It is neither hard, nor a waste of time to go a fishing, but is one of the most delightful, elevating and invigorating of any of the out-door sports. Fishing, so far from being a stupid pastime, in which one plants himself on the bank of a stream, and plants his rod in the bank and then dozes and dreams waiting for fish, as is so very true, and though I do not mean directly to raise you of it. And, if success is to crown his labors, all his powers of endurance, patience and skill are to be brought into play. I do not know any sport that requires better judgment than fishing. The selection and preparation of tackle, the supply of bait, the state of the weather, the condition of the water, and just that place in the pool where your trout or bass lives to seize the prey, the striking of your fish, the management of him after he has been hooked, and your successful landing him requires consummate skill and the best management.

EMMENT MEN ANGLERS.

Dr. Nowell, Dean of St. Paul's Cathedral, England, lived to the ripe old age of ninety-six, and he died in his that years had not dimmed his eye nor weakened his memory, and that angling and temperance were the cause of it.

Sir Humphrey Davy says: "For my health I thank my ancestors after my God, and I have no understanding what it was that so beneficially gave and brought me to the world, but in one patriarch Walton, to number ninety years and upward, yet I hope as long as I can enjoy a vernal day, the warmth and lights of the sunshine, still to haunt the streams, following the example of our late venerable friend, the President of the Royal Academy, Ben West, with whom I have thrown the fly, caught trout, and enjoyed a delightful day of angling and social amusement by the bright clear streams of Wamblee."

Dr. Taylor writes to a friend who was anxiously inquiring when one of his great philosophical works would be completed, "As soon as the fly fishing is over," evidently considering this diversion of equal importance with those mental efforts that have rendered his name so famous.

Gay Thompson, John Tobin, Samuel Taylor Coleridge and Sir Walter Scott, all literary characters, were ardent disciples of Walton. Admiral Lord Nelson was so passionately fond of the sport that he fished with the left hand long after he had lost his right. Ben West, the celebrated painter, engaged in many days sport

with Sir Humphrey Davy, and Daniel Webster, America's great statesman, during his lifetime, found relief after a tedious session of Congress in angling for salmon in the Kennebec. And the Bishop of Exeter, in the same fishery, is reported to be delighted in following the streams of the river, with his boat, gaff, and enjoying the pleasures afforded by the splendid bass fishing, for which they were famous in the early settlement of the State. And many other distinguished men who

"I have tried it with baited hooks."

To tempt the tenant of the brook

might be added to the list to show that angling is held in high esteem by all classes of people, but it is unnecessary. I am trespassing too largely upon your time in introducing quotations to show that it is worth the while to be angler, but I hope not unprofitably, and therefore I shall give you but one more from the "American Angler."

It is true that many have ridiculed this noble art and pitied its followers, but let those who are extreme and somewhat ridiculous have rendered them blind to the beauties of nature, remember that He who went about doing good chose a number of his disciples from fishermen, and considered them worthy objects of His consideration.

It seems in the way of apocryphism to attempt to justify that agreeable pastime after the expressed opinion of so many learned and distinguished men of every age, for is there any pleasure so common as to be with and with which so many happy associations are blended as angling?

Adieu, ye sports of noise and toil,

That crowd us senseless strife and toil;

Debauch the mirth, the husbandman's train,

More maid delight my life employ,

The angler's unobtrusive joy.

Here I have sweetened my declining hours,

Nor envy kings the bliss of crowns!"

My own experience as an angler heartily echoes all that has been said in this essay; and I men do not agree. The great and learned Dr. Johnson describes angling to be "a stick and a string with a worm on one end and a fool on the other," but we have an ingenious Spaniard giving the following rebuttal testimony: "Rivers and the inhabitants of the watery element were made for wisdom to contemplate, and fools to pass by without consideration."

Dr. Johnson never sat in a boat in the mouth of the Emory river, surrounded by the beautiful scenery which greets the angler, and he never had the pleasure of catching a hundred feet away, and left that thrill which electrifies you when the fancy fellow leaps three feet clear of the water to shake the hook from his mouth, and the exquisite pleasure of playing him and the joy of pinning him to the bank. I have ever stood on the rim of some pool in the mountain gorge, and watch the deftly cast fly dance along the eddies, and then disappear like magic, and in an instant feel that delightful contest between himself and a trout, and when he has over strike a fifteen-pound jack salmon, with his treacherous line, and his boat in his boat, as he glided over the blue waters of some beautiful lake or stream, or he would never have penned such a severe, though steeped satire.

CHARACTERS OF ANGLERS.

My knowledge of anglers has led me to make this observation, that anglers, as a class, are liberal, large-hearted, generous men, genial and full of good social qualities. Men who have acquired the habit of looking on the bright side of life and of extracting joy from every phase of it, and of trying to make the best of everything. Now and then you find a croaker, not often—a sort of evil prophet—who begins at the very inception of the excursion to predict that no fish will be caught, that the wrong time has been selected, that the hook or line is faulty, and that the fish are really a sort of disappointment when the party has made a handsome catch; but even these, taking them all in all, are good fellows, and only furnish a little variety. I only wish I could persuade all who have been in the habit of angling, to give up their fishing. You have no idea how differently you would regard life, if it works a happy change in the gloomy and morose, and gives the invalid a new lease on life.

THE RHODE ISLAND COMMISSION.

THE tenth annual report of the Commissioners of Inland Fisheries of Rhode Island, for the year ending on the 31st of March (New York), *Stenonopus argyrea*, in the traps this spring, was not as large as usual, but that the prices were better, and the fishermen received a fair price for their labor. On the subject of trapping the commission has the same views expressed in their last report, in which they recommended that the trap on Narragansett Pier to Socanquet Point be abolished, and the whole coast line protected, and that heart-pets or ponds should be licensed. Fish have been plentiful, especially sump of large size, orange or blackish, young blueback and sprat, or weakfish, and this is attributed to the two causes, first, the close time, and second "an exceptionally abundant season for these sorts of fish, due to favorable circumstances at the spawning season, etc."

The scarcity of lobsters which New York is so famous, is accounted for by the use of traps, which are the means of catching the fish by the thousands when they only weigh from one half to three to four pounds each. There are invested in this State by persons residing there, the sum of \$100,000 in traps, and giving employment to 394 men. In the menhaden fishery there are 248 men who depend upon fishing for their support during the whole year, of whom forty-three are interested in heart-pets. Exactly why this small number of individuals should be allowed year after year to deplete and almost ruin the fisheries, the Commissioners fail to see, and in their capacity as Commissioners, they earnestly beg that the General Assembly will cease such additions to the fishery laws as they suggest. The Commissioners find that there are a number of individuals, non-residents of the State, who carry on the manufacture of fish oil and gano and heart-seining, to say nothing of lobster catches.

The Commissioners desire to call the attention of the General Assembly to the fact that the lobster fishery of Rhode Island waters, Maine, Massachusetts and New York have the same fish to protect themselves, and it is more than time that the State of Rhode Island followed their example. The lobster law of Massachusetts forbids the sale of lobsters under one and one-half inches in length. The capture of small lobsters has gone on in Rhode Island since the first lobster pot was put in Rhode Island waters. The larger ones are sent to market and the smaller are marketed for the light of lobsters, and the small ones are their lobster pots. For a number of years past the catch of lobsters has been steadily decreasing, not as to numbers, but as to size. They recommend the passage of a law forbidding the sale of lobsters under one and one-half inches in length, and suggest that it would be advisable to forbid the sale of female lobsters with their spawn. So far as the limit of size is concerned, the Commissioners are assured that the law will be most popular. To show the value of the lobster fishery they state that one man in this city handles \$100,000 worth of traps, and that the same man handles \$100,000 worth of traps.

The Commissioners have received a consignment of 200 carp from Prof. Baird, the United States Commissioner.

DAMAGE TO THE SALMON BREEDING RANCH.—In addition to our notice of the almost complete destruction of the Government buildings on the McCloud River, Cal., in our last, we print the following from the San Francisco *Bulletin*:

"To persons who have visited the United States Fishery the height of the water will be appreciated when it is stated that it completely covered the Indian burial ground on the hillside in the rear of the buildings, and that the water which was in the tanks supplied the hatchery with water from the river were saved, they having been chained to trees. The cost of the buildings and works destroyed, it is represented, was from \$20,000 to \$25,000. At the time of their construction all the lumber had to be obtained from

saw-mills near Mount Shasta. It is claimed that they can be replaced now for \$12,000 or \$15,000.

It was from these works that the salmon eggs have been obtained and hatched for stocking the Sacramento and other rivers. The United States Fish Commission has been authorized by the Government the State has placed annually two million salmon in the Sacramento River, at an expense not exceeding \$1,000 for each million. The catch of salmon in the Sacramento River has in consequence doubled in the past few years, having risen from five million pounds to nearly eleven million pounds.

The following letter from the young man left in charge of the property to a friend in this city gives some of the details of the effects of the flood:

UNITED STATES FISHERY,
BAIRD, SHASTA COUNTY,
February 3, 1881.

"DEAR SIR, To-day I send you a few lines to let you know how we stand up this war. I had expected a great storm. Well, it came January 30, and the river that night rose thirteen feet, but went down next day. The day after it commenced raining more than ever, and at night about 10 o'clock the water rose twenty feet six inches, when Dick Hubbard and I burst in two doors in Mr. Stone's private rooms, and took out all the boxes, etc. At 11 o'clock all the houses were two feet under water, and rocking from the force of the wind. At 12 o'clock the water rose to the dwelling-house, the kitchen, bunk rooms, store house, wood shed, in fact, all the houses were."

"The remainder of the night we spent in Groom's house (post-office) on the east side of the river, and at 2 o'clock the water rose. In the morning this house stood three feet under water, and did not go down the stream. I saved all the postage stamps and stamped envelopes, but the two mail bags and letter stamps were lost."

"What shall I do about them?"

"You remember our house is opposite, and where the new trail was made last summer, well, the water rose above there. This will show you how high the river was—probably thirty feet. I have all my clothes except a new coat, and a suit that I had on at the time."

"What shall I do now? Shall I remain and take care of the chickens, for they are all that is left, pretty much?"

"Fish Commissioner B. B. Redding has telegraphed to United States Fish Commissioner B. B. Redding, asking the passage of an appropriation by Congress to defray the cost of rebuilding the hatchery. Mr. Redding thinks if the Legislature were to pass a joint resolution asking Congress for such an appropriation it would help its passage.

ICHTHOLOGICAL NOTES.

WE have received a paper of "Proceedings of the National Museum" in which are "Descriptions of two new species of Scopeloid fishes, *Sialis ringens* and *Myoxiphan crinitus*, from Santa Barbara Channel, California," by D. S. Jordan and C. H. Gilbert. The former differs from Gunther's *S. halyalis* chiefly in the dentition, canine teeth being present on the preopercle and palatines. The latter fish belongs to Gunther's genus, *Myoxiphan*, the *Scopelus* of Reinhardt. Jordan and Gilbert also describe two new founders, *Parophrys isochrysus* and *Hippinoscoloplos sinuatus*, from Fuzet's sound; several *Schodius*, whose range in the region of the family necessary in order to accommodate them, and which is here proposed; a new *Enbiotocoid* (*Abeona aurora*) from Monterey, Cal.; a new founder, *Phyllosomus stans*, from California; an *Enbiotocoid*, (*Gynostomus rostratus*), also from California.

Mr. W. N. Lockington gives a "note on a new flatfish, *Lepidosteus isolepis*, found in the markets of San Francisco, from Fuzet's sound; a note on a forgotten paper of Dr. Ayres and its bearing on the nomenclature of the *Cyprinoid* fishes of the San Francisco markets;" a "note on 'Soma' and 'Daucus'";

Jordan and Gilbert have a "Description of a new Scopeloid fish, *Schistocylus procyon*, from Monterey Bay;" a "Description of a new *Agonostomus*, *Agonostomus* from the coast of California;" and a "Description of a new species of Paralepis, *Paralepis coruscans*, from the Straits of Juan de Fuca." Mr. S. I. Smith gives a "Preliminary notice of the ornateca dredged in 64 fathoms, off the coast of New England, by the United States Fish Commission in 1880."

THE McDONALD FISHWAY.—On the 9th of this month the Virginia Legislature passed an act obliging all persons owning dams which interfere with the free passage of fish, to provide a suitable fishway, under the name of the McDONALD FISHWAY, as the fish may have free passage up or down the streams during the months of March, April, May and June of each year; and it shall be required of such parties that the same shall be restored in case of destruction, and shall be repaired and maintained at their expense, inasmuch as the fishway is to be constructed, sluices or ladders as required, they shall forfeit five dollars for each day so refused. It is the duty of the supervisors of counties at least twice a year, in the months of April and October, to examine and see that the law is complied with.

STRIPPED BASS IN CALIFORNIA.—About a year and a half ago Messrs. Throckmorton and B. B. Redding secured three hundred bass spawn from the waters of New Jersey and transported them in a live box to the McDONALD FISHWAY, where in a year a bass was caught in those waters, weighing one pound. Yesterday, a bass weighing four pounds and measuring twenty inches in length and seven inches in width, attracted attention at San Francisco, and having been caught in the ocean, off Bolinas Point, Mr. Redding secured it for \$25. The bass had already been secured by D. J. Staples, who intends to present it to the Academy of Sciences, where it will be officially examined and named.

"The above is from the San Francisco *Alta*, of February 26." We happen to know that the bass referred to were striped bass, or rockfish, *Roccus lineatus*, although the bending of the article, "California Bass," did not convey the information. They were not "California bass," but were young of the year, and were speaking, "spawn" or eggs, although in some parts young fish or " fry" are termed spawn.]

GERMAN FISH CULTURE.—The *Fischerer Zeitung*, of Stettin, says: "We learn that Mr. K. Eckardt, of Lubbenitz, has this year actually applied the principle of the 'live box' to the culture of fishculture. There is great need of the propagation of this fish in certain districts; it grows rapidly, as proven by the fact that some which Mr. Eckardt impregnated on the 13th of March were ready to be sold for sale (5000) in his carrying tanks in over one pound—a most wonderful growth, proving this fish a valuable acquisition. Mr. Eckardt will investigate the breeding of the Zander (pike perch, *Stizostedion*), which has hitherto been neglected, and will devote his efforts to the culture of the impregnated eggs of the different varieties of carp, as the scale, leather and mirror carp spawn and fry, and in the month of May will send a large package of them to America."

SALT IN TROUT PONDS.—Mr. J. Amin, Jr., of Caladonia, N. Y., writes that he will devote his attention to the culture of one of his breeding ponds with the salt water results. He found that he lost but very few fish from any disease, but more especially from fungus, which in many cases starts from the hatching while spawning, and he thinks it helps the trout in many ways. They look cleaner, and after a while grow to like it, after throwing it in the pond they would run in among it, also rub themselves in it. It also helps very much to clean the bottom and sides of the ponds of any incrust matter. He recommends the dose of ten fifteen pounds of salt per acre, and to be dissolved in the water in spawning season. The fish would be the better if it was continued during the year. If the pond is larger, use more. The pond spoken of was about 10x10ft, 3 1/2 ft deep.

AMERICAN FISHERY CULTURE ASSOCIATION.—The annual meeting of the American Fishery Culture Association will take place on Wednesday and Thursday, March 30th and 31st, 1881, at eleven o'clock, in the rooms of the Directors of the Fulton Market Fish Bonger's Association, foot of Beekman street, New York.

B. PHILLIPS, Secretary. E. B. JOSEF, President.

The Kennel.

CHAMPION RUSH.

WE present to our readers in this issue a picture of Mr. Edmund Orgill's champion small sized lemon and white pointer flush. This dog is so well known to the sportsmen of this country, having been so frequently and successfully exhibited, that further comment would appear unnecessary. He has achieved the reputation of being the typical small pointer dog in America. In breeding both for field and form his pedigree would be hard to beat; coming on the dam's side, Lilly, from a noted strain of field dogs in Tennessee that were considered second to none in flat hunting, possessing nice and great endurance. On the sire's side, Flake, he is equally good. Flake was bred by Dr. A. Russell Straehan, of this city, and was descended from the most noted Kennels of England, being a grandson of George, who was bred in the Duke of Devonport's kennels, and especially chosen for Sir Frederick Bruce, who was then Minister from England to the United States, and from whom Dr. Straehan obtained him. This gentleman has a fine life-size painting of George, executed by Bishopham George also figures in the group of three dogs pointing quail, painted by Bishopham for Dr. Straehan and which has been so extensively chronicled all over the country. He was a very stylish, compact looking dog, weighing about sixty pounds, and was the sire of Dr. Straehan's Flash, who was the sire of Flake, and, probably, was the most handsome small pointer ever exhibited in America. Flake when a puppy was presented by Dr. Straehan to Mr. William F. Stead of New York, N. Y., for whom the Dr. had a great admiration, believing him to be one of the very best dog handlers he had ever known, combining patience, firmness, gentleness and the judgment which culture brings in an eminent degree, and it was under Mr. Stead's care that Flake developed into the fine dog he was when first exhibited at the Westminster Kennel Club's first show, winning first in his class and running second to Snapshot for championship, although acknowledged by Mr. Macdonna (who brought out Snapshot to be as handsome a small pointer as had ever been seen).

Dr. Straehan seeing Lilly for the first time at the Mincos Show, strongly urged Mr. Orgill to breed her to Flake; he followed the advice, and the result was the finest and most successful litters ever born—three of the progeny at least becoming champions, namely, Bitch, Daisy and Rose. So much for good breeding. Flake and Lilly were indeed a beautiful brace, and from this union Mr. Orgill had the gratification of establishing that dynasty of pointers so familiar to small pointer admirers.

- The subject list shows the prize winnings of Rush:
1877—Baltimore—Puppy class, second prize; by his litter sister, Rose, taking first prize.
1877—New York Open class, under 50 lbs., first prize.
1877—St. Louis—Open class, under 50 lbs., first prize.
1877—Louisville—Open class, under 50 lbs., first prize. Also special prize for best pointer in show; also special for best pointer under 50 lbs.; also special for best pointer under eighteen months of age.
1879—St. Louis—Champion class, under 55 lbs., first prize; also special for best pointer in show.
1879—Philadelphia—Champion class, under 55 lbs., first prize; also special for best pointer in show.
1880—New York—Champion class, under 55 lbs., first prize; also special for best pointer in show.
1881—Pittsburgh—Champion class, under 55 lbs., first prize; also special for best pointer in show.

In addition to the above Rush has won several prizes in brace and other kennel shows.

NORNA.

WE publish on this page the portrait of the imported field trial setter bitch NORNA, owned by Mr. James H. Goodsell, of this city. Norna is a beautiful bitch, black, white and tan in color, and was bred by Mr. R. H. Bayley, of New York. She was sold to Mr. Cunningham. This gentleman being obliged to give up shooting owing to ill health, sold Norna to Mr. A. H. Moore, of Philadelphia, from whom she was purchased by Mr. Goodsell.

Norna is out of Mr. Llewellyn's Nolla, by his Dan. She thus traces her blood back through some of the most celebrated of Mr. Laverack's prize and field trial winners to Fonthill and Old Moll. Her brother grand sire, was the sire of most winners on the beach and in the field than any dog that ever lived. Among them were Llewellyn's Countess, Prince and Nellie, Bayley's Daisy, Bayley's Victor and Clara, Wardlaw Read's Sam, Pilkington's Dash, Laverack's Cora, Field's Bruce, and many others, all equally well known. Mr. Raymond's Pride of the Border and Fairy were also by Dash II. It is hard to say whether this great dog was more celebrated as a prize winner or as a sire of winners. Moll III, the granddam of Norna, is as famous as a mother as Dash II. is as a sire. She is the mother of Llewellyn's Countess, Prince and Nellie, Bayley's Daisy, Raymond's Sam, Raymond's Fairy, Pilkington's Victor and Scott's Dicksie's Belle, Laverack's Cora, Llewellyn's Daisy, and many others.

Dan, the sire of Norna, is so well known to our readers as to need no long eulogiums. In field trials he won first in the Bruce stakes at Shrewsbury in 1871, and first in the Bruce stakes with his brother Dick at the same time and place; he also won the champion at Shrewsbury that year. He has never been beaten in a competition in the field. Old Duke and Rhoebe, the sire and dam of Dan, are especially well known as field trial winners, and Rhoebe is especially so as the founder of the field trial strain of setters. In the four years from 1870-1873, inclusive, the National Field Trial Champion Plate was won by

Bruce and Roy Roy, her sons, and Daisy, her granddaughter. She was the mother of many field trial winners. It will thus be seen that on both sides Norna comes from a race of winners, and no doubt we shall hear of her or her progeny in coming field trials on this side of the water.

WANTED, A WOODCHUCK DOG.

EDGEMONT, Delaware Co., Penn.
"DEAR SIR—The farm is overrun with ground-hogs (woodchucks). Last season it was bad enough—this year it will be worse, as none were destroyed. They swarm all over the county and are becoming a positive pest. Their holes are in every field, and it is no longer safe to run the mower without first going over the ground to stake or mark the holes to prevent injury to the team, for if a horse steps into a "hog hole" there is a good chance of breaking a leg.
"What are we going to do about it? We can't poison the little brutes, for they eat nothing but vegetable food and prefer growing clover to anything else. I suppose Paris green sowed over the clover when the dew is on the field, but that the business, but it would scarcely be healthy for the cattle. So that won't do. Shooting I have tried; it is 'mighty long between shots.' They know all about it and won't show a nose above ground after the first shot. Our

MR. ORGILL'S POINTER RUSH.

farm dog can't catch them outside, and he is too big to go down the hole and drive them out.

"Is there any breed of dog small enough to go down a hog hole and with phokt enough to stay there until he drives the 'varmint' out?"

"If there is such a breed I want it, and so do my neighbors."
"B. W."

The foregoing letter from a farmer friend recites a real grievance, so I have taken the liberty of forwarding it to you to place before the readers of the FOREST AND STREAM. And now, as to the kind of dog needed. Small size is the first requisite, else he cannot enter the burrow. Next comes gameness, for the groundhog is a sharp biter and makes a brave fight when in his stronghold. The next requirement is ability to punish the vermin and make his quarters so hot that he will bolt out. Now, what breeds that are available in this country, fill the bill? The Skye will not answer—he carries too much coat; of a lot summer day, underground work would almost stifle him and in wet weather he would be loaded with mud. Dandies would answer, I have no doubt, but no one breeds them here. Fox-terriers would seem to be the dogs indicated, as their coats are right for the work, their size suitable and they have the necessary gameness. They are classed at our bench shows as a sporting dog—why, I never could exactly understand, as no legitimate field work is offered for them; but if they answer for this they will earn the name—and the blessing of every farmer in this region. Will the breeders of fox-terriers take up this subject in your pa-

per and let us know if the dog has been used in this line and if he has proved a workman?
If such are the facts, we will see the fox-terrier take the place of the farm cur, and the breeding of these dogs will receive a fresh impulse, as the demand for them in agricultural districts will be almost unlimited.
LETS.

THE PURE LAVERACK SETTERS IN ENGLAND.

BY "LEATHERHEAD."

IN consequence of the very unmerciful way in which the name of "Laverack" was made use of by advertisers and those who wanted to sell setters, I determined three years ago to collect a list for *Bret's Life* of all the setters that could be proved to be purely bred from the strain mentioned and described by Mr. Laverack in his "Book of the Setter." This list, I believe, had some effect in warning people that setters, because they were called Laveracks, were not necessarily of that breed, and I know in some cases, when proof has been asked for, it has been wanting, and that the dogs advertised as such had no more pretensions to be called Laveracks than Hereford cows had to be called Short-horns. In my original list I know I was thought credulous for not admitting some that were undoubtedly very closely related to Laveracks, but the sequel has proved, I think, that it was right, as in closely breeding to the strain, others might have an equal right to claim purity by the admission even of one cross; and if that was allowed the result would ultimately follow of having the pure Laverack blood, such as we can fairly consider it, stamped out. A cross, however remote, would not be allowed as thorough bred even in the "Stud" or "Herd Books," and as there are very good proofs that the Laveracks belong to an old and distinct family of setters, I think that on every principle of breeding it should be guarded in just the same degree as any other specified breed. I know I shall be met with the argument that other setters are a good, but that is beside the question, and must remain as a matter of opinion, it being only reasonable that just as ordinary horses are improved in their generation by being crossed with thorough-bred sires, and all cattle are improved by crosses to the short horns, so has every sort of English setter been improved by an alliance with the Laveracks. It might be well imagined that the Laverack could be improved, but I maintain that there has been a total want of proof in this direction; as far as I am aware, the Laverack may be as beautiful as a pure one, and be as perfect, in every particular, the proof that such merit is permanent must be tested by future breeding, such as breeding a cross bred animal to a cross bred; and as regards setters, I think that in this country or America? I think not, though doubtless other strains have been improved by Laveracks, and these bred into the Laveracks again, have as a matter of course continued to improve. All setter breeders, if they will really acknowledge their true connections, will, I think, corroborate me in this position, but if any of the show lists and Field Trials for the last three years are examined, it will be found that Laveracks have had a good deal to do with success, as with the exception of old champion Ranger, nothing less than a half Laverack has won any Field trial or a large show. The victories of the pure ones have been limited, simply because they are very scarce, and as regards Field Trials, those who own them have not been as a rule the habitual patrons of those pastimes. In America, where the Laverack has been very nearly the first year that our Transatlantic cousins had tried running the pure ones, and, by-the-by, of their own breeding. The success that followed the breed last autumn was almost remarkable, as Thimber, a pure bred one, and his daughter Daisy Laverack, also pure, were well known to the public, and engaged in the younger being second in the American Field Trial Derby. At New York, and also at Philadelphia, the pure Laveracks were very prominent in the prize list, and in England they have not been behind either, as out of seven prizes at Birmingham the pure ones took five, and at the Alexandra Palace, two out of ten. This is against long odds, it must be recollected also, as the half and three-parts bred ones outnumber the pure ones by at least thirty to one; they are not plentiful for as my appended list will show, the number of owners having both dogs and bitches is extremely limited, and, as good representatives of the breed are expensive to purchase, there are many people who have a partially for the family, but with purses not sufficient to get dogs and bitches bred far enough away to breed to, and then as a matter of necessity the progress in forming a kennel is very slow. The possession of a good bitch is almost better than owning a dog, as blood can be hired or borrowed, but those owners in my list are the most fortunate who own representatives of both sexes at a sufficient distance in their breeding to allow a continuation of the policy to breed pure.

Beginning with the dogs, I find I can give a longer list than I could three years ago, although there are several death vacancies, the notable ones being Blue Bird, and the other two. The reason of this is a good bitch is almost better than owning a dog, as blood can be hired or borrowed, but those owners in my list are the most fortunate who own representatives of both sexes at a sufficient distance in their breeding to allow a continuation of the policy to breed pure.

MR. GOODSSELL'S SETTER BITCH NORNA.

Mr. W. Bayley's Lem V. Victor (K. C. S. B. 4,563), by Old Dash out of Moll; whelped 1860.

For Sale. Water Cress & Brook Trout. AQUETONG TROUT and CRESS FARM.

Messrs. Thompson Brothers offer for sale Fresh Water Cress in one-half bushel baskets, cut fresh every morning, and delivered in New York city between 8 and 12 o'clock at any point below Twenty-third Street at 20 cents per basket. We have constantly on hand, in our ponds, Brook Trout from the egg to three years old, all sizes, for stocking private ponds or streams. Can supply private parties, hotels or restaurants in New York to a limited extent with fresh brook trout in their season every morning, leaving our ponds at 4 A. M. and arriving at New York at 9:30 each morning. Further information apply to

THOMPSON BROTHERS, Aquetong Trout Farm, New Hope, Bucks County, Penna.

FOR SALE.

A Farm of 22 Acres at Gouldsboro, Bucks Co., Penn.

On the Letcher River; about 12 acres under cultivation; the balance is wooded with a beautiful pine grove, through which a stream of clear spring water runs; abundantly stocked with speckled trout; the finest place in the State for a trout pond; a dam can be put in at a slight cost and will cut itself with trout. A fine young orchard of about 30 trees on place, which is in grass and will cut about 10 tons of hay per year. All kinds of game and fish in the vicinity. Will sell for \$200, one quarter its value, and will take a first-class \$10,000 in part payment. Clear title and possession given at once. A. H. SPIGNER, Morris, Tioga Co., Pa. Mar24

FOR SALE.

Trout Hatchery and Preserve in Connecticut, four hours' ride from Grand Central Depot; 71 years' lease of about one mile of a grand stream; high natural falls at one boundary and solid masonry dam at the other; also a timber dam for smaller lake. New Hatchery House complete. Every article of troutery, very good and, in fact, all necessary appliances. Stream and lakes now thoroughly stocked with trout from fry to five year olds. All trout sold at \$22 per annum. Will sell lease and improvements low to a prompt buyer. JOHN B. MORGAN, 83 Broadway, Brooklyn, E. D., N. Y. Mar24

GRAND EXHIBITION OF BROOK TROUT. Important to Fish culturists!

All parties that have Brook Trout that they desire to market this season will find it to their advantage to consign their FISH TO ME. I shall make my usual display (on April 1 and 2) of Trout, both alive and dead, from all the leading Fish culturists in the United States and Canada. Specimens are also expected from France and England. Do not ship any Trout to arrive before the morning of April 1, as THEY WILL NOT BE RECEIVED. All Trout that are intended for the exhibition should be packed carefully and marked, "FOR EXHIBITION"

Box 3,994.

The Kennel. FOR SALE—THE BLUE STAR DOG KENNEL SPANIEL BREEDING KENNEL.—I will sell reason, on due to increase of price, or to business cares, which will call for the spare time I care to give in the future, and also enable me to complete my unfinished work on breeding, breaking and management of Spaniels for American Sportsmen. Therefore I offer as above my Kennel stock, all accessories, with the best of the breed, and good-will, to any one who having the taste and competent to carry on the good work well. The demand for this breed is increasing every year, and it would have been sold last year (1890) from this Kennel had we had them. My price, \$1000, is extremely low, considering the well established reputation and lucrative facilities. I will give all time and advice required, gratis, to the successor. One having breeding experience is preferred, and would like to hand over before June next. Only parties meaning business need apply. M. P. McKEON, Proprietor, The Blue Star Kennel, Franklin, Del., Co., N. Y. Mar10

THE FASHION KENNELS offer for sale or exchange the following stock: Basset, fox terrier dog, 18 months old, white with black and tan head, bred by Worsley of Liverpool; he is by former out of Fanny, price \$25. Wire-haired fox terrier bitch, white with black and tan mark on head, 18 months old, bred by C. Kirke, Lincolnshire, England, price \$20. Fox terrier liver-and-white cocker dog, 18 months old, by Worsley's Carlo, out of Elio Kirke; price \$20. Luke Schoofart, full terrier, white with brindle mark on head, body and tail; good on all points; kind and fit to win on the beach; price \$30. Cocker, liver, white-and-tan set; said to be trained, and runs up very well on all points; price \$10. I will exchange any of the above stock for fine black, white and tan, or red and white cocker spaniel dogs, or any kind of dog, but the above has each a full pedigree except the set, and his sire is well known. Address J. H. WINSLOW, P. O. Box 475, Baltimore, Md. Mar24

FOR SALE—Irish Setter Dog, Imp. Grifza, by Moore's Rufus ex Twigg's Kate, 2nd Prize, Dublin, 1877; Rufus, by Palmerston ex Queen; Kate by Palsey ex Palmerston ex Moore's Fido; dam of Mina and several other champion and prize bitches. Grifza won 2nd open class and V.I.C. champion class, Baltimore, Md., when but 12 months old. Only Irish setter ever shown. Red Irish Setter, Bitch Rosina by Imp. Grifza ex Imp. Bell, by Dr. Ross's Patsy ex Moore's Bell; Bell, by C. Moore's old shot (father of Palmerston) ex Kate. Both the above dogs were bred and broken by Mr. Gilbert, ex Mr. O'Gill. Also the Chesapeake Bay dog Greek, by Mr. Jno. Schwartz ex Mr. Martine's bitch. Address GEORGE BROWN, No 4 Enoch Street, Baltimore, Md. Mar17

FOR SALE, the elegant black-and-tan Gordon Setter dog, 2 years old, first prize winner New York Bench Show; full pedigree; is thoroughly broken on all game and is sure in the field. Also two first prize setters, one with puppies by Mr. O'More, out of Beesey, and one by Miley imported York, out of Diddford's Bess. These are our most perfect dogs, and are bred by few white litters on breast. Price of pups, each \$10. Also two red Irish setter bitch Beesey, by Miley's imported York, out of Diddford's Bess; is three years old; deep rich red; is thoroughly broken on all game; is second in the field and a perfect retriever. Also one pair of setters, one of all of above, address R. RUSSELL, Bowry, N. Y. Mar24

**GUNPOWDER!
Dupont's Rifle, Sporting and
Blasting Powder.**

THE MOST POPULAR POWDER IN USE.
DUPONT'S GUNPOWDER MILLS, established in 1803,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

Dupont's Diamond Grain.—Nos. 1 (course)
to 4 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass ball and pigeon
shooting. Packed in 1b canisters.
Dupont's Eagle Ducking.—Nos. 1 (course)
to 4 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass ball, pigeon, duck and other shooting,
with either muzzle or breech-loaders. Packed in
1b and 50c canisters and 6x and 12x kegs.
Dupont's "Choke Bore" Guns, and particularly for
prairie and upland shooting. Burns slowly, strong
& moist; does not cake or burn on the barrels,
gives both a good penetration and a close pattern,
will be found well adapted for glass ball and pigeon
shooting. Made of two sizes, only No. 7 and No. 5,
No. 7 being the coarsest. Packed in 6x½ kegs and
1b canisters.
Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain for pistol shooting.
Packed in 1b canisters and 6x½ kegs.
Dupont's Rifle Pk.—See Shooting.
FFG, and FFFG. For long-range rifle shoot-
ing, the FFG, and FFFG, for general use, burning
strong and moist. Packed in 2½, 1b and 50c canis-
ters, 6x, 12x and 25½ kegs. FFG coarse, FFFG fine.
Dupont's Sporting, Mining, Surprise and Blasting
Powders of all sizes and descriptions. Special
Grades for Export. Also Rifle, Cartridge, Musket,
Cannon, Mortar, Mammoth, Hexagonal, Cubical
and Pellet Powder, U. S. Government standard.
Powder manufactured to order of any required
grain or proof.
Agencies in all the cities and principal towns
throughout the United States. Represented by
F. L. KNEELAND, 70 Wall Street, N. Y.
N. B.—Use none but DUPONT'S Pk. or FFG, for
long-range rifle shooting.

**The Hazard Powder Co.,
MANUFACTURERS OF
GUNPOWDER.**

Hazard's "Electric Powder."
Nos. 1 (fine) to 4 (course). Unsurpassed in point
of strength and cleanliness. Packed in square
canisters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 5 (course). In 1 lb. canisters and
4½ lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (course). In 1 and 5 lb. canisters
and 4 and 12½ lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting,
it ranks any other brand, and is equally ser-
viceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG FFG, and "Sea Shooting" FG in kegs of
4½ and 6½ lbs. and cans of 5 lbs. FFFG is also
packed in 1 and 1½ lb. cans. Burns strong and
moist. The FFFG and FFG are favorite brands
of ordinary sporting, and the "Sea Shooting"
FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON and MUSKET POW-
DER, also SPECIAL GRADES FOR EXPORT,
OF ANY REQUIRED GRAIN OR PROOF,
MANUFACTURED TO ORDER.

ANSWERS TO CORRESPONDENTS..... 178

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, March 31.

WHAT SUPPLIES SHALL WE TAKE WITH US, is a question that has probably vexed the spirit of many a man, and has caused anxious thought to every one who has ever started out to go into camp in the wilderness. There are some men who are contented to live on what they kill during the trip, and who carry with them nothing but bacon, bread and coffee, and there are others who scorn such meagre fare and demand the accessories of condensed milk, canned vegetables, potted meats and preserves. There is no way of transporting edible luxuries so convenient or so safe as in cans, and such goods have been deservedly popular in the past. Lately, however, we have begun to hear complaints, which lead us to imagine either that the goods put up by long established firms are deteriorating, or else that inferior articles are being placed on the market. We have recently received a cheerful letter from a New England correspondent who tells us that a canning establishment near where he resides, sent through the country last winter and bought up all the sheep that had died and all the old poor cattle for use in their establishment. Such a statement is not particularly pleasing to one who is accustomed to depend in part, while in camp or on his yacht on his meats put up in cans. But aside from anything of this kind, what can be more annoying when one is wholly out of reach of the market than to find one's vegetables spoiled and the meats tough or uneatable?

Our readers, whether on land or on board ship, use a great quantity of such stores as these, and they want them good. There must be some reliable houses which deal in provisions of this kind, and we should be glad to know who they are—whom we can feel safe in recommending.

Will some of our readers give us their experience in this matter for the benefit of the fraternity at large?

THE COMING OF THE SHAD.

THE advance-guard has arrived, and the main body, in solid phalanx, may be expected soon. About this time, as the almanac man would put the case, it is in order to scald out the frying pan to take the flavor of the autumnal sausage from its ferruginous pores; scour up the gridiron to remove all suspicion of chops, steaks or oleaginous mackerel; but if you plank your shad simply wipe the dust from the plank, for it is held that the longer a plank is used the more its pores become filled with the essence of previous shads, and the less can therefore be extracted or absorbed from present ones.

The extension of lines of travel have enabled New Yorkers to eat shad nearly all winter, beginning with those of Florida, and after consuming quantities of them they take from the more northerly rivers in turn until the run begins in the Delaware and the Hudson, or "North River," as they locally call it. This has tended to entirely destroy the romance of the coming of the shad, which was formerly hailed with delight by the old Dutch settlers as a relief from the spare-rib and "oleo-cooks" of winter. In those days it meant an unlimited supply of a new food, and great was the rejoicing at the capture of the forerunner of the school of eulopoids which were as certain to come after as the dogwood and shad-blows were to bloom. In yore olden time the advent of the shad was a thing to talk about, and Mynheer has been known to even let the fire in his pipe die away in his haste to convey the news over the old half-door to his neighbor on the other side of the way, how Pieter Weindirk and "Brommy" Van der Kuinck caught a shad in their fyke by the Battery this morning. Later than this, within our own short memory, the crack hotels paid prices from twenty-five to fifty dollars for the first Hudson shad, and it was announced in all the city papers that the enterprising proprietor of the Asterick House had served up the first shad of the season to his guests at the price above named. Alas! he comes as unheralded and unnoticed now as the Member of Congress from Sawlogville, who wonders if the people will close their stores on his arrival; and so many Southern shad have preceded him that his identity is lost, and instead of a pioneer leading a mighty host he is simply a shad whose only credentials are the word of the marketman who certifies to the fact that he bought it of a fisherman who caught it at a certain place; but in appearance it is not to be distinguished from its fellows of the Chesapeake who have graced the slabs for weeks before, except perhaps by a slight fullness in the eye which denotes the freshly caught fish.

We feel sorry for the man who does not long for the season of succulent shad, and for the man who "likes 'em if 'twasn't for the bones." We grieve for the former because, perhaps, he never ate shad, except small ones; and your real shad lover abominates a small one, dried up, perhaps, in a pan, and wishes that he could sit down to a juicy six-pounder quickly broiled or planked. The latter—the bone man—has our sympathies, because he does not know that shad were made to linger over and enjoy and not to bolt as our African brothers do their ham and eggs; and besides, shad are not suitable for the railway lunch where "twenty minutes for refreshment" are shortened at both ends until there is actually only half that time available. Moreover, he knoweth not that a shad or other fish is not to be cut across like a slice of liver, but that the fork must separate the layers of muscle between which lie the small bones, which in cutting are inextricably intermingled with the flesh. He knoweth not that the shad is built upon a correct plan, and that it is his piscivore knowledge which is at fault; but we will tell him at every opportunity, so that he may yet learn to enjoy one of the finest fishes which the palate of the man whose ichtyophagic education has been complete knoweth of.

The first shad is usually taken at New York on or about St. Patrick's Day, blessings on him for it; for perhaps if the Saint had not existed we would never have known to what a height a form of herring could attain. Think of it! As Ireland owes her freedom from snakes to St. Patrick, so America owes the shad to him. The admirers of St. Patrick vehemently insist that he was a gentleman. We believe it. Why they so strenuously insist upon his gentility we do not know. Perhaps it was an unusual quality in a saint; but,

be this as it may, we hope that while his memory endures the snakes will not invade Ireland nor the shad desert the waters surrounding Manhattan.

WE CALLED ATTENTION LAST WEEK to an admirable provision in Assembly Bill 242, in which a bounty is offered for vermin. Some such excellent amendment we hope to see added this session to the existing law.

There are other sections of this bill, however, which by no means recommend themselves to the public. Section 2, for example will call forth the unqualified disapproval of all shore gunners. It provides that "No person shall kill, or expose for sale * * * any * * * rail, snipe, plover * * * between the first day of May and the first day of September, except in the waters of Long Island, in which waters none of said birds shall be killed between the first day of May and the first day of October. Any person violating," etc. This provision would certainly appear to have been drawn up by some one who was wholly unfamiliar with the shooting along the tide water flats and marshes of our sea coast. By the introduction of such an amendment to our law, the rail and the bay snipe shooting would be practically abolished in this State. By the first of October the rail shooting is about over, September being the month in which these birds are found in our marshes in the greatest abundance. We usually kill a few birds after October first, but no counts are made as late as that which will compare with those made about the middle of September.

The bay birds commence to fly in July, and often the height of the shooting at dowitch and jack is during that month or early in August. By the first of October none of these birds, except a few stragglers, are to be found on the Long Island shore.

We have assumed that the word "snipe" here used is a general term employed to designate bay snipe and shore bird, and as it is immediately followed by the word "plover" this inference seems a fair one. We think that all will agree that the section alluded to is an unfortunate one and should not be passed.

THE FACTS IN RELATION TO THE ANNUAL DESTRUCTION OF deer in Michigan will certainly be read with interest by every one. There are at present but few localities within reach of large cities where a man can go with any reasonably fair prospect of having a deer hunting. Minnesota and Michigan are two States in which this game is still abundant, but in which, unless steps to check its slaughter are speedily taken, it will not long remain so.

There is much to be said in favor of the proposition to enact a prohibitory export law, and there is little doubt that such a measure would meet with general approval among a large class of sportsmen. On the other hand, it would have to encounter the most bitter opposition from those who shoot for the market and those who deal in game. Such a law, however, would certainly protect large game, for if it were illegal to carry game out of the State no one would kill more than he could use on the spot. The market hunter's occupation would be in a measure gone, for he would only kill what could be bought and consumed within the limits of the State. A provision taxing the green hide would probably do good work in supplementing the Prohibitory Export Act and would so raise the cost of the hides that it would be no longer profitable to kill the deer for these alone. This question of the protection of large game is one that demands the immediate attention of those interested in game preservation, and we are glad to see the Michigan sportsmen, through their able and energetic representative, Mr. Roney, taking hold of the subject in earnest. It is so much easier to preserve the game now, while there is some left, than it will be in the future to attempt to restock districts from which the indigenous *fera natura* have been exterminated, that it is worth while to make great efforts to save what yet remains to us.

AMONG the "dogs" recommended or suggested as useful for killing woodchucks are the fox terrier, the dachshund, the spotted turtle and the steel trap. Surely with all these assistants our farmers ought to be able to clear the pests from their gardens and clover patches.

A SUCCESSFUL NEWSPAPER.—It gave us great satisfaction a few weeks ago to compliment the *Commercial Advertiser*, on its general appearance and readable columns. Again we are obliged to note the great change made in its appearance since last Monday. The paper has been enlarged to 36 columns, the "make up" changed and altered for the better, and it is printed from the newest invention in presses. A type web rotary press, made by R. Hoe & Co., capable of printing 22,000 perfect sheets an hour, has been added to their press-room, and the paper may be said to be in perfect shape for any and all kinds of work. This is an evidence of prosperity and a good bank account on the part of our aged contemporary. The columns are as young as ever, and filled as usual with bright and clever hits. The advertising columns also appear fuller, and everywhere the impression is that the *Commercial* is the leading afternoon paper of this city. We congratulate the *Commercial*, and utter the wish that its prosperity in the future will be as solid as it is at present.

A LETTER purporting to be written by D. C. Sanborn has recently been published, in which he complains that a communication addressed by him to the *FOREST AND STREAM* was mutilated in publication. The letter in question contained a considerable amount of matter which had no bearing whatever on the point at issue, which was a difference of opinion between "Fritz" and Sanborn. On the receipt of the latter's communication he was written to, on the 28th of February, that we would publish that part of his letter which referred to him personally.

The letter was held over our issue of March 3 in order that his reply might be received, and, as nothing was heard from him, we assumed that he was satisfied with our offer and his letter was printed. Does it take eleven days to receive a reply from the town where Mr. Sanborn lives? We usually can receive replies from there in half that time.

It is evident that the *FOREST AND STREAM's* strictures on the dishonorable practices of certain unprincipled dog handlers have cut them deeply, for the snappings and snarlings at our heels are loud and continuous. Mr. Sanborn we believe to be a very honest and worthy man, but we cannot congratulate him on the company he has gotten into. The bark of this crew is worse than their bite, however—if they have any bite.

THE CHARMING STORY of the two little gray foxes so delightfully told in another column by an English lady resident in Virginia, teaches a lesson that all may study with profit.

There is no animal that is by nature wilder than the fox, and yet by kind treatment and constant association with man even these wild creatures may be rendered docile, companionable and fond. Each experiment of this kind that is related confirms the belief that only patience and perseverance are needed to render the wildest animals contented under domestication. The instances of tamed grouse being tamed, recently cited in these columns, bear directly on this point, and every year's experience leads us to hope that the day is not far distant when many species of our wild game may be bred in the domesticated state and may thus afford a constant supply from which our covers may be stocked.

THERE IS IN ENGLAND a Children's Society for the protection of birds, and it is said that the membership now numbers over 23,000. Each child who becomes a member takes a pledge as follows:

"I promise to be kind to all birds as far as I can; to feed birds in winter with spare crumbs instead of wasting them; not to molest or disturb birds during their building season; not to rob the nests of their eggs or to tear out the nests; not to kill the young ones or otherwise injure them; to try and induce others to take an interest in these beautiful creatures, and promote the objects of the society."

ON THE WING.—Early next spring Col. E. Z. C. Johnson, "Ned Buntline," will leave the East on a visit to the Ranch of Buffalo Bill and Frank North, the Chief of the Pawnee Battalion in Western Nebraska, thence to Denver, Colorado, and still further to New Mexico, to see to interests he holds in the Lode and Placer Mining Co., now working a heavy force near Fort Craig. He will send a condensed report of all he sees that tends to sporting interest to its white gene.

IF THE BENCH-LEGGED BEAGLES are really basset hounds, as General Bond in his letter printed in another column hints, by all means let them be called so. This strain of dogs is recognized at all the English dog shows and is classed as a distinct breed, quite as much as mastiffs, poodles or blood-hounds.

The very clear statements of fact in General Bond's letter seem to be a conclusive reply to the insinuations that the bench-legged dogs of Maryland indicate a dactylomet cross with the straight-legged beagle.

THE RULES OF THE TORONTO GUN CLUB, revised for 1881, contain in a very small space a large amount of valuable information. In addition to the Constitution and By-Laws of the club and the rules for trap shooting, there are printed the game act and the laws affecting the fisheries of the Province of Ontario, the whole forming a compendium of great value. We understand that the Toronto Gun Club will be glad to

exchange copies of their rules with any other gun clubs or sportsmen's associations.

THE AMERICAN FISHCULTURAL ASSOCIATION.—The annual meeting of the Association is taking place as we go to press. Our next issue will contain a full account of the incidents, papers and discussions.

The Sportsman Tourist.

WILD TURKEY HUNTING.

NOW and then we have an item in *FOREST AND STREAM* on turkey shooting, and as the item seems to prevail that large shot is the only way in this line of game and as my experience puts me in a position to say something on the subject, I propose to give some of my views and add a few incidents which may not be uninteresting to your readers.

Twenty-five years ago this was a locality fit to gladden the heart of any not over-exacting sportsman. Here were quail, woodcock, snipe and ducks in thousands, with wild turkeys in flocks numbering sometimes a few hundreds to be found in all directions; and here my father and I indulged in intense love of dog and gun, limited for years only by such laws as govern sportsmen who need no statutes. In season we turned our attention to all the varieties of game mentioned; and it was not uncommon when hunting quail in briery or grassy coverts to come suddenly upon wild turkeys which, taking wing, sometimes afforded the delicious opportunity of a successful "double." One day, many an old gopher was abruptly gave up his life to a charge of No. 8 shot, fired from a seven-pound, fifteen gauge, cylinder bore, muzzle-loading gun.

This need not seem incredible, as it is a fact easily explained. It may not be generally known that the head and neck of a turkey is exceedingly vulnerable; but to such an extent is so, that a single pellet of No. 8 in the head at forty or fifty yards will prove instantly fatal; so considering the closeness of a No. 8 pattern and the soundness of a good gun, with his head and long neck exposed at thirty or thirty-five yards, and scarcely a chance of escape, and with a good choke-bore I should expect to kill almost certainly with each shot at forty yards.

On the other hand, it has frequently happened within my knowledge that turkeys shot through the body with several bushshot or a double-barrelled gun, and that they were fortunate found and secured by another shot, escaped to die or recover from their wounds. For example, I will mention two or three of the many instances to which I might refer. A flock of about a hundred wild turkeys was scattered one evening at roosting time and a party of four of us went to the place next morning before daybreak with the intention of calling. One of the several turkeys killed on this occasion was to all appearances active and sound as usual, and as he was about picking revealed that a rifle bullet had entered about an inch to the left of the tail and passed out at the breast within an inch or two of the neck, thus traversing nearly the full length of the body. Yet this wound was almost healed.

While hunting near in one of our northern counties a companion was taken sick and had to return home. He left his gun (a double-barrelled) with me, thinking I might sometimes prefer to use the shot-gun with a double-barrel, and far from the house at which I stopped was a large stubble field bounded on two sides by a deep forest. Knowing that wild turkeys were in the habit of feeding in the field I concluded to take both rifle and shot-gun and steal a march on them. Loading the shot-gun with No. 6 shot I made a detour into the woods and stealthily approached the field. Looking cautiously over the fence I discovered in the centre of the field, at least a hundred yards away, a flock of turkeys unsuspectingly feeding.

Knowing the probability of getting either a single or double wing shot with the shot-gun should I fire the rifle before they observed me, and fearing to wait for a better chance lest I be seen and lose all, I leaned the shot-gun ready for escape against the fence, selected my turkey and fired. I saw that the bullet had taken effect, but the turkey, with its wings slightly, managed to rise, and with the rest of the flock came directly toward me. Quickly changing guns the prospect was now quite pleasing, but I determined to secure the wounded bird if I got no other. I, therefore, kept my eye on the laggard, and as he gave me his side I fired and killed him dead. Turning quickly to shoot the second barrel I found that the other had entered the tree and he had escaped. Thus it was that the opportunity to make a double shot, but secured a fine turkey, which, though shot through with a ball weighing fifty to the pound, I should have lost, but for that fatal No. 6.

Next day I went again with both guns to the same field, but this time I approached it on the other wooded side. Near the same spot which the turkeys occupied on the previous day was a single turkey and about the same distance away. At the crack of the rifle he fluttered round in every direction trying to rise, and finally succeeded in clearing the stubble, going directly away from me, but after getting a start he circled round and came straight toward me. When close enough I let him have a charge of No. 6 which sent him almost perpendicularly more than a hundred feet high, where suddenly his life ended, and he fell with a tremendous thud almost at my feet. The rifle bullet had gone through just an inch back of the centre, just as the one of the day before had done.

While the latter two incidents serve to show what fine shot may do and how a bullet may fail I consider them also worthy of mention as something remarkable, that on two successive visits to the same field, and yet from entirely different positions, so nearly the same train of circumstances occurred.

It happened often enough that turkeys and sometimes old gobblers, presenting a side shot with the wing raised, were killed with No. 8 shot by hitting in the body only, but for body shooting no one who has tested the matter is better aware than myself that No. 8 is too light. For many years my father and I preferred No. 6, and very rarely used anything larger, but later I adopted the plan of loading one barrel with No. 8 the other with No. 3, and in doubtful cases firing both at once. This gave most gratifying results. But now that guns are changed my theory would be to load one barrel of a good choke bore with No. 8 the other with No. 1.

Our usual method of hunting turkeys was by the aid of a pointer trained to take the trail, and follow it as rapidly as possible, giving tongue only when one or more birds were forced to take wing, and then returning to take the trail of any that had been driven, forcing them to flight in the same direction as the repeating this line as a trail could be found. Then if in heavy timber discretion was used as to the best

location for a blind, and one hastily constructed of stumps, sticks, bark or anything suitable at hand. Entering this with the dog, and placing the gun in readiness for quick work, should it be necessary, a bone from the wing of a turkey was employed in imitating the call. This generally elicited an answer from some already lonely and anxious turkey, which possibly came rushing almost into the blind before the bone or other call could be casually laid aside and the gun brought to bear. I once had a turkey so quickly upon me that before I could catch up my gun and shoot he jumped on the log behind which I was hidden, within a foot of my face. The result was a beautiful opportunity for a flying shot, which terminated his career, but I have always been sorry that I did not grasp him by the legs.

Some flocks sometimes will come thus freely to the call, and there has been times when there was reason to doubt that had I been so disposed I might have killed nearly if not quite all of the flock. I have, however, killed as many as five from a single blind within about an hour. Then, again, a flock may be scattered which calls more or less freely, but will not come where no turkey is to be seen. Others are not disposed to call at all, but now and then if calling is good, the dog close and no movement of the hunter has been detected one of them will suddenly appear, and if you are close before any discovery is made either on the part of the hunter or turkey. The surprise in this case is generally mutual. And some flocks cannot by any means be induced either to call or come. I once killed at intervals by one means or another, eleven out of a flock of twelve turkeys; but though they were often most thoroughly scattered I never could by any possibility get them to answer me if I came. Nor did I ever hear them call under any circumstances.

When turkeys are found where high grass, weeds or briars abound they are apt to hide like quail and will lie to the point of a dog, or until the hunter approaches within a few feet of them, when if there is considerable cover through which they can run easily, they will often try to make their escape on foot; but if the cover is too dense for that, or so scattering that they must stand or lose their heads, they take wing. A flock so scattered affords the grandest sport of any kind, and then, only a search through the cover as for quail, flushing a turkey here and one there, until, perhaps, in sheer ecstasy one is tempted to kill too many. My father once scattered quite a number of turkeys in a little prairie thickly overgrown with bonset in which they hid. Hunting this he flushed and killed six turkeys, one, at least, making a double shot. He then quit, without knowing how many more he might kill, the remainder of the flock being still in hiding there.

"F. P.," in a late number of *FOREST AND STREAM*, tells of his astonishment at killing three turkeys at a single shot with No. 4. But I shall not be surprised if some day I kill three times three with a single charge of No. 8, provided I can get their heads together in such a way as sometimes happens, and as I still hope will yet happen to me. My father once scattered a flock of turkeys, but he blind and continued calling. Pretty soon three turkeys came up, and, waiting until their heads were in range, he fired, killing all three at one shot with a fifteen-bore gun weighing less than seven pounds, and loaded with two drams of powder and an ounce of No. 6 shot. This is better than "F. P.'s" performance, as there were but three turkeys and the shot was two sizes smaller.

Sooner than I could expect a double-barrelled gun in a vicinity where wild turkeys were plenty. There was a large wheat stubble not far away which they were in the habit of visiting. One day while my friend was plowing this field, some turkeys came in to feed over the freshly plowed ground. They kept a respectful distance between him and then, but evidently were not much afraid. Leaving his horses and plow he came to the house and told me that the turkeys were in the field, and then went back and continued calling. I took my gun, a 13-bore muzzle-loader, charged with one and a quarter ounces of No. 6 shot, and slipped around to the far corner of the field. Peeping carefully through the hazel brush that grew in the fence corners, I saw five turkeys feeding slowly along and coming parallel with the fence toward me. I carefully changed my position for a more favorable one, and then, as they came along within a few feet of me, I fired. Here I lay down, placed the muzzle of my gun through the fence and awaited their arrival. As they were passing about thirty yards distant I managed to get three heads and necks in range, and fired. Without waiting to see the result of my shot, I sprung quickly to my feet, and as two turkeys were winging their way out of the field I fired at one of the turkeys, and brought it down. On looking around I found that I had killed two out of five large turkeys, and with the first barrel and one with the second. My friend was so elated over it that he took his horses from the plow, tied the turkeys together, laid them over the back of one of the horses, and thus took them to the house, where he remained the rest of the afternoon.

Though I have already filled far more space than was intended, there is one incident so remarkable that it ought not to be omitted. Some years ago a friend of mine, with five or six others, went one night to shoot turkeys on the roof. After hunting them for a while and firing some unsuccessful shots, they were about to abandon the hunt, and had gathered under a tree where, for some time, they were laughing and talking. One of the party who had loaded his rifle in the dark was satisfied as to the result, and proposed to fire it.

Pointing toward the tree, he said, "I have just done so, when he remarked that he was afraid to shoot it and hesitated. My friend said, 'Here, give it to me. I'm not afraid.' So, taking the gun, he also held it toward the roof of the tree, and was about to press the trigger, when it occurred to him that there might be some danger in firing it in that position. He therefore laughingly remarked, 'Wait and let me tell you a story that a turkey he had the gun as far above his head as he could reach, and pointing it up through the tree-top overhead, fired. Their consternation may be imagined when right into their midst dropped a turkey which no one had the least idea was in the vicinity. On examination it was found that the ball had struck centrally between the thighs and passed out at the back. The fact that this was done at night with a rifle, without aim, and without the knowledge that a turkey was there, is very wonderful, and certainly worthy of record.

While I regard the events herein referred to as worthy of note, there is no doubt in my mind that, with the exception of the last, they have been more than eclipsed by the performance of others. I have heard of many more than three turkeys being killed at one shot, and, with my knowledge of the subject, readily recognize the probability of its truth. There are many instances of this kind, but I have only a few instances of interest reported for record in *FOREST AND STREAM*. I, for the nonce, refrain.

Ohio, March 17, 1881.

"A TRIP THROUGH THE PROVINCES."

CONCLUDED.
"Whom the gods would destroy they first make mad."

I TAKE up my pen for the last time I hope in the discussion of a much hackneyed subject, by way of a parting shot at my esteemed critic "Mic Mac," toward whom I did not intend to be "savage," but only earnest. The opinion I express in my reply to his article that I did not believe to ever took a salmon or knew anything of the fishing qualities of the rivers named was based upon the fact of an article, which reflected the idea that either he must have enjoyed good sport on the "debatable ground," and desired to keep others away, or he knew little of it. In my review I determined to bring this information to the surface if possible. I submitted if I assumed the former proposition to be the fact and so charged if I should provide no denial of my charge, whereas if I assumed the latter to be true then he, true to the instinct of sportsmen in general, would d in his pride, would "give himself away" if the former were true, and it would seem my guess was not a bad one. I have, therefore, accomplished what I sought to prove by my adversary, viz, that salmon may be taken in goodly numbers on the rivers under discussion, and the question of "expenses" every reader can pass upon for himself from what follows. Having expressed my most cheerfully withdraw any seeming "sarcasms" toward my critic, and inasmuch as I did not intend to offend, and I humbly crave pardon for having assumed for a moment that he lacked knowledge and information regarding salmon fishing, with which he seems to be au fait (O-Pay).

Now, a word as to whether "Mic Mac" is dealing fairly with our fraternity in advising that my "statement of the possibility of getting good salmon and trout fishing" was "in the space of two or three weeks at very moderate cost" is an "exaggerated account of the chances of salmon fishing" (see his article Feb. 24, 1881).

Now, confessedly, you went there in the fall, which is not the season of salmon, but June and July is. Secondly, you "devoted each year the first part of our vacation—i. e., from six days to a fortnight—to salmon fishing, and the rest to shooting" (F. & S., Feb. 24, '81).

On the 21st of November we were in camp four days on the Nepisquig River, where we were in the "Rough Waters," when we paid the Government license of \$1 a per diem. * * * During this trip we killed thirty-two fish, salmon and grise."

The next fall you fished but two days and took but two salmon, while last year in ten days you "killed eight salmon that averaged nearly 19 lbs."

This, however, was at Gaspe, where you under-leased a river from a friend, and your friend says that your friend, at the close of your first trip, after you "had enough fishing for that season * * * went up the little southwest branch of the Mirimachi * * * and killed six or seven fish," and yet you say later in your article that "I returned there because I liked the country * * * and had sport that satisfied me, although it has been by no means phenomenal."

Shades of Isaac Walton! "Mic Mac," your modesty is truly shocking!

In two weeks' time you and your friend killed "thirty-two fish, salmon and grise," and that was nothing to emphasize, while you say later, "These scores are not very large ones, but still they show that we did have a certain amount of salmon fishing." Well, I should so remark! Yes! yes! So you did, "Mic Mac." My shaft hit hard, friend, and you s'ld out.

Now, on neither of your trips did you devote over "six days to a fortnight to salmon-fishing." Now, will you please plain the following, contained in your last article: "But I do say, and know, that it is not to be got (i. e., salmon-fishing) by anybody who happens to get two or three weeks' spare time and has a hundred dollars in his pocket, and anybody who starts off with any such idea will come back sold."

I ask now of the question of time. Let the reader answer. Of expenses, my estimate was \$150 for two weeks, in the first article, and in the second that I actually made a twenty-day trip for \$100. Now, let us look at this question just a moment. You say yourself: "Guides and canoes are cheaper and the cost of board at the taverns and inns is less" than in the Adirondacks or Maine. Let us "figger" together, brother:

Table with 2 columns: Item and Price. Items include Fare, Board, Eight days' fishing, Guides, Seven days' board for self, Total.

Now, where is the error, if one? There is not one single hotel in New Brunswick, to my knowledge, which charges in excess of \$2 per day, and most of them are less by the single day. The estimate of \$200 per day while salmon-fishing was based upon experience, and we boarded at Fraser's Hotel, guides included, while camping reduces expenses in this direction.

The fishing grounds of the Mirimachi are within easy approach from Newcastle, on the Intercolonial Railroad. The Northwest Branch—"Big Hole"—is twenty three miles from Newcastle and easily accessible by private team. John Hatt will keep you through the forest, and the small boats, at prices very modest. "Southwest" Branch, at Indian Point, seventeen miles from Newcastle, is the other place, reached by small steamer or teams; small inn kept by Frank Jardin.

The fishing grounds of the Nepisquig are reached from Bathurst on the railroad. "Rough Waters" are about two miles up river and Grand Falls about twenty miles further up, reached by canoes or team. What fishing is now to be had on the Restigouche is reached from Campbellton on the railroad. Trout-fishing near at hand, with the best chances of salmon below the New York Club pool. Since their arrival, however, the main chance is gone here.

Now, it will be seen all of the fishing, whether good or bad, is of easy access and at moderate expense. From Campbellton to Gaspe a steamer runs every week; fare down and back last year, if my memory serves me right, \$7 (we did not take the trip).

Now, the next word with regard to "poaching," "sponging," and that sort of thing. Every trout-fisherman is anxious to try for salmon. In going to New Brunswick he is sure of finding plenty of trout, for "Mic Mac" says so and I agree. He can make the trip here as cheaply as to New York woods or Maine and take his chance for salmon. If the season should prove favorable the chances are promising of his worthily being gratified; for, first, there are several places where, upon the small stream of \$1 a per diem per day, he can try. Failing here, if he wishes to plunge

into the wilderness, as "Mic Mac" did, there is "sea-room" there that is not leased, or at all events may be fished with impunity by anybody without being called "poachers."

A very large per cent. of the salmon rivers in Canada and New Brunswick are leased, and yet it is not an uncommon thing for a few days' fishing to be granted to strangers, nor is it called "sponging." I agree with "Mic Mac" if there were no fishing ground for trout or salmon but what was leased I should not care to go there, relying upon chances, but with the honorable arrangements that can generally be made, if your own ground fails, which is not likely in a fair season, I should not hesitate to try and get a chance with some one who had a whole river to himself.

"Mic Mac" says "that to hire a river * * * is beyond the limit of our purses." Well, this is also encouraging. I was fearful heretofore that he was one of those "purse proud" "fishers" of Boston, but as he is poor like the rest of us, and as he has done some pretty tall fishing without "leasing" or "sponging," and as I have been eminent also with my success there, under like treatment, why not another try his chances there?

However, let us rest here awhile. I will reel up my line and unjoin. I will not refer to the defence on the inaccuracies of my "bill of costs." If I did not tax it correctly I would like to know how to do it. Neither will I discuss with my friend the "dog" question. I am not much of a shot anyhow, yet I think I can beat him on "misses" out of a possible hundred. I have no doubt his judgment is superior to mine on the hunting question in New Brunswick, and I cheerfully yield to his opinions and experience. I also cheerfully forgive his crushing remark, bristling all over with sarcasm, that he does not, "on the strength of a few weeks annually spent in the woods, feel competent to give advice to anybody on the subject."

Yet I am sorry he has made this announcement, for if we cannot hear from those who have ripened with information by such experience as "Mic Mac" has had from whom shall we expect it?

But let this suffice for a reply to "Mic Mac." Our words have been many, but I trust not venomous, and whilst they have provoked a little information, which I trust will be relieved by those who contemplate visiting the Provinces. And let us hope that neither you nor I have lost anything—not even our tempers—thereby. May you live to kill many salmon, and may your gun never miss you, is the heartiest wish of your Reviewer.

I would be glad if my article might stop here, but I do not feel willing to suffer misrepresentation, nor am I willing that the readers of FOREST AND STREAM should be misled by any misinterpretation of previous articles from my pen, hence I am led to inquire why does "Manhattan" persist in misrepresenting the tenor of my articles?

In an article published in the FOREST AND STREAM under date of March 10, 1881, the last named gentleman retires from the field of discussion as to the question of there being "good salmon fishing" in New Brunswick, but differs with me on the question of expenses.

That, I confess, is legitimate warfare, if he deals with my previous articles as I wrote them, and does not by innuendoes lead the reader to believe I wrote something entirely different from what in fact I did write. I will not say that he does this purposely, but the effect is perfectly apparent. I quote:

"To fly fish for salmon properly also each angler requires a canoe managed by two canoeists. This costs money. I cannot comprehend any enjoyment or success in having two anglers in one canoe, as must be done if the trip is to cost within or near Mr. Ray's figures. Fancy two lines, each with a twenty-pound salmon on, from the same canoe! Or fancy a man traveling 1,757 miles and then taking turns with three friends in fishing from the same canoe!"

Now, really, "Manhattan," your insinuation is unworthy of you. You know if I ever saw a salmon taken I could never have "figgered" "two anglers in one canoe." My arithmetic may be bad, but I never could have blundered on the propriety of my article, and I wrote the guide for each angler. Now, did I write so, nor did you understand me to have written so, nor have you any right to insinuate I did write so. And here is just what I did write in FOREST AND STREAM in the issue of March 10, 1880:

Expenses of Fishing at Restigouche per Day. Board (self), Board of two guides, Permit to fish, Canoe, Two guides per day (wages).

Total expenses per day...\$6.50
" As the water is very quiet and the guides are indispensable per man. Estimated expenses for two weeks' trip from Boston to Restigouche, \$150."

Now the above is exactly what I did say, and I here repeat it with this addition: that a two week's trip to that region can be made for \$100, even money.

"Arithmetic" is my stronghold. You may chase the salmon boat to the sea, or into the New York Club pool, but I'll surrender my "figgers" never!"

Recapitulation. Ticket—Boston to Restigouche and return, Six days' fishing, Eight days' fishing, Incidentals, Total.

In my estimate of \$150 for the trip, as before remarked, I allowed a very wide latitude for all sorts of extravagances. The sum seems a low one, I confess, but the solution is this: Aside from St. John City I now recall ten different hotels we stopped at, and at none of them was the charge in excess of two dollars a day, and from that down, and the week's rates at \$2 a home, about \$15. Guides can be obtained readily from 75 to \$1.50 per day, other things in proportion. There is no place in this country where expenses are lower than in N. S. and N. B. In the matter of guides, for instance, at the Adirondacks I find \$3 per day; at the Rangeley's, \$2.50; at Moosehead, \$3 and \$3.50.

Salmon and trout are as plentiful in New Brunswick as anywhere, and having said this, I am prepared to agree with my critic, "Manhattan," that salmon are proverbially "fickle," and ditto trout I could add—and this I said before—go where you will, and you are liable to disappointment, and you may wish you had gone somewhere else. "A rolling stone gathers no salmon," says "Manhattan." True. Neither does a selfish or jealous sportsman gather any friends.

Since writing the article which has provoked these discussions I have received several letters of approval from brother sportsmen who "have been there," notably Charles Hallock,

formerly of the FOREST AND STREAM. So it would seem that my views are not entirely unsupported.

In conclusion, let me say that I presume all anglers do not go for fish simply, but to see the country, to study its resources and products, and get an outside view of this microcosm of theirs. To those would I say, Go hence. The United States is not the whole world. You will find a new people and a new land, and feel kinder for contact with the "Blue Noses."

Your curiosity will readily be awakened by the high tides—best seen at Moncton, N. B.; a pleasant country lying along the St. Lawrence Bay will greet the eye, and you will realize that you breathe a different atmosphere than at home. Suppose you catch no fish you will not be "swindled out of a good holiday." Kind reader, in conclusion I commend to your careful pursuit the introductory in W. C. Prime's "I go a Fishing," which is a type I would hesitate, for he breathes the true sentiment of every loyal sportsman.

Let be warned in time. The best of anglers does not always find fish, and the most skillful casting of a fly does not always bring up trout. * * * I, however, you have the true angler's spirit, and will go a fishing prepared to have a good day of it, even though the weather turn out vile and the sport wretched, then turn over the leaf and let us be starting.

My very, very, amiable brother sportsman, "Manhattan," I cordially give you my right hand in full faith and fellowship.

Meriden, Conn., March 14. GEORGE A. FAY.

WISCONSIN SHOOTING GROUNDS.

WISCONSIN abounds in small lakes, rivers and ponds, made attractive to water fowl by the generous supply of rice, and in some instances celery, which they produce. The heavy land around the shores, and the sportsmen of that portion of the State included in Winnebago and Washburn counties journey includes portions of the Wolf and Fox rivers, and lakes Poygan and Betteles Mortes, with their great expanse of adjoining marsh, ponds, sloughs, etc.

Lake Poygan is a body of water of some pretensions as to size, being ten or twelve miles in length and three or four wide. At its northwest corner is situated the little village of Tusten, there being a hotel, two or three stores, sawmills, and a few dwellings. Nearly the entire western and southern shore of the lake is of a marshy character, a portion being used as hay marsh, but all overflowed in spring and fall and producing in abundance the food which delights the palates of the duck family. At Tusten is a hotel, the Le Pevre House, where good fare, clean beds and reasonable rates are at hand—the latter being a dollar day, which included, in one case, the use of a boat, and in another, Tusten one has but a short paddle of a mile or two before a favorable spot to locate may be found; in fact, a gunner may establish himself almost anywhere along the edge of the lake on a favorable day and not go amiss. Back on the marshes, accessible for light boats and valuable for hippobots, are many holes in which mallards love to congregate for their night's rest.

Located in a convenient cluster of willows with boat drawn up, the spot is well reviewed, the sportsman is certainly envied who can get his money's worth in the hour preceding darkness. I never have felt the need of nor the ability to pay for that expensive luxury called a "putter," which I take to be unno to do the hard work of such a trip, but have no doubt a small sum per day could secure the services of any of the several qualified persons who have their home at Tusten.

Within a distance of three miles from Tusten along the western shore of the lake three streams empty their waters into Poygan. Pine River for some distance from its mouth runs through marshy ground, and on either side wild rice is abundant. There is a stiff current, rendering shooting up stream almost impossible for a single canoeist; but at certain seasons fine sport may be had by paddling up to the timber and then floating down stream, "jumping" ducks. Pumpkin Seed Creek is very similar at its mouth to Pine River. I have never followed it any distance, but presume it affords equally good facilities for sport. Willow Creek, the larger of the three, threads its way for many miles through a regular paradise for ducks. The writer has followed it from Aurora—some twenty miles above its mouth—to the lake, and for nearly the entire distance on both sides are marshes abounding in ponds, sloughs, etc., and producing rice in profusion in which game *galline* may be found. But in traversing this creek in looking for "jumping" ducks one needs a gun which will "reach out" a goodly distance and hit hard, for there is little shelter to hide the approach, and the birds seem to be competent judges of distance and get up just a little out of range of an ordinary twelve gauge.

At about six miles from the mouth of this creek, and almost the only available spot, is a bridge crossing the stream. On one side of the creek is the farm residence of John Dilline and on the other, built upon land leased from Dilline, the club house of the Oneco Gun Club. The spot is famous heretofore as one of the best points for shooting in this section; and at certain seasons this bridge affords fine shelter from which gunners may bang away at flock after flock of ducks leaving the creek above and flying across this point to the lake or returning from the lake for their morning meal.

Both above and below the bridge the bends in the creek afford good stands from which to shoot. The sportsman needs accommodations at Dilline's, though he says he "don't keep a hotel." A boat can generally be procured of him, but the safest and most satisfactory way is to provide your own outfit. All in all, that portion of Willow Creek between Dilline's and the lake may be considered the best ground for shooting—availability and everything considered.

To the north of Tusten a short distance, Norwegian Point offers accommodations to the sportsman in the form of canvas-backs, which are said to congregate there late in the fall. I have never had the fortune to investigate its merits and can only speak by hearsay. It is a famous spot for summer camping parties.

The Wolf River enters Poygan about its centre on the north, and goes out at the southeast corner, when it enters the Fox River which soon swells out and becomes Lake Betteles Mortes, again assuming the proportions of a river, and flows through Lake Winnebago and on to Green Bay. On the Wolf, between Lake Poygan and the Fox River, is the little village of Winneconne—a sleepy, country town, possessing, however, all the requisites for an enjoyable hunting trip—a hotel, boats, boundless marshes and plenty of game. At the mouth of the Wolf in reality, but seemingly at the mouth of the Fox—for the positions of the streams are such that the latter seems to enter into the former—and on the adjacent marshes ducks are abundant, and he who cannot get at

many as he wants is either greedy or a mighty poor shot. The good ground extends down the Fox to and including Lake Butte des Mortes.

The varieties of ducks found here include, in local parlance, mallards, redheads, blue and green wing teal, wood duck, bluebill, butter balls, Weminago and canvas-backs. Mallards, teal and wood duck are protected by law in the spring, and it is probable the game laws will be so changed this winter as to prohibit spring shooting entirely. The law as it is receives little attention, as gunners are apt to take anything in the duck line that comes along without regard to its species.

To reach these places one may go by either the Chicago & Northwestern or Chicago, Milwaukee & St. Paul Railway to Oshkosh, whence a steamer leaves every afternoon for Tusten, arriving about six o'clock. Daily steamers also leave Oshkosh each morning for up the Wolf, touching at Winneconne, but not at Tusten. One can also go direct to Winneconne via the Chicago, Milwaukee & St. Paul road. Should one desire to paddle down Willow Creek he can take the same line of railroad for Berlin, ad, being provided with a boat, can charter a team to take him to Aromville—seven miles—where he may discharge his team, launch his boat, and be independent. Four or five hours will bring him to Dilline's, and three more to Tusten. Here, having had his fill of hunting, he can put his boat and himself on board the O. B. Reed and, leaving at 6 A. M., be in Oshkosh about nine o'clock; or, being set of a wandering mind, he can "paddle his own canoe" through Foyan, down the Wolf past Winneconne, through Butte des Mortes and bring up at Oshkosh. One should go well provided with ammunition or supply himself at Oshkosh or Berlin as none of the other points keep a supply for breech-loaders.

Though wild geese are seen in plenty in their spring and fall migrations, comparatively few are taken at any of these places. There are, however, in Winnebago County to the west of Lake Koshong, several small lakes which are favorite resting-places for geese and brant, and some seasons fine sport may be had among the cornfields near the lakes.

Both the Wolf and Fox Rivers afford many attractions in scenery, game and fish to the canoeist of which we expect to see them take advantage in the near future. BADGER.

Wauwasha County, Wis.

FOUL FANCIES.

GLIMMERS VS. COCHINS.

I HAD a neighbor years ago, A jovial fellow he; His countenance shone out with mirth, A pleasant light to see.

We lived in friendship, side by side, Nor thought of ending it; But soon, alas! a cloud arose Which marred our peaceful life.

My neighbor fancied fancy fowls; They tickled around his door; Of game birds, Cochins, was his best, He had full many a score.

And I possessed two pairs of dogs, Of breed unblemished they; I loved to ro to into the yard And watch their graceful play.

Oh, fitness will mischief breed In dogs as well as in men; The oldest dog one summer's day Proposed to eat a hen.

And from that date until to-day, With many fearful howls, These wretched dogs on my under bent Keep foully eating fowls.

My neighbor wrote me sundry notes, Which grieved me to the core; In gentle tones I answered him, "To a wicked man no more."

Two dogs are tied in iron chains And two are far away In regions where no hounds exist, Those banished felons stray.

But still a cloud is in my brain, A sorrow in my mind; I miss my neighbor's cheerful bow; To me he's grown quite blind.

And in the night I toss about, His dreams disturb my rest; A branny's pecking at my eyes, A Cochin's in my chest.

And to the neighbors I would say, Keep up your fences all; Don't leave one single little gap Through which a dog may crawl.

"Familiarity contempt will breed." From this dog's case, and then The dog bred up to capture birds May perchance kill the hen.

And so this wicked game goes on, With naught to check or cure; For well the sportsman's old dog, know No hen will eat a dog.

To love your neighbor as yourself Is precept good and true; But with those hounds and with those dogs How hard it is to do!

Dear friends, this story's moral Is scarcely clear to me; I never had four Janies, And I love the dogs, you see.

But if this read should prosper May the Court defend the right, And the jury find a verdict "That the plaintiffs' cock won't fight."

HIDEAUX.

WORTH REMEMBERING.—Probably every reader of FOREST AND STREAM has experienced serious inconvenience and pain from what is commonly called sun or snow blindness. Many times when hunting in the winter season my eyes have become so painful and my sight so badly hurt by the reflection of the sun from the snow, that I could see game but a short distance away, and even when I did see it could do no satisfactory work with my rifle. A short time ago I discovered, sitting on its haunches, its back turned toward me, and utterly unconscious of my presence, a huge wild-cat; but I was so badly "snow blinded" that though I could see the cat I could not see the sights upon my rifle, and consequently failed to kill the beast. Often, too, when shooting from a boat on the water, I have been so blinded by the sun on the water, I have experienced the same difficulty of vision if the sun was shining brightly.

Once last winter I spent several hours fishing through the ice; the sun shone brilliantly; the ice was a perfect "glare,"

and the result was that I came home with my eyes so badly inflamed that for several days I was in sore distress, and feared that the injury was permanent. I have tried several remedies for this evil, and find that the following is by far the most efficacious, and right willingly do I give it to my brethren of the FOREST AND STREAM.

Take a piece of burnt cork, or if that is not conveniently at hand take a "sawdust" and thoroughly black the skin around the eyes, and also the top and sides of the nose. Try this, and you will not only find it to be an excellent remedy for what you have often found to be a great annoyance, but feel inclined to thank me. J. FRANK LOOKE. *Brownhamsville, Minn., March 4, 1881.*

Natural History

PRESERVING FLUIDS FOR FISH AND FISH EGGS.

[Translated from the *Fischer's Zeitung*.]

MANY persons may wish to make a collection of fish-eggs and fish. For this purpose it is first necessary to take of each species, from time to time, some of the eggs laid by for breeding, and carefully preserve them. After the fish have come from the eggs some of them must at certain periods be again preserved, and this is to be continued until the collection represents the fish, or the different species, in as many degrees of development as possible, from the unimpregnated egg to the fish fit to be eaten.

No great skill is necessary in making such a collection; it is only necessary to have a proper liquid for preservation in order to obtain specimens really true to nature and at the same time remain beautiful preparations. This liquid must above all be antiseptic, that is, preventing corruption; it should not, however, deprive the eggs and fish of their form and color, but should let them appear in their most natural condition. Hence many experiments have been made. We will briefly review them, and then enter especially on a later process, that of Mr. John Meyer, assistant at the Imperial Institution of fish culture at Hünning. In doing this we follow the deductions of Mr. J. Meyer himself, as he published them in his book, "The Sweet Water Fishes of Middle Europe," (Berlin 1870).

The common article for preserving—namely, alcohol—is not very good for the said purpose, for, no matter in what relation it is applied, it always bleaches the fish, and also causes them to shrink more or less; besides, alcohol does not prevent corruption if very much diluted, or if it is not in the beginning several times renewed. At the same time it assumes in a short while a wine color, and must then, from time to time, be renewed. Fish-eggs preserved in alcohol lose at once their transparency, shrink, and hence are worthless, because the germ is no longer perceptible, only the more advanced degrees of development show the faint outlines of the embryo, and the black dots of the eyes are plainly discernible through the skinny shell.

Glycerine has also frequently been recommended, but used without success; for although the color remains to some extent, the fish and eggs, nevertheless, shrink so that they cannot be recognized. Glycerine, and in different proportions with alcohol and water, might sooner be recommended, but even the bleaching of the fish cannot be prevented, and the eggs would entirely lose their transparency. Besides those mentioned, other liquids have been recommended, but none of them could satisfy me. I have, therefore, for years endeavored to prepare a proper liquid myself; that is, one which will produce none of the said evils, but which will preserve the eggs transparent, not essentially change the color, and prevent the bleaching of the fish as much as possible. After unnumbered trials I succeeded, and in the following I give the necessary directions:

First of all, the following mixtures or liquids must be at hand:

- 1. The English conserving liquor, which, used alone, preserves large fish splendidly, but bleaches them. This liquor consists of—

Common salt,	0 250 kilogramme
Alum,	0 120 "
Corrosive sublimate,	0 001 "
Water,	4 500 liter

The water is made to boil, the other ingredients put in, and the whole stirred until the salt has become dissolved. After it is cold the mixture is to be filtered.

- 2. A solution of ten parts, by weight, of salicylic acid and pure alcohol, thirty parts by weight.
- 3. Alcohol of 90 degrees.
- 4. Pure glycerine; and
- 5. Distilled water.

These five liquids in different mixture I use for preserving, and I proceed in the following manner: To preserve eggs I mix—

- Of No. 2 take 3 parts in liquid measure.
- Of No. 3 take 20 parts "
- Of No. 4 take 15 parts "
- Of No. 5 take 20 parts "

In this solution the eggs appear in a living state, remain transparent and keep their form. It is necessary, however, to renew the solution several times. Salicylic acid is known as a prominent antiseptic, and operates at the same time antizymic; that is, preventing fermentation. Hence eggs can be preserved for quite a time, even in a pretty watery solution, with the addition of only a few more drops of No. 2.

For preserving young fish in the period of the yolk sack and to the age of about six months the following mixture is recommended:

- Of No. 1 take 20 parts, liquid measure.
- Of No. 2 take 2 parts, "
- Of No. 3 take 5 parts, "
- Of No. 4 take 4 parts, "
- Of No. 5 take 4 parts, "

For larger fish the following mixture is used with success:

- Of No. 1 take 3 parts, liquid measure.
- Of No. 2 take 3 parts, "
- Of No. 3 take 10 parts, "
- Of No. 4 take 10 parts, "

Larger fish preserve in this mixture excellently, and remain very beautiful if in a few days deep cuts are made into the belly of the fish.

All these mixtures mentioned are to be filtered before used. As already stated, the mixture is in all cases to be renewed frequently, and especially with fish; the renewal must be continued as long as the liquid becomes muddy. The old liquid can be made clear by filtering and then used again.

To take up the prepared eggs, little re-agent glasses may be used, which should be only a little wider than the eggs. Every glass should contain only a small number of the latter; in fact, no more than about five. Thereby it is possible to observe the development of the embryo distinctly, which cannot be done if many eggs are contained in a wide glass, because in that case not one of them would appear in a light fit for observation, as one darkens the other. It is sufficient if, in each station, an inscription which tells the name, day of five days, and the young fish, after their coming out, at intervals of eight days, until the disappearance of the yolk skin. This answers for salmon and trout; with fish of more rapid development the degrees are to be chosen correspondingly. Naturally these larger specimens are to be introduced into the collection. That the glasses should be labelled and provided with an inscription which tells the name, day of development, etc., need not be specially mentioned; if possible, in regard to the eggs, the temperature of the water should be marked at which the development has taken place.

ROMEO AND JULIET.

MY TWO GREAT FOXES.

ROSLINTON COTTAGE, Prince William, Va.

NOT long ago my husband went fox-hunting and met with a den of wee little fox babies, at the most three days old. My husband must needs fetch those little waifs home cradled in his silk pocket handkerchief. This caused me utter consternation, for what could be done with such tiny little things? I happened to see an inscription which told me that one of them, a little girl, had one little hair of her own. "Fussy body!" said she in amazement, when the little things crooked against her. She behaved in such a kind manner and commenced nursing them at once, so that her little girl divided its nourishment with its little brother and sister fox, to the astonishment of every one. So they grew and thrived in my rocking-chair, and became as big as my own, at least in three months, for they all took a possession of me and the foxes. They soon began to be very playful and cut up all kinds of little capers and began readily to answer to their names. They were so much alike that I could not distinguish one from the other except by the colored ribbons on their necks. Romeo wore scarlet, Juliet blue.

They became my little companions and friends. What I walked out they were most anxious to go along and would walk on each side of me, and never once offered to desert me. One day I went some distance to see a neighbor and the broom grass being very high crossing the field I felt very much afraid of losing them, but they stuck close to me and never attempted to desert me and run away. I met a gentleman on the road who said, "What are those animals that you have with you? They do not look like foxes, they are little gray foxes?" He would scarcely believe it, and said that he had never seen such a pretty sight before. On my return I was astonished to see as soon as I got to the corner of the fence Juliet make the near cut across the field to the house, Romeo keeping close to me all the way around the lane. At this time they were about six months old.

The morning after Juliet came home with one of her hind legs broken. I took her up in my lap and splintered it and it knitted beautifully. She was perfectly quiet, and never offered to prevent me from binding up her leg, and was most grateful. At night they slept on the porch with five or six big hounds that were very fond of them—a curious sight to see pussy, the hounds and the foxes all cuddled up together.

Thus soon as the house door was opened Romeo and Juliet would race up stairs, jump on the bed, and then and cut all kinds of flings; Romeo would purr in my face and creep down into the bed and lie at my feet, but Juliet was much more shy. She would jump on the bed, run around and jump off again; Romeo would remain in bed until breakfast time. Then they would take their station, with their forepaws on my lap, waiting for any little thing that would come their way. They were so fond of anything, but had a preference for eggs. If we rose from table and left eggs they were as quick as lightning, and would take the eggs in their mouths and enjoyed them. They were exactly like two cats about the house, and not any more trouble. Strange to say, they were never known to rob the house or take a chicken of any kind. My husband and I became very fond of them, but they were not like strangers. They were perfectly free—never were tied or confined in any way. I had but one objection to them, that was their fox odor. One of our oldest Virginia fox-hunting friends, Major Thornton, came once to spend the night. The Major admired the foxes amazingly, but the little animals did not behave at all well to the Major, for they snapped and snarled at him in an unbecoming manner that became quite afraid of them and said, "Pray, Madam, do take them away." I think they must have had an instinct that the Major had brought many of their species to grief. Shortly after this, to our great sorrow, Romeo and Juliet met their fate. They were then fourteen months old, and began to wander too far from home. They were mistaken for foxes and hunted down. It was not discovered that they were my tame foxes until the hunters saw the scars upon their necks. They were killed by a strange pack of hounds. Romeo and Juliet were both affectionate and grateful little animals. I could have retained them until now by keeping them in captivity. That I would never have done, however, for I think it most cruel to confine any animal, and very selfish, too, for one's mere gratification, to punish one poor little creature for the sins of others. I have seen many a person is aware of. This brief sketch may be a matter of contemplation to some of my fox-hunting friends, and let them remember the fox hunted to death has both affection and gratitude, and can be domesticated, as this little history of Romeo and Juliet will manifest. I doubt really if many persons ever inquire into the real nature and character of the poor little fox.

THE OYSTER FISH.—In a late number you publish from the New York *Sun* the report of Prof. A. E. Verrill upon the deep sea fishing enjoyed by himself and others in their cruise in the Fish Hawk, and "the discovery was made that the telefish is plentier than the cod, etc.," and that "the telefish, one of which weighed fifty pounds, is a magnificent fish, of a light yellow brown color, shaped like a sea bass, fine eating and destined to become a favorite market fish." I have searched scientific works in vain to find a description of a telefish. Dr. R. Hamilton, in his work, "British Fishes," describes *Balistes capreus* (European telefish) as being in length one or two feet, and named telefish, in consequence of the first dorsal spine being covered on its anterior edge with rough,

Game Bag and Gun.

THE WINTER AND THE BIRDS.

THE statistics printed last week have naturally attracted close attention from sportsmen, and we have received many letters thanking us for the very full reports which we gave, and complimenting us on the enterprise manifested in so thoroughly canvassing one of our sister States. We print this week a rough summary of the reports from each county together with some further reports which reached us too late for last week's issue.

SUSSEX COUNTY is the northern county of the State. On the west it is bounded by the Delaware River and is drained by the flat kill, Paulinkill, Walkkill, Pequest and other streams. The area of the county is about 600 square miles. The Blue Mountains traverse the western and the Hamburg and Wayanda Mountains the eastern part. The surface is hilly. It abounds in fertile valleys which are still dotted with the spring swamps once the theme of Herbert's stories. Undoubtedly they were the best woodcock covers in America. Until recently a famous county for ruffed grouse, it may always have been considered an uncertain locality for quail, the crop varying according to the severity of the winter weather. A few seasons ago quail began to be plenty again, but from our reports we estimate that fully 60 per cent. of the game had perished.

SALLEN COUNTY covers an area of 230 square miles; it is watered by the Ringwood, Ramapo and Passaic Rivers and the surface is very much diversified. Both grouse and quail seem to have suffered greatly, and it is safe to say that 50 per cent. have been destroyed.

BERGEN COUNTY is intersected by the Ramapo, Hackensack and Saddle Rivers; it has an uneven and part mountainous surface, a productive soil and covers an area of 350 square miles. Game at this place is partly numerous. Through it runs the Pequest Swamp, once the harbor of all kinds of game. The land is fertile and the table land and valleys well cultivated; area 550 square miles. The destruction of game in this county has been very great, from 50 to 75 per cent. having perished.

WARREN COUNTY has the Delaware River for its Western boundary; it is intersected by the Paulinkill and Pequest streams. The area is 620 square miles. The county is traversed by the Pequest Swamp, once the harbor of all kinds of game. The land is fertile and the table land and valleys well cultivated; area 550 square miles. The destruction of game in this county has been very great, from 50 to 75 per cent. having perished.

MORRIS COUNTY is partly bounded by Pequonock and Passaic rivers, and is drained by the Rockaway and Whippany rivers; the area is 620 square miles. The county is traversed by ranges of hills, some of which, as Secoley's mountains, reach a considerable height. The southern part of the county is covered with vast tracts of low meadow lands and swamps which in years past were the paradise of snipe shooters. The reports from this county have been very full, no less than fifty correspondents having expressed their views. A careful recapitulation of the letters received shows that 75 per cent. of the quail have been destroyed.

ESSEX COUNTY has an area of 200 square miles. The surface is generally level; it is traversed by two elevated ridges called the First and Second mountains. Much of the soil is highly fertile. There were few sections of the State better adapted by nature for the increase and preservation of game than this county, but of late years the woodlands have been cleared away to make room for that unshrinking growth called the suburban villa, and the haunts of the game have been broken up. Of what game was left at the beginning of the close season the loss has been very heavy.

HUDSON COUNTY lies along the Hudson River facing New York city. There is little or no game in the county at any time; its area is seventy-five square miles.

HUNTERDON COUNTY is drained by the branches of the Raritan River. Its surface is level in the centre, but mountainous at the north and south. The hills are well timbered, and the soil of the valleys fertile. The county has an area of 430 square miles. About one-half of the game has perished.

SOMERSET COUNTY has a surface which in some parts is very hilly. Its soil is fertile, especially along the streams which water the entire county. Its area is 275 square miles. 60 per cent. of the game has perished.

UNION COUNTY is partly bounded by Newark Bay, and has a surface of 101 square miles. The hills are well timbered, and in places by vast tracts of salt and wild meadows. About 60 per cent. of its game has been destroyed.

MIDDLESEX COUNTY has a soil which is in places sandy. Its surface is undulating, and covers 399 square miles; 75 per cent. of the game has been killed.

MERCE COUNTY is bounded on the west by the Delaware River. Years ago was a famous section for game, but of late the shooting has been but fair. One-half of the game left at the end of the season was destroyed last winter.

MONMOUTH COUNTY is drained by the Neversink, Shrewsbury, Shark and Tom's rivers. It has an area of 800 square miles, and a surface generally level, with elevations toward the northeast. This county has the reputation of being one of the best sections for quail in the State. There was excellent shooting last autumn in many localities, but the past winter has depleted the stock of game from 60 to 75 per cent.

BERLINGSBURG COUNTY extends from the sea coast to the Delaware River. The soil is fertile near the river, but sandy in the eastern part. The surface is level, and is covered by vast forests of pines. Its area is 600 square miles. Less than a hundred years ago there was excellent prairie chicken shooting in this county, but it is entirely a thing of the past. The loss of game during last winter was very heavy; probably over 70 per cent. perished.

OCEAN COUNTY has a level surface, much covered with pine forests. The soil is light and sandy. Area, 550 square miles. About 50 per cent. of the game of this county has been exterminated.

CAMDEN COUNTY is bounded on the west by the Delaware River. The surface is generally level; the soil is sandy. Area, 220 square miles. Over one-half of the game of this county has been destroyed.

GLOUCESTER COUNTY has an area of 280 square miles. Its surface is level, covered with forests. Along the Delaware River the land is well cultivated, but the soil inland is sandy and unimproved. Sixty per cent. of the game was killed last winter.

ATLANTIC COUNTY has a surface of 620 square miles, which is low and flat. Near the coast it is marshy, but further inland the soil is light and sandy. Seventy-five per cent. of the game has perished.

SALLEN COUNTY is bounded on the west by the Delaware River. It is drained by the Salen, Alloways and other creeks. The area is 540 square miles. The surface is level and the soil a fertile sandy loam. The game in this county has been practically exterminated.

CUMBERLAND COUNTY has a surface which is generally level, overgrown with pine forests. Its area is 480 square miles. The loss has been heavy, but not as much as in other counties.

CAPE MAY COUNTY, the southern county of the State, has a level surface, with a soil entirely alluvial. Numerous inlets indent the shores, and great marshes extend along its coast boundaries. The game has not suffered as much as in other counties of the State.

SUSSEX COUNTY.

Beemerille.—The quail have perished from the snow and cold weather. Nine out of ten quail are dead. The farmers and sportsmen have not fed any quail.

Quarryville.—Snow and cold weather have had a bad effect on quails and partridges. A great many have been frozen to death—about 75 per cent. Some farmers feed them, but not many were saved, I am sorry to say.

Stanhope.—The winter has been very severe on quail, but owing to the fact that many farmers and other individuals have fed flocks, and that it is a thickly settled farming county, the birds have been able to get food and shelter. Stocks of hay and grain standing in the field have afforded much protection. I do not think 100 per cent. have perished.

BERGEN COUNTY.

Saddle River.—I think the winter has had little effect on the birds here. The birds are not fed here. Permit me to state a fact here, namely: That if for a couple of years a bounty should be placed upon hawks there would be fifty per cent. more birds in all sections of the land. In former years there were forests or thick shrubbery to protect the birds from the hawks. If the sporting clubs, instead of spending their money or a limited portion of it for pigeon shooting, would spend some of it in feeding the hawks they would be doing good for themselves and others.

WARREN COUNTY.

Blairtown.—At least from 60 to 75 per cent. of the quail have perished from the snow drifts and hail storms being the cause. Generally the birds are fed.

HUNTERDON COUNTY.

Perryville.—The destruction has been somewhat greater this winter than usual. About 50 per cent. of the quail have perished. Do not think the farmers fed the birds.

SOMERSET COUNTY.

Diaboll's Mills.—The destruction of birds in this locality has been greater this year than in other years, but not to the extent that many anticipated. A mile or two back from the river many more quail have perished than near the river. Farmers and residents did, as a general thing, feed the birds.

North Branch.—The winter has been very destructive to birds in this vicinity. Very few, if any, birds are left. I cannot give the percentage. Have not heard that any farmers have fed them.

UNION COUNTY.

Plainfield.—The destruction of game birds in Union County by the cold weather the past winter has not been noticeably greater than in former years. Farmers tell me of berries that have wintered over and been fed them. Members of our society have also watched over them.

Plainfield.—The cold and severity of the winter caused food to be taken by the residents and farmers as to feeding the birds. The game society of this place have awakened such stocks of hay and grain for the game that the percentage of birds that perished last winter was less than for any winter for some time.

MIDDLESEX COUNTY.

Crabtree.—The farmers never feed birds here and game is scarce here from the fact that the law is disregarded and game destroyed in and out of season.

MERCE COUNTY.

Pennington.—I knew of a number of small bunches of quail, but the snows killed most of them, and what fed in the stack yards the hawks killed. One farmer kept ten quail all winter.

MONMOUTH COUNTY.

Long Branch.—I have traveled the county through and have not seen a quail and but very few pheasants. They are nearly all dead. The farmers fed them where they had a chance, but they perished with cold.

Ocean Grove.—The destruction of birds in consequence of the severe weather, scarcity of food, greater exposure to owls and hawks while in search of food is one hundred per cent. greater than during ordinary winters. Only a few farmers took the trouble to feed.

BERLINGSBURG COUNTY.

Birmingham.—The farmers and citizens have fed the birds this winter to some extent; yet the loss has been, I should judge, 20 per cent. of the whole—much greater than ever before.

Mount Holly.—In my opinion fully 90 per cent. of the quail have perished this winter. A few were fed, but the hawks have had it their own way. Rabbits have done better; they can subsist on bark. Quail were plenty last fall. We need better laws for the protection of game in Jersey. I would not be as well off at first to have those you have cited?

Rancocas.—Birds are very scarce here. One farmer saved five and another seven birds. I think the birds went South.

Wrightstown.—The cold has been very severe on the birds in this section. The destruction has been fully one-half greater than any winter for a number of years. Flocks of quail all frozen are frequently found. The farmers do.

OCEAN COUNTY.

Silverton.—The destruction of game in this section during the cold was about 60 per cent. Some of the farmers fed the quail.

GLOUCESTER COUNTY.

Clayton.—The snow and cold so unusual here have destroyed nearly all the small game. An attempt was made to feed the birds, but it was not done systematically. It was all we could do to protect the people, for no one was prepared for such a winter.

Franklinville.—The quail and partridges have all been killed, for I do not hear their favorite note any more. The winter has been the hardest on game here that I know of. I cleared away the snow till it got too deep to feed.

granular projections, and the term *Balistes* has reference to the bones or rays of the first dorsal fin acting in concert in considerable force, etc.; and the flesh of this fish is held in no estimation and has even been regarded as positively deleterious. The query is: "Are these the same fish under a different name?"

During the past winter a great many ling (*Loto mola*), a new fish on our coast, have been caught near Atlantic City. Being strangers to the fishermen, they called them "New-couars." They are said to be quite equal to the cod as food.

The tilfish is a new fish and, therefore, not to be found in the old books. Our correspondent is referred to "Proceedings of the United States National Museum," 1879, Vol. 1, p. 205, published under the direction of the Smithsonian Institution. For the benefit of our correspondent and others we will here give some of the facts in relation to this fish, as described in the above work under the following title: "Description of a new genus and species of fish (*Lopholittus charlestonensis*) from the south coast of New England," by G. Brown Goodie and Taretout H. Bean.

In 1879 Capt. Wm. H. Kirby, of Gloucester, Mass., took 500 lbs. of a remarkable new fish on a codfish trawl in latitude 40 deg. N, lon 70 deg. W., at a depth of 84 fathoms, 80 miles S. E. of Noman's Land, the largest of which weighed 50 lbs. The species appears distinct from the described species of *Lattidae*, of Gill. "It is related by its very rayed vertical fins and other characteristics to the genus *Lattius* as restricted by Gill, but is distinguished by the presence of a large adipose appendage upon the nape resembling the adipose fin of the *Salmoidae*, and by a fleshy prolongation upon each side of the labial fold extending backward beyond the angle of the mouth. For this genus we propose the name of *Lopholittus*."

It being necessary to give the fish some handy vulgar name which could be used by the fishermen, Prof. Goodie took the last syllable of the generic name and christened it the "tilfish" which has been accepted. Should our correspondent wish the full description of the fish we refer him to the work above named.

The investigations of the U. S. Fish Commission have brought to light many new fishes, some of which are of great commercial value, and as the descriptions of these are not to be found in foreign publications we will be pleased at any time to light up such questions as may be necessary for our correspondents to understand these fishes. It was certainly very natural to think that "tilfish" might be a misprint for one of our old "filfishes" of the family *Balistidae*.

MOOSE FEEDING.—Bethel, Maine.—While living in the lake country in Oxford County in 1845, one of my neighbors related to me a graphic scene which occurred a few years before, when the country was new and he had to travel by a spotted line through the wilderness twenty miles to mill or store or post office.

While passing through the woods in what is now Andover, North Surpass, he came into an open space of alder ground where the alders were trampled down and broken off and rooted up for a space of nearly two acres. On examination he found the cause was the fighting of two large bull moose, and he soon came upon the skeletons of them with their horns so locked that it was almost impossible to separate them. Each pair had a great number of prongs, indicating their great age—as each prong is supposed to represent a year. They had become hooked together in the first of the fight and fairly tore up the forest in their struggle, and so ended their lives. This occurred in the fall of the year in the rutting season when the male moose is very savage. I have seen where a large, heavy moose chased a smaller one on to a sand beach and crushed the smaller one into the sand.—J. G. R.

WOODHOEK OUT IN WINTER.—Barrington, N. Y., February 19.—Editor *Forest and Stream*: While out fox hunting on the 14th inst. my friend and myself came across a coon track, as we supposed, and were delighted to think we could follow the gentleman up and get him "cured." We found the hole under a ledge of rocks, and returned to the house to obtain a man and tools for digging him out. When we came to meath him we found our coon was a woodchuck, and a right hard tussel did my mind have to kill him. We took the woodchuck home and skinned him, and to our astonishment found him to be very fat indeed. The fat alone would fill three good sized tubs. How he lived through the winter and the male moose in very scarce. I have seen where a large, heavy moose chased a smaller one on to a sand beach and crushed the smaller one into the sand.—J. A.

A very unusual occurrence, we think.

AN ALBINO QUAIL.—Hope, Arkansas, February 21.—Editor *Forest and Stream*: I send you per mail the head and wing of a white quail, killed on the 17th inst., by Mr. C. M. Conway, of Washington, Hempstead Co., Ark. Mr. Conway states that there is another like this in the same covey from which this one was killed. I am extremely sorry that I could not procure the entire bird, but trust that the scant remains will serve to establish the fact that it was a white quail. Are such birds common, or is this but a *novus avator*? Have any of the readers of *FOREST AND STREAM* ever met with the like?—B. M. C.

The specimen reached us, and is an undoubted specimen of *Oryz virginianus*—a beautiful silvery white quail. We have never seen so complete an albino of this species.

WANTED.—A BLACK BRANT.—Will you kindly request Mr. T. S. Van Dyke, of California, through your columns, to be in mind his promise of sending for me the skin of what he supposes to be the black brant (*Branta nigripennis*), one of which minus the head was some time ago sent to a contemporary of yours? I am exceedingly curious to see this bird, and am now inclined to believe it is the black brant. Can exchange with Mr. Van Dyke for the skin of the ordinary variety, plentiful on our coast at present. Ask him what he has learned further of the bird.—Homo.

Paralytic, nervous, tremulous old ladies are made perfectly quiet and sprightly by using Fog Bitters daily.

Harrisville.—I think the winter has destroyed one-half of the game. Very few have been shot or trapped for them.

Newfield.—The destruction of quail and other game has been greater than for many years past. Ninety per cent. perished. The resident farmers have fed.

Newfield.—In my opinion a great many birds were frozen last winter. I have had my dogs out once since the snow left us, but did not find one bird. There were a great many birds before the snow came, but I have been told by some parties that they have seen none left, but I have seen none.

Camborough.—In reply the birds have suffered and died in great numbers. The farmers have fed in many instances.

ATLANTIC COUNTY.

English Creek.—I should think perhaps that one-half of the game perished.

English Creek.—I have heard of several coveys of quail perishing. One-half must be dead.

May's Landing.—I have made a good deal of inquiry about game in this county, as I am very much interested, and I think much game has perished. The hawks have destroyed large numbers, and the shooting next fall will be very poor. Quail and rabbits have been found frozen to death. Pheasants (ruffed grouse) I think have suffered less.

SALEM COUNTY.

Darlington.—The destruction of birds in sections has been severe. Seventy-five per cent. have been destroyed by snow and cold. Some flocks were fed, and thus saved.

Salem.—Since my last report I have seen two lewies of quail. So we know a few are left.

SPRING SNIPES NOTES FROM DELAWARE.

FROM time immemorial the State of Delaware has been the resort of New York and Pennsylvania sportsmen in the early spring for the English snipe or gray snipe shooting. We have, therefore, arranged to give our readers this year the very first reports on the shooting, and take this opportunity of thanking our numerous correspondents for their kind and prompt replies to our inquiries. The subjoined notes are arranged, beginning at the south and running to the northern parts of the State:

SUSSEX COUNTY.

Laurel, March 26.—We have no snipe here. Thirty miles down the river there are some.

Rehoboth Beach, March 26.—Geese and ducks are plenty, but snipe are not on much, but suppose they will be if we have one or two days of southerly wind.

Georgetown, March 28.—Snipe are on now, and the shooting is getting good at Draw Bridge and Rehoboth.

Seaford, March 30.—There are no snipe in this section.

Cold Spring, March 28.—There are no snipe in this vicinity.

Willamsville, March 29.—A few snipe have been killed.

KENT COUNTY.

Willow Grove, March 30.—There have been no snipe killed yet. The ground is in good order.

Flores, March 26.—On March 23 Mr. C. shot eight snipe—the first we have heard of this season.

Fols, March 28.—The snipe are now in this vicinity.

Little Creek Landing, March 28.—The meadows are in good order for snipe. They are scarce.

NEWCASTLE COUNTY.

Pymond, March 26.—The best snipe shooting is on the entire marshes bordering upon Delaware Bay. The spring is very late with us and the snipe have not yet made their appearance.

Middletown, March 28.—A few snipe have arrived. A few more days will make them plentiful.

McDonough, March 29.—There are some snipe. I killed a few to-day.

St. Georges, March 26.—The snipe are here though not yet in abundance, as our late cold snap has kept them back. The Peckard, Stewart, Unshook and Hindred Acres are the favorite meadows for finding them.

St. Georges, March 26.—From 5 to 10 in an hour has been the largest bags of snipe reported yet. They have been here a few days.

Christiana, March 29.—The spring snipe have come. I shot half a dozen, but it is too cold for them to come in numbers yet.

Christiana, March 23.—I shot the first snipe of the season in this section on March 17. They are still scarce; I have been running them since the week end.

Neigort, March 28.—There is a scattering of snipe from the South. The 1st of April is about the time for them to be on with us.

Newark, March 28.—Some snipe are here, but about April 15 they will be plenty.

Marshallton, March 26.—Snipe may be expected daily.

Kirkwood, March 28.—Have not seen any English snipe this spring.

Mount Pleasant, March 26.—It is too soon for snipe.

Mount Pleasant, March 26.—Snipe will be on in a week or two.

Yorklyn, March 26.—No snipe as yet that I can see.

Yorklyn, March 26.—Snipe have not come yet.

Green Spring, March 29.—Snipe began to appear on the meadows ten days ago.

Bookland, March 29.—The snipe have not made their appearance yet.

Glasgow, March 28.—There has been no snipe shooting this spring. Will be in ten days.

NEW YORK—SARATOGA LAKES, N. Y. March 26.—Snow still very deep and ice very thick over lakes and streams. Troubling prospects never more favorable, as the game laws have been almost strictly retained, owing to the faithfulness of the Commissioner in making the arrest at Lake Placid. During the winter Martin's Hotel has changed hands, owing to financial embarrassment. After being repainted, partly refurnished and other improvements made, it will be opened by Milo Miller in due time for spring guests and sportsmen.

At Harrietstown thirty guests, chiefly from New York and Philadelphia, have passed the winter.

Owing to the public spirit of Dr. Trudo a handsome library building has been erected, and we trust are long to boast of a good library. S. S. N.

A Pine River, Wis., correspondent writes that a neighbor of his has a mallard drake living in a stream flowing near his house. The bird is one of a pair, and was wounded when its mate was killed. Though at first very wild when approached, it has now become so tame that one can approach near enough to throw it corn without frightening it away. BADER.

A DAY WITH THE SQUIRRELS.

NORWICH, N. Y.

A FRIEND of mine who lives next door to me is the most successful squirrel shooter I ever saw. Having hunted them from his boyhood he thoroughly understands their habits, knows just where to look for them during the different fall months, and the result is when he goes after them he generally returns with a full bag.

Two years ago in October he made an arrangement to spend a day in a large piece of woodland lying some eight miles from this village. We left in the morning before daylight, and we drove up to the door of a farm-house just as the sun was gilding the tree-tops of the woods which we were bound.

There we separated for the day, agreeing to meet at the house where we had left our horse at sundown. I make my along the edge of the woods through a grove of second-growth pines toward a corner where are some large chestnut trees, hoping to surprise some squirrels at their breakfast. In this I am disappointed. I see no signs of their working. I go over the fence, outside of which is an old pasture, and as I look across the fields all thoughts of squirrels are for the time forgotten. Less than half a mile away lies the farm owned by my father. There stands the old red barn and I am born. How familiar are those fields, even the old rocks seem like friends. Those patches of woodland, the old orchard, and down through the little valley runs, just as it used to, the little spring brook, where I caught my first speckled trout. Can it be that the old farm is now owned by strangers, and that father, mother, sister, brother are all gone, and that nearly forty years have passed away since that old red house was my home? Yes, and I am a gray-headed man, and my son follows those who have passed on before me, and it tears do fill my eyes as I gaze on this scene so dear to the years gone by, still as I turn from it I feel stronger to meet life's battles and trials.

But I came for squirrels, and the morning's passing. So I turn into the old wood road that leads to a ridge near the edge of the woods, and I reach the top of the ridge. Making my way with all possible caution, I reach the little grove and stop. Yes, they are everywhere; I hear the rustle of branches in a large chestnut near by, the leaves are so thick I cannot see the squirrel, but I know in an instant it is a gray. I think I see where he is, and I give him the right-hand barrel. He does not fall, though hard hit, but the other barrel brings him tumbling to the ground.

The noise starts up another, and within a few seconds a large tree within shot, and when about half way up stops and commences barking at me. Carefully slipping in a shell I lift my gun to my face, and at its sharp crack he tumbles to the ground. Picking them up I find they are large and fat, and I consign them to the spacious pockets of my hunting coat. I follow on in the old wood road, perhaps six or eight rods, (keeping near the edge of the woods, for there the chestnuts are the ripest at this time of year, and there I know I shall find them if anywhere), when about fifteen rods away, in a small chestnut just at the edge of the woods, I see two more feeding. I dare not go toward them, they will hear my steps on the leaves, and I shall lose them. A noise on a ridge above me attracts my attention. There is another running around under the trees looking for his breakfast, but as he is so close I do not dare get near him, and I set my wits to work to see if I cannot outwit them. If I can get into the pasture perhaps those two who are feeding in the little chestnut will not hear me, and I can get within shot. But how can I get over that fence without their taking alarm? I have it. About a rod back of me is an old pole bar way, and I cautiously make my way toward it. I reach the edge of the pasture and walk carefully toward where they are feeding. They are busy; they are eating and breakfast. I go perhaps two rods when one of them leaves the tree, jumps on to the fence, and comes directly toward me. I let him come within range, and with the right-hand barrel tumble him off the fence. The crack of the gun starts the other, but he does not leave the tree. He stops feeding and commences barking; as I move a few steps toward him he jumps on to the fence, and I too get up on it, and with my remaining barrel I drop him. Picking them up I retrace my steps to the old wood road which leads toward where I saw the other. Reaching the spot where I last saw him, I stop and wait fifteen or twenty minutes, for I think he is somewhere near me, and if I wait he will show himself. As I take out my watch to see the time I hear a rustling in the leaves, and sure enough there he is, not five rods away. But the movement to put on my watch will send him jumping up one of these large trees. But I see no other way. The movement of my hand disturbs him, and he mounts a tree and is out of sight. Quickly glancing up the tree, away toward its top I see an open space of a few feet. Perhaps he may come into view there. I throw my gun to my face, and as he comes into view, although on a spring, I pull on him. He is hard hit, but his life is enough to rattle into a large maple, and I fear I have lost him. I make my way to the upper side of the tree and anxiously peer up into its branches. Yes, there he is, stretched out at full length on a limb close to the body. He is badly wounded, but I give him the other barrel and he falls like a clod. Then I have got them all, and now I will sit down on that old mossy log and eat my lunch.

All the morning I have heard my friend banging away, and I know he is having fine sport. I rest for an hour or more, but I see no more squirrels. Following up the old wood road to a ridge I stand and wait some minutes, when, clear out of shot, in the top of a tall chestnut, I see one feeding. Close to it is a large pine, which I conclude is his home. I make my way toward him as still as I can, but he takes alarm and starts for the pine. If he catches a sudden body, I start on the run toward him, and before I can get nearer than nine or ten rods he makes a jump and strikes the body of the pine. At just that moment I pull on him. I know my aim was all right, but with No. 8's he is too far, and I lose him.

The afternoon is wearing away, and I retrace my steps toward where I first found them in the morning. As I find the old fence by the side of the pasture I see a splendid old fellow quietly making his way toward a large chestnut. As he comes opposite I cut loose on him, and he is mine. This makes six, all large and fat. By the time I can reach the house it will be time for us to leave for home. As I near the house I see my friend coming up the road, and in answer to my inquiry, "How many?" he answers, "Twenty-one." He is tired, and his squirrels are the losers. I shut my bag, as usual when I have a full bag. I have had a most enjoyable day, and I am content. A ride of ten hours brings us home, and we unanimously voted it a most agreeable day with the squirrels. H. C. C.

The gray squirrel is more numerous in some localities than in others and also more plentiful some seasons than others, owing to the scarcity of food and the severity of winters. This can also be accounted for by their roving habits. The best months for hunting them are September, October and November, at early morning and evening—from sunrise till eight or nine o'clock and after four in the afternoon. A rifle with a small bore is better than a shot gun, because it tears the game very little and will kill at a long range, but an amateur would probably kill more with shot than with a rifle and for all kinds of game the latter is best.

Squirrels are found in the neighborhood of beech, oak, chestnut or hickory trees. They are also found on the borders of corn and wheat fields, near timbered lands, where they congregate in the fall and are often killed in large numbers. They are found on the highest branches. It is a good plan to start at sunrise, approach the hunting ground cautiously, examine every tree in which a "gray" might be feeding. You can often detect their presence by the dropping of cuttings and bark from the trees or by their peculiar hop and scratch among the leaves on the ground. Walk slowly, look in every direction, keep behind the brush as much as possible and make no unusual noise. Pilot your way in this manner until you reach a central, elevated position, commanding a good view of the surroundings. Of course you will follow the line of the trees, and you will stop quietly. Much care should be exercised in selecting a favorable point from which to watch, which can easily be found by looking for cuttings, broken branches, nests and scratches on the trees and fences. If these indications are observed you may be sure there are squirrels in the neighborhood, although many inexperienced sportsmen might wander about the woods for hours without seeing one.

Having selected a favorable point for observation, conceal yourself behind some brush or other objects, and keep a sharp lookout. If you have secured your position without frightening the game, they will soon begin to show themselves. Probably one will come into full view, but out of range. Do not move, but keep an eye on it, and perhaps it will shortly come within range; if not, note its general course, follow slowly, and when it is within range, take it as it are that it will hide, and much time will thus be lost, while the gray will be trembling with fright but safe in the trunk of some hollow tree. Probably you will see one emerge near at hand, but from what particular point is often difficult to determine. Don't move a muscle; he will soon be in a position which prevents him from seeing you; then bring your rifle to bear, shoot, and take care to get a clean shot. If you don't leave your position, but prepare for another shot. If the gray was among the branches, it will be a satisfaction to see him roll into a ball and drop. If you have missed he will start to run the tree-tops; but just before and after springing he generally stops long enough to allow another shot to be delivered. If missed entirely, don't go tearing after him; you will probably frighten the squirrel to the neighborhood. It would then be a necessity for you to look for some other favorable position, as the shooting would probably be over at that point. If the squirrel has been killed, let it lie, and watch for another. In this manner you may be able to bag several in an hour or two from the same position, especially if the mast is plenty and a good season. Then gather up your game and seek another favorable point. When the sun is high it will be well to look for oak trees, and carefully and along the fences and outskirts of the timber. If you know of any nut-bearing trees in open ground, examine them, as these little animals know where to find the sweetest nuts as well as you.

Trained dogs are often employed to track and tree them, when they will hide and often exercise considerable cunning in evading their pursuers. This method is often more successful than still hunting, especially if the game is scarce.

D. TAIL.

NEW JERSEY, March 23.

I was much delighted with your *Christiana* correspondent, in his narration how he saw "Och Hone!" the Willow Macree" or some similar "roundface," to the listening rodents in the pine woods. From *Christiana's* fondness for a "piping" of the woods" he must be a fan-theist!

But to a youth of sixteen with double-barreled muzzle-loader in hand, the sight of the upturned tail of the nimble squirrel would, in the days of my youth, rather lead to immediate slaughter, not to concert music.

Still it is pleasant to see the healthy lover your correspondent shows for animal nature and his keen enjoyment for the "aisles of the dim woods."

The Mic Mac correspondence has given us a good idea of where to go for salmon, and there is to me no summer joy like that the fired man catches in breathing the invigorating air of the Marguerite or any of the little rivers of the upper Saguenay.

I meant when I began to gossip to tell of an experience, in Indiana, in seeking the festive gray squirrel in October. It shows that little animal's extreme tenacity of life.

In a tall beech tree, flat on a limb, I caught a glimpse of gray fur and blazed away—down came the squirrel. I loaded the empty barrel, went to pick up my game, but he had quickly, as a single bird, reached the hollow tree and ensconced himself there. With smoke and a rimrod screw I finally got him out, and, *excessively rei*, I banged the squirrel's head over a log and sat down on that same log neglecting to bag him while drinking in the beauty of the russet splendor all around me.

As I started to go I reached for the *fantastic villosa* squirrel, as a supposition—our English name is a white-bellied woodrat's chamber, Bunny took to his heels and hid in the long grass by a gurgling trout brook. I hunted for half an hour before I spied the runaway and pounced on him, putting Mr. Squirrel in my side coat-pocket.

After a delightful walk, gazing as I went at the glories of a Western sunset—"the looming bastions fringed with fire" in the fantastic splendor of the clouds of red and gold, and as I sat down on the rude bench on the piazza I said: "Here, Boniface, breakfast of this squirrel," and I threw the gamey little rascal on the floor. Boniface "scooped" for him. The squirrel took wings and ran—landlord in full chase—and the squirrel in the lead, dodged under the barn! That squirrel, I never saw him more—J. J. M. S.

A STATESIDE SNIPER—Port Richmond, March 26.—While three members of the Holiday Gun Club were out "prospecting" to-day they started a woodcock, put up and brought to bag one English snipe, the first of the season.

PATRY.

The head of the snipe accompanied the above note.

TERRIBLE SLAUGHTER OF DEER IN MICHIGAN.

SECRETARY RONEY, of the Michigan Sportsmen's Association, has recently been engaged in collecting statistics as to the killing of deer in that State. These statistics were presented to the State Legislature March 15, and are of startling interest. Their importance will be especially appreciated by the residents of Michigan. The following abstract gives the main points of the report:

A prominent railroad man says: After careful investigation it was found that 9,000 deer and saddles shipped over the Mackinac division during the open season last fall. More than half of this number is said to have been killed on the Saginaw River, and in the red coat, that had been killed on the An Sable River out of season by "shinning" and done by persons hunting for the hides to take away the skins, saving only the saddles by jerking. These bales contained about 400 skins. The deer were killed at that season of the year left vain to die of starvation.

It has got to be a common thing to have venison upon the hotel tables at Grayling and Forest during the summer months, furnished by persons who do nothing else except hunt and kill at all times of the year whenever they can find saddle for their venison and grayling. A party told me that he had killed four deer one night by "shinning" on the Manistee River.

The estimate of 9,000 deer shipped on the Mackinac division of the Michigan Central during the fall of 1880 is based upon 10 following statements of venison shipments from stations north of Bay City, and which, being copied from the shipping bills, are necessarily correct:

Table with 2 columns: Stations and Pounds shipped. Includes entries for Gaylord, Oscego Lake, Grayling, Roscommon, etc.

Averaging 112 pounds to a deer, which is not too small considering that a large portion were fawns and saddles, gives us in round numbers 81,000 pounds of venison from the fifteen stations above with ten stations on the road yet to hear from.

As to the shipments on the Flint & Pere Marquette and the Grand River & Indiana Railroads it is perfectly safe to place the number at 5,000 from each road.

There are in northern Michigan at least 4,000 lumber camps. Taking only 300 of these and averaging forty deer killed to supply each camp gives 120,000 killed for this purpose alone.

If 1,000 were shipped from Oscoda by steamer. According to a moderate estimate for the entire coast from Oscoda by steamer, 4,000 deer, and 2,000 shipped by rail and steamer is considered a fair estimate for the entire coast.

To closely estimate the number of deer killed for their hides in the red coat is a more difficult matter; but knowing personally of 2,500 deer so killed, and in view of the secrecy with which this kind of slaughter is conducted, consider 7,000 deer a reasonable calculation for the number so killed.

The number for home consumption in the lower peninsula I have placed at 5,000, and by this term I include all deer killed by settlers for food purposes, which you will remember occurs every day in the State. The deer muzzles are sold to the sportsmen and hunting parties as extra baggage but of which no record is had in most cases, the game being returned free.

The upper peninsula is allowed 7,000 as its quota, which includes all deer killed for any purpose (for the hides, home consumption, lumber camps and shipment by rail and steamer. You will remember that no calculation has been made for the large number of sickening fawns which have of necessity starved to death during the summer months and which are the result of their mothers' milk by the bullet of the insatiable "hide hunter."

The grand summary of deer killed for all purposes in Michigan during the year 1880 is thus as follows:

Table with 2 columns: Location and Number of deer killed. Includes West Shore, East Shore, etc.

This is about 7,500,000 pounds of venison destroyed in the single year of 1880. At this rate how long will it be necessary to deplete the species in Michigan? And when the present supply is gone, where can the next come from? Certainly not from the North, East or West, for that is a geographical impossibility; while from the West the deer are driven out of the States which border upon vast wilderness, out of which a large number of deer are plucked the disappearing race, the Lower Peninsula of Michigan, when it has once permitted this noble animal to be exterminated and its species extinct, has forever lost a great source of wealth and valuable food supply, which if now wisely preserved, will last for generations.

The immense increase from 21,000 deer killed in 1875 to 60,000 killed in 1880 is in part due to the cold winter which came early and continued for many months of the fall, but principally to the prohibitory export laws of surrounding States, which are driven into Michigan all the professional market hunters of the country. Can a Legislature which is cognizant of these facts delay longer that very protection which is the first law of nature, as it is of States and of nations?

Of the 60,000 deer killed in Michigan in 1880, 45,000 were shipped from the State or destroyed for the hides. How long can this be maintained? It is a question which will be answered in a few months more.

The remedy is plain. Declare the killing of game for other purposes than consumption as food within this State as illegal, as recommended by the Committee on Laws for the protection of game animals of fur and feather and insectivorous birds. All game shipped from the State will be prima facie killed in violation of the law. This will save 20,000 to 28,000 deer yearly. It will also prevent the importation of deer in the red coat, spotted coat, or have in possession such red or spotted coat, and the killing for hides will almost wholly cease, and illegal killing for lumber camps will be greatly restricted, saving 12,000 to 15,000 deer annually and reducing the annual destruction from 60,000 to about 12,000 to 15,000.

At the highest estimate there are not more than sixty-six hundred hunting parties in this State who hunt with dogs for pleasure, requiring twelve deer to each party of twelve men upon each trip. The deer are killed by the tax-paying citizens of this

State during 1880. The writer knows of but one party (of three men) of resident hunters for market who hunt with dogs, but there may be others. These parties are always small in number. Granting that there may be ten such parties in the State, and that each takes fifty deer yearly, we have 500 deer as the aggregate of the carcasses killed for the market with dogs. Then we will concede that there may be forty non-resident parties who come to Michigan at various seasons of the year and take their venison home. Allowing them the same ratio of success as the resident parties, viz.: two limits a year of two weeks each, and twelve deer for each hunt, give 960 deer killed with the aid of dogs and shipped out of the State, to be consumed in the families of our friends from other States. This number, if multiplied by the Prohibitory Export Bill, makes an aggregate of 2,900. Adding another 100 for the sake of even numbers, and 1,000 more to that, from a desire to treat this question with undiscriminate fairness, and what is the result? Four thousand, three hundred and one, with the aid of dogs in Michigan during 1880, and 56,000 killed by still-hunters for all purposes during the same year. Can any sane person now ask that deer hunting be restricted solely to still-hunters by means of a law to prohibit citizens of the State the pleasure of hunting with dogs?

THE FLIGHT OF RIFLE BALLS.

MR. T. S. VAN DYKE, in his interesting article published in the FOREST AND STREAM of March 10, proposes ("just for fun") to demonstrate that a rifle ball does not begin to fall the instant it leaves the muzzle, that as regards a falling motion although driven at great velocity forward it is in a state of inertia. He appears to claim (for fun, presumably, he is full of it) that during a certain space of time, and under the state of inertia, a rifle ball will be "driven on a level line." To show how far this will be projected on this "level line" he sighted his rifle of a calibre of .65 "to cut at ten yards the lower edge of an inch bullseye so as to get the line of sight, and the centre of the line of fire parallel, and could detect no drop at fifty yards. At seventy-five yards the ball was in the lower edge of a two-inch bullseye; at 100 yards at the lower edge of a four-inch bullseye.

Now, it is believed that Mr. Van Dyke's position is not tenable on philosophical grounds nor on correct practical experiment. And to convince him that Maj. Merrill is right when he declares: "It is as mathematically certain that the rifle does not carry straight for ten yards as that it does not for 1,000 yards. Gravity is always pulling the ball down, its efforts commence at the muzzle of the gun, and no velocity of the ball can cancel it. He has only to remember that an ounce ball at an elevation of 45 degrees will travel ten feet above and exactly parallel to a horizontal line, and the same size and weight of ball dropped from the same height at the same instant the ball fell left the muzzle of the gun, both balls will strike the plane below at the same instant of time, or if he blow a ball through the gun ten to fifty feet or drop another at the same time both will strike the ground together. Taking this for an undoubted fact, there could be no time for the ball fired to be "driven on a level line" and strike the ground at the same time the dropped ball does. Both balls must begin to fall at once, and continue to fall all the time, and exactly alike, to reach the same distance at the same instant of time. The same force of gravitation acts exactly equally on each ball no matter how great the velocity of one may be; and if one ball lost any time in traveling on a "level line," and the other kept on dropping all the time, and both at the same rate, they could not both strike the plane at the same instant.

The atmospheric retardation of lead balls and shot is said to be as the square of their diameter. The diameter of an ounce ball is .66267 of an inch; its fall in one second of time by gravitation is 16.990 feet, and if unobstructed it will fall with an increasing speed (inversely as the square of the distance) until it acquires an ultimate velocity of 207.25 feet per second, and forever after continue at that speed. As the fall increases very rapidly until the ultimate velocity is reached, the initial velocity and time of flight per second becomes very essential in arriving at the true fall of any given diameter and weight of ball and shot. It is difficult to ascertain the exact highest initial velocity that can be given to any projectile by the expansion of gunpowder. It may range from 800 to 4,000 feet per second, but in rifle and shotgun shooting from 1,000 to 3,500 will not be far out of the way.

If you could give an ounce ball (diameter .6626) an initial velocity of 4,000 feet per second it would be projected up (a little more horizontally than then there would be no gravitation to pull it back) 895.9 feet in 9.405 seconds, while at an initial velocity of 1,000 feet per second the total distance would be 2,100 feet in 8.460 seconds, and in one-eighth of a second it would be projected 124.9 feet, and at 4,000 feet muzzle velocity 439.9 feet in one-eighth of a second; at 3,000 feet muzzle velocity 237.5 feet in one-eighth of a second. And if you give No. 6 shot (diameter .10131 of an inch) an initial or muzzle velocity of 4,000 feet per second it would be projected 800 feet in 3.754 seconds; at 3,000 feet muzzle velocity 741.20 feet in 3.738 seconds; at 2,000 feet, in velocity 655.31 feet in 3.706 seconds, and at 1,000 feet, velocity 514.54 feet in 3.548 seconds. Thus it will be seen that while an ounce ball at an initial velocity of 4,000 feet per second will travel 895.9 feet in 9.405 seconds a No. 6 shot at the same initial velocity will only travel 800 feet in 3.754 seconds.

Hence it appears that at all these there be a constant parabolic fall from the instant a projectile leaves the muzzle to the end of its flight there is a great difference in the trajectory of an ounce ball at 4,000 feet initial velocity and one at 1,000 feet initial velocity and a still more marked difference between the one at 4,000 feet and No. 6 shot at the same initial velocities of 4,000 and 1,000 feet per second.

Mr. Van Dyke himself explains in the last paragraph of his ingenious article the real cause of his (real or assumed) mistake as to the actual fall of any projectile from the muzzle to the target, no matter what the distance may be, by showing a difference of six inches in the fall of his .65 inch round ball shot from his ten pound rifle, at 175 yards, charged with six drams of fixed powder (Always the best), and six drams of the same powder. His rifle is unquestionably a good one. Its weight allows him to load heavily and not kill at both ends, and yet acquire an extraordinary initial velocity. The great velocity and great weight of his ball and his six drams of mixed powder undoubtedly give him a remarkably flat trajectory in the first 150 to 200 yards, and this may have led him to fall into the error (if he is not in fact) of suggesting that there might possibly be a space, and, therefore, a time when a ball could be "driven on a level line." It cannot be done.

FLORIDA—Monticello, March 24.—The English snipe have all gone north.—W. V. W.

OUR DETROIT LETTER.

LIGHT begins to break in the sportsmen's east, and ducks are becoming plentiful herabout. One day this week Dr. E. C. Franklin of Michigan University (who is not only a learned and eminent and grave professor, but an enthusiastic sportsman all round), accompanied by Justice Walter Schweiket, of this city, went down to Turkey Island, in Detroit River, where they stayed two days and captured a rousing bag of ducks each. In looking around town to-day I find that redheads are selling at thirty cents and bluchills at twenty-five cents a pair. They stick close to the river, for the reason that the marshes and bays about and below Detroit River are yet unbroken fields. The Huron River is breaking up, however, and the note of preparation at Point Moultrie is heard "like clink of armors closing rivets up." Several enthusiasts, including M. P. Clegg, of Cincinnati, are going down next week, big with hope of immortal achievements.

The bill now before the Michigan Legislature passed the Senate yesterday with the clause prohibiting night shooting stricken out. There is every reason to believe that the bill will have a safe and peaceful passage through the House and secure the Governor's signature.

There is a deal of indignation manifested by Detroit sportsmen at the reckless and criminal neglect of the game laws now in vogue in Michigan—at least in respect of killing deer in the northern counties. A gentleman who has been very active in the matter of game-legislation informed me yesterday that the Indians and whites have gone to the extreme of killing animals with knives and tomahawks, and merely to obtain the skins, leaving the slain carcasses lying on the snow. The worst instances that have been reported occurred along the extension of the Jackson, Lansing and Saginaw Railroad, north of Gaylord, and in the vicinity of Mullet Lake. As I got it, there were fifteen deer killed in one yard—not shot, but brutally butchered like hogs, and several of the does were heavy with young. The only arrest has been made, so it is said, so that a hunter who was fined the ridiculously inadequate sum of \$2. The only way to put a stop to this is for genuine sportsmen to organize a merciless crusade against these criminal butchers. Detroit, March 26, 1881. Vidocq.

LIFE IN THE WOODS.

HYDE PARK, Feb. 23.

Editor Forest and Stream: Capt. Barker delivered a sixth and last lecture on Friday p. m., and I had taken notes preparatory to sending the closing portion of his lecture, which I can only do so and below as I found it reported in the Boston Herald. I clip it out and send it to you, as a specimen of a vivid and thrilling description of one phase of a hunter's life; and considering that it is in the language of a man who is a simple, honest hunter and who claims not to be a man of education, I think it remarkably good. He is to be with us next winter, and will be well prepared to give our boys another course of lectures. He will, in all probability, be superior to those given this winter, as he has not learned what is expected of a lecturer, and has lost that embarrassment which necessarily accompanied his first appearance before an educated audience.—E. D. M.

The lecture, as reported, was as follows: Imagine yourself trapping off to the woods in the month of December. There is a foot of light snow on the ground. You are just leaving camp in the morning, and have another camp twelve or fifteen miles away on the mountains; you have two lines of traps leading to this camp; one goes to the right over the hard-wood mountains, where there is good ground for the rabbit and the other goes to the left over the soft-wood mountains to a pond, where the other, beaver and mink work; then up another brook valley to camp. You take your axe, rifle, bag of bait and lunch, and follow the mountain line, while your partner takes the other line, both carrying a load of traps, and a camp before dark. It begins to snow at 10 o'clock, but you cannot get any trouble in following the valley line. He gets to camp, and the fire and gets supper, expecting to hear you coming every minute, but things are very different with you. There is more to a tree, a little mountain than in the valley; the traveling is hard; the traps want a good deal of setting over and fixing; a fisher has got into one of them and dragged it off a little ways, and it takes quite a while to find him. You find that you have another camp twelve or fifteen miles away on the mountains; you have two lines of traps leading to this camp; one goes to the right over the hard-wood mountains, where there is good ground for the rabbit and the other goes to the left over the soft-wood mountains to a pond, where the other, beaver and mink work; then up another brook valley to camp. You take your axe, rifle, bag of bait and lunch, and follow the mountain line, while your partner takes the other line, both carrying a load of traps, and a camp before dark. It begins to snow at 10 o'clock, but you cannot get any trouble in following the valley line. He gets to camp, and the fire and gets supper, expecting to hear you coming every minute, but things are very different with you. It begins to snow at 10 o'clock, but you cannot get any trouble in following the valley line. He gets to camp, and the fire and gets supper, expecting to hear you coming every minute, but things are very different with you. There is more to a tree, a little mountain than in the valley; the traveling is hard; the traps want a good deal of setting over and fixing; a fisher has got into one of them and dragged it off a little ways, and it takes quite a while to find him. You find that you have another camp twelve or fifteen miles away on the mountains; you have two lines of traps leading to this camp; one goes to the right over the hard-wood mountains, where there is good ground for the rabbit and the other goes to the left over the soft-wood mountains to a pond, where the other, beaver and mink work; then up another brook valley to camp. You take your axe, rifle, bag of bait and lunch, and follow the mountain line, while your partner takes the other line, both carrying a load of traps, and a camp before dark. It begins to snow at 10 o'clock, but you cannot get any trouble in following the valley line. He gets to camp, and the fire and gets supper, expecting to hear you coming every minute, but things are very different with you. There is more to a tree, a little mountain than in the valley; the traveling is hard; the traps want a good deal of setting over and fixing; a fisher has got into one of them and dragged it off a little ways, and it takes quite a while to find him. A NOVEL PROPOSITION—March 22.—*Editor Forest and Stream:* I presume that I may fairly be called a "gentleman sportsman." At all events, I have many elaborate theories concerning fire-arms and projectiles. I seldom kill any game and never sell any. Who, then, has a better right to the above mentioned title? I have a very good and very accurate notion about the game law and the recollection that I once shot an inadvertent prairie-chicken on the 5th of August is the bitterest memory of my life. But, Mr. Editor, these laws are rapidly putting it out of the power of members of my profession to do any hunting whatever. You would be surprised to learn how many school-teachers, college tutors and professors are in the habit of spending the month of August in the woods and among the deer, bear, etc., by "tagging surrounding objects." We are a burning crowd, but now and then one of us kills something, and it would be possible to be able to do so legally. Soon, however, unless all signs fail, August will be everywhere a close month for deer and most other game, and then good-bye to our favorite amusement, for our vacations do not usually extend much beyond September.

The game laws seem intended to accomplish two principal objects—1st, to protect game during the breeding season and while the young need maternal care; 2d, to so limit the time for hunting that our forests and fields shall not be depopulated. As to the first of these objects, I have nothing to say. But it is well known that the open season for most varieties of game is not nearly as long as the time during which it may be hunted to a reasonable extent without injury to the young. Is it not possible, then, to considerably extend the general open season, but limit the time during which individuals may shoot? Make every man who wants to hunt get a license which shall cover the days or weeks which he wishes to devote to this recreation. Let these licenses be for short periods and do not issue more than one or two to one man. Such a plan is feasible and such a law could be enforced at least as easily as those at present in vogue. A small fee for the license would be in order, and it is not impossible that these fees would pay the salaries of competent detectives and prosecutors. Few laws bear equally upon all, but it seems to me that some modification as I have suggested would preserve the game and enable many to indulge in much-needed recreation who cannot devote October to such charming pursuits. PEDAGOGUE.

SOUTH ABINGTON SPORTSMEN'S CLUB—South Abington, Mass., March 20.—The sportsmen of South Abington held a meeting this evening, the object being to unite the South Abington Sportsmen's Club and the East End Glass Ball Club under one organization, the new association to be known as the South Abington Sportsmen's Club. The meeting proved successful and the following officers were elected to serve one year: President, W. H. Cook; Vice-Presidents, Thos. Fish and Geo. Harlow; Secretary, F. W. Bryant; Treasurer, C. Good; Directors, Wm. D. Luculo, Geo. Edison, Sam'l Norton, P. Smith and Warren Edson.

A Committee on Constitution and By-Laws was appointed, consisting of Messrs. Thos. Fish, Geo. Harlow and Seth P. Gurney.

A club badge has been ordered and will be contested for in the following manner during the season: The first shoot will take place on Fast Day, the second in July and the third in August. The badge will be given to the property of a member who shall win it three times in succession. It is hoped that much good may result from the union of the clubs.

The game in this section needs looking after badly—not with dog and gun, but by energetic, fearless game constables. By merciless trapping the ruffed grouse is in this vicinity about exterminated. Go where you will, the woods are filled with snags—not of recent make—but made and set years ago, and would not pay man or boy to waste his time setting snares now. I suppose the ticks had something to do with it also.

Quail were getting quite plenty last fall, but the severe winter has probably proved too much for them. Quite a number of foxes have been killed about here the past winter and fox-hunting is a popular sport. Among the successful hunters may be mentioned Wm. Wilder, Dave Howe and Seth Gurney. One of our directors, I think, killed two foxes in one day. I will conclude by saying that **FOREST AND STREAM** is appreciated by sportsmen here, and its articles are read with interest; but I think "Uncle Liebia's Spring Gun" rather lays over anything I ever heard before in the gunning line. WHITE WING.

BULGING OF CHOKE-BORE GUNS.—In your issue of March 10, among your answers to correspondents, I find the following: "The 'bulging' of a choke-bore is not uncommon. It cannot be remedied. Does not hurt the gun, and will not affect the safety of the barrels. Allow me, please, to say that you are mistaken. 'Bulging' can be remedied. 'Bulging' does not hurt the gun, as far as accuracy is concerned. Try well 'bulged' gun at the target and you will find how incorrect your statement is. I have been there, and know of what I write. 'Bulging' can be remedied. Last August I discovered that both barrels of my 12-gauge gun were badly 'bulged,' caused by shooting No. 10 wads from No. 12 brass shells. I, to, then supposed that my gun was ruined; showed the gun to John Brewer. He told me it could be fixed, and the barrels never shrank where the bulge had been; that there was only one gun-maker in the United States that could make a perfect job of the gun for me, and that man was Frank Kuhn, at No. 476 North Eighth street, Philadelphia, Pa. I had my doubts about it, but Brewer satisfied me when he stated that two years before he owned a fine Greener treble-vedge fast gun, No. 10 gauge, which he had badly 'bulged' in both barrels by using No. 8 wads in his No. 10 brass shells. He took the gun to Mr. Kuhn, who rebored it and removed all signs of the 'bulge' from both barrels. This was very cheering information, for, like you, I had supposed there was no remedy for the 'bulging.' I sent my gun to Mr. Kuhn; he rebored it and removed all sign of the 'bulging.' The barrels now are as smooth and perfect as the day they were made, and I have given it pretty hard usage during the past six months, and am quite satisfied the last sign of a bulge in my barrel will be very scarce on a gun present to him. How Mr. Kuhn does away with the 'bulging' is a secret only known to himself. I hope the information may be of value to my brother sportsman. Huanminton, N. J., March 14. L. W. S.

GAME IN NOVA SCOTIA.—New Glasgow, N. S., March 17, 1891.—The heavy "silver snow" in January has done great damage among the ruffed grouse, and they will be very scarce next season. The ice remained so long on the trees that the birds were literally starved to death. Moose and caribou have been plenty, and good sport has been had.

At the last meeting of the F. & G. P. Club it was decided to reduce the license fee for non-residents of the Province

from \$50 to \$20. It only now requires the sanction of the Governor to become a law, of which I will advise you in due time. This is a step in the right direction. The law which imposed \$50 as a license fee for non-residents was a most absurd one. While no true sportsman objects to contribute his share to the fund for the protection of game, it is not always convenient if he has a friend whom he invites for a few days' shooting, to be obliged to pay \$50 for the privilege; and it has been pretty well proven that it is not the sportsman who goes out for a few weeks' hunting, once or twice a year, that destroys the game. If the moose and caribou were only subject to inroads from such as these they would soon "increase and multiply," as the amount of legitimate hunting which would be done would not to any extent reduce their numbers.

The prospect for wild fowl shooting is very good this spring. Already the geese and brant are beginning to come, and we look forward to grand sport about the end of this month and the first part of April. GLOBE SPORT.

PENNSYLVANIA.—Rush, Pa., March 15.—The Legislature of this State has passed a bill on second reading offering a bounty of fifty cents on hawks, and a dollar on foxes and wild cats. I don't know that it has passed on third reading, but it may be confidently expected. Such a bill ought to be hailed by the farming and sporting community. There were more quail in this section last year than for the fifteen preceding years. Many were killed by hunters, and the remainder have been killed by the severe winter just past. For weeks the ground was deeply covered with snow, and the thermometer ranging from freezing point to 80 deg. below zero. Trout, too, must have suffered in the small streams on account of the late setting in of the winter and the great thickness of the ice.—J. W. G.

A RIFLE FOR VERMIN.—Hackensack, N. J.—In killing foxes, hawks, etc., I have often wondered that sportsmen, particularly anglers, do not use a light rifle more. They would find that they could have considerable sport if on their excursions they would carry along one of Remington's .22 calibre rifles. The report is very light, and the execution up to 100 yards is most excellent. There is hardly a trip I take but I have a shot at either a hawk, cat, coon, or some such animal, and while having the fun, it also benefits the birds by killing their enemies. Around home these little rifles are more effective than a shot gun, and do not disturb our birds with a heavy report. I have fed a number of quail this winter, and hear of others having done the same. Still quite a number were found frozen.—W. HOLBERTON.

A GAME PROTECTOR'S WORK.—Heikler Co., March 22.—*Editor Forest and Stream:* Another deplorable case was brought up with a short turn by State Game Agent Dodge last week in this county for killing deer. He arrested two, Geo. Wandover and Rudolph Wheeler. The jury before which they were tried found a verdict against Wandover, but let Wheeler off. However, the trial will have a good effect, for it demonstrates that the game laws are going to be enforced. And all true sportsmen will feel encouraged by the good and effective work of State Agent Dodge, and it is to be hoped that in the year to come he may receive more help from parties interested in the protection of fish and game.—ZACH.

THE DEER SHOOTING.—Myriads of canvas-backs are now at Haver de Grace, but the northwest winds being so high few boxes could be put out the last two or three shooting days. Brant have arrived in earnest on the New Jersey bays. A new method of netting ducks is now being practiced at Simpsonton and Patuxent countries. A zill-net is set under water over the feeding grounds and the ducks, mostly blackheads, are caught by the heads in the meshes in their efforts to dive through.

EXTERMINATION OF VERMIN IN GREENWOOD CEMETERY, N. Y.—The annual report announces that I is noted that chipmunks made their appearance in the cemetery during the last year for the first time. The injury done by them has been deemed a sufficient cause for their extermination, and 2,253 of them were killed. Ground mice to the number of 375, 148 cats, 40 dogs, 133 snakes, 24 moles, and 64 rats have also been killed.

GAME NOTES.—Chagrin Falls, O.—Dr. Garlick, of Bedford, O., who writes occasionally for the fish department in **FOREST AND STREAM**, is very feeble, and does not think he will live very long.

During the past week there has been quite a number of white swan on the river, between here and Lake Erie. Mr. Robert Graham succeeded in shooting one of them and winging another. There have also been a few geese and ducks on the river.—H.

KANSAS.—Lawrence, March 4.—We are having excellent duck shooting just now. The birds are here in great variety and almost countless numbers. Another than many canvas-backs. Quail seem to be quite plenty, and I think they have passed the hard winter in good shape.

THE BURY GUN.—Several correspondents write us that the gun marked "Geo. Bury" is a cheap make, W. & C. Scott's. They are for sale in Boston by Messrs Wm. Reed & Son, and are said to be serviceable arms.

MICHIGAN.—Bellevue, March 21.—Snow, snow! Slush, slush! describes the weather here. Boys have fun with coons. Saw two ducks this week. There are quite a fine lot of partridges left over, and some quail.—C. M.

NEW JERSEY.—Tuckerton.—A fine buck deer was caught not very far from this place during the past winter by a "collar" bait. The animal is now on exhibition at the house of Mr. H. E. Mulholland, and is becoming very tame.

NEW JERSEY.—Pine Brook, March 26.—The snipe ground is all covered with water. There are quite a number of ducks flying.—W. J. P.

INDIANA.—Wortington, March 27.—A few snipe have come, but they are very wild as yet.—S.

MISSISSIPPI.—Philadelphia.—We have plenty of deer, turkeys, ducks and squirrels in the woods up here now, and a few quail and snipe in the open lands, but our shooting, except for squirrels, will soon close for the season. S. P. N.

VIRGINIA.—Norfolk, March 25.—Snipe are beginning to come on the marshes below here. Time to get ready for them.—J. E. M.

NEW JERSEY.—Glassborough, March 15.—I have seen some few woodcock already this season.—B.

INFORMATION WANTED.

W. J. M. wants the pedigree of an Irish setter dog named Buck, brought to Norfolk, Va., by a young man named McFall, who once lived in Brooklyn, N. Y.

A CORRESPONDENT desires to obtain eggs of the sharp-tailed grouse to hatch under a bantam hen. Can any of our Iowa, Nebraska or Minnesota readers help him?

To "C. E. W."—BRAINED, Minn.—"O. E. W." Troy, N. Y., asks where he can find deer hunting 150 miles from St. Paul with board, etc. Tell him that if he will write to R. H. Morford, Deerwood, Crow Wing Co., Minn., he will post him and take care of him next fall; or write to C. D. C. Williams, Otter Tail, Otter Tail Co., Minn., or go to Perham, on the line of the U. P. R., and radiate in any direction. Sporting centre on line of St. P. M. & M. M. anywhere west of Sauk Rapids to St. Vincent.—T. P. C.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

FRESH WATER.	
Brook Trout, <i>Salmo fontinalis</i> .	White Bass, <i>Roanoch atryopus</i> .
Pickereel, <i>Rose reticulata</i> .	Rock Bass, <i>Ambloplites</i> . (Two Spotted)
Striped Bass, <i>Morone americana</i> .	Walleye, <i>Stizostedion vitreum</i> .
Pike-perch, (Wall-eyed pike) <i>Stizostedion americanum</i> , S.	Wharmouth, <i>Channopyrgus gulosus</i> .
Yellow Perch, <i>Perca flavescens</i> .	Crappie, <i>Pomoxis nigromaculatus</i> .
Striped Bass, <i>Roccus teneatus</i> .	Bowfin, <i>Pomoxis canaliculatus</i> .
	Chub, <i>Serrinus corporalis</i> .
SALT WATER.	
Sea Bass, <i>Centropristis striata</i> .	Pollock, <i>Polichinus carbonarius</i> .
Striped Bass, <i>Morone americana</i> .	Spot or Blackfish, <i>Tautoglabrus onitis</i> .
White Perch, <i>Morone americana</i> .	

FISH AND FISHING IN THE EDISTO, SOUTH CAROLINA.

Editor Forest and Stream:—Our town Bamberg is situated on the S. C. R. R., two miles from Edisto River, a comparatively small stream, but one abounding in the most beautiful semi-tropical scenery in early spring that it is possible to imagine, and I have sometimes thought while waiting on some quiet and secluded island in the swamp to get a shot at some very old gobbler than nowhere else in this green earth can equal forest beauty be found.

The gigantic moss-crowned cypresses, the spreading benches festooned with the trailing jessamine, and the deep sea green of the glorious magnolia at sunrise of a spring morning make up a scene I think unrivaled and worthy of the pencil of a Salvador Iosa.

But I am to talk about fishing. So come, Mr. Editor, let you and I with Donald the old veteran, get into the buggy and go down to Simms' old river to try the redbreast perch. At sunrise we arrive, and having provided ourselves with a good supply of bait—earth worms or angle worms—we immer Donald's boat, push off and move down the stream two hundred yards to the sand bar where the fish have come to spawn. The water is about four or five feet deep, and the bottom swept perfectly clean by the male fish which are the principal ones caught, it being very rare to catch a female while spawning, though afterward they take the hook very readily.

With a long line, a long flexible cane or rod, a small hook and plenty of bait here goes your first cast. Donald says, "Wait," and we wait, as the fish, alarmed by the disturbance in the water, have sought the cover of the bounets; but pretty soon they come back, and you notice your float or cork moving rapidly away. Wait a moment and then pull, and for a moment you have as fine a contest as you could wish. You land a perch that will weigh say eight ounces, and as handsome a fellow as ever rejoiced the eye or palate of an epicure. Dark on back, dark gray on sides, sharp dorsal fins, spinous ventral and pectoral and a dark crimson breast, altogether as handsome a fish as one would wish to see. They are vigorous biters when in the notion, and when they are not you might as well roll up and go home, as no amount of coaxing will avail anything. I have often taken twenty-five or thirty in a morning using two rods and lines at the same time.

Redbreast fishing is, take it altogether, the most exhilarating sport next to partridge shooting that I know of.

We have also trout (black bass), rockfish (striped bass), besides many other kinds, and shad in early spring when the dogwood is in bloom.

The rockfish grows to quite a respectable size, twenty-eight to thirty pounds, so also the blue-crab. These heavy fish are rarely taken with rod and line as, owing to the many obstructions in the river, we cannot use the rod and fly to any advantage. We tie a very stout hook and line (short) to an overhanging limb or bush, and bait it with a large perch of some kind, and wait sometimes all night, and in nearly every instance if the hook holds we capture a large cat or rockfish.

You will say perhaps that this is not very sportsmanlike, and it isn't, but we catch 'em.

Another not much known method of taking fish is with a basket trap.

This trap is an oblong basket, eight feet long, made of white oak splits. One end is closed up, and the other is partly so, by the incurved horizontal splits of the framework, so arranged as to permit the fish to enter the basket through a narrow opening, but prevents their escape. This trap is baited with Indian corn ears, and sunk in some deep quiet cove and left for a week, and generally the owner finds it full of cats when he returns.

Our best fishing for trout is in the fall season, in October and November, and during these months, if the river is not too high, our best baskets are made. The bait mostly used is what we call roaches, also "horneyheads" and "silvers." Having procured a sufficient number of these and having a rod of say twelve feet long and a line of eight or nine feet,

"From our correspondent's description this 'redbreasted perch' is evidently one of the many fishes which are variously known as 'Sauter pond fishes,' etc. It is probable that it may be Jordan's bloody sun-fish, *Xenops angusticentus*."

tolerably stout, and a stout hook, we make a start. The rower sits in the stern of the boat to paddle. We bait the hook by hooking through the lips the little fishes, usually three at a time, and proceed to make a cast. Moving slowly up stream, we drop the line in every dark-looking corner, wherever water swirls around a stump, or under the bushes or causes, and pretty soon we feel a tug like some one suddenly wanting our rod. Now you must, "mind your eye," for you don't know yet whether it is a yearling three-pounder or an old mossy-back trout that has you, but pretty soon you find out; for if it is an old setter he will notify you of the fact by going straight to the bottom in spite of you, and it will only be by the very best management that he does not outstrip you, for he knows exactly how to go down among the roots of that old cyprus and tangle, you so that you are glad to get off with only the loss of hook and fish. There is not much time for any fancy touches, and if you really want him you try to lead him out into deep water and swing him around to the man who is paddling, who puts his fingers into his gills and lands him in the boat.

There is no science about this, not even a landing net, but lots of good sport, and from 30 to 50 pounds of fine "brook." This is perhaps the most exciting kind of fishing that a man can engage in—constantly on the move, constantly on the lookout for a big bite, the ever varying antenna tints of the trees, the long waving moss, the chatter of the squirrels, the "quack" of the English duck, and sometimes the sudden "quit, quit" of the wild turkey, make up as good a day's sport as any reasonable man would want. BUCKSHOT.

WILL QUINNAT SALMON TAKE THE FLY?

THIS is a question often raised, and we are permitted to publish the following private letter on the subject:

Mr. Livingston Stone—Dear Sir: In July last I was fishing for trout with a fly on the Sacramento in a pool a short distance below a bridge. Some of the trout were on the bank, having on three flies—brown, hackle, jungle and black gnat. I had fished from the upper end of the pool down to a ripple at the lower end. When near the lower end of the pool a salmon of about five pounds arose to the surface and took the black gnat. I played him for about twenty minutes. He had but an eight-ounce rod and single line. I thought to try to snare head and get him before he reached the shore. He got away, and I got behind him and throw him ashore with my hands. In this I made a failure. In throwing him on shore the hook broke from his mouth and he slipped from the wet bank back into the stream and I lost him. He took the fly from the surface in the same manner as a trout takes it—that is, he arose to the surface, opened his mouth and grabbed it.

On the same trip, further down the river, at Southern's, an English gentleman, whose name I have forgotten (who is the superintendent of the Eureka Mining Company), was there fishing. He considered it unsportsmanlike to take either salmon or trout with anything but a fly, and persisted in whipping the river, although the water was somewhat roily from the mining above. The fishing was very good with black flies, and with the fly, and I think he did not also. He, however, took one salmon, weighing about ten lbs., also with a black gnat, and brought it to the house. This was the day previous to my arrival at Southern's. On the day I was there he had gone with a camping party over to the McCloud. I have heard of several others, but these are the only two cases that have come within my own personal knowledge. As you are aware, salmon can be so readily taken with bait that I think there are rarely any gauges with fly, except by persons fishing for trout. My opinion is that the quinnat in the Sacramento just in from the ocean will take a fly; but after being in fresh water for two or three weeks they will take nothing but the bait.

I was not fishing on the river with Sir Rose Price. He took his wild bait, and it is reported also with grab hooks. I fish in the same stream with Sir John Reed, but do not see him take a salmon with a fly. B. B. HADDOCK.

TENNESSEE FISH NOTES.—Our anglers are already getting their tackle in order for the spring fishing. The Legislature has not yet passed the much needed protection law, and it is questionable if they will. It is singular that in this day of enlightenment so many persons should object to laws which have become necessary and proved so efficacious in their workings elsewhere. The many streams of this State could soon be replenished with fine game fish could trappers, anglers and giggers be prevented from destroying them, as they do, while the trout are rarely being caught. Plans for catching minnows is now being offered for sale in many places. It consists of a globe made of fine wire, split in two, and joined together on the lower side by a hinge; to therein of those sides is fastened a small stand for holding bait. The two halves open when set at the bottom of the creek, or can be opened and shut at will. When suspended in deep water by these strings, these are attached through a pulley to the end of a jointed rod, thus allowing the angler to fish in the water and manipulated without the angler getting wet, as is the case with the old-fashioned minnow sled. Many of our sportsmen have seen experiments tried with it, and pronounce it the most perfect implement yet invented for the purpose. Besides, taking large fish becomes an impossibility, and doing away with the tugging about of heavy minnow sleds, etc., it is a very good trap for new Government Intenders appointing a person to fill the position of Fish Commissioner for Middle Tennessee so long and ably filled by Col. George F. Akers. It is to be hoped that the rumor is unfounded, since no more efficient Commissioner could be found than the Colonel, besides being a base injustice to him after doing so much as he has for the fish interest of the people. He has created a desire for protection in the minds of the people, besides having been a most successful angler. He is known to the National Fish Commissioner, and to Prof. Goode, Mather, Nicholson and others, all scientific gentlemen and enthusiasts for fish culture. With proper laws, a hatchery, and the able assistance of the above-named gentlemen, the Colonel could soon stock our streams and make for himself a notoriety which, after years of stubborn opposition and difficulties, he is justly entitled to. Nashville, March 7, 1891. J. D. H.

PROPOSED LAW IN MICHIGAN.—Concord, Jackson Co., Mich., March 21.—Allow me to place before your readers the fish law which is to be passed by the Legislature of the State of Michigan. I find by glancing over the Legislative report of said State that if House bill No. 234, which has been reported on favorably for passage, becomes a law, there

will be little use of any other regulations in regard to fishing in the inland waters of the State for three or four years; for the three years prohibition includes the streams of every county. Brook trout have been deposited by the Fish Commission in the tributaries of every river, and by the time the three years have expired the probability is that they will be stocked with the California trout.

The text of the bill is: Section 1. The people of the State of Michigan enact, that hereafter it shall not be lawful for any person or persons—1. To take or catch by any means whatever any fish from any stream stocked with brook trout by the Superintendent of Fisheries of the State for the period of three years after the plant of such brook trout therein; or to capture, in any manner, in any of the inland or public waters of the State, or to take in his possession brook trout, or gray ling, of a less size than six inches in length; 2. To take or catch, by any means whatever, any fish from any stream stocked with California trout by the Superintendent of Fisheries of this State for the period of four years after the plant of such California trout therein. Section 2. Any person violating any of the provisions of this act shall, on conviction thereof before any court of competent jurisdiction, be punished with fine not more than \$100, or by imprisonment in the jail of the county wherein he shall be convicted for not exceeding three months, or both such fine and imprisonment in the discretion of the Court. WOLVERINE.

SOARCITY OF CANADIAN SALMON.—In the article in your issue of Feb. 10, from the Albany Journal, on the "Unexplained Scarcity of Salmon," allow me to give my idea, and the reasons why. It is, as stated, the winter feeding grounds of the fish are on the far Labrador coast, and on the North Atlantic. I believe they get caught and many of them destroyed in the immense ice fields last May on their approach to the coast. Many fish were taken in the nets with the skin, fins, tail, and even the gill covers worn and split, not bitten or torn, as I have formerly seen them. They were also in poor condition, very milky, generally the first-run fish, more like meadow trout than salmon. It is not so common for their way through thick brush. The fish belonging to our different rivers arrive at different periods. Metacopia River fish, always first, they are easily distinguished from all the others. This, formerly a well stocked river, was nearly a blank, the netters getting none, and only 30 by the rod (formerly near 300). Main River proper, Patapedia and Kedon, were the best. Next came the others. This river had about one third the fish of last year, and only five years. Its fish gave the small supply the estuary and coast netters obtained last year. In this river the parent fish are taken for the hatchery, and owing to the very low water its stock could easily be seen, particularly when in October the fish come to the shallows to spawn. On its lower waters, for the first 40 miles, fish were very scarce, and in the proportion of five males to one female. On its upper waters it had half the usual number in stock, and three females to one male. Such was the proportion taken by us, and in all my former experience males were in excess. (I may here observe more females than males take the fly.) I can form no reason for the disproportion. The Upsalquitch River fish are termed greenbacks, generally small size, coming in July, many of them being through the netters' 7-inch meshes. I saw many pools in this river, and in the middle of the stream, and notwithstanding the low water and small stream, had better rod fishing than any previous year. I think this series of facts must show that if the ice fields did not do the damage, the late run fish escaped in a great measure the general destruction. As there is in the hatchery here 750,000 salmon ova, in fine condition, to supplement the natural supply, no fear need be entertained for the future. Metacopia, Feb. 18. JOHN MOWAT, Fishery Officer.

MAINE FISHING IN CALIFORNIA.—A correspondent in California writes us that the fishing in San Francisco Bay is excellent at present, notwithstanding the floods. The Sacramento and San Joaquin rivers, which drain so large a portion of the State, are pouring immense volumes of muddy fresh water into the bay, and the water in the channels and surface water is fresh as far down as Sausalito, which is only a mile or so from the mouth of the Golden Gate. Yet the bay fishing never was better. Catches of fifty, seventy-five, and a hundred pounds of rock cod are frequent at the points of Angel Island, Goat Island and Aleatraz. All down along the Sausalito shores the rocky banks afford opportunity for rod fishing, with a little bait and a float anchor, and deep water work is done. Small boats to run early, and are of seeming larger size than formerly. The tom cod, too, are abundant, and in good condition. Drop line angling for rock cod and perch is indulged in from the wharves at Oakland, Alameda, San Quentin and Sausalito. Sea trout, blue perch and green cod are taken from the deep water off Lime Point, at the Golden Gate. In fact the rock cod have been so numerous that there is not much genuine sport in catching them. Aleatraz Island, where there is very deep water and strong current, sea trout, blue, white and ribbed perch, and rock cod are caught in abundance. Owing to the swiftness of the current, piano wire lines are used, and leather-fingered gloves are necessary. Very heavy sinkers are of course required. Our correspondent promises us a description of the deep-water fishing at some future opportunity.

EFFORT OF MUDDY WATERS.—Dauphin Co., Pa.—Will muddy water in any stream or river, if very muddy, say for several weeks at a time, kill or suffocate black bass? The reason for asking is this: Ever since the warm weather and rains of several weeks ago, which caused a rise in the Susquehanna, and made quite a lively fresher of ice and water in the same, the water in the river has been very muddy, and within the past week large numbers of black bass have been picked up at the water's edge in a torpid or seemingly unconscious state, while many were quite dead. The different papers of Harrisburg have all contained notices of the same, and have given it as their opinion that the fish have been suffocated by the muddy water, and as all the streams emptying into the river were equally as muddy, the fish were unable to get into clear water, as well as the fact that many are interested in this matter, should be glad to hear your opinion or that of some one else on the matter, through the columns of FOREST AND STREAM.—JOHN H. ROTHBUCK.

Ordinarily, fish stand freshets very well and the mud washed from the surface of the ground, but if the bottoms of the streams are stirred the gas asphyxiates them.

FRESH SALMON.—St. John's, N. B., March 26.—The first salmon of the season was caught last Tuesday morning in Port Meday River, N. S., by Mr. James Palmer. It weighed nine pounds, and was sold for \$4.50.—STANSTEAD.

HE SAW NO CATFISH.—Hampton, Ill.—In answer to "How far North do Catfish Run or Live?" one correspondent says perhaps the Mississippi takes them the farthest; another has told of them in the Red River, and another of the St. Louis taking them farthest north, which is correct, I think. In 1866 I made a boat trip from St. Paul up the Mississippi to Sandy Lake, 350 miles above, and was about four weeks going up. I fished and hunted all the way, and did not see a catfish or trout. The Indians and soldiers told me that there were no catfish or trout in any of the waters that fell into the Mississippi above the falls of St. Antony. I caught plenty in St. Louis. I then portaged out of St. Louis to Pike, and down Pike to Vermillion Lake, at the time when there was such a rush there for gold and silver. In 1876 I paddled down from Sandy Lake again, but saw no catfish.—A. M. STAYWARD.

ST. LAWRENCE CATCH.—Many years ago I used to catch some fish in the River St. Lawrence, between Ogdensburgh and the Galops Rapids, which were then called "hub." My memory is not very clear regarding them, but I believe there were two kinds—one small and silvery, ranging from 1/2 lb. to perhaps 2 lbs. in weight, and another, less bright in hue, with reddish fins, and very much larger. They were taken with a frog bait, and I have seen some very large ones, rather reasonable to ask you to name these fish for me, considering how absurdly meagre my description is; but as they are (or were) common enough in the locality indicated, some correspondent might recognize them, even from the above. Any light upon these points will be most acceptable to—X.

ILLEGAL BASS—Buffalo, N. Y., March 9.—I was very much surprised a few days ago to learn that black bass were, as is familiarly quoted in the price lists sent out by the dealers in New York, and that they are kept on sale all the while, regardless of the close season. I have mentioned a friend who is a dealer to have no transactions with black bass, as there were many appointed by the State to watch the markets and dealers as well as the fishermen, whose duty it is to prosecute all infractions of the law. I have seen some very large ones, rather reasonable to ask you to name these fish for me, considering how absurdly meagre my description is; but as they are (or were) common enough in the locality indicated, some correspondent might recognize them, even from the above. Any light upon these points will be most acceptable to—X.

VERMONT BASS—Highgate Springs, Vt.—We have some fine black bass fishing here. Two gentlemen from New York captured over two hundred with the fly one week last August. The largest catch was sixty-three in one evening, when one of them, in six successive casts, landed twelve bass.—L. L. P.

Fish Culture.

STRIPPED BASS IN LAKE ONTARIO.

WE saw the following in the Watertown Times of March 15: "Clark & Robbins, the fish merchants of Sackets Harbor, had brought to the city a few striped bass, rather small, but only one ever caught in the lake or river. It was caught in Chautauque Bay and weighed six pounds. They are a very fine fish and it is thought by some that this is a forerunner and that there will be other 'strappers'."

We immediately wrote the firm named, enclosing drawings of two fishes which might be meant by the term "sea bass" and received the following reply:

SACKETTS HARBOR, N. Y., March 24. Your favor of the 21st inst. at hand with inclosure of slip from the Watertown Times, also drawings. The fish taken here was the lower one in drawing—*Roccus lineatus*—or striped bass of New York.

It is the first one ever seen by us taken from these waters, and we have an idea that it found its way up here by following the alewife. The specimen was very handsome and there is no doubt as to its identity. The drawing is a fair one, and that will be the ultimate result of the appearance here of the alewife? Have they caused the extermination of the native osage? Will the alewife remain in us or are they to disappear as mysteriously as they came, or will they, as some of the food fishes of the salt water become habitues of our lake?

These are questions we hardly dare venture an opinion on, as we really can see no good that is to be enduring by the appearance of the alewife in our waters.

We should be glad to read your opinion on these questions, and would be pleased if the department at Washington would appoint a commission to investigate. The subject needs to be dealt with in a more thorough manner. CLARK & ROBBINS.

The Ogdensburgh Journal has an article on the alewife as follows, for we think we are correct in assuming that they refer to this fish when they speak of menhaden, which do not go into fresh waters. It says:

Considerable interest will hang upon the question, "What effect did the singular mortality noticed last year have upon the alewives or menhaden of the St. Lawrence?" The total absence from the fish markets of the old-fashioned osage of Lake Ontario, and the fact that species of fish have been supplanted by the newcomers as certainly as the aborigines have disappeared from the whites on the land. If it shall turn out that the menhaden are as numerous as ever the present season the fish commissioner should take some steps to investigate them, and teach the people how to utilize their presence. If the presence of the alewife recently caught near Sackets Harbor comes from the following of the menhaden to our waters and other species are liable to do the same thing, it is to be hoped that the department at Washington will suggest the appointment of the St. Lawrence in June of the present year to investigate the menhaden visitation which takes place at that time.

THE GEORGIA COMMISSION.

WE have received the annual report of the Commissioner of Agriculture of the State of Georgia, who is also *ex-officio* Commissioner of Fisheries for the year 1890, together with "Circular No. 145," new series, which is a supplemental report. We learn that "Dr. H. H. Cary, of Troup County, was appointed Superintendent of Fisheries Jan. 1, 1890, and has discharged the duties of that position with energy and fidelity without salary since that time."

Dr. Cary reports that it has been a grave question how to conduct the work with the limited appropriation which has been appropriated for the purpose. He thinks that no State in the Union is so well adapted for the cultivation of anadromous fishes as Georgia. In former times the shad passed up all the rivers which empty into the Atlantic Ocean, and the shad were found in those which fed the Gulf of Mexico it has been demonstrated by experiment that they will thrive in those rivers of which the State has several. The shad have been taken from the rivers at Rome and Columbus in Georgia, and from numerous streams in other States which empty into the Gulf, all of which are traceable to artificial hatching. In

Water Cress & Brook Trout.
AQUETONG TROUT AND CRESS FARM.

Messrs. Thompson Brothers offer for sale Fresh Water Cress in one-half peck baskets, cut fresh every morning, and delivered in New York City between 9:30 and 10 o'clock at any point below Twenty-third street, at 60 cents per basket. We are constantly on hand, in our ponds, Brook Trout, from the egg to three years old, all sizes, for stocking private ponds or streams. Can supply private parties, hotels or restaurants in New York to a limited extent with fresh brook trout in their season every morning, leaving our ponds at 7 A. M. and arriving at New York at 9:30 same morning, further information apply to

THOMPSON BROTHERS,
 Aquetong Trout Farm,
 New Hope, Bucks County, Penna.

THE BLUE STAFF COCKER SPANIEL BREEDING KENNEL.—I will sell responsibly to increase the quality of the business care, which will call for all the spare time I care to give in the future, and also enable me to complete my stock of brook trout, and the breeding and management of Spaniels for American Sportsmen. Therefore I offer as my Kennel stock, all accessories, together with Kennel and good-will, to any one having the taste and competent to carry on the good work with it. The demand for this kind of dog is ever increasing, and the Kennel have been sold last year (1889) from this Kennel had we had them. My price, \$100, is extremely low considering the well established reputation and lucrative facilities. I will give all time and advice required, gratis, to the successor. One having breeding experience is preferred, and would like to hand over before June next. Any parties meaning business need apply. M. F. MOOKOON, Proprietor, Blue Staff Kennel, Franklin Co., N. Y. Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R.R. Mackinac, Grand Rapids and Cincinnati Short Line FOR THE Trout, Grayling, and Black Bass Fisheries.

FAMOUS SUMMER RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained. BROOK TROUT abound in the streams, and the LAKING AMERICAN GRAYLING is found only in these waters. THE TROUT season begins May 1 and ends Sept. 1, the LAKING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE are abundant in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "put up" at home, also for packing fish can be had at many points. TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing any other countries new enough to afford the finest of fishing. During the season Round Trip Excursion Tickets are sold at low rates, and the best facilities offered to Tourists and Sportsmen. Dogs, Guns and Fishing Tackle Carried Free of Charge.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide (an attractive illustrated booklet) of 48 pages, containing full information and accurate maps of the Fishing Grounds and Lakes, address A. B. WELSH, Care, Juss. A cent, Grand Rapids, Mich.

Wild Fowl Shooting

THE SPRING SNIPLE SHOOTING.

IT is time for the snipe to arrive. For three months our dogs have had nothing to do; now, for two or three weeks, they can have a little work. All of our readers who shoot have looked forward for weeks to the coming of the snipe. The guns have been carefully looked over, cleaned and oiled, the shells loaded, the long boots dragged out from their hiding place and examined to see that they don't leak, and the dogs given an extra amount of exercise to wear off some of the fat that they have accumulated during their enforced idleness, and to harden their muscles for the severe exertion of trotting all day over the bogs and through the mud and water. For the next three weeks the meadows will be thronged with shooting men of all sorts and descriptions. If you choose to visit these meadows, you shall see, on any day during the remainder of April, an army of skirmishers who have vowed death to the unlucky snipe. There you will find the man accoutred in yellow leather leggings, white corduroy pants, a green hunting-coat and a fancy cap, who bears a gun bright with German silver mountings, carries a fringed game bag swung over his shoulder and is followed by a rabbit hound. You will find, too, the dandy, clad in velvet, with English high-laced boots, whose gun is of the most recent and improved make, and who is followed by, or rather around whom plays in circles half a mile in diameter, a well-bred pointer or setter, so wild and so little under command that it chases up every bird on the ground long before the gunner comes within shot. Mingled with these are the more sober-minded shooters, who, in long boots and quiet, well-worn suits of canvas, moleskin or fustian, handle their more or less well-broken dogs with a considerable degree of intelligence, and give a good account of themselves at the end of the day's tramp. Besides these men, there is the old fellow who carries usually a muzzle-loader, whose rags flutter wildly in the wind, and whom, but for his gun and dog, you would certainly take for a

tramp. This man scarcely speaks to his dog, and his dog hardly looks at him, but between them they find more birds than all the rest of the shooters put together; and the snipe that gets up within range of the old man has a marvellously small chance for life.

Our green-coated hunter, if he has good luck, returns home from his snipe-shooting with a mud-hen, a spotted turtle and a musk rat, which he found swimming in a creek in the meadow, and which, after it was wounded, his hound retrieved in excellent style. The dandy has even less to show, for he disdains the turtle and the musk-rat, and has nothing but one snipe, wounded by some one the day before, and today picked up and somewhat mangled by the dog, from which he recovered it after a sharp struggle. The others have each three or four birds, while the old ragg-man has, likely enough, fifteen or twenty.

Snipe shooting on the best known meadows here in the East is no longer sport. It has become a circus performance, in which each one who carries a gun acts the part of clown. The grounds are crowded, and if a dog makes a point you see men hurrying from all directions to surround the bird, each one fondly hoping that when it rises, it may fly toward him. The ground, having been thoroughly beaten over by the shooters, a portion depart for other meadows, while others, more lazy or more knowing, proceed to roost on the fences, the logs or the musk-rat houses, near the best feeding spots in the hope that during the day other birds may drop in. Should an unlucky snipe, startled from another piece, appear in the heavens, each man of the waiting multitude hastily seeks ambush behind his late seat, and if the bird alights, a wild rush is made for the spot he has chosen for his refuge. It is go as you please in very truth, and when the unhappy bird arises, pounds of shot are sent after him by his panting and breathless pursuers.

There are many pieces of meadow or bog land, however—each of our readers probably knows of one or more and jealously guards the secret of its existence—where a few birds are to be found each season. One can go in the morning and start from one to three birds, and again toward night with a reasonable hope of picking up one or two more. The spot is probably a small one, and we know just where the birds will be lying, according to the wind and the weather. The old dog trots carelessly, as a matter of form, through the portions where the birds never lie, and as he approaches the well-known feeding-ground, gradually slackens his pace. He takes advantage of the wind, and at the first breath of the scent stops until we come up. Then, slowly advancing and keeping just in front of us, he moves on a little farther, and stops once more. We step forward, and one, two or three birds get up. We kill what we can of them, and usually they can all be secured, and then pass on to some other ground. If we get a dozen birds and meet no one during the day we feel that we have done well, and go home at night contented.

Far different is the shooting in the West and Southwest, where a man can bag from fifty to seventy-five birds in a day. But, alas! the West and Southwest are far off, and the snipe is proverbially an uncertain bird, so that the business or professional man has but little encouragement to travel far for the spring shooting. Yet there are undoubtedly many localities which offer superb sport at this season of the year, but those who know where such places are as a rule keep the information to themselves.

The practice of shooting the snipe in spring is one which, in our opinion, is unhesitatingly to be condemned. We know well enough the old and worn out arguments in its favor: that the snipe are the only birds on which we can work our young dogs in spring; that they are the only birds we have which can be shot in the field between the close of the fall shooting and its opening the following year; but these statements are no reply to the undeniable fact that the birds are killed while on the way to their breeding grounds—nay, in some instances on their very breeding grounds, and often with eggs almost ready for deposition. These birds have been found nesting in Connecticut, New York and in Pennsylvania, and it is in the highest degree probable that, were it not for the uncompromising war which is waged up on them in the spring, many of them would each year raise their broods with us instead of, as now most of them do seeking safety from persecution in more northern latitudes.

We hope some day to see the game laws so amended that snipe shooting shall only be permitted during the fall migration, and when such a law is passed and observed we look to see the birds increase once more to something like their old numbers.

Most of our readers are old enough to remember when these birds were fairly plenty on our Eastern grounds, both in spring and fall. That day has long passed, nor can we hope for its return until the spring snipe shooting is done away with.

THE FISHCULTURAL DINNER.

FOR some years past it has been the custom to have a dinner at the close of the annual meeting of the American Fishcultural Association, at which dishes composed of such fishes as are attainable shall form a large proportion of the bill of fare. These dinners have obtained such a local renown for the quality of their menu and for their flow of wit that they are quite popular among gentlemen outside the association, and so it happens that on all occasions the latter outnumber the fishculturists. This year the notices read "Dinner of the American Fishcultural Association, at Sieghorner's, 32 Lafayette Place, Thursday, March 31, 1881, at 6:30 p. m. ('Tickets, five dollars.)"

At seven about thirty-five sat down and found an elegant card with the same beautiful chromos on the covers which were designed for Mr. Blackford's trout opening, on the inside of which was the following:

MENU.
ENTREES.
Blondoise de tortue a la grande duchesse.
Bisque d'oreilles, cardinal.
Amontillado.
HORS D'OEUVRE.
Ravioles of hard cheese a la Grimod.
Whitebait a la diable.
BELEVRES.
Rale au beurre noir.
Nicoisieur.
Redsnapper a la Windsor.
Filet de bœuf pique a la Duc de Montebello.
St. Etienne.
Moyonnaise de crevettes. Salade a la russe.
Pommes nouvelles. Asperges.
Courcoubes. Tomates. Radis
ENTREES.
Grenadins of chicken halibut a la Robespierre.
Poussin sauté et glacé en surprise. (?)
Muscovado au social.
PIECES FROIDES.
Aspic de carpe mouillé a la Neptune.
Grande piece de saumon en mayonnaise a l'artique.
Nicoisieur.
ROTI.
Striped bass pique et farcie a la normando.
Shad baked a la haitie et d'hotel.
English snipe sur canapé.
Cresson. Pommeury sec. Salade de fattue.
DESSERT.
Glace Napolitaine. Sorbet Americain.
Petits fours. Gateaux d'amanides.
Fruits. Dessert assortis.
Cafe.

Mr. Roosevelt, President of the Association, presided, flanked by Profs. Goode and Atwater, while Mr. John Ford, of the Times and the Ichthyophagous Club; Mr. Blackford, of the Whitebait Identification; Mr. W. M. Laffan, of the Tile Club and Long Island R. R.; ex-Mayor Smith Ely; Judge Godney; Mr. Geo. Bird Grinnell and Mr. E. R. Wilbur, of FOREST AND STREAM; Mr. Gilbert E. Jones, New York Times; Mr. James Annin, Jr., Rec. Sec. Am. Fishcult. Ass'n; Capt. J. H. Mortimer, the sailor naturalist; Mr. Charles B. Everts and Mr. F. Mather, of the Ass'n; and Messrs. C. Norwood, Jr., R. B. Hill, Douglas Smythe, G. W. Van Sicten, W. Ottman, C. L. Van Brunt, Mr. Embee, O. N. Jordan, J. L. Perley, Gaston L. Feuardent, W. Haveshaw and several gentlemen from the press. Little of note occurred until *Rais au beurre noir* was reached, when some gentleman of an ichthyological turn discovered that *Rais* was only another word for skate, and those to whom the dish was new approached it with caution which was soon laid aside, and all pronounced it "good," some adding "excellent," and others indulging in other superlatives, while three gentlemen asked the waiters for another piece. With the advent of the *Amion* the President arose and said the Fishcultural Association was now ten years old and its record was a proud one. The United States Fish Commission had grown out of it. Ten million salmon had been brought from California and planted in Eastern waters, and think of the good dinners in ten

million salmon! While he was in Congress he had advocated the propagation of fish, and James A. Garfield had voted to carry on the work. Now Garfield is President of the United States and the speaker is president of the Piscicultural Association. If part of the work of the association is to find presidents we can supply them for ages to come. Before the advent of the Smithsonian in fishculture we all knew a little ichthyology, but now they make new names so fast that we can't keep up, and he would call on Prof. Goode to give us the latest atrocity in nomenclature.

Prof. Goode said that perhaps the President would be best pleased with the restoration of the Russian name for the California salmon, which was now *Oncorhynchus tshawytscha* (we hope we do not mistake the spelling), and he would leave the gentleman to pronounce it as he chose.

Mr. Penardent caught the word "restoration," and immediately bethought him of the Ctesola statues, but his mistake was kindly corrected when the President remarked that while on the subject of words he would say that a gentleman had proposed a new Greek word for a class of fishes to-day, at the piscicultural meeting, which the author got stuck in pronouncing, and he now called on Mr. Mather to tell what it was and what it really meant. The gentleman referred to stated that it was late in the day to remember Greek words said in the morning, but that if the word was Greek to the worthy President, he would assure the members that it was also Greek to him. Mr. Hill was called on to know what relation the Long Island Railroad bore to fishculture, and replied that it was built entirely to afford facilities to this association to go a-fishing, and to bring skates to the President of the Ichthyophagous club, and referred to Mr. Laffan for confirmation. Mr. Laffan stated that his principal duties on that road had been to refuse passes to the President of the Piscicultural and his friends; that he had more than earned his salary during the past year and had been promised an assistant.

Judge Gedney rose to inquire if the skate which had been eaten to-night was of the roller or parlor variety; and from this time until 11:30 the wit flashed with such brilliancy that Seignior turned down the gas in order that the fire department might not be called out, and our eyes were dazzled so that it was no longer possible to take notes. We remember, however, that Mr. Everts spoke of the excellence of Vermont trout; and that Mayor Ely was called to account for the great numbers of little eels, after which the "good nights" were said and all retired to dream of skates eating chicken halibut on the half shell, or blue points pointing at the young eels which were running down the President's chair-back.

PROTECTION OF INTRODUCED GAME.

We print below the full text of a bill passed at the last session of the New Jersey Legislature and approved by the Governor, March 7, 1881. Such a law has been greatly needed by those interested in game protection, who have heretofore, when they turned out these birds, had no security that even the breeders let loose by them would be shot or trapped by selfish or pot-hunting individuals.

The step taken by the New Jersey Legislature is in the right direction, and all friends of game protection will feel encouraged at the action taken by this body. It is earnestly to be hoped that other States will follow in the footsteps of New Jersey, and that at no distant day we may feel confident that birds not indigenous to the East may, at least, have a fair chance to establish themselves here before they become objects of pursuit to the sportsman.

The text of the bill referred to is as follows:

CHAPTER LXXVIII.

An Act to Protect and Propagate Grouse or Prairie Fowl.

1. Be it enacted by the Senate and General Assembly of the State of New Jersey, That where any person or game club shall, at their own expense, procure any grouse or prairie fowl, and turn out the same upon his or their lands or game preserve, and the same or their offspring shall stray or go upon the lands of others, it shall not be lawful for any person other than the owner of said lands or member of said game club to shoot any grouse or prairie fowl, and no person shall trap or catch the same.

2. And be it enacted, That any person other than those authorized by section one, shooting grouse or prairie fowl, or found catching with trap or any other device, any grouse or prairie fowl shall, upon proof and conviction thereof, before any justice of the peace of the county wherein the offense was committed, or any other court of competent jurisdiction, pay to the treasurer, for the use of said game club, or to the person turning out the same, as the case may be, for every such grouse or prairie fowl the sum of ten dollars, with cost of suit, or an imprisonment in the county jail not exceeding three months, or both, at the discretion of the court.

3. And be it enacted, That it shall not be lawful for any person to kill, by gun or in any other manner, any grouse or prairie fowl, between the first day of December and the fifteenth day of October, yearly and every year: every person so offending shall be subject to the penalties named in section two of this act.

4. And be it enacted, That every member of any association or organized game club in this State, turning out any grouse or prairie fowl upon their lands or game preserve, shall be and are hereby empowered to prosecute, either in his own individual name or the name of the game club of which he is a member, for the penalties above prescribed for the violations of the provisions of this act.

5. And be it enacted, That this act shall continue in force for a period of five years.

6. And be it enacted, That this shall be deemed a public act and take effect immediately.

ALL OF OUR READERS will pursue with interest the very full and exhaustive account of brant shooting on the Massachusetts coast which we publish this week. The author is an old brant shooter, and is thoroughly familiar with the particular phase of this sport which he describes, and no one could speak more authoritatively on the subject than he.

The Monomoy Branting Club is certainly to be congratulated on its prosperous condition, and on the excellent sport which its members enjoy.

THE PISCICULTURAL ASSOCIATION.—We give this week merely a synopsis of the proceedings of the late meeting, but will give a full report of the transactions, papers and debates in future issues. It was one of the most agreeable meetings which the association has ever held, and the character of the papers read was fully equal to that of any previous meeting. The papers by Profs. Goode and Atwater were exceedingly valuable.

Quæstio, s'ocuse.

The Sportsman Tourist.

BRANT-SHOOTING AT CAPE COD.

WITH A BRIEF SKETCH OF THE MONOMOY BRANTING CLUB.

BRANT-SHOOTING is a peculiar kind of sport that but few have indulged in. There are many obstacles in the way. The haunts of the birds are few and isolated, their feeding grounds limited, their sojourn brief; nor can any degree of success be achieved without the proper appliances, such as a house to live in, boats, boxes, bars, live decoys and a skillful hand to manipulate them. With, however, all these are attained no sport is shown on the coast of New England gives greater satisfaction or better rewards the energy and skill of the sportsman. The birds are large, numerous and, gastronomically, have no superiors. This little goose must not, however, be confounded with the brant of the West. In some of the States almost anything in the shape of a goose is called "brant." Our bird—*Anser bernicula* and *ferula berula*, Steph.—weighs about three and a half pounds. But they are not distributed universally along the Atlantic shores as are Canada geese, black ducks, coot and other aquatic birds. At the easterly end of Massachusetts is the nice, old-fashioned town of Clatham, and some three miles away to the southward of this is the island of Monomoy, a mere belt of sand running still further southward about six miles. Almost the whole of Cape Cod is composed of a granulated silicious sand which has great mobility in wind or water. Monomoy shares the common heritage of the cape and her sister isles. Had Rip Van Winkle fallen asleep on Cape Cod in place of Kaatskill he would on waking have found the harbor, channels and islands metamorphosed as thoroughly as the people. Not many years since the bar or island of which we are speaking had a ship channel between it and another similar bar, Nauset, through which the commerce of the town was carried on. Subsequently a shifting current filled the channel with this moveable sand, connected the bars and closed the entrance to the inner harbor. Still later, during a severe easterly storm, a crevasse near the town was made in the outer bar which has since so widened as to allow the tide to ebb and flow through it. This change of current has not only choked and fretted away the hill upon which stood the government light-house, compelling its removal, but also washed away the wharves, filled the channel and ruined the remnant of commerce that was left to the unfortunate town. What strikes one as most singular at this place is that at a depth of some fifty feet below the foundation of said light-house, where the hill has been cut away by the action of water, the stumps of large trees, quite unlike any forest growth of the present day in the vicinity, are exposed in view. Overlying these stumps is a stratum of clay which has the appearance of being hardened into rock by the pressure of the sap reabsorbed mass of sand or some other cause. Similar instances of large stumps still remaining in salt marshes occur at Hingham and other places along the coast. Of course these large trees did not grow in salt water. Whether the erosive waves have destroyed the barriers that guarded these dozens of the forests or the whole coast is not expressed than formerly, we leave to the researches of the archeologists to determine.

Facing eastward from Monomoy one sees the broad Atlantic where "they on the trading flood ply, stemming nightly toward the pole." It is no uncommon occurrence for a fleet of a hundred sail to be seen at anchor or struggling against wind or tide to reach a port, and many a gallant ship has been wrecked on the coast. The waves are so expressed upon the beach as a mere toy. After an easterly gale one of the objects of intense interest to tourists is the matchless grandeur of the spectacle of "bills of seas Olympus high" that dash themselves in thunder upon this sand bar, again and again to be absorbed in the bosom of the reluctant wave. On the westerly side of the island, stretching up and down some miles, is what is called "Clatham Great Plains," a sandy beach that water flows, varying from two feet to twenty nothing according as it is full or near tide. Adjoining these flats on the southerly or westerly side is deep, blue water where grows an immense quantity of common eel grass (*Zostera marina*) upon which the brant feed; and this is the great feeding ground for these birds on Cape Cod. So attractive is this locality that thou and of these little *Anserina* assemble here every spring to feed and bask in preparation for the long journey to the Prince Edward's Island to their breeding grounds at or near the North Pole. It will be understood the marine vegetable that proves so savory a morsel to the brant grows in water five or six feet deep at high tide, and as these birds are not divers they can only feed at low or nearly low tide. Then as the flood tide drives them from their feeding grounds, particularly when it is breezy, the birds become uneasy and scatter about in little "pods" or flocks, evidently seeking and their feeding grounds or more comfortable quarters where they can rest till the tide ebbs so they can return to the feast. It is during this periods—about half flood to half ebb tide—that the brant are fitting about over the flats and are liable to catch sight of and be lured to the decoys; and it is during these four or five hours each day that the shooting is done. The time for the brant to arrive from the Southern spring waters considerably; in fact, none of the swimming birds—*Natæores*—are as punctual on time as are the

waders or *Grallatores*. A warm, forward spring brings along the brant in considerable numbers by the 1st of March; whereas, a backward season will hardly make good shooting before the end of that month, and by the 1st of April so few remain as to offer the sportsman no inducement to pursue them further, though it is not infrequently a few straggling flocks may bescon as late as the 1st or even the 10th of May. During this period they are constantly coming and going, especially when the wind is to the southward and westward. It will be readily observed that the shooting season at best only extends over a period of four or five weeks. They rarely stop at this place in autumn on their way South, and if they do are not to be fat on the water. The birds on arriving in the spring enter the bay from the West in flocks or gaggles—varying from a few individuals up to several hundred—at no great distance from the mainland, sometimes passing directly over not deigning to stop even though their food is abundantly spread out before them, and thousands of their less suspicious brethren are feeding there, while other flocks will gradually lower themselves down, swing round once or twice, then plunge into the water. All the migratory birds that follow the coast line must of necessity pass this point both spring and fall. Sometimes they lift and go over Nauset Bar or Monomoy Island, and sometimes they pass around the southerly end of the island, Cape Malabar, but the great mass rise to a safe altitude, strike a "bee line," east by north, and pass directly over this strip of land. We have on one or two occasions seen a flock of birds that must have a pocket compass placed in the top of his head so unerringly do they steer. The flocks of brant on arriving, departing or passing over are quite irregular in shape—now in column, now in line, now one end or the other folding upon the centre, now are in a bunch, then again in line, and as the little dark specks disappear away down the dim, distant eastern horizon they are more and more scattered in the latter position. All the other. Of all the multitudinous millions we have seen during the last quarter century not a single flock was ever for any length of time in unicorniform or V shape as are Canada geese. We do not pretend to say how they fly in other latitudes or under other circumstances. Dr. Kane and other good authorities have spoken of their flight as being conical. We have on one or two occasions seen a flock of birds on the ground at Wellington Channel or Kamschatka Bay, but does not accord with our observations at Cape Cod. One would naturally suppose on seeing these birds constantly feeding at any locally along shore it would be easy enough to kill them. There are many such places up and down our coast, but for reasons very few birds can be killed. At the mouth of Bass River many brant linger and feed through the entire season, but they are not to be shot, for the water is so shallow and successfully worked that the water is too deep, the shooting bluff and the brant feed only at low tide. A box might be placed on the feeding ground, and operated for a short time during each low tide, but the depth of water in the immediate vicinity would prevent the recovery of cripples, an important item in brant shooting, and moreover, all our experience teaches us that shooting these birds on their feeding grounds soon drives them to their common haunts, and they would never return. The same conclusion was arrived at on examining the harbor of Nantucket. It will be found even at Clatham that before any shooting can be done a vast amount of hard work is to be performed. The feeding grounds and flats are so far from the town that living there is not practicable, and a shanty or house must be built on the island. Boxes and traps are not to be put out, but the live decoys and a well dug for fresh water. This arrangement is a curiosity to the uninitiated. The island where the shanty is located is not over 200 yards wide, but of undulating surface, i. e., composed of little hills and valleys or basins. If a hole three feet deep be dug in one of these basins and a common flour barrel inserted it will on the flood tide partially fill with pure, soft water, and will continue to rise and fall with each tide. The reason for this is that it falls upon this porous sand and percolates till it reaches shallow water, which, being of greater specific gravity, holds or buoys up the fresh water. If, however, one digs a little further down he will pass through the fresh water stratum, and arrive at bog mud, showing conclusively that this sand has been driven from the beach by the wind, and deposited on the island. In fact, the reason for this is that the water in the shanty, but an abundant supply of fresh potable water will be found indisputable to health and comfort.

Various contrivances have from time to time been introduced for slaughtering these wary winged wanderers, but none have succeeded so well as shooting from boxes built in the sand. It would really seem to one not acquainted with their peculiarities and habits, these immense flocks could be approached and slain by the use of a gun. The reason for this has been tried and as often failed. A well trimmed "float" in the hands of a skillful manager was tried with no better success. For several years one club used that domination of all true sportsmen, a "floating battery." This was anchored on or near the feeding ground, and for a short time met with moderate success, but the birds with their keen eyes soon discovered the location and were not to be deceived.

The bay is miles wide, and a stiff breeze or squall keeps the flood into such turbulent waves as to endanger the life of the occupant of said nuisance, and it was a wise move when they concluded to abandon the battery and return to the old method of shooting from boxes. About the same time the battery was in use some twelve years ago wood decoys were introduced, but to our mind were of doubtful necessity, for the live decoys, with all their disadvantages, do not attract the attention of a passing flock, but they rarely ligh with them, and if perchance they were deceived into such impropriety, the deception would soon be discovered, and so hasty a retreat made as barely to give the gunner a snap shot at a single bird. Nor are they very likely to swim up and mingle freely with dead decoys or wood decoys, but they are very shy, and it is true that sometimes a flock of brant that otherwise would not think of coming near the bar, will fly up and scale round a lot of wood decoys, but such flocks, scattered by doubt and fear, offer very little satisfaction to the sportsman, nor will any great shot ever be made in this way. Once fired at on the wing they will not return, but if allowed to alight in the water and swim up to the decoys a much larger number will be killed, and then the same flock will afterward visit the bar and repeat this several times on the same day. They do not seem to be frightened out of their wits when fired at on the bar, or near the live decoys, as they do on the wing or near wood decoys. Still, if two or three clubs are operating at the same time near each other, the one having most wood decoys, other things being equal, will get the most wing shots. But our boxes are not yet so perfect, and this is not all. To accommodate three persons, must be about six feet long, three

ness is found to be caused by the presence of an intestinal parasite—named by Dr. Spencer Cobbold *Strongylus douglasi*.

This worm was discovered by Mr. Arthur Douglas, and appears to subsist on the coats of the ostriche's stomach. No remedy has as yet been found for these parasites, nor has the cause of their existence been discovered, and the question of what is to be done in the matter is becoming a serious one to South Africa farmers.

SNAKE EATING SNAKE.

IN the number of FOREST AND STREAM for March 3, a correspondent criticises the account given by me in a previous number of the paper of the killing and swallowing of a rattlesnake by a large gopher snake, particularly the statement that the victor bit off the head of the vanquished, and rejected it before swallowing the body, and the editorial comment is that the act could not be performed by a serpent.

It happened that I received the paper with the above comments at the house in South Florida where the affair is said to have occurred. I therefore allowed the paper to my informant, Mr. Bartolo Paecetti, and asked if there was any error in my repetition of the story. He replied that there was none, that he saw the occurrence in his own door-yard, that it was seen by all his family, and also by a visitor, a Captain Hatch, master of a vessel trading on the coast. That the whole battle between the snakes occupied two hours during which they were closely watched, and were so fiercely engaged as to pay little regard to the observers, that the biting or chewing off of the head alone took nearly an hour.

And here Mr. Paecetti remarked that if the writer in FOREST AND STREAM had ever examined the teeth of a gopher snake, which resemble those of a file saw, he might change his opinion as to the possibility of the act. It went on to say that the gopher snake had finished the business, and had gone away unharmed, that he, Paecetti, buried the severed head under a tree in the garden from fear of accidents from the fangs. "I said he," "This is a true story which I buried the head, and perhaps I could find the bones of it there still, though it is ten years ago." This man is entirely truthful and trustworthy as will be testified by all who know him, and they are many, he being an old Floridian well known on this coast as the best fisherman in the region as well as a good hunter, and an Indian scout in the Seminole war.

I may add that I also had the account of the biting off of the head in all its details from Captain Hatch mentioned above.

Such is the positive testimony which I produce to confirm my statement, which I may be permitted to say is of at least equal value with a negative found on general theories.

Halfway Inlet, March 21.

S. C. CLARKE.

FACTS ABOUT DEER.—GLEN FALLS, N. Y., March 23.—Editor Forest and Stream: I notice in your issue of March 24 a communication from Mrs. Westminister, B. C., about deer and what becomes of their horns.

Now what I have to say I have ascertained by an experience of twenty-five years of hunting and trapping in the northern part of the New York wilderness, in the southern parts of Franklin and St. Lawrence counties, and it corroborates the opinion of the above correspondent in respect to the weight of large bucks. If the whole carcass weighs over two hundred pounds, and such are very rarely seen, but occasionally I have captured deer that would go a little more when in prime condition. The heaviest one I ever killed was in October, 1876, three miles below the village of North Lawrence on Deer River, and I brought it there to ship to Moira Station, the next east of where I then lived, but as I received a bid for the venison dressed, at 12¢ cents per pound, I accepted the offer, for then I should have to skin, allow and send to the city, and I never saw a deer set with one exception; the left horn had nine tips and the right but eight. Can any one tell by the tips how old he was? The meat of this buck weighed 208 pounds with the legs off at the knees and gamblers. I sold the horns on the spot for three dollars. I think the hide, rough tallow, legs and head and horns would, if weighed, have brought up his weight to 250 pounds. This was a buck that had fattened on the grain and turpentine feeds the farmers. This, real as it is, is not only one of the weights in thousands, but the funniest part of the whole affair of killing this old stager came in this way. It was near sundown, and getting impatient I had started for home—four miles—and left Deer River behind a few rods. Suddenly I heard my old dog, Spot, at work on the creek, and knew by the sound he was swimming; all of a sudden he started for the river below and I for the river above, and on reaching I saw a wack as if some animal was swimming in the water, and such was the gray of the evening. He swam low in the water and was trying to hide as he had done before. It was getting dark, and being higher and having a side shot I held for his eye and let fly. Down went his old chair head, and what a floundering he made; but he couldn't get his big head out of the water. The fact was, my ball struck near the eye, but glanced and slid under the hide across his forehead and did not penetrate the skull but stunned him, and so the venison was "found drowned" in respect to him, when they are first shed naturally they are quite soft, and the bucks eat them before they leave unless driven from them. I have found them gnawing them, and tame bucks will also eat them if not provided with salt.

—JOYNER.

It is a well-known fact that cattle will chew and munch bones if they are not provided with salt.

CANADIAN BIRDS NOTES.—NEW YORK, March 29.—Your correspondent, "An Able," in your issue of the March 23, paid a well-merited tribute to the valuable ornithological researches and observations of John Neilson, of Quebec, upon the Canadian fauna. I am authorized by Mr. Neilson to say that he is now engaged in arranging for publication through the columns of FOREST AND STREAM a series of short notes upon the land birds of Northern Canada. In a recent letter to me, Mr. Neilson says that his notes are now well advanced and that he expects to forward them very shortly. You have already had submitted to you a few extracts from his voluminous memoranda.—G. M. FAIRBOLD, JR.

WINTER RANGE OF THE SONG SPARROW.—BRADFORD, Pa., March 21.—In your issue of March 17 "Lycoming" is surprised at seeing a song sparrow (*Melospiza melodia*) through the winter. Last Christmas I saw one but heard no songs. March 16 I saw two and both were in full song. See "Cooles' Birds of the Northwest," p. 139.—Winters as far north as

the Middle States, if not in southern New England," also Maynard in "Naturalist's Guide"—"Have taken it December 3.—STALLA.

We have seen this species wintering in Connecticut.

MATED, BUT NOT MATED.—I have long known that I have god of love was, to say the least, very short-sighted, but he was loath to believe that in the dear creature was stone blind; but I have just witnessed an exemplification of the truth of this that entirely convinces me of the fact. I will recount the tale that you may fully understand the reason for my belief. Some eight years ago, upon one of the coldest mornings of the winter, my little boy came running in all excitement and had me come quick, for a wild duck had just alighted among the hens. Hastily seizing my gun and a couple of shells I followed him out and caught a glimpse of a strange-looking duck as she ran under the shed. Standing guard at the entrance, I ordered the boy to go in and catch her. As soon as he came near her she rose and started for the opening, and as she went over my head I made a grab and was fortunate enough to seize one of her legs, and, notwithstanding she gave me several severe whacks with her wings, I held on. Upon examination she proved to be a female "Muscovy." I clipped her wings and gave her the freedom of the yard where she has been ever since. Although I have provided several mates for her she has invariably turned up her nose at them and obliged them to keep their distance; and my fear, that "Old Prim" as we called her, would die an old maid, appeared well grounded. A few days ago I was presented with a pair of black-red, game hantams. I turned them down among the ducks—of which I have five pairs. The drakes held a short council of war and, deciding that the interlopers must be driven from the pond at all hazards, advanced in battle array and at once commenced a furious onslaught. The cock, with the well-known pugnacity of the breed, stood his ground, and by a well-directed blow soon hurst the tide of battle and forced his assailants to beat a hasty retreat. "Old Prim" had taken a lively interest in the scrimmage from the first, and when she witnessed the utter rout of her importunate tormentors, and probably knowing full well that "the brave deserve the fair," she mostloyally sided toward the hero and with a vicious snort as though she would embrace him, in humble homage knelt at his feet, and with the proverbial gallantry of his race he ardently responded to her loving advances, and ever since this devoted pair have been inseparable. Surely the love of this ill-matched couple is "proof strong as Holy Writ" that the gentle king of hearts is blind as a bat.—SHADOW.

SPRING NOTES.—HORNELLVILLE, N. Y., April 4.—Bluebirds and blackbirds arrived March 10.

Robins arrived March 12.

Song sparrows March 13.

A great many shrikes here now, a large white-headed eagle has been here for a week trying to get a meal of dead horse, but the crows drove him away—a nice bird surely for an emblem of American liberty!

April 1.—Saw a large flock of pigeons flying east.

J. OTIS FELLOW.

NEW YORK, March 25.

The following notes as to the advancement of spring were made at Eastchester, N. Y. I think they would be of some interest as showing the progress of the season. Birds were not as plentiful as they usually are at this date. *Turdus migratorius* is quite common, and a few specimens of *Sialia sialis* were seen. In a piece of open ground I heard the rather sharp notes of *Sturnella magna*, which are very common on the salt marshes of that section, and should judge that they were residents. A scattering flock of black birds also noticed.

The frogs make the swampspecho with their music. Walking along the banks of the creeks that intersect the meadows in every direction I failed to see many *Trituridactyla*, a few species of *Rana* and *Pseudis* only observed. On a woody hillside, where the sun shone very brightly I noticed that the *Hepatica* was just preparing to bloom. Last season they were in blossom the latter part of February; also in a swampy piece of woodland the skunk cabbage (*Symplocarpus foetidus*) was projecting forth its curious spathe and spadix.

From the appearance of the burrow of an *Ardoromyia monax* I should judge that he had awakened from his winter's hibernation.

CHAS. EARL.

BUFFALO, April 8.

Lake Erie is still covered with a solid sheet of ice of over two feet in thickness. The advance guard of robins, bluebirds, cow black birds and song sparrows made their appearance as early as the 30th of March, but have since then not been reinforced to any appreciable extent. They are all male in good plumage. Niagara River is all open with the exception of the little creeks and slips running into it from the American and Canadian shore. Vast flocks of ducks, composed chiefly of bluehills, redheads and mallards, arrived a few days ago, and afford incidental sport to those who are hardy enough to decoy them behind blinds made of snow and face the cold weather which ranges only at mid-day above freezing point.

There are, however, no authenticated reports concerning the arrival of the Wilson's snipe, although vague rumors are current that they have been seen in the neighborhood of the city. It is hard to conceive how they could manage to make their hearings unless by an attachment of the diamond disk to their beaks, as the ground is either still covered with deep snow or frozen solid wherever it is bare. Unless they long looked for southerly sets in soon we may not look for an opening of the navigation before the end of May, if not later. The southwest winds which prevail here, like trade winds in May, convert the bay into a vast refrigerator by the vast fields of ice which are finally firmly wedged up at that eastern terminus of the lake.

CHAS. LINDEN.

TO OWNERS OF TAME GROUSE.—CORTLAND, N. Y., March 26.—Editor Forest and Stream: In my article of March 3, signed "Mig," describing the tame grouse, I thought of making the suggestion myself that if the bird could be mated with a hen grouse—as the one I have is a cock bird—it would be well to try the experiment of breeding them in confinement. As this bird shows quite a disposition to mate with a human hand, it seems quite probable that with proper care and a suitable place they would, if mated, produce their young. If either of the two gentlemen that mention in the last issue of the FOREST AND STREAM having a tame grouse will try the experiment or send the bird to me I will give the matter a fair test.—EUGENE POWERS.

A FOND FOSTER-MOTHER.—SARDIS, Miss., March 31.—Last fall I was out in the country a few miles south of this place, and while stopping to let my horse rest in front of a country store the proprietor, a very clever gentleman and an experienced angler, showed me a sight that made me open my eyes wide. It was an old yellow cat suckling two kittens and three young rabbits (hares). She had found them in a field near the store and, after guarding them until their mother came, caught and killed her, and gathered up the three little ones and brought them to live with her and her family in the store. They lived until they could run about the house then all three died. The foster-mother seemed very much distressed over her loss and for several days sat around the house and worried pitifully. This is a true story, and a number of gentlemen from town went out to see them.—CROOK.

PARTIAL ALTRINISM IN CANADA GEESE.—NEW YORK.—On the 25th of March, while shooting Canada geese (*Anser canadensis*) at Capt. Lane's, Good Ground, L. I., a bunch of seven lit on our live snoots, but out of gun-shot. While we were waiting for our tender to swim their nearer we had an opportunity to watch their movements as they washed and plumed themselves. The captain called attention to the way the gander was marked; his head had large spots of white on it instead of being all black. When we shot he was not among those killed, so we had no chance to examine him further. However, among those shot were two that were also marked all over, but in the other way. One had on each of his thirty pure white feathers in it, and in the other the white throat patch extended to the base of the mandible, which was also white to its tip. The eyes and other markings of these birds were normal.—WM. DUTCHER.

Game Bag and Gun.

THE WINTER AND THE BIRDS.

STATISTICAL REPORT SHOWING THE EFFECT OF THE STATE OF LAST WINTER'S WEATHER ON GAME IN DELAWARE.

THE very wide spread interest with which our notes on the effect of the winter on the quail in New Jersey have been received in all quarters has induced us to push our investigations still farther, and to include in our canvass the State of Delaware. This extends the inquiry still farther South and includes all of Maryland and all the northern portion of Virginia. The whole inquiry has thus covered a north and south sweep on this coast, reaching from about north lat. 41 deg. 30 min. south to lat. 38 deg. We wish to thank our correspondents for their kindness in so promptly responding to our inquiries.

NEW CASTLE COUNTY.

Centreville.—Birds are not very plentiful during the gunning season in this locality, owing to the fact that early in the fall season they travel south into the lower part of the State. The destruction has been somewhat greater than in former years. I think I am safe in saying fifty per cent. of the quail perished. They were fed to some little extent.

Christiana.—The destruction compared with the last five years has been enormous. This winter, two-thirds of the quail have been destroyed, and few remain.

Christiana.—The cold winter has killed almost all the quail. I have been making inquiries far and near, and have received poor accounts about the quail. The Game Association, of Wilmington, is importing quail from the Carolinas to fill the void. The rabbits have not suffered much, nor have the squirrels. I think the birds in our section have suffered by the snow this winter as much as they did in 1893, which nearly killed all the birds, and we had no shooting for some years. The loss in our section is ninety-five per cent.

Claymont.—I have understood from the farmers and sportsmen that the quail have been generally destroyed by the severity of the winter and the unusual quantity of snow. I have heard of no quail being seen or fed.

Delaware City.—I find now and then a man who has seen a covey of birds (quail) this spring, but am led to doubt the existence of more than ten or more of those alive at the end of the shooting season of 1880. Constantly recurring snows prevented successful feeding, and but little was accomplished.

Delaware City.—The effect of the cold and snows of the past winter has been very destructive to birds in this section. Fifty ninety per cent. of the quail have perished. We know of several farmers who have fed sick birds as took refuge in their barn or stock yards, or in other sheltered places near the dwellings. We have seen whole beavies frozen at roost, and starved to mere skeletons.

Frankland.—The cold weather and snow did the birds no very great harm in this section.

Forest.—The cold and snows have been very hard on the game in this section. The destruction of birds has been noticeably greater than in other years. I judge twenty per cent. perished. Very few birds were fed.

Forest.—A great many partridges have been seen and not less than 75 per cent. Few birds have been seen and none fed.

Glasgow.—The cold winter has killed ninety per cent. of the quail. The winter has been extremely hard on all kinds of game. We have a good supply of rabbits left. Birds have been fed and saved until the last heavy snows killed them.

Green Springs.—The quail were nearly all frozen in this section. Those that were left have since been destroyed by hawks. Gunners believe the quail are all killed.

Greenville.—As a general rule we have but few birds in the fall, and what few we have are gunned to death. In other words there are more gunners than birds. I have not heard of any quail being seen since fall. No feed was distributed.

Kirkwood.—The birds suffered more this winter than for a long time past. Think one half have perished. People in many cases tried to feed them, but the snows drifted in the night and covered the feed.

McDonough.—It is said that nearly all the quail in the upper part of the State have been killed, and fifty per cent. killed in the southern part of the State.

Marshallton.—The past winter has been a very severe one on quail in this section, and I should suppose some thirty to forty per cent. perished. Some birds were fed, but the majority neglected.

Middletown.—The extreme cold winter has nearly destroyed the game in our country. The destruction has been far greater than any winter since 1857. I think at least seventy-five per cent. of our birds have perished. Many were fed by the farmers, although it was a difficult task to reach them owing to the depth of snow.

Middletown.—The severe winter has destroyed seventy-five per cent. of the game in this section. The loss is greater than

in any year since the winter 1855-56. The birds were fed when practicable. They often froze to death rather than starved. We had more game last fall than in years.

Mount Pleasant.—Our birds almost entirely perished last winter, but very few are reported yet alive. Our farmers fed them whenever they could.

Mount Pleasant.—A large percentage of birds perished than in a number of years.

Newark.—The winter has been very severe on the partridge or quail here, but some remain in good condition. Some few were fed, others lived on the wild grapes in the low swamp-land. Quite a number were caught and kept over. The Game Association imported from North Carolina about 1,200 for stocking for use in the three counties.

Northampton.—Nine tenths of the birds were perished by the cold weather and snows. Some of the farmers fed some of the birds, but having no cover the hawks "cotched" the most of them.

Port Penn.—Destruction of game (quail) from the frigid severity of the weather last winter was much greater than in any previous years. But few birds saved by the exertions of the farmers and but few lived that had no protection.

Red Lion.—The farmers did all they could to save the birds, but the snows and the cold weather caused many of them to perish. I would say nine-tenths of the birds died.

Red Lion.—Game is not as plenty as it was last spring. I know of no one feeding the quail through the winter.

Rockland.—There were very few game birds when the cold weather commenced. Some were fed, but the others are supposed to have perished.

St. George's.—The cold and snows had a serious effect upon the quail in this section, though many have been protected, and the actual loss is not greater than usual from such weather. In this immediate neighborhood my inquiry and search has proven that not more than one-third of the usual number of quail have perished.

The Wood.—There has been considerable destruction of quail and rabbits in this vicinity. There are very few rabbits and not a quail to be seen.

Towson.—The effect of the snows and cold has been most terrible and destructive on the birds. Whole coveys have been found dead, frozen and starved. My impression is that very few escaped except those that were fed and otherwise cared for.

Washington.—The season is exceedingly scarce in New Castle County. No care has been taken of the birds during time of snow.

Wilmington.—Should say at least one-third of the birds in the northern part of the State have been killed. In the lower portion, thanks to the pieces which keep the snow from the ground in places, most of the birds manage to live. A good many were fed through the agency of our Game Association, although they were caught by our hunters. We are respecting the State and hope to have (all things taken into consideration) fair sport next season.

Wilmington.—From all I can learn in regard to quail in this section, the heavy and severe snows which covered the ground for about six weeks, our native quail are scarce. The Sportsmen's Association is making great efforts and have so far succeeded in buying a few birds for the State.

Yorktown.—This has been a hard winter on the birds, twenty per cent. have perished by cold or been killed by hawks. They were not fed regularly.

KENT COUNTY.

Bowers.—Some birds have undoubtedly perished, but though the loss is greater than for a number of years, the birds, having been fed by our farmers, are not exterminated.

Brenford.—The winter has destroyed more birds than usual, especially quail. No birds fed by farmers; in fact very few are left.

Camden.—In regard to the quantity of birds left after the severe snow storm in this section, I would reply that I have been gunning for past nine or ten years, and every year after the gunning season is over I take my dogs out at least once a week during the months of March and April for a double purpose—first to keep them in practice, and secondly to see how many birds there are left over. And in my opinion there are more birds this spring than I have seen for years; not only so many small birds, but in instances where there would have been but the snow not fallen, several small coveys of four or five birds each, all have gone together in one, I suppose for the purpose of keeping warm—and then our farmers and sportsmen have fed them; so I think, with what birds our Game Protective Association are turning out and the good luck of our native birds living through the very severe winter, we may look forward to a plenty of sport next season.

Camden.—I am inclined to say I do not think that any one of our birds has perished during the past winter. But the game laws of Delaware, as you know, commence on the first day of November and continue until the 15th day of February, and if the snow had not fallen and the gunners kept shooting until that time, I contend we would have had less birds than we have to-day. In other words, the gunners would have killed more than the snow did, from the fact that snow fell about Thanksgiving Day, stopping all gunning for the season. We admire your idea of getting views from different parties and places for the benefit of the readers of your valuable paper.

Camden.—Game of all kinds has suffered very much in this vicinity.

Camden.—The people of this community or section that last winter 75 per cent. of the birds were killed by the winter. We notice there are very few. Some farmer fed the birds.

Harrington.—We have had a very cold winter and some of our birds frozen, but not over ten per cent. of them I am sure. I am sure we have more birds now than we had last season at this time. Our shooting season does not run out until the 15th of February in this county. Our Legislature was a session when the winter was so severe, and we had a special act passed preventing the shooting or killing of any game for the balance of the season.

Havertown.—A great many birds have been killed from the effects of the cold and snows. I suppose 75 per cent. of quail are dead. The farmers to some extent have fed.

Havertown.—The hard winter has been very hard, on quail in this vicinity. I suppose 70 per cent. of the birds have perished. The farmers fed the birds to some extent.

Leprie.—We have not many birds in this section; the winter has killed nearly all.

Little Creek Landing.—The cold and snow have been very severe on all kinds of game, especially the quail have suffered, and a great many have perished. A great many birds have been fed by residents.

London.—The destruction of birds is scarcely noticeable except of quail, which I feel confident 75 per cent. perished. I saved one flock.

Magnolia.—The past cold winter and heavy snows have been very destructive to our game. Birds and rabbits have suffered fearfully. I think at least 75 per cent. of the birds were killed. Some farmers would feed the birds when they could find them, but the cold and snows came so suddenly upon them that the birds died before we could think they were suffering. Our game for the coming season I think will be very scarce.

Miford.—The cold weather and snow have been very severe on all kinds of game birds in this section. Partridges have suffered 25 per cent.; rabbits about 10 per cent. There were very few partridges killed in this section by the gunners, the snows being so deep, that they prevented the sportsmen from killing the birds. I am the largest dealer in game in the State. Last season I sent to Philadelphia and New York markets 7,000 partridges, 437 rabbits, 288 woodcock, and this season only shipped 2,300 partridges, 184 rabbits, 36 woodcock. I merely give you the above to show you the falling off in shipment. The partridges have been fed by the majority of our farmers. The game Protective Association have been buying the partridges from farmers who have trapped them, and have paid as high as forty and fifty cents for each. They purchased considerable of them in this vicinity, and turned them out a short time ago after feeding them all winter. A few days ago they received some Western birds, and have also turned them out, so the prospect is good for next fall shooting providing the summer rains don't drown the young birds. The rabbit shooters report that there will be plenty of this game next fall. From my observations there are as many rabbits here perished as was first thought.

Petersburgh.—I should say there was 75 per cent. of quail killed.

Smyrna.—The partridge (quail), lark and opossum have suffered the most of all, but still we have plenty left if nothing more happens.

Towson.—My impression here is that nearly all of our partridges have perished. Some few have been trapped and kept, and a few others have been fed by the farmers; but I think about 50 per cent. were destroyed.

Vernon.—Although the winter has been very severe on the game in this section, yet we think very few birds have perished. In a few instances they have been cared for by the farmers.

Wilmington.—Very few birds have perished here. From what I can learn not over 10 per cent. The timber lands have protected them. After the snow fell they got game, and a great many were trapped. The Game Protective Association paid twenty-five cents for birds kept until spring, so that there will be plenty left to breed.

Willow Grove.—The winter has been very destructive to the birds in this section. The quail are mostly killed. I suppose three-fourths of them were killed. A few farmers fed them, but not much.

Woodside.—The cold and snow have killed a great many birds, yet there are many left. A few farmers fed the birds.

Woodside.—The birds have not fared so badly since the winter of '05 as they have this winter. In many places there have been birds who have frozen to death on the roost. I have noticed that this has not happened to birds that have had a stream of water close by or a place that they could get water and gravel; but in places that they could not get water or gravel they are all dead. I think I can safely say that three-fourths of them are dead. The farmers fed a great many and tried hard to protect them from the negroes who were sneaking around and tracking them up and killing whole coveys at a shot when the birds were so poor that they could not fly. There are a good many birds in this section yet. There was very little shooting done here before the snow, and the coveys were left large, and where they were large they stood the winter better than small ones. I have three coveys on my place that have thirty-eight birds in the three. Did not lose one during the snow. They are in a heavy cripple. I also have eight Messina quail that have stood the winter nicely.

Woodsboro.—None of the game has suffered except the quail. They have perished greatly throughout this section and in Maryland. They have been found dead by whole coveys. It will take several years to make good the loss.

Woodsboro.—On account of the cold and snows a great many birds were frozen and starved to death. The destruction has been much greater than ever before. At least one-half have perished. Birds were not fed when found.

SEXSEX COUNTY.

Angola.—There have been a great many birds frozen this winter, as the weather has been so very hard on them. It has been unusually severe.

Bethel.—So far as noticeable, the destruction of birds has not been greater than in the past. The quail have not been fed to any great extent with us.

Black Water.—The hard winter has killed most of the birds; they are very scarce—hardly enough to raise. The farmers fed them well.

Cool Spring.—The severe winter has not killed many birds in this section. They were not fed by any one.

Ellendale.—The destruction of birds has been about one-third greater than in other winters, and a great many quail have perished. The farmers fed a few birds.

Ellendale.—A great many birds have died this winter—about twenty per cent. The farmers fed the birds.

Georgetown.—The birds were not so much affected by the cold weather. Farmers did not generally feed the birds from what I can learn. There are enough left for further batching.

Georgetown.—The cold here last winter was intense, at one time being as low as 17 degrees below zero, but I do not think that any quail perished from that cause, although it was a "close" slipping. The coveys were not plentiful here last fall, and consequently very few were shot as there was very little gunning. The farmers did not feed the birds, but several trapped them. I bought twenty-five pairs, the last of which I released on the 15th of February. I think there will be fully as many quail here next year as there was last. I am exporting more birds from our Game Protection Association soon, which I will at once put on the market.

Georgetown.—The cold and snows this winter have been very severe on the birds. A great many have been found dead. I suppose 25 per cent. perished. The birds fed on the grain the farmers did not get in before winter set in.

Laurel.—The cold and snow this winter have killed at least thirty per cent. of our birds. Our farmers have not cared for the birds as they should have done, consequently many birds have been butchered at night. Our Game Association has been importing Messina quail and restocking the State with game.

Lees, Hanover Farm.—So far as this farm is concerned, we have more birds, owing probably to my having sowed buckwheat, a patch on each end of the farm. We have three coveys with from eight to fifteen birds each. The prevailing opinion, however, is that the winter was very destructive, more so than in past years. I have no knowledge of farmers feeding birds.

Lees.—Winter very severe on birds. Loss of birds greater than ever before. Probably 10 to 20 per cent. of birds have perished. Nobody fed the birds around here; people are too indifferent.

Milton.—The past winter was a very severe one on the birds. For several days the thermometer was 8 degs. below zero. About one-third froze and starved to death.

Naas.—The cold and snow this winter did kill a greater number of the birds than for many years before. I think I can say that thirty per cent. was killed. Some of the farmers and others fed the birds.

Ocean View.—There were a great many birds found dead this winter, more so than for several winters. They were not fed.

Rehoboth Beach.—I will say it has been a very hard winter on the birds. I should say about twenty per cent. has perished. I have not heard of one farmer feeding the birds; they take no interest in game.

Rever.—I do not think the cold destroyed much game. The birds were not fed. A great many farmers did not get their crops in, the cold came on so early.

Safoard.—The hardest winter we ever had on game. Very few farmers fed the birds.

Safoard.—Quail have perished in great quantities during the past winter, we think eighty per cent. We have been getting quail this spring from North Carolina.

Williamsville.—This has been a very severe winter. In regard to game the cold has not been uncommonly destructive. The farmers did not take extra care to feed the birds.

NEW JERSEY GAME NOTES.

REPORTS as to the effect of the severe weather of the past winter on the game of New Jersey continue to come in, and we publish this week another installment of them. The very wide spread interest which this matter has attracted, even among people who do not shoot, is surprising. The great number of pleasant acknowledgments of our work, and the numerous complimentary notices of the press show in a most encouraging manner how strongly the idea that our game must be protected and increased, is taking hold of the people at large.

Bergen County.—Carlsbad.—Game in our vicinity has suffered very much this winter. Many birds have died for want of food. Barn-yards were the only refuge for starving birds. Residents have fed some of the birds.

Broadway.—I consider the cold this winter has destroyed many more birds than usual. No farmers fed.

Waukesha County.—Cato.—There seems to be an unusual number of quail, considering the hard winter. The farmers gave them attention by feeding. There is about the usual number of partridge in the mountains.

Calno.—The comfort of the birds has been looked after. There is the usual number of quail this spring. Partridge are growing much scarcer in this vicinity, although the seasons are not a favorable average.

Monroe County.—Danville.—At least one-half of the quail in this section have perished. Some farmers have fed and cared for the birds. We had a nice lot of birds, but they are scarce now.

Somerset County.—Bedminster.—The destruction of game birds in this vicinity has been greater the past winter than for several years. Fully forty per cent. have perished from snows, hawks and foxes. The farmers do not feed the birds at all.

Union County.—Roselle.—The cold weather has not perceptibly affected the birds in this township. Some of the residents feed the birds.

Merger County.—Yardville.—Game of all kinds is very scarce in this section, with the exception of rabbits. There are no other mammals.

Monmouth County.—Cott's Neck.—The destruction of quail by the severe snows of last winter is almost complete; have hunted around a good deal with good dogs and have only found sixteen birds.

Mantoloking.—The cold and snows have taken off about one-half of the birds. In many cases the birds have been fed, and I think there is enough left to do well.

Barren County.—Columbia.—The birds of almost every kind have suffered severely this winter in this neighborhood. I suppose thirty per cent. of the game birds have perished.

Mount Holly.—The severity of the past winter has been very hard on the quail in this section; also on rabbits. I suppose fully 25 per cent. of all kinds of game perished. In some places whole coveys of quail have perished. A few farmers fed the birds, but not many.

Ocean County.—Bennett's Mills.—Fully one-half of the birds have perished. I do not think the farmers fed the birds.

Barreget.—Birds are not numerous in this section of the county. The cold weather has probably destroyed two-thirds of them. The quail suffered severely and are now very scarce. More birds were shot than the winter of any year before known. Do not know of any farmers feeding birds.

Beach Haven.—The general impression is that many birds have perished during the winter.

Manchester.—Quail and rabbits are about the only game that winter here and more than one-half have been destroyed by the deep snows. They have not been fed to any extent.

Manchester.—Game is not plenty in this section. The quail suffered, and probably two thirds of them perished. Some of the residents fed them.

Camden County.—Sicklerville.—The game in our section is quail, rabbits and pheasants. The cold and snows have completely destroyed the quail, with the exception of a few that were saved. The destruction of quail has been greater than has been known for years.

Gloster County.—Williamston.—The snows and cold weather have destroyed all the quail in this place except what I caught and bought and fed. I had thirty-two birds—twelve hens and twenty cocks. I don't think out of 1,000 birds that were within two miles of our place when the season closed, that over forty are left, and I had thirty-two of them. I do not think that a bird should be killed in Jersey next season.

Bridgeport.—The cold and snows have killed ninety per cent. of the quail. There have been a few birds fed

by the farmers. I have made inquiry of all the farmers and gunners in this vicinity and from my own knowledge I believe this report to be correct.

COMBESMAN COUNTY.—*Milville.*—The winter has been unusually severe on the quail. Many have perished—fully ninety per cent. The same is true of rabbits. Along the sea-coast only about sixty per cent were destroyed.

Greenwich.—Many birds and other game were killed by the severe weather during the winter. The farmers and residents did feed the birds, but many were found frozen.

Gouldtown.—The severe cold weather, attended with continued snow, has had the greatest effect to destroy the game ever known. The birds have been nearly all killed. I have not seen one since the snow. I think the hawks go nearly all or quite what was left. Pheasants and rabbits are very scarce.

Finey Station.—There are scarcely any birds left in this section. I think nine out of every ten quail have perished this winter and there were a great many birds in this section. The farmers fed them.

Port Elizabeth.—The birds have not suffered very much in our section this winter. They have been well protected on the swamps.

CAPE MAY COUNTY.—*Cape May Court House.*—Game in this part of the county has perished with powder and shot, and the cold weather has about wound up the winter game. If the game society don't restock this spring the shooting is about finished. There are some English snipe (March 31).

Petersburgh.—The loss in this section has been principally in quails. At least one-half have been frozen to death. Quail took to the hard timber tracks and could not be fed by the farmers.

SPRING SNIPES NOTES FROM DELAWARE.

The latest reports from the State of Delaware indicate that the birds have not yet come in in any great numbers. As soon, however, as the present cold snap is over, and we have either a southerly rain storm or a few days of warm weather, we shall expect to hear of the arrival of a flight. The season is right and the birds may be looked for at any time. Through the kindness of our many correspondents we shall continue to furnish the latest information on this subject. The following notes will be read with interest by those who intend to travel the meadows and marshes this spring.

DESSERK COUNTY.

Ellendale, March 30.—There have been a few snipe; they came last week.

Ellendale, March 30.—Very few snipe yet.

Gundorrough, April 2.—Not many snipe here.

Lees, March 30.—Duck-shooting is not a success. Snipe have made their appearance.

Lees, March 31.—Duck-shooting fair at this time. No snipe as yet, about the middle of April we expect them. Plenty of geese going southward.

Lees, March 31.—The snipe have come. The first dozen were killed yesterday on the Great Marsh by the best gunner in this vicinity.

Milbon, April 5.—There are very few snipe this spring.

Nassau, March 30.—The snipe have just begun to come. Very good shooting.

Ocean View, March 29.—The meadows are in order for snipe.

Paris, March 28.—It is time for snipe here early in April. No birds have been killed yet.

KENT COUNTY.

Camden, March 28.—I have heard of some snipe being killed, but not enough to make it worth while going out for. But I think they will be out by the second week in April if the weather will only get warm by that time. I find in my travels an unusually large quantity of woodcock, apparently getting ready to lay.

Canterbury, April 4.—We do not have any snipe here, as we are some distance from the water. There are plenty around the water courses, some eight or ten miles from here, if the water has not dried up.

Harrington, March 31.—The snipe meadows are a little too wet as yet, although there are some snipe on now.

Hotlettsville, April 2.—We already hear of the snipe below.

Hotlettsville, April 2.—No snipe have been killed as yet.

Leipsic, March 31.—Our snipe meadows are in good condition this spring. There are plenty of snipe.

Magnolia, April 2.—Snipe have come on our marshes; not a very plenty.

Milford, March 30.—Snipe-shooting has just fairly commenced. Quite a few have been killed. Your scribe killed sixteen yesterday, with the wind to the southward. Should it hold for a few days we would have plenty of them. Our sportsmen are making great preparations for them. I suppose in this vicinity, last week, there was killed by our sportsmen upward of a hundred snipe. Ducks are quite plenty on our marshes and considerable are killed daily and shipped to Northern markets.

Vernon, April 4.—We have no snipe.

NEWCASTLE COUNTY.

Delaware City, April 4.—The wretched weather continues, and we have had but few snipe.

Forest, March 30.—A few snipe have been killed.

Port Penn, March 28.—It is time for the snipe now.

Port Penn, March 30.—Snipe are bowing along rapidly now, and the shooting will continue good for several weeks yet.

NEW YORK.—*Corlandt, March 20.*—A flock of wild geese, thirteen in number, have been in our immediate vicinity for over a week. They have in the meantime been hunted by boys and full-grown sportsmen both day and by night with the use of lanterns. I cannot ascertain that any have been killed, up to this time. They have never before been known to remain with us for so long a time.—**BURGESS POWERS.**

NEW YORK.—*Hayt's Corners.*—Saw first robin on the 16th inst., bluebirds and chickpees quite numerous here now. Have seen no wild geese yet. Snow mostly all gone; not a quail have I heard since January last. We have had a severe cold winter and I fear we will be no quail the coming season here. I trust there will be a move made by our best sportsmen here to purchase some to replace those which have been frozen.—**L. E. W.**

SCENE IN COURT.—*Judge:* Why do you plead for your husband when he has just given you such a beating? *Wife:* Because the beating has made me tender.

THE STORY OF A WILD GOOSE.

PHILADELPHIA, MISS.

SUNDAY, October 24, we had one of the largest flights of geese that has ever been known in this section, commencing about the middle of the day on Sunday and continuing through the greater portion of Sunday night. I went out of the house very early between dark and bed time to listen to the honking of the different flocks, and it was never the case but what plenty of them were within hearing. The geese were going southwest and none of them stopped with us. Some preachers reported, seeing one flock that had five or six white geese with them, which was rather unusual for this country, as the Canada geese are the only ones that ever visit us, and they nearly always pass over without stopping. It is only occasionally during protracted cold spells that a flock will spend a few days on a weak in some wheat field, but upon being shot at once or twice they go to other parts.

This migratory instinct which enable migratory fowls to start for a certain point thousands of miles away, and go with unerring certainty to that desired point, unless frustrated by fire lights or other causes, is rather strange to man who has the higher order of intellect and will often get badly lost within a few miles of his own home. That geese can and do start for a certain point and make their way with unerring certainty to that place under circumstances will go far toward proving. It was many years ago when our farming was in my father's workmen came to the house and told my father that he saw a flock of geese alight in the wheat field. As they were out in the open field of young wheat it was useless to attempt to get near enough to them to get a shot with a shot-gun, so my father took a trusty old rifle and succeeded in getting a shot with it, but he had to shoot a long distance, and only wing tipping geese he shot at. He brought it to the house, and it was with me shortly. A few members of the family concluded to try to tame it, and it was put into the garden and its wound dressed.

It was very wild at first, and the children on the place gave it the name of Wily. Soon, however, Wily began to show less fear, and before his wound was entirely healed he became so tame that he was allowed to stroll about the yard, and afterward to be placed with the tame geese and to go where he pleased during the day, but he and the other geese were confined in the yard at night. Wily soon seemed to be perfectly contented with his new home and companions, and showed no disposition to wander away. He remained with us I believe through the next summer and winter, and during the time seemed to regain the full use of his wounded wing, although from some misplaced feathers, or other cause, there was a constant creaking sound produced by his wounded wing while flying.

During the second winter that Wily was with us there was a school opened within a few hundred yards of my father's house, and the children would come down during recess and after school to see Wily, and they would often, by clapping their hands, screaming and running after him, cause him to take wing and fly for a considerable time. This became so constant that Wily would often leave the place and be gone during the day, but was sure to come home at night. As spring began to approach Wily seemed to grow restless under his treatment, received from the school children, and one morning he did not wait as usual to be started by them, but took wing very early, and after rising high in the air, and circling around the place many times, as if to take a farewell view of his little home, then with a few "honks," as if bidding those farewell who had loved and cared for him while with us, he turned his head northward and was soon lost to sight. Nor did he put in an appearance that night as we had hoped he would do. Days, weeks and months passed away, and still he did not return, and no hopes of ever seeing him again were entertained.

One day, after the next winter had fairly set in, a flock of geese were seen circling around the place, and the children ran out into the yard to look at them. They came nearer and nearer, and at last directly into the yard, and the leader of the flock alighted within a few yards of the dwelling-house door and in the name of the geese in his wing he was recognized as our Wily. The other geese in the flock had become accustomed to the noise and sight of the children would not alight, but after hovering over their leader a few seconds started away toward the wheat field.

Upon seeing their movements Wily arose, and after circling with them for a while took his place in front, and again headed for the yard. This he did several times, but upon being conveyed to his family would not share his old home with them he carried out to the wheat field, but he did not fail to make repeated trials for a number of days to get them to take up their winter quarters in the yard.

My father and brothers commenced shooting the geese from the flock as we would need them for the table, and during the week they remained around the place killed seven of the number. The shooting was done with the rifle, and while the geese were in some portion of the field, and only as one was wanted for the table that the flock might not be scared away from the place. Up to the time that the seventh goose was killed Wily did not fail to make several attempts each day to bring his followers into the yard nor did he seem the least afraid of the noise or sight of anything on the place. It is supposed that the seventh goose was Wily himself as the balance of the flock suddenly left and never returned.

We have had several flights of ducks since the one mentioned above, and many of the ducks have stopped with us, but they are only to be found in the sloughs and marshy places in the river swamp. Deer are sometimes plentiful here, and turkeys are often to be found in abundance. We have a tolerable supply of quail, but there are so many briars and so much brush that there is not so much sport shooting them here as there is in more open countries. Squirrels were quite plentiful during the summer and fall, and it would have been an easy matter for a good shot to have killed from ten to a dozen during a day's hunt. The squirrels were killed in the swamps now, but they are not quite so numerous as they were two or three months ago. Farmers often have to guard their fields here to prevent them from destroying their crops, and it is a great blessing to the farmer that the game law does not protect the squirrel. They often afford good summer shooting, and when the game law protects other game the summer takes revenge on the squirrel. The large and small turkeys do so much damage in the gardens and young orchards that it would be a great blessing to this section of the country if they were entirely exterminated. Our game law does not protect the hare and should not for we have plenty of better game less mischievous.

Our best sport here in the way of fishing is in May, and for what is here called blue breem. We take many other fish through the spring, summer and fall, many of which are very fine, especially what are here called trout (but what I suppose

are really big-mouthed black bass), and what are here called blue cat, channel cat and forked tailed cat (all the same fish) I would not like to give weight of the largest of these bass, without giving names as reference, but if your correspondent who a short time ago spoke of a full-grown bass that weighed 77 lbs. would like to write to Capt. James S. Lewis or Mr. Jesse Fisher, Watkinsville, Neshoba County, Miss. he will find that the trout (black bass) are often caught in this county that weigh from 9 to 12 lbs., and some extra large ones a little over 12 lbs. S. P. NASH.

AN ALLEGED DEER HUNT AMONG THE POCONO MOUNTAINS.

ON Tuesday, October 26, 1890, at 8:45 A. M., three individuals might have been seen loaded down with hunting gear steering for the depot of the Wind Gap Railroad.

The individuals referred to were Dick, Doc and Jim, and the two latter were bound for the Pocono Mountains for a few day's sport with the game in that vicinity.

Just as we reached the station the train hove in sight, and shortly after we parted with Dick, who waved us a farewell as we rounded a curve and disappeared from his view.

The weapons the two sportsmen carried were respectively a Deane and a Parker both 12 bore. As we calculated to spend some of our time in a deer country we took some luck with us, all stored in a place which could never be found in case of emergency. We regretted then that we could not take a rifle, but we rejoiced afterward that we had not do so.

Well, the distance to the Wind Gap (twenty miles) was passed over in the smoking car, where we made various surmises as to what our success would be.

We very foolishly left our dogs at home relying on our friends in the mountains. In due time we arrived at Wind Gap, a small village somewhat famous as a local summer resort. Here we met a gentleman who was going our way as far as Saylorsburg, and who promised to take our traps while we went through the woods in the hope of securing up some game. On the way we flushed a bevy of quail from which we caught a bird, but as a slight rain was coming up and our time there was limited we went on, reaching Saylorsburg just in time for dinner. Our traps had gotten to the hotel and our dogs were all right. They consisted of about 250 cartridges, two blankets, two rubber coats, two overcoats, camp, hatchet, tobacco, matches and a Colt. 44. The latter was intended for bears, which are by no means uncommon in those parts.

After an excellent dinner, which was well attended to, Doc and I started out despite the rain to find something in the shape of game. One grouse fell to Doc's gun, and that was all we saw. Returning to the inn we played "seven up" till dusk, then came a good supper and a chat with the landlord. Doc bargained with him to take us as far as Effort (eleven miles), and shortly after we turned in. Next morning we started out early, and walked to Lake Pappanamong to look for ducks. Saw none, but I had the good fortune to flush and cut down a grouse.

After breakfast we left for Effort where we arrived at 10:30. Now we were only six miles from our Mecca, but we did not like to rest until we had seen a few more birds. The game as night fall in our way. Our "friends" had gone back on us, so we had no dogs, and beating the brush is not much fun, still we had fair success and ate our lunch with the air of men who were having a good time, but we regretted that Dick and some other club members were not with us. Next morning we pushed on for Pocono about leaving the bulk of our baggage with mine host, Herr Eherle. Passing along this road the tourist or sportsman cannot help admiring the picturesque beauty of the scenery on all sides of him. Right ahead looms great Pocono, and just as we saw it a dark cloud crowned its summit, and seemed to frown down at its poor mortals for attempting to scale its sides. In the rear was the great Blue Mountain plain, distant and hazy, stretching around the country at our feet like a vast world whose only portal visible was the Wind Gap through which we had come.

We reached the summit of old Pocono about 9:30 A. M. Here, contrary to our expectations, we found a small wide inn. Upon inquiry we found that the proprietor of the place, Steve Hurst by name, was out deer hunting, but would return about noon, so we passed the rest of the forenoon looking around for lures and grouse, in which pursuit we were moderately successful. On the return of Steve we "put away" a substantial dinner and started out, Steve and old Joe Eherle, the old deer hunters, being the only ones.

The top of Pocono resembles the upper surface of a truncated cone, and is surmounted by a small mound known as Temple Hill for the base of which westward. When within a quarter of a mile of it we stopped and consulted as to what our best move would be. It was decided that Steve should go over the hill leaving us to watch the runways, so he gave us our directions and left. We waited, but no deer came in sight all that afternoon.

When Steve returned he said he had started a doe and two fawns, but they had gone to the north while we were carefully guarding the south. Next morning Doc proposed trying for deer again, but having strained my ankle the day before I decided to go off "on my own hook" and get what small game I could.

Before I had gone far a very large hare started off, giving me a fine chance for a quartering shot, so I let drive at him and he never turned back. The shot hit him and he died instantly. When I held him by the hind legs at the height of my waist his forelegs swept the ground, and I am a six-footer. Shortly afterward I saw an eagle about 200 yards distant. I commenced "crawling" for him, but he left when I was almost within range.

About noon I returned, hoping to find Doc, but he had not come back. I waited two hours for him and then took my dinner. Just as I was about to start for the east end of the inn, and with him were Joe and Steve, but no deer. They had been outwitted the same as the day before. At 4 P. M. Doc and I started back to Effort, which we reached without incident. We stayed there all night, and the next morning our man from Saylorsburg came for us with a wagon. He made much fun for the bystanders by his questions concerning our deer. The rest of our trip was made in a driving rain, and uninteresting in the extreme.

We just caught the last train from Wind Gap to Bethlehem, and with a hurried farewell to our host were whittled rapidly home.

As we brought most of our game home we had a game supper for the club at a celebrated restaurateur, at which Doc and I presided and were the lions of the evening.

aquaria; Willett H. Robison, Patohogue, L. I., small trout; E. B. Rogers & Co., North Stonington, Conn., wild trout, plump; E. B. Sutton, Babylon, L. I.; Thompson Bros., New Hope, Pa., very nice; C. Valentin, Brookhaven, L. I.; Seth Weeks, Corry, Pa.; E. W. Woodward, Manlius, N. Y., plump, spots yellowish. Messrs. Middleton and Carman also made a display of Long Island trout. Two gold fish, and large striped bass flanked by an enormous lobster.

The fishing tackle dealers were all busy as they have been for weeks past, in fitting out the anglers for the opening of the season. Among the anglers who braved the season on Long Island, to have a cast at the trout on that dreary day which appalled all but the thoroughbreds, there went to South Oyster Bay, Luntz, Joseph Stanley, J. Van Valkenburg, and Mr. Noble, of Brooklyn. To the South Side Club's waters, at Oakdale, over Islip, went Shepard F. Knapp, Thomas M. Bissett, Robert S. Burling, John C. Congreve, W. R. Breece, George W. Hall, Charles P. Fearing, Pelag Hall of Newport, Harry Nichols, George H. Palmer, F. Shushard, James Denard, Henry B. Hollins, Frank Johnson, John A. Lowery, Fred. H. Halsey, Roland Redmond, Mr. Peacock, H. R. Clark, John Halsey, Alexander Lutz, John Bier, Fred. De Luce, Mr. Simmons, Mr. Brand, Ed. Heylin, James Gluck and Ed. Matthews. Harry Miner went to Loest Grove. To C. F. Imbrice's and Mr. Wilbur's Green River preserve, at Sayville, went Andrew Clerk, James R. Thompson and others. Charles E. Strong, H. S. Fearing, George R. Fearing and many other members of the South Side Club enjoyed the day at their preserve near Patohogue.

To our notion the trout fishing will be more enjoyable a few weeks later, when the spring rains have warmed up the streams and started the vegetation.

BLACK BASS IN TENNESSEE.

CHATTANOOGA, Tenn.

EDITOR FOREST AND STREAM:

Men are at variance about just the kind of day, some contending for bright days, others for partially cloudy; but observation has taught me that a partially cloudy, sultry day is certainly better for very clear water, while a bright day is better suited for murky water. A south or southwest wind is the best. The best time of the year for fishing in our waters for bass is from the first of April till the first of June. They are more abundant at this season than at any other season of the year. They bite well, however, in August, September, October and November.

One of the finest bass I ever caught, weighing something over five pounds, I caught in the month of January. I was fishing at the mouth of a creek which flows into the Sequachee River, perched on the forks of a box elder tree, when I saw my float disappear and thought the current had washed my hook against a root or snag. I pulled gently and felt a fish; struck and gave him time to gorge the bait; struck him and finding that I had a large one, and my position not admitting of paying him, I was compelled to cut my rod behind me to the shore, through the boughs of the tree, and wind him up hand over hand. He measured two feet from the tip of the under lip to the tip of the tail; eight inches across the broadest part, and the tail, when stretched, six inches, and his mouth, when stretched, twelve inches in circumference.

One summer I went down into North Chickamauga gaitch on a tour of inspection. I had left my tackle in Chattanooga. I secured on the mountain a small perch hook and some flax thread, and this, with a fly hook I happened to have in my pocket, was the extent of my outfit. We descended into the canyon, which is at least 800 feet deep, over the most rugged part I ever traversed, which to be appreciated must be experienced. On reaching the water, I found a dry sassafras pole, crooked and knotty, that had been washed down by the high water—for this stream rises in winter and dashes through the gorge with a rapidity and roar which echoed by the mountain sides reminds one of Niagara—and attaching my flax line, upon which I had knitted my hook to this pole, I put an angle worm and caught a large chub, from whose shiny side I severed a fin with a small piece of flesh attached, and with this I made a cast and soon had dangling in the air a beautiful black bass. One of my companions had attached my fly hook much in the same manner as my own; and we followed the stream up, crossing boulders and great slabs of stone and broken fragments, and we caught with these rude fixtures in four or five hours over forty black bass, averaging from eight to ten inches long. We saw larger fish than we took, but they were shy of our rude gear—some of which I applied subsequently to the same purpose, by Mr. W. C. Crocker, Green Clerk of Sequachee, Mr. Pell Brown and Mr. Millsaps, of Walden's ridge, at which time we captured during the day one hundred black bass.

I mention this incident to show you how abundantly our streams are supplied with fish where they are unimpaired, and how successfully fishculture could be carried on in any part of our country; for where they exist in such great numbers naturally, artificially they may be increased more largely.

H. H. SIKERD.

LITMUS BLACKBERRY.—In speaking of the habits and mode of catching the little known "red-snapper," the New Orleans *Lemercet* says: "The red-snapper grounds are estimated to 700 miles. It is only a question of labor what amount can be caught. They are found in countless myriads at all seasons at a certain depth of water, say from fifty to eighty feet. They are caught with lines having a number of hooks, which are eagerly seized by the fish. It is pretty bad to draw up these lines with such a number of these fish attached to them. The fishermen are frequently used to draw them up. In a very few hours the wells of the snappers are filled with them. To prevent their floating and keep them alive until the port is reached, it is necessary to reduce their bulk by compressing the large excess of air accumulated in their long passage from the great depth of water in which they are caught to the surface. This is done by a small inflatable just behind the gills, which operates as a vent through which the air escapes until the fish is reduced to its natural size, so that it sinks and keeps alive and healthy. It was through this simple suggestion that the red-snapper became a great commercial fish. Previously it was found difficult to bring them to market fresh. Now they can be bought in far greater abundance than any other fish. There is a large fleet and a large number of men engaged in catching them. As the value and cheapness of the fish begins to be generally appreciated throughout the West, this industry will be greatly increased. With enterprise and labor, and cheap transportation, we believe that in time this business will equal in its proportions and extent the cod and mackerel fisheries of Mas-

sachusetts. The abundance of the red-snapper in the Gulf is equal, if not superior, to that of the cod off the coast of Newfoundland. It is a better fish than either, and involves less labor and expense in filling the demand and in transporting to any of the interior towns.

FISHING IN THE OSWEGO RIVER.—A correspondent from Fulton, N. Y., sends us an extract from a local paper giving a fishing record as follows: As the fishing season for 1880 has closed it will perhaps interest sportsmen to see the score of F. J. Van Valkenburg's fishing in the Oswego River, at Fulton. The season has been an unusually fine one for this kind of sport, and many strangers have been here during the summer to try for the first time their luck in the Oswego River, and all of them made good catches. Mr. Van Valkenburg's score for the season will show there are few places superior to the Oswego River for good fishing. He begins his record on the 20th of May, 1880, and closes it October 30. His fishing has been at odd times—at early morning, at night or evening—just as he could get away from business, and only once during the entire time has he devoted the entire day to the sport, and generally his fishing has been from one to two hours only at a time.

He has been out 73 times and at an average of two hours at a time or 144 hours of fishing, or twelve days of twelve hours each. During this time he has made an average catch of about 17 fish each trip out, or 102 fish for each twelve hours fishing.

The following is the score: Black bass, 532; Stranberry bass, 16; rock bass, 10; rock bass, 405; pike, 10; pickerel, 6; catfish, 26; chub, 20. Total, 1,213.

These fish were all taken, with the exception of 100, in the corporation limits. Of these 303 were taken by legitimate fly fishing. The balance of 300 were taken by bait. Those taken by bait were taken early in the spring and late in the fall. The bait used was the dobson or helgramite and no other. The best fly fishing is in the months of July and August.

A NEW BAIT.—Putnam, Conn.—As many of your readers are preparing their lines and would like to learn anything that would contribute to their success in trouting, and I have laid aside my rod and reel, I will insert a secret I have kept for years, and when fishing beside others I have wondered how it was that I was so successful.

Years ago I have perhaps noticed a bright shiny silvery hairs on a hen's neck after the feathers were plucked off. To make this bait, pluck off the feathers, but be careful not to pull out those hairs. Then cut round the neck up next the head, and also down next the breast. Then slip off the skin, and just when you want to fix the bait on the hook cut off a strip the size of a good-sized worm, and double it on over the hook, and you will see it is the most tempting bait you ever used and it being tough, will hold on for an hour. I used to secure the neck skin whenever I could and salt them a little, and keep them moist until I wanted to use them. Try it, and see if it is not the best bait you ever saw (r used).

G. F. W.

FISHING IN TENNESSEE.—Savannah, Tenn., March 21.—Fishing has begun this season several weeks earlier than last year. The bass hit well last week, and several line strings were caught, the fish being large and in fine condition. No pike, perch or black perch have been caught yet. The fishing with nets and trot lines in the river has been almost nothing for the past two years. The fishermen are beginning to see that their habit of setting nets in the mouths of the creeks and catching all that fish that run up them to spawn has exterminated the species. One of the best streams in Tennessee, the fishermen in past years has sold his nets and stopped fishing. The fish caught now are small, and so few in number as to make fishing a losing business. The supply of buffalo, drum and catfish, thought by many to be exhausted, five or six years ago, now seems entirely destroyed. What we need is a good law, well enforced, for the protection of fish, or in a few years this part of the State will be entirely deprived of this valuable and cheap supply of food.—WILL.

NO TROUTING HERE.—The Reading (Pa.) Times has the following: "The streams in the vicinity of Berkeley, six miles north of Reading, have for some years been favorite resorts for trout-fishing by lovers of the sport residing in this city. In anticipation of the usual advent of fishermen on the 1st of May, the extent of the trout season will open, the farmers residing along the Maiden and Willow Creeks have been signing a notice this week, prohibiting all outsiders from coming on their lands to fish. Trespassers will be severely dealt with."

THE FLY CASTING TOURNAMENT.—Mr. Fred. B. Divine, of Utica, N. Y., has given a prize committee of the New York State Association as follows: "I will donate two rods, a trout and a bass rod, all lucewood, silver mountings. Each rod to consist of one butt, two second joints (different weights), and three tips; also, extra bamboo tip case, making four different weights and hanging rods. The rods are put up in a handsome black walnut case, lined with velvet and bound with four hands of silver, as a prize in fly casting."

BASS FISHING IN THE POTOMAC.—We are now about to commence our spring fishing. We have the black bass in the Potomac, which affords us good angling; we have taken as much as 115 pounds in one day—myself and companion. It was in the fall of the year 1880, at Muddy Branch, in the Potomac. The best fishing is at the great falls of the Potomac, in early spring. The bass make up stream to the falls, and there they stay in eddies, as they cannot get over the falls. Any one wanting to have a good bass fish had better strike the falls. There is a good hotel, kept by John W. Carroll, who will take great pleasure in showing his guest how to catch large bass. This is a great resort for the anglers of Washington, D. C. It is only ten miles from the latter.—W. H. B.

TROUT TAILS STRIKE FLYS.—Charlestown, N. H., March 21.—Alluding to the quite extended discussion in your columns some time ago concerning the trout's use of its tail in striking the bait presented to it by the fly fisherman, allow me to say that there is no longer any doubt that the California trout at least (*Salmo trutta*) uses its tail intentionally for the purpose of disturbing and examining any unusual kind of food which it finds in the water. Long and careful observation has confirmed this fact beyond a doubt. Very truly yours, LEVISON'S STONE.

BEAVERHILL CLUB.—Two or three gentlemen will be admitted, upon introduction, into the Beaverhill Club, which

this year has obtained sole control of the trout fishing in the famous Balsam Lake, and a continuous four miles of the headwaters of the stream. Inquiries should be addressed to Mr. George W. Van Sicken, 99 Nassau st., N. Y.

Fish Culture.

THE AMERICAN FISICULTURAL ASSOCIATION.

THE tenth annual meeting of the association took place at Fish Monger's Hall, Fulton Market, New York, on Wednesday and Thursday, March 30 and 31. The weather on the first day was cold, rainy and disagreeable, and the attendance was small, not over twenty-five persons being present, but an improvement in meteorological conditions on the second day brought out about seventy-five. President Roosevelt was in the chair. Letters were read from Vice-President Page, now in England, on the importance of introducing shad into that country, and from Prof. Baird regretting inability to attend. While the shad question was before the house Mr. Masler was called to detail his experience in eating the German substitute for it, the mallesh, and Prof. Goode was asked for the specific differences. Mr. Masler then proposed an amendment to the constitution to permit honorary members to be elected by a two-thirds vote—carried. The same member then proposed for honorary membership Dr. Theodatus Garlick, of Bedford, O., the first American fishericulturist, which was unanimously carried. The President then read a paper from Mr. Seth Green on "Hybridizing Fish" and other matters, which was followed by a discussion about the death of fish in winter when the ponds were closed by ice, in which several members took part.

A paper on the habits of the German carp was then read by Mr. H. D. McGovern, which was followed by a discussion as to whether the so-called carp of the Hudson was a true carp or not, which was negatively decided. Dr. Hudson described the three varieties of the German carp. The Secretary then read "A Contribution to the Biography of the Commercial Cod of Alaska," by Dr. Tarleton H. Bean. Prof. G. Brown Goode followed with "Epochs in the History of Pisciculture," in all lands, down to the present time. Mr. Phillips gave some statistics of the value of the sturgeon fisheries and the amount consumed in New York. The Treasurer's report was read and accepted and the following gentlemen were appointed a committee on nomination of officers for the year: Messrs. Hudson, Wilbur and Miller. Mr. Wilbur having left a few moments before, Mr. Evans was substituted and the society adjourned for the day to eat Hackensack smelts at Mr. Blackford's invitation.

On Thursday at the opening of the session the nominating committee reported the following officers; after a ballot, were elected: President, Robert B. Roosevelt; Vice-President, Geo. Shepard Page; Treasurer, E. G. Blackford; Corresponding Secretary, Barnet Phillips; Recording Secretary, James Annin, Jr.; Executive Committee: Fred Mather, G. Brown Goode, Samuel Wilmot, Benjamin West, Thomas B. Ferguson, James Denard, John B. Morgan.

The following new members joined: Robert T. Morris, David T. White, W. A. Wilcox, Charles Barrett, Charles Hewlett, Prof. A. O. Atwater, G. N. Woodruff, John D. Hicks, Samuel Whiting, Frank Endicott, Geo. H. Shafer, Abel Crook.

Mr. Barnet Phillips read a paper on the value of our edible fishes and included some statistics by Mr. George Lamphere. Mr. Mather read on fishes which live in both salt and fresh water. Mr. James Annin, Jr., read a paper on "Fanchers," including those wearing feathers, fur and clothing. Mr. Blackford called attention to some specimens of viviparous perch sent by Mr. B. B. Redding, of San Francisco, and Mr. Mather opened one and found no young, although he found them in another specimen after the Association had adjourned and the trout show had closed. Alcoholic specimens of *Salmo gairdneri*, from Alaska, by Capt. L. A. Beardsley and Dr. T. H. Bean, were also shown, and then Prof. Goode read: "Some further light from Europe on the ool question." This started the usual argument, Mr. Roosevelt taking his old ground that the eels spawn in fresh water and the young go down stream, at least on his place on Long Island, Mr. Hewlett taking the opposite view.

After this a messenger brought in a large package for Mr. Mather, which on opening, proved to be a diploma from Berlin recording the fact that a gold medal had been awarded him at the International Fishery Exhibition at Berlin, for his invention of the conical shad hatcher. It had been sent by Prof. Baird, whose letter announced the arrival of the medals and their readiness for distribution. A valuable paper was then read by Prof. Atwater entitled: "The chemical composition and nutritive value of fish." Mr. Phillips then offered the following resolution: "That the American Fish Cultural Association heartily appreciate the importance of the investigations upon the nutritive value of fish, now being carried on by Professor Atwater, the results of which have been in part communicated by him at its meetings in 1880 and 1881, and that, in the opinion of the members of the Association, the importance of these researches to the fish industries of the United States can scarcely be over-estimated. We would therefore urge upon the United States Commissioner of Fisheries the importance of encouraging these investigations to the fullest extent possible. Carried. Mr. Crook, President New York State Association for Protection of Fish and Game, then requested the members to send communications on subjects of interest in time for their June meeting, papers to be ready by the middle of May. Resolutions thanking the Fish Mongers Association for the use of the room were passed, and the meeting adjourned.

We will publish the papers, debates and proceedings in full in our succeeding issues.

SMELTS IN FRESH WATER.—Some time ago I observed in your columns an inquiry relative to the finding of smelts or "frostfish" in fresh water. The so-called frostfish is found in several lakes of the Fulton chain, in the "John Brown's Tract." Most visitors to that region have naturally wondered at the sight of the old wooden weirs or "picket lines" set up the inlets. These fish run up the shoal inlets between those lakes in October, or about the period of the advent of frost—whence the peculiar title—at which time they are taken and stored in ice. Some are made up by the guides for home use, and occasionally sent out to the adjoining settlements. The fish is a regular habitant of Second, Fourth and Eighth Lakes of the Fulton chain, and also

In answer to "Lepus," asking for a woodcock, can I say I have a black and tan terrier, weight 14 lbs., which can whip any woodcock except the very largest. It does not go into the hole until he would not part with him. He is the best of his kind and then cuts off their retreat; and if too large to handle he snags and backs at them, to keep them from the hole till help comes. He has caught as many as thirty-eight, and sixteen is the least he has caught any one season in the last six years. We have lots of clucks here in Orange County, and they are a perfect nuisance.

SMAR.

VALUABLE DOGS POISONED.—Some evil disposed persons administered poison last Saturday to two valuable dogs, owned by Major John W. Mahan, in the Dorchester district. One was probably the finest St. Bernard dog in the country. He weighed 160 pounds, and had a head of the best quality, and a good tip of his tail, and was but two years and three months old. He was greatly admired by everybody, and was especially affectionate to children. Major Mahan was offered some months since \$500 for him, but would not part with him. The other victim of malice was a dog of the pure Shepherd species, eight months old, and was a gift to the owner from inmates of the Soldiers' Home, at Togus, Me., the father and mother being owned by Gen. Tilton, Deputy Governor at that institution. Major Mahan has offered a reward for the conviction of the perpetrator of the act.—*Boston Journal.*

NEW YORK DOG SHOW.—The Westminster Kennel Club are giving the following prizes for dogs that have run and been placed in the following classes:

A. For the best pointer dog; silver medal, suitably engraved. B. For the best pointer bitch; silver medal, suitably engraved. C. For the best English setter dog; silver medal, suitably engraved. D. For the best English setter bitch; silver medal, suitably engraved. E. For the best Irish setter dog; silver medal, suitably engraved. F. For the best Irish setter bitch; silver medal, suitably engraved. G. For the best black and tan setter; silver medal, suitably engraved.

The Westminster Kennel Club also offer the following additional prizes: H. For the best kennel of large-sized pointers, to consist of not less than five, owned by exhibitor; silver medal, suitably engraved. I. For the best kennel of small-sized pointers, to consist of not less than five, owned by exhibitor; silver medal, suitably engraved. J. For the best kennel of English setters, to consist of not less than five, owned by exhibitor; silver medal, suitably engraved. K. For the best kennel of Irish setters, to consist of not less than five, owned by exhibitor; silver medal, suitably engraved. L. For the best kennel of black and tan setters, to consist of not less than five, owned by exhibitor; silver medal, suitably engraved.

The following prizes are offered by a gentleman of New York City, who has been an English setter dog, and is now proposed to be competed for only by winners of not less than three first prizes; winnings of dogs previous get to be taken into consideration; cash, \$25. N. For the best pure Laverack setter dog; cash, \$25. O. For the best pure Laverack setter bitch; cash, \$25. P. For the best Irish setter dog, for stud purposes; to be competed for only by winners of not less than three first prizes; winnings of dogs previous get to be taken into consideration; cash, \$25.

Q. For the best English setter dog; silver medal, suitably engraved. R. For the best English setter bitch; silver medal, suitably engraved. S. For the best English setter dog; silver medal, suitably engraved. T. For the best English setter bitch; silver medal, suitably engraved. U. For the best English setter dog; silver medal, suitably engraved. V. For the best English setter bitch; silver medal, suitably engraved. W. For the best English setter dog; silver medal, suitably engraved. X. For the best English setter bitch; silver medal, suitably engraved. Y. For the best English setter dog; silver medal, suitably engraved. Z. For the best English setter bitch; silver medal, suitably engraved.

Special Prize.—For the best English setter dog or bitch, not live or imported, to be competed for by the winners in the respective classes of dog and bitch, and to be taken into consideration with winner's name engraved on same, value \$25; presented by Geo. C. Sterling, Esq.

Mr. Paul Dana will judge mastiffs, St. Bernards, New Foundlands and Scotch terriers. The entry list thus far comes favorably with that of last year.

Entries in special classes are free to all dogs entered in the regular classes. Entries close April 11th.

THOSE NERVOUS DOGS.—It is, perhaps, unfortunate for me that in my article on gun-dogs, I used the expression, "A few blue bloods are not bred as much as they should be." I am sorry to find, particularly, as a rule, excessively nervous," as it has brought forth an attack from Mr. Arnold Burgess; and I confess I do not wish to enter into any newspaper controversy with him. I should have written expressly on blue bloods, for certainly this was my intention, and did not intend to include the Irish Setter, the pointer, or the pointer, unless they were much inbred. I followed my remark by mentioning the Laverack setter, which it is known is greatly inbred, and will not bear correction, as other breeds do, and I regretted that I had written a letter to that effect on this subject, from Mr. Laverack to myself.

Mr. Burgess is not to be blamed for defending his blue bloods, but this attack on me is unequalled. I will confess, if I will call him blue, that I have not bred as much blue bloods as he has. I have a judge of the work of a dog and capacity as a sportsman, to rest with those who have been in the field with me. I do not aspire to be authority, and never intend to write a book on dog-dogs, but I will not comment upon any good work I come across. Mr. Burgess certainly cannot charge me with copying a line from his in my articles, which I ever strive to make practical and of interest to the lover of out-door sports.

Mr. Burgess is not to be blamed for defending his blue bloods, but this attack on me is unequalled. I will confess, if I will call him blue, that I have not bred as much blue bloods as he has. I have a judge of the work of a dog and capacity as a sportsman, to rest with those who have been in the field with me.

NATIONAL AMERICAN KENNEL CLUB DERBY.—The following entries have been made since March 31, for the second annual Clarence C. Drane entered Dashing Novice, white, black and tan setter bitch by Dash II out of Novol, whelped July, 1890.

E. F. Stoddard entered Doctor Bob, red Irish setter dog by Bob out of Fend, whelped May 8, 1890.

E. F. Stoddard entered Lady Friend, red Irish setter bitch by Bob out of Fend, whelped May 1, 1890.

Col. A. G. Stoc entered Gladly's blue Belton setter bitch by Gladstone out of Nellie, whelped June 8, 1890.

W. E. Hughes entered Cliffe, blue Belton setter bitch by Gladstone out of Nellie, whelped June, 1890.

following programme was adopted for the coming meeting of 1891:

ROBIN'S ISLAND STAKES.—Open to all puppies whelped on or after April 1, 1890.—Prizes: First, \$100; second, \$50; third, \$20. Nominations to close positively on October 1. Forfeit, \$5, with \$20 additional to fill.

PEACOCK OR ALL AGES STAKES.—Open to all sitters and pointers. Prizes: First, \$250; second, \$150; third, \$50; Forfeit, \$5, with \$20 additional to fill. Bernard stake will be added by the club a special prize of \$100, or a silver cup of equal value, at option of the winner, for the best pointer competing in the stakes. Stakes to close same as in the Robin's Island Stake.

IMPORTED DOGS.—Mr. Robert Hume, of Orange Co., Va., has just returned from a visit to the other side, and has brought with him seven excellent dogs; four Dandie Dinmont terriers a brace of fox terriers (dog and bitch) and a cocker spaniel dog. The names are of the best breed, and well known. Mr. Hume a long price. The fox terrier are of a well-known champion strain, the bitch being a hard one to beat and the cocker a remarkably well made animal, liver and white in color and perfectly striking show. This remarkably nice lot will be entered in the forthcoming show.

AN ILLINOIS BIG ONE.—Highland Park, Ill., March 14. For several months past a number of notices of big dogs have appeared in the FOREST AND STREAM, and I contribute another. The dog to which I refer is owned by Mr. W. S. Crosby and is said to be a cross between a Bull Terrier and Newfoundland. His color black; length from tip to tip, 5 ft. 10 in.; measures round chest 3 ft. 9 in.; height at shoulder, 2 ft. 7 in.; weight, 193 lbs. I may be mistaken, but I think Highland Park is ahead.—Edward R. Truxton.

BENCH-LEGGED BEAGLE QUESTION.—Iroquois, Md., March 27.—*Editor Forest and Stream:* I notice an article from Mr. Pottinger Dorsey in your valuable paper of March 17.

In reference to the bench-legged beagle. We have them in our county (Montgomery), and can say that they were first raised by Mr. Tobias Child, New Unity, Md. They cannot be surpassed for rabbits. As Mr. Dorsey says, they are slow but sure for the game. They are sought after all over the State and also in Pennsylvania. They usually bring from \$15 to \$20 per pair. W. H. H.

PURE LAVENHAGERS IN AMERICA.—At the time when we published our article from *Dogs' Lives* on the pure Laverack setters in England, we determined, if possible, to prepare a similar list of those owned in this country. We have consulted on this subject a number of prominent breeders who most kindly responded, and we hope before long to be in a position to furnish our readers with a fairly complete list of dogs of this kind on this continent from any gentleman who own pure Laverack setters in this country.

MASTIFFS.—We understand that Mr. Charles E. Wallace is building on his place at Long Branch, N. J., some very extensive kennels, after an approved English model. He is also importing some very fine young dogs from one of the first mastiff breeders and judges in England. This is a step in the right direction, and we shall be glad to see this noble breed improved in this country.

SAN FRANCISCO BENCH SHOW.—This dog show will be held at the Mechanics' Pavilion, San Francisco, Cal., under the auspices of the Pacific Coast Kennel Club, on April 7 and 12. Valuable prizes will be offered for all kinds of dogs in each class, also certificates of highly commended to dogs possessing superior qualities who fail to win first or second prize. And a very valuable special prize will be given to the most perfect specimen of dog or bitch of the North American breed. Mr. Taylor, Secretary, office 513 Montgomery st., San Francisco, Cal.

IMPORTED HARRIERS.—There has been lately imported from England, by Mr. S. Reed, of Louisville, Ky., two large-sized harriers, dog and bitch, Bincill and Plaudit, from the kennel of Dr. Gordon Slane, B. N. These harriers are greatly admired. It is supposed that dogs of the kind from good strains will improve the breed of fox-hounds in the West.

GERMANTOWN HARE AND HOUNDS CLUB.—The Germantown Hare and Hounds Club will meet twice a month, beginning in April with a limit of a number of visitors from other clubs will participate. "Homo."

NOTICE.—In another column we insert the notice of a gentleman who wishes to secure a partner for the purpose of establishing a first-class kennel. References—Capt. M. O. Campbell and Capt. Jos. H. Dew.

AN ENGLISH ADVERTISER.—We call special attention to the advertisement of Mr. A. W. Langdale, and would advise our readers that any one who is interested in the subject of dog-dogs, or who is considered by Mr. Vero Shaw to be an eminent authority on the subject. Read what he says of the Sussex spaniel.

THE COCKER CLUB.—The advertised meeting of the Cocker Club did not take place at Buffalo.

KENNEL MANAGEMENT.

116 J. A. Barrytown, N. Y.—For beagle bitch use same treatment as recommended in this issue, but as the cases are identical. 2. The injury sustained by your cocker bitch can only be relieved by rest and the bathing of the sprained leg with some strong stimulating liniment; this is all that can be done.

117 G. S. Buffalo, N. Y.—The dog should be carefully examined by some competent physician. It is impossible to arrive at a proper diagnosis of the case from the account given.

118 F. W. N. Poughkeepsie, N. Y.—My setter dog for three or four months has been troubled with his head, discharging from both ears, becoming excruciatingly sore, and causing him to howl. The dog does not trouble him. Don't seem to show any signs of pain. He scratches his ears occasionally; has no appetite. I have been treating him with a wash of equal parts of sulphur and water, but his ears when diluted with water. As far as I can see so his ears they appear to be all right. The difficulty is beyond sight. A white spot on his side which has been present for some time, but his skin still run and smell quite badly. He is very lively and apparently in good condition. He is a very young dog and I can quite anxious about his health. What can I do for him? The dog has probably been overfed and not sufficiently exercised. Give him low diet for a while and plenty of exercise, also a little sulphur in his food once a day for a week, and a purge of two castor oil. Continue to use the lead lotion.

119 H. C. Mount Vernon, O.—My beagle hound dog two years old has a cold in his head. Keeps sneezing and sneezing. Nose appears to be stopped up. When I rub him just to wind follow a few drops, I know he is no good. Will leave the track in five minutes. What shall I do for him? Ans. Try to promote his general health as much as possible by a course of moderate exercise, and give him two grains of quinine three times a day.

120 L. E. B. Westfield, Mass.—I have got a beagle puppy ten months old. About six weeks ago he had the distemper. The first two or three days he did not eat, and since then his appetite has been good, though he has gotten along nicely and now, to all appearances, he is entirely well, with the exception that within about a week he has twice passed a hard stool, which was very hard and dry. It is a natural result of distemper. It confounds me, give him a small teaspoon of castor oil ten drops of linseed oil each night until it stops.

121 J. R. C. New York City.—I have a small cocker bitch which is now in heat. One of my friends have advised me to cross her with a Beagle spaniel. Would the cross be advisable? Ans. The cross is no bad one made where direct breeding cannot be effected, but never cross when you can avoid it. Is the best motto.

KENNEL NOTES.

* * * Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes, but request in each case that notes be made up in order and conform, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.

NAMES CLAIMED.

Shoo Fly.—Messrs. Dan Stokes & Son, Lebanon, N. H., claim the name of Shoo Fly, a single black puppy out of Bess by Victor, purchased of Mr. M. G. Gilroy.

White-Mr. D. Ladd, Martin, Tenn., claims the name of White for his cocker spaniel puppy, presented to him by Mr. Ed. Joyce.

Dominion.—Mr. V. Weston, St. George's, Del., claims the name of Dominion for sold white Italian greyhound dog puppy, whelped Feb. 8, 1891, out of his lawfully bred female by imported Duke of Saborn's Nellie by Gladstone.

Chap.—Mr. John W. King, St. John, N. B., claims the name of Chap for his cocker spaniel puppy, presented to him by Mr. Ed. Joyce.

Trick.—Mr. Addison Child, Childwood, N. Y., claims the name of Trick for black, white and tan dog puppy, whelped Nov. 8, 1890, out of Lark by Don, Gordon setters imported by Mr. E. L. Barr, Boston, Mass.

Dick.—Mr. W. H. Hobbs and Mr. Chas. Smyth, Lake City, Minn., claim the name of Dick for pointer puppy out of Fleet by Ranger, purchased of Mr. S. B. Dibley.

Douglas.—Mr. F. D. Du Bois, Morristown, N. J., claims the name of Douglas for his seven-months-old foxhound puppy (white with tan spots) bred by imported Duke out of owner's Bess.

Kilroy.—Mr. E. B. Du Bois, of Morristown, N. J., claims the name of Kilroy for his seven-months-old foxhound puppy by imported Duke out of owner's Bess.

Mag.—Mr. C. L. Wrigley, Revere, Mass., claims the name of Mag for his red Irish setter bitch out of imported Ellen by Champion Elcho.

Firth.—Mr. C. L. Wrigley, Revere, Mass., claims the name of Firth for his young and white fox terrier bitch, whelped November 23, 1890, out of Trexley by Ike.

NAMES CHANGED.

Lora to Lora Laverack.—Mr. J. H. Henrichs, Pittsburg, Pa., changes the name of his pure Laverack bitch from Lora to Lora Laverack, she being purchased from Mr. G. C. Simpson, Ingersoll, Canada. Lora Laverack is entered for the Derby of 1891, and will be broken for that event by Mr. H. M. Short.

Beauty-Cheer.—Mr. F. B. Fay's (Boston, Mass.) Coo (Adelstein-Lose) to Dr. Greenough's black and tan Beauty by Copeland's Shot out of Dr. Carson's Lora. (Dor's imported Dan and Greenough's N. Y.)

Imperial-Dray-Morrell (Cocker Kennel's (Hornellville, N. Y.)) liver cocker bitch (bitch to black Cocker Bag, March 10).

WHIPLASH.

Maule's Cocker Bitch.—Mr. Richard Nagles' (St. Johns, N. B.) cocker spaniel bitch whelped, March 18, sixteen puppies, all living and doing well, by Mr. M. J. McGill's Gyp.

White-Mr. D. Ladd, Martin, Tenn., claims the name of White for his cocker spaniel puppy, presented to him by Mr. Ed. Joyce.

Trick.—Mr. Addison Child, Childwood, N. Y., claims the name of Trick for black, white and tan dog puppy, whelped Nov. 8, 1890, out of Lark by Don, Gordon setters imported by Mr. E. L. Barr, Boston, Mass.

Dick.—Mr. W. H. Hobbs and Mr. Chas. Smyth, Lake City, Minn., claim the name of Dick for pointer puppy out of Fleet by Ranger, purchased of Mr. S. B. Dibley.

Douglas.—Mr. F. D. Du Bois, Morristown, N. J., claims the name of Douglas for his seven-months-old foxhound puppy (white with tan spots) bred by imported Duke out of owner's Bess.

Kilroy.—Mr. E. B. Du Bois, of Morristown, N. J., claims the name of Kilroy for his seven-months-old foxhound puppy by imported Duke out of owner's Bess.

Mag.—Mr. C. L. Wrigley, Revere, Mass., claims the name of Mag for his red Irish setter bitch out of imported Ellen by Champion Elcho.

Firth.—Mr. C. L. Wrigley, Revere, Mass., claims the name of Firth for his young and white fox terrier bitch, whelped November 23, 1890, out of Trexley by Ike.

Maule's Cocker Bitch.—Mr. Richard Nagles' (St. Johns, N. B.) cocker spaniel bitch whelped, March 18, sixteen puppies, all living and doing well, by Mr. M. J. McGill's Gyp.

White-Mr. D. Ladd, Martin, Tenn., claims the name of White for his cocker spaniel puppy, presented to him by Mr. Ed. Joyce.

Trick.—Mr. Addison Child, Childwood, N. Y., claims the name of Trick for black, white and tan dog puppy, whelped Nov. 8, 1890, out of Lark by Don, Gordon setters imported by Mr. E. L. Barr, Boston, Mass.

Dick.—Mr. W. H. Hobbs and Mr. Chas. Smyth, Lake City, Minn., claim the name of Dick for pointer puppy out of Fleet by Ranger, purchased of Mr. S. B. Dibley.

Douglas.—Mr. F. D. Du Bois, Morristown, N. J., claims the name of Douglas for his seven-months-old foxhound puppy (white with tan spots) bred by imported Duke out of owner's Bess.

Kilroy.—Mr. E. B. Du Bois, of Morristown, N. J., claims the name of Kilroy for his seven-months-old foxhound puppy by imported Duke out of owner's Bess.

Mag.—Mr. C. L. Wrigley, Revere, Mass., claims the name of Mag for his red Irish setter bitch out of imported Ellen by Champion Elcho.

Firth.—Mr. C. L. Wrigley, Revere, Mass., claims the name of Firth for his young and white fox terrier bitch, whelped November 23, 1890, out of Trexley by Ike.

Maule's Cocker Bitch.—Mr. Richard Nagles' (St. Johns, N. B.) cocker spaniel bitch whelped, March 18, sixteen puppies, all living and doing well, by Mr. M. J. McGill's Gyp.

White-Mr. D. Ladd, Martin, Tenn., claims the name of White for his cocker spaniel puppy, presented to him by Mr. Ed. Joyce.

Trick.—Mr. Addison Child, Childwood, N. Y., claims the name of Trick for black, white and tan dog puppy, whelped Nov. 8, 1890, out of Lark by Don, Gordon setters imported by Mr. E. L. Barr, Boston, Mass.

Dick.—Mr. W. H. Hobbs and Mr. Chas. Smyth, Lake City, Minn., claim the name of Dick for pointer puppy out of Fleet by Ranger, purchased of Mr. S. B. Dibley.

Douglas.—Mr. F. D. Du Bois, Morristown, N. J., claims the name of Douglas for his seven-months-old foxhound puppy (white with tan spots) bred by imported Duke out of owner's Bess.

Kilroy.—Mr. E. B. Du Bois, of Morristown, N. J., claims the name of Kilroy for his seven-months-old foxhound puppy by imported Duke out of owner's Bess.

Mag.—Mr. C. L. Wrigley, Revere, Mass., claims the name of Mag for his red Irish setter bitch out of imported Ellen by Champion Elcho.

Firth.—Mr. C. L. Wrigley, Revere, Mass., claims the name of Firth for his young and white fox terrier bitch, whelped November 23, 1890, out of Trexley by Ike.

A GREAT BLUE HERON.—Newport, R. I., April 4.—Robert Allan, a lad thirteen years old, while gunning at Price's Neck on Saturday last, shot a large heron which measured six feet from tip to tip. I have never heard of one being shot before at this place. The right wing has three long dark feathers on it. Head, but this bird only had two and a very long bill and legs. Color of back, slate color; wings black; neck a shade lighter. He was shot in the daytime. What is it? (J. S. B.)

The bird was no doubt a great blue heron (*Ardea herodias*), a species quite common in New England, and the largest of our herons.

OUR READERS should not confound our frequent contributor Major W. W. Merrill of New Rochelle, N. Y., with the Major Merrill, who is sitting as a member of the Whittaker Court Martial.

Indigestion, weak stomach, irregularities of the bowels, cannot be so when STOP DRUGS are used.

Or W. R. SCHARFEL, 31 Elm St., Boston. Or THOS. L. GOLCHER, 116 Girard Ave., Phila.

The Kennel.

FOR SALE.—THE BLUE STAR COCKER SPANIEL BREEDING KENNEL.—I will sell privately business cards, which will call for all the spare time I care to give in the future, and also enable me to complete my unfinished work on breeding, breaking, management of Spaniels for sportsmen. Therefore I offer as above my kennel stock, all accessories, together with Kennel name and good-will, to any one having the taste and competent to carry on the good work well. The demand for this breed is immense. Over five hundred pups would have been sold last year (1890) from this Kennel had we had them. My price, \$400, is extremely low, considering its well established reputation and lucrative facilities. I will give all dogs and advice required, gratis, to the successor. One having breeding experience is preferred, and would like to have over before June next. Only parties meaning business need apply. M. P. MCKOON, Proprietor, The Blue Star Kennel, Franklin, Del. Co., N. Y. March, 11.

FOR SALE.—Red Irish Setter Dog, Imp. Grimsa, by Moore's Rutus ex Twigg's Kate, 2nd prize, Dublin, 1877; KILUS, by Johnson's The Queen; Kate, by Patsy, (a Palmerston) ex Moore's Flora, dam of Miss and several other champion and prize winners. Grimsa won 2nd open class and V.I.C. champion class, Baltimore, 1878, when but 12 mos. old. Only time ever shown.

Red Irish Setter Bitch, Rodine, by Imp. Grimsa ex Imp. Bella; Bella, by Dr. Boyd's Patsy ex C. Moore's Bell; Bell, by C. Moore's Old Shod (father of Palmerston) ex Old Kildie. Both the above dogs were thoroughly broken by Mr. Gladson, now with Mr. Ogilby. Also the Chesapeake Bay dog (Greek), by Mr. Jno. Stewart's Turk ex Mr. Martin's bitch. Address GEORGE BROWN, No 4 Exchange Place, Baltimore, Md. March, 11.

ST. BERNARDS FOR SALE.—The undersigned, wishing to reduce his kennel, offers for sale several magnificent imported Mount St. Bernard dogs and bitches, carefully selected from the best European studs. Will be sold for no fault. For prices, pedigrees, etc., address LE ROY Z. COLLINS, Lancaster, Mass., U. S. A. Sept 15-17.

REMAKETT KENNEL, Richmond & Vantage Proprietors, Middleboro, Mass. Sporting dogs (champion, breaker, setter) by most of the experienced Setters, Pointers, Fox Hounds and Beagles trained for their respective work. Satisfaction guaranteed. Also, a number of imported and native dogs for sale. Address BOX 253, Middleboro, Mass. H. B. RICHMOND, N. H. VAUGHAN. Feb 17, 91.

EXPLORER IRISH WATER SPANIEL KENNEL.—For full particulars regarding Irish water spaniels, how to train and where to secure the best, send for descriptive circular to the undersigned. J. H. WHITMAN, 108 South Clark Street, Chicago. J. D. OLCOTT, 109 Reed street, Milwaukee, Wis. March, 11.

TO COCKER BUYERS AND BREEDERS.—A. W. Langdale, of 5 Newmarket Terrace, Victoria Road, Leytonstone, England, late owner of Champion Lawver, beaten by most of the experienced Lizzie, Loustie, Letosser, Limerick, Lithuan, Laurence, Lena, Sydney, Bobb, Young Bobb, Bessie II., Barons, and many more imported and native winners of our best shows; also, contributor to Vero Shaw's new work on spaniels, will buy on commission spaniels of any breed, and has on his books a number of grand specimens; deposit system. March, 11.

RICHARDSON AND RANGELY LAKES ILLUSTRATED, a thorough and complete guide book to the Hangley Lake Region, Kennaquam, Cuscutta, Parimachoo and Connecticut Lakes and the headwaters of the Connecticut, Magalloway, Androscoggin and Dead rivers; illuminated covers, lined paper, 90 pages, 60 illustrations and a map, made mostly from accurate surveys. Price, post-paid by mail, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

OLBOTT COCKER SPANIEL KENNEL.—For pure cockers from the finest selected stock in the United States, imported and native in the stud, imported cocker, liver and white, a very handsome, powerful dog, 3 years old, the feather, weight, 28 lbs., litter warranted. Will serve good and hard work, made mostly from accurate surveys. Price, post-paid by mail, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

See Kennel Advertisements next page.

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R.R. Mackinac, Grand Rapids and Cincinnati Short Line FOR THE Trout, Grayling, and Black Bass Fisheries, AND THE FAMOUS SUMMER RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of life in these waters.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1. BLACK BASS, PIKE, PICKEREL AND MUSKOGEE, also abound in large numbers in the many lakes and lakelike of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, \$3.00 for packing fish can be had at many points. TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful, the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections. The hotel accommodations are good, far surpassing the average in countries new enough to be without the amenities of this territory.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen. Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on their route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and cards, address the Fishing Grounds and Hotel Cards, Address A. B. WELT, 2nd, Pine, Great, Grand Rapids, Mich.

Bromfield House, Boston.

Carlsile, Limerick, Sprout, Virginia, Bass, Aberdeen, etc. Swivels, Floats, Lincs, Gimp, Snells, Leaders, etc. REDDITCH, ENG. TORONTO, CAN. MAKERS OF Silk Worm Gut of the Finest Qualities, MURCIA, SPAIN.

The largest manufacturers of Fishing Goods in the world. All best goods bear our name and trade mark, and can be had of all respectable dealers. Exhibition Awards-Gold medals Paris, Berlin, Wursburg. Highest Awards at Sydney, Toronto and South Africa. Special Prize of Honor, Wursburg, 1880.

Hornbeam Rods A SPECIALTY.

W. HUNTINGTON, WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON, as above.

FINE FLIES. Send for catalogue to C. F. ORVIS, Manchester, Vt.

GUNPOWDER! Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!
 DUPONT'S GUNPOWDER MILLS, established in 1809, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1 lb. and 5 lb. canisters and 4, 6 and 12 1/2 lbs. kegs.

Dupont's Cloke Hole.—Specially adapted for "Cloke Hole" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern. Will be found well adapted for class fall and pigeon shooting. Made of two sizes, only No. 1 and No. 5, No. 7 being the coarsest. Packed in 4, 6, 8, 10 and 12 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1 lb. canisters and 4, 6, 8, 10 and 12 lb. kegs.

Dupont's Rifle Pk.—Sea Shooting, 77-FFG and FFG. The Pk. for long-range rifle shooting, the FFG and FFG. for general use, burning strong and moist. Packed in 4, 6, 8 and 12 lb. canisters, 4, 6, 8, 10 and 12 lb. kegs. For coarse, FFG, see Dupont's Sporting, Mining, Snapping and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also rifle cartridges, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S Pk. or FFG. for long-range rifle shooting.

The Hazard Powder Co., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric Powder."
 Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."
 Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 4 and 12 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. W. and B. pattern.

Hazard's "Duck Shooting."
 Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 4 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
 FFG FFG, and "Sea Shooting" FFG in kegs of 4, 12, and 24 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FFG is the standard rifle powder of the country.

Superior Mining and Blasting Powder, GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

ANSWERS TO CORRESPONDENTS..... 217

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, April 14.

AVIAN RIDERS.

DR. MERRILL'S interesting account of the belief of the Crow Indians that a small bird, probably a grebe, performs its migration on the back of the sand hill crane, was no doubt new to our readers. It appears, however, that a similar belief is widely spread among various tribes of North American Indians. Dr. Merrill's account referred to the Crows, but he mentioned also that the Crees entertained the same belief in reference to the white, or whooping, crane. Recently in the *London Nature*, Mr. John Rae gives an account of the supposed passage of certain small birds on the backs of the Canada geese as related by the Northern Indians which he apparently believes in. It is generally asserted by the Maskegon Cree Indians who dwell about the southwestern part of the Hudsons Bay, that a small bird, one of the *Fringillidae*, performs its northward migration in spring on the back of the Canada goose (*Bernicla canadensis*).

This species reaches Hudson's Bay about the last of April, and the Indians state that often when the geese are fired at the little birds are seen to fly away from them. The Indians of this region devote considerable time each spring—a month or more—wholly to goose shooting, and their method of doing this is to set out decoys near a blind and to call down the geese which are passing over. It is said that the small birds are only found to accompany those flocks which are called down from a considerable height, the low flying flocks never appearing to have the small birds with them. It is inferred from this that such geese having rested on the ground or having passed near it have been deserted by their little passengers. Mr. Rae says of this belief of the Indians:

"An intelligent, truthful and educated Indian named George Rivers, who was very frequently my shooting companion for some years, assured me that he had witnessed this, and I believe I once saw it occur."

It is said that these little birds only make use of the Canada goose as their conveyance, and it is certain that both arrive at the same time—about a week earlier than the white fronted and snow geese (*Anser albifrons gambelli* and *A. hypereboreus*). A similar story is told by the Indians on the shores of the Athabasca and Great Slave lakes, both of which are great resorts of wild geese, and the story is purely a fabrication it is difficult to see why it should be told only about the Canada geese and not about any other species.

Unfortunately the bird which is said to employ this labor-saving method of performing its migrations has not been identified, although the writer, an abstract of whose views we have given, stated that he knew it well, and had preserved specimens of it, but it is so long ago that he has forgotten the name.

We trust that further information on this most interesting point will be forthcoming before long.

CARE OF QUAIL IN CONFINEMENT.

PERHAPS there have never been at any time in the history of American shooting so many live quail in confinement as there are at the present time. This fact is the result, on the one hand, of the growth of a healthy sentiment in favor of game protection throughout the length and breadth of the land, and on the other, to the severe weather of the past winter which has led the sportsmen generally to believe that quail have suffered severely throughout the East and South, and in many sections have been so nearly exterminated that without a restocking of the covers little or no shooting can be looked for for several years. It is exceedingly satisfactory to see the interest in this matter so general and widespread, and it may be regarded as one of the signs of the times most encouraging to those interested in the protection and propagation of our game and fish.

Those earnest workers who have for years been laboring for the cause against almost constant discouragement and defeat may now take heart of grace and renew their efforts with fresh vigor. The people are really becoming interested and are taking hold of the matter on all sides. And if the sportsmen as a body and individually shall lead the movement it will unquestionably be a success.

The example of the Springfield sportsmen, already alluded to in *FOREST AND STREAM*, will, we trust, find many imitators. An enterprise of this kind, when it is once started and has gathered a little way, acquires constantly more momentum. It is cumulative. In winter we have all seen the children when the damp snow lies thick upon the ground make a little ball at the top of a hill and after it has attained respectable proportions roll it to the brow, and start it on its way to the bottom. At first it moves slowly, and sometimes stops two or three times before finally moving off, but when it does at last get started it increases constantly in size and power until at last it is a force that nothing living could withstand. So we trust to see it with game protection in this country, and we believe that the day is not very distant when almost every one will be deeply interested in this most important subject.

FROG CULTURE.—We have had some inquiries regarding frog culture of late. The subject attracted some attention some years ago, when the success of the culture of certain fishes caused people to look at certain other animals which are of value to see what could be done with them. Frogs and mink were among these, and Mr. Henry Kessig started a minkery in Central New York and raised a few, but his profits came in from supplying other beginners with live stock at \$25 per pair, and not from the regular sales of skins at three to seven dollars each, the average prices in those days. The fact that mink fur went out of fashion as seal-skin came in put an end to all trials in this line, and it is a question whether a mink will eat what his skin is worth or not; or if not, whether there is anything left after feeding the parents all the year and building stockades for them.

Frog culture never got as far as this. The few experimenters found that birds, by day and night, ate the tadpoles,

fish and larger frogs ate them, and that there was no way of feeding frogs, which was satisfactory and profitable. Large frogs will eat small ones, and unless each individual had a wire covering to protect him and an attendant to feed him, he either ate up his smaller kindred or was engulfed in the capacious maw of his grandfather. From time to time marvelous stories appear in the rural press of some enthusiastic lover of the tailless batracian who has accomplished wonders in rearing frogs. Tadpoles rejoice at his coming, the pipers cry "knee deep" and the bassos greet him with a "bollunk" from the lowest register as he approaches. We have investigated these frog farms, at the cost of much postage, and have invariably found that they were located in the brain-pan of the "funny man" of some rural journal.

The stories might be varied and an increased interest taken in them if the alleged funny man would add that the frogery was under the superintendence of a patriotic frog who nursed the sick tadpoles and administered justice to young scapgraces who took surreptitious rides on the backs of their aged grandparents; also, that he selected water for the maiden frogs in the spring and skinned the hind legs of all confirmed bachelors for market. But, alas! the idea of ringing a change does not occur to him, and so the old paragraphs do duty occasionally.

Frogs for the New York Market now mainly come from Canada. The neighboring States have been skinned; and as frogs seem to be of slow growth—perhaps three or four years—they do not give a chance to multiply in great numbers. We do not advise large investments in frog culture.

GOING A-FISHING.

EVERYTHING betokened an early start and very young was the day when we started, for punctual as the old-fashioned clock over the fire-place we are off, buoyant with anticipations of pleasure and delight.

We had talked over the trip during the winter weeks, when Jack Frost held possession of the trout streams, and this commenced to look like the realization of a — you might call it an Utopian dream, and more, for the wildest and most extravagant fancy could not picture half the charms of the reality. This is true of angling. It is a solid pleasure to put the rod and reel in order, to inspect line and leader, to take an inventory of the fly-book, to build airy castles, but this is not being among the green hills, nor on the rippling streams, nor in the woods, where sunlight and shadow play at hide and seek. Hoping and wishing is not feeling the electric thrill that tingles through one when some lord of the pool makes his rush for the allurement you have placed before him; but we are getting there fast as our Encephalus and Rozinante can drag us.

Snap! crack! goes the whip, and the graceful horses, moving easily along, whirl us across the hump-backed bridge to the music of their hoofs, and we are well under way. Not the least important ingredient of going a-fishing is the day's ride when it leads through a pleasant country, and more especially so if one has with him two or three anglers after his own heart; and the experienced angler can rarely be imposed upon in the choice of his companions. It is a very essential part of his piscatorial education to measure men as they are in camp, for he knows that is the place of all places where a man shows more decidedly than anywhere else the good or the bad that is in him. Attempt at disguising his qualities and disposition will not succeed. He will show his colors unconsciously perhaps, but show them he will.

Away we go nodding good-morning to every one we meet, except the pretty girls, speeding along the old road the wild winds

"..... Where old roads will
Here to a ferry and there to a mill;"

past meadows glowing with tender and dainty green; past orchards where the "wind that shakes the barley" has strewn the ground rosy white with the apple blossoms; past daisy-decked meadows by the brook that goes laughing and bawling over the stones, dreaming in the shade and playing in the sunlight. Cloud shadows glide over forest and clearing, and everything is one picture of delightful, blushing spring, the time to go a-fishing.

The nooning at the wayside tavern, where we bait our nags and gossip with the landlord, while his good wife, flitting about like a swallow on the wing, is superintending the

preparations for dinner, is quite a noteworthy event of the day. It is a substantial brace, and lets the high liver down by easy stages to the plainer and healthier diet of his lodge in the wilderness.

On again, the horses, brisker than ever after their hour's halt, until at early evening we reach our resting-place for the night, as pleasant a lodging as ever described by Izaak Walton. If a mechanic or master builder would not admire its proportions it would certainly meet with the approval of an artist. Everything about the exterior of the building presented an air of dilapidation and extreme old age. The moss grew thick among the shingles that covered it. The old-fashioned chimney, with its smoke blackened top, had a dangerous slope from the perpendicular. The old logs had commenced to settle, and gave the entire structure a disjointed and irregular appearance. Within doors, however, everything is perfect, from the great fire-place, with its immense capacity for consuming back logs, to its well polished floor and grotesque corners and closets.

We are expected and welcomed with the frank hospitality of a backwoodsman, who knows his friends and displays none of the magnificent indifference that strangers sometimes encounter from men of his calling.

A chatty evening follows, during which we pack our camp kit, for here we leave our horses and swell clothes, and early in the morning, with our guides leading "forward to the north," we foot it away into the woods beyond the last settlement and clearing, beyond the sound and sight of everything that reminds one of business and enterprise to every the primitive sanctity of nature still remains, where she works her fairest marvels and, untrammelled and uncalculated asserts her sovereignty.

Off the beaten track to some choice spot known only to a few hardy trappers, where quiet is the deity that presides over its solemn fastnesses, is the place where we unsling our loads, rig our tackle and in earnest go a-fishing.

MILLARD.

NEW HAMPSHIRE FISH AND GAME LEAGUE.—The annual meeting of the League was held at Manchester, April 5, the President, J. W. Clark, in the chair. The Fish Commissioners reported favorably as to the progress of the work, which now includes also the care of the game. The League itself is giving its attention principally to the restocking of the Merrimack with shad and salmon. Addresses were made by Rev. Henry Powers on "The Future of New Hampshire;" Mr. Geo. P. Whitman, on the "North American Grouse," and by Col. Waterman Coleman on the introduction of the migratory quail. The following officers were elected for the ensuing year: President, John B. Clarke; Secretary, Charles L. Richardson; Vice-Presidents, Marcellus Eldridge, of Portsmouth; Luther Hayes, of South Milton; E. B. Hodge, of Plymouth; W. W. Fletcher, of Concord; Edward Spaulding, of Nashua; W. S. Shurtliffe, of Colebrook; John Clement, of Troy; W. M. Wood, of Sandwich; M. A. Haynes, of Lake Village; George P. Whitman, of Manchester.

The New Hampshire League is composed of the solid, substantial portion of the commonwealth, and its meetings are always characterized by a spirit of earnest and intelligent discussion of game and fish protection viewed from its highest economic standpoint. We shall refer later to some of the points of Mr. Power's address.

THE RIGHT WORD.—An esteemed Montreal correspondent, Mr. R. H. Kilby, writes: "I sometimes regret the term 'sportsman' is so often made use of in connection with fish and game protection, the word has a tendency to cause the non-sporting classes to feel that the effort to protect fish and game arises only from a desire to preserve that which contributes to the sportsman's amusement. Let us endeavor to impress on the minds of those who love neither Rod nor Gun what a bountiful harvest of food our Forests and Streams will yield if short sighted avarice and greed can be so far restrained as to permit nature to work out her wonderful laws of reproduction."

While endorsing fully the economic view taken by our correspondent we cannot share his regret that the term "sportsman" is so frequently employed in this way. The non-sporting public will find out in due time what an important work has been accomplished by the "sportsmen" of the country, and as the value and importance of the "sportsmen's" fish and game protective efforts are appreciated, it will be fitting that the "sportsman" should receive the credit. The connection between "sportsmen" and game protection is also doing much to eradicate some of the popular misconception which still clings to the title.

AMERICA HAS SENT TO AUSTRALIA her salmon and her pinnated grouse, and in the first instance at least the gift has proved a valuable one to the recipient. We learn that the favor is now being returned, and that on the Pacific coast the experiment of importing game birds from Australia is being tried. A Mr. Coates, of San Francisco, has recently imported several pairs of Australian pheasants, and has distributed them among a number of gentlemen interested in the acclimatization of game.

An interesting experiment has been tried by one gentleman, Lieutenant Richman, of Mare Island, who is said to have successfully crossed those presented to him with his game fowls, and now has a number of the half breeds alive and well!

It is proposed if the Australian pheasants can be successfully propagated in California to turn a number of them out to shift for themselves in the hope that a new bird may be added to the game fauna of that State.

THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION has elected the following officers for the ensuing year, a selection which gives ample assurance of the continued good work which has given the Massachusetts Association so high a standing: President, John Potler, Jr.; Vice-Presidents, Hon. Thomas Talbot, Hon. Daniel Needham, Walter M. Brackett, Esq.; Col. Henry Smith, Theodore Lyman, Esq., Edward P. Brown, Esq., H. T. Rockwell, Esq.; Treasurer, James R. Reed; Recording and Corresponding Secretary, E. S. Toley, Jr.; Librarian, E. M. Messenger; Executive Committee, Ivers W. Adams, W. S. Hills, Arthur K. Roberts, F. R. Shattuck, C. T. Jenkins; Committee on Membership, L. Prouty, F. Thekenman, E. Delano.

The society is doing a good work in the face of much opposition, and the determined manner in which its members are striving for the perfection of the game laws indicates that in time the laws of Massachusetts may be as efficient as those of any other State.

FISHERY EXHIBITION PROPOSED.—The Berlin International Exhibition last year and the national one held at Norfolk, England, this month have aroused the interest of the Scotch Fisheries Improvement Association, and they talk of holding an exhibition in Edinburgh next year.

INTERNATIONAL HUNTING AND SPORTING EXHIBITION.—We learn from the *English Fishing Gazette* that an exhibition as above will be held at Cleves, Rhinisch Prussia, an 18-hour journey from London. The classification includes fire-arms and ammunition from the earliest to the present time. Dresses and accoutrements for hunters and anglers, fishing tackle, hunting carriages, stalling, hoes, hides, skins and articles made therefrom, stuffed animals, birds, etc.

The Sportsman's Tourist.

GETTING LOST.

WORCESTER, MASS., Quinsigamond Eyrie, March 18. An article in *FOREST AND STREAM* of Feb. 24, "What to Do When Lost," has called up in me some reminiscences which, for what they are worth, go to show that a white man is not only liable, but indeed has a natural tendency to get hopelessly lost when once he has passed beyond the limit of recognized landmarks and is without compass or such guides as he may be familiar with in the realms of space.

A pig and an Indian rarely get lost. An Indian may look for moss on the tree trunks, may cast his eyes to the tree tops, knowing that the higher branches will always bend and take a set from the higher winds, or may observe the direction of the tree or bush, rock, or swell of land to break the dead monotonous. Rivers and mountains, lakes and streams, forest and prairie, desert and wilderness have been my bed-fellows and messmates. From Mexico to the interior of Canada, from Eastport far to the westward I have hunted and fished, but not so much for the hunting and fishing as for the love of the company, the flow of the winds and heaves, rocks and rivers, the mountains, and seas of wild grandeur. I have seen my game world besetting, and I catch trout with an angle worm and I am a great tramp and would bet on extricating myself from a tangle about anything living except a fox-hound or a cat, a pig or an Indian.

And yet I have been lost many a time, and often under circumstances attended with great danger—in the night during storms of snow, or in the day, in flooded pine lands that skirt the Alleghania and in the forest.

I will relate one or two instances, but only such as are accompanied by that peculiar, unaccountable tendency to go astray, a tendency attaching itself to both horse and man, as I will try to show.

Men and horses, when recognizable points are out of sight and a distant enough, invariably fall to traveling in circles. Twenty-five years ago I bought a prize farm in the township of Chelms, fifty-eight miles south of Chicago. I located four miles west of the R. R. station, and nothing intervened but prairie, not a hut nor a tree, not even a trail. To the south nothing—fifteen miles of nothing—saving perhaps the village of Ashkum, and that under a swell and visible only in mirage. To the west, three miles away, was Mill's Grove, and fifty miles beyond that prairie again for miles, and then Vermillion River.

To the north was a range of hills thirty feet high, and between were two pre-eminences—Bard's—deserted, and one other; and beyond the hills was Kaukaue City, then a village of a few hundred souls, ten miles away.

Three of us had been deer-hunting with greyhounds. I had run a herd of six bucks, and my dog, which last week I had lashed with our knives to aid the dogs who had found their match and were hardly equal to their undertaking. It was now nightfall, the sky was overcast and rapidly thickening, and before we had the headquarters wrapped in the skip and were mounted a fine snow was falling. We put spurs to our horses and with a swift gallop went for the hills, now no longer visible. Ten minutes of hard riding and we were lost—horses and men. Before starting we could see Kaukaue and knew we were exactly in line for home. But where were we now? We should have crossed the hills at the pace we made, but we had missed them. We could have discerned the inclination, slight as it is, up to this time, but with a little more obscurity all would be level way to us. We halted simultaneously and without word or token. Each felt—somewhere in the region of the stomach—a disagreeable but unspoken sensation. I say stomach, for brains have nothing to

do with a lost condition until they are called to the rescue. Attached to this condition is a sort of sickening sensation half-way above the belt—a feeling that with the hardy usually vents itself in a mocking snile, to be dissipated as reason goes about her task. "Where are we?" "I don't know," was answered by two voices, and, in default of others, all agreed to give their horses their heads and trust to them.

On we went, walking our horses, and never drawing rein. One—two hours must have elapsed, and we had discontinued to aid circulation, keeping by our horses' whithers that they might not be influenced indirectly by us, when—"Presto!" "Hold up!" says one. "Here's that—buck's carcass."

It was now our turn. No more horse guides for us. We were lost to the horses, and the horses were lost to us. The wise one—there is always a wise one in a party of three—acted as guide while neither of the others for a moment dismounted with his direction. Somewhere about midnight, the snow still falling, but very fine and making on the ground very slowly, we came abruptly against the side of a board shanty, but it was too dark to examine it by sight, and the guide dismounted and, running his hands along the cave and counting the openings, pronounced it Bard's pre-emption.

Now we certainly were right. It had taken us as hours to straighten out, but the trouble was all over, and we were less than three miles from home, and knew the points of the compass precisely. Bard's shanty lay east and west from end to end, and I had often at my front door seen the needle in arrow Bard's roof at right angles with the ridge-pole. But how we used up the five hours' time at a brisk walk, I say nothing of a ten minutes' lope at a thoroughbred's pace, and gained not more than three miles? It was a puzzle, and as we jogged along we talked it over and theorized upon the inclination of a stray to travel in a circle. We were now moving due south

—true as pigeons. There was no wind to aid us, but we had no wind to hinder us, and the wind was not blowing to the right or left? The wind was long and the noise was dead. My uncle—the oracle of the party—took out his watch, lifted the crystal side of the case, and after a delicate manipulation of the pointers with his finger-tips and accurately locating the stone, ejaculated: "Four o'clock, by jimey! Four hours and three miles yet. I don't understand it, but the horses all stopped short, like horses that know their stalls, and within five minutes our feet were so tired we couldn't budge an inch. It was darker than night, and we could see nothing more, forsooth, it was extra darkness. The oracle dismounted, walked hump against some object, and we could hear his hands rattling and sliding away from us. And now the sound was lost, but now again it emerged from an opposite direction and my uncle said: "By jimey! It's Bard's pre-emption." The door fell down and we sheltered there till morning.

I had been with a pair of horses and prairie wagon to Friuk's Grove—seven miles away. Prink was the name, and the grove there was none. Two or three thirt-forsaken, lightning-riven, ghostly oaks that, being surrounded by wet pines and dry sloughs, had for a few ages escaped the annual fire, now to mention some lately planted locusts, made up the grove, and the rest was a mass of dead, fallen, and slabs. My load—was just one section away and one mile as the hen flies. In front of me was a slough of perhaps two acres. It was not far from the pan, but not so far across it, and I understood sloughs pretty well. Some of them are bottomless pits, but those almost invariably subside up near their ends, and the water runs out, and I found one such here. To be sure it was past sunrise, and what I saw was a drizzling rain had set in. But I could see across. I could even barely discern my horse, like a shadow in the gray of evening. I drove in. The horses nired, and one that always played me false lay flat down in the mud. Five minutes sufficed to unbind and lead the horse, and the other, after a cross and whiffle-tree to rear, took with a chain the horse for the end of the pole in four feet of mud to steer—as with a rudder—and so ordered, to shout "Git!" But the horses couldn't start it, and the next thing to do was to carry the stones, one by one, to land and arming for a start. This time I lauded high and dry, but it was too late to relate and so I went on empty.

And ceased raining but was getting quite dark, and as the way—all the prairie, I mean—was smooth, I sang out in Sucker parlance an emphatic "Git!" and admonished the beasts with bridled necks. It got dark and grew darker, and I drove on and drove ever, seemingly, but no landmark that I knew manifested itself to my only remaining sense of discernment—the sense of feeling—for all I could hope for was to jolt over some body of water. I stopped to take reckonings, for I was lost to light, and then I saw, and on my larboard bow. There was no breaking that signal—Mrs. R. had set a beacon light in the window. I knew the world, and I drove on, but it seemed as if the d— I carried the lamp, for I never reached it, and now it went out altogether. A little further on and I halted, took out my seven-dollar watch and dexterously fingered out eleven o'clock. But Mrs. R. had set a beacon light in the window, and I was confronted by the grim again—right astern, and I turned half round since I lost the light. I followed on to disappointment, for again my beacon disappeared but soon reappeared, though not just where I should have located it. Again I pursued it. I seemed now to travel miles and at last struck upon broken ground, very rough—in Ashkum, probably. I was to jolt over some body of water. For I guessed was seven miles from home and all the light I had seen was jack-o'-lanterns. I had often watched the *ignis fatuus* upon that prairie. Striking the breaking I was determined. I stepped down and out, slid off one harness and mounted after loosing the other horse. I had as lief follow that one as any other phosphorescent treachery—but not with wheels over plowed ground.

The light still glared—a flicker, lying, hollow promise—luring me to some new evil; to the black swamps of Vermillion—maybe into mire of Latham Creek, most likely—fornow on this side, now on that, sometimes in rear, but never in front, it seemed as if a thousand voices had opened from throats that already scented the effluvia that was to arise a week hence from the decaying carcasses of your correspondent and his horse. But didn't you think much care for the wolves. They and I were old acquaintances. I had more than once scattered a pack of them with mud balls. I jogged on, may be a minute, perhaps not half of it. That light stood for me. It was in my house, and I had unlatched just thirteen rods from my own door, at two o'clock by the Wallman.

I started on horseback with a companion from Savannah, with the mixed design of hunting and tramping, making Jacksonville the objective point. We crossed the

OUR LAST MATCH.

Ogechee at the twelve-mile bridge and ferried the Altamaha. It was now the third day out. We spied turkey tracks in the sand and separated, having previously arranged in case of a complete separation to meet at Jacksonville unless chance should bring us together. There were many turkeys. The pine woods seemed full of them. I did my horse by the roadside for an hour or more heard occasional discharges of fire-arms, distant and more distant, until the crack softened to a tick, and the tick was no more audible. Late that night I took lodgings alone at Trader's Hill, a village of two houses, a store and a blacksmith-shop, on the banks of the St. Mary's. At seven o'clock A. M. I mounted and made for the ferryman—his trail my way to Jacksonville was to "take this trail"—a blind sort of cart road that never a cart went over—and a mile below I was to cross a creek and take a bright blaze, which I might follow to a branch (brook), there to take a new blaze which I might follow a mile or so to an old blaze, that would lead to the King's road, an old Spanish road near the coast, thirty-three miles from Jacksonville. Trader's Hill was forty miles from the Floridian city. I struck the trail, crossed the creek, till the bright blaze, and was soon lost. This country is one vast stretch of pine standing far apart, with branches interlacing, and with underbrush whatever. So wide apart are the tree trunks that one may look for half a mile in any direction, or ride at a swift lope with perfect safety, and the things you might meet with were a sand-hill crane, a ratter, a deer, a black bear or a flock of turkeys, and perchance, but quite unlikely, one of those short-tailed grizzly things with unpromising claws and teeth, the thing usually seen curled up in the fork of a tree glancing at you. At 8 o'clock, the afternoon I struck the edge of a cotton field, and being on the west side of it the cheerful white faces, turned by millions toward me, seemed to invite me down the line which, following, soon brought me to a planter's house. The planter received me respectfully, but not cordially. He knew me for a Yank. He received me dignifiedly, and set his horse and stables at my disposal. I partook and thanked him, having learned long before better than to offer a planter compensation.

The gentleman gradually throwing off his reserve, inquired my destination, and informed me I was eleven miles from Trader's Hill, seven miles from the King's Road, and forty miles from Jacksonville, and having set me on another blaze for the aforesaid road I started and was lost in twenty minutes.

"How do you think you could have done better? I wish your supper hung for once upon following a bright blaze with time short and road long. Inexpert as I was I could have made it out, but I was in a hurry, and that was as good as three pairs against me. That night at 10 o'clock, by a digital calculation on the bulleseye, I was following the edge of an immense swamp, no slough or bog, but a wooded swamp that something that's astray has an abiding horror of.

Both myself and horse felt absolutely certain that we ought to head to the right, and sharply, too. Domestic animals and man mutely, but not less intelligibly, mutually communicate thoughts. We both kept bearing to the right, but no, that interminable swamp kept moving up in front of us every time we veered. Again and again we essayed it, sometimes the horse, unguided, and sometimes myself. I felt sure we were moving in a circle by the swamp forcing us to the left.

At midnight we saw a torch-light, and going for it brought up to a cracker's log-house and halted for the night. The cracker said I was seven miles from Trader's Hill, seven miles from the King's Road and forty miles from Jacksonville. The edge of the swamp we had followed lay due east and west, and our wish to turn to the right was the natural tendency to move in a circle. T. C. RICE.

I think it was the year 1864, in the month of March, I went in to Mollchukunuk Lake to prepare my camps at Angler's Retreat for the spring fishing parties. The camps are situated at the foot of the lake, near the outlet, and are sixteen miles from the Upton settlements and twenty miles from Andover, in an unbroken forest and on the lake north of Umbagog, being a difficult place to reach in the winter season.

I used to store all the provisions I had left from the summer supplies, as also the bedding and crockery, &c., in a room in the centre camp, and lock the doors and nail up everything in the strongest possible manner, not only to keep them from wild beasts, but also from any vagrant biped who might stray so far away from human society. It was not only expensive, but difficult to freight in supplies over Umbagog Lake up a rapids, and I had the greatest carry for four or five miles on my sled in the summer time, and I was the more careful to take care of every pound weight possible.

On approaching the camps I found they were open and everything in disorder—the wood burned up and the provision room broken into, and considerable of it gone. The bedding was all disarranged and overhauled, showing plainly that some one had camped there quite a while.

Recently I discovered a piece of paper tucked up on a post in the centre camp, and in a fair handwriting the following words:

"CAMP RICE, AT HEAD OF RICHARDSON'S LAKE, NOV. 6.
To who may read this, sir or lady:
Should I not be able to get away from here but kind enough to notify my friends or at least my father, the Hon. Peter Edsall, No. 10 Morton street, New York city—that is, should you find me dead. By examining papers in my pockets you will find out how I came here and my business. Yours truly,
WM. H. EDSALL.

After reading the above I immediately made a thorough search for the body, both indoors and out, fearing the poor fellow had perished in this lonely, faraway place. But I did not then, and neither have I since, in all these seventeen years, been able to learn the least tidings of any such a person. J. G. RICE.

Bethel, Maine, Feb. 28, 1881.

MINNESOTA DEER BUTCHERY.—The Long Prairie, Minn., Argus, says that, "In Ward and beyond, parties are butchering deer in a disgraceful manner. Some of the deer are so poor that they can scarcely stand, and yet these bones are relentlessly pursued on snow shoes and slates." Commenting on this abomination, one of our correspondents writes: "The inclosed slip I ask you to insert in your influential journal for the sake of humanity and civilization, as I feel certain that you are a civilized man or woman can regard the abominable butchers with any other than the most shocked and execration. The snow here is yet a foot deep on the level, while many huge drifts are from five to eight feet high."—M. J. E.

HAVING read many hunting and fishing adventures in THE FOREST AND STREAM, I contribute one of my own written for the benefit of myself, as well as for the hunting expedition in Colorado last October. We left our wagon in Estes Park and packed our outfit on a couple of mules and a pony up to the head of Black canyon and camped at the foot of the big lake at the head of Fall River, a well-known stream which runs through the park. Our camp was made nearly at timber line, and above were bald, bare peaks and huge snow banks which must have been there as long as the mountains were. The mountains in that section are very rugged and cut up by deep canyons, so that one has to keep a sharp lookout when going any distance to avoid difficulty in retracing to his camp. A man may be familiar with one side of a large peak and think he would know it if he were miles away, but let him change his location a few miles and it will look strange and entirely different. It is the same way with snow landmarks. One may pass down a small valley and see half a dozen large snow banks on either side, and then a day or two later enter the valley from a different direction and proceed up and nothing will look familiar. There several canons will head close together and lead in different directions so that you can hunt up one to its head, turn around a few times and start back down another and think you are in the same one you went up when in reality you are going in another direction. This will show how easy it is to get lost, especially in the night.

On the third day after arriving we all started together in a northerly direction to look for bears. And let me say right here that we do not hunt range grizzlies with shot-guns and squirrel shot, and when one is not on a bare mountain and a gun goes off the hunter always gets the bear, or the bear gets the hunter. So we always kept together, for three men with two leaders and many traps can keep a streak of lead in the air hard for any animal to follow. We got off about 9 A. M. in a northerly direction and at the sun was shining brightly and the day promised to be warm I left my coat in camp against the advice of the boys, who said it might get cold before our return. We tramped around until about 3 P. M. killing nothing but some snow quail, which at that season were spotted—about half white and half brown. Later in the day we started down toward the town, and I took down upon our camp from the town, and we were, but the sides was so steep and rugged that it was impossible to get down without going to the upper end of the valley, the way we went out, or else going down and cutting at the lower end. We decided on the latter route and started that way. After going a short distance we came to a deep canyon and had to make a long detour, and before we got up and a heavy fog came in, dense that it hid the mountains for over twenty feet. As this caused the sun's rays to disappear, it began to get cold and before we realized our danger night came on, and we were out in the cold on a dark night, tired and hungry. I was sure I knew the direction of the camp, but my companions were equally certain it was in an entirely different direction. So we went wandering on.

It getting very cold, the wind which came up after dark blowing over the snow, we were very busy. Then Tommy, the biggest and stoutest one of the party, got out and we had to carry his gun. It was so cold we could not stop and not a particle of wood of any kind. Finally we came to a sort of valley and concluded to follow it down and find wood and camp. At last we came to a patch of scrub-oak about two feet high, and prepared to make a fire. A search of the scrub-oak revealed six matches. Some twigs were gathered, a small stick of wood cut off, and no fire. Four times more was the same thing repeated with like result. We knew the other world go the same way, and so decided to keep it until our return to camp the next day, so as to be able to make a fire there. Then the fact began to strike us forcibly that we were in for a night on the mountain, too tired to travel, and too cold to be still. Once we all crawled up to a thick bunch of bushes, myself in the middle, and tried to snuggle up close and keep warm. But it was no go, the ground was hard and stony, and any object I would the top side would soon get so cold that I would have to change my position.

Finally this became unendurable and we crawled out and went on a little farther. Then we stopped at another bunch of brush and sat down out of the wind and shivered. I took the matches out of my pocket, and after considering the chances, said, "Boy, I don't want to do it to any good to-morrow, for we will all freeze to death before morning." Tommy produced quite a large piece of flour sack which he had in one of his pockets and proposed trying to start a fire with that. Lucky thought! The match was struck, the cloth blazed up and we laid it on the ground and put a few twigs on it, but the blaze went out and with it our hopes, almost. But as the cloth smoked and smoldered we commenced to blow and fan it, and the way we did work! One would blow until he could find no more breath, then another would try it, and then we would blow all together, until at last the twigs began to get red, they blazed, faint at first, but by careful nursing a fire was started. This we moved to a bunch of brush and soon had a fire blazing five or six feet high. The night kept getting colder, until toward morning we could hardly keep our feet on the fire, except by changing our positions so that first one side of the fire would be warmed and then the other. When the sun came out in the morning, was about played, but the others felt better. Tommy went up on a high peak to take a look and came back and said he did not know where we were, as everything looked strange. So we decided to follow our back trail, knowing we could reach camp that day. This we did, arriving about 2:30 P. M. Everything was all right, and the fire we had left burning the day before had been lit to a bunch of brush and was smoldering when we got there. We soon had a fire going, coffee put on and also the camp kettle, which contained some grouse and potatoes and plenty of broth. We broke our thirty hours' fast with soup and coffee, and wound up with bread and meat. The next day a big bill elk came pretty early into camp. Before he knew it and we all commenced shooting at once. He got off quite a distance, but was finally sent down after being hit in the neck. The day following we butchered a 300 pound grizzly in pretty much the same way. All commenced shooting at once. He fell at the first fire, then got up and made the mountain echo for a minute and tried to get to us, but it was no use. We shot as long as he kicked, and gave him one or two after he quit to make sure of his not playing possum.

I have been out in poor cold weather, but that our night above timber line, but a little better. I ever have. This is little doubt but for our "last match" that we would sit up there yet, frozen solid, perhaps serving as curiosities in a side-

show conducted by some enterprising old grizzly hunter. We afterwards found that the place where we spent the night was within a mile of our camp, with only a low divide between.

ANOTHER TOUR IN THE PROVINCES.

IF any one of your million readers has ever chanced to see a book published a long time ago, entitled "Stewart's History of Prince Edward's Island," and thinks he will treat to a sporting tour on that excellent and really—for its time—most reliable work, he will find himself (triflingly mistaken). Stewart, as is the effect that the Province of Prince Edward's Island in the "Gulph" of St. Lawrence abounds in game, large and small; and as to fish, you or any other man have only to drop a line in the shape of a crooked pin on the end of a string to catch any number of fish such as sea-cows, seals, smoggon and huss, with salmon (Richardson's and the other kinds), sea trout, river trout of colossal proportions, and every other phase of the *Salmonidae*. In fact, Stewart, and later people who have erred from his book, say that Prince Edward's Island offers a paradise to the sportsman and angler.

It don't! To the pilgrimages that it is my lot to make frequent throughout the length and breadth of the island now mis-called by the name of the otherwise forgotten Prince Edward—(please to understand that I am not a book agent and I repute chrome with scorn), I have been really sorry to see several American gentlemen who looked like sportsmen, excepting that their fit-out seem'd too awfully expensive, trying in vain to find where the paradise of gaming and fishing was in this Province of ours. That is the main reason I now write you.

Game laws here none to speak of now in Prince Edward's Island. Antlers of deer have been blown up, showing that good sport was once upon a time. Flint arrowheads, both of war and the chase, have been given to me from several localities, indicating a stone era long ago down into the abyss of ages. An archaeologist might take some interest in a locality that I could show him where the flint arrowheads that have been dug up within the range of an arrow's flight show a perceptible difference of construction. The defendants were evidently the occupants of the soil, the new efforts, but then not unpowerful nomadic sept of the Mic Maes; the plaintiffs were the Mohawks—those Indian Normans who beached their long galleys on the banks of Miminigish Creek here on our *Prospero's* isle. And, strange to say, in the inner consciousness of the remnant of the Mic Maes tribe now living on Ninous Island, here lives an unwholesome dread of the bogey "the Mohawk!" Once your present correspondent was privileged to hear a Mic Maes mother say to a pappose stammered Indian fashion to a shingle, "Uthi, uctahy, m'ijyayy, Abogee, Mowahk-ee-hoo!" or words to that effect, which being freely rendered may read: "You little brute, if you don't shut up I'll give you to the Mohawks to eat!" The remark was followed by a sort of rhythmic cadence that sounded not unlike the white-gloved applause at a successful opera. But I must confess that my unwritten legends of the Hiawatha type are mostly derived from an Indian of my acquaintance in the happy hunting grounds, where the security of game, I rather confess I have half a wish to be with him—and whom once upon a time in camp I reverently christened one of *A Jackwood's M'itigine* by the Christian and surname of Tony Butler.

To resume: The Province of Prince Edward Island is a long, narrow, stonless bank of earth, one hundred and thirty miles, more or less, in length, by a width of eight to thirty-five miles, and completely without rivers, estuaries, in which, at the right season, is always to be had some good fishing. "The Island," as we islanders love to call it, has been unecessarily called "the garden of the Gulf." No greater height on any part than thirty to eighty feet prevents the whole thing from being washed away. The soil is the loam of fruit-bearing Devonshire, England, and from what is told to the undersigned not unlike the earthy part of that New Jersey, where early frosts all ways kill, by telegraph, and the orchard peach crop.

In such a strip of land, barely showing above the surrounding sea its crown of green fields, dotted here and there with the *conifere*, that are now almost the only suggestion to remind that before Cabot came drifting along this was an isle

That on its summer shade of trees
Lay all atoot,
it cannot be expected that there should be any rivers. There are none. The temperature of the running waters over shallow depths is too tropical for salmon. Trout, however, are to be had in holes.

It is now two years and perhaps more since the present Canadian Minister of Fisheries came into office and at once took decisive steps to redress from utter fish-exhaustion all the waters of that smallest of the maritime provinces that made the largest show in ephering up that most reluctant \$5,300,000—meaning, of course, Prince Edward Island.

The fishery officers now state that the number of trout in our small but innumerable angling streams is certainly doubled during the past year, and is very enthusiastic. I know whereof I speak in saying that there is reasonably good sport for a reasonable number of legitimate trout rods. The only thing further to be remarked is that it would not be best to land upon the Island shore from the Gulf steamer and go wandering around with one's rod on one's shoulder, looking at all the horse ponds, without having previously arranged one's route. Perhaps your present correspondent might suggest that if any really enthusiastic angler would like to try the little purring trout-brooks of Prince Edward Island (trout only) at a total expense for rough accommodation—*ex-transport*—of scarcely over \$2 per diem, including small boys as missionary guides, he had better consult beforehand with the fishery officer for the Province whose name recently appeared with the other fishery officers of the continent in FOREST AND STREAM. As probably that designation of the *Provy* referred to does not live in the minds of his contemporaries, his address is: Col. Duvar, Alberton, P. O., Inspector of Fisheries for the Province of Prince Edward Island, Canada. D.

DEATH OF MR. COBB.—Warronton, Va., April 6.—Please notice death of the elder Cobb, discoverer and proprietor of Cobb's Island, Va., who died March 26, 1881, aged 81 years. Many sportsmen of the United States will remember him as a splendid hunter, a man wise in sporting lore, and withal a good raconteur. He was buried on the Island that he found, and in the blists that sweep over his grave, which come from the ocean, mingled with the tears of the gall and soul that he will sleep sweetly. An honest, true-hearted man.—CHASSAUB

obtain specimens for preservation, they seemed to learn nothing from experience, but would allow me to approach as closely as ever.

After the snow began to deep that I was compelled to wear snow shoes to get to them. The "crunching" of the crust under the shoes was a source of great uneasiness to them and I was unable to approach as closely as before. They would feed as unconcernedly as ever until an unusually loud "crunch" would cause the whole flock to take wing, the flight being led by no one in particular. Indeed, during my observation of this species I have never noticed any trace of that tendency to follow a recognized leader, which is so prominent a trait with many birds. They show no sympathy for a dead or wounded comrade, often feeding within a few inches of such without manifesting any concern whatever. There was in constant attendance upon this flock, the first three times that I visited it, a small hawk, of which they manifested a wholesome dread, but I gave him a charge of number eight upon a favorable occasion, after which I saw no more of him.

The grosbeaks are quite indifferent crows, showing no more agility on the small firs than a crow. I have seen them on the ground feeding on the seeds which had fallen from the bushes above.

Some writers have accused this bird of eating the buds of fruit trees, and one at least has said that buds form their principal food. I have dissected many of these birds and have yet to find the first sign of a bud of any kind. I have watched them closely while feeding on apple trees and have never seen them eat anything while there but the apples left on the trees the fall before, and have even seen them descend to the ground for these. I have never seen anything in the habits of this beautiful and interesting bird which should lead us to regard it as other than a very welcome winter visitor.

CHAS. E. INGALLS.
East Templeton, Mass., April 4.

THE RATTLESLAKE AS A TREE-CLIMBER.

FOUR WALLA WALLA, W. T., March 23.

Editor Forest and Stream:

As I have not had anything to say to you for some time, and as we are here looking for them, I will place to you what I know about rattlesnakes climbing trees. To put the matter concisely, let us say about the rattlesnake commonly found in the West—the *Crotalus tigris*—of Baird & Girard. This species at any rate does climb, now and then; if not on large trees, at any rate on sage bushes and small willows. I don't mean to say either that it is a constant habit of the species—I do not believe it is, but rattlers are found now and then in such situations. There is one instance at least, and I have a witness for it in First Lieutenant Chas. E. S. Wood, Twenty-first Infantry, now stationed at the Military Academy at West Point, New York, who undoubtedly remembers the occasion, as I showed him the snake in position on a small willow tree, probably about five feet from the ground, before shooting it. I told him at the time that I might want him to verify the occurrence, and here is your chance if you have any doubts about the facts. Lieutenant Wood and myself were returning from a hunt after musky grouse in the vicinity of Camp Haney, Oregon, some time in the latter part of August, 1875. I think, following down a small mountain stream called Rattlesnake Creek, along the banks of which a number of willows and cottonwoods grew. The willow on which the snake was found was somewhat leaning toward the creek and was probably three or four inches thick. The snake had worked its way up into a fork about five feet from the ground, and was curled up there and rattled as I passed it. It attracted my attention, and before disturbing it I showed it to the lieutenant.

What the particular inducement was to cause the snake to climb in this instance I can't tell, as there were no birds' nests or any thing of that sort on the willow in question or in the vicinity, as I examined the surroundings closely after shooting the snake. The snake was not over three feet in length, and had only five rattles.

On another occasion I saw a rattlesnake in a sage bush near Owens Lake, Sage County, Cal., but the bush was not over two and a half feet high. There are exceptions to every rule, and here you can have at least one well-authenticated instance where a rattlesnake climbed, if not a tree, at least a good sized willow.

CHAS. BENDIRE.

EVENING GROSBREAK IN WISCONSIN—FON DU LAC, Wis., March 23.—I send you as close a description of a bird recently shot here as I am capable of giving, and regret that I am unable to send you a skin, but have already mounted nine: Male bird; length, eight and one-half inches; bill, grescous yellow, very large and heavy. Top of head black, front of head bright yellow extending in a narrow line over eyes. Neck, dark olive brown extending down until blended with the bright yellow of the belly and back. Rump, pure yellow wings, four and one-half inches long, exterior covers black, those near the body pure white; tail and upper tail covers deep black.

Should I succeed in securing any more specimens I shall take great pleasure in forwarding skins to you. I am an enthusiastic sportsman, and very fond of observing habits, etc., of birds and animals. I shall in a few days send you a detailed description of a strange bird, no record of any large ones having been killed in Nova Scotia. The horns are well proportioned and nearly equal, one side having nineteen points the other seventeen. The pan or palmated part extends well on both sides and over the front. The head was killed last season in this country. The following are the dimensions of the horns spread from tip to tip: Five feet six inches (or sixty-six inches); from point of brow anterior to top of horn, three feet, four inches; from tip of beak to pan from twenty to thirty-five inches.—THOMAS L. BEAVER.

The antlers form a pair of the most superb specimens ever coming to our notice. We should be pleased to hear of other records.

A SNAKE-CATCHING KING FISHER.—The interesting account which we print below of the capture of a snake by the "laughing jackass," a large Australian king fisher, is taken from the New South Wales *Albany Banner*. It is as follows:

It has long been a matter of popular belief that the great king fisher was an enemy of the snake, perpetually warring upon the tribe in general, and never happier than when dining on serpent *au naturel*. It is not often, however, that even persons habitually residing in the bush have so good an opportunity as that afforded a few days since to Mr. Christian Westendorff, of Jindera, for observing the laughing jackass when in the act of hugging the gane referred to. Mr. Westendorff was engaged with another man in clearing some land, and in the course of the day's operations it became necessary to shift a large log. For this purpose levers were applied to each end, and after some straining the log was rolled from its resting-place. The very moment it commenced to move, a laughing jackass, which had hitherto been taking a deep but unobtrusive interest in the proceedings, made a swoop down from the limb of an adjacent tree and seized a large snake which had been lying under the log. The snake was gripped by the back of the neck (if snakes can be said to have necks) and borne away to the bird's previous perch, where the unfortunate reptile was hanged against the bough until the body separated from the head and fell to the ground. The jackass then dropped the head, and seizing the body sallied away in triumph with his prize. Whether the bird had seen the snake go under the log and was watching for it to come forth again, or whether it knew by instinct that the reptile was there, is a question which may be left for nature to determine. But we are credibly informed that as soon as the log was shifted, and before Mr. Westendorff or his companion had any idea of a snake being in their neighborhood, the jackass was down and had made good his seizure.

A CAT'S LONG JOURNEY—BANCOR, Me.—I am well aware that cats are not game, and are reckoned as "neither flesh nor fish, nor rod red herring," and so have no legitimate standing in *FOREST AND STREAM*, yet the recording of a pedestrian feat recently performed by one in this vicinity may interest you to admit her into your columns as a poacher on your manor.

A gentleman in this city had presented to him a Maltese cat with four young nursing kittens by a former friend living fourteen miles out in the country. This cat and her kittens were placed in a close covered basket instead of which was a blanket in which they were wrapped, and the whole then covered with a thick rug. The basket and its contents were then brought to the city by the distance stated. The cat and her kittens were kept in a room in their new home, and carefully watched, fed and petted for seven days she appearing to be wanted and content. On the morning of the seventh day she and her kittens were seen at their new home for the last time and were missed very soon after. The following day at noon she appeared at her old home with all her kittens. She did not return by the road, the way she came as she was seen by several persons going through the fields with a kitten in her mouth. Allowing thirty hours to have elapsed between the time she was last seen at her new home and the time she was first seen at her old home she must have traveled a distance of 112 miles, carrying a kitten one-half the same distance.

"TALKING A SKUNK"—ROCKLAND, Me.—A young man earned a quarter and made himself a hero by removing a skunk from an entry at the head of the stairs in a building on Main street. The skunk was master of the situation, preventing ingress or egress to the offices and tenements on that floor. Our hero coming upon the scene, approached the passive end of the skunk, and moving his hand in front of the skunk's nose to take his attention, he reached over him, seized him by the tail, carried him eight or a mile and threw him into the dock where the boat finished him with stones. When I came upon the scene he had just returned and was inviting the public to smell of him. I with a few hundred other citizens accepted of his kind invitation, and I can testify under oath that he was as sweet as a nut.—TURNER.

[Take a bull by the horns and a skunk by the tail.]

Game Bag and Gun.

CATCHING RABBITS IN SIBERIA.

BY XIL YORRIS.

ROMANOFF is a Russian and a Nihilist. Banished to Siberia he was fortunate enough to escape after a time and became a diamond hunter in the south of Africa. He failed, however, to discover Kohn's noors or great moguls, and went to the gold mines of Australia and from thence to the Black Hills. He drifted over the land wherever he could hear of gold or gems. A perfect cosmopolitan, thoroughly educated and informed, a Hercules in strength and able to curse the Autocrat of all the Russias in half the languages in Europe, he was gentle as a child, and his voice was musical as running waters. I believe he would have made his fortune as a singer. He was, of course, a fanatic, and capable of no doubt, if he thought it for the good of his cause, of committing any deed of blood. I met him for the first time in the San Juan mountains in 1880. We became friends, and after a time partners, and spent the summer prospecting near Ouray.

Very one day from climbing over boulders 8,000 ft. above the sea, we spread down our blankets in the hollow of a rock for a mid-day rest.

"Do you know, Mr. Yorris, how they catch rabbits in Siberia?" asked Romanoff.

I was watching a mountain sheep standing on the summit of a crag a long way off, but boldly outlined against the sky, and answered, carelessly, "As elsewhere, I suppose."

"There you are wrong," said the Russian. "Let us light our pipes and I will tell you.

"Rabbits are very numerous in the wilds of Siberia, and you know, the winters are long and terribly cold. We select a locality where we know they are abundant and, at night when the frost giants are abroad on the Steppes. Along the frozen streams and sheltered valleys we place a number of lighted lamps. The rabbits, poor things, freezing out in the darkness see the welcome lights, and soon approach near enough to feel the genial warmth. They collect around the

lamps in immense numbers, and tears come into their innocent, beautiful eyes, and fall down as frozen pearls on the snow. Higher and higher grow the crystal columns, and soon poor puss becomes a prisoner; bound by his own tears to the ice fastenured there. I caught in this way in a single night 92,003 rabbits."

I glanced fiercely at Romanoff; there was a merry twinkle in his eyes, but not the shadow of a smile. "Now, by the iron rule of Peter the Great, and the beard of Ivan the Terrible!" I exclaimed in simulated passion reaching for my Winchester, "Pill!"

"No you won't," said the Russian, curtly, as he coolly placed in his dark eyes that I had never seen before, "No man ever gets the drop on me."

A WOODCHUCK GUN.

AN inquiry for a woodchuck gun in your issue of March 1924 leads me to write of a woodchuck gun or rather rifle. Last spring I had some tree planting to do in a large cemetery in my neighborhood, Billy, but beautiful place. The President of the Cemetery Association told me that woodchucks were greatly injuring the beauty of their place by their numerous burrows, and asked me if I knew of any plan to rid the grounds of them. I told him that I could dispose of a good many of them by shooting them. He said that this would not do, as they did not allow guns in the inclosure, as their report would frighten visitors (it was quite a public resort), especially the ladies. I at once showed him that my rifle, a 30 inch, 22 calibre Ballard, made but very little report with a 22 short cartridge. He thought it might do to hunt grasshoppers with if I could hit them, but that an old woodchuck would laugh at such a gun. I showed him that it would shoot through three inches of pine, and then he told me to go ahead.

Well, I am not a very great "slouch" with the rifle, but I cannot shoot a grey squirrel's hind end every time one hundred paces as I heard once a fellow say that his brother could do, but I shoot as well as any of the boys I have struck yet at short range. I went a woodchuck hunting in the cemetery. I first looked over the ground, and found numerous holes or borrows, only a small portion of which were occupied at the time, and made careful observations so as to distinguish the used from the unused holes, and soon learned to get a good idea of the depth of the burrow, carefully watching, and soon as Mr. Woodchuck protruded his cranium from his burrow I flipped one of the little leaden pills into it, or missed it as the case might be. Yes; I missed sometimes, for a woodchuck's head is a pretty small mark for me to 100 yards away against a bank of clay of almost exactly the same color. And right here is where the joke comes in: the rifle made so little noise and so unlike the ordinary gun that the woodchuck would pay no attention to it, but they would run into their holes from the stroke of the ball near them and would generally come right out again to see what the rumpus was and give me a fairer shot.

The result of my rifle practice was, that I killed fourteen "chucks" by this still hunting about three hours in each of two days, and four more, making nineteen during the week, while going to lunch at noon. I found the best time to get sets in the spring, as they often were swelling, was between ten and three o'clock of bright warm days. When shot directly through the brain they bounded right out of their burrows, but if hit in the body they could work themselves back into their burrows and die, and this appears to be the most desirable way to get rid of them, for I have a theory that the woodchuck, being found dead in his hole in this way by his neighbors, strikes the survivors with mortal terror and they emigrate. At least the survivors all left this cemetery, for I am sure I did not kill the half or the third of them, and I could see no signs of any there a month after.

While "working" these woodchucks I made one of those wonderful shots we so often read about. Looking across a ravine one day I saw a very large woodchuck coming over the brow of the opposite bluff, full 200 yards away, run a little way down the bank, stop and sit down on his tail, hold up his full length, as they often do, and dig down and dig down on his back about three feet above his head, and let go. I heard the little bullet whack on his "noggin" plainly, and the "chuck" went tumbling heels over head to the foot of the bluff, fully 150 feet, and then gathered himself up and, running like a wild turkey directly up the bluff to within a few feet of where he was when I shot, bounced into his burrow. They can stand nearly as much killing as a cat. I shot one of the "boster" kind, and he died, and the ball coming out to be half an inch behind the left eye, the ball coming out to be half an inch behind the right eye; he bounded out of his burrow, admired around awhile and quietly died. I picked him up, admired the beautiful shot I had made, threw him down, and went on with my lunch. Pretty soon he gave a sneeze, jumped up and started off quite comfortably. I then gave him a rapping shot in the left flank, and out at the point of the right shoulder as he was quartering from me. He lay down and died again. In about five minutes he began making rather too much of a racket—I was watching for another across a ravine—and I shot him again right down through the centre of his head, the ball coming out at his throat. In about ten minutes I got the fellow across the ravine. He was a bad one; he would just raise his head from the burrow far enough to see me with the corner of his eye, and could not see his head as he was lying down, but I would give him a movement every time I could stir; so I drew a bead and held it until I thought his head was there and pulled, and out he bounced. I then picked up the old fellow I had killed so often, put him in my basket to show how big he was, and twenty minutes at least after I had killed him last found him breathing as regularly as a healthy babe.

And now a few concluding words about the modern .22 calibre rifle. I have used and carried them of different makes, actions and lengths, almost continuously for the past five years, and have found them not to shoot first rate and to be big enough for any game we find in our older settled States; grand for ruffed grouse, squirrels, rabbits, hawks, cats, etc. I have killed a great many ducks with them, and killed them out of large masses 300 to 400 yards away. I have found their trajectory for the first 200 yards to be about the same as that of a .38 cal. rifle with the ".35 long" rim fire cartridge. I have used all lengths of barrel from 12 inches up to 30 inches, but found I could not hold a short gun. I therefore got a 30 inch Ballard, weighing 9 lbs., same as my shotgun. This is the gun for enjoyment and pleasure. It makes but little report when fired, not near so much as the old-fashioned percussion cap. It cost but little to shoot it—twenty-five cents per 100 shots; is no trouble to load. One can car-

THE SILVER LAKE STANDS AGAIN.

ONE of the prettiest little sheets of water to be found in this section is Silver Lake, or, as it was originally called, Jones Pond. It is situated in Plymout Co., Mass., and has been the scene of several roving matches. The pine grove has been cleared up on the west side of the pond by the Old Colony Railroad Company, whose road runs in close proximity to the lake and, with its pines and boating, has proved a popular resort. Its waters are extremely deep, in some places measuring over sixty feet, and is probably fed by springs, as the flow of water from the lake is more than can possibly run into it. Its length is about three miles, which, with its width from four to six miles, makes a mile. Owing to its size and depth it never freezes until late and forms a r-sting and watering place for geese, ducks and other small water fowl. At various places, generally points, individuals have erected small houses or shanties, which in the fall are dressed over and maked with pine boughs.

It requires some capital to run one of these stands. In the first place a set of wooden decoys for geese and one for ducks are procured, those for geese being three times as large as a common goose. They are anchored in the center of the pond and are for the purpose of attracting the notice of any passing flock.

It takes from one to two hundred of these to make any kind of a show, and then the stand has to be supplied with live geese decoys, of which it takes from ten to fifteen to do any business. These last, if well trained, command good prices. Then about the stand there must be twenty or thirty live decoy ducks and one or two hounds. But let us see them light a flock and get them within gunshot.

It is a bright day in autumn, and as we sit listening to the musical honk of the old gander fastened on the beach, the look-out announces a flock in sight. Quickly, but silently, everything is put in readiness for their reception. The bush-covered slanters on the house are drawn up, while upon a little knoll a man sits concealed, ready to throw the fly geese, which are caught on the spot, circle-around and finally alight in the water. If not trusted decoys, young ones are used, as they will return. As fast as these are thrown the geese decoys on the beach and in the pens set up a loud honking and, if managed rightly, seldom fail to induce the flock to alight. The wild geese generally alight some distance from shore and when the birds are wild it takes an old hand to draw them near enough to shoot. To do this the geese decoys are pushed out on the beach in front of the stand, while an occasional fly decoy is thrown in one or two hours. The honking is made that all the display of decoys, together with honking, is made that can be invented.

Where there is only one stand this works all right, but when two or more stands are all trying to draw one flock the strongest team and most skillful handler takes the cake. The geese near enough, each man takes his place and fires at the word given by the one in command—first a volley; afterward you can get it in on the wing or shooting over the cripples; for, be it known, a crippled goose in the water is a hard bird to capture.

It seems sportsmanlike to murder these unsuspecting creatures while swimming boldly in your very face and eyes, but as it is the only way they can be captured here, and as there are plenty who like it, I don't know why it is not all right. As for me, the excitement of sitting around a stand day in and day out and not getting a shot is rather tedious; and when the flock is all over in ten or fifteen minutes, and it won't do to leave the stand, for if you do a chance may be missed. I tell it, upon the whole, poor sport.

We were much entertained by a discussion in FOREST AND STREAM a while ago, referring to the "Silver Lake Horror," in which the writer was fearful the geese would all be slaughtered. They need not be alarmed, for I have lived about here all my life, and all the geese killed at Silver Lake, and other parts in its vicinity, will not seriously diminish the family of honkers.

AN OTTER TRAPPED.

THE extreme wariness so characteristic of this animal is too well known to the practical trapper to admit of a positive mention, but suffice it to say they are very suspicious of the appearance of man, and will not frequent a place where he has left his scent. It is also a well-established fact that they will not partake of any bait the trapper may prepare for them, but, like the generality of the animal kingdom, have a curiosity that leads them sometimes into a very unfortunate situation.

A few mornings since as I was going the "grand rounds" on Bailey Lake, my trapping ground, I was agreeably surprised to meet an otter in the open water. He was swimming as carelessly paddling down the outlet of the lake, visiting the traps along the shore. Floating down near a huge cypress tree, behind which a trap was set, I heard a rattling of the chain and splashing of water that convinced me that a fur-beaver—a coon, I thought—was a victim to my devices. Landing just above the tree I stepped ashore, and to my wonder and astonishment, what should I see wriggling and fretting at the end of a milk trap chain—nothing more than a fine otter. It took but a moment to take in the situation. Seeing that the hold was more insecure than I liked, and under the extra excitement I was fearful he would disengage himself from his tenacious companion, so my rifle was soon brought to bear upon him. A crack, and there lay a prized treasure struggling his life out, with three toes of the right foot within the fervent clasp of a No. 1 Newhouse trap. After he was thoroughly dispatched and placed in the boat with the remains of the lucky creature, I returned to the trap. The torn leaves near the scene showed that the whole bird had been there, and had emerged from the water at the foot of the great cypress. The trap was at the base of the tree at the entrance of a V shaped pen, baited with a white bird's wing, and slightly submerged preparatory to taking a coon or mink. The otter having indulged sufficiently in the leaf-scratching pastime, probably took a retrospective view, resting in the discovery of the white trap, but that so proved to be an extraordinary skin, showing prime in quality and No. 1 in size, and can be easily classed with the usual more northern catch, so had been the winter.

West Point, Ark., Feb 7.

R. D. CHILDRESS.

NOTES FROM DETROIT.

IN the actual active game-killing world hereabout there is nothing to record beyond the fact that ducks are catching it. The ice in the lakes and bays has surrendered, and I find on making my accustomed rounds that the Hon. Andrew Jackson, of Sault Ste. Marie, and K. S. Fay, of Boston, led by some well-known sportsmen of Detroit, among them the irrepressible, ubiquitous, enthusiastic and enormous-appealed Ed. Gillman, are gone down to Point Mouillee for a few days' fun. Nothing has been heard from them as yet, but I am going down myself to see what will be able in the next to give all the readers of FOREST AND STREAM a photographic, or at least a graphic, account of the party's adventures. It is the first rally of the season and we are all anxiously watching and waiting for results.

The Lake St. Clair Fishing and Shooting Club, a history of which you published a few weeks ago, held its annual meeting a day or two ago and elected Wm. C. Colburn, President; E. C. Norton and B. F. Farrington, Vice-Presidents; Fred W. Hayes, Sec., and Wm. A. McGraw, Treasurer. It was also decided at that meeting to enlarge and otherwise improve the club buildings for use during the approaching season, the idea being to make them the most attractive places of the kind in the United States. The club's finances are in excellent shape and there is no reason why its property should not be made and kept in A 1 condition.

The North Channel Shooting Club also has buildings on the St. Clair Flats. It has just elected a new set of officers as follows: President, R. D. Robinson; Vice-President, J. P. Knight; Sec., Dr. J. Lathrop; Treas., W. A. Butler, Jr. Directors—Congressman Henry W. Lord, J. P. Donaldson, Geo. M. Savage, Julius Hess and Geo. H. Lathrop. There is some quirk about this club's title to the land on which its buildings stand. It seems that the Dickinsons, who occupied it for many years, never got from the Government a patent for it, although their right to such a patent is now conceded. The present representative of the family has informed the club that they will aid him to procure the patent for the land he will let them have the use of it for club purposes at a merely nominal price. They have commissioned Congressman Lord to bull-doze the Interior Department to that end.

GHEAR.

"FLIGHT OF RIFLE BALLS."

GANNETT, April 4, 1881.

I F we take the *ipse dixit* of "C" and "D. W. Cross" as a conclusive evidence upon this topic, why the whole matter is decided.

But is it decided? I think the fun is scarcely begun. The only argument employed by these gentlemen which leaves upon the issue "—An ounce ball or any ball fired from a rifle placed say ten feet above and exactly parallel to a horizontal plane, and the same size and weight of ball dropped from the same height at the same instant as the ball fired, will strike the ground at the same time, or if he blow a ball through the gun ten to fifty feet and drop another at the same time, both will strike the ground together. Taking this for an undoubted fact, when they will both begin to move toward the center of gravity, one on a level line" and strike the ground at the same time the dropped ball does."

Now I fail to see how Mr. Cross reaches the conclusion expressed in the concluding sentence of the above quotation. That bullets, one fired from a rifle and the other dropped from the hand, under the conditions named, will strike the ground at the same time is "an undoubted fact."

It is plain that in such case both bullets start toward the center of gravity from a state of rest, and that so long as they need not so resistance other than the atmosphere, will continue to approach it at the same rate of speed.

It is also perfectly plain that as both start from a state of rest, if there is aeretic resistance to the one, there is an equal amount of inertia to overcome in the other. Admitting that there is inertia to be overcome by gravity before the bullets will commence to move toward the centre of gravity, it is perfectly plain that the bullet from the gun will move forward in a straight line until such inertia is overcome, when they will both begin to move toward the centre of gravity, one in a vertical line, the other in an eccentric curve. We now come to the "pit."

Does neither oppose inertia to the force of gravity at the instant of leaving the muzzle of the rifle and the hand of the shooter?

Some may say that this is "splitting" very fine "hair." When it is remembered that the bullet may have an initial velocity of 3,000 feet per second, of course he means at right angles to the direction in which gravity acts, it is no trifling question to say that the centre of gravity, when they will both begin to move toward the centre of gravity, one in a vertical line, the other in an eccentric curve. We now come to the "pit."

I have been at considerable pains to derive the question for myself, and must not be regarded as having any ulterior motive toward that the bullet is "driven on a level line" for a short distance beyond the muzzle of the rifle.

What has become of Major Merrill? I for one would like to hear more of him in connection with the subject. It is now expounded with the view of favoring the readers of the FOREST AND STREAM with another carefully prepared article on the subject we can afford to wait.

Mr. T. S. Van Dyke is evidently the possessor of a remarkably "level head" upon the science of gunnery. The issue upon which he now invites discussion is one which has never been clearly settled, either in theory or practice, that I am aware of. Let the "fun" go on.

JOS. W. SHUTTER.

AN OTTO DECEIT.

The following case is reported in the Cincinnati, O., Times-Star of March 25:

On the 12th of last month H. J. Cain, the game dealer on Fifth street, near Vine, was cited to appear before the police court to answer a charge for exposing for sale birds, to wit: two quail which had been killed on a certain day, between the 1st day of January, 1881, and the 31st day of February, 1881, contrary to the statute in such case made and provided, and against the peace and dignity of the State of Ohio.

Mr. T. A. Logan appeared as attorney for Mr. Cain and made the point that the quail had been killed in the State of Illinois, and that the laws of Ohio did not apply to quail killed outside of the State. Judge Wilson heard the arguments *pro* and *con*, about a week ago and this morning gave his decision in Cain vs. H. J. Cain.

The defendant is charged with exposing to sale on February 17, 1881, quail which had been killed during the time when the killing thereof is made penal. He does not deny the quail were exposed for sale, but sets up as a defense that they were killed in Illinois. Section 6,964, Revised Statutes, makes it unlawful to expose to sale quail killed during the time when the killing thereof is made penal. It is held in Illinois quail "killed during the time when the killing thereof is made penal" within the meaning of the section?

Section 6,961, Revised Statutes, makes it unlawful for any person to kill any quail between January 1 and November 1. The section is limited in its operation to the State of

Ohio; the prohibition as to time, which it contains, applies only to the State of Ohio, and consequently quail killed outside of the State are not, in a legal sense, killed during the time when the killing thereof is made penal in Ohio. That such is the legal meaning of the words, "killed during the time when the killing thereof is made penal," is further evident from the fact that by Section 6,964 the exposure for sale during the prohibited season is made *prima facie* evidence that the quail were unlawfully killed within the State. The defendant will be acquitted.

The present decision was rendered by Judge Ford in case No. 30,967, Common Pleas. The cases cited (Whitehead vs. Smithers, 2 Common Pleas Division [British L. R.] 533, Phelps vs. Racey, 60, No. 3, 10, Magner vs. People, Supreme Court of Illinois, February, 1881,) are based on statutes which made the exposing for sale of quail during the prohibited season an offense irrespective of the time or place of killing.

THE NEW JERSEY LAW.—The following bill, entitled: "Senate No. 193," introduced March 1, 1881, by Mr. Taylor, has been passed by the New Jersey Legislature. It explains itself, and we regret to see permits summer shooting the woodcock. We sorely expected that New Jersey would fall back from the advanced position she had taken among the States that wished to protect game. The text of the bill is as follows:

An Act to amend and to partially consolidate the game laws of this State.

1.—*Be it enacted* by the Senate and General Assembly of the State of New Jersey, That from and after the passage of this act no person shall kill, take, expose for sale or have unlawfully in his or her possession after the same has been killed, any woodcock, except only between the last day of June and the first day of August, and between the last day of September and the twentieth day of December, and any person who shall be convicted of doing so shall be liable, taken, exposed for sale or had in possession after the provisions of this section.

2.—*And be it enacted*, That no person shall kill, take, expose for sale or have unlawfully in his or her possession after the same has been killed, any hare (commonly called rabbit), ruffed grouse (commonly called pheasant), or quail (sometimes called Virginia partridge) except only between the last day of October and the last day of December in any year, and any person who shall be convicted of doing so shall be liable, taken, exposed for sale or had in possession after the provisions of this section.

3.—*And be it enacted*, That the penalties provided by this act may be sued for and recovered with costs of suit in any district court in or for the county of the person prosecuting the same, and the remaining one-third shall be paid to the collector of the township wherein the offence shall have been committed, for the township; and in case the defendant in any suit shall neglect or refuse to pay the amount recovered against him or her, or shall be adjudged guilty of the offence, before whom judgment has been obtained, to issue writs of habeas corpus, or to be committed to the jail of the county in which the offence was committed until the judgment and costs are paid, the writs may be returned, not to exceed sixty days from the date of such commitment.

4.—*And be it enacted*, That all laws now existing relative to the preservation of game troated in this act, but the same are so far as the same are inconsistent with this act but no further, hereby repealed.

5.—*And be it enacted*, That this act shall be taken to be a public act and shall take effect immediately.

SNARED QUAIL IN NEW JERSEY. Your correspondent recently had a long conversation with a prominent gentleman from Burlington County, N. J., relative to the preservation and protection of game in his county and adjoining counties, Manahawkin, West Creek and Barnegat—there are parties who purchase from the farmer's boys all the quail snared or trapped by them, and that very many birds have been thus destroyed this season. He remarked to the writer that it would be a very simple matter for the West Jersey Game Protective Association to send to those parts counting under their jurisdiction one of their detectives who could learn from him always find snared quail in the possession of these dealers. There is a law against the carrying of quail in the five lower counties of New Jersey and these dealers know it. By making an example of one or two of the leading ones, my informant feels sure, will correct the evil. Let the West Jersey Game Protective Society begin at Tuckerton when the time comes.

The passage of the law two or three years since prohibiting fishing by seines in Tuckerton and Barnegat Bays in certain seasons of the year has had a marked effect. Almost any day you may enjoy fine fishing and the summer watering season at Long Beach and Beach Haven have become famous to the angler.—HLOO.

QUAIL SHOOTING IN GEORGIA.—Bainbridge, Ga., March 3.

Little do your sportsman dream of the glorious fun to be had in this part of the country. Our county—Deer—alone would furnish sport of this kind to hundreds of sportsmen year without diminishing the number of the birds. Last week myself and two companions left our law offices at eight o'clock, went five miles from town, commenced hunting at half-past nine, stopped an hour for dinner, ceased hunting at four and bagged seventy-five quail—killing every one of them on the wing. Pretty good for lawyers! During the same week, a few days subsequent to our hunt, three sportsmen bagged one hundred and eleven. The dogs were both pointers and setters, and their conduct in the field unbegging good hunters.

Ours is mostly an open, pine wood country. The birds range at large and do not confine themselves to fields, hence their great numbers. We have pleasant town, a climate that is genial and healthy, and would be glad to welcome our Northern sporting friends, with their well-trained dogs and fine guns, to join us in our winter sports. Should they come we are confident they will repeat the visit. Besides quail, there are deer, turkeys, wild ducks and squirrels in abundance.—O. G. G.

HAY BAY GAME PROTECTION CLUB.—We are happy to be able to chronicle the formation of this club, as reported in the Belleville (Canada) Daily Intelligencer: "Some months ago we announced that steps were being taken to prevent the despoiling slaughter of ducks on Hay Bay, which from there is the best resort of waterfowl in this region had of late years been almost deserted by the feathered tribes on account of the operations of pot hunters and so-called 'sportsmen' whose only object seemed to be to kill as many birds as possible. Some fifty persons, chiefly residents along the bay, together with a few sporting gentlemen of Napanee, petitioned the Ontario Government for a lease of the marshes

located on the east side of the river, thirty-five miles by road from Winn, an about same distance by river. The clearing is in good grass land and is beautifully located. The western river side of the farm is bounded on the river—Hunt's mountain and extensions in the background. There is a little a pool near the house, formed by the waters coming together after being separated by an island, the heaviest water making a sharp turn, forming the pool, in which we were informed the salmon were continually leaping during the months of July and August. Half a mile above is a splendid pool, at the junction of the Wassatquik stream, which enters from the west, being in the vicinity of Mount Katahdin, fifteen miles distant, which is the most rapid road following the valley of this stream. This is the salmon stream of the vicinity, and salmon will be taken from it next season by the visiting fishermen, also good trouting at any proper season.

The pool at this junction was waded every evening this season, from the arrival of the salmon up to July 15, and it was reported that over 600 fish were taken from it, weighing from nine to twenty-eight pound each. Thirteen was the largest number netted any one night from this pool while we were in camp.

Mr. Davis, while carefully drawing the fly along one evening, had a salmon rise to it, but missed, after which we whipped the pool an hour, without success; same evening the net took out seven, weighing 142 pounds. A few rods up the Wassatquik there is another nice pool and a good cast. Dr. Sturtevant found three salmon in it, one morning and succeeded in raising them twice. The same evening, they were another time, they came for the fly, but missed. (I will say here that Dr. Sturtevant never yet had the pleasure of handling a salmon with rod and reel, but proposes to realize the feeling in the near future.)

Going up the river from this point we found smooth water three miles to Sabovis stream, said to be a salmon stream, but we did not examine it. One of our party reported seeing three salmon at the junction, but did not give them any attention. Seven miles above the Hunt place we found a pool, in the river and a nice pool for fish at the lower end. Above the pond is three or four miles of rapid water. After pushing over it we arrived at Cold Spring Brook, where we found exciting sport with trout, taking all we wanted in a very short time. There is a good camping place here; good, cool spring water near. We noticed only one salmon in the pool on our return. One mile above this we made camp at foot of the Katahdin Hills. Hunting salmon we found a fine pool, about half a mile, with strong water between. At foot of Hulling Machine Falls good trout-fishing and a good salmon pool at head of Bowline Falls.

Howard Brown and myself, with our guides, visited Grand Falls, which were informed was the largest of any on this branch. We found it quite imposing—think about fifty feet fall—and a nice fishing point at proper stage of water. On our return from Grand Falls we broke up camp, arriving at Hunt's farm the same evening. Our party then decided to return to Winn next day and, starting at 7 A. M., we arrived at the Katahdin House at 5 P. M.

I can see but one reason why we did not succeed in taking salmon, which is this, that we met a rise in the water the second day out at Grindstone Falls, caused by opening of the gate of dam at Molokus Lake, giving us the benefit of some thirty miles surface water, for which we must wait until it run off and get down to the stage for which we are fishing. As you can see, wishing to visit the East Branch and try for salmon can receive reliable information when the water is at proper level for fishing by writing to S. B. Gates, Winn, Me., who will procure guides and necessary camping articles also conveyance to the Hunt farm. To go by road leave Winn on arrival of morning train from Bangor, arrive at Hunt's place early in the evening, over a good road to Sturney, thence a nice trail to the falls, but passable for light camp. As you can go over the same route by the daily stage to Hunt's, buy your ticket from Boston to Mattewaukeag, and check baggage to Winn, where you will find good accommodations at the Katahdin House.

We visited Gordon Falls on the Mattewaukeag River, three miles above the village, and found salmon leaping below the falls. The commissioners proposed putting in a fish-warehouse this season at this fall, which will make another salmon stream for fishing. Since writing the above we received information that H. L. Leonard, of Bangor, took the first salmon this season with the fly near the Hunt place which would establish the fact of salmon taking the fly on East Branch; also, Mr. Gates informs me he has secured the possession of the Hunt clearing, and will put the buildings in repair comfortable for fishermen. C. H. B.

PENOBSCOT SALMON.—A statement that has been going the rounds of the newspapers in regard to taking salmon with a fly in Penobscot River requires some correction lest parties be misled thereby. The question in question from the annual report of the Maine Fish Commissioners for 1880, but its meaning was misapprehended. Reference was therein made to taking Penobscot salmon with a fly, it is true, but those salmon had first been caught in weirs and then placed in a pond near Bucksport, where they were confined for purposes of fish culture, and it was from this pond that the fish mentioned were taken with a fly and not from the river. Some six hundred or more salmon were in this small pond where they had been kept many weeks without food other than such insects as nature supplied.

The statement in regard to the number of salmon caught in 1879 and in 1880 in the Penobscot referred solely to fish caught by means of nets and by professional fishermen. So far as is known but a single salmon was taken with a fly in the Penobscot River last year, although several parties of rod fishermen visited the east branch and other portions of the river for the express purpose of fishing for salmon; but their time, money and patience were spent in vain, and they returned without a fish, although they had many bites—from flies and mosquitoes. There was a single exception among the many failures. Mr. H. L. Leonard, with a persistency worthy of greater success, made repeated trips to the upper waters of the Penobscot for the purpose of catching a salmon and did succeed in catching one fish. This fact was consistently reported in the newspapers, and the only solitary salmon was the only one recorded as taken with a fly. Nor does this river afford good trout fishing as compared to smaller streams, although some of its lesser tributaries abound with small trout; the river itself does not, owing, probably, to the warmth of the water, until one reaches the very uppermost sources.

He who seeks the Penobscot for good fishing—for salmon or trout—is like to be disappointed as he would be did the water upon his trips made for that purpose. An occasional fish may be taken by an expenditure of time and means such as would afford some dozens elsewhere.—SAMADA.

NEW FISH LAW IN NEW JERSEY.—The following law, entitled An Act for the protection of fish, was recently passed by the Legislature of New Jersey:

1. Be it enacted, by the Senate and General Assembly of the State of New Jersey, That it shall not be lawful to cast or draw any seine or net of a mesh of smaller size than four and one-half inches in the Delaware River above the foot of Trenton Falls, between the first day of April and the fifteenth day of June in each year; and it shall not be lawful to cast or draw any seine or net in said river above the foot of Trenton Falls between the fifteenth day of June and the first day of November in any year, excepting small mesh nets used for the purpose of catching minnows and anconowets.

2. And be it enacted, That it shall not be lawful to take at any time in any of the waters under the jurisdiction of this State, any black bass or Oswego bass, with any contrivance or device, excepting with hook and line, in the manner commonly known as angling or with scroll, spoon or artificial bait, in the manner usually known as trolling; nor shall it be lawful to place any set lines in the waters of this State inhabited by black bass, Oswego bass, landlocked salmon, salmon trout or brook trout.

3. And be it enacted, That it shall not be lawful for any person to take from any of the waters under the jurisdiction of this State any black bass, or Oswego bass, before the first day of July, nor after the first day of November in any year.

4. And be it enacted, That it shall not be lawful to place any fyke nets in any of the waters under the jurisdiction of this State before the fifteenth day of June, nor after the tenth day of August, and it shall not be lawful at any time to place fyke nets at the confluence of any wing-dams in any of the streams in this State.

5. And be it enacted, That it shall not be lawful for any person to place in any of the streams of this State, which are runways of migratory fish, shingles or other devices, to frighten the said fish, or deter them from ascending the said streams on their way to their spawning grounds.

6. And be it enacted, That when any of the lakes, ponds or streams in this State have been stocked with game or food fishes by the Commissioners of Fisheries of this State at the public expense it shall be unlawful to take fish from any of the said waters for the term of three years from the date of such stocking.

7. And be it enacted, That the penalty for the violation of any of the provisions of this act shall be twenty-five dollars for each offence, and that when any of the lakes, ponds or streams of the several counties of this State to cause the removal and destruction of any of the appliances herein forbidden, and the arrest and prosecution of any offenders against the provisions of this act.

8. And be it enacted, That nothing in this act shall be construed to prevent the Commissioners of fisheries of this State to take or to have taken under their direction fish from any of the waters of this State, at all times, for purposes connected with the performance of their duties.

9. And be it enacted, That all acts or parts of acts inconsistent with the provisions of this act are hereby abrogated and repealed; and this act shall take effect immediately.

BLACK BASS OUT OF WATER.—I have been reading up the stories of carp living out of water for twelve hours or more, and believe that the black bass will exist just as well when twelve hours out of the water. Yes, and I would be prepared to back him to do the same at the end of twenty-four hours, provided the bagging is kept wet. Now for my fish story. Last October I took to the fly, and caught a black bass to fish for me. The first caught was a two-pounder, hooked and landed by a nephew of mine, a boy fourteen years of age, and being his first fish he was rather proud of it. The boy and I fished all day, from 8 A. M. till 6 P. M., the two-pounder being all this time the first fish on the string. We quit fishing at dark, jerked the string of fish over the side into the boat, rowed two miles to Linden, carried the string of fish to the boat, and then, as they were over one hour, when they were tossed into the wagon and we drove home. The porter takes the string of fish—about ninety nice ones—shows them all around to the ladies and gentlemen and places them on a slab in a cool storeroom. About half-past nine some ladies, anxious to see the string, went to the store, and while they were examining and admiring, I slipped the boy's first catch off, and while I was explaining to them how nearly he had done it, the first lady, Miss East, took it out of my hand on to the floor, and I picked him up and took to a fountain, where he lived till I had to dry up the outside water works. Seeing the whole affair I can vouch for it, and should you ever tell the story and an unbeliever say "Jonah!" and if he is a good fellow and the friend of all good fellows, just consign him to me next September and I will take pleasure in giving oenar demonstration. Wilmansport, Pa. M.O.D.

SALMON FISHING IN IRELAND.—The Shannon, Castleconnell, March 18.—The fishing season opened here on February 1, and up to the present has not been bad, in fact better than it has been for a few years past, considering that we never look forward to fishing with much chance of success before 20th of this month (March) after a succession of floods and rising water during February. The river is now scaling down to good fishing order.

Mr. Henry Hodges' fishermen on the Doonass fishery Feb. 11, one salmon 18 lbs.; 16th one salmon, 20 lbs.; 22d, one salmon 32 lbs.; March 4, one salmon, 14 lbs.; Mr. Henry Hodges, March 11 one salmon 17 lbs.; Mr. I. Muller's fishermen on the Newgardon fishery, Feb. 12, one salmon, 16 lbs.; 23rd, one salmon, 18 lbs.; Mr. I. Muller, March 16, one salmon, 13 lbs.; 17th, one salmon, 17 lbs. The fishermen on the Prospect and Landscape fishery, Feb. 23, one salmon, 12 lbs.; March 12, one salmon, 16 lbs.; Mr. J. E. H. Orr, Royal Artillery, on Mr. E. T. Ingham's preserves, March 15, one salmon, 21 lbs.; Captain Vansittart's fishermen on the Hermitage fishery, Feb. 12, one salmon, 14 lbs.; 16th one salmon, 16 lbs.; Captain Vansittart, March 17, two salmon, 25 and 19 lbs.; Mr. Richard Bourke Jr., on same fishery, Feb. 23, two salmon, 22 and 14 lbs.; Colonel John Vandeleur on the Irinas fishery, Feb. 26, one salmon 35 lbs.

JOHN ENRIGHT & SON

A NEEDED LAW IN ARIZONA.—AN ACT TO PREVENT THE DESTRUCTION OF FISH.

Be it enacted by the Legislative Assembly of the Territory of Arizona:

Section 1. From and after the passage of this act it shall be unlawful for any person to take, kill or destroy any fish in any river, stream, pond, spring or stream of water in the territory by the means or use of giant powder or cart-ridges, or any explosive substance.

Sec. 2. Any person violating the provisions of this act

shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not more than \$300, or by imprisonment in the County Jail not exceeding three months, or by both such fine and imprisonment.

Sec. 3. One-half of all fines collected under and by virtue of this act shall be paid to the informant or informants who shall have caused the arrest and conviction of the person or persons offending, the right of such claimant thereto appearing to the satisfaction of the Court, and the other half shall be paid into the County Treasury as the fines collected for misdemeanors.

Sec. 4. All acts or parts of acts in conflict with the provisions of this act are hereby repealed.

Sec. 5. This act shall take effect and be in force from and after its passage.

Approved February 3, 1881.

(Signed) J. C. FLEMONT, Governor Territory of Arizona.

THE BLUE MOUNTAIN HOUSE.—Molina, N. Y.—I have just had an opportunity to examine Blodgett's new map and guide book for the Adirondack region. The map is a very good one, and shows up the northwest portion of the wilderness or St. Regis Rivers district better than any map I have seen before, although he has given some of the ponds wrong names, or different ones from the ones they are known by here. His book makes no mention of the Blue Mount-in House, but it mentions a house which he calls the Forest House, by C. A. Merrill. I never heard of a house by that name. I have known Mr. Merrill several years ago, and he lived in a small house near the Blue Mountain House, and also that he occasionally went with parties of sportsmen as guide and sometimes had one or two residents from other portions of the country. The Blue Mountain House, on the contrary, is a large two story building; Mr. Phelps, the proprietor, keeps a span of horses and a spring-seat wagon to carry his guests to the station, if they should wish it. He has several good hounds, and a few cats and dogs in the vicinity, two or three good hounds, and the best pointer dog I know of, also tents and camping outfit, etc. The table is as good as any house where the charges are moderate.

I am in no way interested in the Blue Mountain House or its proprietor. I always camp out and take along my own provisions, tent, boat, etc., when I go to the woods. I only write this to explain why I have not mentioned a house for a week or two at the head of the Adirondack, and also to numerous sportsmen in describing that locality. ALBERT CORNISH.

CANNED MEATS.—In your issue of March 31, under the heading "What Sportsmen Shall We Take With Us," you ask for the names of reliable dealers in canned goods. I was in the employ of Wm. Underwood & Co., of Boston, for five years and think their goods will be found reliable. The statement concerning the sheep and cattle is rather tough, but I can't say it surprises me much. I suppose there are few traders in which fraud can be more successfully practiced than in the canned goods trade. Nine times in ten the label sells the goods. Canning dried corn and peas which have first been soaked, and then selling them as "fresh" corn and peas is one of the most common frauds.

I mention the above concern simply because I have had some experience with them. There are good and reliable concerns in most of the large cities, and canned goods can be bought which are all they are represented to be. In making a selection of Richard's canned goods, you will find a few bottles of which are selling at prices below the cost of honest manufacture. A few cents can save will ill repay one for the loss of a meal, especially when out of reach of stores. As a rule cheap goods are dear at any price. SIALIA.

RELIABLE CANNED GOODS.—New York, April 4, 1881.—*Editor Forest and Stream.*—The canned meats, fruits and vegetables of Richard's are good, and well known to the hunters of Gordon & Dilworth, and the Monticello brand of chow-chow, gerkins, etc., can always be depended on as being of the best quality.—T.

TENNESSEE.—Nashville, April 4.—With the exception of snipe, our shooting season is over, until August, when doves become plentiful, the shooting of which will be liked by sportsmen about here. Snipe have been unusually scarce, owing, doubtless, to the bad weather. Messrs. Breyer and Legler were the most successful in their bags of the many who went out, yet they never got more than ten or twelve to each gun.

The "German Carp" imported to this State about two years ago, form the subject of conversation among our fishermen on account of their wonderful growth, and the fact that they are so prolific in spawning. One female, it is said, there can be no doubt of the fact, a female, one year old, was taken from the pond at the asylum grounds, which contained a roe as large as a man's hand. The superintendent, Dr. Callender, is the authority for the above and the statement that there are thousands of carp fry in the same pond. John Burkholz, a native of Bavaria, Germany, living here, told me that in a carp pond on his father's farm the year old females spawned from this three-year old theory would apply only to very cold countries.—J. H.

WE HAVE RECEIVED a copy of the new illustrated catalogue for the season of 1881, published by Messrs. Conroy Bissett & Malleson, 65 Fulton street, N. Y. It contains, besides the price list, a great deal of valuable information to the angler and camper-out and is very fully illustrated. The directions for selecting tackle are so explicit that the beginner cannot make any mistake in ordering his goods, and the well-known reputation of this house, established since 1830, is sufficient guarantee that everything sold will be of the best. This catalogue, arranged by Mr. W. Hetherington, has been published at great expense, and is furnished at the nominal price of 15 cents, which amount will be returned to customer ordering tackle.

BASS FISHING IN MICHIGAN.—I fully agree with U. S. S. in regard to placing a minnow on the hook for bass. We fish here in Michigan almost always with the live minnow hooked as U. S. S. describes or hooked only through the under lip. The fishing for bass has been tried but little here, but there are many anglers myself among the number, who wish to test it thoroughly before coming south. Our bass are very game and I see no reason why we cannot have fine sport with the fly.—A. P. S.

A POISONED TROUT STREAM.—Our correspondent, "J. M. B.," writing from Sullivan County, N. Y., says that an oil

The Kennel.

FIXTURES.

April 26, 27, 28 and 29, at New York City.—Westminster Kennel Club Fifth Annual Bench Show, American Institute Building, Third Avenue and Fifty-third Street. Entries close April 11. Charles Lincoln, superintendent, No. 128 Fulton street, or P. O. Box 1,701, New York City.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials, First Annual Derby. C. E. Stanton, Secretary, Pittsburgh, Pa.

October 1st, New York City. Close of entries Eastern Field Trials, Third session on Thanksgiving Day. Jacob Peina, Secretary, P. O. Box 514, New York City.

A PURE LAYBACK SETTER IN THIS COUNTRY NOT GENERALLY KNOWN.

[T] is not generally known to breeders that at the time Fairy II, imported by Mr. Higgins of Delaware City, was imported, Mr. Taster, from whom the writer purchased, had ordered a blue setter pup from Mr. Lavrack, and fully expecting both animals in time for the Centennial Bench Show, made his entries accordingly—in the bitch class, Fairy II, already named, and in the dog class, blue-fleeced English pointer, not as yet named. Fairy II, arrived first, and just on the eve of the show the puppy reached him, but instead of a blue-ticked, the dog proved to be liver and white and named by Mr. Lavrack Price of the Border II. Mr. Taster, who had been told by Mr. Higgins that the dog was the same as that time he was but eight or nine months old. Shortly after this the writer purchased Fairy II, and Mr. Taster went to Texas to enter into the cattle business, taking Price II with him. He returned not many months afterward, disappointed in his enterprise. He had a few more puppies and being interested in the whereabouts of such a valuable animal unknown to breeders to the country, learned that "the dog had turned out AI and was now in the hands of Col. Hughes, president of a leading bank at Dallas, Texas."

Mr. Lavrack wrote to the writer that "the young setter I have sent to your townsmen, Mr. Taster, will make a grand field dog if handled properly. I can breed no better." If I am not mistaken Price II was a Coon puppy.

I think it will be safe to say that this dog is entirely unknown to the sportsmen of the East. Mr. Lincoln, Dr. Traddell and Mr. John L. Long and a few who know of his importation may remember him. At the time of the Centennial show the dog, as I have said, was a few months old, and being interested in his pedigree and magnet, made a very sorry appearance. Exhibitors at the Baltimore show the following January had reason to be much surprised at the improvement of my brace, Price II, and Fairy II, which were the best of the grand old-made dogs I ever saw; his color, liver and white—against him, however.

HONO.

NATIONAL AMERICAN KENNEL CLUB.

Subjoined is the full list of entries for the second annual Derby, for puppies born on or after April 1, 1880; entries closed April 1, 1881:

- 1 Capt. Pat. Henry enters Buckel, lemon and white setter dog, whelped July 1, 1880, by Pride of the South out of Cammie.
2 Capt. Pat. Henry enters Adair, black and white setter bitch, whelped July 1, 1880, by South out of Cammie.
3 P. H. Bryson enters Linton, blue Belton setter dog, whelped July 22, 1880, by Gladstone out of Clip.
4 P. H. Bryson enters Memphis, blue Belton setter dog, whelped July 23, 1880, by Gladstone out of Juno.
5 D. H. Dew enters Gilda, blue Belton and tan setter bitch, whelped April 7, 1880, by Gladstone out of Floy.
6 J. H. Dew enters Gilda, blue Belton setter bitch, whelped April 7, 1880, by Gladstone out of Floy.
7 D. H. Dew enters Gilda, blue Belton and tan setter bitch, whelped July 4, 1880, by Gladstone out of Nellie.
8 David McK. Lloyd enters Mack Lavrack, lemon Belton setter dog, whelped April 2, 1880, by Thunder out of Peeres.
9 Jos. J. Stuenkel enters Len Lavrack, lemon Belton setter dog, whelped April 2, 1880, by Thunder out of Peeres.
10 Jos. J. Stuenkel enters Pet Lavrack, black and white setter bitch, whelped April 2, 1880, by Thunder out of Peeres.
11 Edward E. Hardy enters Clair, black and white setter dog, whelped May 15, 1880, by Dash III out of Diana.
12 Edward E. Hardy enters Clairine, black and white setter bitch, whelped May 15, 1880, by Dash III out of Diana.
13 Edward E. Hardy enters Felix, black and white setter dog, whelped May 15, 1880, by Dash III out of Diana.
14 Edward E. Hardy enters Sautner, lemon and white setter dog, whelped April 20, 1880, by Scout out of Frost.
15 W. A. Blakemore enters Bonnie Scotland, white, black and tan setter dog, whelped May 1880, by Lincoln out of Kansas Beauty.
16 L. H. Smith enters Sue Morton, black and tan setter bitch, whelped July 22, 1880, by Gladstone out of Clip.
17 L. H. Smith enters Lass of Kinneloe, blue Belton setter bitch, whelped July 22, 1880, by Gladstone out of Clip.
18 L. H. Smith enters Bristol, blue Belton setter dog, whelped Oct. 14, 1880, by Paris out of Comassee.
19 L. H. Smith enters Dover, blue Belton setter dog, whelped Oct. 14, 1880, by Paris out of Diana.
20 Clarence E. Dreac enters Dashing Novice, white, black and tan setter bitch by Dash II out of Novel, whelped July, 1880.
21 Dr. N. Lowe enters Countess Peg, blue Belton setter bitch, whelped Sept. 25, 1880, by Daniel out of Peg.
22 E. F. Stoddard enters Doctor Boy, red Irish setter dog, whelped May 7, 1880, by Bob out of Fraid.
23 E. F. Stoddard enters Lady Friend, red Irish setter bitch, whelped May 7, 1880, by Bob out of Fraid.
24 E. F. Stoddard enters Belle, blue Belton setter bitch, whelped June 3, 1880, by Gladstone out of Nellie.
25 W. E. Hughes enters Cliffo, blue Belton setter bitch, whelped June, 1880, by Gladstone out of Nellie.
26 St. Louis Kennel Club enters Lilla, black and white pointer bitch by Faust out of Lassie, whelped Oct. 17, 1880.
27 St. Louis Kennel Club enters Mistake, liver and ticked pointer bitch by Dow out of Junc, whelped May 20, 1880.
28 A. J. Faly enters Reform, white and black setter dog, whelped June 3, 1880, by Louise Beauty.
29 A. J. Faly enters Sallie, blue Belton setter bitch, whelped April 7, 1880, by Gladstone out of Floy.
30 Wm. Segner enters Smart, black and white setter dog, whelped April 2, 1880, by Thunder out of Peeres.
31 J. W. Orth enters Fly, setter bitch, whelped April 2, 1880, by Rake out of Pora.
32 J. J. Ladd enters Willie, black and white setter dog, whelped April 2, 1880, by Rake out of Pora.
33 Sportsman's Kennel enters Show Flaks, white and lemon setter dog, whelped May 16, 1880, by Frarie Ranger out of Highland Lassie.
34 Sportsman's Kennel enters Judge, blue Belton setter dog, whelped May 16, 1880, by Shatto out of Jolly May.
35 Overman's Queen City Kennel enters Norwood, red Irish setter dog, whelped May 24, 1880, by Blich out of Rose.
36 W. A. Givens enters Minerva 2nd, blue Belton setter bitch, whelped April 4, 1880, by Rose out of Minerva.
37 J. R. Henricks enters Lora Lavrack, blue Belton setter bitch, whelped by Young Lavrack out of Petrel II.
38 Harvard Kennel Club enters Iess, black and white setter bitch, whelped April 2, 1880, by Dash III out of Comess Ada.
39 Harvard Kennel Club enters Holly, liver and white setter dog, whelped April 2, 1880, by Dash III out of Comess Ada.
40 Harvard Kennel Club enters Judy, black and white setter bitch, whelped Aug. 21, 1880, by Dash III out of Comess Ada.

- 41 Harvard Kennel Club enters Rap, black and white setter dog, whelped Aug. 21, 1880, by Dash III out of Comess Ada.
42 Harvard Kennel Club enters Iess, black, white and ticked setter dog, whelped Aug. 21, 1880, by Dash III out of Comess Ada.
43 W. D. Gates enters Tom Paine, white, black and ticked setter dog, whelped June 4, 1880, by Gladstone out of Sanborn's.
44 W. B. Gates enters Twin Mande, black, white and tan setter bitch, whelped July 22, 1880, by Gladstone out of Clip.
45 Arthur Merriman enters Oliver Twist, black, white and tan setter dog, whelped July 22, 1880, by Gladstone out of Clip.
46 Ed. J. Carr enters Slender, black, white and tan setter bitch, whelped Sept. 11, 1880, by Lincoln out of Daisy Dent.
47 Geo. C. Miller enters Prince Lofly, lemon Belton setter dog, whelped May, 1880, by Lofly out of Dot.
48 George dook enters Spot, setter dog, red Irish setter dog, whelped April, 1880, by Fishmerston II out of Eva.

THE "BENCH-LEGGED" BEAGLE QUESTION.

Editor Forest and Stream:—I have just appeared an article under the above caption and signed "Beagles." I request that inasmuch as I have written over my own signature, and am therefore recognized, and as the author of the articles questioning my statements assumes a cognomen which, upon the face of it, seems to claim to speak, or to refer to, the subject of the article, I will appear before the public in the same category with myself—in other words, over his own name.

When any one assumes to speak as I have done in reference to matters of which I profess to have knowledge, and the statement is called in question, he as well as the public have a right to know who the disputant is. Nor should a gentleman hesitates who occupies the latter position to let the party challenged, as well as the public at large, know whether he is entitled to responsibility in the premises.

In brief, whenever the gentleman who assumes by his signature "Beagles" to know so much gives his name I hold myself ready to answer his every retort and make good all that I have heretofore asserted. My name is not to be put out from your cover, "Beagles," and then your real issues. DR. MADDEX, Baltimore, Md., April 4.

WOODCHUCK DOG CHAT.

I NOTICED a letter in FOREST AND STREAM of March 24 that some one wants a "woodchuck dog." What kind of a dog is that? I have seen Newfoundland, setters, pointers, spaniels, terriers, bulldogs, beagles, fox-hounds and mastiffs, besides pretty well every other breed that can be named. I am not going to tell you about a little dog that can kill woodchucks about as fast as terriers will hunt a rabbit. He is a queer little fellow—all ears and body. When I am on my fishing trips up in Michigan he is generally the first to meet me when the steamer pulls up at the wharf. He is not a dog before I can meet the warm grasp of friends. When I have changed my city clothes for a dead-grass fishing suit and get outdoors again he is waiting for a hunt. "Well, Fido, where's the woodchuck?" sets him off. I cannot give his pedigree, because he has no any. He has no pride of ancestry, for he is a cur, without claim to any particular breed; in fact he is probably a combination of half a dozen kinds. Yet, for all that he is a faithful little watchdog and will hunt woodchucks until he is ready to drop. Here's a picture of him. A long body; short, dapper, little legs; a long snout; bright, sparkling eyes; swifl long ears. These are the marked features in the dog. As he lies they are constantly erect, like a jack rabbit's, and move backward and forward. While he is awake he is listening for something, but he is not a "sally dawg;" in color he is a dark brown and as sleek as a mole.

I left the house for the brook and was intent on trouting, when "Yap, yap, yap" came the ringing bark of Fido. He was calling for me to go with him. I have called him "Where are you?" Following the sound of his voice through the thick woods I came to a wood-pile, where Fido was bounding around as fast as his little legs would carry him. The bark was again heard as he was sitting a large stick I found a rabbit and poke. Finally I heard a rustling sound, a scrambling and snarling, then a yelp, but before I could run around the pile, climbing logs to do so, Fido had caught him by the back of his neck and sent him flying into the air, and it came down a kicking noise. Fido lay panting beside him, bleeding at the nose with a nip the chuck had given him, but intently watching to see if he was playing "possum." Just how it was done I cannot say, for it was a running chuck, a scrambling dog, both of them snarling dogs and through the underbrush I saw his chance came for the death grip, then he gave it quick as a wink. He can do this at any time and will hunt a mile for woodchuck.

I am inclined to think Fido is a species of the smooth-haired terrier, but he is something like a fox-terrier, a black and white rabbit, hunt-squirrel, trail woodchucks and gophers. He is grit to the backbone and will hang on when once he bites. So much of a pet is he that his mistress has refused a handsome cocker spaniel that we offered to send them. I think if the "frisk of a dog" could get a rough-haired Scotch terrier he would soon make the woodchucks scarce. They can watch a hole as long as any dog we ever saw when game is there. We have seen him hunting otters. "How' it howling in the lake when he has the back of the otter's neck in the thick of the fight the moment the otter makes a rush for the water.

We have never considered any dog as special for hunting woodchucks as the fox-terrier, but I have seen a number of such dogs kill them until it is a difficult matter to find any to hunt. Our observation has induced us to think that any plocky dog can be trained to kill woodchuck, because a dog never forgets the first bite of a rat or the first nip of a woodchuck, and from that time he never forgets the sweet memory of both these animals. NOTWAX, Chicago, Ill.

Editor Forest and Stream:—While the subject of woodchuck dogs is being discussed I wish to chronicle the achievements of an imported English setter. Finding a hound that was contented to stalk, but not take a dog that he could observe it, his head only exposed. This for hours would he wait, if necessary, for chance to come forth, waiting until his game had placed a proper distance between himself and the hound. Then he would spring forward, and with a single bound and kill his quarry, never miscalculating his distance. In this connection I cannot forbear relating other achievements showing remarkable intelligence. Taking an empty jug from any part of the farm to the house to be filled with water; seeking the mistress and making known his errand; going to any part of the lot for a farming tool or forgotten garment were a few of the many that might be mentioned. As a bird dog he had few equals—no superiors. So, too, as a watch-dog Sancho excelled. He would allow strange dogs to come in and sit on the porch, but would bark the stock at the stables he promptly notified his master. For the children he was a gentle companion and staunch protector. A quieter, more perceptible dog never existed. Still he would brook no insult or abuse from man or his own species. One instance of the latter in point: There was at the neighboring village the veritable "big yellow dog," a terrible tyrant, whose chief delight it was to pounce upon all passing dogs. One day, wiled Sancho was trotting beneath his master's wagon, the bully jumped in for a fight and got on for all through much larger and always before a victor, yet in less than a minute he fled indignantly from the field. WARFIELD.

BERRATA.—In the short article entitled "These Nervous Dogs" in our last issue, our correspondent "Hono" was made by the types to say "thine line" "expressly on bird dogs," whereas he had written "excessively in bred dogs" and "a line from eod) the types had it, "nervous instability," whereas the copy read "nervous irritability."

NOTES FROM ABROAD.

Mr. C. S. Fauntleroy lost by death, on the 15th inst., his grand old setter bitch, Snake, at the ripe age of fourteen years. Snake I had a great preference for; she was well made, a true setter, although not so fashionable as some, yet she won many first prizes, including Crystal Palace, 1871, and also secured a first at the South-western trials of the same year.

Snake's progeny have turned out well, both here and in America, she being dam and grand-dam of such good ones as Diner, winner of Field Trial Derby, 1877, and Darkie, winner of Challenge Cup, 1878; and of her illustrious daughters, Mrs. Fauntleroy still the well-known "Bird" by Reid's Sam, and two by Bine Prince—Sibus, in the Stock Register.

ACCIDENT TO FORTUNES.—Lord Fitzhardinge's well-known pack of foxhounds have had a narrow escape from being out to pieces. While hunting in the vicinity of the inland railway at Gosington, near Dursley, the fox crossed the line, and as the two leading hounds were following an express train came up and killed one of the dogs, a very valuable one, on the spot, and injured the other. Had the train been a little later the whole pack would have been on the line.

SHOCKING DEATH FROM HYDROPHOBIA.—A fearful death occurred at Penwitherton, near Preston, on Tuesday, from Hydrophobia. A gamekeeper, a fine, stalwart man, named Peter Green, in the custody of Mr. L. Haselhurst, of the Penwitherton bitton at Pidsley by a stray dog. He sucked the wound in his right thumb and had it canterized. On Sunday last he felt a peculiar pain in his hand. Having on several occasions been in charge of persons suffering from Hydrophobia, he was called in by Dr. Bell, of Preston. This gentleman found hydrophobia quickly developing. The man rapidly became worse, and on Tuesday was so violent that he had to be bound to the bed by ropes and held by while hunting. All medical skill was unavailing, and he died in the afternoon.—Stock Register.

I am informed that the Cologne Field Trials will take place on the 11th and 12th of April, the draw being on the evening of the 10th.

MR. S. H. Prince Albert Selms, of Braunfels, has entered Champion Ringer, whom he has lately purchased of Mr. Macdon, and in event of the grand old dog carrying off the stake, has generously offered an extra third prize, which will be of equal value to the second.—SEXES, in the Live Stock Journal.

MR. MASON'S DOGS.—In a letter from our worthy friend Mr. Hugh Daniel, we are informed that Mr. Mason sailed from Cardiff on the 10th inst. on a tour to the Continent, and that we have already noticed would be entered in the forthcoming show. These of our friends who desire to communicate with Mr. Mason can do so through this office. The following notice, taken from the Stock Register, March 25, gives the list of Mr. Mason's dogs:—A pair of English Mastiffs, bred by Mr. Mason and sent for of Hebben Bridge, also, leave for America to-morrow. Both are well known as successful breeders and exhibitors here, and Mr. Mason is going to try his luck at New York Show and has sent his pair of Mastiffs to the Crystal Palace and sent for of Newfoundland.—Mayor of Bingley.

We wish Messrs. Mason and Lucy a pleasant voyage and success to them in their objects.

LIFE OF DOGS TAKEN OUT BY MR. MASON. Pointers—Champion Dog (4,201); Champion Clamcocker (first Place, 1880); Water Lily, with five puppies by Dou; Chalmford, by Don-Lady Lizzie.

Box-Terriers—Mouseta II, Twilight, Moonlight and Tartar (all winners).

Greyhounds.—Dropping Well, by Telegraph-Old Mother Ship-ton (grand young bitch, black and white, never exhibited); Fly, red bitch, by Riot Act-Affection; Stingsby, by Rapid (black dog).

Bulls.—Alexander, Noble (late Petrie's, winner at three kennel club shows).

Pigs.—Eugene—Young Bill.

Smooth sheepdog, Hatten greyhound bitch, deodoo bitch, pug, Lina (late Foster's), capital Airdeale, two good Yorkshires.

SAN FRANCISCO BENCH SHOW.—Our esteemed contemporary, the Pacific Life, so well known as the authority on sporting matters on the Pacific Coast, writes as follows in its issue of March 25, regarding the bench show of dogs which has just been held in that city: "The bench show was held at the Hotel de France, and the Pacific Coast Kennel Club, 313 Montgomery street. D. R. McNeill the courteous manager has been overwhelmed with applicants for entries and black forms of entry. Several entries of dogs were made in the city, but the majority of the exhibitors expressed an intention to enter their pets for the exhibition. The indications are that the bench show will be a great success, and next week we hope to be able to give our readers a partial list of the entries. At any hour during the day persons desiring to see the dogs may call on the exhibitors, and as it is our desire to find places among those to be put on exhibition. The majority of the owners of valuable animals seem to be uninformed as to the rules and regulations governing bench shows, and Mr. McNeill is daily assisting them in this respect. It is generally understood that while the pedigree of the dogs are desired they are not necessary. Many people fear that they cannot enter their dogs because their pedigrees are unknown to them. Mr. McNeill is daily explaining to them that pedigree is not necessary. Valuable prizes will be awarded to the best specimens of dogs in each class, also certificates of highly commended to dogs possessing superior qualities and fall to win first or second prize. And a very valuable special prize will be given to the most perfect specimen of any breed or bitch in any class."—Pacific Life.

ANOTHER BIG DOG HEARD FROM.—The Dodgeville, Wis., Chronicle, says: "A correspondent of the FOREST AND STREAM, writing from San Francisco, describes a dog owned by him of the species known in natural history as the 'Great Dane,' but more generally known as the 'Irish bloodhound,' and asks if any one knows of a larger one. His dog took the first prize at the bench show in New York, in 1879. He stands 33 inches high at the shoulder, 32 at the hump; is 6 feet 5 inches long from end of nose to tip of tail; 42 inches round the girth; and weighs 135 pounds. He is so well bred, and in such good condition that he weighs 175 pounds. 'If the gentleman were a subscriber of the Chronicle we could give him some information on the subject; but as he is not, we suppose he will have to remain in the blissful depths of ignorance. He is a very fine dog, however, and for his dog and handsome woman Dodgeville 'takes the cake.' We shall not undertake to mention the handsome woman, for we haven't time to make out a census report of the village, but Edward Dros, of this place, have a dog that has been over 10 years old, and is still in the prime of life of the same breed, is 34 inches high at the shoulder, 33 inches high over loins, girth, 47 length from tip of nose to tip of tail 6 feet 7 inches, weight 211 pounds, and is not yet four years old. How if that San Francisco correspondent had a big dog, let him trot him out, but if not, let him call that one a lap dog, and hold his yamp.'"

THE COCKER COMMITTEE CRITICISED.—Toronto, April 1.—I noticed the announcement in your journal that the Cocker committee would meet at the rooms of the Forrester Gun Club, Douglas street, on March 30. I had accordingly proceeded to Buffalo to subscribe to the American Cocker Club, I thought that by attending the meeting of the committee I might gain valuable information by listening to the arguments upon the various points and qualities of a cocker spaniel, and, accordingly, proceeded to Buffalo on the date announced for the meeting only to find one solitary member of the committee present. The absence of the other members, I have since been informed, was caused by a telegram received by Mr. A. H. Moore, of that city, in which he was informed that the meeting was postponed indefinitely. Matters are, it seems to me, being unnecessarily delayed. The great aim of some at the first was to rush things too fast, and now the order of the day seems to be to place stumbling-blocks in the way. Had the meeting been called for April 1 it could have under-

Worcester, Mass., April 8.—Yesterday the rifle club of this place had a shoot at Cliff's Grove Range. Wind and weather were favorable. Distance 200 yards, 10 rounds, off-hand, with a possible score of 50. The following is the record:

Table with columns for names and scores in 'Worcester, Mass., April 8'.

Worcester, Mass., April 8.—Quite a party of Worcester sportsmen, who control the Pine Grove Range, in Shrewsbury, had a shoot yesterday. Their work is told by the following score:

Table with columns for names and scores in 'Worcester, Mass., April 8'.

John Norman, 200 Yards, Off-hand. M G Fuller, 18 1/2; C Jencks, 18; Dr Arnold, 17 1/2; A I. Hise, 17; F Wesson, 16 1/2; A B Plympton, 16.

Worcester, Mass., April 8.—The glass-ball tournament, under the auspices of the Worcester Sportsmen's Club, Fast Day, at their range, was presented in an attractive and highly interesting manner. Talism's seven fine blue balls were used; they were sprung from C. D. Holden's improved rotating trap, at 15 yards rise. The first event was the 100-yard pistol, shot by teams of three, 20 balls per man. The following is the score:

Table with columns for names and scores in 'Worcester, Mass., April 8'.

The second event was for a purse of \$50; individual sweepstakes. A. H. Henshaw, who had the first prize, was divided between Perry, Cole and Gerrish, each scoring 9; the second was divided between Perry, Holden and Jones, each scoring 8; the third was divided between Kuge, Webster and Bush, who each scored 7 balls.

The third event was for \$100; individual sweepstakes; 15 ball per man. There were 21 entries. The first prize was divided between Perry and Haskell, who scored 14 each; the second between White and Pond, the third between Smith, Handy and Eager.

The fourth event was for \$100; individual score to the person shooting in all the events was awarded to W. S. Pond. He broke 62 of the 63 balls offered.

Mr. Pond is now on his way to Chicago. Mr. Pond is now on his way to Chicago.

Worcester, Mass., April 7.—Some thirty or so lovers of sport gathered at the Bellevue range to-day, and for seven hours, in spite of an adverse wind, the bullets pattered like hail-stones on the targets, a large percentage of the shots bringing in white discs to the center of the target. Subjoined are the seventeen best scores 200 yards:

Table with columns for names and scores in 'Worcester, Mass., April 7'.

Assistant-Secretary A. E. Weston is busy preparing an address of the members and ex-members of the Board of Directors of the National Rifle Association. There are some sixty in all, who have during the year past assisted in the councils of the Associa-

tion. The majority of the photographs have been secured, but he would like to receive imperial photos of the following gentlemen: Gen. A. E. Burnside, J. Powell, Jr., A. W. Craven, Col. H. G. Shaw (California), Gen. J. M. Vanin, Gen. Augustus Funk, Hon. David W. Hoag, Gen. J. H. Johnston, Gen. J. H. Liebenow, Col. Gouverneur Morris and Judge Hilton.

ALBANY, N. Y., April 7.—The weather this afternoon was not very inviting for the ribidon who attend the weekly matches at Betschelschewyck. The wind blew in gusts, and the matches set down for competition being at the extreme short range are not cutting to many of the mark. The matches were a succession of matches with re-entries allowed. In spite of the adverse conditions good scores were made by a number, though fully as many more did not get an average of 100, the scores in detail being:

Table with columns for names and scores in 'ALBANY, N. Y., April 7'.

Following this came a match at 300 yards for a Wilkinson re-loader. The entrance fee was small, the shots few and unlimited re-entries allowed. Mosher had gone over for the express purpose of winning that re-loader; he had all kinds of ammunition, and was ready to stay until dark, or later, to make a winning score. He nearly pulled the lock out of his gun, but he succeeded in winning the re-loader, and came back a happy man. The scores were as follows:

Table with columns for names and scores in 'ALBANY, N. Y., April 7'.

A new match was arranged at the same distance as the two previous matches, for a large cake. Lieutenant Spelman wanted the cake. He had come prepared to win something. He had a rifle which had been won by a team of the tenth regiment three years ago. After the disbandment of the regiment the rifle was delivered to Lieutenant Spelman by the State authorities, and now it was Spelman's turn to do something with it. He had got the hang of the gun, and for the sake of the gun the rest of the competitors were willing to let him win. They shot carefully, getting inners and centres right along. Spelman's chances were good, and the gun was doing splendidly. He had one shot to fire before he divided the cake. With the aid of two rangers and the banner, he succeeded in carefully loading the prize gun, and stepped to the firing point with a look of confidence that only comes to a man on the eve of a great battle. He fired, the bullet struck the bullseye at the right moment—and got—a miss, and lost the cake. The shot decided the fate of the gun. It will probably be divided among the members of the team. The scores were as follows:

Table with columns for names and scores in 'ALBANY, N. Y., April 7'.

Next Thursday afternoon will be three matches at 200 yards, for a gold badge, which has been in progress during the Fall Membership match; second, a match for a Wilkinson re-loader and the third, for a Greener gun, which has been presented to the association and will be won in one competition. These matches are open to any member and the entrance fee being small, there should be a large turnout to secure the valuable prizes.

COHEN'S RIFLE, PISTOL AND RECORD GALLERY, 1,222 Broadway. The Pistol Tournament, which has been in progress during the last few weeks ended on the 26th inst. The competition for the supremacy in skill was extremely close, and the general public evinced a great amount of interest in the shooting throughout the entire match. The wonderful scores obtained considered the fact that the tournament would be held for ten weeks. During each week the championship for a certain style of shooting would be contested, and the competitor making the best score to be declared the winner of the championship of each style of shooting. The contestant who makes the second best score to win an expert's badge, but in no case could the holder of the championship win the expert's badge. The competitor holding the greatest number of expert's badges would be the holder of the grand M. E. and the record made by the champion is rendered all the more notable by the fact that he is comparatively a new hand with the pistol.

Heretofore there has been no standard or basis by which the various records of crack shots could be compared owing to the differences in the target which they had to compete in. The uniformity of marksmanship had been performed. The tournament supplies the deficiency. If the conditions of same be stipulated for each of the styles of shooting, and universally adopted, then it will be an easy thing to compare the marks of a player in any one of the styles during the match form a starting point for the comparison of future records.

CAMDEN, N. J.—Stockton Rifle Range, April 9.—The opening of the range for the year took place to-day. Short-range match, all comers, any rifle, 200 yards, 1 rounds; 10 balls, value, \$65.00:

Table with columns for names and scores in 'CAMDEN, N. J.—Stockton Rifle Range, April 9'.

SAN FRANCISCO, CAL., March 26.—S. I. Kellogg, Jr., Robt. McKilloan, G. H. Brown and Nicholas Williams shot a match to-day at 200 yards, 10 shots each, N. R. A. rules. Brown was given 20 points by Kellogg and Williams, 10 by McKilloan. Brown was given 20 points by McKilloan. The prize was a silver ten-set. Brown and Kellogg used the Bolekiska rifle, 45 grains powder, 45 cent. McKilloan used a Remington-Union, 45 grains powder, 45 cent. McKilloan used a Remington-Union, 45 grains powder, 45 cent. McKilloan used a Remington-Union, 45 grains powder, 45 cent.

Table with columns for names and scores in 'SAN FRANCISCO, CAL., March 26'.

A match has been arranged between ten members of the New York Club, and ten members of the Riverston Club, to be shot some time in April.

LONG ISLAND SHOOTING CLUB.—Dexter Park, Jamaica Road, L. I., April 8.—First contest of the Long Island Shooting Club for the prize gun, presented by the club, shot for 7 birds each, from a ground trap, hand-pumped rise, 30 yards boundary. The gun to be awarded to the competitor winning it the greatest number of times in the year. Club rules, Entrance \$1, one-half of which is used for extra prizes in ammunition. The shot of each was:

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained. THE TROUT season begins May 1 and ends Sept. 1. THE GRAYLING season opens June 1 and ends Nov. 1. BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and creeks of this territory. The sportsman can readily send trophies of his skill to his friends or "lead it" home, as he for packing fish can be had at nearly all points.

TAKE YOUR FISH WITH YOU. The climate of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The scenery is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1883 by new buildings and additions. During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen. Dogs, Guns and Fishing Tackle Carried Free at owner's risk. It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address A. B. LEEB, Gen'l Pass't Agent, Grand Rapids, Mich.

HODGMAN & CO., 425 Broadway and 27 Maiden Lane, New York. ARE OFFERING THE LARGEST ASSORTMENT OF RUBBER Hunting and Fishing Outfits, COMPRISING Light Weight Shooting Jackets, Hats, Cartridge Bags, Gun Covers, RUBBER FISHING PANTS, RUBBER FISHING BOOTS, Rubber Blankets, And Complete Rubber Outfits. (ESTABLISHED 1853.) Send for Catalogue.

Philadelphia Fishing Tackle HOUSE.

A. B. SHIPLEY & SON, Manufacturers of Fine Fishing Tackle of Every Description.

508 COMMERCE ST., PHILA. Shipley's Looped and Plain Mist Color Leaders. Shipley's Improved Adjustable Floats. Reversed Fly, Trout, Bass and Salmon Flies, in stock, and also list to pattern. A full assortment of common and finest rods, Lines, Reels, etc. Our Bethabara Fly and Bait Rods and Split Bamboo Fly Rods received the first premiums at the Centennial, Franklin Institute and Penna. State Fairs. A Specialty of the celebrated Bethabara Wood for Fish Rods and Archery Bows. Stronger than split bamboo and as tough and elastic as steel. Rod mountings of all descriptions on hand and to order. Price list of wood and rod mountings free. Our 65-page new Illustrated Catalogue of Fishing Tackle sent, post-paid, on receipt of ten cents in stamps.

SPORTSMEN'S DEPOT. (ESTABLISHED 1853.) First premium at World's Fair at New York, and Centennial Exhibition.

JOHN KRIDER N. E. Cor. Second and Walnut Sts., Philadelphia. GUNS, RIFLES, PISTOLS, Fishing Tackle, Rods, Reels, Lines, Hooks, Flies, Lances, Snoods, Artificial Bait, Fly Books, etc. etc. Salmon, Bass, and Trout Flies, Made to Order. "Kriders'" Celebrated Center Emanuel Split and Bird's Eggs and Birds' Skins in Great Varieties. Taxidermy in all its branches. Repairing of all kinds.

S. Allcock & Co., NEW YORK. Manufacturers of all descriptions of FISHING RODS. Fish Hooks. Carlisle, Limerick, Sprout, Virginia, Basser, Aberdeen, etc. Swivels, Floats, Lines, Gimp, Snells, Leaders, etc. REDDITCH, ENG. TORONTO, CAN. MAKERS OF Silk Worm Gut of the Finest Qualities, MURCIA, SPAIN.

The largest manufacturers of Fishing Goods in the world. All best goods bear our name and trade mark, and can be had of all respectable dealers. Exhibition Awards—Gold medals Paris, Berlin, Wursburg. Highest Awards at Sydney, Toronto and South Africa. Special Prize of Honor, Wursburg, 1880.

TO ANGLERS: JOHN ENRIGHT & SONS, Fishing Rod & Tackle Makers Castle Connell, near Limerick, Ireland. Reels and Lines to match balance of rods. No agents. All information respecting fisheries on the Shannon in this locality, as also catalogues of our greenheart rods and general assortment of tackle, to be had on application.

BIRDS' EYES. Birds' Skins, Taxidermists' and Naturalists' Supplies. Send for New Price List. Reduced Rates. W. J. KNOWLTON'S Natural History Store, 168 Tremont St., Boston, Mass.

Hornbeam Rods A SPECIALTY. W. HUNTINGTON, WILTON, CONN. Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-dancer should have one of these rods, for whatever preference he may have those are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON, as above. \$5 to \$20 per day at home. Samples, worth \$5 free. Address, STINSON & CO., Portland, Maine.

Last Issue of Forest and Stream Contained:

Table of contents for the last issue of Forest and Stream, including sections like 'EDITORIAL', 'NATURAL HISTORY', 'GAME BAG AND GUN', 'FISH CULTURE', 'THE KENNEL', 'RIFLE AND TRAP SHOOTING', 'YACHTING AND CANOEING'.

THE NEW YORK Commercial Advertiser.

THE LARGEST EVENING CIRCULATION OF THE THREE-CENT DAILIES.

Office, 126 FULTON ST., NEW YORK.

THE FISHERMAN'S Automatic Reel. New in its construction and effective in its working. In size, weight and general appearance does not differ from ordinary reels. With its aid the sportsman can capture fish so slightly hooked as to be entirely beyond the control of any other reel. For descriptive circular, address LOOMIS & PLUMB, manufacturers, No. 1 Oneonta County Savings Bank Building, Syracuse, N. Y.

Hornbeam Rods A SPECIALTY. W. HUNTINGTON, WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-dancer should have one of these rods, for whatever preference he may have those are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON, as above.

BOOK OF THE BACK-BASS COMPLETE SCIENTIFIC AND LIFE HISTORY, FULL INSTRUCTION IN ALL THE MODES OF ANGLING AND FLY FISHING. A DETAILED ACCOUNT OF ALL TOOLS, TACKLE AND IMPLEMENTS, Fully Illustrated. BY JAMES A. HENSHALL, M.D. In Press. Ready in May Large 12mo. 400 pages, price \$3.00 (PUBLISHED BY SUBSCRIPTION.) For Prospectus or Particulars Address DR. J. A. HENSHALL, 32 Wesley Ave, Cincinnati, Ohio.

BROWN'S PATENT GUN CLEANER. Cleans and Oils For Breeds-loading Arms. For One Dollar, one Cleaner, Patches, Brushes and full directions sent free of postage. Write for circular of price, 11-20-80. Address, T. YARDLEY BROWN, Paterson, N. J.

EASTWARD HO! or, Adventures at Rangely Lakes. A capital story of sport and adventure in the wilds of Maine. Interesting alike to old and young. Has received the highest commendations from the metropolitan press. Handsomely bound in cloth, and contains 576 pages, 6 illustrations and 12 maps, possessing on receipt of price, \$1.00. CHARLES A. FARRAR, Jamaica Plain, Mass. SEND FOR NEW CATALOGUE. Vanderbilt Bros., 22 Fulton St., N. Y.

FINE ELLES. Send for catalogue to C. F. ORVIS, Manchester, VT. THREAD-WOUND, LONG-RANGE SHOT CARTRIDGE CASES For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of breech, giving close pattern and great penetration. 10 and 12 gauge. Send for circular. 20 Sent, Post-paid, for \$1. H. H. SCHLEBER & CO., Rochester, N. Y.

Eaton's Rust Preventer. FOR-GUNS, CULLETRY, AND SURGICAL Instruments. Safe to handle, WILL NOT GUM, and will keep in any climate. Sportsmen everywhere in the United States procure it at the best price in the market. Judge Holmes, of Bay City, Mich., writes: "It is the best preparation I have found in thirty-five years of active and frequent use of guns."

The trade supplied by sole manufacturer, GEO. B. EATON, 546 Pavilion Avenue, Jersey City Heights, N. J. Sold by principal New York dealers, and by Wm. Reed & Sons, Boston, Mass.; E. H. Cressler & Co. Cincinnati, O.; E. B. Eaton, Chicago, Ill.; Brown & Hilber, N. Louis, Mo.; Thos. W. Parr, Newark, N. J.; Trunk & Kellbacker, Baltimore, Md.; Cropley & Sons, Georgetown, D. C.; Jos. C. Grubb & Co., Philadelphia. CANNOT BE SENT BY MAIL.

FOREST AND STREAM

ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

(Entered According to Act of Congress, in the year 1881, by the Forest and Stream Publishing Company, in the Office of the Librarian of Congress, at Washington.)

Terms, \$4 a Year. 10 Cts. a Copy.
Six Mo's, \$2. Three Mo's, \$1.

NEW YORK, THURSDAY, APRIL 21, 1881.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, April 21.

LOCAL NAMES OF FISHES.

A CORRESPONDENT writing from Augusta, Ga., says: "Your correspondent, 'Bucksfoot,' as well as yourself I think are mistaken in the name of the 'red-breasted perch.' It should be called 'bream.' It is very plenty in all Southern waters, and a gamey fish to catch, and delicious to eat when fresh caught."

This well illustrates the confusion existing among common names. We knew of the name 'bream' being applied to the fish in certain sections, but did not give it because we do not wish to extend that error. There are no bream in America. That is, if the fish which is so-called in England for centuries past has a right to the name by priority. The fact is, as has often been stated, that English names have been misapplied to American birds, fishes and mammals which have not the slightest resemblance to the originals bearing the names. The English bream (*Abramis brama*) is a fish with soft fins, a cyprinoid, nearer to the "fall-fish," "corporal," chub (of the North) and "shiner," whose only resemblance to the Georgia fish is in its outline; and that is not a very close one. The misnomer is as great as the application of the name of "salmon" to a pike-perch in the Susquehanna, Ohio and Upper Mississippi rivers, or that of "trout" and "chub" to the black bass in Virginia and Southern waters. The names bream, salmon, trout and chub are pre-occupied in the language, and really belong to certain fish as much as "cat," "dog" and "horse" do to certain animals, and to those who know to what they belong it sounds just as outlandish to transpose them.

We thank our correspondent for calling our attention to this matter, as it serves as an excuse to lecture upon. There is much confusion arising from the application of names purely American applied to purely American species in different parts; and we do not feel warranted in the latter case in assuming that a certain one is correct because it happens to be the one which has been familiar to us from childhood.

For instance, between the names "striped bass" and "rock-fish," applied to the same fish North and South; "bluefish" and "tailor," etc. These are commercial fishes, and as the great market is New York the names in use in the markets there will probably prevail, because the buyers use them.

Now to the fish in question: "Bucksfoot" wrote of "red-breasted perch," and described its colors and sharp dorsal fin-rays; and as we always like to make it clear what fish our correspondents mean, if we are sure that we can do so, a foot note was added in which we said: "From our correspondent's description this red-breasted perch is evidently one of the many fishes which are variously known as 'sun-fishes,' 'pond fishes,' etc. It is probable that it may be Jordan's 'bloody sunfish,' *Xenotis sanguinolentus*." We have fished in waters North, South, East and West, and have picked up an extensive vocabulary of local names applied, or misapplied, to many fishes. In the North the name "bass" is applied to many fishes which become "perch" in the South. Bass is a corruption of the Dutch *Barach* for perch, and therefore the two names stand on about an equal footing. The Northern angler knows only two "perch," the white and the yellow. The former is a tidewater fish; and the latter is common to all fresh waters except cold trout streams, and is the "raccoon perch," "barred perch," etc., of the South, where the yellow ground color of the fish did not attract so much attention as the dusky bars on its side. The Southern angler has many "perch," which often includes all the "bass" of the North, the "black bass" becoming "black perch" in parts where it is not a "trout," chub or welshman. But what shall be the name of our so-called red-breasted perch? "Bream," no matter how dear to the heart of the Georgian from old associations, is pre-occupied by a fish as widely different as a hedgehog differs from a rabbit, and therefore is not available. "Red-breasted perch" is descriptive, and there seems no objection to it. If this particular species, which belongs to an extensive family, which in some form inhabits all the ponds and warm streams east of the Rocky Mountains, were caught by a Massachusetts angler, he would christen it a "red-river," a man from New Hampshire would say "Here is a red-pond fish," while one anywhere from New York to Iowa, and along that line north and south, would immediately call it a "red-bellied sunfish," which Prof. Jordan has crystallized into "bloody sunfish."

Now to a few scientific distinctions: The family *Centrarchida* (centron) a spine, arches the anal opening, from many spines in the anal fin, or fin just behind the opening), includes not only many species but also many genera. They are all short bodied, flat sided fishes, quite rounded in profile. They have but one dorsal (huck) fin, which has both hard and soft rays, a large anal fin with three to nine spines according to species. There is usually a black spot at the end of the opercle (gill cover), which sometimes lengthens into a flap which projects some distance over the side of the fish. The family includes the black bass, the warmouths, rock bass, goggle eyes, red eyes, etc., as well as forty or fifty more species which are quite local and have different local names, but from the usual bright colors, in which red and green are usually prominent, they are widely known as "sunfishes." The name sunfish is also applied to a great marine fish not related to this family, whose body is flat sided, round as a cart wheel, and has the appearance of having no tail. And so the common names go. It is often impossible to tell to what fish a man refers, unless one is exceedingly well posted in the changes which are made in the names in every State or county in the Union. It is sad, but true, and it will take long to better it, so strong is local prejudice, even with the help of widely circulated papers like the FOREST AND STREAM and the reports of the Fish Commissioners, some of whom have tried hard to overcome the use of names which are palpable misnomers, but which people generally stick to after they know them to be so, because it is really difficult for most people to change a familiar for an unfamiliar name.

N. A. K. C. MEETING.—Mr. P. H. Bryson, president, has called a meeting of the National American Kennel Club at the American Institute Fair Building, on Wednesday, the 27th inst., at eleven A. M., to take action on such business as may be presented. The room for the meeting is furnished through the courtesy of the Westminster Kennel Club.

RIFLE PRACTICE VS. ENCAMPMENTS.

FROM being the leading State of the Union in the matter of militia rifle-practice, New York promises to become of the worst conditioned. The notion seems to possess the Adjutant-General that he has only to pass strict martial laws, and the volunteers of the National Guard will at once come up to the requirements. The fact that the members of the State militia never intend to do more than give their leisure time to soldiering does not seem to enter into the calculation of the officer general, who has shown thus far only a facility in throwing matters into discord. In rifle-shooting the evils of the present ill-advised system are specially patent. In place of having the citizen soldiers visit the range at their convenience and for the sole purpose of perfecting themselves in butt-firing, there are to be official encampments, where the men are supposed to learn something of camp duty at an expense of several days taken from business, and in connection with these brief episodes of tent-life there are to be intervals of practice with the rifle. The fault of the system which we have had for several years past was its wastefulness. There was a waste of labor, of material and of time. A regiment as a whole was ordered to Creedmoor or any other of the State ranges and set at work blazing away at the shortest distance. There was none of the gradual promotion from the instruction of the company drill-room, where the manipulations of the rifle and position were to be taught, to the opportunity of the range, where the varying influences of distance, light, wind and moisture were to be mastered. The results under the old system were not as great as they should have been, yet something was accomplished, and to-day we have in the ranks of the ten thousand national guardsmen in and about New York City scores and hundreds of marksmen whose performances would compare favorably with the sharp-shooters of any army of Europe. To cease practice now would mean the loss of those experts as they gradually go into the ranks of the veterans, and it would mean also the loss of the instructions by example which these marksmen are able to give to the new recruits in the guard. All that has been accomplished in ten years of careful cultivation of rifle practice by the National Rifle Association in connection will be lost by a few years of this repressive policy, and Gen. Townsend must be prepared to take the strong talk which will follow the placing of the national guard on its old basis of mere tactical knowledge; and while an enlightened policy would be looking to a change in the arming of the men to bring them up to the latest developments in rifle construction, the object of the present regime seem to be the rehabilitation of the old pompous packages of gold lace and uselessness. If our soldiers are not to shoot then we might as well buy up a lot of old army muskets at old-iron rates, for, with a little scouring, they will glitter very nicely on parade. But if we are to have a force of civilian soldiers, ready for any emergency, then we want not only the best arms that our inventive genius can devise and our armories turn out, but with efficient instruction in the use of them, so arranged as to bring out the best results with the least inconvenience to the volunteers.

THE PROTECTION OF BLUEFISH.

UNDER the provisions of the proposed law now before the Legislature of New York it will be unlawful to offer for sale bluefish weighing less than three-quarters of a pound. This clause has been the subject of some verbal criticism among the professional fishermen of Long Island, who claim that as there is no such law in other States all the small bluefish caught will go to other markets, and that these fish are caught by them in great numbers and are a great source of revenue. The anglers claim that often there is nothing else to be caught except bluefish under the weight named.

The facts, as they appear to us, are that there is little in protecting this fish in any manner. It is a bold, fearless and aggressive fish, which breeds freely in our waters and is abundantly able to take care of itself. It is a scourge and a terror to all other fishes which may be smaller than itself, and while the bluefish seem in no danger of decreasing it is a belief of ours, seconded by many fishermen and anglers, that their decrease would be fully supplied by an increase in weak-

fish, Spanish mackerel and many other fishes equally valuable. The fact, as developed by the inquiries instituted by the United States Fish Commission, is that the bluefish is increasing in numbers notwithstanding the enormous yearly captures, and that it is in no danger of extermination, nor even of diminution. It may seem odd to some of our readers that FOREST AND STREAM should look with disfavor upon a clause which proposes to protect a valuable fish, for our voice is usually for protection to all such, but the bluefish is a peculiar fish. It came as a stranger to our shores about fifty years ago, and after a year or two of trial took its place as one of our finest table-fishes; and not only did it establish itself here, but it has steadily increased in numbers at the expense of other fishes, which are decreasing, until it is an open question if it would be a loss to our food resources if the bluefish should depart forever, for then other fishes, relieved from the presence of this ichthyic tiger, could propagate in peace. All who know the bluefish well know that it slays after its appetite is sated, and often rushes into a setnet of menhaden and bites large pieces from their bodies, which its gorged condition forbids it to swallow.

If the law passes, it means an end of "snapper fishing," that sport of the juvenile which takes the family to the seaside; and if the fish is to be protected at all, it seems to us that a quarter of a pound is a better limit than three quarters. A bluefish of the latter weight is quite a respectable fish, and while not in much demand at hotels is largely sold to the family trade in New York bringing sometimes twice as much per pound as its larger brethren; but if there is a fish in our waters which can better do without protection, or about whose actual benefit to our food supply there may well be differences of opinion, it is the fish with stark-like habits of destruction known in the North as "bluefish," and in the South as "tailor," but whose full name is *Pomatomus saltatrix*.

EVENING IN CAMP.

THE day was one of abundant satisfaction. It could not have been improved upon had it been made to order. We had spent it with Nature, listened to her voice in the babbling brook and in the echoes that came rolling down the mountain sides, and had seen her face in a multitude of varying expressions, rough and sturdy in the gnarled and knotted trees and in the jagged rocks, bright and smiling in the quiet lake, joyous and laughing in the hurrying stream, modest and timid in the creeping vines and wild flowers, and radiant in the hues of sunset. In purple and gold and crimson the sun went down, and following came the gray of evening, and that in its turn melted into blackness.

Our shanty was a jewel among shanties. No temporary affair was it, hurriedly constructed to afford some belated sportsman a resting-place for a night, but one put together carefully and with full attention to details. A spring of water near at hand and a wood pile all around furnished a supply more than equal to the demand for those necessities. There was a back round of precipitously rising mountains, and a stone's throw in front was the lake whitening beneath the rising moon. Rods are placed safely aside, wading shoes kicked off, dry clothes put on, and wistful glances cast toward the preparations for supper.

The coffee pot was singing a solo for tea, the frying pan was hissing the song and putting golden brown touches on the trout, while the big kettle seemed to be bubbling over with light-hearted merriment and potatoes, and occasionally betraying a desire to throw water on the performance; and the odors that commenced to titillate our nostrils announced that four hungry men would soon have little cause for complaint. It makes one fierce as a wolf this missing of a mid-day meal, but it's well worth the missing if you are casting your lines where the trout sport with matchless grace and activity.

Appetites seemingly insatiable were satisfied with the quality and quantity that had been prepared and the pleasant, jolly evening around the camp fire commences. It may not last late, for the angler, while suffering no real sensation of weariness from his day's tramping and fishing, may perhaps have a feeling of being healthily tired, yet will not forgo for an hour the story and song and the after-supper smoke. He counts it as a very important factor in his sport when, glowing and pleasant in the ruddy glare of the camp fire, every face beaming with cheerfulness, comes the evening's reunion—a glorious lassitude.

Carlyle's precept, "Speech is silver; silence is golden," will not content him in holding his tongue. Speech by the camp fire is golden. There one wants a fellow to talk even though he says nothing. The brilliant flashes of wit may be very obscure, the choice morsels of wisdom seldom half done, and where well done spoiled in the cooking; but let them have free play. They help to frighten away the blue devils if there are any lurking about the camp. They can't bear the sound.

And then the smoking! No cigars, but the choice old pipes, next to the rod and reel the most indispensable articles of the angler's outfit. The shanty is fast filling, and we are soon enveloped in clouds from the fragrant weed which are peculiarly odorous and refreshing. The nicotine of civilization mingles best with Nature's oxygen here in the woods, where the air is laden with balsamic odors. It makes one's tobacco the more enjoyable, and improves the balsam of the forest.

And then the singing! The far-away hills reverberate our

songs and return our choruses in trembled sounds. Now and then the crickets crowd in a word edgewise, but seldom or even they heard, incessant talkers though they be. The sweetness of the music would be heightened by distance, and the greater the distance the sweeter the heightening. Revival hymns, campaign choruses, songs of love and war are irredeemably mixed and commingled with the monotonous refrain of the crackling fire, the sighing breeze and the chirping insects. It would make the average midnight serenade close his music-box and "sleently steal away."

The stories are told; the songs, thank Heaven, are finished; the pipes are empty; the night fire replenished. Read the Riot Act and disperse the crowd. Metaphorically speaking, we go to roost, and balmy sleep needs no more earnest wooer than the man who has angled from rosy morn till dewy eve. MILLEARD.

ANIMAL LIFE AS AFFECTED BY THE NATURAL CONDITIONS OF EXISTENCE, by Carl Semper, Professor of the University of Wurzburg. D. Appleton & Co., New York. This is a volume of the International Scientific Series, and, like its fellows, is very fully illustrated. Prof. Semper writes in an attractive style, clear in expression and profuse in illustration, and his book may be read with pleasure by any one at all familiar with zoology. He thinks with Jaeger that "enough has been done in the way of philosophizing by Darwinists, and that the task that now lies before us is to apply the test of exact investigation to the hypothesis we have laid down," but at the same time acknowledges its difficulty. It appears to him that of all properties of the animal organism variability is that which may be fit and most easily traced by exact investigation to its efficient causes. This is no doubt, the subject around which the strife of opinions is at present raging, and therefore one of general interest. The author has collected a wealth of material which he compresses into a digestible form and presents it in a manner to show its fullest significance. His freedom from dogmatism may be seen in his frank admission that "in all zoological investigations, as in almost everything else, a certain influence may be detected which may be termed the person element."

The book is filled with his instances of the influence of changed conditions upon animal life, taken from his own and the investigations of others, and the variability of life in different situations seems to the author to be a vulnerable point in what is known as the Darwinian theory. He treats the subject very fairly and makes no claim to have pierced this point, which he only suggests exists, nor that he has by any means exhausted his subject—but he seems desirous of indicating paths for others to follow. He tells us that Darwin showed the possibility of discovering the path which nature struck out in order to produce her endless variety of animal forms, and of detecting the means she has employed in her task; and that under the influence of Darwin's views zoologists have begun to inquire into the true and natural affinities of animal types by the studies of comparative anatomy and embryology. They at the same time began to devise genealogical trees for the different groups, which is where the personal element comes in and renders the pedigrees doubtful.

Prof. Semper inclines to believe that the conditions which affect animal life are not of as great importance as have been attached to them, and claims that Darwin has partly modified his views on this subject. At times our author draws distinctions which require not only constant attention to enable the reader to follow him, but also a train of thought which may be called profound, such is his separation of the physiology of the organization of an animal from the physiology of its organs. Each chapter contains the conclusion which the author arrives at: "That no power which is able to act only as a selective, and not as a transforming influence, can ever be exclusively put forward as the proper efficient cause, *causa efficiens*, of any phenomenon." Among the influences which he considers as influencing animal life are food, light, temperature, stagnant water, a still atmosphere, water in motion, (currents as a means of extending or hindering the distribution of species, influence of other conditions of existence, influence of living surroundings, and the selective influence of living organisms on animals, each of which is treated of in an entire chapter.

THE BERLIN MEDALS.—The medals and diplomas from the International Fishery Exhibition at Berlin have arrived at Washington, and have been delivered by the Secretary of State to Prof. Baird for distribution. Those intended for the vicinity of New York will be sent to Mr. Fred. Mather, of the FOREST AND STREAM, where their owners can obtain them. The diplomas are beautiful, as we have seen, and the cuts of the medals which we have published show that they also must be elegant.

A NEW EDITION of Westwood's "Bibliotheca Piscatorum" is ready for the press. We have received proof-sheets which show that it will be a most valuable record of all books on fishing and fish culture in English and other languages from the earliest times to the present, with occasional notes on their value, etc. An instance of the thoroughness of the work is shown in the fact that twenty editions of Dame Juliana Berners's (or Barnes) "Boke of St. Albans" are given, dating from 1486 to 1880, and the notes occupy as much space as in two columns of FOREST AND STREAM. The new edition will contain much fresh matter.

The Sportsman's Tourist.

SPRING ONCE MORE.

HARK! The blue-bird sends its carol
To the whiter-weathered air,
And the lark-land red-breasted robin,
Yells its awfully it is here,
Sings the tree-freer, happy bracket,
Or its best of pebble stones,
While Old Winter, his faint death song
Thro' the pines and birches moans.

Hang the bells and robes of wof's skin
In the darkened loft away;
Swing the skates and steel-shod coaster
Up above the land-up sledge;
Get your ezel and mussy in-shook
Down and lock them kindly out,
And those rods all grim and unsly
From behind the sanctum door.

For in the Forest, on the Stream,
Phosphyre waives the knighly band;
Those who worship God in Nature
Know His great creative hand.
Hear His music in the waters,
Find His shadow in the clouds,
And a pleasure, quiet, holy,
Never known to Fashion's crowd.

Brother sportsman, Spring comes blushing
Like a maiden to Fashion's court,
Sod and treading, clad with flowers,
Full of sweet and soft alarms;
Let us up and ready to be
With our guns and rods in hand,
Thankful for the health that this is
For the forest and the stream.

Eagle's Nest, March 22, 1881. NED BENTLEY.

THE WHITE BUFFALO COW.

"A P-WE-CUN-NY," said Pe-nuk-wi-um to me one evening when we were camped near Black Butte, "the young men say that there is a white cow in the land of buffalo below here. A white cow! The words sent an electric thrill all through me, for I unconsciously passed my hand along the barrel of the carbine which lay close by my side. A white cow! One of those rare albinos, so rare that among thousands upon thousands of buffalo I had never seen one of them. For a long time I had hoped to come across out of these animals, but as time passed and the buffalo kept decreasing in number, I finally concluded that I would never see one. I unconsciously passed here was a chance. A white cow was close by, and I determined to kill it or kill my horse in the pursuit."

"Pe-nuk-wi-um," I said, "let us 'unake medicine,' and you tell the sun I want to kill that white cow."
"Al, that will be good," he replied, and accordingly unwrapped the sacred "medicine-pipe," filled and lighted it, and blowing a few whiffs toward the sky and the ground, repeated the following prayer:
"Oh, Sun, Oh, World-maker. Take pity. Not far off a white cow stops; it is with many buffalo. Take pity. We are not strong. You are strong. Long ago you went behind the mountains. Be quiet and get up early to-morrow morning. One white man stops here. His name is Ap-we-cun-ny. Take pity. Give him *Xa-ye-ye* (that of the sun). Give his horse *Yi-ye* so that he can go on the white cow. We will not eat it. We will tan the robe and hang it in a tree. The robe we will give to you. I have said."

As he concluded and passed me the long pipe I asked him why he would not eat the meat of the white cow. "Because," he replied, "because the sun owns the white cow. He sends it from way off in the sky. It is his and we must not eat it. We must give him the robe. We must tan it soft and white and hang it up where he can see it. Then he is glad."

Taking down a yellow and red painted "medicine sack," which hung over his head, Pe-nuk-wi-um emptied its contents into his lap—queer stones, little fossilized snails, etc. Singing out one perfectly round pebble he gave it to me, saying, "Take it. I give it to you. It is the sun's, and we call it a buffalo rock. When you see it in your horse will not fall; you will shoot straight; you will kill the white cow."

Of course during all this I kept a perfectly grave face. For it is only by seeming to believe that a person can get an Indian to talk on these subjects. I had been so successful with Pe-nuk-wi-um that he thought I believed in his religion and legends as much as any one of his tribe.

"I think you are wrong," I said after a long silence, "tell me one short story and then we will go to bed."
"All right," he replied; "I will tell you a short one about the Old Man (Old Man: a mythical person who forms the chief subject of Blackfoot legends). Once the Old Man was taking a walk. It was night, but the moon and stars were all looking down, so it was not very dark. When crossing a little prairie he heard music, which seemed to come from a hole in the ground. 'Ha! Who can be in there, I wonder,' said the Old Man to himself, and looking in he saw a multitude of mice having a war-dance, some of them beating drums and others dancing about the fire singing and brandishing spears of grass over their heads. 'I would like to dance with you,' said the Old Man. 'Come in, come in,' replied the mice. 'I poke your head one way and another and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now all of you sit down and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said

with antelope hair and devoid of stirrups—a buffalo runner wanting no such death-traps to entangle him in case of a fall. Soon the horses were driven in, and singling out my favorite I bid the woman saddle it. "Saddle a horse for me," said Pe-nuk-wi-un in his own way. "Yes, you will, by the white cow," he said. "It is going to kill the white cow," I remarked. At this there was a general laugh, for Pe-nuk-wi-un is so heavy that the best horse in camp could not carry him and run a hundred yards. "No, no," he replied. "I am only going to the top of the hill where I can see Ap-we-cun-yi shoot the white cow." By the time we were mounted all the rest were ready, and together we started out toward the herd. Some three hundred men were to run that day, many of them as determined to kill the white cow as myself. When they saw me they looked disappointed. "Are you going to run?" said some one to me. "No," I replied. "I am afraid to run after the white cow." At this they brightened up considerably, and in less than five minutes the whole party understood that Ap-we-cun-yi, who had the fastest horse in camp, was only going to look on. Pe-nuk-wi-un, riding by my side, laughed, and quietly remarked that my horse might run away with me.

As soon as my rifle was come in sight of the buffalo, which were feeding on the edge of a high level prairie. A convenient "cutline" ran along close to them, and entering it, we carefully approached the herd. Arriving within a hundred yards of them, we slowly climbed the hill, and then the horses, catching sight of the buffalo, made a simultaneous rush at them. Soon the firing commenced, many of the Indians having no hopes of catching the white cow and starting in at the outset to make a big killing. Way up at the top of the hill, I could see the animal, and, with about two hundred others, I started after it. Our horses seemed to fly over the ground. An occasional bill, coming too close, was dropped to clear the way. Past hundreds of shaggy, sharp-horned animals we rode, every nerve strained, and our hearts, scintillating in our throats, beating time to the thumper of a thousand hoofs. In the excitement we jumped ditches and mudholes which a moment ago we would never have attempted, but would have preferred to go several miles around. But no one thought of danger. Several horses fell, throwing their riders far over their heads. No one looked back to see if they were hurt. We were now within three hundred yards of the white cow. It was time to make a dash, and hitting my horse several times with a heavy rawhide "quirt," I soon left all my competitors behind. But I found that the white cow was no easy animal to catch. It was as if I was close in pursuit, and left the hand in order to run faster. For a time it despaired of getting close enough to shoot; but my horse, perceiving what I was after, redoubled his energies, and before long I was within easy range. Bang! The cow dropped, and as quickly arose and ran. Bang! She dropped again and arose, but this time stood still. Bang again! She dropped, and with a quivering, rattling gasp, expired. Disappointed, I unsaddled the horse to roll and rest. Then I inspected the cow, which I found to be like any other buffalo, with the exception of light, dirty cream-colored hair; but it was a white cow, and I had added another feather to my cap. After a time Pe-nuk-wi-un's women came up, and giving them charge of the animal, I resaddled my horse and slowly rode back to camp. The news had already arrived there, and I found the lodge full of men, waiting to hear the details of the run. Pe-nuk-wi-un was holding forth, talking excitedly of his feat, and of the big medicine. I was asked and the sun to give Ap-we-cun-yi the white cow. I gave him a buffalo robe, and he wore it in his shirt. Is it not so, Ap-we-cun-yi?

"Ah," I answered; "it is the truth. I knew I was going to kill the white cow. I heard a voice right over the lodge before I got up. It said, 'The white cow is Ap-we-cun-yi's—the white cow is Ap-we-cun-yi's.'"
 "I really said 'Ap-we-cun-yi' and 'no, no.'"
 "Hi, hi, hi!" muttered the listeners. "Skoon-i-taps Nat-o-yi, Ap-we-cun-yi."—Strong sun power Ap-we-cun-yi's.
 Ap-we-cun-yi.

Upper Marais River, M. T.

THE NORTH SHOULDER OF THE BAY OF CHALEUR.

A FEW lines about the fishing in the above locality, and you go to get to it, may be of some interest to your readers. The point to make for first is Campbellton, N. B., a station on the Intercolonial R. R. and the head of navigation on the Bay. Within a day's drive of here are the Notre-Dame and Escombre rivers, both famed for the number and size of their sea trout, permits to fish them being obtainable from Mr. John Mowat, fishery overseer at Campbellton. The best place to make headquarters at Campbellton is at the Royal Hotel, and the obliging host, Mr. Sproule, keeps a capital team and is an enthusiastic sportsman himself. An attempt has been made to stock the Nouvelle with salmon, but so far, I believe, without success, owing to the poaching propensities of the people living on its banks. To reach the streams further down the bay it will be necessary to take the steamer City of St. John, which leaves Campbellton for Gaspe Basin every Wednesday and Saturday during navigation. The trip between these points occupies about seven-teen hours.

After leaving Campbellton the first stopping-place is New Richmond at the mouth of the Grand Cascapequin River, indeed as a salmon river, but which, also, is reserved exclusively for the use of the Governor-General. A mile or two farther on the Little Cascapequin enters the bay. This is only a fair salmon river, but full of very large sea trout. It is not leased at present.

The scenery, which so far has been very beautiful, comparing very favorably with the Firth of Clyde in general appearance, now becomes very tame, and about halfway down the bay the steamer stops at Grand Bonaventure, at the mouth of the river of the same name. This is a large stream, leased by Mr. Donville, M. P., of St. John, N. B., but for some cause or other the catch of salmon has never been very large. After leaving the next calling places are New Carleton, the county town of Bonaventure, and Paspébiac, the headquarters of the large fishing firms of G. Robit & Co. and Le Boutillier Bros., the general hospitality of whose guests is well known to all salmon fishers who frequent this coast.

After rounding Point Macqueron the steamer turns into Port Daniel, a Scotch settlement situated at the head of a small bay affording good and safe anchorage. Here are two good trout streams which are not leased, and no permits are necessary to fish them. Very comfortable accommodations can be had at neighboring farm-houses at reasonable rates. Sixteen miles further the steamer passes the Grand Robeson River, a beautiful stream, full of salmon, and, in fact, a failure, owing to the extreme clearness of the water and the

skillness of the pools. It is, however, like all the rivers on this coast, a splendid trout stream. This river is leased to a Montreal gentleman. The Little Pabos comes west about six miles further. In this river are a few salmon and plenty of trout. It is not leased, and permits may be obtained from the commissioner in Ottawa.

Twenty-six miles from Port Daniel the steamer stops at Grand River, a considerable fishing village at the mouth of the river of that name. This is a capital salmon stream, as it has been well preserved for some fifteen years. It is leased by two gentlemen from London, Ont. Turning Cape Despair the steamer next reaches Force with its famous rocks. This is the county town of the county of Gaspé, and is one of the most picturesque spots on the coast. A twelve-mile ride from here brings you to the Malbaie or Barbois River, a fine trout stream, in which there are also salmon, though not until late in the season. It is not leased and permits can be had from Mr. Vibert, fishery overseer at Gaspé. Leaving Force the steamer reaches Gaspe Basin about midnight. The rivers running into Gaspe Bay—the Dartmouth, St. John and York—are all leased to American gentlemen. Leaving the question of sport out of the matter, the trip from Gaspe to Campbellton is well worth taking, the officer of the City of St. John most obliging, being quite willing to land you on any part of the coast you may wish, and there is a very comfortable boarding house in Gaspe Basin where a visitor in search of health can live almost in luxury and recruit his strength in as pretty a spot as can be found in North America.

VIATOR.

WHERE SHALL WE GO?

MANY thousands of hard-worked, over-worked men are at this time asking the above question. Merchants, lawyers, editors, clerks, mechanics, all are looking forward to a holiday next summer, and all want to make the most of it. To get away from the heated streets of the city for a few days or weeks only to come back with a sense of lost time and money, not to say of being swindled out of both, leaves a misery on the mind which there should be only a pleasant memory.

I am led to these remarks by a letter published in FOREST AND STREAM under date of Jan. 27, requesting "Nesmit" to indicate a pleasant and available route for a three weeks' excursion in the woods. The letter is from a Utica gentleman, who signs himself "H."

It was at Winmar Lake last season, and seems to have had excellent luck with the rod, but complains of land sharks, and did not find his excursion satisfactory. "H." took in too much civilization. Winmar Lake is private fishing ground, and you pay for your fishing or leave your fish at the "House." Don't do it! I would as soon go hunting tame deer as fishing in private waters. I want to go where the waters, woods, forest trees and mountains are free as the air I breathe; where I may fish, hunt, camp, paddle and cut timber, with none to molest or present me a bill.

I think I lay out a route that will answer and will not be too expensive, including a much-needed, and with care, free and fair fishing, as a reasonable man can expect. I suggest the Brown's Track, Moose waters. Go in by Bonneville, backboard line, to Moose River; from there to the Forge House by backboard, or foot it to Jones' Camp at foot of the Stillwater, and boat up the Stillwater. If you bring your own boat, and it is light, the latter route may be best, but it includes a heavy carry of over seven miles from the Tannery to Jones' Camp. The rest is easy. It is twelve miles up the Stillwater from Jones'; by the road it is thirteen and one-half miles to Forge House, foot of Fullon Chain. The first two miles, from the Tannery to the Herkimer County line, is the most excruciating road I was ever on—or in—for it was between wading and swimming last summer, although \$200 would have made a decent road of it; but the Peckensiffs who had charge of road matters refused to lay out a dollar for a better road. The rest is easy. They spend the county funds to accommodate pleasure seekers, ignoring the fact that there was a constant influx of visitors, who all left money at Bonneville and Moose River; that these visitors kept up the Backboard line, and consumed the supplies that were constantly going over the road to Brown's Track via the Forge House, the money all finding its way to Lewis County, and that the guides, landrods and others who operated in the Moose River country belonged for the most part in Lewis County.

Plucky little Charley Phelps who run the backboard line worked like a beaver to get his parties through comfortably. This he could not do, but he did get them through safely with their multifarious traps, with no other mishap than an unavoidable coating of Browns' Track mud, which was soon cleaned off.

The road from the Herkimer County line was better. Men were at work on it all summer, and eleven and one-half miles of the road might be called quite passable. The other two miles will be very different the coming season. Jolly, energetic Tom Nightingale, of the Moose River House, has taken the matter in hand, and he assured me last September that tourists coming that way in the summer of '31 should find a respectable road to the lakes.

If you go to the foot of the Stillwater by wheels you can hire a boat of one Barret, landrod of the Forge House. If by the way of Jones' Camp hire a boat of Jones. Once at the foot of the lakes with a boat the route is all before you where to choose. I should stop a few days on Third Lake. It was the pleasantest camp and the most desirable lake of the chain to my taste. It is a salmon lake, and there is good speckled trout fishing within ten minutes' pull of the landing. Also it is within a hundred rods of Fourth Lake, which is the largest of the chain (1,979 acres), and is reputed the best for salmon trout, while there are many spring-holes along the shores that give fly fishing. Within a mile of Third Lake camp, and on the north side of Fourth, is the carry to the North Branch lakes. These are lovely enough, and afford fine fishing with excellent camping grounds. A week in this region would be little enough. Opposite Ed. Arnold's camp on Fourth Lake is the carry to Big Moose. One may spend weeks on and around this lake without tiring of it. But it includes four miles of carries to reach it from Fourth Lake passing two of the Branch lakes, on which there is good floating as well as fishing.

Having done Big Moose and the intervening waters come back to Fourth, row up to Fifth, which is a pug-hole of ten acres, carry from Fifth to Sixth, three-fourths of a mile, and if you are late enough for carrying you can get two or three miles of it in an excellent way, but is sometimes overdone by floaters. From Sixth to Seventh, by boat, and you will find solitude enough on the latter lake to content a reasonable man.

If not take the carry on the North (two miles) for Little Eagle and Bay Lakes. There you may fish from the rocks in fifty feet of clear, cold water, and, by lying bait over night and fishing in the evening, catch speckled trout of three pounds or more, with but a fly. The bait must be brought from Seventh Lake, as there are no minnows in Bug or Little Eagle. Three or even six weeks might be very pleasantly passed on the rocks indicated, with such digressions as information gained on the way might suggest. There are many other lakes easily accessible by this route. I have mentioned those I thought best and easiest. Supplies may be had at the Forge House, at Third Lake Camp, or at Ed. Arnold's on Fourth Lake.

Third Lake Camp is being renovated and enlarged for next summer, and will be kept by Robert Perrill of Bourville, Ky., fly maker and dealer in fishing tackle.

Ed. Arnold will probably keep the Jack Shepard camp on Fourth Lake. His charges are very reasonable, his people kindly and attentive, and he sold supplies at lower rates than common. He also is a guide, and one of the oldest and best.

Sam Dunsink is another of the older guides and knows as many of the Adirondack routes as any guide I found there. Nearly all the Forge House guides are competent and faithful to their parties. Although I never took a guide and could not well do it, having a canoe with me that weighed only eighteen pounds, and that I would not leave behind, I found the guides intelligent, friendly and willing to give any information they possessed to one going through alone for the first time.

Last season there was a rush of tourists to the east side of the wilderness, and I found every camp and woodland hotel overcrowded. Also the Louisville route on the west side was well stocked with tourists, twenty being obliged on one night to seek lodgings in the barn at Fenton's (No. 4), on the Beaver. The only quiet section I found was on the waters of the Moose. I do not expect to find it so quiet next summer, but I can easily find all the solitude I want and all the trout I can use in the much desired Brown's Track.

NESMIT.

Natural History.

OUR UNIQUE SPOON-BILLED SANDPIPER.

[*Eurynorhynchus pygmaeus* (LINSX).]

THE U. S. Coast Survey party on board the schooner "Yukon," commanded by Mr. W. H. Dall, in whose company the writer made a voyage on the coasts of Alaska and Siberia last summer, was so fortunate as to obtain what is now the only specimen in any American museum of the curious little spoon-billed sandpiper. The skin is one of the treasures of the National Museum collection. Most of the great museums of the world are without it.

Up to the time of Nordenskiöld's voyage around the north coast of Siberia but twenty-four of these birds in all were recorded as killed; how many of them are preserved is unknown. We found great flocks of them, but unfortunately the bird was not recognized, only a few skins were secured. The great bulk of the birds having been served on toast without regard to their distinguished identity.

The form of the bill resembles that of the common spoonbill so closely that Linnæus referred his type specimen to the genus *Pelecanus*, yet the bird is related structurally to the *Tringas*, and appears like any common little sandpiper with the exception of its bill.

The habitat from "Cis." vol. v, 1869, in which is given a colored plate of the species; "Mouths of the Ganges and east coast of Bay of Bengal; Edmonstone's Id., Saugur Sand, Saugur Id., Chittagong, Arracan, Anherst in Tennessean, Amoy, Behring's Straits, N. E. Asia (Barrow teste Scatler)." The species, therefore, is known from the extremities of the Asiatic coast. The exact locality of Barrow's specimen is not known. It is, therefore, interesting to have the bird from a well-authenticated place. One was shot on the end of a sand spit on which is the Eskimo village of Port Providence, Plover Bay eastern Siberia; it was secured for us by one of the natives during the interval between our first and second visits to the Bay. On the same sand and gravel beach I shot *Aedonopus interpres* (?), *Pelidna alpina americana*, *Streptiles interpres*, *Squatarola helvetica* and *Heterosopus incanus*. During the months of August and September it is said that the spoon-billed sandpiper is occasionally seen on this spit and always about the same place.

While in Plover Bay on the return from the Arctic our bird was shown to Capt. L. C. Owen, commanding the steamer Mary and Helen. Capt. Owen at once said that the same bird was brought aboard his vessel by Eskimo at Point Barrow. As the bird is unmistakable, there can be no doubt that the species is a member of our Alaskan fauna, and Mr. Ridgway so recorded it in his recent catalogue of North American birds on the strength of the statement made to us by Capt. Owen.

It is to be hoped that some of the parties who are to be sent to Point Barrow may collect additional skins of this curious bird as well as information about its habits. It is only necessary to remember it as resembling some of our common little beach snipe, but with a bill shaped like that of a spoon-bill. TALENTUS H. BEAN.

U. S. National Museum, April 15.

WHERE THE BIRDS WINTERED—New York, April 15.—Your correspondent, John Neilson, Esq., of Quebec, one of the best informed ornithologists of Canada, in a late issue of your paper calls attention to the marked absence in all parts of Lower Canada of its customary winter feathered residents. As the weather there was not severer than in former seasons he fails to account for their absence.

Through the valuable reports of your many correspondents in the New England and Middle States I believe I can offer a satisfactory theory that will remove all cause for further speculation and set the matter at rest.

As we are all aware, the past winter in the States above mentioned has been the severest experienced for many years and the snow fall unprecedented. Attracted by this favorable condition of things the more Northern species of birds have been led to make a more Southern journey and residence during these congenial months of cold and snow. The various different species of birds observed along their distribution through the sections before spoken of irresistibly lead me to this conclusion.

I myself in my snow-shoe journeys through the forests of northern New Jersey noted several species supposed to be

quickly dispel such illusion. According to such a principle a locomotive detained by a rope and straining with all its force would shoot off at full speed when the rope was suddenly cut. Any one who has seen a tow line part on a steaming, or had a rope break on which he was pulling with all his might, knows that this is not so. These cases are, of course, not exactly analogous to the action of gravity which acts on every molecule at once; but they are near enough to it to cast a shade of doubt on "C's" position on the release question.

I am sorry that "C." did not take more time, for I think he could have thrown some light on the subject. He has evidently written hastily and with full confidence in the soundness of his position—a thing liable to make any one mistake the true point of any question. But I am much obliged to him for even attempting to answer it.

The questions are—

1. Can gravity instantly produce motion any more than any other force?

2. Can release be transmitted from molecule to molecule any faster than motion can be transmitted?

One word about Express bullets. "Edmund G. K." need have no fears about Express bullets "reducing the inside of a deer's lungs, blowing holes in his entrails, etc." Of all objections to bullets calculated to spare animals unnecessary suffering, to spare the hunter frequent loss of his game and more frequent work in securing it, none proves on trial more useless than the "spoil the meat" theory. Occasionally a deer is badly "missed." But take an average of five, and there is not half the spoiling there is with chasing a deer half a mile with a dog, letting him lie down an hour or two and get sick, or shoot two or three more balls into him. In a deer killed and dressed at once there is not half the meat bloodshot and otherwise spoiled than there is in the other cases. The difference in the amount actually cut away by a large or expensive ball practically amounts to nothing.

There is nothing probably in hunting about which as much waste has been written as the effect of Express and explosive bullets. Blowing holes in a deer's lungs, as if it were a snuff box, "nutrizing a wild bear's head" as if it were a puff ball, "Express shock" as if it were a bottled-up stroke of lightning suddenly let loose, etc., etc., are only the least of their marvelous imputed effects.

It is astonishing that it never occurred to "Col. John Hills, of the Indian Army," quoted by "Nemo," that the dashing of a ball by penetrating into the entrails, the size and shape of the hole is not that, it is, instead of velocity, and the shock of a ball depends more upon its momentum and striking surface than upon velocity. If any one will run back the files of FOREST AND STREAM and other sporting papers they will find just such wonderful bullets as Capt. Hills speaks of, condemned by other Indian hunters, and also by American hunters such as H. Batty, W. H. Franklin and others who, it is safe to say, know better than are talking about. Read Capt. Williams's experience with grizzlies in FOREST AND STREAM of two or three years ago and see his opinion.

The truth of all this is this: A ball that flies to flinders is far the best, provided it strikes the heart, lungs or kidneys. For those favored individuals who know how to make a deer nose for a shot and know how to pull the ball in "to the heart" every ball on the face of the earth, "at forty rods" etc., these balls are the best. But then for American game they don't need them. But "duffers" like myself, who have to take a shot just where they can get it who have to shoot at dark or brown spots in brush without waiting to see just where the heart is, who think they are doing tolerably well if they hit a deer at a long shot or who are running a deer, who have to take a deer as such penetration quite as often as the other kind. Essential as expansion is, penetration is in the long run quite as much so. Such a ball as Captain Hills describes in "Nemo's" letter would make complete minced meat of the heart or lungs of a deer, but if it hit him in the hunch or stern would not kill him in one-tenth the time a Winchester 73 bullet would do it, and in the present world of game it is as effective as if it fattened out and passed clear through without breaking. A ball that flies to powder will have no penetration where solid flesh or bone is to be met, and no amount of velocity will give it. To the penetration of all such balls there is a limit which cannot be passed any more than that of fine shot can. And this limit is a very short one too.

I think Major Merrill has made a mistake in his figures of trajectory. If he can get a ball to go into a deer at the highest point he could do more than I ever could. He says the bore of a rifle so sighted will point nine and one-half inches above the centre at 100 yards. Unless the rifle throws downward from recoil, as is often the case, this ought to carry it at least four and one-half or four and three-fourths inches over at fifty yards. That is just about the rise I have often found, and I have seen balls being about ten inches with long range ball fired on a level.

Instead of fifty-five yards the point of highest trajectory for 100 yards will often be sixty-five yards with some rifles, and even a little over. The highest rise of my heavy rifle, with round ball sighted for 100 yards, is about sixty-eight or seventy yards, and is three one inch, and only about one-half inch at fifty yards; this will globe sights about three-fourths of an inch above axis or bore.

For the plains a rifle sighted over is all right, but for the woods and bushy ground, especially for quick shooting, running shooting, or downhill shooting, or in the dim light of evening or early morning, or with the sun on an actual front sight one that overshoots four inches at fifty to seventy yards is an abandonment. Better sight every rifle level for all such ground, unless you know how to make your game strike a mark and wait for you to calculate your distance—a valuable art that, judging from their writings, many seem to possess.

T. S. VAN DYKE.

SPORT ABOUT SAVANNAH.

SAVANNAH, Ga., April 11, 1881.

DURING the winter months the waters around Savannah are fairly alive with aquatic fowl of almost every description, especially on the waters adjoining the rice plantations. Among the numerous species are the canvas backs, mallard, wildgeon, ruff-blue and green-wing teal, hard heads, bald pates, butter-bell, and a variety of other snipe ducks. The most successful way of hunting them, in fact the only way (except by shooting), is to have a duck boat about 13x4, decked all over, save a cock-pit in the middle, and on the main deck a blind made securely of rice straw and cane tops. You sit behind this, and with your oars push the boat forward until you spy your game in the distance; then you take in your oars and lie on your left side, and by the use of a long

snell net that goes through a small hole in the stern you can snort right in their midst, especially in the early part of the season. Looking at the boat coming toward you it appears to be an old snipe or bunch of trash floating down with the tide. The boat can be bought at a cost of from \$25 to \$75. In the early part of the season I bought a fine one of white cedar for \$65, also a large 5-gauge duck gun weighing 20 lbs., together with a small breech-loader for cripples. Repeatedly during the winter I have been out with my snipe net and waters around the city with from 100 to 200 ducks of various species. The best waters are "Lonesomony," "Knockborough," "Union," "Collis," "Abeveron," and "Fife-maker" creeks, also the back rivers, which are too numerous to mention.

The most successful hunt I had this winter was about the 30th of January. I put my duck boat on the steamer "W. T. Wheelers," which plied between this city and Augusta, and went up the river as far as "Parachuckie," about seventy miles from Savannah, and sculled all the way back, taking in a number of lakes and creeks, arriving in the city again on Friday evening after a hunt of about two and a half days. I bagged sixty-five mallards, twenty four summer ducks, a few mall, eight wild turkeys and a small dove. Before reaching the city I had to take out my net gear and stop the snell hole to keep the water from running in my boat, it was so well loaded. One or two of the numerous professional gunners around here make a very fine living at it. One especially, a Mr. Westcott, who realizes, at his own account, from \$2,000 to \$2,500 for six months, and I don't doubt it, for I have seen specimens of his success myself.

Some of the best snipe hunting every winter to hunt for a living, but soon gives it up, the majority of them know nothing of the way to get it, to say nothing about the skill in manipulating the boat, and are totally ignorant of the waters, which is a very great item in successful duck shooting.

In the spring there are thousands of snipe in the low-lands, especially when the ground is wet from rains or a heavy dew. Myself and several other sportsmen of the Chisholm's plantation, and would have got more had our ammunition not given out. Quail are not so numerous in this immediate section, but a little higher up the country they are as thick almost as blackbirds. My dogs have repeatedly found eighteen and twenty covies in a day in Jefferson, Burke or Richmond Counties, and in those counties they are as thick as blackbirds. As the shooting ground is excellent and one has no excuse to miss a bird on ordinary occasions. The birds rise in old broom sedge fields, where there are a few young pines and stubble, also on the margins of the numerous little ponds in that section. With good dogs and a little knowledge of the country a good shot can bag easily from 75 to 100 birds in a day's shooting. It is best to hunt on horseback, as you can get over more ground in less time. I always find the best, and never hunt a quail any other way. You can very easily jump off your horse when your dogs "come down" if you don't wish to shoot them from the saddle.—K. W. A.

SPORTING SCRAPES.

THERE being a dearth of sporting news in this immediate locality, bar being rabbit hunting, of which there is considerable, with fair success, it occurred to me that possibly two or three incidents which helped to embellish and relieve my rather monotonous bird life in the country, might be of interest, and at the same time a warning to some of your youthful readers at my rate.

By the way, that life must be an exceedingly stupid one which was not its ludicrous side, and that mind dull of perception which cannot discern and enjoy the ludicrous as it crops out now and then, here and there, in speech and act.

Our nearest neighbor was a tanner. Through his name was Washington Barclow, a name very milks that of the Civil War farmer which has become so illustrious, yet by trade he could claim a sort of relationship to him, and by name to the Father of his Country. His son William and myself were about the same age. We had arrived at that delectable period in our boyhood when we were allowed, by the very reluctant consent of our parents, to handle firearms a little. Hence we used to practice our wooding together with an old fire-lock, hitting the bulls-eye over an twenty times at short range. His father was a good marksman and a fair huntsman.

His theory was, and he conscientiously practiced it, that all game should have a chance for its life; it should be taken in motion, either on the wing or on foot. A righteous theory, surely, and one which every true and honorable sportsman would heartily endorse. I have only to add that any one can find sport in stealthily crawling up, on a sitting rabbit for instance, and riddling it with shot. To my mind it is belittling to one's manhood. If it is not criminal, it is inexcusable butchery. It smacks somewhat of the "stab-man-behind-his-back" principle. It is anything but fair, and as for the fun and fancy that there may be in the game, it is far in going out alone in the woods, pinning a white patch against a tree, and shooting at that. I did not think so when I was a boy. In boys, still shooting is tolerable, but not in men. Men are supposed to have outgrown the crude ideas of their boyhood, many of which savor largely of folly. I went out for rabbits Monday afternoon with a boy who was old enough and had hunted enough to know better. Though I had never seen more than the plain back barn, I happened suddenly on a rabbit, he jumped on him with his great cow-hide boots, instead of giving him a fair chance and shooting him in a sportsmanlike manner. He seized him by the hind legs and dragged him out from underneath his big feet, when I insisted that he should let him go and get him alone fairly, or not at all. He let him go, and then disappeared. I went on for some time, and then I found that one of his hind legs was badly broken, and the boy then told me that he had that jumping on him, and that was the reason why he let him go, for he thought that he couldn't get away anyhow; but even with his three legs he would have made his escape if the boy had been alone.

The unfeeling youth I describe here, who in the plain language of a sportsman, and I sincerely trust that no boy or man that may read this will ever be guilty of such a mean, unprincipled deed as that was. A great deal of game is never killed outright, where it is in the power of the sportsman to do so, but is miserably tortured to death, inch by inch, as if the game possessed no more feeling than the hearts of those who thus butcher it.

Apologizing for this digression I return to the episode with my neighbors. One cold, crisp January morning I wandered

back to an old well on the farm, two fields away from the house. The well was almost full to the curb with water, and as I looked over the curb into the well I saw a rabbit floating upon the surface. It looked as if it had not been in there long, so I climbed the curb, reached down into the well and took him out. He was very quite lumber. Right behind our house and barn there was a young peach orchard. I brought the rabbit down to the orchard and set him up as nicely as I was long enough to point to the tree where the rabbit floated. He looked as natural as if he had been a rabbit floating to our neighbor's boy that there was a rabbit in the peach orchard behind the barn. He ran for his old flintlock, but when he emerged from the house, his father was with him armed with his own fowling-piece. I saw that my game was up. However easily the boy might be fooled the father could not be into shooting a dead rabbit. I stood my ground, however long enough to point to the tree where the rabbit floated. Mr. B. cocked his gun and, true to his theory, began to approach the tree nearer and nearer, waiting for the rabbit to leap forth. And somehow, curious as it may seem, the nearer he drew to the tree the further away from it I got, until, as he placed the end of the barrel underneath the rabbit and tossed him out from the tree a lifeless carcass, I stood behind the tree, my eye being behind the sight around the corner at the cool performance. Such a fine cool performance as burned in the orbs of that man and his son as they turned to look for the little practical joker was enough to squelch forever any boy of ordinary grit. For a long time thereafter it seemed to me the better part of valor to keep out of the way of both, and I did.

On the occasion while passing through this same orchard at nightfall on my return from a moon hunt, I started a rabbit, fired and missed him. He ran under the barn behind which I hid in the other scrape. The barn rested on stone pillars and there was space enough between the floor timbers and the ground to enable a boy to creep under with difficulty. I loaded again and crawling under a short distance I saw the rabbit, fired and killed him. The boy, who I had not seen before, came out from the barn and there. I forgot all about my gun and game in my anxiety and eagerness to put out the fire, which I succeeded after a while in doing. I then recovered my rabbit and gun and went home, did my evening chores and retired early to bed as the custom is in country life. But I could not sleep. I kept wondering whether or no there might not be some fire still burning, and I thought that I had been overlooked. I sometimes imagined that I heard the crackling of flames. I entertained my fear until almost midnight, when it became torturing. In desperation I sprang from my bed and went out in the darkness and looked under the barn to assure myself that it was all right. These incidents enforce two lessons:—First, never to play tricks on children that would be likely to involve the parent; second, never to be so over-zealous in any cause as to be regardless of probable evil consequences. H. A.

Butcher, Ill.

MY FIRST MOOSE.

I READ with interest and pleasure "Ned Buntline's Last Moose," in your issue of 31st March, and propose to tell you something about the first moose I ever shot or ever saw, although since that time I have killed a great many, at least between fifty and sixty, in the water and out of the water, in winter on snow-shoes and in summer in boats, as you will find in my book, "The Moose and the Moosemen of Lakes and Rivers, and the shores of pokokogons and cumberly bogs; and have called them out of the woods with a trumpet formed of birch bark, by imitating their call to their mates in the rutting season, in the early evening when they seek the low swampy feeding grounds to obtain the lily and other succulent plants, of which they are very fond.

My first moose was an old hunter of the Huroncy Lakes by the name of Kinnab (who has long since gone to the better hunting grounds beyond) and myself paddled up to the foot of Onspitup; Bog and camped for a canoe still-bunt in the evening. This being my first experience, the old man made me shoot at a mark with a bullet, seven rods, and I hit the spot on the tree to his satisfaction, and he said I'd do. My gun was a 247 lb. barrel of the Huroncy name. I believe he called it a smooth bore, and carried about an ounce bullet, and by the way, I used that same gun for many years after for all purposes—with shot for birds and small animals, and bullets for bears, deer, caribou and moose, and it seldom failed me.

We cooked our supper of trout and flap-jacks before night, so as to make all arrangements early for evening hunting, and in the evening we started for the better hunting grounds. Our boat was a wooden skiff, just large enough to hold two persons, and the Captain, as the old hunter was familiarly called, took the stern and the paddle, and stationed me near the bow with my gun at my right hand, in the bottom of the boat, and his old rifle at my left. The plan was for the Captain to hit me with his paddle when we were near enough to shoot, and I was first to fire my gun and then catch up the rifle and give him a long shot as he made off, should we miss him at first.

We got well started up the bog before daylight left, moving very slow and still. Not a sound greeted our ears except the everlasting croaking of the frogs and the sighing of the innumerable multitudes of mosquitoes, gnats, black flies, midges and other winged insects, which swarmed about our heads and necks, and, knowing our deadly nature, making the blood trickle down my face, although I had smeared myself well with salt pork before starting. (Salt pork was then the only antidote known for insect bites.) My orders were not to move a hand or stir, but to sit up straight and not look around or whisper. This, I think, was the toughest experience I ever had—being eaten up alive without being aware of it. I was first to fire, but I was five rods short in a moment to have rubbed my face well just once, but this could not be. The night was clear starlight, but no moon, and the captain propelled the light skiff steadily along without lifting his paddle out of the water, a feat that has to be acquired by long practice and much patience, so as not to hit the paddle against the boat, and all the way you could realize you were moving, and I was first to give my gun the sound of the grass blades as they rubbed against the boat.

It had now got to be between nine and ten o'clock, and the flies still were punishing us dreadfully, when all at once the stillness of the night was broken by the sound of some heavy animal running into the water at the upper end of the bog. No electricity ever went through a body like this sound. I can only speak for myself, but I felt no more fly-bites after that. I was first to fire, but I was five rods short, and I never forgot. Captain just then turned gently the head of the skiff into a little creek and headed toward the plishing in the water. I slowly raised my old smooth-bore into an

easy position for an aim and pressed my eyes intensely through the darkness to try to discover some thing tangible, and presently saw what I took to be a bunch of bushes directly ahead, and soon after the bushes seemed to turn partly around. Then I knew it was a living animal, and at the same time the Captain touched my back with his paddle and I drew a bead on him and fired and instantly grabbed the rifle for the last chance; but the smoke of my discharge cut off all chance for a second shot, and I sung out, "Captain, we have lost him, I cannot see or hear him." I approached them with a gun, and when I saw the how again, a large mouse waddling in the mud in his death struggles, and after cutting his throat we paddled our way back to camp and rested until morning, when we went back and dressed him off and divided him between us. J. G. R.

Bethel, Maine, April, 1881.

DO CROWS REASON?

PORT ROYAL, TENN.

IN your issue of February 24 "K. R. C." asks, "Do crows reason?" I think they do. I have watched the crow closely ever since I have been a shooter, and I know him as well as he knows himself. Crows differ in reason or talk. If not, why do they always know what's up? A crow will sit on a limb and caw and caw and look saucily at you and allow you to approach very near him, provided you leave your gun behind; but just sholder your gun and the argus-eyed black demon will take wing and keep out of range. Does he know what a gun is? As well as you do. And he appears to know what you are doing with it too, as the following circumstance will show. A roofer sportsman recently informed me, while discussing the cunning and sagacity of the crow, that he once attempted to "slip up" on a flock of wild geese in a field to get a shot at them; but a flock of crows got between him and the gun and, as he put it, "let me get right up on them. Never did crows let me get so near them before with a gun. Now, they knew my business in that field as well as I did, and I was after larger game. Do not mistake me for an apocryphal Pli shot, if it does make my friends mad who are approaching the geese from another direction." Bang, I went, and down came a crow and up went the geese, and then somebody was mad.

I have been amazed at the statements of some of your correspondents when they speak of the crow as the farmer's friend. With us here in the South, they are nearly as destructive to young chickens as are hawks. They never sackle at a grain of corn for a whole field of young chickens. The crow is a great peckster—nobody so fond of eggs as he; and he has such a hankering for young birds—will gobble up the last one he can find. But he is not a success as a depredator till spring comes and you plant your corn. Then he will take it up row by row. To shoot him is out of the question, unless you have a gun that will kill across a twenty-acre field. This is the way to deal with him then: Take out from a horse's mane or tail a few feathers and put in a machine size "thread" a hair in it as in sewing, pierce a grain of corn with the needle, draw the hair half way its length through the grain and then tie it. Prepare a number of grains that way and scatter them where the crows frequent. If the crow swallows one of those grains he may swallow the grain, but he will find six or eight inches of horsehair not swallowed, but protruding from his mouth. Then you will see an eagle, fly by, and you will see him cut full shins. He will begin to scratch and pull and claw to get rid of that grain of corn and hair, which will attract other crows. Every crow that hasn't got a hair in his throat will be on hand, and when a large flock of them thus congregates, each one trying to see what he can save the loudest and longest, what a racket! Now that crow will have to fly—perhaps not like Pterodactyl's "proud bird" that could

"Soar through heaven's unfathomable depths,
And baffle the fury of the northern hurricane,
And bathe its plumage in the thunder's howl!"

but he will have to keep on the wing, for his relentless pursuers will not cease till they have worried and picked him to death.—BIBBO.

BIRDS IN CONNECTICUT.

SOMERS, TOLLAND CO., CONN., April 11, 1881.

SPRING has surely come to us again, and with it has returned many of our birds, which make nature more complete. I am seated on the old barnyard gate, south of the barn, where the sun shines warm, and not any one to disturb the quiet seat I possess. The flies are buzzing, blackbirds are singing in the trees, robins are singing, and the corn-stalk hills in the lot near by, and old Dan (I will not give his correct name, as he is known far and near) my setter, is enjoying their presence by working them up slowly and enjoying very good apologies for points. Here he comes now, with some of those pests of the setter which abound here in great numbers—burdocks. What is much worse to extract from the setter's fur than one or more of these dry things? All the snow disappeared from this locality some four weeks since, and since then the weather has been slowly improving. The earth is nearly settled and dry now, and we are looking for steady pleasant weather. Some few ducks have been seen to pass up the stream and stop at the head of the ponds a mile above. Last Friday two swallows made their first appearance and seemed to enjoy sailing, darting and dodging about the buildings. Saturday another was with them, and I also noticed a kingbird, carrying out his song on an old tree near the river. The presence of all these birds, and the feathered tribe give us full assurance that spring is surely with us. We all are grateful for the change, as the winter has been a long, hard, cold one; and if we are grateful how much more so must be the poor partridge, quail and other game that has had to find food and shelter through all this long, cold winter. A good number of foxes and skunks have been taken here this season, and I have seen a fox with the partridge and quail are to be found, therefore cannot tell how they have stood the winter. Some reports give us hopes of good shooting next fall. Chance, a few days since, threw me into conversation with a man that a year ago last fall made a business of trapping for the market. He said that a man came into their town, which is in this county, that had been in the business before, and told him what they could do and what he should do, and he went to the woods, and they commenced to build their hedges about the first of August, and by September 1st they had three hundred ready to set. The first month they made \$100, or \$50 each. They caught over 300 partridge, and sold what they could of the rabbits again, and gave away the rest. He said they took six partridge from less than an acre of swamp brush one afternoon, where a man could not have bagged two

of them with gun and dog. I don't know how truthful his statement is. I do know the locality he gave for their trapping to be one of the best about here for game. It is plain to see where our game is going. If trapping and vermin, which destroy our birds and eggs, were exterminated, we should have abundance of birds in spite of hard winters. Where are our men that can bag six or seven four partridge per day with dog and gun, in our cover here and with our number of birds? I tell you they are few that can average it. I have always hunted partridge, and it is no trap work. I can assure you.

Those that have followed this swift, wily fellow know it is not. He will steal away from you every chance he has, and you and dog have got to work very hard to average four per day. You will have an appetite every night, and also appreciate your bed. The most partridge I ever bagged in one day was nine, and these over Dan the day he was nine months old. But what a day that was! It never will be forgotten. I had hunted none for two years, and was badly "off;" Dan young, and had to be watched; and he whipped me badly, and where are the old dogs that can do much better? To be sure we found many birds that day, and had I done my duty I should have had nearer thirty than ten. Many men find fault with their dogs, when the dog will beat the gun two to one every day. I have been other days and worked just as hard, and had but my pair of partridge to show for it. Do mention my dog luck to boast, but only to compare with the snoring of these men. I am sorry to see the partridge so fast diminishing here. They are our best game birds. We all know they will take care of themselves during the winter, and are able to hold their own with the gun. I would say we always call our rough grouse partridge, so that no one will misunderstand my meaning. I have spun out much longer than I intended. Rock.

"WHERE IGNORANCE IS BLISS."—My son Lew and his young friend Joe thought they would like to go a-gunning. Having secured the loan of a gun they trotted off for a marsh some three or four miles distant in the country, and calculated on having some sport shooting at marsh hens. Neither one of them knew a marsh hen from a turkey buzzard, never having seen one; but somebody had told Lew that the marsh was full of them, and as the mud there was not over knee deep, by wading through it he could find plenty of birds and have lots of sport popping away at them. Away they went, skipping along the road like frisky colts in their haste to reach the marsh. The marsh in the distance looked beautiful and the exhalations from the foliage and clover fields would have been called delicious by their city friends. But what cared they for the sweet perfumes with which the morning air was charged! All such nonsense they left to those who could appreciate it. They wanted to shoot marsh hens, and had the air been as fragrant as the "perfumes of Araby" they should have enjoyed the smell of burned powder a hundredfold more. The mud they reached the marsh. As they walked along its edge a great blackbird suddenly rose up, and Lew, who was on the lookout, took aim and fired. Down came the bird, about thirty feet, but in the marsh, and out Joe waded after him. The mud was up to his knees, but he persevered until he recovered the bird.

"What is it, Lew? Joe inquired.
"It's a marsh hen, Joe. Ain't he a thin one. What long legs he's got."
"How long he smells!" Do they live on fish, Lew?"
"I guess he's lived on skunks by his snell. But people say they're awful good eatin'! You carry him and I'll shoot."

They soon flushed another marsh hen, and Lew brought him down. This kind of game was plentiful, and by the time they turned toward home they had lagged about a dozen. Lew divided fairly with Joe, giving him about one-half of the lot.

On their way homeward they had ample time to examine their birds. They were all neck and legs, and as Lew said before, "awful thin." The effluvia emitted from them was nauseating, but they hung on to them, thinking that the strong smell was caused by something in the marsh which had got on their feathers.

They entered the village with their birds hung out conspicuously, for they felt proud to exhibit such a magnificent lot of game.

Just before they got home they met Bill Somers.
"What kind of birds have you got there, Joe?" said Bill, taking Joe's bunch in his hands.
"Marsh hens, Bill. Ain't they thin?"
"Marsh hens, Joe? Pshaw! Skunks, you mean!" said Bill, dropping them quicker than he took them up.
"How are you going to do with them, Joe?" said Bill.
"Have them 'briled' for supper, Bill. Lew's going to keep his for a picnic."
Bill seemed lost in astonishment for a minute, and then he yelled out:
"I say, Lew, you old duffer; don't you know that them birds ain't marsh hens? The'n's pokes!" E. MANNING.

UNTIMELY SHOOTING.—Indianapolis, April 4.—A few days since I saw a man—not sportsman—walking along the street carrying a half dozen or more squirrels. This is enough to make one angry. I wish it was in my power to punish those fellows who shoot game out of season. Any man with common sense and a spark of humanity knows better than to shoot squirrels at this season of the year, especially north of the Ohio River. Every time a man shoots a squirrel now he runs great risk of starting a nest of them. If he does, he will tell whether it has not, before he brings it down, a nice little family, perhaps a week or two old in a hole in the neighboring oak ash? There should be a law preventing such fellows from carrying a gun at all. A man that will do it will shoot a farmer's ducks and chickens, and is a disgrace to the name of sportsman. The middle of May, better still the first of June, is soon enough to shoot squirrels in this section, or even to begin to start a nest of them, and take care of themselves. If the single case that prompted this letter were the only one it wouldn't be so bad, but it is not. There are hundreds of "shooters" in every large city who take advantage of the first nice days of spring to shoot every squirrel they can find. Shame on them. Very few hunters, however, think the birds have suffered to any great extent. I noticed some fine lines since in your *Field and Pond*, corresponding to what he declared there were very few birds in his section. Would say for his and other benefit that about the middle of last November a friend and myself raised nine good coverts with a single dog, and on a space not more than 100 acres within five miles of his place.—S. H. S.

IOWA DUCK SHOOTING.—Hastings, Iowa, April 11.—We are located on the C. & Q. R. R., about thirty-five miles

from Council Bluffs. The West Nishnabotna River runs close to town. The duck shooting this spring has been very fine; they did not arrive till March 23, owing to the cold weather, but they came with a rush—red heads, sprig tails, mallards and teal, all at once. The river is out of its bank and spread over the bottom for a mile in width, so we can only get at them in boats as they come in from the fields and light in the river banks, among the willow and cotton woods. I bagged nineteen in two hours shooting, eighteen of them mallards; killed them all but one dead the first shot. It is almost impossible to secure cripples as the current is very strong and the brush and driftwood prevent a dog doing good work.

As soon as the river runs down we will have good shooting in the sloughs and river bends, and a little later at geese in the fields. I find 43 drams orange ducking No. 4 and 13 oz. No. 4 killed shot make a good "duck call," with my gun, a 10 gauge, 10 lbs. We don't go much on 12 gauges here, as most of our shooting is duck and geese, although we have very fair quail and chicken shooting. The past winter was very severe on quail. Numerous crows have been found frozen.—M.

MINNESOTA NOTES.—Snark County, Minn., April 9.—Following is the amendment to our game law passed last winter:

"No person shall kill, or pursue with intent to kill, any woodcock, saving only during the month of July after the first day of August, and during the months of August, September and October, nor any prairie hen or chicken, nor any white-breasted or sharp-tailed grouse or prairie chickens, save only during the months of September, October and November, nor any quail or partridge, nor any ruffed grouse or pheasant, save only during the months of September, October and November, nor any aquatic fowl, save only between the first day of September and the fifteenth (15) day of May in any year. In the foregoing willow and cotton woods, the chickens for a period of two weeks, and they will be our more difficult to kill, owing to the increased strength of their wings. This noble game-bird has received fearful persecution since the advent of the breech-loader and in a very few years would become extinct. Old hunters have put in an appearance, and the breech-loader is in active service once more. We expect grand sport in the stubble the coming fall, for geese and ducks will be unusually plenty.—DREXEL.

EXTERMINATING THE HAWKS.—The Clinton County O., Forest and Stream Association, with headquarters at Wilmington, offered a series of prizes for the destruction of hawks.

The result of the endeavor is thus told: "The Forest and Stream Association of Clinton County on Thursday received and counted the hawks killed in the county and awarded the prizes as advertised. Arthur W. Johnson had twenty-two hawks and took the first prize, \$100; Wm. Polk took the second of \$5 with forty-one hawks; W. H. Bay took the \$25 with ten hawks; Messrs. Lewis, Hildress, Pickeral, Richardson and McGillery had twenty-seven, making seventy-three in all. The association paid eight and one-third cents each for the hawks in addition to the cash prizes. The scheme has been very successful and has resulted in the destruction of nearly 200 hawks. Our farmers and sportsmen are very anxious to rid this section of this pest and they are making strenuous efforts to secure the passage of the Pennsylvania law, which provides for the payment of fifty cents each, out of the surplus Dog-tax fund, for each hawk killed in the State. There is a surplus of over \$1,300 in the fund in this county, and our sportsmen and farmers, who pay this tax, very properly claim they have a right to some part of it for the protection of game, as they (the sportsmen) have no sheep, and numbers of farmers who are paying dog tax have no sheep killed, so the money lies idle while the hawks are busy. It is expected that our State Senator, Cramer, will support the bill."

LATEL.—We learn that the "Grenier Hawk Bill" has passed.

CHINESE BIRDS IN OREGON.—Portland, Oregon, April 15, 1881.—Hon. O. N. Denny, a former resident of this city, and now U. S. Consul at Shanghai, has sent to the sportsmen club a fine lot through Mr. A. H. Morgan, a fine lot of game birds. He shipped by the Otage 66 Mongolian pheasants, 7 Chifoo partridges and 12 Mongolian sand grouse. There were received 17 pheasants, 5 partridges and 11 sand grouse. The pheasants and partridges were placed in the hands of Mr. George Green, a thorough sportsman and bird fancier, who has a fine place twelve miles from the city, where he will turn them out. The sand grouse were sent to Catsop beach ash with the pheasants taken care of. They were fine birds, especially the pheasants, which were large, strong and very brilliant in plumage. If they live they will be quite an acquisition to the game birds of this State. I will keep you posted with regard to their welfare.—FRANSEL.

TIM POND.—Kennedy Smith, of Eustis, Me., gives in substance the same report of the good fortune of ruffed grouse in this section of the country given by your correspondent, "Penobscot," of Newport, Me. He says these birds have wintered well from same reasons given by "Penobscot," and are unusually plenty, and if they are successful in their nesting there will be excellent sport about his Tim Pond cabins next September. For the first time the law has fully protected the trout in Tim Pond during the close season. Visitors will appreciate the fact the present season. Smith is making preparation for his guests, of which more anon.—J. W. T.

NEW YORK ASSOCIATION.—The prize committee have announced that, excepting cash, no prize will be received after April 23, as the committee on printing must have all matter for the elaborate programme by that date. The Washington Gun Club have secured the following prizes: Emil Zeller, of W. Sachse & Company, New York, donate two cases of Mossie wire and two of Rihne wire, valued at \$50; C. W. F. Darr, N. Y., donate one baby carriage, valued at \$50; John E. Lenz, Brooklyn, N. Y., a mescalium pipe, valued at \$25; Trans-Atlantic Fire Insurance Company, of Hamburg, Germany, donate through Charles H. Hubbs, assistant manager, \$35 cash.

FLORIDA LAWYER IN THE BUSH.—"Blackstone's thrown aside while the FOREST AND STREAM is consulted by the court scribe his return from Tampa; in fact, the *Deerskin* forms an admirable position in his library."

The editor of the *Key of the Gulf* indulges in the above, just because the United States district judge, attorney and clerk, recently went on a camp hunt from Tampa, Florida, and helped kill six deer in three days, ten miles from town, the judge killing his first deer. FLEET.

ROCHESTER GUN CLUB.—The Rochester Gun Club has forty-five members, of whom twelve are lawyers. The officers of the club are: President, M. A. Stearns; Vice-President, J. W. Butts; Secretary, L. A. Amidsen; Treasurer, Dr. C. R. Sumner. Executive Committee—H. L. Ward, M. H. Briggs, George D. Butler. Vigilance Committee—M. F. Hines, Dr. R. A. Adams, A. Bigelow, Dr. H. S. Miller, F. Blaine, S. G. R. Monroe, B. McMurry. Delegates to the Coney Island Convention will soon be selected. The four clubs of Monroe County propose to have a tent in common at the tournament.

SUGGESTION TO WOODCHUCK KILLERS.—This woodchuck business is "none of my funeral." There is something utterly revolting to me in the murderous process of charging a rodent to death with dogs, and now that one "Jones" has struck the right chord, give him your ears. There are undoubtedly many ferrets kept for ratting purposes, at least there were some years ago. If the owner of one of these animals would take his gun (ferret) and start on a woodchuck tour through the Eastern States, charging each farmer so much a head for the dead "varminns," he would find it a better business than selling whisky at camp meetings.—**DIVYUM.**

INDIANA NOTE.—Cloverdale, Ind., April 11.—Snipe have made their appearance, but seem to be very wild. Was out a few days ago and managed to get three out of perhaps a dozen shots. Our quail are, I think, next thing to exterminated, caused by the severity of the past winter and by varminns. Rabbits and squirrels are numerous. A few woodchucks since I shot a red fox that was being teased by dogs not over two hundred yards from the house. These pests are particularly numerous, one dealer alone handling over fifty pelts the past season. Furs of all kinds have been plentiful and have proved profitable to the handler.—**LA BELLE.**

DO FOXES EAT APPLES?—Bethel, Me., April 1881.—One of my boys saw a fox the other morning jump into an apple tree in my orchard and run out on a limb and take an apple that had hung on the tree all winter and jump down again and eat it at the foot of the tree and then make off. A few mornings after I tracked one from the same tree, which had probably been there to try and find another apple.

J. G. RICH.

WEBSTER, MASS., April 15.—The Rod and Gun Club have elected these officers for the ensuing year: President, Henry Butterfield; Vice-President, T. F. Bigelow; Secretary, Victor Conant; Treasurer, A. E. Klobort. The officers are to constitute the executive committee. They are to have a practice Wednesday. The club are to plant twenty bushels of wild rice around the pond for the purpose of inducing wild duck to frequent its shores.—**J. B. ARD.**

Sea and River Fishing.

FISH IN SEASON IN APRIL.

FRESH WATER.

- Brook Trout, *Salma fontinalis.*
- Pike-perch, *Esox reticulatus.*
- Pike, *Esox lucius.*
- Pike-perch (walleyed pike) *Stizostedion americanum.*
- White Bass, *Roccus chrysops.*
- Rock Bass, *Ambloplites.* (Two species.)
- Wal-mouth, *Chesobrychus gulosus.*
- Crappie, *Pomoxis nigricaudatus.*
- Saccharin, *Pomoxis carolinensis.*
- Chub, *Semotilus atropurpureus.*

SALT WATER.

- Sea Bass, *Centropristis striata.*
- Striped Bass, *Morone tenebris.*
- White Perch, *Morone americana.*
- Pollock, *Poliachius carbonarius.*
- Tautog or Blackfish, *Tautoga onitis.*

We also meet sometimes with the "Spick and Span" Angler, who has a lightly varnished rod and a superabundance of useless tackle; his outfit is the most elaborate kind as regards its finish. He is a dapper, "well got up" angler in all his appointments, and fishes much in doors over his closet and window when he has a good listener. He frequently displays bad taste in his tackle, intended for fly fishing, by having a thirty-dollar multiplying reel, filled with one of Conroy's very best "reel" sea-runs lines strong enough to hold a dolphin. If you meet him on the towing waters of northern New York, in the evening, his display of his outfit depends much on the roughness of his guide. The Rough and Ready Angler, the opposite of the aforementioned, disdains all "tomfoolery," and carries his tackle in an old shot-bag, and his flies in a targeted mass.—**THAD NORRIS.**

A CHEAP TRIP TO THE NORTH WOODS.

I WOULD say to your many readers that parties desiring a pleasant and economical trip into the Wilderness will find it a good plan to buy a ticket to Prospect, on the Ulica & Black River R. R. From there they can get conveyance to any point they desire of the liveries there, or by hiring a few days in advance to J. E. S. Wilkinson or Griff Evans, of Wilmurt, Herkimer County, N. Y., either of those gentlemen will meet them at Prospect station and take them right through, and furnish guides at reasonable rates to visit any portion of the Wilderness with them.

Prospect is the best objective point for all the lakes making the West Canada Creek, the Otsego, the Jones', Otter, Moose, Little Salmon, Metcalf, Spruce, Little Rock, Big Rock, G. Pine, Morehouse, Wilmurt (private) and the Canada Lakes, six in number; also North and South Lakes, at the head of the Black River, and many other lakes and streams, well stocked with the finest brook trout in the world.

The expenses of a two weeks' trip through this section need not over five dollars per week after leaving Prospect, including carriage and horse hire, and a horse can be hired to any point they desire for guide if the party numbered five or over. All of which goes to show that a fine time may be had in the woods by parties that are not blessed with a large bank account just as well as though they were millionaires.

This locality is receiving a good deal of attention from State Game Protector Dodge, who resides at Prospect. A. E. Jones and a party, who have just returned from a fishing trip to Jack's, Jones' and Little Salmon lakes, report the fishing good, and not a sign of a deer having been killed in that region during the closed season, which makes the boys believe that next August will open the finest season for deer-hunting known for a long time. And the main reason is that, with a few exceptions, the guides and resident hunters are in accord and willing to co-operate with Game Protector Dodge and see that the laws for the protection of fish and game are enforced. Occasionally a "smart Aleck" tries to get the best of the law, but sooner or later they come to

grief. On the 30th of March Dodge seized a box containing forty-four trout in transit from Northville to Fulton Market, New York. The trout weighed thirty pounds, which you see made them a nice average lot to reach New York April 1 and bring a fancy price.

But the "fancy price" will rather be on the other side now, I fear, as the shipper will have to come down with twenty-five dollars for each trout, which is a little higher than the best quotations ever on the first day of April. The same week Dodge captured a few "crusing geese" up in the South Lake region, took him before Justice Garlock, and "squared him off" to the tune of fifty dollars, which satisfied the young man that he had got deer-hunting enough to last him until the season opened. This active and energetic work on the part of the State Game Protector is having a good effect. Many who have been quite indifferent to the game have now become strongly in favor of protection and show a willingness to assist in enforcing the law. All of which I believe will please the many readers of your valuable paper as well as

ZAOK.

THE SPANISH MACKEREL.

(Cybium Maculirene.)

LOVELY with all their spangled eyes,
Fairer than fish of any land or sea,
With golden borders their sides along,
Tinted like the rain-cloud's prismy bow,
The gorgeous Spanish mackerel roam
The rolling, sea-swept world of foam;
Now, glittering on the waves they skim;
Now, lost in deep abysses swim.

When fields are green and woods of June
Are vocal with the song-birds' tune,
When weeping willows, a fair group,
Full foliaged, or in moorland droop,—
When hazels their pale catkins ope,
By rivulet edge and turf slope,
Then swift these rovers of the deep
O'er all the Northern surges leep.

Far off the headlands of Montank,
Above the howling gull and hawk,
Far off the isles of Orient,
Where the Sound's breaking waves are spent,
And by the rough New England shore,
Where the vessels of the merchant rear,
Their gleaming schools of light and wide,
Disporting in the crystal tide.

Pursuing their erratic way,
Keen as a tiger for its prey,
They follow fast by island and cape,
The fish-school that hath no escape,—
Follow where'er the line sea reel
By sandy spit and pebbled shoal,
In open bay and spacious Sound,
Where'er the flying reel abound.

Most beautiful in shape and hue
Of fish that bustle the waters blue,
Fairer than plumes of the bird
Or fur of the wild forest herd;
Remorseless are they as the grave,
To all the tenants of the wave;
No speed or cunning they can boast,
When these marauders shall assail.

And yet a cruel fate prepares
For them its treacherous, vile snares;
The fishers, with their fleet of boats,
Outspread their meshes and their floats,
The wind sweeps on their leeching sail
As stoops the sea hawk in the gale,
And glittering squid and trailing line
Tear them reluctant from the brine.

ISAAC McLELLAN.

THE TARPON.

"Harness me down with bands,
Curb me with bit and rein,
For I scorn the puny hand
As the lightning does the chain."

—CHITRE.

YOUR correspondent "Al Fresco," an esteemed personal friend, says I must make contribution to the columns of your wide-spread and valuable paper, as from the mouth of two or more witnesses is the truth established.

Once upon a time, passing along the wharves in the city of Jacksonville, Fla., a schooner in front of the Carleton House attracted my attention. She was getting ready for sea and had a goodly number of passengers for so small a craft, and as I drew near I discerned a great number of Jacksonville brand for the "snapper hanks." "Al Fresco" was of the number. I was invited to join them. Nothing loth I sped to my boarding house to say good-by to wife and horrow a blanket, and within ten minutes was with them, having procured a proper line on my way from a friend at the "Club House."

The party, chiefly landmen, consisted of the Rev. Mr. Tully, Judge Randall, of the Supreme Court, with merchants, lawyers, "Al Fresco" and myself, eighteen in number. We dined while in the river St. Johns (en route). To meet the steward's requirements we divided into three parts, 1, 2 and 3 respectively, as the table would only seat six. First meal: No. 1 came to the first table, followed by No. 2, second table; then came No. 3, third table. Our next meal, No. 3 was entitled to the first table, No. 2 second and No. 1 last. Our third meal, No. 2 was to come to the front, etc., but the first meal was the only one the order was observed at. The second meal only six of all classes came to the call, and thereafter but three maintained their ground and their rations. Your correspondent, "Al Fresco," was among the first to succumb. As with the "Domine," before the vessel crossed the bar he will several times have a purse of \$50 begging and pleading to be landed; but it was no use. We started "to go a-fishing." Three or four times a day for three days did the "Domine" poll the party for a return (no majority each time). We reached the banks at midnight—first day out—and anchored. At daylight every line (save one) awaited the order (a prize purse awaited the captor of the first snapper) to cast, but it was no go. "Al Fresco" was somewhat excited; he took the lead and made a haul. At a moment all was explained; the schooner had drifted off the banks. We up anchor and by 11 A. M. struck a fine coral reef of thirteen fathoms. Our lines were all ready and into the water by the time the anchor was overboard. Within the first minute the deck of our little schooner was covered with the sparkling beauties, with scales of pearl covering a body of carmine, and about twenty fish were landed. It was my good fortune to get a thirty-pound grouper, a superior fish for the table. We had snapper chowder at once and black fish in abundance for the fry-pan. It was laughable and amusing to me to see

"Al Fresco" casting up his accounts and hanging up his snappers at one and the same time. He is an expert at both. Our sympathy for the landmen marred in a measure the full enjoyment of the "fish."

Mr. Editor, did you ever go in search of one of those "fabulous gardens of the great deep," where submarine plants grow in magnificent luxuriance and whose avenues are teeming with the "finny tribe"? Last June we formed a party of four "to go a-fishing" after snappers. "Al Fresco" was accorded the leadership by unanimous consent. Says he (to the Captain): "I can put you on the banks of our course lay nor by no'cast, on the light till you strike fifteen fathoms, distance about twenty-five miles. At that point the snappers are very large, and there is an abundance of submarine plants," says he to us—"tropical sea fern, sea coral, sea fans, etc., etc.; and as I have promised some specimens to a friend, will give you some." We were making about eight knots, testing the lead every thirty minutes for character of bottom as well as depth. Two of us, with six hooks each to our lines, sought for the "marine plants." We kept it up three days and three nights, eight knots and no stops. The "garden" (only one-quarter of an acre) was not struck. Went fifty miles seaward and cruised up and down. Thirteen fathoms was our greatest depth; still 'twas exhilarating and we returned pleased with the trip.

Excuse this divergence. My subject was the Tarpon—king of all game fishes throughout the world. I am indebted to that true lover of the sport, "Al Fresco," for the information that induced me last August "to go a-fishing" after large game. I was residing temporarily in Jacksonville, and almost daily the doctor would call upon me. As the "month gards" the fullness of the harvest, and the more the most frequent was "the gentle sport." I had frequently made mention of the enjoyment of taking black bass eight and one-half pounds each from my own wharf at Orange Mills, and "Al Fresco's" invariable reply was "Why, man, you have been catching minnows." 'Twas provoking, to say the least of it, to thus have my game fish disparaged. "Go down to the mouth of the river and fish," he said. We resisted me in making some snoods. He frequently remarked that my hooks were too small (they were the size of butcher hooks and would support a whole beef), and that my lines were too small (I thought they would hold a mad bull). All being ready, I started alone for the steamer to take me to "the fishing" (my friend could not accompany me). Meeting a "sportan" on my way, I wanted him to join me. We reached the mouth of the river St. Johns 6 P. M. The tide being favorable, went immediately to fishing. My hooks were at once broken and my lines were as cotton thread. My companion's outfit was very different from mine, and loaned me a duplicate line (twas like a bed cord, and the hook like an anchor). Our outfit for the evening was four "red bass" 4 1/2 lbs., two or three pounds; however, that was the night. Next morning at 4 A. M. was again upon the "fishing ground," and as the sun's rays made golden sheen of the ocean swells our fishing began.

After killing one thirty-seven and one forty-two pound red bass I felt—'twas touch and go. My hook was set, and Mr. Editor, three hundred feet of my line went out like streaked lightning. My hands were badly burned. My comrade seized my line, the auspicious moment and aided us. Three hundred feet away I witnessed the most magnificent spring (10 feet) into the air that my eyes ever looked upon. "What's that?" I cried out. My comrade knew the fish. "A tarpon," was his reply; "watch your line—don't let it snarl—let me play him." He reached the water, head foremost, describing a parabola, and off again with lightning speed. An addition of two hundred feet of line and again that grand acrobatic spurt into mid-air. With an angry shake of the head again he plunges into the water, and the maddening rush continues. Six hundred feet away we see him in his third spring, and he was checked, and his return was with like speed, undiminished, and with the same grand agility and power in his mighty leaps. At his fifth bound he broke my hook. Mr. Editor, twas fair to give adequate description to that grand acrobatic spurt into mid-air. With an angry shake of the head again he plunges into the water, and the maddening rush continues. Six hundred feet away we see him in his third spring, and he was checked, and his return was with like speed, undiminished, and with the same grand agility and power in his mighty leaps. At his fifth bound he broke my hook. Mr. Editor, twas fair to give adequate description to that grand acrobatic spurt into mid-air. With an angry shake of the head again he plunges into the water, and the maddening rush continues. At his fifth bound he broke my hook

A TRIP FOR BASS IN KENTUCKY.

Mount Sterling, Ky., April 18.

THE skies are clear, but the signs are not "the Neck." But a mysterious wad passed from the Judge to Ticket Agent Parker, of the Lexington and Big Sandy Railroad, and from Coonie Jones, the jeweler, to the Doctor, that bass would bite. So the Doctor invited Grocer Thompson into the counting room as though he would pay his bill, and the same question was put and like answer returned, and in two hours the buck wagons were loaded with sundries and camp life, tent, mess chairs, and after a slight delay in repairing the minnow seine, we were off for Licking River, in Bath and Rowan counties. Nothing occurred to mar the ride through this fine Blue Grass country, covered with its greenest of green carpets, with short-horn herds grazing on every hillside. Here and there were plenty of plowed land, with hands plaiting corn or preparing the tobacco fields. We passed by the famous "Hamilton's Flat Creek herds," which contain some of the choicest blood of Europe and America's short-horn stock. Fifteen miles on our road and the scene changes. The country is very poor—plenty of oak timber of fine size, soil of an ashen color, grass thin and stunted. We soon came to the famous "Confedrit X Roads." Did not see anything of Isaacor McGavitt or Deacon Pogrom. Reckon they were resolved in solennit conclave to ascertain how to obtain a drink. We were near the main road some miles to Gleebs Dam, the only one in the main Licking river was constructed for a fish trap, but afterward put to grinding corn meal, "a more noble and glorious purpose."

We arrived at the Dam about 4 o'clock, pitched camp, and bought some eggs of a small boy at twenty cents per dozen. Upon reexamining at such a price, the lad said they were worth more than that, as he had to "break up the old water to sit on." He appended that "eggs was the powerful seace." While the supper was being cooked, we made valuable progress by adjusting our tackle and surveying the river, which tumbles over a low dam about a hundred yards long, placed at the head of a rapids, thus making some beautiful boils and eddies to catch bass and "salmon" in.

We were aroused at daylight next morning hastily, and dressing, we then gathered our rods and shoved the ferry scow into position and anchored, with a dug-out for a tender. All were eager for the first trial, which was made by a ring-eye five inches long, then a ten-inch bass to Jones. I handed another to the Doctor, then another to the Judge. Breakfast was announced, but such fun could not be left, so we continued until we had eight fine fish, not large but fair size—and who but a hungry, enthusiastic angler can tell how good those fish tasted, killed and cooked to a turn inside of two hours!

The next day we divided, two of us going over in the dug-out to the opposite shore, where we found one of our long, gaunt mountaineers perched on the end of a projecting timber, with a long stout pole cut from the natural growth, with a chalk line attached, fishing as solemnly as a kingfisher waiting for his breakfast. He east a loak of pity upon us as we threw full fifty feet to some favorable looking eddy or swirl or smooth patch of water. Then reeling in and recasting he, being the first, got our black's reels slowly unknicked himself, stuck the end of his pole into a hole, and proceeded to take a nearer view of our "trix," and relieved himself thusly: "Wal, 'I low it won't take much of a fish to break that buggy whip thing of youen." I good-naturedly informed him the fish that broke that rod would have to be near as long as he, and just then I felt that well known savage jerk that all know so well, and the fun began. This was, that way, then out of the water two feet high, and after a little more of the same, he was up to his chest in a half dozen places, but in two minutes I reeled in a fourteen-inch bass, whipped and subdued, as passive as a clip. Our mountain friend gave a low, long whistle, gathered his old coffee pot under his arm, pulled up his line, and somewhat initiated the Arabs upon a certain occasion. And right here let me say, of all rods I ever used (and they are many) a split bamboo is the best, and a level hook for a better. The cost is considerable at first, but it is an assurance one feels with them in hand!

We caught sixty-two bass, and one red-head twenty inches long. The bass were not large, but made fine sport. We had all we could eat and brought twenty home with us. Saw plenty squirrels, but the season is closed until May 15, and no member of Sterling Fishing and Shooting Club, I trust, will molest game in close season. YAN.

VERMONT NOTES—Ferrisburgh, Vt., April 2, 1881.—A Westport, N. Y., correspondent of our local paper stated a couple of weeks ago that game-protektor Liberty of Elizabethton, had made a seizure of nets in Pennsylvania. From last week's issue of the same paper I cut the enclosed slip, by the same correspondent: "The suit brought against game-protektor Liberty, of Elizabethton, by Byram, of Peru, for seizure and confiscation of Byram's nets, was tried in Pittsburgh last week, and resulted in a verdict for plaintiff for \$25 and costs. Cannot your old Keseeville contributor tell us how it happened, and how the case was successfully prosecuted by a violator of the laws? Why such things should be is a mystery to us, who are anxiously watching the workings of protection on your side of the lake. If it is impossible to frame a game or fish law without a hole through which the poacher may crawl out and get top of the heap, we might as well give up the good but losing fight first as lose another slip from the same correspondent's items.

What are the fish which have been caught near Valcour? I am very sure that our fish commissioners have never placed any land-locked salmon in Lake Champlain, and as sure that if anything of the salmon kind has been taken in the lake it must be the true salmon, the results of the planting of the salmon fry in the Winorski and Lewis Creeks in 1876. Later some land-locked salmon was introduced in some of the smaller lakes and ponds in the northern part of the State, from which they could not possibly reach Champlain. Perhaps the blue fish, salmon herring, etc., which from my drawing Mr. Hallock took to be of the salmon kind, have just reached the Valcour fishermen. I cannot learn that this beautiful and well-flavored fish had ever been caught in Champlain till within ten years, or twelve years at the utmost, and as far as I know is never caught nor put in winter by fishing with a hook through the tail.—H. E. B.

This slip which our correspondent incloses is as follows: Who can tell what they are? "It is reported that land-locked salmon of good size are becoming plentiful in Lake Champlain, several having been caught during the winter

near Valcour. These waters were stocked with land-locked salmon five or six years ago by the Vermont State Fish Commission, and it seems that they may yet become one of the most valuable fish of our lake."

THE TENNESSEE FISH LAW.—Our Tennessee friends intend making their State, in the language of a valued correspondent, "the grandest angling Eden in America." The Nashville Banner says:

"One of the important measures passed by the General Assembly was the enactment of a general law for the protection and preservation of the food fish of Tennessee. For this great benefit to the State and its citizens they are much indebted to the tireless and potent endeavors of the Fish Commissioner of Middle Tennessee, Col. George F. Akers, who has worked faithfully to secure the passage of the bill." This law is intended to prohibit the use of any net or trap for any person to catch, kill, destroy, or take fish in or from any of the waters of this State by any means otherwise than by angling with baited hook and line and with trot line; provided that none of the provisions of this act shall hinder or prevent the Commissioners of Fisheries, or their agents, from taking fish from any waters, at such time and in such manner as they may deem proper, and to them only, for the purpose of stocking or restocking the waters of the State; and provided further, that this act shall not be construed so as to prohibit the use of a hand or minnow net in taking small fish or minnows for bait.

It shall not be lawful for any person to place any trap, of any kind whatever, in any stream, or in the mouth of any stream or in lake or pond which has any outlet to any stream either in high or low water, thereby preventing the free ascent and descent, up and down, to and from said waters.

It shall not be lawful for any person to molest, disturb or damage any fish during the spawning season, or to disturb any fish eggs or young fish in any of the said waters in this State.

Any person violating the sections of this act shall be guilty of a misdemeanor, and on conviction thereof shall be fined not less than five nor more than twenty-five dollars, and shall forfeit all boats, nets, seines, gigs, spikes, grab and snatch hooks, and all other contrivances violating the provisions of this act, which contrivances will be sold at public auction by the sheriff of the county in which the offense is committed.

CATFISH AS FOOD—Quincy, Ky.—Dr. Sterling wanted to hear from some of his southern friends on the above subject.

First, the doctor is badly mistaken in regard to size. The regular yellow catfish of the Ohio River grows to a very large size. The father of the writer once caught a yellow cat that was 6 feet long, weight 127 pounds. Last summer one was taken that tipped the beam at 115 pounds within a mile of this place, and one was taken about five miles above that drew 185 pounds was taken in the summer of 1878.

We also have the blue or channel cat, as we call them, but they do not grow so large; one was taken Feb. 27, that weighed the scale at 42 pounds; it was injured some way and was barely alive when taken.

The blue and black cats are the fish we eat the most of in our creeks. They are quite a game fish, make a hard fight and will take any kind of bait from the common eel worm up the scale to the fly. The writer while fishing last season for bass looked a blue cat in very unexpected water. He was in the foot of a riffle fishing with very strong tackle, wirewood, etc., and was using a large sunfish as bait. All at once the line ran out at a very rapid rate, and after some further maneuvers he was finally landed—a five-pound cat. I never caught nor saw one caught in so swift water. They covet still, deep water, around old roots or logs, and prefer a mud bottom. They take the hook with ease and are caught in great numbers around here. They are one of our best table fish, being very free from bones, and are a rich, tender fish. They are cooked like other fish of the same size, but after they get above 25 pounds they are best stewed. I am sure if the doctor could get a dish of this fine fish, stewed by some of our Kentucky cooks, he would never say they were coarse and inferior again.—D.

THE GREENWOOD LAKE SPORTSMEN'S ASSOCIATION have arranged to erect a fine club-house this season on the upper part of Greenwood Lake, Orange county, N. Y., where for some years they have owned a valuable property. Among the members of the association are Messrs. H. O. Havemeyer, W. O. McDowell, C. Oleott, A. S. M. Hill, C. C. Cooke, Daniel E. Starr, C. H. R. Doringe, P. M. Millsap, C. A. Oleott, H. Griswold, John Underhill, E. A. Wallis and the Rev. A. H. Young. For a number of years these gentlemen and their colleagues have enjoyed camp life, boating and fishing on Greenwood Lake, and so well have they become attached to the attractions of the locality that the erection of a commodious club-house has been decided upon. The building will be complete in all its appointments and architecturally attractive, and measures are to be taken for its immediate erection, so that it may be in readiness for use early in June.

A FISH WITHOUT AN ENGLISH NAME.—There is a fish in Pyramid Lake, and sometimes in the river, which the Indians call couteyone. They weigh about 2½ pounds and resemble the whitefish. They have been caught weighing as high as four or five pounds. They come up as far as Wadsworth in the summer to spawn. Alvaro Evans says the couteyone is the best fish in the river. Comparatively few people know anything about the fish. Plans will be taken to secure a few specimens for the California Academy of Sciences. Old anglers say they never saw a fish of the same kind in any other waters. It may be that the couteyone is a species of fish peculiar to the Truckee and its lakes. If some of the fish sharps in San Francisco get their eye on a specimen its true species may be determined.—Reno, Utl., Gazette.

When you have a fish with no name call it "trout," no matter if it is not a bit like a trout. It is the fashion, and you might as well be out of the world, you know. America suffers from Old World names applied to new things, and can't suffer any more; so don't be original and get a new one for a new fish when good old names, as trout, salmon, etc., are plenty.

Ohio Fish Law.—The following was recently passed: "Under a penalty of a fine from \$50 to \$100 it is forbidden to catch any fish for salting, packing and selling from the 1st of June to the 1st of September. The fine goes into the

Common School Fund. The owner of every dam across any river or creek in the State must keep a chute or way open for the passage of fish. When he does not do so, such passage may be made at his expense by seine or net, or in any other way than by hook and line, and by law is prohibited, except in the Mercer county Reservoir, Laramie Reservoir, in Shelby county, and Lake Erie. The penalty is from \$10 to \$50, or imprisonment from ten to sixty days. Fishing of any sort, except in bodies of water containing as much as a thousand acres, is prohibited during the spawning season—from April 1 to June 15.

SALMON NOW GOOD.—The Pacific Life calls the attention of all salmon lovers to the excellent condition of the salmon now in the markets. They are more delicious at this season than they are later on in July and August. In these latter months the salmon are ready to spawn, and the flavor of the fish has in a great measure been lost in the nourishment of the eggs. Just now they are in prime condition, and would be relished by all who desire to enjoy salmon at their best.

PROBABLE EXTINCTION OF GRAYLING IN MICHIGAN.—A correspondent writing from Bay City says: "I fear the grayling are all killed by anchor ice in the Au Sable and Manistee rivers. I saw one of the residents a few days ago, and he said there were millions of them dead. I shall go as soon as the weather will permit. If you desire I will let you know the result."

Fish Culture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

[CONTINUED.]

THE SECRETARY then read the following paper: HABITS AND FOOD OF CARP.

BY L. D. GOVERN.

IT is with pleasure that I place before you some of my experience with fishes, more particularly the carp, during the past year. In the first I have taken great interest, and have been, I am glad to say, successful in developing their growth in our New York State waters. My first mention will be of a lot of eighteen-month-old carps, thirty-five in number, placed by me in a pond prepared for the purpose. The pond was three feet in depth, there being a bottom of mud or the loam of a garden. Some of my carp would turn the scales at two and a half pounds previous to placing them in the pond, which was constructed for observation and fed from springs. In the early part of January I kept an air hole open in the bottom, and accustomed on the pond, and fed the fish by means of a wooden spout, one foot square and four feet long, enclosed in a large sheet of calico and closed at the opening with a wad of salt grass to keep the frosty air from entering the tube or shaft. When I wanted to feed my carp I would remove the wad and drop my food down the aperture, after which I would obscure the light from the opening by throwing a cover over my head, and would then be rewarded by seeing all fish within range of the food opening at the bottom. By this means I could ascertain the food habits of the carp. And here it will be well to say that they disposed of oatmeal dough and a dough of rye meal mixed with chopped cabbage more quickly than any other kind of food given them. My shaft worked well until the temperature fell to zero, for then, the ice being so close to the pond, it was necessary to cut holes in it, and I was compelled to cut holes in the ice and remove all the particles remaining.

After the opening was closed I would drop in food, and as the fish were taken up by the opening and hovered around after eating. Then suddenly you would see a fine carp turn over on its side and, as if attracted by magnetism, come to the under part of the ice and there stick fast. I extracted some few, which you will see on exhibition in the market, with my other fish on Mr. Blackford's stand. I could have saved many more, but, to use an old fisherman's phrase, I could not see the point of wasting a mackerel to catch a sprat. Now, gentlemen, I am inclined to think that a carp pond should be at least four feet deep, with a foot of soft bottom, making in all five feet. I say this only for our Northern waters, and would not recommend feeding in the months of December, January and February as I think the fish I have mentioned would have gone in the mud and be safe now had I not kept them on a shaft of ice during the frosty weather. I would say a fish that I can assure you will withstand any amount of handling in moderate weather, and live longer out of water than any other fish I have ever handled. Some time ago I took an eighteen-month-old carp from my pond—its weight was about two pounds—folded it in a piece of wet muslin, brought it to my home, 283 Fulton street, a distance of four miles, and laid it on a slab, while I partook of dinner. I then started with it for New York, and arrived at Mr. Blackford's stand two hours and thirty minutes from the time I took it from my pond. I would say that I would fish in one of the tanks, and in presence of many of the market men the carp swam off as if it had only been changed from one tank to another. There was no swooning nor cause for reconstituting. I would still further say that the fish who may have carp in their ponds not to be astonished if, after placing them in one pond, at the lapse of a month or two they find them in an adjacent one having no seeming connection with the first. The fact is, the carp will swim the body of water, and then like an eel wriggle its way over such long grass, and make its way to other waters. This has been my experience, and having had, previous to its introduction from Germany by Professor S. F. Baird, but very little knowledge of the fish, I suppose some of my associates in this body are still in the same position of uncertainty in regard to the carp as I was in previous to my personal investigation.

MR. ANNIN—My experience with carp has been that I received seventeen from Mr. Blackford and have only one left. I would say that I would fish in one pond, and I would fish in the Hudson River for years? I have heard of one being caught quite often, but do not know if they are the same as the so-called German carp.

MR. ROOSEVELT—I have seen many hundreds of the carp in the Hudson. They seldom grow above a pound in weight in Ohio, but they have a carp which weighs several pounds, as high as seven, I think.

PROF. GOODE.—The fishes spoken of are not the German carp which has lately been introduced. The fish I speak of are found especially in the southern States. In the national carp ponds at Washington there are now two hundred of the original carp brought from Germany some four years ago; many of them are so large they could not be put in a ordinary sized tank. The smallest of them will weigh over fifteen pounds. So great has been the growth in America that the Germans have applied for some of the stock to improve their own. A carp sent to Texas when only a few inches long grew to eight pounds in one year.

MR. MATHER—I collected all the specimens of the growth of carp in America and read them before the Central Fish-cultural Society at its last meeting at Chicago. It was published in FOREST AND STREAM of January 27 of this year and will soon appear in the report of the Society's committee, of which I am a member, and being corresponding secretary, and I will be pleased to mail that report to any members of this Association who may apply for it.

MR. ROOSEVELT—I forgot what that large carp in Ohio is called. I gave some account of it in a book of mine, published many years ago.

PROF. GOODE.—The President probably refers to some of the carp suckers, which from their superficial likeness to the carp they are often mistaken for such. They are found in the Valley and occur in the great lakes. They were called *Carpodes* by the Germans, and belong in the family *Catostomidae* or suckers, and not in the family

FIXTURES.

April 26, 27, 28 and 29, at New York City—Westminster Kennel Club Fifth Annual... Entries close April 11, Charles Linnell, Superintendent, No. 118 Fulton street, or P. O. Box 1,790, New York City.

October 1 at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day, Jacob Penz, Secretary, P. O. Box 274, New York City.

THE LAVERACK SETTERS IN AMERICA.

ATHERHEAD, in his article on the Laverack setters in England, refers to but few of the purely bred dogs and bitches of this celebrated breed which have been imported into and bred in the United States.

Prize from E. Laverack's kennel by C. S. Westcott. Pride of the Border II, from E. Laverack's kennel by C. P. Parker. Allershot from J. R. Robinson's kennel by A. H. Herzberg.

Of these, Pride of the Border, Pedigree, Fairy and Viectors are the best and best known of those imported into and bred in the United States.

Dogs—Young Laverack, L. B. Blue Prince-Fairy, 1874, E. Laverack; Pontiac, B. B. Pride of Border-Petrol, 18, S. J. C. Higgins; Not Named, B. B. Pontiac-Fairy II, 1880, J. C. Higgins.

Bitches—Petrol, T. B. Prince-Lill II, 1878, R. L. D. Llewellyn; Petrol II, B. B. Pride of Border-Petrol, 1878, J. C. Higgins; Petrol III, J. B. Carlowitz-Petrol, 1879, J. C. Higgins; Princess Petrol, L. B. Carlowitz-Petrol, 1879, J. C. Higgins; Countess Petrol, B. B. Carlowitz-Petrol, 1879, J. C. Higgins; Fairy II, L. B. Victor-Bine Daisy, 1878, E. Laverack; Fairy III, J. B. Pontiac-Fairy II, 1880, J. C. Higgins.

Dogs—Carlowitz, L. B. and W. Pilkington's Dash-Countess, 1878, J. P. L. Llewellyn; Not Named, J. P. L. Llewellyn; Not Named, 1878, H. P. Grant; Duke of Devonshire, B. B. Pride of Border-Fairy II, 1878, C. S. Westcott.

Bitches—Daisy Laverack, L. B. Thimder-Perress, 1879, J. J. Snellenberg; Carlena, I and W, Carlowitz-Spencers, 1879, M. Von Ouhls.

Dogs—Planel, L. B. Carlowitz-Petrol, 1879, J. C. Higgins. Dog—Thunder, A. H. Moore, Philadelphia, Pa. Dog—Lulu Laverack, B. B. Pride of Border-Fairy II, 1877, C. S. Westcott.

which are a subject of constant complaint of the fishermen, how much more could they thrive in the waters of this country, with their great riches of food? But if we take into account the rivers of the mid south and southwest of the United States, what success may not be expected for this fish in those regions?

If the carp finds food in superfluity it will grow much more rapidly than the above statement indicates. This gives an increase of from three to four and one-half pounds in one year and six months; but this is only a normal one, the food consumed being of an average amount. If the fish obtain food very plentifully it will grow more rapidly. In this case again, it is to be considered that the waters of the middle climate of this country possess this advantage. The water is of a moderate temperature, its purity value as yet—that too fish may be able, during three-quarters of the year, or even the whole year round, to take food, and will omit the lethargic winter sleep conditioned by the cold winter. There is scarcely a comparison to be made, far as the carp are concerned between the rivers of this country, so richly supplied with food, which it will not be compelled to seek for under a constant strife for existence, and those of the much poorer waters of the Rhine, Elbe, Danube, etc. In contrast of an active country, in Central Europe, after its first waking from the long winter sleep, it seeks most diligently after the contents of the seeds of the Nymph or larva and Nymphæa alba, the yellow and white waterily, the Tribolium aquaticum, Psephenus glabrus, etc. The contents of the United States in all these plants and numerous others, the seeds of which will serve the fish as food; for instance, the wild rice (Zizania aquatica and Z. australis), the water lily, Juncus racemosa or "water oats" with its great riches of seed and its green leaves, and the water hyacinth, etc. In Europe water does not possess, thus giving a great advantage to the American carp-enthusiast. And then there is the culture of fish in ponds. There are enthusiasts in Central Europe who, wishing to see the fish grow more rapidly, take the trouble to feed them with soaked barley, which they occasionally throw out in different places, and by so doing they have had a very full success, the fish growing larger, that is, more quickly, than when not thus fed. By introducing the above-named wild or natural water plants in carp-ponds they will be perpetuated, and the grains which have fallen to the bottom of the water will form an ample article of food for the first spring days, if we do not prefer to give them the almost worthless offal of the slaughter-houses. I do not advocate the so-called artificial feeding of the fish where the ponds themselves yield food in ample abundance, a consumption toward which the Tuscarora rice will largely contribute.

Let us once more consider the fact of its extraordinary increase of weight of about 110 per centum in the exceedingly short space of time. It is not to be wondered at, when we take into account the rivers and lakes, nature banishes it into its temporary tomb, which it chooses and digs for itself, to hold its winter sleep in. This fish needs fifteen or eighteen months of growth to gain, according to the most correct methods of time and weight, and when being fed. But much more satisfactory results are frequently attained when favorable circumstances combine, and it will reach a greater weight. There are some cultivators who obtain in the same space of time fishes of four pounds weight, of course they are provided with a very rich and abundant food, and perhaps they assist nature in some degree by feeding the fishes. I have done so myself in two successive years which were exceptionally warm, when I fed the fishes with the almost worthless material of saw-dust, and the weight was not attained to the above-mentioned weight in the same space of time.

This fifteen to eighteen months of the actual time of growth transpires during a period of three years and six months, as interfering months of winter sleep are to be included during which the growth is interrupted.

I will not recur to what this fish promises to become in the milder regions of the South, who neither ice-bound water nor cold temperatures force upon it the lethargy of the winter sleep, and by so doing it will have very early in the spring, and perhaps they assist nature in some degree by feeding the fishes.

It is not to be doubted that the carp will arrive at the weight of from 25 to 30 pounds in one year and six months. I do not think that I am mistaken in this; I am ready to stand by this assertion, which the future will surely verify. The above is all that I think is most desirable for the cultivator to know concerning the carp and its natural history, and I will now treat briefly of its culture in ponds, rivers and lakes, as also the construction of the ponds.

[This article will be published entire in succeeding numbers of FOREST AND STREAM.]

HOW BLACK BASS SPAWN—Florida, April 8.—Your correspondent, "Gringo," in your issue of March 10, is right in his surmise as to how black bass spawn. This I know from personal observation. I have seen a male black bass take a female that is stocked with them some four years ago, my attention was attracted by a large bass throwing its tail and only one-third of its body out of the water. After seeing this movement repeated I locked for the cause, and walking out on a tree that had fallen into the water, I saw very near the surface of the water a hole that I stepped on. The water was about three feet in depth. Very soon a smaller bass came up to the other, and heads together, they swam rapidly around in a circle directly over the hole which I noticed just under the tree. The male and female were very close together, and the female lay on her side and floated or rose to the surface throwing her tail and body out of the water as I first described, sinking gradually again. The male now swam rapidly toward her with wide extended mouth, and grasping her body pressed it to her. She then settled upon it, and he then sank to the bed and ejected the milt, making a rapid motion across and over the bed as if spreading everything evenly. This operation continued, I should judge, for nearly an hour, and during that time he must have grasped her five or six times. I noticed that she finally struck from his approach, acting as though she had been used too roughly. To me it was an interesting study, and I think it highly corroborates "Gringo's" ideas. I notice he offers to give his bass to any one who will undertake to examine the eggs and food fish. I think I could have proved to him to-day had he been at my table where I had a six-pound fellow nicely baked.

My carp are thriving. They will be two years old in June. Do you wish to see them? They are now in a box and are ready for shipment to them in this matter connect. Geo. E. Bixford.

Very likely the carp will spawn this year. Please inform us of the result, and their size.

TENNESSEE.—Mr. James E. Warner bought 100,000 eggs of the brook trout from Mr. James Amin, Jr., of Caledonia, N. Y., and has established a hatchery in Northern Tennessee, on a stream emptying into the Cumberland River. Mr. Warner says: "If the Legislature will appropriate the sum of money for the purpose of establishing fish hatcheries, I am willing to undertake the hatching of any variety of fish eggs for any individual or persons, at the actual cost of hatching them, as I have a good hatchery, well appointed with every requisite necessary for practical work, and I have had nearly twenty years' experience."

SMELTS IN FRESH WATERS OF FLORIDA.—Jacksonville, April 6.—I have seen the smelt about smelt breeding in fresh water lakes. Would say they are very abundant in all our fresh water lakes down in Eastern Maine, also in New Brunswick, and in some lakes grow to a large size and they never go to the salt water. They are not the same species as those we take in our water.—G. A. B.

TEXAS.—Austin, April 5.—The Legislature has erected the office of Fish Commissioner on a sound basis, making an appropriation of \$5,000 per annum, and giving him a salary of \$1,500 per year.—HASTINGS.

Balmy sleep, good digestion, rich blood, elastic step and cheerfulness in the old Bitters.

they rise more often from the depths below to the surface. Two or three or more of the male fish keep near the female; the latter swims more slowly on a warm, sunny morning, keeping mostly close to the surface. The eggs are laid in the water, and are called "streichel"—running-spawning—and is more frequent in warm than in windy and rainy weather. Answers to Correspondents.

No Notice taken of Anonymous Communications.

All planned smooth on facing surface, and great care has been taken in obtaining a fair ship. The engines are by W. Webb, of East Boston. They are compound 22 in. dia. with 15 in. stroke. Boiler is of the tubular type, 1 1/2 ft. diameter and 10 ft. high. The wheel is 6 1/2 ft. diameter. A speed of 10 knots or 19 miles is expected. She is schooner rigged with the following spars, made by Boutwell & Bailey: Mainmast, 45 ft.; mainboom, 27 ft.; foremast, 44 ft.; foreboom, 28 ft.; main boom, 38 ft., and gaff 24 ft. There is also a square yard 40 ft. long on the fore. Laid by the following riggers: J. J. Baker, of Boston. This winter, among them for the new sloop of Mr. W. S. Eaton. He has also done a vast amount of overhauling and alterations on boats, and built up yachts, of which mention has already been made in these columns.

THE EVOLUTION.—Mr. W. Baden Powell writes very truly in the London Field: "The practical amateur yachtsman must view this subject with mingled feelings of pleasure, alarm and hope; for it is indeed a pleasure to be instructed in the ingenious modes of construction developed in the design before us—a pleasure to see that the changes sent forth by the evolution of the vessel are not the result of an alteration of the tonnage rule, and which were pool-pooled by one or two 'authorities' as mere 'logies,' are herein related, alarm they feel. Evolution should merge and multiply, and create so powerful a plea of vested interests that alteration of the rule which fosters such craft would be impossible. And they hope that the evolution may be successful, make a clean sweep of the rules, and clearly demonstrate that, so long as the present rule is law, you have only to go on in one direction—length—for success."

But what must be the feelings of the professional yacht architect? Simply alarm; for the value of theories as to lines and pet misadventures fades away as length increases. Till the design of the construction of a racing machine becomes a problem and work to be solved and carried out by the mechanical or practical engineer, who, with the assistance only of the sail-maker, will produce the latest idea in aquatic plows."

THE ANNUAL CANOE REGATTA.—Editor Forest and Stream: W. E. Welch, C. E., Surveyor of the Lake George Canoe Club, assisted by Messrs. L. Barber, H. E. Archibald, O. B. Lockhart, and James Kirkpatrick, completed the regatta course at the request of the American Canoe Association for August, 1881. This party of gentlemen volunteered their services for the purpose. A plan of the course will soon be drawn and sent to Commodore W. L. Allen, of New York. The survey was made upon the smooth ice of the lake, and will afford a correct distance of 1 1/2 miles. Secretary A. C. A.

BUFFALO YACHT CLUB.—We learn that the club is considering a new measurement rule, and may possibly adopt a "three dimension" rule. Western clubs are generally wide awake to the necessity of a change from the length rule, at least for cabin yachts. Hingston Bros., of York street, are building a steam yacht for Capt. Hunter, of Cleveland. She is 40 ft. over all, 16 ft. beam, and 17 ft. deep. Steel boilers and double direct acting engines. The Knobloch Bros. have had a steamer 30 ft. long for Eric owners, which they hope to launch in May.

SAN FRANCISCO YACHT CLUB.—The following officers were elected for the year 1881: Commodore, C. H. Harrison, yacht Frolic; Vice Commodore, J. D. Sprickell, schooner Consuelo; Secretary, Chas. G. Yale; Executive Secretary, Frank Tibbault; Treasurer, W. Follen; Bus, Messrs. Matthew Purser, school Nellie; Directors—R. B. Bowie, schooner Nellie; W. Lates Oliver, yacht Emerald; J. C. Claiborne, schooner Calista; J. A. Magee, Jr., John Rae Hamilton, sloop Clara.

FIXTURES.—As suggested in these columns, the Dorchester Y. C. has arranged its regatta to date June 18, so as not to interfere with the Marblehead annual regatta in the 17th, and the Boston Y. C. has selected the 19th for a similar reason.

PRESENTATION.—Mr. F. E. Peabody, the retiring Commodore of the Dorchester Y. C., has been presented with a token of appreciation by the club in the shape of a handsome yacht clock and barometer compass.

AMERICAN CANOE ASSOCIATION.—The colors adopted by the association consist of a pointed red pennant with horizontal white stripes through the center carrying the letters A. C. A. in red.

HOLLOW SPARS.—Laid by Messrs. J. J. Baker, of Boston, and Mr. Boutwell & Bailey, of Boston. The hull, a hollow yonk for Mr. Cabot's Maudslayi, and also several smaller yachts for New York owners.

J. L. A.—This sloop, 35 ft. long, built in New York nearly twenty years ago, has recently been purchased by Mr. J. L. A., and has been sold to Boston owners for the very respectable sum of \$694.

BOSTON YACHT CLUB.—Has now 225 members, 27 schooners, 52 sloops and steamers. Prizes to the amount of \$300 and over are offered for the July regatta regatta.

BOSDON RIVER YACHT CLUB.—The club have opened their new house, foot of Seventy-fourth street, N. R. They have fixed their annual meeting for July 5.

SLOOP WANTED.—The attention of owners of small sloops is called to our advertising columns, through which a sale may be effected.

ALICE.—Mr. W. Leckner's schooner Alice, now at Leighton's yard, East Boston, has been altered from a board to a keel.

C. F. R., Lexington.—Your inquiry will receive early attention.

S. F., Hollisburgh, Pa.—There is a letter for you at this office.

S. F. E.—For another address J. Tagliavia, 62 Fulton st., N. Y.

A. B. T.—Your letter has been forwarded to the canoe builder in question.

R. F.—An article on light drafts and sharpies has been deferred for want of space.

O. W. F.—Nothing else published about catamarans than the paper recently sent.

W. H. K.—Plans for two-tonner delayed on account of previous commitments.

C. A. C.—For catalog of engineers, guide books, etc., write to Van Nostrand, 37 Murray street, N. Y.

W. T. P., Danbury, Conn.—Write to Hartley & Graham, Maiden Lane, New York. They import the gun.

L. O.—The patent does not seem of much practical value, though inventor is sanguine. Want of funds prevent introduction.

S. A. M.C.—The contract with Brentano has expired. Kemp's Yacht Designing, 235. Kemp's Yacht and Boat Sailing, \$10.

R. M.—No other publication make a specialty of yachting all the year round. Bruce's Magazine is now devoted to chess only.

X. Y. Z.—Too late to do anything more than keep him quiet and prevent him from using the tooth jowl headed. He will keep it clean by using it.

C. F. P., Boston.—Mr. J. Matthew Jones, we presume, meant the common furl. There is enough of spunk in the furler to clean out the woodblock.

C. A. C.—For model, engines, etc., address Peck & Snyder, Nassau st. below Jackson, or Hatfield, 13 Liberty st., for heavier material. Mention this paper.

T. K., Lawrence, Mass.—We know nothing of the party beyond having been in the city. You can learn of his transiency by inquiring of his townsmen.

S. B., New York.—You will see changes in the game law duly reported in our columns. We have no knowledge of such a law as you mention having passed.

G. G.—Think you can canoe the Rappahannock from a village by that name in Pamunkey county, easily reached by rail. Write to the Y. M. C. of the place.

A. H.—There is ample testimony in favor of the boats you mention dry and salt. If you are sent in choosing either, head to maker for descriptive catalogue.

W. S.—Shower canoe see cut and figures in issue of March 17. She is a decked boat belonging to the "paddingless-sailing" class. Good for cruising and open water.

F. A. T.—The yacht in question has three beams to length, has outside keel and is considered safe and able. If you do not object to her draft, will suit your wants. She is very well built.

J. A. S.—Both your mention can be recommended for all that is claimed for them. It is a matter of individual preferences between them. They are extensively used throughout the West.

G. A. G.—Cannot recommend the plan of edge fastening outer plank instead of depending upon a regular frame. The article was probably not written by a practical person. Too heavy and too expensive.

H. and Others.—For cuts of canoes and steamboat with dimensions see issue of March 17. Only book on boat building is Nelson's revised by Kemp. Send to Van Nostrand, 37 Murray st., N. Y. Price about \$1.50.

H. R. S.—To give directions for building a boat would involve writing a small volume, and part is short, refer to Manning, 32 Beaver street, for Nelson's "Boat Building." Price about \$1.50, or consult with local boat builders.

SNAKE.—For cut and dimensions of snake-boat see issue of March 17. Could not help you by further explanation, as it is a matter of individual tastes. See Bishop's "Three Thousand Miles in a Snake-boat," Lee & Shepard, Boston.

M.—The book coating nearest to your wants is "Kemp's Yacht and Boat Sailing," replete with valuable information and data generally on building, handling and care of small boats. Price \$1.50. For Watson's "Model Yachts," send to E. P. Dutton & Co., N. Y. Price about \$1.50. Vanderleecken does not treat of building.

J. W. D.—Shadow cone will come nearest your description, or one of the "paddingless sailing canoes" of builders advertising in this journal. Any style you prefer than you will probably have to use for her with proper care. They are light, but tough. Do not like paper canoes. Not in the market now. Use removable keel for windward tacks. Centreboard is in the way and leechboard not very efficient.

W. H. D.—The yacht would be drier and larger with a raking stem starting with the load-line as a basis to build from. Also involves sheet of water-proofing canvas. By supplying mix will forward you get along with a single job and have larger mainmast. For bad weather use mizzen and jib only. Weight of anchors dead weight upon service to be seen. Ordinary work anchor, say 25 lbs. best power 40 lbs., and for extensive cruising a spare anchor slow-bow, say 50 lbs.

A. S.—For water-proofing canvas the following is recommended: To 60s. yard water-proofing add 1 1/2 pint of water and when boiling add 2 pounds of ground spruce, 3/4 pound patent, orders and 4 pounds berried linseed oil, or use less quantity of same proportion. Another recipe is to take 3/4 pound sugar of lead and 3/4 pound of powdered silica, dissolve in bucket of pure water and pour off into another vessel, steep the canvas in this, soaking well and letting dry naturally without wringing.

COMMODORE.—Yacht-racing in England is carried on according to different principles. Races are not annual and are confined to one club. They are open to all comers, almost without exception. They are public, the same as our "union regattas." Entries could only be limited by specifying "restricted," or, to draw the line closer, "recognized incorporated," or else publish list of clubs admitted. Limiting entries to a single club is baby's play, and would do many other old-fashioned features from the sport's youthful days. Time we progressed a little.

SUBSCRIBER, Wheeling, W. Va.—You will be kind enough to inform me of a mixture that will color silk-worm gus. I mist color for lead-gold or fading lines, so that it will not injure the strength of it. Also, the mixture to stain gum. Ans. Take an earthen jar with a quart of cold water; put in one dram of logwood and six grains of gamboge, boil one hour in the water and the other in the jar; add, rub it with a piece of India rubber. All bad pieces will break if rubbed well; those serving to full length in undisturbed water.

W. S. Shanon, Mass.—I what kind of ponds do land loaked salmon thrive best in? 2. What month to buy spawn? 3. What is their size at one year old? Ans. We have delayed answering this in order to get an answer from Mr. Charles G. Aldus, of the U. S. Fish Commission, Bucksport, Me., who is the best posted man in America on the fish in question, as he has taken trout eggs for years. Mr. Aldus writes as follows: Land loaked salmon thrive best in deep ponds and lakes of very pure water with clear bottom and fed or drained by large brooks or rivers of pure water with abundance of gravelly rapids. 2. They spawn a little in October, but mostly in November. 3. Cannot tell size at one year old exactly, but in six months they get to be from two and a half to four inches long, and 1 1/2 to 2 inches high. Both annual in minutes and, after allowing to stand two months, they will be from one and a half to two inches long, and 1 1/2 to 2 inches high. We have found among the wild fish in their native haunts on the Schoodic Lake, Maine.

H. B., Brimmondville.—Is there any good trout fishing, fly only, to be had in Ontario? If so, where and in which month? 2. Watch for humped fishing lines, both worn and new ones, be water-proofed with lead-gold. 3. Fly fishing. We could not enumerate all the places. Try the vicinity of Peterboro, or streams emptying into Lake Simcoe any time between June and September. 2. Humped lines we know nothing of. To water-proof silk line the following is given by Norris: "To a quarter of a pint of double-boiled cold-drawn lard, add about one ounce of gold size. Gently warm and mix them together, and be careful to keep the lard dry. When the mixture is warm, soak it therein until it is fully saturated to this end, press it twenty-four hours. Then press it through a piece of muslin, and sufficiently to take off the surplus of lard, which causes that which is in the interior to dry well, and in time to get stiff. The muslin then be hung up in the air, wind or sun, until of the reach of moisture, or about a fortnight, till pretty well dry. It must then be redipped to give it an outer coat, for which less soaking is necessary."

After this wind it again, and lightly; when it is clear hard or tough before a dry fire and to renew it for two or three hours, which will cause the mixture on it to "flow" (as japsen term) and give it an even gloss over the whole. It must then be left to dry as before, and so on. (The, as it depends upon the weather and place, observation must determine upon. By this means it becomes impervious to wet and sufficiently stiff to hold the line quite dry. The former quality, and the gold size which is insoluble in water) the latter, while the co-mixture prevents the size becoming too hard and stiff."

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpenter's or clothier's, rugs, etc., can be sure of fair treatment at the hands of JOHN H. PRAY, SOUS & CO., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[Ad.]

NOTICE!

Keep Manufacturing Co., 631, 633, 635, 637 Broadway, N. Y.

J. J. KING'S PIGEON TRAP (PATENT), With attachment for starting without plugging or touching the bird, can be seen at E. S. Hart's gun shop, No. 47 Broadway, New York, or at No. 12 West 56th st., where orders should be sent.

KNAPP & VAN NOSTRAND, FOWLER AND GAME, Nos. 280 & 290 Washington Market, N. Y.

THE GREAT REDUCTION in the quality of this article, and the increasing admixture of rough strands, has forced us to go into the manufacture of it for our own account. Our Mr. Imbric has recently established in Murcia, Spain, where all the high quality gut is made, the most extensive and perfect factory of this article in the world. The grades named below will run at least 25 per cent. better than those of any other manufacturers.

Table with 4 columns: Per Thousand, Corta, Regular Ordinary, Padron. Prices range from \$1.00 to \$5.00.

Orders received from persons residing in cities in which the dealers keep a full line of our goods will not be filled at any price. ABBEY & IMBRIE, 48 Maiden Lane, New York.

BRANDY AND WINE FOR VITALIZED PHOSPHITES.

Composed of the NERVE-GIVING principles of the oat train and wheat germ. It restores to both brain and body the elements that have been carried off by disease, worry, overwork, excesses or nervousness. It promotes digestion and strengthens a failing memory. It prevents the return of the brain, gives good sleep, and recuperates after excesses. Physicians have prescribed 300-600 packages. For sale by druggists or mail. E. CROSBY, 464 and 666 Sixth Avenue, N. Y.

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER HEALTH AND GAME RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these wild and unbroken regions.

THE TROUT season begins May 1 and ends Sept. 1. THE GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakes of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU, the scenery of the North Woods and Lakes is very beautiful. The fish are dried and brined. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1887. During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For tourists Guide a handsomely illustrated book of 60 pages sent free. Fine Card Folders and other information, address

GUNPOWDER! Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. We manufacture the following celebrated brands of powder.

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 15 canisters.

Dupont's Eagle Brand.—Nos. 1 (coarse) to 5 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 15 and 50 canisters and 6, 12 and 15 lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, one No. 7 and No. 6, No. 7 being the coarsest. Packed in 6 1/2 lb kegs and 15 canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 15 canisters and 6 1/2 lb kegs.

Dupont's Rifle Fg.—"Sea Shooting"—FFG, and FFG. The Fg. for long-range rifle shooting, the FFG, and FFG. for general use, burning strong and moist. Packed in 15, 12 and 6 1/2 canisters, 6 1/2, 12 1/2 and 25 lb kegs. Fg. coarse, FFG, fine.

Dupont's Sporting, Mining, Snapping and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Muzzle, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof. Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEBLAND, 70 Wall Street, N. Y. N. B.—Use none but DUPONT'S Fg. or FFG. for long-range rifle shooting.

ANSWERS TO CORRESPONDENTS..... 257

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondents' name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, April 28.

A NEW NORTH CAROLINA CLUB.

THE quail grounds of North Carolina are to Northern sportsmen what the grouse moors of Scotland are to English sportsmen. The number of strangers who visit that State for sport is yearly increasing. If the people of North Carolina are wise enough to protect their own interests by restricting the excessive killing of their game, this influx of sportsmen tourists will be unabated, and the advantages accruing to the residents undiminished.

Among the game centres of the State one of the most inviting is Gaston, in Northampton County. Quail are abundant all about for an area of thirty miles, with other birds in goodly numbers, and ducks and geese on the Roanoke from October to March. Within that compass there is not a pack of hounds, and foxes and deer are in consequence numerous, and the pursuit of them successful. Our valued correspondent, Col. Goode Tucker, of Gaston, whose many fox chases in his old age have been recorded in the columns of the FOREST AND STREAM, proposes to organize a club of sportsmen, with headquarters at Gaston. Riding by the old Gaston Hotel one day, it occurred to him that here was just the spot for a yearly rendezvous of congenial spirits. The hotel is a substantial brick structure, with accommodations for fifty guests, and was built before the Greenville & Gaston Railroad collapsed. It is now unoccupied and somewhat out of repair, but can be put into good condition at a small expense.

Col. Tucker's project is briefly this: He wishes first to organize a social hunting association of twenty members, ten of whom shall be from the North and ten from the South, and our friend proposes to banish politics and political opinion entirely from the association. The shares are fixed at \$100 each. The fund of \$2,000 will be used to purchase the hotel building, with several acres of very productive land belonging to it, to make necessary repairs, build stables,

dog kennels, etc. The preliminary labor Col. Tucker offers to assume himself, without charge, and the general management of the property, after the association is formed, also placing at the service of the club his pack of seventeen well-trained hounds. It is further proposed that the association shall be governed by a board of managers, to be elected by the members, and other matters to be determined by the will of the members.

This necessarily brief outline of Col. Tucker's plan is sufficient to show its inviting character. The opportunity to secure an excellent club house in a fine game district is one not often found, and we do not doubt that some of the readers of the FOREST AND STREAM will avail themselves of the advantages offered. The names of gentlemen who wish to associate themselves in the enterprise may be sent to us, and we will gladly endeavor to promote the speedy formation of the Gaston club.

Col. Tucker is one of the best known sportsmen of the Southern States. His fund of field reminiscences, adventures and anecdotes is inexhaustible, and to gather with himself and comrades, after the sport of the day, to listen to the stories of men and things in the past would be to none of the most enjoyable pleasures of a stay in the club house. This in itself would repay us for the trip.

THE KITTY HAWK BAY CLUB.

THE organization of the "Kitty Hawk Bay Sportsmen's Club" will be regarded by a large number of gentlemen sportsmen throughout America as a progressive and timely movement toward the preservation of our choicest varieties of wild fowl and the rarer species of game fish, which, if properly protected in the localities which they frequent during their migrations, would for many generations to come afford hunters and anglers rare sport, combined with opportunities for mental repose and bodily invigoration so much needed by the overworked in all our large cities.

The ruthless destruction of canvas back, redhead, black head and teal ducks in the waters of Currituck, Kitty Hawk Bay, North Carolina, during the month of October, 1880, by natives and market-shooters who employ batteries by day and fire by night, is a circumstance greatly to be deplored. During the period mentioned canvas back and redhead ducks were slaughtered by the thousands and packed in barrels, only to decompose before reaching market. Such a general and wanton destruction as this of our very choicest wildfowl is shocking to the sensibilities of every true sportsman, and cannot often be repeated without the most serious consequences.

It is plain that these shooting grounds must pass into the possession and control of well-managed club organizations, or a marked decrease and rapid extinction of game, now so abundant, will surely follow.

The various clubs heretofore organized in this section have found it difficult to secure legislation favorable to their interests, chiefly because the clubs themselves have owned comparatively little territory or shooting privileges. The Kitty Hawk Bay Club, owning as it does nearly fifty thousand acres of land and controlling a water frontage of over fifty miles, will, by reason of its vested rights, become a leading factor in obtaining such legislation as is now needed for the preservation and protection of game. We hardly need urge the importance of this matter, as judging from the character and standing of the gentleman projecting this club its success in every direction would seem already assured. Certainly, with telegraphic facilities already established at Kitty Hawk and the early completion of the Norfolk and Elizabeth Railroad, the matter of communication is most satisfactorily settled, and the distance from New York is now covered in about twenty-three hours instead of eighty hours as was formerly the case. The latter advantages will be greatly appreciated by members of the club living in New York, as they have rarely if ever before been combined with such unusual opportunities for really first-class shooting and fishing as are here offered. That the great future value of these vast acres of our choicest fowl and fish is beginning to be appreciated is attested by the very general inquiry and demand for these properties (since they were secured for the Kitty Hawk Club) by parties at the South as well as at the North. The variety of shooting ought to satisfy almost any sportsman, as it includes

canvas back, redhead, black head, widgeon, teal and other kinds of duck. Swan, geese, brant and snipe, deer and bear are also plentiful, and the waters abound with bluefish, Spanish mackerel, mullet, sheep's head, sea trout, spot perch, striped and black bass, oysters and diamond back terrapin.

We have ever deemed the question of game preservation one of national importance, and have felt a growing interest in this region, whose very remoteness and inaccessibility, rather than the intelligence of its people, have combined to protect and secure from extermination its vast, varied and almost numberless flocks.

A CANADA ANGLING CLUB.

IT gives FOREST AND STREAM much pleasure to note the proposed formation of an angling club, which will have its headquarters at Lake St. Jean, at the head waters of the Saguenay, where most excellent wiminish or land-locked salmon fishing may be enjoyed. The enterprise is projected by a gentleman well known to the anglers of Canada and of this country, who knows the country thoroughly, and whose enjoyment of the sport to be found there has prompted him to devise a means whereby others may share the same. The purpose of our friend—who has already, we believe, secured the land—is to build a suitable house for the accommodation of the club members while on the ground, and to put this in charge of a man who shall live there the year around, keeping a cow, poultry, etc., and cultivating a vegetable garden, all for the benefit of the club's table. There is room for from ten to fifteen rods, good sport being assured. The season extends from June to September 10, being best in July and to the middle of August.

The expenses of building the house, making roads and other necessary preparations, will cost from \$1,000 to \$1,500. There will be either ten or fifteen members, and if the latter number, the entrance fee will be \$100; if there are only ten members, the fee will be \$150. The annual dues for the maintenance of the property thereafter, \$10. Each member will be allowed to invite one companion to accompany him. The fares from New York to the grounds will not exceed \$60 for the round trip, and supplies can be obtained at Quebec. Besides the angling attractions of the country, there are several varieties of game in abundance and within a short distance from the club house. The surrounding country affords bear, beaver, martins, minks, caribou and moose.

We commend this movement to the attention of our angling friends, being confident that they will avail themselves of the opportunity here afforded to secure—a share in the advantages offered. We may add that the enterprise is due to the efforts of Mr. J. U. Gregory, of the Department of Marine and Fisheries, Quebec, a gentleman for whose many courtesies American anglers have been indebted in the past, and whose name is a sufficient guarantee of the success of the club. Further information of the conditions of membership in the club may be obtained on application to the Secretary, W. A. Griffith, Esq., Quebec, Canada.

AN EXAMPLE FROM THE SOUTH.

THOSE who supposed grit and enterprise to be absent among Southern sportsmen were completely taken aback by the bold, well executed and successful venture of a New Orleans yachtsman in sending his vessel two thousand miles and more in search of the best of her class to sail in the New York Bay regatta last year. Others who imagined that our friends from Dixie could teach us nothing in the way of mechanical contrivances of a nautical sort had occasion to modify their opinions when Mr. Israel's crack, Snelc S., went over the line. There is, to the honor of New Orleans and Southern yachtsmen be it said, as live a spirit of the true sort, as much and more "go ahead," as good and better management, as keen and keener competition, as honest sailing, more method and far greater public interest manifested among all classes than in any city of the North. We are not surprised, therefore, at the offers made with liberal hand to induce a visit from the higher latitudes, and live in hope that the owners of some of the fastest and smartest of our "open boats" may find the time to ship their racers around to Lake Ponchartrain. Those who own craft of the second order may as well stay at home, for it takes a live ship, a quick crew

and a very fair allowance of good luck to keep abreast of a Southern flyer toiled by a naive skipper and worked by a crew used to their waters. The dates for the races have been considerably left open to be filled in accord with the wishes of the strangers expected. The prizes exceed anything of the sort ever offered in the North, and apart from the credit attached to winning a well-fought match, are inducement enough to travel a long distance, and will cover the expenses of the undertaking. In the modeling of fast shifting ballast boats New York thinks she has taken the lead, and in our waters there is little or nothing to dispute her well-established fame. But it was a Southern-built crack that first "took down" our vanity, at least on Lake Ponchartraine last year, when Cydus most unmistakably beat the smartest of the Northern importations, and we have a little more to wipe out in that direction. Unlikely to succeed in raising attractive purses for a public "day regatta" at home, will not some of those devoted to racing open boats show hitherto unseemly colors among the fleet of the Crescent City this summer? They will have no cause to regret the trip from any point of view, and may bring home with them some conceptions of what a live and wide-awake yacht club owning open boats may be when animated by a sportsmanlike spirit and controlled by men of broad views and intelligence. We quote with pleasure a letter from Vice-Commodore Harris, S. Y. C., and commend a consideration of the matter to all interested:

"The Southern Yacht Club decided April 18 to offer in the "Water-State Regatta" under its auspices, to first-class boats (over 25 ft. and not over 25 ft.) a prize of \$1,000. If one yacht from your city will complete \$1,200, it will enter and \$1,500, if three or more will sail. We are anxious to have your first ones down here and will fix the date of regatta to suit the convenience of intending visitors. Yachts in this class allow an another 515 seconds per mile per mile. Arrangements for the transportation of yachts and crews can be made at advantageous rates, and you can guarantee a hearty welcome and every attention from our people.

HOWARD WARRICK,
Vice-Commodore S. Y. C.

THE NEW YORK FISH COMMISSION

Governor Cornell vetoed the appropriation for fishculture last year, but fortunately the Commission has surplus funds enough on hand to bridge over by a severe economy the time when a new appropriation may be available. If it were not for this the results of former years' labor might have been entirely lost. Now that the season approaches when the subject is again brought before the Legislature, the New York Times, the Sun and the Brooklyn Eagle have taken up the question, and beseech the Governor not to repeat the veto. On this point the Times said:

The Governor took the ground that it was contrary to public policy to allow an appropriation for such a purpose to become a fixed annual charge on the State, and that as he conceived the purpose of the appropriation in restocking our depleted streams with fish to have been fully accomplished, there was no need for further prosecution of the work. In point of fact, the propagation of good fishes in the waters of this State, as of other States, is still in its infancy. There is not a State in the Union possessing any extensive habitat for fish which does not make an annual appropriation for fishculture, and New York is the first in which any objection has been made on the score that the money cannot be profitably expended. Private enterprise will certainly not provide for keeping up the supply of shad in the Hudson River or for carrying on the proposed breeding of Spanish mackerel for the Long Island shore any more than it will do the work of the United States Fish Commission in distributing German carp by the thousand throughout the entire country. There are, it is true, private persons who breed their own trout, but the streams of the State will not be replenished by that agency. The entire business properly belongs to the State and national Governments, and we have yet to hear of any public protest in regard to the non-productiveness of the small amount of money which it requires.

It is not that the Governor had doubts as to the benefits which fishculture has already accomplished, but he seems to think that after a stream is once stocked that should be enough. He should remember that our increased population requires an increase of nets, and that shad cannot be kept in the Hudson without artificial culture. The Times further says:

If an appropriation is to be made this year, it would be wise if a certain amount of the sum granted by the State should be used for fishculture of Long Island. Long Island possesses certain natural advantages which no other portion of the State enjoys. The artificial propagation and rearing of trout has always been very successful here. Trout seem to find their natural food in the Long Island streams, and grow with wonderful rapidity. But it is not for trout alone that Long Island would serve as a nursery. Since the United States Fish Commission has found that Spanish mackerel can be reproduced without any trouble, the waters of the Sound could be made to abound with this excellent fish. Last year Spanish mackerel were almost entirely wanting in the waters adjacent to New York, their absence being attributed to the damaging of refuse in the Bay. In the Sound they were exceedingly scarce, the whole number of pounds of Spanish mackerel reared last year in the wholesale markets of New York being only 235,189, whereas it should have been four or five times as much. From having on one side a protected shore the Long Island presents certain advantages for the construction and maintenance of experimental hatcheries for Spanish mackerel, and there are the best reasons to suppose that just as cod can be reproduced so can Spanish mackerel and striped bass be largely increased in numbers. From Long Island all the southern and southeastern counties in the State could be supplied. With the appointment of a fourth Commissioner, Mr. E. G. Blackford, it was distinctly understood that some efforts should be made toward fishculture near New York City. For all these reasons, the principal ones being that money thus given by the State serves a useful purpose—that of giving food to the people—and because for every dollar expended

the return is a thousand-fold, it is hoped that Gov. Cornell will not withhold his consent to an appropriation to be employed in such a legitimate way.

There are so many things to be said in favor of the good work done in the past by the able Fish Commission of New York, and so little against it, that we do not at all despair of seeing the Governor convinced that an appropriation for the purpose of increasing the food supply of the people is money well invested.

It is an ENCOURAGING SIGN OF THE TIMES that a Western newspaper, long notorious for its scurrilous and abusive attacks upon gentlemen of unblemished character and reputation, has announced that it will no longer permit its columns to be made the vehicle of "personalities." The lame attempts at explanation and excuse by which this announcement is accomplished are so feeble that they might excite feelings of amusement were it not so pitiful a spectacle to see a person compelled to struggle and squirm in such a humiliating fashion as does the writer of the paragraphs in question. He assures his readers that he has "endeavored to publish a gentleman's paper," and tacitly asks their sympathy for him in his struggles to this end, and in his notable failures. It is certainly to be hoped that his efforts hereafter may be more successful than they have been. We cannot but feel a certain pity for one whose course has been such that he is now obliged to go about to the different individuals whom he has vilified and, humbling himself with cap in hand, to apologetically apologize for his unwarrantable conduct in the past. To be sure, in such a case the humiliation is not so deeply felt as might be supposed, since long before such shameful attacks as those referred to could have been made or permitted, all self-respect and pride must have been lost; and it is a suggestive circumstance in this connection that the sudden determination to wash and be clean was not a voluntary resolution of the individual himself, but was, on the contrary, a tardy concession to the emphatic demands of numerous outraged subscribers.

We are glad, for the credit of American journalism, that the torrent of reckless abuse which has so long poured from this source is to cease, and we shall watch with some little curiosity the continuance of the endeavors to publish a gentleman's paper. That these efforts will be attended with any very marked degree of success is, under the circumstances, scarcely to be hoped for; but there is such abundant room for improvement that we may, perhaps, look for some change for the better.

FISHCULTURE AND EVOLUTION.—At a recent meeting of the Illinois State Natural History Society, Prof. S. A. Forbes made the statement that the time was past for arguing the truths of the doctrine of evolution; that scientific men substantially agreed that, if it was not in all cases proved to be truth, it in most of them approximated so closely that its entire truth could be safely assumed; and that they agreed that it was easier to believe than the theory of special creation. On every hand the naturalist found evidences pointing in this direction, and he instance some of his own observations upon the development and anatomy of fishes.

In speaking of the development of fishes he referred to the work of the fishculturists, and objected to the theories of some that all or any fishes could be indefinitely increased without regard to the numbers captured or to their competition for food with other fishes. He claimed that this was a contradiction of the accepted theory of natural selection, and that the protection of fishes was as important as their culture. He explained how the food supply of the fishes was diminished by the drainage of swamps, the restriction of the overflow of streams by dykes or levees and other works of man, and doubted if the supply could ever be made to equal that of the country before its subjection to civilization.

HON. W. B. WELLS, of Ontario, died April 8, in Toronto, of paralysis. Judge Wells was born at Maitland, in the County of Grenville, October 3, 1809, and commenced the practice of law in Prescott in 1832. He was actively interested in politics, and was three times elected to represent Grenville in the Canadian Parliament. In the year 1853 he was appointed Judge of Kent, and filled this position with ability and honor for twenty-seven years, resigning it two years ago, when he went to Toronto, where he has since resided. Up to within a short time he has enjoyed excellent health, and his death was sudden. He was struck down by paralysis on Monday and died the following Friday.

To the sportsmen of the last generation Judge Wells was known as a brilliant and versatile writer on subjects treating of the rod and gun. He was a frequent contributor to the old *Porter's Spirit*, and under the pseudonym *Cinna* contributed to the *British Whig* a series of interesting "Sporting Sketches." He was also the author of a book on field sports, which was highly thought of in England.

AS IF THE GAME OF NEW JERSEY had not suffered enough from forest fires last spring and bitter cold and snows last winter, fresh reports of destruction now reach us. Extensive forest fires are raging in Sussex county, New Jersey, among the pines, and it is feared that unless they are promptly checked by rains much game may be destroyed.

Nor are the fires confined to New Jersey, for in the mountains of Pennsylvania, near Port Jervis, the forests are on fire. There has as yet been no loss of life so far as reported, but much property has been destroyed and probably a large amount of game has perished.

The Sportsman's Tourist.

TID FRANKLIN CLUB AT REELFOOT.

IT has long been the custom of the "Franklin Hunting and Fishing Club" to spend a couple of weeks of every fall in shooting and fishing at Reelfoot Lake, situated in the extreme northwest corner of this State, and within a short distance of the Mississippi River. This lake is twenty-five to thirty miles long and from four to eight miles wide, with many numerous arms or inlets extending in every direction, many of them to a distance of three or four miles. These arms are favorite resorts for ducks and geese, the water being shallow and their appropriate food abundant. Patches of lily and bonnets impede somewhat the headway of the sportsman's watercraft—generally a dug-out—but give many good stands for shooting the game in its flight, and here the best bags are generally made. The lake is fringed with the remains of gigantic cypress trees, still standing straight as arrows, but limbless, and all showing more or less the effects of fire on their charred and blackened bodies. This feature is so constant and gives such a sameness of appearance as to make it necessary for the uninitiated to have guides. The depth of water does not generally exceed ten feet, and where it is only three or four feet in depth the bottom is covered with moss, furnishing vast amounts of food for waterfowl and such fish as live on vegetable diet, besides giving shelter and protection to the small and growing fish against their large and rapacious brethren. Sportsmen from St. Louis, Cincinnati, Louisville, Nashville and all portions of Tennessee and Northern Mississippi meet here, some camping out, some in the city, and some in the hotel. The guides are expert, especially for sportsmen, and furnishing comfortable quarters, good, substantial fare and kind attention, with guides and boats for all comers at a rate sufficiently moderate to be within the reach of men of modest means. On the opposite side of the lake from Carpenter's stands a beautiful and well-built club-house, the property of some Nashville gentlemen who, in making arrangements for their annual pilgrimages to this Mecca of Tennessee sportsmen.

We left Nashville at five o'clock p. m. Nov. 11 by rail, and the trip from Nashville over the Northwestern Railroad is always made pleasant by the courtesy and attention of the officers and employes, who extend every desired and proper privilege to sportsmen in the way of transporting and caring baggage, dogs, minkoes, traps, the guides and one independent outfit for a party on a campaign. The game on the road may be left either at Union City or Hickman, both of which places are provided with excellent liveries. We stopped at the former place, and after a drive of twenty miles, reached the lake at 3 p. m., near Carpenter's Hotel, and immediately crossed in boats to a narrow strip of land known as "Loig Point." Here we made camp, and before eight o'clock our tents and our quarters made as comfortable as a house. Our camp was about thirty yards from the margin of the lake, looking southward, while toward the north and east we were sheltered by a dense emerald protecting us against the biting winds whose visits were in store for us.

Every duck known to Western waters may be found here and, in some seasons, in numbers almost incredible. It is a source of sorrow to those who love the birds and their Northern habitat and their southern points to which they migrate. Their stay is a sometimes a question of food, and sometimes of weather. Geese were very plentiful last fall, and large numbers remain here during the entire year, rearing broods of young. The native geese is much heavier than his migratory brother from Canada, and possessed of an amount of soft sense which the Canadian bird would not be fancied and our quarters made as comfortable as a house. Our camp was about thirty yards from the margin of the lake, looking southward, while toward the north and east we were sheltered by a dense emerald protecting us against the biting winds whose visits were in store for us. Every duck known to Western waters may be found here and, in some seasons, in numbers almost incredible. It is a source of sorrow to those who love the birds and their Northern habitat and their southern points to which they migrate. Their stay is a sometimes a question of food, and sometimes of weather. Geese were very plentiful last fall, and large numbers remain here during the entire year, rearing broods of young. The native geese is much heavier than his migratory brother from Canada, and possessed of an amount of soft sense which the Canadian bird would not be fancied and our quarters made as comfortable as a house. Our camp was about thirty yards from the margin of the lake, looking southward, while toward the north and east we were sheltered by a dense emerald protecting us against the biting winds whose visits were in store for us.

The weather on the day following our arrival gave promise of good fishing, and after breakfast we set out for the "drift," some half a mile from camp. This is a portion of the lake in which there is an occasional live cypress growing, among which numbers of fallen trees and logs have drifted and become so wedged and rotten in as to defy removal by winds and currents. They are sufficiently scattered to allow canoes to penetrate in almost any direction, and afford the fish security against every device except hook and line. There were four of us, and from 10 a. m. until 4 p. m. we caught thirty-seven black bass, many of them going over four and none under two pounds. Although the next morning was more colder, we determined to fish again, and from 10 a. m. until 1 p. m. caught twenty-five—Capt. P. taking the largest, five and a quarter pounds. The weather was now getting colder every moment, our lures standing up from the eorks like wire, and not a man with fingers enough to put a minkow on a hook. As we started for camp, Col. W. had a bite, and did not get off in company with the rest of us. The fish carried his own collar, and was a fine specimen of a black bass, and the moment he was on the hook he stepped up to the stump, but after a short struggle his hook was released and the fish gone. On turning to enter his boat, imagine his feelings to find that the wind had blown the boat thirty or forty feet away, and it was still going. His first thought was to make a cast with his hook and sinker, and he heaved them in the canoe and drew out. His landing net. His next cast was more fortunate, the line lodging in a split on the side of the boat and holding where the sinker had reached, enabling him to reel it in. The situation was suggestive to a man of a contemplative turn of mind—water ten feet deep, wind blowing half a gale, thermometer far below freezing point, and camp half a mile away.

The weather continuing to grow colder, our party gave their attention to hunting, with but success. On the 17th of November, Capt. P. and Jno. C. went up one of the arms a distance of two or three miles, to what is known as the "Hickles," a famous stand for ducks and geese. But few birds were seen, and by 12 o'clock they found the ice making so rapidly between themselves and camp as to render their

escape only possible through great exertions, and indeed men of lighter physique or less pluck could not have made the return trip. Shooting from boats was now out of the question; the ice too thick to force a boat through and not strong enough to bear the weight of a man. We were in for it, and had to wait for a thaw or for ice strong enough to bear us.

Most of the parties at Carpenter's Hotel had left for their homes, as had those encamped where wagons could reach them, but we were completely isolated and determined to bide our time. We discovered an air hole of some acres in extent about half a mile from camp and near the terminal point of our peninsula. By dragging boats over the strong ice and working through the thin places, Col. W. and John C. reached the further side of the opening where ducks and geese had congregated in large numbers, while Capt. A. and I remained on the shore. Here, by dint of perseverance and defiance of an amount of cold that would have congealed an Esquimaux Indian, we managed to bag fifty or sixty ducks and three or four geese per day, losing at least as many more that fell on the ice where we could not reach them. On the 23d the ice became strong enough to justify us in venturing across the lake with bag and baggage, and this we did. Our tents were pitched within a 100 yards of a hole in an old boat and piled his vacation for six or eight miles up and down the lake. To him we were indebted for much kind assistance in making our escape from our imprisonment.

Most of a sled upon which we moved our baggage that could not be packed in the boats, and when everything was loaded we presented rather an Arctic appearance as we swung out along the ropes with which we drew them over the ice, and I can still remember the solemn and still painful fact that the slippery side of that ice was unpropitious and that it developed a wonderful dexterity in its motions. After great labor, much fatigue, unnumbered falls and several breaks through thin places we reached a point within a 100 yards of the hotel shortly after nightfall, leaving everything on the ice until morning. After a supper at Carpenter's, we retired to clean beds and slept the sleep of the innocent. Wagoning the waiting us early next morning and we left for Union City, reaching our homes in the time, and so far from being the worse for wear, feeling that we had gained in health, strength and vigor. KILMER.

Franklin, Tenn., 1880.

ANTELOPE HUNTING IN COLORADO.

OUR starting-point was the ranch on the Fountain, fifteen miles from Pueblo. Our destination, Chico, a dry creek some thirty miles to the eastward, from the bed of which rise numerous springs called by the natives "water holes," where the antelope came to drink. Our outfit—blankets, provisions, rifles, ammunition, etc.—was packed in a large covered wagon. There were three of us in the party, Harry, who was to drive the mule team because he had seen service; Dan, a New England boy, who had been in the army, and myself. It was quite necessary that some one should pick out the best path for the wagon, as the country was quite rolling, and we were to strike directly across it. The Fountain Valley reminds one of New England. Its clumps of cotton-wood trees are similar to our silver leaf poplar, and its grasses of wild plum are mixed with huge grape vines much resemble our black alder swamps.

These thoughts were quickly dispelled, however, on mounting the opposite bluff and seeing spread out before us as far as the eye could reach, a brown and sere desert, not a tree nor even a shrub, except the clump of cactus and sagebrush, and patches now and then of prickly pear, and occasional tufts of buffalo grass about the color of an "old fog," and crooked bushes Harry called "cholla." Huge turkey-buzzards wheeled in the air, watching with keen eye for the carcass of some sheep that had succumbed to age or disease, or, perhaps, for the remains of the coyotes' last night's meal. Cotton-tail rabbits scampered before us from cactus to cactus, while occasionally a jack-rabbit leaped out from beneath the horses' feet and bounded off with the speed of the wind until he had placed a safe distance between himself and our party. Now we came upon a prairie dog village with its mounds of holes, each one resembling the frustrum of a cone, the entrance at the top being ten inches or a foot above the level of the ground. On the rim sat the dogs upon their haunches, chattering like so many magpies, ready on our nearer approach to dive into their holes.

All the morning we traveled toward a butte which seemed only a few miles from us at the start, but which was really only a few miles from Chico. This we reached about 1 o'clock, but seeing a cabin some distance further on we concluded to push ahead, for there we were sure of water for ourselves and beasts. No one thinks of locating in that country except by never-failing springs. Although the cabin was deserted we found the spring, and after quenching our thirst, and watering and picketing our animals we gathered dry sagebrush enough for Dan to cook our dinner, which we relished keenly after our ride of nearly thirty miles.

After the dinner we drove down the Chico about three miles to an old abandoned "doby cabin," close by a number of water holes, which show signs of antelope, and here we concluded to camp for the night. We had heard before starting that there were plenty of ducks in some of the water-holes, and had brought along our guns hoping to bag a few. After tramping three or four miles and crawling up to numerous water-holes without seeing a duck or a sign of one, we at last reached a large one, and following the same tactics, crawled up to it on our hands and knees, keeping between us and the pond a large cottonwood, and hugging the earth so that our buttocks fairly plowed the ground. The pond was packed and we were within thirty yards. Dropping down, we laid two cartridges on the ground before us, and together poured six barrels into the thickest bunch of them. Such dashing and splashing, and such noise of "whizzing bullets," as the great flock rose straight in the air never greeted my ears before. Cranking in our other cartridges we gave them a parting shot as they were about separating into smaller flocks, bringing down a few more. The pond being narrow, all the birds were easily poled ashore, and we found on counting up that we had thirty-four of the largest and fattest gray ducks I ever saw.

The next morning we took our stands at different water holes. Harry, who had founded a cottonwood lodge, built a cab-house fashion by some rancher; Harry fired rods further down the valley, behind a big stump, and myself

about equidistant between the two, with an old bench from the "doby" for a blind. We had waited nearly an hour when a band of antelope made their appearance on the bluff some four miles away, their sides glistening in the morning sun like so many silver dollars. They halted ten minutes or more, seeming to take a survey of the situation, and then galloped toward us at a rapid rate. Every now and then they would stop a second, throw their heads in the air, and gaze about them as if to assure themselves of their fire safety, and again dash forward at their old pace. Thus they approached until within three hundred yards of us, when they slackened up to a walk and I counted twelve in the band. They were making directly toward my stand. Keeping so low down that their horns were only visible until they were near enough to shoot, I carefully raised my head. Within fifty yards of me were twelve of the finest animals of the deer kind I was ever my lot to behold, each one seeming to dare the others to go near, as they walked round and round nearly in a circle. The end of my rifle all the while had been resting on the bench in front of me. Clutching it more firmly, and glancing along the barrel, at the same time making a sharp whistle to bring them to a stand still, I singled out a large buck and fired. Down went a fine fellow, while the rest bounded toward the bluff. Three or four more shots at the remaining band only crippled one which, however, led the whole band until they were out of sight. We carried the killed animal to the "doby," and had hardly regained our places when a band came over the bluff further up the valley and headed directly for Dan's place of concealment. When they were yet a thousand yards away, the report of a rifle rang out sharp and clear, and they wheeled and galloped back to the plains. It did not sound like Dan's gun, and appeared to be a longer distance off.

Although greatly surprised, I kept my place until it was repeated on the next band, and then went up to Dan's crib to find out the cause. Dan was walking back and forth in a towering rage.

"Did you shoot, Dan?" said I.

"Shoot! Do you see that cabin up there," pointing with his finger to a "doby cabin" some half a mile up the valley. "Yes."

"Well, old Sykes and his two sons live there, and a meager crew can't be found between Denver and the Spanish Peaks. The old man is in the calabos for shooting a fourteen-year old boy in Colorado Springs, and the boys dare not show their heads in Pueblo. Every band of antelope that comes down from the west one of the boys goes out and shoots across, and turns back to the hills. Now if they do it again I'll show them a trick worth two of theirs, or my name ain't Dan. I'll put a ball so close to him that he'll think he has had a pretty loud call."

"Suppose you kill him?"

"Well, everybody in the country would be glad, and it would save the 'cow pinchers' the trouble of hanging him to a cottonwood, which they will surely do if he stays in the country much longer."

Another band showed themselves in a short time, and while they were yet a long distance off one of the Sykes walked out a little way and more from his cabin and sent a bullet whistling across them, sending them scampering back to the bluff.

"That's what I call a dog in the manger," said Dan, worked up to fever heat again.

Grasping his rifle and laying it across a log he blazed away, and down dropped Sykes.

"You have killed him," said I.

"No, I haven't," he said, "want any more; see him crawling on his hands and knees through the sage brush. He is all right."

And it proved to be the case, for when within fifty feet of his door he sprang to his feet and ran for dear life to cover.

"Now we have cooked him well we will have some shooting for the day is hot and they will come in certain," said Dan. We kept our places until nearly two o'clock, when we had ten fine animals, making up the three fine ducks Harry had shot for thirteen. With these we loaded our wagon and started for home, where we arrived about midnight. Don't think that we needlessly slaughtered them, for the ranchers along the Fountain Valley were very glad to change their diet of corn bread and bacou for delicious, juicy antelope. J. M. B.

MINNESOTA SPORT.

AMONG the many happy hunting grounds, Clear Water Lake, on the branch line of the St. P., M. and M. Railway, sixty-three miles from St. Paul, Minnesota, is one of the best. The lake is an irregularly formed body of water about six miles long, and from one to two miles wide. It abounds in gravelly points and marshy bays, and each year from September 15 until the lake is closed with ice it is a favorite resort of the toothsome teal and its larger and warrier brother the mallard.

Each returning year finds me there on some lone point which guards the passage between contiguous bays marking up and down that the leaden messengers of death within my faithful "Parker" may be sped at the adventurous duck that seeks a passage from one feeding place to another. Large flocks of game do not always reward me for my visits there, but the plovers, snipe and redpolls, is almost unknown to the pot-hunter and good passes are abundant where the sportsman can see his game, a mere speck in the distance, can watch it increase in size until he can name the genus and species of the feathered balls which are shooting toward him, and can make his shot and know that whatever falls is due to his gun, and is a legitimate trophy of his luck or skill.

On an early October day I had piloted a party of three to this lonely spot, and sprang from my seat to return.

There was Pat B., the blushing, modest Pat, who says there is no sport in shooting glass balls (his average on the vitreous spheris is a fraction over one in ten), but who loves to shoot ducks (in a crowd). He has a first-class retriever that learned to steal from the half breed who first owned him, and Pat actually believes that every duck his dog brings him was shot by him, and, therefore, that he knows how to use the same. There, too, was Jim B., who has French blood coursing through his veins, and who is, therefore, a hunter by instinct, and there was the subscriber, as ardent a lover of a gun and dog, green fields and shady woods as ever lived. We left St. Paul at seven o'clock A. M., and after a three-hour's run on the cars reached Clear Lake section. Mine host, Mr. Peterson, met us at the depot, and stowing ourselves, baggage and dogs in his commodious platform wagon, we started for the lake, thir-

teen miles distant. The day was a jewel, even among the many lovely days a Minnesota autumn brings to us, and we were a merry party as we bowled along the faultless natural road toward our destination. An occasional mallard in the little lakes along the way excited the sanguine Pat, but as our experience of him was that he was a very successful water duck, we held him in the wagon and passed on that we might have an evening's shoot at the lake.

We had engaged accommodations at the farm-house of Mr. Ross, a veritable hunter's home, made so by the ever watchful kindness of his excellent wife and accomplished and pretty daughters. Arriving there, we were warmly greeted, and soon after, hunters' style, we were on our way to the pass, a ridge of land between two lakes, distant about a quarter of a mile from the house.

We found Frank W., a romancer (with all the name implies), a New Yorker, a spinner of tales, an inflated Col. Schlers, at Mr. Ross', and besides there were millions of ducks about the lake. Of course we knew there were not when he said there were, so we trudged along to the pass rather dispirited. The aggravating Pat sarcastically said, "This is a fine place to bring a man," and the quiet Frenchman said, "It is a fine place to bring a man," and I got very much recollecting "No ducks here." As luck would have it, just as we reached our stands a single mallard passed over rather high, and Pat scolded an "unaccountable" by dropping it as prettily as one could wish. Then loudly he he his horn, and smiled like his healthiest smile, and he said, "I told you so;" and, as Jim B. shortly after commenced his pile with a bronze-head we were a happy trio and thought we had struck "just right."

It was rather early for the evening flight, and as I had some doubts of getting any ducks while in the vicinity of Pat's dog, I took a stiff and rowed across the lake to a point covered with low bushes, where the unreliable W. said he had bagged nineteen mallards the evening before. I found it a daring point for a sportsman. The flight was mostly single mallards, but they came low, against the wind, and as they winged their flight within range they grew upon the vision until they appeared to be as large as geese, and when the little pellets which were hurled from my gun found a vital spot they came down into the clear water with a splash and a bound, as if they were hurled from so heavenly bowitzer. I bagged seven mallards before dark. Then came the invigorating pull for home, the merry music of the waters as they dashed against my boat, and as the deepening gloom of night fell over the waters, blotting the shore from sight, the feeling evoked over me that was alone in the world. The tinkly waters of the lake glistened like the dreamed-of seas which the phantasy of nightmare sometimes conjures up; and the dapping mud-hens were demons gloating on my loneliness. But the shore was soon reached, and a few moments afterwards I was seated at Mr. Ross' hospitable board playing the knife and fork and listening to the romances of W., vouched for by his "Old Bill Jones," the general Pat, and laughed at by all the rest. As my companion tonight only secured five ducks I was accused of picking-up the ducks they had wounded and lost. The penalty of greatness easily submitted to under the circumstances.

After supper, cards (old sledge) to which the ladies joined, and then bed with dreams of all the feathered tribe—they being the hunters and I the hunted, the only retribution the poor things can ever get with man.

The following day was clear and warm, and small bags were made by Pat and Jim, began to get anxious about their business, and started for home, leaving W.—and myself sole monarchs of the lake.

That evening the elements let themselves loose. Old Boreas sought southern climes, and whistled and howled about the house in a manner quite ridiculous for an October visitation. The next morning the blizzard was upon us. A hurricane of snow filled the air with driving whiteness and a biting wind sought such shelter as they could find. About three o'clock in the afternoon the storm lifted, and I started out through drifts of snow to my waist, for I knew the lee shores would swarm with ducks and that I could relieve my mind of the bloody thoughts which the howling winds had engendered by imitating its stealthy march, *seras* its bluster, and by dealing out destruction upon the unsuspecting mallards that would be feeding out of the reach of the wind. The noise of the elements and a snow-drift favored the hunter and doomed the ducks. I made a bee line from the house to the lake, and peering over the bank felt the indescribable thrill of pleasure which the sight of a mob of bobbing mallards within easy range must ever give the sportsman. My first barrel surprised them in the water, and the second crashed through the straggled swarm as they rose in the air. Three birds were bagged at this shot, and soon after Dan, Mr. Ross' son, and I got a four-bird haul. The fourth shot was a dud, and I was left with one heavy mallard less than half an hour satisfied me, and the load was a heavy one to pack home through the deep snow and against the strong wind.

The following morning furnished me the finest sport of the hunt. The wind had changed into the South, and I chose for my stand a little point near the house. I hardly had my blind completed before a green-head swept down upon the water and was dropped sixty yards away from me. The bird had found about the shores of the lake during the night. Now came the test of Pat's dog, and nobly he proved himself an all-weather hunter. Every foot he made toward the duck was gained by breaking the ice before him. Yet he never hurried back nor flinched the cold rattle he laid his duck at my feet. The noble dog repeated this ten times before I was signalled for breakfast, and you may be sure I rewarded him with a good square meal when we reached the house. The mallard is regarded as a very cunning bird, and they have to be hit hard to be retrieved in open water. This morning I did not lose a duck, however slightly hit. When one of the beauties came down it broke the ice, but the rebound sent them forward on the solid ice, and then they were helpless. It was very ludicrous to see the old fellows frantically pounding the thin ice with their heads, no doubt wondering why they did not disappear beneath its surface.

This ended my fall hunt at Clearwater Lake for 1880. It combined several elements of true pleasure, pleasant companions, a hospitable stopping place, fine weather for game and a fairly filled bag. It furnished pleasant memories for the long winter evenings which followed, and it heightened the anticipations of the coming time, when stooping low behind my blind, with every curve struck, and every wing and tail-pulse, I clear my path, I slip away in the coming flock until it passes within range, and the waiting fingers, responsive to the moment, presses the trigger and the shot is made.

THUR.

Natural History.

NEW CATALOGUE OF NORTH AMERICAN BIRDS.

MR. RIDGWAY'S paper on the nomenclature of North American birds is by far the most important of the shorter ornithological works that has appeared in this country for many years. It is a complete revision of the last Smithsonian List, published in 1859, and is brought down, as nearly as such a work ever can be, to date.

Three catalogues of the birds of North America have been issued previous to the one now before us, and of these the only one which has had any general circulation even among ornithologists is that of 1859, which was based upon the work of Baird, Cassin and Lawrence, published as Vol. IX. of the Pacific Railroad Reports. Another one entitled, "A Catalogue of the Birds of North America," by Robert Ridgway, forms part of the proceedings of the United States National Museum III. This last is in fact the basis of the present one, which, however, has been much modified, and in many ways elongated and corrected, and to which a new introduction has been written.

The present list contains no less than 226 species and recognizable races which have been added to the North American bird fauna since the year 1850, while sixty-two names contained in the old catalogue of that year have either been reduced to the position of synonyms, or have been removed from the list as not occurring within the region to which it refers. Of the remaining 698 names over 300 have been more or less changed orthographically and otherwise, so that in the present list only 395 of the 760 names given in the old catalogue are retained in the nomenclature of the day.

Only those forms which are regarded as distinct species are in the present catalogue distinguished by separate numbers, the races or varieties being marked by a letter of the alphabet—a, b, etc., under the number of the species. There are 764 numbers in the list of 1881, and 180 sub-species or races, so that the catalogue in reality contains 924 names.

North America, as understood in the present list, includes the entire continent down to the Southern border of the United States, Greenland, the peninsula of Lower California, with the outlying islands of Guadalupe and Socorro. The bird fauna of these two islands is essentially Neartic in character, only two species of Neotropical birds being found on them. A number of species, known only from Audubon's description of them, are retained in the list, and reasons, which will commend themselves to every one, are given for falling to throw them out. One great difficulty encountered by Mr. Ridgway in the compilation of this catalogue consists in the adoption of trinomials for the designation of forms, which, while differing from the typical stock, has not yet become so differentiated as to merit a specific appellation. In other words, the determination of the question; when does a certain form cease to be a variety and become a good species; where shall the line be drawn between species and a sub-species, variety or race, is an extremely difficult matter, and one which has to be decided anew in the case of each different bird.

That this is a point about which individual opinions are extremely likely to vary is evident enough, and it is not to be supposed that all of Mr. Ridgway's decisions will be accepted by ornithologists, but all will feel sure that the work has been carefully done, and that the determinations have not been made without reasons which seemed good, and at the time convincing, to the author of the present list.

For the benefit of those of our readers who, while they are interested in birds and more or less familiar with the nomenclature of the older authors, do not keep up with the progress of ornithological science, we print below a few of the more important changes of the generic and specific names of our more common birds.

Hyalocichla is substituted for *Turdus* in that section of the thrushes of which *Turdus mustelinus*, Gmel., is the type. *Merula* is substituted for *Turdus* or *Planesticus* in that section of the thrushes represented by *Turdus migratorius*. *Turdus naevius* has become *Hesperocichla naevius*. *Helminia* has been changed to *Helonina*. *Helminthorhis*, *Collyria* has been changed to *Lanius*. *Hirundo horrorum* is now *H. erythrogastra*. *Cotyle* has become *Cottie*.

Chrysomitris is changed to *Astragalinus* for that section of the American goldfinches of which *C. trisidis* is the type, while the generic name *Chrysomitris* is applied only to *C. nictata* and *C. pinus*.

Spizella socialis is now *S. domesticus*. All of the Junco heretofore regarded as mere varieties have been elevated to specific rank.

Melospiza melodia becomes *M. fasciata*; *Amphispiza* becomes *Zamelodia*; *Cyanocitta* becomes *Pusserina*; *Euspiza* becomes *Spiza*; *Corvus americanus* becomes *C. frugivorus*. *Pica melanoleuca hudsonica* is *P. rustica hudsonica*, while *P. nuttalli*, so long regarded as a variety, is given specific rank. *Cyanurus* has become *Cyanocitta*; *Chocura pelagica* or *pelagica* is now *C. pelagica*. *Antrostomus nuttalli* becomes *Phalacropterus nuttalli*. *Picus albolarcatus* has become *Xenopicus albolarcatus*. *Otus* and *Brachyotus* are united in the genus *Asio*; *Strix* is changed to *Aluco*; *Syrnium* is changed to *Strix* for the barred-owl group, while the great gray owl is placed in a genus *Otus* by itself. In the *Fulcoidea* there are some changes of name which we

have not the space to enumerate, and in the herons we notice the adoption of a number of generic appellations long since proposed by Prof. Baird, but not generally accepted until the publication of Mr. Ridgway's paper on this group a year or two ago. Among the blues the white and scarlet species are removed to the genus *Ibisoides*, while the glossy and white-faced are called respectively, *Plegadis fulvicinctus* and *P. guarana*.

The rosy spoonbill is *Ajaja rosea*; the killdeer plover, *Oxyechus vociferus*; Wilson's plover, *Ochthorhynchus wilsonianus*; the mountain plover, *Poasopus montanus*; and the Wilson's snipe, *Gallinago media wissoni*. The old genus *Tringa* is separated into *Arquatella*, *Actodromus* and *Pelidna*, and certain of the specific names are changed, not only here, but among the godwits and other waders. The grass, gray or upland plover is no longer *Actitis trivernis*, but *Bartramia longicauda*.

In the *Anatidae* there are a number of changes. *Cygnus* has become *Olor*; *Anser* (in part) *Chen*; *Bronca*, *Bernicla*; *Bucephala*, *Oxyungula*; and the genus *Somateria* is separated into *Polyptila*, *Lamprotoneta* and *Somateria*, while the old term *Eidemia* now includes *Eidemia*, *Melanetta* and *Peltonetta*, and *Erismanura dominica* has become *Nomonyx dominica*.

Among the remaining groups a number of important changes in nomenclature appear, most of which, however, are of interest only to the ornithologist, who will, of course, at once supply himself with a copy of the present work.

In a very full Appendix to this catalogue, Mr. Ridgway furnishes a condensed analysis of the changes which have taken place in North American ornithology since 1859. This extremely important portion of the work includes a list of species eliminated from the catalogue of 1859; a list of the species and races described or added to the North American fauna since 1859, with references to the first description or first North American record of each species; a list of North American genera, which have been described or added to the fauna since 1859, together with those whose names or orthography have been changed since that date; a list of the species included in the catalogue which have not yet (according to the records) actually been taken within the prescribed limits; a list of (chiefly) North European species which occur only as stragglers in Eastern North America, or regularly only in Greenland and adjacent portions of the continent; a list of Palaearctic and Oceanic species occurring only in Alaska and other parts of the Pacific Coast; Palaearctic species occurring both in Greenland and Alaska, but not recorded from any intermediate point in North America; a list of tropical American species occurring only in southern portions of the United States; an enumeration of valid species described by Audubon and Wilson which have not since been met with, and of which no specimens are known to exist in collections; a list of untenable species and races of North American birds described since 1859; a list of exotic species attributed to North America by various authors apparently on insufficient evidence; a partial list of foreign birds introduced into the United States and those which have been captured after escape from confinement.

From the summary which we have given of the contents of the present paper it will be seen that there is compressed into a very small space a vast amount of information of the greatest value to the ornithologist. We have here collected matter which was originally scattered through hundreds of volumes, journals, proceedings of scientific societies and the like, and the service which Mr. Ridgway has performed in collating and arranging this material cannot be overestimated. The author of this list, too—standing as he does in the first rank of American ornithologists—was just the one to have undertaken this laborious task, for his name gives us the assurance that the work has been well done, and that a mature and ripened judgment has been brought to bear on all doubtful points.

BREEDING OF THE GREAT HORNER OWL.—The following slip is from the Cayuga (N. Y.) *Chief*, and is interesting. The local science of Cayuga is, however, at fault when it states that this species is supposed to "incubate later in the season." *Bubo virginianus* is one of the earliest birds to nest in this latitude, and the eggs are usually deposited by the middle of March. The extract is as follows: "On Thursday morning, C. K. Durlin, son of Thomas Durlin, taxidermist, while out on a hunting expedition, succeeded in capturing a large horned owl, while on its nest. Two little owlets were in the nest, which are the queerest creatures we have seen. They are evidently but recently hatched, and are covered with the nest, uttering sounds not unlike a young chicken when seeking the comfortable shelter of its mother's wings. The mother owl had evidently laid in a good stock of provisions for her young, for in the nest were found eight mice, a rat, a rabbit and a robin. The capture is quite important as a contribution to natural history, inasmuch as the species were supposed to incubate later in the season. The family are alive and may be seen at Durlin's greenhouse."

CANADA BIRDS.—BOWENSVILLE, April 14, 1881.—I send you a few notes on the winter and early spring birds observed by me in this section of this country during the past winter. I am inclined to ask you with my friend, Jno. Neilson, what has become of them? Who can give the information? That we have had a very severe winter there is no doubt, but I do not think this accounts for the scarcity, as most of our Canadian winter birds, and especially those of the Quebec district, are of the most hardy kind and not likely to be frightened by any amount of cold, as long as food was plentiful. I have occasion to see only solitary specimens of the woodpecker ful. I have seen but one of the most common of winter birds, and but once have I observed any crossbills.

Below I give you a list of the winter kinds and the date of the first spring arrivals:

- January 17, Shore Lark.
- " 21, Hudsonian Chickadee.
- February 24, Pine Grosbeak
- March 3, Crossbills, Blue jays, Bufflehead, pintail duck.
- " 4, Red-shouldered Buzzard.
- " 5, B. Iddhead Eagle, Cedar birds.
- " 13, Crows, purple grackles.
- " 14, mns. downy woodpecker, red-tailed hawk.
- " 20, blue birds, robin.
- " 25, hermit thrush.
- April 9, song sparrow, ground or field sparrow.
- " 15, wild pigeons, golden winged woodpecker, meadow lark.
- " 16, peregrine falcon.

Most of my observations have been made under difficult conditions this winter, as we have no woods near the town, and my time is generally taken up by my business.—A. U. SABLE.

MIGRATING HERONS.—PAWTUCKET, R. I., April 21, 1881.—Editor *Forest and Stream*: Yesterday I was spee shooting on Valley Falls Flats, in Rhode Island, and saw what I supposed to be a flock of geese flying very low, but soon discovered them to be blue herons; there were twenty in the flock. Now I have had a great deal of experience in shooting and have never seen them in such numbers before. Will you please inform me if it is not a very unusual occurrence for this part of the country.—G. W. PITOWER.

We saw once such a flock as this observed by you. It was in the gray of the morning in April, and we were rowing out to the ducking ground, when we observed twenty great blue herons, and about a quarter of a mile behind them nine more. The birds were coming from the South across Long Island Sound and were about half a mile from the north shore of the Sound when they were seen.

FLORIDA NODDIES.—HALFAX ISLAND, E. Florida, April 17, 1881.—We sometimes see a party of fish-hawk to tempt the pursuit of the predatory eagle by ascending high into the air. Apparently the eagle, *Haliaeetus leucocapillus*, cannot or will not ascend so high, for, at a certain elevation, she abandons the chase. The osprey only occasionally adopts these tactics. Perhaps only when the fish carries is light enough to allow the upward flight, or it may be only the older birds, which have acquired by many contests this cunning. A specimen of the marsh hen, *Ardeus longirostris*, was brought in lately, with its bill caught between the shells of a clam; so imprisoned, the bird had been drowned by the rising tide.

Four specimens of the shell of the paper nautilus were brought in from this beach lately, after a storm. It has been doubted by some whether any species occurs on the coast of Eastern Florida, but specimens are found here every winter, sometimes containing the animal.—S. C. C.

TAME QUAIL.—DOVER, N. J., April 20, 1881.—Last summer Elias Carter, living between Sweeneys and Flinders, drove a mowing machine over a quail's nest. He took the eggs home and set them under a basket. Nine were hatched. A cat killed one, but did not disturb the rest. The hen would wander with them in the daytime, but always brought them into the kitchen to sleep. I saw them a number of times when small. Yesterday I saw the only surviving two (males). They are fine, large, healthy birds, and are allowed their freedom and go in and about the house just as an ordinary fowl would.—A. C. C.

GREAT NORTHERN DIVER.—WEST MILFORD, W. VA.—On the 15th inst. I killed a great northern diver (*Columbus glaucus*) on our mill pond, which measured thirty inches in length and three feet and nine inches from tip to tip of wings, and weighed eight and three-fourths pounds. I believe it is a very rare bird in this section. Will some of the correspondents of this paper state whether it is common in the northern part of the United States and what is the usual size of the birds.—B. D. H.

The loon is common in the North, especially on the sea coast, during the spring and fall migrations.

ALBINO ROBINS.—A milk-white, red-breasted robin is exciting considerable interest among citizens of Sewickley, Pa., where she has been discovered building a nest, assisted by a male robin of normal color, save that he has a white head.

MAINE.—LINCOLN, April 16.—A fine specimen of a white-headed eagle (*Haliaeetus leucocapillus*), measuring eight feet from tip to tip of wings, was caught in a trap in this vicinity recently, and is now in possession of our local taxidermist.—F. C. P.

Game Bag and Gun.

"BLACK POWDER" EXPLOSIONS.

LAST Thursday morning there was a terrible explosion at the Dittmar powder works at Binghamton, New York. The buildings of the manufacturers were shattered, and the stone foundations distributed over an area of half a mile. The trunks of trees were twisted off and others torn up by the roots; many thousands of panes of glass were broken in all parts of the city, and the shock of the explosion was felt for thirty miles around. This tremendous explosion was that of "black powder which had been stored on the premises." Mr. Carl Dittmar told the reporters that the first and most serious explosion was caused by the spontaneous combustion of a barrel of nitro-sulphur; and then explained to them as they in turn dutifully explained to the public:

"The Dittmar powder first took fire and was consumed in a slow blaze which reached the black powder in about five minutes, when the terrific explosion which startled the inhabitants for many miles around took place."

There is a flavor of simplicity and ingenuousness about that statement which leaves no room to question its entire veracity. Mr. Dittmar is now engaged in the manufacture of blasting explosives; the "black powder" part of the story reminds us of a similar curious circumstance attending the Park Place, New York, explosion last year. On the morning of the 30th day of last June a tremendous shock started the Park Place, and a dense cloud of smoke was seen pouring from the Dittmar powder company's establishment. Amid the commotion of firemen, police and excited citizens, a news-

there for air, which may be shot or speared from the banks. This method to be successful must not be attempted when the ice is higher at the shore than on the surface, as the floats break and the ducks which will be of advantage in preference to the openings described heretofore.

Experiments, which were the results of long experience, and which have been successful, were always considered secrets of the trade and jealously guarded, but such secrets are of no great importance except to experienced hunters and trappers; for you may explain just how to cast a fly, or how far ahead to aim on a ruffed grouse, and then it takes years of practice and long experience which will be necessary to make the information of any practical use. H. C. W. *Wellsville, N. Y.*

SHORE AND INLAND NOTES.

LEHIGH VALLEY, Pa., April 12.

I HAVE been summoned to the beautiful town of _____ in the Lehigh Valley, by a friend who is anxious that I should accompany him on a fishing trip to a stream not far distant, where he has always enjoyed good fishing, and especially in the season, when the trout are in the best of condition, and running in torrents, and I must content myself with looking out of the window at the dull clouds as they roll over the hills, tops, and be impressed with the not very good prospects for the morrow.

Before leaving Philadelphia and stopping in at Krider's to replenish my stock of flies, leaders, etc., I met Capt. Bond, of Long Beach, N. J., and arranged to learn anything of interest from Tuckerton. Bond questioned him regarding the fowl in his waters and the effect the freezing of the shoal places had upon the feed of the ducks. The Captain tells me that when the ice broke up it carried off all the vegetable matter with it, pulling it up by the roots, and thus leaving no food for the fowl. "Geese and brant have been plentiful enough, but not so good as they were in Tuckerton Bay." The black duck shooting is being done, he states, by the night shooters and "poond watchers." "Captain Sam Shords and his boys and Captain Billy Gaskill and his boys following this sort of work every favorable night. The consequence is," said Bond, "the black ducks are yearly decreasing in numbers, and soon will not come into the bay to feed."

I found Captain Clay and Dan Wells just about starting on a yachting trip down the Delaware River to the bay for ducks and snipe. They will go down as far as Prime Hook and Slaughter Hook marshes.

Last week Mr. Geo. Filer had a shot at a swan, a short distance below Philadelphia, but it was a long one, and the bird was not killed. This swan is the second one that has been seen so near the city for many years. One of our river men killed several wild geese near Timonium's Island a few days since. This is considered a "ten-strick and a spare."

To break the monotony of the dull, rainy day your correspondent ran up to Mauch Chunk to inspect the trout ponds of Mr. Alex. Leisenring, and to pass an hour or two with the genial sportsmen of that place. At the Mansion House we were shown a very well bred red Irish setter belonging to the worthy landowner, Mr. J. M. Blackfoot. The dog was told, in three thousand words, that the dog was never another very fine setter we once had the pleasure of shooting over when she (Kate) was in the possession of her former owner. We looked at a number of very fair native setters belonging to the sportsmen of the neighborhood. Some are famous for ruffed grouse, and their owners kill not a few of these noble birds every season, as the boys and girls in this district do not care to witness the commotion.

The quail of the Lehigh Valley have been completely destroyed by the snows of the past winter, but we are pleased to know that a few gentlemen have clubbed together and housed between one and two hundred birds, which will furnish the stock for the coming breeding season.

We were luckily present at feeding time, when we reached the trout ponds of Mr. Leisenring, and witnessed the commotion made by two or three thousand hungry fish, as the attendant threw upon the water the minced liver with which they were fed. Mr. Leisenring has two ponds—in one there are twelve or fifteen hundred fish, at least fifteen inches long—in the other a like number, averaging eighteen to twenty inches. One of the fish we saw Mr. John Leisenring stated was twenty-six inches from tip to tip—Mr. B. Blackfoot should have this monster. The ponds are well understood as for sale and can be bought at a very low price.

To-morrow, if the weather will permit, we will try the trout in _____ Creek, but the prospect, as I look out of the window, is a forelorn one. Home.

GAME NOTES FROM MANY QUARTERS.

California.—Our quail season closed on the 18th of last month, and we have lots of them left for breeding purposes. I am glad to see that a war of extermination is begun against the hawks; they are a terrible scourge and I never miss an opportunity to kill heavier cover than the Eastern quail do.—H. M. B.

Colebrook, N. H.—The game of this part of the State has wintered unusually well. Some crabs hunting have been seen in the water. The natives are killing deer at a great rate, and the hotel men there are encouraging it to all appearances. Sportsmen will contribute to their own pleasure by increasing the price. Tom Chester in one of his excursions after fishers found where they had been digging in the snow. Investigation revealed an old bull moose that had died here some time last fall. The horns measured 8 ft. 7 in. spread, and had a great number of points and broad antlers. E. J. Gansby, of this town, has caught fifty-eight foxes since last October.—NED MORRIS.

Woodstock, N. Y.—Woodcock, snipe and plover are coming in.—Doc.

Osterville, N. J.—Whole boxes of quail were found here frozen to death after the snow went off.—W. J. O.

Pittsboro, Pa., April 21.—Ducks are beginning to arrive on our rivers; some fair bags have been made. A few arrived within the city limits, but they did not stay long, as they came to the conclusion that they had found an unsafe place, as every gunner in the city almost was out after them.—N.

Minnesota.—Camden, N. J.—I have just come in from a few days' sojourn in Minnesota. What a grand State it is, with its roads and tracing air! Ducks and geese are very thick, and I found some very good gunning ground a section of the State in which I had hunted some time last year. I was very much surprised to find the land—then a wilderness—now on the St. Paul & Duluth Railroad, and near the former city. I came through with Gen. Gibson, of Montana, of the Regular Army. He told me of a splendid mountain trout in the Missouli River. Montana. I took the liberty of

telling him you would be glad to get his experiences by "flood and field," and he said he would gladly avail himself of your pages.—J. M. S.

St. Ignace, Island—Brooklyn, April 12.—A friend and myself made a flying visit to Staten Island last Thursday to try our luck. After a tough fog day, cold and windy, we found twelve birds of which we bagged eleven. Birds very wild—only getting two points out of the lot. We hunted down wind.—Snoaks.

WESTERN NEW YORK—Buffalo, April 17.—Spring is still very backward and fishermen are catching large quantities of the blue and yellow perch through holes in the ice, which still covers Lake Erie to the depth of nearly three feet, as far as the eye can reach. The first Wilson's snipe of the season was shot here on April 15 by Geo. Swartz, an irrepressible purveyor of fur, fish and feather. A few specimens of the snipe were secured. Our water was very low, and the mountain ash trees in and about the city are alive with flocks of the cedar birds. Beyond this everything has a January-like aspect, with sharp frosts every night.—C. L.

WEST VIRGINIA—West Hillford, April 19.—I seldom see any communications in FOREST AND STREAM from our State, and I am awfully sorry that I have not much interest in this section as in many other States, nevertheless we are taking more interest of late years than formerly. Our game laws are good enough, if enforced, and of late are generally observed in regard to fish and birds, and the fact that we are so much interested in this section is well stocked with pike, perch, catfish and a great variety of the sucker tribe. Ruffed grouse (here called pheasant) and quails are our principle game birds—geese, I think have wintered well; and the above are the only birds that are secured. Our water is saved. We will have no shooting now for three years; expect plenty by that time, if the following winters should be favorable. We had no good shooting last fall, on account of winter setting in so early.—E. D. R.

WHO SHOT "OLD ALEX."—Confluence, Pa.—There appeared in the Pittsburgh Post, Sept. 18, 1880, an article signed "J. C. B., Confluence, Pa.," in which he stated that he had within a mile of Confluence, Pa., a fine family of foxes, "Old Alex.," roamed in the mountains near Confluence, Pa., defying the skill of our own as well as Pittsburgh's most noted marksmen. But by good fortune it fell to Mr. Ed. W. Watson, of Allegheny, to kill his buckskin; and the writer of the article ends by saying that shot would settle all controversy as to who killed "Old Alex." Now I wish to correct the above, and give the honor to whom it is due, as we dislike very much to see any one wearing laurels not their own. At the above mentioned time "Old Alex." was not alive, as he was shot by R. T. C. Stephenson, of Burgettstown, Washington Co., Pa., with a rifle, distance 110 yards, the deer on the dead run at the time he was shot. He was killed in Fayette County, this State, on the 9th day of December, 1874, at 7.15 A. M., by the first shot fired by Silas Butler, but now with possession, and Matthias McClintock. For the past two or three years before he was killed he was often seen pasturing on the farms of Squire Tice, Jonathan Butler, L. P. Shipley and Wm. Rickner, who are among the oldest settlers; and who, upon seeing him dead, pronounced him the famous deer known as "Old Alex.," and would testify to the same, if necessary. Stephenson has his horns and tide in his possession. We wish to give him the mercy to show that Stephenson did shoot the old and only original deer known as "Old Alex.," and that Washington County is entitled to the honors of his death, and not Allegheny. If "J. C. B." will go back to the files of the ROO AND GUN, then published in New York City, in February, 1877, he will find an account of his having been shot by Stephenson.—G. C. BUTLER.

DETROIT NOTES.—This is the first day in which there has been felt a genuine touch of spring. Yesterday (April 17), we had a tremendous fall of rain, which began about 3 P. M., and continued incessantly for a period of fifteen hours. When I came down town this morning the air was balmy, the grass between the curb and the sidewalk in the city parks and on private lawns had taken on a lively green, which twenty-four hours before was not visible; singing birds made pleasant music; the pavements were warm and dry, and there was in the city a kind of business quiver that made me think spring had indeed come at last. We of Detroit, in common with you of New York, have had a distressing winter. An old hunter told me not long ago that no such severe winter as that just ended had been known hereabout since 1841. The fall of snow was enormous—hunting was out of the question, except during the season of deer, and fish through the ice was practically impossible, even the most cautious fishers had to quit their sensitive, unable to have the extraordinary severity of the weather.

I can look out of my window nowadays and see considerable flocks of wild ducks flying up the river Lake St. Clairward, though at this moment the river is checked with ice floating Erieward. Shooting is going on rather lively.

It is reported that several Marquette sportsmen intend to erect a hunting box at sixteen-mile Lake. They could not select a better spot for such a purpose, as there is in that region an abundance of game and speckled trout. Trout fishing, says a wagfish friend, is rather slim just now—the snow and ice darken the water so much that they can't see to bite. CHAS. O.

A LOON-Y PERFORMANCE.—Last Saturday afternoon we had a rather animated shooting tournament to this place. It was on the city a kind of business quiver that made me think spring had indeed come at last. We of Detroit, in common with you of New York, have had a distressing winter. An old hunter told me not long ago that no such severe winter as that just ended had been known hereabout since 1841. The fall of snow was enormous—hunting was out of the question, except during the season of deer, and fish through the ice was practically impossible, even the most cautious fishers had to quit their sensitive, unable to have the extraordinary severity of the weather.

Wild ducks and geese have been flying here this week in large numbers, and I may have been shot about this time. There is but one fox left in the county but we are getting flying over our village. It gives one the "gun fever" to hear their unmonotonous cawing, and large coveys of ducks like the rush of mighty winds. Hix.

MASSACHUSETTS WILD FOWL SHOOTING—Pocasset, Mass., April 13.—Spring shooting affords us much sport at times. This bay—Buzzard's—lies in the way of many migratory fowl. The best shooting places are "Baek of Marshnee," "Hog Island Narrows," and "Cape Cod Neck," and some points on the western shore. Brant favor Catamnet Beach, as they sometimes are killed "Baek of Marshnee," "Baek of Marshnee" is the passage between Marshnee Island and Toby's. Coots, loons, sheldrakes and many other species fly up through this passage on their way North.

A party of three camped for a few days near Catamnet Beach. They were out early for the coots, but did not get some sheldrakes, and had a great time notwithstanding the bad weather. In a week or two the coots will come, and though poor eating they afford fine shooting. In season I have seen thirty boats lying between Marshnee and Toby's islands. The coots fly in flocks ranging from a few pair to thousands. The time of shooting is from daybreak till an hour or so after sunrise. The afternoon shooting begins at about 4 P. M., and lasts till it's too dark to see. A southern sportsman, as he calls himself, then try to cross over the cape—Cape Cat. fly too high then the gunner whistles them down. I have known them to pitch down to the water from a height of more than 200 yards on hearing the gunner's sharp whistle. At these times they often fly very close to one's boat and are quite difficult to hit. After they are whistled down they go up like a flash, and the short time for the gunner to discharge his two shots. In this way many are killed in one hour. Loons give good point shooting, but they are tough in every sense of the word. Our winter ducks have left. MERRIS.

THE WAYS OF REYNARD.—Pittsford, Rutland Co., Vt.—I see in issue of Feb. 24 an article in regard to foxes relieving one another when hard pressed by the hound. My experience has not been so good. A southern sportsman, as he calls himself, then try to cross over the cape—Cape Cat. fly too high then the gunner whistles them down. I have known them to pitch down to the water from a height of more than 200 yards on hearing the gunner's sharp whistle. At these times they often fly very close to one's boat and are quite difficult to hit. After they are whistled down they go up like a flash, and the short time for the gunner to discharge his two shots. In this way many are killed in one hour. Loons give good point shooting, but they are tough in every sense of the word. Our winter ducks have left. MERRIS.

PIPPY-DOLLAR GUNS—Bowmanville, Ont.—I saw in the FOREST AND STREAM of some weeks ago (I cannot just call the number to mind) an article entitled "The Best Fifty-dollar Gun." I have been so long in the habit of using a fifty-dollar gun that I am unable to get a pair of Damascus or laminated steel barrels on a fifty-dollar imported gun. I am inclined to differ with him. I think that any imported breech-loader that is represented as having these barrels really has them. The barrels turned out in a factory are by no means uniform in quality nor free from flaws. The barrels of these cheap guns will without exception be found to have some laminations; but they are rejected barrels; and in some hundreds of these guns, that I have had opportunities of examining, I never remember seeing one without one or more flaws, either inside or outside of the barrels. This is the secret of their cheapness; not because they are stained imitations, as many suppose, for it is impossible to figure the barrels of a gun by striking to represent the weight of metal where the fraud is done. I killed the fox the dog was after and found him very tame. In all my experience in fox shooting, during which time more than 150 foxes have fallen to my gun, never to my knowledge has a stray fox relieved the one started by the dog, and never have I owned a dog that would not start and chase a pregnant fox as long and well as any other. We have nothing but red foxes here, with gray ones it may be different. With a dog that has taken no doubt as much change could take place.—E. S.

AT SABLE.

MIGRATORY QUAIL.—The Rockland, Me., Express reports that a pair of Messina quail have been seen in the west part of the State, near the mouth of the Kennebec River, and that they were liberated. The same paper says that "Dr. Stevens has in his stable at North New Portland a deer that is a curiosity in that section. It was taken in the Dead River woods near Flagstaff. Woodmen and hunters who have seen it say they never saw the like. The ears of the animal are nine inches long, and its tail is like a young colt's. It completely answers the description given by Howell of the mule deer of the eastern slope of the Rocky Mountains." Mr. Everett Smith writes to the Portland, Me., Argus: "The quail liberated and known to have bred in Maine last year, migrated south in the autumn, but may be expected to make their appearance here in May, and commence nesting in the fields in June. In reply to inquiries about these birds, which always nest on the ground, I will quote a paragraph from the report of the Commissioners of Fisheries and Game for 1880:

NOTE.—A quail's nest may be identified by the number of eggs, from 5 to 15 to each nest. None of our native field birds lay so many. Farmers are requested, when finding nests in hay-fields, to leave a square foot of grass standing about it, or, if mowed over, to place some small branches around and over the nest, so that it may not be deserted. See article on quails, page 86.

It is hoped that the above description will be kept of this section, and produce quail to the sportsmen of our State, and I would therefore request that any observation of these birds be communicated to me at the above address.

A FORMIDABLE FISH OF ORDNANCE has recently been submitted for our inspection. It is the invention of Mr. Fayette S. Giles, well known to the sportsmen of America as the founder and leading spirit of the Express. The fish is a gas-siphon, and consists of a breech-loading six-barreled rifle, so contrived that one, two or three barrels may be discharged at once, or the entire six "turned loose" simultaneously. It is claimed that the arm will give the same pattern at 500 yards with bullets as that usually attained at 30 yards with shot from a choke bore, the penetration being equal to that of an Express rifle. The object of the arm is to give the squirrel on a stump and the grizzly on a mountain peak.

THE WINDCHESTER EXPRESS IN INDIA—Poona, India.—Editor Forest and Stream: Having lately seen several let

Sea and River Fishing.

FISH IN SEASON IN APRIL.

Table with 2 columns: FRESH WATER and SALT WATER. Lists various fish species such as Brook Trout, Pickerel, Pike, Yellow Perch, Striped Bass, etc.

We have also the Literary Angler, who reads Walton and admires him hugely; he has been inoculated with the sentiment only; the five-mile walk up the creek, where it has not been fished much, is very fatiguing to him, he "did not know he must wade the stream," and does not until he slips in, and then he has some trouble at night to get his boots off. He is provided with a stout bass rod, good "strong" leaders of watermelon, and a stock of Corry's "journal flies," and considers if he had not better put a shot just above his stretchers fly.—THAD NORRIS.

SMELLING BLUEFISH AT A DISTANCE.

The following letter from Dr. D. Webster Prentiss, Professor of Materia Medica in the National Medical College in Washington, to Prof. G. Brown Goode, of the U. S. Fish Commission, contains an idea new to us, and we hope to have a chance to verify the odor of a school of bluefish and locate them by the odor alone, when summer comes, without reliance on the leaping of the fish when feeding, or on the presence of screaming gulls. He writes:

Prof. G. BROWN GOODE: WASHINGTON, D. C. Dear Sir—Visiting Nantucket last summer (1879), I was present on the South Beach when several fishermen came in with bluefish in their dories. In conversation with one of them I asked how it was on the broad ocean he knew where to find fish, and they do not to the surface, and the gulls were attacking the small fry from above. Shortly after, passing near the spot, I noticed a peculiar fresh odor, something between the smell of cucumbers and watermelons.

On the return from Wauwinnet down the Nantucket harbor we again passed through a school of bluefish, and a line was cast and one caught. On board the yacht was a party of twenty-five or thirty ladies and gentlemen. Just after the fish was caught one of the ladies remarked, "I smell watermelons, where can they be?" I noticed the odor very strongly, and several others of the party also spoke of it and conjectured as to its source, coming to the conclusion that a school in the distance must be carrying a cargo of watermelons. Such, however, was not the case. The day after this occurrence I joined a party for a trip—bluefishing—out to the "rifls" at the northeastern extremity of Nantucket. On reaching the fishing grounds the captain of our yacht called attention to a smooth surface on the water a short distance ahead and explained that a school of bluefish had recently been there feeding upon unheeded, the smooth appearance being caused by the oil liberated in chewing up the young fish. He further remarked, as we approached the spot, "If you will notice now you will smell 'em." In a few moments I perceived this same odor of watermelons. "Do the bluefish smell like watermelons?" I asked. "Yes, that is the smell, and we always know in that way when we are near a school of them."

After this, while beating back and forth along the "rifl," I was reminded frequently of fresh-cut watermelons, and each time we had evidence of the presence of bluefish in the catch, either on our own yacht or another on the same course. Thus, from being utterly skeptical of the story of the South Beach fishermen, I became a thorough convert to the belief in the reality of a peculiar and easy recognized odor betraying the presence of schools of bluefish. This odor, as nearly as I can describe it, is as already stated, that of a freshly-cut watermelon and combined with fresh cucumbers. Whether it is an emanation from the bluefish, or whether it is produced by the mangling of the small fish which they make their prey, I am unable to say. The odor, however, is certainly not the same that the bluefish gives out after being taken from the water, and I am inclined to the belief that it owes its origin to the small fry upon which it feeds.

There are three ways in which schools of bluefish are tracked by the fishermen in their pursuit: first, by the flocks of gulls which hover over them, feeding upon the menhaden which they drive to the surface; second, by the spots of smooth water caused by oil escaping from their mingled prey (this, however, only indicates that the bluefish have recently been at that point); third, by this peculiar watermelon and cucumber-like odor. D. W. P.

WEIGHING vs. GUESSING.

AMONG the many departments of a paper like the Forest and Stream there is hardly any more interesting to the angler than the advertising columns. He scans them closely from week to week, and in every issue his attention is sure to be called to some useful article pertaining to his craft. But for once, at least, there has appeared an advertisement against which we most earnestly protest, as it is so antagonistic to one of the most valuable pleasures enjoyed by the angler.

It says, "Weigh your fish on the spot." Great heavens! Mr. FOREST AND STREAM, when you knock Piscator's privilege of guessing at the weight of his fish and guessing as high as he pleases, by producing a pocket scale that tells the exact truth, you are depriving him of one of his most, inestimable privileges. Measuring was in a degree an infringement of his prerogatives, and he was obliged to resort to innumerable quibbles to circumvent its accuracy, one of which was insisting that the fish he caught made up in thickness what they

lacked in length. He would say, "I do not doubt that the system of calculating weight by first judging the length might, in many cases, prove nearly accurate, but mark the unusual breadth and thickness of these fish. Why, man, the ordinary weight of a trout is a young one in comparison to these magnificent fish in my basket. You may have a trout that takes into consideration not only length, but breadth and thickness, before it approaches anything like correctness in all cases. Besides, did you ever feed a fish so firm and solid as this one?"

Measuring was bad enough, but against weighing, oh, shade of gentle, truthful Walton protect us! When we return from a day's sport and with radiant smile display the result of our skill—"I sent you a heavy 'em." "What will he weigh?" "Well, three pounds and a half." "Hardly," says Mr. Matter-of-fact. "Oh, yes, easily." Mr. 30-40 unfortunately is the possessor of a pair of pocket scales, and unconsciously attaches them to the jaw of the fish in dispute, and the record is two pounds and a quarter.

"It's devilish queer," says Mr. Piseator, "but that is the biggest I ever saw to weigh so little," and he immediately proceeds to impeach the veracity of the scales. They have the stiffest springs, the appearance of the graduate is faulty, and they show no mark of ever having been officially inspected. No, it will never do to ring in on an old traveler such a playing as that. It is not half as accurate as the old-fashioned style of weighing Western hogs, which was to take a rail, balance it across a stump, put the pork on one end, and in a basket attached to the other end place stones until the pork was hoisted; then guess at the weight of the stones, deduct the basket, and there you are, so much per pound.

These scales are robbers of the angler's reminiscences. They will dwarf a five-pounder into a fingerling quicker than the angler can fill his creel in his mind. For the dealer they may be necessary in order to protect his trade from any exaggerating tendency he may have to overstate weight; but so far as the angler is concerned they are an encumbrance and a nuisance that ought to be looked out for and banished.

He can tell no fish-stories with a clear conscience and unblushing perversion of the truth, with the evidence of Scales staring him in the face. He is not so lost to all moral restraint as to misrepresent when he knows he is going to be smoked out. It is the most genial and unselfish person in the world. He will not keep secret a good place where the trout or bass may be captured, but he will brook no infringement on the cherished privilege of weighing his fish to suit himself. A scale that will at least double the weight of the fish caught seems to us to be the great desideratum, and such a one might be made which would meet the approval of the angler and put money into the purse of the inventor. Its sale should be restricted to those who go a-fishing. But even then the demand would test the capacity of any manufactory. Some capricious people would perjure themselves, "Leave the angler alone for over-estimating the weight of his fish." Very true, but fortify him with a pair of patent dupesters, and he will observe more strictly the commandment treating of this particular point. There is nothing mean about him, for he will let the scales do the lying for him, and attach the charge of perjury to the manufacturer.

Dr. Johnson's drive about a fool at one end of a rod and a worm at the other was ignorance, but for a vicious attack on anglers the scales promenade away with the sweetest. E. E. M.

THE TROUT STREAMS OF CORRY.

CORRY, BERK COUNTY, PA., April 3, 1881. ACCORDING to law, trout-fishing began on April 1, 1881 in Pennsylvania; but from the look of the landscape around here not a trout will be caught, or even fished for, for many a long day. With snow from twelve to twenty inches deep on a level, and the nights so cold that the morning sun, from sunrise to eleven o'clock a. m., doesn't even cause a drop of water to fall from the pend at icicles draping the eaves on the east and south sides of our houses, it don't look much as if the fish of Western Pennsylvania would attempt to rise and expectled denizens of the sparkling (frozen) brooks; and if they were so rash as to wade through the snow, whether the fish would be visible is a mooted question.

We have here in our vicinity and near neighborhood some of the best trout streams in America; and an hour's ride on the railroads will bring us to brooks and streams literally crowded with trout, which are almost as anxious to be caught as the famous fabulous piece of one child's days, and in their month's crying, "Eat me, eat me." Whether these streams will continue to be as munificently stocked with trout by natural production is a somewhat mooted question, as the catch is so very large annually, and the smallest is taken home as eagerly as the largest, and counting one in numerical luck and boasting equally with the larger ones. I often have wished, when I have seen the creels emptied by so-called sportsmen that there was a law forbidding the catching of trout of less than half pound weight. Then we should not only have trout in their prime, but every one could spend a day catching something of epicurean value. In my boyhood days, when I used to "whip the streams" of grand old Kent (Eng.), and in the moonlight nights would see the pounders and such sized trout jumping up to theackle, or the white muck, or whatever "fly" was in season, which will naturally increase in importance to that army of workers who are continually prophesying a dearth of lumber and corresponding exorbitant prices. But I notice that each year as it passes brings no sensible diminution to the eye; and as one passes through the country, whisked along by the fast traveling railroads, there are still to be seen acres upon acres, miles upon miles, leagues upon leagues of forest and woodland, beautifying the sides and crowning the

ters in your very interesting paper on the subject of hunting rifles, and as inquiries are being continually made on the same subject in the columns of the *Astorian*, our only sporting paper, especially one or two lately on the merits of the Winchester Express rifle, may I be permitted to say that from all accounts this weapon appears to me to fulfill nearly all the conditions required of a perfect sporting rifle. Its one defect, however—the smallness of its charge for the comparatively large calibre—will prevent its general adoption, I think, in this country. When that is remedied and the gun is made to take the usual English .500 Express charge of 120 to 160 grs. powder, and 340 to 390 lead, the days of the double rifle will be numbered, for in addition to the advantage of having a reserve of five shots in the repeater against one in the double-barrel, the price of a really good double rifle would buy several repeaters.—SEFOY.

A CUBAN QUAIL SKAVER.—HAVANA, Cuba, April 9.—Our colored sportsman arms himself with a bag and a long cane pole with a mass of horsehair at the end and a little dog to find and flush up the quail. As soon as flushed the dog runs after them, harking as if his life depended on it. The flock generally light in the first tree; then the dog keeps barking, and as soon as the negro comes up he joins in the bark, and with his pole he will put the loop over the bird's head and then, in a flash, of one catching the most of the flock before they fly out that he will not allow this. This style was best early in the season when the birds are quite young. In this way of catching the birds this season they have taken them all near the small villages. I wish that your game law could be enforced here.—J. W.

KITTY HAWK BAY CLUB.—Another large tract of land in Currituck and Dare counties, North Carolina, is to be taken up by a club for shooting and fishing grounds. The Kitty Hawk Sportsmen's Club has secured the purchase and lease of 25,000 acres of the far-famed sporting district on the Carolina coast where the shooting includes canvas backs, red-heads, black heads, mallards, teal, brant, geese, swan, snipe and deer, and the fishing comprises black and striped bass, Spanish mackerel, sheep's head and mullet.

SEABOARD SHOOTING ASSOCIATION.—PORTSMOUTH, Va.—At a recent meeting of the Seaboard Shooting Association the following officers were elected for ensuing year: President, Dr. W. H. Williams; Treasurer, James M. Binford; Secretary, H. G. Williams; Treasurer, A. C. Freidlin; Executive Committee—Dr. H. F. Bunt, H. G. Williams, E. V. White, A. C. Freidlin and James F. Carr.

BOWMANVILLE, Ontario.—Our spring has opened in earnest, and the duck shooting has commenced, but as yet the bags made are neither heavy nor many. I have seen no snipe nor woodcock, but expect them in very soon. Wild pigeons not seen so far this spring, which is a very unusual state of affairs as some always come in, though often in small numbers compared to what I have seen in years gone by.—ALU SABLE.

WILD PIGEONS.—The wild pigeons are about seventy miles west of Atoka, Indian Territory, nesting; set in about one week ago. Large body of them reported.

QUAIL FOR SPRINGFIELD.—The Rod and Gun Club, of Springfield, Mass., have secured a quantity of quail to be hunted by a party of the four hundred and twenty club purchased by them, and are in hopes that the balance will arrive soon.

Camp Fire Flickerings.

By the way, that reminds me—

PROPOS of the stories published recently in Forest and Stream in connection with shooting, I send you the following to find if anything similar has come within the observation of the fraternity.

One morning last fall, one of our gunners, armed with what "Byrne" would call a "woodchuck gun," was out in the bottoms west of town after squirrels. A number had already fallen to his unerring aim, when, observing a squirrel working toward him, he sat down on a log to wait. He had hardly seated himself when a "Byrne" came in, and he had to look around. What was his surprise to see a big cone about ready to descend. Thinking this a chance to obtain the wherewith for a coon-pie, our Nimrod raised his rifle and fired. By the way the cone kicked he was evidently hard hit, and struggled to retain his grip on the tree. But his conspish was not destined to become a hungry man's meat, for immediately cone No. 2 came out of a hole above, and snatching his wounded brother by the wool, gathered him in to a place of safety.—ANON.

This comes from Micoon, Ga.: I read with much interest in FOREST AND STREAM of March 31, a very good article on turkey hunting by "Splatser." He writes about killing four out of five turkeys at one shot. This calls to mind a story an uncle of mine told me some years ago. This uncle was from North Carolina, and was, when a young man, very fond of sports, and I have listened to some marvelous stories from his experience with the game of North Carolina. There was in his neighborhood a man who was notoriously trifling and lazy, disagreeable and offensive in many ways, and, in fact, a real pest. One day, on one occasion he approached one of his neighbors and requested that he would allow him to use his gun for a day or two—stating that a large flock of turkeys were near his house, and he having baited them could kill several of them at a shot. His neighbor, thinking the opportunity to get rid of him a good one, readily consented; told him he would load the gun for him, and going into his house put in about three charges of powder and shot—each shot, and a single charge. Then he approached the owner of the gun congratulated himself on ridding the community of the vagabond. Several days after, to his amazement, the man came to his house with the gun, and in response to his questions about the turkeys entered into a graphic description of how he saw the flock approaching, how they came up to the trench, and he, taking aim, fired. "And did you kill them?" "Yes," said he, "when I came to, I picked up seven."—J. H. J.

"We wonder if that uncle could not be induced "to tell another."—Ed.]

The vigor of youth given to the aged and infirm by using Hop Bitters. Try it.

grammus), hake (*Phycis*), or of a cusk (*Bromius*) in Alaskan waters. The only members of the cod family definitely known are the true cod (*Gadus morhua*), the low-cod (*Micropogonias undulatus*), the polar-cod (*Boreogadus saida*), the "wachna" (*Gadus macrocephalus*), and the pollock (*Pollachius catenarrhinus*). Wherever the cod is found, it is the best of the *Gadus* species, *Gadus vulgaris*, the same as the Atlantic species. These two prime fish are associated; they come almost to the doors of the fishermen and are present now around the shores of Alaska in the proportion which attended their capture at Cape Cod fishery.

The cod seems to be entirely unknown as far south as San Diego, California. A circular sent by the Chief of the Bureau of Statistics, W. A. Brown, collector of Customs at San Diego, elicited the following response: "The cod is not known here. W. Barnes, the president of a society of natural history, and to various fishermen, but cannot ascertain that the codfish is known to exist in any of the waters adjacent to this port." On the Hecla bank, north-west from Cape Oxford, Oregon, cod are found. The Indians residing on that coast report this fish as quite abundant in the summer months, and they are said to be large, solid and delicious.

Dr. Donald, in a book entitled "Hidden Treasures, or Fisheries Around the Northwest Coast," states that "cod are taken in very limited numbers off the Farrallones; they are rare and very poor and resemble the jaundiced cod on the Grand Bank."

James G. Swan, in a report on the food fishes of Cape Flattery, Washington Territory, writes on the cod of the North Pacific is not found in abundance at Cape Flattery; occasionally it is brought in, but it is by no means common. It seems to inhabit the deep water of Fucus Strait, and for that reason is seldom fished for, except on occasions of a cold storm, when the weather is very fine weather to take fish in eighty fathoms. Further up the sound and in Hood's Canal and a few other localities the *Gadus* is found, but it is small, evidently a young fish. Although its existence is well known to residents of Puget's Sound, it is not taken in sufficient quantity to collect as a cod fish.

Mr. H. A. Webster, collector of Customs at Port Townsend, Washington Territory, writes thus to the Chief of the Bureau of Statistics: "The cod, I believe, is always present in the waters of Puget Sound, and is taken in small quantities. The best catching has never been pursued as a business, and the knowledge of their habits is very limited. Young cod, about the size of shad, have been seen most abundant in Puget Sound during the winter months. Cod were taken in the harbor of Port Townsend during the summer months by Indians at Neel-Bay. The presence of small cod in the winter months in Puget Sound and at the mouth of the Strait of Fuca is an indication that large quantities may be found in the neighborhood of Cape Flattery—say, south of the 'Hatchet'—if a diligent search is made. The most efficient search has been made off the coast of Washington Territory for this valuable fish."

At Sitka Indians brought a few cod to us vessel in June, 1880. They were rather small, and of a reddish tint, but the hake, in the many fine "lass" (*Sebastes*), several species and "rockfish" (*Hecemus*) seemed to have greater popularity. Mr. A. T. Whitford told me that the cod spawn in the vicinity of Sitka in spring, and that they have a remarkable number of eggs. We caught a fine cod twenty-six inches long, for ten cents here. At Port Mulgrave, Yakutat Bay, we took but one cod in the harbor during the day spent there, this one was large but sick. Good fish are to be had in the deeper water outside. Nothing but hand-line is used for the capture.

Capt. J. Halsey reports cod very abundant on the Hoochoo bank in Chatham Strait. The bank extends from Hoochoo Point to Point Sumner. He also states that there is a bank off Point Sumner, and that there are banks off Cape Sabine, Fort Barroff Island near Foghish Strait, also that small cod are abundant in Prince Frederick's Sound.

While on a visit to the Aleut village near Graham Harbor, Cook's Inlet, we were told by Mr. O. Gibb, the chief of the village, that Port Chatham, Cook's Inlet, a great many fine young cod were seized. It was in Port Chatham that we first saw capelin schooling. Plenty of excellent cod were caught with lines from the vessel.

At the island of Unalaska, we were told that the young cod were taken on Wedded Island, July 13. Between Kodiak and Unalaska are the extensive and well-known banks Portlock, Semionoffsky and the Shumagins, which have furnished the great bulk of the cod so far taken in Alaska.

The true cod is the vicinity of Unalaska. We had no difficulty in catching all we wanted with a small trawl line or with hand-lines late in July. Native fishermen at Iliulik were bringing in bidarra loads of beautiful fish, most of which were very large, to be taken for cod. On the 17th of July, we were told that a young cod three to four inches long was a feature here in October.

Cod have been reported as far west as the island of Atka of the Aleutian chain.

Cod are being reported abundant in Bristol Bay; they appear to be uncommon in Norton Sound, though occurring again more abundantly further north as far as the ice line. The eastern portion of Behring Sea may yet furnish important supplies of cod in suitable depths, since there is an abundance of its favorite food—small fish and larvæ. On the 17th of August, 1880, we were told that the "whiting" spoken of by Seman as occurring abundantly in Hotham Inlet, Kotzebue Sound.

A island of St. Paul cod are taken rarely, the fur seal having been nearly exterminated. At St. Lawrence Island Messrs. Maynard and Elliott caught cod on the 22d of August, 1874.

The great fishing grounds of Kamchatka are in the Okhotsk Sea and the Sea of Kamchatka.

We were informed by one of the whaling captains in Plover Bay last September that he has caught cod off the heads of Marcus Bay, East Siberia, in latitude north and about longitude west. Off Indian Point (Cape Tchaplina), East Siberia, a little further north than the former, we were told by Estimo, who came aboard the vessel, that they sometimes take cod at that point.

In the Arctic Ocean we saw no traces of the *Gadus morhua*, its place being supplied to some extent by myriads of small polar cod (*Boreogadus saida*), which were taken in the same manner as the larger than the polar.

On the 19th of August, 1880, in latitude 60 deg. 45 min. north, longitude 166 deg. 35 min. west, we saw great numbers of young *Boreogadus* from an inch to an inch and a half long swimming under the tongs of a *Kyadlet* jelly-fish.

J. G. Swan writes that the cod is called "Kadlet" by the Mahah Indians. The Sitkas call it "Sacht." A Kodiak Eskimo, to whom I showed one of the fresh fish, told me that they knew it as "Animo." The Russian name for the fish is "Wachna" and is a pretty widely known in the territory. It is worthy of remark here that natives generally distinguish closely the "Wachna" from the "Treska." To the fishermen generally the fish is known as "the herring" when they are taken from New England. The "Treska" has been brought with them the term "brook cod" and "kelp bangers" for certain individual varieties. The "brook cod" are the variously colored algae fish, exactly similar to those known by the same name at Gloucester. "Kelp bangers" are the purple fish that are taken in the kelp. The name "Wachna" is a term applied to several species, among them the tom-cod and a species very different structurally from this.

J. G. Swan reports that none but small cod occur in Puget Sound and in the Grand Banks. He reports that he took one at Sitka, which was brought from Indians; one taken May 30 in 662 millimeters long and two others secured June 12 were 435 millimeters and 542 millimeters respectively. Capt. J. Halsey informed me that he purchased 10,000 cod from Indians at Sitka, which were dried. The largest he saw weighed thirty pounds. He saw a few young fish. A cod caught by us in the harbor of Port Mulgrave,

Yakutat Bay, June 24, measured 570 millimeters. It was stout and heavy, but not fat. In Port Chatham, Cook's Inlet, two healthy fish of one lot taken July 5 measured 722 millimeters and 750 millimeters, one of these was a spent female. Off Marmot Island (Portlock Bank) on the 8th of July we caught with hand-line a fine cod, weighing 25 pounds. It was a fine plump and healthy, averaging not less than twelve pounds. Capt. D. C. Bowen, who passed twenty-five years on the eastern fishing banks, gave me the following information about the shore fish around Kodiak:

First, comes the "herring school," consisting of medium size fish, continuing from May 1 to June or July; then the "lant school," short, thick, well-meated, but not so large as the herring school, June to July. After this the "capelin school" of good-sized fish, best of the season, from July to August. Last comes the "spud school," averaging twelve pounds each. All of these are shore fish, the lank fish are always larger.

Capt. J. C. Caton, who is well acquainted with the Shumagin fishing, says that in 1857 the "Sunborn" took 50,000 fish averaging 2 1/2 lbs. ready for market. Now she will average eighty (80,000 fish) of 2 1/2 lbs. each. Capt. C. told me that none of the fish are so large as the George's cod. Capt. Andrew Anderson informed me that when he was made in the "Wild Gazelle" in 1873 she took nearly 100,000 fish, 30,000 to 35,000, averaging 2 1/2 lbs. dressed. In 1874 she caught 37,000, averaging 3 lbs. Capt. H. R. Bowen, of St. Paul, Kodiak, gives the average of the shore fish there as six pounds, and says that the largest weight taken by her was 25 lbs. The Shumagin fishing, as done at Prine Cove, Shumagins, was done as an average of the fish there something between eight and twelve pounds, the largest weighing fifty pounds.

On the 19th of July I saw many fish brought in to this station by the "Sunborn" on the 15th of July. The fish were of two kinds, one of them being less than twenty-six inches in length, and many of them weighing not less than thirty pounds, the smallest weighed about eight according to my estimate. Prof. George Davidson, assistant to the United States Fish Commission, has reported that in north latitude 53 deg. 30 min., west longitude 164 deg. 10 min., in fifty to sixty fathoms of water, many cod were caught from his vessel, the largest being thirty-seven inches long; several reaching thirty-six inches; the finest was thirty-six inches long, twenty-three inches girth, and weighed twenty-seven pounds, was very fat, etc., etc. In the New York Times of July 15, 1879, is found the following extract from the report of Capt. White of the United States Revenue Marine Service, who was on duty in the Aleutian Islands during the month of July, 1879. He reports, wishing to lay in a stock of codfish, ordered the sails set, and prepared twenty lines with four or five hooks to each line. Perfect sound claims were used as bait, and in two hours we caught 250 fish, weighing from 3 to 15 lbs. each.

From Dr. Kellogg, of San Francisco, surgeon and botanist of one of the Coast Survey's expeditions, I have the following memorandum: "I copy from my diary verbatim the very brief note made on the spot relative to the cod caught on board the 'Lincoln,' July 25, 1859, at 30 miles from the mouth of Kodiak. The fish, girth, thirty and one-half inches, length, fourteen and one-half pounds; twenty and one-fourth girth and thirty-four inches long, weight twenty to twenty-two pounds; three feet long and twenty-three inches girth, twenty-six inches long, weight twenty-seven pounds. We were in the harbor of Iliulik, Unalaska, from the 27th of July to August 3, and from October 6 to 18, 1880. Between the first two dates we saw native fishermen daily bringing in cod for winter use. The fish were caught in the village, and were miserably small, and of a poor quality. The fish were taken in two or three feet off in the supply, and the size was about the same. In deeper water further from the village we took larger cod."

I had in the notes of Prof. D. S. Jordan the following comparison between the fish of the Shumagin and the fish of the Kodiak. "Otokok cod are larger and more numerous than Shumagin cod, but they are thinner, less fat and more pot-bellied, and weigh rather less than dressed—80,000 Shumagin fish, dressed, weigh 260,000 pounds; 80,000 Otokok fish, dressed, weigh 220,000 pounds. The Shumagin cod are larger and more numerous than the Kodiak cod in spring. They are fatter in July; fishing, however, begins in June." For the dressed Shumagin fish this gives an average of three and one-quarter pounds each, and for the Otokok two and one-quarter pounds each. The Shumagin fish are found in the banks substantially with that given by most persons who have furnished information about the Alaska cod. Prof. Jordan's information was obtained from the foremost fish merchants in San Francisco, and none from captains of sailing vessels.

With reference to the Shumagin cod Capt. J. C. Caton informed me that most of them are black napes, but there are some white napes. Some of the fish we caught on Portlock Bank, July 8, 1880, had black napes, and others white napes. Thomas Devine, who has charge of McCollin A. Co.'s fishery on the coast of Alaska, and who is well known as a cod fisherman, says that "very seldom find fish with white napes—generally black." Capt. D. C. Bowen, of the same place, told me that he had never seen a white nape fish, but that he had seen many black napes. He says that white napes are generally young fish; the big ones are almost always black napes. Capt. J. Halsey informed me that the Hoo-chee-no cod have black napes. These information coincide with my own observations at various points along the coast of Alaska, and seem to be true as far as the present information goes. The Alaska cod are of two large ones, measuring 722 and 750 millimeters, caught in Port Chatham, Cook's Inlet, July 5, 1880, had black napes. The same variations in the external color of the fish exist as far east in the Atlantic; the shore fish are generally darker than the bank fish, and a reddish tinge is very common. Rock cod are as well known as with us. Mr. Devine states that they are very pretty yellow cod are sometimes taken. Capt. H. R. Bowen says that he has seen a yellow cod taken in the Hoochoo bank. Mr. Devine informed me that the winter fish are whiter than those of any other reason. The same gentleman mentions peculiarities of shape among the cod, as, for example, "bull-eyed" fish with prominent eyes and seal-like fish with short snout and large forked tail. The latter of which were brought to us by Indians from Old Sitka were always dark colored, with long heads and eyes far apart and with conspicuous blotches, in general appearance often resembling the small cod taken in shallow water off the coast of New England. The Alaska cod are of two large ones, no differences so far as general appearance go between Alaskan and New England cod; it would be impossible to tell one from the other if they were mixed in a tank without tags or some other means of identification.

DISTRIBUTION. In general terms we may say that cod are found around the whole southern shore of Alaska and westward along the Aleutian chain as far as Atka, extending on the western shore not much beyond British Bay, though they have been secured as far north as Cape Sabine. Large quantities were secured far into the interior of the Kodiak group, the Shumagins and Unalaska Islands. I have seen them taken in about nine feet of water at Iliulik, and at a depth of at least fifty fathoms off Cape Chatham, and in the harbor of Port Chatham, which is not the entrance to the inlet, we found them common and good. Mr. Cohen told me that cod were taken in the Hoochoo bank, and in the Hoochoo Cove, a small arm of Port Chatham, we took many young cod in brackish water. At Chernoffsky, also, on the island of Unalaska, we again found them abundant in brackish water associated with young *Onchorhynchus*, *Sebastes*, *Arctogadus*, *Zoarces*, and *Leptocottus*. The central small streams that run to Chernoffsky Bay at this point, and the young fish were taken in water varying from three feet to one fathom in depth close to the shore. Fish of considerable size (weighing several pounds) were taken from the Hoochoo bank, and in the Hoochoo Cove, and in the Hoochoo Bay. I have seen them taken in about nine feet of water at Iliulik, and at a depth of at least fifty fathoms off Cape Chatham.

Mr. Devine, of Pirato Cove, says they are caught as far as thirty miles off Semionoff Island and as deep as forty-five fathoms, and that on the middle ridge, in sixty to seventy fathoms, the best fish are taken with hand-lines.

Captain H. R. Bowen states that they are caught in three feet of water off the village of St. Paul, but these are always the same fish. Whenever there are soundings of fish they are always sick fish. Whenever there are soundings of fish they are always sick fish. The cod of the Shumagins are generally taken at such short distances from the shores as can be readily reached in dories. The fishermen go out in dories from their vessels, or from the fishing-boats, and return in the evening, and return in time to dress the fish aboard on shore in the evening.

MOVEMENTS, ETC.

MR. DEVINE. Mr. J. B. McIntyre, Mr. D. C. Bowen and Captain H. R. Bowen all agree in stating that cod remain throughout the year around the island of Kodiak. They were the last winter to be taken on account of the extreme cold, and up to the time of our arrival at St. Paul (July 9, 1880) the customary summer run had not yet begun. Between that date and July 14, however, we saw schools of them around the vessel where they lay anchor. According to Mr. Bowen they made their first appearance at St. Paul Aug. 1, 1880. Captain Bowen states that they are always found in the same places. Mr. McIntyre said that they were so scarce about St. Paul last winter that the natives could not catch enough of them for their own use.

According to Capt. J. C. Caton, cod are present around the Shumagin Islands all the time, but at some seasons they are very scarce. The best fishing is in February, commencing about the 15th, and continuing to March, the best of the year's coming up, get the best fish and best fare in April, some times they do well in May. The fleet come up late in July or early in May and stay until the 1st or 15th of August.

Mr. Thomas Devine, who manages the permanent fishing station on Point Iliulik, Semionoff, also informed me that cod are to be found all the year, but that they go into deep water in cold naps and toward evening. He stated that the schoolish leave in August or September and return in January and February. They seem to move off to the southward and to return from the southward and westward.

With reference to the bank, twenty miles east northeast of Semionoffsky, Capt. Andrew Anderson told me that the fishing is best in August, and September. The yellow fish, *Pleuronectes macrocephalus*, school there in numbers about the middle of August, and follow the bait up to the top of the water. Cod will bite at the yellow fish in preference to anything else.

Mr. Alrons Baker has translated for me a note by Ivan Veniaminoff, the Russian collector of the Bales of the Unalaska region, containing the following sentence: "Some of these, and especially the cod, in the winter go off shore into deep water, but in summer time they are found along the shores of certain bays and in shallow water."

Mr. D. C. Bowen, of St. Paul, distinguishes various schools of cod about the island of Kodiak, which vary in size and other particulars, and take their names from their favorite food during the time of their stay. He gives them in the following order: First, the "herring school," consisting of medium size fish, which come about May 1 and stay until June or July; next, the "lant school," feeding on sand-lance (species of *Ammodytes*), made up of short, thick, well-meated fish, not so large as those of the herring school, which are present in June and July; then follows the "spud school" (the capelin is our *Matlubus villosus*), July to September; these are good-sized fish, about the same as Newfoundland cod; the "spud school" comes in August or September, and remains until October.

The fish of this school average twelve pounds in weight. The schools are far from numerous, and are all shore fish, and they are always smaller than bank fish. From October there are winter schools in some places; these are generally short, thick fish.

Mr. G. C. Caton says that they catch males and females together in the spawning season, and that they do not school when spawning.

Mr. Wm. J. Fisher has furnished the following information concerning the schooling of the fish of Kodiak. He says that cod are taken from Captain H. R. Bowen: Cod associate in schools generally from May to the middle of September, and they live independently the rest of the year, the severity of the winter having much influence. At different seasons and in different places there are different schools. Males and females are found in the same schools. The movements of the schools are affected by the presence of food and by the state of the tide, the fish taking the hook more readily at slack water.

With reference to the schooling of the Shumagin cod told me on the 19th of July, 1880, that they found the fish both in schools and independent. There were "picking fish" at the time, and there had been "no great fish" of school fish this year. Different schools were present in different places at different times. Mr. Devine says that males, females and young are not found associating the males go together at certain times and the females. At the spawning season there are more females than males. The movements of the schools are very much affected by sharks especially, and dogfish, which are extensive in Kodiak Bay, and all shore fish, and the dogfish is identical with our Atlantic spotted dogfish. We did not get a specimen of the shark, but the National Museum has a couple of small ones from Sitka, which are very close if not identical with the one from Kodiak. Mr. Devine says that fishing is best during the spring tides, and poorest in slack tides.

Sometimes the cod have such a superabundance of food that they refuse to take the hook.

Mr. Bowen indicates various points along the Alaskan coast seemed to observe that young cod from two to four inches in length prefer to school near the shores in sheltered coves where the water is shallow, and often where it receives a large admixture of fresh water. At Iliulik I found myriads of such young fish playing about the wharves eagerly seizing the hooks baited for larger prey. Occasionally a larger cod of say sixteen or eighteen inches in length would be caught in the same vicinity, but almost always they would form a school of themselves.

A supply of food forms a very important motive for the presence of cod in particular places at certain times. When we were in Port Chatham, for example, capelin were schooling there abundantly, and many of the fish were very fat. On Portlock Bank again capelin were plentiful, and nearly every cod examined had its stomach filled with them.

At the Shumagins "England hake" or more properly pollock (*Pollachius catenarrhinus*) were abundant in July, and the cod were taken on the 19th of July. The *Pleuronectes macrocephalus* is one of the finest of all baits for cod, and will play an important part in the future of the fishery. This "yellow fish" is said by Capt. Andrew Anderson to be very abundant about the island of Kodiak. It was first taken on August 1, 1880, northeast of Semionoffsky, where they are found schooling, and will follow the bait up to the surface of the water. It is to be noted that August and September are the best months for cod on the bank.

The herring (*Clupea harengus*) also has a great deal to do with a prosperous cod fishery. Capt. J. Halsey told me that herring are wonderfully plenty on the Hoochoo bank at the fishing season, and that there are enormous quantities of the herring in Prince Frederick's Sound where also cod are abundant.

ABUNDANCE. Before entering into an examination of the influence of modes of fishing and practices of the fishermen upon the abundance of fish it will be well to review the actual numbers taken at different times and places during the season. On the 19th of July, 1880, two weeks from Indians on the Hoochoo bank, and could have got many more. The Indians caught these cod with bark lines on barbed, but iron hooks, two to four inches long in a canoe and bringing in from twenty-five to fifty fish, which were quite enough to satisfy their hunger.

Mr. D. C. Bowen states that as many as five hundred have been taken in a day by one hand-line on Portlock Bank, and that the average catch of the whole season per man is seventy-five a day.

Here may be repeated the statement of Captain White, of the U. S. Revenue Marine Service, who reported the capture, south of Kodiak, of 250 fish weighing thirty to forty pounds each with their heads having four or five hooks each. This number was taken in two days.

From the New York Times of July 15, 1879, I extract a sentence by William S. Dodge, formerly Mayor of Sitka, to the effect that: "As Kodiak Henry Richard and Thomas Lake, fishermen, caught about a hundred fish, with the last fish weighing 22,000 cwt."

Captain Andrew Anderson told me at St. Paul that with a crew of ten men, on Semiofki bank, he has caught many as 4,000 in a day, and that his average catch there was from 1,000 to 1,800 cwt.

Mr. D. C. Bowen stated that John McCarthine and a man used Smith caught 1,700 cod in a day on one trawl (a 12-line trawl of 600 or 700 fathoms) in "One strain." Their average catch was 1,200 fish. A corresponding trawl, of 200 fathoms, caught 22,000 cwt. in 1876, says: "The men on board the schooner Selma, which arrived the other day, had 18,000 fish to his credit," etc. These were caught during a season of four months.

Captain J. C. Catin, who has been familiar with the Slumagin fishery ever since the second year of its existence, affirms that fish are plenty enough to supply a large market when that is found. The evidence of all the fishermen goes to prove that the great want is fish, but demand for fish. One such customer as Gloucester would whitewash the Gulf waters with hundreds of sails which there are less than a dozen, and there is every indication that full faves will repay the venture.

As to the nature of fishing and its accompanying practices, we have information from the two points—Port Kodiak and Pirato Cove, Slumagin. Capt. H. R. Bowen, of the former place, says that cod are as abundant there now as they were when white men began fishing; that their habits and habits have not been changed by the introduction of man, and that numbers are not diminished by over-fishing. Trawls have never been used in that vicinity. He regards the practice of throwing gurry overboard as injurious to the fishery; the cod, he says, will leave the trawl to be taken on Portlock bank.

Mr. Thomas Devine, of Pirato Cove, said that cod are scarcer there now than they were five years ago. He accounts for their decrease by the increased fishing, the injurious effects of trawling and the throwing of gurry overboard. He says that the extent by the capture of the mother fish, which will sometimes take the hook freely. The lost gear attendant upon trawling has a bad effect upon the fishery.

The food of the cod in the Pacific is as plentiful and as varied as in the Atlantic. Most other fishes of suitable size are liable to suffer from its voracity, while certain species for which it has an especial liking are slaughtered in great numbers. There is a wonderful variety of marine life in the waters of the Pacific, and holothurians, crabs, marine worms, sea-leeches, and in short, just such forms as are well known to every fisherman on the eastern ground. The waters of the Alaskan fishing grounds fairly swarm with such food for fish. One such customer as Gloucester would whitewash the Gulf waters with hundreds of sails which there are less than a dozen, and there is every indication that full faves will repay the venture.

Mr. Devine says that sick cod are sometimes seen feeding at the surface, and sometimes healthy fish will chase bait up. In this way yellow fish will attract cod to the surface and capelin will also, and the cod is so used to enter for cod in the eastern States.

Mr. Devine says that sick cod are sometimes seen feeding at the surface, and sometimes healthy fish will chase bait up. In this way yellow fish will attract cod to the surface and capelin will also, and the cod is so used to enter for cod in the eastern States.

Mr. Thomas Devine tells me that the Slumagin cod spawn in from ten to fifteen fathoms of water in January and February; the size and color of the eggs is the same in the Eastern States. The yellow fish is the best bait for cod, according to Capt. Anderson and Capt. Catin. Another food fish of the cod is worthy of mention here, because of the interest which attaches to its common name of "Cusk" (*Bathymaster signatus*). The cusk is a fish which comes from the coast of Alaska to the coast of the eastern States.

Mr. Thomas Devine tells me that the Slumagin cod spawn in from ten to fifteen fathoms of water in January and February; the size and color of the eggs is the same in the Eastern States. Mr. Devine mentions, as parasites found on Slumagin cod, "cuttle-fish, whelks, worms and fish-lice." The commonest external parasites observed by me were small lozenges.

Amund Kodiak seals and sea-foxes prey upon cod, frequently taking them out of the net according to Captain Bowen.

Mr. Devine tells me that sharks are very abundant about the Slumagin and very destructive to cod; dogfish (*Squalus acanthias*) also prey upon cod, but they are not abundant. We caught comparatively few dogfish during the summer—one at Port Althrop, one on Portlock bank and many at Sitka.

THE DETROIT HATCHERY.

OFFICIAL information has been given by the building occupied by the State Fish Hatchery in Detroit is ill arranged and so rotten that the Commissioners have determined to seek another habitat. The city Water Works donated pay for every pint of water used in the hatchery, and with that Sibiokian fact to guide them, they have decided to expend to rebuild the present concern. It is said that Detroit is the only city in the United States which makes a charge for water used in fish hatcheries, and there are matters which seem to indicate the possibility of a removal of the hatchery to the Huron, at the mouth of the River, where water, ground and railroad transportation will be free. Detroit has obviously the best advantages for this kind of business, the one thing wanting being free water. The Fish Commissioners have held a meeting at Port Huron, at the residence of Mr. J. M. Kollig who will keep the readers of FOREST AND STREAM advised as to any important action which the Board may take. The present water (at \$200 a year, and a pretty liberal rental for the ground on which the hatchery is situated) is not so good as it used to be, and so far as possible for economy's sake, the Commissioners have been obliged to use it four times. Inasmuch as the hatchery is a public good I do not see why the city of Detroit should exact its price of fish for the water used *pro bono publico*.

FISHCULTURE IN NEW HAMPSHIRE.—At the recent meeting of the New Hampshire Fish and Game League, Mr. A. B. Powers, superintendent of the hatching-house at Plymouth, was called upon and gave a detailed report of the operations of the commission for the past year. He said that 138,475 salmon fry had been hatched at this hatchery, and that 3,000 California trout eggs, and that 70,000 fry of the brook trout had been planted in various waters; 67,000 land-locked salmon, 2,000 California trout and some black bass have also been distributed. He further says: "I have in the hatchery at this time 3,000 California trout eggs; 124,000 Schoodic salmon eggs; 30,000 shad-worm or Lake Winipisaukee white-fish eggs now hatching. January 21 I received from Germany some 60,000 sabbing eggs, a present from Prof. Bell, which have hatched, and I have some 35,000 or more young sabbling to plant.

There were some 220,000 brook-trout eggs taken last fall, one-half of which were sent to Massachusetts, but it is safe to say I have 100,000 young trout. Sixty thousand salmon eggs were taken last fall, and I received about 149,000 salmon eggs. It would be safe to say that I shall have 450,000 young salmon for the Merrimack River."

Mr. Luther Hayes, of Milton, also one of the commissioners, was called upon. He reported that wherever he has been the people were well pleased with what had been accomplished, and had spared no pains to further the plans of the commissioners and entertain them.

Fish and Game Commissioner Webster spoke of the German fish, and furnished undoubted reports of the success which had met with in introducing this fish into American waters. He stated that the greatest obstacle to fish propagation was the use of the spear and that the spear had been stopped there by the State. He said that he doubted but that we shall have plenty of fish. He believed the low water in the Merrimack last summer was the only reason why salmon were not seen in abundance, and with a fair quantity of water coming down the river, he thought that they would be seen. He stated that the establishment of a branch fish and game league in every county would greatly assist the commissioners in their work. In closing, Col. Webster stated that the commissioners proposed to stop the catching of snails, which would probably had been stocked, and also to reduce the size of fish tanks which was quietly dropped out at the last session of the Legislature.

Dr. Fletcher suggested that the stocking of the waters of the State with whitefish should be mentioned in connection with the work accomplished by the commission.

FRANK BUCKLAND MEMORIAL FUND.—34 Portland Place, London, W.—A proposal has been made by some of the friends of the late Frank Buckland to form a memorial fund to honor his memory and the recollection of his services to natural history and agriculture, and generally afford to the public an opportunity of paying a tribute of respect to his memory and appreciation of his life-long work. For this purpose a subscription list has been opened. It is intended to expend a portion of the sum subscribed upon a bust of Mr. Buckland, to be placed in the museum at South Kensington with the collection which he so generously bequeathed to the nation. It is desired that the names of the subscribers should be published to supplement the income of Mr. Buckland's widow by an annuity of £100. Should there be any surplus after the purchase of the bust and annuity, the committee propose that it should be applied to promoting the interests of the fish and game industry generally. The names of the subscribers should be sent to the Secretary, Mr. Frank Buckland has so much at heart. Subscriptions will be received by Messrs. Cox & Co., Bankers, Craig's Court, Charing Cross, and at the above address by T. Douglas Murray, Esq., Bridges (Lionel Col. Grenadier Guards), Honorary Secretary.

HYBRID TROUT.—Worthville, Mich., April 13.—On the 25th inst., Mr. E. N. Clark took 824 eggs from two California trout, and fertilized them in the regular way this season. Up to the present he was unable to decide positively that impregnation had been accomplished when he was called away on the 11th inst., and requested me to drop you a line as soon as the result was definitely known. To-day the result, although very much satisfactory, is not yet clear. The eggs which were taken from the two California trout had not been done in more than one or two instances, and that an item in FOREST AND STREAM noting the success of this attempt would probably interest fishermen generally by giving added value to the eggs. The result, however, was possible. Although ripe nuclei of the *fontinalis* are rarely found as late as this, the one used in the present instance was by no means "stinky" quite the reverse—the mill being some six or seven days younger than the regular trout season. Up to the present date (April 13) forty eggs have died leaving 484, of which undoubtedly ninety-five per cent. will hatch. SEYMOUR POWERS.

HATCHING THE SAIBLING.—Plymouth, N. H.—The Saibling eggs have hatched. The first egg hatched Feb. 28, the last March 24. The loss has been quite large, but no more than I looked for. No doubt some of the eggs were chilled when they arrived here, which may have a great deal to do with the loss. When arrived, 3,000; died since, 6,515. Total, 11,515. I shall have 85,000 or more to plant in Newfound Lake, as that is the place they are to be planted as I understand it.—A. H. POWERS.

THE CULTURE OF CARP AND CONSTRUCTION OF PONDS.*

1.—ITS ADAPTABILITY TO ARTIFICIAL CULTURE.

THE conclusion from what has been said will be, that the carp is excellently qualified for culture in inclosed waters, such as artificial ponds, and also for the stocking of open waters, such as rivers and lakes, for what is called "free fishing."

As to the power of the culture by means of, by means of artificial impregnations and hatching, as also by the natural increase of the fish, with its abundance of eggs, any amount of fry, as well for fresh water as most probably also for salt water, as the fact of its occurring in the waters of the Danube, and very frequently in that of the Adriatic Sea, will demonstrate.

There is no other fish which will, with proper management, be as advantageous as the carp. Its frugality in regard to its food, its adaptability to all climates, in rivers, in lakes and ponds, and even in salt water estuaries, its rapid growth, and its value as a food fish, are its best recommendations.

2.—THE LOCALITIES BEST ADAPTED TO A CARP POND.

I will try to describe, in the first place, the manner in which carp culture in ponds is conducted in Central Europe, and subsequently explain more fully its introduction in open waters.

If intending to establish a carp pond, it will be necessary to ascertain the following points before the execution of the plan:

1. Is there a sufficient quantity of water at hand for all purposes, for the summer as well as winter?
2. Is the ground, soil and water available for culture?
3. It is important to examine the land minutely, in order to find what are the components of the soil, for not every kind of soil is suitable for carp culture.

It is difficult to be decided from the commencement how large the establishment is intended to be, whether only for private use and pleasure, or whether wholesale production of the fish as an article of trade is contemplated.

Points 1 and 2 are most satisfactorily settled, then the ground must be examined, particularly whether it is so constituted as not to allow the collected water to penetrate, and whether the ground is sandy or loamy. Above all, it must not be neglected to ascertain the nature of the soil, and whether it is so fully assured that it is sufficiently impervious to withstand the pressure of the water and to hinder its oozing through, so as to prevent the consequent drying up of the pond.

Points 1 and 2 are most satisfactorily settled for carp culture. Sandy ground, without a considerable mixture of loam, clay and humus, is of small use. I speak here of large ponds of considerable extent. Small ponds with a sandy bottom may be improved by supplying them with loam, as it is frequently done in agriculture.

Loam is a mixture of a small per centum of sand and a larger quantity of clay, and is suitable for ponds. If such ground contains some marl, or, in other words, small elements of humus, it is of the greatest advantage. The advantage of these constituents of humus, if dissolved, give the water a yellow, muddy color; and this water supports by its ingredients a profuse number of microscopic beings, which again form the support of a larger number of minute insects, and these in their turn produce the food of the pond, on which, in its turn, the carp depends for its subsistence. Too much humus or dissolved peat is injurious. Water which runs through bog meadows or oak woods is not of much value, because it contains a considerable amount of tannin. (These impart a muddy taste to the fish. A too considerable amount of gypsumiferous earth, carbonate of lime, or sulphate of lime is injurious also. Should any mineral springs fall into a pond they must be stopped off. The water of a pond must be such that it comes from rivers and brooks. Ponds might be constructed which would fill themselves with rain-water during the winter or at any other time, but such water takes a muddy taste, which is not all commensurate to the fishes, as does the water from logs also.

In Europe, experience has shown that water coming from fertile fields and meadows, carrying with it particles of soil from villages, is the best adapted for the purpose.

Spring water direct from the ground is not favorable, and ought to be conducted for at least a few hundred yards through wide, shallow ditches, in order to receive more nourishing components from the soil, as well as to purify the water. These considerations must be taken into the account, and above all it is to be warned to avoid a tract of land, such as above described merits the preference as a site for a pond, if in other particulars the ground is favorable and has not too great a fall. In this case, the cost, very high and strong dikes, are necessary to prevent the water from overflowing, which cost large sums if constructed of good waterproof material.

A low undulating country, with only slight elevations or hills, where the small valleys are easily closed up by dams for the purpose of collecting water, is the most favorable for the construction of ponds involving comparatively trifling expense.

3.—THE CONSTRUCTION OF THE PONDS.

Ponds must not be too deep, as the water will be colder and will harbor fewer insects, larvae and worms, which form part of the carp's food. Besides, this fish does not grow quickly in cold water. A position for the pond is to be chosen in such a way that it should ward the outlet-slopes it may be from six to eight feet deep, but only for an area of from 200—1,000 square feet. In the depths of this "collector" the fishes seek their resting-place for the winter. A position for the pond is to be chosen in such a way that it should ward the outlet-slopes it may be from six to eight feet deep, but only for an area of from 200—1,000 square feet. In the depths of this "collector" the fishes seek their resting-place for the winter. The other part of the pond should not be deeper than one foot for the distance of about 70 or 100 feet, so that the water there may be warmed more thoroughly by the sun.

The depth of the water should be in accordance with its size, a cavity of from twenty to fifty feet in length and two feet deeper than the rest of the ground should be dug. This will serve the fishes for a resting-place in summer and winter. This cavity is sometimes called a "kettle," though the appellation varies in different localities.

From the entrance of the pond to the other end, where the "collector" and the outlet-slopes are situated, two or three ditches (two to two feet in depth) are to be dug, and these are to be connected by "kettles" transversely as far as the collector. These ditches are intended to carry all the fishes into the collector when the pond is being drained. The collector is nothing but a place of from twenty to forty feet in length and breadth, near the outlet-slopes, and is to be dug to a depth of from six to eight feet. In ponds of proper construction it has generally a wood flooring, and must be cleaned of the mud every year, so that the fishes may not become too much annoyed by the mud. The water should be conducted into the pond sideways from the stream; and if it should be a small brook only, it may be turned off entirely and conducted into the pond, from which point the latter can be easily applied with water.

The inlet-ditches from the stream must of course be of a strong and practical construction, so that an overflow is impossible, and they ought to be provided with gratings to prevent other fishes from intruding.

It is an indispensable condition for the culture in ponds, according to established rules, that they be so constructed as to allow of being thoroughly drained, so that the bottom of ponds should be of such a nature as to permit their being dried up for agricultural purposes if necessary.

* "The Carp and its Culture in Rivers and Lakes, and its Introduction in America," below Part IV. of the Report of the U. S. Fish Commission, 1876-77.

Major Taylor finished all the English setter classes, except the bitch puppies, and, as already stated, his duties were admirably performed.

Excellent Breeze was Leicester never looked better, and as Mr. Moore states this is his last exhibition, we were glad to see the old dog retire a champion. St. Elmo was not looking as he usually does, and Coin showed the effect of his washing in the morning. Timmer was Leicester's most formidable rival. The struggle in the bitch class was between Lizzie Lee and Spark, decidedly the best two shown, and Spark won—a thing being between them.

The imported dog was of a very difficult one, a dozen dogs, being magnificent dogs. Finally Major Taylor got Duke of Beaufort and Emperor Fred together, and muscle carried the dog over beany of conformation. We do not doubt Emperor Fred's claim, but he is not a dog of quality, compared with the second or third. Pontiac was in splendid trim, and also Dashing Monarch, the latter's coarseness keeping him back. Temple Bar looked as handsome as anything in the ring, but a description of all the good ones is out of the question. Mr. J. O. Higgins won in the bitch class with Petal II, a sweet bitch. But we sadly missed Mr. Moore's pair—Luna May and Less 'o' Gowrie, who had not come on from the South. Daisy Lavracker is slightly undersized or she would have taken a little higher than third. Blue Bell is a well-shaped bitch and was shown in excellent trim.

Native dogs of the class were of a very good one, the best were finally selected. Count Zora, a good one for his age, was, we thought, a little better than the winner, who was not looking well. Racket, at third, was a good choice, and Mr. Goodsell's Royal Carl is a handsome blue Belton. Blue Dan, a talking dog of the same color, was equally well taken care of.

In taking the class of imported dogs it was as good as anything seen before, and Afton, second last year, was this time only highly commended. The native bitch class was not a large, but it was a good one. Donna, the winner, is a bitch of great merit, but if she had only been second it would have been no hardship, as Flirt is a genuine good one, beautifully proportioned. Maida, we regret to say, was an absentee. Lady Lavracker, like her sister Daisy, is small, but a good one. The dog to go to as a good one would have been expected, and beyond Royal Dale and Doc there was nothing to call for any mention. The former was decidedly the best, and does credit to his dam, Daisy Dale.

Dr. Niven began his work in the afternoon with spaniels, and got through them and fox terriers before six o'clock.

Irish Water Spaniels.—Mike, a fine dog, won and deceased his hind leg. Judy, the next best, taking second, and Limerick, a credit to Barney, was given a very highly commended mention.

Field Spaniels.—A large class of various kinds. The question was at last reduced to Dash and Benedict, both of the Jacob's strain. Dash was beaten by his younger relative, Jenny, more of a cocker stamp, was placed third, and a daughter of hers, Jessie, secured v. h. c.

Cocker Spaniels.—The dogs were pretty fair; Brag, decidedly the best, being first, with the liver and white Teddy second, and the well known Music third. Music is hardly a working cocker. The bitches were not so good as dogs, and there was nothing in the class as good as Queen Vie. Busy was in bad condition or she would have won. Beatrice was the only good puppy.

Fox Terriers.—Dr. Niven began by selecting the clunky-bitch, Beatrice as the champion dog—a sound and justifiable decision. Tipsey was not of the same stamp, however, and Mr. Rutherford should have been first here also. The open dog class was an extra good one, and Moslem II. had all he could do to come in ahead of Royal. Notts is a hardy dog but not overmuch quality, and we do not think Tark should have been where he was. Mr. Mason was again in front in the bitch class, and the decision was sound. Mr. Rutherford again hunting him home with the smart Sally and Tricksey. Junker made up somewhat for disappointments by easily winning in the dog puppy class. He should make a good one. The bitch puppies were very poor, winner the best.

The remainder of our comments will be concluded next week.

FULL LIST OF AWARDS.

- v. L. C., very highly commended; H. C., highly commended; C., commended.
- Class 1. Champion Mastiffs: Dogs, silver medal, C. C. Bulls' Turk, New York.
- Class 2. Champion Mastiffs: Bitches, silver medal, M. Rathbun's Leah, New York.
- Class 3. Mastiffs: Dogs, first prize, \$15, C. P. Fraleigh's Grim, Brooklyn; second, \$10, C. C. Dodd's Mrs. Grub, Zanesville, O.; third, silver medal, C. H. Mason's Jugg, New York.
- Class 4. Mastiffs: Bitches, first prize, \$15, C. H. Mason's Creole, England; second prize, \$10, Miss S. C. Hewitt's Jemima, New York; third prize, silver medal, Mrs. W. J. Haines' Queen, New York.
- Class 5. Mastiff Puppies: First prize, \$10, Miss S. C. Hewitt's The Anal; second prize, silver medal, Miss S. C. Hewitt's Frou Frou; v. h. c., W. R. Hubbard's puppy, New York.
- Class 6. Champion Rough Coated St. Bernard Dogs: Silver medal, Mr. P. F. Foster's Turo.
- Class 7. No entries.
- Class 8. Rough Coated St. Bernard Dogs: First prize, \$15, H. Clawson's Barry, New York; second prize, \$10, H. Baxter's Turk, New York; third prize, silver medal, H. Baxter's Turk, New York.
- Class 9. Rough Coated St. Bernard Bitches: First prize, \$15, A. E. Goddard's Brantley, Guyard, N. J.
- Class 10. Champion Smooth Coated St. Bernard Dogs: Silver medal, J. P. Haines' Don, Tom's River, N. J.
- Class 11. Champion Smooth Coated St. Bernard Bitches: Silver medal, J. P. Haines' Don, Tom's River, N. J.
- Class 12. Smooth Coated St. Bernard Dogs: First prize, \$15, H. H. Samuel's Tullier's Ashlin, New York.
- Class 13. Smooth Coated St. Bernard Bitches: First prize, \$15, H. H. Samuel's Vix, Tom's River, N. J.
- Class 14. St. Bernard Puppies: First prize, \$10, John P. Haines' Gertie, Tom's River, N. J.; second prize, silver medal, J. P. Haines' Gertie, Tom's River, N. J.; v. h. c., John P. Haines' Toper, Tom's River, N. J.; v. h. c., J. P. Haines' Toper, Tom's River, N. J.
- Class 15. Newfoundland Dogs: First prize, \$10, C. H. Mason's Mayor of Huxley, England; second prize, silver medal, A. T. Ibberson's Bogusius, New York; v. h. c., J. P. Haines' Gertie, Tom's River, N. J.
- Class 16. Newfoundland Bitches: Second prize, silver medal, E. E. McCormack's Flora, New York. First prize withheld.
- Class 17. No entries.
- Class 18. Siberian or Jim: First prize, \$10, A. Field's Caro, New York; second prize, silver medal, G. F. Keller's Lyon, New York; v. h. c., G. F. Keller's Lyon, New York.
- Class 19. Deerhounds: First prize, \$10, W. Sherman's Baco, Newport, R. I.; second prize, silver medal, W. Renkin's Sir Walter, New York.
- Class 20. Deerhounds: First prize, \$10, A. H. Moore's Leicester, Philadelphia, Pa.
- Class 21. Imported English Setter Bitches: First prize, \$30, D. E. Sandoz's Spark, Dowling, Mich.
- Class 22. Imported English Setter Bitches: First prize, \$30, J. C. Higgins' Empress, Philadelphia, Pa.
- Class 23. Imported English Setters: First prize, \$30, J. C. Higgins' Duke of Beaufort, New York; third prize, silver medal, J. C. Higgins' Pontiac, Delaware City, Del.; v. h. c., C. Murray's Annus, London, Ont.; second prize, silver medal, W. W. Wainwright, Del.; A. J. Moore's Temple Bar, Philadelphia, Pa.; v. h. c., G. Moore's American Rancer, Pittsburgh, Pa.; J. C. Higgins' Dashing Monarch, Delaware City, Del.; J. C. Higgins' Don Juan, New York; G. Moore's Blue Blood, Meriden, Conn.
- Class 24. Imported English Setter Bitches: First prize, \$30, J. C. Higgins' Empress, Philadelphia, Pa.

Higgins' Petrel II, Delaware City, Del.; second prize, \$10, W. H. Beebe's Blue Bird, New York; v. h. c., J. C. Higgins' Empress, Philadelphia, Pa.; v. h. c., J. C. Higgins' Empress, Philadelphia, Pa.; v. h. c., J. C. Higgins' Empress, Philadelphia, Pa.; v. h. c., J. C. Higgins' Empress, Philadelphia, Pa.

Class 25. Native English setter dogs: First prize, \$20, B. F. Cornell's Spot, Pittsburgh, Pa.; second prize, \$15, W. White's Count of Baltimore, Philadelphia, Pa.; third prize, \$10, W. White's Count of Baltimore, Philadelphia, Pa.; v. h. c., J. C. Higgins' Duke of Beaufort, New York; v. h. c., J. C. Higgins' Duke of Beaufort, New York; v. h. c., J. C. Higgins' Duke of Beaufort, New York.

Class 26. Native English setter bitches: First prize, \$20, C. Moran's J. R. Donna, New York; second prize, \$15, Sportsman's Kennel's Blue Bird, Philadelphia, Pa.; v. h. c., Sportsman's Kennel's Highland Lassie, England; v. h. c., Sportsman's Kennel's Highland Lassie, England; v. h. c., Sportsman's Kennel's Highland Lassie, England; v. h. c., Sportsman's Kennel's Highland Lassie, England.

Class 27. English setter puppies: First prize, \$10, N. M. Drake's Blue Bird, Philadelphia, Pa.; second prize, \$10, N. M. Drake's Blue Bird, Philadelphia, Pa.; v. h. c., N. M. Drake's Blue Bird, Philadelphia, Pa.; v. h. c., N. M. Drake's Blue Bird, Philadelphia, Pa.

Class 28. English setter bitches: First prize, \$25, D. W. Jarvis' Noreen, Claremont, N. H.; second prize, \$15, B. F. Clarke's Reg, Manchester, N. H.; third prize, \$10, B. F. Clarke's Reg, Manchester, N. H.; v. h. c., B. F. Clarke's Reg, Manchester, N. H.

Class 29. Irish Setters—Dogs: First prize, \$25, Max Venzels' Chief, Philadelphia, Pa.; second prize, \$15, Max Venzels' Chief, Philadelphia, Pa.; third prize, silver medal, H. C. Ripley's Sky, New York; v. h. c., C. Denison's Sam Deen, Hartford, Conn.; v. h. c., C. Denison's Sam Deen, Hartford, Conn.

Class 30. Irish Setters—Bitches: First prize, \$25, Dr. W. Jarvis' Noreen, Claremont, N. H.; second prize, \$15, B. F. Clarke's Reg, Manchester, N. H.; third prize, \$10, B. F. Clarke's Reg, Manchester, N. H.; v. h. c., B. F. Clarke's Reg, Manchester, N. H.

Class 31. Fox Terrier Dogs: First prize, \$10, J. O. Patterson's Queen Vie, New York; second prize, \$5, R. Tinsley's Busy, Hamilton, Ont.; third prize, silver medal, C. V. Sewell's Lou, New York; v. h. c., C. V. Sewell's Lou, New York.

pose of general arrangement, the dogs were divided into three classes, viz.: Watch dogs including great Danes, St. Bernards, etc.; sporting dogs including all classes of dogs used as an adjunct to shooting, and to dogs including bull-dogs and terriers, and nondescript dogs of all kinds. The officers of the show and judges were as follows: A. H. Moore, President; J. C. Higgins, Vice-President; J. C. Higgins, Secretary; Colonel Stuart M. Taylor, of San Francisco; Superintendent, Thomas Trustees, of San Francisco; Vice-President, Dr. Meats, health officer of San Francisco; Business Manager, D. L. McNeill, of Edgewater, N. J.

All sporting dogs, except greyhounds—J. Leavesley, late of Lancashire, England, at present residing in Gilroy, Cal.; Greyhounds—Judge Men, of Alameda; Terriers and brigs—Dr. O. Quinn, of San Francisco; Cocker spaniels—Judge Men, of Alameda; Farley, Esq., of San Francisco; Coach-dogs—Captain B. Taylor, of San Francisco; Newfoundland, St. Bernards, mastiffs, Great Danes or Ulm dogs and Russian terriers, T. L. Williams, Esq., late of Hauserstadt Gate, London. The awards made by these gentlemen gave the utmost satisfaction to all who could be considered judges of dogs, and so popularized the Pacific Coast Kennel Club that any future exhibitions they may give will be even greater successes than this one was. The prizes awarded consisted of handsome silver cups manufactured expressly for the club by the Meriden Company and ranging in value from \$130 for first prize in the large classes to \$25 for second prize in the small classes. The entrance fee for all dogs, including dogs of all classes, was \$1.00. The prizes awarded were as follows: The greyhounds were the largest and best class of dogs exhibited and included some forty entries, all of which, with one exception, were bred in California. That exception was the first prize, imported from England in 1877; sire, Buller; dam, Minerva; valued at \$1,000. It is as nearly a perfect specimen of a greyhound as could be found in any country, and, though fully nine years of age, is still available for stud purposes, and is a very handsome dog. The dog is a black and white, big chest, powerful limbs and perfect limbs, and in condition would weigh about 64 pounds. His get have gained a splendid reputation in the coursing field here, no less than four of them taking prizes for their high breeding. The first prize was won by the dog owned by Dr. J. C. Higgins, of San Francisco; sire, Buller; dam, Minerva; valued at \$1,000. The dog is a black and white, big chest, powerful limbs and perfect limbs, and in condition would weigh about 64 pounds. His get have gained a splendid reputation in the coursing field here, no less than four of them taking prizes for their high breeding. The first prize was won by the dog owned by Dr. J. C. Higgins, of San Francisco; sire, Buller; dam, Minerva; valued at \$1,000. The dog is a black and white, big chest, powerful limbs and perfect limbs, and in condition would weigh about 64 pounds. His get have gained a splendid reputation in the coursing field here, no less than four of them taking prizes for their high breeding. The first prize was won by the dog owned by Dr. J. C. Higgins, of San Francisco; sire, Buller; dam, Minerva; valued at \$1,000. The dog is a black and white, big chest, powerful limbs and perfect limbs, and in condition would weigh about 64 pounds. His get have gained a splendid reputation in the coursing field here, no less than four of them taking prizes for their high breeding. The first prize was won by the dog owned by Dr. J. C. Higgins, of San Francisco; sire, Buller; dam, Minerva; valued at \$1,000. The dog is a black and white, big chest, powerful limbs and perfect limbs, and in condition would weigh about 64 pounds. Higgins, of San Francisco; sire, Buller; dam, Minerva; valued at \$1,000. The dog is a black and white, big chest, powerful limbs and perfect limbs, and in condition would weigh about 64 pounds. His get have gained a splendid reputation in the coursing field here, no less than four of them taking prizes for their high breeding. The first prize was won by the dog owned by Dr. J. C. Higgins, of San Francisco; sire, Buller; dam, Minerva; valued at \$1,000. The dog is a black and white, big chest, powerful limbs and perfect limbs, and in condition would weigh about 64 pounds. His get have gained a splendid reputation in the coursing field here, no less than four of them taking prizes for their high breeding. The first prize was won by the dog owned by Dr. J. C. Higgins, of San Francisco; sire, Buller; dam, Minerva; valued at \$1,000. The dog is a black and white, big chest, powerful limbs and perfect limbs, and in

could stand like a bloodhound. Lion, the second prize taker, weighed 155 pounds, was dark gray, black white, and stock hind-quarters. J. F. Carroll took a first with Spray, a fine-looking imported Scotch deerhound. The shepherd dogs and collies were a poor, half-bred, undersized class.

One of the finest classes in the show in point of quality were the great Danes, among which J. P. Ames' blind and Maltese dog Noto took first prize. Colonel Stewart M. Taylor's Bruce came second, owing to a slight defect in coat and legs. Bruce also took a special prize for the Magnet in the show. He stands thirteen-two and a half inches at the shoulder and weighs twenty-four inches from tip to tip. W. Theobald's Gelert took first from the Landseer Newfoundland. He is a splendid specimen in every respect excepting that his ears are a little too small. There were ten St. Bernards in the show, and the best was a rough-haired one, too. J. W. Schaffer's Major, the winner, was a large black and tan dog thirty inches high, seventy-two inches from tip to tip and weighing in condition 185 pounds. His head, coat and limbs showed the perfection of the breed, though his black coat was thought by some to indicate a Newfoundland cross, and a few on this side of the big river would like some English expert like the Rev. Macedon to say through the columns of the FOREST AND STREAM if it is possible for a purely bred St. Bernard to be nearly all black to a certain extent. A rather small specimen, however, received favorable mention and had the most perfect head markings that any San Francisco experts had ever seen. He was tanney and white with a perfect white line up the pole, but his head was too light and there was a little of his dog, and he was not worth the advantages of coat and color he failed to secure a prize. Upward of \$6,000 was taken in at the gate during the exhibition, but that only just paid for the prizes given and other necessary expenses. Another show will be given by the club next year.

STOLEN DOGS.

NEVER before was there raging such an epidemic for stealing dogs as there is at present, in both town and country, and it is full time that there should be a law to protect the owners. The words of caution seems to be simply useless, for our exchange from all parts of the country continue to cite cases of the disappearance of the canines, which, as far as we know, are seldom recovered. Their owners, however, are not without means to produce the desired results, for, in many instances, we have seen more than twice the value of the lost animal offered by a fond master or mistress, and yet no prodigal returned. Although a great number of those dogs are lost, yet a far greater number are recovered, and there are many who have to be content with hearing the name of the owner and his address, and in our cities a dog worth keeping has always a collar about his neck. The stealing of dogs is a business just as distinct from the other branches of the trade as the stealing of a horse or a cow. There are a dozen expert judges of dogs in our metropolis who profit about with no other object in view than to steal the best looking subjects they can find. These professionals at once "spot" a dog of quality, follow the animal to his owner's residence and, by waiting their chance and by frequently using a bitch in season, the dog is spirited away, and after being cooped up for a while his hair is clipped, his color changed by artificial means and the dog shipped to some confederate in a far-off city, where the dog is placed on the market, with a considerable amount of safety and for a fair amount of profit. The sporting dogs, of course, the most difficult to handle, as almost every setter and pointer has some recognizable marking; but in the non-sporting classes, where so many animals are of the same color, and where the dog is small and their size enables the thief to secret the victim in his pocket, it is no very difficult task to understand why so many fashionable dogs, such as pug, Skye, etc., are constantly disappearing. It was only a few months since a dog of this class was pointed out to us, and we entered into an arrangement with him to purchase three Yorkshire terriers, a *la Merman*, from an inside skirt pocket, where he confessed in a very unpretentious manner to have previously secreted them, thus differing somewhat from a lightning-colored dog, the dog of this class was discovered in a chicken house, which history tells of as follows: "After being searched and not even a nest-egg being found on the premises, a young stage was distinctly heard to caw in the neighborhood of the gentleman in question, and he at once proceeded to search under the derby's pericarpium, a fine rooster dressed out much to the apparent astonishment of the owner. 'Blessed be Lord,' said the darkey, 'how did he get that? Why, he snufft *aw* down up my trousers leg.'

Two years ago, a picture of the dog-stealing art in a rather striking way. In was in the time of the Crimea War. A dog-fancier refuses to sell to an officer going abroad a Irish-looking Skye, because the dog is worth two pun a week to the hawker if sold only in London. This trade is now being carried on this side of the water.

It is much easier to find a complaint than it is to find a remedy; but as long as rewards are offered by those who can afford to pay them, and bells are rung to come to the aid of the poor, and notices are posted, and the owners know that their dogs have been stolen, to the end of the chapter. At all times, however, our friends would do well to promptly notify us of their losses and we will send them as fast as publishing a description of the dog and the circumstances of the case, and we will do our best to recover them.

Before us is a letter from a correspondent in Hartford, Conn., who recently lost a native-bred setter dog with black head and ears, white star on forehead, one large black patch on right side, back of forehead, and one on the side of the head, and white. He writes from his home on February 19, carried to this city on the fast express, N. Y. N. H. and H. R. B. The dog was taken to Trenton, N. J., and there offered for sale, but not purchased, and here the clue ends. The dog is usually his best day and was cared for more for what he had done than for what was expected of him in the future. A liberal reward was offered, but as yet no sign has been made. We purposely avoid giving the names of dogs in these cases, and would advise our friends to omit publishing them in our notices. We sincerely trust that we shall be able to detect a miscreant in the act of stealing his dog and that he will make an example of him in such a way as will have a demoralizing effect on all creatures of his kind.

FAST AND SLOW DOGS—A PORTABLE KINNEL.

I THINK your idea of presenting a cup for field trial competition among dogs handled by their owners is an excellent one, and also that the dog who is the best in the world is the one who is the best thing but a very small percentage of the good field dogs are ever represented at the trials, and it is an undoubted fact that many men owning first-class dogs are deterred from entering them, because they are either unwell, or unwilling to place their dogs in the hands of professional handlers for the purpose of running. We do not care to handle them themselves against men who make it their business, as they would be heavily handicapped by want of knowledge of just such "tricks of the trade" as were developed by the professional handlers.

Besides, who would care to do their shooting or break their dogs after the manner of the ordinary "devil take the hindmost" style of field trials. Speed and style are no doubt desirable qualities in a dog; but dogs, just strike you in that cultivating those very qualities to the pitch of the present required—or at least prevailing—field trial standard, another and very important factor—namely nose, has been sacrificed. As almost every one can testify who has shot over setters or pointers or other and more reliable dogs are generally those fellows who strike into an easy, swinging, all-day hand-gallop; just fast enough to be checked at the first whiff of scent, without humming head over heels into the middle of the bay. They are the dogs who have bagged most game over in a day, with the fewest mistakes and the most pleasure; for they are

always cautious, rarely pass a bird, and consequently are less speedy than the more showy pointers. As a general rule, the dog who is not advocating the ear-of-e of the pointer, than which nothing is more abominable. But with all those good qualities which go toward making up a first-class sportsman's dog, what chance, I ask you, would such a dog have when running in an animal race? The present racing type of character—broken, probably, with an eye expressly to field trial form, as we have had it. So, therefore, by all means let the experience of owners running and handling their own dogs in something like the sportsmanlike manner one would like to see him put in an actual day's sport, and free from the hippodrome which has heretofore too frequently characterized field trial exhibitions. It will be refreshing.

And now let me give you a kennel note or two, to speak in an ethical liberal sense. There are no doubt many of you readers, who like myself, keep but one dog. At first sight it does not seem as if the kenneling of a single dog should be worth mentioning, and I suppose it isn't to those worthies who stalin their dogs with their horses, or cram them in an iron doghouse, but if we can provide a kennel which combines cleanliness, comfort and easy locomotive qualities at the same time and with little expense, why not adopt it? My excuse for giving you the benefit of my experience is that I have never been anything of the kind but my own, which says one with the "laste taste" of the carpenter in his anatomy can make for himself. Mine is an ordinary single kennel 48 inches by 33 inches, with an A roof, but—and here the patent comes in—with a detached bottom of the same size as the outside ground measurement of the kennel. This bottom is hinged by two stout strap hinges to the side of the kennel, and is provided with two wooden axles, to which are fitted four wooden wheels, say four inches in diameter. When closed it looks like any other animal on wheels. It can be raised or lowered by a rope from a dump spring, etc., and is turned the kennel back upon its hinges the bedding can be daily turned and aired and the kennel washed and purified without trouble. The wheels also serve to keep the bottom clear of the ground, and allow of a free circulation of air, and the kennel can be raised or lowered by means of a kennel on wheels, yet made as above, its landness is indubitable. W. B. W.

DICK, THE BLIND CUR DOG.

I F I may speak from my own experience in partridge-shooting in the woods of Maine, I do not think I have a more devoted and preferred to the common cur over and above all others. I have owned and shot over pointers, setters and cockers; and while I would not undervalue these beautiful and high-bred dogs, I do not think them a match in the woods to the small, yellow, curly-haired cur dog. I must be understood as claiming this superiority for every cur; on the contrary, he must be to the "minor" and have a natural taste for the business. The nearer a cur dog resembles a fox in size and color the more useful he is to the hunter, and the more he is liked by the sportsman. In our words, that when they are put up by a large-sized dog or any dog that has not a fox appearance, they are apt to fly to a great distance into some high tree, where they will sit close to the trunk, or they will alight on the ground, and show and hide. I have seen many of these cur dogs, and they are put up by a small yellow cur, for, taking him to be a fox, which they may have often seen, they fly to the nearest bush or tree, just high enough to get out of his reach.

In this connection I will mention an instance of intelligence and acute sense in a cur which was actually blind. I did not own him, but borrowed him from a man who said he was "sood for partridges." His owner did not tell me that the dog was fourteen years old, but I must be understood as claiming this superiority for partridges on the Fish River road, in the woods of Northern Maine, when, leading the dog with a string, I saw in the road a small covey of partridges which were in plain sight of the dog and within shooting distance. I instantly desisted and waited for his dog, but to my surprise he refused to set. I thought him stupid, and suspected his owner of playing a trick on me, but I soon found my mistake. The partridge had crossed the road and entered the bushes out of sight; but when the dog came to the bushes he sniffed the air, and rushed forward into the bushes, and in less time than I can tell it had fully buried in a tree. I did not at this time suspect his blindness, but as he continued to act ever after in the same manner, I was at last convinced of his strange condition, and that he had a film over each eye. I do not think he made a single mistake or failed to put up a bird where the track was in any fair degree fresh. With this dog I shot one hundred and one partridges in less than a day, not losing one through any blunder or mistake on my part. He was blind, but he was a dog that was blind. He said, "Yes, but it made no difference, he was sure pop every time," and so I had found him. I engaged him for the next fall shooting, but when the time came poor Dick was dead. J. C. Dwyer, 1881.

"WHEN THE SPRING TIME COMES."

Editor Forest and Stream: CLINTON, CONN., April 20, 1881.

Dogs are so numerous, and whether we like them or not, we meet them so frequently that their habits must be of interest to all. Dog-fanciers and those who like to have a "blooded" dog about them, are often distressed, and I may say, mortified, in the spring months, by the fact that their dogs are often very dirty. The very bad taste of eating carrion, and often rolling in it and thereby making themselves extremely offensive. The true reason why dogs show this disposition may not be generally known, and I write this to inform your readers why dogs act in this way, and how they may be prevented from doing it.

In the spring they, like all other animals, feel the need of a purgative. Decomposing animal matter serves as a cathartic. It is very easily digested, and carnivorous animals in their wild state often burrow portions of it into the ground, and it is decomposed, because the process of decomposition is really a cooking process, and cooking food, as a rule, makes it tender, as every one knows. Again, in the process of decomposition of animal matter, sulphur is largely given off. The sulphur in this attenuated form is the active principle that makes decaying meat so powerfully cathartic. This is to a great extent what the dogs are burrowing after.

Now for the remedy. Give dogs meat that has been cooked, and also give them some sulphur on it. The sulphur can be put in the meat so that they will not hesitate to eat it. C. W. R.

CHARLES KINGSLEY'S DOGS.—The following pleasant chat about Kingsley and his animal friends is from an English exchange: The party who devoted him to the care of his dog, says that if his dogs were not in the foreground, his love for the better for animals generally, was strengthened, it appears, by his belief in their future state—a belief he shared with John Wesley and other historical names. Kingsley was a wonderful power of attracting the attention of his admirers, and likewise of quelling their fury. He was known to have more than once driven large savage dogs, quite strange to him, back into their kennel by nothing but a word, a look, or a gesture, cowering them still with his look as they growl and snarl at him. On one occasion he was on a high occasion, after having thus forced an infuriated brute to retreat into his lair, he once pulled him out again by his chain. Muzzie was his dog at Mezzden, a clever, svelte-looking gray Scotch terrier. Kingsley was devoted to him. On the day he was shot, the proprietor at the Eversley Rectory, Mr. John Marlborough, who spent eighteen months at Eversley as Kingsley's pupil, thus concludes his description of the study: "On the mat, perhaps, with brown eyes and the yellow hair, with a gently agitated tail, asking indulgence for the intrusion, long-bodied, short-legged Dandie

Dimton, wisest, handsomest, most faithful, most memorable of his race." How well established was the position of Dandie in the Kingsley household may be gathered from the reminiscence of an American visitor: "Still I see Dandie lying lazily, stalling and winking in the sun." He was Kingsley's companion in his parish walks, attended all the cottage lectures and school lessons, and was the children's friend for thirteen years. Victor, a favorite terrier, given him by the Queen, had Kingsley for an un-sleeping nurse during the last two suffering nights of the little creature's existence. Sweep, a magnificent black retriever, finds a niche in the annals of the household, and the reminiscence recalls after his father's death: "I can see him now on one of those many summer evenings, as he strode out of the back garden-gate with a sorrowful 'No, go home, Sweep,' to the retriever that had followed me stealthily down the garden walls, and who now stood with an ear cocked and one paw up, hoping against hope that he might be allowed to come on." And there the dogs, buried side by side under the greatest fit trees on the rectory lawn—Dandie, Sweep and Victor—with the brief but telling inscription on the head-stone, *Fideli Fideles*.

N. A. K. OUD DERBY.—*Columbian, Tenn., April 19, 1881.*—The following are additional entries by the St. Louis Kennel Club to the second annual Derby. The exact date of Mitr's birth will be furnished as soon as received from England:

St. Louis Kennel Club enters Maxim, liver and white pointer dog, born July 29, 1880.
St. Louis Kennel Club enters Meteor, liver and white pointer dog, whelped April 26, 1880, out of Jill by Garret.
St. Louis Kennel Club enters Mitr, pointer bitch, whelped June 1, 1880, out of Dot by Garret. Jos. H. Dwyer, Secy.

[The above list was received too late for publication in our issue of April 21: it is in addition to the list of forty-eight entries which appeared in the FOREST AND STREAM April 14, and increases the number of entries to fifty-one in all as against one hundred and fourteen last year.]

BOIY O'MORE.—We learn from Mr. W. N. Callender, of Albany, N. Y., that his champion Rory O'More winner of first prize at the New York show in 1877, of the championship at the New York show in 1879, and of the gold necklace at the New York show in 1880, will re-appear in the city again at the coming show.

A FORTUNATE CURE.—The celebrated Laverack setter dog Doo Juna, owned by Mr. James H. Goodsell, of Orange, N. J., which was taken seriously ill some few weeks ago has, as has been seen at the show, completely recovered under the skillful treatment of Dr. J. H. Dancer, of East Orange, N. J. Mr. Goodsell in writing about the case, in which we were much interested, says: "Dr. Dancer really deserves great credit. He was very attentive, and when he took hold of the case, late at night, the dog was almost in a dying condition, so that I can truthfully say that Dr. Dancer's treatment was very successful."

LAYBACKS IN AMERICA.—We should state that the list of pure Laveracks in America, published in our issue of April 21, was printed without the supervision of our kennel editor, and his absence several errors crept into the article which will be corrected. Mr. Llewellyn's initials are R. L. P.; C. P. Parker should be J. E. Parker. Other important errors are so obvious as to need no special mention.

The dog Ranger w. and liv. by Pride of the Border out of Fairy, born in 1875, is now owned by Mr. Frederick Austin, of Ottawa, Canada.

DEAF AND DUMB.—The Sacramento *Bea* describes a deaf and dumb dog, unable to bark or hear. He has a head like a coyote, and white in color, making it look like a dog from the other canines. Where he came from or who he belongs to nobody knows, though he looks like an Indian dog. He seems to be a much fiend and lives upon what he can beg or steal. Owing to deafness he has narrowly escaped being run over on different occasions.

THE COCKER CLUBS.—Philadelphia, April 22.—Please publish that the following have resigned from membership of the Cocker Club:—A. H. Moore.

COCKER CLUB.—The Westchester Kennel Club has kindly offered the use of a room at the Bilk for the use of the Cocker Club Committee and Cocker Club on this Thursday afternoon and evening.

KENNEL NOTES.

* * * Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelped, sales, etc., for insertion in this column. We make no charge for the publication of such notices, but request in each case the writer to make up a record of his own name, and that the name of both owner and dog be written legibly, or printed, and that the strain of which the animal belongs be distinctly stated.

NAMES CLAIMED.

Prince Rake—Mr. D. C. Berglund, Indianapolis, Ind., claims the name of Prince Rake, white dog, puppy, black and tan, by Rake out of Phyllis, whelped Feb. 7, 1881.
Patsy—J. M. R. P. Poughkeepsie, N. Y., claims the name of Patsy, black setter bitch, whelped Oct. 1, 1880, out of (Cussie by Chief, purchased of Mr. W. H. Pierce, Peekskill, N. Y.)
Cotton—Mr. Wm. Short, New Albany, Ind., claims the name of Cotton, black setter bitch, whelped Oct. 1, 1880, by Miss by champion Faust, purchased of Mr. A. J. Kelly, New Albany, Ind.
Royal—Mr. B. F. Jennings, Springfield, Mo., claims the name of Royal, black setter bitch, whelped Oct. 1, 1880, by Miss by champion Faust, purchased of Mr. A. J. Kelly, New Albany, Ind.
Fanny—Mr. George T. Wells, Boston, Mass., claims the name of Fanny, for Irish setter bitch out of Bridget Louisa (Plunkett) and Duke's National, whelped Oct. 1, 1880.
Dodd—Mr. Abner Fuller, Jr., Pine Bush, Orange Co., N. Y., claims the name of Dodd for his liver and white ticked English setter puppy whelped July 18, 1880, out of Lady by Oakley's Frank.
Venture—Mr. James Page Stinson, Leavenworth, Kansas, claims the name of Venture for fox terrier bitch whelped August 19, 1880, by Lady by Oakley's Frank.
Phyllis—Mr. James Page Stinson, Leavenworth, Kansas, claims the name of Phyllis for fox terrier bitch whelped Sept. 17, 1880, by Buff II. out of Lady.

NAMES CHANGED.

Nelly to Thorndale Nellie—Mr. J. H. Winslow, Baltimore, Md., changes the name of his cocker bitch Nelly to Thorndale Nellie, and by Buff out of Ruby, champion (757) champion Rake (245).

BREDS.

Marie Moretto—Rake—Mr. J. H. Rhodes' lemon and white Laverack bitch Marie Moretto to Mr. D. C. Berglund's imported Rake.
Princess Fay—Rake—Mr. O. G. Olden's Llewellyn's setter bitch Princess Fay (Duff) to Mr. D. C. Berglund's imported Rake.

WHELPS.

Queen—Mr. F. E. Kirk's (Toronto, Ont.) black cocker spaniel bitch Queen whelped four puppies, two dogs and two bitches, by his Iron-horn, black setter bitch, whelped Oct. 1, 1880, out of (Cussie by Chief) (Maud (Finney, France) whelped eight puppies, 6 dogs and two bitches, April 2, by H. L. Covell's Jacko (Hyer's Belle-Ome, Kynd Sanchio).
Miss Phyllis—Mr. B. W. Byrnes, New York, whelped one puppy, Y., whelped on Wednesday, April 20, three dogs and three bitches, by Dr. J. W. S. Alford's puppy.
Rory—Mr. J. E. Johns (Fayetteville, Mass.) Gordon setter bitch Kirk whelped April 24, five puppies, four dogs and one bitch, by his Gordon dog Dock, all black and tan with white on breast, and going lively.

Gina—Mr. D. C. Berglund, Indianapolis, Ind., has sold to Mr. W. H. Durgill, Bangor, Me., his Llewellyn setter dog Cuy, by Gladstone out of May II.
Whelp—Mr. D. C. Berglund, Indianapolis, Ind., has sold to Mr. Wm. W. Holliday, Allegheny, Miss., a dog puppy, white, black and tan, by Rake out of Phyllis, whelped Feb. 7, 1881.
Jenny—Mr. J. H. Dancer, East Orange, N. J., whelped one puppy, Jersey, Sorrento, Pa., imported fox terrier liver (Fogger-Magle).
Luce Schooner—Mr. J. H. Winslow, Baltimore, Md., has sold to Mr. E. E. Mott, Mott, Ill., the bull-terrier Luce Schooner's (all Sky-Grippe).
Elle Rake—Mr. J. H. Winslow, Baltimore, Md., has sold to Mr. E. E. Mott, Mott, Ill., the cocker bitch Elle Rake (Don-43) puppy.

Answers to Correspondents.

No Notice taken of Anonymous Communications.

H. T. H., Preepot, Ill.—See game columns.
W. C. B.—Amount of drag for ten-tonner about 2 ft.
J. L. C.—Write for circulars to the postmaster at Rugby, Tenn.
R.—The American holly (Ilex opaca) is found as far North as Maine.
S. R. Hooley, Philadelphia, N. J.—wants a pair of quail to breed from.
J. H. J., Bethlehem, Pa.—No more quail can be procured this season for restocking.
J. H. D., Lowell, Mass.—Write to P. T. Barnum. We do not keep a record of circus fests.
A. W. M., Farmington, Me.—We believe the practice to be as injurious as it is inhuman.
W. A. J., Philadelphia.—No, but later on some of the dogs will be represented in our paper.
G. A. J.—Possibly an advertisement in this paper may secure you the kind of yacht you want.
C. S., Bradford, Pa.—You can secure the hammock through any of the New York dealers in sportsmen's goods.
J. R., Boston.—For list of secretaries of Cricket clubs apply to Mr. O. A. Knipe, editor American Cricketer, Philadelphia.
I. F. S. K., Port Robinson, Ontario.—You can perhaps obtain the birds you want from Chas. Reiche & Brother, Chatham st., New York City.
C. A.—You will not find so small a cabin yacht to suit you here, better try Boston. We have heard of several smart ones 20 ft. water line for sale here recently.
B. A.—Suits and small boats in issues of Sept. 29, Aug. 9, Sept. 20, 27, Nov. 1 and 8, 1891. Built with a flat bottom. Easier and serves your purpose; also safer boat.
J. M. B., Boston.—At Prince Edward's island you will find curlew, plover, black ducks, wood ducks, trout fishing. A Chesapeake bay dog would answer your purpose best.
J. G. M.—Secretary National Yachting Association is John Erick, 21 Maiden Lane, N. Y. The association has fallen through from want of leaders and premature action.
W. H., Red Bank, N. J.—Address Mr. A. J. Kelly, Anderson P. O. Howard co. will give you the information you want. Mr. Kelly has charge of the Baltimore Kennel Club dogs.
E. B. T.—To color the canvas of your canoe a muddy green boll can-

Yas in both of 3 lbs. ferrous sulfate of copper, wring out half dry and then boil in solution 1/2 lb. sulphate of potash in 10 gallons of water.
G. C. W.—We can send you covers for lining Forest and Stream. Price \$1.00 will hold twenty-six numbers. We cannot supply complete sets of back volumes. H. G. Kirk, No. 55 Swan st., Albany, N. Y., has a set for sale.
A. B., South Boston, Va.—Apply to your Fish Commissioner, Col. M. McDonald, Lexington, for black bass fry for stocking a stream; or, as they are plenty in the James and Potomac rivers you can get them from fishermen there.
A. M. D., New Haven, Conn.—The Forest and Stream discontinued its cricket column last November. We return subscription and advise you to transfer it to the American Cricketer, published in Philadelphia, P. O. Box 1350.
F. L., Cincinnati.—We advise every one to see the dog they are buying before they pay for it. It is not so much a question of the honesty of the breeder as it is of the buyer's own personal estimate of the merits of his purchase.
Crassay, Montreal.—Limit of range of the Winchester's model of 1868 is 300 yards. The choice between octagon and round barrels is not one of superiority, but simply of taste. The model of 1875, 45-60, or 45-75 would probably suit you the best.
LIVE QUAIL.—Several inquirers are informed that the demand for live quail has far exceeded the supply and we are unable to refer them to parties now having birds for sale. Those who advertised birds in this paper could not meet all the orders which poured in upon them.
J. Zickler.—You neglect to give your post office and so we cannot say where you will find good fishing within fifty miles of the city, nor knowing what city you live in. Post offices are not to be trusted. They are not only illegible, but are never sent to the Editorial rooms. Please write again.
L. W. P., Middletown, Conn.—Will you please inform me if there is any good trout fishing in the southern portion of Chester county, New Hampshire and if so what part and the name of the parties who could post us in regard to streams? Ans. Write to Mr. Samuel Webster, Commissioner of Fisheries, Manchester, N. H.
J. M., Poughkeepsie.—Your letter is not clear, but we presume you wish to enter our dog in volume II. of the N. A. C. Club Stud Book; this you can do by addressing the secretary of the organization, Mr. Joe. H. Dew, Columbia, Tenn., who will furnish you with entry blank. Cost for single dog entry twenty-five cents.
S. S., New York.—Do snipe (English) fly only on moonlight nights, or, in other words, would the flight continue (the weather being favorable) without a moon? Ans. The birds are believed to fly best

on moonlight nights, but they would no doubt continue to move even if there were no moon.
SINGLE HANT.—It is not the vertical distance of centre of gravity relative to centre of buoyancy, but to meta centre which gives an estimate of stability. Boats with a c. g. above c. b. are often stiffer than those with very low c. g., owing to their c. b. shifting out to leeward faster and giving higher meta centre. Our design was very stiff without being hard and uneasy in rough water.
F. W. Jr., Shiloh, Mo.—If luckless hand, one wing and legs of a bird which I shot this morning. Can you tell me in your next issue what bird it is, as I have never seen one unless it is a pig on, but its flight and run was more like a quail, although I never saw one like this. Ans. The bird is a turtle dove, Zenaidura macroura.
CARPENTER.—The law compelling the display of licenses applies to all boats, rafts, canoes or any thing else. It is both impractical and ridiculous, so long as it is a law you should comply with as well as possible. It was sprung upon a Congressional committee by steamboat lobbyists several years ago, but has hitherto been a dead letter and is likely to remain so.
C. H., New York.—How early in the spring are striped bass taken at the Falls of the Potomac, and what kind of bait and tackle is used? Ans. Usually in April onward. Probably later this year than usual on account of the spring being so backward. A stiff twelve-foot rod with multiplying reel, with a hundred yards of good foot line. Different baits, as live minnow, pearl minnow, chub, etc. are used.
P. C., Lynn, Mass.—Please give me the address of some person from whom I can obtain a few pure bred black ducks (Anas obscura), and what you would like to see, etc. Can be secured here in New York for them. How much would it cost to send a couple of pairs from New York to Lynn? Ans. We are not able to hear of any one now who has what you want. Possibly some of our correspondents may be able to furnish them.
W. H. J., Philadelphia.—Will you be kind enough to say what sort of rod is considered best for bait fishing for black bass? What line and what reel? Can you put me on the track of a first-class reel maker, either in Philadelphia or New York? Ans. A ten to twelve-foot rod moderately stiff, a stout trout reel will often do. Use multiplying reel with 100 feet of line line, if you use ball or fly and 80 yards if you tell will spoon or minnow. Yes, we put you on the track of a first-class rod. Write to each one of our advertisers and choose what pleases you best.
Any subscriber or reader of Forest and Stream in want of any kind of carpenter, joiner, cabinet maker, etc. can be secured far and near at the hands of John H. Pray, Sons & Co., Bo. Con. Call or correspond with them, and get their prices before buying. It will pay you to try them.—Ed.

A nickel plated sample sent on receipt of fifty cents; P. O. stamps taken in payment. Send for circulars to DUDLEY & CO., Poughkeepsie, N. Y.

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE BEST OF HEALTH AND GAME RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained in their waters. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in the trout waters of this territory. THE TROUT season begins May 1 and ends Sept 1. THE GRAYLING season opens June 1 and ends Nov 1. BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and streams of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, and the climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the season of 1891 by new buildings and additions. During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen. Jiggs, Guns and Fishing Tackle Carried Free at Home.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated booklet, 60 pages, free. Time Cards, Folders and further information, address A. B. LEEB, Gen'l Pass. Agent, Grand Rapids, Mich.

Upper Chateaugay Lake, N. Y.

This property (formerly the Adirondack House) has been purchased by A. B. LEEB, of Newburgh, N. Y., and has this season been enlarged and remodelled, broad piazzas built nearly surrounding the house, and connected to several rooms, and the whole newly furnished. The location is delightful. It commands a view of the entire lake, with a view of the mountains, unscathed by fire and unbroken by the axe. The view can be seen from the porch. Conceding this place says, under date of March 17, 1881: "Chateaugay Lake is one of the pleasantest resorts in the entire North Woods, and notwithstanding the encroachments of civilization all about, it still retains its primitive grandeur and simplicity. Good hunting abounds in its vicinity, and its deer and antlers are still alive with trout, and men who have whipped its waters with rod and reel for a generation aver that their success and that of others last season was most satisfactory."

SALMON FISHING IS SURPRISINGLY GOOD, AND BEGINS USUALLY BY MAY 1.

One of the best features of the location is its ease of access. Parties can leave New York at 4 p. m., breakfast at Plattsburgh, and three hours later, by rail, to Lyon Mount, be at "Ralph's," as the resort is hereafter to be known. Dr. J. M. Smith, of Malone, having leased it for a term of years. The terminus of the Plattsburgh and Danmore Railroad is but three and a half miles from the hotel; mails regularly received and telegraph office in the house. The altitude, dry soil and surrounding mountainous country render this locality peculiarly adapted to those suffering from pulmonary troubles, or any one in need of the bracing effects of nature to follow even a brief sojourn in the Adirondack country. Already this season several of the

FIRST PHYSICIANS OF NEW YORK

have advised their patients to seek the benefits to be derived from a sojourn in this resort. See article in May number of "Harpers Magazine," entitled "Camp Lyon," by one who has tried the physicians' orders, and who has been induced on application, Ralph's is but twenty-eight miles from Paul Smith's. It also contains Indian Point, a delightful canoeing place, where those who prefer to camp can have comfortable cottages, with beds, cooking utensils, etc., and be within 50 rods of one of the best fishing and hunting points on the lake. The summit of Lyon Mountain (5,209 feet high) is reached from this hotel. The view from there is one of the best views in the Adirondacks, and is unobscured by that from any other peak in the range. Good boats (rust-proof), guides and all camp supplies on application. Excellent accommodations for horses and carriages. In fact it has been our aim to do nothing that will add to the comforts and pleasure of our guests. Cards, with distances to points of interest and all desired information furnished on application.

M. D. RALPH, Proprietor, P. O. address, Lyon Mountain, Clinton Co., N. Y.

Virginia Midland R. R.

The Safest, the Shortest, the Best Route to Florida and South. Pullman Palace cars direct without change. Guns and dogs carried free. Leave New York at 10 p. m. and 8:40 p. m.; Washington, 7:10 a. m. and 10 p. m. MESSEUR SLAUGHTER, General Ticket Agent, Alexandria, Va.

Hotels and Routes for Sportsmen.

Fred. Sauter, NATURALIST

TAXIDERMIST

199 WILLIAM ST. Near FRANKFORD, N. Y.

Particular Prices taken in mounting pet birds and animals. LARON STOCK or GROUPS, BIRDS, DEERHEADS AND GLASS CASES.

The Hazard Powder Co., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 8 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting." Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to hot gun.

Hazard's "Duck Shooting." Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 5 lb. kegs. Burns slowly and very clean, shooting remarkably close and with good penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFG FFG, and "Sea Shooting" Fg in kegs of 1, 2, and 5 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands of ordinary sporting, and the "Sea Shooting" Fg is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER; also SPECIAL GRADES FOR EXPORT, 97 ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company, at very prominent city or wholesale office.

88 WALL STREET, NEW YORK.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.
Thursday, May 5.

THE BENCH SHOW.

THE show held last week was certainly, from the point of view of an outsider, a decided success. As to how previously held in New York has the quality of the animals exhibited been so good, and never has there been so little trash exhibited as this year. The English setters, the pointers, both large and small, the collies and the fox terriers were exceptionally good. Among the black and tan setters and the red setters there were some poor specimens that should not have been sent to the show, but on the whole the classes were very large throughout.

The good number of entries in the beagle class show, perhaps, better than anything else could, the rapid strides which this merry little hound is making in public favor, and we have no doubt that before very long hare-hunting with beagles will in many localities take the place of bird-shooting. It is a noteworthy fact in this connection that the entries for the special prizes for the best beagles, straight and bench-legged, in the show were more in number than those for any other special prize offered.

It is not often the case that an exhibition of this kind passes off without some protests on the part of exhibitors who, while fully alive to the excellence of their own animals, are somewhat blind to that of the competing dogs. Such protests are always annoying and almost invariably useless, for the importance of supporting the decision of the judges is appreciated by the managers of all shows. The present year has been unusually free from such evidences of dissatisfaction, and we have scarcely heard of a serious complaint in relation to judging. The advantages of the single-banded system were clearly shown, and we presume that in future the Westminster Kennel Club will always adopt this method. It is said that the exhibition was peculiarly successful, and if this be the case there is no cause for anything but congratulation in regard to the show.

ENGLISH ZOOLOGICAL NOMENCLATURE.

THE lamentable confusion which exists in different parts of the country in regard to the common names employed to designate our various wild animals is extremely perplexing to every one who is not to some extent familiar with the local names employed in different sections. The same bird, mammal or reptile, as the case may be, has a name for each section of the country where it is found. The most familiar example of this confusion is of course found in the two birds, *Bonasa umbellus* and *Ortyx virginianus*, which occur almost everywhere through the Eastern and Middle United States, and are variously called ruffed or ruffled grouse, partridge or pheasant for the first, and quail, partridge, Virginia partridge and colin for the second. Among mammals we have the two deer, *Cervicus macrotis* and *C. Columbianus*, each of which is called in its own range "black tail," though the name belongs properly to the latter alone. Similarly there are two distinct species of hares, *Lepus callosus* and *L. campestris*, which are called indiscriminately jackass, or Jack, rabbits.

The utter and hopeless absurdity of some of the names that are applied to certain of our animals need not be dwelt on at any length. What can be more improper and out of place than to call a grouse a pheasant? One would say that in this case the extreme had been reached, and yet at some points along the Atlantic coast the pintail duck, *Drifla acuta*, is called pheasant.

It is true that in applying these local names those who acted as sponsors at the christening have in many cases seized upon the salient characteristic of the animal to be named, and that in many cases the appellation is an extremely fitting one; but this does not help us at all in attempting to straighten out the tangle which now exists in this matter. If any one, who had never before heard of the name, were asked what a "nigger goose" is, we think that he would guess a long time before hitting on the correct answer to the conundrum. Yet we have seen old sportsmen who have shot hundreds of geese, but had never seen a corncrant, take a flock of the latter for Canada geese, judging by their mode of flight, and express profound astonishment at the fact that "those geese were all black."

This confusion of names has been brought to our mind again by a series of questions addressed us by an esteemed Canadian correspondent, who says: "Is it correct to call *Tetrao umbellus*, ruffed grouse, and *Cervus virginianus*, Virginia deer?"

"Is elk the correct name for what is known in this Province as moose?"

"Is the hare which is common in this and other parts of the Province of Quebec the 'Arc le' hare?"

"The above names are applied to the birds and animals mentioned by our local authority on natural history matters, *The Canadian Sportsman and Naturalist*."

It is almost impossible to give a categorical reply to questions like these. In such matters it is usage that governs, and what is custom in one part of the country is, or may be, not at all customary in another. The nomenclature of science is regulated by certain fixed rules which every one must comply who wishes to have the name which he has applied to any animal adopted by naturalists. This of course is not, nor can it ever be, the case with popular names, for the masses will continue to employ those errors which they have been educated to make use of. It is, however, very important that we should all endeavor to impress upon those with whom we shoot and fish the desirability of calling things by their proper names, for it seems a pity that the sportsmen of different States should have to speak different languages. Surely there ought to be a common tongue for the craft.

The importance of the subject would certainly warrant us in preaching a very pretty little sermon on it were the space at our command. As it is, however, we must turn to our correspondent's questions and reply to them. A reference to "Webster's Dictionary" shows that ruffed grouse is the proper English name of *Bonasa umbellus*, but under the head "grouse" we see enumerated several European species, and also the ruffed grouse, *B. umbellus*. Still, ruffed grouse is no doubt the best as it is the shortest term to employ in designating this species. The common red deer of the East is spoken of by some older authors as the Virginia deer, but we

do not remember to have seen the adjective Virginia applied to it.

What we call Moose is the elk of Europe, the latter being a word of Anglo-Saxon derivation, while moose is a corruption of an Indian name. In this country, however, *Alce americana* is universally known as moose, while the name elk is always applied to *Cervus canadensis*. What is an elk in Europe, therefore, is an entirely different animal from the Elk of America—just as the partridge of New England is different from the partridge of Virginia.

The hare common near Montreal and Quebec is not the Arctic hare, *Lepus timidus glacialis*, but the varying hare, *L. americanus*. The range of the Arctic hare does not extend much, if any, south of Labrador.

We are sorry that we cannot give more definite and precise replies to the inquiries of our correspondent, but hope that we have at least made clear some of the difficulties of the case. It is really important that there should be one settled and distinctive name for each bird and mammal of the country. But, unfortunately, each local name has a number of warm adherents who will not give it up, but would fight for it to the death. Still we are glad to see that some attention is now being given to this subject, and that some associations—notably that of Michigan—are striving to work a reform in the matter of local nomenclature. If any such reform is to be attempted it will require the influence of the best sportsmen of the land to be successfully carried out.

INSPECTION OF THE DELAWARE RIVER SHAD FISHERIES.

THE annual tour of inspection of the shad fisheries of the Delaware River, by the New Jersey Fish Commission, took place on Thursday, April 28. Mr. Hamilton Diston very kindly loaned his handsome steam yacht Mischief for the trip, and Commissioners Dr. B. P. Howell, E. J. Anderson and Theodore Morford, with about twenty guests, mostly newspaper men, started from Camden at 10 A. M. A stop at Gloucester was made, and they learned that fishing was good, that it had been backward, as upon all other Northern rivers, but that the shad were now coming in good numbers, which were increasing; that their size was good and quality as fine as ever. The river was filled with drifting gill nets, and on the return at night it was a pretty sight to see it dotted with the lanterns of the fishermen, one in the boat and another on a float at the farther end of the net. These gill nets are sunk deep, the floats being connected by lines ten to twenty feet long, experience showing that the shad swim in the channel, near the bottom. Hence it not only economizes time and labor in making the net, but is much easier to handle.

The principal places of interest were Howell's Cove, Eagle's, Thompson's, Old Man's, Finn's and Eisenborough's Points. The estimates made show that over \$100,000 are invested in the shad fisheries here on the New Jersey side alone. Thirty-five hundred men are engaged in drift-net fishing, and their nets, if placed end to end, would reach three hundred miles. The shore fisheries are controlled by eleven men, who employ from twenty-five to thirty men each, as well as numbers of horses.

As point after point was passed, Dr. Howell, whose memory runs back more than half a century, gave the history of the river and pointed out the places of interest. The Doctor says that in the olden time a ten pound shad was not a rarity, and that in his youth there was believed to have been one of sixteen pounds taken. For the ten years previous to the practice of pisciculture in the river the shad had been getting small, and the meshes of the nets had to be made smaller in order to take them. A shad of four to five pounds was a large one. This was no doubt caused by continually taking the larger fish and allowing only small ones to ascend to the breeding grounds—a course which would be apt to influence the size to a very great extent. Now, however, the eggs of fish which are destined for market are saved, and they are of course the best shad. For the past two or three years the fishermen claim that the size is increasing, and shad of six and seven pounds are often taken.

The trip was a very pleasant and instructive one, and from the conversations with the river men the guests were convinced that the Fish Commission of New Jersey have done

nch to increase the food resources of the State as well as to educate the men of the lower counties, who were so much opposed to all restricting laws, to the knowledge that the commission was working for the interest of the fishermen, as well as for the public in general. The fishermen now very generally observe the law which compels a close time from Saturday midnight to Monday morning, which is six hours longer than the Pennsylvania law, which allows fishing at midnight of Saturday.

An ichthyological student on board interested the company in the dissection of a young sturgeon. The fish was a young "sharp nose," *Alepis coryphæoides*, called "mamoose," by the fishermen who claim that they do not grow to be over a foot in length. The ichthyologist said that in later life the nose lost the extreme sharpness of youth, and that it did grow large. He also dived into the secrets of its digestion, and showed how its mouth was capable of extension and of sucking up infusorial mud; how the barbels beneath the nose felt of the bottom near the mouth which the eyes could not see on account of the nasal projection; how its stomach contained straws, grasses and minute worms and snails; and how the digestible portions were used and the great intestine, filled to repletion, carried away the refuse, and then went into the vertebral structure and showed how the back bone ran into the upper lobe of the tail like the old ganoid fellows.

And the sturgeon died.

An artist of *Frank Leslie's Illustrated Newspaper* accompanied the party and sketched points of interest for publication.

THE LAST ACT IN THE AQUARIUM.

ON the 26th of April the New York Aquarium presented a sorrowful spectacle to those who had known it in its days of grandeur. The great tanks were torn down, and piles of brick and mortar only remained to mark their location. The large slabs of l-inch-thick plate glass were removed, and stood on edge in the hall-way. The pipes, pumps and table-tanks were set apart, and an auctioneer was just knocking down the great stuffed Anaconda as we entered. Next he offered a lot of statuary of life and heroic size, including the Venus of Milo, the Dancing Pawn and the Laocoon, which were bought by Mr. George Bunnell, of museum fame. A small Octopus, which had once been in alcohol, a big pile of chairs, a stuffed Sloth and the table-tanks went to as many different bidders, the dime museums getting their share.

About one thousand square feet of plate glass one inch thick, in plates five feet high by two and one-half feet wide, were bought, after a spirited competition, by Mr. E. G. Blackford, of Fulton Market, who also bought the smaller plates, some of the table-tanks and all the wood-cuts belonging to the Aquarium, which had been used to illustrate the catalogues, etc. An acquaintance asked Mr. Blackford if he was going to build an aquarium. "No," said he, "but it is handy stuff to have in the house." The cat roamed about disconsolate. She was not sold. We would have purchased her if the crier had put her up. We have some stock in her in the shape of a valuable mocking-bird, which she ate in 1879, and would like to own her for a half minute. Half of a brick lay on the floor within convenient reach, but pussy kept in front of the glass, and thus vanished another of life's opportunities.

The giant "devil fish" goes to Europe. It is fearfully dilapidated. Two seasons on the road with a circus has demoralized it. The bumpkins believing it a fraud (which it was not) often broke the glass and cut pieces from its tentacles.

Farewell "The Great New York Aquarium." An opportunity to establish a good institution which would have paid a moderate rate upon the investment has come to grief through mismanagement. The greed of present gain permitted all kinds of shows to invade it, and the class which once supported it in good style left it. There is still a chance for a meritorious, prudently managed aquarium in New York to illustrate the wonders of the vast deep.

THE ICHTHYOPHAGOUS WILL DINE.

THE invitations are out. The monsters are being caught, and the devotees of the famous Ichthyophagous Club, of New York, are preparing to astonish their stomachs with new problems in ichthyology. The committee have letters out for untried dishes, such as "hell-benders" (called "alligators" in Western Pennsylvania), beaver tails, the protens, or lizard, of the Great Lakes, sea-robins, toad-fish, etc. We wish that our readers living where such things are plenty would communicate with us, and then send us some of these things. Soft-shelled turtles from the West would be acceptable as an unusual thing here.

The club is a social institution; and, while it enjoys itself greatly on these occasions, when wit flows at the suggestion of the strange viands, it is really a philanthropic society and has done good in teaching the people of New York to eat the d spid skate. This fish was not eaten, simply because our grandfathers did not eat it; and this is the only reason why many other things are proscribed. Skates are eaten in Europe, but tons upon tons were daily thrown away by our coast fishermen without reason, until the Ichthyophagous Club ate them, chronicled the fact that these adventur-

ous spirits not only declared that they were good, but that not a man was lost in the charge upon prejudice. Not even a pang under the waistcoat of the hungriest of the Ichthyophagi was felt after the insertion of skate beneath its ample folds. And the coroner was disappointed.

This year Mr. John H. Starin does the honors and offers his hotel and steamer to take these ichthyic crusaders to Glen Island. It is even whispered that the President and Vice-President of the United States will be present to see what virtues may be hidden under the forbidden exteriors of certain fishes now despised only because they are not handsome. New members are welcomed by the club and will be instructed how to take the wrinkles out of their stomachs by the elder brethren, without money and without price. No dues are claimed; the purchase of a ticket invests the new member with all the privileges and rights; and if he is a little weak on the question of tackling an alligator steak or the limb of a lizard made in a ragout with bat's wings, he can always order a fillet of sole or of beef, and trust to time and the example of the ease-hardened ones about him to bring his rebellious stomach to the scratch.

At the dinner of last year the man who consumed the vast quantity of razor-blades carried off the honors gastronomic. He still lives and will feel his mouth water, even in retrospect, as he reads this.

The following is the invitation:

NEW YORK, May 1, 1881.

Dear Sir—THE ICHTHYOPHAGOUS CLUB will give its Annual Dinner at Glen Island on Friday, May 27, at 6:30 p. m.

The objects of the Club are to reveal to gourmets the unsuspected excellence of many neglected varieties of fish food, and to make manifest to the people at large the still untried capacity of sea, lake and river to yield the materials of human nourishment. There will be submitted to the Club numerous kinds of fish and mollusks, specially provided for the occasion, which are not commonly eaten, in addition to some of the usual accompaniments of such a feast. The dinner, though partially experimental, will include enough familiar components to satisfy the least adventurous taste.

Tickets Five Dollars each, to be had of the Treasurer, Mr. E. G. Blackford, Fulton Market.

JOHN FOORD, President.

Eugene G. Blackford, Bernard Phillips, Fred Muller, } Committee of Arrangements.

A steamer will be provided to convey the party to the island, without charge, of which due notice of the time of sailing of which will be given.

OUR PIPES.—With the opening of the present week the contests which have been going on for four months past in two of the most prominent of the Boston galleries, for the possession of the elegant pipes offered by the FOREST AND STREAM, came to a finish. The prizes were worthy of a special effort, and so keenly have the marksmen pushed each other that one of the trophies was taken with a perfect score, while the other is but a trifle short of it. The merchandise represents the best workmanship of F. J. Kaldenberg, known throughout the country as one of the leading artificers in that material, and they are well worth the \$50 valuation placed on each of them. We are eminently satisfied with the results of the competitions, and believe that the contests have been fair and open, and that the best men have won. While gallery practice is poor-poohed in some quarters and regarded as child's play, such treatment merely displays the ignorance of the scoffer. There has been, within the past two years, a wonderful advance in the quality of our gallery arms, and many who are prevented by circumstances or who have not the inclination to visit the out-door ranges find an excellent drill in the efforts of the galleries. The eye must be as accurate and true, and the arm as steady to gain a place under cover as to win prizes over the green wall. Besides, the emulation is as keen in one place as in the other, and already the makers of the .22 calibre rifles report a larger sale to parties who find a cheap, healthful home amusement in private ranges. There need be no danger in such a sport, and a proper knowledge of firearms would be the best preventive of the many mishaps that now occur from their careless handling.

FISHING ABOUT NEW YORK.—We have made arrangements by which we hope to secure information which will be of great value and interest to our angling friends. Our plans are now so far completed that we are able to furnish the names of a number of localities within one hundred miles of New York where fair fishing can be had. This information comes from correspondents whom we believe to be reliable, though of course we do not vouch for the accuracy of all the statements made. To any one, therefore, who may desire fresh water fishing, such as trout, bass or pickerel, we shall be pleased to supply such information as we have. This will include the name of town, the kinds of fish to be had, the fare and distance from New York city, the character and price of the hotel accommodations and the distance from the station at which the fishing is to be found.

No inquiries on these points will be answered through the columns of FOREST AND STREAM, and those who desire to have their questions attended to must apply personally or accompany their written inquiries with an envelope stamped and addressed.

TROUT FISHERMEN will do well to kill all the water snakes that they may see in the streams during their fishing. These reptiles destroy great numbers of trout, and any one may, by

opening one of those killed, demonstrate that they are fond of the fish, and that at this season these form a very considerable portion of their food. Every snake killed means a number of fish saved, and hence better fishing in future.

"THE GUN AND ITS DEVELOPMENT."—Just as we go to press we are in receipt of advance sheets of this elaborate work on gunnery and shooting arms, forwarded to us from Mr. W. W. Greener, through his American agent, Mr. Henry C. Squires. A hasty inspection of the volume shows it to be a most noteworthy contribution to the literature of the subject; and at an early day we shall give an extended notice of its contents.

We NOTICE that the *New York Clipper* has changed its form and now appears as a folio paper. This is a great improvement and the editors and readers both must be gratified at the change. Our trans-Atlantic contemporary, the *Illustrated Sporting and Dramatic News*, comes to hand with a newly adopted cover, an addition which will be appreciated by all readers of that excellent publication.

DARWIN'S NEW WORK on the "Habits of Worms" is nearly ready. We anxiously await the special chapter on angle-worms, and their habit of squirming through the hole of the small boy's pocket and wriggling down inside the leg of his pants.

The Sportsman Tourist.

SOUTHERN CALIFORNIA AND ITS FIELD SPORTS.

A WILD and tumbling sea of land—a land of rolling green plains, to wering mountain peaks and tree-filled canyons—a land of hillsides blazing with all the soft colors of the rainbow on a background of soft, warm green—a land stocked with game, where one is able to travel in almost any direction with a buggy or saddle horse; where one may stroll beneath soft, clear skies over green sod and flowery hillsides, with no mud to flounder through, no briars nor saw grass, with no chilled fingers, wet feet or mosquito riddled face, and in two or three hours have all the shooting that a man should desire; where one may lie down in the cool night air with no tent but the stary blue or the glistening moonlit leaves of some royal oak—a land where the winter sun rises soft and clear—a land of bees, birds and rabbit-fed bachelors—a land where even the legend "No Shooting Here" carries no fear to the gunner's heart—a land where everything is slow, life, death, railroads, debtors and all, and the presumption is strongly in favor of the slowness of the gunpowder—a land where earth, air and sky all combine to produce a delightful indifference to the flight of time—a land where nothing is certain but death, and even that is a remote contingency—this is Southern California as it is pictured in a charming volume now before us coming from the pen of Mr. T. S. Van Dyke.*

The vast area of this great land of America is so extended, its boundaries are so wide, that one extreme is a *terra incognita* to the people of another section. We venture to say that the average American knows more about Constantinople and the Golden Horn than he does of San Diego and its fair harbor. The trans-Atlantic steamer is just now bearing company—this is Southern California to the mountain lands of the Old World; but of all those excursionists how many know that in the southwestern corner of their own country rises a mountain 14,000 feet above the surrounding plains, and affording a view from its summit of two hundred miles? We fill our libraries and museums with memorials of the extinct races of foreign lands, and even the ruins of the limits of the United States are moss-grown walls, crumbling colonnades, fretted arches, cactus-grown church tower, and time-ratn cloisters, each in their ruin eloquent of a faith and heroism of life, about which has gathered the glamour of time, and which only awaits the touch of the master-hand to develop its romance and pathos.

Mr. Van Dyke writes of an out-of-the-way corner of the United States, which by reason of the neglect of railroad projectors, is to nine-tenths of the readers of this paper practically as unknown as the plains of Thibet; and because these pages tell us a great deal about California we could hope that the hook might have a wide readership for no other purpose than to make Americans more familiar with one portion of their own land, its natural characteristics and advantages, its people and their ways, and the fascinating history of its past.

To the sportsman, however, the attractions of California as a game country are, in a general way at least, well known, and it is to a faithful description of the game birds and animals that Mr. Van Dyke's hook is chiefly devoted. "Flirtation Camp," we take it, is the title given to the book by the publishers. The reason by which we deem this name to be happily conceived is and is sufficient, perhaps, to justify this title; but, as the author explains, "it occupies far less space than in many sporting works is devoted to getting the hunters waked, dressed, fed, armed, 'ligored up' and into the field."

California is famed as a game country. A book, written by a competent hand, descriptive of its game and fish and the various methods of pursuing them has long been awaited. This book is now given us in "The Rifle, Rod and Gun in California." Its author is a practical sportsman of long and varied experience in hunting the game of different localities in America; and he is as good a master of the pen as of the rifle. Mr. Van Dyke has long been known to the readers of the FOREST AND STREAM as a man to whom they might look for plain statements of facts as determined by himself rather than by others. A careful reading of his book shows us that the characteristic adherence to the facts in the case has been the rule in his preparation of the volume. Lower California and its varied charms are here pictured in a most interesting manner; a volume prepared with the sole purpose of

* Flirtation Camp; or, Rifle, Rod and Gun in California. A Sporting Romance, by Theodore S. Van Dyke. New York: Fords, Howard & Hulbert, 1881. Price, \$1.50.

box where they have been for over ten days, receiving a great deal more attention than the balance of the family. The old cat will allow her kittens to crawl out of the nest, but she will not allow the squirrels outside at all. A good many of our citizens have visited Mr. Forster on purpose to see this, to us, new and strange family.—W. L.

A TREE CLIMBING SNARE.—Twin Lakes, Fla., April 20. I saw, while hunting, a very large, water moccasin lying on the body of a six-inch pecan tree which might have leaned a trifle from perpendicular, only a trifle, though. His head was down, and body laid straight as an arrow up the tree, which was smooth and straight. His neck (if snakes have necks) was bent to one side two or three inches back of his head, rest of body perfectly straight. Did he crawl down the tree in this position, or how did he take it? It was certainly very odd and new to me.—S.

ARRIVAL OF BIRDS AT LOCKPORT, N. Y.—Song sparrows, arrived March 7; meadow larks, 13; robins, 15; cow blackbirds, 15; bluebirds, 16; cherry birds, 22; crow blackbird, April 6; redwing blackbirds and mourning doves, 7. Snipe have not made their appearance yet.—W. P. D.

DEATH OF AN ARCTIC EXPLORER.—Lieut. Karl Weyprecht died March 29 of Anorexia, after a long illness. Forty-three. He was with Lieut. Prytz, the discoverer of Franz Josef and in the Austrian Arctic expedition in 1872-4.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—One white-lizard porcupine, *Basiliscus borsoni*; one red-shouldered buzzard, *Buteo lineatus*; one blue-winged teal, *Hydrochelidon cyanea*; two purple gallinules, one white wren, *Psaltriparus carolinensis*; two opossums, *Didelphis virginiana*; one virginia dove, *Columba virginiana*; two rabbits; two raccoons, *Procyon lotor*; one red-tailed hawk, *Buteo borealis*; one Carolina wren, *Thryothorus ludovicianus*; one sulphur-crested cockatoo, *Cacatua galerita*; one red-shouldered hawk, *Buteo lineatus*; one turkey vulture, *Cathartes aura*; one canvas-back duck, *Patula canadensis*; and one duck hawk, *Falco sparverius anatum*—were presented. One rail quack, *Himantopus mexicanus*; one blue-winged teal, *Hydrochelidon cyanea*; one dove, *Columba*; one zebra, *Bos taurus*; one Bactrian camel, *Camelus bactrianus*; and one raccoon, *Procyon lotor*—were born in the Garden.

Game Bag and Gun.

HOUNDING VS. STILL HUNTING.

WE begin the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. The particular points of the inquiry were as follows:—
1st. What is the character of the country referred to?
2d. What is the prevailing method of hunting deer?
3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
4th. Describe in like manner still hunting and its effects.
5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
6th. Would resident sportsmen approve of a law prohibiting hounding deer?
7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
8th. What are the open seasons for deer?

9th. What are the water-holes of deer, so far as you have personally observed them.
In addition to the following communications, we have on hand, and will publish from week to week, letters from J. P. F. Hunter, Still Hunter, Edw. Norton, Kiffe S., J. W. S., C. Fenton, G. F. W., H. P. Mayo, D. P. Med., G. T. B., Adrian Outback, A. G. C. The Willpower, and G. C. These writers are scattered over the country, and the mass of testimony thus furnished is of corresponding value.

MAINE.

Having visited and thoroughly explored a tract of country lying between the headwaters of the Passadunkear, Narraganset and Union rivers, this fall, during the hounding season, I will endeavor to give your readers the benefit of my observations.

The tract alluded to is bounded on the west by Brandy Pond, north by Nicktoonas Lake, east and southeast by Eagle and Alligator Lakes, and south by William's or Great Pond. It comprises a tract of land which may be roughly computed as six by twelve miles square. Nine-tenths of this tract is "old burnt land," part of it densely and partly covered with a second growth of poplar, hick and maple; and scattered throughout the territory are small unburnt swamps, so thick to be all but impassable into which the deer andawns retire at the approach of the rutting season. On the east side of the tract there is an extensive feeding of old-growth, hardwood timbers. No better cover or feeding ground for deer exists in this State. It is safe to say that no season has passed, for twenty years, that has not witnessed hounding in some, and frequently all, of the lakes above mentioned, and my surprise was boundless when I found twenty deer to every one which was to be found there when I visited the place ten years ago. It is needless to state that this was not because of the hounding, but in spite of it, and wholly owing to the splendid facilities for cover made by the growth of the timber during the ten years of my absence, it being too small to afford the necessary protection at that time.

There were gangs of men and hounds at every one of these lakes this fall. Twenty-four deer were killed in Eagle Lake, presumably twice the number at Nicktoonas, and very few at the others. The fact that deer abounded throughout the entire length and breadth of that tract furnishes an unanswerable argument in favor of those who hold that hounding deer does not drive them out of the country, and, I must confess, completely revolutionized my ideas on the subject. The music of the hounds could be heard in almost every direction, and yet the deer appeared totally unconcerned, and we obtained two nice bucks which jumped up ahead of a small Irish setter which accompanied us.

Hounding in this section is practiced as follows. From one to four canoes are placed in the lake (according to its size) with usually two men in a canoe. They lie concealed near the runways, where experience has taught them the deer usually take water. Perfect silence and quiet is necessary when the deer approaches the beach. If he strikes boldly in and swims away from the shore, his return is out off and his capture certain, but if he courses along the shore, in shallow water, in a direction opposite to that from which the hunters are concealed, he escapes for the time being, and has to be given another run; and some of them arc so wary in this respect that their capture is a matter of no little difficulty. Perhaps I ought to state that there always has to be a spare man to put out the hounds, and when all are concealed they

usually take turns. Some hounds can be turned loose and will scour the forests till they start a deer, paying no attention to any but the freshest track, others will port for half a day on an old one, and have to be led till a fresh track is found. Formerly ten deer were killed in this State by still hunting to one by hounds, but the deer grew scarcer till the proportion killed by hounds increased, and the figures have very nearly reversed. More are killed in this manner by non-residents than by residents, but the numbers killed by visiting sportsmen (properly so called) are comparatively few.

There is, as is well known, a law prohibiting hounding at all seasons in this State, but it is not enforced, and I doubt the propriety of attempting to do so, as the great majority of our business men stand about the same chance to lose a deer by still hunting, as a deer to go the other way. It would be better to let it enter the kingdom of heaven. It needs, or it richly deserves, to be kept at bay at present any gentleman who has got a deer during the season, with hounds, feels a moral restraint which prevents him from complaining of the man who butchers them when they are floundering helplessly in the crusty snow. But there is a strong feeling against the use of hounds in Washington county and the eastern part of Hancock county, which is fully shared by their senators and representatives, and a repeal is not practicable.

As for still hunting, there are two ways of following up a deer on light snow. Both have strenuous advocates, and both are equally successful when practiced by a master of the art. The most common mode is to creep on the track with all the silence and softness of a cat, to avoid the breaking of a twig or the crushing of a stick under the feet, and to act at all times as though the deer were within half a gun shot, watching for the hunter, with every sense alert. The other, and more rarely adopted method is to travel at the highest rate of speed which the hunter is capable of sustaining through the day, trusting to his quickness of hand and eyesight to beat the deer at his own game. I have seen this method followed, with great success, by a few who were peculiarly adapted for it, and it has this great advantage, that in rocky, crusty hunting, one will have almost success using this mode, when it is impossible to get a deer by creeping. A law permitting hounding, but prohibiting shooting in the water, would not be practicable here, as shooting deer on their runways is almost unknown, right royal sport though it be.

About the middle of December, at the close of the rutting season, the older bucks retire to the most impenetrable swamps, where to remain till the hunters drop off, and the younger ones will have to do almost all the hunting. The lawns be together, usually selecting their feeding grounds on the heads and along the banks of small brooks, the extent of their travels being wholly regulated by the depth of snow.

In conclusion, I would state that it is my unalterable conviction that deer will increase and multiply no matter if they are hunted in all and every manner known to man, provided that one are killed in any manner but seen and shot. I see no objection to a law which should be related to swages, or the still member white man who has none of the instincts of the hunter except the desire to eat when he is hungry.

PENOBSCOT.

ONTARIO.

The very able defence of "hounding deer," by "J. C. H.," in the FOREST AND STREAM of the 24th February, has elicited a reply on the part of "I am sure" which will be read with pleasure by the hundreds of gentlemen sportsmen who take an annual "outing" in the backwoods of Ontario, seeking health and recreation and very necessary rest from the excessive brain work of the other forty-eight or fifty weeks.

My experience extends only to the Muskoka and Nipissing districts, the counties of Haliburton, Victoria and Peterborough, but I have, in company with a few friends, paid this section a visit every year for the last sixteen or eighteen years, doing a little hunting and fishing, having a good deal of canoeing and camping out, and returning home in better health and spirits, and in better humor with ourselves and all mankind. We go ostensibly to hunt deer, which being some thing to look forward to, carries us over many trials and hardships. Some of our trips extend seventy-five or one hundred miles into the wilderness, in canoes, with fifteen or twenty "portages," or carrying our gear over the mountains, and varying from a good Indian trail through a clean, dry, and comparatively level hardwood forest, to a climb over a rocky ridge four or five hundred feet high, and any amount of fallen timber, or through an almost impassable cedar swamp, full of roots to trip one at every step, and sink holes which have even a greater tendency to send one headlong, especially if he has a fifteen foot canoe on his shoulders, and his horse with pleasure the hundreds of gentlemen sportsmen who take an annual "outing" in the backwoods of Ontario, seeking health and recreation and very necessary rest from the excessive brain work of the other forty-eight or fifty weeks.

On returning to camp in the evening, the following and similar remarks are frequently heard: "I never heard a sound of deer or dogs all day. If I could have only heard the dogs giving tongue for awhile, I should have been quite satisfied." The country is principally composed of granite ridges, cedar swamps and small lakes with an occasional stretch of hardwood. The lakes are so numerous that there are said to be no less than fifty-two in one particular township, therefore the only possible method of hunting deer in the fall is by hounding them, and they can hardly run a mile in any direction without coming to a lake or river. Some few are shot in the woods, but rarely after they have taken to the water.

My experience goes to show that hounding on water is an absolute sport for the hunter, if he be good and quick shot, but it is rather the reverse for the poor deer. It is no exaggeration to say that not one in twenty are "killed in their tracks," that we so often read about, perhaps 60 or 75 per cent are wounded; a few may not get more than two hundred or three hundred yards, and can generally be found, the greater number can travel for miles before being overhauled by the dogs, and worked to death, or being left to die by holes, in either case the hunter never hearing any more of them.

The other method, shooting them in the lakes here, calls for no little skill and judgment. The lakes are mostly small, the larger ones being long and narrow. A deer can swim them almost before the hunter dare show himself, and when pushed they swim almost as fast as a man can paddle a canoe. In proof of this I know it as a very thing, on our country for a number of years, by six gentlemen, with as many guides, to kill more than eight or nine deer in a two weeks' trip. It being a common occurrence for one or two members of a party to never see a deer on the whole trip, except those brought to camp by their more fortunate companions. Your correspondent, "Adrian Outback," is about right when he says "Deer have many ways of fooling both dogs and men." If some of those gentlemen who take of "being paid up" to a deer to slaughter it in the water, would learn to "pad-

dle their own canoe," and rely on their own resources to get the deer, and leave their guide at the camp to have dinner ready on their return, or make himself otherwise useful, I rather think there would be less of this kind of talk, unless it came from some of the disappointed ones! When a man does get up in a canoe about the distance of a deer in the water, the deer is almost always killed, preventing future suffering to the animal, and making it of service as food.

Still hunting is practiced here after the first snow fall, which usually occurs about the end of October, away into the close of the season, by both settlers and pot hunters, the latter killing them by wholesale, and selling the meat to the lumber shanties at four cents per pound. When it becomes a drug does get up to a market, or as much of it as does not spoil! I have known two men to kill more deer than a lumber gang of fifty men could be induced to eat. It is considered poor work indeed if each hunter cannot average one deer a day, Sundays included. In one case, in the back part of the county of Peterborough, one still hunter killed nine deer in one day.

It is a very rare thing indeed to bear of sportsmen still hunting in this section of the country. The weather is so very changeable, the country so very difficult of access when the lakes are partly frozen up, and life in a tent very pleasant just then.

Deer have a worse enemy than the pot hunter in our country. Wolves probably destroy more than all other agencies combined. With a crust on the deep snow, the poor deer are completely at their mercy. We have a Government bounty of four dollars, which is sometimes sometimes paid to township or county bounty of two dollars, for the scalps of wolves.

In reply to your fifth question, I can safely say ten deer are killed by settlers and pot hunters to one killed by sportsmen.

Sixth.—The game law of Ontario has been amended so that it is now lawful to hound deer only between the 1st of October and the 15th of November.

Seventh.—A law permitting hounding, but prohibiting killing deer in the water, would be useless and impracticable.

Eighth.—The open season for deer in Ontario is from the 15th of September to the 15th of December, with two weeks to market venison in.

Ninth.—Deer congregate or herd in "yards" during the continuance of deep snow, in the winter, in the lumber woods, where there is plenty of fallen timber to browse on, or until driven by two-footed or four-footed wolves.

They seem only to diminish on the approach of the settler, there being as many to-day as there were twelve or fourteen years ago some of our old hunting grounds not as yet invaded by the advancing footsteps of civilization. It is a noteworthy fact, in this connection, that after the lumbermen have culled the best timber off from a section, and have moved farther on, deer have again become plentiful.

In conclusion, if it were made, as proposed, on the section I am writing of, it would put a stop to deer hunting, as far as sportsmen are concerned, and would be a benefit only to the pot hunter, the settlers being quite willing to see a party of gentlemen hunters come among them and engage them at two or three dollars a day, each canoe and dog fifty cents per day extra. I could name a party, partly New Yorkers and partly Canadians, whose expenses on two sections of Muskoka, in October, exceeded one thousand dollars, after leaving Toronto. Settlers get all the venison they want, and do not begrudge the few deer killed by the sportsmen, for which they are so well repaid by having these little extras thrown in their way. G.

WEST VIRGINIA.

In calling for information upon this subject, the FOREST AND STREAM has taken a wise step toward the solution of a much vexed question. To the minds of many sportsmen, however, it is already solved. With a bigotry and unfairness which, happily, is not characteristic of them, they see but one side. Having made up their minds that hounding is reprehensible, they would stop it by any means, even shooting down the poor dogs whenever a safe chance presents itself. But the man who undertakes, in this manner, to redress what is a wrong, will be a wrong, can hardly be classed among sportsmen.

If our legislators would recollect what an important part game laws played in the early history of England, perhaps some of their now latent wisdom might be aroused. The abrogation of the Forest Laws was an important step toward that freedom of which we are the heirs. In those early days, to hunt with hounds was a courtly pastime, while still hunting was considered by persons of high rank, a vulgar and uncivilized sport. It is a pity that the sportsmen of the present time have reversed matters, and we now find the still-hunter seeking to put himself in the position of the ancient nobles—no one must hunt except as he dictates.

As yet we can have no national game law, and it will be well if centralization never reaches so far. Our game laws can be adapted to the necessities of localities, and we think that some localities may properly admit of hounding. In West Virginia, where I have hunted for a number of years, the death of a valued hound is often followed by an unpleasant occurrence—a cracked bead, for instance. Let us look for a moment at the results of hounding in that country. One bright morning, several years ago, I went out with an old darkey guide to start the hounds. Our ground had been run over all the season, and when we reached it several packs of dogs were making the old dog with their howling harmony. The still-hunter would have sworn that no deer was left in the woods. I thought differently, however, and climbing slowly up the mountain, I uncoupled five hounds, one at a time. In less than ten minutes I had four bucks running, and might have as easily started a dozen. In conversing with an old resident that day, I inquired how long hounds had been run upon this particular mountain. "You must ask some one older than I am," said he, "for they were run there before I was ever born. It is a piece of deer forest in which the deer have been hounded for at least a hundred years. Of course the deer have become scarcer, but they seem to be in goodly numbers yet. After the ground had been hounded over all last season, a party went out still hunting in the snow, and reported tracks so thick that they could not follow the deer. I thought it was a good thing that they were run there before I was ever born. I have hunted with hounds for twelve years, and during that time have seen many escape. I feel perfectly sure that out of every three deer started two escape, and once they are set free to return to their old haunts as they see fit, it would be very well to have a law prohibiting the killing of deer in water, for here they have less chance of escape.

rides, and are thinning out the game rapidly. We are about twenty miles from Reelfoot Lake, the great breeding and fishing grounds for our black bass, striped bass, white perch and other fish. Reelfoot was formed by the great earthquake of 1812, thirty miles long, by five to seven miles wide, is teeming with fish, duck and geese, and a few swan. Squirrels are "thick as leaves in Valambora." They are gentle, and are very fat and juicy. The young ones are now half-grown, and will be mature very soon. It is not an unusual thing for a good hunter to bag fifty in a day. One word about guns. Why does not some manufacturer a .32 cal. magazine gun? We have lots of the .33 cal, but it is too large for small game. Who will be the first to make such a gun?—T. L. W.

MIGRATORY QUAIL.—We see it reported in a Boston paper that "the Messia quails which Messrs. Peter Jerris and J. D. Longley, of Lewiston, set free on the farm of Mr. Longley's brother in Greece last fall have returned to the farm in large numbers. They are the first returned quail heard from of the hundreds imported by our Maine sportsmen last year."

THE NEW JERSEY GAME LAW.

THE game law passed by the late Legislature of New Jersey is one of the worst pieces of legislation of this character ever put on the statute books. It is a law that will ruin the quail and quail season until September 1. The Legislature of this year, without waiting to allow that law to produce good results, has opened the season from July 1 to August 1, closed it during August, and opened it again from September 1 to December 16.

The second section of the new law is as follows: "2. And be it enacted, That no person shall kill, take, expose for sale, or have unlawfully in his or her possession, after the same has been killed, any ruffed grouse (commonly called partridge), or quail (sometimes called Virginia partridge), except only between the last day of October and the last day of December, in any year, or any rabbit between the last day of October and the first day of December in any year, under a penalty of fifteen dollars for each rabbit, grouse or quail so killed, exposed for sale, or had in possession contrary to the provisions of this section."

The intention of this law was to make the open season for rabbits from October 31 to December 1, but, as a careful reading of the above section will show, the law is so framed that the open season for rabbits, so that they can be shot at any other time in the year. Even without this error the new law would be extremely ridiculous, for what sportsman can remember so complicated an arrangement as makes rabbit shooting end on December 1, woodcock shooting on December 16 and quail shooting on December 31? Every one who knows anything about practical game protection knows that quail hunters, as a rule, kill all the rabbits and woodcock that they can during the whole of December.

It is surprising that practical sportsmen, like Senators Lawrence and Yall, did not defeat this law in the Senate or show the Governor why he should veto it.

[Another correspondent, J. J. B., is informed that we printed the above communication furnished to us by a member of the Senate. That copy does not contain the blunder pointed out in the above communication respecting the rabbit season.—Ed.]

Notes and Incidents.

GATHERED FROM EXCHANGES.

—The Spanish bark *Oluja*, from Liverpool, now lying at Welch, Kithet & Co.'s wharf, has on board a tame walrus or sealion. This animal was captured by Captain DeAbortz thirteen years ago, while cruising in Behring Straits. It was then a "pup," was trained by him, and has since been with him on all his voyages ever since. He is called "Senor," and answers to his name or to a blast from a silver whistle blown by his master; but if blown by any one else he pays not the slightest attention to the call. He eats bread and meat, enjoys tea and tobacco. He is as passionately fond of beer as an old toper, and on many occasions has become genially "tight" from imbibing too heavily. When caught he weighed 150 pounds, but he now turns the scale at 414 pounds, and carries two enormous tusks, measuring 6 feet 4 inches at the girth and 8 feet 4 inches long. As the Captain good-naturedly remarked, as he allowed the brute to a few visitors, he is becoming "one big moosance." In bright weather he sleeps in the sun on deck. During heavy blows he resorts to a kennel, but when the weather is calm he leaps overboard and sports about the ship for hours, bawling and eating fish. When tired of swimming he is hauled on board by a great net, and then he lies on a cot in the Cape of Good Hope, a great shark lashed Senor, laying hold of one of his paws and lifting off one of his toes; but Senor does, and coming up under his enemy's belly, ripped him up with one thrust of his great tusks, and devoured him with savage cries of delight and satisfaction. He is very fond of the Captain, and when the latter is absent from the ship for a day or two he manifests his uneasiness by a thumping noise until the sounds of his whistles are heard, and he bawls and howls of dogs barking in chorus. Senor is perfectly docile, allows himself to be patted on the head, and is very susceptible to kindness.—*Victoria, B. C. Colonist.*

—A few years ago some kindly enthusiasts, among whom the late John Keast Lord and Frank Buckland were leading spirits, made strenuous efforts to stock our woods, moors and rivers with strange fish, fowl and fish. We were to eat eland steaks, and luxuriate on sturlet and eorrogons, which alone of all the funny race has the property of never satisfying. We were to have prairie fowl, blue grouse, and pintails from the West coast woods and prairie, while salmon was to be sold on oostermongers' barrows as sprats and bloters are at present. But, somehow, nothing came of their projects. There was a good deal of experimental eating and drinking, several hopeful reports, and some indigestion. And then the Acclimatization Society faded from public recollection. Tinned meats, cold-air storage, and Anti-Game Law Associations seem to have taken the place of them. Nevertheless, in the four continents there are the newer worlds, its scientific progeny flourish apace, and are busy bringing to our roughest dependencies the salmon, trout and birds of the Old World. If, as some ethnologists assert, the European is not yet naturalized in America, the horse, the ox, and the sheep which he introduced three centuries ago certainly are.

It is not yet a hundred years since John Hookham Frece and a number of other ingenious young gentlemen of the University of Cambridge were speculating as to whether the Antipodes could ever be a self-feeding settlement. Already the land is covered with millions of kine and sheep, and in some of the Australian colonies the wild horses are becoming a public nuisance. As for the rabbit and the thistle, which the patriotic Scot imported, they have cost the squatters and the Government thousands of pounds, and are yet it is questionable whether they or some private immigrants will conquer in the struggle for existence.—*London Standard.*

The *Princeton Angler*, to use a favorite expression of the lamented Dickcy River, says "Recorder of the city of New York, is one 'that prevaile to a great extent in this community.' This gentleman has many of the qualities attributed by Fisher, of the 'Angler's Socievnt,' to Sir Humphrey Davy. If he has obtained the higher branches of the art, he affects to despise all sport which he considers less scientific; if a salmon fisher, he calls trout 'vermin,' if he is a trout fly fisher, he professes contempt for bait-fishing. We have talked with the anglers who were even disposed to censure the eminent Deane, who has so ably and well such labor of local edify our American edition of Walton, for affectation in saying of the red veer, 'Our hands have long since been washed of the dirty things.' The servant should not be above his master, and certainly 'E. W.' whose disciple the Doctor professes to be, considered it no indignity to use them, nor was he disgusted with his 'horn of gentles.' But the Doctor was certainly right in depressing the use of ground bait in reference to trout, but the angler, with a little faith and less greed, soon learn the use of the fly.—THAD. NOBIS.

AN ANGLER'S LIFE.

I've thraven the flees the sixty year,
Ay, sixty year an' more,
An' a'mout a speckled troute kilt
We heekle, heekle an' hair;
An' now I'm auld an' feebly grown,
My loess an' like the snow;
But I'll gang again to coquet-shade
An' take a farewell trout.

A CHARMING book* is given to his brothers of the rod by Mr. Henderson, who tells us that he is now 61 years of age, and as ardently attached to the noble sport of angling for salmon and trout as ever. "For the pleasure he has given in this handsome volume we hope that he may continue to enjoy his angling for many years more, for his portrait looks like a hearty man, and one who would be a good companion on the stream, or in the bivouac.

How the above verse touches the heart of every one who was ever truly a boy, for "all are not men who wear the human form," and many men were never boys, as some of us were. He says: "The acquisition of his first fishing rod is always an era in an angler's life, and well do I remember the circumstances which led to my possessing one. Prowling along the river bank in search of minnows I came upon two boys apparently possessing a joint interest in a fishing-rod which projected over a willow bush. Youth is a period of freemasonry, and I was soon on good terms with the strangers, who readily exhibited the results of their sport—three small eels strung on a willow twig. How often did we take them down and carefully measure and re-measure, wash and re-wash them, flap their tails when they showed signs of retreating life, and discuss the important question as to whether they were members of the silver or golden eel families! It was not in human nature to witness such joys unmoved, and soon I was bold enough to request from my mother the sum of eighteen-pence, for which I proposed to pawn my weekly stipend of three-pence. Behold me now the proud possessor of a 'two-piece rod,' glowing with bright vermilion and rich in brass ferrule!"

From this time our author was an angler. At eighteen he fished with a young friend who aspired to fly-fishing. He tells it: "A gravel bed was selected as the spot most appropriate for donning our tackle; my friend took the lead and was ready first; the 'feed' had just come on. A score of blueheads were floating in the water, while round his head went my friend's line, and a sharp sting within my nostril made me scream aloud. Not seeing his cast fall, as intended, the rod made another circle, but the instinct of self-preservation enabled me to grasp the line and save myself the dreadful wrench that would have followed. What was to be done? On examination the hook was found deeply imbedded in my unfortunate nostril. I was on the point of running off to Rothbury in search of help, when my friend, with a gravity more becoming his profession (for he was an embryo surgeon) than his years, undertook the case himself. 'Lie down upon the ground,' he said, with a tone of authority. 'Shut your eyes.' I obeyed. Another sharp sting and the offending hook was extracted and lying in my hand. Many were my thanks, and warm my admiration of the operator's skill. 'Don't mention it,' said he, 'I never had a lancet in my hand before; but as I got my first case of instruments last week it seemed a good opportunity for trying them.'

We cannot quote the whole book; and find that we must leave the angler at eighteen, while he writes at sixty: But we so admired the man who forgot that he had been injured

*"My Life as an Angler." By William Henderson, author of "The Folk Lore of the Northern Counties of England and the Borders." With Woodbury portrait and twelve woodcuts, engraved by Edmund Evans. A new edition. London: William Spottiswoode & Co., 12 Tavistock street, Covent Garden, W. C., 1880.

ly the man who hooked him in the nose, at a time when he was not taking flies any way, and thanked his awkward companion, instead of ducking him, that we had to quote it, to show the stuff our author was made of. We are all lovable men if the world knew us!

FISHING ON THE CARP RIVER.

NORTHERN MICHIGAN.

HERE we are, H. C. Lonnis, my chum from Columbus, O., and our old friend, Capt. David Smith (whom we dub "Old Reliable"), of Cheboygan, Northern Michigan, are leading on the steamer Mary bound for the Carp River on the North Peninsula, with traps and provisions for a ton day's trip in the wilderness where we are to fight mosquitoes and catch trout.

Leaving Cheboygan about 5 o'clock in the evening we have a pleasant run of eighteen miles to Mackinac Island, where a stop of about an hour gives us ample time to get supper at our choice of the miserable hotels, and then a run of five miles to St. Ignace, where we intended crossing from there being northwards along the extreme northern shore of Lake Michigan, twenty-two miles past St. Helena Island, which we expected to row or sail unless lucky enough to strike one of the very few steam-tugs which ply around the shore gathering fish from the ponds. The captain of the Mary said this was the evening for the fish-tug Martel, but unless she had been detained up the shore we would miss her. By this time it was half past eight o'clock, raining, and not a very agreeable outlook. The captain of the Mary said he thought the lights of the craft off to starboard were those of the Martel. The little fish-tug running in at this moment, all our traps were duly stowed on board, and the little craft was off without ceremony. Fish? Well, I should think so. The snell was so strong I was afraid I should trip on it. The bow of the boat is filled with boxes, with covers—I guess more properly called cases—in which fish are carried from point to point, and on one side of the wheel-house and engine-room are boxes about eight feet long, two feet wide and two and a half feet high, used for scooping the fish into the boat from the pond nets, and for assorting them.

The boat was filled with the worst lot of drunken fishermen I ever saw—French Canadians—and they made a wild night of it until 1 o'clock, when we were landed at our destination. All were good-natured—lucky for us—but full of Tiffin whiskey. One of them, a fishy sort of fellow, weighing not less than 210 pounds, sat down on our big two-handed basket filled with provisions, and the top course being five dozen ginger cakes. "Here, stranger, get up if you please, you have sat down on our basket of provision." Up he rose, turned right around and sat down on it again, harder than ever.

As we ran into the dock at St. Helena Island, the moon was shining brightly, bringing out the residents and the shipping lying in this, the handsomest little bay I ever saw. I only wished I could have an opportunity of visiting this place in daylight. The approach is far prettier than that of Mackinac. We follow up the shore about ten miles further, when we launch our boat, and, getting all our goods aboard, a good long whistle or two from the tug brought some one with a light on the dock, which the captain said was about a quarter of a mile off, and for which we pulled, the tug steaming off and we not regarding it as our company. On the dock we found two men, who helped us safely stow our traps in the warehouse; after which we take possession of a couple of rude bunks kindly tendered us, and we are soon dreaming.

We were up in the morning and on our way by 7 o'clock for a twelve mile trip on wagon to the Carp River, over a Michigan pike, i. e., a lot of trees cut down in order to drive over the stumps. We landed safely at the upper logging dam about nine Saturday. Here we dumped our traps, and the wagon leaves to call again Monday, and take us by road five miles down the river, from which point we expect to run to its mouth in our boat, which we had rented at Indian River. In the afternoon we fished for trout and with moderate success, catching a string of fair size and excellent quality. Sunday a little incident occurred which I will always recollect with the greatest of pleasure, illustrating what many others have noticed—that what we gain is not being familiar to the fish on the water, but that the man here, for instance above us an orduroy bridge spans the stream; several times when we had been on this bridge a red squirrel would come down from his tree, jump on the bridge and chatter away at a great rate, running quite close to us. This afternoon he came down again, and running around me and under my foot, which I had raised on the rider log. Thinking to try the little fellow I reached down my rod toward him and he jumped on it, and within three seconds of my having the team came by 10 o'clock Monday morning, and at a little after 12 we were again on the banks of the Carp. The team again left, and we had before us a trip by this stream never before undertaken by a fishing party, and variously estimated at from forty to sixty miles by people who knew all about it, but had never been on the river.

We start off and load a hundred feet, when we have to climb out, and then the boat goes along all right—with one man pulling and another pushing. Here it bends in the river, water deeper, all aboard, around the curve, and all out again. We kept this up for about an hour, but found no improvement in the river. We pulled our boat over bars, rocks, trees, stones, briars, etc., and floated it over pools and worked our best to make the railroad cut, five miles below, until 6 o'clock, when we camped for the night, my chum celebrating the event by catching a trout weighing just one and a half pounds.

Tuesday morning it rained until about noon, when it cleared, and we were on our way again. The water was deeper after a couple of hours' run; we could ride with ease, and take in all the fine looking pools with satisfaction. About six o'clock we pitched tent at an old deserted logging camp. Thus far we have pushed ahead too hard, have, in fact, been in too great a hurry, and we resolve to take matters more easily and to go slowly.

Wednesday morning we were out bright and early, taking advantage of the beautiful morning and the cool, fresh, bracing air, and after a turn at a couple of trout pools in our vicinity, we are off again. But a short distance is traveled before we sight a long, deep, black looking pool on the outer curve, about fifty feet long and about fifteen to twenty feet wide, while on the inner curve the water was quite shallow. "Hold on," said our "ex" up to the boat, "up to the hole in the shallow water; no noise!" Out we was my chum's line, and in less than two moments a half pound trout is in the bottom of the boat. Out goes my line, zip! and I have in

the bottom of the boat a beauty, 10 1/2 inches long, and weighing one pound and ten ounces. We each of us catch one or two more at this pool, when they slack up and we are off again. If the fish don't bite we do not wait for them, but float along and try another place.

This river is so crooked that it would put to shame the river so called—connecting Crooked and Millet Lakes, on the lower peninsula. Here, on the point of V, very narrow and a quarter of a mile long. Could we have crossed overland twenty-five feet would have saved half a mile. These sharp turns have no good fishing places; it is in the long, round swing where we find them. We keep up this stopping at all the best looking pools until about 5 o'clock, when we again pitch tent, and, as is our custom, make a bed that is hard as a rock. My eyes, for the first time, were closed from the front to the back of the tent. I was covered with a number of extra layers at the head, a rubber blanket immediately over, with three thicknesses of blankets following, with covering, make a bed that my experience teaches me is better than any other contrivance I have ever tried. None but good-sized trout were saved during the day, and we have twenty-four and a half pounds of dressed trout—not a bad haul for a day's fishing. Three heavy meals of our own returned to the stream, and three hearty meals for three hungry men. This day will always remain as a bright and shining spot in my memory.

Thursday morning we are off again. It is a beautiful morning. We floated along, fishing and enjoying the grand air until about 1 o'clock, when we ran into a logging dam, and a couple of men, who were fishing, whom we learn the river is full of logs from about a mile below the dam to its mouth, a distance of a number of miles, that it would be impossible for us to go down any further. We went to the mouth of the river for the only team within a radius of twenty-five miles. A drizzling rain sets in about 3 o'clock, and about 4 o'clock the team comes—a mist, and John Donnell, the teamster. I wish I were an artist, I would like to have sketched this, but, alas! six feet on the top of my head—don't know how high he would be if straightened up—brimmed, greasy old slouch hat; pants and coat of many colors; both hands in breeches pockets, and a "gad," about ten to twelve feet long, stuck under his arm; whiskers all over his face, very unevenly clipped close with shears; front teeth out, the balance black, and an old stub pipe with some tobacco smelly smoke sizzling away in it. "That's a nice team of mules," he ventures to remark.

"Yes; purely fair, but yetter not go too close" to 'em as that'er off mule's a lectle light behind"—a demonstration which we were witnessing.

Our boats and traps safety on the wagon-bed, and tied down both fore and aft, our "Old Reliable" takes the trail, while my chain and myself climb on the boat to ride. We stood it I guess 200 yards, and walked about a mile or so, until I felt glad of a chance. We arrived safely at the mouth of the Carp, and took a tug Friday morning to Point St. Ignace, a little town stretched along the beach for more than a mile. From here we went on to Mackinac and to Cheboygan, from which place we started a week before.

I wish to take this opportunity of personally and publicly thanking Dr. J. H. Fisher for his able, interesting and valuable letters on fly-fishing for black bass, which have appeared in your columns. The same I have duly transferred to my "FOREST AND STREAM" scrap book, and prize highly. Columbus, O. FRANK N. BEEK.

THE VICISSITUDES OF ANGLING.

ON Tuesday afternoon, July 20, while driving from Compton to Sawyersville, in the Eastern Township, P. Q., I went several miles out of my way, over a bad road that led through an almost unbroken forest, to visit a mill dam, where trout were reported to be both numerous and large. I fished that small body of water faithfully for at least a couple of hours and killed but half a dozen small trout, finger-ling, which satisfied me that information obtained from countrymen on sporting matters is not to be relied on. As I was slowly driving back over the grass-covered path, my horse, a valuable young Foughe Boy mare that I had recently purchased, leaped by the green grass at her feet, suddenly threw down her head to catch a busy mouthful, when she stepped on the long martingale that was dangling between her bit and girth. A moment later her head was free of both bit and headstall; then, with one wild look backward, she was away at full speed. Before she had run a dozen yards the high wheels of my huggy struck a log, which sent the writer on against a stump, whack! Though the stump uttered not a word of complaint because that violent embrace, every bone and muscle in my whole body found expression in the loud "Oh!" that followed. I slowly unbound myself from that stump, and with much pain regained the perpendicular position, head up and limped out to the road, where I found my fishing rods, carriage-rug, etc., and a little further on where, minus the horse. I left these things as I found them and hurried on to learn the fate of my horse. A mile distant, at the edge of the clearing, I saw a man and a couple of towheaded boys standing beside a heap that lay in the ditch. As I approached nearer I was accosted with, "Weel, mon, I hev her head oop so shoil na' smother." There in the ditch lay the mare quietly, with the wreck of my new Dexter buggy piled atop of her. An hour later a farmer's heart might have been seen leaving that spot riding on the back of a horse, and a boy on top of a large log. This pile was a solid, disconsolate-looking fisherman reading a lame horse, which was so covered with mud that its natural color was indiscernible. After a weary ride of six miles we arrived at Eaton Corners, where my team was laid up for repairs. The next day I drove out to Lenoxville and took the cars for a distant station, so as to get away as far as possible from the mishap.

Yesterday I had occasion to visit Kinneer's Mills and Leeds. My fishing tackle was left at Eaton, excepting a couple of flies and casting line on my hat. I obtained a slow and reliable "Kanuck" for my trip, and borrowed the only fishing-rod in the place—a cheap affair. Thus rigged, I determined on my way back from Leeds to try the Osgood and Thames rivers for trout. I reached the Osgood late in the afternoon, and after using the "Kanuck" for a few casts, I found my rod together and made my way through the raspberry bushes up above the old mill, which stands within fifty yards of the roadside. Where I approached the stream a large pile of driftwood lay along the bank in the water. At my first attempt to make a cast with that rickety rod my flies caught in the outer edge of the bank. A "swirl" proclaimed a rise, and I saw the fish rise, and, as I was about to cast, I saw that as he returned back under cover after his unsuccessful attempt to take one of the flies. With a long stick I carefully loosened and secured the flies, and passed on up the stream

to the next pool, where I practiced casting until I got the hang of my rod. Here I caught a pair of one-quarter pound trout; and after ten minutes I returned to my first pool, and carefully made a cast near the edge of that pile of rubbish. There was a rush, and *spice-a-see* the line goes singing through the water. I sprang out on the pile of floodwood, so as to keep the fish away from it, and away he sped out into the centre of the pool. How he tugs and pulls! A half-pounder comes to the surface, and I see the fisher fight in and out of the water he shows himself motionless for a moment. What a beauty! He'll weigh nearer four pounds than three. Suddenly, with a high splash, he's off again, with more fight than ever. Yes, he will go over four pounds. I know that by the way he pulls. No lighter trout could pull so heavy and strong. Skip he goes out of the water, a full foot or more, and the fish comes to a foam by an angry slap with his tail as he falls back. He is so fat that his eyes stick out when I show him at the hotel? Ha! ha! he's getting well tuckered out. A little more play and then to land him is the question. My landing net is with my rods, but I don't think that I'll need it, for he now leads well and I will bring him alongside of this log, then slip my hand down the line and catch him behind the gills.

"And out he comes with his accustomed hoists, and snorts at his sisters and his cousins and his aunts."

Hish! I have him almost in my grasp. I give him the hut a little harder to bring him nearer, when—flop, he is off the hook! With a languid roll and a lazy wag of his tail, head downward, he disappears from view under the driftwood. Bah! I don't believe he would weigh two pounds, even if he were a full pound. It's all moonshine to imagine or think that so small a trout could be so fat and so fat. They may occasionally grow to the size of one or one and a quarter pounds, but never larger.

I silently reel up my line, unhitch Kanuck and proceed on my way, fully determined not to fish any more that afternoon; for, without a landing-net to land your trout, half of the sport is spoiled. But when I arrived at the Thames, where the three crosses the trail at the head of the big gully, the sight of the foaming water and deep, dark pools drew me back to those wild, overhanging cliffs, which are verily abodes of large trout, overcame my recently formed resolution, and I again tied up Kanuck to the fence and prepared for work. A large mill formerly stood near the bridge, but had been burned down. The rubbish had been cleared away, leaving the foundation walls bare, and workmen were preparing to erect another mill there. I walked out on the outer foundation wall where I could cast into the pool below the dam. A single workman was at work on the flume inside the walls. The rest of the men were engaged framing the timber some six dice away. Drawing off a long line I made a cast, then more line, and raised my rod to make another cast, when the wind suddenly whirled around and carried the flies far down below me. I was obliged to reel in the line forward and cast a tug. Then I am greeted with a howl from that lone workman. "Ough! Ough! ye murd'rin' devil! yees hev yer yizen hook in me ear-m. Oh! oh! oh! murder! murder!" I instantly approached the edge of the flume and tried to quiet him with the assurance that I had a beam in my jack-of-all-trades knife with which I could easily cut out one was getting into the eye, and the other a gray hammer, the man that said that. I was back to ye, ye, ye, long-legged spalpeen!" I had no particular wish to give him an opportunity to put his threat into execution, and as the wide and deep flume was between us I told him that I presumed that he was fond of fishing and I would make him a present of those flies, and that he could rely on my word that one was a genuine Montreuil and the other a gray hammer—just the cast for large trout. I cut the line and advised him to go home and let his wife take them out at her leisure. As I was driving away the other men, attracted by the noise, approached. I explained to them that I was leaving a couple of my best flies with their companion at the flume, and that he was so overjoyed with my present that his joy seemed to know no bounds. After the flies were given, I took my gun and gunnysack, and went back to the hotel, where I commenced on the little incidents and uncertainties connected with trout fishing, and firmly resolved, first, never again to drive a horse with a long martingale unless with a check rein; also, second, to see that the coast is clear behind when I attempt to make a cast against the wind with a weak-jointed rod.—STARSTREAK.

LAW FOR BLACK BASS.—There is need for an inter-State legislation on the subject of many fresh water fishes, and especially for the black bass in waters which lie between States. New Jersey has just forbidden black bass fishing before July 1, and both New York and Pennsylvania permit it one month earlier. This affects waters which lie between the States, and causes the Newark, N. J., *Sunday Call* to say: "Anglers are somewhat 'in a tux' over the recent act prohibiting catching bass in New Jersey until July 1. The Pennsylvania law allows them to be caught on and after June 1. These conflicting laws, when applied to the river Delaware, which we all know forms a dividing line between these States, puts the bass fisherman in a quandary as to his rights in the matter. The same difficulty exists in regard to Greenwood Lake, the waters of which are in both this State and New York. We would suggest that when he catches a bass before July 1 he should be careful to land him on the Pennsylvania or New York bank." New York allows the bass to be caught in the waters of the State of New York, Mahopac or Dutchess County and in Lake George. In the two former the date for catching is July 1, and in the latter July 20. In all waters which lie between States, as Greenwood Lake and the Delaware River, there should be concurrent legislation."

BOY TO IN THE FOXGROVE DEER.—Dyersburg, Tenn., April 18.—All day yesterday the long bridge over the Forked Deer, at this place, was crowded with people, watching the thousands and tens of thousands of buffalo fish, rolling, splashing, slashing and cutting up generally. This is their season, lasting two or three days, and as this river is out of bank, they have taken the overflow and are out in shallow water, from one to three feet deep, and can be seen in multitudes, and in abundance, until they get into the water, and find a limb or drift-wood egg sticking to them, and as this is the case for miles, some idea may be formed of the immensity of their numbers.—L. L. W.

VIOLATION OF LAW.—Onondaga Valley, N. Y., April 15, 1881.—I met a party resident of Upper Shout Bay, Oneida Lake, yesterday, who, to show his regard for the game law, exhibited card for two pound nets, claiming that, law or no law, he was going to net the lake in fish and was doing so at twenty years. While ducking last fall I think there were at least sixty pound-nets between Bridgeport and Upper Shout Bay. To-day, in a peddler's wagon, I saw suckers, bull-heads and pike from Oneida Lake. Who believes they were caught with hook and line? Yet none of the local game constables interfere. On Oneida Lake there has for the past several years been a great deal of fishing, and an inferior pickered made by spearing. Of course they are an inferior fish, but at the same time the law protects them (in bulk). You can see from ten to forty lights any night, and they will average thirty fish to the boat. The lake was stocked with trout five or six years ago, and should the spears see one, of course he would pass it by. On Skaneateles Lake they spear trout, openly defying any one to prevent them. Up to this date there has been no ironing. The water has held in the northwest since the 21st of March, and until we get a change of wind and rain the trout will not take bait.—DOO.

TROUT IN NEW BUNSWICK—Singer Brook Camp, York Co., N. B.—The trout fishing is earlier than usual. John Stewart, Supt. M. B. & C. R., caught a very fine one on the 23d, the first of the season. Water very low no rain yet. Soon as rain has fallen the fishing will be at its best. Ice is fast melting in the eastern lakes of the St. Croix. The first open water will yield the best land-locked salmon fishing. Salmon are fast leaving these lakes, owing, I believe, to a lack of small fish, their principal food. Last spring, at the proper time, I went to Fifth Lake, where, five years ago, they were in great abundance, and found not one, nor even a few. Formerly the shalows were below the upper dam would be alive with them. The bears are trying their legs a little, but have not reached the camp. An placing out traps in readiness.—WARFIELD.

THE TROUT HOG IN RUDOLPH ISLAND.—Newport, April 15.—In Lawson's Valley, some four miles from here, is the only trout pond in this county, and it is a very small one. There are ten fishermen on the pond, and who call themselves disciples of Isaac Walton. I could not find their spot springs. One of the "disciples" while fishing there this spring made an embankment of earth and stones across the narrow part of the stream, and walking up a short distance cut a willow rod, and with it splashed the water as he returned to his embankment, then using his creel as a scooper, and catching the water in it, and the creel weight was one and one-half pounds—then brought them to the city for sale. Was this "disciple" a true sportsman?—TROTT.

SKINNING IN THE NIAGARA RIVER.—The Niagara Falls Gazette says: For some years past annual complaints have been made about the employment of seines in the Niagara River. The complaints this year are not only as numerous as heretofore, but are specific, naming the location of the parties using the seines. All our sportsmen are interested in having this suppressed. It is not only a violation of the law, but it is leading to the destruction of some of the best fishing grounds in the State. Not only are the nets drawn, but others are anchored so as to prevent the fish from going in directions where the seines cannot be easily used. We call the attention of the Game Constable to the matter, and trust he will, in due season, have the river cleared up as far as his jurisdiction extends, and also have authorized parties to see that this business is stopped. We also recommend that our sportsmen take steps to aid in this matter.

TROTTER IN THE SNOW—Oswego, N. Y., April 10.—I desire to record the opening of the trout season in this country by the magnificent crew of two handsome trout, captured by N. Wright and brother, of the "Leather Stockings" of this city, upon April 15. The season is very backward, snow water flooding all the streams, and the gentlemen who made the effort referred to were forced to cast fish from advantageous perches upon snowbanks, which were from two to six feet in depth at many points along the course of the brooks. The weather is cold and backward, but a strong wind and sun and snow melt the old winter's bonds, and within a month I hope to have a worthy basket to report.—LOUIS H.

PRESERVING FRESH FISH.—An Austrian scientist claims to have discovered that fish can be kept perfectly fresh for many days. He impregnates them with a weak solution of salicylic acid, by means of hydraulic pressure, and then packs them in casks and pours gelatine over them, which prevents their becoming stiff and dry, as well as keeping the salt from them. He says it does not affect their flavor. They should be soaked in water, which restores their freshness.

STRIPED BASS—Red Bank, N. J.—A few striped bass are being taken at Port Monmouth, N. J. The largest this far, fifty inches in length, weighing 8 1/2 pounds, trying to escape the meshes of the law, got insane (in selene).—WILD.

ANGLES WHO MAY WISH TO LEARN OF FISHING RESORTS ABOUT NEW YORK MAY DO SO BY APPLYING AT THIS OFFICE, AS PER NOTICE IN ANOTHER COLUMN.

AN EIGHT-POUND SHAD.—A shad weighing eight pounds was recently caught in one of the pound nets at Saybrook, Conn. It was exhibited at Bronson & Fitzgerald's, Hartford, on April 19.

Read of, procure and use HOP BITTERS, and you will be strong, healthy and happy.

PUBLISHERS' DEPARTMENT.

Hotbird Shooting Suits. Upholstered & McEllan, Valparaiso, Ind. Oh, why will you let that terrible friend that Top Bitter will so soon get you?

A chance to secure good shooting at Barnegat Bay is offered in our advertisements this week.

WE HAVE RECEIVED FROM MESSRS. J. C. GRUBB & CO. OF PHILADELPHIA, Pa., their catalogue of guns in stock. It includes many of the best makes.

REPEATING MAGAZINE RIFLES are rapidly supplanting the single barrel rifles for shooting furred game. The manufacturers of the Ballard rifle have added to their stock a new arm of this description—the Martin repeating rifle—which has every appearance of being a durable and effective weapon.

The Kennel.

September 1 at St. Louis, Mo. St. Louis Kennel Club Third Annual Beach Show. Charles Lincoln, Superintendent.

September 1 at New York, N. Y. Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Tenet, Secretary, P. O. Box 64, New York City.

THE NEW YORK DOG SHOW.

"DOG Show Week" has so thoroughly become an established fixture in the annual sporting events of the metropolis, that for weeks previous to the opening day all dog lovers are on the tip-toe of expectation. This year there was no cause for disappointment, for the fifth annual bench show of dogs, given under the auspices of the Westminster Kennel Club, began on April 26, 27, 28, and 29, completely outdone in every particular all exhibitions of the kind ever held in America.

The change of location, from the district and crumbling Madison Square Garden to the new and airy building, was a most commendable departure. In the face of removing from the centre of the city to a remote section it was expected that the attendance would not be adequate to cover the very large outlay which is necessary to provide of some of the most expensive premises as to the motive, and they have more than justified that the shows were run in the interest of those who had little here more in mind than the improvement of the breeds of dogs at heart. Even for the moment's sake, it would be hard to find any one who doubts that the bench shows here and elsewhere have done anything but assist a system which cannot but do good? But we do not agree that money-making has been the object, for there has always been too much uncertainty in the experiment, which would have caused the most sanguine to have turned to some other trade that dollars and not dogs was the hobby to be ridden. At all times it requires pluck to back the pocket, and even the modest vendor of pig-pen at the street corners takes his chances in this world—and does so good.

As already stated in our last issue, the "Pink" was the best place we have ever seen for holding the show. In fact, we do not hesitate to advise those of our friends who were opposed to entering the dog in the show, that they should have done so. The "Pink" and we look to see many old faces back again. The ventilation was perfect, and although the weather was warm, the air was at no time tainted with a doggy smell. The pens were an improvement on those previously used, and the cement floor was clean and free from dirt. Under the excellent management, and with Mr. Lincoln as superintendent, the experience of the past was utilized, and from the opening both to the wind-up the show ran like a well-oiled machine. This was the first year we have ever seen the veterinary arrangements up to the mark, and Dr. John W. Dancer, the Inspector, was prompt in having the few dogs withdrawn that from time to time showed signs of sickness.

The attendance was a most fashionable and respectable one, usually about a dog show, there were many ladies present in elegant toilets, which reminded one more of a London flower show in the season than anything else. About the rings, when the judging was being carried on, there were the well-to-do faces of gentlemen in the most fashionable attire, and the benches of dogs they were not largely represented. The judging is always one of the attractions of the show, as the animals are seen to much better advantage when grouped together in the ring than when fired and carried in in their respective classes, and the spectators, for their own sakes, and although we believe that only employees of the show should enter the ring, yet the judges this year seemed throughout to keep their eyes on the right end of the chain. At a glance also at the official placards of the judges, which were seen to collect throughout the day, reminding one of the old story of "Beauty and the Beast," and the obvious that some of the "pets" received, no doubt were extremely aggravating to those who did not see the lot, and we look forward to the next year.

From what we saw in walking around the stalls, there seemed to be more absentees than usual; conspicuously the kennel of the St. Louis Club, which is undoubtedly the best collection of large pointers in the country. The goodly number of dogs present, however, were of a standard quality that have ever been exhibited, and many were the typical dogs of their breed. They were universally shown in first-class condition.

Referring to the files of the FOREST AND STREAM, we extract a comparative table of the entries that have been held in New York, which we summarize below:

Table with 3 columns: Entries, Classes, Specials. Rows include First Show-1877, Second Show-1878, Third Show-1879, Fourth Show-1880, Fifth Show-1881.

Exclusive of the specials, the club paid out \$2,000 as awards in the regular classes, besides donating \$5 silver medals.

Table with 3 columns: Pointers, Scotch, English, Irish, Black and Tan. Rows show counts for each breed.

Dog showing has now become a science in this country, and but few owners send in dogs without merit of some sort. The ragged, waxy lot that yelped and caught the tyro's eye in the piouser days, sandwiched between the best specimens of their class, are now left at home to guard.

It was a remarkably peaceful show, with an absence of "sold protests" that would have worried the noses of the "Wags." It was a very much better than usual, as was also the small pointer classes. The non-sporting exhibit was a great improvement on previous years, particularly the Fox Terriers, which we so rapidly gained favor in America.

The Beagles turned out in grand numbers, as will be seen by a reference to the classified comparative table of entries annexed below. Had the club opened a special class for the "bench-legged" Beagles, there is no doubt that a very much larger number could have been secured, as it was, the special class, opened for the FOREST AND STREAM since, as

the Straight Beagles, contained more entries than any other special, except in Class B. We have already spoken of the large dogs, and refer our readers to our comments in another column.

COMPARATIVE TABLE OF ENTRIES AT THE FIVE SHOWS.

Table with 6 columns: Classes, 1877, 1878, 1879, 1880, 1881. Rows include Mastiffs, St. Bernards, Newfoundland, etc.

The judges selected had to do their duty single-handed, and the classes were divided as follows:—Mastiffs, St. Bernards, Newfoundland, Siberian, English setters, Irish and Gordon, Mr. P. Dana, of New York City; greyhounds, black and tan setters, foxhounds and miscellaneous class, Hon. John S. Wise, Richmond, Va.; pointers, Mr. S. T. Hammond, Springfield, Mass.; champion imported and Irish setters, Mr. J. W. Devereux, New York City; Skye, Taylor, of Lexington, Ky.; spaniels (all classes), dobermans, terriers, collies, huddalls, bull terriers, Slavo terriers, pug, rough-haired terriers, black and tan terriers, Dandie Dinmont terriers, Irish terriers, English bulldogs, Sharpey or Breamish spaniels, Japanese spaniels and Italian greyhounds, Dr. J. S. Nixon, London, Ontario.

The club management was in the hands of the following members:—The acting stewards, Mrs. and Mrs. Smith, J. Coleman Drayton, George DeForest Grant and Annie B. Light.

On both sides of the building there were long lines of booths, which offered the visitor everything from a cake of dog soap to a stuffed rhinoceros.

On Friday evening, after the doors of the show were closed, the Westminster Kennel Club held its annual dinner at the Hotel Brunswick. About fifty members and their guests sat down to table, over which Mr. H. Waller Webb presided. Toasts were given and well received by Mr. H. Waller Webb, Mr. J. W. Devereux, Mr. Niven and Hammond—Major Taylor and Mr. Dana being absent. The superintendent, Mr. Lincoln, also came in for his share of the ovation, as did the representatives of the sporting and daily press.

WESTMINSTER KENNEL CLUB'S POINTERS.—The club itself entered eight of their cracks, and, as usual, they were not for competition. The best was the "Pink," which was the only one that was well known as a winner on the bench and of third at Eastern Field Trials, 1880; Polly, the recently imported lemon and white bitch out of Sumner's Nancey by champion Shot; Whiskey (Flash-Jack), black and white, in whelp to Sansation; Daisy, the charming lemon and white bitch by Blake out of Lilly, in whelp to Sansation—this bitch has a model head of her kind, denoting power, but entirely free from coarseness, with a grand muzzle; Gerbie, black and white bitch by Cal out of Miss's Psyche; May, liver and white, by Balin's Trump out of Tuff's Doss, and Queen May (Native-Fan), black and white bitch.

On Wednesday morning Mr. S. T. Hammond, commenced on his class in the east ring, and he found no easy task out for him. The first lot he offered for sale, consisted of five dogs, of which he retained five entries, the absence of the St. Louis Kennel Club's Fant, Bow and York, brought together Mr. Wilks' lemon and white Trump (Sensation-Psyché) and Mr. Moore's liver and white Nancey (Artful-Dog). The first lot he offered for sale, consisted of five dogs, of which he retained five entries, the absence of the St. Louis Kennel Club's Fant, Bow and York, brought together Mr. Wilks' lemon and white Trump (Sensation-Psyché) and Mr. Moore's liver and white Nancey (Artful-Dog).

POINTERS, LARGE SIZE.—Six and twenty pointers, all in a row, comprised this unusually fine class. Indeed, we have never seen a better lot in the ring together. The first lot he offered for sale, consisted of five dogs, of which he retained five entries, the absence of the St. Louis Kennel Club's Fant, Bow and York, brought together Mr. Wilks' lemon and white Trump (Sensation-Psyché) and Mr. Moore's liver and white Nancey (Artful-Dog).

well-developed chest of great depth. Guess we thought was rightly placed. He was the younger of the two, and he was his first appearance we fancied the powerful follow for his many good qualities. This order would place Jump third, Lord Duffern, Ray, Ship and Tockel, justly deserved the third letters, but we did not like to do so. The first lot he offered for sale, consisted of five dogs, of which he retained five entries, the absence of the St. Louis Kennel Club's Fant, Bow and York, brought together Mr. Wilks' lemon and white Trump (Sensation-Psyché) and Mr. Moore's liver and white Nancey (Artful-Dog).

CHAMPION POINTERS, SMALL SIZE.—This was a capital class of five entries. Mr. Orgill's old standby Rush (Flake-Lily), added another line ribbon to his large collection. Mr. Moore's Donnie was shown in magnificent form and in the best of his best liver and white dog of his size in America. Mr. Wright's liver and white Dick (Colonel-Fly), was also benched in fine condition; he was a rattling good dog, with grand head and body, and is a superior male. The first lot he offered for sale, consisted of five dogs, of which he retained five entries, the absence of the St. Louis Kennel Club's Fant, Bow and York, brought together Mr. Wilks' lemon and white Trump (Sensation-Psyché) and Mr. Moore's liver and white Nancey (Artful-Dog).

On Tuesday morning Major J. M. Taylor, Lexington, Ky., commenced judging the English setter classes in the west ring, and throughout showed great care and trouble in making his decisions. Mr. John B. Robinson, who was the judge of the best of the dogs brought before the other judges. The first lot was the best of the dozen dogs we ever saw represent the breed.

CHAMPION ENGLISH SETTERS.—They were St. Elmo, Coin, Frank and the other names mentioned in our last issue. The first lot he offered for sale, consisted of five dogs, of which he retained five entries, the absence of the St. Louis Kennel Club's Fant, Bow and York, brought together Mr. Wilks' lemon and white Trump (Sensation-Psyché) and Mr. Moore's liver and white Nancey (Artful-Dog).

IMPORTED ENGLISH SETTERS.—This class was a poser for any judge, but the typical Kentinian was equal to the occasion, and he was well served by the other judges. The first lot he offered for sale, consisted of five dogs, of which he retained five entries, the absence of the St. Louis Kennel Club's Fant, Bow and York, brought together Mr. Wilks' lemon and white Trump (Sensation-Psyché) and Mr. Moore's liver and white Nancey (Artful-Dog).

above will be acknowledged when comparing such vessels as *Idola*, *Vidette*, *Corsair*, *Yosemite* and *Clean*, each possessed of certain qualities in a high degree, with a corresponding lack in other directions, and all taken together presenting a strange and in some respects a crude mixture and cross of "strain," due to the individualities of their modellers, who for want of precept and experience have been thrown upon their own resources. Out of all this chaos of type something giving expression to the best proportions and most suitable to the purposes of the steam yacht owner will be certain to grow. So far each builder has contributed his share of improvements, all of which combined in a single vessel, as far as compatible, would produce a very creditable specimen of the genus, and we think that by publishing the practice of the various establishments, our share will be done toward bringing about the desired consummation—the union of safety, speed, accommodation, sturdiness, cruising capacity, economy and popularity in a single hull propelled by steam. We may briefly classify steam yachts as "open launches," "cruising launches," "river" and "sea-going" steamers. Of the first and third class we this week publish representations of the practice of the New York Safety steam Power Co., whose headquarters are at 30 Cortlandt street, New York, and where engines and models of their make may be inspected. The particular characteristics of their machinery we take to be strength, compactness, simplicity, accurate workmanship and excellent finish, the company securing a reputation founded upon the solid worth and durability of their engines and hulls, rather than upon showy hardware and superficial ornamentation. It may be remarked here that the best is the cheapest in the end, and that experience will teach that a small extra outlay, to secure accuracy of fitting and perfect finish of wearing parts, will more than repaid by the greater life of the engine and less cost and annoyance of repairs. This applies especially to launch engines, generally run at high speed and particularly susceptible to heating of the journals and brasses. A glance at our cut, representing the company's engine suitable for boats from 30 to 60 ft. long, will show that there are two bearings for the crank shaft cast, solid in the frame as well as the cross-head slides, thereby preventing the machinery from getting out of line and avoiding serious consequences. The bearings are long and the shafts of large diameter, giving ample working areas, the need of which in high-speed engines is well understood by mechanics. The crank is counterbalanced, piston rod, valve rod, crosshead pin, etc., are of steel, the connecting rod of wrought iron and the boxes of composition. The link motion is supplied with an index, enabling the cut-off to be set as desired. In engines over 200, balanced valves are introduced to overcome the friction of the valve, affording at the same time additional ports for the entry of the steam, and producing an initial pressure in the cylinder more nearly equal to that in the boiler. For reference we add a table showing proportions and weights of launch engines, and the approximate sizes of boats for which they are suitable. Engines include link motion, reversing gear, cylinder lubricatory, stop valve, drip cocks, oil cups, wrenches, pry wheel and half coupling.

Concerning the boilers of the same company we might say much in praise of their sectional water-tube generators for land use, their originality, economy, safety and popularity, having had charge of 1,500 H. P. a large manufactory with gratifying results in more ways than one, but we will confine attention here only to their marine boilers. For the use of engines under 200 the vertical boiler is given preference; but for larger boats boilers of the horizontal, return-pattern take their place. Shell, furnace and tube sheets are made of the best brands of steel or flange iron, and the tubes are all tested. To produce season rally the furnaces are large and the heating surface has, say, two to three times the area required for stationary work on shore. Steam gauges, safety valve, water gauges and fittings are the best in the market, and the work conforms in all respects to the United States laws. The company has had such an extensive experience in building vertical boilers that better proportions for the purposes of safety and economy are not likely to be reached. Launch boilers are tested to 200 lbs. The following data will aid builders and amateurs in selecting the right amount of power. The dimensions of boats attached are of course only approximate, and may be varied from an ordering to purpose. The complete boiler includes ash pan, grates, smoke-bonnet and stack, guy rods, safety valve gauges, feed check-valve and feed globe-valve, steam stop-valve and whistle.

MOHAWK

32' Launch of Beam 6' Draft (model)

COLORADO HUNTERS.—Luko Wheeler, partner of Frank Ainsworth, the champion shot of Colorado, was in Fort Collins, Friday, having just come down from North Park with a load of game. Mr. Wheeler favored the *Express* with a call, and kindly gave some account of his season's hunting, which is now over. The two hunters, during the season, brought to market fourteen large loads of elk, antelope and deer. They killed 600 antelope and 250 elk. They sold all the meat readily in Denver and Boulder. Elk sold from 7c. to 10c. per pound; antelope, from 7c. to 8c., and deer, from 10c. to 12c. The season was a very profitable one. They made two shipments of hides, the last being 3,500 pounds. Game was fat and in fine condition. There is plenty left in the mountains. There was a herd of 500 elk within 6-8 yards of camp when Mr. Wheeler left. The hunters, at one stand, killed eighteen elk within ten minutes. Wheeler considers Ainsworth the most experienced hunter and the best shot he ever saw. He began hunting when a boy, and hunted buffalo in Kansas.—*Fort Collins Express.*

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R. THE ONLY LINE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. The TROUT season begins May 1 and ends Sept. 1. The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PILE PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or club. Ten times as good for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1891 by new buildings and additions. During the season ROUND TRIP EXCURSION TRIP TICKETS WILL BE SOLD AT LOW RATES, and attractive trip facilities offered to Tourists and Sportsmen. Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on our route. For Tourists' Guide a handsome illustrated book of 160 pages sent free. Time Cards, Folders and further information, address A. B. LEIBT, Gen'l Pass. Agent, Grand Rapids, Mich.

Virginia Midland R. R.

The Safest, the Shortest, the Best Route to Florida and South.

Pulman Palace cars direct without change. Guns and dogs carried free. Leaves New York at 10 P. M. for Washington, 7 1/2 A. M., and 10 P. M. MERCER SLAUGHTER, General Ticket Agent, Alexandria, Va.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the "Parque House," that city, and on the train for Ausable Forks and on to the Adirondack Park. I have a large range for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Dowling's latest approved pattern, I can not only add to other more comforts and conveniences than other lines, but having guided over the entire Adirondack Park so many years, I can furnish a handsomely reliable information as well assist them in carrying out their plans for hunting or fishing. CLAS J. GREENE, II, Stage Proprietor, Adirondack Park, Saranac Lake, Franklin County, New York.

50 All Gold, Chromo & Litho Cards, (No 9 alike), \$1.00. Send on, to CLINTON BROS., Clinton, N. Y.

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co., Respectfully invite attention to the SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of re-shipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF Pennsylvania Railroad Company also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to R. A. N. PENNOY, H. D. FORD, CRESSON, HALLSTON, MINNEQUA, and other well-known centers for Trout Fishing, Wing Shooting, and Still Hunting.

Also, to TUCKERTON, BEACH HAVEN, CAPE MAY, BAZAN, and points on NEW JERSEY COASTS renowned for SALT WATER SPORT AFTER FIN AND FEATHER. L. F. PALMER, Gen'l Pass. Agent. FRANK THOMSON, Gen'l Manager. Feb 11-91

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1822, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

- Dupont's **Ramond Grain**.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 15 canisters.
- Dupont's **Eagle Ducking**.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with close pattern; adapted for glass ball, pigeon, duck and other shooting; with either muzzle or breech-loaders. Packed in 15 and 50 canisters and 4, 8 and 12 1/2 kegs.
- Dupont's **Choice Bore**.—Specially adapted for "Choice Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6 1/2 kegs and in canisters.
- Dupont's **Pezee Rifle**.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 15 canisters and 4 1/2 kegs.
- Dupont's **Rifle FG**.—"Sea Shooting."—FFG and FFG. The FG, for long-range rifle shooting, the FFG and FFG for general use, burning strong and moist. Packed in 15, 18 and 50 canisters, 4, 8, 12 and 25 kegs. 2 1/2 kegs. FFG, fine.
- Dupont's **Sporting, Mining, Snappers and Blasting Powders** of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Muzzle, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S FG, or FFG, for long-range rifle shooting.

Oriental Powder Mills, BOSTON, MASS.

Western Sporting, Wild Fowl Shooting, Falcon Ducking, SPORTING POWDER.

ALSO ALL GRADES OF

Blasting Powder.

Agencies at all Principal Points in the West.

GOOD'S OIL TANNED MOCCASINS.

The best thing in the market for hunting, fishing, canoeing, snow-shoeing, etc. They are easy to the feet and very durable. Made to order in a variety of styles and warranted the *quintessence* article. Send for illustrated circular. MARTIN S. HUTCHINGS, P. O. Box 393, Dover, N. H. (Successor to Frank Good.) BRADFORD & ANTHONY, Boston Agents.

AFIELD--AFLOAT---BY TRAVEL.

ACCIDENTS ARE UNAVOIDABLE.

NAME.	RESIDENCE.	DISABLEMENT.	INDEMNITY.
A. R. Hubbard	Mt. Clair, N. J.	Shot while staming.	\$10,000
P. H. Carter	New York	Browned fishing.	10,000
James Harper	"	Thrown from carriage.	5,000
Frost Thomas	"	Drowned fishing.	5,000
M. A. Attau	"	Railroad travel.	5,000
W. J. Farrar	Cleveland, O.	Eye injured by iron.	250
Geo. B. Heywood	North-South, N. J.	Thrown from buggy.	250
A. J. Hall	New York	Eye injured by champagne cork.	250
E. Rice	"	Spirited while.	500
Clara Vanderpelt	"	Knocked down by horse.	500

These instances are from over 55,000 claims paid for loss of life and disabling injuries, aggregating \$5,612,092, by the "OLD TRAVELERS," of Hartford, Conn.

THE LARGEST AND MOST SUCCESSFUL ACCIDENT INSURANCE COMPANY IN THE WORLD.

The Insurance and indemnity is against dislocations, fractures, bruises, cuts, gunshot wounds, burns or scalds, bites of animals and reptiles, stroke of lightning, drowning, etc. All and every accidental injury that the Sportsman or Traveler is liable to at home or abroad.

THE TRAVELERS

LIFE AND ACCIDENT INSURANCE COMPANY, HARTFORD, CONN.

Assets, \$5,519,194, Jan. 1, 1881.

INSURES \$10,000 WITH \$50 PER WEEK INDEMNITY, IN CASE OF A DISABLING INJURY, FOR AN ANNUAL PREMIUM OF \$50.

NO MEDICAL EXAMINATION. NO DELAY IN PAYMENT OF VALID CLAIMS.

SPECIAL RATES: Hazardous Occupation and Ocean Travel.

For information, rates, etc., address,

SCHUYLER & DUANE,

IMPORTERS AND DEALERS IN

Guns and Sporting Goods,

FINE ENGLISH BREECH-LOADING SHOT GUNS,

189 BROADWAY, NEW YORK.

Agents for W. & C. SCOTT & SONS.

English Bicycles a Specialty.

R. V. SCHUYLER, J. R. SCHUYLER, J. M. DUANE
Of the late firm of SCHUYLER, HARTLEY & GRAHAM. Special.

Best Hunting Arm in the World. Send stamp for circular and price list. New Haven, Conn. P. O. B. 715. New York Salesroom: With Messrs. John P. Moore's Sons, 802 Broadway, where our goods can be had at factory prices.

The Hazard Powder Co., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting." Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 and 12 1/2 kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFG FFG and "Sea Shooting." FG in kegs of 25, 12, and 6 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. cans. Burns strong and moist. The FFG and FG are favorite brands for ordinary sporting, and it is equally serviceable for muzzle or breech-loaders.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT. IF ANY REQUIRED, OIL OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

A Skin of Beauty is a Joy Forever.

DR. T. FELIX GOURAUD's

Original Cream or Magical Beautifier

Removes Tan, Pimples, Moth-Patches and all blemishes of beauty. It has a good effect on the skin of thirty years, and is so harmless that you can use it to be sure the preparation is properly made. Accept no counterfeit of similar name. The distinguished Dr. L. A. Sayre said to a lady of the same sex: "As you ladies will use them, I recommend 'Gouraud's Cream' as the least harmful of all the skin preparations." Also, Dr. R. B. Williams removes superfluous hair without injury to the skin. MRS. M. B. T. GOURAUD, Sole Prop., 43 Bond St., N. Y.

For sale by all Druggists and Fancy Goods Dealers throughout the United States, Canada and Europe. Also found in New York City at R. H. Macy & Co., Stern Bros., Ehrlich & Co., L. Bloom & Bro. and other Fancy Goods Dealers. Beware of base imitations which are abroad. We offer \$1.00 Reward for the arrest and proof of any one selling the same.

BRADFORD & ANTHONY,

774 Washington Street, Boston, Mass., Importers of English Fish Hooks, English Reels, Swivels, Silver Fishing Gimp, Artificial Baits, Spanish Silkworm Gut, Calcutta and Japan Bamboo Poles.

Sole selling agents for United States Fish Hook Works. Sole selling agents for the Fishing Lines bearing the Trade Mark "Best Quality Hand-Laid Line and Silk Lines," which received Centennial Medal for "strength and care taken in manufacturing." Sole selling agents for the Patent Adjustable Floats and Sinkers. Sole selling agents for Braided Fishing Lines. Trade mark, GLOBE. Sole selling agents for Enamelled Waterproof Braided Fishing Lines. Trade mark, a silver medal. Selling agents for the best manufactured joint Fishing Rods. Sole selling agents for the best Trade List, Brass, Nickel Plated and Rubber Fishing Reels. Selling agents for Skinners, Best's, McHardy's and Mann's Trolling Bats. Selling agents for Union Web Hammocks.

\$5 to \$20 per day at home. Samples worth \$5 rec. Address, BRADFORD & ANTHONY, Portland, Maine.

The Baker Guns.

OUR DOUBLE GUN. The Best Gun made for DURABILITY AND SHOOTING QUALITIES

PRICE, BEST ENGLISH TWIST BARRELS, DAMASCUS STEEL, \$40 - \$55 to \$200

PRICE, \$75 to \$250

"This gun is light and compact, from 6 to 10 lbs. weight. The rifle is perfectly accurate."

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, May 12.

SPRING DUCK SHOOTING, and its effects upon the game supply, is a subject which is attracting the attention of sportsmen at various well-known ducking-grounds.

"TO CORRESPONDENTS."—The note with this heading below the table of contents on the fourth page is published every week for the information of all concerned. Read it.

IT IS STATED that since May 1 there have been a good many snipe killed in New Jersey. The birds came on late, and lingered longer than usual. It is hardly necessary to say that the shooting of snipe at this date is scarcely less reprehensible than would be the shooting of quail or woodcock, and is something that should by no means be permitted.

THE PROSPECTS of the Kittyhawk Bay Sportsman's Club has been received at this office, and a few copies can be had on application to us. We learn from this document that \$12,000 is required to complete the purchase of the property, which is already secured, and which includes some of the finest shooting-ground on the North Carolina coast. We shall report from time to time the progress toward final organization of this club.

THE TATHAM WATCH.—We have been shown the watch given by Messrs. Tatham & Bro. as one of the prizes at the coming tournament. The watch is of gold, with engravings of hunting scenes on the front case. It is an elegant and costly piece of work, in the best style of Theodore B. Starr, the well-known jeweler of this city, and its fortunate winner at the coming contest may well be regarded with envy. The watch will be a most valuable and handsome souvenir of its possessor's skill and luck at Coney Island.

WHEN THE ICHTHYOPHAGOUS DINES.

THE article in our last issue giving the date and place of the coming dinner of the Ichthyophagi has sounded the needs of the club far and wide, and friends are offering their services to procure several of the required articles of diet. The hellbenders are secured, the water snakes are promised, and the lake proteus or "lizard," *Menobranchus*, is being sought. No one has yet promised soft shelled turtles, or beaver tails, but they may come.

A caterer has been found in Mr. Murray, who enters into the spirit of the feast with his whole heart. He has longed for such a chance to display his ability, and has experimented with all sorts of strange viands. The Club welcomes him, and he halls the Club as the progressive gastronomical champions of the century.

Sitting on the editorial tripod, late the other night, the uncanny odors of the coming feast were wafted to us, and wrought up by the fumes, like the Delphic priestess of old, the spirit of prophecy came upon us, and we beheld the gathering of the Ichthyophagi. The rhyme ran thus:

When the Ichthyophagus dines

There'll be many a curious dish

Of things never caught with lines,

And not at all like fish—

Steaks of porpoise and ribs of whales,

Salmi of muskrat and beaver tails,

Aspic of jellyfish, octopus stew,

Shark-fin soup and gurry-gur-roo,

When the Ichthyophagus dines.

For the Ichthyophagus eats

All things that live in the sea—

Slimy crawlers instead of meats,

Unusual to you and me.

Menobranchus from out the lakes,

Mud puddles, turtles and water snakes,

Devilled hell-bender with sauce hellgramite,

Garfish older than a croquette,

When the Ichthyophagus dines.

There will come to this Ichthyo feast,

Things that crawl or swim or squirm:

The fish, the scorpion's head,

And the arenaceous worm.

The garrulous frog and the frisky skate,

The batrachian toad-fish with flattened pate,

The flying-fish with hyaline wing,

Will come with sea nettles, which prick and sting,

When the Ichthyophagus dines.

The eel and the sturgeon will come,

And the lamprey with his nine eyes,

The swordfish and croaking drum,

And the sculpin with look of surprise.

The gurnard will walk arm-in-arm with the dab,

The horse-foot will waltz with the great spider crab,

The silken-eyed angler will ogre the sprat,

And the devil fish twine the shrimps round his hat

When the Ichthyophagus dines.

The fiddler crabs will fiddle

To the crowd so strange and weird,

And the prawns dance down the middle

While the mussel strokes his beard.

The oysters will swim in cuttlefish ink,

The starfish will tip the soft clam a wink;

Periwinkles served in sillery-go-lee,

A slight worth footing it miles to see,

When the Ichthyophagus dines.

When the Ichthyophagus dines

There'll be queer frog to eat;

The usual thing in the way of wines

And a single course of meat.

The lobster will come in his coat of mail;

Weak stomachs will shrink from eating the snail,

But the brave ones will sample every dish,

Whether water-snake, muskrat, snail or fish,

When the Ichthyophagus dines.

THE date of the Coney Island tournament has been fixed. The convention will be called for June 20. The Long Island Association reports an ample prize list. The preliminary preparations are rapidly being disposed of, and the Island itself is assuming its festive garb. In addition to the usual attractions of the State shoot, those which are peculiar to Coney Island will this year offer special inducements for a large representation of the interior clubs. If a delegation does not even win one of the many superb prizes, the novelty of the scene at New York's great watering-place will fully repay the visitors.

AN EXTENDED REVIEW of Mr. W. W. Greener's new book on the gun is in type, and will be published next week.

PROVISION AGAINST ACCIDENT.—Special attention is invited to the card elsewhere of the Travelers Insurance Company of Hartford, Conn. We are not disposed to rate the sportsman as subject to special risk from the use of firearms; but the frequency of accidents in every pursuit and avocation, and amid the accustomed surroundings of daily life, is so great, that it is certainly the part of wisdom to make some provision against the possible losses incurred. With the present admirable system of the company, the failure to secure a policy may present itself as a most serious neglect of duty. We have no hesitation in indorsing the Travelers and its methods, and commending it to the readers of FOREST AND STREAM. We have had personal knowledge of the New York management of the company for more than sixteen years, and believe it to be above reproach; the company is trustworthy, and has a name for prompt and fair dealing with its policy-holders. During the past year it paid out 11,774 claims, or an average per month of nearly 1,000. There was about one payment to every eight risks assumed, a strong evidence both of the frequency of accidents and of the beneficial working of the system, which is still further shown by the fact that the total number of claims paid by the Travelers is over 50,000. In conclusion, without further suggesting the worth of this system of insurance, we commend our readers to communicate with the New York agent, and having secured the information which he is ready to furnish, to judge for themselves of the merits of the Travelers Life and Accident Insurance Company.

NEBRASKA BENCH SHOW.—This show, which is to be held at Lincoln, Neb., on May 17, 18, 19 and 20, under the auspices of the Lincoln Sportsmen's Club, will take place in connection with the seventh annual Nebraska State Sportsmen's Tournament. The official catalogue announces that the exhibition will be for hunting-dogs only, and that the entries will close, May 17, at 9 o'clock a. m. Thirty a. s. es have been opened, and the premium list gives \$5 prizes to first prize winners, and \$3 for seconds. There are champion classes for pointers, English setters, Irish setters, and Gordon setters, one for dogs and one for bitches; and open classes for dogs and bitches of the same breeds. The same breeds also receive recognition in dog and bitch puppy classes, and in addition, there are classes, one each for Chesapeake Bay dogs, Irish water spaniels, cocker spaniels, other spaniels, greyhounds and deerhounds. The show will be conducted under the rules of the National American Kennel Club, with slight modifications. The awarding committee will consist of Messrs. Samuel M. Chapman, J. T. McCartney and F. E. Brown, who are empowered to award a V. H. C. and a C. one in each class on merit. Isaac T. Webster, U. S. A., has been selected as superintendent. The show promises to be a success.

THE CHEAP GUN PHILANTHROPIST is out again with his glaring advertisements of \$20 guns, which he is eager to furnish to bumpkins and greenies for \$7 each. The President (with a capital P) of a Ducking (with a capital D) Club has bought one of these \$20 guns for \$7, and thinks it fully equal to a \$90 arm at the most ridiculous calculation. Numerous other equally egegent proofs of the excellence of these arms are set forth for the edification of the Cheap Gun Philanthropist's pocket. We advise those in search of a gun to give the \$7 arms a wide berth.

QUAKERS AND ANGLERS.—This is an age of "magnetic," "galvanic" and "electric" frauds. There are suits of magnetic clothing, which ward off disease; electric hair-brushes, to cure all the ills of modern society; magnetic breast-plates, to be worn as shields against contagion; electric female garters, to develop the limbs; and now, last of all, comes the electric wristlet, to strengthen the grip of the fisherman, that he may handle his rod without fatigue. We have endured without complaint the pretensions of the clothing, shield, brush and garter quacks, but the "wristlet" wrinkle awakens our indignation.

WE have been shown some of the artist's proofs of the illustrations of Mr. Thos. Sedgwick Steele's forthcoming book, "Paddle and Portage," and we find them perfect gems. The book, we may safely premise, will be one of the most elaborate things of the kind ever published.

Natural History.

WALLACE'S ISLAND LIFE.*

holder, who observes an unwonted commotion in the branches of his favorite Pearmain, what time apples be ruddy and small boys do most abound. But when I spied the marauder, I was as much astonished, as would be the aforesaid householder should he discover his trusted Maltese cat in the act of mauling and devouring the cherished fruit. On account of the steep slope of the hillside, the upper branches of the bush hung so low as to touch the ground, and there, perched upon a convenient stone, sat a little mountain-weasel crumming his maw with the delicious berries. The small rascal had donned his winter suit of snowy ermine, in contrast to which the black tip of his tail shone blacker than ever. In cating he held the berry upon the rock, between his fore-paws, and nibbled at it as daintily as Miss Whyte-Kydds would taste a chocolate bun-bun. With him cleanliness was one of the cardinal virtues, as he smimed against etiquette by carefully making his toilette after every course, washing first his hands and, then his face, next combing his hair, and lastly brushing the crumbs off his fur suit, of which he was very proud. From the care taken to keep it from being soiled, I judge it was the first one he had ever owned, and that, being too poor to afford another one till next winter, he felt that he should keep it as immaculate as possible.

Having eaten five or six berries, he happened to turn his head, and caught me in the impoliteness of spying upon him. Paralyzed for a moment at my lack of breeding, he soon recovered, resolved himself into a flash of white light, and, in the felicitous phrase of a Western editor, "hctook himself to the solitude of his own privacy." His departure was so sudden that nothing short of the Yankee comparison of "quicker'n a wink of greased lightning" could describe it. Telling Ignotus of my adventure, he said they had been known to run so fast, when badly scared, as to set their fur on fire; at least, so he had heard; but, as he had not seen to more than half believe the story, I, too, felt justified in receiving it with a modicum of doubt.

After we had gone to bed, we found we were out the only inhabitants of the cabin. A large family of mountain rats had taken possession, and the blowing out of the candle was the signal for the commencement of a nocturnal "jam-boree." (By the right of pre-emption that word belongs to Ignotus; but I am forced to "jump his claim," as to no other expression will describe the performance.) We had put our bread in a tin pan, turned another one over that, set the heavy iron cover of the bake-oven on top of it, and fondly imagined our improvised safe was burglar proof; but the unblinking of the lid to the ground and the rattling fall of the covering tin pan had shattered our mistake.

With a snatched blanket, Ignotus, who slept in the lower bunk, arose and replaced them. Another tumble and rattle, another skurry of the retreating enemy up the cabin walls, another midnight procession over the cold dirt floor, and Ignotus again sought his blankets. After two more repetitious his patience was exhausted, and I heard him in the darkness engaged in some mysterious performance, after which he again lay down. We had just dozed off, when there came a mighty clatter of tubware and Ignotus, jumping up and lighting a candle, showed us his ratship caught in an ingenious trap. Tomatoes had formed part of our supper, and the can which held them had been opened by two cuts in the top in the shape of a Greek cross, leaving four projecting points of tin. These Ignotus had bent down inside the can, and at the bottom had put a little butter, of which these rats are very fond. When the thief had secured the tempting bait, he attempted to withdraw his head, the sharp point had caught him under the jaws, and he was a prisoner. Having "caught our hare," Ignotus proceeded to "cook" him with a billet of wood, and we again lay down. Whether he was chief commissary, or whether his terrible fate deterred the rest, is uncertain, but we were not annoyed any more during the night.

THE GATEWAY TO THE PLAINS.

DETROIT, Minn., Feb. 14, 1891.

ALTHOUGH the world is predicted to close his career during the year, and become, as it were, an incident of the past, we beg leave once more to call the attention of your readers to this land away to the North, where but a short time ago nobody but the red-man roamed over the vast prairies between here and the Rocky Mountains, and the antelope and elk bounded over hill and knoll as free as the wind. I remember to sit with my bow and arrow, as the buffalo grazed in vast herds where now their white and bleached bones checker the wheat-fields of the sturdy farmer, grim emblems of the past. To a person who has never been in the West and seen these vast stretches of land, without even a shrub or tree to mark their surface for hundreds upon hundreds of miles, the realization of their magnitude can be but feebly portrayed in the mind.

Detrol is, in one sense of the word, the gateway to these vast plains on the line of the Northern Pacific Railroad, for to the east of it extend those mighty forests which cover the northern parts of Minnesota, Michigan and Wisconsin, while to the west the prairie begins and continues in an unbroken stretch to the Rocky Mountains. The prairie is rolling with alternate highlands and marshes, in which the wild fowl congregate thickly in the spring and fall, until it reaches the Red River level, where it widens into the lowlands and prairie marshes. A faint idea of the nature of these prairies can be obtained when the method of plowing pursued on some of the great farms there is mentioned. The plowman in his day's work takes a straight course and keeps his single-furrow until noon, when he turns around and occupies the remainder of the day on the return trip, thus making but two furrows in a whole day. This may sound a little "fussy" to some Eastern people, but it is a fact, never to be forgotten, well known out here.

Deer, nose and chicken shooting occupied the attention of our sportsmen here during the fall months, and rich harvests were reaped by them. There came winter and with it the sport of deer stouling, and many a proud old buck stained the white mantle of mother earth the morning after the first snow with his life-blood. The deer were never known to have been as thick in this county as they were this season, and thousands of them were killed about here alone. The extreme cold put a stop to the exciting sport of deer shooting, and as an occasional warm day presented itself our sportsmen started out and had a rabbit hunt or tried their luck at angling through holes in the ice. Some of them have pretty good luck and obtain fine strings not uncomfortable to carry in a few hours.

HIAWATHA.

THE ATTENTION OF TOURISTS is called to the advertisements of CHAS. J. GREENOUGH, SARANAC LAKE, NEW YORK, and of KENNEDY SMITH, EUSTIS, MAINE.

Few works on science have attracted more general attention and admiration than those of Mr. Wallace, and few have met with more general appreciation and acceptance among naturalists. Well known in the scientific world as having independently worked out the law of Natural Selection, which he announced at the same time with Darwin, and the author of numerous works of importance, he stands in the very front ranks of England's scientific men.

His Geographical Distribution of Animals, published in 1876 by the Harpers, is justly regarded as one of his greatest works, and to this the present volume is, in some sort, a supplement and completion.

The study of the fauna and flora of islands, as distinguished from continental life, is marked by many and serious difficulties, and in many cases the knowledge that we require can never be obtained, owing to the settlement of the country and the consequent destruction of the forests and introduction of exotic species of plants and animals, which must obscure the extensive list of indigenous forms of life. A true and natural classification of plants and animals is required for the intelligent pursuit of this study, and though this is now being reached, it is too late in many instances for us to benefit by it. The doctrine of evolution, or to use a term as expressive and more generally understood, "descent with modification," is the key to the problems which we have to work out, and it is only since 1859 that this doctrine has been set before us in its full clearness, and has received general acceptance. So long as the various forms of life could be accounted for on the theory of a special creation for each one, there was manifestly no further explanation required of the phenomena of the distribution of plants and animals. If each form of life was created and placed in its special habitat, everything was said, we could not go back of that.

The conditions which serve to influence the distribution of life are so many and various, and the factors requiring attention are so intricate, that until the present time, the problems presented to us have never been satisfactorily explained. The traveler in Northern Japan will find there birds which he has been accustomed to see in Great Britain, some species being the same, others closely similar, though he is separated from that island by the whole breadth of a great continent. But let one who is familiar with the fauna of Australia proceed to New Zealand, only thirty hundred miles distant, and he will find almost every form of life, whether animal or vegetable, wholly unlike what he has been accustomed to in the neighboring continent. In the Malay Archipelago is a still more striking instance. The islands of Bali and Lombok, each about as large as Corsica, are separated by a strait only fifteen miles across, yet these two islands differ more widely in their birds and quadrupeds than do England and Japan. On this continent we have a similar case. The flora and fauna of the Hawaiian Islands, which lie southward from Northern New England, changes somewhat, becoming more luxuriant as we approach the Gulf, but not altering its essential character, even at the Southern extremity of Florida. But just across the narrow strait which divides that peninsula from the Bahamas, is a vegetation truly tropical, and with it a bird and insect fauna almost identical with that of Cuba. Paleontology gives us much assistance in working out the genetic connection of the various forms of life existing upon the earth. In some cases, the ancestors of living forms have been traced back through their various changes and modifications to the beginning of Tertiary time, while, too, many evidences of the migrations of certain groups are furnished by their fossil remains, and the proofs of such migrations shed a flood of light on the present distribution of many existing animals. The knowledge derived from stratigraphical geology is also very important, for from we learn what portions of the earth have been long submerged beneath the surface of the ocean, and thus what portions have long been isolated and allowed the time for the development of a special flora and fauna of their own.

Other and even more important classes of evidence are the great changes of climate which have taken place both in the polar and temperate zones—which are shown by the evidences of a luxuriant vegetation in the former, and of glacial ice in the latter, and the great permanency of existing oceans and continents. It is now generally believed that mild climates near the poles and periods of intense cold in temperate regions have several times in the course of the world's history alternated with climatic conditions not markedly different from those now existing, and the influences of such changes upon life as regards the migration, the modification and the extinction of species can scarcely be over estimated. The theory of the substantial permanency of continental and oceanic areas is a new one, and is as yet very imperfectly understood. It is, however, thoroughly believed in by Mr. Wallace, and there seems to be good evidence in support of it.

After presenting us with a vast amount of information on the distribution of different forms of life on islands and continents, Mr. Wallace summarizes the facts which he has brought together, and in the concluding chapter of his work gives the results of his study of the most difficult subject. He says, in brief,

That the distribution of the various species and groups of living things over the earth's surface, and their aggregation in definite assemblages in certain areas are the direct result and outcome of a complex set of causes, which may be grouped under "biological" and "physical." The biological causes are mainly of two kinds—firstly, the constant tendency of all organisms to increase in numbers and to occupy a wider area, and their various powers of dispersion and migrations through which, when unobscured, they are enabled to reach widely over the globe; and, secondly, the laws of evolution and extinction which determine the manner in which groups of organisms arise and grow, reach their maximum, and then dwindle away often breaking up into separate portions which survive in very remote regions. The physical causes are also mainly of two kinds. We have, first, the geographical changes which at one time isolate a whole fauna and flora, at another time lead to their dispersal and intermixture with other faunas and floras; and it was important to ascertain the exact nature and extent of these changes, and to determine the question of the general stability or instability of continents and oceans; in the second place it was necessary to determine the exact nature, extent and frequency of the changes of climate which have taken place in various parts of the earth, because such changes are among the most powerful agents in causing

the dispersal and extinction of plants and animals. Hence the importance attached to the question of geological climates and the causes which have been here investigated at some length with the aid of the most recent researches of geologists, physicists and explorers. These various inquiries lead us on to an investigation of stratified deposits with a view to ascertain some limits their present age; and also to a study of the probable rate of development of the organic world; and both these processes are shown to involve, in all probability, periods of time much less vast than have generally been thought necessary.

Having done so much in the First Part of his work, Mr. Wallace then proceeds to apply the facts and theories already established to the explanation of the phenomena exhibited by the faunas and floras of the principal islands of the globe, which he classifies in three groups in accordance with their physical origin, each of which exhibits certain well-marked biological features.

Of all the conclusions which the author draws, perhaps the most important is that with regard to the age of the earth which we inhabit, or more properly, that which treats of geological time as bearing on the development of life, and with an abstract of his remarks on this subject we must close our review of this most interesting work. The periods of time usually demanded by the geologist for the development of the world have been very great, but we find that the earliest fossiliferous rocks evidences of the existence of many forms which require vast periods of time for their development. The physicist, however, denies that any such enormous periods of time are available. The sun is losing heat more rapidly than it could acquire it from any conceivable source, and the earth is cooling and must once have been too hot to admit of the existence of life upon its surface; the friction of the tides is constantly working its rotation, and this cannot have gone on indefinitely without making our day much longer than it is. By means of various estimates, which need not here be gone into, it is shown that the rate of modification in the organic world, in remote geological time, was probably much greater than it now is, and that at the present epoch the earth is in a "phase of exceptional stability both physical and organic, and it is from this period of exceptional stability that our notions of the very slow rate of change have been derived.

Mr. Wallace's work is replete with new facts, and gives us the views of the most advanced thinkers of Europe. It is of the utmost value to science. Besides this it comprises a fund of interesting information on natural history that will recommend it to a very large class of readers who have no special scientific knowledge.

MIGRATORY BIRDS AT QUEBEC.

WHILE New York and adjacent States lay hurried under a deep coating of snow, swept by Boreas in no gentle humor, we, of the province of Quebec, have stood *bona fide* Beant, at the bare idea that for once the old tyrant, in a moment of hilarity, should have vaulted over us to wreak his malignity beyond the line 45 deg. We record an exceptionally mild winter, followed by a precocious spring. Isothermal freak notwithstanding, migratory birds do not appear to have been much influenced by this abnormal state of weather. The following extracts from my note-book show no very marked deviation from their ordinary time of arrival here the last five years—

March.

- 3. Pine Grosbeak, returning North. Mr. J. M. Lemoine informed me that he noticed a few up to 15th inst. Snow blitting at Lyster.
6. Bald Eagle at Cape Sante.
8. Shore-Lark. Never abundant.
15. Crows 10 days late.
16. Canada Geese. Flying N. E.

April.

- 1. Wilson's snow bird, or "Nun" (*Junco hyemalis*) we presume to flight to this date.
11. Song-Sparrow (*Rossignol*). Five days early. Herring Gulls.
14. Robins. Five days late; very abundant 30th. Ring-legged Buzard on one occasion noticed February 28th. I have never seen the *Var. sancti-johannis*. Wood-cock (see *Quebec Morning Chronicle*), rather early.
22. Snow-Geese. Rare; irregular. Shrike (*C. borealis*), ordinary time.
23. Field Cuckoo, flushed in pasture field ponds. Swallows (city) reported by H. C. early.
23. Tree Sparrow (*S. monticola*), irregular.
24. Savannah Sparrow, not common.
25. Wilson's Snipe (*A. Beccanini*), ordinary time.
26. Hermit Thrush. A warbler not identified. Wood-cock—flushed Chestnut Cove—late. Bullfinch (*B. albicollis*).
27. Purple Finch, occasionally noticed the year round. Blackbirds, ordinary time. Binohird, first observed to breed here last season. Golden-winged Wood Pecker, ordinary time. White-throated Sparrow, ordinary time. South-southerly, of Cape Horn. Mallard, very rare in this section.
28. Grass Finch, usual time.
29. Fish Hawk (*P. Carolinensis*) shot on day previous at Grenacres by a gunner, who offered it for sale on board steamer *D'Etobit*.
30. House Wren, rare in this locality. Yellow Rump Warbler in scattered bands. The first Butterfly of the season was observed to flutter about merrily on the 9th. Frogs held a weak rehearsal on the 23d (*no treat* us to a full chorus). A Ribbon Snake was noticed quite lively on the 25th, and these busy bodies, the bumble bees, put in a first appearance on the 30th.

Gardening in sheltered localities commenced on the 13th. Potato planting (Roberts & Copeman), on a large scale, began on the 15th. Since then, farming operation progressing without interruption. J. N.

Dorvald, Cap Rouge Road, St. Foye (near Quebec), April 30th, 1881.

CRIOUS HABIT OF A WOODPECKER.—The following note is taken from the *New York Sun*, and calls attention to a habit that we have never noticed in a woodpecker. It is one that one often sees the common and widely distributed red headed woodpecker rattle on the dry shingles of a barn, or against a loose board on the side of a house, where his only object, so far as we could be divined, was to make a noise, but we have never known of this being done regularly as appears to have been the case in the instance referred to. We presume that the species referred to is the California woodpecker, *Melanerpes formicivorus*. The note is as fol-

*Island Life, or the Phenomena and Causes of Insular Faunas and Floras: INCLUDING A REVISION OF THE SO-CALLED "LAW OF PROF. WALLACE'S ISLAND LIFE," by Alfred Russel Wallace, New York: Harper & Brothers, 1881.

Notwithstanding that this subject has been so often commented upon by the public press, and by sportsmen of the true type by the same medium, nothing was done at the last session of the Ontario Legislature to put a stop to the criminal practice of spring shooting. Year after year it has become apparent to those who observe and take an interest in game protection how fast this species of game is diminishing, and that mainly owing to the negligence or apathy of our legislators. We claim that no argument can possibly be adduced in justification of the practice at present tolerated by law in this wanton and indiscriminate slaughter in the breeding season. We are aware that individuals, some of whom are simply interested in the matter, and who still advocate spring shooting, do so for the mere sport, while others approve from a pecuniary and sordid motive. But then, to prove from a scientific and humane standpoint, there is but little or no distinction between the criminals. In this section, for a month at least, thousands upon thousands of ducks have been slaughtered, either to gratify the former's morbid taste or the latter's greed for gain. "And how many a birdling thus shot on the wing, while others are sent maimed on their journey." But it is not in this duck-shooting alone that the same cruel and unfeeling spirit is manifested by law fall a prey to this class of so-called sportsmen, as long as our law-makers aid and abet the crime, we may reflect that in a few years more our commonwealth in the matter of game will have become so depleted that an entire prohibition for a series of years must ensue.—*Winslow Correspondent Toronto Mail.*

AN ANTELOPE SHOOTING STRATAGEM.—We left Edgerton, Colorado, on the Denver and Rio Grande Railroad, with no place in view, but intending to go east or southeast until we struck game. We were very pretty lucky in our quest, and on the second day found ourselves in the most exciting, and as it was the second day of the shooting season when we arrived at our destination, we found the antelope very tame, and in a week had shot as many as our two ponies could draw home. Encouraged by our first success, we started out again two months later, and although we located our camp in the same place, we found things very different from our first visit. The antelope were not so tame, and in fact, eighty or one hundred yards off, they would not even allow them to be hunted so much that it required considerable skill to get within even three or four hundred yards of them. We had lain behind soapweds and sage bushes for two or three hours at a time, waiting for the game to feed up to us, but in every instance something either startled them or they got within range or they changed their direction on the morning of the fourth day we heard a low rumbling of bacon, and concluded that we would try one more, and then "break camp." We hit upon the following plan. We put a bridle on one of the ponies, and both mounting, we hoisted a sheet of brown paper in front of us, leaving a couple of holes as points of observation, and commenced our advance on a herd quietly grazing a mile away. Although we were in plain sight, they did not seem to notice us until we were within half a mile, then they turned their heads and sniffed the air, and as we advanced they came forward about fifteen or twenty yards, craning their necks, trying to make out what it was coming. When we were within eighty yards we stopped, and, slipping quickly off the horse, I dropped on my knee, raised my piece, and at the word "fire" we both fired, both balls taking effect. At the sound of the reports the herd started and ran, but instead of turning tail they described a circle round us; this enabled us to put in two more shots each, but only one took effect. We collected the spoils after some trouble. We sat down to dinner with lighter hearts than we commenced the morning with, and on no occasion has an antelope steak tasted richer to me than it did that day. We found exercise and fresh air rather soon after the venison than we had craved. We tried the same plan several times on a later trip we took and found it work well each time.—*G. B. H.*

DOGS AS RAILROAD BAGGAGE.—Chelsea, Mass., April 6.—Why is it that the railroads advertise in the columns of your valuable paper to ship one dog for each sportsman free? In your issue of March 17 is a statement from "Kenwock," which is an outrageous outrage. Now, if these railroads advertise to do this and so, why would it not be a good idea to paste one of their advertisements on each dog, and if it is the baggage man, enter a complaint? My experience is different from Kenwock's. On Nov. 9, 1880, I left Boston, via New York and New England, for Gordonsville, Va. I inquired at the office what would be the charge on my dog, and was informed not a cent. I asked if the baggage man were allowed to charge anything, and was informed that they were not. I then asked the baggage man what he would charge to take care of my dog to Washington, D. C., and was almost paralyzed when he told me fifty cents. I gave him one dollar, and did not see him again, but my dog was O. K., and in Washington on the same train as myself, and in as good condition as myself.

Now, to Gordonsville is less than 100 miles. I asked the baggage man how much for my dog—fifty cents again. I paid it. My dog was passed to me by the baggage man at Gordonsville all right. If I had not had this experience, and at so little expense, I should doubt Kenwock's statement. But south of Gordonsville they (baggage men) perhaps have no conscience. By answering this through your valuable paper you will confer a great favor on a constant reader.

I wish to say I found at Gordonsville abundant numbers of quail and partridge, wild turkey and woodcock in fair numbers, and hares in abundance. Also the best accommodation at the Magnolia House, kept by Mr. Mayhew, and Capt. Harry Carter Clerk one of the best of fellows. Wishing the success to your valuable paper which it deserves.—I remain,

CHAS. H. SINGLAIR.

THE STATE TOURNAMENT.—A meeting of the Long Island Sportsmen's Association was held Friday evening, May 6, Vice-President Cook in the chair. The prize committee reported that they had received eighty prizes of the aggregate value of between \$5,000 and \$8,000. The bird committee reported everything favorable for a large number of birds. The game law committee reported that the Long Island Association bill was practically killed, and that the bill known as the Armstrong bill had been reported favorably and ordered for a third reading. On a motion by Mr. Altenbrand, the secretary was instructed to write to the members representing Long Island, and have them try to insert in the Armstrong bill as amendments, the bill of the Long Island Association bill relating to woodcock, Convey to the members of game protectors and ruffed grouse, and if they could not do this to try and defeat it. The committee on finance are to

provide badges for the members of the association and for all others that they may see fit, that will serve as a passport to the freedom of the grounds. It was decided to call the convention for June 20. A committee to be appointed by the chair are to arrange the order of shooting, the prizes and to consider the propriety of having a shoot open to all on the two days following the tournament, and are to report to the association.

CURTAIN.—There have been, perhaps, more wild fowl, ducks, geese and swan, shot at Currituck during the past season than there has in any season for ten years. It is worthy of note to think what a vast quantity of game has been shipped from our sound this fall and winter past. Eighteen years of experience will enable me to estimate the numbers very closely. From Oct. 11, 1880, to March 25, 1881, I have shot 1,700 ducks, 43 geese and 31 swan, making in all 1,769 birds. There are about 400 gunners in the Sound, including sportsmen from the North. Some of the gunners have shot three to four thousand each. Two of them have shot more than two thousand to each gunner, that will be 800,000 birds were killed in our little Sound in less than six months. Is there a sound, river or lake in the United States that can produce as many birds of the same kind and in the same length of time?—*J. B. WHITE.*

CONNOTICUT.—The only amendment of the Connecticut game law, passed at the session of 1881, was as follows: "Section 8. Any person found with a wild dog and gun upon lands where birds mentioned in Sec. 1 of this act are known to exist, shall be deemed *prima facie* to be there for the purpose of pursuing said birds with intent to kill, and the owner of such lands, with such others as he may command to assist him, may arrest such person while on said land, if he refuses to leave the same at once, forthwith carry him before a justice of the peace, who, upon the written complaint of such owner, shall proceed to try said person in all respects as if he had been complained against by a grand juror or other proper informing officer, and, in case of a conviction under any of the sections of this act, one-half of the fine imposed by the Court shall be paid to the informer."

MINNESOTA SEASON.—Minnesota game law was amended, Feb. 26. Open season, woodcock, July 1st to Sept. 1st. August, September and October. Pinnated and sharp-tailed quail, quail and stuffed grouse, September, October and November. Aquatic pond, September 1st to May 15th. Fine of \$5 to \$50, or forfeiture of guns, sporting implements, dogs and game, together with costs of prosecution, or both at discretion of court.

ENGLISH SNIP ON TOAST.—These birds should not be drawn. Pluck them, wipe them and trim the head under the wing, which, like the neck, must be skinned. Press the feet upon the thighs and pass a skewer through them and the body. Put four on each skewer, tie them to a spit and roast them at an open fire for a quarter of an hour. Put slices of toast in the dripping pan under the birds to catch the trails, and on these toast serve the snipe, after flouting and browning them. Add a little brown gravy. These birds must be eaten very hot.—*The Gastronomist.*

SMALL CALIBERS FOR GAME.—Philadelphia, April 24.—I have been intending buying for some time a small bore rifle for small game shooting, principally squirrels, and, while I should like for many reasons a .22 cal., have been in much doubt as to their force and accuracy up to 75 or 100 yards. I should like very much to hear the experience of others who have used these light bore on game.—*T. J. S.*

NEBRASKA TOURNAMENT.—The seventh annual Nebraska State Sportsmen's Tournament will be held at Lincoln, Neb., May 17 to 20 inclusive. The prize list aggregates \$2,265. The Nebraska State Sportsmen's Association will convene Tuesday evening, May 17th. The secretary is Mr. E. Hallelt, Lincoln, Neb.

GEORGE W. FLOWER.—George W. Flower, of Watertown, New York, died in this city last Wednesday evening. Mr. Flower was well known to the members of the New York State Association, of which, in 1874, he was the President. He was a prominent citizen of Watertown, having been its first mayor.

THE MANY FRIENDS OF MR. C. S. SHATTUCK, the manufacturer of single-barrel guns, will learn with pleasure that he is getting into shape again after the destruction of his factory by fire some months ago. The new factory, we are informed, will be ready for work June 1, 1881.

NEW JERSEY.—There were some snipe on the Big Piece at Pine Brook, N. J., last week—the first lot this year. Newark Meadow also had a sprinkling last week.

WE HAVE A LIMITED NUMBER OF OUR PAMPHLETS ON "Dittmar Sporting Powder." Copies may be had on application at this office.

Camp Fire Flickerings.

By the way, that reminds me—

THAT "Uncle's" story in issue of April 28 reminds me of a deer shooting incident here in Detroit, Minn. One man last Winter killed thirty, another twenty, and so on, while one fellow had the extraordinary luck, cheek, or whatever you may wish to style it, in bringing down two at one shot, and with a rifle at that. While out in the woods he saw them standing still, unconscious of his presence, and just as he pulled the trigger they moved alongside of each other and both received the fatal bullet. I have never heard of a similar occurrence, and do not think its like was ever accomplished.—*HIAWATHA.*

THE fox-hunting stories in the late numbers of your paper bring to my mind an anecdote narrated to me by a friend of mine, a gentleman of impeccable veracity. In the latter part of March or the first part of April we often have on moonlight nights very pretty fox hunts. About four or five weeks ago my friend and two gentlemen rode with a good pack of dogs to a den where a fox had young ones. They stationed a man at the den to keep the fox out until the second or third day. The dogs soon made the woods echo, and made one round, running hard, and then all was still as death, and the dogs one after another came in.

The man at the den was sure that the fox had not run in, and so there was nothing to do but to blame the dogs and to start for another den; there the performance was repeated, but, *mirabile dictu*, they heard the old fox barking in the woods not a hundred yards away. They at once looked on the dogs, but they would not run. Now, as to whether the dogs were more humane than the hunters, and would not run an animal that had young to provide for, or whether it was something supernatural, I leave for some of your fox-hunting subscribers to explain.—*D.*

CLERGYMEN, LAWYERS, EDITORS, BANKERS AND LADIES NEED TOP BITTERS daily for nerve force.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	
Brook Trout, <i>Salmo fontinalis.</i>	White Bass, <i>Roccus cryoptes.</i>
Pickereel, <i>Roccus reticulatus.</i>	Rock Bass, <i>Ambloplites.</i> (Two species).
Pike-perch (wall-eyed pike) <i>Sitichelium americanum, N.</i>	War-mouth, <i>Chonobrythys guttata.</i>
Yellow Perch, <i>Perca flavescens.</i>	Crappie, <i>Pomoxis nigromaculatus.</i>
Striped Bass, <i>Roccus linatus.</i>	Striped Bass, <i>Roccus linatus.</i>
	White Perch, <i>Morone americana.</i>
	Snout of Perch, <i>Neotomus erythrus.</i>
SALT WATER.	
	Pollock, <i>Polachatus americanus.</i>
	Tattler or Blackfish, <i>Taxtoga onitis.</i>

"The 'True Angler' is thoroughly imbued with the spirit of gentle old leach. He has no objection and when a subject is not to be had, can find amusement in catching such fish or roach, and does not despise the sport of any humble brother of the angle. With him fishing is a recreation and a 'calmer of inquiet thoughts.' He never quarrels with his luck, knowing that safety dwells only in the appreciation of sport as much as a want of success, but is ever content when he has done his best, and looks hopefully forward to next propitious day. Whether from lust or rooky shyness, or along the steady bank of the creek, he deems it an achievement to take fish when they are difficult to catch, and his satisfaction is in proportion. His enjoyment consists not only in the taking of fish; he derives much pleasure from the soothing reflexive and delight of the assignments of the art. God be with you gentle fisher, and may the best of our old master, whether you are a top fisher or a bottom fisher; whether your bait be gentles, hawnting, grub, or red worm, crab, shrimp, or minnow, caddis, grasshopper, or the feathery counterfeit of the ephemera. May your thoughts be always peaceful and your heart filled with gratitude to Him who made the country and the trees, and may the east wind never blow when you go fishing."—*THAN. NORTON.*

We are glad to be able to state that we have now a large number of 10-liners near New York where fishing can be had. We shall be glad to supply to such of our readers as may desire the information a list of such places from which they can make a selection. A stamp and addressed envelope must accompany each application.

DUCKS, BLACK BASS AND MASKINGOGE.

ERIC PA., May 2, 1881.

UNTIL within a few days Lake Erie has been covered with an unbroken sheet of ice, but now it is well broken up and has entirely disappeared from the surface from a boat as the bay opened large flocks of duck arrived, and have remained ever since, though they have had little inducement to do so, owing to the hundreds of guns that are constantly banging at them. We are endeavoring to have a law passed prohibiting spring ducking and limiting the shooting in the fall to three days a week—Tuesday, Thursday and Saturday. If they are not disturbed a great many remain here as breed. Our Game Fish Association has planted wild rice for several seasons, and the ducks are yearly becoming more numerous.

Fishing through the ice has been good all winter, the catch being perch, blue pike and herring, with occasionally a pickerel. The black bass appeared April 25, nearly a month earlier than usual. Two boys fishing for hours found a fat one anchored near the ice lauded "eighty-four bass." Since then large numbers have been caught, the best string so far being 102 for one man. They run very large for spring fish; one that I saw weighed going 5 lbs 9 oz. The large perch are also running in, and are so numerous as to be almost a nuisance; they bite as fast as one can drop in his line. In a week or two all the different varieties will have appeared, and we will have great sport. At present, though there are plenty of fish, the wind blowing over the ice is rather uncomfortable.

Our Game Fish Association is an energetic body. We have a fish-warden or detective paid by the city, and in addition the association pays a reward of fifty dollars for information leading to the conviction of any one for violations of the fish law, by selling or giving. We have already convicted and fined one man, and several are awaiting trial.

I have noticed the articles in your late issues calling attention to different points as pleasant places for sportsmen to visit, and I will say this much for Eric, that one who enjoys first-class fishing for bass, maskinonge, pickerel, etc., without being compelled to suffer the discomforts of camp life and the sports attendants of the black fly and mosquito, can do no better than come here at any time until the first of August, or during the fall. In my next I will give an account of some of its advantages. PARSQUO 1881.

KINDRED SPIRITS.

THE long wharf at Mandarin, Florida, stretches some six hundred feet out into the peaceful St. Johns, and hither repair the fishermen after their night's toil in their row-boats with their nets to sell the quivering fish to the inhabitants, and ship the surplus by morning steamer to Jacksonville.

I strolled down the wharf in quest of mess and met a tall, honny fisherman on whose face the habit of fishing all night had left a very plain impression. Did ever any one look so much in need of going to bed early for a few nights and sleeping unincalled in the morning? Not from any apparent fatigue, however. He had got used to fishing all night, and his nature, true to hereditary training, had such transportation of day and night without permitting red the eye and spread

ing over the whole face such a sort of beaten-to-death countenance was visible.

"Haven't got a fish," said he. "No luck at all last night. I should have had some loek, too, if it weren't for a confounded alligator. Gosh, he got in my net and it took me nearly all night to get him out, and that was two of the prettiest schools of bass flopping close by that I ever saw. Instead of getting a good lot of um as I ought ter hev done and would hev done if it wain't for that blasted alligator, here I am this morning with nothing at all in the boat except him."

"I have you got him in the boat," I asked. "Yes" followed he yet want to come down and see him?" I followed him down to the end of the wharf, and proceeding we went his fisher companion, a lad of about seventeen. The boat lay moored to the bulkhead and up above on the wharf, under a shed, sat a half dozen negro women with their babies, waiting for the next steambot.

The boy, with an animated grin, ran down the flight of steps into the boat, and as we approached pulled out an alligator, four or five feet long, by a cord that was fastened about its neck, and held it on his knees, bending its tail around from side to side.

The negro women at the first look grabbed their babies, and fled in all directions, notwithstanding the boy's good-natured, "He won't hurt you." He picked him up and put him down, coiled his tail, rubbed his sides and put his ugly head into the boat, and as we approached pulled out an alligator, four or five feet long, by a cord that was fastened about its neck, and held it on his knees, bending its tail around from side to side.

"No," alligators won't generally bite?" said my fisherman, "unless you tantalize him. That boy there" he continued "is just like a boy; just as quick as his head is down in the water as his aspick."

Now this seemed just unlike most babies to me, but maybe he was janned for a comparison, so I said nothing, while he went on:

"Last night, sir, after we ketchted that 'gator we put him in the bottom of the boat forward, and that boy there went and laid right down alongside of him, and I'll be danged, sir, if he and the alligator didn't sleep together, rolled in the same blanket, and as we approached pulled out an alligator, four or five feet long, by a cord that was fastened about its neck, and held it on his knees, bending its tail around from side to side."

I looked in the boy's face for some trace of kinship to the ugly Saurian, or some sign of that which had won its mild behavior, but the kind eyes and look of jolly good nature were all I could see. I know not whether that friend of animals, the renowned Bergh, adds a jolly disposition to his humane treatment of the brutes, but here is a lesson, if it be a lesson, which it has apparently won the heart of even so un-motherly a beast as an alligator, and if adopted with more favored animals, who can tell what wonders might result. Possibly if all the winter visitors to Florida were endowed with good-humored, rollicking natures, the ugly brutes might yet be transformed into affectionate domestic pets, which we might lead about with a pink ribbon, or dandle in our arms with interested love.

SPEARING FISH IN MARYLAND WATERS.

MUCH has been said and written lately of the products of the Chesapeake Bay, and of the means used to entrap and secure those products. An American sportsman is just when to visit Maryland in order to obtain the one delicacy that snits his appetite. In summer he has the soft crabs of the Chesapeake and its tributaries, and certainly a more delicious morsel could never have served to the gods. A Baltimorean will boast of this dish and glory over it to a stranger; but let that same Baltimorean go twelve or fifteen miles treatment of the brutes, but here is a lesson, if it be a lesson, which it has apparently won the heart of even so un-motherly a beast as an alligator, and if adopted with more favored animals, who can tell what wonders might result. Possibly if all the winter visitors to Florida were endowed with good-humored, rollicking natures, the ugly brutes might yet be transformed into affectionate domestic pets, which we might lead about with a pink ribbon, or dandle in our arms with interested love.

"But," he continues, "do you mean to persuade me that this is the same species of crab that we consider such a luxury in the city?"

"The very same, only we, living here, can procure them, as the crabbers say, 'just as they have shed,' or, in other words, just after they have worked themselves out of their hard shells. In this condition they are too delicate to be transported. They have to be kept for a day, at least, before they are strong enough to bear even a short journey, and by that time their shells have commenced to harden once more. By the time you buy them they are very apt to have what we would call a paper shell, when to us they are no longer soft crabs. Ah! you must eat them where they are caught to eat them in perfection."

And so it is with most things of the kind—they never taste the same away from their favorite haunts. Crabs, both soft and hard, are caught from the middle of May until the middle of September and are considered a delicacy as long as they last. Catching them has not been as yet turned into a sport, for, unlike the sportsman who brings in the head of a dog or pack to start his game, the crabber must trust to his own eyesight and skill in the use of his crab-net. From sunrise to sunset he wades in the water, dragging his boat along by one hand and using his hands with the other. At times his labors are well rewarded and he finds himself at the end of the day possessed of six, eight or ten dozen crabs; but at other times he will, perhaps, for weeks catch but four or five single crabs a day.

So much for crabs—a subject we had no intention at first of touching on at such length. There are other points in regard to them that I am sure would be of interest; but the subject of this article does not allow a fuller account of them.

The sportsman of Maryland longs for the last of October

and first of November. Then, with his dogs, he scours those parts of the country where he is safe from the penalty of the law, a notice that will at times make the heart of a gunner sink within him, and if he meets with success he is very apt on his return to the city to invite a few select friends to a partridge supper.

Oysters are a third luxury of which much has been said elsewhere. I have never heard them spoken of as a luxury whose capture was indulged in as sport, and yet personally have derived much pleasure from fishing parties that started out to go oystering. The sport consists in vainly endeavoring to fish up the oysters with long rakes. We betide the party who start out without an experienced oysterman on board, who not only fishes up the oysters, but roasts them on the shore afterward.

Spear-fishing, although a means of livelihood for the fisherman and crabber through some of the colder months of the year, seems to be something of which little is known elsewhere. A stranger on one of our duck-crocks is sometimes surprised into an exclamation of astonishment at the appearance of the landspeer, which is lighted up even to the heavens, as though all the woods were in a blaze. A snail will form itself on the features of the native, who pines:

"Oh, that is only some one giggling."

"And pray what is that?"

Accompany us on an expedition of that kind and we will indicate you into one of the most picturesque sports conceivable. Let us choose a picturesque place to begin with. The "Eastern Shore," as all Marylanders call that part of their State that lies east of the Chesapeake, is too low and flat for beauty, and the western shore—well, I think we'll try the Severn up above Annapolis, near its head, where the banks are high, thickly wooded and dotted over with evergreens that give them beauty even in the cold, dreary winter months. Here one of the little crocks that give beauty and romance to the river we may find some fishermen preparing for the night's work. They are an easy-going set, who take life as it comes and find a fund of amusement when together in their own sayings and doings. Evidently they have just been laughing over one of these same jokes, for on the face of an old negro in the background there is a broad grin still visible, and his old head moves from side to side as if he were just about taking in the fun.

"Oh," they say, "they call him, fishes and crabs some in summer, but the entomologist at his side prevent his taking an active part in what those about him are now preparing for. And while we are speaking of Uncle Philip, perhaps you would be interested in knowing his first impressions of an earthquake. Some three years since, this region of country was visited during the winter by a succession of "shocks" quite alarming at times to the dwellers on the soil. The first one occurred on a night that the city of Richmond was roused from its peaceful slumbers and its inhabitants forced into the streets by the unusual sounds and motions accompanying a shock of earthquake. The time was twelve at night, and though Uncle Philip had retired, his worthy better half was still busying herself about household matters. As the rumbling was heard he roused himself and called:

"Lucy, who dat ar drivin' round de house dis time o' night? Take it dat ar good, suvver, suvver."

Then, as the little cabin shook and swayed from side to side, he added:

"Dar, now! He drunk; done run ag'in' de house."

But our fishermen have some of them completed their work for the present, and are preparing to go home for their snappers; so we select one for our guide in the evening, and then examine more particularly their arrangements. The wood that he uses for the handle of his rake is called "light-wood," and is procured from old rotten pine stumps. It is very resinous and gives a brilliant light, which the fishermen tell us is what attracts the fishes. In slavery times, when the negroes were not allowed to have lamps to carry about at night, they would use knots of light-wood for torches.

"What is this?" asks some one, picking up a long wooden handle with an iron instrument at one end that looks like a pitch fork, or a tool for digging out worms. It has three heavy teeth barbed at the ends, and the whole thing resembles Neptune's trident more than anything else.

"That is a jig," is the reply.

"And please tell us if this is what you use to spear the fish with."

The answer only confirms our notions of its being an instrument of torture, and we turn to watch one of the men who has just crossed his boat from side to side a broad board on which he is now placing a long supply of sand.

We begin to see into things a little, and are not surprised, when, after supper, we sunter down to the water to the place where our fisherman was to meet us, to see him building a fire of light-wood on the sand in his boat. How quickly it blazes and how brightly it illuminates everything around. We take our places in the boat and are roved across to one of the smaller creeks, where everything looks wild and unnatural. We feel almost as though we were entering on enchanted ground, and our whisperings soon cease as the fisherman, after putting aside his oars and adding fuel to the fire, noiselessly propels the boat by means of the handle of his jig. Suddenly he raises and reverses it, and even our inexperienced eyes see what has riveted his attention. A fish, attracted by the bright light, has gradually approached the surface of the water, and when nearly there has become a prisoner. We scarcely dare breathe as we wonder what the next move will be; but we have not long to wait, for the jig descends with fatal aim and comes up bearing on its end a bleeding fish.

But, as usual under similar circumstances, we forget the sufferings of the victim and enter into the excitement of the hour, watching for the poor, unsuspecting creatures to appear, and then anxiously noting the descent of the instrument which has become their death-blow.

Our experienced fisherman seldom misses a "strike," but we, who flatter ourselves we know more of physics than this uneducated waterman, are soon compelled to admit that he has practically mastered the laws of refraction, as applied to his particular calling, while we, understanding it in theory, are unable to put it into practice, for our attempts to imitate him and "strike" a fish are signal failures. We only succeed in spearing the fish, which glides swiftly away, to return perhaps in a very few moments to the same spot, becoming perfectly still as before, in a most tantalizing way.

But it is of no use. We try and try again with the same result, and resignedly return the jig to the hands that have become accustomed to its use.

As we turn our faces homeward we notice that our companions have the appearance of having just emerged from a coal mine, and that the air is so thick with smoke that it is, for them, impossible to have such dense smoke so

near us, blowing directly in our faces at times, without it leaving its mark.

As now we land, and our fisherman turns to go, we prepare to enjoy the picturesqueness of "spearing." The boat glides noiselessly along, being propelled by a small boy who sits in the stern and sculls, while the fisherman stands at the bow, zig in it and ready to pounce down on his prey. The freight plays upon their forms and renders every movement distinctly visible. It plays upon the water and surrounding trees and underbrush till the whole scene becomes alive and in motion, as if touched by the wand of a magician. In the centre of all is a column of dense smoke, brilliantly illuminated, and rising high above our heads, wandering off into space, as if a messenger sent to other scenes to tell of the one little spot of beauty it had left.

A. WATSON, W.

THE BERLIN MEDALS.

THE medals from the International Fishery Exhibition at Berlin, 1880, and diplomas accompanying them have been distributed. Those belonging to New York city and vicinity came to the office of the FISHERY AND STRAITS department. The medals are all of one size, whether of gold, silver or bronze, and are three inches in diameter, and a quarter of an inch in thickness. The gold medals are twenty carats fine, and weigh seven and a half ounces, a liberal and costly souvenir. The diplomas are elegantly lithographed in blue and gold on heavy paper, and are handsome enough to hang in any place. They contain the name of the person to whom a medal, or honorable mention, was awarded, and the object for which was given. We have already published electrolytic types of the medals, and now give the following list of American awards:

- CLASS I.—PRODUCTS OF THE FISHERIES.
 - Silver Medal and Diploma.*
 - Alaska Commercial Co., San Francisco. Seal skins in various stages.
 - N. E. Atwood, Provincetown, Mass. Oils.
 - J. W. Beardsley & Sons, 179 West st., New York. Salted and smoked fish.
 - Eugene G. Blackford, Fulton Market, New York. Fresh American fish.
 - A. Booth & Co., Chicago and San Francisco. Canned Salmon.
 - Hagedorn, Hamburg and New York. Fresh American oysters.
 - Portland, Me., Packing Co. Canned fish.
 - Russia Cement Co., Rockport, Mass. Fish glue.
 - H. K. & F. B. Thurber, Read St., and West Broadway, New York. Collection of canned lobsters, crabs, clams, mackerel, etc.
 - Dr. H. Ward, Rochester, N. Y. Collection of stuffed fishes and reptiles.
 - Bronze Medals.*
 - J. H. Bartlett & Son, New Bedford, Mass. Preserved fish and oils.
 - J. B. M. Carley, Fulton Market, New York. Pickled oysters, etc.
 - Catch Cook, Princeton, Mass. Oils.
 - A. W. Dodd, Gloucester, Mass. Oils.
 - W. K. Lewis & Co., Boston. Canned salmon.
 - Joseph Palmer, Smithsonian Institution, Washington. Plaster casts of fishes.
 - Joseph Fryer, New York. Oils.
 - S. Schmidt, 162 W. 19th st., New York. Smoked sturgeon and other fish.
 - J. W. Stullis, Smithsonian Institution, Washington. Photographs of fishes.
 - William Underwood & Co., Boston. Preserved fish.
 - Honorable Mention.*
 - Max Ams & Co., New York. Preserved fish.
 - H. M. Anthony, New York. Preserved salmon.
 - A. Booth & Co., Baltimore, Chicago and San Francisco. Canned Oregon salmon.
 - Kemp, Day & Co., New York. Preserved fish.
 - Hoare & French, Boston. Prepared glass.
 - Maryland Packing Co., Baltimore. Canned hard crabs.
 - M. Mayo & Co., Boston. Codfish salted, and other fish.
 - McMeuany & Co., Hampton, Va. Canned crabs and oysters.
 - Franklin, Snow & Co., Boston. Prepared mackerel.
 - S. Schmidt, New York. Eels in jelly.
- CLASS II.—FISHING TACKLE AND APPARATUS.
 - Gold Medal.*
 - H. L. Leonard, Bangor, Me., agent Wm. Mills & Son, 7 Warren st., New York. Split bamboo fishing rods.
 - Honorable Mention.*
 - J. W. Collins, Gloucester, Mass. Marine drug for preventing vessels drifting to leeward.
- CLASS III.—FISH CULTURE.
 - Gold Medals.*
 - Charles G. Atkins, Bucksport, Me. Models of fishways and hatching apparatus.
 - C. B. Ferguson, Baltimore. Fishculture on steamer, invention of movable hatching buckets.
 - Steth Green, Rochester. Collection of fishhatching apparatus.
 - M. McDonald, Lexington, Va. Invention of fishway.
 - Fred Malher, New York. Invention of conical hatching apparatus.
 - Livingston Stone, Charlestown, N. H. Fish breeding apparatus.
 - Silver Medal.*
 - Oren M. Chase, Detroit. "Self-picking" hatching jar.
 - Bronze Medal.*
 - B. F. Shaw, Annapolis, Md. Fishway.
 - Honorable Mention.*
 - James Annin, Jr., Calcedonia, N. Y. Apparatus for seeding fish eggs.
 - F. N. Clark, Northville, Mich. Hatching box for salmon and whitefish.
- CLASS IV.—TRANSPORTING LIVE FISH.
 - Bronze Medal.*
 - Fred Malher, New York. Tank for transporting fishes at sea.
- CLASS V.—ACCESSORIES TO THE FISHERIES.
 - Silver Medal.*
 - United States Commission of Fish and Fisheries. Fishermen's clothing, collection of fishing implements.
- CLASS IX.—MAPS, CHARTS AND LITERATURE.
 - Silver Medal.*
 - G. Brown Goode, Smithsonian Institution, Washington. Chart of the distribution of valuable American fishes.

FIG. 1.

FIG. 2.—A CROSS-SECTION OF POND THROUGH BREEDING-PLACE.

FIG. 3.—PLAN OF A NATURAL CARP POND.

into the market-ponds. The pikes, which have reached an almost equal weight, are put into pike-ponds. It requires often two or three days to weigh the fishes, ponds of 1,000 or 5,000 acres area containing on an average 200 tons of carp and twenty tons of pike, perch and other fishes not included.

I assisted once at the fishing-out of one of these ponds, which took place in the neighborhood of the town of Groppe, Prussia, province of Brandenburg, Germany. The pond was the property of a competent culturist and valued friend, Mr. Thomas Berger, of Georgenhof, near Cottbus-Putz. The ponds in which this gentleman carries on carp-culture exceed the extent of 6,000 Prussian acres. The pond which was fished out at the time I speak of was but a small one, not more than 200 acres in size, yet to my surprise I found that the greater number of the fishes were fine specimens of about three pounds weight, though they were but in their second year, having weighed no more than 1 1/2 pounds five short months before, (the fishing-out took place at the beginning of October,) and they had attained to this great weight in a comparatively very limited space of time. Several establishments of this kind are located in that district, and they commonly belong to some large princely domain, (crown property). They are, like all large fisheries, admirably managed and the results are most satisfactory.

6.—MIXED CARP-CULTURE.

We have so far spoken of carp-culture, according to the different age of these fish, in special ponds (hatching, breeding and carp ponds), termed "class-culture" in Central Europe. We must now speak of another method, pursued in so-called "mixed ponds," in which there are fish of all ages, from 1 year to 8 to 10 years.

Not much can be said regarding this method, as there are no hatching and breeding-ponds, but only one pond, which, however, must combine all the characteristics of the class-ponds. It must, therefore, have shallow places, overgrown with grass or aquatic plants (*Festuca pectinatus* and *Phalaris arvensis*), for the spawners and the young fish, and also places, 8 to 10 feet deep, for the larger fish. If such a pond is to yield some profit, it must also be particularly rich in food. A natural pond may be used, or, if such a one is not found, it may be artificially constructed. It is indispensable, however, that such a pond should have the same depth of water all the year round, and it should be so arranged that even the last drop of water can be let off, as occasionally even the smallest fish, measuring only 2 to 3 inches in length, must be taken out. Such "mixed ponds" must likewise have "collectors" and "collector-ditches." It will also be found very useful to construct a sort of hatching-place, on some flat and sunny place, near the bank, &c., a so-called cut in the bank, measuring 40 to 100 feet in length and 30 to 50 feet in breadth, and having a depth of 5 inches to 1 1/2 feet. This cut should be thickly planted with the above-mentioned aquatic plants, and ought, so to speak, to be the only place in the pond where carp can ascend from the depth in order to deposit their eggs conveniently and engage in the spawning process.

As soon as this has taken place, the entrance to this cut is closed with a net, so the eggs cannot be eaten by the fish. This net may be removed when the young fish have come out of the eggs, but it is preferable to leave it in its place for some days, that the young fish may be able to feed for some time undisturbedly.

Explanation of Diagram.—A is the pond, B the cut, which, though directly connected with the pond, is in reality nothing but a hatching-pond, such as has been described above. In order to have a complete system of ponds, nothing would be required but a "breeding-pond."

In Europe this method was generally adopted by beginners in carp-culture, commencing with a mixed pond, and gradually proceeding to the small "hatching-pond," and finally to the "breeding-pond," as the great advantage of separate ponds for the different ages of fish over the "mixed-pond" system soon became evident.

Each of such a "mixed-pond" no pike must be kept for regulating the stock, as may be done in a class-pond, for all the small fish would then soon be devoured. It must be made a strict rule that, with the exception of the tench (*Cyprinus tenca*), no other kind of fish, however harmless, is allowed in the pond. The tench is related to the carp, but it spawns 4 to 5 weeks later, so there can be no danger of cross-breeds.

Great care should be taken that no gold-fish (*Cyprinus carpio auratus*) or brown (*brama*) get in the pond, for these fish would

soon mix with the carp and tend to degenerate the breed. Such fish should therefore be removed or killed at once. The gold-fish, especially the milk, swims in spawning-schools like the carp, and at the very same season. It thus spoils the egg of the carp, as all eggs which it impregiates will produce spotted fish, having at least a silvery streak 3/4 to 1/2 inch long and 1/2 inch broad between the caudal and the dorsal fin. Such bastards (the cross-breeds of gold-fish and *Carassius* also resemble them) do not grow larger than gold-fish, and have as many bones. They are unfit for table use and entirely unsuited for ornament, as they are neither genuine carp nor gold fish, and are disagreeable objects in the eyes of the scientist and connoisseur. If such fish are not removed immediately the consequence will be another cross-breed during the next spawning-season, for such a hybrid spawns, like the gold-fish, when it is a year old, and the brood of carps would degenerate still more. It is best to kill such worthless cross-breeds at once, as they are apt to give great trouble.

I would embrace this opportunity to impress upon every carp-culturist who intends to make breeding experiments with any carp procured through the United States Fish Commission, the importance of having, if possible, only one of three above-mentioned kinds of carp, unless he can have every kind in a separate pond. Thus the common carp (*Cyprinus carpio communis*) should never be placed in the same pond with the "mirror carp" or the "leather or naked carp" (*Cyprinus carpio alpinus, corticeus mol natus*), nor should the two last mentioned varieties ever be in the same pond. Cross-breeds would invariably be produced, and in such a manner that one would have neither genuine common carp nor genuine mirror or leather carp, but a cross-breed of all the three varieties. Not even when quite young and not yet capable of spawning should these varieties be put together, because, even if they are kept strictly separate during the spawning process, the young fish would never have the sharply marked characteristics of their variety as regards form and color, but would approach nearer to the "mirror-carp" and the "common carp." The carp has a striking tendency, when living with other varieties, to approach the primitive form of the common carp, and finally to be merged in it. These beautiful varieties should therefore be kept strictly separate; lack of ponds or any other reason should never induce people to mix them.

If the breeding experiments are to be accompanied by good results, a pure variety should be selected, and the finest and best milkers and spawners, showing strongly all the characteristics of their variety should be procured, and the experiments will be crowned with success.

I must return to the so-called "mixed culture," by mentioning that it is not to be recommended. In Central Europe it is never practiced by scientific pisciculturists, but only by small operators mostly in so-called "peasant-ponds." This method does never yield a certain and truly profitable result.

EXPLANATION OF DIAGRAMS.

Fig. 3.—Pond P is a natural body of water. Its extent is about one hundred and fifty to two hundred acres. It is formed by a dam, D, about seven to eight feet high, crossing the valley and thus collecting the water of a run flowing there. Before D is a deepening, C, the collector. In the dam D there is an outlet leading to another deepening—the so-called outlet-collector OC. The purpose of this collector is to keep back fishes that may have passed the outlet when opened. It is provided with a screen or netting, CD, upon the bottom of pond P, is the collector ditch, which conducts the fishes to C when the water is let out, and thus prevents them being caught in the mud. A is the run of water which, to prevent overflow, has to be conducted around the pond in a separate ditch, leaving an inlet at J, protected by a sluice with screens.

Fig. 4.—F, surface of the pond; I, collector; D, dam; A, outlet; OK, outlet collector; J, inlet; R, stream; D, the dam; I, the run or creek.

Fig. 5.—R, stream supplying artificial pond between undulating hills; J, inlet; I, inlet dam; CD, collecting ditches; C, collector; OD, outlet dam; O, outlet; OC, outlet collector; E, cavity; H, sluice, in which the carp collect for the winter; H, canal to let off surplus water in case of frosts.

Fig. 6.—I, breeding-pond for spawning fishes and spawn; II, pond for small fry; III, pond for large fish; a, supply of water; b, inlet; c, collector; o, outlet.

FIG. 5.—PLAN OF ARTIFICIAL CARP-POND.

FIG. 6.—PLAN OF ARTIFICIAL CARP-PONDS.

7.—FEEDING THE CARP.

In conclusion I will make some remarks on the feeding of carp in close ponds. It is not every natural pond which is a good pond, having the essentials of a good soil at the bottom and capable of producing sufficient food for the fish. If these conditions are wanting, the fish must be fed. This is, as a general rule, only necessary in ponds with sandy bottom without any clay. As I have said before, I am not in favor of feeding fish, as my standpoint is that of the rational culturist sharing the opinion with most of the prominent pisciculturists of the Old World, that carp should find its own food in the ponds.

Never give them much food at one time, but by degrees in small quantities, never during the day, but either early in the morning or in the evening. During the hot season only feed them late at night, because the carp, if it has eaten sufficiently in the morning, will remain at the bottom all day, while during the higher temperature of the water it is necessary for its health that it should swim round and get a change of water. It is therefore useful to place in ponds containing large carp a limited number of pike, which, however, must be smaller than the carp. The carp fears the pike and flies from it. If there are pike in the pond the carp will get more exercise and will seek natural feeding-places, whither, on account of its innate sluggishness, it would never have gone.

Pond-carp are accustomed to other food than the river-carp. The former continue themselves to worms, larvae and plants, while those living in streams find all sorts of animal and vegetable refuse; these latter can also stand a greater amount of food, as the current naturally makes them take more exercise, thus increasing their appetite. It is different with the pond carp; if you give it too much food, it will not take any more than is necessary to satisfy its hunger; the remnants will remain at the bottom, and if their quantity be considerable they will spoil the water. If these remnants are chiefly animal refuse, as flesh or blood, fungi will grow on them, and will then produce, as with the salmon and trout, diseases of the skin, the gills, and in the case of the carp, sometimes internal diseases.

The writer once had the following experience: During his absence a number of large carp were fed on congealed blood which had begun to putrefy; the fish devoured it eagerly, got sick, and most of them died in a few days from an inflammation of the intestines. Spoiled food should never be given to fish. If lighter house or kitchen refuse can be had, give these, chopped up small about the size of peas. Never give so much that remnants remain for any length of time in the water and begin to putrefy. Let no one be induced by the circumstance that the carp like to eat the dung of hogs, sheep and cows, to feed them on any putrescent, particularly diseases of the scales, have originated.

The carp likes above everything else vegetable matter, such as cabbage, lettuce, boiled potatoes, corn, turnips, pumpkins, radishes, etc. The refuse of meat from brewers and distilleries is also very good food for carp, and wherever such refuse can be had it should be given to the fish.

The small pisciculturist, having a pond of perhaps one to two acres near his house, will often be able to feed his fish on refuse, as he will always have it fresh from the kitchen and stable.

In conclusion, I earnestly recommend the culture of the carp to all pisciculturists. If the value of the carp for table use has once been recognized it will become a highly esteemed fish, especially in the neighborhood of large and populous cities, and its culture will yield a larger and more certain profit than the expensive trout.

8.—EXTENT OF CARP-CULTURE IN EUROPE.

In Europe many thousand acres of artificial waters are to be found. In these enormous quantities of carp are bred. Some of

"Great barks are fine hitters." We also say, "What, keep a dog bark myself?" These need no explanation, and the same is true of others, such as "A quick eye do to beat a dog." Give a dog a bad name and hang him." It is easy to find a stick to beat a dog, and "When a dog is drowning every one offers him drink." On the same principle of giving to those who do not want, we are told that every one beats the fat dog, while the lean one burns. Of course a hungry dog will eat dirt and mud; it is a bad dog that desecrates no crust, and "It is useless to tie up a dog with a chitliver."

The French language is singularly prolific in sayings about dogs. A good dog never barks and he never bays. The best of friends must part, as Dagobert said to his dog. This is well known, and so is this: Ho is like the dog of Jean de Nivelle, which runs away when it is called. A dog may look at a bishop, but he will not eat him. A cat may look at a king. To beat the dog when the lion is present is bad. But he is rather cowardly. Two dogs to one bone are bad. He who would drown his dog calls it bad. You must throw stones at the dog which bites; but after the dog kill you to the stone bare, and do not make fun of the dog till you are out of the village, perhaps because a dog and a cock are always bare on their own ding-hill, and a dog takes a dog by the ears is bitten it is no wonder.

A young man is sometimes as foolish as a young dog. To be always under control is to be like a dog in a string. A man who is used to submit to bad treatment, and who is not a dog, is a dog with a bare head. He is treated like a dog, sometimes, and especially if he comes in like a dog at nine-pins, or when he is not wanted. Love me, love my dog, is advice recognized in different countries, but it is French to call the chief man a dog with a grand collar. More curious is between dog and wolf to denude a thin down in which objects can scarcely be distinguished. We could add several others from French sources, but we wish to give a few examples from elsewhere, and particularly from the German.

Here we find that some people should not be squeamish. They go over a dog that they must go over the tail. This reminds us of the saying, "When you have swallowed the ox don't make a fuss about it." A German, like many more, may be as hungry or as thirsty as a dog, and he will be before under a delusion, sees a lion dog. That the dogs bite the hindmost is as true as stronger utterance among ourselves. He is in a destitute condition who has not a dog to draw out of the oven. Do not blame the innocent. It is not the dog who is to blame, but the man who has a dog. There may run the fastest, but many dogs are the death of the hare. Nobody cares to own a dog which is everybody's companion.

When they have nothing, the French will tell you that you will find it in the dog. The Italian man may be as snappish as a dog, but he will be the first to draw the dog's teeth and bone. They think it a foolish thing to draw the dog's teeth and bone. You, but having no greater wisdom in the matter, they say, "Put a dog on the jaws till you can muzzle it. From Chinese we learn that a dog which muzzles its tail despises its owner. One who beats a dog should think of its master. Other rough and ready sayings are, that the dog in its kennel howls at the fleas, but the dog which is hunting does not feel them; and that it is not dogs' fleas which make the cats cry out.

THE AMERICAN COCKER SPANIEL CLUB.

NEW YORK, MAY 7, 1881.

TO THE MEMBERS: Your committee appointed at the adjourned meeting of the club, held at the American Institute Building, New York City, on the 20th of April, beg to submit the following Constitution and By-Laws for the government of the club:

Information of those not present at the annual meeting held on the 28th of April, your committee would state that the standard of excellence, as incorporated in the Constitution, was unanimously adopted by those attending the meeting. The committee's work consists of the Constitution and By-Laws other than the standard.

Your committee now requests all who desire to perfect their membership to forward the first year's dues of \$2 to the secretary of the committee. On the 1st of June a list of members will be sent to the secretary, and on the 1st of July the dues will be collected. If you have five, to hold office until the next annual meeting. This done, the labors of your committee will cease, and it remains in your hands to assist them by your joining at once and getting as many to become associated with us as possible. Yours respectfully, J. L. Morrill, Chairman, James H. Watson, Secretary, Committee of Organization of the American Cocker Spaniel Club. Secretary's address, P. O. Box 2,950, New York City.

CONSTITUTION.

ARTICLE I.

Name. This club shall be called the American Cocker Spaniel Club.

ARTICLE II.

Object.

The object of this club shall be the encouragement of the breeding of the cocker spaniel and the award of special prizes at all dog shows where the standard of points of this club is recognized and the prizes are awarded by a judge approved by the Executive Committee of this club.

ARTICLE VII.

Membership.

This club shall consist of an unlimited number of members.

ARTICLE IV.

Application for Membership.

Any person desirous of joining this club must make application to the secretary, in writing, and pay the amount of dues for the first year, which shall be returned in the event of the non-election of the applicant.

ARTICLE V.

Election of Members.

The power of election shall rest with the Executive Committee, a four-fifths vote being requisite to elect a member.

ARTICLE VI.

Management.

The management of this club shall be intrusted to an executive committee consisting of five members, who shall be elected at the annual meeting, to hold office for one year or until their successors are appointed. Vacancies in the membership of the Executive Committee, arising from any cause whatever, shall be filled by the same number of members at the next annual meeting. They shall from their number elect a president and secretary-treasurer, who shall perform their several duties as prescribed by the By-Laws, and generally such duties as pertain to their office.

ARTICLE VIII.

Special Meetings.

A special meeting of the club shall be called by the Executive Committee on the written application of one-fourth of the members in good standing.

ARTICLE IX.

The Executive Committee shall have power, by a four-fifths

vote, to suspend any person from membership of this club until the next meeting of the club who, in the opinion of the committee, has been guilty of fraudulent or dishonorable practices in connection with bench shows or dog trials.

ARTICLE X.

Standard.

The standard of points of the cocker spaniel, as defined and adopted by the club, is as follows: A cocker spaniel must not weigh over 28 lbs. nor less than 18 lbs. General appearance, Symmetry; (value 10).—A cocker spaniel should be eminently a well built, graceful and active dog, and should show strength without heaviness or clumsiness. Any of the spaniel colors is allowable, but beauty of color and marking must be taken into consideration.

Head (value 15) should be of fair length, muzzle cut off and tapering gradually from the eye, but not snipy. Skull rising in a graceful curve from the stop, and with the same outline at the occiput, the curve line being higher but still curving at the middle of the skull. The head should be narrower at the eyes, and broadest at the set-on of ears, and viewed from the front, the outline between the ears should be a nearly perfect segment of a circle. The stop is marked and a groove runs up the skull, gradually becoming less apparent, till lost about half way to the occiput. This prevents the domed King Charles' skull, and there should not be the heaviness of the large field spaniel, but a light, graceful, well-balanced head. Jaws level, neither under-shot nor pig-jawed, teeth straight, regular and free from canker.

Eyes (value 6) round and moderately full. They should correspond in color with the coat.

Ears (value 10) lobular, set on low, leather fine and not extending beyond the nose, well clothed with long, silky hair, which must be straight or wavy—no positive curls or ringlets.

Neck and Shoulders (value 10).—Neck should be sufficiently long to allow the nose to reach the ground easily; muscular and running into well-shaped sloping shoulders.

Body (value 16).—The chest well sprung; chest of fair width and depth; body well ribbed back, short in the comping, tank free from any lumpy appearance, long strong.

Length (value 5), from tip of nose to root of tail should be about twice the height at shoulder; hind legs straight, pasterns straight, short and strong; elbows well let down; the hind legs well set on, the hocks straight, locks straight, looked at from behind and near the ground. Fore feet should be good size, round, turning neither in nor out, toes not too spreading; the soles should be furnished with hard, horny pads, and there should be plenty of hair between the toes.

Legs and Feet (value 15).—The forelegs should be short, strong in bone and muscle; straight, neither bent in nor out at elbows; pasterns straight, short and strong; elbows well let down; the hind legs well set on, the hocks straight, locks straight, looked at from behind and near the ground. Fore feet should be good size, round, turning neither in nor out, toes not too spreading; the soles should be furnished with hard, horny pads, and there should be plenty of hair between the toes.

Coat (value 10) should be smooth, silky, straight or wavy, but without curl; chest, legs and tail well feathered. There should be no top-knot or curly hair on top of head.

Tail (value 6) usually curved, carried nearly level with the back. At work it is carried high, with a quick, nervous action which is characteristic with the breed.

Body.....	16	Total.....	100

AMENDMENTS.

No addition, alteration or amendment shall be made to the Constitution except by a two-thirds vote of the members present or represented by proxy at the regular annual meeting of the club. No proxy to be admitted unless it is specifically stated therein in what manner the vote shall be recorded. At least thirty days notice of any such proposed change must be given to the Executive Committee, of which due notice shall at once be sent to the club members.

BY-LAWS.

ARTICLE I.

Officers.

The officers of the Executive Committee shall be a president and secretary-treasurer, who shall be elected at the first meeting of the committee after each annual meeting of the club, to serve until the next annual meeting.

ARTICLE II.

Duties of Officers.

SECTION I. The president shall preside at the meetings of the club and Executive Committee, appoint all sub-committees, audit and approve all bills, and order meetings of the committee whenever, in his judgment, he may deem it necessary.

Sec. II. The secretary-treasurer shall record the minutes of each meeting of the association and of the Executive Committee; shall conduct their correspondence, and have charge of and be responsible for all books and papers. He shall also have charge of all moneys belonging to the association; shall pay all bills, when properly presented, and shall receive therefor to the committee whenever called upon by them to do so.

ARTICLE III.

Payment of Bills.

All bills shall be presented to the President, and shall be audited first. In case of approval his signature and date of approval. After such approval the secretary-treasurer shall be authorized to pay.

ARTICLE IV.

Prize.

Sec. 1.—It shall be the duty of the Executive Committee to endeavor to obtain suitable classes for cocker spaniels at all bench shows, and that at such shows as agree to abide by the standard of the club, and appoint a judge approved by the committee, who committees shall have full power to offer such prizes as they may deem advisable in addition to those given by the show authorities.

Sec. 2.—That these prizes shall be known as "American Cocker Spaniel Club Special Prizes."

ARTICLE V.

Judges.

Sec. 1.—A list of gentlemen competent and willing to officiate as judges of cocker spaniels shall be made up by the Executive Committee, and the secretary shall, on application of the manager, superintendent, or any other person, submit a copy of said list, and arrange, if desired, with the gentleman chosen therefrom to act as a judge at said show. That the expenses incurred by said judge shall be paid to him by the show committee engaging him.

Sec. 2.—The club judges may, at their discretion, or be interested directly or indirectly in, the shows at which they officiate.

Sec. 3.—The judge shall award prizes to dogs impartially and according to the order to which the dogs approach perfection in their respective classes, and proposals made by the club as the true standard of excellence. They shall not recognize any other type or standard, and shall be amenable for their decisions to the committee of the club alone. They may withhold prizes, etc., if the specimens exhibited do not, in their opinion, merit the same.

ARTICLE VI.

Dues.

Sec. 1.—The annual dues shall be \$2, payable upon application for membership, and thirty days before each annual meeting thereafter, and to members whose dues remain unpaid shall be entitled to vote at the annual meeting.

Sec. 2.—Any member in arrears for dues shall not enjoy any of the privileges of membership until his dues are paid.

ARTICLE VII.

Expenses.

All expenses incurred by the secretary-treasurer, or by any member of the committee, for or on behalf of this club and on the authority of the committee, shall be defrayed out of the funds of this club.

members, together with the rules of this club, names of members, committee and officers, shall be printed and supplied to each member of this club.

ARTICLE IX.

These By-Laws may be altered, amended or suspended by a majority vote of the Executive Committee, provided notice shall have been given to each member of the committee of the proposed change. That such change must be confirmed at the next annual meeting of the club.

A BULL DOG ROBINSON CRUSOE.

JUST below Suspension Bridge is a small rock and sand island, in Niagara River, which can only be reached from the high bank, two hundred feet above, or through the perilous rapids at its feet. About twenty-five years ago a man named Taylor fell into the river at the Maid of the Mist landing, and by great effort came down and landed on this island.

About seven years ago a dog got into the current at the above landing, and he, also, made his way to this island. This animal lived on the island for nearly two years, and was fed by the late Wm. Flemming, of the United States Customs. At the end of nearly two years a young man from Canada ventured over the bank on a rope ladder and landed safely on the island; but the dog was wild and unmanageable, and the man was drawn up without him. Strongly, he shot himself and lay down in the sun to die. It was shipwreck and his bark lost forever.

Since that time Taylor Island has been uninhabited until Sunday, April 16. A man from Niagara Falls was seen walking out on the island, which is located about twenty yards above the island. He had with him a small-sized bull dog that he had sentenced to death for the paltry error of killing chickens.

When he had reached about the centre of the bridge he picked up his canine friend, and, after patting him for a moment, threw him from the bridge. Down he went, two hundred and twenty feet into the perilous rapids below. But, instead of floating off as hundreds of other dogs have done—stone dead—he came to the surface and hobbled struck out for Taylor Island, where he landed, shook himself, and lay down in the sun to dry. It was him this morning and fed him; he appeared to be as lively as ever.

His appearance has arrested the attention of many sight-seers. Suspension Bridge, N. Y. O. E. Lewis.

CAPTAIN McBURDO'S KENNEL.

UNWITTINGLY the longest "wait" for the front cover to open I have ever known, I can enclose a letter in which I have news from these parts that give a short sketch of the kennel and surroundings of Captain McBurdy, who, it will be remembered, moved his establishment this winter from Campbell County to Shadwell, Alabama, some five miles from Chattahoochee.

First, we will go back to the Captain's long historic grounds, Monticello, the home of Jefferson, grows a lofty birch right in front of us, while upon a field between where the aristocrats of the kennel stretch their legs before starting out for their daily instruction upon the lounge where the great stamper was born.

The kennels themselves are situated on a breezy lawn, with enough shade to keep off the hot summer sun, while the cold north winds are intercepted by a mountain that rises immediately behind the place.

A more beautiful spot it would be hard to imagine; and when the foreground is enlivened by the forms of ten or twelve of some of the best bred setters of the day, who have "dropped in their tracks" to the down charge and see watching with keen eye for the signal from the master that releases them again, the picture becomes a doubly charming one.

The healthiness, condition and high state of training of the inmates of the Captain's kennels are due to methodical and judicious feeding, to the perfect cleanliness in which they are kept, and to the untiring and constant attention given them by the Captain himself. To say that he devotes himself entirely to his pets would be a mild way of putting it. If, in short, all two-legged creatures get such an amount of devoted attention and matters as do these four-legged ones from their parents and guardians might well sleep easy in their beds.

Particularly promising are two bitches by Gladstone out of Stralder's Frost, and some pups by Dash II. Mr. Foster, of Leesburg, too, has a very handsome lemon and white setter bitch with the Captain, while a powerful black Hungarian pointer from the kennels, I believe, of Peter Esterhazy, is the one representative of his breed. Ringwood.

FAST AND SLOW DOGS.

AFTER reading in the valuable columns of Forest and Stream a number of letters about dead trials, fast and slow dogs, etc., it seems to me pretty clear that some of the field trials should be held on entirely open ground. It is very uncommon to find a really fast dog, who is perfect, or even first rate in cover. And, on the other hand, in many localities, it is very serviceable, it is desirable to encourage their breeding to limited extent. Such dogs will always be scarce, and consequently rank first, because they must not only have extraordinary speed, but also the finest noses, together with endurance and the other qualities that are required in a dog for such work. It is, therefore, the duty of every sportsman who prefers a reliable slow dog to a blundering fast one. For mixed ground extraordinary speed is useless, and an active, lively worker, with a fine nose and all the other necessary qualities, is the best style of dog one can have.

I have always found that I had the most satisfactory partridge (quail) shooting when hunting over a brace of dogs, one very fast and wide ranging, the other slower and pretty close ranging. The former finds most of the coveys, and the latter does the best work in the woods and rough places.

What any one can want with a really slow pointer or setter I can't understand, for if their hunting grounds consist of very nice cover a brace of good spaniels will do better work than any of them.

As regards putting a stop to jockeying and field trials, I believe we are entirely dependent upon the judges, who, if they are the right sort of men (thoroughly understanding the ways of birds, as well as of dogs), will not be so easily deceived as to the value of any handler who does anything unfair, either to help his own or hinder his competitor's dog. To watch some handlers one would think they were doing their dogs—not showing what they had in them, but trying to get the best of their own dogs. And how this can be called hunting them "in all respects as in an ordinary day's shooting," is beyond my "ken."

The proposed trials, in which the dogs would be handled by their owners, might, I fancy, be very popular, and as they would be confined to gentlemen to learn how to handle dogs better than is usually done at present it would not only be a benefit to themselves, as it would add very much to their interest in their dogs, but would also be a great boon to the dogs, by preventing the cruel treatment and exposure to frost for want of a proper knowledge of the art of training them. Inex.

WHOSE DOGS?—Portland, Maine, April 29.—For a long time occasional reports have come to me concerning setters freely selected to have been bred by myself, or from my stock, and the number of reports and inquiries have so increased that I wish to answer to all by a single reply, through FOREST AND STREAM, which I trust will be read by all those who are interested in the matter.

My setters are of two native strains—the Irish reds (Gora II, Cale, Covert, etc.) and an orange and white strain that I term the "Sargent" strain, in compliment to Gen. George Binney Sargent, of South Scituate, for whose dog I originally bred the dogs imported, upward of thirty years ago. As much care and precautions

to present to the club a handsome gold medal, known as the Engletr Trophy, which was to be shot for at three regular shoots, 10 birds each. In a most speech the vice-president accepted the trophy and thanked Mr. Engletr for his gift. He then presented to the club. After the meeting adjourned the first shoot for the Engletr trophy took place.

The following is the score: John B. Voskamp, 5; Wm. D. Steers, 4; James T. Davis, 3; Michael Engletr, 1; John Wood, 0; Henry Wallace, 9; John A. Dinkel, 9; Major George Aery, 5. Judge Dinkel hit the tenth bird fairly; the bird was a strong trophy and did not fly out of boundary, hence it was not scored for him. Mr. Henry Wallace hit his tenth bird but it lighted on a tree out of boundary and was not scored for him.

Forer Mimus, May 2.—Monthly glass ball contest of the Knickerbocker Gun Club took place on their grounds, April 20. 15 balls, 25 yards rise, rotary trap.

Table with 2 columns: Name and Score. Includes names like G. Baker, F. B. Chesley, A. A. French, etc.

Excuses Gun Club—Brooklyn, April 20.—Monthly match for a badge. Score: K. Y. C.

In the decision of the tie between Schlemmer and Medler eight birds were shot at. Schlemmer killed five straight, his sixth fall dead out of bounds, and he killed his seventh and eighth. Medler killed five straight, missed number six, killed number seven and missed his last.

The Long Island Forester Club held their first monthly shoot at glass balls for a gold badge Saturday, May 7. The badge was won by Mr. R. T. Sablin. The club, though young, are enthusiastic and every fall go to Novae, L. I., for a two weeks' expedition over the mountains of the Catskills. The members of the organization are: Henry Thorpe, President; Charles M. Edwards, Vice-President; Robert T. Sablin, Treasurer; and Charles W. Field, Secretary.

BRADFORD, April 29.—Match between the Bradford Gun Club, of Bradford, Pa., and the Athletics of this city. The shoot was at ten single rises each twenty-one yards rise, from ground traps.

Table with 2 columns: Name and Score. Includes names like Risher, Smith, Longacker, etc.

Total. 113. Total. 113.

SCOTT SIMS, Great Britain. The inaugural shoot of the newly organized South Side Gun Club, of Newark, N. J., took place Saturday. Match at five birds; 25 yards; three ground traps; 1/2 oz. of shot; both barrels allowed.

Table with 2 columns: Name and Score. Includes names like Painter, White, Smith, etc.

*Killed with second barrel.

VINCENNES, N. J., May 2.—The Coaxen Glass-Ball Club of this place held their monthly contest for badge here to-day. Card's traps, 18 yards. Only four winners present!

F. S. Hilliard, 1001 0111-7 S. S. Butterworth, 1001 1011-7 Capt. W. D. Haines, 1010 1111-5 W. S. Hilliard, 1010 1111-5

The shot at 3 balls: W. S. Hilliard, 2; Capt. W. D. Haines, 1.—SHIELD-BALL.

CATAWISSA, May 7.—The Catawissa Glass-Ball Club has adopted a medal to be shot for until Sept. 1, the man winning it the most times is declared the champion shot and owner of the medal. Woolly match, first scores:

Table with 2 columns: Name and Score. Includes names like A. Thomas, W. G. Lester, etc.

This on 10, both barrels, 100 yards, 6 Mr. Eger had no more shells. The match was put off until next week.

CAPITAL CITY GUN CLUB, Washington, D. C., May 9.—The regular weekly contest of this club on their grounds at Eagle Park, Saturday afternoon, resulted as follows: Cards' rotary trap, seconded; 50 yards rise; glass balls:

Table with 2 columns: Name and Score. Includes names like E. W. Miller, W. E. Eldridge, etc.

RESTON GUNNING AND FISHING CLUB—Covington, Ky., April 4.—This club will give a National glass ball tournament on May 18, 19 and 20. Offering prizes amounting to about \$5,000. We had a practice shoot on April 2. Glass balls, 18 yards rise. Mole traps. First match; 6 balls:

Table with 2 columns: Name and Score. Includes names like McGraw, Hinds, etc.

McGraw, 10 1 1 1-4 Reinington, 11 1 0 1-3 Gusewright, 1 1 0 1-3 Josie, 11 1 0 1-3 Hinds, 1 1 0 0-6

McGraw, 1 1 1 0-4 Smith, 1 1 1 0-4 Gusewright, 1 1 1 0-4 Josie, 1 1 1 0-4 Hinds, 1 1 1 0-4

LEWYNSWORTH GUN CLUB.—Shoot for the club badge April 26. Twenty balls each, ten from a revolving, and ten from a rotary trap. First match:

Table with 2 columns: Name and Score. Includes names like E. D. Leconte, C. N. Whitman, etc.

Table with 2 columns: Name and Score. Includes names like D. B. Himmou, E. H. Himmou, etc.

Five others shot. Leconte, Whitman and Himmou tied on 18 balls. On the shoot off at five balls Leconte won, taking the badge. A. Girard won the leather medal with a score of seven.

TOPEKA, Kan., April 26.—The tournament of the Topexka Gun Club opened in good style to-day. There were present to-day between thirty and fifty sportsmen, among them Gwyn Price, of St. Louis; Fred Erb, of St. Joseph; J. M. Horsley and Sam Black, of Oange City, and W. Ellet, of Eldorado.

The tournament takes place on the Topexka Gun Club's excellent range in the Fair Grounds, where everything has been admirably arranged for the accommodation of those taking part.

The first shoot was at seven birds, 21 yards rise. The following shows the results:

Table with 2 columns: Name and Score. Includes names like W. C. Himmou, A. C. McClaren, etc.

The gentlemen who tied on seven divided first money. Those who killed six birds shot off their tie, and Irwin and Davis tied again and divided second money. Those who killed five birds shot off their tie, and Brugnauer and Ellison tied again and divided third money. Fourth money was won by Howe.

The next shoot was at ten glass balls, 15 yards rise, from five Bogardus traps, placed five yards apart, for a purse of \$300. The score stood as follows:

Table with 2 columns: Name and Score. Includes names like W. C. Himmou, T. D. Wellman, etc.

Ellet won first money, and Black after shooting with the others who broke 3 balls won second money. Irwin and Wellman divided third money.

The next was a team shoot at five single birds, 26 yards rise, two men in each team. The score stood as follows:

Table with 2 columns: Name and Score. Includes names like W. H. Ellet, J. M. Horsley, etc.

The first prize was won by Eaton and Houghton, who are from Kansas City, Erb, of St. Joe, and Caven, of Kansas City, won second.

The next shoot was at six single birds, 26 yards rise: Himmou, A. C. McClaren, A. C. Allendorf, S. Hershby, A. Black, A. Wheelock, J. Houghton, S. Egan, G. Howd, A. Mudge, A. Fuller, E. Eaton, E. E. Eason, G. Davis, G. Irwin, A.

The tie being shot off, Fargo won first money, Hershey second, and Howe third.

The first match of the second day was at ten glass balls, eighteen yards distance, sprung from a rotary trap. The entries and score were as follows:

Table with 2 columns: Name and Score. Includes names like W. H. Ellet, J. M. Horsley, etc.

W. H. Ellet, J. M. Horsley, J. C. Allendorf, S. Hershby, A. Black, A. Wheelock, J. Houghton, S. Egan, G. Howd, A. Mudge, A. Fuller, E. Eaton, E. E. Eason, G. Davis, G. Irwin, A.

The tie being shot off, Fargo won first money, Hershey second, and Howe third.

The first match of the second day was at ten glass balls, eighteen yards distance, sprung from a rotary trap. The entries and score were as follows:

Table with 2 columns: Name and Score. Includes names like W. H. Ellet, J. M. Horsley, etc.

W. H. Ellet, J. M. Horsley, J. C. Allendorf, S. Hershby, A. Black, A. Wheelock, J. Houghton, S. Egan, G. Howd, A. Mudge, A. Fuller, E. Eaton, E. E. Eason, G. Davis, G. Irwin, A.

The tie being shot off, Fargo won first money, Hershey second, and Howe third.

The first match of the second day was at ten glass balls, eighteen yards distance, sprung from a rotary trap. The entries and score were as follows:

Table with 2 columns: Name and Score. Includes names like W. H. Ellet, J. M. Horsley, etc.

W. H. Ellet, J. M. Horsley, J. C. Allendorf, S. Hershby, A. Black, A. Wheelock, J. Houghton, S. Egan, G. Howd, A. Mudge, A. Fuller, E. Eaton, E. E. Eason, G. Davis, G. Irwin, A.

The tie being shot off, Fargo won first money, Hershey second, and Howe third.

The first match of the second day was at ten glass balls, eighteen yards distance, sprung from a rotary trap. The entries and score were as follows:

Table with 2 columns: Name and Score. Includes names like W. H. Ellet, J. M. Horsley, etc.

Table with 2 columns: Name and Score. Includes names like Aug. 2—Quincy Y. C., Second championship regatta, etc.

IN our last issue we illustrated examples of open launches and cabin yachts suitable for bay and harbor work. This week we take the opportunity of presenting a type of launch very popular in England, and which will find favor with us in the future, being a cruising launch of fair speed, accommodation and ability. Such boats combine the handiness and moderate cost, and draft of the ordinary launch and living accommodations of a permanent sloop. Cruising launches, not being built solely for speed, are more reasonable in first cost, can be depended upon for strength and a long life, and their engines being of lower velocity of piston than the water and gas engine, give much less trouble and annoyance, while the coal account is also less serious an item of expense. One of two hands compose the crew. Fuel can be carried for a long extended period, as a minimum displacement is no object; and with ample draft, dead rise and an easy bilge, very fair bow water qualities may be secured, so that this type is especially adapted for 24-hr. use, for sportsmen, for cruising about, and in short for steam cruising on small tonnage. To persons interested in mechanics, who like to observe the working of machinery, it affords an opportunity to observe the working of machinery, and others in their place, who like besides the romances of adventure, life in the open air, to invest in a cruising launch and take your return for your money than the steam boat, or a sloop, or a cutter, or a motor launch, or a launch built for an Oriental potentate by J. S. White, of Cowes, England. The boat is decked fore and aft, with the exception of a small cockpit forward. There is a hatch over the hull space surrounded by a hand-rail and another aft over the fore-cabin. The fore-cabin is a small cabin, but has two berths and a toilet should the craft be caught in bad weather. For use in waters

STEAM YACHTS.

IN our last issue we illustrated examples of open launches and cabin yachts suitable for bay and harbor work. This week we take the opportunity of presenting a type of launch very popular in England, and which will find favor with us in the future, being a cruising launch of fair speed, accommodation and ability. Such boats combine the handiness and moderate cost, and draft of the ordinary launch and living accommodations of a permanent sloop. Cruising launches, not being built solely for speed, are more reasonable in first cost, can be depended upon for strength and a long life, and their engines being of lower velocity of piston than the water and gas engine, give much less trouble and annoyance, while the coal account is also less serious an item of expense. likely to be covered the windows in the cabin can be kept much smaller and every other part solid, so that if well built, braced and lashed, the danger of being stove in forward is but small. The accommodations, besides cockpit and locker room for stores, a dining table and shooting outfit, consist of a small cabin forward, a pantry and galley, situated forward of the machinery. The latter occupies 16 ft. and the galley, which has two berths and a stove for the crew. She may be steered by tiller or rudder, and is a launch on the open cabin bulkhead, a position affording a good view forward, and protecting the accessories from the weather and sea. The launch inside a passage from Cowes to London in the teeth of a strong easterly gale, and any one who knows what bumpiness and the south sea are in such weather will appreciate the superior qualities. Her length is 30 ft.; beam, 10 ft.; draft forward, 3 ft. 10 in.; aft, 3 ft. 10 in.; displacement, 11 tons; screw, four blades, diameter 3 ft. 6 in.; stroke, 18 in.; grate surface, 55 sq. ft.; heating surface, 215 sq. ft.; at the speed of 12 1/2 miles (9.5 knots) per hour, the number of revolutions was 265, and the gauge showed 6 lbs. per sq. in. With a mean effective pressure in the cylinder equal to 75 per cent. of the boiler pressure, the power developed would be 24.4 H. P., which must be considered very satisfactory in so small a boat. The hull is built of teak and mahogany, laid in two layers diagonally, coppered and copper fastened, and the exterior fittings are of a rich character. The launch has been reported as springing great satisfaction and living up to her trial speed, a mean of 11 miles at sea.

THE INTER-STATE REGATTA.

There seems to be very little courage and enterprise of late among the owners of racing "open boats" in New York. Not only are we unable to organize a New York Regatta at home for a single day in any month, but we have a number of regattas, through sheer inability, to race the most liberal and tempting offers held out in other directions. A very fair example of this is the regatta being arranged among owners of racing boats in these latitudes we publish the following correspondence between Vice-Com. Harris, of the Southern Y. C. and Capt. Ira Smith, of the New York Y. C. The latter is a very experienced and successful yachtsman, and his views are of great value. He writes: "I have been consulted by the Southern Y. C. as to the conditions which the regatta Capt. Smith offers to accept of late among the owners of racing 'open boats' in New York. Not only are we unable to organize a New York Regatta at home for a single day in any month, but we have a number of regattas, through sheer inability, to race the most liberal and tempting offers held out in other directions. Hotels and Boutes for Sportsmen.

"THE FISHING LINE." TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS OF MICHIGAN.

NORTHERN MICHIGAN. The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, it is equalled in the abundance and great variety of fish contained.

THE GRAYLING season begins May 1 and ends Sept. 1. THE GRAYLING season opens June 1 and ends Nov. 1. BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and creeks of this territory. The Sportsman can readily send orders for his club, his friends or "club" at home, as ice for packing fish can be had at nearly all points.

WANT WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma & Rheumatisms.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1891 by new buildings and additions. During the season of TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle carried Free at owner's risk. It is our aim to make sportsmen feel "at home" on this route. For Tourists send a handsome illustrated book of 160 pages quite free. "Time Cards, Folders and our other literature" sent free.

A. B. LEEB, Gen'l Pass' Agent, Grand Rapids, Mich.

Virginia Midland R. R.

The Shortest, the Shortest, the Best Route to Florida and South. Pullman Palace cars direct without change. Dogs and dogs carried free. Leave New York at 10 P. M. and 3:30 P. M.; Washington, 7:10 A. M. and 10 P. M. MERCEDES SLAUGHTER, General Ticket Agent, Alexandria, Va.

ADIRONACKS.

Sportsmen and Tourists going to the woods via Pittsburgh after July 1 can find out at the Fougue House, that day and on the Monday after. Tuesday, Thursday and Saturday mornings to arrange for conveyances and seats in coach for the lake. My notes being ready and at hand, my own nice latest approved pattern, I am not only able to offer you a comfortable and convenient train over the lake, but also to guide you over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing.

SARANAC LAKE HOUSE, (Formerly "Martins"). I beg leave to draw the traveling public and old patrons of this well known and popular resort that I have purchased it, and will open it to visitors on or about May 1. The house is being thoroughly renovated with new furniture throughout, and very comfortable and convenient to make it equal or superior to any of its kind in the country. At a table; best of attendance; superior and experienced guides. Neither expense nor pains will be spared to give my guests the best of everything.

MILB R. MILLER, Saranac Lake, Franklin Co., N. Y.

PARKER'S POCKET MAP OF THE RICHARDSON-NON-RANGELEY LAKES REGION, including all the lakes, ponds and rivers of that famous country, and showing the head waters of the Connecticut, Connecticut and Tamaheque Lakes, etc.; also the best routes for hunting or fishing. Price, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

Hotels and Boutes for Sportsmen.

GUN POWDER! Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1809, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequal in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Choice Bore.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lbs kegs.

Dupont's Chokey Bore.—Specially adapted for "Chokey Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6 1/2 lbs kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1 lb. canisters and 6 1/2 lbs kegs.

Dupont's Rifle Fig.—"Sea Shooting."—Ffg. and Ffg. The Ffg. for long-range rifle shooting, the Ffg. and Ffg. for general use, burning strong and moist. Packed in 3 1/2, 1 lb. and 5 lb. canisters, 6 1/2 and 12 1/2 kegs. Fg. coarse, Ffg. fine.

Dupont's Sporting, Mining, Surplus and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEBLAND, 87 Beaver St., N. Y. N. E.—Use none but DUPONT'S Fg. or Ffg. for long-range rifle shooting.

374 Washington Street, Boston, Mass., Importers of English Fish Hooks, English Reels, Swivels, Silver Fishing Gimp, Artificial Baits, Spanish Silkworm Gut, Calcutta and Japan Bamboo Poles.

Sole selling agents for United States Fish Hook Works. Sole selling agents for the Fishing Lines bearing the Trade Mark "Best Quality Hand-Made Linen and Silk Lines," which received Centennial Medal for "strength and care taken in manufacture."

Sole selling agents for the Patent Adjustable Floats and Sinkers. Sole selling agents for Braided Fishing Lines. Trade mark, GLOBE.

Sole selling agents for Enamelled Waterproof Braided Fishing Lines. Trade mark, a silver medal. Selling agents for the best manufactured Jointed Fishing Hooks.

Selling agents for the best Trade List, Brass, Nickel Plated and Rubber Fishing Reels. Selling agents for Skeners, Bael's, McHarg's and Mann's Trolling Bait.

Selling agents for Union Web cka.

The Baker Guns.

OUR DOUBLE GUN.

The Best Gun made for DURABILITY AND SHOOTING QUALITIES

PRICE, BEST ENGLISH TWIST BARRELS, DAMASCUS STEEL, \$40 \$55 to \$200

SEND STAMP FOR DESCRIPTIVE CIRCULAR.

OUR NEW MODEL

THREE BARREL GUN.

PRICE, \$75 to \$250

This gun is light and compact, from 9 to 10 lbs. weight. The rifle is perfectly accurate.

L. C. SMITH, Maker, Syracuse, N. Y.

ANSWERS TO CORRESPONDENTS:—..... 318

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, May 19.

WE are pained to learn of the death at Philadelphia on the 11th inst. of Dr. Chas. E. Cady, the writer of the sketch "In East Tennessee," published in our issue of March 7, and of frequent communications which have appeared in the FOREST AND STREAM in the past months. We had never met Dr. Cady in person, but he was one of the scores of correspondents with whom we enjoy a most pleasant epistolary friendship. The formation of such acquaintanceship is among the amenities of editorial life. The correspondence of a widely circulated journal is voluminous, and extends to scores of persons who, in time, are regarded as personal friends. Possibly the knowledge we thus gain of an individual is imperfect; at the best it reveals but one part of his personality, and this may be the side the least known to those who are in daily intercourse with him. The man who appears in his letters is not the man who mingles with his fellows; yet who shall say which is the more true revelation of character—the written or the spoken thought?

THE NEW MICHIGAN BILL which has passed the House and Senate of that State, and at the time of our correspondent's writing, was awaiting only the Governor's signature to become a law, is a decidedly wise provision. It prohibits the exportation of game from that State. We long ago expressed the conviction that only by the enactment of such laws would the Western States save their game from the refrigerators of the great market centres. The Michigan Sportsman's Association originated the non-export bill, and deserve the credit of it. They will be indorsed by all classes save the nomads who butcher game for the market. It is to be hoped that other States may follow the wise lead of Michigan in this matter. By cutting off the traffic in game, the far-seeing societies who are attempting to check extermination have attained a notable advance toward the accomplishment of their object.

THE DEVELOPMENT OF THE GUN.

THE breech-loading shotgun embodies a perfection attained after centuries of slow development. It is a product of the labor and skill of successive generations of workers and thinkers.

Of the first firearm we have no record. Its experimental discharge must have been regarded as a wonderful and noteworthy event, but the echo of that report had died away long before the time of written history. The invention of gunpowder is one of the disputed dates of history. It is not improbable that the inventor of the rude primitive cannon made his experiments before Moses wrote the book of Genesis. In the Gentoo laws, a code believed to have been coeval with the Jewish law-giver, mention is made of gunpowder as applied to firearms. For the prototype of our breech-loader, then, we must go back at least to India centuries ago. Gunpowder is believed to have been introduced into Europe in the seventh century, and its adoption for firearms to have been general in the thirteenth century.

The first guns must have been crude affairs, for those which came later, and of which fair representations have been preserved to us, were exceedingly rude, clumsy and inefficient. They were made of wood, bound with iron bands; formidable for the actual damage done by their projectiles less than for the terror inspired by their belching forth of fire and smoke.

The first mention of cannon throwing stones is of those employed at the siege of Seville, in 1247. Leaving aside now the successive steps in the perfection of cannon and large guns, and following the advance in the single line leading to the sporting shotgun, we find the next step to have been the invention, in the fourteenth century, of small cannon which could be carried into the field and manipulated by three or four men. Then came semiportable weapons fastened to long stocks, the muzzle end resting on a forked stake support, and the other end upon the ground. Another advance was the *bombardello*, or small bombard, fastened to a straight piece of wood, supported against the shoulder and fired with a match. Later followed the hand culverin, with bent stock and flash pan, and fired with a match. The soldier armed with the culverin and *bombardello* had, we are told, in addition to the unwieldy weapon itself, his coarse powder for loading in a flask; his fine powder for priming in a touch-box; his bullets in a leathern bag, with strings to draw to get at them; whilst in his hand were his musket rest and his burning match. It is needless to say that he must have risen very early in the morning to have brought much venison home at night with such a rig as that. But the old worthies thus accoutred did not try for any smaller game than their own genus. Hunting for game was practiced with bow and arrow only, until in the sixteenth century the Spaniards contrived the arquebus or matchlock. Here the match was fitted to a "serpentina" or cock, hung upon a pivot, and brought into contact with the priming by a working substantially the same as that of the modern hammer and trigger. This was further improved by the German invention of a steel wheel with serrated edge, fitted to a spring, and made to revolve rapidly, the edge coming in contact with a piece of pyrites, and by this friction producing the sparks to ignite the priming. The use of the wheel-lock for sporting purposes was very general in the middle of the sixteenth century, and for a long time was not improved upon.

But necessity is the mother of invention. A band of Dutch chicken stealers or of Spanish marauders—it is disputed which—being too poor to provide themselves with the high-priced wheel-lock, and afraid to use the matchlock because its light revealed their whereabouts to the minions of the law, abstained from their evil practices long enough to devise a weapon better adapted to the needs of roost robbers. The result was the flint-lock; and the pot-hunting fraternity scored a long credit mark. The sportsmen of our grandfathers' generation owed the mechanism of their guns to a band of poultry thieves; there is yet hope for the colored brother.

The flint-lock reached its perfection in the hands of "that king of gun-makers," Joseph Manton, in the early part of the present century, and it gave way only to a worthy superior in the modern gun exploded by percussion.

The discovery of fulminating powders and their applica-

tion to gunnery mark a most important epoch in the manufacture and employment of firearms. The charge in the gun was at first placed above the fulminating powder which was ignited by the concussion of an iron plunger, struck by a cock. Then this plunger was dispensed with, and the fulminate was simply placed in the flash pan. The successive steps are familiar to almost all gunners: the priming was placed between two bits of paper and called percussion pellets; the fulminate was affixed to the breech of the newly invented cartridge and fired by a penetrating needle; then came the copper cap; then the culminating improvement of the cartridge containing both the charge and the priming, and ignited at first by the pin and afterward rim-fire and central-fire principle.

Of the many improvements and modifications of the breech-loading percussion system we shall not attempt a catalogue here. It has been our purpose simply to outline the most important stages of development through which the gun has passed. For a detailed description of guns, ancient and modern, we refer those interested to Mr. W. W. Greener's new book on the subject, where they will find clear and concise descriptions of the weapons, with numerous illustrations which admirably exhibit the peculiarities of each arm.

THE ZOOLOGICAL SOCIETY OF PHILADELPHIA.

THE success which, from the inception of the project to the present time, has marked the progress of the Philadelphia Zoological Society has been something remarkable. This success is due purely to the fact that the management is in the hands of careful business men, who have secured as their assistants gentlemen who are both competent for their positions and deeply interested in the work that has been intrusted to them.

The Ninth Annual Report of the Society, which was read at the annual meeting of the stockholders, held April 23, shows the society's affairs to be in a very flattering condition. The admissions for the year amount to no less than 208,478, of which 180,000 were paying visitors. The months of May, July, August and September were those in which the attendance was largest, that for May being 26,203, and in September running up to 36,011, indicating a large attendance of country people. The greatest number of visitors recorded for any one day was on July 5, when 4,702 were admitted. The receipts from admissions show for the year 1880-81 a slight falling off as compared with the preceding year, the difference, however, being less than \$1,000. The average daily receipts from admissions were \$110.26, and the largest amount received at the gate on any one day was \$976.50. As might be supposed, the attendance is much larger on Sunday than on any other day of the week, and the receipts at the gate amount to \$15,952.40 for that day alone. Saturday stands next in order, with \$5,800 as its footing.

A comparison of income and expenditures, the estimated loss on animals having been charged to the last-named account, shows an excess of receipts over expenses of \$2,749.74, and this notwithstanding the fact that the expenses of feeding the animals and of heating the garden during the unusually long and severe winter just past have been much increased. Several new buildings have been erected during the year, and much grading, tree planting and landscape gardening has been done.

The report of Mr. Arthur E. Brown shows the number of animals at present in the garden to be 901, of which 436 are mammals, 370 birds and 95 reptiles and batrachians. The collections have been increased during the year by the purchase of 82 mammals, the presentation of 58 and the birth of 19; 29 birds have been purchased and 69 presented. Of reptiles and batrachians there were purchased 77 and born 43. The deaths among the animals exhibited make the numbers of the collection slightly less than it was at the close of the year previous. Among the births at the gardens of the society may be noticed that of a dingoo, a mule deer, a colared peccary, a bactrian camel, a llama, a great kangaroo and a rat kangaroo. Two very interesting animals—a great ant-eater and a Rocky Mountain sheep, or bighorn, were received during the past year and attracted the attention of all visitors, but unfortunately neither of the two long survived its introduction to the Garden. A young female

hippopotamus was purchased for the society in New York last winter, and most careful preparations have been made for its reception at the Gardens. It was thought best not to attempt its transportation from one city to the other during the cold weather.

We are happy to learn that [the young female orang-utan purchased in 1879 continues to be healthy and has increased in size and weight. Her continued good health is not less remarkable than satisfactory when we consider the almost universal disease and death which speedily overtake the anthropoid apes in confinement. The excellent health of the present specimen is, no doubt, due in large measure to the great freedom which she is allowed, and to the consequent open air exercise enjoyed by her.

An interesting feature of this pamphlet is the report of the prospector of this society, Dr. Henry C. Chapman, so well known as one of the leading men in the younger generation of Philadelphia's physicians. The value to those in charge of the collections of *post mortem* examinations on the animals which die can scarcely be over-estimated.

SEWAGE CAN BE UTILIZED.

THE prize of \$100 offered by the Mayor and Corporation of Norwich, England, at the National Fisheries Exhibition at that place for the best method of treating sewage, chemical refuse and other sources of pollution to rivers, so as to render them innocuous to aquatic life, has been awarded to the Native Guano Company, Limited, of Aylesbury. This company has so treated the sewage of that town for a number of years that it is perfectly harmless; and they save the solid product, which they call "native guano," and find it profitable. They exhibit a tank with trout, alive and healthy, living in water which has been purified from the sewers of Aylesbury.

This is a subject well worth investigation on this side of the Atlantic. The day will come when we will be civilized enough to utilize our city sewage to fertilize our fields and at the same time save our fish from being asphyxiated by it, thus turning what is now a curse into a double blessing. The sooner we arrive at that stage of civilization the better.

FYSSHYNGE WYTH AN ANGLE.

A SHORT time ago we began to head our department of Sea and River Fishing with a quotation each week selected from some author on angling. We began with descriptions of different styles of anglers, from Norris, and this week we show another kind from an English author.* He is portraying some well-known *librettist*, and not giving a fancy sketch of some ideal character. The sketch is of a man with whom it would please us to fish, being somewhat the sort of an angler that presides over the fishing columns of the FOREST AND STREAM. With us, fishing is merely the excuse for being on the stream, lake or bay. The enjoyment of nature is the first consideration, and as for the mere killing of a fish it is certain that if we could sit on the sill of the back window, and take trout out of the cistern, we would not go to the trouble to tie on a fly.

We have had a glorious day's fishing, which comprised a trip of two hours down-stream and back in the morning, and as much up-stream in the afternoon, the sum total of which would foot up from a dozen to twenty trout of one-quarter to half a pound each. The remainder of the day was spent in finding where the kingfisher bred and how the chipmunk dug his hole. On one of these occasions a raccoon came to the same brook, and a delightful hour was well invested in seeing him first catch and then wash and eat his frog. During this time the utmost quiet was observed and the breath drawn as lightly as possible for fear of breaking the silence and the charm. A day has been spent in bluefishing on the salt bays of the Atlantic coast, and night has come and still no fish were caught, but the day was well and pleasantly spent. The angler whose whole satisfaction is contained in the few moments during which he has a fish upon his line enjoys only a small portion of his day, and if he takes no fish at all, as often happens to the best of men, he is perfectly miserable.

The character drawn by Davies is a man after the style of Walton himself, and not at all unlike our two American anglers, Dr. Bethune and "Uncle Thad" Norris. How the term "disciple of Walton" is misapplied! Imagine the gentle Isaak arising before daybreak and rushing to the stream at a furious pace to head off some one else, splashing into the pools and half fishing them in the race to do them all ahead of some other angler, and then at night returning after a hard day's work at whipping streams in the broiling sun to brag of the number of troutlings he had killed, and meriting his enjoyment by the rule of addition! "Disciples of Walton?" Why, such men were unknown in Walton's time—they are a modern invention, a compound of restlessness, selfishness and brag. Walton would have declined their company. Van Dyke in his recent book classifies them as "The Great American Trout Swine," and scorches them severely for slaughtering fingerlings for comit. The peace and quietude of the angler's spirit is unknown to them, and they are not capable of comprehending the pleasures of the

man who has only taken twenty fish in the same time that they have captured a hundred. They work hard at their play, and, not being thinking men, the quiet pleasures of angling which made Walton term it "the contemplative man's recreation" are an unknown quantity; not being contemplative men, they cannot contemplate.

To such men angling is a contest into which they enter as to a race track; the man who gets the most miles, or trout, to his score is, of course, entitled to the highest honors; and Bethune's verse:

O for the free and stinless wild,
Far from the city's pother,
Where the spirit-mild of nature's child,
On the breast of his holy mother,
In the silence sweet, may hear the beat
Of her loving heart and tender,
Nor wish to change the greenwood range
For worldly pomp and splendor

is lost to him. He only hears, in anticipation, the question "How many did you get?" on his return, and his heart only beats faster as he hurries up to add five more before sundown in order to be able to reply, "A hundred," and when he can do this, at a time when no other man has achieved over half as many, his triumph is complete. Poor fellow! In vain for him the loon laughs and the thrushes pipe. In vain the trees whisper in the breeze; they say nothing to him. All is drowned in the prospective "How many did you get?" The man works hard to enjoy fishing, but he has not an idea of his pleasures. If he has read Walton, he has not profited by his teachings. His whole idea is to fish for brag, and there are no accessory enjoyments to fishing. He could enjoy pulling taut trout out of a well, if they were there in quantity, as well as he could a trip into the wilderness. We thank Van Dyke for the term "Great American Trout Swine." We will often have occasion to use it, although we doubt the species being a purely American one, judging from English angling books and papers, and we incline to believe it not entirely unknown on the other side of the Atlantic. The G. A. T. S. may read with profit the portrait from Davies, under Sea and River Fishing, and see the reverse of himself, a man who may be too careless in his angling, but who is thoroughly respectable, and whom many anglers could, profitably to themselves, pattern after to a slight degree, and learn that the whole pleasure of fishing is not comprised in catching fish.

WE ARE INFORMED that a number of individuals who ought to, and no doubt do, know better, have been since May 1 and are still killing English snipe in New Jersey. Now, while there may be no law on the Statute books protecting these birds after May 1, and while it may be legally permissible for so-called sportsmen to kill these birds as they rise from the nest, there is the unwritten law of decency and fitness which it might be supposed all self-respecting persons would regard. It is discouraging to find in men of education, position and wealth the instincts of the pot-hunter overcoming the breeding of the gentleman.

In New York and New Jersey we understand that a number of persons have been permitted by a fish-warden to capture black bass during the present month, providing that the fish are returned to the water as soon as caught. This is, of course, all wrong. Many of the fish may be returned to the water, but many others will be retained by the angler. Even if they should all be put back in the lake it is impossible that any great number should be taken without some injury which is likely either to cause death or to prevent spawning during the season now at hand. We recommend the individual above referred to to withdraw his permits to fish during the remainder of the close time. He is acting illegally, and may get himself into trouble.

WHEN THE ICHTHYOPHAGES DINE.—The Ichthyophages Club will dine on Friday, May 27, at 6.30 p. m. The steamer Mattawan will leave the pier foot of Fulton street, New York, at five, and foot of Thirty-third street, East River, at half-past five. The dinner will be given at the great hotel at Glen Island, in Long Island Sound, and the party will return by the same steamer. "Don git on board, eld'n, git on board!"

DEATH OF MR. KILBOURNE.—The numerous friends of Mr. S. A. Kilbourne, the celebrated fish artist, will regret to learn of his death on the 11th inst. Mr. Kilbourne was yet a young man and had just begun to be appreciated. His work on the "Game Fishes" showed him to be a careful draughtsman as well as a skillful colorist. Those who possess specimens of his exquisite paintings of fish on shells are fortunate. As a man he was quiet and much respected.

THE LISTS OF recent additions to the zoological collections of Philadelphia, and of the Central Park, this city, often include specimens which it is worth a special visit to those institutions to inspect.

THE TRAVELER is the name of a weekly paper just started by Mr. Chas. A. O'Rourke, the widely known and popular superintendent of the New York City Press Association, and the manager of the proposed "International Exchange" of this city. The purpose of the paper is to furnish concise and useful information to travelers in all parts of the world. It deserves success, and being in good hands will doubtless realize it.

The Sportsman Tourist.

ON THE LARRIWEEP.

IN THREE PARTS.—PART II.

WE had agreed to start early in the morning after deer, and it was hardly gray dawu when Ignotus shook me, to announce that breakfast was ready. As I went down to the creek for an early wash, I was struck with the unearthly stillness of the morning. These stillnesses are quiet enough in their noisiest moments, but of all hours of the twenty-four, the one immediately preceding day far exceeds the rest in this respect. The prowlers of the night seem to have sought their lairs, and the matinee performers have not yet left their beds. At the same hour the Eastern woods would be vocal with birds—

"The thrush, that carols at the dawu of day,
Tears the first notes of the blue-winged wood;
The oriole in the elm; the noisy jay
Jargoning like a foreigner at his food;
The blue-bird balanced on the topostop spray,
Flooding with melody the neighborhood;
Linnet and meadow-lark, and all the throng
That live in nests, or have the gift of song!"

but here they were all sing-a-beds. To be rid of the noise of the brook, so that I could better appreciate the intensity of the stillness, I climbed the hill, and sat down upon a fallen spruce. Here I listened with keen ears for any external sound, but could hear none. Even the leaves of the quaking aspens, which are generally in motion with a low rustling noise, were perfectly still. I shut my eyes, in order to hear better, but if I had been the one existent thing in the universe, the silence could not have been more absolute. As the line from an old song goes,

"The beating of my own heart, was all the sound I heard."

There was something so uncanny in the stillness, that it would have been a relief to have heard even the rancorous cry of a jay. I felt then that I could understand how strong men had gone mad in oubliettes. The horror of silence, superimposed upon its kindred horror of darkness, would affect the sturdiest intellect. The quiet finally became so oppressive that I could endure it no longer, but broke out into a whistle, and so returned to Ignotus and breakfast. As I reached the cabin door, a couple of Indians rode up, and sat gravely upon their ponies waiting for me to address them. If it be

"repose,
Which stamps the caste of Vere de Vere,"

then these two might have been leaders of the House of Lords. How comes it that those dwellers in the Autipodes, the Hinloos, and the North American Indian resemble each other so strongly in their imperturbable courtesy and their brave politeness? I commend the problem to students of Sociology, as one possessed of ethnological value. Ignotus had told me that "Por unde na?" was Mexican for "Where are you going to?" or "Where do you come from?"—I had forgotten exactly which—a and as nearly all the Utes in this part of Colorado talk a little Mexican, I hatched it, at a venture, at the one which I had looked least like a mahogany tree. I essayed though the query was, and mid the tongue which it was put, the first effect was somewhat startling. The one whom I addressed calmly drew his revolver, and before I could compose an appropriate Leather-Stocking harangue, dragged from the holster a dirty serap of paper, which he gravely presented. This manifesto was brief and to the point—"Ko-ke-litz and Savaro—Ute sub-chiefs from Los Anizes to San Miguel by Escavage by this first historic triumph, I essayed another, and in courteous tones, pronounced the commondm, "Biseuit?" A crack echoed in the lower part of each mahogany knot, a guttural "Si, Senor, muchos gracias" rumbled forth, and Ko-ke-litz and Savaro, after unsaddling and picking their ponies, accompanied me to breakfast. There was quite a party of us by this time, and the camp-probbers had already taken to the ground. I had joined the company, seeming to take it for granted that the invitation included them as well as their red brethren. At any rate, they made themselves so much at home that I doubted sometimes whether they were not the hosts and we the guests. Were I rich enough, I should like to settle by competitive examination upon the question as to how much highly-sweetened coffee the coffee the camp-probbers had joined the company, seeming to take it for granted that the invitation included them as well as their red brethren. At any rate, they made themselves so much at home that I doubted sometimes whether they were not the hosts and we the guests. At any rate, they made

Game Bag and Gun.

AN ENCYCLOPEDIA OF GUNNERY.

THROUGH the courtesy of Mr. Henry C. Squires, his American agent, the FOREST AND STREAM has received advanced sheets of Mr. W. W. Greener's new book on gunnery. The volume is a large quarto of nearly 700 pages, and is illustrated with 343 woodcuts which are substantial complements of the descriptions in the text.

Mr. Greener is known the world over as one of the foremost gun-makers of the day; he has brought to the task of book-making the practical knowledge gained in a lifelong study and experiment in perfecting the manufacture of firearms. The result is a comprehensive encyclopedia of all that pertains to the subject; forming an invaluable book of reference, which will take its place unchallenged at the head of the literature of firearms.

The opening chapters are devoted to a history of the gun at different periods in the development of the arm. Much of the material for these chapters was gathered from works inaccessible to the general reader, while the frequent illustrations have been drawn from all available sources, being copied from rare old books or original sketches of antique arms preserved in European museums.

Following this division of the work is an exposition of the mechanism and principle of each of the different models of breech-loading rifles, and the various styles of bullets employed in them; and then the same method is pursued with the shot-gun.

Of special interest will be found the pages devoted to a description of the successive stages of gunmaking as now practiced in England. As this is a subject concerning which we have reason to believe, very little is popularly known in this country, we extract here the following passages, referring our readers to the book itself for the full details:

THE MAKING OF GUN-BARRELS.

In the earliest firearms the barrels were made of plain iron, usually from one strip, which was bent, whilst hot, round a mandril, and the two edges welded together. Later on two pieces were used, one for the breech-end of the barrel, the other for the muzzle, or in some old pieces the breech-piece and the breech-rod were of iron or steel, and the muzzle-piece of brass or bell-metal. The cold-drawn steel barrels made in 1805 and the few following years were far superior to the plain iron and decarbonized steel barrels generally used. These barrels were drawn out, whilst cold, from blocks of steel, by pressing them with punches through orifices. Next in quality comes the "solid fluid compressed steel" barrel, as made by Sir J. W. Roith, which withstands heavy charges better than any plain metal barrel now used; but they are very expensive, and not well liked, for they, in common with other plain metal barrels, show no figure whatever when finished, but resemble in appearance a musket barrel. The first notice we can find of iron or steel as used conjointly as a metal for gun barrels is in the letters patent of William Dupin (1798). His method was to lay round a rod of iron a strip of steel, then a coating of iron of "iron and steel mixed." The whole was then welded together, and the iron cores bored away so as to leave the barrel of steel, or steel and iron, as required. A few years later, old horse-nails were greatly in vogue for the manufacture of gun-barrels. The nails have always been made from the very best iron, and are also considered to obtain some virtue from the contact with the horse's hoof. The nails were welded together into a straight or taper bar, which was lapped over a mandril and welded into a tube. These barrels held a high reputation at the commencement of the present century. They were easily distinguished, being figured barrels; the figure, however, runs longitudinally with the barrel, the nails being light, and dark lines at each weld. We believe that in horse-shoe nail stubs was the first successful attempt at a figured barrel. In 1806 a J. Jones patented an improved method of manufacturing gun-barrels. He made the barrels by twisting a square bar, the twisted edges round a mandril, so that the edges overlapped each other, and then welding together the edges of the scelp. Once introduced, the manufacture of twisted barrels increased rapidly in importance. Scelp or plain rods were first twisted, afterward the horse-shoe nail stubs were twisted in the same manner, and the introduction of Damascus barrels followed shortly afterward. The manufacture of barrels from scrap iron with tilt hammers was its next step. When John Olive, the noted barrel-maker, kept a mill in Birmingham, turning out large quantities of barrels weekly, by which he achieved a good reputation and a considerable fortune.

The iron for the manufacture of gun-barrels was formerly made from scrap and old horse-shoe nail stubs. In preparing the metal for the old-fashioned laminated steel barrels, a number of scraps were collected of various proportions, the shavings of saws, steel pens and scraps of best iron. The bloom was made up into the whole from new metal, as follows: Pig-iron obtained from a mixture of the best ores is placed in a furnace, melted and cleaned from all dross by puddling—the dross, being much lighter than the iron, rises to the surface, and is skimmed off. When sufficiently cleaned the draught plates of the furnace are lowered, the heat reduced thereby, and the liquid iron while cooling gathered and worked into blooms of about 1 cwt. each. The puddler takes the bloom with a pair of tongs, and then the steel hammer and bands it over to the shingler, who by dexterously turning the metal under the hammer forms it into a square block and passes it to the roller; it is then passed through the various rolls until of the required size, and drawn out into a bar of about ten feet in length. The hammering under the heavy tilt condenses the metal, and causes the dross and scale to fly off. The rolling increases its ductility and tenacity by elongating the mass with the steel hammer, and the same way from the best Swedish pigs, but are considerably improved by the hammering and rolling, becoming much more tenacious and elastic in proportion than the iron.

The bars are cut into equal lengths, laid together and fastened into faggots; these faggots are heated in the draught furnace, welded under the tilt hammer, and the block of metal re-heated and hammered for the manufacture of the best barrels, to condense the fibres of the metal and increase the specific gravity. After being hammered the blocks are rolled out into bars; these bars are again cut into equal

lengths, laid and fastened into faggots, heated in the furnace, and welded together and rolled into thin narrow strips. In the above processes the ends of the bloom, or extremities of the rods, are cut off and thrown aside, being less dense and consequently useless for gun-iron.

The iron is now again cut into equal lengths and laid together and fastened into faggots, heated and welded and drawn out as before described, and rolled into rods of the sizes required by the welder. The faggots are each heated seven times during the process of manufacture of the metal for the best barrels. The proportionate amounts of the different descriptions of metal in a barrel determine its quality. The old-fashioned laminated steel was composed of nearly three parts of steel; best English Damascus and modern laminated steel contain over 60 per cent of steel; and our new silver-steel Damascus consists of nearly 75 per cent of the best worked steel. The amount of steel is determined upon before making the metal into faggots for the last time; if for scelp barrels the strips of iron are twice the thickness of the steel, the faggots being formed of alternate layers of iron and steel. In single iron Damascus barrels the proportion of iron used is not much less than the steel, but the metal for these common barrels does not pass through quite so many processes as the Damascus barrels, although far superior in quality to ordinary iron; its tenacity and specific gravity is not so great as that of the very best gun-iron. In best Damascus barrels the iron and steel are mixed together systematically. Our silver-steel Damascus is mixed in a different manner to that of Damascus, the exact proportions of iron and steel being used, as have been found by experiment, to give the greatest strength with the finest figure. The tenacity, durability and beautiful figure of the barrels depends on the quality of the materials and arrangement of the steel and iron, the desiderata being the placing of the iron in the best position to give the regular and fine figure in the finished barrel.

Too large an amount of carbon in gun-iron is more detrimental than a scarcity, for where carbon has once been it is impossible to entirely eradicate it, and although it may be extracted to as great an extent as possible, it leaves a residue that possesses a tenacity and specific gravity inferior to the original quantity; thus steel, however manufactured, cannot by any process yet discovered be re-converted to iron of the same nature it was originally. It will then be apparent that barrels composed wholly of steel are altogether unsuitable for shot guns. We show the fallacy of so manufacturing shot barrels, and describe the process when treating of the manufacture of rifle barrels.

In twisting the rods care is taken to keep the edges of the iron and steel strips to the outside, for it is the twisting of the different metals that gives the various figures in the finished barrel. The steel being hard resists the acids, and retains a white or light brown hue, whilst the iron, or softer metal, is so acted upon by the acids as to be changed into a dark brown or black color.

The best barrels must be made from the best, and therefore from the *most expensive, steel and iron that can be produced*. Owing to the difficulty of obtaining good scrap iron and steel—the importation of old horse-nail stubs from the Continent has long been discontinued—it has been found necessary to manufacture gun-barrel iron from new metal. Barrels so manufactured are much superior to those made from scrap metal, and are almost entirely free from flaws. Indeed, before the introduction of the new mode of making gun-iron, it was a most difficult matter to obtain English barrels free from flaws; as the steel makers of the best kind are not without it having a certain percentage of Bessemer steel among them, which, owing to its non-adhesiveness, is most difficult to thoroughly weld and amalgamate with the other metals, and consequently most disastrous to the successful manufacture of gun-barrels. The rods of metal as now prepared are extremely tenacious, and capable of withstanding an enormous strain. The average strength of rod six-sixteenths by five sixteenths by twelve inches long, containing 1.40625 cubic inches of iron, is equal to a tension of over 16,000 lbs.

We may add that it takes 18 lbs. of prepared gun-iron to weld an ordinary pair of 12-gauge barrels, which, when finished, weigh, with the ribs, lumps and loops, but little over 4 lbs. After bearing in mind this fact, and considering the great expense and loss of expensive steel and iron attending the manufacture of the metal, and the cost of welding of best barrels, it will be seen that the cost of wadding that best guns are expensive to produce.

BARREL WELDING.

The square rods of prepared iron are first twisted to give the Damascus figure. The rods are about four feet long, and are placed in the forge fire until about eighteen inches of the rod is brought to a red heat, when one end is thrust into a square hole in a block made fast to a frame, and the other end fixed into a movable head at the other end of the frame; a rotary motion is then given to the movable head; the rod, being square, cannot turn round with the head, so is twisted in itself. The rod is carefully watched while twisting, and should, on any emergency, be twisted more rapidly than another, a man is ready with a pair of tongs to hold that part of the rod, so that it is preventing from twisting. This process is repeated until the whole rod is perfectly twisted, and a regular figure in the barrel insured.

When finished twisting, the rod will be round, except the squares at each end where held in the block and head, the four feet end will have become shorter to about three feet three inches, and have about eight turns to the inch; it is this twisting of the rods that makes the difference between a best barrel and a common one. All Damascus barrels must be made of twisted rods, whilst plain twist or scelp barrels are made from plain straight rods or ribbands. It is the twists in the rods that cause the figure to appear in the barrels, and all iron so twisted is called Damascus—from Damascus, where a similar process was first practiced for the manufacture of Damascus swords. It is not usual to use iron rods of gives increased strength and tenacity to some extent by rendering the fibres more dense.

The rod prepared, it is either joined to other rods or coiled and welded into a barrel singly. Laminated steel barrels are twisted, and the rods welded in the same manner as the stub Damascus, but the rods are composed of superior metals containing a larger percentage of steel. In laminated steel and silver-steel Damascus barrels it is not usual to use iron rods of the same manufacture. Fine Damascus barrels, as manufactured by the Belgians, are occasionally made from four or six rods together, but three is sufficient to give a very fine figure.

The true English Damascus barrels are manufactured usually from three twisted rods prepared in the same way as described for the manufacture of stub Damascus, but the rods are composed of a superior iron of a finer quality in the

figure or streaks, which have to be very decided, white and black, as described in iron-making.

The rods having been twisted, and the required number welded together, they are sent to the iron mill and rolled at a red heat into ribbands, which have both edges bevelled the same way. There are usually two ribbands required for each barrel, one ribband or strip to form the breech-end, and another, slightly thinner, to form the fore or muzzle part of the barrel.

Upon receiving the ribbands of twisted iron, the welder first proceeds to twist them into a spiral form. This is done upon a machine of simple construction, and consists simply of two iron bars, one fixed and the other loose; in the latter there is a notch "or slot to receive one end of the ribbon. When inserted, the bar is turned round by a winch-handle. The fixed bar represents the ribband from going round, so that it is bent and twisted over the movable rod like the pieces of leather round a whipstock. The loose bar is unshipped, the spiral removed, and the same process repeated with another ribband.

The ribbands are usually twisted cold, but the breech-ends, if heavy, have to be brought to red heat before it is possible to twist them, no coqs being used. When very heavy barrels are required, three ribbands are used—one for the breech-end, one for the fore or muzzle part, and one for the middle.

The ends of the ribbands after being twisted into spirals, are drawn out taper and coiled round with the spiral until the extremity is lost.

The coiled ribband is then heated, a steel mandril is inserted in the muzzle end, and the coil is then well hammered. Three men are required—one to hold and turn the coil upon the grooved anvil, and two to strike. The foreman, or the one who holds the coil, has also a small hammer with which he strikes the coil, to show the others in which place to strike.

When the muzzle or fore-coil has been heated, jumped up and hammered until thoroughly welded, the breech-end or coil, usually about six inches long, is joined to it. The breech-coil is first welded in the same manner, and a piece is cut out of each coil; the two ribbands are welded together and the two coils are joined into one, and form a barrel. The two coils are then joined, and all the welds made perfect, the barrels are heated, and the surplus metal removed with a float; the barrels are then hammered until they are black or nearly cold, which finishes the process.

This hammering greatly increases the density and tenacity of the metal, and the wear of the barrel depends in a great measure upon its being properly performed.

When the barrels are for breech-loaders, the flats are formed on the undersides of the breech-ends, and when for muzzle-loaders the bars are forged on. If an octagon barrel is required it is forged in this form upon a properly shaped anvil; and in rifles the barrels are welded from thicker ribbands, and welded upon smaller mandrils.

Ribs are forged from rods twisted in the same manner as for the manufacture of Damascus iron. They are then forged to the required shape upon a grooved anvil. Plain ribs are used for any common guns, in which case they are filed for the gun to the required shape.

We have now described the process of barrel welding, as practiced at St. Mary's Works under personal supervision. The same method is generally followed by the other barrel-makers of Birmingham and neighborhood, who manufacture for the London and country trade.

We will now proceed to describe the method practiced in Birmingham for the manufacture of medium and common gauge barrels, and without which this work would be incomplete.

The iron is twisted in much the same way as that already described, but steam-power is used to turn the winch instead of hand-power. The forge-fires are blown by a steam fan, instead of the old-fashioned bellows, and the welding is done by one man instead of three. This is accomplished by having a tilt hammer close to the forge regulated to give sharp, quick short blows, and capable of being thrown off with a pair of gear with the foot. The welder is also provided with an anvil, swages, mandrils, etc. When he removes the coil from the fire, he has only to knock in a mandril, straighten the coil on the anvil, jump it close by striking it on the floor in the usual manner, and place it under the tilt, re-heating the coil, repeating the process until the barrel is properly finished. The appearance of barrels so welded is not so good as that of those hammered by hand, but they are strong and sound, and on account of less care and labor being bestowed on their production, they are cheaper than hand-forged barrels.

The famous Belgian Damascus barrels, in which the figure is very minute, are made of thirty-two alternate bars of iron and steel rolled into a sheet 3-16ths of an inch thick, which is then split by a machine into square rods. These rods are then twisted in the usual manner by hand, but they are strong and the threads resemble a very fine screw, there being not infrequently eighteen turns to the inch. Six of these rods are then rolled together to make the ribband, and the result is the extremely minute figure; and the overtwisting, it is claimed by our author, reduces the strength of the metal, just as a hemp rope is rendered useless by overtwisting. The barrel-welders of Belgium are chiefly located at or near Liege. Other principal places where good barrels are made are St. Etienne in France, Brescia in Italy, and Suhl in Prussia.

Passing through the successive steps in the preparation of the gun-barrel, we come at length to the proving of them. This is obligatory upon the manufacturer in London, Birmingham and Liege.

MODE OF PROVING.

A description of the *modus operandi* of proving gun-barrels may be interesting to sportsmen and gunmakers in those countries in which no proof-house exists. The system of proving at both the Birmingham and London proof-houses are identical. Each barrel passes through the proof-house with a number of plugs, varying in size from one to ten, and pees up to two inches. Having ascertained the exact bore of the barrel by means of one of these plugs, he takes up a punch, bearing a similar number to the plug, and stamps that number upon the barrel—say seventeen. The man whose duty it is to load the barrel, seeing the number, is able to judge of the proper amount of loading to put in it. Leaving this room and following a short tramway, along which the barrels are conveyed, we come to the "Loading-Room."

The Gun and its Development; with Notes on Shooting, by W. W. Greener, author of "Modern Breech-Loading," "Choke-Bore Guns," etc. Illustrated. Cassell, Pott, Galpin & Co.; London, Paris and New York, 1881.

Here everything is done by rule and measure, every precaution taken to ensure safety, and every means used to prevent "rain." The room is divided into three compartments, separated by strong brick walls, so that should an explosion occur in either the firing room, the second or the third, it will not take place. The floors of these rooms are always kept damp and well swept. In the first compartment the barrels are loaded by one man who has the barrels arranged round the room. In front of him is an arch of copper measures numbered successively from one up to about fifty; upon ascending the number stamped upon the barrel by the man in the receiving room, he takes up one of the measures bearing the number, and having filled it with powder, he passes on to the third compartment, where it is placed in a powder from a bowl by his side, he places the charge in the barrel; he next takes a proper sized cork wad and a leaden plug from a numbered box corresponding with the boxes, and afterwards a second cork wad with which he loads the barrel. Thus loaded the barrels are passed into the second compartment, where the charge is duly rammed home by copper rods prepared for the purpose. The barrel is then passed on to the third compartment, where it is primed, and then transported into the firing-room. The firing room is a large, lofty building, lined throughout with sheet iron, and has ventilators; in the roof and the windows are apertures, capable of being immediately closed, with iron shutters arranged upon the same principle as the Venetian blind. The barrels are arranged upon a grooved rack, and fired by a train of gunpowder which connects the breech vents with each other. The train is fired by a percussion cap, which is detonated by a hammer working on a pivot and pulled from the outside; the door is of iron, and it and the shutters are closed before firing. The method of firing and arranging the barrels will be better understood from the annexed diagram, showing the interior of the firing-room while the barrels are being proved. After the train is fired the doors and shutters are opened and the smoke allowed to clear off, and the barrels may be seen by a partially hoisted in a sand heap behind the rack; the bullets are shot into the sand heap on the other side of the room. The barrels are then collected, and those that have, through any cause, missed fire are re-primed and again placed on the rack; the other barrels are conveyed to the inspecting rooms, where they are washed out, inspected, and if found perfect, marked according to the maker's test, which consists in plunging the muzzle with a lead stopper, filling the barrel with boiling water, stopping the breech with a similar plug, and striking it with a hammer, so that the water, being compressed, exerts an internal pressure upon the barrels, and if there be any flaw or minute hole it will force its way through. Commonly the barrels have to stand for twenty-four hours before being cleaned or looked over, so that if any flaws are in the barrels the action of the acid residue from the powder will eat into them and make them more apparent.

The plan of proving described is provisional proof, when the barrels are in tubes; for definite proof, when the barrels are together, and have the breech-actions attached, each barrel is fired separately. The guns when loaded are taken to the lobby of the firing-room, where they are taken into the room and proved at a time; the barrels and breech-actions are fixed upon and fastened to a traveling block of the required shape, and fired by means of hammers dropping upon a striker which strikes the cap in the cartridge. The hammer is pulled by a cord passing through a hole in the wall. Various shaped blocks are provided to suit the various sized and differently constructed single and double rifles. Should any flaws or defects be discovered after proving the barrels, they are returned to the maker, who remedies them as he best can, and re-returns them for proof. Best barrels are frequently burst at proof, but they are more often bulged, in which case the bulges are knocked down by the maker, and the barrel re-proved, until it either bursts or stands proof. We have heard that in one case a barrel was proved and bulged eight times, but that it stood all right, after being proved the ninth time. In the definite proof the breech-actions are frequently blown to pieces, or else made to gape at breech, in which case the maker hammers the false breech till close, and ease-hardens it, and when again proved it generally stands. The proving of breech-actions is very necessary, as it prevents, in a good measure, dangerous common breech-action house accidents. In the United States, France, Germany and Holland, the proofing of guns and rifles is done; it is only in London, Birmingham and Liege that it is compelled to be proved by Act of Parliament. All small arms bearing the Belgian proof mark may be sold and used in England without being re-proved, provided they do not bear the name of any English maker. The Gun Barrel Proof Act does not extend to Ireland, Scotland or the Colonies.

PHILADELPHIA NOTES.

PHILADELPHIA, May 16, 1881.

MR. FRANKLIN JONES, of Philadelphia, ex-president of the Philadelphia Sportsmen's Club, has presented to the Philadelphia Mercantile Library a complete set of FOREST AND STREAM, handsomely bound, from the first issue of the journal to about May 1, 1881. The library association values the gift highly, and has so expressed it to Mr. Jones. The second annual hare and hound meet of the Germantown Bicycle Club was given on last Saturday at Germantown. Three hares were chosen for Saturday's meet, Messrs. F. W. Corse, Chas. Taitan and Geo. G. Gidion, and were given ten minutes' start. Nearly twenty-five hounds, mounted on every variety of bicycle, followed in hot haste after the fugitives who left behind them a trail of foot paper. The hares were not overtaken and finished five minutes in addition to the time allowance ahead of the first hounds. Nearly all of the latter rode from start to finish. Among those participating were several invited representatives of other city clubs.

A very exciting match between the two best pigeon shots of the Liverton Gun Club lately took place at the grounds of the club. The gentlemen, whose names I am not allowed to mention, made excellent shooting, and the one whom it was thought beyond all doubt would win was vanquished, the winner astonishing every one by his coolness.

Mr. L. M. Gilbert will furnish those wonderful going birds" for the late match between two members of the N. Y. Gun Club at Bergen Point had just snub flyers at Liverton. We doubt if better pigeons could be found among the "blue rocks of England."

Within the city limits of Philadelphia woodcock has been found nesting. On Crum Creek the dividing line of Dela-

ware and Philadelphia county, young birds just fledged were seen last week—is this not early?

The protection afforded by our park has had the effect of making it an excellent harbor for the quail, and we are told by one of the guards that the number have already paroled off and may be expected to rise rapidly. Last year several quays were hatched within the park limits, and favored ones had the opportunity of working (without gun) their young dogs on the birds.

Many anglers are off trout fishing.

Horo.

HOUNDING VS. STILL HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. The particular points of the inquiry were as follows:

- 1st. What is the aim sportsmen in hunting deer?
- 2d. What is the prevailing method of hunting deer?
- 3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
- 4th. Describe still hunting deer, and its effects.
- 5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
- 6th. Would resident sportsmen approve of a law prohibiting hounding deer, and the means used in enforcing it?
- 7th. Would they approve of a law prohibiting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
- 8th. What is the open season for deer?
- 9th. What are the winter habits of deer, so far as you have personally observed them.

MAINE—PENOBSCOT CRITICIZED.

"Penobscot" has given you the geography of a small portion of our game region and its character, which applies to the whole country drained by the Machias rivers, save that some of the townships are well timbered. I will not give bounds, for an examination of a map will show the region drained by these rivers to be many times larger than that described by "our correspondent."

I propose to answer some points of his article, hoping others will follow suit.—"Having visited and thoroughly explored a tract of country," etc. This must have been in September, as I understand the hunting season is September; also he must have killed two deer out of season. "My surprise is boundless" when I see such admissions.

It is needless to state that this was not because of the hounding, but in spite of it, and wholly owing to the splendid facilities for cover made by the growth of the timber during the ten years of my absence, it being too small to afford the necessary protection at that time." Let us see what are the facts just here. I have been upon this ground for the past ten years, not as a hunter, but among the families of the lumbermen, and frequently at their camps, and they, knowing the interest I take in sports and game protection, have kept me well posted, not only for the last ten, but thirty years. I am well acquainted with nearly all the lumbermen from Ellsworth and Cherryfield to Calais, besides having hunted and explored, myself, this region last October, as far as Budington.

I did not see a hound or hear his "music," only one porcupine, dead, near a deserted camp. "I did" in what L. K.'s camp, where unfortunately gentlemen were "killed" by him, to take home, with a wonderful story of its capture by themselves.

Ten years ago deer were nearly exterminated by crust hunters with dogs snarl by wolves. After the wolves had cleaned out nearly the whole they left. When we found that near the settlements there were a few deer remaining we set them to protection, and they commenced our trouble with the crust hunters. Every worthless scamp had a cur and an old army gun, ready for the first good crop, no matter when December, January, February or March (I will say here, in my opinion, the open season for all kinds of game in Maine should be from September 1 to December 1.) We found the wolves were not our worst enemy, but the dogs, hence the law against hunting deer with dogs.

Finding law stone-eyes, we formed a society for the protection of game, and have labored with a will until the present against no little opposition.

These men, as a class, were poor and worthless, idle, dishonest and treacherous, and worse than all, have the sympathy of a large portion of the community not interested in game protection.

We paid our own bills, sent men into the woods to look after law breakers and dogs year after year, and soon the change came that was apparent to all. Deer were certainly rapidly increasing, and our cause soon became popular, and those who were our worst enemies when we began, are now friends. Nearly all the crust hunting is stopped, and has been for several years. We admit that a few deer are killed out of season; not many. Some of our late converted friends are our most active workers. Nearly all the camps upon the townships in this region have one or more of our friends who keep us posted, in each year, which helps us greatly. All the pot hunters, crust hunters, duck netters, hounders, etc., are known to us. That there has been the amount of hounding deer during this time that "Penobscot" alleges, I deny. What the poor man means by "the result" is due to the efforts of sportsmen resident in this middle and eastern part of Washington County, aided by the dog law, not by the "growth of timber and hounding," is evident to all.

"There were gangs of men and hounds,"—"Hounding in this region is practiced as follows."

"Thanks for the above information." "There is, as is well known, a law prohibiting hounding at any time of the year in this State, but it is not enforced, and I doubt the propriety of attempting to do so, as the great majority of our business men." Unhappily men have the same rights as mechanics or day laborers, and no more. If business men are to be allowed dogs to hunt as they please in August and September, why not the resident poor be allowed the same privilege in February and March? But the poor man needs the law, and the business man does not. I regard the poor man who kills a deer for his family use, out of season, a king beside the business man who hounds deer in August or September. Cannot any man see that it is either protection or not protection? A law not enforced is worse than no law. Any reasonable man can see that class legislation is out of the question, for we all have equal rights by the laws of our country. In Washington County do not intend to have the law repealed, but to have it enforced, and for that purpose we called for an appropriation, which we have, and more, intended "to pull in," if required.

"As to still hunting" * * * Still hunting is where two still hunts, and no sportsman can help enjoying it.

"In conclusion," etc., I will change this and have it read, "I am convinced that if dogs are not allowed to hunt deer, no other legislation will be required for their protection."

Who are to protect our game—residents or non-residents? We have a few deer in Maine, besides some small game, which is rapidly being destroyed, and unless great care is exercised we shall soon be without it. As you will see.

We are sensitive—I mean we not I—for we feel our efforts are in vain unless sustained by those who ought to be our friends. We claim we are entitled to some respect for our efforts to protect game from citizens of our own State. Sportsmen cannot afford to trample game laws under foot in any State much less this where game is so nearly extinct. Why are the true sportsmen?

I think I have shown the cause of the feeling against dogs in this State, and will say no more at present.

- In answer to questions, 1. Answered by Penobscot. 2. Still hunting. 3. Don't believe in it; drives them off, etc. 4. New burms at night, or evening and morning upon light snow, driving. 5. Market hunters. 6. Yes, yes. 7. No. 8. Oct. 1 to Jan. 1. 9. Yardling. Old Trg.

The writer of the above sends us the following letter received by him. The country referred to is a tract twenty miles square:

"Dear Doctor: Because I have carried 'rod and gun' about here for twenty-seven years, less thirty-two months during the unpleasantness, you ask me, 'What do you think of 'Penobscot's' article in FOREST AND STREAM of May 5?'"

I think it well calculated to mislead those not fully acquainted with the facts.

No comparison can with any degree of fairness, be drawn between the present time and ten or twenty years ago, so far as hunting deer with dogs is in question.

"Penobscot" speaks of deer being hunted with dogs every year for the past twenty at these lakes. Now, whatever of value his article may have had, it is nearly destroyed by this statement, for, fifteen or twenty years ago, deer were almost as numerous as they are now, owing to the presence of very large numbers of wolves throughout this section. The wolves did not all go away until within ten or twelve years, not leaving until the deer were nearly exterminated. And it is only since about 1870 that they have begun to return and increase. There has been comparatively little hounding as yet, being against the law of the State.

Since the organization of the game association at Machias five or six years ago, through their efforts to enforce the law against illegal killing, deer have increased wonderfully.

Now, as to the effect of hounding. Does it frighten or drive them from the country? There is a large tract of almost unbroken forest, nearly twenty miles long, and from one to four or five miles wide, and lies so near the settlements as not to have been molested by the wolves. Lumbering operations have not been one-half as extensive as through the Mopang section. Ten years ago deer were far more plenty here than anywhere on the Machias rivers. The conditions for hunting with dogs were unusually favorable, owing to the many lakes it contained. Now, while the swamps here, as about the Mopang, have become more dense and impenetrable, and not to have been molested by the wolves. Lumbering operations have not been one-half as extensive as through the Mopang section. Ten years ago deer were far more plenty here than anywhere on the Machias rivers. MEASUREMENTS OF FIRST PRIZE WINNERS.

We give below the age, weight and measurements of some of the first prize winners in the setter and pointer classes at the late Westminster Kennel Club Show. We have written to the owners of all the blue ribbon dogs, and will publish the list in full as received.

Mr. Edmund Orgill's champion pointer dog Besh, winner in champion pointer class for dogs under 55 lbs., age 5 years, weight 53 lbs., height at shoulder 29 in., length from nose to set on of tail 36 in., length of tail 22 in., girth of chest 28 in., girth of loin 23 in., girth of head 17 in., girth of forearm 8 1/2 in., girth of neck 16 in., length of ear from occiput to tip of nose 8 in., girth of muzzle midway between eyes and tip of nose 9 1/2 in., girth of neck midway between head and shoulders 17 in., length from corner of eye to end of nose 8 in., length from elbow to top of shoulders 13 in., length of ear from top to set on at skull 5 in. - May 13, 1881.

Mr. Edmund Orgill's champion pointer bitch, Ruc, winner in champion pointer class for bitches under 50 lbs., age 21 months, weight 40 lbs., height at shoulder 21 1/2 in., length from nose to set on of tail 33 in., length of tail 12 in., girth of chest 20 in., girth of loin 20 in., girth of head 14 1/2 in., girth of forearm 7 1/2 in., girth of thigh 13 1/2 in., length of head from occiput to tip of nose 8 1/2 in., girth of muzzle midway between eyes and tip of nose 8 1/2 in., girth of neck midway between head and shoulders 13 1/2 in., length from corner of eye to end of nose 3 1/2 in., length from elbow to top of shoulders 10 1/2 in., length of ear from top to set on at skull 5 in. - May 13, 1881.

Mr. Edmund Orgill's pointer bitch Rhona, winner in pointer class for bitches under 50 lbs., age 2 years, weight 46 lbs., height at shoulder 22 1/2 in., length from nose to set on of tail 35 in., length of tail 18 in., girth of chest 27 in., girth of loin 21 1/2 in., girth of head 15 in., girth of forearm 8 in., girth of thigh 14 in., length of head from occiput to tip of nose 9 in., girth of muzzle midway between eyes and tip of nose 9 in., girth of neck midway between head and shoulders 11 1/2 in., length from corner of eye to end of nose 4 in., length from elbow to top of shoulders 11 in., length of ear from top to set on at skull 5 1/2 in. - May 13, 1881.

Mr. George G. Barker's champion pointer bitch Princess, winner in champion pointer class for bitches over 50 lbs., age 3 years 7 months, weight 54 lbs., height at shoulder 27 1/2 in., length from nose to set on of tail 36 in., length of tail 12 1/2 in., girth of chest 28 in., girth of loin 22 1/2 in., girth of head 15 1/2 in., girth of forearm 8 1/2 in., girth of neck midway between eyes and tip of nose 9 1/2 in., girth of muzzle midway between eyes and tip of nose 9 1/2 in., length from corner of eye to end of nose 4 in., length from elbow to top of shoulders 11 1/2 in., length of ear from top to set on at skull 6 1/2 in.

Mr. C. H. Mason's pointer bitch Water Lilly, winner pointer class for bitches over 50 lbs., age 3 years, weight 58 lbs., height at shoulder 24 in., length from nose to set on of tail 37 in., length of tail 13 in., girth of chest 28 in., girth of loin 13 in., girth of head 16 in., girth of forearm 7 1/2 in., length of head from occiput to tip of nose 9 1/2 in., girth of neck midway between eyes and tip of nose 9 1/2 in., girth of muzzle midway between head and shoulders 26 in., length from corner of eye to end of nose 4 in., length from elbow to top of shoulders 11 1/2 in., length of ear from top to set on at skull 6 1/2 in. - May 13, 1881.

Mr. W. R. Hobart's pointer dog Napp, winner in pointer class for dogs over 55 lbs., age 5 years, weight 72 lbs., height at shoulder 24 1/2 in., length from nose to set on of tail 41 1/2 in., length of tail (has been docked) 13 1/2 in., girth of chest 31 in., girth of loin 23 1/2 in., girth of head (in front of ears) 17 1/2 in., girth of forearm (2 in. below elbow) 7 in., length of head from occiput to tip of nose 9 1/2 in., girth of muzzle midway between eyes and tip of nose 10 1/2 in., girth of neck midway between head and shoulders 16 1/2 in., length from corner of eye to end of nose 4 1/2 in., length from elbow to top of shoulders 14 in., length of ear from top to set on at skull 6 in. - May 12, 1881.

Mr. D. C. Sanborn's champion English setter bitch Spark, winner in champion English setter class for bitches, age 3 years, weight 50 lbs., height at shoulder 20 in., length from nose to set on of tail 37 in., length of tail 13 in., girth of chest 26 in., girth of loin 20 in., girth of head 15 in., girth of forearm 10 in., length of head from occiput to tip of nose 9 in., girth of muzzle midway between eyes and tip of nose 8 1/2 in., length from corner of eye to end of nose 4 1/2 in., length from elbow to top of shoulders 13 in., length of ear when extended (measurement taken across the head) 15 in. - May 12, 1881.

Mr. John C. Higgins' English setter bitch Petrel II, winner in imported English setter bitch class, age 3 years 4 months, weight 45 lbs., height at shoulder 20 in., length from nose to set on of tail 33 in., length of tail 14 in., girth of chest 26 in., girth of loin 20 in., girth of head 15 in., girth of forearm 10 in., length of head from occiput to tip of nose 9 in., girth of muzzle midway between eyes and tip of nose 8 1/2 in., length from corner of eye to end of nose 4 1/2 in., length from elbow to top of shoulders 13 in., length of ear when extended (measurement taken across the head) 16 in. - May 12, 1881.

Mr. Max Wenzel's Irish setter dog Chief, winner in open Irish

RATTLER.

setter class for dogs, age 21 months, weight 67 lbs., height at shoulder 24 in., length from nose to set on of tail 41 in., length of tail 14 in., girth of chest 29 in., girth of loin 19 in., girth of head 16 1/2 in., girth of forearm 7 1/2 in., length of head from occiput to tip of nose 10 in., girth of muzzle midway between eyes and tip of nose 9 1/2 in., length from corner of eye to end of nose 4 1/2 in., length from elbow to top of shoulder 12 1/2 in., length of ear when extended (measurement taken across the head) 15 in. - May 14, 1881.

Mr. Charles Moran, Jr.'s, native English setter bitch Donna, winner of first in open class for native English setter bitches is expected to whelp shortly; we are thus privy to learn from securing her measurements at this time. Later on they will be given.

PHILADELPHIA AND BALTIMORE NOTES.

OUR Hiverton Gun Club is, of course, much pleased with its late victory over the New York City Club, and its members receive the warmest sort of congratulations from their friends, and well they may, for it takes the best of shooting to overcome our knights of the trigger. Was not Arnold's a splendid score?

For the past year or four days those of our sportsmen who found time to attend the late Westminster Kennel Club's show have been discussing the merits and demerits of the winning dogs. Is it not strange there exists such a diversity of opinion when animals are bred so near perfection in form? I am sure from what I hear Philadelphia dog men say they hold to the "handsome is as handsome does" doctrine.

MAJOR.

DYKE.

Mr. W. W. Collett's Echo, out of Hnbell's May by Reid's Sam is becoming a great favorite as a sire in Philadelphia. Not a few gentlemen have bred their native bitches to him, and his get are making capital field dogs. Echo is a large setter, much to large to my liking, but there is perfection in his head and outline. In the field he has proven excellent, and he is worked regularly and often, which cannot be said of but few of our noted blue-blooded dogs in Philadelphia. The majority of them are never hunted. Echo is not in the public stud, let me say, and it is only the friends of his owner that can procure his services. If sportsmen were more particular in breeding their bitches to animals of known and tried field qualities, and not make their choice of dogs noted for the appearance and extended pedigree alone, there would be less disappointment, and I would say fewer nervous and gun-shy dogs bred.

During the past week a number of snipe were killed on the meadows bordering Woodbury Creek, which, on being opened, were found to contain eggs. There was not a female among the lot that did not have them in a very advanced stage of development. This fact speaks for itself.

While at Baltimore last Thursday and Friday I noticed in Druid Hill Park several varieties of warblers had reached that section. I observed the black and white creeper, yellow rump and yellow warbler which struck me as being rather early this backward spring. In the most advanced seasons we hardly look for the body of warblers before the 10th to 15th of May in the neighborhood of Philadelphia, and all migratory birds of this order most certainly will be late in their coming this season.

Such members of the Baltimore Kennel Club I conversed with seem to think that a class at dog shows for so-called bench-legged beagles would be out of order. Said one - "If bench-legged beagles are bassetts let the class be for bassetts - do not create a new name." I was assured that there had been some beagles in Baltimore that had been bred to the dachshund.

Dr. Geo. Reeling, of Baltimore, showed your correspondent two pair of deer antlers interlocked that had been found with the skeletons of the animals near Warm Springs, Va., showing that in combatting the bucks had become thus securely fastened together and miserably perished.

Roan.

THE LOST ONE FOUND. - Editor Forest and Stream. - As I was walking up New street on Saturday the 7th I saw a mat with a liver-colored spaniel bitch evidently for sale. He was showing her obedience by letting her follow him off the chain, and, of course, I stopped at once, as anything in the shape of a spaniel is an irresistible attraction to me. Judge of my surprise on recognizing my

bitch, FERT II, the notice of whose loss appeared in your columns some two months ago. As I crossed the street she bounded up to me much to the man's astonishment, and in about ten seconds there was a crowd of delighted messenger boys and bootlacks listening to the argument between us. Of course he made the usual assertions - she was given to him by his uncle - was then ten months old - he had had her from a pup, etc., etc., but I opened her mouth which settled the question of age (about two years), and showed him my private mark and told him she was mine, and I was going to take her. He was quite good-natured up to this point, but then he changed, and dared me to take her. I said, "All right," and turned away with "Come on, York," and didn't let her "come on." Some of your morbidly nervous New Yorkers would have taken their "Davy" she was mad if they had seen her, but I guess Mister Man was the mad one of the three in reality, as he followed me, calling "Rosa, Rosa, come here, Rosa!" but Rosa had vanished from the moment. "FINEST" had seen her master, and I turned into the friend's office to avoid trouble. When I came out Mister Man had disappeared, while one of the "FINEST" wanted to ask me why I didn't keep the fellow in conversation till he arrived. Had I seen him coming I would have done so, for the sake of punishing at least one dog thief, but the argument was becoming slightly warm, and I wanted to get the bitch at all hazards. I think the breeders may "tally on" against the dog thieves on this. I only hope others who may have lost valuable dogs may be as fortunate as I was. - DRoo.

EASTERN FIELD TRIALS CLUB MEETING.

A MEETING of the Executive Committee of the Eastern Field Trials Club was held Thursday afternoon, May 12. The principal business before the meeting was the revision and adoption of the running rules, which were accepted with a few alterations, which will be published if forwarded to us as promised by the secretary. The cup offered by the FOREST AND STREAM for the best run by its owner was accepted with thanks. A cup was presented to be given to the best dog in any state that the club saw fit. The president, Mr. J. O. Donner, will also give a cup to be called the "President's Cup," to be competed for by puppies only. The cup offered by the FOREST AND STREAM has also been presented called the "Members' Cup." The report of the Committee on By-laws is to be printed and distributed among the members. It was deemed advisable to try and procure more birds, and Mr. Donner was given power to do so. The meeting was called by Mr. Geo. T. Leach was elected treasurer in place of Mr. H. N. Mann resigned.

A DOG'S LONG JOURNEY HOME. - The following clipping is sent to us by Mr. J. C. Ledor, of Chattanooga, Tenn.: "Saturday morning a setter dog was sent on the C. S. train by Mr. J. O. Ledor to Glen Mary, a station on the C. & N. Railway, 112 miles distant from Chattanooga. As the train pulled into the station the dog suddenly jumped from the car, and before any measures could be taken to arrest him he disappeared in the forests. He arrived in this city Wednesday noon, and immediately on reaching home sought his former companions, and was found in the kennel by its owner soundly and comfortably asleep. The dog traveled fully 200 miles over a rough, mountainous region, and was compelled to swim the Tennessee River twice during its journey, making the entire trip in three and one-half days. He recovered little or no food while on route, and was half starved when he reached home. The dog had never been through the country before, and how he found his way through the almost impenetrable forests and interminable mountain ranges will ever remain a mystery." Our correspondent adds a most interesting sequel to the story: Inclosed please find an account of a remarkable instance of instinct which appeared in our Daily Times under date of 7th inst. Your correspondent at this point says "I had written to you, but I thought to give you the correct version of it, as it is in some things incorrect. The facts are these. A black setter bitch owned by me named "Mit," of imported red Irish and Gordon blood, being gun-shy and thereby useless, as I had no time to break her to the depot and back her on the car to take her back and send her again to Glen Mary, but upon his trying it she refused to follow him, and when he tried to catch her she growled and snapped at him - the first time she was ever known to be cross. I had to call and tie her for him, when he took her on Friday (6th) and re-shipped her to Glen Mary, which place she reached, and Mr. C., the gentleman to whom I sent her, acknowledged the receipt, and said she seemed pretty well satisfied. This morning, while breakfasting, I heard one of the dogs come in through the front part of the house and tie down at the back of my chair where I had taught Mit to lie. Thinking if my pointer pup I paid no attention to it, but asked, when I had finished eating, "Nick, do you want your breakfast?" and was very much surprised at the response in Mit's voice. I looked around - it was she. She had never been ten miles from this place before her trip to Glen Mary, but had found her way from that place to her home town. Mit has surely earned the right to stay at home. - J. O. LEDOR.

GONE EAST—The sloop Afradne has been sold to Boston owners through Manning's Agency. She was built in 1871 by Witzman, and in 1872 had her stern spun out, much improving her. She is now 57 ft over all, 14 ft in water, 16 ft in beam, 5 1/2 ft deep and draws 5 1/2 ft.

Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS. J. S. Jersey City.—The date is too late for snipe on Long Island. M. & W., Galveston.—Dobrook trout have scales? Ans. Yes, small ones. E. M. BROADWAY & ANKORT, Boston Agency.

G. E. J., New York City.—From your description your dog is what is called a harrier. We have not space, unfortunately, to give a treatise on the harrier, but if you will call at this office we will be pleased to answer your questions on the subject.

F. J. H., Fairport, Va.—Can you give me any information through your columns, or refer me to any book numbers of FOREST AND STREAM having reference thereto, as to the modus operandi of raising sea terrapin or "diamond backs" in inclosed sea ponds as practiced in North Carolina and elsewhere? Ans. Little is done in the way of cultivating terrapins. We looked up the subject and you will find all that is known about it in FOREST AND STREAM of March 3 and 31 of this year.

J. M. Albany, N. Y.—There is a fish now in our market that is too small for a shad and too large for a herring. Is this a new species, or a hybrid? Ans. It is not possible to say, judging from size alone. At some periods of its life a shad is but a trifle larger than the river "herring." If they contain male roe they may be still fertile bybrids. The shad and alewife (river herring) have been extensively hybridized in the market and would be well to send a dozen specimens to Prof. Baird for identification. Mark them "fresh fish" and send particulars with them. Note if these fish are all of one sex or small male shad and ascend the river at two years old and are ripe milters. The females do not return to fresh water until they are third year. If the fish in question are all males they may be young shad. There are structural differences between the shad and alewife.

wife which, when small, are quite hard to make out, but when of the size of the latter are plain to be seen. Note the length and shape of the sub-orbital bone, or long bony cheek scale under the eye. In the shad it reaches down to the lower jaw.

RIFFLE.—In a shooting match at halts or pigeons is it the duty of a privilege of the referee to decide against a person who in shooting violates the rules unless such violation is challenged? In other words, is it his duty to inflict a penalty without a challenge? Where can I find the duties of a referee most fully defined? In a match where the first prize was a medal, and the second and third prizes money, A and B tied on the highest score, C and D on the next and E and F on the next. A and B were the winners for the first A winning. It was decided that B, who had made a higher score than any except A, had no claim on any of the prizes, C and D shooting for second prize and E and F for third. Nothing was being previously agreed on in reference to this point, was this right? If it was please make the reasons for it as plain as possible, as I cannot now see that it was just to B. Ans. 1. No, the referee only decides where appealed to. 2. Write for the "Trap Shooter's Referee" to L. C. Squires, No. 1 Cortlandt st., New York. 3. Except in class shooting the highest score wins, with preference for the class shooting should have taken second prize and C should have shot out with D for third. In class shooting the various ties shoot out and the losers go out, and in this case B would have had no chance for second prize. In the case you mention, if nothing had been previously agreed on in regard to this point B should have taken second prize.

ABBEY & IMBRIE, "Highest Quality" SNELL HOOKS.

Finest Spring Steel Hooks tied on Selected Spanish Silk Worm Gut (the Gut and Hooks our own make), or Best White Silk Wired Gimp.

GUNPOWDER! Dupont's Rifle, Sporting and Blasting Powder

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 10 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 8 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 10 and 5 lb. canisters and 6 1/2 and 1 1/2 lbs. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and 10 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 10 lb. canisters and 6 1/2 lb. kegs.

Dupont's Rifle Fg.—"Sea Shooting."—FFG and FFGG. The Fg. for long-range rifle shooting, the FFG and FFGG, for general use, burning strong and moist. Packed in 4 1/2, 10 and 6 1/2 canisters, 6 1/2, 1 1/2 and 2 1/2 kegs. Fg. coarse, FFG fine. Dupont's Sporting, Mining, Superior and Blasting Powders of all sizes and descriptions. Special Grades for Export, Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 47 Beaver St., N. Y. N. B.—Use none but DUPONT'S Fg. or FFG for long-range rifle shooting.

The Hazard Powder Co., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric Powder." No. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square measures of one pound only.

Hazard's "American Sporting." No. 1 (fine) to 6 (coarse). In 1 lb. canisters and 4 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting." No. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean. Shooting remarkably close and with great penetration. For field, forest, or water shooting, 6 ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFG FFG and "Sea Shooting" FG in kegs of 4, 12, and 24 lbs. and cans of 5 lb. FFG is also packed in 1 and 1 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER also SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office. 88 WALL STREET, NEW YORK.

A CONNECTICUT PLAN.

THE Middletown, Conn., Association has made a successful attempt to secure better game presentations by enlisting in the work the co-operation of farmers and land owners. The system works well because it recognizes and provides for the mutual interest of farmer and sportsman.

For a certain merely nominal payment, the owners of the land agree to confine the privilege of shooting over it and fishing in its streams to the members of the Association, of which they are themselves by the terms of the agreement honorary members, having the same shooting and fishing rights as the rest. Each individual belonging to the Association is furnished with a ticket, which serves as a permit to enter the lands under its control; if others trespass, they are intercepted and driven off. The advantage accruing from its expenditure of funds are thus secured to the Association. The game and fish replenished by them are protected from the pothunter and net fisherman.

The Middletown plan appears well in theory, and we are assured by its officers that it works well in practice. It preserves the game; and involves no clashing of interest between sportsman and farmer. We print on another page the form of government of the club; and commend it as a model to be adopted elsewhere. The society is incorporated and can bring suit through its attorney, without involving any individual member in the thankless task of prosecuting offenders.

The success of the Association has been largely due to the exertions of Dr. Joseph W. Alsop, its president.

SOME POINTS OF LAW.

THE MAGNER CASE AND THE OAK CASE.

THE opinion of the Court in the case of *Magner vs. The People* of the State of Illinois, recently decided by the Supreme Court of that State, is a well considered and comprehensive review of the law respecting the legal status of animals and birds, *fera natura*, especially those that are generally dominated "game." It may be well to review this case in connection with certain other cases arising in the courts of this country as well as in England, involving in one way and another the leading questions determined by the Illinois Court. This case, sustained as it is by the eminent authorities to which we shall refer upon elementary principles of law, will commend itself to the legal fraternity both at the bar and upon the bench.

The lawyer who, for fee or reward, or the judge who, through the vista of an occasional quail-on-toast, or preconceived notions and prejudices against restrictive laws, shall seek by subtle distinctions or judicial fine sifting to evade its consequences or overturn its force, that lawyer or that judge should receive the just condemnation of all fair-minded men.

The doctrine of the law that all animals, birds and fishes that are by nature wild, belong to the sovereign or government, has been so long and so well settled as to admit of no question among lawyers or judges, and hence they are entirely subject to the legislative will of the State. At least, until the Federal Government shall have passed some act, or otherwise assert Federal control over the question, the matter must remain of State sovereignty and subject to State legislation. It is a matter of grave doubt, after this right has been for so long a period of time exercised by the State governments, whether Congress would have the power to legislate upon the subject at all, except, perhaps, within the jurisdiction of the unorganized territory belonging to the Federal Government.

It follows, then, that the Legislature of the State may prescribe the time and manner in which any or all wild animals, birds and fishes may be taken or killed, or it may prohibit the killing or molestation of them entirely. This being so, the State has the power, under what is known as the police power, or authority to prohibit the sale or traffic in dead animals, birds and fishes within the State that have been killed outside of the State and brought within the State for sale, as well as those that may have been lawfully killed within the State during the licensed period for killing, and kept until their sale is forbidden by the local law. This question was before the Court in *Phelps vs. Racey*, 60 N. Y., 10. The defense in this case was that the bird, a quail, had been killed in the proper season, and kept by a process of preserving game until after the season expired, and then offered for sale. But the Court held that "the penalty is denounced against the selling or the possession after that time, irrespective of the time or place of killing." It seems that this question has recently been decided in the English Common Pleas Division, *Law Reports, Whitehead vs. Smithers*, but we have not examined that case.

But, notwithstanding the clearness with which the cases referred to have settled these questions, it seems to remain for the Police Court of Cincinnati, by some method of judicial legerdemain, to evade the effect of those decisions, as applied to the game laws of Ohio. See *State vs. Cain*, published in the *FOREST AND STREAM*, April 14, 1881. The question before the Court in that case appears to have been whether quails killed in Illinois and exposed for sale in Ohio in the month of February were so exposed for sale in violation of the Statute of Ohio, which prohibits the exposure for sale of "quails killed during the time when the killing thereof is made penal." The first section of the Ohio Statute provides "It shall be unlawful to kill quails between January 1 and November 1." The act is limited only as to the time of killing, namely, "within the time when the killing thereof is made penal," without regard to place where killed. The only distinction between this case and the case of *Magner vs. The People*, is this: The Illinois Statute prohibits the exposure for sale of quails after the expiration of five days next succeeding the first day of the prohibited season for killing them, without regard as to when or where such quails may have been killed. Consequently quails lawfully killed in Ohio during the "open season" cannot be sold in Illinois

THE MASSACHUSETTS MUDDLE.

AS to the general legal sapience of the legislators who have been convened under the big gilded dome of the State House at Boston, we have no knowledge. Of their specific lack of wisdom, when they are called upon to confront the vexed problem of game protection, they have just given striking evidence.

The Massachusetts Fish and Game Protective Association is a society of anglers and gunners, who have had a great deal of experience in the actual work of preserving the game and fish of the State. They presented, at Boston, the bill of a proposed new game law. It embodied what after mature consideration they believed to be the best practicable regulation of the taking of game and fish. The bill ought to have passed. It was lost by a large majority. This result was not wholly unexpected. In Massachusetts, as elsewhere, game legislation is too much in the hands of know-nothings, and the know-nothings are in the hands of a class of men who are concerned not to preserve the game, but to squeeze the almighty dollar out of it as it goes. It was not, therefore, strange that the existing law was not made any better; nor even that it was made worse.

But the stupidity exhibited by the adoption of Sect. 4 is an occasion of genuine surprise. This section prohibits the trapping and snaring of game birds and hares, "provided, the provisions of this act shall not apply to the trapping or snaring of ruffed grouse, commonly called partridge, or hare or rabbit, by owners of land upon their land, or by any person or persons authorized by them, between the first day of September and the first day of January of any year."

This is in so many words a concession that wild game is the private property of the landowner. By no other doctrine can an individual, a private citizen, be authorized to kill the game at a time or in a manner forbidden to the people; and by no other doctrine can the individual delegate to another the privilege of so killing game. On no other principle than this can the section be construed as other than an absurd absurdity; the principle once adopted makes of the rest of the law equal nonsense. If game is private property the Legislators under the big dome have no business with it, and should let it alone; if it is the property of the State, the man upon whose land it happens to be has no more right or control over it than any other citizen has. The two doctrines are inconsistent; a law must be based upon one of them only. The attempt to embody each in different sections of the same law only makes a muddle of the whole statute. The Massachusetts law is such a muddle.

IONTHYOPHAGOUS DINNER tickets at Blackford's. Steamer Mattewan will leave Fulton st., E. R., 5 P. M.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, May 26.

SAN FRANCISCO sportsmen are about organizing a game protective association. There is a most emphatic call for a live, working, earnest society in that vicinity. If it is started in the right spirit, and confined strictly to securing a better enforcement of the law, the good it may do is very great. From the character of those who are engaged in the effort to form such a society, we are sanguine of its success. We notice that the San Francisco *Call* is devoting some attention to the subject of game and fish protection, and is exerting a very commendable influence in that direction.

THE ENGRAVING OF MAJOR, Mr. Dorsey's beagle, in our last issue, was cut from a drawing on the block by our valued contributor Mr. Rowland E. Roblison, who has thus proved his pencil to be as facile as his pen. The drawing, which we need not say was an admirable piece of work, was a veritable labor of love; and possibly Mr. Roblison's success was partly due to this enthusiasm for his subject. We count Major's owner and ourselves fortunate in having secured so true and artistic a portrait of the dog; and we only regret that our acknowledgment to the artist should not have been made last week.

PREPARATIONS for the State shoot are nearly complete, and the programme for the week is now in the printer's hands. The prize list is an extraordinary one. The delegates, it is now proposed, will meet at the Hotel Brighton, Monday noon, June 20, the first business being the discussion of an immense clam chowder. The afternoon will be devoted to locating the club tents, providing hotel accommodations, and other preliminaries. The evening sessions will be held at the Hotel Brighton, and some rare musical attractions will add to the entertainment provided. Mr. Crooke, to use a homely phrase, is working like a beaver, and the smooth working of details will be largely due to his energy.

after five days succeeding the first day of the "close season" in the latter State. The Ohio law prohibits the exposure for sale of quails killed during the "close season," *ex gr.*, quails killed between the first day of January and the first day of November, and by parity of reason quails killed in Illinois between those dates cannot be lawfully exposed for sale in Ohio. The section of the Ohio Statute which makes the possession of quails during the prohibited season *prima facie* evidence that such quails were killed in violation of law does not seem to relieve the case from its embarrassment. The only purpose or effect of that statute is to shift the burden of proof upon the defendant to show that the quails were not killed within the time when the killing thereof is made penal, and which proof would have been a complete defence under the Ohio Statute. It is to be regretted if this case shall not be taken to the Supreme Court for final adjudication of that question. And in the meantime let the friends of the game laws of that State see to it that their laws are so amended as to avoid any pretext for technical discrimination by judges who may have a greater regard for votes in succeeding elections than for an impartial adjudication of the law. Bon WHITE.

NO LUCK.

BIRDS chirruped welcomes to the morning sun which shone from a cloudless sky. Big, well-fed bees in their black velvet jackets and yellow trimmings hummed monotonously and bumped their noses against the wild flowers as they stole their sweets. Breezes from over the hills streaked the lake with ripples. It was one of those cheery mornings you find lying around loose up in these parts, one of the unencumbered mornings, on which no person holds a mortgage, and you can step in and take possession by pre-empting what you want of it. It means not only good health, but more of it. No one could be brazen enough to return your salutation of "Good-morning" by saying he had seen better. It was a perfect fishing morning, every sign beckoning to the full fruition of enjoyment and the word is "Up, Guards, and at them!"

Fair it was ad fraught with promises. Every angler is aware of the uncertainties attending these promising mornings, and is prepared in a measure to meet ill-fortune if she happens his way. All signs at times fall him. We have filled our creel fishing carefully, when the wind was blowing from the east; and we have failed to obtain a rise when we have plied our gentlest art and fulfilled to the letter all the instructions those modern disciples of the rod Francis, Norris and Scott require. We did not, however, borrow trouble nor quarrel with ill-fortune, but continued our ineffectual casts with a delightful feeling of indifference to the result that would perplex a less stoical person.

This bright, auspicious morning we cast our lines in the deep, shady pools, in the whirling eddies, in the rapid riffles, and threw them carefully beneath the overhanging bushes and branches. But things were not what they seemed. The trout were coy and shy, and hard to catch than a lass of eighteen summers. Their peculiar idiosyncracies could not be satisfied. Though every spot on their beautiful sides were an eye, it could hardly have improved their vision or rendered an approach toward them more difficult.

A trout is sometimes notional like a woman, or, to be still more truthful, like a man. All argument is wasted, and every inducement goes for nothing, when—say *she*—has made up her mind to pursue a certain course. It may be more fancy, but she is immovable, and will not listen to reason.

Our lines were cast far off and fine, but the old resents had been there before, and too much experience restrains for this day at least their natural daring, and makes them too suspicious of our manoeuvre. They pluck from the nettle danger the flower safely, by not biting.

Excepting with our worm-fishing companion, Tyro—and a genial old fellow he was—we were all possessed with the true inspiration of good old Izaak, inasmuch as patience, called contentment and singleness of purpose, filled our souls to the utter exclusion of every worldly thought and desire.

"Well," says Tyro, "it's a fine thing that some souls are so easily satisfied with that kind of filling, but it doesn't spread the butter on one's bread. Contentment and a well-filled creel are compatible, else my mental and physical organization is peculiar."

"It is peculiar, for you are growing and faint finding because the fish don't bite. Have a little reason and common sense. What splendid sport you had yesterday 'yauking' them out with your disgusting angle worms and sporeing grass-hoppers. You never miss a meal, I know, but give the trout credit for knowing when they want your bait. They have got memory and reasoning powers, and it's not for any of us to force the argument."

"All right. Salt pork for supper."
"Plenty of yesterday's catch in the ice-house."

So passed the day. The sun came up and blistered our noses; the forenoon passed, and the dinner-bell rang for many a dinner, and the sun went down and the birds to roost, but so far as this vicinity was concerned, there was hardly a trout in the stream but what could have proven an unimpeachable *alibi*.

Not so the musquitoes. They were present, and improved to the fullest extent their unusually fine opportunity of displaying their infernal wickedness; and if ever any of us resembled saints it must have been when those musquitoes

came around our heads like halos around saints' heads, as the picture-books represent them.

Wet, weary, but not despondent, we reeled up, and with almost empty baskets retraced our steps. It was only an episode in our cheerful holidays, a day to be remembered as having been spent pleasantly and profitably, no matter how it may have resulted piscatorially. Without harboring any vindictive feelings we plotted full revenge on the victimizing department at headquarters. MILLIAR.

LIVE QUAIL.—The demand for live quail for stocking purposes last season was unprecedented. We are still in frequent receipt of inquiries for birds. The parties who secured a supply of live quail for sale and advertised them in the *FOREST AND STREAM*, soon found that the responses were more numerous and for greater numbers than they could furnish. (Advertisers of other things in this paper have had the same experience.) Next season, there is every reason to believe, the demand for birds will be very large, and we already hear of parties who will make propositions to supply the birds. The quail brought, in some cases, \$3, \$4 and \$5 per dozen last year, and whether that price will hold another season will depend altogether upon the quantity trapped. Those who are favorably situated for securing birds to supply to clubs and individuals desiring to obtain them would do well to trap the birds as late in the season as may be practicable, so that their season of captivity may have as short a duration as possible. It will be long enough in any event, for we do not believe in turning down quail in this latitude before the middle or last of May, and if they are Southern birds the first of June would be still better.

DEER FLOATERS, if any such there be within sound of the *FOREST AND STREAM*'s voice, are commended to a perusal of our game columns, where they may find a new form of "sport" indicated for their express delectation. After all, what is the necessity of going away off to the Adirondacks to stab a deer in the water, or to Michigan or Maine to shoot the victim in a lake, when within a few minutes of Boston and New York and Chicago are abattoirs and oxen and swine in scores, ready for the slaughter?

The "barn-yard" plan recommended by our correspondent is not very different, indeed, from a Continental form of deer shooting. It is quite the correct thing in some parts of Europe to drive the game of a locality into a limited area, thus confining several hundred head in the space of a thousand acres. A fence of cloth is then erected about the poor brutes, shooting stands are built near the circumference, and the beaters are sent in to drive the animals up. Four or five hundred deer and bears in the course of a day is a fair "bag" for a "hunting" party. We notice in the *London Illustrated Sporting and Dramatic News* an illustration of such sporting. The shooter in the foreground, about whom lie the deer already slaughtered, and who is just bringing down another victim at six paces, is no less a personage than His Royal Majesty, William III, Emperor of Germany.

Our esteemed English contemporary, the *London Illustrated Sporting and Dramatic News*, gave to its readers the other day one of Mark Twain's cleverest speeches. But the editor neglected at the time to explain the joke for John Bull's edification, and, as a consequence, of course got himself into trouble. The following week appeared an editorial, stating that a shoal of letters had been received, and two or three quite angry ones, showing that "the humor of the article was not apparent to all." Then follows an elaborate explanation of Mark Twain's witticisms. The *News* will doubtless in the future confine itself to "sporting" topics. American jokes are away up beyond its readers. If our neighbor, *Puck*, were published in England it would have to publish a weekly supplement, explaining its fun, so that John Bull could know when to laugh.

As a choice example of British wit, by the way, we note in the same journal a comment on the weights of foxes recently recorded by "Antler" in the *FOREST AND STREAM* to the effect that "America, being a bigger country than England, ought to have bigger foxes." If any of our readers do not understand that, we hold ourselves in readiness to explain it in person at this office at any time.

A LAWN TENNIS CONVENTION, at which thirty-five clubs were represented, met at the Fifth Avenue Hotel, in this city, last Saturday, and organized the United States Lawn Tennis Association, with the following officers: President, General R. S. Oliver, Albany Lawn Tennis Club; Vice-President, Samuel Campbell, Orange Lawn Tennis Club; Secretary and Treasurer, Clarence M. Clark, Young America Cricket Club, Philadelphia. Executive Committee—Dr. James Dwight, Beacon Park Club, Boston; G. S. Scofield, Staten Island Cricket Club, and Berkeley Moultry, St. George's Cricket Club. The All England Lawn Tennis rules of 1881 were adopted. The Executive Committee will report in two weeks on the style and brand of the ball to be used in all matches and tournaments.

WE UNDERSTAND that a gentleman of this city has secured for the Kitty Hawk Bay Sportsman's Club, by lease and purchase, a number of valuable shooting properties, in addition to those already acquired. These properties are stated to comprise between seventy-five and eighty-five thousand acres of land, most of it points, marshes and

islands. Numbers of shoals adjacent to these lands are said to contain valuable oyster beds and to be favorite resorts for fish. On the Gallop property the deer-shooting is good. We have been shown copies of statements made by residents of the section in which these properties are located, which are unanimous in agreeing that these lands are excellent shooting ground for fowl of all descriptions. The railroad to Elizabeth is now, we understand, completed, and that city is only twenty-three hours from New York.

"THE FISHING LINE," as the Grand Rapids and Indiana Railroad is termed, leads into that part of Michigan which is far-famed for its grayling and trout streams. The wide-awake general passenger agent, Mr. A. B. Leet, Grand Rapids, Michigan, has prepared a handsome edition of his annual guide-book. It has descriptions of the best localities for sportsmen tourists and their families, and we advise those who are planning for a summer vacation trip to send for this pamphlet and study its pages. If they cannot find something to their taste in Michigan they are hard to please. The book, moreover, contains that famous account of the capture of a grayling, written by Mr. Charles Hallock, and published in these columns some years ago.

NEW YORK CITY spends \$1,000,000 a year for rose-buds, and 2,000,000 a year for other cut-flowers. In the *June Scribner* Mr. Peter Henderson, the great seedsman of this city, says that "at some seasons the prices paid for forced rose-buds are perfectly astounding. One grower, of Madison, New Jersey, took into New York three hundred buds of the erimrose rose known as 'General Jacqueminot,' for which he received at wholesale three hundred dollars, and which, no doubt, were retailed at a dollar and fifty cents to two dollars each. A flower dealer in Fourteenth street, a few days before Christmas, received the only lot of this same variety of rose that were offered in the city, and found a customer for them at sixty dollars, or fifteen dollars apiece, or eight times the value of their weight in gold."

A GAME PICTURE.—Mr. M. A. Stearns, President of the Roebuck Gun Club, has presented to the association, as a prize for the greatest consecutive number of birds killed at the next meeting, an oil painting—"A Pair of Canvas Backs"—by J. B. Stearns, Esq., N. A. Mr. Stearns is an artist of excellent reputation as a historical painter, and was for many years Secretary of the N. A. Academy of Design.

ON THE LARRIWEEP.—We conclude this week the publication of the charming picture of camp life on the Larriveep; a series which, the reader will agree, has proved one of rare interest. We take pleasure in announcing that other papers from the same pen will appear from time to time in our columns.

SUMMER SIGNS—circus posters on country fences. There may be some fun in fishing without lying about the fish caught, but half the charm of a circus is in the brazen lies flung on the bill board and in the columns of the home paper.

THE ADDRESSES ARE WANTED OF "C," who wrote "Our Last Match"; "Kliph," who wrote "The Franklin Club at Reef-foot."

The Sportsman's Tourist.

ON THE LARRIWEEP.

IN THREE PARTS.—PART III.

AFTER supper, as we sat smoking our pipes by the fire, we fell to talking of early times in this country, and I asked Ignatius if he was not with Baker, when the latter made his unfortunate expedition to the park which now bears his name.

"No," he answered, "I came in two years after, and went out again in a hurry."

"Tell me about it."

"Well, it's a thing I don't like to think about much, and I don't talk about it any more than I can help. Still, if you'd like to hear about it, all right. I was living in Denver (it was in the fall of '60), running a little assay office, when one day a ragged old chap came in and asked me if I could assay some ore for him. I told him yes, and he pulled out a little chunk of greenish rock, and said he'd like to have that tested, but he hadn't any money to pay for it. Business was pretty slack just then, and besides, I kind of felt for the poor old chap, for I'd been there myself and knew what it was to make a strike that I thought that there might be millions in, and not have money to pay for getting it assayed, so I told him I'd do it for him, and he could pay whenever he got the money. I didn't think, from the looks of it, that it would pan out ten cents to the acre, but I knew it was no use to tell him so until I'd assayed it. I went to work on it that afternoon, and by thunder, it turned out to be worth about twelve thousand dollars a ton. I thought I must have made some big mistake, so I tried it again and got the same result. Well, when the old man came in again I told him what I'd found, and he didn't seem much surprised—said he thought it was pretty rich. 'Got much of it, old man?' says I. 'Well, about a nine foot streak,' says he. 'Nine deevil!' says I. 'Why, that's better than the Constock.' 'Yes,' says he, 'but it's there—covers more than over a hundred acres, and not less than seven feet anywhere, and from that all the way up to thirteen.'

"I thought the old chap was lying, but next day he comes

instance of the kind on record. This record of the habits of these little-known animals is due to the careful observation of Mr. Frank J. Thompson, of Cincinnati, who has charge of the Zoological Garden, and who contributed this observation to the columns of FOREST AND STREAM.

The fur seal is less in size than the sea lions, but the difference between the males and females is still greater than in that genus, the males weighing from 500 to 700 pounds, and the females from 80 to 100 pounds. Opportunities for observing the habits of the fur seals have, of course, been exceptionally good at the Pribilof Islands and the material for a biography of this species is very full. But it is, however, is known of their habits except during the time that they remain on the islands, that is from April to November. Where they pass the winter is as yet a matter only of conjecture, and further observations on this point are needed.

Of the habits of the Phocææ, or family of earless seals, though these are much more numerous in species than the groups before mentioned, perhaps even less is known than about the *Otariæ*. From their mode of life they offer less opportunity for observation and study than the latter. Prof. Allen mentions nine genera of earless seals, represented by seventeen species, of which seven, or possibly eight, are found on the coast of North America. The business of seal-hunting has been, and is still, followed with such energy that several species are threatened with extermination, and in more than one case, notably that of the sea elephant (*Mæcrotinus angustirostris*), the pursuit of the species has been abandoned, as the animals are no longer to be found in any numbers. As some indication of the yearly destruction of seals, the following figures are given: The annual catch of the West Greenland "fishery" is estimated by Dr. Hink as about 89,000 seals. Here they are captured by the natives with harpoons or shot with rifles. In 1873 the "catch," so-called, of the Newfoundland fishery is said to have been 526,000. In the Jan-Mayen, or Greenland seas, the annual catch is about 200,000, and so wasteful and imprudent is the slaughter of breeding females that the European nations interested have all passed more or less stringent laws for the protection of the animals during certain seasons. With regard to the "fisheries" of the Kara Sea and Nova Zembla, the White Sea, the Caspian Sea, and the North Pacific, we have no figures, but from all the accounts which we have it is certain that a shortsighted policy of indiscriminate slaughter is pursued in all these localities.

It is, perhaps, not generally known that the Caspian Sea an inland breakish lake having no natural communication with the ocean, is a mere inland sea during certain seasons. With regard to the "fisheries" of the Kara Sea and Nova Zembla, the White Sea, the Caspian Sea, and the North Pacific, we have no figures, but from all the accounts which we have it is certain that a shortsighted policy of indiscriminate slaughter is pursued in all these localities.

It will be seen from what has been said above that the history of the seal is simply one long tale of butchery, and that the extermination, certainly, of the more important groups, has many times been threatened. The fact that their resorts are distant from the haunts of man has alone protected them up to this time. The governments of Europe most immediately interested in the seal are the United States and Canada, and it is high time that the United States and Canada took some effective steps in the same direction.

A DUCK NEW TO NORTH AMERICA.

FROM advanced sheets of the Proceedings of the United States National Museum for 1881 we learn that another new bird has been added to the North American fauna. The story of the identification of the specimen, which has been in the National Museum for nine years, is worth telling. Mr. Ridgway says:

Some thirty years since (February 2, 1872), Mr. George A. Boardman, of Calais, Maine, sent to the Smithsonian Institution a mounted specimen of a duck obtained in Fulton Market, New York city, and supposed to have been shot on Long Island Sound, which he was unable to determine satisfactorily, but which he supposed to be a hybrid between the redhead (*Alhya americana*) and some other species. The specimen was in immature plumage, with the feathers of the first lively moulting worn, while those of the new moult, which was generally interspersed, indicated a very different garb when the moult should have been completed. At the time the specimen was received at the Smithsonian I (also supposing it to be a hybrid) made comparisons with nearly, if not quite, all the American species of ducks, but was unable to get the slightest clue to its parentage. It was then put back in the case and not again thought of until a few days ago, when in removing the specimens with a view to their rearrangement I happened to take the one in question in one hand and an adult female of the European rufous-crested duck (*Fuligula rufina*) in the other; and having the two thus in a very favorable position for comparison, I at once perceived a striking similarity in general appearance and in the form of the bill, which induced me to extend the examination to an adult male, the result being that no question remained of its being in question, but an immature male of *Fuligula rufina*, a species hitherto not detected in North America. I have written to Mr. Boardman, requesting full particulars as to circumstances and date of capture, but have been unable to elicit any further particulars than those given above.

"As the species has never been described in any work on North American birds, I give a description of the characteristics of it in the collection of the United States National Museum, as well as of the downy young, the latter quoted from Dresser's 'Birds of Europe,' also the principal synonyms and references, compiled from the leading European authorities."

For the benefit of our duck shooting readers we quote below Mr. Ridgway's very full description of adult male and female and immature male:

HAZ.—Southern and eastern Europe, northern Africa and India; occasional in northern and central Europe, and eastern and British islands; accidental in eastern U. S. (New York market; Boardman; spec. in U. S. Nat. Mus.).
Adult Male (57207, U. S. Nat. Mus.; Hungary, W. Schluter). Head and upper half of the neck delicate pinkish cinnamon, or vinaceous-rufous, the full, soft crest (occupying the entire

pileum) paler and less reddish, the feathers light buff at tips; lower half of the neck (including a narrow stripe which extends up the nape to the occiput), neck and jugulum, breast, abdomen, anal region, crissum, upper tail coverts, and rump brownish black, deepest on the jugulum, and with a decided dark-green gloss on the npper tail-coverts. Back and scapulars uniform light amber-drab or luscious color; wing-coverts and tail-feathers brownish gray; speculum white, basally changing gradually into pale ashy, then succeeded by a rather broad subterminal bar of dusky, the tip narrowly and abruptly white; four outer primaries with outer ends dusky; inner quills pale ashy, with broad dusky ends; tail dull dark grayish. A broad bar or transverse patch across anterior scapular region, anterior border of the wing, lining of the wing, axillars, and a very large patch covering the flanks and posterior half of the sides, pure white. Bill bright vermilion-red, the tip white; irides reddish brown; legs orange-red. Total length 21 inches." (Dresser, B. Eur. pt. xxii.)
Wing, 10.20; culmen, 2.00; tarsus, 1.50; middle toe 2.35.

Adult Female (57208, U. S. Nat. Mus.; Hungary, W. Schluter).—Crest much less developed than in the male, light hair-brown, this color descending to the level of the lower border of the eyes, and posteriorly continuing in a narrow stripe down the nape; rest of the head and neck very pale ashy, as are also the lower parts in general; jugulum, sides, and flanks light raw-umber brown, the tips of the feathers lighter; anal region and crissum uniform light drab, the latter whitish terminally. Upper parts in general amber-drab (the wing being more brownish than in the male), darker on the rump; white patch at base of scapular region wholly obsolete, and white border to the wing indistinct; speculum pale ashy, becoming gradually dull white basally, and brownish dusky subterminally, and with narrow white margin in the male. "Eyes hazel; beak blackish, with a pink tip, a portion of the lower mandible being yellow pink; legs and feet pinkish, webs blackish." (Dresser, l. c.)
Wing, 9.00; culmen, 1.90; tarsus, 1.50; middle toe, 2.20.

Immature Male (61957, U. S. Nat. Mus.; vicinity of New York city, Feb. 1872, G. A. Boardman).—Similar in general appearance to the adult male, but the description above, but crest much less developed (the tips of the feathers much worn) and decidedly more reddish in color; sides and under parts of head thickly interspersed with cinnamon-colored feathers (new moult); the jugulum, breast, and under posterior parts also mixed with black feathers, indicating the approaching adult livery; white patch at base of scapular region plainly indicated, and broad white border to anterior portion of the wing very distinct; speculum dusky as in the female, lacking the distinct subterminal mark as in the adult male.
Wing, 9.80; culmen, 1.80; tarsus, 1.50; middle toe, 3.15.

A MORNING'S WALK.—TANTON, MASS. May 7, 1881.—5 A. M., wind south, thermometer 50 deg., foggy. No school to-day. Frederic, a boy 11 years old, wants to go to the trout pond to see and feed the trout. We started at 5.30. The birds were singing merrily, and we proposed to take the names of all that we saw, and then to go to the pond. Mr. Stryker, a paper he thinks much of. Last autumn there were flocks of perhaps hundreds of English sparrows about our streets, but there are not one-tenth as many now as there were then. But our native or summer birds are as plentiful as usual. In walking three-and-a-half miles on the Tanton and New Bedford R. R., we saw 1 fish hawk, 4 hen hawks, 5 sparrow hawks, 8 owls, 2 blue jays, 4 red thrashers, 6 cowbirds, 14 barn swallows, 25 bank swallows, 12 or 15 robins, about the same of bluebirds, and flocks of blackbirds, 2 bobolinks, 1 humming-bird, 6 marsh-quits, 4 yellow-birds, 5 woodpeckers and a great number of smaller birds. We heard quite a number of quails whistle. They are quite plenty here, but partridges are not. We let the dog work along by the side of the R. R. where he started 1 partridge and 4 woodcocks, three of them at one time, and a pretty sight it was. We arrived at the spring about 7.30. There were two bounds following rabbits as we went up the brook. One rabbit, about one-quarter grown, or perhaps six weeks old, attempted to cross the trench that runs to the pond, and fell in, and was quite dead when I got him out. We also saw 3 red squirrels and 1 gray one. The dog worked on some good snipe ground, but did not start any. I have not seen one this spring.—C. B.

NOTES FROM CANADA.—NIAGARA, May 16, 1881.—I send you to-day, per Canada, a little note that was picked up dead in my yard this A. M. What kind of bird it was I noticed, the other day, some people fishing for black bass on the other side (N. Y.) of the river, just off Port Niagara. I thought the close season was not up until June 1. Before I give you the arrival of several of the birds here: bluebird, March 14; robins, about the same time; swallows, April 19; cat bird and oriole, May 5; crows were here off and on all winter. Have heard no snipe this spring; they are probably nested here by the game laws. The "Cowbirds" have left us. Although we are in Canada, a country supposed to abound in ice and snow and wolves, the black Hauberg grouse is grown here out doors, and we have as fine peaches, in their season, as can be grown.—W. S.

The specimen sent is a rose-breasted grosbeak, one of the most beautiful and sweet-voiced of our birds. The bass season in New York does not open before June 1.

SNAKES CLIMBING TREES.—Webster City, Iowa, May 10, 1881.—While passing over the battlefield of Belmont, in the summer of 1863, I heard a slight noise just over my head. Looking up I saw, in close proximity to my face, and resting upon the leaves and twigs of a newberry tree, one of the small, pale-green snakes so common in that region, and sometimes met with here. As I was on horseback, the snake was seven or eight feet above the ground. The tree was six or eight inches in diameter. How the snake got up there I did not know, but he seemed perfectly at home on his airy perch.—CHARLES ALDHOE.

GUIDE BOOKS OF THE SEASON.—"Homes and Sports Along the Erie. A directory to hotels, boarding-houses, lakes and streams in the romantic regions near New York reached by the Erie Railway." This is a useful epitome of information for city residents who are looking for sunnier boarding places or who want to take a flying trip into the country. Sent by the Erie R. R. Co. General Passenger Agent N. Y. L. E. & W. R. E., New York city.
"The Hills and Homes of Berkshire." A pamphlet setting forth the summer attractions of the Berkshire hill country. By Clark W. Bryant, Great Barrington, Mass.

Game Bag and Gun.

THE HAUNTS OF THE RUFFED GROUSE.

WING SHOOTING VS. TREKING.

HAVING noticed the reports from New Jersey of the mortality of 40, 60, and 100 per cent. of quail and ruffed grouse "from the effect of cold and snow," I cannot but think, with all due respect for your reporters' veracity, that in relation to ruffed grouse these reports come mostly from hearsay or a superficial knowledge of the habits of this bird, and should be corrected as being liable to mislead the amateurs in forming a just estimate of their value and qualities for cold climates. Some of the snow certainly has been blown from the quail, whose food supply is liable to be cut off by snow at any time, and the ruffed grouse whose ample larder hangs in tempting display far above the possible reach of this enemy. Admitting that a winter like the past may be more trying to the constitution of game raised in a warmer climate than this, I still think that a bird that can make a bountiful meal off a handful of birds and a warm sumptuous couch from a single snail (showing the ruffed grouse does an easier feat than I suppose you will "stand a pile of water.")

I suppose that there is no game bird on this North American continent whose habitat covers so wide a range, of whose habits and peculiarities the average sportsman is so poorly informed as this same namesake and especial friend and protégé of mine. There is a larger class that fairly detect the name of this kind of birds; for is not this the chap that has so many times outwitted the half-broken dogs and caused them to display anything but desirable field qualities, and are not they the gentlemen that have been the butt of so many jokes and caned so much fun by their constant misses and striking display of "grouse fever"? They affect to despise the lordly grouse and in the same breath rave about the beauties of woodcock shooting, a bird which (in my opinion) bears about the same comparison to the noble grouse that a hull butterfly does to a December quail. In fact the warblers, the bluebirds, the jays, and the crows, and the successful descent of summer woodcock strongly re-embles the action of those overgrown butterflies, which hoy chases and capture with sticks.

There are also many aspiring youths that go tearing and smashing through the brush and screaming at their dogs and come home and report "no birds this year," and all this while they have unknowingly flushed more grouse than they can count. They are not to be blamed for this, but for not being that "Unbellas tetrao" not fancying so much racket makes a little run through the first thicket and, with a spring and a few strokes of his powerful pinions, quietly sails to some distant thicket without "showing his hand at all." And the game reports of our non-sporting, noisy farmers and lumbermen are usually still more inaccurate.

Meeting a neighboring farmer, in March, I asked him if he had seen any grouse, while lumbering this winter. He replied quite quickly, "Not a darned one and what's more I knew last fall, when I seen near a dozen blooded pointers and setters at your kennels and heard the creakin of your infernal old Parker gun every day, that there wouldn't be scarcely a bird left within ten mile o'here; and what few there was left has all froze to death long ago." My reply was that if he would give me half an hour's time for two or three nights I would show him more grouse than he ever saw. He quickly consented thinking to enjoy my discomfiture.

Half an hour before sunset I quietly took him to a hill one half mile back which commanded a view for half a mile of a secluded valley and mountain side, covered with a vigorous growth of young timber, largely yellow birch. This was backed by a heavy spruce forest, interspersed with frequent small swamps and dense thickets of hemlock and the whole fell back from civilization. Sealing himself the granger grins made me "fetch on yer partridges." We sat in silence less than ten minutes when *whizz* came a brown streak from a dense thicket on his mountain top, and a fine cock grouse struck a tall birch opposite, his glossy ruff glistening in the sun, as he nipped a few buds, and finding them rather tough descended to the smaller growth, where he made a hearty meal inconspicuous of our proximity. Before he had finished, his kinsmen began to arrive from various directions, until they swarmed on every bush and tree in the valley, and as strong as game cocks. When the first bird arrived a look of blank astonishment surrounded the granger's phiz; and as they continued to come in, his eyes and mouth continued to extend and when the show was over and we turned homeward he merely gasped "I'd no idee, don't tell the boys on't," and actually kept silence until home was reached. However, I hauled him out two nights more for half an hour to favorably compare the grouse with the quail, and the next day, on each time, and showed him no less than fifty five vigorous grouse in these three trips. The last night lumbered him up fearfully and he ejaculated "I'm beat! but for ussack sake don't tell the boys on't, for I have told everybody that every last bird was dead."

His mistake consisted in supposing them all dead because he saw none in their summer haunts, and if he happened to see through the brush, he made so much noise that he could get no sight of them.

And, by the way, speaking of grouse reminds me of a little incident that occurred a few days since. Happening in at the hotel in a neighboring town, I found fifteen or twenty young men who had lately formed a shooting club, purchased new breech-loaders, etc, and were "going in for some fun," as one of their number stated. After discussing various matters pertaining to sport, the subject of shooting grouse from trees came up, whereupon one of the leading members of the club took the floor and stated that he had been "reading up" on sporting matters generally for several months past, and that he had been particularly impressed by several letters to the FOREST AND STREAM from men who, he was confident, would scorn the imputation of shooting a quail while sitting, describing the best dog, best methods, etc, for obtaining a large number of grouse by shooting from trees. He further stated that this kind of slaughter had always rather disturbed his sense of manhood and fair play, but that, inasmuch as many of these letters came from men that scorned the quail pot-hunter, and had also received the sanction of silence (if not more) from so eminent an authority as the FOREST AND STREAM, he had come to the conclusion that his sense of honor had perhaps been rather too sensitive for the occasion, and that he must have been misinformed as to the general public sentiment among sportsmen in relation to this matter, and that in view of the foregoing and also the fact that every other kind of game bird that we have is speedily approaching annihilation, and further, that inas-

much as the leading sportsmen are endeavoring by hook or by crook to obtain the largest bags of grouse, possibly, at last, but not least, that if we fail to grab for this public pie with the rest we shall not get a piece big enough to swear by; therefore I make the motion that we establish a fund "at once to be appropriated to the purchase of a pack of the best 'trailing dogs' that can be found, no matter of what breed, pedigree or style so that they procure the 'heavy bag.'" I regret to remark that the closing sentence of this harangue was received with shouts of exclamation, and the motion was carried without a dissenting vote.

Perceiving the urgent need of a little missionary work, in which these youthful knights of the trigger stood, I took the liberty of introducing myself, and labored long and earnestly to convert them from the error of their ways. It was little use to present the argument that their shooting was with neighboring sportsmen and clubs would be affected by this course, for, said they, "Are they not all in the same boat with us, only, perhaps, a little more sly about it?" But their main stronghold that they fell back on and refused to give up when routed elsewhere, was the fact that there had been published in the FOREST AND STREAM for the space of nearly a year frequent letters, giving full directions for the most successful method of procuring the bird, and that some noble and full game bird by the most ignoble pot hunting, and from among all the numerous throng of the FOREST AND STREAM readers not a single voice had been raised to plead for fair play for the king of game birds. Here they had me "on the lip," and I pleaded guilty, but urged extenuating circumstances in the form of sickness in my family and unusual pressure of business, and also the constant expectation that some noble knight, in the course of the season, would arise to defend the right. I reminded them that the editor of the FOREST AND STREAM was not responsible for the views of correspondents, and that to my certain knowledge he was the avowed enemy of pot hunting in every form. And as for the authors of the above letters, I would guarantee that they would not advise any one to take measures to excruciate any real resident game bird in the vicinity of a pot-hole, and that in contrast to the feelings of the owner of a pot-hunting ill-bred cur, and those of the possessor of a finely bred dog well broken for legitimate main sport, and a constant honor and delight to his master at home or abroad, the exquisite pleasure of seeing such a one at work heightened at each shot by the excitement attendant upon all games requiring skill and "nerve," and the proud and constant expectation that some noble knight would be sprung to the spot, and that he would spoil in a fair, manly way. Observing signs of a truce, I dropped the question of right and honor, and brought to bear what proved (Oh, FOREST AND STREAM, how can I confess it!) to be one of the heaviest guns in my armament, by urging that they never, no, never, could become good wing shots, especially on rifled grouse, if they indulged in even occasional slying shots. And by further appealing to human nature, I reminded them of the fact that they persisted in their course they might as well hang their new breech-loaders "on a willow tree" for a few years, as such murdering pot-hunting would leave them no use for them. I called their attention to the growing popularity of this bird, as evidenced by our sporting papers of late and predicted that at no very distant date the party that took slying shots at King Umbrella would be shunned, and that sportsmen who were pot-hunting quail shooter now, and, finally, by having a good friendly "talk" with them, and promising all the assistance in my power to help them on in this new way, they came to the conclusion that true sport lay only in this direction, and recorded a unanimous vote to "take no slying shots" for one season at least. And, between you and me, if they stick to it for one season, I am not a whit concerned about their talking the buck track. RUFEN GROSS.

Ashfield, Mass.

PENNSYLVANIA WOODCOCK HUNTING.

Soe old Duke in stately statue
Rendered rigid by the scent,
And with a nod the hunter's name,
On a graceful "back" intent.

WHILE deprecating the fact that the laws of our State allow the hunting of the woodcock prior to September 15, at which time both ruffed grouse and woodcock should become lawful game, yet each 4th of July for the last half decade (excepting when the latter date has fallen upon the Sabbath, and in that case the 5th) has found me in the company of a noble companion, a rifle and dog, downed in my corduroys with a good hand and adger at hand, ready to breast the rank growth of nettles, willows, alders and other varieties of spontaneous vegetation with which the islands of the Allegheny River at this season are matted, in quest of *Philohela minor*.

Of the nettles let me say that the scorching rays of the sun are excluded, and the cool and dewy air is as gently as received from a dozen to twenty of their aggravating points simultaneously, while the dog, if unused to the ground, will refuse to be initiated. The birds are seldom if ever found here, but lying in the path the nettles must often be passed through.

The foliage is so heavy that the scorching rays of the sun are excluded, and the cool and dewy air is as gently as received from a dozen to twenty of their aggravating points simultaneously, while the dog, if unused to the ground, will refuse to be initiated. The birds are seldom if ever found here, but lying in the path the nettles must often be passed through.

These islands are usually bordered with a matted growth of dwarfish willows which serve to retard the attrition of the freshets, as where the willows whose roots intertwine are lacking these islands yearly decrease in area, and during my recollection of some fifteen years a number of them within a length of fifty miles on this river have wholly disappeared from the above-mentioned islands.

In these willow borders, which are about fifteen yards in width, and through which it is necessary to force a passage at any season, and in which a clear space of a gun's length were hard to find, many a noble bird may be flushed before the quivering form of your dog—yes, and not unparadoxically missed, too, but as he darts over the tops of the willows or over the tops of the nettles may cleverly "wipe your eye" as the shot there usually is an easy one.

Perhaps 25 per cent. of the area of the islands is overgrown by a particular species of weed of a matted height of three feet whose name I have never heard. Towering above this are numerous button balls and alders in occasional spots, and among these weeds at certain times the heroes of my tale af-

fect in fair numbers, affording the easiest of shooting as they clear the tops of weeds and present themselves to unobstructed view, affording an excuse to a mischievous hunter.

As a medium the shooting is, it is found, say September 15, in the cornfields affords the keenest, most enjoyable sport. The birds have about recovered from the effects of their moulting and the young and old birds are hardly distinguishable from each other.

By the way, speaking of the moulting of woodcock, the writer has never noticed a diminution of their number at that season from their accustomed ground during a period of five years, during which time he has made a number of trips in their quest each year; but he has noticed, however, an abnormal disposition on their part to skulk and hide under piles of dead brush and weeds from which they subornarily refuse to flush for some time.

The corn-stalks are then well matured and tower rankly above the head. Your dog has reached the scene of his staidness, being tempered by the previous month's sun and work. The sun is yet powerful and even more penetrating than in July or August, yet is toned down by the first whisperings of the fall breezes. Your dog systematically weaves back and forth through the waving grain, which is interspersed with barely enough weeds to cover the bird. Suddenly you dog claps his wings and you are the most careful of gais, and in a moment after, as you mechanically throw your gun into position, becomes rigid. Carefully passing ahead, or of necessity stepping directly over him, most likely a few yards to the right or left of where you expected, the bird flushes with a twittering whistle and a rustling as his wings strike the leaves, affording but a momentary glance to the north or south of the corn—nothing in the way of waving leaves to mark his flight. Quickly, yet not too quickly, but thoughtfully deliberate, bring your gun into line with the course he has marked out. If a straightaway shot, fire—yes, a score of times with barre returns if the man behind the gun be a novice—but to the graduate such shots will be successful in perhaps three-quarters of the cases. Should the bird cross on either hand, the most scientific points of your shooting education are called into play. Throw your line of sight to the rear of the bird, guided as before by the nodding leaves, and pass it forward until your eye of faith sees the top of his bill, and as you press the trigger ahead, his wings show the tassels of the corn, your companion on the opposite side of the field asks, "Did you get him?" and you answer that you don't know, feeling pretty sure that you did all the same, and adding a moment later, as your dog, knowing fully as well as yourself, lies in obedience to instructions and goes carefully forward lies another bird before him, and returns holding up to you the bird he has shot. He did get him, but it is the same time smoothing out the ruffled plumage of the bird and caressing the equal partner of your sport or dividing your lunch evenly with him.

Of a goodly number of woodcock which fell to the writer last season perhaps fifty per cent. were killed fully a second after completely disappearing amid the foliage, although the writer makes no pretensions to being a crack shot or a really good one.

While disliking to hunt alone, yet it is much preferable to hunt in company with the dog only to consorting with one of those ungenial spirits (they are not mythical beings, either) who invariably claims to have killed the bird when both fire together, or who ever betrays an obnoxious ambition to lead the score and is never hater of explanations as to the reason if you press the trigger ahead. Fully one-half of the sport consists in a general companionship.

A team (two) of hunters are best adapted for this work if well matched in gentlemanly qualifications, especially between themselves, in which case there is hardly a sport comparable to it, and many such a day have I enjoyed, and I hope many are yet in store for me. It hardens the muscles, gives zest to the appetite, clears the mind of the mists of morning, and, if your sleep has been uncertain, returns at least a night of solid slumber for every day thus invested.

Reader, go thon in the proper season and do likewise.

BELL-MITZELL.

HOUNDING VS. STILL HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. There is no necessity of calling attention to the value of the data we are collecting and setting forth here. The views are those of experienced, well-informed observers. The particular points of the inquiry are as follows:

- 1st. What is the character of the country referred to?
- 2d. What is the prevailing method of hunting deer?
- 3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
- 4th. Describe in like manner still hunting and deer-hunting.
- 5th. What class of men hunt the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
- 6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents approve of a law prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
- 7th. What is the open season for deer?
- 8th. What are the winter habits of deer, so far as you have personally observed them.

DEER IN FLORIDA.

The communication from Mr. Hughes in your issue of February 24 is well put. I do not advocate deer driving as the sport par excellence, but why it should be condemned as illegitimate, I am unable to understand. Certainly the sport of attacking a deer is of the very finest. If there is anything more exciting, more thrilling than standing on a runway and listening to the far-away music of the hounds as they scout the game, then, with devotions course or direct run, bring the bounding deer nearer and still nearer you, the rustic momentarily growing louder and louder distinct, until the noble game bursts upon you, to be skillfully dropped by the hunter. There is nothing more enjoyable than this, some one else must hunt it up. And yet I never shot a deer from a runway, nor do I own dogs. I came very near getting a shot, or being shot, off my mule once when driving. I was aboard Sampson, a sixteen-hand game-and-gun-shy monstrosity of a mule, whose lively ears would show more game in field or forest than my eyes; and a companion afoot was in a strip

of hammock bordering the river where the does had wended their way. I stopped Sampson, cocked my gun, and awaited developments. The mule's ears worked nervously and I gathered the reins. Presently a dog yelped, then a rifle cracked and Aleck sung out "Look out," and I heard the shrubs rattle and caught a glimpse of a buck as he rose and fell among the tall palmettos, coming directly toward me, but that glimpse was all I got. Sampson whirled, and I pulled, not on the trigger, as I wished, but on the reins. I pulled, and I whirled. The mule's ears worked nervously and I gathered a funny sight, and I lost all direction of the buck until I got the beast partially stopped, when the deer was a hundred yards away, going like the scared deer he was. I sent a load of buckshot after him, but they failed to find him, and Sampson indulged in some more lofty tumbling.

But, although I never killed a deer on a "stand," and but seldom indulge in the pleasure of a drive, I can fully appreciate the sport that accompanies it. All the deer I have ever killed have been either shot still or fire hunting, both of which I very much enjoy; but if I were in a locality where still hunting were practicable, that method would be my favorite. When a sportsman takes the field, he goes first of all to get game, that is the primary object. He may and ought to indulge in the pleasure of a drive, and a hunt of nature, tints of sky and foliage, beauty of bud and blossom, of shimmering stream and shady wood; but he goes to get game, else would he leave his Scott or "pot-metal" at home, and enjoy these other things without impediment.

Now, what success, think you, he would have still-hunting in a Florida hammock, where saw and cabbage palmetto, inextricable confusion of vines, bushes and all the rank growth of nature, thick and dense as it is, and where deer love to resort after their night rambles? A deer would hear a hunter long enough before he got anywhere near him to take a nap and think about it before he got up and off, and when he did the hunter would be none the wiser. Still-hunting would be folly in such places. In the neighborhood of such spots, from September to March, deer seek the open pine and black jack lands at night to feed on acorns and such herbs as they can find, so that they must either be driven with dogs or fire hunted if shot at all. The day finds them securely hidden in the hammock. A method of hunting which will answer in one locality will not work in another.

As to dogs running deer out of the country, I do not believe it. Deer become accustomed to dogs easily, and will walk and run with pleasure, and hunt with them as long as they will still-hunt in the more open country south and west of here, I heard, one evening when returning to camp, the notes of a hound some distance away, and in a few moments three deer appeared on my left, running on a course at right angles to mine, and about a hundred yards in front. I stopped and watched the game in progress. The deer would not hunt, but would walk easily along stopping now and then to feed a moment, and listening to the dog (which was a slow one) about a quarter of a mile in the rear. When he got where they thought he was close enough, they looked on easily, and after a while stopped again. They were having their own amusement with that dog, but they were nearing me, and when they were directly in front I dropped one with a single shot rifle, and the dog ran easily along stopping now and then to feed a moment, and shortly turned back, as it was nearly dark. A swift dog would have stirred the deer up in a more lively manner, but I doubt not they would have got away easily without greater alarm. Deer will not so readily leave their haunts.

If deer cannot be got except by hounding, and that is prohibited, what good are they to us? As Mr. Hughes has pointed out, we can have such arts and implements, as experience and observation show, are most efficacious in securing game. So long as methods are lawful and seasonably used all are alike legitimate. If one method is undivisible in certain localities it does not follow that it is in all, and should not be sweepingly condemned.

John Lakes, Fla.

THE ADIRONDACKS—"FLOATING."

I wish to endorse the views of "Adrian Ondack" as embodied in the article which appeared over his signature in your issue of March 10. The article is evidently the offspring of practical experience and honest convictions. Many incidents tending to prove the correctness of his views occur to me, but I will relate only two.

I was stalking deer in Oceana County, Mich., during the month of November, 1878. One morning I was cautiously "working up" the trail of two deer when a hound came in hearing, and a few minutes later a deer went crashing by about twenty rods from the place where I stood, followed in due course of time by the hound in full cry. The deer continued to run, and the dog was lost in the distance I threw off all caution, and pushed forward thinking that had the deer I was working on been anywhere near the clamor of the chase would certainly have stampeded them. However I had scarcely taken half a dozen steps when, with a snort and crash, they sprang from their beds not over eight rods from the trail on which the hound had gone past them. The deer continued to walk as if they had not seen a dog, but little for the presence of hounds when they are not the objects of their pursuit.

During a full hunt on the Cedar River, Hamilton County, N. Y., a party of which I was a member drove no less than seventy-five races "from one mountain (Old Roundtop). There could not have been over a dozen deer or more than about twenty hounds on the mountain, and on the trail there were more than a number on the mountain when we stopped exercising them. I also think that the deer we left were the same we first experimented with. Certain it is we failed to kill any before the hounds, and just as surely as we drove a deer from the mountain just as surely could we find a fresh track leading up the side of the mountain on the following morning. This circumstance would seem to show that the hounds were not so numerous as to have driven the deer to their haunts, and that "hounding" is not a very destructive method of hunting deer.

In point of destructiveness I think there is not much difference between these two methods, when both are practiced by experts in a locality alike favorable to both. Personally I can kill two deer stalking while one would be very hard to get by hounding. I do not think it affords me more pleasure to stalk one than to stand on a runway and shoot a dozen. The mere act of pulling the trigger and sending the charge into an animal as big as a jackass is of secondary importance to me. It is the sharp struggle between human muscle, skill and cunning and the keen senses and instincts of the animal that afford me my greatest pleasure.

Agrees with "Adrian Ondack" in thinking our present deer

law pretty good. However, I would urge slight changes as to time of open season, and would utterly taboo "floating," were it not for that class of sportsmen who delight in it as furnishing the only chance for them to kill a deer. Perhaps if I suggest a substitute for that sort of sport I will be forgiven, if I do urge the suppression of floating.

My vote, then, to the sportsman who desires the prominence which is achieved by killing a deer ahead of the "floaters" is:—Take the money with which you would pay your guides, hotel bills and other expenses, and with it buy a cow, the her to a tree, then stand at the distance of twenty feet and shoot her. You will be entitled to fully as much credit for skill, be subjected to less discomfort, and secure more meat than you would should you kill a deer before the "jack." Should you desire to do something particularly brilliant, give the hunter the run of the barnyard when you open your battery upon her. Killed at the first fire, under these conditions, the exploit will win more fame for you than you can ever hope to secure by "floating" for deer.

I think if the open season were to commence Sept. 1 and close December 15 the change would be beneficial. When a deer weighing 200 pounds is killed four or five miles from any road or habitation of man, as is frequently the case, and is skinned to an August ten, or some other time, among the nobles, the chances are that by the time it is put upon ice it will be more suitable food for buzzards than human beings. Deer are in much better condition after than before September 1. The fawns are larger and better able to take care of themselves. No reasonable objection can be urged to changing the close of the open season from December 1 to December 15.

The deer are usually in good condition up to January 1. Snow does not usually deep enough to make crusting possible before December 1. Then, it would more nearly equalize the opportunity for stalking and coursing.

What I have written is written because I believe it to be true, and because I would insure to all an equal chance to enjoy sport in the way that pleases them best, consistent with efficient game protection. I like the idea of basing game laws upon the practical experience of sportsmen, rather than upon the selfish demands of a class. I am glad that we hear no more about renting shooting privileges and taxing guns.

However well such measures may work in other countries, I think they would work only mischief here. The average American is too intelligent, his love of equality and hatred of anything that smacks of class distinction too strong for such measures ever to become popular in this country.

Replying briefly to the questions you propound, I would say:

1st. I have hunted deer in several States, and find their habits practically unaffected by the "character of the country" they inhabit.

2d and 5th. Since it has been the fashion to "do the Adirondacks," viz.: for the last three or four years more deer have undoubtedly been killed or destroyed during the months of May, June and July, in that section, by the method commonly called "floating," than by all other methods combined. It is practiced principally by "sportsmen" (?) from the city.

3d and 4th. "Hounding" and "still hunting" deer does not drive them permanently from their chosen haunts.

6th. In some sections they would. In the great majority of sections they would not.

7th. Such a law would be impracticable.

8th. Practically from about the 1st of May to the 1st of December.

9th. The winter habits of deer," like their habits at other seasons of the year, are governed by their instincts of self-preservation. To answer the questions fully and in detail would be to "write a book." The answers given above are based upon personal observation and reliable statements of guides and residents.

We have, awaiting publication, a farther communication on the subject from "Adrian Outack."

DEER IN MASSACHUSETTS.

PLYMOUTH Woods in Eastern Massachusetts is some 70 miles in length by from 8 to 16 miles in width, extending from Plympton to Falmouth and beyond, and a rather barren hilly district of scrub oak and stunted pitch pine, with once in a while a cedar swamp or piece of lowland white pine, with many ponds and brooks.

All over the land is the blue buckberry and the roxbury, which the deer are very fond of. There is quite a number of "blue" trees and "days" ride from Plympton to Sandwich will reveal quite a number of tracks crossing the roads. Forty years ago deer were very abundant, and it was not an uncommon thing to see droves of from fifteen to twenty. I well recollect when my father used to fix up things in his corn and rye fields to frighten away the deer that would come and trample down and destroy his grain. Still-hunting was the only way generally allowed, and if hunters owned and used a hound in killing deer, the dog would soon be killed some way.

Finally some of the wealthier or more prominent men in Kingston eluded together and bought two or three deer-hounds, and there were two or three owned in Plympton, and that winter there were not as many deer killed as when still-hunting was practiced; the deer were more often hounded, and the dogs would sometimes return bloody, having come up with an antlered deer, which could not be killed. The next year deer were scarcer, and when routed would seem to bound away for Sandwich, and the dogs could not find their way back, being often lost or stolen. Deer soon became so scarce in the northern end of the woods that the Kingston party, uniting with the Plympton hunters, would not start a deer in an all day's hunt. Finally deer hunting was given up for a few winters at the north end, and the hunters, by the way, who were more southern part of the woods, drove them north again, and they were quite plenty, but on hunting them again with hounds we drove them all off south, and for ten years past but one or two deer have been seen in all the woods north of Plympton, with one exception. A large buck's track was seen at the old guide road crossing, and I was one of the party that went for him. We started him in Watson's Valley, and he struck out straight for Falmouth, and the dog was soon out of hearing, and we never seen him since. The deer now seem to abound most in the more quiet wilderness in the neighborhood of Great Herring Pond, some fifteen miles below Plympton, although their better feeding-ground is at the northern end of Plympton Woods. From my experience in both still-hunting and hunting with dogs, more deer are wounded and lost and driven away from the feeding-ground by hunting with dogs, than when shot with dogs. Wounded deer secured by still-hunting, and they do not seem to be so disturbed nor frightened away.—G. F. W.

MIDDLESEX COUNTY ASSOCIATION.

CONSTITUTION.

Article I.—Name. This Association shall be known as "The Middlesex County Association for the Protection of Fish and Game."

Article II.—Object. The object of this Association is to insure a rigorous enforcement of the game laws of this State throughout Middlesex County, and to promote the increase of game of all kinds, including fish, wild birds and animals.

Article III.—Officers. The Officers of this Association shall consist of a President, and four Vice-Presidents, a Secretary, a Treasurer, a Counsel and an Executive Committee, consisting of the above-named officers and five active members of the Association, whose duties shall be such as the by-laws provide, all of whom shall be elected annually by ballot at the yearly meeting in January.

Article IV.—Members. Any resident of this County over eighteen years of age, and of good character, shall be eligible to membership in this Association.

Article V.—Quorum. At any meeting of this Association seven members shall constitute a quorum, and a majority vote shall be necessary to the election of any officer, or the transaction of any business.

Article VI.—Amendment to Constitution and By-Laws. The By-Laws shall be of equal binding force with the Constitution, and no alterations or amendments shall be made in either, unless proposed in writing at a preceding meeting and adopted by the concurrent votes of two-thirds of those present.

BY-LAWS.

No. 1.—Executive Committee. The general management of the business of the Association shall be intrusted to the Executive Committee.

No. 2.—Annual Meeting. The annual meeting of the Association shall be held the third Wednesday in January of each year, at such hour and place as the Executive Committee may direct. If by any cause such meeting shall fail to be held on such date, it shall be held the corresponding day of the following week.

No. 3.—Duties of Officers. Section 1.—It shall be the duty of the President to preside at all meetings; to see the rules and regulations strictly enforced; to give the casting vote whenever there is a tie, and perform such other duties as usually appertain to the President of an Association.

Sec. 2.—The Vice President shall assist the President when necessary, and in his absence perform all the duties and be invested with all the powers of President.

Sec. 3.—In the absence of the President or Vice Presidents from any meeting of the Association; any member present may be elected to preside, but shall have no power for any other purpose.

Sec. 4.—The Secretary shall keep an accurate record of the proceedings of the Association, issue all notices required, and keep the records and papers of the Association.

Sec. 5.—The Treasurer shall receive all the moneys of the Association, and see that all fees, charges and subscriptions are regularly collected; keep an account of all moneys received and expended, subject to the investigation of the Executive Committee. He shall, at each meeting of the Association present a list of all delinquent members, and at each annual meeting shall furnish an account of all the moneys received and dispersed during the year.

Sec. 6.—It shall be the duty of the Counsel to attend to all legal affairs of the Association; to bring suit immediately on information of any infraction of the game law; to report all suits, instituted or pending, at each regular meeting of the Association; and to prosecute, in the Treasurer, as far as received, all penalties collected for such non-observance of the game law, after deducting his expenses.

No. 4.—Executive Committee. Section 1.—The Executive Committee shall make all purchases authorized by the Association, have a general supervision and jurisdiction over the internal concerns and regulations of the Association, and assist the Counsel, when required by him, to prosecute in the name of the game laws. They shall audit the accounts of the Treasurer; they shall serve as a Court of Appeal, by whom all questions shall be decided as to the true meaning of any part of the Constitution and By-Laws, and their decision shall be final; and they shall have power to suspend any officer, whose conduct shall have been prejudicial to the welfare of the Association, until the next regular meeting.

Sec. 2.—The Executive Committee shall have full power to fill any vacancy which may occur from death, resignation or otherwise, among its officers, and any appointment so made by them, shall be valid until the next annual election. It shall also prescribe such rules regulating the affairs and conduct of the Association as, in their judgment, may from time to time be necessary; provided, they do not conflict with the Constitution and By-Laws.

No. 5.—Dues. The annual dues of active members shall be two dollars (\$2.00), payable at the annual meeting in advance.

No. 6.—Proposals and Election of Members. Section 1.—Proposals for membership may be made at any meeting of the Executive Committee, if, on a two-third vote of the members present, it be accepted, the candidate may become a member; but no person shall be considered a member until he has subscribed to the Constitution and By-Laws and paid the dues of the current year.

Sec. 2.—Every gentleman, by becoming a member of this Association, shall be considered as having pledged his honor to promote and carry out the objects of the Association; and whenever a member shall have knowledge of any violation of the game laws by killing game or fish, or having the same in possession during prohibited seasons, it shall be the duty of such member to communicate the facts immediately to the Counsel of the Association, whose duty it shall be to enforce the penalties of the law, in such case made and provided.

No. 7.—Forfeiture of Membership. In case a member shall neglect to pay his dues for a period of six months after notice given, he shall, ipso facto, cease to be a member of the Association, and shall forfeit all right or claim to the property of the Association. The names of such delinquents shall be stricken from the list of members, on motion, at a regular meeting, and the Secretary shall notify him or them of the fact; but such member may be reinstated,

within twelve months from the period of forfeiture, by the unanimous vote of the Executive Committee, provided that all his arrears are paid.

No. 8.—Expulsion of Members. Any member guilty of violation of the game laws of this State, or having knowledge of any violation of the same by any person, and failing to report to the proper authority, may be expelled by a two-thirds vote of the Executive Committee; but any member so expelled shall have the right of appeal to the Association, which appeal shall be decided by a majority vote of the members present, at a meeting called for said purpose.

No. 9.—Matters Not Provided For. All matters not particularly provided for in the Constitution and By-Laws shall be controlled by the Executive Committee, until specially passed upon by the Association at a regular meeting.

No. 10.—Special Meetings. Special Meetings may be called by the President and Secretary on three days' notice, and it shall be their duty to call a meeting on the written request of three members.

CHARTER.

STATE OF CONNECTICUT, ss.:) Office of Secretary of State.)
General Assembly, January Session, A. D. 1878. (Senate
Joint Resolution No. 81). 128. Incorporating a Game
Club in Middlesex County.

Resolved by the Assembly: That Joseph W. Alsop, Jr., Silas A. Robinson, Samuel Russell, O. Vincent Cudwin, C. W. Harris, J. C. Broatch, Robert N. Jackson, George A. Chaffee, Charles G. R. Vinal, A. Putnam, John R. Pitt, Jr., O. P. Grover and George M. Pratt, all of Middletown; George H. Comstock, of Center Brook; Isaac Arnold, of Hamdam; Wm. Glover Buell, of East Hampton in Chatham; W. W. Coe, of Portland; Wm. Lyman, of Middfield; H. R. Wooster, of Deep River; Charles S. Hough, of Essex; and George H. Davis, of Durham, and all such other persons as may be from time to time associated with them, together with their successors, be, and they hereby are, constituted a body corporate and politic, by the name of "The Middlesex County Association for the Protection of Fish and Game;" and by said name shall have perpetual succession, and be capable in law to purchase, lease, hold, possess and convey real and personal estate, and to receive any real and personal estate devised or bequeathed by any person or persons capable of making the same; provided, that the said corporation bill shall not at any time hold real estate exceeding in value the sum of ten thousand dollars. And said Corporation shall have power to sue and be sued, plead and be impleaded, in all courts and places whatsoever; may have a common seal, and may change and alter the same at pleasure; they elect such officers as they may find necessary and convenient, and make and carry into effect such by-laws as they may deem necessary, not repugnant to the laws of this State and the United States.

Sec. 2.—This Act may be altered, amended, or repealed at the pleasure of the General Assembly, and shall take effect from the date of its passage.

Approved, March 26, 1878.

STATE OF CONNECTICUT, ss.:) Office of Secretary of State.)
I hereby certify that the foregoing is a true copy of record in this office.

In testimony whereof, I have hereunto set my hand, and affixed the Seal of said State, at Hartford, this 30th day of March A. D. 1878.

DWIGHT MORRIS, Secretary of State.

FORM OF LEASE. Know all men by these presents, that..... of the Town of..... Middlesex County, State of Connecticut, for, and in consideration of One Dollar to each of us in hand paid by "The Middlesex County Association for the Preservation of Game and Fish," and an Honorary Membership to each of us in said Association with all the privileges of regular membership except that of voting, during the term of five years, or so long as we shall respectively continue this license, have let unto said Association for the term of five years from the..... day of..... 18... the right to stock with game any and all lands and farms owned by us respectively, within said County, and all streams and ponds thereon with fish, together with the right to protect the same, and the sole right and privilege of hunting and fishing thereon and therein; said rights of hunting and fishing to be enjoyed by its individual members under such regulations and restrictions as the said Association may itself adopt.

It being understood and agreed that all damages done to our walls and fences by said members while in the exercise of the above granted privileges, shall be promptly repaired by them; and further, that upon six months notice, in writing, prior to the first of April in any year, either of us may revoke our share of this license, and the same privilege is reserved to the Association.

Signed with our hands and sealed with our seals this..... day of..... 18.....

FORM OF PERMIT. Middlesex County. Association for the Protection of Game and Fish.

This Permit is not good unless endorsed with name of the holder and countersigned by the President or Secretary of the Association.

Not Transferable. N. B.—Members are cautioned to keep this permit by them, as if they cannot show it when called for they will be liable to be turned off the lands of the Association.

REMINISCENCES OF AN OLD FOGY.—No. 1.—I have shot with deer and wild turkeys in the same county in the Missouri, between the George and the Gasconade. I have shot deer in Pennsylvania and Missouri, duck and wild fowl in New Jersey, Ontario West and in Virginia; but old age will tell, and now I can only think about those things, for I am too old and have laid aside my gun, rod and tackle. I did have a son who, as they said here, could catch fish where there were none, but, alas! last summer he went to the "Happy Hunting Ground," and so I am left with only my recollections. They may amuse your numerous readers, and so I send them. In the fall of 1868 we had a hard storm of wind and rain

contra, the catch in the Potomac in 1866 amounted to 316,000 pounds; in 1876, to 100,000; in 1878, to 50,000.

Many more instances of the enormous abundance of the anadromous fishes (marine species running up from the ocean into fresh waters for the purpose of spawning) in different parts of the country in former times could easily be adduced. Similar illustrations of the former abundance of fishes exclusively inhabitants of the salt water can be brought forward to any extent. In the early days of the Republic the entire Atlantic shore of the United States abounded in fish of all kinds. Where cod, mackerel and other species are now found in moderate quantities they occurred in incredible masses.

The halibut, one of the best of our fishes, was so common along the New England coast as not to be considered worthy of capture, and was considered a positive nuisance when taken. It is only within a few years that our people have come to learn their excellence and value, but they have already disappeared almost entirely from the inshore of New England, and have even gradually become exterminated in nearly all waters of less than five hundred feet in depth.

The inquiry now arises as to the causes of the terrible depletion of the inhabitants of the water, and one so detrimental to human interests. The question relates in part to an actual extermination, and in part to the disappearance of nearly all other kinds in the inshore fisheries of America. The supply has diminished in enormous ratio is unquestioned. What were and are the causes, and what the remedy?

One most plausible solution of the problem is to be found in the very close relationships between the so-called anadromous fishes and those permanently resident in the ocean. The anadromous species are represented by the salmon, the shad, the herring, the water herring, and many other kinds, which, although spending the greater part of their life in the ocean, periodically enter the fresh waters, in greater or less numbers, and ascend as high as they can for the purpose of finding suitable places wherein to deposit their spawn. This done, the parent fish soon returns, leaving the young to follow. The young shad or herring remain in the river three or four months and then go down to the ocean. The salmon more persistent, the young remaining from one to two years before which they ascend to the ocean, while the shad and herring, for the most part there attain their entire growth. It is not thought that either the parent fish or the young go to any great distance from the mouths of the rivers, and it is believed that the fish born in one stream never think of entering any other than that in which they first made their appearance.

Entering in mind the countless myriads of these fishes forever entering our rivers—the shad and herring along the entire coast of the United States to the Bay of Fundy, the salmon from the Connecticut eastward—and noting the extent to which they are preyed upon by the more rapacious inhabitants of the sea, we may understand why such multitudes of the larger fish formerly approached the shores in pursuit until deterred by the increasing shallowness or freshness of the water. Even then, however, they would remain near the shore, waiting in wait for the parent and their young returning in such vast quantities during the later months of the year. In all probability these constituted a chief inducement to the movement of the predaceous fish to the coast in such numbers during the spring and summer. In autumn and winter the sea-herring and the fish of the cod family visit the shores for quite another purpose, namely, to deposit their eggs. Be it from whatever motive, the fact remains that the young are throughout the twelve months an ample supply of the finest fishes was within the reach of every one, so that a fisherman with a small hand-line and an open boat was able to support his family without any difficulty.

Now, with the continued reduction in abundance of the salmon, shad, and fresh water herring, the summer fisheries have dwindled and nearly disappeared, leaving only those of winter with its inclement weather to furnish occupation to the fisherman, and coming to the attention of our people only at the season of the year to betake himself to the Georges, La Have, Quebec and other banks, especially to the Grand Banks of Newfoundland, to prosecute his work in expensive vessels, and exposed to perils and privations of a terrible character.

Assuming, then, that the chief agency in the decrease of the ocean shore fishes has been the reduction in the number of the anadromous fish, the question arises from the ocean into the fresh waters to spawn, let us inquire into the causes of the diminution of the latter. They certainly were very plentiful in the early days of European colonization in America, but at that period all the rivers were open to the sea, without dams or other artificial obstructions. Few or no sawmills cast into them sawdust and other refuse; no gas works polluted them with coal-tar, creosote, etc., and paper mills, cottoneries and other establishments of our modern world were unknown. The fishing apparatus was confined to lines and nets of no great extent, not sufficient to barricade the streams and impede the upward movement of the fish.

After the settlement of the country began, these possible dangers came to have an actual existence. It is probably to the erection of dams, however, that the first great diminution was due. The salmon, the shad and the herring proceed from the ocean to the point where the water of their stream were met by an impassable barrier, which they were unable to surmount, cutting them off from their favorite spawning ground, and, indeed, in many cases, from the only localities where the operations of reproduction could be properly performed. They were themselves out in fruitless attempts to overcome these obstructions, and were compelled finally to return to the ocean without depositing, or, at least, without their spawning. A second year a third, and so on, until the water would probably make but little difference in the number making the attempt to ascend, this being due to the fact that four years is the average period from birth at which most fish are mature and able to exercise the reproductive act. By the end of the fourth year, the last crop of young fish hatched in the upper waters of the river will have made its appearance as mature males and females. After this the diminution takes place with increasing rapidity, until five or six years afterward the fish are found to have disappeared entirely from the stream. So much for the dams. As for the other causes, sawdust and other refuse matter get into the gills of fish and produce irritation and subsequent death. Coal-tar refuse is known to be a very great detriment to the healthful

condition of water so far as fish are concerned, and it is probable that a part at least of the decrease of shad and herring in the Potomac is due to the discharge from the gas works of Washington and Alexandria.

The rapid increase in the size and number of the nets, whether ponds, seines, drift or gill nets, that has manifested itself within the last twenty years has doubtless had a similar effect with the dams in producing a decrease. The fish are harassed and worried by them, and hindered in an equal degree from reaching their spawning ground, and thus another drain on the supply is added to the many already in operation.

What, now, are the remedies to be applied to recover from this lamentable condition of the American fisheries (a condition which, we may remark, has existed in all countries of Europe, but which in some of them has already been greatly lessened by the proper measures)? These are involved. One consists in the enactment and enforcement of legislation protecting what we have, and allowing natural agencies to play their part in the recovery; the other consists in the application of the art of artificial propagation of the fish. Either, alone, in some circumstances, will answer a very good purpose. The two combined constitute an alliance which places at our command the means of recovering our lost ground, and, but for the experience of the last twenty years, would hardly be credible.

THE FLY-CASTING TOURNAMENT.

WE print the list of prizes, as arranged by the Prize Committee of the New York State Sportsmen's Association at the coming tournament. The list is larger than ever before, and of greater value. We think that the arrangement will give perfect satisfaction to all, the amateurs having a class by themselves which should bring out new fly-casters.

This has been a change long needed, as heretofore the amateurs have had to cast against acknowledged champions, if they cast at all, and this is a point for which Mr. Mather, the director of fly-casting this year, has labored. Some proposed changes in the rules will be given in our next issue.

Salmon Fly-Casting. Entrance, \$5.

Thursday, June 23, 1881, at 10 A. M.

First Prize.—One split bamboo salmon rod, 18 feet in length, in three pieces with two tips in grooved case, and sack. Especially constructed for this contest, and donated by B. F. Nichols & Co., 30 Beach st., Boston. Value, \$50.
Second Prize.—One split bamboo fly rod, reel and line, donated by Peck & Snyder, 124 Nassau st., N. Y. Value, \$25.

Third Prize.—Five dollars gold.

Fourth Prize.—One year's subscription FOREST AND STREAM, donated by the Forest and Stream Publishing Co., through Fred. Mather.

Striped Bass Casting, Outfitted Style. Entrance, \$5.

Thursday, June 23, 1881, at 11 A. M.

First Prize.—One split bamboo striped-bass rod, with steel pivot, rubber and German silver reel filled with a 21 thread line. Rod silver mounted and in fine case. Donated by J. F. Masters, 65 Court st., Brooklyn. Value, \$75.
Second Prize.—One split bamboo fly rod with hard rubber discs, gold mounted and appropriately inscribed and decorated. Donated by Loomis & Plumb, Syracuse, N. Y. Value \$50.

Third Prize.—Five dollars gold.

Fourth Prize.—One year's subscription FOREST AND STREAM, by the Forest and Stream Publishing Co., through Fred. Mather.

Trot or Black Bass Fly-Casting. Entrance \$5.

Thursday June 23, 1881, at 2 P. M.

Class A open to all members of the Association.

First Prize.—Fishing tackle to be selected by the winner, of the value of \$50. Donated by Chas. F. Imbrie, of Abbley & Imbrie, 48 Maiden Lane, N. Y.
Second Prize.—One greenheart fly rod with click reel and waterproof line. Donated by J. B. Crook & Co., 50 Fulton st., N. Y. Value \$35.

Third Prize.—One split bamboo fly rod Gorman silver mounted, cane wound butt, two tips, with bamboo tip case, rubber click reel and fly line. Donated by Wm. M. Cornwell, 21 Warren st., N. Y. Value \$25.

Fourth Prize.—Five dollars in gold.

Fifth Prize.—One year's subscription FOREST AND STREAM, by the Forest and Stream Publishing Co., by Fred. Mather.

Class B.—Open to all members of the Association, excepting those who have won a first prize at this or a previous convention in a casting contest open to all.

First Prize.—Two rods, (trot and bass), all lancewood and silver mountings. Each rod consists of one but two second joints of different weights and three tips with extra bamboo tip case. All in handsome black walnut case lined with velvet and bound with four bands of silver. Especially made for this occasion and donated by Fred. B. Divine, 76 State st., Utica, N. Y. Value \$50.

Second Prize.—One split bamboo fly rod with click reel and Holberton's full length fly book with improved Hyde clips, English leather cover. Donated by Couray, Bissat & Malcom, 65 Fulton st., N. Y. Value \$30.

Third Prize.—One pair MacKintosh wading pants with boots. One Hallock hunting coat, donated by Goodyear's Rubber Manufacturing Co., 488, 490 & 492 Broadway, N. Y. Value \$40.

Fourth Prize.—Five dollars gold.

Fifth Prize.—One year's subscription FOREST AND STREAM, by the Forest and Stream Publishing Co., through Fred. Mather.

Class C open to all members of the association who have not won any prize at this or a previous convention.

First Prize.—One Leonard split bamboo Catskill fly rod, gold mounted, with Mills & Son's best rubber click reel, filled with their "Standard" enamelled water-proof fly-line. Donated by William Mills & Son, 7 Warren st., N. Y. Value \$30.

Second Prize.—One trunk rod, with reel and line complete. Rod silver mounted and in fine case. Donated by J. F. Masters, 65 Court st., Brooklyn. Value \$25.

Third Prize.—One Henshall black-lack rod, with extra second joint and two tips. Donated by S. W. Goodridge Gratton, Windham Co., Vermont. Value \$15.

Fourth Prize.—One elegantly bound copy of Dore's "Ancient Mariners." Donated by Harper Bros., Franklin st., N. Y. Value \$10.

Fifth Prize.—One expensively bound copy of "Pastoral Days" (W. H. Gibson). Donated by Harper Bros. Value \$10.

Sixth Prize.—One oil painting, "Quail Seeking Refuge

from Stress of Weather." Donated by Henry W. Abbott, 11 Commonwealth ave., Boston.

Seventh Prize.—One hundred cigars. Donated by F. W. Metcals & Son, 175 South st., N. Y. Value \$10.

Eighth Prize.—Five dollars gold.

Ninth Prize.—One year's subscription to FOREST AND STREAM, by the FOREST AND STREAM Publishing Co., through Fred. Mather.

N.B.—No more than one prize can be awarded in any class or contest to the same contestant. If the prizes should outnumber the competitors, the awards in each class will be made in the order of merit, and the surplus prizes revert to the Long Island Sportsmen's Association.

WESTERN FISHES.

WE have received advance sheets of the "Proceedings of the United States National Museum, 1881." It contains a check list of duplicates of fishes from the Pacific coast of North America, distributed by the Smithsonian Institution in behalf of the United States National Museum, prepared by David S. Jordan and Pierre L. Joly. The list contains 63 families, 157 genera and 245 species.

Mr. Joly describes a new species of cyprinoid, *Squalius altian*, from Utah Lake, which is closely related to the *Tigania intermedia* of Girard. Rosa Smith describes a new Gobloid fish, *Otholobos eos*, from San Diego, California. Dr. Tilton H. Bean describes *Cromidia marginata*, *Potamorhynchus dentatus* and *Myxobolus granulatus*. The two first were received from our correspondent, Capt. Charles Beaudre, U. S. A., and one of them has been named after him.

Under the heading of "Notes on the Fishes of the Pacific Coast of the United States," Prof. David S. Jordan and Charles H. Gilbert give a list of the species known to occur along our Pacific coast, between the Mexican boundary and British Columbia, together with notes on the distribution, habits, size, value, etc., of each species, in advance of the publication of a general descriptive work. The common names in use by the fishermen are also given. We will refer to these notes again and give some extracts from them.

BASS, RED-SNAPPERS AND TARPOM.

A CORRESPONDENT of your paper, writing from Putnam Co., Florida, describes with spirit his experiences in fishing for red-snappers and bass on that coast, together with a tarpon adventure, in which he, like most anglers who have encountered the fish, came by the worst.

It appears to have used the rind method of fishing commonly practiced on that coast—the heavy hand-line and hook which is necessary in dealing with red-snappers in fifteen fathom water, but not so with the shoal water fish, like red bass, sea trout, mangrove snappers, cavalli or ladyfish, all of which may be taken on that coast with rod and reel, affording the first sport. In that way we take at Mosquito and Indian River inlets bass up to thirty-five or forty pounds. As to the tarpon, called by naturalists *Megalops potomacensis*, it is a fish of such immense strength and swiftness, as well as size, that it can seldom be taken with rod and line, either in its furious leaps tearing itself loose—its mouth being tender, like the herring family, to which the tarpon belongs—or parting the line, or breaking the hook. It enters the inlets in April in schools, pursuing the mullet, and may often be seen leaping five or six feet from the water like an immense salmon, which it resembles in silvery brightness and activity. It is sometimes taken with the "grains," a strong line and buoy being attached, which controls the rushes of the fish.

I myself have twice hooked a tarpon while fishing for bass with rod and reel, but my line was all taken from the reel at the first rush, and parted without in the least checking the fish, which went off seaward in great leaps.

I am told that the great feat of killing this fish on a rod was performed last winter at Indian River inlet by a veteran angler of Philadelphia. The time expended in the contest I do not learn, but the weight of the tarpon was said to be 140 pounds—about double the weight of the heaviest salmon ever killed on a rod. With rod and reel of the strongest, and three hundred yards of 15 thread line line, strong muscles and skill in using them, and good luck—it is therefore possible to kill the tarpon on a rod. The fishermen tell me that no common net will hold this fish, which has sharp labial bones which cut their way through the meshes; also, that it is a rich and well flavored fish on the table.

S. C. C.

Halfway Inlet, Florida, May 3, 1881.

TROUT IN THE ADIRONDACKS.

MOIRA, FRANKLIN CO., N. Y., May 17.

TROUT fishing in this part of the Adirondack region is now at its best. The late winter wea her cleared out all the ice and snow, and during the past week, many fine lots of trout were caught in the St. Regis and Salmon rivers and also in Meacham and Ragged lakes and many of the ponds. Many salmon trout were caught at Menaham Lake the past week, one weighing fifteen pounds. From now until the middle of June or the first of July is, in my opinion, the best part of the season for trout fishing.

If any of the readers of the FOREST AND STREAM would like to get a fine specimen of the crane for mounting they can do so per good here. In a large piece of woods here, some miles north of here there are hundreds of them now nesting. Every dead tree has from one to five nests in it. They choose the dead trees, of which the woods are mostly composed. This is the third season they have nested in that vicinity. Many boys and men go there to shoot them for the sport. It seems hardly right to shoot them, but residents near claim they have caught all the fish out of the large brook that runs through the woods here. Two young men last Saturday afternoon shot a dozen with rifles in a short time. A. C.

TAKING SWALLOWS WITH THE FLY.—The Rochester Union tells us that Mr. John Harris, the Arcade confectioner, laid aside the cares of business Tuesday, and made a visit to Castledonia Creek, trout fishing. The day was cold and unfavorable for taking trout, but he managed to put a few good ones in his creel. If he had not caught a fish at all, the experience he had would have been ample compensation. He was using a very small fly essential to success on the creek, an unusual number of swallows were skimming over the water, and when Harris began to whip the stream the birds commenced to dart at the flies. There was no way of preventing them taking the flies, and before he stopped fishing he caught three of the birds on his hooks. Very light tackle

S. W. M., Galveston, Texas.—Do brook-trout have scales? Ans. They do. A careless observer will not see them, because they are covered with fine white scales ...

C. F. O., Eason, N. Y.—Read the article on gun barrels in our last issue. The drop of a neck best adapted to yourself, you can determine by experiment ...

DECEMBER, Clinton, Wis.—In selecting a pointer or setter puppy for the purpose of using a natural food, they are apt to be misled by dog from biting his game? Ans. You find in a dog that will destroy his scolding partner? Ans. I, by trying him on game ...

W. F. S., Woonsocket, R. I.—Where and when can I get lead for the purpose of using a natural food, they are apt to be misled by dog from biting his game? Ans. You find in a dog that will destroy his scolding partner? Ans. I, by trying him on game ...

J. S., New Brighton.—The three names, fyke net, hoop net or set net, are applied to one form of net. The body of the net is a cylinder disposed with hoops and having from one to three inches in diameter ...

C. E. J., Zanesville, O.—What is the best bait for bass and salmon besides live minnows? 2. What kind of bait is used for trout? Ans. 1. For black bass use the drop altered to suit taste and the crayfish ...

W. B. L., New York City, L. I.—Will a red setter pup that is kept out of doors exposed to sun grow darker than if he were kept in the house? 2. Does bathing make his coat darker or lighter? 3. What color will a setter pup be at 15 days? 4. Can anything be fed to a setter pup on his coat which will make him darker? 5. Does a setter pup rubbed (quail) give out enough scent to make it worth while to get some more when pups out? 6. Can you tell me of some man who gets some that he knows of? 7. Wood will not affect his coat. The coat will permanently keep it. 8. We know of no one who has any live quail for sale; it is too late in the season ...

Any gentleman who would like to purchase a fine country residence on Manhattan Bay, North Shore, L. I., should contact advertisement of J. P. Travers this week.

NOTICE! Advertisements received later than Tuesday cannot be inserted until the following week's issue. Rates promptly furnished on application.

Hornbeam Rods A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.

Makes a specialty of the manufacture of PINK HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE SHOT CARTRIDGE CASES

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST FAVORABLE POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1809, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 5 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 5 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.

Dupont's Choque Bore.—Specially adapted for "Choque Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 6 1/2 lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6 1/2 lb. kegs.

Dupont's Rifle Fg.—"See Shooting."—FFG, and FFFG. The Fg. for long-range rifle shooting, the FFG, and FFFG, for general use, burning strong and moist. Packed in 5/8, 1 lb. and 5 lb. canisters, 6 1/2, 12 1/2 and 50 lb. kegs. Fg. coarse, FFFG, fine.

Dupont's Sporting, Mining, Serrano and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEBLAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S Fg. or FFG. for long-range rifle shooting.

Oriental Powder Mills, BOSTON, MASS.

Ammunition, Etc.

The Hazard Powder Co., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square tinisters of one pound only.

Hazard's "American Sporting." Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFG FFG, and "See Shooting." FG in kegs of 6, 12, and 24 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "See Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents. All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, June 2.

INTRODUCTION OF SKY LARKS IN AMERICA.

THE good influence of the charming writings of Mr. John Burroughs are not confined to this country. Many of our readers will remember, in "Notes of a Walker," published not long ago in *Scribner's*, his description of his feelings on hearing the song of a stray English skylark which he came upon during one of his walks. In the same paper Mr. Burroughs suggested that this species should be introduced into this country, and that it would thrive here as well as in Europe. Acting on this suggestion, Mr. Charles R. Rowe, of Cornwall, England, sent out to Mr. Burroughs a number of the birds, which reached this city April 23 last. The story of their importation and subsequent treatment is told, in answer to our inquiries, by the recipient of the birds, in the following letter:—

LEOPOLD, N. Y., May 24, 1881.

Editor Forest and Stream:
You ask about the skylarks sent me from England. Twelve pairs were procured for me by Mr. Rowe, but only ten birds lived to be shipped. Of these seven reached me April 24 in good condition. I kept them in confinement about a week, when two of them died from the effects of myria's of small lice. The remaining five I liberated in a wide, low meadow just back from West Park landing on the Hudson. Up till a few days since I have daily seen a pair of them in the meadow, and had hopes that they would breed there, though I could not determine the sex of the birds. I have heard no song from them, but only their call note. On one occasion I saw one so-called meadow-lark drive one of them from the grass. I do not regard the experiment of introducing the larks a success, and all similar experiments will doubtless fail. The birds become dispersed and lost in our vast territory. A likely way to succeed, I think, would be to liberate the birds on some island off our coast, where the climate would be more like that of Britain, say on a bantock or Martha's Vineyard. The birds would not be so apt to lose each other, and would probably plant a colony from which in time they would spread to the mainland.

JOHN BURROUGHS.

Mr. I. W. England's attempts to acclimatize the skylark have been undertaken on a larger scale, and consequently with a better promise of success. Two hundred birds were shipped to him in December last, one hundred and seventy-five of which reached New York. During their transportation to Ridgewood, New Jersey, some escaped, and others afterwards died, so that when they were turned out, about May 1, to shift for themselves, there remained but seventy-four healthy birds. Since their liberation they seem to have done very well. They have been heard to sing, and some of them have mated, and their nests have been found containing eggs, and later, young. No doubt a number of these will reach maturity.

Will the birds survive the coming winter? Will they migrate in the fall, and thus escape the fate that is sure to overtake them if they remain with us? We trust that they will. In the mean time, however, they should be protected by every means that can be devised. The professional collector is one of the worst enemies that these newly introduced birds have to fear, and it is to be hoped that he will spare these little strangers.

"ONLY A TALLY OF NOSES."

IN 1878 the National American Kennel Club gave birth to its first offspring in the shape of Volume I. of the Stud Book. It is a production that has never reflected especial honor on its parent, being a complication of inaccurate entries. In looking back at the means employed in its creation, we are not surprised at the paucity and defects of its information as a record. It was a long time, some eighteen months, before it was ready for distribution, even after registers, collected from various sources, had been placed in the hands of the compiler. At least it came in a lump, and then had to be taken as a dose. But no sooner had it seen the light than the public was promised Volume II., and entries were solicited from the breeders and owners of dogs for that purpose. Many have responded to the call, but from the outlook at present we are about as far off from having a really accurate and authentic record as ever. For a long time we possessed our soul in patience, awaiting the action of the club that had the matter in charge; but at last, worn-out by having to answer numerous correspondents, that we knew no more of the matter than they did, and fearing that several of them might lay violent hands on themselves at the supposed loss of their twenty-five cent pieces, we applied to headquarters, and at last not in vain, as the following reply from Mr. Dew will show. It reads thus:—

COLUMBIA, TENN., May 24, 1881.

Editor Forest and Stream:

Your favor, making inquiry as to time of closing entries and publishing Volume II of the Stud Book has been received. I regret I cannot answer your questions definitely. The publication depends upon the action of the National Association and as Secretary I only receive and file properly the entries forwarded. I think it high time that some action looking to the closing of entries and publication should be taken, and it will not be amiss for the sporting papers to ventilate the matter. I was much in hopes that some action looking to this end would be the result of the New York called meeting. The correspondence that it necessitates more than doubles the duties of the Secretary. I am in almost daily receipt of letters such as yours and also letters of inquiry as to pedigrees furnished the late Secretary, many of which I am at a loss to answer. Suppose you start the ball.

JOSEPH H. DEW, Secretary N. A. K. Club.

Now there is much of practical and outspoken sense in Mr. Dew's communication, and at the same time he shows clearly where the burden of blame should rest. To strike at the root at once, it is clear to us from correspondence now in our hands that the National American Kennel Club was not in 1877 and 1878, or since, in a financial condition to justify the attempt of the publication of any such important work as an American Kennel Stud Book. A reference to the letters of Mr. L. H. Smith, chairman of the publishing committee, in 1878, justifies us in this opinion, for a delay of months was occasioned in bickering over a very paltry sum. We agree fully with Mr. Dew, it is full time that something should be done, for over a year has elapsed since it was officially announced that the entries had closed. The book was promised early in the summer of last year, then immediately after the November trials, and now the entry is open again for an indefinite period, and every dog in the land may have had his day before the record is in the hands of the printer.

It is a certain thing that the entry should close at once and the book be published immediately, or the scheme should be abandoned and the money returned to the subscribers. But unless the book is accurate it will be of no possible value. It would be greatly to be deplored if the club should have to give up the publication of the record, for only an organization of the kind should be allowed to take the matter in hand. No private enterprise should be considered sufficiently responsible. The National American Kennel Club is unquestionably the best of its kind in the country, but still it is not doing itself justice or commanding the position it should occupy. In its long list of members there are many respectable and wealthy men, but they cannot be expected to pay the expenses of the organization. The club must be put on a sound financial basis; this is absolutely necessary for its success. The dues should be increased, and a fund provided for contingencies. Guarantee funds and passing the bat around are always means to be avoided, and no man should be allowed to pay more or less than his neighbor. If members do not pay their dues they should have no quarter, but be dropped from the roll. As a well filled larder is indispensable to a well-appointed house, so is a balance in bank necessary for the success of any organization. The meeting called at the New York show was for this express object of devising a plan to raise funds to pay off a long-standing indebtedness. Those behind the scenes "were conspicuous by their absence." But Mr. C. H. Raymond was there, and he offered to personally assume the club's indebtedness, but the generous offer was most properly declined. Thus the matter stands.

CAMPING OUTFITS.—Now is the time for camping parties to look over our advertising columns to decide on what they want to take in the woods. Rods, reels, lines, flies, boats, clothing, rubber goods, etc., will be found in profusion until the weight of the outfit becomes a serious question, and then the subject for discussion will be "what can we do without?" No matter what may be decided upon to leave behind the party must eat, and here we would call attention to the canned goods of Thurber & Co. We have long known the firm, and find their goods of first quality and reliable in every respect. They have their vegetables packed on the spot where they are grown, and so secure the highest perfection possible. Sportsmen will do well to follow our advice and ask for Thurber's canned goods.

TO STUDY AMERICAN FISHERY.—Mr. George Eckardt, Jr., son of the proprietor of the great carp ponds at Lublinchen, near Guhen, Germany, arrived by steamer Mosel on Sunday. Mr. Eckardt will remain in America about a year and study our methods of fisheries. He will first go to the stud hatchery of Col. McDonald, in Virginia, then on board the Fish Hawk to see the hatching of Spanish mackerel. In August he will go to the U. S. salmon-breeding ranch on the McCloud River, California, with Mr. Stone, and later will visit the salmon works of Mr. C. G. Atkins, in Maize.

THE LIGHTEST FLY ROD.—The first prize in Class C, for amateurs, at the coming fly-casting tournament is, "One Leonard split bamboo Catskill fly-rod, gold-mounted, with Mills & Sons best rubber click reel, filled with their 'standard' enameled water-proof fly-lic. Donated by Wm. Mills & Sons, 7 Warren street, New York. Value \$60."

We especially mention this prize because we believe it to be the lightest fly-rod yet made. It weighs less than four and three quarter ounces, and is a nicely-balanced little tool. It is ten feet in length, and in expert hands no doubt will do good service.

FOOD AND HEALTH is a bright weekly published in this city and edited by Mrs. Amelia Lewis. It is sensible, able and growing in influence. It is not an organ of the long-haired men and short-haired women disciples of any food craze, but is a practical paper for everyday life.

MESSRS. WILLIAM READ & SONS, of Boston, Mass., inform us that the Scott & Sons gun has been awarded a special gold medal at the Melbourne Exhibition of 1881. As will be seen by their advertisement elsewhere, the Messrs. Read have in their warerooms a full stock of these guns.

HOW THE ICHTHYOPHAGOUS DINED.

THE dinner of this famous club came off on the evening of the 27th of May, as advertised, and was a great success. At 5 p. m. the steamer left the foot of Fulton street and proceeded up the East River to Thirty-third street, where most guests were waiting to be taken on board, and then steamed away through Hell Gate and up to the hotel of Mr. John H. Starin, at Glen Island, which is above Throg's Neck, where the East River becomes Long Island Sound. The hotel is seventeen miles from the starting point and is beautifully situated for a summer resort.

About one hundred persons sat down to the table, which formed three sides of a square. Many more would have been present but for the false impression that the Club is a private affair, when in reality it consists of only the President and three others, who are a committee of arrangements. Invitations are sent out and the "members" are those who choose to attend. The nominal sum charged for tickets hardly covers the wines, all deficiencies being otherwise provided for. The country had been scoured for weeks for things aquatic which are not eaten, through absurd prejudice against their appearance. Now, the Ichthyophagus holds, if it holds anything, that much good food is lost to man through this ridiculous prejudice, which says that certain things "were made to eat" and certain other things "were never meant to be eaten." "How do you know?" asks the Club; "did you ever eat them?" "No," says popular prejudice, "but I don't believe they were made to be eaten." "Why not?" again queries the Club. "Because they don't look fit to eat and nobody eats them," answers prejudice. This is all that prejudice has to say, his grandfather never had them on his table and he is satisfied to feed things to his pigs or let them

traet of meat, but not yet put upon the market. It contains the pure muscle juice, and later in the evening was referred to by Dr. Hammond as having more life-giving and stimulating qualities in it than champagne. The razor clams (*Solen astus*) made a fair bisque, and the wonder is that they are not eaten in this country. They are said to be best when broiled (Jones' Animal Creation). The greysnapper (*Lutjanus castis*) is a fine fish from the Gulf Stream much esteemed in Bermuda, but rare here. The deviled horseshoe crabs, (*Limulus polyphemus*) were lacking in delicacy, their pronounced character might suit some palates better than ours. The drum, like the fillet of beef, was good, but not uncommon; one of the members voted it "too respectable." The rail (*Anglice Ray or Skate*) with black butter was not good. We have eaten skate and called it delicious, this whether the fish or the cooking, seemed coarse and strong. Why the sheephead, the best of salt-water fishes, was served, unless as a concession to the weakness of some of the brethren who had a little prejudice left, we don't know. The shark was very fair, not as coarse nor as strong as might be expected, and the tarry trousers of the African sailor had not flavored it with pitch as was feared. It was noticed that the niere-sticium was freely used with this dish. The squid seemed more of it to our thinking. Menhaden a la Goode was good, but boy. Striped bass, another concession to the weak stomachs.

The hellbenders were most excellent, the only fault being the small pieces consequent upon a limited supply. Scorpions (or sculpins) were also good. Lophins is the genuine name of the monster known as goosefish, fishing frog, angler, monk-fish and great sea-toad. It had a flavor of all the fishes which entered its ponderous jaws never more to return, it seemed like one of those things which one could eat but not

The Sportsman Tourist.

EL CONQUISTADOR.

"Half-way down, while picking our way through an old windfall Ignovius kicked something which rattled. Stooping to see what it was he picked up a jagged, rusty knife and a bleached human skull. Nothing else could we find though we searched carefully. Of what tragedy these were the sole mementos we could only conjecture. Was it red of color, a hunter, warrior, miner or prospector, who had perished miserably in this gloomy thicket? What was the manner of his taking off—by wasting disease, by famine, by ravaging wild beasts or by his brother man? We could not tell. Broke's skull at all, and not, perhaps, a woman's?—FOREST AND STREAM, May 19.

"Two hunters toiling up a cliff
Of the blue Colorado range,
Pained for a moment to survey
The landscape, wild and strange;
Far off, chain of mountains dim
Along the horizon crest,
While groves and valleys soft below
In tranquil beauty slept.
Near by El Conquistador rose,
Its steep sides dark with tufted woods,
Its peaks wind-swept and lightning-scour'd,
All around and near with forests clad,
And here a little mountain vale
Its natural garden fair outspread:
Fair with its grass, and blue of bloom,
And the bright, blue heavens overhead.

And here the careless foot uprind'd
A skull, a jagged, rusty knife,
Were these the sole mementos left
Of some foul, murderous slaine—
Sole relics of a tragedy
That stained these grasses green:
These moldering bones that here have lain
For years, unknown, unseen?
Was it the red man or the white,
Hunter or miner, Indian brave,
That perished in this lonely spot,
Dead, and defamed a grave?

Oh, happy, 'twas some tender maid,
Some Indian swain, some emigrant,
Sailing across Atlantic seas,
To die in this sequester'd haunt,
But who the mystery would solve,
The story of these bones unfold?
Ah, never! 'till the last Great Day,
When all our's secrets shall be told.

Ah, many who seek this Western ether
Were outlived men from foreign shores;
Men steep'd to the very lips in crime
With heart of iron and hand of steel.
They blast the rocks, they dig the mines,
They sift the sands, 'till nuggets shine,
And even in savage midnight fray
Are prompt with the bloody blade to slay.
Shelter Island, May 21. ISAAC MORELAND

NOTES OF AN ANGLER IN THE NORTH.

BY FAIRCHILD, JR.—FIRST PAPER.

AS Canada is to be the anglers' and sportsmen's paradise in the coming years, I shall endeavor, in the following series of short sketches, to describe some of the most marked features of that portion of the Dominion embraced between Quebec on the north shore of the St. Lawrence River and Lake St. John and the Saguenay River, the discharge of this lake, together with some slight account of the people dwelling upon the outskirts of that mighty wilderness, and what facts in the natural history and fishing of the country may appear to me to be new or of interest to the general reader.

I shall avoid the continuous narrative, and thereby some of the dull, trite and stupid incidents of the daily journal, as I am quite convinced that the hour at which the writer may be writing, or the hour at which you may be reading, what he has had for breakfast, have very little in crest to any one but himself.

SOME FACTS ABOUT THE COUNTRY.

Canada is destined before many years have passed to enjoy a supremacy as a resort for those enthusiastic and adventurous anglers and sportsmen who, no longer content with the famous spots of the East, and the West having passed into the hands of the hardy and intrepid sportsmen of Canada. Such they will remain for generations to come; for the long arctic winter and immense snowfall, together with the unproductiveness of the soil, unfit it for settlement. So inhospitable is the climate that the cultivated lands on the north shore of the St. Lawrence are but a mere fringe. Quebec, the venerable old city, still stands within the shadows of the forests. From the summit of the storm-beaten cape which surmounts the town, the eye roves over a well cultivated valley, dotted with smiling homesteads, and rests upon a range of mountains, whose blue summits blend into the azure of the sky. These mountains—the Laurentides—extend to the Labrador coast, and are the barriers which agricultural development will never surmount. To the hardy and intrepid sportsman they are but the sentinels that guard his domain from the ruthless and rapid destruction that is overtaking some of our fairer but too accessible regions.

This boundless wilderness is intersected with a network of lakes and rapid shallow rivers, all of which absolutely teem with trout, and many of the latter are the salmon. The vast forests are the ranging grounds of the brown and black-footed carbon—the renderer of the western hemisphere—while the mink, otter, beaver, lynx, fisher and bear are also found in abundance. The widely scattered and solitary posts of the Hudson Bay company are still to be seen beside the lonely lakes of the interior. The nearest post to Quebec is at Lake St. John, one hundred and twenty-five miles distant. Since the completion of a government road to the lake, which is the head of the Saguenay River, a section of the country has been opened to the angler that is prolific in fine fishing, but strict caution necessitates the assertion that the latter must be musquito and fly-proof, as both insects appear to flourish amidst the dank, dark forests of the North. The thin-skinned man's life would be rendered utterly miserable from the attacks of these little pests.

Winter is the season of the year most affected by the Canadian sportsmen for their trips into the interior to hunt the caribou and moose, and for fishing. Inured to the cold from infancy, they defy its utmost severity, and find themselves as happy sitting before their little camp-fire in a hole in the snow, while the storm shrieks wildly through the shaggy pines above them, as the thermometer marks 50 deg. below zero, as in their comfortable homes. Upon their broad snow shoes they traverse the wilderness to its remotest parts.

THE INHABITANTS.

Upon the outskirts of this wilderness dwell a singular people, a race long settled upon the land they till, but who,

THE ICHTHYOPHAGIST'S DREAM.

he wasted for this slight reason, if it is a reason. The motto of the Club is: "He who eats a hog, or any portion of one, has no right to despise the flesh of any creature that the Creator has made."

No shark was to be obtained, but, by one of those fortunate chances, a fisherman from Cape Cod came into Fulton Market with a "man-eater," which he brought in as a curiosity. Blackford bought it and, notwithstanding its stomach contained the left leg of a colored boy, with a boot and a piece of his tarry trousers, the Club considered it a prize and was happy. The hellbenders were obtained through the kindness of Dr. Beechley, of Meyersdale, Penn., who personally interviewed the fishermen and secured them. Their absence would have disappointed Prof. Cope, who came from Philadelphia on purpose to eat the menoponia which he has so often dissected and found to contain wholesome-looking muscle, but which it never occurred to him to eat until he saw that the Ichthyophagi proposed to serve it.

The company sat down at 7 p. m. At each plate was a card with a nightmare in shape of a sleeping individual, who, having dined on the hellbender, was visited by them in his sleep. The reverse contained the following:—

- | | | |
|-------------------------------|-----------------------------|---|
| Little neck clams. | MENU. | Sauterne. |
| Consommé of Mossbunker. | Potages. | Bisque of Razor Clams. |
| Amontillado. | Hors d'œuvre. | Boudins of grey-snapper à la Blackford. |
| Horseshoe crabs à la diable. | Sardines. | Anchovies. |
| Drum à la Cope. | Relishes. | Filet de boeuf à la Richelieu. |
| Pommes duchesse. | St. Emilion. | |
| Entrees. | | |
| Rate à beurre noir. | Sheepshead à la Normandieu. | |
| Saute of shark—Chinese style. | Rapid à la Starin. | |
| Pain de menhaden à la Goode. | Asperges. | Niersteiner. |
| Sorbet des Princes. | | |
| Noté. | | |
| Striped bass à la Mather. | Pomery. | |
| Boeur. | | |
| Hell benders. | Sea robins. | Angie worms. |
| Lophins à la Baird. | Pieces Froides. | Sturgeon à la Ichthyophage. |
| | Salade. | |
| | Seaweed. | |
| | Dessert. | |
| Glace nautique. | Petits fours. | Fruits. |
| Fromages. | Cafe. | Liquere. |

The first new thing was the consommé of mossbunker (menhaden). This was made from "Goode's Extract of Fish," an article made on the same principal as Lichig's ex-

"hanker after." The angle worms and sea-weed salad did not appear because, being easy to obtain, they were left to the last and not attended to in time. The "angle worms" were not to be the earth worms, *Lumbricus terrestris*, but the sand worm found on the sea coast at low tide, called lob-worm, or bug-worm, (*Arenicola piscatorum*). They are said to be good when first placed in warm water to make them eject the sand and then dropped into hot fat like dough-nuts.

The President, Mr. John Ford, arose with the coming of the sorbet and congratulated the club on the improvement in the *menum* from last year, and said that in time it might be possible to get up a dinner of articles which no human being had tasted of. He then stated that the club contained a poet, and called on him to recite his verses, and Mr. Fred Mather read his alleged poetry, "When the Ichthyophagous Dines," from FOREST AND STREAM of May 12th. Mr. George Weremarth, the accomplished tenor of Plymouth Church, sang in Italian, German and English, to a piano accompaniment by Mr. Benedict. Hon. Robert B. Roosevelt was then called upon and maintained his character of one of the best of after-dinner speakers. He referred to the fact that these dinners were having an effect upon the members; Mr. Phillips had increased in weight to 250 pounds, while the speaker equaled to 212 pounds, Mr. Blackford weighed 200, and the President of the club had increased his waist measure. Professor Cope being called on gave then a little scientific nomenclature which nearly broke his inferior maxillary. Captain J. H. Mortimer told some good stories, the military band from David's Island serenaded the club, and at 11:30 they rose and went to the boat. On the way home songs were sung and nothing marred the harmony of one of the most famous dinners on record which language cannot describe and only those who were there can thoroughly appreciate.

—Mr. William E. Dorwin, who has been known for a long time as the capable and efficient superintendent of the Brighton Beach Railroad, has retired from that office to take charge of the extension of the Delaware, Lackawanna and Western Railroad. Being a railroad man, Mr. Dorwin is, perforce, an expert angler. He recently made a vacation trip to the Vermont hills, whence he returned laden with the finny trophies of his detours.

SEVENTY-FIVE YEARS AGO.—In the *Evening Post* for June 20, 1806, the New York Sporting Club announces the expulsion of two members for shooting woodcock out of season.

amidst the progress of the last two centuries, have successfully resisted its encroachments, and to-day exhibit the strange anomaly of French customs, manners and habits of the 17th century preserved to the 19th in the new world, under a foreign government. A happier, more contented peasantry do not exist, and their virtues are manifold. They are a social, loving people, and delight to live within sound of the parish church bell. Very devout, they have an immense number of *jeûs* during which all labor is suspended to enable them to attend the mass and the subsequent festivities. Sunday is pre-eminently the happiest day of the week. If in summer, no sooner is mass concluded than the whole parish adjourns to the greensward upon the river bank and partake of their frugal meal amid much railway and laughter, and then the afternoon is given up to dancing and singing, courting and canoeing, and other innocuous amusements.

They labor no harder than is necessary to provide for their simple wants. They are a self-contented people, and extreme indigence is rare among them. The wives and daughters spin and weave their own linen and woolen cloth wherewith they clothe themselves; their small farms yield sufficient for the family use; the maple bush the sugar and syrup; the nearest stream or lake abundance of luscious trout for fast days; the *sapin* swamp its quota of snared hares and partridges. There is little to sell, still less to purchase. They are exceedingly polite in their intercourse with each other and toward strangers; even the little children bow and courtesy on the road when passing you. They are hospitable in the extreme, and anticipate the every wish of the traveler who seeks their door. Above all they are devoted to their native soil, the *beau Canada*. When the long arctic winter spreads o'er the land, and all labor is suspended, the people abandon themselves to the delights of that social intercourse of which they are so fond. Day and night the rooms resound with the lively tinkling of sleigh bells and the merry laugh and song, as gay parties of young and old wend their way to and from each other's houses.

"Thus dwell together in love these simple Ardenian farmers; Dwell in the love of God and of man. Alike were they free from; That reigns with the tyrant, and evey, the vice of republics. Wealth locks their doors, and the heart of the owners; But their dwellings were open, and the hearts of the owners; There the richest was poor, and the poorest lived in abundance."

Happy the angler who, in his short respite from the harassing cares of the busy world, finds his way among such pleasant pastures green.

NOTICES BY THE WAY.

The elevation of the banks of a river at the foot of a rapid mark the height of that rapid. In the estuaries of rivers and the head of rapid islands are always formed. Deep holes in rivers instead of filling up from the deposits brought down from above by the floods gradually grow deeper. To effect this there must be a strong under-current, during heavy freshets, or whirlpools with a set toward the lower end of the pool. In no other way could they purge themselves. Among ledges of limestone and blue clay in river bottoms large round holes are frequently found. These holes are formed by the water cutting its way through the current, in which whirls them around and around precisely as the burr stones of a mill revolve.

Snow is dissolved by thawing to one-fourth part of its bulk, and the process of melting it is so slow and toilsome that it is of the utmost importance in winter to find water near camp. It is always advisable, therefore, to camp beside a lake or a rapid stream. From the former enough water can be collected from the surface of the ice by scraping away the snow. The weight of the latter depresses the ice and causes the water to rise over it, which it also prevents from freezing. All frozen waters must have a breathing place, therefore air-holes are always to be found, or rather avoided, in lakes and rivers. They are necessary, too, for the life of the fish.

In summer thunder-storms are of frequent occurrence, and rage with great violence for a short time. They spring out of what would be a fine morning of bright, unclouded sky, but they as quickly disappear, and all the time smiles again. Wind storms are not uncommon that lay waste extensive tracts of country, leveling the mighty forest before them like so many reeds. Such tracks are termed windfalls by the settlers, and are executed by every one who has occasion to cross them.

Forest Indians always walk intod for two very good reasons. Were they to walk with the toes turned out, they would be constantly tripping amidst the loose roots and the brush, and secondly, the habit of wearing snowshoes enforces the intoc step. It is an imperative law of snowshoeing, to red and white alike, to walk with toes well turned in; an at, tempted violation of this unwritten code is swiftly followed by a severe punishment—a "header" into four or five feet of snow, from which it is no easy matter to extricate one's self.

Cattle on a bush farm, where they are much troubled with flies and mosquitoes, soon lose all dread of a fire, and often seek its protection as against their little winged tormentors. Often large snudge fires are burned for them in their pastures. I have often seen them rush headlong into it to obtain relief from the venomous attacks of the insects.

Large forest trees much exposed are often split by the extreme action of the frost, which expands their outer fires and they are then broken through the center, accompanied by a loud report like the explosion of a small cannon, and as startling in the extreme in the quiet stillness of night. Rocks are sometimes similarly acted upon where there are seams into which the water percolates and then freezes.

Wherever extensive fires have burned off the coniferous forests an entirely different growth takes place. Birches, poplars, wild cherry, etc., spring at once into luxuriant growth for a distance of several miles, which it is difficult to force a way. Many bush fires are occasioned by the lightning striking some old dry *cheek*.

Trout are not often captured by the fish hawks, for they are about as quick as their feathered foe, and at the first flash they dart away. It is the heavy sluggish fish, such as the suckers, which lie motionless and asleep in the warm, shallow waters, that fall a prey to the keen-eyed hawk. As the capture of such vile fishes is no small gain to a stream, the fish hawks must be considered a benefactor to the race of anglers. Suckers consume an immense amount of trout spawn.

People always smile incredulously when the angler relates his ill luck in losing his largest fish, but it is nevertheless the case that the very large fish more often escape than find their way into the angler's creel. I have captured some old staggers from the numerous species of fish, the mouth showed their frequent acquaintance with the angler's fly. Rivers upon which much logging is carried on, while they

may abound with trout, afford poor fly fishing. The fish are so often disturbed by the drifting logs that they seek the still, deep waters, and feed near the bottom. The Jacques Cartier, one of the most beautiful rivers in Lower Canada, and a famous one for large fish, has been almost ruined for fly fishing the past few years from this cause.

Trout, when they attain a very large growth, become almost entirely cannibalistic. The better to conceal their nefarious practices they seek the dark waters of some hole in the stream, sailing forth at night upon their smaller and more helpless brethren. Early in the spring they seek the rapids to cleanse themselves from the parasites that infest them, and they will then rise to the fly, but very rarely at other times.

Feeding and the nature of the water are the two principal causes of the diversity in the coloring of trout, and their forms. In very rapid, clear streams the trout are very brightly marked, and are like and like. In the quiet waters of the lakes the lazy life and abundant food gives them a roundness of form and duller markings.

Large trout are usually found in couples. Can it be that as they advance in life they permanently mate? Is it simply a platonic affection, the desire for the congenial companionship, the mutual aid and sympathy extended to each other? Who knows!

[TO BE CONTINUED.]

A MICHIGAN FISHING TRIP.

I HAVE just received the neat pamphlet issued by the Grand Rapids and Indiana Railway Company, and while looking through its pages at the illustrations and the general information therein contained, occasionally a headline would attract my attention, calling to mind a beautiful creek, lake, camping-place, town or hotel, and I found myself in a very short time with the book on my desk and thinking over the delightful trip one may take from Traverse City to Petoskey. I will try and sketch a trip that, to me, was one of the most enjoyable I have ever taken, and one you will not be satisfied with going over once, but will wait with anxious anticipation for the time to come when you can again traverse the *beau pays* of the north-west.

The old reliable Grand Rapids and Indiana road, with its courteous attaches, will land you safely at Traverse City. Here you will find a neat, clean, cool little town, facing the west arm of Grand Traverse Bay, with as good a hostelry as one would wish to find—the Park Place Hotel. Stop here a day and rest, then take the early morning boat for Elk Rapids, thirty-three miles distant via Long or West Bay straits, touching at Old Mission, arriving at Elk Rapids about noon, at which point you will change boats for the inland route.

Take the spring-wagon, which meets the boat, and you will be whirled along the long dock—piled with iron ore high on either side—down onto a short stretch of level road, around a mill over a stream nearly above a large fish chute, and in about five minutes brought up whirling at the Lake View House, a clean, homelike little inn, where you will be treated well by a very gentlemanly landlord, and you will have a beautiful view of Traverse Bay, and to the right and left, attractions enough to interest you until time is called to take the little steamer for the Lewis House Landing at the head of Torch Lake. As you leave Elk Rapids you pass neat white houses, with their beautiful green lawns in contrast, lumber mills, a very large blast furnace, etc. Leaving these behind our little steamer puffs away taking us along at a lively enough, Elk River—two and a half miles long, and considerably wider than the usual Michigan River—into Elk River, nine miles long, a very beautiful sheet of water and clear as crystal. Crossing this we again go through one of those narrow, crooked, little streams for a short distance into Round Lake, three miles long, thence through Torch River, four miles long—a purely typical northern Michigan River—into Torch Lake eighteen miles long.

The steamer makes two stops on the trip through this beautiful lake country, at the Lewis House Landing early in the evening, where you stay all night. Mr. Lewis, the proprietor, is as genial and whole-souled a landlord as you would wish to meet. Should it be moonlight walk over a narrow strip of land about one fourth of a mile to the beach on Grand Traverse Bay, where you will find a beautiful, broad, sandy beach, a walk here gives a refreshing, rejuvenating feeling and then back to the hotel for a good night's sleep. After an early dinner the next day Mr. Lewis will take your baggage in his "street car" over to the lay shore where you again take passage on the steamer for Petoskey, on the way making a stop at a small (saw mill) town, and then into Charlevoix, a very pleasant and at the same time peculiar looking place, situated back a short distance from the lake, on both sides of a small stream, on quite a little bluff overlooking, to the east, a short distance, Pine Lake, and to the west, Lake Michigan. By evening you land at Petoskey, where you take up quarters at either of the comfortable hotels there—the Occidental or Cushman, both good. Here you will want to stop a day or more, as it is quite a bee hive, everybody you will see in good humor, and all evidently looking for something. This place is at present the terminus of the G. R. and I. R., and should you desire any information not obtainable elsewhere call on Mr. Quaintance, the agent of the company at this point, whose gentlemanly and accommodating ways will be a pleasant recollection. Beyond this point a stroll down the beautiful pebbly beach will be in order and amply repay for the time and trouble taken, and you will here, with little trouble, find many handsome stones, and many very fine agates are here picked up. The same can be taken to one of the number of lapidaries there who will polish or make from it a memento of which you will long cherish as a souvenir, a glance at which, at any time, will bring back many pleasant recollections. Beyond this point you will have the beautiful inland route through to Cheboygan, which all should take, and which I will not mention here further as I have taken up space in your columns heretofore with details of this trip.

I have made this sketch a flying one. You can well lengthen it to good advantage by making a longer stay at Traverse City, Elk Rapids or Lewis House. There is more sport and more to be seen here at Elk Rapids, however, than at the other mentioned points.

Excellent fishing may be had at any place you may choose to stop. At Traverse City, deep water fishing, and near the town trout, bass, etc. At Elk Rapids shoulder your rod at the hotel, and you can be back again in one hour with quite a respectable string, and undorably the same at the head of Torch Lake. At Elk Rapids I know you can, for I have tried it. Go, take this trip, and be convinced.

Columbus, O.

FRANK N. BEER.

ON THE SAWKATAWABET.

POST-ET. MICH.

IN season, it is no exaggeration to say that the forests of the south shore of Lake Superior are a "fairly alive" with game, consisting chiefly of pigeons in July and August, when the huckleberry is ripe, partridge and that variety commonly called spruce partridge, in September and October, and a fall and winter innumerable hare and red deer. Nearly every mill, rimlet and river has countless numbers of speckled trout, and the flesh of the same is invariably hard and compact, owing to the frigorific temperature of the waters in which they live and sport. In places where wild rice or celery grows, many varieties of water fowl may be seen, and owing, in a measure, to the fact that they are rarely disturbed, are comparatively quiet tame and easily approached.

Not long since Friend B— and myself decided to put in a week or two, fishing and hunting in the vicinity of the Sawkatakawab River. This stream rises in the south range of Keweenaw county, the extreme northern county of the Upper Peninsula, flows in a southerly direction and empties into Keweenaw Bay. It drains about seventy-five square miles of territory, and in consequence of its being the receptacle of several small creeks increases to quite a volume ere it dashes, piece-meal, over the ledge of rocks at its mouth. It is a most beautiful stream, and its waters are pure, translucent, except in the season of freshets, when it is a darkish red, and with its driftwood and other debris is anything but attractive to the eye.

In the early days of the month of September, with our camp outfit, with dogs, guns and ammunition, and with old Joe, our cook, guide and woodsman, a veritable Pathfinder, we took our places in a light spring-wagon and were transported over a well-kept road, through beautiful forests and romantic dells, past low farms resting in the shadows, and over hills from whose summits ever and anon were afforded us charming vistas of land and water for a distance of about ten miles to the head of Lac La Belle. Here we procured a Mackinaw boat, and placing our baggage therein, were soon afloat, headed to the mouth of the canal which connects this lake with Keweenaw Bay. Meeting, as soon as we landed, our old friend John Mayno, a half-breed who, with his family, were occupying the Lewis House, we engaged comfortable quarters for the night, and he also advised John and an Indian named Frank for our voyage to the river. We also at this point made preparations for an early start in the morning of the coming day. Inasmuch as Frank was the proud owner of a water craft which he guaranteed would outrun anything on the lakes, we concluded to follow his advice, to wit, discard the Mackinaw which brought us down and proceed on our journey in his yacht. Everything having been completed for the morrow's sail, it became incumbent upon us to wade away in the most agreeable manner possible the few hours intervening before bed-time. This we did in rowing around the foot of the lake near the head of the canal, at the suggestion of a fisherman, who assured us that we would probably have the pleasure of killing a beaver or two.

The conditions were indeed favorable to success, as the night was still and the water glassy and smooth. As we approached a bayou we expected, from what we had heard of them numerically, to see one or more of the quadrupeds at no great distance from us, but for a time, however, we were doomed to disappointment. Carefully and patiently we paddled wherever we thought there was a prospect of obtaining even a transitory view of the game we were after, and it was not until some time had elapsed that we heard a splash, which at a distance of six or seven miles could be seen in the night, were circling away from the spot which our quarry had dove to the bottom. In a moment or two another plunge was heard, and the ripples indicated the place where this one had taken his immersion. It was not long before plunge after plunge and splash after splash kept up quite a little tempest, but we were unable to get a shot at any of them, although they were apparently in close proximity to us. They kept about the margin of the bayou, and on the edge of the rushes, where the tall trees would cast their shadows and render them unobservable to us while they rippled the water, when it was too late for execution. We saw that it was necessary for us to change our base of operations, which we accordingly did, and it was not long after we had taken a position as near to the shore as practicable before an opportunity presented itself. Simultaneously B. in the stern of the canoe and I in the bow discharged our weapons at two handsome beaver, whose heads were distinctly visible some few yards above the surface. We soon discovered that B. had fired with fatal effect; and, elated at his success, he lifted his beaver into the boat. My shot, however, was a failure, as not even a piece of fur could be seen to evince me with the reflection that I had at least not missed entirely. It was now useless to attempt to kill any more of this species of game, as our guide, who knew well the habits of this animal, informed us that they were easily frightened, and would keep concealed or move away to safe distances.

In the morning we were up bright and early, made a hasty toilet, ate a light breakfast, and got everything into the yacht preparatory to starting. During the early morning a stiff breeze came up from the east, and by the time we were ready to pull out there was quite a commotion on the bosom of Eto-de-gris. However, our Indians were determined to brave the elements, and made bold to out for Point Isabella, three miles distant. Off this point the sea was running quite high, but inasmuch as the wind was quivering all and our outfit was riding the waves as easily and gracefully as a duck, we got along very nicely on our course to the mouth of the river. The direction we took, which at times lay near a bold headland and again at some considerable distance from the shore as we were passing a bay, presented to the eye an ever-changing and most beautiful scene. The agitated sea on the one side and the dark, impenetrable woods on the other, mingling at the background in a high ridge with points Houghton and Gratiot as distinctive features, displayed nature in her wildest, wildest grandeur. The shore, in places, was rocky, and discovered us oaves in which the hardy mariner could find a haven of refuge.

Late in the afternoon we arrived at our destination. As we were sailing into the river we observed a flock of thirty or more ducks of the red-head species, directly ahead of us. Becoming alarmed, they arose and rose in a line for the surface, which brought them over us. For a few minutes we had sport such as the most enthusiastic duck hunter might envy, and when it ceased we were, as our trophy, ten fat, large ducks.

Selecting a spot for our camp within easy access of water, we bade adieu to John and Frank, who were to return to their homes and were desirous of taking advantage of the

LEAVES FROM THE NOTE BOOK OF A SCHOOL GIRL.

May 13. The fly-catchers seem to be made of springs. Their motions are the most angular of any of the feathered...

The chimney-swallows have homes rather difficult to reach, though it may not seem so. When they wish to descend the chimney, they circle round and round till they think they are directly over the opening, then, lifting their wings till they are nearly vertical, flutter down. They sometimes miss the mark, and dart off to try again.

The summer yellow-bird catches insects with more grace than the fly-catchers. Every motion of the yellow-bird is a curve. It takes its time, yet it is always sure of the mark.

May 14. Saw a robin fly some distance to catch an insect in the air.

May 16. The wren is a perfect model among birds of the passionate lover. He is in perfect ecstasies over his mate. His song is short because he is so eager that he knows not what to say, and the notes nearly trip one another up, they come so fast. While he is singing his wings quiver with excitement.

May 17. In flight the bobolinks hold their wings down, not horizontal or up as with most other birds. They sing most commonly during flight, and bring their song to a close just as they reach the ground. If they light on a post or a tree, they sing in a subdued tone.

The crows do not seem to be very much afraid of the poles and strings put around a corn-field. Two were sitting on a tree near a field, deliberating. "Caw, caw, caw, caw," says one. "Caw, caw, caw," replies the other. Then they slowly flap over and settle down in the midst of the poles and strings. Warning!—Farmers, always put string around your corn-fields. It is a first-rate way for fly-catchers to alight on.

May 19. Saw a chestnut-sided warbler in our apple-tree. It caught insects like a fly-catcher.

The nut-hatch seems a very voracious little bird. He runs around the trunk, his head often down than up, and squirts under the bark with a most quizzical expression. There almost seems to be a twinkle in his eye as he pulls out the sticky bug.

May 23. The woodpecker never runs down a tree-trunk. When he wishes to be lower down he flies or drops down. Authority—Prof. Scott, of Westfield. The nut-hatch goes oftener down than up.

Very many birds accompany their short notes, especially those of excitement by some motion of the body. The robin jerks out his chirp of excitement with his tail. It seems as if the chattering of the swallows was made by the wings, as the swift fluttering of the wings always comes with the twittering.

May 18. The cuckoo is a shy bird, keeping itself hidden in the foliage, turning its head from side to side on the look-out for a dnger.

Above the trees a crow is seen pursuing its heavy flight, with laborious flapping wings. On a sudden the enemy, in the form of a king-bird, or perhaps two of them, is upon him. They dart down upon him with all their force, fly up in a short circuit, peck, flick and come down again, and their swift movements contrasting with the crow's steady flapping. Perhaps the crow is frightened, but his motions do not show it, though he does seem to be getting out of the way as fast as is consistent with the dignity of his character. When his pursuers have chased the enemy from their domains, they leave him to the tender mercies of the next king-bird who may happen to spy him, and return for more crows, hawks or insects, just which comes luckiest.

A B. W. was troubled by a colony of swallows which took possession of his large, old-fashioned chimney, one spring, sending the smoke down and causing great inconvenience. One day, while the birds were all away, he went up and put a wire network across the opening of the chimney. About a dozen the birds returned. Imagine their feelings when they discover their doors barred against them! They rush wildly back and forth, they dash against the branches of the chimney after dark. At last they are obliged, in despair, to seek other homes. Poor swallows!

Ha-fid, Mass.

MARGARET MILLER.

RATTLESNAKES CLIMBING TREES—New Orleans, May 25.—Editor Forest and Stream: I am writing to the question, Do rattlesnakes ever climb trees. I will relate what I once saw. In the spring of 1869, about the middle of April, I was behind the plantation hunting wildcats. The dogs had started one, and were leading him a lively race, and I was sitting on my horse listening to the music of the chase, when my attention was drawn to some object up a large water oak that was standing in an opening by itself, and leaning at an angle of about 15 degrees. There was water all around the tree, as there had been in the morning a heavy rain, but the water had been high the water did not remain long after the rain stopped, but went to the swamp, leaving the land dry. The object that I saw was about thirty feet from the ground, and lying on a limb about ten feet from the trunk of the tree that made out at about right angles, and forked where the object lay.

I rode up to the tree but could not make out what it was, and having no time to lose I sent a ball up, when I was, came one of those large diamond rattlesnakes (Crotalus adamanteus) about six feet long.

On a former occasion I shot one out of the top of a tree that had fallen down, having some large limbs lying about ten feet from the ground.

Those are the only two that I ever saw on trees, but I have seen thousands on rocks that looked as hard to climb as trees.—T. P. LOVINOY.

A WELL-MARKED TURTLE.—A box turtle was found in a field at Baiting Hollow, Long Island, a few days since in the following marked on its bottom shell—"B. F. Y., 1836; B. F. Y., 1841; B. F. Y., 1851." B. F. Youngs, of Riverhead, marked the turtle first forty-five years ago, and also the second and third times. After marking it for the fourth time "B. F. Y., 1881," he let it go again.

The above item from the Sun reminds us of a snapper once found by a friend of ours, which was probably the oldest turtle ever found. It was marked, "In the year of our Lord 1"

BIRDS THAT EAT FISH.

M. R. BOWLER SHARPE, the eminent British ornithologist, recently delivered, under the auspices of the National Fisheries Exhibition, a most interesting lecture on fish-eating birds. A novel and attractive feature of the discourse was the exhibition, by means of an oxy-hydrogen, of a number of excellent paintings of fish-eating birds. Mr. Sharpe's lecture is reported in the Live Stock Journal, and we give below an epitome of it.

Mr. Sharpe said, fish-eating birds were chiefly swimming birds—the grebe, grebe, etc., but there were many birds of prey that were distinctly fish-eating birds. The white-tailed eagle was very fond of fish, though it did not catch them for itself. It was renowned for the way in which it followed the osprey or sea-eating eagle, and robbed it of its prey. While the golden eagle was feathered to its toes, the tarsus of the white-tailed eagle was bare. The majority of birds of prey had a thin or thigh-bone only just a little longer than the tarsus, but in the osprey the thigh was twice as long as the tarsus. While some birds had three toes in front and one behind, others two in front and two behind, the osprey had an outer or reversible toe, which he had the power of turning backwards or forwards, so that in catching hold of a fish his toes were at right angles to each other, which gave him a circular grasp, a great help to him in seizing such slippery prey in fish. But the osprey was now pretty nearly extinct in England. Owls were fish-eating birds. Water-hen once saw a barn owl hit its foot for a fish. In Africa there were some regular fish-eating owls which had the bare tarsus, so that they could wet their feet without fear of catching cold from damp feathers. Coming to the perching birds, there was a certain group which was separated from them by the osteological structure of the sternum or breast bone; and amongst these was the kingfisher. This bird, which would soon make a good meal of the contents of an open trout trap, did not do much damage in the river, where he caught small minnows, etc. People would be sorry to miss the kingfisher from our rivers; and, luckily, his habits were so shy that he was able to take care of himself. Lizards had much to answer for in the destruction of the kingfisher. When there was a demand for his plumage for ladies' hats, there was an immense slaughter of these birds on the Thames. Foreign kingfishers, though of the same size and form, were abundant on the banks of rivers, and had only three toes instead of four. The form of the kingfisher was such as to adapt him exactly to catch fish. He had no long tail to retard his motion when he plunged into the water; but he had a long bill with which to cleave the water, while his short tail served as a rudder. Then the robin had been seen to eat fish—a bird one would not have expected to take such food. Among the waders, or long-legged birds, the greatest culprit as a fish-eater was the heron. Though an ardent fisher, he was not a fish-eater, but he did the damage attributed to him, as he lived principally on eels. He was not, however, averse to frogs and small animals; and the lecturer told the story of a heron in captivity which seized a rat that had been stealing his fish, held him under water in his bill, and then swallowed him at one gulp. He also mentioned an instance of an eel strangling a heron, an illustration of which is shown in the exhibition. The kingfisher was not a fish-eater. Like the heron it ate small fish and frogs; but unlike the heron it was solitary, not sociable in its habits. The spoonbill, which ate small fish and aquatic insects, used to be found in Norfolk; and some of the large family of storks, much protected in Germany, were formerly residents in England. Cranes did not do much damage to fish. The knot was an interesting swimming bird, from the mystery which surrounded its breeding haunts; but it was a great deal to be feared, like that which had reduced the number of unknown haunts of European birds during the last few years from six to one. Another bird which was maligned because it was said to devour small fish and ova was the moorhen; but he had never found any evidence of its being a fish-eater. The same might be said of its cousin, the coot. These birds should be protected for their extremely tame disposition. Moorhens could be tamed so as to go about a house as a pet animal. Like the heron it ate small fish and frogs, Mr. Sharpe said that there was no doubt that ducks at the mouth of rivers ate a good number of fish; but the golden eyed duck was under the accusation of being an absolute fish-eater. It would be difficult to defend the goose and from the like accusation, as he probably lived on scarcely anything else but fish.

ABOUT LOONS.—Pocasset, Mass., May 12.—In your issue of April 28, "B. D. R." writes, "I was of West Milford, W. Pa., asks for some information about loons. His bird was not very large. The last one that I shot is before me now; it measures thirty-six and one-half inches in length and four feet five inches in extent. Weighs nine pounds, and is light for the dimensions. Here this is not called a large one. I am told that the one was killed at Calumet Beach which weighed twenty pounds." "Beach" weight, I guess, with the shooter's arms for balances. I once knew one to weigh by scales sixteen pounds; that was a white one—a female; they are said to grow to the largest size. I have seen them in Chesapeake Bay, where they are often caught in the fish ponds. Both species—C. tylosus glacialis and C. septentrionalis are found at Buzzards Bay. The last is locally known as "Pegging owl," "Pepperlin" or "Tuckermant." It is much smaller than the former species, and weighs about four pounds. It is spotted like its larger brother on the back. The male has a slate or drab-colored throat, with a red spot on the throat, whence its name—red-throated diver. The female is like the larger white loon in color.

Loons have been known to breed in Plymouth, Mass. A few years ago Mr. Warren, of Duxbury, had a nest on the shore of "Oliver's Neck." He was wading along the shore fishing for pickerel, and saw the loon on her nest. She fluttered off into the pond at his approach; they were two white eggs in the nest. Can any one tell if they were two or two? "Oliver's Neck" is a point in White Island pond, and is owned by the White Island Club. Some of the members found the nest soon after, and took the eggs, my informant said. I am also told that they have bred on the island on Half-way Pond. I have seen loons there in the summer, but could not find any nest. In a former article I spoke of the loon as a tough bird—how tough you may judge by the following, which I had verbatim from the shooter. He had been on Hog Island Point and shot at a loon, which, he said, was thirty yards high; the bird fell at an angle of forty-five degrees, struck on a big flat rock and rebounded off into the water. He went to the spot, looked about him, then dove and went his way. One would have thought he had been—though broken by a rock—might disjoin the framework of

any bird. "B. D. R.'s" loon was about the average size; eight such loons slung on a pole, and the ends of the pole on the shoulders of a brother shooter and the writer, made a heavy load to tote up from the shore. A live loon can pick hard, and a dead one is hard to pick, nevertheless some of the softest beds in these parts have loon's feathers in them.

MEAGRS.—The information given by our correspondent relative to the breeding of the loon in Massachusetts is interesting, but are the eggs of either species of loon mentioned whiter? We think not.

THE IBERX IN THE ALPS.—The Iberx, it would appear, promises to be again naturalized on the Alps. A herd which was turned out on the Grisons are reported to have survived the Winter without damage, and to be making themselves at home in the vicinity of the glaciers. This cannot fail to be a source of gratification to the thousands who make Switzerland their Autumn playground. For some time past the Alps were each year getting barer and barer of life. The chamois had almost disappeared from some of the more accessible parts, and even the marmot could scarcely have long survived the edelweiss, which the Government of the different Cantons have also put under the protection of the law. The Iberx, which is a species of the family of the bouquetin, is a species of goat which shares with the chamois the upper reaches of the mountains. But it climbs even higher than that animal, and can rarely be seen far below the limits of perpetual snow. In Gernua Switzerland, where it is known as the scioibock, the Iberx was at one time comparatively common. But the persecution of tourists and the multiplication of cheap rifles have all but exterminated it on the higher alps, and of late years it could rarely be seen except on those of Valais and Piedmont, where, thanks to the enlightened efforts of the late King Victor Emmanuel, it was carefully protected.—London Telegraph.

A HINT FOR THE SMITHSONIAN.—We are permitted to publish the following from a letter of a well-known Canadian ornithologist, Mr. John Nelson: "I read with much attention all such notices as appear in the Plover and Stream respecting the migrations of birds. Coming as they do from all quarters of the country, they afford the student a means to study the migratory habits of our fauna, so mysteriously erratic in many species. Stations of observation should be established at all points where the service of competent persons could be obtained, such persons to send in monthly and semi-annual reports to a centre, some one of your large institutes. The material thus collected after a properly collated and tabulated matter possessing very high ornithological value. The migratory course of such species could be accurately determined, and other information of paramount importance secured tending to perfect our knowledge in this most interesting science."

A FLORIDA GALLINULE.—Hornellsville, N. Y., May 23.—I shot a bird here yesterday and want to know what it is, that is if you can tell from my poor description. General appearance like an over-brown rail; length 13 inches from end of bill to tip of tail; bill black; tip of tail long, and of a bluish cream color, the base bright red; wings and back blue; neck and breast blue-black; under tail coverts white; some white or gray on belly; legs about 5 inches long, three long toes and a short one; color of legs pea-green, and some bright red on thigh just below the feathers.

Nothing like it ever seen here before by the oldest inhabitant. I should like to know what it is, and in what position to include it in Orn. Fauna.

Your bird is a Florida gallinule (Gallinula galeata), a near ally of the rails and coots. It should be mounted in the position of a rail, as in habits it closely resembles those birds.

INSECTIVOROUS PLANTS.—The generally accepted belief that the insectivorous plants are nourished by the animals which they capture, is not believed by the veteran florist, Mr. Peter Henderson, of Jersey City. That gentleman has been making some experiments on this point, and concludes that these plants do not derive any more nourishment from their victims than do the pines and hemlocks, which destroy such great numbers of insects by their restitutive excretions.

In the summer of 1878, Mr. Henderson and A. R. W. J. Tait made experiments, using 100 plants in each test, and the conclusions which they reached were that those plants which had received no animal food were quite as vigorous as those which had been fully supplied with insects. The plants used in the experiments were the well-known "Venus fly-trap." Further experiments on this point are required to settle this point definitely, but those which have been made are certainly extremely interesting.

THE ENGLISH SPARROW NEBROZO.—Dedham, Mass., May 14.—I had a week ago, a fine row of pens about a hundred feet in length, but now they are riddled by the English sparrows having cut off the tops of the largest portion, and they are still at it. I have three lots more yet to come up, which I wish to save if possible. Can you suggest some means of poisoning them? Something that, if they leave any, will not be dangerous for my dogs or hens, which will have the run of the ground after my crops are off in the autumn?—F. J. B.

Shoot the birds. That has been found effective in other instances. It will take some time and ammunition, but it is the only thing to be done.

NOTE ON THE SCARLET TANGER.—Westfield, Mass., May 21.—During the cold rain of this week, which lasted about four days, a large number of scarlet tanagers were noticed hopping about the dooryards and sidewalks unable to fly. I carried a chain with a snail of two of our warblers rather seldom seen in this vicinity, and a great many thought it a new species. Other birds are as lively as ever. Why isn't the tanager?—S.

AN OLD EAGLE.—Wilkesbarre, Pa., May 22.—In the middle of April an eagle was shot at Naksok, Denmark. It measured 78 inches from tip to tip of wings. Head its neck extended a chain with a snail of two of our warblers rather seldom seen in this vicinity, and a great many thought it a new species. Other birds are as lively as ever. Why isn't the tanager?—S.

SPRING NOTES.—Framingham, Mass., May 14, 1881.—Though the season may fairly be called a little "backed up" but the birds are not so far from their normal state as they were earlier than usual, viz., the black pool (D. striata) and the black and yellow (D. maculosa) on May 11.—P. C. BROWN.

Game Bag and Gun.

THE NEBRASKA SPORTSMEN'S CONVENTION.

THE State convention of sportsmen met at the Board of Trade Rooms, at 8 p. m. President J. C. McBride called the meeting to order. Upon the calling of the roll of delegates the following clubs were represented by full delegations, viz: Omaha Sportsman's Club—J. M. Woods, N. W. Logan, L. A. Beltzer, W. F. Miller, J. H. Abbott, S. L. Sibley, G. N. Church, J. C. Strassberger, R. W. T. Peet, A. B. Barney, Ira. P. Conger, F. E. Brown. Plattsmouth Sportsmen's Club—Gen. R. R. Livingston, Sam. M. Chapman, Geo. S. Smith, F. E. White, W. T. Matthews.

Working Men's Club, Omaha—E. Leeder, F. R. Smith, Geo. Jones, John McDonald, Wm. Robinson. Lincoln Sportsmen's Club—J. H. Honeywell, S. C. Elliott, S. S. Brock, C. E. Strassberger, Dr. F. S. Ronse. Osceola Sportsmen's Club—J. M. Woods, N. W. Logan, L. A. Beltzer, W. F. Miller, J. H. Abbott, S. L. Sibley, G. N. Church, J. C. Strassberger, R. W. T. Peet, A. B. Barney, Ira. P. Conger, F. E. Brown. Plattsmouth Sportsmen's Club—Gen. R. R. Livingston, Sam. M. Chapman, Geo. S. Smith, F. E. White, W. T. Matthews.

Norfolk Sportsmen's Club—J. S. McClary, C. P. Matthews, Wm. Suttler, C. Selah, S. W. Hayes. Nemaha County Sportsmen's Club—W. T. Den, W. M. Kanfman, W. W. Browning, Church Howe, A. R. Davis. On motion a committee of three on credentials was appointed by the president. The committee retired and soon returned and reported the foregoing list of delegates entitled to seats. Report adopted.

The address of the retiring president was read, as follows: *Gentlemen of the Convention:*

Custom seems to call upon the retiring president of this association for a few last words, something in the form of a message, reviewing the past and suggesting topics for consideration now and in the future. Since your last meeting quite a revival in shooting and fishing circles has taken place, as is witnessed by the number of new clubs organized in this association. Whether they ultimately become members or not we have the satisfaction of knowing that in spirit they are valuable allies, and that the good work begun six years ago will be more carefully guarded in the future.

The stocking of the streams with valuable fish by the State Fishery Commissioners, all of whom are members of this association, has had a cheering effect upon Nebraska sportsmen, and we are still more encouraged by the splendid appropriation of \$74,400 to be expended by them in their good work.

By the act approved Feb. 29, 1879, the catching of fish in any of the waters by means of nets, seines or baskets of any kind is prohibited, and a severe penalty is inflicted upon the guilty party; yet such is the greed of man, or more generally of boys, that many cases of violations have no doubt occurred and are occurring in the interior of the State, and a sharp lookout for violators of this law is recommended.

In accordance with your instructions given at your last meeting, 2,000 copies of the game laws of the State, in poster form, were printed and distributed to the local clubs, a large number posted at railroad stations, and a copy mailed to each postmaster of the State with a request to post it up in the office. Railroad stations and public places in this good work, and directed agents to post up bills in a conspicuous place, all of which, your president believes, was of great benefit to the game and fish interests of the State.

Through the sentimentality of a few visionary persons the Legislature of 1875 enacted the most ridiculous law which protected hawks and owls from destruction, and permitted them to prey not alone upon the song-sparrow, the wren and hundreds of other native birds, but to appreciate their never-ceasing hunger upon the quail and the prairie chicken. There is no sportsman in the State who annually kills as many birds as the average hawk or owl destroys. He is a constant and unrelenting "pot-lunier." From break of day until nightfall he skims the prairies in search of the lesser of his tribe; and he is no respecter of age, for he devours not only the old but the young also, and particularly fond of the fledglings and the eggs. After darkening his eyes with the prey he is compelled to retire, the "moping owl," his alert and accurate hearing takes up the work of destruction, and thus, day and night, these ravenous bird killers piled their vocations, and were protected by law because of their reputed appetites for grasshoppers. Your president is not a believer in the theory advanced by the over zealous advocates of the law, that the hawk and owl do not subsist upon grasshoppers, except in the absence of any more toothsome quail or sparrow, and if they did the large number of small birds annually destroyed by them would pick up millions of locusts and other noxious insects, where owls and hawks would destroy but few. It is in consideration of the destruction annually wrought by hawks and owls that I recommend their destruction on every occasion. I would go even further and advise local clubs to offer a bounty for each head of hawk or owl delivered to them, and would take the market hunter and the "pot hunter" to join in the work of extinguishing these most destructive enemies of our game birds.

There are many who think that the open season for quail shooting is too circumscribed by the present law, that December should be added to October and November. But for the fact that the past few years have usually severe upon quails, and that thousands of them perished, an attempt would have been made to have the law amended in that respect at the last session of the Legislature. Under the circumstances, however, it was hoped that through the shortness of the open season and strict obedience to the law the birds would be spared and would multiply and replenish their decimated ranks and furnish a better sport in the future.

If the loss has been so heavily upon quails than has been reported and which they shall continue to increase as in the past it may be well to ask the Legislature of 1882 to extend the open season so as to include the month of December.

The reports of the secretary and treasurer show that by economical management the annual dues from members of the association are sufficient to defray the ordinary expenditures, and but for the expense of publishing the game laws, and the still greater expense of the bench show, the association would have a balance on hand sufficient to commence another year's work. However, these expenses have not been in vain, and their lessons do not go unlearned. The bench shows have not only taught many of us what good dogs are,

but we have learned to appreciate a good dog and to own one. The field trial, while, owing to the slight attendance of our own members, was not a success, nevertheless, taught us several things, the most satisfactory and important of which was that we have a great many dogs in Nebraska that for practical purposes are as good as any sportsman can wish, and even better than some foreign dogs exhibited on that occasion. I am satisfied that many of our sportsmen who have good dogs, failed to attend, for the reason that they feared to run their dogs against the "crack" dogs of the country, anticipating a defeat that would have been ignominious; but now that they have witnessed the actions of the best in the field will be willing to pit their own against any that may come. For that purpose and to stimulate interest, I recommend that a field trial be had the coming season on prairie chickens in August, and not to be deferred until the birds get old, wild and scarce. Such a trial, if open to the world and properly advertised, would bring a large number of fine dogs and an interesting time be had.

Finally, allow me to extend my thanks to the officers and members of the association for their kindness and willingness to aid me in the discharge of the duties of office, and to turn my thanks for the honor you conferred upon me in this connection. J. C. McBRIDE, President.

After reading of the President's message, on motion the President appointed a committee of five to agree upon a place for holding the next annual meeting of the association and report to-morrow evening.

J. E. McCartney, of Omaha, declined to serve as one of the judges at the bench show, whereupon Mr. J. S. McClary, of Norfolk, was appointed in Mr. McCartney's place. Upon request of Mr. F. E. Brown he was also relieved from a similar duty and Mr. Dew, of Brownville, Neb., was appointed in his stead. On motion, the meeting adjourned until to-morrow evening at 8 o'clock.

Minutes, May 18, 1881.—Meeting called to order by Vice-President Matthews, in the absence of the President. The following business transacted:

The reports of the officers and committees being in order, they were severally received and placed on file. The treasurer's report showed a small balance of money on hand. The secretary's report contained sundry bills, etc., unpaid. The same were audited, and ordered to be paid.

The committee appointed at the last annual meeting to present resolutions on the death of Maj. T. Thoroughbred, reported appropriate resolutions, the language expressive of the sterling character of the deceased; and the good fellowship he maintained with this association, and the loss sustained by his sad and unexpected death. The report and resolutions were adopted and were ordered to be spread at large upon the records of the association.

The committee appointed to fix the place for holding the next annual meeting reported in favor of Omaha, and their report was adopted.

Election of Officers.—The election of officers for the ensuing year being in order, the following gentlemen were duly elected:—

President, B. E. B. Kennedy, of Omaha; Treasurer, R. W. Purzage, of Brownville; Secretary, J. F. McCartney, of Omaha; Vice-Presidents, J. S. McClary, of Norfolk; J. W. P. Peet, of Omaha; Josiah Rogers, Edward Luder, of Omaha; J. H. Harley, Lincoln; L. A. Beltzer, of Osceola; W. H. Hackney, of Brownville; Wm. C. Lyons, of Lyons; J. C. Strassberger, Lincoln; W. L. May, of Fremont; E. S. Hawley, of Nebraska City. On motion, Sam M. Chapman, of Plattsmouth, was elected a member of the executive committee. On motion, it was unanimously voted to hold a field trial of dogs on prairie chicken the last week in August or first week in September next at or near Norfolk. The executive committee was given the matter in charge, and instructed to advertise the same in Eastern papers.

Mr. Chapman submitted the report of the judges of the bench show containing list of awards. Adopted. Resolutions of thanks to the outgoing officers were severally adopted.

Gen. Livingston, Mr. Kennedy and Mr. Harley made reports of last year's field trials with severe though merited criticism upon the lack of attention given to the rules by Nebraska sportsmen, attributing the same to cowardice, etc.

On motion, the president appointed John W. Peet, W. H. S. Hughes and C. P. Matthews a committee to report resolutions at next meeting respecting the death of G. H. Collins, of Omaha.

On motion, the convention adjourned *sine die*.

THE LONDON SOCIETY.

AT the annual meeting of the London (Ontario) Fish, Game and Insectivorous Birds Protective Society, last week, Dr. Niven in the chair, the secretary, D. Skirving, presented his report, which was as follows:—

"It is most gratifying to find that now most of the sportsmen in and around London take a deep interest in the protection of our fish, game and insectivorous birds, and that each year new members are added to our list of subscribers. The good effects of the society are being felt all over the London district by local sportsmen, and I think it is not exaggerating when I state that more game birds were found last shooting season than during any three seasons previous. From information received from various sources, which I consider most trustworthy, I can state that quail have wintered well in this locality, notwithstanding the severe frost of January and February, and I think next fall we will have more birds than ever if there are only a few more cold coming summer. I regret that the Legislature at its last session, at the solicitation of the fruit-growers, amended the Insectivorous Birds Act, and placed robins on the list of birds that may be shot. Still, they did it in a very gentle way. The Act reads: 'Robins may be destroyed during the fruit season by the owners of fruit-bearing trees or plants.' I wish to state, however, that I have only seen one robin shooting robins at any other time liable to be fired upon. Formerly, if the Legislature had seen fit to place woodcock larks on the game list, making an open season from the 1st of September to the 1st of January, we would think they deserved praise. We, as a society, have asked this, but it has not been granted. Possibly, when the scientists, who are now experimenting on them, give a description of the contents of their stomachs, they will be placed on the list of birds suitable for food. During the year only two infringements of the law have been reported. The offenders in both cases, I am happy to say, were fined five dollars each and costs. I am satisfied that if the farmers would only re-

port all violations of the law coming under their notice it would have a very marked effect, and not only would the pot-lunier become extinct, but the game birds would rapidly increase in numbers. We have issued during the year about 500 large posters with the close season for fish and game, and the fines and penalties attached for the violation of them. I would suggest, when getting out the new bills for this year, we should offer a reward for the head of each fox, skunk, weasel and hawk killed, or a prize for any one producing the greatest number of heads; as, undoubtedly, they destroy as much, if not more, game than all the shooters put together. The fishing interests are being well and closely watched by the energetic fishery officer, Mr. Peter McCann. Within the past few weeks he has had some eight or ten persons up for catching bass out of season, and the majority of them have been fined \$2 each and costs. Mr. McCann reports the following on the Thames to be in good order, with the exception of Blackfriars' dam, which will be remedied this spring. Last year we had some correspondence with the Fishery Department at Ottawa relative to the close season for bass, suggesting that it be changed to, say, from 15th May to the end of June, as we consider that to be the time during which the fish spawn, but we were unable to get Mr. Wither to change the time, which at present is from 15th April to 15th May. Some of the Chatham fishermen, last session, also tried to get the law changed, but were likewise unsuccessful. This is to be regretted, as during the latter part of May and beginning of June bass are quite unfit for food. The fish in the river this year are very plentiful, and already great quantities have been caught—below Cashmere—one family alone netted \$300. Last year the water was so low that we lost a well-known trout stream in the neighborhood, and replenished it with trout at considerable expense, with very gratifying results, and this year other two streams are being leased for a similar purpose. If the shooters would show as much energy, and get the farmers as a body to assist them in protecting game, in a few years we would have the best fishing and shooting grounds to be met with in Canada.

For the destruction of vermin, hawks, owls, skuks, foxes, etc., it was decided to offer \$50 to the person who killed three hundred and over; second prize, \$25, for two hundred and fifty; third prize, \$15, for two hundred. The persons competing for the above prizes must give satisfactory proof to E. Raymond & Son, furriers, of having killed the birds or vermin. Mr. McCann has brought the question of prohibiting the destruction of robins under the same law, although if anglers were allowed indiscriminately to take out trout of all weights and sizes the streams in Western Ontario would soon be depleted.

The election of officers was proceeded with, resulting as follows: President, Dr. Niven; Vice-Presidents, Dr. Woodruff and W. C. I. Gill; Secretary, D. Skirving; Executive Committee—H. Sullivan, Harry Brant, C. S. Elliott, W. T. Strong, J. P. Pudicombe, A. McCrae and L. McDonald.

GAME IN INDIANA.

INDIANAPOLIS, May 9, 1881.

SNIPES, with us, have come and gone again. We had a very little left feather for the shooting this spring, the atmosphere jumping from cold, up to and through the middle of April, to an uncomfortable warmth from the first week of May to the present time. Snipe and plover were rather plentiful for a short time, though. A company of four hunters are reported to have killed 116 plover in a single day on the flats west of the city, across White River. Your correspondent has also been hunting, thirty snipe and eight plover in a morning's hunt east of town. In company with a couple of friends, I am going down to Martineville, Ind., about the 19th or 20th of this month, and spend a couple of days among the squirrels, which are reported as quite plentiful this spring. Should we have any luck it will be a pleasure to give the readers of FOREST AND STREAM an account of the ups and downs of a squirrel hunt in Hoosier-land.

During the recent session of our State Legislature a bill was introduced into the House prohibiting quail-shooting for two years. It passed the House, but was not brought up in the Senate. We are, therefore, to be governed by the old law, which allows quail-shooting during the months of November and December of each year. There are no partridges in this section, at least not enough to pay for hunting them, although they are found in considerable numbers in the northern part of the State, as are also prairie chickens.

The woodcock season opens here the first of July. The law on this point is very good, but by that time the weather is generally so intensely hot as to melt the ardor of the most enthusiastic sportsman, and but few care to indulge. For myself, when I have a spare day in midsummer, I prefer to seek the shady banks of the White River, and there, with my pipe and rod, and a hookworm.

WISCONSIN NOTES.

MENOMONIE, Wis., May 23.

NOTWITHSTANDING the dreariness of last winter, a considerable sport was enjoyed by hunters and farmers in this vicinity; a large number of deer were killed during the season, with an occasional bear to make it interesting. All winter a destructive war was waged on the wild animal hereabout. From November to March, our country paid \$471 bounty on scalps. There were killed thirty wolves, one hundred and twelve foxes and thirty-seven wild cats. Most of them were killed with poison.

A curious circumstance connected with the above-mentioned business happened. One Horland was putting out poisoned baits when he discovered three wolves in the bushes; the first he shot and treated and a few rods, when one of the wolves advanced, ate, died, and in fifteen minutes was being dragged home by Horland.

The prospect of a plentiful supply of prairie chicken this season is flattering; but few were killed last season owing, in part, to their advanced age and consequent wildness at the opening of the season. Reports from farmers are to the effect that chickens are numerous, and appear to be attending strictly to business; nests with a score of eggs in each have been found.

Our Legislature last winter made few changes in the game laws. It is now unlawful to kill woodcock between the first day of January and the tenth day of July; quail, partridge, prairie chicken or grouse of any kind, or any wood-duck, mallard or teal duck between the first day of January and the first day of August; and between the first day of January and the fifteenth day of September, any waterfowl, mink, muskrat or fisher between the first day of May and the first day of November.

SOME HINTS ABOUT GUNS.

FROM Mr. W. W. Green's very comprehensive book, "The Gun and Its Development," of which we have received advance sheets through the courtesy of Mr. Henry C. Squires...

CONVERTING MUZZLE-LOADERS INTO BREECH-LOADERS.

Some guns will admit of this conversion; others will not. The barrels best adapted for this conversion should be very strong at the breech, so as to allow for boring the chambers to admit the cartridge-case, and yet be strong enough to resist the large powder charge that they are subjected to in England.

CONVERTING PIN TO CENTRAL FIRE.

This must be done by a thoroughly practical gunmaker, for if the holes receiving the sector legs are bored out of position, the breech ends are materially weakened and the guns made exceedingly dangerous.

CLEANING GUNS.

Unless a gun can be properly cleaned after a day's shooting, it had better be left until the proper time can be given to it. The best plan is to wipe out with petroleum or turpentine, and then wipe dry, afterward oiling the barrels. Before putting away at the end of the season, or after shooting near a lake, the barrels should be well-cleaned inside and out with boiling water, wiped dry and oiled.

THE COST OF GOOD GUNS.

A first-class gun, says Mr. Greener, is expensive because the best material and the best workmanship are employed. In every stage of the manufacture, from the first selection of the iron and steel, through all the successive processes of welding, boring, grinding, filing the barrels, and the preparation and fitting of the different parts, there may be a vast difference in the quality of the work.

CHOKE-BORES.

The term "choke-bores" means simply "barrels whereof the diameter of the bore at the muzzle is less than the bore at some point behind the muzzle, other than the chamber," while any barrel constricted at the muzzle to the extent of 5,000ths of an inch, may be termed a modified choke.

HOUNDING VS. STILL-HUNTING.

WE continue the publication of this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. There is no necessity of calling attention to the value of the data we are collecting and setting forth here. The views are those of experienced, well-informed observers. The particular points of the inquiry are as follows:

- 1. What is the character of the country referred to?
2. What is the prevailing method of hunting deer?
3. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
4th. But in hounding deer, by the greater method, are the deer prepared to go south, and between now and July, if there will, I have not the least doubt, be more deer killed than in all the remainder of the season besides.

FLOATING IN THE ADIRONACKS.

The slaughter of deer in the Adirondack region has already begun. This week a party of six or seven hunters, with guns, jacks, etc., have gone up to the St. Regis and vicinity for a two weeks' hunt for deer by floating. And others are preparing to go soon. And between now and July, if there will, I have not the least doubt, be more deer killed than in all the remainder of the season besides.

miles, he could not reach here without going around a distance about as far as it would be from that city.

I never could understand why these three northern counties, Clinton, Franklin and St. Lawrence, which contain a large portion of the Adirondack region and many of the best hunting and fishing localities within the State, were without a game protector, while in the centre of the State they have appointed them in counties where there is but little game and little market for its sale. It looks to me as if the places or counties to appoint them would be where game is plenty and where it is sold.

THE BEAVER RIVER COUNTRY.

- 1. Updating forest lands interspersed with streams, lakes, meadows and burned timber on the lands level, 9 miles below and level on East Branch and many of the ponds south and east-ward from here, and also as far east as Clinton county. This is what is killing off the deer, not hounding, as some hotel keepers and pot-hunters would like to make out. If a correct count of all the deer killed during the year by hounding and floating could be had, I would stake all I have got that two are killed by floating to one by hounding, in these three northern counties at least. ANTHONY OSKOLK. Near the Adirondacks, May 23.

Still-hunting is the most scientific method of hunting deer. It is generally pursued during the first light fall of snow, which enables the hunter to track the deer and to move quietly through the woods; is attended with great privations and fatigue, many disappointments and constant vigilance. All combined will not guarantee a deer to the hunter between break of day and evening twilight.

6th. Residents of the Adirondacks would assist in enforcing laws that seemed to them more for protection of deer, than so much for the benefit or pleasure of outsiders, who only go to the woods for pleasure. And I think they would approve of a law allowing only a few weeks of hounding, commencing Sept. 1.

7th. First, I do not think so. Second, I do not think it would. 8th. The fawns are dropped in May, and generally are able to care for themselves after July 15th. Open season would therefore naturally begin then and last till about January, or deep into the spring.

I agree with one of your correspondents that "the present law, with a little alteration in the time for hounding to commence and duration thereof, would be good enough, even allowing floating, if it could be enforced."

I agree with one of your correspondents that "the present law, with a little alteration in the time for hounding to commence and duration thereof, would be good enough, even allowing floating, if it could be enforced." His testimony in regard to numbers of deer killed graphically states the customs of hunting in the Adirondacks—19 killed out of season, 4 killed since he left. Take the 19 killed during 46 days, 17 of them were killed in 15 days, at a time when deer should not be hunted even. They are easily fooled in June. The last of July they get more wary and are approached with greater difficulty. He gives July credit for only two deer killed, 17 in 15 days of June, 2 in 31 days in July. I should not wonder if the reason for only two being "recorded" as killed during that month was owing to a little more "muscle" day times than the deer liked. Floating in August would do no harm where bounds are used. He starts August off with 4 killed before bounds. There were but 15 days in August during which bounds could be legally used for driving deer. That was doing well for August. September should have been better, and October twice or three times better than Sept., in a region where 17 can be killed in 15 days floating, for the fact does not like to run far, and we take to water quickly. Well, I suppose the deer were pursued in hot weather every day by the different parties and betook themselves to parts unknown to starters of dogs. They found "the 16-mile level" too hot. The starter of hounds generally knows where to go, but sometimes he will not go there. A starter might readily fool greenhorns by starting hounds in hot weather with a hearing of his party, and let them hear the "francise" for a while, and allow the dog to convince themselves of the true reason for not killing the deer so started. They think he did his part, but the deer would run away off to some other stream or lake. Just so I have known a conscientious starter to put out the hounds seven or eight miles away, then walk back to camp only to hear, "We waited till two o'clock and heard no dog, so gave up the watch. Just after we came in a big buck swam across the river," etc. Or if any number of the party get fired and went to sleep, the starter is happy to hear "the first thing I knew a deer jumped in, the water not being deep enough for him to swim in. I could not get my gun up before he disappeared on the other side." A party of that kind will get very few shots, and every night their dogs come home with tails down, and a starter knows there is no use in over exerting himself.

PROGRAMME OF THE STATE SHOOT.

At 12 o'clock, noon, the Reception Committee, Judge Henry S. Lott, Chairman, will attend at the Long Island Sportsmen's Association, Reading Room, at the Hotel Brighton (Brooklyn), in Coney Island, to meet delegates and friends to exchange courtesies, to assist in the location of visitors in satisfactory lodgings, and generally to make such final arrangements as may be advisable. A special shower, with appropriate accompaniments, will be provided. Delegates and others from abroad are especially invited to avail themselves of this opportunity.

After all preliminaries shall have been consummated, an opportunity will be afforded to view the ground selected for the tournament, and also by special train to visit the city of Brooklyn with the committee, and inspect the prizes, which will be grouped in attractive form in the exhibition windows of the Brooklyn Furniture Store, 501 Fulton street.

read B. A. M.'s letter on the "Founding vs. Still-Hunting" discussion in your number of May 19th with much pleasure as I can from quite a number of years' experience verify his conclusions. But on one point, that he does not touch, I think special mention must be made, and that is the proportion of deer wounded and not secured by the hunters by jack or still hunting is far greater than by any other way of hunting. My guide, "Honest John" Plumley of Murray's Rock (whose statement is that of all guides who honestly tell what they know of the matter), is that on the average not over one out of five shot at is ever got by the night hunter. He says that he has paddled a sportsman up to us many as twelve miles in one day, and that the deer was secured, though most of the rest had probably been wounded by a few bucks shot and had died in the woods. He says that on some carry or lonely hut he has often come upon the carcass of a deer that had thus been wounded by some midnight fusillade, and had died where skin and venison could benefit no one.

For five years past I have made one of a party to come in on an October hunt with hounds, and during that five years not one deer that was shot at and wounded got away from us. We have always had excellent success (an average of one deer each for a week's hunting, but find we must go farther back every year, as the pot or still hunters, who spend the summer hunting for the hotels, are fast clearing all the easily accessible places. I have considerable hopes that the State Game Constables will stop at least part of this early killing this season, as they appear to be more active than usual this spring, and I hope that the fear of the \$75 fine may save the life of not only many a doe and her fawn that are sure to die if she is killed, but of many a noble buck that would cheer the heart of the real hunter, as on some crisp October day he stands on some river runway listening to the hounds on the mountain side ready for the quick shot with his Winchester rifle as the lordliest of all our game gives a few bounds in sight.

I think that if my brother sportsman would follow my plan, viz., a two-weeks' or more fishing trip in the last two weeks of May before black flies bother much, and fishing is the best; then take the same time in October for hunting, and not try and combine the two in July or August they would not only enjoy themselves much better, but find their general health improve, and would join the guides and myself in condemning the useless slaughter that always accompanies floating or still-hunting.

As they know and all say, that unless this summer hunting is stopped their "occupation will soon be gone." Winter killing is now practically stopped, and we must attack the next objectionable feature, and I think you for the opportunity given to this thoroughly placed matter before the public. M. S. NORRIS.

In Camp, Racquette Lake, May 24.

THE YELLOWSTONE BUFFALO SLAUGHTER.

IT is estimated by competent authorities that 100,000 half-bred hides will be shipped out of the Yellowstone country this season. Two firms alone are negotiating for the transportation of 25,000 hides each. When to this is added the immense amount of skins and furs of other kinds—deer, elk, antelope, bear, beaver, etc.—some idea may be formed of the extent of the Yellowstone peltry and fur trade.

Most of our citizens saw the big load of hides that the C. K. Peck brought down last season, a load that hid everything about the boat below the hurricane deck roof. There were 10,000 hides in that load, and they were all brought out of the Yellowstone on one trip, and transferred to the C. K. Peck. How such a load could have been piled on the little Terry, not even the men on the boat appear to know. It hid every part of the boat, barring only the pilot house and the smokestacks. But such a load will not be attempted again, for such boats as the Terry will not be there at least fifteen full loads of buffalo hides and other pelts. Requiring 1,000 hides to three carloads, and adding to this fifty cars for the other pelts, it will take at least 550 box cars to carry this stupendous bulk of peltry east to market. These figures are not guesses, but estimates made by men whose business it is to know about the amount of hides and furs awaiting shipment.

Nothing like this has ever been known in the history of the fur trade. Last season the output of buffalo hides was above the average, and last year only about 30,000 hides came out of the Yellowstone country, or less than a third of what is there now awaiting shipment.

The past severe winter caused the buffalo to bunch themselves in a few valleys where there was pasture, and there the slaughter went on all winter. There was no sport about it, simply shooting down the fawn-tanned animals as cattle might be shot down in a barn-yard.

To the credit of the Indians it can be said that they killed no more than they could save the meat from. The greater part of the slaughter was done by white hunters, or butchers, rather, who followed the business of killing and skinning buffalo by the million, leaving the carcasses to rot. When the buffalo are all killed off, as they bid fair to be in a very few years at the present rate, then everybody will wonder that the government did not do something to preserve this, the noblest of animal game, or at least prevent the killing of the buffalo for the hides alone.—Sloat City Journal.

PROGRAMME OF THE STATE SHOOT.

FIRST DAY—MONDAY, JUNE 20, 1881.

At 12 o'clock, noon, the Reception Committee, Judge Henry S. Lott, Chairman, will attend at the Long Island Sportsmen's Association, Reading Room, at the Hotel Brighton (Brooklyn), in Coney Island, to meet delegates and friends to exchange courtesies, to assist in the location of visitors in satisfactory lodgings, and generally to make such final arrangements as may be advisable. A special shower, with appropriate accompaniments, will be provided. Delegates and others from abroad are especially invited to avail themselves of this opportunity.

After all preliminaries shall have been consummated, an opportunity will be afforded to view the ground selected for the tournament, and also by special train to visit the city of Brooklyn with the committee, and inspect the prizes, which will be grouped in attractive form in the exhibition windows of the Brooklyn Furniture Store, 501 Fulton street.

Return trains will leave the city for Coney Island to accommodate those wishing to participate in the meeting of the Convention. At 8 o'clock in the evening the Convention will meet in the east

dining hall of Breslin's Hotel, Brighton, when the credentials of delegates will be received and the Convention organized. Delegates are respectfully requested to wear their club badges during the Convention.

All the contests for prizes during the Convention are open to members of the Association only, and will be conducted under the rules of the Association.

Special Notice to Clubs.—Express tents and bulky baggage to Long Island Sportsmen's Association, care Wm. Engeman, Coney Island, N. Y.
