WEYMOUTH WEEKLY GAZETTE.

PUBLISHED EVERY FRIDAY MORNING, BY C. G. EASTERBROOK.

THE PRESCRIPTION.

I wish you would tell James, when he comes in, to turn the cows in the lower lot. And if Turpin calls, tell him I have concluded to take those sheep. I want the Merinos. And while I am getting ready, please take my memorandum book and note down four harness straps, five pounds of mola, and a gimlet, half a jock-strap, and—and yes, I believe that the all. I forgot them when I made out the items this morning.

Mrs. Streeter rose wearily, laid her sleeping babe carefully in a crib, and proceeded to attend to the various errands named. She was young—not over twenty-five, but the blonde complexion was sadly faded, the brown hair thin and lustreless, and faint lines were already marking the white forehead, while the tired eyes told of care, and hinted strongly of an unsatisfied love.

And this thin-cheeked, pink-lipped woman had been called a beauty only seven years before. She had been admired and petted, but not spoiled. And when she gave her hand to Newton Streeter, she could say, what so few girls of even eighteen can, "I married my first love."

Judge Streeter, the father, was supposed to be wealthy. But soon after his son's marriage, a financial crisis came, and his thousands dwindled into hundreds. It was false pride, perhaps, but the young man shrank from a position under those who had once looked up to him. And his thoughts turned wistfully toward the western prairies where the sun he could now call his own, would render him independent of others at least. He expected objections from his young and accomplished wife. But she saw with his eyes, and was not only willing but eager to follow him to the westward.

A hired girl seemed necessary on the farm, but a girl could be dispensed with. Indeed, the small dwelling contained but three sleeping apartments, and that fact, added to their uncertain income, induced Mrs. Streeter to take upon herself the entire care of the household.

She was a systematic housekeeper, abhorred dirt in all its phases; and the rich, alluvial soil seemed ever haunting her, like a taunting spirit of labor that would not be appeased. In dry weather it was every where, and in wet, it became a smatch that was hardly less aggravating.

Two children had come in the seven years to nestle in her bosom. But one, a fey girl of three summers, had slid away from them, and was now sleeping beneath the flowers of the prairie. And the tired wife had sighed as she looked on the first child she had ever seen. "This will never tell as I have done, but oh, I wanted her so much!" the lovely mother sobbed forth.

Mr. Streeter was now considered a wealthy farmer. His acres were broad, his stock had increased, the little village, a mile away, had put on city airs, and the steam horse waded respectfully at its depot.

Still, the thrifty farmer confined himself closely to labor, hardly taking time for needful rest. The love of getting had increased with his gains, and he was constantly scheming and planning to add to his already many acres. Physically and mentally strong, he had grappled with toil, and it hardly left a mark on his splendid physique—bronzed a little, and with harder hands, that was all.

A pleasant home, with a gentle, loving wife ever studying his tastes and wishes, why should he wear fastidiousness? But of her? Naturally frail she had been like a willow beneath a burden voluntarily taken up. With the exception of an inefficient girl for a few weeks when little Mary died, she had performed all the labor required in the house since she became a mistress.

As a girl she was a great reader and an extravagantly fond of music. But there was no room in the small dwelling for her piano, and it still remained back in the old home; and books only added to her labor by accumulating dust, for where was the time to read them? "Physically and mentally strong, he had grappled with toil, and it hardly left a mark on his splendid physique—bronzed a little, and with harder hands, that was all."

Newton Streeter took the memorandum, glanced hastily at the neatly written items, and then said, "One thing more, Mary, and then I am off. Please see this button a little closer."

The loose button was soon confined to its place, and then Mary Streeter watched her husband as he stepped into the light buggy and drove rapidly away.

But not for long might she linger, for the sponge was waiting in the kitchen to be used, and baby's naps were like angel's visits. And before her task was well over, his bugle note called to arms, and the fretful child was taken up and carried, and soothed to quietness. But he would not go down again, and back and forth from the kitchen she carried him as she watched the leaves brown in the oven.

ed to purchase another parcel of land, he found no supper prepared, and his wife helpless upon the bed, with her cheeks flushed with fever, and the wailing child distracting her with demands for care.

A physician and nurse were soon summoned from the city, and the weary wife enjoyed the luxury of being nursed. But convalescence soon followed, and before leaving his patient, the old doctor, a close observer and deep thinker, took the husband aside and asked: "Do you know what brought this fever on your wife, Mr. Streeter?"

"No," in a surprised tone. "I don't know, doctor." "Certainly, I am anxious to know," "You have worked her nearly to death." The red flushed out, beneath the tan. "You are speaking of my wife not my horse."

"Granted, and I say again, you are working her to death." "Really, doctor, such language is unpardonable." "And yet you will pardon it. And furthermore, by the great love for the self-sacrificing woman we have just left, I shall perform an operation on your eyes."

And then in his own peculiarly abrupt manner, he placed the hard, cold facts before him, from the time she came a bride, beautiful and accomplished, to the village, up to the date of her present illness in which domestic cares only had hindered her cherished dreams. In concluding he added: "I truly believe, if she takes up her old burden at once, that before a year has passed, the grave or an insane asylum will receive her."

"The strong man shuddered. As a witness, sir, I have only performed the exacted this sacrifice. She voluntarily took up her burden by my side, and as uncomprehendingly kept step with me."

"No, she has not kept step, to follow out your own figure. Unable to keep up with your long rapid strides, she has fallen, faint and footsore, by the way. And she has not been able to carry her load. I will take her in my arms and carry her a while. I mind you she must rest for both her mind and body, or I will not answer for the result. And it would be better if found away from here."

"Yes, I begin to comprehend. And it can be found away. And, offering his hand, he said, "I will take care, doctor, that you do not get a chance to administer another such a dose to me."

"Then see that you do not need it," replied he dryly, as he mounted his horse and rode away.

Mr. Streeter went back to the room where a systematic housekeeper, abhorred dirt in all its phases; and the rich, alluvial soil seemed ever haunting her, like a taunting spirit of labor that would not be appeased. In dry weather it was every where, and in wet, it became a smatch that was hardly less aggravating.

Two children had come in the seven years to nestle in her bosom. But one, a fey girl of three summers, had slid away from them, and was now sleeping beneath the flowers of the prairie. And the tired wife had sighed as she looked on the first child she had ever seen. "This will never tell as I have done, but oh, I wanted her so much!" the lovely mother sobbed forth.

Mr. Streeter was now considered a wealthy farmer. His acres were broad, his stock had increased, the little village, a mile away, had put on city airs, and the steam horse waded respectfully at its depot.

Still, the thrifty farmer confined himself closely to labor, hardly taking time for needful rest. The love of getting had increased with his gains, and he was constantly scheming and planning to add to his already many acres. Physically and mentally strong, he had grappled with toil, and it hardly left a mark on his splendid physique—bronzed a little, and with harder hands, that was all.

A pleasant home, with a gentle, loving wife ever studying his tastes and wishes, why should he wear fastidiousness? But of her? Naturally frail she had been like a willow beneath a burden voluntarily taken up. With the exception of an inefficient girl for a few weeks when little Mary died, she had performed all the labor required in the house since she became a mistress.

As a girl she was a great reader and an extravagantly fond of music. But there was no room in the small dwelling for her piano, and it still remained back in the old home; and books only added to her labor by accumulating dust, for where was the time to read them? "Physically and mentally strong, he had grappled with toil, and it hardly left a mark on his splendid physique—bronzed a little, and with harder hands, that was all."

Newton Streeter took the memorandum, glanced hastily at the neatly written items, and then said, "One thing more, Mary, and then I am off. Please see this button a little closer."

The loose button was soon confined to its place, and then Mary Streeter watched her husband as he stepped into the light buggy and drove rapidly away.

ed into something or somebody else. But the merry twinkle in his eyes told him he was enjoying her surprise, and slowly she began to realize the entire situation. Yes, now she understood his strange reluctance to mention what he was doing, and his willingness to have her remain, even after she expressed anxiety to return.

"Come, I have more to show you," and he showed her into a large, commodious room, furnished from her only sleeping apartment, even to baby's crib. This is for you. And now lay aside your dusty garments and prepare for tea. It must have been ready an hour ago. I will go and see."

When he returned, he found his wife sitting in her little rocker and weeping silently. "Have I wounded where I wished to heal?" he asked a little reproachfully.

"For once, which the people against the Chinese. This feeling among a certain portion of the population is already a white heat. And I will add just here that this Chinese question will be the grand political issue in our next state election, and it is thought this will be the first time since the war that a man who can trace his ancestry back to Ireland can be counted upon to oppose any measure that favors in any way the Chinese population, and many others among the laboring classes, will vote and labor against the interests of the Chinese, as they are against the existing dull, trying times to the presence of the Chinese in our midst."

But this letter was to be a continuation of the customs and habits of the Chinese as seen among us. It may be not understood that the 70,000 Chinese of California are not all of the same race. On arriving here those who have friends or relatives are at once provided for, while those who come as strangers bring letters from the county in which they have been living to the company here that represents that county. That there are six Companies in this city representing the interests of the six counties of Canton, the names of the companies are as follows: Ning Yung, Kong Choo, Hop Woo, Sam Yung, Young Woo, Yung Woo.

Men arriving from these different companies, and passengers may in the Chinese language, the sum of \$5 in coin, which secures them a lodging place and food until they find employment. This being the case it is for the interest of these companies to see that they are employed at an early day. This \$5 also secures the return of their bones to their country, and the death; for a Chinaman die without the assurance that his remains will finally rest with those of his ancestors is to die without hope.

When men are received by these companies, their names and former homes are registered in a book, and whenever they are employed the facts are so stated in this book against their names, so that a reliable record is kept of their whereabouts.

Chinese labor is gradually working its way into all departments of trade and industry, and as they can do the work more cheaply than Americans will, they work for much lower wages. Their food consists principally of rice, and they eat no bread, butter, cheese or eggs, drink no coffee and use but little sugar. (I am speaking now of the laboring classes.) The articles of food that enter so largely into the consumption of our people. A very small proportion of this class, in fact we might say almost none, have wives in this country, and by crowding together in some basement or loft to sleep, the cost of living is still further reduced.

The business of making cigars was formerly conducted by Jews principally, but they, finding Chinese labor cheap and available employed it. The result was, the enterprising business Chinamen, after learning the trade, started business themselves, hiring of course their countrymen exclusively to do the work, working also themselves. This has increased until now the business is almost entirely in the hands of the Chinese.

The same thing is true of the slipper manufacturing, and this business is constantly being taken over by the Chinese to the extent of a great many factories. The Chinese in either of the above named countries carrying with them to work, working also themselves. This has increased until now the business is almost entirely in the hands of the Chinese.

I will state just here a fact that may have a significance to your readers. A secondary business has been established in factories conducted by the Chinese before the suburbs of the city a few days since, with the evident intent of destroying the property and driving the operators from their work. But probably to their surprise, the attacking party were countrymen exclusively, who, with their light and reach within two inches of the bottom of the tank, leaving a space in the tank something larger than that occupied by the sixty cases, for the chemical to circulate about and act on the cases, when the chemical falls below freezing point. In each of these cases is poured a quantity of glycerine, diluted with water, but which will not freeze till the temperature of the vaporizing fluid is reduced at least ten degrees below zero, Fahrenheit. Tin cans or moulds, twenty-six inches deep by twelve wide and two thick, holding twenty pounds of pure water, are now dropped into these cases, the glycerine filling the vacant space between the moulds and cases, and acting as a conductor of the cold to the water; or, more correctly speaking, as a conductor of the latent heat of the water to the imprisoned chemical, which kept in a constant state of evaporation, carrying the extracted heat off to the cooling tank. The slabs of ice frozen in these moulds, at a temperature at least sixteen degrees below the freezing point, contain less latent heat, or in other words, more frost, than natural ice frozen on the surface of a pond.

When the process of freezing is completed the moulds are lifted, one at a time, and dipped in a small tank or tub of water heated by the exhausted steam from the engine, for an instant, and are then turned upside down to let the cake or slab slip out. By piling six such slabs on top of each other, while the surfaces are slightly wet they instantly freeze together, making solid blocks two feet long and one foot square and weighing 120 pounds.

Chinese labor is gradually working its way into all departments of trade and industry, and as they can do the work more cheaply than Americans will, they work for much lower wages. Their food consists principally of rice, and they eat no bread, butter, cheese or eggs, drink no coffee and use but little sugar. (I am speaking now of the laboring classes.) The articles of food that enter so largely into the consumption of our people. A very small proportion of this class, in fact we might say almost none, have wives in this country, and by crowding together in some basement or loft to sleep, the cost of living is still further reduced.

The business of making cigars was formerly conducted by Jews principally, but they, finding Chinese labor cheap and available employed it. The result was, the enterprising business Chinamen, after learning the trade, started business themselves, hiring of course their countrymen exclusively to do the work, working also themselves. This has increased until now the business is almost entirely in the hands of the Chinese.

Their food consists principally of rice, and they eat no bread, butter, cheese or eggs, drink no coffee and use but little sugar. (I am speaking now of the laboring classes.) The articles of food that enter so largely into the consumption of our people. A very small proportion of this class, in fact we might say almost none, have wives in this country, and by crowding together in some basement or loft to sleep, the cost of living is still further reduced.

LETTER FROM CALIFORNIA.

SAN FRANCISCO, CAL., May 25, 1870. Mr. Editor:—Since my last letter, upwards of 2000 Chinese have arrived on our harbor, direct from Hong Kong. The steamer Japan brought 1370, the ship Wm. Wilson 380, and the ship Niagara which arrived Sunday 530. This last vessel has been placed in quarantine, she having two cases of small pox on board, besides having buried several at sea, who died of the same disease. Doubtless the passengers will be detained on board till the scourge has left the ship entirely, and there appears no possibility of the disease being communicated to the inhabitants on shore, as such an event would greatly excite the people against the Chinese. This feeling among a certain portion of the population is already a white heat. And I will add just here that this Chinese question will be the grand political issue in our next state election, and it is thought this will be the first time since the war that a man who can trace his ancestry back to Ireland can be counted upon to oppose any measure that favors in any way the Chinese population, and many others among the laboring classes, will vote and labor against the interests of the Chinese, as they are against the existing dull, trying times to the presence of the Chinese in our midst."

But this letter was to be a continuation of the customs and habits of the Chinese as seen among us. It may be not understood that the 70,000 Chinese of California are not all of the same race. On arriving here those who have friends or relatives are at once provided for, while those who come as strangers bring letters from the county in which they have been living to the company here that represents that county. That there are six Companies in this city representing the interests of the six counties of Canton, the names of the companies are as follows: Ning Yung, Kong Choo, Hop Woo, Sam Yung, Young Woo, Yung Woo.

Men arriving from these different companies, and passengers may in the Chinese language, the sum of \$5 in coin, which secures them a lodging place and food until they find employment. This being the case it is for the interest of these companies to see that they are employed at an early day. This \$5 also secures the return of their bones to their country, and the death; for a Chinaman die without the assurance that his remains will finally rest with those of his ancestors is to die without hope.

When men are received by these companies, their names and former homes are registered in a book, and whenever they are employed the facts are so stated in this book against their names, so that a reliable record is kept of their whereabouts.

Chinese labor is gradually working its way into all departments of trade and industry, and as they can do the work more cheaply than Americans will, they work for much lower wages. Their food consists principally of rice, and they eat no bread, butter, cheese or eggs, drink no coffee and use but little sugar. (I am speaking now of the laboring classes.) The articles of food that enter so largely into the consumption of our people. A very small proportion of this class, in fact we might say almost none, have wives in this country, and by crowding together in some basement or loft to sleep, the cost of living is still further reduced.

The business of making cigars was formerly conducted by Jews principally, but they, finding Chinese labor cheap and available employed it. The result was, the enterprising business Chinamen, after learning the trade, started business themselves, hiring of course their countrymen exclusively to do the work, working also themselves. This has increased until now the business is almost entirely in the hands of the Chinese.

I will state just here a fact that may have a significance to your readers. A secondary business has been established in factories conducted by the Chinese before the suburbs of the city a few days since, with the evident intent of destroying the property and driving the operators from their work. But probably to their surprise, the attacking party were countrymen exclusively, who, with their light and reach within two inches of the bottom of the tank, leaving a space in the tank something larger than that occupied by the sixty cases, for the chemical to circulate about and act on the cases, when the chemical falls below freezing point. In each of these cases is poured a quantity of glycerine, diluted with water, but which will not freeze till the temperature of the vaporizing fluid is reduced at least ten degrees below zero, Fahrenheit. Tin cans or moulds, twenty-six inches deep by twelve wide and two thick, holding twenty pounds of pure water, are now dropped into these cases, the glycerine filling the vacant space between the moulds and cases, and acting as a conductor of the cold to the water; or, more correctly speaking, as a conductor of the latent heat of the water to the imprisoned chemical, which kept in a constant state of evaporation, carrying the extracted heat off to the cooling tank. The slabs of ice frozen in these moulds, at a temperature at least sixteen degrees below the freezing point, contain less latent heat, or in other words, more frost, than natural ice frozen on the surface of a pond.

When the process of freezing is completed the moulds are lifted, one at a time, and dipped in a small tank or tub of water heated by the exhausted steam from the engine, for an instant, and are then turned upside down to let the cake or slab slip out. By piling six such slabs on top of each other, while the surfaces are slightly wet they instantly freeze together, making solid blocks two feet long and one foot square and weighing 120 pounds.

Chinese labor is gradually working its way into all departments of trade and industry, and as they can do the work more cheaply than Americans will, they work for much lower wages. Their food consists principally of rice, and they eat no bread, butter, cheese or eggs, drink no coffee and use but little sugar. (I am speaking now of the laboring classes.) The articles of food that enter so largely into the consumption of our people. A very small proportion of this class, in fact we might say almost none, have wives in this country, and by crowding together in some basement or loft to sleep, the cost of living is still further reduced.

By piling six such slabs on top of each other, while the surfaces are slightly wet they instantly freeze together, making solid blocks two feet long and one foot square and weighing 120 pounds.

ingly a "Washmen's Association," or, as they would probably call it, "the high and equitable confederation of intelligent washmen," was formed, consisting of the longest tails and smallest eyes to be found in Chinatown. They laid down rules which were as exacting and impartially which insured their being broken if the Chinamen had anything human about them. The regulations were as follows: No wash-house could be started within ten houses of another, including both sides of the street; a rule that applied to barbers in San Francisco, would, we fear, be disastrous to many of them. If the wash-house were situated on a corner then it could include ten houses each way on each of the four streets. The several companies entered solemnly into this contract, but the commission was so sharp that the restrictive sometimes transgressed, and those cases of delinquency as well as applications for permission to establish new wash-houses were adjudicated upon and discussed by a sort of

CHINESE BOARD OF SUPERVISORS, which met regularly each Sunday in the city hall, at the corner of Dupont and Sacramento street, at the corner of Dupont and Kearny and Dupont streets, a locality densely inhabited by Chinamen. For Sunday last a violation of the above rules was fixed for consideration. It was Yung, or Wash Up Company, who had only built a wash-house on Third street, within the prescribed distance of another establishment, but had actually charged a lower price for their washing than the rules of the association allowed. The Board assembled, and the mighty question was brought upon the agenda, to be discussed, and ultimately decided against the Was Yung. The latter, however, had a strong lobby of friends, still stronger in the possession of pistols, knives, hatchets, cleavers, iron bars, and clubs, and directly the decision was announced, they went for the president of the board, who was sitting at the table, and a general melee ensued. Not content with breaking one another's shaven skulls with iron bars, and still further flattening noses and closing up eyes with heavy clubs they began firing at one another with derringers and revolvers. The firing could be distinctly heard, and that a fight was going on, rushed up the stairs and joined in the affray till the house was completely filled with a mob of fighting Mongolians. At this juncture officers Mangier, Duffield and Irving, attracted by the sound of the firing, arrived at the scene, but of course were not able to effect anything toward the dispersion of the Celestial host, locked in deadly conflict within the narrow confines of the Joss House; and the chances of a pension were hardly definite enough to induce the officers to find themselves into the office regardless of consequences. They accordingly withdrew for aid, and officers Hines, McLaughlin and States obeyed the summons. Although six in number, the officers were still unwilling to attempt the Joss House; and sundry chair legs and a live Chinaman propelled through one of the windows together with the cries, roars, yells, and a general smash up of everything, from skulls to teeth and plaster partitions, which were going on in the interior, were not encouraging. All the officers, however, were ready to die, and from being reinforced. About this time some excited individual went to the police office and announced there two policemen killed; and Captain Hanna and four men at once started to the rescue. As they approached the pandemonium, the firing could be distinctly heard, and the storming the stairs at last, fought their way into the room where the principal combat was raging, and by the persuasive argument of the club, succeeded in persuading the combatants of the advisability of peace. Before, however, this desirable consummation was reached, the trapped Celestials made a wild attempt to escape, and rushing down the stairs tried to overpower the officers by weight of numbers. It was not to be done, however, they were seized as fast as they came, tied in pairs, and pushed aside. Fifteen, three of them wounded, were secured.

"TOO MUCH THE BUSH!"

There is a narrow channel, some thirty miles in length, which separates the island of Cape Briton from the mainland of Nova Scotia, called the Strait of Canso. To the north limit of this channel, where it connects with the Gulf of St. Lawrence, the Indian once published his light canoe. Being ready to return just as a gentle breeze sprang up from the north, he pulled up a little spruce brush and placed it in the bow of his canoe for a sail. Seating himself in the stern, he grasped his paddle and glided on. The wind soon freshened into a furious gale, and the poor Indian did not dare to leave his seat to pluck up the brush and cast it away. On and on, beyond the little cove, where stood the wigwams of his tribe, by harbor after harbor, where nestled securely many a vessel, he sped as on the wings of the wind; and as he flew by Cape Croker harbor and jutting point, he pointed to his extemporized sail and frantically shrieked: "Too much the bush!" Thus shrieking, louder than the wail of the gale, he dashed on to the open sea and was seen no more.

In these days of thoughtless, wicked extravagance, how many families are gliding before a breeze which will soon be the bush! O man! O woman! just feeling the moving breeze of fashion, listen and hear from those who are caught in the gale the cry, "Too much the bush!"

PIQUANTS.

An injured hiquant in Dayton, Ohio caught his wife just on the point of eloping with a handsome man. He took a terrible vengeance by locking up all her good clothes, and then telling her to go. In place where saloons abound, where wine sparkles on the sideboards at evening parties, many and many a young man, the hope of many a home, the pride of many a circle, is just leaving the shores of purity, peace, and domestic love, gliding off to the temptations of the bush. In places where saloons abound, where wine sparkles on the sideboards at evening parties, many and many a young man, the hope of many a home, the pride of many a circle, is just leaving the shores of purity, peace, and domestic love, gliding off to the temptations of the bush. THE ERIE RAILWAY.

The battles of the railway bulls and bears have brought into general notice the great lines of railway extending from New York city to the West...

The construction of the Erie Railway was commenced in 1836, the enterprise receiving State aid to the amount of \$3,000,000...

With this brief statistical review of the great thoroughfare, our readers will be in a position to form a correct opinion...

EAST WEYMOUTH.

The Y. M. C. A. will commence a series of open air meetings the first Sabbath in July.

Next Sabbath afternoon Rev. D. W. Waldron will give a Sabbath School of instruction in which he will speak of the restoration of our Sabbath Schools to the Temperance cause.

A Sabbath School is soon to be organized at Lovell's Corner. It is to be held in Shaw's Hall, Sunday afternoons, at 5 o'clock.

STRUCK BY LIGHTNING.—During the tempest of Monday last, the house of Mr. Leavitt Bates was struck by lightning.

THEIR SUCCESSFUL ADVENTURES.—On Saturday evening last, the shoe store of Mr. John Crane, on Washington Square, was forcibly entered.

A large assortment of Straw Hats can be found at C. S. Williams, Weymouth.

OUT DOOR CONCERTS AT SO. WEYMOUTH.—Two of our enterprising young men at So. Weymouth, last Saturday evening started a subscription paper.

HEALTHY HOME for this week (dated June 20th) contains the first of a series of sketches entitled "John Throp's Night Thoughts."

PUBLIC DOCUMENTS.—Dr. Torrey of Washington, has forwarded a large amount of documentary matter relating to the business of the different State departments.

NATIONAL CAMP-MEETING.—The National Camp-meeting is to be held in Hamilton, Mass., from June 21, to July 1.

GRAND CONCERT.—A crowded house greeted the South Shore Orchestral Union at their concert given in Weymouth Town Hall on Tuesday evening last.

At Hornsbluffs, 322 miles from the point of departure, the main track passes one of the most beautiful and fertile spots in the State.

DRY GOODS and clothing at low prices at C. S. Williams, Weymouth.

LOVELL'S CORNER.

The Union Circle held their annual strawberry festival last Tuesday evening. Owing to the festival in the Town Hall the same evening the attendance was small.

Last Monday, Rebecca Kimball, of this place, went to work on clothing in the house of Mrs. Asa Holbrook, as she was wont to do.

SABATH SCHOOL ASSOCIATION.—The Weymouth Sabbath School Association held its monthly meeting on Sunday evening last in Rev. Mr. Rockwood's Church in N. Weymouth.

Monday night in this section was comparatively a sleepless one, as according to all intelligence, most people were listening to the deep toned voice of the clematis.

FOR NEW YORK.—We have previously had occasion to commend our routes for the New York and Boston Steamship line.

THE FOURTH.—The Directors of the Weymouth Agricultural and Industrial Society, believing it to be a wise policy to provide home entertainment for our citizens on the anniversary of American Independence.

RECONSTRUCTION.—Miss Ellen Adair of Weymouth, who is a teacher in a freedman's school in North Carolina, writes that that State is far from being reconstructed.

RECENT DEATHS.—On Monday last, at 6 o'clock, at the house of Mr. N. F. Baker was struck by lightning.
