#### PUBLISHERS' NOTE ON THE COMPLETED WORK

WITH the publication of the Atlas which is incorporated in the present edition The Century Dictionary and Cyclopedic has been brought to completion. As the Cyclopedic of Names grew out of the Dictionary and supplemented it on its encyclopedic side, so the Atlas has grown out of the Cyclopedic, and serves as an extension of its geographical material. Each of these works deals with a different part of the great field of words,—common words and names,—while the three, in their unity, constitute a work of reference which practically covers the whole of that field. The total number of words and names defined or otherwise described in the completed work is about 450,000.

The special features of each of these several parts of the book are described in the Prefaces which will be found in the first, ninth, and tenth volumes. It need only be said that the definitions of the common words of the language are for the most part stated encyclopedically, with a vast amount of technical, historical, and practical information in addition to an unrivaled wealth of purely philological material; that the same encyclopedic method is applied to proper names—names of persons, places, characters in fiction, books—in short, of everything to which a name is given; and that in the Atlas geographical names, and much besides, are exhibited with a completeness and serviceableness seldom equaled. Of The Century Dictionary and Cyclopedic as a whole, therefore, it may be said that it is in its own field the most complete presentation of human knowledge—scientific, historical, and practical—that exists.

Moreover, the method of distributing this encyclopedic material under a large number of headings, which has been followed throughout, makes each item of this great store of information far more accessible than in works in which a different system is adopted.

The whole represents fifteen years of labor. The first edition of The Century Dictionary was completed in 1891, and that of The Century Cyclopedic of Names in 1894. During the years that have elapsed since those dates each of these works has been subjected to repeated careful revisions, in order to include the latest information, and the results of this scrutiny are comprised in this edition.

## PREFACE.

**I**N the plan of this Atlas the unequal division of space between the two hemispheres, which often is a marked characteristic of works of its kind, has been avoided. The United States, with Canada, Mexico, the other portions of the two American continents, and the West Indies, have been exhibited with great detail; and a closely corresponding degree of completeness will be found in the maps of the more important sections of Europe, Asia, and Africa. The practical needs of the user, as regards all parts of the earth's surface, have thus carefully been considered; and by devoting a relatively large share of space to those sections, both of the New World and the Old, about which information is most likely to be desired, an exceptionally large amount of serviceable geographical information has been brought within a volume of reasonable bulk. The double-page maps devoted to all parts of the globe number 120, and the corner or inset maps about 145; to these are to be added the pages of historical maps, which raise the total number in the Atlas to about 305.

All the maps have been made especially for this Atlas, and have been based upon the latest and best official information, with a comparison of the results of recent explorations. Those of the United States are founded upon maps issued by the United States government, and also upon many others published by State and local authorities; those of England, on the map of the Ordnance Survey; and those of all other countries upon similar authoritative materials. The railroads, which are printed in red to increase the legibility and attractiveness of the maps, are shown in accordance with the most recent official information; the figures for depth of water in seas, bays, and harbors have been taken from the British Admiralty charts and those of the United States Hydrographic Office; the heights of mountains and the elevations of lakes are those given by the latest surveys; and the various political divisions are exhibited in accordance with the most recent adjustments.

In portraying the mountain systems of the United States a feature has been introduced which is a novelty in general atlases, namely, lines of equal elevation above the sea (contour-lines), which have been printed in olive or brown. These have been taken from the published results of the Government Surveys, and are given for elevations of 100, 500, 1,000, 2,000 feet, etc. This method has been extended to the maps of Mexico also, by means of determinations furnished by Mr. H. M. Wilson of the Geological Survey.

The selection of names of places has been determined, in general, by their population; the intention has been, however, to include, as far as possible, all places, however small, which are of considerable interest from their historical significance, or to the tourist. In the spelling of these names the authority followed (with a few exceptions) for the United States has been the United States Postal Guide; and in other countries in which characters identical, or nearly identical, with those of the English alphabet are used, the local spelling has been adopted, except for certain names for which well-established Anglicized forms exist. In such cases the local or native spelling or name is placed under the English form. Wherever, as in maps of Africa and the East, it is necessary to give to entirely foreign names an English dress, the use of accented letters and of extreme and unusual methods of spelling has been avoided, and those forms (among the many existing and permissible) have been chosen which seemed likely to be the simplest to an English eye. Where several familiar spellings of important foreign names exist, these spellings (particularly those recorded in "The Century Cyclopedia of Names") are entered in the index.

## PREFACE.

These place-names are, as a rule, printed in type graded in size according to the population; but the most detailed information on this point will be found in the population-figures which are given in the index for all places of considerable size. The number of names of all kinds given in the Atlas, and recorded in the index, is about 170,000, a total considerably larger than that found in most atlases heretofore published.

Besides the general geographical and political matter, a number of details have been added to this Atlas which are not usually included, and which give it exceptional completeness as a work of reference. Among them are the main routes of discovery and exploration in North America (Map No. 4), the West Indies (Voyages of Columbus; Map No. 67), South America (Map No. 69), Africa (Map No. 109), Australia (Map No. 115), and the North Polar Regions (Map No. 3, which shows all important routes down to and including those of Peary, Jackson, and Nansen); the marking (with the addition of dates) of a large number of sites of important battles, ancient and modern, on land and sea; submarine cables and important steamship routes; standard time (Maps No. 5 and No. 73), and the "date-line" (Map No. 1); important highways and caravan routes in countries where there are few railroads or none; lines of equal depth of water corresponding to the "contour-lines" on land; important lights and lighthouses; a special travel-map of Central Europe; etc.

A number of historical maps also have been included, in which are given many of the more important names of ancient geography, as well as certain of the main points in modern historical geography. They are about equally divided between ancient and modern history, and comprise 40 maps, including plans of the ancient cities of Jerusalem, Rome, and Athens.

In the choice of types, the arrangement of the names, and the coloring of the maps, the greatest legibility possible has first of all been sought, while variety and attractiveness to the eye have not been neglected.

Finally, not the least important characteristic of the book is its convenient size, since it is almost alone among the atlases which contain approximately the same amount of information, in being as easily handled and consulted as a volume of a cyclopedia.

## NOTE TO THE EDITION OF 1899.

The annexation of Hawaii to the United States and the results of the recent Spanish-American war have made it desirable that The Century Atlas should show with greater detail the regions affected by these events. A map, on a larger scale, of the Hawaiian Islands and the Philippine Islands (No. 118), with inset maps of Honolulu and vicinity and of Manila Bay, and a map of Porto Rico and the Lesser Antilles (No. 68½), have accordingly been added in the present edition. Inset maps of Havana and the vicinity of Santiago de Cuba (No. 68), the Ladrone Islands and the island of Guam (No. 117), the region between Liverpool and Manchester (No. 76), and Chickamauga National Park (No. 38) have been inserted. There is also included a new map (No. 107½) of Eastern China. Advantage has been taken of the opportunity thus afforded to revise all the maps, in every particular, and to bring them down to date, incorporating especially the results of the latest geographical explorations (for example, in Alaska, No. 58, and in Central Africa, No. 112) and of recent political changes (notably in Northwestern Africa, No. 111).

- Colosso Nero, H 8

## CAPITOLINUS &amp; PALATINUS.

0 500 1000 1500 2000  
English Feet.

NO. XIV.

# EUROPE AT THE TIME OF THE REFORMATION.

NO. XVIII.

Note. Whenever the last date on a certain piece of land does not correspond with the date of admission of the state in which it is located, it shows that there was a territorial organization of the same name as the state in the interim.

Missouri became a state with practically its present limits in 1821.

The name Missouri Territory continued to be used for the Northern Section.

THE M-N-CO., BUFFALO, N.Y.

 Translations

A map showing the locations of Pit of Pisa, Peak See, Lake Thal, Val or Valle, Valley, and Mud Volcano.

Pierre Floutain  
de Boulogne  
Palais

A small map of the northern coast of Chile, specifically the area around the Gulf of Callao. The map shows several rivers flowing into the sea, including the Chillan, Biobio, Maule, and Bío-Bío. The city of Concepción is marked. A green shaded area labeled 'Copeia de Juquima' covers a portion of the coastline between the Maule and Bío-Bío rivers.

A historical map of the Alpine region, specifically the Ligurian Sea area. The city of Genoa (Genova) is highlighted in green and labeled in large capital letters. The surrounding landmasses are shown in brown, and the sea is depicted in blue. The map includes several place names and geographical features.

A detailed map of the Pyrenees mountain range, showing the border between France (labeled "FRANCE") and Spain (labeled "ESPAGNE"). The map includes labels for various towns and geographical features in both languages.

NORWAY AND SWEDEN.

# THE CENTURY ATLAS. NORWAY AND SWEDEN.

Entered, March, 1887, by The Century Co., New York,  
in the U.S. Patent Office, as Serial No. 100,730,000.  
Scale, 12 English Statute Miles to One Inch.  
Latitude and Longitude.  
Scale, Kilometers.

Norway (Nor) is a Kingdom 28,115 Square Miles, which is divided politically into 29 divisions (Amter), and administratively into 6 Lathes, 390 Stifts, 1,000 Fylkes, and 1,000 Krets. The area of Norway is 172,726 Square Miles, which is divided politically into 20 provinces (Lan), 360 Amter, 1,000 Fylkes, and 20 divisions (Lan). The three most extensive divisions are the ones most frequently used.

\* The area is given in square miles and is computed for the different countries and divisions according to boundaries shown on the maps of this edition of the Atlas

INDEX TO MODERN MAPS.

## INDEX TO MODERN MAPS.

**H**IIS index contains all the names (about 170,000) of places, rivers, mountains, capes, etc., given on the modern maps of The Century Atlas. Each line begins with the name of a place, or a river, or a mountain, etc., followed by the name of the country, state, or large division in which it is found; the population (when the name is that of a place, or a country, etc.); the map-number; and the reference letter and figure, by means of which the exact location of the name upon the map may be ascertained. Thus, in the following diagram, Edinburgh would be indexed B 3:

The squares are formed on the map by the lines of longitude and latitude, and the reference letters and figures are placed on the borders of the map.

The maps of the hemispheres, the region around the North Pole, and the islands of the Pacific Ocean (including Maps 117 and 118), are indexed by imaginary squares formed by the space allotted to each letter and figure. Inset maps are indexed by imaginary squares formed by the meridians and parallels of the main map extended across them. Names, such as *Mount Vesuvius* or *Lake Erie*, have been indexed both under the proper name (*Vesuvius*, *Erie*) and under the descriptive noun (*Mount*, *Lake*). Names which are found on the map proper and also on an inset map have been indexed where they appear to the best advantage; the largest places, however, have been indexed twice and referred to both maps. Rivers are indexed where the name is most readily found; those that flow through several of the United States are indexed from the general map of the United States. In an outlying possession (such as Corsica) which is shown in an inset map, the names are identified by the general title (for example, "France") of the map in which they occur.

Where a place may be known under different names or by various spellings of the same name, the different forms have, to a large extent, been inserted in the index and referred to the one which appears on the map.

The figures for population have, as far as practicable, been taken from the latest official censuses. Where these official census figures have been used the year of the census has been inserted (e. g., '95 for 1895). The letter *a* ("about") or the abbreviation *est.* ("estimated") is placed before all figures not taken from a census.

For places in the United States the population number indicates, as a rule, the population that is represented by a post-office (that of a city, incorporated borough, or village or hamlet) of which the name is printed on the map; it does not indicate the population of the township or other division of the same name in which the post-office (often with others having different names) is situated. In some cases, however, particularly in New England, New York, and New Jersey, the figures for the township having the same name as the post-office are also given. The population of all incorporated places is given as reported in the official census of 1890; and where the growth of the place has been so great since that census was taken that the census figures do not give an exact idea of its present size, the population for 1897, as estimated by the best local authorities, has also been inserted. These estimated figures have, in many cases, been furnished by the mayors of the respective cities. For the States of Massachusetts, New Jersey, Wisconsin, Minnesota, South Dakota, Iowa, Kansas, Utah, and Florida, where State censuses were taken in 1895, the figures from these various censuses have been used as the highest authority for the population. Where these figures have been given, the census year has been inserted before the figure for the population. For all smaller places with over 100 inhabitants, which are not separately reported in the census of 1890, or in the various State censuses, the population for 1897, as estimated by the best local authorities, has been given. All these estimated populations are marked by the letter *a* placed in front of the population-figure. All population-figures which are not marked by a prefixed date or the letter *a* are from the United States Census of 1890. The population of counties is given as recorded in the different censuses. When the boundary of a county has been changed or the county has been divided to form new counties since the census was taken, the population as furnished by the census has been given as it was before the division took place. For recently-established counties no population can be given. The latest county boundaries are, however, shown on the maps.

The size of type in which place-names are printed on the maps indicates the relative importance of the places, which is determined in general by their population as given in this index. In certain crowded sections it has been necessary to reduce the type employed from the scale elsewhere used; most of these regions are, however, shown with the regular scale of type in the inset or corner maps.
