PREFACE

This bulletin presents the final results of the Census of Agriculture taken as of June 1, 1956.

A brief introduction sets out the definitions of terms used in the bulletin, and contains a section on the Agriculture Quality Check. The tabular material contains pertinent information for a number of earlier censuses; a series of tables showing current data for counties and census divisions; and tables in which the data are cross-classified by size, tenure and economic class of farm.

Specimens of the various questionnaires used will be found in the appendices, along with a Tabular Index and Index to tables.

Material for this bulletin was prepared in the Agriculture Section of the Census Division.

WALTER E. DUFFETT
Dominion Statistician

Ottawa, July 31, 1957.

PRÉFACE

Le présent bulletin contient les résultats définitifs du recensement de l'agriculture effectué en 1956 à compter du 1^{er} juin.

Dans une courte introduction on trouve les définitions des termes et explications employées dans le bulletin de même qu'une section traitant du contrôle qualitatif du recensement de l'agriculture. Les tableaux contiennent des renseignements pertinents sur un certain nombre de recensements antérieurs; une série de tableaux donnant les chiffres actuels pour les comtés et les divisions de recensement; et d'autres tableaux où les données sont regroupées selon la grandeur, le mode d'occupation et la catégorie économique de la ferme.

Des reproductions des divers questionnaires employés se trouvent dans les appendices de même qu'un index tabulaire et un index des tableaux.

La matière du présent bulletin a été établie à la Section de l'agriculture de la Division du recensement.

WALTER E. DUFFETT
Statisticien du Dominion

Ottawa, le 31 juillet 1957.

INTRODUCTION

This is part of a series of ten provincial reports and a summary report for Canada, which present the final results of the 1956 Census of Agriculture.

Definition of a Farm.—For census purposes, a farm is defined as a holding on which agricultural operations are carried out and which is:

- (1) three acres or more in size, or
- (2) from one to three acres in size, and with the agricultural production in 1955 valued at \$250 or more.

The holding may consist of a single tract of land or of a number of separate tracts held under the same or different tenures, and operated as a single unit. Where the farm was made up of several parts located in different municipalities, the 1956 Census reported the complete farm as one unit in the municipality where the headquarters were located.

The same farm definition was used in the 1951 Census. For a comparison with earlier censuses in which different criteria were used, see the Introduction to Volume VI, 1951 Census.

Year to which Census figures apply.—The statistics of farms, farm operators, farm areas, crop areas, livestock numbers, farm machinery and electric power relate to June 1, 1956, while data on new breaking, months of part-time work, male farm labour and farm expenditures relate to the year 1955. In order to minimize the error due to memory bias, both milk and egg production were reported for May, 1956.

The number of male farm workers refers to the week ending June 2, 1956, while grass silage production applies to the year 1956.

Fully Owned Farms.—Full ownership means that the operator holds the title or deed to all the land he operates or has a purchase agreement for same. It does not necessarily mean that the property is free of debt.

Partly Owned, Partly Rented.—This term refers to instances where the farm operator owns only part of the land he operates and rents or leases the remainder.

Farm Operator.—This term is used in the Census to designate the person who is directly responsible for the agricultural operations of the farm, whether as owner, tenant or hired manager. As one operator only was listed for each farm, the number of farm operators is the same as the number of farms. If, for example, the farm was operated by a partnership, only one partner was considered to be the farm operator.

Farm Population.—All persons living in a dwelling situated on a farm as defined in the Census were considered to be farm population, regardless of their occupation. In the case of institutions located on a farm, only the manager and members of his household were included with the farm population. Prior to the 1951 Census, the farm population as shown in the Agriculture Volume was tabulated from a question appearing on the General Farm Schedule. In both the 1951 and 1956 Censuses the question appeared only on the population document. Nevertheless, the term farm population has the same definition in all censuses. The farm population figures given in Tables 1, 9, and 15 include both urban and rural farm population. Persons living on farms that were located in cities, towns or villages were included with the farm population of the adjoining subdivisions.

Farm Areas.—The area of farm land reported for each municipality or subdivision represents the area of land operated by farmers whose headquarters are in the municipi-

INTRODUCTION

Le présent rapport fait partie d'une série de dix rapports provinciaux et d'un rapport national qui donnent les chiffres définitifs du recensement de l'agriculture de 1956.

Définition d'une ferme.—Aux termes du recensement, une ferme est un lopin de terre consacré à l'exploitation agricole et ayant une superficie

- (1) de trois acres et plus, ou
- (2) d'une à trois acres et une production agricole de \$250 ou plus en 1955.

La ferme peut se composer d'un seul ou de plusieurs lopins distincts détenus selon le même ou différents titres d'occupation mais exploités comme ferme unique. Là où une ferme se compose de plusieurs parties situées dans différentes municipalités, la ferme entière est consignée comme une unité dans la municipalité où est située la partie principale.

La même définition d'une ferme a servi au recensement de 1951. Pour la comparer avec les notions différentes des recensements antérieurs, voir l'introduction du Volume VI sur le recensement de 1951.

Année à laquelle s'appliquent les chiffres du recensement.—La statistique des fermes, des exploitants agricoles, des superficies des fermes et des cultures, du nombre de bestiaux, des machines agricoles et de l'énergie électrique porte sur le 1^{er} juin 1956, tandis que les données sur les nouveaux labours, les mois de travail à temps partiel, la main-d'œuvre agricole masculine et les dépenses de la ferme portent sur l'année 1955. Pour réduire l'erreur d'un défaut de mémoire, la production de lait et d'œufs porte sur mai 1956.

Le nombre des travailleurs agricoles est celui de la semaine terminée le 2 juin 1956, et la production des herbes d'ensilage est celle de 1956.

Propriété entière des fermes.—La propriété entière signifie que l'exploitant détient le titre ou acte notarié de toute la terre qu'il exploite ou a signé une convention pour l'acheter. Cela ne veut pas dire nécessairement que la propriété soit libre de dette.

Partiellement possédée, partiellement louée.—Ces expressions s'appliquent aux fermes où l'exploitant n'est propriétaire que d'une partie de la terre qu'il exploite et loue le reste à bail ou autrement.

Exploitant agricole.—Aux termes du recensement, cette expression désigne la personne directement responsable des travaux agricoles de la ferme, soit à titre de propriétaire, de locataire ou de gérant engagé. Comme on n'a attribué qu'un seul exploitant à chaque ferme, le nombre d'exploitants agricoles correspond au nombre de fermes. Par exemple, si la ferme était exploitée en société, un seul des associés est considéré comme étant l'exploitant de la ferme.

Population agricole.—Toute personne demeurant dans un logement situé dans une ferme, telle que celle-ci est définie dans le recensement, fait partie de la population agricole, quelle que soit son occupation. Dans le cas des institutions situées dans une ferme, seule le gérant et les membres de son ménage sont comptés parmi la population agricole. Avant le recensement de 1951, la population agricole figurant au volume de l'agriculture se calculait d'après les réponses à une question du Questionnaire agricole général. Lors des deux recensements de 1951 et de 1956, cette question ne figurait que sur le Document-population. Toutefois, la population agricole a gardé sa même définition dans tous les recensements. Les chiffres sur la population agricole des tableaux 1, 9 et 15 comprennent la population agricole urbaine et rurale. Les personnes demeurant dans des fermes situées dans les villes et les villages font partie de la population agricole des subdivisions voisines.

Superficie des fermes.—La superficie des fermes ou terre agricole, déclarée dans chaque municipalité ou subdivision représente la superficie de la terre exploitée par des cultivateurs

pality. The area of farm land reported in Table 15 for the municipal units may, therefore, be greater or less than the actual farm area within the municipal boundaries. For larger subdivisions of the provinces, such as census divisions or counties, the discrepancy between reported area of farms and actual farm area within the subdivision will be less significant.

Large areas of timber land or other non-agricultural land held by a farm operator, but operated apart from the farm business are excluded.

Condition of Land.—All farm land is classified according to use, with each acre included in only one of the categories. The classes are as follows:

(a) **Total Cropland** (Question 6).—This is the total area of cropland sown or to be sown for harvest in 1956. It is the total area of all field crops (Table 6), and fruits, vegetables, nursery and greenhouse products (Table 11). Because some crops are reported in fractions of an acre there may be slight differences between the sum of the individual crop acreages and the total cropland. Where intercropping and double cropping is practised the land area was to be reported only once under area of cropland (Question 6) but the areas of each crop were included with the individual crop acreages (Questions 15 to 32 incl.).

(b) **Improved Pasture.**—All land which has been cultivated and seeded to pasture and was used for grazing is included in this item. Enumerators were instructed not to include natural prairie or hay land that was pastured after the crop had been removed.

(c) **Summer Fallow.**—Enumerators were instructed to include in this item the total acreage which was tilled or was to be tilled as summer fallow in 1956. They were not to include as summer fallow, land ploughed in the summer after a crop, such as hay or fall rye, had been removed. It includes an area which was sown to a crop with the intention of ploughing it under as green manure.

There are indications that in some areas the enumerator may have erroneously included summer or fall ploughing and idle land as summer fallow.

(d) **Other Improved Land.**—This item includes the area of barnyards, home gardens, lanes and roads on farms. It also includes areas of cultivated land that were lying idle, being neither summer fallowed nor cropped, and area of new breaking that had not yet been cropped.

(e) **Woodland.**—This includes farm woodlots, land leased for cutting and cutover land with young growth which has or will have value as timber or fuelwood. It excludes large timber tracts which are run as a separate business from the farm. There is some evidence that changes in the area of this item between censuses may be due to differences in interpretation. This would be particularly true in areas of brushland.

(f) **Other Unimproved Land.**—Areas of natural pasture or hay land that had not been cultivated, brush pasture, grazing or waste land, sloughs, marsh and rocky land, etc., are all included in this item.

Crops.—The area of crops in 1956 represent the areas planted or to be planted for harvest in 1956, as reported to the enumerator on the Census date. Actual harvested acreages may vary from the Census report due to changes in planting intentions or crop failure which occurred after the Census date.

Vegetables and small fruits were to be reported only when grown mainly for sale and tree fruits only when there were 25 or more fruit trees on the farm. In the case of vegetables, there are indications that some enumerators may have misunderstood the question and included home gardens as "Vegetables grown mainly for sale". Greenhouse and nursery products were to be reported only when grown mainly for sale.

dont le quartier général est dans la municipalité. La superficie des fermes des subdivisions municipales, indiquée au tableau 15, peut donc être plus ou moins grande que la superficie réelle des fermes en deçà des limites municipales. Dans le cas des grandes subdivisions des provinces, comme par exemple les divisions de recensement ou les comtés, la différence entre la superficie déclarée et la superficie réelle des fermes dans la subdivision sera moins marquée.

Les grandes étendues de terres boisées ou autres terres non agricoles, détenues par un exploitant mais exploitées en marge de l'entreprise de la ferme, ne comptent pas.

État de la terre.—Toute terre agricole est classée d'après son utilisation et chaque acre n'est inscrite que dans une des catégories. Voici ces catégories:

a) **Terre en culture** (question 6).—Par là on entend la superficie totale de la terre ensemencée ou devant l'être en vue de la récolte de 1956. Cette superficie totale comprend toutes les grandes cultures (tableau 6), les fruits, les légumes, les pépinières et les serres (tableau 11). Comme certaines cultures sont déclarées en fraction d'acre, il peut y avoir de légères différences entre la somme des superficies individuelles et la superficie totale en culture. Là où se pratiquent les cultures entre-plantées ou successives, la superficie de la terre ne devait figurer qu'une fois dans la superficie totale en culture (question 6), mais devait être répétée pour chaque culture avec les superficies individuelles des cultures (questions 15 à 32).

b) **Pâtures améliorées.**—Ils comprennent toute la terre qui a été préparée et ensemencée de graine à pâture et sert de pâture. Les agents recenseurs avaient reçu instruction de ne pas inclure les prairies naturelles ou les terres à foin devant servir au pâture après la coupe du foin.

c) **Jachère.**—Les agents recenseurs devaient indiquer en acres la superficie labourée ou devant l'être en jachère à l'été de 1956. Ils ne devaient pas considérer comme jachère la terre labourée au cours de l'été après une récolte, soit de foin, de seigle d'automne ou autres, mais devaient y inclure la superficie ensemencée et retournée ensuite pour que la récolte serve d'engrais vert.

Il semble qu'en certains endroits les agents recenseurs aient, par erreur, inclus avec la jachère le labourage d'été ou d'automne et la terre inexploitée.

d) **Autre terre défrichée.**—Elle comprend la superficie des basses-cours, des jardins potagers et des chemins de ferme. On y inclut aussi les superficies de terre cultivée mais inexploitée, n'étant ni en jachère ni en culture, et les nouveaux labours qui n'avaient pas encore été mis en culture.

e) **Terres à bois.**—On entend par là les lots boisés de ferme, les terres affermées pour la coupe du bois et les terres déboisées recouvertes de jeunes pousses qui ont ou auront une valeur de bois d'œuvre ou de chauffage. Ces terres ne comprennent pas les grandes étendues boisées qui sont exploitées en marge de la ferme. Il y a lieu de croire que les changements de superficie de ces terres d'un recensement à l'autre tiennent à des différences d'interprétation. Tel serait particulièrement le cas dans les régions de terres en broussailles.

f) **Autre terre non défrichée.**—Cette rubrique comprend les étendues de terre naturellement en pâture ou en foin et sans culture, les pâtures de brousse, les terres à pâture ou incultes, les fondrières, les marais et les terrains rocallieux, etc.

Récoltes.—La superficie des récoltes de 1956 représente les superficies ensemencées ou devant l'être en vue de la récolte de 1956, d'après les renseignements donnés à l'agent recenseur lors du recensement. La superficie réelle des cultures peut différer de celle du recensement, car après la date du recensement on a pu modifier les projets de semaines ou une récolte à pu manquer.

On ne devait déclarer les légumes et les petits fruits que lorsqu'ils étaient cultivés surtout pour la vente, et les fruits de verger seulement si la ferme comptait 25 arbres fruitiers ou plus. Dans le cas des légumes, il semble que certains agents recenseurs aient mal compris la question et inclus les jardins potagers parmi les "légumes cultivés surtout pour la vente". On ne devait déclarer les produits de serre et de pépinière que si on les cultivait surtout pour la vente.

Fruit trees which were definitely abandoned and worthless were not to be included.

Livestock.—Livestock are reported on the farm where located, regardless of ownership, except for livestock kept on community pastures. In this case, livestock are related to the farm of the operator owning them rather than to the community pasture.

Enumerators were instructed to include all "helpers, 1 year and under 2 years, being raised mainly for milk production" and "cows and heifers, 2 years and over, milking or to be milked" regardless of whether or not they were of dairy breeding.

Milk Production.—In order to keep response error to a minimum, the production of whole milk was enumerated for the month of May, 1956.

The enumerator was required to enter both the amount of dairy products produced on the farm and the milk equivalent for each product. A table of conversion rates was given on the Agriculture Document to assist the enumerator in calculating these milk equivalents. Only the milk equivalent figures were tabulated, and the amount of dairy products was calculated by dividing the milk equivalent figures by the conversion rates given to the enumerator.

Egg Production and Sales, May, 1956.—An examination of a small number of the Agriculture documents, made after the tabulations were completed, indicated that the inquiries on egg production and sales were not always completed by the census enumerator. Some Agriculture documents contained entries for laying hens but not for egg production or egg sales. The extent of the under enumeration is not known and the data for these items published in the tables have not been adjusted.

Farm expenditures.—Specified farm expenditures for 1955, whether paid in cash or obtained on credit, were reported for each farm. In the case of tenant-operated farms, these expenditures include contributions made by the landlord as well as those made by the tenant operator.

Part-time Work.—The enumerator was instructed to report the total number of months the farm operator worked for wages, commissions, etc., at non-farm work off the farm during 1955. Non-farm work included fishing, working in the woods or on the roads, trucking (non-agriculture), factory or clerical work, carpentry, etc. It also included such non-farm work as operating a filling station, grocery store, or tourist cabins, either on the farm property or elsewhere.

Farm Labour.—Only male farm labour, 14 years of age and over was included. Total labour includes twelve months for the operator's labour on all farms.

Any male, 14 years of age and over, working on the farm for wages, salary or board, commission, or on a piece rate or contract basis, was reported as "paid labour". Male members of the operator's family (related by blood or marriage) who did farm work or chores full-time or part-time on the farm but did not receive specified wages, were reported as "unpaid family labour".

Net farm labour was calculated by deducting from total male farm labour the months of part-time work performed by operators of all farms other than "Commercial crop and livestock" farms.

Conversion of "Arpents" to "Acres".—In certain sections of the Province of Quebec, the land measure is the "arpent" and enumerators reported land areas in this unit. The conversion to acres was made in the Dominion Bureau of Statistics using the factor "1,000 arpents equal 845 acres".

Economic Classification of Farms¹.—The need for an economic classification of farms in Canada has been recog-

Les arbres fruitiers définitivement abandonnés et sans valeur n'ont pas été comptés.

Animaux.—Les animaux sont attribués à la ferme où ils se trouvent, sauf ceux qui sont mis dans des pâturages en commun, quels qu'en soient les propriétaires. Dans ce cas, ils sont attribués à la ferme de l'exploitant à qui ils appartiennent plutôt qu'au pâturage en commun.

Les agents recenseurs devaient inscrire toutes les "génisses d'un an et de moins de 2, élevées principalement pour la production laitière" et "les vaches et génisses de 2 ans et plus en lactation ou devant être traitées", de race laitière ou non.

Production de lait.—Pour réduire l'erreur des réponses, la production de lait entier a porté sur le mois de mai 1956.

L'agent recenseur devait inscrire le montant des produits laitiers obtenus dans la ferme et l'équivalent de lait de chaque produit. Le Document-agriculture donnait une table de conversion pour aider l'agent recenseur dans ses calculs d'équivalents de lait. Seuls les chiffres en équivalents de lait entraînaient dans les calculs et on a obtenu la quantité des produits laitiers en divisant les chiffres en équivalents de lait par les facteurs de conversion donnés à l'agent recenseur.

Production et vente d'oeufs en mai 1956.—L'examen de quelques Documents-agriculture une fois les calculs terminés a révélé que les agents recenseurs n'ont pas toujours complété les données sur la production et la vente d'oeufs. Certains Documents-agriculture contenaient des chiffres sur les poules pondueuses, mais non sur la production ni la vente d'oeufs. Conséquemment, la statistique relative à ces deux articles ne doit pas servir sans une certaine réserve. Le degré de sous-dénombrement n'est pas connu et les données relatives à ces articles et publiées dans les tableaux n'ont pas été rectifiées.

Dépenses de la ferme.—Chaque ferme a dû déclarer des dépenses spécifiques pour 1955, qu'elles aient été faites au comptant ou à crédit. Dans le cas des fermes exploitées par des locataires, ces dépenses comprenaient les contributions du propriétaire et celles de l'exploitant locataire.

Travail à temps partiel.—L'agent recenseur devait relever le nombre total de mois durant lesquels l'exploitant avait travaillé pour un salaire, une commission, etc., à du travail non agricole en dehors de sa ferme en 1955. Le travail non agricole comprend le pêche, la coupe du bois, le travail de voirie, le camionnage (non agricole), le travail de fabrique ou de bureau, la charpenterie, etc. Il comprend aussi l'exploitation d'un poste d'essence, d'une épicerie, de cabines de touristes, soit sur les terres de la ferme ou ailleurs.

Main-d'œuvre agricole.—Elle ne comprend que la main-d'œuvre agricole masculine de 14 ans et plus. L'année entière de travail comprend les douze mois de travail de l'exploitant sur toutes les fermes.

Tous employé masculin de 14 ans et plus, travaillant dans une ferme pour des gages, un salaire ou la pension, à commission, à la pièce ou à l'entreprise, était inscrit avec la "main-d'œuvre rémunérée". Les membres de sexe masculin de la famille de l'exploitant (parents par le sang ou le mariage) qui faisaient des travaux agricoles ou le train de ferme de plein temps ou à temps partiel sans recevoir de salaire fixe, étaient considérés comme "main-d'œuvre familiale non rémunérée".

La main-d'œuvre agricole nette s'obtient en déduisant de la main-d'œuvre agricole masculine le nombre de mois de travail à temps partiel des exploitants de toutes les fermes, sauf des fermes commerciales de culture et d'élevage.

Équivalent des "arpents" en "acres".—Dans certaines parties de la province de Québec, la mesure agraire est l'"arpent" et les agents recenseurs ont consigné les superficies en arpents. La conversion en acres a été faite au Bureau fédéral de la statistique à raison de 1,000 arpents pour 845 acres.

Classement économique des fermes¹.—Depuis nombre d'années, on reconnaît au Canada la nécessité d'un classement

¹. Préparé avec la collaboration de la Division de l'économie du ministère de l'Agriculture.

1. Prepared in cooperation with the Economics Division, Department of Agriculture.

nized for a number of years. The 1951 Census, in response to this need, provided a number of economic classes based on reported sales of farm products.

Following the publication of the 1951 Census, the "Advisory Committee on Agricultural Economics" directed attention to the need for more detailed study of the prospects and for problems involved in establishing an economic classification of farms. It was felt that a classification based on income as reported in the Census left much to be desired. In the first place, the reliability of the income data is open to serious question. Second, areas suffering crop failures or abnormal production and marketing conditions during the Census year are penalized in any classification based solely on income data.

In view of these limitations the Economics Division, Department of Agriculture, developed a classification based on the productive capacity of farms as reflected in the inventory data shown by the Census. Three classes of farms were delineated.

- (a) Commercial crop and livestock farms.
- (b) Institutional farms, etc.
- (c) Other farms.

(a) Commercial crop and livestock farms.—Farms having a potential production of \$1,200 or more (based on average production and price series) are classified as commercial crop and livestock farms. Commercial farms thus defined delineate that segment of the total number of farms on which the operators devoted most of their time to farming with a view to selling on the market. The selection of the \$1,200 benchmark is an arbitrary one but is believed to represent the lower limit of those farms which provide substantial employment to the operator. While an income of \$1,200 is clearly below desirable living standards it does represent a farm unit which has passed the subsistence stage.

(b) Institutional Farms, etc.—The following types of farms are classified as "Institutional farms, etc."—Indian Reserve farms, Experimental farms, Community Pastures, Hutterite Colonies, and farms operated by penitentiaries, hospitals, etc.

(c) Other Farms.—This is a miscellaneous category including not only those units producing crops and livestock worth less than \$1,200 but including also acreages devoted to greenhouses, nurseries, apiaries, forest products, fur production and goats.

Standards of Production.—On the basis of national production and price data for recent years the average annual value of production by type of enterprise was established. The values are shown in Table 1.

Evaluation Procedure.—Using the point values in Table 1, each farm was examined with a view to determining whether the inventory shown represents a crop and livestock production of 100 points (\$1,200) or more. For example, each farm reporting 50 acres or more of cropland (excluding acreage of tame hay) was credited with 100 points since each acre of cropland (excluding acreage of tame hay) has a point value of 2.

The inventory data on each farm schedule was evaluated according to the following procedures.

- (1) Acres of cropland less the acreage of tame hay was multiplied by 2.
- (2) If Procedure 1 resulted in a point value of less than 100, the point value of all livestock items except pigs was added to the total points in Procedure 1.
- (3) If Procedure 2 indicated a total of less than 100 points the additional points applicable for special crops and fruit trees were added to Procedure 2.
- (4) If Procedures 1, 2 and 3 resulted in a total of less than 100 points, one and one-half points were added for each hog reported.

des fermes au point de vue économique. Pour répondre à ce besoin, le recensement de 1951 a établi certaines catégories économiques d'après les chiffres de vente des produits agricoles.

Après la publication des résultats du recensement de 1951, la "Commission consultative sur l'économie agricole" a attiré l'attention sur la nécessité d'une étude plus détaillée des perspectives et des problèmes propres à l'établissement d'un classement économique des fermes. On s'est rendu compte qu'un classement basé sur le revenu déclaré au recensement laissait beaucoup à désirer. D'abord, la valeur des données sur le revenu peut être mise en doute. Ensuite, un classement basé uniquement sur les données relatives au revenu ne rend pas justice aux régions souffrant de cultures manquées ou anormales et des conditions du marché.

A cause de ces restrictions, la Division de l'économie du ministère de l'Agriculture a élaboré un classement basé sur la capacité productive des fermes d'après les inventaires déclarés au recensement, et a délimité trois classes:

- a) les fermes commerciales de culture et d'élevage
- b) les fermes des institutions, etc.
- c) les autres fermes.

a) Les fermes commerciales de culture et d'élevage.—Les fermes dont la capacité de production est de \$1,200 ou plus (d'après la production moyenne et les séries de prix) sont classées comme fermes commerciales de culture et d'élevage. Les fermes commerciales ainsi définies forment dans le grand total un groupe de fermes où les exploitants consacrent la plupart de leur temps à l'agriculture en vue de la vente sur le marché. Le choix du montant de \$1,200 est arbitraire, mais représente apparemment la limite inférieure des fermes qui fournissent de l'emploi convenable à l'exploitant. Même si un revenu de \$1,200 est nettement inférieur au niveau de vie désirable, il représente une ferme qui peut désormais se suffire.

b) Les fermes des institutions, etc.—Dans cette catégorie, on classe les fermes des réserves indiennes, les fermes expérimentales, les pâturages en commun, les colonies hutterites, et les fermes exploitées par les pénitenciers, les hôpitaux, etc.

c) Autres fermes.—Cette catégorie diversifiée comprend non seulement les fermes dont les produits de culture et d'élevage rapportent moins de \$1,200, mais aussi les superficies consacrées aux serres, aux pépinières, à l'apiculture, aux produits forestiers, à l'élevage des animaux à fourrure et des chèvres.

Normes de production.—On s'est basé sur la production nationale et les prix des dernières années pour établir la valeur annuelle moyenne de la production par genre d'entreprise. Ces valeurs paraissent au tableau 1.

Méthode d'évaluation.—On a appliqué les valeurs en points du tableau 1 à chaque ferme en vue de déterminer si les cultures et les animaux déclarés représentaient une production de 100 points (\$1,200) ou plus. Par exemple, chaque ferme qui déclarait 50 acres ou plus en culture (autre que de foin cultivé) recevait 100 points, car chaque acre de culture (autre que de foin cultivé) a une valeur de 2 points.

On a évalué les données d'inventaire de chaque questionnaire agricole de la façon suivante:

1^o les acres en culture moins les acres en foin cultivé ont été multipliées par 2.

2^o Si le calcul 1 donnait moins de 100 points, on y ajoutait la valeur en points de tous les animaux (sauf les porcs).

3^o Si le calcul 2 donnait moins de 100 points, on y ajoutait les points supplémentaires applicables aux cultures spéciales et aux arbres fruitiers.

4^o Si les calculs 1, 2 et 3 donnaient moins de 100 points, on y ajoutait un point et demi pour chaque porc déclaré.

(5) If Procedures 1, 2, 3 and 4 gave a total of less than 100 points this summation was discontinued. Attention then was turned to whether the farm reported pigs. If there were 29 pigs or more, the farm was classified as a "commercial" crop and livestock farm.

(6) If the farm reported one or more pigs and 29 acres or more of cropland (exclusive of tame hay) the farm was classified as commercial. This procedure is based on the assumption that where there is evidence that pigs are kept and there is sufficient cropland from which to feed 29 or more pigs, the farm has the capacity indicated for a commercial farm. This deductive process is necessitated by the absence in the Census of a total count of all pigs raised during the year.

5° Si les calculs 1, 2, 3 et 4 donnaient moins de 100 points, on cessait d'y ajouter. L'attention se portait alors sur le nombre de porcs déclarés. S'il y en avait 29 ou plus, la ferme était classée comme ferme "commerciale" de culture et d'élevage.

6° Si la ferme déclarait un porc ou plus et 29 actes ou plus de culture (sans le foin cultivé), la ferme était classée commerciale. Cette façon de procéder est fondée sur l'hypothèse que là où l'on élève des porcs et qu'il y a suffisamment de culture pour en nourrir 29 ou plus, la ferme a la capacité requise pour devenir une ferme commerciale. Ce procédé deductif est nécessité par l'absence dans le recensement du nombre total de porcs élevés durant l'année.

TABLE 1. Crop and Livestock Inventory Requirements to Meet "Commercial Crop and Livestock" Classification, 1956 Census¹
TAELFAU 1. Normes de culture et d'élevage exigées dans une "ferme commerciale de culture et d'élevage", recensement de 1956¹

| Item | Requirements for \$1,200 gross revenue Normes pour un revenu brut de \$1,200 | Point Value Valeur en points | Détail |

| Cherries | 400 | 0.7 | Cerises |
| Other tree fruits | 143 | 0.2 | Autres fruits d'arbres |

1. Source: Dominion Bureau of Statistics Annuals; Markets Information, Department of Agriculture; Federal and Provincial Census Reports.

2. Most recent ten-year averages. The category "all other cattle" is based on normal rate of growth of yearlings as reported in Morrison's *Feeds and Feeding*, p. 825. Sheep and lamb rating includes value of wool clip. Poultry data for 9-year period 1946-54 due to change in classification of poultry in 1946.

3. Five-year averages (1950-54) except apple and pear trees where the 1951 Census count of trees was applied to value of production in 1950, 1951 and 1952 as reported in provincial statistics. Other crops such as corn, etc., enter as fodder, other fodder crops like for seed, sunflowers (for seed, mustard seed, and hops are valued at 2 points per acre. Information on these crops was insufficient to establish separate ratings.

1. Source: Rapports annuels du Bureau fédéral de la statistique; information sur les marchés, ministère de l'agriculture; rapports fédéral et provinciaux du recensement.

2. La norme détermine la plus récente. La catégorie "toutes autres bêtes à cornes" se tient sur le taux de croissance des animaux d'un an, établi par Morrison dans *Feeds and Feeding*, p. 825. L'évaluation des moutons et agneaux comprend la valeur de la laine tondue. Les données sur les volailles portent sur une période de 9 ans (1946-54) à cause d'un changement dans le classement de la volaille en 1946.

3. Moyennes quinquennales (1950-1954), sauf dans le cas des pommières et des poiriers, dont le nombre au recensement de 1951 a été appliquée à la production de 1950, 1951 et 1952, puisqu'elle est établie par la statistique provinciale. On a accordé 2 points pour les autres cultures: maïs, ensilage ou fourrager, autres cultures fourragères, colza pour la semence, graine de moutarde et houblon. Les renseignements sur ces cultures étaient trop incomplets pour leur attribuer une évaluation individuelle.

AGRICULTURE QUALITY CHECK

Purpose of the Survey

Difficulties are encountered in the Census of Agriculture in making a complete and accurate enumeration. These include definitional problems (such as what constitutes a farm), the inability of some census enumerators to perform a thorough job, and difficulties experienced by some farmers in answering questions concerning their farms.

Previously no concerted effort had been made to measure by means of a field check the extent of these difficulties. As part of the 1956 Census of Agriculture, a Quality Check Sample survey was undertaken to provide estimates of the completeness of coverage of the Census and to provide checks on the quality of selected items.

Description of Sample

The Agriculture Quality Check was undertaken in all provinces except Newfoundland and entailed a post-Census re-enumeration of all farms in an area sample of farms. The frame from which the sample was selected was an ordered listing of rural areas segments containing an average of eight farms according to the 1951 Census. Rural Census Subdivisions (municipalities or townships) containing farms in 1951 were listed within Type of Farming Area strata principally on the basis of geographic contiguity and similarity in type and size of specific farm enterprises. Within subdivisions, enumeration areas were geographically ordered by official census numbering. A geographic ordering of area segments within the enumeration areas was implicit but delineation of area segments on maps was completed for only those enumeration areas identified as containing sample segments. Separate listings were made for each province.

Two systematic samples with different random starts were selected in each province. The sampling rate was variable among provinces, though constant within each province. The national sample of 601 area segments represents an average sampling rate of 0.8 per cent. Sampling rates by province, and the total number of farms in the sample by province are recorded in Table II.

TABLE II. Number of farms in the sample and sampling rate by province, 1955

1. Does not include Newfoundland, Yukon and Northwest Territories.

1. Non compris Terre-Neuve, le Yukon ni les Territoires du Nord-Ouest.

All farms with headquarters located inside the sample segment boundaries were defined as belonging to the sample and were re-enumerated. For resident farms, (farms for which the operator's residence was located on one of the tracts comprising the farm holding), the farm residence was defined as the headquarters. For non-resident farms, (farms on which the operator did not live), the northwest

Toutes les fermes dont le bâtiment de gestion ou pied à terre était situé à l'intérieur des limites d'un segment de l'échantillon ont été considérées comme se trouvant dans l'échantillon et ont fait l'objet d'un nouveau dénombrement. Dans le cas des fermes habitées (fermes dans le cas desquelles la demeure de l'exploitant se trouvait située sur l'une des parcelles constituant la terre), la demeure agricole a été considérée comme bâtiment de

AGRICULTURE - CONTRÔLE QUALITATIF

Objet du contrôle

Il est difficile d'effectuer le Recensement de l'Agriculture de façon que le dénombrement soit complet et exact. Cela tient aux problèmes que posent les définitions (par ex., qu'est-ce qu'une ferme?), à l'impossibilité pour certains agents recenseurs d'effectuer un dénombrement complet et aux difficultés qu'ont certains cultivateurs à répondre aux questions relatives à leur ferme.

On n'avait pas encore fait d'effort concerté afin de déterminer au moyen d'un contrôle sur place l'étendue des difficultés. Un Contrôle qualitatif par sondage a été pratiqué, dans le cadre du Recensement de l'Agriculture de 1956, afin d'obtenir une estimation de l'intégralité du dénombrement et un contrôle de l'exactitude de certains points.

Description de l'échantillon

Le Contrôle a été pratiqué dans toutes les provinces, sauf Terre-Neuve, et a consisté à effectuer un nouveau dénombrement post-censal de toutes les fermes d'un échantillon *aléatoire de fermes*. Le cadre d'où a été tiré l'échantillon est une liste méthodique de segments de secteurs ruraux contenant en moyenne huit fermes d'après le recensement de 1951. Les subdivisions rurales du recensement (municipalités ou townships) renfermant des fermes en 1951 ont été inscrites dans les strates (Régions de types d'agriculture) surtout d'après la contiguité géographique et la similitude de genre et d'importance des exploitations agricoles déterminées. Au sein des subdivisions, les secteurs de dénombrement ont été rangés géographiquement d'après leur numéro officiel de recensement. Les segments de secteur se trouvaient implicitement rangés par ordre géographique au sein des secteurs de dénombrement, mais la délimitation des segments de secteurs sur les cartes n'a été faite que pour les secteurs de dénombrement renfermant des segments compris dans l'échantillon. Une liste distincte a été dressée pour chaque province.

Deux échantillons systématiques à partir de points de départ aléatoires ont été tirés dans chaque province. Le taux de sondage a varié d'une province à l'autre, tout en étant constant au sein de chaque province. L'échantillon national de 601 segments de secteur forme un taux moyen de sondage de 0.8 p. 100. Les taux de sondage par province et le nombre total de fermes comprises dans l'échantillon de chaque province sont indiqués au tableau II.

corner of the most northerly tract in the farm holding was defined as the farm headquarters.

The re-enumeration was performed by approximately 200 enumerators selected from the larger group of census enumerators on the basis of their competence in completing the regular census enumeration. They were given additional training and assigned to areas in which they had not previously enumerated. Detailed instruction manuals and maps were provided. All households within the segment were interviewed with provision on the questionnaire for terminating the interview when it was established that the holding was not a farm according to the census definition. A complete accounting of all land within the sample segment boundaries was required with appropriate designation on work maps of farm headquarters and the disposition of land as between farms with headquarters inside and outside the segment boundaries. Most of the re-enumeration was completed during July and August, 1956, although a few reports were received in September. No field check was carried out to explain differences between data secured through the Quality Check and the Census.

The questionnaire used for re-enumeration contained similar questions and referred to the same time period as the Census for acreages sown to individual crops and respecting numbers of livestock on farms at June 1. Additional explanations for particular questions and additional questions were included to (1) facilitate complete coverage of farms, (2) encourage accuracy in response to individual questions, and (3) compensate, in the case of numbers of pigs, for the later interview date. With respect to acreages sown or to be sown to individual crops for harvest in 1956, it was recognized that data reported in the re-enumeration could differ from that reported in the Census, if there were elements of intention to seed in the census reports and those intentions were not realized or were changed by the time the re-enumeration took place.

Large Farms whose headquarters were located inside the sample segments were re-enumerated but were removed from the sample before tabulation. A listing of large farms was compiled in advance of the 1956 Census and special efforts were made during the 1956 Census to ensure that these farms were enumerated. These large farms in the pre-Census listing were treated as a sub-Universe for purposes of the Quality Check, the 1956 Census totals for these farms being added to the sample estimates derived from the area sample of all other farms.

Method of Estimation

A ratio method of estimation was used to derive sample estimates, except in a few cases where the correlation between sample and census totals within the sampled segments was less than 0.5; in these cases a "straight" estimate was used, being more efficient than the ratio estimate. The straight estimate was obtained simply by multiplying the sample total by the inverse of the sampling rate. For the ratio estimates, sample totals were multiplied by the ratio of the Census all-farms total to census totals for farms in the sample segments only. The "Census" sample was obtained by superimposing sample segment boundaries on enumeration-area maps returned by census enumerators on which were marked the headquarters of all farms enumerated in the regular census. The Census reports for all farms belonging to the sample segments were then tabulated to provide the required census-enumerated sample. Where enumerators' maps had not been satisfactorily completed, these were completed in the office, before superimposing segment boundaries, on the basis of reported location and related data. Where enumerators' maps could not be used, a random sample from the enumeration area was selected to represent the census-enumerated sample for the sample segment within it. Estimates were made for each province, and the all-Canada totals derived by summing provincial estimates.

gestion. Dans le cas des fermes inhabitées (fermes où n'habitaient pas l'exploitant), l'angle nord-ouest de la parcelle située le plus au nord de la terre a été considéré comme étant le lieu de gestion de la ferme.

Le nouveau dénombrement a été effectué par environ 200 agents choisis parmi l'ensemble des agents recenseurs d'après la compétence dont ils avaient fait preuve au recensement. Une formation spéciale leur a été donnée et des secteurs où ils n'avaient pas travaillé déjà leur ont été attribués. On leur a remis un manuel et des cartes détaillées. Les agents ont interrogé tous les ménages du segment; il était pourvu dans le questionnaire à l'arrêt de l'entrevue lorsque l'agent constatait que la terre n'était pas une ferme selon la définition du recensement. L'agent devait rendre compte de toute la terre située dans les limites des segments de l'échantillon et devait indiquer sur des cartes de travail le lieu de gestion de la ferme et la répartition de la terre entre fermes avec lieu de gestion situé à l'intérieur et à l'extérieur des limites du segment. Le gros du nouveau dénombrement s'est fait en juillet et août 1956; quelques rapports sont parvenus au Bureau en septembre. Il n'a pas été pratiqué d'enquête sur place afin d'expliquer les différences entre les résultats du Contrôle qualitatif et du Recensement.

Le questionnaire utilisé pour le Contrôle renfermait des questions semblables à celui du Recensement et portait sur la même période en ce qui concerne les superficies consacrées à chaque culture et le nombre de bestiaux dans les fermes le 1^{er} juin. Il contenait d'autres explications au sujet de certaines questions ainsi que d'autres questions afin 1) de faciliter le dénombrement de toutes les fermes, 2) d'aider à obtenir des réponses exactes aux différentes questions et 3) de tenir compte, dans le cas des parcelles, de la date plus tardive de l'entrevue. En ce qui concerne les superficies consacrées ou à consacrer aux diverses cultures et à récolter en 1956, il a été admis que les chiffres déclarés au nouveau dénombrement pouvaient différer de ceux du Recensement si les déclarations faites au Recensement se fondaient en partie sur des projets auxquels il n'a pas été donné suite ou qui ont été modifiés subseqüemment.

Les *grandes fermes* dont le lieu de gestion était situé à l'intérieur d'un segment de l'échantillon ont été dénombrées de nouveau; cependant, elles ont été exclues de l'échantillon avant la totalisation des résultats. Une liste des grandes fermes a été établie avant le Recensement de 1956 et on a veillé de façon toute spéciale durant le Recensement à en faire le dénombrement; les grandes fermes ont été considérées comme étant un sous-univers pour les fins du Contrôle qualitatif, les totaux du Recensement de 1956 à l'égard de ces fermes étant ajoutés aux estimations fondées sur l'échantillon aréolaire de toutes les autres fermes.

Méthode d'estimation

La méthode du quotient a servi aux estimations de l'échantillon, sauf dans quelques cas où la corrélation entre les totaux de l'échantillon et ceux du recensement dans les segments échantillonnés était inférieure à 0.5; dans ces cas particuliers, on a utilisé l'estimation "directe", étant plus efficace que l'estimation par quotient. L'estimation directe a consisté simplement à multiplier le total de l'échantillon par l'inverse du taux de sondage. En ce qui concerne les estimations par quotient, les totaux de l'échantillon ont été multipliés par le rapport entre le total de toutes les fermes obtenu au Recensement et les totaux du recensement pour les fermes situées dans les seuls segments de l'échantillon. L'échantillon du "Recensement" a été obtenu en superposant les limites des segments de l'échantillon sur les cartes des secteurs de dénombrement renvoyées par les agents recenseurs et sur lesquelles était marqué le lieu de gestion de toutes les fermes dénombrées au recensement régulier. Les chiffres du Recensement de toutes les fermes situées dans les segments de l'échantillon ont ensuite été totalisés afin d'obtenir un échantillon du Recensement. Dans le cas des cartes que les agents recenseurs n'avaient pas marquées de façon satisfaisante, le Bureau les a complétées avant de superposer les limites des segments en se fondant sur les renseignements relatifs à l'emplacement et autres renseignements connexes déclarés au recensement. Lorsqu'on n'a pu utiliser les cartes des agents recenseurs, on a tiré un échantillon aléatoire du secteur de dénombrement qui a constitué l'échantillon de recensement correspondant au segment à échantillonner compris dans le secteur de dénombrement. Des estimations ont été établies pour chaque province et les totaux de l'ensemble du Canada ont été obtenus en faisant la somme des estimations provinciales.

Variances of sample estimates were calculated on the assumption that the sample segments within each sampling interval were random drawings from the population of segments within the interval. In this context, the sampling interval was considered to be a Zone and the two drawings within each Zone to be independent of the drawings in other Zones¹.

Analysis of Sample Estimates

A comparison of Census totals and sample estimates is presented in Tables III to VI for selected characteristics of farms for Canada and for regions. Items for which the standard error of the sample estimate exceeds 10 per cent are excluded.

For each sample estimate the sampling error is recorded in the tables as the Standard Error in absolute terms and as a percentage of the Census total. The observed difference of the sample estimate from the Census total is also presented, and the ratio of the observed difference to the Standard Error is shown in the second last column.

In the last column is given the approximate probability that a difference as large or as larger than the observed difference would result from sampling error alone. In this regard, it is assumed that a complete and accurate coverage of the farm universe was obtained in the Census enumeration. Further, it is a premise that the Quality Check sample was an unbiased sample of the farm universe. Under these assumptions, in repeated samples of the same size drawn from the farm universe by the same procedures, sample estimates would then be distributed about the Census total as an average. It is further assumed that the sample estimates from repeated samples would be approximately normally distributed about the Census total with standard deviation equal to the computed standard error.

From Table III, it is evident that for most of the items selected the sample estimate for Canada differs from the Census total by an amount which could be attributed to sampling error. For example, the sample estimate in Table III for total acreage in farms differs from the Census total by 6,583,000 acres or 3.8 per cent. The probability of this positive difference or a larger positive difference occurring because of sampling error alone is approximately 0.29 and the observed difference, therefore, is not judged to be unusually large. However, the sample estimate of number of farms (Table III) differs from the Census total by 47,000 or 7.6 per cent, and the probability of a positive difference this large or larger is less than 0.01. In this case, the observed difference cannot safely be attributed solely to sampling error. It would appear that the hypothesis that the census enumeration was a complete and accurate coverage of the farm universe with respect to number of farms would, therefore, have to be rejected. However, there is another consideration. There seems to be no significant under-enumeration of farm acreage. Consequently, much of the apparent under-enumeration in the number of farms is probably due to a difference in the application of the definition of what constitutes a farm between the Census enumeration and the Quality Check enumeration. On the other hand, a rejection of the hypothesis that the Census enumeration was complete and accurate would be appropriate with respect to the number of pigs on farms where the same definitional problem is not present. Similar interpretations of the evidence for individual items in Tables IV, V and VI can be made.

The effectiveness of the Quality Check sample in detecting error in the Census totals is limited by the sampling error associated with the sample estimates. Where the sampling error is large, errors in Census totals can also be large and may even remain undetected. Given the variability that exists in the farm universe, the design and size of the Quality Check sample determine the sampling errors of resulting estimates. For potatoes (Table III), for example, the appreciable observed difference of 12.8 per cent can be attributed to sampling error alone and the Quality Check sample was, therefore, a rather blunt tool for determining the quality of Census totals of potato acreage. In this regard,

'Des variances des estimations de contrôle ont été calculées en posant en hypothèse que les segments d'échantillonnage au sein de chaque intervalle d'échantillonnage étaient des prélevements aléatoires de la population de segments au sein de l'intervalle. Dans ce contexte, l'intervalle d'échantillonnage a été considéré comme étant une Zone et les deux prélevements au sein de chaque Zone comme étant indépendants des prélevements des autres Zones¹.

Analysis of estimations de contrôle

La comparaison des résultats du Recensement et du Contrôle, en ce qui concerne certaines caractéristiques des fermes du Canada et des régions, est donnée aux tableaux III à VI. Sont exclus les articles dont l'erreur-type de l'estimation de contrôle dépasse 10 p. 100.

L'erreur d'échantillonnage de chaque estimation de contrôle est inscrite dans les tableaux comme erreur-type en chiffres absolus et en pourcentage du total du Recensement. La différence observée entre l'estimation de contrôle et le total du Recensement est aussi donnée; le rapport entre la différence observée et l'erreur-type est donné dans l'avant-dernière colonne.

Dans la dernière colonne sont données les probabilités approximatives que la seule erreur d'échantillonnage cause une différence aussi grande ou plus grande que la différence observée. Il est posé en hypothèse, à ce sujet, que la couverture de l'univers des fermes a été complète et exacte au Recensement. En outre, en principe, l'échantillon du Contrôle qualitatif a été un échantillon sans erreur systématique de l'univers des fermes. Ces hypothèses posées, si l'on tire à plusieurs reprises et par la même méthode des échantillons de même taille de l'univers des fermes, les estimations obtenues seraient alors réparties autour du total du Recensement comme moyenne. Il est de plus posé en hypothèse que les estimations provenant d'échantillons répétés seraient à peu près normalement réparties autour du total du Recensement, l'écart-type étant égal à l'erreur-type calculée.

Au tableau III, il est évident que, dans le cas de la plupart des articles choisis, l'estimation de contrôle pour le Canada diffère du total du Recensement d'un montant qui pourrait être attribué à l'erreur d'échantillonnage. Ainsi, entre l'estimation de contrôle (tableau III) de la superficie totale des fermes et le total du Recensement, il y a une différence de 6,583,000 acres ou de 3.8 p. 100. Les probabilités d'une différence positive égale ou plus grande du fait de la seule erreur d'échantillonnage sont d'environ 0.29; aussi, la différence observée n'est-elle pas jugée exceptionnellement grande. Cependant, l'estimation de contrôle du nombre de fermes (tableau III) diffère de 47,000 ou de 7.6 p. 100 du total du Recensement et les probabilités d'une telle différence ou différence plus grande sont inférieures à 0.01. Dans ce dernier cas, on ne saurait attribuer la différence observée à la seule erreur d'échantillonnage. Il semble donc que l'hypothèse de la couverture complète et exacte de l'univers des fermes quant au nombre de fermes au Recensement soit à rejeter. Il existe, cependant, un autre point à considérer. Il ne semble pas que la superficie des fermes ait été beaucoup sous-recensée. Par conséquent, le sous-dénombrement apparent du nombre de fermes tient probablement pour beaucoup à une différence d'application de la définition de "ferme" au Recensement et au dénombrement du Contrôle qualitatif. Par contre, il semble à propos de rejeter l'hypothèse de l'intégralité et de l'exactitude du Recensement quant au nombre de porcs dans les fermes lorsque le même problème de définition ne se pose pas. On peut interpréter de même façon les constatations relatives aux divers articles des tableaux IV, V et VI.

L'efficacité de l'échantillon du Contrôle qualitatif comme moyen de découvrir l'erreur des totaux du Recensement est limitée par l'erreur d'échantillonnage qui fausse les estimations de contrôle. Bien que l'erreur d'échantillonnage soit grande, les erreurs qui comportent les totaux du Recensement peuvent aussi être grandes et même ne pas être découvertes. Étant donné la variabilité de l'univers des fermes, le plan et la taille de l'échantillon du Contrôle qualitatif déterminent les erreurs d'échantillonnage des estimations. Dans le cas des pommes de terre (tableau III), par exemple, on peut attribuer à la seule erreur d'échantillonnage la différence observée de 12.8 p. 100; l'échantillon adopté pour le Contrôle qualitatif était donc un outil plutôt

¹ Les variances des estimations par quotient et des estimations directes ont été calculées au moyen des formules (4) et (15), respectivement, de W.E. Deming's données dans "On Simplification of Sampling Design through Replication with Equal Probabilities and Without Stages", J.A.S.A., mars, 1956.

it may be noted that approximately 80 per cent of the sample estimates in Tables III to VI are larger than Census totals. This suggests the presence of under-enumeration in the Census as a whole, even though for most items individually the observed difference can be attributed to sampling error.

The combined effect of incompleteness of coverage and error in reporting may be termed under-or over-enumeration. An unbiased estimate of the under-enumeration in the Census is the observed difference recorded in the tables except in the case of crops where the effect of changes in the farmer's intentions are reflected. These estimates of differences contain components due to sampling, definitional difficulties, changes in intentions, memory recall, and actual under-enumeration. Though providing a measure of under-enumeration they do not provide a means of adjusting Census statistics, but by indicating the relative stability of estimates by item, they should condition the use of the Census statistics in any particular study.

grossier pour déterminer la valeur des totaux du Recensement quant à la superficie de pommes de terre. A ce propos, il y a lieu de noter qu'environ 80 p. 100 des estimations de contrôle aux tableaux III à VI dépassent les totaux du Recensement. Il faut en conclure que le dénombrement a été incomplet dans l'ensemble au Recensement, bien que pour la plupart des articles en particulier la différence observée puisse être attribuée à l'erreur d'échantillonnage.

L'inTEGRALITÉ de la couverture et l'erreur intervenant dans les déclarations peuvent se traduire par un dénombrement exagéré ou insuffisant. Une estimation non faussée de l'insuffisance du Recensement est la différence observée indiquée dans les tableaux, sauf dans le cas des cultures qui se ressentent des changements intervenus dans les projets des cultivateurs. Les estimations des différences renferment des éléments qui tiennent à l'échantillonnage, aux difficultés liées aux définitions, aux changements intervenus dans les projets des cultivateurs, à la fidélité de la mémoire et au sous-dénombrement lui-même. Bien qu'elles fournissent une mesure du sous-dénombrement, elles ne fournissent pas le moyen de rectifier les résultats du Recensement; cependant, en indiquant la stabilité relative des estimations concernant chaque article, elles devraient servir de guide aux études qui utilisent la statistique du Recensement.

1. For comparison with the later censuses, deductions have been made as follows: 243 plots under 1 acre in 1901 and 1,278 in 1911. In 1911 and 1921, farms on Indian reserves were not included.

2. The land area total has been revised since the 1951 Census.

3. Area includes only improved acreage on Indian reserves.

4. Includes area operated by manager.

5. Includes field, garden, orchard and nursery crop land.

6. Includes field, vegetable, fruit and nursery crop land but excludes home gardens.

7. Includes idle land.

8. Includes duplication where farms had tractors under 15 h.p. and 15 h.p. and over.

9. Includes some farms reporting gas.

10. Does not include rent for farms operated by share tenants or by cash and share tenants.

11. Based on 20 p.c. sample.

1. Pour comparaison avec les derniers recensements, ont été éliminés: 243 lopins de moins de 1 acre en 1901 et 1,178 en 1911. En 1911 et en 1921, les fermes dans les réserves indiennes ne sont pas comprises.

2. Les chiffres de la superficie des terres ont été révisés depuis le recensement de 1951.

3. Les chiffres de superficie sont basés sur les données des réserves indiennes.

4. Comprend la superficie exploitée par le gérant.

5. Comprend la terre à grande culture, à jardins, à vergers et à pépinières.

6. Comprend la terre à grande culture, à légumes, à fruits et à pépinières, à l'exclusion des potagers.

7. Comprend la terre imprudente.

8. Comprend un double emploi alors que les fermes possédaient des tracteurs de moins de 15 h.p. et de 15 h.p. et plus.

9. Comprend certaines fermes qui déclarent le gaz.

10. Ne comprend pas le loyer des fermes exploitées par les locataires à parts ou les locataires partie à parts et partie en argent.

11. Fondé d'après un échantillon de 30 p. 100.

1. Les chiffres de la superficie des terres ont été révisés depuis le recensement de 1951. Les superficies totales des terres des divisions de recensement, qui n'ont pas été révisées, ne concordent pas avec le total provincial.

2. Comprend la terre à grande culture, à légumes, à fruits et à pépinières.

3. Comprend la superficie exploitée par le gérant.

1. Includes area operated by manager.

2. Includes field, vegetable, fruit and nursery crop land.

3. Includes data for 1 farm on Indian Reserves.

4. See footnote 3.

1. Comprend la superficie exploitée par le sérant.

2. Comprend la terre à grande culture à légumes, à fruits et à pépinières.

3. Comprend les données relatives à 1 ferme dans les réserves indiennes.

4. Voir renvoi 3.

FORM 6 (PART II) - AGRICULTURE

Name of operator _____
 Form No. _____ Dist. _____
 (Enter the same number as on Part I
 of the document for this form.)
 Enum. area. _____

Milk equivalent table

| Unit of measure | 1 gal. milk | 1 lb. butterfat | 1 lb. cream | 1 gal. cream | 1 lb. butter |
|--------------------------------|----------------|--------------------|----------------|-----------------|-----------------|
| Approximate milk equivalent | 10 lb. | 30 lb. | 10 lb. | 100 lb. | 25 lb. |

PRODUCTION OF WHOLE MILK, MAY 1956

| SALE OF MILK AND CREAM, MAY | Quantity | Milk equivalent lb. |
|--|----------|---------------------------|
| 49. Whole milk sold in MAY (Check unit - include milk sold retail and to dairy or factory) □ Gal. □ Qt. □ Lb. | | |
| 50. Cream sold, MAY: a) On a butterfat basis Lb. OR b) By measure Lb. (Report in pounds - 1 gal. of cream weighs approx. 10 lbs.) | | |

FARM USE OF MILK AND CREAM, MAY
(Do not include milk bought)

51. Butter made on this farm, MAY Lb.

52. Milk and cream used in
households, MAY
(Check unit - Convert cream to
milk equivalent)
□ Gal.
□ Qt.

53. Whole milk fed to live
stock, MAY
(Check unit - Do not include
skim milk)
□ Gal.
□ Qt.

54. Total whole milk produced, MAY
(Must equal the amount reported in 49 to 53)
Lb.

55. Number of cows and heifers milked yesterday No.

56. How much of the milk sold in MAY did
you sell directly to consumers?
(Not for resale)

RECENSEMENT DU CANADA, 1956
FORMULE 6 (PARTIE I)-AGRICULTURE
BUREAU FÉDÉRAL DE LA STATISTIQUE

N° de la ferme _____ (Dans l'ordre de la visite)

Dist. _____ Secteur de dénombr. _____

I. Nom et adresse de l'exploitant de la ferme
(Personne responsable de cette exploitation - propriétaire, locataire ou gérant employé)

Nom de famille _____

Prénom et initiales _____

R.R. no.

Adresse postale _____

2. Situation de la ferme-indiquer séparément chaque lot, section et partie de section. (Indiquer toute la ferme exploitée dans la section et dans les parties de section, qu'elles soit possédées, louée à bail ou autrement; d'autres personnes, ou confiée à un gérant)

| Quart de section et section | Township | Rang | Milieu | Posséde, louée à bail ou autrement, ou gérée (Inscrire P, loué G) | Superficie en acres |
|-----------------------------|----------|------|--------|---|---------------------|
| (a) | (b) | (c) | (d) | (e) | (f) |
| M.P. | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

N° du lot _____ Rang au # concessione _____

Superficie totale
(Inscrire aussi à la question 5)

3. En votre qualité d'exploitant, demeurez-vous dans cette ferme ?

Oui Non

4. De combien d'acres de cette ferme êtes-vous:

a) Propriétaire ?

10 20 30 40 50 60 70 80 90

1 2 3 4 5 6 7 8 9

b) Locataire à bail ou autrement ?

10 20 30 40 50 60 70 80 90

1 2 3 4 5 6 7 8 9

c) Gérant engagé ?

10 20 30 40 50 60 70 80 90

1 2 3 4 5 6 7 8 9

5. Quelle est la superficie totale de toute la ferme que vous exploitez ?

(Dans ce secteur de dénombrement ou ailleurs)

Répondez aux questions 15 à 34 ou verser avant de répondre aux questions 6 à 14

ÉTAT DE LA TERRE AU 1^{er} JUIN 1956

6. Terre ensemencée ou devant l'être en vue de la récolte de 1956

(La superficie doit être égale à celle déclarée à 33.)

7. Terre défrichée pour pâturage et paillage (Exclure la superficie devant être couplée cette année pour le foin, l'ensemencage et la semence)

8. Jachères

9. Autre terre défrichée (Brusseaux, roches, rochers, terres défrichées mais non exploitées, etc.)

10. Terre à bois

11. Autre terre non défrichée (Terre à feuilles mortes, pâtures naturelles, marais, etc.)

La somme des superficies données à 6 et 11 doit être égale à la superficie donnée à 5

10 20 30 40 50 60 70 80 90

1 2 3 4 5 6 7 8 9

12. Pâturages non défrichés-Superficie de terre non défrichée (Question 11) servant aux pâturages

10 20 30 40 50 60 70 80 90

1 2 3 4 5 6 7 8 9

13. Nouveaux labours-Superficie de terre vierge labourée pour la première fois en 1956

10 20 30 40 50 60 70 80 90

1 2 3 4 5 6 7 8 9

14. Herbes d'ensilage-Tonnes d'herbes de luzerne et de trèfle devant être coupées pour l'ensilage en 1956 (Exclure les malherbes de graminées)

10 20 30 40 50 60 70 80 90

1 2 3 4 5 6 7 8 9

Tonnes (Poids vert)

| d'énergie électrique pour cette ferme | | | | | | | | | | | | | | | |

Form 7

LIVE STOCK ELSEWHERE THAN ON FARMS

This form is to be used for reporting live stock on:-

- (1) All holdings under 1 acre.
(2) Other holdings under 3 acres if the agricultural production in 1955 was less than \$250.

Note: Agricultural operations on holdings of 3 acres or more must be reported on Form 6.

Province
Electoral District
Enumeration Area

Recensement du Canada, 1956
Bureau fédéral de la statistique

Formule 7

BESTIAUX AILLEURS QUE DANS LES FERMES

La présente formule doit servir au dénombrement des bestiaux dans:

- 1) Toutes les terres de moins d'une acre.
 2) Toutes les terres de moins de trois acres si la production agricole en 1955 a été inférieure à \$250.

Les opérations agricoles exécutées sur les terres de trois acres ou plus doivent être déclarées sur la forme 6.

- 1-17 Family composition.— Families by number of children, and children by age, for counties, municipalities of 10,000 and over, and metropolitan areas, 1956 (32 pp., 25 cents).
- 1-18 Families by type.— For counties, municipalities of 10,000 and over, and metropolitan areas, 1956 (32 pp., 25 cents).
- 1-19 Families by characteristics of head.— Families by marital status and sex of head, for provinces, municipalities of 30,000 and over, and metropolitan areas; family characteristics by marital status, sex and age of head, and age of husband by age of wife, for provinces, 1956 (28 pp., 25 cents).
- 1-20 Household and family status of individuals.— Population by sex, age, and marital status, showing household and family status; population by sex, age, and relationship to head of household, for provinces, 1956 (28 pp., 25 cents).

Reference Maps

- 1-21 Reference maps.— Provinces, counties and subdivisions, metropolitan and other major urban areas (60 pp., 50 cents).

Agriculture

A series of ten provincial reports, and a summary report for Canada, are being issued on the results of the 1956 Census of Agriculture. Each report contains information on the number and area of occupied farms, tenure, area of crops, number of livestock, output of dairy products, and inventories of farm machinery. Tabulations of this information by size, tenure, and by an economic classification of farms are also shown in the reports. Additional tables provide data on certain aspects of farm expenditures and farm labour.

- 2-1 Newfoundland (36 pp., 50 cents).
 2-2 Prince Edward Island (24 pp., 25 cents).
 2-3 Nova Scotia (36 pp., 50 cents).
 2-4 New Brunswick (42 pp., 50 cents).
 2-5 Quebec (210 pp., \$1.50).
 2-6 Ontario (132 pp., \$1.00).
 2-7 Manitoba (42 pp., 50 cents).
 2-8 Saskatchewan (66 pp., 75 cents).
 2-9 Alberta (42 pp., 50 cents).
 2-10 British Columbia (36 pp., 50 cents).
 2-11 Canada — Summary tables (54 pp., 75 cents).

In order to make available at an earlier date some of the data from the 1956 Census of Agriculture, three reports are being issued in advance of the provincial reports. They show the following information for the provinces and counties. The number and area of farms (Report No. A-1) are shown also for census subdivisions, and where possible, comparative figures are given for 1951.

- A-1 Number and area of farms (72 pp., 75 cents).
 A-2 Number of livestock on farms (48 pp., 50 cents).
 A-3 Area of field crops (36 pp., 50 cents).

Analytical Reports

A further series of 1956 Census reports (Reports No. 3-1, 3-2, etc.), will consist of analyses of the statistics in the earlier series. The subjects to be covered will include: Growth of Population, Rural and Urban Distribution, Age Composition, Marital Status, Households and Families, and Agriculture.

- 1-17 Composition de la famille.— Familles selon le nombre d'enfants, et nombre d'enfants selon l'âge, comtés, municipalités de 10,000 habitants et plus, et zones métropolitaines, 1956 (32 pages, 25 cents).
- 1-18 Familles selon le type.— Comtés, municipalités de 10,000 habitants et plus, et zones métropolitaines, 1956 (32 pages, 25 cents).
- 1-19 Familles selon les caractéristiques du chef.— Familles selon l'état matrimonial et le sexe du chef, provinces, municipalités de 30,000 habitants et plus, et zones métropolitaines; caractéristiques des familles selon l'état matrimonial, le sexe et l'âge du chef, et l'âge de l'époux selon l'âge de l'épouse, provinces, 1956 (28 pages, 25 cents).
- 1-20 Situation familiale et situation dans le ménage.— Population selon le sexe, l'âge et l'état matrimonial, situation familiale et situation dans le ménage; population selon le sexe, l'âge et le lien avec le chef du ménage, provinces, 1956 (28 pages, 25 cents).

Cartes de référence

- 1-21 Cartes de référence.— Provinces, comtés et subdivisions, zones métropolitaines et autres grandes agglomérations urbaines (60 pages, 50 cents).

Agriculture

Les résultats définitifs du recensement de l'agriculture de 1956 sont contenus dans une série de dix rapports provinciaux et dans un rapport récapitulatif national. Chaque rapport contient des renseignements sur le nombre et la superficie des fermes occupées, le mode d'occupation, la superficie des cultures, le nombre de bestiaux, la production de laitages et le nombre de machines agricoles. Les mêmes renseignements sont aussi classés selon la grandeur, le mode d'occupation et la catégorie économique des fermes. Des tableaux sont ajoutés qui donnent des détails relatifs à certains aspects des dépenses et de la main-d'œuvre agricoles.

- 2-1 Terre-Neuve (36 pages, 50 cents).
 2-2 Île-du-Prince-Édouard (24 pages, 25 cents).
 2-3 Nouvelle-Écosse (36 pages, 50 cents).
 2-4 Nouveau-Brunswick (42 pages, 50 cents).
 2-5 Québec (210 pages, \$1.50).
 2-6 Ontario (132 pages, \$1.00).
 2-7 Manitoba (42 pages, 50 cents).
 2-8 Saskatchewan (66 pages, 75 cents).
 2-9 Alberta (42 pages, 50 cents).
 2-10 Colombie-Britannique (36 pages, 50 cents).
 2-11 Canada — Tableaux récapitulatifs (54 pages, 75 cents).

Afin de faire connaître plus tôt certains des résultats du recensement de l'agriculture de 1956, trois rapports sont publiés avant les rapports provinciaux. Ils contiennent des renseignements pour les provinces et les comtés. Le Rapport n° A-1 contient aussi le nombre et la superficie des fermes des subdivisions de recensement et, là où la chose est possible, des chiffres comparatifs tirés du recensement de 1951.

- A-1 Nombre et superficie des fermes (72 pages, 75 cents).
 A-2 Nombre de bestiaux dans les fermes (48 pages, 50 cents).
 A-3 Superficie des grandes cultures (36 pages, 50 cents).

Rapports analytiques

Une troisième série de rapports sur le recensement de 1956 (Rapports 3-1, 3-2, etc.), comprendra des analyses de la statistique parue dans les deux séries précédentes. Les sujets observés seront: l'accroissement de la population, la répartition rurale et urbaine, la composition par âge, l'état matrimonial, les ménages et les familles, et l'agriculture.

REPORTS OF THE 1956 CENSUS OF CANADA

Results of the 1956 Census on Population and Agriculture are being issued as a series of reports, rather than as bound volumes. The reports are prepared so that by removal of the covers the tables can, if desired, be placed in loose-leaf binders or bound in volume form. In the latter case, Reports No. 1-1 to 1-21 would form the first volume, and Reports No. 2-1 to 2-11, the second. Introductory signatures and appendices will be issued on request to subscribers of the full series of population reports to complete the materials of this volume.

Population — General Characteristics

- 1-1 Electoral districts. — By counties and subdivisions, 1956 and 1951 (96 pp., 75 cents).
- 1-2 Counties and subdivisions. — By sex, Nfld., P.E.I., N.S., and N.B., 1956 and 1951 (8 pp., 25 cents).
- 1-3 Counties and subdivisions. — By sex, Quebec, 1956 and 1951 (16 pp., 25 cents).
- 1-4 Counties and subdivisions. — By sex, Ontario, 1956 and 1951 (12 pp., 25 cents).
- 1-5 Census divisions and subdivisions. — By sex, Man., Sask., Alta., B.C., Yukon and N.W.T., 1956 and 1951 (16 pp., 25 cents).
- 1-6 Incorporated cities, towns and villages. — (With guide to locations); metropolitan and other major urban areas, 1956 and 1951 (28 pp., 25 cents).
- 1-7 Rural and urban distribution. — Rural farm, rural non-farm and urban population, by sex, for provinces and counties, 1956 (16 pp., 25 cents).
- 1-8 Sex ratios. — Population by sex (showing proportions of males to females), for provinces, counties, municipalities of 10,000 and over, and metropolitan areas, 1956 (8 pp., 25 cents).
- 1-9 Age groups. — Five-year age groups and sex, for provinces, counties, municipalities of 10,000 and over, and metropolitan areas (by specified age groups), 1956 (64 pp., 50 cents).
- 1-10 Single years of age. — By sex, for provinces, 1956 (12 pp., 25 cents).
- 1-11 Marital status. — By sex, for provinces, counties, municipalities of 10,000 and over, and metropolitan areas, 1956 (44 pp., 50 cents).
- 1-12 Marital status by age groups. — By sex, for provinces, municipalities of 30,000 and over, and metropolitan areas, 1956 (32 pp., 25 cents).

Households and Families

- 1-13 Households by size. — Households showing average size, for provinces and incorporated centres of 1,000 and over, 1956 and 1951; dwellings (occupied, vacant and under construction), for provinces and municipalities of 10,000 and over, 1956; and households by number of persons, for counties, municipalities of 10,000 and over, and metropolitan areas, 1956 (44 pp., 50 cents).
- 1-14 Household composition. — Households by number of families and lodgers, for counties, municipalities of 10,000 and over, and metropolitan areas, 1956 (24 pp., 25 cents).
- 1-15 Households by characteristics of head. — Households by type, for provinces, municipalities of 30,000 and over, and metropolitan areas; household characteristics by sex and age of head, for provinces, rural and urban, 1956 (24 pp., 25 cents).
- 1-16 Families by size. — Families showing average size, for provinces and incorporated centres of 1,000 and over, 1956 and 1951; families by number of persons, for counties, municipalities of 10,000 and over, and metropolitan areas, 1956 (40 pp., 50 cents).

(Continued on inside back cover)

RAPPORTS DU RECENSEMENT DU CANADA, 1956

Les résultats du recensement de la population et de l'agriculture de 1956 sont publiés dans une série de rapports plutôt qu'en volumes reliés. Les rapports sont préparés de façon que, si on le désire, on puisse, en enlevant la couverture, placer les tableaux dans des reliures à feuilles mobiles ou les relier en volumes. Dans ce dernier cas, les rapports 1-1 à 1-21 formeraient le premier volume et les rapports 2-1 à 2-11, le second. Une introduction et des appendices seront envoyés sur demande aux personnes qui s'abonneront à la série complète des rapports sur la population, ce qui complétera la matière de ce volume.

Population — Caractéristiques générales

- 1-1 Districts électoraux. — Par comté et subdivision, 1956 et 1951 (96 pages, 75 cents).
- 1-2 Comtés et subdivisions. — Selon le sexe, T.-N., I.-P.-É., N.-É., et N.-B., 1956 et 1951 (8 pages, 25 cents).
- 1-3 Comtés et subdivisions. — Selon le sexe, Québec, 1956 et 1951 (16 pages, 25 cents).
- 1-4 Comtés et subdivisions. — Selon le sexe, Ontario, 1956 et 1951 (12 pages, 25 cents).
- 1-5 Divisions et subdivisions de recensement. — Selon le sexe, Man., Sask., Alb., C.-B., Yukon et T.N.-O., 1956 et 1951 (16 pages, 25 cents).
- 1-6 Cités, villes et villages constitués. — (Guide des localités); zones métropolitaines et autres grandes agglomérations urbaines, 1956 et 1951 (28 pages, 25 cents).
- 1-7 Répartition rurale et urbaine. — Population rurale agricole, rurale non agricole et urbaine, selon le sexe, provinces et comtés, 1956 (16 pages, 25 cents).
- 1-8 Masculinité et féminité. — Population selon le sexe (proportion des hommes par rapport aux femmes), provinces, comtés, municipalités de 10,000 habitants et plus, et zones métropolitaines, 1956 (8 pages, 25 cents).
- 1-9 Groupes d'âge. — Groupes quinquennaux selon l'âge et le sexe, provinces, comtés, municipalités de 10,000 habitants et plus, et zones métropolitaines (selon certains groupes d'âge), 1956 (64 pages, 50 cents).
- 1-10 Années d'âge. — Selon le sexe, provinces, 1956 (12 pages, 25 cents).
- 1-11 État matrimonial. — Selon le sexe, provinces, comtés, municipalités de 10,000 habitants et plus, et zones métropolitaines, 1956 (44 pages, 50 cents).
- 1-12 État matrimonial par groupe d'âge. — Selon le sexe, provinces, municipalités de 30,000 habitants et plus, et zones métropolitaines, 1956 (32 pages, 25 cents).

Ménages et familles

- 1-13 Ménages selon la taille. — Ménages et taille moyenne, provinces et centres constitués de 1,000 habitants et plus, 1956 et 1951; logements (occupés, vacants et en construction), provinces et municipalités de 10,000 habitants et plus, 1956; et ménages selon le nombre de personnes, comtés, municipalités de 10,000 habitants et plus, et zones métropolitaines, 1956 (44 pages, 50 cents).
- 1-14 Composition du ménage. — Ménages selon le nombre de familles et de chambres, comtés, municipalités de 10,000 habitants et plus, et zones métropolitaines, 1956 (24 pages, 25 cents).
- 1-15 Ménages selon les caractéristiques du chef. — Ménages selon le type, provinces, municipalités de 30,000 habitants et plus, et zones métropolitaines; caractéristiques des ménages selon le sexe et l'âge du chef, provinces, régions rurales et régions urbaines, 1956 (24 pages, 25 cents).
- 1-16 Familles selon la taille. — Familles et taille moyenne, provinces et centres constitués de 1,000 habitants et plus, 1956 et 1951; familles selon le nombre de personnes, comtés, municipalités de 10,000 habitants et plus, et zones métropolitaines, 1956 (40 pages, 50 cents).
