been won by an American marksman, this being the third year in which it has gone across the water. Mr. Frank Hyde was the winner. He shot with Lieutenant Godal with seventy points. In shooting off the 800 yards, Godal made 100 meters and a bull. Mr. Hyde made three bulls.

The shooting for the Elcho shield took place on the 21st, and resulted in a signal victory for the English team. The scores standing:

800 Yards.		900 Yards.		1,000 Yards.		Total.		Average.	
England.	519	538	549	1,606	1,642	3,255	1,627 1/2	1,642	1,627 1/2
Ireland.	518	510	527	1,549	1,615	3,164	1,582	1,615	1,598 1/2
Scotland.	518	519	529	1,566	1,642	3,208	1,604	1,642	1,623

The teams were of eight men each, shooting fifteen shots each at 800, 900 and 1,000 yards, making the team range possible 600 and the aggregate 1,800. The strength of the British teams which competed this year for the Elcho shield, may be ascertained from the following table, which gives the competitors for the Elcho shield since the contest was first held under the present conditions:

Year.	England.	Scotland.	Ireland.
1875.	322.	1,405	1,437
1876.	322.	1,405	1,437
1877.	322.	1,405	1,437
1878.	322.	1,405	1,437
1879.	322.	1,405	1,437
1880.	322.	1,405	1,437
1881.	322.	1,405	1,437
1882.	322.	1,405	1,437
1883.	322.	1,405	1,437
1884.	322.	1,405	1,437
1885.	322.	1,405	1,437
1886.	322.	1,405	1,437
1887.	322.	1,405	1,437
1888.	322.	1,405	1,437
1889.	322.	1,405	1,437
1890.	322.	1,405	1,437
1891.	322.	1,405	1,437

Growing out of the fact that the Canadians had small bore rifles with them came a challenge for a match of six Canadians against six of the English. The match was arranged for the 21st, and took place the last day of the meeting. The British were represented by Mr. Martin Smith, Wimbledon; Lieutenant Baker, Loudon Rifle Brigade; Mr. Humphrey, Cambridge University; Mr. Murphy, Dublin; Lieutenant Baker, the latter being an American and a member of the Gilmer, of Harrow. The Canadian team was composed of Sergeant D. Mitchell, Corporal Mitchell, Sergeant J. Mitchell, Private W. Mitchell (all four of whom are brothers), Sergeant Pain and Private Linton. The match was a very close one, and it was long range shooting, the light being dull and gray and the wind steady. The ranges were 800, 900 and 1,000 yards. At 800 yards the British made a total score of 324 points out of a possible 450. The English team made the 800 yards was 196—eighteen behind the home team. At 900 yards the Canadians shot very wildly, while the English increased their lead, finishing this range with an addition of 63 to their lead. The score was: Home team, 415; Canadians, 352. At 1,000 yards the Canadians were a little steeper, but here again they were dropped 30 behind their adversaries, ending with a difference of 117 points.

The totals were:

British.		Canadian.

Murphy.	190	C. Mitchell.	177
Mackerrall.	181—1,922	Pain.	172—1,165

CONSOLATORY.

The Canadians were much surprised, and their captain was greatly annoyed at the result. Earl Brownlow, captain of the English team, in announcing the numbers, congratulated the Canadians on having fought an uphill fight pluckily, and hoped they needed no assurance that the United Kingdom marksmen would always be glad to see them competing on the ground. Colonel Gibson, captain of the Canadian team, replied that he was not surprised at their being beaten, but much disappointed at being beaten so badly. They were not, however, sent over to fight another match with the latter and give better account of themselves. Small-bore shooting was practiced by very few in the Dominion, still, it was known that some of their best small-bore men were coming over, and as Sir Henry Hall suggested a friendly long range match, the thought of the latter might be better account of itself, but very anxious to fight side by side with the home country team. Although beaten, and beaten badly, he must say that the victory represented fairly enough what the mother country could do when pitted against Canadian long range shots, and hoped that another time the latter would give better account of themselves. The meeting was brought to a close by the presentation of prizes by the Princess of Wales, who was accompanied by the Prince of Wales and the young princesses. An immense array of spectators was present. Altogether the Canadians have carried off £250 in money prizes, two badges of the Queen's 1st class, sixty-two of the St. George's, three grand aggregate badges and the Kelsope Cup.

Boston, Mass., July 26.—The long-range shooters kept up their fire to-day at Walnut Hill under the following conditions. The scores stood:

I. Y. Y.		II. Y. Y.	
800 yards.	5 5 5 5 5 5 5 5 5 5—73	5 5 5 5 5 5 5 5 5 5—73

July 23.—The best day of the season for rifle shooting presented itself to-day, yet only a small number were present when the matches were called. The day was very bright, with perfect light, there was steady and perfectly reliable during the day. There is no way to account for the small attendance unless the defect at Gardner was the cause. The day had been a very successful one for the members who are usually present at the regular Saturday meet. In the Sharpshooters' match Mr. Adams did the best work on the paper and in the long range match Mr. Adams did the best work on the paper, followed by Jewell for 100. In the handicap match Mr. Wassen was high man for 60, Bolt and Jordan followed for 45 respectively. The best work on the paper was done by Mr. Adams, followed by Jewell for 100. It was a foregone conclusion that Adams would win the beautiful medal offered by the association. Mr. Adams wanted one more to make him high man for the trophy, which he succeeded in winning, and became the owner of the badge on the elegant score of two 45's and one 42. Bolt also did good work yesterday before the bullets, making 47 at the shoulder at 300 yards. Subjoined are the scores:

Sharpshooters' Match.	
A. Adams.	12 11 11 12 11 10 10 10 10
G. M. Jewell.	11 11 11 11 11 11 11 11 11
C. H. Hildreth.	12 10 11 10 10 10 10 10 10
A. C. Bell.	8 11 12 11 12 12 10 10 10
H. B. Brown.	12 10 12 11 12 11 11 11 11
S. F. Sargent.	11 12 10 10 10 10 10 10 10
B. A. Curtis.	10 10 10 9 11 11 11 11 11

Handicap Match.	
G. W. Brown.	455454545454
C. Bell.	4455455454
J. Borden.	4455454544

Boston MAMMOTH GALLERY.—There has been a good attendance at the Mammoth gallery all the week, particularly during the evening. The two pistol matches now on the programme have attracted a large number of shooters, and the more familiar with this little art. Only the best are given below:

Amateur Rifle Match.	
M. L. Pratt.	45 46 46 47 47—200
G. H. Brown.	44 44 44 44 44—200
L. M. Marshall.	44 44 44 44 44—200

Experts' Rifle Match.

J. H. Smith.	45 46 46 46 47—200
J. B. Tye.	45 45 46 46 46—200

William B. Eaton. 79 75 85—219 J. Ames. 72 73 73—218

William B. Eaton. 67 68 70—205 J. H. Scott. 61 62 63—200

GARDNER, MASS., July 22.—The Gardner Rifle Club at their last weekly practice made the following record:

R.	C.	R.	C.	Totals.
Chester Hills.	87	87	87	261
G. F. Ellsworth.	87	87	87	261
G. F. Pratt.	82	82	82	246
L. M. Marshall.	82	82	82	246
G. C. Goddard.	78	78	78	234
A. Matthews.	73	73	73	219
C. H. Hildreth.	68	68	68	204
C. Shaw.	47	47	47	141
C. Merrill.	51	51	51	153
H. B. Brown.	42	42	42	126

The distance was 300 yards, lock ring and Creedmoor target combined.

To-day the club have as guests for a friendly contest members of the Cambridge Rifle Club. The match was a very close one, and it was long range shooting, the light being dull and gray and the wind steady. The ranges were 800, 900 and 1,000 yards. At 800 yards the British made a total score of 324 points out of a possible 450. The English team made the 800 yards was 196—eighteen behind the home team. At 900 yards the Canadians shot very wildly, while the English increased their lead, finishing this range with an addition of 63 to their lead. The score was: Home team, 415; Canadians, 352. At 1,000 yards the Canadians were a little steeper, but here again they were dropped 30 behind their adversaries, ending with a difference of 117 points.

The totals were:

British.		Canadian.	
Baker.	212	T. Mitchell.	193
Gilmer.	208	W. Mitchell.	191
Smith.	208	Mason.	190
Humphrey.	202	Murphy.	189
Murphy.	190	C. Mitchell.	177

Special prices to follow others according to their value.

SIMPSON'S NEW FISHING-TACKLE CASE.

A want long felt for by Sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen them is to have his spoons, hooks and lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his tackle in shape. They are made of the best material and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its perfections. Size-Box: Length 12, width 7, depth 4 1/2 inches; trays (4): Length 7 1/2, width 4, depth 1 to 1 1/4 inches; top tray: Length 1 1/2, width 7, depth 1 1/2 inches. These parts fit in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-book, and each case packed in a neat box and sent on receipt of \$4.00. To Clubs taking \$1 at one time, \$24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS. R. SIMPSON, 96 Fulton Street, New York

CIGARETTES

That stand unrivalled for PURITY. Warranted Free from Drugs or Medication. FRAGRANT VANITY FAIR. THREE KINGS. NEW VANITY FAIR.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find at the Fougus House, that city, and on the train for Ausable Forks Tuesday, Thursday and Saturday mornings to 8 P. M. My coaches being new and of Abbott & Downings' latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing.

Field Cover, and Trap Shooting.

BY A. H. BOGARDUS.

Price, \$2.

FOR SALE AT THIS OFFICE.
