ROUND THE GALLEY FIRE.

These stories and sketches originally appeared in *The Daily Telegraph*. No further preface to them is needed than this statement; for the title under which they are collected will fitly express their character, if the reader can imagine himself one of an audience, in a cold dog-watch, listening to the yarns of a man who has planted himself in the galley, where he delivers his memories and notions to the little company who have gathered round to listen.

A DANCE AT SEA.

A LARGE Australian passenger ship, homeward bound from Sydney, New South Wales, lay becalmed in about two degrees south of the line. She had carried the trade-wind to that point, but it had failed her at daybreak, and all day long she had hung upon the whitish-blue of the oil-smooth sea, slightly leaning with the swell that ran through the bosom of the deep with the regularity of a restful respiration, her white canvas softly beating against the yellow masts, which were radiant with lines of fire, and the water bubbling like a fountain under her counter, as the stern of the great fabric was depressed by the heave of the swell under the bows.

She was tolerably well crowded with human beings, carrying a large number of passengers in the cuddy and steerage, and some thirty or forty people in the 'tween-decks. The poop was sheltered by an awning, and under it, seated on chairs or lounging upon the skylights and the hen-coops, were such of the passengers as were privileged to use that portion of the decks, reading, talking, smoking, casting languid eyes upon the breathless ocean; ladies fanning themselves, gentlemen in the airiest possible costumes, and at the extremity of the shadowed deck the steersman grasping the wheel, his figure in the pouring vertical sunshine rising and falling against the rich sapphire of the tropical heavens with the swaying of the ship, and the brilliant brass of the binnacle-hood flashing into flames as it slowly lifted and sank under the eyes of the burning luminary.

The quarter-deck was partially sheltered by the folds of the main-sail, which hung from the great yard in the grip of the leech-lines; and there, wherever the shadows rested, congregated the steerage and 'tween-deck passengers, lolling, red-faced and open-breasted. In one place a knot of women with children gathered about them;

in another a number of men in their shirt-sleeves sprawling in many postures; and, forward, glimpses of Jack could be caught at work at some job in the waist, or on the fore-castle, or in the shadow of the break of his big parlor, or popping his head through the scuttle, with a sooty inverted pipe between his teeth, to have a look around him, or enjoying a wash-down, stripped to the hips, in a bucket of salt-water, screened from the passengers' eyes by the galley; while the live stock in the long-boat filled the air that way with rumbling and squeaking noises, which harmonized with the hoarse pipes of the boatswain standing betwixt the knight-heads and bawling instructions to a couple of ordinary seamen on the foretop-sail yard.

The day passed with never so much as a shadow upon the sea to give the officer on duty an excuse to sing out to the watch. But nobody could reasonably complain. The ship had rushed grandly into this stagnant ocean under topmast and top-gallant studding-sails, and for days and days the roar of foam speeding furiously past and the thunder of the trade-wind sweeping into the spacious concavities of the gleaming cloths had been familiar sounds. This calm was only like giving the ship a little breathing-time. Besides, it would directly serve a very pleasant purpose then in hand, which was simply this: it was the birthday of the daughter of one of the passengers, a rich Australian gentleman. The girl was pretty, charming in manners, and universally liked; indeed, four gentlemen were seriously in love with her, and one of these had suggested that they should celebrate the occasion by a dance. The skipper came promptly into the scheme, and so did the rich Australian papa, who merely stipulated that the dance should be general from one end of the ship to the other, and that he should be at the charge of enough wine to keep the heels of the fore-castle and 'tween-decks nimble and up to the mark. They could dance in a calm like this, and the light and regular swell would be rather a help than a hinderance, as the heave of the deck should put additional alacrity into the swing of a waltz or the stampede of a galop round the hen-coops and hatchway. They could muster a little music: a flute, a concertina, and two fiddles, and they also had the cuddy piano. So all that was needful for a sea-ball was at hand, and in the second dog-watch, before the sun went down, they began to prepare for the festivity. There would be a bright moon, and the question whether they should dance in its light, like the Buffalo girls, or keep the awning spread, had been earnestly debated at luncheon and dinner. It was decided, however, to let the awning stand—first, because it would keep the dew from the deck; and, secondly, because the lanterns would show to advantage in its shadow.

At the appointed time, therefore, the sailors came along to rig up the lanterns, as many as they had—side-lights, cabin-lamps, and the like. Any departure from regular routine delights Jack, and his grin is never broader nor his whispered jokes more explosive than at such times. Besides, he was to dance presently, and he tumbled through the preparations like a man in a hurry to enjoy himself. The sun went down—a mass of glorious splendor—flinging up the glass-smooth water until the western horizon all that way looked to be twenty leagues distant, and shedding a haze of purple gold far to

the eastward of the zenith that tinted the mighty expanse of ocean with a delicate crimson which yielded fast to the eager stride of the tropical night, though darkness was in the east, and the large tremulous silver stars were sparkling upon its deep ebony bosom, and the white snow-like moon was floating in the pure deep shadows in the south and whitening the water with a slender stream of icy light, when the west was still ardent with the fires of the vanished day-beam.

The cool of the night was immediately felt in the air, and now the circling draughts thrown down upon the decks by every flap of the lower canvas could be felt and enjoyed. With the row of lanterns along the poop, here a red and there a green one, mingling with the yellow radiance of the other lamps, the lustrous pearl of the moonlight on the main deck and forecastle, and the drowsily-flapping sails lifting their pale heights to the stars, the ship was a picturesque object indeed. The musicians posted themselves against the rail at the break of the poop, so that all hands could hear their strains and dance to them; and, everything being ready, they dashed into a waltz, keeping very good time, and accompanied (after a fashion) by the piano in the cuddy, the notes of which rose very clearly through the open skylights. Aft, of course, there was the necessary decorum, ladies and gentlemen gliding over the smooth planking and skimming along with great propriety, and with a more or less tolerable exhibition of art. But on the main deck and forecastle shore customs were not very strictly adhered to. Women danced with women, men with men; the children hopped to and fro, clapping their hands and getting in the way; here and there a sailor would be showing off his paces in a lonely dance, slapping the deck with his heels in a hornpipe without the least reference to the music, which, so long as it kept going, was all the same to him, no matter what dances it played. The steward and his mates bustled about with wine and glasses; but the wine was light, and Jack, and many of the steerage and 'tween deck passengers too, no doubt, were seasoned, and the mild refreshment did no further mischief than impart a sense of festivity.

They say, and I can well believe, that a prettier sight was never seen than all those people dancing, and laughing, and enjoying themselves on the decks of that becalmed and sleeping Australian vessel. You must figure yourself taking your stand on one of the poop-ladders, say, clear of the awning, where, looking aft, you could see the row of lanterns and the dancers shifting their colors as they swept round into the rays of the green and red lamps, with little floods of moonlight here and there upon the deck under the awning; and beyond, the man at the wheel, standing there like a bronze figure, the binnacle lamp softly touching his shape with light, and making his image clear against the stars which slowly slid to and fro past him; or where, looking forward, you commanded the vessel to the very eyes of her, whence the great bowsprit and long jib-booms forked into the gloom like a spear pointed by a giant, on which the row of jibs glimmered as they soared into the pale obscurity. On those decks the moonlight lay broad; but in places shone a yellow light which, with the moonshine, threw twin shadows upon the silvered planks, and the shadows of the rig-

ging were sharp and black, and scored the sails as though they were ruled with lines of Indian-ink. The crowd of big spare booms over the galley, the outline of the huge windlass barrel under the fore-castle, the solid masts piercing the night and bearing on high their vast stretches of symmetrical canvas, from which an occasional shower of dew would fall when the sails came in to the masts, loomed large and vague in the moonlight; there was something of shadowiness, too, in the figures of the dancers as they swayed in crowds between the bulwarks, and frolicked on the fore-castle, with frequent bursts of hearty laughter and loud calls, which were thrown back in light echoes from the lofty sails.

The musicians varied the dances often, but it was all one to the sailors and the steerage passengers, and while the cuddy people were staidly stalking through quadrilles or decorously gyrating in waltzes or hopping gravely through a mazurka, the company on the main deck kept steadily to galops and polkas—this last, a beloved dance among sailors—floundering against each other, capsizing over the children, spinning around the main hatch and through the galley, and awaking the echoes of the fore-castle with their active toeing and heeling.

But it was impossible to look abroad upon the vast and vague distances of the dark sea, upon whose horizon, down to the very water's edge, the stars were shining like fire-flies, without a mingling of melancholy in the thoughts. How small a speck that ship made in the midst of the lonely leagues of ocean! how minute a theater sufficed for the revelry of near upon two hundred human souls! The contrast between the sounds in the vessel and the deep silence upon the sea was defined to a degree such as no pen could give expression to. The silence was like the night itself, a near and impervious envelopment which absorbed the shouts and laughter of the dancers as a stone flung at a mound of snow vanishes in it. The water against the ship's side looked thick and black and sluggish as liquid pitch, but now and again the wash of the swell would set it on fire with phosphorus, that poured away under the surface in bright, illuminated clouds, which sparkled and faded until they vanished utterly and the water was black again. Once an exclamation from the second mate, who was looking over the rail at the sea, brought several dancers to his side, and, following the indication of his outstretched finger, they perceived a fiery oval shape sneaking stealthily along toward the bows of the ship. "Only a shark, ladies, hoping that some of us may waltz ourselves overboard;" and, merrily laughing, the dancers drew away and fell to their prancings afresh.

But presently, and in the midst of all this gayety, the stream of moonlight in the southwest sea—a reflection that had hung like a cone of solid silver without a breath to tarnish the exquisite polish of its surface—trembled, and the water on either hand of it took a deeper shadow. Overhead the sails were silent, and a faint air streamed athwart the poop under the awning. The skipper, a fine-looking, hearty seaman, swung himself abreast of the officer in charge, with his arm still clasping the waist of his partner, said something in a low voice, and whisked off again. The officer

walked to the break of the poop, and his loud cry startled the dancers on the main deck for a moment:

"Trim sail, the watch! Lay aft, some hands, and man the star-board main braces. Wheel, there; how's her head?"

"North-west-by-north, sir."

And now some new strains were added to those produced by the musicians. The rough voices of seamen rounding in the braces rose harshly, and the measures of the dance music were somewhat perplexed by the sharp cries of "Belay all that!" "Haul taut to wind'ard!" "Too much the royal yard; slacken a bit to leeward!" But the dancers, to whose ears those cries were as familiar as their fingers were to their eyes, went on footing it bravely. The decks grew steady and slightly inclined; the sails had fallen asleep, and there was not a stir among the pallid folds; a pleasant sound of tinkling water came up from the ship's side, and under the counter a narrow wake of green fire crawled away, with little eddies of foam twinkling among the ghastly sparkles of the phosphorus.

But the musicians began to slacken; the piano had given over, and Jack had lighted his pipe forward, and was beginning to remember that his watch below would be up in two hours. By and by a bell was rung in the cuddy, and those who looked through the skylight saw that the grog and the biscuits were on the table. The music ended suddenly, and the fiddlers and the others gathered round the cuddy-door, where they were received by the steward, who handed them each a glass of liquor. In twos and threes the steerage and 'tween-deck passengers went below, and in half an hour the ship's decks were deserted save by the steersman, the pacing officer of the watch, and some dark figures leaning over the head-rail, visible from the poop under the arched foot of the foresail. Up through the booby and main hatches would come fitfully the sound of a child crying, or a woman's voice talking low, or the growling hum of men; otherwise the silence was profound, the ship like a phantom in the moonlight, and nothing audible aloft but the moan of the tropical night breeze in the rigging, with now and again the creak of a sheave as the light swing of the swell hove the great ship very gently to windward, and brought an extra strain upon the taut sheets.

GOING ALOFT.

SOME time ago, when the Queen was at Osborne, her Majesty visited a troop-ship in her yacht the *Alberta*. Her Majesty's ship *Hector*, lying in Cowes Roads, manned yards in honor of the royal presence. One of the men got as high as the main truck and stood upon it. The main truck is a small circular platform—varying in diameter, of course, according to the size of the ship—fixed on the royal-mast head, the highest point of the mast. Sometimes it has holes in it, through which halyards are rove for hoisting flags. The trucks of the *Hector*, I was told, are furnished with iron staffs, so that the sailor who stood on the main truck had something to lay hold of. But this diminishes nothing of the wonder of the feat. The nerve required coolly to stand upon a small circumference at a pro-

digious elevation is one thing; the more extraordinary feature of that achievement lies, it would strike a landsman, in the man's getting over and on to the truck, and then kneeling and swinging himself off it, and down upon the royal rigging. In the fine old song of the "Leap for Life," the skipper's son gets upon the main truck and stands there, holding on with his eyelids. To save his life he is ordered to jump, and the dog follows him overboard and picks him up. The order to that boy was a sensible one, for though it is perfectly true that he had managed to get upon the truck, it was really impossible that he should get off it without falling.

In truth, going aloft is one of the hardest parts of the sea life at the first start. Seamen who were active, courageous men enough, have told me that it took them months to vanquish their nervousness; and many a young fellow has given up the sea after the first voyage simply because he never could overcome the purely physical infirmity of giddiness the moment he had his feet in the ratlines. In "Redburn," one of Herman Merivale's delightful sea tales, this weakness is illustrated in an incident narrated with wonderful power. A young man, named Harry Bolton, ships for the return voyage from Liverpool. He is rated as an ordinary seaman, but his friend notices that when any work has to be done aloft, Harry is always busy about the belaying pins, making fast the clew-lines, etc. At last he candidly owns to his friend that he has made a private trial of it, and that he cannot go aloft; that his nerves would not allow of it. But this does not save him. One day the mate ordered him to mount to the main truck and unreeve the short signal halyards. Where the ends of the halyards came is not stated, but one might think that the royal yard would have been high enough for the unfortunate young man to have clambered, even if the cross-trees would not have done. Be this as it may, Harry Bolton hesitates, is rope's-ended by the mate, finally springs into the main-rigging and gets as high as the maintop. When there he looks down, and his heart instantly fails him. The pitiless mate thereupon orders a Dutch sailor to follow and help him up, which the Dutchman does with his head, butting at the base of his back and hoisting him along in that way. "Needs must," continues the narrator, "when the devil drives;" and higher and higher, with Max bumping him at every step, went my unfortunate friend. At last he gained the royal yard, and the thin signal halyards—scarcely bigger than common twine—were flying in the wind. "Unreeve," cried the mate. I saw Harry's arm stretched out—his legs seemed shaking in the rigging, even to us down on deck; and at last, thank heaven! the deed was done. He came down pale as death, with bloodshot eyes and every limb quivering."

Sailors will know there is no exaggeration in all this. Some beginners will run up aloft like monkeys; others will get into the shrouds and stand there, hanging back and looking up, and holding on as if they meant, to use an old sea phrase, to squeeze all the tar out of the ropes. There is not, perhaps, any worse cruelty practiced on board ship than that of driving a nervous lad aloft. In former times there was a custom called pricking—a sailor got behind a boy and forced him up by digging into him with a pin, or a "pricker." It is, perhaps, scarcely worth while nowadays to speak

of such things—the sailing-ship is dying out, and the steamer gives but little work to do aloft; but there are few men who have followed the sea who cannot recall cases of exquisite suffering in nervous boys hurried and pricked and thrust up the rigging. One instance I remember—that of a lad of thirteen, who was shipped in an Australian port. He was ordered on to the fore-royal yard along with another youngster. It was his first journey up the masts, and when he was half-way up the shrouds he came to a dead stop. The boatswain sung out to him to look alive and go on. The poor little chap, with shaking hands and a face like the foam alongside, footed it as high as the futtock shrouds, where he halted looking up at the overhanging platform of the top. “Over you go!” shouted the boatswain from the forecastle. “I can’t sir! indeed I can’t, sir!” cried the little fellow, piteously. “We’ll see about that,” said the boatswain, and called to an ordinary seaman to help him up. This youth was a brute, and when he reached the clinging boy he began to pinch him in the legs, and pulled out his sheath-knife and threatened to stab him if he did not go over the top. It was a big top; the angle of the mast—the wind being abaft the beam—was a small one, and the futtock shrouds stretched away from the boy like the rib of an open umbrella from the stick. The miserable little fellow, terrified by the sight of the knife behind him, laid hold of the long irons and made a swing with his legs at the ratlines, missed them, vibrated a moment or two like a pendulum, and then dropped past the outstretched hand of the sailor below him like a flash, striking the shrouds and rebounding as a ball might overboard. He was drowned, of course.

But as steamers multiply and the number of sailing-ships decreases, going aloft will become the least and most infrequent of sea duties. Practical seamanship, in the old sense, is bound to die out, because there is no need to preserve it. It was only the other day that an old skipper assured me that he was acquainted with the mate of a steamer who did not know what a harness-cask was, “and worst of all, sir,” cried my friend, “he’s not ashamed of his ignorance.” It is true that harness-casks have not much to do with seamanship; but one may excuse a shipmaster of the old school for taking a very gloomy view of the contemporary marine when he meets a man holding a master-mariner’s certificate ignorant of the receptacle in which Jack’s salt horse is kept when he is at sea. Most of the steamers nowadays are monkey-rigged, many of them with pole-masts, which are useful mainly as derricks upon which a little bit of fore and aft canvas will be hoisted to steady the vessels. What should men who serve in such ships know about going aloft? Even a landsman may comprehend the emotion excited in a seaman who has passed his life in sailing-ships when he sees sailors without any spars or rigging to attend to, and with nothing to do but to wash decks down.

Nearly all the work of the traditional mariner lies aloft, and to reflect upon Jack without dead-eyes to turn in, chafing gear to look after, reef-points to knot, rigging to tar, masts to stay, studding-sail gear to reeve, and the like, is almost as confounding as to think of him sleeping aft, eating fresh meat throughout the run, and going to the steward for a can of filtered water, instead of to the captain.

for his eight bells calker of fiery black rum. No doubt things are pleasanter as they are. It must be nice to turn in with the certainty of having the whole of your watch below, instead of going to bed in your sea-boots in readiness for the thundering of a handspike, and the cruel roar of "All hands shorten sail!" And yet, to the true sailor, going aloft is so much a part of his life, it is so complete a condition of his vocation, that when such a man finds himself aboard a steamer with nothing to take notice of above his head, it may be supposed that at the first going off he is as fully bewildered as a steamer's man—that is, a man who has never served in anything but steamers—would be among the ropes of a full-rigged ship, taken aback with her studding-sails abroad. He will miss the old songs at the reef tackles, the flapping of canvas, the thud of coils of halyards and clew-lines flung down on deck, the springing into the shrouds, the helter-skelter for the weather-earring, or the ascent of the top-gallant mast that jumps to the flogging of the clewed-up sails.

There is a touch of wild excitement in going aloft in heavy weather, which no seaman can be insensible to; just as in a calm day or night a man may find a strange pleasure in lingering a few moments aloft after he has done his work, and looking down. The labor of reefing has been greatly diminished by the double top-sail yards, which halve the great sails, so that when the halyards of the upper yards are let go, the ship is under close-reefed top-sails. Moreover, there is only half the weight of the sail to handle in reefing or stowing. This valuable contrivance makes the task of shortening sail light in comparison with what the labor was in the days of the whole top-sail. Old seamen will remember what that kind of canvas involved in a ship of fourteen or fifteen hundred tons, manned by about eighteen or twenty men, capable of doing sailor's work aloft.

It is the second dog watch. The royals and mizzen-top-gallant sail have been furled, but the wind comes in freshening puffs, the sky has a menacing look away out on the starboard beam, and at eight bells all hands are kept on deck to roll up the main-sail and top-gallant sails, and tie a single reef in the fore and mizzen top-sails. The sea washes noisily against the weather bow, and the night settles down as black as a pocket; but the ship is tolerably snug, there is no great weight of wind as yet, and the watch below are dismissed to the fore-castle. They have been an hour in their hammocks or bunks, when, on a sudden, the scuttle is rudely flung open, and a loud cry summons them on deck. They are up in a moment, scarcely waiting to pull on their jackets, for the instant they are awake they perceive that the vessel is on her beam-ends, and they can hear the thunder of a gale of wind raging overhead. All three top-sail halyards have been let go, and the watch are yelling out at the reef-tackles, the skipper shouting at the mizzen-rigging, the chief mate bawling from the break of the poop, and the second mate and boatswain roaring in the waist and on the fore-castle. The sea is flying heavily over the weather rail of the prostrate ship, and adding its peculiar bursting noise to the din of the furiously-shaken canvas, to the deafening booming of the wind, and the hoarse, long-drawn cries of the sailors hauling upon the

ropes. You can barely see the weather shrouds, though to leeward their black lines are plain enough against the washing heights of foam which swell up as high as the rail of the bulwarks. You do not feel the force of the gale until you are in the rigging, and then for a spell the iron-hard pressure of it pins you against the shrouds as if you had been made a spread-eagle. The rain drives along in slashing horizontal lines, and you see the sparkle of the deluge over the sky-light where the light of the cabin lamp is shining; or, maybe, the gale is charged with sleet and hail, and the cold so tautens your fingers that you can scarcely curl them to the shape of the rope you grasp. Over the top you swarm in company with the rest of your watch, perhaps getting a blow on the head from the heel of some fellow above you as you lay yourself backward to swing over the futtock shrouds; and then, finding the weather side of the top-sail yard with as many hands on it as are needed, you pass over to leeward, where you find the boatswain or third mate astride of the yard-arm, ready for the cry of "Haul out to leeward," to pass the earing. At such a time as this a man has too much to do to look about him; the ship is brought close to shake the sail, that the men may get the reef-bands against the yard, otherwise the canvas stands out to the force of the gale in a surface as round as St. Paul's dome, and so hard and tense that it would serve as a platform for a ball-room.

In the whole top-sail days I have seen half a dozen men standing upon the canvas in the slings and quarters trying to stamp the sail down to bring the reef-points within reach without so much as dinting the wind-swollen convexity. Still it is possible to knot a reef-point, and take a look round and below. It is a wonderful scene: no landsman can conceive of its wild and awful majesty. The ship surges heavily through the black heavings, and with every headlong plunge fills a wide circumference of the far-down ebony waters with a furious swirling of foam, in the midst of which her long, narrow shape is distinctly visible. Overhead is a dim vision of naked spars and yards, reeling in the boisterous void in whose gloom it is just possible to trace the outline of huge black clouds rushing past like folds of swiftly-carried smoke. The yard on which you stand is at an angle of thirty or thirty-five degrees, and every lean-down of the slender fabric that supports the immense superstructure of masts threatens to submerge the point of it, astride of which—riding it as a horse—sits the seaman who takes the lee-earring; and his figure and that of the fellow beneath swinging on the flemish-horse, and those of the row of men who overhang the yard, and who chorus with a kind of shriek that rings athwart the yelling of the gale to the cry from the weather yardarm of "Light over to windward!" are marked like pen-and-ink drawings upon white paper against the snow of the seas which stretch from the ship's side into the darkness.

But this is only one aspect of "going aloft." Another—if the bowsprit and jib-booms may be included under the head of the word "aloft"—is that of laying out to furl, let me say the outer jib, when it has come on to blow hard enough to make the stowing of that sail necessary. From the mast-head you see the ship under you; you can watch her hull flying through the sea, mark the

glorious white of the foam that bursts from her bows and races in a broad band astern, and behold the ship in her noble solitude amid the tenantless world of waters whose pale green skirts lean against the hazy azure of the remote heavens. But on the jib-boom you have the ship rushing at you, as it were; her cut-water seems to bear right down upon you; you see her coppered forefoot gleaming with a greenish tinge through the glass-clear water whose surface it divides into two feather-shaped fountains, whose seething and hissing and prismatic summits arch away from the glossy bends.

And now, as she dips with a glorious rush into the hollow over whose yawning gloom you are poised as you overhang the jib-boom, the half-buried bows break the sea into smoke, and yeast, and snow; the white and hissing mass, splendid with sunshine or rendered more vivid yet by the dark green of the seas along which it is sent rolling, roars and runs ahead of the ship as far as the flying-jib-boom, where its impetus fails and the soaring vessel swings over it, rising almost noiselessly over the thick froth, and in a breath it is passed, while you look down along the sloping deck from the forked-up boom and mark how like a creature of instinct the noble ship seems to be gathering herself together for the next headlong jump, her copper shining to windward, her black sides lustrous as a curried hide with the whirling spray, her leaning masts full of thunder on high, the white sails hard and still as carven marble, no sound reaching you but the regular wash of the spurned and trampled waters under the bows, the rude and clear moaning of the wind in the rigging, and the complaining of massive timbers as the stem of the ship lengthens in a steady upheaval, and then crushes down until the torn and sobbing billows of foam are flashing their white feathers over the head-boards. Or jump aloft to loose, let us say, the mizzen-royal after the tropical squall has gone away to leeward, and left the clear moon shining in a purified heaven of indigo, and striking a cone of silver glory in the dark sea whose northern waters are studded with flakes of light from the great stars. It is the middle watch; you have overhauled your clew-lines, the yard has been hoisted over your head, you come down the top-gallant rigging into the cross-trees, and linger there a few moments. All is silent on deck; the helmsman stands motionless at the wheel; you hear the faint jar of the tiller chains; you mark the delicate nimbus of light round the binnacle hood. Nowhere is the mystery wrought by the magical beams of the moon felt so much as at sea. The pearl-like radiance steps the fabric of the ship in an atmosphere of soft light as illusive as the clouds of phosphorescent fires which break from her sides as she leans with the swell. The movements of the sails are like the flapping of phantom wings; and not a sigh of air, not a sound of chafing rope, not a voice calling suddenly from the distant deck, but seems to take from the moonlight and the measureless and impenetrable spaces of the deep, and the immense and infolding silence of those far-off waters, a character of unreality that makes them seem the very phantasm and mockery of the things they veritably are.

A man might linger a long hour at the altitude of the cross-trees among the shadows of the moonlit, placid ocean night without weariness. Better than the loftiest and loneliest cliff is the mast-

head of a ship for the surveyal of the sublime and mighty surface on which she floats, for you rock in unison with the breathings of the deep; you are upon her great heart, and every beat of it is marked by a stately motion of the towering masts against the stars; phosphoric outlines of huge fish haunt the sluggish wake; or a sound as of a long, deep-drawn respiration denotes the neighborhood of a leviathan whose vast proportions, as they heave in the broad silver stream of moonlight, resemble the hull of a ship keel up, driven to the surface by some hidden power and slowly settling downward again.

These are some of the excitements and some of the quiet pleasures of "going aloft." It is, no doubt, a highly sentimental view of the duty, and sailors who have had to let go the reef-points, and beat their hands against the yards to drive life enough into their fingers to enable them to hold on, may consider that a very different representation of that kind of work would recommend itself a good deal more than this to their experience. Very possibly. But retrospection is apt to make us tender; and since "going aloft" must in the course of time—unless the ship-builders change their minds—become a thing of the past, it is worth while spending a few minutes in trying to discover what there was of poetry and the picturesque in that old obligation of the marine life in the discharge of which the English sailor has always proved a shining example to all mariners. Even now—in these days when the steam-engine has so eaten into our maritime habits that a sailing-ship is looked upon as a kind of wonder of other times—do we not find Jack doing honor to his Queen by standing erect upon the main truck? But, oh! master mariners, mates, boatswains, and able seamen, all you who have youngsters under your charge or among you as shipmates, have mercy upon the timid lad, give him time to feel his way aloft, show him the lubber's hole, and remember that many a first-rate sailor has faltered at the outset, and gazed with horror and despair at those giddy heights whose summits seemed to his boyish gaze to pierce the sky.

A TRICK AT THE WHEEL.

I REMEMBER a seaman, who had served for years both in sailing and steamships, telling me that never in all his life did he remember the like of the impression produced upon him one night when he was at the helm of a large ocean passenger steamer. He described the darkness; the occasional scattering of red sparks blown low down upon the sea on the lee beam; the glimmer of white water here and there out in the windy gloom; the silence aboard the vessel, disturbed only by the muffled beating of the engines and the seething of water washing in snow from under the bows; and he told me how all these things, combined with the thought that under his feet there lay sleeping a whole crowd of men and women, made him feel as though he and the ship and the great wind-swept shadow through which she was speeding, were portions of a phantom world, and that nothing was real and sentient but the compass, whose illuminated card stood out upon the gloom like a compositant at a ship's yard-arm.

I can conceive of many a strange, fanciful thought coming into a sailor's mind as he stands grasping the wheel in the lonely night watch, and I say this with a plentiful knowledge of the seaman's prosaic and unsentimental character. A man must be but a very short way removed from a four-footed animal not to feel at times the wonderful and subduing spell which the ocean will fling over the human soul; and being at the wheel will give him the best chance of yielding to the nameless witchery, for at such a time—in most cases—he is alone, no one accosts him, the gloom falls down and blots out the figure of the officer of the watch, and completes the deep sense of solitude that is to be got from a spell at the helm on a dark and quiet night at sea. I cannot but think that the spirit of the deep is brought, at such a time, nearer to you aboard a sailing than aboard a steam ship. The onward-rushing fabric that is impelled by engines demands incessant vigilance; she may be off her course even in the time that a man takes to lift his eyes to mark a flying meteor; there are no moments of rest. But in a sailing-ship you have the moonlit night and burnished swell heaving up in lines of ebony out of the visionary horizon, where the stars are wanly winking, until it rolls in billows of sparkling quicksilver under the wake of the bland and beautiful luminary; there is not a breath of air aloft, though little creepings of wind circle softly about the decks as the pallid surfaces of canvas swing in and out with the leaning of the ship; the moonlight falls in pools of light upon the planks, and every shadow cast upon those pearl-like surfaces is as black and sharp and clear as a tracing in ink; the after-ports of the sails are dark as bronze, but looking at them forward they rise into the air like pieces of white satin, soaring into a stately edifice full of delicate hurrying shadows which resemble the streaky luster on the inside of an oyster-shell as the cloths swell out or hollow in with the drowsy motion, and crowned with the little royals, which seems to melt, even as the eye watches them, like summer clouds upon the heaven of stars.

Moments of such repose as this you will get in a sailing-ship. Who that has stood at the wheel at such a time but remembers the soft patter of reef-points upon the canvas, the frosty twinkling of the dew upon the skylights and rail, the hollow sob of the swell under the counter as the ship heaves her stern, and the tiller-chains rattle, and the wheel jumps to the echo of the groan of the rudder-head?

It is the middle watch; eight bells were struck a quarter of an hour since; the watch on deck are forward, coiled away, anywhere, and nothing stirs on the fore-castle; the officer on duty walks the starboard side of the deck, for the yards are braced to port, and that makes a weather deck where the mate is pacing, sleepily scratching the back of his head, and casting drowsy glances aloft and at the sea. The moon is low in the west, and has changed her silver into copper, and will be gone soon. The calm is wonderfully expressed by the reflection she drops; the mirrored radiance streams toward you like a river of pallid gold, narrow at the horizon and broadening, fan-shaped, until it seems within a biscuit's throw of the ship, where it vanishes in a fine haze; but on either hand of it the water is as black as ink, while the luster of the

moon has quenched the stars all about her, and left the sky in which she hangs as dark as the ocean.

The setting orb carries the mind with it. The eye will seek the light, and it is a kind of instinct that makes a man watch the sinking of the moon at sea, when there is a deeper repose in the air and nothing to hinder his thoughts from following the downward-sailing orb. Many a time have I watched her, and thought of the old home she would be shining upon; the loved scenes she would be making beautiful with her holy light. There is nothing in life that gives one such a sense of distance, of infinite remoteness, as the setting of the sun or moon at sea. It defines the immeasurable leagues of water which separate you from those you love with a sharpness that is scarcely felt at other times. It is the only mark upon the circle of the ocean, and courts you into a reckoning which there is something too vague in the bare and infinite horizon to invite. As one bell strikes the moon rests her lower limb upon the horizon, and her reflection shortens away from the ship's side as the red fragment of disk sinks behind the black water-line. In a few seconds nothing but a speck of light that glows like a live ember is visible: and when that is quenched the faint saffron tinge that hung about the sky when the moon was setting dies out and the whole circumference of the ocean is full of the blackness of night.

The ship makes but a ghostly shape. The stars are there, but a haze floats like a veil under them; the diamond-dust that glittered in the hollow caverns of the firmament is eclipsed, and the planets are rayless and sickly in their defined and bluish-colored forms. A fold of deeper darkness seems to have swept along in the wake of the vanished moon, and the officer of the watch coming up to the binnacle takes a brief look at the card, and then goes to the quarter and stands there softly whistling, while the canvas aloft echoes with a louder note, and the rolling of the ship breaks the water under her counter into foam that seethes sharply and expires quickly. Black as the water is out on the starboard bow, you notice a shadow upon it that gives a fresh shade, a further profundity, to the jetty obscurity, and in a few moments the sails aloft fall asleep as though the wand of a magician had been waved over the swaying spars and a soft air comes blowing over the rail.

"All back forrards!" rings out a hoarse voice, and the cry finds an echo in the hollow canvas. The mate runs along the deck bawling out orders to flatten in the head-sheets and square the after-yards, and so forth; the men come out of a dozen corners, coils of rigging are flung down, songs are raised, sheaves squeal as the yards are swung, top-sail sheets rattle, and all is bustle and hurry. Meanwhile the wind freshens with a moan in the gathering gust, and the ship leans under it as her headsails fill, and she pays off. Presently the yards are braced round, the vessel brought to her course, and the wind is found to be a point free. The decks are still full of life, tacks have to be boarded, "small pulls" are wanted here and there, and the running gear has to be coiled away; the light from the binnacle lamp puzzles your eye, and when you lift your gaze from the illuminated card the darkness seems to stand around you like a wall; but the compass is there to tell you that the ship

heads her course. You would know with your eyes blindfolded, by the mere feel of the helm, that everything is drawing, and amid the calls of the mate and the songs of the sailors you can hear the sloppy sound of flat falls of water under the weather-bow, and the hiss of exploding bubbles, and the faint wash of froth churned up by the rudder below you.

Two bells are struck, and all is quiet once more. The skipper has been on deck, talked with the mate, pushed his bronzed face betwixt you and the binnacle, and after a few turns and several prolonged looks aloft and around the sea, has gone below again. The wind has steadily freshened, and the ship, under all plain sail, heels amid the darkness like a leaning column of white vapor. So softly she sweeps through the snow with which she girdles her shapely length, courtesying with queenly grace as she runs over the long-drawn undulations out of whose inky coils the wind is striking phosphoric sparks, that she steers herself; you have nothing to do but keep hold of the spokes, and let the breezes blow the noble fabric along. The deep gloom is full of strange sounds now that the seamen are forward, and all is silent aft.

A spirit-like minstrelsy echoes down from the glimmering inclined heights like a far-off chorus of human voices; the wind is full of the mysterious sound. It does not appear to come from the ship, but from a group of invisible ghostly creatures sailing through the air over the mastheads, and setting the moaning voices and sobbing wash of the ocean to melodies which may easily seem to make this darkness belong to the night of a world peopled by phantoms and creatures without similitude in human knowledge. Hark! how plaintive is the song of the bow-wave that falls in an arch of green fire from the shearing stem, and rolls aft in a white swirl, interlaced with fitful and sullen flashes of phosphoric light! But the breeze freshens yet; you cannot count a dozen stars in the void of gloom overhead, the music aloft takes a clearer note, straining sounds are audible as the passing swell rolls the ship to windward, the white water under the main sheet rises closer to the scuppers and flashes fast and far from under the counter into the blackness over the stern. An order is sharply bawled out, and some hands come tumbling aft and jump into the mizzen rigging to roll up the cross-jack. A hoarse song reaches you from the forecastle as the flying-jib down-haul is manned, and at the same moment the fore and mizzen-royal halyards are let go. You hear this canvas flapping in the gloom amid the chorus of the men on the cross-jack yard as they trice up the bunt. There must be no more wool-gathering with you now. The wheel is giving you as much work as you want; every now and again a smart kick stiffens your arms into iron, and you begin to feel that your jacket will have to come off soon.

For some time nothing more is done, but the watch keep on their feet and stand about ready for the next call, which they know will not be long delayed. The sea to windward is full of white glancings, and the breaking heads make a vague light of their own which gives you a sight of the water for some distance. The canvas that has been taken off the ship counts for nothing; the main-royal is still on her, and she is heeling over like a racing yacht, striking

the bow swell with a stem that hisses like red-hot iron, and shattering the coils of liquid jet into foam, which widens out on either hand of her into a storm of snow, in the midst of which the flying hull of the vessel is as clearly traced as were the shadows of her rigging in the moonlight, while her iron-hard distended canvas is full of the low thunder of the pouring blast, and her fore-castle is dark with flying spray that sweeps over the rail and strikes the deck like a hail-storm. It is noble sailing, and this booming and hooting ocean night wind is something to be made the most of while it lasts; but it gives you at the wheel as much occupation as you relish. It is like drawing teeth to "meet her" as the swell sweeps the ship round; and at last the captain, who is again on deck, and who has been standing at the binnacle for five minutes, sings out for another hand to come aft to the wheel. A figure tumbles along in a hurry and stations himself to leeward of you, and thereupon your work, though it is by no means half as easy again, becomes considerably lighter than it was. "Hold on a minute, Bill," says your mate, and he feels over his pocket for a chew of tobacco. The quid found and properly stowed away in his cheek, your companion resumes his grasp of the wheel, and in the haze of the binnacle lamp you may see his leathern jaws working like an old cow chewing the cud as he mumbles over the black fragment, sometimes directing a doleful squint at the compass, sometimes looking astern while he helps you to put the wheel up or down that you may keep the course swinging fair with the lubber's mark.

But the ship was being overdriven. At one bell it was a dead calm; it is not three bells yet, and here is the sea white with wind, and the vessel roaring through the smother with the blasts thundering like a hurricane in the sails—

"In main royal and mizzen top-gallant sail."

The canvas rattles like an old wagon over a stony street as the clew-lines are manned, and while furling it the foretop-gallant halyards are let go. What other sails are taken in you do not know, for the ship wants much clever watching, and the skipper is at hand to bring you up with a round turn if the vessel should be a quarter of a point off her course. Being eased, she steers more comfortably, but whole top-sails and courses and main top-gallant sails are rushing her through it fiercely; the water on her lee quarter is pretty nearly as high as her main brace bumpkin, and the billow there goes along with her as if it were a part of the vessel; the main tack groans under the tearing and rending pull of the huge convex surface of canvas; now and again the blow of the swell which the racing vessel hits laterally makes her tremble fore and aft like a house under a clap of thunder. But she is to have all she can bear; the spell of dead calm is to be atoned for; and so on through the shrilling and echoing darkness rushes the great fabric, sweeping her pallid canvas through the folds of gloom like the pinions of some vast spirit of the deep, making the water roar past her as she goes, breaking the dark swell into fire and foam as she rushes through the liquid acclivities with her powerful stem, with notes of mad laughter and lamentable wailing in her rigging, and with screaming decks which hollowly echo the fall of the solid bodies

of water which shoot up just before the weather fore-rigging, and roll in a rush of creaming white into the lee scuppers as far aft as the break of the poop.

At last you hear the welcome sound of four bells; your trick is up, the wheel is relieved, and catching your jacket off the grating abaft the helm you walk forward, wiping the perspiration from your forehead; and, dropping down the fore-scuttle, grope about for your pipe, which you light at the slush-lamp that swings from a grimy beam, and returning on deck squat somewhere out of the way of the wind and wet, earnestly hoping that if it is to be a case of "reef topsails," there will be time for you to have your smoke out before the order is thundered forth.

THE BAILIFF AT SEA.

SOME time ago I heard that a bailiff had been carried off to sea while in the execution of his duty. Anxious to learn the nature of his voyage, how he fared, and what condition he was in, mentally and physically, when restored to his anxious relatives, I made inquiries, and my diligence was at last rewarded by meeting the mate of the vessel that had sailed away with the man. Truth obliges me to own that this mate was not what might be considered a very gentlemanly person. It was not his velvet waistcoat, nor a rather vicious squint, nor a striking-looking bald head ringed with a layer of red hair like a grummet of rope-yarns; the want of genteelness was noticeable in his abundant use of what is called "langwidge." "If I were a bailiff," thought I, as I glanced at his immense hands and huge arms, which swelled out his coat-sleeves like the wind in a sailor's small-clothes drying in a strong breeze on the forestay, "I should not like to be put 'in possession' of a house occupied by *you*, my hearty."

I took a seat opposite him and said, "So you're the mate of the vessel that stole away the county court man?"

"Right," said he, looking at me, without a move in his face; "but don't you go and say that I'm the mate as gave him up again. If I'd had my way he'd be in charge o' any goods he might have come across in the inside of a whale by this time. I'd ha' chucked him overboard, as sure as that there hand's on this table," and down came a very leg-of-mutton of a fist with a blow that jerked his tumbler into the air. It was as good as a hint that the glass wanted filling; and when this was done, my companion opened the top buttons of his warm and tight velvet waistcoat, and composed himself into a posture for conversation.

"How," asked I, "came your skipper to have a bailiff aboard his vessel?"

"You may ask how," he growled; "what I say is, what right had he to come? I've got nothing to say against the law as it works for them as lives ashore—for them as are in fixed houses, and can't sail away with any blooming old rag of a chap, in a greasy coat, as comes in with a bit of paper, and takes a cheer, and says, 'Here I sit, mates, till I'm paid off.' But what has the likes of such scow-

banks got to do with sailor-men when once they're aboard? What I say is, that when a man's on the water, his chest stowed away, articles signed, all the law that consarns him is in the cabin. The cap'n's the law; and not only the law, but judge, magistrate, bailiff, husher, registrar, High Chancellor, and Lord-Mayor o' London on top of it; and my argument is that any man as takes the liberty to walk over a wessel's side and order captain about, and sing out contrary orders, and threaten to have him purged (I heard that very word. 'Ye'll have to purge for this,' says the bailiff. Did ye ever hear such language applied to a captain?)—any man, I say, as takes such liberty as that ought to be dropped overboard without asking 'by your leave,' and, as I said before, left to take possession of any goods he came across in the inside of a fish or at the bottom of the ocean."

I waited until he had partially quenched his excitement by a long pull at his tumbler, and then asked him again how it happened that his vessel had been boarded by a bailiff.

"I'll tell you," he answered. "The wessel was a brig of three hundred tons. Coming home, she plumped into a schooner. It was the schooner's fault; we sung out to her to get out of the road; instead of doing which she ported her helm as if to provoke us, and in we went, doing her a deal of damage and carrying away our own jib-boom. Well, we arrived in port and discharged, and then filled up again with coal. It was Toosday afternoon, the sky middling dirty, and a fresh breeze of wind blowing. We hauled out and lay at a mooring-buoy, waiting for the tide to serve. I was talking to the captain, when I took notice of a boat coming along, rowed by a couple o' watermen, and a chap in a chimbley-pot hat sitting in the stern sheets.

"'Is that boat for us?' says the captain, looking.

"'Why,' I says, 'it looks as if she meant to run us down. Is it a wager? Bust me if hever I saw watermen pull like that afore.'

"They were dragging on their oars as if they would spring 'em, lying back until nothing but their noses was to be seen above the gunwale, and making the water fly in clouds over the cove in the stern as if prompt drowning was too good for him, and he was to be smothered slow. They dashed alongside, hooked on, and the fellow in the chimbley-pot hat comes scraping over the rail, shaking him-self free o' the water as he tumbled on to the deck like a Newfoundland dog.

"'Just in time, captain,' says he, with an impudent kind o' smile, rummaging in his side-pocket; and with that he houts with a sort of dockiment, and hands it to the skipper.

"'What's this?' says the skipper, smelling round the paper, as it might be, but never offering to touch it.

"'Only a horder for you to return to the bosom of your family,' he says, 'as the date o' your sailing's not yet fixed.'

"'Isn't it?' says the captain, breathing short. 'Who are you, and what d'ye want?'

"'I'm a bailiff,' says the man; 'and I'm here to take charge o' this vessel, pending the haction that's been entered against her in the Hadmiralty side o' the county court by the schooner as ye was in collision with.'

“ ‘Can ye swim?’ asks the captain.

“ ‘Never you mind whether I can or not,’ says the bailiff, looking round at us, for all hands were collected and listening their hardest.

“ ‘Because,’ says the captain, ‘if you can’t swim you’d better turn to and hail that boat to come back again and put ye ashore.’”

“ ‘No, no,’ says the bailiff, ‘I’m not going ashore, my friend. I’m here to take charge o’ this brig and stop her from going to sea.’

“ Had the captain chosen then and there to give orders for that bailiff to be dropped overboard, I believe I’m the man as would have executed the command. Taking the temper I was then in, I don’t know anything that would ha’ given me more satisfaction to perform. The aggravation of being stopped when we were all ready to get away was the least part of it: it was the bailiff’s cool grins, the impudence in his eyes as he looked round, as much as to say, ‘All what I see is mine,’ his taking the skipper’s place and saying, ‘Ye sha’n’t do this, and I won’t allow that,’ that made me want to lay hands upon him. The captain stared at him a bit, as if considering what he should do; then turning to me, he asked me the time. I told him.

“ ‘In another quarter of an hour,’ says he, ‘loose the torp-sails and make ready to get away.’

“ ‘You’d better not,’ says the bailiff; ‘it’ll be gross contempt of court if you do.’

“ ‘Court!’ says the skipper. ‘Court! there is no court here, Mr. Bailiff. This is a brig, not a court. Don’t talk of courts to me. The gross contempt is of your committing. How dare you stand there ordering of me?’

“ ‘Rest assured,’ says the bailiff, ‘you’ll be punished if you don’t do what I say. You’ll have to purge in open court, and that’s a job that may cost ye enough to lay up in the Union for the rest of your natural days.’

“ ‘Stow that!’ says I, doubling up my fist, and stepping close to the fellow; ‘if the captain stands that kind o’ jaw, I won’t.’

“ ‘I’m here in the hexecution of my duty,’ says the bailiff, dropping his confident grins, and beginning to grow whitish. ‘Whatever you do contrary to my orders you’ll do at your peril.’

“ And so saying, he walks right aft, and sits on the taffrail with his arms folded.

“ Never was any quarter of an hour longer than that which the captain told me to wait. I had my watch in my hand, and all the time I was afraid the skipper would change his mind and give in to the bailiff, who sat aft, with his hat over his ears, looking at the shore with his little eyes.

“ ‘Time’s up, sir!’ I bawled to the captain.

“ ‘Loose the torp-sails,’ he sings out; and in a moment all hands were running about, sheeting home, and yelling out at the ropes, being as much afeared as I was that if we were not quick the sight of the dogged bailiff ’ud operate upon the skipper’s hintellect and stop our just rewenge upon that funkshonary’s audacity. The bailiff, seeing the men at work, tumbles off the taffrail and comes running forrards.

“ ‘D’ye mean to say you don’t intend to obey the law?’ he shouts out, holding on to his chimbley-pot.

“ ‘Out of the ways!’ answers the skipper; ‘there’s no room for law here. We’re full up, mate; and since ye’re bound for a voyage, blow your nose and wave your hand to them as ye’re a parting from!’ and, as he says this, the wessel, catching the wind that was coming strong enough to make nothing above our top-sails necessary, lays down to it, and we heads for the open water.

“ ‘I saw the bailiff staring wildly around him, as if he really *would* jump overboard, and it was worth a month’s pay to see him looking like that, and holding his hat on.

“ ‘Why, man,’ he shouts to the captain, ‘you’re never in earnest! d’ye know what you’re a doing of?’ and finding that the skipper took no notice, he calls out to the men, ‘You’ll work this vessel at your peril if you obey your captain. My orders are to stop this brig, and if you don’t allow me to execute my duty—’ But just as he came to this the wessel met the first of the seas which were rolling outside the harbor—stiff seas they wos, for it was blowing half a gale o’ wind; she put her nose into it, and then rolled over, fit to bring her lower yard-arms into the water; away flew the bailiff’s chimbley-pot hat clean overboard, and ye may boil me alive if I didn’t think he meant to follow it; for the send o’ the wessel tripped him over the weather hatch coamings, and he seemed to shoot—ay, as neatly as if he’d been kicked by one of them giants I used to read about when I was a little ‘un—clean into the lee scuppers, where he lay stunned, as I thought, until all on a sudden he jumped up and went clawing along till he come to the lee o’ the after-deck house, where he squatted down, looking with his yaller face and blowing hair like a Madagascar monkey recovering from a fit of intoxication.”

Here my companion broke into a loud laugh, which he repeated again and again, as if the thoughts awakened in his mind were of too exquisite a kind to be dismissed with a single guffaw.

“ ‘I don’t know,’ he continued, after a bit, wiping his eyes, and then fixing his dismal and malignant squint upon me, ‘whether on the whole we should ha’ done better by dropping him overboard.’ The brig was as deep as pretty nigh twice her tonnage in coal could make her; she was a wet boat at any time; but now she tumbled about as if she had made up her mind to drown herself. I reckon she knew she had a bailiff aboard. Every dip forrards threw the water over her head in oceans; she’d roll to wind’ard almost as heavily as to leeward, so that the decks was all awash, and I was looking and hoping all the time to see the bailiff fetch away. But there was enough law left in him to keep him holding on. I was standing to wind’ard of the house—the skipper being aft agin the wheel—when Mr. Bailiff comes staggering round, his breeches clinging to his legs like wet brown paper, and his shoes full o’ water.

“ ‘Halloo, shipmate!’ I sings out, seeing him making for the cabin door, ‘where are you bound to? Aren’t you happy where you are?’

“ ‘I’m going to lie down on one of the lockers,’ says he. ‘I feel half froze, and I shall be sick presently.’

“ ‘You may be half froze and sick too,’ says I, ‘but smother me, Mr. Bailiff, if you shall use the cabin.’

“ ‘Not use the cabin?’ says he, gaping at me, and talking as if there was something in his swaller; ‘d’ye mean to keep me on deck all night?’

“ ‘Don’t ask no questions,’ says I. ‘You’re here by French leave. Nobody wants you. If I had my way you’d be towing astern, with your neck in a bowline; and if all the rest o’ your tribe and the blooming ’tornies you sarve were tailed on in your wake, I’d be willing to woyage round the world, and never grumble if we took years in reaching home.’”

“I was in a passion, which rose my voice, and the skipper, hearing me, comes over.

“ ‘Halloo, bailiff!’ says he, cheerfully, ‘not drowned yet, my lad? What d’ye think o’ the weather?’

“ ‘Captain,’ says the man, ‘you’ve carried me away by force. D’ye mean to freeze me to death by keeping me on deck all night? Your mate here says I’m not to use the cabin.’

“ ‘Why should he use it, capt’n?’ says I. ‘Could a sailor man sit with the likes of him? I’ve messed afore now with Chaney-men; I’ve slept along with Peruvian beach-combers when the air’s been that thick with the smell of onions ye might have leant agin it; but ye may boil me, skipper,’ says I, ‘if ever I occupied a cabin along with a bailiff afore, and if he’s to share that crib along with us, I’ll sleep forrards.’

“ ‘You hear that, bailiff,’ says the skipper. ‘I can’t let my mate live forrards, to oblige you. If you’re cold, I dare say the cook’ll let you warm yourself in the galley. But nobody wanted you here. You were not invited, consequently it’s not for you to grumble if you don’t find yourself perfectly comfortable and happy.’

“But as he says this, Nature fell to manhandling the bailiff as if she’d taken his own trade upon herself, and making one rush he lay over the lee rail so ill that I never saw the equal of it, even in a Frenchman; he twisted himself about just as if he’d been revolving on a corkscrew; the water blowing over the forward weather-rail hit him neatly, and he was like a streaming rag in five minutes.

“We left him enjoying himself and went on with our work. It was falling dark, and not only blowing hard, but there was the look of a whole gale of wind in the south-west sky. The brig was making desperate bad weather of it under lower top-sails and reefed foresail, taking in the water fit to wash every movable thing overboard and shoving through it very slowly with a surprising sag to leeward. The skipper went below for some supper, and after a bit he calls me in.”

“ ‘Where’s the bailiff?’ says he.

“ ‘Don’t know, exactly,’ I says. ‘To leeward somewheres. There’s a figure half over the rail just abaft the fore-rigging, if that’s him.’

“ ‘I’ve been tarning it over in my mind,’ says the skipper, ‘and I’ve got a notion, William,’ says he, ‘that we’d ha’ done better not to bring that bailiff along with us.’

“ ‘But he wouldn’t go ashore when you told him,’ says I.

“ ‘Quite true,’ says the captain; ‘but that won’t make it beftter for us. After all, the law’s not a thing ye can take liberties with, and there’s something in his threat of making me purge in open

court, William,' says he, 'which mightn't matter if I knew what it meant; but, being ignorant, I'm willing to think it alarming.'

"'Pooh!' says I, 'it's only a lawyer's words. There's nothing in it. They use onintelligible words to scare plain men; but there can't be anything more terrifying in language ye don't understand than in language ye do.'

"'I wish I had some book aboard that 'ud explain that word,' says he. 'The bailiff 'll know; but I'll not ask him for fear he should think me afraid. But we can't let him starve. Better send him here and let him get something to eat.'

"'I was going to argue, but he wouldn't listen.

"'No, no,' says he, 'send him here;' and I knew by that that the fear o' the law was beginning to master him.

"Well, it was my duty to obey, so I went on deck, and after rummaging about I found the bailiff sitting up to his hips in water against the scuttle-butt abreast of the galley.

"'Come along,' says I, 'supper's in the cabin, and the captain wants you there.'

"He stood up, but was so cramped in his timbers that he could scarcely shuffle along, and I had to drag him by the collar. When the captain saw by the lamplight the plight the fellow was in, his heart failed him altogether. There was no more proper dignified scorn.

"'Why,' says he, looking at him, 'I didn't think it was such a bad job as that,' and he jumped up and fetched him a suit of dry clothes, and then poured out a dose of brandy. This was regular knuckling under. He had gone on con-sidering and con-sidering until he was in an out-and-out funk. There was no use in my saying anything. The bailiff had growd on a sudden to become the strongest man aboard that brig; though as for me, when I tell you that had I been the captain I'd have sent the fellow aloft, and kept him there all night, as a hint to leave sailor-men alone on future occasions, ye'll allow that *my* caving in wur only because I wasn't skipper, and that's all. Well, sir, to cut this yarn short, luck turned in favor of that bailiff with a wengeance. At midnight it was blowing a hurricane, and the skipper said there was no good going on facing it, he must put back.

"'There's a handier port,' says I, naming it, 'than the one we're from to make for.'

"'Ay,' says he, 'but since we're bound to up keeleg, it'll look better to carry the bailiff slick home than to give him a railway journey.'

"It would have made a hangel growl to hear the captain, all through fear, placing this bailiff afore the werry hurricane that was blowing, and thinking of him only whom he'd ha' gladly drowned a few hours earlier, instead of the wessel and the lives aboard her. But reasoning was out of the question. The brig was just a smother of froth, the gale roaring like thunder, the seas as high as our main-top, and the old hooker shivering with every upward heave, as if she must leave all the lower part of her behind her. It was a job to get the vessel round, but we managed it, and at half-past five o'clock in the morning we fetched the harbor we had started

from and brought up, nothing having carried away but the bailiff's chimbley-pot."

"And what was the result of all this?" said I.

"Why," said he, with a loud, rumbling laugh, "the skipper had to find out what purging in hopen court means. He was brought up afore an old gentleman, who lectured him for about half an hour, said that the law was meant to be respected, and that it would be a bad job for any man as sneered at it; and after having talked out all that lay in his mind, he up and fines the captain ten pounds and fifty shillings costs. It served him right. He'd no business to bring that bailiff back. But he was hoperated on by the fear o' words, and depend upon it the man who allows that sort of alarm to wisit him is not a fit person to carry a bailiff to sea."

OFF THE HORN.

THE passage of the Horn has long ceased to be a thing to boast about. Time was when a man who had doubled that formidable iron headland reckoned he had performed a feat that entitled him to a good deal of respect. This is characteristically shown in "Two Years before the Mast," the author of which dwells at great length upon the struggles of the *Alert* among the ice in latitude 58 degrees south, as though he considered that part of the voyage to be something proper to hand on to posterity in a bulky form. Not so much notice is taken of the achievement nowadays. It still confers privileges; it qualifies a man to "spit to windward," for instance, and no doubt it inspires many a youthful midshipman or apprentice with much big talk and nautical airs in the presence of lads who have yet to see with their own eyes what an Antarctic iceberg is like.

But the passage of the Horn is much too common an occurrence in these days to inflate anything but a boy. In Dana's time a ship was a wonderful object down there; it seemed almost a deserted ocean; nothing was to be met but an old "spouter" jogging along with stump top-gallant masts, and her sides full of boats, or a cargo-ship, with a freight of "notions," bound to the Peruvian or Mexican ports. Now, if it is not so full as the Atlantic, it is pretty nearly as busy; for since those days Australia has grown a mighty and populous continent; towns have sprung up as if by magic along the western seaboard of the Americas; even the little remote South Sea Islands have lent a hand in the thronging of the great Cape Horn highway; and the most desolate, sterile region in the world—such a harsh, forbidding, ice-bound piece of coast as no man who has passed within sight of it can ever forget—is skirted, week after week and year after year, by scores and scores of great steamers and sailing ships, bound west, and east, and north, if never south. The Panama Canal threatens the famous old route; and should that water-way ever be completed, the Horn will probably fall even more out of date than the Cape of Good Hope has. It is not to be expected, however, that even the most ancient mariners will be found to mourn over the desuetude. There are many uncomfortable spots to be encountered in a voyage round the world; but a turn off

the Horn, in the months which we call summer here, probably beats anything in the shape of marine discomforts to be found on the ocean. Of course this is speaking of it as sailors find it—as it is experienced by the men who have to remain on deck, go aloft, stand at the wheel, and whose shelter is a fore-castle with the scuttle closed, and not a dry stitch of clothes to be found by groping.

For it is off the Horn where the galley fire gets washed out, and where, therefore, the streaming and hungry watch below have nothing to eat but what they may find in the bread-barge; where the tears freeze in a man's eyes faster than the most pitying angel of a woman living could wipe them away; where one is glad to keep one's sea-boots on for fear that one's toes may go as well as the boots where they are hauled off; where everything is like sheet and bar iron aloft; where the very cockroaches turn in to wait for the equator, and the hardiest rats are so put to it with frost that they watch in the gloom until a man goes to bed and falls asleep, in the hope of getting a meal off his nose. Unhappily, the Horn does not improve. It blows and snows as hard there now as it did when the old *Wager* rounded it, and when Drake or Anson was rolling among its stupendous combers. Other places are more tractable. For instance, Dana, twenty-four years after he made his memorable voyage, found that the climate off Point Conception had altered, that the south-easters were no longer the curse of the coast, and that vessels anchored inside at Santa Barbara and San Pedro all the year round. No one could have told him this of the Horn. Had he chosen to beat to the eastward or westward a second time, in the months when the attempt was made by the *Pilgrim* and the *Alert*, he would have found the same blinding snow-storms, the same hurtling seas, the same sunless, melancholy sky, the same plunging, washing, straining, roaring tumblification he recorded forty-two years ago. Let the story of a brig of three hundred tons register bear witness to this.

It was in the month of May that the vessel in question was bound to Callao with a cargo of coal, but a strong north-westerly gale had driven her much further to the southward than the captain had any desire to find himself. The gale left them on a Wednesday morning, rolling their yard-arms into it on a real Cape Horn swell. What is there to which to liken these prodigious heavings? The actual altitude of those liquid hills may seem small in comparison with the appearance they present when viewed from their hollows; but whatever may be their height, to lie dipping and wallowing among them in a vessel of the tonnage of that brig is to undergo an experience hardly less formidable than what was devised by the Mohocks, when they shut up old women in empty casks and sent them spinning down Ludgate Hill. What straining and groaning and complaining of the tortured fabric, if it be of timber! Every beam, carling, treenail, transom, knee, stanchion, and futtock lifts up its dismal creaking and wailing voice as the bewildered craft, with her top-sails rattling in the motionless atmosphere, is swung like a pendulum up the shoulder of the swelling mass of green water, leaning down as she goes until she is fairly on her beam-ends, with pots and pannikins, sea-boots and sea-chests, dishes, books, furniture, and whatever else may be inside of her, fetching

away with dreadful noise to leeward, amid a volley of sea-blessings from skipper, cook, and steward, and muffled shouts from the watch below in the fore-castle.

Luckily Cape Horn calms do not last very long; indeed, there is nothing but "weather" down in those regions, and a calm is only a short pause among the gales and squalls while they are considering whose turn it is next. Within an hour from the time of the first gale failing them, another gale from a little to the north-of-west was bowing down the bothered and beaten brig, which, under lower top-sails and foretopmast-staysail, manfully struggled to look up to it with her head in the direction of Cape Horn and her wake streaming away over her weather quarter. It was one of those pictures of storm which are rarely seen in like perfection out of the parallels that divide Terra del Fuego from the South Shetlands—an ocean of mountainous seas, raising each of them a note of thunder as their arching summits crashed from a dark, oil-smooth ridge of green water into huge avalanches of snow; a sky of gloomy slate, along which masses of scud—torn, ragged, and tendril-shaped—were flying with incredible velocity. The horizon was broken with the incessant rising and falling of the pyramidal billows, dark as the night, against a ring of sooty clouds, from which, ever and anon, one would break away, like a winged messenger of evil, whitening and veiling the air with a kind of boiling appearance as it swept its furious and blinding discharge of snow and hail along.

No wonder that in olden times the man who had passed these tempestuous and inclement seas should have considered himself an object of importance. Stand, in fancy, upon the deck of that laboring brig, and survey one of the countless aspects of marine life. The seas are breaking heavily over the port bow of the vessel, deluging her forward and racing aft in a foaming torrent as she sinks her stern to mount the huge surge that almost lays her yard-arms level. The bitter, raw, flaying cold of the wind there is nothing in language to express. The flying spray smites the exposed face like a volley of sail-needles.

Now and again a squall of snow and hail comes along with so much fury in it that it takes the breath away from the strongest of the seamen cowering with their backs to it. The rigging crackles to every strain put upon it like burning wood. The snow upon the yards makes them glimmer like lines of pallid light as they furiously sway against the dismal ground of the dark and rushing sky. There are spears and arrow-heads of ice upon the bulwark rail, upon the catheads, upon the scuttle-butts lashed amidships; and though the seas repeatedly break over them they are always left standing. The helmsman, with his hard fists wrapped up in mitts, rigged out in oil-skins from his head to his huge, well-greased sea-boots, and with the after-thatch of his sou'-wester blown up by the gale, and standing out from his head like the tail of a gull, gets the full of it. Nothing of the man is visible but a fragment of mahogany face showing between the flannel ear-covers of his head-gear, and a pair of watering eyes, which he now and again wipes upon his mitt when a pause in the yaws and come-to's gives him a chance to raise one of his hands from the spokes.

How would some of our summer-water mariners appear beside

that salt-water sailor were they to have stood their trick at the helm on such an occasion as this; gazing to windward as yonder skipper is doing, holding on like grim death to a backstay, with the salt drying in crystals in his eyes; or making one of that oil-skinned group there to leeward of the galley, stamping their boots upon the deck to put life into their frozen toes, ducking as a shriek in the wind warns them of the passage of a green sheet of water over their heads, biting doggedly upon the tobacco in their cheeks, and growling as they reflect that another three hours must elapse before they are privileged to quit the deck and take such warmth and comfort as they may find in the fore-castle, whose darkness is scarcely revealed by the spluttering slush-lamp, and whose beams and stanchions are decorated with draining clothes?

It was already blowing two or three ordinary gales in one, and the lower top-sails were more than the brig could safely stagger under, though the captain held on, since by ratching to the northward he might hope to get clear of the ice, of which, on the previous night and that morning, some monstrous specimens had hove in view. Indeed, at one bell in the afternoon watch, during a flaw in a heavy squall of snow that was blowing in horizontal lines along the sea, they caught sight on the lee bow of the greenish marble-like glimmer of a berg that looked to be a mile long and as tall as St. Paul's Cathedrall. It vanished, but re-appeared broad on the lee beam when the squall passed, and stood out in its complete shape against the smoke colored gloom of the sky over the horizon, where, though it was four or five miles off, the men on the brig's deck could see the white, steam-like haze of the spray that flashed in clouds from its base, and fled past it in eddying volumes, and almost imagine that they heard the thunder of the smiting surges reverberating in the hollows and caverns of the mighty frozen mass. But when it had drawn on the lee quarter another squall blew up and smothered it, and after that it disappeared entirely.

It was at this time that the gale increased in fury, and the sea grew terrible. The weather was enough to blow the masts out of the vessel, and all hands were turned up to stow both topsails and bring the brig to the wind under a small storm-staysail. How is the aspect of that Cape Horn ocean to be described? the rage of its headlong acclivities: the long sweep of olive-green heights, piebald with hissing and seething tracks of foam, blown along their gleaming sides; the hard iron-gray of the heavens, out of which the storm of wind was rushing, bearing upon its wings masses of vapor which it tore to pieces in its fury; and the cold—the piercing, poignant cold—of the gale, with its lashing burden of sleet and spray and hail?

The men had come off the yards after having struggled, each watch of them, for hard upon three quarters of an hour with the frozen top-sails, when the brig shipped a sea just abaft the weather fore-rigging. It was a whole mountain of green water, and it fell in a dead weight of scores of tons upon the deck, beating for a while the whole life out of the devoted vessel, and making her pause, trembling and stunned, in the roaring hollow in which it had found her, while above the thunder of the dreadful stroke could be heard

the crash of breaking wood, of splintered glass, and the rending noise of deck furniture torn from its strong fastenings. A heavy upward send drove the water off the decks, and all hands were found to be alive, holding on like grim death to whatever was next them; and then it was seen that a long range of the weather-bulwarks had been torn down flush with the deck, the cabin skylight broken into shivers, the long-boat amidships stove, and nothing left of the port quarter boat but the frame of its keel and stem dangling at the davits. The loss of the two boats was a bad job, but still worse was the terrible straining the deeply freighted vessel had undergone, and the destruction of the skylight, that left the cabin open for the floods of water that rolled along the deck. The benumbed and half-frozen crew turned to to secure what remained of the skylight and to cover it with tarpaulins; but while they were in the midst of this work the brig gave a heavy lurch, which made the men believe it was all over with her; and before a single cry could have been raised, a portion of the weather fore-rigging carried away, and in a trice the foretopmast broke off at the cap, and fell over the side—a horrible muddle—with all its raffle of sail, yards, and gear.

The early Antarctic night was now drawing down over the furious sea, and it was already so dark that the men could hardly discern one another's faces. Some active fellows sprang forward at the risk of their lives to cut away the rigging, and release the wreck alongside before the yards upon it should pierce the brig's bottom; and this being done, the helm was put hard up, with the idea of wearing ship, in order to secure the foremast. But the storm-fiend had marked this unhappy brig, and the successive blows came thick and fast. Scarcely was the wrecked spar sent adrift and the helm shifted, when all the rest of the port fore-rigging carried away, and the foremast fell down, carrying with it the bowsprit, main-topmast, and a portion of the port main-rigging.

By this time it was as dark as the bottom of a well; the brig wallowed before the seas with a mass of wreckage over her side, pitching miserably in the fearful hollows, and huge surges curling their white heights around her. A man had need to be a seaman, indeed, and to have a seaman's heart in him too, to act at all in such a moment as this. The full extent of the mischief could not be guessed. Nothing was certain but that the brig was dispossessed of all but her main-mast, and that there were some heavy spars over the side, pounding at her like battering-rams with every hurl of the raging seas. The first business would be to get clear of this mischief, and the men went to work with their knives, feeling for the lanyards and hacking and cutting with a will. Darkness gives a peculiar horror to disasters of this kind at sea. In the daylight you can see what has happened; you can use your eyes as well as your hands and make dispatch, and the worst is evident. But the darkness leaves everything to be guessed at. You shout for help for some job too heavy for you, and it does not come. The outlines of the sea grow colossal by the illusion of the faint light thrown out from their breaking crests; you cannot perceive the flying water so as to duck away from it, and in a breath you may find yourself overboard. It is all distraction and uproar, loud and fearful shouting,

and blind groping. When at last the wreck was cleared, the vessel seemed little better than a sheer-hulk, nothing standing but her main-mast, upon which the main-yard swung helplessly. That she should have lived through that long and fearful Antarctic night, the seas combing over her, icebergs in her vicinity, and draining in water with every roll, must count among the miracles of the deep. Her people had discovered that the main-mast, having little to support it, had worked loose, breaking away the mast-coamings, and starting the planking all around it; so that through this large aperture the water poured into the hold in torrents. The port pump had been disabled by the fall of the masts, and the only other pump was manned and worked with such energy as dying men will put into their arms; but in less than an hour the coal choked it, and now nothing remained but to lighten the vessel by throwing the cargo overboard and baling with buckets. All through those black and howling hours, amid freezing falls of water, and in the heart of the raging Cape Horn storm, this severe labor was pursued, so that when the bleak and melancholy dawn broke upon the desolate ocean it found the brig still afloat, and the brave hearts in her grimly fighting death, though faint, famished, and frozen. Help came shortly before noon. A sail was made out heading dead for the wreck, and by the time she was abreast the wind and sea had so far moderated as to enable her to bring all the men safely off. It was not a moment too soon, for twenty minutes after the crew had been transferred to the ship the brig was observed to give a heavy lurch, and so lie on her beam-ends, never righting, but slowly sinking in that position, so slowly that after her hull had vanished her main-mast remained forking out like the lifted arm of a drowning man.

When this story was told me I could not help thinking of what the Horn route was in Dana's time, and the very small chance that brig's crew would have had for their lives had her name been the *Pilgrim*, and had she been seen beating to the westward forty years ago. Certain it is, that however ships may come and go, and change the nature of their material and the form of their fabrics, the weather in the Pacific down there is very much what it was in Anson's time, and as it has been, in all probability, since the creation of the world. Other climates may vary in the lapse of ages, and south-easters may in places be found to work themselves into north-westerns. But the Horn remains always the same harsh, tempestuous, frozen headland, echoing at this hour the hurricane notes which reverberated over it centuries ago, and grimly overlooking the stormiest space of waters in the world. Who, then, does not hope that the final construction of the Panama Canal may abridge the bleak and ice-bound horrors of that point of continent which looks on the chart to stretch its leagues and leagues of tongue into the very heart of the Southern frozen waters? To be sure, the passage of the famous cape has long since ceased to be a wonder; but none the less is it full of perils to vessels which, like the brig I have written about, are at the mercy of the monstrous seas and furious gales of that formidable tract of Pacific waters.

A STRANGE CHASE.

ONE is sorry to hear of the growth of the very un-English habit of sheering off and scuttling away after a collision. The first duty of a ship-master who plumps into a vessel or is run into is to stand by, if the condition of his ship will permit him, and render all the assistance in his power. There is nothing more despicable and cowardly than running away after a disaster of this kind. We know what came of such conduct in the case of the *Northfleet*; and week after week one reads in the shipping papers how such and such a vessel was run into, and how the other ship made off, and how so many people were drowned in consequence. Darkness, that is fruitful of collisions, is also, unhappily, favorable to these mean and unmanly escapes. At night it mostly happens that the utmost you can tell of the vessel that comes grinding into your ship is that she is big or little, a steamer or a sailing-vessel, and rigged in such and such a fashion. The letters on her name-board cannot be deciphered; she will not answer your hail; and her reply to the melancholy shout of "For God's sake don't leave us! we believe we are sinking," is to shift her helm and vanish in the gloom. The obligation to record such casualties in the log-book, or to depone to them before receivers of wrecks, does not, it is to be feared, always imply the sort of accuracy that would be useful to sufferers. From time to time a buoy is sunk, a light-ship run into, and the Trinity Corporation offer a handsome sum of money for information, but without avail. The absence of all reference by shipmates to such occurrences must make one hope that they are mainly the work of foreigners. But whatever the flag under which a captain sails, his sneaking away from a disaster in which he has had a hand expresses a species of cowardice that presses heavily upon the humbler order of ship-owners. A little coaster is run into by a fine large vessel, which stops a minute or two and then proceeds. The master of the coaster may be her owner, and all that he has in the world is in his little ship. She is not sunk, but her masts are over the side, and she looks as if she had been for some hours under the guns of a fort. Whether or not the master be to blame for the collision, he is pretty sure to consider that the fault was not his; and his hardship is, that while he stands a chance of being ruined, he is unable to discover the name of the ship that ran into him, so as to be able to bring her owners into a court of justice, and take his risk as a litigant.

I was amused and interested some time since by hearing the story of the resolute behavior of Mr. John Whitear, master of the schooner *Jehu*, a vessel of about one hundred and fifty tons. Giving chase, if you can, is one way, at least, of clearing up the mystery of the paternity of an offending ship that sneaks off in the darkness in the hope of saving her owner's pocket. Anyway, Mr. John Whitear's conduct illustrates a spirit pleasant to come across in the homely prosaics of the marine life of to-day. Eighty and a hundred years ago it was men of the stamp of Mr. Whitear who commanded Brit-

ish privateers—otherwise how should the maritime memorials of that kind of vessel be so full as they are of the unflinching obstinacy and the grim courage which followed the fleeing enemy over leagues and leagues of ocean, through storms and through calms, finally overhauling and boarding the breathless chase in latitudes so remote from the point of departure that the span between the two places might even now be reckoned a long voyage?

Not very many days ago, then, the *Jehu*, with two hundred and thirty tons of coal aboard, was quietly jogging along on her way to her port of destination. The afternoon had been fine, and the night came down very clear and bright, with starlight. The water was smooth, though a merry wind was blowing, and the little vessel, under easy canvas, lay softly leaning in the gloom, with the white water rippling and crisping past her sides in a hollow, brass-like tinkling. Starlight gives beauty even to a coal-man; and I have known stump top-gallant masts and sails yawning upon sheets hard upon a fathom from the points in the yard-arms through which they lead, make as dream-like and dainty a picture in the tender sobering shadows of the night as the tall and tapering rig of the handsomest yacht now afloat.

At all events, the *Jehu* was Mr. John Whitear's sea-home, and as he paced the weather side of the deck, sometimes squinting into the windward darkness where the loom of the land hung low upon the vague, grayish softness of the water that way, or sometimes aloft where the stars, like so many benign and encouraging eyes, were tipping him cheerful winks through the black squares in the shrouds, and over the main-gaff, and among the dim tracery of the standing and running rigging, whose heights seemed to bring near the sweeping infoldment of the glittering heavens, as though the vast star-laden shadow were revolving, and was weaving its circling burden of gloom closer and closer yet round the lonely schooner journeying slowly along with a bell-like resonance of broken water around her, he was no doubt as well satisfied with his little hooker as the captain of an ocean steamer could be with his stately ship.

His pipe being smoked out, the weather looking as steady as a church, and all being well in every possible sense of that marine expression, Mr. John Whitear thought that no harm could come of his going below for a spell to take some rest. Accordingly, after exchanging a few words with his mate, and taking another good look to windward and then aloft, he walked to the companion and disappeared down the steps. But instead of going to bed like a landsman he kept on his boots and his coat, merely removing his cap as a preliminary to turning in, and stretching himself upon a locker, within easy hearing of the first shout that should come down through the companion, he closed his eyes, and was presently contributing to the other creaking sounds raised in the plain and quaint little cabin by the occasional movements of the *Jehu*.

How it came about he could not say, not having been on deck at the time; but while he lay dreaming such peaceful dreams as should visit a master-mariner whose whole professional life is dedicated to the careful attention of the three L's, he was suddenly aroused, and in some measure startled, by a loud and fearful cry in the companion of "Below, there! here's a bark running into us!"

Fortunately, Mr. Whitear had no occasion to stay to dress himself; in a breath he was up the ladder and on deck. The first thing he saw was a large bark on the port bow, apparently paying off, having just gone about. Fresh as he was from a deep sleep, Mr. Whitear had all his wits about him in a moment; and he immediately perceived that, let him do what he liked and shout as he would, a collision was unavoidable. The bark loomed up large and massive in the darkness. Her lights were as plainly to be seen as the stars, while the *Jehu's* burnt as brightly. The wind had freshened somewhat, and both vessels were heeling under it. All was silent aboard the bark, not the least sound could be heard, and in that thrilling and breathless moment all other noises took a startling distinctness—the washing of water, the creaking of spars, the squeak up in the darkness of a sheave upon a rusty pin. There is no sensation comparable to what is felt in the few minutes which elapse between the approach and shock of two meeting vessels. A railway collision gives you no time. If by chance you look out of the carriage-window and see what is going to happen, before you can sing out the thing has come and is over. But a collision at sea furnishes you with leisure to think, to anticipate, and to make an agony of the disaster before it actually befalls you. Whichever way the helm of the *Jehu* had been jammed would have been all the same; the bark was bound to come, and in a few moments there she was, with her bows towering like a cliff over the low bulwarks of the well-freighted *Jehu*, her jib-boom and bowsprit arching across the little schooner's deck like a great spear in the hand of a giant.

The *Jehu* heeled over under the blow until the rail of her star-board bulwarks was flush with the water. The men came skurrying, half-naked out of the fore-castle, thinking she was sinking, and rushed aft to be out of the way of whatever might tumble down from aloft. You heard the grinding noise of crushed wood, the thud of falling gear, the tearing of canvas. The weight of the bark, that was a big vessel in ballast, swept the stern of the little *Jehu* to windward, rounding her in such a manner as to free them both. But by this time there was plenty of noise and activity to be noted aboard the bark. Orders were rattled out in plain English, and you could hear the scampering of feet and the songs of the seamen as they ran to and fro and pulled and hauled. She heeled over like a great shadow, with her main-yards square and her fore-sheets flattened in. It was impossible to know what mischief she had done; and, running to the side, Mr. Whitear shouted to her at the top of his voice to stand by them, as he feared the schooner was sinking.

No answer was returned.

“They're leaving us!” cried the mate. “Look! they're trimming sail—they're swinging the main-yards.”

Again Mr. Whitear bawled to them not to abandon the schooner, but no answer was vouchsafed, and in a few moments it was not only seen that she was leaving them, but that she meant to get away as fast as she could, for they loosed their foretop-gallant sail and main-royal, and sheeted the canvas home with all expedition.

Under such circumstances most men would have contented themselves with bestowing a sea-blessing on the stranger, and then

turned to to sound the well, and, if the schooner was leaking fast, get the boats over. But Mr John Whitear was made of the old and, as some people might think, the right kind of stuff.

"Bill," says he to William Dart. A.B., who was at the wheel, "keep your eye upon that old catermerang while me and the mate overhauls the schooner. Follow her without a wink, William, for if there's a creak left in this old bucket we'll stick to her skirts and have her name, though she should go all on sailing till we comes to Australey."

Forthwith he and the mate went to work, sounded the well, looked over the side, peered at the damage done aloft, and then coming aft again, "She's tight, and she's right, boys," said Mr. Whitear. "Now, bullies, here's a mess that's to cost some one pounds and pounds. That some one's not to be John Whitear; so, William, starboard your helm, my lad; and the rest of ye all turn-to and make sail forrard, every stitch ye can find, and then we'll repair the main-rigging, and get a new main-sail bent;" for he had discovered that the bark's jibboom had cut through the center cloths of the main-sail, ripping it open from the head to the second reef-band as neatly as if a sail-maker's knife has done the job.

They all went to work with a will, putting uncommon agility into their limbs and spirits by calling the shadow ahead many hard salt names, and swearing they would catch her if she carried them into the Polar regions. The labor was severe, for there were not many of them to "turn-to;" nevertheless, they managed, in a time less by three-quarters than they would have occupied on any other occasion, to repair the damaged shrouds, set up preventer back-stays, bend a new main-sail, and cover the little vessel with canvas. The bark was close-hauled, three or four miles ahead, on the port tack, lying over, as a light vessel will in such a merry breeze as was then blowing, under both royals and gaff-top-sail; she was trusting to her heels, and running away like a big bully from a little man whom he has accidentally hurt, and is afraid of. Her people would probably ridicule the idea of the deep-freighted schooner chasing them; indeed, they had left her apparently helpless, her port main-rigging hanging in bights over the side, her main-sail in halves, and the whole fabric looking wrecked and stunned from the shock of the collision.

Meanwhile, Mr. John Whitear stumped the quarter-deck of his little craft, often pausing to point an old leather-covered telescope at the leaning shadow out away under the low-shining stars just the merest trifle to leeward of the lee knight-head, and then cocking the glass under his arm afresh, and swinging round with a sharp, obstinate stamp of the foot to resume his walk.

"Boys," he sung out, "there's no occasion for the watch below to remain on deck."

"No, no," was the gruff answer; "there's no going below till we've found out that vessel's name."

The wind came along with a fresh, strong sweep, and a deep moan in the gusts as they blew over the bulwark rail into the hollow glimmer of the great main-sail; there was a kind of flashful light in the breaking heads of the little black surges, and a regular rise and fall of fountain-like sound from forward, where the stem of

the driven schooner was hissing through the dark water, and the wake ran away astern like a snow-covered road, until, looking at it, you seemed to see the dark water on either side stand up as if the white vein were the frothing stream of a cataract rushing into darkness betwixt the shadows of hills.

"Why, smother me, if she's not got the scent of us!" suddenly cried Mr. Whitear, with the glass at his eye; "she's off three points, and there's no luff left in her! Boys, did any of you take notice if she had her stunsail-booms aloft?"

"No," answered William Dart, "her foreyards were just up yonder" (pointing into the air), "an' I'll take my oath she'd got no booms on 'em."

"Then we'll run her down yet; we'll have her!" cried Mr. Whitear, fetching his knee a slap that sounded like the report of a pistol. "Keep her away a bit; ease off the sheets fore and aft. Hurrah, my lads! the *Jehu* knows the road! We'll weather the sneak, boys!" and so he rattled on, sometimes talking to his men, sometimes to the schooner, and sometimes addressing the bark ahead.

Shortly after two o'clock in the morning, however, four or five sailing-vessels hove in sight and bothered Mr. Whitear exceedingly, for there was a chance of mistaking the chase among them and pursuing the wrong vessel. All hands were implored to keep a bright lookout, and the glass was now much more often at the skipper's eye than under his arm. It is strange enough to think of a little collier with two hundred and thirty tons of coal in her bottom pursuing a vessel three times her size. It might really pass as a most satirical travesty of the old maritime business, were it not for the very strong commercial instincts at work in it. The purse was always as great a power on sea as on land, and the flight of the big bark from the little coal-man was only another illustration of its supremacy.

To the great satisfaction of Mr. Whitear, the schooner turned out to be more than a match for the cowardly runaway. It was quite clear that the bark had no more sail to set; as it was, she was bowling along under a press of canvas that must have made her decks mighty uncomfortable, to judge from the sharp angle of her inclination. Had she chosen to put her helm up and bring the wind well aft, she would no doubt have walked away from the schooner, whose fore-and-aft canvas then would not have much helped her. But the bark could not forget that she had to work her way to windward, and that her port lay north-east and not south-west, and though she might slacken away her lee braces in the hope of making the obstinate little schooner give up, it would not answer her purpose to do more than that.

Inch by inch the *Jehu* crawled up to her. Just before daybreak the wind breezed up like a squall, though the sky was clear, and Mr. Whitear, who all through the night had watched the chase with the intentness of an old British commodore following a squadron of Frenchmen, shouted out that she had taken in her royals and gaff-topsail, and that, as it was, she was nearly out of water to windward. But not so much as a rope-yarn was touched aboard the *Jehu*; she had never been so pressed since the hour that she was launched. She hove up the foam as high as the head-boards;

every bone of her trembled; the wind boomed away from under the foot of her sails in a thunder-note, and the sheets and weather standing-rigging stood like bars of iron. There seemed as much eagerness in her shivering, rushing frame as in her skipper, whose excitement deepened as the square and leaning shadow ahead loomed bigger and bigger. Earnestly was it to be hoped that the port main-rigging would stand all this straining; and yet such was the temper of the captain, and the men of the brave little *Jehu*, that I believe, had the main-mast gone overboard, they would have held on after the bark with a single spar; just as I once saw a man with one arm and a wooden leg give chase to a rogue who had sneered at his misfortunes.

The faint gray of the dawn was in the sky when the bark was brought to the wind again, and, after holding on for a short while with a close luff, went about. Before she had her fore-yards braced round the schooner had stayed, and was on the starboard tack, savagely breaking the quick seas, which were rolling in the wake of the wind, and finding all the advantage she needed in the weathering she had made upon the bark, who, with the rising of the sun, appeared to lose all heart, for no more sail was made, and when she was braced up she was kept so close that the weather half of her foretop-gallant sail was aback. The white sunshine that had flung a deep blue over the stars, and transformed the ocean into a tumbling green surface full of sparkles and white lines, and a horizon so clear that it was like the sweep of a brush dipped in bright green paint along the infolding azure of the morning sky, gave stout-hearted Mr. John Whitear a good sight of the tall vessel he had been chasing all through the middle and morning watches. She was what he called "a lump of a bark," so light that half her metal sheathing was out of water, with very square yards and a main skysail-mast, and she tumbled with such unwieldy motions upon the running seas that it seemed no longer wonderful that the *Jehu* should have been able to weather and fore-reach upon her. Her way was almost stopped by the gripe of her luff, and within an hour of the time of her going about the schooner was on her weather-quarter.

Mr. Whitear, had already deciphered her name upon her stern; but he had some questions to ask, so, jumping on to the rail and clawing a backstay with one hand while he put the other hand to his mouth, he bawled out, "Bark ahoy!"

"Halloo!" was the answer.

"What's the name of your vessel?" sang out Mr. Whitear.

"Have you forgotten how to read, skipper? It's under your nose," came the reply.

"You're the bark *Juno*, of Maitland, N. S.; that's clear enough on your starn," shouted Mr. Whitear, whose temper, inflamed by the long pursuit, was not improved, as may be supposed, by this reception; "and you're the vessel that ran into us last night, and carried away our shrouds and braces, and running-gear, the main-rail, top-gallant bulwarks, and split our main-sail."

"No, we ain't," was the reply. "We know nothing of the job you're talking about; so sheer off, will ye, and take care to spot the right party afore letting fly."

Without answering, Mr. Whitear shifted his helm so as to bring his vessel to leeward of the bark; and then, running forward, when the schooner had forged abreast of the other vessel, he shouted to the man who had answered his hail to look over the port bow of the bark and there he would see the marks of the schooner's chain-plate bolts, while further evidence of the bark being the culprit lay in particles of her planking adhering to the *Jehu's* chain-plates. This was too decisivve to admit of further denial; and Mr. John Whitear, having obtained all the information he required, walked aft again, once more shifted his helm, saluted the bark with a farewell flourish of his fist, and then gave orders to his men to trim sail and head for the port to which they were bound.

A SALVAGE JOB.

AMONG the most picturesque and lively incidents of the sea are those of the encountering of abandoned vessels, and the struggles of the people who board them to carry them into port. Were it not for the imperative injunctions of owners, and the various obligations imposed upon ship-masters, by the terms of charter-parties, policies, and the like, there is no doubt that we should hear very much oftener than we now do of the preservation of derelicts and their cargoes. The mariner often stumbles upon some substantial prize in this way: A ship is sighted, low in the water, with nothing standing, perhaps, but the stump of her foremast. A spell at the pumps eases her, she is overhauled, and her hold seen to be full of valuable cargo. She is taken in tow, and after several days, or perhaps weeks, of maneuvering, she is carried into port and found to be worth some thousands of pounds, a goodly portion of which goes to the men who navigated her into a place of safety. There is a touch of romance in such findings that never fails to render them amusing and even exciting reading; and as stories they are often rich in a high kind of marine characteristics.

One of these yarns, I remember, impressed me greatly at the time. The master of a vessel, called the *Fides*, sighted a Dutch bark water-logged. On approaching her only one man was to be seen on board. He proved to be the skipper, who said that his crew had refused to remain by the vessel, and had left him alone in her. He was brought aboard the *Fides*, but had not been there ten minutes when he begged to be sent to his water-logged bark again. His entreaties were so moving that the captain of the *Fides* yielded, and he was once more put in possession of his wreck and left there. Next day a vessel, called the *Ballater*, took him off, and the wonder was that the poor fellow had ever managed to keep his life on the deck of the wave-swept hulk. Here, in the most obscure form in the world, is an exhibition of the sailor's loyalty to his ship so great as to make a truly heroic figure of that Dutch captain.

Narratives which recount the meeting with derelicts and their conveyance to port often reveal some of the best qualities of the sailor—I mean his indifference to peril, his capacity of determined

labor, his triumph over forces whose antagonism would leave most landsmen helpless and hopeless. Such was the story of the *Caledonia*, a prize crew from which took charge of the brig *Emily*, and, after ten days of fierce battling with violent gales of wind in a vessel jury-rigged and half full of water, were eventually forced to abandon her. Such was the voyage of five men in the derelict bark *Thor*, of Tvedestrand, laden with scrap-iron and oil-casks. They had to rig a jury-rudder to get her to sail, and for nearly a fortnight struggled with heavy weather and baffling winds, eventually being shipwrecked near Youghal, and narrowly escaping with their lives only to witness the craft they had desperately labored to save go to pieces among the rocks.

Not very long since a ship-rigged vessel of nine hundred tons was proceeding on her voyage to one of the West India Islands. The weather had been calm and thick through the night, with a long swell rolling up from the westward, and the morning broke with a fiery sun, red as that luminary is at his setting, and a mountainous heave of the sea that in the wake of the orb rolled in billows of molten gold, giving a kind of dreadful splendor to the hazy morning, with its faint and tarnished sky, and the sickly green of the swelling and foamless deep, and the stubborn belt of haze that hung like the grayish shadow of rain upon the horizon, save where the sun loomed like a blood-red shield as he floated heavily out of the deep. There were a hundred signs to betoken a gale at hand, and preparatory measures were accordingly taken aboard the ship. All the light canvas and the main-sail were furled, and single reefs tied in the top-sails. Never was such rolling. The draught of air had no weight to steady the vessel; she fell into the hollow of the swell, and from side to side she swayed as each ponderous liquid fold caught and hove her over, the water busting in-board in smoke through her scupper-holes, the shrouds creaking with the tension of the strain as though they would draw the chain-plates like pliant wire, and every beam, strong fastening, and bulk-head added their groaning notes to the general clamor of the laboring hull and the beating canvas. By nine o'clock the sun had vanished under an expanse of slate-colored cloud that hung over the whole surface of the deep; but yet another hour elapsed before the gale burst, and then it came along in a voice of thunder, and over a surface of milk-white waters. With the upper top-sail halyards let go, and hands by the lower top-sails sheets, the ship leaned down to it until the foam was up to a man's shoulders in the lee scuppers; but they managed to get her to pay off, and presently she was speeding like an arrow on the wings of the tempest, piling the foam as high as her figure-head, her main-top-sail blown in rags out of the bolt-ropes, and sheets of spray fogging her decks like bursts of vapor from a boiler.

The next thing to do was to bring her to the wind before the sea rose; the crew went aloft to stow the top-sails and trap what remained of the main-top-sail upon the yard; and after a little there was the ship with nothing on her but a small storm-trysail, bowing and shearing at the huge surges which the storm had lifted in cones and pyramids, and which were now pouring and breaking with a terrible roaring noise. All day and far into the night the storm

blew without intermission, but it broke in the middle watch, and then fined down so rapidly that at eight o'clock in the morning the ship was pursuing her course under whole top sails and top-gallant sails, and courtesying over the long heave of the sea, whose green seemed to sparkle after the purification of the tempest, and whose beautiful arching coils were brilliant with the diamond-like flashing of the foam chipped out of the emerald acclivities by the keen teeth of the clear, fresh northeast wind.

Shortly after noon the watch on deck had come out of the fore-castle after eating their dinner, when a small brig was made out right ahead, apparently standing athwart the ship's hawse. On approaching her it was seen that she was drifting, and that though there might be people aboard, she was not under control. Aloft she was in a state of great confusion, her fore-yards squared and her after-yards braced as wildly as the leaches of the canvas would allow. The davit falls were overhauled to the water's edge, and all the boats were gone. Here and there ends of her running-rigging trailed overboard, and as she rolled heavily in the trough of the sea the sound of her flapping canvas threw a wild and melancholy echo athwart the breeze. The master of the ship loudly hailed her, and all eyes were eagerly fastened upon the brig to observe if there were any indications of life in her. Possibly nothing so heightens the mournful and tragical suggestions of an abandoned vessel as the loud hail of a passing ship and the death-like stillness following, unbroken save by the hollow beating of canvas, the drowning sob of swelling water, and the creak of straining timbers.

It was very evident that nothing alive was in the brig, and the master of the ship, after consulting with his mate, decided on sending a boat. Accordingly, the second mate and a couple of seamen went over the side, and, after some hard rowing and careful dodging of the seas, they gained the brig and scrambled upon her deck. They found that she was damaged to an extent that could not be imagined by inspection of her from the ship. Her galley and cabin skylights were smashed in, bulwark stanchions were started, and, in addition to various other injuries, there were three feet of water in the hold. Whether she had drained this water into her from the deck, or whether it was due to a leak, could not at once be ascertained; it was certain at least that her hold was full of cargo, and that it was of a nature that would not enable her to float should the water gain upon her. These facts were reported by the second mate, who added that he could find no papers belonging to the vessel, and that she had been stripped of all her provisions.

"It seems a pity to leave her knocking about here," shouted the captain. "It'll be another man's job if we don't tackle it. Do you see your way to carry her to Fayal?" then distant about four hundred miles.

The second mate conversed with the two men who were with him, and, after a little while, called out, "Ay, we'll risk it."

On this the two seamen were ordered to come along-side, when some provisions, water, a sextant, chart, and other needful articles were lowered into the boat. With these they put off, receiving a loud, encouraging cheer from the rest of the ship's crew; and, on

reaching the brig's side, hoisted out the provisions, and hooked on the boat and dragged her up to the davits. The ship stood by for a while, watching the plucky fellows, and perhaps suspecting that they might repent their undertaking, for even with a dry bottom the brig might have been reckoned a big navigating job for three men. She rolled heavily and continuously, her canvas striking the masts with loud reports, and making the light spars buckle, and as she lifted her shining sides out of the bright green seas the water was seen to gush from her bulwarks in a manner to prove the wrenching they had undergone from the recent tempest. There was no show of misgiving or repentance, however, on the part of the men. Having hoisted their boat they turned to and trimmed the yards, clapping the jigger on to the top-sail halyards, and giving everything a good spread. The little vessel took the wind, slightly heeled, and came round to her course for the Western Islands, and the last thing the ship, as she filled and stood on her voyage, saw of the brig was the second mate at the wheel, the two men toiling at the brake-pump amidships, and the little vessel under fore and main top-gallant sails heavily swinging over the long ocean swell, throwing the foam from her deep, round bows, and looking but the merest toy amid the vast surface of undulating waters which leaned away into the furthest reaches of the sky.

A crew of three men leaves, with one at the wheel, only two to do the ship's work. Four or five seamen would not have been too many to handle that brig's main-sail alone, and a gale of wind might therefore oblige the second mate and his two companions to put their helm up and run for it, and leave the canvas to blow away with a blessing upon it before they could bring the vessel to. Four hundred miles seem but a short voyage nowadays; but a head-wind might enlarge the period of such a journey into weeks, in which case, unless these men met with help—which, though very likely, was by no means certain—they were bound to perish of starvation, as the quantity of provisions supplied to them by the ship could not, however economically used, outlast four or five days. It is just because a sailor would keenly understand all the heavy risks and difficulties comprised in such an adventure as these three men had engaged in, that the courage implied in this and many other attempts of the same kind to save property found at sea deserves a good place in the annals of naval heroism. A half-hour's spell at the pumps satisfied them that by regular application the water might be kept under, though there could be no longer any doubt that the vessel was leaking, either from a started butt or some puncture below the water-line. A tarpaulin was found and secured over the broken skylight, as a provision against dirty weather; the galley fire was lighted and the decks cleared up, and there being an old reel-log near the wheel, along with a sand-glass, they managed among them to heave it—the second mate at the helm holding the glass—and discovered that the brig was making a little less than four knots. But the weather kept fine, and this supported the men's courage, as did also their assurance one to another that they were bound to be well rewarded for the risks they were running. They had another spell at the pump, and then fetched a bit of the ship's beef that had been put to cook in the galley copper, and bringing it

aft with some biscuit, made out a tolerable meal, the mate steering with one hand and eating with the other.

The day passed quietly, but the wind was light, and the progress made was small. The duty of keeping the pump going at regular intervals grew exhausting, but it was absolutely necessary that the quantity of water should be kept under the depth found in the brig when she was boarded, and every hour throughout the day the harsh clank of the pump might be heard, ceasing after an interval, when the men, pale with fatigue, and with the sweat streaming from their faces, flung themselves upon the deck breathless and spent. The breeze freshened at sunset, and the top-gallant sails were taken in. The night came down very dark, with a few misty stars here and there, and a flavor in the swing of the wind as it blew in gusts over the bulwarks that was a promise of bad weather. The weight of the water in the little vessel, coupled with the cargo, that came flush with the main-hatch, sunk her deep, and as the sea rose her behavior grew wild. The billows tumbled against her weather-bow, and such was her inelasticity that at times she would not rise to them, but let them roll over her fore-castle, burying herself pretty nearly as far aft as her fore-mast, and flooding her decks to the wheel.

Fortunately her upper works were stanch, or she must have been drowned again and again by the seas which tumbled in tons' weight over her head. The men made shift to stow the upper top-sails before it came on hard, but they could do nothing with the lower canvas, which must blow away if it would not stand. This the fore-top-sail did shortly after ten o'clock in a squall of wind; the weather-sheet parted, and in a few moments the sail was in rags, increasing the roaring noise of the gale and the crashing sound of the sea by the fierce whipping of the tattered cloths.

Amid all this confusion and wild scene of the black heavens and glimmering heights of water the men betook themselves again and again to the pumps, and the metallic ring of the working brake flung a dismal note of shipwreck into the harsh uproar of the war-ring elements.

It is difficult to realize a sterner picture of struggle, a more furious array of perils. Here were three men as crew of a vessel which wanted a good nine hands to work her, exhausted by pumping, and yet obliged regularly to apply themselves to the pump to keep the vessel afloat, forced by this work, or by having to tend the helm, to remain unsheltered upon the decks over which the seas were bursting in whole oceans; wet through to the skin, without the means of obtaining a warm drink, and without the chance of preserving a dry stitch even were an opportunity afforded them to change their clothes; a black and howling void overhead, and below a huge broken sea, in whose thunderous hollows the little vessel labored like a drowning thing, one moment upright and becalmed by the towering coil of a rushing surge, the next on her beam-ends on the summit of the liquid height, with the full force of the gale howling through her rigging, and the spray from the breaking heads of the near combers sweeping over her decks upon the breath of the black and ringing wind like a furious snow-storm.

In the limits assigned here it is impossible to do justice to this

struggle. To make it a conceivable thing to the landsman's intelligence something of photographic minuteness is wanted in the reproduction: the picture of the men leaving the pumps and crawling along the deck to the wheel, their talk, their postures as they sat crouching and listening to the infernal din in the ebony void on high—a hundred such matters indeed—together with the outline of the vessel, revealed for a breathless space, as she swooped into a trough with a headlong shearing of the bows that made the water boil in whiteness which flung a kind of twilight round about, in which the ink-like configuration of the straining and beaten fabric was thrown up as though a gleam of pallid moonshine had broken through the dense vapors of the storm and fallen for an instant into the swirling and creaming hollow in which the brig lay weltering. That the deeply laden and half drowned vessel should have outlived that night was a real miracle.

Fierce as had been the preceding storm encountered by the ship, this gale had at times an edge in it that the other wanted. Happily, like its predecessor, it was short-lived, and blew itself out soon after daybreak, though it left such a tremendous sea behind that for several hours after the wind had sobered down into a top-gallant breeze the brig was in the utmost jeopardy. The rolling was so frightful that the men could do nothing aloft. The mate refused to allow them to leave the deck, expecting every instant to see the mast go over the side.

It was almost impossible to stand at the pumps; sometimes the little vessel would literally *dish* a sea over her rail that swept the two seamen off their legs, and forced the mate, who grasped the wheel, to hold on to the spokes for dear life; and it was as much as their necks were worth to let go for a moment. By noon, however, the swell had greatly subsided, and the men made shift to set the main and upper foretop-sails and top-gallant sails, and to board the foretack. The mate also got an observation which enabled him to set his course. But the night that was passed had almost done for them; they could scarcely stand, and crawled about like sick men; and such was their pass that when the mate, laying hold of the pump, sung out to one of his companions to come and lend him a hand, the reply was that if the pumping was to depend upon *him*, the blooming hooker might as well sink at once, as there was not strength enough left in him to kill a flea; and it was not until the mate and the other man who stood at the wheel had consumed twenty minutes in entreaties, curses, and other marine rhetoric, that the exhausted creature was induced to "tail on."

Fortunately for the poor fellows, the wind had shifted into a quarter favorable for their voyage; they dried their clothes, cooked some beef, and managed to snatch sufficient rest between the intervals of pumping to give them back something of their strength. Everything went on well until they were about forty miles distant from Fayal, when the wind backed, and blew a fresh breeze right ahead. This was maddening enough. They braced the yards hard up, packed all that they could hoist upon the vessel, and swore that, come what might, they would not slacken a halyard nor touch a sheet though it should blow fit to prize the old butter-box out of the water.

It was not long after this that a steamer hove in sight, and probably suspecting a case of distress by the look of the brig aloft—for the rags of the lower foretop-sail still fluttered upon the yard—slowed her engines to speak the little vessel. “What ship is that?” was asked. The name was given and the circumstances related. The steamer then offered to give the brig a drag toward Fayal; but when it was understood that a share in the salvage would be expected, the second mate sung out no, they wanted no help, they had scraped through it all right so far, and were willing to venture the remaining risks. Thereupon the steamer proceeded, but had not sunk her hull when the wind again shifted and enabled the brig to look up for her port with the breeze full abeam; and within nine hours from the time of having been spoken by the steamer, the pilot had boarded her, and she was safely moored at the west end of Fayal Bay. The value of the brig and cargo proved to be sixteen hundred pounds, and when the award came to be made, four hundred pounds were given to the owners of the ship that had boarded the brig, one hundred pounds to the master and crew of the ship, and a substantial sum to the second mate and his two men.

A CHANNEL INCIDENT.

THE captains of the steamers which ply as passenger and cargo vessels between London and the French ports are a class of men familiar in a more or less degree to most of us, and it is probably this familiarity that prevents us from dwelling, with the emphasis that is deserved, upon the singular skill they exhibit, day after day, and year after year, in carrying their ships through what may be fairly called the most dangerous waters in the world, with scarcely a misadventure to vary the chronicles of their little voyages. By night and by day they are threading the intricacies of the crowded river Thames, groping through white mists so thick that a buoy must be along-side before it can be seen; struggling against sudden bursts of furious Channel weather, which bring up the most abominable kind of sea that a sailor can tumble about in—short, roaring cross surges, which seem to knock the very breath out of the paddle steamer, sloping her funnel like the *bâton* in the hand of a band conductor, submerging one paddle-wheel to let the other revolve like a windmill out of water, and blowing up in storms of snow from the sponsons, while the worried vessel pitches savagely into the narrow hollows, flinging up her stern like the hind-legs of a colt that takes fright at a passing train, her tarpaulins streaming with wet, the escape-pipe blowing as she reels, a few sea-sick passengers wet through aft, two or three seamen in oil-skins dodging the seas forward, and the skipper on the bridge holding on to the rail with both hands, and wondering what that confounded old *Geordie* right ahead is up to, coming along with square yards and his patched boom-foresail bellying out like a sailor's shirt drying in the fore-stay as if the whole of the Channel were his private property, and it was his duty to run over anything that got in his road.

Take the trip to Boulogne alone. In fine, clear weather it is all

plain sailing, no doubt. But if a passenger wants to appraise the merits of these captains rightly, let him quit the pitch-dark deck, and a night so black and thick that it is a positive relief to the eye when a shower of sparks breaks out of the funnel and blows away into the ebony gloom to leeward, and go below into the bright, warm cabin, and overhaul a chart of the mouth of the Thames and the adjacent waters as far as the South Sands Head light. Why, the sight is bewildered by the mere look of that chart. It is as though a spider had got foul of an ink-bottle, and had been cleaning its legs on a large sheet of white paper. West and East Girdlers, Margate Sands, Long Sands, Sunk Sands, Goodwin Sands—it seems to be all sand; while the soundings are more alarming still—eleven fathoms here, and close against it, one fathom—the English of which is blue-lights, rockets, hovellers, life-boats, and Board-of-Trade inquiries. Jones, asleep in his little state cabin, knows nothing of the maze of perils through which he is being steered: he will rise in the morning and take his seat at the breakfast-table, and in the composed features of the brown-faced, hearty-looking captain who sits modestly eating a rasher of bacon, he will find no trace or hint of a vigil which began at London Bridge and which will not terminate until Boulogne is reached, though perhaps—the Goodwins being astern, and neither the Varne nor the Ridge being very much in the road—the hardest part of it may be said to be over.

But the dangers of the English Channel are by no means limited to shoals and foul weather. If those were all, the captains who safely carry hundreds upon hundreds of passengers to and fro in the course of the year would have to abate something of the praise to which their excellent skill and remarkable vigilance entitle them. In truth, a danger more to be feared than shallow water and tempestuous weather is collision. I am not speaking of the daytime and fine weather; though even in the daytime and in fine weather collisions at sea will happen through a dozen circumstances more absolutely unavoidable than the most apparently unavoidable railway collision ever attributed by a coroner's jury to pure accident. It is the thick and silent night that is most haunted by this deadly peril. There is no wind, but a drenching drizzle drops unseen, save in the haze of the cabin skylight, from a black heaven that seems to rest its ponderous burden on the slender mast-heads of the creeping steamer. It is the English Channel, the great maritime highway that leads to all parts of the world, and now as ever it is crowded with shipping; and through this mighty shadow, full of hidden life and hidden danger, those captains I am writing of must bring their vessels, day after day, week after week. They must not lag, for time is precious to their owners. Their unscathed emergence year after year must surely savor of the miraculous to any man who will but give his mind to the character of the dangers through which these sailors steer their vessels in safety. As a sample of this particular peril of collision, let me give an instance—a recent one. It may remove reference from all risk of misapprehension if I say at once that the steamer was from Bilboa bound to a North-country port.

She was abreast of Beachy Head when the night fell, and the fresh southerly wind, suddenly shifting to the westward in a little

squall, dropped. During the latter portion of the afternoon the weather had been slowly thickening, but when the wind went the haze rolled up all round like smoke, blackening the moonless night until the very foam breaking away from under the counter was a scarcely perceptible glimmer upon the inky surface that melted into the midnight void within a biscuit's throw from the vessel's side. There were a few passengers, who vanished with the daylight, and might be seen, by peering through the cloudy skylight glass, seated at the cabin-table, the lamplight bright upon them, and making the picture of the irradiated interior, by contrast with the breathless blackness on deck, like a magic-lantern show. There was no gleam of phosphorus, no pallid streak of foam, to define the presence of the deep; but the soft seething of the passing froth, resembling the escape of steam heard thinly and at a long distance, filled the ear with a permanent note, and the dull vibration of the engines could be lightly felt. The haze was as wetting as the rain; and the bull's-eyes over the lighted interior glimmered like emeralds in the decks upon which the mist was crawling as the vessel carried it along. There is a mystery in the hushed blackness of a night like this at sea which may be enjoyed in the open ocean, where the imagination lets itself loose upon the hidden leagues of waters, and finds a kind of life in death in the mere capacity of sentience amid such a universe of shadow; but it comes with an element of fear in a narrow sea studded with quicksands and alive with vessels. The eye struggles with the darkness in vain. Every instinct sympathizes with the blindness that has fallen upon you; but the strained ear catches no more than the sob and fret of passing water and the chafing of gear as the vessel sways upon the indistinguishable folds of the swell. A man coming up out of the cabin of that steamer might have reckoned the vessel deserted and left to her own guidance. The wheel was amidships, and there was no familiar binnacle-lamp to relieve with its soft mist of light the eye that strove to pierce the darkness aft. To know where the captain was, or whether there were any hands on the lookout, it would have been necessary to sing out, or go about the decks and upon the bridge groping.

Presently, what looked to be a composant—a small trembling point of light—hovered in the blackness on the starboard bow, and a moment after there crept out under it a dull green smudge, as faint and baffling in the thickness as the wavering flame of spirits of wine. A steamer's lights; but all that was visible of her was a deeper darkness in the air where she loomed, a row of illuminated scuttles like the beach-lamps of a little town seen afar, and fibers of radiance striking into the foggy air from the bright light on the foremast. A deeper fold of darkness seemed to overlap the night as the invisible steamship swept by; the pulsing of her engines thinned down, and the wash of the bow-wave melted into the vague, haunting undertone of chafing water—a sound coming you know not from where. On a sudden the decks rang with a loud and fearful cry—"There's a vessel right ahead! Hard aport! Hard aport! mind, or we shall be into her!" Crash! You could hear the sound of splintering wood, followed by a whole chorus of shrieks, while a dozen orders were volleyed out in horase notes on the steamer's decks. "What

is it?" "Where is she?" "Get some lights along, in God's name!" A bright red flame threw out a wild radiance over the steamer's side: there was a rush of men to see what it was, and there, gliding past the steamer, every outline distorted by the crimson, flickering, streaming fires of a flare-tin held on high by one of her men, was a French three-masted smack, her decks apparently full of people, shrieking all together, and in every conceivable posture of entreaty and terror—a dreadful picture indeed, standing out with terrible distinctness in the red light of the flare against the liquid pitch of the sea and the sky. Their shouts and cries were in the rudest *patois*; it was impossible to distinguish their meaning amid the hubbub on the maimed and broken hull, as it veered swiftly astern, the main-mast over the side, the wild light flashing up the crowd of white faces as the flame from the tin broke out in a blood-red fork of radiance, and the whole fearful picture vanishing as the light suddenly expired, and the night rolled its inky tide over it. The steamer's engines were instantly reversed, and the iron fabric stopped. The passengers came rushing up out of the cabin, increasing the distraction of the darkness by their eager, terrified inquiries to know what had happened. The chorus of shrieks astern was silenced, and only faint, single, most melancholy shouts broke forth the terrible silence upon the sea, proving but too conclusively that the vessel had foundered, and that these cries came from swimmers.

Meanwhile every lamp and lantern aboard the steamer that could be collected had been brought on deck, and you could see the dark figures of seamen struggling to get the boats overboard, rushing aft, and vociferating promises of speedy help into the blackness astern, some bending on lanterns to ropes'-ends, and letting them drop over the side, and flinging ends of line overboard for the clutch of such swimmers as should reach the steamer; while the cries of the captain and mates and the shouts of the crew were made deafening by the pouring and hissing of steam up in the blackness overhead. It always seems an eternity at times like this before the boats are overboard; something gets foul; the oars have been taken forward to be scraped, and cannot be found; a kink in the fall has jammed in the davit-block; there is no plug, and a dozen voices are shouting all at once for something to take its place. But two boats at last were launched, after an interval of about five minutes, and pulled slowly away for the spot where the smack had foundered, a hand in each bow holding a lantern and keeping a bright lookout for those black spots which should denote the heads of swimmers and drowning men. A silence as of death fell upon the steamship as her boats left her. A crowd of people stood in the stern, watching the two spots of light upon the water, breathlessly listening for any sound that should indicate the rescue of even one man. The lanterns over the side flung a short space of radiance upon the sea, and men were posted along the rail to watch for any approaching swimmer who should have been missed by the boats.

"Are you finding any of them?" bawled the captain of the steamer, sending his voice in a roar through the hollow of his hands.

"Ay, ay, we're picking them up," came back the answer in the merest thread of sound.

Ten minutes went by, and then suddenly there arose a shout from one of the men stationed at the port bulwarks.

"Here's a man swimming here!" and in a breath there was a rush to the side.

"Get another light over!"

"Fling him this life-buoy!"

"Pitch a coil of rope to him, but mind you don't hit his head or you'll sink him!"

Half a dozen splashes told that these various orders had been executed. "He's got hold of my line!" sang out a voice, and as the rope was gently hauled in, a seaman, jumping into the bight of a rope, sprang overboard, and in a few moments both were dragged over the side.

The half-drowned French smacksman fell down in a heap the instant he touched the deck. He was dressed in heavy sea boots and oil-skin leggings, and how he had managed to swim the distance from where his vessel had foundered to the steamer was a miracle not to be explained by any known law of specific gravity. He was carried into the forecastle, unable to articulate; but another quarter of an hour went by before the boats returned.

"How many have you" shouted the captain, as they approached.

"We have four, and the other boat has five. There are women among 'em," was the answer.

They came alongside, and one by one the poor creatures were handed up. There were three women, dressed in the picturesque costume of the Boulogne fish-wife; but draggled, streaming, with closed eyes, and a quick, suffocating breathing, half dead. Most of the others were in the last stage of exhaustion; but one was able to speak, and as he stood a moment in the lantern-light answering the captain's questions, a more moving object could not be imagined. The water drained from his fingers, his hat was gone, and his iron-gray hair—for he was an old man—lay in a tangled mass over his eyes; and there was a most heart-rending expression of horror and despair in his face.

He said his vessel had left Boulogne early that morning. There were four women and ten men and boys on board. He owned that they had had no lights burning. He trembled like a freezing man, and was then led below, with his hands to his face, sobbing as if his heart would break, and moaning in his rude French that among the drowned were his wife and boy.

"Are you sure there were no others afloat when you came away?" asked the captain of the mate, who had charge of the boats. "One man swam to us, I must tell you, and we have him aboard."

"Sure, sir," was the answer. "We pulled round and round, but there was nothing to be seen. The people were saved by the mainmast, that was left afloat when the smack went down. Those who were drowned missed it, otherwise it was big enough to keep all of them up."

For another twenty minutes the captain lingered, peering into the darkness, and keeping one boat overboard ready for the first sound. But the deep was as silent as the tomb, and nothing disturbed the death-like stillness unless it were the murmur of the men forward talking over the tragical incident, and the quick, passionate

whispers of the passengers, as one would suddenly say, "Hush! what was that?" and another, "See! is not that something moving out yonder?" Nothing more could be done. Very reluctantly the captain quitted the stern of his vessel and gave orders to get the boat on board, and in a little while the steamer was slowly moving again, through the blackness, her decks wrapped in darkness and silence, while the haze floated like steam round the mast-head light, and the water gurgled like the cry of a drowning man as it eddied round under the counter and went away in a pale glimmer of froth into the midnight gloom astern.

This little incident will, I believe, fairly set before the reader one of the perils against which those particular captains to whom I referred in the beginning of this article have to contend. Here is a fishing-smack, lying becalmed, without a light showing, on a night made pitch-dark by a drizzling haze. How could such a collision be averted, short of the captain of the steamer bringing up? a remedy which his owners most assuredly would not think the better of him for adopting. I repeat that having regard to the difficult navigation of the mouth of the Thames, as far south as the southern limb of the Goodwins, to the mass of shipping of all kinds that is always crowding these waters, to the perilous weather to be found there, and to the negligence, foolhardiness, and indifference which are characteristics of the seamanship of scores of the men—English as well as foreigners—who have charge of small craft navigating that sea, the manner in which the masters I am speaking of carry their steamers from port to port, year after year, showing always the same clean bill of health, implies an amount of skill and vigilance which any one acquainted with the navigation and dangers of the English Channel from the Nore to the Bullock Bank will own cannot be too highly praised.

LOSS OF A SMACK'S CREW.

I FELL once into conversation with a smack-boy—a Yorkshire lad—who told me a story which I privately declined to believe until I saw the printed report of the inquest, and had confirmation of his narrative from other hands. Men who go to sea meet with strange accidents, and perish through causes which landsmen would ridicule as impossibilities in marine novels; but seldom do a vessel's crew encounter such a disaster as that which befell the people of the smack *Apostle*, of Hull. I wish I could tell the story as the fishing apprentice gave it me. No painter could imagine a finer study than the figure of the lad in his blue knitted overall, his big boots, his sou'-wester, the hinder thatch of which forked out from the back of his head like the tail of a gull on the wing, his young face, as he talked, warming up into a kind of passionate awe and fear, as it might in his sleep when the dreadful circumstance stood out in the sharp configuration of a dream; while now and again he would pass the back of his rough hand across his forehead to rub off the goutts of sweat which gathered there. However, I can do no more than translate the lad's yarn, and make it complete, in its way, by facts I

got from others. The *Apostle*, then, was a smack, belonging to Hull. Will Stevenson was her master, and John Butler her mate. Besides these she carried two other men and a boy—the lad who told me the story—making in all five souls. She left Hull, however, with only four men, for the boy did not join her until she had been out cruising a week, when he was sent to her in a steamer.

Life on board a smack is but a dull affair, and such excitements as it has are all against the fisherman. It is tedious work drifting for hours with the trawl overboard; but what is to be made of it when, as sometimes happens, the trawl is got aboard and the net found torn to pieces by a piece of sunken wreck or something of that kind, and all the fish gone? Or take a gale of wind blowing for a week, keeping the fisherman waiting and waiting for a spell of moderate weather to fetch his ground. To be hove-to in a smack in the North Sea is such a dance as you must endure—not for a day, but for several days together—to understand. Who that has rolled in a big steamer across the tempestuous stretch of waters which wash our eastern coasts has not watched from the reeling, spray-swept deck the spectacle of some dandy or cutter-rigged boat, jumping as if by magic into the arena of the green, pelting, and foaming amphitheater, with her storm jib-sheet to windward or well amidships, a slender band of dark, close-reefed main-sail tearing at the quivering gaff, while she tosses the high spring of her bows at the rushing snow of the surges, chopping sharply down into the livid vortex and making it flash up in white spume that smothers her like the smoking spray of a great water-fall, vanishing until her gaff is hidden, and nothing shows but the jerking vane at the mast-head behind the glittering ridge of the sea that runs at her with the roar of a goods train sweeping through a tunnel; and then springing afresh to the height of the thunderous surge until some fathoms of her keel forward are exposed, and leaning down upon the slope of the mountainous wave, and under the giant pressure of the ringing gale, until her mast seems parallel with the water, and her dark shred of canvas a mere black patch upon the snow-storm under her?

One wonders, looking at such a sight, how the big-footed fellows aboard of her hold on; how they manage to cook their food; by what inconceivable art they contrive to “fetch” their bunks, or sleeping-closets, without numerous ineffectual struggles, first of all, to hit the holes. But, in truth, no class of sailors make less trouble of dirty weather than fishermen. With his tiller securely lashed, the storm-jib slatting a moment or two as the reefed main-sail swings the little craft into the wind, then shoving her nose round again as the sea runs hissing away under her, the air forward dark with flying foam and the water draining overboard in bucketfuls with every send, the smacksman sits cozily in the companion, pipe in mouth, keeping one eye on the lookout and the other eye on the time when one of his mates shall come and take his place, and send him below to toast his hands at the little stove, whose ruddy glow pleasantly tinges the darksome twilight of the cabin, and enables him to find, without groping, another pipe of tobacco before he lies down.

Daybreak on Friday, the *Apostle* being then very nearly five weeks

out from Hull, found the smack with her trawl over the weather-quarter and near the north-east end of the Dogger Bank. There was a fresh breeze blowing and a middling sea running, and the smack, surging to leeward with the tread of the waves, rose and fell with the regularity of a pendulum. Many miles distant to windward was another smack, apparently heading for the same ground over which the *Apostle* was dragging her trawl; otherwise the sea was vacant, and the greenish dawn, flinging a sickly tint into the sky, but leaving the water dark by contrast, and throwing up the great circle of the horizon until the ocean resembled a black and solid disk centering the huge concavity of the heavens, made the immediate aspect of the deep indescribably wild and melancholy. Indeed, there is not a more desolate scene in the world than daybreak at sea. The shadow of the night still hangs in folds upon the water, and the dim illumination in the east only serves to accentuate the chilly sullenness and grim bleakness bequeathed by the black hours, the last of which is drawing away in gloom into the west. But the sun is a noble magician, and one stroke of his flashing wand converts the mystery of the dawn's vague hints into a glorious revelation of blue heights and sparkling waters. The *Apostle's* trawl had been over all night, but a further short spell of drifting could do no harm, and might furnish out another trunk of fish, and the interval would give them time to get breakfast. So the little fire in the stove was stirred into a good blaze, the coffee boiled, and the two men at rest in their bunks routed out for the meal.

Fishermen are usually well fed, and that is one reason, I suppose, why they appear to relish their food in a manner you shall not find in any fore-castle. They have generally a good freight of fish to pick from, and they are not slow to boil a cod or cook a big sole when fancy and appetite prompt them. Somehow or other, to me, the smoke that comes blowing away out of the little chimneys which pierce their decks always savors of good cheer, and I was not at all surprised, on looking over some victualling accounts shown me by a smack-owner, to discover that the fishermen's sea-larders—many of them, certainly—are stocked with a liberality that must make owners very anxious indeed to know how much fish there is aboard, when their vessel's number or burgee comes within reach of their telescopes.

Breakfast done, the master gave orders for the trawl to be got in, and all hands tumbled up on deck to help at one of the few heavy jobs which happen aboard fishing-smacks. I have already said there was a fresh breeze blowing, and the vessel, though hove-to with her jib-sheet to windward, leaning down freely under the weight of the reefed main-sail. The sea was regular, but ran quickly, and every lift of the surges helped the wind to lay the little craft along, until at times her lee gunwale was flush with the water; but, like all boats of her class, she would right with great vehemence, jumping to windward like a goaded creature of instinct, and making the decks, slippery with wet, extremely dangerous even to practiced feet. They say that a fisherman's walk is two steps and overboard, and any one would have thought the saying a true one who had seen this jumping bit of a fabric—sparkling like a shrimp in and out of the hollows of the tumbling waters—and

watched those big-booted, clumsily-moving, powerfully-built men striding about the decks and making ready to drag the great trawl in.

The process is very simple. The dandy wink is manned, the beam secured, and the net is then dragged in over the side. The *Apostle's* men had succeeded in getting in the net to the cod-end, as it is called. All five hands were employed on this job, as it is one that demands the united strength of such little companies as smacks carry. They leaned over the rail to grasp the net, but the vessel at that moment burying her lee side through the lift of an unusually heavy sea, one of the men lost his balance and went overboard, and the net bellying out and sending away as the vessel rolled to windward, in the twinkling of an eye the other three men, whose hands grasped the meshes, were torn clear over the beam and buried in the sea along-side, leaving only the boy on deck. It was done in a breath. There was no time even to raise a shriek.

One moment there were all four men leaning over the side, the net securely inwreathed about their fingers and waiting for the signal from the master to drag together; the next they were floundering in the water along-side, struggling, desperately clutching at the sinking net, and drowning. There was a portion of the net on deck, and to this the boy—who preserved an heroic presence of mind in the midst of this appallingly sudden and dreadful disaster—clung, that the men might not drag it all overboard (and so have nothing to hold by) in their wild and overhand grasping at the deadly, deceptive meshes which floated and sunk under them, and clogged the free action of their limbs, and clung to them like masses of sea-weed, settling them lower and lower as new folds of it were swept by the water around them.

The net being to leeward, the tendency of every sea was to belly it out and increase its weight, while also setting the whole mass of it further and further away from the vessels's side; but this weight was beyond description increased by the men, who battled with the fury of strong, dying creatures in the deadly envelopment of the trawl. Every now and again a sea would break under the vessel and bury the poor fellows in foam; and then, as the smack swept down into the hollow and leaned heavily to windward, the drag of the hull upon the net would strike it up again, and the four smack-men would re-appear with dusky, despairing faces, their eyes protruding as they strained for breath. Robust as the boy was, here was a conflict it was impossible for him long to engage in. He held to the net with as manly and resolute a heart as ever an English lad brought to a struggle for life; but the weight of the bellying net, and of the men clinging to it, increased as it was tenfold at times by the swing and rush of the smack upon the sea, must have taxed and presently exhausted the strength of a dozen such as he; gradually as he failed the net was torn foot by foot away from him, though every time it was wrenched from his hand he grabbed at it again, and held on with clinched teeth until another swoop would unlock his fingers as you might snap a clay pipe-stem.

Suddenly turning his head—for hitherto he had been engrossed by the dreadful struggle in the water just a fathom or two away beyond him—he spied the smack that had been sighted at dawn, about half a mile to windward. She was manifestly heading for

the *Apostle*, and the boy shouted to the miserable drowning men that help was coming, and urged them to hold on. But it was doubtful whether they heard the lad's voice. Close upon the water the seething and hissing of foam would be deafening; moreover, their eyes were glazing—death had his hands on their throats; they presented a row of asphyxiated faces, now and again revolving in the eddies amid the trawling-gear, sometimes thrown up until their bodies as high as the waists were out of the water, in which posture they would remain poised with uplifted arms that gave them a horrible appearance of entreaty, then vanishing utterly, to emerge a few seconds after as the roll of the vessel swung them up and out. The boy's strength was now completely exhausted, and also he had to let go, in order to signal to the approaching smack. The whole of the net then went overboard.

About an hour had passed since the men had fallen into the sea, during all which time this most shocking tragedy was being enacted, while the boy with magnificent courage protracted his shipmates' lives by maintaining his hold of the net. But the moment he let go the net veered out to its full sweep, and an instant after one of the men sunk and rose no more. The smack was now within hail. The boy rushed to the weather side, and shouted out the dreadful story with such strength as remained in him, at the same time pointing frantically at the water where the drowning men were. The dreadful scene was by this time visible to the crew of the vessel, that proved to be a Yarmouth smack called the *Esther*. They tumbled their boat over the side; a couple of hands jumped into her and rowed at once for the perishing fishermen. The boy ran back to the lee side of his vessel to encourage the poor creatures, but, looking, he discovered that the third man was gone; the master and mate only were to be seen, both clinging to the gear and scarcely living. The little boat—hardly better than a walnut-shell in such a sea—came along fast; but before she could come up to the master, he let go his hold and floated away, face down and arms hanging lifeless upon a running wave. A few strokes of the oars, however, brought the rescuers abreast of him, and he was seized and lifted into the boat, which then returned and took off the mate from the gear, to which he clung like a mass of black sea-weed torn from the rocks. Calling out to the boy that they would see to him presently, the Yarmouth fishermen rowed back to the *Esther* with their dreadful freight, but when they came to hand the men up over the side they found that the master was dead. The mate was carried below, stripped and dried before the cabin stove, then wrapped in rugs and laid in a bunk. But he was little more than a corpse when rescued, and the skipper of the *Esther*, going presently to see how the poor fellow fared, found that he had expired. This was the last of the four seamen who a couple of hours before were full of life and hope and heartiness. Meanwhile the master of the *Esther* had sent three of his men aboard the *Apostle*, and two days after the disaster both vessels arrived at Yarmouth.

I know not how this simple little narrative may affect others, but the relation of it moved me deeply. That four English sailors should meet with death so unexpected, so full of anguish in its protraction, so bitterly cruel throughout a long, long hour's suffering,

is perhaps significant only as another illustration of the perils of the deep. It is just one of the brief and simple annals of the poor sailor. But I cannot but think that the behavior of that young apprentice—named Frederick John Graham—makes it worthy of record. Those who have any acquaintance with English fishermen are only too painfully well aware that the relations between owners and apprentices are by no means of a cordial kind, and in several places I hear of the clergy and others taking up the cause of these boys, and asking the public for funds to help to give them homes and to educate them into some knowledge of religion and morality, and out of the deplorable ignorance in which they are suffered to live. I am well aware that some apprentices are decidedly trials to smack-owners. They will run away with their master's clothes. They will refuse to go to sea in the hope of being taken before a magistrate and sent to prison instead. But, nevertheless, I cannot quite satisfy myself that smack-owners—taking them as a body, granting many exceptions—treat their apprentices with the consideration that even the most hard-worked and ill-paid servants in other walks of life expect and exact from their masters. One does not want them to act the part of school-masters, and teach the boys to read and write; but upon what principle do they oppose the efforts of others who are willing to perform that duty? and why do they find something obnoxious in homes established to furnish smack apprentices with certain comforts and harmless recreations—calculated to keep the lads out of the streets when they come ashore from a voyage—which smack-owners themselves do not apparently see any reason for providing?

For these and other reasons, therefore, the endurance and hearty English spirit of Graham may be thought a proper subject to hold up to applause; for, accepting the lad as a type, the public may witness enough merit in the hardly used and laboriously worked community to which he belongs to justify them in giving a helping hand to the humanitarians who are struggling to make the lives of the apprentices when ashore happy and useful to themselves. While the smack-owner will recognize in this narrative of Graham a spirit to which he is by no means unaccustomed, though he needs perhaps to have it more diligently emphasized than he has yet found it, before he will accept the hint it offers to his forbearance and to his humanity as the owner—in a most literal sense—of lads who, taking them all round, are the most friendless beings in the world, with the whole machinery of the law against them, and only here and there a few sea-side dwellers to take their part by endeavoring to give some little wholesome sweetness to their existence when out of their vessels.

FIRE AT SEA.

AN impressive story of the destruction by fire of a full-rigged American ship in the North Atlantic has been told me. Certain features of it combine to make it an incident certainly worthy a longer record than is usually devoted to maritime disasters, and altogether it yields such an idea of the horror of fire at sea as is not often to be got from stories of misfortune of that kind.

A certain Wednesday in August found the *R. B. Fuller* a little over three weeks out on her voyage from Cardiff to Valparaiso. She was freighted with coal, and carried a crew of twenty hands, being indeed a ship of 1360 tons register. A vessel of that size, unless maimed by short fore and mizzen-top-gallant masts, is sure to make a handsome picture on the water under full sail. The Americans rarely mutilate their ships, but, on the contrary, with sky-scrappers and moon-sails, pile their canvas to the heavens, and, mixing plenty of cotton with their sail-cloth, carry a yacht-like whiteness aloft that will shine upon the horizon like a peak of ice brilliant with snow.

The weather had been fine all day, with a beam wind, and the deep, long, black-hulled ship, leaning under the weight of her cloths, slipped softly along her course over the trembling and flashing blue. What witchery is there comparable to such sailing? No sense of delight that is born of freedom and movement surpasses the joyousness kindled in the spirits by the swift, smooth rushing of a lofty sailing-ship over the swelling bosom of a great ocean, all sky above, all sea below, and between, the music of the clear, glad breeze.

The sun sank and the night gathered, the wind fined down, and the American ship, with spars erect, floated over the dark waters, in which the starlight seemed to flake away in small coils of quick-silver. Over the side nothing could be heard but the tinkling of the ripples at the stem; aloft there was not a stir, unless it were now and again the muffled chafing of the foot of a sail upon a stay or the rattle of a reef-point upon the canvas. Forward all was in shadow, with the figure of a man on the lookout; while aft the mate on duty paced the deck, pausing sometimes to take a peep at the compass-card, where the binnacle-lamp glistened in the brass center-bit of the wheel, and shone upon the face of the officer as he stooped to observe the indication of the card.

The captain, Mr. Thomas Peabody, had left the deck about three-quarters of an hour. He was asleep in his cabin when, shortly after ten o'clock, he was awakened by a feeling of suffocation, and perceived that the cabin was full of smoke. Moreover, the atmosphere was charged with a deadly, nauseating, gaseous smell, that gave an iron tightness to his throat and filled his body with an unendurable prickly sensation, as though strong mustard had been rubbed into his skin. He rushed on deck, where the fresh air at once revived him, and not immediately perceiving anybody about, shouted for the officer of the watch. The chief mate came running out of the darkness forward, and before Captain Peabody could address him, cried out that the ship was on fire. The news spread as if by magic, and in a few moments the decks were alive with the crew hurrying out of the fore-castle.

Of all cries, none thrills through the heart of a sailor like that of fire. Human helplessness is never so felt as at such a time. The ship is a burning volcano, from whose cabin the red flames may soar presently, making a wide circumference of air scorching hot with a furious play of withering flame. The mate said that he believed the fire was in the hold under the cabin. Forthwith there was a rush to the hatches, which were immediately closed; calk-

ing-irons were fetched, and the air was busy with the hammering of mallets. It was a sight to see the men. There was no lack of determined courage among them, but the cry of "Fire!" was ringing in their ears; they toiled in quick, impulsive rushes, with feverish haste, glancing to right and left, knowing not in what part of the ship the fire would first show itself in flame. Every ventilator was closed and the cabin shut up, in the hope of stifling the fire, and the crew then gathered in a group in the waist to watch and wait and see what their work would do for them.

Presently somebody called out that the smoke was still breaking through.

"Look there—and there, sir!"

It was hard to guess how it could escape; the hatches were closed and calked, every aperture securely blocked, and yet there was the smoke breaking out from all parts of the vessel as steam rises from the compact earth. On this the carpenter's chest was overhauled, and by order of the captain the men fell to work to bore holes in the deck. As the solid planks were pierced the smoke belched forth in puffs, mingled with a pestilential exhalation of gas that forced the seamen to work with averted faces. The pumps were then manned, the hose got along, buckets dropped over the side, and all hands turned to to drown the fire by discharging water into the glowing cargo. Clouds of steam came up through the holes, regularly followed, as the white vapor thinned, by spiral columns of black smoke which wound round and round to the height of the main-top, where the light breeze caught and arched them over. No flames were as yet visible, but the men knew that the ship was full of fire, that at any instant the hatches might be riven and shriveled up by a discharge of flame, and therefore when the captain gave orders to lower the boats there was a rush to the davits.

When the boats were in the water alongside, the captain, desiring to save certain articles, called the mate and four seamen to accompany him to the cabin; but they had not been there a minute when they suddenly ran out, some of them vomiting blood, and all of them complaining that their heads were swelled so that they were like to burst. Indeed, but for their speedy flight, they must have dropped dead in an atmosphere that was rendered virulently poisonous by the combined gas and smoke. A short spell of rest and fresh air recovered the poor men, and the crew then proceeded to victual the boats with such provisions as they could come at. The main-yards were braced aback, and the men entered the boats and rowed to a distance of about half a mile from the vessel, where they remained.

It was a fine night, very calm, and the ship, with her main-yards aback, lay steady. Hour after hour went by, but no flame showed itself, though there was a gradual thickening of the smoke from the deck, and the seamen could observe it hanging in a shadow over the mast-heads of the vessel and to leeward of her. Gazing at her as she stood like a marble carving upon the dark sea, it was difficult for the men to realize that her hold was a concealed furnace; that by taking off one of the hatches and looking down they could have beheld an incandescent interior, a red-hot surface like a lake of fire with blue and green flames crawling over it, and masses of smoke,

repelled or consumed by the intense heat of the central spaces. But for the shadow overhanging her glimmering heights, there were no signs that anything was amiss with the ship. Surveyed from the low level of the boats, she looked a majestic fabric out there, a brave sight in the faint, fine starlight. It was a long, weary and bitter vigil for the poor fellows to keep. They would not leave the neighborhood of the vessel while she remained afloat. They could not tell what might happen. If she burst into flames the light she made might bring them help; or the fire might die out and so give them their home to return to. While she was there she was, in a manner, something to hold on to: for it was a fearful thing to look away from her into the mystery of the darkness around, and to think of being left to struggle amid that black and fathomless desert of water in open boats, which brought the mighty deep within reach of their hands.

Slowly the long hours went by and then the dawn came, and the sun uprose. With the first of the gray light every eye was turned upon the ship. They could see the shroud of smoke that overhung her, yet not a spark of fire had been visible throughout the night, and this, now that the sunshine was on the sea, begot a hope in the men that, though to be sure the smoke crawled thickly from the ship, the fire was not so bad as they had feared, and that a long and resolute struggle might enable them to conquer it. Accordingly, the oars were thrown over, and the boats headed for the vessel. The boat occupied by the captain was the first to get along-side. He jumped on board and was followed by others; but the heat of the decks striking through his boots made him put his hand to the planks. It was like touching hot iron. He walked to the cabin, but on feeling the door he withdrew his fingers with a groan. The whole fabric was full of fiery heat; whatever touched the flesh gave it pain; the very ropes which lay coiled over the belaying-pins were too hot to handle; the pitch was bubbling in the seams; the air between the bulwarks resembled the atmosphere of a furnace; in the haze of the heat every object seemed to revolve like a cork-screw; and the men in the boats said that feeling her side, even to the level of the water-line, was as bad as putting the hand upon a boiler full of steam.

A cry from one of the seamen who had come over the side in bare feet, raised a kind of panic among those already aboard. "Over with you," was the shout, "before she bursts into a blaze!" and in mad haste the poor fellows dropped over the bulwarks, seized the oars, and resumed the same distance from the ship that they had occupied all night.

Soon after this a small breeze of wind arose. It seemed to penetrate the vessel, for with the draught there soared up a thick body of smoke. Her passage to leeward was perceptible in the short, oil-smooth wake to windward of her; but the drift of the boats was the same as hers, so that the men had no need to use their oars to maintain their distance. There was now weight enough in the wind to blow the smoke clear of the decks before it rose a foot above the bulwarks, so that the picture of that full-rigged ship remained there in its completeness. As the time passed the men would see a fountain of sparks heve up occasionally in the smoke. It was dismal

work sitting and watching that fine ship smoldering. All that the men possessed was left aboard of her; they had come away, most of them, in their shirts and trousers, many without shoes, and there in those three boats they sat looking at the burning vessel, silent in the main, often glancing around them on the lookout for a sail, and holding on to the thwarts or gunwales as the boats jerked and toppled sharply about on the bit of a sea that the wind had raised. A little before noon those who had their eyes on the ship perceived the mizzen-mast to sway to and fro a moment; then suddenly it fell with a crash; a rush of smoke, like a monstrous balloon, hovered over the quarter-deck and concealed the ruin; but it soared into the air, and sailed away on the wind under a sudden furious discharge of sparks, which resembled the explosion of a mass of rockets, and when the vapor had settled down it was seen that the mizzen-mast was over the side, the vessel a wreck aft, while forward the sails were dusky and red, as though iron-stained, with the blowing of the sooty coils and the fire of the glowing sparks.

Until the night came down no further alteration took place in the appearance of the vessel. During all those long hours the men sat crouched in their boats, watching their burning ship and searching the sea for the help that did not come. The second night rolled down dark, with windy clouds drifting across the skies. Here and there the phosphorus shone in the curl of a breaking surge. The half-clad men shivered under the fresh night wind; but the ship while she stayed there was a beacon. If they quitted her, what was there to do? She was a dreadful signal upon the dark sea, and might yet bring succor, and so they stayed. But the darkness had not gathered an hour when a tongue of red flame darted out of the deck abaft the main-mast. It threw out a great light, like the flash of a big gun, and the men could see one another's face in it. It sank and seemed to expire, and then there rushed up a body of crimson sparks which clearly defined the dense and swelling volume of smoke that blotted out the heavens in the south-east; but speedily the flame swept aloft again like a serpent, wreathing itself around the main-mast; then forward and apparently out of the fore-hatch sprang up another pillar of fire, and presently there were tongues and lances of flame crawling and hissing all over the doomed vessel, gliding in serpentine convolutions along her bulwarks, over her stern, around her bows, limning the configuration of her hull with burning pencils, filling whole leagues of the darkness with light.

The stays, the shrouds, all the gear connected with the bowsprit and jib-booms caught fire; the yards were kindled; the whole outline of the vessel was scored in fire upon the night; every detail of the standing masts and yards and sails, the cross-trees, outriggers and tops—all the furniture of the ship's decks, the boat-davits, the catheads, the martingale, the spritsail-yard, were expressed in flame. It was like the picture of a ship drawn in fire upon a black curtain. Not a sound came from the men in the boats. They watched breathless, full of amazement, thoughts of their serious position being overwhelmed by the dreadful but magnificent sight of that noble ship. When suddenly the burning vessel opened, a flame such as might go up from Vesuvius soared into the air, making a roaring noise upon the wind; there was a sound of the falling of the

burning masts and yards—and then, in a breath, the whole terrific picture vanished; it disappeared as you might blow out a candle; the boom of an explosion came dully up against the wind, and there was nothing but the stars, and the black sea, and a dense shadow in the south-east where the smoke from the foundered ship was heavily sailing away.

If ever loneliness was felt at sea it was felt by those men when that great light went out, and left them in darkness and dread and uncertainty. But enough if I say that, after tossing about for two days and nights, they sighted a sail to the westward, which they chased until they were sufficiently near for her people to see them. She proved to be the London bark *Paracca*, whose captain gladly received the poor fellows and treated them with the utmost humanity.

SEA-SICKNESS.

MANY will remember the terrible description of Mr. Aaron Bang's pangs of sea-sickness in "Tom Cringle." It is fortunate that everybody while suffering from nausea is not so demonstrative as the West India planter. The horrors of a rough passage between Calais and Dover would be fearfully increased were the prostrate passengers to bewail amid their throes the wines and dishes which old Neptune exacts from them. And yet one has only to consider what kind of heaving sea it was that set the West Indian howling for brandy-and-water to commiserate the poor old epicure's noisy anguish. Sailors will appreciate the effect upon a passenger's stomach of a heavy gale of wind dropping as if by magic, and leaving the sailing-vessel—for Tom Cringle flourished before the days of steam—rolling upon a tremendous swell. A steamer whose screw or paddles are revolving and driving the hull through the water will not, amid the heaviest sea, give you the same sensation you get from a vessel tumbling about on a strong, fine weather swell, not a breath of air to steady her or give her way. The steamer in a measure escapes the worst of the seas by sliding out of them; her bows are lifted clear of the washing coil, while her lee sponsons are buried, and she half jumps the intervening hollow as her paddles thrust her from the summit of the surge. Often have I watched this behavior in swift steamers, and seen them take a bow or beam sea as a horse takes a hurdle.

But the motion of a vessel becalmed amid a heavy swell is one of the most uncomfortable of all sea experiences. Let the merest relic of nausea linger in the human breast, and this movement shall make a full-blown anguish of it. I have heard of stewards, men who have made a dozen voyages around the world—whose stomachs were as immovable in a gale of wind as the ship's figure-head—I have heard of such men, I say, in a heavy, breathless swell, tumbling down among their dishes too sick to stand, rolling about among the crockery, and echoing with their groans the spasmodic gurgling of the water as it sobbed in the scupper-holes or washed up full, green, and sickening over the glass of the scuttles or the cabin windows.

This sort of tumblification is fast becoming a thing of the past

among passengers, very few of whom nowadays make their voyages in sailing-ships, although it is by no means yet an extinct feature of the emigrant's progress from the Old World to Australia and New Zealand. At such times as this the ship is as sea-sick as any of the yellow and haggard sufferers who moan in her cabins; squeaks and cries and the rumbling of a disordered internal organization resound in her hold. Over she leans like a fainting creature, and the bubbling wash of water along-side delivers a note full of nauseating suggestion; the beating of the canvas against the masts sends a shiver through the hull; down drops her counter amid a swirl of gurgling eddies, the stern-post complains, the rudder jars, the wheel-chains harshly strain; and then, up, slowly and giddily, mounts the after end of the staggering fabric, making the pale and helpless holder-on there feel that his brains are descending into his boots, and that his bowels are rising to fill the emptiness of his skull, while sharp reports of crashing crockery break out through the skylights, the cask that has broken adrift on the main-deck rolls to and fro, and defies the pursuit of the three or four seamen who dodge about after it and go sprawling over one another into the scuppers, the pigs under the long-boat scuffle and snort, chests and boxes fetch away in the cabins, the sailors flounder over the cable range as they stagger out of the galley, with hook pots of tea in their hands, and the sea-blessings showered out by the cook, as he chases his dishes and pans and burns his fingers in his efforts to save the cuddy dinner, can be heard by the man at the wheel and the youngster who is shifting the dog-vane at the main-royal-mast-head.

This, I say, was an old experience; but it was a time to try the stomach while it lasted. Think of three or four days and three or four nights of it! In these days, if you are sea-sick, you at least have the satisfaction of knowing that the ship is always going ahead, and that the day, if not the hour, when your nausea will have terminated may be pretty accurately fixed. And yet, what man hanging over the side or prostrate on his back and execrating existence can get satisfaction out of the thought that, bad as his sufferings are, they might be worse by being protracted? I believe there are some people who, when once their heads are fairly over the rail, or when what Thackery calls the "expectaroon" is between their knees, are inspired by such a loathing for life that they are not to be moved by the wildest threats of destruction.

Once, in crossing from Calais to Dover, I noticed a vast pile of luggage, unsecured by a single lashing, heaped up on the fore-deck. All was well until we got clear of the French coast, when a small beam-sea set the vessel rolling. In a few minutes the bulwarks, from the sponsons to the eyes, were crowded with people of both sexes and various nationalities, all engaged in raising their voices in the most dismal manner, wiping their cheeks, and casting blood-shot glances around them, only to direct their gaze again with hideous rapidity upon the giddy white waves that rushed in a spinning dance aft while they exploded in loud roars. I looked with alarm at the nodding pile of luggage, feeling sure that an extra lurch would tumble the whole over and seriously injure the unhappy sick people on one side or other of the vessel.

I spoke to a French sailor—they were all Frenchmen aboard that steamer—and advised him to secure the luggage. He merely shrugged his shoulders and made off. I addressed another, who could not or would not understand me. Thereupon I went up to the sea-sick people, and touching first one and then another, I pointed to the tower of luggage and advised them to go further aft, out of the way of the boxes, lest they should tumble upon them. They must have seen their danger as plainly as I, but not one of them offered to move. They kept a tight hold of the rail, merely turning their lack-luster eyes upon me with an expression in them half imploring, half savage, as much as to say, "Let the boxes come! Let us be crushed! What stops the boxes from falling?" Fortunately the second sailor I accosted perceived by this time that if the luggage was not secured the top boxes bade fair to go overboard when the stronger sea of mid-channel was reached; and so among them the Frenchmen bound the boxes to the deck by ropes, and by so doing, in my humble opinion, saved several valuable sea-sick lives.

In this same journey I was amused by an aspect of sea-sickness, or, let me say, a condition of it, that will be familiar to many who make short passages by water. Going forward of the funnel, where smoking is not prohibited, I took notice of a gentleman wearing an eye-glass. He was clad in a yaching-coat embellished with brass buttons, and he was smoking a large cigar. A very stout gentleman was asking him some questions in broken English. I heard the gentleman with the eye-glass say that he believed there was a pretty middling sea on outside; but "if you're afraid of being sick, mounseer, you should smoke, sir. You should do as I do. Nothing like tobacco for settling the stomach;" and he gave a horribly confident laugh. The corpulent Frenchman withdrew with a groan, and lodged himself in the gloom under the bridge near the engines, the vibration of which caused his immense body to quiver like a jelly on a supper-table when people are dancing overhead, and there he lay so clamorously ill that the firemen dropped their shovels below to come up and look at him.

Meanwhile I kept my eye on the gentleman who believed in tobacco, and when the steamer took the first of the seas I saw him seize hold of a shroud or a funnel-stay and set his legs wide apart. He continued puffing at his cigar for some time, but the intervals between removing and lifting it to his mouth grew longer and longer; presently it went out, but he took no notice. He had his glass in his eye, and his face looked forward; he was deplorably pale, and I never could have believed that such a trifling thing as a brass-button, and so prosaic an object as a nautically-cut coat could become, on occasion, more cuttingly ironical than anything a man's friend could say of him. The eye-glass gave this gentleman an unusally glaring expression; he never shifted his gaze—I should say that he never winked. There he stood with his legs wide apart, the extinguished cigar in one hand and the other supporting him with a death-grip, staring with a horrible intensity at nothing. I knew perfectly well that if that man were made to shift his posture or speak he would rush to the rail.

It was a brave fight; but it could not last. A young colored gentleman, the ashiness of nausea visible in his dark skin, suddenly

jumped up from under the pile of luggage, where he had been screening himself from the wind, and bolting to the side, expended himself in a howl full of the deep throaty noise that is peculiar to negroes. It was irresistible; the man with the eye-glass let go, and staggered away, with his cigar gone and his hands extended. I feared that he would find no room, for the bulwark was lined with sufferers; but, with the selfishness of acute suffering, he plumped with all his might between a couple of Frenchmen, squeezed the aperture between them open with his elbows, and fixed himself there; and there he remained until the water grew smooth near the English cliffs, and the steamer went forward on a steady keel.

It is difficult to understand why people should find anything diverting in sea-sickness—than which surely nothing can cause more suffering. Of course, if a man will give himself airs ashore or on smooth water, use nautical words, and deride the misgivings others are honest enough to confess to, then, indeed, if we find that marine gentleman with his head in a basin, or with his face over the side and his hat gone, we have some excuse to laugh at him. There are people who never will own that they are sick at sea, just as there are people who deny with indignation that they snore in their sleep. Such folks deserve our ridicule. For what is there to be ashamed of? I have known old sea-captains quit ships newly arrived from around the world and be ill on a voyage from London Bridge to Hull. If such men can shout for the steward without blushing, it is hard to know why Jones, of the Middle Temple, or Smith, of the Stock Exchange, or Snooks, the celebrated novelist, should sneak to the side and feel humbled if his fellow-sufferers see him blue in the face with his pocket-handkerchief half-way down his throat. It may be that people laugh at sea-sick sufferers because of the enormously and by consequence absurdly leveling character of the malady.

One might be the most compassionate creature living, and yet find it impossible to stop laughing at the debasement of the high-and-mighty personage who, when he came aboard, people whispered was the Right Honorable So-and-so, or the acute and the famous Mr. Justice Somebody-else. He sits aloof, he is full of dignity, he scarcely raises even a condescending eye from the book or paper in his hand to glance at the other passengers, who sit doggedly, if humbly, waiting for the wheels to go round, inside and outside. I say that a man must be more than human if he can help laughing when the high-and-mighty personage changes color when he puts his paper down and rolls his eyes about, when nothing seems to keep his head on but his shirt-collar, and when an invincible horror of life gleams in that gaze which has grown hollow with surprising rapidity. Alas! no amount of reputation, no social importance, no eloquence, which in other places might affect the heart and even improve the understanding, can save him.

Yonder in the bows is a poor little cockney, a second-class passenger, in a shabby coat and his trousers half-way up his legs, sick beyond the power of description; there is no bench long enough on that vessel to furnish room for him and the great man at once if the water were smooth; but Nausea has waved her wand, and the humble little cockney and the high-and-mighty personage are brothers and

equals, fellow-sufferers, with all distinctions vanished between them as, with yellow faces, the cockney forward, the great man aft, they overhang the rushing foam with open mouths, the tears pouring from their eyes, and anguish inimitably expressed in the curve of their backs and the occasional kick-up delivered by their legs.

More pathetic, perhaps, is the newly married couple, though many a cruel laugh and jeer have been directed even at them. But nothing is sacred at sea. Sentiment that is full of poetry in drawing-rooms, among flowers, under the moonshine, among hedges, takes another character among rough waters.

I remember once crossing fifty miles of sea in company with a young gentleman and his bride. They were returning, I took it, from their honeymoon. They sat together upon a small, uncomfortable bench fixed against the inside of the paddle-box, whence they commanded a fine view of the action of the engines, and where the smell of the oil-cans hung steadily in the wind. They both knew they were going to be sick, and sat with hands locked, two devoted hearts bent on suffering together. The steward—a pale, large, sandy-haired man—considerately anticipated their wants by placing a couple of basins at their feet. The dismal implements made but a melancholy foreground for the impassioned pair, and I wondered how they would like to have had their photographs taken in that posture. A quarter of an hour sufficed to make the picture tragical. The wife leaned across the husband and the husband held on to her. His heroic devotion was immense. I could hear him in guttural accents pouring consolation into her deaf ears amid the intervals of his own convulsions, and when an unusually heavy roll to leeward caused both basins to slide away out of sight under the bench, I never beheld anything more touching than his struggles to replace them without letting go of his wife.

Happily, however, the heart is occasionally steeled against such objects of misery as this by spectacles of selfishness and fear in the last degree contemptible. I particularly recall a gaunt Frenchman with a spiked mustache, who, long before nausea afflicted him, refused to stir from his seat to help his miserable, prostrate wife, and who answered her murmurs to Emile to put something under her head and something over her feet, by fierce commands to her to hold her tongue. This wretched man was himself seized with nausea, and so great was his fear—either excited by the somewhat heavy sea that washed along-side the vessel or by his sufferings, which, to judge from the noise he made, must have led him to suppose that, bit by bit, the whole of him was going overboard—that after every explosion I could hear him shrieking, "Maman! maman!" like a girl.

What is the remedy for sea-sickness? I wish I knew; most cheerfully would I impart the secret. There are many prescriptions, from the ice of Dr. Chapman to Jack's lump of fat pork attached to a rope-yarn; but nothing seems to answer the end desired. Nor is it very remarkable that the wonderful vessels which were to put an end to nausea, should still leave the "expectaroon," even on their own decks, the useful piece of furniture passengers have for generations found it; for while clever gentlemen have shown us how the effect of the rolling and pitching movement of a ship upon the

head or stomach may be overcome by pivoted saloons, and swinging accommodations, they have entirely failed to produce any kind of mechanism to obviate the consequences of those movements of a vessel in a sea-way which are alone responsible for sickness; I mean the heave up and the swoop down. If the ship oscillated on an immutable basis, a cot or a balanced chair would effectually stop nausea; like a wine-glass on a swinging-tray, the passenger could always maintain a posture perpendicular with the horizon. But what is to qualify the sensations which follow the swoop down into the hollows and the roaring heave up on to the summits of the seas? Everything in the ship must accompany her in her falls and in her risings; and it is this motion which sends people rushing to the side, which sets them roaring for the steward, which causes them to loathe life, and to lie with their heads anywhere and their feet anyhow.

I cannot help thinking, however, that imagination contributes something, and often a very great deal, to sea-sickness; otherwise, how are we to account for people suffering from nausea actually before they step on board the vessel that is to carry them? If a sea-sick man could be sent to sleep his sufferings would cease; yet the vessel goes on rolling, and if it is this movement, affecting the stomach, that causes nausea, I cannot quite see why the stomach should not be as sympathetic in sleep as in waking. Anyway, I believe that a person could be made to forget to be sea-sick by having his imagination intensely occupied or his fears excited. Let a vessel full of sea-sick people drive ashore, or catch fire, or be in collision; let the captain bawl out, "We are all lost!" it would be interesting to conjecture how much sickness would remain aboard that ship. A good prescription might be a profoundly exciting novel; some hideous mystery so distractingly complicate as to make one sink all thoughts of waves and stewards in the eagerness to discover whether the figure Sir Jasper sees was really a ghost or his first wife, and whether it was her ladyship or the groom she ran away with who shot Signor Squallini in the throat and did the fine arts a real service. But it is better to be sea-sick than in danger; and, if the novelists can do nothing for us, I am afraid there is no alternative but to go on feigning the stewards and building swift vessels.

A LOG EXTRACT.

THE following entry was made in the official log-book of a ship named the *Oxford*, "Fifth November, 1882, Sunday, 4.0 P.M., lat. 35° 39' S., long. 18° 53' E., W. Waters, A.B., while furling the mizzen-top-sail fell from the yard into the sea, striking the half round of the poop in his fall. A life-buoy was promptly thrown him, the ship brought to the wind—it blowing a fresh gale from the S.W., with thick weather and a heavy sea at the time. The port life-boat was at once lowered, and proceeded under the charge of Mr. A. Bowling, second mate, to pick up the man. Owing, however, to the shock sustained by him in striking the ship, and his being encumbered with oil-skins, etc., he sank before the boat could reach him. After an unsuccessful search the boat returned to the ship

and was with difficulty hoisted up, owing to the heavy sea which half filled her. Everything was done that could be done to save the poor fellow. (Signed) J. BRADDICK, Master."

Now, here is the whole story, as who would not suppose? The sailor dropped overboard, a boat unsuccessfully searched for him, and then the ship braced her main-yard round and sailed away. But extracts from log-books, I have taken notice, are like the little box which the fisherman in the "Arabian Nights" found upon the sea-shore; when it was opened a wonderful creature shaped itself out, and its figure filled the sky. I particularly realized this when Mr. Bowling gave me a sketch of the yarn of which Captain Braddick's log is the briefest hint. Why, what a world of adventure, of heroism, of peril, grows up out of these marine entries! It is four lines about a ship rescuing a crew from a sinking vessel; or about a captain coming across a smack's boat in the middle of the North Sea, with nothing in her but a little crouching, starving boy; or about a brig found drifting helplessly, with her crew dead of frost, lying upon her deck? Assuredly in those four lines there is the making of a thrilling volume to any man who shall faithfully put his hand to the work, and, exaggerating nothing, relate merely the adventure as it befell, and how it came about and ended, and what the actors in it said, and did, and thought. Here, in very brief form, is Mr. Bowling's own yarn, told with my pen, of an incident as common, pretty nearly in its way, at sea as the sight of froth blowing into a hollow, or of the curve of the bow-wave flashing green and glass-smooth from the shearing cut-water:

"We left Calcutta on Sept. 4, 1882, with a full cargo, bound for the port of London. All went well—if by well you'll understand nothing extraordinary outside spells of bothersome head winds, dead calms, and now and again a twister over the quarter to give us legs—until came Sunday, Nov. 5, on which date, you'll see by the extract from the log-book where we were; the glass stood low, and in the morning there was a kind of wild, wet light in the sun when he sprang up from behind the dull-colored sea, and the luster that came along with him seemed to roll on the top of the swell as if it was burning oil lying there instead of being up-and-down flashing of fair weather, when the light sounds the very bottom of the ocean with its silver lead-line, as you may see for yourselves if you'll watch the break of day under a pure sky and over clean blue water. We were under top-gallant sails, on the starboard tack, the wind about west, with weight enough in it to swear by, and a slow gathering of haze all along the horizon over the port quarter—south-west the bearings would be about—and a thick, deep-breathing swell coming out of it, tumbled by the wind into a bit of a sea that washed with a stormy noise along the bends, and made the ship as uncomfortable as an old cab on a road full of stones.

"I had charge of the deck, and not liking the look of the weather, I went below to tell the captain about it. He had been up pretty nearly all the night that was gone, and was in his cabin taking some rest. But there's very little rest for ship-masters, who need to have as many eyes as you find in a peacock's tail, that they might close two or three of them at a time, if ever they're to get the amount of sleep that all other kinds of people, barring nautical

men, find needful to keep themselves alive on. Well, sir, I called the captain and told him that the weather looked threatening, and straightway he came on deck and took a squint around. The wind was freshening slowly and surely, and the top-sails and top-gallant sails, out of whose cloths the wet of last night's squalls of rain were not yet dried, were stretching as if they would burst under it; and the water to leeward washed like boiling milk all along the scuppers as the ship was rushed by the pressure, taking the seas with a floating jump, and making them roar as she split them with her sharp stem and sent them seething in white smothers on either hand. There were clouds crawling up out of the thickness in the west and south, and passing like smoke over the mast-heads, and there was a look of racing about the whole ocean with the sailing of those bits of vapor, and the pelting of the ship, and the wild, hurrying, rolling of the seas, along which there were sea-birds screeching as they skimmed in their low flight through the driving spray in pursuit of us.

“Well, sir, the fore-top-gallant sail was furled and the watch lay aft to roll up the main-sail; but not for long did we hold on with the main-top-gallant sail; that was clewed up soon, and the wind freshened as sail was diminished; so that, although half stripped of canvas, the ship was keeling to it as before, while there was the hard look of a gale of wind in the sky that you saw gray between the scud; and the thickness was blowing up nearer and nearer, making a mere biscuit's-throw of the horizon, so that the seas looked lumping things as they rolled, all of a sudden like, out of the haze, and were under the ship and standing up on either hand of her almost as fast as they seemed to be formed. We were now under top-sails and foresail only—of the square canvas—when on a sudden there comes a bit of a lull, and a sort of silence aloft that sounded strange after the roaring, and a great noise of washing waters all around; and then plump sweeps up the wind in a wild out-fly out of the south-west, driving the ship forward until the foam of the cut-water looked to be smothering her head. All hands were called to shorten sail, the three upper top-sail halyards were let go, the starboard braces rounded in, and the helm shifted to bring the ship to her course. Four able seamen and four boys went aloft to furl the upper mizzen-top-sail. You know the old story: the light hands well out, the older hands in the slings and quarters, and the sail swelling up like a sheet of iron to the wind, that blew fair into it in a storm betwixt the two yards. I had my eye on those men I am speaking of, when a blast like a squall swept the canvas out of their fists, and in a breath one of them fell with a twirl and a toss of his clinched hands off the yard, striking the half-round of the poop a blow that came along with the yell of the wind in a frightful thud; and with that, rebounding as a ball might, over he goes into the yeast and froth along-side. It is a horrible thing to happen; it will stop the breathing of the strongest for a minute. The fellows on the yard roared out, “Man over-board!” I sprang aft, and had a life-buoy in my hand in an instant, which I threw fair, as I prayed and believed, to the yellow patch of sou'wester that I saw dark on the foam of the side of a sea; but the wind blew the light thing, like a feather, to leeward

of him. But he was swimming—there was life in him—though man, you should have heard the thump of his fall, and then thought of him struggling there with his great sea-boots full of water, and his heavy oil-skins dragging him down, and a rushing of froth over him every time that a sea swept him up into the snow of its breaking crest. Well, sir, we went to work smartly; the hands came tumbling down from aloft, and the ship was brought to with her main-top-sail aback, while half a dozen of us were obeying with mad haste the order to clear away the quarter-boat ready for lowering.

“Meanwhile a hand remained in the mizzen-top-sail yard to keep the poor fellow in sight, and he was shouting that the man was swimming, and swimming strong; that he didn’t seem to see the life-buoy, but that he was struggling bravely; and I, seeing this too, and driven half mad by the pitiful sight of that sailor and shipmate fighting the whole ocean, as I may put it, and battling with an English seaman’s courage, sang out, “Who’s going to volunteer for the boat?” There was no hanging back; it was just a leap to see who should be first. As fast as they could tumble in, there they were, six of them, the pick of the crew—merchant seamen, sir—whom we’re being taught to despise; there they were, I say, with the others handling the falls, and every one looking as if the saving of the life of the man astern was his business and nobody’s else; for he was a shipmate, and that means a brother at sea, sir, when the fore-castle holds real sailors.

“It was four o’clock in the afternoon, and the mist was driving between the masts. I was in charge of the boat, but try my dead best I could not help her being badly stove before we got away, and the water came in fast as we headed for the spot where the man was last seen. You must go through it to realize the difference between the deck of a ship pitching and rolling, no matter how heavily, and the feel of an open boat released from her side in the same sea. The solid deck you’re fresh from makes the contrast fearfully sharp, and I can well believe what I remember reading in your yarn of the wreck of the *Indian Chief*, that the survivors of her crew when in the life-boat owned to being more frightened by the fearful tossing and jumping of the buoyant craft than they were when in their foretop, with the hull of the ship going to pieces under them. We could only pull four oars, for two men had all their work in baling the boat, one with a souwester and the other with a sea-boot, those being our balers. My duty lay at the helm, in watching over the men and looking out for the seas. Bitterly cold it was, the sun going down, the haze thick around, and the ship a mere heaving darkness upon it when we had measured but a few lengths from her. I looked narrowly about me, but could see nothing of the man. Sometimes a lump of green water tumbling over the foam would show like his head, and my heart would leap; but the next moment the clear sea would roll away from the blowing froth and explain what the deception was. We pulled to the buoy, but it was empty.

“Then one of the men said, ‘Supposing even Bill had not been hurt by the fall, surety he couldn’t live in such a sea as this.’ And another said, ‘Think of his wraps and oil-skins, sir. The best

swimmer in the world couldn't hold up all these minutes under such drags.' But they spoke not as if they wished to give up, but as if preparing themselves for the disappointment. Had he hurt himself more than we could know? Was he broken and dying when he touched the water, and were his struggles there the despairing efforts of a broken and dying man? We strained our eyes, but could see nothing save the boiling heads of the seas which came roaring down upon us and threatened with every desperate swing to fill the boat. Still we kept up heart. 'Another pull, boys! impossible to go back without him!' I would cry, while the two fellows in the bottom were chucking the water out over the side, and the thickness stood like a wall around.

"Well, for three quarters of an hour did we hang about, pulling in all directions, and thinking only of finding and saving him; and then we gave up and looked round for the ship. I could not see her. I sung out to the men, 'Do you see the ship?' and they turned their heads upon their shoulders to look; and the chap in the bow cries out, when we were standing nearly end on the side of a sea, 'There she is, I think.'

"Well, to be sure, I could see her, but it might as well have been the thickening of the mist that way as the ship, for she made a shadow scarcely noticeable, and I looked with dismay at the distance that lay before us to row over, and at the water that was coming into the boat as fast as the two men could bale it out, and at the terrible sea around us. We had got into such a situation that the seas ran right abeam, and every send drove us to leeward, and sometimes the mist swept down so thick that there was never a man of us all who could see the ship, though, thanks be to Heaven, it did not come to our losing sight of her for good. It was a bad job for us that the heaving and straining of the boat caused her to leak worse and worse. But for her leaking I could have put the two men who were baling her to the oars, and they would have been just the sort of help we wanted; instead of which, they were scarcely able to prevent the boat from filling. It would, however, have been destruction to us to have set more men than those two at the job they were on. Every moment was precious; the afternoon was fast waning; in a short while the night would be upon us, and I knew quite surely that if it came before we fetched the ship we were doomed men. Oh, sir, it was a fierce bit of labor! In the midst of our struggles a squall of sleet blew down and hid the whole surface of the ocean to within our own length of us; but it cleared off, and when it was gone the mist thinned somewhat, and gave us a better view of the ship, at whose peak we could see a color streaming as a signal of recall. Never was any man of us nearer to death in his life than he was during the time we occupied in reaching the vessel. That we did reach her you may reckon, or I should not be here to tell you this story. But by the hour we had pulled across her head, and dropped along the port side of her, the water in the boat was up to the thwarts, we showed scarce more than our gunwale, it was almost dark, the sea had increased in volume, and the wind was blowing half a hurricane. We were fairly exhausted when we gained the deck, but, humbly grateful as we were for the preservation of our lives, ne'er a one of us could cast

a look over the quarter in the place where our shipmate had gone down, and where the darkness of the evening now lay, with the white foam showing with startling clearness upon the sides of those black, rushing hills, without feeling that our thankfulness would have been deeper had we been allowed to rescue the man whom we had been very near to losing our lives to save."

IN AN OPEN BOAT.

LONELINESS has many forms. It is Selkirk, imprisoned in an island, with nothing but the wash of the surf to break the shocking stillness; it is the mountain-climber missing his way, and passing the long night amid the tremendous silence of towering hills and black valleys; or it is the loneliness described by Byron, that of a man solitary in crowds. But what sense of solitude can equal that felt by shipwrecked men in a small open boat, surrounded by a universe of waters, with no other chance for their lives than such as a passing ship may bring? It is not the first hour, nor yet the first day; the agony of such a trial lies in the slow maddening of the mind by fruitless expectation; the deception of the white shoulders of clouds, which look like ships as they seem to linger a moment upon the horizon before sailing above it; the straining of the aching sight against the pitiless, vacant sea-line; the sense that death is close at hand, though a hundred deaths may have been suffered before the skeleton's clutch is upon the sufferers.

No kind of human anguish is more terrible, and no stories catch a tighter hold of the imagination than those which relate it. Generations have shuddered and generations will yet shudder over the grand and soul-moving description in "Don Juan." The raft of the *Medusa* is an immortal horror. The narratives which are at once the most fascinating and depressing in the marine records are always those which concern the sufferings of human beings adrift in an open boat in the midst of a great ocean. The deep is unchanging in the misery it works. Our ships are of iron; they are propelled through the calm sea by an irresistible power faster than a gale of wind would drive them; they are of proportions so colossal that many of them could sling the "tall schippes" of our forefathers over their sides, and stow them on skids as they stow their boats; and yet just the same sort of sufferings are endured now by mariners as were experienced by them in the days when a vessel of thirty tons was reckoned big enough not only to seek the North-west Passage but to hunt the unnavigated oceans after continents.

I heard once a story that seemed fitter for the lips of an ancient mariner, like Coleridge's, than the mouth of a seaman who lives in an age in which the Atlantic is crossed in eight days, and in which the Cape of Good Hope has been pretty nearly extinguished by a narrow water-way across a hundred miles of sand. The hearing it took me back in imagination to the days of the ship *Thomas*, of Liverpool, the *Lady Hobart* packet, the Yankee ship *Peggy*, the French East India Company's *Prince*, and I know not how many more old craft which ages since became phantom vessels, to be

wrecked again and again upon the dark and noiseless oceans of tradition.

“My name,” began my informant, “is William Pearce. I have used the sea for above eight-and-twenty year, have sailed in all kinds of ships in all sorts of capacities—boy, ordinary seaman, sail-maker, bo’sun’s mate; crossed the Atlantic seventeen times, and have been round the world eight; been shipwrecked thrice; likewise overboard during seven hours of darkness, and picked up at daybreak with my head in a life-buoy; know pretty nigh the best and the worst of the weather that’s to be found at sea; and am therefore capable of taking my oath to this, that of all the bad jobs that ever I was in or that ever I heard of any other sailor being in, there’s nothing to beat the sufferings us men of the schooner *Richard Warbrick* had to endure when the foundering of that vessel obliged us to take to the boat.

“The schooner sailed from Runcorn with a cargo of coals for Plymouth. She was twenty years old, and a trifle over a hundred tons burden. There were five of a crew, and nothing particular happened until we were abreast of the Bristol Channel, when there blew up a heavy gale of wind from the east’ard. There’s no call to describe it; it was of the regular kind, full of wet, and raising a sea a sight too big for a vessel of one hundred tons pretty nigh chock-a-block with coal and with twenty years of hard use in her hull. However, we scraped through the gale, and two or three more that followed fast, until one morning we were somewhere betwixt the Scilly Isles and the Cornish coast. It was dark, thick weather, blowing and raining hard, the sea rough, bitter cold—as you may calculate it was, the month being January—and everything invisible that was more than half a mile off. The wind was east and north, and we were ratching along under very small canvas, when, being turned in, as it was my watch belcw, and the Land o’ Nod close aboard, I was roused up by a loud cry on deck and a tremendous crash. I tumbled up as fast as ever I could pelt, and found the schooner going down and the men getting the only boat we carried overboard. It was no time for questions. You could feel the vessel settling under your feet, just like standing on soft mud and sinking in it. The seas were washing over the deck, and growing heavier as her bulwarks sank lower. There was nothing but white water to be seen on the starboard bow—no rocks, nothing showing above the froth; but I didn’t want any one to tell me that we had run foul of the Seven Stones. There was no time to do more than launch the boat and roll into her. Daly was the last man in, and scarce had he jumped when the schooner plumped clean out of sight, going down like a deep-sea lead, so suddenly that it took my breath away.

“There’s no sensation worse than that a man feels when he looks for the ship he’s been forced to abandon and finds her vanished under the sea. The ocean never seems so wide as then. The whole world appears to be made of water. Sailors are a class of men little given to talking; and when they come clear of such jobs as this they say next to nothing about it, and so people think that either they’re men without the capacity of feeling, or else their sufferings were not equal to what might be supposed. Had people who take

these views been in that boat along with us, they'd look sharp in altering their opinions. The suddenness of the disaster—of being one moment safe, and the next tossing on the sea in a small boat, with the schooner gone, nothing saved but what we stood in, not a morsel of food nor a drop of drink of any kind, the wind blowing fit to freeze the eyes out of our heads, every mother's son of us soaked to the skin, and drifting fast away toward the Atlantic—took our senses away for a spell. We sat holding on and staring like daft men. The captain was the first to rally.

“He called out, ‘A bad job; it's a bad job, lads!’ several times, and then said, ‘No use letting her drive too fast. We mustn't let her blow away into the ocean;’ and with that we lashed the two oars to the painter and flung 'em overboard.

“This brought her head to wind and slowed her drift; but, for all that, every hour was carrying us further and further toward the open sea, and away from the Scilly Isles and the Cornish coast, which were our best chance, so that all the hope that was left us was being picked up by a passing vessel. Yet there could be no worse month in the year than January for that likelihood. How long were the gales and the frost going to let us last? We were far to the nor'ard of the fairway, in a part of the sea that every vessel was bound to give a wide berth to. The weather, as I have said, was so thick that you couldn't see half a mile off; and though of course it was sure to clear in time and open out the horizon, so that vessels could have a view around them, the question was, where should we be when it came on fine?

“Unlike a good many others who have gone through such dreadful messes as this, our sufferings began the moment we tumbled into the boat. In the lowest latitudes that ever I was in I never felt such cold. Had the water been fresh our clothes would have froze into coverings of ice. The air was full of spray, and squalls of sleet came rolling up. We sat in the bottom of the boat in a lump, to keep her steady, and for the shelter of one another's bodies, and those who were to windward—that is, in the forepart—would shift from time to time and others take their place. We had no mast nor sail, nothing but the two oars we rode to. It was a Monday, and all through the daylight we sat lifting our eyes above the gunwales, and trying to pierce the haze for a vessel. It was blowing about half a gale of wind, and it kept steady. Now and then we'd ship a dose of water, and bale it out with our caps; but it kept our feet soaking, and I reckon it was worse than being without boots at all. The boat did well, and the oars were a kind of breakwater, and helped her. After four in the afternoon the night drew on. We never could get used to the darkness. The daytime was bad enough, but the night made our sufferings maddening. The wind, when the sea was black, would take the feel of solid ice. We couldn't see one another, and that made talking a kind of foolishness; and so we never spoke—which caused every one to feel himself a lonely man upon the sea. Likewise the noise of the water would sound stronger. In the daytime I took no notice, but at night I'd find myself listening to the crying of the wind up in the dark, and the hissing that rose all over the ocean from the breaking of the waves.

“I don't know what my mates did; but that first night I never

closed my eyes, never tried to shut them, never thought of sleep. I saw the dawn come, but the haze was too thick to let the light show on the horizon; it was overhead as well as around when the morning broke; there was no darkness that you'll find hanging in the west at daybreak. Indeed, I believe the sun was up above the sea before any light came, so thick it was. All the men were awake, and dreadful they looked, as of course I did. One of them was named Burke. I noticed him at once, and thought he was dying. He lay athwartships, with his back against the starboard side of the boat, and there was a strange working in his fingers, like the movement of a woman's hands opening a skein of thread.

"The captain said, 'For God's sake look around, lads, and see if there's anything in sight.'

"The sea ran high, and made it dangerous for any of us to stand up, for fear of capsizing the boat: so we hung over the gunwale, with our chins on a level with it, and stared into the driving smother with all our might; but there was nothing to be seen but the breaking seas when we were hove up, and the water standing like walls on either hand when we dropped into the troughs. All at once Burke sat up, and began to sing out for a drink of water. He talked as if he believed we had it and wouldn't give it, which was the first sign of his insanity. The captain tried to pacify him, speaking very kindly, and seeking to cheer him.

"'We have outlived a day and a night,' said he. 'Keep up your heart, mate; we may have a thousand-ton ship under us before it comes dark again.'

"But Burke kept on crying for water, saying that he was dying for it, and pointing to his throat; and then, falling on all fours, he puts his face to the salt-water washing about in the bottom of the boat and sucked up several mouthfuls. Well, it seemed to do him no hurt, and he lay quiet. Soon after this I spied something knocking about in the sea a few fathoms astern, and called the skipper's attention to it. He said it was one of some kegs of butter that had been aboard the schooner, so we pulled the oars in and dropped down to it, and picked it up. We broke it open and ate the butter in fistfuls, being mad with hunger; but it was as salt as brine, and the effect of it was to make our thirst raging. The knife we had used to open the keg lay in the bottom of the boat, and Burke, on a sudden turning over, seized hold of it, jumped up and fell upon the captain. He hit him once, but the knife didn't pierce through the thick jacket the skipper had on, and before he could raise his hand again we dragged him down and kneeled upon him.

"There was no worse part in all that dreadful time than this. The madman's face was a terrible sight; almost black it was. He snapped about him with his teeth, and his cries and curses were things it brings the sweat upon my face to talk about. Think of our situation; mad with thirst ourselves and struggling with a madman, a killing north-easter blowing like knives through our frozen bodies, the sea leaping and roaring around us, and nothing between us and the bottom but the little old boat we were in. We were too weak, and in too much suffering ourselves, to remain holding the madman down, and finding him quiet we let go, and squatted one close to another for warmth; but scarcely had we

hauled off from the poor wretch when he jumps up and throws himself overboard. 'Mind!' shouted the skipper—'one's enough!' fearing that if we all got to the side Burke had leaped from, we should upset the boat. I was the nearest, and as he came close I leaned over and got him by the hair, and dragged him into the boat. He was pretty nigh dead, and gave us no more trouble.

"Well, sir, the night came down a second time, finding us living, but without the looks of live men. I made sure I should never see another daybreak. My thirst was not so sharp as it had been; but I don't know whether the dull throbbing in my throat, the kind of lockjaw feeling in my mouth, the burning in my tongue as though it were a lump of hot iron, was not more torturing than when the craving was fiercer. All night long it blew a strong wind, with now and then a squall of sleet and rain, and hour after hour two of the men, Parsons and Daly, were groaning in the bottom of the boat. When the light came I looked to see who was alive, and my eyes falling on Burke, I called out, 'Dead!' The captain leaned down and felt him, and said, 'Yes, he's gone. He's the first. God have mercy upon us!' and catching hold of my shoulder he stood up to search the sea, but the haze was as thick as it had been all the time, and he threw himself down with his hands over his face. Presently, looking at the body, he said, 'We must bury him; but first, my lads, let us say a prayer for him, and for ourselves.' We all knelt while the captain prayed, and when he had done we lifted the body and let it go overboard.

"The madness that thirst creates broke out strong in Daly and Parsons when the body was gone, and down they dropped as Burke had, and lapped up the salt-water in the bottom of the boat like dogs would. The captain implored them not to drink, but they never heeded him or me, who likewise entreated them. However, no harm seemed to come of it. Well, sir, there's no need for me to describe that Wednesday nor our third night in that open boat. Thursday morning came, making the fourth day, and to our joy the weather cleared, the wind shifted and moderated, and the sea went down. We got the oars in, rigged up one as a mast, and two of us having oil-skin coats on, we joined them so as to form a sail, made a yard of the other oar, and putting the boat before the wind, which was blowing a light breeze from the south'ard, headed, as the captain judged, for the Irish coast. All the day long we kept a wild lookout, as you may reckon, for any passing ship, but never once, not the furthest distance, did such an object heave in sight. We might have been sailing in the middle of the Pacific. Nature in us was almost numbed. We had come to such a pass that we were too faint and exhausted to feel the craving of hunger and thirst. At least I can speak for myself, and it's in that way I account for my suffering less at the end than I did at the beginning of the dreadful time we went through. It was still cold, but nothing like the bitter cold of the gale and the heavy seas and squalls. We reckoned by the sun that the wind hung steady, and we let the boat slip before it; that was all that could be done. If we were to sail at all we were bound to keep the breeze over our stern, seeing there was nothing to draw but a couple of oil-skins secured to the oar.

"But the coming on of Thursday night was like the bitterness of

death itself, sir—indeed it was. All day long we had reckoned upon sighting something before the sun went. Every hour we had hoped, and prayed, and believed would heave up some sort of vessel to come to our rescue; and, therefore, when it drew up black, only a few stars among the slow clouds, and we were brought face to face with another long winter's night, my heart failed me altogether; I felt that there was a curse upon us, and that we were doomed men, singled out to die of famine, the most cruel of deaths, because the longest. Think of ninety-six hours in an open boat, in January, in the Chops, a north-east gale blowing most of the time, with never a morsel of food except the salt butter, and no drink but the salt water washing in the boat! And yet when the Friday morning came we were still alive, the captain steering, doubled up with faintness and the cold, his knees against his mouth, and his head lolling for want of strength in his neck; Daly and Parsons lying still as dead men under the thwarts; and me in the bows, too weak and broken-hearted even to cast my eyes around the sea to notice if there was a vessel in sight.

“The morning passed; the afternoon passed. Were we to go through another night? The sun was within half an hour of his setting when Parsons, who was leaning his breast on the gunwale, stood upright and pointed. His mouth was full of froth, and as he tried to speak the foam flew out of his lips, but no words he spoke; it was naught but a kind of death-rattle in his throat. We all looked in the direction he pointed to, and saw a large sailing-vessel heading right down for us. How we watched her! all of us standing up, never speaking, and only moving with the roll and toss of the boat. It took her an hour to approach us, and then she hove us a line; but her people had to sling us aboard. None of us could move. Nothing but the excitement of seeing her had allowed us to stand. The moment the line was in the boat and we were along-side, we all became as helpless as babies.

“The vessel's name, sir? She was the Austrian bark *Grad Karlovak*, commanded by so humane a man that I feel fit to cry when I think of him and his kindness to us poor, miserable, shipwrecked English sailors. That's the story, sir, or as much of it as there is any call to relate. Five days and four nights in the month of January in an open boat, most of the time blowing heavily! The tale's known at Plymouth—it's known at Runcorn—it's known to Mr. Hopkins, the agent of the Shipwrecked Mariners' Society at Plymouth. And I'll tell you somebody else it's known to, sir—some one as'll swear to every word of it, and that's me.”

WAITING FOR A SHIP.

THE Shipping-office in Tower Hill is a place where seamen, firemen, stokers, and others assemble in the hope that captains in want of crews will come and pick out the best men among them to “sign on,” as it is called. I was induced to visit it the other day by hearing a sailor complain bitterly of the filthy state of it. “Neglect,” said he, “is our lot; but the condition of that shipping-office beats my time. It's all dirt and Dutchmen, and if ye want to see

something to make you reflective, just trot down the steps and take a turn round the yard the next time you're passing that way." When finally I did trot down the steps I found myself in a kind of court-yard, flanked on the one hand by the shipping-offices—grimy doors, leading into gloomy interiors—and on the other hand by a species of shed, partitioned into stone rooms, with hard and painful seats against the walls, and unwholesome draughts of dampish wind eddying about them.

It was a gloomy day—rain had fallen, and pools of muddy water gleamed here and there in the yard; the brown and stooping London sky threatened more wet, and flung a shadow that made the shipping-office and its yard and its condemned cell-like rooms under the shed an unspeakably cheerless, depressing, and miserable picture. Some sixty or seventy men stood or moved about in groups in the yard, or were seated in the cells under the shed.

I was hardly prepared to witness so large an assembly, and remained near the steps for a little while surveying them. A few of them were decently attired—one or two respectably and comfortably dressed in good clothes and clean linen; but a large proportion of them were, so far as their costume went, little better than scarecrows. Some were clad merely in shirt and trousers, with their naked feet thrust into old shoes or boots; here and there was a red or blue shirt, or a figure buttoned up in such a manner as to suggest that under the ragged old coat there was no shirt at all. "And is this," thought I, "the British sailor of the nineteenth century? is this the original of those rubicund features, those flowing breeches, that tarpaulin hat on nine hairs, those well-polished shoes, twinkling in the light-hearted measures of the hornpipe, which are offered by novelists, dramatists, and theater lessees as accurate representations of the jolly tar we are so fond of joining in choruses about, and whom we gaze at with such patriotic enthusiasm as he hitches up his breeches, turns his quid, and smites his timbers?"

Every crowd of human faces is full of variety, but no crowd that ever I looked at had the variety submitted by the countenances of these sixty or seventy men who were "waiting for a ship." The negro's face—flat, bland, and open-mouthed—was, of course, not wanting; square cheeks, hollow cheeks, high cheeks; complexions black, brown, and yellow; eyes of every pattern and shade, from the small, twinkling blue of the North-country to the filmy and red-webbed optics of the gin-soaked cockney, combined, with the different build and shapes of the men, the appearance of their clothes, the various head-coverings, to make up a truly singular scene.

I stepped forward and got among a little bunch of men, of whom, addressing myself to one, I asked what sort of shelter that dirty and wretched shed and those bleak and stony cells offered in the winter, when the wind blew with an edge and the sleet and rain fell. No notice had been taken of me before, but on my making this inquiry the eyes of the whole group were fixed upon me, and half a dozen voices answered at once. The meaning of the replies was lost in the confusion, but the noise was like a signal; for I can truly say that within a few seconds of my having asked that question every man in that yard and every man that had been lounging in

the cells had gathered about me, so that before I very well knew what was happening I found myself—pretty tightly squeezed—in the center of a mass of men, the outer portions of whom pressed eagerly upon the inner to hear and see what was going forward. It was like a mutiny on a large scale; and when I looked around at the mass of faces, and tasted the tobacco-laden breath of the near people blowing hot against my cheeks, I felt that nothing was wanted to complete the suggestion of revolt but the gleam of a score of sheath-knives flourished in the air. “Give me a little room, my lads,” said I, working with my elbows; and having freed myself somewhat, I said, “there seems no lack of men here; captains ought to find no difficulty in manning their ships.”

“They don’t want Englishmen; it’s Dutchmen they take,” shouted two or three voices.

“Here’s a man,” called out some one, pointing into the left of the crowd, “who’s been walking this yard for five months.”

“Five months; as true as the words I use is English,” bawled a hoarse voice. “But they won’t have me because my name’s Johnson. If it was Unks von Dunks, I’d ha’ been woyaging o’er and o’er again in the time I’ve been kicking my heels about starving here.”

“Scoffen von Romp would do as well,” said a man near me. “Don’t matter what the name is, so long as it sounds Dutch.”

“By Dutch I suppose you mean foreigners of all kinds?” said I.

“Ay, they’re all Dutchmen!” was the shout.

“But why is it that Dutchmen are preferred to Englishmen?” I asked.

The hubbub raised by this obliged me to hold up my hand and entreat silence; but it would not do. Every man’s mind was full of the grievance, and, amid the chorus of replies, I barely succeeded in catching such answers as “Dutchmen ’ll ship for two pound a month!” “Dutchmen ’ll eat anything!” “Englishmen won’t put up with the messes Dutchmen ’ll swallow!” “Skippers can rope’s-end Dutchmen, but they durs’n’t serve Englishmen so!” “It’s the Dutch crimps as does it!” and so forth.

It was difficult to hear these cries and watch the sea of surging heads and faces around me with unmoved gravity. There was something to touch the very dullest capacity of appreciating the ridiculous in the astonishing contrasts of physiognomies, and in the multifarious expressions which adorned the poor fellows’ countenances; but I am not sure that the appeal made to my laughter did not owe much of its force to the sorrowful element in it, to a quality of pathos lying close to humor. Many of these faces had a pinched look, that was painfully expressive of want, if not of positive starvation; and sad indeed, it seemed to me, was the sight of it in men who carried the manners of real seamen, and who appeared to me to be fit for any fore-castle afloat, and for any duty that a sailor is expected to understand.

“I suppose you all come here with certificates of conduct in your pockets?” said I, when the hubbub had ceased.

Instantly a crowd of fists were thrust under my nose, filled with documents, and “Here’s mine!” and “Here’s mine!” “V. G. every one of ’em!” was roared out in twenty or thirty voices. I

looked at some of these certificates, and found the letters "V. G." (very good) indorsed on the backs of all that I examined.

"D'ye want to ship, sir?" sung out a fellow while I was glancing over these papers; "I've got two V. G. certificates in my pocket, and as I've not had anything to eat to-day you shall have 'em both for a couple of shillings."

"Are certificates often sold in this fashion?" said I, of a quiet-looking man standing along-side of me.

"Sold!" he exclaimed, indignantly, "what's to hinder 'em? If a man sticks to the name that's on the certificate who's to know? and so ye get men shipping themselves with false characters, no more fit for sailor's work than if they was green-grocers."

"Perhaps that's one reason why skippers and owners prefer Dutchmen to Englishmen," said I. But this raised another storm; they shouted that more rascality went on in that way among Dutchmen than British sailors; that the reason was not that, but because, as I had heard, Dutchmen shipped for wages no Englishman would look at, and put up with food, accommodation, and treatment which no Englishman would endure, and likewise because there was a deal of underhand crimping work going on between the foreign boarding-house runners and mates and captains, and so on.

Here the emotions of these sixty or seventy men brought them pressing so heavily around me, that my anxiety to hear their statements was swamped in the labor of breathing and the struggle to liberate myself. I bawled to them to make way, as I wanted to have a look at the rooms under the shed, on which they drew back and let me out, though they followed at my heels as I passed from one room to another, talking and arguing hotly, calling marine blessings down on the heads of all Dutchmen, and wondering what good it was nowadays being born an Englishman, when even a Finn, whom, in the olden times, no sailor liked to be shipmates with, was thought a better man? The rooms were middle-sized, damp, dark, and dirty compartments, and were meant to serve as waiting-rooms for the unhappy creatures who thronged the bleak and frouzy yard in the hope of being engaged by captains.

It was like being in the dungeons in the Tower of London—which, by-the-way, stood close at hand—to pass through these death-cold apartments, and view the legends, dictated by hopeless waiting, roughly scrawled in pencil upon the walls. Dirt and soot everywhere! on the ceilings, on the floors, on the walls, on the benches, in the very atmosphere that filled the cheerless haunt. A strip of grating ran through the floors, disclosing the outline of a hot-water pipe; but it looked, in that grave, the very corpse of a heating apparatus; and when I asked if ever these stone rooms were made warm by that old, moldy, dirt and soot covered contrivance, the only answer I got was a loud, growling laugh, as if, exquisite as was the joke, it was likewise very offensive. And this, thought I, as I stood gazing with mingled astonishment and disgust at the picture of crime, neglect, and dirt, is the great London shipping-office, the medium for the vast and ever-growing port of London for the transaction of business between the masters and crews of ships! Who are these men, who come here in the hope of obtaining employment by manning the fleets we are never weary of extolling as

the source of Great Britain's wealth and power, that they should be used in this manner, furnished for their long, weary, and often hopeless waiting with accommodation fouler, unwholesomer, colder, more soul-depressing than the worst prison that ever excited the horror and provoked the denunciations of the philanthropist?

"Has this place," I asked, "been long in this condition?"

"It used to be kept a little more decent," was the reply; "but it's been falling from bad to worse for many a month gone. Considering the fees* we sailors have to pay, it's a shame that we should have to put up with a place which no farmer who values the lives of his hogs would stow 'em in. I've been day after day down here, from the opening hour till the closing at four o'clock, for six weeks, hoping to be engaged; and I tell you, sir, that a man needs to be born a gutter-snipe, used to sleeping all his life under railway arches, and the likes of them places, not to feel the effects of such a slum as this upon his spirits, when day after day goes by and he has to keep on waiting here for a captain to single him out. You are seeing it now in summer, when the air's warm; think of it in winter, sir, with the slush a foot thick, and the wind blowing into those waiting-rooms fit to turn your marrow into ice."

The Board of Trade is responsible for the conduct and keeping of this office. Have the officials of that great Department any conception of the state of the place? Is it ever visited by them? Do they know anything more about it than that it is situated somewhere in the neighborhood of Tower Hill? Nothing more disgraceful is to be found in London.

By degrees the men left me to resume their weary trudging up and down or to draw together in groups; on which, finding that I should be able to converse without the risk of suffocation, I went up to a well-looking, decently-dressed sailor-man, on whom I had had my eye for some time previously, and asked how long he had been waiting for a ship.

"It will be three weeks to-morrow," he replied.

"What are your certificates?"

"I have four in my pocket," he answered, producing them; and I found that he had served in the several capacities of boatswain, sail-maker, and able seaman aboard sailing-vessels belonging to some of the best firms in London.

"How long have you been at sea?"

"Thirty years," he replied.

"And is it possible," said I, running my eye over his neat suit of pilot-cloth, his clean blue shirt and silk handkerchief, and admiring his unmistakably sailorly appearance, and the frank expression in his tanned face, "that in this age, when one hears so many complaints of the difficulty of procuring good seamen, that a man who has been thirty years at sea, filled responsible posts, and holds honest vouchers to his efficiency and good conduct, cannot get a ship! What countryman are you?"

"A Scotchman—an Aberdeen man."

"Wouldn't the last ship you were in take you again?"

"She discharged at Cardiff, and is now for sale. My wife lives

* This was written in 1881.

just out of the Commercial Road, and that's why I'm in London," he answered. "I had only been home a week when I tried to get a ship again, for I'm a poor man."

"What are you willing to ship as?"

"As anything; I'm too poor to choose, sir. I'll go as A. B. if I can get the berth. But this hanging about is eating up all our little savings."

"Why can't you get a berth?" said I.

"Because the captains won't take Englishmen," he said.

"What are their objections?"

"Oh," said he, "objections are easily made if they're wanted. Captains say that English crews desert, that they're loafers, bad seamen, expect more wages than they're worth, and that the best of us are no better than vagrants, turnpike-sailors, who'll never work so long as there's a police-magistrate within hail, and who'll soger* when they're at sea. That may be true of some, but it's false if said of the rest; and, depend upon it, sir, it don't account for eighty per cent. of the men employed in the mercantile marine being 'Dutchmen.' Our argument—the English sailor's argument—is this: There are a lot of foreign boarding-house keepers in London. We'll take one of 'em. He has, say, twenty Dutchmen in his house, who pay him, each of 'em, sixteen shillings a week. Well, sir, most of these men have no means to last their expenses much beyond a fortnight; so the boarding-house keeper or runner says, 'Look here, my lads, you can't stay here. I must get you a ship, and you'll pay me five shillings apiece out of your allotment notes for doing it.' To this they're agreeable. The runner then goes down to a ship with his pocket full of his men's certificates, hands them, along with a bribe, to the mate or master, who brings 'em to this office, and the Dutchmen, who've been told by the runner to come to Tower Hill, are called in to sign articles. It pays the runner, who gets five shillings a man for shipping them, besides his other expenses out of the allotment note, which he discounts at about fifty per cent.; and it answers the purpose of the skipper, who pockets the bribe, and comes down to find a crew all ready cut and dried for him; but it leaves us Englishmen out in the cold, kicking our heels about, starving, any of us, and standing no shadow of a chance against the underhand roguery that goes on."

"This is a grave charge to bring against captains," said I.

"Grave or not," he replied, "go and ask the opinion of British seamen all round the coast, and see whether or not this crimping swindle is understood by them and taken as the evil that's filling English ships with foreigners."

"But this kind of rascality is provided against; for the Act says that any person who receives any remuneration whatever other than the authorized fees for providing a seaman with employment incurs a penalty of twenty pounds."

"Act or no Act," he answered, contemptuously, "it's done every day; it's done every hour."

"Can't you Englishmen catch one of these 'Dutch' crimps and make an example of him?"

* Loaf, skulk.

“It’s carried on so that it’s hard to prove,” he replied. “Dutchmen won’t give evidence against one another; besides, the men sail away and are lost sight of, and there’s no seeing how to get at the runners.”

“What is the remedy, then? what is it you want?” I asked.

“We English sailors want this,” he said; “we ask that captains shall come to the shipping-office and pick crews out of the crowd; not go and take certificates from crimps, and come down to find a crew ready beforehand, to step in as they’re called in. Give us a fair chance along with the Dutchmen. If already eighty per cent. of the crews in English ships are foreigners, what’s to happen later on when there’ll not be an Englishman found in the fore-castle of a ship that flies the red ensign? Why, the whole breed of sailors ’ll die out. Talk of Jack being a skulker, a scaramouch, a no-sailor! What’s the good of abusing him if you don’t give him a chance? It was said not long ago that owners meant to ship black crews, so hard did they find it to get Englishmen to act honestly by their employers. But look at this,” said he, pulling a newspaper cutting from his pocket, “look at this account of three Arabs, two Egyptians, and a negro locked up for thirty days for refusing to serve as firemen after they had signed articles; receiving three pounds apiece in money, and then striking because they wanted a month’s advance; getting it, and then refusing duty because they said they couldn’t get the allotment notes cashed; receiving the money from the captain, and still refusing duty, and threatening to cut the captain’s throat. Those were black men. Suppose they had been Englishmen? Dutchmen! why, sir, the most dreadful mutinies that ever happened have taken place aboard vessels manned with foreigners. Captains and owners know that. And does any man suppose,” he continued, speaking with great warmth, “that if England should find herself at war with foreign nations, the Dutchmen who man her merchant-ships wouldn’t carry ’em into the enemy’s ports? Why, in crowding our fore-castles with foreigners, sir, we’re striking the heaviest blows that could be aimed at this nation; we’re stopping all chance of recruiting the navy with seamen to fight our battles; and we’re putting our property into the hands of strangers who hate us, and who’d betray us by running away with it at the sound of the very first gun that was fired in anger.” And so saying he touched his cap, and left me to make my way out of the gloomy, dirty, melancholy haunt, followed as far as the steps that led up to the street by several men petitioning me to “do something for them,” “to get ’em a ship,” “to help them out of this starving life.”

Sailors are men of strong prejudices, and will often take wrong-headed views of things. To what extent my informant spoke the truth, those who have a wide knowledge of the inner life of the mercantile marine will judge. But certainly I cannot persuade myself that ship-masters act the part in relation to the foreign crimp which my seaman charged them with. I will go further, and assert that the shipment of foreign seamen is due, not to the British captain’s dislike of the English sailor, but to his owner’s order that he shall man the vessel with “Dutchmen” only. But these admissions must still leave the current system of crowding the English

forecastle with foreigners an unmixed evil; nor do they affect the British sailor's declarations as regards the energetic agent the foreign crimp, runner, or boarding-house keeper is allowed to be in the recruiting of our mercantile marine.

The subject is one that will probably, in due course, command attention. It is as unreasonable as it is impolitic that the "Dutchman" should be caressed and honored with the full confidence of British employers while the English seaman, willing to work, is left to starve or decay. From ship-masters and mates, at least, some sympathy should be expected for him, for they are largely sharing in the neglect he is visited with, and finding themselves ousted out of their berths by foreigners. The English sailor has many faults, but he certainly is not so bad but that he may be made better if something of the old good-will is shown him, and something of the old helpful hand extended to him; and, let his demerits be what they will, depend upon it he is the man who should be found aboard an English ship, and that a fair specimen of him is worth as many "Dutchmen" as he has fingers.

SKIPPER'S WIVES AT SEA.

SHOULD owners allow captains to take their wives to sea with them? Opinions vary among master-mariners on this head. Some think that a man has as much right to be taken care of at sea as ashore; that shirts, buttons, and linen want as much looking after in a ship as in a house; that captains are always the better for having their wives with them, because when in port they have an inducement to stop by the vessel and spend their evenings in the cabin, instead of roaming ashore at nightfall and bringing up in bad and perilous anchorages; and they also reason that a ship and cargo are bound to be rendered the safer by the captain's wife being on board, as the skipper is sure then to be vigilant and keep his weather-eye lifting. Of course a cynic might say that so far as regards the safety of the ship, and the inducements to the skipper to spend his evenings when in harbor aboard of her, a good deal must depend upon the lady as wife and companion.

I once met a captain who told me that he questioned whether an insurance could be effected on his ship and cargo were it to be suspected that he had any intention of carrying his wife to sea with him. "We're always quarreling," said he—a remark that saved me from asking him more questions. But what do the wives think? Are owners' objections to their accompanying their husbands agreeable to them? It is quite possible for a woman to love a sailor without loving the sea; and though owners deserve no praise for their hard and fast rule touching captains' wives, as there is not an atom of sentimental regard for the ladies in it, I cannot but think it a good rule, as it saves many a woman from following her husband into a life to which nothing could have courted her but the sense of wifely duty.

After all, what sailor would willingly subject the woman he loves to the perils of the deep by taking her with him voyage after voy-

age? The farewells, it is true, are hard to say; the shot is often low in the locker, and she and the children will have a hard job to scrape through the months while father is absent—but then she is safe; there are no gales of wind to affright her, no mutinies, no collisions; the little home can never be waterlogged, nor can there ever arise the need of taking to the boats, and perishing of famine after a week of unspeakable anguish. There have, indeed, been many heroines among captains' wives, many brave and some truly heroic acts performed by them while at sea with their husbands.

Nothing, for instance, in its way was ever more striking than the conduct of the wife of the captain of the *Edgar*. All the crew, with the exception of the captain and mate, were prostrated with sickness. The ship was homeward bound from Senegal, and the captain and mate had to work in the engine-room while the wife steered. In this way the vessel was safely brought home, though, as was related in the newspapers at the time, seven of the crew died of the fever on the voyage. Here, perhaps, was a valuable ship saved by a captain's wife, for without her it is difficult to imagine what the other two could have done; and those skippers who think owners unjust in forcing them to go to sea *en garçon* should quote the case of the *Edgar* as a very strong commercial argument—the only sort that is likely to prove successful—in favor of their views.

But, as Lord Bacon said of dancing, so may I say of such instances as this: The better the worse. The greater the marine dangers in which women distinguish themselves, the more resolved should husbands be to guard their wives against the like risks. If it were always fine weather; if charts were always perfectly accurate; if there were no fogs and no shoals; if there was no danger in iron pyrites; if all surveyors were above suspicion; iron ships as well constructed as they are highly classed; stevedores scientific people; and if vessels were built by rules of common-sense instead of being the fragile products of a system of economy rendered vicious by insurance, then, indeed—the maritime millennium having arrived—might all skippers laudably combine to agitate until owners gave in, and allowed wives to ship with their husbands.

But while the ocean and all the conditions of the ocean—wrecks, leaks, piece-work, blind rivet-holes, "boat iron," storms, thick weather, and all the rest of it—remain as they are, captains who are good husbands will keep the ladies ashore. It is only men of the Billy Taylor type who deserve to be followed to sea; and it is only the Hannah Snells of this world who should attempt such pursuits. Over and over again one is reading of the wrecks in which the captain's wife, and too often, alas! the captain's little child, lose their lives. The poor things are always called "passengers," and it is usually the "passengers" who seem to be drowned. Here is one of these stories related by the captain himself; and, taking it as a typical thing, which all seamen may know it to be, I will ask, is it not well that owners—no matter the reasons which influence them—should object to their captains taking their wives to sea with them?

"The steamer I commanded was a schooner-rigged vessel, built at Low Walker, and you may call her tonnage in round numbers five

hundred. She left a North-country port on a certain day with a crew of seventeen hands and a cargo of coal, our destination being Cronstadt. My wife was on board, and this was the first voyage she had made with me. We had been married two years, and in that time I had made several trips, as you may imagine; these voyages—as I suppose I must call a trip across the North Sea, or a run along the Mediterranean—occupying only a few weeks. Every time I started, my wife wanted to go too; the owners had no objections, but I had. I told her the sea was all very well for lady passengers who had to cross it, but it was no place for a woman to make a home of. She would do far better keeping house ashore, and making all ready for my return; and so I would put her off. But when it came to this trip, she pleaded so earnestly, saying that she loved the sea, that the run would do her good, that she felt terribly lonely when I was away, and that her place was at my side let me be where I would, that I could no longer refuse. ‘Very well,’ said I, ‘for this once;’ my notion being that one voyage would do more for my wishes than fifty years of arguing, and so she came aboard. Well, sir, at the start, we had fine weather. It was in the spring; the air was sharp, but the sky was blue and the sunshine strong and cheerful; and my wife heartily enjoyed it. There was no sea-sickness to balk her relish; she was too much a sailor’s lass for that weakness. We were not much of a ship: you know the regular type—high bows, wall-sided, Plimsoll’s mark well awash, you may take your oath, the flying-bridge over the chart-house, and the pole compass forking up like a scarecrow above that. But my wife thought the vessel made a fine sight—merely, I expect, because I commanded her.

“Poor girl! poor girl! Often I’d come on deck and see her leaning over the side when she’d call to me to admire the line of froth there—as if that was a thing an old fist like me would take notice of—and if a vessel passed she’d stand and watch it with a look of delight, as though nothing more beautiful was ever seen, though it might be an old sailing collier, sir, with nothing showing over the rail but a red night-cap, or a steam-wagon after our own pattern. But much as she enjoyed the water her presence never gave me pleasure.

“I remember going below on the very night on which the ship was lost, and looking at my poor lass as she lay sleeping, and I recall that the sight of her worried me to a degree you’d scarcely think likely. I was forever wishing her back home, snug and secure in the little house that she always had ready and bright and cheerful for me to return to. You might almost think such wishes unnatural, but I see them in their proper light now, and reckon there’s a world of truth in that old saying about coming events casting their shadows before them. It was a Tuesday afternoon. The weather had changed in the forenoon, and at mid-day it was blowing a strong breeze from the north-west. It had grown as cold as January, and now and again when a squall drove up there’d come a shower of hail that was like heaving a bucket of shot on to the decks. I had kept the patent log towing astern, our course being a trifle to the north of east, and on hauling it in at noon I found that we had made about a hundred and seventy miles run since quitting our port. There

were no sights to be got, for, though the morning had opened fine, the sky was now as thick as mud.

“All this time the wind was freshening up into a gale. I put the log over again, keeping the vessel on the same course, under sail, and her engines going full ahead. The wind was well abaft the beam, the sea a following one, and there was nothing to stop the ship; she drove along handsomely, whitening the water all around her, and for a couple of miles astern, and making excellent sport for my wife, who stood holding on and taking in the scene with her eyes like diamonds, and her cheeks like roses. I never could have supposed that there was so much to admire in the sea as she had found. To me it was hardly much more than a waste of salt-water that was to be crossed as soon as possible, full of hard work, exposure, poor pay, and heavy anxiety. My poor lass knew nothing of that part of it, except the pay. I think, had time been given her, and we'd been making a long voyage, she'd have converted me into a kind of poet, and taught me to see beauties even in thick weather and strong head-seas.

“Well, sir, by this time there was thick weather enough. It was three o'clock, a gale of wind on the quarter, the sea out of sight half a mile ahead, lost in a haze of rain, and the steamer pitching heavily as she swung over the stormy tumble. Nothing could have been more annoying than the thick weather: the gale was good, the sea did no harm; we were getting an extra two knots out of the ship; but the haze was like your being in a hurry, mounted on a swift horse, with your eyes blindfolded. However, I was determined not to slow down. Dispatch is everything nowadays. It is all very well to talk of risk, but if a man's situation depends upon his pleasing his owners by being sharp, sharp he must be, and take the odds as they come. Better lose a ship and let the owners touch the insurance than make a losing venture by tardy delivery. So, as sailors say, we 'held on all,' keeping the canvas aloft and firing up below, and racing through the smother in proper modern fashion. Darker and darker it grew, and the wind came along more fiercely. My poor lass was frightened, and came up to me and asked what made me rush the ship when scarcely her own length was visible. I said we couldn't stop the vessel; the wind was after her, and she was bound to go. 'But you may run into another ship,' said she, and not know she is there until you have struck her.' 'Ah, Polly,' said I, 'that sort of calculation belongs to a past age. Certificates would be of no use if they were based on such reckoning. All that we skippers have to do is to drive on. If there were to be any trouble over a tardy delivery, do you suppose this thick weather would be taken as an excuse? Others who left, perhaps, after we did, will have arrived before us; and the luck of one is expected to be the luck of the others.'

“It stormed up harder after nightfall, and was then as dark as a vault. I was on deck from eight till twelve, going into the chart-house occasionally, but never into the cabin, and at midnight I hauled the log in, and found we had run about one hundred and twenty miles since noon. The course, east by north half north, seemed to me correct. It was as I always steered on this run, and so I held on, putting the log overboard again; and I was going below for a min-

ute to see after my wife, when there was a noise like the explosion of a gun forward, and some one sung out that the fore trysail had blown away. This was a small matter, but it was good as a hint. We took in the other canvas, and went rolling and pitching along under steam, averaging about seven knots, but shipping a good deal of water forward, which washed about the decks and made walking difficult and uncomfortable. At four bells in the middle watch I went below to get some rest, leaving the chief mate in charge. Everything was right, as I supposed; a hand on the lookout on the fore-castle, plenty of water under and around us, and nothing to cause anxiety but the haze. My wife was sound asleep. I lay down, completely dressed, on a locker, but could get no rest. This was unusual; a sailor they say can sleep anywhere, and amid any sort of disturbance; and I, for one, in former days, have been able to sleep when it was impossible to hear a voice calling the watch in consequence of the shrieking of the storm on deck, and the groaning of the vessel below.

“I had a foreboding, an uneasiness in my mind; there was nothing to account for it, but it kept me awake, and presently it found me standing looking at my wife, wishing her to wake up that she might talk to me, yet unwilling to arouse her. At that moment the ship struck—I felt the grind on her forefoot along the stony bottom; she heeled over, with the engines working their hardest, and I knew that she had come to a dead stop, not only by the manner in which I was thrown forward, but by the thunder of the seas breaking over her decks. I rushed up and heard the men shouting. It was still very thick, hailing and raining in torrents. I sung out for the mate, and he came to me and I told him to get the wheel put hard aport while I bawled down to the engine-room to keep the engines going.

“No attention was paid to this, for the engineers, firemen, and the others, thinking the vessel was going down, swarmed up on deck, and without heeding my commands, turned to to help the rest of the crew to get the boats over. My notion was that all hands meant to abandon the ship, and would leave my wife and me to our fate if we did not bear a hand to join them; so I ran below, and found my poor lass dressing herself and in a terrible fright. I did not wait to answer her questions, but, catching her by the hand, ran on deck with her. Great Heaven what a night! what weather! what a scene for any poor girl to be dragged into! I heard the cries of men along-side, and understood by that that one of the boats had been stove and the men in her thrown out. I shouted, ‘Here is my wife, men; for God’s sake, take her with you if you intend to abandon the ship!’ The chief-engineer answered, ‘Bring her here—there’s room in the starboard life-boat.’ I ran with her to the side, and, looking over, saw the boat with seven or eight men in her. I called to the men to look out, and I then put her over, giving her a kiss as I did so, and bidding her have no fear; and the men caught her, and sung out to me to let go the painter. I answered no, it would be better to let the boat veer astern and ride there while I endeavored to find out the condition of the ship; and they agreeing, I carried the end of the painter aft and made it fast.

“I now called to such as remained on board to join me, but only

three men came, among them my two mates; all the others had got away, were drowned, or were in the boat with my wife. We could do nothing till daylight came, and sat crouching out of the reach of the water that was flying in heavy masses over the ship. It was as much as I could do to see the boat astern; but every now and again I'd crawl aft to notice if she still lived, and then come back again to the others, thankful to the Almighty that she was making good weather of it, and might still save my lass's life. But how am I to describe my feelings as I reflected upon what she was suffering in that open boat, pelted with the hail and rain, the deadly cold wind penetrating her poor body, tossed like a nutshell upon the roaring seas, and never knowing but that the next moment would find her struggling in the water.

“ Well, sir, the daylight came, and showed us that we were hard and fast upon a dangerous reef off the Jutland coast. We could see the land there looming upon the haze about four or five miles off. The ship was full of water, and bound to go to pieces, though she was still holding well together in spite of the terrible pounding of the sea. I went to the stern to hail the boat and say a word of comfort to my wife, and when the men saw me they sung out, ‘ Let go the painter, captain. We must take our chance of driving ashore; it's killing work here.’ My wife put out her arms to me, and I heard her cry, ‘ Oh, don't leave him behind!’ The boat had already as many as she could well carry. Perhaps the men feared that I would try to join my wife, and drag the boat along-side, which might end in sinking her; but I had no thought of that kind, the gig still remaining; and was about to tell them to hold on and keep the shelter of the wreck for a spell, as the weather might moderate presently, when a man in the bows cut the painter.

“ A heavy sea taking the boat as he did this, swung her up and around; she plunged into the hollow, and the water rolling between prevented me from seeing her. But as it passed it hove up the boat again bottom up, the black keel just showing among a smother of foam, with here and there the upright arms of a drowning man. It was a done in a moment—it was all over in a moment; it left me staring like a man struck dead by lightning, and holding the posture he was killed in. The chief mate, catching me by the arm, cried out, ‘ She's going to pieces, sir. For Heaven's sake, let's get away! We're doomed men if we linger!’ I broke from the horror and grief in me, and went to work, not so much to save my own life as to help the others to save theirs.

“ Had I been alone, I should have thrown myself down and waited for death. The shock I had sustained had driven all instincts of life out of me. Well, sir, we got the gig overboard, and that we were saved you may suppose, as I am here to tell the story. Four other men got ashore besides us, making ten of the crew drowned besides my lass. Oh, sir!” cried the poor fellow, covering his face and speaking amid convulsive sobs, “ why did she insist upon accompanying me! Why did she not keep to our little home ashore, and be there to cheer and comfort me when I came back from this shipwreck a ruined man! My certificate has been suspended—I cannot get a berth—and I have lost the darling of my heart, the truest wife

What ever man had. Why did she insist! why did she insist!" he repeated; and, rising like a blind man, he left me speechless, in the face of a grief it was not in the power of human sympathy to soften.

SEA SONGS.

CONSIDERING that Great Britain is an island, that immense numbers of the inhabitants live in seaports, that the sea is within an hour or two of the metropolis, that there is always an abundance of sailors "knocking about" ashore, and that pretty nearly all our wealth as a nation is owing to our seamen and our shipping, it must be owned that many of those notions of Jack and his life ashore and at sea which may be found among the greatest maritime people on the face of the earth are in the highest degree extraordinary. Is it possible that the sailor is still supposed to have nothing to do at sea but to sit down with a pipe in his mouth and let the wind blow him along? Are there people yet living who imagine that on Saturday nights at sea cans of grog are handed about, roaring nautical songs sung, and wives and sweethearts toasted? Is it, even in this day of steamboats, believed that a sailor cannot express himself without loading his language with marine terms; that he cannot speak of "walking," but of "steering;" that the right-hand side ashore is the "starboard;" and that he cannot step backward without making "sternway?"

Where do these highly nautical fellows live when they are at home? I never have the luck to come across them. In some seaports you may still see here and there, over a public-house, the sign of the Jolly Tar; a figure in flowing breeches, tarpaulin hat on "nine hairs," a bottle of grog in one hand, and a great red nose, set in the midst of a shining face. Who was the original of that fellow? He is not a man-of-war's man, and most certainly he is not a merchantman. I take it that he is nothing more nor less than the embodiment of the landsman's notion of the sailor obtained to a large extent from marine novels, but mainly from the English sea songs. You might walk the whole of Great Britain over without meeting with the counterpart of that effigy, unless it lay in some turnpike impostor who gets a living by swearing he has been shipwrecked. If the merchant seaman is to be typified, he must not be dressed in loose breeches and an open-breasted shirt. If his language is to be imitated, it must not altogether consist of "hard a lee" and "haul the bowline." And if his life at sea is to be pictured, one must drop all reference to cans of grog, and have nothing whatever to say about Saturday nights and sweethearts and wives.

But how can landsmen be ridiculed for their absurd ideas of the sailor when for years and years writers who profess to know all about him have persisted in reproducing the same stereotyped likeness—the same drunken, singing, good-humored, sprawling mountebank, shouting out for more grog, bawling inane verses about his Poll and his Sue, clamoring the purest "slush" about the Union Jack, and talking inconceivable nonsense about top-gallants and handspikes? Of course the likeness is accepted by those who know no better, and songs are sung about Jack which no sailor can listen

to without astonishment that ignorance so profound should be also so widespread. I remember a man, who was much applauded in his day as a singer of nautical ballads, saying to me, "To-morrow I have to sing 'Tom Tough,' by desire. Can you tell me, sir, what attitude I ought to adopt when I come to—

" So I seiz'd the capstan bar,
Like a true, honest tar,
And in spite of tears and sighs
Sung yo! heave ho?"

Do I pull or do I push, sir?"

What did it matter? Whether he pulled or whether he pushed would have been all the same to his audience. Who but a sailor at a concert would notice that a vocalist thought it all right when he roared out—

" And at the bosun's call
We man the poop downhaul,
And furl the main jib-boom, lads,
So, boys, so?"

Apparently, let the words employed be as nonsensical as they will, so long as there is plenty of "yohoing" and "heaving" and "so-hoing," the song is accepted as extremely nautical, and peculiarly expressive of the free and open character of the sailor.

I was once in a house much frequented by seamen when there entered the room in which I was sitting an elderly man of a somewhat sour cast of countenance dressed—not, believe me, in that flowing rig in which all kinds of sailors are popularly supposed to go clad, but in plain black cloth and an unstarched, striped cotton shirt, with a cravat round a stand-up collar. He had the look of a man who had been at sea all his life, and consequently no marine exterior could be less suggestive than his of "So-ho's," and "Heave-ho's," and "Pull aways." He called for half a pint of ale, and filled his pipe, and sat smoking, and listening to a conversation between two men relative to a collision in which the vessel they had recently left was concerned. By and by he began to grope in his pockets, and presently produced some sheets of songs, which he held out at arm's-length the better to inspect the highly marine figure who, in sailor's shirt and jacket, straggled legs, immense belt, and lifted hand, embellished the title-page of the cheap collection. He took a long look at this striking figure, frequently removing his pipe to expectorate, and then very leisurely began to examine the songs.

I saw by the movements of his lips that he read little bits here and there, and now and again I would catch him stealing a glance at me, as though he had something on his mind, but was too shy to address me.

"What have you there?" said I.

"Why," he answered, reverting to the title page, "something I paid a penny for just now—bought it from a chap who stood alongside a row of 'em fixed against a wall. They call it the 'Sea Songs of Great Britain.' It's full of queer spelling, and it's all about Jack, whoever *he* may be, if this b'ent him," and he pointed to the absurd straddling woodcut.

He went on reading for a short time, his pipe in his hand, and his

mouth opening wider and wider until, coming to the end of the song, he looked at me and said, "Well, I'm jiggered!"

"What's the matter?" I inquired.

"Dibdin—Dibdin!" said he "d'ye know anything of that gent, sir?"

"Only as the greatest nautical song-writer this country ever produced," I replied.

"Yes," said he, casting his eyes upon the page, "I see he is a nautical song-writer; but was he ever at sea?"

"Not as a sailor, I believe."

"Mates," he called out to the others, who had stopped talking and were listening to his questions, "what d'ye think of this for a nautical job? It's called 'My Poll and my Partner Joe;'" and he read slowly and hoarsely—

"I did my duty manfully while on the billows rolling;
And night or day could find the way,
Blindfold, to the main-top-bowling."

He paused and looked around him.

"'Blindfold to the main-top-bowling!'" he ejaculated. "Which end of it, d'ye reckon, mates? Would he come down the bolt rope to the bridle? That must have been it, otherwise what manfulness would he have had occasion to talk about? But listen to this, boys—evidently the work of another nautical man. It's called 'The Storm.'

"Now it freshens, set the braces;
Quick, the top-sail sheets let go!
Luff, boys, luff; don't make wry faces!
Up your top-sails nimbly clew!"

'Set the braces!' How's that job done, d'ye know? And when they was told to 'Luff, boys, luff,' did they let go of the wheel to 'Up their top-sails nimbly clew?' It must have been a bad storm, that. I wonder they didn't ship a capstan bar in a lee scupper-hole to keep the ship upright."

"You mustn't be too critical," said I; "it's the music of those old songs that makes them beautiful."

"I've got nothen to do with the music," he said, warmly. "It's the words I'm looking at. What's the music got to do with the sense? See here!" he cried. "What's the name of it? oh! 'The Boatswain Calls,'" and he read—

"Come, my boys, your handspikes poise,
And give one general huzza,
Yet sighing as you pull away
For the tears ashore that flow,
To the windlass let us go,
With yo! heave-ho!"

He let fall the paper on his knee and stared at me.

"Well, that is certainly very poor stuff," said I.

"Poor stuff!" he exclaimed. "Why, it ain't even that. Ne'er an omnibus driver but could do better. How can they pull away if they've got their handspikes poised? and what's the windlass got to do with pulling away? And hear this—

"If 'tis storm, why we bustle; if calm, why we booze,
All taut from the stem to the stern."

Booze in a calm! Why, there's naught going but liquor in these blooming rhymes. And 'All taut from the stem to the stern'—did the chap who wrote that have the least glimmerin' shadder of a notion of what he meant? But stop a bit: here's a song called 'Poor Jack:'

“ ‘ Though the tempests top-gallant masts smack-smooth should smite,
And shiver each splinter of wood,
Clear the decks, stow the yards, and house everything tight,
And under the foresail we scud.’ ”

What d'ye think of that, boys?" said he, addressing the others, who were on the broad grin. "Did ye ever hear of a top-gallant, mast going smack-smooth? One lives and larns. I always thought that was a job for the lower masts. And, I say, how d'ye relish stowing the yards? He can't mean atop of the booms, for he keeps the foresail on her to scud with; but perhaps the foreyard's stowed too, and the reefed course is set on the flying jib-stay. But follow this:

“ ‘ For,’ says he, ‘ d'ye mind ye, let . . . ’ ”

—something; here's a word left out—

“ ‘ . . . 'ere so oft
Take the top-lifts of sailors aback! ’ ”

Does he mean topping-lift? If so, that's a queer sort of thing to be taken aback. Why, if he goes on in this fashion he'll be reefing the mainsheet next."

All this was exceedingly amusing to me. It was too good, indeed, not to encourage.

"Nautical blunders seem uncommonly cheap," I said. "You appear to have got a wonderful lot for one penny."

"Look here," he cried, bursting into a laugh as his eye lighted on another ballad:

“ ‘ 'Twas in the good ship *Rover* ’— ”

that's the name of it—

“ ‘ That time bound straight to Portugal,
Right fore and aft we bore;
But when we made Cape Ortugal
A gale blew off the shore. ”

“ ‘ She lay, it did so shock her,
A log upon the main,
Till, sav'd from Davy's locker,
We put to sea again. ’ ”

Only a Harley or a Robson could do justice to the seaman's face as he looked at me after putting down the paper: there is nothing in words to convey the sour astonishment and contempt in his expression.

“ ‘ Right fore and aft we bore! ’ ” he presently exclaimed. "Did any man ever hear the like of that? What sort of course is it? How's her head when she's bearing right fore and aft? And then think, arter lying like a log upon the main, of putting to sea again without going into harbor first!"

“ I doubt if ye can beat that,” said one of the other sailors.

“ Think not?” answered the old fellow, quickly, “ then what d’ye say to this out of a song here wrote down as ‘ Spanking Jack?’ ”

“ ‘ One night, as we drove with two reefs in the main-sail,
And the scud came on lowering upon a lee shore,
Jack went up aloft to hand the top-gallant sail,
A spray washed him off, and we ne’er saw him more.’ ”

“ What is wrong there?” I asked.

“ Wrong!” he shouted. “ Did ye ever hear of a square main-sail with two reefs in it? and a square one’s meant, if anything is meant at all, by the hallusion in the verse to the top-gallant sail. And what’s intended by the scud coming on lowering upon a lee shore? Scud comes from windward, don’t it? And what’s a spray?”

“ Quite enough water to wash off such a sailor as Spanking Jack, I dare say,” I remarked.

“ Ay, you’re right,” said he, with a grin. “ But I’m not done yet. Here’s something in the ferocious line, called ‘ The Demon of the Sea:’ ”

“ ‘ With equal rage both ships engage,
And dreadful slaughter’s seen;
The die is cast—a ball at last
Has struck his magazine.

“ ‘ And now appall’d, his men they all
Stand mute in deep despair;
The pirate, too, and all his crew
Were blown up in the air.’ ”

“ What d’ye think of that for a nautical bust-up? Think of standing in mute despair after the ball had struck the magazine! How long did the chap as wrote this wash reckon it takes powder to explode arter it’s fired? Instead of being appalled and standing in mute despair they should have taken to the boats; for ye see that convenient magazine was bound to give ’em plenty of time. And they calls this,” said he, turning the pages backward and forward, “ ‘ Sea Songs.’ It’s the likes of this—that’s offered to shore-going folk as correct representations of the mariner’s calling, hey? Ain’t it true to life? Here’s a bit for ye:

“ ‘ William, who high upon the yard
Rock’d with the billows to and fro,
Soon as her well-known voice he heard,
He sigh’d and cast his eyes below.
The cords glide swiftly through his glowing hands,
And quick as lightning on the deck he stands.’ ”

“ What sort of cords did he come down by—the signal-halyards? And isn’t it quite conceivable that, being on a man-o’-war, and aloft on duty, he should drop his job to come down to his Susan without leave of the officer in charge? Wonderfully true to life, sir, ain’t it, especially them bits about the sailor-boy capering ashore, and jolly tars drinking and dancing at sea, as if cargoes consisted of nothing but casks of rum which sailors are allowed to broach whenever they want to be merry?”

He turned to the rude woodcut, and had another long look at it;

then suddenly twisting the sheets up in his hand he thrust one end into the fire, singing out, as he looked around him,

“Anybody want a light?”

This sour seaman was, of course, a very hard and exacting critic, belonging to a class of sailors who, when reading about the sea, should they come across the least oversight on the part of a writer, will fling his book or poem or song out of window, and vote the author a lubber and utterly ignorant of all that concerns the calling. I remember, when I wrote an account of the wreck of the *Indian Chief*, a sailor gravely told me he was cock-sure the whole yarn was an out-and-out lie, because I had made the chief mate escape from the mizzen-mast by getting into the main-top by the mizzen-top-mast stay. No doubt I should have done better by sending the mate to make his way into the top from the top-gallant-mast-head; but just because my sailor was sure that the mizzen-top-mast stay of the *Indian Chief* set up half-way down the main-mast, he refused to believe the story of the wreck. Yet it is quite possible to read many of our English sea songs with wonder and ridicule without necessarily bringing to them the sourness and severity of judgment I found in the old seaman. The present generation of writers are not worse sinners in respect to accuracy than the past; but I am bound to say that their blunders are to the full as numerous. The production of a sea song is by no means conditional on a man's having been to sea. The finest marine lyric in this or any other language, “Ye Mariners of England,” was written by a man who had no knowledge whatever of the sailor's calling. There is nothing false in that glorious poem, no absurd references to bow-lines and top-sail sheets, and other words of which few landsmen have the least idea of the meaning. But can as much be said of Allan Cunningham's popular poem, “A Wet Sheet and a Flowing Sea?” It is just possible that the poet may have used the word “sheet” rightly, and meant the song to refer to a small fore-and-aft vessel that when heavily pressed down might wet her sheets; but Jack, when he hears that ballad, is strongly disposed to believe that the writer thought that a “sheet” was a sail, and this being his suspicion, he could never sing the song with the least relish or enjoyment of even the beautiful air with which the words are associated. By all means let landsmen continue to write sea songs; but if they desire a larger audience than shore-goers for their compositions—if they wish to hear of their verses in the fore-castle, and learn that they are popular among sailors—let them rigorously avoid all technicalities, all the stupid old clap-trap about cans of grog and “Yeo, heave-ho,” and “So-ho!” and the like. For a song may be as salt as the sea itself and yet be free from the stereotyped nauticalisms as a page of “Hamlet.” Indeed, the real English sailor is not one third as nautical as he is supposed to be; and the numerous inanities dedicated to his rollicking enjoyment when at sea, his Sues and Nans ashore, are about as true to his real character as the public-house effigy of him, on one leg, in shoes, and round hat at the back of his head, is like the original.

AN HOUR'S ROW.

THERE is not a more painfully diverting sight in the whole world than that of a Cockney with a face as yellow as a London fog, a tall hat at the back of his head, his colored shirt-sleeves rolled above his elbows, tugging upon the sea at a small pair of oars in a rather heavy wherry. He has no idea of tides, of waves, of winds, or weather. He looks to leeward for squalls, and over the stern for any other news of the sea. The current that dangerously and helplessly sweeps him away from the land delights him by a sense of velocity. The waves which rise and threaten to fill the boat gladden him with the sensation of going "up and down." I once took the trouble to watch a Cockney get into a wherry and row himself out to sea. I kept a very powerful glass bearing upon him, and had his face within reach of my hand, so to speak, when he was two miles off. There was a strong tide setting to the eastward, in which direction lay the North Sea. He went away very fast, and with my eye to the telescope I found myself smiling in sympathy with his radiant enjoyment of the speed at which his boat was going. He did not feather his oars, but rowed with prodigious contortions of his body, carrying his nose aft until I thought he would tumble upon it in the stern-sheets, and then lying back at an angle so acute that I was constantly watching for his heels, while his oars flourished themselves in the air like a pair of tongs in the hands of a clown. I was sure, by the expression in his face, that he believed it was his fine rowing that made the boat go so fast. He did not know that the tide was helping him at the rate of very nearly three and a half land miles an hour.

At last he thought it was time to turn back. He let go one oar to pull at the other with both hands, and so he got his boat's head round. He still smiled and looked confident, and rowed unintermittently for about ten minutes, in which time he had gone astern about the sixteenth of a mile. Then he stopped and took a look over the bows. His face was no longer radiant, but on the contrary, very much puzzled, and even slightly distressed. He rowed hard again, and then stopped and took another look. This time he seemed horribly frightened. Indeed, examined through the telescope, his yellow face was a curious study. The emotions of his soul were finely expressed, and every time he stopped rowing to turn his head and gaze at the land, a fresh passion was depicted on his fog-colored lineaments. Eventually a couple of boatmen went to succor him, and with much difficulty towed him home. He stepped on shore very defiantly, and, instead of rewarding the boatmen for their services, expressed his gratitude by offering to row either of them for a pound.

It is plain that hardy and dexterous landmen of this kind must occasionally meet with exciting adventures on the deep. An experience not so commonplace but that another touch or two would have raised it into tragical dignity was encountered not very many

days ago by a plain, honest, decently-educated Londoner, a City clerk, aged forty-four, who, being afflicted with the delusion that he could row, put forth in a wherry along with his wife and child. He told me the story, begging me to print it as a warning to others, but at the same time on no account to mention his name, nor the port at which he embarked on his disastrous voyage. As nearly as I can remember, this is how his story went.

"I don't know," he began, "whether I shall ever live to keep a servant, but it would be more sensible for me to hope I may never live to feel the want of one. Anyway, when a man can't afford to keep a servant, then, if he has a baby it must always go along with the wife: and this being so, when I offered to take my wife out for an hour's row we were bound to carry the baby with us. The baby was weaned six weeks ago. It's a small thing to say, but worth taking notice of, as it made our troubles harder, as you'll hear. I never professed to be an oarsman. I had in my time pulled a pair of sculls on the Thames, and got along middling well—well enough to enable me to say to my wife, on this occasion, 'Look here, Sarah, there's no need to take a man. A man will be a shilling extra. I don't say I can feather; and I don't know, if I were to row with other men, whether I should be able to keep time. But I'm quite competent to pull in a boat by myself.'

"'Very well, William,' said she; 'if you think there's no danger, an hour on the water will be very enjoyable. But we don't want more than an hour.'"

"'Certainly not,' I answered; 'an hour is eighteenpence.'"

"The baby was dressed and fed, my wife put on her hat, and we left our lodgings for the place where the wherries lay. As we went along my wife suggested that we should carry a few buns with us.

"'What for?' said I; 'we shall be back for tea. We're sure to eat the buns, and they'll destroy our appetite for the shrimps. That was my reasoning. It was very short-sighted; but what should a man who is cooped up in the City of London for eleven months in every year know about the sea, and how to provide against its dangers?'

"We were pursued by four or five boatmen to the landing-stage, where I selected what looked to me a nice light wherry. It was five o'clock in the afternoon. We meant to be home by six. The sun was still very hot; but the boatmen who helped us to get into the wherry said we should find a cool air on the sea. I removed my coat and waistcoat, and turned up my arm-sleeves and set my hat securely on my head. My wife sat upon a cushion in the hinder part of the boat, and the boatman put on the rudder and told my wife to lay hold of the strings—I don't know what sailors call them. But she said she would rather not touch them, as she had no idea of steering, and besides, the baby kept her hands employed.

"'I can steer,' said I, 'with my oars.'

"On this an old man with a long stick with a hook at the end of it pushed the boat off. There was quite a crowd of other boats—empty boats—in the way, and I was a good deal confused by the shouts of the boatmen telling me what to do. We ran into several of these boats and twice I let one of the oars fall overboard, which gave me a great deal of trouble to recover. We got clear of these

boats, and I was rowing pretty steadily when, to my surprise, I found the boat's head turning and aiming for the pier. I endeavored to remedy this by rowing more strongly with one oar than with the other, but the wherry would insist upon going the wrong way, and I had come to the conclusion that there was something seriously amiss with the boat, and was about to put back and exchange it for another that would go straight, when I perceived that the rudder was inclined, in consequence of my wife sitting on one of the strings connected with it.

"When this was freed the boat went straight, and I pulled vigorously for the open sea. We had several alarms, however, before reaching the open water. First, there were three boats full of school-boys, splashing about with their oars, who kept on screeching to me to mind where I was going. Then a man on the pier roared to me to keep clear of the tug. Then, again, we were nearly run down by a smack.

"'I certainly don't call this enjoyment,' said my wife faintly, striving to soothe the baby, who had been awakened by the boys, and was crying at the top of her voice.

"I made no answer, but continued rowing with great resolution, and, as I flattered myself, with a dash of science too, all things considered, earnestly looking over my shoulders to see where I was going, until my neck was as stiff as an office-ruler. At last we got out of harbor into the open sea.

"There was a large steamboat arriving from some place or other; there were numbers of people on the pier, but all watching the steamboat and thinking about her, and so nobody took the least notice of us. The water was quiet, with what nautical men call a swell that lifted and sank us; there was a nice wind that cooled the air. I saw two or three wherries at anchor in the opposite direction to that I was rowing in, and I fancy the people in them were fishing. Very far out at sea were some ships, but the only vessel near the harbor was a smack that came out soon after us, and, filling her sails, pushed quickly past us. One of the men upon her called out something as the vessel went by, but I didn't catch what he said.

"My wife now agreed with me that this was real happiness. There was a delightful quiet in the air, to enjoy which a man must live for eleven months every year in the bustle and noise of the City; the town looked beautiful in the afternoon light, the tops of the white cliffs as green as new silk, and over and over again, after rowing a few moments, I would hang on my oars and look at the houses in the distance and the different objects changing their shapes or shifting their places. As I had pulled the oars very leisurely indeed, I calculated that it would not take me more than a quarter of an hour of steady pulling to cover the distance I had been easily traversing; I mean, I reckoned that I could cover in a quarter of an hour the distance I had slowly come in three-quarters. That would make the hour; but my wife was enjoying the air and the sea so thoroughly that I thought it would not greatly matter if we broke into another hour. This was a treat we didn't often get. My wife flattered me by saying I rowed very well, and made the boat go wonderfully quick, considering I put very little strength into the oars. I thought so too, indeed, and was surprised to observe how

rapidly, in proportion to my exertion, the land had receded away from us. By this time the pier was only a black line upon the water, and the people upon it invisible.

“ ‘You’ll be facing the shore, Sarah,’ said I, ‘when I turn the boat to row back, and you’ll be much interested in seeing the various objects growing bigger and bigger as we approach the land.’

“ ‘No wonder people are fond of the water,’ said she; ‘I could stop here for weeks.’

“ ‘Poor woman! I doubt if she’d say that now.’

“ ‘It was six o’clock when I turned the boat’s head. I never doubted that I could row back in twenty minutes, and reckoned that the extra half hour would be well worth the money. I rowed at first with a good deal of energy, and my wife was delighted at the manner in which I made the foam fly with my oars. Indeed, I worked too hard; the exertion soon tired me, and I perspired at every pore with the heat. It was slightly distracting that the baby, who had been sleeping very quietly, should now wake up and cry for what I suppose you might call her tea, if you can give regular names to milk-and-water administered about seven times a day.

“ ‘I am sorry, William,’ said my wife, ‘that we have stopped longer than the hour.’

“ ‘Oh,’ said I, knowing that the child was running in her head, ‘baby will do very well until we get home; we sha’n’t be long now;’ and again I exerted my strength and toiled like a champion rower.

“ ‘It’s very curious,’ said I, giving up after about ten minutes, and feeling quite exhausted, and panting for breath.

“ ‘What’s very curious?’ said my wife.

“ ‘Why,’ said I, pulling out my watch, ‘here it is twenty minutes past six, and the land seems rather further off than it was before I turned the boat’s head toward it.’

“ ‘Yes,’ said she, growing a little pale; ‘I’ve been noticing that, too.’

“ ‘Perhaps it wants a steadier stroke,’ said I, wiping my forehead; and, settling to the oars again, I rowed for another ten minutes, and then looked over my shoulder. I could not be deceived. Row as I would, I not only could make no way, but the boat actually lost ground. I could not conceive of a current in the sea; a tide was an intelligible thing to me in a river, but I could not realize that the great body of water we were floating on was moving in a contrary direction to the land. There was nothing about to give me the idea; no bouys, or anything of that kind. All that I understood was that the harder I rowed toward the land the further we fell away from it. I was heartily frightened, and pulled in the oars to stand up and look around me. My wife began to cry, and the baby roared as babies can when they are particularly wanted to keep quiet. There were some ships, as I have said, a long distance off; and there was the smack that had passed us, two or three miles distant; but there was nothing near us. I put my hands to my mouth and shouted toward the land as hard as ever I could, flattering myself that there was a faint chance of the smooth water conveying the sound. I then stood waving and flourishing my hat for at least five minutes.

“ ‘Oh, William, what will become of us?’ cried my wife, sobbing piteously.

“ I was much too upset to answer her. I had hoped that we should be noticed by some of the people who keep a lookout on the pier; but as the time went by, and the sun sank lower, and I could see no signs of anything coming to our rescue, my spirits fell, and I sat down and stared blankly at my wife. I put out the oars again, but was so wearied that I soon gave up rowing; besides, I felt that we were being carried away, and that the oars scarcely hindered our progress toward the ocean. All this while the baby was giving us the greatest trouble with its incessant crying. My wife filled up the pauses of its screams by anticipating all the horrors which might befall us. She assured me that she could see nothing before us but death from starvation, unless the sea should rise and upset the boat and drown us, or unless a passing vessel should crash into us when the darkness fell. What could I do? We were in one of those situations in which it is simply impossible for people to help themselves. I could not row; we had no sail, and even if we had had a sail I should not have known how to use it; I had no means of calling attention to our position except by waving my hat or flourishing an oar, which seemed an idle thing to do, considering what a speck the boat made upon the water, and how far off we were from everything but the miserable sea.

“ Sure enough, presently the sun sank, and though the twilight lasted a good bit, yet the water soon grew dark, and speedily after sundown the coast grew faint, and the ships in the distance were swallowed up in the gloom. When the night fairly came the wind got up, not very much, but enough to disturb the water, and the wherry began to slop about horribly. What was worse, it blew off the land, and helped to carry us further away. How I cursed my folly for not having brought a man with me! The crying of the poor hungry little baby, and my wife’s moans and reproaches, were just maddening. It was very fine overhead, the sky full of stars; but there was no moon, and the sea looked as black as ink. I could see the lights on the land, and could even very faintly hear the strains of a band of music playing on the cliff, for, as I have told you, the wind blew from the shore. I pulled out my watch; but though I held it close to my nose I could not see what time it was. I kept on looking around in the hopes of observing a passing vessel, but, though no doubt some must have passed, I did not see them.

“ My wife was continually saying, ‘Oh, William, what shall we do?’

“ ‘Do,’ said I, ‘what *can* we do? We must sit here and wait.’”

“ ‘Wait!’ she would cry; ‘what is there to wait for?’”

“ ‘For daylight, if for nothing else.’”

“ ‘But what will daylight do for us? We have been lost in daylight, and when daylight comes where shall we be?’ and here she would hug the poor crying baby and wish herself dead, and so on.

“ Lord, what a time it was! The sea kept the boat rocking incessantly, so that it was impossible for me to stand up. The dew fell like rain, and my clothes were as heavy as if I had been exposed to a shower. My wife said her limbs felt like pieces of iron, and that she had the cramp in every joint, which I could easily un-

derstand, for I, too, suffered atrociously from having to keep seated and to balance myself to the tumbling about of the wretched little wherry. By degrees we lost sight of the lights on shore, and we felt as if we were in the middle of the Atlantic. Once or twice I thought of taking to the oars again, but when the lights disappeared there was nothing to aim for. How we passed the hours I can't tell you. The baby would wake and cry until she cried herself to sleep; then wake and cry herself to sleep again, and so on, hour after hour. My wife and I fell silent; we had exhausted all that *could* be said, and we sat there like two statues. To my dying hour I shall remember the gurgling and sobbing noise of the water splashing against the boat's side, and the dreadful silence overhead and around, above the water, as I may say.

"It must have been past midnight when I thought I heard a kind of groaning or rumbling sound in the wind. I could not imagine what it could be, until, looking into the darkness on my right hand, I spied three lights upon the sea—one green, one red, and one white—this last much higher than the others. Soon after there was a heavy noise of washing water, and just over the white light there was a shower of sparks, and presently a great black shadow stood up on the sea and blotted out the stars behind it. I was weak and worn-out—terrified to a degree by the swift approach of this steamer—and though I managed to shout, my voice seemed to stick in my throat. The great vessel swept past us not above twenty yards distant: saving those lamps she was all in darkness, and soon after she had gone by I thought the wherry would have upset in the waves the steamer had left behind. My wife screamed as the boat sprang up and down, and every instant I expected the sea to rush into us. I shouted again to the steamer, hoping that I might be heard. This time my voice carried well, but nothing came of it; the steamer rushed on, and was soon out of sight.

"The dawn was just breaking when I saw a vessel making a black mark against the pale-green light in the place where the sun was coming. It took me some time to find out which way she was going, but presently the rising sun made her plain, and I saw that she was a small smack, and that she aimed directly for us. I managed to stand up in the wherry and flourish my hat. There was no coast to be seen—nothing visible upon the sea but that smack. So far as water went, we might have been in the middle of the biggest ocean in the world. I perceived before long that the smack saw us, for she lowered one of her sails and came along slowly. I looked at my wife to see how this adventure had served her, and it seemed to me that she had aged twenty years. Her face was hollow, her dress draggled and limp with the dew; she was a most melancholy object to look at. I hardly knew her, indeed; and she was equally astonished by my appearance, as she afterward told me. Who could suppose that a night spent in an open boat at sea would work such a change in people's looks? As to poor little baby, she had been crying on and off all night, and, being pretty nearly perished with hunger, she was a distressing thing truly, for us parents to see. It was nearly three-quarters of an hour before the smack came close to us, counting from the time I had first seen her. A great man in yellow clothes bawled out, 'What's that boat, and what do you

want?" You might have supposed he would guess our want by our appearance.

" 'We've been carried away to sea,' I answered, in a faint voice, for I felt as weak as an infant, and just fit to cry like one, 'and we've been in this boat all night.'

" 'Where do you come from?' he called.

" I told him, and he answered, 'We'll tow you in. Look out for the end of the line;' and another man threw a rope at me.

" I caught it, but did not know what to do with it, seeing which the first man told me to keep hold, and dragged the wherry up to the smack, and then got into her and attached the line to the boat.

" 'Will you sit here, or come aboard?' he asked.

" 'Oh, come aboard, certainly,' I replied; so he took the baby and passed it to a sailor on the smack, and then helped my wife up, and then me.

" So here we were saved; but faint, broken-down, feeling as if we had been dug out of the grave. Luckily, they had a few tins of Swiss milk in the cabin, and so poor little baby got something to eat at last. Also, they gave us some corned-beef and bread, which we devoured gratefully, after the manner of shipwrecked people. The captain of the smack laughed when I told him we had originally started for an hour's row.

" 'How much do they charge you for an hour?' says he.

" 'Eighteen-pence,' I answered.

" 'You have had a good eighteen-pennorth,' said he. 'You may thank the Lord, master, that ye're alive to pay even eighteen-pence. D'ye know how many miles you've drifted from your port?'

" 'No,' said I.

" 'Well, then,' said he, 'you've drifted eleven miles. There's the coast—you can calculate for yourself;' and he pointed to the white cliffs, which were visible from the smack's deck, though not from the boat. A fearfully long distance off they looked, to be sure.

" 'William,' said my wife at this moment, 'I'll never come upon the water again.'

" 'Nor I, Sarah,' said I—'at least without a man.'

" 'Man or no man,' said she, 'I'll never venture my life again.'

" And I have no doubt she will keep her word, though it won't cost her a very great effort to do so, for I am quite sure I shall never attempt to make her break it."

" And so," said I, "you got home safe?"

" Yes," he answered; "the smack landed us in about two hours. The boatman wanted to charge me for twelve hours' use of his wherry; but I got off for half a sovereign, which I thought cheap; as he talked of having the law of me."

And here terminated this middle-aged City clerk's narrative. The moral of it is not far off; and may be found without much hunting; and that a little musing over it shall not be without value, any man may judge for himself if he will but take his stand upon a British pier and watch the typical sea-side visitor enjoying "an hour's row."

THE PLEASURES OF YACHTING.

STEAM has played sad havoc with the beauty of our naval and merchant vessels; but, though it has not spared our pleasure fleets, it has left untouched numerous graceful fabrics among the yachts of the country, and sail-power may survive for many years yet in the most beautiful form it has ever been molded to by the genius of man. There is a story told of a butterfly alighting on the breast of a dying girl and taking wing at the very moment she expired, and soaring into blue sky with the sunshine sparkling on its bright wings. I thought of this tale the other day when I spied the hulk of what appeared to have been a sailing frigate or an old East India merchantman towing up Channel. There was a strong, clear wind, and the water flashed like a prism; and I was gazing with interest at the poor old dismantled hulk when a fine schooner yacht, beating to the eastward, swirled up under her stern. A noble sight was that pleasure vessel. Her lee rail was almost flush with the foam which swept like a storm of snow under the gleaming milk-white curve of her lower cloths; to windward her sheathing was hove high, and the yellow metal glittered like new gold as it glanced through the net-work of spray and the shining emerald-green fibers of water which leaped about her glossy sides. She might have been the very spirit of the old dismantled sailing-ship, leaping into bright and beautiful being as the most exquisite and the completest expression of marine grace. It would have gratified the most morose sailor to see her. Here was a sight to comfort Jack for the loss of the noble sailing-ships of his younger days. The grand piles of canvas, the little skysails topping the swelling pyramids, the magnificent sweep of jib-booms bearing their marble-colored cloths in layers like a heap of clouds, the ringing minstrelsy of the wind among the taut hemp that resembles a spider's web as you look at it against the sky of the horizon—these things are gone, or fast going; the ocean will soon be bare of them, and the star-like shine of sails upon the sea-line smothered by the long black coils of furnace smoke. But while such yachts as that whose flashing progress I watched remain afloat, the sea will still possess her English beauties.

It is the owners of such vessels who are perpetuating all that is fair, all that is memorable of the traditions of our English ship-building yards. The survival is a very fit one. It seems proper, indeed that the stateliness and elegance of the sailing-vessel should come into the keeping of men to whom the deep is its own exceeding great reward—as poetry was to Coleridge—who traverse it for love only of its caressing waters and the glorious life of its noble expanse, and who make it the framework for marine pictures into whose idealization enters all that money, fine taste, and devotion to what is beautiful and harmonious can furnish.

Surely to those who love her for herself the sea is a bountiful and great-hearted mother. The fascination the ocean exercises over the mind cannot be expressed in language; and happy is the man who,

yielding to her spell, counts himself one of her sons as a yachtsman. Mercantile Jack may profess to despise such seafaring as a fresh-water job; but, nevertheless, let him own that he envies the sand-white decks, the snug fore-castle, the easy life, the glorious runs under blue skies and over tumbling and silver-bright waters. No other form of "sailorizing" yields so much unalloyed pleasure. Privacy is the first grand privilege. You will get that in your yacht, but you will get it aboard no other kind of ship which ever I have heard of. No amount of passage-money will save you from worry and companionship you may not be in the humor to enjoy on board the finest passenger vessel. It is hotel-life; you are a number; you have luggage; you are making the voyage for a direct object; in short, you have a destination, and the having a destination makes one of the main differences between yachting and going to sea in any other way.

A yacht is a man's home. He need never be in a hurry. Like Jefferson in "Rip Van Winkle," he lives about in spots. He may leave a good deal to his skipper, but he is always master; he owns the craft which others steer, and never a humor can come into his head which he may not indulge without having anybody to argue with him. It is a fine thing to be lord of the sea in this fashion. A captain of a big ship is a great man, but he is a sort of a slave also. His business is to make haste, and obstacles vex his soul. The patent log that he tows astern typifies the condition of his mind. A head-sea is an affliction, and most of the wonders of the deep are great nuisances to him. He wants to sight nothing. He objects to excitements and adventures. All that he prays for is fine weather, and so many nautical miles a day. These are the penalties of having a destination.

The bliss of yachting lies in the having to go nowhere in particular, and one port being as good as another. If you can't weather a point, then there is nothing to do but put your helm up and come back again. The barometer seldom tells lies, and one of its safe readings, which makes yachting so delightful is, "Keep the harbors aboard." That, certainly, may always be done in the English Channel; and not for this reason only does one cease to wonder that it should be the most popular of all yachting waters. Much has been written about yachting in the Scotch lakes and northward among the isles. Such cruising might suit a man who is easily sea-sick, and who is never so comfortable as when his tow-rope is aboard a tug. But the yachtsman who has the instincts of a seaman will choose the wide waters of the English Channel, pushing away to the westward until the Atlantic swell is under his fore-foot, and his white sails mirrored in water as blue as the heavens.

The Channel is a sea of itself, and most of the changes of the sea may be felt and enjoyed on its breast. Here you will get breezes which toss a yacht prettily enough, and the calms are made beautiful and soothing by the gentle swell that runs out of the vague horizon, and keeps the water flashing and fading under the sun. Once to the westward of the North Foreland, there is no finer space of water for yachting, and nowhere more beautiful shores and nobler coast scenery. It is a great martime highway, too, always full of ships, and so crowded with marine interests that the yachtsman is never

weary of looking over the side of his vessel. Given a strong and sweeping wind from the southward of east, with the sharp blue sky which that sort of breeze makes; and let the sun still be soaring, and the atmosphere so transparent that the coast stands along like a photograph; and let your mainsheet be eased, and the white heights of the North Foreland on your starboard quarter, the whole of the grand old Channel is under your bowsprit. Though there be no cups to win, there shall be a hundred races to run as you go; and, keeping to leeward of the Goodwins, every jump of the yacht unrolls a glistening length of white, and green, and brown, and golden shore. Indeed, there is not a little sport to be got out of the unpremeditated races of yachting. I remember once coming up Channel, homewardbound, in a fine clipper-ship. We had the wind abeam, and foretop-mast studding-sail out, and we went ahead of everything like a roll of smoke, until, coming abreast of the Isle of Wight, a powerful yawl—as superb a yacht as ever I saw—came frothing and buzzing along, with her main-boom almost amidships, and Dunnose like a blue shadow over her stern. She ratched like a phantom to windward of us, and then, settling herself upon our weather-quarter, starboarded her helm, eased away her sheets fore and aft, and overhauled us as if she had a mind to tow us. She was in a smother of foam. It must have been up to a man's knees in the lee scuppers. She showed us the whole of her deck—a lady sitting in the companion, coolly ogling us through a binocular glass; there or four yachtsmen aft, squatting under the weather-rail. But the view she offered was not prolonged. She forged ahead of us like a “bonito,” and in a couple of hours was a small leaning white pillar upon the horizon dead over our bows.

These are the unpremeditated matches I mean, and I have known some of them to be run with as wild a desire for triumph as ever a regular yacht race kindled. They used to make one of the heartiest pleasures of yachting; but nowadays where is the foeman worthy of the steel of the slashing yawls, and cutters, and schooners? Nearly everything that floats goes by steam, and for a yacht to race a steamer would be as sensible as to make up a Derby of locomotives and thoroughbreds. Yet those crank racers, with their enormous spread of cloths—though they are things of beauty—are certainly not a joy to everybody. They are very proper to take prizes; but those who love the sea most wisely will least envy the privileges of the owners of such craft.

Sailing with your mast at an angle of fifty degrees, half the main-sail dark with water, the froth hissing and seething and bubbling up to the lee side of the skylights, all hands holding on to windward, and wondering what's going to happen next, may be exhilarating to some souls, but it is a mad sort of yachting. These crank and nimble spinners give you no chance of looking about. They are a fine sight to watch. I know nothing more exciting to witness than a great narrow-waisted yawl, almost on her beam ends, hurling through an ocean of foam, jumping the seas until half her keel is out of water, then burying her bows in the storm of froth as if she were about to dive out of sight, her metal to windward looking like a sheet of polished gold, with the sunshine sparkling in the wet of it. But to be aboard! Decks that one can walk on may be an unsailorly prej-

udice, yet they are comfortable; and the obligation to stick to windward and to hold on with clinched teeth grows tedious and even fatiguing if too long imposed.

But the word yacht is a generic term, and comprises many different kinds of vessels. The middle kind between the knife-like racer and the motherly, lubberly tub, is the best for those who go down to the sea in pleasure vessels, not to do business, but to enjoy the freshness and wonder and beauty of the ocean. There are scores of them afloat, superbly modeled craft, whose lines would have made the old Baltimore clipper-builders green with envy.

I will name no names, but will think of a yacht I have seen—a schooner, near about one hundred and fifty tons by yacht measurement, with magnificent spars exquisitely stayed, a bow bold about the figure-head, but fining away with delicate keenness at the fore-foot, with such a swell of the side as promises stability in a gale of wind, but arching thence to the keel in a conformation so tenderly sinuous and beautifully clean that a sailor would want to know no more to enter her in his mind as one of the fastest vessels of her class. This she is; but she gives you a beam as well as speed. There is plenty of room to walk about her decks; there is no fear of falling down the fore-hatch for want of a gangway to get into the eyes of her; the coils of her running-gear are never in the road. Is there anything more tenderly beautiful than a vessel of this kind slightly leaning under her cotton-white cloths, her polished and swelling heights of canvas softly shaded at the leeches, the brass-work on her deck full of blinding crimson stars which wink like bursts of fire from the mouths of cannon watched from a distance, as the lift of the swell veers the brilliant metal in and out of the sphere of the sun, while a line of froth streams past her like a shower of silver dust upon the sea, and the gentle moaning of water at the stem mingles with the vibratory humming of the wind in the vessel.

This is the sort of vessel in which a man can take his ease and enjoy all that the sea has to offer. And this, too, is your ship for Channel cruising. She would carry you round the world if you had the mind to try her. She'll creep into the wind's eye with the luff of her foresail blowing to windward, not shivering, but standing out full of wind that way, while the after half is drawing and doing its work. I know her to be a typical boat, and that is why I describe her. While such a craft as she remains afloat, the grace of the sailing-vessel in its most beauteous form survives, and steam may be defied to demolish a lingering but most noble marine ideal realized.

Owners of yachts do not all take the same view of the delightful pastime. Between the yachtsman who never seems so happy as when he is out of soundings, and those sailors who creep from port to port, and take a three weeks' spell of rest in every harbor, they succeed in making, there is a prodigious stretch, filled up by a surprising variety of tastes. But the harbor-haunting yachtsman grows rare. His excursions to sea, even out of sight of land, are every year more frequent. He learns to bear a music in the wind that's piping merrily, and the threat of lightning in the horned moon ceases to scare him. This is as it should be. Yachting is surely but a

sorry entertainment when warps hold your vessel against a stone or wooden pier, and no livelier recreation offers than bobbing for flounders in the mud at the bottom of the water along-side.

Our English summers are not very long, and there is much to be seen, much to inspirit the mind, much to invigorate the body. The warm and brightly-colored sea, for many a league enriched with verdant and dazzling and tender stretches of coast scenery, courts the fortunate yachtsman with promises which it never breaks. It is not racing only, it is not sailing only; it is the calm day sleeping under the rich azure heaven; the water a breathless surface of molten glass, shadowed here and there where the shallow soundings are; the horizon streaked with floating wreaths of vapor or darkened by the bluish smoke of a long-vanished steamer; the coast line some miles away swimming in the haze of heat, and the water in the south blending with the flood of light which the sun flashes into it. Here and there is a motionless smack, with her reddish sail reflected without a tremor under her, or a distant ship whose white canvas seems to be melting upon the faint light blue over the horizon; or it is the summer night, with a flood of moonlight shivering the ripples, while on either hand the sea stretches away in solemn darkness, touched faintly in places by the luster of the glorious planets unpaled by the moonshine. A soft breeze murmurs over the water, and keeps the spectral canvas on high sleeping, and a narrow wake goes away astern into the darkness, with fitful flashes of phosphorus in the circling eddies, in the run of the ripples as they break near the silent hull.

Small wonder, indeed, that the sea should court men as it does, and fascinate them too. Happy the man who can take the pleasure it yields as a yachtsman, and in his own beautiful vessel can traverse its glorious waters as idly and freely and gayly as the wind that impels him.

A DRUNKEN SHIP.

IN one of Edgar A. Poe's stories there is an account of a crew clinging to the bottom of their capsized vessel, and watching a ship approach them. She comes yawing and steering very wildly, but there are people aboard, and the poor sailors are full of hope; until on a sudden an insufferable smell is borne to them by the wind, and they discover that the figures lolling upon the ship's sides are putrefying corpses.

This tale of horror as well as of imagination came into my head some time ago, when I read the evidence that had been tendered in St. George's Hall, Liverpool, by a certain pier-manager and coxswain of the life-boat belonging to a north-western town. He said that at about half-past five in the morning he was roused out by a man who told him that there was a vessel drifting ashore. He hurried down to the beach, and saw a bark of between three and four hundred tons a short distance off under lower topsails. There was a fresh breeze from the westward. He watched the vessel a few minutes, and perceived that she would sometimes fall off so as to bring the breeze on her quarter, and then round close to the wind,

like Poe's dreadful ship, and that she was coming ashore as fast as ever she could drive. The life-boat was launched when this strangely behaved bark was within one hundred and fifty fathoms of the beach, and on the boat getting along-side a strong smell of rum and-water was found to pervade the atmosphere. A man got on to the rail and dropped into the boat, and the coxswain said "he seemed stupefied, took no notice of anything, and did not speak." This was the skipper. The rest of the crew tumbled into the life-boat and were conveyed ashore, while the bark took the ground and became a total wreck, nothing being saved but some sails and a few stores.

Such a very unusual circumstance as that of a well-found bark sailing ashore, as one might put it, of her own will, was sure to have a queer story behind it. And assuredly the story is a queer one, making one of the most disgraceful narratives to be found in the modern marine annals. It shall be told by a specimen of one of those plain, honest, English seamen who captains say are no longer to be found, and whose extinction they declare obliges them to ship "Dutchmen." I will not give this excellent man's name, glad as I should be to do so, for the punishment inflicted on the captain and mate by the court that inquired into their conduct would render a large public identification a needless supplementary penalty. The certificate of competency held by the captain has been canceled, but to the mate there has been granted a twelve months' chance of reformation, and this alone should explain the reason for suppressing all names.

"The bark was a vessel of three hundred and forty tons, and we had a crew of ten men, not counting the captain and mate. We were bound for Quebec, which, I reckon, should make a ship's course about west by south; but on this, as you'll make note presently, all mariners don't seem to be agreed. The whole of the crew, saving me and another whose name shall be Bill, were drunk when the bark left Liverpool. Speaking of the fo'ksle, I don't mean to say there's anything unusual in this. Drink's grown with legislation. In old times, where there was less law, there was less lush. It's a teetotal age, this; nothing but water going in vessels, and the consequence is that men newly shipped, knowing that there'll be no grog betwixt this and the next port, go in for a bout of drinking to serve them, as it might be, for the whole voyage. See 'em come aboard, sprawling and roaring too sick to stand, rolling below, and leaving the ship to sail away with no one but the idlers—and them drunk, too, maybe—to do her work for twenty-four hours or longer. If I was an owner my ship shouldn't be a teetotaler. Every day, at noon, there should be a can of rum on the capstan for the men—a tot apiece; but I'd make this rule, that any man as came aboard in liquor should have no grog served out to him for the rest of the voyage. That would stop the drunkenness ships carry away from the ports, and all the dangers which a drunken crew brings on a vessel that's got to grope her way down rivers and along channels full of peril.

"Well, there was ten of us, and eight were drunk. I'm speaking of forrards; I'll come aft presently. I never saw men worse in liquor. You remember them Scotchmen that used to stand at

tobacconist's doors, taking a pinch of snuff? dummies they were, you'll recall. Well, think of giving one of 'em a shove, and seeing him fall. If ye can fix such an object in your imagination you'll comprehend the sort of helplessness of my eight shipmates. They lay in the fo'ksle as lifeless as bits of timber; and this being the condition of the bark, we were towed out with the pilot aboard, and then when abreast of the Nor'west Lightship, were left to shift for ourselves. The mate was aft, me at the wheel, and Bill forward. There was not an inch of canvas on our vessel, and no one on deck excepting those I've mentioned. While we were towing, the mate came up to have a look at the compass now and again, and then I noticed that if he wasn't downright slewed he didn't want very many more nips to settle his business. He goes lurching along till he comes abreast of the main-rigging, and here he lays hold and sings out, 'All hands make sail. Tumble up, my lively hearties! Bear a hand with your hair-oil and your silk stockings, my sweet and noble fellows!'

"But nobody took any notice except Bill, who sings out, 'There's no tumbling up aboard this gallant vessel sir—leastways, forrards; there's naught but tumbling down.' At which the mate bursts into a loud laugh, swaying upon the rope he had hold of as though he meant to swing off on it. Then, looking up and around, he sings out,

"'This ain't a steamer. The sails must be loosed and the yards hoisted, bully, if the Liverpool gells are ever to clap eyes on us brave mariners again; so jump below among them dreadful drunkards and rout 'em out; rout 'em out, do you hear?'

"Well, Bill did as he was told, and after a bit he managed to shove two or three of the crew through the scuttle on to the deck. They stood blinkin' in the light like owls, rolling up against one another with their hair over their faces, and their clothes looking as if they had been put on upside down.

"'Now, then! now, then!' sings out the mate, who couldn't keep his legs, without holding on; 'what's the meaning of this here dissipation? There's no drink allowed aboard this tidy little ship. There's nothing but the teetotal lay to be found in this handsome hooker. Milk-and-water, my bully sailor lads! that's the tap if ever ye want to end as philosophers. Loose the fore-top-mast stay-sail. Loose the spanker. Get the main top-mast staysail on her. Lay out, some one, and loose the inner jib. And he rattled order after order as though he'd got a ship's company of fifty men to do his bidding.

"How the drunken fellows scraped through the job I'm sure I don't know. It was a bad lookout for us two sober men, but for the life of me I couldn't help laughing to watch the sailors Bill had managed to shove on deck go aloft. Talk of hanging on with your eyelids! Again and again I expected to see 'em all drop overboard; but I suppose their instincts for holding on were there, though their senses were gone, and the same mental henergy it was, no doubt, as enabled them to get the gaskets adrift and loose the lower top-sails. When those sails were sheeted home—the jib, staysails, and spanker being already set—the drunken men refused to do any more work; they rolled over to the scuttle and disap-

peared, the mate looking on, but too intoxicated to act. The skipper all this while never showed himself. I asked the mate what course I was to steer.

“ ‘Course?’ said he; ‘why, keep the vessel’s head followin’ the jib-boom, can’t ye?’

“ ‘Easy enough,’ says I; ‘but where’s the jib-boom a-going?’

“ ‘No impudence!’ he cries out. ‘Smother me if I know what the British sailor’s a-coming to! It’s all drink and jaw nowadays. What’s become of all the old, ’spectable, sober seamen?—tell me that, you terrapin.’

“ ‘There was no use arguing with a man who couldn’t stand without holding on. I says, ‘I’m not going to steer this bark all day, especially as we seem bound to nowheres. My trick was up and out a long spell since.’

“ ‘And d’ye think,’ says he ‘the vessel don’t know her way without you? Hook it forrard, afore I skin yer!’

“ I let go the wheel and walked forward. I looked behind me as I went, making sure that he’d take my place. But the deuce a bit. He was leaning against the rail, and shook his first at me when I turned my head, and there was the bark without any one steering her, her fore-and-aft canvas full, but her top-sails aback, and her whole company, saving two, so drunk as to be incapable. It was a good job that old Drainings was not so drunk as the others, otherwise we should have been obliged to light the galley fire and get ourselves supper. We were not disposed to take this job upon ourselves; so we hauled him on deck and gave him several buckets of water, which appeared to wash some of the fumes out of his intellects, and he then turned to—in a very staggering fashion, sartinly—and got us some tea, being scared by our threats to drown him out of hand if he didn’t tend to our wants.

“ Me and my mate hung about the deck forrard watching to see if the skipper showed himself, but he never appeared, which, taken along with the condition of the mate, made us suppose he was drunk too; but we couldn’t have sworn to this without getting a sight of him first. I says to Bill, ‘Here’s a pretty lookout. What’s to be done? No one at the wheel; no one in charge; everybody drunk, and the night coming along.’

“ ‘There’s nothing to be done,’ answers Bill, ‘except to turn in and take our chance. It won’t do for us to take command of the bark. If there’s to be a mess, let it find the skipper boss, not us. I don’t want no magistrate’s job, for one. We’re but common sailors, and common sailors have but a poor chance now when it comes to law, and the fight’s between them and the captain.’

“ This was a middlin’ sensible view; but still, life’s life, and I couldn’t quite see my way to turn in aboard a drifting ship, and take our chance of all going well throughout the night. So, calling old Drainings, who was getting his senses and beginning to understand the muddle we was all in, we lighted our pipes and had a long confab, the end of it being an agreement that the three of us should keep a lookout, turn and turn about. There was to be no steering—nothing but looking. Well, I kept the first lookout, and in all them hours I never see either the captain or the mate on deck. The breeze was small, and the ship lay steady enough, her top-sails

aback and her staysails drawing. Two or three steamers drove past, and I'm pretty sartin they'd have been into us if I hadn't taken the precaution to get the side-lights over. Bill relieved me at six bells, we having settled for his turn to follow mine, so as to give Drainings time to sleep off the rest of the rum that worked in his system. When I went below the fo'ksle was as hot as an oven, such a smell of liquor about as would have made you think yourself in a public-house, and all hands snoring so loud that you might have reckoned the bark was sailing ten miles an hour, and that noise the sound of the water rolling away from her stem. I turned in all standing, ready for whatever might happen, and fell asleep, and when I woke it was to the tune of a desperate hammering on deck. It was broad daylight, and, when I tumbled up, I found the mate beating the deck and bawling at the top of his voice, 'up with ye, you drunken swine! up naked, every mother's son of you, and don't stop to dress!' he was roaring, filling up his meaning with more oaths than he had fingers and toes. He was just in the same condition he had been in all along, rolling and sprawling here and there, and fogging the air all about him with the smell o' spirits.

"Old Drainings was at the wheel, and I spied the captain aft, holding on to a backstay with one hand and shaking his other hand at Drainings, who grinned in his face. Though pretty near the whole ship's length was betwixt us, I easily saw that the captain was as drunk as his mate. By and by he turns his head and sings out for the mate to lay aft. The mate goes, and the skipper, fetching him a thumping whack on the back—meant for love and good-fellowship—casts his arm round the other's neck, and down they tumbled below for another reviver, no doubt. Drainings left the wheel and came forrard.

"'I can't help laughing at the old man,' says he; 'never heerd such nonsense as he talks. But, all the same, what's to do?' says he. 'We shall be driving ashore if we don't mind. Have any of the men recovered?'

"'I've not had time to see,' I answers, and I dropped down the fo'ksle-hatch to have a look. I stirred them as was on the deck with my foot and made some of them talk to me; but there was not one man among them as was of any use. They had not only come aboard steeped to the eyes in drink, but had brought a quantity of lush along with them; and two or three empty black bottles knocking about 'splained how it was that sleeping in all night hadn't made these scow-banks fit for duty.

"Well, I don't want to make an endless job of this yarn, or I'd give you the particulars of that day and the night as followed. By that time most of the men had recovered their senses, and me and Bill took care, as fast as ever we could get 'em to sit up and listen, to 'splain the quandary the vessel was in, and our danger. This sobered 'em quicker than water would have done. They came on deck and took a look around, saw nobody at the wheel, no one in charge, and nothing on the bark but what we had made shift to hoist after the tug had left us.

"This was the afternoon of the third day. The weather looked dirty in the south-west, and shortly before five o'clock the wind breezed up hard. Luckily, we was under small canvas. I says to

the men, 'The best thing we can do is to haul down the staysails and heave her to. There's no telling where she's been drifting to all these days. No sights have been taken, the log never hove, no reckoning of any kind kept. Whether we're off England, Hireland, or Scotland, I'm not going to calculate; but one thing I'm certain sure of, we shall be having one of them kingdoms close aboard of us before long; and so I reckon our business is to slow down this here drift as fur as we can, while we see if the captain means to take charge and sail the vessel to Quebeck, or keep drunk and send us all to the bottom.

"Everybody being agreeable, we hauled down the staysails and backed the foretop-sail. There was no watches, the crew hadn't been divided; however, we formed ourselves into two gangs, and agreed to keep watch and watch till morning; then, if things remained as they was, we arranged for some of us to go aft to the captain, and if he refused to do his duty, to hoist a distress signal, and 'splain our situation to the first ship as came along. The deuce of it was, ye see, there was ne'er a man forrards as knew anything of navigation. Had we turned to and seized the skipper's instruments and charts, they'd have been of no use to us. Well, next morning arrived, and found the bark still drifting, and the weather as thick as mud in a wine-glass. All hands assembled, and we held a sort o' Parliament; and then it was agreed that I and another should go aft and inquire of the captain what he meant by this conduct. 'Cordingly we lay aft, and going into the cabin found the mate lying there drunk, though not incapable. He asked us what we wanted; but we took no notice, pushing on to the captain's berth. We hammered on the door, but, getting no answer, opened it, and saw him lying sound asleep, and kinder stupefied, in his bunk. We laid hold of him and hauled till we'd roused him up.

"'Captain,' says I, 'we've come aft to ask what you mean to do with the bark. She's drifting anyhow, and all hands feel their lives to be in danger.'

"'Pooh, pooh!' says he, stretching his arms and gaping, 'it's all right. Have a glass of grog?'

"'No,' I says, firmly; 'we don't want no grog. What we require is to know what you mean to do?'

"Instead of answering, he lay back, turned over, and shut his eyes; so, seeing that there was no satisfaction to be got, we came away and went forrards again. The men were now thoroughly scared. 'They said they warn't going to stand skylarking of this kind, and if the captain didn't turn-to and take charge and sail the ship back to Liverpool they'd knock off work. I went aft once more with this message; but though I nearly dragged the captain out of his bed, I couldn't make him understand, nor even rouse him up. So I walked up to the mate and told him of the men's resolution.

"'I don't care,' says he; 'it's no business of mine. I'm not going to do anything without the captain's orders.'

"We was in a regular fix. The weather was so thick that it would need a ship to come very close to make out any signal we might hoist; we none of us knew where we were, in what direction to steer, what to do with the bark if we took charge of her. While

we were debating, the mate came out and orders us to square the yards.

“ ‘What for?’ says the crew.

“ ‘Why, for Liverpool,’ he answers.

“ We turned-to, with a will, the mate standing at the cabin door looking at us. We held on E.S.E. till about midnight, when we spied a light on the port quarter, and the mate said it was the Chickens off the Calf o’ man. It proved to be nothing of the kind, but Morecambe Bay light. At daybreak the land was plain to be seen about four miles distant, and the captain, who was now on deck, gave orders for the helm to be put up to let her drive ashore, which she did, the life-boat coming out when we was close on to the beach, and taking us all off. The first to drop into the boat was the skipper; he wasn’t too drunk to do that.

“ What d’ye say to this tale of the sea, sir? What’ll the public think of merchant sailors, after hearing it? Should you think proper to print it, I’ll allow that there’ll not be a landsman as won’t reckon it an out-and-out twister, spun from the winch o’ your own invention. But, that there may be no doubt about it, just add what the finding of the Court was as inquired into this business: ‘Neither the master nor the mate attended properly to his duties in navigating the vessel. They were both under the influence of drink during the voyage. The vessel was not navigated with proper and seamanlike care. She was stranded owing to the utter neglect from drunkenness of both master and mate. The Court considered that this was about as gross a case as ever came before a court of inquiry, and found both master and mate grievously and wrongfully in fault.’

“ Mild enough, sir. Had the Court been aboard, you may take your oath they’d have drawed it considerably stronger.”

A SAILOR'S CLUB.

NOT very far from the London Docks, and within a stone’s-throw of that refined and odoriferous thoroughfare known as Leman Street, Whitechapel, there is situated a large, fine building, with entrances commanding two streets, and a summit that towers very nobly among the adjacent roofs. Once upon a time the Royal Brunswick Theater stood where that house now stands, and vestiges of the old structure still linger in the form of some pillars or columns at the main entrance, and various underground avenues, in whose atmosphere, despite forty years of very strong marine flavoring, there seems to lurk to this hour a kind of ghostly smell of ancient orange-peel. The house is known far and wide as the “ Well Street Home for Sailors;” and I once accepted an invitation from the manager to overhaul the premises, and judge for myself to what extent the Home improves upon the comforts and privileges the sailor flatters himself he may obtain at a common seaman’s boarding or lodging house. I must own that I approached the place with a certain amount of foregone prejudice.

Establishments known as Harbors of Refuge, Seaman’s Sheet Anchor, Ports of Call, and the like, all mariners who will not sham

piety for the sake of a coat, or a plug of tobacco, or a meal of bread and meat, will keep to windward of. Jack objects to this kind of classification. He dislikes to be dealt with as something apart from the ordinary run of mortals; to be preached to in a language which the minister may fondly imagine to be the dialect of the sea; to have tracts doled out to him in the form of marine allegories, as if he could comprehend no other allusions to life and death, and sin and virtue, than those which referred to heaving billows and storm-driven barks and broken tackle; and, when ashore, to make one of a flock of seamen, to meet nobody but seamen, to go to prayers in a church filled with seamen; to be treated indeed, as if he ought to carry a badge or number on his back, as if his whole class were socially tabooed. So, thinking this Well Street Home to have something of the old unpleasant and ill-judging form of charity mixed up in its composition, and considerably disturbed in mind by the first four lines of its forty seventh annual report, I entered the Dock Street entrance, never doubting but that I should meet with plenty of features to account for the sailor's preference for the grimy, frouzy, and squalid lodging-houses, of which there were some dozens in the neighborhood.

I found myself in a very large hall filled with seamen. There was perhaps hardly a nationality that was not represented. Englishmen and Scandinavians were plentiful; but in numerous places were black and yellow skins, the sight of which carried the mind thousands of miles east and south, and brought up visions of skies different indeed from the brown heavens which were careering in gloomy folds over the chimney-pots visible through the windows. In a few moments I was joined by the manager, and we proceeded to inspect the premises. In a manner it was like surveying St. Paul's Cathedral. Big as the building looked outside, it seemed four times as large again when I began to roam about it. Room led into room, wing conducted into wing, until methought Whitechapel itself might seem to lack area enough for the accommodation of this most ramified and capacious interior. Behind a glass front stood a porter wading through several huge piles of letters in search of those expected by some dozen men, who eagerly waited while he looked.

"The correspondence here must be enormous," said I, "judging by those samples."

"It is enormous," answered the manager. "Thousands upon thousands of letters and telegrams are received and distributed in the course of the year."

We entered a large room with a circular counter in it, behind which were several clerks hard at work over their ledgers, while a number of seamen were drawing or paying in money.

"This is the bank," said the manager; "here we receive such moneys as the men choose to deposit, and credit them with the wages which they have to receive from the ships they have been discharged from. Here, too, we cash their allotment notes, and what we do in that way you may guess by looking at that long box there, that is full of allotment notes which are maturing at various dates."

"But," said I, "I thought the allotment note was only made payable to a relative or to a savings-bank. This is not a savings-bank?"

"Oh," he exclaimed, dryly, "there are two kinds of allotment

notes. One is, as you say, payable only to a relative or a savings-bank; the other is an illegal document, sanctioned by the Board of Trade, February, 1868—here it is in the corner; you see their imprimatur?" said he, handing me one of the notes.

"What is the meaning of this," said I, "at the bottom of the note? 'Caution. The Merchant Shipping Act does not provide summary remedy in the case of this note.'"

"Only a confession that a blunder was made," he answered, "when the Act was passed. The advance note was said to encourage crimping; accordingly, the allotment note was substituted. The seaman protested, as he found the note practically useless. Instead of rescinding or modifying the Act, an illegal concession was made by the issue of notes payable to anybody, like the old advance note. The issue is sanctioned by the Board of Trade, who compromise with their official conscience by giving the holder of the note to understand that he cannot recover upon the note by summary remedy. The old advance note was made payable three days after the man had sailed in the ship; in the present note the ship-owner protects himself by making the note payable fifteen days, or in some instances thirty days, after the man has sailed. This may not increase the risk, but the delay in payment causes the holder to charge a heavier rate of interest for cashing the note, so that practically the Act leaves the sailor as much at the mercy of the boarding-house keeper as he was in the days of the advance note. We have hitherto charged nothing for cashing these notes; but we shall have to do so in self-protection, for we are perpetually losing money by them; and the law, which sanctions their issue, yet deprives the holder of all means of recovering on them."

So much for British maritime legislation, thought I. Here are people, willing to pay the sailor the amount his note is worth without any deduction whatever, obliged to own that they can no longer act in this liberal manner, because the law prevents them from dealing with the dishonest clients who rob them! Will the day never come when the hidden part of our gigantic marine interests will be capably represented in the House of Commons?

"Any pray," said I to the manager, "where are your bedrooms?"

He led me a short distance, and presently we came to a stand at the bottom of what I may call a shaft of galleries of a very curious skeleton-like appearance. The highest tier was probably about seventy feet. Every fibrine-looking gallery or platform ran the whole length of the wing, and was flanked on either hand with rows of little bulkheaded rooms called cabins, all of them numbered, and every one containing an exceedingly comfortable wire-wove spring mattress, slung by a species of metal triangle from the ceiling. I found that there were three of these gallery shafts situated in wings of the building, and capable of comfortably accommodating and bedding between five and six hundred persons. One of those gigantic ranges of cabins, dedicated to the late Admiral Hope, struck me as exceedingly handsome and curious. The lower berths here are devoted to the mates and captains. They are large; airy, superbly ventilated; but these are the characteristics of all the cabins. At one end of this fine division is a marble tablet inscribed to Admiral

Hope, with handsomely carved colored flags on either side. To see these cabins, the manner in which they are poised one above another, the stairs leading up to them, the delicate tracery of the platforms, and observe the seamen coming out of their rooms and descending the steps fifty and sixty feet above your head, is to get a new theory of human existence. I never saw anything more comfortable, more clever, more strange. I mounted to one of these galleries with the manager, and seeing a cabin door open put my head in. The place was in gloom, and I was about to withdraw, when to my astonishment I observed what looked like two little half-moons glimmering in the dusk. I stared, and was amazed to find a negro lying upon a chest, reading. I saw the whites of his eyes the moment he rolled them up to look at me, but the rest of him being black was not to be discerned at once. I asked him what he was reading.

"The Bible," said he, showing the book.

He was newly arrived at Hull from Barbados, he said, and had come to London to look for a berth as steward aboard a ship bound to the West Indies. He was a handsomely-spoken, well-mannered young fellow, pronouncing his words with the finish of a man of culture. We next visited the dining-room. This was a great department with rows of tables stretched along it, all covered with white linen and hospitably furnished with good glass and cutlery. At a large center heating contrivance stood a carver flourishing an immense knife over a big pile of joints of roast beef. Sirloins, ribs, top-sides were mixed up, but the manager said that did not matter, as there would be little enough to be seen of them presently. A number of waiters ran in and out setting dishes of potatoes, vegetables, puddings, bowls of soup, and such matters, on the table, and it needed nothing but a loving-cup and a flourish of trumpets to make the thing look like a civic feast. Presently a bell was beaten, the seamen came tumbling in, and in a trice every table was crowded, and all hands eating their hardest.

"There is plenty of independence here, apparently," said I, looking round at the rows of "shell-backs;" and I appreciated the term when I marked the taut curve of their shoulders, working away with the spoons and knives and forks.

"Independence!" exclaimed the manager. "Why, no hotel confers more privileges. We are in reality a club. We were originally called a Home, and have stuck to the name; but I think it would be better had we borne the title of Club, for there is something in the sound of a Home that savors of charity, and charity is a thing most seamen object to."

"What are your charges?"

"Fifteen shillings a week to the men and eighteen shillings to mates, who eat in a room by themselves."

"Do you mean to say," I exclaimed, "that you give these men a bedroom apiece and feed them after the fashion I now see for fifteen shillings a week?"

"Yes," said he, smiling at my surprise. "And we go a little further even than that; for if a sailor arrives here without clothes or means, we dress him and put money in his pocket, and repay ourselves by deducting the amount, without a farthing of extra

charge, from the allotment note he receives from the ship in which, in numerous instances, we procure him a berth."

"And may the men do as they like here?"

"As if they were in their own house. We close at half-past twelve; but there is a night porter, and a man is admitted at any hour."

"So that, practically, this is nothing but a first-class hotel, worked at a cost that enables the very poorest seamen to use it?"

"Exactly. Our sole object is to provide the sailor with a comfortable home while he is on shore, help him in every way that he will allow, and so keep him clear of the boarding-house people—the wretched men and still more wretched women who prey upon him, drug him with vile drinks, cruelly rob him, and often turn him adrift with scarcely a stitch on his back. Come, sir; more remains to be seen."

He took me down-stairs into a ready-made clothing shop belonging to the Home.

"The tailors in the neighborhood," said he, laughing, "more especially those who pay women commission to bring sailors to their shops, don't love us for this invasion of their rights or wrongs, for our charge for clothes is very little above the price they cost us, and a man may get here for two pounds ten a suit he would have to pay eight or nine guineas for to a boarding-house tailor. I may say the same thing of the bar we have opened. There were some murmurs at first among the directors; but, sir, we found lemonade and coffee would not do. They drove the sailors to the public-houses, for the men would have their glass, and if they could not get it here they would go to low places for it. Jack must be treated sensibly, as a man with brains. To stop his grog at sea is one thing, but to put him upon cold water on shore is merely to drive him to those who live by plundering him. The result of opening a bar here has been to extinguish half the public-houses in the neighborhood, and you may believe me when I say that our people know their business too well to suffer any approach to intemperance in this Home."

"Well," said I, "I came here expecting to find a lot of false and mischievous sentiment mixed up in the administration of the place. I see that Jack's character is understood among you. You treat him as a rational man, and he respects you for it. No wonder the same people return again and again."

"There is no need for a man to do anything here he does not like," said the manager. "We have serious, sober, steady fellows among us; for them there are prayers morning and evening, and all may attend who will. But there is no obligation to be present. So at church—yonder it is, close to the Home, you see—we muster a good congregation; but there is no compulsion. Whatever can be done to reclaim those who need it, to help to set men right, to teach them to lift up their thoughts, we attempt; but there is no forcing of religion, nothing to induce hypocrisy on the one hand, nor to excite aversion on the other. We say, 'My lads, here are your opportunities, take them if you will; but, take them or leave them, we wish to do our duty by you, to make your lives ashore happy and comfortable, to keep you to windward of the low and nauseous snares which are everywhere set about for you, to come between

your simplicity and the acts of the miscreants who find their account in your easy-going natures. That is about the amount of our theory," said the manager; "and if we are not greatly successful, it is because the job we have set ourselves to perform is a very, very large one."

From the dining-room we went to the basement, where I was shown a number of capital bath-rooms, fitted with a plentiful supply of hot and cold water; a laundry and drying-rooms; store-rooms filled with joints of meat, loaves of bread baked in the establishment, white as milk and of a flavor that made one think of farm-houses and Mrs. Poyser; sacks of flour, potatoes, and other things of that kind; and an immense kitchen, with a wonderful array of ovens and boilers for cooking by steam; everything as polished and bright as a new bell, and not the smallest feature anywhere discernible that did not exhibit the completest signs of anxious and attentive supervision. This Well Street building may be called a Home, and in a sense may answer to that character, but in reality it is nothing but a fine, admirably managed marine hotel or club, filled with bedrooms a good deal more comfortable than many a one in a hotel that a man has had to pay five or six shillings a night for; providing liberal meals in the shape of breakfast, dinner, tea, and supper, and furnishing the seaman with all the comforts of a first-rate club for the extraordinarily moderate charge of fifteen shillings a week. What does such an institution replace? Or rather what is it designed to replace? I suppose there is no part of the sailor's shore-doings more talked about and less understood than the life he leads at the greasy little boarding-house kept by a crimp or a tailor, or worse still, by old women and abandoned daughters. I stood gazing at one of these houses—a broken-down bit of a hole, with an evil, swaggering look in the posture of its door, and with dirty stained white blinds in the windows—and thought what a wonderful, dreadful book might be made of the scenes that had taken place in it. A sailor man was at my side, and I fell into a short talk with him.

"Do you regularly stop at the club?" I asked.

"Yes; it is my home whenever I am in London. I have used it for years, and so have scores of the men you see."

"A pity all sailors are not equally alive to their own interests," said I. "Here they are made really comfortable for a few shillings a week; money is advanced to them, clothes furnished to them at cost price, a hundred little comforts placed within their reach, and friends are at hand to help them to a berth if they find difficulty in getting a ship."

"Perfectly true," said my companion.

"What attraction beyond the privileges and happiness a residence in this club-house offers can they discover," said I, pointing to the miserable little boarding-house we confronted, "in such a den as that?"

"Most of the men you find in such places are forced into them," replied the man. "All about here is filled with touts and runners and their bullies. Sailors are watched coming ashore; they may want to put up at this Home; but the boarding-house runners are at hand to tumble 'em into cabs, drink is given them, the girls—

and such girls!—are called in to help, and if the men are obstinate they are fallen upon and beaten; and, to such an extent is this kind of intimidation carried on, that however anxious a man may be to rescue a shipmate from the hands of those rascals, he'll think twice before he does it; for so sure as he attempts to interfere and bring a man to this Home, so sure is he of being fallen upon and half killed when he's alone and the night's come. There's not a policeman hereabouts but is full of stories of such work."

"And what, pray, is the sailor's life in the low sort of lodging-house?"

"A vile debauch, as a rule, caused by the temptation thrust upon him. It would be difficult to make respectable people understand how he's robbed. I knew a man who was brought to one of these dens and asked to 'shout'—that is, to stand a drink all round. He did so, and was made drunk. Next day he was charged for eight 'shouts,' the people swearing he had ordered the liquor, and that it was not their fault if he was too intoxicated to remember. That's only one sample. Abandoned women are kept in the pay of the slop tailors to bring seamen to their shops and press them to buy, and a single purchase at such places is enough to ruin a poor man. There are, no doubt, respectable boarding-houses, but they are few and far between; the most of them are kept by rascally men and women, who, taking the sailor as a simple-hearted fellow, fresh from a spell of salt-water, and willing for a bit of a frisk, ply him until they have peeled him, and then kick him out. It was not long ago that a pencil scrawl was brought to this Home. It had been chucked out of a lodging-house window by a man to a friend who was passing. It stated that the people of the house had stolen all the writer's clothes, and it begged the manager to send up a suit that the man might get away."

"Such things must be known to sailors?" said I.

"Ay," he replied, "and a good deal more."

"And yet many of them persist in putting up at those haunts?"

"I can't account for it," said he. "Here's such a chance as any gentleman with plenty of money in his pocket might be glad to take; and yet there are sailors who'll carry their bags or chests to the lodging-houses, as certainly knowing that they are going there to be robbed of all they have as that their feet are upon dry ground."

I have only ventured to write down a very little part of what I was told about these lodging-houses. I will not pretend to be ignorant of much of the inner life of those places; but I own that some of the stories related to me filled me with horror and astonishment that such deeds should still be doing in this enlightened age of marine progress. But is it not strange that so truly valuable an institution as this Well Street Home, which counts bishops, marquises, admirals, and captains in abundance among its directors, should be deliberately neglected, and even viewed hostilely, by the Board of Trade, whose efforts to promote the interests of the sailor it helps to a degree no one would credit without close and careful investigation of its theory and practice? Why, for instance, should the Board of Trade decline to license a shipping-master in connection with this Home? Surely the directorate should abundantly guarantee the character of the duties such an official would dis-

charge. What conceivable object can the Board of Trade have in objecting to the Home endeavoring, by legal means, to obtain employment on board ship for the numerous highly respectable men who use the institution, and who must often want help to obtain a berth? The Home asks for no State help; it is self-supporting; it has extinguished a number of low public-houses and crimps' haunts in its neighborhood; it is doing a great work; and no man who values the sailor can read the list of gentlemen whose names are associated with it without an emotion of gratitude to them for the generous, wise, and humane part they are playing. Surely it is the duty of the State to co-operate with the endeavors which the working of this Home exemplifies, and to omit nothing that may tend to lighten the labors of its exemplary officials, and advance the truly national purpose for which it was originally established.

THE PERILS OF HUMANITY.

"SIR," said a middle-aged master of a merchantman to me a few days since, laying down his pipe in order to grope with both hands at once in his waistcoat-pockets—"I should very much like," said he, looking now at one hand and now at another as he produced a number of odds and ends before lighting upon the things he wanted, "to have your opinion upon some documents which I cut out of a morning newspaper, and must have stowed away somewhere with such uncommon carefulness that, dash my wig if I know where I've put 'em!"

I waited while he groped and slapped himself, and explored a weather-beaten pocket-book. Finally, returning again to his waistcoat, he produced, with an air of triumph, three newspaper cuttings, which, after putting on a pair of spectacles to read them first himself, he handed to me one at a time.

One was headed "Thanks." The writer said that he considered it a portion of his duty to publicly express his deep gratitude and that of his surviving shipmates to Captain Townshend and the crew of the bark *M. J. Foley*, "who not only rescued us from a miserable death by frost and starvation, but did everything in their power, by the kindest possible treatment and self-sacrifice, to mitigate our intense suffering and supply our many wants." The writer added that nautical men would fully appreciate the meaning of the addition of nineteen persons to a small crew in the winter-time; "but in this case my men were well fed, and we were sorry to be the means of every one being put on a limited supply of water." The writer of this letter, brimful of honest, sailorly thanks, signed himself, "Abraham Evans, chief officer of the late *Bath City* (s.)."

My friend the ship-master kept his gaze attentively fixed upon me while I read this newspaper extract, and on my putting it down called out, "Kindly now cast your eye over this document," and handed me a second cutting.

This was headed "*Elba*, brig," and was a request to be allowed to thank Captain Jacob Backer, of the Norwegian bark *Sarpen*, for rescuing the eight men who signed the letter "from our water-

logged vessel, when only two pounds of putrid meat stood between us and starvation. He gave us food, clothing, medicine, and every attendance, and was most ably seconded by his kind-hearted crew; and in the seven days we were on board his vessel he made us in a great measure forget the privations we had undergone."

The third extract was of a similar character, signed by three survivors of a crew of fourteen souls.

"Well, sir," said the ship-master, as I handed him back the third and last cutting, "what do you think of these documents?"

I replied that they were expressions of gratitude honorable to the saved and to the savers, and that it was a pity such illustrations of the humanity and gratitude of seamen did not obtain more publicity than was generally given them, as not only was there nothing nobler in the world than the marine stories which the letters he had given me to read touchingly testified to, but that the interest of the sailor could never be better served than by landsmen again and again dwelling upon the bitter perils of his vocation, and upon the scores of illustrations of the magnanimity and generosity of his simple heart.

My friend the ship-master listened to me very attentively, as though I had given him a new view of the subject; but, shaking his head suddenly, as if to clear his mind of all matter that was not in it before, he said, "Ay, it may be as you observe, and I'm not the man to tell you that sailors are likely to get more than what they ought to want. The point's this: If it's a beautiful thing to read such pieces of gratitude as these documents contain, how much more beautiful would the reading of them be if it was to be known what impediments, that have grown up like mangrove-bushes from the lack of a proper Christian civilization to cut 'em down, a ship's captain has to contend with in order to gratify his instincts as a man of feeling and compassion. It's all very well," said he, striking a match and holding a flame in the hollow of his hand as though a stiff breeze were blowing, "for landsmen to read those letters of thanks and to feel touched, and to talk of the generosity of sailors and the like. Why—since the laws which govern folks are made ashore, and not at sea—why, after they've done wiping their eyes over the humble thanks poor sailors give to them who save their lives, don't they turn to and give a hand to the cause of humanity on the ocean by letting captains know that the laws of the British nation, anyway—leaving other countries out—will never let a man who does a noble act suffer for it as much, ay, and sometimes more than if he did a wrong? You hear of ships passing vessels in distress—taking no notice—pushing on, as if in a hurry to get out of sight. There is nothing in the marine reports which set my teeth more on edge than those yarns—nothing! but I'm master of a ship; I know the duties and responsibilities of that position. I've tried to do good, have hauled some fellow-mortals out of the very jaws of death, and have been so made to suffer for my humanity that when I think of it there comes into my mind a bitterness that makes me curse the ill-luck which drove me into the track of the sinking ship and her perishing crew. These are strong words, but if I don't justify them you shall force me to eat 'em. Give me your attention for five minutes. I'll try not to keep you longer: and if I should

lose my temper and talk a bit stronger than you may think there's need for, take no notice, but just quietly go on listening till I've done, and then should I fall a-swearing, maybe I'll have got you into a frame of mind fit to join me.

“ In the middle of last October my ship sailed from a certain port—there's no need to give any names—in ballast, bound on a voyage across the Atlantic. The weather was promising enough for three or four days after we got away; moderate, north easterly winds, which, crank as we were, enabled us to carry a foretop-mast studding-sail, and we drove along prettily enough, nothing happening to call for remark. But this sort of thing was too good to last; accordingly, at midnight or thereabouts on the fifth day of sailing, I was roused by the mate, and hurrying on deck found half a gale of wind blowing, everything in confusion, vessel almost on her beam-ends, everything let go, and as much shindy aloft as would furnish out noise for a battle-field. It was a squall with a storm behind it. However, bit by bit we managed to roll up the canvas and save our spars, and when daylight broke we found ourselves under a lower maintop-sail, tumbling upon as savage a sea as was ever rolled up in a few hours by a gale in the Atlantic.

“ This was the beginning of a deal of delay. The gale kept us humbugging about in one place—allowing for that lee drift which you'll expect of a ship in ballast—for hard upon a week; then better weather came. We shook out reefs, mast-headed the yards, and crawled a trifle to wind'ard; but the slant was a short one; another gale came along and lasted three days; and so it went on, sometimes fine and most often foul, until at the end of thirty-six days we found ourselves a good deal closer to Europe than we were to America.

“ Well, sir, the thirty-seventh day proved moderate; a breeze from the W.N.W., a heavy swell running to show that either a gale had been blowing or was coming, and pretty clear weather with a little glimmer of sunshine now and again streaming through the cloud-rifts; enough to improve our spirits. I came on deck at half-past seven, and was taking a look at the weather and wondering if the swell that was making the ship roll like an empty cask was to signify more bother, when I was hailed by the mate, who sung out that there was a dark object upon the water, a point on the lee bow. I took the glass and made out the hull of a totally dismantled vessel—apparently a bark, but all that was left of her masts were three stumps barely showing above her top-gallant bulwarks. She was water-logged—like a pancake on the swell that hid her with every send; and after taking another look at her, and not doubting from her appearance that she was abandoned, I put the glass down, waterlogged vessels being by no means rare objects in the North Atlantic.

“ We were swarming along over the swell at about three to four knots an hour, and as we should pass the hulk pretty close to windward, I reckoned that if there was any poor miserable creature aboard her we were bound to see him as we drove by. However, I had scarcely put the glass down five minutes, and was standing looking over the taffrail, when the mate again hailed me, and on my going to where he stood peering through the telescope, he put the glass into my hand, and told me to look youder, for there was a

boat full of men heading directly for us. I looked, and sure enough saw a whole boat-load of human beings lifting and falling and coming toward us. It was more like an apparition than a real thing, for when I examined the wreck again I could not conceive how such a number of men had managed to keep by a hull which offered them no refuge aloft, and over whose decks the water rolled in shining masses, as she swung into the hollows.

“As the boat approached, we backed the mainyards, and lay waiting for her to come along-side. By this time I could make out no less than fourteen men, and a sadder freight of human beings I never want to see again. Their white faces, their streaming clothes, their gaunt, hollow looks, the languid movement of the oars, and, above all, the manner in which those who rowed kept their faces turned toward us upon their shoulders, as if they feared we should vanish if they did not keep their eyes fixed upon us, was a sight the most iron-hearted man could not have viewed without pain and grief. We hove them the end of a rope and dragged the boat along-side; and I wanted no better assurance of the character of their sufferings and of the lamentable condition they were then in than their slow, weak motions as they caught the line, and got their oars in and stood up. One by one we lifted or helped them over the side—fourteen of them, sir. Some of them were too weak to answer our questions. My men took the seamen forward, holding them up as they walked, for they could scarcely use their limbs; and I carried the captain and the two mates into the cabin, where we furnished them with food and dry clothing, and then got them to bed.

“All this while we remained hove-to with the wreck bearing about a mile distant from us on our lee bow. My own crew consisted of eleven hands only, and the job of helping the rescued men forward had given them work enough until the poor fellows were below. I went on deck, and found the mate singing out to the hands to swing the main-top-sail and get way upon the ship. I stood looking on, full of thought. Presently the sails were trimmed, and I called the mate over to me.

“‘Do you know,’ said I, ‘that we have been very nearly forty days at sea?’

“‘Ay, sir,’ he answered, ‘I know it only too well.’

“‘We’re provisioned, Mr. —,’ said I, giving him his name, ‘for one hundred and ten days, counting for our crew only. But if you add fourteen to eleven you get twenty-five, and that’s the number of people our provisions must now serve for.’

“He grew very thoughtful, and took a long look round at the weather.

“‘I fear,’ continued I, ‘that it will merely be tempting Providence to pursue our voyage with all these extra men aboard in the face of the ill-luck that’s dogged us for near upon forty days. If we’re to make no more head-way than we’ve already done in the same time, I’m afraid,’ said I, pointing to the wreck that was slowly drawing abeam of us, ‘we shall be as badly off here as if we turned to and shipped ourselves aboard yonder hulk.’

“‘That’ll be about it, sir,’ said he. ‘The harness-cask, to say nothing of the scuttle-butts, is much too small for fourteen extra hands, unless we’re to get a gale of wind astern of us.’

“ ‘Which we’ve got no right to expect,’ I answered.

“ However, before I decided I thought I’d first take counsel with the captain we had rescued, and, on his waking up much refreshed in the afternoon, I put my position before him, and asked him for his opinion. He never hesitated when he heard how long we had been at sea and for how many days we had been provisioned. But I’m not sure that even his advice would have settled my resolution—for what can be more trying than to have to give up and go back, after beating about and toiling to get across for over a month?—had it not that same evening breezed up ahead with a stormy appearance. It was just as if the weather said, ‘No, you don’t!’ I took a look, listened a moment or two at the men singing out as they clewed up the top-gallant sails, and then told the mate to get his helm over and head the ship for the homeward passage.

“ Now, sir, though it was disagreeable enough to have to go back after consuming so much time in getting forward, I was a good deal comforted by reflecting upon the cause that was sending me home. It was a cheerful thing, likewise, to see the men who had come aboard half dead gradually recovering their health and spirits, and testifying their gratefulness by not only lending a hand with a will, but by striving to take all the work they could come at out of the hands of my crew. Besides, I will frankly own to you, sir, that I was buoyed up by the belief that any money difficulty that must follow my useless trip into the Atlantic—useless I mean in the commercial sense of that word—would be in some degree met by the owners of the craft whose people I had saved, and if not by them, then by the ‘authorities’—a sort of strange people who come into one’s head when one falls into an expecting mood, and stop there as if they were real, and had all the disposition and power you fancy of ’em, though to my mind there’s no illusion to equal ’em, and ne’er a word in the English dictionaries that makes a man fiercer to come across after he’s got, by writing letters and calling, to find out the true meaning of it.

“ The nearest port was a French port, and there we arrived after a pretty quick run, and landed the rescued men, of whom I’ll say this—that their gratitude was such that if they could have turned their bodies into gold, so that we could have made sovereigns out of their flesh, they’d have done it cheerfully. Well, sir, after I arrived in England, the first thing I did was to represent what I had done to the owners of the bark, whose crew I had saved. I told them that I had been obliged to abandon my voyage in consequence of the assistance I had rendered, and that by so doing I had not only lost a voyage, but consumed the whole of my stores. No notice was taken of me; and when I complained to a friend who knows a good deal about the law, he said the wonder would have been if any notice *had* been taken, as I had no claim whatever on the owners of the bark for the rescue of the crew.

“ ‘But,’ said I, ‘d’ye mean to tell me that there’s no Act of Parliament no statute, no sort of general understanding, no kind of provision, call it by what name you will—to protect a man from suffering heavily in his pocket because he goes out of his way to save fourteen human lives?’

“ ‘No,’ says he.

“ ‘And must I,’ says I, ‘be compelled to pay off my crew—which I’ve done—and ship another—also done—and accept a two-penny freight to the West Indies to enable me to reprovision my ship—all which I’ve had to do—with never a living being in this whole wide world made responsible, either as the manager of a fund set apart for such cases, or as the owner of the wrecked vessel, or as the British Government itself whose business it should be to encourage acts of humanity shown to those sailors it’s always bragging about and leisurely looking after, for the loss I’ve been put to?’ ”

“ ‘Well,’ says he, ‘on reflection, I think ye might drop a line to the “authorities” ’—you know who he meant, sir: ‘there’s a fund called the Mercantile Marine Fund, out of which, I think—mind, I only think—the “authorities” may if they think fit, pay a certain sum, whatever it be, in satisfaction of salvage where nothing more valuable has been saved than fourteen human lives.’ ”

“ ‘Well,’ says I, ‘I’ll write to them;’ and so I did; and what do you think was the result?’ ”

I cannot imagine, I replied.

“I got no answer,” said he. “I got no answer,” he repeated, passionately: “and there’s no more chance of my getting an answer than there is of—” he paused, and added, “I was going to say than there is of my stopping to pick up more shipwrecked mariners—but God forgive me for the fancy! It’s not in my head, sir. But, putting all sentiment aside, wouldn’t you consider mine a hard case? And is my loss made the lighter to me because I am asked to reflect whether I *ought* to expect the authorities or the owners, or anybody else, to pay me for saving fourteen men from a dreadful death? Here, sir, you have one of the difficulties—one of the hundred difficulties—master-mariners have to contend with, as little known to or understood by landsmen as Jack comprehends the business of an attorney. It’s not for me to suggest what should be done. But when next you hear of shipwrecked sailors being abandoned by a passing ship, don’t be too quick to condemn the captain as a coward and a villain for leaving his fellow-beings to perish miserably, but say to yourself, ‘His heart was with them, and he’d have saved them if he had dared; but British civilization said, whatever you do you do at your own risk. If no harm befalls you, good and well; you shall pass by, and nothing more be said or heard of your act; but if you lose money, don’t look to me,’ says British civilization, ‘for the only answer you’ll get will be that you’re an impudent fellow to expect to recover any loss you incur in the service of humanity;’ and so the skipper, knowing this to be true, sails away, holding that his wife and children at home must not be beggared that a perishing crew may be rescued.”

Thus speaking, my friend the ship-master rose abruptly from his chair, pulled his hat down to his ears, and, impetuously wishing me good-day, left me to lapse into a very brown, I may almost say a very black, study.

SMACK APPRENTICES.

"I DON'T know what country he hailed from, I'm sure; but, thank the Lord, he wasn't an Englishman," said a smacksman, in the most fervent manner, to me the other day, speaking of Osmond Otto Brand, who was executed on the 23d of May for the murder of an apprentice named William Papper or Pepper. At any other time than this I believe the story of that miscreant's barbarity would have deeply stirred the public mind; but of late days * murder has become a common thing, much talked of and freely practiced. People's capacity of being horrified gets dulled by iteration of shocking news, and the significance of any one item in a blood-red catalogue loses value as a particular impression. Whatever effect, however, may have been produced by Brand's crime on the lay mind outside the district where the murderer and his victim were known, there can be no doubt of the impression it has made upon smack-owners and smacksmen all round the coast. There is scarcely a fisherman who has not the horrible story off by heart, who does not view the atrocious cruelties practiced by the foreign smack-master as a foul disgrace to the fishing industries, and who does not indignantly lament that the men who helped Brand to slowly kill the miserable apprentice were not hanged along with their skipper. One result of Brand's crime was to cause some questions to be asked in the House of Commons. There was also some talk about the whole subject of fishing apprentices being considered by Government. If it is to be dealt with it will be as well, perhaps, first to give the Hull murder time to drop out of memory. To adopt it as a text for legislation would assuredly be to mislead honorable members who voted without looking very deep into the matters on which their opinions are challenged. If the condition of the smack apprentice is an improvable feature of current life, it is not so merely because Brand slowly tortured Pepper to death. We must shelve all thoughts of that murder, and ask questions without the least reference to it. What is the life of a fishing apprentice at sea? What is it ashore? How is he fed and clothed? What is the nature of his relations with the owners' interests? What is the average character of the men with whom he is thrown? These and other questions I will endeavor to answer from inquiries I have made into the inner or hidden part of the lives of a body of lads of whom the public know less than they know of any other kind of seafaring people.

I once wrote an account of a voyage in a smack in the North Sea. One such journey is enough for a lifetime, and the recollection of it makes me here declare—and I am sure there is not a sailor living who will contradict me—that of all the several forms of seafaring life there is absolutely none comparable in severity, exposure, hardship, and stern peril to that of the smacksman. His vessel is a small one;

his cabin a little darksome hole; his working hours are full of harsh toil; he has to give battle to the wildest weather, to struggle on for bread through storm and snow and frost, through the long blackness of the howling winter's night, through the gray wilderness of a foaming ocean swept by winds as pitiless as the hand of death. No legislation can alter these conditions of his life. Philanthropy will have its cod and sole and turbot. The fish must be caught, but caught in such a manner that those who shoot their trawls for them catch other things besides—a wild roughness of bearing, a defiance of civilized instincts, a sense of outlawed and neglected life that brings with it a fixed conviction of social immunity. "I'm a fisherman myself, sir," a man once said to me; "and I'll allow that there are many well-mannered, sober, steady men among us; but, taking us all round, you'll not find a coarser set of human beings in the world; and, if you want to know the reason, you've only got to look at yonder smack, heading away into the North Sea, where, may be, she'll be heaving and tossing about for weeks, with ne'er a proper influence in the shape of books or company for the men to come at."

Take, now, the fishing apprentice. He comes to this severe, coarse life, himself most often of the coarsest. He is fresh from a reformatory, from a union, or, worse still, from the gutter. His associates are men who were themselves apprentices; lads who came one knows not from where—the refuse of the street, manufactured into marine objects by the owner's boots, and breeches, and coats; and hammered into sprawling, unwieldy smacksmen by the hard blows of their calling. They know all about dandy-bridles and twarl-warps; but they do not know how to read, and they do not know how to write, and they do not know how to think. Their home is the public-house when ashore, and they take the morals of that sort of home to sea with them. The apprentice comes among them, gets knocked about, picks up their oaths and their shore theories, and imitates them masterfully enough to be able to hand on their conditions with an added flourish, when he is out of his time and has boys under him to swear at. Now, what is legislation going to do here? You have the roughest life in the world; the roughest lads in the world recruit its ranks. What is to be done, short of what a few philanthropists are endeavoring to do, to prevent them from being the roughest men in the world? I cannot see that the smack-owners are to blame. They must have apprentices. They will take the best of such boys as they can get; and it is really carrying idealism too high to expect that these men, who have to work hard themselves, who have to be down among their vessels, seeing that their men do not run away, that they are properly engaged in preparing for the voyage, and so forth; I say you cannot expect that these men, who come home of a night tired out, should turn school-master and parson to their apprentices, and set them to moral jobs, when they are ready to abscond—with their master's clothes also—if they are not allowed their evening out after being at work all day up to their knees in mud, scrubbing the vessel's bottom.

No one with any knowledge of the smack-owner's calling, of his hardly earned money, of his risks and anxieties, will envy him

Boys are boys all the world over, and that smack-boys should be peculiarly troublesome is not hard to account for on reference to their antecedents—that is, the antecedents of most of them. “The law has come between us and the boys,” was said to me, “and makes our case harder than it was. We have no remedy now. Time was when we could send a constable after a lad when he was off; but the law has stopped that. We have got to wait a couple of days, and then apply for a warrant, by which time the boy’s t’other end of England. Take the case of a vessel about to start. A boy refuses to turn-to. I’m on the spot, and call a policeman, and in his presence repeat the order. Boy still refuses. Policeman then walks him off afore a magistrate, who fines him, and I have to pay the fine if I want to get the vessel to sea; for if I don’t pay then the boy’s locked up, and the vessel detained two or three days while I’m seeking another boy.” The hardship is clear enough, though I for one should be heartily sorry to see it rectified by a return to the old and brutal system of locking up lads in jail at the will of the smack-owner.

Let me briefly place the case of the owners before you with regard to their apprentices. To begin with, the lads come from all parts, as I have said, and are bound apprentice for terms of three, five, or six years. If bound by institutions such as workhouses, reformatories, and the like, a certain sum of money is paid with them—in some cases £10, enough to purchase an outfit. I asked a smack-owner what he reckoned to be the average yearly cost of a lad’s clothes, and he said £8. “A pair of sea-boots alone,” said he, “cost £1 16s.” Boys, however, when they first go to sea do not get sea-boots, but “bluchers,” the cost of which is about 12s. a pair. When the lads are in harbor the smack-owner has to house them. In many instances they sleep in his own house, or in lodgings provided for them. If they do not take their meals with their masters they live as well, dining from the same joint and getting much the same fare as he has for tea and breakfast.

There may be exceptions to this; but it is a practice so general that it may be taken as a rule. When ashore the owners also keep the boys furnished with a little pocket-money. The lad, for instance, who acts as cook at sea gets, when in harbor, 6d. a night, the deck-boy 9d., and the third-hand apprentice 1s. These payments are made during what is termed “settling time;” but in addition to this money, the owner gives them the small fish caught during the voyage, called “stocker-bait,” the produce of which yields each lad an average sum of 1s. a week all the year round. While in port the apprentice’s work mainly consists in scrubbing the vessel’s bottom, touching her up with the paint-brush, preparing nets for the next voyage, etc. At sea the lesser duties are assigned him.

Suppose a smack carries three boys; the youngest will probably act as cook. When the net is hove up his post is in the hold, where he coils away the trawl-warp, which done he returns to his cooking. The deck-boy’s post is on deck when the men are below taking their meals. He steers the vessel in the morning until noon, or 12.30; then gets his dinner and turns in. The duty of a third-hand apprentice is that of a man. He is commonly within two years of his time; and, though he is still an apprentice, he is generally treated

as a well seasoned and fully developed smacksmen. Talking recently with a body of smack-boys, I asked them what sort of grub they got aboard.

“ Good enough, master.”

“ What do you have for breakfast?” said I.

“ Well, we has the choice of tea or coffee or cocoa; we has roast fish and butter and soft tack—as long as it’ll last—and then we has biscuit.”

“ And what do you get for dinner?”

“ Why, fresh and corned beef for a spell; and when that’s ate up we has fish, and suet-pudden, and cabbage—as long as it lasts—and carrots and parsnips when they’re in, and ’taties.”

“ And your tea?”

“ Tea’s the same as breakfast.”

“ Do you get any supper?”

“ Ay, master, ’twixt eleven and one, ’cording as the watch is called, we has cheese and pickles and biled fish, or if there’s any cold meat left we has that.”

When it is considered where these lads come from, this fare is scarcely of a kind to justify them in grumbling and running away. Indeed, of all seafarers, smacksmen live the best. When Jack is gnawing upon a piece of junk, and knocking his biscuit upon the deck to get the worms out of it, the fisherman is regaling himself with the best of the produce of his trawls, or fattening himself on hearty fresh beef and—if it be Sunday—on good plum-duff. The apprentice fares just the same. And even in other ways he is better off than if he were in a ship’s fore-castle, as, for instance, in the matter of clothes—the owner being obliged to keep him well furnished in that respect, and to equip him with garments a hundred-fold warmer and better than those which most sailors take to sea with them. The whole truth is, so far as I can judge, the comfort and happiness and prospects of the smack apprentice depend upon his own conduct.

Owners, like all other employers of labor, want the best hands they can get, and smacksmen are glad to have smart and willing lads along with them. It is a rough life—the whole marine calling is a rough life, and there is none rougher than a fisherman’s. If a boy is dull and slow, obstinate and sulky, he will be shoved and kicked about, and that would be his lot in any ship he went aboard of; but if a boy is willing, does his best, lends a hand cheerfully, and is a steady lad, then he will be well treated, the men will like him, the owner favor him, and before long he will find himself in command. He has inducements to persevere and behave well, such as no other ship-boy gets that I know of; for if he has served his time honestly, and shown such promise as the smack-owner wants to see, then, when he is out of his time, he is furnished with £20 worth of clothes, and a sovereign or two for his pocket. I am aware that all smack-owners are not so liberal, and I have heard of some men sending their apprentices, when out of their time, adrift in the clothes they stood up in, and forcing them to seek work from other masters. But the rule is to treat a good lad liberally when out of his time.

Whoever has examined into the fishing industry must be well aware that smack-owners have substantial cause of grievance in respect of their treatment by their apprentices. An owner told me that a boy came to him for a berth; the lad was in rags and starving, and so filthy that the owner would not send him to his house where his apprentices were. He walked with him to the Sailor's Home, had him bathed and scrubbed and fed, paid nearly a pound for him for seven days at the Home, purchased for him some clothes that cost over £2, and then on the morning of the day on which the vessel was to sail the boy ran away, and the smack had to be detained until another lad could be shipped. Instances of such behavior are numerous, and might really account for, if they should not justify, a very much harsher discipline and sterner kind of treatment than I have been able to discover. For always let us remember that the smack-owner has, as a rule, been a fisherman himself, gone through the mill, suffered all the hardships of the life, and, though ashore, has to work harder for his living than ever he did when at sea. He is in this position, that he is only able to insure for total loss. He belongs to a club whose members subscribe in proportion to the number of vessels they severally enter. "Only yesterday," said a smack-owner, "one of my vessels came in; she had lost fifteen fathom of warp, two main-bridles, dandy-bridle, trawl-warp tackle, two trawl-heads, a trawl-beam, a ground-rope, mortices, head-line, and other gear. I have to bear all that.

"There is Mr. ——. In one night of storm his loss amounted, in insurance of other vessels which had foundered, to £245, together with eight sets of gear, valued at £60 a set." It is a vocation full of risk; scores of men may be beggared by a gale; and, seeing the important part that smack apprentices play in the fishing interests, it is reasonable that we should survey the question from every point of view before hastily forming conclusions on the basis of such an incident as that of the recent Hull atrocity. Of course there are savages and bullies among smacksmen, as there are the whole wide world over whether among landgoers or seafarers. But whatever might have been the state of things in former days, I do not believe that, at the present time, there is half the ill-usage to be found aboard smacks that I know exists at sea in other kinds of vessels.

The crime of the murderer Brand necessarily gives a malignant coloring to every smack-master's report of having lost a boy by drowning while at sea: but the old salt maxim, "A fisherman's walk, three steps and overboard," should go a long way in explanation of many of the disasters that befall smack-boys. An accident aboard a smack happens in a breath; a lad dips over the side for a bucket of water, the vessel is sailing fast, the bucket pulls the lad over the rail, and he is astern and drowned before the fellow at the tiller can sing out. Or a boy goes to look over the stern to see the white water running away, the boom jibes and flings him into the sea. I should very gravely question whether a deliberate murder could be done without some one of the men reporting it. No doubt black deeds have been perpetrated in fishing-smacks. For instance, a story is told of a lad who was frying some fish; through his neglect the fish were burnt, whereupon the skipper, smelling the fumes, bundled below, seized the boy's hands, and thrust them into

the boiling fat. The instant he was released, the boy rushed on deck and flung himself overboard, and was drowned.

One might conceive of a man hating another and jogging him into the sea on a dark night. But the statistics of loss of life among smacksmen and smack apprentices at sea must reduce such dreadful possibilities to a very small number; and of that small number it is rare indeed to find one to which any better basis can be furnished than suspicion. So far as the professional life of the smack apprentice goes—his treatment at sea, his food, his clothes, and the like—it is difficult to guess, having regard to the unavoidable roughness and hardship of his calling, how his position is to be improved. You cannot make a drawing-room of a smack; there will be always hard work and hard words where there is hard weather, and there is not much hope of polished airs and genteel behavior among a race of men who sleep in holes at which a black beetle might stand aghast; and who are boxed up for many months together in the year in a bit of a fabric whose fore-castle is full of raffle, and whose hold is full of dead fish. But ashore no doubt something may be done for the lads to advance them morally and make real men of them when they come to be men.

It would be well if there were a few more Smack-boys' Homes than there are. There is one in Ramsgate, the theory of which is exceedingly good. The manager writes to a school or reformatory for boys, the conditions of acceptance being that the lads are healthy and strong and of good character; also that enough money be paid down to furnish each youth with a fishing outfit and a Sunday suit. The boys being got together in this fashion, the smack-owners are asked to take apprentices from them. This many of them do, I believe, on the understanding that the boys lodge at the Home when in port at a cost of 2s. a day each. By this means the lads are brought under a certain moral influence. They are watched over by the clergy associated with the Home, attend service in a chapel that adjoins the building, and are provided with the means of harmlessly amusing themselves in the evenings. The sole objection is—and it is a commercial one—the expensiveness of the arrangement to smack-owners who have several apprentices. "If I had but one apprentice," said an owner, "2s. a day would be cheap enough; but I have ten, who at 2s. a day per boy would be a good deal dearer to me at the Home than I find them in my own house." This is a point I will not deal with, but in all other respects I know of nothing that can be advanced against Smack-boys' Homes.

Smacksmen make fine sailors; the navy and the merchant service ought to have no better recruiting field than the British fisheries, and therefore something of Imperial significance should enter into consideration of the smack-boy's moral and material welfare. You are not going to make him a refined person, but you can teach him to write and read, to have a reverence for God, to think of himself as a responsible being. An early training of this kind will not impair his hardiness, but it will put him higher than he is as a human creature. The lower orders of smack-owners let him run loose of a night when he is ashore; he is quite uncared for, and in the prison days he passed a good deal more of his time in jail than at sea.

“ Making every allowance for second or third convictions,” says the Rev. J. E. Brennan, of Ramsgate, writing in 1878, “ we are not far from the truth in stating that fifty per cent of these boys go to prison during some part of their service.” These incessant punishments naturally led people to infer the worst of the fishing life. “ Think what a calling it must be,” they would say, “ when boys actually beg to be sent to prison rather than on board these smacks.” But Mr. Brennan justly, I think, attributes the lads’ defection to their neglected condition, to the absence of all suitable guardianship. “ The scenes of drunkenness and sin,” he writes, “ of which some of these lads are cognizant I will not describe. Let it suffice to say that many a pure-minded boy has in a few months become utterly corrupted, and his character, it may be, utterly ruined forever.” He is writing of the boys of one town; but his remarks are equally, and even more, applicable to such places as Grimsby and Hull and Yarmouth.

Here, then, is the real evil. It is not that the boys are maltreated at sea to any extent outside the proverbial rough usage of the marine life; it is not that smack-owners—the majority of them certainly—do not feed and clothe them well, nor that they exact unreasonable share of labor from them; it is that, when ashore and during the evenings, they wander about, fall into bad company, acquire habits of intemperance, become unspeakable nuisances to the police, to the inhabitants, and to their own masters, run away, and leave owners in the lurch, and practically now without redress: and so, in a large proportion of instances, end in becoming untrustworthy men, worthless sailors, people whom nobody will employ. Smack-owners, as I have said, cannot be expected to look after the morals of the lads; their hands are full of business, they come home wearied, and, even with the best will in the world, they must lack in ways it would take too much space to explain here the opportunities to care for the boys as they are cared for at a Home. What is really wanted is a Home wherever there are fishing apprentices, an institution conducted with something of the self-sacrificing spirit that characterizes the Ramsgate Home; where the boys can be comfortably housed and tended at a small expense to their employers; where they may be educated and helped and rewarded for their merits as seafaring lads; and any one truly concerned in the welfare of our mercantile marine, and who holds that we should neglect no source from which we may derive the forces that keep our nation dominant upon the sea, will believe that the State could make no wiser disbursement than in helping in the establishment of such institutions, and contributing to them until they become self-supporting.

GRAVESEND.

I NEVER pass Gravesend without thinking of poor Mrs. Henry Fielding’s dreadful toothache, and the trouble her husband and the surgeon, “ the best reputed operator in Gravesend,” took to persuade the suffering lady to keep the hollow tooth a little longer. To what extent has the old town changed since the author of “ Tom Jones ” surveyed it from the deck of the little old vessel that carried

him to Lisbon to die there? Much should have happened in a hundred and thirty years; yet in one respect Gravesend remains unaltered; it is still, so to speak, the same old point of nautical departure; ships still "drop" down abreast of it, and bring up to receive their passengers; and yet it remains the one spot of English soil which, when left astern, makes you feel that the great ocean is all before you, and that your voyage has commenced indeed. But is not human nature the same in all ages? Fielding's description of sitting at dinner and being startled by the bowsprit of "a little ship called a codsmack" driving in through the cabin window, and his account of the sea-blessings showered upon each other by the crews of the two vessels, might stand for a picture of to-day's river life. "It is difficult," he says, "I think, to assign a satisfactory reason why sailors in general should, of all others, think themselves entirely discharged from the common bands of humanity, and should seem to glory in the language and behavior of savages." His opinion of Jack as a gentleman was not ill-founded. But what would he think now if living, and, with the memory in him of his uncouth sea-swab of a skipper (who, to the delight of posterity, fell upon his knees at last and begged Fielding to forgive him), he should step on board the four-thousand-ton steamer that lay abreast of Gravesend, with blue-peter at her masthead, on the day I happened to find myself in that town?

Not much imagination is needed, I think, to extinguish the monster fabrics which day after day lie floating motionless abreast of Gravesend, and refurnish the broad and quivering stretch of waters with the marine phantoms of olden times. The Indiaman of five hundred tons is viewed with astonishment at her prodigious dimensions as she lies straining at her hempen cable, the sunshine sparkling in the big windows which embellish her huge quarter-galleries, her stern towering out of the water like a castle, a wondrous complication of head-boards and massive timbers distinguishing her bows, long streamers whipping from every mast-head, and rows of cannon bristling along her tall, weather-tossed sides. You have little pinks, and snows, and cutters of fifty tons burden which have made part of a convoy from the West Indies, and have out-weathered the heavy Atlantic surges as bravely as any Cunard liner of to-day does. Here, too, are colliers, "ships of great bulk," Fielding calls them, though there is scarcely a skipper of an old boom-foresail *Anna Maria* or *John and Susan* now afloat who would not hold them capacious only as long-boats. To appreciate all that the present means, you must step back and then look ahead. Only the other day I saw a Blackwall liner towing up the river. It is not so very long ago when that ship would have been thought a wonderfully large vessel. Handsome she is, with her painted ports and frigate-like look, though her main royal-mast was uncomfortably stayed aft when I saw her, and she wants a prettier stem-piece; but, as to her size, she seemed little more than a toy as she swam past the line of huge towering iron hulls. You think of the scene of the river as Fielding surveyed it; then as you remember it twenty years since; then as you see it now, and your wonder is, What will the end be should the end ever arrive? What will be the bulk and vastness of the fabrics in the good time coming?

“The new docks,” said a waterman to me, pointing across the river with a finger like a roll of old parchment, “are to start from yonder pint, and end right aways down there;” and the sweep of his finger seemed to embrace some leagues of the opposite low, flat, treeless, and mud-colored shore. Assuredly all that can be given will be wanted. Our marine giantesses are multiplying faster than they drown; and it seemed to me that there was something prophetic in my waterman’s finger when he made the gesture of it to signify miles instead of acres. But many changes must take place and a long time elapse before Gravesend loses its old distinctive tradition as a point of departure. Think of the thousands of eyes which have grown dim as they watched the old town veer away astern, and of the thousands of hearts which have leaped in transport as from mouth to mouth the cry has gone round, “Gravesend is in sight!” No other place—I am speaking, of course, of vessels bound Thames-wise—gives one such a sense of home as this. Jack may have the English coast in view pretty nearly the whole way from the Isle of Wight as high as the South Foreland; he may bring up in the Downs, and have Deal and Walmer close aboard, and hear the church-bells ringing, and see the people walking on the beach; he may take his fill of Ramsgate and Margate as he rounds the great headland; but somehow or other it is not until Gravesend has hove in sight, and he sees the shipping abreast of it, and the river curving into Northfleet Hope, that Jack feels home is reached at last; that the voyage is as good as over, and that in a few hours the noble ship that has carried him in safety through storm and calm, through sunshine and blackness, will be at rest, silent as the grave, as though, after the long and fitful fever of the deep, she was sleeping well.

These are the gayer thoughts, for they come with the hurricane-chorus that breaks from the fore-castle of yonder ship as her crew get the anchor, now that the first of the flood has come, and the tug along-side is all ready to forge ahead and tauten the hawser. “Oh, when we get to the dockyard gates!” shout the poor fellows gleefully, with as much voice as a voyage from San Francisco has left in them; and you think that to-night there will be some middling salt and tough yarns spun in more than one grog-shop, while already Jack’s most unlovely Nan—as Charles Dickens only too truthfully described her—is overhauling her few penn’orths of finery in anticipation of the treats which are to be got out of a fund made up of £3 10s. a month.

But Gravesend appeals most from the other side of the picture—the outward-bound side. I was favored with an immense illustration of this. A big steamer, with a black-and-white funnel, lay abreast of the Gravesend pier, with her decks literally choked with emigrants. She should have sailed the day before, I was told; but the emigrants—mainly foreigners—had rebelled; declared they had been promised a steamer belonging to another company, and refused to start in the vessel they were packed aboard of. Some one on the Gravesend pier told me that a thousand people had been put into her that morning. There was hardly room for a pin along the bulwarks. Clustering masses of human Leads blackened the rail, as though all the crows in Kent had swooped down upon that great

iron steamship, and were taking their ease upon her sides. I had no excuse to board her, but I managed to gather a good idea of her living freight by taking a boat and pulling round her. I had seen a very similar class of foreign emigrants in a North-country port, and had made a short voyage in company with five or six hundred of them, but that crowd did not impress me as this did.

There was something very pathetic and melancholy in the postures and looks of this large concourse of people, who overhung the water, and gazed, with little of movement among them, at the shores on either hand. The thought of this mass of human souls afloat on the deep with nothing between them and eternity but a thin surface of iron, combined with the speculations as to the future into which the mind was irresistibly impelled; the new lands which awaited them; the long—perhaps everlasting—separation from their mother country; the numberless interests they represented; and the rapid growth of that amazing Western Empire, whose humanizing and civilizing progress was strangely illustrated by the embarkation of this immense assembly—the freight of a single ship, too!—for its ports, contributed to make the picture of the *Holland*—for that was the name of the steamer—a truly impressive and memorable one.

It was a warm, sunny afternoon; far down the Hope, trending northwise athwart Gravesend Reach, were the white heights of Cliffe, sparkling like marble in the brilliant radiance; the long stretch of water was crowded with shipping, whose bunting and variously colored sides filled the eye with color; Gravesend lay in a heavy mass of grouping close down to the water's edge, with a number of huddled houses to the right of the new Falcon Hotel, here and there a window flashing back the sunlight, and the church-bell ringing a pleasant farewell to a Peninsular and Oriental steamer, whose head was being canted toward the north shore by a tug that she might have a clear road before her engines were set in motion; while, some distance up the river, vessels which had passed Gravesend twenty minutes before were fading upon the bluish haze of smoke from tall chimneys and fog from the marshes, the spars of the Blackwall liner looming huge and vague above the land which concealed her hull.

The very beauty of the picture furnished an element of melancholy to the crowded steamship, and the rows upon rows of faces which were all steadily gazing landward. I watched the Peninsular and Oriental steamer get under way, and contrasted her with the emigrant ship. The big deck-house or saloon of the former, with the two funnels rearing out of it, gave her, to my eye, a somewhat heavy look forward; but it was something to remember to run the eye from her almost unpeopled decks—nobody to be seen but some men in uniform on the bridge, a Lascar in a turban squatting in the after-awning, holding a little white flag in his hand, and one or two figures in the forward part of the ship—to the motionless black hull of the emigrant steamer, teeming with life, and the bulwarks literally creeping with faces. It is a responsible thing to carry mails, to be answerable for a mass of specie, and for the lives of a number of gentlemen and ladies; but think of standing on the deck of a steamer on a dark night, and reflecting that under your

feet lie sleeping a thousand human beings, not counting your crew, and that the very existence of this vast company of fellow-creatures depends upon your vigilance, judgment, skill as a seaman.

I believe the sympathy and wonder of any man who saw that crowded vessel, and gave attention to the sight, would have gone to the captain, to the seaman who was to hold all those lives in his hand, so to speak. Who would willingly accept such a responsibility? and who, finding men equal to the discharge of these enormous trusts, would not gladly lend a hand to smooth their path for them by denouncing and demanding the removal of whatever unfairly obstructs and harasses them—the action of unjustly constituted courts, the decisions of empirics, and of people who could not tell the difference between a gin-block and a dead-eye, the iniquities of the modern ship-building yard and the hundred small red-tape worries which make the ship-master's life a burden to him ashore?

How much Gravesend is a point of arrival and departure I was reminded as I stood overhanging the stone projection and looking down on the landing-steps. From a large sailing-ship towing up the river a waterman's boat shot away and made for the Gravesend pier. In it was a middle-aged man, bronzed with the suns and winds of four months, and dressed in clothes which it scarcely needed a tailor to guess were of an Antipodean cut. His luggage was heaped about him in the bottom of the boat. I watched him land, and followed him as he came up the steps, when a rush was made by a little group of people dressed in mourning, and in a breath a woman, tossing up her black veil, was in his arms and sobbing on his shoulder. Those somber garments threw a shadow upon the happiness of this meeting; but still, he had come back; he was well; and by and by the dead, never to be forgotten, let us hope, would be buried indeed, and the living heart re-assert itself. The watermen seemed to know when that ship had left her port on the other side of the world, and so I found that this man had been four months in making his way to England. And how much longer had he been absent? But then think of the glory of the green trees and fragrant beauties of our English May to this traveler, fresh from one hundred and twenty days of salt-water! Figure the flavor he will find in a cut from a prime sirloin! the sweetness of "soft tack"—ay, even such bread as is now baked—after the bilious little bits of dough manufactured in the galley by the baker, and sent aft under the satirical title of "rolls!"

Scarcely had the sunburnt man and his friends disappeared, when there came a little figure that I could not view without lively concern and compassion. This was a small midshipman, resplendent in the newest of uniforms. The buttons glittered on his tiny jacket, and the brand-new badge on his cap shone like a freshly minted sovereign. There lay his ship a short way down the stream—a good-looking iron vessel, very long and very narrow, without an inch of that "swell of the sides" one loves to see, as I had taken notice when she slewed on her heel to the first of the flood and gave us a view of herself end on, with double top-gallant yards, skysail poles, and the capacity for an immense spread of lower cloths. The poor little chap took a long squint at his new home, and then a

peep at the lady along-side of him, whom, from the strong family likeness between them, I reckoned at once to be his mamma. She had been crying, her eyes were red, but she looked at her youngster with a kind of quivering smile now, for it would clearly not do to capsize his sensibilities at this most trying point. He had insisted upon going to sea, no doubt, much against poor mamma's will. He had fine notions of the marine calling, I dare say, all acquired by days and nights of study of nautical romances; and here he was ready to sail away, handsomely brass-bound, mamma, red-eyed, at his side, bravely fighting with her heart. Hundreds of men have gone through this, and something betwixt a laugh and a sigh will come from them when they think of this little brass-bounder and look back to their first voyage.

What ideas had the young fellow formed of the life? But, alas! what mariner has not allowed his boyhood to gull him in the same way? "There is," says Dana, a "witchery in the sea, its songs and stories, and in the mere sight of a ship and the sailor's dress, especially to a young mind, which has done more to man navies and fill merchantmen than all the press-gangs in Europe. I have known a young man with such a passion for the sea that the very creaking of a block stirred his imagination so that he could hardly keep his feet upon dry ground." These sentences recurred to me as I watched the little midshipman. But for how many days was the spell of the ocean's witchery to lie upon him? Probably, if they had head-winds down Channel, he would be sick of the life, and longing to be ashore in a warm bed, with his mother to tuck him up, and a good breakfast to go down-stairs to next morning, before they were abreast of the Start. "Oh, my golly!" said a negro whom I met at Gravesend, selling flowers, "S'elp me, sah, as I stan' here, I'd gib dis basket, yas sah, I would, and all de close horff my back, for a good blow-out of lobscouse!" But that little middy will have to be a black man if he wants to enjoy sea-fare as my negro friend did. A few days of dark and evil-looking pork, and salt beef out of which he might cut models of ships for his friends at home, and "duff" made of copper skimmings, not to mention the being routed out in his watch below, and having to tumble up aloft in a night blind with storm and rain, are pretty sure to disillusion him. But his buttons are new, and his hopes are young and fresh; there is no tarnish of salt-water on either as yet; so let him take his mother's yearning, passionate kiss, and bundle into the boat and be off. She could not bear to see him row away, and the moment he went down the steps she hurried off, while he, to show what a man he was, squatted himself in the stern sheets, and pulled out a short wooden pipe and lighted it. In a few minutes he was out in the stream. I watched him get along-side his ship, trot up the gangway ladder, and vanish in a kind of twinkling of new brass and gilt over the side.

It is these constant comings and goings which give Gravesend its interest and its memories. One hour it is a party of people newly arrived from the bottom of the world; another, it is a couple of drunken firemen tumbling into a boat and shoving off for some lump of a steamer that lies abreast of the Obelisk or Denton Mill. But, in spite of the heaps of nautical conditions which beset it,

Gravesend cannot be called wholly marine. It may be thought fishy, but it certainly is not salt. Contrast it with Deal, which it resembles in its lower streets. The wind may pipe never so merrily, but there is no shrewd, briny pungency in the shrilling gusts as they sweep round the corners. The boatmen have a fresh-water look. Their sou'westers and jerseys cannot deceive the practiced eye. They can handle an oar capitally; but they have not the toughened and bronzed Channel-tossed look of the fellows whom you encounter lolling in blanket trousers over the Ramsgate piers, or arguing in groups at the entrance of the Margate jetties, or heightening the picturesque appearance of the Deal and Folkestone shingle. Yet I cannot conceive of any place better calculated to delight a man of maritime studies and scenes than Gravesend. You may linger all day on the queer-looking roofed-in pier, with the old barge moored against it, and never feel weary. Hour after hour unfolds the canvas of a never-ending panorama of shipping. Picture after picture goes by—the great ocean steamship, the little ratching ketch, the sturdy old collier, the white and shining yacht, the large and loftily rigged ship, the eager tug hissing through the trembling current, and all the life and light and color and wondrous transformations of the river take a certain character of remoteness akin to unreality, as though what you gazed at was nothing but a series of noble paintings, indeed, from the quietude that prevails about you; an atmosphere of lazy stillness broken by the muffled, rushing sound of the current sweeping under the pier, the dulled voices of men conversing outside the wooden structure, and the straining noise of boats as the tide sets the little craft chafing one another's sides.

A CHAT WITH A FISHERMAN.

A FEW days after the dreadful gale that had wrecked whole fleets of smacks belonging to the eastern and north eastern ports, and drowned many hundreds of fishermen, I was visited by a Hull smacksman, who came to tell me that he had lost a son in one of the vessels which had gone down on the Dogger Bank during the storm, and to inform me of the misery and destitution into which the widows and children of the poor drowned men were plunged. He told me in a rough, plain, earnest way how his son was to have been married to a young girl on his return, and how the poor lad had saved up a few pounds to purchase a little furniture for the home which she was preparing, when the news reached her that the smack in which her sweetheart was had gone down with all hands; how, in house after house, down whole streets, there was a constant sound of wailing and moaning, with misery and hunger indoors, among the weeping women and the sobbing children; and, said my fisherman to me, though God knew he was a poor man, yet such was the suffering he had witnessed, so unspeakable great was the calamity that had overtaken the fishing population of Hull and of other ports—but he spoke of Hull because he belonged to it—that had the thirty shillings he subscribed to the fund for relief of these widows and orphans been the last bit of money he had in the world, he must have given it and taken his chance for himself.

The subject was a deeply interesting one to me, who had lived among fishermen, written about them, knew their heroism well, their hardships, the simple-heartedness of them. We got talking about the smacksman's life, his risks, of various features connected with his calling; and, as the subject is one that has been commended to the British public in an appeal for charity for those whom the frightful storm bereaved, I offer no excuse for repeating in print some of the observations made by this smacksman of his own vocation.—His reference to what is known as the "boxing system" enabled me to lead off with my questions. The term boxing, I may say, is applied to the conveyance of fish in boats from the smacks to the steamers which bring the fish home. As the vessels fill up with fish they transfer them to steamers, which, by relieving them of their freight, enable them to remain for weeks on the fishing-ground.

"Is it a fact," I inquired, "that smacksmen object to the boxing system?"

"It is, sir," was the reply.

"Why?"

"Because it's dangerous to life, sir. It keeps men working for a considerable time in open boats in all kinds of weather. It answers the owner's purpose; he shares in the profits of carrying the fish, and it enables him to keep his vessel at sea as long as it is possible for her to remain there; and by this means the men are deprived of all home comforts and of the management of their families."

"What is the size of the boats employed in carrying fish from the smacks to the steam-cutters?"

"Well, their length'll be about twenty feet, breadth six feet, and depth three feet."

"And these boats the men have to launch in heavy weather?"

"Yes, often in weather that may be called heavy. The risk is increased by the peculiar circumstances under which the men are placed while working at the boating system; for you'll hear again and again of their shoving the whole of a night's catch into the boat at once, in order to secure a quick dispatch and obtain the earliest possible market."

"How is the Dogger Bank relished as a fishing-ground?"

"Well," he replied, "it passes by the name of 'The Cemetery' among us. In the winter-time, I don't suppose there's a more dangerous place in the world. With strong winds from the N.E. veering to the N.W., there come the heavy seas from the Atlantic—if you can call the ocean to the norrards of the North Sea by that name—which strike the rising ground of the bank and turn the water into a boiling caldron. It was there where the smacks went down. The seas just coiled over and fairly broke upon 'em, smothering 'em, smashing in their decks, stamping 'em out as you might grind a beetle out of sight with your heel."

"Are your smacks supplied with barometers? I mean by that, have they any means of knowing when to expect foul weather?"

"No, sir; they're not generally supplied. One firm owning about twenty sail of vessels, who always work on the single-boat system in winter, provide their vessels with barometers. I should think they must be very useful instruments," said he, speaking as

though he had never been shipmates with one; "and I may here add that none of those twenty vessels alluded to were lost. The majority of us smacksmen have nothing to tell the weather by except practical experience."

"But couldn't the admiral signal—couldn't he at least be furnished with a barometer?"

"No doubt," he replied. "But smacks get scattered, and it would be best for each master to understand the weather for himself. The admiral is more for rallying of us. He has his job cut out for him after a storm. His general scheme is to fall in with a steam carrier, and then sail to the ground from which he's been driven by the gale, expecting the rest of the fleet to do likewise; but it often happens that many days pass before they're able to get together, and this brings heavy losses among the fishermen, who, having no ice, are forced to find the admiral before they can start fishing afresh."

"What difference is there in the mode of fishing among the Hull, Grimsby, Ramsgate, Penzance, and other smacks?"

"Vessels belonging to Hull, Grimsby, Ramsgate, and Lowestoft use the trawl-nets; but the Penzance boats are what is called 'drifters,' or herring-boats."

"I asked that question," said I, "in order to inquire what kind of fishing—that is, which sort of voyage—is most in favor among smacksmen."

"Why, in winter-time we like best the single-boat system—when a smack goes out and gets what fish she can, and returns. This system does not require us to use small boats. It pays just as well as the other system, and is less dangerous in other directions than that of doing away with 'boxing,' as it leads to vessels scattering, and helps in that manner to lessen the risks of collision. We don't object to the boxing system in summer, but it oughtn't to be practiced in winter. That's what we think."

"Smack-owners manage to secure themselves, don't they?"

"Well, yes, by what's termed natural insurance, which provides for total loss—and for damage to a certain amount, apart from fishing-gear. Masters don't much like these here insurance companies. They're too despotic. I'll tell you what they do, sir: they won't allow a master the right of defending himself against any charge that's brought against him before them. Why, they think nothing of suspending a man from acting as master for a couple of years, perhaps for nothing worse than an error of judgment which the Board of Trade Commissioner would have been satisfied to reprimand him for."

"Do smacksmen make a provision for their families by any method of insurance or clubbing?"

"Yes, sir," he answered; "as a rule they do. There is a Fisherman's Widow and Orphan Society, which, for payment of one shilling a month, pays a widow £20 or £25, according to the time her husband has been a member, and there is also a Friendly Protection Society, numbering at Hull seven hundred members, which gives sick-pay for certain periods and £12 at death. Both these institutions do a great deal of good. Many fishermen also join the local friendly societies."

“But a large number, I suppose, do not subscribe, and it is the widows and children of those who have been plunged into immediate destitution by their husbands' death?”

“Yes, sir; but it is not always possible to subscribe; there are too many of us, and some go without work for weeks.”

“What is the average tonnage of the Hull and Grimsby smacks?”

“About seventy tons.”

“What is your opinion of them as seaworthy vessels?”

“Well, sir, the build and behavior of them are first-rate; but a great many are ill found, are in a bad state as concerns leakage; and I can assure you that among us fishermen there is a strong feeling that there ought to be Government inspection of fishing-vessels by practical men.”

“Will you explain to me the meaning of shares, and how they are proportioned?”

“It's in this way,” said he; “the net proceeds are divided into eight shares; the master takes $1\frac{3}{8}$ share, the mate $1\frac{1}{8}$ share, and the owner $5\frac{1}{2}$ shares, out of which he has to pay three boys or casual hands, who receive together on an average about £2 2s. a week, and he has also to find his vessel's outfit.”

“Is it true that smacksmen object to life-belts?”

“No; they don't object generally. Some do, on the ground of their being too cumbersome to work in. They ought to be worn in 'boxing.' There's a particular danger in that system which I forgot to mention; it's that of collisions, which are constantly happening, owing to the men being anxious to get their fish on board the steam-cutter, to do which they all sail to her as close as they can, with their boats in tow, and two hands in each boat.”

“And what other special dangers are there,” said I, “connected with your calling?”

“Well,” he replied, “answering that question, as concerning the single-boat system which I've explained, I can but say that what the smacksmen has to contend with are just the ordinary perils of a seaman's life, such as shipping heavy seas which wash us overboard, and being dragged into the sea while drawing water, hauling in the net, and the likes of that. But the boxing system adds to these dangers by the risk of collision, the capsizing of boats, and the uselessness of the casual hands, the best of them preferring to ship in vessels on the single-boat system.”

“Your casual hands, as you call them, touch the apprentice question. What is your opinion of smack-boys' homes?”

“Why, that they're a great advantage to all fishing-ports and to the lads themselves, if the homes are properly managed.”

“Can you say that smack-boys are ill-treated at sea?”

“No, I can't, sir. There are a few exceptions, but my experience is that the boys are treated with uniform kindness.”

“To return to the question of loss of life,” said I, “among smackmen, what proposals have you to offer to diminish it?”

“Well, sir, if I had my way, I'd totally abolish the boxing system from the end of September till the end of March. That alone would greatly reduce the death-rate among fishermen; and I'd also have Government inspectors to survey the vessels, and see that they were found, and equipped, and ballasted, and so on.”

“And now,” I asked referring to the vessels which trade among the smacks in spirits and tobacco, “what can you tell me about the system called ‘coopering’?”

“Why,” he answered, warming up, “my opinion of ‘coopering’ is that steps ought to be taken to put a stop entirely to such degrading traffic. If it could be put an end to, it would be a blessing to all concerned—particularly to the men. It ’ud make your hair stand on end to hear of some of the awful things I and scores besides have witnessed—many of our men having, in their drunken fury, jumped overboard, and in many instances been drowned; and in hundreds of cases ‘coopering’ has been the means of causing the men at sea to fall out and fight almost to death’s door. I’ll explain how it’s carried on. The trafficking craft is in most cases an old vessel that has been condemned in England and sold to some foreigner for the purpose of carrying on this trade—some one hailing from Hamburg, Bremerhaven, Antwerp, or some port along the Dutch, German, or Belgian coast. This man—or call it these people—get their tobacco, cigars, liquors and the various other articles they deal in, in large quantities from agents in the different ports they visit at a very low price. The articles sold are of a very inferior quality—especially the drink, which is chiefly rum and gin of a very common and fiery nature. The prices charged as a rule are—for shag tobacco, 1s 6d. per lb.; cavendish, 2s. per lb.; cigars, from 6s. to 12s. per box. Gin and rum are sold at 1s. 6d. per bottle, brandy 2s. The smacksmen generally arrange to take a little money to sea with them for the purpose of buying tobacco, to save paying 4s. per pound for it at home. In my opinion, this traffic would receive a blow if fishermen were allowed to get their tobacco out of the bonded stores.”

This, it will be seen, coincides with the report of the Sea Fishing Trade Committee, who called attention in strong terms to the evils of “coopering.” Not only, was it stated, do these boats lead to the bartering of ship’s stores and gear for drink, “but they bring about the demoralization of the hands and even of the skippers serving on board smacks, and directly lead to risk and loss of life. We have it in evidence that they are floating grog-shops of the worst description, and that they are under no control whatever.”

There was little more that I could think of to ask my intelligent friend. In reply to my inquiry as to the value of smacks at various ports, he said the question was difficult to answer, “as there’s a vast deal of difference among the smacks belonging to the ports, and likewise in the damage done ’em, for it’s damage that counts heavily in the support of them. The cost of a new smack at Hull and Grimsby, with all the modern appliances, will be about £1500; the average worth of smacks at those ports is about £900, and the cost of their fishing gear about £70.”

“And a Hull smack’s earnings?”

“Between £800 and £900 a year—I mean the gross earnings.”

“Smacks are being constantly run down by vessels. Do they want better lights? What is the reason of these frequent disasters?”

“As a rule,” he answered, “smacks carry very good lights; but there is room for improvement. I’m one of many who strongly ad-

wise that smacks should carry more powerful lights than they now use. If smacks are very often run down—and true enough that is—it's mainly because of the bad lookout that's kept aboard vessels navigating the North Sea. There are captains who don't respect our lives. They see us lying to our nets, they know we can't get out of the road; but on they come, never shifting their helm; and if they pass by without striking us, and we call to 'em to know where they're coming, all the answer we get consists of brutal curses."

Apparently, then—and I say it not alone on the evidence of this man, but on the assurance of many others engaged in the fishing-trade—the measure that is required to diminish the loss of life at sea among the valuable class of men employed in the North Sea fishery is the suppression of the boxing system during the winter months. And another most important step would be the supervision of smacks by qualified inspectors appointed by the Board of Trade. At present I do not know of any law to prevent an owner from sending, or to punish an owner for dispatching, to sea the craziest old smack that can be kept alive by long and frequent spells at the pump. It is certainly most anomalous that close attention should be given to the loading, construction, and equipment of ships belonging to one section of the English marine, while another section that finds occupation for many thousands of men and boys is utterly disregarded by the State in all things saving the exhibition of lights.

A FOURPENNY VOYAGE.

DR. JOHNSON once said that the full tide of human life was to be seen at Charing Cross. The full tide of human commerce begins a few bridges lower down. A man should count it a real privilege that, for the modest sum of fourpence, he is able to survey such an illustration of the wealth and power of this Empire as may enable him to form a very clear and true conception of the aggregate commerce and industry of the United Kingdom. To embark at London Bridge on board a fourpenny steamboat, bound to Woolwich, is, in my humble judgment, to be conveyed through the most wonderful series of transformation scenes that the world has to offer. What is comparable to that passage? No one who has entered the Sidney Heads but will remember the astonishment and delight inspired by the miles of blue water, studded with fairy islands, the jasper-like reflection of clouds in the glass-clear depths, the rich tropical vegetation of the shores, the gleaming spars of shipping lifting their delicate tracery into the darkly-pure blue. Passages of strange and shining beauty recur like haunting memories of fragments of Eastern story to those who have threaded the waters of the Nile or the Hoogly; and recollections of the Peiho are made delightfully picturesque and impressive by visions of uncouth junks moored in the rushing stream, by glimpses of distant temples, by remembrance of soft winds aromatic with spices.

But the Thames! Its scenery is the work of human hands. An atmosphere of yellow light gives magnitude and a vagueness of outline to the leagues of water-side structures, and an obscurity to

the horizon in which the monuments of industry fade with a simulation of immensity that cheats the senses into a belief of immeasurable remoteness. The great ships are in the docks far down the river; but though the steamers which lie in tiers upon tiers in the Pool, and far beyond the limits of that reach, are for the most part but of middle size, yet the mind loses all sense of their individual dimensions in the overwhelming impression produced by their collective tonnage. One journey through this magnificent stretch of stream is a large education. The flags of a score of nationalities color the somber heavens with their green and blue and yellow and white folds. All the countries in the world appear to pass in a kind of review as the ear catches the hundred tongues, and the eye the hundred faces, and the nostrils the hundred scents wafted from the holds of ships whose grayish spars seem yet to retain the heat of the equatorial sun, and whose sides are fretted with the wash of the surges of the great oceans.

I once took fourpenny worth of travel aboard a Woolwich steamer, for the sake of renewing some old recollections. I will not say that a better kind of steamer would not have made the voyage more comfortable. The dexterous and watchful skipper, who stood upon the bridge, carrying his freight of human lives through the intricacies of blundering barges and the bewilderment of swinging ships and capricious tugs, by light motions of his arm and soft asides to the boy, who furnished them with ear-piercing echoes, seemed to me to deserve a stouter ship. The funnel casing had much the appearance of an aged sauce-pan whose bottom had been burned to the thinness of a sailor's shirt. I thought to myself, "Suppose we should tip some of these old barges our stem by mistake? Assuredly we should crumple up forward like a sponge-cake; and how should we manage to save our lives?"

I looked everywhere, but there was not so much as an old cork to pitch overboard in case of accident. Even the seats, rotten as the hinges were, were not likely to come away in a hurry. But there was too much to be seen to permit me to bother over the crazy, quivering, admirably handled and most dangerous old machine that was running us from pier to pier against a strong flood-tide. Once clear of London Bridge we were in a complete lane formed by moored or anchored steamers. They were very much alike—little beauty among them; some of them well decked, with their gangways out, showing the covering-board close to the water, and making the structures, with their tall after-decks and top-gallant fore-castles, look as if they were in course of being built, instead of newly arrived from voyages long and short. But all such characteristics were lost in the thoughts of the immense mass of tonnage here submitted. Where did it end? where would the last of these steamers be lying? To right and left they stretched, with lighters along-side, steam-winch rattling, the vapor of donkey-engines blowing out in volumes, some in semi-discharged state, with a heavy list to port or starboard with frequent alternations of the flags of Denmark, Sweden, France, the Netherlands—I know not what other bunting—amid which our own red ensign counted as twenty to one.

The whole commerce of the world seemed to be here; but in truth

the Thames' show of it was only just begun. On either hand, trembling in the distance, in the vacant places between the buildings, could be caught the hair-like outlines of the masts and riggings of ships, with their house-flags twinkling in tiny spots of color; and still, as the fleets of steamers held us in their interminable lane, did there heave up out of the remote sky more lines and threads, and tapering, tremulous heights of shipping. But the wealth of industry and the prodigious achievements of British commerce were not more noticeable in the vast assemblage of steam and sailing vessels than in such minute particulars as the little panting screw-tug with a chain of deeply laden coal-barges in her wake, every ebony mound embellished with a recumbent figure in shirt-sleeves, a sooty pipe in his mouth, and his face to the sky. The familiar Thames wherry was also here to add its touch of interest to the wonderful scene—the old waterman resting on his oars, and squinting over his shoulder at the passing tug, in whose tumble, as she goes by, the little boat begins to flounder, while the tall hat of the rower shortens and enlarges with the reeling of the wherry like an optical illusion.

As the lines of steamers dwindle the river widens; and when we come to the bend of a long reach, it opens into a metal-colored surface of gleaming water, trembling with the speeding of its own rushing, though it retains polish enough to serve as a mirror, and to hold under each vessel the dark, inverted shadow of a phantom ship. Here we come across a long, low, iron four-masted craft, with painted ports. Even a sailor who has never been shipmate with more than three masts at a time might gaze with something of astonishment at the complex tracery that crowds the air over that immensely long and narrow hull, and wonder how long it would take a man to find out where all those ropes lead. It is not enough that there are four masts; there must be double top-gallant yards too, making eight sets of braces where in former times three were found enough. But these are progressive days in ship-building. By-and-by we shall have five-masted, full-rigged sailing-ships, no doubt, with new Board of Trade rules for the examination of candidates in square-rigging. Let us hope that there will be also rules for the proper manning of such craft; for it struck me, as I looked at that big, four-masted ship, that if her complement is assessed on the basis of her tonnage, without reference to the number of cloths she spreads, it must go desperately hard with the cook and the butcher's mate in a gale of wind.

Father Thames, once a god, might more fitly be termed a goddess, under the title of Commerce; for this assuredly is the presiding spirit. It quickens with life the smallest and craziest structure by the water-side; the very ebb and flow of the noble stream seem obedient to its laws, and its shadow is in the air and upon the face of the waters. I cannot imagine any one of those skippers of the Woolwich and Greenwich steamboats, who pass up and down the river some scores of times in the course of a week, so intimately acquainted with the wharves and warehouses and the uncountable features of industry which crowd the bank for miles and miles, as not to behold something new, something he has never taken close notice of before, every time he directs his gaze with attention to

the shore on either hand. The billy-boys and barges squattering like mud-banks hard against the slimy piles; the giant cranes poisoning tons' weight of burden in the air; the vast warehouses, with the long and powerful steamships snugged securely alongside them; the endless procession of wharfage teeming with hurrying figures full of business—these and countless other features of the scene furnish the apparently limitless lines of steamers and other craft with such a background as completes the deep and stirring significance of their multifarious aspect. It is a vast picture of motion—of great vessels coming, of great vessels going, of lighters swirling up swiftly with the tide broadside on, of tugs speeding in quest of towage-jobs, of passenger steamers driving through the steel-colored current with a glancing of silver at their keen stems and a whirl of snow sluicing in a broad torrent from under their counters. Now it is a big ocean steamship, of some three or four thousand tons, leisurely making for Gravesend, as trim as a man-of-war to the eye, her sides and funnels spotless, her scuttles twinkling like diamonds in her black length as they catch the sparkle of the passing water; while in vivid contrast there comes towing past her a full-rigged ship fresh from some Antipodean port, her brave hull covered with the scars of the conflicts she has waged with distant seas, her canvas carelessly rolled up on the yards, her rigging slack, and a crowd of men forward and aft engaged in pointing out one to another the familiar scenes ashore.

Ay, pathos is not wanting even amid so prosaic a scene of commerce as the reaches of our noble river exhibit. You find it to a degree proportioned to your powers of perception and realization in some such an object, for instance, as that ship yonder, newly warped out from one of the docks, and all ready to begin her voyage. The hearty shouts which rise from her decks, the active little figures aloft, the bustle and business in her, cannot impair the pregnant suggestiveness of her leave-taking. You think of the people aboard who have said "Good-by" to their friends, perhaps forever. Poor Jack, sitting astride on the foretop-gallant yard-arm, catches hold of the lift, while he turns his head in the direction of where he reckons Stepney or Poplar lies, and, as he thinks of his wife or sweetheart and the perplexities of the new allotment notes, he discharges a stream of tobacco-juice into the air, and, with a melancholy countenance, wipes his mouth with the back of his hand and goes on with his job. There may be plenty of bustle and loud calls, but there is bound to be a share of sorrow too. It is not long since the skipper took his wife to his heart, and his head is full of her and the youngsters as he paces the quarter-deck, sometimes pausing to peep over the side at the cluster of boats round the gangway ladder, and sometimes singing out to the mate, who has his hands full forward. Indeed, it is impossible to look at an outward-bound ship without sympathy and a kind of respect that comes near to being reverence in some minds. What will be her fortune, you think? She holds herself bravely on the bosom of the calm river; the current wrinkles itself sharply against her solid bows, and breaks away along her side in a cadence like the tinkling of bells. Who can doubt that tears are being shed in her darksome interior? It is hard to leave the old home. The glimpse of the church spire

through the open scuttle brings up memories which tighten the throat. When shall the next meeting be? and when time brings it about, will not absent faces and a change in the spirit of old associations make it sadder than this going is? Pray God that no harm befall the stout ship! As you sweep past her your hearty hope is that prosperous winds may attend her, and that in the new country fortune and happiness await those whose sad eyes dwell fixedly on the land that will be far astern of them before the sun has thrice sunk beyond the deep.

It may be that thoughts of this kind are suggested more by sailing than by steam ships, because the existence of the propeller does to a large extent mitigate the bitterness of the contemplation of distance. But let no in-shore dweller flatter himself that the sailing vessel is very nearly extinct. She may have one leg in the grave, but the other seems to me still to possess an astonishing amount of animation. The hulls of the vessels in the docks on the Blackwall side of the river are not, for the most part, visible from the water; unhappily for steamers, there is not the least difficulty in telling, by the look of spars bristling out of a hidden dock, which are steamships there and which are sailing vessels. Some of these days, perhaps, when the right kind of moral shall have been drawn from broken propeller shafts and twisted rudder-heads, the difficulty of distinguishing between the rig of a sailing-ship and the rig of a steamer may prove very much more considerable than it now is; but, as this matter is at present ordered, the towering masts, the immensely square yards, should leave even a ploughman in no doubt as to the character of the vessels to which they belong.

The number of sailing-ships which crowd the docks on either side the river must prove a real surprise to people who believe that it is all steam nowadays. Let ancient mariners be consoled by this assurance: there is plenty of steam indeed but there is a deal of canvas too; so that all Jack's work does not lie in the bunkers yet, and there must still be a large demand for seamanship of the old sort.

I am not sure that the wonder of the river does not owe quite as much to the sailing-ships as the steamers. The tall spars, the magnificent spread of yards, the black lines of shrouds, the beautiful tracery of intersecting running gear, added to the shapely hulls which support these towering fabrics of hemp and steel and wood, make a most noble and impressive sight, and give, so to speak, a final touch to the teeming, opulent, commercial inspirations of the great river. Lower and lower yet down the grand old stream the spirit of enterprise is settling, and the day is not far distant when the projected dock-yards at Tilbury will veritably transform the quaint old town of Gravesend into the sea-gate of London. It is almost startling to contemplate that time. One thinks of Gravesend now as a mere break in the departure from the Thames. Will the chain of docks end at Tilbury? At Gravesend, apparently, they are thinking otherwise, and reckoning—somewhat against their own hopes—that if the Tilbury Docks people play at leap-frog with the Albert Dock proprietors, the latter company will repay the compliment and land themselves some distance lower down yet. The limits of the port of London, however, will, I believe, be reached

by within a quarter of a mile by the promoters of the Tilbury Dock undertaking,* so that one cannot say in this case that there is room enough for all. Unquestionably the docks which are nearest the sea will be the docks best liked; and owners will profit at the expense of tug masters and pilots.

Meanwhile Gravesend may be complimented on its prospects. But what do the watermen think? They are loud just now in their complaints of the steam ferries. They say that they are not allowed to board the ocean steamers, even to put Gravesend passengers ashore. Everybody must go to Tilbury first. How much of their vocation will be left when the new docks are opened? But assuredly if some old interests vanish, many new interests will start into life under the magic wand of the harlequin Progress.

One may look for a complete transformation of the low, flat, treeless shore of Tilburyness, and an ever-increasing clustering of industries along the banks of those reaches whose skirts now mainly consist of mud. Our fourpenny voyage will have to be extended if we are to compass all the wonders of our river below bridges. The New Zealander who is to muse over the ruins of St. Paul's may come as soon as he likes, only it is quite certain that his meditations will not be excited by any spectacle of decay. Life and industry were never more active on the Thames than now—enterprise never more bold, speculation never more prophetic. The time is not remote when Gravesend, which I may say for centuries has been thought of as a port of call, will be connected with London by lines of edifices and piers and wharfs, as Blackwall is connected, and future passengers by the little Thames steamboats—which it is to be earnestly hoped, in the good time coming, will be considerably more river-worthy than they now appear to be—will be conveyed past a continuous panorama of commercial life and marine interests to limits which will make Gravesend and the opposite shore the actual sea-gate of the port of London; in other words, the entrance to a scene of civilization comparable to nothing that we can imagine even by the building up of fancy from the wondrous facts at present submitted to any man bold enough to adventure upon a fourpenny voyage down the Thames.

POOR JACK.

I CLIMBED the steep hill that runs from the Belvedere railway-station, pausing now and again for breath and to glance at the summer beauty of the distant green land through which the river toiled, like a stream of quicksilver sluggishly rolling, and presently, passing through a gateway, found myself in a fine park-like stretch of grounds, shaded by a multitude of tall far-branching trees, in the midst of which, and upon the highest point of the billowy soil, stood a spacious and exceedingly handsome mansion. There were circular seats affixed to many of the trees, and upon them I noticed several bent and aged figures leaning their breasts upon stout walking-sticks, and holding themselves in very quiet postures. Here and

* Since this was written other limits have been deprived.

there, walking to and fro near the house or upon the grass under the trees, were similar figures, all of them bowed by old age, though some of them paced the turf with a certain nimbleness of tread. They were dressed in pilot-cloth trousers and sleeved waist-coats, with brass buttons; and ancient as these men were, yet it was wonderful to observe, even where decrepitude was at its height, how the old sea-swing and lurching gait of the sailor lived in their hobbling and determined their calling, as though the word "seaman" had been branded upon every man's forehead. I stood looking at them, and at the house and at the great trees, beyond which the distant prospect was shining under the high sun, for many minutes before advancing. The sense of repose conveyed to me by the shadows of the trees, the restful shapes of cattle upon the slopes beyond the mansion, the motionless postures of the old men seated, and the movements of the few figures who were walking, cannot be expressed in words. I listened. There was no note of human life in the air; no sound broke the fragrant summer stillness but the piping of birds in the trees, the humming of bees and flies, the silken rustling of leaves. The landscape was like a painted picture, save where here and there, upon the far-off shining silver of the river, a vessel slowly gliding broke the still scene with a fugitive interest.

I walked to the house and entered the spacious hall, and, as I did so, a single stroke on a bell to denote that it was half an hour after noon resounded through the building. A number of ancient men hung about this entrance, and I examined them curiously; for of all the transformations which old age works in the human countenance I never beheld stranger examples than were submitted by many of these venerable seamen. Let me own to a feeling of positive awe in my inspection, for there was no face but that time had invested it with a kind of sanctity. "How old are you, my man?" I said to one of them. He turned his lusterless eyes upon me and bent his ear to my mouth. I repeated the question, and he answered that he was ninety-three. Years had so honey-combed his face that such likeness of humanity as there was in it appealed to the eye rather as a fantasy than as a real thing. A sailor is usually an old man at fifty, thanks to exposure, to hardship, and to the food he has to live on. Many of these men had used the sea for above half a century; some of them were drawing near to a hundred years of age; little wonder, therefore, that they should be mere dim and feeble vestiges of creation, and that vitality in conformations so decayed should excite the awe and reverence of those who explore the vague and crumbling features, and behold the immortal spirit struggling amid lineaments which have the formlessness of the face of a statue dug from the sand which entombs an ancient city. I turned my eyes from these old men to the hall in which I stood. Pretty columns of malachite supported the roof; wood-work and ceiling were lavishly decorated; marine hints helpful to the prejudices of the decayed mariners were not wanting in the shape of models of full-rigged ships—men-of-war, and East Indiamen of the olden time; through the door I could see the green grass sloping away into a spacious lawn; and the warm air, full of sunshine, gushed in sweet with the smell of clover and wild flowers.

In a few minutes I was joined by the house-governor, himself a skipper, and fresh from the command of a sailing-ship—a genial, hearty gentleman, and the fittest person in the world for the command of such a quarter-deck as this.

“The old men will be going to dinner at one o’clock,” he said; would I like to see them at their meal? I answered “Yes;” so we stood in the door of a long, handsome room, fitted with tables and benches, and watched the aged seamen come in one by one, hobbling on their sticks, many of them talking to themselves.

“Have you any ship-masters among these men?” I inquired. “Several,” answered the house-governor; and he instantly called out a name. An old man approached us slowly; he was bald, with a very finely-shaped head and a long, gray beard, and stood deferentially before us, his hands clasped, waiting to be addressed.

“This man had command of vessels for many years,” said the house-governor.

I looked at the poor old creature, and received one of the gentlest, saddest smiles I ever saw on a man’s face. I asked him how it was that he came to need the charity of this institution in his old age.

“I was in the General Steam Navigation Company’s service, sir, for many years, and had charge of vessels running to Boulogne. But my memory began to fail me; I was attacked with dizziness, and had to give up. I had saved some money, and took a little hotel at Boulogne, on the Quay. I could not make it answer, and, being ruined and an old man, sir, I had to come here.”

He broke down at this, his eyes filled with tears, and he turned his back upon me. I waited a little, and then, taking his arm, I asked him if he was happy in this house. Yes, he said, he was quite happy.

“You may talk to me without fear,” I continued; “I am here to learn the truth and to speak it. Do they feed you well?”

“Very well, sir.”

“Have you no complaints to make?”

“None, sir.”

“You think this institution a good and honest charity?”

“God knows what we should do without it,” he exclaimed, looking round at the old men who were taking their seats at the dinner-tables. Here the house-governor brought up some other aged men, whom he introduced as ship-masters. One of them was a North Shields captain, eighty years of age; he supported himself on two sticks, was a little, white-faced, ancient creature, with strange silver hair, and he spoke with a wistful expression of countenance. He had been seized with paralysis by “farling doon” the main-hatch of his vessel. He told me, in his rich, plaintive, North-country brogue, how the doctor had measured his leg and thigh with a tape for some purpose I could not clearly understand—and how the accident had flung him upon the world a beggar, and forced him to take a refuge in this institution. Was he happy? Ay, it was a man’s own fault if he wasn’t happy here. He was grateful to God for the care taken of him. At eighty a man was “na’ langer a laddie;” and with a bright old laugh he hobbled hungrily toward one of the dinner-tables.

In a few moments two bells were struck, signifying one o'clock, and all hands being seated, I followed the house-governor to the bottom of the room to have a look at the tables before the old men fell to. The dinner consisted of salt fish, butter, potatoes, and plain suet-pudding.

"This is Tuesday's fare," said the house-governor; "on Sundays they get boiled beef, potatoes, and plum-pudding; on Mondays, vegetable soup, boiled mutton, and vegetables at discretion; on Tuesdays, what you see; on Wednesdays, soup, boiled beef, and potatoes; on Thursdays, roast mutton, vegetables, and bread-and-cheese; on Fridays, salt pork, pea-soup, and calavances, and on Saturdays, soup and *bouilli*—not soap and bullion, as Jack says, one onion to a gallon of water—but a very good preserved soup, with potatoes, or rice and bread-and-cheese. Taste this fish."

I did so and found it excellent, so, likewise, was the suet-pudding.

The potatoes were new. The beer was the only doubtful feature of the repast; it was thin, insipid, and flat. I made haste to taste and approve, for I could see that the old fellows were very hungry. The governor left me, and went to the top of the room, where, in a loud and impressive voice, he said grace, bidding the ancient mariners be thankful for what they were about to receive; they all half rose, and in one feeble, rustling old pipe sung out "Amen," and then, like school-boys, made snatches at the dishes, and in a minute were eating with avidity. It warmed my heart to see them. It made me feel that there must yet be plenty of goodness left in this world, when, through the benevolence of strangers and their large-hearted concern for poor Jack, ninety-three old, very old seamen, tottering on the verge of the grave, so poor and so destitute, so feeble and so friendless that, but for the benevolence of those whom Providence had brought to their succor, they must have miserably starved and died, were clothed, and fed, and sheltered, and tenderly watched over.

I know not that I have ever been so moved as I was in my passage through that dining-room. It was not only the pathos that lies in the helplessness of old age; I could not but think of the great compass of time these men's experience embraced, of the changes they had witnessed, of the sorrows and struggles which had made up the sum of their long lives, and how eighty and ninety years of privation, endurance, and such pleasures as sailors take, and such ambitions as sailors have, had ended in these bowed and toothless shapes, clutching at their plain repast with child-like selfishness, indifferent as death itself to the great machine of life that was whirling with its thousand interests outside the silent sphere of their present existence, and dependent for the bread their trembling hands raised to their poor old mouths upon the bounty of those who love the noble profession of the sea, and who will not let the old and bruised and worn-out seamen want for such help as they can send him. Here and there were men too infirm to feed themselves; and I took notice how thoughtfully their aged messmates prepared their meal for them. Some of those thus occupied were more aged than the men they assisted.

"Bless your honor, he's but a child to *me*," said one of them, in

answer to my questions; "he's but three-and-seventy, and I shall be eighty-nine come next September."

One pitiful sight deeply affected me. It was an old man stone deaf and stone blind. How is the helplessness in his face to be conveyed?

"He's losing his appetite fast," said a seaman of about eighty who sat near him. "His senses is all locked up. Ye never hear him speak."

There were sadder sights even than this; but I dare not trust myself to write of them.

I followed the house-governor out of the dining-rooms into a large apartment, well stored with books, magazines, etc., the gifts of friends of the charity. This I was told was the reading-room. It looked on to the green grounds, and was a most cheerful and delightful chamber. Further on was another room, furnished with bagatelle-boards and side tables for cribbage, etc. There was a particular cleanness and neatness everywhere visible, and I asked who did the work of the house. The house-governor answered, "The inmates. The more active among them are put to washing down and dusting at ten o'clock, and they finish at twelve. This is all the work required of them. Throughout the rest of the day they have nothing to do but to lounge about the grounds and amuse themselves as they please in the bagatelle or reading-rooms, or in the smoking-room, which is a large apartment in the basement." Mounting the wide stone staircase, and admiring as I went the singularly handsome and lavishly embellished interior of the very fine building, I found myself on a floor devoted to the sleeping-rooms. These consist of rows of bulkheads partitioning off little cabins, each with a door and a number, and furnished with a comfortable bed, and some of them were movingly decorated by photographs of a mother, a sister, a child, with humble memorials saved from the wreck of the past; such relics of the old home as a few china chimney-piece ornaments, a colored picture, and the like, with here and there a sea-chest; though, as a rule, these little cabins, as they are called, were conspicuously empty of all suggestions of marine life. Now and again the opening of a door would disclose an old man seated on his bed darning a sock or mending a shirt. It might have been that they were used to the visits of strangers; but I could not help observing in all these old seamen an utter indifference to our presence and inspection, a look of deep abstraction, as if their minds were leagues astern of them or far ahead, and existence were an obligation with which they had no sympathy, and of which they never took notice unless their attention was compelled to it.

"Here," said the governor, taking me into a room in which three or four old men were assembled—for dinner had been finished some time, and the seamen had quitted the tables—"is a veteran who has taught himself how to write. Show us your copy-book, my man," said he, giving him his name.

The old fellow produced his book with a great air of pride, and I was struck by the excellence of the writing.

"Is this all your own doing?" I asked.

"Ay, sir, every stroke. It's been a bit of a job, for you see when

a man's nearing eighty ye can't say that his brain's like a young 'un's."

"This would shame many a youngster, nevertheless," said I.

"I'd be prouder if I could read it, though," he exclaimed, with the anxious and yet gentle expression that seemed a characteristic of the faces in this institution.

"Ah, I see," said I. "You can copy, but cannot read what you copy. Never mind! that will come too, presently."

"I'm afeard not," said he, shaking his head. "Writin's one thing, readin's another. I have learned to write, but dunno as ever I shall be able to read it."

The governor, with an encouraging smile, told him to persevere, and then led the way to one of the sick-wards, where I found a very aged man in bed, and two others seated at a table.

"That poor old fellow," said he, pointing to the bed, "begged to be allowed to attend the funeral of a man who died in the institution a short time since; he was so much affected that he was struck with paralysis, and had to be carried back here. He was for years a ship-master, had command of several fine ships, and is a man of excellent education. He has been in this institution some years. And then, addressing him, "Well, and how do you feel yourself now?"

"Mending, sir, mending," answered the old man. "It's death to me to be lying here. Why, for seventy-nine years I never had a day's illness, never took a ha'porth of physic."

"You must have patience," said the governor; "you'll be up and doing presently."

"Ay, the power of forereaching is not taken out of me yet," he answered, breaking into a laugh, the heartiness of which somehow pained me more to hear than had he burst into sobs.

There were more "cabins" up-stairs, and in one of them we found an old Irishman standing, lost in thought, looking out of the window. I addressed him, and he answered me in a rich brogue. I never remember meeting a more winning old face, nor being won by a voice more cordial and pleasant to hear. He told me he had been in the *Kent*, East Indiaman, when she was burned. This was so long ago as 1825, and he was then a hearty, able-bodied man. It was like turning back the pages of the history of England to hear him talk of that famous and dreadful disaster.

"There's another man in the institution who was along with me in the *Kent*," said he.

I thought of the description given of the *Kent* by the master of the *Caroline*, as I looked at this ancient man. "Her appearance was that of an immense caldron or cage of buoyant basket-work, formed of the charred and blackened ribs, naked, and stripped of every plank, encircling an uninterupted mass of flame." Again and again had I read the story of that terrible fire at sea, thinking of it always as something deep-buried in history, and infinitely remote; and now here was a man who had been an actor in it, talking of it as if it had been but of yesterday, quavering out his "says I's" and "says he's," and eager to let me know that if he liked he could tell me something about the behavior of certain responsible persons on board that would not redound to their credit. It was pantaloons

with harlequin's wand in his hand; the faded old picture was touched, and became a live thing, the seas rolling, the ship burning, the terror and anguish of nearly sixty years since growing quick again under the magic of this ancient man's memory, and in the presence of a living witness of that long-decayed night of horror.

Of such a charity as this of the Royal Alfred Aged Merchant Seamen's Institution how can any man who honors the English sailor and values his calling hope to speak in such terms of praise as shall not seem hyperbolic? Not for one instant will I say that as a charity it is superior to others which deal with the sick, with the destitute, with the infirm, with little children.

"There is misery enough in every corner of the world as well as within our convent," Sterne's monk is made to imply by his cordial wave of the hand. But I do claim for this institution the possession of a peculiar element of pathos such as no man who has not beheld the aged, the stricken, the helpless, the broken-down men congregated within its walls, can form any idea of. As you survey them, their past arises; you think of the black and stormy night, the frost and snow, the famine and the shipwreck—all the perils which sailors encounter in their quest or carriage of that which makes us great and prosperous as a nation; and then reflections on the dire ending which must have befallen these tempest-beaten, time-laden men but for the charity that provides them with a refuge, break in upon you, and you feel that no words of praise can be too high for such an institution, and that no money dedicated by generous hearts to the alleviation of human suffering can be better directed than to the exchequer of this aged seamen's home. Ninety-three old sailors are at present lodged in the institution. The house is big enough to accommodate two hundred, but the funds of the charity are already stretched to their last limits, and many an old and broken-down seaman who this home would otherwise receive, and whose closing days would be rendered happy by all that tender ministrations, by all that pious kindness can effect, must die in the cold and cheerless silence of the Union, unless the charity that is prayerfully entreated for him is given.

ON THE GOODWINS.

ON a fine calm day, from the height of the cliffs betwixt Ramsgate and Broadstairs you may spy at low-water time a yellow vein, like a thin winding of pale gold, a hand's-breadth this side of the horizon—the famous and fatal Goodwin Sands. I suppose there is no shoal in the whole world that a man whose sympathies are with sailors can view with more interest. Starting from the North Sand Head, which is almost abreast of Ramsgate, and looking east, the eye follows the south-westerly sweep of the Goodwins until the Downs are embraced, with all their dim tracery of spars and rigging and faint sinuous lines of steamers' smoke beyond, while the giant South Foreland acclivity stares down upon the light-ship abreast of St. Margaret's Bay, marking the extreme limits in the south and west of the deadliest stretch of sands upon the face of the globe.

Who can view the Goodwins without thinking of the treasures which lie buried in their heart, of the hundreds of ships which have gone to pieces upon them, of the thousands of human corpses which have floated out of their flashing surf to be stranded upon some distant beach, or to drift, maybe for days, upon the bosom of the tides, looking up with blind faces to heaven through the green transparent lid of their sea-coffin? There is no spot that has ever been the theater of wilder human suffering. Again and again, as you sail past, you see forking up out of them some black gibbet-like relic of a wreck a week, a fortnight, a month old. Something of the kind is always visible, as though even on the tenderest of summer days, when the blue water sleeps around, and the heavens are a violet hollow, with a rayless sun making gold of the sea in the west, the deadly suggestiveness of that long sweep of yellow sand should be as plain as when its presence is denoted amid the black tempestuous night by the ghastly gleam of boiling white waters.

I remember once passing these Goodwins, and seeing a number of little black figures running about them. A pleasure vessel from one of the adjacent ports was lying at anchor a short distance off, and her boat was against the slope of the shoal. It was a very calm day indeed; the sea just blurred here and there with small draughts of air that gave the water in those places a look of ice, with a pallid streak of the French coast beyond the white main-sail of the pleasure-cutter, hove up by the refraction of the light above the sea-line. I brought a small pocket telescope to bear, and observed that those little black figures running about like the savages Robinson Crusoe saw were Cockney excursionists engaged in playing cricket. They played as if they wanted to be able to talk of having played rather than as if they enjoyed the game. Talk of contrasts! A man may be rendered pensive by watching children sporting in a graveyard, by mingling in a festivity held upon a space of ground where once a famous battle was fought, and where the feet of the merry-makers are separated from the bones and skulls of warriors by a couple of spades'-length of earth. But to see those little black-coated creatures running about after a ball on top of such an ocean burial-place that the like of it for the horror of its annals and for the number of those it has sepulchered is not to be found in this habitable world, might well have made the gayest heart sad and thoughtful for a spell.

As I leaned over the rail, looking at those happy pygmies—those lords of creation who, viewed half a mile further away, might have passed for a handful of black crabs crawling about—the scene in imagination changed, the darkness came rushing out of the east with a moan of approaching storm, the three lanterns winked like stars beyond the North Sand Head, and there was a sound of weltering waters and the seething and hissing of surf rising up through the gloom out from the whole length of the shoals. The wind rose fresh and eagerly, with a raw edge in it; the ebony of the swelling water was broken by the glimmer of the froth of breaking seas. I could hear the muffled thunder of the confused play to windward of the surf, with the shrieking of the blast overhead, while a deeper shadow yet gathered in the air. Then, with a blinking of my eyes, back would come the facts of the thing again, and yonder

were the little figures merrily chasing the ball, the sea spreading like a sheet of silk to the yellow rim of the hard sand, and the blue sky bright overhead. Yet another touch of the magician Fancy's wand, and it was all howling storm and flying blackness and the steam of hurling spume again, with a sudden glare of lightning between, flinging out the shapes of the piles of whirling clouds, like monstrous brandished wings going to pieces in the hurricane, and throwing up the black fabric of a big ship on her beam-ends, her masts gone, and a fury of white water veiling her.

There are life-boat coxswains who need but close their eyes to see fearfuller things. Just where those little creatures are brandishing their tiny bats, and flourishing their shrimp-like legs, the great ship struck, and four hundred men and women shrieked out to God for mercy in one breath. A man's fancy must be feeble even on the softest of summer days not to hear the crash of her timbers, the thunder-shocks of the smiting seas, the rending noises of hemp and wire and spar torn by the tempest from their strong fastenings; not to see the ghastly picture she makes in the wild gleam of the signal flare, whose tongues of fire are blown horizontal, like streaming flags, by the furious breath of the storm, illuminating with a dull, horrible crimson light the throngs of human beings who cry and struggle upon her decks, or hang, like streaming suits of clothes, in what remains of her rigging.

Is this an exaggerated picture? Alas! the pen never yet was wielded that could portray, in the barest form, any one of the countless horrible scenes which have taken place on that stretch of sands where one summer day I watched, leaning over the rail of a vessel, a number of light-hearted excursionists playing cricket.

Among the things which never can be known may be placed the thoughts which possess a man in the moment of shipwreck. Of the hundreds of published narratives none satisfies the reader; and of those who relate their experiences, how infinitely remote from the truth do their statements strike them as being when they put what they have written side by side with what they remember having felt! The reason is, I take it, because in no other situation is death more awful than upon the sea. It is commonly slow—at least, it gives time for anguish to become full-blown—and the hope of rescue must be very strong indeed, and well founded, to qualify that agony of expectation, sinking into paralyzing despair, which confounds and, in a manner, stuns a person stranded far out upon the water in a black night, seeing nothing but the glare of lightning or the spectral flashing of froth flying past, hearing nothing but the grinding and trembling and desolating noises of the hull upon the ground.

It is supposed, because sailors cannot or do not describe the horrors they pass through, that they lack the capacity of expression. But you may put the most eloquent writer now living, call him by what name you please, on board a ship foundering amid a tempest, or going to pieces in a storm on such a shoal as the Goodwins or the Sunk Sand, and when he has been long enough rescued and ashore to recover the use of his brains, you may defy him to write such a narrative of the disaster as will come, to his own conscience and memory, one jot nearer to the truth than the newspaper para-

graph of five lines in which the wreck was chronicled. A man can describe what he has suffered in a railway collision, in a house on fire, down in a mine where there has been an explosion, in a theater where there has been a panic; but put him aboard a ship, and let him clearly understand that he is going to be drowned, and when succored he can tell you little more than that the waves ran mountains high, that some people were brave, and that some people shrieked, and that what he best remembers is catching hold of something, and hearing the waters in his ears, and being dragged into a boat.

Very true is the old saying, "If you want to learn how to pray, you must go to sea." So distracting, so paralyzing, so utterly despairful are all the conditions of shipwreck in its worst forms, that I cannot but think, when a man is known to act bravely and coolly in that situation, unmindful of himself, thinking of others, encouraging and heartening them, the heroism he exhibits is of a kind not to be matched by any kind of courage a man may show in a position that lacks the overwhelming features which distinguish the foundering or the stranding of a ship.

Some days ago I met a seaman who had made one of the crew of a brig that a few months since was stranded on the Goodwin Sands, and went to pieces there. The circumstances of the wreck were so recent that I was sure it could not but be a very sharp, clear memory in this sailor; and, wanting to hear what sort of thoughts come into a man's head at such a time, and how he will act, what kind of impulses govern him, and the like, I carried this mariner to where a seat and a glass of beer were to be had, and conversed with him.

"She was a wessel," said he, "of two hundred and twenty ton, and we was in ballast, bound from Can (Caen) to Seabam. All went well, nothen particular happening, I mean, till we comes abreast o' the South Foreland. It might then be twelve o'clock in the middle o' the night. The weather was as thick as mud, plenty of rain driving along, and the wind west, blowin' a fresh breeze. We was under upper and lower main-tops'l, lower fore-tops'l and foresail."

Here he took a drink.

"And the weather as thick as mud, you say?"

"Ay, thick as mud in a wine-glass. The Sou' San'head light was on our starboard beam, and ye may guess how clear it was when I tell you that that light took a deal of peering at to make out. As to the East Good'in, why, all that way was black as my boot; not the merest glimmer to betoken a light-wessel *there*. I was at the side, heavin' the lead, getting nine fathom, and then seven, and then eight, and then seven again. Right fair betwixt the Callipers and the Deal coast I'll allow ye'll get eleven and twelve fathom good till you come on to past the Downs—headin' up, I mean—and then it shoals down to height and seven and five and a 'arf. So in a night as black as a dead wall, when there's no moon, who's to know, when the last light seen has drawed out of view, and there's ne'er another to be sighted, where you are in that water? We was going along tidy fast, when a squall of rain drives right up over our starn in a wild smother, and I had just made seven

fathom by the lead when the wessel took the ground, chucking me off the rail on to the deck. The skipper begins to bawl out like mad, 'Let go the main-torps'l halyards! Haul up the foresail! Let go the—' Wash at that moment comes a lump of sea right over the port quarter, cantin our starn to the south'ard and smotherin' the decks. You didn't want to see—you could feel that the brig was hard and fast, though as the sea thumped her she'd kinder sway on her keel."

Here he took another drink.

"Well?" said I.

"Well," he continued, "what was to do now, master? Everything being let go aloft, the canvas was slatting like thunder up there—and though I'm not goin' to tell you it was blowing a gale of wind, yet it seemed to come twice as hard the moment we took the ground, and the seas to rise as if our falling helpless on a sudden had swelled 'em up with joy. We lay with our head about nor'-east, and over the starboard bow you could see the white water jumping. But that was all that was visible. The wind seemed to blow up the thickness all round us, there was not a light to be seen, and looking around anywhere away from the white water was like putting your head in a pitch-kettle. Cold! Master, that was the worst part of it. I'll allow that in all sitivations of this kind the cold's the part that's hardest to bear. Somehow danger ain't so frightful when it's warm. Can't explain it, I'm sure; matter o' constitootion, perhaps; but I doubt if ye'd find much bravery among the Hesquimos and the Roosians up near the pole, and the likes o' them. Can't see how it's possible; but it's only my 'pinion."

Another drink.

"Well," he continued, holding up the fresh glass of ale I had ordered for him to the light, with a look of pensiveness in one blood-shot eye he kept open, "we tarns to and makes a flare—a sort o' bonfire. But if we couldn't see anything, who was to see us? However, we kept all on burning flares, while first the foretop-gall'n-mast came down with a run, causing us all to jump aft out of the road, and then the main-topmast carries away at the cap, and falls with a roar over the side, and set us all running forrard. I, for one, made up my mind we was all to be drowned. I couldn't see no help for it. The noise of them spars cracking and tumbling away in the blackness overhead, and the shindy set up by the slatting canvas, along with the creaking of the hull and the washing of the water that came as white as milk over the starboard rail, was enough, I reckon, to make any man suppose his time had come, and that his ghost was to be turned out of him. However, we took heart after a spell, by noticing that the seas burst with less weight as the tide left us, though every butt in her must have yawned open after she had been grinding a while, for she was full of water, and a few hours more of such dusting was bound to have made staves of her. Well, at about half-past four o'clock in the morning, we being by that time pretty near froze to death, the weather thinned down, and we caught sight of the Gull Light shining—about three miles off, I dare say. What was to be seen of our wessel was just a fearful muddle; masts overboard, washing along-side, the lower

masts working in her like loose teeth with every heave, decks full of raffle, and the water every now and again flying over us, as though determined if it couldn't wash us overboard it would keep us streamin' wet. When we spied the Gull Light we turned to and made another flare, and presently they sent up a rocket; and to cut this yarn short," continued he, having by this time emptied his second tumbler, and finding me slow in offering him a third, just as the light was a-breakin' in the east, one of us sings out that there was a steamer heddin' for us, and when the mornin' grew stronger we spied a tug making for us with a life-boat in tow. Well, by this time there was little enough sea, and the life-boat, letting go of the tug, came along-side, but two of our men were so badly froze up that they had to be lifted into her, and such had been our sufferings, though I'm not going to say they equaled what others had gone through on those cussed sands, that we couldn't have looked worse, with salt in our eyes and our faces washed into the appearance of tallow, had we been spendin' forty-eight hours on that shoal. We lost all our clothes, every bloomin' thing we had with us; and that same forenoon, just afore twelve o'clock, half a gale of wind sprung up, and by two o'clock there was nothing to be seen of the brig."

"And that's the story," said I.

"That's it," he answered; "every word gospel true."

"How did the others behave," said I, "in this awful situation? Pretty well?"

"It was too dark to see," he answered.

"Did you encourage one another?"

"Well," he replied, "the cook at first kept on singin' out, 'We're all drowned men! Lord have mercy on me!' and the like of that, until the cold took away his voice. I don't know that there was any other sort o' encouragement."

"And what were your feelings," said I, "when the brig took the ground and the water washed over her?"

"My feelings?" he replied. "Why, that we was in a bloomin' mess. That was my feelings."

"How did the prospect of death affect you—I mean the idea of being swept into the black water and strangling there?"

"Are you chaffin' me, sir?" he asked.

"Certainly not," said I.

"Well," he said, grinning, "I'm blessed if I was asked such a question as that afore. It's like a meetin'-house question."

"Didn't you think at all?" said I.

"Yes," he answered; "I thought what a jolly fool I was to be ashore on the Good'ins on a winter's night, gradually dyin' of frost, instead of bein' in a warm bed ashore, with a parlor to take breakfast in when I woke up. That's about it, sir."

THE STRANGERS' HOME.

A PLAIN red-brick building stands in the West India Dock Road, with the following lengthy name or description written along the front of it: "The Strangers' Home for Asiatics, Africans, and South-sea Islanders." On the day I visited this house there were three or four people standing on the doorsteps, with faces which did more in an instant to express the character of the place than could have been effected by reams of reports of the annual meetings and descriptive pamphlets. They were, it is needless to say, persons of color, and of very decided color too: one as black as a hat, another of a muddy yellow, a third a gloomy brown. They were dressed in European clothes: they might have belonged to nations which were in a high state of civilization when the Thames was clean water, and rolled its silver stream through a land whose scanty population hung loose and unclothed among the trees; but for all that, they had the look of wild men in breeches, and the very black person needed little more than a boomerang or a bow and arrows to give him the aspect at least of an unsafe object. I had, however, but little time to inspect these men, for a commotion in the hall of the building, coupled with an assemblage of some dozen or twenty people on the street pavement, called my attention to a spectacle of real interest. This consisted of the starting of a troupe of Javanese musicians for the place of entertainment where they were then performing. There were a number of men and four women—at least, I think there were four women; yet it is possible that I may have mistaken a man for one of the other sex, for some of the men and women were very much alike, especially the men. They streamed cut in a great hurry, their bright black eyes sparkling in their brown faces, the men smoking short pipes of a decidedly West India Dock Road pattern, and the women bundling along in such queer raiment that it would be as hopeless to attempt to describe its colors and cut as to catalogue the stock of a rag-and-bottle merchant. A kind of large private omnibus stood at the door, into which these strange people got, some of them climbing upon the roof; and striking indeed was the appearance of the windows of the vehicle, framing, as they did, every one of them, a dark, contented face, while the roof of the omnibus was crowded with blacks and whites, like the keys of a piano-forte.

"Who are those people?" said I to a Chinaman, as the omnibus rolled away.

"Hey?" answered John.

"Those people," I said, pointing toward the retreating vehicle; "they are not sailors, are they? There are women among them."

"No, no, not sailor, no, no," cried the Chinaman, with great earnestness, and wagging his head so violently that he nearly shook his hat off. "Music-man, not sailor; play tic-a-tic, tic-a-tic;" and here he screwed an imaginary fiddle into his throat, and fell to sawing the air with his elbow.

At this moment I was joined by the secretary—a gentleman, let me say at once, who, after spending many years of his life in India, is now gratuitously devoting his services to the poor Asiatic who finds himself homeless in this great wilderness of London, often penniless, and speaking a tongue with which he may journey from Mile End Gate to Hammersmith without finding an ear capable of comprehending a word he says. This gentleman told me who those queer-looking people were, how they were in charge of a Dutch *entrepreneur*, and how they were “putting-up” at the Strangers’ Home because there, and at no other place in London, they were likely to meet people who, even if they did not speak their language, would impart a sense of home.

We now proceeded to inspect the building. As at the Well Street Sailors’ Home, so here, the common room, if I may so term it, is the central hall, a large place furnished with seats and tables, and heated by an immense stove. Here of an evening, when it is cold or damp out-of-doors, the inmates of the Home assemble, and the bright lamps shed their light upon as many diverse countenances and costumes as there are nationalities to the eastward of Russia and in the great oceans which wash the Capes of Africa and South America. Strange, indeed, is the admixture to an European eye: the Hindoo sitting cross-legged on a bench listening, with dusky eyes rolling in his black attenuated features, to the pigeon-English of a round-faced Chinaman; a Malay endeavoring by gestures to make himself understood by a Kanaka; a native of Ceylon smiling over the porcine gutturals of a couple of Zulus; with here an Arab *reis* pacing the floor in lonely dignity, or a red man of a paternity indistinguishable in his features, which seem compounded of the Nubian, the last of the Mohicans, a dash of Polynesia, with a hint of Liverpool or Bristol, spelling over a volume full of murky and eye-confounding hieroglyphics.

“When this hall is full the sight is a remarkable one,” said the secretary. “What with the hum of the strange languages—perhaps as many as twenty all going at once—together with the various faces and clothes, I assure you it needs no small effort of mind to convince one’s self that one is still in London, and that just out-of-doors omnibuses are rolling, small boys calling out the evening papers, and policemen standing at the corners.”

I felt the force of this, thinly peopled as the hall was, when I stood in it gazing around. Was it the strange haunting Eastern smells—vague fumes, as of a hubble-bubble recently smoked out: a lingering whiff as of curry; a thin, ghostly odor of bamboos, chillies, oil, nutmeg, and cedar-wood? or was it the turban, the pigtail, the almond-shaped eye, the black, bronze, and yellow skins of the few Asiatics who were seated in a body on a center bench, that carried my imagination out of the West India Dock Road into the tangled forests, the hot, blue heavens, the joss-houses, the sampans and junks, the rushing rivers, the jackals, the dusky figures, the blue gowns and red or yellow shoes of the distant, spacious provinces of the sun? Hark to the sing-song chatter babbling from that Mongolian visage! What is the magic of it, that this hall, gloomy with the smoke of the great city blowing riverward, should be transformed into a shining Eastern city, whose shores, rich with

the green of tropical vegetation, are washed by a sea whose breast reflects a heaven of sapphire? The voice ceases; the spell is broken; the muffled roar of the toiling world outside breaks in and establishes one of the very sharpest contrasts in life—that of the condition of an Asiatic, fresh from the hot suns and thick jungles of his own country, plunged amid the smoke, the turmoil, the unspeakable odors of the east end of London, incapable of making his wants known, languishing in misery and cold in the gloom of railway arches of some unfrequented court, feeling what solitude is in a sense never imagined by Byron. For the Asiatic's loneliness is that of the dumb brute; he has a language, but he might as well be voiceless; and, worst of all, he is the victim of the unnatural, ignorant, and wicked prejudices which finds in the colored skin nothing but what is fit for derision, contempt, and cruel neglect. This was the lot of the Eastern stranger, before a number of humane Englishmen banded themselves together to furnish him with a refuge. I own that the fine humanity of this institution affected me so strongly as I stood looking at the knot of dark-visaged, strangely appareled men, and considered what would be their fate if this Home were not at hand to help them, to receive them, to interpret their wants, and to assist them to return to their native countries. Time was when few tragedies were commoner than that of the finding of the body of some colored man who had made his way as a sailor or stoker to London, been robbed by the beasts of prey who wander hungrily round the dockyard gates, and had lain himself down in some corner of this opulent city to die of cold and hunger. Such horrors are things of the past, and honored be those and the memory of those who have made them so. No Asiatic stranger need perish for the want of a friend in London now. The Home will receive him, and for a very moderate sum—which he may easily pay either from the wages due to him from the ship he leaves, or by the note advanced by the owners whose ship he joins—feed and lodge him, and spare no trouble to restore him to his own country. Hence, to a large extent, the institution contributes to its own support. But the charges it makes are so small, the losses it incurs through the new allotment or bonus notes are so frequent, and the cases of absolute destitution it deals with so numerous, that it is bound to continue to be dependent upon outside help to a certain extent; and I believe that no one who has any knowledge of the work it is doing, no one with sympathy for the helpless of his own species, but will admit that there is not an institution in existence that better deserves the gifts of the charitable than this Home for Asiatic Strangers.

But all this time I am leaving the obliging and kind-hearted secretary waiting to show me over the premises. We pass out, first of all, into a space of open ground at the back of the building, of which a substantial piece has been converted into a flower-garden. This the superintendent of the Home who has joined us, contemplates for a while with silent satisfaction, and then, with considerable pride, draws my attention to it.

"It has all been done within the last two or three years," he says. "The Asiatics lend a hand, find old seeds knocking about the bottom of their chests, and plant them, but they never come to

anything. They won't grow, you know, in this climate. Here's a sample," he says, pointing to a row of shoots which look like the first buddings of that patriotic vegetable the leek; "they were planted three days ago, by those Javanese women you saw, and this is what they've already come to. But I suspect they'll end at that."

A balcony runs at the back of the house, and along it there was stumping a John Canoe, smoking something strange, whether a pipe, or cigarette, or piece of cane, I could not tell. He vanished through a door when we mounted the steps, which I regretted, as I should like to have examined the thing he had in his mouth.

"This," said the secretary, on our re-entering the building, "is what we call the firemen's dormitory." It was a large room, with a bulkhead dividing it, and on either hand of the bulkhead went a row of narrow beds furnished with coarse coverlets and mattresses stuffed with fiber. There was no carpet, and I ventured to ask the reason, as the bare boards had but a cheerless look.

"Carpet!" exclaimed the secretary; "my dear sir, these Asiatics wouldn't know what to do with such a thing. They'd pull it up and make trousers of it. You cannot conceive the strangeness of their habits and customs. For instance, to give them a table-cloth would be like ill-treating them. Nothing bothers them more than a fork, and you may see them eating eggs with clasp-knives, which they pull out of their pockets." Then, seeing me eyeing the beds, he continued, "It would hardly do to give the firemen fine linen to lie in. Sir, they arrive here thick with grime, they foul whatever they touch, and it takes several days of hard bathing to clean them."

There were several of these dormitories, each of them divided by bulkheads, uncarpeted, and containing the same kind of bedsteads, every one bearing a number at its head. The Javanese troupe occupied one of these dormitories, the men sleeping on one side of the bulkhead and the women on the other. I looked for their luggage, but could find nothing but a fiddle and an old sword. I think, if the public had seen where these musicians sleep, they would reckon the sight stranger than any other part of the performance these Eastern people were giving. There is one dormitory, however, up-stairs filled with cabins similar to what they have at the old Sailors' Home at Belvedere. These are occupied, I was told, by the better class of Asiatics.

"And who might they be?" I asked.

"Why," I was told, "Japanese officers, stewards, Chinese carpenters, native doctors, and the like."

These are the "dignity men." They have a little room in which they may dine apart from the Lascars, Kanakas, John Chinamen, and the others; but, somehow, they don't seem to value exclusiveness, for most of them will quit their table to join the pigtailed and half-castes in the big eating-room down-stairs, where they find a relish in their rice and fish which appears to be wanting in the dishes in the other apartment. In one of the dormitories we came across a Javanese—one of the troupe—sitting cross-legged on his bed, ill with a cold in the head. His unsmoked pipe lay by his side, and he was listlessly handling some pieces of printed calico, though the use he meant to put them to I could not divine. There

is a no more melancholy object than a colored man suffering from a bad cold in the head. I saw him shiver, and then roll his eyes—black as ebony set in orange—upon the window, and I thought to myself, “How this harmless colored man, who speaks nothing but Javanese and who belongs to a country where the air is radiant with beautiful birds, and fragrant with delicious fruits, must enjoy the climate of the West India Dock Road?”

We struggled to impart sympathy by several kinds of gestures and motions, but it would not do; we could not get further than alarming him, and so we left him. In another dormitory we found a Ceylon man, a Madrassee Lascar, and a Japanese. The Ceylon man was a very handsome fellow, his hair parted down the middle, and he had as fine a pair of eyes as ever I saw in the human countenance, regular features, and a wonderfully good figure. He was reading an English book, and spoke English, so well that, what with his correct utterance, the color of his skin, and his striking face, a misgiving seized me.

“Are you a pure Cingalese?” I asked.

“No, no,” cried he, with much anxiety in his manner; “my father was an English sailor!”

But the Madrassee man, in a measure atoned for this disappointment. He was the real thing—just the sort of conformation to tumble about in a surf-boat, very black, very lean, with snow-white teeth, and a high, long nose as thin as a hatchet. The secretary conversed with him in his native lingo, and it seemed to do the poor fellow good to talk. The Japanese had a wooden face, and had very little to say. Indeed, I always think that the people of his race and the Chinese view us and our works with a good deal of contempt. What a mean opinion they must have of our toys, of our paintings, in which the literal is sacrificed to the poetical; of our clothes, tea, head-dresses, coiffures, and a thousand other matters! They have a Chinese porter at the Home, who is dressed in a black coat and wears a hat. I did not speak to him, but I should judge from observing the expression on his face when in a state of repose, that he has but a poor opinion of Great Britain. In another dormitory were a couple of Arabs mending shirts; and down-stairs, in the scullery, I met a Zulu, who told me that he was a subject of Cetewayo, and had called at that King’s lodgings when he was in London, but had not managed to see his Majesty. One of the suite promised to write and appoint an hour for an interview; but no letter ever reached the youth, and the next thing he heard of Cetewayo was that he had sailed for Africa. This scullery led into a large kitchen, very well appointed, and in spick-and-span condition. Adjoining was the provision room, containing one large sack of rice, a quantity of smoked herrings, a jar of chillies, another jar of curry powder, and other Eastern relishes.

“The mackerel is the favorite dish with our inmates, be they of whatever nationality they will,” said the secretary. “They consider it the finest fish that is caught in European waters, and lament when the season for catching them is over.”

I asked what food they were supplied with in the Home.

“We have,” he replied, “what we call three messes. The first-class mess is sixteen shillings a week—this includes a separate

cabin; the second, without a cabin, is fourteen shillings; and the third, which we term the curry-and-rice mess, is ten shillings. The first two messes comprise, for breakfast, fish or eggs, coffee, bread and butter; for dinner we give beef or mutton, with vegetables, and curry and rice always; tea the same as breakfast."

"The charge is small enough," said I.

"But they have other privileges," said he. "For instance, there are hot and cold water baths down-stairs, for the use of which no charge is made. We also receive and take care of their money and valuables—for some of the people who come here bring real valuables, such as jewels, with them, I assure you. Since last January the amount deposited in money with us has amounted to £2,285, of which I do not scruple to say that, but for the existence of this Home, the greater portion would have been stolen from its owners by the crimps and boarding-house people who haunt our neighborhood. That room you see there is our shipping-office; captains come to us and select men for their vessels, and when the choice has been made we accompany the men to the marine offices, see them sign articles, and that the advance is duly made. Indeed, we do all that we possibly can to help and protect these poor strangers."

"What I have seen assures me of that," said I.

"This," he continued, as we went up-stairs and entered a large, cheerful dormitory, "is what we call the ayahs' room. It is meant for native women who are brought home as nurses and discharged. Sad cases of destitution are often occurring. Not long ago a City missionary found a native woman in an empty house in Shepherd's Bush. He brought her here, and, having learned the name of her mistress, we went to her, and were told that the ayah was insane, that she had been kept as long as possible, had at last refused to go, and was accordingly turned out. We took charge of her for a while, but her madness increased, and we were forced at last to send her to a county asylum, where she now remains.

The inspection of this room exhausted all that was to be seen; so, bidding the cordial secretary farewell, and taking a lingering look at a knot of dusky men who were talking in the hall, I quitted this hospitable and most valuable institution, resolving to record all that I had heard and viewed, in the earnest hope that of those by whom this record of my visit will be read some may be induced to help an excellent charity by sending donations to the manager of the Strangers' Home, West India Dock Road, London.

THE END.
