

SUM OF ALL VIDEO GAMES

Our road to make Wikidata
the hub of all video game metadata.

Jean-Frédéric Berthelot, @[JeanFred](#)

Tracy Hoffmann, @[nabatz](#)

Envel Le Hir, @[envlh](#)

WikidataCon 2019, 25-26 October, Berlin

Why should we care about video games?

- Exist since the **40s/50s/60s/70s** (it's complicated, check Wikipedia :-p)
- Major cultural industry, more than **2.5 billion** players worldwide
- At least **100K to 200K** games published

Current state of video game data (in Wikidata)

- 38,539 video games (Q7889)
- 423 expansion packs (Q209163)
- 294 video game compilations (Q16070115)
- 78 downloadable contents (Q1066707)
- 112 game controllers (Q865422)
- 766 video game consoles (Q8076)
- 206 video game genres (Q659563)
- 287 video game magazines (Q69662460)

- **A lot of databases**
 - Mobygames, GameFAQs, IGDB, ...
 - Special-interest fan-databases, government agencies, commercial players...
- **No common identifier**
- **Little or no cross-linking between databases**
- **Different data coverage / specialization**
- **Conceptual differences**

And out of Wikidata

Activities

Alignment

- Property creation (Identifiers ❤️)
- Mix 'n' match-ing
- More advanced matching & bulk import
 - Examples: Mixer ID, PCGamingWiki, MediaArt/GameFAQ import

*Only 9,6K items
without identifiers!
(down from 15K 5 months ago)*

Master Cataloguer

60 Mix'n'match catalogs

Identifier fiesta

100 external identifier properties

Data Integration

The project relies on several tools to import data into Wikidata:

- Wikidata website
- Tools dedicated to Wikidata: Mix'n'match and [its gadget](#), QuickStatements, ...
- General tools: OpenRefine, Dataiku DSS, ...

→ Importance of an healthy ecosystem of tools.

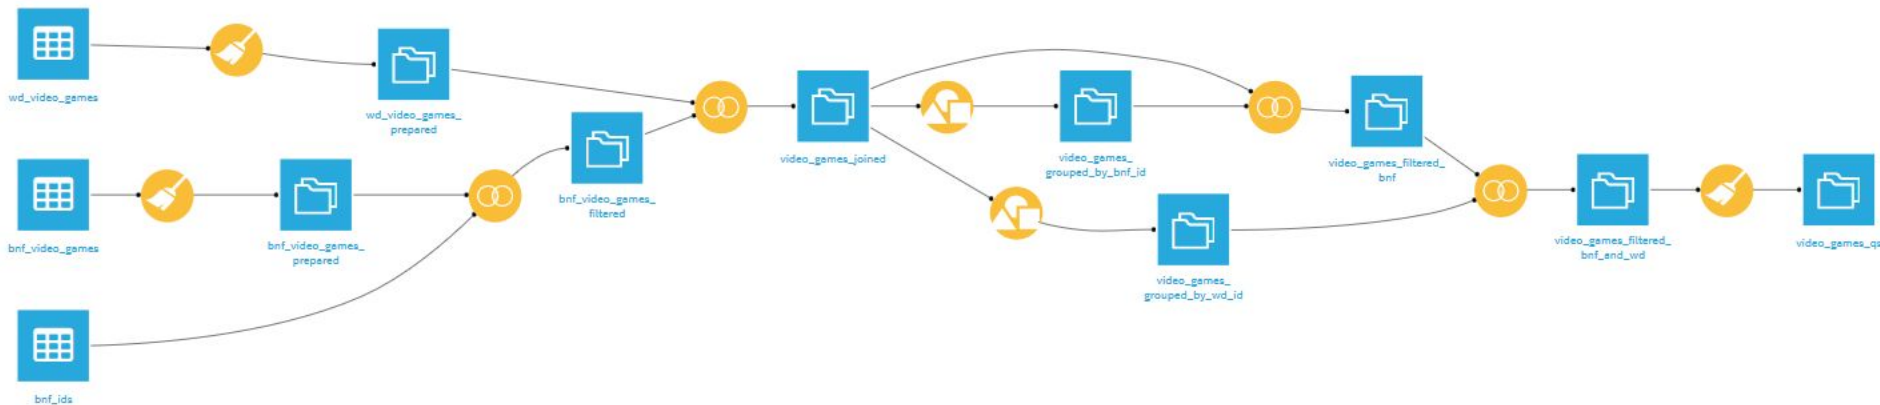

Some imports:

- [Connecting PCGamingWiki and Wikidata](#)
- [Linking the OLAC Video Game Vocabulary with Wikidata](#)

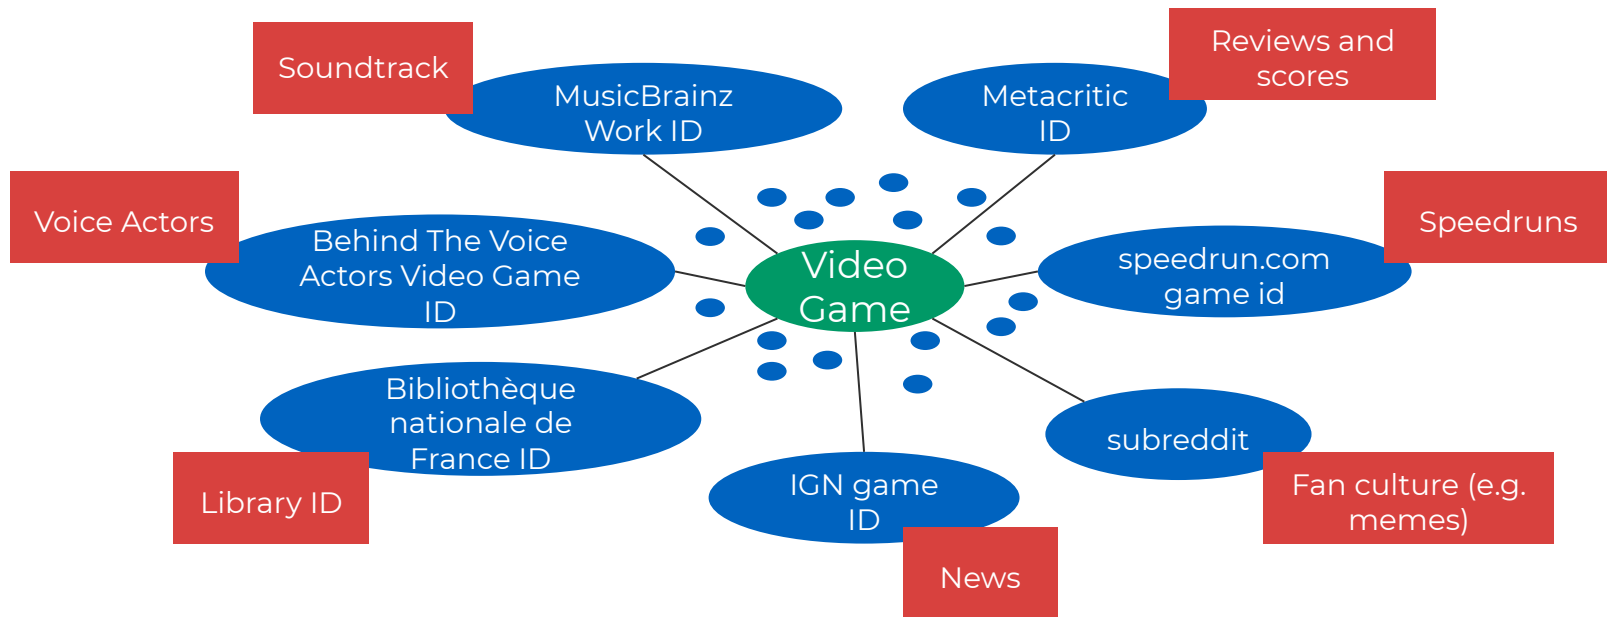

Case Study

Matching BnF and Wikidata video games using Dataiku DSS

- Project to align the catalog of National Library of France (BnF) about video games (~4000 entries) with Wikidata
- Development of a Dataiku project
- Development of a [Dataiku plugin](#) to facilitate SPARQL querying
- Contact established with BnF

THE Linking Hub for Video Games

Data Modeling challenges

- At the moment: (more or less) one Wikidata item per video game
- Challenging for identifiers
 - e.g. Identifier points to a specific edition or release of a game
 - Specific qualifiers needed
- Editions/versions/releases, hardware, relation with other items, ...
- refer to several other cultural artifacts, actors and subjects
 - leads to several (sometimes complex) relationships with other Wikidata items or with external identifiers
- In discussion: one item per video game, release, ...
- Academic literature: FRBR considered not precise enough, several models proposed

Video Game Research

- Video games have become a subject of interest in research in recent years
- Relative new field in academia
- Little (reliable) research data
- No authority for video game data
- Wikidata to the rescue!

Video Game Research

- Creating and using links
- Curation of data about video games and video game companies
- Alignment with OLAC Video Game Genre Vocabulary
- Using Wikidata as Work Authority for Video Games (Fukuda, 2019)

What do we want to be?

- The one-stop shop for researchers
- Being/Staying useful to Wikipedias
- Enhancing other databases
 - Visual Novel Database
 - Internationale Computerspielesammlung
- Powering third-party applications
 - Example: <https://vglist.co/>

THANK YOU SPARQL!

BUT OUR DATA IS IN
ANOTHER DATABASE!
