I. INTRODUCTION

The data for this report are taken from the 1947 Annual Census of Patients in Mental Institutions. This yearly census was conducted by the U.S. Bureau of the Census, Department of Commerce, for the years prior to 1947, and by the National Institute of Mental Health thereafter. A detailed historical account of the development of this census may be found in "Patients in Mental Institutions; 1947" pp. 1-4, U.S. Government Printing Office, Washington 25, D.C.

The publication is divided into four parts as follows:

- Part I - Public Institutions for the Mentally Retarded
- Part II - State and County Mental Hospitals
- Part III - Private Hospitals for the Mentally Retarded and General Hospitals with Psychiatric Services
- Part IV - Private Institutions for the Mentally Retarded

These reports provide basic data on the numbers and characteristics of hospitalized patients, movement of patient population; and certain administrative information for State and county mental hospitals and public institutions for the mentally retarded.

Provisional survey data for the State and county hospitals and public institutions are published more currently in "Mental Health Statistics - Current Facility Reports", Series MHB.

A listing of all psychiatric facilities surveyed is available in the Mental Health Directory, 1966, published by the National Clearinghouse for Mental Health Information. These publications are available on request from the National Institute of Mental Health, 5454 Wisconsin Avenue, Chevy Chase, Maryland 20203.

II. COVERAGE

The report contains data for Public Institutions for the Mentally Retarded. Prior to 1960, these facilities were designated as Public Institutions for Mental Defectives and Epileptics and data were tabulated separately for each of these categories of patients. In the past, the distinction was based on the primary cause of the patient's admission, or statistical presentation of data, and in light of the American Association on Mental Deficiency's revised Medical Classification, which did not provide for this distinction (refer to the section on Medical Classification on page 8), it was believed that the distinction was no longer meaningful. Therefore, beginning with the 1960 report, data have been tabulated for all patients combined. The Public Institutions for the Mentally Retarded are all State controlled except the Wayne County Child Development Center, Northville, Michigan. In 1966, Nevada had no public institutions. Mentally retarded patients requiring hospitalization received care at the State mental hospital. Part II (State and County Mental Hospitals), of this series, contains data on patients resident in public mental

hospitals with a diagnosis of mental retardation.

This report covers the fiscal year ending in 1966. Most of the institutions' fiscal years end on June 30th. Exceptions are as follows:

March 31	- New York
August 31	- Texas
September 30	- Alabama
December 31	- Oklahoma
December 31	- Wyoming

The following data were requested:

- a. First admissions during year by age, sex and
 - 1. Medical Classification
 - 2. Supplementary term
 - 3. Measured intelligence
- b. Resident Patients at end of year by age, sex and medical classification.
- c. Maintenance expenditures for the year and full-time personnel at end of year.

III. DEFINITIONS

A. Patient Movement Categories

A movement of population table is a book-keeping account of the flow of patients into and out of an institution during the year. Since this type of table shows the number of transactions rather than the number of patients, there may be some duplication in the counts of patients. Each movement category is defined as follows:

1. Patients on the Books at the Beginning and End of the Year

- a. Resident in institution. Patients physically present at the beginning and end of year.
- b. In extramural care. Patients on the books of the institution but not in actual residence, i.e., subject to institution control but residing in a location other than the institution proper. Patients in extramural care are further classified as follows:
 - (i) On trial visit. Patient is placed on trial visit, usually in his own home, as a test of his ability to adjust to community life.
 - (ii) In family care. The patient is placed in the community with a private family other than his own, under the supervision of the institution.
 - (iii) Otherwise absent. Includes all patients on leave from the institution where a definite date for the patient's return has been specified such as summer vacations and work leaves for definitely specified periods of time.
 - (iv) Unauthorized absence. Includes all patients on escape, elopement, or AWOL who are still carried on the institution's books.

2. Additions. Patients who enter an institution during the course of a year.

- a. First Admissions. Patients who have not been admitted previously to any public or private inpatient facility for the care or treatment of mental retardation.
- b. Readmissions. Patients admitted with a record of previous care as indicated above.

c. Transfers In. Patients who are shifted within the same State system from the supervision of one public institution to that of another without a formal discharge. Thus, transfers do not represent additions to the total patient population of institutions within a given State system. Movement of patients into and out of a State system are considered admissions and discharges respectively.

3. Separations. Patients who are removed from the books of the institution.

- a. Discharges. Patients formally removed from the books of the institution. Such patients may be discharged directly from the institution or from extramural care.
- b. Deaths. Patients who die while in the institution or while on extramural care.
- c. Transfers out. Patients who are shifted within the same State system from the supervision of one public institution to another, without a formal discharge.

B. Age of Patients

Age of first admissions is reported as of the last birthday prior to admission. Age of resident patients is taken as of the last birthday prior to the end of the reporting year.

C. Medical Classification, Supplementary Term to Medical Classification, and Retardation in Measured Intelligence

The medical classification, supplementary term to medical classification and retardation in measured intelligence may be found in "A Manual on Terminology and Classification in Mental Retardation" (Monograph supplement to American Journal of Mental Deficiency, second edition, April, 1961). This represents the fifth in the series of manuals on terminology and classification published by the

merican Association on Mental Deficiency. the following chart the categories for re-

tardation in measured intelligence have been reordered and more specifically labeled:

Word Description of Retardation in Measured Intelligence	Level of Deviation in Measured Intelligence	Range in Standard Deviation Units	Corresponding Range in IQ Scores for Tests with S.D. of 15
Borderline	+5	Over +5.00	Over 175
	+4	+4.01 to +5.00	161-175
	+3	+3.01 to +4.00	146-160
	+2	+2.01 to +3.00	131-145
	+1	+1.01 to +2.00	116-130
	0	+1.00 to -1.00	85-115
	-1	-1.01 to -2.00	70-84
Mild	-2	-2.01 to -3.00	55-69
Moderate	-3	-3.01 to -4.00	40-54
Severe	-4	-4.01 to -5.00	25-39
Profound	-5	Less than -5.00	Less than 25

IV. LIMITATIONS OF INSTITUTIONAL DATA

The category "mental retardation unclassified" as used in this publication, includes those patients who have been admitted for suspected mental retardation but whose medical classifications have not yet been established. The category "without mental retardation" includes only patients for whom diagnostic procedures were completed and no mental retardation found.

These data when combined with those for private institutions (Part IV of "Patients in Mental Institutions") should not be used as measure of incidence and/or prevalence of mental retardation which is sufficiently serious to require institutionalization. Such persons may not be admitted to public institutions for a variety of reasons. For example, they (1) may be seen in mental hos-

pitals, outpatient or other types of facilities; (2) may not have access to an institution; (3) may never have been diagnosed as mentally retarded or (4) may not seek or receive care for other reasons.

It should be kept in mind also that data on resident patients reported as of a specified day during a vacation period¹ may reflect a lower figure than the number actually receiving care because many patients may leave the institution for the holidays and in some States may not be included.

¹ For example, in 1964, March 31, the "end of year" date for New York State, occurred during both the Easter and Passover holidays.

Those patients who were home for the holidays were not counted as resident patients.

NOTICE

Due to incomplete coverage of private institutions for the mentally retarded, Part IV of this series (Patients in Mental Institutions: Private Institutions for the Mentally Retarded) will not be published for the year 1966. Data on these institutions are available on request, however, to:

- 1/ Nevada does not have a public institution for the care of the mentally retarded.
- 2/ The Sunland Training Center at Miami reported for the fiscal year on Table 2 and for the calendar year on the age, sex and diagnosis tables. The other four Florida institutions reported for the fiscal year 1966.
- 3/ Includes data for the Pineland Hospital and Training Center, a dual purpose facility. Only data pertaining to the mentally retarded are reported here.
- 4/ First admissions include 33 patients, children of working mothers. These children were temporary summer placements who received no services.
- 5/ Resident patients at end of year data include 108 patients out on work placement.
- 6/ Albion State Training School is part of a dual institution; the personnel data are for Albion State Training School and Western Reformatory.
- 7/ Includes Apple Creek, Cambridge, Mt. Vernon State Hospital and Springview Hospital, all dual purpose facilities. Only data pertaining to the mentally retarded patients are reported here. However, the data for personnel and maintenance expenditures cover both the mentally ill and the mentally retarded at Apple Creek and Mt. Vernon. Personnel and maintenance data for Cambridge and Springview are not included.
- 8/ Includes Western State School and Hospital, a dual purpose facility. Only data pertaining to the mentally retarded patients are reported here. However, the data for personnel and maintenance expenditures include the cost of both the mentally ill and the mentally retarded patients, and, therefore, are overestimates.
- 9/ These totals include 11,471 out of 12,986 first admissions (See Table 2).
- 10/ "Mental Retardation Unclassified" and "Without Mental Retardation" categories were combined in California data; therefore, these two categories were estimated, based on 1965 California data.
- 11/ Alaska had no first admissions in 1966.
- 12/ These totals include 10,238 out of 12,986 first admissions (See Table 2).
- 13/ This table will not necessarily add internally, since a patient's medical classification may contain one or more supplementary terms.
- 14/ The data for "With Psychiatric Impairment" were not available for Texas.
- 15/ These totals include 10,895 out of 12,986 first admissions (See Table 2).

- 1/ These totals include 148,298 out of 191,987 resident patients at the end of year (See table 2).
- 2/ "Mental Retardation Unclassified" and "Without Mental Retardation" categories were combined in California data; therefore, these two categories were estimated, based on 1965 California data.
- 3/ The Mental Retardation Center resident patients at end of year included 32 patients on leave up to 30 days.
- 4/ Nevada does not have a public institution for the care of the mentally retarded.
- 5/ Age, sex and diagnosis data for Oregon's Fairview Home included students who were on three months vacation as resident patients and excluded them on the movement table (Table 2).
- 6/ "Mental Retardation Unclassified" resident patients at end of year in New Jersey had unknown ages that were distributed.
- 7/ "Mental Retardation Unclassified" resident patients at end of year in Texas had unknown ages that were distributed.
