### PERSONAL.

Mr. Waiter Jones has been apointed City Engineer of Niagara Falis, N. Y.

Mr. Geo. W. Ames has been appointed City Engineer of Grand Rapids, Mich., with a salary of \$2,400 per year. Mr. Gustave A. Roullier, M. Am. Soc. C. E., of Flushing, N. Y., has been appointed Engineer in Charge of Water Supply for the Borough of Queens, New York

city. Mr. L. F. Lewis has been appointed City Commissioner of Baitimore, Md., with Messrs. O. W. Comet, F. S. Hancock and John S. Patterson as Assistant City Commissioners.

Mr. William L. Kenly, M. Am. Soc. C. E., Consulting Engineer of the Water Department, Baltimore, Md., has been appointed Chief Engineer of the same, to succeed Mr. Nicholas S. Hill, Jr.

Mr. Frederick H. Beach has been elected President; Mr. Charles E. McOmber, Vice-President; Mr. A. B. Paine, Secretary, and Mr. C. E. Lent, Philadelphia, Pa., easurer, of the Bailston Terminal R. R., Ballston,

Mr. James Dredge, M. Inst. C. E. and Editor and one of the proprietors of London "Engineering," has had recently conferred upon him the title of Companion of the Order of St. Michael and St. George. Mr. Dredge was one of the English Commissioners to the Chicago Exposition in 1893.

Exposition in 1833. Mr. H. L. Noyes, civil engineer, has severed his con-mection with the Buffalo Bridge & Iron Works, and has opened an office at 846 Eilicott Square, Buffalo, N. Y. He will make a specialty of the design and inspection of steel bridges and buildings, and will also represent the Pittsburg Testing Laboratory, Ltd., of Pittsburg, Pa.

Mr. Russell Sturgis, the editor of the "Dictionary of Architecture," to be published by the Macmillan Co., has selected Mr. William Paul Gerbard, Consulting Sanitary Engineer, to write the articles on plumbing, house drain-age and kindred subjects for the dictionary. Mr. Gerhard has recently heen elected an honorary corresponding member of the British Fire Prevention Committee.

The Canal Investigating Commission, which will in-vestigate the work already done in enlarging and im-proving the Erie, Champlain and Oswego canals in New proving the Eric, Champiain and Oswego canais in New York state, has been appointed by Governor Black, and Consists of Messrs. George Clinton, Buffalo; Darwin R. Jones, Brookiyn; Frank Brainerd, New York; William McEchron, Glens Falls; Smith M. Weed, Plattsburg; Franklin Edson, ex-Mayor of New York, and A. Foster Higgins, Chairman of the Harbor Committee of the New York Chearer of Commerce The State Science of the New Tork Chamber of Commerce. The commission will in-restigate the expenditure of the \$9,000,000 appropriated for canal improvements and such other matters in consection with the work as are in the judgment of the formission of public interest. The commission may em-ploy counsel, experts, engineers and such other assist-ants as it may deem necessary.

Ants as it may deem necessary. Mr. Mordecai T. Endicott, C. E., U. S. N., M. Am. Soc. C. E., was appointed by the President on March 21, Chief of the Bureau of Yards and Docks, in the Navy Depart-ment, to succeed Rear Admiral E. O. Matthews, retired. Mr. Endicott was born in New Jersey in 1844, and was graduated as a Civil Engineer from the Rensseiaer Poly-technic Institute, of Troy, N. Y., in 1868. He practiced his profession as a civil and mining engineer in the Penn-Sylvania coal regions. and on railway and hridge work in sylvania coal regions, and on railway and hridge work in Connecticut and Ohio. In 1872 he became an assistant engineer on the first improvements at the League Island Navy Yard, in Philadelphia, and from there was trans-Navy Yard, in Philadelphia, and from there was trans-ferred to the oid Philadelphia Navy Yard. On July 13, 1894, he was commissioned a Civil Engineer, U. S. N., and later served in that capacity at the New London Na-val Station, and at the Portsmouth, League Island, Nor-folk and Port Royal Navy Yards. On April 4, 1890, he Was called to the Navy Department as Consulting Engi-meer to the Eureau of Yards and Docks, and held that of-lee at the time of the recent superiment. Mr. Dedicate after to the Sureau of Yards and Docks, and Hein that the fice at the time of his recent appointment. Mr. Endicott was also a member of the Nicaragua Canal Commission of 1895, and a member of the U. S. Armor Factory Board of 1897. He was made a Member of the American Society of 1897. He was made a Member of t of Civii Engineers on April 7, 1877.

### OBITUARY.

Mr. William J. Whitaker, civil engineer, of Pittsburg, Pa., died March 12, aged 30.

Mr. Arnold B. Hoimes, electrical inventor, of Newton, Mass died recently, aged 69.

Mr. David Demarest, one of the oldest raliway contrac-ors in the country, died March 19, at Newark, N. J., aged 84 years.

84 years. Mr. Aliyn Cox, Secretary and Treasurer of the New York, Chicago & St. Louis R. R. and Secretary of the Beech Creek R. R., died suddenly March 18, at his office in New York city, aged 62. He entered the railway ser-vice in 1870, and was at one time Private Secretary to the President of the Canada Southern Ry. He was also Secretary and Treasurer of the Carthage & Adiron\*ack Ry. He was a memher of the Metropolitan Museum of Art and of the American Museum of Natural History. His brother, Mr. Charles F. Cox, is Treasurer of the Cleveland, Cincinnati, Chicago & St. Louis Ry. and Cleveland, Cincinnati, Chicago & St. Louis Ry. and Secretary and Treasuler of the Toronto, Hamilton & Buffalo Ry., with office in New York city.

Admiral Popoff, the inventor of the famous Popoff war ship, died at St. Petersburg, Russia, March 19. Taking the Ericsson "Monitor" as model, he invented a curious circular iron-clad vessel, around the circumference of circular iron-clad vessel, around the circumference of which were arranged tweive propeilers, which could be worked separately, thus giving the vessel a movement in any direction desired. Upon the disk was a turret with a brace of heavy coast defense guns inside. This vessel at-tracted a great deal of attention at the time and hecame the subject of much expert controversy. With it, its de-fense, its striking power, its supposed advantage of being propelled quickly in any direction, Admirai Popoff thought to revolutionize naval warfare. The vessel, however, proved witerly unseaworthy. proved utterly unseaworthy.

Hon. wheelock Graves Veazey, of Vermont, a member of the Interstate Commerce Commission from 1889 to 1896, died at Washington, D. C., March 22. Judge Veazey was died at Washington, D. C., March 22. Judge Velzey was born in Rockingham Couuty, N. H., Dec. 5, 1835, and there passed bis early life. He was educated at Philips-Exeter Academy and Dartmouth College. He was admitted to the bar in Vermont in 1860, practising until the war broke out, when he was made captain in a volunteer Vermont regiment. He served with distinction at Gettysburg, and was a full Colonel when discharged. He was Judge of the Supreme Count of Vermont in parts it is 1860, and suc Supreme Court of Vermont from 1878 till 1889, and suc-ceeded Aidace F. Waiker on the Interstate Commerce Commission in 1889, serving until 1896, when he resigned through ili-heaith. He leaves a widow and a son and a daughter.

Gen. Geo. W. Rains died at Newhurg, N. Y., March 21. Gen. Rains was horn in Craven County, N. C., in 1817. He went to the United States Military Academy at West Point, and was graduated in 1842. He was first assigned to the Engineer Corps, hut was transferred to the artillery and assigned to the Fourth Regiment in 1843. The fol-lowing two years he was Assistant Professor of Chemistry, Mineralogy, and Geology at West Point. During the Mex-ican War he served on the staffs of Gen. Scott and Gen. Pillow, and was hrevetted Captain and Major for gallantry at Contreras, Churubusco, and Chapuitepec. He served in the Seminoie War, and in 1856, after being made Captain, resigned, to hecome part proprietor and Presi-dent of the Washington Iron Works and Highland Iron Works at Newburg, N. Y. When the rebeilion broke out he followed the fortunes of his native State, and was given a commission as Colonel in the Confederate Army He had charge of the erection and equipment of a powder mill at Augusta, Ga. He was made a Brigadier General in 1865. Two years later he accepted a position as Professor of Chemistry and Pharmacy in the medical department of the University of Georgia.

AMERICAN WATER-WORKS ASSOCIATION.
June, 14-15. Annual meeting Buffalo, N. Y. Secy., Peter Milne, 95 William St., New York city.

ENGINEERS' CLUB OF MINNEAPOLIS.-A meeting of this club was held on March 14. Mr. Howe read a paper on "Brick Paving," which was followed by a paper entitled "Some Effects of Heating and Work on Iron and Steel," by Mr. Harry E. Smith.

STREET RAILWAY ACCOUNTANTS' ASSOCIATION OF AMERICA.-The second annual convention of this Association will be held in Boston, Mass., Sept. 6-9. Parers will he read and various blanks exhibited. The meeting will be at the same time as that of the American Street Raiiway Association.

SCRANTON ENGINEERS' CLUB.—A regular meeting of this club was held March 17. Prof. M. C. Hseng, Dean of the School of Mines, Pennsylvania State College, delivered a lecture on the "History and Development of Gold Mining; the Disposition of Claims, the Rights of Claim Hoiders and Mining Laws."

STATE ENGINEERS .- A meeting of the State Englneers of Colorado, Nebraska, Kansas, Utah and Wyom-ing was held March 7 at Cheyenne, Wyo., to consider the administrative problem arising out of the questions of as the consideration of uniform iaws relating to irrigation and water rights in the states represented.

LOUISIANA ENGINEERING SOCIETY .- At the regular meeting of this society, held March 14, Mr. Thos. L. Raymond read a very interesting paper, entitled "The Best Method of Treating the Mouths of the Mississippi River." He favored the improvement of Southwest Pass, as it is the best suited for navigation, and sfter the removal of its bar by jetties it would afford an enduring waterway 1,200 ft wide, not less than 35 ft. deep in any part of its channel.

BOSTON SOCIETY OF CIVIL ENGINEERS .-BOSTON SOCIETY OF CIVIL ENGINEERS.-The an-nual meeting of this society was held March 16, with about 250 members present. Reports of the officers were read, followed by a fecture on "Road Construction" given by Mr. William E. McClintock of the Massachu-setts Highway Commission. The following officers were elected to serve during 1808: Pres., Howard A. Carson; Vice.Pres. Alexis H. French: Seev. S. Everett Tinkham: Vice-Pres., Alexia H. French; Secy., S. Everett Tinkham; Treas., Edw. W. Howe; Librarian, Frank L. Fales; Director, X. H. Goodnough.

Director, X. H. Goodnough. ENGINEERING ASSOCIATION OF THE SOUTH.— The regular monthly meeting was held March 10 at Nash-ville. Hunter McDonald, Chief Engineer of the Nash-ville, Chattanooga & St. Louis Ry., presented a paper, entitled "Small Railway Culverts." Costs and efficiency of cast-iron pipe, clay pipe and brick culverts were treated. The writer advocated the use of circular brick culverts for culverts exceeding 3 ft. in diameter. He

94

stated that in the past few years 3,997 ft. of brick cul-verts have been built ranging in diameters from 3 to 6 ft., and that as yet no failure has occurred. Mr. Wm. Leftwich, Asat. City Engineer of Nashville, discussed the sewer system of Nashville. He gave a short historical sketch of the development of the present evatem and data showing present coats of city sewer system, and data showing present costs of city sewer

WESTERN SOCIETY OF ENGINEERS .- At the meetwhich is a paper on "Mechanical Plants of Large Buildings" was read by Mr. Dankmar Adler, describing the power equipment necessary for the light, heat, and elevator service, and sometimes for the ventilation of large buildings. At the Auditorium there is an arrangement for cooling the fresh air in summer by passing it through a spray of brine, but it is rarely that the tem-perature of the hall itself can be lowered more than 2°

A paper on "Improved Portland Cement," by Mr. John W. Dickinson, was then read, in which tables were given showing the superiority of certain American brands over some German brands.

ENGINEERS' CLUB OF ST. LOUIS .- The 469th me ing of this club was held March 16. The paper of the evening, hy Mr. E. W. Sterne, was entitled "The Steel Frame of the St. Louis Coliseum," and treated of the roof which has lately been built over the Collseum building in St. Louis. The paper gave a general descrip-tion of the arches, the loads for which the atrains were figured, and the grade of steel used in the construction. The details of the various members and the methods by which the expansion was taken care of were described. After the discussion Prof. Johnson presented by title a

paper hy Mr. Carl G. L. Barth, entitled "Investigation of Col

Mr. Croshy called attention to the fact that girders were being taken out of the Polytechnic Building which had heen in service about twenty years, and stated that this was a good opportunity to observe the effect of rust upon this class of work. Richard McCuiloch, Secv.

ENGINEERS' CLUB OF PHILADELPHIA.—At the regular meeting held Mar. 5, Mr. Benjamin Franklin presented a paper, entitled "The inspection of Buildings." The paper referred to the good resulting from the Building Law of Philadelphia in correcting vicious forms of construction. In the discussion Prof. Edgar Marhurg called attention to certain radically defective portions of the building law, and stated that the allowable unit load of timber should be fixed by law, leaving nothing for the judgment of the designer.

Mr. James Christie discussed the safe loading of tim-ber, and gave 750 ibs. as an outside limit for fiber stress, further stating that cast-iron columns should no longer be permitted on first-class work. The building laws should also discourage the use of lime and encourage the use of cement mortars. the

Mr. J. T. Richards advocated the formation of some high tribunsi which should establish a standard of strength of materials. Sand used in making mortars and the connections of framed structures were items meeding attention in the building laws.

WESTERN RAILWAY CLUB .- At the meeting of March 35, held at the Auditorium Hotel, Chicago, there was an interesting discussion on a paper by Mr. Gustave Giroux on "The M. C. B. Coupler," which paper gave special atwhich paper gave special attention to the methods of drop-testing couplers. There was also some discussion as to the amount of air brake tentio equipment required on freight trains in order to comply with the federal law. Mr. G. W. Rhodes (C. B. & Q. R.  $\mathbb{R}$ .) thought a train having air brakes on the driving the federal law. wheels, tender and one-fourth of the cars would meet the legal requirements, but he did not think any railway would stop when it had fitted a third or a quarter of its equipment. One of the greatest troubles in freight serwith hrake the men in the caboose would be notified of a break-in-two as promptly as the men on the front end. The Southern Pacific Ry. is having a number of cars equipped with train pipes only, so that trains can be made up in station order and not in air-brake order, and the C., B. & Q. R. R. is going to try the plan on 1,000 cars. In the discussion, however, a strong protest was made against any such plan, on the ground that the airbrake equipment is needed on all cars to meet service conditions, regardless of legal requirements. Later there brake was a discussion on some proposed changes in the Car Interchange Rules.

The club voted to accept an invitation to hold its April meeting at Lafayette, Ird., to inspect the mechanical laboratory at Purdue University, and also to visit the shops of the Chicago, Indianapelis & Louiaville Ry.

ONTARIO LAND SURVEYORS .- The 6th annual meeting of this organization was held on March 8 at the Par-liament buildings, Toronto. The usual routine business connected with the opening of a convention was transacted, and the first day was devoted to the President's address and various committee reports. On the second day Mr. A. W. Campbell, chairman of the engineering committee, presented a report in which he referred the importance, from an engineering standpoint, of of the proposed Mackenzle & Mann Ry., and also to the pro-posed railway from Toronto to James Bay. Continuing, he outlined the development of Canadian mines and water power during the past year, as well as municipal and

civil engineering. The Committee on Topographical Sur-vey presented its report through Mr. L. B. Stewart, This was a brief resume of what best the state of the was a brief resume of what had been done during the year in that branch of science. Special atress was laid upon the need of a geodetic survey upon which to base the topographic survey.

The report of the Committee on Land Surveying was presented by Mr. M. Gaviller. In this it was stated that the large demand for mining location surveys, and supplying information for the development of the same, has afforded a promising opening to those who had taken the technical courses at any of the engineering colleges. the technical courses at any of the engineering colleges. During the third day other reports were read, as were several papers. The bill proposed by the Canadian So-ciety of Civil Engineers to regulate the practice of civil engineering in the Dominion of Canada and define what was meant by civil engineering was considered. During the three days' session the papers mentioned in our is-sue of March 10, 1898, were read. The election of offi-cer for the averting was required in the following ophics: cers for the ensuing year resulted in the following choice: Pres. P. S. Gibson, Willowdaie; Vice-Pres., H. J. Bow-man, Berlin; Secy.-Treas., H. J. Van Nostrand, Toronto.

AMERICAN SOCIETY OF CIVIL ENGINEERS.— At the regular meeting held March 16, a paper on "Mov-able Dams," by Mr. B. F. Thomas, M. Am. Soc. C. E., was read by the secretary. This was a very complete review of the subject, based upon researches made by the author when Assistant Engineer under the late Maj. James C. Post, U. S. Engineers. The various forms of movable dams in use here and abroad were treated his torically and described in detail.

discussion which followed, it was stated that In the movable dams were well suited to the conditions existing on many rivers in this country, and that they were without doubt superior to solid dams where heavy and sudden freshets occurred. Shutter dams operated by hydraulic cylinders all supplied from the same pipe, using the pressure due to the head to operate pumps, or steam operated pumps, were worthy of serious consideration. Accumulators could be pumped up when the dam was Accumula raised, thus affording power to raise them at some other time. Ice might cause trouble, but the same pos-sibility existed with all forms of movable dams.

It was also suggested that there was a tendency to run towards complicated forms of shutters and folding dams. The simplest was apt to he the best, and the old style shutters hinged so they 'could be released and allowed to swing down-stream, were after all an excellent form. They were first folded up-stream at low water, and when it was desired to raise the dam, catches were released, allowing the shutters to lift part way by their own buoyancy. In this way they would be caught by the current and raised to a vertical position where each shutter would be held by a chain which was released when desired by a suitable trip catch. Capt. H. N. Chittenden, U. S. A., in a written dis-

cussion suggested that the term movable dam was too hroad, and that the several types needed special and appropriate names. In their operation all work should he done by the power of the water, and owing to the danger to operators, especially at high watér, hand work should be eliminated.

In a communication Mr. D. A. Watt stated that movahle dams were quite extensively used abroad generally on small rivers, but there was no reason why they should be restricted to small rivers. He considered the needle type, using trestles 20 ft, apart, as possessing many advantages

SOCIETY OF ENGINEERS. Columbia University. regular meeting of this society was held Columbia University, New York city. M March 18 Mr. Gano S Columbia University, New York city. Mr. Gano S. Dunn, Chief Engineer the Crocker Wheeler Electric Co., spoke upon the subject "New and Old Systems of Power Distribution in Factories." Heretofore most attention had been given to the saving of power, and nearly all claimed advantages in the use of electricity, for factories had stopped at this point. There were, however, many resultant effects of varity more importance that the resultant effects of vastly more importance than the saving of power. Taking the average employee's pay as about \$500 per year, the cost of power used per man in many cases is not more than 1% of his wages for the It is therefore apparent that a saving of 25% of the operating power plays a very small part in the cheapening of manufacture. The other savings brought about are the proper ones to consider. Considering the item of power for the moment, the relative economy of electrical and mechanical shop transmission is often disputed. There is, however, no question that where power is to be distributed throughout a long shop, or where it must be transmitted from floor to floor or around angles, must be transmitted from noor to noor or around angles, electricity is far superior to the ordinary systems em-ploying belts, bevel gears and long lines of shafting. Engineers, in designing a shafting system, cannot figure upon an average load, for the shaft must be able to stand the greatest possible load due to all the machines starting or operating at once. This may seldom or never occur, and yet, year in and year out, that mass of shaft-ing, belting, etc., must be operated. With an electric system the average load can be adopted, and even should an abnormal load fall upon the generators, the worst that can happen is to throw one or possibly several circuit Another factor playing guite an important part breakers. In shafting transmission is the settling of buildings, with a consequent distortion of shafting and increase in fric-tion. If any out-buildings are to be supplied with power,

quarter turn belts, bevel gears or rope drives are neces-sary, and the efficiencies of these devices are usually lower than those given by text books. The many belts necessary to drive machinery from a long line of shaft-ing all exert a sidewise pull upon shafting in-creasing the friction of bearings and hence the creasing the intertoin of bearings and hence the waste power to a marked degree. One case illustrating very clearly where a large proportion of power goes in a mechanical transmission system came to light in a machine shop where a steam engine weighing 6,700 lba costing \$1,000, was employed to drive 73,000 lbs., costing \$1,000, was employed to drive 73,000 lbs. of pul-leys, belts and shafting, costing \$3,800. A large propor-tion of this mass could have heen eliminated by the use of direct connected electric motors.

use of direct connected electric motors. Mechanical distribution does not permit of the use of single tools unless the entire system is operating. In the average shop each tool will be in operating. In 75% of the time, yet the shafting must always be run-ning ready for the instant use of all machines; also the shutting down of any one machine makes practically no difference in power cost. Loose pulleys frequently ab-sorb large emounts of power. In the case of night work, resulting as a rule from a congestion of work about a few tools, the whole system of shafting and beiting must run in order that these few machines may be opho

With the electrical system, employing small motors, operating one, two or three adjacent machines, it would he entirely different, the only power expended being that necessary to drive the congested machines. In the older methods it was necessary to lay out the building with the transmission system constantly in view. Building had to be heavier and ceilings higher to accommodate Buildings had to be neavier and cerings insuer to accommodate shafting and belting. With electricity, more floors could be built within the same height of walls, the shops could be lighter, buildings and machinery could be placed wherever convenient, and the power easily conveyed where needed.

where needed. The ease with which the speed of electrically driven machines can be controlled, either by changing arma-ture voltage or field strength, and the added fact that the buildings can he lighted from the power mains tend to put the balance in favor of electricity.

In connection with some of the special applications of electricity to manufacture, Mr. Dunn stated that in the manufacture of silk the close speed regulation of motors, driving the looms directly, had reduced the amount of spoiled material to a very marked degree. In printing offices also great saving resulted from the use of mo-tors, the best example of this being the Government Printing Office in Washington, D.C., which is the larges world. Here the operating expenses, formerly \$11,000 day, were reduced about \$1,500 per day, due to the the greater speed at which presses could be run and the ensponsible for the loss of a considerable amount of paper.

by George R. Blanchard; "Needful Harbor Im-ents," Louis Windmuller; "The Commercial Suprovements, premacy of New York," John C. Guhring; "Our Con-sular Service," John N. Beach.

ODORS AND TASTES OF SURFACE WATERS, with Special Reference to Anahacma, a Microscopical Organ-ism Found in Certain Water Supplies of Massachu-aetts. By D. D. Jackson, Assistant Biologist, and J. W. Ellms, Assistant Chemist, of the Massachusetts State Board of Health, Boston, Mass. Reprinted from the Technology Quarterly, Vol. X., No. 4, December, 1897. Paper, 7 × 10 ins.; pp. 11; one plate. Address the authors.

The organism to which this reprint is largely devoted gives rise, while in its natural state, to a moldy, grassy which, in the case of decay, changes to a pig pen l. The natural odor of this and several other orodor, smell. ganisms mentioned in the pamphlet is believed to be "due compounds of the nature of essential oils." The alet describes briefly a series of experiments ma The pam phlet the authors to determine the cause of the odor due to anabaena.

ANNUAL REPORT OF THE CHIEF OF THE BUREAU OF CONSTRUCTION AND REPAIR to the Secretary of the Navy, for the Fiscal Year ending June 30, 1897,--Washington, D. C.: Government Printing Of-fice. Paper; 9×6 Ins.; pp. 75; with diagrams. This annual report of Chief Constructor Philip Hicbbora, U. S. N., Chief of Bureau, contains valuable information building the provide of the U.S.

relating to the vessels of the U. S. Navy, and upon the very important additions to plant is the model-tank to be set up at Washington, and for which Congress appropriated \$02,500 on March 3, 1897. The contract for building this tank was awarded to the Penn Bridge Co., of Beaver Falls, Pa. for \$50,000. It will be the largest and best equipped model-tank in the world.

THE PROCEEDINGS OF THE 31ST ANNUAL CONVEN-TION OF THE AMERICAN INSTITUTE OF ARCHI-TECTS.-Heid at Hotel Cadillac, Detrolt, Mich., Sept. 29, 30 and Oct. 1, 1897. Publiahed by the Board of Directors. Alfred Stone, Editor. Paper, 9½×7 ins.; pp. 117.

The proceedings of this 31st annual convention of the Included are Institute are published a a handsome form. Included are the reports of committees, lists of officers and members, speeches made at the convention and papers read. Among the pap

the papers is a very interesting one on the American etcher-artist Whistler, hy Mr. W. L. B. Jenney, of Chi-cago, and a portrait of Mr. A. J. Bloor, for many years Secretary of the Institute, forma a frontispiece to the rolume. The present Secretary of the Institute is Mr. Aired Stone, of Providence, R. I., and those interested Alired St

TEST OF THE SYNCHRONOGRAPH ON THE TELE-GRAPH LINES OF THE BRITISH GOVERNMENT.-By Albert C. Crehore, Ph.D., and George Owen Squires, Ph.D. Pamph., 5% × 9 ina.; pp. 34; illus-trated.

This is a report submitted to the Poatmaster-General of the United States giving the results of a rather complete the United States giving the results of a rather complete series of tests of the rapid telegraphing system invented by the authors of the paper.

in the report a knowledge of their apparatus and pre vious experiments (Proc. Am. Inst. E. E., Apr., 1897) is vious experiments (Froc. Am. 1981, E. E., Apr., 1897) is assumed and the recent experiments made on the govern-ment telegraph lines in England during the summer of ment telegraph ince in Lagrand curing the summer of 1897 are described. Four tests were made with circuits rang-ing from 557 miles to 1,097 miles in length. To make this long circuit the regular postal wires were used from this long circuit the regular postal wires were used from London to Aherdeen via York and Edinburgh, 535 miles; Aberdeen to Glasgow, 151 miles, and Glasgow to London, a distance of 411 miles. Using the ordinary Wheatstone ransmitter and receiver and 100 voits, 185 words per minute were sent over the linea. Using the aynchrono-graph and a Wheatstone receiver and a voltage of 215, messages were transmitted at a rate of 540 words per formed. With the synchronograph alone, using a chemical messages were transmitted at a rate of D40 words per minute. With the synchronograph alone, using a chemicai receiver, the rate was 723 words or the timit of the al-ternator, which was being operated at 2,892 revolutions per minute. In their conclusions the authors state as the re-sult of their experiments that the substitution of the synchronograph for the uaual Wheatstone transmitter, retainchronograph for the uaual Wheatstone transmitter, retain-ing the same receiver in each instance, increased the speed threefold. Further, that it is possible to use a higher voltage with a resulting benefit. Figures and curves pertaining to the volume of postai and telegraph husiness in England are given, and also curves showing the speed and distance relations between wires of different materials, as well as other data of es-pecisi interest. The concluding paragraph may be quoted and more as showing an opinion which is coming more and more

into prominence: It is believed that the government control and operation of the telegraph would prove a great benefit to the people of the United States. The natural relation hetween this service and the general postal service requires that they should be under the same department for the most effi-cient and economical management.

#### TRADE PUBLICATIONS.

(The standard sizes for pamphlets and trade catalogues reconnected by all the principal engineering societies of the United interesters  $1\cdot 2 \times 6$  ins.;  $6 \times 9$  ins., and  $9 \times 12$  ins.)

GAS AND GASOLINE ENGINES.—New Era Iron Works Co., Dayton, O. Paper, 7% × 5% ins.; pp. 32. The New Era engines are of the horizontai, aingle-cylinder

cycle type, with center crank and two flywheels.

 METAL BRAKEBEAMS.—Monarch Brakeheam Co., Detroit, Mich. Paper, 5% × 3½ ins.; pp. 12.
 This pamphiet describes two forms of hrakebeams. The "Monarch" is built up as a howstring truss with a 2½-in.
 steel pipe and 1-in. truss rod, while the "Solid" has a 5-in. Both are fitted with malleahie iron heads for the i.heam rakeshoes, wheel guard clips, and hrake lever jaws.

WINDMILLS AND WOODEN TANKS.-Wiiliams Mfg. Co., Kalamazoo, Mich. Paper; 4 × 10 ins.; pp. 32; also 6×10 ins.; not paged; both illustrated.

These two catalogues describe Manvel, Empire and Kal-amozoo windmills; steel towers for elevated tanks; and cedar, cypress, white pine and tamarack tanks; acid vats and silo tanks; hand pumps, well plants and other sun-141418

DURYEA MOTOR WAGONS.—The Duryea Motor Wagon Co., 837 State St., Springfield, Mass. Pamph.; 7% × 5½ ins.; pp. 18; Illuatrated.

This little pamphiet, hy means of half-tones and hrief descriptions, presents one of the highest types of gasoline road carriages. It clearly shows a form of vehicie, many of which we may expect to see about our streets in the near future.

STEAM JET PUMPS.—The E. W. Vanduzen Co., Cin-cinnati, O. Paper, 3½×6 ins.; pp. 14. In this method of lifting water, a steam pipe is carried

down parallel with the main pump plpe, and is tapped into the latter above the water level, the steam jet being directed upward. It is stated that this method is in extensive use, and a number of extracts from testimonials are given.

GAS AND GASOLINE ENGINES.—Columhus Machine Co., Columhus, O. Paper, 6×9% ins.; pp. 4. The Brown engine manufactured by this company is of the horizontal type, with central crank and two fly wheels. A special form of electric igniter is used, and the engine can be run in either direction hy making a alight change, which can be effected in a few minutes. The aizes range irom 3 HP. to 50 HP.

THE NEW WALKER SUSPENSION FOR RAILWAY MOTORS.—The Walker Co., Cleveland, O. This is circular No. 1065 of the company's regular series. In it a new form of motor suspension is explained and its points of excellence set forth. Briefly, the usual position of the springs is reversed and the motor, instead of resting rigidly upon the axie. rests upon a cross har, and has dly upon the axle, rests upon a cross har, and has

arms from this sieeve to the armature shaft hold the gears in proper relative position, while permitting the springing.

springing. MiLLING MACHINES.-Ingersoil Milling Machine Co., Rockford, Ill. Paper,  $S_{A}^{*} \times 6$  ins.; pp. 30. This firm huids slah-milling machines exclusively, with either horizontal or vertical spindies. A new type of machine has been brought out, and the milling cutters are made in all widths and for milling any shape. The line restions show various patterns of machines for milli-

illustrations show various patterns of machines for mili-ing surfaces, slotting, dressing boxes, etc. AIR COMPRESSORS.—The Ingersoli-Sergeant Drill Have meyer Building, New York. Paper;  $5\% \times 3\%$  pp. 20; illustrated.

This is a condensed edition of the catalogue of air-com-

pressors, showing the various types of compressors, and, on the opposite page, the names of users. It is a handy little volume, which will be supplied to any reader of this notice on application to the firm named.

CANDELABRA AND BATTERY LAMPS.-Geuerai Ele tric Co., Harrison, N. J. Pamph.; 5½ × 7½ ins.; ; tric Co., Harri 44; iilustrated.

This pamphiet is in keeping with all the literature issued by the General Electric Co. As implied in the name, it is devoted to the consideration of miniature incandescent lamps for decorative, dental or surgical purposes. The pamphlet is illustrated with excellent actual size wash drawings of the different styles and sizes of miniature lamps, sockets, receptacles and shades for use upon ordinary incandescent battery circuits.

SURVEYORS' AND ENGINEERS' INSTRUMENTS AND SUPPLIES.-T. F. Randoiph, Cincinnati, O. Paper.  $6 \times 9$  ins; pp. 36. This is an illustrated catalogue and price list of in-

struments and supplies. Among the specialties are a surveyor's compass fitted with a telescope supported by oue side frame, this taking the piace of the ordinary sights. There is also a light ievel for ditch and road work, in which the telescope turns on a vertical spindle. The biadea of all compass needlea are twisted so that the metai ia on edge at the ends, thus giving a fine live in reading

MARINE GAS ENGINES.—Union Gas Engine Co., San Francisco, Cai. Paper.  $9\% \times 5\%$  ins.; pp. 48. The Union gas and oil engines are made for marine and stationary work, and are of 4 to 40 HP, while special patterns are kept for engines up to 125 HP. The eu-

gines are double cylinder, vertical, inverted direct acting, gines are double cylinder, vertical, inverted direct acting, and the iiiustrations include a number of haif-tones of launches, yachts and trading vessels with engines of 4 to 60 and 120 HP. Some of the vessels have twin screws Similar engines are used for driving hoists and air com-pressors, hut the atationary engines are of the horizontal type.

ARCHITECTS AND ENGINEERS.-Constahie Bros., 22 East 16th St., New York City. Paper, 14×11 ins.; pp. 12.

This is a series of handsome photogravures in colors of various public and private huldings designed by this firm. With it is an essay on fire-proofing lately delivered as a lecture hy Howard Couatable hefore the Bostou Soclety of Architects. This firm, including Stevenson Con-stable, late Chief of the Building Department of New York city, will devote especial attention to fireproof construction and tests, in connection with their general huai-ness as architects and engineers.

REFRIGERATING AND ICE MAKING MACHINES Vuican Iron Works, San Francisco, Cal. Paper, 6 (5) Vuican Iron ins.; pp. 87.

This firm's plant operates on the compression aystem, the cooling effect heing produced by the evaporation of liquid anhydrous ammonia. The different atyles of ma-chines are described, as well as the manufacture of ice hy the can system and the plate system, and the methods of insulating cold atorage rooms. Specifications are given for planta of various capacities, and there are lists of customers, and particulars of engines, hoilers, pumps, etc., manufactured by this firm.

WOVEN WIRE FENCE.—Page Woven Wire Fence Co., Adrian, Mich. Paper;  $9 \times 6\frac{1}{2}$  ina.; pp. 32; iilustrated. These fences are woven of galvanized wire in such a man-

The laterals are made of hard steel wire; and the catalogue lilustrates and describes fences for parka or paddocks, farms. gardens, lawns, cemeteries, etc. Ornamental double and single gates are shown; and special attention is paid to the supply of the standard rallway fencing. The photographic illustrations show clearly the appearance of the various types of fence in use; while more detailed draw-ings give the dimensions for each.

BOOSTERS .- Walker Co., Cleveland, O. This is No. 1068 of the regular series of Walker circulars. It is a hrief description of what a hooster is and the typea of such apparatus manufactured hy the Walker Co.

ELECTRIC LOCOMOTIVES .- This is also a Walker circular, being No. 1067. As the title implies, it is de-voted to describing the several styles of electric locomo-tives manufactured by this company. This includes small, comparatively light machines for mine haulage when small headroom is obtainable and very narrow gages are used, large and heavier machines still for mine service, special locomotive cars for passenger or freight service, and iastly, electric locomotives for speeds up to 60 miles, capable of exerting a draw-bar pull of 26,000 hs. when running at a speed of 17 miles per hour. Suitable iliustrations accompany the description

**BAILWAYS.** ALLEGHENY & WESTERN.-J. M. Floesch, Ch. Engr., Kittanning, Pa., writes us that the contract for construct-ing 11 miles of railway on this line from Punxsutawney, Pa., westward, has been let to the Pennsylvania Construc-tion & investment Co., of which A. E. Patton, of Cur-wensville, Pa., is president.

ALASKA.-The Alaska R. R. Co. was incorporated in New Jersey, March 19, with a capital stock of \$1,000,000, of which \$1,000 is paid in. it is proposed to construct a railway from a point on the Lynn Canai, in Alaska, to Fort Selkirk. The incorporators are: Clinton W. Sweet, New York; Joel Francis Freeman, East Orange, N. J.; Henry W. Desmond, Cranford, N. J.

Henry W. Desmond, Cranford, N. J. BALTIMORE & OHIO.-The new tunnel on this line at Falls Cut was used for the first time on March 14. The distance was shortened thereby about 600 ft., and six curves climinated. The new tunnel is 535 ft. long and has been built for a double track.-Plans of the route for the proposed new entrance of this railway into Washington, D. C., for the purpose of abolishing grade crossings have been agreed upon by the company and District officials, and the street extension plans made to conform thereto. As planned, the Washington Branch will leave its old line near Montello station, proceeding parallei to and 200 ft. from New York Ave., extended un-til it joins the present Metropolitan Branch. From thence it will proceed down Delaware Ave. on a four-track masonry and earth viaduct to tbe terminus. Yards will probably be located at the intersection of the two lines in Eckington. It is the intention to do away with every grade crossing in the District of Columbia. The bill authorizing this work will be reported next year.

BEAVER CREEK.-J. B. McIntyre, Engr., Jersey Shore, Pa., informs us that no track extension of this line is contemplated, as stated in current reports.

line is contemplated, as stated in current reports. BUFFALO, ROCHESTER & PITTSBRUG.-Press re-ports state that Bennett & Talbot, of Greensburg, Pa., and M. H. Smith, of Altoona, Pa, have been awarded the con-tract by this company for boring a tunnel, 2,300 ft. long, between Punxsutawney and Moss Grove. This is on the proposed extension to Butler, Pa., where it is expected to meet the Pittsburg, Bessemer & Lake Erle and to gain an entrance into Pittsburg. William E. Hoyt, Ch. Engr., Rochester, N. Y.

CHESTNUT RIDGE .- W. W. Booth, of Kunkletown, Pa. CHESTRUT RIDGE.-W. W. Bootn, of Kunkletown, Pa., Informs us that bids are now being received for the con-struction of this railway from Lehigh Gap to Kunkle-town, via Miliport and Little Gap, a distance of 15 miles, for the purpose of opening up about 6,000 acres of clay soil. Surveys have been made, the right of way obtained and the capital subscribed. Pres., James Pearsol, Kun-kletown, Pa.

CiliCAGO, ROCK ISLAND & TEXAS.—John D. Hughes has been awarded a contract, according to reports, for the grading of the first 15 miles of the proposed extension of this line from Bridgeport to Jacksboro, Tex. II. A. Par-ker, of Chicago, III., is interested.

ker, of Chicago, Ill., is interested. CINCINNATI, GEORGETOWN & PORTSMOUTH.-E. W. White, Vice-Pres., Cincinnati, O., informs us that surveys bave been completed and estimates made for the proposed extension of this line from Georgetown to West Union, via Russellville and Eckmanville, O., a distarce of 23 miles. The right of way and \$50,000 in cash or material has been asked for from the people along the route, and the success of the project depends largely upon the financial assistance given.

COLORADO & NORTHWESTERN.-J. L. Frankeber-ger, Ch. Engr., Boulder, Colo., Informs us that Orman & Crook, of Pueblo, Colo., are the contractors for this pro-posed line between Boulder and Ward, Colo., 27 miles. Grading will be completed in about 30 days: 15 miles of track are already laid. Surveys to the Eldora mining camp will be made at once. Pres., C. E. Thompson, Boulder.

Boulder. DENISON, BONHAM & NEW ORLEANS.—A senate bill has passed the house of representatives at Washington granting a right of way to this railway to and through In-dian Territory. The road as projected ran from New Or-leans, La., through Bonham to Denison, Tex. Ten years ago construction was begun, and several miles of the road-bed completed. It is now proposed to revive the project and to extend the line through Indian Territory. DES APC & NORTHERN - Gence Califish Para

and to extend the line through indian iterritory. DES ARC & NORTHEIN.-Geo. C. Griffith, Pres., Bald Knob, Ark., informs us that E. R. Dalhoff is building this new line to Des Arc, Ark, to be 20 miles in length. About 11 miles are aiready completed, and it is expected to fin-leh the balance within 50 days. W. H. Mipolite, Ch. Engr., fligginaon, Ark.

In the batance within b0 days. W. H. Hipolite, Ch. Engr., Higginson, Ark. ERIE & CENTRAL, NEW YORK.—N. A. Bundy, Gen. Mgr., Cortland, N. Y., Informs us that 20 miles of this railway from Cortland to Cincinnati, N. Y., are almost completed, and that 16 miles of the same are now in op-eration. Pres., W. D. Tisdale, Cortland; Ch. Engr., W. M. Miserole, 189 Montague St., Brooklyn, N. Y. INDUSTRIAL NOTES.

#### THE UNION CAR CO., Buffalo, N. Y., has the contract build 1,000 box cars for the Lehigh Valley R. R., acto cording to report

THE NATIONAL ELASTIC NUT CO., Milwaukee, Wis., as established a Chicago branch at 508 Calumet Bldg., with Mr. W. S. Grubh and Mr. D. R. Truckenmiller as

This Annual a Chicago with Mr. W. S. Grubh and Mr. D. R. ... agents. R. D. WOOD & CO., Philadelphia, are reported to have recently shipped 45 tons of heavy machinery to Glasgow, Scotland, including a steam riveter and a steam hydraulic Scotland, including a steam riveter and a steam hydraulic foor, 200 x 200 x

THE W. A. MURTFELDT CO., Boston, Mass., has finlahed the large contract for an artificial stone floor,  $300 \times 180$  ft., for the paint shop of the Boston & Alhany R. R. at Alston, Mass.

at Aiston, Mass. THE FREDERICK POST CO., manufacturers of drawing materials is the new name by which the former Post & Jacoh Co., Chicago, will be known hereafter. The com-pany in its new form remains identical with the former company and assumes all of the former's liabilities and dehts. Mr. Frederick Post is the President. CHE UNIANA ROAD MACHINE CO., Fort Wayne,

THE INDIANA ROAD MACHINE CO., Fort Wayne, ind., has recently put upon the market its Indiana stone crusher, which is made in hoth stationary and portable forms. The company claims that hy the use of a com-pound oscillating die having curved face the capacity is greatly increased. It is also manufacturing the Indiana reversible road grader. THE O & C CO Chicago has scented the Western

reversible road grader. THE Q. & C. Co., Chicago, has accepted the Western agency for the Pennsylvania Steel Co., Steelton, Pa., with headquarters at its general offices, Western Union Build-ing, Chicago.—Mr. Frank W. Edmunds, for many years General Sales Agent of the Troy Steel Co., Troy, N. Y., will assume, after April 1, the active duties of Secretary of the Q. & C. Co., and be located in Chicago. THE FORE MORE PRIDEC CO. Wimington Del. Ac-

of the Q. & C. Co., and be located in Chicago. THE EDGE MOOR BRIDGE CO., Wimington, Del., ac-cording to report, has the contract to furnish 2,000,000 ibs. of steel eye-hars required in the Brooklyn anchorage of the new East River Bridge, New York.—The company has also the contract, it is said, for furnishing and erecting the steel frame work of the 17-story huiding of the Reai Estate Trust Co., Broad and Chestnut Sts., Philadelphia, Involving about 3,500,000 lhs. of metal.

The RAILWAY CYCLE MFG. CO., Hagerstown, Ind., Bestate Trust Co., Broad and Chestnut Sk., Philadelphia, Involving about 3,500,000 lhs. of metal. THE RAILWAY CYCLE MFG. CO., Hagerstown, Ind., has an order for seven Hartley & Teeter railway cycles, of 3½-ft, gage, for shipment to a foreign country, through its New York agents, T. N. Motiey & Co. It recently furnished a cycle to the Mitchell Lime Co., Mitchell, Ind., which is heing used daily on a 4% grade, and is giving complete satisfaction. Many of these cycles have heen shipped to Russia, and a numher of them are in use in the different provinces of South America and in other foreign countries. THE DETROIT GRAPHITE MFG. CO., Detroit, Mich., reports that it is buy at present and that the outlook for future orders is very bright. Mr. A. A. Boutell, Mgr. and Treas., advises us that its Superior graphite paint has been carriages, etc., at the various arsenals in different parts of the country. The New York office of this concern is at 256 Broadway, and Messrs. Church & Getchell are the general Western agents, with headquarters in the Mar-quette Bidg., Chicago, advises our represent-tive that negotiations are pending with other railways with every prospect of being favorably terminated in the near future. The improved Heath joint was designed by mr. Dorwin, who has had over 35 years' experience in railway affairs, most of which has been in the track de-partment. The guarantee given with this joint is that it will last as long as the rail, and that every joint is that it will ast as long as the rail, and that every for is black for the rail.
