This industry's shipments of transportation equipment, n.e.c., represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was 86 percent. Secondary products shipped by this industry in 1963 include parts and accessories for passenger cars, trucks, and busses shipped to other than motor vehicle manufacturers ( $\$ 3$ million).

Shipments of transportationequipment, n.e.c., by this industry represented 75 percent of all shipments of these products ( $\$ 190$ million) by all industries. In 1958 the coverage ratio was 73 percent. Other industries shipping transportation equipment, n.e.c., consisted
mainly of industry 3522, Farm Machinery and Equipment, $\$ 25$ million; and industry 3791, Trailer Coaches, $\$ 4$ million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3799, e.g., Automobile trailers, excluding housing type coaches, 89 percent; and Other transportation equipment, 62 percent.

SHIP AND BOAT BUILDING: SIC 373
Value Added by Manufacture by State: 1963

## MOTORCYCLES, BICYCLES, AND PARTS: SIC 375

Value Added by Manufacture by State: 1963

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of foroduction workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unad justed value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustnent is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further nanufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipnents: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified.
$(S)$ Withineld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ For the period $1954-1963$ the adjusted value added figure for the ship building and repairing industry has not been adjusted for the change in inventory between the beginning and end of the year, since the figures reported by establishments in this industry are value of work rather than value of shipments. It does include the value added by resales. For prior years, this figure is unadjusted value added.
${ }_{3}^{2}$ Represents value of work done rather than value of shipments.
${ }^{3}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{4}$ For 1939 and prior years separate industry figures for "Ship building and repairing" and "Boat building and repairing" are not available. However, for the period 1899-1939 combined data for the two industries are shown.
${ }^{5}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that data for prior years are not strictly comparable.

${ }^{1}$ General statistics for sone producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State. SIC 3731, Ship Building and Repairing: New England-Maine, 8 (2,626); Vermont, 1 (1-19); Massachusetts, 12 (4,613); Rhode Island, 2 (20-99); Connecticut, 10 (15,932); East North Central-Ohio, 9 (707); Indiana, 3 (611); Illinois, 3 (166); Michigan, 5 (737); West North Central-Minnesota, 2 (1-19); Iowa, 1 (20-99); Missouri, 3 (102); South Atlantic-Delaware, 2 (100-249); Maryland, 9 (8,027); Virginia, 13 (20,847); West Virginia, 1 (500-999); South Carolina, 5 (402); Georgia, 1 (500-999); East South Central-Kentuc ky, 1 (200-249); Tennessee, 1 (500-999); Alabama, 7 (2,500-4,999); Mississippi, 7 (5,084); West South Central-Oklahoma, 1 (1-19); Texas, 23 ( $2,500-4,999$ ); Pacific -Washington, 17 (2,500-4,999); Alaska, 1 (1-19); Hawaii, i (1-19).
SIC 3732, Boat Building and Repairing: New England-New Hampshire, 8 (20-99); Vermont, 1 (1-19); Massachusetts, 81 (1,181); East North CentralIndiana, 26 (974); Illinois, 25 (440); West North Central-Iowa, 3 (1-19); Missouri, 16 (207); South Dakota, 2 (1-19); Nebraska, 1 (1-19); Kansas, 9 (20-99); South Atiantic -Delaware, 5 (1-19); District of Columbia, 1 (1-19); Georgia, 20 (250-499); East South Central-Kentucky, 6 (20-99); Tennessee, 20 (500-999); Alabama, 17 (20-99); Mississippi, 13 (100-249); West South Central-0klahoma, 11 (20-99); Texas, 85 (1,000-2,499); Mountain-Montana, 4 (20-99); Idaho, 2 (1-19); Colorado, 2 (1-19); New Mexico, 1 (1-19); Arizona, 3 (20-99); Utah, 9 (20-99); Nevada, 1 (1-19); Pacific-Alaska, 8 (20-99); Hawaii, 4 (20-99).
SIC 3741, Locomotives and Parts: Middle Atlantic-New York, 1 (1,000-2,499); New Jersey, 1 (1-19); Pennsylvania, 6 (4,555); East North CentralOhio, 3 (260); Indiana, 1 (1-19); Illinois, 7 (7,671); Michigan, 1 (1-19); Wisconsin, 2 (100-249); West North Central-Minnesota, 1 (20-99); Nebraska, 1 (1-19).
SIC 3742, Railroad and Street Cars: Middle Atlantic-New York, 5 (1,660); New Jersey, 3 (538); East North Central-Indiana, 5 (2,500-4,999); Illinois, 18 (2,747); Michigan, 3 (1,000-2,499); Wisconsin, 2 (20-99); West North Central -Minnesota, 1 (20-99); Iowa, 1 (20-99); Missouri, 2 (2,500-4,999); Kansas, 2 (250-499); South Atlantic-West Virginia, 1 (500-999); Georgia, 2 (20-99); East South Central-Kentucky, 1 (100-249); Alabama, 2 (1,000-2,499); West South Central-Texas, 2 (100-249); Pacific-Washington, 1 (1,000-2,499); California, 3 (248).
SIC 3751, Motorcycles, Bicycles, and Parts: New England-Massachusetts, 2 (250-499); Connecticut, l (20-99); Middle Atlantic-New York, 8 (873);
New Jersey, 4 (20-99); Pennsylvania, 3 (1-19); East North Central-Illinois, 4 (500-999); Wisconsin, 3 (1,000-2,499); West North CentralNebraska, 1 (500-999); South Atlantic-Georgia, 2 (20-99); Florida, 2 ( $1-19$ ); East South Central-Kentucky, 2 (250-499); Tennessee, 2 ( $1,000-2,499$ ); West South Central—Arkansas, 3 (500-999); Louisiana, 1 (20-99); 0klahoma, 2 (1-19); Texas, 1 (1-19); Mountain-Colorado, 1 (1-19); Utah, 4 (20-99); Pacific—Oregon, 1 (1-19).
SIC 3791, Trailer Coaches: New England-Maine, 2 (20-99); New Hampshire, 1 (1-19); Massachusetts, 1 (1-19); Connecticut, 1 (1-19); Middle AtlanticNew Jersey, 1 (20-99); Pennsylvania, 23 (1,000-2,499); East North Central-Illinois, 3 (1-19); Wisconsin, 10 (851); West North Central-Minnesota, 4 (100-249); South Dakota, 2 (100-249); South Atlantic Maryland, 2 (100-249); Virginia, 1 (100-249); South Carolina, 2 (100-249); East South Cen-tral-Kentucky, 1 (20-99); Tennessee, 3 (177); AIabama, 2 (250-499); Mississippi, 1 (200-249); Mountain-New Mexico, 1 (1-19); Utah, 8 (100-249).
SIC 3799, Transportation Equipment, N.E.C.: New England-Vermont, 2 (20-99); Massachusetts, 7 (20-99); Connecticut, 4 (20-99); Middle Atlantic -
New York, 12 ( $250-499$ ); New Jersey, 4 (20-99); West North Central-Minnesota, 12 (100-249); North Dakota, 4 (1-19); South Dakota, 1 (1-19);
South Atlantic-Maryland, 1 (20-99); Virginia, 2 (20-99); South Carolina, 3 (1-19); Georgia, 6 (20-99); East South Central-Kentucky, 2 (20-99);
Tennessee, 6 (20-99); Alabama, 2 (20-99); Mississippi, 2 (1-19); West South Central-Arkansas, 4 (20-99); Louisiana, 5 (20-99); Texas, 47 (498); Mountain-Montana, 2 (20-99); Wyoming, 1 (1-19); Colorado, 13 (20-99); New Mexico, 2 (1-19); Arizona, 7 (20-99); Utah, 5 (100-249); Pacific-Washing ton, 13 (20-99); Oregon, 7 (100-249); Alaska, 1 (1-19).
${ }^{2}$ See footnote 1, table 1.
${ }^{3}$ Represents value of work done rather than value of shipments.
${ }^{4}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of tiousands rather than rounding in computer operations. See Introduction for an explanation of terms used.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable.
${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufac-
turing establishments.
${ }_{4}^{3}$ Represents value of work done rather than value of shipments.
${ }^{4}$ See footnote 1 , table 1.

# table 4. Selected Statistics, by Employment Size of Establishments: 1963 

[^277]
# TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958 

#### Abstract

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such

as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |

(X) Not
applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ Represents the value of work done.

# TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963 

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industres" column shows the total value of shipments of the primary products of the industry by all manusacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products). (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industiy reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

[^280]${ }^{2}$ A passenger and freight train car is defined as rebuilt when the cost of their dismantling, improvement and modernization is more than 50 percent of the replacement cost of a new unit of the same class and lind at the time of rebuilding. Conversions, reclassifications or units which were reconditioned by replacing defective parts are not included.
${ }^{3}$ Excludes parts for passenger and freight cars, made in railroad car shops.
4 The 1963 product codes 3742111 , $3742198,3742245,3742298$, and 3742331 are included with the figure for "Other cars" (code 3742313 ).
${ }^{5}$ The 1958 product code 3742211 is included in the figure of $\$ 74,067$ thousand.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(S) Withheld because the estimate did not meet publication standards on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Represents value of work done rather than value of shipments.
${ }^{3}$ Data include value of new and rebuili railroad cars made in railroad car shops. The 1947 total and detailed statistics include $\$ 37.9$ million of new railroad cars shipped by railroad repair shops. Value of railroad cars built by railroads for own use represent amounts at which they were written into property accounts.

4product class 37422 includes an undetermined value from product class 37423.
${ }^{5}$ Includes an undetermined dollar amount of other automobile trailers (boat, camping, commercial display, etc.).

## table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

See footnotes at end of table.

TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958-Continued
 Standard Notes: - Represents zero
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(x) Not applicable. (Z) Shipments of less than $\$ 1$ million reported.
${ }^{1}$ For the specified product classes shipments of $\$ 1$ million or more were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 37311, Pennsylvania, Ohio, Indiana, Wisconsin, Maryland, Kentucky, Tennessee, Alabama, Oregan, Califormia; 37312, Maine, Massachusetts, Connecticut, New York, New Jersey, Illinois, Michigan, Wisconsin, Virginia, West Virginia, Alabama, Mississippi, Louisiana, Texas, Oregon, California; 37313, Massachusetts, Pennsylvania, Ohio, Maryland, Virginia, North Carolina, Florida, Alabama, Mississippi, Washington, California; 37314, Massachusetts, Connecticut, New Jersey, Pennsylvania, Maryland, North Carolina, South Carolina, Georgia, Florida, Alabama, Texas, Washington, Oregon; 37316, Ohio, Illinois, Wisconsin, Maryland, Virginia, Georgia, Kentucky, Alabama, Oregan; 37321, New Hampshire, New York, Pennsylvania, Illinois, Michigan, North Carolina, Tennessee, Louisiana, Texas, Washington; 37322, Pennsylvania, Missouri, Virginia, Arkansas; 37422, New York, New Jersey, Pennsylvania, Indiana, Illinois, Missouri, West Virginia, Kentucky, Alabama, Texas, Washington, Oregon; 37423 , New York, New Jersey, Ohio, Wisconsin, Minnesota, Missouri, Kansas, West Virginia, Alabama, Texas; 37510, Massachusetts, Connecticut, Ohio, Illinois', Wisconsin, Nebraska, Georgia, Kentucky, Tennessee, Arkansas, Utah, Califormia; 37991, New York, Maryland, Idaho, Colorado; 37992, Massachusetts, New York, New Jersey, Kentucky, Tennessee, Alabama, Arkansas, Utah.
${ }^{2}$ Represents value of work done.
${ }^{3}$ Shipments of $\$ 1$ million or more were reported but exact figures are withheld to avoid disclosure of individual company figures.

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(Z) Less than 500 horsepower.
(S) Witheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated
 consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to totai product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for estabishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

See footnotes at end of table.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963-Continued

Standard Notes: - Represents zero
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment

# Instruments and Related Products 

38A. Instruments; surgical, dental and ophthalmic goods<br>38B Photogranhic equipment; clocks, watch and watchcases

This major group covers establishments primarily engaged in manufacturing mechanical measuring, engineering, laboratory, and scientific research instruments; optical instruments and lenses; surgical, medical, and dental instruments, equipment and supplies; ophthalmic goods; photographic equipment and supplies; and, watches and clocks. Dental laboratories making dentures and artificial teeth to order for the dental profession, and establishments grinding ophthalmic lenses on an individual prescription basis, are classified in trade industries.

During the period 1958 to 1963, reports received from some large establishments indicated a change from the manufacture primarily of such individual instruments as those used for indicating air speed, rate-of-climi, angle-of-yaw and similar flight characteristics, and gyroscopes which are sold separately, to the manufacture primarily of complete instrumentation systems for navigation, guidance, check-out, etc. The major impact of this change has been on the classification of products and, consequently, the SIC coding of these large establishments. This change in reporting was brought to light by the initiation, by the Census Bureau, of detailed commodity surveys in the fields of electronic products and instrumentation. The electronic and associated products report (MA36 N ) was started covering the year 1961 and the instruments series (MA-38B) was broadened for 1963 to encompass most types of instruments
following an introductory report for 1961 and 1962 covering industrial process instruments and test and measuring equipment. Annual statistics from both reports are published in the Current Industrial Reports Series.

In both the 1958 Census of Manufactures and the Annual Survey of Manufactures from 1959 through 1962, the classification of systems was not sufficiently spelled out in the product inquiries of these programs, especially at the 5 -digit product class level. However, with the introduction, in the MA-36N and MA-38B surveys, of detailed 7 -digit product information which itself is used to build up to broader 5-digit product class totals, these totals, although they should be the same as those reported on Form MA-100 (Annual Survey of Manufactures), have differed. The respondents affected have identified the proportion of earlier years' output which consisted of systems rather than instruments as such, which was the manner in which the items were originally reported.

In view of the above, the annual data for 19581962 have been revised. Because of the shift in recent years from instruments which are classified in industry 3811 to complete systems which are classified in industry 3662 , the year-to-year changes are of dubious validity for the industries considered separately. The two industries taken in combination however, would yield significant measures of activity in the general area.

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies. (NA) Not applicable
${ }^{1}$ The figures for 1939 through 1963 include data for employees of manufacturing establishments who are engaged in distribution and construction work. The extent to whic
$2^{2}$ for such employees are included in the figures for earlier years is not known.
for the period 1954 to 1963, figures represent adjusted value added by manufacture shipments (including resales of finished products) less cost of finished products, value of materials, supplies, fuel, electric energy and contract work, plus the net change in value of finished products and work-in-process inventories between the beginning and end of of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. See Introduction, "Value Added by Manufacture."
The total value of shipments and cost of materials for industry groups (2- and 3digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction. not yet in inures for 1958 to 1963 include expenditures for plants under construction and ${ }^{n}{ }_{5}$ The figures for $i$
in the in the manufacture of automatic temperature controls.
or manufacturing central administrative offices and figures for employment and payroll for manutacturing central administrative offices and auxiliary units are shown for the are not available for the years 1955 to 1957 , 1959 to 1962 , or prior to 1949.
${ }^{7}$ Figures for 1958 to 1963 for operating manufacturing establishments are not strictly comparable with prior years due to revisions of the Standard Industrial classification System. Prior to 1958, data for the following cormodities were excluded: laboratory precision balances; laboratory furniture; revolution counters; operating room and other hospital furniture; surgical corsets; and hearing aids. Establishments primarily en
gaged in the manufacture of sanitary napkins and tampons are included prior to 1958 . ${ }^{8}$ These figures represent estimates derived from a representative sample of manufac-
turing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all macturing establishmel survey of manufactures volumes for this period
estimates are published in the annual survey of manuf actures volumes for this period
arlier years. Statistics for 1939 and later years (a) include data for establishments earlier years. Statistics for 1939 and later years (a) include data for establishment establishments primarily engaged in the manufacture of time-recording stamps and machines. Value added by manufacture for 1939 on a basis strictly comparable with 1937 was $\$ 314.1$ million.
${ }^{10}$ The figures for 1937 to 1954 include, whereas those for earlier years exclude, data for establishments primarily engaged in the manufacture of certain mechanical measuring instruments. Value added by manufacture for 1937, excluding data for these establishments and on a basis comparable with 1935, was $\$ 294.5$ million
${ }^{11}$ The figures for 1935 to 1954 include, whereas those for 1933 and earlier years exclude, data for establishments primarily engaged in manuf acture of certain dental equipment and supplies (chairs, cabinets, and electrical devices).
${ }^{12}$ The figures for 1929 to 1954 exclude, whereas those for earlier years include, data for establishments primarily engaged in manufacture of gas machines. Value added by manufacture for 1929, including data for these establishments and on a basis comparable with 1927, was $\$ 306.3$ million.
13 The figures for 1927 to 19
The figures for 1927 to 1954 exclude, whereas those for earlier years include, data for dental laboratories operating on a custom basis. Value added by manufacture for 1927 including data for these laboratories and on a basis comparable with 1925, was
$\$ 280.3$ million. $\$ 280.3$ million.
for for 1899 to 1923 include, whereas those for later years exclude, data for establishments primarily engaged in grinding lenses for spectacles and eyeglasses to individual prescription. 1909 exclude, whereas those for 1914 and later years include data for establishments primarily engaged in manufacture of motion-picture machines Value added by manuf acture for 1914, excluding data for such establishments, was $\$ 96.4$ million.

The value of shipments anj cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between estailisinents in the same
inóvsiry. For a more complete explanation, see Introduction.

## INSTRUMENTS; SURGICAL, DENTAL, AND OPHTHALMIC GOODS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3811-Engineering, Laboratory, and Scientific and Research Instruments and Associated Equipment<br>3821-Mechanical Measuring and Controlling Instruments, Except Automatic Temperature Controls<br>3822-Automatic Temperature Controls<br>3831 -Optical Instruments and Lenses<br>3841-Surgical and Medical Instruments and Apparatus<br>3842 --Orthopedic, Prosthetic, and Surgical Appliances and Supplies<br>3843-Dental Equipment and Supplies<br>3851-Ophthalmic Goods

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4 ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Each of these industries is characterized by a wide variety of products. However, most of the individual establishments tend to specialize in a single product or group of similar products. Many of the categories include hundreds of different specific products. For example, data for most types of laboratory and scientific instruments and apparatus are presented as a single item. The products included in many of these items are highly diversified and range from very simple hand tools to highly complex instruments such as mapping equipment.

Establishments in the instrument industries (particularly industries 3811, 3821, and 3831 covered in this report and industry 3611 , Electric Measuring Instruments, which includes plants primarily engaged in manufacturing instruments for indicating, measuring, and recording electrical quantities and characteristics), produce a wide variety of complex items requiring skilled workmanship and an unusually high degree of precision. Plants of this type have a higher ratio of wages to value of shipments than are found in other industries. The instrument industries have also experienced significant technological advances which have intensified even further the need for the high degree of precision.

Industries 3842, Surgical Appliances and Supplies, and 3843, Dental Equipment and Supplies, include many establishments which specialize in a single line of appliances or
supplies. These establishments perform a wide variety of manufacturing processes and consume different types of materials. However, they are brought together into these two industries by the use to which their products are put.

Separate descriptions of these industries are given below.

## 3811 -ENGINEERING, LABORATORY, AND SCIENTIFIC AND RESEARCH INSTRUMENTS AND ASSOClATED EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing laboratory, scientific, and engineering instruments such as nautical, navigational, aeronautical, surveying, drafting, and instruments for laboratory work and scientific research (except optical instruments--industry 3831). Establishments primarily engaged in manufacturing surgical and medical instruments are classified in industry 3841 ; dental instruments and equipment in industry 3843; mechanical measuring and controlling instruments in industry 3821; machinists' precision measuring tools in industry 3545; instruments for indicating, measuring, and recording electrical quantities and characteristics in industry 3611; watches and clocks in industry 3871 ; and measuring and dispensing pumps in industry 3586. For a detailed list of products of industry 3811, refer to tables 6A-1 and 6A-2.
The code number as well as the definition of this industry was unchanged between 1958 and 1963.

During the period 1958-1963 reports received from some large establishments indicated a change from the manufacture primarily of such individual instruments as those used for indicating air speed, rate-of-climb, angle-of-yaw and similar flight characteristics, and gyroscopes which are sold separately, to primarily manufacturing complete instrumentation systems for navigation, guidance, check-out, etc. The major impact of this change has been on the classification of products and, consequently, the SIC coding of these large establishments. This change in reporting was brought to light by the initiation by the Census Bureau of detailed commodity surveys in the fields of electronic products and instrumentation. The electronic and associated products report (MA-36N) was started covering the year 1961 and the instruments series (MA-38B) was broadened for 1963 to encompass most types of instruments following an introductory report for 1961 and 1962 covering industrial process instruments and test and measuring equipment. Annual statistics from both reports are published in the Current Industrial Reports Series.
ln both the 1958 Census of Manufactures and the Annual Survey of Manufactures from 1959 through 1962 the classification of systems was not sufficiently spelled out in the product inquiries of these programs, especially at the 5 -digit product class level. However, with the introduction in the MA-36N and MA-38B surveys of detailed 7 -digit product information which itself is used to build up to broader 5-digit product class totals, these totals, although they should be the same as those reported on Form MA-100 (Annual Survey of Manufactures), have differed. The respondents affected have identified the proportion of earlier years' output which consisted of systems rather than instruments as such, which was the manner in which the items were originally reported.

In view of the above, the annual data for 1958-1962 have been revised, as indicated with the symbol " $r$ " in the appropriate tables. Because of the shift in recent years from instruments which are classified in industry 3811 to complete systems which are classified in industry 3662, the year-to-year changes are of dubious validity for the industries considered separately. The two industries taken in combination however, would yield significant measures of activity in the general area.

Value of shipments and other receipts of the Scientific Instruments Industry totaled $\$ 554$ million. This amount included shipments of scientific instruments (primary products) valued at $\$ 406$ million, shipments of other products (secondary products) valued at $\$ 80$ million, and miscellaneous receipts (mainly resales) at $\$ 68$ million.

This industry's shipments of scientific instruments represented 84 percent of its total product shipments. The industry specialization ratio in 1958 was 78 percent. Secondary products shipped by this industry in 1963 consisted mainly of industrial process instruments ( $\$ 6$ million), and aircraft engine instruments, except flight ( $\$ 6$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8 . Approximately 46 percent of the total industry shipments are represented by plants specializing in product class 38111, Aircraft, flight, nautical and navigational instruments and automatic pilots; 28 percent in 38112, Laboratory and scientific instruments; and 23 percent in 38113 , Surveying and drafting instruments and laboratory furniture.

Shipments of scientific instruments by this industry represented 56 percent of all shipments of these products ( $\$ 722$ million) by all industries. In 1958 the coverage ratio was 67 percent. Other industries shipping scientific instruments consisted mainly of industry 3662, Radio, TV Communications Equipment, $\$ 175$ million.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 3811, e.g., Aircraft, flight, nautical, and navigational instruments and automatic pilots (38111), 44 percent; and Surveying and drafting instruments and laboratory furniture (38113), 91 percent.

## 3821--MECHANICAL MEASURING AND CONTROLLING INSTRUMENTS, EXCEPT AUTOMATIC TEMPERATURE CONTROLS

This industry comprises establishments primarily engaged in the manufacture of industrial process instruments for indicating, recording, measuring and controlling temperature (except automatic temperature controls-industry 3822), pressure and vacuum, fluid flow and liquid level, mechanical motion, rotation, humidity, density, acidity, alkalinity, and combustion; dial pressure gauges; physical property testing apparatus such as hardness, tension, compression, torsion, ductility; and elasticity testing apparatus. For a detailed list of products of industry 3821, refer to tables 6A-1 and 6A-2.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Mechanical Measuring Devices Industry totaled $\$ 1,143$ million. This amount included shipments of mechanical measuring devices (primary products) valued at $\$ 819$ million, shipments of other products (secondary products) valued at $\$ 207$ million, and miscellaneous receipts (mainly resales) at $\$ 117$ million.
This industry's shipments of mechanical measuring devices represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 86 percent. Secondary products shipped by this industry in 1963 consisted mainly of carburetors, pistons, and other machine shop products ( $\$ 20-\$ 50$ million), and miscellaneous electrical measuring instruments ( $\$ 17$ million).
While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 52 percent of the total industry shipments are represented by plants specializing in industrial process instruments (38213).
Shipments of mechanical measuring devices by this industry represented 83 percent of all shipments of these products ( $\$ 984$ million) by all industries. In 1958 the coverage ratio was 76 percent. Other industries shipping mechanical measuring devices consisted mainly
of industry 3494, Valves and Pipe Fittings, $\$ 9$ mi!lion; and industry, 3811, Scientific Instruments, $\$ 13$ million.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 3821, e.g., integrating meters, nonelectrical type (38212), 98 percent; motor vehicle instruments, except electric (38214), 66 percent; and aircraft engine instruments, except flight ( 38211 ), 62 percent.

## 3822-AUTOMATIC TEMPERATURE CONTROLS

This industry comprises establishments primarily engaged in manufacturing automatic temperature controls activated by pressure, temperature, level, flow, time, or humidity (including pneumatic controls) of the type principally used as components of air conditioning, refrigeration, and comfort heating, or as components of household appliances. Establishments primarily engaged in manufacturing industrial electric controls are classified in industry 3622. For a detailed list of products of industry 3822, refer to table 6A-2, product codes 3822014 to 3822018 .
The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Automatic Temperature Controls Industry totaled $\$ 527$ million. This amount included shipments of automatic temperature controls (primary products) valued at $\$ 409$ million, shipments of other products (secondary products) valued at $\$ 91$ million, and miscellaneous receipts (mainly resales) at $\$ 27$ million.

This industry's shipments of automatic temperature controls represented 82 percent of its total product shipments. The industry specialization ratio in 1958 was 88 percent. Secondary products shipped by this industry in 1963 consisted mainly of industrial controls ( $\$ 13$ million), and metal valves for piping systems ( $\$ 7$ million).

Shipments of automatic temperature controls by this industry in 1963 represented 95 percent of all shipments of these products ( $\$ 432$ million) by all industries. In 1958 the coverage ratio was 94 percent. Other industries shipping automatic temperature controls consisted mainly of industry 3821, Mechanical Measuring Devices, $\$ 10$ million; and industry 3494, Valves and Pipe Fittings, $\$ 2$ million.

## 3831-OPTlCAL INSTRUMENTS AND LENSES

This industry comprises establishments primarily engaged in the production of optical lenses and prisms, and in manufacturing optical instruments such as microscopes, telescopes, field and opera glasses; and optical measuring and testing instruments such as refractometers, spectrometers, spectroscopes, colorimeters, and polariscopes. Establishments primarily engaged in manufacturing eyeglass lenses, frames, or fittings are classified in industry 3851; and those engaged in manufacturing sighting and fire-control instruments, but not engaged in manufacturing optical components, in industry 1941. For a detailed list of products of industry 3831, refer to table 6A-2, product codes 3831131 to 3831262 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Optical Instruments and Lenses Industry totaled $\$ 196$ million. This amount included shipments of optical instruments and lenses (primary products) valued at $\$ 165$ million, shipments of other products (secondary products) valued at $\$ 17$ million, and miscellaneous receipts (mainly resales) at $\$ 14$ million.

This industry's shipments of optical instruments and lenses represented 90 percent of its total product shipments. The industry specialization ratio in 1958 also was 90 percent. Secondary products shipped by this industry in 1963 consisted mainly of still picture equipment ( $\$ 3$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by ach of the different product classes. The extent of this specialization is indicated in table 8. Approximately 75 percent of the total industry shipments are represented by plants specializing in product classes 38311 , Optical and analytical instruments and lenses; and 21 percent in 38312, Sighting and fire-control equipment made from lenses, prisms, etc., produced in the same plant.

Shipments of optical instruments and lenses by this industry represented 61 percent of all shipments of these products ( $\$ 270$ million) by all industries. In 1958 the coverage ratio was 66 percent. Other industries shipping optical instruments and lenses consisted mainly of industry 3662, Radio, TV Communications Equipment, \$10-\$20 million.

## 3841-SURGICAL AND MEDICAL INSTRUMENTS AND APPARATUS

This industry comprises establishments primarily engaged in manufacturing medical, surgical, ophthalmic, and veterinary instruments and apparatus. Establishments primarily engaged in manufacturing surgical and orthopedic appliances are classified in industry 3842; and electrotherapeutic, electromedical, and X-ray apparatus in industry 3693. For a detailed list of products of industry 3841, refer to table 6A-1, product codes 3841012 to 3841095 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Surgical and Medical Instruments Industry totaled $\$ 284$ million. This amount included shipments of surgical and medical instruments (primary products) valued at $\$ 215$ million, shipments of other products (secondary products) valued at $\$ 29$ million, and miscellaneous receipts (mainly resales) at $\$ 40$ million.

This industry's shipments of surgical and medical instruments represented 88 percent of its total product shipments. The industry specialization ratio in 1958 was 83 percent. Secondary products shipped by this industry in 1963 consisted mainly of surgical, orthopedic, and prostheticappliances and supplies (\$3 million), and furniture and fixtures, n.e.c. (\$3 million).

Shipments of surgical and medical instruments by this industry represented 74 percent of all shipments of these products ( $\$ 291$ million) by all industries. In 1958 the coverage ratio was 76 percent. Other industries shipping surgical and medical instruments consisted mainly of industry 2834, Pharmaceutical Preparations, $\$ 22$ million; and industry 3842, Surgical Appliances and Supplies, $\$ 6$ million.

The production index for the primary products of the industry increased to 254 in 1963 from the 1958 level of 117 . The unit value index for 1963 was 109 compared to 112 in 1958. Both indexes were computed on a basis of $1954=100$.

3842-ORTHOPEDIC, PROSTHETIC, AND SURG1CAL APPL1ANCES AND SUPPLIES
This industry comprises establishments primarily engaged in manufacturing orthopedic, prosthetic, and surgical appliances and supplies, arch supports, and other foot appliances; fracture appliances, elastic hosiery, abdominal supporters, braces, and trusses; bandages; surgical gauze and dressings; sutures; adhesive tapes and medicated plasters; and personal
safety appliances and equipment. Establishments primarily engaged in manufacturing surgical and medical instruments are classified in industry 3841. Establishments primarily engaged in manufacturing appliances and in the personal fitting to the individual prescription of a physician are classified in trade industries. For a detailed list of products of industry 3842 , refer to table 6 A-1, product codes 3842111 to 3842400 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Surgical Appliances and Supplies Industry totaled $\$ 597$ million. This amount included shipments of surgical appliances and supplies (primary products) valued at $\$ 415$ million, shipments of other products (secondary products) valued at $\$ 105$ million, and miscellaneous receipts (mainly resales) at $\$ 77$ million.

This industry's shipments of surgical appliances and supplies represented 80 percent of its total product shipments. The industry specialization ratio in 1958 was 84 percent. Secondary products shipped by this industry in 1963 consisted mainly of pharmaceutical preparations affecting parasitic and infective diseases, for human use ( $\$ 10-\$ 20$ million), and cosmetic and toilet preparations (\$10-\$20 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 73 percent of the total industry shipments are represented by plants specializing in product class 38421 ; Surgical, orthopedic and prosthetic appliances and supplies; and 18 percent in 38423 , Personal industrial safety devices.

Shipments of surgical appliances and supplies by this industry represented 90 percent of all shipments of these products ( $\$ 462$ million) by all industries. In 1958 the coverage ratio was also 90 percent. Other industries shipping surgical appliances and supplies consisted mainly of industry 2641, Paper Coating and Glazing, $\$ 10$ million; and industry 3851, Ophthalmic Goods, $\$ 5$ million.

The production index for the primary products of the industry increased to 155 in 1963 from the 1958 level of 118 . The unit value index for 1963 was 104 compared to 107 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3843-DENTAL EQUIPMENT AND SUPPLIES

This industry comprises establishments primarily engaged in manufacturing artificial teeth, dental metals, alloys and amalgams, and a wide variety of equipment, instruments, and supplies used by dentists, dental laboratories, and dental colleges. Dental laboratories constructing artificial dentures, bridges, inlays and other dental restorations on specifications from dentists are classified in service industries. For a detailed list of products of industry 3843 , refer to table 6A-1, product codes 3843011 to 3843098.
The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Dental Equipment and Supplies Industry totaled $\$ 148$ million. This amount included shipments of dental equipment and supplies (primary products) valued at $\$ 128$ million, shipments of other products (secondary products) valued at $\$ 9$ million, and miscellaneous receipts (mainly resales) at $\$ 11$ million.
This industry's shipments of dental equipment and supplies represented 94 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent. Secondary products shipped by this industry in 1963 consisted mainly of surgical and medical instruments ( $\$ 2-\$ 5$ million).

Shipments of dental equipment and supplies by this industry represented 92 percent of all shipments of these products ( $\$ 140$ million) by all industries. In 1958 the coverage ratio was 92 percent. Other industries shipping dental equipment and supplies consisted mainly of industry 3842, Surgical Appliances and Supplies, $\$ 5-\$ 10$ million.

The production index for the primary products of the industry increased to 134 in 1963 from the 1958 level of 118 . The unit value index for 1963 was 131 compared to 118 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3851—OPHTHALMIC GOODS

This industry comprises establishments primarily engaged in manufacturing ophthalmic frames, lenses, and sunglass lenses. Establishments primarily engaged in manufacturing slit lamps are classified in industry 3841, and molded glass blanks in industry 3229. Establishments primarily engaged in grinding lenses and fitting glasses to prescription are classified in trade. For a detailed list of products of industry 3851, refer to table $6 \mathrm{~A}-1$, product codes 3851012 to 3851098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Ophthalmic Goods Industry totaled $\$ 273$ million. This amount included shipments of ophthalmic goods (primary products) valued at $\$ 226$ million, shipments of other products (secondary products) valued at $\$ 37$ million, and miscellaneous receipts (mainly resales) at $\$ 10$ million.

This industry's shipments of ophthalmic goods represented 86 percent of its total product shipments. The industry specialization ratio in 1958 was 87 percent. Secondary products shipped by this industry in 1963 consisted mainly of personal industrial safety devices ( $\$ 5$ million).

Shipments of ophthalmic goods by this industry represented 92 percent of all shipments of these products ( $\$ 244$ million) by all industries. In 1958 the coverage ratio was 98 percent. Other industries shipping ophthalmic goods consisted mainly of industry 2821, Plastics Materials and Resins, and industry 3861, Photographic Equipment, both over $\$ 2$ million each.

The production index for the primary products of the industry increased to 139 in 1963 from the 1958 level of 109. The unit value index for 1963 was 126 compared to 113 in 1958. Both indexes were computed on a basis of $1954=100$.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All erployees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacturc, processing or assembly. For 1939 and prior years, except. 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zoro. (D) Withheld to avoid disclosing figures for individual conpanies. (NA) Not available. (X) Not
applicable. revised.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

These ligures represent estinates derived from a representative sample of manufacturing establishnents canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishnents. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures show in parentheses either have associated standard errors excceding 15 percent or are not consistent with other census series and related data. See text for explanation concerning shift from individual instruments to systens.
${ }^{2} A$ revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that the industry is not
comparable. The 1957 and earlier figures are on the old SIC definition of the industry.
${ }^{3}$ Data for Alaska and Hawaii are not included.
${ }^{4}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1958-1963 are not comparable with those for earlier years.

- Represents zero.
(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.

# table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958 

as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary produc ts $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio $\frac{\text { Col. (X) Not
applicable. Revised.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary nroducts). (b) mroducts classified in other industries (secondary products). and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

| Prod. <br> class <br> code | Class of products and <br> miscellaneous receipts |
| :--- | :---: |
|  |  |

Sighting and fire-control equipment made from lenses, prisms, etc., produced in this plant.
Surgical and medical instruments and apparatus
Miscellaneous receipts.

## Contract <br> Resales

Receipts for installation (or construction of products of this establishment)
Receipts for research and development work.
Receipts for repair work...
Other miscellaneous receipts.
Listing of other industries with over $\$ 2$ million shipments of each primary product class:
3611 Electric measuring instruments..
3621 Motors and generators
3662 Radio, TV communications equipment
3679 Electronic components, n.e.c..
3721 Aircraft.
3729 Aircraft equipment, n.e.c
3742 Railroad and street cars....
3821 Mechanical measuring devices.
3871 Watches and clocks.

38213
38214
38216
38216
38210

Integrating meters, nonelectrical type...
MECHANICAL MEASURING DEVICES INDUSTRY
Total shipments and receipts of the industry.
$\qquad$
Aircraft engine instruments, except flight
Industrial process instruments.
Motor vehicle instruments, except electric
Other mechanical measuring and controlling instrument
Mechanical measuring devices

See footnotes at end of table.

## Standard notes: - Represents zero,

(X) Not applicable.
${ }^{\text {Revised. }}$.
${ }^{1}$ For these products, figures were also collected in the Bureau of the Census commodity survey program. In lieu of asking for detailed statisticis on these products in the census of manufactures, respondents were asked to report only value of shipments for specified groups of products for which separate figures had previously been collected in the commodity survey. In most cases, the value figures reported in the census of manufactures for each group of products agreed closely with the corresponding figures reported in the commodity survey. However, there were minor differences between the census figures and the commodity survey figures. These variations, except as noted below were due primarily to the following reasons:
a. Better coverage in census of manufactures program. Coverage in the annual surveys will be supplemented by adding respondents not currently in the survey but making the specified product according to their census of manufactures report.
b. Use of different reporting periods (calendar year vs. fiscal year).
c. Use of estimates in reporting figures on the commodity survey, whereas census of manufactures figures generally represent more exact shipment figures.

See table 6A-2 for more detailed product data.
${ }^{2}$ The major difference between these two figures concerns the method of reporting parts and components for aircraft, flight, nautical, and navigational instruments and automatic pilots. Whereas many respondents have included such parts under the broad heading in the census, parts were not covered in the $1963 \mathrm{MA}-38 \mathrm{~B}$ survey. While the exact value of such parts cannot be derived, it is approximately represented by the difference between the two sets of figures.
${ }^{3}$ The major difference between these two figures concerns the method of reporting parts and components for industrial process instruments. Whereas many respondents have included such parts under the broad heading in the census, parts were not covered in the 1963 MA-38B survey. While the exact value of such parts cannot be derived, it is approximately represented by the difference between the two sets of figures.

41963 product class codes 38311 and 38312 were collected as a single product class in 1958.
${ }^{5}$ Product code 3842161 is included with product code 3842198, "Other surgical and orthopedic items" to avoid disclosing figures for individual companies.

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically
significant and which have production that is geographically dispersed, provided that the disper-
sion is not approximated by the data in the geegraphic table for the industry (table 2) and they sion is not approximated by the data in the geographic table for the industry (table 2) and they
are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1 .

See footnotes at end of table.

| Aggregate horsepower per 100 production workers | 242 | 390 | 266 | 204 | 195 | 335 | 332 | 253 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. (Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specializa tion in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## PHOTOGRAPHIC EQUIPMENT; CLOCKS, WATCHES, AND WATCHCASES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SlC Code and Title
3861 --Photographic Equipment and Supplies 3871 -Watches, Clocks, and Parts, Except Watchcases
3872-Watchcases
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1-4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3861 -PHOTOGRAPHIC EQUIPMENT AND SUPPLIES

This industry comprises establishments primarily engaged in manufacturing (1) photographic apparatus, equipment, parts, attachments, and accessories, such as still and motion picture cameras and projection apparatus; photocopy and microfilm equipment; blueprinting and diagotype (white printing) apparatus and equipment; and other photographic equipment; and (2) sensitized film, paper, cloth, and plates and prepared photographic chemicals for use therewith. Establishments primarily engaged in manufacturing photographic paper stock (unsensitized), and paper mats, mounts, easels and folders for photographic use are classified in Major Group 26; photographic lenses in industry 3831; photographic glass in Major Group 32; chemicals for technical purposes, not specifically prepared and packaged for use in photography, in Major Group 28; and photographic flash, flood, enlarger and projection lamps in industry 3641. For a detailed list of products of industry 3861 , refer to table 6 A, product codes 3861106 to 3861811 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Photographic Equipment Industry totaled $\$ 1,851$ million. This amount included shipments of photographic equipment (primary products) valued at $\$ 1,578$ million, shipments of other products (secondary products) valued at $\$ 80$ million, and miscellaneous receipts (mainly resales) at $\$ 194$ million.

This industry's shipments of photographic equipment represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent.

Secondary products shipped by this industry in 1963 included 36112, "Testing equipment for testing electrical, radio, and communication circuits and motors" ( $\$ 2$ million), and 38311, "Optical instruments and lenses, except sighting and fire-control" (\$5 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subirıustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 45 percent of the total industry shipments are represented by plants specializing in product classes: 38615, Photographic sensitized film and plates, and 19 percent in 38611, Still picture equipment.
Shipments of photographic equipment by this industry represented 97 percent of all shipments of these products ( $\$ 1,631$ million) by all industries. In 1958, the coverage ratio was 94 percent. An important industry shipping photographic equipment was industry 3831, Optical Instruments and Lenses, Except Sighting and Fire-control, $\$ 3$ million.

The production index for the primary products of the industry increased to 177 in 1963 from the 1958 level of 124 . The unit value index for 1963 was 119 compared to 111 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3871-WATCHES, CLOCKS, AND PARTS, EXCEPT WATCHCASES

This industry comprises establishments primarily engaged in manufacturing clocks (including electric), watches, mechanisms for clockwork operated devices, and clock and watch parts. This industry includes establishments primarily engaged in assembling clocks and watches from purchased movements and cases. Establishments primarily engaged in manufacturing watch cases are classified in industry 3872 , glass crystals in industry 3231 , and unbreakable crystals in industry 3079. For a detailed list of products of industry 3871 , refer to table 6A, product codes 3871111 to 3871589 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Watches and Clocks Industry totaled $\$ 511$ million. This amount included shipments of watches and clocks (primary products), valued at $\$ 386$ million, shipments of other products (secondary products) valued at $\$ 83$ million, and miscellaneous receipts (mainly resales) at $\$ 42$ million.

This industry's shipments of watches and clocks represented 82 percent of its total product shipments. The industry specialization ratio in 1958 was 88 percent. Secondary products shipped by this industry in 1963 included fractional horsepower motors ( $\$ 7$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 43 percent of the total industry shipments are represented by plants specializing in 38711, Clocks.

Shipments of watches and clocks by this industry represented 95 percent of all shipments of these products ( $\$ 406$ million) by all industries. In 1958, the coverage ratio was 95 percent.

The production index for the primary products of the industry increased to 130 in 1963 from the 1958 level of 93 . The unit value index for 1963 was 105 compared to 107 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3872-WATCHCASES

This industry comprises establishments primarily engaged in manufacturing watchcases, for sale as such. Establishments primarily engaged in assembling complete watches by assembling purchased movements with watchcases of their own manufacture are classified in industry 3871 . For a detailed list of products of industry 3872 , refer to table 6A, product codes 3872011 to 3872071 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Watchcases Industry totaled $\$ 34$ million. This amount included shipments of watchcases (primary products) valued at $\$ 28$ million, shipments of other products (secondary products) valued at $\$ 4$ million, and miscellaneous receipts at $\$ 1$ million.

This industry's shipments of watchcases represented 86 percent of its total product shipments. The industry specialization ratio in 1958 was 80 percent.

Shipments of watchcases by this industry represented 97 percent of all shipments of these products ( $\$ 29$ million) by all industries. In 1958, the coverage ratio was 98 percent.

The production index for the primary products of the industry increased to 92 in 1963 from the 1958 level of 72 . The unit value index for 1963 was 91 compared to 112 in 1958. Both indexes were computed on a basis of $1954=100$.

WATCHES, CLOCKS, AND WATCHCASES: SIC 387

(D) Withheld to avoid disclosing figures for individual companies.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State. SIC 3861, Photographic Equipment: New England-Rhode Island, 2 (20-99); Connecticut, 12 (250-999); East North Central -Indiana, 8 (1,097);

Michigan, 19 (201); West North Central-Minnesota, 8 (699); Iowa, 2 (20-99); Nebraska, 2 (1-19); Kansas, 2 (20-99); South Atlantic-Maryland, 4
(1-19); District of Columbia, 2 (20-99); North Carolina, 3 (763); South Carolina, 1 (250-499); Florida, 5 (20-99); East South Central -Kentucky, 2 (1-19); Tennessee, 1 (1-19); West South Central-Louisiana, 3 (20-99); Texas, 11 (101); Mountain-Colorado, 6 (100-249); Arizona 2 (20-99); Utah, 2 (1-19); Pacific-Washington, 3 (1-19); Oregon, 3 (489); California, 95 (2,500-4,999); Hawaii, 1 (1-19).
SIC 3871, Watches and Clocks: Middle Atlantic-New Jersey, 8 (250-499); Pennsylvania, 6 (1,000-2,499); East North Central~0hio, l (20-99); Indiana, 4 (467); Michigan, 3 (100-249); Wisconsin, 4 (564); West North Central-Minnesota, 1 (1-19); Iowa, 1 (500-999); South Atlantic--Maryland, l (20-99); District of Columbia, 1 (1-19); North Carolina, 2 (250-499); Georgia, 3 (607); Florida, 1 (1-19); East South Central-Kentucky, 2 (100-249); Tennessee, 1 (250-499); Alabama, 1 (20-99); Mississippi, 1 (100-249); West'South Central-Arkansas, I (1,000-2,499); Louisiana, 1 (1-19); Oklahoma, 1 (1-19); Texas, 3 (890); Pacific-Washington, 1 (I-19); California, 7 (20-99).
SIC 3872, Watchcases: New England-Rhode Island, I (500-999); Connecticut, 1 (250-499); Middle Atlantic-New York, 46 (1,000-2, 499); New Jersey, 2 (20-99) ; East North Central-Michigan, l (250-499) ; West South Central-Oklahoma, l (1-19); Pacific-California, l (1-19).
This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

## TABLE 3. Detailed Statistics: 1963

|  |
| ---: | :--- |

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Introduction for an explanation of terms used.

(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
${ }^{1}$ Includes capital expenditures for plants under construction but not in operation which constitute $\$ 500-\$ 1,000$ thousand of the total for the size class.
${ }^{2}$ Includes capital expenditures for plants under construction but not in operation which constitute a small proportion of the total for the size class.

## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio $\frac{\text { Col. [^291]
## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

(X) Not applicable. n.s.k. Not specified by kind.
${ }^{1}$ Includes $\$ 3,098$ million shipped by industry 3831, "Optical Instrunents and Lenses." In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3651, Radio and TV Receiving Sets; 3622 , Radio and TV Cormunications Equipment and, 3871, Watches and Clocks.
${ }^{2}$ Includes $\$ 2$ million shipped by the following industries; however, the exact figures are withheld to avoid disclosing figures for individual companies: 3651, Radio and TV Receiving Sets, and 3662, Radio and IV Communications Equipment.
${ }^{3}$ Figures for sensitized photographic film and cloth, silver halide type, made in other industries (less than 1 percent of the total), are included with shipments by the Photographic Equipment Industry to avoid disclosing individual company figures.
${ }^{4}$ Includes shipments of over $\$ 2$ million of each of the following product classes; however, the exact values are withheld toavoid disclosing individual company figures: 35595, Other special industry machinery and equipment; 36624, Electronic navigational aids; 36625, Electronic search and detection apparatus; 36795, Other electronie-components and accessories, n.e.c.; and, 38510, Ophthalmic goods.
${ }^{5}$ Includes shipments of over $\$ 2$ million by industry 3822, Automatic Temperature Controls. However, the exact value is withheld to avoid disclosing individual company figures.
${ }^{6}$ Figures for watches with imported movements, made in other industries (less than 1 percent of the total) are included with shipments by the Watches and Clocks Industry to avoid disclosing individual company figures.
${ }^{7}$ Figures for clocks, watches and clock and watch parts, n.s.k., made in other industries (considerably less than 1 percent) are included with shigments by the Watches and Clocks Industry to avoid disclosing individual company figures.
${ }^{8}$ Includes shipments of over $\$ 2$ million of each of the following product classes; however, the exact values are withheld to avoid disclosing individual company figures: 19291, Ammunition over 30mm; 33560, Rolled, drawn and extruded nonferrous metal mill products, except copper and aluminum; 35790, Addressing, dictating, duplicating, and office machines, n.e.c.; 36343, Other small household electric appliances; 36430, Current-carrying wiring devices; 36623, Intercommunication equipment (except telephone and telegraph) and electric alaxm and signal systems and devices; 37292, Guided missile components and subassemblies, n.e.c.; 38111, Aircraft, flight, nautical, and navigational instruments and automatic pilots; 38611 , Still picture equipment; and 39111, Jewelry, made of platinum metals and karat gold.

[^294]table 6C. Product Classes-Value Shipped by All Manufacturing Establishments, 1947, 1954, 1958 to 1963

## TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1 .

[^295](D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. (Z) Less than \$i million.
${ }^{1}$ For the specified product classes shipments of $\$ 1$ million or more were reported for the States listed but the exact figures are withheld to a oid disclosure of individual company figures: 38611, Massachusetts, Connecticut, New Jersey, Ohio, Michigan, Minnesota, Virginia, South Carolina, Arkansas, Colorado, Oregon, and California; 38612, Massachusetts, New York, Indiana, Illinois, California; 38613, Massachusetts, Connecticut, New York, Pennsylvania, Ohio, Indiana, Michigan, Minnesota, South Carolina, Colorado, and California; 38615, Massachusetts, New York, New Jersey, Ohio, and Illinois; 38616, New Hampshire, Massachusetts, New York, New Jersey, Illinois, Iowa, and Missouri; 38617, Massachusetts, Rhode Island, Pennsylvania, Ohio, Indiana, Illinois, and Texas; 38618, California; 38711, Connecticut, New Jersey, Ohio, Wisconsin, Iowa, North Carolina, Georgia, Kentucky, and Tennessee; 38714, Connecticut, New York, Pennsylvania, and Texas; 38715, Connecticut, New York, New Jersey, Pernsylvania, Illinois, North Carolina, Arkansas, and Texas.
${ }^{2}$ Shipments of $\$ 1$ million or more were reported but exact figures are withheld to avoid disclosure of individual company figures.

## table 7A. Materials by Kind: 1963 and 1958

[^296]
## TABLE 7B. Fuels and Electric Energy Consumed, and Horsepower Rating of Power Equipment: 1962

|  |  |
| :--- | :--- |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard

- Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. (Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general
consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

(D) Withheld to avoid disclosing figures for individual companies.

## table 9. Establishments and Production Workers for Selected Metalworking Operations: 1963

| Metalworking operations | Number of establishments |  |  |  | Employment in the specified operation |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | Number of production workers ${ }^{1}$ |  |  | Total | Number of production workers ${ }^{1}$ |  |  |
|  |  | 1 to 4 | 5 to 19 | $\begin{aligned} & 20 \text { or } \\ & \text { more } \end{aligned}$ |  | 1 to 4 | 5 to 19 | 20 or more |
| Electroplating and other plating Heat treating of metals. <br> Automatic screw machine department <br> Machine Shop. <br> Tool and die shop. <br> Stamping, blanking, and forming of metals | INDUSTRY 3871.-WATCHES AND CLOCKS |  |  |  |  |  |  |  |

| Electroplating and other plating....................... | 16 | 12 | 31 | 1 | 82 | (D) | (D) | (D) |
| Heat treating of metals.......... | 10 | 9 |  | - | 19 |  | (D) |  |
| Automatic screw machine department. | 3 | 1 | 1 | 1 | (D) | (D) | (D) | (D) 134 |
| Machine shop................ | 8 | 4 | - | 4 | 143 | 9 | - | 134 |
| Tool and die shop........ | 12 | 6 | 4 | 2 | 119 | 10 | (D) | (D) |
| Stamping, blanking, and forming of metals. | 18 | 5 | 10 | 3 | 212 | 6 | 82 | 124 |

Note: Very small establishments were not requested to report their metalworking operations and in some instances a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production worker employment on the last line of the table below.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishments.

# Miscellaneous Manufacturing 

39A Jewelry, silverware, and plated ware

39B Nusical instruments and parts; toys, and sporting and athletic goods
39 C Office supplies, costume jewelry and misc. notions
39D Miscellaneous manufacturing industries

Major Group 39 covers establishments primarily engaged in manufacturing products not classified in any other major manufacturing group. Industries in this group fall into the following categories: Jewelry, and silverware and plated ware; musical instruments; toys, and sporting and athletic goods; pens, pencils, and other office and artists' materials; buttons, costume novelties, and miscellaneous notions; brooms and brushes; morticians' goods; and, other miscellaneous manufacturing industries.

For 1953 and earlier years, data for Major Group 19, Ordnance and Accessories, are included with Major Group 39 in table 1.

For 1954 and subsequent years Major Group 19 data are published separately. However, in some tables within these volumes, data for Major Group 19 are given both separately and combined with Major Group 39.

Major Group 19 covers establishments primarily engaged in manufacturing artillery, small arms, and related equipment; ammunition; tanks and specialized tank parts; sighting and fire control equipment; complete guided missiles and research and development on complete guided missiles and, miscellaneous ordnance and accessories, not elsewhere classified.

## Miscellaneous Manufacturing: Major Group 39

Value Added by Manufacture by State: 1963

## TABLE 1. General Statistics: 1963 and Earlier Years

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for ndividual companies. (NA) Not available. (X) Not applicable.
${ }^{1}$ The figures for 1939 through 1963 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which
data for such employees are included in the figures for earlier years is not known. and for earlier years, unadjusted value added. Adjusted value added is equal to value or and for earlier years, unadjusted value added. Adjusted value added is equal to val materials, supplies, fuel, electric energy and contract work, plus the net change in th materials, supplies, fuel, electric energy and contract work, plus the net change in the of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in
inventories of finished products and work-in-process during the year.
${ }^{3}$ The total value of shipments and cost of materials for industry groups (2- and 3digit) include extensive duplication arising from shipments between establishments in the same industry classification. For more information, see Introduction.
4The figures for 1958 to 1963 include expenditures for plants under construction and not yet in operation.
${ }_{5}$ In addition to data for operating establishments, figures for employment and payroll
for manufacturing centraladministrative office and auxiliary units are included in industry group 39 for groups 39 and 19 for the years 1949 to 1953 in the annual survey of manu-
factures volumes. Data for these units are not available for the years 1955 to 1957 , factures volumes. Data for these units are not available for the years 1955 to 1957, ${ }_{6 F}{ }^{2}$ irures , 1058 to 1963 .
${ }^{6}$ Figures for 1958 to 1963 for operating manufacturing establishments are not strictly comparable with prior years due to revisions of the Standard Industrial Classification products, n.e.c., cork products, soda-fountain and bar equipment, and jewelry, plastics products, n.e.c., cork products, soda-rountain and bar equipment, and jewelry, primarily engaged in the manufacture of linoleum and other hard surface floor covering, n.e.c., are excluded in data prior to 1958.
${ }^{7}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. Ordnance and Accessories," are included with Major Group 39, "Miscellaneous Manufactures."
${ }^{9}$ For 1953 and earlier years data includes ordnance and accessories.

## JEWELRY, SILVERWARE, AND PLATED WARE

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3911-Jewelry, Precious Metal<br>3912-Jewelers' Findings and Materials<br>3913-Lapidary Work and Cutting and Polishing Diamonds<br>3914-Silverware and Plated Ware

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1-4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3911-JEWELRY, PRECIOUS METAL

This industry comprises establishments primarily engaged in manufacturing jewelry and other articles, worn on or carried about the person, made of precious metals with or without stones (including the setting of stones where stones are used), including cigarette cases and lighters, vanity cases and compacts, trimmings for umbrellas and canes, and jewel settings and mountings. Establishments primarily engaged in manufacturing costume jewelry from nonprecious metals and other materials are classified in industry 3961. For a detailed list of products of industry 3911, refer to table 6A, product codes 3911298.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Jewelry, Precious Metal lndustry in 1963 totaled $\$ 482$ million. This amount included shipments of precious metal jewelry (primary products) valued at $\$ 387$ million, shipments of other products (secondary products) valued at $\$ 32$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 63$ million.

This industry's shipments of precious metal jewelry in 1963 represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent.

Secondary products shipped by this industry in 1963 include costume jewelry and costume novelties, except precious metal ( $\$ 12$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 73 percent of the total industry shipments are represented by plants specializing in jewelry made of platinum metals and carat gold and 21 percent in Jewelry made of precious metals, except platinum metals and carat gold.

Shipments of precious metal jewelry by this industry in 1963 represented 97 percent of all shipments of these products ( $\$ 400$ million) by all industries. In 1958 the coverage ratio was 98 percent. Another industry shipping precious metal jewelry (primary products) was industry 3961, Costume Jewelry $\$ 4$ million.

## 3912--JEWELERS’ FINDINGS AND MATERIALS

This industry comprises establishments primarily engaged in manufacturing unassembled jewelry parts and stock shop products such as sheet, wire, and tubing. Establishments primarily engaged in lapidary work are classified in industry 3913. For a detailed list of products of industry 3912, refer to table 6A, product codes 3912011 to 3912051.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Jewelers' Findings and Materials Industry in 1963 totaled $\$ 73$ million. This amount included shipments of jewelers' findings and materials (primary products) valued at $\$ 63$ million, shipments of other products (secondary products) valued at $\$ 6$ million, and miscellaneous receipts at $\$ 4$ million.

This industry's shipments of jewelers' findings and materials in 1963 represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 90 percent.

## 3913-LAPIDARY WORK AND CUTTING AND POLISHING DIAMONDS

This industry comprises establishments primarily engaged in all types of lapidary work, and cutting and polishing diamonds. This industry also includes establishments primarily engaged in cutting and polishing other precious stones; recutting and setting stones; preparing jewels for instruments, tools, and for watches and chronometers; and preparing real and imitation stones for settings. For a detailed list of products of industry 3913 , refer to table 6A, product codes 3913011 to 3913031.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Lapidary Work Industry in 1963 totaled $\$ 65$ million. This amount included receipts for lapidary work (primary products) valued at $\$ 55$ million, shipments of other products (secondary products) valued at $\$ 4$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 6$ million.

This industry's receipts for lapidary work in 1963 represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 99 percent.

Value of lapidary work by this industry in 1963 represented 81 percent of all shipments of these products ( $\$ 68$ million) performed by all industries. In 1958 the coverage ratio was 87 percent.

Excluded from the $\$ 68$ million value of shipments of lapidary work reported by all industries is the value of lapidary work by establishments classified in other industries (i.e., jewelry, etc.) where (1) this activity is combined with other finishing operations in the production of jewelry or other products or (2) this activity is reported as a receipt for contract work. Contract receipts for lapidary work were not separately reported or tabulated. The relatively small amount of lapidary work done in retail stores is also excluded.

## 3914-SILVERWARE AND PLATED WARE

This industry comprises establishments primarily engaged in manufacturing flatware (including knives, forks and spoons), hollow ware, toilet ware, ecclesiastical ware, and related products made of sterling silver; of metal plated with silver, gold, or other metal; of nickel silver; of pewter; or of stainless steel.
"Flatware" is defined for purposes of the census as all knives, forks, spoons, etc., made wholly of metal, including stainless steel knives, forks, and spoons, and carving sets with metal handles. Knives, forks, spoons, etc., with handles of materials other than metal are included in industry 3421, Cutlery. For a detailed list of products of industry 3914 , refer to table 6A, product codes 3914111 to 3914261.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Silverware and Plated Ware Industry in 1963 totaled $\$ 238$ million. This amount included shipments of silverware and plated ware (primary products) valued at $\$ 209$ million, shipments of other products (secondary products) valued at $\$ 11$ million, and miscellaneous receipts, at $\$ 19$ million.

This industry's shipments of silverware and plated ware in 1963 represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was also 95 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 66 percent of the total industry shipments are represented by plants specializing in jewelry made of platinum metals and karat gold and 21 percent in jewelry made of precious metals, except platinum metals and karat gold.

Shipments of silverware and plated ware by this industry in 1963 represented 98 percent of all shipments of these products ( $\$ 212$ million) by all industries. In 1958 the coverage ratio was also 98 percent.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for rccale without further manufacture, processing or assembly. In addition, figures prior io 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ No comparable data available for earlier years.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "0ther industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

[^301] applicable. n.s.k. Not specified by kind.
${ }^{1}$ The following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3871 , Watches and Clocks.
${ }^{2}$ Includes $\$ 4.4$ million shipped by industry 3961, Costume Jewelry.
${ }^{3}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 27530 , Engraving and plate printing; and 39130, Lapidary work and diamond cutting and polishing.
${ }^{4}$ Includes the following product class which totaled $\$ 2$ million or more but is withheld to avoid disclosing individual company figures: $342 l l$, Cutlery, scissors, shears, trimmers and snips.
table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

| Product code | Product | Value of shipments including interplant transfers $(\$ 1,000)$ |  |  |

## n.s.k. Not specified by kind.

${ }^{1}$ These figures represent estimates derived from a representative sample of manuracturing establishments canvassed in tne annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

## table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

| Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  |

| Aggregate horsepower per 100 production workers..................... | 180 | 393 | - | 590 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes:

- Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | ```Value added by manufacture, adjusted ($1,000)``` | Cost of materials $(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |

# MUSICAL INSTRUMENTS AND PARTS; TOYS, AND SPORTING AND ATHLETIC GOODS 

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3931-Musical Instruments and Parts
3941-Games and Toys, Except Dolls and Children's Vehicles
3942-Dolls
3943-Children's Vehicles, Except Bicycles
3949-Sporting and Athletic Goods, Not Elsewhere Classified
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics(tables 1 to 4 ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3931-MUSICAL INSTRUMENTS AND PARTS

This industry comprises establishments primarily engaged in manufacturing pianos, with or without player attachments; organs; other musical instruments; and parts and materials for musical instruments. For a detailed list of products of industry 3931, refer to table 6A, product codes 3931111 to 3931498.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Musical Instruments and Parts Industry totaled $\$ 314$ million. This amount included shipments of musical instruments and parts (primary products) valued at $\$ 294$ million, shipments of other products (secondary products) valued at $\$ 8$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 13$ million.

This industry's shipments of musical instruments and parts represented 97 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 31 percent of the total industry shipments are represented by plants specializing in organs; 30 percent in pianos; and 28 percent in other musical instruments.

Shipments of musical instruments and parts by this industry represented 92 percent of all shipments of these products ( $\$ 319$ million) by all industries. In 1958 the coverage ratio was 91 percent.

The production index for the primary products of the industry increased to 190 in 1963 from the 1958 level of 141 . The unit value index for 1963 was 99 compared to 102 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3941-GAMES AND TOYS, EXCEPT DOLLS AND CHILDREN'S VEHICLES

This industry comprises establishments primarily engaged in indoor games and game sets for adults and children, and mechanical and nonmechanical toys. lmportant products of this industry include games such as chess, checkers, dominoes, puzzles, and other indoor games; and toys, such as toy furniture, doll carriages and carts, construction sets, mechanical trains, toy guns and air rifles, and other mechanical games and toys. Establishments primarily engaged in manufacturing dolls are classified in industry 3942; children's outdoor wheel goods and vehicles, except bicycles, in industry 3943; and sporting and athletic goods for children and adults, in industry 3949. For a detailed list of products of industry 3941, refer to table 6A, product codes 3941011 to 3941097.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Games and Toys lndustry totaled $\$ 797$ million. This amount included shipments of games and toys (primary products) valued at $\$ 694$ million, shipments of other products (secondary products) valued at $\$ 62$ million, and miscellaneous receipts (mainly sales of products bought and resold). at $\$ 41$ million.

This industry's shipments of toys and games represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary products shipped by this industry in 1963 include miscellaneous plastic products ( $\$ 10$ million) and baby carriages and children's vehicles ( $\$ 3$ million).

Shipments of games and toys by this industry represented 91 percent of all shipments of these products ( $\$ 764$ million) by all industries. In 1958 the coverage ratio was 92 percent. Other industries shipping games and toys include industry 3079, Plastics Products, N.E.C., $\$ 18$ million; and industry 3943, Children's Vehicles, $\$ 4$ million.

3942-DOLLS
This industry comprises establishments primarily engaged in manufacturing dolls, doll parts, and doll clothing. Establishments primarily engaged in manufacturing stuffed toy animals are also included in this industry. For a detailed list of products of industry 3942 , refer to table 6A, product codes 3942006 to 3942055 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Dolls lndustry totaled $\$ 248$ million. This amount includes shipments of dolls (primary products) valued at $\$ 165$ million.

This industry's shipments of dolls represented between 80 and 85 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent.

Shipments of dolls by this industry represented 87 percent of all shipments of these products ( $\$ 190$ million) by all industries. In 1958 the coverage ratio was 94 percent.

The production index for the primary products of the industry increased to 124 in 1963 from the 1958 level of 113 . The unit value index for 1963 was 119 compared to 109 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3943—CHILDREN'S VEHICLES, EXCEPT BICYCLES

This industry comprises establishments primarily engaged in manufacturing baby carriages, strollers, and gocarts; children's velocipedes and tricycles, coaster wagons, play cars, sleds, and other children's outdoor wheel goods and vehicles, except bicycles. For a detailed list of products of industry 3943, refer to table 6A, product codes 3943011 to 3943098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Children's Vehicles lndustry totaled $\$ 78$ million. This amount included shipments of children's vehicles (primary products) valued at $\$ 54$ million, shipments of other products (secondary products) valued at $\$ 22$ million, and miscellaneous receipts (mainly sales of products bought and resold), at $\$ 1$ million.

This industry's shipments of children's vehicles represented 71 percent of its total product shipments. The industry specialization ratio in 1958 was 84 percent. Secondary products shipped by this industry in 1963 include games and toys ( $\$ 4$ million), and metal household furniture ( $\$ 2$ million).

Shipments of children's vehicles by this industry represented 65 percent of all shipments of these products ( $\$ 83$ million) by all industries. In 1958 the coverage ratio was 78 percent.

The production index for the primary products of the industry increased to 116 in 1963 from the 1958 level of 99 . The unit value index for 1963 was 110 compared to 114 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3949-SPORTING AND ATHLETIC GOODS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing sporting and athletic goods, not elsewhere classified, such as fishing tackle; golf and tennis goods; baseball, football, basketball, and boxing equipment; roller skates and ice skates; gymnasium and playground equipment; billard and pool tables; and bowling alleys and equipment. Establishments primarily engaged in manufacturing athletic apparel are classified in Major Group 23, small arms ammunition in industry 1961, and firearms in industry 1951. For a detailed list of products of industry 3949 , refer to table 6A, product codes 3949114 to 3949298.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Sporting and Athletic Goods Industry totaled $\$ 705$ million. This amount included shipments of sporting and athletic goods (primary products) valued at $\$ 598$ million. Shipments of other products (secondary products) valued at $\$ 47$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 60$ million.

This industry's shipments of sporting and athletic goods represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 88 percent. Secondary products shipped by this industry in 1963 included miscellaneous plastic products (\$3 million).

Shipments of sporting and athletic goods by this industry represented 91 percent of all shipments of these products ( $\$ 656$ million) by all industries. In 1958 the coverage ratio was also 91 percent. Other industries shipping sporting and athletic goods includes industry 3069, Rubber Products, N.E.C., $\$ 15$ million.

The production index for the primary products of the industry increased to 196 in 1963 from the 1958 level of 158 . The unit value index for 1963 was 110 compared to 109 in 1958. Both indexes were computed on a basis of $1954=100$.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this tatie: All emplovees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

## Standard Notes: - Represents zero. <br> (D) Withheld to avoid disclosing figures for individual companies. <br> (NA) Not available.

(X) Not applicable
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ No comparable figures are available for earlier years.
${ }^{3}$ The figures for $1937-1963$ are not entirely comparable with those for earlier years because they include data for establishments primarily engaged in the manufacture of playground equipment. Value added by manufacture for 1937, excluding data for these establishments, amounted to $\$ 26.3$ million.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

#### Abstract

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the indusiry (primary products), (b) products classified in other industries (secondary products), and (c)

miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

## table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
n.s.k. Not specified by kind.
${ }^{1} 1958$ data for fretted and string instmuments are included with data for "Other musical instruments, " code 3931498.
${ }_{3}^{2} 2,538$ thousand umits were shipped in 1963 and 2,397 thousand in 1958.
${ }^{3}$ The quantity figure relates to a value of $\$ 53,874$ thousand. In addition, $\$ 8,265$ thousand were reported without quantity.
${ }_{5}^{4}$ The quantity figure relates to a value of $\$ 33,650$ thousand. In addition, $\$ 5,906$ thousand were reported without quantity.
${ }^{5}$ In 1958, data for children's pedal driven automobiles and tractors (product code 3943033) were included with other children's vehicles (product code 3943098).

In 1958, product code 3949225 was combined with product code 3949229, "Other bowling alley playing supplies," to avoid disclosing figures for individual companies.
${ }^{7}$ Some products, e.g., pin setters, are not sold but are leased. The values reported for such products represents the valuation placed on them for tax, insurance, and similar purposes.

In 1958, data for product codes $3949249,88,86,92,87,93,94$, and 91 are included with "Other sporting and athletic goods," product code 3949298.

## table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

| Productcode | Product and year | Indexes (1954 = 100) |  |
| :---: | :---: | :---: | :---: |
|  |  | Production | Unit value |
| 393 |  | $\begin{aligned} & 190 \\ & 141 \end{aligned}$ | 99 102 |
| 3931 |  | $\begin{aligned} & 190 \\ & 141 \end{aligned}$ | 99 102 |
| 39311 | Pi.anos................................................. 1963. | 134 98 | 116 115 |
| 39312 | Organs................................................... 1963.. 1958. | $\begin{aligned} & 394 \\ & 261 \end{aligned}$ | 73 81 |
| 39314 | Other musical instruments and parts............ 1963.. $1958 .$. | 198 135 | 105 98 |
| 3942 | Dolls...................................................... 1963. . $1958 .$. | 124 | 119 |
| 3943 | Children's vehicles............................... $19.1963 .$. | 116 99 | 1110 |
| 3949 | Sporting and athletic goods........................ 1963.. $1958 .$. | $\begin{aligned} & 196 \\ & 158 \end{aligned}$ | $\begin{aligned} & 110 \\ & 109 \end{aligned}$ |
| 39491 | Fishing tackle and equipment.................... ${ }^{\text {1963. }} 19$. | $\begin{aligned} & 140 \\ & 107 \end{aligned}$ | 103 105 |

## TABLE 7A. Materials by Kind: 1963-Continued

| Code | Material | Unit of measure | 1963 |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Quantity | $\begin{gathered} \text { Delivered cost } \\ (\$ 1,000) \end{gathered}$ |
|  |  |  | INDUSTRY 3949.—SPORTING AND ATHLETIC GOODS-Continued |  |
|  | Materials, components, parts, containers, and supplies-Continued |  |  |  |
| 282130 | Thermoplastic resins. | 1,000 lbs.... | 11,511 | 14,557 |
| 282140 | Thermosetting resins. | ...do..... | 6,441 | 12,276 |
| 220123 | Broadwoven fabrics (cotton, wool, man-made fiber fabrics, etc.) | 1,000 lin. yds. | 17,519 | 9,006 |
| 311100 | Leather, finished...... | 1,000 lbs...... | 8,159 | 14,276 |
| 265011 | Paperboard containers and boxes. |  | (X) | 9,002 |
| 362115 | Fractional horsepower electric motors (under 1 hp .) (excluding timing motors) | 1,000. | 69 | 2,088 |
| 970099 | All other materials and components, parts, containers, and supplies consumed. |  | (X) | 175,645 |
| 976000 | Materials, parts, containers, and supplies, n.s.k. ${ }^{2}$........................... | ............ | (X) | 47,576 |

Note: No comparable data for materials consumed was collected in 1958.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
n.s.k Not specified by kind.
${ }^{1}$ Estimates for 1958 for selected materials were published in MC58(1)-7 (Supplement), "Selected Materials Consumed," from data collected in a supplemental survey on Form MA-131, "Consumption of Materials, Parts, Containers and Supplies During 1958." This survey was limited to large establishments in selected chemical, machinery and equipment industries and resulted in estimates which are subject to greater error than are the figures on materials consumption collected as a regular part of the census of manufactures. Estimates for these industries are as follows:

| Industry | Materiaıs | Delivered <br> cost <br> (million dollars) |
| :--- | :--- | ---: |
| 3941 | Iron and steel shapes and forms.... | 17 |
|  | Plastics and resins materials..... | 27 |
|  | Paperboard containers and boxes.... | 34 |
| 3949 | Plastics and resins materials..... | 8 |

${ }^{2}$ Represents (a) total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not requested and (b) total cost of materials reported for those establishments which failed to report costs of individual materials on "standard forms."

## table 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. (Z) Less than 500 horsepower.
n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Value added by manufacture, adjusted $(\$ 1,000)$ | Cost of materials <br> $(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Total <br> (number) | $\begin{aligned} & \text { Payroll } \\ & (\$ 1,000) \end{aligned}$ | Total <br> (number) | Man-hours $(1,000)$ | $\begin{aligned} & \text { Wages } \\ & (\$ 1,000) \end{aligned}$ |  |  |  |  |
| 3931- | MUSICAL INSTRUMENTS AND PARTS <br> Entire industry <br> Establishments with-$90 \%$ or more specialization. 75-89\% specialization...... |  |  |  |  |  |  |  |  |  |  |

## $3+31 \mathrm{n}$

## OFFICE SUPPLIES, COSTUME JEWELRY, AND MISCELLANEOUS NOTIONS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title
3951 -Pens, Pen Points, Fountain Pens, Ball Point Pens, Mechanical Pencils and Parts
3952-Lead Pencils, Crayons, and Artists' Materials
3953-Marking Devices
3955-Carbon Paper and lnked Ribbons
3961-Costume Jewelry and Costume Novelties, Except Precious Metal
3962-Feathers, Plumes, and Artificial Flowers
3963-Buttons
3964-Needles, Pins, Hooks and Eyes, and Similar Notions
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

```
3951-PENS, PEN POINTS, FOUNTAIN PENS, BALL POINT PENS, MECHANICAL PEN- CILS AND PARTS
```

This industry comprises establishments primarily engaged in manufacturing pens, pen points, fountain pens, ball point pens, refill cartridges, and parts for pens and mechanical pencils. For a detailed list.of products of industry 3951, refer to table 6A, product codes 3951001 to 3951071.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Pens and Mechanical Pencils Industry totaled $\$ 185$ million. This amount included shipments of pens and mechanical pencils (primary products) valued at $\$ 165$ million, shipments of other products (secondary products) valued at $\$ 18$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 3$ million.

This industry's shipments of pens and mechanical pencils represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary products shipped by this industry in 1963 include artists' materials ( $\$ 2$ million).

Shipments of pens and mechanical pencils by this industry represented 93 percent of all shipments of these products ( $\$ 178$ million) by all industries. In 1958 the coverage ratio was also 93 percent. Other industries shipping pens and mechanical pencils include industry 3952, Lead Pencils and Art Goods, $\$ 6$ million.

The production index for the primary products of the industry increased to 216 in 1963 from the 1958 level of 141. The unit value index for 1963 was 63 compared to 83 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3952-LEAD PENCILS, CRAYONS, AND ARTISTS' MATERIALS

This industry comprises establishments primarily engaged in manufacturing lead pencils, pencil leads, and crayons; materials and equipment for art work such as airbrushes, drawing tables and boards, palettes, sketch boxes, pantographs, artists' colors and waxes, pyrography goods, drawing inks, and drafting materials. Establishments primarily engaged in manufacturing mechanical pencils are classified in industry 3951, and drafting instruments in industry 3811. For a detailed list of products of industry 3952, refer to table 6A, product codes 3952111 to 3952211.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Lead Pencils and Art Goods lndustry totaled $\$ 122$ million. This amount included shipments of lead pencils and art goods (primary products) valued at $\$ 97$ million, shipments of other products (secondary products) valued at $\$ 14$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 11$ million.

This industry's shipments of lead pencils and art goods represented 87 percent of its total product shipments. The industry specialization ratio in 1958 was 88 percent. Secondary products shipped by this industry in 1963 include pens and mechanical pencils ( $\$ 6$ million).

Shipments of lead pencils and art goods by this industry represented 90 percent of all shipments of these products ( $\$ 108$ million) by all industries. $\ln 1958$ the coverage ratio was 92 percent. Other industries shipping lead pencils and art goods include industry 3951, Pens and Mechanical Pencils, $\$ 2$ million.

## 3953-MARKING DEVICES

This industry comprises establishments primarily engaged in manufacturing rubber and metal hand stamps, dies, and seals; steel letters and figures; and stencils for use in painting or marking. For a detailed list of products of industry 3953, refer to table 6A, product codes 3953011 to 3953098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Marking Devices Industry totaled \$127 million. This amount included shipments of marking devices (primary products) valued at $\$ 96$ million, shipments of other products (secondary products) valued at $\$ 19$ million, and miscellaneous receipts (mainly sales of products bought and resold) at \$12 million.

This industry's shipments of marking devices represented 84 percent of its total product shipments. The industry specialization ratio in 1958 was 96 percent.

Shipments of marking devices by this industry represented 90 percent of all shipments of these products ( $\$ 107$ million) by all industries. ln 1958 the coverage ratio was 86 percent.

## 3955-CARBON PAPER AND INKED RIBBONS

This industry comprises establishments primarily engaged in manufacturing carbon paper for business machines, sales books, etc.; spirit or gelatin process and other stencil paper; and inked ribbons for business machines. For a detailed list of products of industry 3955 , refer to table 6A, product codes 3955011 to 3955098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Carbon Paper and lnked Ribbons Industry totaled $\$ 156$ million. This amount included shipments of carbon paper and inked ribbons (primary products) valued at $\$ 133$ million, shipments of other products (secondary products) valued at $\$ 7$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 15$ million.

This industry's shipments of carbon paper and inked ribbons represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent.

Shipments of carbon paper and inked ribbons by this industry represented 83 percent of all shipments of these products ( $\$ 161$ million) by all industries. $\ln 1958$ the coverage ratio was 89 percent. Other industries shipping carbon paper and inked ribbons include industry 3579, Office Machines, N.E.C., $\$ 14$ million.

The production index for the primary products of the industry increased to 160 in 1963 from the 1958 level of 130 . The unit value index for 1963 was 110 compared to 100 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3961-COSTUME JEWELRY AND COSTUME NOVELTIES, EXCEPT PRECIOUS METAL

This industry comprises establishments primarily engaged in manufacturing costume jewelry, costume novelties, and ornaments made of all materials, except precious metal, precious or semiprecious stones, and rolled gold plate and gold filled materials (industry 3911). For a detailed list of products of industry 3961, refer to table 6A, product codes 3961011 to 3961098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Costume Jewelry lndustry totaled $\$ 280$ million. This amount included shipments of costume jewelry (primary products) valued at $\$ 243$ million, shipments of other products (secondary products) valued at $\$ 13$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 25$ million.

This industry's shipments of costume jewelry represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was also 95 percent. Secondary products shipped by this industry in 1963 include jewelry made of precious metals, except platinum and carat gold (\$5 million).

Shipments of costume jewelry by this industry represented 95 percent of all shipments of these products ( $\$ 257$ million) by all industries. In 1958 the coverage ratio was 96 percent. Other industries shipping costume jewelry include industry 3911, Jewelry, Precious Metal, $\$ 11$ million.

## 3962-FEATHERS, PLUMES, AND ARTIFICIAL FLOWERS

This industry comprises establishments primarily engaged in manufacturing artificial flowers, fruits, and foliage made from all materials, except glass (industry 3231 ); in producing fancy feathers, plumes, and articles made principally of feathers and plumes; and curling, dyeing, and renovating ostrich feathers for the trade. For a detailed list of products of industry 3962 , refer to table 6 A , product code 3962011.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Artificial Flowers Industry totaled $\$ 60$ million. This amount included shipments of artificial flowers (primary products) valued at $\$ 53$ million, shipments of other products (secondary products) valued at $\$ 2$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 6$ million.

This industry's shipments of artificial flowers represented 97 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent.

Shipments of artificial flowers by this industry represented 87 percent of all shipments of these products ( $\$ 59$ million) by all industries. In 1958 the coverage ratio was 98 percent.

## 3963-BUTTONS

This industry comprises establishments primarily engaged in manufacturing buttons, button parts, and button blanks and molds, of all materials except precious metal and precious orsemipreciousstones (industry 3911). For a detailed list of products of industry 3963, refer to table 6A, product codes 3963011 to 3963098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Buttons Industry totaled $\$ 82$ million. This amount included shipments of buttons (primary products) valued at $\$ 71$ million, shipments of other products (secondary products) valued at $\$ 3$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 7$ million.

This industry's shipments of buttons represented 96 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent. Secondary products shipped by this industry in 1963 include needles, pins, fasteners (except slide), and similar notions ( $\$ 2$ million).

Shipments of buttons by this industry represented 87 percent of all shipments of these products ( $\$ 82$ million) by all industries. In 1958 the coverage ratio was 88 percent. Other industries shipping buttons include industry 3079, Plastics Products, N.E.C., $\$ 4$ million; and industry 3964, Needles, Pins, and Fasteners, $\$ 2$ million.

## 3964-NEEDLES, PINS, HOOKS AND EYES, AND SIMILAR NOTIONS

This industry comprises establishments primarily engaged in manufacturing notions, such as machine and hand needles, pins, hooks and eyes, eyelets, buckles, and slide and snap fasteners. For a detailed list of products of industry 3964, refer to table 6A, product codes 3964111 to 3964289 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Needles, Pins, and Fasteners Industry totaled $\$ 337$ million. This amount included shipments of needles, pins, and fasteners (primary products) valued at $\$ 290$ million, shipments of other products (secondary products) valued at $\$ 29$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 18$ million.

This industry's shipments of needles, pins, and fasteners represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary products shipped by this industry in 1963 include hardware n.e.c. ( $\$ 7$ million). and buttons ( $\$ 2$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 50 percent of the total industry shipments are represented by plants specializing in needles, pins, fasteners (except slide); and similar notions and 45 percent in zipper and slide fasteners.

Shipments of needles, pins, and fasteners by this industry represented 92 percent of all shipments of these products ( $\$ 315$ million) by all industries. In 1958 the coverage ratio was 89 percent. Other industries shipping needles, pins,and fasteners include industry 3963, Buttons, $\$ 2$ million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3964, e.g., zipper and slide fasteners, 99 percent; needles, pins, fasteners (except slide), and similar notions, 85 percent.

The production index for the primary products of the industry increased to 168 in 1963 from the 1958 level of 128 . The unit value index for 1963 was 105 compared to 98 in 1958. Both indexes were computed on a basis of $1954=100$.

table 1. General Statistics: 1963 and Earlier Years

| Year | Companies (number) | Establishments |  | All employees |  | Production workers |  |  | Value added by manufacture, adjusted $(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new$(\$ 1,000)$ | Spe-cialization ratio (percent) | Coverage ratio (percent) |

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unad justed value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
(S) Withheld because the eswimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{2}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The rigures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related ${ }^{\text {data }}$ No comparable figures are available for earlier years.
${ }^{3}$ The 1957 Standard Industrial Classification combined in this industry two industries which were separate in the 1945 Standard Industrial Classification. These were: 3952, Lead Pencils and industry 3954, Artists Materials. The data for 1954 and earlier years for these two industries have been combined.
${ }^{4}$ Less than $\$ 500$ thousand.

## tABLE 2. General Statistics, by Geographic Areas: 1963 and 1958-Continued

## Footnotes for Table 2--39C

Standard Notes: - Represents zero. applicable.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State. SIC 3951, Pens and Mechanical Pencils: New England-Rhode Island, 4 (342); Connecticut, 3 (327); Middle Atlantic-New Jersey, 18 (1,000-2,499);

Pennsylvania, 2 (20-99); East North Central-Ohio, 2 (1-19); Illinois, 5 (411); Michigan, 2 (1-19); Wisconsin, 2 (1,000-2,499); West North Central-Minnesota, 2 (20-99); Iowa, 2 (1,000-2,499); Missouri, 3 (491); Nebraska, l (1-19); Kansas, 1 (1-19); South Atlantic-Virginia, 3 (240); Georgia, 1 (1,000-2,499); Florida, 1 (1-19); East South Central-Kentucky, 2 (100-249); Tennessee, 1 (1-19); West South Central-0klahoma, 1 (1-19); Mountain-Colorado, 1 (1-19); Pacific—Washington, 1 (1-19); California, 15 (1,000-2,499).
SIC 3952, Lead Pencils and Art Goods: New England-Massachusetts, 5 (20-99); Connecticut, 5 (567); East North Central-Indiana, 3 (279); Illinois, 8 (100-249); Michigan, 1 (1-19); Wisconsin, 2 (1-19); West North Central-Minnesota, 1 (1-19); Missouri, 4 (100-249); Nebraska, 1 (1-19); Kansas, 2 (20-99); South Atlantic-Georgia, 2 (100-249); Florida, 1 (1-19); East South Central-Kentucky, 1 (100-249); Alabama, 1 (1-19); West South Central-Arkansas, l (1-19); Texas, 1 (1-19); Mountain-Colorado, 1 (1-19); Pacific-California, 16 (100-249).
SIC 3953, Marking Devices: New England-Maine, 2 (1-19); New Hampshire, 2 (1-19); Rhode Island, 6 (20-99); Middle Atlantic-New Jersey, 28 (250-499); Pennsylvania, 39 (500-999); East North Central-Ohio, 29 (329); Indiana, 12 (20-99); Michigan, 25 (294); Wisconsin, 11 (20-99); West North Central-Iowa, 7 (20-99); South Dakota, 1 (1-19); Nebraska, 4 (20-99); Kansas, 4 (1-19); South Atlantic-Delaware, 2 (1-19); Maryland, 7 (20-99); District of Columbia, 3 (20-99); Virginia, 7 (20-99); West Virginia, 4 (1-19); North Carolina, 7 (20-99); South Carolina, 3 (l-19); Florida, 29 (100-249); East South Central-Kentucky, 8 (20-99); Alabama, 3 (1-19); Mississippi, 1 (1-19); West South Central-Arkansas, 3 (1-19); Louisiana, 4 (20-99); Oklahoma, 6 (1-19); Mountain-Montana, 1 (1-19); Iáaho, 2 (1-19); Colorado, 6 (20-99); New Mexico, 2 (1-19); Arizona, 7 (1-19); Utah, 3 (20-99); Nevada, 1 (1-19); Pacific—Washington, 10 (100-249); Oregon, 5 (20-99); Alaska, 1 (1-19); Hawaii, 2 (1-19).
SIC 3955, Carbon Paper and Inked Ribbons: New England—Massachusetts, 4 (222); Connecticut, 4 (304); East North Central-Ohio, 7 (500-999); Michigan, 2 (100-249); West North Central-Iowa, 1 (100-249); Missouri, 1 (1-19); Nebraska, 1 (1-19); South Atlantic-District of Columbia, 1 (1-19); Georgia, 2 (20-99); East South Central-Tennessee, 1 (1-19); West South Central-Iouisiana, 1 (1-19); Texas, 5 (20-99); MountainColorado, 2 (100-249); Pacific-Washington, 1 (1-19); Oregon, 1 (20-99).
SIC 3961, Costume Jewelry: New England-Maine, 1 (1-19); New Hampshire, 2 (1-19); Connecticut, 9 (1,275); Middle Atlantic-Pennsylvania, 9 (1-19); East North Central-Ohio, 4 (20-99); Indiana, 1 (1-19); Michigan, 1 (1-19); Wisconsin, 1 (1-19); West North Central-Minnesota, 2 (1-19); Iowa, 1 (1-19); Missouri, 2 (20-99); South Dakota, 3 (1-19); Nebraska, 3 (1-19); South Atlantic—Maryland, 4 (1-19); Virginia, 2 (1-19); West Virginia, 1 (1-19); North Carolina, l (1-19); South Carolina, 1 (1-19); Georgia, 2 (1-19); Florida, 14 (20-99); East South Central-Kentucky, 2 (1-19); Tennessee, 1 (1-19); Alabama, 3 (100-249); Mississippi, l (1-19); West South Central-Texas, 3 (20-99); Mountain-Wyoming, 1 (1-19); Colorado, 5 (1-19); New Mexico, 1 (1-19); Arizona, 7 (20-99); Nevada, 2 (1-19); Pacific—Washington, 2 (1-19); Oregon, 1 (1-19); Hawaii, 8 (20-99).
SIC 3962, Artificial Flowers: New England-Maine, 1 (1-19); New Hampshire, 1 (1-19); Massachusetts, 5 (1-19); Rhode Island, 2 (250-499); Middle Atlantic-New Jersey, 17 (121); East North Central-Ohio, 6 (20-99); Indiana, 6 (20-99); Illinois, 18 (100-249); Michigan, 5 (20-99); West North Central-Minnesota, 9 (100-249); Iowa, 5 (20-99); Kansas, 3 (1-19); South Atlantic-Delaware, 1 (20-99); Maryland, 1 (20-99); Virginia, 3 (1-19); West Virginia, 2 (1-19); North Carolina, 12 (134); East South Central-Tennessee, l (1-19); Alabama, 3 (20-99); Mississippi, l (1-19); West South Central-Louisiana, 1 (1-19); Oklahoma, 4 (20-99); Texas, 11 (144); Mountain-Montana, 3 (1-19); Colorado, 4 (20-99); Utah, 1 (1-19); Pacific-Washington, 10 (20-99); Oregon, 6 (20-99); California, 24 (100-249); Hawaii, 1 (1-19).
SIC 3963, Buttons: New England-Maine, 1 (20-99); Vermont, 1 (20-99); Massachusetts, 10 (20-99); Rhode Island, 1 (1-19); Connecticut, 8 (619); Middle Atlantic-Pennsylvania, 5 (247); East North Central-Illinois, 9 (100-249); West North Central-Missouri, 1 (1-19); North Dakota, 1 (1-19); South Atlantic-Delaware, 3 (1-19); Maryland, 6 (20-99); Virginia, 3 (261); Florida, 2 (20-99); West South Central-Arkansas, 2 (1-19); Texas, 3 (1-19); Pacific-California, 9 (20-99).
SIC 3964, Needles, Pins, and Fasteners: New England-New Hampshire, 2 (100-249); Vermont, l (1-19); Massachusetts, ll (425); Middle AtlanticNew Jersey, 22 (1,668); Pennsylvania, 7 (1,535); East North Central-Ohio, 2 (1-19); Michigan, 3 (1-19); Wisconsin, 3 (100-249); West North Central-Iowa, 1 (1-19); Missouri, 4 (20-99); Nebraska, 1 (500-999); Kansas, 2 (1-19); South Atlantic-Maryland, 1 (20-99); Virginia, 2 (250-499); North Carolina, 3 (250-499); South Carolina, 4 (500-999); Georgia, 4 (500-999); Florida, 3 (1-19); East South Central-Kentucky, 1 (100-249); Mississippi, 2 (250-499); West South Central—0klahoma, 1 (1-19); Texas, 2 (20-99); Mountain-Colorado, 2 (20-99); PacificCalifornia, 7 (250-499).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.
table 3. Detailed Statistics: 1963

Note: Detailed figures may not add to totals because of independent rounding or independert dropping of fractions of thouiands rather than rounding in computer operations. See Introcuction for an explanation of terms used.

## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column I.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

#### Abstract

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary nroducts). (b) products classified in other industries (secondary products), and (c) miscellaneous

receipls. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

[^311]applicable. n.s.k. Not specified by kind.
$(S)$ Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the
basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

## TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

> In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geegraphic table for the industry (table 2) and they are not miscelianeous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1 .

| Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power
 fore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors
 "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated
 consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## MISCELLANEOUS MANUFACTURING INDUSTRIES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3981-Brooms and Brushes<br>3982-Linoleum, Asphalted-Felt-Base, and Other Hard Surface Floor Coverings, Not Elsewhere Classified<br>3983-Matches<br>3984-Candles<br>3987-Lamp Shades<br>3988-Morticians' Goods<br>3992-Furs, Dressed and Dyed<br>3993-Signs and Advertising Displays<br>3995-Umbrellas, Parasols, and Canes<br>3999-Manufacturing Industries, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3981—BROOMS AND BRUSHES

This industry comprises establishments primarily engaged in manufacturing household, industrial, and street sweeping brooms; and brushes such as paint brushes, toothbrushes, toilet brushes, and household and industrial brushes. For a detailed list of products of industry 3981, refer to table 6A, product codes 3981113 to 3981398.
The code number as well as the definition of this industry was unchanged between 1958 and 1963.
Value of shipments and other receipts of the Brooms and Brushes Industry totaled $\$ 321$ million. This amount included shipments of brooms and brushes (primary products) valued at $\$ 231$ million, shipments of other products (secondary products) valued at $\$ 27$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 63$ million.
This industry's shipments of brooms and brushes represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was also 89 percent. Secondary products shipped by this industry in 1963 included housefurnishings ( $\$ 8$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 60 percent of the total industry shipments are represented by plants specializing in 39813 , Other brushes; and 25 percent in 39812 , Paint and varnish brushes.

Shipments of brooms and brushes by this industry represented 93 percent of all shipments of these products ( $\$ 248$ million) by all industries. In 1958 the coverage ratio was 94 percent. Other industries shipping brooms and brushes include industry 2392, Housefurnishings, N.E.C., $\$ 2$ million.

The production index for the primary products of the industry increased to 135 in 1963 from the 1958 level of 107 . The unit value index for 1963 was 101 compared to 107 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3982-LINOLEUM, ASPHALTED-FELT-BASE, AND OTHER HARD SURFACE FLOOR COVERINGS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing linoleum, asphalted-felt-base, and other hard surface floor coverings, n.e.c. Establishments primarily engaged in manufacturing rubber floor coverings are classified in industry 3069, and cork floor and wall tile in industry 2499. For a detailed list of products of industry 3982, refer to table 6A, product codes 3982111 to 3982291.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Hard Surface Floor Coverings Industry totaled $\$ 204$ million. This amount included shipments of hard surface floor coverings (primary products) valued at $\$ 165$ million, shipments of other products (secondary products) valued at $\$ 37$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 2$ million.

This industry's shipments of hard surface floor coverings represented 82 percent of its total product shipments. The industry specialization ratio in 1958 was 84 percent.

Shipments of hard surface floor coverings by this industry represented 98 percent of all shipments of these products ( $\$ 168$ million) by all industries. In 1958 the coverage ratio was also 98 percent.

The production index for the primary products of the industry decreased to 95 in 1963 from the 1958 level of 98 . The unit value index for 1963 was 114 compared to 100 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3983-MATCHES

This industry comprises establishments primarily engaged in manufacturing matches, regardless of the material used. For a detailed list of products of industry 3983, refer to table 6A, product codes 3983012 to 3983061.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Match Industry totaled $\$ 64$ million. As in 1958, this consisted almost entirely of primary products (matches). Furthermore in 1963 as in 1958, this industry accounted for approximately all of the matches produced in manufacturing industries.

## 3984-CANDLES

This industry comprises establishments primarily engaged in manufacturing candles from fatty acids or from mineral and animal waxes. For a detailed list of products of industry 3984, refer to table 6A, product code 3984011.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Candle lndustry totaled $\$ 46$ million. This amount included shipments of candles (primary products) valued at $\$ 41$ million, shipments of other products (secondary products) valued at $\$ 2$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 2$ million.

This industry's shipments of candles represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent.

Shipments of candles by this industry represented 94 percent of all shipments of these products ( $\$ 44$ million) by all industries. ln 1958 the coverage ratio was 95 percent.

## 3987-LAMP SHADES

This industry comprises establishments primarily engaged in manufacturing lamp shades of all materials, except glass (industry 3229), and metal (industry 3642). For a detailed list of products of industry 3987 , refer to table 6 A , product code 3987011.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Lamp Shade Industry totaled $\$ 37$ million. This amount included shipments of lamp shades (primary products) valued at $\$ 35$ million, shipments of other products (secondary products) valued at $\$ 2$ million, and miscellaneous receipts (mainly contract work on materials owned by others) at less than $\$ 1$ million.

This industry's shipments of lamp shades represented 96 percent of its total product shipments. The industry specialization ratio in 1958 was 97 percent.

Shipments of lamp shades by this industry represented 98 percent of all shipments of these products ( $\$ 36$ millon) by all industries. In 1958 the coverage ratio was 97 percent.

## 3988-MORTICIANS' GOODS

This industry comprises establishments primarily engaged in manufacturing caskets, coffins, burial cases, and coffin shipping cases, whether of wood or other material, except concrete (industry 3272); morticians' supplies and accessories, such as burial garments, gloves, slippers, casket linings, and embalming fluids; and morticians' paraphernalia and equipment. For a detailed list of products of industry 3988 , refer to table 6A, product codes 3988111 to 3988398.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Morticians' Goods Industry totaled $\$ 290$ million. This amount included shipments of morticians' goods (primary products) valued at $\$ 262$ million, shipments of other products (secondary products) valued at $\$ 14$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 14$ million.

This industry's shipments of morticians' goods represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was also 95 percent. Secondary products shipped by this industry in 1963 included surgical and medical instruments and apparatus.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 54 percent of the total industry shipments are represented by plants specializing in 39881, Metal caskets and coffins, completely lined and trimmed; and 24 percent in 39882, Wood caskets and coffins, completely lined and trimmed.

Shipments of morticians' goods by this industry represented 98 percent of all shipments of these products ( $\$ 267$ million) by all industries. In 1958 the coverage ratio was 99 percent. Other industries shipping morticians' goods include industry 3443, Boiler Shop Products.

The production index for the primary products of the industry increased to 155 in 1963 from the 1958 level of 126. The unit value index for 1963 was 105 , the same level as in 1958. Both indexes were computed on a basis of $1954=100$.

## 3992-FURS, DRESSED AND DYED

This industry comprise establishments primarily engaged in scraping, currying, tanning, bleaching, and dyeing pelts. For a detailed list of products of industry 3992, refer to table 6A, product code 3992011.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Furs, Dressed and Dyed, Industry totaled $\$ 42$ million. This amount included shipments of furs, dressed and dyed (primary products) valued at $\$ 41$ million, shipments of other products (secondary products) valued at $\$ 1$ million, and miscellaneous receipts, at less than $\$ 1$ million.

This industry's receipts for furs, dressed and dyed, including value of receipts for work done on materials owned by others, represented 98 percent of its total product shipments. The industry specialization ratio in 1958 was 100 percent.

Shipments of furs, dressed and dyed, by this industry represented 94 percent of all shipments of these products ( $\$ 44$ million) by all industries. In 1958 the coverage ratio was 100 percent. Other industries shipping furs, dressed and dyed include industry 2371, Fur Goods.

## 3993-SIGNS AND ADVERTISING DISPLAYS

This industry comprises establishments primarily engaged in manufacturing electrical, mechanical, cutout, or plate signs and advertising displays, including neon signs and advertising novelties. Sign painting shops doing business on a custom basis are classified in service industries. Establishments primarily engaged in manufacturing electric signal equipment are classified in industry 3662, and lighting fixtures in industry 3642. For a detailed list of products of industry 3993, refer to table 6A, product codes 3993111 to 3993311.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Signs and Advertising Displays Industry totaled $\$ 647$ million. This amount included shipments of signs and advertising displays (primary products) valued at $\$ 555$ million, shipments of other products (secondary products) valued at $\$ 26$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 66$ million.

This industry's shipments of signs and advertising displays represented 96 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent. Secondary products shipped by this industry in 1963 included job stampings.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 49 percent of the total industry shipments are represented by plants specializing in 39932, Nonelectric signs and advertising displays; and 28 percent in 39931, Luminous tubing and bulb signs.

Shipments of signs and advertising displays by this industry represented 95 percent of all shipments of these products ( $\$ 584$ million) by all industries. In 1958 the coverage ratio was also 95 percent. Other industries shipping signs and advertising displays include industry 3079, Plastics Products, N.E.C.

## 3995-UMBRELLAS, PARASOLS, AND CANES

This industry comprises establishments primarily engaged in manufacturing umbrellas, parasols, canes; and trimmings, frames, handles, and other parts. For a detailed list of products of industry 3995 , refer to table 6A, product code 3995011.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Umbrellas, Parasols, and Canes Industry totaled $\$ 37$ million. This amount included shipments of umbrellas, parasols, and canes (primary products) valued at $\$ 33$ million, shipments of other products (secondary products) valued at $\$ 2$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 1$ million.

This industry's shipments of umbrellas, parasols, and canes represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 96 percent.

Shipments of umbrellas, parasols, and canes by this industry represented 98 percent of all shipments of these products ( $\$ 34$ million) by all industries. In 1958 the coverage ratio was 95 percent.

## 3999-MANUFACTURING INDUSTRIES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing miscellaneous fabricated products, including beauty shop and barber shopequipment; hair work; tobacco pipes and cigarette holders; coin-operated amusement machines; and many other articles, n.e.c. For a detailed list of products of industry 3999 , refer to table 6 A , product codes 3999111 to 3999398.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Miscellaneous Products, N.E.C., Industry totaled $\$ 458$ million. This amount included shipments of miscellaneous products, n.e.c.
(primary products) valued at $\$ 395$ million, shipments of other products (secondary products) valued at $\$ 27$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 36$ million.

This industry's shipments of miscellaneous products, n.e.c., represented 94 percent of its total product shipments. The industry specialization ratio in 1958 was 92 percent. Secondary products shipped by this industry in 1963 included wood products, n.e.c., and precision measuring tools.

Shipments of miscellaneous products, n.e.c., by this industry represented 84 percent of all shipments of these products ( $\$ 472$ million) by all industries. In 1958 the coverage ratio was 87 percent. Other industries shipping miscellaneous products, n.e.c., include industry 2844, Toilet Preparations, $\$ 7$ million.

MISCELLANEOUS MANUFACTURES: SIC 398
Value Added by Manufacture by State: 1963

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unad justed value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. (Z) Less than $\$ 500$ thousand. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
secause of the inclusion of excise taxes in both the cost of materials and the value of shipments for 1937 and 1935 , the statistics for these years are not strictly comparable with statistics for other years.
${ }^{3}$ No comparable figures are available for earlier years.
"The figures for 1925 and prior years do not include data for metal burial vaults, whereas the figures for later years include data for this product.

Relationships not meaningful because predominance of miscellaneous receipts, particularly contract and commission work on material owned by others.
table 2. General Statistics, by Geographic Areas: 1963 and 1958

See footnotes at end of table.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures of individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3981, Brooms and Brushes: New England-Maine, 3 (159); New Hampshire, 2 (100-249); Vermont, 3 (118); Massachusetts, 26 (2-139); Rhode Island, 4 (20-99); Connecticut, 9 (535); East North Central-Indiana, 11 (184); Michigan, 22 (194); West North Central-Missouri, 13 (298); Kansas, 7 (20-99); South Atlantic-Delaware, 4 (1-19); Virginia, 5 (20-99); West Virginia, 3 (1-19); South Carolina, 4 (20-99); East Scuth Central-Kentucky, 10 (20-99); Alabama, 8 (100-249); Mississippi, 3 (1-19); West South Central-Arkansas, 9 (20-99); Oklahoma, 8 (20-99); Mountain-Montana, 1 (1-19); Colorado, 8 (20-99); New Mexico, 2 (1-19); Arizona, 1 (1-19); Utah, 1 (1-19); Pacific-Washington, 4 (20-99); Hawaii, 5 (1-19).
SIC 3982, Hard Surface Floor Coverings: New England-Maine, 1 (100-249); Massachusetts, l (250,499); Connecticut, 1 (100-249); Middle Atlantic-New York, 1 (1-19); New Jersey, 2 (1,000-2,499); Pennsylvania, 3 (3,980); East North Central—Ohio, 1 (100-249); West North Central-Nebraska, 1 (l-19); South Atlantic-Virginia, 1 (20-99); East South Central-Kentucky, 1 (20-99); Pacific-California, 3 (114).
SIC 3983, Matches: New England-New Hampshire, l (100-249); Massachusetts, 1 (250-499); Rhode Island, l (1-19); Middle Atlantic-New York, 2 (250-499) ; New Jersey, 2 (500-999); East North Central-Ohio, 4 ( 833 ); Illinois, 4 ( 738 ); Michigan, 1 (1-19); West North Central-Minnesota, 1 (250-499); Missouri, 2 (250-499); South Atlantic-North Carolina, 1 (20-99); West South Central-Louisiana, 1 (100-249); Texas, 1 (20-99); Pacific-Washington, 1 (100-249); California, 3 (250-499).
SIC 3984, Candles: New England -Vermont, l (1-19); Massachusetts, 6 (100-249); Middle Atlantic-New Jersey, 8 (208); Pennsylvania, 5 (100-249); East North Central-Ohio, 5 (292); Illinois, 3 (1-19); Michigan, 1 (1-19); Wisconsin, 2 (250-499); West North Central-Iowa, 1 (179); Missouri,

SIC 3987, Lampshades: New England-Vermont, 1 (1-19); Massachusetts, 6 (100-249); Rhode Island, 6 (182); Middle Atlantic-New York, 89 ( 920 ); East North Central-Michigan, 6 (20-99); West North Central—Minnesota, l (1-19); Iowa, 2 (20-99); South Atlantic-Delaware, l (1-19); Maryland, 2 (1-19); Georgia, l (1-19); Florida, 3 (1-19); East South Central-Kentucky, l (1-19); Tennessee, l (l-19); Mississippi, l (20-99); West South Central-Texas, 1 (1-19); Mountain-Arizona, 3 (1-19); Utah, 1 (1-19); Pacific-Oregon, 1 (1-19).
SIC 3988, Morticians' Goods: New England-Maine, 4 (20-99); New Hampshire, 7 (200); Rhode Island, 3 (20-99); West North Central-Minnesota, 8 (190); North Dakota, 1 (1-19); South Dakota, 1 (1-19); Nebraska, 3 (20-99); Kansas, 6 (20-99); South Atlantic—Maryland, 3 (20-99); District of Columbia, 1 (1-19); West Virginia, 4 (20-99); South Carolina, 6 (189); East South Central—Kentucky, 8 (20-99); Mississippi, 3 (20-99); Mountain-Montana, 1 (1-19); Colorado, 7 (20-99); New Mexico, 2 (1-19); Arizona, 2 (20-99); Utah, 4 (20-99); Pacific—Oregon, 4 (20-99); Hawaii, 3 (1-19).
SIC 3992, Furs, Dressed and Dyed: New England-Maine, l (1-19); Vermont, l (1-19); Connecticut, 2 (1-19); Middle Atlantic-Pennsylvania, 6 (20-99); East North Central-Illinois, 2 (100-249); Wisconsin, 1 (1-19); West North Central—Minnesota, l (1-19); Missouri, 2 (1-19); Nebraska, l (1-19); South Atlantic-Virginia, 1 (1-19); South Carolina, 1 (200-249); West South Central—Louisiana, l (1-19); Mountain-Colorado, 2 (20-99); PacificWashington, 4 (1-19); California, 5 (1-19).
SIC 3993, Signs and Advertising Displays: New England-Maine, 11 (20-99); New Hampshire, 5 (1-19); Vermont, 4 (20-99); Connecticut, 47 (333); West North Central-North Dakota, 4 (20-99); South Dakota, 6 (20-99); South Atlantic-Delaware, 4 (20-99); District of Columbia, 13 (100-249); West Virginia, 10 (20-99); East South Central—Mississippi, 11 (20-99); Mountain-Montana, 14 (20-99); Idaho, 16 (20-99); Wyoming, 5 (20-99); Nevada, 8 (158); Pacific-Alaska, 3 (1-19); Hawaii, 6 (20-99).

SIC 3995, Umbrellas, Panasols, and Canes: New England—Massachusetts, l (20-99); Middle Atlantic-Pennsylvania, 7 (250-499); East North CentralOhio, 2 (20-99); Illinois, l (1-19); West North Central-Iowa, l (1-19); Missouri, l (1-19); South Atlantic-Maryland, 4 (214); Georgia, l (1-19); Florida, 3 (1-19); East South Central—Mississippi, 1 (1-19); West South Central—Arkansas, 3 (20-99); Louisiana, 1 (1-19); Texas, 1 (1-19); Mountain-Arizona, l (1-19); Pacific-Oregon, 1 (20-99); California, 2 (20-99).
SIC 3999, Miscellaneous Products, N.E.C.: New England-Maine, 3 (1-19); New Hampshire, 6 (20-99); Vermont, 3 (161); Rhode Island, 33 (670); East North Central-Indiana, 24 (301); Wisconsin, 29 (678); West North Central—North Dakota, l (1-19); South Dakota, 4 (20-99); Kansas, 2 (1-19) South Atlantic-Virginia, 9 (114); West Virginia, l (1-19); North Carolina, 11 (250-499); South Carolina, 4 (1-19); Georgia, 2 (1-19); East South Central-Tennessee, 13 (100-249); Alabama, 2 (1-19); Mississippi, 4 (1-19); West South Central-Arkansas, 4 (20-99); Louisiana, 4 (1-19); Oklahoma, 5 (20-99); Mountain-Montana, 1 (1-19); Colorado, 8 (20-99); New Mexico, 2 (1-19); Arizona, 7 (20-99); Utah, 5 (21-99); Nevada, 3 (20-99); Pacific-Washington, 11 (20-99); Oregon, 8 (20-99); Alaska, l (1-19).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report
showed the number of establishments and total employment (either actual or in size ranges) for such States.

## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

> An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of mary to other industries (secondarsi products of a given industry) and receipts for activitied puch
as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ Includes receipts for work done on materials owned by others.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary nroducts). (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." In. dustries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

${ }^{2}$ Not shown because comparable quantity data were not obtained for a significant portion of these products.
${ }^{3}$ No quantity data obtained for these products.

## table 6C. Product Classes-Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958 to 1963

[^316] (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. Figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data
${ }^{2}$ For 1963 and 1958 include receipts for work done on materials owned by others. Such receipts are excluded in other years.

# TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

## table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958-Continued

| Driven by purchased energy......................................... |  |  | 10 | 1 |  | 54 | 5 | 89 | - | 64 |
| Aggregate horsepower per 100 production workers. | 384 | 1,874 | 316 | 143 | 76 | 463 | 262 | 293 | - | 329 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated ith these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Po er Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
(Z) Less than 500 horsepower. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## Ordnance and Accessories

19A Ordnance and accessories

For 1953 and earlier years, data for Major Group 19, Ordnance and Accessories, are included with Major Group 39 in table 1.

For 1954 and subsequent years Major Group 19 data are published separately. However, in some tables within these volumes, data for Major Group 19 are given both separately and combined with Major Group 39.

Major Group 19 covers establishments primarily engaged in manufacturing artillery, small arms, and related equipment; ammunition; tanks and specialized tank parts; sighting and fire control equipment; complete guided missiles and research and development on complete guided missiles and, miscellaneous ordnance and accessories, not elsewhere classified.

## Ordnance and Accessories: Major Group 19

Value Added by Manufacture by State: 1963

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for
(NA) Not available. individual companies. (NA) Not available. ( $X$ ) Not applicable,
${ }^{1}$ The figures for 1939 through 1963 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not know.
${ }^{2}$ For the period 1954 to 1963, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year.
${ }^{3}$ The total value of shipments and cost of materials for industry groups (2- and 3digit) include extensive duplication arising from shipments between establishments in the same industry classification. For more information, see Introduction.
${ }^{4}$ The figures for 1958 to 1963 include expenditures for plants under construction and not yet in operation.
SIn 1954, data for administrative and auxiliary establishments for Major Group 19,
"Ordnance and Accessories", are included with Major Group 39, "Miscellaneous
Manufactures"
${ }^{6}$ Data for 1958 to 1963 include establishments primarily engaged in manufacturing complete guided missiles, and in performing research and development on complete guided missiles.
${ }^{7}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates therefore, may differ from the results that would have been obtained from a complete zanvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

industry. For a more complete explanation, see Introduction.

## ORDNANCE AND ACCESSORIES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>1911 -Guns, Howitzers, Mortars, and Related Equipment<br>1925-Guided Missiles and Space Vehicles, Completely Assembled<br>1929-Ammunition, Not Elsewhere Classified<br>1931-Tanks and Tank Components<br>1941-Sighting and Fire Control Equipment<br>1951-Small Arms<br>1961-Small Arms Ammunition<br>1999-Ordnance and Accessories, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 1911 -GUNS, HOWITZERS, MORTARS, AND RELATED EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of naval, aircraft, anti-aircraft, tank, coast, and field artillery having a bore over 30 mm . (or over 1.18 inch), and components. Establishments primarily engaged in manufacturing small arms and parts 30 mm . (or 1.18 inch ) and below are classified in industry 1951. However, all statistics for industry 1911 combined with those for industry 1999 in 1963, with the exception of a value of shipments figure for the products primary to industry 1911. The latter figure is shown separately in table 6A.

## 1925-GUIDED MISSILES AND SPACE VEHICLES, COMPLETELY ASSEMBLED

This industry comprises establishments primarily engaged in the manufacture of completely assembled guided missiles and space vehicles. Establishments primarily engaged in manufacturing guided missiles and space vehicle engines and engine parts are classified in industry 3722; space satellites, guided missile and space vehicle airborne and ground guidance, check-out and launch electronic systems and components in industry 3662; and guided missile and space vehicle airframes, nose cones, and space capsules in industry 3729. This industry is now a separate one under the Standard Industrial Classification System. In 1958 the SIC included it as part of industry 1929; it was published separately at that time as census industry 1925. For a detailed list of products of industry 1925, refer to table 6A, product codes 1925111 to 1925115.

Value of work done and other receipts of the Complete Guided Missiles lndustry totaled $\$ 3,054$ million. This amount included work on complete guided missiles and space vehicles (primary products) valued at $\$ 2,735$ million, shipments of other products (secondary products) valued at $\$ 176$ million, and miscellaneous receipts at $\$ 143$ million.

This industry's receipts for work done on complete guided missiles and space vehicles represented 94 percent of its total product shipments. The industry specialization ratio in 1958 was 73 percent. Secondary products shipped by this industry in 1963 consisted mainly of aircraft and parts ( $\$ 131$ million).

Shipments of complete guided missiles and space vehicles by this industry represented 69 percent of all shipments of these products ( $\$ 3,957$ million) by all industries. In 1958 the coverage ratio was 83 percent. Other industries shipping complete guided missiles and space vehicles consisted mainly of industry 3721, Aircraft, and industry 3729, Aircraft Equipment, N.E.C.

## 1929-AMMUNITION, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in the manufacture of ammunition, n.e.c., or in loading and assembling ammuntion over 30 mm . (or over 1.18 inch) for naval, aircraft, anti-aircraft, tank, coast, and field artillery; including component parts. This industry also includes establishments primarily engaged in manufacturing bombs, mines, torpedoes, grenades, depth charges, chemical warfare projectiles, and their component parts. Establishments primarily engaged in manufacturing small arms ammunition are classified in industry 1961; explosives in industry 2892; and military pyrotechnics in industry 2899. This industry has been amended to include industry 1921, Artillery Ammunition and industry 1922, Ammunition, Loading and Assembling, which were defined as separate industries in the 1957 Standard Industrial Classification Manual. Also, establishments producing guided missiles and space vehicles are now classified in industry 1925, Complete Guided Missiles. For a detailed list of products of industry 1929, refer to table 6A, product class codes 19291 to 19293.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been significantly changed from the classification systemused in 1958. The change in composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due principally to industries 1921, Artillery Ammunition, and 1922, Ammunition Loading and Assembling, being included in this industry for 1963.

Value of shipments and other receipts of the Ammunition, N.E.C., Industry totaled $\$ 503$ million. This amount included shipments of ammunition, n.e.c. (primary products) valued at $\$ 290$ million, shipments of other products (secondary products) valued at $\$ 123$ million, and miscellaneous receipts (mainly contract work on materials owned by others) at $\$ 89$ million.

This industry's shipments of ammunition, n.e.c., represented 70 percent of its total product shipments.

Shipments of ammunition, n.e.c., by this industry represented 82 percent of all shipments of these products ( $\$ 356$ million) by all industries. Other industries shipping ammunition, except for small arms, n.e.c. (primary products) included industry 3461, Metal Stampings; industry 3545, Machine Tool Accessories; and industry 3621, Motors and Generators.

## 1931-TANKS AND TANK COMPONENTS

This industry comprises establishments primarily engaged in the manufacture or assembly of complete tanks and other tracked military vehicles and specialized components for
tanks. Establishments primarily engaged in manufacturing wheeled military vehicles are classified in group 371, and tank engines in industry 3519.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Tanks and Tank Components Industry totaled $\$ 394$ million. This amount included shipments of tanks and tank components (primary products) valued at $\$ 358$ million, shipments of other products (secondary products) valued at $\$ 18$ million, and miscellaneous receipts at $\$ 18$ million.

This industry's shipments of tanks and tank components represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 89 percent.

Shipments of tanks and tank components by this industry in 1963 represented 79 percent of all shipments of these products ( $\$ 454$ million) by all industries. In 1958 the coverage ratio was 84 percent. Another industry shipping tanks and tank components was industry 3717, Motor Vehicles and Parts, $\$ 5$ million.

## 1941-SIGHTING AND FIRE CONTROL EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of sighting and fire control equipment, but which are not engaged in manufacturing optical lenses and prisms. Important products of this industry include bomb sights, percentage correctors, wind correctors, directors, and sound locators. Establishments engaged in manufacturing optical lenses and prisms, and also manufacturing sighting and fire control equipment, are classified in industry 3831.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Sighting and Fire Control Equipment Industry totaled $\$ 157$ million. This amount included shipments of sighting and fire control equipment (primary products) valued at $\$ 86$ million, shipments of other products (secondary products) valued at $\$ 66$ million, and miscellaneous receipts at $\$ 5$ million.

This industry's shipmerts of sighting and fire control equipment represented 57 percent of its total product shipments. The industry specialization ratio in 1958 was 62 percent. Secondary products shipped by this industry in 1963 consisted mainly of test equipment for testing electrical, radio, and communication circuits and motors, electronic navigational aids, and missile-borne and space vehicle-borne navigation and guidance systems and equipment.

Shipments of sighting and fire control equipment by this industry represented 80 percent of all shipments of these products ( $\$ 107$ million) by all industries. In 1958 the coverage ratio was 89 percent. Ariother industry shipping sighting and fire control equipment was industry 3662, Radio, TV Communications Equipment, $\$ 13$ million.

## 1951-SMALL ARMS

This industry comprises establishments primarily engaged in the manufacture of small firearms having a bore 30 mm . (or 1.18 inch ) and below, and parts for small firearms. Establishments primarily engaged in manufacturing artillery and mortars having a bore over 30 mm . (or over 1.18 inch ), and component parts are classified in industry 1911. For a detailed list of products of industry 1951, refer to table 6A, product codes 1951113 to 1951281.

Value of shipments and other receipts of the Small Arms, 30 mm . and Under, Industry totaled $\$ 133$ million. This amount included shipments of small arms, 30 mm . and under, (primary products) valued at $\$ 122$ million, shipments of other products (secondary products) valued at $\$ 6$ million, and miscellaneous receipts (mainly resales) at $\$ 5$ million.

This industry's shipments of small arms, 30 mm . and under, represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent.

Shipments of small arms, 30 mm . and under, by this industry represented 82 percent of all shipments of these products ( $\$ 149$ million) by all industries. In 1958 the coverage ratio was also 81 percent. Other industries shipping small arms, 30 mm . and under, included industry 3722, Aircraft Engines and Parts; and industry 3729, Aircraft Equipment, N.E.C.

## 1961~SMALL ARMS AMMUNITION

This industry comprises establishments primarily engaged in the manufacture of ammunition for small arms having a bore of 30 mm . (or 1.18 inch ) and below. Establishments primarily engaged in manufacturing ammunition except for small arms are classified in industry 1929, blasting and detonating caps and safety fuses in industry 2892, and fireworks in industry 2899 . For a detailed list of products of industry 1961, refer to table 6A, product codes 1961012 to 1961089.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Small Arms Ammunition Industry totaled $\$ 192$ million. This amount included shipments of small arms ammunition (primary products) valued at $\$ 177$ million and shipments of other products (secondary products) and miscellaneous receipts which together totaled $\$ 16$ million.

This industry's shipments of small arms ammunition are between 85 and 99 percent of its total product shipments. The industry specialization ratio in 1958 also was between 85 and 99 percent.

Shipments of small arms ammunition by this industry represented 92 percent of all shipments of these products ( $\$ 192$ million) by all industries. In 1958 the coverage ratio was 94 percent. Other industries shipping small arms ammunition included industry 1999, Ordnance and Accessories, N.E.C.; industry 3352, Aluminum Rolling and Drawing; and industry 3694, Engine Electrical Equipment,

## 1999-ORDNANCE AND ACCESSORIES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in the manufacture of ordnance and accessories, n.e.c. Complete guided missiles and space vehicles are classified in industry 1925. However, in 1963 all statistics for industry 1999 include those for industry 1911, with the exception of a value of shipments figure for the products primary to industry 1911. The latter figure is shown separately in table 6A.

Therefore, the textual material below represent the activities of industries 1999 and 1911 combined.

Value of shipments and other receipts of the Ordnance and Accessories, N.E.C., Industry (including SIC 1911) totaled $\$ 351$ million. This amount included shipments of ordnance and accessories, n.e.c.; and howitzers, mortars, and other artillary over 30 mm . (primary products) valued at $\$ 175$ million, shipments of other products (secondary products) valued at $\$ 49$ million, and miscellaneous receipts (mainly contract work on materials owned by others) at $\$ 126$ million.

These industry's shipments of ordnance and accessories, n.e.c., and howitzers, mortars. and other artillary over 30 mm . represented 78 percent of the total product shipments. (The specialization ratio for industry 1999 alone is not affected by the inclusion of industry 1911).

Shipments of ordnance and accessories, n.e.c., and howitzers, mortars, and other artillary over 30 mm . represented 69 percent of all shipments of these products ( $\$ 256$ million) by all industries. (The coverage ratio for industry 1999 alone in 1963 was 72 percent.) Other industries shipping ordnance and accessories, n.e.c., and howitzers, mortars, and other artillary over 30 mm . consisted mainly of industry 3729, Aircraft Equipment, N.E.C., $\$ 7$ million; industry 3662, Radio, TV Communication Equipment, $\$ 6$ million; and industry 3722, Aircraft Engines and Parts, $\$ 4$ million.

## table 1. General Statistics: 1963 and Earlier Years

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies,
(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ Industry 1911 combined with industry 1999 for 1963. However, a value of shipments figure for the products primary to this industry is shown in table 6A.
${ }^{2}$ The adjusted value added for the Guided Missiles and Space Vehicles Industry does not take into account the change in inventory between the beginning and end of the year, since the figures reported by establishments in this industry represent value of work done rather than value of shipments. It does include value added by resales.
${ }^{3}$ For industry 1925, represents value of work done.
«Excludes 1958 SIC 1922, ammunition loading.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio <br> Col. B <br> Col. Note: See Introduction for an explanation of terms used.
Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ Data for industry 1911 included with industry 1999 in 1963 .
${ }^{2}$ Data for industry 1911 and a portion of industry 1929 has been included with industry 1999 in 1958 to avoid disclosing figures of individual ${ }^{2}$ Data for industry 1911 and a
${ }^{3}$ Represents value of work done.
${ }^{4}$ For industry 1961, value of shipments of secondary products are included with miscellaneous receipts. The specialization ratios are between 85 and 99 percent.
${ }^{5}$ The inclusion of data for industry 1911 does not effect the specialization ratio for industry 1999 in 1963.
${ }^{6}$ The coverage ratio for industry 1999 alone for 1963 is 72 percent. The difference in coverage by inclusion of the products primary to industry 1911 results from the fact that most of the value for industry 1911 is accounted for by establishments in industries other than 1911.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

## In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)

miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963-Continued

${ }^{1}$ Includes $\$ 372,326$ shipped by industry 3721, Aircraft. In addition, the following industries had shipments of $\$ 2$ million or more; however, the exact values are withheld to avoid disclosing individual company figures: 3662, Radio, TV Communications Equipment; 3722, Aircraft Engines and Parts; and ${ }_{\frac{1}{2}} 3729$, Aircraft Equipment, N.E.C.
${ }^{3}$ Includes shipments of $\$ 2$ million or more by the following industries; however, the exact values are withheld to avoid disclosing individual company figures: 3662, Radio, TV Communications Equipment: 3721, Aircraft; and 3729, Aircraft Equipment, N.E.C.

# TABLE 5B. Industry-Product Analysis-Production by Product Class and Industry: 

## 1963-Continued

## Footnotes for Table 5B-19A-Continued

${ }^{3}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 27313 , Technical, scientific, and professional books; 36624, Electronic navigational aids (except missile-borne and space vehicle basin equipment) and 36628, Missile-borne and space vehicle-borne navigation and guidance systems and equipment.
${ }^{4}$ Includes shipments of $\$ 2$ million or more by the following industries; however, the exact values are withheld to avoid disclosing individual company figures: 3461, Metal Stampings; 3545, Machine Tool Accessories; 3621, Motors and Cenerators; 3661, Telephone; Telegraph Apparatus; and 3871, Watches and Clocks.
${ }^{5}$ Includes $\$ 2$ million shipped by industry 3729, Aircraft Equipment, N.E.C. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 1941, Sighting and Fire Control Equipment; 3443, Boiler Shop Products; 3599, Miscellaneous Machinery; and 3636, Sewing Machines.
${ }^{6}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 19310, Tanks and tank components; 33991, Metal powders and paste; 34320, Plumbing fixtures and fittings and trim (brass goods); 34434, Gas cylinders; 34612, Job stampings, except automotive; 34615, Stamped and spun hospital utensils and cooking and kitchen household utensils except aluminum: 36621, Radio and TV commercial communication equipment; 37775, Parts and accessories for passenger cars, trucks, and busses, shipped to motor vehicle manufacturers; 37221, Aircraft engines for military customers; 37223, Research and development on aircraft engines; 37291, Other aircraft parts and auxiliary equipment; and 37292, Guided missile components and subassemblies, n.e.c.
${ }^{7}$ Includes $\$ 5,029$ shipped by industry 3777, Motor Vehicles and Parts. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 1929, Ammunition, N.E.C.; 3323, Steel Foundries, 3585, Refrigeration Machinery; 3722, Aircraft Engines and Parts; and 3742, Railroad and Street Cars.
${ }^{7}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 37291, Other aircraft parts and auxiliary equipment; and 37292, Guided missile components and subassemblies, n.e.c.
${ }^{9}$ Includes $\$ 12,997$ thousand shipped by industry 3662, Radio, TV Communications Equipment. In addition, industry 3585, Refrigeration Machinery, had shipments which totaled $\$ 2$ million or more, but is withheld to avoid disclosing figures for individual companies.
${ }^{10}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 19293, Ammunition, n.e.c.; 36112, Test equipment for testing electrical, radio, and communication circuits and motors; 36624, Electronic navigational aids; 36628, Missile-borne and space vehicle-borne navigation and guidance systems and equipment; 37291, Other aircraft parts and auxiliary equipment; 37292, Guided missile components and subassemblies, n.e.c.; 38311, Optical instruments and lenses, except sighting and fire-control equipment; and 38410, Surgical and medical instruments and apparatus.

Includes shipments of over $\$ 2$ million of the following industries, however, the exact values are withheld to avoid disclosing individual company figures: 3722, Aircraft Engines and Parts; and 3729, Aircraft Equipment, N.E.C.
${ }^{12}$ Includes shipments of over $\$ 2$ million of products classified in industry 3717, Motor Vehicles and Parts; however, the exact figures are withheld to avoid disclosing individual company figures.
${ }^{13}$ Includes the following industries which total $\$ 2$ million or more but are withheld to avoid disclosing company figures: 1999, Ordnance and Accessories, N.E.C.; 3352, Aluminum Rolling and Drawing; and 3694, Engine Electrical Equipment.
${ }^{14}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing company figures: 19990, Ordnance and accessories, n.e.c., and 34295, Other hardware.
${ }^{15}$ Includes shipments (in thousands of dollars) by the following: \$2,020 by industry 1929, Ammunition, N.E.C.; \$6,134 by industry 3662 , Radio, TV Communication Equipment; $\$ 3,562$, by industry 3722 , Aircraft Engines and Parts; $\$ 7,227$ by industry 3729, Aircraft Equipment, N.E.C.; as weil as by the following industries, the shipments of which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 1961 , Small Arms Ammunition; 2522, Metal Office Furniture; 3011, Tires and Inner Tubes; 3433, Heating Equipment, Except Electric; 3443, Boiler Shop Products; 3461, Metal Stampings; 3519, Internal Combustion Engines; 3544, Special Dies and Tools; 3571, Computing and Related Machines; 3599, Miscellaneous Machinery; 3679, Electronic Components, N.E.C.; 3721, Aircraft; and 3861, Photographic Equipment.
${ }^{16}$ Includes the following product classes which total $\$ 2$ million or more, but are withheld to avoid disclosing individual company figures: 19610 , Small arms ammunition, 30 mm . and undre (or 1.18 inches and under); 351ll, Steam, gas, and hydraulic turbine generator set units and parts; 35595, Other special industry machinery and equipment; 36122, Power and distribution transformers, except parts; 36131, Switchgear, including power switchgear assemblies, and other switching and interrupting devices 2,300 volts; 36212 , Integral horsepower motors and generators, except land transportation; and 36220, General industry power circuit devices and controls.
table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

## TABLE 7A. Materials by Kind: 1963 and 1958-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind
${ }^{1}$ Does not include materials produced and consumed at the same establishnent.
${ }^{2}$ Represents (a) total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not requested and (b) total cost of materials reported for those establishments which failed to report costs of individual materials on "standard forms."
${ }^{3}$ Includes data for the following industries: 1911, 1929, 1931, 1951, and 1999.

## table 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishwents; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Valueadded bymanufacture,adjusted$(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures,$(\$ 1,000)$ |

Note: Very small establishments were not requested to report their metalworking operations and in some instances a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production worker employment on the last line of the table below.

| Item | Industry |  |  |  |  |  |

1963 and 1958 ..... 8

## MANUFACTURING ACTIVITY IN GOVERNMENT ESTABLISHMENTS

This special report presents data of manufacturing activities for selected government establishments within the United States. These data are not included in other 1963 Census of Manufactures reports, which cover privately operated establishments only. Manufacturing establishments owned by the Federal Government and operated by private companies either for the government or for their own account are included with privately operated establishments. Three types of establishments are covered in this report: (1) Manufacturing facilities owned and operated by the Department of Defense; (2) prison industries (Federal, District of Columbia, and State); and (3) manufacturing facilities owned and operated by other U.S. Government agencies. The data were prepared with the cooperation of the Department of Defense, the Department of Justice, the Department of Interior, and the District of Columbia and State prison systems.

## MANUFACTURING FACILITIES OWNED BY THE U.S. GOVERNMENT AND OPERATED BY THE DEPARTMENT OF DEFENSE

Data are shown in tables 1 to 3 for manufacturing facilities owned by the U.S. Government and operated by the Department of Defense. Although these establishments may also be engaged in nonmanufacturing activities at the same location, the statistics represent only their activities relating to manufacturing. All manufacturing installations which produce goods or perform manufacturing services, such as industrial research and development, are covered in this report. Data resulting from the conversion and modification of ships and aircraft by the Army and Navy, but not the Air Force, are also included. Manufacturing activities of the U.S. Air Force are not included because its accounting system is different from that used in the Industrial Fund of the Department of Defense and thus the Air Force concluded it could not provide data comparable to the other respondents (Army and Navy). Also, the report does not include activities of Defense Department installations which serve primarily or exclusively their own installations (e.g., bakeries and some machine shops). All printing and publishing activities are excluded because almost every large government installation engages in these activities to some degree, thus making coverage difficult.

There are approximately twice as many plants reporting in this survey as in the comparable 1958 survey. This increase is primarily because of the additions of research and development activities and manufacturing divisions of supply depots. As a result of this increase, there are two types of tables. The first type shows 1963 data for all Defense Department plants within the scope of this survey. The second shows 1963 data for only those plants that reported in 1958 and their comparable 1958 data.

In all tables, statistics are shown for employment, man-hours, payrolls, costs, and billings. Military personnel are not included in any of the employment, payroll, or manhours data. The data represent only nonmilitary (wage board and graded) employees engaged in manufacturing activities at the plant. The cost and billings data for 1963 are based on the lndustrial Fund accounting system of the Department of Defense. The Industrial Fund concepts of "TotalBillings" and "Total Earned Revenue," which were used for the 1963 data, differ because the latter is the result of increasing or decreasing "Total Billings" to reflect the change in unbilled costs of work in progress.

The 1963 value added by manufacture data, shown in table 1, represent total earned revenue (including the value of manufacturing services) less the cost of materials, parts, and supplies actually consumed or put into production during the year.

## PRISON INDUSTRIES (FEDER AL, DISTRICT OF COLUMBIA, AND STATE)

During 1963, manufactured products valued at $\$ 112,702$ thousand were produced in Federal, District of Columbia, and State prisons in the United States. The comparable 1958 figure of $\$ 97,307$ thousand also includes the value of products produced for use within the institutions as well as for productstransferred to other governmental agencies or for sale in the open market. These data, shown in detail in table 4, cover the activities of the Federal Prison Industries, Inc., as well as those of the prison industries of each State and the District of Columbia.

## MANUFACTURING FACILITIES OWNED AND OPERATED BY OTHER U.S. GOVERNMENT AGENCIES

Manufacturing operations of the Bureau of Mines, U.S. Department of lnterior, are not included in the tables of this report. That agency is the primary producer of refined helium in the United States. During 1963, it operated five plants from which 627 million cubic feet of helium valued at $\$ 21,945$ thousand were shipped. The average number of employees totaled 639 , of which 479 were production and related workers, and the total wages and salaries paid amounted to $\$ 4,195$ thousand. Comparable figures for other years as well as additional detail for production, shipments, consumption, prices, reserves, and activities relating to conservation and technology appear in the Minerals Yearbook, a publication of the Bureau of Mines.

Excluded from this report are the manufacturing activities of the Government Printing Office, the National Aeronautics and Space Administration, and the Tennessee Valley Authority. The operations of these agencies are covered in their annual reports. Also excluded are the minor manufacturing activities of such other government agencies as the Post Office Department and the General Services Administration.

## COMPARABILITY OF CENSUSES OF MANUFACTURES IN TERMS OF THE VALUE ADDED MEASURE

It is doubtful whether any census could be kept fully comparable with one taken for an earlier period. Even if all systems of classification, such as the SIC, and definitions were identical and if the same procedures were employed in compiling the statistics, the changes in the structure of industry would introduce elements of noncomparableness. For example, a shift to the use of commercial services instead of the manufacturers' own labor force in performing some functions would affect the comparability of operating ratios such as output per man-hour associated with an industry.

The changes in definitions and procedures introduced in a census are described in the introductory text of the census volumes and historical data are revised where practical. (See Introductory text, Section 5.) Nevertheless, over long periods of time the comparableness of series will be significantly affected and the problems of revising historical data become difficult.

One way of displaying the problems connected with comparing the statistics from two censuses is to review the history of a single concept. For this example, value added by manufactures has been chosen. Currently, it is looked upon as the "best" additive measure of manufacturing activity provided by the census of manufactures. It is widely relied upon for comparative statistics by industry and by geographic location.

The phrase, "value added to materials by manufacturing processes," first appeared as a column heading in the census for 1904, where it was proposed as a measure suitable for comparing industries and areas. Earlier censuses had provided information on value of product and varying amounts of information on costs of materials, the two sets of figures which census analysts use to compute value added (table A). In connection with the census for 1869, costs of materials were subtracted from value of product for each industry but the difference, which was labeled "excess of product over materials," was used primarily to indicate variation among industries classified by the ratio of materials to employees and by the manner in which products were valued for census purposes.

[^324]During the 19th century, interest centered chiefly in obtaining an aggregate which would reflect the growth of the American economy. In 1889, the subtraction of costs of materials from value of product was labeled, "net value of products." It was later criticized as a "statistical absurdity" unsuitable for measuring the growth of manufactures since the net value of products was made to appear less than the cost of materials. The census for 1899 proposed as a measure of growth the sum of "(1) the value of all raw materials which have entered this output; and (2) the entire value added to these ,raw materials by manufacturing processes," and, (3) the value of the partially fabricated materials imported "since their value is counted nowhere else."

The concern with the appropriate basis for the measurement of growth, and the desire to include within the measure all activities not explicitly included elsewhere, probably had its roots in the sparsity of available data. The census of manufactures was almost the only source of information on output and apparently there was a desire to make it as comprehensive as possible. It purported to cover output wherever it occurred-in factories, in the hand trades, in stores, and even in homes if the output was commercial-though the censuses for 1869 and later disclaimed an ability to obtain reliable statistics from the hand trades.

The census for 1899 devoted 77 pages of text to the emergence of a "factory system" and to formation of 185 "industrial combinations" or "trusts," consisting of 2,040 plants in 12 industrial groups and 36 States. All but eight of the "combinations" had been formed between 1890 and 1899. After 1899, the census was confined to the "factory system." Its frequency increased and emphasis shifted to the organization and structure of manufactures.

The formulation of net value of products as the sum of raw materials and value added had required that data be collected separately for raw materials and for fabricated materials and, as is shown in table A, data were obtained on many other expenses. The problem of allocating net value of products among industries and areas was discussed extensively in the census for 1899 but a satisfactory solution was not found. "Value added" was adopted, almost reluctantly, for this purpose in the census for 1904, but only the cost of materials consumed directly was subtracted from value of products to arrive at the value added used for that year. Materials consumed by the manufacturing process (e.g., mill supplies, fuels, etc.), but not embodied in the product, were not subtracted even though information on their magnitude was available in the census.

## Table A.--Approaches to Value Added, Selected Census Years 1869 to 1958

In millions of dollars. The entries are from the original reports for the years shown. Estimates adjusted for changes in the scope of manufactures are shown in table 1, General Summary. The exclusion of the hand trades and neighborhood operations from the 1899 census reduced the value added shown in this table by 44 percent; the adjustments for 1809 and later censuses were about 4 percent.]

*Subtracted from value of product in computing value added by manufacture.

- Represents zero.
${ }^{1}$ Includes only items named in a request for separate information.
${ }^{2}$ For 1947, value of shipments; for 1958, value of shipments and miscellaneous receipts, sales of goods bought and resold without further manufacture, and changes in inventories of work in process and finished goods.
${ }^{3}$ Includes all materials consumed in the manufacture of products plus an increasingly comprehensive list of supplies consumed currently in the operation of the plant.
${ }^{4}$ Specifically mentioned as included in item 2, but not shown separately.
${ }^{5}$ Obtained separately but cambined with item 7 for publication.
${ }^{6}$ Information requested but no mention of it was found in publication.
${ }^{7}$ Excluded from value of product and, thus, from value added. Data on excise taxes were obtained for 1947 and published as a memorandum item in the tables for industry, but have not been requested since 1947.
${ }^{8}$ Data were obtained in a sample survey conducted in connection with the census for 1958 and relate to 1957.
${ }^{9}$ Specifically mentioned as included in item 15.
10 Items 13 and 14 were combined and requested as item 12.
${ }^{11}$ The instructions for 1899 and 1904 requested the inclusion of the following expenses: Federal excise taxes, rent of office and buildings, interest paid, insurance premiums paid, advertising, ordinary repairs of buildings and machinery, all other sundries. The instructions for 1909 modified this list by requesting the separate reporting of Federal excise taxes, dropping interest paid, and adding traveling expenses, royalties, use of patents.
${ }^{12}$ Published only for individual industries; total not shown for all industries.
${ }^{13}$ For 1869 , labeled, "excess of value over materials;" for 1899 , labeled, "net value of product."

The chief concern of those first deciding upon the appropriate definition of value added was to circumvent the problem discussed in most censuses under the heading, "Duplication in cost of materials and value of products.'" To them, it must have seemed undesirable to subtract from value of products anything not essential to reduce "duplication" to manageable proportions. The considerations which went into the decisions to subtract additional costs from value of products are incompletely recorded, but there is no doubt that such decisions were taken. By 1909, mill supplies and fuels, including rented heat and power, were subtracted. To this list were added purchased electricity in 1929, and the cost of contract work, partially in 1935, and fully in 1939. Beginning with the 1947 Census of Manufactures, Federal excise taxes were excluded from value of shipments and thus from value added by manufacture. In a special table in the 1954 Census of Manufactures (Volume I, General Summary, table 2B), the concept of adjusted value added was introduced. Value added by resales was added to standard value added by manufacture and the total further adjusted by the change in finished products and work-inprocess inventories. During the 1955 to 1959 Annual Surveys of Manufactures, both adjusted and unadjusted value added were calculated for each industry. Since the 1958 census, only adjusted value added has been used.

While there was an increase in the range of costs subtracted from value of product in arriving at value added since 1869, there was also a curtailment of the detailed information obtained on costs. Why some items were dropped is not known precisely but perhaps the following information is relevant. The census reports contain testimony that difficulty had been experienced in collecting data on costs or expenses and that respondents had
complained about the burden of providing such information. The reports also contain statements, with increasing emphasis, that profits could not be calculated from published figures; such statements also appear in the reports for 1899 and 1904, the years when maximum detail was requested. There may have been more effort by the Census Bureau to obtain data essential to a "key" measure, such as value added, than there was for data to be presented only as supplementary information. Too, the introduction, in 1921, of the biennial census of manufactures, coupled with uncertain and fluctuating appropriations, may have led to the adoption of a policy to concentrate on a minimum number of key measures. The appropriations for the census for 1933, for example, were too small even to cover the key measures.

It is not clear whether the inclusion of fuels and electricity in the value to be subtracted from value of product was simply to reduce "duplication" within the manufacturing sector or is evidence of a growing awareness of the contribution of other sectors to the value of manufactured product, a contribution that must be subtracted to arrive at value added by manufacture. During the opening decades of this century, coke and manufactured gas had a larger share of the fuels market and much of the electricity consumed by manufactures was produced in manufacturing plants. On the other hand, a continuous attempt was made from the early censuses to exclude transportation costs from the value of products and value added, by requesting that products be valued f.o.b. the plant and that materials costs include the cost of transporting them to the plant. Item 6, table A, was provided as "correction" to costs of materials which were reported exclusive of delivery costs.

## Appendix B

## INDUSTRY DESCRIPTIONS

This appendix is included in Volume I, Summary and Subject Statistics, and in Volume III, Area Statistics, but has been omitted from this volume. The appendix shows the industry descriptions and the primary product coverage and specialization ratios for each industry. Similar but more extensive information of this type is contained elsewhere in this volume: industry descriptions are shown in the text pre. ceding the tables for each industry, and the ratios in table 5A for each industry.

## Appendix C

## COMPOSITION OF INDUSTRIES IN THE 1963 STANDARD INDUSTRIAL CLASSIFICATION

The 1963 and 1958 Censuses of Manufactures covered all establishments primarily engaged in manufacture as defined in the revised edition of the Standard Industrial Classification Manual (SIC), issued by the Bureau of the Budget. For 1958, the published census statistics were for the manufacturing industries as defined in the 1957 edition of the SIC Manual. For 1963, statistics are for the manufacturing industries as defined in an amended version of the 1957 edition.

The 1957 revised edition of the classification represented a considerable revision from the previously existing structure. Several appendixes in the published volumes of the 1958 Census of Manufactures dealt with the contents of that revision as it affected the manufacturing sector. (See 1958 Appendix A, "Notes on Comparability of 1954 and 1958 Data for Selected Industries and Industry Groups;" Appendix B, "Industry Descriptions;" and Appendix C, "Composition of Industries in the New SIC.'") Several appendixes to the 1963 Census of Manufactures volumes, including this appendix, likewise make reference to the relatively minor revisions of the SIC following the issuance of the 1957 revised edition.

Presented in two parts, this appendix traces, in part 1, the industries as defined for 1963 in terms of their 1958 counterparts and, in part 2, the industries as defined for 1958 in terms of their 1963 equivalents. Where no change in code or definition occurred, the short industry title and 4-digit code apply to both census years. Most of the industries fall into this category. Where change occurred, the title for a line showing only a 1958 code is a 1958 title and that for a line showing only a 1963 code, a 1963 title. In these instances of change in the SIC (a new industry
broken out of an existing industry, existing industries combined into one, or products shifted between existing industries) the relationship between the two periods is clarified by the manner of presentation. For example, in part 2, in the columns under "Industry code," the 1958 SIC industry 2025, "Special Dairy Products," is shown as part of 1963 industry 2022, "Natural and Process Cheese." This situation, that is, being part of an industry in the other year, is notated by an asterisk (*). Part 2 also indicates that 1958 industry 2022, "Natural Cheese," is likewise a part of 1963 industry 2022. Part 1 shows that, for 1963, industry 2022 encompasses 1958 industries 2022 and 2025. Thus, to determine comparability between the years, parts 1 and 2 of this appendix should be studied together. In both parts, 1963 data shown are for the following items: Number of establishments (total and those with 20 employees or more); employment; and value added by manufacture.

The manner of coding products and classifying establishments in the 1963 Census of Manufactures (utilizing only 1963 SIC codes) did not, in general, permit a tabulation of 1963 data in terms of 1958 industry definitions. Thus, in part 2 it was not possible to show the data for that part of 1963 industry 2022 which is equivalent to 1958 industry 2025. However, where the change in industry definition between the two years was such as to subdivide an old SIC industry into two new industries, the 1963 data for the former industry can be derived by summing the figures for the component parts; e.g., the 1958 industry 2649, "Paper and Board Products, N.E.C.," consists of the 1963 industries 2647 and 2649 , and totals for 2647 and 2649 are added together in part 2 to show their 1958 SIC industry equivalent.

Manufacturing industry codes used by the Bureau of the Census are identical to the SIC industry codes, with a single exception: SIC industries 3711 (Motor Vehicles), 3712 (Passenger Car Bodies), and 3714 (Motor Vehicle Parts and Accessories) are combined by Census into a single industry, number 3717, entitled "Motor Vehicles and Parts."

## Composition of Industries in the 1963 SIC

Part 1. Derivation of 1963 SIC Industries from 1958 SIC Industries

| Industry code |  | Industry title | Establishments |  | All employees (number) | Value added by manufacture$(\$ 1,000)$ |

## Appendix D

## CENSUS REPORT FORMS AND PUNCH CARDS

In the 1963 Census of Manufactures, approximately 180 standard length report forms were employed in collecting data from all "annual survey of manufactures" establishments and from all of the larger "non-annual survey" establishments. A typical report form, MC-35Q, sent to establishments primarily producing industrial furnaces and ovens, is reproduced on pages $\mathrm{D}-2$ to $\mathrm{D}-13$ of this appendix. Inquiry items 1 to 16 were identical on all forms. Differences among forms are reflected in items 17 and 18 , requesting information, respectively, on materials consumed in manuíacture and products and services of the establishment. These items were "tailored" to reporting by establishments primarily utilizing the selected materials shown and primarily producing the products or performing the manufacturing services listed. Items 19, 20, and 21 are similarly different among forms and were intended to secure information of special significance to the industries primarily covered on the report form. For annual survey establishments, the front sheet of the 1963 report form was the annual survey report form used for 1962 and 1963 with provisions for entering figures for 1963.

In addition to the standard length forms, 50 short or abbreviated forms were used for smaller establishments. A copy of one such short form, MC-36Z, covering electrical machinery, equipment and supplies, is reproduced on pages $D-22$ to $D-24$ of this appendix. The size cut-off for the use of these short forms varied by industry, in most instances below 6 and in the others below 10 employees. The abbreviated forms requested information on a few key items: Number of employees; payrolls; total
cost of materials; and value of shipments by class of product. For those few industries in which small plants constituted a significant proportion of the total value of shipments, modified short forms were designed to collect some detail on the individual products shipped and less frequently on the types of materials used. The appendix also reproduces the general instructions for completing the standard length report forms. No instructions accompanied the short forms; all reporting instructions were contained on the form itself.

Copies of the basic punch cards utilized for tabulating the data reported on the 1963 Census of Manufactures forms are shown on page $\mathrm{D}-25$. One card was used for punching data reported on the standard length form; the other for the short form.

For the 1963 Census of Manufactures, additional report forms were used to cover separately operated central administrative offices and auxiliary units, plants under construction but not operated in 1963, etc. Copies of these forms are not shown in this appendix but are described in the introductory text appearing at the beginning of this volume.

A copy of Form MC-D3, covering Department of Defense owned and operated establish. ments, primarily engaged in manufacture or in research and development, will be found on pages $D-26$ to $D-29$ of this appendix. Statistics developed from these forms will be found in the special report section of this volume.

On pages $D-30$ to $D-31$ is a copy of supplemental report form MA-175, Report on Shipments to or Receipts for Work Done for Federal Government Agencies and Their Contractors and Suppliers in 1963. Pages D-32 to D-33 contain a copy of supplemental form MA-161, Exports of Manufactured Products 1963. Data from both of these supplemental surveys are published in the special reports section of this volume.

FORM MC-35Q
ITEM 8 QUANTITY OF ELECTRICITY DURING 1963
ITEMS 9-11 Not applicable to this form.
ITEM 12 CHANGES IN OWNERSHIP OR OPERATION OF ESTABLISHMENT
Please check proper box and furnish information requested below for 1963.
a. Did the company have any manufacturing plants under construction but not yet in operation during 1963?
b. Changes in ownership or operation of this
(1) Purchased (Enter date, name, and address of former oumer in Remarks Section)
(2) Sold (Enter date, name, and address of purchaser in Remarks Section)
(3) Discontinued operations:
(a) Plant dismantled or destroyed

## (b) Inactive

(4) Reorganized (Partnership change or change in corporate status)
(5) Started new business in 1963 (No previous owner)
(6) Remained the same as in the previous year
(7) Other changes in ownership (Describe in Remarks Section)

## ITEM 13 <br> ITEM 13 CHECKS TO ASSURE A COMPLETE AND ACCURATE REPORT (Pleose complete this item after you have answered all items on the report.)

The Census Bureau reviews your report for omissions, inconsistencies, and unusual ratios. To save you future correspondence about these problems, please make the following checks before returning your report:
b. Enter the results after calculating the four "reasonableness" checks (described below) and review the results.
c Correct your report for any errors you find; explain unusual figures in Remarks Section.

|  | "Reasonableness" checks | Calculation required tor each check <br> (Use figures reported in "Millions and Thousands" columns) | Resulting figures for 1963 |
| :---: | :---: | :---: | :---: |

The following instructions supplement the "General Instructions to Manufacturers
INSTALLATION (OR CONSTRUCTION) OF PRODUCTS OF YOUR OWN MANUFACTURE
Include these workers engaged in installing your products in Items 2 and
3, "Employment and Payrolls 1963."
Receipts for installation services should be reported separately on Line
Do not include these receipts in the value of industrial furnaces and ovens as reported on Lines 1-16, Item 18.
If your records do not provide exact figures on the value of installa-
In no case should installation costs (or the value of the service) be included in your report where the installing or erecting is performed by a separate company, whether the services of that company have been contracted for by your customer or by yourself.
Please sfate In the Remarks Sectlon of this form whether you install or erect your manufactured products. -If you do such installing or erecting, you should further indicate whether or not the installation costs and value of such services are included in your report (using the above instructions as the basis for reporting.

# 1963 CENSUS OF MANUFACTURES 

## REPORTING INSTRUCTIONS

In all correspondence with the Census Bureau, please include the 11-digit file number which appears in the address box of the report form. Highspeed electronic equipment will be used to identify both the correspondence and the reports in the 1963 Economic Censuses. If your correspondence does not include the Census file number, it will be returned for the addition of that number. Address all correspondence to JEFFERSONVILLE CENSUS OPERATIONS OFFICE, 1208 East 10th Street, Jeffersonville, Indiana.

Please do not mark or mar the two lines of symbols above the address on each form. These symbols or rectangles which are unique to each establishment will be photographed and used to record mechanically the receipt of your report form.

As you complete the reports for each establishment, please enter the 11-digit file number at the top of the odd numbered pages as requested.

This booklet is provided to assist you in filling out the enclosed Census of Manufactures form(s) MC19A through MC39L. Please read these instructions and those appearing on the individual report forms for each item before entering your figures.

## A. Who Should Report?

The Census of Manufactures reports are required by an Act of Congress (13 U.S.C.). The reports submitted are confidential and may be seen only by sworn Census employees. They may not be used for purposes of taxation, investigation, or regulation. Copies retained in your files are also immune from legal process.

Every concern is required to submit a separate Census report for each of its manufacturing establishments in the United States, the Virgin lslands, and Guam. Enterprises with more than one establishment must submit a separate report for each establishment operated during all or any part of 1963. Reports should be returned to the Jeffersonville Census Operations Office as shown on the enclosed envelope.

Based on Census Bureau records, a report form is provided for each establishment which your company operated in 1963. If you have not received sufficient forms to cover all the manufacturing establishments operated by your company, write for additional copies. Be sure to describe the type of activity carried on at the establishments for which you request additional forms.

## 1. What ls a Manufacturing Establishment?

For purposes of the Census, a manufacturing establishment is defined as a single physical location where manufacturing operations are performed; for example, a factory, mill, or plant. Since the information reported will be summarized to totals for each industry, State, county and standard metropolitan statistical area, separate reports are required for different physical locations even though the establishments may be engaged in the same line of manufacturing.
lf your company operates two or more units in distinctly different lines of manufacturing at the same location, you should also file a separate establishment report for each unit, provided separate records are maintained or substantially accurate reports for these separate activities can be prepared. It is not necessary to file separate reports for departments or organizational subdivisions within an establishment.
In completing your reports, a limited amount of prorating or estimating is acceptable when book records are not readily available.

## 2. How To Report for Establishments not in Operation During 1963 ?

lf any of your company's manufacturing establishments were not in operation at all during 1963, you should nevertheless return the report for each such establishment with a notation as to its status in ltem 12 "Changes in ownership or operation of the establishment." If a manufacturing location was not in production, but had custodial employees, maintained inventories, or made shipments during the year, the information should be reported in the appropriate section of the report form.

## B. What Activities Should Be Reported?

Each report should cover all the activities (manufacturing, fabricating, processing, and assembling) conducted within the establishment. The reported figures should also include activities such as the maintenance of plant and equipment, receiving, shipping, warehousing, storage, research, record keeping, health, safety, cafeteria, and other services, when carried on at the same physical location by the manufacturing establishment. The manufacturing establishment reports should exclude sales branches, sales offices, research laboratories, retail stores, mining activities, and general administrative offices, if they are operated as separate establishments. However, separate Census of Business, Census of Mineral Industries, or Central office or auxiliary reports should be submitted for each of these establishments.

Please note that establishments engaged in the activities listed below are considered to be manufacturing for the purposes of this Census:

Apparel jobbing and contracting
Assembling from purchased components
Commission processing of materials owned by others Job casting, stamping, machinery
Lapidary work
Logging camps and logging
Machine shops, including those operating on a job order basis
Manufacturing and delivering ready-mixed concrete
Milk pasteurizing and bottling
Plating, galvanizing, polishing materials owned by others etc.
Poultry dressing
Printing
Publishing: Book, magazine, periodical, etc.
Rebuilding on a factory basis
Sawmills
Seafood, fresh packaged or frozen
Ship and boat repairing
Wood preserving

## C. What Period Should Each Report Cover?

Each report should cover the calendar year 1963. If your book records are not on a calendar year basis, carefully prepared estimates will be acceptable. If reporting on a calendar year basis will involve considerable additional costs, and your fiscal year covers at least 10 months of calendar year 1963 (i.e., ends between October 31, 1963 and February 29,1964 ), you may report on a fiscal basis. However, all employment, payroll, and man-hour figures should relate to the calendar year rather than the fiscal year. (These calendar year payroll records should be available from your tax records.)

In the certification, the dates should show the exact period which the report covers. Thus, if an establishment began to operate or ceased to operate within the year, the dates should span only that part of the year during which the plant was in operation. If the ownership changed during the year, complete the report only for that part of 1963 in which your company owned and operated the establishment. Report in ltem 12 the appropriate information on changes in ownership or operations.

## D. How Should Multiple Establishment Companies <br> Determine Transfer Values of Products and Materials from One Establishment to Another ('Interplant Transfers")?

One of the important statistical measures of manufacturing activity is "value added by manufacture," which is derived by the Census Bureau from the figures reported for value of shipments, cost of materials and inventories.

In order for statistics on value added and other subjects to be comparable from industry to industry or area to area, it is necessary that the operations of each establishment of a multiple establishment organization be reported as though the establishment were a separate "economic" unit. This means that the value of interplant transfers within a company should include, in addition to
direct costs of production, a reasonable proportion of "all other costs (company overhead) and profits." The establishments receiving such transfers should report them as materials consumed (or inventories of materials, etc.) at the same value plus costs of freight and other direct handling charges. (See ltem 5.)

## ITEMS ON THE REPORT FORM

## ltem 1. (See instructions on Form.)

ltem 2. Number of employees.-(You may follow the definition of employees specified by your State Employment Security Agency.)--Report employees at the establishment who worked or received pay for any part of the pay period (preferably one week) ending nearest the 15th of the specified months (i.e., March, May, August, and November of 1963 for "production workers" and March only for "all other employees"). lnclude all persons on paid sick leave, paid holidays, and paid vacation during these pay periods; exclude members of armed forces and pensioners carried on your active rolls. Include officers at this establishment, if a corporation; if an unincorporated concern, exclude proprietor or partners.
ltems 2 e and 2 f .--Divide the total on Line 2 e by FOUR and enter the result on Line 2f; divide by FOUR even if the establishment did not operate in all four periods.
ltem 3. Payrolls. (You should follow the definition of salaries and wages that is used for calculating the withholding tax.) Report the gross earnings paid in calendar year 1963 to employees on the payroll at the establishment prior to such deductions as employee's Social Security contributions, withholding taxes, group insurance premiums, union dues, and savings bonds. lnclude in gross earnings commissions, dismissal pay, pay bonuses, vacation and sick-leave pay, and the cash equivalent of compensation paid in kind. Include salaries of officers of this establishment, if a corporation; if an unincorporated concern, exlcude payments to proprietor or partners. Exclude payments to agricultural employees, fishermen, members of armed forces, and pensioners carried on your active payroll.

Item 4. Plant Man-Hours of Production Workers, by Quar-ter.-"Plant man-hours" of production workers are designed to measure the over-all activity of the plant during each quarter. The figures should include all man-hours worked or paid for, except hours paid for vacations, holidays, or sick leave. If an employee elects to work during the vacation period, report only actual hours worked by such employee. Overtime hours should be reported as actual hours worked, not straight-time equivalent hours.
ltem 5. Cost of Materials, Fuels, Electricity and Contract Work.-The entries in this item are used by the Census Bureau to calculate the 1963 value added by manufacture. The figures reported, therefore, should represent the total cost of materials, supplies, semi-finished goods, fuels, etc., actually consumed or put into production during 1963.
If your records do not show the amounts actually consumed or put into production during 1963, the reported figures may be derived from purchase and other records. Cost of purchases may be used if these do not differ significantly from the amounts actually used. However, if
consumption of any major item differs significantly from purchases, the amount used may be estimated by adding beginning inventories to the amounts purchased and subtracting from this total the cost of goods on hand at the end of the year.

Cost is delivered cost and should be the amount actually paid or payable after discounts and should include freight and other direct charges incurred by the establishment in acquiring materials and supplies consumed. The cost figures for consumption should represent receipts from all sources, i.e., amounts purchased from other establishments, withdrawn from inventories, or obtained from other establishments of the same company. However, if intermediate products were made in this establishment in 1963 and incorporated into other products also made in this establishment, the reported figures should only include the costs of the materials from which the semi-finished items were made.

For materials, parts, and supplies received from other establishments of your company, cost should be checked against the values reported for the plant producing and transferring the codes (see ltem D above). Freight and other direct handling charges should be added.
Item 5a. Cost of Materials, Parts, Components, Containers, Supplies, Etc., Consumed. --The delivered cost figures reported in Item 5 a should cover all raw materials, containers, scrap, and supplies, etc., which were: (1) put into production, (2) used as operating supplies, (3) used in repair and maintenance. Include also cost of materials owned by you but consumed by other companies to make products for your establishment under contract. Amounts paid to other companies for such contract work should be reported on Line 5 e and should include freight in and out. If semi-finished goods, parts, or components were produced during 1963 and incorporated into finished products at the same plant during 1963, include the cost of raw materials used rather than the value of the intermediate products.

Include only physical goods used or put into production. Exclude services used or overhead charges. Exclude cost of such services as advertising, telephone, telegram and cable, insurance, developmental and research services or engineering, management, marketing and other professional consultants, etc., unless charges for such services are included in the prices paid for materials. Exclude also such overhead items as depreciation charges against plant and equipment; rent and rental allowances, interest payments, royalties, and patent fees. Exclude materials, supplies, machinery, and equipment which were used in the construction of new structures or additions to your plant, or new machinery and equipment, and which are chargeable to fixed assets accounts. Exclude products purchased and resold without further manufacture or processing or assembly; their costs should be included in ltem 5 b.
ltem 5b. Cost of Goods Sold Without Further Manufacture, Processing or Assembly in this Establishment.-Report the cost of all products bought and resold in the same condition as when purchased and not made part of another product manufactured by this establishment. (Total sales value of all products resold is to be reported in ltem 18 on the line for "Resales.")
ltem 5c. Fuel Consumed.-Report the total amount actually paid or payable during 1963 for all fuels consumed for heat, power, or the generation of electricity. Do not include the estimated cost of fuels, such as sawdust or blast furnace gas, produced as a byproduct of your manufacturing activities. Include anthracite and bituminous coal, coke, natural and manufactured gas, fuel, oil, liquified petroleum gas, gasoline, and all other fuels including purchased steam. For selected industries, such as Carbon Black, Blast Furnaces and Coke Ovens, special reporting instructions on the report form provide that the above fuel types should be reported as materials in ltem 5 a rather than as a fuel Item 5 c .
ltem 5d. Purchased Electric Energy.-Report the total amount actually paid or payable for electric energy purchased during 1963 from other companies, or received from other establishments of your company. Exclude the value of electricity generated and used at this establishment.
Item 5e. Cost of Work Done for You by Others on Your Own Materials (Contract Work).-lf any work was done by others on materials furnished by your establishment, report the total payments made during 1963 for such work, including freight out and in. Exclude the cost of materials worked on, which should be included in Item 5 a.
Item 6. Inventories of this Establishment. - See report form.
ltem 7. Capital Expenditures for This Establishment (Exclude Expenditures for Land).-Capital expenditures during 1963 may be determined by the following computation: The cost of additions completed during the year, plus con-struction-in-progress at the end of the year, minus construction-in-progress at the beginning of the year.
ltem 7a. New Structures and Additions to Plant.-Report total expenditures during 1963 for new construction, (whether constructed on contract or by your own forces) major alterations, capitalized repairs, and improvement of buildings (including all new elevators, cranes, heating and ventilating equipment, essentially a part of the buildings), other fixed structures (such as blast furnaces, brick kilns, fractionating towers, shipways, and similar types of structures), and site improvements (such as roads, docks, tracks, parking lots, fences, utilities.)
Item 7b. New Machinery and New Equipment.-Report total expenditures at this establishment for new production machinery and equipment and other new machinery and equipment. lnclude replacements as well as additions to capacity. Include the value of improvements and capitalized repairs to machinery and equipment transferred from other establishments of this company or produced and used at this establishment. Include all new motors, lathes, punch presses and similar machinery and equipment for use in production, as well as all new office machines and fixtures, furniture, cafeteria and dressing room furnishings, automobiles and trucks, and other similar equipment.
ltem 7c. Used Plant and Used Equipment Acquired from Others.-Report total expenditures at this establishment for old or existing plants and for second-hand equipment acquired from others (including the U.S. Government). lnclude at approximate market value machinery or equipment transferred from other plants of your company.

Item 8. Quantity of Electricity.-All quantities for electricity preferably should be reported in thousands of kilowatt hours. Please be careful to enter your figures in the CORRECT COLUMNS.
ltem 8a. Purchased Electricity.-Report the quantity for which cost is reported in ltem 5d.
ltem 8b. Generated Electricity. - Enter the total quantity of electric energy generated in this plant (gross less generating station use) during 1963.
When totals are reported on this line, data relating to the activity of the power stations would also be included in other sections of this report. For example, the number of employees assigned to the power station, their wages and man-hours should be included in the figures reported in ltems 2, 3, and 4; and the cost of fuels used to generate electricity, in ltem 5 c .
ltem 8c. Electricity Sold or Transferred.--Enter the quantity of electric energy, which was also included in ltems 8 a and 8 b but which was sold to other companies or transferred, to other manufacturing or non-manufacturing establishments of your company.

1tems 9-11. - Not applicable to these forms.
ltems 12-15.-See Report forms.
Item 16. Industrial Water Use During 1963 (See Instructions on Forms).-A selected group of establishments, consisting mainly of those consuming large quantities of water, will be required to supply the following additional detail on water consumed during 1964: total intake during the year distributed by source and type of use; quantity discharged; quantity recirculated; and quantity treated.

## Items 17-23-(See instructions on form.)

Period of Report. - Enter the month and day of the beginning and the end of period your report covers. If a calendar year report: "From January 1 to December 31, 1963;" if a fiscal year, specify which (such as "From December 1, 1962 to November 30, 1963)." If a part year report is submitted because the establishment was not in operation or under your company's control for the entire year, specify the actual period covered: For example, January 1, 1963 to August 15, 1963 or June 1 to December 31, 1963.
ligg ity th on nejing paspag :panosday mod CONFIDENTIAL. Response to this inquiry is required by Act of Congress (13) U.S.C.). The report you submit to the Census Bureau is confidential and may taxation, investigation, or regulation. Copies retained in your filcs are also
and immune from legal process.

[^331]REPORT ON SHIPMENTS TO OR
RECEIPTS FOR WORK DONE FOR FEDERAL GOVERNMENT AGENCIES AND THEIR CONTRACTORS AND SUPPLIERS IN 1963
(Based on the Totol Shipment Figures from the Annual Survay of Manufoctures, Consus Form MA-100)

TO: Buroou of the Consua, Industry Divialon Woshington, D.C. 20233
(PLEASE RETURN THIS COPY)
ITEM 2 Please check the box which describes the 1963 receipts for shipments or other work done in this plant for Federal Government agencies and their contractors and suppliers:

## $\square$ None

Up to $\$ 100,000$For purposes of this report, such receipts will include payments received by you for work done by you on Federal by you to Federal Government contractors and suppliers for use in their performance of Federal Government contracts.
If your response to this question was " $\$ 100,000$ or more," please complete the form on the reverse side. Otherwise, sign the form in the space provided below and return it.

INTRODUCTORY NOTE

#### Abstract

The Census Bureau is conducting this survey to develop a measure of the level of industrial activity generated by the expenditures made by Federal Government agencies. expenditures made by Federal Government agencies. Special attenrion is directed toward expenditures made by the Department of Defense (DOD), the National Aeronautics and Space Administration (NASA), and the Atomic Energy Commission (AEC). Industrial activity generated by Federal Government expenditures is being measured in terms of receipts (includng value of shipments) for work done, or for value of products shipped to Federal agencies, their contractors, subcontractors and suppliers. corsist of two kinds of payments. The first is payments received for work done directly for Federal agencies on Government prime contracts. The second is payments received for work done for other Government contractors and suppliers for use in the per-

formance of Federal Government contracts. Subcontract receipts reported will normally be based on payments made or work done on Government subcontracts when subject to he Renegotiation Act of 1951 , as amended. These receipta assemblies, and services supplied to other plants of the company (interplant transfers) as well as to contractors and suppliers outside the company for use in the performance of contracts. This is in accord with standard Census reporting procedures.
This survey is being conducted on an establishment or lant basis. This method of reporting is necessary or that the data reported by each plant may be tabulated by he geographic area in which the work is actually being performed. Additionally, it will permit the data to be classified by appropriate product claaa and Standard lndustrial Classification.

## SPECIFIC INSTRUCTIONS

Except as may be specificaily requesred, a reporr should be submitted for each establishment for which you received a preaddressed form. If additional forms are needed, ment for which a blank form is required. If you have any questions about the survey, write to the Bureau of the Census, Washington, D.C., 20233, referring to form MA-175 and to the file number in the upper right-hand corner of the address box. The basic concepts used in this survey (establishment, shipments, receipts, materials consumed, employment, etc.) are the same as tbose uaed in the Annual Survey of Manufactures (Form MA-100), and related figures reported on each form should agree.
Columna (1), (2), and (3) - These entries--lines a through item 9A for the Product Class Description, the Product tem 9 A for the Product Class Description, the Product Class Code, and the for 1963 .
The three lines " $i$, " " $j$," and " $k$ " that follow specific product class entries, are in the same position in which they appear on form MA-100. Only "'" is expected to be of particular importance on form MA-175; "i" is an item primarily of interest to manuracturing industries nor
covered by form MA-175, such as textiles and apparel, coating and engraving, etc.; " $k$ " ia used by manufacturers coating and engraving, etc.; to list the shipments of products they buy and ship without any manufacturing of assembling, usually to round out a product line. Line " j "" on the other hand, can be very important in this survey. Receipts for research and development that have not been separately identified on form MA-100 ahould be reported here. (Note that research and development receipts for certain aerospace activities are to be aupplied in lines "a" " $h$ "' in tbe appropriate class of product (37216,37223,37226,37293,37294,19253).) (Line " $j$ would also be used for reporting receipts for installation or testing. Installation or testing costs of more than $\$ 1$ million done at other locations should not be reported on MA- 175 form should be filed for each such inatallation or test sice. If you have such cases it would be desirable to test site. If you have such cases, it would be desirable to completing the MA-175 forms.

Columns (4) through (7) - Data reported should represent the total value of shipments, billinga, or receipts (in \$000) from Federal Government agencies during 1963. For long ead time production or research, development, testing, the evar is reported on the Annual Survey of Manufacture and on this report. Such a figure is represented by net and on this report. Such a figure is represented by net payments), for work done during the. year. This method of payments), for work done during the. year. This method of application to work done on aircraft, abips, missilea, space vehicles, and the like, as well as work done on related syatems.
Columna (8) through (13) - Data reported should represent the value of recelpts (in $\$ 000$ ) for work done by you for Government prime contractors and subcontractors for uae in the performance of Government contrsctactors it is recosnized that indirect Government work is not always identified as such. In view of thia, it will be acceptable to use as base receipts on Government subcontracta subject to he Renegotiation Act of 1951, as amended. Note particu arly that the value of transfers to orher plants of the company as well as receipts from contractors outaide tbe ompany are to be included.
Columna (8) through (11) - Data entered should represent the value of receipts (in $\$ 000$ ) for work done by you on aubcontracta of DOD NASA, AEC, and other Government agencies wben the Government agency placing the prime contract is known to you.
Columna (12) or (13) - Receipta for work done by you on overament subcontracts, for whicb Government agency tbe prime contract is not specifically known to you should be NASA, or AEC, but you cannot specifically determine wbicb, enter the value of receipts (in \$000) in column (12). If the subcontract work is for anotber Government agency, or for Government agency unknown to you, enter tbe value of receipts (in $\$ 000$ ) in eolumn (13).
Column (14) - Data reported should represent the difference etween che total values of shipments and/or receipts, eol Name of person to contact regarding this report umn (3), and the aum of entries in columna (4) through' (13).

## INSTRUCTIONS

## INTRODUCTORY NOTE

We are conducting this survey to obtain statistics on the origin of exports of manufactured goods by States and smaller areas. This information is needed by various branches of government to assess the impact of foreign trade on the economy. If you have any questions about the survey, please write to the Bureau of the Census, Washington, D.C., 20233, referring to form MA-161 and to the 11-digit file number in the address box.

This survey is being conducted on an establishment or plant basis. This method of reporting is necessary so that export figures reported by each plant may be tabulated in the proper geographic area. A report is required for each establishment for which you received a preaddressed form. If additional forms are needed, please write to us, specifying the address of the establishment for which a blank form is required.

If the figures requested are not readily available from your records, carefully prepared estimates will be accepted.

## DEFINITION OF EXPORTS

The following description of exports is consistent with definitions used in compiling official foreign trade statistics of the United States. It is provided as a guide for respondents. A manufacturer would be expected to report according to his own definitions except where major differences might be expected. In such cases, he would be expected to estimate rather than compile revised data from detailed records. 1

Exports as understooci in this survey include shipments from the United States to foreign countries of products which are not subjected to further manufacture, fabrication, or assembly in this country before being shipped abroad. Exports include shipments to foreign subsidiaries or divisions of your company and its affiliates. Sales to the United States Govemment for shipment abroad are considered an expori if the products are for a foreign nation. They are not classified as an export if for use by the United States Armed Forces.

[^332]Sales (shipments) to customers in Canada are classified as exports. Shipments to Alaska and Hawaii are not exports. Shipments to Puerto Rico are not classified as exports.

Exports do not include products shipped to domestic customers or other plants of your company who will further manufacture, fabricate, or assemble them. Please note, however, that the breaking down of bulk shipments of your products into smaller lots or packages by a wholesale exporter or by other units of your company is not considered to be further manufacturing, processing, or assembly.

## EXPORT VALUES

The export values to be reported on this form should be on the same basis as the values in item 3a, total shipments of the plant in 1963.

## EXPORTS OF THE PRODUCTS OF THIS PLANT BY THIS FIRM (item 3b)

Item 3b will include-Export shipments of your products by this establishment and export shipments of the products of this establishment by or on order of other parts of your company or its affiliates such as sales branches, sales offices, warehouses, export offices, and export subsidiaries.

It will also include-Sales for export of your products to or on order of export firms, and other sales known to you to be for export. Also, sales to the United States Govemment in this country for shipment abroad under military and economic assistance programs.

## 1960 EXPORTS

The value of products shipped for export by this establishment in 1960 has been entered in item 5 , wherever the 1960 report form could be precisely matched. Please be sure the figure posted for 1960 is consistent with the 1963 figure entered in item 3b. Make revision, if necessary.

If no figure has been posted but the 1960 export figure is readily available, please enter the 1960 figure in item $S$, otherwise leave the item blank.

## Appendix E

## AUTHORITY FOR CENSUS: TITLE 13, UNITED STATES CODE

(Codification of August 1954 amended by Acts of August 1957, September 1960, and June and October 1962)

## Collection and publication: Five-year periods (131)

The Secretary shall take, compile, and publish censuses of manufactures, of mineral industries, and of other businesses . . . in the year 1954 and every fifth year thereafter, and each such census shall relate to the year immediately preceding the taking thereof: Provided, That the censuses of manufactures, of mineral industries, and of other businesses, including the distributive trades and service establishments, directed to be taken in the year 1954 relating to the year 1953, shall be taken instead in the year 1955 relating to the year 1954.

## Geographic scope of censuses (191a)

Each of the censuses authorized by this chapter (other than censuses of population) shall include each State, the District of Columbia, Alaska, Hawaii, the Virgin Islands, Guam, and the Commonwealth of Puerto Rico, and as may be determined by the Secretary, such other possessions and areas over which the United States
exercises jurisdiction, control, or sovereignty. Censuses of population shall include all geographic areas referred to in the preceding sentence. Inclusion of other areas over which the United States exercises jurisdiction or control shall be subject to the concurrence of the Secretary of State.

Failure to answer questions affecting companies, businesses, religious bodies, and other organizations: False answers (224)

Whoever, being the owner, official, agent, person in charge, or assistant to the person in charge, of any company, business, institution, establishment, religious body, or organization of any nature whatsoever, neglects or refuses, when requested by the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, whether such request be made by registered mail, by certified mail, by telegraph, by visiting representative, or by one or more of these methods, to answer completely and correctly to the best of his knowledge all questions relating to his company, business, institution, establishment, religious body, or other organization, or to records or statistics in his official custody, contained on any census or other schedule prepared and submitted to him under the authority of this title, shall be fined not more than $\$ 500$ or imprisoned not more than sixty days, or both; and if he willfully gives a false answer to any such question, he shall be fined not more than $\$ 10,000$ or imprisoned not more than one year, or both.

Galveston-Texas City, Tex.
Gary-Hammond-East Chicago, Ind.
Grand Rapids, Mich.
Great Falls, Mont.
Green Bay, Wis.
Greensboro-High Point, N.C.
Greenville, S.C.
Hamilton-Middletown, Ohio
Harrisburg, Pa.
Hartford, Conn.

Honolulu, Hawaii
Houston, Tex.
Huntington-Ashland, W. Va.-Ky.-Ohio
Huntsville, Ala.
Indianapolis, Ind.
Jackson, Mich.
Jackson, Miss.
Jacksonville, Fla.
Jersey City, N.J.

Consists of Cook, Du Page, Kane, Lake, McHenry, and Will Counties, III.
Consists of Clermont, Hamilton, and Warren Counties, Ohio; Boone, Campbell, and Kenton Counties, Ky.; and Dearborn County, Ind.
Consists of Cuyahoga, Geauga, Lake, and Medina Counties, Ohio
Coextensive with El Paso County, Colo.
Consists of Lexington and Richland Counties, S.C.
Consists of Chattahoochee and Muscogee Counties, Ga., and Russell County, Ala.
Consists of Delaware, Franklin, and Pickaway Counties, Ohio
Coextensive with Nueces County, Tex.
Consists of Collin, Dallas, Denton, and Ellis Counties, Tex.
Consists of Scott County, Iowa, and Henry and Rock Island Counties, III.
Consists of Greene, Miami, Montgomery, and Preble Counties, Ohio
Coextensive with Macon County, III.
Consists of Adams, Arapahoe, Boulder, Denver, and Jefferson Counties, Colo.
Coextensive with Polk County, Iowa
Consists of Macomb, Oakland, and Wayne Counties, Mich.
Coextensive with Dubuque County, Iowa
Consists of St. Louis County, Minn., and Douglas County, Wis.
Coextensive with Durham County, N.C.
Coextensive with El Paso County, Tex.
Coextensive with Erie County, Pa.
Coextensive with Lane County, Oreg.
Consists of Vanderburgh and Warrick Counties, Ind., and Henderson County, Ky.
Consists of Fall River city, and Somerset, Swansea, and Westport towns in Bristol County, Mass.; and Tiverton town in Newport County, R.I.
Consists of Cass County, N. Dak., and Clay County, Minn.
Consists of Shirley and Townsend towns in Middlesex County; and Fitchburg and Leominster cities, and Lunenburg and Westminster towns in Worcester County, Mass.
Consists of Genesee and Lapeer Counties, Mich.
Coextensive with Broward County, Fla.
Consists of Crawford and Sebastian Counties, Ark.; and LeFlore and Sequoyah Counties, Okla.
Coextensive with Allen County, Ind.
Consists of Johnson and Tarrant Counties, Tex.
Coextensive with Fresno County, Calif.
Coextensive with Etowah County, Ala.
Coextensive with Galveston County, Tex.
Consists of Lake and Porter Counties, Ind.
Consists of Kent and Ottawa Counties, Mich.
Coextensive with Cascade County, Mont.
Coextensive with Brown County, Wis.
Coextensive with Guilford County, N.C.
Consists of Greenville and Pickens Counties, S.C.
Coextensive with Butler County, Ohio
Consists of Cumberland, Dauphin, and Perry Counties, Pa.
Consists of Hartford city, and Avon, Bloomfield, Canton, East Granby, East Hartford, East Windsor, Enfield, Farmington, Glastonbury, Granby, Manchester, Newington, Rocky Hill, Simsbury, South Windsor, Suffield, West Hartford, Wethersfield, Windsor, and Windsor Locks towns in Hartford County; Cromwell town in Middlesex County; and Andover, Bolton, Coventry, Ellington, and Vernon towns in Tolland County, Conn.
Coextensive with Honolulu County, Hawaii
Coextensive with Harris County, Tex.
Consists of Cabell and Wayne Counties, W. Va.; Boyd County, Ky.; and Lawrence County, Ohio
Consists of Limestone and Madison Counties, Ala.
Consists of Hamilton, Hancock, Hendricks, Johnson, Marion, Morgan, and Shelby Counties, Ind.
Coextensive with Jackson County, Mich.
Consists of Hinds and Rankin Counties, Miss.
Coextensive with Duval County, Fla.
Coextensive with Hudson County, N.J.

Johnstown, Pa.
Kalamazoo, Mich.
Kansas City, Mo.-Kans.
Kenosha, Wis.
Knoxville, Tenn.
Lafayette, La.
Lake Charles, La.
Lancaster, Pa.
Lansing, Mich.
Laredo, Tex.
Las Vegas, Nev.
Lawrence-Haverhill, Mass.-N.H.

Lawton, Okla.
Lewiston-Auburn, Maine
Lexington, Ky.
Lima, Ohio.
Lincoln, Nebr.
Little Rock-North Little Rock, Ark.
Lorain-Elyria, Ohio

Louisville, Ky.-Ind.

New York, N.Y.
Newark, N.J.
Newport News-Hampton, Va.
Norfolk-Portsmouth, Va.

Consists of Cambria and Somerset Counties, Pa.
Coextensive with Kalamazoo County, Mich.
Consists of Cass, Clay, Jackson, and Platte Counties, Mo., and Johnson and Wyandotte Counties, Kans.
Coextensive with Kenosha County, Wis.
Consists of Anderson, Blount, and Knox Counties, Tenn.
Coextensive with Lafayette Parish, La.
Coextensive with Calcasieu Parish, La.
Coextensive with Lancaster County, Pa.
Consists of Clinton, Eaton, and Ingham Counties, Mich.
Coextensive with Webb County, Tex.
Coextensive with Clark County, Nev.
Consists of Lawrence and Haverhill cities, and Andover, Georgetown, Groveland, Merrimac, Methuen, North Andover, and West Newbury towns in Essex County, Mass.; and Newton, Plaistow, and Salem towns in Rockingham County, N.H.
Coextensive with Comanche County, Okla.
Consists of Auburn and Lewiston cities, and Lisbon town in Androscoggin County, Maine
Coextensive with Fayette County, Ky.
Coextensive with Allen County, Ohio
Coextensive with Lancaster County, Nebr.
Coextensive with Pulaski County, Ark.
Coextensive with Lorain County, Ohio
Coextensive with Los Angeles County, Calif.
Consists of Jefferson County, Ky., and Clark and Floyd Counties, Ind.
Consists of Lowell city, and Billerica, Chelmsford, Dracut, Tewksbury, Tyngsborough, and Westford towns in Middlesex County, Mass.
Coextensive with Lubbock County, Tex.
Consists of Lynchburg city, and Amherst and Campbell Counties, Va.
Consists of Bibb and Houston Counties, Ga.
Coextensive with Dane County, Wis.
Consists of Manchester city, and Bedford and Goffstown towns in Hillsborough County; and Hooksett town in Merrimack County, N.H.
Consists of Shelby County, Tenn., and Crittenden County, Ark.
Coextensive with Meriden city in New Haven County, Conn.
Coextensive with Dade County, Fla.
Coextensive with Midland County, Tex.
Consists of Milwaukee, Ozaukee, and Waukesha Counties, Wis.
Consists of Anoka, Dakota, Hennepin, Ramsey, and Washington Counties, Minn.
Consists of Baldwin and Mobile Counties, Ala.
Coextensive with Ouachita Parish, La.
Consists of Elmore and Montgomery Counties, Ala.
Coextensive with Delaware County, Ind.
Coextensive with Muskegon County, Mich.
Consists of Davidson, Sumner, and Wilson Counties, Tenn.
Consists of New Bedford city, and Acushnet, Dartmouth, and Fairhaven towns in Bristol County; and Marion and Mattapoisett towns in Plymouth County, Mass.
Consists of New Britain city, and Berlin, Plainville, and Southington towns in Hartford County, Conn.
Consists of New Haven city, and Bethany, Branford, East Haven, Guilford, Hamden, North Branford, North Haven, Orange, West Haven, and Woodbridge towns in New Haven County, Conn.
Consists of New London and Norwich cities, and East Lyme, Griswold, Groton, Ledyard, Lisbon, Montville, Old Lyme, Preston, Sprague, Stonington, and Waterford towns in New London County, Conn.
Consists of Jefferson, Orleans, St. Bernard, and St. Tammany Parishes, La.
Consists of New York City, and Nassau, Rockland, Suffolk, and Westchester Counties, N.Y.
Consists of Essex, Morris, and Union Counties, N.J.
Consists of Newport News and Hampton cities, and York County, Va.
Consists of Chesapeake, Norfolk, Portsmouth, and Virginia Beach cities, Va.

## STANDARD METROPOLITAN STATISTICAL AREAS-Continued

| Norwalk, Con | Consists of Norwalk city, and Westport and Wilton towns in Fairfield County, Conn. |
| :---: | :---: |
| Odessa, Tex | Coextensive with Ector County, Tex. |
| Ogden, Utah | Coextensive with Weber County, Utah |
| Oklahoma City, | Consists of Canadian, Cleveland, and Oklahoma Counties, Okla. |
| Omaha, Nebr.-lowa | Consists of Douglas and Sarpy Counties, Nebr., and Pottawattamie County, lowa |
| Orlando, | Consists of Orange and Seminole Counties, Fla. |
| Paterson-Clifton-Passaic, | Consists of Bergen and Passaic Counties, N.J. |
| Pensacola, Fla. | Consists of Escambia and Santa Rosa Counties, Fla. |
| Peoria, | Consists of Peoria, Tazewell, and Woodford Counties, III. |
| Philadelphia, Pa.N.J. | Consists of Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties, Pa., and Burlington, Camden, and Gloucester Counties, N.J. |
| Phoenix, | Coextensive with Maricopa County, Ariz. |
| Pine Bluff, Ark. | Coextensive with Jefferson County, Ark. |
| Pittsburgh, Pa. | Consists of Allegheny, Beaver, Washington, and Westmoreland Counties, Pa . |
| Pittsfield, Mass. | Consists of Pittsfield city, and Dalton, Lanesborough, Lee, and Lenox towns in Berkshire County, Mass. |
| Portland, Maine | Consists of Portland, South Portland, and Westbrook cities, and Cape Elizabeth, Cumberland, Falmouth, Gorham, Scarborough, and Yarmouth towns in Cumberland County, Maine |
| Portland, Oreg.Wash. | Consists of Clackamas, Multnomah, and Washington Counties, Oreg., and Clark County, Wash. |
| Providence-Pawtucket-Warwick, R.I.-Mass. | Consists of all of Bristol County; Warwick city, and Coventry, East Greenwich, and West Warwick towns in Kent County; Jamestown town in Newport County; Central Falls, Cranston, East Providence, Pawtucket, Providence, and Woonsocket cities, and Burrillville, Cumberland, Johnston, Lincoln, North Providence, North Smithfield, and Smithfield towns in Providence County; and Narragansett and North Kingstown towns in Washington County, R.I. Also, Attleboro city and North Attleborough, Rehoboth, and Seekonk towns in Bristol County, Mass.; Bellingham, Franklin, Plainville, and Wrentham towns in Norfolk County, Mass.; and Blackstone and Millville towns in Worcester County, Mass. |
| Provo-Orem, Uta | Coextensive with Utah County, Utah |
| Pueblo, Colo. | Coextensive with Pueblo County, Colo. |
| Racine, Wis. | Coextensive with Racine County, Wis. |
| Raleigh, N | Coextensive with Wake County, N.C. |
| Reading, | Coextensive with Berks County, Pa. |
| Reno, Nev. | Coextensive with Washoe County, Nev. |
| Richmond, Va. | Consists of Richmond city, and Chesterfield, Hanover, and Henrico Counties, Va. |
| Roan | Consists of Roanoke city and Roanoke County, Va. |
| Rochester, N.Y | Consists of Livingston, Monroe, Orleans, and Wayne Counties, N.Y. |
| Rockford, III. | Consists of Boone and Winnebago Counties, III. |
| Sacramento, Cali | Consists of Placer, Sacramento, and Yolo Counties, Calif. |
| Saginaw, Mich | Coextensive with Saginaw County, Mich. |
| St. Joseph, Mo. | Coextensive with Buchanan County, Mo. |
| St. Louis, Mo.-III. | Consists of St. Louis city, and Franklin, Jefferson, St. Charles, and St. Louis Counties, Mo.; and Madison and St. Clair Counties, III. |
| Salt Lake City, Utah | Consists of Davis and Salt Lake Counties, Utah |
| San Angelo, Tex. | Coextensive with Tom Green County, Tex. |
| San Antonio, Tex | Consists of Bexar and Guadalupe Counties, Tex. |
| San Bernardino-Riverside-Ontario, | Consists of Riverside and San Bernardino Counties, Calif. |
| San Diego, Cali | Coextensive with San Diego County, Calif. |
| San Francisco-Oakland, Calif. | Consists of Alameda, Contra Costa, Marin, San Francisco, and San Mateo Counties, Calif. |
| San Jose, Calif. | Coextensive with Santa Clara County, Calif. |
| Santa Barbara, Calif. | Coextensive with Santa Barbara County, Calif. |
| Savannah, Ga. | Coextensive with Chatham County, Ga. |
| Scranton, Pa. | Coextensive with Lackawanna County, Pa. |
| Seattle-Everett, Wash. | Consists of King and Snohomish Counties, Wash. |
| Shreveport, La. | Consists of Bossier and Caddo Parishes, La. |
| Sioux City, lowa-Nebr. | Consists of Woodbury County, lowa, and Dakota County, Nebr. |
| Sioux Falls, S. Dak. | Coextensive with Minnehaha County, S. Dak. |
| South Bend, Ind. | Consists of Marshall and St. Joseph Counties, Ind. |
| Spokane, Wash. | Coextensive with Spokane County, Wash. |

Springfield, III.
Springfield, Mo.
Springfield, Ohio
Springfield-Chicopee-Holyoke, Mass.-Conn. --

Stamford, Conn.
Steubenville-Weirton, Ohio-W. Va.

Stockton, Calif.
Syracuse, N.Y.
Tacoma, Wash.
Tampa-St. Petersburg, Fla.
Terre Haute, Ind.
Texarkana, Tex.-Ark.

Toledo, Ohio-Mich.
Topeka, Kans.
Trenton, N.J.
Tucson, Ariz.
Tulsa, Okla.
Tuscaloosa, Ala.
Tyler, Tex.
Utica-Rome, N.Y
Vallejo-Napa, Calif.
Waco, Tex.
Washington, D.C.-Md.-Va $\qquad$

Waterbury, Conn

Waterloo, lowa
West Palm Beach, Fla.
Wheeling, W. Va.-Ohio $\qquad$
Wichita, Kans.
Wichita Falls, Tex.
Wilkes-Barre-Hazleton, Pa.
Wilmington, Del.-N.J.-Md.
Winston-Salem, N.C.
Worcester, Mass.

York, Pa.
Youngstown-Warren, Ohio

Coextensive with Sangamon County, III.
Coextensive with Greene County, Mo.
Coextensive with Clark County, Ohio
Consists of Chicopee, Holyoke, Springfield, and Westfield cities, and Agawam, East Longmeadow, Hampden, Longmeadow, Ludlow, Monson, Palmer, Southwick, West Springfield, and Wilbraham towns in Hampden County; Northampton city, and Easthampton, Granby, Hadley, and South Hadley towns in Hampshire County; and Warren town in Worcester County, Mass.; and Somers town in Tolland County, Conn.
Consists of Stamford city, and Darien, Greenwich, and New Canaan towns in Fairfield County, Conn.
Consists of Jefferson County, Ohio, and Brooke and Hancock Counties, W. Va.

Coextensive with San Joaquin County, Calif.
Consists of Madison, Onondaga, and Oswego Counties, N.Y.
Coextensive with Pierce County, Wash.
Consists of Hillsborough and Pinellas Counties, Fla.
Consists of Clay, Sullivan, Vermillion, and Vigo Counties, Ind.
Consists of Bowie County, Tex., and Miller County, Ark.
Consists of Lucas and Wood Counties, Ohio, and Monroe County, Mich.
Coextensive with Shawnee County, Kans.
Coextensive with Mercer County, N.J.
Coextensive with Pima County, Ariz.
Consists of Creek, Osage, and Tulsa Counties, Okla.
Coextensive with Tuscaloosa County, Ala.
Coextensive with Smith County, Tex.
Consists of Herkimer and Oneida Counties, N.Y.
Consists of Napa and Solano Counties, Calif.
Coextensive with McLennan County, Tex.

- Consists of Washington, D.C.: Montgomery and Prince Georges Counties, Md.; and Alexandria, Fairfax, and Falls Church cities, and Arlington and Fairfax Counties, Va.
Consists of Thomaston, Watertown, and Woodbury towns in Litchfield County; and Waterbury city, Naugatuck borough, and Beacon Falls, Cheshire, Middlebury, Prospect, and Wolcott towns in New Haven, County, Conn.
Coextensive with Black Hawk County, lowa
Coextensive with Palm Beach County, Fla.
Consists of Marshall and Ohio Counties, W. Va., and Belmont County, Ohio
Consists of Butler and Sedgwick Counties, Kans.
Consists of Archer and Wichita Counties, Tex.
Coextensive with Luzerne County, Pa.
Consists of New Castle County, Del., Salem County, N.J., and Cecil County, Md.
Coextensive with Forsyth County, N.C.
Consists of Worcester city, and Auburn, Berlin, Boylston, Brookfield, East Brookfield, Grafton, Holden, Leicester, Millbury, Northborough, Northbridge, North Brookfield, Oxford, Paxton, Shrewsbury, Spencer, Sterling, Sutton, Upton, Westborough, and West Boylston towns in Worcester County, Mass.
Consists of Adams and York Counties, Pa.
Consists of Mähoning and Trumbull Counties, Ohio

## Appendix G

## CURRENT INDUSTRIAL REPORTS (CIR) COMMODITY STATISTICS

This appendix lists the 1963 Current Industrial Reports (CIR), a series of commodity surveys conducted by the Bureau of the Census, together with their frequency of publication. From many of these CIR's, selected data for 1963 were included in table 6 of the industry chapters of Volume II of the 1963 Census of Manufactures. The extreme right column lists the page numbers in the volume, including page numbers for data-containing footnotes, where

CIR data (as published in the 1963 census) may be found. Where the column for page number reference is blank, it signifies that no data from that CIR were published in the 1963 Census of Manufactures. It is to be noted that the CIR numbers and titles in this appendix relate to designations as separate published reports. References in the 1963 census volume itself will usually be in terms of the number and title of the CIR survey forms as mailed to the respondent for reporting in 1963.

For "frequency of publication," the letter symbols have the following meaning: $\mathrm{M}=$ Monthly; $\mathrm{Q}=$ Quarterly; $\mathrm{SA}=$ Semiannually; and $A=$ Annually. In the extreme right column "Ftn." represents "footnote," on the page shown immediately to the left.

# Current Industrial Reports Commodity Statistics Included in Volume II of 1963 Census of Manufactures 

| CIR series number | Title | Frequency of publication | Pages of Volume II containing CIR data | CIR <br> series <br> number | Title | Frequency of publication | Pages of Volume II containing CIR data |

## Appendix H

## COMPARABILITY OF PRODUCT CLASSES BETWEEN THE 1963 AND 1958 CENSUSES OF MANUFACTURERS

This appendix list those classes of products which were changed in coverage and/or in code between the 1958 and 1963 censuses of manufactures. Part 1 traces the comparability of classes as defined in 1963 and as changed from 1958; Part 2 shows comparability of classes as existing in 1958, and as altered for 1963.

The changed relationship between the classes of products between 1958 and 1963 resulted partly from a revision of the Standard Industrial Classification (SIC) (published early in 1963 as a supplement to the SIC Manual), on which classification codes and procedures employed by the Bureau of the Census are based. The supplement and manual referred to are published by the Bureau of the Budget and are available from the U.S. Government Printing Office, Washington, D.C. 20402. The 1963 revision was a limited one, confined to some reordering of 4 -digit industries within 3 digit groups. In addition to product class changes resulting from the deletion of some industries defined in the Manual in 1958, and the defining of new industries out of existing industries, there were a considerable number of changes in product classes within the boundaries of unchanged 4 -digit industries. These resulted from (1) an effort to isolate important product classes in growing areas, (2) a desire to recognize different end-uses or markets, and (3) a reexamination of the detailed commodity structure of some industries (for example, 2821, plastics materials, etc., and 2834, pharmaceutical preparations). All of these changes
are reflected in the accompanying tabular presentation of product class comparability.

Product classes, coded to five digits, represent an intermediate level of classification between the 4 -digit establishment industry coding of the SIC and the 7-digit level used for product coding by the Bureau of the Census for the census of manufactures and for the more than 100 Current Industrial Reports published by the Bureau. Product classes, representing relatively homogeneous groupings of products, are utilized for requesting output data in the Annual Survey of Manufactures (ASM). In addition to data published in the ASM, production and/or shipments information for product classes are shown in the table 6 series of the industry chapters of the Census of Manufactures for 1963 (Volume II, Industry Statistics) and, for product-class specialization, in the general statistics in table 8. Production, shipments, inventory, and other data by product class will be found in numerous publications in the Current Industrial Reports series. Where applicable, table 6A of the industry chapters of the census of manufactures carries product data obtained from the Current Industrial Re: ports.

In the two parts of this appendix, the codes and descriptions of product classes affected by revision between 1958 and 1963 are given. In each of the parts, the product class or classes shown on the left are comparable to the class or classes shown on the right. For example, in Part 1, product classes 20221 and 20222 for 1963 are the equivalent in coverage to classes 20220 and 20252 for 1958. In Part 2, the reverse situation is the case. Where a product class shown in the left column is part of a product class in the right column, the class code in the right column contains an asterisk (*). Thus, it is evident that a product class iit one year may be a part of several product classes in the other year. Where such situations exist, comparability between the cenuses becomes difficult at the product class level.

## Appendix

## ALPHABETIC INDEX OF MANUFACTURED PRODUCTS

This index is designed to assist in locating statistics on manufactured products as published in table 6A, "Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958," in the respective industry chapters of the 1963 Census of Manufactures volumes. The product code or codes and the page or pages in the industry chapters where statistics will be found are shown for each of the products or groups of products. The index covers the almost 6,000 coded products as reported in the 1963 Census of Manufactures and several thousand products covered by the Bureau of the Census Current Industrial Reports series of commodity surveys for 1963, which are also included in table 6A. Typically, the products alphabetized in this index are of a broad nature; more detail by size, material components, end use, etc., will be found in
table 6A itself. Occasionally, the same product or group of products will appear under more than one industry; page numbers so indicate. To assist in locating statistics for particular products, cross references or alternate ways of describing products are included in this index.

Product codes are based on the 1957 revised edition of the Standard Industrial Classification Manual (SIC), as amended, issued by the Bureau of the Budget. Bureau of the Census expansion of the 4-digit industry coding of the SIC to 5 -digit product classes and 7 -digit products, as published in table 6A, is used as the basis for this alphabetic index.

Assorted product information is contained in tables other than 6A but no references to such other tables are shown here. For example, summary product information at the industry level may be found in table 5A and at the product class level in table 5B. Product class information may also be found in tables 6B to 6D and in table 8. Occasion. ally, detailed product information may be contained in tables other than 6A, typically in the table 6 series.

## CENSUS REGIONS AND GEOGRAPHIC DIVIIIONS

[^0]:    For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, or any Department of Commerce field office. Price $\$ 9.25$

[^1]:    1 The 1963 censuses covered the United States, Guam, and the Virgin Islands. Separate censuses of manufactures and business for 1963 were also conducted in Puerto Rico jointly with the Commonwealth Government. The statistics from 1958 onward include establishments in Alaska and Hawaii which achieved statehood in 1959.

[^2]:    ${ }^{2}$ Since the annual survey of manufactures is a sample, the crossclassifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 425 industries. However, at the State and SMSA levels, statistics are published only for 3 -digit and 2 -digit industry groupings, respectively. At the county level, information is published for about 10 percent of the 3,000 counties. These 300 -odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. No information is published at the city level.

[^3]:    Source: Survey of Current Business, August 1965, pp. 42-45, and July 1966, p. 15.

[^4]:    ${ }^{3}$ The census originally scheduled to cover 1953 was conducted for 1954 on the basis of special legislation authorizing this change． A census covering 1958 and this census covering 1963 were con－ ducted under the legislation of 1948．In an effort to spread its workload more evenly over the decennial period，the Bureau of the Census，in 1964，asked for and obtained legislation（P．L．88－532） specifying that subsequent censuses of manufactures would cover the years ending in＂ 2 ＂and＂ 7 ．＂Consequently，the next census of manufactures is scheduled for 1967.

[^5]:    4 For the manufacturing industries, a revised manual was issued in 1945 which, with minor modifications, was used in the 1947 Census of Manufactures. For the 1954 census, the classification structure used in 1947 was again employed, again with minor modifications. In 1957, the SIC system was extensively revised for manufacturing industries and historical comparability of some data was seriously affected. This revision and its effects on census series are described in the introduction and appendixes to the 1958 census volumes. A minor revision of the SIC between 1958 and 1963 introduced some 4 -digit industry changes but none of them crossed 3 -digit group lines. Also, there were some amendments in industry titles, definitions, and index items, and additions to the index items in the SIC Manual.

[^6]:    ${ }^{5}$ Frequently the business world and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers or they may be individually grouped with other products of similar materials such as converted paper products, wood products, glass products, etc.

[^7]:    ${ }^{6}$ See Industry Classification and Sector Measures of Industrial Production by James W. McKie, Bureau of the Census Working Paper No. 20, 1965. and Historical Comparability of Census of Manufactures Industries, 1929-1958 by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

[^8]:    7 Executive Office of the President, Bureau of the Budget, Standard Metropolitan Statistical Areas, 1964.

[^9]:    X Not applicable.
    ${ }^{1}$ The total is the sum of operatins establishments plus auxiliaries.

[^10]:    ${ }^{8}$ See 1963 Census of Manufactures, MC63-2, Numerical List of Manufactures Products, and MC63-1, Alphabetic List of Manufactures Products.

[^11]:    ${ }^{1}$ Includes $\$ 21$ million shipped from industry 3443 , boiler shop products; $\$ 11$ million shipped from indus ${ }^{4}$ ry 3444 , sheet-metal work; $\$ 10$ million from industry 3449 , miscellaneous metal work, n.e.c.; and $\$ 7$ million from industry 3731, shipbuilding and repair.
    ${ }^{2}$ Includes $\$ 2$ million shipped from industry 3443 , boiler shop products.
    ${ }^{3}$ Includes $\$ 9$ million shipped from industry 3443, boiler shop products, and $\$ 2$ million from industry 3446 , architectural metal products.
    ${ }_{4}^{4}$ Includes the following products: 34421, metal doors and frames (except storm doors), $\$ 7$ million; 34422, metal window sash and frames (except storm sash), $\$ 3$ million; 34432, fabricated steel plate, $\$ 31$ million; 34438, metal tanks and vessels, custom fabricated at the factory, $\$ 7$ million; 34441 , sheet-metal roofing, siding, and drainage equipment, $\$ 15$ million; 34442 culverts, flumes, irrigation pipes, $\$ 8$ million; and 34443 , other sheet metal work, $\$ 8$ million.

[^12]:    ${ }^{1}$ Excludes 13 industries with 297 thousand employees.
    ${ }^{2}$ Excludes 12 industries with 740 thousand employees.
    ${ }^{3}$ Less than 0.5 percent.

[^13]:    ${ }^{9}$ For a few industries (e.g., aircraft, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

[^14]:    ${ }^{1}$ Source: National Income and Product Accounts of the U.S., Survey of Current Business, August 1965, p.42;
    July 1966, p. 15.
    ${ }^{2} 1947$ and earlier figures are unadjusted value added.

[^15]:    Standari Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies
    The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

[^16]:    See footnotes at end of table.

[^17]:    See footnotes at end of table.

[^18]:    Standard Notes: - Represents zero
    (D) Witriheld to avoid disclosing figures for individual companies.
    (NA) Not available.
    (X) Not

[^19]:    - Represents zero.
    (D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
    ${ }^{1}$ Includes capital expenditures between $\$ 1$ million and $\$ 2$ million for plants under construction but not in operation.

[^20]:    See footnotes at end of table.

[^21]:    See footnotes at end of table.

[^22]:    Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.
    (NA) Not available.
    (X) Not
    applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
    $(S)$ Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
    ${ }^{1}$ Reporting companies were requested to classify itens in the same manner as billed by the shipper regardless of how the refinery (or blending and compounding establishments) would otherwise classify them.

    Represents the difference between "Total shipments" (Quantity) and "Receipts" (Quantity).
    ${ }^{3}$ Product code 2911151 included with code 2911111 for 1963.
    ${ }^{4}$ Product code 2911198 included with codes 2911111 and 2911131 for 1958.

[^23]:    Standard Notes: - Represents zero.
    (D) Withheld to avoid disclosing figures for individual companies.
    (NA) Not available.
    (X) Not
    applicable. (Z) Less than \$l million reported.
    ${ }^{1}$ For the specified product classes, shipments of $\$ 1$ million or more were reported for the States listed, but the exact figures are withheld to avoid disclosure of individual company figures: 29110, Connecticut, Minnesota, Missouri, Kansas, Delaware, Maryland, Virginia, Kentucky, Montana, Colorado, Utah, and California; 29111, Massachusetts, New York, New Jersey, Michigan, Wisconsin, Minnesota, Missouri, North Dakota, Nebraska, Delaware, Maryland, Virginia, West Virginia, South Carolina, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Colorado, New Mexico, Washington, Alaska, and Hawaii; 29112, New York, Pennsylvania, Kansas, Mississippi, Arkansas, Washington, and Hawaii; 29113, Massachusetts, New York, Pennsylvania, Michigan, Wisconsin, Minnesota, Missouri, North Dakota, Delaware, Maryland, Virginia, West Virginia, South Carolina, Kentucky, Tennessee, Arkansas, Oklahoma, Washington, Alaska, and Hawaii; 29114, New York, New Jersey, Michigan, Wisconsin, Missouri, Delaware, Kentucky, Tennessee, Mississippi, Arkansas, Oklahoma, New Mexico, Utah, Washington, and Hawaii; 29115, New York, New Jersey, Indiana, Michigan, Minnesota, Delaware, Maryland, Virginia, West Virginia, Kentucky, Arkansas, Utah, and Washington; 29116, New York, New Jersey, Pennsylvania, Ohio, Indiana, Michigan, West Virginia, Kentucky, Louisiana, and Wyoming; 29117, New York, Pennsylvania, Indiana, Michigan, Louisiana, Oklahoma, and California; 29118, Massachusetts, Rhode Island, Pennsylvania, Ohio, Indiana, Kansas, Maryland, West Virginia, South Carolina, Arkansas, Wyoning, Washington, and Alaska; 29119, Massachusetts, Rhode Island, New York, Pennsylvania, Michigan, Wisconsin, Minnesota, Missouri, Kansas, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Colorado, New Mexico, Utah, Washington, and Oregon; 29522, Massachusetts, Michigan, North Carolina, Georgia, Florida, Tennessee, and Oregon; 29523, Massachusetts, Connecticut, Pennsylvania, Indiana, Mi chigan, Minnesota, Delaware, Maryland, West Virginia, North Carolína, South Carolina, Florida, Tennessee, Mississippi, Colorado, New Mexico, and Washington; 29926, Indiana, Wisconsin, Nebraska, Kansas, West Virginia, Georgia, Florida, Kentucky, Oklahoma, Washington, and Oregon; 29927, Connecticut, New York, Iowa, Kansas, Louisiana, Oklahoma, Texas, and California.
    ${ }^{2}$ Shipments of $\$ 1$ million or more were reported, but exact figures are withheld to avoid disclosure of individual company figures.

[^24]:    ${ }^{1}$ Although it was intended that respondents include petroleum coke in these figures, a comparison of these data with those collected and published for 1962 (table 8 of 1963 Census of Manufactures Report MC63(1)-7, Fuels and Electric Energy Consumed in Manufacturing Industries: 1962) shows that some companies did not report their production and consumption of petroleum coke for 1963 and 1958.

[^25]:    Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available
    ${ }^{1}$ This industry group consists of a single 4-digit industry. Detailed data by State are included in the 4 -digit industry tables.
    (X) Not applicable.

[^26]:    - Represents zero. n.e.c. Not elsewhere classified.
    (D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
    ${ }^{1}$ Includes capital expenditures of approximately $\$ 5 \mathbf{-} \$ 10$ million for plants under construction but not in operation.
    ${ }^{2}$ Includes capital expenditures of approximately $\$ 500-\$ 1,000$ thousand for plants under construction but not in operation.
    ${ }^{3}$ Includes capital expenditures of approximately $\$ 1-\$ 2$ million for plants under construction but not in operation.

[^27]:    See footnotes at end of table.

[^28]:    See footnotes at end of table.

[^29]:    See footnotes at end of table.

[^30]:    n.e.c. Not elsewhere classified.
    ${ }^{1}$ Adjusted to include product classes 30694, Rubber floor and wall covering; 30695, Mechanical rubber goods, n.e.c.; and 30698, Other rubber
    goods, n.e.c., for which separate indexes are not shown due to the lack of adequate quantity information covering these products.
    ${ }^{2}$ Not show because comparable quantity data going back to 1958 and 1954 were not obtained for these products.

[^31]:    Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not speciried by kind.
    (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the
    basis of a consistency review.
    ${ }^{2}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

    Because a major revision in the classification of products assigned to Industry 3079, Miscellaneous Plastics products, was introduced in 1963, prior data, for the most part, are not comparable at the product class level.

[^32]:    Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
    
    
     between 20 and 25 percent; thermosetting resins, between 3 and 5 percent.
    
    
     percent.
    ${ }^{3}$ Not separately classified in 1958; included in code 970099.
    
     ${ }^{5}$ forms." 1 neludes $\$ 17,190$ thousand for industry 3031 and $\$ 1,008,067$ thousand for industry 3069.
    ${ }^{6}$ Includes $\$ 14,923$ thousand for industry 3031 and $\$ 750,158$ thousand for industry 3069.

[^33]:    - Represents zero. (D) Withheld to avoid disclosing figures for individual companies, or valued at less than $\$ 100,000$.
    ${ }^{1}$ Includes less than 1 percent synthetic rubber produced and consumed in the same establishment. Value of this rubber is not reflected in the
    "delivered cost" column.
    ${ }^{2}$ Includes 43,642 long tons of reclaimed rubber produced and consumed in the same establishment. Of this total, 6,079 long tons were in New England and 18,161 tons in East North Central. Value of this reclaimed rubber is not reflected in the "delivered cost" column.

[^34]:    See footnotes at end of table.

[^35]:    This industry group consists of a single 4-digit industry. Detailed data by State are included in the 4-digit industry table.

[^36]:    See footnotes at end of table.

[^37]:    - Represents zero.
    (D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
    ${ }^{1}$ Includes capital expenditures for plants under construction but not in operation which constitute $\$ 100-\$ 200$ thousand of the total for the size

[^38]:    See footnotes at end of table.

[^39]:    Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.

[^176]:    ${ }^{19}$ For 1963, all machines with an average value of under $\$ 1,000$ for codes 3542212 , 3542213 , 3542215 , 3542241 , and 3542257 are included with code 3542259, "All other mechanical presses."
    ${ }^{20}$ Figures for codes 3542255 and 3542258 are included in code 3542259.
    ${ }^{21}$ For 1963 , all machines with an average value of under $\$ 1,000$ for codes 3542261 , 3542268 , and 3542274 are included with 3542279 , "All other hydraulic presses."
     are included with code 3542279.
    ${ }^{23}$ Includes data for product codes $3542311-98$ and 3542811-59
    ${ }^{24}$ Some machines with an average value of under $\$ 1,000$ for code 3542811 are included with codes 3542855-59, "Spinning lathes."
    ${ }^{25}$ In 1958, product code 3544000 has been combined with product code 3544100.
    26 Excludes industrial molds made and used in the same establishment.
    ${ }^{27}$ For 1958 , data for these products include tips sold separately but exclude blanks.
    ${ }^{28}$ For 1963 , respondents were requested to use the following definitions of blanks, tips, and inserts:
    Blanks are unground material, cast or formed, from which a solid tool or cutting tip can be made.
    Tips are a finished or semifinished form ready to be brazed, soldered, or otherwise bonded to a shank to form a cutting tool. Inserts are replaceable machanically held cutting components of cutting tools, ground on all surfaces or on top and bottom.
    The 1958 report form carried no definitions for these products.
    ${ }^{29}$ Data for product code 3548235 are limited to pneumatic drills. Pneumaticscrewdrivers and nut-runners are included with "Other pneumaticpowered hand tools."
    ${ }^{30}$ The data published in the 1958 report for these products have been revised. As a result, it is not possible to publish separate data for these products without revealing the operation of individual companies.
    ${ }^{31}$ A major portion of this value represents metalworking assembly and automation equipment not elsewhere classified.

[^177]:    ${ }^{1}$ Not shown because comparable quantity data were not obtained for a significant portion of these products.
    ${ }^{2}$ Adjusted to include products not shown separately below (product classes 35418 and 35419 ) as well as a minor amount of machine tools not specified by kind.

[^178]:    Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.

    ${ }^{1}$ For those products classiried in industry 3717 , with the exception of fuel pumps, production figures exclude units produced by establishments in other industries. Although it is not possible to precisely measure the effect of this undercoverage, it is believed to be minor for most products. ${ }^{2}$ The number of motor vehicle parts for replacement, export and other purposes were derived by subtracting from the total number of units produced, the quantities used in the assembly of new vehicles as reported by motor vehicle assembly plants. ${ }^{3}$ For these products, total number of units shipped were used instead of total number of units produced. "In 1958, these products were described respectively as "mufflers (exhaust)," and "muffler tail pipes."

[^268]:    See footnotes at end of table.

[^269]:    See footnotes at end of table.

[^270]:    NOTE: See Introduction for an explanation cf terms used. The following variations in definition of terms should be considered in the use of this table: All erployees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nomproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

    ${ }^{1}$ See footnote 2, table 1.
    ${ }^{2}$ Includes capital expenditures of approximately $\$ 200-\$ 500$ thousand for plants under construction but not in operation.

[^320]:    Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.
    (NA) Not available.
    (X) Not
    applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
    ${ }_{1}{ }^{\text {Although }}$ general statistics for industry 1911 have been combined with SIC 1999, the value of products primary to SIC 1911 is shown separately.
    Most of this value is accounted for by establishments in industries other than 1911.
    ${ }^{2}$ Value of shipments for 1911 and 19292 included with 1999 for 1958.
    ${ }^{3}$ Data for industry 1925 represents receipts, billings or value of work done.
    4In the 1958 Census of Manufactures, a single value figure for research and development and all other services on complete guided missiles and space vehicles was collected. Consequently, separate detailed statistics comparable to 1963 are not available.

[^321]:    Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
    (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estinate or on the basis of a consistency review.
    ${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[^322]:    Note: Includes manufacturing facilities, research and development activities, and manufacturing performed in supply depots. Not comparable to

[^323]:    Note: Research and development activities, and manufacturing performed in supply depots are excluded, making 1963 data comparable to 1958.
