Love, smiling, roams its pathways
When each day is done.

LAWN GRASS SEED

The earlier in the Spring the lawns can be rolled, fertilized and reseeded the better they will thrive when warm weather comes.

Plan to improve the LAWN—Don't be content with a worn-out, moth-eaten, patchy appearance. Make a LAWN that will last. First of all BUY ONLY THE VERY BEST SEED OBTAINABLE. CHEAP LAWN SEED IS DEAR AT ANY PRICE. You wish to raise GRASS, not WEEDS. Be sure that the soil for your lawn is rich, so as to furnish the grass roots an abundance of food. Sow the seed as early in the spring as possible to get the grass well started before the very hot weather arrives.

APRIL or MAY are both good for SPRING SOWING. Figure on about a pound for every 300 square feet.

Top dress the LAWN with BONE MEAL about 2 weeks before seeding, mixing the Bone Meal with fine screened loam (1 part loam to 5 of bone).

Do not apply bone meal at the same time the seeding is done.
